He opposed conscription at the time and was sentenced to six months' imprisonment. His opposition to war was strenuous although he disclaimed that he was a pacifist. Some wars, he thought, were justifiable; however intensely he hated them. The second world war, for instance, was unavoidable if Hitler was not to usher in a new dark age and the western civilisation was not to perish. But after the war, he was intensely concerned over the prospect of the total annihilation of human life on this planet by a nuclear war.

When over seventy-five, he began his campaign against nuclear disarmament. In 1961, nearing eighty, he performed a *dharma* near Whitehall in London and suffered seven days' imprisonment. At eighty-eight, he launched a civic disobedience movement against nuclear arms. Until the very end he did not lose either the intellectual clan of his youth or his moral courage.

Thus, all his life, this man who believed the will to doubt and the duty to question was a crusader—for emancipation of women, against imperialism and racial dis-

crimination, for social justice and freedom of speech, against the brutalities of war and the invention and manufacture of horrible weapons of destruction, and, above all, for peace.

Adventure

Eric Fromm, the distinguished psycho-analyst and sociologist, has observed that for Russell "rational thought is not a quest for certainty but an adventure, an act of self-liberation and of courage which changes the thinker by making him more awake and more alive." He rejected dogmas and nebulousness in thought and everything that violated his reason and conscience in action.

Although an activist in many directions, he did not, except on rare occasions, identify himself with a party or an organisation nor did he pay obeisance to a creed. Life should not be too closely regulated or too methodical, he always contended. Social life demanded organisation and discipline but that was all the more reason why thought should be free—in art, philosophy and science. He believed that "to teach how to live without certainty and yet without being paralysed by hesitation is perhaps the chief thing that philosophy in our age can still do for those who study it."

Bertrand Russell was concerned with the whole spectrum of knowledge and human affairs and made a notable contribution to nearly all of them—mathematics, logic, metaphysics, psychology, social philosophy, theory of education and international politics. He was one of those rare geniuses who, while mastering a branch of knowledge, was never satisfied with working in a limited sphere and always sought to come to grips with problems of individual and collective life.

Knowing the tragic destiny of man and the ultimate futility of all human endeavour, Russell always acted with a spirit of resignation. And though his life lacked in some measure the virtue of self-control, it was one of personal involvement in causes which he cherished. He was indifferent to public obloquy and ready to suffer. His scepticism always concealed a deeper faith—faith in man's capacity to create his own paradise through knowledge and love.

BRS PROJECT

- (12) A Bertrand Russell Calendar: Wouldn't you like to see one? Here's what one might be like:

11 x 8.5-inch pages. 12 pages, one for each month, plus a cover. Pages hinged together, so that when the calendar is in use, say, on a wall, you would see two 11 x 8.5-inch pages, one above the other.

The lower page would have the days of one month in boxes, as shown here (greatly reduced). Important events in BR's life would appear in the boxes on the proper dates: birth, death, marriages, divorces, ditto his children and wives, honors received (Nobel, etc.), major books published, other important events in his life or in the world (BR sent to prison, anti-nuke marches, start of WWI and WWII, etc.)

The upper page would have a BR quotation, or explanations of the events, or possibly a photo.

Probable cost \$5.

The Calendar should be a joint effort of BRS Members. Let everybody get into the act...and onto the Calendar! Members would send in items for the Calendar: dates, events, and quotations, including sources.

LET'S HEAR FROM YOU! If there is sufficient interest in this project, if you think you would buy one for \$5, let us know, and we'll go ahead with it.

NUCLEAR STRATEGY

- (13) BRS Laureate John Somerville states the case against U.S. nuclear strategy, in *New Patriot* (Nov/Dec 1989), Suite 1420, 202 S. State, Chicago, IL 60605. We have added the underlining.

NUCLEAR DETERRENCE -- PHILOSOPHY OF OMNICIDE

By John Somerville

From its beginning philosophy has meant the systematic use of reason to answer ultimate questions concerning human life and the fate of the human world. In our day, for the first time in human history, the physical existence of the whole human world can be irreversibly terminated by one brief conflict fought out with the present nuclear weapons. Philosophers, like everyone else, are therefore faced with the categorically imperative task of preventing what might well be called instant nuclear omnicide.

In this effort our best method is education of the public and of governments. It is not necessary for any philosophy to change its doctrines or teachings. It is necessary only to convince people and governments that in order to go on living in any human community whatever, nuclear weapons must be outlawed. To use them in conflict would not only be mass suicide but mass murder as well-enforced omnicide. The facts that need to be taught are relatively simple, though some are not widely known and others are so painful to admit that many refuse to believe them or even to think about them at all.

While everyone knows what happened at Hiroshima and Nagasaki it must be emphasized that the nuclear weapons used there were only the first crude models, and were used only by one side, against only two cities. Yet the results were so inhumanly horrible that for next thirty years the acknowledged policy of our government was that we would never again be first to use nuclear weapons.

However, this policy was abruptly reversed July 2, 1975, in a startling public announcement by our Secretary of Defense, James Schlesinger, who stated in his press interview: "Under no

circumstances could we disavow the first use of nuclear weapons". This option of first-use became the present NATO policy called nuclear deterrence. As officially acknowledged, this policy stance means that anything considered by us to be an attack against any U.S. or NATO forces by any conventional weapons, such as tanks, may be answered by our nuclear weapons if, in our judgement, our conventional weapons are insufficient to meet it. That is, we would transform survivable conventional war into unsurvivable omnicausal conflict.

This first-use policy stance has been maintained by the U.S. and NATO in spite of the fact that on ten separate occasions the United Nations General Assembly has reiterated that any first use of nuclear weapons would now be "a crime against humanity, and a violation of the U.N. charter". This charter was not only signed by us, but largely created by us.

We cannot overlook the fact, highly significant to the rest of the world, that both the People's Republic of China and the U.S.S.R. have unilaterally pledged before the United Nations that they would never be first to use nuclear weapons. It is also a fact, much better known by the world public than by our own, that the Warsaw Treaty Organization has several times proposed to the U.S. and NATO a mutual treaty that neither side would be first to use nuclear weapons. All these proposals have been rejected by NATO and by the executive branch of our government, without waiting for any debate in our Congress or our media.

At the same time President Reagan repeatedly stated in public speeches here and abroad: "Nuclear war cannot be won, and must never be

fought". Since the President is also Commander-in-Chief of our armed forces, Reagan's statements may account for the fact that repeated polls taken by the Public Agenda Foundation and Brown University show that more than 80% of our eligible voters are firmly but mistakenly convinced that our policy is now no-first-use, that is, that "we will never use nuclear weapons unless we are attacked with nuclear weapons". But the very heart of our present nuclear-military policy is to retain the option of first-use, in spite of the fact that nothing is more destabilizing than the explicit threat to be first to use nuclear weapons, and nothing would be more confidence-building than mutual agreement to ban their first use.

Paradoxically, President Reagan and later President Bush urgently called for a ban on the use of chemical weapons, specifically because they are "too horrible". Are not nuclear weapons even more horrible? The policy of first-use of nuclear weapons today is morally indefensible and legally criminal because it tries to justify a crime so horribly enormous that it could be committed only once, a sin so utterly unspeakable that it never even had a name, until now--omnicide.

In view of these facts nuclear deterrence might actually be termed insane nuclear blackmail. It was this that led the head of the government of India to say that nuclear deterrence is the ultimate form of state terrorism. It should be rejected by all people and every government in the world, by all philosophers and every philosophy in the world. Humankind has many other problems that philosophers and governments must deal with. But if the nuclear omnicausal problem is not solved first, there will be no possibility of dealing with any of the others.

2 PHILOSOPHERS REMEMBER SIDNEY HOOK

(14) Paul Kurtz, in *Free Inquiry* (Winter 1989/90, pp.40-1):

On September 25, 1989, a memorial was held at the New York University to commemorate the passing of the veteran secular humanist philosopher Sidney Hook. Participating at the meeting were distinguished leaders of thought and action representing a wide range of viewpoints—Senator Daniel Patrick Moynihan; Jean Kirkpatrick, the former ambassador to the United Nations; Lane Kirkland, the president of the AFL-CIO; John Bunzel and Miro Todorovich of the University Centers for Rational Alternatives; Leo Cherne and Leonard Sussman of Freedom House; Carl Gershman of the Endowment for Democracy; Herbert Hill of the A. Philip Randolph Institute; Melvin Laskey, the editor of *Encounter* magazine; and others.

Many of the speakers who attended are considered neoconservatives—yet Hook resisted that description. He was a social democrat, he said, who believed in a free society and the welfare state, but strongly rejected the idea that the social order must be based on religion. He was well known for his polemical skills, and maintained relationships with individuals of diverse political and ideological stances. He once quipped that many of his friends were not friends of one another.

Sidney Hook exerted a powerful influence on modern thought. Moynihan, Laskey, and others heralded his vital role in alerting Western intellectuals to the dangers of Stalinism, and noted that Hook lived to see his heroic efforts vindicated: Even within

the Soviet Union he is now recognized as one of the vital critics of totalitarian repression.

In my remarks at the memorial I pointed out that Hook was one of the leading American secular humanist philosophers of the twentieth century. Belief in God, he argued, was a "speculative hypothesis of an extremely low order of probability." He did not criticize religious beliefs, which are personal, but he objected to efforts to publicly declare religious doctrines as a form of public truth, or to impose them upon others in the community.

Hook disagreed with those who attempted to justify democracy in terms of religion. He pointed out that from belief in the fatherhood of God, mutually antagonistic political systems may be drawn: Monarchy, oligarchy, dictatorship, and so on. He believed democracy to be justifiable only by virtue of its empirical consequences, that is, whether it leads to the good life for the ordinary person and preserves the dimensions of freedom. He likewise thought that morality was independent of religious foundations, and that ethical judgments would be justified autonomously by means of intelligence.

It was thus a cause for considerable dismay for many at the Hook memorial when Norman Podhoretz, the editor of the neo-conservative *Commentary* magazine, published by the American Jewish Committee, came to the podium wearing a skullcap, and immediately proceeded to chant the

kaddish, an ancient Hebrew prayer for the dead. Those who understood and appreciated Sidney Hook's entire philosophical career were aware of how this might have offended him. Irving Kristol, a columnist for the *Wall Street Journal* and *Public Interest*, related his profound indebtedness to Hook but he too adamantly rejected Hook's secular humanism. Yet Sidney Hook represented the secular humanist tradition in his time as no one else did; he was a fearless defender of free inquiry, reason, and the ethics of democracy.

Hook confessed to me several times over the years his displeasure with the religious tone that many neo-conservative journals were taking. He deplored the "new failure of nerve" in an article published in *Partisan Review* shortly after World War II, and continued throughout his life his opposition to it. He even disagreed with his revered teacher John Dewey about whether humanism was religious in nature; he believed that Dewey was abusing the ethics of language by using the term "God" to refer to human ideals. Hook maintained on the contrary that humanism is secular.

Hook embarrassed me several times in his later years by telling me that John Dewey had passed the torch of freedom and reason to him and that he was bequeathing the same responsibility to me. When I remonstrated at his generous remarks he said that all around us contemporary society seemed to be abandoning the conviction that rational inquiry and science could be used for the betterment of humankind, and that the ideals of secular society needed to be defended against its religious detractors. He thought that FREE INQUIRY, SKEPTICAL INQUIRER, and Prometheus Books were beacons of light in an often irrational world.

Last fall, I went to New York City to bestow upon Andrei Sakharov—like Hook a humanist laureate in the Academy of Humanism—the International Humanist Award on behalf of the International Humanist and Ethical Union. I invited Hook along, but he was too ill to go. He told me, however, to give Sakharov his regards and tell him how much he appreciated his valiant defense of democracy and humanism. One of Sidney Hook's definitions of humanism seems to best sum up his ideals: "An ethical humanist today," he said, "is one who relies on the arts of intelligence to defend, enlarge, and enhance the areas of human freedom in the world."

Adieu, Sidney. You will be sorely missed. We hope we will fulfill your great expectations of us.

Notes

1. Sidney Hook, *The Quest for Being* (New York: St. Martin's Press, 1961).
2. Paul Kurtz, ed., *The Humanist Alternative* (London: Pemberton Books, 1973), p. 34.

Quotations from Sidney Hook

"Instead of a revival of religious faith in general, we should work specifically toward a revival, or a new birth, of faith in democracy."

"The validity of democracy as a moral and political ideal does not rest upon religious doctrine."

"Of great relevance to the concerns of rational humanists is the contention that without commitment to transcendent religious beliefs no programs of social reform can be justified or implemented. Even some neo-conservative thinkers . . . hold this view. . . . In recent years many large claims have been made for religious faith. It has been celebrated as the topsoil of democracy, indeed of all morality. . . . I believe all of these claims are false. The validity of democracy as a moral and political ideal does not rest upon religious doctrine."

"The validity of a moral proposition . . . is independent of any divine revelation or any other transcendent or supernatural element."

"Humanism to me is the view that morals are autonomous of religious belief, that they are relevant to truths about nature and human nature, truths that rest on scientific evidence."

"I do not believe there is empirical evidence that large-scale ideas about the existence of God, freedom, and immortality have a direct bearing on human behavior and that the erosion of transcendental beliefs gets expressed in immoral conduct."

"I am willing to call myself an atheist except when it is assumed . . . that an atheist must be a Communist."

All of the above quotations are reprinted from FREE INQUIRY

(15) Corliss Lamont, in *Free Mind* (Jan/Feb 1990, p. 7):

The eulogy on Sidney Hook in the September/October 1989 issue of *Free Mind* properly praises him as an eminent Humanist philosopher. However, in noting that Professor Hook was "one of communism's fiercest critics in the West," it did not add that he was so fierce that he became one of America's most fanatical anti-communists and anti-Soviet polemicists. His speeches, articles, and books helped to stimulate the Cold War and make rational relations between the Soviet Union and the United States more difficult. At the same time, he conducted irrational feuds against liberals and radicals, including Bertrand Russell, a greater philosopher than Hook, and also myself.

Regardless of his basic philosophy, Hook went far astray in his politics and, toward the end of his life, aligned himself with right-wing forces in the United States. Although we were fellow students and friends at Columbia, Hook later carried on a bitter feud with me for some fifty years, based primarily

upon our disagreements about the Soviet Union. At one point, Hook claimed I was not a genuine Humanist because I remained sympathetic to the Soviet Union even while the tyrant Stalin remained its bloody dictator. Admittedly, I and thousands of other intellectuals in America and the world at large made serious mistakes about the U.S.S.R.

However, I do not believe we should expel American Humanists from our ranks because of their position on the Soviet Union or any other foreign country. The primary job of American Humanists is to educate the American people concerning naturalistic Humanism and win them over to that philosophy.

I must state that I never wished any kind of stormy fight with Sidney Hook or anybody else about the Soviets but have discussed disagreements on that subject with many people in the calm and rational attitude of a dedicated Humanist. Hook carried on the battle with the publication of his auto-

biography *Out of Step* in 1987, in which he uses four or five pages to demolish my character by telling of my bad judgment about fifty years ago in the late thirties. Ye gods, Hook, should there not be a statute of limitations on denunciation for intellectual errors? In the same volume, Hook registers his support of the United States' brutal and evil war in Vietnam.

In conclusion, let me say that Sidney Hook was a man of varied attributes—a first-rate Humanist philosopher and teacher on the one hand and on the other an intemperate and irrational individual in the realm of politics.

Let us now put aside the Cold War wrangles and rejoice that Soviet President Mikhail Gorbachev is putting through reforms in the Soviet Union that promote democracy and is also offering a foreign policy that truly aims to establish international peace and disarmament.

OPINION

(16) Arthur Schlesinger Jr. This essay has been adapted from a lecture given at Brown University on the occasion of Vartan Gregorian's inauguration as president. From the *New York Times*, 1989, exact date uncertain.

The Opening of the American Mind

LITTLE is more surprising these days than the revival of blasphemy as a crime. A secular age had presumably relegated blasphemy — irreverence toward things sacred — to the realm of obsolete offenses. No American has been convicted for blasphemy since Abner Kneeland in Massachusetts a century and a half ago (for what was deemed a "scandalous, impious, obscene, blasphemous and profane libel of and concerning God"); and the last prosecution, in Maryland 20 years ago, was dismissed by an appellate court as a violation of the First Amendment.

Arthur Schlesinger Jr. is professor in the humanities at the City University of New York.

But a secular age, when it creates its own absolutes, may well secularize blasphemy too. Consider the deplorable role the Pledge of Allegiance to the flag played in a recent Presidential campaign, or the cries of outrage provoked by the Supreme Court decision in *Texas v. Johnson*, holding that punishment for the political burning of an American flag breached the Constitution, or the demonstrations protesting the "desecration" of the flag at the Art Institute of Chicago.

The very word "desecration" implies that the American flag is sanctified, an object of worship. We are witnessing the rise of what Charles Fried, Ronald Reagan's Solicitor General, calls the "doctrine of civil blasphemy." Whether religious or secular in guise, all forms of blasphemy have in common that there are things so sacred that they must be protected by the arm of the state from irreverence and

challenge — that absolutes of truth and virtue exist and that those who scoff are to be punished.

It is this belief in absolutes, I would hazard, that is the great enemy today of the life of the mind. This may seem a rash proposition. The fashion of the time is to denounce relativism as the root of all evil. But history suggests that the damage done to humanity by the relativist is far less than the damage done by the absolutist — by the fellow who, as Mr. Dooley once put it, "does what he thinks th' Lord wud do if He only knew th' facts in th' case."

Let me not be misunderstood lest I be taken for a blasphemer myself and thereby subject to the usual dire penalties. I hold religion in high regard. As Chesterton once said, the trouble when people stop believing in God is not that they thereafter believe in nothing; it is that they thereafter believe in anything. I agree with Tocqueville that religion has an indispensable social function: "How is it possible that society should escape destruction if the moral tie is not strengthened in proportion as the political tie is relaxed?" I also sympathize with Tocqueville who, André Jardin, his most recent biographer, tells us, went to his death an unbeliever.

IT would hardly seem necessary to insist on the perils of moral absolutism in our own tawdry age. By their fruits ye shall know them. It is as illogical to indict organized religion because of Jimmy Swaggart and the Bakkers as Paul Johnson is to indict the intelligentsia because of the messy private lives of selected intellectuals, but the moral absolutists who are presently applauding Paul Johnson's cheap book

"Intellectuals" might well be invited to apply the same methodology to their own trade. As the great theologian Reinhold Niebuhr said, "The worst corruption is a corrupt religion" — and organized religion, like all powerful institutions, lends itself to corruption. Absolutism, whether in religious or secular form, becomes a haven for racketeers.

As a historian, I confess to a certain amusement when I hear the Judeo-Christian tradition praised as the source of our concern for human rights. In fact, the great religious ages were notable for their indifference to human rights in the contemporary sense. They were notorious not only for acquiescence in poverty, inequality, exploitation and oppression but for enthusiastic justifications of slavery, persecution, abandonment of small children, torture, genocide.

Religion enshrined and vindicated hierarchy, authority and inequality and had no compunction about murdering heretics and blasphemers. Till the end of the 18th century, torture was normal investigative procedure in the Roman Catholic church as well as in most European states. In Protestant America in the early 19th century, as Larry Hise points out in his book "Pro-Slavery: A History of the Defense of Slavery in America, 1701-1840," men of the cloth "wrote almost half of all the defenses of slavery published in America"; an appendix lists 275 ministers of the Gospel who proudly proclaimed the Christian virtue of a system in which one man owned another as private property to be used as he pleased.

Human rights is not a religious idea. It is a secular idea, the product of the last four centuries.

of Western history.

It was the age of equality that brought about the disappearance of such religious appointments as the auto da fe and burning at the stake, the abolition of torture and of public executions, the emancipation of the slaves. Only later, as religion itself began to succumb to the humanitarian ethic and to view the Kingdom of God as attainable within history, could the claim be made that the Judeo-Christian tradition commanded the pursuit of happiness in this world. The basic human rights documents — the American Declaration of Independence and the French Declaration of the Rights of Man — were written by political, not by religious, leaders. And the revival of absolutism in the 20th century, whether in ecclesiastical or secular form, has brought with it the revival of torture, of slaughter and of other monstrous violations of human rights.

Take a look at the world around us today. Most of the organized killing now going on is the consequence of absolutism: Protestants and Catholics killing each other in Ireland, Muslims and Jews killing each other in the Middle East, Sunnis and Shaites killing each other in the Persian Gulf; Buddhists and Hindus killing each other in Ceylon; Hindus and Sikhs killing each other in India; Christians and Muslims killing each other in Armenia and Azerbaijan; Buddhists and Communists killing each other in Tibet. "We have," as Swift said, "just enough religion to make us hate, but not enough to make us love." The Santa Barbara Peace Resource Center, reporting on the 32 wars in progress around the planet in 1988, found that 25 had "a significant ethnic, racial or religious dimension." And when religious religion is not the cause, then the totalitarian social religions of our age inspire mass slaughter.

It is natural enough, I suppose, if you believe you have privileged access to absolute truth, to want to rid the world of those who insist on divergent truths of their own. But I am not sure that it is a useful principle on which to build a society. Yet, as I noted earlier, the prevailing fashion is, or was a year or two ago, to hold relativism responsible for the ills of our age. A key document, of course, is Allan Bloom's best seller of a couple of years back,

The revival of absolutism in the 20th century has brought with it the revival of monstrous violations of human rights.

"The Closing of the American Mind." Indeed, one cannot but regard the very popularity of that murky and pretentious book as the best evidence for Mr. Bloom's argument about the degradation of American culture. It is another of those half-read best sellers, like Charles Reich's murky and pretentious "Greening of America" 17 years before, that plucks a momentary nerve, materializes fashionably on coffee tables, is rarely read all the way through and is soon forgotten.

NOW one may easily share Mr. Bloom's impatience with many features of higher education in the United States. I too lament the incoherence in the curriculums, the proliferation of idiotic courses, the shameful capitulation to factional demands and requisitions, the decay of intellectual standards. For better or for worse, in my view, we inherit an American experience, as America inherits a Western experience; and solid learning must begin with our own origins and traditions. The bonds of cohesion in our society are sufficiently fragile, or so it seems to me, that we should not strain them by excessive worship at artificial shrines of ethnicity, bilingualism, global cultural base-touching and the like. Let us take pride in our own distinctive inheritance as other countries take pride in their distinctive inheritances; and let us understand that no culture can hope to ingest other cultures all at once, certainly not before it digests its own.

But a belief in solid learning, rigorous stand-

ards, intellectual coherence, the virtue of elites is a different thing from a faith in absolutes. It is odd that Professor Bloom spends 400 pages laying down the law about the American mind and never once mentions the two greatest and most characteristic American thinkers, Emerson and William James. Once you see why he declined the confrontation, it is because he would have had to concede the fact that the American mind is by nature and tradition skeptical, irreverent, pluralistic and relativistic.

Nor does relativism necessarily regard all claims to truth as equal or believe that judgment is no more than the expression of personal preference. For our relative values are not matters of whim and happenstance. History has given them to us. They are anchored in our national experience, in our great national documents, in our national heroes, in our folkways, traditions, standards. Some of these values seem to us so self-evident that even relativists think they have, or ought to have, universal application: the right to life, liberty and the pursuit of happiness, for example; the duty to treat persons as ends in themselves; the prohibition of slavery, torture, genocide. People with a different history will have different values. But we believe that our own are better for us. They work for us; and, for that reason, we live and die by them.

At least this is what great Americans have always believed. "Deep-seated preferences," as Justice Holmes put it, "cannot be argued about . . . and therefore, when differences are sufficiently far-reaching, we try to kill the other man rather than let him have his way. But that is perfectly consistent with admitting that, so far as it appears, his grounds are just as good as ours."

ONCE Justice Holmes and Judge Learned Hand discussed these questions on a long train ride. Learned Hand gave as his view that "opinions are at best provisional hypotheses, incompletely tested. The more they are tested . . . the more assurance we may assume, but they are never absolutes. So we must be tolerant of opposite opinions." Holmes wondered whether Hand might not be carrying his tolerance to dangerous lengths. "You say," Hand wrote Holmes later, "that I strike at the sacred right to kill the other fellow when he disagrees. The horrible possibility silenced me when you said it. Now, I say, 'Not at all, kill him for the love of Christ and in the name of God, but always remember that he may be the saint and you the devil.'"

These "deep-seated preferences" are what Holmes called his "Can't Help's" — "When I say that a thing is true, I mean that I cannot help believing it . . . But . . . I do not venture to assume that my inabilities in the way of thought are inabilities of the universe. I therefore define truth as the system of my limitations, and leave absolute truth for those who are better equipped." He adds: "Certitude is not the test of certainty. We have been cock sure of many things that were not so."

Absolutism is abstract, monistic, deductive, ahistorical, solemn, and it is intimately bound up with deference to authority. Relativism is concrete, pluralistic, inductive, historical, skeptical and intimately bound up with deference to experience. Absolutism teaches by rote; relativism by experiment. "I respect faith," that forgotten wit Wilson Mizner once said, "but doubt is what gets you an education."

I would even hazard the proposition that relativism comporting far more than absolutism with the deepest and darkest teachings of religion. For what we have learned from Augustine, from Calvin, from Jonathan Edwards, is not man's capacity to grasp the absolute but quite the contrary: the frailty of man, the estrangement of man from God, the absolute distance between mortals and divinity — and the arrogance of those who suppose they are doing what the Lord would do if He only knew the facts in the case. That is why Reinhold Niebuhr acknowledged such an affinity with William James — far more, I would warrant, than he would have found with Allan Bloom.

When it came to worldly affairs, Niebuhr was a relativist, not because he disbelieved in the absolute, but precisely because he believed in the absoluteness of the absolute — because he recognized that for finite mortals the infinite thinker was inaccessible, unfathomable, unattainable. Nothing was more dangerous, in Niebuhr's view, than for frail and erring humans to forget the inevitable

"contradiction between divine and human purposes." "Religion," he wrote, "is so frequently a source of confusion in political life, and so frequently dangerous to democracy, precisely because it introduces absolutes into the realm of relative values." He particularly detested "the fanaticism of all good men, who do not know that they are not as good as they esteem themselves" and he warned against "the depth of evil to which individuals and communities may sink . . . when they try to play the role of God to history."

Niebuhr accepted, as James did, "the limits of all human striving, the fragmentariness of all human wisdom, the precariousness of all historic configurations of power, and the mixture of good and evil in all human virtue." His outlook is as far away from Mr. Bloom's simple-minded absolutism as one can imagine. It represents, in my view, the real power of religious insight as well as the far more faithful expression of the American mind.

I would summon one more American, the greatest of them all, as a last witness in the case for relativism against absolutes. In his Second Inaugural, Lincoln noted that both sides in the Civil War "read the same Bible, and pray to the same God, and each invokes His aid against the other . . . the prayers of both could not be answered, that of neither has been answered fully. The Almighty has His own purposes." Replying thereafter to a congratulatory letter from Thurlow Weed, Lincoln doubted that such sentiments would be "immediately popular. Men are not flattered by being shown that there has been a difference of purpose between the Almighty and them. To deny it, however, in this case, is to deny that there is a God governing the world."

The Almighty has His own purposes: this is the reverent answer to those who tell us that we must live by absolutes. Relativism is the American

Our relative values are not matters of whim and happenstance. They are anchored in our national experience.

way. As that most quintessential of American historians, George Bancroft, wrote in another connection, "The feud between the capitalist and laborer, the house of Haves and the house of Wants, is as old as social union, and can never be entirely quieted, but he who will act with moderation, prefer fact to theory, and remember that every thing in the world is relative and not absolute, will see that the violence of the contest may be stilled."

THE mystic prophets of the absolute cannot save us. Sustained by our history and traditions, we must save ourselves, at whatever risk of heresy or blasphemy. We can find solace in the memorable representation of the human struggle against the absolute in the finest scene in the greatest of American novels. I refer of course to the scene when Huckleberry Finn decides that the "plain hand of Providence" requires him to tell Miss Watson where her runaway slave Jim is to be found. Huck writes his letter of betrayal to Miss Watson and feels "all washed clean of sin for the first time I had ever felt so in my life, and I knowed I could pray now." He sits there for a while thinking "how good it was all this happened so, and how new I come to being lost and going to hell."

Then Huck begins to think about Jim and the rush of the great river and the talking and the singing and the laughing and the friendship. "Then I happened to look around and see that paper . . . I took it up, and held it in my hand. I was a trembling because I'd got to decide, forever, betwixt two things, and I knowed it. I studied a minute, sort of holding my breath, and then says to myself 'All right, then, I'll go to hell' — and tore it up."

That, if I may say so, is what America is all about.

BOOKS

(17) Gross error. Starting on Page 131 of *The Best of Humanism*, Roger Greeley, ed., this series of numbered sentences is attributed to Sherwin Wine:

1. Do not feel absolutely certain of anything.
2. Do not think it worthwhile to produce belief by concealing evidence, for the evidence is sure to come to light.
3. Never try to discourage thinking, for you are sure to succeed.
4. When you meet with opposition, even if it should come from children, endeavor to overcome it by argument and not by authority, for a victory dependent upon authority is unreal and illusory.
5. Have no respect for the authority of others, for there are always contrary authorities to be found.
6. Do not use power to suppress opinions you think pernicious, for if you do, the opinions will suppress you.
7. Do not fear to be eccentric in opinion, for every opinion now accepted was once eccentric.
8. Find more pleasure in intelligent dissent than in passive agreement, for if you value intelligence as you should, the former implies a deeper agreement than the latter.
9. Be scrupulously truthful, even when truth is inconvenient, for it is more inconvenient when you try to conceal it.
10. Do not feel envious of the happiness of those who live in a fool's paradise, for only a fool will think that it is happiness.

Recognize them? They are by BR, and are called *A Liberal Decalogue* in BR's *Autobiography*, Vol III (Simon & Schuster, 1969, p.71.) They are called *Bertrand Russell's Ten Commandments* in *The Humanist* (July/August 1982). They also appeared in RSN30-14, and again in RSN54-2.

To attribute them to Wine instead of to Russell is a gross error. It is, of course, an unintended error, a slip-up; somebody goofed. Sherwin Wine had nothing to do with the error.

Nevertheless the error is a continuing one. There it stands, in print. There is no erratum page (which corrects the error) accompanying the book. The reader who doesn't happen to know that Russell is the author will not learn it from this book; he will be misinformed.

We want to see an erratum page included in the book, and have requested it.

We cannot recommend the book -- which we would like to do, for it contains an excellent collection of quotations on Humanism -- until it provides an erratum page.

BOOK REVIEWS

We are indebted to HARRY RUJA for all of the following reviews.

(18) From *The Times Literary Supplement* (12/3/76 p.1518):

The view from outside

By Mary Furness

KATHARINE TAIT :

My Father, Bertrand Russell

211pp. Gollancz. £5.95.

Katharine Tait's *My Father, Bertrand Russell* is perhaps mistitled; it is not, except incidentally, a memoir of her father, but an account of what it was like in her own case to be part of his family. It is a serious attempt to analyse

the effect this had on her, as someone subjected both to her parents' high-minded theories about the education of children and to the vicissitudes of their lives, which refused to be moulded into the theories of even such a great man as Bertrand Russell.

The union of Dora Black and Bertrand Russell started out in the joyous confidence of their shared theories about the right conduct of life; marriage being for the production and benefit of children (but without entailing sexual fidelity) and for the education of children to produce "a generation educated in

fearless freedom". Their own children were welcomed not only for themselves, but also as an opportunity to put their theories into practice.

Katharine Tait's memories of her early childhood, with its long summers spent in Cornwall, are nearly all happy, although from the first she was aware of an atmosphere of superiority in her family, a feeling that they were wiser and knew better how to live than the ordinary run of humanity. Being set apart from other people by their unconventional views was the self-righteous convention in which the children were brought up. It is significant that her earliest remembered pastime was, with her brother, making a mixture which they called "Poison for the Government". Bertrand Russell pointed out that the Government would be far more likely to drink it if it were labelled "Nectar for the Gods". Children have a natural desire to conform; and the insecurity of a child who is brought up on the outside, albeit in fierce pride that the outside is the only right side, has pursued her ever since. To conform and to belong have remained among her strongest desires.

Bertrand Russell early on rejected Christianity as a set of irrational beliefs adopted by people too cowardly to face life without their comfort, and put pure rationality in its place. He had a hatred and a fear of the irrational, perhaps stemming not only from his own unhappy childhood, which had been dominated by Christianity, but also from the streak of madness which allegedly ran in his family and which his grandmother used as an excuse to try to prevent him marrying his first wife.

It is ironic that both his children by Dora Black, having been brought up with rationality as their creed, should in their separate ways have been overtaken by the irrational: John suffered a serious mental breakdown and Katharine only found true happiness when she became a dedicated Christian and a missionary. There is a curious flash forward in Katharine Tait's childhood to her eventual destiny. On the way to one of the beaches in Cornwall there was a rectory which she regarded with fear because of her parents' attitude to the Church of England. But, again, she had a sense of unease at being on the outside:

I felt vaguely that if I could get inside there and *belong* I might cease to be afraid. Within the house lived possessors of a magic

powerful against the wild chances of life, and those they welcomed into the charmed circle might share their protection. But I could not be one of them, for I was part of the enemy, exposed not only to the normal risks of living, but also to their powerful disapproval, and could not wish it otherwise, knowing they were both wicked and foolish.

She thinks that her parents' liberation consisted in casting aside one set of rules and adopting another, and maintains that when she finally rejected her father's demanding and unrealistically idealistic precepts and adopted those of Christianity, which she found much easier to live with, she had the same sense of liberation herself.

When the family founded Beacon Hill school and started putting their educational theories into practice, the sunshine of her early years began to be overcast. She felt a growing sense of isolation from her parents, although in many ways she appears to have enjoyed the school. Theories about marriage, too, were put to the test; Dora Black had two children by someone else and life, which could not be contained by theories, erupted, leading to the separation of her parents and Bertrand Russell's marriage to Peter, their governess: "It was hard to admit that the ideal had been destroyed by the old fashioned evils of jealousy and infidelity." Thus the children of a union whose reason for existence had been the well-being of the children "became the battleground for their now opposing theories of child welfare". The children were shared religiously between the parents to the extent that if the holidays contained an uneven number of days, there would be a quarrel if the odd day was not divided.

Yet Katharine Tait's book is not composed entirely of musings over an experiment that failed. It is also full of charming and affectionate recollections of Bertrand Russell who is, to a small child's eyes, the ideal father; he is kind, witty, commands respect and tells fascinating stories about everything, particularly about China. He gets so carried away on this subject that the children often cunningly manage to postpone bedtime by asking him about it at the right time. Regularly, on April Fools' day, he looks out of the window and says "There's an elephant coming down the path", and no one ever fails to be taken in by it. Indeed, the presence of elephants in unlikely places was, to Bertrand Russell, a recurring and serious possibility.

There is a story which tells how, when giving a lecture about the evidence of the senses, he asked if anyone could seriously doubt that there were no elephants in the room. Wittgenstein, who was in the audience, said that he could and, after the lecture, the two of them were

to be seen crawling about on all fours looking under tables and behind chairs trying to establish whether or not there were in fact any elephants lurking there. Their conclusions are not recorded. But Bertrand Russell, elephant-hunter *manqué*, is a nice thought.

(19) From the *New Statesman* (9/10/76, p. 344):

David Cauté

Please, Sir

My Father, Bertrand Russell by KATHARINE TAIT Gollancz £5.95

In every month of every summer, on every beach in my childhood, he stands in the centre of the picture in the sunshine, the very image of love. . . . He is holding a pipe in his hand and telling a witty story, which he finishes with a deafening burst of hearty laughter, looking quizzically at his listeners to see if they share his amusement.

Thus Katharine Tait, daughter of Bertrand Russell, recalls her father 50 years later.

But this idyll, associated with the six months of the year when Russell and his second wife, Dora, moved from London to Carn Voel in Cornwall, was shattered for the four-year-old Kate when her parents decided in 1927 to bestow on their children the educational theories they had nurtured in intellectual abstraction. Russell himself had longed for children but was not rewarded until John was born in 1921, when the father was almost 50. 'I felt,' he later wrote, 'an immense release of pent-up emotion, and during the next ten years my main purposes were parental.' Demanding an immaculate synthesis of emotion and reason, the brilliant philosopher who had sacrificed his own reputation and career by abandoning a first wife he no longer loved and by openly campaigning against the war, now placed his little son and daughter on the altar of 'unconquerable hope', of 'fearless freedom'.

Students of the Enlightenment will recognise the 200-year-long call of that clarion: 'If existing knowledge were used and tested methods applied, we could, in a generation, produce a population almost wholly free from disease, malevolence and stupidity.' Poor generation! Rejecting the prudery, religious instruction and 'many restraints on freedom' of conventional schools, the anti-academic bias of Deweyite progressive education, the fetishes of Montessori, as well as A. S. Neill's search for the head through the hands, the Russells brought some 20 little children to Beacon Hill School and offered them crude behavioural conditioning and merciless bullying by the stronger and more sadistic offspring of homes which couldn't wait to get rid of them. The education, Katharine Tait, recalls, was 'fantastic':

the total experience one of 'désolation'. And she lost her parents. For they, determined to avoid any semblance of favouritism, maintained an aloof distance during term-time, while John and Kate were cruelly persecuted as surrogates for their parents, the philosopher kings.

By the end of seven years the Russells had lost not only their children's confidence and a lot of money but also one another. Mrs Tait's painful and perceptive description of the breakdown of the marriage gives flesh to Russell's own elliptically honest account. Whereas he merely mentions that his *Marriage and Morals* (1929) did not claim that 'a marriage could with a vantage be prolonged if the wife has a child . . . of whom the husband was not the father', she describes how Dora, though totally dedicated to Russell, pursued her own theories of womanly liberation by giving birth to two babies sired by another man. She recalls a summer at Hendaye when Patricia ('Peter') Spence, later the third Lady Russell, acted both as governess and Russell's mistress, while Dora brought along her new baby together with its father. If this was an attempt to transcend the cramping conventions of the nuclear family, it failed: Russell soon went off to live with Peter and to quarrel with Dora so violently that they could communicate only through lawyers. Fearing that their tough, fellow-travelling bohemian mother would carry the children off to Bolshevik Russia, the rebel philosopher who had been to prison and disinherited himself had them made wards in Chancery.

Faced with the lynching pressures of school holidays split fifty-fifty with a quibbling slide rule between mother and father, Kate, in her deep insecurity and guilt, not surprisingly gravitated towards the polite decorum of her father's new household and the dazzlingly assured beauty of his new wife. Her mother's battered old cars, eccentric clothes, lipstick-stained cigarettes and habit of remaining seated in cinemas during *God Save the King* made her squirm with embarrassment. And so it was always to be: the title of her autobiography, whatever its debt to sales promotion, is a genuine reflection of the long-term influence - ultimately a rich, inspiring and generous influence - of her father. And this despite the succession of divorces, quarrels and emotional breakdowns that dogged Russell and his children.

My Father Bertrand Russell is a book which should be read not only by admirers of Russell but by anyone who is fascinated by the impact of parental fame, talent, rigid idealism and ultimate indifference (or

BRS LOCAL CHAPTERS

McMASTER UNIVERSITY
THE BERTRAND RUSSELL SOCIETY

- (22) The BRS Chapter at McMaster met on 1/25/90, and heard a talk by Dr. Francisco Rodriguez-Consuegra titled, *Russell's Unpublished Manuscripts as the Only Way to Understand his Philosophical Evolution*.

Dr. Rodriguez, a post-doctoral fellow in McMaster's Department of Philosophy, teaches philosophy in his native Spain. His dissertation dealt with Russell's analytical method in philosophy. He discussed unsolved problems from his dissertation. These included the origins of Russell's logicism; the need for some account of logic, truth and the nature of propositions, in his developing system; and the evolution of his theory of judgment.

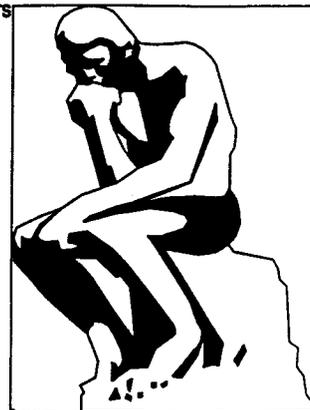

**RUSSELL'S UNPUBLISHED MANUSCRIPTS
AS THE ONLY WAY TO UNDERSTAND
HIS PHILOSOPHICAL EVOLUTION**

Francisco Rodriguez-Consuegra

Dr. Rodriguez is a post-doctoral fellow in McMaster's Department of Philosophy. He teaches philosophy in his native Spain, and his dissertation concerned Russell's analytical method in philosophy. He will discuss unsolved problems from that dissertation.

These problems are the origins of Russell's logicism; the need for some account of logic, truth and the nature of propositions in his developing system; and the evolution of his theory of judgment.

The meeting will also bring the membership up to date on the plans for the annual meeting of the Bertrand Russell Society, Inc., to be held at McMaster on June 23-25, 1990. The theme for submission of papers is Illusion vs. Reality: Education and Religion.

Thursday, January 25, 12:30. UH-317
All welcome.

FOREIGN CHAPTERS

- (23) Benares Plan approved. The vote was unanimous; all the Directors who voted voted to approve.

Here is most of what we said about the Benares Plan last August (RSN63-3):

There are people in foreign countries -- third world countries, developing countries, where living standards are low and money is scarce -- who might like to join the BRS but who cannot afford the dues.

That's a pity, because they are being deprived of the benefit of Russell's thinking, and we are being deprived of new foreign members.

We needed to find a way to let people who cannot afford the dues join the BRS anyway...and we have found it! Credit for this goes chiefly to Chandrakala Padia, of Benares, India, who knew there was a need, and who devised a way to fill it.

Here's the plan, the Benares Plan:

1. There will be a Benares Chapter of the Bertrand Russell Society, Inc. in Benares, India. This will be the first or what we hope will be many chapters in foreign countries and cities.
2. Dues will be \$40 per year for the Chapter, regardless of the number of members. Plus \$7.50 for airmail, which is essential. For example, if the Benares Chapter acquires 10 members, the cost to each member will be \$4.75.
3. The Chapter will receive only one copy of the BRS newsletter, which can be passed around, member to member, or photocopied.
4. The Chapter will be headed by a Director. The Director of the Benares Chapter will be Chandrakala Padia.
5. The members will have all rights (and responsibilities), including the right (and responsibility) of voting.

The Benares plan, having been approved, is now in effect.

NEW MEMBERS

We thank Prof. Bruce White of Centre College, Danville, KY for a generous contribution to the Russell Society Library.

Contributions are welcome at any time, in any amount, large or small. Send them c/o the newsletter or the RS Library, addresses on Page 1, bottom.

NEWS ABOUT MEMBERS

- (29) Herb Lansdell has a paper in *Behavioral Neuroscience* (1989, Vol. 103, No.4 893-897). Here is the top portion of its first page, which provides a summary.

Sex Differences in Brain and Personality Correlates of the Ability to Identify Popular Word Associations

Herbert Lansdell
National Institute of Neurological Disorders and Stroke
National Institutes of Health, Bethesda, Maryland

The ability of men to identify popular word associations had earlier been shown to be affected by left-sided thalamic surgery for movement disorders; now, over a year later, the impairment has been observed with operations on both sides. In addition, upon testing at approximately the same time interval, men who had undergone temporal lobe surgery for epilepsy have also shown the impairment. In contrast, women have improved after the operations. The Word Association Test (WAT) requires a subject to identify popular word associations to 54 words. In a large group of unoperated subjects, the errors on the WAT were greater for men than for women, although the men scored higher on the Wechsler-Bellevue Intelligence Scale (WB). WAT scores were found to correlate with scores on the WB and the Minnesota Multiphasic Personality Inventory, and the WAT scores of the men tended to show a higher correlation with these measures than did those of the women.

- (30) Cherie Ruppe, who is with Northwest Airlines, says she intends to contact BRS Member NOBORU INOUE during one of her visits to Japan.
- (31) Warren Allen Smith has the amiable custom of writing a year-end letter to his friends, reviewing his past year. Here is this year's, dated 1/1/90:

A friendship has been described as "a long, long conversation." On February 20th, a 40-year conversation with Fernando Vargas ended. Cancer claimed my Costa Rican roommate/business partner, the one who had been with me during most of the important times of my life (for example, from photographing Eisenhower as he handed me the M.A. diploma at Columbia U. to attending my retirement-from-teaching dinner 37 years later. At the memorial service we held in the recording studio, Steve Allen's touching letter was read, and we listened to Liza Minnelli's first demonstration record that "Freddy" had cut for her and pianist Marvin Hamlisch. No other man can be said to put you in mind of Fernando, although he looked and sounded a bit like Desi Arnaz. His wit penetrated in a moment to the inner core of international humbug, and although I may have taught him English he was easily the best teacher I ever had. For his remaining two sisters and family, I carried the remains to San Jose. Well, not all: One vial was scattered in the Hell's Kitchen and Times Square areas he (and I) loved so much; I, yes, still hold a vial. Toward the end of her life Queen Mary reportedly said, "The one thing I regret is never having climbed over a fence." In his 60 years, Fernando unashamedly climbed every conceivable fence, being included in Who's Who in the World as he did so. (I left a copy of that book in his Costa Rican colegio.)

Together, we'd built his Variety Recording Studio into the city's #1 Hispanic studio, with the loyal help of Joe Cyr, David Lescoe, and many others. We had clients from 50 different countries, completed mastering and stampers for pressing plants around the world, and had as customers a who's who of internationally known musicians....Upon his death, however, I decided to retire a second time, this time to really retire except for writing. Partly for sentimental reasons, I arranged sale of the studio to another Hispanic, also a Vargas; and continuing as the able manager is our talented Colombian-American buddy, Jose Gallegos. With no little pride I foresee the successful continuation of what Fernando and I had started in 1961, el mejor estudio para músicos Hispanos combined with a clientele of razzle-dazzle showbiz types that always, always made work a joy.

The swift change of events also resulted in my decision to move from Hell's Kitchen (George Raft/Rocky Stallone/Sen. Moynihan territory) and also from Connecticut to Greenwich Village, not far from the White Horse Tavern where Dylan Thomas had his very last drink (and where in my radical youth I fought intellectual humanist battles with Dorothy Day's inspiring Catholic Workers or drank and fought with the Trotskyites). My co-op overlooks the Village, with a view from Jefferson Market to the World Trade Towers, the Statue of Liberty off in the distance. Such a change reminds me of the philosopher Mae West's observation: Too much of a good thing can be wonderful....

Trivial 1989 tidbits: I'm now listed in the fifth Who's Who book, this time in advertising....Langston Hughes's biographer, Arnold Rampersad, gave me a credit (Vol. II) for having arranged his meeting with Langston's favorite protegee, Gilbert Price....Sun Ra gave me a credit on the CD we recorded for A&M Records, "Blue Delight"....When the CD of Manuel Acosta's "Paintings" comes out, listen for Vangelis on the synthesizer, Tito Puente on percussion, Jose Gallegos on piano, and me playing "Tambora Pa' Debussy" on the emulator....Isaac Asimov, Paul Edwards, Liz Smith, and Sidney Hock each gave me their permission to list them as honorary members of the Secular Humanist Society of New York, for which I'm treasurer....My intellectually stimulating correspondence with historian and humanist Priscilla Robertson ended on Nov. 26th, when I notified The Times of her death—the obituary was published. Author of Revolutions of 1848, she never had a chance to follow up with a book about 1989, the most exciting time since 1848 for revolutions....Another loss to the humanist cause is Andrei Sakharov, a major reason for the rapid and inspiring changes in the USSR. (In 1973, I had signed the Humanist Manifesto II that he, Julian Huxley,

and 200 signed.)....In one of the last letters he wrote, Sidney Hook supplied me with material for a forthcoming article on "Authors and Humanism." He also penned one last attack on Corliss Lamont (who had entertained me at his home earlier in the year and who at 87 and wearing a red vest is as provocative as ever. Lamont approves of CNN's Ted Turner, 1990 Humanist of the Year, who fearlessly told Dallas broadcasters that he'd like to see his Ten Voluntary Initiatives replace the Ten Commandments)....I've been re-elected to the board of directors of the Bertrand Russell Society.

In short. Auntie Mame was right when she said that life's a banquet. Cheers!

ABOUT OTHER ORGANIZATIONS

- (32) **CSICOP**, *Committee for the Scientific Investigation of Claims of the Paranormal* -- publishers of *The Skeptical Inquirer* -- will hold its 1990 Conference in Washington, DC March 30 through April 1. Information: 1990 CSICOP Conference, P.O. Box 229, Buffalo, NY 14215.

- (33) **NECLC**, *The National Emergency Civil Liberties Committee*, ran this ad on the op ed page of *The New York Times* (1/12/90, A35). The original was 6.5 x 10.5 inches, shown here somewhat reduced in size. NECLC's *The Bill of Rights Journal*, goes to its members. The December 1989 issue includes, among other things, Thurgood Marshall's remarks at a Second Circuit Judicial Conference, a look at the judicial appointments of the Reagan and Bush Administrations, an appraisal of the Reagan-Bush legacy in civil liberties. Individual membership \$25. 175 Fifth Ave., NY NY 10010

WE BELIEVE THE U.S. INVASION OF PANAMA VIOLATES:

1. THE AMERICAN WAR POWERS ACT
2. THE UNITED NATIONS CHARTER
3. THE CHARTER OF THE ORGANIZATION OF AMERICAN STATES
4. THE U.S. PANAMA CANAL TREATIES
5. INTERNATIONAL LAW IN GENERAL
6. THE HISTORIC AMERICAN IDEAL OF WORLD PEACE

Although the tyrant Noriega finally surrendered, it remains clear that President Bush's resort to military force against Panama was rash, immoral and unconstitutional. This flagrant aggression of one state illegally invading another state was condemned by the Latin American governments, the Soviet Union, China and public opinion throughout the world.

In the efforts to oust and seize Noriega 23 American lives were lost, while the dead in the Panama Defense Force numbered some 300, and civilians killed reached 400 with 2,000 wounded. "Gun Barrel Democracy," as *The Nation* puts it.

Further consequences of the invasion are to trap the United States into responsibility for helping to rebuild ruined Panama City and to restore the gutted economy. It is reliably estimated that for America to work its way honorably out of the Panama shambles will cost close to \$2 billion. At least 10,000 U.S. troops out of the 27,000 sent to Panama will need to stay on to help in the general reconstruction.

A deplorable example of American irrationality was that U.S. troops violently broke into and searched the Nicaraguan Embassy in Panama City. This action in itself showed a serious disregard for international law and diplomatic immunity, for which President Bush later apologized.

Any rational evaluation of the Panama invasion must conclude that in important ways it was a disaster. What the Pentagon probably claims as a military victory was clearly a serious defeat in terms of human values and international relationships. The U.S. giant has managed to shoot itself in the foot and humiliate itself in dealing with a very small nation of 2,400,000 people.

Once again the U.S. government, with Vietnam looming in the background, has disregarded the many mistakes of the past in Central America, and without considering all the implications, launched a massive overkill. This tragedy will increase anti-American sentiment abroad, especially in the nations of Central and South America.

As Democratic Congressman Ted Weiss says, "Ultimately the decision to invade Panama will be contrary to the national security interest of the United States and will reflect poorly on the reputation and prestige of our nation."

(34) **FFRE**, Freedom From Religion Foundation, was written up in *The Atlanta Constitution* (10/6/89, p.C1). In RSN64, we ran the beginning of this story, but ran out of space. Here now is the whole thing:

Atheists Gather to Keep Faith With Each Other

By Gayle White
Staff Writer

Their T-shirts proclaim, "Blasphemy is a Victimless Crime," their songs ring out with the words, "I don't need Jesus," and in tones reminiscent of camp-meeting testimonials, they describe their "deconversion" experiences.

Atheists and agnostics from across the country are gathering in Atlanta this weekend for the annual convention of the Freedom From Religion Foundation.

The organization, founded in Madison, Wis., in 1978, has two purposes: to further the cause of separation of church and state and to educate the

public about non-theistic thought.

The convention gives members a chance for fellowship and exchange of information. It also gives them a chance to buy "Reason's Greetings" cards to mail out in December, "Freethinker" bumper stickers, and coffee mugs bearing pictures and quotations of famous atheists and agnostics.

Foundation members are not hostile to God, said Tom Malone, Southeast region vice president and head of the local chapter. "How can you be hostile to something that doesn't exist?"

The foundation does not attempt to pull people away from the church.

ATHEISTS Continued on C4

Doug Jager

Atheists Come To Atlanta for Annual Meet

From Page C1

he said, and it doesn't advocate governmental opposition to religion. "We think the government should be neutral, as Jefferson and Madison proposed."

With 3,400 members, the national foundation is smaller than several metro Atlanta churches, but among its ranks are people whose influence has reached far, drawing the praise of church-state separationists and the ire of fundamentalist Christians.

William Jager of Douglas County will accept the Freethinker of the Year award on behalf of his family for his son, Doug's successful lawsuit to stop prayer before Douglas County High School football games.

Dr. Ken Saladin, a biology professor at Georgia College, will discuss his application to lead a Scout den, which the Boy Scouts of America denied because he refused to sign an oath acknowledging the importance of a belief in God. He will also give an update on his fight with the city of Milledgeville to get the word "Christianity" removed from the city seal.

Columbus radio station manager J. Edward Wilson will describe his leaving the Seventh-day Adventist Church after years as a minister. Mr. Wilson hosts a radio talk show on which he sometimes expresses his atheistic views.

And part-time Georgian Butterfly McQueen will be given a Heroine Award for her advocacy of free thought. The honor comes during the 50th anniversary of her most famous film, "Gone With the Wind," in which she played Prissy.

'Home-Grown Concerns'

The program will include a speech by Dan Barker, a former Pentecostal evangelist who works for the foundation's home office, and a raffle featuring a "clean" \$100 bill — one printed before "In

GREG FOSTER/Special

Dan Barker of the Freedom From Religion Foundation wears a T-shirt that reads, 'I'm Your Friendly Neighborhood Atheist.'

God We Trust" was added in the 1950s.

It is no coincidence that the agenda is loaded with Georgians. "We anticipated that since our organization is based in Madison, Wis., some people would accuse the organization of being outside agitators," said Mr. Malone, 30, a social studies teacher at Clarkson High School in DeKalb County. "We wanted to show some of our home-grown concerns."

Mr. Malone, who will welcome the group, said he grew up in a "mainstream Methodist" home. As a teenager, he began to question religious teachings, he said, a common posture of youth. Most adolescents return to the church because questioning is uncomfortable, he said. "Religion offers such comfortable crutches and props for life."

He said he likes to point out to Christians and Jews that "the only difference between me and them is that I have discarded one more God than they have."

For many foundation members, acknowledging their agnosticism or atheism, even to themselves, requires courage.

Mr. Barker, 40, who spent 17 years as an interdenominational Pentecostal evangelist, describes his change of heart as a gradual movement from religious fundamentalism to acknowledging that he no longer believed in God.

"There was no bitterness," he said. "In fact, I went through a period of almost mourning or nostalgia.

It was like getting a divorce, almost."

In fact, divorce soon followed. His experience made his former wife more religious, he said.

Mr. Barker later married Annie Laurie Gaylor, daughter of Foundation founder Anne Gaylor, whom he met on an Oprah Winfrey show about atheism.

He still receives royalties from earlier religious material, but now Mr. Barker writes hymns for the freethought movement, including "I Don't Need Jesus," a song with a chorus that says, "I don't need Jesus to give me a smile. Don't need a holy book to make my life worthwhile. Just give me reason, fairness and love. True human happiness is not from above."

A Different Background

Unlike Mr. Barker, William Jager, 53, grew up with very little religious involvement. An Alaskan native, he lived in a remote village where the only religious figure was an Orthodox priest who occasionally came to town to conduct services in Russian.

After 20 years in the Army, sometimes stationed at Georgia bases, he settled down in Douglasville in 1978.

Although he describes himself as an agnostic, he said he would never have forced the issue of prayer before high school football games if his son had not been harassed by other students for not participating. When school officials failed to re-

spond to his concerns, he suggested that his son file suit.

Since the case before the U.S. Supreme Court, Mr. Jager has become active in the foundation.

Dr. Saladin, 40, a Michigan native, decided to challenge the city of Milledgeville to remove the word "Christianity" from its seal shortly after he moved there to teach at Georgia College in 1977. He wanted to establish himself, he said, but filed suit in 1983.

Early this year, the city offered to remove the seal from the city's water tower, vehicles and uniforms but wanted to continue to display it on stationery and documents, in a form so small that it would be unreadable. Dr. Saladin refused the compromise. The case remains unsettled.

He became embroiled in another controversy in 1987 when he was removed from leadership of a Scout den for refusing to sign a statement recognizing that a belief in God is essential to good citizenship.

"To me, that says anyone who doesn't swallow that line is a second-class citizen."

J. Edward Wilson, 47, manager of WIQN radio station in Columbus and a talk show host, gave up 13 years of ministry in the Seventh-day Adventist Church and, finally, the church itself.

"When I gave up superstitions ... when I was finally able to lay aside those things, I felt I had experienced a great deliverance," he said.

His greatest sadness was in losing relationships with fellow Christians, including fellow ministers. The foundation has helped to compensate.

That is one of its important roles, said Mr. Malone.

"To attend meetings with hundreds more like yourself is a very comforting feeling. It's the same sort of feeling church folks get."

3rd National Conference

CONCERNED PHILOSOPHERS FOR PEACE

Call for Papers

(35) CPP, *Concerned Philosophers for Peace* ----->

The 3rd National Conference of Concerned Philosophers for Peace will be hosted by the University of Notre Dame. The conference is scheduled for September 21-23, 1990. James Starba (Department of Philosophy, University of Notre Dame, Notre Dame, IN 46556) will serve as Conference Director.

Papers limited to twenty minutes reading time (about 10-12 pages) are now being reviewed for inclusion in the program. Papers are preferred over abstracts, although some detailed abstracts may be accepted. Topics include the entire range of nuclear issues, peace and justice concerns, and interactions with published books and articles. Be creative. The deadline for submissions is June 15, 1990. Send two copies to Duane Cady (Department of Philosophy, Hamline University, St. Paul, MN 55104) who will chair the Review Committee for submitted papers.

FOR SALE

(36) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge." Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." New reduced USA price, \$5 for 90 sheets, postpaid. Canada & Mexico still \$6. Order from the newsletter, address on Page 1.

BOOK REVIEW

(37) From *The Observer*, London (1/22/84, p.53):

Intellectual foundations

THIS is the first volume of a projected series of all Bertrand Russell's papers, published and unpublished, to be issued in 28 volumes between now and the year 2000. The volumes will be divided into two major groups by subject, so that volumes II to XI will consist of strictly philosophical material, while volumes XII to XXVI, containing political and social papers, will be ordered chronologically. A paper, for these purposes, is a 'public writing,' including political messages and open letters as well as newspaper articles, book reviews and essays. 90 per cent of these papers, the editors claim, have never been collected, and 15 per cent are unpublished.

This vast enterprise is edited from the Russell Archive at McMaster University, Hamil-

ton, Ontario, an institution whose quiet existence on a scarp by the Niagara River was transformed when it became, through the purchase in 1968 of Russell's papers, the world centre of Russell studies. The editors have provided a full-scale apparatus, with elaborate annotations and textual notes. This is clearly intended to be a great monument.

THE COLLECTED PAPERS OF BERTRAND RUSSELL: Volume I, Cambridge Essays 1888-99
 edited by Kenneth Blackwell and others
Allen & Unwin £48

ton, Ontario, an institution whose quiet existence on a scarp by the Niagara River was transformed when it became, through the purchase in 1968 of Russell's papers, the world centre of Russell studies. The editors have provided a full-scale apparatus, with elaborate annotations and textual notes. This is clearly intended to be a great monument.

The first volume covers,

among other things, Russell's adolescent years, undergraduate work at Cambridge, and material associated with his first and second books. 'German Social Democracy' (1896) and 'An Essay on the Foundations of Geometry' (1897). A good deal of the material is unpublished. Some papers that Russell read to the Apostles, that now excessively well-known secret society, are included, to some extent marked by what Paul Levy, in his biography of Moore, unkindly called the 'sophomoric' quality of the discussions. Russell, urging the cause of the admission of women (not entirely popular with his brethren), observes: '... when we divided last term on "Can we love those we copulate with?" the presence of women in the discussion would have been invaluable.'

From his years as an undergraduate, there is a 'locked diary' ('the dons are sad specimens of wasted power, and have persuaded me that emoluments for mere academical distinction are a very pernicious institution'), and there are also some essays read to his philo-

sophy teachers which, perhaps unsurprisingly, are greatly impressive. His history of philosophy is more accurate than in 'The History of Western Philosophy,' but there are fewer jokes.

The overwhelming impression is not merely the fact of Russell's precocity, but how much of his later style and manner was already formed in these earliest years. In 1888-9, when he was 16, he kept a secret journal written in Greek letters. It is full of sentences such as 'I now come to the most difficult of subjects, immortality, a question I have already tried to answer in this book, but, as now seems to me, on false lines of reasoning. . . . He seems to have had from the beginning an extraordinarily easy and elegant way of writing, and some of the earliest pieces here are a great pleasure to read, while one is less irritated at this stage of his life than one is in his later writing by those less happy characteristics of the bright youth which he was never to lose — the occasional condescension, for instance, and the unnerving briskness. He said that by the time he came to

write anything down, almost all the work had already been done; but the impression he too often gives in his mature work is rather that the work is being done then, at the speed it takes to read it.

After he left Cambridge, his wit also found its natural shape, and there are some funny pieces

in the book, particularly an unpublished item on the Uses of Luxury. The introduction to this, incidentally, shakes one's confidence in the editors, who seem to be better detectives than readers. They have tirelessly uncovered possible locations at which the paper

may have been read, but they also say that it defends inherited income, which it expressly attacks.

This very interesting book contains, as all this series will, public and scholarly documents rather than personal ones. We do not have so much here as we

do in the 'Autobiography' of Russell's chilly declarations of his emotions, but rather discover him looking brightly and busily outwards, at intellectual and political problems. It is rather wonderful to see him so fully formed so early, exercising just the weapons he would use for the next 80 years.

OBITUARY

(38) From *The Times*, London, 6/29/89, with thanks to KEN BLACKWELL:

A. J. AYER

Language and logic in the pursuit of philosophical truth

Sir Alfred Ayer (A. J. Ayer), who died on June 27 at the age of 78, was without doubt the most widely known of the analytic philosophers who followed the tradition of Bertrand Russell in Britain since 1920.

He did not have the genius of Wittgenstein or the originality of F. P. Ramsey, Gilbert Ryle or J. L. Austin. But his quite exceptional brilliance as an expositor, together with his skill and resource as a debater, secured him as great an influence as any of them with the philosophical profession and he bulked much larger than they did in the eyes of the interested part of the general public.

Ayer matured early and the coherent system of ideas put forward with such striking effect in his first book, *Language, Truth and Logic*, when he was in his mid-twenties, remained as the abiding foundation of his thinking thereafter.

But there was a price to be paid for his youthful success. Before 1939 he enjoyed both the rewards of early achievement and the leadership of intellectual fashion. After 1945, in a philosophical atmosphere that was more sensitive to the varieties and complexity of thought, his point of view, with its simple, severe and exclusive lines, had a somewhat dated air, most of all to those more concerned that reasoning should be fashionable than that it should be valid.

Alfred Jules Ayer was born in London on October 29, 1910, the only child of Jules Louis Cyprien Ayer, a timber merchant of Swiss extraction. He went to Eton as a scholar in 1923. He entered Christ Church, Oxford in 1929 as an open scholar in classics and obtained a first in Lit.Hum. in 1932. It is said that he owed this good result to the high marks given to his papers on ancient history. Certainly the polemical flavour of his modern version of the philosophy of Hume was unlikely to attract the philosophy examiners.

His chief philosophy tutor was Gilbert Ryle, though an equally strong influence was H. H. Price, the leading defender of Russell's views in the generally unsympathetic Oxford of the period. Unlike his contemporary and chief rival and competitor, J. L. Austin, he was unsuccessful in his attempt at an All Souls fellowship. In the year in which they both sat for the John Locke scholarship the principal examiner, H. A. Prichard, true to his principle of discouraging budding philosophers, ensured that it was not awarded. Ayer was a lecturer in philosophy at Christ Church from 1932 to 1935 and a research student there from 1935.

Soon after graduation Ayer visited Vienna and took part for some months in the discussions of the Vienna Circle, then at the height of its activity. The outcome of this was *Language, Truth and Logic* (1936), his brilliantly forcible exposition of their main ideas in an English philosophical idiom.

Laying down that verifiability in sense-experience was a necessary condition of the meaningfulness of a sentence, he rejected speculative metaphysics and theology as literally devoid of sense and interpreted judgements of value as ejaculations expressive of feeling. He analysed the factual content of the world, physical objects

and minds, as systems of immediate experiences and held the necessary truths of logic, mathematics and analytic philosophy to be verbal propositions, true by definition. In a concluding chapter of splendid boldness he presented concise and tidy solutions to the outstanding disputes of traditional philosophy.

This was the most exciting and influential English philosophical book of the decade.

He joined the Welsh Guards in 1940 and became a captain in 1943. After a period of regimental duty he moved to intelligence work. He played a lively part in the liberation of France in 1944, where his enterprise was not always to the liking of his superiors. The fact that he was bilingual in French and English was useful to him here. (It could be said of him, as Johnson said of Hume, that he wrote like a Frenchman.)

The preface to his second book *The Foundation of Empirical Knowledge* (1940) was written from the Guards Depot at Caterham. In it the doctrines of H. H. Price's *Perception* are transformed in accordance with the philosophical methods of Carnap. A much more resolute phenomenalism than Price's

is put forward and the essentially linguistic and conventional character of philosophical theories of perception is insisted on.

On demobilisation he went back to Oxford for two years as fellow in philosophy at Wadham College, which, in 1959 to his very great delight, elected him an honorary fellow. In 1946 he was appointed to the Grote Chair at University College, London, which had been vacant for some years.

On his arrival he found a dejected scene. The staff consisted of a disenchanted reader who spent as much time as possible in France and a Greek lady of negligible philosophical attainments who taught an idiosyncratic brand of ethics. The accommodation

consisted of a cupboard-like room with a small quantity of battered institutional furniture in it.

When Ayer left London in 1959 he had five first-rate lecturers in his department, three of whom had done their philosophical studies there. Ayer's public reputation from his books and from broadcasting vastly enlarged the recruitment of students and much improved its quality. The atmosphere of the department was combative, vigorous and rapid. Visiting philosophers found attendance at a seminar was a bracing experience to say the least. Ayer's own high-speed style of debate set the prevailing tone. The presence of both Ayer and Karl Popper in London soon made it the second philosophical centre in the country.

Ayer now became familiar to a very wide public through his frequent appearances on the television *Brains' Trust*. He was supremely qualified to provide the lucidity and agility of mind that the programme demanded. He was already known to a wide circle as the foremost "logical positivist", a term connoting for most people hostility to religion and scepticism about morals.

Journalists of various levels of intellectual elevation had often singled him out as a corrupter of youth and underminer of the body politic. For the most part he bore this good-humouredly. But as lifelong and active supporter of the Labour party, he se-

mented the accusation that he nourished fascism.

His critics took his view that morality was not a factual science to be a way of saying that it was unimportant. His position was that one's morality must be chosen since it cannot be proved. His personal choice was for a resolute utilitarianism and he himself was the most loyal of friends and the most public-spirited fulfiller of obligations. Ayer was no puritan but his love of pleasure was not egoistic and his integrity and lack of cynicism were conspicuous. As far as the television public was concerned, his undeviating and well-informed fidelity to Tottenham Hotspur more than outweighed the effect of his more "shocking" opinions.

While at London he published a collection *Philosophical Essays* (1954) and an excellent general book on epistemology *The Problem of Knowledge* (1956).

In 1959 Ayer returned to Oxford as Wykeham Professor of Logic in succession to his mentor H. H. Price. His election caused something of a rumpus since three electors preferred two other candidates between them. However it turned out to be very successful although Oxford was deprived by Austin's early and lamented death of the enlivening spectacle of a direct engagement between Ayer and his most pertinacious critic. As it happened, Austin's more casuistic and delicately philological way of thinking has since come to seem more dated than the more rigid and

formalistic style of Ayer's philosophising.

Ayer took a notable part in the intellectual life of the university, not least as an indefatigable addresser of undergraduate societies, and also in the somewhat lenten social life of New College of which he was Fellow from 1959 to 1978, before being made Hon. Fellow in 1980.

In 1963 Ayer published *The Concept of a Person*, a collection of powerful, technical essays on currently active issues in philosophy, and in 1969 a collection of more popular and wide-ranging pieces: *Metaphysics and Common Sense: His The Origins of Pragmatism* came out of 1969, a detailed, sympathetic survey of the philosophies of Pierce and James. A parallel study of Russell and Moore, published in 1971, was first presented as the William James lectures at Harvard in 1970, during a visit to the USA in which he also gave the John Dewey lectures at Columbia on induction and probability. In 1968 Ayer was knighted, an honour that was in some part a recognition of his services as a member of the Plowden commission on primary education.

Ayer continued to write, almost to the end. True, *The Central Questions of Philosophy* (1974) was in many ways a new edition of *Language, Logic and Truth*, an elegant survey but somehow lacking the invigorating bite of Ayer's first book. *Perception and Identity* (1979) was a festschrift presented to Ayer in

1979 (he had retired from his Wykeham chair the previous year) with his replies to the essays by distinguished contemporaries. *Philosophy in the Twentieth Century* (1982) seen by Ayer himself as very much a sequel to Russell's *History of Western Philosophy*, nevertheless abandoned Russell's attempt to relate philosophical ideas to their social and political circumstances, sacrificing, in doing so, the opportunity to give an orderly account of the philosophy of our age. *Studies of Wittgenstein* (1985), *Voltaire* (1986) and *Thomas Paine* (1988) followed, and there were two volumes of autobiography, *Part of My Life* (1977) and *More of My Life* (1984).

Ayer was not a major philosopher like Russell or Wittgenstein, or even, perhaps, like Popper and Ryle. But he was a very able philosopher indeed, endowed with particularly sparkling intellectual gifts, an admirable if slightly chilly prose style and unflagging energy. As a philosophical teacher and influence there is no one to compare with him since Russell and Moore.

He was four times married: first in 1932 to Grace Isabel Rene Lees, by whom he had a daughter and a son, and secondly, in 1960, to Dee Wells by whom he had a son. In 1983 he married Vanessa Lawson, who had previously been the wife of Nigel Lawson. She died in 1985, and recently "Freddie" Ayer remarried his second wife, Dee Wells.

(39)

PHILOSOPHERS

From *The New York Times* (12/30/89, p.10), with thanks to STEVE REINHARDT:

Philosophers Hang Out The Shingle

Special to The New York Times

AMSTERDAM, Dec. 29 (Reuters) — Following the example of psychotherapists, Dutch philosophers are opening private practices and charging clients up to \$50 an hour to discuss ideas.

"There's a new generation of philosophers who want to take part in society, not just work in an ivory tower," said Ad Hoogendijk, who in 1987 became one of the first Dutch

philosophers to set up practice. "We are making use of philosophical tradition to exchange thoughts with clients over whatever subject they want."

Mr. Hoogendijk has been joined by a dozen others who talk with clients about subjects from the meaning of life to a possible career change. Unlike some psychologists and psychiatrists, practicing philosophers do not try to probe deep into the past of the individual to understand childhood-ingrained, subconscious behavior and then suggest modifications.

'Very Basic Questions'

Rather, they try to apply the wisdom of their discipline to help people see their problems from a new perspective.

"I try to help people answer very basic questions like: 'Who are you?' 'What do you want?'" Mr. Hoogendijk said in an interview. "It's a kind

of re-orientation to structure their desires. I don't try and fit a person into a pre-existing theory but take what they say about themselves at face value and try to act as a midwife to let them articulate what they have inside."

He said that about 80 percent of his clients are at some major emotional crossroads: businessmen worried about approaching retirement, women upset when their grown children leave home and youths unsure what to study at college. He usually meets a client four or five times.

Faced with a depressed client, he tries to offer some perspective in discussions about the high value modern culture places on happiness and how thinkers in the past have put a high value on melancholia.

From Great Minds

"There is a famous saying that

Plato and Aristotle said it all, and it's true," he said. But his reading of Spinoza, Marcuse, Karl Marx and Hannah Arendt have also informed his counseling, he said.

One of his colleagues, Eite Veening, said he began his practice in the northern city of Groningen in 1987 because he was disturbed by "how much sloppy thinking there was around."

He said he was not interested in "curing" patients by helping them sort out their emotions but in helping them to puzzle out their values and thought processes intellectually.

"I try to get people to understand their own ethics and what the best choice would be for them in a situation," Mr. Veening said. "If you can get yourself to do what is best or not is another thing. If you find you can't, well then maybe that's more a matter for a psychologist."

ASSISTANCE REQUESTED

(40) BR books badly needed "for our poor tribal library," says Dr. K. D. Chauhan, Activist Amerbharat Library, Post. Unjha. 384170, North Gujarat, India. "We have no resources due to continuous failure of rain the last 3 years." Please "donate some of your publications new, old, bruised, defective or paperback, on any subject."

ANNUAL MEETING (1990)

(2)

- * Register If you haven't sent the REGISTRATION FORM that appeared in the February newsletter, please use the one in this newsletter. Soon, please! (Item).

How to get to McMaster. See Item .

The Program:

FRIDAY, JUNE 22:

4:00 - 6:00	Registration
6:00 - 7:30	Dinner
7:30 - 9:15	Awards, and talks by recipients
9:15 - 9:30	Coffee break
9:30 - who knows?	Board Meeting (all members welcome)

SATURDAY, JUNE 23:

8:00 - 9:00	Registration
9:00 - 10:00	Lee Eisler, <i>The History of The Bertrand Russell Society.</i>
10:00 - 10:45	Harry Ruja, <i>Knowing and Feeling in Religion.</i>
10:45 - 11:00	Coffee break
11:00 - 12:30	Tour of The Bertrand Russell Archives
12:30 - 1:30	Lunch
1:30 - 2:15	Chandrakala Padia, <i>Russell's Socio-Political Views.</i>
2:30 - 3:15	Michael J. Rockler, <i>Bertrand Russell and Education; Katharine Tait's Critique.</i>
3:15 - 3:30	Coffee break
3:30 - 4:15	Marvin Kohl's Workshop, <i>Russell's Theory of Rational Love.</i>
4:15 - 5:00	Joan Houlding, <i>Platonic Themes in Russell's Views on Education.</i>
5:00 - 6:00	Free time
6:00 - 7:00	Red Hackle Hour
7:00	Banquet. Talk by Louis Greenspan, Staff Member, The Russell Archives, and Managing Editor, The Bertrand Russell Editorial Project

SUNDAY, JUNE 24

8:45 - 9:45	Don Jackanicz Discussion, <i>Religion and Science.</i>
9:45 - 10:00	Coffee break
10:00 - 11:00	Tim Madigan, <i>Russell and Dewey on Education: Similarities and Differences..</i>
11:00 - 12:00	Thom Weidlich, <i>The Bertrand Russell/City College Case. 1940</i>
12:00	Adjournment. So long, Auf Wiedersehen, A bientôt, Ciao!

ABOUT BERTRAND RUSSELL

(3) From *The Diary of Beatrice Webb*, vol. 2., 1892-1905 (London: Virago. Cambridge, MA: Harvard University Press, 1983), with thanks to HARRY RUJA.

The Russells are the most attractive married couple I know. Young and virtuous, they combine in the pair personal charm, unique intelligence, the woman having the one, the man the other, in the superlative degree. Romantically attached to each other, they have divine interests; Alys concerns herself with social reform, Bertrand with the higher mathematics. The scheme of their joint life is deliberately conceived to attain ends they both believe in, and persistently yet modestly carried out. The routine of their daily existence is as carefully planned and exactly executed as our own. They breakfast together in their study at 9 o'clock (we breakfast at 8!), then Bertrand works at mathematics until 12.30, then three-quarters of an hour reading together (*Ranke's History of England* since we have been here), a quarter-hour stroll in the garden together. Lunch with us 1.30, chat in our sitting-room or out-of-doors over cigarettes and coffee: then Bertrand plays croquet with Logan [Pearsall] Smith (Alys's brother who lives near here) until tea at 4.30. After that mathematics until 6 o'clock: reading with Alys until 7.30, dine at 8 o'clock, chat and smoke with us until 9.30: another hour's reading aloud with Alys until 10.30. They sleep and dress in the same room, and they have no children.

As individuals they are remarkable. Alys comes of an American Quaker family. She is charming to look at – tall, graceful, with regular features, clear skin, bright blue eyes and soft curly nut-brown hair, always smiling, often laughing, warm-hearted and sympathetically intelligent. She has not the gift of intimacy except with her husband. Her manner is the same to everyone, at least as far as I have seen. She has no art of flirtation, if anything she prefers women to men, and I think really likes the womanly woman better than the professional. She has no moods or they are controlled. She seems always happy and grateful for happiness and yet perpetually thinking how to make others happier. Since we have been here she has spent days away nursing a friend at Cambridge, with no consciousness of virtue, responding to a call of friendship as readily as most women respond to a call of pleasure. If she has a defect it is a certain colourlessness of intellect and a certain lack of 'temperament'. But in a woman are these defects?

Bertrand is a slight, dark-haired man, with prominent forehead, bright eyes, strong features except for a retreating chin, nervous hands and alert quick movements. In manner and dress and outward bearing he is most carefully trimmed, conventionally correct and punctiliously polite, and in speech he has an almost affectedly clear enunciation of words and preciseness of expression. In morals he is a puritan; in personal habits almost an ascetic, except that he lives for efficiency and therefore expects to be kept in the best physical condition. But intellectually he is audacious – an iconoclast, detesting religions or social convention, suspecting sentiment, believing only in the 'order of thought' and the order of things, in logic and in science. He indulges in the wildest paradox and in the broadest jokes, the latter always too abstrusely intellectual in their form to be vulgarly coarse. He is a delightful talker, especially in general conversation, when the intervention of other minds prevents him from tearing his subject to pieces with fine chopping logic. He is always fruitful, especially in clearing up definitions and distinctions or in following out logical conclusions. He is fastidious with regard to friends and acquaintances. He dislikes bores and hates any kind of self-seeking selfishness or coarse-grainedness. He looks at the world from a pinnacle of detachment, dissects persons and demolishes causes. And yet he recognizes that as a citizen you must be a member of a party, therefore he has joined the Fabian Society! And more or less accepts

Sidney as his 'representative' man. But the kernel of his life is research into the processes of reasoning. Of this new and highly abstract form of logic, more abstract than mathematics, I have no vision. All that one can say is that the effect on his own mind of these processes of pure reasoning is to make him singularly helpful in clearing up more concrete issues; even when he starts with no specialized knowledge of facts. To sum up, he is an expert in the art of reasoning, quite independently of the subject-matter.

A vigorous intelligence, at once subtle and honest, with the best kind of pride, the determination not to swerve from his own standards of right and wrong, truth or falsehood, are perhaps his finest characteristics. What he lacks is sympathy and tolerance for other people's emotions, and, if you regard it as a virtue, Christian humility. The outline of both his intellect and his feelings are sharp, hard and permanent. He is a good hater.

I observe in Bertrand a curious parallel between his intellectual and his moral nature. He is intolerant of blemishes and faults in himself and others, he dreams of Perfection in man. He almost loathes lapses from men's own standards. So in his thought he is almost violently impatient of bad reasoning. A right conclusion come to by bad arguments is offensive to him. It is the *perfection of the reasoning* that he seeks after, not truth of the conclusions. Now it seems to me that there is the same sort of connection between an intellectual concentration on applied science, and a tolerant, if not lax judgement of men. Just as I am always striving to adjust my order of thought to the order of things — exactly as I am always looking to results as the test of right reasoning (power of prevision, for instance, by the result of shockingly bad reasoning?) so I am perpetually excusing myself and others for any lapses in morality. I analyse and describe my own and other's faults. But these faults seldom offend me in themselves, but only because they result in what is unpleasant and ugly. I have no 'sense of sin' and no desire to see it punished. Bertrand, on the other hand, is almost cruel in his desire to see cruelty revenged.

KATHARINE RUSSELL TAIT

- (4) Kate Tait's talk at the Women's National Democratic Club was reported in *The Washington Post* (3/12/76). (Thank you HARRY RUJA.)

Growing Up Liberated: 'No Place to Go'

By Michael Kernan

When Bertrand Russell took his family down the rocky Cornwall cliffs to the beach for a swim, there was always a solemn discussion: of the tides, the wind, the course of the sun. Not until all factors had been logically worked out did anyone sit down on the sand—there to smile covertly at the foolish day trippers who had settled themselves in the path of a rising tide.

"Both my parents liked being different, being rebels," said Katharine Russell Tait, the great philosopher's only daughter, "and they brought us up liberated. The problem was, there was no place to go from there. We had everything, but my feeling was that it was a no-man's land."

Speaking at the Woman's National

Democratic Club yesterday, the author of "My Father, Bertrand Russell" admitted that she would have like to be a bit more like "Brown, Jones and Robinson": she could belong, she could feel safe.

"It was a demanding life. You were free to be brave and adventurous—we were allowed to be dirty, rude, and take risks, and nobody ever said to be careful—but an awful lot was expected of us."

Having a famous father has happened to any number of people, but being a child of the celebrated radical idealist, militant atheist and cosmic thinker Lord Russell was something else.

"I learned to read at 3," commented Tait, who is staying with friends at Arlington while she hunts for a writing job, "and at 4 my father started

our schooling. He was not permissive about learning."

It did have its compensations.

"There was a tower on top of the house which was my father's study, and we'd all go thundering up there for our history lessons. He had his Chinese rug there, and his Chinese ivories and paintings and the bust of Voltaire he always had near him, and he'd be reading in front of the fire with his spectacles on. And he knew it all, whatever we would ask, he'd know it and would make it all sound like a fairy story."

Educated in England and at Radcliffe, Tait married an American minister and raised five children—but not in the rigid traditions of her own childhood. There were a number of things she learned to discard as she grew up and out of her father's shadow.

"He believed in progress, and I don't," she said. "Actually, I'm not sure he felt it himself. He taught us to believe in the equality of women—his godfather was John Stuart Mill, a great feminist, and in 1907 he stood for Parliament as a women's suffrage candidate—but he liked a wife who did nothing else except be his wife. And he had four of 'em."

Brought up as a pacifist, Socialist and rational skeptic, Bertrand Russell's daughter gradually found out what Russell himself began to suspect at the end of his 98-year life: that human perfection may be possible, but it is hardly just around the corner.

"I think he realized, at the end, that nothing was as rational and simple as he had thought."

Quiet words from a quiet woman. But one senses painful years forgiven if not forgotten.

- (5) *My Father, Bertrand Russell*, by Katharine Tait, from the Book Review Section, p. 16, *Los Angeles Times* (4/25/76), with thanks to HARRY RUJA.

Expurgatory Paean to Bertrand Russell

BY KEITH S. FELTON

MY FATHER BERTRAND RUSSELL by Katharine Tait (Harcourt Brace Jovanovich, \$8.95).

"It is very difficult, my father once told me, 'pretending to an emotion you don't feel all the time. Even when I am half asleep I have to show affection. I cannot relax for a moment.'"

—Bertrand Russell to his daughter

This book bears weighty testament to the notion that if you look between the lines of a personal biography, you will find an autobiography. Katharine Tait's skillfully written account of her life as the daughter of Lord Bertrand Russell, P.R.S., O.M., Third Earl Russell and unparalleled 20th-century philosopher, is a knife which makes an incision into a long-passed life. It is the story of a well-to-do and worldly thinker, his wives, his lovers, his children; but what is exposed for surgical attendance by this biographer is a good look at her own life.

Tait shares with us much about her experiences with her father—often in the form of anecdote, frequently in the fashion of exposition of his famous views on education and his adherence to rationalism. But much more than any episodic memory of a famous man, this is a chart of a daughter's trials in the tripartite underdog roles of child, female and servant to a genius-father's theories. Katharine Russell Tait's story is binding and literate, but it is also bitter and pervasively sad.

Though she claims not to have worshiped her father in any unqualified sense, there is a strange thread that runs, *sub rosa*, through the author's narrative and it can only be called filial resentment. Rather than emerging as some full-blown lifelong gripe, however, it is transmogrified into a sort of feminist stance, and as such, Tait develops a theme which can be acceptably open in her story. This is the tale of the trials of the women in the Russell families—chiefly the philosopher's four wives and the author herself—against the overpowering figures of the males they contended with, most notably of whom were Russell himself and the favored son John, born after Katharine and following a trip their parents made to China.

In view of Lord Russell's long libertinism, and especially in view of his choices of women (feminism was always a key to his interest in women), it may seem contradictory to feel from his daughter this muted sense of daughterly disparagement. But these plaintive cross-sections of the Dominant Male Russell are only resonators, really, of the great man's own turn-of-the-century philosophical paradox. Raised in as puritanical an environment as anyone in England, he grew out of this, with his first marriage, and into the spirited dissenter who was a liberal clarion from Verdun to Vietnam.

Indeed, Mrs. Tait's love was never blind love at all; this she makes certain. But there are moments, even in her expressions of virulent dissatisfaction with her father, when the reader is sure that the Russell family

tendency to paradox was passed on: Love of and hate for the giver of life can sometimes abide so passionately and for so long in one's offspring.

These themes—of women versus men, and idealism versus pragmatism—are keenly noted in Tait's chapter on Beacon Hill. Describing her childhood education at this institution, the Russell family's private free school, the author says, "We were freaks and never knew it, because we lived protected from the world." Fearful that some might attribute the school to her mother's efforts alone, after her father's interest in it failed, she speaks of her parents' equal involvement in its charter in such a way almost as to exonerate her mother for any untoward blame.

Far from a "free" school for young Katharine, she seemed hemmed in: "I remember (a bright and sunny hall) as a place of desolation. I remember standing in the middle of the polished floor, surrounded by space and dark woodwork, not knowing which way to go or what to do, having no belonging place in all that vast building." It makes her all the more seem to the reader that she was a child lost in the cavern of her father's will.

Whatever awkwardness in inspiring a free education, the family togetherness remained a powerful force in the Russell household, and Katharine's father was to be a part of her life for many years. During the period preceding World War II, her parents' mutual affection died, and Russell's teaching brought him to the United States, and to a lectureship at UCLA. And somewhere in this transmigration, Katharine Russell implanted her spirit in American soil. A further period, in Pennsylvania and at Radcliffe College, seemed to cement in Mrs. Tait a sense of belonging more in harmony with this country than with England. But a more powerful force for her was destined to provide direction for the future: She underwent a conversion toward a most un-Russellian concept—a living God. This inspiration became a deity so important to Mrs. Tait and her husband that they felt it "should lay claim to the whole of our lives, though we were not quite sure how to offer them to Him."

In facing the blank page to begin her record of her father, Mrs. Tait tells us that the praises have stepped aside in favor of the "buts" and "complaints." They come out in her book, spoken as a sigh, but they are gale-forced in old, deeply felt, apparently long-held feeling. This remembrance is a paean, but it is also movingly and subtly a daughter's expressive expurgation; and using the public form of this book seems somehow to have provided a necessary part of the later growth of this once-celebrity-shadowed child. Mrs. Tait is to be commended for her candor, and encouraged to delve deeper into her father; it feels from her writing to be a self-search of the most exigent kind.

Felton is a local free-lance writer.

BOOK REVIEWS

- (6) *Cambridge Essays, 1888-99*, reviewed in *The Listener* (1/26/84). Thank you, HARRY RUJA. The book has also been reviewed by Sidney Hook (RSN41-25) and Justin Leiber (RSN42-18). John Watling's review is on the next page.

John Watling
Russell's
beginnings

Cambridge Essays, 1888-99.
By Bertrand Russell
Text edited by Kenneth Blackwell
Allen and Unwin £48

Throughout his life, Bertrand Russell hoarded his manuscripts, but not without some selection. Two years before his death he sold most of them. Rupert Crawshaw-Williams notes in *Russell Remembered* that they fetched hundreds of thousands of pounds. It is that book that reveals that Russell did destroy some things, 'masses of extremely purple passages [written] in his early Twenties'. The manuscripts went to McMaster University, Canada, where the collection has been brought nearer completion by further purchases. Editors at McMaster, with the help of an international board, now plan 28 volumes of those of Russell's shorter papers that, as the editors put it, 'record his own thoughts', but omitting letters. The letter collection is said to be not yet complete enough for publication to begin. Volumes Two to Twelve of these papers will contain his writings on philosophy, including theoretical ethics, logic and mathematics. Into the rest will go his writings on all other topics, international relations, history, political theory, religion, education and practical ethics. Volume One, now published and entitled *Cambridge Essays*, contains his shorter writings of all kinds before 1899, except for one group of the papers on geometry thought more suitable to Volume Two.

The papers in *Cambridge Essays* are of four kinds. There are two secret diaries. The earlier, spanning the year in which he became 16, was protected by the use of the Greek alphabet and the heading 'Greek Exercises'; the later, written mainly two years afterwards but with very sporadic entries during three following years at Cambridge, had a clasp with lock and key. There is a set of study essays, a few from his preparation for the Trinity College scholarship examination and many from his work for the philosophy tripos. There are papers read to the Cambridge discussion society, the Apostles. Finally, there are papers written during his graduate work, and published work stemming from it. Some of this concerns economics and politics, for Russell hesitated between politics and the philosophy of mathematics for his research, but most is on the nature of geometry.

How much of this material has been published before? Fairly extensive selections from the Greek Exercises were included in *My Philosophical Development* and in the autobiography. None of the study essays seem to have seen the light of day before. Russell, apparently, included some of the school essays in an early draft of his autobiography but deleted them later, and Alan Wood never carried out a plan to use the philosophy essays in a study of Russell's philosophy. One of the papers

Russell: educated to be Prime Minister

read to the Apostles appears in *Why I Am Not a Christian*. Of the papers arising from his graduate work, the most substantial are two articles reprinted from philosophical journals, no manuscripts having survived, some are reviews, and some are drafts from his fellowship dissemination on geometry.

Besides the main material, there are two appendices of considerable interest. One includes very competent newspaper reports of a series of lectures on geometry Russell gave at Bryn Mawr College in 1896. The other is a reading list covering the whole of Russell's twenties. It was made in a note-book with the printed heading 'What Shall I Read?' but is thought by the editors to be a list of books actually read by Russell and, in the later of the years, his wife Alys. Many of the one-word comments he made at the time have been heavily obliterated by Russell, efficiently enough nearly always to defeat modern methods of restoration. The general and textual notes, the chronological information and the bibliographies are copious and meticulous.

One exception to that is worth noting. The editors should, I think, have indicated that the view that Kant was unaware of the possibility of non-Euclidean geometry, held in the 19th century and, if the report of the Bryn Mawr lectures is accurate, shared by Russell, has been substantially undermined by Gottfried Martin in his book *Kant's Metaphysics and the Theory of Science*. Martin shows that Saccheri, one of the earliest investigators of the consequences of denying Euclid's axiom of parallels, was in communication with Kant. Martin argues that Kant's theory was developed in the light of the belief that a non-Euclidean geometry could be developed, not in ignorance of the possibility. Certainly, that accords with Kant's theory itself, which allows that such geometries would not be self-contradictory, while offering an explanation of why they cannot possibly be true. Russell himself largely ignored Kant's insistence on the synthetic character of the geometrical axioms; why he supposed the development of non-Euclidean geometries to refute Kant's belief in the necessity of Euclid is not explicit in these papers. Russell's own purpose was to vindicate Kant's approach, as far as he thought it feasible, by identifying a common basis to both Euclid

and non-Euclid and showing that to be known *a priori*.

Fuller information would have been welcome in a note to the second Greek Exercise. Can the author of an article in *The Nineteenth Century* really have suggested sexual passion, a tinge of melancholy and a desire to commit suicide as common characteristics denoting both genius and madness? Mustn't the young Russell have been misinterpreting him?

This is a volume for the biographer, not the philosopher. The study essays are excellent pieces of work but provide little illumination. It is hardly to be expected that they should. What is more, they come too early in his studies to throw light upon his philosophical development. Taken together with the editors' account of the lectures Russell followed during his year's course for Part Two of the philosophy tripos, they reveal the limitations of that course as a grounding in philosophy. There was nothing on logic, to which Russell made his major contributions.

In the first diary we find him, in rather Olympian style, attempting to reconcile religion and science with the hypothesis that God instituted the laws science discovers, concerned about the problems posed by man's free will and consciousness, and congratulating himself upon the perfection of his education. In some ways, that education was less than perfect. To contravert his grandmother's adherence to conscience rather than utility as a guide to conduct, he argues that conscience is a product of education 'as for example common Irishmen do not consider lying wrong'. The consciences of politicians, and Russell was brought up among politicians, allow them to lie more freely than the consciences of common Irishmen have ever done, a fact which an education for the role of Prime Minister, which Russell's was, ought surely to have imparted. The diaries have some value in correcting errors in the autobiography. For example, the locked diary contains no account of his grandmother's reactions to his wish to marry Alys, as Russell says it did; yet there are, apparently, no pages removed. However, the expectations raised by the measures taken to ensure their privacy are unfulfilled. They provide a very pale shadow of the story told in the autobiography.

There is much interest in many of these writings, in others, very little. That is inevitable in a publication of this kind, which Russell's standing as a major figure in many fields demands. It is in the later volumes that the interest will come.

FOR SALE

- (7) It's back! After being out of print for several years, our favorite photo of BR -- taken in 1959 -----> by Philippe Halsman -- is once again available on a postcard, \$1 for the first one, 75¢ each for more ordered at the same time. Postpaid.

- (8) 16-Year Index of BRS Newsletters, 1974-1989, Issues 1-64, 43 pages, 2379 entries. Buy it from the newsletter, \$7 postpaid (within the USA). Or borrow it from the BRS Library, \$2 postage (within the USA). Addresses on Page 1.
- (9) Members' stationery, 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge." Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." New reduced USA price, \$5 for 90 sheets, postpaid. Canada & Mexico still \$6. Order from the newsletter, address on Page 1.

CHURCH/STATE SEPARATION

- (10) Ophelia Hoopes reminds us -- with an article from *Church & State* (March 1990) -- that England, despite its many great merits as a democracy, still has an official state religion. Here is an excerpt:

Nowhere else in Europe does a religion by law established enjoy anything like the privileges the Church of England enjoys here. A totalitarian regime wishing to indoctrinate the population with its beliefs could hardly ask for more: favored time on radio and television, a guaranteed unique role in the law and constitution, reserved places in the upper House of Parliament, the exclusive religion of the head of state, a special protected status in the school curriculum, the right to the leading role on occasions of national solemnity, and a vast tax-free income.

Clifford Langley, religion writer,
The Times of London

OTHER ORGANIZATIONS

- (11) AHA -- the *American Humanist Association* -- chose Ted Turner as its 1990 Humanist of the Year. Turner accepted the award on April 27th, at AHA's 49th Annual Conference, in Orlando. (We were there.)

An excellent article in *The Humanist* (Nov/Dec 89) tells the remarkable Turner story in a few pages. Here is one excerpt:

In a speech to the Hollywood Radio and Television Society this past Spring [1989], he exhorted the 990 industry executives in attendance to "stand up, get off your knees, and go to work instead of spending all your time praying." He then unveiled his ten "voluntary initiatives" -- a humanistic alternative to the "obsolete" Ten Commandments. (see below)

WARREN SMITH says Turner "fearlessly told Dallas broadcasters that he'd like to see his Ten Voluntary Initiatives replace the Ten Commandments."

We think Turner is a great choice. We also think you'll find the Turner article in *The Humanist* worth reading.

Here are Turner's Ten:

TURNER'S "VOLUNTARY INITIATIVES"

1. I promise to have love and respect for the planet earth and living things thereon, especially my fellow species—humankind.
2. I promise to treat all persons everywhere with dignity, respect, and friendliness.
3. I promise to have no more than two children, or no more than my nation suggests.
4. I promise to use my best efforts to save what is left of our natural world in its untouched state and to restore damaged or destroyed areas where practical.
5. I pledge to use as little nonrenewable resources as possible.
6. I pledge to use as little toxic chemicals, pesticides, and other poisons as possible and to work for their reduction by others.
7. I promise to contribute to those less fortunate than myself, to help them become self-sufficient and enjoy the benefits of a decent life, including clean air and water, adequate food and health care, housing, education, and individual rights.
8. I reject the use of force, in particular military force, and back United Nations arbitration of international disputes.
9. I support the total elimination of all nuclear, chemical, and biological weapons of mass destruction.
10. I support the United Nations and its efforts to collectively improve the conditions of the planet.

- (12) NECLC -- the *National Emergency Civil Liberties Committee* -- devotes almost the entire issue of its publication, *Rights* (March-April 1990) to remembering Leonard Boudin, a great civil rights attorney. This issue can be borrowed from the BRS Library (address on Page 1, bottom)

- (13) Society for the Right to Die cites an article by Columnist Jane Bryant Quinn, of the *Washington Post*, headlined A LIVING WILL IS THE BEST WAY TO AVOID SPENDING LAST DAYS ATTACHED TO A TUBE. The Society's own letter says it has been fighting "monstrous abuses of medical technology...where a family is forced to stand helplessly as a loved one is connected to a machine that does nothing more than prolong dying." "In many cases patients are held captive to unwanted treatment because they have not put their wishes in writing. The solution is to make out a document called a Living Will, that allows you to describe the kind of treatment you do and do not want." Quinn says you can get the appropriate documents free by sending a self-addressed stamped envelope to the Society at 250 W. 57th St., NY NY 10107.

ABOUT BERTRAND RUSSELL

(14) David Horowitz, Director of The Bertrand Russell Peace Foundation, 1964-1967, writes as follows...in *Ramparts* (April 1970)...with thanks to Al Seckel:

Bertrand Russell: The Final Passion

TOWARDS THE END of his life, Bertrand Russell spent most of his time in Plas Penrhyn, Wales, in an ample but not opulent house set high on a cliff, with a spectacular view of the Glaslyn estuary below. He came down to London rarely, the wearying six-hour trip and the dank urban climate presenting hardships he could risk less and less as time went on. Because of an intestinal kink, and the inadvisability of an operation at his advanced age, he was already living on a wholly liquid diet, which he roguishly supplemented with seven Red Hackle scotches a day.

I met Lord Russell on one of the increasingly rare occasions when he was spending a few months in London in his Chelsea flat. It was on a crisply clear day early in the fall of 1964, and I remember feeling anxiety and agitation as I searched out the number I had been given among a row of indistinguishable and modest red brick houses. A compulsive early arriver, I walked around the block several times after locating his flat in the hopes that others would have arrived by the time I got there, and I could slip in unnoticed. Finally, I knocked weakly on the door.

It was opened by a diminutive, incredibly frail and fragile-looking white-haired old man. A mixture of feelings came up like a blush—awe, humility, admiration, and most of all, a sense of unbridgeable distance. He smiled, amused at my confusion but also so warm and friendly that he had already overcome the worst of it, although I never did manage to conquer that sense of being where I didn't belong, of not being remotely capable of stepping across that awesome gap—a gap created by time, by culture and by forces of history that I could only dimly imagine.

I followed Lord Russell's slow steps down the corridor, past the portraits of his ancestors: Lord John Russell, his grandfather, who as Prime Minister presided over the famous Reform Act of 1832; William Russell, who, as he pointed out later with a puckish twinkle in his eye, had opposed authority and had his head cut off. The short walk was obviously a great burden on him, and it alerted a Bellovesque guilt in me. ("Jesus, Lord Russell, you didn't have to come all the way to the door just for me.")

Later, when I got used to Russell and his routine, I was to realize that these efforts—the arduous trek down that short but seemingly endless hall, the pouring of tea for everyone from what appeared more a cauldron than a teapot in those frail, bony hands—were, for him, part of a fierce struggle against the failing of the life force, against time which had not beaten him over all the generations, although it had beaten down those he had known, loved and fought. ("I believe," he had written, "that when I die I shall rot and nothing of my ego will survive. I am not young and I love life but I should scorn to shiver with terror at the thought of annihilation. Happiness is nonetheless true happiness because it must come to an end. Nor do thought and love lose their values because they are not everlasting.") On that first day, however, after we got settled and began talking, one thing quickly became clear: the physical decline was deceptive; the mind which peered out through those at once sad and twinkling eyes was keen and resilient.

The gathering which I had come to attend was a meeting of the members of the Bertrand Russell Peace Foundation to discuss plans for setting up an International War Crimes

Tribunal to investigate America's war in Vietnam. The room was filled with people who were under thirty, and more likely under twenty-five—all born after Russell had attained more than twice that age. In the political actions in which he engaged during the last years, it was always thus: we who served him and laid plans with him always looked at him across a full lifetime. A memoir by Ralph Schoenman, his secretary, captures it well: "We are separated by 64 years. His talk is studded with Lenin, Victoria, Poincaré, Mill, Browning, Wilde—people he knew or disputed. . . . 'How close were you to Bakunin, Bertie?' 'Not all that close, but then I wasn't well acquainted with Methuselah either.'"

THE MEETING ITSELF was one of those interminably windy sessions familiar to anyone who has been in on the organizing of anything. It veered off on a dozen tangents, all the time increasing for me the incongruity of the afternoon—the legendary Lord Russell, godson of John Stuart Mill, holding court with these youthful activists and entering their circumambulatory discussions about organizational details and structures of the forthcoming Tribunal. Russell was concerned that the plans should not be too grandiose and appear ridiculous in the outcome. One long digression of the afternoon concerned possible sites for the Tribunal, and elaborate speculation as to whether any government would allow it. Russell was heavily inclined to doubt the will or ability of any officials—Russian, Swiss or Third World—to be hospitable to a project which they wouldn't control and which would undoubtedly get them into hot water with the United States.

This skepticism—which turned out to be simple realism—was a feature of Russell's intellect that was to impress me again and again in the brief period in which I was a director of the Bertrand Russell Peace Foundation. Russell's incapacity for illusion—that ingrained sense of doubt which was his inheritance from the age of Victoria—was an essential characteristic of his being. In a BBC interview on his 94th birthday,

Russell had been reminded that many of his critics were claiming that the youngsters who had followed him in his nuclear protests were just young and irresponsible, and that when they got to be over thirty, they would become conservative and respectable and abandon him. What did he think? Russell, whose actions had foreshadowed and inspired the upsurge of mass protest in the '60's, replied: "Yes, that's probably true. 'Could I, I would ask myself many times after hearing this story, put my life energies into the political struggle if I did not really believe I was helping to shape a future majority, if I was not confident of the ultimate triumph of reason and justice?"

There was on the other side of Russell's profound skepticism, however, an equally profound romanticism. Among his books was a whimsical one-sentence work which he had written in his 89th year, called "History of the World in Epitome." It began with a picture of Adam and Eve and ended with a photograph of the atomic bomb. "Since Adam and Eve ate the apple," read the text, "man has never refrained from any folly of which he was capable." He had a passionate love for this same wicked, folly-ridden creature, man. Some called it quixotic but Russell was well aware of the monstrous cruelties

his passion encompassed. He was like those favored figures of Shakespeare's imagination, romantic skeptics who, like Hamlet, were disgusted by the animal in man and the vanity in his works, yet recognized him as the noblest of creations. It was in this ability to embrace antitheses that the compelling magnetism of Russell lay. You had in Russell's presence at once awesome tradition, genius and age, and from the very center of all these humbling radiances, a ninety-year-old imp who would puncture the illusion, the pomp and the heroic vision with a deflating barb. As his old friend Leonard Woolf once remarked of Russell, "It is very rare to be a Socrates and a Puck at the same time."

Nothing was more alien to Russell than posturing, and nothing more devastating to pretension than his own searing vision: if there is a lesson in his life, it is that in the last analysis, the truly heroic can arise only on the ground of the relentlessly real.

(ii)

IN HIS YOUTH HE DID work of importance in mathematical logic, but his eccentric attitude toward the First World War revealed a lack of balanced judgment, which increasingly infected his later writings." So Russell wrote of himself in a mock obituary which he composed in 1937. But this whimsy became, in the eyes of editorial writers in the great Western newspapers, reality, and their abuse of the political writings and activities of his last years was unmitigated. These culminated in an incredible viciousness directed against the last great effort of his life—the pitting of his intellect and final energies against the American destruction of Vietnam.

From the editorial page of the New York Times, under the headline "Corpse on Horseback," C. L. Sulzberger "informed" readers that Russell had "outlived his own conscious ideas and [become] clay in . . . unscrupulous hands." The tragedy of the War Crimes Tribunal, Sulzberger continued, "cannot fairly be laid at the door of the wasted peer whose bodily endurance outpaced his brain. . . ." This was written in May 1967, a week before Russell's 95th birthday, when the Tribunal was in session, and while Lyndon Johnson was still President of the United States. It was written before the revelations about the massacres at My Lai and elsewhere, and before the great revulsion against the war which broke forth in the massive Moratorium demonstrations. Even now, however, the consensus of obituaries on Russell is that this last gesture (referred to variously as a "mock trial" or the "notorious trial") was something to be ashamed of, a final unfortunate surrender to the naive, caprice and inconsistency which characterized his involvement in social affairs.

Such a distortion is easily conjured out of the press symbols of Russell's career. To see Russell clearly across the near century of his life, however, is to comprehend the inner consistency of his stance, from his resistance to World War I, through his nuclear protests, to his last defense of Vietnam's revolutionary peasants—this final act, the hardest, the most courageous, the most important gesture of them all.

RUSSELL'S VERY FIRST BOOK was a critical account of German Marxism (with an appendix by his wife Alys on Marxism and the woman question). His first venture into politics saw him stand unsuccessfully as a socialist candidate for Parliament with woman's suffrage as one of his main planks. In *Roads to Freedom* (1918), Russell outlined a program of guild socialism and laid down the two principles of reform in international relations which became the all-consuming cause of the last decade and a half of his life: "First, the avoidance of wars, and, second, the prevention of the oppression of weak nations by strong ones."

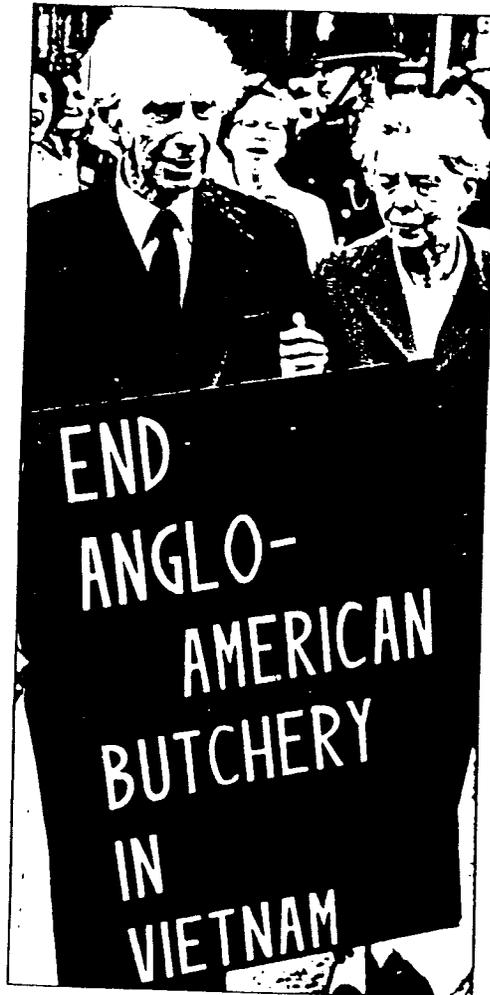

It was the *Practice and Theory of Bolshevism* (1920), written on his return from a trip to revolutionary Russia where he met Lenin and Trotsky, that established Russell's reputation as an early anti-communist. What he had written about this crisis in world history, however, was something quite different from what his reputation as a "liberal anti-communist" might suggest. "I believe," Russell declared at the outset, "that Socialism is necessary to the world, and believe that the heroism of Russia has fired men's hopes in a way which was essential to the realization of Socialism in the future. Regarded as a splendid attempt, without which ultimate success would have

been very improbable, Bolshevism deserves the gratitude and admiration of all the progressive part of mankind."

It was the method by which the Bolsheviks were attempting to establish Socialism that caused Russell's doubts. What he reacted to most negatively in this "method" was its fanatical intolerance and its welcoming of class war and its hatreds which the counter-revolution had, he conceded, made necessary. With the advent of Stalin came the institutionalization of the worst elements and tendencies in Bolshevism as he had witnessed them in 1920. It was only after Stalin's death, and the subsequent changes in Soviet policy, that Russell's view of Russian Communism became less censorious. In this he was greatly influenced, as were many other socialists, by the writings of the Marxist biographer of Trotsky, Isaac Deutscher, whom he later chose to serve on the War Crimes Tribunal.

Prior to Russell's invitation, Deutscher had not participated in a political action since the 1930's, when he had been expelled from the Polish Communist Party (whose entire Central Committee later perished at Stalin's hands) for "exaggerating the dangers of Nazism" and similar Trotskyist sins. Denounced as a Marxist revolutionary by the right, as a spokesman for Wall Street by the Communists, and as a Stalinist apologist by the Trotskyists, Deutscher had lived the last 30 years of his life in political isolation for his principles, a situation which Russell understood well.

I remember how moved Deutscher was when we brought him the invitation from Russell, and how deep was the respect which this classical European Marxist expressed for the English empiricist's life and work. The Russell-Deutscher relationship subsequently provided one of the most touching and fulfilling moments in the Tribunal proceedings. On November 13, 1966, the Tribunal met for the first time in closed session in London. Russell appeared and read a brief statement asserting the need for such a Tribunal "composed of men eminent, not through

their power, but through their intellectual and moral contribution to what we optimistically call 'human civilization.'" When he finished, there was a respectful silence as he turned, and with his usual slight annoyance at the hands that went out to help him, began the slow, aching, proud steps that would take him to the door. I understood the silence—again that awesome gap between the figure and his audience, though this was a group considerably closer in age and in distinction than most—but I felt it still and especially inadequate. And then Deutscher rose and addressed him for all the others, for the French philosopher Jean-Paul Sartre, for the Yugoslav historian Vladimir Dedijer, for the eminent mathematician Laurent Schwarz and the rest. Deutscher, who orally dictated his epic historical works, had the most literary and finely-architected speaking style of anyone I have ever heard, and now his central European accents filled the room as he told Russell what a magnificent and courageous task he had undertaken, what a beacon of hope he was to the young, what a light to the oppressed, and what a debt of gratitude was owed to him. The old man nodded, visibly moved, and then turned again to make his slow way out.

[m]

EACH OF THE PRINCIPAL Tribunal figures was, like Russell, one of those displaced intellectuals that had been cast into the twilight zones of politics because of his commitment to the Enlightenment ideals that capitalism and imperialism had made impossible, and that the Stalinist revolutions had betrayed. There was Sartre, the President of the Tribunal, who had traveled from Existentialism to Marxism, but because of his fierce and principled independence had been compelled to live a political career under attack from Communists and liberals alike. And there was Dedijer, the Chairman, a thrice wounded Communist partisan, once one of the four top leaders in Yugoslavia who had been cast into internal exile for defending Milovan Djilas, even though he did not share Djilas' views.

These men, and most of the other Tribunal members, were Marxists, it is true, albeit independent ones. Russell's intellectual distance from Marxism, however, has been exaggerated (on occasion even by himself). Where the basic divergence really lay was in Russell's stress on psychological factors as motive forces in history, and even more profoundly in his skeptical outlook, which was both philosophical and constitutional: "Throughout my life," he wrote in the second volume of his *Autobiography*; "I have longed to feel that oneness with large bodies of human beings that is experienced by the members of enthusiastic crowds. The longing has often been strong enough to lead me into self-deception. I have imagined myself in turn a Liberal, a Socialist, or a Pacifist, but I have never been any of these things, in any profound sense. Always the skeptical intellect, when I have most wished it silent, has whispered doubts to me, has cut me off from the facile enthusiasms of others, and has transported me into a desolate solitude." These lines were written a propos his anti-war activities during the First World War, when he worked with "Quakers, non-resisters and Socialists" as an ally, but not a comrade. He would tell the Quakers that some wars were justified, and the Socialists that he opposed the tyranny of the state, and get suspicious looks from both.

World War I and its aftermath had deepened Russell's skepticism to the point of despair. "The optimist now," he wrote in 1948, "is the man who thinks it possible to hope that the world will not get worse; to suppose that it may get better in any near future is scarcely possible except through wilful blindness." In the two decades that Russell lived after these words were written, and especially after the development of the hydrogen bomb in 1953, he dedicated his political energies not only to the end that the world should not become a worse place to live, but that it should not cease to be a place to live altogether. In 1954, he concluded a radio broadcast on the hydrogen bomb by saying, "I appeal as a human being to human beings: remember your humanity, and forget the rest. If you can do so, the way lies open to a new paradise; if you cannot, nothing lies before you but universal death." In 1955 he initiated a joint manifesto of scientists from both East and West (a radical departure for the times) warning against the dangers of nuclear annihilation. From that time on he became the intellectual symbol of the struggle against the bomb.

In 1957 he launched the Pugwash conferences of East-West nuclear scientists, which had an important influence on the subsequent development of the nuclear test ban, and in 1958 helped to found the Campaign for Nuclear Disarmament (CND), which he served as president. In 1960 when the CND and its Aldermaston marches were at the height of their popularity, he resigned as president to lead a campaign of mass civil disobedience under the auspices of a "Committee of 100." Early in 1961, Russell led a sitdown of 5000 people at the Ministry of Defense. Later in the year he addressed a meeting in Hyde Park, which was stopped by the police (the microphones were removed while he was speaking) because a permit was lacking. Russell was arraigned with other members of the Committee and was sent to Brixton prison for seven days. (He had previously spent six months there for his opposition to World War I.) This frail eighty-eight-year-old had replied with a firm "No I won't" when the magistrate offered to exempt him from jail if he pledged himself to good behavior. When the sentence was pronounced, cries of protest went up from the onlookers. This gesture of concern wounded the old man's pride. "It angered me," he said. "I knew that it was well meant, but I had deliberately incurred the punishment and, in any case, I could not see that age had anything to do with guilt. If anything, it made me the more guilty. The Magistrate seemed to me nearer the mark in observing that, from his point of view, I was 'old enough to know better'."

In October 1962, the Cuban missile crisis brought mankind to the brink of the disaster that Russell had fought so long. The crisis over America's former neo-colonial dependency, coupled with the steady escalation of U.S. intervention in Indo-China, brought to a climax a change in Russell's sense of the priorities involved in mankind's survival. In many ways this change represented a return for him to his perspective when he first raised his voice in rebellion during the 1914 War which, he noted wryly on his 90th birthday that year, had been the war to end peace.

Nineteen-fourteen marked for him a dividing line not only between eras, but between worlds. A phrase in a diary note he set down a week before his birthday in 1950 expresses the almost preternatural significance of that date for him. Writing of the marital difficulties of his children he says: "They were born after 1914, and are therefore incapable of happiness."

[iv]

DURING THE YEARS OF his opposition to the First World War and his consequent isolation, there was one figure who stood out above all the rest in Russell's admiration and foreshadowed his own future course. E. D. Morel was a liberal crusader against the atrocities being committed by white Europeans in Africa, particularly the Belgian Congo, and was the founder of the Congo Reform Association. A major theme of Morel's work was that the bestiality, violence and aggression of European imperialism in Africa had come home to roost in the European conflict. For this, he was (in Russell's words) "more than any other opponent of the war . . . attacked by politicians and the press," and was eventually thrown in jail, where "he suffered an injury to his health from which he never recovered," dying in 1922.

Russell himself recognized the economic, as well as the moral and political interaction between imperialism and the World War, and in 1934 finished his book *Freedom and Organization* with the following admonition: "The same causes that produced war in 1914 are still operative, and, unless checked by international control of investment and of raw material, they will inevitably produce the same effect, but on a larger scale. It is not by pacifist sentiment, but by world-wide economic organization, that civilized mankind is to be saved from collective suicide."

For a considerable period, coinciding with the early Cold War, Russell had thought that Stalin's tyranny was taking an expansionist turn, patterned on the Napoleonic episode after the French Revolution. Since the mid-fifties, however, like many others, he had changed his views and recognized the essential conservatism of Stalin's foreign policy. Nuclear weapons had made the ambition of global empire a possibility, but it was the "free world" empire of the United States, with its thousands of overseas bases, and property rights to most of the

world's natural resources, that was expanding across continents and oceans, intervening in underdeveloped countries and raising threats to world peace. "As my researches into the origins and circumstances of the war in Vietnam showed, the United States was embarking upon military adventures which increasingly replaced war with Russia as the chief threat to the world. The fanaticism of America's anti-Communism, combined with its constant search for markets and raw materials, made it impossible for any serious neutral to regard America and Russia as equally dangerous to the world." So Russell wrote at the end of volume three of his *Autobiography*, adding that, "For people in the West, this was most difficult to admit, and again I experienced the silence or opposition of those who had come to accept my views of the previous decade."

There is a control in these words, a suppression of personal bitterness and pain wholly characteristic of the man, which gives no hint of the vicious weapons of attack that were wielded against him in his last years, the wounds he suffered, or the anguish of the battle he fought. Even now, one can only guess at their measure. To attend the press conference announcing the War Crimes Tribunal, for example, Russell, now a few months shy of ninety-five, undertook the long trip to London in the dead of winter. Caxton Hall, where the conference was held, has a winding staircase which must have seemed interminable to the old man as he mounted them at snail's pace

[HIS 95TH BIRTHDAY]

to confront the glaring inquisitorial klieglights and the hatchet faces of the world's press jammed in intimidating, hostile numbers in the inadequate room. For his attempt to lend an aged hand to the Vietnamese, the most distinguished living philosopher in the West was featured in the august *New York Times Magazine*, which described his entry thus: "A stir, a bustle, a craning of necks; he comes! *He comes?* Say rather, without disrespect, *it comes.* . . . The man who has now become the holiest relic the international left possesses is to be unwrapped and shown to the populace."

IT WAS NOT ONLY the West that dealt blows to Russell at this hour. Because it was independent and because the uncompromising terms of its mandate would make cooperation with the United States more difficult, the Communist countries had disapproved of the Tribunal from the outset. By their silence, the Soviet and East European press assured a minimal awareness of the Tribunal's findings in the white sectors of the world where that awareness was needed most.*

From its inception, the Tribunal had had no real base of support, beyond the agreement of the Vietnamese to cooperate. The money to finance its \$200,000 costs came almost entirely from Russell himself, who had only a modest annual income from books. As a young man he had given away his inheritance, and the controversies which arose over his anti-war activities and liberated views on sex made university appointments scarce. Readers of the *Autobiography* know what a struggle it was for him for decades to live on royalties from his books, so that it was a poignant and touching irony that when the advances on the *Autobiography* brought him a small fortune for the second time in his life, he gave it all to the War Crimes Tribunal.

It is difficult to know how deeply the unscrupulous reporting of the prestige press in the West, along with the lack of immediate success of the Tribunal, affected Russell. His 95th birthday took place just after the first Tribunal session. In contrast to his 90th, where an orchestra had played in his honor and he had been toasted by lords, ladies, old distinguished friends and celebrated intellectuals, this one saw him once again isolated, probably more than he had ever been. The Tribunal had deprived him of being regarded affectionately as a remarkable antique from the Victorian era, to be trotted out for annual celebrations. He had done something that old men aren't supposed to do: he had rebelled against the respectability his age and achievements guaranteed him. As a younger man, he had raised his voice against the bourgeois morality that stifled sex, and now he protested against the morality that sanctified official murder.

THE BATTLE WHICH RUSSELL had chosen to enter in his last years was infinitely bloodier and dirtier than the previous ones he had come through so well. In part this was in the nature of the contest. It was as though a revered prince of the Philistines had taken his stance by the side of David and slung verbal thunderbolts at the giant. To oppose in its own citadel white western civilization, to take up the cause of the niggers of the earth, to lay the finger of blame on the technological Goliath, the "last best hope" of liberal democracy, as it committed mass murder in the rice paddies of Southeast Asia—this was to court devastation. And thus, the media of the Western world entered a loose conspiracy to take revenge against Russell by portraying him as a senescent, bird-like and wrinkled creature who should have done himself the favor of dying when his reputation as a humanist and philosopher was unsullied by such follies as

* A 650-page account of the proceedings of the Tribunal, called *Against the Crime of Silence*, is available for \$5.75 from O'Hare Books, 10 Bartley Road, Flanders, New Jersey 07836.

intruding in global politics on the side of the weak and oppressed.

But there was another more personal cross which Russell had to bear into the conflict. In his last triumphant battle as the head and inspirer of the Committee of 100, he had stood forth as advocate and antagonist and led his troops in his own person into the fray. Between then and the Tribunal the body had begun to give up. No longer could he speak extemporaneously before the public: the eyes had weakened, and

read only with immense effort under the television lights; the voice was thinner and seemed at times ready to disappear forever; the dignified stride had collapsed into an unseemly shuffle; and the face often became slack, giving a false impression of vacuity that the incomparably quick mind still burning inside must have found especially painful to bear.

History has already vindicated the public acts of Lord Russell's last years: the historical record will show that the War Crimes Tribunal—the climax of what began as a lonely crusade—correctly characterized and identified a war of atrocity, a war conducted to maintain imperial dominance in Southeast Asia, a war representing the archetypal conflict of the age and the chief threat to mankind's future survival. But history will not show the inner struggle of the man who initiated this Tribunal. It will not record the triumph of an heroic will that could not hear the cry of suffering without attempting to answer, or the passionate concern for human survival that moved an old man to put himself in an international pillory before the greatest power in the world as the defender of a peasant people and its struggle to be free.

For most, Lord Russell will be remembered as the great

mathematician and philosopher, the man whose life encompassed the transition from Victorianism to the modern world, the friend of men as various as Alfred North Whitehead and D. H. Lawrence. But for me, the image was formed on that first day in Chelsea: the arduous shuffle, the pixy smile, the brittle bowed movements, the kind, wise face which hid the anguish of its own struggle.

To have known him is always to be humbled by the courage, the immense guts of the old man, and the sustaining calm of the inner vision: "An individual human existence should be like a river," he had written, "—small at first, narrowly confined within its banks, and rushing passionately past boulders and over waterfalls. Gradually the river grows wider, the banks recede, the waters flow more quietly, and in the end, without any visible break, they become merged in the sea, and painlessly lose their individual being. The man who, in old age, can see his life in this way, will not suffer from the fear of death, since the things he cares for will continue. . . . I should wish to die while still at work, knowing that others will carry on what I can no longer do, and content in the thought that what was possible has been done."

PROMOTING BR & THE BRS

(15) Newspaper story. An enterprising staff writer for the Times Mirror newspaper in Allentown, PA, *The Morning Call*, noticed that the small BRS classified ad in *The Nation* said we were located in Coopersburg.

Coopersburg is a town in the region covered by his newspaper, so he decided to investigate. First, he sent us a postcard, asking for information about the BRS, which is what our ad invites people to do. After a while, he phoned for an interview, and got one. Later he sent a photographer.

The final result was a surprisingly big story in *The Morning Call* (4/5/90). We show it here greatly reduced, to indicate the prominence it was given; there couldn't have been much real news that day. As shown here, it's much too small to read; if you just can't stand not knowing what was in it, you may borrow it from the RS Library. We're pleased to report that the story succeeded in bringing in inquiries and new members.

NEWS ABOUT MEMBERS

(16) John Lenz, BRS VP, who told us about his Fulbright year in Greece and Turkey, in RSN64-16, now tells us about his new job, his first: "I am happy to report that I will be a Visiting Instructor, (and soon to be an Assistant Professor) in Classics, at Union College in Schenectady, NY. It's a nice old campus, graced by a statue of an alumnus, Chester Arthur." [Vice-President Arthur became President Arthur when President Garfield was assassinated, in 1881. We looked it up.]

OBITUARIES

- (17) Helen Page -- BRS Member and wife of BRS Director, Frank Page -- died on 11/25/89. We offer Frank our sympathy.
- (18) Willard S. Sellars is honored in death by some of his philosopher-colleagues...in a Letter to the Editor in The New York Times (8/15/89). He is the third distinguished philosopher to have died last summer; the other two were Sidney Hook and A.J. Ayers. (Thank you, STEVE REINHARDT.)

A Philosopher Who Shattered Our Complacency

To the Editor: *NYT 08-15-89*
 Wilfrid S. Sellars (obituary, July 6) revolutionized both the content and the method of philosophy in the United States.

Along with W. V. O. Quine, Wilfrid Sellars thoroughly shattered our Cartesian complacency, and taught us that a proper philosophical understanding of the relation of thought to reality, and of thought to action, would have to be much more subtle — and probably much messier — than we had supposed.

But his work is difficult, and largely inaccessible to nonphilosophers. Its impact on the larger world of letters and science has been made through the influence it has had on other more readable writers.

Professor Sellars, who many informed scholars believe was the greatest philosopher of his time, perhaps unfortunately never took the time to write a textbook.

Some measure of Professor Sellars's impact on his discipline can be found in the professional honors conferred upon him. He gave the John Locke Lectures at Oxford, the John Dewey Lectures at Chicago, the

Ernst Cassirer Lectures at Yale and the Paul Carus Lectures.

He was president of the American Philosophical Association, Eastern division. Professor Sellars's 75th birthday was celebrated by hundreds of philosophers from around the globe, meeting for several days of lectures and seminars on the implications of his thought.

Anyone who wishes to begin to understand the reason for the extraordinarily high regard for Professor Sellars's work among professional philosophers would do well to start with his early collection of papers "Science, Perception and Reality." These essays demand a bit less of the reader than his later work, and they contain deep and compelling refutations of traditional empiricist positions in epistemology, the philosophy of mind and the philosophy of science, together with at least a partial picture of the Sellarsian alternative.

The writers are professors of philosophy at the University of Pittsburgh. The letter was also signed by four other professors in that department.

ELECTION OF DIRECTORS

- (19) Nominations for Directors, please. We wish to elect 6 Directors this year, for 3-year terms starting 1/1/91. This will give us a total of 24 elected Directors. The August newsletter will provide a ballot for voting.

We are asking you to nominate candidates (whose names will appear on the August ballot.) Any member may nominate any other member to be a Director-Candidate.

If you wish to be a Candidate yourself, notify the Elections Committee and someone will probably nominate you. The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something or other by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. The cost of attending meetings is (federal) tax-deductible for Directors.

We would like to have more than 6 names on the ballot, so as to give members a choice.

A brief statement about the candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.

Directors whose terms expire at the end of 1990 are IRVING ANELLIS, BOB DAVIS, JIM MCWILLIAMS, HUGH MOORHEAD, KATE TAIT.

TO NOMINATE SOMEONE -- or to volunteer yourself -- write the Election Committee, c/o the newsletter, address on Page 1, bottom.

THANK YOU VERY MUCH!

(20) The Times Mirror Company -- publisher of the excellent *Los Angeles Times*, *The Morning Call* (Allentown, PA) and 10 other newspapers -- responded most generously to our request for help on a research project.

As you may know, HARRY RUJA and KEN BLACKWELL are preparing a comprehensive bibliography on BR. BR visited the United States and Canada repeatedly during the 55-year period, 1896 to 1951, and gave many, many lectures and interviews. Newspapers carried a great number of stories about him during this period. The comprehensive bibliography aims to include as many of these newspaper items as can be located. It will be published by Unwin, Hyman, London.

We wrote to the 6 newspapers that cover this part of Eastern Pennsylvania -- from Philadelphia to Easton -- requesting the dates of BR items that had appeared in their papers during the period. We also wrote to *The Times Mirror Company* and to *Knight-Ritter, Inc.*, each of which owns one of the papers.

We did not ask for photocopies of the items; we thought that might impose too great a burden; we asked only for the dates of the items. The researchers could then go to their libraries, and, knowing the dates, locate the items.

None of the 6 newspapers responded to, or even acknowledged, our request. *Knight-Ritter, Inc.* responded politely, with regrets. But *The Times Mirror Company* came through handsomely!

The Times Mirror Company supplied not only the dates, they also provided photocopies of the items themselves, more than 50 of them, along with a gracious covering letter wishing us "success in compiling and publishing the Russell bibliography."

The Times Mirror Company clearly invested a lot of time and money, as a contribution to the success of the Russell bibliography, and we feel greatly indebted to them.

BRS AUTHORS

Author's Query

(21) From *The New York Times Book Review* (3/18/90) ----->
Thom, you recall, is a BRS Director, and will be giving a talk on the same subject at our June meeting at McMaster. (Thank you, Jean Anderson and Linda Egendorf.)

For a book on the Bertrand Russell/City College case of 1940, in which Russell was prevented from accepting a post there because of his unconventional views on social behavior, I would appreciate hearing from participants or observers who have reminiscences.

THE RUSSELL ARCHIVES

- (23) The Bertrand Russell Editorial Project -- which aims to publish all of BR's "shorter writings" -- went through some agonizing times a few years ago when the Canadian Government stopped funding it, and almost the entire staff had to be let go. You may recall that the BRS contributed a modest \$1000 to help pay for some secretarial assistance (RSN60-21) -- that's how desperate the situation was.

Now, happily, things seem to be back on track, as this letter from Louis Greenspan indicates:

U.S.A.

Dear Mr. Eisler:

This letter has been passed on from various people and finally reached my desk.

It is indeed true that we have been funded again. Volume 2 titled Philosophical Papers, 1896-99 was sent to the publisher in October and currently we are working feverishly on volumes in mathematics and the First World War.

Funds were restored by SSHRC but as ever the SSHRC grant must be supplemented by the University. We hope that by 1992 five more volumes will appear. There are ten people on the staff.

Yours sincerely,

Louis Greenspan

DEMONSTRATION FOR PEACE IN GREAT BRITAIN

Not a political demonstration. Bertrand Russell present

By John J. Meehan

London, 17 [Feb 61.] (UP) -- Lord Bertrand Russell and about 20,000 demonstrators congregated in London and Scotland, in order to protest against allowing United States nuclear submarines armed with Polaris missiles to be based in Great Britain.

The British Communist Party is apparently unaware of the demonstrations planned for tomorrow in London and Glasgow, which are directed as much against the United States as against Russia. In fact, the marches are a protest against all nuclear armaments, whether of the United States, Russia, Great Britain, or France.

The Committee of 100, formed in London -- in order to fight against the establishment of Polaris nuclear submarine bases in Britain -- by the philosopher, Lord Bertrand Russell, and other distinguished pacifists, predicted that at least 10,000 people would assemble in front of the statue of Lord Nelson in Trafalgar Square.

Acts of "non-violence"

Later, an "assault force" of about 20,000 non-violent pacifists will march past Whitehall, after which they will stage a sit-in on the sidewalk in front of the British Defense Ministry for 3 hours. The demonstrators will not offer resistance if the authorities decide to arrest them.

In Glasgow the pro-nuclear-disarmament Scottish Council announced that it hopes that some 7,000 demonstrators will march in the streets of the City to the sound of bagpipes, as an expression of protest against Polaris submarines that are on their way to patrol the seas around Russia from a base in Holy Loch, Scotland.

In advance of tomorrow's demonstration, groups with posters like this -- "We don't want Polaris bases in Scotland" -- today marched through the streets of Glasgow carrying torches, as a prelude to tomorrow's march. They demonstrated today, at mid-day, in front of the American Consulate in Glasgow, where they plan to spend the next 24 hours.

MANIFESTACION POR LA PAZ EN GRAN BRETAÑA

No tiene carácter
político: Presencia
de Bertrand Russell

Por JOHN J. MEEHAN

Londres, 17 (UP) -- Lord Bertrand Russell y alrededor de 20.000 manifestantes se congregaron esta noche en Inglaterra y Escocia para protestar por la concesión de bases en Gran Bretaña a submarinos nucleares de los Estados Unidos, provistos de proyectiles Polaris.

El partido Comunista británico, aparentemente ignorante de que las marchas que deben realizarse mañana en Londres y Glasgow están dirigidas tanto contra los Estados Unidos como contra Rusia, prometió su asistencia.

Las marchas serán también una expresión de protesta contra el armamento nuclear de los Estados Unidos, Rusia, Gran Bretaña y Francia.

El Comité de los 100, formado en Londres para luchar contra el establecimiento de submarinos nucleares Polaris en bases británicas, por el filósofo lord Bertrand Russell y otros destacados pacifistas, predijo que por lo menos unas 10.000 personas se reunirán ante la estatua de lord Nelson en la plaza Trafalgar.

Acción de los "no violentos"

Más tarde, una "fuerza de asalto" de unos 20.000 pacifistas partidarios de la "no violencia", realizarán una marcha por el Whitehall y se sentarán luego en las aceras, frente al Ministerio Británico de Defensa durante un período de tres horas. Los manifestantes no harán resistencia alguna si las autoridades deciden detenerlos.

En Glasgow, el consejo escocés pro desarme nuclear anunció que espera que unos 7.000 manifestantes marchen por las calles de la ciudad al son de gaitas, como expresión de protesta por submarinos Polaris que se hallan en viaje para patrullar los mares vecinos de Rusia, desde una base en Holy Loch, Escocia.

Una avanzada de la manifestación de mañana marchó hoy por las calles de Glasgow llevando antorchas, como prelude de la marcha de mañana.

Grupos que llevaban cartelines en las que se lee "no queremos bases de Polaris en Escocia", montaron guardia hoy a mediodía frente al consulado norteamericano en Glasgow, donde piensan permanecer durante 24 horas.

BRS LOCAL CHAPTER

McMASTER UNIVERSITY
THE BERTRAND RUSSELL SOCIETY

BERTRAND RUSSELL (1872-1970);
BY ACQUAINTANCE
AND BY DESCRIPTION

I. Grattan-Guinness

This new paper by Dr. Grattan-Guinness, scheduled to be published in the *Notes and Records of the Royal Society*, will be read in his absence.

The paper concerns the contemporary state of Russell Studies and its resources.

Dr. Grattan-Guinness is an historian of mathematics and a distinguished Russell scholar. He is editor of *History and Philosophy of Logic*.

The meeting will also discuss progress in organizing the annual meeting of the Bertrand Russell Society, Inc., to be held at McMaster on June 23-25, 1990. The theme for submission of papers is Illusion vs. Reality: Education and Religion.

Thursday, March 1, at 12:30. UH-317
All welcome.

(26) The BRS Chapter at McMaster met on 3/1/90 to hear a new paper by I. Grattan-Guinness on the contemporary state of Russell Studies and its resources. The Chapter also discussed plans for the forthcoming annual meeting at McMaster of The Bertrand Russell Society.

CUBA (1962)

(27) From the *Los Angeles Times* (2/16/62), with thanks to HARRY RUJA:

LORD RUSSELL URGES
U.S.: LET CUBA ALONE

HAVANA (Reuters) — British philosopher Bertrand Russell Thursday appealed to the United States government to let Cuba solve its problems without interference.

Lord Russell replying to a statement published in the newspaper *Revolution*, to the newspaper's appeal to world statesmen and thinkers for their opinions about "North American imperialism's preparations

for another armed attack on Cuba."

The newspaper reported that Russell wrote:

"It seems possible the U.S. contemplates another attempt to impose on the Cuban people a regime which is contrary to their wishes."

Stating that a U.S. attack on Cuba could lead to nuclear war, Russell said Premier Fidel Castro's regime "deserves confidence and simulation, not blind hostility."

FROTH

(30) From *A Brief History of Time* by Stephen ----->
 W. Hawking (NY: Bantam, 1988), p. 1,
 with thanks to STEVE MOLENAAR.

A well-known scientist (some say it was Bertrand Russell) once gave a public lecture on astronomy. He described how the earth orbits around the sun and how the sun, in turn, orbits around the center of a vast collection of stars called our galaxy. At the end of the lecture, a little old lady at the back of the room got up and said: "What you have told us is rubbish. The world is really a flat plate supported on the back of a giant tortoise." The scientist gave a superior smile before replying, "What is the tortoise standing on?" "You're very clever, young man, very clever," said the old lady. "But it's turtles all the way down!"

BR. PANELIST

- (31) Hegel, ugh!, In the great days of radio -- before TV overshadowed it -- CBS had a weekly radio series titled *Invitation to Learning*, where one could hear intelligent talk by intelligent people. These talks were later published as a book, *Invitation to Learning* by Huntington Cairns, Allen Tate, and Mark Van Doren (NY:Random House, 1941).

Here is one of the talks, from Pages 410-421, with thanks to TOM STANLEY.

(MR. BERTRAND RUSSELL, GUEST)

Cairns: Mr. Russell, I have a letter here from you in which you state: "Hegel's *Philosophy of History* is important as a source of much evil, but (I think) of no good." Would you like to amplify that statement? It was the last sentence in your letter, and it was left hanging in the air. It whetted my appetite.

Russell: I am quite willing to amplify that statement. I think Hegel's *Philosophy of History* is a very important book indeed, judged by the effects it has had, and a totally unimportant book judged by any truth that it may contain.

Tate: Mr. Russell, don't you think it may contain a few incidental truths here and there?

Russell: It is a long book and it is difficult for a man to avoid saying something true when he uses so many words.

Van Doren: I like your distinction between influential books and true books. Rousseau's *Confessions* is often said to be an important book because it is influential. I assume it cannot be called important because it is true.

Russell: We do not know much about Rousseau's *Confessions*, whether they are true or false.

Cairns: Would you like to be a little more specific about Hegel?

Russell: I should be glad to be more specific about Hegel. I think Hegel's *Philosophy of History* is important, partly because it presented a pattern in history—a scheme, a system—according to which historical events were supposed to have developed, which of course people like. It is a simple formula and they think "now we understand it all"; if it is false, they do not notice it.

Cairns: That is an objection to all philosophies of history so far devised. The safest course, it has always seemed to me, is to reject the system and ascertain if the philosophical position of the writer contributes anything illuminating to the discussion of particular historical points. Nothing short of omniscience can devise a system that will embrace all the world.

Tate: But didn't Hegel, himself, say that he actually understood it all?

Russell: He understood it all. Oh, yes, of course, he understood it all.

Van Doren: As if he knew all history.

Russell: He, of course, happened to have read it all; so he knew.

Tate: You say his formula is simple. Could it be stated briefly?

Russell: Everything proceeds by thesis, antithesis and synthesis, and what moves it is the self-development of the Idea, and the Idea is what Hegel happened to believe. The whole course of the universe is making it just such as Hegel thought it was. That is the formula.

Tate: Don't you think one of the marvelous things in Hegel's system is that it applies both at the top and at the bottom? That is, he has a speciously convincing psychological argument, almost like Descartes', that consciousness has two aspects. First, it knows something, then the next problem is what it knows. It knows itself. When Spirit, or Idea, is triumphant, then the condition is reached where we become pure spirituality, and everybody will be merged in the state.

Cairns: Hegel claims that the great virtue of the system is that it accounts for everything in the universe. It is all-embracing, and it assigns to everything in the universe the place that is absolutely proper for it.

Russell: It is bound to; he thought the universe as a whole was the only reality, and if it did not account for the universe, it did not account for anything at all, because he thought you could not pick the universe to bits.

Cairns: Do you object to his primary aims? They are first to write a universal history and secondly to write history in terms of ideas representing periods.

Russell: I object to the second point. I do not mind a man writing universal history, if he has time; but I do object to the notion that there is a simple scheme or thread running through it all.

Tate: Most of us would probably disagree with a great deal that Gibbon says, but you would not object to that kind of comprehensive history, would you?

Russell: No, I don't.

Cairns: Would you mind elaborating a little your objection to writing history in terms of abstract ideas?

Russell: Such a system must be false. Let us say, if you think so, that it is what Hegel calls rational; of course, there are abstract ideas that can be distilled out of the facts, but they must be taken out of the facts and it is not a rational development.

Tate: Didn't Hegel try to distill the facts out of the ideas?

Van Doren: And it was easy for him to do that because any facts that he found he could use. He could choose among the infinite facts there are.

Cairns: I understand Mr. Russell's point to be that he objects to Hegel's system, or rather Hegel's basic notion that historical sequences follow the order of logical categories.

Russell: I object to that.

Cairns: I have no disagreement with you on that point. Such a notion is bound to lead to absurdities, as in Hegel's deification of Prussia. The order of logical categories, at least in Hegel's system, is finite, but since historical development is not finite, one of the two must yield. In Hegel's hands it was history that yielded. The question now, however, is not whether Hegel's sys-

tem is true, but the nature of the objections which can be brought against historians for writing history in terms of abstract ideas.

Russell: Take Hegel's disciple, Marx. You can get Marx out of Hegel by just a few transformations. Where Hegel talks of nations, Marx talks of classes. Where Hegel talks about the Idea, Marx talks about methods of production. With those two changes the two are practically identical.

Cairns: But you are not going to attribute the sins of the disciple to the master?

Russell: I say they are the same sins. I do not say that Hegel is responsible, but I say that the same sin is there in both cases, of thinking there is a simple formula.

Tate: Won't you describe the relation of Marx to Hegel, Mr. Russell?

Russell: It was just the relation of a Hegelian of the left. Hegel started two movements in philosophy, the one of extreme conservatism and the other of extreme revolution. The one represented by the conservative Hegelians and the other by Marx and his followers. But there is not nearly as much difference between Marx and Hegel as there seems to be.

Van Doren: Couldn't the same objection be raised against both historians, insofar as Marx and Hegel were historians? For them, history writes itself. There is an idea, there is a spirit; the idea and the spirit express themselves in the things that have actually happened. The aim, as Hegel somewhere says, is equivalent to the result. In other words, whatever we see has happened in the world must have happened. For my part, I can see no point in either of them calling himself a historian, properly speaking; history is too easy for them to write. Anything that happened had to happen.

Tate: It seems to me that Hegel's conception of freedom is a complete paradox and is unreal. If history is the determinism of thesis, antithesis and synthesis, then freedom has no real meaning at all; it is nothing but a fiction.

Van Doren: History is completely determined.

Tate: Yes, an intellectual determinism, a logical determinism of history.

Russell: Certainly there is, but Hegel uses freedom in a very peculiar sense. Freedom means the right to obey the police, and it means nothing else at all in the works of Hegel.

Van Doren: I wonder if you don't want to substitute one word there. This might be fairer to Hegel: Freedom is the desire to obey. Not the right to obey, but the desire.

Cairns: I think he would say it is a duty to obey because the happy life, as he defined it, was one lived in accordance with duty.

Van Doren: I do not think so. When he describes a happy people, an effective people such as the Athenians, he says that a single Athenian's instinct was to love Athens and to obey its laws; and he represents the English people of the eighteenth century and the early nineteenth century as very happy at being Englishmen. There is nothing else they want to be. Their desires coincide, as he says, doubtless in a pretty highfalutin way, with their destiny. There is nonsense in the background of that, but there is something real in the foreground.

Cairns: I do not think Mr. Russell would make your point a ground of criticism of Hegel, if there is any evidence in support of the position that you just outlined. As I understand it, Mr.

Russell, you think that the course of history cannot be determined speculatively.

Russell: I do.

Cairns: At the same time, you also think that the course of history is subject to laws; but that they cannot be determined because of their complexity.

Russell: I think the course of history is subject to laws and is probably for a sufficiently wise person deterministic; but nobody is wise enough. It is far too complicated and nobody can work it out; and the person who says he has done so is a charlatan.

Van Doren: Back to the subject of freedom for a while. Freedom probably does not mean freedom to do nothing, does it? Freedom is surely freedom to do something.

Tate: I think Hegel bases his most plausible argument on that very point, that there is no such thing as perfect freedom, or pure freedom.

Cairns: At one end he puts despotism and at the other end anarchy.

Tate: Hegel has a real insight there, even if it is a very common one and not at all profound. There is no such thing as unchecked freedom. But the trouble with Hegel is that he proceeds then to take that insight and contradict it with his logical determinism.

Russell: There is a different point here that we have not yet raised. That is Hegel's worship of the state, which I think is a far worse thing than any of the points we have mentioned. He says that the state is the perfect embodiment of spirit, that it is the divine idea as it exists on earth.

Cairns: I do not know what that means; it sounds like nonsense. Would you like to explain it to us?

Russell: It seems to me, of course, nonsense; but what Hegel means by it is that the state is the element of unity in the community, and the element of unity in the world is what he calls God; therefore, the state is analogous to God. He has first misused the word "God"; then he misuses the word "state," and so he comes to the conclusion that the state is what is divine.

Tate: Is he perfectly straightforward when he maintains that this vast unity of the state is based fundamentally upon a prior moral unity in the individual? I am not quite convinced by that, because I don't think he is much interested in unity in the individual.

Van Doren: He is interesting here. He seems to say that a man who is fortunate enough to be born into a state and not into a tribe such as the Scythians, for instance, or the Thracians—a man who is fortunate enough to be born in Athens is indeed fortunate because he has something to obey, something he is delighted to obey and honor.

Russell: But I think it is the community and not the state. Let me give an illustration. Hegel says: All spiritual reality that a human being possesses, he possesses through the state. Now let us apply that to St. Paul, who said he was a Roman citizen. Is anybody going to say that all the spiritual reality of St. Paul came from the Roman State? The thing is preposterous.

Cairns: I am not sure it is as simple as that. Hegel gives this illustration to explain his notion of freedom. He says it is real-

ized by acting within the system and not in opposition to it. He gives a biological analogy, as I recall it; if you want to realize your full capacities as a human being, you must do so within the limitations of your human organism. If you oppose it, you do not realize your aspirations and you destroy your organism.

Russell: But there are many organisms besides the state. Take the church; or suppose you were a man of science and belonged to a learned body.

Cairns: That is true; and the political question is: Which institution has the right to demand the greatest degree of loyalty?

Tate: What did Socrates do about this very problem when he was condemned? Did he not accept the verdict of Athens and refuse to escape? He rejected the chance to evade the sentence of death. Now, why did he do that? Was it the community or the state that commanded his loyalty even to the point of death?

Cairns: My recollection is that Socrates said it was the state.

Russell: There it was, I think, the state; but then his loyalty was extremely limited. He made it perfectly clear that he would not stop talking, not for all the states in the world. He said there was only one way he could be made to stop talking; that was to make him drink the hemlock. However much they ordered him not to talk, he would talk. He makes that quite clear.

Van Doren: Of course, he could not have talked in any other country than Greece. Your instance of St. Paul was interesting, but say a contemporary of St. Paul lived in Vladivostok with all St. Paul's qualities, his brains and his heart. Now, you deny that St. Paul's achievement can be attributed to the existence of the Roman state. I think it might be so attributed, because a citizen of Vladivostok with those same qualities could have got nowhere.

Russell: I did not say his achievement; I said his spiritual reality—which is Hegel's phrase. Now, the spiritual reality of the man in Vladivostok may be the same.

Cairns: Some sentences have been quoted from Hegel that certainly cannot stand analysis. But have we been entirely fair to Hegel? He says explicitly that he is opposed to despotism; that the monarch or the ruler must act for the best interests of the people; that the monarch must encourage the utmost liberty among his people so that he will have an informed public opinion to guide him in his decisions. The monarch must encourage the liberty of the press to the utmost, that is to say, to the limit of abuse. This means that the ruler must submit to vilification on the part of the press as the price of greatness.

Russell: I think you are really overestimating what he says about the liberty of the press. You are not allowing for the fact that he always uses words in a Pickwickian sense.

Cairns: He does indeed.

Russell: He says there should be liberty of the press but not to the point of making the government ridiculous. It must stop short of that. And he sees a whole lot of limitations about that.

Cairns: But he also does say that the ruler must endure vilification.

Russell: He says this of the despot, for instance: The ruler should not be a despot. A despot is an absolute monarch ruling over a country which is not Prussia. That is the definition of a despot.

Cairns: Is that fair? Let us apply his own dialectic to that problem. What is the thesis? Despotism—is it not? The antithesis is democracy and aristocracy, and the synthesis is monarchy. He must, therefore, on his own logic reject despotism wherever it is; and he did so, it seems to me, in his *Philosophy of History*.

Russell: Take again, Mr. Cairns, what you said about public opinion. He is very clear that public opinion is not always right and that it must not always be submitted to; there may be a certain expression of it; but the ruler should not think it is right.

Cairns: He is certainly clear that public opinion should not always be submitted to. I do not think you would insist that a ruler should be bound by public opinion in all cases.

Russell: Absolutely bound. I do not know what else there is that is better, because while public opinion is very likely to be wrong, so is the ruler.

Cairns: That is right. But you must allow for the case where the ruler may have private sources of information not open to public opinion.

Van Doren: Private wisdom?

Cairns: No, I won't say private wisdom. No ruler's private wisdom is necessarily greater than that of public opinion. But I insist we must provide for the case of greater factual knowledge on the part of the ruler.

Tate: May I ask a question about another phase of this same point? In what respect does Hegel's despotism as thesis, aristocracy and democracy as antithesis, and monarchy as the synthesis of the two differ from the kind of compromise that Aristotle contemplated? I think it is the Aristotelian "commonwealth" that is a compromise between oligarchy and raw democracy. Now, doesn't Aristotle have some notion there of the Hegelian "synthesis"?

Cairns: It has always seemed to me that Hegel's theory was quite similar to some of Aristotle's thought.

Russell: I agree. I think it is very similar; but I do not think the better of it on that account.

Cairns: Are you implying that Aristotle is as wicked a man as Hegel?

Russell: Yes.

All together: Oh, you are?

Tate: Mr. Russell, before we began this conversation you said that Plato was very wicked. You would have neither of them, then?

Russell: I think that philosophy has suffered four misfortunes in the world's history: Plato, Aristotle, Kant and Hegel. If they were eliminated, philosophy would have done very well.

Cairns: Who would be left, Mr. Russell? We will exclude present company.

Russell: There would be very many people left. There would be Locke, Berkeley, Hume, Leibnitz and Spinoza.

Tate: A very bad tradition, Mr. Russell.

Van Doren: What about this man as a historian? I was interested in a certain conversion of terms that he seemed to make. Here is this sentence: "History in general is, therefore, the development of Spirit in time, as nature is the development of the Idea in space." He makes a distinction between time and space which may remind us of Lessing in his *Laocöon*.

Cairns: I think it goes back to a point we were discussing before. In history the Idea unfolds its various phases in time and the dominant phase at any epoch is embodied in a dominant people. The succession of these phases, in Hegel's theory, constitutes world history.

Van Doren: Perhaps it is a modern—I wonder if it is an especially modern—notion that a philosopher can turn his attention from space relations which are either metaphysical or physical, scientific or rational, to those relations which are in time? Here is a philosopher trying suddenly to develop a new language—altogether a temporal language instead of a spatial one.

Cairns: He devised his own language to a large extent. While he viewed history as a temporal sequence, he did not thereby neglect spatial elements.

Van Doren: I wonder if you can see things arranged in time as clearly as you can see them arranged in space?

Russell: I think you can, yes. Of course, it did not suit him so well arranged in space because he wanted a dialectic process, so that the one-dimensional series was more suitable for his purposes.

Van Doren: But dialectic originally considered was not anything that took place in time, was it?

Russell: No, it was purely logical, but it was a one-dimensional series.

Van Doren: Something anterior in logic is not necessarily earlier, is it?

Russell: Not necessarily, but for Hegel it was.

Van Doren: Hegel literalized the anterior and posterior relation into before and after.

Cairns: If he proceeded in space, he would have to exclude America from the development of his system, as he did anyway.

Van Doren: Exclude what?

Cairns: America.

Van Doren: I thought you said a "miracle."

Tate: It is the same thing.

Russell: He did not exclude America. He said America was some day going to be very important; there would be a great war, he said, between North America and South America; that was when America was going to be important.

Cairns: He said America at that time, and he was speaking or writing in the 1820's, was not worth discussing because it was an echo of Europe, which may have been true in the 1820's.

Tate: Now, this question of time and space: I should like to ask about Spengler's relation to Hegel. It seems to me that Spengler's leading notion is the flow of time; it eliminates space altogether; the Faustian or modern culture is the great culture, and space is annihilated. Do you think he derives from Hegel?

Russell: A little, I think, yes.

Tate: His notion of the destiny, destiny of the world historical figure and of a culture, seems to me to come from Hegel.

Russell: Yes, the whole notion of the pattern in history. Of course, there is one spatial element in Hegel's *Philosophy of History*—he thinks that the absolute idea is always moving west-

ward.

Tate: That is a geographical notion.

Cairns: Do you think it is unreasonable to think of the universe as Hegel did, both of nature and mind, as a process, a development, a history?

Russell: It is unreasonable to think of it as the development of an idea; because, while possibly it may be, it certainly is not a development of my ideas or your ideas or Hegel's ideas. Hegel assumes that he is as wise as the Creator of the universe when he says it is his ideas that are developing.

Van Doren: He tells us equally little whether we ask him what the Idea is or whether we ask him how he knows what it is. In either case, he has no answer to give us. If we do not believe this book, he cannot convince us.

Russell: I always think a man's inconsistencies are the key to his passions. Hegel thought that unity was the important thing and that the whole was always more real than its part, and so forth. He should, therefore, have emphasized mankind rather than separate nations or separate states. In fact, he makes the state supreme. He says no state has any duty whatever in relation to any other state. War is, therefore, a thing not to be deplored but is good. That is inconsistent with his metaphysic and shows therefore that he had a passion in favor of war.

Van Doren: The significant events for him have been military events.

Russell: He says men are warriors. He says, "War has the higher significance, that through it the moral health of peoples is preserved in their indifference toward the stabilizing of finite determination." He says war is the condition in which we take seriously the vanity of temporal goods and things.

Tate: Don't you think probably in the long run he would contemplate a world state, a Pax Germanica?

Cairns: No, he expressly repudiated the idea of a universal peace.

Tate: Would that not logically develop if the Idea is going to be completely realized?

Russell: That is just the point. It should have followed from his premises.

Van Doren: Is there anything for a philosopher to worry about in the notion some people have—Tacitus had it, William James had it too—that peace can be degenerating and softening? If we could imagine peace stretching ahead of us now for 10,000 years, is it possible to imagine what human beings would then be like? What would they be doing, what would they be interested in? Would they be bored to death? Is this a problem to be solved? The existence of such questions is the reason philosophers have advanced for worrying about the notion of universal peace.

Russell: Yes, they have; but I always regard that as a mark of brutality. I think that if you have brutal instincts, you like killing people. War is the only occasion when you can do it without being hanged. That is the sole reason why anybody likes war; anybody who praises war praises it from beastliness.

Why I Changed My Mind

EDITOR'S NOTE: The following guest-editorial by Bertrand Russell was written in response to criticism that his position on the USSR has drastically changed. Thirteen years ago he felt that the West should threaten war against the Soviet Union. Today he urges the pursuit of agreements.

LONDON.

AT A TIME when America alone possessed the atom bomb and when the American Government was advocating what was known as the Baruch Proposal, the aim of which was to internationalize all the uses of atomic energy, I thought the American proposal both wise and generous. It seemed to me that the Baruch scheme, if adopted, would prevent an atomic arms race the appalling dangers of which were evident to all informed opinion in the West.

For a time, it seemed possible that the USSR would agree to this scheme since it had everything to gain and nothing to lose. Unfortunately, Stalin's suspicious nature made him think that there was some trap, and Russia decided to produce her own atomic weapons. I thought, at that time, that it would be worthwhile to bring pressure to bear upon Russia and even, if necessary, to go so far as to threaten war on the sole issue of the internationalizing of atomic weapons.

My aim, then as now, was to prevent a war in which both sides possessed the power of producing worldwide disaster. Western statesmen, however, confident of the supposed technical superiority of the West, believed that there was no danger of Russia achieving equality with the non-Communist world in the field of nuclear warfare. Their confidence in this respect has turned out

to have been mistaken. It follows that, if nuclear war is now to be prevented, it must be by new methods and not by those which could have been employed ten years ago.

My critics seem to think that, if you have once advocated a certain policy, you should continue to advocate it after all the circumstances have changed. This is quite absurd. If a man gets into a train with a view to reaching a certain destination, and on the way the train breaks down, you will not consider the man guilty of an inconsistency if he gets out of the train and employs other means of reaching his destination. In like manner, a person who advocates a certain policy in certain circumstances will advocate a quite different policy in different circumstances.

I have never been a complete pacifist and have at no time maintained that all who wage war are to be condemned. I have held the view, which I should have thought was that of common sense, that some wars have been justified and others not. In the present situation, if a great war should break out the belligerents on either side and the neutrals would be equally defeated. This is a new situation and means that war can no longer be used as an instrument of policy. It is true that the threat of war can still be used, but only by a lunatic.

Unfortunately, some people are lunatics. Not long ago lunatics were in command of a powerful state. We cannot be sure this will not happen again. If it does, it will produce a disaster compared with which the horrors achieved by Hitler were a flea-bite. The world at present is balanced in unstable equilibrium upon a sharp edge. To achieve stabil-

ity, new methods are required, and it is these new methods that those who think as I do are attempting to urge upon the East and upon the West.

I do not deny that the policy I have advocated has changed from time to time. It has changed as circumstances have changed. To achieve a single purpose, sane men adapt their policies to the circumstances. Those who do not are insane.

Though I do not admit inconsistency, I should not be wholly sincere if I did not admit that my mood and feelings have undergone a change somewhat deeper than that resulting from strategic considerations alone. The awful prospect of the extermination of the human race, if not in the next war, then in the next but one or the next but two, is so sobering to any imagination which has seriously contemplated it as to demand very fundamental fresh thought on the whole subject not only of international relations but of human life and its capabilities. If you were quarrelling with a man about some issue that both you and he had thought important, just at the moment when a sudden hurricane threatened to destroy you both and the whole neighborhood, you would probably forget the quarrel. I think what is important at present is to make mankind aware of the hurricane and forgetful of the issues which have been producing strife.

I KNOW it is difficult after spending many years and much eloquence on the evils of Communism or Capitalism, as the case may be, to see this issue as one of relative unimportance. But, although this is difficult, it is what both the Soviet rulers and the men who shape the policy of the United States will have to achieve if mankind is to survive. To make such a realization possible is the purpose of my present policy.

What is needed is a new direction on both sides and a determination, not only to make proposals, but to find compromises which give no net advantage to either side. The risk involved in not negotiating is the extermination of the human race. This, surely, is a greater risk than that of some diplomatic advantage to one side or the other. We must hope that this will become obvious both to Russia and to the United States. What is needed is emphasis on our common interest in human survival rather than upon the matters in which our interests are supposed to differ. Whether we wish it or not, the only road to the welfare of each is the welfare of all.

—BERTRAND RUSSELL.

In the Direction of Sanity

ON THE second floor of a small walk-up apartment in London, overlooking the Thames River, I had a chance to chat with Bertrand Russell. He was surrounded with papers, letters, and documents relating to the one matter that commands his dominant attention and concern these days—the danger of nuclear war. It was on the eve of his eighty-sixth birthday, but he had lost none of the alertness or intellectual agility that had so impressed me when we had met in the United States almost fifteen years earlier.

Lord Russell escorted me to the narrow balcony facing the Thames and pointed out some of the sites in the surrounding area. He spoke of the color of the sky and water at dusk in terms that were none the less poetic because of the reserve in which his appreciation was phrased. Then we came into his workroom and spoke about the movements in the United States and Great Britain aimed at creating policies adequate to cope with modern weapons and modern totalitarianism.

This led me to say that I had been troubled by reports reaching the United States; he had been quoted by several interviewers as having advocated surrender to the Soviet Union in order to avert nuclear war. I told Lord Russell I had been deeply distressed at these reports and indeed had been in the unhappy position of having to disagree with him editorially in *The Saturday Review*. Many Americans shared his apprehensions over the effects and implications of continued nuclear testing and on the danger of nuclear war in general. But we did not believe it was necessary to turn in our freedoms or our values in order to meet the challenge.

And we condemned the opposite view; namely, that the only way to meet the threat was through preventive war.

Lord Russell smiled as I spoke. "There's still no difference between us," he said. "I have never believed and I do not now believe that capitulation is the only way out. Recently some commentators from the United States came to interview me. They felt my position on nuclear testing was inimical to the interests of the West. I responded by making the case that the West could not survive except through a workable system of control over nuclear weapons, for the West is totally vulnerable to atomic attack and, if war came, the West would disappear as a force in history, assuming of course that anything would be left at all anywhere."

"At any rate, my interviewers continued to force the issue. Finally, one of them put the question to me in its most extreme form: namely, if I were convinced that the only way of averting worldwide nuclear extermination would be by surrendering to the Russians, what would I do?"

Lord Russell interrupted himself at this point to light up his pipe.

"I replied to the interviewers," he resumed, "that I did not believe that these alternatives were the only ones before the world, therefore it did not seem to me that any answer I might give would be a useful one. But my interrogators continued to press me on this: how would I answer the question theoretically, they demanded."

"Theoretically, I replied, if I were convinced that the only way of avoiding a war of extermination would be through surrender to Communism or to anyone else, then under those terms I would be obligated to prefer

surrender. Not that life would not be oppressive under totalitarianism; it would be. And it would be foolish to expect that the oppression would be lifted until after many years. But the important thing is that human life would continue and with it the hope that man eventually might be able to restore some measure of his values and his good sense. In this context, therefore, my choice was not a difficult one. Human survival is the real issue and the higher value. Without people, you have neither freedom nor the hope of freedom. I believe in both.

"The alternatives before the world today are neither preventive nuclear war nor capitulation." Lord Russell continued. "We still have a chance to apply sanity to our problem in a way that very possibly might preserve the peace and keep our freedoms. But a policy based on the illusion of security through nuclear supremacy is unworkable. The only security is through a plan of control over nuclear weapons and, eventually we hope, over the causes of war itself."

I put a question to him that had come up time and again in the U. S.

"Don't people ask how you propose to get the agreement of the Soviet Union to such propositions?" I inquired.

"Certainly," he said. "They put it much more severely than that. They remember that I advocated a policy of toughness toward the Soviet Union at the end of the Second World War. Now they want to know whether I've gone soft and why I've changed my mind."

"And I tell them that any man who doesn't change his mind in the light of changed conditions is an idiot. Profound changes have taken place. Apart from the changes of personnel and policy in the Soviet Union, we have the great changes in the world itself, the biggest of which is the change in the nature of warfare. To advocate a policy based on the feasibility or the eventuality of war is to advocate extermination."

"The big question, therefore, is to find out whether it is possible, in the interests of mutual survival, to come to any agreements with the Russians in the nuclear field. I think we ought to begin with nuclear testing, not only because of the demonstrated danger of nuclear testing but because the Russians have said they would agree to a cessation with inspection and safeguard. For us to refuse to pursue this possibility makes no sense. Naturally, we do not have 100 per cent certainty or safety in any course of action we may take. But it helps when one moves in the direction of sanity. It helps more than a little."

—N. C.

HONORARY MEMBERS

(35) Honorary Member review. These are the present Honorary Members: Katharine Tait, Conrad Russell, Paul Edwards, D.F. Pears, Sir Karl Popper, Paul Arthur Schilpp, and Linus Pauling. Two former Honorary Members have died: A.J. Ayer, and John Russell. If you wish to name someone for consideration as an Honorary Member, please do so, and say why you think he/she may qualify.

BRS/APA 1991

(36) Call for Papers.

The Bertrand Russell Society announces a call for papers to be presented at its meeting with the Eastern Division of the American Philosophical Association in December 1991. Papers may be on any aspect of Russell's Philosophy. They should have a reading time of about one half an hour and should be submitted in triplicate, typed and double spaced with an abstract of not more than 150 words. The name and address of the author and the title of the paper should be submitted on a separate page. The submission deadline is April 1, 1991 and the papers should be sent to David E. Johnson, Chair, Philosopher's Committee, The Bertrand Russell Society, Sampson Hall, U.S. Naval Academy, Annapolis, MD 21402-5044. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

ANNUAL MEETING (1990)

- (37) Registration form: 1990 Annual Meeting, The Bertrand Russell Society, Inc.
June 22-24 McMaster University, Hamilton, Ontario, Canada

Name(s) _____

Address _____

City _____ Zip _____ Phone (____) _____ - _____

Single or double occupancy? _____ Amount enclosed (Canadian) \$ _____

One all-expense fee includes registration, lodging Friday and Saturday nights, 5 meals (including Banquet) from Friday evening meal through Sunday morning breakfast, Red Hackle Hour. Double occupancy \$110; Single \$125; Canadian money.

Send completed Registration Form and Fee as soon as you can to:

Bertrand Russell Archives, Mills Memorial Library,
McMaster University, Hamilton, Ontario, Canada, L8S 4L6

- (38) How to get to McMaster. You can travel to McMaster via Toronto or via Hamilton (which is closer to McMaster).

If you fly to Toronto, take the Trentway-Wagar bus to Hamilton (\$16.50.), then bus or cab to McMaster. Or take the luxury minivan from the Airport directly to McMaster (\$33). About an hour's ride.

If you fly to Hamilton, take the bus to Hamilton; then bus or cab to McMaster.

If you drive, park your car in Zone 1 (north of the tennis courts).

Check in at The Bertrand Russell Archives, in Mills Memorial Library, McMaster University.

CONTRIBUTIONS

- (39) We thank these members for their recent contributions to the BRS Treasury:

We solicit contributions from members. You may send a contribution at any time, in any amount, large or small, care of the newsletter or the RS Library, addresses on Page 1, bottom.

(40)

BR ON MANDELA (1962)

From *The Daily Worker*, London, 21 December 1962, p. 5, with thanks to HARRY RUJA:

We are in great debt to Nelson Mandela, leader of the banned African National Congress, says Earl (Bertrand) Russell.

Paying tribute to the African leader in a message to the Anti-Apartheid Movement, Lord Russell says South Africa is one great concentration camp.

"Because this is so, the protest of those who stand out against it is all the more incredible and courageous," he adds.

CLEAR DUTY

"There is in South Africa the most clear duty of conscience. Conscience requires that everyone who finds it possible to do so should resist to the limit until this filthy regime is eliminated and the people of South Africa are free."

BOOK REVIEW

- (41) *Bertrand Russell on God and Religion*, ed. Al Seckel, a "Paperback Original" reviewed by Jonathan Kirsch in the Book Section (p.13) of the *Los Angeles Times* (4/20/86).

Another lion of the English literary world is celebrated in *Bertrand Russell on God and Religion*, edited by Al Seckel (Prometheus: \$12.95), an anthology of Russell's essays on the varieties of faith, and the lack of it, in his times. We are reminded that Russell, who may be best remembered for his early leadership of the contemporary nuclear disarmament movement, "began thinking about philosophical questions at the age of fifteen"—in 1888! His famous confession of faith in

pure reason, "Why I Am Not a Christian," was an address first delivered in 1927. "The whole conception of God is a conception derived from the ancient Oriental despotisms," he proclaimed. "It is a conception quite unworthy of free men." Indeed, the sheer elegance of Lord Russell's language, the strict logic of his argument, and the extremely civilized tone of even his most ardent rhetoric all seem almost antique. Still, "On God and Religion" is a classic not only

because of its place in the history of ideas, or its roots in the tradition of Western literature and philosophy, but also because the truths that it offers are truly timeless. Russell could have been writing for today's op-ed page when he observed that "the qualities most needed are charity and tolerance, not some form of fanatical faith such as is offered us by the various rampant isms."

ABOUT BR'S VIEWS

- (42) *Dewey and Russell*. BRS Laureate Alan Ryan in *The Wilson Quarterly* (Winter 1990), with thanks to MARK HOGAN:

Having only recently published a political biography of Dewey's British counterpart, Bertrand Russell, I was intrigued and amused by the similarities and differences between Diggins's hero ["John Dewey: Philosopher in the Schoolroom," *WQ*, Autumn '89] and mine. The similarities, of course, are many and obvious; both were ardent defenders of an education in which the child learned by doing, both began by doubting the need for any authority in the classroom other than the discipline of the subject matter itself, and both came to think in Hobbes's memorable words that children "are born inapt for society." Both, again, were hard to place on the spectrum that runs from left-wing liberalism to moderate socialism; Dewey, as Diggins remarks, thought FDR by no means went far enough in reconstructing the American economy

after the Depression, while Russell all his life hoped that mankind would become rational and adopt the decentralized Guild Socialism to which he and Dewey had both subscribed in optimistic pre-war days.

What is more striking than their similarities is the absolute barrier that divided them. Diggins only touches on it when he observes that critics of pragmatism "believed that pragmatism simply confused truth with the process of its verification." For Russell at any rate, pragmatism was a sort of secular blasphemy. With God gone and most ethics shaky, all mankind had left was a concern for the truth—not a concern for what it would "pay to believe," but a concern for how things really were.

By bringing philosophy back into the marketplace, Dewey closed the breach that Russell had

opened between the concerns of the intellectual and the duties of the plain man. By the same token he lost something important. It is not only, as Diggins says, that critics like Van Wyck Brooks and Lewis Mumford could complain that he exalted the practical at the expense of the spiritual. It is more that Dewey's passion for closing all gaps and rejecting all dichotomies is ultimately less true to life than Russell's insistence on the tragic dimension of everyday existence. A strong sense of the uselessness of truth and its unrelatedness to human affairs still strikes many of us as an indispensable element in the psychology of the serious philosopher.

THE BENARES CHAPTER

(2)

The BRS in India The Benares Chapter of the BRS -- located in Varanasi, India (formerly called Benares) -- is the brainchild of its Director, DR. CHANDRAKALA PADIA, of Benares Hindu University, a Russell scholar and BRS member.

What is novel about the Benares Chapter -- other than its location -- is that the annual membership dues which the Chapter pays to the BRS is a fixed amount, regardless of the number of chapter members. This lowers the cost of membership dues for individual members very considerably, and makes it possible for persons who otherwise might not enroll in the BRS, to do so.

Dr. Padia saw the problem (dues), and developed its solution, in consultation with the BRS.

The Chapter's official inauguration took place on May 18, 1990, Russell's birthday. It was an important occasion, attended by eminent scholars, and reported in the newspapers (see below).

Talks were given by Professor R. R. Tripathi (Dept of Psychology, and Dean, Faculty of Social Sciences), Professor Nalini Pant (Department of Political Science), Professor D. K. Srivastava (Department of Economics), Professor R. S. Sharma (Department of English), Dr. D. K. Rai (Department of Philosophy), Professor V. C. Srivastava (Department of Ancient Indian History and Culture), and Dr. Rashmikala Agrawal (Department of Art History).

Dr. Padia offered her thanks to all the participants, and expressed the hope that there would be many more such gatherings on themes related to Russell's thinking.

The Benares Chapter is off to a good start. It had 14 members on the day it was officially inaugurated.

Papers from the Benares Chapter's inaugural meeting of May 18, 1990 -- including summaries of many of the talks -- have been bound, and may be borrowed from the Russell Society Library.

From *The Pioneer*: VNS: (May 19th, 1990), of Varanasi, India:

The Pioneer: VNS: Saturday May 19, 1990

Russel's works relevant for developing countries

By Our Staff Reporter
VARANASI, May 18--The works of Bertrand Russell are more important/relevant for India and other developing Third World countries than Europe and America or other developed countries. His community works and ideas are so revolutionary that he cannot be confined to time and space limits. In fact the multi-faceted intelligent Russel was torch-bearer of a new age" opined the speakers at the inaugural function of the Varanasi Chapter of

Russel Society---USA held at the Political Science Department of Benares Hindu University here today. Today was the birth anniversary of Bertrand Russell, too.

The Varanasi chapter of the Society was inaugurated by the Dean of Social Sciences Faculty Prof R R Tripathi.

Professor Nalini Pant, the Chief Orator on the occasion, in her key-note address said Russel was a 'perfect man'. He was the foremost protagonist

of peace, liberty and socialism. For his ideas, he had to remain behind bars, but even this could not deter him from his clinging to the humanity and he kept snubbing the British Prime Minister Churchill", said Prof Pant.

Prof D K Srivastava of Economics Department said Russel was the one of the philosophers who cautioned the world about the ill effects of technical progress on humanism and the life style of the

people.

Prof R S Sharma, the Head of the Department of English, said Russel's writing was diverse and complete. He superbly blended the poetic and prose expressions to create a new sensibility and aesthetics.

Dr A K Rai gave a detailed illustration of Russel's philosophy. He said, Russel was the first philosopher who bluntly attacked the Idealism. Dr V C Srivastava of the Department of History said Russel's contribution

to the fight against nuclear weapon could not be thrown into oblivion. Dr Rashmi Kalia Agrawal of the Department of History of Arts also spoke on the occasion.

Earlier, Dr Chandrakala Padia, the convener of the society threw light on the objectives of the society and the life and works of Russel. In the end, she also proposed vote of thanks.

ANNUAL MEETING (1990)

(3)

McMaster University was the site, June 22-24 was the weekend. And as we had come to expect -- this being our 4th meeting at McMaster -- the physical facilities which McMaster provided were excellent, this time in Wallingford Hall.

Members present: STEFAN ANDERSSON, LYNDA ARCHER, KEN BLACKWELL, JACQUES CARBOU, WHITFIELD COBB, JIM CURTIS, DENNIS DARLAND, BOB DAVIS, LINDA EGENDORF, LEE EISLER, NICK GRIFFIN*, WILLIAM HARE, ROBERT HICKS, DON JACKANICZ, ROBERT JAMES, MARVIN KOHL, GLADYS LEITHAUSER, JOHN LENZ, TIM MADIGAN, STEVE MARAGIDES, ED MCLENATHAN, CHANDRAKALA PADIA, RAY PONTIER, STEVE REINHARDT, BENITO REY, MICHAEL ROCKLER, HARRY RUJA; THOM WEIDLICH, JAMES WOODROW. *enrolled at the meeting.

Non-member speakers present: Elizabeth Eames, Joan Houlding.

Other guests present: Betty and Lyman Flint, Doris and John Passmore, Mrs. Ray Pontier, Carl Spadoni, Sheila Turcon, Derek Watters.

The present BRS Officers were re-elected for another year: Chairman, Marvin Kohl; President, Michael Rockler; Vice-President, John Lenz; Treasurer, Dennis Darland; Secretary, Don Jackanicz; VP/Information, Lee Eisler.

Other decisions made during the Meeting:

- . The site and time of the 1991 Annual Meeting were chosen: National Lewis University, Evanston, Illinois (where Michael Rockler teaches), June 21-23
- . 2-page summaries -- of papers to be presented at the 1991 Meeting -- will be distributed at the Meeting, and published in the newsletter.
- . A new procedure for selecting BRS Award recipients was decided on. Details in the Minutes ().
- . Money will be made available to the Archives, to match money from McMaster University, to publish a 2nd Archives catalog. Details in the Minutes ().

There was a Red Hackle Hour -- Red Hackle was BR's favorite brand of Scotch whiskey -- followed by a banquet (very good!) in the Refectory.

Events of the weekend included the presentation of two awards:

- . The BRS Service Award to Ken Blackwell, Archivist of the Russell Archives, "for his many contributions furthering Russell Studies";
- . The BRS Book Award to Elizabeth Ramsden Eames, "for her outstanding volume, *Bertrand Russell's Dialogue With His Contemporaries*;"

...and these talks:

- . Elizabeth Eames on Russell and the other sex.
- . Lee Eisler's *A History of the Bertrand Russell Society*.
- . Marvin Kohl's Workshop, *Russell's Theory of Rational Love*.
- . Chandrakala Padia's *An Essay in Interpreting Some Details in Russell's Socio-Political Thought*.
- . Michael Rucker's *Bertrand Russell and Education*; Katharine Tait's Critique.
- . Joan Houlding's *Platonic Themes in Russell's Views on Education*.
- . Harry Ruja's *Knowing and Feeling in Religion*.
- . Don Jackanicz's Discussion, *Religion and Science*.
- . Tim Madigan's *Russell and Dewey on Education: Similarities and Differences*.
- . Thom Weidlich's *The Bertrand Russell/City College Case, 1940*.

We will not attempt to summarize the talks, but are pleased to report an innovation: the talks were taped (audio-taped) and will be available from the RS Library. Also, the papers that were read will be duplicated, and bound into two identical volumes. One volume will go to the Russell Archives, the other to the RS Library. So you will be able to read 'em and hear 'em. But not quite yet; we haven't yet received all the papers from their authors.

Start saving your pennies, to come to the 1991 meeting!

(4) MINUTES OF THE 1990 ANNUAL MEETING

MINUTES OF THE 1990 ANNUAL MEETING

The 1990 Annual Meeting of The Bertrand Russell Society, Inc. was held from June 22 to June 24 on the campus of McMaster University in Hamilton, Ontario, Canada. Except as noted, events took place in the first floor lounge of Wallingford Hall.

Friday, June 22, 1990

The meeting was called to order at 7:43 p.m. by President Michael J. Rockler. After welcoming remarks, President Rockler introduced BRS Book Award Committee Chairman Gladys Leithauser, who presented the 1990 BRS Book Award to Elizabeth Remeden Eames for *Bertrand Russell's Dialogue with His Contemporaries*. Ms. Eames then addressed the meeting on "Russell on Women." Following a short break, Lee Eisler presented his paper, "The History of the Bertrand Russell Society." The meeting was recessed at 9:45 p.m. The first session of the 1990 Annual Meeting of the Board of Directors was then held.

Saturday, June 23, 1990

In the absence of President Rockler, Board of Directors Chairman Marvin Kohl reconvened the meeting at 9:00 a.m. Chairman Kohl proceeded to conduct a workshop titled "Russell's Theory of Rational Love." After a short break, President Rockler chaired the Society Business Meeting. Robert K. Davis moved that the 1989 Annual Meeting minutes not be read; this motion was unanimously carried. Treasurer Dennis J. Darland reported that as of the morning of June 23, 1990 the Treasury balance was U.S. \$4,873.67. Kenneth Blackwell reminded attendees that the McMaster University Bookstore was open and that a tour of the Russell Archives was scheduled. Robert K. Davis asked for information on foreign group membership in India and Caribbean areas; it was agreed that this subject would be considered at a later time. Robert K. Davis then moved that the Society Business Meeting be ended and that the second session of the 1990 Annual Meeting of the Board of Directors be begun; this motion was unanimously carried. With the beginning of the Board session, the meeting was in effect recessed at 10:55 a.m. After the Board session, all meeting participants were directed to the Bertrand Russell Archives in the Willis Memorial Library for a tour conducted by Kenneth Blackwell and Sheila Turcon and the opportunity to view exhibits of Russell manuscripts and memorabilia.

The meeting was reconvened by President Rockler at 1:45 p.m. Chandrakala Padia presented her paper, "Understanding Russell: An Essay in Interpreting Some Details of His Socio-Political Thought." President Rockler next read his paper, "Bertrand Russell and Education: Katherine Tait's Critique." Following a short break, Joan Houlding read her paper, "Platonic Themes in Russell's Views on Education." Chandrakala Padia then reported on the Banaras Chapter of the Bertrand Russell Society. The meeting was recessed at 5:05 p.m.

At 6:00 p.m. the Red Hackle Hour began in Wallingford Hall as a prelude to the Banquet, which was held at 7:00 p.m. in the Refectory. After the meal, President Rockler introduced Chairman Kohl, who presented the 1990 BRS Service Award to Kenneth Blackwell for his many contributions furthering Bertrand Russell studies. Mr. Blackwell then briefly addressed those assembled on his past and present archival work. In his remarks, Chairman Kohl also praised Mr. Blackwell and Sheila Turcon for their excellent planning of the Hamilton meeting. As the principal Banquet speaker, Harry Ruja presented his paper, "Knowing and Feeling in Religion." The meeting was recessed at 10:15 p.m.

Sunday, June 24, 1990

The meeting was reconvened by President Rockler at 9:00 a.m. Donald W. Jackanicz offered introductory comments about and moderated an audience discussion of Russell's book, *Religion and Science*. After a short break, Timothy Madigan read his paper, "Russell and Dewey on Education: Similarities and Differences." Thom Weidlich then presented his paper, "The Bertrand Russell/City College Case: 1940." Following President Rockler's closing remarks, the meeting was adjourned at 12:05 p.m.

MINUTES OF THE 1990 BOARD OF DIRECTORS ANNUAL MEETING

The 1990 Annual Meeting of The Bertrand Russell Society, Inc. Board of Directors was held in two sessions on June 22 and June 23 in the first floor lounge of Wallingford Hall on the campus of McMaster University in Hamilton, Ontario, Canada.

Friday, June 22, 1990

The meeting was called to order at 9:51 p.m. by Chairman Marvin Kohl. The following Board members were present throughout the session: Robert K. Davis, Dennis J. Darland, Lee Eisler, Donald W. Jackanicz, Marvin Kohl, Gladys Leithauser, John R. Lenz, Steve Maragides, Stephen J. Reinhardt, Michael J. Rockler, and Harry Ruja. Board member Kenneth Blackwell arrived after the session began.

Chairman Kohl announced that the BRS will sponsor a session at the December 27-30, 1990 annual meeting of the American Philosophical Association in Boston.

Mr. Maragides moved that incumbent officers be reelected. This motion was carried unanimously. (Relected officers are as follows: Marvin Kohl, Board Chairman; Donald W. Jackanicz, Board Secretary; Michael J. Rockler, President; John R. Lenz, Vice President; Lee Eisler, Vice President/Information; Donald W. Jackanicz, Society Secretary; Dennis J. Darland, Treasurer.)

Mr. Rockler reported on tentative plans for a 1991 annual meeting in Evanston, Illinois on the campus of National Lewis University. Mr. Davis moved that the 1991 annual meeting be held in Evanston. This motion was carried unanimously. It was later agreed that the meeting dates would be Friday, June 21 through Sunday, June 23, 1991.

Mr. Maragides moved that the 1992 annual meeting be held in the Chicago area, preferably at Northwestern University in Evanston, Illinois. Although this motion was seconded, no vote was taken. Discussion ensued on possible 1992 meeting sites, most notably the San Francisco area. It was informally agreed that BRS member Timothy J. Madigan would contact San Francisco area universities, including San Francisco State University, to determine what might be possible.

Discussion turned to the proposal of publishing annual meeting proceedings. Mr. Rockler moved that a trial procedure be instituted for the 1991 annual meeting in which participants would be requested to provide a two page presentation summary to be distributed at the meeting and to be published in the newsletter following the meeting. This motion was carried with a vote of Yes--10, No--1 (Mr. Reinhardt), Absent--1 (Mr. Blackwell).

Attention then turned to awards. Ms. Leithauser and Mr. Jackanicz were commended for their work on the 1990 book award. Mr. Davis stated that awardees should preferably be selected from the locality of the meeting site to increase the possibility that they may be able to attend the meeting. Mr. Ruja suggested, but did not make a motion, that Christie Heffner be nominated for the 1991 BRS Award for her work relating to the candid consideration of the sexual aspects of life. After discussion, Mr. Ruja withdrew his suggestion. Mr. Rockler asked for clarification of membership on award committees and clearer procedures for awardee selections. Mr. Reinhardt commented on the need for documentation and accountability of award committee choices. Although Mr. Rockler began to put forth a motion relating to the Board reformulating the criteria for systematic awardee selection, time considerations forced further consideration of this subject to be deferred.

Mr. Blackwell then described the Russell Archives' need to locate funding for the publication of a catalogue of the second Russell archives, which is completed in camera-ready copy. He requested that the Board consider the possibility of the BRS funding one-half of the publication cost. It was agreed that further discussion on this subject would be deferred.

BRS member Benito Rey suggested that the BRS send messages of support to recently reformed countries, such as those in Eastern Europe. It was agreed that discussion on this suggestion would be deferred.

The meeting was recessed at 11:50 p.m.

Sunday, June 25, 1990

The meeting was reconvened by Chairman Kohl at 10:55 a.m. The following Board members were present throughout the session: Kenneth Blackwell, Robert K. Davis, Dennis J. Darland, Lee Eisler, Donald W. Jackanicz, Marvin Kohl, Gladys Leithauser, John R. Lenz, Steve Maragides, Stephen J. Reinhardt, and Michael J. Rockler.

Mr. Rockler moved the following: That (1) the Chairman of the Board of Directors appoint the chairman and six other members of the BRS Award Committee from the BRS membership; (2) nominations for the BRS Award be solicited each year from the BRS membership through the newsletter; (3) nominations be sent to the BRS Award Committee chairman, who will coordinate the Committee's selection of up to three nominations to be submitted to the Board of Directors; (4) the Board of Directors vote on the nominations; and (5) the BRS Award Committee chairman rank the results of the voting and with the Committee choose the awardee. This motion was carried with a vote of Yes--10, Abstain--1 (Mr. Jackanicz).

Mr. Reinhardt moved the following: That the Society create a fund of \$3,500 over a period of two years, by a budgetary allotment of \$1,000 each year and by specific fund-raising in the *Russell Society News*, which fund will be available during 1991 as a loan to the Bertrand Russell Archives of McMaster University to the extent that it is matched by McMaster, for the purpose of printing and publishing the work by Kenneth Blackwell and Carl Spadoni known as *A Detailed Catalogue of the Second Archives of Bertrand Russell*, on the condition that the Bertrand Russell Society be fully and prominently acknowledged in the work, that the loan be repaid as a first liability upon sales of the work, and that copies be available at a substantial discount to members of the Society. This motion was carried unanimously.

Discussion returned to Benito Rey's suggestion made the preceding day. Mr. Rockler moved that Vice President Lenz gather information on Eastern European universities to determine which institutions the BRS may wish to contact concerning Bertrand Russell and the Bertrand Russell Society. This motion was carried unanimously.

The meeting was adjourned at 11:23 a.m.

LORD JOHN

- (5) Grandpa. According to his grandson: "His greatest achievement was the carrying of the Reform Bill of 1832, which started Britain on the course that led to complete democracy." (*Portraits from Memory*, p.109)

But was it really his greatest achievement?

Consider the following, from *The Bathtub Hoax and other Blasts and Bravos* by H. L. Mencken 1958 NY:Knopf, with thanks to KEN KORBIN.

The bathtub was then still a novelty in England. It had been introduced in 1828 by Lord John Russell and its use was yet confined to a small class of enthusiasts. Moreover, the English bathtub, then as now, was a puny and inconvenient contrivance—little more, in fact, than a glorified dishpan—and filling and emptying it required the attendance of a servant. Taking a bath, indeed, was a rather heavy ceremony, and Lord John in 1835 was said to be the only man in England who had yet come to doing it every day.

(6)

BRS/APA 1990

December 1990. The Philosophers' Committee of the Bertrand Russell Society announces the following program to be held in Boston in December 1990, in conjunction with the Eastern Division Meetings of the American Philosophical Association:

Chair: Marvin Kohl, SUNY Fredonia

"Russell's Fifteen Private Language Arguments"
Jan Dejnozka, Union College, Schenectady, NY

Commentator: Fred Guy, University of Baltimore

"Bundle Theory: Its Scope and Limits"
Trip McCrossin, Yale University

Commentator: Albert Casullo, University of Nebraska, Lincoln

For exact date and location, see the November newsletter.

BR'S BIRTHDAY

- (7) Glasses were raised, and a toast drunk, to BR's memory, on his 118th Birthday, May 18, 1990, in Louis' Restaurant in Allentown, PA. Participants included BRS Members GLENN & SANDI MOYER, LEE EISLER, and Moyer son and daughter, Gary Moyer and Kate Lewis, and her husband, James Lewis, and Moyer colleague, Debra Walker. Everyone had a good time, and liked the idea of doing the same thing again next year.

If you took special note of BR's birthday in one way or another, please tell us about it.

BY BERTRAND RUSSELL

(8) From *The Atlantic Monthly* (date of issue not known), with thanks to AL SECKEL.

Turning Point

What first awakened Mahatma Gandhi to the humiliations imposed by their "masters" on "inferior" classes and races?

The same problems which stirred Gandhi have long engaged BERTRAND RUSSELL, the English author, philosopher, and mathematician. Earl Russell, who received the Nobel Prize in Literature in 1950, provides the third in our series dealing with the turning points that shaped the lives of famous men.

MAHATMA GANDHI

by BERTRAND RUSSELL

1

MAHATMA GANDHI was unquestionably a great man, both in personal force and in political effect. He molded the character of the struggle for freedom in India, and impressed his own ideals upon the new governing class that came into power when the English went home. There is, at the present day, a general awakening throughout Asia, but the spirit and policy of India, thanks largely to Gandhi, remains very different from that of any other Asiatic country.

Gandhi, like some other great men, developed slowly. Quite extraordinary psychological acumen would have been necessary to discern his future in the shy youth who studied law, first in India and then in England. His autobiography contains a picture of him as he was in his early days in England, and there is nothing in it to suggest the future loincloth; on the contrary, his costume is faultlessly correct and would pass inspection by the "Tailor and Cutter" without any criticism.

Some of the characteristics that he displayed throughout his life were already in evidence at this time. He had a wide and unsectarian interest in religion, and listened to Christian teaching without hostility, though without acceptance. He had already that scrupulous honesty which later distinguished him. He had been married, as was the custom of this country, while still a schoolboy, but when he came to England he left his wife in India and was not generally known by his English friends to be married. He believed, rightly or wrongly, that a certain young lady was becoming interested in him, and he therefore wrote a long letter to her chaperone explaining his matrimonial position. He had been brought up to be a vegetarian on religious grounds, but his brother, who wanted to become "modern," induced him on a few occasions to taste meat. He found it made him ill, and he disliked the deceiving of his parents that was involved. He therefore reverted to strict vegetarianism before his journey to England. All through his life he attached an importance to questions of diet which it is a little difficult for most modern Europeans to understand. But although in England he observed as far as he could the customs in which he had been brought up, he did not become in any degree a rebel, and did not apparently encounter the kind of treatment by which rebels are created.

After a year or so in India, he went on professional legal business to South Africa, and it was there that events soon pushed him into the career which made him famous. He landed at Durban and

had to travel to Pretoria. The incidents of this journey are treated vividly and precisely in his autobiography. He took a first-class ticket at Durban, and apparently the railway authorities had no objection to selling it to him. But after he had been in the train for some time, a railway official insisted that however much he might have a first-class ticket, he must travel in a third-class carriage. Gandhi refused to yield voluntarily, so he was pushed out of the train, which went on without him. He sat throughout the night in the station waiting-room, shivering with cold, because his overcoat was in the luggage of which the railway company had taken charge, and he would not ask of them the favor of being allowed to get it out.

"I began to think of my duty," he writes in his autobiography. "Should I fight for my rights or go back to India; or should I go on to Pretoria without minding the insults, and return to India after finishing the case? It would be cowardice to run back to India without fulfilling my obligation. The hardship to which I was subjected was only superficial. It was only a symptom of the deep disease of colour prejudice. I should try, if possible, to root out the disease and suffer hardship in the process. Redress for wrongs I should seek only to the extent that would be necessary for the removal of the colour prejudice. So I decided to take the next available train to Pretoria."

A part of his journey had to be done by stage-coach, as there was at that time no railway from the Natal frontier to Johannesburg. He had a ticket for the journey by coach of which the validity was not questioned, but as he was a "colored man," the conductor of the coach considered that he could not be allowed to travel inside.

For a time he was allowed to sit next to the driver while the conductor sat inside, but presently the conductor decided that he wanted to smoke, and ordered Gandhi to sit on the floor of the roof. Gandhi describes the incident: "So he took a piece of dirty sackcloth from the driver, spread it on the footboard and, addressing me, said, 'Sammy, you sit on this, I want to sit near the driver.' The insult was more than I could bear. In fear and trembling, I said to him, 'It was you who seated me here, though I should have been accommodated inside. That insult I put up with. Now that you want to sit outside and smoke, you would have me sit at your feet. I refuse to do so, but I am prepared to sit inside.' As I was struggling through these sentences the man came for me and began

heavily to box my ears. He seized me by the arm and tried to drag me down. I clung to the brass rails of the coach-box and was determined to keep my hold even at the risk of breaking my wrist-bones. The passengers were witnessing the scene — the man swearing at me, dragging and belabouring me, and I remaining still. He was strong and I was weak."

It is difficult to guess how this scene would have ended but for the intervention of some of the passengers, who apparently had some inkling of humanity. Thanks to them, Gandhi was allowed to remain where he was, and a Hottentot, who had been sitting on the other side of the driver, was made to vacate his seat for the conductor. The feelings of Hottentots about this incident remain for a future page of history.

He had some further adventures on the journey, but of a less dramatic sort. No good hotel would give him lodging, and it was only with some difficulty that he procured a first-class ticket from Johannesburg to Pretoria. This he did by writing a long letter to the stationmaster, and then appearing at the station so faultlessly dressed that the stationmaster observed, "I see you are a gentleman." If he had met Gandhi in later life, clad in his loincloth, he would not have been able to say this.

At this time, as Gandhi's reflections show, although he was outraged by the color prejudice that he encountered, he had no conception of general human equality. He was aware of himself as an educated man, a man whose family in their own country had a certain social prominence. He was rendered indignant by the fact that all Hindus in South Africa were called "coolies," however little they might work with their hands. He had not yet thought of Negroes as having the same right to equality as he was claiming for himself, and at first he was not particularly interested in the wrongs of Indian indentured laborers. It was only step by step, through a number of years, that his outlook on human affairs developed to the point where the untouchables became his main preoccupation. I think, however, that the indignities which he suffered on this first journey in South Africa were what first awakened him to the intolerable humiliations to which classes and nations which are deemed "inferior" are subjected by the insolence of their "masters." I should therefore judge that it was this journey which was the turning point in Gandhi's life.

2

GANDHI returned to India in 1896, and while in India he gave large publicity to the bad treatment of Indians in South Africa. What he had to say on this subject was quoted in many Indian newspapers and brought him into contact with Indian leaders. This agitation had repercussions in South Africa, where the white population became filled with fury against Gandhi. His Indian friends in South Africa telegraphed to him to return to that country, which he did. All sorts of measures were adopted to prevent him from landing. First the ship on which he had come was kept in quarantine for a long time, without any medical justification. Then he was warned not to land with the other passengers, but to slip ashore surreptitiously after dark. He would not do this. His refusal nearly cost him his life. His own account in his autobiography is so vivid that it must be quoted: —

"The number of persons present about the wharf was not larger than what is to be usually seen there. As soon as we landed some young lads saw us. As I was the only Indian who wore a turban of a particular type, they at once recognized me, and began to shout, 'Here's Gandhi! Here's Gandhi!

Thrash him! Surround him!' and they came up towards me. Some began to throw stones. Then a few older Europeans joined the boys, and gradually the party of rioters began to grow. Mr. Laughton thought that there was danger in our going on foot. He therefore beckoned for a rickshaw. Up to now I had never sat in a rickshaw, as it was thoroughly disgusting to me to sit in a vehicle pulled by human beings. But I then felt that it was my duty to use that vehicle. Five or six times in my life I have experienced that one whom God wished to save cannot fall even if he will. If I did not fall at that moment I cannot take any credit for it to myself. These rickshaws are pulled by Zulus. The older Europeans and the young lads threatened the rickshaw puller that if he allowed me to sit in his rickshaw they would beat him and smash his rickshaw to pieces. The rickshaw boy therefore said 'Kha' (No), and went away. I was thus spared the shame of a rickshaw ride.

"We had no alternative now but to proceed to our destination on foot. The mob followed us. With every step we advanced, it grew larger and larger. The gathering was enormous when we reached West Street. A man of powerful build caught hold of Mr. Laughton and tore him away from me. He was not therefore in a position to come up with me. The crowd began to abuse me and showered upon me stones and whatever else they could lay their hands on. They threw down my turban. Meanwhile a burly fellow came up to me, slapped me in the face and then kicked me. I was about to fall unconscious when I held on to the railings of a house near by. For a while I took breath, and when the fainting was over proceeded on my way. At that time I had almost given up any hope of reaching home alive. But I remember well that even then my heart did not arraign my assailants."

He was saved from further injury, perhaps even from death, by the wife of the Superintendent of Police, whose name was Mrs. Alexander. She had been a friend of his before, and insisted upon walking beside him so that the mob, even with the worst will in the world, could not injure him much without injuring her too, which they did not wish to do. Finally the police heard what was happening, and escorted him to the police station. From there he reached his destination without further injury.

It was not until many years later that Gandhi became in any general sense a rebel against authority. At the time of the Boer War he did war work for the British, and justified his doing so on the ground that Indians owed something to British protection. He argued at this time that "the authorities may not always be right, but so long as the subjects own allegiance to a State, it is their clear duty generally to accommodate themselves, and to accord their support, to acts of the State." He did not think that arguments as to the injustice of the British case in the Boer War justified a British subject in disobedience, or even in an attitude of passivity. Many things are surprising in Gandhi's development, and this is certainly one of them.

3

GANDHI possessed every form of courage in the highest possible degree. We have already seen his courage in facing the Durban mob. He showed another sort when, shortly after the end of the Boer War, the pneumonic plague broke out. The pneumonic plague, as everyone knows, is even more deadly and even more infectious than the bubonic plague, but without a moment's hesitation Gandhi devoted himself to the care of the victims, and did everything in his power for them until the outbreak had been adequately coped with. He was not under

any kind of official obligation to do this work. I think that few men would have behaved with the wholehearted and immediate devotion which he displayed on this occasion.

The Boer War and its aftermath give more occasion for cynical disillusionment than most events in British history. The war was brought on by the intrigues of moneygrubbing financiers, who spread a network of corruption that descended far down in the social scale. It was fought by the British, first with incompetence and then with inhumanity. It was in this war that concentration camps were invented. Boer women and children were taken to these camps, where they died in large numbers of enteric fever, brought on by the sanitary carelessness of the authorities.

Throughout the war two arguments had been used by the British Government to mitigate its imperialistic character. It was said that the Boers treated non-Europeans very much worse than the English colonists, and it was said that when the war was ended, British miners would find lucrative employment in the mines of South Africa. The British Government, however, decided that Chinese indentured labor would be cheaper than the labor of British miners. A great wave of popular indignation swept out of power the Government which had introduced Chinese labor. Those who had voted for the Liberals imagined that a victory had been won. The Chinese, it is true, were sent back to China, but their place was taken by Indian indentured labor. At the same time legislation was introduced to make the position of Indians in South Africa worse than it had been. At first the British Government refused to sanction this legislation, but very soon it granted self-government to the Transvaal, a measure which was universally hailed as a "noble gesture," and as allowing to the brave Boers the enjoyment of that liberty for which they had fought so well.

The brave Boers immediately saw to it that only they should enjoy the blessings of liberty. The oppressive measures which the British Government had refused to sanction were immediately carried, and the British Government no longer dared to use its legal power to veto. The country had been made safe for mineowners and slave drivers, and the vanquished had been generously granted permission to persist in their slave-driving. This was the situation with which Gandhi had to contend.

The Transvaal Government was faced with a dilemma which generally confronts governments in such a situation. On the one hand cheap colored labor was very convenient, while on the other hand there was a general hatred of Asians, and a desire, so far as possible, to have no non-Europeans except Negroes. With this end in view, acts were passed to compel a sifting of Indians, with a view to diminishing their numbers and to reducing those who remained to a much more subservient condition. Gandhi led the opposition, and it was in this campaign that he first developed the method of *Satyagraha*.

The essence of this method, which he gradually brought to greater and greater perfection, consisted in refusal to do things which the authorities wished to have done, while abstaining from any positive action of an aggressive sort. If the police could be provoked into brutalities, so much the better, but those who were brutally treated were to submit to the treatment with complete passivity. The method always had in Gandhi's mind a religious aspect. He came gradually to object more and more to violence, while at the same time preaching, with ever greater emphasis, the duty of not resisting violence with violence. As a rule this method depended upon moral force for its success. The authorities found it intensely repugnant to persist in

ill-treating people who did nothing whatever in self-defense.

The method was, however, subject to two limitations. One of these, which led Gandhi to what he called a "Himalayan blunder," was the likelihood that excited crowds would be carried away and would forget to observe the limitations that Gandhi endeavored to impose. On some occasions in India Europeans and policemen were killed by the infuriated mob — occasions when the first impulse had come from Gandhi, but he was unable to restrain the subsequent fury. The other limitation to which the method is subject is one which did not arise either in South Africa or in India, but certainly would have arisen if the method had been employed against Nazis or Russian Communists. If the authorities are sufficiently brutal, they can exterminate nonviolent resisters without experiencing that moral repugnance from their acts which in the end paralyzed the British in India. During the Second World War, for example, disciples of Gandhi would lie down on the rails of railways and refuse to move. English drivers would not run over such men, and the result was that railway traffic was paralyzed. I cannot think that if the drivers had been Nazis and the men on the rails had been Jews, the result would have been the same. But in the circumstances with which Gandhi had to deal, his method was capable of bringing successes that probably no other method would have brought.

Take, for example, the "battle" which occurred during the campaign against the salt tax, which was described by an eyewitness, Webb Miller, in an account of which the following is a summary: "The raid which Gandhi had planned on the salt-pans at Dharsana was now carried out by 2,500 volunteers, led by his second son, Manilal. Before they advanced, Mrs. Naidu led them in prayer and appealed to them to be true to Gandhiji's inspiration and abstain from violence. 'You will be beaten, but you must not resist; you must not even raise a hand to ward off blows.' Round the depot a barrier of barbed wire had been erected and a ditch dug. As the first picked column of the volunteers went forward, police officers ordered them to disperse; they still advanced in silence. Suddenly scores of police fell upon them and rained blows on their heads. Not one man so much as raised his arm to fend off the blows. Soon the ground was carpeted with the prostrate bodies of men writhing in pain, with fractured skulls or broken shoulders, their white clothes stained with blood. Then a second column advanced, without wavering, knowing well what awaited it. There was no struggle; the volunteers simply marched forward until they, too, were struck down. Now the tactics were varied. Groups of twenty-five men advanced, sat down and waited. As they sat, the enraged police fell upon them, beat them on the head and kicked them in the abdomen or the testicles. Some were dragged along the ground and thrown into the ditches. Hour after hour this went on, while stretcher-bearers removed the inert, bleeding bodies. Over three hundred casualties were taken to hospital with fractured skulls and other serious injuries; two died. Mrs. Naidu and Manilal Gandhi were arrested."

This sort of thing filled every decent English person with a sense of intolerable shame, far greater than would have been felt if the Indian resistance had been of a military character.

There was, of course, also an opposite effect. The police and some of the British authorities in India were rendered furious as a reaction from their own shame, and became more brutal than they would have been against less passive opponents. But this was not the effect that was produced at a distance by those who read of what was being

Gandhi's moral sense had various aspects that are strange to most modern Europeans. Matters of diet had an importance to him which is a little puzzling. In the midst of events of the most enormous importance, it would occur to him that he ought not to eat salt or pulse, and he would feel about this with the same earnestness that he felt about the fate of India. For example, he took a vow against milk, but once, when he was very ill, the doctor said he would die unless he took milk. His wife pointed out to him that the word he had used in his vow applied only to the milk of the cow or the buffalo, and did not include the milk of the goat. It was therefore permissible for him to drink goat's milk. He was aware that his death would be a loss to India, and on this ground he allowed himself to accept his wife's argument, although it appeared to him somewhat sophistical.

His own account of this matter is as follows: "The will to live proved stronger than the devotion to truth, and for once the votary of truth committed his sacred ideals by his eagerness to take up the *Satyagraha* fight. The memory of this occasion even now rankles in my breast, and fills me with remorse, and I am constantly thinking how to give up goat's milk. But I cannot yet free myself from that subject of my temptations, the desire to serve which still holds me."

Many modern Europeans will have difficulty in understanding his motives for the vow of complete chastity in marriage which he made at a time when he was trying to help the Zulus who were being persecuted for what the Government chose to call a "rebellion." He felt, so he tells us, that he could not be wholehearted in his work, or have all the strength of endurance that it demanded, unless he gave up the joys of family life. This attitude was common in the early Church but now, to a European, feels somewhat strange. Probably for him the decision was a right one. He did and endured things which it is very difficult to do and endure. In spite of bad health, he continuously risked his life by fasts and other hardships. It may be that to achieve the great measure of success which he no less absolute devotion would have enabled him to achieve the great measure of success which he did finally achieve. As to this, no one except himself could be the judge. However that may be, it is impossible to understand him psychologically so long as we think of him in purely modern terms. To build him up psychologically from European ingredients we must make a combination of early Christian saints with medieval ecclesiastics, adding to both, however, something of the sweetness of St. Francis.

For India, which is not a modern country, his character and his religion were what was needed. A more modern-minded man, for example, could not have been nearly so successful in the campaign on behalf of the untouchables. But while his memory deserves to be revered, it would be a mistake to hope that India will continue to have the outlook that to him seemed best. India, like other nations, has to find her place in the modern world, not in the dreams of a bygone age. His work is done, and if India is to prosper, it must be along other roads than his.

done. English people who were not familiar with India, and had no direct financial interest in maintaining the British raj, felt that something must be done to put an end to such atrocities. General Dwyer, who at Amritsar ordered soldiers to fire for ten minutes upon a packed, peaceful mob, unable to escape, killing many and wounding many more, was recalled, and a Conservative Government even went so far as to deprive him of his pension. It is true that he had a number of admirers who presented him with a large sum of money and a Sword of Honor, but this did not represent average British feeling. People who were neither exceptionally rich nor exceptionally brutal began in the end to feel that if British rule could be preserved only by such methods, then it was not worth preserving.

But all this belongs to the later stages of Gandhi's career. To return now to South Africa, the next large campaign in which he was involved concerned the three-pound tax which was imposed upon indentured laborers when the period of their indenture terminated. Very few of them possessed three pounds, and if they were unable to pay the tax, it was remitted on condition of their serving a new period of indentured labor. This meant in practice for most of them that they had unintentionally and unwittingly incurred a life sentence. The conditions of indentured labor were sensibly, and by means of this tax it was transformed by a trick from being temporary to being probably permanent. The agitation which Gandhi conducted against the poll tax was spectacular, and had the political merit of bringing the indentured laborers into the campaign. Gandhi induced them to strike and to undertake a long march, in the course of which he himself was arrested. The movement was so successful that the government was paralysed. After this, the South African authorities compelled the government to capitulate. Lightenment until Gandhi was dead.

4

Gandhi's successes throughout his career depended upon a combination of deep religious conviction and astute political insight. He was immovable when he was certain that one of his many moral principles was involved. He was flexible whenever there was negotiation within the limits of his principles. When his followers got out of hand and practiced violence that he could not countenance, he would punish himself by a fast. And as his devoted adherents imagined him becoming daily more emaciated and risking death on account of their misbehavior, they inevitably repented and, like naughty children, promised not to do it again. His motive in all this was religious, but the effect was to reveal his power upon the whole movement that he had created. Who could venture to disobey a revered and beloved leader who would inflict upon himself suffering, and perhaps death, in expiation of the sins of others? It was a perfect technique, but it was perfect because in his own mind it was not a technique, but obedience to the dictates of duty.

NEWSLETTER MATTERS

(9) Our apologies for the poor printing of Arthur Schlesinger's article, *The Opening of the American Mind* (RSNB5-16) pp. 11-12. We'll try not to let that happen again.

PROMOTING BR/BRS

- (10) Libraries. The Harvard College Library of Cambridge, and The Morris Library of Southern Illinois University at Carbondale now subscribe to the BRS newsletter, and have complete sets of back issues. They also have the 16-Year Index of BRS Newsletters that covers the years 1974-1989. The same BRS materials are in the Library of Congress. We will try to interest more libraries in subscribing to *Russell Society News*. We are indebted to HARRY RUJA, whose suggestions led to these results.
- (11) BR at Muhlenberg. We showed a videotape of BR to a group of about 25 students at Muhlenberg College (Allentown, PA) on April 30th. Professor Ted Schick, in charge, had made the arrangements. Also present were Professors Schlecht and Reed. Four of the Woodrow Wyatt 1959 interviews were viewed. At the end, 12 students signed up to receive information about the BRS.
- The Woodrow Wyatt BR Interviews now exist in several forms: in book form as *Bertrand Russell Speaks His Mind*; in the BRS newsletter, twice: RSN46-10 and RSN64-33; on audio cassettes (RS Library Audio Cassettes 229 and 230.) On videocassette (RS Library Videotapes 263, 268, 269.)

AWARD NOMINATIONS WANTED

(12)

We encourage members to submit names of people they think should be considered for the 1991 BRS Award and the 1991 BRS Book Award. When you submit a name, state why you think your candidate deserves the Award. Here are the 2 Awards:

The BRS Award. Your candidate should meet one or more of the following requirements: (1) worked closely with BR in an important way, (like Joseph Rotblat); or (2) made an important contribution to Russell scholarship (like Paul Arthur Schilpp); or (3) acted in support of an idea or cause the Russell championed (like Henry Kendall); or (4) promoted awareness of BR or BR's work (like Steve Allen); or (5) exhibited qualities of character, such as moral courage, reminiscent of BR.

The BRS Book Award should go to a recent book that deals in an important way with some aspect of BR's life, work, times, or causes.

Please send your candidates c/o the newsletter, for forwarding. Address on Page 1, bottom.

HONORARY MEMBERS

- (13) Conrad Russell, BR's 2nd son and the present Earl, gave a talk at the University of Illinois, Urbana-Champaign on 4/5/90. Here's part of what the announcement said...with thanks to DON JACKANICZ:

A Not-Quite-Federal State: Britain 1603-1990

Conrad Russell
Department of History, King's College, *University of London*

With the accession of James VI of Scotland to the English throne in 1603, Britain became a "sub-federal" state composed of England, Scotland, and Ireland but has never come to terms with its identity as such. This has notoriously caused certain problems in Northern Ireland where the interests of all three nations met and still meet

The announcement continues with this:

Professor Russell is in a unique position to observe and analyze the tensions between separatism and central control. He has strong ties to both the academic and political worlds as an eminent historian and, since 1987, as a member of the House of Lords.

BOOK REVIEWS

- (14) *Spinoza And Other Heretics* by Yirmiyahu Yovel, reviewed in the NYT Book Review (3/18/90). It helps explain why Spinoza was BR's favorite philosopher.

A Durable Heresy

SPINOZA AND OTHER HERETICS

By Yirmiyahu Yovel.
Volume One: *The Marrano of Reason*. 244 pp.
Volume Two: *The Adventures of Immanence*. 225 pp.
Princeton, N.J.: Princeton University Press.
Volume One, \$24.50. Volume Two, \$29.50.
\$45 the set.

By Seymour Feldman

IN 1492, following a century of massacres and forced conversions, the Jews of Spain who refused to become Christians were expelled. Out of the conversion campaign there emerged a new phenomenon in Spanish and Jewish history: some of the new converts, or Marranos, preserved a hidden Jewish life and identity.

It is the argument of "Spinoza and Other Heretics," Yirmiyahu Yovel's erudite and important work on Baruch Spinoza, the 17th-century Dutch philosopher who was the child of Marrano parents, that the Marrano mentality was a major factor in the formation of Spinoza's personality and philosophy. And, in turn, insofar as Spinoza's thought influenced modern philosophy, this Marrano character pervades much of our own culture, especially among those who have been influenced by such thinkers as Marx, Nietzsche and Freud, whom Mr. Yovel calls "heretical." Although there is a very fine chapter on Spinoza's philosophical style and language and a superb study of one of his salient ideas, salvation through knowledge, Mr. Yovel's book focuses on Spinoza's antecedents and his influence.

Building upon and extending the research of a number of European and Israeli scholars who have revealed the Marrano context of Spinoza's background and of his excommunication from Judaism, Mr. Yovel gives us a fascinating and richly textured picture of 17th-century Jewish Amsterdam. It is now well established that there were heterodox elements in the Jewish community and that Spinoza was not alone. Along with two others, Spinoza was excommunicated in 1656 for "unorthodox" practices. Since the announcement of the ban is vague, scholars have been trying to give a more detailed picture of the reasons for it.

It is Mr. Yovel's thesis that Spinoza and his colleagues in heresy had developed a "philosophy of immanence" that was thoroughly incompatible not only with traditional Judaism, even in its own considerable diversity, but inimical to all historical religions that are based on a dualistic concept of God and the world. This philosophy of immanence was joined with a certain literary and philosophical style of semantic dissimulation, giving rise to a specific genre of discourse, the Marrano "dual language," which had been developed by Spinoza's Marrano predecessors to enable them to say what they wanted to without revealing too openly their true thoughts or identity. As what Mr. Yovel calls a "Marrano of reason," Spinoza used this dual language both to undermine the traditional belief in a transcendent God and to convert others to the philosophy of imma-

Seymour Feldman, a professor of philosophy at Rutgers University, has edited a new English translation of Spinoza's "Ethics."

nence, which is neatly summed up in Spinoza's famous formula: God, or Nature.

Since Spinoza's God is not encountered in any supernatural revelation but in nature, the way to know and love this deity is different from the rituals of traditional religion. Whereas Spinoza's Marrano father would have said that salvation is in the law of Moses and not in the law of Jesus, Spinoza sought salvation in reason. Mr. Yovel gives us an insightful analysis of Spinoza's notion of intuitive cognition, the highest level of knowledge whereby the knower attains "blessedness," or salvation, and does it in this life.

Realizing that this goal was too difficult for everyone to achieve, Spinoza enunciated a twofold message: a religion for the multitude purified of its inessential, false and dangerous elements; and a philosophy for those able to pursue the life of pure reason. Those attaining the latter would have to live a Marrano-like existence, since they would be out of tune with the majority who still thought in terms of traditional religion.

Baruch Spinoza (1632-77).

Although Mr. Yovel has made an important contribution to the understanding of Spinoza by providing us with such a detailed description of the Marrano world in which Spinoza was born and educated, I do not share his conviction that this Marrano mindset was "the fundamental" influence on Spinoza. That Spinoza was an "immanentist" is correct; that he came to this philosophical position as a result of his Marrano heritage is unconvincing. Most Marranos who were able to escape from the Inquisition in Spain returned to the Jewish community as faithful Jews; only a small minority found the reconversion difficult.

Spinoza's immanentism is better understood as the logical outcome of his own philosophical critique of the medieval Jewish philosopher Moses Maimonides and Spinoza's

contemporary, the French Christian philosopher René Descartes, the two men with whose doctrines he was most familiar. The difficulties in traditional philosophical and theological dualism led Spinoza to reject this approach and to develop the alternative philosophy of monism, or immanentism. The Marrano environment and experience had very little to do with this.

In the second volume of Mr. Yovel's study the focus shifts to the history of modern thought, especially the major figures from Kant through Freud. Mr. Yovel argues that these modern thinkers all share or reflect several important themes or projects drawn from Spinoza. In short, they are "heretics" or revealers of a "dark enlightenment," according to which man is not a temporary citizen of this world to be transported eventually to a different domain where his true salvation lies; instead, the only world is this one. The major modern thinkers are disciples of Spinoza insofar as they advocate some form of "secular salvation," or "immanentism." Mr. Yovel's discussions of Nietzsche and Freud are most illuminating and stimulating. In an epilogue he presents his own version of the philosophy of immanence in which Spinoza's metaphysical moralism is tempered with Freud's more sober therapeutic approach. The "dogmatic" philosophy of Spinoza is replaced with a "critical" philosophy of immanence in which finitude, tolerance and pluralism are the main motifs.

AT THE end of Volume One, Mr. Yovel raises the questions of Spinoza's Jewishness and his significance for Jewish history. Was Spinoza "the first secular Jew"? Indeed, was he the first secularist? There is no doubt that secularism was an integral component of Spinoza's social philosophy. He advocated a society in which religion was to be a private matter and freedom of apd from religion was guaranteed. But, Mr. Yovel reminds us, in that age Spinoza could not live as a secularist. He was a "Marrano of reason," who lived in a society in which one was either a Christian or a Jew. He was neither and he cautiously taught a philosophy that undermined both. Society was not ready for him.

There was no place for Spinoza as a secular Jew in 17th-century Amsterdam or in any other Jewish community. In this respect he had to be banned from the Jewish community. Yet, Spinoza's philosophy of secular salvation has become a main theme in modern Jewish thought and life, especially among the early Zionists who saw in Spinoza their forerunner. Of course, Spinoza was not a Zionist, in spite of his admission that the revival of a Jewish state in their ancestral land would not be impossible, if the Jews would throw off the "emasculating" elements of Judaism. Spinoza perceived the normality of Jewish existence in its ancient homeland and its abnormality in the centuries of exile, especially as expressed in anti-Semitism. In this sense Spinoza stimulated several early Zionist thinkers, such as Moses Hess, to think practically about the "return to Zion."

Today many Jews have chosen to live secular lives without abandoning their Jewish identity. Spinoza could not, but he provided the philosophical rationale for doing so. It is not without interest or irony that today the state of Israel is one of the more important centers for Spinoza studies. Mr. Yovel is himself the director of the International Spinoza Institute in Jerusalem. I wonder what the "eternal essence" of Spinoza would think of this turn of events.

*In a world where one
was either Christian or
Jew, Spinoza was
neither and he
undermined both.*

BR'S INFLUENCE

(15) From *Wellesley* (Spring 1990), a magazine for alumnae, with thanks to RUTH SPIRA.

She Credits Her Success to Bertrand Russell

Laurel Cutler '46—"Madison Avenue's
most powerful woman."

by Phyllis Méras '53

If Bertrand Russell had not spoken at Wellesley when Laurel Cutler was a freshman she would not be the Chrysler Motor Corporation's first woman vice president today.

Unlikely though the link between the Nobel-Prize winning English philosopher and big business may seem, it is her background in philosophy, Laurel Cutler believes, that has put her at the top of the corporate world.

At Wellesley in February to accept an Alumnae Achievement Award, Laurel Cutler reminisced about college days and that Bertrand Russell visit.

The Achievement Award dinner became a family reunion for (from left) Laurel Cutler, her daughter Amy Bernstein, and daughter-in-law and son Suzanne and Jonathan Bernstein.

"It was my sophomore year. The lecture was open only to juniors, seniors and sophomores majoring in philosophy. I had two passions when I came to Wellesley—one was acting, the other writing. I had immediately signed up for *News and Barn* and assumed I would major in English because it was the major that touched both of them.

"But that all changed after the Bertrand Russell visit. I heard he was coming, and was determined to hear him, so I expeditiously said I was going to be a philosophy major so I could get into the lecture. He made so powerful an impression that by the end of the evening I really was a philosophy major. Thomas Hayes Procter, who was the head of the Philosophy Department, had Bertrand Russell come back to his house afterwards and I sat there with my eyes bugged out as I listened to those two men talk. The effect of listening to such incredible minds was such that I was a goner.

"I went ahead and wrote the novel for the novel course that I had planned to write in College. I continued to do a lot of acting, but it was philosophy that became the controlling influence in my life. Though English was *how* I said something, the '*what-ness*'—the thinking behind it, became much more important than the '*how-ness*.'"

It took a while for this change in attitude to bear fruit, but Laurel Cutler today has no doubt that it was that one Wellesley evening that started her on the route that has made her one of the nation's most renowned figures in advertising and marketing. Not only is she vice president for consumer affairs of the Chrysler Motor Corporation, but she is the vice chairman and director of marketing planning for FCB/Leber Katz Partners advertising agency.

FOR SALE

- (16) BR postcard. After being out of print for several years, our favorite photo of BR -- taken in 1959 by Philippe Halsman -- is once again available. \$1 for the first one, 75¢ each for more ordered at the same time. Postpaid.
- (17) 16-Year Index of BRS Newsletters, 1974-1989, Issues 1-64, 43 pages, 2379 entries. Buy it for \$7 postpaid (within the USA). Or borrow it from the BRS Library, \$2 postage (within the USA).
- (18) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge." Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." New reduced USA price, \$5 for 90 sheets, postpaid. Canada & Mexico still \$6.

Order any of the above items from the newsletter, address on Page 1, bottom.

HUMANISM

(19) From the Atlanta Journal-Constitution (April 29 or 30, 1990), with thanks to PAUL KUNTZ. Turner's 10 Voluntary Initiatives -- referred to below -- was included in last month's issue (RN66-11).

Ted Turner, whom one Atlanta pastor calls a 'blasphemer,' refused to let the Rev. Jerry Falwell renew his WTBS contract last year.

Humanists honor Turner, nemesis of religious right

Media magnate had Christianity 'pounded' into him, he tells group

By Gayle White
Staff writer

— ORLANDO

Only a few years ago, Ted Turner was a darling of the Moral Majority for his stands against sex and violence on television.

Since then, he's called Christianity "a religion for losers," labeled anti-abortionists "bozos" and rewritten the 10 Commandments.

Friday night, Mr. Turner was named Humanist of the Year, cited particularly for his work on behalf of world peace and the environment.

The award came from the American Humanist Association, a group whose ideals religious fundamentalists love to hate, because, among other things, the group says "promises of immortal salvation or fear of eternal damnation are both illusory and harmful."

"Obviously we are kindred souls," Mr. Turner told the 200 people at the association's annual convention. He told the humanists he was taken to Sunday school and church as a child, then attended a Christian prep school — McCallie in Tennessee — where he was required to take religion courses, attend chapel services and listen to visiting evangelists.

Religion was "pounded into us so much," he said, "that I was saved seven or eight times."

At one time, he said, he considered becoming a missionary. "I was into it. I really was."

Please see TURNER, A11 ▶

Turner: Calls humanist group 'kindred souls'

▶ Continued from A1

He said he started to lose his faith when his sister died after a lengthy illness, despite his prayers. "If God is love and all-powerful, why does he allow these things to happen?" he asked.

The more he strayed away from faith, "the better I felt," he said to loud applause.

Mr. Turner criticized fundamentalist Christianity for emphasizing that man was born into sin, and said Jesus would probably "be sick at his stomach" over the way his ideas had been "twisted."

Conservative Christians blame the humanist philosophy for much of what they say is wrong in the world and say the recognition of Mr. Turner confirms what they feel about him.

"As far as the Christian perspective on Turner, he's come out clearly as a blasphemer," said the Rev. John Rowell, pastor of the 300-member Northside Community Church in Doraville and one in a network of "conservative pastors" who pray regularly for public figures, including Mr. Turner.

Ironically, a few years ago some evangelical Christian leaders — including the Rev. Jerry Falwell, founder of the Moral Majority, and the Rev. Donald Wildmon, who established the American Family Association — were allies of Mr. Turner in his attacks on television networks for excessive sex and violence.

But last year, Mr. Turner's WTBS television network refused to renew the Rev. Falwell's contract to purchase programming time at \$20,000 to \$30,000 per weekly program, said Mark DeMoss, a spokesman for the Rev. Falwell.

The Rev. Falwell called Mr. Turner personally to appeal the decision, Mr. DeMoss said. "The call lasted a couple of minutes."

Ted Turner was named Humanist of the Year for his work on behalf of world peace and the environment.

Programming on Mr. Turner's networks — from the animated "Captain Planet" ecological cartoon to a pro-choice documentary on abortion — now reflect his goal to save the world through television by advocating population control, concern for the environment and world peace.

This is the aim of the Better World Society, formed by Mr. Turner in 1985. He credited much of his new world vision to Cuban leader Fidel Castro, "my commie buddy."

Last year, Mr. Turner told a Dallas Morning News reporter that Christianity is "a religion for losers" and that he wanted no part of Christ's death.

"I don't want anybody to die for me," Mr. Turner said. "I've had a few drinks and a few girlfriends, and if that's going to put me in hell, well then, so be it."

But Friday night, Mr. Turner told the humanists he believes "we're all basically good."

Copies of his own version of the 10 Commandments, the "10 Voluntary Initiatives," were placed on each table at the banquet. His initiatives include population control, recycling and pacifism — from a man who once said war was a means of weeding out the weak.

No. 1 is love and respect of the earth and all living things, "especially my fellow species — mankind."

Some Christian leaders charge that in his remarks, particularly his characterization last year of anti-abortionists as "bozos," he violated his own rules.

Mr. Turner's changing alliances correspond with his growing ambitions, said Eric Guthey, a doctoral candidate in American studies at Emory University who is writing his dissertation on Mr. Turner.

"When his goal was to capture a national market, it was natural to cast himself as a national moral leader" in the heyday of Ronald Reagan and the Moral Majority, Mr. Guthey said. "Now, he's out to capture a global market. ... He needed people like Falwell before. He doesn't need them now."

The Rev. Wildmon said, "Mr. Turner is going to go whichever way the water's flowing."

Mr. Turner has proved a rallying point for both Christians and humanists, said Ted Baehr, founder of Good News Communications, a Christian film review service. "Christians rally to abhor his statements. The others rally toward his perceptions. He's definitely a catalyst."

Christian leaders have not given up on Mr. Turner.

"Ted Turner is not beyond God's reach," the Rev. Rowell said. "Today he's the Humanist of the Year. Who knows what God has in store for him?"

BY BERTRAND RUSSELL

(20) BR's 80th Birthday, with thanks to AL SECKEL.

THE OBSERVER, SUNDAY, MAY 18, 1952

THE NEXT EIGHTY YEARS

By BERTRAND RUSSELL, O.M.

MY last ten years, according to the Scriptures, ought to have consisted of labour and sorrow, but in fact I have had less of both than in most previous decades. The world takes a lot of getting used to, and I have only lately begun to feel more or less at home in it.

When I was born, eighty years ago to-day, my grandfather, whom I well remember, had just reached the age of eighty. Now that I have reached that age, my only grandson (so far) is a few months old. If he lives to my age he, my grandfather and I will between us have covered about two and a half centuries.

My grandfather was born at the height of the French Revolution, in the month preceding the September massacres. He imbibed in youth an admiration for Fox and a contempt for Pitt. His first literary venture, written while Pitt was still Prime Minister, contained an ironic dedication to him, ending with the words, "may you remain at the helm of State long enough to bestow a pension upon your humble servant." My grandfather entered Parliament in 1813 for a semi-rotten borough of his father's. He visited Napoleon in Elba, he introduced the Reform Bill in 1832, and his last term as Prime Minister was in 1866.

Victorian Summit

As for me, my early youth was passed at the very summit of the Victorian epoch. I saw Disraeli driving to the opening of Parliament in 1879. I knew Kinglake, the historian of the Crimea and the author of "Eothen." I knew Sir Moses Montefiore, who had retired in 1824 and spent the next fifty years in combating the disabilities of Jews, in which my grandfather ardently supported him. I knew Lecky, the historian of rationalism. In Paris I went to tea with Whistler and there met the poet Mallarmé.

England in those days was still aristocratic. Country houses and town houses retained all their pomp. Democracy had begun to exist as a theory, but not as something that coloured people's everyday thoughts. There was an old Duchess of Cleveland whom I knew who was outraged by the institution of Bank

Holidays and exclaimed acidly, "What do the poor want with holidays? They ought to work." This was thought a little extreme even in those days. But at the same time some sympathy was felt for the old lady in having to endure such a vulgar and democratical period.

With the greatness of the aristocracy went the comparative unimportance of the Crown. The great Whig families felt towards the Hanoverian dynasty much as they might to an old family butler. It was they who had hired the dynasty and, if at any time it should cease to give satisfaction, they could send it back to Hanover.

A Cloth Cap

I will remember the first crack in the imposing aristocratic façade. It was when Keir Hardie, who had been newly elected, came to the House of Commons in a cloth cap instead of a top hat. When it was found that no thunderbolt struck him down for this impiety, strange new doubts began to germinate in men's minds. The flood of revolution was let loose. The landed aristocracy was reduced to a ruin which began with Lloyd George's Budget. Those who had thought that the poor ought to work became themselves poor.

The revolution which has taken place in the social life of England has been accomplished without the use of the guillotine or the concentration camp, though it has been more profound than anything that the guillotine achieved in France. And as the great have lost status in England, so England has lost status in the world. For old people like myself the mental adjustments involved have not been easy.

Two Visions

What, I wonder, will my grandson have seen if he lives to the year 2032? Will the next eighty years continue the downward plunge towards disaster, which has characterised the latter half of my life? Or will mankind see the abyss ahead and turn back into a happier landscape? I do not see how any rational prognostication is possible, and I have two entirely different visions of the future.

according as I happen to feel cheerful or the reverse.

On gloomy days I foresee a third world war in the near future, lasting for years and ending indecisively after unparalleled destruction—ending not in a real peace but in a grim determination on both sides to renew the fight as soon as possible and to continue this time until a definitive issue has been reached. In the course of these struggles I see Western Europe with its cities reduced to rubble and its countryside transformed into a radioactive desert. I see the total expulsion of all white men from Africa, and Asia rendered even poorer than at present by internal strife. I see Latin America throwing off the yoke of the United States and reverting to barbarism. I see the United States shorn of power, surviving like the Byzantine Empire as the last fading glimmer of a more civilised age, endeavouring to survive behind defensive walls and living on old ideas which the rest of the world will regard as archaic. This is what I see on a gloomy day.

Better—or Worse

On cheerful days I see a quite different vision. I see Russia and America gradually growing less suspicious of each other, and arriving at last at the point where a genuine accord is possible. I see an international authority more capable than the United Nations of enforcing its will upon recalcitrant members, and therefore able to make world peace secure. I see Communism losing its fierceness and white men learning to acquiesce in equality for those of different pigmentation. I see science at last allowed to bring to mankind the happiness it is capable of bringing, instead of the universal death and destruction which is now threatened.

I do not know which of these two visions has the greater likelihood of being realised. What does seem to me nearly certain is that things must get either much better or much worse. Man has survived hitherto because his ignorance and incompetence have made his folly ineffective. Now that science has shown us how to make folly effective we must abandon folly or perish. Perhaps my grandson will see the issue.

BR'S 80th Birthday was also noted by NBC, which sent Rodney Wheeler to interview him. See RSN45-28 for a transcript.

REPORTS FROM OFFICERS

(21) Vice-President John Lenz reports:

At our June meeting, Benito Rey proposed that the BRS make overtures to Eastern Europe in the light of the changes there. I was asked to look into it, to see how we might go about it.

To establish a local chapter along the lines of the highly successful "Benares Chapter" which Chandrakla Padia has set up in India requires the presence of an already committed individual organizer.

Experience tells us that we cannot be sure of the fate of unsolicited mailings; we would be better off contacting individuals known to be interested in Russell or associated causes.

I would be grateful for your ideas, and particularly for the names of contacts to send information to...probably, but not necessarily, in universities and their philosophy departments.

In our mailing, we would like to mention some of Russell's positions on Eastern European issues. Your suggestions on this would be welcome.

Please send your suggestions to me at these addresses:

Until September 1st: 514 W. 114th St., Apt 63, NY, NY 10025

After " " : Dept. of Classics, Union College, Schenectady, NY 12308

REPORTS FROM COMMITTEES

(22) Grants Committee (Hugh Moorhead, Chairman):

With the inauguration of our new awards policy in 1990 -- offering a grant to candidates for the M.A. degree as well as for the Ph.D. -- we are getting significantly more attention and results than in the past. This year, for the first time, there were three doctoral candidates as well as one master's.

The master's, new this year, seems to hold considerable promise for spreading the word about our grant program and increasing the number of applications for grants...for 2 reasons: (1) there are more students at this level; and (2) they may, on average, be more needy, and thus more likely to take the trouble of applying for a grant.

In sum, I think the grant program has a bright future.

The 1990 Grants:

Doctoral: Al Essa, Yale, Philosophy Department. His dissertation, *Russell's Later Philosophy*, aims to show that there is a false consensus that Russell's later revisions (following *The Philosophy of Logical Atomism*) are not significant advances over his earlier views on ontology and theory of knowledge. \$1000.

Master's: Neil Kennedy, University of Chicago, Philosophy Department. His thesis, *Language and Certainty: Russell and the Philosophy of Language*, stresses the importance of Russell's epistemology to his thought about language. \$500.

PUBLICATIONS RECEIVED

- (23) The Truth Seeker -- "Freethinker's Publication since 1873. A Journal of Free Thought and Inquiry". The good-looking, 56-page Spring 1990 issue has many articles on taxation, including one by Edd Doerr, *Churches and Taxes*. Subscription \$20. Box 2832, San Diego CA 92112-9797.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

- (24) Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Treasurer, Dennis J. Darland; Secretary, Don Jackanicz; Vice President/Information, Lee Eisler.

TWO LETTERS

(25) 1962 letter. The context, as described by BETTE CHAMBERS:

Background to Lord Russell's letter of 20 November, 1962, is the Cuban Missile Crisis.

I had written Lord Russell on the very day that Nikita Khrushchev chose to reply to a telegram Russell had sent to him, with another to Kennedy, imploring them both to avoid nuclear war. As many will recall, there had been an "eyeball-to-eyeball confrontation," with neither world leader taking the initiative to speak first.

Russell's telegram was taken by Khrushchev as a way to say something to the world community, thus avoiding speaking directly to Kennedy. Khrushchev saw Russell's telegram as a way to utilize the "good offices" of a world famous philosopher, whose life work had been dedicated to resolving east-west differences, as an opportunity to be the first to "blink" in the eyeball-to-eyeball confrontation, thus not engendering loss of "face" were he to reply first directly to Kennedy.

It would be worthwhile to research news magazines from this period, in the immediate aftermath of the Missile Crisis. I recall that either TIME or LIFE magazine, LIFE

I believe, called Russell's belief that his good-offices-intervention had helped, to be a bold-faced lie, and attacked him for his statements.

I regret that in my haste I did not make a carbon copy of my letter to Lord Russell. I recall sending it airmail, and the date on his reply suggests that he responded immediately. I called the AP man at the Minneapolis Tribune about this letter, and I think there was some coverage of it, but the news of the crisis kept much local news out of the papers at that time throughout the whole nation.

Russell clearly believes his intervention played a significant role in staying the nuclear holocaust. Many European writers of the time agreed. Perhaps it was too much for US authorities to allow that Russell's telegram had the effect many believed it did...or, they knew it had, but were unwilling to say so.

No history of this time of nuclear threat should be written without giving Lord Russell full credit for what he accomplished.

From: The Earl Russell, O.M., F.R.S.

Mrs. Elizabeth Chambers,
1900 Dixon Drive,
Bloomington 31,
Minn. U.S.A.

20th November, 1962.

Dear Mrs. Chambers,

Thank you for your kind wishes. I was pleased to receive them.

As you ~~might~~^{may} appreciate, the crisis was such that it was not at all clear that we should survive the week, but I can assure you that the solution to the crisis made the week one of the most worthwhile of my entire life.

With good wishes,

Yours sincerely,

Bertrand Russell

Bertrand Russell.

1968 letter. Again, as Bette tells it:

.Background to the letter from Lord Russell, dated 21 June, 1968:

I had written Lord Russell to inform him that a then current issue of Christianity Today, the magazine, had opined that he was "becoming religious" now that he was approaching his 100th birthday.

This is his reply to this information from me.

News of this letter was published in numerous newspapers across the US.

FROM: THE EARL RUSSELL, O.M., F.R.S.

21 June, 1968

Mrs. Bette Chambers, Chairman
Division of Humanist Involvement
American Humanist Association
N6610 Moore
Spokane, Washington 99208

Dear Mrs. Chambers,

Thank you for bringing to my attention these continuing rumours of my imminent conversion to Christianity. Evidently, there is a lie factory at work on behalf of the after-life. How often must I continue to deny that I have become religious? There is no basis whatsoever for these rumours.

My views on religion remain those which I acquired at the age of sixteen. I consider all forms of religion not only false but harmful. My published works record my views.

Yours sincerely,

Bertrand Russell
Bertrand Russell

Bette is President Emeritus of the American Humanist Association. Currently, she is Assistant to the present President of the AHA, Isaac Asimov. Her address: 4116 Candlewood Dr., S.E., Lacey, WA 98503. (206) 491-8671

PHILOSOPHY

- (26)
- Marvin Kohl on skepticism
- , in
- Free Inquiry*
- (Summer 1990), p. 40:

Bertrand Russell, one of the great patrons of rationalism and secular humanism, was an agnostic skeptic. "If only men could be brought into a tentatively agnostic frame of mind," he writes, "nine-tenths of the evils of the modern world would be cured. War would become impossible, because each side would realize that both sides must be wrong. Persecution would cease. Education would aim at expanding the mind, not at narrowing it. Men would be chosen for jobs on account of fitness to do the work, not because they followed the irrational dogmas of those in power. Thus rational doubt alone, if it could be generated, would suffice to introduce the millennium."¹

What is this wonderful thing that would initiate a period of prevailing virtue and happiness? What is skepticism? And why do skeptics consider it the height of wisdom to place stringent limits on what can be rationally believed?

I believe that Russell's skepticism is a complex notion involving several distinct claims and not always even referring to the same subject matter. Yet several things are clear. First of all, he does not advocate an absolutist's position. For example, he does not claim, as W. K. Clifford does, that "it is wrong always, everywhere, and for anyone, to believe anything upon insufficient evidence."² Russell seems to have understood that if it is wrong, presumably everywhere and for anyone, to believe anything upon insufficient evidence, and if, as the facts reveal, we have insufficient evidence for believing this, then agnostic skeptics must reject their own meta-belief. The apparent paradox is that, if the absolutist's version of agnostic skepticism is true, then intellectual integrity require that it be cast aside.

But Russell's position cannot be taken by this argument, since he does not hold that all beliefs are subject to the skeptic's sword. In a 1904 letter, he clearly distinguishes between propositions that may be fairly allowed to be self-evident and propositions that ought to have proofs if they are to be accepted. In other words, Russell appears to hold that certain foundational beliefs aside, it is wrong to believe anything upon insufficient evidence. He thought the letter sufficiently important to quote it at length in the first volume of his autobiography.³ In this early and rather remarkable letter, Russell writes that "truthfulness demands as imperatively that we should doubt what is doubtful as that we should disbelieve what is false."

BR ON TELEPATHY

(27)

BR says: No, thanks. Upton Sinclair had become interested in spiritualism. Actually, it seems to have been more than mere interest; he seems to have become a believer.

The following is from *Upton Sinclair: American Rebel* by Leon Harris (NY: Thomas Crowell Co., 1973), with thanks to TOM STANLEY:

Upton collected Craig's telepathic experiments into a book that he finally called *Mental Radio* and asked Bertrand Russell to write an introduction to it. But Russell, despite the many liberal causes they had fought for together, replied "it is quite impossible for me to express any opinion on the subject of telepathy. My feeling is that there is nothing in it, but I do not know enough to support this opinion, and I am most unwilling to spend time upon what I believe to be humbug."

CORRECTION

- (28)
- The \$1000
- that the BRS gave to the Archives, when money was needed in 1988, was not for secretarial assistance, (as we had said, RSN66-23) but for Sheila Turcon to assist Ken Blackwell and Harry Ruja on the Russell bibliography. We're glad to correct the record.

ON THE STATE OF THE WORLD (1927)

(29) Russell at Dartmouth, as reported in *The Dartmouth* (11/30/27):

AMERICA, RUSSIA, AND CHINA WILL DOMINATE EARTH IN NEXT CENTURY
—BERTRAND RUSSELL

Speaker States U. S. Leads Way in Creating World Built on Science

AVERAGE MAN HAPPIER

Civilization Not Secure So Long as War Continues To Govern People

"America, China, and Russia rather than the nations of western Europe will dominate the world in the next century," said Bertrand Russell in his address before the student body last night in 103 Dartmouth.

"Science has greatly modified and is

being modified by the civilization in which we live. The United States leads the way in the creation of a world built on science; Russia and Asia follow closely in her footsteps.

"The essential part of a scientific education is to give people the idea that scientific methods may be used in connection with all things. The essence of this method is that one should not imagine that he can do anything without going to see what that thing is like. All scientific knowledge must be based upon an initial doubt and primarily ought to teach people their ignorance.

"The stimulation of nationalism is probably the most important political effect of science, and is at the same time one of the greatest evils of the modern world. Nationalism is the doctrine that one's own nation should get as much of the world as possible and the increase in the power of the state has furthered this extreme. Another political effect is that of education and the press. These two influences go hand in hand and serve only to increase men's awareness of

(Continued on Page Four)

(Continued From Page One)

foreign nations. To be aware of men is to hate them; therefore I doubt whether it is worthwhile to merely educate people to the ability to read the papers. The national organization of trusts and companies further promotes nationalism and a fifth political consequence of the introduction of science will be the entry of Russia and Asia into world affairs and their emancipation from the western yoke.

"The introduction of science in the social world has developed a more interesting middle and lower class of people. There is not now the poverty, the drunkenness and tremendous death rate of earlier times. The average person is happier at present although the select few at the top of society are probably not so intellectually alive as formerly.

"The full change in the ordinary man's outlook on life has not made itself fully evident as yet. It has, however given man a greater sense of power over his environment. Great terrors which once hung over men's mind are being swept away. This change has made men drunk

with their new sense of power. Man's intellect has reached a higher plane than his passions.

"Men will forego their own happiness to prevent others from being happy; I am speaking of war. Civilization is not secure as long as war exists so that man must learn to cope with it in order to save himself. The next war will be a bacteriological war far more terrible than we can imagine. We must seek some international authority in the form of a union of financiers which will throw such a preponderance of weight upon one side that a prolonged war will be impossible.

"Life under these circumstances will not have much of art and will perhaps be less interesting with fewer opportunities for spectacular heroism. There will be no local color, but there will also be no poverty, little ill health, plenty of amusement and no fear of ruin of war. Life will be happier and pleasanter though with perhaps less of pleasure and less of anguish. Unless, however, we can sweep away the menace of war we cannot hope to enjoy the benefits of science."

BR QUOTED

- (31) The New Yorker (6/4/90) has an interesting article by Harvey Sachs (*Der Ordinaire*) about a good German in Germany during the Nazi years. The following comes near the end, with thanks to NAN SCOFIELD:

Luisa, too, praises Hans's generosity, but she has her doubts about his unflagging rationalism and his confidence in social and political progress. "He still can't understand why people don't always behave responsibly, and he still believes that someday they will and that the world will therefore become a better place. You can't help wondering how an intelligent person can pass the age of eighty and still believe such things, but, on the other hand, you can't help hoping he's right to think that improv-

ing the world is at least worth a try."

It is to be wondered at (and admired) —just as one wonders at (and admires) what a much more celebrated rationalist and ameliorist, Bertrand Russell, said at eighty: "I may have thought the road to a world of free and happy human beings shorter than it is proving to be, but I was not wrong in thinking that such a world is possible, and that it is worthwhile to live with a view to bringing it nearer."

ANNUAL MEETING (1990)

(37) Here's how the meeting was reported in the McMaster campus paper:

The McMaster Courier, July 17 1990/Page 5

Russell conference explores web of intrigue and prejudice

Bertrand Russell scholars and admirers met together June 22-24 at McMaster for the annual conference of the Bertrand Russell Society, Inc.

The Society has been holding annual conferences to honor the man and explore aspects of his life and thought since 1974.

Conferees from the United States, India, Sweden, Australia and Canada heard papers discussing Russell's views on love, women, religion, education, and politics.

A vividly written paper on the web of intrigue and prejudice which led to the cancellation of his appointment to the faculty of the City College of New York in 1940 was especially appreciated.

Professor Elizabeth Eames of Southern Illinois University received the Bertrand Russell Society Book Award for her recently published book, *Bertrand Russell's Dialogue with His Contemporaries*.

Dr. Kenneth Blackwell, archivist of the Bertrand Russell

Archives, received the Society's Service Award.

In addition the Society voted unanimously to approve a loan to help fund publication of a comprehensive catalogue of the Archives' holdings. Dr. Blackwell led a guided tour through the Bertrand Russell Archives.

Professor Michael Rockler of the National College of Education, Evanston, Illinois was re-elected president of the Society.

(38)

FREETHINKERS, ARISE!

Memo from Arizona:

TO: All freethinking organizations
 FROM: James L. Sanders, 413 W. Navajo Rd., Flagstaff, AZ 86001
 SUBJECT: Organizing free thought clubs in high schools and colleges
 DATE: July 23, 1990

Too often we react to religion.
 Now is the time to act.

The United States Supreme Court has given us the opportunity to have free thought clubs in high schools, as well as in colleges. Without reacting to what the religious organizations do, let's help students form such groups. It would be an excellent way to spread the philosophy of freethinking.

All the organizations which support this idea need to put aside any differences, if any, and work together. A national conference on this subject would be appropriate.

Let's act, not just react.

DISSENTING OPINION

(39) Re Watling's review, IRVING ANELLIS writes:

N Modern Logic (1)

An International Journal of the History of Mathematical Logic, Set Theory, and Foundations of Mathematics

7 June 1990

Dear Lee,

In his review of Russell's *Cambridge Essays* (Russell Soc. News no. 66, item 6, p. 5), John Watling takes the editors to task for failing to include an editorial note declaring that it is untrue that Kant was unaware of the possibility of non-Euclidean geometries. This criticism is unfair to the editors.

Watling bases his complaint on the fact that Girolamo Saccheri was in correspondence with Kant and that Saccheri had published a non-Euclidean geometry (in 1733). In fact, Saccheri thought that he had vindicated Euclid - hence the title of his book, *Euclides ab omni naevo vindicatus*. Saccheri set out to prove that Euclid's fifth postulate (the parallel postulate) follows from the first four Euclidean postulates. What may have led Gottfried Martin, on whom Watling relies, and hence Watling, to apparently suppose that Saccheri showed that non-Euclidean geometries are possible was no doubt the manner in which Saccheri constructed his proof.

Saccheri's "proof" is a proof by contradiction; that is, he assumed that the fifth postulate was false, and sought to derive a contradiction. By showing that the first four Euclidean postulates together with the *negation* of the fifth postulate yields a contradiction, Saccheri would have proven that the first four postulates, together with the fifth postulate, is a valid system. This is precisely what Saccheri thought he did, *vindicating* Euclid by proving that the assumption of the negation of the fifth postulate together with the first four postulates yields a contradiction. Today, we know of course that Saccheri's attempt actually failed to do what it was meant to do, that what it actually did was prove that non-Euclidean geometries (in which the negation of the fifth postulate, together with the first four of Euclid's postulates) are possible after all. But to impute to Saccheri himself - and hence to Kant - the view that Saccheri proved that non-

Euclidean geometries are possible, is anachronistic, and thus a misunderstanding of the history of geometry. Under these circumstances, it is difficult to believe that Russell could have concluded that Kant could have believed in the possibility of non-Euclidean geometries.

Kant came as close to the subject of non-Euclidean geometries as it would be possible for anyone of his day to come through a reading of the work of the mathematician A.G. Kästner, who was one of a number of mathematicians in the late eighteenth-century attempting to prove Euclid's fifth postulate from the first four. Kästner was disappointed that his attempts failed, and in the 1790s wrote a series of papers (entitled "Was heißt im Euclids Geometrie möglich?" in vol. 2 of the *Philosophische Magazin* on the nature of the possible in Euclid's geometry. Kästner argued that "possible" for Euclidean geometry means that the system is consistent; a proposition is "possible" if it can be obtained within the system of Euclidean geometry without leading to any contradictions. Kästner went on to assert with Leibniz that mathematics consists solely of analytical truths. In reply to Kästner, Kant wrote (and published under the name of his student Johann Schulze) *that mathematical propositions are synthetic, rather than analytic, and that this is why Kästner was unable to prove the parallel postulate*. But this is hardly the same as asserting the possibility of non-Euclidean geometry.

The situation is not as clear-cut or simple as Watling's remarks suggest. Besides Saccheri, it is also necessary to take account of a number of other mathematicians who were Kant's contemporaries, including Lambert, who contributed (in 1766) towards the future development of non-Euclidean geometry and Kant's knowledge and understanding of his work, and in particular of the work of Carl Friedrich Gauss, a young contemporary of Kant who developed the first full-fledged and explicit non-Euclidean geometry, but did not publish it in his lifetime, and ask whether Kant could have known of this work, and if so, what he thought of it. There is much historical work yet to be done here. Under the circumstances, it is Watling's view that needs to be challenged, and his criticism of the editors taken *cum grano salis*.

Sincerely yours,

Irving H. Anellis

OBITUARIES

(40) From *The Economist* (7/8/89) p.81, with thanks to CLARE HALLORAN:

SIR Alfred Ayer, who died on June 27th, was the last surviving protagonist of Britain's second golden age of philosophy. The first spanned the lifetimes of the eighteenth-century empiricists, Locke, Berkeley and Hume. It was Hume's intellectual descendants, Bertrand Russell and G. E. Moore, who sparked off the second early this century. Their style of "analytical" philosophy grew to encompass Wittgenstein's work at Cambridge, the Anglicising of Viennese logical positivism and the work of J. L. Austin and Gilbert Ryle at Oxford. It is now the world's largest philosophical movement, but it is no longer British.

Ayer's main role in this empire-building was to carry logical positivism to the English-speaking world, which he did in 1936 with his book "Language, Truth and Logic". That book—written when Ayer was 25—roundly declared all traditional metaphysics, ethics and theology to be meaningless and therefore redundant. They were meaningless because they failed the positivists' test of verifiability: if it is unclear how the truth of a given assertion can be determined, then that assertion should be treated as suspect.

Positivism soon impaled itself on the horns of a dilemma. All versions of the test of veri-

fiability proved to be either too strict—ruling out most of the theories of natural science, for example—or too lax. In a dozen later books Ayer moderated and refined his views, keeping always to the central questions of philosophy. In so doing, he inherited the mantle worn before him by Russell, and became the official incarnation of British philosophy during his tenure as professor of logic at Oxford in 1959-78. Like Hume and (to a considerable extent) Russell, Ayer wrote brilliantly, stylishly and straightforwardly for the educated layman of his day.

Today British philosophy has ghosts but no incarnation. Most of the best work is done in America, and philosophy itself (wherever it is practised) has evolved into a different beast, diversifying too far for any one man to wear Russell's mantle any more. Britain's philosophers are ignored, demoralised and emigrating. What went wrong?

The philosophers themselves, in their valedictory declamations from the quayside, usually blame Mrs Thatcher's government. That is mistaken. True, the number of lectureships and professorships has been cut—sometimes whole departments have been closed—in order to save government money. But the people responsible for that are university administrators, who make their cuts in apparent ignorance of the rising demand from students for philosophy places, of the value to other departments and students of having a philosophy department, and of what philosophers actually do.

Besides, the number of philosophy jobs in Britain now is no smaller than it was in the great days of the 1940s and 1950s; nor did philosophers then get any more moral support from the governments of the day. One simple reason why America is predominant now is that it is bigger. Once the seeds of analytical philosophy had blown across the Atlantic and germinated, they were bound to bloom in greater profusion there eventually. Golden days cannot last for ever.

But good ideas can, usually in slightly different forms. Ayer's logical positivism is enjoying a sort of comeback—though none of its practitioners would describe himself as a positivist anymore. The idea that the meaning of an assertion is somehow intimately related to its method of verification is at the heart of "anti-realism", one of the most powerful positions in contemporary metaphysics. Anti-realism in general philosophy was brought to prominence by Michael Dummett, Ayer's successor in Oxford's chair of logic, and is influencing some of America's top philosophers, such as Hilary Putnam at Harvard. But it is mostly discussed in terms too arcane to stimulate the wide interest that Ayer's positivism did.

With his natural clarity and lightning acuity, Ayer could engage anybody who was intellectually inquisitive, both in his writings and in person. He relished debate and never hid behind jargon, pride or intellectual superiority. It is not within the power of cost-cutting governments to abolish such men, or to create them.

NEWS ABOUT MEMBERS

Dave Johnson, Chairman of the Philosophers' Committee, will be savoring a 4-month sabbatical in New Zealand and Australia. It began June 13th.

Corliss Lamont's
new book, from
Prometheus Books

----->

"Dear Corliss"

Letters from Eminent Persons

edited by Corliss Lamont

American activist and social critic Corliss Lamont has been at the stormy center of many of the major issues of this century, armed with the courage of his convictions and his pen as a cudgel. Over the years, while Lamont produced hundreds of essays, pamphlets, and books, he also maintained an extensive, lively correspondence with prominent figures in the worlds of philosophy, art, literature, motion pictures, finance, and politics.

Preceded by brief biographical sketches and accompanied by rare photographs, "Dear Corliss" features letters from John Dewey, Katharine Hepburn, Julian S. Huxley, Horace M. Kallen, Rockwell Kent, Thomas W. Lamont, Anne Morrow Lindbergh, Henry Cabot Lodge, John Masfield, Gilbert Murray, Bertrand Russell, George Santayana, and Konni Zilliacus. These letters—eloquent, direct, often witty and amusing—provide a fascinating glimpse at a cross-section of this century's noteworthy people.

Corliss Lamont has been a teacher of philosophy at Columbia University, a Director of the American Civil Liberties Union, and Honorary President (now President Emeritus) of the American Humanist Association. He is the author of many books, including *A Lifetime of Dissent*, *The Illusion of Immortality*, and *Freedom of Choice Affirmed*.

BR HAVING FUN

- (2) From *The Saturday Review* (8/11/56), with thanks to WILLIAM FIELDING:

IN THE COMPANY OF CRANKS

After the death of George Bernard Shaw half a dozen years ago, in the view of many observers his mantle as a writer of witty, learned, provocative prose fell to Bertrand Russell. With close to fifty volumes of philosophy, mathematics, and fiction on the cards behind his name in the library catalogues, with such honors as the Order of Merit and the Nobel Prize in Literature embellishing his "Who's Who" sketch, with scars to show for a long series of intellectual storms and battles, he has accomplished enough in his eighty-four years to warrant his taking a little ease. But Earl Russell, who once wrote his obituary for publication in the London Times of June 1, 1962, is still as acute and peppery as ever, as this new essay from his pen proves.

By BERTRAND RUSSELL

I HAVE long been accustomed to being regarded as a crank, and I do not much mind this except when those who so regard me are also cranks, for then they are apt to assume that I must, of course, agree with their particular nostrum. There are those who think that one should only eat nuts. There are those who think that all wisdom is revealed by the Great Pyramid, and among these there are not a few who think that priests carried the wisdom of the Pyramid to Mexico and thus gave rise to the Mayan civilization. I have come across men who think that all matter is composed of atoms which are regular solids having twenty faces. Once, when I was about to begin a lecture tour in America, a man came to me and very earnestly besought me to mention in each lecture that the end of the world would occur before my tour was ended. Then there was the old farmer who thought that all government, both national and local, ought to be abolished because public bodies waste so much water. And there was the amiable gentleman who told me that, although he could not alter the past, he could by faith make it different from what it otherwise would have been. He, I regret to say, was sent to prison for a fraudulent balance sheet and found, to his surprise, that the law courts did not take kindly to his application of faith to arithmetic. Then there was the letter sent from a suburb of Boston which informed me that it came from the God Osiris, and gave me his telephone number. It advised me to ring up quickly since He was about to re-establish His reign on earth when the Brotherhood of True Believers would live with Him in bliss, but the rest of mankind would be withered by the fire of His eyes. I must confess that I never answered this letter, but I am still awaiting the dread moment.

There was an incident which illustrates the perils of country life: on a very hot day, in a very remote place, I had plunged into a river in the hopes of getting cool. When I emerged I found a grave and reverent old man standing beside my clothes. While I was getting dry he revealed the purpose of his presence. "You," he said, "in common with the rest of our nation, probably entertain the vulgar error that the English are the lost Ten Tribes. This is not the case. We are only the tribes of Ephraim and Manasseh." His arguments were overwhelming, and I could not escape until I had put on my clothes.

Experience has taught me a technique for dealing with such people. Nowadays when I meet the Ephraim-and-Manasseh devotees I say, "I don't think you've got it quite right. I think the English are Ephraim and the Scotch are Manasseh." On this basis a pleasant and inconclusive argument becomes possible. In like manner, I counter the devotees of the Great Pyramid by adoration of the Sphinx; and the devotee of nuts by pointing out that hazelnuts and walnuts are just as deleterious as other foods and only Brazil nuts should be tolerated by the faithful. But when I was younger I had not yet acquired this technique, with the result that my contacts with cranks were sometimes alarming.

RATHER more than thirty years ago, at a time when I shared a flat in London with a friend, I heard a ring at the bell. My friend happened to be

out and I opened the door. I found on the doorstep a man whom I had never seen before, short and bearded, with very mild blue eyes and an air of constant indecision. He was a stranger to me, and the English in which he explained his purpose was very halting.

"I have come," he said, "to consult you on a philosophical question of great importance to me." "Well," I replied, "come in and let us sit down." I offered him a cigarette, which was refused. He sat for a time in silence. I tried various topics, but at first extracted only very brief replies. I made out at last, though with considerable difficulty, what he wanted of me. He informed me that he was a Russian, but not a supporter of the then recent Communist Government. He had, so he told me, frequent mystic visions in which voices urged him to do this or that. He did not know whether such voices deserved respect or were to be regarded as delusions. It had occurred to him that he might obtain guidance from eminent philosophers throughout the world. At the moment it was British philosophers whose advice he was seeking. When he had had such guidance as he could obtain from me he proposed next to consult Arthur Balfour, at that time Foreign Secretary. I listened with such respect as I could command to his revelations from the spirit world, but in my replies to him I remained, for the time being, non-committal. At last he

said that he would wish to read some of my books (an extreme step which he had not previously taken) to see whether they contained anything that would be a help to him. For a moment I thought of lending him some book of my own, but I was doubtful whether I should ever see it again and also whether he would really take the trouble to read it. I therefore advised him to go to the British Museum and read such of my books as seemed likely to be helpful. He said he would do so and would return to resume the discussion after he had got a grip on my general outlook.

SURE enough, he came back a few days later. Again I invited him into my study and again I tried to set him at ease. But he looked more dejected and defeated than ever, shabby and hopeless, a drifting waif who seemed almost insubstantial. "Well," I said, "have you been reading my books?" "Only one of them," he replied. I asked which, and found, after some trouble, that it was not a book by me but a skit on my philosophy written to make fun of it. By this time I had begun to think that it did not much matter what he read, so I did not trouble to explain the mistake. I asked, instead, what he thought of the book. "Well," he replied, "there was only one statement in the book that I could understand, and that I did not agree with." "What statement

was that?" I asked, expecting that it would have to do with some deep philosophical doctrine. "It was," he replied, "the statement that Julius Caesar is dead." I am accustomed to having my remarks disputed, but this particular remark seemed to me innocuous. "Why did you disagree with that?" I asked in surprise. At this point he underwent a sudden transformation. He had been sitting in an armchair in a melancholy attitude and as though the weight of the world oppressed him, but at this point he leapt up. He drew himself up to his full height, which was five-foot-two. His eyes suddenly ceased to be mild, and flashed fire. In a voice of thunder, he replied: "BECAUSE I AM JULIUS CAESAR!" It dawned upon me suddenly that this had been the purport of the mystic voices and that he was hoping to reestablish the empire which had temporarily been toppled on the Ides of March. Being alone with him, I thought that argument might be dangerous. "That is very remarkable," I said, "and I am sure that Arthur Balfour will be much interested." I coaxed him to the door and, pointing along the street, said, "That is the way to the Foreign Office."

Whatever Mr. Balfour thought of him when he got to the Foreign Office I never learned, but an obscure footnote to a subsequent new edition of that eminent thinker's "Foundations of Belief" led me to wonder

BRS LAUREATES

Henry W. Kendall, recipient of the 1982 BRS Award for his anti-nuclear studies and campaigns, Chairman of the Union of Concerned Scientists, and Professor of Physics at M. I. T., shares the 1990 Nobel Prize in Physics with 2 colleagues.

The three, who met as graduate students at Stanford in the 1950's, were honored "for their 'breakthrough in our understanding of matter' achieved by a series of experiments from 1967 to 1973. In essence, their work confirmed the reality of quarks, fundamental particles that had been hypothesized in 1964" by two scientists at Caltech, and for which the Nobel Prize in Physics in 1969 was awarded, according to the *New York Times* (10/18/90), p. A20.

"In recent years, Dr. Kendall has been an outspoken opponent of the 'Star Wars' anti-missile project as a founder and chairman of the Union of Concerned Scientists," says the *Times*.

(4)

BRS AWARD NOMINATIONS WANTED

* Please submit names of people you think should be considered for the 1991 BRS Award. When you submit a name, also provide supporting evidence which shows why you think your candidate qualifies for the Award.

Your candidate should meet one or more of the following requirements: (1) worked closely with BR in an important way, (like Joseph Rothlat); or (2) made an important contribution to Russell scholarship (like Paul Arthur Schilpp); or (3) acted in support of an idea or cause that Russell championed (like Henry Kendall); or (4) promoted awareness of BR or BR's work (like Steve Allen); or (5) exhibited qualities of character, such as moral courage, reminiscent of BR.

Please send your candidate(s) to Clare Halloran, 71-21 69th Street, Glendale, NY 11385 (718-366-8350). She chairs the BRS Award Committee. Deadline for submissions: January 15, 1991.

We want your input!

BR CRITICIZED

(5)

The year was 1920. The Communist Revolution -- the Soviet Union -- was 2 years old, barely out of the cradle.

Russell visited Russia, didn't like what he found there, and said so in his 1920 book, *The Practice and Theory of Bolshevism*. It alienated everybody on the left, and many liberals.

Max Eastman, who, incidentally, has written some excellent books -- *The Enjoyment of Laughter*, and *The Enjoyment of Poetry* -- was, like many Americans, enthusiastic about the Russian Revolution. The promises of Communism were seductive; the very least that could be said was: *anything* would be an improvement on the Czar.

Eastman wrote a long article, taking Russell to task, in *The Liberator*, September 1920, Volume 3, No. 9 [Serial No. 30]. Here are excerpts from it, with thanks to Al Seckel.

Nietzsche, Plato and Bertrand Russell

By Max Eastman

NIETZSCHE'S "Anti-Christ" would be a good medicine for those soft-headed idealists who are doing so much to botch the progress of science and life in this critical time. They suffer from a very Christian sickness. And yet that sickness is so insidious that even the most pagan might be startled to learn that there are not only healthier and wiser views of life, but healthier and wiser religions than Christianity—religions which, no matter how superstitiously, nevertheless resolutely sought to enhance life and escape from suffering and failure, religions whose key-note was health rather than weakness, fulfillment rather than pale, vaporous promise. Nietzsche makes it credible that Christianity—not the exact teaching of Jesus, but Christianity as we know it—is a supreme ingenuity of the priestly class, whose prevailing motive is their dominance, and who have therefore "a vital interest in making mankind sick, and in confusing the values of 'good' and 'bad,' 'true' and 'false,' in a manner that is not only dangerous to life, but also slanders it."

The quotation is from a new translation of "The Anti-Christ" by H. L. Mencken*—a translation that abates none of the reckless and magnificent contempts of the original. It is a great book, a book that stands up and will be visible across the centuries. And if I were presiding over a course of study in Communism, I would begin by asking every member of my class to read it. For until we have got purged of the contagion of this holy feeling that the world can be saved by softness, we are not even ready to begin the search for a true theory of progress.

The translator of "The Anti-Christ" places himself beside Nietzsche in a venturesome preface, showing us a brilliant but passionless and decadent disciple, one who sneers without contempt, and making us feel that there was only one Nietzschean and he died in the madhouse. This preface advises a world that trembles before the menace of Bolshevism that it might "combat the monster with a clearer conscience and less burden of compromising theory—if it could launch its forces frankly at the fundamental doctrine," which is "democracy in another aspect, the old *ressentiment* [spite, that is, or vengefulness] of the lower orders in free function once more." Nietzsche saw all such movements to be what they are, says Mr. Mencken, "variations upon the endless struggle of quantity against quality, of the weak and timorous against the strong and enterprising, of the botched against the fit."

A valuable comment upon this hasty dictum is furnished by the intellectual news of the moment—namely, that Bertrand Russell has arrived home from Russia wounded and shocked by the hard vigor of the Bolshevik leaders, and has run to cover in a conviction "that kind-

liness and tolerance are worth all the creeds in the world."

I take this to be the real character of Bertrand Russell's reaction to Bolshevism, because there is a degree of the fantastic, of sheer professorial gullibility, in his manner of swallowing down the whole established Menshevik propaganda—lies, truths, and true lies, and lying truths, all together—which makes it quite certain that he found his place among the Mensheviks *before* this intellectual process began. His extreme state of feeling is revealed in the fact that in flying home to that conviction about "kindliness and tolerance," he even asserts that "English life has been based" upon that conviction "ever since 1688"—although it is a view, he admits, "which we do not apply to other nations and to subject races."* One must have to be homesick indeed for "English life," and for the tender philosophy that is applied by the owners of England to the starved and degenerated poor upon their own island, in order to achieve such an assertion. And to publish it almost in the same paragraph, in which one *admits the whole communist "indictment of capitalist society"* is simply to lay aside the controls of rationality altogether, and emit a very human cry out of a disappointed heart.

In view of this fact the character of Bertrand Russell, and the quality of his idealism, becomes of high interest. And his article arrives for me with a magical timeliness—just in the midst of what I had set out to say about Nietzsche, and the feeling of Communism.

For Bertrand Russell is the sincerest and most gifted representative on earth of the three things against which Nietzsche thundered his most devastating contempt—a belief in the "true world" of metaphysical "philosophy," an indiscriminate ardor of democracy, and a pacific and soft ethics, the residue of the Christian religion. And the cry with which Bertrand Russell warns his fellow idealists of England and America against the lure of the Bolsheviks, might almost be summed up in these words: "They are not '*philosophic*,' they are not *democratic*, they are not *soft*. They have extreme faith in a *scientific theory*, they have created an *aristocracy of brains and character*, and they are *ruthlessly efficient*. . . . In short they are Nietzschean *free spirits*, and not Christian *saints*. Beware of them!"

But it is not necessary to paraphrase, for Bertrand Russell's own description of the character of Lenin, or of the Russian Communist in general, could be almost a quotation from one of Nietzsche's annunciations of the "new nobility."

"The Communist," says Mr. Russell, "who sincerely believes the party creed is convinced that private property is the root of all evil; he is so certain of this that he shrinks from no measures, however harsh, which seem necessary for constructing and preserving the Communist State. He spares himself as little as he spares others. He works sixteen hours a day, and foregoes his

Saturday half-holiday. He volunteers for any difficult or dangerous work which needs to be done, such as clearing away piles of infected corpses left by Kolchak or Denikin. In spite of his position of power and his control of supplies, he lives an austere life. He is not pursuing personal ends, but aiming at the creation of a new social order. The same motives, however, which make him austere make him also ruthless."

It is upon such grounds as these that Mr. Russell asks us to believe that "if the Bolsheviks remain in power, it may be assumed that their Communism will fade, and that they will increasingly resemble any other Asiatic government—for example, our own government in India."

Where His Heart Is

My proletarian friends will tell me that I am naively elaborate in my explanation of Bertrand Russell's reaction to the reality of a working-man's revolution. It is but another proof, they will say, of the theory of the class-struggle upon which the revolutionists are acting. Bertrand Russell is by birth a member of the ruling class, and by profession a fellow of the ancient society of its ideologists and apologizers. And merely because he was a little over-sensitive to the hypocrisies of "democracy," and had enough intellectual hardihood to accept the proletarian theory in the abstract, we need never have expected him to desert his class and calling in the face of a concrete situation. Whatever he may have had in his head, he had not the interests of the proletariat in his heart, and that is why he came out of Russia altogether disappointed, while Robert Williams of the Transport Workers' Union, who traveled with him, reports that "all my previous hopes and expectations were more than borne out by my actual contact with Soviet Russia's affairs." It is not a conflict of opinion, but of will. And so we ought to be glad that Bertrand Russell has got a dose of the concrete facts. His mind will hereafter be found where his heart is, and his heart will be—as Marx and Jesus for once agreed—where his treasure is.

That is, in effect, what my very Marxian friends will tell me. And it is hard to combat so simple a statement, which accords so well with all the facts. It is quite true that Bertrand Russell was without curiosity as to the particular class interests of the proletariat in his visit to Russia. He throws out quite casually the remark that the Bolsheviks are succeeding in enlisting the highest business and engineering ability in the organization of industry "without permitting it to amass wealth as it does in capitalist communities." He calls this "the greatest success so far outside the domain of war" of the Bolshevik government. But to a proletarian, or to a man who ever had the proletarian theory in the sinews of his heart, that is the essence of all success.

Mr. Russell even confesses that this success of the Bolsheviks in organizing industry without capitalism "makes it possible to suppose that, if Russia is allowed to have peace, an amazing industrial development may take place, making Russia a rival of the United States." Let any workingman reflect upon that! An industrial development comparable to that of the United States, and no waste in competitive buying and selling, and no waste through strikes or lockouts, and no inhibition of production when prices fall—the whole social and industrial machine working only to produce, produce, produce—and the whole product going to the working-class!

Bertrand Russell is a prodigy of "scientific method"—in philosophy. And he is also a man of moral courage

and of deep and sincere idealism. Just such a man, you would say, as might comprehend and be able to expound the revolution as a process—a thing that must begin at a beginning, and proceed through certain consecutive steps towards a goal of fundamental freedom, with at least a framework of "kindliness and tolerance" in our social relations. What is it, then, that prevents him from bringing over that austere and celebrated "scientific method" into his contemplation of the problems of society? It is the contagious Christian disease of idealizing the soft, and worshipping the ineffectual. Nothing else.

Mr. Russell did not like Lenin. Although he found him "very friendly and apparently simple, entirely without a trace of *hauteur*," and although Lenin laughed a great deal, and the laugh seemed at first merely "friendly and jolly," it gradually began to appear that there was something a little "grim" about him.

"He is dictatorial, calm, incapable of fear, extraordinarily devoid of self-seeking, an embodied theory. The materialistic interpretation of history one feels is his life-blood. . . . I got the impression that he despises a great many people and is an intellectual aristocrat."

Thus Bertrand Russell expresses his disaffection. And if I may put that also in other words, *Lenin did not give Mr. Russell any food for his tender emotions about human progress*. He was just as "grim" in excluding the ethico-deific from his conception of history and his plans for getting along *the road to freedom*, as Mr. Russell is about excluding it from his investigations as to the *existence of an eternal world*.

There is actually nothing any more "fanatical," or any more like a "religious belief," or an "embodied theory," in Lenin's fidelity to the Marxian hypothesis than in Bertrand Russell's adherence to the tenets of Christianical democracy. Indeed if their conflicting conceptions occupied the same position in our traditional culture, it would be evident to everyone that Lenin's mind is the more flexible of the two. Lenin is all but an avowed pragmatist, Bertrand Russell the leading defender of "absolute truth." But the "democracy" system of ideas is a part of our established inheritance; therefore a rigid adherence to that seems "liberal." The Marxian interpretation and method is new, both in mental content and in its organization of the sentiments, therefore the coolest kind of scientific fidelity to that method seems fanatical. That is why Bertrand Russell is unable to perceive the gift that makes Lenin unique among all the revolutionary leaders of history, his mental flexibility and quick sense for concrete facts. That is why he could not like Lenin intellectually.

And so it is by no means an accident that in order to sum up in a word his objections to Bolshevism, Bertrand Russell is compelled to revert to the ideal of a great pagan who never dreamed of confusing the good with the helpless and unhealthy. What they are creating in Russia, says Bertrand Russell, is Plato's Republic! And for my part I do not know how to describe the joyful feeling of quiet and final relief that came to me when I read those words.

For Plato was a Communist. He was the first conceiver of a kingdom of truth and genuine nobility upon this earth, a society in which great qualities of mind and heart should actually coincide with great influence and power.

Bertrand Russell introduces his parallel between the Soviet Republic and that of Plato with an idea that it

will be bad news to the advocates of a Soviet Republic. "I suppose it may be assumed," he says, "that every teacher of Plato throughout the world abhors Bolshevism, and that every Bolshevik regards Plato as an antiquated *bourgeois*." In which statement Mr. Russell shows that he is better acquainted with teachers of Plato than he is with Bolsheviks.

The fact that Russell was able to predict the tyrannical character of the Russian Communist regime at the remarkably early date of 1920, when it was only 2 years old, is evidence of his good judgment.

And his comparison of it with Plato's *Republic* is right on target.

Plato's *Republic*, according to Russell, is a prescription for a totalitarian state. Here is some of what he says about it, in his *History of Western Philosophy* (Simon & Schuster, 1945), p. 109-113:

There is to be rigid censorship, from very early years, over the literature to which the young have access and the music they are allowed to hear.

Mothers and nurses are to tell their children only authorized stories.

Homer and Hesiod are not to be allowed, for a number of reasons.

First, they represent the gods as behaving badly on occasion, which is unedifying; the young must be taught that evils never come from the gods, for God is not the author of all things, but only of good things.

Second, there are things in Homer and Hesiod which are calculated to make their readers fear death, whereas everything ought to be done in education to make young people willing to die in battle.

Our boys must be taught to consider slavery worse than death, and therefore they must have no stories of good men weeping and wailing, even for the death of friends.

As for economics: Plato proposes a thoroughgoing communism for the guardians. The guardians are to have small houses and simple food; they are to live as in a camp, dining together in companies; they are to have no private property beyond what is absolutely necessary. Gold and silver are to be forbidden. Though not rich, there is no reason why they should not be happy; but the purpose of the city is the good of the whole, not the happiness of one class. Both wealth and poverty are harmful, and in Plato's city neither will exist.

Friends should have all things in common, including women and children.

Girls are to have exactly the same education as boys, learning music, gymnastics, and the art of war along with the boys. Women are to have complete equality with men in all respects.

The legislator, having selected the guardians, some men and some women, will ordain that they shall all share common houses and common meals.

Marriage, as we know it, will be radically transformed. "These women shall be, without exception, the common wives of these men, and no one shall have a wife of his own."

All children will be taken away from their parents at birth, and great care will be taken that no parents shall know who are their children, and no children shall know who are their parents.

Mothers are to be between twenty and forty, fathers between twenty-five and fifty-five. Outside these ages, intercourse is to be free, but abortion or infanticide is to be compulsory.

In the "marriages" arranged by the State, the people concerned have no voice; they are to be actuated by the thought of their duty to the State, not by any of those common emotions that the banished poets used to celebrate.

Since no one knows who his parents are, he is to call everyone "father" whose age is such that he might be his father, and similarly as regards "mother" and "brother" and "sister."

I come last to the theological aspect of the system. I am not thinking of the accepted Greek gods, but of certain myths which the government is to inculcate. Lying, Plato says explicitly, is to be a prerogative of the government, just as giving medicine is of physicians. The government is to deceive people in pretending to arrange marriages by lot,

There is to be "one royal lie" which, Plato hopes, may deceive the rulers, but will at any rate deceive the rest of the city. This "lie" is set forth in considerable detail. The most important part of it is the dogma that God has created men of three kinds, the best made of gold, the second of silver, and the common herd of brass and iron. Those made of gold are fit to be guardians; those made of silver should be soldiers; the others should do the manual work. It is thought hardly possible to make the present generation believe this myth, but the next and all subsequent generations can be so educated as not to doubt it.

Plato was right in thinking that this myth could be generated in two generations. The Japanese have been taught that the Mikado is descended from the sun-goddess, and that Japan was created earlier than the rest of the world.

So much for Plato's *Republic*. However, if you want more, there's plenty more. See Chapter XIV (pp. 108-119) of *A History of Western Philosophy*.

ABOUT BRS MEMBERS

(7)

Society member and 1987 BRS Award recipient John Somerville protests the American invasion of Panama. The Californian, December 28, 1989.

Protest against Panama invasion

I am sending this letter also to the president of our United States:

In the name of peace, justice and law, Americans must protest against your massive armed invasion of tiny Panama at the cost of innocent American and Panamanian lives.

Your presidential war is forbidden by our Constitution and laws.

Any armed intervention in the internal affairs of another country is strictly forbidden by the Charter of the United Nations and of the Organization of American States, in both of which our own country is a founding and leading member.

The other member-states of these organizations have, by overwhelming majority votes, demanded that you withdraw your invasion forces immediately.

Have you no respect for law and the sovereignty of other countries?

Have you no feeling for justice, for the most important human rights of inno-

cent men, women and children not to be killed?

Did you not realize how hypocritical it was to launch an armed invasion while you were publicly telling other countries that they must respect human rights and practice democracy by peaceful means?

Did you not feel how morally incongruous your reversion to the old dictatorial gunboat diplomacy was at the very time so many other countries, at your urging, are casting off the old detested methods of dictatorship?

You are now in the grotesque posture of publicly claiming credit for their victory over dictatorship while you yourself are practicing dictatorship.

Mr. President, in the name of peace, justice and law, your invasion forces must be withdrawn from Panama immediately, before any more innocent lives are lost.

JOHN SOMERVILLE, Ph.D.
Professor Emeritus of Philosophy,
City University of New York
El Cajon

- (8) Harry Ruja has been invited to speak at the Conference of Bangladesh Philosophical Congress in November 1990. One topic at the conference will be "the Philosophy of Bertrand Russell."

"But when I took matters in my own hands, I found it." And his letter to the Boston Globe librarian tells how:

- (9) The Case of the Missing Photo. Harry also informs us that his search for a specific photo of BR has finally ended in success. The journey started this way, as reported by Harry:

"I knew that Russell had been at Harvard the fall of 1940, so I ordered the Boston Globe for Oct. 1940, planning if necessary to go through Nov. and Dec. 1940, to try to find the photo -- but success came sooner than I could have hoped. I only needed to turn to 2 Oct. and there on page 4 was my photo.

"When Newsweek and The New Republic published in early 1976 reviews of Clark's Life of BR, they printed an interesting photo of BR striding along with a big grin on his face and both hands clasped behind his back, a photo which had appeared in Clark. Clark and The New Republic acknowledged the Boston Globe as the source of the photo taken of BR at Harvard in 1940. Thinking that if the Globe could tell me when the portrait appeared there, I could order the newspaper for that date on our university's interlibrary loan service and not only find it, but perhaps an accompanying interview."

"I was in for another surprise when I found it: Russell was not alone. Striding along with him was professor Raphael Demos of the Harvard Department of Philosophy. What is amazing about that is that 26 years earlier, Demos had been Russell's pupil at Harvard when Russell was a visiting professor there in 1914. Ironically, none of the reprints of that photo which I have seen so far print Demos along with Russell. So much for the importance of being a Harvard professor. By the way, if you are curious to know what Russell thought of Demos as a pupil, you might look at Russell's Autobiography, vol. I, 1967, p. 327 (Little, Brown edition)."

So Harry wrote to the Boston Globe, but was informed by its librarian that the search was fruitless. "Because we are unable to locate the original photo," she wrote to him, "we cannot look up the date [the] photo was published. The date of publication is stamped on the original."

Harry reports: "As I had hoped, there was a report of an exchange BR had with his walking companion... You see, virtue is rewarded."

As Harry writes, "For the poor librarian, it's a Catch-22 situation: She can't find the photo because she doesn't have any way of finding the date when it appeared; and she can't find the date because it's stamped on the photo!"

To see the photo in question, pull your copy of Clark's Life of BR from your bookshelf and find illus. No. XVIII.

Thank you, HARRY RUJA!

BR ASSESSED

- (10) *The Bluffer's Guide to Philosophy* by T. V. Morris (South Bend, IN: Diamond Communications, Inc., 1989) has several pages on BR which TIM MADIGAN sent us. (Thank you, Tim.) Tim says, "The author is a Professor of Philosophy at Notre Dame, so I imagine he's not very sympathetic to Russell's views." Actually, considering the source, Russell doesn't come off too badly. (pp.111-113)

= Bertrand Russell =

BERTRAND RUSSELL (20th century [d. 1970], British). Renowned for work in logic and romantic escapades, he was a fertile thinker who changed his mind a lot and was enormously influential. Russell began to express his intense curiosity about the world from the time that he was three days old, as we know from his mother's writing then: "He lifts his head up and looks about in an energetic way." Told at the age of five that the world is round, he refused to believe it, but began digging a hole outdoors to see whether he would end up, bottom end up, in Australia. As it turns out, he didn't get to Australia until his late seventies. Early on, he became fascinated with mathematics, a study which awakened his philosophical interests. Later in life he once summed up his intellectual history by saying that when he became too stupid for mathematics he took to philosophy, and when he became too stupid for philosophy he turned to history. Russell did write on a wide variety of topics and often had quite interesting things to say: Democracy, for example, has at least one merit—elected officials cannot be more stupid than the electorate, for the more stupid the official is, the more stupid yet the people were to vote for him. Once asked by a publisher to write a complimentary foreword to a book by a philosopher whom Russell thought always stole his ideas, Russell replied: "Modesty forbids." In his late sixties, he was offered a position at the College of the City of New York, but because of a taxpayer's suit to annul the appointment initiated by a Brooklyn dentist's wife, he was legally ruled morally unfit to teach New Yorkers and was prevented from accepting such a position. In the suit, his books

were described as "lecherous, salacious, libidinous, lustful, venerous, erotomaniac, aphrodisiac, atheistic, irreverent, narrow-minded, untruthful, and bereft of moral fibre." The philosopher Wittgenstein commented when he heard about this that if anything was the opposite of aphrodisiac it was Russell writing on sex. Russell predicted that only inhabitants of Tierra del Fuego (southern-most tip of South America) and, perhaps, a few Australians, would survive the next major war. He went on to win a Nobel Prize for Literature (because there isn't one for philosophy, and I want to know *why not?*).

Famous Russellian Proclamation:

"That Man is the product of causes which had no prevision of the end they were achieving; that his origin, his growth, his hopes and fears, his loves and his beliefs, are but the outcome of accidental collocations of atoms; that no fire, no heroism, no intensity of thought and feeling, can preserve an individual life beyond the grave; that all the labours of the ages, all the devotion, all the inspiration, all the noonday brightness of human genius, are destined to extinction in the vast death of the solar system, and that the whole temple of Man's achievement must inevitably be buried beneath the debris of a universe in ruins—all these things, if not quite beyond dispute, are yet so nearly certain, that no philosophy which rejects them can hope to stand. Only within the scaffolding of these truths, only on the firm foundation of unyielding despair, can the soul's habitation henceforth be safely built."

P.S. Have a nice day.

No, it wasn't history, Professor Morris. Here's the quotation as we know it: "When I was young, I liked mathematics. When this became too difficult for me, I took to philosophy, and when philosophy became too difficult, I took to politics." (RSN7-17)

Will someone please tell us the source of the Famous Proclamation?

(11)

RESULTS OF THE VOTE

Elected: IRVING ANELLIS, BOB DAVIS, BOB JAMES, HUGH MOORHEAD, CHANDRAKALA PADIA, HARRY RUJA. Of 8 candidates, 6 were elected, bringing the total number of directors to 24. All 8 were excellent choices; no matter who won or lost, the BRS itself was bound to win.

We suggest that those who did not win this year try again next year.

BR REMEMBERED

(12) From Freethought Today (Freedom From Religion Foundation), May 1990.

Remembering Bertie

May is the birth month of Bertrand Russell, who was born May 18, 1872 and died Feb. 2, 1970.

By Annie Laurie Gaylor

His mother described him as "21 inches long and very fat and very ugly, very like Frank everyone thinks — blue eyes far apart and not much chin."

His second wife, Dora Black, also painted a rather unglamorous picture: "My first impression was that he was exactly like the Mad Hatter." He was, she said, "enchantedly ugly."

T.S. Eliot, a close friend, once remarked, "You see he has pointed ears, he must be unbalanced."

And the New York attorney

who won a suit to void his appointment to the philosophy department at the College of the City of New York in 1940 because of his tolerant attitude toward sex, described him as "lecherous, libidinous, lustful, venerous, erotomaniac, aphrodisiac, irreverent, narrow-minded, untruthful and bereft of moral fiber."

"What I wish at bottom is to become a saint," Bertrand Russell once admitted, but he couldn't help being pleased by the label "aphrodisiac." He noted: "I cannot think of any predecessor except Apuleius and Othello."

In his 98 years Russell wrote 68 major books, including the three-volume *Principia Mathematica* (with A.N. Whitehead). He devoted his youth to that work, citing mathematics as his "chief interest and source of happiness." In fact, this British-born philosopher, mathematician and social activist once wrote that beginning Euclid "was one of the great events of my life, as dazzling as first love. I had not imagined that there was anything so delicious in the world."

Brought up by a severe, formally Victorian grandmother, the adolescent Russell worried whether he would ever be able to talk freely with people, and would write down his secret,

heretical ideas in English written in Greek letters, "for fear lest someone should find out what I was thinking." Very isolated and unhappy, the genius-to-be did not commit the suicide he pondered, "because I wished," he wrote, "to know more of mathematics."

In his 40's Russell started a career of popular writing, academic writing and social activism that may be unrivaled, beginning with his fight to keep Britain out of World War I and highlighted by books against religion or nonjudgmental toward sex that scandalized post-World War II America. His activism culminated in work for nuclear disarmament that continued until his death.

Upon being sent to prison for his pacifist work during World War I, Russell wrote: "I was much cheered on my arrival by the warder at the gate, who had to take particulars about me. He asked my religion, and I replied 'agnostic.' He asked how to spell it, and remarked with a sigh: 'Well, there are many religions, but I suppose they all worship the same God.' This remark kept me cheerful for about a week."

Russell wrote his own Ten Commandments:

1. Do not feel absolutely certain of anything.
2. Do not think it worth-

while to proceed by concealing evidence, for the evidence is sure to come to light.

3. Never try to discourage thinking, for you are sure to succeed.

4. When you meet with opposition, even if it should be from your husband or your children, endeavor to overcome it by argument and not by authority, for a victory dependent upon authority is unreal and illusory.

5. Have no respect for the authority of others, for there are always contrary authorities to be found.

6. Do not use power to suppress opinions you think pernicious, for if you do the opinions will suppress you.

7. Do not fear to be eccentric in opinion, for every opinion now accepted was once eccentric.

8. Find more pleasure in intelligent dissent than in passive agreement, for if you value intelligence as you should, the former implies a deeper agreement than the latter.

9. Be scrupulously truthful, even if the truth is inconvenient, for it is more inconvenient when you try to conceal it.

10. Do not feel envious of the happiness of those who live in a fool's paradise, for only a fool will think that it is happiness.

BOOK NOMINATIONS WANTED

(13) The 1991 BRS Book Award should be given to a recent book that deals in an important way with with BR's life, work, or times...or some cause that he had championed (such as control of population, control of nuclear weapons, defense of individual liberties, etc.)

Please send your candidate(s) to Gladys Leithauer, Chair, BRS Book Award Committee, 122 Elm Park, Pleasant Ridge, MI 48069.

(14)

1991 DUES ARE DUE

TO ALL MEMBERS: Everybody's renewal dues are due January 1, 1991. The January 1st due-date applies to all members, including first-year members (except those who joined in the final quarter (October/November/December 1990)).

Here is the 1991 dues schedule: Regular, \$33; couple, \$38; Student and Limited Income, \$12.50. Limited Income couple, \$15. Plus \$7.50 outside U.S., Canada, and Mexico. Plus \$2.50 for Canada and Mexico. In US dollars.

Please mail dues to: 1991, 1664 Pleasant View Road, Coopersburg, PA 18036.

If you want to make our life a little easier, send your dues soon. And if we receive them before January 1st, you'll find your name on the Renewal Honor Roll.

Thanks!

TO FIRST YEAR MEMBERS -- members who joined any time during 1990; the rest of this item is for you.

We know from experience that new members sometimes feel put upon when asked to pay dues after less than a year of membership. We understand that. We'll tell you why we do it this way.

In the previous system, a new members's dues covered 12 months of membership. That required us to notify each member individually -- on the anniversary date of enrollment -- that the next year's dues were due. And after that, we had to follow up on all members, to see whether dues were in fact paid. This went on throughout the whole year. It was cumbersome, provided many chances for error, and took a lot of time. In fact, it took more time than we had. We had to make a change.

The present system is easier to administer, produces fewer errors, and takes less time. Everyone's dues come due on the same day, January 1st. Simple!

We don't think that the new member whose first year of membership is less (sometimes considerably less) than 12 months has been short-changed in any important way. He/she has received just as many newsletters (and knows as much about the BRS) as the member who joined in January.

All first-year members (except those who enrolled in January) have a first-year membership period that is shorter than a year. Thereafter, the yearly membership period is always a full 12-months.

The one exception to all the above are those who joined in October/November/December 1990. Their renewal dues are not due till January 1, 1992.

BR'S INFLUENCE

(15) Up with women! From *Kathleen Mansfield, A Secret Life*, by Claire Tomolin (Knopf 1988), p. 46, with thanks to Jean Hollyman:

Ideas which had merely hung subversively in the air until now began to take on body and strength, and behaviour which would have been unthinkable a generation earlier began to appear openly, at least in intellectual circles. Changes were of many kinds: in politics, over fifty Labour Members of Parliament reached the House of Commons in the 1906 election, and the Liberal Government had an unprecedented majority. The suffragette movement was approaching its militant zenith; in 1907 the first candidate of the National Union of Women's Suffrage Societies, standing at a by-election in Wimbledon, was Bertrand Russell, member of the political aristocracy, Fellow of Trinity College, Cambridge, and distinguished as a philosopher and mathematician. A newspaper commented sagely that 'the mere fact that a thinker of his intellectual distinction should stand primarily to promote women's suffrage marks an immense advance in the fortunes of the cause'.

BR AND THE THIRD WORLD

1. Marcha, the broadly Marxist, generally anti-American weekly which is followed closely by the intellectual and academic communities in Montevideo, in its November 18 issue carried an article by Bertrand RUSSELL entitled "Message to The Peoples of the Third World". The article, billed by Marcha as having been written especially for and at the request of Marcha, is noteworthy because of the unyielding exhortation Russell makes to Latin Americans and all other peoples of "the third world" to follow the Viet Cong example and confront "American imperialism with a Viet-Nam on every continent".

2. Russell begins by saying that he is directing himself to the peoples of Latin America, Asia, and Africa who are "suffering" because of American "exploitation". The thrust of Russell's argument is that since the United States with only 6% of the world's population controls 70% of the world's resources, it lives in luxury at the expense of the misery of the third world. Russell argues that the United States can only maintain this state of affairs by force but that the efficacy of its force has been called seriously into question by the "heroism and bravery" of the Vietnamese whom the United States has not been able to reduce despite the fact that it is "using virtually all of its power except atomic weapons".

3. Russell writes that "a fundamental lesson should be extracted from the (example of) Vietnamese heroism" and he adds "I hope that this example will be emulated". His conclusion is that "everywhere where it is possible to resist American imperialism as the Vietnamese have done, it is necessary to do so." Russell writes that "the lesson of Viet-Nam is applicable in many places; from Angola, Portuguese Guinea, and South Africa to Guatemala, Peru and Bolivia". Russell calls for a worldwide struggle and says "the peoples of Latin America, Asia, and Africa can be

successful if they will treat every isolated case of resistance as part of a global struggle".

4. A Marcha staffer told an Embassy officer that Marcha editor Carlos QUIJANO corresponds regularly with Bertrand Russell and is personally flattered that Russell would use Marcha as a Latin American outlet for some of his material. The staffer added that he personally thought it was a terrible piece of intellectual dishonesty on the part of Russell and wishes Marcha had not printed it. The Marcha staffer said that there are others on Marcha's staff who share his view.

5. The Russell article is one of the most intellectually dishonest, emotionally distorted, and viciously anti-American articles the Embassy has noted in Marcha in recent months. In making his basic argument as outlined above, Russell makes a succession of charges of American barbarity, including the use of chemical and bacteriological warfare in Korea, Viet-Nam, and Peru. The Embassy has heard little local comment on the article and doubts whether there is any cause for concern that it could incite the normally placid Uruguayan intellectual left to violence. Nevertheless, it will provide ammunition for the more militant leftist extremists in their arguments that direct action is necessary to further more quickly their revolutionary goals. A copy of the article is forwarded herewith as an enclosure.

FOR SALE

- (17) BR postcard. After being out of print for several years, our favorite photo of BR -- taken in 1959 by Philippe Halsman -- is once again available. \$1 for the first one, 75¢ each for more ordered at the same time. Postpaid.
- (18) 16-Year Index of BRS Newsletters, 1974-1989, Issues 1-64, 43 pages, 2379 entries. Buy it for \$7 postpaid (within the USA). Or borrow it from the RS Library, \$1 postage (within the USA), plus you pay return \$1 postage.
- (19) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge." Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." New reduced USA price, \$5 for 90 sheets, postpaid. Canada & Mexico still \$6.
- (20) 1990-Meeting Papers. The 10 papers presented at the 1990 Annual Meeting -- papers by Elizabeth Eames, Lee Eisler, Joan Houlding, Don Jackanicz, Marvin Kohi, Tim Madigan, Chandrakala Padia, Michael Rockler, Harry Ruja, and Thom Weidlich, 145 pages in all, bound -- can be yours for \$18 postpaid. Or borrow them from the RS Library for \$1 postage, plus you pay return \$1 postage

Buy any of the above from the newsletter, or borrow from the RS Library. Addresses on Page 1, bottom.

BOOK REVIEWS

- (21) *Essays on Language, Mind and Matter, 1919-1926*, Volume Nine of the Collected Works of Bertrand Russell (London: Unwin Hyman, 1988), reviewed by JUSTIN LEIBER:

This sumptuous book maintains the meticulous scholarship of the series. Most of the "essays" are book reviews; there are also several short papers, an outline for Analysis of Mind, two course syllabuses, miscellaneous notes, and the editors supply ample and often striking background information for this melange. Throughout Russell ranges over a vast variety of topics with his accustomed brilliance, clarity, and wit.

A pleasing surprise, for this reviewer, was to read the material that prefaces Russell's famous (or infamous) Introduction to Wittgenstein's Tractatus (1921). Ludwig Wittgenstein tried and failed to interest publishers in his book. He appealed to Russell for help and Russell agreed to write an introduction to the book as an inducement to publishers. Wilhelm Ostwald agreed to publish the book in his Annalen der Naturphilosophie only upon condition that he use Russell's introduction. Russell also secured C. K. Ogden's agreement to publish a bilingual edition in London (in Ogden's International Library of Psychology, Philosophy and Scientific Method, issuing from Routledge & Kegan Paul). Ogden prefaced the book with the note that

In rendering Mr Wittgenstein's Tractatus Logico-Philosophicus available for English readers, the somewhat unusual course has been adopted of printing the original side by side with the translation. Such a method seems desirable both on account of the obvious difficulties raised by the vocabulary and in view of the peculiar literary character of the whole. As a result, a certain latitude has been possible in passages to which objection might otherwise be taken as over-literal... The proofs of the translation and the original have been very carefully revised by the author himself.

Wittgenstein hated Russell's Introduction. Perhaps in desperation to get his book published, Wittgenstein did not, however, attempt to make this clear to either Ostwald or Ogden. He did, however, land on Russell like a ton of bricks and he also made his antipathy abundantly clear to many others, including the devoted followers he eventually acquired. He must also have said some things about the translation to the latter as well, for his followers eventually circulated the accusation that Wittgenstein had always been dissatisfied with the translation. This so distressed Ogden that he wrote Russell, shortly after Wittgenstein's death, to verify Wittgenstein's role in the translation. To this inquiry Russell replied, Aug. 1, 1951

Tell Ryle to go to hell. The translation of the Tractatus in 1922 was sanctioned point by point by Wittgenstein, and where it differs from the German it does so by his wish. I had various arguments with him on points in the translation, and while nothing would induce him to alter one syllable of the German text, he was quite willing that the English text should not represent it accurately if in the meantime he had thought of some improvement.

Ogden died in 1957. When A J Ayer succeeded him as editor, he commissioned a new translation by D. F. Pears & B F McGuinness. Russell gave permission for his introduction to be used. But Ogden's bother persuaded Russell to withdraw permission on the basis that it would otherwise suggest

that Russell agreed with "Ryle's allegations" and was denying what he wrote in his 1951 letter.

A J Ayer asked Russell to reconsider, writing "This new translation will supercede the old, so that if your introduction is not including in it, it will practically cease to be available; I think this would be a great pity, as quite apart from the light it throws on Wittgenstein, it is a very interesting piece in itself." To this Russell replied

I was influenced by the fact that Wittgenstein and all his followers hated my introduction and that Wittgenstein only consented to its inclusion because the publishers made it a condition of their publishing the Tractatus. I did not know, until I received your letter this morning, that there was anyone who thought that my introduction had any value. Since you think that it has, I am quite willing again to grant permission for its publication.

Personally, I find that the hairs on the back of my neck stand up much more satisfactorily when I read some sentences from the "over literal" 1922 edition as opposed to the limpid 1961 one. To me "Death is not an event of life. Death is not lived through." sounds better than "Death is not an event in life: we do not live to experience death." And I put "Whereof one cannot speak, thereof one must be silent" on my T-shirt, not "What we cannot speak about we must pass over in silence."

[Justin Leiber, Philosophy Dept., University of Houston, Houston, TX 77204]

BR QUOTED

(23) From the Post Script section, p.1, of the St. Louis Post-Dispatch, (8/29/90), with thanks to STEVE MARAGIDES:

Work is of two kinds; first, altering the position of matter on or near the Earth's surface relative to other matter; second, telling other people to do so.

ABOUT BERTRAND RUSSELL

- (24) In one of the most unlikely associations of the century, BR wrote an almost-weekly column for the Hearst Press between 1931 and 1935. BR wrote in his autobiography that he was dropped because he refused to visit Hearst's castle in California. BR's Hearst columns can be read in Mortals and Others (Allen & Unwin, 1975), edited by Harry Ruja. Thank you, AL SECKEL.

W. R. Hearst, Russell Tie

By George McEvoy

Bertrand Russell and the late William Randolph Hearst shared a mutual respect, if not a warm friendship, and the Hearst Newspapers carried a column by the British philosopher for many years.

The Hearst Newspapers were his main sounding board in the United States throughout most of the 1920s and 1930s.

His columns were peripatetic, to say the least, and the topics ranged from his fear and abhorrence of militant feminists to the question of whether Socialists should smoke good cigars.

Some of his thoughts, as expressed in the early 1930s:

● ON VEGETARIANS — "They would not hurt a fly, but their charity toward flies does not extend to human beings."

● ON FEMINISTS — "When they have their way, instead of talking of 'man and the lower animals' we can speak of woman and the lower animals."

● ON YOUTH — "Expect of the young the very best

of which they are capable, and you will get it. Expect less, and it is only too likely that you will get no more than you expect."

● ON POLITICIANS — "When the French Revolution's reign of terror came to an end, no one was left among the politicians except prudent cowards who had changer their opinions quickly enough to keep their heads . . . the result was 20 years of military glory because there was no one left among the politicians with sufficient courage to keep the generals in order."

Russell was a maverick, and this quality probably appealed to Hearst. On Dec. 1, 1931, the Hearst Newspapers prominently played a Russell column called "On Being Good", in which he wrote:

"We believe a boy ought to show spirit and should on occasion have the pluck to defy the authorities and take the consequences.

"At any rate, this is the belief where the sons of the well-to-do are concerned. Courage in wage-earners is less admired by the authorities."

- (25) William Kunstler, the lawyer, discusses his involvement with BR. From an interview in Williamette Week (Portland Oregon), December ---> 22-28, 1987. This story is news to us. Anyone? With thanks to JEAN ANDERSON.

What was your involvement with Bertrand Russell?

Bertrand Russell? Well, the Honeywell Corp., for which Dennis Banks worked in Minnesota, published an employment ad in *The New York Times* which had pictures — you know, sketch drawings — of Alfred North Whitehead [a philosopher], who was dead, and one other figure who was dead, and Bertrand, who was not dead, although they listed his death date under his name. And he was then running the Stockholm Peace Com-

mittee, so to have him associated with a war profiteer like Honeywell pissed him off no end. So somehow he wrote to me and asked me to do something about it. I threatened Honeywell with a right-of-privacy action, first for maligning him by saying that he was dead, which he laughed at, and second for using him in an advertisement to recruit engineers who would be deep into the war-materials gains. They settled the matter out of court. I don't remember what the amount was, but Bertrand said, "You bring the money over to me, take your money out of it, you can see Stockholm." But he died before the check cleared, so I just sent it over to Stockholm.

113a GRANTS

BRS GRANTS

- (26) The 1991 BRS Grant Program continues to include Master's as well as Doctoral Grants. See the details in the announcement below. The announcement was mailed on 10/10/90 to 4 departments -- Philosophy, English, Graduate School, and "Grants & Fellowships" -- in each of 30 U.S. and Canadian colleges and universities. Included in the mailing were a press release ("2 SCHOLARS ARE HONORED ..") and an updated BRS Fact Sheet (R22 10/90); these are shown the following pages.

Please post

2 Grant Announcements

1991: A PROGRAM of DOCTORAL and MASTER'S GRANTS

1990: THE DOCTORAL and MASTER'S GRANT RECIPIENTS

1991. The Bertrand Russell Society will award funds to help defray expenses of currently enrolled Doctoral and Master's candidates for graduate level degrees, whose proposed dissertation (Ph.D.) or thesis (M.A.) best gives promise of dealing in a significant way with the thought, life or times of Bertrand Russell.

Depending on the number and quality of applications, the award money will fall into one of two patterns: (a) \$1000 for a doctoral candidate and \$500 for a master's, or (b) \$500 to each of three candidates for the master's.

Candidates are required to send to the Society:

- (1) An abstract of his/her dissertation or thesis, and plan of study.
- (2) A letter from the Chairman of the candidate's department which states the following: (a) for the Ph.D. candidate: that all work for the doctorate has been completed except the dissertation, and that its topic has received academic approval; (b) that the candidate for the master's is actively involved in graduate study, and is studying Russell via course work, personal reading, and/or research.
- (3) (a) A letter from the dissertation adviser evaluating the applicant and plan of study. (b) A letter from the Chairman or potential thesis advisor evaluating the applicant and probable plan of study.
- (4) A statement in the candidate's covering letter saying that if a grant is awarded, he/she will provide the Society, at its expense, with a copy of the completed work as approved by the department.

Applications and supporting documents should reach Professor Hugh S. Moorhead, Chairman, Philosophy Department, Northeastern Illinois University, 5500 North St. Louis Avenue, Chicago, IL 60625 by May 1, 1991. The recipients will be announced on or around July 1, 1991.

Please note: Candidates may be enrolled in any field. Past grants have gone to persons in the fields of History, Mathematics, and Philosophy. English, Education, Sociology and Psychology are other likely fields.

1990 Doctoral Grant recipient: Al Essa, Philosophy Department, Yale University. His dissertation, *Russell's Later Philosophy*, aims to show that there is a false consensus that Russell's later revisions (following the *Philosophy of Logical Atomism*) are not significant advances over his earlier views on ontology and theory of knowledge. \$1000 Grant.

1990 Master's Grant recipient: Neil Kennedy, Philosophy Department, University of Chicago. His thesis, *Language and Certainty: Russell and the Philosophy of Language*, stresses the importance of Russell's epistemology to his thought about language. \$500 Grant.

October 1, 1990
 For immediate release

THE BERTRAND RUSSELL SOCIETY HONORS 2 SCHOLARS

Elizabeth R. Eames, Professor of Philosophy at Illinois State University, Carbondale, is the recipient of The Bertrand Russell Society's 1990 Book Award, for her *Bertrand Russell's Dialogue With His Contemporaries*.

Professor Eames's talk, "Russell and Women," delivered at the Russell Society's 1990 Annual Meeting, ended with this observation: "If a caring individual (as Russell was in general) and one committed to the skeptical inspection and rational replacement of all traditional relations between the sexes cannot free himself from the male prerogative of exclusivity, possessiveness, and the role of women as sexual prey, we can see how long and difficult a journey there is to equity for women in sex, marriage, and motherhood."

Kenneth Blackwell receives a 1990 Bertrand Russell Society Service Award. Before assuming his present post at McMaster University as Archivist of its Bertrand Russell Archives, he had been Archival cataloguer, in England, for Bertrand Russell and for Russell's literary agent. At McMaster, he has been active in many research projects, grants for which have totalled some \$2.5 million. He has authored many scholarly works, and edited others. He won the Bertrand Russell Society Book Award twice, in 1985 and 1987. This brief paragraph does scant justice to the towering sum total of his many contributions to Russell Studies.

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970), philosopher, social reformer, Nobel Laureate, and possessor of one of the seminal minds of this century. Some Society members are professional philosophers; most are members of the general public. Membership is open to anyone interested in Russell. For information about the Society, write to: Award/90, 1664 Pleasant View Road, Coopersburg, PA 18036.

FREETHINKERS, ORGANIZE!

(28) 2nd memo from Arizona:

TO: Selected Freethinking Organizations
 FROM: James L. Sanders, 413 W. Navajo Rd., Flagstaff, AZ 86001
 SUBJECT: Response to my MEMO 7/23/90 re college/high school freethought clubs
 DATE: September 1, 1990

I mailed my July MEMO to 31 freethought organizations, 18 of which went to the headquarters and selected chapters of American Atheists, Inc. As of this date I have received 8 responses (16%). All were favorable.

I received phone calls from Bonnie Lange, President of The Truth Seeker Co., Inc., and from Conrad Geringer of the Tucson Chapter of American Atheists, Inc. My MEMO has been printed in the August issues of the "Bertrand Russell Society News" and in "Freethought Today". The September issue of Church and State has printed it also. Free Inquiry will carry it in its next issue if there is space.

I have heard from the South Bay Chapter of American Atheists, Inc., in San Jose, California. And Thomas Getts sent me information about the CALES campaign to inject bible teachings into the schools of Denver.

I am aware of the conflicts between various freethought organizations across the nation. Is there any person or organization which could take the lead in forming an "American Council of Freethought Organizations" to deal with such problems as religious clubs in high schools and colleges?

The FEPs (fundamentalists, evangelicals, Pentacostals) are working together in this matter; why can't we?

(signed) James L. Sanders

(29) This Fact Sheet was included in the Grant announcement mailing:

Fact Sheet
THE BERTRAND RUSSELL SOCIETY, INC.
Founded 1974

General aims: to foster a better understanding of Russell's work, and to further his aims by promoting ideas and causes he thought important.

Some specific aims: to present Russell's ideas as attractive, rational alternatives to alienation, cynicism, and belief in the supernatural; to oppose misuses of science and technology; to encourage new scholarly and popular works on Russell; to make Russell's views better known -- they deal with virtually all the problems facing modern man, from how to be happy to how to work for nuclear disarmament.

Why people join: most members join (they have told us) for one or more of five reasons: to learn more about Russell; to be in touch with other admirers; to work for things Russell worked for; to discuss Russell's work with others; to do something useful for others via the BRS.

Most members are members of the general public, and are of diverse back-grounds.

Academe. The BRS membership list includes a number of professional philosophers. The BRS aims to promote Russell scholarship; a BRS session is held each year at the annual meeting of the American Philosophical Association (Eastern Division); BRS grants are offered to a Doctoral and Master's candidates. Papers from the sessions and grant-recipients' dissertations -- as well as papers presented at the BRS Annual Meeting (starting 1990) -- are available from the BRS Library.

BRS Library lends films and tapes on Russell as well as books by and about him. A limited number of books are offered for sale.

How the BRS functions: the BRS meets annually, in June. Between meetings, members communicate by mail or phone. Committees work in specific areas (next item). Members receive the BRS quarterly newsletter *Russell Society News*, and the semi-annual periodical *Russell*, published by the Bertrand Russell Archives at McMaster University, Hamilton, Ont.

Committees: Science Committee deals with selected scientific issues. Philosophers Committee organizes the annual BRS session at the APA (Eastern Division) meeting. Award Committee selects recipients for annual BRS Award (next item). Book Award Committee, as its name implies, selects a book to receive the Book Award.

BRS Award. Past recipients: PAUL ARTHUR SCHILPP (1980), creator of "The Library of Living Philosophers", for promoting Russell scholarship; STEVE ALLEN (1981), creator of the TV series, "Meeting of Minds," for promoting public awareness of Russell; HENRY W. KENDALL (1982), Chairman, Union of Concerned Scientists, for anti-nuclear studies and campaigns; JOSEPH ROTBLAT (1983), for organizing the first 23 Pugwash Conferences; DORA BLACK RUSSELL (1984), for sharing Russell's concerns, collaborating in his work, and helping to perpetuate his legacy; ROBERT JAY LIPTON (1985), for providing new psychological insights into the nuclear peril; PEOPLE FOR THE AMERICAN WAY (1986), for exposing and opposing the current crop of self-appointed guardians of American morality and culture. JOHN SOMERVILLE (1987), for his efforts to alert mankind to the threat of "omnicide", total and irreversible destruction by nuclear weapons. PAUL KURTZ (1988) for his unswerving commitment to skepticism and his undaunted devotion to secular humanism. PAUL EDWARDS, (1989), Editor-in-Chief of Macmillan's 8-volume *Encyclopedia of Philosophy*, for his agnostic skepticism and scholarly contributions to the growing renaissance in philosophy.

Degree of member activity: members may be as active or as inactive as they wish. Some are very active; some wish merely to be kept informed. No matter. Anyone interested in Russell will be welcome as a member.

"DEAR CORLISS"
*Letters From
 Eminent Persons*
 edited by
Corliss Lamont

Activist and social critic Corliss Lamont, always deeply involved in the major issues of our time, has maintained for decades an extensive, lively correspondence with prominent artistic and political figures. Featuring biographical sketches and rare photographs, this book includes letters from John Dewey, Katharine Hepburn, Julian Huxley, Rockwell Kent, Anne Morrow Lindbergh, Henry Cabot Lodge, John Masfield, Bertrand Russell, George Santayana, and others. These eloquent and witty letters provide a glimpse at a fascinating cross-section of this century's noteworthy people and events.

NEW BOOK

Prometheus Books advertises in the New York Review of Books a new collection of Corliss Lamont letters. Recognize the guy in the top left-hand corner?

Turner is right — Christianity is for world's losers

In reporting Ted Turner's reception of the Humanist of the Year award, The Constitution noted his description of Christianity as "a religion for losers."

In this Mr. Turner may actually be closer to a correct understanding of Christianity than some of his Christian opponents quoted in the article.

From its very beginnings, Christianity has been a religion for the losers, for the marginalized, the oppressed and the left out. St. Paul described his fellow-believers at Corinth as mainly "contemptible nobodies," claiming that God had chosen these very losers, rather than the affluent and the capable, to overturn the world.

Jesus uttered beatitudes blessing the poor and the miserable, and called for loving one's enemies, even offering them another cheek to hit. He himself ended up as the guest of honor at a crucifixion, not an awards banquet, a genuine loser and certainly no company for an American winner to keep.

The association of Christianity with "losers" continues. It is no accident that many of the heroes of the civil rights movement were Christian ministers, and that civil rights rallies often gathered at churches. It is no coincidence that the homeless and abused are frequently sheltered by churches, or that Christian activists for the poor in Central America are gunned down by the cadres of the powerful.

The greatest danger that churches in America face is a success ethic like that of Mr. Turner. It is an ethic that regards winning and being seen as a winner as the chief

good, and sacrifice of self-interest for the sake of others as contemptible. It idolizes power and fame, and fears and despises weakness, failure and obscurity.

Only when Christians abandon our centuries-long fascination with power and success will we be able to defend the Earth and its most helpless children from the depredations of the winners. However much Christianity may be burdened by hypocrisy, it still bears an ember of radical solidarity with the world's losers that must be cherished until it once more bursts into flame.

DAVID RENSBERGER

Mr. Rensberger is an associate professor of the New Testament at the Interdenominational Theological Center, Atlanta.

Ted Turner applauded

As a subscriber to the "Humanist," published periodically by the American Humanist Association, I was aware of and applauded its nomination of Ted Turner as 1990 Humanist of the Year.

I am most certainly surprised and pleased that the newspaper found the occasion sufficiently newsworthy to feature it on page one April 28.

Of course flak from the clergy is to be expected, as well as letters to the editor expressing outrage at Turner's humanist views.

But what Christian, Jew or Humanist can take offense at Ted's "10 Voluntary Initiatives" — a far more positive statement of hope for mankind than the largely negative dictum that the Jewish deity laid on Moses?

JACK FRIDLAN

(31)

ON CHRISTIANITY

Ted Turner, once the darling of the Christian Fundamentalists, has left their ranks to become a humanist. He was awarded the 1990 Humanist of the Year award, an event which generated these letters to the Atlanta Journal. Thank you, PAUL KUNTZ.

A BR INCIDENT

- (32) CCNY, 1940. BR had been appointed to teach mathematical logic at CCNY -- the College of the City of New York. Local clergy objected to the appointment, because -- among other things -- they didn't like what BR had said about Christianity and about relations between the sexes, in his book, *Marriage and Morals* (1929). The situation caused considerable stir -- the papers were full of it -- and in the end, BR'S appointment was cancelled, and he was out of a job. See RSN32-11 for August Heckscher's excellent report on the whole affair.

The following excerpt (incomplete) is from *The New York Post* (3/18/40) -- a proper newspaper in those days. Thank you, HARRY RUJA.

NEW YORK POST. MONDAY. MARCH 18. 1940

Einstein Backs Russell as Board Prepares to Vote Pros and Cons Get in Their Last Words Before Reconsideration Tonight

As the Board of Higher Education prepared to reconsider tonight its appointment of Bertrand Russell to the City College faculty, Russell's friends and foes today exchanged final volleys.

PROS:

Albert Einstein issued at Princeton a statement saying: "Great spirits have always found violent opposition from mediocrities. The latter cannot understand it when a man does not thoughtlessly submit to hereditary prejudices but honestly and courageously uses his intelligence and fulfills the duty to express the results of his thought in clear form. I confidently hope that in the Bertrand Russell affair it will become manifest that at least those of us who carry the responsibility know how to appreciate fully rational service and rational strength of character."

John T. Flynn, a board member, said it was "a very grave thing for men who hold themselves out as leaders of opinion

to misrepresent the character and teachings of so great a scholar" as Russell, and pointed out that "all his great contributions to philosophical thought are put into the ashcan because a few narrow-minded leaders have thumbed through a couple of his books to pick out isolated paragraphs which they have used to calumniate Russell."

The Ticker, official undergraduate newspaper of the City College school of business, day session, urged that the board uphold Russell's appointment and "disregard entirely his personal opinions on marriage and religion, opinions which he was not hired to teach and which he does not intend to teach."

The Rev. A. J. Muste, director of Labor Temple, conceded that "some of Bertrand Russell's views are unsound and dangerous and that it is the duty of the church to combat them," but added that "the risks of any form of dictatorship and external pressure in education or elsewhere seem to me much more grave."

Sole Criteria

The New York city chapter, National Lawyers Guild, sent to the board a resolution holding "the technical, scientific and intellectual qualifications of Mr. Russell to teach and to provoke earnest thinking must be the sole criteria for his appointment" and that "danger to democratic principles of education is present in sectarian opposition, improper in our system of separation of church and state."

More than 200 philosophy pro-

"unfortunate controversy" over Russell's appointment, attributed it partly to "a misunderstanding of the function of non-sectarian public institutions of higher learning," and expressed the hope that the appointment would stand.

The Civil Rights Federation, through the Rev. Owen A. Knox of Detroit, its president, declared that "to yield to the pressure of bigoted groups by discrimination against so obvious-

ly well qualified an educator as

Bertrand Russell because of his personal views . . . is in direct violation of the spirit and tradition of American democracy."

The American Committee for Democracy and Intellectual Freedom announced the receipt of letters supporting Russell from almost a dozen noted scholars, including Dr. Raymond Pearl, Johns Hopkins biologist; Dr. James W. Angell, Yale economist; Dr. D. W. Prall, Harvard philosopher; Dr. John P. Peters of the Yale School of Medicine, and Roscoe Pullian, president of Southern Illinois Normal.

CONS:

The Diocesan Union of the Holy Name Society in Brooklyn and Queens, in a telegram to Charles H. Tuttle, a member of the board, demanded "that this indefensible appointment be rescinded for the reason that the offensive and morally abhorrent writings and teachings of said appointee render him absolutely unfit as an instructor and guide of the youth of this city."

MORE NEWS ABOUT MEMBERS

- (33) Neil Abercrombie, you may recall, won a Special Election to fill a vacancy in Congress in 1986, in Hawaii's First District. Now he's running for Congress again; the *New York Times* reported (9/24/90, p.16) that he had won the Democratic Primary. We wish him the best of luck! We like the idea of having a BRS member in Congress.
- (34) Cherie Ruppe, our peripatetic investigator of the unusual -- she once served as volunteer researcher at the Orangutan Research and Rehabilitation Center in Borneo (RSN49-21) -- is now "crewing on a 57 foot ketch for 2 months. Started in Singapore. Tomorrow start 5 day passage to Kuching on NW coast of Borneo. Merry Christmas!"

BR ON COMPANIONATE MARRIAGE

- (35) In the 1920s BR was one voice among many calling for a reconsideration of the institution of marriage. What follows is his side of "Is Companionate Marriage Moral? -- A Debate" in The Forum, July 1928. The opposing side was presented by a Professor William McDougall. Judge Ben B. Lindsey, whom BR refers to in his first paragraph, was the leading American proponent of companionate marriage. Thank you, AL SECKEL.

I WISH to begin with a tribute to Judge Ben B. Lindsey, whose courage and humanity I cannot sufficiently admire. Having long used his office for the unprecedented purpose of promoting human happiness, he has, not unnaturally, been ousted by a combination of sadists of all parties. But what Denver has lost the world has gained. If I understand aright his advocacy of "companionate marriage," his purpose is, in the highest and best sense, conservative, not subversive.

Companionate marriage has two aspects, one legal, the other social. The legal aspect is threefold. First, there is to be recognition of marriages not intended (at first, at any rate) to lead to children, and in such marriages the parties are to be encouraged to obtain the best available information on birth control. Secondly, so long as the marriage remains childless, divorce by mutual consent is to be permitted. Thirdly, the wife is, in general, to have no claim to alimony if the marriage is dissolved. But as soon as there are children the marriage is to become, *ipso facto*, an ordinary marriage.

The social aspect of companionate marriage is a matter of custom and public opinion. At present when a man marries, he expects to support his wife, and she often expects it of him. Whether there are children or not, it is expected that both will behave, from an economic point of view, as if there were. Moreover, they are expected, unless for some serious reason, to live together continuously, so that it is impossible for the wife to have work in a different place from that in which her husband lives. In companionate marriage these conventional expectations are to be absent. The husband and wife will be together as much as they choose, but no more. Since children are not expected, there is no reason why the wife should not earn her living, and every reason why she should. There will be no interference with each other's work, none of the fuss and flummery which at present make marriage disgusting to young people of spirit, none of the foolish pretense of protection by the male and dependence on the part of the female.

What are the advantages to be expected from the legal and social recognition of such an institution?

The root fact is that few men can afford the usual type of marriage while they are very young. Outside of the wage-earning class, most men wait till they are nearly thirty before undertaking the financial responsibilities involved. But their sexual instinct does not wait. In the old days they found an outlet with prostitutes. Because this was easily concealed, it never troubled the moralists much. Nowadays, young women, for the most part, no longer feel bound to abstain from extramarital intercourse, with the

result that unmarried men can have decent relations with women with whom they have much in common mentally — relations not founded upon a cash nexus, but upon mutual affection. It is this that so pains our moralists. For my part, I think it immeasurably better than prostitution. Nevertheless, as it exists at present it still has grave defects — defects due chiefly to the influence of elderly morality upon law and custom.

The great evil in the present system is that the sexual relations of the young have to be surreptitious. This tends to make them frivolous, promiscuous, and unduly exciting, because a quasi-permanent relation with one person is harder to conceal than a series of casual and more or less accidental affairs. And the mere fact of concealment, combined with the terror of pregnancy, is very bad morally and nervously. Young people in coeducational colleges are led by this state of affairs to spend far too much time and thought on sex, to the great detriment of their work. It is just as if we could only obtain food by hunting. In the old days when that was true, the pursuit of food took up almost the whole of a man's energy, leaving little over for anything more valuable.

The same thing seems to be happening with regard to sex, owing to the fact that there is no conventionally recognized way in which the young can satisfy their instincts. The pursuit of the female by the male, and the male by the female, occupies far too much time and thought, and in a manner which precludes the higher satisfaction to be derived from sex. It would be far better if young people could live together openly, without interfering with each other's work, without economic ties, without children until they deliberately chose to have children. I have no doubt that the improvement in health, in morals, and in intelligence would be quite enormous if this were rendered possible.

What are the arguments against Judge Lindsey's plan? They are two: objections to birth control, and objections to divorce by mutual consent. Let us take them in turn.

(1) Objections to birth control are, to begin with, hypocritical. Nine-tenths of the married people who publicly object to it do, in fact, practise it. This is evident when we compare the size of families at the present day with the size of families sixty years ago.

(2) Objections to birth control are futile. The young will employ contraceptives whatever the old may say. The only effect of legal obstacles is to cause the employment of bad and unscientific methods, leading to a percentage of failures, generally followed by the highly undesirable practice of abortion. There is also a tendency to cause stupid people to breed faster than intelligent people, so long as some intelligence is required to find out about contraceptives. This leads to a progressive mental deterioration of the race.

(3) It is positively desirable that young people should have experience of sex without at first having children. Abstinence is nervously and mentally undesirable. Children, when the parents are very young, are a financial burden, a barrier to the most useful career, and not likely to be wisely and adequately cared for.

(4) Without birth control, we cannot dispense with the old checks on the increase of population — war, pestilence, and famine. This has been obvious ever since the time of Malthus. Every opponent of birth control, unless he is incapable of arith-

metic, must be assumed to be a supporter of war, pestilence, and famine. In fact, most of them are supporters of war — or at least were so during the Great War.

(5) Thus the practice of birth control should be regarded, not merely as permissible, but as a public duty; and every citizen should be helped to perform this duty.

I come now to divorce by mutual consent. I confess that the objections to this, where there are no children, seem to me to be based wholly on instinctive, unconscious cruelty. The elderly people who make our laws are often no longer capable of sexual pleasure, and are frequently conscious of having missed its best forms when they were young. This leads to a species of envy, and they try to impose a morality which shall prevent the young from being happier than they were. What more admirable method than to say that when two young people have made a mistake of which both are conscious, they shall nevertheless remain tied to each other, and be prevented from escaping except by some act at which moralists can point the finger of scorn?

As Judge Lindsey points out, most divorces are in fact collusive, and are obtained by means of perjury. Is it not ridiculous to inflict all this upon people who wish to part? Was ever anything so absurd as the law which says that a marriage may be dissolved if only one of the parties desires it, but not when both do? What would be thought of such a provision in any other sphere? Suppose, when a man rents a house, the lease could only be terminated when one party desired it and the other did not. Everyone would see the absurdity at once, and would say that of course the lease should be terminable when both parties so desired. It must be understood that in this whole discussion of companionate marriage we are only concerned with childless unions, in which there is no one to be considered except the husband and wife.

The fact is, of course, that the crew of traditional moralists on this whole matter are not rational. Their explicit basis is texts of Scripture and theological dogma; their real basis is envy, cruelty, and love of interference. I hope and believe that the greater sexual freedom now prevailing among the young is bringing into existence a generation less cruel than that which is now old, and that a rational ethic in sex matters will, therefore, during the next twenty years, more and more prevail over the doctrines of taboo and human sacrifice which pass traditionally as "virtue."

WORLD PEACE

(39) Linus Pauling, Grenville Clark, and Louis B. Sohn were exploring means for world peace at the same time BR was. Pauling was awarded the Nobel Peace Prize in 1962. Here is a review of two books from the 1960s. Thank you, HARRY RUJA.

But first, a mention of some other Pauling honors: the Nobel Prize in Chemistry in 1954; he is the only person ever to have won two unshared Nobel Prizes. He is a BRS Honorary Member, and the recipient of a BRS Lifetime Achievement Award.

No More War!

No More War. By LINUS PAULING. New York: Dodd, Mead and Company, 1958. \$3.50. 254 pages.

World Peace Through World Law. By GRENVILLE CLARK and LOUIS B. SOHN. Cambridge: Harvard University Press, 1958. \$7.50. 540 pages.

DR. EDWARD Teller and Dr. Linus Pauling, two first-rate atomic scientists, have each in a recent book debated the amount and significance of the radiation occasioned by our atomic tests.¹ Dr. Teller, relatively speaking, minimizes the ill effects of the tests and maximizes their value. Dr. Pauling, relatively speaking, maximizes their ill effects and minimizes their value. It should be understood that each is a responsible scientist, and neither finally depends on figures, estimates, or doubts that are without foundation. Both recognize the problematical character of the evidence about the effect of tests, and Dr. Pauling's criticism of particular comparisons made by Dr. Teller reminds us that errors may affect details of presentation. Both agree of course that test effects are small indeed compared with those to be expected in a nuclear war, though they differ also on the magnitude of those effects.

For a nonscientist, perhaps the most interesting thing to observe is the extent to which nonscientific estimates of chances and values create the most serious issues between these two scientists. One can take Dr. Teller's conviction that another war is likely and the lesser of threatening evils, but that the best means of preventing it is the development of atomic weapons, and find that the sacrifices represented in Dr. Pauling's figures are justified. One can add or substitute Dr. Teller's optimistic estimate that another nuclear war will be clean, restricted to combatants, and moderated by new defensive weapons, and find, at any rate, interesting problems for reflection. Each of Dr. Teller's arguments with respect to the next war depends partly on generalizations about psychology and politics. It is with respect to the psychology and politics that Dr. Pauling is most sharply at issue with Dr. Teller,

¹ *Our Nuclear Future.* By EDWARD TELLER and ALBERT LATTER. New York: Criterion Books, 1958. Reviewed in the *Bulletin*, June 1958, pp. 235-36, by Jay Orrear.

and it is here that Dr. Pauling appears to have the better of the argument.

The history of varying forms and intensities of warfare, including the history of our war with Japan, suggests that a nuclear war will, at the outset or in the end, be fought by means of maximum destruction. Whatever the style of warfare, participants tend to use the most effective means of destruction available. The case of poison gas is perhaps evidence to the contrary, but it appears to be explicable by peculiar psychological and geographical factors. Dr. Teller relies on the example of biological warfare. There has, however, never been psychological public preparation for biological warfare comparable to the present preparation for nuclear warfare, nor any reason for expecting it comparable to our use of nuclear bombs against the Japanese cities. If new apprehensions are inadequate to prevent a nuclear war, it seems unlikely that, with heightened fear and hatred, they will restrict it when it comes. It is probably true that our forces are being trained in restricted war, and the chance that both sides will keep to it gives us some assurance, as does the chance that war will not occur. There is much evidence in history leading to the view that a new war is likely. Nevertheless, the present circumstances are unique. The degree of widespread human apprehension about the next war may serve to correct the fascination that wars have for us, and prevent us all from starting this new one, even though it seems unlikely to moderate a new one if it comes.

Two of Dr. Pauling's estimates of the effects of each year's testing at about the present rate are 15,000 seriously defective children born, and 9,600 deaths from leukemia and bone cancer, both apart from the effects of carbon-14, and both subject to large margins of error. If these figures are stated as percentages of estimated effects of natural radiation, or in comparison with estimated effects of the current use of X-rays, they become somewhat less impressive. The saving of this number of catastrophes would, however, be a notable achievement for any medical organization. If one in his 60's can judge, they still do not seem an excessive price to pay if the testing program is necessary and sufficient to prevent another war, even if there is

some chance that it would be a restricted nuclear war. If, on the other hand, the testing program is itself part of a procession toward war, especially if it is to be an unrestricted war, and only slightly affected by new defenses, the expenditure is hard to justify. Even if Dr. Teller's lower estimates and greater skepticism are at all warranted, the lesser expenditure, or chance of expenditure, if it is part of a process leading to the maximum destructive use of atomic weapons, is hard to justify.

Neither Dr. Teller nor Dr. Pauling argues at great length his views about the probability and character of the next war, which must affect conclusions about the testing program. Without arguing the position fully either, I will indicate somewhat further the basis for my agreement with Dr. Pauling's conclusions.

Our apprehension seems likely to prevent any atomic war, small or great. It seems unlikely, on the other hand, that if a small war between the great powers once starts, it will end without maximum destruction.

The circumstances are unparalleled.

The factors may be obscure, but a peculiar disposition to intra-species lethal group conflict doubtless characterizes the history of our species. The tendency has been extraordinarily persistent and seems to have been more irrational on all sides than is generally recognized. Nevertheless, the kind of apprehension which we now feel is a new factor, which in my rather hopeful judgment reduces the chances of a new war considerably.

There is, of course, no way of knowing how in dealing with incalculable nonmathematical probability one somehow reaches a number. My estimate is, nevertheless, that the chances of another war are such as can be roughly expressed in a wager giving some odds against it. The odds against war in the immediate future seem, at the moment, to be going up. On the other hand, as far as I can understand what little we are told, my estimate is that the damage which is likely in a new war is also increasing. It is apparently true, as Dr. Teller says, that advances in the design of weapons are making it more practicable for their users to try to do what a wise victor would of course prefer, that is, minimize the destruction needed to win. I have indicated doubt that a war

begun with this end in view would conclude with a similar governing purpose. The more puzzling question is whether, as Dr. Teller suggests, defense is likely again to catch up, as it has done so often, with attack, including perhaps attack with dirty nuclear weapons, including perhaps cobalt weapons. As far as I can understand the situation, it seems unlikely now that defense can develop in such a way as to limit significantly the destructive effects of the next war.

If the likelihood of the event is of the order suggested and the probable consequences of the somewhat improbable event are also of the order suggested, a reader must be impressed with Dr. Pauling's controlling argument for taking all consistent steps which together have the best prospect of success, to make sure that the next war does not occur. A persuasive feature of his argument is an account of the war that is now a possibility. Dr. Pauling estimates that an unrestricted attack well within present capacity would leave one-half to three-quarters of our population dead at the end of sixty days after one day of attack. Similar proportions could be expected in other parts of the world, presumably in the northern hemisphere, subject to attack or counterattack. Besides recognizable injuries, delayed effects on germ plasm and in the form of leukemia

and cancer, are to be added. Whatever the biological-effects, even if slightly lower official figures are taken, the social and economic effects can hardly be estimated. These are days in which the appeal to fear is easy and in which it should doubtless be moderated. There is, however, no danger of overstating the appeal to our humanity, emphasized by Dr. Pauling, which this not impossible future presents.

A reader impressed with Dr. Pauling's argument may well have difficulty in finding any fault whatever with the proposals of Dr. Louis Sohn and Mr. Grenville Clark for a simple and effective scheme of world law. Mr. Clark is an eminent and practical New York lawyer, with considerable experience in affairs and ready access to many of those, in both parties, who have been conducting our government in the generation coming to a close. Professor Sohn and he have presented, with explanations, a draft providing for minimum changes to make the United Nations an effective peace-enforcing body. Except for one debatable provision for limited economic aid to the poor, their amendments are designed only to give a more representative assembly power, through administrative and military agencies, and with the aid of improved judicial agencies, to provide for effective police action. The critical proposals are for a controlling assembly working through a veto-less council and a small army commanded by officers from third-rank nations and made effective as a world police force through complete disarmament of all nations over a twelve-year period.

The organization would be incomparably easier to administer than are the standing military forces in the world today, as anyone with any experience of military administration can readily see. The serious obstacle for the plan is psychological. Like the *New York Times* reviewer, we all instinctively dislike a plan which will deprive us of the satisfactions that go with threatening and beginning wars. Now, however, the new apprehension that has been described may sober us sufficiently so that we shall install the simple kind of government which is proposed, and support it after it is installed.

Dr. Pauling gives an account of the scientists' appeal for an effective agreement to end testing. He urges agreement and law as protections against war. He advocates large-scale study of measures needed to keep peace. He does not mention the kind of study which seems most needed, a study of psychology and history; nor does he seem fully aware, on the other hand, of the simplicity of the administrative problems, and the ease with which a sensible plan, useful at least as a basis for discussion, can be drafted. It is not that Professor Sohn and Mr. Clark have taken their task easily. They have worked for some years, asking advice from many qualified persons, and have given their problem the same kind of care which is given to corporate problems on Wall Street. The simplicity of their result is, in the end, a tribute to their industry and their genius. But it is, in the end, the work of two men; it is simple; and it is, in my opinion, perfect for its purpose.

It would be useful to ask the Russians to make countersuggestions and to start on negotiation. Dr. Pauling agrees with Professor Sohn and Mr. Clark about the usefulness of steps now being taken. As Mr. Clark observes, his and Professor Sohn's proposed organization may be promoted by such steps as the present plans for test suspension and supervision within the territories of the powers, and for measures to prevent a surprise attack. From a consideration of these matters, the Russians might be induced to go on to consideration of the simpler but more ambitious organization proposed by Professor Sohn and Mr. Clark. They might, for example, be induced to make their own proposal, with an eye for the votes of what may be called the non-Communist Socialists in Europe, Africa, and Asia.

It would, indeed, be worth while to make considerable concessions to the Russians with a view to taking any measures, such as the organization of world law, likely to prevent another war. Bertrand Russell, not a systematic pacifist, considers that unilateral disarmament in the West and concession of military hegemony to Russia, would not be to great a price for the preservation of the race from the destruction, including the impairment of germ plasm, which is to be expected from a

nuclear war. At the other extreme, Mrs. Roosevelt seems to have suggested, perhaps by inadvertence, that it is the duty of Western leaders to get us accustomed to taking the chances of annihilation required in maintaining our military position.

These chances are perhaps less than even. They are, however, high enough

and the event serious enough so that I am now prepared to agree with Lord Russell. I would agree in the philosophical position, that is, and yet suggest caution about its political application. As Lord Russell recognizes, the proposal for unilateral disarmament is at present and for the foreseeable future impractical as a matter of working politics. The danger in the proposal is that it may contribute not to a decisive step, but to a gradual weakening of Western defenses, which may if it is not well managed produce the worst of possible results, a war as destructive as the one risked by our present policy, and somewhat more likely to occur. Those who agree with Lord Russell as a philosophical matter should make it clear that there is a sharp distinction between favoring decisive unilateral disarmament and favoring every indecisive step, like some of the proposals for test suspension without supervision and without reference to stockpiles or conventional arms, which appear to some to have something of the same effect. The philosophical position, thus narrowly defined, may at the same time contribute one factor to the reckonings of practical politics. It can indicate, in an emphatic way, that our estimate of chances and values may well include some unfamiliar factors.

There is, for example, an estimate of the likelihood that the communications between American and Russian livestock farmers and steel manufacturers recognize a whole scheme of values common to citizens of the two countries. These are the values of production and life, which may be set against the strange pride and domination which have contributed to the endless wars of history and threaten us now with widespread destruction. There is, for another example, the plain good nature that has appeared in so many of the relationships between American and Russian groups, and which, as C. P. Snow has observed, is one of the odd components of the species which is also capable of producing the German concentration camps, the Hiroshima and Nagasaki bombs, and the Russian purges.

Whatever Dr. Pauling's views on such matters, his humanity, care, and courage prepare us all to examine thoroughly our preconceptions about both testing and modern warfare. Dr. Sohn and Mr. Clark offer us a plan for order, which seems at first daring in its simplicity, but which after thoughtful study appears to be a practical means for attaining practical purposes.

NEWSLETTER ITEMS WANTED

- (41) We depend on you to help us with the newsletter. Whenever you come across something in your reading that strikes you as specially interesting, please send it to us -- or send a good photocopy -- for possible inclusion in a future newsletter. If you're not sure about whether or not to send something, send it! We'll use it if we can. We need your input.

BR APPRECIATED

- (42) Great Books update. For the first time in the nearly 40 years since it first appeared in 1952, *Great Books of the Western World* is available in a new edition. This enormous collection of great writing, the brainchild of Mortimer Adler, provides 517 works by 130 authors, in 60 volumes.
 60 new works are included. One of them is *The Problems of Philosophy*, by Bertrand Russell.
The Chicago Sun-Times (10/23/90, p.5) supplied this information. It also lists all 60 works now included. Our thanks to JOHN JACKANICZ.

- (43) From the *Los Angeles Times* (12/11/61), with thanks to ----->
 HARRY RUJA.

Bertrand Russell Hits Ban-Bomb Police Action

LONDON (Reuters) — Philosopher Bertrand Russell Sunday described as a "shabby success" police prevention of an invasion of three American air bases Saturday by his ban-the-bomb supporters.

"The forces of the establishment are congratulating themselves on what they regard as a victory against the demonstrators," he said. "The weakness of the establishment is shown by their rejoicing in so shabby a success."

The 89-year-old British

peer is chairman of the Committee of 100, a group which promoted the civil disobedience "sit-downs" against nuclear weapons.

Hundreds of demonstrators sat down in roads outside three U.S. bases — Wethersfield, Ruislip, and Brize Norton—but were unable to penetrate inside barbed barriers to "immobilize" them as they announced was their intention.

About 850 demonstrators were arrested in the protests at the three bases and also at four cities in England and Wales.

BOOK REVIEW

(44) From *The Washington Post* (6/27/68), p. A27. Thank you, HARRY RUJA.

War and Lord Russell

By Karl E. Meyer

Washington Post Foreign Service

THE OPENING chapter of this brilliant autobiography makes uneasy reading in our own violent spring. The year is 1914. Russell, his reputation as a philosopher already established by "principia mathematica," is feeling stale and moody when suddenly World War I becomes a threatening reality.

"I found it impossible to believe that Europe would be so mad as to plunge into war," writes Russell, but nevertheless the war inexorably came. Before the British declaration, Russell collected the signatures of a large number of colleagues at Cambridge University who supported a statement saying that Britain should remain neutral.

The day war was declared, "almost all of them changed their minds." More surprises were to follow. Russell went to London in the hope of hearing the statement in Parliament by Sir Edward Grey, the Foreign Secretary. The evening of Grey's speech calling for war, the philosopher walked around Trafalgar Square to appraise the popular mood. Russell writes:

"During this and the following days I discovered to my amazement that average men and women were delighted at the prospect of war. I had fondly imagined, what most pacifists contended, that wars were forced upon a reluctant population by despotic and Machiavellian governments.

"I had noticed during previous years how carefully Sir Edward Grey had lied in order to prevent the public from knowing the methods by which he was committing us to the support of France in the event of war. I had naively imagined that when the public discovered how he had lied to them, they would be annoyed: Instead of which, they were grateful to him for having spared them the moral responsibility."

So war came and it was more than a catastrophe for Western civilization—it was the catastrophe, exterminating millions of the young and preparing the soil for Nazism, communism and fascism.

The experience tempered the iron of Russell's character and augmented the strain of skepticism in his outlook: He was "tortured by patriotism" but he resolutely opposed the war and was jailed for his resistance in 1918, serving six months in prison.

This insight into mass self-delusion perhaps inoculated Russell against the sanguine optimism of so many Western intellectuals when the Bolsheviks seized power in Russia. Russell visited the Soviet Union in 1920 and

Book Review

'The Autobiography of Lord Russell, 1914-1944'

(Little Brown, 418 pp., \$8.95)

was deeply disappointed, writing a hostile book that shocked his high-minded friends. The contrast is with H. G. Wells, who said the First World War was being fought "to make the world safe for democracy" and who later became an indulgent apologist of Stalin's.

The truth is that Bertrand Russell has always walked his own way and he remains today as much a distinctive part of the English landscape of the Trafalgar Square through which he walked in August, 1914.

His virtues shine in this second volume of his autobiography. He disbelieves in angels, but he writes like one; he brings to his personal affairs the same honesty that he applies to public events; he is the supreme agnostic about all revealed truth, religious or political.

The book covers a period rich in events for Russell—his travels to China as well as Russia, his successive marriages to extraordinary women, his many friendships, including his brief and highly charged encounter with D. H. Lawrence. Each chapter is supplemented by letters notable for their liveliness and variety.

But no American can read with excessive pleasure the final chapter, which concerns his stay in America from 1938 to 1944. In 1940, he was invited to teach philosophy at City College of New York but a taxpayer's suit blocked his appointment. The prosecuting attorney described Russell as "lecherous, libidinous, lustful, venerous, erotomaniac, aphrodisiac, irreverent, narrow-minded, untruthful, and bereft of moral fiber."

No doubt. His offense, like that of Socrates, has been to voice truths (sometimes, to be sure, a bit sweepingly) that seem unacceptably subversive to those who believe that the herd knows best.

Yet nevertheless one senses a paradox. Today it is the admirers, as well as the detractors, of Bertrand Russell who talk with bland unconcern about the virtues of violence. The British populace in 1914 at least had the excuse that general war was something that Europe had not known for a century, and its appeal could be more romantic than horrific. What excuse can be offered nowadays for those, of whatever political persuasion, who talk lightly about wars of liberation?

WE DOFF OUR HAT

- (46) To Harry Ruja. We wish to acknowledge our great indebtedness to this Emeritus Professor of Philosophy at San Diego State University who is also Emeritus Chairman of The Bertrand Russell Society, Inc. One of Harry's major interests and specialties is Russell bibliography. He and KEN BLACKWELL are currently working on a comprehensive 2-volume Russell bibliography, to be published by Unwin Hyman, London. In the course of his research, Harry finds -- and sends us -- items for the newsletter. This issue contains 6 items contributed by Harry. Our newsletters -- over the years -- would have been far, far skimpier if it hadn't been for Harry's many contributions.

We close with a phrase you have seen very often: *With thanks to HARRY RUJA*.

(47)

BRS/APA 1990

Boston, December 28th, 2 pm, in the Suffolk Room of the Marriott Copley Place; that's the time and place of the next BRS session at a meeting of the American Philosophical Association (Eastern Division). As mentioned earlier (RSN67-6), BRS Chairman Marvin Kohl will chair the session. Open door; everyone is welcome.

RUSSELL ON WITTGENSTEIN

- (2) From *My Philosophical Development*, Allen & Unwin, 1959:

It is not an altogether pleasant experience to find oneself regarded as antiquated after having been, for a time, in the fashion. It is difficult to accept this experience gracefully.

When Leibniz, in old age, heard the praises of Berkeley, he remarked: "The young man in Ireland who disputes the reality of bodies seems neither to explain himself sufficiently nor to produce adequate arguments. I suspect him of wishing to be known for his paradoxes."

I could not say quite the same of Wittgenstein, by whom I was superseded in the opinion of many British philosophers. It was not by paradoxes that he wished to be known, but by a suave evasion of paradoxes. He was a very singular man, and I doubt whether his disciples knew what manner of man he was.

There are two great men in history whom he somewhat resembles. One was Pascal, the other was Tolstoy. Pascal was a mathematician of genius, but abandoned mathematics for piety. Tolstoy sacrificed his genius as a writer to a kind of bogus humility which made him prefer peasants to educated men and *Uncle Tom's Cabin* to all other works of fiction.

Wittgenstein, who could play with metaphysical intricacies as cleverly as Pascal with hexagons or Tolstoy with emperors, threw away this talent and debased himself before common sense as Tolstoy debased himself before the peasants -- in each case from an impulse of pride. I admired Wittgenstein's *Tractatus* but not his later work, which seemed to me to involve an abnegation of his own best talent very similar to those of Pascal and Tolstoy.

His followers, without (so far as I can discover) undergoing the mental torments which make him and Pascal and Tolstoy pardonable in spite of their treachery to their own greatness, have produced a number of works which, I am told, have merit, and in these works they have set forth a number of arguments against my views and methods. I have been unable, in spite of serious efforts, to see any validity in their criticisms of me. (pp. 214-5)

I have not found in Wittgenstein's *Philosophical Investigations* anything that seemed to me interesting and I do not understand why a whole school finds important wisdom in its pages. Psychologically this is surprising.

The earlier Wittgenstein, whom I knew intimately, was a man addicted to passionately intense thinking, profoundly aware of difficult problems of which I, like him, felt the importance, and possessed (or at least so I thought) of true philosophical genius.

The later Wittgenstein, on the contrary, seems to have grown tired of serious thinking and to have invented a doctrine which would make such an activity unnecessary. I do not for one moment believe that a doctrine which has these lazy consequences is true. I realize that I have an overpoweringly strong bias against it, for, if it is true, philosophy is, at best, a slight help to lexicographers, and at worst, an idle tea-table amusement. (pp. 216-7)

In common with all philosophers before WWII [Wittgenstein's *Philosophical Investigations*], my fundamental aim has been to understand the world as well as may be, and to separate what may count as knowledge from what must be rejected as unfounded opinion.

But for WWII I should not have thought it worth while to state this aim, which I should have supposed could be taken for granted. But we are now told that it is not the world that we are to try to understand but only sentences, and it is assumed that all sentences can count as true except those uttered by philosophers. This, however, is perhaps an overstatement.

Adherents of WWII are fond of pointing out, as if it were a discovery, that sentences may be interrogative, imperative or optative as well as indicative. This, however, does not take us beyond the realm of sentences.

There is a curious suggestion, already to be found among some Logical Positivists, that the world of language can be quite divorced from the world of fact. If you mention that a spoken sentence is a physical occurrence consisting of certain movements of matter and that a written sentence consists of marks of one colour on a background of another colour, you will be thought vulgar. You are supposed to forget that the things people say have non-linguistic causes and non-linguistic effects and that language is just as much a bodily activity as walking or eating. (pp. 217)

*Russell Society News, a quarterly. Lee Bisler, Co-Editor, 1664 Pleasant View Road, Coopersburg, PA 18036
Thom Weidlich, Co-Editor, 349 W. 123rd St., NY NY 10027

Russell Society Library: Tom Stanley, Librarian, Box 434, Wilder, VT 05088

There had been two views about empirical statements: one that they were justified by some relation to facts; the other that they were justified by conformity to syntactical rules. But the adherents of Witt do not bother with any kind of justification, and thus secure for language an untrammelled freedom which it has never hitherto enjoyed.

The desire to understand the world is, they think, an outdated folly. This is my most fundamental point of disagreement with them. (pp. 218-9)

- (3) Mortimer Adler, author of *How To Read A Book*, and editor of *Great Books of the Western World*, in a recent lengthy interview on C-SPAN, said, "Wittgenstein was a great man, but not a great philosopher. Those who think he was a great philosopher don't know much philosophy."

ANNUAL MEETING 1991

- (4) June 21-23 is the time, Lehigh University's handsome mountainside campus in Bethlehem, Pennsylvania, is the place, of the BRS 1991 Annual Meeting.

Events of the weekend will include talks by the recipients of the BRS Service and Book Awards; a workshop with Don Jackanicz on a Russell essay; Marvin Kohl on *Russell, Love, and Moral Education*; Michael Rockler on *Beacon Hill and Summerhill -- the Russell-Neill Correspondence*; John Lenz on *Russell on History*; a talk by the winner of the BRS Award at the Saturday Night Banquet; Gladys Leithauser on *Russell as a Fiction Writer*; Bob Davis on *"Is Russell's Socialism a Phoney?"*; and a Red Hackle Hour before the Banquet.

A single fee of \$135 includes everything: housing, meals, coffee breaks, Red Hackle Hour, and registration. Housing is in air-conditioned suites on the campus, 2 persons in a suite; please note that a suite has 2 bedrooms, so everyone will have his or her own bedroom. Meals start with Friday evening dinner and go through Sunday morning breakfast, and include the Banquet.

The local airport is Allentown, PA. Bus from New York City to Bethlehem takes about 2 hours, bus from Philadelphia to Bethlehem takes about one hour.

The May newsletter will provide more details, such as how to get there, where to check in on arrival, etc.

We urge you to register immediately, which is a great help to those making arrangements for the meeting. Please use the Registration Form on the blue top sheet of this newsletter.

Call for papers. If you'd like to present a paper at the meeting, send a one-page abstract to Michael J. Rockler, 1029 Linden Avenue, Wilmette, IL 60091.

Thanks!

DUES

- (5) Your dues are overdue if you haven't yet renewed them for 1991.

As you know, everyone's 1991 dues were due before January 1, 1991 (except those who enrolled during the last 3 months of 1990.)

The penalty for non-payment of renewal dues is extreme. It is the penalty than which no greater penalty can be described or even imagined. It is extinction...obliteration. Status: non-person. Ugh!

Spare yourself that fate. No need to suffer!

Use the MEMBERSHIP RENEWAL COUPON on the blue top page of this newsletter...without delay.

And do it now also to save money, as dues are likely to go up soon because of the new higher postage rates.

Do it for yourself...and do it for us, for we like having you as a member.

Better do it right now.

BEACON HILL

(6) The Sunday Express takes a rather disapproving look at the Beacon Hill school run by BR and his second wife, Dora, in the late 1920s and early 1930s. After their marriage collapsed Dora continued to operate the school on her own. BR and Dora are referred to here as "an earl and a countess"; BR had only just

assumed the earldom upon his brother's death, about a month before this article's publication. We've sought to maintain the "aesthetics" of the article as originally printed, so you'll have to go to the next page to finish the first column, and then back again.

SUN. EXP.

29 MAR 1931 LONDON,

THE SUNDAY EXPRESS

PLEASE SCHOOL CHILDREN TAUGHT TO BE FRANK.

AND ALLOWED TO BE CHEEKY TO THE TEACHERS.

"Sunday Express" Special Correspondent.

THE most extraordinary school in Britain, conducted by an earl and a countess, may soon have to close down. Parents are too conservative to send their children to it.

Beacon House, a big estate on the Hampshire Downs, near Petersfield, is run on astounding do-as-you-please principles by Earl Russell, the famous philosopher, formerly the Hon. Bertrand Russell, with his wife and six teachers as assistants.

The thirteen boys and girls, between three and ten, come in to lessons each morning—if they like. Otherwise they go out, and nothing happens to them. If they do not like a subject it is dropped.

If they want to be rude to a teacher they are, and if she is grumpy they tell her so. One teacher figures on the lesson list as "Betty," and the other teachers may also be addressed by their Christian names.

again a swear word gets round, and then, after unrestrained use, is probably forgotten again. To tell them it was wicked would make it secretly used as something clever. We do sometimes say, though, 'That is a good old English word, and you can use it here. But if you say it outside people will not like you, and think you funny.'

"On hot days we say, 'You can take off your clothes if you like.' There is a whoop of joy, and you will see little piles of clothes left behind. Everything is optional, but they love sun-bathing and playing without clothes.

"We had hoped to keep the children up to sixteen, and I do not see why clothing should not be discarded in hot weather up to then.

"We answer all questions frankly. The children knew all about my baby Harriet long before she arrived. The boys love to play with her—they would be ashamed to do that at an ordinary school.

"Personally I do not believe in God, but I say some people believe there is a God and some do not. If the children say, 'What do you think?' each teacher answers honestly for himself. Some say, 'Yes,' and some say, 'No.'

"I have heard the children arguing with the servants about it. We do not

If the pupils put potato in each other's hair at meal times—they are reasoned with. If they want to hit each other they may, provided they use no instruments.

The boys and girls at happy Beacon House can slip all their clothes off in hot weather if they like (and they all do). If they want to swear they may (but a swear-word fashion generally only lasts a short while).

"No lies about anything" is Lord Russell's rule. Beacon House is a school where the children discuss tables and heredity with complete frankness and interest both in class and among themselves. The pupil's inside is not a barred topic.

If you throw things out of the window they reason with you about it, contemplation of art works is not encouraged, and one of the few taboos is the B.B.C. children's hour.

But, as Mrs. Dora Russell (she does not want to use her title) says: "The school is losing from £1,600 to £1,800 a year, and the number of pupils has fallen off. The fees are £150; my husband is fifty-eight, and the strain of making good the loss by lecture tours and books is too great for him.

"The lease is running out, too, and though we could buy the place we cannot carry on unless we have more pupils and more room. Unless something unexpected happens the school will have to close down at the end of this term.

Our object all along has been to remove restraints and let the children be educated without interference, and even, as far as possible, without the assistance of the teachers.

"NO SPOILING."

"Most parents either spoil or bully, and we rectify that. Two of my own three children, John, aged ten, and Kate, aged eight, are in the school, but they are treated exactly as the others.

"What is the good of punishing pupils, for instance, for saying you are grumpy, as ours have done? They think it if they do not say it, and sometimes it is true.

"Only yesterday matron was finishing lunch, and the children were waiting for their medicine.

"One peeped round the door and shouted, 'Come on, you silly, white-livered old idiot.' 'Shut up, I'm having my coffee,' was all the matron said.

"Another called out, 'Come on; we're waiting,' but nothing happened to him. A tiny tot once called me, 'You old Russell, you,' but no notice was taken of that either.

"Only a few pupils stay away from classes, though they know nothing will happen if they do.

"Once two of them wandered right out of the estate and got lost. We found them late at night. What happened? Nothing. We showed them how they had caused trouble to every one else. They saw how their companions had been worried about them.

"We do not attempt to make false taboo by banning swearing. Now and

MRS. BERTRAND RUSSELL.

teach religion, but one boy reads the Bible every day of his own accord—he is interested.

"We can teach biology and Mendelism and use such works as Wells' 'Outline of History,' and the 'Science of Life,' as well as teaching the 'three r's'.

"Mr Russell did begin geometry, but they did not like it—so he gave it up. In history we do not allow nationalistic books; we want the children to be internationalists.

"Because they have not been bound by conventions, their essays are wonderfully original and interesting, and often very amusing.

"One boy wrote about a dream—'I was in hell and I saw—(another pupil) being fried in a pan. I could not help him. I went away.'

Even a play called "Marriage and Death," written by a pupil, which severely satirised grown-ups and featured a clergyman, was officially permitted. I was shown the champagne and liqueur bottles which figure in the properties.

MOZART AND BACH.

On the other hand, art masterpieces are excluded as much as possible, so that the children can learn to express themselves independently; there is a rule limiting pocket money, and though sex matters, for instance, may be freely discussed, some detective novels were excluded as being too exciting.

Both a piano and a gramophone are provided for unrestricted use. Tiny tots voluntarily labour with the pedals to hear Mozart and Bach. Composers like Stravinsky, Debussy, and Prokofiev (whose music sounds like a dilapidated motor-car to many adults) are among the children's favourite records.

When I asked Mrs. Russell what the outer world thought of the school she said: "The servants think it is rather funny at first. The local people and villagers are very friendly, but the county people think we ought to shoot and hunt instead of having children here."

GOOD QUOTES

(7)

I have observed that the world has suffered far less from ignorance than from pretensions to knowledge. No agnostic ever burned anyone at the stake or tortured a pagan, a heretic, or an unbeliever..."

Daniel J. Boorstin, former Librarian of Congress, and Professor of History at the University of Chicago.

Quoted by the Rev Joseph Mohr, "free lance religion columnist for *The Morning Call*," Allentown, PA daily newspaper, 1/19/91, p. B29.

"I am tired of the hair-splitting nonsense of the white bachelors of the Church who are defining sexual intercourse."

Dr. Uta Ranke-Heinemann, author of *Eunuchs for the Kingdom of Heaven*, Doubleday.

Quoted in an article in *The New York Times*, 12/5/90, p. C19. For the complete article, see Item (24).

"One should respect public opinion insofar as necessary to avoid starvation and keep out of prison, but anything that goes beyond this is voluntary submission to an unnecessary tyranny."

Bertrand Russell

Quoted in the *St. Louis Post-Dispatch*, 11/18/90, p. 6C. With thanks to STEVE MARAGIDES.

BY BERTRAND RUSSELL

- (8) SIN, from the British periodical, *Horizon*, January 1948, pp.7-15. In this essay, R offers an explanation of guilt feelings. That is, when people feel guilty, why do they feel it? What causes feelings of guilt? With thanks to AL SECKEL.

THE sense of sin has been one of the dominant psychological facts in history, and is still at the present day of great importance in the mental life of a large proportion of mankind. But although the sense of sin is easy to recognize and define, the concept of 'sin' is obscure, especially if we attempt to interpret it in non-theological terms. In this article I wish to consider the sense of sin psychologically and historically, and then to examine whether there is any non-theological concept in terms of which this emotion can be rationalized.

Some 'enlightened' persons believe themselves to have seen through 'sin', and to have discarded the whole complex of beliefs and emotions with which it is associated. But most of these persons, if scrutinized, will be found to have only rejected some prominent part of the received moral code—e.g. the prohibition of adultery—but to have retained, none the less, a moral code of their own, to which they give complete adherence. A man may, for instance, be a conspirator in a left-wing movement in a Fascist country; in the pursuit of his public objects he may consider himself justified in deceiving and hoodwinking half-hearted 'fellow-travellers', in stealing from the funds of reactionaries, in making love insincerely with a view to discovering secrets, and in committing murder when the situation seems to demand it. He may at all times express himself with a devastating moral cynicism. Yet this very man, if he is caught and tortured with a view to discovering his confederates, may display a heroic endurance beyond the capacity of many who would consider him ethically vile. If he does at last give way and betray his comrades, he is likely to feel a burning sense of shame which may drive him to suicide. Or, to take a very different example, a man may, like the hero of Shaw's *Doctor's Dilemma*, be morally contemptible in all respects except where his artistic conscience is involved, but in this one matter may be capable of very painful sacrifices. I am not prepared to maintain that to all men there are some acts that are felt as 'sin'; I am willing to believe that there are human beings who are utterly shameless. But I am convinced that they are few, and that they are not to be found among those who most loudly proclaim their own emancipation from moral scruples.

Most psycho-analysts make much of the sense of guilt or sin, which they seem to regard as innate. I cannot agree with them in

this. I believe the psychological origin of the sense of guilt in the young to be fear of punishment or disapproval by parents or whoever is in authority. If a feeling of guilt is to result from punishment or disapproval, it is necessary, however, that authority should be respected, and not merely feared; where there is only fear, the natural reaction is an impulse to deceit or rebellion. It is natural to young children to respect their parents, but school boys are less apt to respect their teachers, with the result that only fear of punishment, not sense of sin, restrains them from many acts of disobedience. Disobedience, if it is to *feel* sinful, must be disobedience to an authority inwardly respected and acknowledged. A dog caught stealing a leg of mutton may have this feeling if he is caught by his master, but not if he is caught by a stranger.

The psycho-analysts, however, are certainly right in tracing the origins of a man's sense of sin to the very early years of childhood. In those years parental precepts are unquestioningly accepted, but impulse is too strong for them to be always obeyed; hence experience of disapproval is frequent and painful, and so is temptation which may be successfully resisted. In later life the parental disapproval may come to be almost forgotten, and yet there may still be a feeling of something painful associated with certain kinds of acts, and this feeling may translate itself into the conviction that such acts are sinful. For those who believe that sin consists in disobedience to God the Father, the change of emotional pattern is very slight.

However, many men who do not believe in God nevertheless have a sense of sin. This may be merely a subconscious association with parental disapproval, or it may be fear of the bad opinion of a man's own herd, when the man is not a rebel against the herd's standards. Sometimes it is the sinner's own disapproval, quite independently of what others think, that makes him feel wicked. This is not likely to happen except to men who are unusually self-reliant or have exceptional gifts. If Columbus had abandoned the attempt to find the Indies, no one else would have blamed him, but one can imagine that he would have felt degraded in his own eyes. Sir Thomas More was removed from Oxford in his youth, on account of his determination to learn Greek in spite of the disapproval of his father and the University authorities. No doubt

if he had yielded to the advice of his elders and betters he would have had a sense of sin, though everyone would have praised him.

The sense of sin has played a very important part in religion, more especially the Christian religion. In the Catholic Church it was one of the main sources of the power of the priesthood, and did much to facilitate the victory of the Popes in their long struggle with the Emperors. Psychologically and doctrinally, the sense of sin reached its acme in St. Augustine. But its origin lies far back in prehistoric times; in all the civilized nations of antiquity it was already well developed. In its earlier forms it was connected with ritual defilement and with breaches of taboo. Among the Greeks it was especially emphasized by the Orphics and by the philosophers whom they influenced. By the Orphics, as in India, sin was connected with transmigration: the sinful soul passed, after death, into the body of an animal, but after many purgative ages at last achieved emancipation from bondage to 'the wheel of life'. As Empedocles says:

'Whenever one of the daemons, whose portion is length of days, has sinfully polluted his hands with blood, or followed strife and foresworn himself, he must wander thrice ten thousand years from the abodes of the blessed, being born throughout the time in all manners of mortal forms. . . . One of these I now am, an exile and a wanderer from the gods for that I put my trust in insensate strife.'

In another fragment he says: 'Ah, woe is me that the pitiless day of death did not destroy me ere ever I did evil deeds of devouring with my lips!' It seems probable that these 'evil deeds' consisted of munching beans and laurel leaves for he says: 'Abstain wholly from laurel leaves', and again: 'Wretches, utter wretches! keep your hands from beans'. These passages illustrate the fact that sin, as originally conceived, was not essentially something that injured someone else, but merely something forbidden. This attitude persists to our own day in much of orthodox doctrine on sexual morality.

The Christian conception of sin owes more to the Jews than to the Greeks. The Prophets attributed the Babylonian captivity to the wrath of God, which was kindled by the heathen practices that were still prevalent while Judea was independent. At first the sin was collective and the punishment collective, but gradually, as the Jews became accustomed to the absence of political independence, a more individualistic view came to prevail: it was the individual who sinned, and the individual who would be punished. For a long time punishment was expected in this life, with the corollary that prosperity was a proof of virtue. But during the persecution at the time of the Maccabees it became evident that the most virtuous were, in this life, the most unfortunate. This stimulated belief in a future life of rewards and punishments, in which Antiochus would suffer and his victims would triumph—a point of view which, with appropriate modifications, passed over into the early Church and sustained it during the persecutions.

Sin, however, is psychologically very different when imputed to our enemies from what it is when thought of as our own shortcoming, for the one involves pride and the other humility. The extreme of humility is reached in the doctrine of original sin, of which the best exposition is to be found in St. Augustine. According to this doctrine, Adam and Eve were created with free will, and had the power of choice between good and evil. When they ate the apple they chose evil, and in that moment corruption entered into their souls. They and all their progeny were thenceforth unable to choose the good by the strength of their own unaided wills; only Divine Grace enabled the elect to live virtuously. Divine Grace is bestowed, without any guiding principle, upon some of those who have been baptized, but upon no one else, with the exception of certain of the Patriarchs and Prophets, and a small number of miraculously enlightened pagans. The rest of mankind, although, since Grace is withheld, they are fatally predestined to sin, yet, because of their sin, are justly objects of God's wrath, and as such will suffer eternal perdition. St. Augustine enumerates the sins committed by infants at the breast, and does not shrink from the conclusion that infants who die unbaptized go to hell. The elect go to heaven because God chooses to make them the objects of His mercy: they are virtuous because they are elect, not elect because they are virtuous.

This ferocious doctrine, though accepted by Luther and Calvin, has not, since their time, been the orthodox teaching of the Catholic Church, and is now accepted by very few Christians, of whatever denomination. Nevertheless hell is still part of Catholic dogma, though fewer people suffer damnation than was formerly supposed. And hell is justified as the appropriate punishment for sin.

The doctrine of original sin, according to which we shall all deserve punishment because of Adam's transgression, is one which strikes most people at the present day as unjust, although there are many who see no injustice when analogous doctrines are proclaimed in politics—for example, when it is thought right that German children born since 1939 should starve because their parents did not oppose the Nazis. This, however, even by its supporters, is recognized as rough human justice, and not of a sort to be ascribed to the Deity. The standpoint of modern liberal theologians is well set forth by Dr. Tennant in his book *The Concept of Sin*. According to him sin consists in acts of will that are in conscious opposition to a known moral law, the moral law being known by Revelation as God's will. It follows that a man destitute of religion cannot sin:

'If we press the indispensableness of the religious element in the concept of sin, and if we adopt the psychical definition of religion, then it will follow that persons, if any there be, possessing no religion—who would confess, that is to say, to entertaining no ideas of deity or of the supernatural, and to feeling no religious sentiment of any sort—cannot be accounted sinners at all, in the sense in which we agree to use that term, however morally evil, even from their own point of view, may be their lives.'

It is difficult to know exactly what is meant by this statement, owing to the qualifications with which it is introduced. By the 'psychical' definition of religion the author means, as he has previously explained, whatever a man accepts in the way of religion, and not only what Christians regard as true religion. But it is not clear what is meant by 'feeling no religious sentiment of any sort'. I myself have 'sentiments'—emotions and moral convictions—which are apt to be associated with Christian beliefs, but I have no 'ideas of deity or of the supernatural'. I am not quite sure, therefore, whether, in Dr. Tennant's view, I am or am not capable of 'sin'. Nor am I sure whether, in my own view, there is a valid concept deserving to be called 'sin'. I know that certain acts, if I perform them, fill me with shame. I know that I find cruelty detestable and that I wish it did not exist; I know that failure to use to the full such talents as I may possess would feel to me like treachery to an ideal. But I am by no means certain how to rationalize these feelings, nor whether, if I succeeded in rationalizing them, the result would afford a definition of 'sin'.

If 'sin' means 'disobedience to the known will of God', then clearly sin is impossible for those who do not believe in God or do not think that they know His will. But if 'sin' means 'disobedience to the voice of conscience', then it can exist independently of theological beliefs. If it means only this, however, it lacks some properties commonly associated with the word 'sin'. Sin is usually thought of as deserving punishment, not only as a deterrent or as an incentive to reform, but on grounds of abstract justice. The sufferings of hell, theologians assure us, do not make tortured souls morally better; on the contrary, they persist in sin through all eternity, and have no power to do otherwise. The belief in 'sin' as something meriting the purely retributive infliction of pain is one which cannot be reconciled with any ethic at all analogous to that which I believe in, though it has been advocated independently of theology, for instance in G. E. Moore's *Principia Ethica*. When retribution for its own sake is not thought good, the concepts of 'justice' and 'punishment' need re-interpretation.

'Justice', in its legalistic interpretation, might be taken to mean 'reward according to desert'. But when retributive punishment for its own sake is no longer advocated, this can only mean 'reward and punishment on the system most likely to promote socially desirable conduct'. It might happen, on occasion, that a man who expected punishment would undergo a change of heart if he were given a free pardon; in that case, it would be right to pardon him. It might also happen that a man who had acted in a

socially desirable manner might have set an example which ought not to be followed in apparently similar cases, and on this account, it might be proper to punish him. (Nelson's blind eye.) In short, rewards and punishments should be awarded according to the desirability of their social effects, and not according to some supposed absolute standard of merit or demerit. No doubt it will, as a rule, be wise to reward those whose conduct is socially desirable and punish those whose conduct is harmful, but exceptions are conceivable and are likely actually to occur from time to time. Such a conception of 'justice' as underlies the belief in heaven and hell is not defensible if 'right' conduct is that which promotes the satisfaction of desire.

The conception of 'sin' is closely connected with the belief in free will, for, if our actions are determined by causes over which we have no control, retributive punishment can have no justification. I think the ethical importance of free will is sometimes exaggerated, but it cannot be denied that the question is relevant in relation to 'sin', and something must therefore be said about it.

'Free will' must be taken to mean that a volition is not always, or not necessarily, the result of previous causes. But the word 'cause' has not as clear a meaning as could be wished. The first step towards clarity is to substitute 'causal law' for 'cause'. We shall say that an event is 'determined' by previous events if there is a law by means of which it can be inferred if a sufficient number of previous events are known. We can predict the movements of the planets because they follow from the law of gravitation. Sometimes, human actions are equally predictable; it may be that Mr. So-and-so, on meeting a stranger, never fails to mention his acquaintance with Lord Such-and-such. But, as a general rule, we are not able to predict with any accuracy what people will do. This may be only from inadequate knowledge of the relevant laws, or it may be because there are no laws that invariably connect a man's action with his past and present circumstances. The latter possibility, which is that of free will, is always unhesitatingly rejected except when people are thinking about the free-will problem. No one says: 'It is useless to punish theft, because perhaps people henceforth will like punishment'. No one says: 'It is useless to address a letter, because the postman, having free will, may decide to deliver it somewhere else'. No one says: 'It is useless to offer wages for work that you wish done, because people may prefer starvation'. If free will were common, all social organization would be impossible, since there would be no way of influencing men's actions.

While, therefore, as a philosopher I hold the principle of universal causation to be open to question, as a common-sense individual I hold that it is an indispensable postulate in the conduct of affairs. For practical purposes we must assume that our volitions have causes, and our ethics must be compatible with this assumption.

Praise and blame, rewards and punishments, and the whole apparatus of the criminal law, are rational on the deterministic hypothesis, but not on the hypothesis of free will, for they are all mechanisms designed to cause volitions that are in harmony with the interests of the community, or what are believed to be its interests. But the conception of 'sin' is only rational on the assumption of free will, for, on the deterministic hypothesis, when a man does something that the community would wish him not

to do, that is because the community has not provided adequate motives to cause him not to do it, or perhaps could not have provided adequate motives. We all recognize this second possibility in the case of insanity: a homicidal lunatic would not be deterred from murder even if he were certain to be hanged for it, and therefore it is useless to hang him. But sane people, when they commit a murder, usually do so in the hope of escaping detection, and it is this fact that makes it worth while to punish them when they are detected. Murder is punished, not because it is a sin and it is good that sinners should suffer, but because the community wishes to prevent it, and fear of punishment causes most people to abstain from it. This is completely compatible with the deterministic hypothesis, and completely incompatible with the hypothesis of free will.

I conclude that free will is not essential to any rational ethic, but only to the vindictive ethic that justifies hell and holds that 'sin' should be punished regardless of any good that punishment may do. I conclude, also, that 'sin', except in the sense of conduct towards which the agent, or the community, feel an emotion of disapproval, is a mistaken concept calculated to promote needless cruelty and vindictiveness when it is others that are thought to sin, and a morbid self-abasement when it is ourselves whom we condemn.

But it must not be supposed that, in rejecting the concept of 'sin', we are maintaining that there is no difference between right and wrong actions. 'Right' actions are those that it is useful to praise, 'wrong' actions are those that it is useful to blame. Praise and blame remain as powerful incentives, tending to promote conduct which serves the general interest. Rewards and punishments also remain. But with regard to punishment, the rejection of 'sin' makes a difference that has some practical importance, for, on the view which I advocate, the punishment is always *per se* an evil, and is only justified by its deterrent or reformative effect. If it were possible to keep the public persuaded that burglars go to prison, while in fact they are made happy in some remote South Sea island, that would be better than punishment; the only objection to the scheme is that it would inevitably leak out sooner or later, and then there would be a general outbreak of burglary.

What applies to punishment applies also to blame. The fear of being blamed is a very powerful deterrent, but actual blame, when the blameworthy action has been performed, is, as a rule, painful without being morally helpful. The person blamed is likely to become sullen and defiant, to despair of the good opinion of the community, and to acquiesce in the position of an Ishmael. This result is especially probable when it is not an individual, but a large group, that is blamed. After the First World War the victors told the Germans that the guilt was wholly Germany's, and even forced them to sign a document by which they pretended to acknowledge their sole culpability. After the Second World War Montgomery issued a proclamation telling German parents to explain to their children that British soldiers could not smile at them because of the wickedness of their fathers and mothers. This was, on both occasions, bad psychology and bad politics, of a sort that is encouraged by belief in the doctrine of 'sin'. We are all what our circumstances have made us, and if that is unsatisfactory to our neighbours, it is for them to find ways of improving us. It is very seldom that moral reprobation is the best way of achieving this object.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

- (9) Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Treasurer, Dennis J. Darland; Secretary, Don Jackanicz; Vice President/Information, Lee Eisler.
-

NEWS ABOUT MEMBERS

- (10) Abercrombie (Neil) won a seat in the House, beating his Republican rival in the November election. He now represents Hawaii's 1st District in the U.S. Congress. We saw him interviewed on C-SPAN; we're sure that he would have approved of his liberal views (as did we). Congratulations, Neil!
- (11) McVeigh (Hugh) is making considerable progress with his CDHS (CAPITOL DISTRICT HUMANIST SOCIETY, INC.) He publishes *The Humanist Monthly*, "The Voice of Secular Humanism for Eastern Upstate New York", holds monthly meetings, and is acquiring new members. BRS VP JOHN LENZ attended a recent meeting. Hugh says "Secular Humanism is the rational approach in a world of contending religions and cultures."
- (12) Rockfellow (John D.) has become Director of the Project Development Office of IFIAS (International Federation of Institutes for Advanced Study) in Maastricht, The Netherlands. We quote from his letter:
 I am responsible for putting together programmes on globally relevant issues, which must be capable of multidisciplinary research, and offer decent bait to potential funding organizations.
 The present programme base includes "International Diffusion of Biotechnology", which addresses the needs of developing countries in obtaining access to all current procedures in Biotechnology, thereby allowing them a way around typical western inefficiency on their way to modernity and self-sufficiency.
 We have a program starting on the "Development of Efficient International Aid Management", which looks at the amount of waste in International Aid networks, and suggests ways to remedy the present abuse.
 We also have a programme run jointly with UNESCO, UNU, and ISSC on "Human Dimensions of Global Change", which looks at every human consequence of climate change, and resource change.
 We, finally, have a programme of my own, which is entitled "DISC" or "Disappearance of Indigenous Small Cultures". This programme seeks to identify endangered indigenous peoples, and to effect policy toward the maintenance of the specific culture.
 All of these programmes are being run interdisciplinary, utilizing all members of our federation (4/ Research Institutes, 25 Countries). The results are always presented to the people physically responsible for the remedy, rather than merely published in a journal or book.
Of potential interest to BRS members is the inaugural edition of our research magazine, in which we will publish articles on new science, both social and natural. I would be interested in receiving short articles (750-1500 words) on issues of new scientific interest and of global relevance.
 John sent several IFIAS publications, including an IFIAS FELLOWSHIP PROGRAMME for young scientists. We will lend them on request.
- (13) Ruppe (Cherie) writes:
 Had such a grand time, I extended my leave and spent three months crewing on the Cloud Nine -- a 57' ketch -- through the South China Sea and Straits of Malacca. It was by far my greatest adventure yet.
 When I rang in the New Year in 1990, it certainly never occurred to me that before I rang it out, I would not only have become proficient with an M-16, but would have used it to keep pirates from boarding, and would have spent a night sleeping on the floor of an opium den!
 I kept a log. If I ever get 'round to writing up an account of my adventures, I'll send you a copy.
- (14) Weidlich (Thom) has an article in *Free Inquiry* (Winter 1990/91), titled *The Bertrand Russell Case*. We reproduce it in this issue (Item 27.) Thom had presented a paper on this subject at the June 1990 BRS Meeting at McMaster.

CONTRIBUTIONS

- (15) Our gratitude goes to these BRS members who included a contribution in their renewal dues. Thank you very much!

SECULARISM

(17) Secular alternatives to Alcoholics Anonymous. From the front page of *The New York Times*, December 24, 1990.

New Way to Treat Alcoholism Discards Spiritualism of A.A.

By TRISH HALL

Over five decades, Alcoholics Anonymous has established itself as the nation's most accepted path to treating drinking problems. But in the last year, people unhappy with the organization's spiritual emphasis have spurred the growth of a secular self-help program, Rational Recovery.

The program has perhaps 2,000 members at any one time, compared with a million or more members in Alcoholics Anonymous. But the California-based Rational Recovery now has meetings in 100 cities — from Boston to Pasadena, Calif. — up from 30 at the beginning of 1990. The four-year-old organization is affiliated with the American Humanist Association in Amherst, N.Y.

Chapters are being started by people with drinking problems who object to the tenets that are fundamental to the 12-step recovery program of Alcoholics Anonymous, and by therapists seeking alternatives to Alcoholics Anonymous for their patients.

Alcoholics Anonymous's first three steps begin with an admission of powerlessness over alcohol, a belief in a greater power that can restore sanity and a decision to turn "our will and our lives over to the care of God as we understood Him."

Clinics, psychotherapists and physicians often insist that patients attend A.A. meetings. Judges sometimes sentence drunken-driving offenders to participate in the program.

Like the older organization, Rational Recovery is a self-help group in which participants attend meetings and talk about their experiences with alcohol. Anonymity is respected.

Alcoholism as Incurable

Alcoholics Anonymous suggests daily meetings for the first 90 days of membership and lifelong participation afterward. It contends that the lasting involvement is essential because of the incurable nature of alcoholism.

Participants in Rational Recovery attend meetings once or twice a week for about a year. The goal is to wean themselves from alcohol, and then from the group. Sometimes, a therapist or volunteer coordinator attends meetings to help direct the discussion.

Rational Recovery's guiding principles differ radically from those of Alcoholics Anonymous. Rather than defin-

ing the individual as powerless over alcohol, Rational Recovery argues that the individual has the power to overcome anything. Adherents believe that A.A.'s 12 steps foster dependency.

Techniques of Psychotherapy

"Rational Recovery says dependency is the original problem with the addict," says Dr. Richard Rosenthal, who founded the group four years ago in Lotus, Calif., after trying Alcoholics Anonymous. The organization is mainly supported by sales of a journal and of Mr. Trimpey's guide to its ideas, "The Small Book," whose title plays off A.A.'s "Big Book."

Mr. Trimpey's program, which sees alcohol and drug use as a problem that can be treated in a finite time, uses the techniques of rational emotive therapy, a system developed by Albert Ellis, a New York psychotherapist. Through talking therapy, his system aims to help people root out irrational thoughts and beliefs that impede them from reaching their goals.

Mr. Trimpey, the full-time director of Rational Recovery, believes that people can figure out what touches off their drinking and, once they understand the irrational beliefs behind their feelings and behavior, change.

"Drinking is always a choice," he said. "Every time a person drinks, they think, 'Screw it, do it.' We identify that addictive voice, become conscious of it, and recognize it as the enemy."

Effectiveness of A.A.

There are other secular groups for alcoholics, like Women for Sobriety, in Quakertown, Pa., but addiction experts say no organization has offered an alternative to Alcoholics Anonymous that can approximate its consistent structure and nationwide network of meetings.

The reassurance of anonymity that is fundamental to A.A. meetings means that its success rate can never be conclusively documented, but the group is considered effective by most experts in the field of addiction.

"We know people have been able to achieve and maintain sobriety with A.A.," said Dr. Richard Rosenthal, chief of the division of substance abuse in the psychiatry department at Beth Israel Medical Center in New York. But he agreed it does not work for everyone. "Treatment of addiction is not an exact science," he said.

The Alcoholics Anonymous dropouts are frustrating to addiction experts. "I'm a strong supporter of A.A., but we see a lot of people who aren't able to relate to it," said Ceane Willis, a psychologist on the staff of the West End Group Practice, the addiction treatment unit within the Department of Psychiatry at Massachusetts General Hospital. She is planning a study of Rational Recovery, hoping to find out who uses it and how it helps them. "It seems to be an interesting alternative to the A.A. model," she said.

Although A.A.'s guiding book, "Alcoholics Anonymous," says belief in God

is not necessary for membership, 7 of its 12 steps are explicitly spiritual; the word God is used four times. The steps retain traces of A.A.'s roots in the Oxford group, a post-World War I movement of evangelical Christian renewal.

Making a Difference

That spiritual element was troubling to Morris Sullivan, a consultant in Orlando, Fla., who specializes in employee assistance plans. When Mr. Sullivan was having marital problems a few years ago, a therapist suggested that alcohol was a problem and urged him to attend Alcoholics Anonymous. Mr. Sullivan took the advice, but was uncomfortable with A.A. "I don't consider myself an atheist," he said, "but the higher power concept wasn't what I was looking for."

Although Mr. Sullivan did manage to stop drinking, he felt depressed until he joined Rational Recovery. "The ideas behind it made a difference," he said.

While Alcoholics Anonymous does not officially comment on other groups, one member agreed that to outsiders parts of A.A. might sound like a "marching chant." But, she said, "it saves our lives."

Some members of Rational Recovery complain that people with drinking problems are steered into A.A. regardless of whether they have the psychological makeup to benefit from it. Some addiction specialists agree, but say this is because of the lack of alternatives and to the proven value of Alcoholics Anonymous for a significant number of people. In addition, the presence in A.A. of many well-educated, successful people adds to its growing influence.

Like a Conversion Process

"They constitute a group of people who provide a model and a promise," said Herbert Peyser, a consulting psychiatrist at the Smithers Alcoholism Center at St. Luke's-Roosevelt Hospital in New York. As part of their commitment to A.A., they are expected to spread the word to others.

"The spiritual quality is a crucial element," said Dr. Peyser, a strong believer in A.A. "It's similar to a conversion process."

In Boston, Rational Recovery meetings are being organized by Dr. Joseph Gerstein, an internist who once routinely referred people to Alcoholics Anonymous.

"Some would go and benefit, and others would say, 'No way,'" Dr. Gerstein said. "I'm embarrassed to say it never entered my mind that A.A. was the problem. It has so infiltrated every aspect of the mental health system that it is accepted as revealed truth."

Dr. Gerstein said he began to reconsider his position after hearing Mr. Trimpey give a speech. "I got interested in it from a civil rights point of view," he said. "People are being mandated by the courts to go to A.A. I wanted an option to be available for people who didn't want to be in a religious environment."

At a recent meeting of a Boston chapter of Rational Recovery, at Mount Auburn Hospital, the four men and three women who attended talked about recent incidents that had tempted them to drink, and how they had handled them. They talked about how they would feel on New Year's Eve, when it was time to raise a glass in toast. They tried to look at the ultimate consequences of drinking.

End of the World

"One beer is not the end of the world," one man said. "But one beer potentially could be. When I want a drink, I know it will cost me a week's pay, and I'll be sick as a dog."

Another talked about a recent office party held in a hotel where he used to go on "martini tours" with his brother. He found himself ready again. "I was wearing a suit, with money in my pocket, and my wife out of town," he said.

Before he could act on the impulse to drink, the man said, he rushed home and took a shower, eventually dispelling the desire by telling himself that it would lead him to a life he did not like.

Dr. Gerstein said the moment of reconsideration was crucial. "With the single step of stopping to think about this, you are 90 percent there," he said.

BR QUOTED

- (18) BR's use of intuition is cited in a logic textbook. *Practicle Logic*. 3rd ed. New York: Holt, Rinehart and Winston, 1988. With thanks to George G. Kuc. The source is: Vincent Barry and Douglas J. Soccio.

A possible source of knowledge is intuition. *Intuition is the direct apprehension of knowledge that is not the result of conscious reasoning or of immediate sense perception.* Philosophers and scholars hold a variety of views regarding intuition. Some speak of intuition as present in all knowledge. For example, before I can even begin to evaluate the soundness of an argument, I must directly apprehend the connection between the propositions that make up the various steps of the argument. In fact, reasoning itself seems to depend on some connection that we grasp or fail to grasp. Similarly, intuition apparently plays a part in our recognition of the beautiful, of the moral principles we accept, of the religious values we hold. Perhaps self-knowledge is the best case for such intuition, for knowledge of oneself seems to be present in all our knowledge of the world. As a simple example, consider that when you hear a phone ring, in addition to hearing it you are also aware of your hearing and of yourself as the one who does the hearing. Thought of this way, then, intuition refers to our awareness of the immediate data of consciousness, and as such, would be an element that's present in all our knowledge.

Other philosophers regard intuition as the accumulative result of one's past experience and thinking. In this sense valid intuitions are short-cuts to knowledge that the senses and reason eventually would disclose. Such intuitions, in effect, are the outcome of unconscious inductions and deductions. Bits and pieces emerge from our unconscious and fall together—we understand. Some psychologists refer to this as the "Aha!" experience, as in "Aha! I've got it!" or "Aha! I see it!"

Many creative people consciously utilize this process. The philosopher Bertrand Russell, in an article entitled "How I Write," tells of "planting" a problem in his subconscious and allowing it to work itself out there "underground."

The most curious example of this process, and the one which led me subsequently to rely upon it, occurred at the beginning of 1914. I had undertaken to give the Lowell Lectures at Boston, and had chosen as my subject "Our Knowledge of the External World." Throughout 1913 I thought about this topic. In term time in my room at Cambridge, in vacations in a quiet inn on the upper reaches of the Thames, I concentrated with such intensity that I sometimes forgot to breathe and emerged panting as if from a trance. But all to no avail. To every theory I could think of I could perceive some fatal objections. At last, in despair, I went off to Rome for Christmas, hoping a holiday would revive my flagging energy. I got back to Cambridge on the last day of 1913, and although my difficulties were still completely unresolved I arranged, because the remaining time was short, to dictate as best I could to a stenographer. Next morning, as she came to the door, I suddenly saw exactly what I had to say, and proceeded to dictate the whole book without a moment's hesitation.

BOOK REVIEWS

Two views of Religion and Science by Bertrand Russell (NY: Henry Holt, 1935), with thanks to HARRY RUJA for both.

View #1:

(19) A review by Gerald R. Phelan, in *The Commonweal*, often referred to as a "liberal Catholic publication":

NOBODY would accuse Bertrand Russell of being a theologian. A fair appreciation of this book, therefore, should be based rather upon its value as a scientific study of the problem of religion and science.

One may reasonably expect a scientist (1) to be in possession of the facts bearing on his problem; (2) to take into account all the known facts affecting it, especially those which appear less favorable to his own solution; (3) to commit himself to no assertion which cannot be supported by an appeal to the facts.

Let me quote (pages 186-187): "The mystics vary greatly in their capacity for giving expression to their experiences, but I think we may take it that those who succeeded best all maintain: (1) that all division and separateness are unreal and that the universe is a single indivisible unity; (2) that evil is illusory, and that the illusion arises through falsely regarding a part as self-subsistent; (3) that time is unreal, and that reality is eternal, not in the sense of being everlasting, but in the sense of being wholly outside time." One may presume that Lord Russell has made a careful study of Buddhist, Mohammedan and Taoist mystics, for he speaks with familiarity of their mystical experiences. But it is a fact that not a single Catholic mystic has ever maintained any single one of these three points. On the contrary, they are all at one in maintaining (1) that the mystical union of the soul with God is incomparably less perfect in the character of the resultant oneness than the unity of the Three Divine Persons of the Blessed Trinity in the oneness of the Divine Nature, and, furthermore, that the soul never loses its separate personal existence, and reality even in the Beatific Vision; (2) that evil is far from illusory, for the "powers of darkness" are the all too real enemies of the soul's salvation, hell is a very real place of eternal punishment for fallen angels and damned souls, the Sacrament of Penance is for the forgiveness of very real sins, etc.; (3) that time is indeed real, for God created the world in time and all this truly real material reality, far from being outside time, is wholly immersed in it. These are facts which Bertrand Russell ought to have known, or learned, before presuming to discuss the question as a scientist.

But let me quote again (page 41): "Descartes who was terrified when he heard of Galileo's condemnation in 1616, fled to Holland, where, though the theologians clamored for his punishment, the government adhered to its principle of religious toleration." Note the date: 1616. Now, let me quote from a letter of Descartes to Mersenne, dated "Deventer, fin novembre, 1633," and to be found on page 270 of the first volume of the great Adam-Tannery edition of "Les Oeuvres de Descartes": "As I was enquiring at Leyde and Amsterdam recently, if Galileo's 'System of the World' were to be found there, because I seem to remember having been told that they were printed in Italy last year, they told me that it was true that they had been printed but that all the copies had been burned at Rome at the same time and that Galileo was condemned to make some amends; this surprised me greatly." (My translation). "This surprised me greatly!" Note the date: 1633. A slight error of fact on the part of Bertrand Russell; seventeen years in the career of a man whose life is so well known! Besides, the Galileo affair had nothing to do with Descartes's going to Holland. Descartes went to Holland; that does not mean "Descartes fled to Holland." A scientist who is scrupulous about the facts does not interpret them in the very act of stating them. Regarding the motives which took Descartes to Holland both for

the first time (most probably in the summer of 1618) and, again, at the time this letter was written, and also regarding the "clamor" of the theologians for his condemnation, it is a pity Lord Russell did not make a closer study of the classical "Etude Historique" written by the anti-clerical, but truly scientific, Charles Adams and published in the last, twelfth, volume of the standard edition of the work of Descartes referred to above.

These two examples, which I have chosen for particular mention from among many that I might have chosen, indicate that Bertrand Russell was not in possession of the facts upon which he would be entitled to make a study of the problem with which he undertook to deal.

Also, he does not take due cognizance of all the facts relative to the problem, especially facts which do not support his own view. For instance, in discussing the opposition of Aristotelian physicists to the new astronomy of Galileo, he quotes from Andrew D. White's "Warfare of Science with Theology," a statement to the effect that Father Clavius said, "to see the satellites of Jupiter, men had to make an instrument [the telescope] which would create them." I do not know where Dr. White found this piece of information nor do I know whether or not it is true; Dr. White has not been invariably accurate in his statements. But that is irrelevant to my present purpose. The point here is that the Jesuit Fathers (to which Father Clavius belonged) organized a great festivity at their Collège de la Flèche on June 6, 1611, to celebrate the discovery of Jupiter's moons by Galileo. This is a fact which Lord Russell should have taken into account along with all the other facts bearing on the point, before giving his interpretation of the facts. (Incidentally, one does not often hear of celebrations organized in our modern secular colleges to commemorate the discoveries of Einstein, Heisenberg or Lemaitre.)

Regarding the whole question of the so-called "Copernican Revolution" (Chapter II), Bertrand Russell ought also to have given due consideration to such facts as the statement by Saint Thomas Aquinas regarding the hypothetical character of Ptolemaic astronomy and the much clearer statements of Nicholas Oresimus, Bishop of Bayeux, who died in 1382, regarding the daily revolutions of the earth and the stability of the heavenly bodies. These facts are looked upon by Nicholas Oresimus as "profitable considerations for the defense of our faith." One might expect Lord Russell to be acquainted with the researches bearing on this point, published twenty-two years ago by the eminent physicist Pierre Duhem. It is the mark of a truly scientific mind to weigh and consider all the facts he can find relative to his problem.

Finally, Bertrand Russell should not, as a conscientious scientist, make assertions which he does not and cannot support by appealing to the facts. Take for example (page 42): "Medieval theology, just because it was a single logical system intended to be immutable, could not avoid having definite opinions about everything, . . ." Such a statement could not possibly be supported by facts. The most superficial knowledge of the history of theology in the Middle Ages reveals it as anything but a "single logical system." Has Lord Russell never heard of the disputes in the schools, from Alcuin to Ockham, which shook the world of medieval thought? Does he not know that the infallibility of the Pope is the means of preserving stability of doctrine and accuracy of its statement amid the constant growth and development of theological thinking? Why does he not deal with the facts of religion and history with the same scrupulous care with which, in his really worth-while,

serious studies, he deals with the facts of science? He could not hope to gain the respect of scientific men were he to treat the Quantum Theory as cavalierly as he does the history of theological thought. Moreover, has he no sense of the responsibility of a learned man to be intellectually honest and not to take advantage of a deservedly great reputation in one field to speak authoritatively, yet without adequate knowledge and without scientific accuracy, in a field to which equally learned men have devoted lifetimes of research?

In this book Bertrand Russell has failed in the three

duties of a scientist, (1) to know his facts, (2) to weigh and consider all the facts and (3) to refrain from making statements unsupported by facts. That is why I am sure that such a book as this will not enhance Lord Russell's reputation. On the other hand, it will, not improbably, do real harm to honest folk who respect both learning and science, by disclosing to them how dishonestly a learned man and scientist may deal with a subject in which his personal prejudices are involved.

View #2:

(20) A review by Henry Hazlitt in *The New York Times* (12/29/35):

Bertrand Russell Challenges The New Intolerance

His New Book Invests the Fundamental Conflicts of Four Centuries of Science and Religion With Fresh Interest

RELIGION AND SCIENCE. By Bertrand Russell. 271 pp. New York: Henry Holt & Co. \$2.

By HENRY HAZLITT

IN this volume Mr. Russell traces, as many writers have before him, the long history of the conflicts of science and religion over the last 400 years; but he succeeds in investing the subject with a fresh interest. He begins with the Copernican revolution, telling once more how Galileo was forced by the church to "abjure, curse and detest" his formerly expressed opinion that the earth was not the center of the universe but revolved around the sun. He describes the long centuries during which comets were regarded not as heavenly bodies moving in regular paths but as omens of disaster. He tells of the opposition to the doctrine of evolution—first in astronomy, then in geology and, at last, in biology. He describes the long connection of superstition with medicine—the belief, for example, that the bodies of the sick and insane were inhabited by evil spirits, which could be driven out only by vile medicines, beating or torture. He devotes considerable space to the belief in witchcraft, which led, between the years 1450 and 1550, to the putting to death, mostly by burning, of perhaps a hundred thousand witches in Germany alone; he ascribes this persecution in large part to the biblical text, "Thou shalt not suffer a witch to live."

Mr. Russell then turns to several problems which are still subjects of controversy—the relation of the "soul" to the "body," determinism and free will, the validity of mysticism, the existence of "cosmic purpose," the relation of science and ethics. On the first problem Mr. Russell concludes that in the present state of psychology and physiology, belief in immortality can claim no support from science, and that such arguments as are possible on the subject point to the probable extinction of personality at death. He rejects determinism as an absolute metaphysical doctrine, but accepts it as

a limited working hypothesis for science. He does not agree with Eddington that our discoveries about the nature of the atom have re-established the existence of "free will" either in man or in the universe as a whole. He rejects the claims of the mystics when they assert that the universe is an indivisible unity, that evil is illusory, or that time is unreal; he does not admit any method of arriving at truth except that of science, but concedes that in the emotional realm the mystical experience may have value. He rejects the belief of such scientists and philosophers as J. Arthur Thomson, J. S. Haldane, Alexander, Bergson and Lloyd Morgan that the universe at least reveals evidence of Cosmic Purpose:

If it is the purpose of the Cosmos to evolve mind, we must regard it as rather incompetent in having produced so little in such a long time. . . . Man, as a curious accident in a backwater, is intelligible: his mixture of virtues and vices is such as might be expected to result from a fortuitous origin. But only abysmal self-complacency can see in Man a reason which Omniscience would consider adequate as a motive for the Creator.

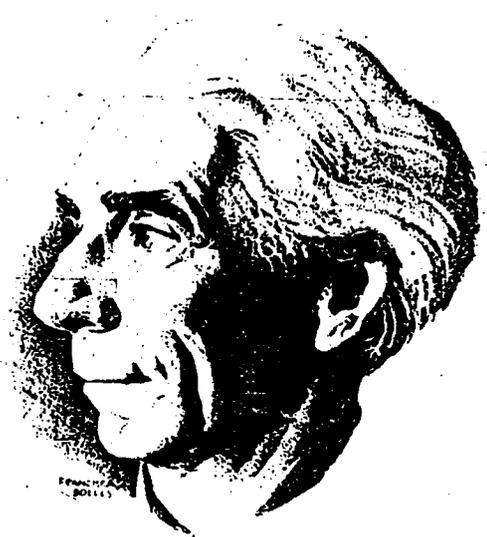

On the relation of science to ethics, Mr. Russell's reasoning is rather curious. He begins by "admitting" that "science has nothing to say about 'values.'" Science is based solely on evidence; "values" are derived entirely from desires and emotions, and there can be no arguing about them. He then arrives at this remarkable conclusion:

While it is true that science cannot decide questions of value, that is because they cannot be intellectually decided at all, and lie outside the realm of truth and falsehood. Whatever knowledge is attainable must be attained by scientific methods; and what science cannot discover, mankind cannot know.

In this passage Mr. Russell in effect identifies "science" with the whole field of knowledge. This can be done only by robbing the word of most of its special usefulness and meaning. Before the appearance of Galileo, "science" as we

Bertrand Russell.

From a Drawing by Francisco Bolina.

think of it today hardly existed, yet priests, statesmen, soldiers, courtesans, painters and cathedral builders certainly knew a great deal, even if their knowledge was not "scientific." Science is simply knowledge of a particular sort—precise, tested, and capable of being stated in the form of "laws" or broad generalizations.

The truth is that general knowledge, and even scientific knowledge, have a great deal to say about "values." "Values" are not raw desires and merely instinctive appetites, but the results of interpreting and reflecting upon our desires in relation to the natural world and to other men. Even Mr. Russell's own selected illustrations do not support his contention: "If one man says, 'Oysters are good,' and another says, 'I think they are bad,' we recognize that there is nothing to argue about." But there may be a great deal to argue about. If you can prove scientifically, or even indicate a fair probability, that oysters are either harmful or beneficial to health, you will probably get one man to change his opinion. Even his previous liking or dislike for the mere taste of oysters will be affected by new knowledge of their consequences.

The effect of knowledge (or ignorance) and logic (or illogic) on personal preference is much greater than Mr. Russell implies. And the ultimate desires of different men do not vary nearly as widely from each other as he appears to believe: Fascists and Communists disagree much more because of differences in political and economic interpretation than because of differences in their innate emotional make-up. While it seems improbable that ethics will ever become an exact science, there is no reason to leave it to intellectual chaos. The problem is one, as Mr. Russell has himself recognized on a previous occasion, of most effectively reconciling and harmonizing conflicting desires, both within the individual and between the individual and society. To which it must be added that the intellectual and emotional similarities between men, and their organic social interdependence, particularly in the intellectual and emotional spheres, are much greater than Mr. Russell's argument implies.

But even on the points on which one disagrees—and in a book of this type there will necessarily be many—the discussion is always acute and illuminating. Mr. Rus-

sell has endeavored to state opposing points of view with fairness. His final animus, indeed, is not against the "older religion," which has become "purified and in many ways beneficial," but against the new intolerance:

The threat to intellectual freedom is greater in our day than at any time since 1660, but it does not now come from the Christian churches. It comes from governments. . . . It is the clear duty of men of science, and of all who value scientific knowledge, to protest against the new forms of persecution rather than to congratulate themselves complacently upon the decay of the older forms. . . . No liking for communism should make us unwilling to recognize what is amiss in Russia, or to realize that a régime which allows no criticism of its dogma must, in the end, become an obstacle to the discovery of new knowledge. Nor, conversely, should a dislike of communism or socialism lead us to condone the barbarities which have been perpetrated in suppressing them in Germany.

BR'S BIRTHDAY

(23) May 18th is the birthday of our Lord. Lord Russell was born 119 years ago. He left us a legacy of insights and great ideas -- which enlighten and inspire. And a sterling example of moral courage. All of which deserves to be celebrated.

One way to celebrate is to get together with other nearby BRS members and arrange for a birthday dinner -- at a restaurant or at somebody's house -- with, if possible, a birthday cake and candles, and -- of course -- a toast to the memory of our Lord.

We suggest that you plan ahead. Start making your arrangements/reservations now. And after the celebration, please tell us all about it.

CHURCH MATTERS

From *The New York Times* (12/5/90), p. C19:

(24)

Cardinal and Doubleday Are at Odds Over a Book

By ROGER COHEN

A dispute has erupted between Doubleday and John Cardinal O'Connor, the Archbishop of New York, over the Cardinal's assertion that the publishing house is acting as a "purveyor of hatred and scandal and malice and libel and calumny" by publishing a book by a prominent German theologian.

The book, "Eunuchs for the Kingdom of Heaven" by Dr. Uta Ranke-Heinemann, was published in the United States last month. The eunuchs in the title refer to a verse in the Gospel of St. Matthew: "There are eunuchs born so from their mother's womb, there are eunuchs made so by human agency and there are eunuchs who have made themselves so for the sake of the kingdom of Heaven."

The book, a best seller in Germany and Italy this year, accuses the Roman Catholic Church of degrading women and undermining the sexuality of believers. Dr. Ranke-Heinemann is the professor of the history of religion at Essen University in Germany.

"We are distressed and deeply disappointed," said Bill Barry, the deputy publisher of Doubleday. "We have never before suffered an attack like Cardinal O'Connor's in more than 30 years of publishing religious books."

Upon receiving a copy of the book from Doubleday late last month, Cardinal O'Connor reacted with unusual vehemence. In a column entitled "A Seed of Hatred" in the weekly publication *Catholic New York*, he described Doubleday's request for comment on the book as "utterly preposterous" and accused the publishing house of "Catholic-bashing."

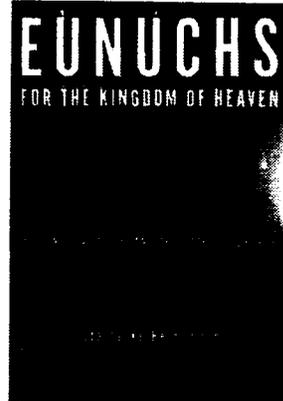

Dust Cover Is Too Much

In the column, Cardinal O'Connor said he had read only the dust jacket of the book and did not intend to read more. He said he was "not suggesting

Doubleday/Ulrich Beatz

Dr. Uta Ranke-Heinemann, author of "Eunuchs for the Kingdom of Heaven," published by Doubleday. The book, which accuses the Roman Catholic Church of degrading women, has angered John Cardinal O'Connor.

Doubleday

The New York Times

editorship for a moment" and did not explicitly call for a boycott of the book.

"I am suggesting," the Cardinal wrote, "that it is time we stopped buying the line of purveyors of hatred and scandal and malice and libel and calumny. It's time we tell them we are sick of their perversions." He added that offenders, including Doubleday, should grow up because "we are not impressed by their prestige."

The dust jacket says that "Dr. Ranke-Heinemann proves that for most of its 20 centuries the Catholic Church (as the principal voice and institutional focus of worldwide Christendom) has been cruelly manipulating and mutilating the sexuality of believers." It adds that "the Church has denigrated sex, degraded women and championed a perverse ideal of celibacy."

The Cardinal declined to be interviewed, but his spokesman, Joseph

Zwilling, said he thought Doubleday was seeking publicity.

In a telephone interview, Dr. Ranke-Heinemann, who is the daughter of the former West German President, Gustav Heinemann, said she objected to the Cardinal's use of the word hatred because "there is nothing of hatred in my book." She added that it was written because she was tired of the "hair-splitting nonsense of the white bachelors of the church who are defining sexual intercourse."

"Why not leave it to people how to live their sexuality?" she added.

Her book has sold more than 300,000 copies in hard cover since it was published in Germany in October 1988. It was the best-selling nonfiction work in Germany last year and was on the best-seller list for 20 months. In Italy, the book went to No. 1 on the nonfiction list this year. Also published in Britain, the Netherlands and France, the book had not previously

been attacked by a prominent churchman.

'A Larger Question'

Mr. Zwilling, the spokesman for the archdiocese, said the Cardinal's attack on Doubleday came because the book's publication was "illustrative of a larger question of church-bashing."

"There is more of it now," he said, "more and more attacks from many places in the media. The church is an open target." As an example, he mentioned "the frequent frivolous use of priests and religious women in advertisements."

But he and Cardinal O'Connor identified only Doubleday by name.

Thomas Cahill, the director of religious publishing at Doubleday, said that he and several other editors were Catholic, and "we all feel de-

Continued on Page C25

Continued From Page C19

famed by Cardinal O'Connor." He described the book as a scholarly work. "It is not anti-Catholic," he said. "It is a highly critical book from the loyal opposition." Dr. Ranke-Heinemann is a Catholic.

Mr. Cahill said he had sent copies of the book to prominent bishops throughout the country and received cordial replies from several of them, including Bishop Thomas Grady of Orlando, Fla., and Bishop Joseph L. Imesch, who is one of several churchmen drafting a pastoral letter on women.

Doubleday is a prominent publisher of religious books, bringing out about 25 titles a year. It also publishes about 300 general-interest books. Doubleday is part of the Bantam Doubleday Dell group, which is owned by the German media giant Bertelsmann A.G..

Author Backs Dust Jacket

Dr. Ranke-Heinemann described the dust jacket, which was written by the book's translator, Peter Heinegg,

as generally accurate. She said she was particularly disturbed by church rulings against contraception, which mean that even AIDS-infected people are not allowed to use condoms. "That amounts to saying that it is better to infect your wife than use a condom," she said. "I cannot agree with that."

She also said that Pope John Paul II was, in her view, "to be blamed for many abortions" because of the church ban on most means of contraception. "Some Catholic women feel it is better to be condemned from time to time with an abortion than everyday with contraception," she suggested.

During the 1970's, she became the first woman to receive a chair in theology at a German university. She lost her position in a dispute over her interpretation of the virgin birth after she declared that Joseph was, biologically speaking, the father of Jesus. "The biological semen was Joseph's, but the theological semen was the Holy Spirit's," she said.

The book was published in Germany by Hoffmann & Campe. Rights were sold to Doubleday for \$28,000.

Whitehead revealed

George Gale

Alfred North Whitehead: The Man and His Work, Vol. I 1861-1910. By Victor Lowe. *Johns Hopkins University Press: 1985. Pp.351. \$27.50, £26.40.*

Science and the Modern World. By Alfred North Whitehead. Introduction by Robert M. Young. *Free Association Books, 26 Freegrove Road, London N7 9RQ, UK: 1985. Pp.265. Hbk £11.95; pbk £4.95.*

SOME works become classics of their type. Such would seem to be the destiny of the first volume of Victor Lowe's superb *Alfred North Whitehead: The Man and His Work*. Certainly, Whitehead deserves a biography. His work as a mathematician, and as partner to Bertrand Russell in creating that original of modern mathematical logic, *Principia Mathematica*, is justification enough. But when one adds to this Whitehead's later achievements following his call in 1924 to a chair in the philosophy department of Harvard University, a biography is not just warranted, it is demanded.

Unfortunately, Whitehead himself desired that no such account of his life should be given. He systematically destroyed, or had destroyed, nearly all written traces of his personal life, including letters to and from his wife and family. Moreover, he kept no journal, believing his personal life was not a fitting subject for such a record. Finally, unlike the typical scholar, he had destroyed all of his unpublished manuscripts, drafts and various manuscript editions of his published works. Thus, he reasoned, there would be no *Nachlass* for younger scholars to waste their time searching in attempts to chronicle his intellectual development. Lowe puts all of this down to Whitehead's personal reserve: "He held an almost fanatical belief in the right to privacy, and thought that the only subject of rightful public interest in him was the work he had published" (p. 7).

Given this state of affairs, it is clear that Lowe had his work cut out. Yet his 20-year-long struggle to tease out information from impoverished sources has been well worthwhile. All of the essential ingredients of successful biography are here. Whitehead's childhood, days at school, time at Cambridge as student and fellow, marriage to Evelyn Wade in 1890, and, finally, his relationship with Russell (first as teacher, then as colleague in the founding of symbolic logic and foundations of mathematics) are each carefully laid out in all the detail that could possibly be given. Even when details are missing, and Lowe must make an inference to fill in the gap, he advises us, often most diffidently, of the fact, and then goes on with no hesita-

tion to reach a conclusion as required.

One of the more delicate of these situations concerns the beginning phases of the cooperation with Russell in 1900. Russell was apparently deeply smitten with Evelyn, and went so far as to surreptitiously support the Whitehead family to the tune of a large sum of money. Was Russell's love ever consummated? Precise details of course are lacking, yet the salient question refuses to go away. Here Lowe marshalls his evidence, warns us, and makes the inference to an answer (p.248).

One major difficulty in understanding Whitehead, especially for Americans, is lack of familiarity with the English middle-class educational culture during late Victorian times. Lowe does a fine job in laying out the entire context of public schools and Oxbridge as they existed during Whitehead's era. Indeed, whether or not interest in Whitehead alone could carry this book, Lowe's account of the educational experience would deserve our attention.

Some interesting biographical points come to light. For example, Whitehead was a supreme team player, especially at rugby. His school's journal, the *Shirburnian Magazine*, called him "the best forward the School has ever had" (p.56). Lowe finds the roots of some of Whitehead's later philosophical attitudes in these experiences on the playing field. Another rich account involves the Cambridge Conversazione Society, that select, secret discussion group more commonly known as "the Apostles". Lowe provides us with a full chapter on this subject, probably about as much as could be asked for regarding a *secret* society! Several roots of Whitehead's later philosophy are to be found in his Apostolic comradeship: years spent in intense discussion with the ebullient McTaggart certainly are sufficient to account for Whitehead's later affection for idealism of the Hegelian systematic sort.

Other Apostolic tenets perhaps account for one of the severest problems that interpreters of Whitehead must face, namely, attempting to make consistent the thinking of Whitehead the English mathematician with Whitehead the American philosopher. Lowe himself eschews the project. During his exquisitely detailed analysis of the cooperative writing of *Principia*, he cautions us so:

But I shall not here make comparisons with the views to be found in what he published after he came to Harvard in 1924 as Professor of Philosophy, and must warn philosophers whose primary knowledge is of the later work that this is a very risky business [p.276].

Risky indeed, since in many ways the earlier Whitehead is manifestly inconsistent with the later. A possible explanation for this lies in the tradition of absolute candour imposed by the Apostles upon

themselves. As Sidgwick, a fellow Apostle, has noted, "No consistency was demanded with opinions previously held — truth as we saw it then and there was what we had to embrace and maintain". This attitude went deep into Whitehead's methods. Professional philosophers, Lowe observes,

like other scholars, show much concern about consistency with at least their own previous opinion. Whitehead did not. He wrote to formulate the truth as he saw it then and there, on the particular subject of his inquiry [p.115].

Evidence of this trait is not hard to find. Whitehead's most accessible, not to mention successful, philosophical treatise is his *Science and the Modern World* of 1926, which, after a ten-year hiatus, has just re-appeared in print, in an attractive edition from Free Association Books. From within the framework of a masterly historical account of the origin, rise and ultimate triumph of the modern scientific world-view, Whitehead deploys a contrary world-view, organic rather than material, concrete rather than abstract, dynamic rather than static, and laden with human values rather than free of them. Yet what is peculiar is that the most enduring aspect of this work, its superb and still-valuable critique of positivism, finds itself upon a philosophical view totally at odds with the position underlying *Principia*.

In *Principia*, the underlying metaphysical scheme is one of unconnected individuals, an atomistic pluralism. In harmony with this, the connecting relations between propositions in the axiomatic scheme consist of the weakest possible sort of implication, the so-called "material (or Russellian) implication", which abstracts completely from the meanings of the propositions, and attends "only to their being either true or false" (p.266).

As Lowe notes, in reference to logical atomism, "Whitehead in his mature philosophy rejected this doctrine" (p.264). Indeed, in *Science and the Modern World* Whitehead's entire critique of positivism results from his vehement attack upon Hume's philosophy, a philosophy whose notion of particular individuals and their causality are so thoroughly and well modelled by the metaphysics and logic of *Principia*.

Explanation of how this startling philosophical shift came about must await Lowe's second volume, which will begin just before Whitehead's move to America. Since this first volume will have so satisfied students of mathematics, logic, philosophy, and, indeed everyone else who has an interest in the culture of the modern world, we will all await with anticipation Lowe's account of Whitehead's transformation from English mathematician to American philosopher. □

George Gale is Professor in the Department of Philosophy, University of Missouri, Kansas City, Missouri 64110, USA.

OPPONENTS

- (27) CCNY 1940. The Bertrand Russell Case by THOM WEIDLICH, from *Free Inquiry* (Winter 1990/91), pp. 18-20:

The Bertrand Russell Case

Thom Weidlich

We shouldn't let 1990 pass without noting that it marks the fiftieth anniversary of the bizarre incident in which Bertrand Russell, one of the century's great humanists, was prevented from teaching at the College of the City of New York.

The episode is important to secular humanists for several reasons. It raised issues of free speech, academic freedom, and church/state separation. Russell came under fire for his controversial social writings, which sought to replace a religion-based ethos with a rational, humanistic one. Seen from the greatest distance, then, the Bertrand Russell/City College case was a clash between twentieth-century secularism and that old-time religion.

And the story resonates for those following today's controversy involving the National Endowment for the Arts. Russell's foes claimed that they had no desire to prevent him from expressing his "abhorrent ideas," but, as taxpayers, they did not want to pay for his privilege to do so: City College was, and is, a public institution. Russell's predicament fifty years ago is a reminder of the folly of condemning those whose ideas are before their time. Today it's Robert Mapplethorpe's homoerotic photographs; fifty years ago it was Russell's defense of masturbation.

But how did it happen? How was Russell turned away from the college's Gothic gates?

When Russell's appointment became public in late February 1940, Bishop William T. Manning, overseer of the city's Episcopal church, sent a letter of protest to the New York newspapers. "What is to be said," the

Thom Weidlich is writing a book on the Bertrand Russell/City College case.

bishop wrote, "of colleges and universities which hold up before our youth as a reputable teacher of philosophy, and as an example of light and leading, a man who is a recognized propagandist against both religion and morality, and who specifically defends adultery?"

Bishop Manning's protest struck a chord with religious and conservative groups. They bristled at Russell's religious skepticism, at his writings on marriage and sexuality, and at his two divorces. They demanded that the Board of Higher Education, which had made the appointment, reverse its decision.

Many were chagrined that a foreigner was designated when qualified Americans were available: Russell was labeled "that alien professor." He was also called "an avowed Communist," which, as one of the Left's earliest critics of Soviet Russia, he certainly was not.

The city's Democratic politicians seized upon the selection of such a depraved individual by La Guardia's handpicked Board of Higher Education to embarrass their nemesis, the mayor. La Guardia's reform movement had been eroding their power. The Tammany-dominated City Council passed a resolution urging the Board to oust Russell and to find "some professor whose teachings would be more attuned to the will and the moral code of the citizens of New York City."

It was generally assumed that the mayor favored the choice. But La Guardia wasn't talking—in public at least. Privately he expressed his view that the brewing controversy meant trouble.

Russell's foes were certain that he would be unable to refrain from uttering his opinions on sex and marriage in even the most antiseptic of logic classes. (The three courses he was to teach at City College concerned the foundations of mathematics; the relation of logic to science, mathematics, and philosophy; and the reciprocal influence of meta-

physics and scientific theories. Not exactly the stuff of erotica.) "His warped and immoral views necessarily will be reflected in his teachings," wrote the head of the city's Knights of Columbus.

Those who supported the appointment at first viewed the opposition as the grumbings of a few reactionary malcontents—the noise would soon subside. But as the protest continued to mount, those of a more liberal view realized that these meddlers posed a real threat. So they too sprang into action.

They were academics, freelance intellectuals, and civil libertarians, and they raised the banner of academic freedom. The American Civil Liberties Union, the American Association of University Professors, and the Committee for Cultural Freedom—the latter formed by Sidney Hook less than a year before to repel just these sorts of attacks—urged the Board of Higher Education to stand its ground. Chief among Russell's supporters were the City College students themselves, who viewed the attack on the appointment as an affront to their school's good name. Throughout the episode they held rallies in the college's Great Hall.

Russell himself had refused to answer Bishop Manning's charges. "Anyone who decides in youth both to think and speak honestly," he said, "regardless of hostility and misinterpretation, expects such attacks and soon learns to ignore them." But soon even Russell, who was then teaching in Los Angeles, would be unable to ignore the clamor rising three thousand miles away.

Yet despite the protest, the Board of Higher Education refused, by a vote of 11 to 7, to reconsider its selection. The conflict, however did not end; it simply moved to a new stage. Mrs. Jean Kay, a Brooklyn housewife, brought a taxpayer's suit to have the court force the Board of Higher Education to rescind the appointment. Mrs. Kay's petition named two grounds for her action: first, that Russell wasn't an American citizen; and, second, that he was of a character unsuitable for a teacher.

Mrs. Kay's lawyer, Joseph Goldstein, charged in an affidavit that Russell had "exhibited practically all his life marked

eccentricities and mental quirks, and his conduct throughout his life has been queer and unusual." Not only was Russell "a person entirely bereft of moral fibre," he was also "lecherous, salacious, libidinous, lustful, venerous, erotomaniac, aphrodisiac, atheistic, irreverent, narrow minded, bigoted, and untruthful." Finally, he was not a philosopher at all, but "a sophist."

The case for the Board was handled by the city's legal agency, the corporation counsel, which filed a counter-petition to drop the suit. At the hearing on this motion before Justice John E. McGeehan, the assistant corporation counsel, Nicholas Bucci, argued that Mrs. Kay had insufficient cause for her suit. But Bucci only discussed the citizenship issue, because he saw it as the only question of law—Russell's character was irrelevant. This omission would prove to be a tactical mistake.

The opposition to Russell found backing on the citizenship question in a New York State law that required all teachers to be American. Bucci argued that this pertained only to primary and secondary teachers, and with the city's public colleges teeming with foreign professors, particularly those who had fled Hitler, he had some evidence.

After Bucci presented his side, there followed what the *Harvard Law Review* was to call the "singular procedure whereby" this matter was decided. Justice McGeehan announced that he was reserving decision on the Board's request to drop the suit, and ordered Joseph Goldstein and his co-counsel, former U.S. Congressman William Bennet, to present their evidence, as if for a trial. But the hearing was called to decide on the board's counter-motion. Even Bennet pointed out the irregularity. But Justice McGeehan insisted.

So, Mrs. Kay's attorneys made their case, and in doing so raised a third reason for Russell's ouster that wasn't in the original petition: Bertrand Russell, quite possibly the greatest living philosopher, had not been administered a civil service examination! Bennet and Goldstein argued that teachers in public colleges were civil servants, and that the New York State constitution required civil service positions to be awarded on the basis of exams. Although it seemed an

Punch Magazine

absurd claim, the *New York Times* reported that it jeopardized the jobs of every one of the city's 3,300 public-college teachers—none had been subjected to such exams.

As Justice McGeehan adjourned the court, Bucci reminded him that he still had pending his motion to dismiss Mrs. Kay's suit.

On March 30, three days after the hearing before Justice McGeehan, those who had been awaiting a ruling on the Board's counter-petition received quite a surprise. The judge had found against Bucci's request—because he had argued only one of the three points raised by Mrs. Kay—and then gone ahead and ruled on the original petition, without allowing the Board an opportunity to answer the other charges. And McGeehan, finding in Mrs. Kay's favor, ordered the Board of Higher Education to revoke Russell's appointment.

In his decision, Justice McGeehan scoffed at the notion that this case was about academic freedom, which he defined as "the freedom to do good and not to teach evil." In selecting Russell, he said, the Board of Higher Education was not bringing a great intellectual to the students, was not boosting the prestige of City College, but merely creating "a chair of indecency."

McGeehan was a Roman Catholic and a Bronx Democrat who proudly called himself "an organization judge." It seemed that he was not loath to break

procedural regulations to support his judicial activism. Several commentators pointed out the superhuman speed at which his lengthy decision was written—that is, if it was composed in the three-day interval between the hearing and the day it was released. Some suggested it was written before the hearing even began.

The City College students demonstrated their anger at McGeehan's verdict by packing into the Great Hall for yet another rally. Afterward a five-member contingent traveled down to City Hall to protest to the mayor. While there, some newspapermen called the students into the pressroom, and told them something that took them completely by surprise: Fiorello La Guardia, that fighter for right and reform, had slashed from his budget the appropriation for Russell's salary.

La Guardia claimed his cowardly act was in keeping with his Depression-era policy of eliminating vacant positions. But it was plain that what the mayor was really eliminating was a political headache. Nineteen-forty was an election year, and the Little Flower had national-office aspirations, possibly for vice president. At the very least, he would be running for re-election in 1941. Evidently he felt that the uncertainty swirling around Justice McGeehan's decision left him vulnerable.

It was unclear whether La Guardia's action was legal. His budget needed to be confirmed by the Board of Estimate, and even if it was confirmed, the Board of Higher Education could find money elsewhere to pay Russell's salary. In a month's time, the Board of Estimate would close this loophole by making as part of the conditions of the city's budget that "[n]o funds herein appropriated shall be used for the employment of Bertrand Russell."

La Guardia's and the Board of Estimate's actions turned out to be unnecessary. Justice McGeehan's decision had done the trick, although officially the fight continued through the appeals process. McGeehan continued to make sure the issues were not given a fair hearing. When the corporation counsel refused to appeal the case, following La Guardia's orders, the Board

of Higher Education hired its own lawyers. But Justice McGeehan declared that only the corporation counsel could represent the Board. This decision was affirmed by the higher courts.

Russell obtained a lawyer to have him made a party to the proceedings. But Justice McGeehan decided that Russell had no legal status in the case: Mrs. Kay had brought her suit against the Board of Higher Education and could not be forced to face him in court. This decision too was affirmed by the higher courts.

That Russell was found to have no say in the matter was ironic in light of Mrs. Kay's professed interest in the case. She had brought the suit, she had explained, for fear that her college-bound daughter might one day come

under the evil professor's spell. Yet this was impossible: At that time, liberal arts courses in City College's day session, where Russell was to teach, were open only to men.

Autumn came and the Board of Higher Education resolved to carry on the fight. Then in October, Albert C. Barnes, the eccentric art collector, engaged Russell as an instructor at his foundation in Merion, Pennsylvania. The contract was for five years and would commence January 1, 1941—the day Russell was to have begun teaching at City College.

And such was the anticlimactic ending of the Bertrand Russell/City College case. On October 21, eight months after

Russell had been appointed, the Board of Higher Education voted in favor of dropping the litigation. On that occasion, one board member wrote to his friend, Mayor La Guardia: "Thus ends, I hope for all time, this melancholy incident. I trust that its end will also serve to wash out the bad feeling that it has brought between so many good people."

Russell himself did not quench his bitterness over the case. On the title page of the British edition of *An Inquiry Into Meaning and Truth*, his 1940 return to technical philosophy (which he had been completing during the New York controversy), he included at the end of his list of attainments: "Judicially pronounced unworthy to be Professor of Philosophy at the College of the City of New York (1940)."

BOOK REVIEW

- (30) *Bertrand Russell: A Political Life*, by Alan Ryan, reviewed by Andrew Whitehead, in *New Humanist*, Quarterly Journal of the Nationalist Press Association [Britain], August 1990, p. 24. With thanks to WARREN ALLEN SMITH.

Political Russell

Bertrand Russell: A Political Life by Alan Ryan (Penguin, £5.99)

INCONSISTENCY CAN, perhaps, be excused in a life as long as Bertrand Russell's. It is disconcerting, though, to discover that just a few years before Russell championed direct action against the British bomb, he was willing to contemplate an American nuclear war on the Soviet Union, even though he acknowledged it would kill five-hundred-million people and set back European civilisation by five hundred years.

Alan Ryan's political biography — first published in 1988 and now in paperback — is admiring, but not reverential. It does not try to excuse or explain away the bizarre and incoherent in Russell's prodigious writings and activity. He admits that many of Russell's books have not weathered well, but argues that parts of his work deserve to be read by those who have grown up in the twenty years since Russell's death. "Russell always touched a particular chord with the young," Ryan writes, "just as he always irritated the middle-aged."

Bertrand Russell is, in a sense, a bridge between Victorian high radicalism and modern socialism. He was born during Gladstone's first term in Number Ten, and died in the year that Neil Kinnock entered Parliament. His first book, on German Social Democracy, appeared before the British Labour Party was established. More than seventy years later, he was castigating a Labour government about War Crimes in Vietnam. Lord John Russell was his grandfather. J. S. Mill a godfather, and Elizabeth Garret Anderson attended the birth, so Russell could hardly have been anything but an advanced radical. Here lay the roots of his rationalism and quasi-utilitarianism, his advocacy of birth control, and his antipathy to the state, as well as a pugnacious contempt for organised religion.

Alan Ryan portrays Russell as "one of the last great radicals". A theme of this engaging and accessible biography is the way in which Russell adapted to the decline of radicalism as an organised force.

He became a socialist, but with an evident tension between the desire for individual freedom and the need for social efficiency.

cy. Ryan describes him as a 'liberal socialist'; the term libertarian socialist might be more apt.

Russell had a healthy disrespect for the conventions of society.

Although awarded the Order of Merit and the Nobel Prize, he remarked: "I have always held that no one can be respectable without being wicked, but so blunted was my moral sense that I could not see in what way I had sinned." His bursts of political activity were short, but intense — in the No Conscription Fellowship during the First World War, and in the anti-bomb and Vietnam solidarity campaigns of the late fifties and sixties. He was not a good party politician, being suspicious of the whole business. "Certainly, he thought that parliamentary democracy was generally a sham."

Ryan says, "but he had no great enthusiasm for the politics of insurgency." He had nothing but contempt for Soviet communism, having witnessed at first hand in 1920 how little the reality corresponded to the theory. Forty years later in his C. N. D. days, when challenged about his apparent antipathy to communists, he said they should choose between working for peace and working for Russia.

It is difficult not to admire Russell, but not easy to identify any enduring political legacy.

He deserves a place in the radical and rationalist pantheon. It is a little difficult, though, to imagine a sixteen-year-old today reacting as Alan Ryan did on his first encounter with Russell and Mill in 1956. He recalls coming "as close as I expect to come to the experience of religious conversion". For all Alan Ryan's eloquence, Russell is from another era. He's been well-served by his biographer, but his fillips and polemics were period pieces.

BRS AWARD NOMINATIONS WANTED

- (31) Please submit names of people you think should be considered for the 1991 BRS Award. When you submit a name, also provide supporting evidence which shows why you think your candidate qualifies for the Award.

Your candidate should meet one or more of the following requirements: (1) worked closely with BR in an important way, (like Joseph Rotblat); or (2) made an important contribution to Russell scholarship (like Paul Arthur Schilpp); or (3) acted in support of an idea or cause that R championed (like Henry Kendall); or promoted awareness of R or R's work (like Steve Allen); or 5) exhibited qualities of character, such as moral courage, reminiscent of R.

Please send your candidate(s) to Clare Halloran, 71-21 69th Street, Glendale, NY 11385 (718-366-8350). She chairs the BRS Award Committee. Please send it without delay, to give the Committee sufficient time.

We want your input!

1991 EARLY RENEWAL HONOR ROLL

- (32) BRS members continue to set records. 149 members renewed before January 1st in 1989, 191 did so in 1990, and 207 did it this year. We are most grateful to all 207 members for their splendid cooperation in making the renewal process go more easily. Here they are:

MR. BECKRY ABDEL-MAGID, MS. AURORA ALMEIDA, MR. J. M. ALTIERI, MR. ROBERT AMOS, DR. JEAN ANDERSON, MR. STEFAN ANDERSSON, DR. IRVING H. ANELLIS, MR. JAY ARAGONA, DR. RUBEN ARDILA, MR. J. LOCAL CHAPTERS

- (33) Benares. Chandrakala Padia is the Director of The Benares Chapter of The Bertrand Russell Society, as well as a Director of the BRS itself. She tells us that the Benares Chapter is doing very well, recently held a hugely successful one-day seminar, and has acquired more members.

However the Chapter needs books by and about BR. If you have BR books that are duplicates or that you can do without for whatever reason, please send them to Benares. MARVIN KOHL and DON JACKANICZ have set a good example for the rest of us to follow by doing just that.

Send books to the Benares Chapter, The Bertrand Russell Society, 26 Teachers' Flats, B.H.U., Varanasi 5, India. It will be greatly appreciated.

PROMOTING BR/BRS

- (34) BR at Muhlenberg. Once again we showed BR on videotape to a group of mostly students at Muhlenberg College, Allentown, PA. Last time (4/30/90) we had shown the first 4 of the Woodrow Wyatt 1959 interviews (RSN67-11). This time (11/28/90) we showed the last 4 of the interviews. As before, Professor Ted Shick was host. About 25 of the students present signed up to receive information about the BRS by mail. Before the tape was shown, we read a paper telling why Russell had a low opinion of Plato's *Republic*; the reason: it is a prescription for a totalitarian state.

FILED
MAR 13 1918

The Honorable
The Secretary of State,
Washington.

Sir:-

I have the honor to invite the attention of the Department to the case of the Honorable Bertrand Russell, who has been sentenced to six months imprisonment for publishing, in a paper called the TRIBUNAL, an article, certain statements in which constituted a deliberate insult to the United States

- 2 -

Army, and were considered by the Court to be prejudicial to the good relations between the United States and Great Britain. Mr. Russell is a man of good education, and a writer by profession; he is a descendant of the former Prime Minister, Lord John Russell, and has been until recently highly thought of in this country. Unfortunately, during this war he has shown himself to be a pronounced and extreme pacifist, and as a result of his activities was once before summoned by the police, and obliged under the Defence of the Realm Act to follow the regulations prescribed for enemy aliens in respect of reporting his movements to the police.

I have the honor to transmit herewith an account of the proceedings in Court, as reported by the TIMES of February 11, 1918.

I have the honor to be,

Sir,

Your obedient servant,

(for the Ambassador)

H. W. G. G. G.

Enclosure:- Extract from the
TIMES, February 11,
1918.
Subject:- Proceedings in Court
re Hon. Bertrand
Russell.

The following is from *The Times* (London)(2/11/18). It has been enlarged, for easier reading. We've kept the right and left columns in their original positions, so once again you'll have to go to the next page to finish the first column, and then back again.

CITY: L O N D O N.

SUBJECT: Insult to the U.S. Army -
Mr. Bertrand Russell Sentenced.

SUMMARY:

MR. BERTRAND RUSSELL SENTENCED.

MISCHIEVOUS WORDS IN AN ARTICLE.

INSULT TO THE U.S. ARMY.

At Bow-street Police Court on Saturday, before Sir John Dickinson, the Hon. BERTRAND ARTHUR WILLIAM RUSSELL, of Gordon-square, W.C., and Miss JOAN BRADGAM, of York-buildings, Adelphi, W.C., were jointly summoned for having in a printed publication called the *Tribunal* made certain statements intended and likely to prejudice his Majesty's relations with the United States of America—contrary to Regulation 27 (b) of the Defence of the Realm Regulations.

Mr. Travers Humphreys conducted the case for the Director of Public Prosecutions; Mr. Cecil Whiteley appeared for the defendants.

Mr. Humphreys asked that the charge should be dealt with summarily. He said that the *Tribunal* was a four-page paper, and in the issue of January 1918, the front page was taken up with an article headed "The German Peace Offer," by the defendant, Russell. The paragraph complained of was in the following terms:—

"The American garrison which will by that time be occupying England and France, whether or not they will prove efficient against the Germans, will no doubt be capable of intimidating strikers, an occupation to which the American Army is accustomed when at home."

The prosecution contended that that statement was intended and likely to prejudice his Majesty's relations with the United States. A statement of that kind was certainly likely to cause trouble and disagreement and mutual antagonism between the soldiers of this country and those of one of our Allies, and thus to prejudice the relations of the two countries, and it was for the magistrate to decide whether, considering that the statement was written by a man of position and of the highest possible attainments in education, it was not intended to have that effect. It was very hard to understand how such a

Detective-Inspector Parker stated that the *Tribunal* was a journal which could be purchased by the public in the ordinary way.

Mr. Humphreys asked if the magistrate desired to hear General Childs.

Sir JOHN DICKINSON said that, as far as he was concerned, it was unnecessary, but if Mr. Whiteley would like to question him he could be called.

CASE FOR THE DEFENCE.

Mr. Whiteley submitted that there was no ground for the inferences which the prosecution had attempted to draw from the passage quoted. Mr. Russell absolutely denied that in writing it he had any intention of prejudicing the relations of his Majesty with the United States; his purpose was the very opposite, for he was warning the public against what he considered, rightly or wrongly, was a serious menace and danger. There was no justification for the assumption that the passage was "likely" to have the effect suggested by the prosecution. The article was not an editorial, but a signed contribution, showing that the views expressed were merely those of the individual writer, and it was idle to pretend that the personal opinions and sentiments of any one man, whatever his position, were likely to prejudice our relations with a foreign State. The German peace offer had been discussed in every paper in every country from every point of view, and from those various papers plenty of isolated passages might have been selected which, over-sensitive officials would have found quite as objectionable as that now complained of. It was not fair, moreover, to fix upon one or two sentences without regard to the general trend of the article, which was directed to pointing out to those who sympathized with the views of the Labour and Socialist Parties the results which the continuation of the war might have on the interests of those two parties. The circulation of the *Tribunal* was probably only a few thousands a week, and the suggestion was ludicrous that a few lines in such a paper were likely to affect the relations of this country with America. The Americans were credited with a keen sense of humour, and he suggested that even the most serious-minded amongst that great nation would not take the objections to the article which had been put forward by the prosecution. Mr. Humphreys had quoted only one sentence, but he had omitted these words which immediately followed:—"I do not say that these thoughts are in the minds of the Government."

Mr. Travers Humphreys.—Read the rest of the paragraph.

Mr. Whiteley.—Yes. It goes on:—"All the evidence tends to show that there are no thoughts whatever in their mind, and that they live from hand to

passage could have been written by any person who was not directly hostile to this country, and it was difficult to overstate its possible mischievous effects if it were allowed to pass unchallenged. What did the suggestion that an American garrison would shortly be occupying England and France mean if not that the British and French Armies would not be able effectively to defend their countries, and that it was necessary to have here, not the assistance of an Ally to fight the enemy, but a garrison in this country and in France provided by America? Following upon that sneer at the Armies of Great Britain and France, there came an insult to the American Army in the words, "whether or not they will prove efficient against the Germans," the suggestion being that the American Army, while capable of forming a garrison in England and France, was not to be very much thought of as an effective Ally in fighting the foreign foe.

Then came the words, "They will no doubt be capable of intimidating strikers, an occupation to which they are accustomed when at home." The first observation to be made on that was that it was untrue; and the second observation was as to the impression that would be created among the citizen soldiers of this country if they believed for an instant that the Army of another democratic country could in any conceivable circumstances be used here for the purpose of taking part in any labour troubles that might arise. If necessary he would call Brigadier-General Childs to give evidence on that point. The female defendant had admitted that she was the actual editor of the *Tribunal*, and responsible for its publication.

mouth consoling themselves with ignorance and sentimental twaddle. I say only that if they were capable of thought it would be along such lines as I have suggested that they would have to attempt to justify a refusal to make peace on the basis of the German offer, if, indeed, they do decide to refuse." Counsel added that during the last year Mr. Russell had written articles regularly in the *Tribunal*, and this was the first complaint about them. Before the issue of this particular article he had made up his mind to discontinue his contributions, because he intended for the future to devote himself to writing and lecturing on philosophy. If the magistrate felt bound to come to the conclusion that Mr. Russell had transgressed one of the regulations, he suggested that a very mitigated penalty would meet the case.

Mr. Humphreys mentioned that in June, 1916, at the Mansion House, Mr. Russell was convicted on a similar charge, and was fined £100 and £10 costs.

"A VERY DESPICABLE" OFFENCE.

Sir JOHN DICKINSON said that the words of the article complained of stood self-condemned as mischievous, and there was no doubt in his mind that they were calculated to prejudice his Majesty's relations with a foreign Power. Mr. Russell seemed to have lost all sense of decency and fairness, and had gone out of his way to insult, by a deliberate and designed sneer, the Army of the great nation which was so closely allied to us by ties of affection and kindred—a nation which had joined us to fight for the same ideals of justice and freedom that had inspired us. The offence was a very despicable one, and although the sound sense—or, as Mr. Whiteley

had put it, the keen sense of humour—of the Americans might treat his libel with the contempt it deserved, there were some people who would eagerly seize upon those false assertions and use them for the injury of the cause to which we had been devoting our lives and our treasure. Mr. Russell's attainments and position only added to the seriousness of his offence. He had previously had a warning on this very subject, but had chosen deliberately to ignore it. The sentence upon him would be six months' imprisonment in the second division. Miss Beauchamp must pay a fine of £60 and £15 *l.s.* costs.

Notice of appeal against both sentences was given, and Lord Russell and Mr. T. J. C. Sanderson became sureties for the prosecution of the appeals.

There was a further summons against Miss Beauchamp for printing false statements in the *Tribunal* in contravention of Regulation 27 (a).

Mr. Whiteley said that this summons referred to statements made in the letter of a correspondent, and if the case was to be proceeded with he would have to ask for an adjournment, in order that he might call the writer of the letter and a number of other witnesses to prove that the statements were absolutely true.

It was eventually arranged that the summons should be adjourned *sine die*.

(38) The 2nd instance -- of U. S. State Department officials reporting to Washington on Russell's activities -- starts on the following page. It comes from General Records of the Department of State (Record Group 59). Decimal Files, 1916 29, 893.42/114. (October 14, 1920 regarding Russell's arrival in China.)

 DEC 1 1920

AMERICAN CONSULATE GENERAL

No. 441

Shanghai, China, Oct. 14, 1920.

CONFIDENTIAL.

Subject: Arrival in China of the Honorable
Bertram Russell.

The Honorable

Charles R. Crans,

American Minister,

Peking, China.

Sir:

I have the honor to inform the Legation that the Honorable Bertram Russell, a British subject, arrived in Shanghai recently by the steamship PORTHOS from Europe. It is understood that he is proceeding to Peking, where he is to take a position as instructor in the Peking University. He is accompanied by his secretary, Miss D. Black.

It has been reported to this office that while on board the ship both Mr. Russell and his secretary gave free expression to sentiments of an extremely socialistic and anarchistic character. The informant gave it as his opinion that Mr. Russell would, during his sojourn in China, be very likely to continue to propagate doctrines of this nature.

Although Mr. Russell is a British subject, it has been, nevertheless, deemed advisable to refer this mat-

-2-

ter to the Legation for its information.

I have the honor to be,

Sir,

Your obedient servant,

M. F. Perkins.

American Consul in Charge.

BOOK REVIEW

(41) Anthony Storr reviews the first volume of the collected papers, in *The Spectator*, December 3, 1983.

Early genius

Anthony Storr

The Collected Papers of Bertrand Russell, Volume 1: Cambridge Essays 1888-99
 Edited by Kenneth Blackwell, Andrew Brink, Nicholas Griffin, Richard A. Rempel, John G. Slater
 (George Allen & Unwin [£48 pre-publication] £60)

Bertrand Russell lived from 1872-1970. He wrote 70 books, and some 2,500 shorter pieces. His writing has always delighted me. Everything of his which I have ever read seems illumined from within by a glowing clarity. He is one of the great masters of English prose, and it is entirely apt that he should have been awarded the Nobel Prize for Literature.

The Collected Papers of Bertrand Russell, of which this is the first volume, will run to 28 volumes in all. The publishers hope to complete this massive undertaking by the year 2000. The papers are being edited by a team at McMaster University, Ontario which bought the Russell Archives in 1968. About one-third of the present volume consists of appendices: outlines of lectures; monthly lists of Russell's reading; annotations, textual notes, and a bibliographical, as well as a general index. It is clear that all the resources of modern scholarship are being employed to make this edition unrepeatably definitive. All in all, it looks as if we shall eventually have more information about Russell's mind and its furnishings than we shall have about any other eminent mind of the 20th century.

The introduction to this volume states: 'Writing came naturally to Russell in a manner that is nowadays rare.' Perhaps; but, in 'How I Write', Russell himself confessed that, when he was young, it was a long time before he was able to write without worry and anxiety. 'When I was young each fresh piece of serious work used to seem to me for a time — perhaps a long time — to be beyond my powers. I would fret myself into a nervous state from fear that it was never going to come right. I

would make one unsatisfying attempt after another, and in the end have to discard them all.' At last he discovered the virtue of incubation. If he left the problem to simmer, 'it would germinate underground until, suddenly, the solution emerged with blinding clarity, so that it only remained to write down what had appeared as if in a revelation.'

Only the professional philosopher can assess Russell's contribution to philosophy, but the greater part of his more popular writing is easily accessible to the layman. From the psychological point of view, this volume is full of interest. It begins with 'Greek Exercises,' a journal started when Russell was 15, written in Greek characters for the sake of secrecy. This reveals a startling precocity and an early interest in many of the problems which were to preoccupy Russell for years. In June 1888 he writes: 'It is extraordinary how few principles or dogmas I have been able to become convinced of. One after another I find my undoubted beliefs slipping from me into the region of doubt.' In an autobiographical talk delivered years later, Russell says that one of the two most important motives which impelled him to take up philosophy was 'the desire to find some knowledge that could be accepted as certainly true.' The other motive was to find some satisfaction for his religious impulses. These early diaries are much concerned with the omnipotence of God, immortality, the origin of conscience and related problems.

There is no false modesty. 'I read an article in the *Nineteenth Century* today about genius and madness. I was much interested by it. Some few of the characteristics mentioned as denoting genius while showing a tendency to madness I believe I can discern in myself.' Among these are 'sexual passion' and 'a desire to commit suicide.' Both impulses remained powerfully active in Russell for years. We are fortunate that the former impulse prevailed over the latter, which it did with vigour.

After 'Greek Exercises' comes the hitherto unpublished 'A Locked Diary' which Russell kept from 1890-94. Amongst much else, it records the ambivalence of his feelings toward Alys Pearsall Smith who became his first wife in 1894. His musical

taste is as yet unformed, since Tosti's 'Goodbye' is reckoned 'absolutely perfect of its kind', in the same class as Shelley's lyrics.

Russell went up to Cambridge in 1890. In 1892 he was elected to 'The Apostles'. Six of the papers he presented to this society have been preserved and are printed here. It was at meetings of 'The Apostles' that Russell encountered Whitehead, with whom he wrote *Principia Mathematica*. Modern students of philosophy will find that they are looking back towards a vanished world, and may perhaps be envious of those who were engaged in the subject before J.L. Austin and A.J. Ayer had launched their assaults upon traditional metaphysics. 'It may be contended that, although we can never wholly experience Reality as it really is, yet some experiences approach it more nearly than others, and such experiences, it may be said, are given by art and philosophy.'

Russell writes on Bacon, on Descartes, on Hobbes; on Ethics; on Free-Will; on Geometry. It is astonishing that so much of his undergraduate and graduate work has been preserved. Did the lonely child who recorded that beginning Euclid was 'as dazzling as first love' treasure these early intellectual exercises in the way that other adolescents treasure love-letters? By the mid-1890s, Russell had become interested in economics and politics. There is a paper on 'German Social Democracy,' and another on 'The Uses of Luxury.' Russell was certainly one of the cleverest men of this century, but one cannot help being amazed at both his range and his mandarin certainty that he can master any subject to which he addresses himself. It is a kind of confidence which no-one can profess today, when many intellectual subjects have become so specialised, so 'technical', that even the cleverest can only master parts rather than wholes.

There will, no doubt, be those who will say that 28 volumes will tell us more about Russell than we want to know. But, because his range was so wide, this huge project will become not only a tribute to Russell himself, but a history of ideas of two-thirds of the 20th century.

ANNUAL MEETING, JUNE 1991

(2)

To register, use the REGISTRATION FORM on the green sheet atop this newsletter. But hurry; the meeting is nearly upon us.

The program:

Friday, June 22:

4:00 - 6:00	Registration
6:00 - 7:30	Dinner
7:30 - 7:45	Welcoming Remarks
7:45 - 8:45	1991 BRS Service Award to Don Jackanicz; BRS 1991 Book Award to Peter Hylton's <i>Russell, Idealism and the Emergence of Analytic Philosophy</i>
8:45 - 9:45	Harry Ruja, <i>Oddities in Russell's Published Work</i>
9:45	Board meeting; all members welcome.

Saturday, June 22

8:00 - 9:00	Registration
9:00 - 10:15	Workshop by Don Jackanicz on Russell's 1950 Nobel Prize Acceptance Speech. The speech appears in Russell's book, <i>Human Society in Ethics and Politics</i> as a chapter titled <i>Politically Important Desires</i> . A copy of the speech will be sent to all who register for the meeting. An audiotape of Russell delivering the Nobel Speech will be available for listening during the week
10:15 - 10:30	Coffee
10:30 - 11:30	Society Meeting
11:30 - 12:30	Marvin Kohl, <i>Russell, Love, and Moral Education</i>
12:30 - 2:00	Lunch
2:15 - 3:15	Michael J. Rockler, <i>Beacon Hill and Summerhill -- the Russell-Neill Correspondence</i>
3:15 - 3:30	Coffee
3:30 - 4:30	John Lenz, <i>Russell on History</i>
4:30 - 6:00	Free Time
6:00 - 7:00	Red Hackle Hour
7:00	Banquet. Speech by Lawrence C. Broadwell, Vice-President, Planned Parenthood Federation of America. Planned Parenthood is the recipient of the 1991 BRS Award.

Sunday, June 23

9:00 - 10:30	Gladys Leithauser and Margaret Moran, <i>Russell as Fiction Writer</i>
10:30 - 10:45	Coffee
10:45 - 11:45	Robert Davis, <i>Is Russell's Socialism Phoney?</i>
11:45 - 12:00	Closing Remarks

FOLLOW-UP

- (3) The "Famous Russellian Proclamation" -- "That Man is the product of causes which had no prevision of the end they were achieving, etc." -- quoted in *The Bluffer's Guide to Philosophy* (RSN68-10), is from *A Free Man's Worship*. It can be found in *Why I Am Not A Christian*, in *Mysticism and Logic*, and in *The Basic Writings of Bertrand Russell*. Thank you, HARRY RUJA.

BOOK REVIEW

- (4) Mr. Russell Predicts" in the
- Saturday Review of Literature
- , December 28, 1935.

Mr. Russell Predicts

IN PRAISE OF IDLENESS. By Bertrand Russell. New York: W. W. Norton & Co. 1935. \$2.50.

RELIGION AND SCIENCE. By Bertrand Russell. New York: Henry Holt & Co. 1935. \$2.

Reviewed by ARTHUR COLTON

BERTRAND RUSSELL is an asset to civilization, whether one agrees with his social philosophy or not. His socialism is not Marxian. He dislikes the Russian procedure as much as the Italian and German. He thinks it probable that the era we are entering will be more socialistic than the last, but he looks to gradual changes born of situations and events, persuasive rather than violent. He finds unregulated economics too erratic to endure; they are headed for control. But socialism to him must be democratic, or it will be a despotism or an iron oli-

garchy. Here one may begin to question the probabilities. A socialistic state would have so much to do, such vast responsibilities, that it would have to be a huge and intricate organization in order to cover the ground. Could such an organization be run at all except by an oligarchy or dictatorship? A Russian Commissar would perhaps say that Russell was not tough-minded enough to face realities, but the Commissar might have his own illusions too. He might think that eventually all Russians will think alike, and then the state can safely change over to democracy and freedom. That speculation would be as dubious as Russell's, and in more diverging directions.

Bertrand Russell is an asset to the times, however, because he is a distinguished scientist and a model of lucidity. The essays in "In Praise of Idleness" are nearly all on social and political, rather than scientific issues, and do not bear the authority of a specialist; but his lucidity is with him always. The essay on Youthful

Cynicism points out that this cynicism is a characteristic of intelligent youth in England, France and the United States, not in Russia, India, China, or Japan, or generally in Germany. The title essay "In Praise of Idleness" recalls Stevenson's on the same subject; but Stevenson is interested in the personal values of idleness, and Russell in the values to society of distributed leisure.

"Religion and Science," in the later part, deals with many ideas that are difficult in themselves, but his opinion is always clear. The first conflicts were in distant fields, the astronomical. The insurgents were Copernicus, Kepler, Galileo. The battle line shifted to geology and biology, and drew nearer and nearer to the intimately human—psychology, ethics, mysticism, free will and determinism. Is there a definite limit to science, any foreseeable halt in its triumphant career? He indicates one by saying that science has to do with facts, not values.

IRAQIS GAS KURDS, 1966

EARL BERTRAND RUSSELL**CONDEMNS THE USE OF TOXIC GAS BY THE IRAQI ARMY AGAINST THE KURDISH PEOPLE**

Earl Bertrand Russell made a special statement on 20th April, 1966, on the situation in Iraq after the Iraqi government used toxic gas in its racial war against the Kurdish people. Earl Russell said in his statement:

"I have now seen the evidence of the use of poison gas against villagers throughout Kurdistan by forces despatched by the oligarchy of Al-Bazzas. This poison gas has been used by the United States in Vietnam. It is clear that these gases, which have been used experimentally against the Vietnamese people by the United States, are being tried out wherever there is popular revolution against cruel oppression. From Vietnam and Peru to Iraqi Kurdistan, the struggle of oppressed people for their liberation is met with barbarism, symbolised and implemented by new and deadly poison gas. In addition, the chemical known as napalm has been used by the Iraqi army against the Kurdish people".

Earl Russell went on in his statement, "Poison gas and napalm are only the first stages in the desperate attempt by the Bazzas oligarchy to keep itself in power by all means. Behind Bazzas stand the oil companies of America and Britain, and the militarism of the Pentagon".

BR would have been appalled at the Iraqi invasion of Kuwait and at Saddam Hussein's treatment of the Kurds. BR was quick to condemn similar crimes in 1966. This is from "Information Bulletin No. 3" (June 1966) of Amnesty for Iraqi Political Prisoners. Thank you, KEN BLACKWELL.

Clara Claiborne Park reviews two books by two important women in BR's life. Sorry about the last six lines!

My Father the Philosopher, My Husband the Man

- (6) **MY FATHER BERTRAND RUSSELL.** By Katharine Tait. Harcourt Brace Jovanovich. 211 pp. \$8.95
THE TAMARISK TREE: My Quest for Liberty and Love. By Dora Russell. Putnam's. 304 pp. \$9.95

By CLARA CLAIBORNE PARK

IN 1921, BERTRAND RUSSELL set down what were in fact his expectations for his own children, the first of whom had just been born:

If existing knowledge were used and tested methods applied, we could, in a generation, produce a population almost wholly free from disease, malevolence, and stupidity. One generation of fearless women could transform the world by bringing into it a generation of fearless children, not contorted into unnatural shapes, but straight and candid, generous, affectionate, and free. Their ardour would sweep away the cruelty and pain which we endure because we are lazy, cowardly, hard-hearted, and stupid.

Fifty-five years later, Katharine Russell Tait and her mother, Dora Black Russell, have given us very different books, each assessing in her own way the experiment which in his own autobiography Bertrand Russell, with laconic honesty, pronounced a failure.

The Russells were far from expecting the average parent to have a natural grasp of "existing knowledge" and "tested methods." Kate quotes her mother: "Those people who are not prepared to equip themselves in the necessary way must either abandon parenthood or have recourse to the expert." Although Dora Black's apprenticeship to parenthood consisted of several years of university study of 18th century France and Bertrand Russell was nearly 50 when his first child was born, neither doubted that they were experts in child development, as in how to live. Dora wrote *In Defense of Children and The Right to Be Happy*; Bertie wrote *The Conquest of Happiness and Education and the Good Life*. They founded their own school so their children could learn happily: "Happiness in children is absolutely necessary to the production of the best kind of human being." The idea of happiness shadowed the childhood of John and Kate Russell as ominously as ever Victorian ideas of sexual repression and sin had shadowed their father's. What right had they not to be happy? As Kate tells us, it was clear to them from the beginning that they had enlightened parents who "knew what was best for their children and did not repeat blindly the mistakes of their own upbringing," "that it was a privilege to belong to their family," that "we need never feel afraid, we could speak to our parents about anything," that "we were free and healthy and privileged." If they fell short, the fault must be their own, "since the

method was foolproof and the parents were perfect." Guilt has many sources. It was an irony her father could not appreciate that Kate would ultimately find her liberation from guilt in that Christianity on which he had blamed many social and individual ills.

For Kate and John were not happy, as children or as adults. "They were born after 1914, and were therefore incapable of happiness," wrote their father. An explanation at once too grandiose and too easy, as Kate shows. Not the least of the ironies of the Russells' various accounts is the realization that the parents, products of an unenlightened Victorian upbringing, lived with so much more zest and confidence than their children. How much they saw and did! Until she comes to the debacle of her marriage, almost every page of Dora's chronicle is testimony to her capacity to enjoy. She decorated her home in brilliant, pure colors that denied the past. When Bertie, who was a feminist in name only, told her it was too dangerous for her to come with him to Bolshevik Russia, she went by herself; she ran for Parliament; she had babies because she wanted to, and enjoyed them. She was one of those "fearless women," and her quest for liberty and love might well have been successful if it had not run afoul of her husband's quest for more of the same.

The children's security was sacrificed not only to their parents' pursuit of happiness, but to their passionately held principles. Kate's memoir begins in a Cornish Eden, with a leisurely father all charm and affection devoting hours every afternoon to his

children. But children need school—the Russells recognized that. Since no ordinary school could be trusted to produce the children of the future, ardent, rational, and free, when Kate was not yet four she and John experienced the transformation of their home into the bleakness of a boarding school and their parents into remote and impartial administrators. Overburdened with teaching, coping with contagious diseases and menu-planning, scrounging to raise money to keep the shaky enterprise going, the Russells seem hardly to have noticed as their children turned into guarded, mistrustful strangers. Dora had given up a promising career for a home and children, but the marriage could not survive the strains imposed by the school, by her two pregnancies by another man, and by the attractions of the pretty young governess hired to give Kate and John the companionship their parents were too busy to provide. The once-happy family had become, in Kate's words, "like jagged splinters, unable to touch one another without wounding."

Russell himself acknowledged the failure of the school in his *Autobiography*. He has little to say about the marriage; at the end of a long, full life (which included two more marriages) it clearly no longer interested him. It interests Dora passionately still. In China, she'd nursed him back to life; she loved him. She still can't understand what happened, when love and freedom and babies were "in accord with the moral principles by which we had been living," and "sexual enlightenment . . . the foundation stone of a human, tolerant, happy, and peaceful society." Why should not Russell, in his six-

ties, welcome a baby that wasn't his, and then another, especially when he'd told her he didn't mind?

But he did mind, and the divorce that followed was as lacerating and ugly as any that take place among the unenlightened. "A word from us of what the other parent thought could bring on an endless explanation from the one to whom we spoke. I can remember still the sick, trapped feeling I used to get when some careless word of mine brought on a speech of self-justification, which could be ended only by assent, whether genuine or feigned." Merely to read of the children's holidays, mathematically apportioned to the half day between father and mother, causes pain.

For all her resilience, Dora too was permanently hurt. One might think so convinced a feminist would have taken her babies and returned gladly to the kind of generous, untrammelled life she believed she had a right to before Russell persuaded her to marry him. But unlike Russell, she was loyal to people as well as to principles. Pathetically, she ends her autobiography with her divorce in 1935, as if the 40 years since then had brought her nothing worth recording. As she had feared, the vibrant feminist was "absorbed, swallowed up entirely in his life and never able to become what I aspired to be in my own person."

Kate is now older than her mother was then, and her marriage too has disintegrated. Her memoir is half the length of her mother's, a quarter the length of her father's. Unlike theirs, it is concentrated, searching, bleakly honest—though less than candid when candor, we may surmise, would bring others embarrassment or pain. It is a touching and admirable book. One of its fascinations is to see recorded how Russell, while preaching freedom and ardor, in fact inculcated in his children the familiar values of his own childhood: duty, understatement, self-control. "Joy was to be shared; distress he considered private." "I believed that demanding a fair share of anything, pointing out any achievement of one's own, was selfish. One should always do one's outstanding best, and then say, 'Oh, it was nothing. I only did my duty.'" Kate feels these values as a prison, but we may be grateful for them. Her book is spare but deeply felt; its record of unhappiness contains no trace of self-pity or self-justification. She tells us she was gauche and fat, taking only easy courses in college; she does not mention that she entered at 15 and graduated with one of the two summa cum laudes in her Radcliffe class. Convinced early of her own inadequacy, she is scrupulously fair to everyone except herself. Out of its understatement, her book wells up unexpectedly to a final paragraph that rends the heart. It will repay reading, and rereading; surely we are concerned with Bertrand Russell, with love and children and families, with theory and practice, and with how passionately his principles interact with recalcitrant nature.

BR QUOTED

- (7) BRS member Ramon ("Poch") Suzara quotes BR at length in his letter to the
- Manila Standard
- , October 23, 1990.

Wise man's words

With the worldwide situation worsening everyday, perhaps we can reflect on the words of a wise man, Bertrand Russell. I quote:

"Our world is a mad world. Ever since 1914 it has ceased to be constructive, because men will not follow their intelligence in creating international cooperation, but persist in retaining the division of mankind into hostile groups.

This collective failure to use the intelligence men possess for purposes of self-preservation is due, in the main, to the insane and destructive impulses which lurk in the unconscious of those who have been unwisely handled in infancy, childhood and adolescence.

In spite of continually improving technique in production, we all grow poorer. In spite of being well aware of the horrors of the next war, we continue to cultivate in the young those sentiments which make it inevitable. In spite of science, we react against the habit of considering problems rationally. In spite of increasing command over nature, most men feel more

hopeless and impotent than they have felt since the Middle Ages. The source of all this does not lie in the external world, nor does it lie in the purely cognitive part of our nature, since we know more than men knew before. It lies in our passions; it lies in our emotional habits; it lies in the sentiments instilled in youth, and in the phobias created in infancy.

The cure of our problem is to make men sane, and to make men sane, they must be educated sanely.

At present the various factors we have been considering all tend towards social disaster. Religion encourages stupidity and an insufficient sense of reality; sex education frequently produces nervous disorders, and where it fails to do so overtly, too often plants discords in the unconscious which make happiness in adult life impossible; nationalism as taught in schools implies that the most important duty of young men is homicide; class feeling promotes acquiescence in economic injustice; and competition promotes ruthlessness in the social struggle.

Can it be wondered at that a world in which the forces of the State are

devoted to producing in the young insanity, stupidity, readiness for homicide, economic injustice, and ruthlessness — can it be wondered at, I say, that such a world is not a happy one?

Is a man to be condemned as immoral and subversive because he wishes to substitute for these elements in the moral education of the present day intelligence, sanity, kindness and a sense of justice?

The world has become so intolerably tense, so charged with hatred, so filled with misfortune and pain that men have lost the power of balanced judgment which is needed for emergence from the slough in which mankind is staggering.

Our age is so painful that many of the best men have been seized with despair. But there is no rational ground for despair: the means of happiness for the human race exist, and it is only necessary that the human race should choose to use them."

POCH SUZARA

- New York Times
- column, December 1, 1990.

FOREIGN AFFAIRS
Flora Lewis**For a
Sober
Balance**

PARIS
Word from America is about a mood of blues, depression, sense of guilt, fears of decline, and dilapidation, a bleak future. A poll shows 4 out of 10 expect things to be worse in the next five years, compared with 2 out of 10 in 1984.

There is an extraordinary contrast to the smug euphoria of last year, when the long confrontation with Communism suddenly dissolved and the American way — the democratic system and free enterprise — were proclaimed triumphant.

It is also a sharp contrast to the East, and the feeling of Americans and West Europeans who go there to listen to pleas for aid and advice on how to "join" the open world. They

explain, and commiserate, and discuss the tremendous problems of change. They can't help feeling lucky, privileged, maybe wiser ... until they cross back over what is still the great divide in how people live and what they worry about.

One commentator says "America is like a barroom drunk," bragging about its prowess one moment and then blathering disconsolately about the hopelessness and futility of it all. Louis Lapham, the editor of *Harpers*, is quoted as writing, "I find myself wondering whether the American experiment with democracy may not have run its course." And that at a time when masses of people around the world are declaring that democracy can't be considered a luxury, as cynics suggested a generation ago, but is a necessity.

The hangover is understandable. There has been a period of intoxication, of trumpeting "We're Number One," and deliberately but unwaveringly neglecting the maintenance and care of society — education, the chronic poor, roads and bridges, the plunge into debt. But a hangover can be a lesson; it isn't a fatal disease.

There has been a peculiar line drawn between foreign and domestic affairs, as though Americans live in two separate worlds that have nothing to do with each other.

Perhaps there was something in

the warning by Georgi Arbatov of the Soviet Union that when America lost its Communist enemy it wouldn't know what to do but mope.

The British philosopher Bertrand Russell wrote that he learned when very young not to compare himself with others because he always found some who were worse, "and that was bad for me," and some who were better, "and that was bad for me." But it's also true that it's the one way to put your problems in perspective when you get bleary-eyed and risk losing balance.

The Persian Gulf crisis brought the sense of things going wrong into intensified focus. In the first weeks after Iraq invaded Kuwait, there was a certain exhilaration to see that the world still looked to the U.S. in an emergency, that the U.S. was still the leader and nobody else would or could play the role. Now the burden is weighing.

People ask why we are practically alone in the military buildup. They ask if it's worth fighting for oil (which gives wealth and power to dominate, the things wars have always been about and aggressors always sought). Reaganesque bravado, which cheered the conquest of Grenada (for the wrong reason) has been left behind now that the challenge is vastly bigger and more serious.

The Gulf isn't a sashay into Panama, a street brawl or a Saturday

afternoon game that leaves everything more or less the same when it's over. Careful planning and public understanding are needed not only on how to deal with the crisis but also the consequences to be faced after.

Sensitivity to Saudi Arabia's strictures is irritating, and in a way demeaning. In respect for its way of life, which can mean death for American troops, the Red Cross is painted out on ambulances, the troops are forbidden pork as well as beer, the President goes out to sea for Thanksgiving prayers. French troops kept the cross, which is simply an inversion of the Swiss flag, but added a Muslim red crescent, dress their chaplains as medical aides and — it boggles the mind for the French — forbid wine. But it hasn't been publicized and people here don't know it.

There isn't an easy way out. War must be avoided if possible, but it may not be possible. Yet the choice cannot be to look after the world or the U.S. It isn't that kind of world anymore. The U.S. cannot run it alone, and cannot meet its own needs and aspirations by turning its back.

There are things to be done urgently at home and abroad. To slump into resigned depression or a sense of being powerless would do no more good than noisy, empty boasts. The U.S. can't fix all the troubles in the world; neither did it cause them. □

(9)

OVERHEARD IN A BOOKSTORE
by Sheila Turcon

"You don't have the book." The excited voice was definitely marked with disappointment. "The university bookstore is all sold out and I was hoping I'd find it here..." The end of his sentence was inaudible but by then he had caught my interest by the intensity of his emotion. I was standing in the next row of a very small bookstore browsing for something that would interest a friend who is a voracious reader. It was a new bookstore but built in an old-fashioned style, with shelves and shelves of books disappearing up into the high ceiling, accessible only by oak-runged ladders that slid across both side walls.

"You see," he continued earnestly to the clerk, "I wanted to give the book to my father for Christmas. He likes to read, really he does, but he actually doesn't do it much. And this book is so clearly written and makes so much good sense that I think he'd enjoy it." There was a brief pause before he concluded with emphasis, "I know he would."

"Whatever is this gem of a book," I wondered, even more intrigued. I couldn't see the two of them that clearly over the rather high central bookshelves. Their voices were fading slightly as they walked away from me toward the Philosophy section. The clerk was listing off a number of possible alternatives to her customer. Her selections varied widely over a number of writers. She seemed to be stressing either their nationality or popularity in describing them. The young man was unenthusiastic as he agreed to look at several titles. Just as I concluded I'd never find out the name of the elusive book he sought so diligently, he said rather loudly, "You're absolutely sure you don't have a copy of *The Conquest of Happiness*?"

A rush of thoughts flooded through my mind. While I was glad that Russell's book, written sixty years ago, was still popular and wanted today, I regretted that neither bookstore had a copy for sale. Yet, there was nothing I could actually do; my browsing continued. It appeared, however, that the customer was not going to be shunted aside so easily. Back at the front of the store, he was asking the clerk what she thought of Russell. "Oh, I like him," she said, to my relief. (Would I have been prepared to go to his defense if the reply had been in the negative?) "I was living in Britain during the 1960s when he was very active for peace. Russell tried to help people, ordinary people, and I admired him for that." The young man seemed satisfied with her reply, nodding his head in agreement. Yes, they concurred, Russell was a good man, perhaps even a great one. He turned back to the Philosophy section and I tried to resume my task at hand.

I ended up leaving the shop at the same time as he and a young woman whom I had noticed drifting about the store like me, not realizing they were together. He had in the end bought some substitute book for his father, he was explaining. "But," he exclaimed proudly, "I got him a Russell book anyway," as he pulled it from the bag and waved it back and forth in a flourish. "My father is going to own a book by Bertrand Russell," he told her in an exuberant tone, "even if it's not my first choice." They were too far away from me to read the title, and I felt I had intruded on their privacy for too long to even consider asking. What, dear reader, do you suppose he chose?

ELECTION OF DIRECTORS

(10) Nominations for Directors, please. We wish to elect 9 Directors this year, for 3-year terms starting 1/1/92. This will give us a total of 24 elected Directors. The August newsletter will provide a ballot for voting.

We are asking you to nominate candidates (whose names will appear on the August ballot.) Any member may nominate any other member to be a Director-Candidate.

If you wish to be a Candidate yourself, notify the Elections Committee and someone will probably nominate you. The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something or other by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. The cost of attending meetings is (federal) tax-deductible for Directors.

We would like to have more than 9 names on the ballot, so as to give members a choice.

A brief statement about the candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.

Directors whose terms expire at the end of 1991 are LOU ACHESON, ADAM PAUL BANNER, KEN BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, TOM STANLEY.

TO NOMINATE SOMEONE -- or to volunteer yourself -- write the Election Committee, c/o the newsletter, address on Page 1, bottom.

From *Common Sense*, March 1936.

Why Radicals Are Unpopular

BY BERTRAND RUSSELL

In his last book "Freedom Versus Organization," Bertrand Russell commented on the tendency toward bitterness in the Marxian movement, tracing it back to the circumstances in the life of Marx himself. Here, at the request of the Editors, the great English philosopher and mathematician develops this idea in more general terms. A life-long socialist and intelligent fighter against every form of oppression, Mr. Russell's constructive hints here may well lead to a more effective radical strategy.

RADICALS (in the American sense) are by no means always unpopular; George Lansbury, for example, is universally beloved and I could think of many other examples of advanced politicians who are or were liked even by opponents. Nevertheless the fact remains that, on the average, men who desire important political or economic changes tend to be less agreeable companions, from the standpoint of the average man, than easy-going people who are content with things as they are.

The reasons for this are of various different kinds.

In the first place, Radicals are unpopular people because unpopular people become Radicals. Few things tend more to contentment than social success. A man who is liked at school and college, respected by business colleagues, and loved by the ladies whom he admires, will, as a rule, think that all's right with the world, unless he suffers from ill health or economic disaster. On the other hand, the man who is always out of it among his equals, who has no friends, and whose offers of marriage are rejected, is apt to become hostile to his own class, and to seek popularity in a new milieu by championing the cause of his social inferiors. The educated men who supply leadership to working-class movements are not infrequently of this type. I do not mean, of course, that the process is conscious. I believe that the rational arguments for Radicalism are overwhelming, and that, when a man's circumstances predispose him to discontent, he becomes capable of appreciating these arguments. To himself it appears that he is guided by pure reason, and, in a sense, this is true, since pure reason supplies grounds, of which he is aware, which wholly justify his opinions.

The man who becomes a Radical because he is unpopular is closely akin to the man who becomes a Radical from inordinate love of power. This latter is the familiar type that loses its Radicalism as soon as it achieves success; its best known examples are Julius Caesar, Napoleon, Mussolini, and Hitler. Most really able young Radicals belong to this class, which is responsible for the constantly repeated betrayal of the people by their chosen leaders. Ambition is a stronger stimulus to hard work than a pure desire for the public good.

The Radical leader, of whatever type, is likely to be

a man who cares more for hard work than for what is called pleasure, and who, therefore, has difficulty in becoming popular among ordinary pleasure-loving people. A good many years ago I lived with Clifford Allen (now Lord Allen of Hurtwood), who was at that time a Socialist. Derby Day was approaching, and I made him a speech, saying: "You and I profess to be on the side of the People, but we have no sympathy with its enjoyments. It cares much more for horse races than for social reform. Is it not our duty, as friends of the People, to go to the Derby?" Neither of us had ever dreamed of doing such a thing, but we agreed that we ought to mend our ways. However, when the time came we forgot all about it. How, then, could we hope to win the sympathy of ordinary men? Most democrats by conviction are aristocrats in their pleasures, and are thereby cut off from the herd.

An Uncomfortable Realism

There are, however, deeper reasons for the unpopularity of Radicals. Their outlook on the world is uncomfortable, and brings to people's notice things which they would like to overlook. I remember once, when I was boating with a cheerful party during a holiday, we came upon a magnificent yacht belonging to a South African magnate, and I remarked: "That yacht is built out of the blood of negroes." You can imagine everyone was a bit disquieted. The gaiety of the occasion was spoiled for the moment. No one can be a Radical without being profoundly conscious of the things that are amiss in the world, which most people at most times wish to ignore. And consciousness of evils is naturally associated with hatred of those who seem to cause them. Very often, hatred and envy of the successful is the cause of Radicalism; but when it is not, it is usually one of its effects. If you think banks do harm, you will hate bankers; if you are a pacifist, you will abominate munition makers; if you are a Socialist, you will think ill of big industrialists. The nature of your pre-occupations will make it inevitable that such men should be much in your mind, and therefore feelings of enmity are likely to play a large part in your emotional life. To easy-going people you will appear soured and bitter, and they will conclude that love of Man is bound up with hatred of particular men.

Hatred of individuals who profit by the present system is, of course, not logically justified by the belief that the system ought to be changed. Successful men, as a rule, are only cleverer than unsuccessful men, not more wicked. We are all the product of our circumstances, and moral categories, as applied to persons, are unscientific. But even those who hold this doctrine most strongly are unable, in practice, to live up to it. Marx, in spite of his economic determinism, was filled with virulent hatred of the bourgeoisie, and in this respect his followers have

been faithful to his example. A profound religious faith, such as that of the Quakers, may enable a man to advocate remedial measures without hatred, but will seldom lead to championship of any fundamental economic or political reconstruction. The resistance to such changes has a force and violence which can hardly be met efficiently without the driving force of hostile feeling, except perhaps by one man in a century.

The Appeal to Personal Hatred

There are times when the very qualities that we have been considering make the Radical popular, and they are the times when radical changes are effected. Marat was popular during the French Revolution, because most people were suffering acutely, but did not regard their own suffering as inevitable. He told them that they would become prosperous if they cut off the heads of such and such individuals. This sounded easy, and they believed him. Similarly Hitler told the Germans that all would be well with them if they sufficiently persecuted the Jews. Misery produces, in the normal man, one or the other of two effects: apathy, if he thinks the situation is hopeless; hatred, if he thinks it attributable to the machinations of some individual or set of individuals. Hatred is more agreeable to the sufferer, and will therefore be adopted if possible. The politicians who appeal to discontent canalize hatred. In order to succeed, they must suggest as the enemy someone who is in any case unpopular, and they must have a very short and simple argument to prove that this person is the source of the evil. Socialists have failed, on the whole, because capitalists are not instinctively disliked, and because the argument that we should do better without them is too long. If, for "capitalists," you substitute "Jewish capitalists,"

the argument becomes much shorter and easier to understand. Foreigners, also, can always be plausibly represented as the enemy. In the French Revolution, the hatred of aristocrats was largely stimulated by the fact that they were in league with the hated Austrians; and in Russia, the Communists have always had national feeling on their side since the intervention of 1915 and 1920. But in general Radicals are internationalists, and are therefore unable to exploit anti-foreign feeling. This has been, perhaps, the greatest of their difficulties.

The Problem a Radical Faces

The conscientious Radical is faced with great difficulties. He knows that he can increase his popularity by being false to his creed, and appealing to hatreds that have nothing to do with the reforms in which he believes. For example: a community that suffers from Japanese competition can easily be made indignant about bad labor conditions in Japan, and the unfair price-cutting that they render possible. But if the speaker goes on to say that it is Japanese *employers* who should be opposed, not *Japanese employees*, he will lose a large part of the sympathy of his audience. The Radical's only ultimate protection against demagogic appeals to misguided hatreds lies in education: he must convince intellectually a sufficient number of people to form the nucleus of a propagandist army. This is undoubtedly a difficult task, while the whole force of the State and the plutocracy is devoted to the fostering of unreason. But it is perhaps not so hopeless a task as many are now inclined to believe; and in any case it cannot be shirked, since the appeal to unreasoning emotion can always be better done by charlatans.

FOR SALE

(12)

New 17-Year Index of BRS Newsletters, 1974-1990, Issues 1-68, 45 pages, 2523 entries. Buy it for \$8 postpaid (within the USA). To borrow it from the RS Library, send \$1 for postage (within the USA), plus you pay return postage, approx. \$1.

BR postcard. After being out of print for several years, our favorite photo of BR -- taken in 1959 by Philippe Halsman -- is once again available. \$1 for the first one, 75¢ each for more ordered at the same time. Postpaid.

Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge." Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." 90 sheets, postpaid: USA \$6, Canada and Mexico \$7.

1990-Meeting Papers. The 10 papers presented at the 1990 Annual Meeting -- papers by Elizabeth Eames, Lee Eisler, Joan Houlding, Don Jackanicz, Marvin Kohl, Tim Madigan, Chandrakala Padia, Michael Rockler, Harry Ruja, and Thom Weidlich, 145 pages in all, bound -- can be yours for \$18 postpaid. Or borrow them from the RS Library for \$1 postage, plus you pay return \$1 postage

AMERICAN ATHEISTS' 21ST CONVENTION

Once again we are indebted to BRS Member LARRY JUDKINS for a report on an American Atheists' Convention. Larry's report on AA's 19th Annual National Convention (March 24-25, 1989) appeared in the August 1989 newsletter (RSN63-6). What follows is his report on AA's 21st Annual National Convention (March 29-31, 1991).

This year's convention was held in Scottsdale, Arizona, and over 400 people were present. I am happy to report that I was not the only BRS member in attendance. At least one other member was present, Christos Tzanetakos, Director of AA's Miami Chapter.

The major events on Friday included two portrayals of "the Great Agnostic," Robert Green Ingersoll, by actor William Boyd Francis. The first was titled "Some Mistakes of Moses", derived from a speech which Ingersoll himself considered one of his most important lectures. For his second performance, Mr. Francis delivered Ingersoll's address to the jury in the blasphemy trial of C. B. Reynolds, widely regarded as one of the hallmark pleas for freedom of speech in the United States.

Two speeches were given on Friday. First, Jon G. Murray, President of AA, spoke on the "Christianization of the United States," a talk which dealt with the efforts of religionists to make America a "Christian nation." Next, ex-theologian Frederick Ide gave an entertaining and informative lecture on "Denominations in America -- or How to Tell One Christian from Another."

Saturday was the principal day. After opening remarks by Jon Murray and others, AA's founder, Madalyn O'Hair gave an excellent extemporaneous talk on "the Rights of Atheists." Appropriately, this was followed by the lecture of Frank Shütte, Director of the International League of Non-Believers and Atheists, headquartered in Berlin, Germany. He spoke on "Mandatory Religion in Germany", a nation where blasphemy laws still exist and are enforced.

BRS members may find it specially interesting that Mr. Schütte also revealed that his organization has initiated an appeal to hold an "International Russell Tribunal" to investigate the causes and consequences of the recent Persian Gulf War. It is modeled on the "International Russell Tribunal on war Crimes in Viet Nam," organized in 1966 by BR and Jean-Paul Sartre.

The day's final speech was that of Frank Zindler, Director of AA's Central Ohio Chapter. He is also a leader in the fight against the killing of children by Christian Scientists and other so-called "faith healers". I found his lecture, "Child sacrifice in America," to be the most fascinating -- albeit disturbing -- event of the entire convention.

Three "workshops" were held simultaneously in the early afternoon on Saturday. One dealt with overpopulation. Another sought to give the "Lazy Atheist" a "Guide to Political Power." In the third, a brief analysis of the Bible was provided by Arthur Frederick Ide.

Three more "workshops" were held concurrently in the late afternoon. One concerned "Atheism and Conscientious Objection." In another, panelists discussed the successful efforts of Atheists to remove a Christian cross from the campus of Arizona State University. In the third, Robert Sherman, National Spokesperson for AA, gave Atheist activists several very helpful suggestions on how to recognize and act on local church/state problems.

On Sunday, ex-CIA agent Victor Marchetti spoke on "the U.S. Special Relationship with Israel and Its Impact on Middle Eastern Affairs." Later, Jon Murray discussed an upcoming Supreme Court case which poses a serious threat to the principle of church/state separation. In this case the Supreme Court will have the opportunity to throw out the so-called "Lemon Test", which for nearly two decades the courts in the United States have used to determine whether or not a given law or practice violates the separation of religion and government.

During the entire Convention, a large book and product display room was open where literally hundreds of different books and other items were available for purchase. A philatelic station was also on hand where one could have envelopes stamped with a special postal cancellation to commemorate the occasion.

Of course, there were also plenty of opportunities for Atheists to socialize. A dance was held every evening, and conventioners could also visit with each other during the wonderful meals, including the special Brunch Buffet and the Members' Dinner.

In conclusion I can only say that there was something for everyone, and that a great time was had by all. I strongly encourage all BRS members who are Atheists to try to attend the next National Convention of American Atheists.

SPEAK UP!

My Program for India

By Bertrand Russell

AS a life-long friend of Indian freedom, I am glad there is every prospect, within a short time after the end of the war, of achieving as much independence in India as any nation in the world ought to have. I have regretted that what seemed to me the mistaken policy of the Congress Party after the failure of the Cripps mission compelled me, for a time, to oppose certain claims made by Hindu nationalists. I opposed them because I was convinced that, if conceded, they would have led to a Japanese conquest of India, which would have destroyed all hope of Indian freedom and would have jeopardized freedom throughout the whole world. But as to what should be done when the Japanese menace is over, I firmly believe that India should have complete equality with other independent nations, subject only, in common with all others, to such controls as may be established by an international authority. I do not expect that India will choose to be a member of the British Commonwealth, and I do not desire that any pressure should be put on India to that end.

A recent book, H. N. Brailsford's *Subject India* expresses opinions which I share more nearly than those of any book on India known to me. Brailsford is, I fear, somewhat too optimistic as regards the prospects of Hindu-Moslem agreement. He ignores some awkward facts, such as Gandhi's statement that he would not eat food cooked by a Mohammedan or allow his daughter to marry into a caste different from his own. But these defects (if I am right in considering them such) are completely outweighed by Brailsford's merits.

His book deals not only with the politics but also with the economics of the Indian peninsula, and gives the kind of facts that a reader who is not Indian would want to know. The average income per person, he tells us, is about \$19 a year; the average life expectation is twenty-three and a half years, as compared with fifty-four years in Great Britain. Of males 18.3 per cent are literate; of females 1.9 per cent. He estimates that in the jute mills, before the war, one hundred pounds went to British shareholders for every twelve pounds paid in wages. Such facts need to be borne in mind in any attempt to solve the Indian problem and in any appraisal of the effect of the British Raj.

He mentions, however, with complete fairness, the facts on the other side of the ledger: that famine was much worse in Mogul times than it is now; that the British have done important work in irrigation; that Indian capitalists are every bit as ruthless as British investors in India; that, since the outbreak of the war, the entire British investment in India has been wiped out; and that Gandhi sides with landowners and wealthy industrialists against the poorer sections of the population.

Brailsford holds, as I do, that the Congress policy after the failure of the Cripps mission was indefensible. He points out that "non-violent" resistance included tearing up railway lines and organizing strikes in munition works—actions which, if Congress had been more successful, would have facilitated a Japanese conquest of India. He mentions Gandhi's description of the Cripps offer as a "post-dated check on a tottering bank," and draws the correct inference that rejection was largely motivated by the expectation of a Japanese victory, since few Indians thought we could defend India against the Japanese. The Congress revolt in the summer of 1942 was, he says, a wrong done to the family of nations: "Congress miscalculated and forgot its international duty." He holds, of course—and in this I entirely agree—that the British badly mishandled the situation. But in criticizing their actions, Americans should ask themselves what would have happened in this country if, for example, the United Mine Workers had adopted a similarly obstructive policy to secure some political end; and, to get a just view of the danger, they should imagine the Germans in occupation of Canada.

THE mistakes of both sides in 1942 are, I hope, ancient history. A new beginning must be made, and I could wish the initiative to come from the British.

I do not myself think it likely that any serious administrative changes will be made while the Japanese are in Burma or the Malay peninsula, nor do I think they ought to be demanded. It is difficult to conduct a great war during rapid governmental changes, and it is at least doubtful whether an independent India would be able, at once, to contribute as much to the war effort as India contributes at present. But if the offer of post-war self-government were one that all India recognized as definite and irrevocable, the delay would be slight, since it must require time to prepare a new constitution and to reach agreement among Indian parties. All the preliminary work could be done while the war is in progress, and would certainly promote Indian loyalty to the cause of the United Nations. Brailsford says—and I have repeatedly urged—that any fresh offer to India should be guaranteed by the United States, Russia and China. Such a guarantee would remove any suspicion of bad faith. In its absence, Indians might expect the British, in the hour of victory, to forget what they had promised in the dark hour. Churchill's unfortunate remark about refusing to preside at the liquidation of the British Empire has naturally strengthened Indian suspicion.

Of British opinion at the present time I cannot speak at first hand, since I have not been in England since 1938. But from all that I can learn,

there has been a strong movement towards the left. Everybody recognizes Mr. Churchill's supreme merit as a leader in time of war, and no one wishes to forget what we owe to his courage in 1940. But his politics, apart from the simple aim of victory, are not those of the majority. As soon as the war against Germany comes to an end, there will have to be a general election, and the new Parliament is likely to be very different from the present one. Great Britain will emerge from the war as a debtor country, subordinate to the United States at sea, and unable to oppose Russia effectively in Asia. Thus the whole basis of British imperialism in Asia will have disappeared. These facts, combined with the growth of liberal sentiment, make it practically certain that, when the war with Germany is finished, the British will be willing to re-open negotiations with Indian nationalists, and to acquiesce in a United Nations guarantee of whatever agreement may be reached. So far as the British are concerned, therefore, the outlook is hopeful.

The British are likely to offer dominion status at first, but as this admittedly entails the right of secession it differs only sentimentally from the offer of outright independence. It is in fact a folly to endeavor to fit India as a dominion into the British Commonwealth of Nations. The other dominions have sentimental ties with England, while India has none. India will belong naturally to an Asiatic Federation, with China and (eventually) Japan. The white country which will have the closest relations with this federation will be neither England nor the United States, but Russia. Even against Russia, south-eastern Asia is likely to assert its independence vigorously.

Japan has created in Asia the feeling that it is possible to be independent of the white man. Neither the United States nor the British Dominions are likely, in any measurable future, to permit much Asiatic immigration, and Asia, in consequence, will maintain an attitude of aloofness towards white men. The genuine independence of Asia is likely to be one of the most important results of the present war. Whatever British imperialists may desire, the day when the British could rule India will cease with the defeat of Japan.

WHAT, then, ought the policy of the United Nations to be? They should recognize—and the British should recognize—that India must have such a measure and degree of independence as is compatible with the existence of whatever international authority may be established. Complete independence is an anarchic ideal: no nation ought to possess it where questions of peace and war are concerned. But the superior authority should be international, not national; national imperialism should be abolished wherever it is politically possible to do so.

Great Britain should, at the earliest possible moment, join with the United States, Russia and China, in an offer of self-government to India, terminating all special British rights. This would come into effect six months or a year after the end of the war with Japan. The four nations would immediately appoint commissioners to negotiate with leading Indians of all parties, with a view to framing a constitution. This constitution would be embodied in a treaty between India and the United Nations as soon as India acquired a national government capable of concluding treaties, and the constitution would be effective at the given date at the end of the war.

Certain conditions should, however, be attached, not only for India, but also for all the nations restored to self-government after liberation from the Nazis or the Japanese. The first of these should concern the rights of minorities. In Europe, however boundaries may be drawn, there will be racial minorities, and there will be the Jewish problem. No persecution of minorities should be tolerated by the international authority. There was such a provision in the covenant of the League of Nations, but it was a dead issue: in the future, care must be taken to make the provision effective. In India the important minorities are religious, and there must be a stipulation that they are to suffer no disabilities.

The second proviso which should be imposed everywhere is more difficult. There should be no overthrow of an agreed constitution by force, though legal means of changing the constitution should be provided, and should not be made too difficult. In many countries, at the outbreak of the war, fascist military groups had acquired power by unconstitutional means; of this process Spain was the outstanding example. In this way democracy was destroyed throughout a large part of Europe, and governments were set up which had no sanction except military force.

IT is generally recognized that the primary purpose of the international authority should be to prevent war. I am contending that it should consider it part of its duty to prevent civil war, as well as war between nations. The reasons are twofold: first, civil war may easily spread into international war, as the Spanish civil war nearly did; second, that by the establishment of fascist tyrannies the aims of the international government can be defeated and war made probable. I do not say that the form of government everywhere should be democratic; I say only that the form of government should be sanctioned by a democratic vote, and alterable only by a democratic procedure. Any attempt to alter it by force should be defeated by the intervention of the international authority.

In the case of India, this means that every important Indian group should acquiesce, in advance, to the proposed constitution, and should bind itself not to resort to civil war to change it. If no such constitution could be devised by the negotiations between Indians and the United Nations' commissioners, Pakistan would be necessary. If an agreement on the basis of Pakistan were also unobtainable, Indian freedom would have to be postponed. It is hardly to be supposed that, in such circumstances, it would long remain impossible to frame an agreed constitution. If it did, the United Nations would have to conclude that India is not yet ripe for self-government.

The dangers of civil discord in India between Hindus and Moslems are said by Hindus to be exaggerated by the British. As to this, I am content to leave the matter in the hands of the proposed commissioners, who should have power to act by a majority, so that the British commissioner could not alone make his view prevail. The commissioners should be expected to negotiate and inquire for some considerable time before making definite proposals. And they should listen to proposals as well as make them. If the problem is soluble, this method should solve it.

Mr. Brailsford suggests ten measures that should be adopted in India. First, there should be

a Pacific Charter, supplementing the Atlantic Charter; it should, in the name of all the United Nations, offer independence to all the Asiatic regions hitherto governed by white men—India, the Dutch East Indies, the Philippines, etc. Second, the India Office should be abolished, and its work taken over by the Dominions Office. Third, there should be a political amnesty. Fourth, Congress should call off the revolt. Fifth, the Viceroy should advise the Princes to concede civil and political rights, with the understanding that if they refused the British would no longer protect them. Sixth, the coalition ministries should resume office in the six Congress provinces. Seventh, Congress and the Moslem League (perhaps with the help of a mediator) should negotiate over Pakistan. Eighth, the Viceroy should call upon the best man to form a national government. Ninth, as soon as active hostilities are over, there should be new elections in the provinces. Tenth, the relations with the British Commonwealth should be fixed by treaty, and India, having been granted dominion status, should decide whether or not to secede.

THESE proposals are designed to be easily practicable and to safeguard British pride as much as is consistent with securing the important points. I should myself prefer to see the United Nations taking a more active part in the negotiations, but so long as the substance is secured, the

form is unimportant. My chief criticism of Brailsford's ten points is that I am not very optimistic as regards the seventh, negotiations between Congress and the Moslem League. I think it likely that considerable pressure will be necessary to produce agreement between these two parties, and I think the United Nations could bring the necessary pressure more easily and more impartially than the British could.

I think also that Mr. Brailsford is optimistic if he supposes that white men will surrender the riches of the Dutch East Indies and the Malay Peninsula, with the strategic port of Singapore. I think it more possible that these will come under a condominium, giving America equal rights with England and Holland. The possibilities of American financial imperialism are suggested by Mr. Brailsford, but could, I think, have been emphasized.

In conclusion, I, like Mr. Brailsford, would say to my compatriots: Do not deceive yourselves into thinking that you can retain your Indian Empire after the war; you cannot, and it would be the part of wisdom to surrender gracefully. To Indians I would say: Since your triumph at no distant date is assured, be a little patient while the war lasts, remembering that a Japanese victory would be fatal to all your hopes. And to both sides I should say: Cultivate an international outlook and endeavor to see the affairs of your own country in relation to the supreme need of world peace.

BR'S BIRTHDAY, MAY 18TH

(16)

We repeat what we said in the last issue:

May 18th is the birthday of our Lord. Lord Russell was born 119 years ago. He left us a legacy of insights and great ideas which enlighten and inspire. And a sterling example of moral courage. All of which deserve to be celebrated.

One way to celebrate is to get together with other nearby BRS member and arrange for a birthday dinner -- at a restaurant or at somebody's house -- with, if possible, a birthday cake and candles, and, of course, a toast to Russell's memory.

We suggest that you make your arrangements and reservations well in advance.

After the celebration, please tell us about it, for mention in a future newsletter.

P.S. Since you will be reading this after May 18th, let us make BR's Birthday a Movable Feast, just like the British sovereign's. Celebrate BR's birthday as soon as you can; we think it will count just as much in Atheist Heaven as if you had done it on May 18th.

RELIGION

(17) Our thanks to WILLIAM K. FIELDING for sending us this ad from *The New York Times* of 9/23/90 (?) (date uncertain):

WHERE WE STAND

By Albert Shanker, President
American Federation of Teachers

An Essential Part of American History

Teaching About Religion

Progress doesn't always follow a straight line. Take the case of religion and the public schools. When I was young, public education still reflected this country's largely Christian and Protestant origins. Most kids, no matter what their faith—or lack of it—started the day listening to a passage from the King James Bible and saying the Lord's Prayer. And this was hard for many of us.

But when the U.S. Supreme Court abolished state-mandated prayer and devotional use of the Bible in public schools, things went to the other extreme—teaching about religion became a bigger taboo than teaching about sex. And this happened even though the Supreme Court was careful to distinguish between teaching religion in public schools and teaching *about* religion. In fact, by the 1980s, religion had disappeared so completely from the public schools that one popular text series for children in elementary school identified the Pilgrims as "people who made long trips"—17th-century tourists, perhaps—and Christmas as a "warm time for special foods."

It's not hard to see how this happened. People in schools worried about the line between acknowledging the role of religion in American society and history and appearing to favor a particular faith. Would yearly concerts of Christian religious music cross the boundary into favoring Christianity? Could a teacher speak about the importance of Christian values in Martin Luther King's life and work without being accused of promoting the Christian religion? Did mentioning one religion—or religious holiday—mean you needed to give equal time to others? (And if so, which others?)

But as the description of the Pilgrims suggests, "When in doubt, leave it out" isn't a responsible, or a practical, answer. If students don't know anything about the religions that helped shape our cultural heritage, they'll have a very limited appreciation of that heritage. And if they're ignorant about the religions practiced in our multicultural society, it will be difficult for them to understand—or live harmoniously with—the people who practice them. Most important, if students don't get a chance to discuss religion in their American history classes, they won't learn about our unique tradition of religious freedom or how and why the separation of church and state was established and main-

tained—and they won't find out about the role they must play in carrying on these essential features of our democracy.

Fortunately, people of all political and religious persuasions now agree that it's important to introduce teaching about religion into the curriculum. That doesn't mean it will be easy to avoid some of the pitfalls, but materials that should help are appearing. For example, *Religious Freedom in America: A Teacher's Guide* by Charles C. Haynes (Silver Spring, Md.: Americans United Research Foundation, 1986) includes articles about the tradition of religious freedom in this country and about Supreme Court decisions on the subject, as well as a list of resources. And this fall, a curriculum series called *Living With Our Deepest Differences: Religious Liberty in a Pluralistic Society*, which was developed and pilot-tested for upper elementary school, junior high and high school by the Williamsburg Foundation, is scheduled to come out.

Religion in American History: What To Teach and How by Charles C. Haynes (Alexandria, Va.: Association for Supervision and Curriculum Development, 1990) is particularly useful because it suggests ways of integrating religious issues and questions into a standard American history course. Besides listing and providing bibliography for 29 religious influences in American history, Haynes offers 9 original documents that illustrate important religious issues, and he provides excellent supporting material for each.

The documents show our country at its unique best—and at its worst. And they raise issues that we are still dealing with and will as long as our country exists. George Washington's moving letter to the Jewish congregation of Newport, Rhode Island, which lays out the distinction between religious toleration and religious freedom, ought to make students feel proud and humble; it's a remarkable tradition they have to live up to and continue. On the other hand, an 1837 petition to Congress arguing for a curtailment of the rights of Catholics reveals a darker side of our heritage. But it doesn't encourage an attitude of comfortable superiority: Some of the arguments it advances were still current when John F. Kennedy ran for president in 1960—and they'd play well in a number of circles today. So students will have to grapple with the problems the petition presents instead of just dismissing them.

The best protection religious freedom can have now and in the future is for all of us to understand the challenges it has faced in the past. Teaching about religion in the public schools, and particularly in American history classes, is belated but welcome; it will help protect this uniquely American—and uniquely precious—freedom.

To order *Religious Freedom in America*, send \$6 to Americans United, 8120 Fenton St., Silver Spring, Md. 20910; to order *Religion in American History*, send \$16.95 to ASCD, 1250 N. BOOK REVIEW

(19) BR, of course, was no friend of Christianity. We think he might have liked this book.

Books of The Times

THE NEW YORK TIMES THE ARTS SATURDAY, SEPTEMBER 15, 1990

The Racist Sins of Those Who Spread 'the Word'By **GEORGE JOHNSON**

During the survivalist craze of the early 1980's, extremist political movements were thriving. There was the Christian Patriots Defense League of Flora, Ill., which insisted that white Americans, not Jews, were God's chosen people. In preparation for a race war that they believed was biblically ordained, members were stockpiling food and weapons and preparing to establish a smaller, all-white America in the middle of the continent, a parallelogram whose corners would be Pittsburgh, Atlanta, Lubbock, Tex., and Scottsbluff, Ark.

The New Christian Crusade Church of Metairie, La., taught that Hitler was a better Christian than Billy Graham. A booklet from something called the Church of the Holy Brotherhood, whose address was a post office box in San Francisco, called upon its members (if there really were any) to stalk and kill black people because they "serve the anti-Christ."

Historians generally dismiss groups like these, which have existed throughout American history, as aberrations. But in "The Arrogance of Faith," Forrest G. Wood, a professor of history at California State University at Bakersfield, argues that "Christianity, in the five centuries since its message was first carried to the peoples of the New World — and, in particular, to the natives and the transplanted Africans of English North America and the United States — has been fundamentally racist in its ideology, organization, and practice."

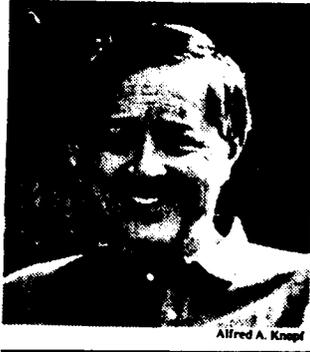

He sees no paradox or doctrinal inconsistency in the fact that so many

The Arrogance of Faith

Christianity and Race in America
From the Colonial Era to the
Twentieth Century

By **Forrest G. Wood**

517 pages. Alfred A. Knopf. \$29.95.

Alfred A. Knopf

Christian settlers persecuted Indians or kept slaves. "English North Americans embraced slavery because they were Christians, not in spite of it," he writes.

Considering all the suffering that has been inflicted in the name of the world's great faiths, it might seem perverse to pick on Christianity. But Mr. Wood argues that Christians have been especially dogged about trying to implant their ideas into unwilling minds.

Drawing on a story from Benjamin Franklin, he writes about a group of

Susquehanna Indians who sat patiently listening to a missionary tell them about the Garden of Eden. After learning that a snake tempted Eve with an apple from the tree of knowledge, the Indians politely agreed that "it is indeed bad to eat apples." But when they told their own myth about a woman coming down from the sky to help them find maize, beans and

tobacco, the missionary dismissed it as "mere fable, fiction, and falsehood." The Indians, who believed in many gods, seemed perfectly happy to accept another one into their pantheon. But they quickly learned that the Christians had no intention of reciprocating.

So it is with monotheism: if there is one true religion, then others are, by definition, superstitions. Islam is known for its enthusiasm in spreading the faith, but Mr. Wood believes that Christianity has been especially aggressive because of its biblical mandate to spread "the word" to every being on the planet. Only then would the prophecies be fulfilled so that Christ could make His Second Coming. "Herein lay the fundamental component of the Christian's racism," he writes, "his inherent inability to leave other people alone."

Some Puritan preachers taught that the "red men" were agents of Satan put in the New World to test the settlers' resolve. In the early 17th century, when tens of thousands of Indians died of smallpox brought by the Puritans, John Winthrop was able to convince himself that the epidemic was God's way of "thinning out" the human fauna to make room for Christians.

Stories like these make perversely fascinating reading. A large part of the book is devoted to describing the theological contortions used to justify

slavery. Especially popular was a cryptic story in Genesis about how Ham was cursed for showing disrespect for his father, Noah. (He watched him sleeping naked.) God punished Ham by making his son Canaan a slave. Throughout the South, preachers taught that black people were descendants of Ham and Canaan and carried the biblical curse.

This kind of theological rationalization continues to this day. The belief that the prophecies will not be fulfilled until the Gospel is spread to every corner of the earth has been used to justify the development of a lucrative Christian satellite broadcasting network. Variations of the story of Ham are still circulated by racist groups. It is disappointing that despite the promise of the subtitle, the book barely makes its way into the 20th century, leaving off just after 1900.

And though the book is engagingly written, there is finally something wearing about the zeal with which Mr. Wood prosecutes his case. Christianity, like all religions, has often been used to encourage rather than transcend mankind's worst instincts. The Bible provided slave owners with a convenient sourcebook of theological excuses. But it also helped lay the foundation for the moral code that led people to question slavery in the first place.

NEWS ABOUT MEMBERS

Coletts (Jan) See Eisler

Eisler (Lee) writes: "If someone had told me a year ago that I'd be getting married again within a year, I'd have said he was either kidding or crazy. That shows how wrong I can be. Jan Coletts and I met about a year ago at a conference of the American Humanist Association. We were married this month -- the merry month of May. And merry it is indeed."

Ruppe (Cherie) -- the adventurous one -- is "off to Australia to visit my friends for a month. All is well here. I'm thriving." Now that's what we like to hear.

BOOK REVIEW

(21) BR's *Religion and Science* (1935) is reviewed by "the gloomy dean," Rev. William Inge in *The Spectator* (18 Oct 1935).

Religion and Science

By the VERY REV. W. R. INGE

Lord Russell is a formidable controversialist, and in this book he deals, as we might expect, shrewd blows at those who still think that the cause of religion may be defended against triumphant naturalism. He believes in science, and "cannot admit any other method of arriving at truth." "Whatever knowledge is attainable must be attained by scientific methods."

He believes in science as the only avenue to truth. And yet for him all truth is relative. The question between Galileo and the Inquisition was "only one of convenience in description, not of objective truth." It is not an intellectual error to say that the sun goes round the earth. Now this may be good science—it is not for me to say—but I think it is bad philosophy. If all truth is relative, there is no standard by which to measure anywhere, and the word truth, which has an absolute meaning, had better be dropped. Some of our physicists and astronomers dabble in subjective idealism, I think illegitimately. We cannot begin with atoms (no matter how much minced up) regarded as concrete entities, and end with mental concepts. Science is based on realistic assumptions, and cannot drop them at will.

The assumption of universal relativity leads Lord Russell, quite logically, of course, to declare dogmatically that there are no absolute values. Now as religion rests entirely on the belief that the ultimate values are absolute, all possibility of agreement is cut off at the outset. If he is right, religion is not worth discussing.

For him, "mysticism expresses an emotion, not a fact; it does not assert anything, and therefore can be neither confirmed nor contradicted by science." Religion poaches when it "makes assertions about what is and not only about what ought to be." "Questions as to values lie wholly outside the domain of knowledge." "What science cannot discover, mankind cannot know."

No papal bull could be more dogmatic than these statements. But a Christian philosopher would deny every one of them. He is not interested in what ought to be, but in what is. Mysticism seeks for facts, not emotions. Spiritual truth is not apprehended by science; but it is, in Plato's language, true "knowledge," whereas our views about the external world are only "opinion." Those who attack religion without perceiving the foundation on which it rests may do some pretty mischief at the outposts, but they will never carry the main position.

Let us suppose, with some not inconsiderable thinkers, that reality is spiritual, and that it is partially but truly revealed to us under the three forms of truth, love (or goodness), and beauty, which the religious mind believes to be the attributes of a living and unchanging Creator. Then we approach nearest to truth and reality (the two words are almost interchangeable) when our minds are most fully possessed by the quest of truth, the experience of love, and the appreciation of beauty. The proof is experimental; in following these three ideals we are at once lifted above ourselves and exalted into a higher state of being. We feel and know that we are in contact with reality. In all philosophy we come to a place where we must trust ourselves; and no other experiences can be compared with these.

Within this scheme, science holds a very honourable place. It is entirely false to say that science gives us facts without values. This is a most fallacious abstraction; there is no perception without valuation. Science is the service of one of the ultimate values, truth. Nor is it possible, since human

nature is after all one, to pursue one of these ultimate values alone. Lord Russell is by no means an example of scientific detachment when he encounters cruelty, oppression, and injustice. But, speaking broadly, we may say that Darwin, St. Francis, and Wordsworth climbed the hill of the Lord by different paths. Does Lord Russell really think that only the first attained to real knowledge?

If I am right, Lord Russell has begun his study of religion with presuppositions which predetermine his verdict against it, and prevent him from understanding the religious view of reality. Science is a noble pursuit, but the saint and the poet or artist have equal rights; and it is a happy truth that those who follow any one of these eternal spiritual values are not much cramped by their specialising, for the three, though distinct, are united as "a threefold cord not quickly broken."

Having thus made our necessary protest, we are free to enjoy the brilliant sword-play of the author. He has a heavy indictment against ecclesiastics for taking away the key of knowledge, and persecuting those who wished to explore new truths. I have no wish to defend them. Rome especially has always been a bully, under Diocletian, under the Popes, and now under Mussolini. It has believed in coercion. We cannot make a man unsee, but we can sometimes make him unsay, or at least we may make him hold his tongue. But I think there have been times—say in the fourth century and in the thirteenth, when theology was abreast of the best thought of the time; and Lord Russell himself thinks it possible that religion and science will soon cease to quarrel. Our angry passions have been diverted to politics, and those who value what Bismarck called the imponderables may find themselves on the same side.

Some of the sly hits are delicious. When chloroform was first used in childbirth, the clergy quoted Genesis: "In sorrow shall thou bring forth children." "Yes, but God gave Adam an anaesthetic when He extracted his rib." "True, but He never gave the woman one."

"The Hegelians identified the moral law with the law of the State, so that true freedom consisted in obeying the police. This doctrine was much liked by governments."

His criticism of alleged cosmic purpose is, I am afraid, unanswerable. "Why did the sun give birth to planets? Why did the earth cool, and at last give rise to life? Because in the end something admirable was going to result—I am not quite sure what, but I think it was scientific theologians and religiously-minded scientists."

It is well known that there is a keen controversy between the mechanists and those whom their opponents call vitalists, as to whether the laws which regulate inorganic matter are sufficient to explain the phenomena of life, mind, and spirit. Lord Russell very dogmatically, as usual, supports the mechanists, and says that only "a very few" men of science hold the opposite opinion. Oddly enough, this is almost a quarrel between the two old Universities. I once asked the dozen of Cambridge science what he thought of Professor John Haldane's views on this subject. He shook his head, and said, "We think him a heretic." But at Oxford he is strongly supported. Lord Russell, of course, is a Cambridge man.

The book ends with the sadly true warning that "the threat to intellectual freedom is greater in our day than at any time since 1680; but it does not now come from the Christian churches." We may trust a determinist to be a champion of freedom, like the Calvinists; the Jesuits, the apostles of free-will, have been the worst enslavers of the mind and conscience. Should a philosopher laugh or weep over the vagaries of human nature?

BOOK REVIEW

Malcolm Rutherford reviews Ryan's *Bertrand Russell: A Political Life* in the *Financial Times*, July 9, 1988.

(22)

Malcolm Rutherford on the philosopher who quarrelled with almost everyone

Reason on the rampage

BERTRAND RUSSELL: A POLITICAL LIFE
by Alan Ryan. Allen Lane The Penguin Press. £16.95, 226 pages.

BERTRAND RUSSELL was a man of supreme intelligence who had all the self-confidence arising from having been born into the top of the aristocracy to boot. He also lived to the age of 97. Those three facts help to explain a great deal about him.

Of his intelligence there was no doubt. It was said of his childhood that the only thing that kept him from suicide was that he wanted to learn more about mathematics. His *Principia Mathematica* was published in 1910. He died in 1970.

His grandfather was Lord John Russell, who had been Prime Minister and Foreign Secretary. His godfather was John Stuart Mill, who agreed that accepting such a title did not imply a belief in the deity. His midwife was Elizabeth Garret Anderson, whose medical studies had been paid for by Russell's mother but who, under the rules of the time, could not practise as a doctor because she was a woman. So Russell belonged firmly to the liberal, aristocratic intelligentsia.

It was a bigger class than it was later. And that in a way was Russell's undoing. He never really learned to belong to anything else, and probably did not want to. The world changed around him and to some extent caught up with him. There was no point in being a Liberal in the 1930s since the Liberal Party was on its way out. There was not much point either in his belonging to the Labour Party after 1945, since to be an

effective member meant becoming embroiled in the Party organisation, and for that Russell was totally unsuited. Eventually the Party threw him out altogether.

In fact, for most of his life Russell quarrelled with almost everyone, though not all at the same time. Again that seems to go back to his origins. Because he was so intelligent and had such a fertile mind that ranged over so many subjects, he could be intolerant of those less able and

less well-read. As Alan Ryan remarks, it was never enough for Russell to refute someone's argument; he had to say that they were sadists as well. The aristocratic background did not lend humility.

He was also sheltered. When he was jailed at the end of the First World War, for writing an article calling for an early peace, he was made a first division prisoner. That meant having another prisoner to clean his cell, eating food sent in to the jail and unlimited reading matter. During his six months inside he read 200 books and wrote two.

His personal life did not help his public persona. He was married four times and had numerous affairs. Sometimes he seemed to write books on morality partly to justify his own behaviour. When he was offered a chair at the City University of New York in 1940, the mother of a girl student objected through the courts. Her lawyer described Russell as: "Lecherous, libidinous; venereous, erotomaniac, aphrodisiac, irreverent and narrow-minded." The court ruled in the mother's favour and the university withdrew the appointment. "Narrow-minded," however, seems a bit much.

Russell spent most of the Second World War in the US, making it clear that he was as opposed to Hitler as anyone and indeed publicly denouncing a book that he had written in favour of appeasement in the mid-1930s. When he returned to England shortly before the end of the war, he was surprised to find that he was regarded as a rather respectable figure. He was given the Order of Merit, the Nobel Prize for Literature (he wished it could have been for philosophy) and gave the first - some say the best - Reith Lectures for the BBC.

It did not last. Russell was too intolerant of other people, of political movements and of any large organisation to stay in line for long. He achieved a reputation for inconsistency. One explanation was that he had thought about so many subjects so often that he sometimes forgot what he had concluded in the first place. Another was that he was getting old. He was 73 when the war ended and 95 when he was denouncing the American presence in Vietnam. A third is that the state of the world changed rather more than he did. He resisted the Vietnam war almost as he had resisted the First World War.

Alan Ryan's book is what it says it is: *A Political Life*. It is about the politics of the man based on a careful reading of all that he thought and said. There is, I think, one omission. Russell's anti-Americanism, both as a young and an old man, stems from his own peculiar background. America simply did not fit into his aristocratic intellectual world. For the rest, the book is wonderfully entertaining and informed: almost a social history.

DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC. elected for 3-year terms, as shown

(23)

- 1989-91: LOU ACHESON, ADAM PAUL BANNER, KEN BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, TOM STANLEY
- 1990-92: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, STEVE MARAGIDES, FRANK PAGE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA, THOM WEIDLICH
- 1991-93: IRVING ANELLIS, BOB DAVIS, BOB JAMES, HUGH MOORHEAD, CHANDRAKALA PADIA, HARRY RUJA

The 6 BRS Officers are also Directors, ex officio

HUMANIST NEWS

- (24) Free Inquiry & Prometheus Books get a free plug from Doug Ireland, media critic in The Village

Voice (April 16, 1991). Ireland also nicely excoriates Catholicism's silliest ritual:

Just when you thought that network television's self-degradation in its endless search for profits had reached its nadir, along came ABC with 20/20's unbelievably repulsive "exorcism video." Complete with a Hollywood-hype soundtrack (the pounding exhortations of Orff's Carmina Burana), the segment stimulated a flood of gush from the show's cohosts: Barbara, more Wawa than ever, lisped her "thanks to the Catholic Church for being so courageous as to allow our cameras" to record the theatrics. No courage was involved: the Church's membership is declining faster than you can pronounce the words "condom" or "abortion," and the decision to put these sensational doings on the air (facilitated by the priest described as Cardinal O'Connor's "exorcism consultant") amounted to a primetime promo. It's as if Saatchi & Saatchi had hired George Romero to produce a spot designed to bring into the fold the ignorant,

the superstitious, and the downright psychotic. There were a few caveats sprinkled over Tom Jarriel's report--the unfortunate girl whose privacy was violated stopped seeing demons after being heavily medicated by her psychiatrist, and by constantly repeating "I'm happy now," she gave the impression of a zombie on mood elevators. But, as Roger Ailes will tell you, it's the pictures that count on TV, not the words. The only real instance of demonic possession on the show involved those who presented it: Jerrold, producer Rob Wallace, Wawa, and Hugh Downs, an overrated airhead who seemed completely duped by this medieval claptrap. All of these avaricious subintelligences should be force-fed On the Barricades: Religion and Free Inquiry in Conflict, a collection from the pages of the useful secular humanist review Free Inquiry just published in Buffalo by Prometheus Books.

AWARD NOMINATIONS WANTED

(25)

If you would like to submit names of people you believe should be considered for the 1992 BRS Award or the 1992 BRS Book Award, please do so. When you submit a name, state why you think your candidate deserves the Award. Here are the 2 Awards:

The BRS Award. Your candidate should meet one or more of the following requirements: (1) worked closely with BR in an important way (like Joseph Rotblat); or (2) made an important contribution to Russell scholarship (like Paul Arthur Schilpp); or (3) acted in support of an idea or cause that Russell championed (like Henry Kendall); or (4) promoted awareness of BR or BR's work (like Steve Allen); or (5) exhibited qualities of character, such as moral courage, reminiscent of BR.

The BRS Book Award should go to a recent book that deals in an important way with some aspect of BR's life, work, times, or causes.

Please send your candidates c/o the newsletter, for forwarding. Address on Page 1, bottom.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Treasurer, Dennis J. Darland; Secretary, Don Jackanicz; Vice President/Information, Lee Eisler.

BY BERTRAND RUSSELL

From *Feinberg and Kasrils, Bertrand Russell's America, vol. I, 1898-1945* (New York: Viking Press, 1973).

Originally published in *Forward*, March 24, 1929, as "When Bertrand Russell Goes to the Movies."

THE CINEMA AS A MORAL INFLUENCE

(27)

Everybody knows that America is more virtuous than Europe, and that the Middle-West of America is the most virtuous portion of that country. There is a perfectly simple test of virtue which proves the justice of this common opinion: if A wants to persecute B, while B does not want to persecute A, then clearly A is more virtuous than B; he has a higher moral standard and is more inclined to moral indignation. Consequently, where a large public has to be appealed to, its most virtuous portions determine the nature of the appeal, for while the vicious can tolerate virtue, the virtuous cannot tolerate vice. Hence every increase in the size of the audience means an increase in the virtuousness of the appeal.

These observations apply with especial force to the cinema. The productions of Hollywood are exhibited in all parts of the world, with the possible exception of Greenland and the Antarctic continent. In the Middle-West, they seem natural; in the rest of America, intelligible; in other continents, interesting because they are so curious. Moreover, much can be done by altering the captions: I saw at Locarno an American film about bootleggers and rum-runners being caught by virtuous policemen, but in order to make it sympathetic to a southern wine-drinking population, all the captions had been altered so as to make it appear that cocaine was the substance in dispute. To an Italian-speaking population, the American objection to alcohol seems just as strange as the Hindu objection to beef: it is a fact concerning which sociologists could speculate, but for which one would not seek a rational explanation.

The movies have had one effect which may hereafter prove of some considerable importance: they have persuaded the populations of all other civilised countries (quite unjustly, of course) that Americans are silly. The morality of the nursery tale and the simplicity of the fairy story are, if one were to judge by the cinema, demanded in America by grown men and women. In this respect, America is peculiar. The British appear to be incapable of producing films, but the Germans and Russians can utilise the cinema to produce things that are really admirable, and are only prevented by political considerations from being popular throughout the continent.

For my part, I am a person of simple tastes: I like to see a race between a motor-car and an express train; I enjoy the spectacle of the villain gnashing his teeth because he has just failed to pick off the engine driver; I delight in men tumbling off skyscrapers and saving themselves by telegraph wires; I am thrilled by a sheriff's posse galloping through a sandstorm in the alkali desert. And the enjoyment of these unsophisticated delights is enhanced by the feeling that in that matter at least one is in harmony with the great world democracy. I am too old to have enjoyed the experience, which younger Europeans have on first landing in America, that the movies have suddenly come to life. In old days, cultured persons arriving in Italy had an analogous sensation; they saw Italian opera and Italian painting exemplified by living men and women. Nowadays, for the great mass of mankind, it is America that gives this sensation, since it is only Americans who are represented in the cinema. America has thus become the classic land of art for all simple souls.

The cinema will lose its international character by the introduction of the 'talkies'; one cannot imagine the characters in the movies talking French, Italian, German, or Russian; American is the only language compatible with their acts, gestures, and sentiments. The cinema is perhaps the most heart-rending of all the many examples of artistic barbarism. Its possibilities in a thousand directions are immeasurable; it is capable of an epic sweep which is quite impossible to the 'legitimate'

drama; it can deal with such a theme as Shaw's 'Methuselah' far better than Shaw has dealt with it; it can present great movements in history; it ought to be used in all schools for the teaching of history, geography, and zoology. But all these things are impossible so long as the whole of the technique is in the hands of men whose taste has been degraded by the necessity of making an appeal to the most ignorant and stupid parts of the population, and who are themselves so ignorant and stupid that they can do this without cynicism. Many countries have State opera and State theatre, but not State cinema, because the cinema is modern and has not yet been dignified by tradition and great artists long since dead. Nor do I altogether desire the creating of State cinemas in the different countries, since they would inevitably be used to further nationalism. The power of the cinema as propaganda is almost boundless, and the propaganda of nationalism by the State would certainly be more harmful than the propaganda of mere silliness by commercial promoters. If the nations were in earnest to avert wars, those which belonged to the League of Nations would spend money in the promotion of first-rate films to illustrate the ideals which inspired the creation of the League and to promote loyalty to the League as a means of averting war. This of course is out of the question, because the will to peace exists only in those small northern nations which cannot hope to gain anything through war. The Americans, the British, the French, the Italians, the Germans, and the Russians all in their various ways desire war, provided it is the right war. Not one of them has any real will to peace, and not one of them would spend a cent to promote the ideals of pacifism. Perhaps American producers could be induced to engage in pacifist propaganda throughout Europe on condition that no film having this object should be allowed to be shown in America. This might be suggested to the Senate as a means of carrying out its intentions in ratifying the Kellogg pact.¹ The power which the cinema has placed in the hands of Americans for purposes of foreign propaganda has hardly as yet been realised by Americans. When they do realise it, the effect may be curious.

The passion of this age for doing things by mechanism which are not worth doing at all is one which I do not wholly share. When the 'talkies' were new, I went to London by invitation to see and hear a professor in America giving a lecture on 'The Marvels of Science'. It was not nearly so good a lecture as hundreds of other professors could have given, and there was not a word in it which to me personally there was any advantage in hearing. I would not have walked across the street to hear the actual professor in person giving the actual lecture. The sole point of the lecture was the mechanism by which it was produced.

I suppose in time we shall have mechanical knives and forks which will shovel the food into our mouths at precisely the best rate from the point of view of digestion and mastication. Conversation at meals will of course become impossible, since the fork will not wait for the end of a sentence; but it will be a marvelous invention. I suppose also that old gentlemen will produce their favorite anecdote out of a gramophone instead of taking the trouble to speak it. In time we shall all become too lazy to think of a new remark of which we have not already a record. Instead of writing love letters, a man will obtain an eloquent set of records from the shop, and anyone who trusts to his own unaided invention will be thought mean. Individual initiative will be confined to crime; those who are plotting a burglary or bank robbery will no doubt still have to rely upon their own invention, but all legitimate activities will have become stereotyped. I do not look forward to this state of affairs with any pleasure, but I do not see how it is to be avoided.

¹ Ratified in July 1929; U.S.A. and France undertook to settle all disputes by peaceful means.

(28) BR's entry in The Cynic's Lexicon by Jonathon Green (St. Martin's Press, 1989). Thanks, Bob Davis.

BERTRAND ARTHUR, EARL RUSSELL
1872-1970 British philosopher

In America everybody is of the opinion that he has no social superiors, since all men are equal, but he does not admit that he has no social inferiors.

Unpopular Essays, 1950

The average man's opinions are much less foolish than they would be if he thought for himself.

We have, in fact, two kinds of morality side by side; one which we preach but do not practise, and another which we practise but seldom preach.

Sceptical Essays, 1928

The infliction of cruelty with a good conscience is a delight to moralists - that is why they invented hell.

Our great democracies still tend to think that a stupid man is more likely to become honest than a clever man and our politicians take advantage of this by pretending to be even more stupid than nature made them.

New Hopes for a Changing World, 1951

It seems to be the fate of idealists to obtain what they have struggled for in a form which destroys their ideals.

Marriage and Morals, 1929

Man is a credulous animal and must believe something. In the absence of good grounds for belief, he will be satisfied with bad ones.

Unpopular Essays, 1950

There are two motives for reading a book: one, that you enjoy it, the other than you can boast about it.

The Conquest of Happiness, 1930

There is no nonsense so arrant that it cannot be made the creed of the vast majority by adequate governmental action.

Unpopular Essays, 1950

Obscenity is what happens to shock some elderly and ignorant magistrate.

Look magazine, 1954

The fact that an opinion has been widely held is no evidence whatsoever that it is not utterly absurd. Indeed, in view of the silliness of the majority of mankind, a widespread belief is more likely to be foolish than sensible.

Marriage and Morals, 1929

People who are vigorous and brutal often find war enjoyable, provided that it is a victorious war and that there is not too much interference with rape and plunder. This is a great help in persuading people that wars are righteous.

Unpopular Essays, 1950

One should respect public opinion insofar as is necessary to avoid starvation and keep out of prison, but anything that goes beyond this is voluntary submission to an unnecessary tyranny.

The Conquest of Happiness, 1930

BR ON EINSTEIN

(29)

BR sent a letter to the September 1984 Annual Meeting of the Society for Social Responsibility, which included a memorial session on Einstein. Here is BR's message to the meeting (with thanks to Whitfield Cobb):

Albert Einstein was concerned throughout his life with the question of individual responsibility and the role of conscience. His concern was directed to his scientific work as much as to the world of political events and personal relations. He had a peculiar dedication which never excluded a simple awareness of other people or of the comparative unimportance of our own desires. The combination of selflessness and deep involvement in creative work characterizes many men of great intellect, but it was the prophetic side of Einstein which led him to speak and agitate against war for the greater part of his adult life.

Science is a creative endeavor and if it is to be pursued as such, the scientist must retain a

deep concern for the relationship of his work to the world around him. The scientist is equipped to understand both the psychological and the physical forces which now threaten us with obliteration. It was Einstein's example which pointed to the desperate necessity for all who could understand and see the problem to give their minds and hearts to the cause of opposing destructiveness and pursuing peace. A world in which the obliteration of hundreds of millions of people instantly can be proudly discussed in terms of national morality is both a dangerous and a diseased world. It is not easy to remain sane and active in such a diseased world. If we are concerned to commemorate the life and work of Einstein then we must dedicate ourselves to the effort of opposing all that moves mankind towards callousness, indifference, destruction, cruelty and murder.

BR QUOTED

(30)

"Atheist Enlivens Prayer," from the St. Louis Post-Dispatch, January 28, 1991. Thank you, Paul Doudna.

The St. Louis Board of Aldermen's tradition of beginning its meetings with a prayer provided unusual fare on Friday: a quotation from Bertrand Russell, one of the century's most famous atheists.

For decades, board meetings opened with a reading of a brief, standard prayer. But Aldermanic President Thomas A. Villa has written his own each week since he was elected in 1987.

His prayers have ranged from solemn topics to hopes for the St. Louis Cardinals during the 1987 World Series, and they frequently include quotations from famous people. On Friday, he quoted Russell in a prayer for peace in the Middle East.

Villa's prayer: "Almighty God and Father, Bertrand Russell stated: 'Extreme hopes are born of extreme misery.' We hope and pray for world peace."

Russell, (1872-1970), was an English philosopher and logician who also was a pacifist and an atheist. Villa said he knew of Russell's philosophy but considered the quote appropriate, "and we need all the help we can get.

"Next week it'll be Nietzsche," joked Villa, a practicing Catholic.

Friedrich Nietzsche, (1844-1900), was a German philosopher who wrote, "God is dead."

BY BERTRAND RUSSELL

(34) "A Philosophy for You in These Times." BR in Reader's Digest! October 1940.

The editors of *The Reader's Digest* proposed to Lord Russell: "Suppose some evening you were able to make a super-broadcast to 130 million Americans. What would you say?"

This is his inspired message.

TODAY'S WORLD is full of painful things. The hopes for mankind which once were universal have come to seem illusory; instead of progress, there has been a revival of ancient savagery.

How can we avoid becoming discouraged and hopeless? What is the use of caring for children if the world is to be such that existence is intolerable for them? Is all hope for human happiness and improvement, indeed, merely self-deception?

I am sure the answer to these questions is not to be found in despair.

IT MAY SEEM to you conceited to suppose that you can do anything important toward improving the lot of mankind. But this is a fallacy. You must believe that *you* can help bring about a better world. A good society is produced only by good individuals, just as truly as a majority in a presidential election is produced by the votes of single electors. Everybody can do something toward creating in his own environment kindly feelings rather than anger, reasonableness rather than hysteria, happiness rather than misery. The sum of such actions makes the difference between a good and a bad world. If you are an eminent statesman, your environment is large; if you are obscure, it is small. In the one case you can do much; in the other, little. But you can always do *something*.

Every parent who brings up a child in such a way that he becomes rational and kindly is achieving part of what must be done to make a happy world. Everyone who resists the temptations to intolerance which beset us all is helping to create a community in which differing groups can live side by side in mu-

tual amity. One man can do little against a vast evil, but vast evils arise from adding together many little evils, and vast goods arise in the same way.

You may say: "What can one man do against a world?" But if you were wicked you could do equally little for evil. Good and evil alike, however vast, spring from the efforts of individuals — not only of eminent individuals, but of the ordinary men and women of whom communities are composed.

Never before in the history of the world has the independent thought and conscience of every human being been so necessary and important. We need — each of us — to make a serious and determined effort toward something better than the present. There must be the hope of a world with less cruelty and suffering, and there must be a firm will to do whatever is possible toward bringing it into existence. We cannot combat the immense dynamic forces of communist and fascist fanaticism without something equally dynamic and at least as resolute.

We *can* set our faces against injustice, prejudice, falsehood, and cruelty. But it is not enough merely to go about overflowing with vague benevolence. Our emotion must lead to work that is somehow connected, however indirectly, with the creation of a better world.

THEN, TOO, if one is to keep sane and balanced in times of disaster, it is necessary to remember constantly what is good in the world as well as what is bad. The only adequate way for us to endure large evils is to find large consolations. If there is to be any way out of despair, it must be by remembering more things, not fewer, by enlarging our horizon, not by narrowing it, by being more aware of what is good, not by seeing only what is bad.

The human race is a strange mixture of the divine and the diabolic, making both good and evil inevi-

table. Complete despair is no more rational than blind optimism. There is not only cruelty and suffering. There is poetry and music and love and aspiration, rising triumphant over pain — showing us how splendid man can be at his best, inspiring us to live up to what is noble and turn away from what is petty and mean. There are the sublimities of man's achievements with pure intellect; thus have we learned what we know of the ways of nature, thus are we able to contemplate the great and timeless universe in which the eddies of the present seem of small account. There are courage and endurance in many millions of human beings, heroism in countless humble homes scattered throughout the land. There is heroism in serving mankind. I am thinking of the doctors and nurses who expose themselves to infection in dangerous epidemics, of scientists who risk their lives in experiments to save others suffering, of firemen and lifeboat crews, of gallant rescues, of facing unpopularity for a cause, and innumerable other forms of bravery.

There have been, in history, good periods and bad periods, but neither have been lasting. It is our misfortune to live in a bad period, but it will end. And it will end the sooner if we as individuals keep hope alive.

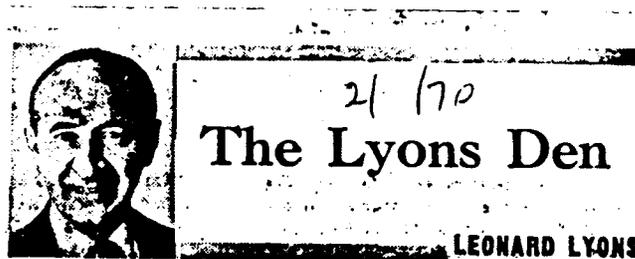

And so, to the man tempted by despair, I say: Remind yourself that the world is what we make it, and that to the making of it each one of us can contribute something. This thought makes hope possible; and in this hope, though life will still be painful, it will be no longer purposeless.

BERTRAND RUSSELL, British mathematician and philosopher, is the grandson of Lord John Russell, twice Prime Minister. A United States resident since 1938, he has taught at various American universities, delivering lectures full of dry humor and giving sympathetic advice on students' personal problems. Eminent as a writer and lecturer on social and moral questions, he is well known for his *Education and the Good Life*, *Conquest of Happiness* and *Marriage and Morals*.

BR REMEMBERED

Leonard Lyons recalls BR in a February 1970 column (in the New York Daily News???):

(35)

Bertrand Russell spent his first eight years with his grandfather, who was born in 1792. And his grandfather told him about reading the news report of George Washington's death. Russell wrote his own obit, he told me, to be published by the London Times June 1, 1962.

He finally published that obit in his "Unpopular Essays." He wrote of himself: "In 1920 I compared the Soviet State to Plato's Republic — to the consternation of Platonists and Communists alike." He suggested when Russia was championing China and Africa: "We should drop pamphlets there, saying 'Remember, the Russians are also white.'"

Our first meeting was at his Waldorf suite, 1414. He said: "An easy number to remember. It's the square root of 2." He said it in clipped British accent, and added "Most Americans think it's affectation—that if you wake up an Englishman he'd speak American."

Another visitor asked about the H-bomb and the possibility of its destroying the human race. Lord Russell replied: "We shouldn't worry too much about exterminating the human race. Human beings are quite unnecessary. Robots can think, make jokes and do other things as well as we can."

If Russia got the H-bomb first, he said, we should be nice and preach the brotherhood of man. "But if we get it first, we should order Russia to sign a peace treaty, then evacuate Hungary, proceeding with legality, always with legality."

"And if we have to use the H-bomb, then use it. Whoever gets it will dominate."

He changed, of course, and led the ban-the-bomb sit-downs: "One should change when a fact comes along. Maturity, I suspect, consists of being so fixed, so set in mind that you cannot learn anything more." He felt that if his white hair overnight were to revert to its original brown, nobody would pay any attention to him again.

I next saw him at his home in Richmond, Surrey, when Sylvia and I brought our two eldest sons to meet him. Lord Russell mentioned his three children and said he should have had 2.4, the precise average per family to maintain the population.

"But having 2.4 children is hard to manage," he said.

BERTRAND RUSSELL

He opposed Winston Churchill, whose wife was Lord Russell's cousin. He admired Albert Einstein, perhaps because they agreed on many vital things: Both disapproved of World War I, and supported the Allies in World War II. He told us the first time he ever heard of Churchill was as a boy when his barber said: "Lord Randolph's son is getting a haircut here too."

Russell refused to advise children: "For one, they have no power." He counseled me: "Send your children to school away from home. Family feeling is undesirable. There's just too much of it in the world."

He told author Joe Heller: "Because half the world is wrong doesn't mean the other half's right."

Russell never took his seat in the House of Lords, he told my sons, because he believed in single-chamber government. He felt visits to the House of Lords were a waste of time, like speaking into a well. "If I want something heard I say it over the BBC. There's no comparison between the House of Lords and the BBC."

At our next meeting at his Richmond home he said he reads one detective story a day, each borrowed from a lending library, to keep his desk uncluttered. He said he paid no tax on his Nobel Prize money, as if it were football-pool winnings.

"A football pool is worth more, and deservedly so. It's harder to win."

The customs of America, he said, are based on the dreams of spinsters. When his publisher, M. Lincoln Schuster, sent him a copy of Russell's "Unpopular Essays," it was held at British Customs. Russell protested: "They think if I read it, my moral character would be damaged." A few days later the book finally was delivered to the author.

He spoke of his five-year contract with the Argyrole King, Dr. Albert Barnes, and of having to sue for the final two years' salary: "Barnes died an appropriate death, running through a red light, and his car was hit. Dr. Barnes had no respect for the law."

Bertrand Russell died Tuesday, at 97, at his home in Wales. He once phoned a N. Y. friend who asked from where he was phoning. Russell said: "From Plas, Penrhy, Penrhynusudrath, Mertoneth, Wales. I'd spell it for you but I'm the one paying for this overseas call."

"I'd spell it for you but I'm the one paying for this overseas call."

HUMANIST HUMOR

(36) From the April 1989 Humanist Association of Canada Newsletter, with thanks to Paul M. Pfalzner.

"Look, I'll defend to the death your right to say what you want to say. I just haven't the time to listen to it."

ABOUT SCHOENMAN

The AP reports on BR's controversial secretary during the 1960s. In The Roanoke Times, March 25, 1985. With thanks to Whitfield Cobb.

(37)

Angry American Serves As Bertrand Russell's Secretary

By MILTON MARMOR

LONDON (AP) — Bertrand Russell's secretary is an angry American, one-third the age of the philosopher who finds so much to criticize in the way the United States deals with world issues.

One thing in particular piques the 29-year-old secretary and confidant Ralph Schoenman:

"There is an attempt all over the world to portray Bertrand Russell as senile and to say that I write his speeches.

"It is very tempting for some people to say this since Russell is 92. These people are raising a red herring in saying these things because they don't want to have to discuss what Russell has said.

"It's invidious. It's outrageously untrue.

"I draft many things for him, of course. That's my job. But Russell is in command. His speeches and his statements are his."

Russell crusades against nuclear weapons, the cold war, for release of political prisoners, against American policy in Viet Nam.

Schoenman, now permanently residing in England, has become, like Lord Russell, a controversial figure. One London newspaper referred to Schoenman as Russell's "lend-hand man" — an allusion to Schoenman's political views.

Intense young Schoenman has more than respect for Russell:

"I'm in awe of him," he says.

"I think Bertrand Russell is a renaissance man. He is a man who can not be comprehended by his contemporaries because of his riches, his range and his subtlety.

"The mind of that man is so extensive in its scope. And he's never without humor. He's never without that double awareness of the tragedy and irony of things."

There are those in the Russell Peace Foundation, formed to propagate the philosopher's views, who see Schoenman as the man to carry on the Russell crusade when he is gone. Schoenman is a director of the foundation, which operates in offices near Piccadilly Circus.

Russell has never been there. He writes and dictates a stream of letters and pronouncements to world statesmen from his rented house in Wales and his tiny, also rented, house in London's Chelsea District.

Meanwhile Schoenman flies all over the world. He has been to Peking to see Chou En-Lai, to Russia, to India, the Middle East and he now is off to Africa.

The United States picked up his passport 14 months after he went to Communist China.

"I got it back without restrictions," Schoenman remarked. "I didn't use it in China. Chou En-lai invited me there."

Schoenman is the only son of Hungarians who went to New York after World War I. He was born in New York.

At 17, he won a scholarship to Princeton University, where he attacked Sen. Joseph McCarthy

of Wisconsin. He hitchhiked to Alaska and worked on a fishing boat but went back to Princeton for his bachelor of arts degree in philosophy and political science.

In 1958 he came to London and soon had a master of arts degree from the London School of Economics.

He plunged into the anti-bomb movement, addressed meetings, took part in the Aldermaston marches. He soon favored mass civil disobedience.

In April 1960, he wrote to Lord Russell, then president and the father-figure of the campaign for nuclear disarmament.

Russell invited him to Wales. Their daily contacts have continued ever since.

Schoenman calls himself a Socialist and an Anarchist.

"They are not necessarily self-contradictory," he says. "But I wouldn't call myself a Marxist. That has the connotation of dogma. My views are too varied. Anyway, I cannot accept the Hegelian nonsense in Marx. Yet, I don't like the attempt to dismiss Marx out of hand."

Schoenman believes the real fight for the future will take place in America and that one day he will go back to the land whose way of life evokes his hostility — and he hopes to change it.

NEWSLETTER ITEMS WANTED

(38) We depend on you to help us with the newsletter. Whenever you come across something in your reading that strikes you as specially interesting, please send it to us -- or send a good photocopy -- for possible inclusion in a future newsletter. If you're not sure about whether or not to send something, send it! We'll use it if we can. We need your input.

OBIT

(39) BR's obit in *Time* magazine, February 18, 1970.

The Last of the Victorian Rebels

AT Plas Penrhyn, his comfortable country house in northern Wales, he worked until the very end—a sparrow of a man, 97 years old and still trying to straighten out the world. A statement went off to Cairo on the Middle East crisis; letters and papers were prepared on Viet Nam and the plight of political prisoners. Then, after a whisky, he retired with a touch of flu to his bedroom overlooking Tremadoc Bay. Not long afterward, the long, passionate life of Bertrand Russell came to an end.

Only five mourners, including members of the immediate family, were present at the private cremation, and there were no ceremonies. But the world took note. Prime Minister Wilson laid clum-

neighbors might say, if not with an active desire to *épater le bourgeois*. His grandfather, the first earl, was Prime Minister of England. His parents were ardent freethinkers and campaigners for women's rights. Bertie, considered frail, was educated at home, and there was much coming and going of tutors.

Perhaps mercifully, both his parents died before he was four years old, and Russell was raised by his grandmother, a Presbyterian of strict self-discipline. At eleven, Bertie discovered Euclid under the tutelage of his older brother—"one of the great events of my life," he wrote, "as dazzling as first love." For the next 27 years, mathematics was his "chief source of happiness."

Liberating Numbers. Sex soon began to run a close second. Russell rhapsodizes in his three-volume autobiography about the joys of honeymooning with his first wife Alys, a Quaker from Philadelphia. Stimulated by such delights, Russell wrote his first major work, *The Principles of Mathematics*, at the breakneck rate of 200,000 words in three months. The book was designed to liberate numbers from the mystique that had clung to them since the days of Pythagoras and to demonstrate that all mathematics derives from logic. The three-volume *Principia Mathematica* took Russell and Whitehead ten years. Most of it is completely inaccessible to non-mathematicians, but not all. For example, it contains a careful explication of what is generally considered Russell's greatest philosophical "discovery": the Theory of Descriptions.

This was designed to purge language of the built-in ambiguities that tend to muddy strictly logical thought. Russell takes as an example the sentence: "The golden mountain does not exist." The ambiguity is that the words "golden mountain" may be taken to indicate a something where there is really a nothing. One might ask: "What is it that does not exist?" The answer would be "the golden mountain," implying that it has some kind of reality. Russell's solution was to turn the substantive phrase into what he called a descriptive phrase, i.e.: "There is no entity *c*, such that '*x* is golden and mountainous' is true when *x* is *c*, but not otherwise."

According to this theory, a man, a concept or an object can only be considered to exist in terms of its exact description. Obviously this requirement can have a devastating effect on such imprecise words as evil or God. Russell's aim—and the aim of the linguistic school that has burgeoned in his wake with the work of his pupil Wittgenstein and many others—was to make over and diminish philosophy. Its traditional function was as a dispenser of wisdom, a guide to right and wrong; the linguistic school saw it merely as a tool to test the truth of limited propositions.

Russell's tremendous intellectual ef-

fort to forge that tool was complicated by his discovery—apparently as a sudden revelation while bicycling along a country road—that he no longer loved Alys. But he slogged along for nine years with both wife and book until *Principia Mathematica* was finished. So, almost, was he. "My intellect never quite recovered from the strain," he wrote. "I have been ever since definitely less capable of dealing with difficult abstractions than I was before."

Indeed, he never again put his intellect to a comparable test, but began a new phase as a public—and private—personality that lasted the rest of his life. First he plunged into an affair with a rangy, red-haired bluestocking named Lady Ottoline Morrell, the wife of an acquaintance. He promptly told Alys. "After she had stormed for some

with his second wife ("We allow them to be rude and use any language they like"). He lectured at the University of Chicago, U.C.L.A. and Harvard.

Declension of Logic. Adolf Hitler was too much for Russell's pacifism; he supported the Allies in World War II. After the war, the honors began rolling in: Britain's Order of Merit in 1949 (an encomium limited to 24 living Britons) and the Nobel Prize for Literature in 1950.

The postwar period also brought the declension of a great logician into a rhetorical polemicist. In 1948, astonishingly, he urged preventive war against the Soviet Union. "Either we must have a war against Russia, before she has the atom bomb, or we will have to lie down and let them govern us." His first recommendation was ignored, and so by the 1960s he was seriously suggesting that the second be adopted. The Ban-the-Bomb movement and then the Viet Nam War set the old humanitarian excitement running high, and this bright-eyed disturber of the peace must have rejoiced when, at the age of 89, he got himself sent to jail again for seven days for leading a demonstration against nuclear weapons. Less elegantly, Russell's anti-Americanism (which he denied on the astonishing grounds that he had had two American wives) became obsessive. The Americans in Viet Nam, he said, were "at least as bad as the Nazis."

Far truer to his life was the courageous confession—in an essay called "Reflections on My 80th Birthday"—that the mathematical structure he had worked so hard to erect was nothing but an illusion: "I set out with a more or less religious belief in a Platonic eternal world, in which mathematics shone with a beauty like that of the last Cantos of the *Paradiso*. I came to the conclusion that the eternal world is trivial and that mathematics is only the art of saying the same thing in different words."

Long before his death, he shed the Victorian optimism that had envisioned a gradual spread of freedom and prosperity and decline of tyranny and injustice. He feared, instead, a nuclear war that would exterminate mankind with terminal horrors of loot, rapine and anarchy. But he was not entirely pessimistic: "I may have conceived the theoretical truth wrongly, but I was not wrong in thinking that there is such a thing, and that it deserves our allegiance. I may have thought the road to a world of free and happy human beings shorter than it is proving to be, but I was not wrong in thinking that it is worthwhile to live with a view to bringing it nearer . . . These things I believe, and the world, for all its horrors, has left me unshaken."

RUSSELL AT 44
The golden mountain . . .

say claim to him as "the British Voltaire." *Izvestia* extolled him as "most representative of the progressive spirit outside the Communist world." The World Jewish Congress called him "one of the greatest humanitarians of all time." The Queen pointed to his "distinguished contribution to 20th century thought."

It was Russell's thought that had primacy and gave weight to the workings of his large and sometimes foolish heart. Skeptic, agnostic and above all rationalist, he won his first fame as a mathematician, later as a philosopher by creatively applying mathematical methods to the linguistic mysteries of meaning. His most notable work, *Principia Mathematica*, written with the collaboration of his fellow mathematician, Alfred North Whitehead, is a bench mark of 20th century philosophy. Paradoxically, though, Russell was less a man of the 20th century than the last of the eminent, eccentric Victorian rebels.

Aristocratic Disdain. The Rt. Hon. Bertrand Arthur William Russell, third Earl Russell, was born into a tradition of aristocratic disdain for what the

AT 89
. . . does not exist.

hours," he writes in his autobiography, "I gave a lesson in Locke's philosophy to her niece, Karin Costelloe, who was about to take her Tripos. I then rode away on my bicycle, and with that my first marriage came to an end." He did not see Alys again for 39 years.

This cool-cat manner, displayed many times during his four marriages and numerous affairs, is a token of the ascendancy of head over heart. Recounting one of his most successful affairs, he wrote: "We did not go to bed the first time we were lovers, as there was too much to say." At least as important, however, was Russell's pre-Freudian ignorance and indifference about his own and others' subsurface motivations.

On the Public Stage. World War I, for Russell, was a "rejuvenating" experience. Like his grandfather before him, the arid mathematician-philosopher became an actor on the public stage. As a passionate pacifist, he was sentenced to six months in jail. After the war, he visited and wrote about Russia, where he found too much government, and China, where he found too little. He started a widely publicized progressive school

TOYNBEE

From the Sun Telegram, Feb 8, 1970, with thanks to Harry Ruja:

A MAN WHO STOOD - 8 FEB 1970 SUN TELG HIS GROUND

ARNOLD TOYNBEE first met Bertrand Russell more than 50 years ago. What was it about the man that captured the respect of so many people? Professor Toynbee makes a valuable contribution to assessment of the remarkable life that ended last week after 97 years.

SUN TELG was his persistence. A lesser man who had brought on himself Russell's experience in 1914-1918 might then have quit—especially, if he had, as Russell did have, a golden bridge to retreat over.

Russell, discharged from gaol, could have withdrawn into an ivory tower and have spent the rest of his life on the further pursuit of mathematical logic and philosophy. By 1914 he was already world-famous in this field for the work that he had done between 1900 and 1913. If he had died in February, 1914, instead of February, 1970, he would still have been famous today. His intellectual work during the first 13 years of this century—the last stage of it in cooperation with Alfred North Whitehead—is, I imagine, unsurpassed both in its intensity and in its fruitfulness. But if he had died before August, 1914, he would have been famous for this one thing only, and the number of people who could have appreciated what he had done would have been far smaller; for his pre-1914 work was esoteric.

However, after finishing the first of his two terms of imprisonment for trying to save mankind from itself, Russell, being Russell, had not had enough. Nature gave him from 1918 to 1970, and he used those last 52 years as he had used the previous

four. He never, of course, ceased to work on at philosophy, but he also never ceased from mental strife in William Blake's meaning of those words.

Russell's spirit was never daunted by hostility, and it was also never damped by ridicule, which is harder than hostility to bear up against. The zest for life with which Nature endowed him, and the self-confidence which was his aristocratic social heritage, led him back into the ring again and again; no number of hard knocks could deter him. But the motive that kept him going more than any other was, I believe, his concern for his fellow men—not just his contemporaries, but all future generations.

Compassion

Powerful minds take long views, and Russell's mind saw the vista of the broad way that leads to destruction. This trenchant intellect was mated with a compassionate heart. To the last day of his life Russell was working like fury to avert the possible coming deluge. He cared intensely about what was going to happen after his long life was over—as intensely as if he had been a believer in personal immortality and had expected to see, as a disembodied spirit, the dénouement of the drama of human life on this planet.

Russell's mind was not only trenchant; it was also satirical and provocative. The impulse to annoy, combined with a generous passion to make all things new, is a well-known mark of youth, and in this sense Russell remained youthful to the end. His insatiable relish for getting into trouble kept him always young in spirit.

After a 43 years' interval he found himself in prison (the same prison) once again; but this time the authorities had their hearts in their mouths. By now he was getting on for 90, and he was already a formidable world-power. If he had died in prison, his posthumous potency as a martyr would have been stupendous. So, this time, the authorities nursed him solicitously and discharged him with despatch. Has any other recipient of the O.M. found himself in prison yet?

Even if Russell had not half courted opposition he would have incurred it. Since 1914 mankind has been in one of those recurrent moods in which it is bent on going to hell, and since 1945 we have possessed the means of instant conveyance. In this mood human beings are infuriated by a fellow creature who does strive officiously to keep the human race alive in spite of being told that he need not. What business has one man to stay sane when the fashion

is to be mad? The intervention is the more exasperating if the self-appointed saviour tries to goad us into facing up to our folly by sticking pins deftly into our tenderest spots.

Did Russell defeat his own purposes by pursuing them so provocatively? On a short view, in some cases, perhaps yes; but on Russell's own long view, no.

This has been proved already by the unanimity of the tribute that has been paid to Russell at his death. He is remembered as the man who dared to take his stand across the path of the Gadarene swine with the audacious intention to stem their head-

long rush—the man who held his ground when the bedevilled herd threatened to trample him underfoot.

Down to the end of his long and indefatigable career, Russell did not know whether the reasonableness that he strove for was going to prevail. We who have survived him are still an enigma to ourselves. But at least we have recognised that, if we do decide to commit mass-suicide, our blood will not be on Russell's head. From 1914 to 1970 Russell did his utmost to save us from ourselves, and this is why we are honouring him now. We still have that much sanity, and therefore that much hope.

- (5) **Neil Abercrombie**, Congressman, as written up in *Congressional Quarterly Weekly Report*, January 12, 1991, volume 49, number 2, page 96:

Neil Abercrombie, D-Hawaii (1)

Election: Succeeds Republican Rep.

Patricia Saiki, who ran unsuccessfully for the Senate.

Born: June 26, 1938, Buffalo, N.Y.

Home: Honolulu.

Education: Union College, B.A. 1959;

U. of Hawaii, M.A. 1964, Ph.D. 1974.

Occupation: Community activist.

Family: Wife, Nancie Caraway.

Religion: Unspecified.

Political Career: Honolulu City Council, 1988-90; U.S. House, 1986-87; Hawaii House, 1974-78; Hawaii Senate, 1978-86; sought Democratic nomination for U.S. House, 1986.

Running in 1990 for a seat he held on an interim basis four years earlier, Abercrombie easily defeated GOP state Rep. Mike Liu. He thus restored the 1st, held for two terms by Republican Saiki, to Democratic control.

Abercrombie's win, expected throughout the campaign, was one of the few predictable events of his unconventional political career. A veteran of protest politics — he took 13

percent of the vote in the 1970 Democratic Senate primary as an antiwar candidate — Abercrombie became one of the leading liberal activists in the state Legislature.

During his tenure in the Legislature, Abercrombie was an avid, sometimes unyielding advocate of aid to the underprivileged. His physical appearance — including a full beard and a mane of hair cascading from his balding pate — made him a widely recognized figure in Hawaii politics.

But Abercrombie's ideological cast and his often-abrasive manner in those days earned him his share of enemies. This cost Abercrombie dearly in 1986, when his House bid was ruined by a political fluke: He won and lost the 1st District seat on the same day.

Democratic Rep. Cecil Heftel's resignation for what would be an unsuccessful bid for governor forced the scheduling of a special House election, which coincided with the regular September 1986 primary for a full term. Abercrombie was rated the front-runner in both contests. However, this status left him vulnerable to attacks from both Republican Saiki, his main competition in the open-ballot special election, and from Democratic businessman Mufi Hannemann, an aggressive newcomer.

While Saiki predictably described Abercrombie as too liberal, Hannemann got personal. Playing off Abercrombie's iconoclastic image, Hannemann unearthed a 17-year-old newspaper article in which Abercrombie suggested what seemed to be a favorable attitude about decriminalizing marijuana. Although Abercrombie furiously denied that he countenanced drug use, the issue was damaging.

Abercrombie won the special election with 30 percent to 29 percent for Saiki and 28 percent for Hannemann. But he narrowly lost the primary to Hannemann. It is widely believed that several thousand voters who supported Saiki in the special election took Democratic ballots and voted for Hannemann in the primary (Saiki was unopposed for the nomination).

An embittered Abercrombie declined to endorse Hannemann: The schism contributed to Saiki's easy win in the general election. Abercrombie did go to Congress, though, to fill out the remaining weeks of Heftel's term. During his 1990 cam-

paign, Abercrombie emphasized that he was appointed in 1986 to the Armed Services Committee, a position that enabled him to speak for defense budget cuts while promoting Hawaii's importance as a military center in the Pacific.

Returning to Honolulu, Abercrombie won a City Council seat in 1988; Saiki won re-election to the House that year, establishing what looked to be a long-term hold on the seat. However, in April 1990, Democratic Sen. Spark M. Matsunaga died, and Saiki decided to take on interim Democratic Sen. Daniel K. Akaka in a November special Senate election.

Abercrombie jumped in, but with a somewhat tamer, less combative style. Better known than his primary foes — state Sen. Norman Mizuguchi and lawyer Matt Matsunaga (the son of the late senator) — Abercrombie won with 46 percent of the vote.

Although Abercrombie maintained a populist agenda, his cautious approach provided few opportunities for his GOP opponent. Liu, like Saiki, emphasized fiscal conservatism while espousing more moderate views on social issues. But he received no boost from his narrow GOP primary victory, and did not have the benefit, as there had been in 1986, of a Democratic split. ■

Thank you, Don Jackanicz

PUBLICATIONS RECEIVED

- (7) **The Skeptical Review** (PO Box 617, Canton, IL 61520), a 12-page quarterly, is aimed at people who know their Bible. It deals with questions of Biblical inerrancy. It will quote two Biblical passages, and then claim that they cannot both be true. [We rudely wonder whether either can be true.] Subscription is free the first year; thereafter \$4 annually.

What got our attention was a quotation at the top of Page 1:

"Skepticism is the chastity of the intellect, and it is shameful to surrender it too soon or to the first caller." (George Santayana)

BOOK REVIEW

From The Christian Science Monitor, February 13, 1974. With thanks to WHITFIELD COBB.

Bertrand Russell, not anti-U.S.

'Half my wives have been American'

Bertrand Russell's America, Vol. 1: 1896-1945, by Barry Feinberg & Ronald Kasrils. New York: Viking Press. \$12.50.

By Gerald Priestland

Where is the Bertrand Russell of today? Where is the philosopher who — having made his original contributions early in life, as most great thinkers do — nevertheless refuses to withdraw into the city of dreaming spires, but sallies forth again and again to do battle with what he sees as the false ideas in our general world?

Alas, we have no second Russell. He died only four years ago, on February 2, 1970; so perhaps it is still too soon to expect a replacement. But as Cy Suizberger remarked, this is "An Age of Mediocrity."

Our philosophers have withdrawn into their private game. They hardly dare to venture out into the world of sordid public affairs; and if they did, they would probably be devoured by television within a year or two, to be dismissed as played-out bores.

When I say that the nearest approaches to a Russell-like figure left to us on the European side of the Atlantic are Mr. Malcolm Muggeridge and M. Jean-Paul Sartre, I hope I need say no more.

Barry Feinberg and Ronald Kasrils are young South African progressives, self-exiled in London as a result of the struggle against Apartheid. Clearly they are attracted to their subject by Russell's early stand against racial discrimination and his steadily increasing socialism and anti-imperialism. However, these are objective facts about the great philosopher and no distortion.

In this first volume, dealing with Russell's visits to America in the years 1896-1945, there is very little that most Americans will not ruefully find all too true, though it remains to be seen whether the final volume proves too close to the bone. The important thing to remember is that, fundamentally, Russell was passionately pro-American. His closing words in this volume, written as late as 1945, are:

"America will inevitably be forced into a kind of non-territorial imperialism, but . . . I have more belief in

Copyright Marsh-Ottawa

Bertrand Russell

Americans than most of them have in themselves. I think their hegemony will be kindly and tolerant to a greater degree than that of any European country would be, and whatever pangs I may feel as a patriot, I look to the Empire of America for the best hopes that our distracted world permits."

Hardly the words of a rabid comic-lover.

As Russell himself used to point out, "Half my wives have been American." Coming of a radical English family, nurtured on Jefferson, Paine, and John Stuart Mill, his anguish over America gushed from his conviction that the Declaration of Independence and the Constitution — which he dared to regard as the finest fruits of the English radical tradition — were being perverted and betrayed.

"When one comes home," he wrote, in the essay I have quoted above, "one misses the warmth of American friends."

What was more, he missed the money, too. For America was prepared, in spite of his struggles with it, to listen to him, take him seriously, and pay him a living wage.

Scandal and uproar

The struggles were considerable, and "Bertrand Russell's America" takes us through two great set-pieces: the City College of New York scandal of 1941, and the Barnes Foundation uproar of 1943.

At this distance in time, both affairs seem pompously ridiculous, though for Russell, trying to raise a young family, they carried the grave danger of being deported and excluded from America. He himself attributed the trouble in New York to the rivalry between the city government (which was largely Catholic) and the college faculty (which was mostly Jewish). Still, it was a Jewish attorney who challenged Russell's appointment as Professor of Philosophy on the grounds that he was (take a deep breath):

"Lecherous, salacious, libidinous, lustful, venerous, erotomaniac, aphrodisiac, atheistic, irreverent, narrow-minded, bigoted and untruthful . . ." It looks a curiously narrow-minded list of epithets for the author of the "Logic of Relations," the "Theory of Descriptions" and the "Five Postulates Validating Scientific Method."

All the same, Judge McGeehan found Russell morally unfitted to teach such obscure theories. The judge vowed he had had to take a bath after reading one of Russell's books — perhaps it was the "Principia Mathematica," which admittedly is rather a sweat.

The New York Times, not to its glory, thought Russell had been unwise to resist the courts at all. It was the worst kind of anti-intellectual witch-hunt, and the spirit in which it was conducted is not dead yet.

The knitting affair

Russell next took refuge in the art-collection-cum-aesthetics-institute financed and directed by the Philadelphia patent medicine millionaire, Dr. Albert C. Barnes. Here two things went wrong.

The first was that Lady Patricia Russell (one of the English wives) jarred on the nerves of Dr. Barnes like the bagpipes on an insomniac. What he complained of specifically was her habit of knitting during her husband's lectures.

But beyond that was the (to my mind understandable, if not pardonable) difficulty of getting on with the Russells' upper-class Englishness. It is a manner which not everyone finds it easy to tolerate, even in England.

Russell himself wrote: "A Frenchman in America is not expected to talk like an American, but an Englishman speaking his mother-tongue is thought to be affected and giving himself airs." I can see his point, too.

But when Patricia Russell wrote that there had never been any complaints about her knitting at Oxford or Harvard, there must, I think, have been something more to set off the Trustees' sarcastic retort: "It was sweet of you to tell us . . . how low-class the Foundation is compared to Oxford. . . . How to bear up under the disgrace is our most serious problem."

At least Russell got away from Barnes with reasonable compensation. When his "History of Western Philosophy" was published in 1945, the preface generously acknowledged the author's debt to Dr. Barnes — and to Patricia.

Righteous anger

Russell was never quite sure whether he was an agnostic or an atheist. He was certainly no Christian; for (as he declared), while Christian love or compassion was at

the very root of all ethics, he personally had no time for meekness. He believed firmly in righteous anger.

And he could get very angry indeed with America — as he could with England: American readers really ought to be given a soothing dose of what Russell had to say about his own country. But his meddling in politics was usually very practical. As this book illustrates, his views on America were based upon considerable knowledge and keen insight.

The volume falls into two parts: the first (rather fussily annotated) gives us the narrative of his American visits, largely in the words of Russell and his contemporaries.

The second part is a collection of supporting articles by Russell, many of them hitherto unpublished. As always with Russell's journalism, they are lucid, succinct and readable. I specially recommend those on "Is America Becoming Imperialistic?" (1925), "The Problem of Minorities" (1942), and "British and American Nationalism" (1945). When the two volumes are complete, they will form an unrivaled anthology.

The authors have had extensive

help from the Russell estate, the archives (at McMaster University, Ontario), the family and publishers. The resulting volume is a good length, well printed and easy to handle — which is not as common as it should be. The only practical criticism I have to make is of the separation of the extremely interesting photographs from their captions.

Anyone who reads this book might usefully be encouraged to turn next to Alan Wood's biography of Russell ("The Passionate Skeptic," Simon & Schuster). For it adds this inspiration: that even though Russell felt unable to supply the world with that certainty it craves, he showed it nevertheless how an agnostic could yet march on unafraid against all the odds. To quote now from Wood: "While cynical scepticism is sterile, a Passionate Sceptic can live a life of courage and achievement."

Gerald Priestland, news editor for BBC radio and roving correspondent, was formerly chief correspondent of the BBC's Washington bureau. He is the author of "America: The Changing Nation," and the forthcoming "The Future of Violence."

ABOUT BR

Self-Portrait

In 1937 Bertrand Russell wrote his own obituary as he imagined that it might appear in The Times of London. The self-portrait that he drew—much of it tongue-in-cheek—was disclosed by him in an interview in 1959. Excerpts from it follow:

"By the death of the third Earl Russell, or Bertrand Russell as he preferred to call himself, at the age of 90, a link with a very distant past is severed. His grandfather, Lord John Russell, the Victorian Prime Minister, visited Napoleon in Elba; his maternal grandmother was a friend of the Young Pretender's widow. [Charles Edward Stuart, the Young Pretender, died in 1788.]

"In his [Lord Russell's] youth he did work of importance in mathematical

logic, but his eccentric attitude toward the First World War revealed a lack of balanced judgment, which increasingly infected his later writings.

"In the Second World War he took no public part, having escaped to a neutral country just before its outbreak. In private conversations he was wont to say that homicidal lunatics were well employed in killing each other, but that sensible men would keep out of their way while they were doing it. . . .

"His life, for all its waywardness, had a certain anachronistic consistency, reminiscent of that of the aristocratic rebels of the early nineteenth century. His principles were curious, but such as they were they governed his actions. . . . He was the last survivor of a dead epoch."

ANNUAL MEETING (1991)

Lehigh University, in Bethlehem, PA, provided the facilities (excellent) for our 17th Annual Meeting, on June 21-23, 1991.

Members present were: NEIL ABERCROMBIE, WHITFIELD COBB, DENNIS DARLAND, JAN EISLER, LEE EISLER, LINDA EGENDORF, DON JACKANICZ, JOHN JACKANICZ, TED JACKANICZ, ROBERT JAMES, MARVIN KOHL, GLADYS LEITHAUSER, JOHN LENZ, BARBARA PONTIER, RAY PONTIER, STEVE REINHARDT, MICHAEL ROCKLER, HARRY RUJA, WARREN SMITH, PETER STONE, THOM WEIDLICH, WALTER WEND, AND JAMES WOODROW.

Also present were guests MARGARET MORAN and STEVEN SHAFER.

Here are highlights of the Annual Meeting (which convened at various times on Friday, Saturday and Sunday):

These awards were presented:

- . A BRS Service Award, to Donald W. Jackanicz, currently BRS secretary.
- . The 1991 BRS Award, to Planned Parenthood Federation of America.
- . The 1991 BRS Book Award, to Peter Hylton's *Russell, Idealism, and the Emergence of Analytical Philosophy*.

The following papers were read:

- . Neil Abercrombie on *Russell's Influence on a Congressman's Politics*.
- . Dennis Darland on the state of the BRS Treasury (not bad).
- . Bob Davis on *Is Russell's Socialism Phoney?*
- . Don Jackanicz on *Russell's Politically Important Desires* (workshop).
- . Marvin Kohl on *Russell's Characterization of Benevolent Love*.
- . Gladys Leithauser on *The Emergence of the Satirist* (fiction).
- . John Lenz on *Russell on History*.
- . Margaret Moran on Russell's early fiction.
- . Michael Rockler on *Beacon Hill and Summerhill -- the Russell-Neill Connection*.
- . Harry Ruja on *Oddities in Russell's Published Work*.

The papers, above, will be duplicated and bound into 2 identical volumes, one for the Russell Archives and one for the Russell Society Library. The Library's volume may be borrowed.

Other events:

- . Red Hackle Cocktail Hour at Bridgeworks, in downtown Bethlehem.
- . Banquet highlight: the acceptance speech by Lawrence C. Broadwell -- Vice President of Planned Parenthood Federation of America -- on its receiving the 1991 BRS Award.

The Board of Directors met on Friday evening. As is customary, all BRS members and guests were invited to attend the meeting. The following decisions were taken:

- . The present slate of officers was re-elected for another year: Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Treasurer, Dennis Darland; Secretary, Don Jackanicz; VP/Information, Lee Eisler.
- . The site of the 1992 Annual Meeting will be one of the following, listed here in order of preference: Washington, DC; California; Chicago; Boston; Buffalo.
- . The Annual Meeting of 1992 -- the year of Karl Popper's 90th Birthday -- will be honoring him, as suggested by Bob Davis. Bob was authorized to invite Sir Karl to the meeting.
- . The BRS will accept an invitation to join the International Humanist Ethical Union.

For more details about the 1991 Annual Meeting, see the Minutes ().

MINUTES OF THE JUNE 1991 MEETING

(11)

MINUTES OF THE 1991 ANNUAL MEETING OF THE BERTRAND RUSSELL SOCIETY, INC.

The 1991 Annual Meeting of the Bertrand Russell Society, Inc. was held from June 21 to June 23 at Lehigh University, Bethlehem, Pennsylvania.

Friday, June 21, 1991

The meeting was called to order by President Michael J. Rockler at 8:00 p.m. in Room A308 of University Center/Packer Hall. Following his welcoming remarks, President Rockler introduced Board of Directors Chairman Marvin Kohl, who presented a Service Award to Donald W. Jackanicz. President Rockler next introduced Book Award Committee Chairman Gladys Leithauser, who reported on the 1991 Book Award to Peter Hylton for Russell, Idealism and the Emergence of Analytical Philosophy. Ms. Leithauser accepted the Award on behalf of Mr. Hylton, who was unable to be present. Harry Bujas then presented his paper, "Oddities in Russell's Published Work." The meeting was recessed at 9:35 p.m. The 1991 Annual Meeting of the Board of Directors was then held.

Saturday, June 22, 1991

President Rockler reconvened the meeting at 9:35 a.m. in Room A303 of University Center/Packer Hall. Donald W. Jackanicz conducted a workshop on Russell's essay, "Politically Important Desires." Neil Abercrombie then spoke on "Russell's Influence on a Congressman's Politics," after which Marvin Kohl read his paper, "Russell's Characterization of Benevolent Love." The meeting was recessed at 12:37 p.m.

After reconvening the meeting in Room A303 at 2:20 p.m., President Rockler read his paper, "Beacon Hill and Summerhill--The Russell-Neill Connection." John Lenz then read his paper, "Russell on History."

The Society Business Meeting began with Treasurer Dennis J. Darland reporting a Treasury balance of \$8,129.44. Lee Eisler moved that Society funds be placed in one or more interest-bearing accounts. This motion was unanimously accepted. A discussion of the PhD/MA grant program followed. At Chairman Kohl's request, Secretary Donald W. Jackanicz read his notes for the Minutes of the Board of Directors Meeting of the previous night. The meeting was recessed at 5:20 p.m.

At 6:00 p.m. the Red Hackle Hour began at Bridgeworks, a restaurant located at East 4th Street and South New Street, a short distance north of Lehigh University. Shortly after 7:00 p.m., the Banquet was held in Room A308 of University Center/Packer Hall. Following the Banquet, the 1991 BRS Award was presented by Chairman Kohl to Planned Parenthood Federation of America. The Award was accepted by Planned Parenthood's Vice President, Lawrence C. Broadwell, who spoke about his organization's mission, origins, and recent history. The evening program ended at 9:45 p.m.

Sunday, June 23, 1991

The meeting was reconvened by President Rockler at 9:05 a.m. in Room A308 of University Center/Packer Hall. Margaret Moran and Gladys Leithauser together read their respective papers, "Bertrand Russell Meets His Muse: The Influence of Lady Ottoline Morrell" and "Bertrand Russell's Fiction: The Emergence of the Satirist." Robert K. Davis then made his presentation, "Is Russell's Socialism Phony?" Following closing words by President Rockler, the meeting was adjourned at 11:58 a.m.

MINUTES OF THE 1991 BOARD OF DIRECTORS ANNUAL MEETING

The Board of Directors of the Bertrand Russell Society, Inc. met on Friday, June 21, 1991 on the campus of Lehigh University, Bethlehem, Pennsylvania.

The meeting was called to order at 9:50 p.m. by the Chairman of the Board of Directors, Marvin Kohl, in Room A308 of University Center/Packer Hall. Because of the closing of that building, the meeting was relocated at 11:00 p.m. to Apartment 9A of the Trebley Park Apartments. In addition to Chairman Kohl, the Directors in attendance were Jack Cowles, Dennis J. Darland, Robert K. Davis, Lee Eisler, David Goldman, Donald W. Jackanicz, John A. Jackanicz, Gladys Leithauser, John Lenz, Steven J. Reinhardt, Michael J. Rockler, Warren Allen Saith, and Thom Weidlich.

Mr. Davis moved that all incumbent officers be reelected for service during the forthcoming year. This motion was unanimously accepted. The reelected officers are as follows: Chairman of the Board of Directors--Marvin Kohl; President--Michael J. Rockler; Vice President--John Lenz; Vice President/Information--Lee Eisler; Secretary of the Board of Directors and the Society--Donald W. Jackanicz; Treasurer--Dennis J. Darland.

Discussion turned to the suggestion that the Vice President be given more official duties or delegated assignments.

After a discussion concerning possible locations for the 1992 Annual Meeting, Mr. Goldman moved that the 1992 Annual Meeting site be selected from these possibilities in the following order of preference (1) in Washington, DC with the assistance of Congressman Neil Abercrombie; (2) at a to be determined California site with the assistance of Jacqueline Berthon-Payon; (3) in the Chicago area; (4) in the Boston area; (5) in the Buffalo area. This motion was unanimously accepted.

Mr. Jackanicz (Donald W.) moved that the 1992 Annual Meeting be held on the second, third, or fourth weekend of June 1992. This motion was unanimously accepted.

Mr. Davis noted that 1992 will mark the 90th birthday of Karl Popper and suggested that the 1992 Annual Meeting in some way honor Popper. Mr. Rockler moved that the 1992 Annual Meeting be dedicated to Popper, that papers relating to the Russell-Popper interface be solicited, and that Mr. Davis be authorized to invite Popper to attend the meeting. This motion was unanimously accepted.

Mr. Rockler then spoke to encourage the consideration of a woman and a feminist for the 1992 BRS Award.

Chairman Kohl read excerpts from a letter inviting the Society to join the International Humanist Ethical Union. Following discussion of this invitation, Mr. Eisler moved that the Society become a member of the International Humanist Ethical Union. This motion was accepted with a vote of Yes--8, No--3, Abstaining or Not Present--3.

The meeting was adjourned at 11:58 p.m.

A CALL FOR PAPERS FOR THE NEXT ANNUAL MEETING (1992)

(12)

Our 1992 annual June meeting will be dedicated to Karl Popper -- who, as you know, is a BRS Honorary Member -- in celebration of his 90th birthday. Bob Davis has written to Sir Karl inviting him to the meeting.

Please submit papers for the meeting to Michael Rockler, 1029 Linden Avenue, Apt. 2, Wilmette, IL 60091. Papers on Popper and his relations with Russell will be specially welcome.

Washington, DC will probably be the site. The precise weekend in June '92 has not yet been determined, nor have the facilities been chosen. Neil Abercrombie is lending a helping hand in this. (He was one of the stars of the 91 meeting.) Sorry that we cannot provide more specific information at this time.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

(13)

Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Treasurer, Dennis J. Darland; Secretary, Don Jackanicz; Vice President/Information, Lee Eisler.

BY BERTRAND RUSSELL

Who May Use Lipstick?

(14)

'What a silly question!' the reader may say. 'Of course, every woman uses lipstick nowadays.' But a little reflection shows that there are still some kinds of women to whom this otherwise universal toleration is not extended. Perhaps if we consider who the women are who are not allowed to use lipstick we shall get an interesting sidelight upon conventional ideas of ethical merit.

Female ministers of religion, while they should be neat in their person, should not have any such adornments as may be supposed calculated to attract the male sex, unless they hail from Southern California. While they are engaged in exhorting us to a life of self-denial, there should be no obvious sign that they do not practise what they preach. Welfare workers should not employ lipstick, in spite of the fact that all the ladies from whom their funds come do so. Hospital nurses while on duty must appear to have no interest except the health of their patients, and the Sister in charge would certainly reproach them if they were found unduly beautified during the hours of work.

The largest class of victims of this curious taboo are teachers. I do not know how it may be in America, but in England any female teacher who wishes to be not unattractive gets into hot water.

Let us try for a moment to think out the philosophy underlying these restrictions. In the first place, it is held – and so far we may agree – that a teacher should have a good moral influence; in the second place, it is held that no woman can have a good moral influence unless she is or pretends to be indifferent to the male sex. In a young woman this implies either hypocrisy or psychological ill-health.

Hypocrisy is, of course, very necessary to success in life and there is much to be said for the view that those concerned in

education should be competent to teach it. I do not think, however, that those who enforce this restriction upon teachers are intending to demand hypocrisy: they consider that the sort of woman who is capable of being a good teacher must be genuinely indifferent on the subject of her own attractions.

For my part I think this view profoundly mistaken. Unless there is physical ill-health, indifference to the opposite sex on the part of a young person can only be secured by means of somewhat violent repressions, which will inevitably produce an attitude of severity and discipline very inimical to the happy and spontaneous development of children.

It is generally admitted that most grown-up people, however regrettably, will try to have a good time, but it is felt that the whole weight of authority should be directed to teaching children that virtue is unpleasant, on the ground, apparently, that this is the way to make them love virtue. In order to prove to them that virtue is unpleasant, education authorities try to provide teachers who shall be at once unpleasant and virtuous.

For my part I have a different view as to the best sort of person. I think people should be jolly, and cheerful, and kindly, and more inclined to say 'Yes' than to say 'No'; those who say 'No' to themselves generally feel that this gives them a right to say 'No' to others, especially to children.

For this reason I think it important that jollity should not be thought a crime in those whose profession it is to be in contact with the young, and generally in those whose business it is to uphold moral standards.

14 September 1931

Are Criminals Worse than Other People?

(15)

One of the most annoying things about the modern world is that it is so much less simple than it used to be. The world used to be divided sharply into honest men and rogues; honest men kept the law, rogues broke it. Rogues, though they might prosper for a while, invariably came to a bad end; some honest men might fail to become rich, but this was considered exceptional, as was shown by the phrase 'honest though poor'.

In such a world no one suffered from the doubts and hesitations and the blurring of sharp lines which cause modern men to vacillate. A long course of rebellious writers has tried to persuade us that it is the wicked who prosper and that the rich, even if they do break the law, are not at all likely to be punished for doing so. Every student of history or sociology must be struck by the fact that the men who do the most harm are not the sort of criminals who are sent to prison but the sort to whom equestrian statues are put up. And so one is led to ask oneself in all seriousness: are criminals any worse than other people? And if not, what is the peculiarity which leads to their being sent to prison?

There was a period during the war when I associated habitually with criminals.¹ I cannot say that I found anything peculiarly dislikeable about them. They fell into various classes. There were debtors who had been ordered by a judge to pay more than they possessed and had therefore been sent to prison

for contempt of court. There was a rich, blind lawyer, seventy years of age, who had gone to gaol for bigamy. There was a fine, upstanding soldier who had been sentenced with what he thought undue severity for returning five minutes late from leave and had thereupon vowed that he would not do another hand's turn of fighting for the authorities: in order to keep this vow, he had made a point of stealing whisky whenever he was released from prison, which, however, occurred with increasing rarity. Then there was a fat, cheerful, good-natured fellow, who was a connoisseur in prisons and always chose his gaol with care; his reason for a criminal career was that only in prison could he escape from his wife. Then there was a man who had been for seventeen years an officer of the Salvation Army, whose boy had been fined for coming late to school; the Salvationist considered that the fine had been inflicted from malice and therefore refused to pay it; he was, however, persuaded that the Lord had led him to that place for a wise purpose. In addition to these desperate ruffians, there were three members of the Soviet Government and a large number of men who considered it their duty to obey the precepts of the Sermon on the Mount.² On the whole, the people I met in prison seemed to me more agreeable companions than the members of the best clubs.

There are, however, two types of criminals who certainly are

undesirable: they are the men who are exceptionally violent and the men who are exceptionally cunning. Murderers and forgers may be taken as representing these two types. In the case of the murderer there is, of course, an element of bad luck; almost anybody might become a murderer given sufficient provocation, but most of us have the good fortune never to be sufficiently provoked. Men differ greatly, however, as regards the degree of provocation necessary to lead them to crimes of violence. Ungovernable rage is a psychological aberration and should be treated by the psychiatrist; it is a mark of disease rather than of wickedness.

The forger and the fraudulent company promoter belong to a different category; they differ from other men chiefly by the fact that they are more optimistic; they take the chance of detection more readily than other men because temperamentally

they overestimate the probabilities in their favour. This is attributable partly to an education in boosting⁴ and partly to unduly healthy glands. The treatment to which they should be subjected is a course of Schopenhauer and lobster salad, to cure them simultaneously of optimism and good digestion.

To prevent crime there are therefore two requisites: one is to make crime contrary to self-interest, and this is a matter for the criminal law and the police; the other is to give men that degree of self-control and sound judgement which will enable them to act in accordance with their own interests - this is a matter for the psychologist. But in neither department has the moralist anything useful to contribute.

29 October 1931

ABOUT BR

(16) Onetime popular columnist Raymond Clapper defends BR during the City College case. Thanks to WHITFIELD COBB.

Clapper: 1940 *The Houston Press* Prof. Russell And N. Y. Morals

By RAYMOND CLAPPER

NEW YORK, April 3.—Everyone seemed to be having a good time laughing at Bert Lehr and Ethel Merman in "Du Barry Was a Lady." As has been the case for weeks, the theater was sold out and it was apparent as one looked around the audience that there was no house rule against minors. No one appeared to be shocked at the hilarious scenes in the old wash-room at the Club Petite and in Du Barry's bed-chamber. Gags were going over that wouldn't have been dared even in the old Century Burlesque Theater in Kansas City 30 years ago. Even those old jokes that the high-school boys used to credit to the traveling salesman brought smashing belly laughs, especially from the ladies, and they seemed fresh and crisp although obviously they had been laundered in only a half-hearted way.

Clapper

Ah! Sinful old New York. This city of moral pitfalls against which Governor Dickinson of Michigan warned the young girls of America! Yes, it was being wicked and loving it.

So it was no small shock to emerge from these two hours in which vicarious sin had been so eagerly enjoyed by a capacity audience and to find, in the late editions of the newspapers, the announcement that the youth of New York City had been saved from moral contamination.

Supreme Court Justice John E. McGeehan, responding to the alarmed cries of those who feared for the morals of New York youth, had revoked the appointment of Bertrand Russell, English mathematician and philosopher, to teach at the college of the City of New York. His private ideas about personal conduct were so unconventional as to render him unfit to lecture on mathematics to grown-up college students in New York City.

Bertrand Russell, who carries the unused title of Earl Russell, long ago reached the higher brackets in the scholastic world and recently was appointed professor of philosophy at the College of the City of New York.

Specifically, he was to lecture on modern conceptions of logic and its relation to science, mathematics and philosophy; problems in the foundations of mathematics; and the relations of pure and applied sciences and the reciprocal influence of metaphysics and scientific theories. He has lectured on these subjects at the University of Chicago and is now at the University of California in Los Angeles. Harvard also has booked him.

Dr. Russell's unconventional ideas about morals may not render him unfit to teach in those institutions, but he can't come into New York and undermine the morals of the youth here. For that, New York provides other facilities and does not intend to permit any competition from a one-man brain trust.

We Like It Funny

The case of this 68-year-old professor with the young ideas has stirred up the most intense moral issue in New York since the strip tease was barred from Minsky's burlesque and driven undercover into the top-price Broadway revues where one might take his wife and daughters. Thus New York has made the strip tease available to all. Similarly it has made Bertrand Russell's bizarre ideas, his echoes of Haverlock Ellis, available to all by the simple expedient of throwing him off the faculty of the City College.

Russell wrote for a small circulation, but the fight against allowing him to teach mathematics has resulted in the juiciest paragraphs from his obscure works being reprinted in newspapers and magazines and thrust before the whole public at three cents a copy.

He wasn't going to mention this stuff in his college lectures. The students would have been safe. But now see the peril. For a nickel they can buy the Sunday papers and read all of the dirty stuff in the text of Justice McGeehan's decision. He has quoted the cream of it.

Of course the trouble with Professor Russell, the reason his line aroused so much resistance in New York, is simple. He didn't make it funny. Most people don't like off-color stuff unless it is funny. Professor Russell could be a big success in New York and he wouldn't have to tone down his private ideas at all. Let him hire a good gag man and get his act on Broadway. Then New York would love it.

ABOUT OTHER ORGANIZATIONS

- (17) Capital District Humanist Society, Albany, NY, founded by the late Hugh McVeigh, heard John Lenz speak on the topic, *Greek Humanism, For and Against*, on May 12th. Here is some of what John said, as reported in CDHS's *The Humanist Monthly* (June 1991, p. 2), and probably written by Hugh:

RECAP MAY 12, 1991

Our May presentation was by John Lenz, Visiting Instructor of Classics at Union College. Lenz is also Vice-President of the Bertrand Russell Society, Inc. Lenz spoke on "Greek Humanism: For and Against."

Basically while ancient Greece is revered as the center for the beginnings of humanism, there is a large body of information which gives rise to the question of whether the Greeks were humanists themselves. Responding to the theory advanced by some scholars that the Greeks really stole their ideas from Egypt and Africa, Lenz noted that there are several differences as well as many similarities.

Guiding us through a catalogue of well known and not so famous Greeks, Lenz made the case that while there is a great deal of thought and philosophy which might be identified as humanistic, many of the practices of the Greeks were anything but

humanistic. Lenz noted, for example, that the Greeks were tolerant towards religion but were not towards the rejection of religion. For example, Socrates was charged with impiety and creating new gods - accused of being an atheist.

As far as ethical humanism is concerned, the Greeks failed the test. They were, according to Lenz, cultural elitists. They practice slavery. Their society was defined in terms of exclusion. And they practiced child-exposure for unwanted (mainly female) and deformed babies.

However, if the humanist ideal is a desire to live a positive life, the Greeks were closest to this ideal than any other aspect of humanism.

On balance, while the Greeks contributed mightily to the advancement of human thought and to the ideals of humanism, their practices and lifestyles were alien to what we would today regard as humanistic.

- (18) Tim Madigan, of *Free Inquiry* magazine, addressed the CDHS on the topic, *Is Supernatural Belief Inevitable?*, on June 16th. Tim speaks at a CDHS meeting every year, which reflects *Free Inquiry's* support for the CDHS. *Free Inquiry* also supports 24 similar groups around the country; one of them, for example, is in San Antonio, Texas.

THE BENARES CHAPTER OF THE BRS

- (19) Chandrakala Padia reports:

The Benares Chapter is doing very well. After the last talk in September, we arranged a two-day seminar on May 18-19 on *The Europeanization of the Earth: The Discourse of Modernity*. Professor A. K. Saran, a sociologist and former visiting Professor at Harvard, was the main speaker. People paid rich tributes to Russell.

Eight more members have joined the Benares Chapter, I will send you a detailed yearly report on this Chapter.

BRS members! Please donate more books to the Benares Chapter. We can use them! Please note our new address: Benares Chapter, BRS/ New G7, Hyderabad Colony/ B.H.U./Varanasi 5, India.

Best wishes and love to Marvin, Michael, Don, to you, Lee, and to other fellow members.

The Benares Members are listed ().

[Chandrakala is the Director of the Benares Chapter, and is also a Director of the BRS.]

Can Power Be Humanized?

by BERTRAND RUSSELL

SUCH A QUESTION as this must be treated historically and without too much concentration on the present day. The problem is one of the interaction of individual and mass psychology: How much will the ruler dare, and how much will his subjects endure? There have been times and places where extreme tyranny aroused no effective resistance and others where even a small degree of arbitrary power was quickly and successfully resented. We must try to understand what brings about such differences.

Consider, at the present day, the governments of Germany and Denmark. These two countries are neighbors, closely akin in race, religion, and language — yet the one exhibits the extreme of autocracy and militarism; the other, the extreme of democracy and pacifism. This example suffices to dispose of the idea that race, in the biological sense, is in any degree relevant to our problem; no one can reasonably suppose that Germans and Danes differ appreciably in their congenital constitution. It is as regards history, tradition, and opportunity that they differ. Those are the forces that mold national character, and it is through these forces that the humanization of power must be effected.

Democracy was invented as a means of preventing the arbitrary use of power, but its success, so far, has been strictly limited. It is greatest in the small Germanic countries — Norway, Sweden, Denmark, Holland, and Switzerland. Next in order comes the United States, but here the system has failed to secure justice for Negroes and to prevent the illegal employment of the police on the side of the rich in labor disputes. England and France are democracies at home but not in their imperial possessions. Germany and Italy have made short and precarious attempts at democracy, which the bulk of their own populations regarded as unsuccessful. Russia, Asia, and Africa have never, even temporarily, had democratic forms of government. The nations that are democratic have not always been so.

The chief conditions for the success of democracy appear to be three: first, an educated population; second, a considerable degree of cultural homogeneity; third, a greater interest in home affairs than in relations with foreign countries.

II

AS TO THE FIRST of these conditions, there is much to be said, but for the moment I shall confine myself to the obvious fact that where a majority cannot read it is impossible that there should be any widespread understanding of political issues.

Cultural homogeneity is a vague phrase, and I will try to replace it by something more precise.

What I mean exists, for example, in Switzerland, in spite of differences in race, language, and religion. It is a matter of sentiment, generated partly by history as taught in schools. A Swiss is a man to whom, from earliest infancy, William Tell has been a national hero. An American is a man who reveres the Declaration of Independence. An Englishman thinks of the Armada and the Battle of Waterloo. A Frenchman is proud of the Revolution, unless he is a reactionary — in which case he gives his allegiance to Joan of Arc.

But in addition to these educational myths there is another very powerful source of homogeneity, namely, similarity in national customs, manners, food, games, and so on. This similarity makes life at home more effortless than life abroad and gives rise to a feeling of safety which makes compatriots seem more virtuous than foreigners. Underlying all this is the instinctive love of home which man shares with other animals.

Where there is not cultural homogeneity in this sense, democracy, if it is to succeed at all, must be federal. A federal system is hardly possible unless the various groups are separated geographically. In eastern Europe, where national groups are hopelessly intermixed, democracy will be impossible until either some despot has sorted out the populations or some new creed has destroyed nationalism and created a new solidarity.

Wherever hostile relations to outside communities are more interesting to the general public than conditions at home, democracy has little chance as against a dictatorship. Democracy is a method of adjusting internal conflicts of interest and sentiment and seems unnecessary when a nation is primarily conscious of itself as a unit in conflict with others. France in the French Revolution, Russia in the Russian Revolution, and Germany since Ver-

sailles were in this situation; and in France and Germany, if not in Russia, foreign enmity was the chief immediate cause of the suppression of democracy by dictatorships. In war the sense of solidarity is such that a leader who personifies the nation easily persuades men to allow him dictatorial power, especially if there is a serious risk of defeat. War and the fear of war are at the present time the most serious obstacles to democracy.

It is obvious that the class war, where it exists in an acute form, makes the rule of force inevitable, not only because all war has this tendency but because class war destroys cultural homogeneity. When class war leads to dictatorship, as it has done in Russia, Italy, and Germany, it establishes the dictators as an oligarchical authority and, by arousing foreign enmity, makes them the representatives of patriotism. As a method of humanizing power, therefore, the class war, in its more violent forms, is inevitably doomed to failure.

Nevertheless, the problem of humanizing power cannot be solved unless it can be dealt with in the economic as well as in the political sphere. I do not believe that it will be solved in the economic sphere so long as the solution is represented as solely in the interest of the proletariat, because the industrial proletariat, in most countries, is a minority and in all countries is too weak to win without such bitter warfare as must lead to dictatorship and so to the creation of a new privileged class. If economic conflicts are to succeed in equalizing economic power, they must not be so severe as to transform economic success into political failure. It will be necessary to have a propaganda quite different from that of Marxism, which will make it clear that economic power, in an advanced capitalistic community, belongs to a mere handful of men, who control not only the proletariat but the professional class and the agriculturists and the immense majority of those who count as capitalists. A propaganda so conducted might win the

support of such an overwhelming majority that its reforms could be carried out without any very serious armed conflict. No method which involves a first-class civil war can hope, with present methods of warfare, to humanize either the economic or any other form of power.

Given democracy, both economic and political, there will still be much to be done before power is completely humanized. There must be freedom to criticize the authorities, opportunities for removing men in power if they act illegally, a spirit of toleration as between opposing groups, and a very widespread respect for legality. This last must be sufficiently strong to deter soldiers from following a general if he invites them to overthrow the civil government. Such a state of opinion is not impossible: it has existed in England since 1688 and in America since 1776.

I conclude that the humanizing of power is possible on certain conditions. First: there must not exist, within one governmental unit, such implacable hatreds as are apt to be associated with militant differences of nationality, intolerant religious disagreements, or violent class war. Second: there must be no imminent risk of serious war; that is to say there must be a federal government of the world, possessed of the sole armed forces beyond such as are genuinely needed for police purposes. Third: economic as well as political power must be democratic, which requires that the main sources of economic power should be controlled by the democratic state.

Some of these conditions may seem Utopian, but the modern world moves fast, and they may be realized sooner than now seems probable. Meanwhile, power can be humanized up to a point in each separate nation. It is more humanized in Scandinavia than in England or America and more humanized in England and America than in Germany. But for the danger of war, there would be good reason for a tempered optimism.

TRIVIA

- (21) Ah, the information age. Just a few strokes on the keyboard of our Nexis system and we're able to inform you that our pal BR is mentioned in 209 stories in The New York Times from June 1980 to the present (July 23, 1991). Not bad for a guy who's been dead 20 years, and in a paper published in a city that was down-right mean to him on occasion.
-

GRANTS COMMITTEE REPORT

Hugh Moorhead, Chairman, reports:

- (22) The 1991 \$1000 Doctoral Grant has gone to Claudio G. de Almeida, who came to McMaster University from Brazil to do graduate work. His thesis, *The Argument of "On Denoting"*, aims to show that there is an error in seeing an alleged close connection between Russell's views and Frege's, and that the historical Frege was "refuted" by Russell's arguments.

The Grant Program will continue unchanged in 1992. Grants will fall into one of two patterns: (1) A \$1000 Grant to a Doctoral Candidate, plus a \$500 Grant to a Master's Candidate, or (2) three \$500 Grants to Master's Candidates.

GOD

(23)

The following is the closing portion of a recent article -- *Theological Questions/ Scientific Answers* -- by BRS Member Wayne Douglas Smith. To borrow the complete article, write the author at 102 Windsor Castle Drive, Apt. E, Newport News, VA 23602

The Argument from Design

The most appealing religious proof for the existence of God is called the Argument from Design. We look at the world around us and admire the beautiful harmony of its arrangements. It is asserted that the universe was planned by a great designer called God.

The idea that there is a designer who planned the world is very enticing. When we examine a plant or an animal, we are struck by how appropriate the structures are to their functions. There seems to be no way in which the parts of even the tiniest organism could self-assemble to make a living machine of such complexity. Every plant and animal seems to be made just so that it could live on the earth.

The belief that everything is constructed by a great designer provides a significance and order to nature. It suggests ends and purposes where our observations would not otherwise detect them. It seems in accordance with common sense and is a very human explanation of the biological world. But the Argument from Design is fallacious.

Evolution: The Scientific Explanation

Evolution is a much more compelling explanation of why living things are adapted to their environment. It is not that the world was made to be suitable to them; it is that they evolved to be suitable to it. From all of the evidence, both fossilized and alive, scientists have pieced together a record of a billion year old process of trial and error, of success and failure, and of adaptation and diversification. These features are inconsistent with the concept of an efficient and all-knowing designer. Evolution is a very powerful process, but its power is directed to the demands of daily life and not to the endpoint of some grand design.

Evolution is the key to our understanding of life on earth, and the secrets of evolution are death and time. Enormous numbers of lifeforms that were imperfectly suited to the environment did not survive, and it took millions of years for a long succession of small mutations, that were by chance adaptive, to produce the plants and animals we see on the earth today. Evolution enables us to recognize that life has a long and continuous history during which living things have changed as they colonized all parts of the world.

Evolution explains the harmony in nature and the diversity of life on earth. The world does not require a designer, and the Argument from Design is no good as proof. Yet in those who have the seeds of a religious attitude already within them, it has a powerful effect. The Argument from Design is in truth no argument at all, but it is a potent instrument in heightening religious emotions.

RUSSELL T-SHIRTS

- (24) Where can one buy Bertrand Russell t-shirts?...we've been asked. It would take too much space here to describe the various options (long or short sleeve, several colors, etc). \$12.75 and up + shipping. For complete details, write Historical Products, P.O.Box 220, Cambridge, MA 02238.
-

ABOUT BR

(25) "Lord Russell's Letters, Documents to Be Sold," from the Los Angeles Times, 6 March 1967. With thanks to HARRY RUJA.

LONDON -- A prolific volume of letters written by Bertrand Russell -- one for every 30 hours of the British philosopher's 94-year life -- and tens of thousands more of his papers will be sold in May, almost certainly for the kind of money that only American academics can afford.

The papers, which established Lord Russell's claim to be the century's most prolific correspondent, are now being cataloged by his literary agents in London.

Besides 100,000 letters to and from Russell, most of them unpublished, there are hundreds of manuscripts, tapes, journals, diaries, notebooks, honors and awards.

These documents shed a multitude of sidelights on the literary, political and intellectual life of Britain for the last 75 years. They are also a reader's delight.

Steady Output

Lord Russell's life has been so long and his output so steady that the causes he has espoused range from the Dreyfus affair in the 1890s to Lee Harvey Oswald. He has commented on nearly every central issue of his time and has corresponded with leading figures from Alfred Tennyson to Jean-Paul Sartre to Graham Greene.

The man who was told by British statesman William Gladstone after dinner that "this is very good port they have given me, but why have they given it to me in a claret glass?" has also discussed Vietnam with Harold Wilson, who became prime minister 155 years after Gladstone was born.

At the age of 18, Russell questioned the existence of God in a ruled black exercise book, writing in Greek for fear that his Victorian family might find it. There is a later translation above the Greek in Russell's own hand.

Friend of Conrad

One surprise is the evident depth of Russell's friendship with Joseph Conrad. It is unmistakable behind the heavily formal style of their exchanges, and is not without comic relief: Conrad appeared to be obsessed with the idea that Charles I had not been executed. The two men found immediate rapport and Russell's eldest son was named after the Polish novelist.

But as in many of Russell's relations with creative writers -- with D.H. Lawrence, E.M. Forster, T.S. Eliot, Ezra Pound, as well as Conrad -- his ideological commitment was a bar to total friendship.

Conrad wrote to him: "The only ray of hope you allow is the advent of international socialism, the sort of thing to which I cannot attach any definite meaning. I have never been able to find in any man's books or any man's talk anything convincing enough to stand up for a moment against my deep-seated sense of fatality governing this man-inhabited world."

Lawrence distrusted Russell's political

evangelism: "You are simply full of repressed desires, which have become savage and antisocial. And they come out in this sheep's clothing of peace propaganda." But with Russell the man and Russell the philosopher he was able to come to terms: "We are one in allegiance, really, you and I."

Russell's Politics

Forster, as an artist, could not accept Russell's credo that men must be made decent now to build a decent society in the future. But he admired Russell's stand, and in the files there is a dogeared note written from Alexandria at the time of Russell's arrest in 1918: "In the middle of a six-course dinner at the club last night I was told you were in prison. This is to send you my love. I suppose they will let you have it when you come out."

But Russell's politics did find an echo in his time, if not among the politicians. George Bernard Shaw responded, even if Russell was sometimes "frivolous, cruel and rather stupid"; there were the Webbs, Harold Laski, George Santayana, Siegfried Sassoon -- "The only thing worth while is the honesty of one's actions." There is even a letter to Maxim Gorky.

Russell went to Russia in 1920 and recorded this impression of Trotsky: "Very Napoleonic. Bright eyes, military bearing, lightning intelligence, magnetic personality. Exceedingly good looking. Would be irresistible to women, and an agreeable lover while his passion lasted. Vanity even greater than a love of power; the vanity of an artist or an actor."

At the theater Trotsky leaned across Mrs. Philip Snowden during a tender love scene and startled her: "There is the great international language."

Russell found Lenin in contrast to Trotsky: "Nothing in his manner or bearing suggests the man who has power. He looks at his visitor very close, and screws up one eye."

Letters Many-sided

The letters are as many-sided as Russell's own life, and as important. His dry wit and laser-sharp concentration come across in almost every letter; there are few frills. Yet the man at their center remains curiously opaque, a catalyst of passion in others, the elusive center of a turning world. Only in martyrdom does the naked passion show, nowhere more explicitly than in his 1918 letter from Brixton Prison:

"I want to stand at the rim of the world and peer into the darkness beyond, and see a little more than others have seen, of the strange shapes of mystery that inhabit that unknown night ... I want to bring back into the world of men a little bit of new wisdom. There is a little wisdom in the world; Heraclitus, Spinoza and a saying here and there. I want to add to it, even if only ever so little."

FOR SALE

BR postcard. After being out of print for several years, our favorite photo of BR -- taken in 1959 by Philippe Halsman -- is once again available. \$1 for the first one, 75¢ each for more ordered at the same time. Postpaid.

17-Year Index of BRS Newsletters, covering the years 1974-1990, Issues 1-68, 43 pages, 2523 entries. Buy it for \$8 postpaid (within the USA). Or borrow it from the RS Library, \$1 postage (within the USA), plus you pay return postage, approximately \$1.

Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge." Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." USA price, \$6 for 80 sheets, postpaid. Higher postage rates plus a different weight paper are the reason for this higher price. Canada & Mexico \$8 for 80 sheets.

1990-Meeting Papers. The 10 papers presented at the 1990 Annual Meeting -- papers by Elizabeth Eames, Lee Eisler, Joan Houlding, Don Jackanicz, Marvin Kohl, Tim Madigan, Chandrakala Padia, Michael Rockler, Harry Ruja, and Thom Weidlich, 145 pages in all, bound -- can be yours for \$18 postpaid. Or borrow them from the RS Library for \$1 postage, plus you pay return \$1 postage

Buy any of the above from the newsletter, or borrow from the RS Library. Addresses on Page 1, bottom.

NEWSLETTER ITEMS WANTED

We depend on you to help us with the newsletter. Whenever you come across something in your reading that strikes you as specially interesting, please send it to us -- or send a good photocopy -- for possible inclusion in a future newsletter. If you're not sure about whether or not to send something, send it! We'll use it if we can. We need your input.

ABOUT BERTRAND RUSSELL

(31) "This Great Englishman Bertrand Russell - John Beavan talks to the famous philosopher, who is 90 tomorrow." Daily Herald (London), May 17, 1962. Thanks to HARRY RUJA.

I'm afraid I bored him. For an hour or more I came between him and his divine obsession - to save mankind from nuclear destruction.

I was wrong to demand commonplace reminiscence. The stage was set for a 'thirtyish transcendental drama. Plas Penrhyn is built on a hill: the sun was going down to the sea and the mountains were darkening.

Twice Russell took me to the balcony to admire the sky. I remembered that this used to be the time of evening when the great sceptic had to fight down his absurd, unwanted, mystical impulses.

We sat by the fire in a room of books. It was a few days before his ninetieth birthday and I had come on a pilgrimage to Portmadoc to talk to the greatest living Englishman after Churchill... the greatest logician since Aristotle... etc.

It was a different Russell from the fierce, insubstantial prophet who had looked only a few months before through the London wind might blow him away with the dead leaves. Now his cheeks were pink, the full white hair was parted and in place. His tuxedo suit and his pipe gave him solidity.

Nonsense about the Absolute

I ASKED him if he did not regret that he is known to most of us only by his ephemeral writings, superb though they often are; that his great work which gives him a firm and important place in the history of thought is understood only by the very few who had gone deeply into mathematics and logic.

Is it not sad that the world knows only the Russell who is the man of passion and prejudice, and not the philosopher?

Russell thought this was a great joke. "Only six people have read through 'Principia Mathematica' and three of those were Poles."

But had he no regrets that the movement in philosophy to which he belongs has retired into logical and linguistic problems and made it unrespectable to expound comforting theories about the nature of man and his world?

Unrepentant chuckles. "We certainly shot down the German Idealists and the nonsense about the Absolute."

"But you have even done-in political philosophy?"

"The collection of prejudices which is called political philosophy is useful," said Russell benignly, "provided that it is not called philosophy."

Lady Russell joined us and asked what we had been talking about. "Oh, philosophy and politics," he said, twinkling at me to soften the reproach—"not the things I am really interested in."

Second thoughts on education

Let me summarise the talk before dinner. Russell is not disappointed in the Labour Party because he never had great hopes of it.

Though he was a close friend of the Webbs, he never believed in Fabian "bureaucratic" socialism which replaced capitalism with Civil Servants. He favoured something like guild socialism, with fragmented social ownership and units small enough to be comprehended by everybody.

He believes this is a ~~Teaching~~ Party such as the Labour Party is virtually destroyed by a period of office in which there is achievement of some objects and compromise in others. It must be followed by a new Party of reform.

As an educationist, Russell no longer believes that children should be left free to follow their interests. "They just do not learn enough."

This was the only recantation.

After dinner, the curtains pulled, the whisky poured, we came at last to the bomb and his campaign, and the Committee of 100. "It's not what I planned to do. I hoped to spend my time reading history, enjoying an elegant leisure. But this is something I feel I have to do. If I believed in a Deity, I would say that I was obeying his command."

"Yet it is generally believed that once you advocated a preventive atomic warfare against Russia."

"The thing I am supposed to have advocated was in a private letter to some anti-Communist friends of mine in America."

"It was never well considered. America alone had the bomb, and Baruch was proposing that atomic energy should be put under international control. I thought this was a way to prevent atomic war and I hoped the Russians would accept it. If they did not, it might be worth while threatening them with atomic war on the sole issue of internationalising atomic energy."

Campaign against the bomb

"But the Russians, insisting on independence, threw it out. A great misfortune. America then was rather liberal and making a generous proposal."

"When my friends did not, later, like the line I took they published the views I had expressed in letters I had forgotten I had ever written. When I was accused of advocating these views I denied it vehemently. Then I was shown the facsimiles and I was greatly embarrassed."

I asked him how his anti-nuclear campaign began. The real start was his speech in the Lords three months after the Hiroshima bomb. Russell predicted the hydrogen bomb and advocated world government as essential to save mankind. This was applauded even by Tory peers.

"In 1954 I gave a Christmas broadcast - 'Man's Peril'. The next step was to get twelve of the most eminent living scientists to sign it. Einstein did so—his last act before he died."

"Out of this came the Pugwash conference, the expert international body on nuclear armaments on which East and West collaborate."

"Then I came to unilateralism. You

will find all the arguments for it in the words of Herman Kahn on thermo-nuclear war.

"Kahn says it would be a good thing. If the various satellites of America adopted unilateral disarmament. The British bomb adds practically nothing to the strength of N.A.T.O."

"My next point is that at the time of the U2 incident both Krushchev and Malinovsky announced that if any satellite of the U.S. permitted its territory to be used for a purpose which the Soviet Government considered unfriendly that country would be obliterated should war with America break out."

"A further point. Under the N.A.T.O. treaty, America is obliged to go to war if we are attacked in Europe. Kahn argues that America would not do so."

"Therefore the situation is this: while we remain in N.A.T.O. Russia has a motive. But the protective effect is illusory."

Equals in power and wickedness

When I protested that without N.A.T.O. there would be nothing to prevent the Russians moving West, Russell answered that he had never believed in the theory that the Russians intended world domination. What stopped them, he asked, from overrunning India?

"I think," said Russell, "that we should always treat Americans and Russians as equals in power and wickedness. I think America will embark on a preventive war. I don't think Russia will."

"There is an alliance of the Pentagon and the arms industry which is very powerful. . . . But I have never suggested that America should unilaterally give up the bomb. . . . Russian militarism is a response to American militarism and would rapidly vanish if there were no threat."

"I would like to see negotiations between Russia and America while N.A.T.O. was in process of dissolution."

"Every policy has its risks. But the worst risk is of the extermination of mankind."

"Nuclear stalemate is very dangerous. It has worked. But at any moment there might be an accident—a meteor mistaken for a bomb, a single neurotic officer. . . ."

When I demurred, Russell became very angry, especially when I confessed I had not read the technical works. Then he apologised unnecessarily and charmingly and sat back and—in the old philosophic manner—asked me to point out the flaws in his argument.

I said the argument was fine. But I did not accept the assumptions.

We parted on a note of agreement. "You cannot have a secure peace as long as the ideological evangelism goes on—on both sides."

In the exaltation of argument I forgot to wish this great Englishman a happy birthday. I do so now, with love—and regret—from a rebellious and multilateralist disciple.

BRS AWARD LAUREATES

(32) An Honor Roll the BRS can be specially proud of: the recipients of BRS Awards:

- 1980 PAUL ARTHUR SCHILPP, creator of *The Library of Living Philosophers*
 1981 STEVE ALLEN, comedian, writer, producer
 1982 HENRY KENDALL, Chairman, Union of Concerned Scientists
 1983 JOSEPH ROTBLAT, Chairman, Pugwash Committees
 1984 DORA BLACK RUSSELL, author, feminist, activist, BR's 2nd wife, mother of Kate & John
 1985 ROBERT JAY LIPTON, "for throwing new light on the nuclear threat"
 1986 *PEOPLE FOR THE AMERICAN WAY*, for opposing right-wing attempts to infringe on liberties
 1987 JOHN SOMERVILLE, for his work to prevent "omnicide", complete and irreversible nuclear destruction
 1988 PAUL KURTZ, for his devotion to secular humanism and intelligent skepticism
 1989 PAUL EDWARDS, for his contributions to Russell scholarship, and dedication to agnostic skepticism
 1990 no award
 1991 *The Planned Parenthood Federation of America*

Please send your candidates for the 1992 BRS Award to Dean Marvin Kohl, 715 Maytum Hall, SUNY, Fredonia, NY 14063.

FINANCES

(33) Treasurer Dennis Darland reports on the quarter ending 6/30/91:

Bank balance on hand (3/31/91).....	5,491.38
Income: New members.....	449.00
Renewals.....	1,770.00

New audio cassette:

206 "Life Without Fear: A View of Poetry". Russell delivered a lecture at the Poetry Center of the 92nd Street Y.N.Y.A. on October 27, 1951. The librarian has supplied the Society with a cassette of the extant portion of that talk. What remains is 36 minutes long: the final 23 minutes and 11 minutes of a question-and-answer period. The text is from New Hopes for a Changing World.

Recent acquisitions:

"Russell and Russell Studies in the USSR-A Report on What's Available" by Irving Anellis. 10pp., 1991 Donated by the author.

"Schröder at the Russell Archives" by Irving Anellis. 8pp Donated by the author.

The Art of Philosophizing and Other Essays by Russell. Donated by the publisher.

Russell, Idealism, and the Emergence of Analytic Philosophy by Peter Hyton. Donated by the publisher.

Misc:

Bulletin 20, Books and Pamphlets by Russell is available from Thomas Antiquarian Books, 15 Park Street, Bristol, BS1 5PJ England. 289 items. March, 1991.

**Bertrand Russell
 Lectures On Poetry
 Saturday, Oct. 27**

Bertrand Russell, noted philosopher, will lecture on Saturday evening, October 27th, at 8:40 p.m. in the Theresa L. Kaufmann Auditorium, as the second event in the Poetry Subscription Series, according to John Malcolm Brinnin, Director of the Poetry Center. Lord Russell, winner of the 1950 Nobel Prize for Literature, will lecture on "Life Without Fear: A View of Poetry."

Lord Russell, who says he has lost track of the exact number of books, articles, pamphlets and scientific papers he has written during his 79 years, has just completed a new book, "New Hopes for a Changing World," which will be published here early next year.

He is the holder of the British Order of Merit, a Fellow of the Royal Society, and a scientist and philosopher of international note.

Tickets for this event are \$1.50. For reservations call ATwater 9-9456 or apply in Room 259.

Here is the newspaper clipping enlarged---->

ELECTION OF DIRECTORS

(36)

Please vote. Use the ballot at the end of the newsletter.

In past voting, we have held to the desired total of 24 Directors, but have not elected the same number (8) every year. Some years it has been 9, some years 6. This year we will start evening things out; we will elect 8 this year, and 8 each year from now on.

Here are 9 candidates (in reverse alphabetical order). Vote for 8. All of them are currently Directors.

TOM STANLEY (Wilder, VT), BRS Librarian, 15-year member. Book lover, book collector, book seller. His Stanley Books specializes in used and out-of-print book.

STEPHEN REINHARDT (Wilmington, DE), 18-year member, attends every Annual Meeting, was an early BRS Treasurer for many years, has been a Director since 1976.

GLADYS LEITHAUSER (Pleasant Ridge, IL), 15-year member, originator of the BRS Book Award and Chairman of its Committee, teaches writing at U/Michigan, Dearborn. Ph.D. dissertation on Russell.

JUSTIN LEIBER (Houston, TX), 16-year member, Professor of Philosophy at U/Houston, student of A.J. Ayer, writes journal articles and fiction, chaired BRS/APA sessions.

DAVID JOHNSON (Annapolis, MD), 8-year member, BRS Philosophers' Committee Chairman, Professor of Philosophy, U.S. Naval Academy, produces annual BRS/APA session.

JOHN JACKANICZ (Chicago, IL), 13-year member, registered agent of the BRS in Illinois (where the BRS is incorporated), brother of Secretary (and Past President) Don Jackanicz.

KENNETH BLACKWELL (Hamilton, Ont.) a Founding Member of the BRS, a BRS Director since the Founding in 1974, Archivist of the Russell Archives, Editor of Russell.

ADAM PAUL BANNER (Ann Arbor, MI), 13-year member, retired industrial chemist, former Volunteer Executive for Int'l Executive Service Corp. in Thailand, Korea, Turkey, etc.

LOUIS K. ACHESON (Encino, CA), 13-year member, BRS Director since 1983, Senior Scientist with Hughes Aircraft, NASA space projects, World Federalists, Unity-in-Diversity Council, etc.

To repeat: the ballot is at the end of the newsletter. Why not use it right now?

OBITUARY

(37) John Lenz reports the sad news:

Hugh McVeigh (1908-1991) died on May 31st. He was tireless in support of numerous freethinking groups. He founded the Capital District Humanist Society, which continues to prosper in Albany. Earlier, as an attorney, he had worked for union rights. In conformity with his beliefs as a member of the Hemlock Society, he refused a pacemaker the day before he died because he was very ill and results were uncertain.

Here are two newspaper accounts:

B-8 THE TIMES UNION

Albany, N.Y., Friday, June 21, 1991

Hugh McVeigh, 83; lawyer, social activist

TROY — Hugh McVeigh, 83, of North Troy died May 31 in Samaritan Hospital after a short illness.

Mr. McVeigh was born in New York City and lived in Brooklyn and Cooperstown before moving to the Capital District in 1978.

He was a social worker in the New York City area for several years. Later, after being admitted to the

state bar, Mr. McVeigh was an attorney in private practice. He represented various labor unions.

An ardent social activist, Mr. McVeigh gave his time and money to numerous organizations.

Mr. McVeigh was the widower of Bertha Hodgson McVeigh.

Arrangements are by Zwack & Sons, Albany.

THE RECORD, TROY, N.Y.

FRIDAY, JUNE 21, 1991

A-5

Hugh McVeigh, 83, had been attorney

TROY — Hugh McVeigh, 83, of North Troy, died May 31 at Samaritan Hospital after a brief illness.

Born in New York City, he was the widower of Bertha Hodgson McVeigh.

Mr. McVeigh had been a social worker in the New York Metropolitan area and had been an attorney maintaining a law practice in Manhattan representing labor unions. He had resided in Brooklyn, moving to Cooperstown in 1978 and later to the Albany area.

Survivors include several nieces and nephews.

There were no funeral services.

Arrangements were the Zwack & Sons Funeral Home, 184 Central Ave., Albany.

(38)

BRS/APA 1991

December 28-30, 1991 is when The Philosophers' Committee of the BRS will conduct sessions at the convention of the American Philosophical Association (Eastern Division), this year in New York City. These BRS sessions are an annual event.

The Committee is pleased to announce the selection of the following two papers for its sessions. Commentators and the time and place of the sessions will be announced later.

Paper: *Russell on Pragmatism*, Jane Duran, University of California, Santa Barbara.

Abstract: Russell's views on the pragmatists are briefly contrasted, largely with Dewey's views, on two major points -- an epistemological account of truth, and the importance of the notion of "desire" for theory of value. It is concluded that the burst in interest in the work of the pragmatists has done a disservice to Russell's original criticisms, and that a particularly salient part of Russell's commentary revolves around his trenchant attack on the motivations behind pragmatist doctrine.

Paper: *Going to No-Man's Land -- a Russellian Conception of Philosophy*, Safro Kwame, Lincoln University, Pennsylvania

Abstract: In one of Bertrand Russell's conceptions of philosophy, philosophy is a no-man's land between theology and science, and a philosopher may be characterized as a "Nomanlander" or an inhabitant of an imaginary land that is owned, claimed, and controlled by no one -- whether theologian or scientist, male or female, black or white. There is much to be said for this vivid non-sexist and non-racist characterization, since Russell conceived philosophy in terms of reasoned speculations about non-scientific issues, and reason, as defined by him, is not the prerogative of any sex or race. On this account, some of the metaphilosophical issues in feminist and African philosophy, especially with respect to the existence of feminist and African philosophies, admit of easy solutions. Further, this concrete, practical and memorable characterization of philosophy provides a useful account of philosophy to both the lay person and college freshman or freshman.

RUSSELL IN RUSSIA

The following is excerpted from a report to the BRS Library Committee by BRS member Irving Anellis. The report concerns the awareness of Russell and his work in the Soviet Union. It was submitted in January 1991 and is based on research, including discussions and correspondence with Soviet scholars, conducted since early 1983. Irving also went to Moscow in August 1987 for the Eighth International Congress of Logic, Methodology and Philosophy of Science.

Politics. During the height of the Cold War, Russell was very nearly banned in the USSR, primarily in light of his slogan "better dead than red." Thus, an article of that period in the newspaper *Pravda* declared him to be "a senile, mad maniac inviting the war-mongers of Wall Street to drop an A-bomb" on peace-loving Soviet Russia. When he had second thoughts and led the anti-nuclear movement and espoused the new slogan "better red than dead," he was rehabilitated, and it was possible to mention him and his criticisms of U.S. imperialism and monopolistic capitalism.

The most available of Russell's works is Why I Am Not A Christian; it was published in large numbers and sold at a very small cost -- nearly free -- as antireligious propaganda. This goes back no doubt to the Soviet tradition of the League of Militant Atheists. There are also very recent copies of this work. While in the Moscow home of a Soviet in August 1987, I happened to see several copies of a very recent edition (1986, if memory serves) of the Russian translation of the work on my host's bookshelves. Friends of Russell might like to know that these volumes were bound in hardcover, the tan-colored leather of the cover setting off gold lettering on the spine of the books.

The Practice and Theory of Bolshevism was completely ignored in the USSR, and has never been mentioned. As recently as a few months ago, a Soviet visitor to the U.S., a member of the "New Democratic Platform" and an active participant (from the Volga region) in the walk-out of the All-Union People's Congress led by Boris Yeltsin, admitted that he had never before heard of that work. A decade ago, another colleague, at the time a recent emigre to the U.S. from the Soviet Union, complained that this work [was] "forbidden," and he mistakenly gave the title as The Theory and Practice of Bolshevism.

Philosophy. Some of Russell's philosophical works were translated into Russian, specifically Human Knowledge and A History of Western Philosophy, but with the pages on Karl Marx deleted from the translation of the History. Neither book, however, was available for sale to the public, and only limited editions were published "for scientific libraries." This reflects a policy that goes back to the early Soviet period that was enunciated by Lenin's wife, Nadezhda Krupskaya in her article

Irving admits his report is not complete. In his conclusion he calls for "[a] much more thorough, and completely documented investigation." "There is prima facie evidence," he writes, "that important work has been done in Russell scholarship by Soviet researchers in philosophy, logic, and mathematics, but that the majority of this work remains unknown to Russell scholars outside of the USSR."

"Defects of the Bureau of Political Education" in the 9 April 1924 issue of the newspaper *Pravda*. There, she expressed her preference for literary and political classics (e.g., by such writers as the novelist Tolstoy and the anarchist Kropotkin) over technical writers such as Plato, Kant or Mach and arguing that to make available the works of the philosophers ... to the masses was not harmful, but senseless, since "a man of the masses will not read Kant."

Nevertheless, Russell's published technical writings in philosophy are known to contemporary Soviet philosophers, but not, from my experience, very well known. Mikhail Kissel of the Institute of Philosophy of the Academy of Sciences of the USSR told me ... that Russell is well known in the Soviet Union as a neo-Hegelian, as a social and political philosopher, and as a logician. Kissel's remarks were evidenced also in my discussion with the Soviet philosopher of logic Z[inaida] A. Sokuler, who in the context of a discussion of the liar paradox and the Russell paradox, stated that one can infer, from the fact that one is lying, that $2 \times 2 = 369$. This is essentially the same example that Russell gave in a 1 April 1963 letter to the mathematician Leon Henkin, in which Russell suggests that Godel's incompleteness results make it possible in "school-boy arithmetic" that $2 \times 2 = 4.001$ (rather than -- what Godel's results actually mean -- that some mathematical statements are undecidable in mathematical systems such as Principia Mathematica). Sokuler knew that Russell's example, given to Henkin, is taken from the neo-Hegelian work Principles of Logic of F.H. Bradley; but it is not clear that she recognized this example as one presented by Russell also (though she did not know of Russell's letter to Henkin). Nevertheless, her presentation of this kind of example in the context of a discussion of the Russell paradox is at least suggestive of the fact that Sokuler was fully aware of the neo-Hegelian strain in Russell's concerns in [the] foundations of mathematics.

Mathematics and Logic. During the early Soviet period, Russell's Introduction to Mathematical Philosophy appeared in Russian translation, and it was still possible in the early 1960s (circa 1960-1962) to obtain copies relatively easily (in scientific libraries). Also quite readily available in some places (most notably the better scientific libra-

ries, for example, or Moscow's Lenin Library), is the Principia Mathematica.

The Role of the Russell Paradox in Soviet Research. It has been denied by some that the influence of Russell on original, on-going Soviet research in mathematical logic has been important. In his 1983 letter, for example, Schein appeared to suggest that Russell's work was neither popular nor well known in the USSR. Nevertheless, about the same time that Schein wrote his letter, there appeared a notice in the no. 7 (1982) issue of the Soviet mathematics abstracting journal Referativnyi Zhurnal - Matematika of a paper by G.D. Levin on "Dialectics and the paradoxes of set theory," published in the Soviet philosophical journal Voprosy Filosofii, no. 12 (1981), 58-68, in which the Russell paradox figures significantly. This suggests that at least some aspects of Russell's technical work is well known.

Certainly Russell's set-theoretic paradox has figured, and continues to figure, prominently both in Soviet work in philosophy ... [and] in technical mathematical work in logic and set theory. The example of L.G. Antipenko's book on philosophy of mathematics and logic, Problems of Completeness Theory and Conceptual Meaning (Moscow, Nauka, 1986) may be given, in which Russell's antinomy (the Russell paradox) is an important issue. When presenting me with this book, the author made a point of specifically indicating to me the role which Russell's antinomy played in his work.

... Soviet dialectical-materialist philosophers have engaged in a polemic against "formalism" in mathematics and logic from the beginnings of the Soviet period. They have argued in particular that, on the one hand, Godel's incompleteness results and the paradoxes of set theory are symptoms of the failures and inferiority of the "idealism" of the formal -- non-dialectical -- approach to logic and mathematics; on the other hand, they view antinomies, as Russell did during his neo-Hegelian youth, as something of value, which ought to be studied if not accepted. ...

... Soviet mathematicians and logicians, from the earliest period, worked to develop systems of mathematics and logic in which antinomies could be resolved by being "absorbed" at a higher mathematical level; that is, they developed systems in which a triadic relationship between truth, pseudotruth, and falsity (as opposed to the classical dichotomy between truth and falsity)

would account for antinomies and render them amenable to the formalistic treatment of mathematics. Thus, Kolmogorov in 1925 developed his system of intuitionistic logic in which the Law of Excluded Middle was "repealed," while the set theorist and logician D.A. Bochvar developed systems of multiple-valued logics (logics having more than the two truth values of true and false). At the present time, Soviet mathematicians have developed these early attempts to deal with the Russell paradox into quite significant and powerful mathematical tools, some of which have gained full acceptance in the West.

Of course Russell's work was also known to turn-of-the-century Russian philosophers, mathematicians, and logicians. One who was perhaps the most familiar with Russell's work during this period was Nikolai Aleksandrovich Vasil'ev (1880-1940), a logician at Kazan University who carried out his work primarily before the 1917 revolution. He was the first to propose the elimination from logic of the Law of Excluded Middle, and is thus considered the founder of multiple-valued logics, and his ideas were known to Kolmogorov and developed by Kolmogorov in his presentation of intuitionistic logic. In a speech on 23 December 1910, Vasil'ev told the History-Philosophy Faculty of Kazan University that "I presumed to make use of the advice and writings of such foreign logicians as, for example, Russell, Husserl, Poincare, and others." In fact, Vasil'ev had several formal and informal contacts with Russell; for example during Vasil'ev's time at the University of Saint-Petersburg, [he may have met] Frank Russell at the British embassy there. These direct and indirect, formal and informal contacts between Vasil'ev and Russell are currently being investigated by the Kazan State University logician, historian and philosopher of mathematics Valentine Aleksandrovich Bazhanov, who has published a biography of Vasil'ev (Moscow, Nauka, 1988).

In light of this work, Minc told me that "Russell's influence on the development of logic and philosophy in the USSR ... was in fact quite formidable." The available evidence which I have examined in reviewing the mathematical and philosophical literature suggests that the appraisal given by Minc concerning the influence and significance which Russell's work has and continues to have on technical Soviet developments is generally correct, particularly as regards logic, somewhat less so for philosophy generally.

CORRECTIONS

(42)

American Atheists' 21st Convention was written up in the May issue (RSN70-13), but we failed to put it into the May Index. Please add it to your May Index; write it under "Award Nominations Wanted". It is Item 13.

Reader's Digest article by BR, A Philosophy for You in These Times, (RSN70-34) appeared in the October 1941 issue. Thanks to Harry Ruja, Marvin Kohl, and Ken Blackwell, each of whom caught this error. Ken goes on to say, "In Reader's Digest, it appeared in highly edited form. BR's original, On Keeping a Wide Horizon, appears in Russell, No. 33-34 (1979): 5-11."

The Leonard Lyons column (RSN70-35) appeared in the New York Post, 7 Feb 1970. Thanks, Harry Ruja.

BALLOT

8 Directors are to be elected -- in this case, re-elected -- for 3-year terms starting January 1, 1992.

Make a checkmark next to each of the 8 candidates for whom you wish to cast your vote. If you vote for more than 8, it disqualifies your ballot. Information about the candidates is provided in ().

(2) CORLISS LAMONT: AN EARLY 90TH BIRTHDAY GREETING

March 28, 1992 will be the 90th birthday of philosopher, educator, and author Corliss Lamont, who also has the distinction of being one of the honorary members of the BRS. We take this opportunity to send him birthday greetings a few months in advance.

At our 1986 Annual Meeting in New York City, Dr. Lamont received "A Bertrand Russell Society Special Award...for a career that reveals values and beliefs remarkably consonant with those of Bertrand Russell." During his all too brief acceptance talk, he spoke about issues of free choice and on Russell as a humanist. We can only regret that Dr. Lamont never appeared otherwise as a speaker at our annual meetings.

Dr. Lamont, who received his Ph.D. in philosophy from Columbia University in 1932, has taught at Columbia University, the New School for Social Research, Cornell University, and the Harvard Graduate School of Education. During his long professional career, Dr. Lamont has been a theorist and/or activist in areas as diverse as death and immortality, Soviet studies, civil liberties, and humanism. His life has had remarkable episodes of controversy and excitement, which cannot be easily summarized here. We can, though, gain some appreciation of Dr. Lamont's engaging approach to life by citing this passage from Current Biography, 1946, p. 322: "'My chief personal problem,' Lamont once wrote of himself, 'is to find time for all the things I want to do both in the field of creative writing and of pure enjoyment in the exciting worlds of literature and art, drama and music, travel and sport, social intercourse, and family relations.'"

As suggested by this Who's Who In the World, 1991-1992 list of his books, it would appear that Dr. Lamont did, happily, "find time" for some substantial "creative writing": Man Answers Death: An Anthology of Poetry, Dialogue on John Dewey, Dialogue on George Santayana, A Humanist Symposium on Metaphysics, Albert Rhys Williams: In Memoriam, The Trial of Elizabeth Gurley Flynn, The Thomas Lamonts in America, Letters of John Masefield to Florence Lamont, Collected Poems of John Reed, The John Reed Centenary, Dear Corliss: Letters from Eminent Persons, Issues of Immortality, The Illusion of Immortality, You Might Like Socialism: A Way of Life for Modern Man, The Peoples of the Soviet Union, A Humanist Funeral Service, Humanism As a Philosophy, The Independent Mind, Soviet Civilization, Freedom Is As Freedom Does: Civil Liberties in America, The Philosophy of Humanism, Freedom of Choice Affirmed, A Humanist Wedding Service, Remembering John Masefield, Lover's Credo, Voice in the Wilderness: Collected Essays of Fifty Years, Yes to Life: Memoirs of Corliss Lamont, A Lifetime of Dissent, "Basic Pamphlet Series," Introduction to Contemporary Problems in the United States, Russia Day by Day. It should be noted too that the current edition of Books in Print shows 14 entries for Dr. Lamont.

To Corliss Lamont, then, we direct our thanks for his many scholarly and practical contributions, and we wish him all good things on his forthcoming birthday.

(3)

ON SIR KARL POPPER

One of the experiences which I remember well from my visit [to England] in 1936 was when Ayer took me to a meeting of the Aristotelian Society at which Bertrand Russell spoke, perhaps the greatest philosopher since Kant. (Sir Karl Popper, Unended Quest: An Intellectual Autobiography, p. 109).

In histories of modern thought, Bertrand Russell and Sir Karl Popper are routinely placed within the ranks of the foremost twentieth century philosophers. The above quotation is indicative of Sir Karl's high regard for Russell. Russell's own appreciation of Sir Karl's greatness in philosophy is suggested by his recommendation of Sir Karl's The Open Society and Its Enemies, which appeared on a paperback book cover:

A work of first-class importance which ought to be widely read for its masterly criticism of the enemies of democracy, ancient and modern. His attack of Plato, while unorthodox, is in my opinion thoroughly justified. His analysis of Hegel is deadly. Marx is dissected with equal acumen, and given his due share of responsibility for modern misfortunes. The book is a vigorous and profound defence of democracy, timely, very interesting, and very well written.

Like his colleague Corliss Lamont who will have a 90th birthday in 1992 (see page 2, section 2), Sir Karl will celebrate his own 90th birthday next year on July 28. At the June 1991 BRS Board of Directors meeting, Robert (Bob) Davis proposed that our 1992 annual meeting honor Sir Karl on this occasion. The Board voted to dedicate the 1992 annual meeting to Sir Karl, and directed Bob to inform Sir Karl of this decision and to invite Sir Karl to the meeting. Sir Karl's gracious reply to Bob's letter is reproduced on page 4. We were particularly pleased to read his comment, "...if I can come, and if I am able to speak, I shall do my best to address your society on a topic that will interest its members." We do indeed hope that Sir Karl will be able to make the trip to Washington, DC, the site of next year's meeting. The BRS will do as much as possible to make his stay with us a pleasant and memorable one for us all.

Sir Karl has been an honorary BRS member since 1978. We are honored to have Sir Karl connected with the BRS in this way. Yet some members may not feel themselves to be adequately familiar with his philosophical work. To acquaint oneself further with Sir Karl's great intellectual contributions, we would suggest first turning to Russell Society News, No. 59 (August 1988), pp. 19-21, section 24 to (re)read the transcription of Bryan Magee's audiotape on Sir Karl. One might also examine Bryan Magee's Modern British Philosophy (New York: St. Martin's Press, 1971), which features thirteen conversations between Magee and prominent contemporary philosophers, including Sir Karl (pp. 66-82, 131-149). The Encyclopedia of Philosophy article on Sir Karl by Anthony Quinton (New York: Macmillan Publishing Company and The Free Press, 1967, vol. 6, pp. 398-401) would be another good background source.

Sir Karl Popper, CH, FRS

*136 Welcomes Road,
Kenley, Surrey
CR8 5HH*

15 August 1991

Mr. Robert Davis
The Bertrand Russell Society
7711 W. Norton Ave.
W. Hollywood, CA 90046
U.S.A.

Dear Mr. Davis,

Thank you very much for your kind letter and for inviting me to come to Washington next year. Although travelling is a little difficult for me, now that I am in my 90th year, I do not exclude the possibility of coming to Washington, especially since I feel encouraged by my most recent journey to northern Spain where I attended a week-long conference on my philosophy - without any apparent ill effects! Quite the contrary, the challenge seems to have done me some good.

At any rate, I find it extremely good of you to think of me in connection with my forthcoming 90th birthday, and if I can come, and if I am able to speak, I shall do my best to address your society on a topic that will interest its members.

Please thank your Board of Directors for adopting your suggestion to invite me.

Yours sincerely,

Karl Popper

But of course the serious student will want to turn to Sir Karl's own writings. Perhaps the place to begin is The Philosophy of Karl Popper, edited by Paul Arthur Schilpp (La Salle, Illinois: Open Court Publishing Co., 1974, 2 volumes) in "The Library of Living Philosophers" series. Included is Sir Karl's "Intellectual Autobiography," which was separately published in revised form as Unended Quest: An Intellectual Autobiography (London: Fontana/Collins, 1976). Also part of The Philosophy of Karl Popper are Sir Karl's "Replies to My Critics" and a lengthy bibliography. Sir Karl's three most celebrated books--The Logic of Scientific Discovery, The Open Society and Its Enemies, and The Poverty of Historicism--merit extended study. In addition, his books include Conjectures and Refutations: The Growth of Scientific Knowledge, Objective Knowledge: An Evolutionary Approach, The Self and Its Brain (with J.C. Eccles), Realism and the Aim of Science, The Open Universe: An Argument for Indeterminism, and Quantum Theory and the Schism in Physics.

This brief excerpt from Jacob Bronowski's essay in The Philosophy of Karl Popper, "Humanism and the Growth of Knowledge" (vol. 1, pp. 606-631), provides a final glance at why Sir Karl is such an appealing figure and why we so much look forward to seeing him in June 1992:

It is the pride of the rationalist and empiricist tradition in England that it raises philosophers who combine intellectual power with liberality of spirit. Bertrand Russell has been an example in our lifetime, and Karl Popper was preordained to be a recruit to that tradition. Coming at a time in the 1930s when a generation of young scientists despaired of philosophy, he helped to reestablish its credit and relevance in the face of authoritarianism. For he insisted in his philosophy as much as in his life that there is no final sanction and authority for knowledge, even in science; that only that is knowledge which is free to change and grow; and that a condition for its growth is the challenge by independent minds.

(4) 1992 BRS DUES WILL SOON BE DUE

Please refer to the yellow sheet atop page 1 of this issue.

BRS members are reminded that 1992 membership dues are due January 1, 1992. We value having each member as a part of the BRS, and we hope each member, by virtue of his or her continuing membership, finds our programs and efforts of value. We ask you to consider renewing your BRS membership for 1992 and will appreciate hearing from you in advance of January 1. Thank you.

(5) NEWS ABOUT RUSSELL SOCIETY NEWS

To many of our members, Lee Eisler has been the personification of the Bertrand Russell Society. Since 1974 he has edited Russell Society News and performed a variety of behind the scenes "information and membership" activities, which have held our organization together. After editing (and most recently coediting) 71 issues, Lee has decided to step down as editor. Lee will continue his work as BRS Vice President/Information and will for now provide valued assistance to the next Russell Society News editors. We salute Lee on his devoted attention to serving the BRS over many years and look forward to continuing to work with him for many more.

Our thanks is also directed to Thom Weidlich, who coedited Russell Society News issues 69-71 (February-August 1991) with Lee. We hope to benefit further from Thom's fine work in his future involvement in other BRS activities. We would also like to acknowledge the coediting work performed by Ben Eshbach and Marvin Kohl in 1988-1990.

The search for a new permanent editor goes on. BRS President Michael Rockler would be pleased to hear from any member wishing to inquire about the possibility of becoming editor. Please direct such inquiries to Michael Rockler; 1029 Linden Avenue; Apartment 2; Wilmette, IL 60091. Until a permanent editor is named, a series of guest editors will attempt to carry on Lee's work. Don Jackanicz will be the first; he has agreed to edit issues 72 and 73 (November 1991-February 1992).

Beginning with this issue there will be some noticeable changes in form and content. For example, this issue has a somewhat larger type than previous issues because of the equipment used. But, for the most part, there will likely be more continuity than change.

Your observations and opinions are most welcome. Please let Don and future editors know how you feel about Russell Society News, its orientation, its style, and its content.

(6) BR BIRTHDAY GREETING CARD

John Lenz has brought to our attention a birthday greeting card featuring a photograph of Russell, his third wife, Patricia Spence, and Russell's three children in their Los Angeles home, circa 1940, playing with a model train set. The inside page message reads "Happy Birthday to Someone Who Refuses to Grow Old!" The card was published by Recycled Paper Products, Inc.; 3636 North Broadway; Chicago, IL 60613; telephone 312-348-6410. Prices shown are U.S.A. \$1.25, Canada \$1.90. Bonus--the card is indeed printed on 100% recycled paper.

(7) 1992 BRS ANNUAL MEETING: WASHINGTON, DC

Mark your calendar now! Washington, DC will be the site of the 1992 BRS Annual Meeting to be held from Friday, June 12 through Sunday, June 14 on the campus of The American University. More detailed information will appear in the February and May 1991 issues of Russell Society News. For now, though, BRS President Michael Rockler is working with Congressman Neil Abercrombie and The American University's conference staff to plan what will likely be one of our finest meetings.

The 1992 Annual Meeting will be dedicated to Sir Karl Popper, who will be celebrating his 90th birthday on July 28, 1992. Sir Karl has stated (see page 4, section 3) that he may be able to attend the meeting. If so, those present will have the opportunity to meet and hear this distinguished philosopher, who ranks among the foremost 20th century intellectuals.

Chartered in 1893 and opened in 1914, The American University is located in a pleasant northwest Washington residential area, approximately four miles from the White House. Because of the possibility of using university housing and dining services, the cost of attendance--which is yet to be determined--should be relatively low for a meeting held in otherwise costly Washington. The proceedings will feature the customary variety of presentations, as well as the Red Hackle Hour followed by a banquet at which the BRS Annual Award and the BRS Book Award will be presented.

Please direct annual meeting questions, suggestions, and program proposals to Michael Rockler, 1029 Linden Avenue, Apartment 2, Wilmette, IL 60091. We look forward to seeing you this June in Washington.

(8) BRS BUSINESS

1. Board of Directors Election. The annual Board of Directors election was conducted via the August 1991 issue of Russell Society News. The following Directors were reelected for three year terms, starting January 1, 1992: LOUIS ACHESON, KENNETH BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEPHEN REINHARDT, TOM STANLEY. Our thanks to all members who voted.

2. BRS Award and BRS Book Award Nominations. Members are encouraged to submit nominations for these annual awards to the respective committee chairmen. For the BRS Award, please write to Clare Halloran, 71-21 69th Street, Glendale, NY 11385. For the BRS Book Award, please write to Gladys Leithauser, 122 Elm Park, Pleasant Ridge, MI 48069. When submitting a name, also provide supporting evidence showing why you think your candidate qualifies for the award.

3. Contributions for Bertrand Russell Archives Publication. At the 1990 BRS Annual Meeting, the Board of Directors decided to loan funds to the Bertrand Russell Archives of McMaster University to assist in the publication of A Detailed Catalogue of the Second Archives of Bertrand Russell. This project merits our financial aid since the Catalogue will be of inestimable value to Russell students and scholars and because of the characteristically high cost of publishing specialized scholarly works of this kind. Although the BRS has received some contributions earmarked for this purpose, we again ask those members valuing the work of the Bertrand Russell Archives to consider donating some amount toward the Catalogue. Contributions, which should be payable to the Bertrand Russell Society, should be sent to BRS Treasurer Dennis Darland, 1965 Winding Hills Road, No. 1304, Davenport, IA 52807. Questions about the Catalogue should be directed to Kenneth Blackwell, Archivist, Bertrand Russell Archives, McMaster University, Hamilton, Ontario L8S 4L6, Canada. Thank you for your support of this endeavor.

4. Treasurer's Report. Treasurer Dennis Darland submitted the following report on the quarter ending September 30, 1991.

Bank Balance on Hand, June 30, 1991.....	\$8,085.21
Income:	
New Members.....	196.00
Renewals.....	217.00
Total Dues.....	413.00
Contributions.....	0.00
Interest.....	52.86
Library.....	210.15
Meeting Fees.....	775.00
Miscellaneous.....	50.50
Total Income.....	<u>+1,501.51</u>
	9,586.72
Expenditures:	
Info. & Memb.....	3,170.03
Library.....	7.72
Meetings.....	40.00
<u>Russell</u>	2,304.00
Doctoral Grant.....	1,000.00
Miscellaneous.....	50.67
Total Expenditures.....	<u>-6,572.42</u>
Bank Balance, September 30, 1991.....	\$3,014.30

Notes: "Info. & Memb." refers to the Information and Membership Committees; "Russell" refers to subscriptions to Russell: The Journal of the Bertrand Russell Archives.

5. Contributions. As the above Treasurer's Report shows, there were no reported contributions over the last quarter. If you are able to make a yearend contribution to the BRS, your generosity will be greatly appreciated.

(9) RUSSELL-RELATED EXHIBIT IN PHILADELPHIA

The Manuscript Society News, vol. 12, no. 4, Fall 1991, p. 128, reports the following:

Exhibits at the Rosenbach Library in Philadelphia, Pa., include "The Poet's Pen: Poetry in Manuscript" and "Dr. Albert C. Barnes and Bertrand Russell: A Philosophical Difference?" Both are open through mid-January.

The Rosenbach Museum and Library, 2010 Delancey Place, Philadelphia, PA 19103, telephone 215-732-1600, is open Monday through Friday, 9:00 a.m. to 5:00 p.m. According to the Directory of Archives and Manuscript Repositories in the United States, its holdings include "a collection of literary manuscripts and correspondence of major English and American authors...correspondence, diaries, journals, logbooks, financial records, and manuscript public documents of American historical persons and activities...[and] materials relating to western exploration and settlement...." These materials include some documentation relating to Albert C. Barnes and the Barnes Foundation, located outside Philadelphia in Merion, Pennsylvania, at which Russell was a lecturer from 1941 to 1943. We contacted the Rosenbach Museum and Library, which promises to send us further information about its Barnes-Russell exhibit. Those persons able to visit the exhibit are encouraged to write to Russell Society News about their exhibit experience.

(10) BRS AT THE AMERICAN PHILOSOPHICAL ASSOCIATION MEETING

The BRS's annual American Philosophical Association (Eastern Division) session will be held during the APA's Annual Meeting in New York City, December 28-30, 1991. BRS Philosophers' Committee Chairman David E. Johnson has engaged Jane Duran of the University of California, Santa Barbara and Safro Kwame of Lincoln University, Pennsylvania to present their respective papers, "Russell on Pragmatism" and "Going to No-Man's Land--A Russellian Conception of Philosophy." Abstracts of these papers appeared in RSN-71 (August 1991).

Chairman Johnson has distributed this announcement to appropriate journal editors in connection with the 1992 APA Annual Meeting:

The Bertrand Russell Society announces a call for papers to be presented at its meeting with the Eastern Division of the American Philosophical Association in December 1992. Papers may be on any aspect of Russell's philosophy. They should have a reading time of about one half an hour and should be submitted in triplicate,

typed and double spaced with an abstract of not more than 150 words. The name and address of the author and the title of the paper should be submitted on a separate page. The submission deadline is April 1, 1992 and the papers should be sent to David E. Johnson, Chair, Philosopher's Committee, The Bertrand Russell Society, Sampson Hall, 107 Maryland Avenue, U.S. Naval Academy, Annapolis, MD 21402-5044. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

(11)

NEWS ABOUT MEMBERS

John Lenz, the BRS Vice President, moved from New York City to College Station, Texas in August 1991 to accept his new position in the Languages Department of Texas A & M University. John was formerly a faculty member at Union College, Schenectady, New York.

Gonzalo Garcia of Glendale, CA wrote the following in October 1991 to former BRS Chairman Harry Ruja:

I just joined The Bertrand Russell Society, Inc., in my desire to be part of the group of persons, like you, who share his humanistic ideas on world affairs.

My personal feeling...was that, after the death of BR, nobody has filled the vacuum of his strong leadership as an apostle of...world pacifism.

The lack of such [a] charismatic personality made [it] easier for the military-industrial complex to promote a pervading campaign, during the last Persian Gulf conflict, implanting in every American mind the jingoistic gimmick "Yellow Ribbons" or "Support our troops."

No question that this extremely chauvinistic campaign won totally the American public opinion, ignoring the two hundred thousand Irakis, men, women, and children...[who died] in such a conflict, just to support another gimmick, the so-called "National Security" (oil).

I wonder if the present political climate, full of macho "rambos" has made completely obsolete the BR ideals of a world without wars.

Are BR ideas dead or alive?....

This letter's writer and recipient have made the above available to the entire BRS. If you wish to respond to Mr. Garcia's comments and his final question, please write to him in care of the RSN.

Nicolas Griffin, a McMaster University (Hamilton, Ontario) Philosophy Department professor, informed us that his forthcoming book of Russell's letters, The Private Years, 1885-1914, volume 1, was submitted to Penguin Books in August 1991. Publication is planned for Spring 1992. Mr. Griffin's other recent book, Russell's Idealist Apprenticeship, was published earlier this year by Oxford University Press.

(12)

"WAR AND PEACE IN OUR TIME"

Harry Ruja located this article on an editorial-opinion page of the Cleveland Plain Dealer for November 1, 1951.

War and Peace in Our Time

Three Kinds of War Curse Mankind and Destroy Civilization

By HYMAN HOROWITZ

This is the last of three articles dealing with the world problems of war and peace today.

Three Choices

Bertrand Russell, in one of his philosophical essays that he himself calls "unpopular," sees one of three possibilities for mankind before this century is over. 1—End of human life; 2—Reversion to barbarism; 3—Unification of the world under a single government controlling all major weapons. He prefers the third possibility, but since the prospect of agreement is in doubt, this may come as a result of war. Russia, or America, or both, might survive, and one or the other would rule the world. He wishes that it might be America.

It seems that the part of realistic wisdom would be for the two dominant powers not to resort to instruments of destruction on the chance that one or the other might

emerge the victor. America would not start it, and there is reason to believe that neither would Russia. Stalin, unlike Hitler, is not believed to be the maniac that will rush to pull down his country or the whole world to obliteration.

Fanatical Ideology

Speaking recently in Cleveland, President Mordcai W. Johnson of Howard University asserted that peace was possible and urged America to work for it even at a price which may be staggering, but still honorable. He said:

"Communism is a powerful revolutionary movement in the realm of ideas and human organization. If peace is to be achieved with Russia and with the Communists it must be achieved in the field of ideas and in the field of human organization."

If we settle for a part of the world, we can lighten our burden considerably. Adequate defense measures will still be necessary, but it should not take out of us as much as if we were readying ourselves constantly for all-out war, or for a contingency that we may construe as a call upon us to liberate some distant part of the world. We may decide to hold whatever we have, but will not send American boys to fight wars of other heroes, be they of the Chiang Kai-shek or Tito variety.

The idea of holding your ground and working for peace may be the only solution to the present crisis. It is not new either. I wish to call attention to an article in a recent issue of This Week magazine by United States Senator Flinders,

entitled "The Sword and the Bible." He advocates a top limit to defense expenditures to be used primarily for "the establishment of production lines and equipment rather than to accumulating vast stores of fabricated war material which may quickly become obsolete." By setting a limit, though high, we can save the country from economic disaster and concentrate on the moral precepts and selling peace ideas to the world. It might be added that preserving America's way of life by letting the people have all the benefits they can get is in itself a way of selling democracy.

Not Isolationism

Will that be isolationism?

Some will call it that, although they may sound silly. America, that has grown in 175 years from 13 small colonies to its present size, is anything but isolationist. Its participation in the two world wars was contrary to isolationism. It is bound to hold every piece of territory from Berlin to Tokyo until there is a reasonable settlement along the whole line. It is ready to aid and support its friends to the extent of its ability. But it is not going to gamble everything on another world war and bankrupt itself by spending and giving away what is essential for the health and welfare of the nation.

It is neither isolationism nor selfishness. It is sound realism, which might be just the answer to the prayers of good Americans for freedom from the curses of war and dictatorship.

(13)

OTHER ORGANIZATIONS AND THEIR MEETINGS

BRS member John A. Wilhelm informed us in August 1991 that a new atheist group has been established in San Diego. Inquiries should be directed to The Atheist Coalition, P.O. Box 880464, San Diego, CA 92168, telephone 619-497-0926.

The 22nd Annual Convention of American Atheists will be held April 17-19, 1992 at the Hyatt Regency Hotel in Austin, Texas. Speakers will include Madalyn O'Hair and Frank R. Zindler. Inquiries should be directed to American Atheists General Headquarters, P.O. Box 2117, Austin, TX 78768-2117, telephone 512-458-1244.

BRS member Nicholas Griffin wrote the following account to us in August 1991: "There was a very exciting conference on Russell's philosophy at the University of British Columbia in June. There were people from the US, Britain and Canada and there was a fair amount of agreement as to what Russell was up to and what issues were important for him. The (emerging) consensus among philosophers about Russell is quite different now from what it was 20-30 years ago. The old issues of that period were barely mentioned. He comes to look more and more important all the time. A volume of papers based on the conference should appear in due course." We would appreciate receiving further information about this conference from anyone who may have attended.

BRS President Michael Rockler submitted the following report on the Free Inquiry conference in Kansas City:

The annual conference sponsored by FREE INQUIRY magazine was held in Kansas City, Missouri from October 31 through November 3, 1991. It offered an interesting and enjoyable program. The meeting began on Halloween evening with a night of music, magic and entertainment. A seance was held that attempted to reach Harry Houdini. Sadly, Harry was not available.

The theme of the conference was "Humanism and Changing Traditional Values." Sessions reflecting this theme were held on Friday, Saturday and Sunday. Friday's program focused on humanism and the family. On Saturday, the conference examined issues related to religion including an interesting session entitled, "Raising Irreverent Children." On Sunday I represented the Bertrand Russell Society and spoke on "Religion, Education, and Curriculum Reform." I shared time with John Brock of the John Dewey Society. Our panel was chaired by Tim Madigan.

The program for Friday's luncheon focused on the work of Dr. Jack Kevorkian who has been involved in physician assisted suicide. Dr. Kevorkian was to address the session but could not attend on the advice of his lawyer. He addressed the luncheon gathering by telephone instead. Dr. Kevorkian is currently facing charges for aiding the suicide of two women in Michigan.

On Friday evening the awards banquet was addressed by William R. Young who is the deputy director of the Master's and Johnson Institute. He spoke on "Sex Research--Back to the Future." Entertainer Steve Allen received an award for the best humanist book of the year. His book, which is a critique of the Bible, is available from Prometheus Press in Buffalo.

Allen entertained on Saturday evening at the Granada Theater in Kansas City, Kansas. This event, which was open to the public, drew an audience of about one thousand persons. Steve Allen demonstrated his many talents as both a comedian and a musician. When asked why he didn't consider running for U.S. President, Allen replied that he thought there were already enough comedians in Washington.

The FREE INQUIRY conference was a well organized and informative one and I was pleased to be there. FREE INQUIRY will hold another conference in Toronto beginning on June 21, 1992. Members of the Bertrand Russell Society should plan to attend and participate in this meeting. The Council for Democratic and Secular Humanism, which publishes FREE INQUIRY, is an organization which promotes ideals that were enunciated by Bertrand Russell.

Information about Free Inquiry and the June 1992 Toronto conference mentioned about may be requested from the Council for Democratic and Secular Humanism, Inc., P.O. Box 664, Buffalo, NY 14226-0664, telephone 716-636-7571.

(14) DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
(Elected for 3 Year Terms, As Shown)

1989-91: LOU ACHESON, ADAM PAUL BANNER, KENNETH BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEPHEN REINHARDT, TOM STANLEY.

1990-92: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, STEVE MARAGIDES, FRANK PAGE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA, THOM WEIDLICH.

1991-93: IRVING ANELLIS, ROBERT DAVIS, ROBERT JAMES, HUGH MOORHEAD, CHANDRA-KALA PADIA, HARRY RUJA.

The six BRS Officers are also Directors, ex officio.

See page 7, section 8 for results of the Directors election for 1992-1994.

(15) RUSSELL: THE JOURNAL OF THE BERTRAND RUSSELL ARCHIVES

Another issue of Russell: The Journal of the Bertrand Russell Archives--New Series, vol. 11, No. 1, Summer 1991--has appeared. BRS members receive Russell as a membership benefit. Reproduced below in reduced size is the Russell Archives's order form for Russell backissues, providing a convenient list of the journal's principal articles over 20 years. Congratulations to Russell editor Kenneth Blackwell and his Russell Archives colleagues, who have for so long produced this fine publication.

~TWENTY YEARS OF RUSSELL STUDIES~

russell:

the journal of the Bertrand Russell Archives

McMaster University Library Press, McMaster University, Hamilton, ON Canada L8S 4M6. (416) 521-9140 ext. 4738. FAX (416) 546-0635

"This journal should be consulted for the general range of Russell scholarship." I. Grattan-Guinness, *Notes & Records of the Royal Society*

Prices are in Canadian dollars. The institutional price is first, followed by the price for individuals. Issues No. 1, 5 and New Series 9, no. 1 are in such short supply that they are available only with the purchase of complete sets. Subscriptions are \$27 annually for institutions, \$15.50 for individuals. Add \$1.50 postage in Canada, \$2.50 internationally.

2. New Audio Cassette.

- 207 "Alfred North Whitehead," the first broadcast in the BBC series "Portrait from Memory." July 3, 1952. 13 minutes. Donated by Sheila Turcon.

3. Videotapes To Lend.

260 Donahue interviews Gore Vidal. Also, a Jonathan Miller interview.

262 "The Life and Times of Bertrand Russell." Produced by the BBC as part of Russell's 90th birthday celebration.

--- NBC's "Bertrand Russell." Interviewed by Romney Wheeler, Russell deals with autobiographical, philosophical, and political topics.

263 Woodrow Wyatt Interviews. Five short television interviews: "Bertrand Russell Discusses Happiness," "Bertrand Russell Discusses Philosophy," "Bertrand Russell Discusses Power," "Bertrand Russell Discusses the Role of the Individual," and "Bertrand Russell Discusses Mankind's Future."

264 "Bertie and the Bomb." A BBC documentary about Russell's last years and his involvement with the early years of the Campaign for Nuclear Disarmament. Interviews with friends and contemporaries.

265 "Bertrand Russell." A lecture by Professor Giovanni Costigan of the University of Washington. An introduction to Russell's life and work.

266 "The 'People For' Story." Produced by People for the American Way.

267 CBS "Close-Up" Interview. Interviewed by Elaine Grand, Russell discusses his childhood, the threat of nuclear war, Einstein, the emancipation of women, and his religious views.

268 "Humanism: Making Bigger Circles." A documentary about the American Humanist Association.

269 Woodrow Wyatt Interviews. Four short television interviews: "Bertrand Russell Discusses Taboo Morality," "Bertrand Russell Discusses Religion," "Bertrand Russell Discusses Fanaticism and Tolerance," and "Bertrand Russell Discusses Nationalism."

270 Woodrow Wyatt Interviews. Four short television interviews: "Bertrand Russell Speaks His Mind." The topics are Great Britain, communism and capitalism, war and pacifism, and the H-Bomb.

The loan fee for videos is \$4.00 each.

*** The Library's VHS copies of the "Meeting of the Minds" tapes, hosted by Steve Allen, are defective and not repairable. The master cassettes are in the Beta I format. Does any member have the facilities to transfer these to the VHS format? If so, please contact Librarian Tom Stanley.

THE BRS FACT SHEET

If you are looking for a concise statement of the BRS's aims and programs-- which could be used to introduce others to the BRS--we suggest this Fact Sheet (here shown in reduced size), periodically updated by Lee Eisler.

Fact Sheet
THE BERTRAND RUSSELL SOCIETY, INC.
Founded 1974

General aims: to foster a better understanding of Russell's work, and to further his aims by promoting ideas and causes he thought important.

Some specific aims: to present Russell's ideas as attractive, rational alternatives to alienation, cynicism, and belief in the supernatural; to oppose misuses of science and technology; to encourage new scholarly and popular works on Russell; to make Russell's views better known -- they deal with virtually all the problems facing modern man, from how to be happy to how to work for nuclear disarmament.

Why people join: most members join (they have told us) for one or more of five reasons: to learn more about Russell; to be in touch with other admirers; to work for things Russell worked for; to discuss Russell's work with others; to do something useful for others via the BRS.

Most members are members of the general public, and are of diverse back-grounds.

Academe. The BRS membership list includes professional philosophers. The BRS aims to promote Russell scholarship; a BRS session is held each year at the annual meeting of the American Philosophical Association (Eastern Division); BRS grants are offered to Doctoral and Master's candidates. Papers from the sessions and grant-recipients' dissertations -- as well as papers presented at the BRS Annual Meeting (starting 1990) -- are available from the BRS Library.

BRS Library lends films and tapes on Russell as well as books by and about him. A limited number of books are offered for sale.

How the BRS functions: the BRS meets annually, in June. Committees work in specific areas (next item). Members receive the BRS quarterly newsletter *Russell Society News*, and from Macmaster University, *Russell*, the Bertrand Russell Archives' semi-annual periodical.

Committees: Science Committee deals with selected scientific issues. Philosophers Committee organizes the annual BRS session at the APA (Eastern Division) meeting. Award Committee selects recipients for annual BRS Award (next item). Book Award Committee, as its name implies, selects a book to receive the Book Award.

BRS Award. Past recipients: PAUL ARTHUR SCHILPP (1980), creator of "The Library of Living Philosophers", for promoting Russell scholarship; STEVE ALLEN (1981), creator of the TV series, "Meeting of Minds," for promoting public awareness of Russell; HENRY W. KENDALL (1982), Chairman, Union of Concerned Scientists, for anti-nuclear studies and campaigns; JOSEPH ROTBLAT (1983), for organizing the first 23 Pugwash Conferences; DORA BLACK RUSSELL (1984), for sharing Russell's concerns, collaborating in his work, and helping to perpetuate his legacy; ROBERT JAY LIPTON (1985), for providing new psychological insights into the nuclear peril; PEOPLE FOR THE AMERICAN WAY (1986), for exposing and opposing the current crop of self-appointed guardians of American morality and culture. JOHN SOMERVILLE (1987), for his efforts to alert mankind to the threat of "omnicide", total and irreversible destruction by nuclear weapons; PAUL KURTZ (1988) for his unswerving commitment to skepticism and his undaunted devotion to secular humanism; PAUL EDWARDS, (1989), Editor-in-Chief of Macmillan's 8-volume *Encyclopedia of Philosophy*, for his agnostic skepticism and scholarly contributions to the growing renaissance in philosophy; PLANNED PARENTHOOD FEDERATION OF AMERICA (1991) for making life better for many women.

Degree of member activity: members may be as active or as inactive as they wish. Some are very active; some wish merely to be kept informed. No matter. Anyone interested in Russell will be welcome as a member.

BRS Information Committee
1664 Pleasant View Road, Coopersburg, PA 18836

(19)

BRS GRANT PROGRAM

This announcement (here shown in reduced size) has been mailed to numerous universities. We encourage grant applications from all qualified students.

"The good life is one inspired by love and guided by knowledge"

THE BERTRAND RUSSELL SOCIETY, INC.

Please post

2 Grant Announcements

1992: A PROGRAM of DOCTORAL and MASTER'S GRANTS

1991: THE DOCTORAL GRANT AWARD

1992. The Bertrand Russell Society will award funds to help defray expenses of currently enrolled Doctoral and Master's candidates for graduate level degrees, whose proposed dissertation (Ph.D.) or thesis (M.A.) best gives promise of dealing in a significant way with the thought, life or times of Bertrand Russell.

Depending on the number and quality of applications, the award money will fall into one of two patterns: (a) \$1000 for a doctoral candidate and \$500 for a master's, or (b) \$500 to each of three candidates for the master's.

Candidates are required to send to the Society:

- (1) An abstract of his/her dissertation or thesis, and plan of study.
- (2) A letter from the Chairman of the candidate's department which states the following: (a) for the Ph.D. candidate: that all work for the doctorate has been completed except the dissertation, and that its topic has received academic approval; (b) that the candidate for the master's is actively involved in graduate study, and is studying Russell via course work, personal reading, and/or research.
- (3) (a) A letter from the dissertation adviser evaluating the applicant and plan of study. (b) A letter from the Chairman or potential thesis advisor evaluating the applicant and probable plan of study.
- (4) A statement in the candidate's covering letter saying that if a grant is awarded, he/she will provide the Society, at its expense, with a copy of the completed work as approved by the department.

Applications and supporting documents should reach Professor Hugh S. Moorhead, Chairman, Philosophy Department, Northeastern Illinois University, 5500 North St. Louis Avenue, Chicago, IL 60625 by May 1, 1992. The recipients will be announced on or around July 1, 1992.

Please note: Candidates may be enrolled in any field. Past grants have gone to students studying History, Mathematics, and Philosophy. English, Education, Sociology and Psychology are other likely fields.

The 1991 \$1000 Doctoral Grant has gone to Claudio G. de Almeida, who came to McMaster University from Brazil to do graduate work. His thesis, *The Argument of "On Denoting"*, aims to show that there is an error in seeing an alleged close connection between Russell's views and Frege's, and that the historical Frege was "refuted" by Russell's arguments.

Honorary Members: Sir Alfred Ayer, Paul Edwards, Louis Pauling, D.F. Pears, Sir Karl Popper, Conrad Russell, The Earl Russell, Paul A. Schilpp, Katherine Russell Ltd

"GRANT-92" (F3)

(20) "TELL ME, LORD RUSSELL; WHAT'S IT ALL ABOUT?"

Here is an article that begins and ends with Russell. It appeared in the Ed. Notes [Editorial Notes] column of American Libraries, vol. 22, no. 10, July/August 1991, p. 604, which is a publication of the American Library Association.

Tell me, Lord Russell; what's it all about?

BY TOM GAUGHAN

Not too many stories in our world summon up metaphysical considerations such as, "What is true?" or anecdotes about philosopher Bertrand Russell. But an *AL* news report (p. 613) about failed talks between the Research Libraries Group (RLG) and OCLC that might have led to a single national database did just that.

Researching the news story, I read an RLG press release that stated that the RLG Board of Governors had unanimously rejected OCLC proposals for linkage.

An OCLC spokesperson's response was unequivocal: Negotiators for both sides reached an agreement which was later rejected by the RLG board.

I learned my meager metaphysics at the movies, and the film that came to mind was *Rashomon*. In that classic, travelers in 9th-century Japan are set upon by a bandit. The crime that occurs is acted out again and again through the eyes of victims and villain alike. Each participant's version makes them the personification of nobility of conduct. *Rashomon* eloquently asks, how can we ever know what is true?

In 11 years supervising staff in libraries, *Rashomon* came to mind whenever I listened to wildly different accounts of the same event. The only answer I'd found was to listen carefully, so I called RLG President Jim Michalko and OCLC CEO Wayne Smith, two of the most intelligent, interesting, and engaging people in the field.

Michalko confirmed the RLG press release, adding, "We made a good faith run at it [agreement] and that was really in order."

Smith said, "I'm disappointed. We had an agreement; their board rejected it unilaterally. We tried hard and very earnestly. I've spent 20-25% of my time on this for the last six months."

Smith said the agreement required Justice Department certification that no violation of antitrust laws was involved. "We tailored the process to recognize legal parameters, economic realities, and benefit to libraries."

I asked both about the importance of building a single national database. Michalko suggested that "large central processing facilities may not be the paradigm of the future. Three, five, seven years from now, that kind of system-to-system linkage may not be relevant."

"I've worked in higher education, government, industry, and the military, and libraries are the most resource-constrained environment I've ever seen," Smith said with emotion. Maintaining two large databases, he told *AL*, is "senseless and needless overlap and duplication. I used to be an economist, and this just doesn't make any sense. The real loser is the American library community."

Michalko told *AL*, "In the final analysis, we just don't dream the same dream."

Smith restated his ideas about comparative advantage—different organizations focusing on what they can do best for the benefit of all libraries. During negotiations, he said, OCLC had offered funding for important ongoing RLG programs. Concluding, he said, "Our door is always open. We're always willing to talk, but we're a tough competitor."

Wanted: A single truth
Conversations with the principals hadn't illu-

minated a single gleaming, unassailable reality. In *Rashomon*, another view is offered by a witness, a woodcutter without a personal stake in the event, so I tracked down a number of librarians familiar with the issues.

But there aren't any woodcutters. Most librarians who really know the organizations are research library directors with a stake in one utility or the other.

A former RLG library director said OCLC's concern about antitrust was overdone. "The landscape is littered with those who've tried to negotiate with OCLC."

The retired director of an OCLC library told me he still bore the "scars" of a heavy-handed RLG recruitment attempt. The president of another university, an RLG member, lobbied the librarian's president to join RLG; the librarian had to defend his choice of OCLC.

The director of a large OCLC library said RLG is financially weak, that it can't continue to maintain its database, and that spurning OCLC was a ruinous decision.

An RLG supporter retorted that RLG has balanced its budget for the last five years and that database activities account for the majority of RLG revenues.

Listening carefully to the participants didn't illuminate that gleaming truth either. There was no woodcutter. Cultivating knowledgeable observers simply harvested that many "truths."

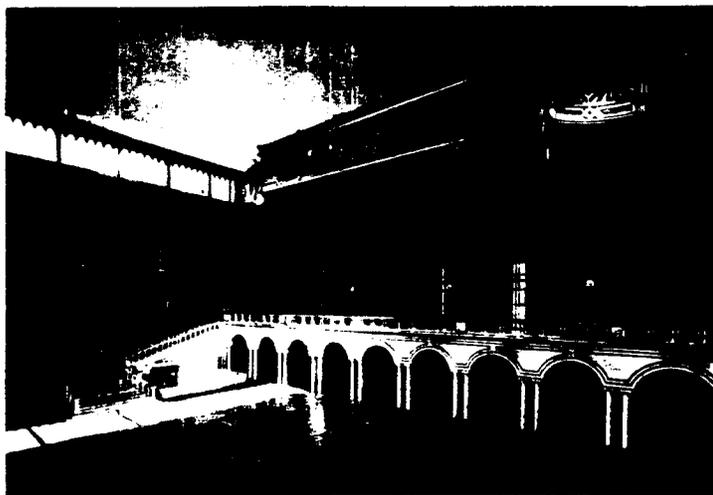

The only answer is the one Bertrand Russell gave to a London cabbie who looked at him in the rearview mirror and asked, "Tell me, Lord Russell; what's it all about?"

Russell smiled and replied, "I don't know."

THE NOBEL PRIZE: PART I

Bertrand Russell received the Nobel Prize for Literature on December 10, 1950. As is customary, the ceremony was held in Stockholm's City Hall. Reproduced below are views of that fine building and two of its magnificent reception rooms in which the proceedings took place.

(22)

THE NOBEL PRIZE: PART II

The University of Chicago is celebrating its 100th anniversary in 1991-1992. Bertrand Russell held a visiting philosophy professorship there from October 1938 to March 1939. This article from the Chicago Sun-Times of October 6, 1991 shows Russell among distinguished company at the University of Chicago.

Nobel callings

The university's ranks yield 61 winners of the prestigious prize

Sixty-one Nobel Prize winners have been University of Chicago students, faculty members or researchers. The U. of C. Nobel laureates (bullets denote the eight current members of the university faculty):

Luis W. Alvarez, Physics, 1968
 Kenneth J. Arrow, Economic Sciences, 1972, with Sir John R. Hicks
 George Wells Beadle, Physiology or Medicine, 1958, with Edward Lawrie Tatum and Joshua Lederberg.
 • Saul Bellow, Literature, 1976
 Hans Albrecht Bethe, Physics, 1967
 Konrad Bloch, Physiology or Medicine, 1964, with Feodor Lynen
 Herbert C. Brown, Chemistry, 1979, with Georg Wittig
 James McGill Buchanan, Economic Sciences, 1986
 Alexis Carrel, M.D., Physiology or Medicine, 1912
 Owen Chamberlain, Physics, 1959, with Emilio Gino Segre
 • Subrahmanyan Chandrasekhar, Physics, 1983, with William Fowler
 Arthur Holly Compton, Physics, 1927, with Charles Thomson Rees Wilson
 • James W. Cronin, Physics, 1980, with Val L. Fitch
 Clinton Joseph Davison, Physics, 1937, with Sir George Paget Thomson
 Edward Adelbert Doisy, Physiology or Medicine, 1943, with Henrik Carl Peter Dam
 Sir John Carew Eccles, Physiology or Medicine, 1963, with Sir Alan Lloyd Hodgkin and Sir Andrew Fielding Huxley.
 Thomas Stearns Eliot, Literature, 1948
 Enrico Fermi, Physics, 1938
 Manhattan Project
 James Franck, Physics, 1925, with Gustav Hertz
 Jerome Friedman, Physics, 1990, with Henry Kendall and Richard

George J. Stigler (right) and then-President Ronald R. Reagan meet in 1982, when Stigler won the Nobel Prize for Economics.

Taylor
 Milton Friedman, Economic Sciences, 1976
 Murray Gell-Mann, Physics, 1969
 Maria Goeppert-Mayer, Physics, 1963, with J. Hans D. Jensen and Eugene P. Wigner
 Trygve Haavelmo, Economic Sciences, 1969
 Friedrich August Von Hayek, Economic Sciences, 1974, with Gunnar Myrdal
 Werner Heisenberg, Physics, 1932
 Gerhard Herzberg, Chemistry, 1971
 • Charles Brenton Huggins, Physiology or Medicine, 1966, with Peyton Rous
 Lawrence R. Klein, Economic Sciences, 1980
 Tjalling Koopmans, Economic Sciences, 1975, with Leonid Kantorovich
 Ernest Orlando Lawrence, Physics,

1939
 • Leon Lederman, Physics, 1988, with Dr. Jack Steinberger and Dr. Melvin Schwartz
 Tsung-Dao Lee, Physics, 1957, with Chen Ning Yang
 Yuan T. Lee, Chemistry, 1986, with Dudley Herschbach and John Polanyi
 Willard Frank Libby, Chemistry, 1960
 Harry M. Markowitz, Economic Sciences, 1990, with Merton H. Miller and William Sharp
 Albert Abraham Michelson, Physics, 1907
 • Merton H. Miller, Economic Sciences, 1990, with Harry H. Markowitz and William Sharp
 Robert Andrews Millikan, Physics, 1923
 Hermann Joseph Muller, Physiology or Medicine, 1946

Robert S. Mulliken, Chemistry, 1966
 Ilya Prigogine, Chemistry, 1977
 Bertrand Russell, Literature, 1950
 Paul A. Samuelson, Economic Sciences, 1970
 J. Robert Schrieffer, Physics, 1972, with John Bardeen and Leon N. Cooper
 • Theodore W. Schultz, Economic Sciences, 1979, with Sir Arthur Lewis
 Julian Schwinger, Physics, 1965, with Richard P. Feynman and Sin-Itiro Tomonaga
 Glenn Theodore Seaborg, Chemistry, 1951, with Edwin Mattison McMillan; Manhattan Project, 1942-46
 Herbert A. Simon, Economic Sciences, 1978
 Roger W. Sperry, M.D., Physiology or Medicine, 1981, with David H. Hubel, M.D., and Torsten N. Wiesel, M.D., Ph.D., 1941
 William H. Stein, Chemistry, 1972, with Stanford Moore and Christian B. Antinsen
 Dr. Jack Steinberger, Physics, 1988, with Leon Lederman and Dr. Melvin Schwartz
 • George J. Stigler, Economic Sciences, 1982
 Edward Lawrie Tatum, Physiology or Medicine, 1958, with George Wells Beadle and Joshua Lederberg
 Henry Taube, Chemistry, 1983
 Harold Clayton Urey, Chemistry, 1934
 George Wald, Physiology or Medicine, 1967, with Haldan Keffer Hartline and Ragnar Granit
 James Dewey Watson, Physiology or Medicine, 1962, with Francis Crick and Maurice Wilkins
 Eugene Wigner, Physics, 1963, with Maria Goeppert-Mayer and J. Hans D. Jensen
 Chen Ning Yang, Physics, 1957, with Tsung-Dao Lee
 Karl Ziegler, Chemistry, 1963, with Giulio Natta ■

PSYCHOLOGISTS ON RELIGION

This article appeared in the New York Times, September 10, 1991, pp. C1, C8.

Therapists See Religion as Aid, Not Illusion

By DANIEL GOLEMAN

EDDIE, just 16 years old, had a record of nine arrests, including rape, assault and battery and drug dealing. But something happened that set him straight: he found religion.

"One day Eddie came into our group and announced he'd been saved," said the Rev. Wayne Muller, who ran a therapy group in Santa Barbara, Calif., for teen-age gang members on probation. "He said he felt happy all the time. He'd given up drugs and crime, and was going to nightly revival services."

Eddie's tale of salvation is as old as the Gospels. But in recent years stories like his have been changing the way psychology regards religion. While Freud dismissed religion as little more than a neurotic illusion, the emerging wisdom in psychology is that at least some varieties of religious experience are beneficial for mental health.

The result is that growing numbers of psychologists are finding religion, if not in their personal lives, at least in their data. What was once at best an unfashionable topic in psychology has been born again as a respectable focus for scientific research.

Some of the research, for instance, confirms what programs like Alcoholics Anonymous have long taken as a tenet of faith: that compelling beliefs like Eddie's "improve your mental health, especially in resisting temptation and organizing your life in terms of what matters and what does not," said Dr. David Rosenhan, a psychologist at Stanford University who, though an atheist himself, is studying religious commitment as a psychological force.

Of course, that organization may be in terms of details like dietary restrictions or rituals that nonbelievers might see as a waste of time. But the emerging

Continued on Page C8

Continued From Page C1

consensus among psychologists studying religion is that the spiritual life is more often of psychological benefit than not, and that it is time for a scientific look at religion that does more than dismiss it.

The quickening of interest by psychologists in religion is witnessed by a series of research papers presented in early August at the meeting of the American Psychological Association in San Francisco on topics ranging from the psychological origins of the cult of the Virgin Mary to the effectiveness of religious faith in coping with chronic pain and arthritis.

The researchers themselves are conscientious about making their own religious beliefs — or lack of them — explicit. But they try to separate their beliefs from their research. The aim is to accept their subjects' beliefs at face value and explore their psychological impact.

Last year a study of children's religious beliefs by Dr. Robert Coles, a child psychiatrist at Harvard, became the best-seller "The Spiritual Life of Children" (Davison/Houghton

Mifflin); the book showed that even children from nonreligious families had active spiritual lives. And earlier this year a lead article in the *American Psychologist* by Dr. Allen Bergin, a psychologist at Brigham Young University, argued that "there is a spiritual dimension of human experience which the field of psychology" cannot ignore.

To be sure, the new research does not find all religious experience to be uniformly beneficial. "Some ways of being religious correlate with greater mental disturbance," said Dr. Bergin, "while others correlate with greater levels of mental health."

The research shows that it does not matter so much what particular creed people hold, but rather how they hold it. For instance, several studies have found poorer mental health among people who see religion as a means to a social or emotional end. Researchers contrast this spiritual orientation, which they call "extrinsic," with an "intrinsic" outlook, in which people's religious beliefs form a personal commitment that they translate into action regardless of social or emotional concerns.

People with an extrinsic religious

attitude have a what's-in-it-for-me attitude, "whether it's making business contacts at church or finding personal comfort to make themselves feel better," said Richard Gorsuch, a psychologist at Fuller Theological Seminary in Pasadena, Calif.

Although there is a great difference between belief motivated by the idea that God will help one out and church-going inspired by the desire for social contacts, psychologists have found that both share a deeper common thread. As religious motives, both use religion in the service of worldly goals, and people with both orientations tend to score in the same range on tests of emotional health.

By contrast, those with an intrinsic orientation find their main motives in their religion and try to express their religious beliefs in their other dealings in life regardless of social pressures.

Characterizing Job's Religion

"The extrinsic person says the prime reason to pray is because I have a problem I want God to solve," said Dr. Gorsuch. "The intrinsic person says the prime reason is for communion with God."

In this analysis, "Job's was an intrinsic religiosity, because he could still maintain communion with God even though everything had gone wrong," said Dr. Gorsuch. "An extrinsic person in those circumstances would say, 'That religion's no good. It doesn't work for me anymore.'"

People with the extrinsic orientation tend to be more dogmatic and prejudiced and to have higher levels of anxiety, according to studies reviewed in "The Psychology of Religion," a comprehensive summary of scientific studies in the field written by Dr. David Wulff, a psychologist at Wheaton College, and published earlier this year by Wiley.

People with the intrinsic orientation tended to have a positive view of human nature and to have a greater sense of control over the course of their lives and a strong sense of purpose in life. In addition, they showed greater empathy and less narcissism and depression.

Paradoxically, atheists and agnostics also have better mental health than those with the extrinsic orientation, studies have found. The reason seems to be that, although they are nonbelievers, such people "see through the social conformity and superstitious rituals of organized religion, but often have a spirituality of another kind, based on their own quest for truth and meaning," said Dr. Bergin.

Some psychologists suggest that the extrinsic and intrinsic religious types actually represent stages in the maturation of faith. A 1988 study of 205 children and adults, from 11 to 83, found that as people grew older, they increasingly tended to hold the intrinsic religious outlook.

The Quest for Faith

The study, led by Dr. Paul Watson, a psychologist at the University of Tennessee at Chattanooga, identified still another religious outlook that appears to be a transitional stage in the evolution of faith: a "quest" in which people struggle with religious doubts and questions about the meaning of their life. This outlook was found most common among those in late adolescence and early adulthood.

According to work by Daniel Batson, a psychologist at the University of Kansas, people with the quest outlook hold that truth is more important than any given religious belief and value their uncertainties and doubts about religious matters. They also are more likely than other religious people to entertain the possibility of changing religions as their spiritual life matures.

Other evidence of the benefits of religious belief has come from a study by Dr. Rosenhan of more than 2,500 Stanford University students. In the surveys, done over five years, 57 percent of students agreed with the statement, "I believe in a God, creator of the universe, who knows my innermost thoughts and to whom one day I will be held accountable."

In interviews with students identified in the survey as having strong faith, Dr. Rosenhan found that their religious outlook gave them distinct emotional advantages in certain areas, such as being able to resist temptations like cheating. Of course, Dr. Rosenhan's data does not reveal whether the religious student's resistance to temptation brought with it the added cost of increased guilt or fear of divine retribution.

Another advantage came from "their ability to see things differently," said Dr. Rosenhan. "A sophomore woman who was being treated for cancer told me, 'God cures in three ways: with medicine, by prayer and by death.'" Her beliefs allowed her to face her illness more calmly.

Some psychologists, notably Dr. Daniel Batson at the University of Kansas, point out that such faith may exchange freedom from worry and guilt for an uncritical bondage to simplistic beliefs. The call for revival of religion as a research topic in psychology was sounded in 1980 by Dr.

Bergin in a journal article that provoked more than 1,000 letters from colleagues, most supportive.

Using Religion in Therapy

To be sure, not all were positive. Albert Ellis, a prominent psychologist in Manhattan, wrote in a rebuttal to Dr. Bergin, "Religiosity is in many respects equivalent to irrational thinking and emotional disturbance." But that negative stance no longer seems to hold for psychotherapists as a group. In his American Psychologist article, Dr. Bergin reported findings from a national survey of 414 psychotherapists showed they had "an unexpected personal investment in religion."

Of those surveyed, 77 percent agreed with the statement, "I try to live by my religious beliefs," although only 29 percent said religious matters were important in therapy.

Nevertheless, there are active movements by many therapists who are themselves religious to offer clients psychotherapy that explicitly embraces a given faith. One of the more active movements is among therapists who are fundamentalist Christians; another is among those who are Orthodox Jews.

Therapists who belong to the Christian Association for Psychological Studies use inspiring passages from the Scriptures as part of otherwise conventional therapy. Likewise, members of the Orthodox Jewish therapists' group are careful to respect the laws and traditions of their Orthodox clients.

And though some psychoanalysts still adhere to Freud's dismissive attitude toward religion, a more accepting mood is evident even in analytic circles. For example, in movements like the "object relations" school of psychoanalysis, which focuses on how people's earliest relationships in life shape those in adulthood, the religious impulse has not been seen with hostility, but studied with sympathy. Harry Guntrip, an influential British psychoanalyst and object relations theorist, for instance, was writing about religion as a path to emotional wholeness as long ago as the 1960's.

Despite Freud's harsh views on religion, "Psychoanalysts themselves are taking a softer line on religion," said Dr. Mortimer Ostow, a Manhattan psychoanalyst recently retired from the faculty of the Jewish Theological Seminary, who will present a paper on Jewish mysticism to next year's meeting of the American Psychoanalytic Association.

Dr. Ostow said: "When I was in analytic training, the attitude was that if a patient brought up religion, you either ignored it or tried to show him it was neurotic. But religion is not necessarily neurosis. It may be something that helps people come to terms with an unkind reality."

The Philosophy of F.P. Ramsey

by Nils-Eric Sahlin.
Cambridge, 256 pp., £27.50, 8 November 1990, 0 521 38543 1

It may surprise those who do not already know it that the world centre for the study of the life and work of Bertrand Russell is at McMaster University, Hamilton, Ontario. Shortly before he died Russell sold his vast collection of manuscripts and personal papers to McMaster for a huge sum of money in order to finance the various projects of the Bertrand Russell Peace Foundation. The sale has proved fortunate, not only for the work of the Peace Foundation, but also for Russellian scholarship. For the Bertrand Russell Archives, established at McMaster under the leadership of Kenneth Blackwell, have made exemplary use of the material acquired for them.

Since 1983, the Archives have been publishing, at irregular intervals, volumes of *The Collected Papers of Bertrand Russell*, which will ultimately comprise about fifty volumes and contain practically every short piece Russell ever wrote, including a great deal that has so far been unpublished. Volume I contains his youthful diaries, his undergraduate essays and the papers he wrote before becoming a fellow of Trinity, then the edition splits in two parts: Volumes II to XI containing his philosophical work, and Volume XII onwards his ethical, personal and political papers. As is often the case with this sort of multi-volume edition, the order in which the volumes have been published is somewhat erratic, but it is already clear that the series is a model of its kind – it is certainly the envy of anyone who has had to work on Wittgenstein's *Nachlass*. Each volume has been skilfully edited and handsomely produced.

Sadly, this superb resource has up to now been greatly under-used by philosophers at British universities, among whom Russell's work has not been much in vogue for a long time. The editors of the *Collected Papers*, therefore, have not only had to provide the source material for a close study of Russell's work, they have also had to generate discussion of it themselves. This they (and others) do in *Russell*, the journal of the Archives, which comes out twice a year. In addition, there have now been two full-length studies of the work published in the *Collected Papers*, written by members of its editorial team. Two years ago we had *Bertrand Russell: The Psychobiography of a Moralizer* by Andrew Brink, a lecturer in English at McMaster who helped to edit Volumes I and XII of the *Collected Papers*. This presented a Freudian analysis of the personal papers published in those volumes.

Nicholas Griffin's *Russell's Idealist Apprenticeship* has a similar genesis, although in terms of philosophical sophistication and scholarly meticulousness it is a much weightier proposition. Griffin is a philosophy professor at McMaster and was one of the editors of Volume I of the *Collected Papers*, and one of only two editors of Volume II, which presents for the first time the work that Russell did during his years as a Hegelian Idealist, between 1894 and 1898. The papers published in Volume II amply reward Griffin's interest in them. They show the astonishing swiftness of Russell's mind and his equally astonishing ability to write lucidly and at length on ideas that were quickly evolving. Griffin's book presents, in a quite masterly fashion, a discussion of the development of these ideas, setting them in context and criticising them where appropriate. It is one of the finest works of philosophical scholarship I have ever read.

The period of Russell's thought covered by Griffin has been ill served by commentators, not least Russell himself, who dismissed his work from this period briskly and unfairly in *My Philosophical Development*: he describes his fellowship dissertation of 1895 as 'somewhat foolish', his Hegelian essay of 1897 'On the Relations of Number and Quantity' as 'unmitigated rubbish', and his work on the philosophy of physics from 1890 to 1898 as 'complete nonsense'. Russell, though, is his own

most unreliable critic, and his account of his intellectual development during the years covered by Griffin is particularly prone to exaggeration and distortion. Russell liked to present each change in his intellectual stance as a more or less sudden flash of insight. His story of how, as an undergraduate, he became an Idealist is a notable example. Having been persuaded by his tutor James Ward that the metaphysics of Idealism turned on the validity of the ontological argument, he was, so the story goes, in the middle of writing a paper for Ward criticising Descartes's version of the ontological argument when he interrupted his work to buy some tobacco. On his way home he experienced a sudden conversion that threw him into a state of ecstasy: 'Great God in boots, the ontological argument is sound!' he cried and flung his tobacco tin in the air.

He also liked to present his development away from Idealism as a clean break, which occurred some time in 1898. At the end of that year he said, 'Moore and I rebelled against both Kant and Hegel. Moore led the way, but I followed closely in his footsteps.' Thanks to Moore, he could, he said, 'rejoice in the thought that grass is really green, in spite of the adverse opinion of all philosophers from Locke onwards.'

These stories of Russell's have been repeated many times and are now part of the folklore of 20th-century philosophy. It is one of the great merits of Griffin's book that it replaces them with an account which, while certainly less dramatic, is more detailed, more coherent, more plausible and ultimately more interesting – a story not of sudden transformations but of a series of insights, not handed over by G.E. Moore, but won by Russell himself in the course of a sustained and productive engagement with some of the most intractable problems of abstract thought.

The centre of Griffin's account and the thread that gives some kind of unity to Russell's very varied output during these years is his struggle against the theory (which he inherited from Bradley and McTaggart) of internal relations, the characteristically Hegelian doctrine that all relations are between intrinsic properties. For Griffin, part of Russell's genius consists in the lengths to which he was prepared to take a theory in order to test it, which meant, therefore, that it was a struggle to supplant any theory tested in this way. Accordingly he first traces the labyrinthine paths into which Russell's adherence to the theory of internal relations took him, and then presents the twists and turns that were necessary before he could abandon it.

Though his book is for the most part rigorously, not to say relentlessly philosophical, Griffin devotes the first three chapters to an account of Russell's life up to 1900 – though even here it is Russell's intellectual development that primarily interests him. His first chapter presents a careful examination of Russell's first efforts as a philosopher, the so-called 'Greek Exercises' written while he was still a teenager. The second chapter is given up to a description of Russell's life at Cambridge between 1890 and 1894, while the third describes Russell's personal life during the six

years that form the subject of the rest of the book, 1894 to 1900. For Griffin, the progress in mathematics, logic and philosophy during these years represents Russell's 'greatest intellectual achievement'.

As he points out in the preface, Griffin leaves out of his account any discussion of Russell's views on ethics and politics during these years. This is a pity, because not only did Russell publish much on politics during this time, including his analysis of Marxism in *German Social Democracy*, but – as Griffin acknowledges – Russell's revolt against Hegelianism was heavily influenced by ethical considerations. His first public renunciation of the metaphysics of Idealism, the paper, 'Seems madam? nay it is', read to the Moral Sciences Club in 1897, presents an essentially ethical argument. Idealism is condemned as morally objectionable because it encourages thinkers to settle for comfortable doctrines rather than true ones. Griffin excuses himself for omitting any discussion of ethics and politics on the grounds that 'neither the author's nor the reader's patience is endless.' What does he mean – that there is only so much Russell that one should be expected to take?

The heart of the book (it forms almost a quarter of the total) is the long discussion of Russell's work on geometry that makes up Chapter Four. The focal point is provided by *An Essay on the Foundations of Geometry*, Russell's first published book on philosophy and an expanded version of his fellowship thesis of 1895. Griffin's exposition here is as detailed, clear and critical as one could wish for. Not only does he give a very thorough exposition of the book itself: he also sets it in context with an examination of the genesis of Russell's interest in non-Euclidean geometries. So meticulously thorough is Griffin that at times the material seems to be cracking under the weight of the scholarship brought to bear upon it, as when, for example, he subjects Russell's undergraduate paper on epistemology to painstakingly detailed critical scrutiny. On the other hand, this attention to detail pays

off in his interesting attempt to reconstruct from the available evidence the differences between Russell's lost fellowship thesis and the *Essay*. Much of this evidence has been published in Volume I of the *Collected Papers* 'Observations on Space and Geometry', a previously unpublished draft of the thesis written in 1895, is of particular interest. Griffin makes good use of this and of the material collected in Volume II, using it, for example, to show how Russell responded to criticism of his theory of geometry from, among others, G.E. Moore and Henri Poincaré, who prompted him to provide his 'axioms' for projective geometry in 1899.

Griffin's chapter on Russell's philosophy of physics is somewhat schematic. What survives from Russell's work is sketchy and, on the whole, supports his own denigration of it. But there is enough for Griffin to fill out what Russell said: that his views on physics changed from a point-atom theory (expressed, for example, in 'Four Notes on Dynamics', 1896) to a plenary theory: a theory that regards space as a continuum. The difficulty with such a view is dealt with in his 1897 paper 'Motion in a Plenum'. It is doubtful whether in this case the work really merits this amount of attention. For, as Griffin makes clear, Russell was always at least one step behind contemporary physical theory and his whole approach to these problems was swept aside after Einstein's Theory of Relativity.

The justification for retracing Russell's tortuous steps through this subject must be to get a clearer picture of the thinking that was eventually (in 1903) to culminate in *Principles of Mathematics*. Griffin's chapter on Russell's work on pure mathematics is fascinating to anyone interested in the genesis and development of that great work. He begins with an analysis of the quantity view of mathematics, held by Russell until Whitehead's *Universal Algebra* shook him out of it in 1898. Before that, Russell, always prolific, had got some way with his proposed book 'On Quantity and Allied Conceptions: An Inquiry into the Subject-Matter of Mathematics' (what survives from this aborted project can be studied in Volume II of *Collected Papers*). Griffin stresses the importance of Whitehead's book, and, in particular, his notion of a 'positional manifold', to Russell's development. Whitehead defined mathematics, not as the science of quantity, but as 'all types of formal, necessary, deductive reasoning'.

After the abandonment of 'On Quantity', Russell began and abandoned no less than five different projects for a book on the foundations of mathematics before, finally, in 1900, his thoughts on the content and structure of *Principles of Mathematics* began to take shape. Of these the three most important are reprinted in *Collected Papers*, Volume II, and

See page 27, section 25 for information about this book review article and other recent work by writer Ray Monk.

Book One of one of these projects was to have been called 'Logic'. It was renamed 'The Manifold' in the light of Whitehead's book, but logic was still its theme and it was here, Griffin shows, that Moore stepped into the picture. What Russell took from him – derived primarily from conversations but also from Moore's paper, 'The Nature of Judgment' (published in 1899) – was Moore's notion of a concept, which corresponds more or less to what Russell called (at this time and later in *Principles of Mathematics*) a 'term'. The importance of this was that it provided an extensional notion upon which to find logical relations. Equipped with Whitehead's notion of a manifold and Moore's notion of a concept, Russell was ready to tackle the central plank in the logic he had been bequeathed by the neo-Hegelians: the doctrine of internal relations. A key paper (reprinted in *Collected Papers*, Volume II) is 'The Classification of Relations', written in 1899. Finally, at the turn of the century, he emerged with a foundation upon which to build *The Principles of Mathematics*.

Griffin's book ends here, and perhaps the most remarkable thing about it is that one isn't left with a feeling that it ends just when the interesting story begins. He finishes the book in schoolmasterly fashion, giving Russell's early work a better report than it has had so far. It was, he says, 'well up to the standards of the best British philosophical work of the day'. What he finds most admirable about it is 'the way Russell unearths a single set of principles as responsible for problems which emerged in such a wide range of work, encompassing geometry, physics, psychology and pure mathematics'. 'Few philosophers,' he concludes, 'have had such a good eye for fundamental unifying principles while conducting detailed investigations over such a wide range.' It is a tribute that applies equally to Professor Griffin's fine work.

A mathematician by training and profession, a philosopher by vocation, and an economist in his spare time, Frank Ramsey was blessed with an extraordinarily acute intelligence and an extremely likable nature. Unfortunately for all those who knew him and for the intellectual history of the 20th century, he was also cursed with a chronic liver condition. He died in 1930 at the age of 26.

For someone who died so young, his list of achievements is nothing short of amazing. In pure mathematics, he is famous for two theorems about combinations which now form the starting-point for what is known as 'Ramsey Theory'; in economics, he is acknowledged as providing the foundation for the theories of optimal taxation and optimal accumulation; in mathematical logic and the foundations of mathematics, his work is seen as a culmination of the logicist tradition founded by Frege and Russell, his theory of probability forms the basis of modern decision theory; and his work on the philosophy of science anticipates, by more than thirty years, the discussion by Thomas Kuhn of 'incommensurability'. His more general philosophical work, his discussions of belief, knowledge and causality, is today the subject of a renewed and growing interest among philosophers.

A further claim to fame is that he was, at the age of 19, the first translator of Wittgenstein's *Tractatus Logico-Philosophicus*, and also – as he demonstrated in the review he wrote for *Mind* – its most perceptive critic. When Wittgenstein returned to Cambridge in 1929, he did so in order to work with Ramsey, who, for the last year of his life, acted as Wittgenstein's supervisor, despite being 14 years his junior. The year they spent together was crucial for Wittgenstein's later philosophy, and if Ramsey had lived a little longer, we can, I think, be sure that Wittgenstein's later ideas would have taken a rather different form.

Ramsey's intellect inspired respect and even awe, and his personality inspired a great

and lasting affection. John Maynard Keynes – who held Ramsey's gifts as an economist in enormously high regard – has written of his 'bulky Johnsonian frame, his spontaneous gurgling laugh' and 'the simplicity of his feelings and reactions', which, he said, blended 'most harmoniously' with 'his homely of mind and heart, his modesty, and the unassuming, easy efficiency of the intellectual machine which ground away behind his wide temples and broad, smiling face'.

Apart from Keynes's memoir, there is, considering the warmth with which he was regarded, curiously little published material that gives any impression of Ramsey's life and personality. His last hours are described very movingly by Frances Partridge in her book *Memories*; some letters of his to his mother have been published (mainly because of the light they throw on Wittgenstein's life in rural Austria in the mid-Twenties); and a group of his Cambridge friends contributed their recollections to a BBC radio programme put together by D.H. Mellor and broadcast in 1978.

He was born in Cambridge in 1903. His father was President of Magdalene College and his brother Michael became famous as Archbishop of Canterbury. Most of his short life was spent in Cambridge. After gaining a first in mathematics at Trinity in 1924, he was elected, at 21, to a fellowship of King's and a university lectureship in mathematics – positions which he held until his death in 1930. His first published work dates from when he was 19. In 1922 he published three short pieces: a devastating critique of Keynes's theory of probability, a discussion of the 'Douglas Proposal' for social credit, and a review of the second part of W.E. Johnson's *Logic*. In the following year came his celebrated 'Critical Notice' of Wittgenstein's *Tractatus*. Between 1925 and 1928 his work focused on what we now know to have been a doomed plan: to complete the work of Frege and Russell in successfully deriving the whole of mathematics from a few logical axioms. It was crucially important, he felt, that the achievements of the logicist tradition should be safeguarded from the 'Bolshevik menace' of the Intuitionist school led by Brouwer and Weyl. During this time he also published two papers in economics, 'A Contribution to the Theory of Taxation' (1927) and 'A Mathematical Theory of Saving' (1928). Keynes considered the latter 'one of the most remarkable contributions to mathematical economics ever made'.

Alongside this work Ramsey was also engaged on a series of related philosophical problems to do with the analysis of belief, truth and scientific knowledge. Had this come to fruition, it seems likely that the result would have been a book of great depth, brilliance and lucidity, putting forward a pragmatist theory of knowledge in the tradition of C.S. Peirce. It would surely have been one of the most important works of 20th-century philosophy, and might even have helped to steer contemporary philosophy onto a more fruitful course.

Ramsey was a great philosopher who died before he could deliver his great work. And who really knows what direction his work would have taken? In the very last year of his life, his thoughts took a fresh and apparently fruitful turn when he abandoned logicism and embraced a finitist view of mathematics similar to that held by Weyl, one of the 'Bolsheviks' whose influence on mathematics he had previously feared. This conversion seems to have thrown his whole work into a state of creative flux, out of which came a series of brilliant papers which remained unpublished in his lifetime but which his friend Richard Braithwaite included in the collection of papers he edited immediately after Ramsey's death.

Among these are the papers upon which Ramsey's reputation as a philosopher now rests: 'Theories', 'Knowledge', 'General Pro-

positions and Causality' and 'Philosophy'. To this list must be added 'Truth and Probability', a paper written in 1926 which remained unfinished and unpublished at the time of his death but which is today regarded by many as his most significant contribution to philosophical thought.

In 'Philosophy', Ramsey provides a typically forthright statement of what he considers to be the aims of the subject and the methods appropriate to it. 'Philosophy,' he says, 'must be of some use and we must take it seriously; it must clear our thoughts and so our actions.' He identifies the chief danger to such an aim – 'apart from laziness and wooliness' – as scholasticism, and gives as a 'typical piece of scholasticism' Wittgenstein's view that all our everyday propositions are completely in order and that it is impossible to think illogically. This last, he says, 'is like saying that it is impossible to break the rules of bridge because if you do break them you are not playing bridge but, as Mrs C. says, not-bridge.'

He wrote this in 1929, the year when he and Wittgenstein were at their closest, when Wittgenstein returned to Cambridge specifically to study with Ramsey. In the preface to *Philosophical Investigations* he paid handsome tribute to the stimulus he received from Ramsey's criticisms, which, he says, helped him to realise the mistakes of the *Tractatus*. In his private diaries of the time, though, he was less generous, emphasising the differences between his way of thinking and Ramsey's and, ultimately, dismissing Ramsey as a 'bourgeois' thinker uninterested in 'real' philosophical thinking. For his part, Ramsey once told Wittgenstein simply: 'I don't like your style of arguing.' The majority of philosophers may be said to have followed Wittgenstein. D.H. Mellor for one, and Nils-Eric Sahlin for another, think that they would have been better advised to have followed Ramsey.

Philosophical Papers, edited by Mellor, is the third attempt to present Ramsey's small but important corpus of work to the public. It is interesting to notice how each successive attempt has been hampered by the changing perception of where his importance lies. Richard Braithwaite's collection of Ramsey's papers, *The Foundations of Mathematics*, took its title from the paper for which Ramsey was at that time best known. In 1978 Braithwaite's edition was replaced by a selection made by Mellor and published under the more general – and presumably, it was felt, more appetising – title *Foundations: Essays in Philosophy, Logic, Mathematics and Economics*. As the subtitle suggests, this edition sought to emphasise the range of Ramsey's work by including (as Braithwaite had not) Ramsey's economic essays. To make room for this extra material Mellor left out Ramsey's review of the *Tractatus*, some 'Further Considerations' to his 1926 paper on probability, 'Philosophy' and 'Epilogue', the last being a kind of apology that Ramsey read to the Apostles in 1925.

In making this latest selection, Professor Mellor has clearly reconsidered his earlier editorial decisions and, more or less, returned to Braithwaite's original choices. The emphasis now is on making Ramsey's work as accessible as possible, rather than on stressing its variety. Out, therefore, go the two papers on economics and the purely mathematical work, and back in come 'Further Considerations', 'Philosophy' and 'Epilogue' (but not, alas, the review of the *Tractatus*). Of Ramsey's purely mathematical work, there is – perhaps surprisingly, given that mathematics was, after all, his living – not very much. The first nine pages of 'On a Problem of Formal Logic', a paper on the *Entscheidungsproblem* in mathematical logic, constitute the only purely mathematical work he ever published. In Braithwaite's collection, the whole paper was included; in the 1978 edition, only these nine pages; and in this latest edition it has been excluded altogether, condemned as 'too technical'. Similarly, the

economics papers are dismissed as 'of no great philosophical interest'.

What this leaves are the five philosophical papers that Ramsey published in his lifetime between 1925 and 1928, together with 'Truth and Probability' (1926), its associated 'Further Considerations' (1928), and the papers mentioned earlier from the last year of his life, collected together in Braithwaite's edition as 'Last Papers' (1929), but here scattered throughout the collection. There is, then, nothing in this new edition that has not been published previously. It is, to that extent, simply a reissue. There is, nevertheless, some attempt to give a new slant to the material, based on the editorial decisions made by Professor Mellor and, more explicitly, on the interpretations of Ramsey's work offered by Nils-Eric Sahlin, whose study of Ramsey's work is expressly designed to complement this new edition of Ramsey's papers, and, in so doing, to replace the specialist introductions of the 1978 edition.

Until fairly recently it was generally agreed that Ramsey's most outstanding contribution to philosophy was contained in his two early papers on the philosophy of mathematics: 'The Foundations of Mathematics' (1925) and 'Mathematical Logic' (1926). On the basis of the first of these, he acquired his reputation as the philosopher who brought to its culmination the logicist tradition, its last important defender before the death blow dealt it by Gödel's incompleteness proof. Today, however, these papers are of more interest to the historian of ideas than to the philosopher of mathematics. They are a contribution to a battle that is no longer being fought. Their central philosophical thesis we now know to be provably false, and the technical innovations of the first paper, its attempts to repair the logical leaks in the system of *Principia*, have been largely ignored. The mathematical logic that is today taught to students of mathematics and philosophy is Russell filtered through Zermelo rather than through Ramsey.

So where does the interest of his work lie, then? A better answer is that it lies through Mellor's introduction is that the ideas of Ramsey, neglected at the time of their publication, have tended to anticipate recent work in philosophy. He refers in particular to the way Ramsey's work anticipates that of Kuhn, Dummett, Nozick and D.K. Lewis. The paper he singles out as 'the one from which we still have most to learn' is 'General Propositions and Causality', one of the 'Last Papers'. It deals with the distinction between a scientific law and a merely accidentally true generalisation, and provides, according to Mellor, 'a starting-point for progress towards an adequate account of the relations between time, knowledge, action, causation and laws of nature'. He offers his own book, *Real Time*, as evidence that progress has indeed been made from this starting-point.

Nils-Eric Sahlin offers a rather different perspective. His book emphasises the importance of 'Truth and Probability', to which he devotes the first and largest chapter and which he represents as 'a first and portentous step away from logic, mathematics and the philosophy of mathematics'. His exposition is detailed and enthusiastic, but whether it is any improvement on Ramsey's own – whether it is any clearer or easier than Ramsey's presentation – is doubtful.

The parts of Sahlin's book which will probably be of most use to non-specialist students of Ramsey's work are those where he is less expert. In his chapter on 'Logic and Mathematics', he explains many things which a reader coming to Ramsey's papers for the first time might be grateful to have explained, such as Russell's Theory of Types and what, exactly, is stated by the Axioms of Reducibility, Choice and Infinity.

Though the aim of his book is to supply an introduction to the papers published in this

new edition of Ramsey's work, he does devote two short and interesting chapters to discussions of the material that has been left out: one each on 'Ramsey's Theorem' (a discussion of the combinatorial theorems in the first part of

'On a Problem in Formal Logic') and the economics papers. He also devotes a chapter, the last, to 'Biographical Glimpses', but confines himself to stating the facts in an almost comically dull fashion and to quoting at length

from published sources. This is a pity, because he has gone through Ramsey's letters and notes, and talked to Ramsey's sister Margaret Paul, his daughter Jane Burch, and others who knew about the life. He could surely have writ-

ten something more vivid, but he seems to have thought there would be something improper in doing so. He does not want Ramsey 'to suffer the same biographical misrepresentation as Wittgenstein'.

RECENT WORK OF RAY MONK

Appearing above in section 24 is Ray Monk's article, "Russell and Ramsey," reproduced in reduced size from London Review of Books, 29 August 1991, pp. 11-13. Thanks to Bob James for bringing it to our attention. We concur in the complimentary article comments concerning the Russell Archives and Nicholas Griffin's Russell's Idealist Apprenticeship.

Last year Ray Monk's Ludwig Wittgenstein: The Duty of Genius appeared (New York: The Free Press; New York, Oxford: Maxwell Macmillan International, 1990). A paperbound edition of this 600+ page Wittgenstein biography was recently published (New York: Penguin, 1991). The hardbound edition dustjacket provides this information about the author: "Ray Monk received a first class degree in philosophy at York University. At Oxford University he wrote his M.Litt. thesis on Wittgenstein's philosophy of mathematics. He lives in Southampton, England." The dust jacket also quotes Northwestern University Professor Stephen Toulmin on Monk's book: "Very impressive: the first account of the man to carry real emotional conviction. Ray Monk shows what others simply assert--the unity of Wittgenstein the philosopher with Ludwig the self-accusatory human being. Monk shows the interplay of Wittgenstein's emotional and intellectual life, notably at times of his crucial transitions."

In addition to its excellent portrait of Wittgenstein, Monk's book contains numerous references to Russell. Those seeking a better understanding of the scholarly and personal relationship of Wittgenstein and Russell will be well served by this book. For a fine review article on this biography, we suggest examining Stuart Hampshire's "'A Wonderful Life'" in The New York Review of Books, vol. 38, no. 3, January 31, 1991, pp. 3-4, 6.

(26)

CONRAD RUSSELL ON THE ENGLISH CIVIL WAR

Also in the 29 August 1991 London Review of Books, pp. 13-14, is Blair Worden's review article of Conrad Russell's The Causes of the English Civil War and The Fall of British Monarchies, 1637-1642 (Oxford: Oxford University Press, respectively 1990 and 1991). Conrad Russell, who is Bertrand Russell's second son and the present Earl, is Professor of History at King's College, University of London.

RUSSELL SOCIETY NEWS

No. 73

February 1992

The Bertrand Russell Society, Inc.

3802 North Kenneth Avenue Chicago, Illinois 60641-2814 U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to further his aims by promoting ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Correspondence concerning **Russell Society News**, a quarterly issued in February, May, August, and November, should be sent to Donald W. Jackanicz, Editor at the above Chicago address.

General inquiries about Bertrand Russell Society information and membership should be directed to Lee Eisler; BRS Information Committee; 1664 Pleasant View Road; Coopersburg, Pennsylvania 18036; U.S.A.

The Bertrand Russell Society Library, which sells and lends Russell-related materials, may be contacted by writing to Tom Stanley, Librarian; Russell Society Library; Box 434; Wilder, Vermont 05088; U.S.A.

BRS BUSINESS

1. 1992 Annual Meeting: Washington, DC. The BRS's 1992 Annual Meeting will be held on the campus of The American University in Washington, DC from Friday, June 12 through Sunday, June 14. Russell Society News for May 1992 will provide a complete program and additional meeting information. For now, though, we encourage all members and interested non-members to consider being with us that weekend. Please refer to the blue pre-registration form accompanying this RSN issue.

Meeting events will include these paper presentations or addresses: Congressman Neil Abercrombie, "Russell's Values and the 1992 Presidential Election"; Marvin Kohl, "Russell and the Good Life"; Tim Madigan, "Russell's Values and Contemporary Secular Humanism"; Michael J. Rockler, "Popper's Fallibilism and Russell's Scepticism as Educational Perspectives"; Steven C. Shafer, "'Witty, Pungent, Philosophical, Whimsical, and Bitter': Politicians' Perceptions of Bertrand Russell in Great Britain"; Chandrakala Padia, topic to be announced. Don Jackanicz will offer a workshop on a BR essay to be specified in the May 1992 RSN. The BRS Book and Service Awards will be presented. The Banquet, the Red Hackle Hour, and other informal periods will allow time for all to meet one another and share the meeting experience.

As this is written, it is our hope that Sir Karl Popper, the distinguished philosopher who on July 28, 1992 celebrates his 90th birthday, may be able to attend. We do hope that Sir Karl's health and schedule make this possible.

A per person fee of \$145 for double occupancy or \$175 for single occupancy includes everything--registration, housing, meals including the Banquet, the Red Hackle Hour, and coffee breaks. Without housing, the per person fee is \$85. Early pre-registration greatly helps the meeting planners. We look forward to hearing from you soon.

2. 1992 Membership Dues. We very much appreciate the prompt membership renewals by numerous BRS members. Those members who have not yet renewed and persons interested in joining the BRS for the first time are asked to refer to the accompanying blue membership coupon. Please note that recent postal increases have forced us to change the annual non-U.S.A. mailing fees to those now shown on the blue coupon.

3. Contributions. Ramon Suzara of Manila recently renewed his membership and contributed an additional \$9.50 to bring his payment to \$50. In his recent letter he described the possibility of establishing a Philippine BRS chapter according to the BRS Benares, India chapter model. He added these thoughts:

Dear members of the BRS: I wonder if all of you are aware that the Philippines is one of the poorest countries in the world. She is poorest next to Bangladesh. The per capita income of Filipinos is \$600, or \$50 a month. Now \$50 is less than what most of you Americans earn in ... [a day's] work. May I therefore challenge all of you members of the BRS residing in the USA to match my contribution of \$9.50?

We realize that for many of our members a contribution, in addition to membership payment, may not be possible. But we do ask you to consider what Mr. Suzara has said. The BRS sincerely thanks all making contributions.

(2)

FROM THE PRESIDENT

BRS President Michael J. Rockler submitted the following report.

The annual meeting this summer--from June 12-June 14--should be one of our most interesting in several summers. We will be meeting in Washington, D.C. with the support and cooperation of Congressman Neil Abercrombie who participated in our last meeting at Lehigh University. Congressman Abercrombie's presence will certainly add to the substance of the meeting, coming only months before the 1992 Presidential election.

One purpose of the meeting is to honor Sir Karl Popper. He will be honored at the annual banquet and it is our expectation at this writing that he will be joining us for the meeting. Members attending the meeting will thus have the opportunity to meet and share ideas with one of the most significant philosophers of the twentieth century.

The cost of the meeting (details of which are described elsewhere in the Newsletter) will be \$145.00 for double occupancy and \$175.00 for single occupancy. This includes all meals and lodging. We will be housed on the American University campus. This cost is comparable to the Lehigh meeting and it represents a bargain for Washington in the summer.

I urge every member to decide now to attend. If you have never attended a BRS meeting, this one can serve as introduction to our summer meetings. And please note: early registration enables efficient conference planning.

A second significant meeting of interest to Bertrand Russell Society members will be held this summer in Toronto beginning on June 18 and concluding on June 21. This is the inaugural conference of the Coalition for Secular Humanism and Freethought. The theme of the conference will be "SECULARISM AND MULTICULTURALISM: A HUMANIST VIEW."

The Bertrand Russell Society will be participating in this meeting. Marvin Kohl and I will speak on Russell's two books on education. We will also address the Plenary Session on June 19. Many other interesting sessions are being planned. Some will focus on competing perspectives on multiculturalism from religious and humanist viewpoints. The conference is also planning to provide an optional Toronto by Night tour on Saturday evening. Like other conferences organized by Free Inquiry, this one should be interesting and significant.

Bertrand Russell Society members are also aware that the Russell Archives are nearby in Hamilton, Ontario. A trip to the

conference could be combined with an interesting afternoon at McMaster University.

As President of the Society, I urge every member to attend this important inaugural event. Perhaps it may be possible for some members to remain on the East Coast following the BRS annual meeting and then attend this second conference as part of a summer holiday. Program details will appear in the next issue of the Newsletter. For further information write:

1992 BRS BOOK AWARD

The BRS Book Award Committee has selected Nicholas Griffin's Russell's Idealist Apprenticeship (Oxford: Oxford University Press/Clarendon Press, 1991) for the 1992 Bertrand Russell Society Book Award. The Award will be presented at the BRS Annual Meeting in Washington, DC, June 12-14, 1992. Mr. Griffin has been invited to join us, and we do hope that he will be able to do so.

The dust jacket of Russell's Idealist Apprenticeship provides the following information on this 410 page book:

Modern analytic philosophy was born around the turn of the century, largely through Bertrand Russell's and G.E. Moore's reaction against the neo-Hegelianism which dominated British philosophy in the last decades of the nineteenth century. It is well known that Russell himself had been a neo-Hegelian, but hitherto little has been known about his work during that period. Yet that work was important, not only for Russell's development as a philosopher, but also for the development of analytic philosophy.

Based mainly on unpublished papers held in the Bertrand Russell Archives at McMaster University, this book is the first detailed study of this early period of Russell's philosophical career. The first three chapters are concerned with Russell's philosophical education at Cambridge in the early 1890s and his conversion to neo-Hegelianism. The remaining chapters outline his ambitious plans for a neo-Hegelian dialectic of the sciences, and the problems which ultimately led him to reject it.

Nicholas Griffin is Professor of Philosophy at McMaster University. He is co-editor of Volumes 1 and 2 of The Collected Papers of Bertrand Russell (Allen and Unwin, 1983, 1990).

This excerpt is taken from Mr. Griffin's preface:

In his old age Russell always referred to his idealist apprenticeship with scorn. It was, he suggested, nothing but an incoherent muddle into which he had been led by teachers and friends and from which he extricated himself with difficulty after several entirely wasted years. His pride in having broken free from the neo-Hegelianism which dominated British philosophy at the end of the nineteenth century was well-earned, and the advance he made in breaking away from it was real enough. Yet Russell's Neo-Hegelianism was by no means the unmitigated disaster most people nowadays assume.

It constituted (though often in outline only) a vast system of philosophy, encompassing a full philosophical analysis and reconstruction of the various sciences and their mutual relations. Although much of Russell's neo-Hegelian philosophy was left in programmatic form, parts of it were worked out with an attention to detail unparalleled among British philosophers of his day. Moreover, given Russell's initial assumptions, which were shared by most contemporary philosophers, the system had a high degree of logical coherence.... By any standards, it is one of the most spectacular works by any philosopher in his early twenties.

Russell's Idealist Apprenticeship includes a lengthy bibliography and index. The body of the book is divided into eight chapters, "'First Efforts'," "Cambridge 1890-1894," "Love and the Absolute," "Geometry," "Physics," "Pure Mathematics," "Logic," and "Relations: The End of Russell's Apprenticeship." All but the first of these chapters are subdivided into major sections with titles such as "The Tiergarten Programme," "Defending Kant against Metageometry and Ward," "On the Paradoxes which Lie at the Foundation of Geometry," "Influences: Leibniz," and "The Contradiction of Relativity." Another section title, "Personal Life: 1894-1897," indicates that Mr. Griffin has brought together both the technical philosophical material and the necessary biographical material to provide a work of interest to anyone wanting to study the early years of Russell's life.

We salute Mr. Griffin's fine accomplishment and look forward to seeing him in June.

(4)

A NEW RUSSELL BIOGRAPHY?

The August 4, 1991 issue of The New York Times Book Review, p. 8, features Ray Monk's review of Carl Pletsch's Young Nietzsche: Becoming a Genius. The short biographical note on the reviewer states, "Ray Monk, the author of Ludwig Wittgenstein: The Duty of Genius, is working on a biography of Bertrand Russell." See Russell Society News, No. 72 (November 1991), pp. 25-27 for more about Ray Monk.

(5) PHILOSOPHERS' COMMITTEE REPORT

David Johnson, Chairman of the BRS Philosophers' Committee and Professor of Philosophy at the U.S. Naval Academy, submitted this two-part report.

Report of the Philosophers' Committee

A lively and provocative discussion was sponsored by the Philosophers' Committee of the Bertrand Russell Society in conjunction with the Eastern Division Meetings of the American Philosophical Association. On December 28, 1991, at 5:15 p.m. the chair, David Johnson, called the meeting to order in the Hart Room of the Marriott Marquis Hotel in New York City.

The program consisted of two papers followed by discussion. The first speaker was Professor Jane Duran of the University of California at Santa Barbara on the topic "Russell on Pragmatism." Her argument was designed to defend Russell's criticisms of the work of the pragmatists James, Schiller and Dewey. In the past decade the ascent of pragmatism has led to severe criticism of Russell's position. Professor Duran defended two points taken by Russell: first, that in developing a philosophical view certain notions must be basic or "foundational," for instance truth and sense-data; second, that it is a mistake to conflate "works" with "is emotionally satisfying" or "good" with "desire." The focus of her presentation was Russell's essay "Pragmatism" in Philosophical Essays. The subsequent discussion focused on philosophical style and how pragmatism is currently a major trend, which results in views like Russell's being discounted.

Professor Safro Kwame of Lincoln University in Pennsylvania presented the second paper, entitled "Going to No-Man's Land--A Russellian Conception of Philosophy." In this age of issues of gender and race (especially Afrocentrism) in education, Professor Kwame recovered Russell's notion of philosophy as a no-man's land between theology and science and built upon that notion. This land is not controlled by any specific group, whether theologian, scientist, male, female, black or white. Professor Kwame wanted to use this conception of philosophy to solve some of the metaphysical issues in feminist and African philosophy. In particular, we must hold that all cultures engage in philosophy. He further argued that neither science nor literature either are philosophy or constitute a necessary prerequisite for philosophy. During the discussion, questions were raised about whether the very language in which philosophical issues are raised does not involve a white male (possibly Eurocentric) perspective, so that doing philosophy constitutes an activity outside no-man's land. Professor Kwame argued that the issues considered in philosophy were not restricted to races or genders, but that everyone is faced with basic questions and can use reason to grapple with them.

A Plea from the Philosophers' Committee

Each December the Committee sponsors a session on the philosophy of Bertrand Russell in conjunction with the Eastern Division Meetings of the American Philosophical Association (APA). Because of the APA's schedule in printing the program, it is necessary for people who would like to have their papers considered by the Committee for presentation at this session to submit them by April 1 preceding the session. In recent years we have received only two or three articles per year. This does not provide the Committee with much latitude for selection of quality papers and/or topics of greatest interest to our membership. Further, there are two other national meetings of the APA, on the West Coast in March and in the Midwest in late April. If we received a sufficient volume and quality of papers, we could expand our efforts to promote the discussion of Russell's philosophy to these two conventions. Therefore, the Committee asks the membership of the BRS either to submit essays yourselves, or to encourage friends whom you know are reading and thinking about Russell's philosophy to submit essays. The call for papers has already been published in an earlier edition of the BRS Newsletter. The December 1992 meeting of the Eastern Division of the APA will be in Washington, DC, between Christmas and the New Year. Papers and/or inquiries can be sent to:

Prof. David Johnson
Sampson Hall
U.S. Naval Academy
Annapolis, MD 21402-5044

(6) MORE ON THE AMERICAN PHILOSOPHICAL ASSOCIATION

The following is excerpted from the APA's general information leaflet.

If you're interested in philosophy and philosophers you should know about the APA. Founded in 1900, the American Philosophical Association is the largest professional organization of philosophers in the world and the only American philosophical society not devoted to a particular school or philosophical approach. Its 8000 members include a large majority of scholars and teachers of philosophy in the United States and a substantial number in Canada and overseas.

Annual conferences are sponsored by the APA's Eastern Division on the East Coast each December, by the Pacific Division on the West Coast each March, and by the Central Division in the Midwestern region in late April or early May.

Prospective employers of philosophers, academic or non-academic, attract

qualified applicants through the APA's publication, Jobs for Philosophers, and regularly interview them at Divisional conventions. Publishers of scholarly books and journals, distributors of computer hardware and software, and others keep philosophers informed of their offerings through various APA publications and in exhibits at Divisional meetings.

The Association publishes the Proceedings and Addresses of the American Philosophical Association seven times annually, containing the Presidential addresses delivered to each of its Divisions, the minutes of the meetings of the Divisions and of the Board of Officers, reports of APA committees, contributed articles on "Issues in the Profession," notices of conferences and publications, an annual directory of grants and fellowships available to philosophers, programs for the Divisional conventions and an annual membership directory.

Other publications include Jobs for Philosophers (five issues per year; circulation restricted to individual members), and Newsletters on computer use in philosophy, philosophy and feminism, philosophy and law, and philosophy and medicine (two-three issues per year).

The Guidebook for Publishing Philosophy, updated in 1986, includes detailed descriptions, including guidelines for manuscript submissions, of 108 philosophical journals and 34 publishers of philosophical books. In 1990-91 the APA plans to publish a Guidebook to Graduate Study in Philosophy.

Become a member. Contact: Janet Sample, Membership Coordinator, American Philosophical Association, University of Delaware, Newark, DE 19716, (302) 451-1112.

Some further notes: The APA's next Pacific Division Meeting will be held in Portland, Oregon, March 25-28, 1992. The APA's next Central Division Meeting will be held in Louisville, Kentucky, April 23-26, 1992. The "1991-92 Publications of the APA" sheet includes this entry: "Guidelines for Non-Sexist Use of Language (No charge). Suggestions prepared by Virginia Warren and endorsed by the Executive Committee of the APA's three Divisions as a guide for persons submitting papers for their meetings."

(7) APROPOS OF RUSSELL SOCIETY NEWS, NO. 72 (NOVEMBER 1991)

1. Errata: (1) Page 7, Section 7, Line 4--"1991" should be "1992." (2) Page 11, Section 11, Line 4--"Nicolas" should be "Nicholas." (3) Page 16, Section 16, Part 1--"R" in the end column indicates a Simon & Schuster remainder.

2. From Harry Ruja: (1) Re: Page 3, Section 3, Line 11--The BR quotation appeared on a dust jacket, not a paperback book cover. (2) Re: Page 6, Section 6--A similar BR photograph appeared in the New York Post, March 30, 1940 and in Ronald W. Clark's The Life of Bertrand Russell, plate 20.

(8) FILOSOFIJA BERTRANA RASELA

This important news was reported by Irving Anellis about A.S. Kolesnikov's new book, Filosofija Bertrana Rasele [The Philosophy of Bertrand Russell] (Leningrad: Izdatel'stvo Leningradskogo Universiteta, 1991).

Anatolii Sergeevich Kolesnikov is a relatively new name in Russell studies, although his book, Filosofija Bertrana Rasele, shows a deep knowledge of the material available on Russell in Russian and a wide acquaintance with Russell's publications in English and in Russian translation. His book is the first in Russian to give a sustained and systematic survey of the development of Russell's technical philosophical work (logic, philosophy of science, philosophy of mathematics, philosophy of logic and philosophy of language, metaphysics, and theory of knowledge.) Kolesnikov's book is therefore the first major Russian monograph-sized contribution to Russell studies.

(9) DIRECTORS AND OFFICERS OF THE BERTRAND RUSSELL SOCIETY

Directors (Elected for 3 Year Terms):

- 1990-92: Jack Cowles, William Fielding, David Goldman, Steve Maragides, Frank Page, Paul Schilpp, Warren Smith, Ramon Suzara, Thom Weidlich.
- 1991-93: Irving Anellis, Robert Davis, Robert James, Hugh Moorhead, Chandrakala Padia, Harry Ruja.
- 1992-94: Louis Acheson, Kenneth Blackwell, John Jackanicz, David Johnson, Justin Leiber, Gladys Leithauser, Stephen Reinhardt, Tom Stanley.

The BRS Officers shown below are also Directors, ex officio.

Officers (Elected for 1 Year Terms):

- Chairman of the Board of Directors: Marvin Kohl.
- Secretary of the Board of Directors: Donald Jackanicz.
- President: Michael Rockler.
- Vice President: John Lenz.
- Vice President/Information: Lee Eisler.
- Secretary: Donald Jackanicz.
- Treasurer: Dennis Darland.

(10)

TREASURER'S REPORT

Treasurer Dennis Darland submitted these reports respectively for the quarter ending December 31, 1991 and for the year ending December 31, 1991. Notes: "Memb. & Info." refers to the Information and Membership Committee; "Russell" refers to subscriptions to the Russell Archives's journal; "Grant" refers to the doctoral/master degree grant program.

1992 EARLY RENEWER HONOR ROLL

We are most grateful to the following 174 members who renewed BRS membership before January 1, 1992, and thus gave the renewal process a good early boost.

Victor Acevedo, Aurora Almeida, J.M. Altieri, Jean Anderson, Irving H. Anellis, Mark Anthony, Jay Aragona, J. Warren Arrington, George Austin, Don-In Bae, Adam Paul Banner, Mamata Barua, Walter Baumgartner, Jacqueline Berthon-Payon, Frank Bisk, Howard A. Blair, Gerard Bornet, Michael Emmet Brady, David Brandt-Erichsen, Deirdre M. Breton, Evelyn Burton, James Haley Buxton, Robert P. Canterbury, Charles E. Carlini, Bette Chambers, Dennis C. Chipman, Lou Clark, Whitfield Cobb, Jack R. Cowles, Glenna Stone Cranford, Peter G. Cranford, Jim S. Curtis, Robert K. Davis, Paul A. Doudna, Lawrence Dow, Margaret Doyle, Pradeep Kumar Dubey, Elizabeth R. Eames, Beverly Earles, Ronald Edwards, Linda Egendorf, Jan Loeb Eisler, Lee Eisler, Richard Fallin, Victor J. Fernandez, William K. Fielding, Sudney D. Finehirsh, Stephen H. Frey, Zoe Furnish, Gonzalo Garcia, Alejandro R. Garciadiego, Seymour Genser, Monica F. Giganti, Arttie Piar Gomez, Marshall A. Gordon, Earl Hansen, Val Hansen, William Hare, John W. Harper Jr., Don Hernandez, Lyla Hernandez, Robert M. Hicks, Charles W. Hill, Jeffrey A. Hill, James Lloyd Hoopes, Ophelia Hoopes, Thomas C. Horne, Chia Teck How, Ting-Fu Hung, Arvo Ihalainen, Ramon K. Ilusorio, Donald W. Jackanicz, John A. Jackanicz, Theodore M. Jackanicz, Adam Jacobs, Robert T. James, David E. Johnson, Larry Judkins, Marvin Kohl, Kenneth Korbin, Zlatko B. Kovach, Henry Kraus, George C. Kuc, Paul Kurtz, Herbert C. Lansdell, Bob Lasater, Philip M. Le Compte, Justin Dunmore Leiber, John R. Lenz, H. Walter Lessing, Martin Lipin, Jonathan A. Lukin, Timothy J. Madigan, Steve Maragides, William McKenzie-Goodrich, Edward McClenathan, Bill McDonald, Nathan McKinley, Theo Meijer, David J. Meltz, Carl Miller, Glenn R. Moyer, Sandi A. Moyer, William P. Myers, William S. Newhall Jr., Nils Nygard, Mark Oakford, Roy H. Odom Jr., David M. Ondik, John C. Parker, Michel Paul, James R. Pearse, James J. Petrassi, Paul M. Pfalzner, Barbara E. Pontier, Raymond J. Pontier, Edward L. Prichard Jr., Millie Priebe, Stephen J. Reinhardt, Benito Rey, Robert A. Riemenschneider, William M. Ripley, Don D. Roberts, John D. Rockfellow, Michael J. Rockler, Andy Rogers, Vivian B. Rubel, Harry Ruja, Cherie Ruppe, Paul Saka, John F. Schaak, Anne-Francoise Schmid, Nan E. Scofield, Steven C. Shafer, Susan L. Shafer, John Edwin Shosky, Warren Allen Smith, Joel Spira, Ruth Spira, Philip Stander, Thomas J. Stanley, Peter Stone, Paul Strom, Ramon Carter Suzara, Shohig Sherry Terzian, Lloyd N. Trefethen, Shiela Turcon, Alice Tzanetakos, Christos Tzanetakos, Henry Van Dyke, Lewis A. Vaughn, Susan Berlin Vombrack, Benjamin A. Wade, Ann Wallace, Robert E. Wallace, Dewey I. Wallace Jr., Mark Weber, Michael J. Weber, Thom Weidlich, Donna S. Weimer, Walter Wend, Charles L. Weyand, Calvin B. Wichern, John A. Wilhelm, Vincent Dufaux Williams, Todd Wilson, Walter Winfield Jr., Eleanor Wolff.

We also thank members whose renewals reached the BRS after the above list was compiled. Members who have not yet renewed for 1992 are asked to refer to the attached blue membership coupon.

(12)

NEWS FROM AND ABOUT MEMBERS

1. Mamata Barua of Assam, India. Here are excerpts from Ms. Barua's July 12, 1991 letter:

There must be a straight path to membership in the Bertrand Russell Society. But in my case the path was curvy, hazy, elongated, and so replete with pleasant excitement. Long back, in 1985, I had heard a feeble call from Hamilton, when by accident William Ready's book Necessary Russell (published in 1969) reached me. That year I had been to Bombay where my husband picked up this particular book from a pile of books displayed on a roadside for sale.... [Learning from this book about the Russell Archives, I was inspired to make] a visit to America in 1990 when my husband, Bhaben Barua, was nominated from India to the International Poets' Conference in Yugoslavia. He was contemplating a visit to his brother in America after his European tour. For me, the main deciding factor whether I would accompany him was the lure of the Russell Archives--since the visit would cause me a great deal of expense.... Finally ... in London I rejoined my husband whereupon on 22 June we went to America and discovered that my brother-in-law Rajen Barua in Texas is far-off from Hamilton! However a pleasant surprise awaited me, two week afterwards, when on 13 July Rajen fixed for me an appointment with a professor in the Philosophy Department in Houston University without knowing precisely whom we were going to meet. The professor turned out to be the beaconlight in my topsy-turvy journey to BRS membership, for I learnt that he was Prof. Justin Leiber, one of the directors of the BRS.... He informed me about the whereabouts of the BRS... Soon after I returned to Assam, in the last week of July 1990, I received Lee Eisler's letter welcoming me for my newly acquired membership. And then, and then only, I learnt that the summer session of the BRS was held from June 22 to 24 [in Hamilton] when I was still in America! Providence has fulfilled my long-cherished wish to be associated with the BRS so that I must not grumble at missing the opportunity to attend this session. On the whole the BRS is a source of happiness and inspiration to me.

2. Jan and Lee Eisler of Coopersburg, Pennsylvania. We received this report from Lee in late December 1991:

[We] attended the National Emergency Civil Liberties Committee's Civil Rights Dinner on December 6, at the Hotel Sheraton New York. Corliss Lamont, in a strong voice that belied his 90 years, recounted many current civil liberties infringements. The audience also heard from Phil Donahue, Faye Wattleton and Robert Moses, all of whom received awards. John Kenneth Galbraith was keynote speaker. It was a star-studded occasion. "We're glad we didn't miss it," said Jan.

3. David E. Johnson of Annapolis, Maryland. David is Chairman of the BRS Philosophers' Committee and a philosophy professor at the U.S. Naval Academy. In 1991, he presented his paper, "Conceptual Obstacles to Peace," at the International Society for Value Inquiry Sessions of the World Conference of Philosophy held in Nairobi, Kenya.

(13) LOBACHEVSKII CONFERENCE AT KAZAN UNIVERSITY

Modern Logic Publishing of Ames, Iowa has sent us these notices concerning the International Lobachevskii Conference to be held at Kazan University, Kazan, Russia, August 6-13, 1992. We are pleased to note that BRS member Irving H. Anellis will be a conference participant.

Fans of Russell's Essay on the Foundations of Geometry and The ABC of Relativity might like to know that December 1, 1992 is the 200th anniversary of the birth of the great mathematician Nikolai Ivanovich Lobachevskii (d. 24 February 1856), one of the founders of non-Euclidean geometry and Rector of the University of Kazan. Lobachevskii's ideas still find applications in different branches of mathematics and theoretical physics.

Aleksandr Vasilevich Vasiliev (1853-1929) wrote a book on Lobachevskii, and another on Space, Time and Motion--Historical Introduction to the General Theory of Relativity (1924). The introduction to the English translation of Space, Time and Motion was written by Russell. Half a century after Lobachevskii's death (more precisely, in 1910-1912), Lobachevskii's non-Euclidean "imaginary" geometry became the model [for] the non-Aristotelian "imaginary" three-valued logic of Aleksandr's son, Kazan University teacher Nikolai Aleksandrovich Vasiliev (1880-1940). Nikolai is known to have also studied Russell's work in logic.

In commemoration of Lobachevskii's birth and scientific career, an international conference on "Lobachevskii and Modern Geometry" will be held in Kazan in August 1992. The conference will include the following sections: (1) Geometry and topology; (2) The theory of relativity and gravitation; (3) History of mathematics. For information, contact Professor V.V. Vishnevskii, Department of Geometry, Kazan University, 18 Lenin Street, 420008 Kazan-8, Russia.

** ** * * * * * * * * * *

Modern Logic editor and BRS board of director member Dr. Irving H. Anellis has been invited to speak at the International Lobachevskii Conference, and Modern Logic associate editor Prof. Dr. Valentine A. Bazhanov of Kazan University is serving on the conference organizing committee.

In An Essay on the Foundations of Geometry, Russell wrote (pp. 10-11):

Lobatchewsky, a professor in the University of Kasan, first published his results, in their native Russian, in the proceedings of that learned body for the years 1829-1830. Owing to this double obscurity of language and place, they attracted little attention, until he translated them into French and German....

...The body of the work begins with the enunciation of several important propositions which hold good in the system proposed as well as in Euclid.... Then follows a definition, intentionally framed so as to contradict Euclid's....

For his discovery of non-Euclidean geometry, whose anniversary and work are being celebrated by this conference in Kazan, Lobachevskii has sometimes been compared with Columbus. The new geometry created by Lobachevskii has radically changed the course of development of science in general and of mathematics in particular.

Dr. Anellis plans to speak at the Lobachevskii conference on the influence of Lobachevskii's work on Russell's work in logic and foundations of mathematics in a talk tentatively titled "Non-Euclidean Geometry in the pre-Principia Development of Russell's Logical Program--from An Essay on the Foundation of Geometry (1897) to The Axioms of Geometry (1899)."

(14)

The Meaning of Life: A Newsletter

Tom Stanley spotted this Associated Press article in Valley News [Vermont or New Hampshire?], December 16, 1991, p. 19. Note the reference to BRS member Hugh Moorhead. Professor Robert Lichtenbert may be contacted in care of Loyola University, 6525 North Sheridan Road, Chicago, IL 60626.

Newsletter Tackles Big Questions

CHICAGO (AP) — Who are we? Why are we here? Where are we going? And what can we learn from Elvis?

A philosophy professor is taking up such age-old questions in *The Meaning of Life*, a quarterly newsletter to help others think deep thoughts.

"I'm hoping that by writing about it, I'll keep people's interest alive . . . and they'll find some help for themselves, and make the most out of their short, brief lives," said Loyola University Professor Robert Lichtenbert, who has been publishing the newsletter for almost four years.

About 50 people subscribe to the

\$10-a-year newsletter, including other educators, libraries, students and philosophy buffs, Lichtenbert said.

In 16 pages they get essays on such topics as "abstract art and the meaning of life," "values and meaning" and "finding meaning in love."

Each issue closes with "nuggets of meaning," a selection of one- or two-sentence thoughts.

Lichtenbert started the newsletter during a slow period in his academic career. It's now a break-even proposition, with his wife producing the copies on equipment at the law firm where she works.

Subscriber Frank Aguilar, 54, said The Meaning of Life has been a boon

since he lost his engineering job several months ago.

"To listen to Bob Lichtenbert has been very helpful in keeping my emotional mind working and challenged," Aguilar said.

Hugh Moorhead, chairman of Northeastern Illinois University philosophy department, whose writings have been quoted in the newsletter, said Lichtenbert has "added insight into possible responses to that ultimate question."

So what is the meaning of life, according to Lichtenbert?

"In general, the meaning of life is to make the greatest social contribution you can and enjoy your own life fully, too," he said.

(15)

RUSSELL AND THE KENNEDY ASSASSINATION

The recent release of JFK, a film directed by Oliver Stone concerning the assassination of President John F. Kennedy, has renewed in a remarkable way the controversy about the assassination. BRS member Evan Frost Gellar has suggested through a letter to the BRS that the Russell Archives devote an issue of Russell to this subject and that members [re]acquaint themselves with Russell's "16 Questions on the Assassination," which appeared in The Minority of One, September 1964, pp. 6-8 and in The Autobiography of Bertrand Russell, volume 3, pp. 197-204 in the Allen and Unwin edition and pp. 289-301 in the Simon and Schuster edition.

Kenneth Blackwell of the Russell Archives wrote to us that Stone's film "expands very well on the doubts expressed in these statements [i.e. Russell's "16 Questions"]", but goes much farther in implicating governmental agencies. Much of the movie, I think, was ultimately derived from Mark Lane's research. Russell wrote an Introduction to Rush to Judgment, which however was never published." Mr. Blackwell kindly sent us a copy of Russell's "Statement on the Warren Commission Report," which "has never, apparently, been printed" and which we reproduce below in reduced size.

199270

*340

Statement on the Warren Commission Report
Bertrand Russell, Chairman 'Who Killed Kennedy' Committee, 27/9/64

The murder of an American President affects the peace of the world: a plot to kill him would have the gravest implications. For these reasons alone, the Warren Commission had to explain the disturbing anomalies which have attended the murder and its aftermath. With all the resources of the White House, the FBI, the Secret Service, the Dallas police, the CIA and other governmental agencies available to the Commission, their report conspicuously fails to dispose of the doubts as to the latest official view of the assassination.

We have seen medical evidence altered, three contradictory official versions of the assassination, the circulation of Oswald's description as Tippit's murderer more than twenty minutes before Tippit was shot, a fabricated report from the Dallas authorities, eye-witnesses ignored, lies about the number of bullets — a parade of distortion and doctored evidence. These facts have been established by the investigations of Mr Mark Lane.

The Warren Commission itself consists of men so close to the investigatory agencies of the United States that they would be ineligible to serve as jurors. They have persistently leaked information about the report they now present. The report evades the facts presented by Mr. Lane, and suppresses the evidence supporting them. It is a sordidly incompetent document and covers its authors in shame.

Mr. Lane is justified in comparing the actions of the Warren Commission with the trials of Trotskyists in the U.S.S.R. and of Dreyfus in France: the same standards of deceit are in evidence and the same lack of interest in the truth.

It is clear that much is still being hidden from the public. We shall continue to campaign and to publish the facts as they emerge until the true murderers of President Kennedy are known. The Warren Commission's lack of integrity is fully exposed.

(16) BOOK REVIEW: GRIFFIN ON JOURDAIN AND GRATTAN-GUINNESS

Nicholas Griffin, Professor of Philosophy at McMaster University, has submitted this review of Philip E.B. Jourdain, Selected Essays on the History of Set Theory and Logic (1906-1918), edited by I. Grattan-Guinness, Instrumenta Rationis: Sources for the History of Logic in the Modern Age, vol. 6 (Bologna: Editrice Clueb, 1991).

The Return of Mr. B*rrtr*nd R*ss*ll

An important piece of Russelliana, long out of print, has recently reappeared, though in a place where it will be easy to miss. Philip Jourdain's The Philosophy of Mr. B*rrtr*nd R*ss*ll, a delightful collection of philosophical jokes and squibs loosely based around themes in Russell's (and others') logical work, was first published by Allen and Unwin in 1918. It did not stay in print long and was never reprinted. Despite this (or perhaps because of it) the book has never become Jourdain's best known work, though few have had the opportunity to read it. Grattan-Guinness, who some years ago published a very fully researched edition of Jourdain's correspondence with Russell, Dear Russell - Dear Jourdain (London: Duckworth, 1977), has had the happy idea of including it in a collection of some of Jourdain's writings on the history of set theory and logic. The other writings included are a long four-part paper on 'The development of the theory of transfinite numbers' (originally published in the Archiv der Mathematik und Physik, 1908-1914) and an even longer three-part article on 'The development of the theories of mathematical logic and the principles of mathematics' (from the Quarterly Journal of Pure and Applied Mathematics, 1910-13). The second paper deals with the development of mathematical logic from Leibniz to Frege and Peano, with sections on Jevons, MacColl and Boole. There was to be a section on Russell, but Jourdain never got round to writing it, though he did ask Russell many questions about the development of his thinking in logic in preparation for it. Moreover, Russell did comment on all the sections that Jourdain completed and is warmly thanked in a footnote on p. 104.

Jourdain was one of the earliest of Russell's students in logic; he took the course Russell gave at Cambridge in 1901-2. He was not himself a great logician, but his knowledge of the history of the subject was unparalleled in his day and rare even now. Looking over the footnotes of the two big historical papers reprinted by Grattan-Guinness, one gets the impression that Jourdain had read everything.

His knowledge of the published writings of his subjects was also supported, in the case of contemporary thinkers, by Jourdain's correspondence with them. Not only Russell was interrogated by letter about his work: Jourdain carried on a busy correspondence with Frege, Peano, Cantor and many others. In the cases of Boole and Jevons, Jourdain availed himself of unpublished letters, where they could be borrowed from the Royal Society.

Jourdain's career was cut short by illness. He suffered from Friedreich's ataxia, a form of creeping paralysis which killed him at the age of 40. The same disease made it impossible for him to teach, and difficult for him to write. Though his handwriting became nearly illegible, with the help of a secretary he was able to keep up a prolific flow of papers until his death. He never received much recognition in Britain and as Grattan-Guinness says of this Italian edition: 'It seems a fitting reflection on his isolated career in uninterested Britain that these essays should be made newly available on foreign soil.' Russellians will certainly welcome the reappearance of 'Mr. Bertrand Russell.'

(17)

RUSSELL AT THE ROSENBACH MUSEUM AND LIBRARY

RSN, No. 72 (November 1991) reported on an exhibit, "Dr. Albert C. Barnes and Bertrand Russell: A Philosophical Difference?," which appeared through mid-January 1992 at the Rosenbach Museum and Library in Philadelphia. The exhibit was based on the Museum/Library's collection of correspondence between Russell and Caroline Lewis Lovett and its other Russell manuscript holdings. The Museum/Library kindly sent us information about its Russell-related materials and the exhibit. These materials include the following:

Bertrand Russell. 6 Autograph letters signed to Caroline Lewis Lovett. 10 June 1941; 16 April 1942; 12 January 1943; 22 February 1943; 2 June 1943; 23 December 1945.

Caroline Lewis Lovett. 2 Autograph letters signed (retained copies) to Bertrand Russell. [May or June 1941] and [January 1943].

Albert C. Barnes. Contract between Albert C. Barnes and Bertrand Russell. 16 August 1940. (Copy made by Caroline Lewis Lovett.)

Albert C. Barnes. Letter to Bertrand Russell. 13 March 1941. (Copy made by Caroline Lewis Lovett.)

Law Offices: White and Staples. Typed letter (carbon copy) to the Barnes Foundation. 31 December 1942.

T.R. White. 3 Typed letters signed to Caroline Lewis Lovett. 16 August 1943; 8 September 1943; 26 December 1944.

Bertrand Russell. Autograph Essay. "Capitalism or What?" 5 December 1925.

Bertrand Russell. Autograph letter to The Editor, The Freeman. Postmarked 4 January 1923.

Bertrand Russell. Autograph letter signed to Elmer H. Youngman, Esq. 15 May 1925.

Bertrand Russell. Autograph letter signed to R.E. Hartcup, Esq. 6 December 1962.

Bertrand Russell. 2 Autograph letters signed to unidentified correspondents. 14 June 1925 and 5 December 1925.

Miscellaneous newspaper clippings.

The above first six entries comprise the Bertrand Russell/Caroline Lewis Lovett Correspondence, donated by Ms. Lovett to the Rosenbach Museum and Library on January 19, 1972. The other entries are additional items in the Museum/Library's custody. Ms. Lovett was a Barnes Foundation student at the time of Russell's Barnes Foundation lectureship.

The exhibit featured seven of the above listed letters and a small variety of other materials. Something of the exhibit's spirit is suggested by these introductory exhibit remarks furnished by the Museum/Library:

In 1940 Dr. Albert C. Barnes hired Bertrand Russell, the noted British philosopher, to lecture at the Barnes Foundation school. Barnes, a Philadelphian, amassed an extraordinary collection of Impressionist paintings and established the Barnes Foundation to house his collection and espouse his own theories of the history of art.

Barnes's temper embroiled him in many controversies; the most publicized was his dispute with Russell. When Russell came to the Foundation to teach, he found that Barnes had chosen a house for him. Further, Barnes advised the Russells on the care of their five-year-old son. Mrs. Russell responded by choosing another house and sent Barnes a note asking him to direct his attentions elsewhere. Russell himself regularly changed his unlisted telephone number. Matters worsened when Mrs. Russell insisted on knitting during her husband's lectures. She received a letter from the trustees of the Foundation declaring that her knitting was "harmful to the Foundation's interests."

On 7 January 1943, Russell was absent from his class. Barnes took the occasion to declare the five-year contract void. Russell sued Barnes for \$24,000, the salary remaining to him according to the original contract. Russell won his suit and \$20,000. Barnes appealed to the Supreme Court, but the Court refused to hear the case.

For further information about this exhibit and the Museum/Library's holdings, contact the Rosenbach Museum and Library, 2010 Delancey Place, Philadelphia, PA 19103, telephone 215-732-1600.

JOHN PASSMORE AND THE RUSSELL EDITORIAL PROJECT

This article from *Insight*, August 1991, p.3, published by McMaster University's Research Department, was submitted by Tom Stanley. We salute Professor Passmore and his colleagues at McMaster University, who continue the mammoth work of the Russell Editorial Project.

Australian expert is general editor of Bertrand Russell Editorial Project

"When I saw the manuscripts, I despaired at ever ordering them," chuckles Professor John Passmore, general editor of the Russell Editorial Project. "But the volumes have been very well done and universally acclaimed, and the work has been very interesting and satisfying."

In 1968 McMaster acquired the archives of Bertrand Russell, the 20th-century's most important liberal thinker and greatest philosopher, with the goal of organizing both his published philosophical writings as well as unpublished articles, essays and personal correspondence. The project has been funded by a grant from the Social Sciences and Humanities Research Council (SSHRC).

Russell was the author of 70 books and 2,500 shorter public writings, and the archives contain over 25,000 letters, four personal journals and several draft manuscripts of unpublished books. Of the 28 volumes of material anticipated, seven have been completed, four more are near completion and two are at advanced stages of preparation.

For the past nine years Professor Passmore has been coming to McMaster for periods of up to 3 months to consult on the mammoth task of producing annotated, scholarly editions of the archival material.

A professor at the Institute of Advanced Studies at the National University of Australia, Professor Passmore is a well-known expert in 20th-century philosophy and writes extensively on the philosophy of environmental politics, education, aesthetics, science and the imagination, among other topics.

"Russell is a central figure in the 20th Century, both because of his purely philo-

sophical writings such as the *Principia Mathematica*, and because he was mixed up in every social issue that characterizes the century's liberalism, from Bolshevism and women's suffrage to pacifism and the anti-nuclear movement," says Professor Passmore. He says that the archives are throwing fresh light on Russell's work and thought. "He maintained an incredible correspondence," says Professor Passmore. "and some of the most illuminating letters are the ones to his mistresses."

Russell left a few challenges for his editors, aside from the sheer volume of work. The prolific philosopher would frequently write a complete, book-length manuscript; then, dissatisfied, start all over again, incorporating only bits and pieces of the first draft. He quoted other writers and philosophers from memory, making it tricky to nail down precisely the source he referred to, and he constantly invented new logical symbolisms recorded only on scraps of paper.

"The unpublished logical writings will be of very great interest to specialists," says Professor Passmore. "We are finding that Russell tried out completely original ideas for his major work on the *Principia*." He adds that the unpublished writings are also revealing in showing with what difficulty Russell broke from 19th-century philosophical thinking.

Professor Passmore hopes that funding levels for the project can continue. "Often these kinds of projects collapse at a certain level," he says, citing the lingering deaths of similarly large projects elsewhere on Thomas More, Reid and Benjamin Disraeli. "For a collaborative project, I have found this team has worked very well. The project has gone very smoothly so far." ■

Professor John Passmore, general editor of the Russell Editorial Project.

RUSSELL SOCIETY LIBRARY

The Russell Society Library sells and lends materials about Russell and related topics. The following shows books for sale and audiocassettes available on loan. The most recent list of videotapes available on loan appeared in RSN, No. 72 (November 1991). Please direct inquiries and checks or money orders (U.S. funds) payable to "Bertrand Russell Society" to Tom Stanley, Librarian, Russell Society Library, Box 434, Wilder, VT 05088.

1. Books For Sale. H-Cloth, otherwise paperback. Prices are postpaid.

BY BERTRAND RUSSELL:

Appeal to the American Conscience.....	\$3.15
Authority and the Individual.....	4.75
Education and the Social Order.....	6.50
Has Man a Future?.....H.....	8.00
A History of Western Philosophy.....	6.50
History of the World in Epitome.....	1.00
The Impact of Science on Society.....	4.00
An Inquiry into Meaning and Truth.....	6.50
Political Ideals.....	4.75
Power: A New Social Analysis.....	5.50
Principles of Social Reconstruction.....	4.75
Roads to Freedom.....	6.50
Sceptical Essays.....	4.75
Why I Am Not a Christian.....	4.25

BY OTHER AUTHORS:

Bertrand Russell, 1872-1970.....	\$1.50
Bertrand Russell by A.J. Ayer.....H.....	8.00
Bertrand Russell as a Philosopher.....	2.25
Bertrand Russell's Theory of Knowledge by Elizabeth Eames.....H.....	8.50
Essays on Socialist Humanism in Honor of the Centenary of BR.....	4.00
Essays on Socialist Humanism in Honor of the Centenary of BR...H.....	9.00
Into the Tenth Decade: A Tribute to Bertrand Russell.....	5.00
The Life of Bertrand Russell in Pictures and His Own Words.....	6.75
Mr. Wilson Speaks 'Frankly and Fearlessly' on Vietnam to BR.....	2.00

2. Audiocassettes. The loan fee for audiocassettes is \$1.00 each.

SPEECHES:

200	Nobel Prize Acceptance Speech.	1950.
201	"Living in an Atomic Age."	BBC. 1953.
202	"Man's Peril."	BBC. 1954.
203	Russell-Einstein Manifesto.	1955.
204	"Address to the CND."	1959.
205	"Appeal to the American Conscience."	1966.
206	Address to the Berkeley Vietnam Teach-In.	1965.
207	"Life Without Fear."	1951.
208	"Portrait from Memory: Whitehead."	1952.

2. Audiocassettes (continued).

INTERVIEWS, DEBATES:

- 225 "Is Security Increasing?" NBC. 1939.
 226 Russell-Copleston Debate on the Existence of God. BBC. 1949.
 227 "Bertrand Russell." Romney Wheeler Interview. NBC. 1952.
 228 "Face to Face." John Freeman Interview. BBC. 1959.
 229 "Bertrand Russell Speaking." Interviews by Woodrow Wyatt on philosophy, taboo morality, religion, and fanaticism. 1959.
 230 Woodrow Wyatt Interviews (I). On the role of the individual, happiness, power, and the future of mankind. 1959.
 231 "Close-Up." Elaine Grand Interview. CBC. 1959.
 232 "Speaking Personally: Bertrand Russell." John Chandos Interview. 1961.
 233 David Susskind Interview. 1962.
 234 "On Nuclear Morality." Michael Tiger Interview. 1962.
 235 Interview on Vietnam. 1965.
 236 Studs Terkel Interview. 1962.
 237 Woodrow Wyatt Interviews (II). On nationalism, Great Britain, communism and capitalism, war and pacifism, and the H-bomb. 1959.
 238 Merv Griffin Interview. 1965.

LECTURES, BROADCASTS:

- 250 "Bertrand Russell." Rev. Paul Beattie. 1975.
 251 "Bertrand Russell as a Philosopher." A.J. Ayer. BBC. 1980.
 252 "Bertrand Russell." Professor Giovanni Costigan. 1986.
 253 "Portrait of the Father as Philosopher. Katherine Tait. (In German)

DOCUMENTARIES:

- 275 "The Life and Times of Bertrand Russell." Soundtrack of BBC film. 1962.
 276 "Sound Portrait of Bertrand Russell." NPR dramatization. 1980.
 277 "Bertie and the Bomb." Soundtrack of BBC television broadcast. 1984.
 278 Beatrice Webb on the Russells/Russell on the Webbs. 1966.

MISCELLANEOUS:

- 300 "Sinfonia Contra Timore" by Graham Whettam. Dedicated to Russell.
 301 "The Conscience of Wisdom." CBC. 1961.

3. Book News.

The second annual sale catalog of Books and Pamphlets by Bertrand Russell-Bulletin 30 (December 1991, 337 items) is available from Thoemmes Antiquarian Books, 85 Park Street, Bristol, BS1 5PJ, England.

The Da Capo Press has cancelled its plans to publish a paperback edition of Clark's The Life of Bertrand Russell.

Routledge, Chapman & Hall formally acquired Unwin-Hyman on June 28, 1991. Only five Russell paperbacks are on their backlist.

4. Recent Acquisitions.

"Bertrand Russell (1872-1970) After Twenty Years" by Ivor Grattan-Guinness. Offprint from Notes Rec. Soc. Lond., 44, pp. 280-306. Donated by the author.

"The First Russell Paradox" by Irving Anellis. Offprint from Perspectives on the History of Mathematical Logic. 14 pp. 1991. Donated by the author.

Mathesis: filosofia e historia de las mathematicas, May and August 1991 issues. Donated by Alejandro Garciadiego, editor.

CONCERNED PHILOSOPHERS FOR PEACE CONFERENCE

Tom Stanley supplied us with this information from the Concerned Philosophers for Peace Newsletter, vol. 11, no. 2, Fall 1991, p. 16.

The fifth annual conference of the Concerned Philosophers for Peace will be held in Charlotte, North Carolina on October 16-18, 1992. The theme of the conference is "Power and Domination." Papers which reflect the conference theme are strongly encouraged, but papers which discuss other topics related to peace and war are welcome. Papers on the conference theme may discuss the phenomena of power and domination operating at any of a variety of levels: international politics, national politics, interpersonal relationships, gender issues, race and class issues, ecology and institutional politics within such institutions as families, schools, peace groups, military organizations, prisons, etc. Papers on the conference theme may discuss how power and domination (or our conceptions of them) work and/or how power and domination (or our conceptions of them) may be transformed. Presentation time for papers will be limited to twenty minutes. Papers are due July 1. Please send three copies of the paper and one copy of an abstract of no more than 150 words to: Laura Duhan Kaplan, Department of Philosophy, University of North Carolina at Charlotte, Charlotte, NC 28223.

(21)

RUSSELL IN THE MANUSCRIPT MARKET

Catalog 63 issued in Fall 1991 by David Schulson Autographs (11 East 68th Street, New York, NY 10021) included one Russell entry on p. 39: "Signed pamphlet, History of the World in Epitome (For use in Martian infant schools) ... Signed on the title page, 'Bertrand Russell.' A powerful and witty production. \$150.00." The Russell entry appears in between those for manuscripts by French composers Albert Roussel and Camille Saint-Saëns.

(22)

RUSSELL, MONKEYS, AND THE GREEK CITY

John Lenz has informed us of yet another Russell reference. The following is excerpted from Oswyn Murray's article, "Cities of Reason," in The Greek City from Homer to Alexander (Oxford: Oxford University Press, 1990), edited by Oswyn Murray and S. Price, pp. 1-2, 22.

Bertrand Russell describes a puzzling feature of the mentality of apes. (Footnote: An Outline of Philosophy [London, 1927], ch. 3. I owe the exact reference for this story, which I had remembered from my undergraduate reading thirty years ago, to the indefatigable curiosity of Mogens Herman Hansen.) Their ability to think rationally was in his day investigated through a series of experiments in which the monkey was put inside a cage and presented with a banana just out of reach; in order to obtain the banana he had to perform some simple logical task, like fitting two sticks together, pulling a string, or pressing a catch. The reward triggered off a learning response which enabled the experimenter to build up more and more complicated variants of the primitive task, with the monkey learning as it went along.

The odd thing about such experiments was that the monkeys behaved differently according to who observed them:

Animals studied by Americans rush about frantically, with an incredible display of hustle and pep, and at last achieve the desired result by chance. Animals observed by Germans sit still and think, and at last evolve the solution out of their inner consciousness. To the plain man, such as the present writer, this situation is discouraging.

Russell's conclusion was not so much the simple one that the observer affects the interpretation of the results, but the more significant point that the character of the experimenter itself is predetermined by the mental attitudes of the experimenter:

I observe, however, that the type of problem which a man naturally sets to an animal depends upon his own philosophy, and that this probably accounts for the differences in the results. The animal responds to one type of problem in one way and to another in another; therefore the results obtained by different investigators, though different, are not incompatible. But it remains necessary to remember that no one investigator is to be trusted to give a survey of the whole field.

...In a world which sees the powers of religion and unreason increasing daily in almost every political system, we must admit that it is we who are the primitive. To return to Bertrand Russell, in our attempt to make the Greeks primitive, we have only made them like ourselves.

(23) SIR KARL POPPER AND THE AMERICAN ECONOMIC ASSOCIATION

Bob Davis brought this recent Wall Street Journal article to our attention, and Agnes Lacomba provided a copy to us. Note in particular the references to Sir Karl Popper's indirect participation at a meeting of the American Economic Association. Sir Karl, of course, has been invited to attend the BRS Annual Meeting in June 1992 in Washington. We are pleased to see his ideas continue to play their role in diverse intellectual circles.

THE WALL STREET JOURNAL MONDAY, JANUARY 13, 1992

Post-Communism's Do-It-Yourself Needs

NEW ORLEANS—Economists like nothing better than new worlds to conquer. No wonder that the big draw at the American Economic Association's annual New Year get-together here was a feast of economic discussions centered on post-communist Europe. George Bush was left to deal with the American slowdown as best he could while economists turned their thoughts to Warsaw, Prague, Budapest, Moscow, Kiev and the other newly liberated national cap-

to a Marxist department head to persuade a graduate student that economists were never meant to rule the world.

My own role here was in a panel discussion titled, "The Road Back from Serfdom, a Tribute to Friedrich A. Hayek." The subject and speakers were chosen by Samantha Carrington, a professor at the University of California-Santa Barbara who learned in her native Iran how authoritarian systems destroy human creativity. At an early age she headed for the U.S. and economic freedom. It's no accident that Friedrich Hayek, whose book "The Road to Serfdom" in 1947 defined the indivisible connection between political and economic freedom, is one of her favorite philosophers.

Other members of the panel were Ron McKinnon of Stanford, whose analytical works have graced these pages; Abram Bergson of Harvard, whose research long ago exposed the inefficiency of the Soviet economy, and Janos Kornai of Harvard, a man who learned the problems of communism firsthand in Hungary. The British philosopher Sir Karl Popper, 89 and an early friend of the 82-year-old Hayek, sent along a paper to be read by one of his young associates.

Sir Karl observed that Karl Marx's assertions on the destructiveness of private capitalism were simply wrong. Yet the Marxist drive to obliterate capitalism attained widespread intellectual support and, ultimately, great political power. Marxism was so fashionable by the time Hayek was writing his most important works in the 1930s and 1940s that it required moral courage to challenge all those intellectuals who believed that people like themselves, given sufficient power, could deliver "social justice." Having positioned themselves on the side of the angels, Hayek's adversaries described him as an enemy of the people—merely because he argued that equality of opportunity is just, but attempts by government to create equality of result would

lead to tyranny.

Now that the horrors of Soviet Marxism and its gulags and KGB thought control specialists have come to light, only Marxist diehards publicly challenge Hayek's assertions. Indeed, Sir Karl argues that communism destroyed itself by suppressing honest debate: it collapsed from the weight of its own lies.

But what about the "Road Back from Serfdom?" It was apparent some time ago that real reform could not happen until communism had totally collapsed. But even a transition from statism to *laissez faire* requires public policy. Some of the new post-communist leaders of Eastern Europe, such as Czechoslovakia's highly respected Vaclav Klaus, are themselves Hayekians, but they must operate in a po-

proposed a new dollar-backed ruble to replace the existing one, which she believes will be inflated out of existence. To bypass the state, she makes the radical proposal of issuing the new ruble directly to all citizens of the former U.S.S.R. as a means of restoring liquidity and capital.

Jeffrey Sachs of Harvard, Poland's principal outside adviser, discussed the knotty problem of privatizing huge state-owned industries. He proposed that workers and managers be given minority ownership to win their backing for privatization and to give them incentives for improvement. Another large block of shares could go to public pension funds and the like. This is a departure from the idea of issuing vouchers or shares in industries to the public in general. But it too has problems. Worker ownership complicates the task of trimming work forces and might also build a large political constituency in favor of continued state subsidies, retarding restoration of sound fiscal and budgetary policies.

Yet privatizing the dinosaurs fortunately is not the only game in town. As both Ron McKinnon and Janos Kornai stressed, economies are built from the ground up, not the top down. New businesses already have sprouted everywhere, over one million each in Poland and the former East Germany. Mainly, all the government has to do is legalize private ownership, sell off shops and commercial space and get out of the way. Human initiative, those famous "animal spirits," do the rest. Millions of eastern Europeans are trying to emulate "the American dream," even as the interventionist U.S. Congress is doing what it can to kill it.

Which, of course, is the sad note. As eastern Europe tries to make its way back from serfdom, western policy makers are not setting the best possible examples. Maybe the economists here should have devoted less time to Europe and more to the problems of George Bush.

Global View

By George Melloan

itals where magnificent feats of privatization, marketization and monetization are being attempted.

What makes these economic policy efforts so fascinating is the opportunity for creativity. As has been pointed out more than once, there were no road maps for the return journey from communism. Post-communism's politicians are engaged in a massive historic experiment. It is no wonder that America's vast army of professional economists want a role.

The big question, of course, is how much advice do the Russians, Ukrainians, Poles et al really need. They have had their fill of new economic plans designed by their communist masters and the very expression "economic reform," uttered so often and so vacuously by Mikhail Gorbachev, is enough to make them gag. Economic freedom, not plans, is what they mainly want.

Economists are good at responding to demand, however. Despite the best efforts of the Marxists, statisticians and other contraption builders in college economics departments, most American economists believe in markets. It doesn't take much exposure

Millions of eastern Europeans are trying to emulate "the American dream."

litical environment. The old statisticians are chortling over the new "chaos," but wiser people know open and free political and economic systems always appear to be chaotic as debate rages over necessary adaptations to changing conditions.

How does one "privatize, marketize and monetize" wrecked economies? That there will be plenty of western advice is evidenced by the fact that U.S. Secretary of State James Baker will convene an international conference in Washington nine days from now to try to "coordinate" western aid efforts. Money packages always come with instructions on use.

All good economists agree that marketization requires first of all a rule of law protecting private ownership; people can't make efficient markets in things they don't own. As to money, Samantha Carrington

(24) SIR KARL POPPER AND THE AMERICAN HISTORICAL ASSOCIATION

The American Historical Association held its annual meeting in Chicago, December 27-30, 1991. Reproduced below is the program listing for session 128, which included a paper presentation relating to Sir Karl Popper. This session and the American Economic Association session described on the preceding page suggest that scholarly interest in Sir Karl's work is not restricted to professional philosophers.

Monday, December 30: 1:00-3:00 p.m.

(25) NEH 1992 SUMMER SEMINARS FOR COLLEGE TEACHERS

The National Endowment for the Humanities (NEH) has issued an announcement about one of its Summer 1992 programs. Here are some excerpts.

The Summer Seminars for College Teachers Program, offered by the National Endowment for the Humanities, provides college teachers, independent scholars, and other scholars, such as archivists, curators, editors, and librarians, a unique opportunity for advanced study or research in their own fields or in fields related to their interests. During the summer, the twelve scholars selected to participate in each of the seminars will work together on a topic of mutual interest under the direction of a distinguished scholar and teacher.... Seminars are five, six, seven, or eight weeks in length.... The application deadline is March 2, 1992.

Stipends range from \$2,825 to \$4,000. There are 50 seminars being held at universities throughout the United States. In addition to seminars in the areas of anthropology and folklore, the arts, English and American literature, foreign and comparative literature, history, politics and society, and religious studies, the philosophy seminar offerings include the following:

- Methodological Debates in Nineteenth-Century Physics
- Religion and Politics in Hobbes and Spinoza
- Meaning Holism
- Responsibility in the Real World: Theory and Its Application
- Frege and the Philosophy of Mathematics
- Virtues and Their Vicissitudes: A History of Philosophical Conceptions of Value
- History of Modern Moral Philosophy
- Knowledge, Realism, and Reflection: Examining the New Skeptics (Cavell, Nagel, Rorty, Stoud, et al.)

Direct inquiries to the National Endowment for the Humanities, 1100 Pennsylvania Avenue NW., Washington, DC 20506.

Perhaps a university-affiliated BRS member might consider working with the NEH to design a future Russell-oriented seminar.

(26) ASSOCIATION FOR THE STUDY AND ADVANCEMENT OF SUPPORTIVE VALUES

Marvin Kohl, who is the BRS Board of Directors Chairman and Professor of Philosophy at the State University of New York at Fredonia, has organized the Association for the Study and Advancement of Supportive Values "to study and foster the supportive values, including empathy, sympathy, benevolence, commitment and caring, social integration, affection and love." We hope to learn more about the Association over time. For more information, contact Marvin Kohl, 715 Maytum Hall, SUNY, College at Fredonia, Fredonia, NY 14063.

CHICAGO QUOTES BERTRAND RUSSELL

Reproduced below in reduced size is the advertisement of PaineWebber, an investment firm, appearing on page 11 of the January 1992 WNIB/WNIZ Classical 97 FM Program Guide. WNIB/WNIZ is a Chicago classical music radio station. The same Russell quotation used in this advertisement is quoted without attribution on the June 1992 page of an appointment calendar book distributed to his patients by Dr. Shirish Shah, a Chicago cardiologist. Can someone please supply the source of this quotation?

RUSSELL SOCIETY NEWS

No. 74, May 1992

The Bertrand Russell Society, Inc.

3802 North Kenneth Avenue Chicago, Illinois 60641-2814 U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to further his aims by promoting ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Letters concerning Russell Society News, a quarterly issued in February, May, August, and November, should be sent to Donald W. Jackanicz, Editor at the above Chicago address.

Inquiries on information about and membership in The Bertrand Russell Society should be directed to Lee Eisler; BRS Information Committee; 1664 Pleasant View Road; Coopersburg, Pennsylvania 18036; U.S.A.

(2) JUNE 12-14, 1992 ANNUAL MEETING: WASHINGTON, DC

You are invited to take part in the Bertrand Russell Society Annual Meeting to be held Friday, June 12-Sunday, June 14, 1992 at The American University in Washington, DC. Attached to this issue of Russell Society News is a blue Annual Meeting Pre-Registration Form. (This form also accompanied RSN, No. 73 [February 1992].) We encourage those planning to attend to pre-register with this form to help us anticipate the needed meeting room space and personal accommodations. Little time remains before the Annual Meeting weekend, so your prompt pre-registration will be appreciated. The Annual Meeting is the highlight of the BRS year, so we hope that every member will consider being present. Interested non-members are also most welcome.

At the June 1991 Annual Meeting, the BRS Board of Directors voted to dedicate the 1992 Annual Meeting to Sir Karl Popper, the eminent philosopher, who will celebrate his 90th birthday on July 28, 1992. Acting on behalf of the Board, Past BRS President Robert Davis invited Sir Karl to attend and received a wonderful letter from Sir Karl, which was reproduced in RSN, No. 72 (November 1991). In his letter Sir Karl expressed his interest in attending subject to his health and ability to travel. In late April, however, we received a copy of Sir Karl's April 17, 1992 letter to Robert Davis in which he explained that circumstances made him decide not to make the trip to Washington. Sir Karl's letter is reproduced on page 4. Of course we regret that Sir Karl will not be present at the Annual Meeting, but we respect his decision and wish him well as his birthday approaches.

The most current tentative Annual Meeting program follows:

The Bertrand Russell Society 1992 Annual Meeting
Friday, June 12-Sunday, June 14
The American University, Washington, DC

Friday, June 12

4:00-6:00 p.m. Registration
6:00-7:30 p.m. Dinner
7:30-7:45 p.m. Welcoming Remarks; BRS Service Award to Gladys Leithauser
7:45-8:45 p.m. Joe Barnhart, "Psychotherapy and the Epistemology of Bertrand Russell and Karl Popper"
8:45-9:45 p.m. Congressman Neil Abercrombie, "Russell's Values and the 1992 Presidential Election"
9:45 p.m. Board of Directors Meeting (All BRS members welcome)

Saturday, June 13

8:00-9:00 a.m. Registration
9:00-10:15 a.m. Marvin Kohl, "Russell and the Good Life"
10:15-10:30 a.m. Coffee
10:30-11:30 a.m. Bertrand Russell Society Business Meeting
11:30 a.m.- Tim Madigan, "Russell's Values and Contemporary Secular
12:30 p.m. Humanism"

Saturday, June 13 (continued)

- 12:30-2:15 p.m. Lunch
 2:15-3:15 p.m. Michael J. Rockler, "Popper's Fallibilism and Russell's Scepticism as Educational Perspectives"
 3:15-3:30 p.m. Coffee
 3:30-4:30 p.m. Don Jackanicz, Workshop on Russell's 1960 Sonning Prize Address, "Old and Young Cultures" (This essay appears in Fact and Fiction, pp. 151-158; pre-registrants will be sent a copy before the meeting.)
 4:30-6:00 p.m. Free Time
 6:00-7:00 p.m. Red Hackle Hour
 7:00 p.m. Banquet; BRS Award to Sir Karl Popper; BRS Book Award to Nicholas Griffin; Banquet Address by Nicholas Griffin

Sunday, June 14

- 8:30-9:30 a.m. Steven C. Shafer, "'Witty, Pungent, Philosophical, Whimsical, and Bitter': Politicians Perceptions of Bertrand Russell in Britain"
 9:30-9:45 a.m. Coffee
 9:45-10:45 a.m. John Shosky, "An Intellectual Bias?: Russell and Modal Logic"
 10:45-11:45 a.m. Chandrakala Padia, "Russell and the Third World"
 11:45 a.m. Closing

A per person fee of \$145 for double occupancy or \$175 for single occupancy includes everything--registration, housing, meals including the Banquet, the Red Hackle Hour (a social hour named for Russell's favored whisky), and coffee breaks. Without housing, the per person fee is \$85.

The American University is located in a pleasant northwest Washington residential area, about four miles from the White House, six miles from Union Station (Amtrak trains) and Trailways/Greyhound Bus Center, seven miles from Washington National Airport, 25 miles from Dulles International Airport in suburban Virginia, and 35 miles from Baltimore Washington International Airport in suburban Maryland. One can reach the campus by taxi, but the cost may be rather high. On campus parking is available. The nearest Metro (subway) station (Tenleytown Station on the Red Line) lies about 1 1/2 miles away. We suggest studying Washington area maps in advance of your trip. For information about the university, write to The American University, Massachusetts Avenue at Nebraska Avenue NW, Washington, DC 20016, telephone 202-686-2000. For information about Washington, contact the Washington Area Convention and Visitors Association, Suite 500, 1411 K Street NW., Washington, DC 20005.

As of this writing, we will meet in the Ward Circle Building (at the campus's east end near Ward [Traffic] Circle at which Massachusetts and Nebraska Avenues intersect); housing will be in nearby Centennial Hall. Pre-registrants will be sent any available additional information by mail before the meeting.

WE LOOK FORWARD TO SEEING YOU ON JUNE 12, 13, AND 14.

Sir Karl Popper, CH, FRS

*136 Welcomes Road,
Kenley, Surrey
CR8 5HH*

17 April 1992

Mr. Robert Davis
Past-President
The Bertrand Russell Society
7711 W. Norton Ave.
West Hollywood, CA 90046-6214
U.S.A.

Dear Mr. Davis,

I am very sorry that it has taken me so long to answer your kind letter of March 6, 1992. I was on a short trip to Spain when it arrived, and I had to go to Germany a few days later. This was followed by a succession of visitors, and the strain has altogether been very great. I am inundated with urgent work, some of which should have been finished weeks if not months ago.

My approaching 90th birthday has caused a real flurry of publishing, or re-publishing interest in my writings. As a consequence, I have had to spend time and effort on revision tasks, and on correcting and amending wherever necessary. All this has left me very tired.

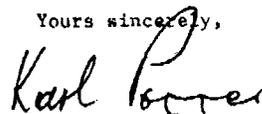

After I received your letter of March 6, I thought at first that I would wait a little to see if I could give you a positive answer. But as the weeks went by, I came to realize that going to Washington in June is out of the question. I think this is the right decision, although I am aware that it may cause some disappointment. I myself was looking forward to the meeting of the Russell Society, as you know. But the possibility of having to cancel at the last moment weighed heavily in favour of my saying now that I would not attend the meeting.

I greatly regret any preparatory efforts that may have already been made. Please tell your fellow organizers how sorry I feel.

As for your candidature for the Californian legislature, I very much hope that you will be successful. You say that you are trying your luck in a "safe Democratic district"; but remember the election we have just had in the United Kingdom. May your "warrior spirit" win through!

With my best wishes for a successful meeting of the Russell Society in June, I am

Yours sincerely,

Karl Popper

ANNUAL MEETING ANNOUNCEMENT

This annual meeting announcement, reproduced in reduced size, was mailed to numerous U.S. academic institutions and organizations involved with philosophy, history, mathematics, science, and public affairs. It is another invitation for you to join us in Washington. You might also want to make copies to inform others about the BRS and our Annual Meeting.

"The good life is one inspired by love and guided by knowledge."

THE BERTRAND RUSSELL SOCIETY, INC.

Donald W. Jackanicz
Editor, Russell Society News
3802 North Kenneth Avenue
Chicago, IL 60641-2814 U.S.A.

March 1, 1992

ANNOUNCEMENT OF THE BERTRAND RUSSELL SOCIETY 1992 ANNUAL MEETING

The Bertrand Russell Society will hold its 1992 Annual Meeting in Washington, DC at The American University from Friday, June 12 to Sunday, June 14. Society members and interested non-members are invited to attend.

Sir Karl Popper, the distinguished philosopher who on July 28, 1992 will celebrate his 90th birthday, plans to be present, if his health permits. The Society looks forward to having Sir Karl as its honored guest and as a speaker. Sir Karl is best known as the author of The Logic of Scientific Discovery, The Open Society and Its Enemies, and The Poverty of Historicism. He is widely regarded as being one of the foremost living philosophers and resides in Kenley, England.

Also making meeting presentations will be Congressman Neil Abercrombie of Honolulu, Hawaii; Marvin Kohl of the State University of New York, Fredonia, New York; Tim Madigan of The Council for Democratic and Secular Humanism, Buffalo, New York; Michael J. Rockler of National-Louis University, Evanston, Illinois; Steven C. Shafer of the University of Illinois, Urbana, Illinois; and Chandrakala Padia of Benares Hindu University, Varanasi, India. The 1992 Bertrand Russell Society Book Award will be presented to Nicholas Griffin of McMaster University, Hamilton, Ontario, Canada for Russell's Idealist Apprenticeship (Oxford University Press, 1991), which concerns Russell's early neo-Hegelian period. Other meeting events will include The Red Hackle Hour reception and a banquet.

For further information about the meeting, please write to Michael J. Rockler, 1029 Linden Avenue, Wilmette, IL 60091. For information about The Bertrand Russell Society, please write to Lee Eisler, BRS Information Committee, 1664 Pleasant View Road, Coopersburg, PA 18036.

(4)

FROM THE PRESIDENT

Thoughts on Russell's Contributions

Michael J. Rockler, President, Bertrand Russell Society

Bertrand Russell lived a long and productive life during which he contributed to intellectual and social life in many diverse ways. His essay "On Denoting," published just after the turn of the century, strongly affected the development of linguistics. His theory of description--contained in this essay--was a standard perspective on linguistic theory for half a century.

Marriage and Morals, published in 1929, contributed significantly to the revolution in sexual mores which occurred in the nineteen-sixties. Through this work and other activities, Russell lent support to the movement for the liberation of women.

Russell also contributed in an important way to the development of educational theory. He wrote two major books on the subject: Education and the Good Life in 1926 and Education and the Social Order in 1932. In the time between the writing of these two books, Russell and his wife Dora founded Beacon Hill School. This experimental laboratory school (which Dora describes in The Tamarisk Tree) became a part of educational history. Russell continued to address issues relating to schooling in almost all of his non-technical books for the remainder of his life.

Russell's first book on education was precipitated by the birth of his children. His second volume reflects his experience at Beacon Hill and was thus tempered by the wisdom of practice. Taken together these two works illustrate two different sides of Russell as an educator.

Education and the Good Life focuses on the aims of education and the development of character. He uses his own experience with John and Katharine to delineate a strategy for early childhood education. In Education and the Social Order Russell examines ways in which education functions in society. He examines the progressive educational perspectives of natural growth and rejects it.

Both of these books contain different perspectives regarding the nature of teaching and learning. In effect, one can look at them as a debate that occurred within Russell's own thinking about schooling.

Marvin Kohl and I will be discussing these two books at the inaugural conference of the Coalition for Secular Humanism and Freethought. This meeting will be held in Toronto beginning on June 18 and concluding on June 21. We would be pleased to have members of the Bertrand Russell Society join us for this discussion. The details of the conference are contained elsewhere in the newsletter. An exciting summer vacation could be had by combining the BRS annual meeting with a trip to Canada for the secular humanist meeting and a trip to the Russell Archives in Hamilton, Ontario--a short drive from Toronto. I look forward to seeing each and everyone of you this summer.

(5) PHILIPPINE BRS CHAPTER ESTABLISHED

A Philippine Chapter of The Bertrand Russell Society was established in early 1992, based on the Benaras [India] BRS Chapter model. We congratulate the Philippine Chapter's chief organizer, Ramon "Poch" Suzara, who himself has been a BRS member for a number of years and is presently a BRS Director. We will regularly report news about the Philippine Chapter. But for now, to introduce the Philippine Chapter's members and to summarize its early history, we reproduce below Ramon's recent letter to Lee Eisler.

BERTRAND RUSSELL SOCIETY, INC. PHILIPPINE CHAPTER

8 Zipper Street, San Lorenzo Village, Makati, Metro Manila * Tel. 810-7592

Feb. 24, 1992

Mr. Lee Eisler
vice president/information
Bertrand Russell Society, Inc.
1664 Pleasant View Road
Coopersburg, PA 18036

Dear Lee,

Herewith are the names of the members of the Philippine chapter:

1. Mr. Gras Reyes
2. Mr. Max Indolos
3. Mr. Placido Joaquin (retired)
4. Mr. & Mrs. Norman Castillo
5. Ms. Wild Teng Santaromana
6. Ms. Raquette Yee Indolos
7. Ms. Yumiko Ikeshiro
8. Ms. Armi Ruby Cortes
9. Ms. Jolie Cruz
10. Ms. Jessica Paeonienda
11. Mr. Joaquin Cerral Jr
12. Mr. Jose Tenedo
13. Mr. Roland Quintos
14. Atty. Dennis Gumpal

It's great to have #8 Zipper Street as the BRS, Philippine chapter. This was also the same office that we used when I set up the Philippine branch of the Bertrand Russell Peace Foundation almost twenty years ago.

We are still organizing. The expenses of the BRS, Philippine chapter, will be first shouldered by me. The immediate plan, however, is to reprint for distribution Russell's "Why I am not a Christian" into pamphlet form. Then later we hope to have our own monthly magazine.

During our next meeting, which will be monthly, we shall elect our own board of directors. In the meantime, I have been appointed with the body's approval to be the International Representative of the BRS, Philippine chapter.

Enclosed are clippings for possible reprint in the BSN.

Please wish us the best of luck.

With all good wishes,

Ramon "Poch" Suzara
International Rep.

(6) FROM THE BERTRAND RUSSELL PEACE FOUNDATION LTD.

Ken Fleet of The Bertrand Russell Peace Foundation Ltd. wrote to us in December 1991 as follows:

Dear Friends,

One of our directors, Ken Coates, is currently serving as Chairman of the Human Rights Sub-committee of the European Parliament.

We thought you might be interested in his annual report to the Parliament, which covers many issues on which you have taken an identical view.

I take this opportunity of wishing you a happy new year!

Yours sincerely,

KEN FLEET

We have sent Mr. Coates' August 5, 1991 report, titled "Report of the Political Affairs Committee on Human rights in the world for the years 1989 and 1990 and Community human rights policy," to the BRS Library from which it may be borrowed. Part A of the report has 22 pages; Part B has 214 pages. To contact Mr. Coates or to inquire about The Bertrand Russell Peace Foundation Ltd., write to this address: The Bertrand Russell Peace Foundation Ltd., Bertrand Russell House, Gamble Street, Nottingham NG7 4ET, England.

(7) COALITION FOR SECULAR HUMANISM AND FREETHOUGHT CONFERENCE

In Section 4, Page 6, BRS President Michael Rockler mentioned the June 18-21, 1992 inaugural conference of the Coalition for Secular Humanism and Freethought to be held in Toronto, one week after the BRS June 12-14 Annual Meeting. The Coalition's conference will be co-hosted by the Council for Democratic and Secular Humanism (CODESH) and the Humanist Association of Canada and has this theme: "Secularism and Multiculturalism: A Humanist View." Among the sessions will be those titled "In Defense of Secularism," "Overpopulation and Reproductive Rights," "Defending the Enlightenment," and "Russell vs. Russell on Education." Michael Rockler and BRS Board Chairman Marvin Kohl will be the speakers in this last BR-centered session. A variety of other distinguished speakers from Canada, the United States, Mexico, and Russia will participate. We highly recommend you consider taking part. Direct inquiries to either (1) CODESH, Box 664, Buffalo, NY 14226-0664, USA; or (2) Humanist Association of Canada (Conference '92), 116 Ravenscrest Drive, Etobicoke, Ontario M9B 5N3, Canada.

(8) FIRST ENCOUNTERS: LUDWIG WITTGENSTEIN AND BERTRAND RUSSELL

The *Atlantic Monthly*'s regular feature, "First Encounters," offers this look at Wittgenstein and Russell in the July 1991 issue, p. 93. Sampling other recent issues, one can learn about the initial meetings of Josef Stalin and Winston Churchill (November 1991) and Paul Robeson and Peggy Ashcroft (May 1992).

FIRST ENCOUNTERS

LUDWIG WITTGENSTEIN AND BERTRAND RUSSELL

IT WAS OCTOBER, 1911, his *Principia Mathematica* was newly out, and Bertrand Russell, fellow of Trinity College, Cambridge, was having his tea when a young man suddenly appeared. He introduced himself as "Loot'vig Vit'gun-shteyn." Russell replied in German, but the young man would have none of that. He had studied engineering, he said in English, but preferred the philosophy of mathematics, and had come to Cambridge expressly to hear Russell on mathematical logic.

Which he did that very day, and throughout the term. He dominated discussions and then followed Russell back to his rooms to press his case, often far into the night. "He thinks nothing empirical is knowable." Russell complained when the Austrian refused to admit, for example, that there was not a rhinoceros in the lecture room, even after Russell had checked under all the tables and chairs. But as Wittgenstein's abilities became more apparent, Russell began to view him as his natural heir in mathematical logic—"the young man one hopes for."

He was—and wasn't. Wittgenstein's intense Teutonic seriousness collided with Russell's mordant wit. When the war came, Wittgenstein enlisted in the Austrian army, ignoring the fact that his friends were on the other side. "The last few days I have thought often of Russell," he wrote from the front. "Does he still think of me?" But lonely nights on watch could be productive, and during a lull in the fighting he put the *Tractatus* on paper. He finished it just before his capture by the Italians.

The war changed Wittgenstein. A kind of logical mysticism pervaded his thinking and seeped into the *Tractatus*, as in its concluding line: "Whereof one cannot speak, thereof one must be silent." Russell did not much like the *Tractatus*, which cast doubt on some of his own work. But others did. It became a small classic, and Wittgenstein returned to Cambridge a legendary figure. He looked askance at Russell, now a socialist, atheist, and advocate of free love, writing popular books for a living. Russell's role as mentor was over. —Nancy Caldwell Sorel

Russell Subscriptions	<u>136.00</u>
Total Expenses	-3,312.75
Bank Balance, March 31, 1992	\$6,545.85

(10)

CAN YOU HELP HARRY RUJA?

We were sorry to learn that Harry Ruja, a distinguished Russell scholar and Past Chairman of the BRS Board of Directors, will be unable to attend the June 1992 BRS Annual Meeting in Washington. He has asked us to bring the following invitation/request to members' attention. If you can help, you will not only be assisting Harry. You will be making a contribution to Russell studies.

RESEARCHER SOUGHT

Dear fellow BRS members: As many of you know, with Ken Blackwell of the Russell Archives in Canada, I am working up a comprehensive BR bibliography. Just now I am on the trail of columns by Joseph Alsop and George Sokolsky which featured BR in 1958. Would any of you who are planning to attend the conference be willing to come to DC a few days earlier and search for the columns? Of course I would pay you for your time. You would do it in the newspaper room of the Library of Congress (James Madison Bldg.). If at all interested, drop me a line (4664 Troy Lane, La Mesa, CA 91941) or call me at 619-469-4887 and I'll send you full details and even suggest procedures to make the search an easy one.

Sincerely, HARRY RUJA

(11) BR ON THE ELECTRONIC BULLETIN BOARD

Irving Anellis sent us these printouts of items relating to Russell, appearing in the sci.math electronic bulletin board on March 9, 1992.

Item: sci.math 22974, Mon, 9 Mar, 29 lines. (21 items left)
From: boroson@spot.Colorado.EDU (BOROSON BRAM S)
Subject: Re: famous quote (Einstein?)

In article <1992Mar4.204111.17822@fs7.ecs.cmu.edu>
snyder@henry.ecs.cmu.edu (John Snyder) writes:

There is a famous quote to the effect: Great ideas are always [often?] met with violent opposition from mediocre minds. I don't know the exact wording, but believe it is attributed to Albert Einstein. I would like to know the exact quote, and when and where he said it. I have already tried our local libraries, including the help of 2 excellent reference librarians, but to no avail. Does anyone out there know about this quote? If so, please send me email.

Thanks

I believe that Einstein said this about Bertrand Russell. Russell was turned down for a teaching position at the City College of New York because of his atheism and views on sex. The original quote was not "great ideas" but either "great minds" or "great spirits", I think. You can find it in the collection Why I am Not a Christian by Bertrand Russell. I am fairly sure.

Subject: Re: famous quote (Einstein?)

In a previous article, boroson@spot.Colorado.EDU (BOROSON BRAM S) says:

In article <1992Mar4.204111.17822@fs7.ecs.cmu.edu>
snyder@henry.ecs.cmu.edu (John Snyder) writes:

There is a famous quote to the effect: Great ideas are always [often?] met with violent opposition from mediocre minds. I believe that Einstein said this about Bertrand Russell, Russell was turned down for a teaching position at the City College of New York because of his atheism and views on sex. The original quote was not "great ideas" but either "great minds" or "great spirits", I think. You can find it in the collection Why I am Not a Christian by Bertrand Russell. I am fairly sure.

Actually City College offered him the position, but when the offer was made public the Episcopal bishop of New York started a campaign against it, raising a fuss that went to the state legislature and to the US Supreme court and led the City Council to call for the dismissal of the entire Board of Higher Education. It was a masterpiece of reactionary frenzy, and besides the chapter in Why I am not a Christian there is considerable discussion and correspondence on it in Russell's Autobiography.

(12) ELECTION OF DIRECTORS

We wish to elect 9 Directors this year for 3-year terms starting on January 1, 1993. This will give us a total of 23 elected Directors. The August Russell Society News will provide a ballot for voting.

We are asking you to nominate candidates, whose names will appear on the August ballot. Any member may nominate any other member to be a Director-Candidate. If you wish to be a Candidate yourself, notify the Elections Committee and someone will probably nominate you. The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something or other by mail, and they are expected to make a reasonable effort to attend annual meetings. The cost of attending meetings by Directors is tax-deductible according to U.S. law. A brief statement about the candidate should accompany a nomination.

To nominate someone--or to volunteer yourself--write to Election Committee, c/o Russell Society News, 3802 N. Kenneth Ave., Chicago, IL 60641, U.S.A.

(13)

VOLUNTEER WANTED

Can you volunteer to be the new Co-Chairman of the BRS Membership Committee?

We need someone who can spare several hours a week to handle inquiries and enrollments.

The present Co-Chairman, William K. Fielding, does a superb job. But he has decided to give up the post of Co-Chairman, as soon as we find a successor.

The record-keeping routines have been worked out and seem satisfactory (but if you find a way to improve them -- fine!). The work is not difficult but it does take time. It is essential work without which the BRS could not thrive. Even though it has become routine, it has always been found interesting. Inquiries come in from around the world, often with comments or anecdotes. This is a job for someone who has worked in an office and has enjoyed doing paper-work. You would need some space for storing the printed material that you would send to inquirers and to new members.

We won't go into further details here, but if you might be interested, please let us know. But do not volunteer unless you are prepared to stay with it for at least a year.

Does it appeal to you? Volunteer! Write: Volunteer, 1664 Pleasant View Road, Coopersburg, PA 18036, U.S.A.

(14)

FROM MEMBER JAMES REID

James Reid, who joined the BRS in 1991, wrote this to us in January 1992:

I'm uncomfortable joining organizations: a life-long acquaintance with Russell has made me so. I hope that we members of the B.R.S. can avoid much of the high-minded seriousness and embarrassing solidarity that has come to mark many of the recent humanist/agnostic/atheist/scientific method "groups," characteristics that, ironically, tend to trivialize--practically theologize!--these otherwise gentle and useful perspectives.

I'm a corporate president (an unabashed capitalist dog) who has always viewed Russell's economics as horribly wrong-headed. On the other hand, I can think of no one whose writings have so influenced my life: his rigorous analytical skills, impeccable honesty, great good humor, self-deprecation, compassion, vitality, and undying optimism in mankind's ability to improve its lot are all part of the spiritual legacy that he

(unknowingly) bequeathed to me.

I hope the B.R.S. always maintains an attitude appropriate to the personality of its namesake: curious, self-critical, generous and forever on guard against a sense of self-importance. Should we ever become overly sectarian we will have done a grave injustice to the memory of one of the last spokesmen for truly liberal thought.

I'm proud to be a member and enthusiastically proffer my dues. Keep up the good work.

Thank you, James, for sharing your thoughts on the BRS with your fellow members. We invite other members to do the same. Should you wish to address the B.R.S. membership on your thoughts about Russell and the B.R.S., please send a short letter to the Editor. If space permits, we will try to print your message.

JACQUES COUSTEAU ON RUSSELL

An interview with famed oceanographer Jacques Cousteau in Calypso Log, vol. 12, no. 2 (June 1985) includes the following question and answer. We are indebted to Whitfield Cobb for providing this article.

Who's been the greatest influence on you?

Who has influenced me? My mother, of course. But I think Bertrand Russell is my idol. He has written pages I will never forget. His work for me is the fantastic combination of a scientist, a good writer, a humane character who loved women, life, who had the courage to go to prison for his ideas. I think he was a great man. The perfect combination. A complete man. Also, one of my fascinations has been to try to assess the real value of truth. It was a big revelation to me to find that logic did not satisfy my thirst for truth. When I reason, when people reason, they come, most of them, to logical absurdities. I find poets closer to the truth than mathematicians or politicians. They have visions that are, for some reason they cannot explain, an inspiration that guides them and brings them by the hand, or by the pen, closer to the truth than anybody else. I believe that we should follow the poets more than anybody else in life. It's the light. It's the star we should be guided by. Poetry, and poetry under all its forms. Poetry in writing. Poetry in images. Poetry in anything you are doing. The only remedy to the logical absurdities are utopias, reasonable utopias. The utopias are shown by the poets. If you make them a little more reasonable, they are the remedies to the logical absurdities that lead us to war, to destruction, to miserable education for our children.

NEWS FROM AND ABOUT MEMBERS

Reuben Heller writes that in February 1992 in Asilomar, California "Sherwin Wine gave a talk on humanism in which he quoted extensively from Russell's The Conquest of Happiness."

When renewing his membership for 1992, John D. Rockfellow reported an address change: Wittgensteinlaan 167, Amsterdam, The Netherlands. He writes, "It was not a simple matter to find an apartment on Wittgenstein Lane, but I've finally done it!"

Chandrakala Padia, head of the BRS Benaras Chapter in India, recently wrote to Lee Eisler about the Benaras Chapter and other matters. Here are some excerpts from her letter:

I am writing this letter to give you a piece of good news. My manuscript entitled "Liberty and Social Transformation: A Study in Bertrand Russell's Political Thought" has been accepted by a leading publisher in India. The name and address of the publisher are: Heritage Publishers, 4C Ansari Road, New Delhi 110002, India. The contract with the publishers has been signed on 31 January 1992. The publisher has assured me to bring out the book before June 1992. Heritage has published many books in collaboration with Basil Blackwell. If possible, please place orders to purchase a few copies of my book in advance. The cost in any case will not exceed \$10.

...I am happy to let you know that the Benaras Chapter of The Bertrand Russell Society is doing very well. I am particularly writing on this letter pad [a reference to the Benaras Chapter letterhead] to show you that a number of professors have willingly joined the Society and are actively participating in its activities. Recently Prof. D.K. Srivastava delivered a talk entitled "Interface between Man and Technology," which was very widely attended. [In addition to Dr. Padia and Prof. Srivastava, the Benaras Chapter letterhead lists Professors R.S. Sharma, Nalini Pant, and V.C. Srivastava, each of Benaras Hindu University.]

ON NICHOLAS GRIFFIN

This article by Russell Archivist Kenneth Blackwell is reprinted from The McMaster Courier, April 7, 1992, p. 5. Nicholas Griffin will be the recipient of the BRS Book Award in June 1992 for Russell's Idealist Apprenticeship. We are in particular pleased to note the information provided about the forthcoming book edited by Dr. Griffin, The Selected Letters of Bertrand Russell.

The McMaster Courier, April 7, 1992/Page 5

Philosopher leads resurgence in Bertrand Russell studies

By Dr. Kenneth Blackwell
Russell Archivist, Mills Library

The '90s are witnessing a resurgence in the study of Russell's thought and life. I don't ordinarily quantify and graph the annual crop of published studies in this research area unique to McMaster since 1968, but the sheer weight of new volumes is drawing attention to itself.

Since 1990, 13 new volumes on Russell have appeared, in German, Italian, French, Russian, Chinese and English. At least eight more are expected this year, as well as nine re-issues of Russell's own books from his new publisher, Routledge. The eight to come include a new biography, specialist studies, an archival catalogue and the eighth to 10th volumes of McMaster's critical edition, *The Collected Papers of Bertrand Russell*. In addition, two more biographies are in the works, as are studies in Russell's logic, mathematics, philosophy and education, biographies of people he knew that draw on their correspondence with him, several more volumes of the *Collected Papers* and the second volume of his *Selected Letters*. There was nothing comparable to this interest prior to institutionalizing the Russell Archives here.

No one, it can be safely said, has or will read all the new volumes. If anyone wishes to try, all are in the Russell Archives. One McMaster faculty member is responsible for nearly a quarter of them. He is Dr. Nicholas ("Nick" to all) Griffin of the philosophy department.

Dr. Griffin came to McMaster in 1976 at age 28 to teach and conduct research on Russell. His interest in Russell studies started much earlier. He is one of the youngest surviving genuine correspondents of a man who, as a boy, knew people born in the 18th century. In the '60s Griffin elicited thoughtful replies on the Vietnam War from Russell. Griffin has

Dr. Nicholas Griffin
Photo: John Hewak

maintained his interests in Russell's political goals. For the Bertrand Russell Peace Foundation journal he has been a steady reviewer of books in Russell studies.

Two years ago, with Albert C. Lewis of the Russell Editorial Project, Griffin published his edition of Russell's earliest professional writings: the extremely difficult, murky, nebulous, tortuous and questionable screeds, long and short, of neo-Hegelian philosophizing that Russell himself described as "rubbish." A valuable caveat in scholarly editing is "Don't take your author's word for it." Griffin didn't. He wished to understand the philosophy for which Russell is famous. To understand that he felt obliged to understand the early writings. Perhaps Russell had secretly hoped someone would find them not rubbish. He did keep the unpublished manuscripts.

In the *Collected Papers* the editors provide intellectual context and a host of other scholarly aids. Griffin directed his deeper findings in Russell's earliest philosophy into a book of his own, and Oxford University Press (OUP) published his *Russell's Idealist Apprenticeship* last year. OUP and the publisher of the *Collected Papers* volume would have done well to have advertised them together, as companion volumes.

Several years ago, when the Russell Peace Foundation considered that it was time again to exercise its rights in 2,000 of Russell's unpublished letters, they turned to Griffin to edit his *Selected Letters* in two volumes. Allen Lane The Penguin Press brought out Volume 1 this March in Britain to widespread acclaim. It is due to appear in July in North America.

The Private Years took five years, concurrent with Griffin completing the two other books. From the few thousand of Russell's extant letters before Griffin's cutoff date of 1914, he chose 240; they are to 22 correspondents. Two of

Viewpoint

them, Alys Russell and Lady Ottoline Morrell, account for 170 letters; yet this number represents a 90 per cent winnowing of the number available to those two recipients. The result is that we observe Russell—and his prose style—maturing through these important relationships. Griffin is the first to delineate the labyrinthine intricacies of the relationship with Lady Ottoline. He calls it an epistolary biography, for what the letters don't cover he does in his important interstitial commentary and 924 annotations. One British reviewer has remarked on his "omniscience." The comment amuses him, for at least one name went unannotated.

Volume 2, *The Public Years*, is under way. The number of candidate letters increases enormously for the latter half of Russell's life. Besides three marriages, children, new and continuing private relationships, Russell embarked on a multitude of public ones. New letters turn up monthly. Griffin, whose methodology is first to look at all the letters and then select the most vivid ones covering a variety of concerns, has his work cut out for him.

Russell wrote fewer "great" letters in the remainder of his life, but he wrote far more letters. Therefore more letters are required to cover even more concerns. The difficulty of making a representative selection is so great that I think the second volume should become two. The world of Russell studies would welcome that development, although the publisher, the sponsor and Griffin himself, to my knowledge, have not contemplated it.

This selected edition is probably the necessary step to the *Collected Letters*, and the *Collected Papers* are the necessary first instalment of the *Collected Works*. Both have an important role in distributing a reliable textual base for the new work in Russell studies taking place around the world.

(21)

BOOK NEWS/MANUSCRIPT NEWS

McMaster University Russell scholar Nicholas Griffin informed us in early April that "although Houghton Mifflin, the American publisher of The Selected Letters of Bertrand Russell, will not be publishing volume 1 officially until 17 July, they hope to have some advance copies available at the B.R.S.'s Washington meeting in June." See Kenneth Blackwell's article elsewhere in this RSN issue for more information about this book edited by Prof. Griffin. We do hope that those attending the June meeting will indeed have a sneak preview of this significant publication.

The March 26, 1992 issue of The New York Review of Books features Noel Annan's review of Samuel Hynes' A War Imagined: The First World War and English Culture (Atheneum, 514 pp., \$29.95) and Robert K. Massie's Dreadnought: Britain, Germany, and the Coming of the Great War (Random House, 1,007 pp., \$35.00). Russell, E.D. Morel, and other figures connected with Russell's World War I experiences are briefly mentioned in the review. We have not seen Hynes' book, but those interested in Russell and World War I may want to examine a copy.

Harry Ruja has forwarded to us a recent mailing from The Scholar's Bookshelf (51 Everett Drive, Box 179, Princeton Junction, NJ 08550), listing the following items as remainders available through that company:

739P1. The Collected Papers of Bertrand Russell. Vol. I: Cambridge Essays, 1888-1899. Vol. VIII: The Philosophy of Logical Atomism and Other Essays, 1914-1919. Vol. XII: Contemplation and Action, 1902-1914. These volumes from the complete McMaster University set present carefully edited editions of Russell's works including adolescent writings, "A Locked Diary," and other early personal writings, graduate essays, "Refuge in Pure Contemplation," and other later philosophical papers. 1983: 1574 pages. (Allen & Unwin) List Price per set of 3 volumes: \$281.25. Sale Price: \$89.50.

David Schulson Autographs (11 East 68th Street, New York, NY 10021) this winter issued its Occasional List No. 2 of "Autograph Letters, Manuscripts, & Historical Documents." Among the 98 entries was the following: "82. Russell, Bertrand. (1872-1970). British philosopher and mathematician. TLS [typed letter signed], 8 vo, Surrey, July 15, 1953. He must 'avoid all "avoidable" work...Russell.' \$90.00" Upon receiving the list, we telephoned this company, but were told this letter had already been purchased.

If you are looking for a book by or about Bertrand Russell, don't overlook the offerings of the BRS Library. See Section /Page . We appreciate your patronage.

BOOK NEWS/MANUSCRIPT NEWS (continued)

BRS Librarian Tom Stanley recently exchanged letters with Peter B. Howard of Serendipity Books, 1201 University Avenue, Berkeley, CA 94702. Mr. Howard is President of the Antiquarian Booksellers Association of America for 1992-1994. Serendipity Books has available a set of Bertrand Russell and Alfred North Whitehead's Principia Mathematica. Mr. Howard supplied this description of these rare books:

SET: \$6500.00 NET, subject to prior sale.

A finders fee of 10% to the BR Society would be in order from Serendipity if a sale eventuated.

Volume I: First printing, 1st edition, Cambridge, 1910. Original blue cloth; spine rebacked; original labeled, gold lettered spine preserved, laid down. Tear in half-title repaired with tape (clear tape). Ownership ink lettering, "Property of H.T. Costello" on h-t; Ditto on title in ink: "PROPERTY OF H.T. COSTELLO (BARNARD COLLEGE) Columbia University." His sig on rear blank. His sig on front blank. NEW ENDPAPERS. Good copy, with flaws as noted.

Volume II: 1st edition, 1st printing. Spine has minor good cloth repairs, but is not rebacked. Inner hinges a bit cracked. Ownership notation as above on title; "H.T. Costello" on rear pastedown. Very good copy. Cambridge, 1912.

Volume III: SECOND EDITION, 1927. (1st ed was 1913.) Original cloth, a nice bright tight copy.

To appreciate the rarity and value of early copies of Principia Mathematica, consider this excerpt from John Slater's forward to Bertrand Russell: A Collection, a catalog issued by Thoemmes Antiquarian Books in 1988:

...A logic collection without a copy of the first edition of Principia Mathematica would be gravely deficient. Arguably Principia Mathematica is the greatest work in logic; almost certainly it is the greatest work in modern symbolic logic. ...this collection boasts a complete copy of the first edition of Principia Mathematica. Copies of the first edition of this book in the original bindings are few and far between. Consider its publishing history to understand why: Volume I was published in 1910 with a press run of 750 copies. It was sold separately for two years before Volume II appeared. Only 500 copies were printed of the other two volumes. Volume III was published in 1913. Under the best possible conditions then, 500 sets were produced. But we know that these conditions were never realized, because many mixed sets exist, as well as many odd volumes. But for the sake of argument, let us assume that there were 500 sets at one time. At least 300 of these would have found their way into libraries, and have been stamped up and probably rebound; this is especially true of Volume I, the part of the set most frequently

BOOK NEWS/MANUSCRIPT NEWS (continued)

consulted by students. Of the remaining 200 sets, a certain significant number would have been destroyed in the two world wars that have ensued since their publication. Based on years of experience with the secondhand book marketplace, I would estimate that there are fewer than 50 sets in private hands. It is still possible to put a set together by buying odd volumes, and this is perhaps the new collector's best way of going about it. But such a method requires enormous patience and diligence, and the ability to buy on the spot.

McMaster University's Library Research News, Fall 1991, p. 2 states, "Alejandro Garciadiego briefly visited the Archives this summer to select photographs for his book Bertrand Russell and the Origins of the Set-Theoretic "Paradoxes", to be published by Birkhäuser. It will print some Russell manuscripts and a letter to G.H. Hardy in facsimile." Mr. Garciadiego, who is a BRS member and resides in Mexico, was the recipient of the 1982 BRS doctoral grant.

(22) BRS OFFICERS, DIRECTORS, AND COMMITTEE CHAIRPERSONS

Officers: Chairman of the Board of Directors, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Vice President/Information, Lee Eisler; Treasurer, Dennis Darland; Secretary, Donald Jackanicz.

Members of the Board of Directors (Elected for 3 year terms. The BRS Officers are also Directors, ex officio.):

1990-92: Jack Cowles, William Fielding, David Goldman, Steve Maragides, Frank Page, Paul Schilpp, Warren Smith, Ramon Suzara, Thom Weidlich.

1991-93: Irving Anellis, Robert Davis, Robert James, Hugh Moorhead, Chandrakala Padia, Harry Ruja.

1992-94: Louis Acheson, Kenneth Blackwell, John Jackanicz, David Johnson, Justin Leiber, Gladys Leithauser, Stephen Reinhardt, Tom Stanley.

Committee Chairpersons:

BRS Award Committee: Marvin Kohl

BRS Book Award Committee: Gladys Leithauser

Doctoral-Master's Grant Committee: Hugh Moorhead

Library Committee: Tom Stanley

Philosophers' Committee: David Johnson

2. New Audiocassettes. The loan fee is \$1.00 for each audiocassette. Please refer to Russell Society News, No. 73 (February 1992), pp. 20-21 for a list of other available audiocassettes.

209 "Mind and Matter." BR's lecture at Swarthmore College, November 12, 1950. Published, with a four page recapitulation, in Portraits from Memory. Prof. Louis Hammon of Gettysburg College attended the lecture,

inherited a reel-to-reel tape of the talk, and arranged to have a cassette copy made for the BRS Library. Audio quality variable. 52'.

210 "Bertrand Russell in Australia." Four of the six broadcasts BR made over the ABC in 1950: "Guest of Honor," "The World as I See It," "What Hope for Man?," and "My Philosophy of Life." Published in RSN, 51, 55, 53, and 52. Audio quality very good. Australian Government Publishing Service. 55'. Courtesy of Sheila Turcon.

211 "The World and the Observer." BBC, February 2, 1958. Published in Chapter II of My Philosophical Development. The write-up in Radio Times follows: "Bertrand Russell, O.M., proposes a theory which he thinks resolves some of the traditional perplexities about our knowledge of the world. He does not pretend, he says, that this theory can be proved; but he contends that, like the theories of physics, it cannot be disproved and that no prudent person will claim more than this for any theory." Audio quality excellent. 30'. Donated by J. William Himmelreich.

212 "The Influence and Thought of G.E. Moore." BBC, April 24, 1959. Published in The Listener, April 30, 1959. The write-up in Radio Times follows: "The Cambridge philosopher G.E. Moore died in October 1958. Four of his friends speak about the influence he had on all those who knew him as a man and teacher. Speakers: Bertrand Russell, Leonard Woolf, Professor Morton White of Harvard and John Wisdom." Audio quality excellent. 50'. Donated by J. William Himmelreich.

213 Kalinga Prize Press Conference and Acceptance Speech. UNESCO House, Paris, 1958. BR's speech was published as "The Divorce of Science and 'Culture'" in the February 1958 issue of UNESCO Courier. Audio quality very good. 48'. Courtesy of UNESCO Sound Archives.

254 "Bertrand Russell's Pacifist Stance in World War I." CFMU-FM, McMaster University, January 30, 1992. With Richard Rempel and Louis Greenspan. Audio quality very good. 30'. Courtesy of Sheila Turcon and the producer.

(24)

AL HIRSCHFELD ON BR'S UNPOPULAR ESSAYS

Tim Madigan has sent us a copy of the "Night-Table Reading" feature from the April 1992 issue of Vanity Fair, p. 158. Included in this short article about books recommended by celebrities and other notable persons is the following: "Al Hirschfeld (illustrator): Unpopular Essays, by Bertrand Russell (Simon & Schuster). 'I've reread this little book several times across the years; I bought it secondhand, published at a paperback price of one dollar. This excellent book is original and witty.'"

(25) GLASGOW AND CAIRO NEWSPAPERS ON BR'S 1961 IMPRISONMENT

We again thank Harry Ruja for supplying Russell-related clippings, this time from newspapers with articles representative of world press attention concerning Russell's 1961 imprisonment. The article on the left is taken from The Glasgow Herald, September 13, 1961, p. 1. The other article appeared in The Egyptian Gazette, Cairo, September 14, 1961, p. 2.

Bertrand Russell Jailed

REFUSAL TO BE BOUND OVER

Earl Russell — the philosopher, Bertrand Russell, who is 89 — was at Bow Street, London, yesterday sentenced to seven days' imprisonment when he refused to be bound over on a summons accusing him of inciting members of the public to commit a breach of the peace on Sunday, September 17.

The magistrate, Mr Bertram Reece, first imposed a sentence of two months' imprisonment, but after seeing medical certificates he reduced it to a week.

Earl Russell was one of 37 men and women who appeared in court. All are members of the "Committee of 100," the anti-nuclear weapons organisation.

Lady Russell was also jailed for seven days after the magistrate had referred to a medical certificate relating to her.

Minister Too

Others who refused to be bound over were sentenced to one month's or two months' imprisonment. Among those jailed for a

month was the Rev. Michael Scott.

Of the 37 defendants 3 were sent to prison for two months, 27 for one month, and 2 for seven days. Five others agreed to be bound over to keep the peace.

Police Sergeant Oakley, who attended a meeting of anti-bomb supporters in August, said in evidence that they were told there would be 10,000 people sitting down in the streets in the centre of London.

One speaker had estimated that the police would be unable to deal with such large numbers, police stations would be swamped, Courts overwhelmed, and justice would become a farce.

Police Evidence

Detective Chief Inspector David Stratton, of the Special Branch, said that at a Hyde Park meeting a speaker drew attention to demonstrations proposed for Holy Loch on September 16 and at Parliament Square on September 17.

The speaker used the words:—"These demonstrations are not intended to outwit the police; but are designed to embarrass the Government, to cause Mr. Macmillan to resign, and to cause a General Election."

[In 1915 Lord Russell went to Brixton Prison as a conscientious objector. In 1918 he was sentenced to six months' imprisonment for an offence under the Defence of the Realm Act.

The Rev. Michael Scott, an opponent of apartheid, was deported from South Africa in 1953 after activities against Government measures.]

Russell's cause

BERTRAND (Lord) Russell has elected to go to prison rather than relinquish his principles. At the London court, where on Tuesday he was sentenced to seven days' imprisonment together with a number of others who drew longer terms, he could, financially speaking, have comfortably posted the £25 bond "to be of good behaviour" for the next twelve months. But, as he put it, "we will not cease to do what lies in our power to avert the greatest calamity that has ever threatened mankind."

It is not the first time that the octogenarian philosopher Peer has stood so staunchly for a cause in which he believes. After World War I broke out he took an active part in the No Conscription fellowship. He was fined £100 as the author of a leaflet criticising a sentence of two years on a conscientious objector. His library was seized to pay the fine. It was bought by a friend but many valuable books were lost. His college deprived him of his lectureship. He was offered a post at Harvard University but was refused a passport. In 1918 he was sentenced to six months' for a pacifist article he had written. His excellent *Introduction to Mathematical Philosophy* (1919) was written in prison.

Adversity, as he has again demonstrated, has never swerved him from his purpose. His views on metaphysics and ethics, on the nature and relation of matter and mind, have changed profoundly in the course of his life, but these changes have all proceeded from the successively deeper applications of his logical method, which is fundamental in his philosophy. It is this selfsame logical approach which led him into the British campaign against nuclear weapons.

He may, in the eye of the British court, have gone beyond the law in exhorting the people to a mass demonstration inasmuch as this would disrupt traffic and possibly disturb the peace, but to many it will seem churlish to gaoil a man because he is more perceptive than the majority and wants only to save mankind from self-destruction.

(26)

TOYNBEE REVIEWS HAS MAN A FUTURE?

This review appeared in The Observer, London, November 26, 1961, p. 25. Harry Ruja, who submitted this item, writes, "...as a result of its dismemberment, the Soviet Union is no longer a threat in the nuclear war standoff, but what of its constituent parts, and Iraq, North Korea, Pakistan, even India? I think BR's reflections on the problem of peace in the nuclear age are still germane and useful."

MAN AND THE CRIMINAL GENERATION

By ARNOLD TOYNBEE

HAS MAN A FUTURE? By Bernard Russell. (Cloth, Allen and Unwin, 10s. 6d. Paper, Penguin Special, 2s. 6d.)

LET us suppose that our generation does not liquidate the human race, and then let us imagine our descendants, three or four generations from now, holding an exhibition of "the criminal generation." That is what they will call us, for sure. My imaginary exhibition, pillorying us, will be an expression of our descendants' abiding indignation.

In that future exhibition, my eye catches a case containing three exhibits of our generation's paper and print. One exhibit is a London evening paper containing nothing but "pure gossip"; the second is a book by an American technical expert on atomic warfare, in which the author discusses whether American casualties at "the first strike" will be 160 million or only sixty; the third is the book by Lord Russell that is the subject of the present review. When the visitors to the exhibition catch sight of this third exhibit, their feelings will, I believe, become slightly less grim. "Well, at any rate," they may say, "that criminal generation did do a little better than Sodom and Gomorrah; it did produce at least one righteous man. Here was a man of that generation who cared about the survival of our species; and he did not make old age an excuse for not taking action.

A most sincere and living concern for the preservation of the human race is indeed the leading note of this book by Lord Russell. In his castigation of human wickedness and folly, he is caustic (as he always has been). And what target could better deserve his shafts than the present behaviour of the nuclear Powers? But his *saeva indignatio* has not made him either a cynic or a misanthrope. He is very much aware that the human race is still in its infancy, and that, if our generation allows it to survive, its expectation of life is many hundred times as long as its age up to date.

HIS abhorrence of mankind's past and present crimes and follies has never made Lord Russell lose sight of the spiritual and intellectual achievements of the best representatives of our species. In these he sees an earnest of mankind's possible future, if it is allowed to have any future, and, on the hypothesis that it is going to have a future, he is an optimist. Perhaps this is too passive a word; for he is an eager participator in our race's possible future greatness and happiness. He actively cares about what may be going to happen long ages after our own generation's lifetime.

His indignation is concentrated upon the present nuclear Powers' gross abuse of the unprecedented power that science has placed in their hands. Even if their political leaders can persuade their adult fellow citizens to commit mass-suicide, they are surely acting preposterously *ultra vires* in preparing for action in which they would be massacring infants in arms and be denying the gift of life to babes unborn—and the potential number of future generations is very much greater than the number up to date.

Lord Russell will not allow the nuclear scientists to be made the scapegoats. He quotes evidence show-

ing that, from the moment of the making of the first atomic bomb, some of the most eminent of them pointed out to the Governments what the consequences of atomic warfare would be, and urged the politicians to abolish the atomic weapon and to make assurance doubly sure by abolishing war itself. It is not the scientists' fault that their appeals went unheeded. They are few in number and are not organised for political action. Lord Russell rightly places the ultimate responsibility on the shoulders of the citizens of the nuclear Powers. If every German had some responsibility for what Hitler did, then every citizen of the United States, the United Kingdom and the Soviet Union has some responsibility for the present threat to the survival of the human race.

One of the most valuable services done by Lord Russell in this book is to drive home the utter lack of proportion between the magnitude of the risks we are incurring and the paltriness of the national interests for which we are contending—interests that would, of course, all go down the drain with everything else if the human race itself were to be liquidated. He finds the psychological root of this madness in our wilfulness. Rather than yield to our adversary's will, we would prefer to take action that would bring human life to an end.

IS THIS will to war at any price a built-in feature of the human psyche? On this question, too, Lord Russell is an optimist, and surely rightly. He holds that our pugnacity is a hang-

over from a habit acquired during the ages in which mankind was fighting for survival against its fellow wild beasts. After it had established its ascendancy over these, it indulged its habit of pugnacity in fratricidal warfare. The habit is as ancient as it is vicious; but a habit can be changed if one has the will to make the moral effort. Our generation is aware that, in the Atomic Age, we must cure ourselves of the habit of making war if the human race is to survive. What is strange in us, and most discreditable to us, is that we are still allowing ourselves to think and feel and behave in the old way sixteen years after dropping the bombs on Hiroshima and Nagasaki.

LORD Russell makes suggestions for setting up a world Government with effective power to make war impossible in future. Any blue-print for a world constitution is likely to be tidier than the reality will be—if we do succeed in establishing a world Government of any kind. Our attachment to national sovereignty is so strong that we shall probably do the minimum, and this only in instalments and, each time, only at the eleventh hour. Even that will be a difficult achievement.

In this field, Lord Russell's most valuable point is perhaps a negative one. He insists that it is useless to propose any arrangements that would have the effect of changing the existing balance of power. It is only on this basis, if at all, that any proposals would have a chance of being accepted by both sides.

One of the hardest jobs in the world is to make people attend to something of vital importance that they know but would prefer not to remember. If anything can give the nuclear nations a jolt, this short book might perhaps do it. The cost of the Penguin edition would be almost covered by one week's abstinence from buying an evening paper.

Two of the three nuclear nations are English-speaking, so a Russian translation would do the rest. If some copies of this were put on board a United States plane by President Kennedy for dropping on Soviet soil, I might almost find myself voting for another of those trespassing American flights.

(27) POPPER, WITTGENSTEIN, RUSSELL, AND THE POKER

If his health permits, Sir Karl Popper will attend the June 12-14, 1992 BRS Annual Meeting in Washington. We very much look forward to having him with us. We also hope that you may have had occasion to read or reread some of Sir Karl's works in connection with his possible meeting attendance. We particularly recommend Sir Karl's Unended Quest: An Intellectual Autobiography, which appeared in an earlier version as pp. 3-181 of Volume 1 of The Philosophy of Karl Popper edited by Paul Arthur Schilpp. Among the most memorable parts of this memoir is the coverage of an incident involving Sir Karl, Ludwig Wittgenstein, Bertrand Russell, and a fireplace poker. You will find Sir Karl's colorful version in Chapter/Section 26. Below, though, is another account of this incident excerpted from Our Knowledge of the Growth of Knowledge: Popper or Wittgenstein? by Peter Munz (London: Routledge & Kegan Paul, 1985), pp. 1-2. We thank Harry Ruja for contributing this item.

Towards the end of October 1946 I had the good fortune to be present at a confrontation in Cambridge which marked a water-shed in the history of modern philosophy. The Cambridge University Moral Sciences Club had invited Karl Popper to speak. As was customary in that club, the secretary had written to Popper and invited him to produce a philosophical puzzle. I recollect vividly the evening on which a major philosophical disagreement found its dramatic expression. The meeting was held in Braithwaite's room in King's College. Apart from the usual crowd of undergraduates, there was present quite a selection of important people. There was Wittgenstein himself and Bertrand Russell, Braithwaite and Stephen Toulmin and Norman Malcolm and Geach and probably other eminent philosophers whom I cannot now recall. At that time the *Philosophical Investigations* had not yet been published and although Wittgenstein had been playing language games in his weekly seminars which he held in his room in Whewell's Court of Trinity College, his position was not widely known outside Cambridge and his general fame was the fame of the *Tractatus*. As to Popper, the *Logic of Scientific Discovery* had not yet been translated into English though his claim to have solved the problem of induction was widely known. His fame, however, at that time, rested on *The Open Society and its Enemies*. Neither *Objective Knowledge* nor his many papers on Darwinian evolution had yet been written, and had possibly not even been thought of. Nevertheless, the evening's events were symbolic and, in hindsight, prophetic.

After Popper's declaration that he did not believe in puzzle-solving and his affirmation that there were genuine philosophical

problems, Wittgenstein started to challenge him to name a 'philosophical' problem. I cannot now recall the precise sequence of events, but after Popper tried to name one or two philosophical problems and Wittgenstein kept countering by saying that he did not know what he could 'mean' by his statements, the drama occurred. Popper was sitting on one side of the fireplace, and Wittgenstein on the other. Both were facing the audience. In the middle, in a big armchair, facing the fireplace with his back to the audience, there was Bertrand Russell. Suddenly Wittgenstein, who had been playing and fidgeting with the poker in the fire, took the red-hot poker out of the fire and gesticulated with it angrily in front of Popper's face. Thereupon, Russell - who so far had not spoken a word - took the pipe out of his mouth and said very firmly in his high-pitched, somewhat scratchy voice: 'Wittgenstein, put down that poker at once!' Wittgenstein complied and soon after got up and walked out, slamming the door.

Looking back now after nearly forty years, one can see the real significance of that incident. It prefigured the clash of philosophical opinions which has developed ever since the gradual decline of Positivism has turned into a rout.

[NOTE: This section was prepared before Sir Karl Popper informed the BRS of his decision not to attend the BRS Annual Meeting.]

(28)

NOTABLE INSULTS

John Jackanicz has brought to our attention a new book, Oh, What an Awful Thing to Say!, compiled by William Cole and Louis Phillip (New York: St. Martin's Press, 1992), which includes one reference to Russell and two quotations from Russell. Described on the dust jacket as "A Book of Notable Insults," this work consists of over 500 insults of politicians, artists, entertainers, writers, and others throughout the ages. The reference to Russell is by Sidney Hook:

The next time anyone asks you, "What is Bertrand Russell's philosophy?" the correct answer is, "What year, please?"

Here is Russell on Anthony Eden:

Not a gentleman; dresses too well.

And here is Russell on William Wordsworth:

In his youth Wordsworth sympathized with the French Revolution, went to France, wrote good poetry, and had a natural daughter. At this period, he was a "bad" man. Then he became "good," abandoned his daughter, adopted correct principles, and wrote bad poetry.

To give some further suggestion of the contents of this book, here are a few other quotations. Thomas Babington Macaulay on Socrates: "The more I read him, the less I wonder that they poisoned him." Ava Gardner on Clark Gable: "If you say 'Hiya, Clark, how are you?' he's stuck for an answer." Aaron Copland on Ralph Vaughan Williams: "Listening to the Fifth Symphony of Ralph Vaughan Williams is like staring at a cow for forty-five minutes." John Kenneth Galbraith on William F. Buckley, Jr.: "It's great to be with Bill Buckley, because you don't have to think. He takes a position and you automatically take the opposite one and you know you're right."

(29)

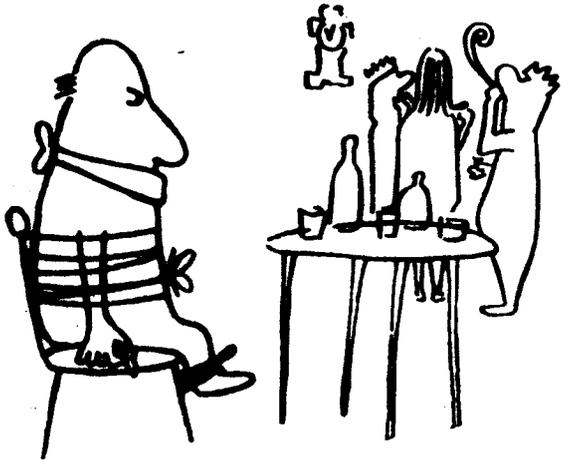

HARRY RUJA TO THE RESCUE

In RSN, No. 73 (February 1992), section 27/page 27, we asked for the source of this Russell quotation: "To be able to fill leisure intelligently is the last product of civilization." Harry Ruja, who with Kenneth Blackwell has compiled the forthcoming massive Russell bibliography, quickly supplied the answer: "The remark on leisure ... is from The Conquest of Happiness, Chap. 14 (Liveright edition, p. 210; New American Library edition, p. 121)." We were impressed with Harry's definitive response, but we have come to expect such reliable help from him. Thank you, Harry!

(30)

ON RED HACKLE

Harry Ruja has unearthed many obscure and rare Russell-related articles, photographs, and references. He has now located this advertisement for Red Hackle Scotch Whisky in The [Manchester] Guardian, December 13, 1961, p. 5. We are not in the habit of running advertisements or endorsing commercial products. But, if you do not know the relationship between Bertrand Russell and Red Hackle, we suggest you refer to Dear Bertrand Russell...A Selection of His Correspondence with the General Public, 1950-1968, pp. 141-142. The BRS Annual Meeting's social hour preceding our banquet is called The Red Hackle Hour. We hope you will be with us on June 13 for the next one.

Guess who's driving?

ONCE AGAIN Red Hackle Scotch Whisky begs leave to remind you if it's one for the **ROAD** make it.

Red Hackle
SCOTCH WHISKY

Produced by one of the few remaining independent Scotch Whisky companies in this country.
De Luxe and Standard RED HACKLE is available in all popular sizes.

RUSSELL SOCIETY NEWS

No. 75, August 1992

The Bertrand Russell Society, Inc.

3802 North Kenneth Avenue Chicago, Illinois 60641-2814 U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to further his aims by promoting ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Letters to Russell Society News, a quarterly issued in February, May, August, and November, should be sent to Donald W. Jackanicz, Editor at the above Chicago address.

Inquiries on information about and membership in The Bertrand Russell Society should be directed to Lee Eisler; BRS Information Committee; 1664 Pleasant View Road; Coopersburg, Pennsylvania 18036; U.S.A.

(1) PRINCIPIA MATHEMATICA BY COMPUTER

Thanks to BRS Vice President/Information Lee Eisler for the following article.

Models of My Life by Herbert A. Simon (Basic Books, 1991) is described on its cover as "The Remarkable Autobiography of the Nobel Prize-Winning Social Scientist and Father of Artificial Intelligence."

Back in the early days of computers, Simon thought that computers could become more than number-crunchers. He thought that they could be made to manipulate symbols as well as numbers, and he and his colleagues found ways to do this. Then he wanted to apply this new technique to human thinking. That is, he wanted the computer to imitate human thinking processes. He wanted the computer, without human intervention, to achieve the same innovative and creative results that human had achieved.

Did he succeed? The following two letters (from pp. 207-208) tell the story:

October 2, 1956

Dear Earl Russell:

Mr. Newell and I thought you might like to see the enclosed report of our work in simulating certain human problem-solving processes with the aid of an electronic computer. We took as our subject-matter Chapter 2 of Principia, and sought to specify a program that would discover proofs for the theorems, similar to proofs given there. We denied ourselves devices like the deduction theorem and systematic decision procedures of an algorithmic sort; for our aim was to simulate as closely as possible the processes employed by humans when systematic procedures are unavailable and the solution to the problem involves genuine "discovery".

The program described in the paper has now been translated into computer language...and produced its first proof about two months ago. We have also simulated the program extensively by hand, and find that the proofs it produces resemble closely those in Principia...

Very truly yours,
Herbert A. Simon, Head
Industrial Management Department

2 November 1956

Dear Mr. Simon:

Thank you for your letter of October 2 and the very interesting enclosure. I am delighted to know that Principia Mathematica can now be done by machinery. I wish Whitehead and I had known of this possibility before we both wasted ten years doing it by hand. I am quite willing to believe that everything in deductive logic can be done by machine.

Yours very truly,
Bertrand Russell

(2)

1992 ANNUAL MEETING

Vice President/Information Lee Eisler prepared the following reports on this year's Society and Board of Directors meetings. Further details appear in the official minutes in Section " ", page 12. Now would be a good time to begin your preliminary planning to attend next year's meeting in San Diego!

Annual Meeting (1992)

American University in Washington, D.C. was the site of the 1992 Annual Meeting of The Bertrand Russell Society, Inc., the weekend of June 12-14.

A fine group of members and guests attended.

The following talks were given:

- . Congressman Neil Abercrombie on "Russell's Values and the 1992 Presidential Election."
- . Joe Barnhart on "Psychotherapy and the Epistemology of Bertrand Russell and Karl Popper."
- . Treasurer Dennis Darland on the current Treasury balance of \$6649.67.
- . Louis Greenspan on the successes and problems of the Bertrand Russell Editorial Project, which publishes BR's non-book writings.
- . Nick Griffin's draft version of his paper on BR's relationship with his first wife, Alys Pearsall Smith.
- . Don Jackanicz's workshop on BR's Sonning Prize address, "Old and Young Cultures."
- . Marvin Kohl on "Russell and the Good Life."
- . Tim Madigan on "Russell's Values and Contemporary Secular Humanism."
- . Michael Rockler on "Popper's Fallibilism and Russell's Skepticism as Educational Perspectives."
- . Steve Shafer on "'Witty, Pungent, Philosophical, Whimsical and Bitter': Politicians' Perceptions of Bertrand Russell in Britain."
- . John Shosky on "An Intellectual Bias? Russell and Modal Logic."
- . Sheila Turcon on recent developments at the Russell Archives (at McMaster University) and forthcoming Russell-related publications.

Ken Blackwell's letter to the Board, thanking the Society for its "moral support and financial willingness" to help with the funding of The Second Archives of Bertrand Russell, was read by President Rockler.

Tim Madigan told about the 1994 World Humanist Conference in Hyderabad, India, and the possibility of a BRS session there.

Chandrakala Padia reported, by letter, on the May 1992 Annual Conference of the BRS Benares Chapter.

These Awards were made:

- . A Bertrand Russell Society Service Award to Gladys Leithauser, who the BRS Book Award Committee some years ago, and has been chairing it with distinction ever since. Gladys may appoint two new Committee members qualified to assist in evaluating foreign language or technical books.
- . The 1992 Bertrand Russell Society Award to Sir Karl Popper. It was accepted on his behalf by Joe Barnhart. Sir Karl, who is 90, had intended to attend this BRS meeting in Washington if his schedule permitted him to make the long journey from Britain, but, alas, it did not.
- . The 1992 Bertrand Russell Society Book Award to Nicholas Griffin for his Russell's Idealist Apprenticeship.

The following interesting proposals were made, and discussed, but no action was taken:

- . To distribute BR's Why I Am Not a Christian to philosophy students.
- . To request New York City to rename LaGuardia Airport the Bertrand Russell Airport, to make amends for the city's part in the outrageous decision in the 1940 CCNY Bertrand Russell case.
- . To hold future Board of Directors' meetings on the Thursday before the Society's annual weekend meeting in June.

On Friday, there was a Red Hackle Hour at Quigleys, a nearby oasis (the campus is dry), followed by the Saturday Evening Banquet at the University Club.

In sum, the 1992 Annual Meeting was good one!

Directors' Annual Meeting (1992)

The BRS Directors met on Friday and Saturday, June 12 and 13.

The meeting was open to all members, as it always is.

Directors present were JACK COWLES, DENNIS DARLAND, LEE EISLER, DON JACKANICZ, JOHN JACKANICZ, BOB JAMES, DAVE JOHNSON, MARVIN KOHL, GLADYS LEITHAUSER, JOHN LENZ, HUGH MOORHEAD, STEVE REINHARDT, MICHAEL ROCKLER, and WARREN SMITH.

The following decisions were made:

- . The present slate of officers was appointed for another year: Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Vice President/Information, Lee Eisler; Secretary of the

- Board and of the Society, Don Jackanicz; Treasurer, Dennis Darland.
- . The 1993 Bertrand Russell Society Award will go to Harry Ruja.
 - . The 1993 Annual Meeting will be held in San Diego, because that's where Harry lives. The date is June 18-20.
 - . The BRS Grant Program will be replaced by a "Prize for a Paper" program. Its chief features are: a prize (or two) for the best paper(s) written by a regularly enrolled graduate student or undergraduate, who will present his or her paper at the next BRS Annual Meeting, and receive a first year membership in the BRS. All of the winner's expenses will be paid; a stipend will also be paid. John Lenz, whose idea this was, will chair a committee to administer the program.
 - . The BRS will increase the amount it pays to the Russell Archives for members' subscriptions to Russell. \$1 increase in 1993, \$2.50 increase in 1994. In U.S. currency.

There was considerable discussion of proposals made by Christos Tzanetakos (1) to attempt to overturn legally the outrageous decision in the 1940 CCNY Bertrand Russell Case, and (2) to give BR's Why I Am Not a Christian to philosophy students. A proposal by Lee Eisler to publicize the 1940 CCNY case--as a means of getting publicity for the BRS, regardless of whether the decision is (or could be) legally overturned--was also discussed. Chairman Marvin Kohl will appoint a committee to explore the publicity possibilities of the 1940 case.

Thus endeth the Directors' meeting.

(3)

ELECTION OF DIRECTORS

The full BRS Board of Directors consists of 24 Directors elected by the BRS membership and the five ex officio BRS officers (President, Vice President, Vice President/Information, Secretary, and Treasurer). Eight of the 24 are elected each year. Terms are for three years. Eight of the following ten fine candidates will be elected for 1993 through 1995. Members are asked to use the ballot at the end of this newsletter and to vote today.

JACK COWLES. Student of BR at UCLA. Frequently attends annual meetings.
 WILLIAM FIELDING. Very active Co-Chairman of Information Committee.
 DAVID GOLDMAN. Psychiatrist. Frequently attends annual meetings.
 TIM MADIGAN. Free Inquiry Executive Editor. Has given annual meeting talks.
 STEVE MARAGIDES. Lawyer. Provided legal services for BRS incorporation.
 PAUL SCHILPP. Retired philosopher. Editor, Library of Living Philosophers.
 WARREN SMITH. Active NYC humanist. Frequently attends annual meetings.
 RAMON SUZARA. Founder and Intl. Representative of BRS Philippine Chapter.
 THOM WEIDLICH. Researched BR/CCNY incident. Frequently attends annual mtgs.
 LINDA EGENDORF. Frequently attends annual meetings.

Please help the BRS choose its future leadership. Your vote does count!

(4)

FROM THE PRESIDENT

Michael J. Rockler, President, Bertrand Russell Society

As I write this, the Democratic Party convention is about to begin in New York City--part of a procedure that leads to the selection of the President. With 5,000 delegates (including BRS member Congressman Neil Abercrombie of Hawaii) representing persons from all over the nation, this national meeting reflects democratic processes in action.

In this context I have been thinking about Russell's views on democracy. While clearly committed to democratic institutions, Russell voiced some interesting qualifications about the process that are worth noting during this political summer and fall.

In writing about education in Education and the Good Life, Russell argued that an ideal system of schooling should be democratic. However, the existence of democratic procedures in teaching and learning should not lead to a "dead level of uniformity." This is because, Russell maintained, "some boys and girls are cleverer than others." Russell felt that it was necessary to recognize and work with children of exceptional ability while at the same time providing opportunity for all students to achieve their potential. He would have shared, I believe, President Johnson's belief that opportunity for all should exist to help create a level playing field.

In Education and the Social Order Russell made the following criticism of democracy:

The error of aristocracy lay, not in thinking that some men are superior to others, but in supposing superiority to be hereditary. The error of democracy lies in regarding all claims to superiority as just grounds for the resentment of the herd. In the modern world, much work which is necessary to the community requires more ability than most men possess, and there must be ways of selecting exceptional men to do this work. (p. 55)

In Education and the Good Life Russell cautioned against the "herd instinct" which he felt could lead to disastrous consequences if left unchecked in a democratic society. Russell's grandmother introduced him to the biblical passage which reads, "Thou shall not follow a multitude to do evil." This perspective became a central focus for Russell. Among other consequences it resulted in his being imprisoned more than once.

Russell's view that democratic institutions must avoid a dead level of uniformity, his recognition that not all persons in a society are of equal ability, and his fear of unchecked democracy that could result in the misdirection of the herd instinct are all important ideas worth thinking about in this political season.

No one can deny that Russell's basic instincts were democratic. This commitment can be seen in all of his social writings and in the way in which

he lived his life. Because of this deep commitment, his views on the limits of democracy are highly significant. Russell's views seem better balanced than those of other theorists (for example, John Dewey) who were uncritical of democratic procedures. It is further evidence of the way in which Russell's ideas continue to be valuable for a world which is about to enter a new century.

(5)

FROM THE VICE PRESIDENT

John Lenz, Vice President, Bertrand Russell Society

BRS Paper Prize: The Directors voted after some discussion to institute a prize, beginning in 1993, for the best one or two papers submitted for the Annual Meeting. It is meant for new members or new participants in the program. During the debate, there was much regret over the loss of the Grant Award, which the Paper Award replaces, but we felt we weren't receiving enough entries for the Grant Award, and we also wish to attract new members and to keep the annual program vital. We decided that with the money currently allocated, we could allocate one or two paper awards each year.

The award will consist of a paid trip to the Annual Meeting--this time in San Diego--plus a stipend. The stipend amount hasn't been fixed but will be about \$100. A prerequisite for receiving the award will be that the winners attend the meeting and present their papers. We will solicit papers on all aspects of Russell's work, suitable for presentation to a general audience. There will be two categories: (1) undergraduate; (2) "young professionals" (graduate students, junior professors, non-academics). The deadline (late Winter/early Spring) and other details should be announced in the next RSN. We will be accepting full papers (not abstracts) with texts about 20 pages long.

As organizer of the paper prize committee, which isn't formed yet, I would like to ask members who haven't yet participated in an annual meeting program to keep this prize award in mind. Remember the saying that everyone has one book in them? Russell is an endless source of topics. Particularly for the undergraduate category, can those who are teachers encourage their students to submit something?

I would like to make a list of courses on Russell being taught in colleges and universities. This would be an interesting survey for its own sake, and we could then direct mailings to those departments. Can anyone send me information about this? (Address: John Lenz, Dept. of Modern and Classical Languages, Texas A&M University, College Station, TX 77840.)

The last RSN contained an interesting testimonial from Jacques Cousteau, who said Russell was his idol (RSN No. 74, section 15). Coincidentally, soon after reading this, I was logged on to the "Usenet" newsgroup, which is a

large electronic bulletin board for UNIX users (e.g. many universities and computer companies) (the one that selections appear from in the same newsletter, section 11). In their atheism newsgroup, someone asked about a rumor that Cousteau had converted to Islam. I jumped in and sent a message that this was unlikely due to his praise of Russell. However, I wasn't sure since the same quotation goes on to praise poetry in a mildly mystical way; what exactly did this have to do with Russell, how did Cousteau see him? Then (this is how academics spend time) someone posted a message attacking me because the quoted interview was in 1985. But I can happily report that the rumor turned out to be just that; someone else explained Cousteau didn't convert but that this was one of a few such rumors emanating from Iran or somewhere like that (I don't recall). And I did get to announce the BRS over these lines, which led to one inquiry!

FOR SALE

These items are for sale from the BRS Information Committee, 1664 Pleasant View Rd., Coopersburg, PA 18036, U.S.A.: (1) BR Postcard--1959 photo by Philippe Halsman, \$1 for the first one, 75¢ for more ordered at the same time; (2) Members' Stationery--8 1/2 x 11, white, across the top: "The good life is one inspired by love and guided by knowledge, Bertrand Russell," USA price, \$6 for 80 sheets, other countries \$8 for 80 sheets.

(8) 1992 ANNUAL MEETING PAPER/TALK ABSTRACTS

Four of the presenters of papers or talks at the 1992 BRS Annual Meeting provided these abstracts of their presentations:

Joe Barnhart, Department of Philosophy, University of North Texas, "Psychotherapy and the Epistemology of Bertrand Russell and Karl Popper."

Albert Ellis drew from Russell an important aspect of rational-emotive therapy that anticipates much of cognitive therapy and the current cognitive treatment of depression. Karl Popper's scheme of "three worlds" and his analysis of "the sources of truth and error" provide a fruitful framework for understanding and improving psychotherapy techniques. His critical realism provides also a unique way of framing voices, visions, and powerful impulses.

Marvin Kohl, Department of Philosophy, State University of New York at Fredonia, "Russell and the Good Life."

The talk "Russell and the Good Life" was essentially Part V of my paper on "Bertrand Russell's Characterization of Benevolent Love." This paper focuses on the characterization of benevolent love found in What I Believe in the chapter on "The Good Life." It explains why this characterization has been relatively neglected, why it appears problematic, and why--despite its apparent limitations--Russell was convinced that the cultivation of benevolent love would add an excellence society would not otherwise have.

Timothy J. Madigan, Council for Democratic and Secular Humanism, "Russell and the Values of Secular Humanism."

In this talk, I looked at two questions: 1. In what ways could Russell be considered to hold the values of secular humanism? 2. Why are there no modern-day public intellectuals of Russell's stature? While Russell did not like to refer to himself as a "humanist," considering this term to be vague, he did hold two views common to all secular humanists: a desire for the good life in the here-and-now and a critical outlook towards supernatural beliefs. One can only wonder what his reaction would be towards the virulent forms of religious fundamentalism that have arisen during the latter half of the 20th Century. Russell Jacoby has argued, in his book The Last Intellectuals, that the main reason that there are no public social critics of Russell's stature today is because an entire generation of intellectuals were swallowed up by academia, and in adapting to their environments lost the broad vision which free-lance intellectuals such as Russell never lost. Even if Jacoby is right, there are public intellectuals today--namely, pundits such as George Will, Irving Kristol, Richard John Neuhaus and Paul Johnson. The aforementioned, who write influential newspaper and journal articles, are strong critics of the values of secular humanism. Therefore, it is particularly important to answer their criticisms and defend the ideals of secular humanism. One way to do so is by keeping alive the memory of Russell, one of the 20th Century's most prominent public intellectuals.

Michael J. Rockler, National-Louis University, "Popper's Fallibilism and Russell's Skepticism as Educational Perspectives."

Karl Popper and Bertrand Russell--two of the twentieth century's most significant philosophers--both created important conceptions which can be applied to education. Popper's philosophy of science has resulted in the development of "educational fallibilism." Russell, who directly affected education both in his writings and in the co-founding of Beacon Hill School, influenced schooling profoundly through his views on skepticism. This paper examines both these views, describing ways in which these important thinkers influenced teaching and learning.

AN OPEN LETTER: RUJA TO ROCKLER

This letter, composed in mid-July 1992, is reproduced as the writer's request. We salute Harry Ruja, who will be the 1993 BRS Award recipient, and look forward to being with him in San Diego next June.

OPEN LETTER TO PRESIDENT MICHAEL ROCKLER

Dear Michael: As you can well imagine, it was a great thrill to hear from Marvin Kohl soon after the June BRS meeting that I was to receive the BRS Award at next year's meeting.

Moreover, as a most thoughtful gesture, the meeting will be held in San Diego, so distance will be no barrier to my attending.

In an advance copy of the Minutes of the 1992 Board meeting, I learned further that you took the initiative in submitting my name, and then, to add to my extreme pleasure, the rest of the Board unanimously approved your proposal.

There is more. Ken Blackwell tells me that there is a good chance that the two volumes of our massive Russell bibliography on which, between us, we have worked a total of sixty years, will be published by next June!

If I were superstitious, I would think that there must be a hex associated with so much good fortune, but as a good Russellian, I shall banish that thought from my mind.

Though Marvin has assured me that others will make all the arrangements, I shall be glad to help in any way I can, when called upon.

Thank you, and all the Board members, once more.

Harry Ruja

(10)

A LETTER FROM SIR KARL POPPER

On June 13 at the Annual Meeting in Washington, the BRS presented the 1992 Bertrand Russell Society Award to Sir Karl Popper "for his many contributions to philosophy in the Russellian spirit of critical thought." We had hoped that Sir Karl would be able to join us that day, but his schedule and events connected to the celebration of his 90th birthday on July 28, 1992, we regret, kept him on the eastern side of the Atlantic Ocean. In Sir Karl's absence, Prof. Joe Barnhart of the University of North Texas accepted the award and spoke most interestingly on having met Sir Karl and the wide-ranging significance of his philosophical studies. The award plaque was shipped to Sir Karl in late June, and we received this letter shortly thereafter.

Sir Karl Popper, CH, FRS

*136 Welcomes Road,

8 July 1992

Mr. Donald W. Jackanicz
Editor, Russell Society News
The Bertrand Russell Society, Inc.
3802 North Kenneth Avenue
Chicago, IL 60641-2814
U.S.A.

Dear Mr. Jackanicz,

The most unexpected arrival of the Bertrand Russell Society Award for 1992 has given me enormous pleasure, and I thank you and the membership of the Society with all my heart for honouring me with this award.

I naturally wish to thank Professor Barnhart for standing in for me, and I would be grateful if you could let me have his address. If possible, I would like to have a copy of his paper given on June 12, and of his acceptance speech if available.

I very much regret that I was unable to come to Washington for this year's meeting, but it was really quite impossible. The pressure of work this year has been heavier than I can ever remember.

With my best wishes for you and the Bertrand Russell Society,

*Yours sincerely
Karl Popper*

Karl Popper

MINUTES OF THE 1992 ANNUAL MEETING OF THE BERTRAND RUSSELL SOCIETY, INC.

The 1992 Annual Meeting of The Bertrand Russell Society, Inc. was held from June 12 to June 14 at The American University, Washington, DC.

Friday, June 12, 1992

The meeting was called to order by President Michael J. Rockler at 7:30 p.m. in Room 220 of the Ward Circle Building. Following his welcoming remarks, President Rockler presented a Bertrand Russell Society Service Award to Gladys Leithauser. Joe Barnhart then presented his paper, "Psychotherapy and the Epistemology of Bertrand Russell and Karl Popper," after which U.S. Congressman Neil Abercrombie spoke on "Russell's Values and the 1992 Presidential Election." The meeting was recessed at 10:05 p.m. The first session of the 1992 Annual Meeting of the Board of Directors was then held.

Saturday, June 13, 1992

President Rockler reconvened the meeting at 9:00 a.m. in Room 220 of the Ward Circle Building. Marvin Kohl presented a talk on "Russell and the Good Life."

With President Rockler in the chair, the Society Business Meeting began at 10:40 a.m. as Secretary Donald W. Jackanicz read the Minutes of the June 12, 1992 Board of Directors Annual Meeting session. The membership agreed to dispense with the reading of the 1991 Annual Meeting Minutes. Treasurer Dennis J. Darland then reported that the current Treasury balance is \$6,649.67. Next, Sheila Turcon of the Bertrand Russell Archives spoke on recent developments at the Russell Archives and forthcoming Russell-related publications. Louis Greenspan of the Bertrand Russell Editorial Project then reported on the Project's successes and problems. President Rockler read a June 10, 1992 letter to the Board of Directors from Kenneth Blackwell of the Bertrand Russell Archives, which thanked the Society for its "moral support and financial willingness" in connection with the publication of The Second Archives of Bertrand Russell. Also read by President Rockler was a May 27, 1992 report from Chandrakala Padia concerning the May 10-11, 1992 Annual Conference of the Benares Chapter of The Bertrand Russell Society. It was moved by Marvin Kohl and unanimously accepted that McMaster University be given permission to use The Bertrand Russell Society's membership list for fundraising purposes. Donald W. Jackanicz then reported on his recent work as Editor of Russell Society News. President Rockler reminded all members that any interested person may request to be on future annual meeting programs or suggest annual meeting program items. Christos Tzanetakos then proposed that (1) the Society purchase copies of Russell's Why I Am Not a Christian for distribution to philosophy students and (2) the Society send a letter to the government of New York City requesting the renaming of LaGuardia Airport to Bertrand Russell Airport as a way of making amends for the City's actions relating to Russell's City College of New York appointment. However,

MINUTES OF THE 1992 ANNUAL MEETING (CONTINUED)

President Rockler ruled that this would have to be a matter to be considered by the Board of Directors. In response to Book Award Committee Chairman Gladys Leithauser's questions about how to consider non-English language books or books too technical for general readership, President Rockler stated that she has permission to appoint two new Committee members capable of assisting in the consideration of such books. Tim Madigan then provided information about the 1994 World Humanist Conference to be held in Hyderabad, India and the possibility of a Bertrand Russell Society session there. Following further discussion of Christos Tzanetakos's proposals, Lee Eisler moved that the Board of Directors hold a second session that night; the Board members present voted as follows on this motion: Yes--7, No--1, Abstain--3. Jan Eisler suggested that for future annual meetings a pre-meeting day be scheduled for the Board of Directors meeting, but no formal motion was made on this matter. Following Lee Eisler's unanimously accepted motion to adjourn the meeting, President Rockler declared the Society Business Meeting adjourned at 11:58 a.m.

Tim Madigan then spoke on "Russell's Values and Contemporary Secular Humanism," after which the meeting was recessed at 12:43 p.m. Following lunch, President Rockler reconvened the meeting in Room 220 of the Ward Circle Building at 2:18 p.m. and presented his paper, "Popper's Fallibilism and Russell's Skepticism as Educational Perspectives." Donald W. Jackanicz next offered a workshop on Russell's 1960 Sonning Prize Address, "Old and Young Cultures." The meeting was recessed at 4:30 p.m.

At 5:30 p.m. the Red Hackle Hour began at Quigleys, a restaurant located near The American University at 3201 New Mexico Avenue NW. At 7:15 p.m. the Banquet was held in the University Club of The American University's Mary Graden Center. Following the Banquet, Joe Barnhart presented the 1992 Bertrand Russell Society Award to Sir Karl Popper and accepted it on his behalf. Gladys Leithauser then presented the 1992 Bertrand Russell Society Book Award to Nicholas Griffin for Russell's Idealist Apprenticeship. After his remarks of acceptance, Mr. Griffin read a draft version of his paper concerning Russell's relationship with his first wife, Alys Pearsall Smith. The evening program concluded at 9:30 p.m. The second session of the 1992 Annual Meeting of the Board of Directors was then held.

Sunday, June 14, 1992

The meeting was reconvened by President Rockler at 9:00 a.m. in Room 220 of the Ward Circle Building. Marvin Kohl provided information about The Association for the Study and Advancement of Supportive Values of which he is a founder. John Shosky next spoke on "An Intellectual Bias?: Russell and Modal Logic." Steven C. Shafer then presented his paper, "'Witty, Pungent, Philosophical, Whimsical and Bitter': Politicians' Perceptions of Bertrand Russell in Britain." Following closing remarks by President Rockler, the meeting was adjourned at 11:58 a.m.

(12)

MINUTES OF THE 1992 BERTRAND RUSSELL SOCIETY BOARD OF DIRECTORS ANNUAL MEETING

The Board of Directors of The Bertrand Russell Society, Inc. met in two sessions on June 12 and June 13, 1992 in the Third Floor Lounge of Centennial Hall on the campus of The American University in Washington, DC.

Friday, June 12, 1992

The meeting was called to order at 10:25 p.m. by Chairman Marvin Kohl. In addition to Chairman Kohl, the Directors in attendance were Jack Cowles, Dennis J. Darland, Lee Eisler, Donald W. Jackanicz, John A. Jackanicz, Robert James, David Johnson, Gladys Leithauser, John Lenz, Hugh Moorhead, Stephen J. Reinhardt, Michael J. Rockler, and Warren Allen Smith.

Mr. Moorhead moved and it was unanimously accepted that all incumbent officers be reelected for service during the forthcoming year. The reelected officers are as follows: Chairman of the Board of Directors--Marvin Kohl; President--Michael J. Rockler; Vice President--John Lenz; Vice President/Information--Lee Eisler; Secretary of the Board of Directors and the Society--Donald W. Jackanicz; Treasurer--Dennis J. Darland.

Mr. Rockler moved and it was unanimously accepted that the 1993 Society Annual Meeting be held in San Diego from June 18 to June 20. Mr. Rockler moved and it was unanimously accepted that the 1993 Bertrand Russell Society Award be presented to Harry Ruja. Although no formal motion was made, Mr. Rockler expressed his view that there should be a two year lead time for planning annual meetings.

Mr. Lenz moved that (1) the doctoral and masters grant program be abolished and (2) a competition be established for one or two annual prizes for the best paper(s) on a Russell-related subject, provided the awardee(s) presents the paper(s) at the annual meeting, with there being an undergraduate category and a young professionals category, and with the prize to consist of a stipend, travel expenses to the annual meeting, annual meeting registration, and a one year Society membership. This motion was accepted with the following vote: Yes--8, No--0, Abstain--5, Not Present--1. Chairman Kohl appointed John Lenz to chair a committee responsible for administering the competition.

Mr. Rockler moved and it was unanimously accepted that the Society pay to the Russell Archives for members' Russell journal subscriptions an additional (U.S.)\$1.50 for 1993 and an additional (U.S.)\$1.50 + \$1.00 for 1994 in relation to the present 1992 price.

The meeting was adjourned at 11:35 p.m.

MINUTES OF THE 1992 BOARD MEETING (CONTINUED)

Saturday, June 13, 1992

Because of a Board of Directors vote taken at the Society Business Meeting on June 13, 1992, the Board of Directors reconvened in a second, previously unplanned session at 9:54 p.m. with Chairman Marvin Kohl presiding. In addition to Chairman Kohl, the Directors in attendance were Jack Cowles, Dennis J. Darland, Lee Eisler, Donald W. Jackanicz, John A. Jackanicz, Robert James, Gladys Leithauser, Hugh Moorhead, Stephen J. Reinhardt, Michael J. Rockler, and Warren Allen Smith.

Discussion exclusively dealt with the proposals made earlier that day at the Society Annual Business Meeting by Christos Tzanetakos, who was present and further outlined his thoughts. To enable Mr. Tzanetakos's proposals to be brought before the Board, Mr. Moorhead moved that the Society seek legally to reverse the New York City government court decision relating to Russell and the City College of New York and that the Society allocate money for the purchase and distribution of Russell books to students. Following discussion, Mr. Moorhead withdrew this motion. There ensued a general discussion of methods of publicizing the Society. Mr. Eisler then moved that the Society make an effort to publicize the City College of New York events and the court decision. Following discussion, Mr. Eisler withdrew this motion. Ultimately Chairman Kohl stated that he will appoint a committee responsible for publicity relating to the City College of New York episode. The meeting was adjourned at 10:58 p.m.

(13)

VOLUNTEER (STILL) WANTED

In RSN, No. 74, May 1992 we ran a section, "Volunteer Wanted." We regret that that article did not produce the needed volunteer. So we are repeating our request: Can you volunteer to be the new Co-Chairman of the BRS Membership Committee?

We need someone who can spare several hours a week to handle inquiries and enrollments. The present Co-Chairman, William K. Fielding, does a superb job. But he has decided to give up the post as soon as we find a successor.

The record-keeping routines have been worked out and seem satisfactory (but if you find a way to improve them -- fine!). The work is not difficult but it does take time. It is essential work without which the BRS could not thrive. Even though it has become routine, it has always been found interesting. Inquiries come in from around the world, often with comments or anecdotes. This is a job for someone who has worked in an office and has enjoyed doing paper-work. You would need some space for storing the printed material that you would send to inquirers and to new members.

Does it appeal to you? Volunteer! Write: Volunteer, 1664 Pleasant View Road, Coopersburg, PA 18036, U.S.A.

(15) THANKS FROM THE BERTRAND RUSSELL EDITORIAL PROJECT

The recent publication of A Detailed Catalogue of the Second Archives of Bertrand Russell was a major bibliographical event in Russell research. See Section 14, Page 16 for a description of this book. We are grateful to Russell Archivist Kenneth Blackwell for this letter of thanks and for his gift to the BRS Library of a copy of this fine work.

The Bertrand Russell Archives

The William Ready Division of Archives and Research Collections

June 10, 1992

The Board of Directors
The Bertrand Russell Society, Inc.

Dear Friends and Supporters of Russell Studies,

I have asked Dr. Louis Greenspan, Managing Editor of the Bertrand Russell Editorial Project at McMaster University, to present to the Society's library on my behalf the first copy I received of The Second Archives of Bertrand Russell, just published by Thoemmes Press of Bristol, England.

I am giving this copy to the Society's library in gratitude for the Society's moral support and financial willingness when it was sorely needed to make publication of this catalogue possible before a publisher could be found. In addition to the Society's offer of a substantial loan, a number of individual members contributed to the Catalogue Fund, further enhancing and broadening the Society's support.

Doing the catalogue with Dr. Carl Spadoni was a large effort, with the major aim of making the research possibilities in Russell's later papers known throughout the world, and during the years in which the catalogue languished unpublished on my desk in its sole photocopy I felt great frustration. The Society, I knew, when two years ago it agreed to make publication possible, shared my mission in making Russell's papers and thereby his efforts in his last decade better known.

Thank you again for your support of Russell Studies.

Yours sincerely,

A handwritten signature in cursive script that reads "Ken Blackwell".

Kenneth Blackwell
Russell Archivist

THE SELECTED LETTERS OF BERTRAND RUSSELL

Following last year's publication of Nicholas Griffin's *Russell's Idealist Apprenticeship, The Selected Letters of Bertrand Russell, Volume 1: The Private Years (1884-1914)*, edited by Prof. Griffin, appeared in Britain this spring (Allen Lane) and in the U.S. in July (Houghton Mifflin Company). *The Selected Letters* is receiving considerable press coverage. In addition to the three comparatively short reviews shown below, you may wish to examine Stuart Hampshire's longer review article, "Russell's Paradox," in *The New York Review of Books*, vol. 39, no. 14, August 13, 1992, pp. 7-8, 10. Our thanks to Bob James, Warren Allen Smith, John Jackanicz, and Houghton Mifflin for providing these reviews. And congratulations to Nicholas Griffin on another fine work of scholarship!

FINANCIAL TIMES WEEKEND MARCH 14/MARCH 15 1992

BOOKS

A great philosopher bares his soul

A.C. Grayling admires the intelligence, generosity and wit of Bertrand Russell

IT IS characteristic of Bertrand Russell that when in 1885 he won his Prize Fellowship at Trinity College, Cambridge, he donated his stipend to the newly-founded London School of Economics. His instinctive generosity did not only express itself in financial terms; to almost everyone he knew he was generous in many intellectual and emotional ways. His letters testify luminously to this trait, as they testify also to his scintillating intelligence and delightful wit. All these facets of Russell are present to us in these letters, each of them serving as a record, preserved in typically sharp, lucid prose, of the freshly-minted responses of a brilliant yet extraordinarily humane mind.

Nicholas Griffin tells us that there

THE SELECTED LETTERS OF
BERTRAND RUSSELL: VOL. 1,
1884-1914

edited by Nicholas Griffin

Allen Lane The Penguin Press £25, 640 pages

are nearly 50,000 letters in the Russell archive. For this volume, the first of two, he has chosen 340, all but one previously unpublished. They cover Russell's first four decades, taking us to the event which impelled him into his controversial public career: the outbreak of the First World War. The projected second volume, still in preparation, covers the remaining six decades of Russell's life, throughout which he was prominent on the international stage as social reformer, peace campaigner and philosophical gadfly stinging the body politic.

Griffin's achievement in this first volume is a splendid augury for its successor. He has in effect given us a new biography of Russell, skilfully weaving the letters into an explanatory narrative of notes and commentary. It is notable that most of Russell's letters are to women, indeed to the small group of women who were most important to him in this period: his grandmother, who brought him up; Alya Pearsall Smith, his first wife; and Lady Ottoline Morrell, with whom Russell had a love-affair which liberated him from the sexual and social poverties of

his earlier life.

To these women Russell wrote intimately of his feelings, hopes, work, friends and conversations. He wrote almost daily, and at length, in characteristically fluent style, so that the letters constitute a remarkable diary, comparable in its autobiographical and literary value to Pepsy or to Rousseau's memoirs, and even more gripping than the epistolary fictions of Richardson because they convey the genuine personal testimony of a great and passionate mind. Only to these women did Russell write so fully; to male friends his letters give less of his inward mind and therefore more that is inessential.

The volume begins with Russell's boyhood letters to his grandmother, widow of the reforming Prime Minister Lord John Russell. She brought up the orphaned Russell at Pembroke Lodge in Richmond Park in an atmosphere of priggish austerity. Hunger for affection remained, Russell later said, one of the permanent compulsions of his life. Tutors and nannies fostered his precocious talents, and at 19 he went up at Cambridge to read mathematics and then philosophy, becoming a Prize Fellow of Trinity at the age of 23.

While still an undergraduate Russell fell in love with a Quaker five years his senior, Alya Pearsall Smith. Soon after graduating, and against his family's determined opposition, they married, so beginning a period of happiness in which Russell produced his greatest work in logic and philosophy. This was not at Alya's expense; the letters show that Russell was a "new man" a century before the expression was invented, for he and Alya devised a "complicated mutual-adjustment system" of marriage which reflected their opposition to traditional views about women's roles. Both were ardent feminists, and even as Russell was writing (with A.N. Whitehead) his great three-volume treatise on the logical foundations of mathematics, the *Principia Mathematica*, he stood several times for Parliament as a woman's suffrage candidate. Later, with Ottoline Morrell, he experienced again the fruitful ecstasy of love which, paradoxical as it seems, inspired some of his best technical work.

Russell never believed in academic exclusiveness, and to any interested

correspondent he enjoyed giving lucidly pithy accounts of his work. As a result the volume describes Russell's philosophical progress from student to internationally famous savant in a series of brilliant vignettes drawn by Russell himself. But even in these letters the discussion ranges widely, touching with equal ease on history or politics, music or personal matters. Concerning these last, Russell was an indefatigable correspondent, entirely unpretentious and full of affection.

The Russell one meets in these pages is enormously likeable and admirable.

Griffin's choice of letters portrays something very different from a Mr Apollinax ravishing maidens. It has become fashionable, even among philosophers, to undervalue Russell's contributions, but both in technical philosophy, where his influence so pervades that citation of his works is no longer necessary, and in the social revolution which freed 20th-century minds from Victorian fetters, Russell is a central figure. He merits celebration, and this volume marvellously demonstrates why.

The Selected Letters of Bertrand Russell. Volume 1: The Private Years, 1884-1914, edited by Nicholas Griffin. Houghton Mifflin; 553 pages; \$35.

IN THESE PREVIOUSLY UNPUBLISHED LETTERS, we see Bertrand Russell learning the painful and elementary facts of life that are much more easily imbibed by most men who do not grow up to be earls or professional philosophers. Orphaned at two, Russell was brought up by his prudish, morbid, and terrifying grandmother, who became a fury in earnest when, at 21, he decided to marry Alys Pearsall Smith.

Russell's grandmother vilified Alys, demanded separations so he could reconsider, and finally told the couple they could not marry because insanity on both sides made it unsafe for them to have children; she was placated only when Russell, in desperation, promised they would have a white marriage. In fact, as his letters make plain, he was desperate to begin his sexual experience, as shown by his regret over his ignorance and confusion ("I was left to learn what I could from the smutty talk of immoral companions—oh it is scandal-

ous, what suffering and wrong-doing I might have been spared by ten minutes candid instruction") and his hesitant assurances to his equally nervous fiancée ("I don't believe we shall find coition such an absolutely different thing from previous physical things, and I believe experience in the one can more or less be extended to the other—but I dare say not").

Russell and Alys were happy for several years, during which he did a great deal of productive work, but the increasing confidence he gained from that work and the marriage, together with Alys's frequent depressions and rest cures, gradually pulled them apart. Russell has been much criticized for cruelty and indifference to Alys, but the letters amply testify to his concern for her, as well as to his own suffering. "Some sorrows can only be met by patience, and the reflection that life is both short and unimportant. This is a consolation not open to the Christians, and it is one which gives us a real advantage over them."

Russell's patience gave out, though, when, in 1911, he fell in love with Ottoline Morrell, who gave him the passionate intimacy his wife could not. "O Dearest,"

he wrote to her at the beginning of their affair, "your love is absolute happiness to me, but it is more than happiness—it purifies all my thoughts, it stills the intolerable home-sickness of the exile, it revives the worship of beauty that I set out to kill in order to endure my life."

Their relationship endured until he wrote that, on a lecture tour of the U.S., he had met a woman of greater sexual appetite than hers who would be following him to England. "I do not want you to think that this will make the very *smallest* difference in my feeling towards you, beyond removing the irritation of unsatisfied instinct. I suppose it must give you some pain, but I hope not very much if I can make you believe it is all right, and that she is not the usual type of American." By then, however, it is August 1914, and, as political events overtake the personal, Russell makes a comment that could apply to both: "Perhaps we shall emerge into a saner world. Anyhow everything has to be begun afresh—old fixed points are gone."

BOOKS

Saturday, March 14, 1992 XXVII

WEEKEND TELEGRAPH

A cantankerous judge

BY THE AGE of 42, at which point this first volume of his letters ends, Bertrand Russell was the most eminent philosopher in the British Isles and among the greatest in the world. He had won a starred first at Cambridge, pioneered the study of the philosophy of mathematics, served as President of the Aristotelian Society, published three volumes of the monumental *Principia Mathematica* and embarked and almost capsized on the *Theory of Knowledge*. A volume of his letters might reasonably seem daunting fodder for an innumerate reviewer who is tone deaf to metaphysics.

He need have no fear. Nicholas Griffin includes just enough of what he calls the "less technical" letters to Louis Couturat, Moore, Whitehead, to make one realize how incomprehensible Russell's work was to the non-professional (and, indeed, to the great majority of professionals as well).

"I began with 22 Pp of general logic (such as the syllogism) and I deduced from them all of pure mathematics, including Cantor and geometry, without any new Pp or primitive concept... Naturally the axioms are replaced by definitions; this process is the only one that would be valid for non-Euclidean geometry."

Naturally. But there is not much of this. The book constitutes, in the editor's phrase, an "epistolary biography." It is admirably equipped with linking passages setting the letters in context and adorned with footnotes that exhibit both Professor Griffin's omniscience and his pleasantly sardonic wit. When Russell first kissed Alys Pearsall Smith's breasts:

To their mutual relief, they found that this physical expression of their love did not compromise its purity. The inci-

dent helped allay fears that they would drift into mere sensuality, a remote danger, one would have thought, for such a very young couple.

The combination of Russell's letters and Griffin's editing provides an enthralling introduction to one of the most remarkable and bizarre figures of the 20th century.

Most of the letters are to the two great loves of this part of his life: his first wife, Alys Pearsall Smith, and Lady Ottoline Morrell. His wish to marry Alys involved him in a fierce struggle with his formidable grandmother, the widow of Lord John Russell, who had brought him up. Lady Russell had the highest possible standards — "I have no intelligent grandchildren," she once moaned. She considered Alys unfit to marry Bertie, both socially and intellectually, finally invoking arguments of eugenics on the ground that there was madness on both sides of the putative family. Russell retorted that, in that case, he would have no children. His grandmother's intolerance accounted at least in part for his revulsion against his class. "Damned aristocrats," he described them. And when it was suggested that he should work for a few months in the Embassy in Paris, he was "blindly averse" to the idea because it was "aristocratic and from my people".

The marriage was a disaster. Russell patronised Alys ruthlessly. She would, of course, never be capable of any "brilliant original thinking" but, if only she would work hard, she would be able at least to "criticize

THE SELECTED LETTERS OF
BERTRAND RUSSELL. VOLUME I.
THE PRIVATE YEARS, 1884-1914
ed by Nicholas Griffin
Allen Lane, £25

my thoughts, instead of laughing at the good ones and admiring those that are really commonplace". He later apologised for hurting her but did it again within a few weeks. Finally, he undermined her confidence and ended by falling out of love with her. "I have made a mess of my private life," he wailed.

"I have not lived up to my ideals and I have failed to get or give happiness. And as a natural result I have tended to grow cynical about private relations and personal happiness — whether my own or other people's. So all my idealism has become concentrated on my work, which is the one thing in which I have not disappointed myself, and in which I have made none of the compromises that destroy faith."

Ottoline Morrell was altogether more able to hold her own and made Russell quite as unhappy as he made her. She contrived to remain — more or less — happily married to her husband Philip, while conducting affairs with Henry Lamb, Russell and, in a somewhat etiolated way, Lytton Strachey. "It is altogether extraordinary to me that you should love me," Russell told her. "I feel myself so rugged and ruthless, and so removed from the whole aesthetic side of life — a sort of logic machine warranted to destroy any ideal that is not very robust." The

explanation was that she didn't love him — it is doubtful if she ever loved anyone except herself — but she hated to let him go. She would have destroyed him if the ruggedness and ruthlessness to which he had admitted had not pulled him back to the work which he knew to be the most important part of his life.

Russell never really liked anyone, or not so seriously to disturb the tenor of his existence. He loved a few. He vastly admired Wittgenstein, whose devastating critique of his work he accepted with a readiness, even a gratitude, which speaks eloquently for his intellectual integrity. He revered Conrad:

"I plucked up courage to tell him what I find in his work — the boring down into things to get to the very bottom below the apparent facts. He seemed to feel I had understood him; then he stopped and we just looked into each other's eyes for some time, and then he said he had grown to wish he could live on the surface and write differently, that he had grown frightened."

But he had few friends.

Most of his judgments of human beings were harsh, some were cantankerous. The Americans in particular inspired his displeasure. American bores were "more virulent, I think, than the bore of any other country — they all give one exactly the same information, slowly, inexorably, undeterred by all one's efforts to stop them". A "regular American place" was described as being such because it was "very dirty, disgusting food, windows never opened, spittoons distributed

tastefully about the floor, hard, efficient, un-meditative men coming and going, talking in horrible American voices". Their appearance was calamitous. "The ugliness of the faces along the table made me almost unable to eat — fat, stupid, complacent, without any redeeming trait of any sort or kind."

Even at their best they were deficient. The most intelligent of his pupils, he wrote, was "proficient in Plato, intimate with French literature from Villon to Vildrach, very capable of a certain exquisiteness of appreciation, but lacking in the crude insistent passion that one must have in order to achieve anything". In spite of his lack of passion, Professor Griffin notes drily, the pupil "didn't do too badly". He was T. S. Eliot.

But what is most memorable about these letters is not the peevishness, the intolerance, the arrogance; not the fierce self-criticism or the sudden flights of almost school-boy lyricism; but the unflinching, unrelenting search for truth. For that he would have sacrificed anything: his success, the reputation of his colleagues, the happiness of those he loved.

To Ottoline Morrell he speculated about the mysteries of God and infinity, about the great things of life and the power of love: "But truth is the one I have mainly served, and truth is the only one I always feel the divinity of." Truth proved a hard master, one which gave him much distress and was the cause of his giving much distress to others. But without the fearless honesty that stamped his life he would have been perhaps more contented, certainly more comfortable, but a lesser man.

Phillip Ziegler

(17) OXFORD UNIVERSITY PRESS RUSSELL PUBLICATIONS

We were pleased to see this Oxford University Press announcement/order form for two of its publications which have been honored with the BRS Book Award.

NEW from OXFORD

OXFORD UNIVERSITY PRESS • 200 Madison Avenue, New York, NY 10016

Winner of the 1992 Bertrand Russell Society Book Award

RUSSELL'S IDEALIST APPRENTICESHIP
Nicholas Griffin, McMaster University

"Griffin opens with three chapters on Russell's early intellectual development. They are superb and, in themselves, well worth the price of the book. The same may be said about the chapters on geometry, physics, pure mathematics, logic, and Russell's theory of relations... A detailed and extremely valuable contribution to the study of the history of British idealism... Highly recommended for all 20th-century philosophy and cognitive development collections."--Choice

Modern analytic philosophy was born around the turn of the century, largely through Bertrand Russell's and G.E. Moore's reaction against the neo-Hegelianism that dominated British philosophy in the last decades of the nineteenth century. It is well known that Russell had himself been a neo-Hegelian, but thus far little has been known about his work during that period. Drawing primarily on unpublished papers held in the Bertrand Russell Archives at McMaster University, this is the first detailed study of this early period of Russell's philosophical career. Griffin examines Russell's philosophical education at Cambridge in the early 1890s and his conversion to neo-Hegelianism; his ambitious plans for a neo-Hegelian dialectic of the sciences; and the problems that ultimately led him to reject neo-Hegelianism.

Winner of the 1991 Bertrand Russell
Society Book Award

RUSSELL, IDEALISM, AND THE EMERGENCE
OF ANALYTIC PHILOSOPHY

Peter Hylton, University of California, Santa Barbara

"Here, at last, is a philosophically sophisticated, historically sensitive, and richly detailed account of the events that led to the overthrow of the sort of idealism that prevailed at Oxford and Cambridge at the turn of the century and its replacement by so-called analytic philosophy... A splendid book. A most welcome achievement and a must for any academic library."--Choice

Analytic philosophy has become the dominant philosophical tradition in the English-speaking world. This book illuminates that tradition through a historical examination of a crucial period in its formation: the rejection of Idealism by Bertrand Russell and G.E. Moore at the beginning of the twentieth century, and the subsequent development of Russell's thought in the period before the First World War.

THE BRS BENARAS CHAPTER

Here is news about a recent meeting of the BRS Benaras [India] Chapter and Chandrakala Padia's new book, Liberty and Social Transformation: A Study in Bertrand Russell's Political Thought. The BRS has been fortunate to have had Dr. Padia as a speaker at more than one of its annual meetings. We are now pleased to see her Russell research in published form. We also salute the BRS Benaras Chapter and look forward to receiving future reports.

If you have extra copies of BR-related books or can make a contribution of new books or money, the Benaras Chapter would be most grateful to receive your gift. The address is BRS Benaras Chapter; New G; 7, Hyderabad Colony BHU; Varanesi 5, India.

A report on the Annual Conference of
the Benaras chapter of the Bertrand Russell Society

The Benaras chapter of the Bertrand Russell Society organized a two day conference on 10th and 11th of May 1992 to felicitate one year completion of Benaras chapter. The subject of discourse on 10th May was 'Disintegration of Soviet Union : Future of Socialism'. The speaker was Prof. Mohan Thampi a renowned social scientist and a professor of English literature from Benaras Hindu University. The meeting was attended by sixty persons which included eminent scholars, journalists, teachers, professionals, students and such others.

The subject of discourse on May 11 was 'Bertrand Russell and Socialism'. Prof. Namwar Singh, renowned Hindi critic and social scientist, was invited from Delhi at this occasion to speak on this subject. The society bear the cost of his journey. He, however, threw light on many new aspect of Russell's Political thought; how people in the west and east have often misunderstood his thought; how he was the one who could think ahead of his time; and how he has added a democratic colour to the concept of socialism. He has the great virtue of being candid in all his analysis and interpretations.

Both the days, Dr. Chandrakala Padia welcomed the participants and guests and apprised them of Society's activities and contribution. She also threw light on the life and works of Bertrand Russell. She also briefed the audience about Russell's views on socialism. In the end, she thanked the speaker and to all those who made it a big success.

The meeting was attended by the President of three Universities and renowned scholars of the city. All the local papers gave it a wide coverage. The members of the Benaras chapter worked day and night to make it a success. Some new officials were appointed to facilitate the working of society with the consent of all its members.

27.05.1992

LIBERTY & SOCIAL TRANSFORMATION

A Study in Bertrand Russell's
Political Thought
Chandrakala

The book is both critical and constructive. By appealing to the text of Russell's own works, it essays to provide reasoned answers to the following criticisms against the greatest philosopher of this century: (a) that Russell is not a political philosopher at all (Stuart Hampshire, Antony Flew, John G. Slater, D.H. Monro); (b) that his thought is disfigured by a dichotomy between his logico-mathematical metaphysics and the categorical imperative of his moral convictions (E.C. Lindeman, John Lewis); (c) and that his concept of liberty is singularly negative (Christopher Candwell, John Lewis, V.J. McGill).

Positively, the book projects the following: Russell's psychological theory of impulse emphasizing the unity of instinct, mind and spirit; his unique doctrine of socialism visualized as a way of balancing anarchy with dominion, initiative with social cooperation, and freedom with authority; his distinct conception of man as a semi-gregarious animal with natural impulses towards both solitariness and sociability; and his commendable endeavour to evolve a politics of love, community and justice which may be impervious to both anarchy and authoritarianism, a politics that will permit neither power to overwhelm liberty, nor liberty to undermine mutual concern.

ABOUT THE AUTHOR

Dr. Chandrakala is a Reader in the Dept. of Political Science, Benares Hindu University. She is a recipient of the prestigious Fulbright Award of USA and the UGC Career Award. She has published quite a few papers in the reputed national & international journals.

SOME OPINIONS

'Dr. Chandrakala has sought out the most direct and explicit rejections of her thesis and responds to them without equivocation or evasion. . . . She reads Russell closely and carefully, something which his critics do not always do.' - Harry Raja, Emeritus Professor of Philosophy, San Diego State University, California, USA.

'Dr. Chandrakala's work will revive interest in Russell's work as providing a middle road between authoritarian communist systems and unbridled capitalism. This will be a great task of the 21st century.' - Louis Greenspan, Professor of Political Philosophy, McMaster University, Hamilton, Canada.

'Dr. Chandrakala's work . . . is a thorough study of Russell's socialism . . . She successfully applies Russell's principles to an analysis of the profound social, political, and industrial problems . . .' - Kenneth Blackwell, Russell Archivist, The Bertrand Russell Archives, Hamilton, Canada.

'Dr. Chandrakala's work shows qualities of clarity and insight which I have rarely encountered in reading about Russell, a lucid, carefully crafted interpretation . . . of Russell's most important works.' - K.E. Garey, Department of History, McMaster University, Hamilton, Canada.

THE BRS PHILIPPINE CHAPTER

Congratulations to the BRS Philippine Chapter on the issuance of its first newsletter! Reproduced below in reduced size is the complete first page. We thank Ramon Suzara for providing us with this newsletter issue. And we salute him and his colleagues for their fine work in creating another strong BRS organization in Asia.

BERTRAND RUSSELL SOCIETY *Philippine Chapter*
QUARTERLY NEWSLETTER
No. 1 June 1992

NEWS!!!!**REGULAR MONTHLY MEETING**

5 p.m., June 06, 1992 held at the BRS Headquarters at SLU, Makati

Summary:

1) The following were elected officers for the period June 1992 to June 1993:

President	Gras Reyes
Secretary/Treasurer	Joie Cruz
Public Relations Officer	Jessica Castillo
International Representative	Poch Suzara

2) We will soon have the maiden issue of the BRS Journal, thanks to the untiring efforts of Gras Reyes and other BRS Members.

We wish to encourage all members to join in this endeavor.

3) A membership fee of P100.00 a year will be collected from all members. Please be ready with your payments next scheduled monthly regular meeting (June 20, 1992). Likewise, a minimal contribution of P20 to P30 will be collected to cover for refreshments and other incidental costs for the meeting.

We also accepted the application of membership to the BRS Philippine Chapter of three (3) friends. They are Joey Reyes of Maryland St., Cubao and a professor at the International School, Apple Peralta of Tandang Sora, Quezon City who is a Computer Engineer and last but not the least, Howie Borja of Project 2, Quezon City who works with the PHRDC at the University of Life.

BRS JOURNAL

We wish to invite all BRS members to send in articles, essays on important issues, book reviews and all other forms of literature for publication. We will give priority to articles on Russell and reviews on his works. However, rest assured all contributions will be accorded its proper exposure. Send your contributions to Joie Cruz, 97 Matimtiman St., Sikatuna Village, Quezon City. She will take care of collation and submission to Mr. Gras Reyes for selection and editing.

START CRACKING YOUR HEADS!!!**BRS PHIL. CHAPTER LETTERHEAD**

A lot of thanks to Ms. Wild Teng Santaromana for a "very handsome letterhead" acknowledged by the BRS U.S.A. in its newsletter of the 1st quarter 1992.

MEMBERSHIP

We welcome these new BRS Philippine Chapter members:

Mr. Joey Reyes, Ms. Apple Peralta and Mr. Howie Borja

BRS FACT SHEETS

We have reprinted copies of above and available for all BRS members. Call Poch Suzara at Tel. No. 810-7592.

Poch Suzara wrote a very good article entitled "TRUE VALUES" which saw print in the December 02, 1990 issue of Manila Standard Daily Newspaper.

For the benefit of those who missed this issue, here it is.

TRUE VALUES

"We believe in the miracles of the past. They were a divine intervention over human affairs. But we have yet to believe in the greatest of miracles that has yet to take place before it is too late: the miracle from God that will convert Filipino hearts and minds no longer to hate, but only to love one another. Indeed, we Filipinos love God up in heaven; but at the same time, we hate one another down here on earth. We have faith in God; but we have no faith in ourselves to create a better nation for ourselves with courage, knowledge and kindness.

We believe in prayer. We believe that time spent in prayer is not time ill-spent because God always favors us with the things we pray for. Indeed, we always pray for peace; unfortunately, we never also pray for social sanity. After all, as insanity prevails in our society, how can there be peace?

We are more proud of our religious values than we are proud of our intelligence. Whenever we are faced with troubles and conflicts we use our knees; we seldom use our heads. We pass on our troubles and conflicts to God for his consideration. We leave everything to God. We believe that God will provide. But as our troubles and conflicts are getting more and more complex each day, we just continue to pray more and more and beg for God's forgiveness. We all pray harmoniously with our hands and hearts and minds together.

Because of our religious values, we believe that sacred truths should never be questioned; that sacred mysteries should never be investigated; that sacred books should always be taken for granted. In the meantime, we have yet to discover the greatest discovery of all time anywhere in the world -- the unfathomable depths of our own ignorance.

Why was it that only the few Bible writers were inspired, but the millions upon millions of Bible readers have not been equally inspired by God?

We are the only Christian nation in Asia. The Holy Bible has been guiding our way of life during these past four centuries. Unfortunately, the Bible does not have all the answers to life's problems. Surely, if the Bible has been the most excellent guide for human behavior, if the Bible encourages human intelligence, if the Bible insures the good life inspired by love and guided by knowledge -- then by this time we should already be the most advanced people under the most developed nation enjoying not only freedom and democracy, but also social order, economic equality, and political sagacity.

Surely, as the only Christian nation in Asia under the power of God through Biblical teachings we should also be teaching by now other nations how to cure leprosy; how to make the lame walk; the blind see; the dumb speak; how to raise the dead. Perhaps those medical miracles were only valid during biblical days. But we cannot even raise not our dead, but just the living among fellow Christians in the streets of Metro Manila.

How does it profit Filipino Christians who will gain eternal happiness in the next life by leaving this life in the Philippines a much worst place than how they found it? The most harmful of beliefs is

CONTRIBUTIONS

We thank these members for their contributions to the BRS Treasury this year:

Neil Abercrombie, Washington, DC
 Louis K. Acheson Jr., Encino, CA
 Cheryl Bascom, Los Angeles, CA
 Deborah Bohnert, Swampscott, MA
 Michael Emmet Brady, Bellflower, CA
 Dennis C. Chipman, Mobile, AL
 Steve Dahlby, Citrus Springs, FL
 Dennis J. Darland, Davenport, IA
 Susan J. Darland, Davenport, IA
 Jack R. Cowles, New York, NY
 Linda Egendorf, Lincoln Center, MA
 Susan J. Girod, Los Angeles, CA
 Louis Greenspan, Hamilton, Ontario, Canada
 Claire Halloran, Glendale, NY
 Jerold J. Harter, Los Angeles, CA
 Justin Leiber, Houston, TX
 Michael H. Malin, Hatsfield, PA
 Stanley H. Neyhart, Berkeley, CA
 Daniel J. O'Leary, Dover, NH
 John C. Parker, Meriden, CT
 Paul M. Pfalzner, Ottawa, Ontario, Canada
 Jim Reid, Wellesley, MA
 Michael J. Rockler, Skokie, IL
 Andy Rogers, Los Angeles, CA
 Richard Shore, Winnipeg, Manitoba, Canada
 Timothy S. St. Vincent, Melrose, MA
 Dewey I. Wallace, Jr., Puebla Pue, Mexico
 Charles Allen Yoder, Long Neck, DE

We remind members that contributions are welcome at all times, in any amount. Please send contributions care of the newsletter or the BRS Library. Addresses are on page 1.

PHILOSOPHER'S CORNER

Dennis Darland has proposed that "Philosopher's Corner" become a regular RSN feature for which all are invited to submit short philosophical articles. We are grateful to Dennis for preparing this first article. May we also hear from you?

Russell desired to apply the apparatus of Principia Mathematica to the problems of philosophy. He sought a logically perfect language which would allow the resolution of the puzzles of philosophy. Wittgenstein was originally seen as working on this task as well. His Tractatus was seen as a work of genius on this task. However, Wittgenstein radically altered his position, attacking his earlier (and Russell's) position as the result of illusions about language. Are Wittgenstein's criticisms of Logical Atomism valid? What is the fate of Principia Mathematica? What is the fate of Philosophy?--Is it reduced to linguistic therapy? What can be said about the philosophy of science and philosophy of mathematics? Are these also to become, perhaps merely more specialized, therapies? These issues and more will be tackled in this and future Philosopher's Corners.

The method used here will rely upon the results of science and everyday knowledge as a starting point. No attempt to deduce this sort of knowledge from logic and immediate experience, as Russell at least at times desired, will be attempted. This author spent years agonizingly attempting to think through such a task--with no result. Although the task can readily be seen as impossible, there are also natural compulsions to return to the task. Both of these aspects of epistemology will be examined in the future, and this method of proceeding will be defended. The reasoning here will not withstand Cartesian Doubt.

Next I will examine Wittgenstein's initial criticism of Logical Atomism. Wittgenstein starts by quoting Augustine and saying he gives us "a particular picture of the essence of human language. It is this: the individual words in language name objects--sentences are combinations of such names....In this picture of language we find the roots of the following idea: Every word has a meaning. This meaning is correlated with the word. It is the object for which the word stands." Wittgenstein criticizes this view of language by saying it is a picture of a language simpler than ours. He gives examples of such simpler languages. He also gives numerous examples of uses of language which do not fit this simple picture.

Is this the demise of Logical Atomism? Well, in any case Logical Atomism cannot be used to give an adequate analysis of the many examples Wittgenstein gives. But cannot one of the many uses of language be to describe the world in terms of "atomic" entities? Isn't physics trying to do this? (I will use physics as my primary example, but it need not be assumed here that physics would be ontologically primary.) Wouldn't a completed physics (or whatever) provide a logically atomic language to describe the world? This isn't to say that the physicist could use this special language independently of ordinary language. Ordinary language,

mathematics, logic, and the special languages of the sciences would provide a background in which this special language would have meaning. But does the fact that the usability of this language of physics depends upon ordinary language along with mathematics and the special practices of the physicists indicate that the meaning of the language is derived from these? The meaningfulness of the language may depend on these, but their combination gives the physicist the ability to describe "atomic" features of the world. These "atomic" features of the world can be maintained to have ontological primacy, without having primacy of meaning or primacy in knowledge.

Ordinary language sentences will not necessarily be analyzable into statements of the ontologically primary language. It would theoretically be possible to describe the uses of ordinary language in terms of the ontologically primary language, but in practice this would be far too complex. Some difficulties of this view will be examined latter. Thus we can concede to Wittgenstein that ordinary language is not "analyzable" into an atomic language, and that we are not acquainted with logically atomic entities, while maintaining that science will lead us to ontologically atomic entities, whose properties and relationships compose the world.

2. New Audiocassette:

279 "Bertrand Russell: A Reassessment". Written and presented by Anthony Howard. BBC January, 1980 With Dora Russell, A.J. Ayer, Anthony Quinton, Canon Collins, Michael Scott, A.J.P. Taylor and Paul Johnson. Two minutes of the introduction are missing. 43 Minutes. Courtesy of Sheila Turcon.

3. Book news:

The library has received review copies of these new volumes:

Word and Object in Husserl, Frege, and Russell: The Roots of Twentieth Century Philosophy by Claire Hill. Ohio University Press, 1992. \$34.95

The Mathematical Philosophy of Bertrand Russell: Origins and Development by Francisco Rodriguez-Consuegra. Birkhauser Boston, 1992. \$68.50.

The Private Years, 1884-1914, Volume I of "The Selected Letters of Bertrand Russell", edited by Nicholas Griffin. Houghton Mifflin, August 15, 1992. \$35.

Any member who would like to volunteer to review a book should write to me soon. Review copies remain the property of the Society library, and are available for loan after a review has been published in the News.

D.D. Bandiste's A Study of the Ethics of Bertrand Russell is being distributed by Wiley Exports, 4835/24, Ansari Road, Daryaganj, New Delhi-110 002, INDIA. The price of \$20 includes Airmail postage.

Chandrakala Padia's Liberty and Social Transformation: A Study in Bertrand Russell's Political Thought will added to the Society's book sale list. Since the publisher has allowed us a substantial discount, the price will be very reasonable. Details in the November issue of the News.

Routledge published seven paperback re-issues of Russell titles in May: The Analysis of Matter, The Basic Writings of Bertrand Russell, Human Knowledge: Its Scope and Limits, Human Society in Ethics and Politics, The Philosophy of Leibniz, Principles of Mathematics, and Theory of Knowledge; The 1913 Manuscript. The first seven have new introductions by John Slater.

SPECIAL REQUEST:

The Library would like to borrow a copy of a video, Bertrand Russell: The Rebel Aristocrat. This 30 minute film was part of a set produced by the Ontario Department of Education in 1970 and is described as follows in a catalog listing: "The life and work of Bertrand Russell, mathematician, philosopher, radical and humanist. Includes a brief sketch of his life, discussion of his major work on the logical foundations of mathematics, samples from the Russell Archives at McMaster, and a talk with a Russell authority, Prof. John Slater, University of Toronto." The video is no longer available for loan from the University of Toronto A/V Library, the only location noted on UTLAS. If you may be able to help the library obtain a loan copy of this video, please write to Tom Stanley, Librarian, Russell Society Library, Box 434, Wilder, VT 05088.

4. Books to lend:

When no author is indicated, the work is by Bertrand Russell. The doner's name appears at the end.

History of Western Philosophy. Jack Ragsdale.
Mysticism and Logic. Jack Ragsdale.
Bertrand Russell's Best. Ramon Suzara.
An Outline of Philosophy. Ramon Suzara.
Autobiography of Bertrand Russell, Vol. I. Ramon Suzara.
Let Me Die Before I Wake by Derek Humphery. The Author.
Essays on Bertrand Russell, edited by Klemke. Bob Davis.
Morals Without Mystery by Lee Eisler. The Author.
Authority and the Individual. Don Jackanicz.
Autobiography of Bertrand Russell (in one volume). Don Jackanicz.
Bertrand Russell 1872-1970. Don Jackanicz.

RUSSELL IN THE NEWSPAPERS

Harry Ruja supplied this medley of newspaper articles. Sources: "Russell Spells S-E-X," New York Post, May 12, 1952, p. 3; "A Mother Wins," [London?] Sunday Express, March 31, 1940; "Run Him Out," [London?] The Daily Mirror, March 21, 1940.

RUN HIM OUT OF TOWN, SAY U.S. MOTHERS

From JOHN WALTERS
D. MIRROR New York, Wednesday.
THREATS to "run him out of town" were made today by New York mothers against Bertrand Russell (Lord Russell), British philosopher and writer, who is well-known for his advanced views on sex.

7 MAR 1940
The threat is a protest against his appointment as Professor of Mathematics at the City of New York College. Police say that Professor Russell takes up the appointment he will have to be guarded day and night from angry women.

One mother, Mrs. Jean Kay, brought a suit before the Supreme Court yesterday asking the Court to review the appointment and admitting that Professor Russell's advocacy of free love might induce New York schoolchildren to put it into practice. Mrs. Kay described his teaching as "repugnant to the accepted standard of good conduct and a danger to the health, morals and welfare of the college students."

Signed by 40,000

Forty thousand members of the American Legion also issued a statement condemning Professor Russell.

At his home in Los Angeles, Professor Russell was unperplexed.

"It was distressing to meet in the metropolis of the world's greatest democracy an attempt to establish an inquisition over teachers and a rigorous censorship of students," he said.

"As for free love, I am far from advocating promiscuity, either among students or elsewhere; but I do think that young people should be allowed to live together in unions which may develop into permanent marriage. It would diminish promiscuity."

A mother wins — and Bertrand Russell goes

Walter
3 1 MAR 1940
SUN, EXP.
Sunday Express New York Correspondent

A DENTIST'S wife has stopped the appointment of Earl Russell (who prefers to be known as Bertrand Russell) as professor of mathematics at New York City College.

The reason: That his teachings would tend to corrupt the morals of the students.

New York Supreme Court Judge John McGeehan granted an order forbidding his employment at the college, on the application of Mrs. Jean Kay, a Brooklyn housewife.

Mrs. Kay, mother of two children at the college, described Bertrand Russell's teachings on sex as "repugnant to the accepted

Bertrand Russell, thrice-married English philosopher, whose moral ideas shocked a New York mother, is professor of philosophy at the University of California. He is sixty-seven, and married his secretary, Miss Helen Patricia Spence, in 1936. Two previous marriages were dissolved.

standards of good conduct, and a danger to the health, morals and welfare of the college students."

Judge McGeehan said the appointment was an attempt to "establish a chair of indecency."

He quoted extensively from Bertrand Russell's works and said: "This is an insult to the people of New York."

When he had read a lengthy judgment he added: "I have nothing further to say about it. I have been up all night with this thing and now I am going out for a shave."

Defending Bertrand Russell's appointment Dr. Nelson Mead, acting president of the college, said: "He has been invited to teach mathematics, not to discourse on his moral views."

Russell Spells S-E-X to Wary Customs Man

By BENNETT SCHIFF
Sex, which just can't seem to be left out of things, got into the picture again today in a little imbroglio involving philosopher Bertrand Russell, who wasn't even there, and one Thomas Sullivan, a customs inspector at Idlewild Airport.

It seems that Sullivan was on duty last night when a tape-recorded interview with Russell ar-

rived by plane, consigned to the National Broadcasting Co.

Russell? Russell? Sullivan pondered as the flicker of memory roared into flame and exploded.

"He's the fellow who wrote about sex, isn't he?"

The NBC men conceded that Lord Russell had upon occasion touched on that delicate subject.

"Then I'm afraid," Sullivan said, "that it'll have to be censored."

It was carefully explained to Sullivan that Russell, who will be 80 Sunday, was also a Nobel Prize winner, one of the world's most distinguished mathematicians, philosophers and writers and that the recording was part of a birthday program to be broadcast at 7:30 tonight.

Sullivan, unimpressed, finally released the tape to the NBC man—but only after he put a government seal on it which will

have to be broken in the presence of a Customs censor.

The book Sullivan referred to—it is not known whether he had read it—is "Marriage and Morals," published in 1929. Sullivan did not exhibit any curiosity about another of Russell's books called "Principia Mathematica," one of the cornerstones of modern mathematics.

Nor is it known if he is familiar with a recent book of Rus-

sell's called "New Hope for a Changing World" which contains a passage reading:

"Consider MacArthur and his Republican supporters. So limited in his intelligence and his imagination that he is never puzzled for a moment. . . . Stalin, I should say, is equally simple-minded and equally out-of-date. . . . One of the painful things about our times is that those who feel certainty are stupid."

BALLOT

Eight Directors are to be elected for 3-year terms starting January 1, 1993.

Make a checkmark next to the names of each of the eight candidates for whom you wish to cast your vote. If you vote for more than eight, it disqualifies your ballot. Information about the candidates is provided in Section 3, page 5.

- JACK COWLES
- LINDA EGENDORF
- WILLIAM FIELDING
- DAVID GOLDMAN
- TIM MADIGAN
- STEVE MARAGIDES
- PAUL SCHILPP
- WARREN SMITH
- RAMON SUZARA
- THOM WEIDLICH

Comments are welcome, on any topic:

Your name (optional) _____ Date _____

Please remove this page and fold it as indicated on the other side. It is addressed and needs no envelope. It does need a stamp (29¢ in the U.S.A.). Ballots must be postmarked before October 1, 1992.

Thank you for voting. And thank you for voting early.

RUSSELL SOCIETY NEWS

No. 76, November 1992

The Bertrand Russell Society, Inc.

3802 North Kenneth Avenue Chicago, Illinois 60641-2814 U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Letters to Russell Society News, a quarterly issued in February, May, August, and November, should be sent to Donald W. Jackanicz, Editor at the above Chicago address.

Inquiries on information about and membership in The Bertrand Russell Society should be sent to Mr. Lee Eisler; BRS Information Committee; 1664 Pleasant View Road; Coopersburg, Pennsylvania 18036; U.S.A.

FROM THE PRESIDENT

Michael J. Rockler, President, The Bertrand Russell Society

The question of "school choice" surfaced as an important issue in the presidential campaign. President Bush supported the use of government vouchers which could be spent in either public or private schools. The Democrats wished to provide students with options but to confine government support to choice among public schools. In the past the Congress has refused to subsidize private schools with tuition vouchers.

I paid particular attention to this issue during the campaign because of my special interest in education. The debate over choice made me wonder how Russell would respond to the conflict. Russell believed in setting limits on unbridled free enterprise. The privatization of education advocated by the Republicans is an example of applying marketplace economics to schooling. Thus one could surmise that Russell would be in opposition to the Republican plan.

Russell was suspicious of all ways that education was organized. He distrusted private schools because they promoted religious beliefs. But he also had reservations about state-supported schools because of their tendency to indoctrinate children with false patriotism. This is one reason why he and Dora opened the Beacon Hill School.

Because of Russell's conflicting views it is difficult to know precisely how he would react to school choice involving private schools. My own guess is that he would ultimately oppose privatization of education because of his generally liberal orientation to the solution of social problems. But this is only my guess.

Russell's views on education will be debated by **Marvin Kohl** and me at the coming meeting of the Society in June. **Tim Madigan**, executive editor of Free Inquiry, will speak on "The Will to Believe Versus the Will to Doubt." **Gladys Leithauser** is planning to do a participatory workshop on Russell's fiction. And hopefully, **Congressman Neil Abercrombie** will be present to analyze the 1992 election. **Harry Ruja** will receive the BRS Award. Other interesting presentations will be made.

The meeting will be held at the University of California in San Diego on June 18, 19, and 20. Housing will be in campus apartments which are walking distance from the ocean. Please come to the 1993 meeting; it is not too early to begin planning for it. If you have never attended a BRS annual conference, scenic San Diego would be a good place to start. I look forward to seeing all of you in San Diego.

If anyone wishes to present a paper at the conference, please contact me at National-Louis University, 2840 Sheridan Road, Evanston, IL 60201 (708-475-1100, ext. 2141).

(2)

FROM THE VICE PRESIDENT

John Lenz, Vice President, The Bertrand Russell Society

Vice President Lenz has prepared this announcement about the BRS's "Prizes for Papers" competition, reproduced here in reduced size. The announcement will be mailed to numerous colleges, universities, and institutions.

"The good life is one inspired by love and guided by knowledge"

THE BERTRAND RUSSELL SOCIETY, INC.

Please post

NEW

PRIZES FOR PAPERS

The Bertrand Russell Society is offering *Prizes for Papers*, starting in 1993. There will be 2 Prizes for the best papers, one Prize for undergraduates, and one Prize for "young professionals" (graduate students, junior professors, non-academics).

The Prize-winners will present their papers at the Society's next Annual Meeting, in San Diego, June 18-20, 1993.

All expenses will be paid. This includes travel, lodging, and meals, plus \$100 in pocket money. Winners outside North America will receive a portion of their airfare.

Another part of the Prize is a first-year membership in The Bertrand Russell Society. Among the benefits are the 4 quarterly issues of *Russell Society News*, and the semi-annual scholarly journal, *Russell*, published by the Russell Archives at McMaster University.

The papers can be on any aspect of Russell's life, work, or influence. They must be intended, not for specialists, but for a general audience. They can be broad or narrow in scope, and in any of the many fields that interested Russell: logic, ethics, history, politics, marriage, religion, education, peace, nuclear war, history of ideas, mathematics, etc., etc. Or they can be on Russell's relations with other people.

Length should be about 20 double-spaced pages, aiming at a 45 minute presentation.

Submit not an abstract, but a complete, or nearly complete, paper. State that you could, if chosen, attend the June Annual Meeting, and that you have not previously appeared on a Russell Society Annual Meeting program. Give your phone number.

Please submit your paper by MARCH 1, 1993 to Prof. John Lenz, Dept. of Modern and Classical Languages, Texas A&M University, College Station, TX 77843, 409-845-4742. e-mail:jrlenz@tamu.edu.

These Prizes replace the Grants we have been giving in recent years.

At its Annual Meeting -- an informal weekend gathering of BRS members of diverse interests and backgrounds -- the Society presents its BRS Award and its Book Award for the current year. In 1992 the BRS Award went to Sir Karl Popper and the Book Award went to Nicholas Griffin for his *Russell's Idealist Apprenticeship*.

For more information about The Bertrand Russell Society (not the Prizes) write to: Lee Eisler, 1664 Pleasant View Road, Coopersburg, PA 18036.

Honorary Members: Sir Alfred Ayer, Paul Edwards, Linus Pauling, D.F. Peiss, Sir Karl Popper, Conrad Russell, The Earl Russell, Paul A. Schilpp, Katherine Russell Tail

(3)

BRS BUSINESS

1. 1993 Annual Meeting. It's not too early to start planning to join your fellow BRS members for the June 18-20, 1993 BRS Annual Meeting in San Diego. Mark your calendars! Study California and San Diego maps and tourism books! Consider means of travel from your city to San Diego! Please refer in this newsletter to the President's and Vice President's reports that in part concern the Annual Meeting. The next RSN will include more details about the meeting. So stay tuned, and do start thinking about being with us in June.

2. BRS American Philosophical Association Session. Each year the BRS sponsors a session at the December meeting of the American Philosophical Association (Eastern Division). For information about the December 1992 BRS APA session, contact Prof. David E. Johnson, Department of Philosophy, Sampson Hall, 107 Maryland Avenue, U.S. Naval Academy, Annapolis, MD 21402-5044.

3. BRS Award. All members are encouraged to nominate persons or organizations for the BRS Award. The 1993 BRS Award recipient will be Harry Ruja, well known for his work in Russell scholarship. But other nominations are needed for future awards. Please send nominations to Prof. Marvin Kohl, Department of Philosophy, 715 Maytum Hall, SUNY at Fredonia, Fredonia, NY 14063.

4. BRS Book Award. All members are also encouraged to nominate authors and books for the BRS Book Award. The 1993 recipient has not yet been announced. In other words, the selection process goes on, and your nominations are needed. Please send nominations to Prof. Gladys Leithauser, 122 Elm Park, Pleasant Ridge, MI 48069.

5. Changes in the Information and Membership Committees. We are pleased to report that the work of the Information and Membership Committees will continue with a change in those doing the work. First of all, our thanks to William Fielding, outgoing Co-Chairman of the Membership Committee, whose fine work did so much to attract and welcome new BRS members. The other Co-Chairman, Lee Eisler, continues for now in his long service to the BRS, but in time he will turn over many of his Information Committee and Membership Committee duties to Michael Rockler and Dennis Darland. Thanks, again, to William, and thanks to Lee, Michael, and Dennis for their contributions of time, effort, and expense in spreading the word on the BRS!

6. Suggestions. Members should feel free to contact the BRS with suggestions about our organization, its aims, and its programs. Send your suggestions and comments to Don Jackanicz, RSN Editor, 3802 North Kenneth Avenue, Chicago, IL 60641. Don will forward them to the appropriate BRS officer. We do want to hear from you.

7. Newsletter contributions. Members are asked to send Russell-related news, clippings, information, etc. to RSN at the above address. Space and editorial considerations limit what can be printed, but your input is most welcome.

(4)

1993 DUES ARE DUE

TO ALL MEMBERS: Everybody's renewal dues are due January 1, 1993. The January 1st due-date applies to all members, including first-year members (except those who joined in the final quarter, i.e. October-December 1992).

Here is the 1993 dues schedule: Regular, \$35; Couple, \$40; Student and Limited Income, \$12.50; Limited Income Couple, \$15. Plus \$10 outside the U.S., Canada, and Mexico. Plus \$4 for Canada and Mexico. In U.S. dollars.

Please mail dues, payable to "Bertrand Russell Society," to: BRS-1993, 1664 Pleasant View Road, Coopersburg, PA 18036.

If you want to make our life a little easier, send your dues soon. And if we receive them before January 1st, you'll find your name on the Renewal Honor Roll. Thanks!

TO FIRST YEAR MEMBERS -- members who joined any time during 1992; the rest of this item is for you.

We know from experience that new members sometimes feel put upon when asked to pay dues after less than a year of membership. We understand that. We'll tell you why we do it this way.

In the previous system, a new member's dues covered 12 months of membership. That required us to notify each member individually -- on the anniversary date of enrollment -- that the next year's dues were due. And after that, we had to follow up on all members, to see whether dues were in fact paid. This went on throughout the whole year. It was cumbersome, provided many chances for error, and took a lot of time. In fact, it took more time than we had. We had to make a change.

The present system is easier to administer, produces fewer errors, and takes less time. Everyone's dues come due on the same day, January 1st. Simple!

We don't think that the new member whose first year of membership is less (sometimes considerably less) than 12 months has been short-changed in any important way. He/she has received just as many newsletters (and knows as much about the BRS) as the member who joined in January.

All first-year members (except those who enrolled in January) have a first-year membership period that is shorter than a year. Thereafter, the yearly membership period is always a full 12 months.

The one exception to all the above are those who joined in October/November/December 1992.

Thanks again to all renewers for their continuing support of the BRS!

(5) BOARD OF DIRECTORS ELECTION RESULTS

RSN, No. 75 included a ballot for the election of eight BRS Directors for three year terms beginning January 1, 1993. There were ten fine candidates, and we thank all of them for participating in this election. We also thank all members who voted. Here are the names of the eight new or reelected Directors:

JACK COWLES
LINDA EGENDORF
WILLIAM FIELDING
TIM MADIGAN
PAUL SCHILPP
WARREN SMITH
RAMON SUZARA
THOM WEIDLICH

(6) NEWS FROM MEMBERS

From Frank Bisk. "I recently read an essay by Paul Johnson that is a rather meanspirited aggressive attack on B.R.'s character. In Johnson's reactionary lexicon "secular" is a pejorative term.... It is in a 1988 book called Intellectuals and is most anti-intellectual in tone."

Frank informed us that his name was omitted from the RSN, No. 75 membership list. We regret this error. Here is Frank's address:

Frank Bisk; 2940 Mott Avenue; Far Rockaway, NY 11691.

From Cal Wichern. Cal also informed us that his name was omitted from the membership list. Again, we regret this error. Here is his address:

Cal Wichern; 3829 South Olathe Street; Aurora, CO 80013.

From Ted Jackanicz and Tim Madigan. We received word from each of these members that BR is referred to in Roger Angell's "Shouts and Murmurs; First Tuesday" article in The New Yorker, November 9, 1992, p. 148. Angell's article, which concerns aspects of the November 3 U.S. election, makes reference to the story that Russell, if confronted after death by God, would defend his prior atheism by explaining, "God, you gave us insufficient evidence!"

(7)

NEW MEMBERS

We welcome these new BRS members and hope to see at least some of them in San Diego in June 1993.

THE ALTERNATIVE READING ROOM; 2 Wall Street; #115; Asheville, NC 28801-2716.
 Ms. ANNA B. CASEY; 320 Willets Avenue Ext.; Waterford, CT 06385.
 Mr. WILLIAM CATUS; 943-C Manor Lane; Columbus, OH 43221.
 Mr. RICHARD CHADY; 2 Alden Court; Delmar, NY 12054.
 Mr. KJER COX; 401 Weare; Woodbine, IA 51579.
 Prof. SUZANNE CUNNINGHAM; Philosophy; Loyola University; Chicago, IL 60626.
 Mr. D.M. DAUGHARTY; 16 North Washington Court; Cheney, WA 99004.
 Mr. WILLIAM V. FLEITZ III; 9303 Robnel Place; Vienna, VA 22182.
 Mr. J. SCOTLAND GALLO; 17916 East Park Drive; Cleveland, OH 44119.

NEW ADDRESSES

Members are asked to inform the BRS of address changes or corrections. Doing so will get your issues of Russell Society News and Russell: The Journal of the Bertrand Russell Archives to you more promptly. Doing so will also reduce BRS mail costs. Please send change/correction notices to Mr. Lee Eisler; BRS Information Committee; 1664 Pleasant View Road; Coopersburg, PA 18036.

Ms. DEBORAH BOHNERT; 1 Beacon Street; Marblehead, MA 01945-2677.
 Mr. WALTER A. BURBANK; RFD 1; 40 McCrillis Road; Epping, NH 03042-5206.
 Mr. ROBERT P. CANTERBURY; 418 West Street; Lansing, MI 48915-1102.
 Mr. STEVEN H. FULLER; 356 SW. 2nd; Apt. 3; Pendleton, OR 97801.
 Dr. SUSAN J. GIROD; 3605 Meda Pass; Fort Wayne, IN 46809.
 Dr. JEROLD J. HARTER; 3605 Meda Pass; Fort Wayne, IN 46809.
 Dr. ROGER OTIS KUHRT; 5717 112th Street SW.; Tacoma, WA 98499-3023.
 Mr. JOHN R. O'NEILL; 961 43rd Avenue; #82; Sacto, CA 95831.
 Dr. JOHN D. ROCKFELLOW; Rosenorns Alle 57 st. th.; DK-1970 Frederiks. C.; Denmark.
 Mr. JOHN EDWIN SHOSKY; 1806 Rollins Drive; Alexandria, VA 22307-1613.
 Mr. JOHN E. SONNTAG; c/o COM PO USCG; Coast Guard Island; Alameda, CA 94501.
 Mr. THOM WEIDLICH; 170 East 3rd Street; Apt. 10; New York, NY 10009.
 Mr. WALTER WEND; 13 Oakland Hills Road; Rotunda West, FL 33947.
 Mr. TODD WILSON; 48 41st Street; Islip, NY 11751-1318.

BRS PHILIPPINE CHAPTER

Here in reduced size is the first page of the Bertrand Russell Society, Philippine Chapter's Newsletter, Number 2, September 1992. If you would like to communicate with the BRS, Philippine Chapter, write to it c/o Poch Suzara, 8 Zipper Street, San Lorenzo Village, Makati, Metro Manila, Philippines. If you happen to have spare copies of Russell books, are able to make a monetary contribution toward the Chapter's work, or just want to send some words of encouragement, Poch and his fellow Philippine members would be pleased to hear from you. We would also like to congratulate Poch on his election as a BRS Director.

BERTRAND RUSSELL SOCIETY, Philippine Chapter
QUARTERLY NEWSLETTER
 No. 2 September 1992

N E W S ! ! !

Sundays. Prompt settlement of dues will be appreciated.

Treasurer's Report

Treasurer Jojie Cruz submitted this report for the period ending August 31, 1992

Bank Balance on Hand as of June 06, 1992	P	2.00
Income:		
Membership Fees		500.00

Total Income	P	502.00

Expenses:		
Stationery & Other Supplies		382.00
Postages/Stamps		40.00

Total Expenses	P	422.00

Bank Balance as of August 31, 1992	P	78.00
		v v v v v

It was agreed upon during the last regular meeting that membership fees for this year would be waived inasmuch as our Treasury has yet to receive payments from the other members. In effect, those who have already settled their membership fees this year would automatically be considered to have paid their membership dues for 1993.

Payments can be made to Treasurer Jojie Cruz thru Tel. Nos. 722-5861 Mondays to Fridays during office hours or at 921-8331 after office hours as well as Saturdays and

ELECTION OF DIRECTORS FOR THE BERTRAND RUSSELL SOCIETY, U.S.A.

We are pleased to inform you fellow BRS members that our very own Int'l Representative Poch Suzara is one of the ten fine candidates to be elected to the BRS Board of Directors for 1993 through 1995.

For your information, the full BRS Board of Directors consists of 24 Directors elected by the BRS membership and the five ex officio BRS officers (President, Vice President, Vice President/Information, Secretary, and Treasurer). Eight of the 24 are elected each year. Terms are for three years.

WE MISS YOU ! ! !

Calling on the following BRS members. We sure want to know how you guys are doing and would appreciate if you can have time to attend our next regular meeting on October 17, 1992.

Jessica & Norman Castillo, Max & Maquette Indolos, Armi Cortez, Dennis Gumpal, Joey Tanedo, Jun Corral, Teng Santamaria, Howie Borja, Dave Baradas, Joey Reyes and Terryliou Peralta.

(10) BRS BENARES CHAPTER IS FLOURISHING

The following is excerpted from Chandrakala Padia's letter to Lee Eisler of May 27, 1992:

I organized a 2-day annual conference of the Benares Chapter of the Bertrand Russell Society for 10th and 11th of May, 1992. It took me about one month of preparation. I invited an eminent social scientist and renowned critic, Professor Namwar Singh from New Delhi, and paid for his to and fro journey, since this Chapter has no funds of its own.

He spoke on "Bertrand Russell and Socialism." His presentation was lucid and analytical -- and if he gives it in print, it will be a novel interpretation. He spoke in Hindi, and I taped the whole thing; but I will need a few days to concentrate upon it and translate it into English. His talk was followed by discussion and a question-and-answer session. I spoke about Russell's book, The Theory and Practice of Bolshevism.

Professor Mohna Thompi spoke on "The Disintegration of the Soviet Union."

The Conference was attended by about 60 persons. Everyone became interested in learning more about Russell, about his work, about the Russell Society, and the Benares Chapter. Everything was quite exciting and very enjoyable.

I shall be sending a detailed report on our activities.

Please inform the BRS members of the Benares Chapter's activities -- its growth and contribution to the spread of Russell's thought.

(11) FROM GONZALO GARCIA TO JAMES REID

BRS member Gonzalo Garcia wrote this July 8, 1992 letter to member James Reid. Unfortunately his letter was returned by the post office for a "wrong address." We therefore print it now for James Reid and other interested readers.

I congratulate you for your thoughtful letter published in RSN, No. 74, May/92.

In the same newsletter I read the editorial invitation to share with BRS members "thoughts" about the Society's goals.

I want you to know that, in RSN, No. 72, Nov. 91, p. 11 was published my letter addressed to former Chairman of the BRS, Mr. Harry Ruja, in which I expressed my ideas to join the BRS. For my part, I also would like to see that the BRS avoid not only "high-minded seriousness," but also its exclusively philosophical posture and try to pursue other BR liberal aims like pacifism, etc.

I'll appreciate your comments on the matter.

(12)

PHILOSOPHER'S CORNER

"Philosopher's Corner" first appeared as a newsletter feature in RSN, No. 75 with an article by Dennis J. Darland. Here is Dennis's second article followed by another on a different subject by Tim St. Vincent. We welcome submissions on any philosophical subject. Thanks to Dennis and Tim for their thoughtful writings.

By Dennis J. Darland

In the last Philosopher's Corner, I said it was impossible to arrive at the results of science from logic and immediate experience. Why is this so? Russell in Human Knowledge admitted the irrefutability of sceptical solipsism. "From a group of propositions of the form 'A occurs', it is impossible to infer by deductive logic any other proposition asserting the existence of something." Thus the solipsist is sceptical of anything beyond his immediate experience.

This is sufficient to support my conclusion as stated, but I wish to show more. Suppose that it is true that the group G of propositions of the form 'A occurs' are true. Then what is G? According to the solipsist G must be present to immediate experience as well! It would have to be possible to find a necessary relation of meaning between the constituents of G and the constituents of the facts to which they correspond. But then it must be possible to infer the existence of these relations from the truth of G. But this contradicts the solipsist's contention. (Russell's analysis of the meaning relation varied. At some points it might have been identity, but even then some further fact must exist when G is believed, such as acquaintance.) I as well have been unable to detect such relations in immediate experience. If the solipsist's position were tenable there would have to be a self evident phenomenology of the meaning relation. Some of Wittgenstein's Philosophical Investigations could be taken as criticisms of such potential phenomenological relations. This does not prove that the solipsist's position is false, but only that he cannot consistently assert his position.

Wittgenstein in the Philosophical Investigations (38): "Naming appears as a queer connexion of a word with an object.--And you really get such a queer connexion when the philosopher tries to bring out the relation between name and thing by staring at the object in front of him and repeating a name or even the word 'this' innumerable times."

I cannot help but repeat here the story of Russell's in Human Knowledge. He tells of receiving "a letter from an eminent logician, Mrs. Christine Ladd Franklin, saying she was a solipsist, and was surprised that there were no others." Her surprise surprised Russell.

Wittgenstein's concern with the relation of a word to its meaning goes back to the Tractatus where the relation is taken to be one of picturing. The picturing relation is maintained to be an internal relation as opposed to Russell's external relation. (Philosophical Remarks [21]). However even by the Philosophical Remarks, Wittgenstein sees that picturing alone is insufficient. "How is a picture meant? The intention never resides in the picture itself, since, no matter how the picture is formed, it can be meant in different ways." (24) Wittgenstein considers various things which could constitute this internal relation (PI [39-201]). He ends up taking (in most cases), the meaning of a word to be its use. "For a large class of cases -- though not for all -- in which we employ the word "meaning" it can be defined thus: the meaning of a word is its use in the language." (PI [43]). Unfortunately there is not an internal relation between a word I am aware of and its use. Thus Wittgenstein's criticisms of other potential relations between a word and its meaning apply to his own as well. It may help to consider the use of a word when clarifying the meaning of a word in philosophy, but this use cannot be used to establish or justify one's relation of meaning between word and object.

It is my belief that Russell's analysis of meaning as a causal relation is closer to the truth when one is considering epistemological questions. Although it is not an internal relation as demanded by Wittgenstein, Wittgenstein himself is unable to provide such an internal relation.

Two Dimensional Utilitarianism

By Tim St. Vincent

Bertrand Russell thought of Utilitarianism as the moral philosophy that is inspired by feelings of compassion. However it conflicts with another compassion inspired principle, which Russell expressed in "The Fate of the Jews" by writing "That millions should have to put up with minor political disabilities is not so grave an evil as that hundreds should suffer the extreme of torture and agony." I will call this idea the "Principle of Personal Tragedy" (PPT). Two Dimensional Utilitarianism (TDU) reconciles this idea with the idea that one should minimize foreseeable harm.

Imagine that an ultra-reactionary politician proposes a bill outlawing artificial voice boxes. In defense of his bill, he argues that leaving a few people (artificial voice box candidates) unable to speak is better than subjecting millions of people to the unpleasant experience of hearing people speak through artificial voice boxes. This bill could be justified on utilitarian grounds, but it is mean-spirited because it violates the Principle of Personal Tragedy.

PPT states that, when all else is equal, having one person suffer a tragedy is worse than having any number of people suffer nuisances. Of course, the concept of personal tragedy should be analyzed. A tragedy is,

in some sense, an unbearable misfortune. I believe that it can be defined as a traumatic experience or something (Ex. death) that would be considered at least as bad as a traumatic experience.

Utilitarianism clashes with the Principle of Personal Tragedy because it allows a large number of nuisances to add up to more harm than one tragedy. TDU resolves this conflict because it claims that harm and suffering are, in principle, measured not by numbers but by pairs of numbers. To see this, consider how chapter and verse are ordered in any book of the Bible. For example, Mark 1:3 comes before Mark 1:5 which comes before Mark 2:1. Now let us consider an imaginary book of the Bible called Jones. If chapter one of Jones had one million verses, then Jones 1:1,000,000 would come before Jones 2:1. In general, I will use the phrase "number pair" to refer to any pair of numbers like 2:30, 500:13, 90:1216, etc. ("number pairs" are called "ordered pairs" in mathematical terminology). In any number pair, I will call the number to the left of the colon the "left number" and I will call the number to the right of the colon the "right number". Thus the left and right numbers of 38:126 are 38 and 126 respectively.

Number pairs are ordered the way they are in the Bible, namely, by using the numerical equivalent of filing two letter names in alphabetical order (mathematicians call this "lexical ordering"). For example, 0:10,000 1:0 because the former number pair has a smaller left number (regardless of what their right numbers are). Also 6:4 6:9 because they have the same left numbers, and therefore their right numbers serve as a tie breaker.

We define the sum of two (or more) number pairs to be the number pair whose left number is the sum of their left numbers and whose right number is the sum of their right numbers. For example, $10:1 + 20:2 = 30:3$. This concept of addition naturally leads to a concept of multiplication. To multiply a number pair by a number, simply multiply its left and right numbers by that number. For example, $100 \times 2:3 = 200:300$.

Two Dimensional Utilitarianism requires one to minimize foreseeable harm, but it measures harm and suffering by number pairs. The left numbers represent the amount of tragedy and the right numbers represent the amount of nuisance. To return to our artificial voice box example, loss of the ability to speak would be a tragedy and might be represented by 3:0 (3 units of tragedy, 0 units of nuisance). Listening to someone speak through an artificial voice box would be a nuisance and might be represented by 0:1 (0 units of tragedy, 1 unit of nuisance). If one million people listened to artificial voice box speech, that would amount to $1,000,000 \times 0:1 = 0:1,000,000$ which is less than 3:0. If any number of people listened, that would amount to any # $\times 0:1 = 0:\text{any \#}$ which is still less than 3:0. In general, the Principle of Personal Tragedy follows from TDU.

When harm and suffering are measured by number pairs, the left numbers represent the "amount of tragedy". This phrase sounds odd, but it makes sense when analyzed. A more severe tragedy is often equivalent to two or more lesser tragedies. For example, having one person loose both legs might be worse than having two people loose one leg each. Also, a great risk of tragedy is often equivalent to an actual tragedy. Subjecting someone to a

90% chance of death is worse than having any number of people suffer nuisances.

It is also clear that the amount of tragedy is, in principle, capable of being measured exclusively by whole numbers. If a given tragedy constitutes one unit of tragedy, there's no such thing as one trillionth of a unit of tragedy. Nuisance is also capable of being measured exclusively by whole numbers. There's no such thing as extremely small fractions of a unit of nuisance, because they couldn't be perceived.

One possible objection to TDU is that it apparently justifies some ridiculous prohibitions. For example, it might seem to prohibit recreational driving, because the enjoyment this activity gives to countless people would seem to be outweighed by the fact that it results in some tragic accidents. However, if we carry this line of reasoning to its full conclusion, it gets TDU off the hook. First of all, it would seem to justify the elimination of all athletic activities, but doing so would cause more fatalities than it would prevent due to an increase in poor health. Secondly, this type of reasoning seems to prohibit all fun activities, which would result in megatragedy, because it would make life unbearable. TDU says that, when all else is equal, one tragedy is worse than any number of nuisances.

The ethical system I am outlining implies that a tragedy has infinite negative weight when compared to a nuisance. In other words, a tragedy (in particular, a death) is a loss of infinite value. TDU therefore provides a secular foundation for belief in "The Infinite Value Of A Human Life."

TDU also justifies the adage that "you can't put a price on a human life." However, this saying needs to be analyzed. It doesn't mean that society should part with unlimited amounts of money in order to save a person's life. Doing so would result in other deaths through destruction of the economy. It does mean that the value of a human life cannot be expressed in terms of dollars and cents. A given amount of money can have finite or infinite value depending on how it is spent. For example, one million dollars can buy ice cream cones for several hundred thousand people, or it can save a few people from life threatening illnesses.

Bertrand Russell spoke out against cruelty in many of his writings. In particular, he expressed concern about situations in which groups oppress individuals. A good intellectual foundation for these values is provided by Two Dimensional Utilitarianism.

(13)

"PRIZES FOR PAPERS" COMPETITION

Be sure to see the announcement of the BRS's new "Prizes for Papers" competition as described by Vice President John Lenz in Section 2, Page 3. Interested authors are heartily encouraged to take part. We look forward to seeing the 1993 winners in San Diego at the next BRS Annual Meeting!

(14) TREASURER'S REPORT

Treasurer Dennis J. Darland submitted this report for the quarter ending September 30, 1992.

Balance on Hand, June 30, 1992		\$5,947.46

RUSSELL FROM ROUTLEDGE

On this and the next page are current advertisements for Russell books available from the Routledge publishing company, London.

Philosophy

Abridged edition now in paper

Theory of Knowledge

The 1913 Manuscript
Bertrand Russell

Edited by Elizabeth Ramsden Eames and Kenneth Blackwell

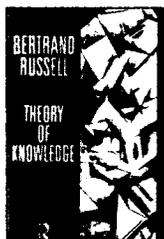

With an Introduction by Elizabeth Ramsden Eames

First published in 1984 as part of *The Collected Papers of Bertrand Russell*, and still available from Routledge (see Volume 7, below), *Theory of Knowledge* represents an important addition to our knowledge of Russell's thought. In this work Russell attempts to flesh out the sketch implicit in *The Problems of Philosophy*. It was conceived by Russell as his next major project after *Principia Mathematica* and was intended to provide the epistemological foundations for his work. Russell's subsequent difficulties in presenting his theory of knowledge, brought on by what he considered to be devastating criticisms of Wittgenstein, led to both his abandonment of this work and to a major transformation in his thought.

Theory of Knowledge, now available for the first time in paperback, gives us a picture of one of the great minds of the twentieth century at work. It is possible to see the unsolved problems left without disguise or evasion. This second edition has retained the full scholarly introduction. The photographs of the manuscript, appendices, and notes on textual matters have been eliminated to provide a concise and accessible guide to understanding both Russell's own thought and his relationship with Wittgenstein.

Elizabeth Ramsden Eames teaches at Southern Illinois University. Kenneth Blackwell teaches at McMaster University.

From The Collected Papers of Bertrand Russell

The McMaster University Edition in twenty-eight volumes

General Editor: John Passmore

The Collected Papers of Bertrand Russell, published in association with McMaster University, provides a complete, reliable, critical annotated edition arranged on the soundest principles. This arrangement recognizes the division between Russell's technical writings on philosophy and logic and the other non-technical writings. It also succeeds in placing the material in approximate chronological order so that the development of Russell's thought can be traced and the many links between his popular and technical writings can be identified.

Logical and Philosophical Papers 1909-1913

Volume 6
Bertrand Russell

Edited by John G. Slater, with the assistance of Bernd Frohmann

The years 1909-1913 were among the most productive, philosophically speaking, of Bertrand Russell's entire career. In addition to the papers reprinted in this volume, he brought *Principia Mathematica* to its finished form and wrote *The Problems of Philosophy*, *Theory of Knowledge* and *Our Knowledge of the External World*.

John G. Slater is Professor of Philosophy and Bernd Frohmann is Assistant Professor, Faculty of Library and Information Science, both at the University of Toronto.

Bertrand Russell Paperbacks

The Analysis of Matter – 3rd Edition
With a new introduction by John Slater,
University of Toronto.

One of the earliest and best philosophical studies of the new physics of relativity and quantum mechanics. *The Analysis of Matter* is a companion volume to *The Analysis of Mind*, which has provided a similar service to psychology. In an attempt to demonstrate the logical structure of the world, Russell develops views about the philosophy of science out of the theories of such scientists as Einstein, Bohr and Heisenberg.

'The whole book is candid and stimulating and for both its subject and its treatment, one of the best that Mr Russell has given us.' – THE TIMES

May 1992: 424pp
Pb: 0-415-08297-8: £10.99

The Basic Writings of Bertrand Russell
2nd Edition

Edited by Robert E. Egner and Lester E. Denon. With a new introduction by John Slater, University of Toronto.

This comprehensive anthology of Russell's writings brings together his definitive essays from the period 1903 to 1959. Whether from his seminal work in the philosophies of mathematics and language or in his provocative views on religion and international relations, his wit and seemingly effortless lucidity remain constant throughout the development of his thinking.

With over eighty essays divided into seventeen sections, there could be no better introduction to the enormous scope of Russell's thinking or to the depth or brilliance of his genius.

May 1992: 744pp Pb: 0-415-08301-X: £12.99

Human Knowledge: Its Scope and Value 2nd Edition

With a new introduction by John Slater, University of Toronto.

Russell's classic examination of the relation between individual experience and the general body of scientific knowledge. It is a rigorous examination of the problems of an empiricist epistemology.

'His intelligibility comes of stating things directly as he himself sees them, sharply defined and readily crystallised in the best English philosophical style.' – TLS

May 1992: 540pp Pb: 0-415-08302-8: £12.99

Human Society in Ethics and Politics

2nd Edition

With a new introduction by John Slater, University of Toronto

Russell gives a logical analysis of ethical concepts and principles. He goes on to relate his ethical conclusions to politics and religion. It is his only extended statement of his later views on ethics.

'I have once again been captivated by the strength of Lord Russell's intellect, the elegance of his prose and the causticity of his wit. He is the Voltaire of his time, and one likes him or dislikes him accordingly.'
– SUNDAY TIMES

The Philosophy of Leibniz

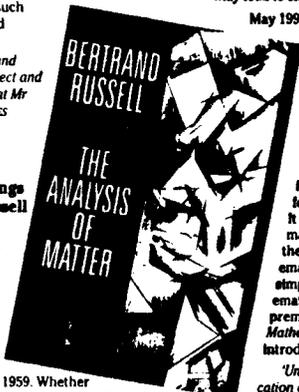

3rd Edition

With a new introduction by John Slater, University of Toronto.

Russell's first strictly philosophical work, this study remains one of the most important studies of Leibniz ever published.

'It is impossible not to see in Mr Russell's work elements of real originality and great power of argument, which together may lead to striking results in the future.' – THE GUARDIAN

May 1992: 352pp Pb: 0-415-08296-X: £12.99

Principles of Mathematics

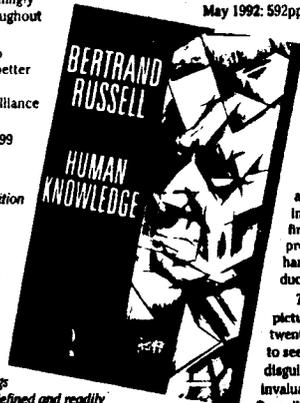

3rd Edition

With a new introduction by John Slater, University of Toronto.

Published in 1903, this book was the first comprehensive treatise on the logical foundations of mathematics written in English. It sets forth, as far as possible without mathematical and logical symbolism, the grounds in favour of the view that mathematics and logic are identical. It proposes simply that what is commonly called mathematics are merely later deductions from logical premises. It provided the thesis for which *Principia Mathematica* provided the detailed proof, and introduced the work of Frege to a wider audience.

'Unless we are very much mistaken, its lucid application and development of the great discoveries of Peano and Cantor mark the opening of a new epoch in both philosophical and mathematical thought.' – THE SPECTATOR

May 1992: 592pp Pb: 0-415-08299-4: £14.99

Theory of Knowledge

The 1913 Manuscript

Edited by Elizabeth Ramsden Eames in collaboration with Kenneth Blackwell.

This important work was abandoned by Russell under the impact of Wittgenstein's ideas. It was first published in 1984 and is presented here for the first time in a handy student edition, with an introduction by Elizabeth Ramsden Eames.

Theory of Knowledge gives us a picture of one of the great minds of the twentieth century at work. It is possible to see the unsolved problems left without disguise or evasion. Historically, it is invaluable to our understanding of both Russell's own thought and his relationship with Wittgenstein.

A NEW NOAM CHOMSKY BOOK

Ophelia Hoopes recommends Chronicles of Dissent, published in 1992 by Common Courage Press. Here is an advertisement for this book, supplied by Ophelia.

Chronicles of Dissent

Noam Chomsky

Interviews with David Barsamian
Introduction by Alexander Cockburn
\$16.95 pbk, \$39.95 cloth

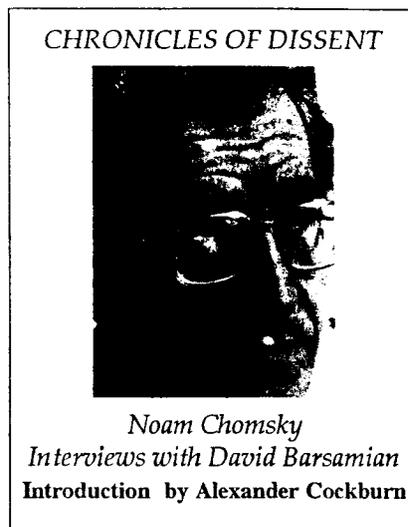

Topics covered by the interviews, conducted from 1986 through the present include:

- New applications of the Propaganda Model;
- Terrorism: The Politics of Language;
- The Propaganda System;
- State Power and the Domestic Enemy;
- Elite Power and the Responsibility of Intellectuals;
- State Economic Planning;

- Substitutions for the "Evil Empire";
 - World Orders: Old and New;
- and many other issues.

Noam Chomsky On Human Freedom:

"If you assume that there's no hope, you guarantee that there will be no hope. If you assume that there is an instinct for freedom, there are opportunities to change things, there's a chance you may contribute to making a better world. That's your choice."

From the introduction, "Excavating the Truth":

"Chomsky feels the abuses, cruelty and hypocrisies of power more intensely than anyone I know. It's a state of continual alertness. Often, after I've glanced at a story in the paper and skipped rapidly over the familiar rubble of falsification, a week or two later will drop into my mailbox a photocopy of that same story marked up by Chomsky, with sentences underlined and a phrase or two in the margin etched deep into the paper by an angry pen.

"What Chomsky offers is a coherent 'big picture,' buttressed by the data of a thousand smaller pictures and discrete theaters of conflict, struggle and oppression... For hundreds of thousands of people—over the years, he

must have spoken to more American students than any other person alive—Chomsky has offered the assurance, the intellectual and moral authority, that there is another way of looking at things. In this vital function he stands in the same relationship to his audience as did a philosopher he admires greatly, Bertrand Russell."

—Alexander Cockburn

An accessible reader on Noam Chomsky's political thought.

Noam Chomsky is author of many books on U.S. foreign policy.

400 pages. ISBN: 0-9628838-8-3 \$16.95 pbk; ISBN: 0-9628838-9-1 \$39.95 hbk

A NEW KARL POPPER BOOK

This advertisement for Sir Karl Popper's In Search of a Better World: Lectures and Essays of Thirty Years appeared in The New York Review of Books, November 19, 1992, p. 54. Sir Karl was the recipient of the 1992 BRS Award.

The essays and lectures collected in this book, many of which have never before appeared in English, chart both the familiar and lesser known aspects of Popper's thinking—his interest in the birth of scientific speculation in classical Greece to the destructive effects on the intellect of totalitarianism in twentieth century states. His profound and original intelligence ranges over the social sciences, the history of philosophy and great figures of the Enlightenment such as Voltaire and Kant, and the relationship between science and art (in an address given at the 1979 Salzburg festival). *In Search of a Better World* offers important new insights into the thought of one of the greatest living philosophers, and into the role of science in civilization.

MORE SELECTED LETTERS REVIEWS

RSN, No. 75 (August 1992) included two British newspaper reviews of The Selected Letters of Bertrand Russell, edited by Nicholas Griffin. Prof. Griffin was the recipient of the 1992 BRS Book Award for this fine work. Here are three recent American newspaper reviews supplied by Bob Davis, Tim Madigan, and Marvin Kohl. We would appreciate learning about reviews of The Selected Works appearing in other publications.

A Philosopher in Love

By JAMES BOWMAN

Apart from its intrinsic interest, the first volume of "The Selected Letters of Bertrand Russell," ably edited by Nicholas Griffin (Houghton Mifflin, 553 pages, \$35), is worth reading because of the gratifying surprise it gives us to find that really smart people can be just as screwed up as we can be. It is reassuring to read Russell's own, contemporary account of his passage from childhood to midlife crisis and never once see any evidence that the great philosopher was less helpless than we are when the good life eluded him. Maybe more helpless.

We know that he was a great philosopher because he wrote books like "The Principles of Mathematics" and, just for variety, the "Principia Mathematica" (co-authored with Alfred North Whitehead) that only really smart people can understand. He was also the teacher and mentor of Ludwig Wittgenstein — another unbalanced philosopher who was undoubtedly one of the two or three smartest people to have lived in this century. Of Wittgenstein, Russell writes: "In discussion with him I put out all my force and only just equal his. With all my other pupils I should squash them flat if I did so."

But in a volume of letters that covers the years — from the time he was 12 until he was 42 — when Russell did all the work on which his reputation for philosophical brilliance rests, most of the space is devoted to his love letters to two women: Alys Pearson Smith, whom he married in 1894, and Lady Ottoline Morell, with whom he had a passionate affair beginning in 1911.

With Alys he is fastidious to the point of priggery, and only partly in response to her exaggeratedly Victorian sensitivities about sex. "As to frequency," he writes to allay her fears, "I am sure it ought not to be great." With Lady Ottoline he abandons himself to passion to the point of obsession, but through it all there is a kind of astonishing naivete that reminds me — forgive me — of Woody Allen's.

Like Russell, Mr. Allen is a talented man more than commonly susceptible to female charms who is too self-absorbed to notice when his desires have taken him beyond the bounds of decency. Mr. Allen's insistence that the affair with his stepdaughter had "turned my life around in wonderfully positive ways" was in a way a translation into modern therapy of the self-delusion that in Russell's day expressed itself in moral terms. Here the philosopher and philanthropist explains to Lady Ottoline why he has had an affair with a young American woman by writing: "The impulse that came over me was like the impulse to rescue a drowning person, and I am sure I was right to follow it."

It is not as if Russell had no idea that Lady Ottoline might have minded about his unfaithfulness because he told his new lover that "I cared for someone else with whom I would not break," and "she did not mind that." As for Lady Ottoline's mind-
ing, "I suppose it must give you some

pain," he wrote, "but I hope not very much if I can make you believe it is all right, and that she is not the usual type of American. The whole family are extraordinarily nice people." Well, that must have been a relief to her!

There is less excuse for this, from a mature man, than for his insensitivities toward Alys when he was only 22. In one letter, written after they had started addressing each other with the ungrammatical Quaker "thee," for example, he tried to reassure her about the disparity in their intellects by writing: "Of course one doesn't imagine thee would do any brilliant original thinking, but thee might form part of the indispensable intelligent audience."

And lucky to be there too, I suppose. But with both women he reveals how com-

Bookshelf

*"The Selected Letters
of Bertrand Russell"*

Edited by Nicholas Griffin

pletely he had to live inside himself in order to accomplish what he did in philosophy and how ill-equipped this "logic machine," as he describes himself in his first letter to Lady Ottoline, was for the real world. That is also no doubt why, later in life, Russell came to hold some really idiotic political views as a socialist pacifist, though it is interesting to read here his youthful defenses of free trade and even of British imperialism during the Boer War.

He began to change, however, in 1901, when he experienced a series of epiphanies by which he realized that (1) the only thing worth living for was human sympathy to break through the shell of loneliness that we all inhabit, (2) the Boers were right and the British were wrong and (3) he no longer loved his wife. It says something about historical perspective that most people now assume that these were progressive steps for Russell because they were the making of the mature philosopher and ethicist whom we remember. Another way to view the matter, however, is that such self-righteousness ultimately ruined him.

For the little prig who wrote to Alys that he hated the sensuality of Paris and had grown "almost morbidly sensitive to the minutest impurity of thought, word or deed" was ready to be corrupted by a sense of his own virtue. That is how he arrived at an ungraceful, Tolstoy-like old age in which he tried to ban the bomb and put the U.S. on trial for war crimes in Vietnam. But it is less surprising to discover that academic brainpower can co-exist with complete political innocence.

Somehow we knew that.

Ferociously Longing for Lady Ottoline

THE SELECTED LETTERS OF BERTRAND RUSSELL

Volume One: *The Private Years, 1884-1914.*
Edited by Nicholas Griffin.
553 pp. Boston:
Houghton Mifflin Company. \$35.

By Arthur C. Danto

Bertrand Russell's writing, at its most characteristic, was clear, crafty, witty and compressed; but when he was bent on the edification of his

readers, or himself, he employed the Sunday-morning style of the Victorian sage. In the opening credo of his "Autobiography," for example, under the title "What I Have Lived For," he wrote in the same tones he employed in his famous essay "The Free Man's Worship": "Three passions, simple but overwhelmingly strong, have governed my life: the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind."

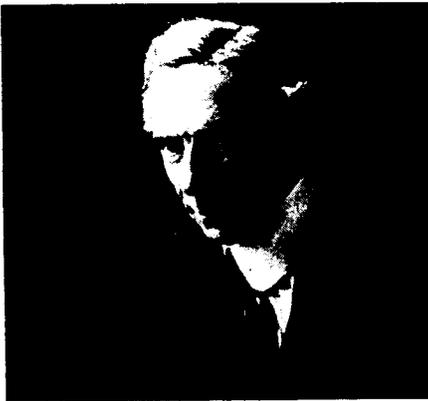

It is the first of these passions that dominates

Arthur C. Danto, the Johnsonian Professor of Philosophy at Columbia University, is the author of the forthcoming "Beyond the Brillo Box: Art in the Post-Historical Period."

"The Selected Letters of Bertrand Russell," culled from a period that ends with World War I, when Russell became very much the public figure of his wider reputation. In the first instance it is Russell as lover we meet in these letters, and secondarily Russell as mathematical philosopher and logician. The humanitarian has not yet emerged, though there is a memorable passage from the "Autobiography," cited in the unfailingly helpful narrative notes by Nicholas Griffin, the editor, in which Russell recalled how the fact of suffering was disclosed to him in a kind of mystical revelation. This was in 1901, when he and his first wife, Alys, shared a house with Alfred North Whitehead and his wife, Evelyn.

Ferociously Longing for Lady Ottoline

Continued from page 1

Bertrand Russell in 1916.

Lady Ottoline Morrell in 1903.

who was becoming an invalid because of a kind of angina. One day, he says, she "seemed cut off from everyone and everything by walls of agony, and the sense of the solitude of each human soul suddenly overwhelmed me." Up until that moment, he goes on to say, "I had forgotten all the deeper issues, and had been content with flippant cleverness."

Now he became convinced that loneliness can be penetrated by nothing "except the highest intensity of the sort of love that religious teachers have preached." Notwithstanding this shattering perception, it is human love, even what Nietzsche would call human-all-too-human love, that he lived for. And this clearly included sexual ecstasy — "ecstasy so great that I would often have sacrificed all the rest of life for a few hours of this joy."

These are selected letters rather than selected correspondence. Russell concludes each chapter of the "Autobiography" with a portfolio of letters, but even after the chapter in which he discloses his intense love affair with Lady Ottoline Morrell, the letters are from Santayana, the classical scholar Jane Harrison, Mary Berenson (his sister-in-law), Gilbert Murray, the mathematician Georg Cantor, Joseph Conrad, Rabindranath Tagore and like members of an intellectual fast set to which Russell happily belonged. But the letters Mr. Griffin, a professor of philosophy at McMaster University in Ontario, has

selected from these years are almost entirely addressed to Lady Ottoline, the celebrated hostess to celebrities whom he met in 1910 when he was active in an election campaign for her husband, Philip Morrell, a Liberal Member of Parliament. In the letters Russell does everything he can to secure a total erotic commitment from a woman who was not altogether unhappily married, and who was in any case reluctant to give up her other lovers or sacrifice her swanky life style and domestic security. She was flattered — "honored" seems not quite the right word when what Russell refers to as "full relations" were involved — to be the object of a great man's love. But she was far from ready for the total surrender Russell considered the only response adequate to his own passionate yearning.

Years ago, when I first read the "Autobiography," I felt Russell was to be envied as much for having been Lady Ottoline's lover as for having written "Principia Mathematica," but now I see that this was in part because of Russell's way of writing about the affair, which focuses on an intense three days of physical and spiritual fulfillment that "remain in my memory as among the few moments when life seemed all that it might be, but hardly ever is."

The affair consisted of a great many more moments when there was anguish and despair, and we are able to experience the bumpy reality of the affair through Russell's

many letters — he wrote at least a letter every day to Ottoline — and through Mr. Griffin's valuable "meanwhile-at-Lady-Ottoline's" other side of the affair. Moreover, as Russell's ferocity of longing was obliged to subside, more and more of the intellectual side of his life got reported on, including his encounter with "my German," Ludwig Wittgenstein. Mr. Griffin is particularly good at explaining such things as Russell's response to a devastating criticism of his theory of knowledge by Wittgenstein, who demonstrated its inconsistency with a central strategy of Russell's logic. It is criticism of a kind that would have been unthinkable before the professionalization of philosophy, a transformation with which Russell must be very largely credited.

BUT the book is essentially Russell's sentimental education, seen from within. The story of his love for Lady Ottoline is the second main chapter here, the first one being his falling in and then out of love with his first wife, Alys Pearsall Smith, the daughter of a wealthy Philadelphia couple who had migrated to Britain (her sister, Mary, became the wife of Bernard Berenson). There is something touching in their ignorance of sex. Alys, Russell later wrote, had been brought up "to think that sex was beastly, that all women hated it, and that men's brutal lusts were the chief obstacles to happiness in marriage." In the event, Alys appears to have been as fully responsive as Ottoline only was sporadically. She did not need Russell's rather priggish reassurances: "As to frequency, I am sure it ought not to be great," he wrote in one nuptial note, and, "I don't believe we shall find cotton such an absolutely different thing from previous physical things." It was and they did.

By putting love at the center of his selection and almost as its criterion, Mr. Griffin has produced a very human document. Russell shows himself to be very much like men very much less clever than himself, and that is perhaps the chief criticism to be made of the book. Love letters finally cloy, and somehow when the humanity Russell shares with us is underscored, the philosopher himself somewhat cloy — especially with the "thee" and "thine" of his correspondence with Alys, who as a Quaker attached a measure of intimacy to the use of these pronouns. Russell as lover writes more in the manner of his lay sermons than with the smart dash and sparkle of his public self. □

'I Want to Keep You'

[To Lady Ottoline Morrell]

Now I will make up an exact statement, and please keep it in mind however dumb I may be, because it is at all times true.

1. I want to keep you and I want not to ruin your life. . . . Compared to these two, all other things in life are trivial to me. Don't doubt this.

2. I want to accomplish, during my life, a good deal more work in philosophy. . . .

3. I want to write general things on religion and morals and popular philosophy. I could do this even if I were discredited, because I could publish anonymously. I can imagine a sermon on Strife . . . and innumerable things of that sort.

4. I like teaching, but that is inessential.

I have put these four in order of importance, the most important first. . . . Whatever may be involved in our holding to each other, the harm to me will be less than if we parted. I believe seriously that the spring of life would be broken in me if we parted. . . . If I have you, there are other goods that may be added; if I don't have you, there are no other goods. . . . I have never imagined such love. I have had the feeling too that I ought to keep it back from you, so as not to interfere with your freedom — but I can't. . . . With you there is life and joy and peace and all good things — away from you there is turmoil and anguish and blank despair.

From "The Selected Letters of Bertrand Russell."

IDEAS

Personal Letters Reveal a Life Story

By Merle Rubin

BERTRAND RUSSELL was a profoundly influential figure in 20th-century philosophy — and one of the most visible spokesmen for radical causes from women's suffrage to nuclear disarmament.

He was, moreover, an extraordinarily fecund correspondent. The letters chosen by editor Nicholas Griffin in "The Selected Letters of Bertrand Russell" represent only a fraction of the material in the Russell archives, but well-represent Russell's brilliant, erratic personality.

A grandson of Lord John Russell, the champion of parliamentary reform who served twice as Queen Victoria's prime minister, Bertrand Russell (1872-1970) continued in his family tradition of working for political progress while reinventing the foundations of philosophy.

Although his groundbreaking work in analytical philosophy is comprehensible to only a small number of people, Russell was known among his peers and students as a brilliant, pithy, lucid, and witty prose stylist, who made these all-but-incomprehensible concepts as comprehensible as humanly possible. Russell is one of the few philosophers ever to be awarded the Nobel Prize for Literature, which he won in 1950.

In addition to such seminal works as "Principia Mathematica" (in which Russell, along with his collaborator Alfred North Whitehead, laid out the logical and philosophical foundations of mathematics through the use of symbolic logic), Russell wrote numerous popular books and essays on philosophy, politics, and education that eloquently addressed a more general audience.

Russell was often in the thick of political controversy throughout his 97 years. Free trade, social reform, women's rights, birth control, nuclear-arms control, and sex education were among his many causes. He was a courageously outspoken critic of British jingoism in World War I. In 1940, he was fired from a teaching post at City College of New York on the charge that his free-thinking views were a threat to student morals.

Ironically, in view of his lifelong devotion as a philosopher to establishing solid, incontrovertible groundworks for any system of thought, Russell was a man of many contradictions. In the period covered by these letters, we can discern his keen gift for analysis, his emotional volatility, and a pattern of abrupt changes in the way he perceived himself and the world in which he lived.

Young Russell initially supported his government in the Boer War on the grounds that the British Empire was a force for peace: A "war of defence," he

calls it in a letter to French philosopher Louis Couturat in 1900. But as the war dragged on, Russell — as he later confided in a letter to Lady Ottoline Morrell — had "a sudden 'conversion,' a change of heart, which brought with it a love of humanity and a horror of force, and incidentally made me a pro-Boer."

Sudden conversions were a hallmark in the emotional life of this supremely rationalistic philosopher. He fell in love with his

BOOKS

THE SELECTED LETTERS OF BERTRAND RUSSELL, VOL. 1: THE PRIVATE YEARS, 1884-1914
 Edited by Nicholas Griffin
 Houghton Mifflin, 553 pp., \$35

first wife, Alys Pearsall Smith, at first sight, only to discover himself out of love with her seven years into their marriage. Nearly a decade later, Russell (still married to Alys) fell wildly in love with Lady Morrell, who would later gain fame as a political-literary hostess and arts patron.

Russell's adolescence, his long courtship of Alys, his attempts at formulating a "logical" foundation for mathematics, his intimate friendships with sympathetic, intellectual women, his increasingly troubled marriage, and his passionate love affair with Morrell are among the main events covered in these letters, aptly entitled

"The Private Years."

Griffin, himself a professor of philosophy, has limited his selections (with the single exception of Russell's first letter to the German mathematician Gottlob Frege) to those that have not previously been published in full. Letters dealing with the more technical aspects of philosophy have also been omitted, leaving an astonishing collection of intensely revealing, self-scrutinizing, profoundly personal letters, which, coupled with Griffin's fine notes and lively commentary, unfold a life story with all the psychological drama and detail of a Russian novel.

Those who are puzzled by the fact that wise and brilliant people often make foolish choices will find a great deal of food for thought in these letters, not the least of which is this observation by Russell himself: "I believe that it is impossible to apply theoretical ethics to politics, or even to private life, for the circumstances are so complicated that one would not know how to do the necessary reasoning. It is necessary, therefore, to appeal directly to common sense for *middle axioms*." But as Russell's letters eloquently illustrate, the search for common-sense solutions can sometimes be as arduous as the conquest of symbolic logic.

SUGGESTED READING ABOUT I.F. STONE

We recently received this good letter from James Woodrow. You might want to follow his suggestion about seeking out a copy of the mentioned I.F. Stone biography.

Some may not realize that the first three subscribers to I.F. Stone's Weekly were Bertrand Russell, Albert Einstein, and Eleanor Roosevelt. The yearly subscription was \$5, and never was raised. Verification can be had in I.F. Stone by Andrew Patner. A biography and very interesting. 1988, Pantheon Books, ISBN 0-394-55808-1.

(23)

NICHOLAS GRIFFIN ON ALYS RUSSELL

After being presented the 1992 BRS Book Award at our Washington Annual Meeting, Prof. Nicholas Griffin of McMaster University read his paper, "Alys." Here is that paper's abstract submitted by Prof. Griffin.

Alys

Bertrand Russell's first marriage, to Alys Pearsall Smith, has an aspect of paradox to it. The marriage itself took place despite the implacable opposition of Russell's powerful and manipulative family. It had little to sustain it at first beyond a romantic and a rather ethereal love, and the couple's conviction that they would break with the Victorian past and embrace turn of the century feminist principles in their relationship. For several years, it was a happy and highly productive relationship and many who knew them came to think of them as an ideal example of a modern young couple.

Yet in 1901 Russell fell out of love with Alys, in circumstances which have never properly been explained, and, though they continued to live together for another 10 years and remained married for 10 years after that, their marriage was effectively dead from that point on. Alys was completely broken by these events and Bertie was thrown into near suicidal depression. With this outcome, biographers have been harsh on the marriage, suggesting that it was loveless from the start and that Bertie treated Alys abysmally throughout. This view has arisen, I believe, because biographers have treated the marriage almost exclusively from Bertie's point of view: seeing Alys as a largely passive, unknown quantity whose marriage was shaped for her entirely by her husband. In my edition of Russell's Selected Letters Russell inevitably occupies centre stage; in my paper, I put Alys at the centre, and show that, while the results were no less tragic, she was both strong-willed and independent-minded and by no means the merely passive victim she has been portrayed as being.

A NEW OTTOLINE MORRELL BIOGRAPHY

Warren Smith has sent us this book review appearing in The Economist, October 10, 1992, p. 113.

Bloomsbury set

Woman scorned

OTTOLINE MORRELL. By Miranda Seymour. Hodder & Stoughton; 452 pages; £25 and \$45

YOUNG Ludwig Wittgenstein suffered the first of several nervous breakdowns while teaching at Cambridge in 1913. Fearing for his protégé's sanity, Bertrand Russell turned for advice to his mistress in London. Her reply was swift and unquestioning. What Wittgenstein needed, she said, was hot chocolate. She enclosed a large packet of cocoa tablets accordingly.

The mistress's name was Ottoline Morrell, and her prescription of cocoa for Wittgenstein's existential doubts sums her life up nicely. The greatest of all the Blooms-

bury salonistes, she managed somehow to avoid being tainted by Bloomsbury's pretensions. When Russell himself threatened insanity, "Ott" dismissed it briskly as "nerves"; when he persisted, she conceded that it might be "toothache". Appointing herself unofficial nanny to London's avant garde, she fed (and, not infrequently, slept with) penurious novelists and painters by the dozen. Like so many nannies before her, she had her hand bitten by way of thanks.

Not least of the biters was D.H. Lawrence. Having spent several omnivorous months, free, at Garsington, Lawrence repaid his hostess's generosity by portraying her as the "macabre", "ghastly" and "repulsive" Hermione Roddice in "Women in Love". Not to be outdone, a similarly well-fed Aldous Huxley satirised the Garsington menage in "Crome Yellow"; Lady Ottoline, lightly disguised as Patricia Wimbush, looked, he said, "like Wilkie Collins in a red wig". Taking up the refrain, Osbert Sitwell

and a legion of other lesser scribblers joined in the Bloomsbury game of throwing Lady Ottoline to the Woolfs with gusto.

This biography by Miranda Seymour, a reviewer for *The Economist*, is the first to show that their ridicule was unfair as well as ungracious. Even if claims for Ott's humanising influence on Russell's philosophy seem a little far-fetched, her function as a fixer is impressive. She was alone in supporting Nijinsky and the first Mrs T.S. Eliot (whom she did not even greatly like) in their respective madresses. Miss Seymour also gives proper due to Lady Ottoline's early appreciation of avant garde French painting, and to her role in setting up the Contemporary Art Society to popularise it in Britain. "I brought them all my rich gifts," wrote an older and sadder Lady Ottoline of the Bloomsburyites. "They pecked me with their sharp beaks." She deserved better.

PHILATELIC RUSSELL

RSN, No. 21 (February 1979) and No. 22 (May 1979) reported on the Bertrand Russell postage stamp issued by India on September 16, 1972. To our knowledge, that stamp remains the only philatelic tribute to BR. (When might the United Kingdom get around to issuing a BR stamp?)

Recently Don Jackanicz purchased the hand-cancelled autographed topical cover (in non-philatelic language, the envelope) reproduced below. Note the two U.S. Post Office cancellations in Bertrand, Missouri on November 17, 1938 and Russell, Illinois on November 12, 1938. These small towns are located in southeastern Missouri and northeastern Illinois. Except for their names, there appears to be no connection between BR himself and these towns. It is not known to Don who first visited the Russell and Bertrand Post Offices to request stamp cancellation and then approached BR for his signature. (Or was it the other way around, i.e. BR signed before the cancellations?) In late 1938, BR was a Visiting Professor of Philosophy at the University of Chicago. So perhaps the explanation would relate to some Chicago area philatelist who was also a BR admirer.

Does anyone else have any "Philatelic Russell" information to share?

(26)

WALTER ARNSTEIN VISITS BERTRAND RUSSELL

On October 20, 1992, Prof. Walter Arnstein of the University of Illinois, Urbana described his correspondence and visit with Russell at the monthly meeting of the University's British History Association. Prof. Arnstein is a well known scholar in 19th and 20th century British history. Among his varied writings is Britain Yesterday and Today: 1830 to the Present, widely used as a college text.

Prof. Arnstein primarily spoke about his March 1957 visit to Russell's home during which Arnstein's dissertation research on what became his book The Bradlaugh Case was the major matter discussed. To set all of this in better perspective, we quote from Britain Yesterday and Today, 1971 edition, p. 129:

The reforms of the second Gladstone ministry, real as they were, tended to be overshadowed in the public press by a series of domestic and foreign frustrations. An especially plaguing problem for Gladstone was the case of Charles Bradlaugh (1833-1891), notorious atheist and advocate of birth control, who was not permitted by the House of Commons to take the required parliamentary oath and who was thereby prevented from taking the seat for which the electors of the Borough of Northampton had chosen him in 1880. His case aroused a flood of emotional oratory and testified to the continued significance in the Britain of the 1880s of organized religion and the Victorian canons of respectability. Gladstone found it distasteful to defend the constitutional rights of a man whose atheistic convictions he found abhorrent; but when it proved impossible to defer the matter to the courts, he supported, in one of his most eloquent speeches, the Affirmation Bill of 1883. The bill would have granted Bradlaugh, and all other MPs, the right to affirm, rather than to swear, their loyalty to the crown; but public opinion was too hostile at the time to permit the bill to pass. Bradlaugh, whose Northampton constituents repeatedly elected him, was finally admitted to the House of Commons in 1886, and he secured the passage of a permanent affirmation bill in 1888. Thus Parliament, which has been opened to Roman Catholics in the 1820s and to professing Jews in the 1850s, was thrown open to avowed atheists in the 1880s.

In addition to describing Russell's reminiscences of persons connected with the Bradlaugh case and the nature of his visit to Russell's home, in his presentation Prof. Arnstein attempted to place Russell within British history and British thought.

Thanks to Steve Shafer for reporting on Prof. Arnstein's talk. We hope that Steve may be able to persuade Prof. Arnstein to set his talk into written form for possible use in Russell Society News or Russell: The Journal of the Bertrand Russell Archives. From Steve's account, Prof. Arnstein's talk was enthusiastically received by those attending, so we can expect a written version to be worth waiting for.

Rocket scores 50 years of marriage

Sex bias linked to poverty

REUTER

WASHINGTON — Attitudes toward women in many developing countries are the most important reason for population growth and a leading cause of poverty, says a report by the World-watch Institute.

"Bias in subsistence economies ranges from wage discrimination, to exclusion from development programs, to legal barriers to owning land, to systemic violence against women," the liberal think-tank said yesterday.

Sexual bias keeps population growth rates high, the report said, because childbirth becomes a woman's only route to economic security.

Women are the main breadwinners in subsistence economies although men are likely to earn more money.

1993 ANNUAL MEETING ANNOUNCEMENT SHEET

Enclosed with this RSN is a blue sheet announcing the 1993 Annual Meeting and calling for papers. For publicity purposes, members are welcome to post this sheet (feel free to make copies) in appropriate settings such as libraries and colleges. We are mailing copies to numerous schools and institutions.

RUSSELL SOCIETY NEWS

No. 77, February 1993

The Bertrand Russell Society, Inc.

3802 North Kenneth Avenue Chicago, Illinois 60641-2814 U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Letters to Russell Society News, a quarterly issued in February, May, August, and November, should be sent to Donald W. Jackanicz, Editor at the above Chicago address.

Inquiries on information about or membership in The Bertrand Russell Society should be sent to Michael Rockler; 4036 Emerson Street; Skokie, IL 60076; U.S.A.

FROM THE PRESIDENT

Michael J. Rockler, President, The Bertrand Russell Society

As I write this, the temperature outdoors is 12 degrees and Chicagoland is covered with snow. In the depth of mid-winter it often seems like summer will never come. But of course it will. It will soon be June and time for another Bertrand Russell Society Conference--this one in San Diego, California from Friday, June 18 to Sunday, June 20, 1993.

San Diego is one of the nicest cities in the United States. The BRS meeting will be held on the beautiful campus of the University of California at San Diego. Housing will be in apartment-style buildings similar to the facilities we used at Lehigh University in Pennsylvania. I understand the campus is walking distance from the ocean.

Please join us for this year's annual meeting which will be special in many ways. The BRS Award will be given to Harry Ruja who has made significant contributions to the development of the Bertrand Russell Society. He is also a renowned Russell scholar whose work has added much to contemporary understanding of Bertrand Russell's work. Harry will deliver the banquet address entitled "Bertrand Russell's Life in Pictures." Please come to the annual conference and honor this important scholar and contributor to the Bertrand Russell Society.

On Friday evening Congressman Neil Abercrombie will offer reflections on the 1992 election. By that time President Clinton will have had several months in office; Congressman Abercrombie's perspective will provide insights on current developments in politics as they affect the kind of goals identified with Russell.

Other highlights of the meeting will include a reader's theater on Russell's autobiography presented by Professor Ernest Walberg and a workshop on one of Russell's essays conducted by Don Jackanicz. Timothy J. Madigan, Executive Editor of Free Inquiry will also speak on "The Will to Believe vs. the Will to Doubt." And of course there will be a Red Hackle Hour at a nearby restaurant.

The annual meeting is always a wonderful experience for those who attend. Won't you please join us in San Diego to honor the work and memory of one of the greatest intellects of the twentieth century?

Sadly, one regular participant in our annual conferences will not be present. Jack Cowles, a longtime member, has passed away in tragic circumstances. He was a loyal member of the Society and an active member of the Board of Directors. I looked forward to his presence at each meeting. I will miss him.

(2) BRS BUSINESS: DUES AND THE ANNUAL MEETING

1. 1993 Membership Dues. Thanks to all members who renewed their membership before the beginning of 1993. Your promptness is much appreciated and has aided our bookkeeping work. Again, thanks to each of you, especially those who thoughtfully included a donation with their dues! Members who have not yet renewed for 1993--and persons interested in joining the BRS for the first time--are asked to refer to the accompanying blue membership coupon. We very much want to have YOU/keep YOU as a member!

2. 1993 Annual Meeting: San Diego, California. The BRS's 1993 Annual Meeting will be held from Friday, June 18 through Sunday, June 20 on the campus of the University of California at San Diego. The May 1993 Russell Society News will provide final program details and additional information, but we can now summarize the tentative program as follows:

Partial List of Paper Presentations/Talks:

- U.S. Congressman Neil Abercrombie, "Reflections on the 1992 Presidential Election".
- Timothy J. Madigan, "The Will to Believe vs. the Will to Doubt".
- John Shosky, "Russell and the Contemplation of Philosophy".
- Ernest Walberg, "Russell's Autobiography--A Reader's Theater".
- Dennis J. Darland, "What is Mathematics About?".
- Harry Ruja, "Bertrand Russell's Life in Pictures".
- Marvin Kohl and Michael J. Rockler, "Russell vs. Russell on Education".
- Gonzalo Garcia, "Did Bertrand Russell Think of Himself as a Pacifist?".

Other Events:

- Workshop on BR's essay "A Philosophy for Our Time" (in Portraits from Memory and Other Essays), conducted by Don Jackanicz.
- Presentation of the BRS Award to Harry Ruja.
- Presentation of the BRS Service Award to Marvin Kohl.
- Presentation of the BRS Book Award to an author/title to be announced.
- Red Hackle Hour reception followed by a Banquet.

The University of California at San Diego, actually located in the suburban community of La Jolla, will provide a beautiful, stimulating environment for the meeting. San Diego, sixth largest U.S. city, has much to offer visitors. For area information, contact the San Diego Convention and Visitors Bureau; 1200 3rd Avenue; San Diego, CA 92101-4190; telephone 619-232-3101.

A per person fee of \$160 for double occupancy or \$180 for single occupancy includes everything--registration; University apartment-style housing for two nights; and meals including Friday supper through Sunday breakfast, the Red Hackle Hour, the Banquet, and coffee breaks. Without housing, the per person fee is \$92.50.

Early pre-registration will be greatly appreciated. Please use the accompanying blue form. We look forward to hearing from you soon with your pre-registration, and we look forward to seeing you in San Diego!

(3) DEATH OF JACK COWLES

We are saddened to inform BRS members of the death of Jack Cowles, who was murdered in his Virginia home near Washington, DC on December 18 or 19, 1992. Workmen arriving at his home on December 21 discovered his body, which had been stabbed. Jack was a retired U.S. Navy officer. His cremated body was to be buried at sea. Survivors include a brother, a sister, and his friend Evelyn Burton of New York City, who accompanied Jack to several BRS annual meetings, including our June 1992 Washington meeting. Jack also maintained a residence in New York City.

Jack was a longtime BRS Director and attended almost every annual meeting. His thoughtful contributions during Board of Directors discussions added much to resolving the matters at hand. He was particularly proud to have been one of the few BRS members to have had Russell as a teacher. Jack's experience with Russell in the classroom took place at the University of California at Los Angeles during Russell's 1939-1940 professorship year.

In addition to his participation in BRS affairs, Jack was involved with other organizations including the Secular Humanist Society of New York and the Institute for Rational Emotive Therapy.

Letters of sympathy to Evelyn Burton may be addressed to her in care of Russell Society News; 3802 North Kenneth Avenue; Chicago, IL 60641; U.S.A.

(4) BRAND BLANSHARD ON NIGHTMARES OF EMINENT PERSONS

Warren Allen Smith has told us about this encounter with philosopher Brand Blanshard:

When book review editor of The Humanist in the 1950s, I asked Brand Blansard to review Bertrand Russell's novel, Nightmares of Eminent Persons.

The famed Yale University aestheticist wrote that "all his characters, when they open their mouths, speak the language of that eminent philosopher, Lord Russell. A passionate young lover says to his love, 'I begin to think that perhaps we have lived, hitherto, with somewhat too limited preoccupations.' Such talk creaks. And Russell is always using his characters to score points. But then after all, what does one want of a philosopher? The points are generally sound ones, wittily put; and at times they go to the heart of the matter."

To learn more about Blanshard, we suggest examining The Philosophy of Brand Blanshard in Paul Arthur Schilpp's The Library of Living Philosophers series.

(5)

BRS DOCTORAL GRANT REPORT

The BRS is pleased to announce the awarding of its 1992 Doctoral Grant to Peter Denton, a doctoral candidate at McMaster University, Hamilton, Ontario, Canada. The award is a cash prize of U.S. \$1,000. Mr. Denton's dissertation is titled "The 'Old Savage' and the Scientific Outlook: Religion, Science and Social Ethics in the Writings of Bertrand Russell, 1919-1938." We would like to extend our congratulations to Mr. Denton and our best wishes to him as he progresses in his research.

We are also pleased to announce that Claudio de Almeida, recipient of the 1991 Doctoral Grant, has presented a copy of his dissertation, "Russell on Meaning and Denotation: The Argument of 'On Denoting,'" to the BRS Library. Mr. de Almeida's dissertation can be borrowed from the Library (Box 434; Wilder, VT 05088; U.S.A.).

Effective in 1993, the grant program has been replaced by the BRS's "Prizes for Papers" competition. Refer to RSN, No. 76, November 1992, Section 2, page 2 for details. Additional information on "Prizes for Papers" is available from BRS Vice President John Lenz (Department of Modern and Classical Languages; Texas A & M University; College Station, TX 77843, U.S.A.).

As the doctoral/masters grant program has come to an end, we would like to acknowledge the work done over many years by Prof. Hugh Moorhead of Northeastern Illinois University, who coordinated much of the work of the program committee. Hugh's commitment of time and work was responsible in large part for the grant program's effectiveness in past years. Again, our thanks to him.

(6)

RUSSELL ON MALCOLM X

In light of the publicity connected with the recent film Malcolm X, Harry Ruja has brought the following Russell quotation to our attention. It comes from The Militant, vol. 29, no. 9, March 1, 1965, p. 4.

A society in which people are shot down at will is a society which will plunge the world into disaster. Malcolm X was reviled in the U.S. and Britain, by the established press, not because of his advocacy of armed defense for the Negro against attack but because he showed that the same standards which promoted cruel and unrelenting wars of atrocity in Vietnam, the Congo and other parts of the world, were responsible for the suffering of the Negro in the U.S.... The violence of Harlem is America's violence and it is to be feared that American violence will become the violence of the world.

(7)

BRS LIBRARY

The BRS Library sells and lends materials relating to Russell. Please send your check or money order (U.S. funds) payable to "Bertrand Russell Society" to Tom Stanley, Russell Society Library, Box 434, Wilder, VT 05088, U.S.A.

THE COLLECTED PAPERS: VOLUME 6

Now joining Volumes 1, 2, 7, 8, 9, 12, and 13 of The Collected Papers of Bertrand Russell is Volume 6, Logical and Philosophical Papers. The list price is £100.00. Here are excerpts from Routledge's (the publisher's) publicity brochure about The Collected Papers and Volume 6 in particular.

**Logical and
Philosophical
Papers
Volume 6**

Edited by John G Slater,
University of Toronto with the
assistance of Bernd Frohmann

The years covered by this volume of the *Collected Papers of Bertrand Russell* were among the most productive, philosophically speaking, of Russell's entire career. In addition to the papers reprinted here, he brought *Principia Mathematica* to its finished form and wrote *The Problems of Philosophy*, *Theory of Knowledge and Knowledge of the External World*. In October 1910, he began teaching at Cambridge, having accepted an appointment as lecturer in logic and the principles of mathematics at Trinity College for a term of five years. A year later Ludwig Wittgenstein began to attend his lectures. Within a few months he was influencing Russell's philosophical thinking as much as, or more than, Russell was influencing his.

By any standards Bertrand Russell was a prolific writer. He was the author of seventy books in addition to over 2,500 shorter public writings including scholarly papers, essays, magazine and newspaper articles, prefaces, introductions, forewords, pamphlets, leaflets, book reviews, political messages, letters and personal journals.

McMaster University in Hamilton, Ontario, Canada purchased the Bertrand Russell archives and appointed a highly qualified editorial board to edit the papers with financial assistance from the Canadian Social Sciences and Humanities Research Council.

The editorial aim of *The Collected Papers of Bertrand Russell* is a complete, reliable, critical edition which recognises the division between the technical writings on philosophy and logic and the other non-technical writings, and yet also succeeds in placing the material in approximate chronological order, so that the development of Russell's thought can be followed and the many interconnections between his popular and technical writings identified.

(9) RUSSELL, MCCABE, AND THE LITTLE BLUE BOOKS

BRS President Michael Rockler has received the following letter from Wanda Kuhn. If you would like to contact Ms. Kuhn, write to her at P.O. Box 67; Phillipsville, CA 95559; U.S.A.

Friday, 1/29/93

Dear members of the Bertrand Russell Society:

Do any of you know of the books & pamphlets of Joseph McCabe (1868-1953), one of the greatest British atheist writers & controversialists who ever lived? Even better in this line than Bertrand Russell, I think. An incredibly learned Franciscan monk, in his twenties McCabe was struck by a Saul-on-the-road-to-Damascus sudden conversion, but in reverse: one morning in the 1890s he awoke in his monastic cell to find himself an atheist. Really, like Paul before him, the culmination of years of "fear and trembling." McCabe wrote hundreds of books & articles over a 60 year writing career. He penned the first critical study of Bernard Shaw in England, I think, and his clashes with G.K. Chesterton on the platform and in the press were legendary. The older he grew, the lefter his politics: McCabe ended his days ranting for Stalin. I'd guess that after about 1920 few of his books were published in the U.S.A. due to their increasing vitriol.

Nevertheless, in the 1920s and 1930s millions of Americans had at least the opportunity to read McCabe's stuff, in the form of E. Haldeman-Julius' Little Blue Books. Perhaps some of the older B.R. Society members recall these. For those who don't: published in remotest Kansas and sold by mail order, these tiny blue (grey, really) pamphlets sold for a nickel, and the thousands of titles ran the gamut from reprints of literary classics jazzed up with sexy new titles, to manuals of farm implements. The motto ran, "A University in Print," and, for all the hype & the cheap printing & the low prestige, the claim was true. Haldeman-Julius had a Socialist background and published as much leftwing & freethinking propaganda as the traffic would bear, including lots of Bertrand Russell. You could call him a village atheist who made money.

Over 30 years E. H.-J. published dozens of Joseph McCabe's works. A few [titles] of my Little (and Big) Blue Books collection are by the trenchant ex-Franciscan, but these mostly date from later, the 1940s. By then McCabe had pretty much acquiesced in Stalinism, and the wit & the fearless independence that marked his earlier writing seems to have dried up, at least on the subject of the Soviet Union. It's really the earlier stuff, from the Twenties & Thirties, that I'm writing to you about. I had quite a bit of his earlier stuff as printed by E. Haldeman-Julius, but it has all disappeared over the years. I remember a series on The History of the Papacy published around 1931, which ransacks the great 19th Century historians to prove that, from its inception, the Catholic Church

has been one long tale of blood, corruption and bigotry. Six volumes, I think it ran, each roughly the size of a modern Reader's Digest (what a comparison), printed on the usual cheap newsprint and stapled in...good typography on this one, though, befitting a great theme. This series deserves to be republished right now, with the full panoply of critical exegesis, by some university press, Catholic, perhaps? First, a set must be found to copy. Even 30 years ago when I owned these volumes, the pages were yellow & brittle. Or is it brittle & yellowing? Hard to believe any original copies of Papacy survive today.

There may be hope, however, for the lost McCabe works, like his history of the Popes. But I need your advice & encouragement, Society members. In 1968, I interviewed the son of E. Haldeman-Julius in the ruins, practically, of the old Little Blue Books printing plant on the edge of Girard, a quiet Kansas village. When I asked him about the older out-of-print L.B.B.s, and about the special publications, he smiled sadly and said that all the (printing) plates had been donated to the University of Indiana. The Kinsey Reports. Remember that? University of Indiana. Does anyone know how to approach these academic mandarins to determine the status of the Haldeman-Julius plates? The lost Haldeman-Julius plates? Sounds like the gimmick of a murder mystery starring some beloved, cranky, bookish academic/amateur sleuth. I may write it myself if my efforts to promote Joseph McCabe come to nothing...Bertrand Russell devoured mystery novels like a drug, you know.

Wouldn't it be grand if the Bloomington archivists could be persuaded to reprint Joseph McCabe's History of the Papacy, or allow others to do so. Bertrand Russell Society...please pray about this!

NEW BOOK FROM THE BRS PHILIPPINE CHAPTER

Poch Suzara of the BRS Philippine Chapter has sent us a copy of The Freethinker's Reader, a 188 page book reprinting writings about religion by Russell, Robert Green Ingersoll, Carlos Esteban, and H.L. Mencken. The four Russell items are "Bertrand Russell's Ten Commandments" (identified elsewhere as "A Liberal Decalogue"); "Why I Am Not a Christian" (1927); "Has Religion Made Useful Contributions to Civilization" (1930); and "Can Religion Cure Our Troubles?" (1954).

In addition to editing this anthology, Poch wrote an introduction, which relates the religious outlook--particularly that of the Christian variety--to the Philippine situation. He concludes his introduction by noting, "Religious values are true values if they promote a better society for all of its members adding, not subtracting, to its own welfare."

To receive a copy of this book, we suggest writing to Poch (BRS Philippine Chapter; 8 Zipper Street SLV; Makati, M.M.; Philippines) with a contribution for the BRS Philippine Chapter to cover printing and mailing costs.

(11) BR'S NOBEL PRIZE SPEECH: CORRECTING THE RECORD

In his capacity as BRS Vice President/Information, Lee Eisler recently exchanged letters with Bruce R. Carsick, Vice President of The H.W. Wilson Company, publisher of numerous well known reference works. Our thanks to Lee for trying to set the record straight in Nobel Prize Winners.

The H. W. Wilson Company
950 University Avenue
Bronx, NY 10452

12/21/92

Dear Sirs:

The article on Bertrand Russell in your *Nobel Prize Winners* (1987) tells about Russell's receiving the 1950 Nobel Prize for Literature.

The last sentence in the paragraph on the Nobel Prize -- on page 897, near the bottom of the left column -- says this:

Russell did not deliver a formal lecture.

That sentence tells what Russell did not do; it could have -- and should have -- said what Russell actually did do. Here is what happened at the Nobel ceremony:

First came the Nobel Prize presentation speech, given by a representative of the Nobel selection committee. Then came Russell's response -- his acceptance speech. He called it *Politically Important Desires*.

I don't know whether it qualifies as a "formal lecture", but I am not sure that it deserves to be overlooked. Russell clearly attached importance to it. He thought it good enough to include as a chapter in his 1954 book *Human Society in Ethics and Politics*.

I suggest that the next edition of *Nobel Prize Winners* give a more accurate, a more inclusive, picture of what happened on the occasion when Russell was awarded a Nobel Prize.

Sincerely,

Lee Eisler

December 28, 1992

Dear Mr. Eisler:

Thank you very much for your letter of December 21, 1992, concerning the article on Bertrand Russell in Nobel Prize Winners.

No doubt we should have a look at Russell's acceptance speech. By any chance, do you have a copy? If we mischaracterized his response, we would certainly change it for the next printing.

Sincerely yours,

Bruce R. Carsick
Vice President

(12) TREASURER'S REPORT

Treasurer Dennis J. Darland submitted these reports respectively for the quarter ending December 31, 1992 and for the year ending December 31, 1992.

ATTENTION BR BOOK COLLECTORS

Thoemmes Antiquarian Books Ltd. (85 Park Street; Bristol BS1 5PJ; England) has issued a 40 page catalog, compiled by Herb Tandree, of books and other materials by and about Russell that it offers for sale. Below are reduced-size copies of the cover and a representative page. According to the catalog, "Thoemmes has emphasized the selling of books by and about Bertrand Russell for a number of years. This bulletin represents a means of making available a very wide range of Russell's works in their different editions, as well as a good selection of critical works, and ending with a section of related books. This wide range is reflected in the prices from collector's items to paperbacks...."

14. **THE PRINCIPLES OF MATHEMATICS.** 1903.
Volume I [All published]. Cambridge University Press. xxix + 534 pp.
Original dark-blue cloth, rough trimmed, very skilfully rebound. Very Rare
FIRST EDITION. £750.00

"The present work has two main objects. One of these, the proof that all pure mathematics deals exclusively with concepts definable in terms of a very small number of fundamental logical concepts, and that all its propositions are deducible from a very small number of fundamental logical principles... The demonstration of this thesis has, if I am not mistaken, all the certainty and precision of which mathematical demonstrations are capable. As the thesis is very recent among mathematicians, and is almost universally denied by philosophers, I have undertaken, in this volume, to defend its various parts, as occasion arose, against such adverse theories as appeared most widely held or most difficult to disprove... The other object of this work, which occupies Part I, is the explanation of the fundamental concepts which mathematics accepts as indefinable. This is a purely philosophical task, and I cannot flatter myself that I have done more than indicate a vast field of inquiry..." (Preface p. v). Upon finishing the book, and sadly leaving certain questions of paradox unsolved, "Russell was not willing to let these destroy his central argument and he spent the rest of the year, and the spring and early summer of 1902, in putting the finishing touches. As far as the contradiction was concerned, he had worked out what he himself well knew was only a crude solution. He put it in an appendix, apologized for its inadequacy, trusted that in due course he would be able to do better, and on 23 May 1902 handed over the manuscript to the publishers.

Then, and only then, did there take place an event which gives the story of mathematics one of its moments of high drama. Russell had read Frege's Begriffsschrift in the 1890s but had failed to follow it. Late in 1900 he had bought the first volume of the same author's Grundgesetze der Arithmetik, in which Frege had applied his symbolic logic to arithmetic and begun to work out an analysis of arithmetic based entirely on logical operations.

Now, reading the book in the quiet of his study at Millhanger, Russell realized that Frege had used, as a cornerstone to his whole philosophy of mathematics, the method of constructing classes which Russell had proved led directly to the paradox.

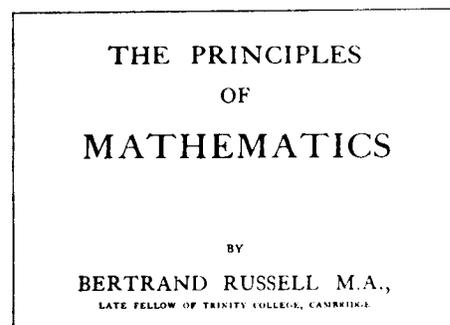

On 16 June, Russell wrote to Frege. He expressed his appreciation of the Begriffsschrift. But, he went on, he had only recently studied the first volume of the Grundgesetze der Arithmetik. He agreed with most of it. But, he continued, "There is just one point where I have encountered a difficulty. You state that a function, too, can act as the indeterminate element..." (and so forth).

Frege replied by return. "Your discovery of the contradiction caused me the greatest surprise and, I would almost say, consternation, since it has

shaken the basis on which I intended to build arithmetic," he wrote. "...It is all the more serious since, with the loss of my Rule V, not only the foundations of arithmetic, but also the sole possible foundations of arithmetic, seem to vanish."

Sixty years later, Russell was still impressed by Frege's noble reply. "As I think about acts of integrity and grace, I realise that there is nothing in my knowledge to compare with Frege's dedication to truth..." (Clark pp. 80-810).

Martin 037/01; Slater PSM/A903A:1903.c1.

15. **THE PRINCIPLES OF MATHEMATICS.** 1950.
London: George Allen & Unwin. xxix + 534 pp. Original blue publisher's cloth in blue dust-jacket.
SECOND EDITION, Fifth Impression. £40.00

Martin 037/08; not in Slater.

16. **THE PRINCIPLES OF MATHEMATICS.** [1964].
New York: W.W. Norton. xxix + 534 pp. + [1]. Original cream, grey and orange wrappers.
First Paperback edition (illus). £16.00

Martin 037/14; Slater PSM/A.964B:1964.c1.

17. **PRINCIPLES OF MATHEMATICS.** 1992.
With a new introduction by John Slater.
London: Routledge. 592 pp., paperback, new,
THIRD EDITION. £14.99

18. **PHILOSOPHICAL ESSAYS.** 1910.
London: Longmans, Green, & Co. vi + contents leaf + 185 pp. Original red cloth, rough trimmed.
FIRST EDITION. £200.00

These essays are a selection of Russell's early philosophical articles (1897-1909). Most were reprints, and the article entitled "On the Nature of Truth and Falshood" was written especially for this volume. The subjects are either on ethics or the nature of truth, the first primarily due to his friendship with G.E. Moore, and the latter partly stemming from his study of William James' philosophy of pragmatism. In a postscript added to the proofs Russell says: "The death of William James, which occurred when the printing of this book was already far advanced, makes me wish to express, what in the course of controversial writings does not adequately appear, the profound respect and personal esteem which I felt for him, as did all who knew him, and my deep sense of the public and private loss occasioned by his death..." (Preface p. vi). This was a polite way of saying he disagreed with James.

(14)

CORRECTION OF RSN, NO. 76

RSN, No. 76 (November 1992), Section 21, page 20 incorrectly stated that Nicholas Griffin was the recipient of the 1992 BRS Book Award for The Selected Letters of Bertrand Russell. That section should have read that Dr. Griffin was recognized with the 1992 BRS Book Award for his book Russell's Idealist Apprenticeship.

(15)

"CONTROVERSY AT 90"

Harry Ruja has located yet another noteworthy BR newspaper clipping. This one comes from the Toronto Daily Star, May 19, 1962, pp. 25, 31.

Russell: Controversy At 90

By RALPH THOMAS

Bertrand Russell, often called "Britain's greatest citizen after Winston Churchill," was 90 years old yesterday. He is considered by some to be the greatest living philosopher and the most important logician since Aristotle, but he is most widely known as a mathematician, moral iconoclast, progressive educator, political passivist, and at the moment as a fighter for nuclear disarmament.

He was jailed during World War I for his passivism and a subject of scandal for his theories of education and morality between the wars. Just two months ago he was again jailed for acts of civil disobedience as a member of the militant Committee of the 100, an off-shoot of the more sedate Campaign for Nuclear Disarmament.

*One of the greatest men
of our age, he's a symbol of
intelligence and moral courage.*

(Continued from Page 25)

"His influence is greater in the realm of social mores and especially education. His book "On Education" is especially important in encouraging schools to allow students great freedom, as opposed to the restrictive methods of the past."

Professor Fulton H. Anderson, head of the university's philosophy department:

"Russell's great exuberance of imagination and facility for construction has led him to producing "philosophical pot-boilers,"

since his earlier more rigorous and systematic works on Leibniz and mathematics."

Professor Marcus Long:

"One of the great men of the age, but by no means one of its outstanding philosophers. He isn't a system builder, but a man who challenged men to think. His work in mathematics and logics will of course last and guarantee him at least a footnote in the history of thought."

"The man today is a symbol of the tragedy of our times, a time when the intellect should be used

His most important philosophic work was before World War I in the field of mathematical logics, culminating in the publication (1910-13) of the three-volume "Principia Mathematica" written in collaboration with philosopher Alfred North Whitehead.

Following the war he changed direction and launched a torrent of popular writings which won him a much wider readership. Such books as "The Conquest of Happiness," "Marriage and Morals," and "Education and the Social Order," earned him the Nobel Prize for Literature in 1950.

This week The Star canvassed teachers of philosophy at the University of Toronto for their estimation of Earl Russell, whose life has spanned two world wars and an enormous development in science and thought. Their comments follow.

Professor David Savan, whose field is symbolic logic and mathematics:

"No other modern logician has exerted a greater direct influence on contemporary thought. At the turn of the century he made a series of contributions to logic and logical philosophy of the greatest importance, both clarifying the work of his predecessors in the field of mathematical logic and making some important discoveries himself."

"Russell is in the very first rank of the great logicians of all history."

Professor Thomas A. Goudge, this year's winner of the Governor General's Award for non-fiction:

"His work is among the most important done in England in the 20th century, but not necessarily in the field of philosophy. He isn't one who encourages a school of thought, because he has frequently changed his fundamental ideas."

(Continued on Page 31)

for the glorification of man, but instead is used for its destruction."

To Rabbi Abraham Feinberg, head of the Toronto Committee for Survival, the third Earl Russell is a symbol of intellectual and moral courage, particularly to the young people throughout the world.

"He is a great scientific thinker, but in the age where science is exploited for military purposes, he uses his mind to disrupt the building of the bomb. He is dedicated to the peace race."

(16)

ON YOUSUF KARSH

Yousuf Karsh is one of the most eminent living photographers. A recently published book, Karsh: The Art of the Portrait (Ottawa: National Gallery of Canada, 1989), provides this information on its dustjacket:

Karsh was born in Armenia in 1908, and, after a difficult childhood, emigrated to Canada in 1924 at the age of sixteen. Now eighty, he is still an active photographer, and the recipient of numerous international honours and awards. In 1989, the one hundred and fiftieth anniversary of photography, Yousuf Karsh has made a generous gift of almost one hundred of his best-known photographs to the National Gallery of Canada. Approximately half of this gift, along with works from the collections of the artist, the Gallery, and the National Archives of Canada, comprise "Karsh: The Art of the Portrait," the largest retrospective exhibition ever mounted of Karsh's oeuvre, presented and circulated by the National Gallery of Canada.

In September 1992, Don Jackanicz visited the Montreal Musuem of Fine Arts and toured this Karsh exhibit. Among the numerous portrait photographs was a fine one of Russell. A different Russell photograph appears on page 11 of the Karsh book. It is identified in the book as "'Bertrand Russell,' 13 July 1949, gelatin silver, printed later, 33.6 x 40.8 cm, National Archives of Canada, PA-165827."

Don subsequently visited the National Archives of Canada in Ottawa on whose lobby exhibit walls was a Karsh portrait photography display titled "Great Humanitarians." Besides Russell, those portrayed included Albert Schweitzer, Albert Einstein, and Martin Luther King.

Copyright restrictions prevent us from reproducing these Russell photographs. But they, and the innumerable other Karsh photographs, are indeed fine works of art as well as important twentieth century documentary images.

(17)

BR CENSORSHIP IN SOUTH KOREA

A recently published one volume reference work, The Encyclopedia of Censorship, Jonathan Green, editor (New York: Facts on File, 1990) includes this brief BR reference in its article titled "South Korea" (p. 294):

Seven-hundred political prisoners were still detained under the law in late 1987 and the police regularly seized "communist" materials (including Bertrand Russell's History of Western Philosophy from Seoul bookshops.

The Encyclopedia is well worth examining for its coverage of historical and contemporary issues relating to censorship in particular media and countries.

(18)

PAPERBACK EDITION OF HYLTON BOOK

Oxford University Press's 1992-1993 philosophy catalog includes this notice of the availability of Peter Hylton's Russell, Idealism, and the Emergence of Analytic Philosophy in a new paperback edition, as well as in the original cloth edition. We are pleased to see the notice mentioned that Dr. Hylton was the recipient of the 1991 BRS Book Award for this work.

*Forthcoming in paper!**Winner of the 1991 Bertrand Russell Society Book Award***Russell, Idealism, and the Emergence of Analytic Philosophy**

PETER HYLTON, *University of California, Santa Barbara*

"Here, at last, is a philosophically sophisticated, historically sensitive, and richly detailed account of the events that led to the overthrow of the sort of idealism that prevailed at Oxford and Cambridge at the turn of the century and its replacement by so-called analytic philosophy.... A splendid book. A most welcome achievement and a must for any academic library."—*Choice*.

Analytic philosophy has become the dominant philosophical tradition in the English-speaking world. This book illuminates that tradition through a historical examination of a crucial period in its formation: the rejection of Idealism by Bertrand Russell and G.E. Moore at the beginning of the twentieth century, and the subsequent development of Russell's thought in the period before the First World War.

RUSSELL ON GROWING OLDER

Wayne Booth, University of Chicago Professor of English Emeritus, has edited a 349 pp. anthology titled The Art of Growing Older: Writers on Living and Aging (New York: Poseidon Press, 1992). The thoughts of 96 writers are sampled. Among them are Sophocles, Edna St. Vincent Millay, Pauline Kael, Oliver Wendell Holmes, Andre Gide, B.F. Skinner, Geoffrey Chaucer, and Russell. The Russell selection is taken from the Postscript of The Autobiography of Bertrand Russell, volume 3.

(20)

A RUSSELL-MILOSEVIC REFERENCE

Tim Madigan has sent us James Walsh's January 4, 1993 Time article, "Man of the Year: The World's Other Newsmakers," which has a subsection titled "The Butcher of the Balkans: Slobodan Milosevic is the High Priest of 'Ethnic Cleansing.'" Woods includes this reference to Russell on page 46:

In one of his typically nonconformist essays, Bertrand Russell once dissected the fallacy of regarding oppressed peoples as morally superior. The fact that they are tyrannized, the British philosopher observed, does not mean that they will perform wonders of nobility and high-mindedness once given their freedom. On the contrary: as unfolding events are proving, communism, even Tito's diluted version, enforced a denial of base instincts that have now burst out all over Central and Eastern Europe.

HARRY RUJA WRITES TO NEWSWEEK, FLORA LEWIS, and RSN

The October 26, 1992 issue of Newsweek featured Tom Morganthau's pp. 36-39 article, "At the Brink of Disaster: Thirty Years after the Cuban Missile Crisis, Newly Released CIA Documents and Transcripts Show Just How Close We Came to Nuclear War." In response Harry Ruja wrote the following letter to the editor of Newsweek:

Of Khrushchev you say, "he was prepared to risk a shooting war as late as Oct. 27". Of Kennedy, in contrast, you say he "fended off pressure to use military force." You neglect, however, to provide many clues as to why Khrushchev eventually backed down.

Part of the answer lies in a cable Bertrand Russell, the English philosopher and peace activist, sent to Khrushchev on 23 October. Published both in Pravda and Izvestia on 25 October, it appealed to him to exercise restraint, declaring that "precipitous action could mean annihilation for mankind."

Khrushchev welcomed this opportunity to wear the mantle of world savior, assuring Russell in a lengthy reply that he would not make any "reckless decisions" but would, rather, do "everything" in his power to prevent the outbreak of war. Distributed by the Tass news agency, the letter received wide attention. Soon after that, negotiations began in earnest, and the crisis defused.

The force of Russell's appeal lay in giving Khrushchev a noble rationale for retreat. Without this face-saving stratagem, he might have tried to bluff it through, with possibly disastrous consequences.

Harry also sent this November 20, 1992 letter to Flora Lewis, European Desk Senior Editor of The New York Times:

It's 25 years later. One president was in effect impeached because he pursued the attack on Vietnam and gave up his hope for another term. We have just elected another president who used every legal stratagem he could think of to avoid joining the carnage. Thousands of friends and relatives of dead Americans have shed bitter tears before the memorial wall in Washington.

Has any of this led you to consider the piece you did for Look in April 1967 trashing Bertrand Russell for condemning the American aggression in Vietnam and for being old?

If so, perhaps you might be willing to write an "I Was Wrong" piece for the Times.

If you are inclined to respond to me directly, you might add an explanation of how that "bulky young Englishman" (in a Sunday Express reprint) could have "hissed" a sentence containing not a single "s", "c", or "z"; and perhaps also how a young reporter for the college newspaper could interview Russell in the fall of 1939 when he came to join the faculty that academic year in such an objective and friendly manner and then, with a distinguished career in journalism behind her, write such a jaundiced report on his anti-Vietnam-War campaign.

On other matters, Harry contacted RSN as follows:

The story about BR and Wittgenstein which you reprinted in RSN, No. 74 from The Atlantic Monthly for July 1991 has various versions. Here's the version from BR's article on Wittgenstein in Mind, July 1951:

[Wittgenstein] maintained that all existential propositions are meaningless. This was in a lecture room, and I invited him to consider the proposition, "There is no hippopotamus in this room at present." When he refused to believe this, I looked under all the desks without finding one; but he remained unconvinced.

I tried identifying the source of "The exercise of power..." from the Gazette [see RSN, No. 76, November 1992, Section 27, p. 26] but did not succeed within the time I allowed myself. I found something like it in Power, Chap. 1: "Every man would like to be God if it were possible; some find it difficult to admit the impossibility."

(22)

MICHAEL ROCKLER VISITS CHICAGO HUMANISTS

On January 24, 1993, BRS President Michael Rockler was guest speaker at the Sunday Platform Meeting of The Ethical Humanist Society of Chicago. His 45 minute talk, "Bertrand Russell: A Skeptical Humanist," was well received by those gathered, who included BRS members Ed Kellman and Don Jackanicz.

(23) CAROLINE MOOREHEAD'S NEW RUSSELL BIOGRAPHY

Caroline Moorehead's Bertrand Russell is now available in a cloth British edition. An American edition, published by Viking, is scheduled for Autumn 1993 release. Rosemary Dinnage's October 2, 1992 Times Literary Supplement book review places this new biography and another about Ottoline Morrell in perspective.

Can philosophy, and philosophers' lives, ever be made completely intelligible to the ordinary reader? The outlines of Bertrand Russell's long life are already known from previous biographies and his own autobiography; but in the end, I suppose, it is philosophy he must be remembered for and not his once popular books on marriage, education and other social topics, nor his work for pacifism during the First World War and the nuclear age. The drama of an intellectual progression has rarely been so strikingly visible. Godfathered by John Stuart Mill, early orphaned of his free-thinking aristocratic parents, brought up by a morally strenuous grandmother; first lessons in geometry from his elder brother ("This was one of the great events of my life, as dazzling as first love"); intense religious doubts, and temporary conversion to Hegelianism ("I had gone out to buy a tin of tobacco... when suddenly I threw it up in the air and exclaimed: 'Great God in boots, the ontological argument is sound!'); rejection of idealism ("a great liberation, as if I had escaped from a hot-house on to a wind swept headland") and then dedication to exploring the foundations of mathematics and logic. Ten years, with A. N. Whitehead, of writing a 4 000 page book, published thanks to a scientific grant, and set by the only composer at Cambridge able to deal with his symbols. The conviction that he had now shot his bolt intellectually; the fateful meeting in 1911 with Wittgenstein. As Russell wrote, Wittgenstein "began as my pupil and ended as my supplanter".

Caroline Moorehead's excellent biography relates all this quite successfully, though in less detail than Ronald Clark's biography of 1975. If it is possible to summarize Hegel in fifteen lines, she has done it. But it still remains hard for the untrained reader to understand how it was that the theory of classes threw up such a contradiction for Russell that his work was held up for nearly two years, or what he and Wittgenstein were at

Bertrand Russell at ninety-six

when they said they had spent the morning discussing whether there were two things in the world or three. It is important to know, at least, that it was his underlying need to know whether anything could be established as true that shaped his whole mind, and his sense of an unbridgeable gap between thought and feeling. He himself felt that his search had made him a "logic machine", a "spectator and not an actor", with a "mind like a search light, very bright in one direction but dark everywhere else". Those who met him were also struck by this. George Santayana saw in both Russell and his brother "a strange mixture... of great ability and great disability; prodigious capacity and brilliance here - astonishing unconsciousness and want of perception there"; Virginia Woolf that "this luminous vigorous mind seems to be attached to a flimsy little car, like that of a large glinting balloon". She would like though, she added, "the run of his headpiece"; but might not have found it comfortable to inhabit.

The other strand in Russell's life is the story of

Loving ghosts

his marriage and love-affairs. His early, idealistic marriage to Alys Pearsall-Smith ran into boredom before his first philosophical work was finished, and then into hatred and misery. From this marriage he plunged abruptly and totally at the age of thirty-six into his love-affair with Ottoline Morrell. In the enormous Russell archive at McMaster University in Canada - as Moorehead says, one of the most remarkable collections ever assembled around a single person - are over 2,000 letters to Lady Ottoline from Russell, covering not only the years of their affair but a lifelong friendship. In view of his later docility with his various women friends, his attachment to her seems almost pathetically intense and single-minded. Of the same age and background as himself, she did return his love, but not physically - his hands "were like the paws of a bear", she said, "no feeling in them" - and not enough to leave her husband and child. Once he had reached a dead end in his love-affair, and a dead end in his philosophical work, one feels Russell becoming somehow a harder, shallower and less likeable man - but he had years of puritanism to make up for. Beatrice Webb, always a surprisingly acute judge, remarked in her diary that compared to the earlier Russell, it was sad "to look on this rather frosty, unhealthy and cynical personage".

But then she did not like Dora, Russell's second wife, whom Russell to some extent chose in order to have children. It is odd how scantily the question of fecundity and childbirth is treated in biography (was Lawrence's behaviour, for instance, affected by the fact that his wife had children by another man and not himself?). Russell had always wanted children, and chose a young and suitable second mate. The story of his marriage, told from her side in Dora Russell's autobiography, is something of a cruel joke played by an iticonal God on two apostles of rationality, free love and birth-control - both authors of books on the art of being happy. When Russell grew sexually bored with Dora Russell, he told her, like a good rationalist, that he would bring up a child of hers by someone else if she wished. She had two by someone else. Russell retaliated by fathering a child on a young girl who became his third wife and, eventually, ex-wife. The hubris of separating intellect from feelings such as rivalry, hurt, jealousy, pride and retaliation can seldom have been so clearly demonstrated. Beatrice Webb again, many years earlier, had commented that "compromise, mitigation, mixed motive, phases of health of body and mind, qualified statements, uncertain feelings, all seem unknown to him", and that this frightened her for the future of those who loved him.

Towards the latter third of Moorehead's Bertrand Russell and in his long old age, the life becomes gradually more that of the political than the emotional man. He was deeply aware of encroaching Nazi and Communist tyrannies, had lost his place in academic life and run out of how-to-be-happy books ("vomitive", Wittgenstein called them). In the academic posts he took in America, he found himself, on his past record, a moral outcast and eventually even without money. His renaissance as figurehead of the anti-nuclear movement after the Second World War deserves a book on its own - one in which the roles

of his fourth wife and his rather sinister secretary, Ralph Schoenman, could be even further examined. As in 1918, he had been jailed for advocating acceptance of a German peace offer, at the age of eighty-nine he was - briefly - sent to prison for inciting public disobedience in the anti-nuclear cause.

Ottoline Morrell at thirty-nine

Thirty years before Russell's death at ninety-seven, and not long after she became godmother to his third child, Ottoline Morrell died in her sixties at the hands of a quack doctor. Miranda Seymour's biography of her is to some extent a partisan rehabilitation of the larger-than-life Bloomsbury character who was so much caricatured. The woman who wondered, as she looked back at her years as a generous hostess at Garsington, "what was wrong, why it aroused so much venom in others and why so many people turned against us", had been cruelly lampooned by former guests Aldous Huxley and D. H. Lawrence, among others, as well as continuously mocked behind her back by most of the Bloomsbury set. Seymour establishes her case that Ottoline Morrell was often brave and generous and kind; the malice that pursued her, Seymour attributes to the fact that, unfashionably, she held vague religious beliefs, and also was secretive about her love-affairs. But can that have been quite enough to make so many people so merciless? It seems there must always have been something that her proteges felt to be false about her benevolence, something anxious and strained and gushing that they quickly picked up. Seymour might have quoted the scene at Lady Ottoline's memorial service when Lady Oxford asked a Bloomsbury group why her friends quarrelled with her. "Pause -", wrote Woolf in her diary (a deservedly guilty pause?). "She was exigent, Duncan volunteered at last."

Both biographers agree that Russell's love-affair with Ottoline Morrell (for it was his with her) was very deeply felt: influential, and in many ways beneficial, for both. There was a deep sympathy between them which lasted as long as she lived, Russell wrote in his autobiography, emphasizing how both came from aristocratic but lonely backgrounds and had overthrown class conventions. With her in particular, Russell struggled to close the gap between mind and feeling. What kind of life together they might have made is one of literary history's intriguing speculations: certainly not an idyllic one.

Both were generous, in particular financially. Caroline Moorehead simply comments, apropos Russell's lean years, that he had given away his inherited fortune - but is this a small thing?

(Hands up, whoever has done the same.) And both of them, essentially, were brave in their stand against class and convention; many friends turned against Russell for his pacifism in the 1914-18 war, but Ottoline Morrell was firm in her support. What, above all, they shared was a scarcely recognized sense of bereavement. Her much-loved father died when she was four; by the time she was nineteen, her mother had died too. In her diary she wrote, "It is no fun being an oddity for it makes one eternally lonely. Unfortunately, I combine being an oddity with being very proud, and that makes one aloof." Russell described a sense of loneliness even more poignantly - almost shockingly - in a well-known passage in his autobiography: "I have loved a ghost, and in loving a ghost my inmost self has itself become spectral. I have therefore buried it deeper and deeper beneath layers of cheerfulness, affection and joy of life." The ghost, surely, was the mother that in adulthood he could not remember.

Biography cannot ever quite represent the place of such feelings in a life; its nature is to fill pages, with actions and decisions and sayings. But there are also the blank spaces that, rarely, open up and show themselves. This is not to say that Russell was not full of real energy and humour and variety; but we must believe what he himself perceived, what he felt as early as 1905 when comforting a bereaved friend - that buried grief "burst their tombs, and waited in the desert spaces of one's mind, from which philosophy offered no comfort whatsoever". The lifelong search for an answer to his question, "Can human beings know anything?" could have started in the mind of a child deprived too suddenly of certainties.

So could his instantaneous rapport, not only with Ottoline Morrell, but with Joseph Conrad, also orphaned in childhood - such an extraordinary and instant rapport that he named his two sons after him. The "conversion" he went through at the age of twenty-nine, when he saw Whitehead's wife Evelyn have a heart attack in front of her three-year-old son, must also have been related to his own childhood experience. From that moment, he wrote, he believed that in human relations one should "penetrate to the core of loneliness in each person and speak to that". But the insight he gained then did not make him the best of parents himself. Just as Ottoline's daughter rebelled against her mother's cultural glitter, Russell's rejected her parents' "enlightened" views; and the mental illness of his older son and two granddaughters makes the family ghosts that he feared in adolescence seem all too real. One would not like to have been the child of either of them.

Rosemary Dinnage's books include The Ruffian on the Stair: Reflections on death, 1990, and One to One: Experiences of psychotherapy, 1988.

(24)

MORE ON NOAM CHOMSKY

RSN, No. 76, November 1992, Section 18, p. 17 discussed Chronicles of Dissent, a new book of Noam Chomsky interviews. We have since encountered two other Chomsky news items of note.

A two hour, 47 minute Chomsky film documentary has begun circulating around art film theaters, such as the Film Center of the Art Institute of Chicago. Compiled by Montreal filmmakers Mark Achbar and Peter Wintonick, Manufacturing Consent: Noam Chomsky and the Media depicts Chomsky the lecturer and interviewee in various settings. Chicago Sun-Times critic Lloyd Sachs wrote in his February 5, 1993 review, "Conversational even in his denunciations, Chomsky is an easy guy to listen to for a radical. It's not difficult to shrug off his charges that modern government, but its nature violent, has the same basic morality as Genghis Khan. But only a head stuck in the sand could fail to appreciate the extent to which the media are designed to distract us from the things that matter most in our lives." Sachs gave the film 3 1/2 stars. We suggest you consider seeking out this film.

A January 1, 1993 Chicago Tribune article by Ron Grossman (Section 5, pp. 1, 5) profiles Chomsky. Titled "Strong Words: At 64, Linguist Noam Chomsky Continues to Say Things Not Everyone Wants to Hear," the article is supplemented by this boxed item: "Being cited in an academic journal is one approximation of intellectual influence. Here are the top 10 most-cited sources in arts and humanities academic journals over a seven-year period inspected by the Institute for Scientific Information, publisher of the Arts & Humanities Index: 1) Karl Marx, 2) Vladimir Lenin, 3) William Shakespeare, 4) Aristotle, 5) Bible, 6) Plato, 7) Sigmund Freud, 8) Noam Chomsky, 9) Georg Hegel, 10) Cicero." Our question would be, Where would Russell be located on such a list?

(25)

A RUSSELL COLLECTIBLE

Main Street Fine Books & Manuscripts (301 South Main Street; Galena, IL 61036; U.S.A.) listed this item for sale in its recently issued Catalog No. 3:

62. RUSSELL, BERTRAND (1872-1970). British philosopher and mathematician awarded the 1950 Nobel prize for literature. Printed DS, 1p, 7" x 10 1/4", Cambridge, England, 1948 May 16. Very good. Updating form for Who's Who in America, to which Russell's 2" x 3" biographical entry from the previous edition has been affixed. Russell has crossed out one line reading "(with Prof. A.N. Whitehead) Principia Mathematica, 1910-13" and written in "Human Knowledge, its scope and limits, 1947" and signed. Comes with a second, similar sheet to which Russell has added the same information. A very unusual piece containing a mini-biography. \$200.00

(26)

RUSSELL AT THE BRITISH HISTORY ASSOCIATION

Steve Shafer, BRS member and an historian and dean at the University of Illinois, Urbana-Champaign, read his paper, "Bertrand Russell and the Politicians," at the monthly meeting of the University of Illinois British History Association on February 8, 1993. The meeting was held at the home of University of Illinois Professor of History Caroline Hibbard, a specialist in the Tudor-Stuart period in British history, which, incidentally, is also the area of expertise of BR's son, Conrad Russell.

(Conrad Russell is a professor in the Department of History of King's College, University of London. On April 5, 1990, he visited the University of Illinois, Urbana-Champaign to speak on "A Not-Quite-Federal State: Britain 1603-1990." See RSN, No. 67, August 1990.)

Steve's paper incorporated material originally intended for his "'Witty, Pungent, Philosophical, Whimsical, and Bitter': Politicians' Perceptions of Bertrand Russell in Britain" presentation made at the BRS's June 1992 annual meeting in Washington, DC. We hope to receive an abstract of his paper for future RSN publication.

In attendance was University of Illinois Professor of Music Nicholas Temperley, who reminisced about being present at a Campaign for Nuclear Disarmament rally at Royal Albert Hall, London. He recalled how, following a succession of less well known speakers, Russell's brief stage appearance was greeted with loud enthusiasm.

(27)

A COMEDIAN READS AND READS AND READS RUSSELL

The comedian in question is Tony Hancock, well known in Britain for his BBC television appearances during the 1950s and 1960s. Hancock was particularly appealing in his regularly scheduled television series, "Hancock's Half-Hour."

Steve Shafer, who has read Jonathan Margolis's Cleese Encounters (New York: St. Martin's Press, 1992), a biography of British comedian-actor John Cleese, reports this item about Hancock from that book (pp. 188-189): Tony Hancock regularly carried two things around his dressing room--a Teddy Bear and a copy of Bertrand Russell's A History of Western Philosophy. This snippet of information was cited in the context of comparing Cleese to Hancock, i.e. both were/are great comedians who were/are also very much interested in serious matters.

Regularly carrying A History of Western Philosophy--an 800+ page book--sounds like something of a literary exaggeration. But it is refreshing to see a reference to Russell connecting him to the world of British television humor.

RUSSELL SOCIETY NEWS

No. 78, May 1993

The Bertrand Russell Society, Inc.

3802 North Kenneth Avenue Chicago, IL 60641-2814; U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Letters to Russell Society News, a quarterly issued in February, May, August, and November, should be addressed to Donald W. Jackanicz, Editor at the above Chicago address.

For information about or to join The Bertrand Russell Society, write to Mr. Lee Eisler; BRS Information Committee; 1664 Pleasant View Road; Coopersburg, PA 18036; U.S.A.

FROM THE PRESIDENT

Michael J. Rockler, President, The Bertrand Russell Society

At the 1992 Board meeting, it was decided to initiate new prizes for young scholars. Various categories were established including undergraduate students and graduate students. Each winner receives transportation to the annual meeting, all costs associated with the meeting, and a complimentary membership for one year in the Bertrand Russell Society.

Two persons will receive the prizes this year. Tyler W. Roberts, an undergraduate student at SUNY in Fredonia, will receive the undergraduate prize. He will present a paper entitled "Russell, the Individual, and Society." Stefan Anderson, joining us from Norway, will receive the graduate prize and present "BR's Search for Certainty in Mathematics and Religion."

Please join us at the BRS annual meeting in June and welcome these young scholars into the organization. I would also like to thank John Lenz who chaired the committee which has awarded these prizes.

This year's meeting honors Harry Ruja with the BRS Award. Harry will present the banquet address and speak on BR's life in photos. On Saturday Hal Walberg will conduct a reader's theater on Russell autobiography. Nick Griffin is tentatively scheduled to present a paper on Lady Ottoline. All of these presentations will add to our understanding of Russell as a person.

I am enthusiastic about our meeting in San Diego. It will be good to greet old friends and meet new ones. Won't you join us? Please send in your registration now. Most persons who attend the annual conference become regular participants. If you haven't been to a meeting, this would be a great time to start.

I look forward to seeing all of you in San Diego, June 18-20.

(2)

1993 ANNUAL MEETING UPDATE

The BRS's 1993 Annual Meeting will be held on the campus of the University of California at San Diego, located in suburban La Jolla, California, from Friday, June 18 through Saturday, June 20.

Accompanying this RSN issue is a blue annual meeting pre-registration form. If you are planning to attend but have not yet mailed in your registration form, please complete the form now and mail it to Michael Rockler. Michael and the other persons responsible for organizing the meeting will very much appreciate receiving your pre-registration and payment as soon as possible. Each person who pre-registers will be mailed additional information concerning meeting room locations and housing. We look forward to seeing you in June!

Here is the latest tentative Annual Meeting program:

Friday, June 18, 1993

- 4:00 - 6:00 p.m. Registration.
- 6:00 - 7:30 p.m. Dinner.
- 7:30 - 7:45 p.m. Welcoming Remarks.
Presentation of the Service Award to Marvin Kohl.
- 7:45 - 8:45 p.m. Timothy J. Madigan. "The Will to Believe vs. the Will to Doubt."
- 8:45 - 9:45 p.m. Presentation of the BRS Book Award to Nicholas Griffin.
Nicholas Griffin. "Lady Ottoline."
- 9:45 p.m. Board Meeting. (All members welcome.)

Saturday, June 19, 1993

- 8:00 - 8:30 a.m. Registration.
- 8:30 - 10:00 a.m. Presentations by Winners of the 1993 Paper Prizes.
Tyler W. Roberts. "Russell, the Individual, and Society."
Stefan Andersson. "Bertrand Russell's Search for Certainty in Mathematics and Religion."
- 10:00 - 10:15 a.m. Coffee.
- 10:15 - 11:15 a.m. John Shosky. "Russell and the Contemplation of Philosophy."
- 11:15 - 12:15 p.m. Bertrand Russell Society Meeting.
- 12:30 - 1:30 p.m. Lunch.
- 2:00 - 3:00 p.m. Hal Walberg. "Russell's Autobiography--A Readers' Theater."
- 3:15 - 4:45 p.m. Marvin Kohl and Michael J. Rockler. "Russell vs. Russell on Education."
- 4:45 - 5:30 p.m. Free Time.
- 5:30 - 7:00 p.m. Red Hackle Hour at Los Torrito's Restuarant.
- 7:00 p.m. Banquet.
Presentation of BRS Award to Harry Ruja.
Banquet Address by Harry Ruja. "Russell's Life in Photos."

Sunday, June 20, 1993

- 9:00 - 10:00 a.m. Dennis Darland. "What Is Mathematics About?"
- 10:15 - 10:30 a.m. Coffee. 10:30 - 11:30 a.m. Don Jackanicz. Workshop: Russell's "A Philosophy for Our Time." 11:30-12:15 p.m. Gonzalo Garcia. "Did Bertrand Russell Think of Himself as a Pacifist?" 12:15 p.m. Closing.

RUSSELL IN THE MANUSCRIPT MARKET

Issued in late winter 1993, Catalog 69 of David Schulson Autographs (11 East 68th Street, New York, NY 10021, U.S.A.) has this entry on page 36.

110. RUSSELL, BERTRAND. (1872-1970). British philosopher, mathematician and reformer; awarded Nobel Prize in Literature (1950).

T.L.S. [typed letter signed] on stationery imprinted in Welsh [sic], Merioneth, October 17, 1961. Typed above the Welsh address is "from: The Earl Russell, O.M., F.R.S."

"I do not for a moment claim that I have 'swept two thousand five years of metaphysics into the discard' . . . something of this sort has occurred in logic, but . . . I have been only one of many contributors. . . . I have the highest respect for many philosophers of past times. . . ." Signed above his typed name, "Bertrand Russell." A fine comment on the course of logic in this century by one of its pre-eminent thinkers.

BRS LIBRARY

The BRS Library sells and lends books, audiotapes, videotapes, and other materials by and about Russell. Please direct BRS Library inquiries and requests to Tom Stanley; Box 434; Wilder, VT 05088.

A new audiocassette has been received by the BRS Library: "Russell vs. Dewey on Education." With Michael Rockler, Tim Madigan, and John Novak. A session from the inaugural meeting of the Coalition for Secular Humanism and Freethought, June 1992. 115 minutes.

The following lists Books For Sale by the BRS Library. H-Cloth, otherwise paperback. Prices are postpaid. Please send your check or money order (U.S. funds only) payable to "Bertrand Russell Society" to Librarian Tom Stanley at the above address.

By Bertrand Russell:

<u>Appeal to the American Conscience</u>	\$3.15
<u>Authority and the Individual</u>	7.95
<u>Has Man a Future?</u>H...	8.00
<u>History of the World in Epitome</u>	1.00
<u>In Praise of Idleness</u>	7.95
<u>My Philosophical Development</u>	7.95
<u>Political Ideals</u>	7.95
<u>Power: A New Social Analysis</u>	5.50
<u>Principles of Social Reconstruction</u>	7.95
<u>Roads to Freedom</u>	6.50

By Other Authors:

<u>Bertrand Russell, 1872-1970</u>	\$1.50
<u>Bertrand Russell as a Philosopher</u> by A.J. Ayer.....	2.25
<u>Bertrand Russell's America, Vol. 2, 1945-1970</u> by Barry Feinberg and Ronald Kasrils.....	9.95
<u>Bertrand Russell's Theory of Knowledge</u> by Elizabeth Eames.....H...	8.50
<u>Essays on Socialist Humanism in Honor of the Centenary of BR</u>H...	9.00
<u>Liberty and Social Transformation: A Study in Bertrand Russell's Political Thought</u> by Chandrakala Padia.....H...	11.50
<u>Into the Tenth Decade: A Tribute to Bertrand Russell</u>	5.00
<u>The Life of Bertrand Russell in Pictures and His Own Words</u>	6.75
<u>Mr. Wilson Speaks 'Frankly and Fearlessly' on Vietnam to BR</u>	2.00
<u>Russell</u> by A.J. Ayer.....H...	8.00

A future issue of RSN will provide an updated list of audiocassettes and videocassettes available through the BRS Library. For now, please refer to earlier RSN issues for such lists.

RUSSELL ALLUDED TO AS A NARCISSIST

In his article "Intense: Reflections on a Personality Type" in The Atlantic, May 1993, pp. 20-24, Richard Brookhiser briefly mentions Russell as "a twenty-four karat narcissist." Brookhiser then quotes Russell's Gladstone anecdote about port being served in a claret glass appearing in "Eminent Men I Have Known," an essay in Portraits from Memory. Thanks to Tim Madigan for this article.

(8)

CONTRIBUTIONS

We would like to express our sincere thanks to these persons who made financial contributions to the Bertrand Russell Society during late 1992 and early 1993.

Neil Abercrombie. J.M. Altieri. Jay Aragona. Dong-In Bae. Michael Emmet Brady. Whitfield Cobb. Robert K. Davis. Linda Egendorf. Lee Eisler. Richard Fallin. Earl Hansen. David S. Hart. Charles W. Hill. James Lloyd Hoopes. Thomas C. Horne. Ting-Fu Hung. Robert T. James. Marvin Kohl. George G. Kuc. Gladys Leithauser. Glenn R. Moyer. Stephen J. Reinhardt. Benito Ray. William M. Ripley. Harry Ruja. John F. Schaak. Nan E. Scofield. Warren Allen Smith. Timothy S. St. Vincent. Henry Van Dyke. Michael J. Weber. Charles L. Weyand. John A. Wilhelm.

Like many small organizations, the BRS operates through a combination of membership dues and gratefully received contributions from those members whose interests or circumstances allow them to make such gifts. Contributions in any amount, large or small, should be made payable to "Bertrand Russell Society" and sent to BRS Treasurer Dennis J. Darland; 1965 Winding Hills Road; #1304; Davenport, IA 52807. Thanks to those who can help the BRS in this way!

(9)

A RUSSELL-MAYA LIN CONNECTION

We recommend at least an occasional perusal of Current Biography, one of The H.W. Wilson Company's fine monthly publications. The April 1993 issue features biographical articles on figures as diverse as Jacques Chirac, Mayor of Paris, actor Jack Klugman, musician Dave Brubeck, and surgeon Richard Selzer. The article about architect Maya Lin (pp. 35-39) was of particular interest as it linked one of her ancestors with Russell:

Maya Lin is best known as the architect whose spare, sculptural public monuments have helped countless Americans come to terms with some of the more painful facts of their country's history. More than a million people travel to Washington, D.C., each year, on a pilgrimage to Lin's Vietnam Veterans Memorial....Among Lin's other illustrious ancestors is her paternal grandfather, Lin Chang-min, a progressive lawyer who lobbied for reform in China and traveled to England in the 1920s as a member of the Chinese Association for the League of Nations. In London, the gregarious Lin Chang-min and his daughter, Hui-yin, counted among their friends and acquaintances such luminaries as H.G. Wells, E.M. Forster, Arthur Waley, Thomas Hardy, Bertrand Russell, and Katherine Mansfield.

(10)

RUSSELL IN SMITHSONIAN MAGAZINE

We were delighted to see Israel Shenker's major article about Russell's life in the May 1993 issue of Smithsonian (vol. 24, no. 2, pp. 128-130, 132-142). Here in reduced size are the first two pages. The issue's table of contents lists the article as "Paradoxical, polemical Bertrand Russell: Brilliant and fearless, the controversial philosopher ranged from mathematics to religion, ethics to free love." Also in this issue are articles about Thomas Jefferson at 250, the Celts, photomicrography, Duke Ellington, blacksmithing, and sharks, as well as one concerning the history and art of the Barnes Foundation. Included in the Barnes Foundation article is the to be expected reference to Russell. We recommend you pick up a copy of Smithsonian!

By Israel Shenker

The provocative progress of a pilgrim polymath

Bertrand Russell, the free-wheelingest philosopher of the century, tried to prove that life is real—and found it earnest

Philosophers traditionally wonder about the nature of reality. How do we know it? How can we prove that we know it? Does the forest exist if there's no one around to see it? It doesn't, say the skeptical idealists. It does, say the philosophical realists. Is the external world, as idealists insist, merely a collection of sensations in one's head? These hairsplitting issues are still in doubt, though the conviction that objects exist, with or without witnesses, is on the rise. Even so, and even with the benefit of hindsight, it is hard to believe that such a one as philosopher Bertrand Russell really existed.

For in nearly every way imaginable, Russell's existence was no common matter. Philosophically, he was sometimes an idealist and sometimes a realist. Physically, he was something of an anomaly, a man slim, erect and fine of profile, who yet resembled the Mad Hatter or, as novelist Aldous Huxley once described him, "one of those extinct bird-lizards of the Tertiary." At the drop of a hat, he was prepared to dispute conventional wisdom, prevailing orthodoxy, even common sense—as well as his own most cherished convictions. He was sent to jail during World War I for writing that American troops in England might be used to intimidate British strikers. (The authorities claimed that Russell had prejudiced His Majesty's relations with the USA.) In the 1920s he visited the Soviet Union but, unlike most liberals of the time, saw it as a repressive disaster area. Yet in his old age Russell was best known as an anti-American, world-class peacenik.

As a thinker, he fixed Man's place as a footnote in an

Among schoolchildren: 60-year-old Russell holds hands with his students at Beacon Hill in the 1930s.

He founded school in 1927, encouraged free thought about sex and religion, and daily orange juice.

obscure portion of the cosmic volume. He once described people as "tiny lumps of impure carbon and water dividing their time between labor to postpone their normal dissolution and frantic struggle to hasten it for others." Before his death in 1970, however, he wrote: "Three passions, simple but overwhelmingly strong, have governed my life: the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind."

In 1950, when he won the Nobel Prize in Literature, he became the only English philosopher and Nobel laureate ever denied a post at an American university for,

among other things, advocating and practicing free love. But he was also, without doubt, the most brilliant, the most inventive, the most fearless and the most controversial philosopher of the 20th century. As well as, hands down, the most prolific—more than 80 books, thousands of articles, 50,000 letters, about everything from the foundations of pure mathematics to the cruelties of Communism, from what makes a true statement true, to the need for birth control.

Arguably, too, he was the century's most influential philosopher. Though Gottlob Frege, a then obscure

German professor of mathematical logic, is now regarded as the founder of mathematical logic, it was Russell, as the main creator of what is known as analytic philosophy, who first made questions about the nature and role of logic and language central to philosophy.

This astonishing polymath was born in 1872. His grandfather was John Stuart Mill, the arch-advocate of liberty and social justice. His grandfather Lord John Russell (later, 1st earl Russell) had twice served Queen Victoria as prime minister and perhaps saved England from revolution by introducing the Reform Bill of 1832. His fa-

FROM HARRY RUJA

At the June 1993 Annual Meeting Harry Ruja will receive the BRS Award for his many contributions to Russell studies. We look forward, too, to hearing Harry's banquet address titled "Russell's Life in Photos."

RSN 76, November 1992 asked for help in identifying this Russell quotation displayed on the first page of the September 13, 1992 [Montreal] Gazette: "The exercise of power is agreeable, especially when it is an obscure individual who exercises power over a prominent one." In response to this Harry wrote to us:

The quote . . . has eluded me, but there is something similar in Chap. 5 of War Crimes in Vietnam (first published in The Minority of One, Feb. 1965): "Man is a quarrelsome and power-loving animal. Life without power and without quarrels would seem to him a tame and tedious affair. From the combination of quarrels and love of power most of history proceeds...."

Harry is often the source for materials reproduced in RSN. Here are two more short newspaper clippings he provided, respectively from The Guardian, October 20, 1965 and The [London] Evening Standard, May 16, 1962.

Labour picks Lord Russell's son

Bertrand Russell's younger son, Mr Conrad Russell, was chosen last night as prospective Labour parliamentary candidate for South Paddington. Mr Russell, aged 28, is a lecturer in modern history at London University. He lives with his wife in Hampstead.

In the general election, South Paddington was held for the Conservatives by Commander Robert Allan with a majority of 3,399.

Russell 90
ALTHOUGH Bertrand Russell is a non-believer, there is to be a religious service on Sunday to mark his 90th birthday. It is to be at Lewisham Unitarian Church. The Minister, the Rev. Jeremy Goring, tells me: "We thought it a good thing to do. Although Lord Russell will have nothing to do with any organised religion, we feel he is a deeply religious man in the real sense." "There is also a strong family connection with the Unitarian Church. His grandparents founded the Unitarian Church in London." There will be an address on Russell's significance; a lesson taken from one of his books; and a hymn written by his uncle, Rollo Russell. Lord Russell has not been invited to the service. "I expect if we had done so, we would have got a rather amusing refusal," says Mr. Goring.

FROM KEN KORBIN

Longtime BRS member Ken Korbin asked for this Open Letter to be printed in RSN. Ken refers to a videotape in the BRS Library of a Phil Donahue television program featuring Gore Vidal. Anyone wishing to respond to Ken may contact him directly at his New York address or may write to RSN.

March 1993

An Open Letter to BRS Members

It troubles me that the Russell Society Library continues to keep the videocassette by Gore Vidal in its collection.

For at least the past 5 years, a great deal of information concerning Mr. Vidal's anti-Semitic remarks and affiliations have been appearing in New York City newspapers.

I myself mailed one particularly informative newspaper article about Vidal to the BRS last summer.

If any other members of the BRS feel as strongly about this matter as I do, please let me know.

Thank you.

Sincerely,

KEN KORBIN

THE SCIENTIFIC OUTLOOK UPDATED

Tim Madigan informed us of Timothy Ferris's May 13, 1993 book review of Understanding the Present: Science and the Soul of Modern Man by Brian Appleyard (Doubleday, 269 pp., \$23.50) in The New York Review of Books, pp. 17-19. Mr. Ferris begins his article with a summary examination of Russell's book The Scientific Outlook and moves on to the body of his review by reflecting, "...it's hardly surprising that controversy continues to flare up over the Faustian question of whether science has at last gone too far."

(14)

REPORT FROM LEE AND JAN EISLER

Lee Eisler, BRS Vice President/Information and Editor Emeritus of RSN, and Jan Eisler now spend the warm months in Coopersburg, Pennsylvania and the cool months in Madeira Beach, Florida. We were very happy to learn the following about Lee's most recent large-scale writing project: "Prometheus Books expects to publish my book--The Quotable Bertrand Russell--in May 93.... A mailing from H.H. Waldo, Bookseller lists the book among his books for sale, and calls it a new paperback, 235 pp. Prometheus says the price is \$16.95." It will be good to see the Eislers again at the 1993 Annual Meeting in San Diego. We hope that Lee's book might be on display then and would be delighted to have an autograph session!

Here is more important news from Lee:

The Virgin Mary Has an 800 Number

Several large billboards in the St. Petersburg, FL area were advertising this fact (if, in fact, it was a fact).

It was.

We called the number -- 1-800-882-MARY -- and got the following recorded message:

The Virgin Mary has been appearing on Long Island, New York, with an urgent message for the world. To receive this message, along with your free brochure, leave your name and address at the tone, and it will be sent to you through the mail at no cost. At the tone, please speak clearly, and spell out your mailing address. And may God bless you.

We of course followed these heaven-sent instructions, and await the outcome with considerable anticipation.

(15)

REVIEW OF NEW POPPER BOOK

We recommend reading Ernest Gellner's review of In Search of a Better World: Lectures and Essays of Thirty Years by Sir Karl Popper (Routledge, 256 pp. \$25), appearing in The New Republic, issue 4,083, pp. 35-38. Sir Karl was the recipient of the 1992 BRS Award. In his review, Gellner refers to Russell as one "of the prophets of liberalism I have met . . . [who] were personally liberal and tolerant...."

(16)

SHEILA TURCON ON RUSSELL'S TITLE

The good work done by Sheila Turcon at the Bertrand Russell Archives and the Russell Editorial Project at McMaster University ends on June 15, when she leaves her current position there. Russell researchers, including many BRS members, are indebted to Sheila for her consistent professionalism and commitment to Russell studies. We were particularly pleased that Sheila was able to participate in the 1992 BRS Annual Meeting in Washington, DC, and we hope to see her again at some of our future meetings. We are grateful to Sheila for having contributed the following article to RSN.

Lord Bertrand?--Never

With my time of employment at the Russell Editorial Project coming to an end, it seems appropriate to record all I know about Bertrand Russell's title less, alas, it be lost forever. One of my first tasks with the Project was to index Volume I of The Collected Papers. I was instructed to get all the titles correct so we would not be pilloried by British reviewers as colonial hicks.

Lord John Russell was born the son of the Duke of Bedford in 1792. His title was a courtesy title as a younger son of a peer. His oldest brother, the heir to the dukedom, took the Duke's second title, Marquess of Tavistock, as a courtesy. Holders of courtesy titles are not eligible to sit in the House of Lords. The second title continued to be held by the father but was used by his eldest son. The styling of Lord John's title (i.e. the inclusion of his first name) told all those familiar with the British system of titles exactly what his status was. He married, in 1841, Lady Frances Elliot, the daughter of the Earl of Minto. In her case, the styling indicated something different, i.e. that her title came by birth from her father. Upon marriage women had to take the titles of their husbands, if they had titles to give them. Thus she became Lady John Russell. If she had married outside the nobility she could have kept the Lady Frances styling. A good example of this is one of Russell's mistresses, Lady Constance Malleson (daughter of Earl Annesley but married to a commoner, Miles Malleson). Lady John was an official title and not a nickname indicative of her ferocity (as was once thought by some).

Younger sons with courtesy titles are not able to pass on their titles to the next generation. When Lord John was created Earl Russell and Viscount Amberley in 1861 by Queen Victoria for his service to the nation in a variety of posts including Prime Minister, he became a peer, gaining titles which he was able to pass on to his children. His oldest son John took the second title, Viscount Amberley, as a courtesy. The Earl's younger sons become the Hon. William Russell and the Hon. Rollo Russell. An earldom is of lesser rank than a dukedom; the titles of the sons are therefore different. The titles of the daughters are the same; his daughter Agatha became Lady Agatha. And his

wife Frances became Countess Russell (alternatively Lady Russell). [Note: for indexing purposes: Russell, Frances, Lady NOT Russell, Lady Frances.] The confusion arises, I think, because both Lord John Russell and Lord Russell are correct for the first Earl Russell at different stages in his life. Lord Russell is an alternative styling for Earl Russell and the only acceptable form of second person address; both styles are fine for third person.

But for Viscount Amberley's younger son, Bertrand, only two stylings are correct: the Hon. Bertrand Russell and Earl Russell (alternatively Lord Russell). Bertrand was never known as Viscount Amberley because he was never the oldest son of an Earl. And when he succeeded in 1931 on the death of his brother Frank, the second Earl, he already had a son of his own. Although he succeeded to both titles, he used only the senior one. His son, John Conrad took the second title, Viscount Amberley, as a courtesy and his daughter became Lady Katharine. Bertrand did not gain a seat in the House of Lords immediately. Sufficient time had to pass (11 months!) to ensure that Frank's long-estranged wife Elizabeth would not give birth to an heir.

Although by that time Russell was well known as simply Bertrand Russell and continued to publish under that name, he was well aware of all the information I have just imparted to you, and, no doubt, could have explained it all more clearly. But take heart, even Frank could get confused by all this. He states in his autobiography, My Life and Adventures, p. 42: "I was no longer Viscount Amberley, I was Earl Russell--wretched child of twelve!" Even if he is correct about being Viscount Amberley (he was not, after all, the oldest son of an Earl) he is wrong about losing the Amberley title; it was his for life.

Russell made several statements to the press that I know of concerning his title. Here are few of them.

1. His announcement, on his succession, with his wife Dora, in March 1931: "Lord and Lady Russell state that they only propose to make us of their title when it is strictly necessary for formal occasions. In the household and ordinary life they and their children will continue to be styled as before. For the purpose of his literary work, Mr. Russell will continue to write as Bertrand Russell. Mrs. Russell, on democratic and feminist grounds, wishes to preserve her identity as Dora Russell, in which name she has hitherto written."

Note: the styling Dora Russell, rather than Mrs. Bertrand Russell broke conventions of the time; Mrs. Dora Russell was the styling of a divorced woman. In 1926 Russell, in an interview with Crystal Eastman, stated: "I admit I should not like to have become Mr. Dora Black."

It was also in 1931 that the story resurfaced that Russell would have taken the title Lord Snooks if he had been given a title to swell the membership of the House of Lords in 1911.

2. Letter to the editor of The New Statesman and Nation, 25 June 1932: "By an inadvertence for which I am not responsible, my signature appears in

your issue of June 18th as "Russell." [Note: this is the correct signature for a peer.] Ever since, through no fault of my own, I became a peer, I have been trying to persuade my snobbish countrymen not to use my title, but it is up-hill work."

3. Divorced from Dora and living with his new wife, Patricia, in the United States: "American journalists say I refused the title. That isn't so. It irritated me to get anonymity as Lord Russell since my reputation was established as Bertrand Russell, but there is no known method of losing a title except to be accused of high treason and have your head cut off on Tower Hill, which hasn't been done for centuries." 14 March 1943.

Patricia Russell had this light-hearted comment to make in Princeton, N.J. on 7 Feb. 1944: "It [the title] is such a handicap. Sometimes we do, sometimes we don't. In shops when they asked for my name I used to say Lady Russell. The girl would look puzzled and say, 'But is it Miss Lady Russell or Mrs. Lady Russell?'"

4. On their return to England, their position seemed to harden: "I must state again that except where my nom-de-plume is concerned, I prefer to be known as Lord Russell. It is still frequently assumed that I prefer to be known as 'Mr. Russell' or 'Professor Russell' or 'Doctor Russell' or anything rather than 'Lord Russell.' This is erroneous. I have never wished to be called 'Mr.' and I am not a doctor or a professor. What is particularly annoying is a widespread practice of alluding to me as 'Mr. Russell' and to my wife as 'Lady Russell' giving the utterly false impression that my wife wishes to use her title while I do not wish to use mine. In fact, she has simply adopted my own usage." 19 May 1945.

5. Later in life he signed many letters to the editor as "Russell." Edith Russell's papers contain a typed information slip for domestic staff on how to properly address them using their titles. Russell made this statement on her title: "To call my wife Lady Edith Finch Russell implies that she is the daughter of a Duke, a Marquis or an Earl, and that I am not a peer. You must call her either Lady Russell or Countess Russell." 16 Sept. 1958. The mistake was to equate Edith's ranking to that of Lady Constance Malleston, when it was, in fact, the exact opposite.

To inquiring correspondents, however, Russell often replied: "I do not care two pins how I am addressed."

RUSSELL'S 23 JULY 1961 STATEMENT

Tom Stanley located this reprinted statement in The Living Theatre Repertory, 1961-62, 10th Anniversary. Tom regrets to report, however, that he is not aware of where it was originally published. Can you supply this information?

STATEMENT

23 July, 1961

Bertrand Russell

Most people in this country, as well as in other countries, appear to be unaware that the Governments of East and West are solemnly preparing, by mutual vituperation, to create a general state of mind in which the nuclear war, as almost all experts are agreed, means, not only the extermination of nine-tenths of the populations of Russia and the United States, but also — what for us in Britain, is peculiarly important — the total and complete extermination of the whole population of Western Europe and Britain. Perhaps, to be scrupulously exact, one should make one small exception: if it should happen that, throughout the few days of war, the wind blew continuously from the West, there might be a few dozen survivors in the Outer Hebrides. A nuclear war would wipe out Europe completely and North America as a component of civilization. If it were not happening, I should have thought it inconceivable that ministers, hitherto uncertified, could calmly contemplate this wanton and merciless disaster. Yet, so it is. Statements have been recently made on both sides of the Iron Curtain claiming that in a nuclear war the side to which the speaker belonged might achieve victory. This is utterly nonsense; and must be known to be nonsense by those who utter it, unless they are criminally ignorant of things which it is their duty to know. The peril is imminent and deadly. Before the end of the year we may all be dead — you, your children if you have any, your wife or husband, our friends, and all who make up the population of our neighborhood and your country. If you do nothing, during the coming weeks of crisis, you will have your share in the blame. You will have your part in the crime of killing all those whom you care for. The Governments can be stopped in their mad folly, but they can only be stopped by a vast movement of protests in which all sane men and women must take part. The time may be short. Action must be NOW, or it may be too late.

The one thing for which we must stand is that the differences between East and West, whether about Berlin or about any other issue, must be settled by negotiation and not by war — for war, in the nuclear age, can leave nothing standing that either side could possibly desire. I call upon the population of this country, and of every other country that is willing to listen, to rise in a vast protest with the cry, "Negotiation, no war." If you wish to live, if you wish those you care for to live, if you care for your country, if you care for human achievement, it is your duty, in this moment of supreme danger, to do all that lies in your power to bring some spark of reason and humanity into the minds and hearts of those who control the destinies of East and West.

We have usually tried to publish in our programs some article which we thought would be of interest to our audience about contemporary theatre, sometimes a poem, or an essay, or a statement. Seeking some new piece for this program, we found that again and again nothing seemed quite so important, so relevant, as this eloquent and moving statement by Bertrand Russell. Since there will be no theatre if there is no world, it seemed to us the most important thing to publish at this moment, and, the space being available, we could not suppress the felt need to put it in print.

J. B., J. M.

AYER UPON RUSSELL'S 100TH BIRTHDAY

The late Sir Alfred Ayer, himself one of the century's foremost philosophers and an honorary BRS member, wrote this tribute upon the occasion of Russell's 100th birthday. It appeared on May 18, 1972 in the [London] Evening Standard. Thanks to Harry Ruja for this article.

24—EVENING STANDARD, THURSDAY, MAY 18, 1972

Bertrand Russell: the passion inside the sceptic . . .

TODAY is the centenary of the birth of the most important philosopher and one of the greatest Englishmen of the twentieth century. Bertrand Russell was born on May 18, 1872 and died, only a little more than two years ago, on February 2, 1970.

To the end of his long life, he retained the luckiness, the wit, the wide intellectual interests, and the passionate concern for human welfare which had always been characteristic of him. He came closer than any other man of our time to realising the Platonic ideal of a philosopher as one who combines universal learning with an active engagement in practical affairs.

It was, indeed, mainly through the political activity in which he engaged towards the close of his life, and through his work as a social and moral propagandist that Russell came to enjoy worldwide fame; but it is to his philosophical work, and especially that which he

Bertrand Russell, who was born 100 years ago today and died in 1970, was once asked what he would say after death if confronted by his Maker. His reply: "I should say 'God—why did you make the evidence of your existence so insufficient?'" Here is a centenary tribute to one of the greatest Englishmen of the twentieth century . . .

by Professor Sir Alfred Ayer

accomplished in his youth and early middle age, that he will chiefly owe his place in history.

Here too his range was exceptionally wide. He himself attached the greatest value to the work which he did on mathematical logic, but he also made important contributions to the philosophy of logic, in a wide sense, to the theory of knowledge and to the theory of being.

Together with his friend G. E. Moore and his pupil Ludwig Wittgenstein he inspired the analytical movement in philosophy which, at least among English-speaking philosophers, has been

the dominant influence in this century.

On both his father's and his mother's side, Russell belonged to the White aristocracy. His parents died before he was five years old and he was brought up by his grandmother, who had been the wife of Lord John Russell, later the first Earl Russell, the famous Liberal statesman who in 1832 introduced the first Reform Bill.

Bertrand Russell had a solitary childhood of which he gives a fascinating account in his autobiography. As he there recalls it, the moment of his first great intellectual awakening occurred in his 12th year when his older brother began to teach him Euclidean geometry.

At first he objected to having to take the axioms on trust, and consented to do so only when his brother assured him that they could not go on otherwise.

This refusal to take anything on trust was characteristic of all his philosophy. He was a con-

stant sceptic in that he regarded all accepted beliefs as open to question.

Like Descartes, he thought that it was the business of philosophy to try to legitimise our claims to knowledge by setting them upon a sure foundation.

Russell went up to Cambridge in 1890 as a mathematical scholar and it was his desire to find some good reason to believe in the truth of mathematics that led him to become a professional philosopher. The idea which he began to develop in his book, *The Principles of Mathematics*, which came out in 1903, was that mathematics was reducible to logic.

To sustain this thesis he needed to construct a new system of logic, and for this he enlisted the co-operation of his former mathematical tutor, Alfred North Whitehead. The result was their monumental *Principia Mathematica*, of which the three volumes appeared between 1910 and 1913.

Landmark

This book is a landmark in the history of logic, but it had a limited appeal to the general public. The authors had to contribute to the cost of its publication and their financial reward for 10 years' labour was minus £500 apiece.

The outbreak of the First World War brought Russell actively into politics. Until then, he had concentrated mainly on philosophy, although he had found time to stand for Parliament in support of votes for women, and the first of the 70 or so books that he was even-

tually to publish was a work on German Social Democracy.

From the beginning he was passionately opposed to the war and the propaganda which he made against it brought him into conflict with authority. He was first of all fined on account of a pamphlet which he had written in defence of a conscientious objector and later sent to prison for six months for libelling an ally.

He had hoped that the American Army might be less efficient in fighting the Germans than in putting down strikes. Being in prison gave him leisure to write an introduction to *Mathematical Philosophy* and to begin work on his book *The Analysis of Matter*.

Although he wrote two very good books on philosophy in later life, *An Inquiry Into Meaning and Truth*, which came out in his seventeenth year, and *Human Knowledge: Its Scope and Limits* seven years later, as well as his very successful *History of Western Philosophy*, Russell was increasingly occupied after the First World War with practical questions of morals and politics.

He succeeded to the Earlship in 1918, but seldom spoke in the House of Lords, preferring to exercise influence through his public speaking and writing. Together with his second wife, Dora, he founded and helped to run a progressive primary school, partly for the education of his two older children, and he wrote a wide variety of books, political, social, historical, scientific, biographical, even including two volumes of short stories.

His liberal views on such topics as Marriage and Morals now seem quite sensible, but they were

thought sufficiently shocking in the United States in 1918 for him to be expelled from the Professorship to which he had been appointed at the City College of New York.

A contributory cause was his outspoken agnosticism. He was once asked at a public meeting what he would say if after his death he found himself confronted by his Maker. He replied instantly: "I should say 'God—why did you make the evidence of your existence so insufficient?'"

Destroy

Honours came to Russell in his old age—he was awarded the OM in 1948 and the Nobel Prize for Literature in 1950—but this did not make him any more friendly to authority. In his last years he came to believe that the policies of the British and still more the American Governments were likely to lead to a war which would destroy civilisation and he opposed them by every means in his power.

His advocacy and practice of civil disobedience in connection with the Campaign for Nuclear Disarmament caused him, together with his fourth wife, Edith, again to be sent to prison in his 86th year. The sentences were commuted on account of their health, and they were detained for a week in British hospitals.

Bertrand Russell liked to be compared to Voltaire, and he did, indeed, resemble Voltaire in his moral courage, his energy, his wit and the elegance of his style. With all this, he was a much profounder thinker than Voltaire and a nobler man.

"BERTRAND RUSSELL CHALLENGES THE NEW INTOLERANCE"

Thanks again to Harry Ruja for supplying the Henry Hazlitt review of Russell's Religion and Science appearing in The New York Times Book Review, December 29, 1935, p. 2.

Bertrand Russell Challenges The New Intolerance

His New Book Invests the Fundamental Conflicts of Four Centuries of Science and Religion With Fresh Interest

RELIGION AND SCIENCE. By Bertrand Russell. 271 pp. New York: Henry Holt & Co. 12.

By HENRY HAZLITT

IN this volume Mr. Russell traces, as many writers have before him, the long history of the conflicts of science and religion over the last 400 years; but he succeeds in investing the subject with a fresh interest. He begins with the Copernican revolution, telling once more how Galileo was forced by the church to "abjure, curse and detest" his formerly expressed opinion that the earth was not the center of the universe but revolved around the sun. He describes the long centuries during which comets were regarded not as heavenly bodies moving in regular paths but as omens of disaster. He tells of the opposition to the doctrine of evolution—first in astronomy, then in geology and, at last, in biology. He describes the long connection of superstition with medicine—the belief, for example, that the bodies of the sick and insane were inhabited by evil spirits, which could be driven out only by vile medicines, beating or torture. He devotes considerable space to the belief in witchcraft, which led, between the years 1450 and 1650, to the putting to death, mostly by burning, of perhaps a hundred thousand witches in Germany alone; he ascribes this persecution in large part to the biblical text, "Thou shalt not suffer a witch to live."

Mr. Russell then turns to several problems which are still subjects of controversy—the relation of the "soul" to the "body," determinism and free will, the validity of mysticism, the existence of "cosmic purpose," the relation of science and ethics. On the first problem Mr. Russell concludes that in the present state of psychology and physiology, belief in immortality can claim no support from science, and that such arguments, as are possible on the subject point to the probable extinction of personality at death. He rejects determinism as an absolute metaphysical doctrine, but accepts it as a limited working hypothesis for science. He does not agree with Eddington that our discoveries about the nature of the atom have re-established the existence of "free will" either in man or in the universe as a whole. He rejects the claims of the mystics when they assert that the universe is an indivisible unity, that evil is illusory, or that time is unreal;

he does not admit any method of arriving at truth except that of science, but concedes that in the emotional realm the mystical experience may have value. He rejects the belief of such scientists and philosophers as J. Arthur Thomson, J. S. Haldane, Alexander, Bergson and Lloyd Morgan that the universe at least reveals evidence of Cosmic Purpose:

If it is the purpose of the Cosmos to evolve mind, we must regard it as rather incompetent in having produced so little in such a long time. * * * Man, as a curious accident in a back-water, is intelligible; his mixture of virtues and vices is such as might be expected to result from a fortuitous origin. But only abnormal self-complacency can see in Man a reason which Omniscience would consider adequate as a motive for the Creator.

On the relation of science to ethics, Mr. Russell's reasoning is rather curious. He begins by "admitting" that "science has nothing to say about 'values.'" Science is based solely on evidence; "values" are derived entirely from desires and emotions, and there can be no arguing about them. He then arrives at this remarkable conclusion:

While it is true that science cannot decide questions of value, that is because they cannot be intellectually decided at all, and lie outside the realm of truth and falsehood. Whatever knowledge is attainable must be attained by scientific methods; and what science cannot discover, mankind cannot know.

In this passage Mr. Russell in effect identifies "science" with the whole field of knowledge. This can be done only by robbing the word of most of its special usefulness and meaning. Before the appearance of Galileo, "science" as we think of it today hardly existed, yet priests, statesmen, soldiers, courtiers, painters and cathedral builders certainly knew a great deal, even if their knowledge was not "scientific." Science is simply knowledge of a particular sort—precise, tested, and capable of being stated in the form of "laws" or broad generalizations.

The truth is that general knowledge, and even scientific knowledge, have a great deal to say about "values." "Values" are not raw desires and merely instinctive appetites, but the results of interpreting and reflecting upon our desires in relation to the natural world and to other men. Even Mr. Russell's own selected illustrations do not support his contention: "If one man says, 'Oysters are good,'

Bertrand Russell.

From a Drawing by Francisco Soler.

and another says, 'I think they are bad,' we recognize that there is nothing to argue about." But there may be a great deal to argue about. If you can prove scientifically, or even indicate a fair probability, that oysters are either harmful or beneficial to health, you will probably get one man to change his opinion. Even his previous liking or dislike for the mere taste of oysters will be affected by new knowledge of their consequences.

The effect of knowledge (or ignorance) and logic (or illogic) on personal preference is much greater than Mr. Russell implies. And the ultimate desires of different men do not vary nearly as widely from each other as he appears to believe; Fascists and Communists disagree much more because of differences in political and economic interpretation than because of differences in their in-

nate emotional make-up. While it seems improbable that ethics will ever become an exact science, there is no reason to leave it to intellectual chaos. The problem is one, as Mr. Russell has himself recognized on a previous occasion, of most effectively reconciling and harmonizing conflicting desires, both within the individual and between the individual and society. To which it must be added that the intellectual and emotional similarities between men, and their organic social interdependence, particularly in the intellectual and emotional spheres, are much greater than Mr. Russell's argument implies.

But even on the points on which one disagrees—and in a book of this type there will necessarily be many—the discussion is always acute and illuminating. Mr. Russell has endeavored to state opposing points of view with fairness

His final animus, indeed, is not against the "older religion," which has become "purified and in many ways beneficial," but against the new intolerance:

The threat to intellectual freedom is greater in our day than at any time since 1660; but it does not now come from the Christian churches. * * * It comes from governments. * * * It is the clear duty of men of science, and of all who value scientific knowledge, to protest against the new forms of persecution rather than to congratulate themselves complacently upon the decay of the older forms. * * * No liking for communism should make us unwilling to recognize what is amiss in Russia, or to realize that a régime which allows no criticism of its dogma must, in the end, become an obstacle to the discovery of new knowledge. Nor, conversely, should a dislike of communism or socialism lead us to condone the barbarities which have been perpetrated in suppressing them in Germany.

EARLY REVIEW OF RUSSELL'S AUTOBIOGRAPHY

This review of the first volume of Russell's autobiography appeared sometime in 1967 in an unidentified Madison, Wisconsin newspaper. Note the last line indicating the review was issued by the New York Times News Service.

BOOKS

Antidote by Bertrand Russell

"The Autobiography of Bertrand Russell, 1872-1967." 356 pages. Atlantic-Little, Brown, \$2.95.

This relaxed and chatty, if random, memoir (you can hear Lord Russell dictating it) will serve as a happy antidote to the pictures of the testy, waspish, prunefaced figure we have had served up to us in the last decade or so in the press and on television.

There is plenty of bite in these pages, especially in those dealing with his near family and the distant Americans, one of whom he married. But the prevailing impression a reader will take away is of sharply delineated profiles and character sketches that are sympathetic and kind.

Russell in those first 42 years of his life must have had a very winning and understanding nature.

He admired and enjoyed the company of a whole range of people, who in turn admired him. When his marriage had already been on the rocks for years, his wife (not yet divorced) wrote him a tender and loving letter than is one of the most moving incidents in the book.

His reverence for the philosopher G. E. Moore was just short of idolatry. As is well known, he collaborated with Alfred North Whitehead on the "Principia Mathematica" and his chapter on that enig-

matic thinker only whets the appetite for more. He made a strong friend in Gilbert Murray, whose translations of Euripides delighted him. And his friendship with Joseph Conrad, which was not of long duration, ran surprisingly deep.

In his dealings with these people and others lesser known to the public, Russell did not merely while away the time. The days and visits were spent in good talk, in discussion, in searching question and answer. The atmosphere, judging from Russell's writings and the letters included in the book, must have been exhilarating.

It wasn't until he got to Cambridge that he really flowered and felt his own mental power. Russell cannot say enough about that university. The stimulus it provided and the friends, the horizons it opened up made it all that a young man with a devouring intellect could have wished.

After Cambridge the memoirs divide into two lines: his marriage and divorce and the writing of "The Principles of Mathematics" and, with Whitehead, of "Principia Mathematica."

The frequent depression he suffered as well as the paralyzing emotional let-downs give us some idea how arduous such intellectual labor can be.

It was also during this decade that his marriage broke up.

What is missing most from the book is any sense of what his work was about.

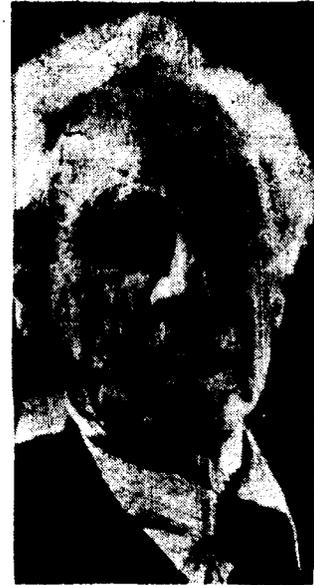

He throws out a hint here and there, but something of more substance was in order. Perhaps he is relying on books like the Egner and Denson volume on the basic writings or the P. A. Schilpp comprehensive survey of his philosophy to take up the slack.

This volume is obviously not a substitute for the life that will be written. On the other hand we will be lucky if

that big book is as good reading as this one.

BERTRAND RUSSELL

(22) ANELLIS REVIEW OF PHILOSOPHICAL PAPERS, 1896-99

Thanks to BRS member Irving H. Anellis for allowing us to use these excerpts from his review of The Collected Papers of Bertrand Russell: Volume 2, Philosophical Papers, 1896-99, edited by Nicholas Griffin and Albert C. Lewis. His much longer full review originally appeared in Modern Logic, vol. 3, no. 2, February 1993, pp. 192-200.

I once heard an undergraduate philosophy instructor seriously proclaim that Bertrand Russell's reputation was so great that, if he chose to scribble notes on bathroom tissue, any distinguished philosophical journal to which he might submit those scribbles would publish them forthwith and without question. Something of this sort has come to pass. It is also popular opinion that Russell could write a paper straight through, without having to make corrections. While this may have become true through many decades of practice on Russell's part, it was certainly far from true for the pre-Principia Russell who had barely finished his studies at Cambridge when the materials included in the present volume were first penned.

This book is the result of a considerable amount of scholarly effort by historians of mathematics, by the secretarial and production staff of the Bertrand Russell Editorial Project (BREP) and the personnel of the Russell Archives at McMaster University in Hamilton, Ontario. It took over a decade for the preparation of this volume; work on it had already begun by Gregory H. Moore and philosopher Nicholas Griffin before I arrived for a one-year stint at BREP in June 1982. After I left, work was taken up again by Moore and Albert C. Lewis, with Griffin providing the continuity during the entire period. Was it worth the effort, the time?...

The materials published in this volume, taken cumulatively, give the impression of a young man, barely out of college, who, having held his thoughts in check while in school, was now impelled by a strong burst of loosed energy too long pent up, to write down every thought he had ever had up to that time. This frenetic work pace, together with the philosophical baggage that distorted Russell's view of the work in analysis and set theory (and most of all of Cantor's work in set theory), might help to account for the egregious errors in Russell's first attempts to understand Cantorian set theory which I have enumerated in previous papers, including, for example, his failure to understand or accept the distinction between natural numbers and the reals. But I am not totally convinced that this by itself, or even in concert with Russell's "poor" mathematical education, is sufficient to explain Russell's difficulties in comprehending Cantor. I spent a year working on many of the materials found in the first part of this volume, and the longer I worked with the materials, the more I felt that there was a deeper problem than Russell's distorting philosophical prism or his poor mathematical training. This may appear to be unfair to Russell, and it leaves the problem of

explaining how Russell could have been so "dense"--excuse the pun--about Cantorian set theory during this time and still have evolved in only a few short years into the titan of logic who co-authored the Principia....

In the end, our sense of disappointment at Russell's lack of mathematical acuity in these writings remains, especially as regards his treatment of set theory and foundations of analysis. We are thus inexorably led to the question of the value of the volume we have here. I found nothing to suggest that the material included in this volume has an intrinsic interest of its own. It neither portends great mathematical achievements from Russell in the future nor presents any long-lasting or significant contributions of its own. If one believes that, at least for the decade or so between 1900 or 1903 and 1913, Russell achieved the status of a mathematical genius as exemplified by his work in logic, then the primary value of this book is in the inspiration it offers respecting the kind of remarkable improvement that can be made in a very short time by a clever and dedicated student--with or without the help of an outstanding mentor such as Whitehead--despite a previously inadequate education. On a more sober note, this book is worthy of the attention of philosophers of mathematics and philosophers of science who wish to trace Russell's development from his early Hegelian idealism to his later realism and learn how the early idealism shaped his thinking in philosophy of mathematics and philosophy of science. It is dubious that even the most dedicated of Russell scholars specializing in philosophy of mathematics or philosophy of science will find it worth the \$150+ pricetag, however. And for the more sceptical, for those who do not believe in miracles that take one from mathematical mediocrity to genius almost overnight, the question remains, whether the unpublished materials that were included in this volume ought not remain unpublished. This was a question which I asked myself when I was working on some of the materials contained between these covers. If they are judged on their own merits alone, without any consideration of the historical context, the reply is clearly 'No.' If, on the other hand, the goal is to provide a complete and accurate portrait of Russell's intellectual development and of the true scope and intellectual level of his work--which is, after all, the purpose of the BREP that prepares for publication the series in which the present volume appears--then the reply is affirmative.

In its physical appearance, this book is magnificent, luxuriant, even ostentatious, with its more than 680 (xl + 647) high bulk, glossy pages and goldleaf trim. From this perspective, its \$150+ price is readily apparent, befitting an author whose archives have taken on certain aspects of a temple shrine, but impractical in its exorbitance for the ordinary scholars who might find these materials of some use.

REVIEWS OF MOOREHEAD AND GRIFFIN

Thanks to Benito Ray for providing these January 16, 1993 Toronto Star reviews of Caroline Moorehead's Bertrand Russell and Nicholas Griffin's The Selected Letters of Bertrand Russell, Volume 1, The Private Years (1884-1914).

Bertrand Russell by Caroline Moorehead Sinclair-Stevenson, 320 pages, \$39.99

By Stephen Vizlincey CAROLINE MOOREHEAD, the English writer who wrote a splendid book about pacifists and conscientious objectors (Troublesome People: Enemies Of War 1916-86) has now written a splendid book about Bertrand Russell, the greatest English philosopher of this century — the greatest, in fact, since John Stuart Mill (1806-73), who happened to be his godfather.

His paternal grandfather was Lord John Russell, author of the Reform Bill of 1832, twice Prime Minister under Queen Victoria, the man who finally freed Catholics and Dissenters from the constraints they had labored under since the time of the Tudors. His parents, who died when he was 2, were both radical freethinkers; his father, Viscount Amberley, lost his seat in parliament because he wrote a pamphlet advocating birth control and refused to swear an oath that he was a Christian.

Bertrand Russell himself lived for 97 years and engaged in most of the major political battles of this century. During World War I he campaigned against conscription so vigorously that he lost his lectureship at Cambridge and even spent 4½ months in prison. Between the wars he attacked both fascism and communism, and from the early 1950s he campaigned for nuclear disarmament. Convicted of civil disobedience, he went to prison again — albeit to the prison hospital and only for a week, because he was nearly 90.

I think everyone alive today owes a debt of gratitude to Russell for alerting Western public opinion to the radically new horror of nuclear weapons and radiation. Moorehead criticizes him for accusing prime minister Harold Macmillan and president Kennedy of being "worse than Hitler," but he was among the first to recognize the importance of a "sound-bite." Nothing calm and reasonable would have produced headlines at a time when world leaders contemplated the possibility of nuclear war with equanimity.

Indeed, the effects of radioactive fall-out were so little understood that the Americans and Russians were still testing nuclear weapons above ground. Russell's hyperbole was needed to shock people into thinking. He was also the main inspirational force behind the Pugwash Conferences of Western and Soviet scientists, which ensured that Khrushchev got the right scientific advice during the Cuban crisis.

But all this is history. Russell's books belong to the present. "I wished to say everything in the smallest number of words in which it could be said clearly," he wrote. I learned English by reading Russell and would recommend him to all readers — though not his first book, Principia Mathematica, produced in collaboration with A. N. Whitehead, a monumental work that can be understood only by outstanding

Radical of the century

BERTIE AND ALYS: Russell's first marriage (to Alys Pearsall Smith, above), was doomed from the start. The young couple's ignorance of sex was astonishing.

logicians. "I'm allowed to use plain English," he wrote later, "because everybody knows that I could use mathematical logic if I chose. I suggest to young professors that their first work should be written in a jargon only to be understood by the erudite few. With that behind them, they can ever after say what they have to say in a language everybody can understand."

Russell's own life makes enthralling reading on the level of the higher gossip. Four times married, the last time at the age of 80 (very successfully, "I'm happy because my glands are working," he said, "that's the whole secret"), he was a tireless punster and a man of passionate contradictions, a genius prone to follies, now lovable now hateful, absurd one moment, profound the next. In one of the best biographies I have ever read, Moorehead does full justice to his private as well as his public life — to his shocking lapses into coldness and indifference as well as his intelligence, charm, humor and almost superhuman energy.

Stephen Vizlincey is the author of the novels 'In Praise Of Older Women' and 'An Innocent Millionaire'. Most recently he has published 'Truth And Lies In Literature', an essay collection.

The Selected Letters Of Bertrand Russell, Vol. 1, The Private Years (1884-1914)

edited by Nicholas Griffin, Penguin, 553 pages, \$47.99

By J. M. Cameron

NICHOLAS GRIFFIN has put together a fine selection of Bertrand Russell's letters, from the time he was a sheltered 12-year-old tutored at home to the start of World War I and the end of his first marriage when he was 32.

In his skilful introduction, Griffin gives a frugal account of his rapid development as a philosopher and especially of his work in mathematical logic — the work on which his reputation chiefly rests — of the "mysticism" that he found himself stretched to, as it were, by his mathematical discoveries. We are given a slight sketch of his first encounter with Wittgenstein, an encounter that was momentous for Russell's own personal development and for the growth of the subject. There is no attempt at a detailed account of Russell's technical work, but enough is given to explain roughly the importance of what culminates in Principia Mathematica, written with Alfred North Whitehead.

For most readers, perhaps, the truly fascinating section of the letters consists of those written to Alys Pearsall Smith, his first wife, and later to Lady Ottoline Morrell with whom he fell passionately in love after he abandoned his marriage to Alys. (Some of Alys' letters to him are included but few from Ottoline.)

One has the feeling that the marriage with Alys was from the beginning strewn with obstacles that these young people lacked the skill to overcome. Both families were opposed to the match.

The opposition was most rancorous on the part of Russell's grandmother, who had raised him after the death of his parents at a young age, and was perhaps the most powerful influence in his life. A stern woman, who, Russell wrote, "never sat in a comfortable chair before dinner," she believed no one was good enough for him. Granny was clear that if the marriage couldn't be prevented, the normal consequences of marriage — children — were to be avoided, on the grounds that the production of mad or otherwise defective offspring was a virtual certainty, given the two family histories.

Alys seems to have acquiesced, though she had qualms about contraceptive intercourse as liable to be injurious to health. One has a suspicion that Russell was skeptical about the eugenic arguments used to defend the sterility of the marriage and we know that Russell was to have children. However, for one reason or another the marriage collapsed.

The letters exchanged between Russell and Alys are full of interest as giving some notion of how emancipated young people of the generation before World War I generation looked at questions of love and marriage. It has to be said that they were in a fog for much of the time and were more ignorant and scrupulous than less educated and worldly people would have been.

At one moment Russell floats the idea that they might severally beget children by those who had had a better prospect of bearing healthy offspring. He apologizes for so indelicate a proposal but Alys, who had more common sense in such matters, tells him not to be a goose. The language in the period of courtship was impossibly high-minded. We hear that Russell read Shelley's Epipsychidion eight times in the course of two years, twice aloud with Alys.

The letters to Ottoline are also exalted and romantic; but this time his partner is a shrewd and worldly woman. She was also highly intelligent, but it seems clear that though she had some sense of the quality of Russell's mind, she never quite understood how brilliant was the feather she had stuck in her cap.

J. M. Cameron is professor emeritus of English and philosophy at St. Michael's College, University of Toronto.

At 90: Lord Russell at a rally against nuclear arms.

NEW HUMANIST REVIEW OF MOOREHEAD BOOK

New Humanist is the quarterly journal of the Rationalist Press Association (15 Lamb's Conduit Passage, London WC1R 4RH, England). In its membership advertisement that organization says, "The aims of the RPA are to argue for a rational approach to human problems, to suggest reasoned alternatives to religious dogmas, to advance a secular system of education, to defend freedom of thought and civil liberties, and to encourage activities in support of these aims." Over the years many prominent persons, including Russell, have been involved with the RPA.

Calling the New Humanist an "excellent journal," Warren Allen Smith provided a sample issue to us--vol. 107, no. 4, December 1992--that included this book review of Caroline Moorehead's recently published Russell biography.

New Humanist Review Bertrand Russell: A Life by Caroline Moorehead (Sinclair-Stevenson, £20)

BERTRAND RUSSELL hasn't done very well by biographers. It is partly his own fault. He was fully aware of the publicity and money value of his life story, and he did his best to exploit it himself. During the last decade before his death, in 1970, he sold his collection of papers to McMaster University in Canada, and then published *The Autobiography of Bertrand Russell* in three volumes (1967-1969) — so on the one hand there is an enormous amount of original material to go through, and on the other he had the first and very good go at it. There have been several studies of his life and thought by friends and relations and by professional philosophers, but the only general biography so far has been Ronald W. Clark's *The Life of Bertrand Russell* (1975), which was long and useful but rather pedestrian, and which is out of print. Caroline Moorehead has now attempted to replace it with a rather shorter and lighter general biography, taking advantage of material which has subsequently become available and talking to more people, giving less detail and concentrating more on the personal life, and looking back from a longer perspective.

Moorehead is a professional writer and has done a professional job, and the result will certainly be welcome to readers who aren't already familiar with the many writings by and about Russell. It is good to have a fresh look at the man who she says was "perhaps the last public sage", and it is also good to have a look by a woman who wasn't personally involved with him. He has suffered the inevitable decline of famous people after death — indeed, he began to suffer it before his death — but after more than twenty years it is stirring to read a new book "about Russell's character and ideas, about his friends and the

women he loved, about the causes he fought for and the sense of wonder and eloquence he brought to everything he touched". But Moorehead, like her predecessors, isn't really capable of rising to the extraordinary pitch of his style or power of his personality. And, like her predecessors again, she isn't really capable of handling the vast range of his interests and activities, and readers who are familiar with particular aspects of the subject will find the book less satisfactory.

I find the treatment of Russell's contributions to politics and to freethought especially weak. His marginal relationship with the anarchist movement is never explored, and his central relationship with the nuclear disarmament movement is often distorted. (For example, the accounts of his associates and followers in the Committee of 100 seem quite wrong to at least one of the latter.) His long relationship with the freethought movement is seriously neglected. Moorehead discusses some of his speeches and writings about religion, but doesn't note that the former were for the National Secular Society and the South Place Ethical Society or that the latter were for the Rationalist Press Association (of which he was president for fifteen years). The crucial point to make is that he was one of the most influential public freethinkers in this country in this century. Even on less familiar ground, I was surprised to find Hegel said to "set out his writings in dialectical triads, consisting of thesis, antithesis and synthesis", when he never did anything of the kind; but then I remembered that Russell himself made the same mistake in his best-known book, *A History of Western Philosophy*! Following current publishing fashion, the book contains an alarming number of minor mistakes and misprints, and it is to be hoped that these will be corrected for the inevitable paperback edition.

From The [Glasgow] Herald, March 12, 1992:

Tormented soul of a closet Romantic

Michelle Griffin, editor.
THE SELECTED LETTERS OF BERTRAND RUSSELL: Volume 1: THE PRIVATE YEARS, 1894-1914
Allen Lane / The Penguin Press, £25 (p. 553)

ALAN BOLD

LIKE the late Tony Hancock I long admired Bertrand Russell. As a populariser of philosophy he (Russell, not Hancock) was in a class of his own; as an irritatingly self-righteous liberal he still made sense on moral issues, as an admittedly muddled political thinker he usually managed to say the right or left things. It was only as he approached his dotage that he began to make an ass of himself on occasions, the celebrated man of reason indulging in irrational outbursts.

Readers of Russell's beautifully written *Autobiography* are often startled by the contrast between the mathematical mathematician and the imp of a man who improvised his private life. When he met Alys Pearsall Smith, the Quaker woman who became (in 1894) the first of his four wives, it was "love at first sight"; when he and Lady Ottoline Morrell "agreed to become lovers" in 1911, he immediately "wanted to leave Alys." This selection of Russell's letters — only one of which (to Frege) has been previously published in its entirety — is dominated by Alys and Ottoline.

In the years covered by Griffin's volume, of course, Russell produced, with A. N. Whitehead, *Principia Mathematica* (1910), a classic of mathematical logic. Yet when Russell finally finished the book, he wrote to Lucy Donnelly on October 18, 1905: "I have been working like a black to get the last bits of revision done in time for my visit to Cambridge tomorrow, and now the MS is packed in two large crates, and now I feel more or less as people feel at the death of an ill-tempered invalid whom they have nursed and hated for years." It is amusing to think how much time and trouble had been spent on small points in obscure corners of the book,

which possibly no human being will ever discover." That anticipates the opinion he expressed, in his old age, of mathematics as essentially trivial, even "disgusting."

Compare the intellectual ennui of the letter to Donnelly with the exhilaration of the letter, in Quakerese, to Alys on January 1, 1894: "I have felt the last remnants of hatred and bitterness melting away in thy love; I will be filled with goodwill to all henceforth and not hate or despise those who are less fortunate than I am. It is delightful to think there is as happy as I am; I have been living all day in a dream of heavenly joy. Dear Alys I cannot write any more only silence is adequate." Though Russell's friend Wittgenstein was to make a philosophical virtue of silence, Russell could never stay silent for long. There are some 50,000 letters in the Russell Archives and Russell published so many books it would take a mathematician to count the titles quickly.

It is evident from the letters assembled by Griffin that Russell was a closet Romantic. In published works and public pronouncements he promoted himself as a supremely erudite rationalist, a man who rested his case on logical clarity. Russell in love was a wildly impulsive creature.

"On March 31, 1911, shortly after his first night of near passion with Ottoline ("I did not have full relations with Ottoline that evening" he explained in his *Autobiography*) he wrote to his new sweetheart: "The world is so changed these last 48 hours that I am still bewildered . . . I see your face always . . . I love you very dearly." Nice one, Bertie, shame about the face — in the *Autobiography* Russell observed that Ottoline had "a long thin face something like a horse."

If a closet Romantic, Russell was an unashamed depressive. A letter of 1893 to Uncle Rollo refers to a "morbidly introspective" nature; a letter of 1914 to Ottoline declares "a very intense and terrible spiritual loneliness." Writing to Gilbert Murray in 1904, 31-year-old Russell felt prematurely old; I feel utter madness for us to join this war.

Bertrand Russell in old age: more the sage than the lover

gentlemen. I shall find to think I needn't bother with politics much longer." Wishful thinking. The last letter in this book dates from August 1914, the month Britain declared war on Germany. Russell told Margaret Llewelyn Davies: "You were right about the Liberals. I have done with them . . . I feel it utter madness for us to join this war."

Some of Russell's letters shed fascinating light on great characters he encountered. On October 18, 1911, he told Ottoline of an odd visit to Trinity College, Cambridge: "an unknown German appeared, speaking very little English but refusing to speak German . . . I am much interested by my German, and shall hope to see him of him."

The unknown German was Wittgenstein. In Harvard, in 1914, Russell possessed one of his pupils in a letter to Lucy Donnelly: "very capable of a certain exquisiteness of appreciation, but lacking in the crude insistent passion that one must have in order to achieve anything." The pupil was T. S. Eliot which goes to show Russell's judgment was not always sound.

Elliot, for his part, caricatured Russell as "Mr Appollinax" (a poem in *Prufrock*) whose "dry and passionate talk devoured the afternoon."

Representing Russell at his most passionate, this selection is obligatory reading for everyone interested in one of the most agile minds and tormented souls of the century.

From The Evening Standard, March 12, 1992 and The Sunday Telegraph, September 27, 1992:

Love and a cool climate

THE SELECTED LETTERS OF
BERTRAND RUSSELL
VOLUME I: THE PRIVATE
YEARS 1894-1914
Edited by Nicholas Griffin
(Allen Lane £25)
COLIN HAYCRAFT

THE ANCIENT Greeks compared philosophers to goats. Both had beards, both wore expressions of apparent profundity. Other aspects of their peculiar behaviour were also in evidence. The Athenians hated Diogenes the Cynic (him of the tub) for embarrassing them in public. What they disliked most was his habit of eating his breakfast in the Agora, rather as itinerant philosophers today can be seen consuming pizzas in Piccadilly Circus. But they also objected to his acts of public self-abuse.

Diogenes affected to despise the sexual act itself. Don't make love to a woman, he said, unless she thanks you for it, a remark only marginally more patronising than "How was it for you?" His performances were solo. After the event he would rub his empty belly muttering: "If only hunger could be so easily assuaged!"

Subsequent philosophers have been more abstemious, or at any rate more private. There is no evidence that Locke, Hume or Schopenhauer, for instance, were anything but virgins. Epicurus was even a vegetarian. Kant ate cream cakes. It was not until Nietzsche died of syphilis in 1900 that sex reared its ugly head again in the groves of academe.

The star performer of the 20th century, it is often said, was Bertrand Russell (1872-1970). But judging by these (excellently edited) letters, his reputation is exaggerated. He is outdone, for instance, by his chief disciple, the late Sir Alfred Ayer, who just before he died (of bronchitis) confided to his daughter that he had notched up 150 — not in the Simonon league, perhaps, but more impressive because probably true.

These letters show that Russell was a slow starter, and no Stokhanovits when he did get started. He was certainly a virgin when he married Alys Pearsall Smith, at the Quaker meeting house in St Martin's Lane in 1894, and sex does not seem to have played a large part in their relationship even at the beginning. It was more a matter of pastoral care.

Alys never really wanted to marry Bertie. His family were do-

ing their eccentric best to forestall them on the grounds that there was inherited madness in both and they should remain childless. But she succumbed to flattery and a sense of duty.

She kept him going emotionally during the period of his greatest intellectual achievement, the work on Principia Mathematica, until the relationship finally petered out and he landed on the wilder shores of Garsington in the arms of Lady Ottoline Morrell.

Ottoline, who emerges from their letters as not half as ludicrous as you might expect, did not want to marry Bertie either. She was married already. Nor did she much care for sex. She had already had plenty of affairs, including a statutory fling with Augustus John. Now she just wanted her mind stretched. She was content to be made love to through the ear.

We, of a generation who have been told repeatedly what women want (apart from shit of the other), will find this less surprising than did poor Bertie, who was pressing her with delayed adolescent passion. Once the First World War had cleared the air, Russell took to popular writing and more regular encounters with women and the world. Under the slithering impact of "an unknown German", Ludwig Wittgenstein, whom he had met on 17 October 1911, he virtually abandoned serious philosophy.

Not the least interesting item in this volume is the account of his gradual awareness of the inextricable error in his manuscript of Theory of Knowledge, pointed out to him by Wittgenstein, a re-enactment in reverse of the logical challenge he had himself presented to Frege 10 years before. Both exchanges, incidentally, reflect immensely well on the participants, who reacted as true scholars without vanity.

This book is full of interest, both human and philosophical. The Letters of Diogenes would have been much more dispiriting.

Colin Haycraft was, until yesterday, managing director of Duckworth.

The vehement philosopher

Paul Johnson on an entertaining account of the long life of the controversial Bertrand Russell

BERTRAND RUSSELL poses enormous problems for a biographer. He was born the year Ulysses Grant became President and died on the eve of Watergate. He was an exact contemporary of Frost but lived to admire revolting students in 1968.

His output of books, articles, broadcasts and speeches was colossal, spanning eight decades. He held vehement views, sometimes four or five contradictory ones, on every conceivable subject. He knew everyone of note and quarrelled with most of them. He was personally involved in almost every intellectual and political controversy of his long life. Though a late starter in sex, he had complex relationships with a large number of wives and mistresses. He got himself into, and out of, every kind of intellectual and emotional mess.

All this is good material — Russell, whatever his faults, was never boring — but the biographer has to sort it out, get the facts straight, distinguish between the important and the ephemeral, fit it into a reasonable length and make the whole thing clear and readable. Caroline Moorehead triumphantly surmounts all these difficulties. Her book is full, fair, messy and compelling.

She wisely recounts and portrays rather than judges. Some would argue that, despite all the sordid and busy, Russell signified little. His greatest work, on which his professional reputation was based, the Principia Mathematica, was written jointly with A.N. Whitehead. As Moorehead says, it made Russell but did little for Whitehead, whom Cambridge insiders whispered had merely done Russell's legwork.

But it may be that Russell got credit which properly belonged to his collaborator, rather as Picasso pinched from Juan Gris the glory of inventing Cubism. Who can say? The work is 1,000 pages long, "so bulky its authors had to hire a four-wheeler to carry the manuscript to the University Press". It was published in three volumes, 1910-13, and it is unclear what it achieved or who read it. Russell himself said he knew of only six people who had read it through: three were Poles, two were Britons and three Texans, "subsequently successfully assimilated" (whatever that may mean).

Of his other books, the autobiography is entertaining but undependable. Power (1939) is a stimulating read but out of date. The Problems of Philosophy is excellent

Bertrand Russell by Caroline Moorehead, Sinclair-Stevenson, £20

and still in print. A History of Western Philosophy is also an enduring success, at any rate in parts, and certainly no one now alive could have written it. Such books ought to be in any good library. The rest can be, and mostly already are, forgotten.

The difficulty for Russell's long-term fame is that he is not associated with any original philosophical "discovery" or approach. He survives more by anecdote than by syllogism. Moorehead relates that he found his pupil Wittgenstein relentlessly argumentative and unreasonably; he refused to accept Russell's proposition: "There is no hip-hipness in this room at all!" even when he went around poking under all the desks without finding one. The episode ended in mutual bad temper, as one would expect.

Russell himself was reasonable and logical only by comparison with other academic philosophers. A man who said: "On a purely statistical basis, Marmalade and Kennedy are about 50 times as wicked as Hitler", could obviously not be relied on to think or talk sensibly. When I once accused him of being illogical, which he often was, he snapped: "Logical fallacies!"

Russell, as Moorehead shows, is most appealing as a character, like Dr Johnson. Her account of his upbringing shows how intellectually stimulating, but humanly defective, it was. His godparents were J.S. Mill and his stepdaughter, one of the first suffragettes. His parents were progressive trendies. God knows where they would have sent him to school. But both died, and his grandmother, Lord John Russell's widow, a strict Calvinist who became a Unitarian, kept him at home.

His first communal life was at a crammer's, then at Trinity, Cambridge. There he was quickly inducted into the Apostles, a freemasonry which tended to promote homosexuality among undergraduates and got them jobs in later life. Russell was never a homosexual and felt a terrified account of one mysterious episode in which the Apostles involved him.

Initially a partisan, he became increasingly keen on sex. He grumbled because his first wife, a Quaker, wore thick "Russell" nightdresses, and discovered promiscuity only after he decided to leave

Bertrand Russell: Knew everyone of note and quarrelled with most of them

her. Thereafter followed much preaching and enacting of free love, affairs, divorces, remarriages and rows, some of which still reverberate. There was much trivia too. Russell lacked a sense of proportion. Moorehead relates that his worst quarrel with his last wife, Edith, occurred over Chinese ideographs, about which neither knew anything.

Russell often displayed a Whiggish worldly shrewdness. He saw through Lenin straight away. He got D.H. Lawrence right too: "One of a long line of people, beginning with Heraclitus and ending with Hitler, whose raising motive is hatred derived from megalomania." Shaw was "a boaster", "a swine"; H.G. Wells was "irritate in the second-rate category".

Russell also had Whig prejudices. He described prison as like being "a delicious book, and some Jew million-

aire bought you and bound you uniform with a lot of others and stuck you up in a shelf behind glass". There was Whig snobbery and off-hand haughtiness too. Moorehead recounts that, when Doris Lessing was driven to Russell's Welsh mountain fastness by a woman friend, to reason with him against wrecking CND, they were received "in icy silence" by both Russell and his last wife.

After a perfunctory discussion, Countess Edith showed them into a double bedroom with the frosty words "I'm sure that's what you like." In the morning they were told by the housekeeper that neither their best nor their bestness was "available".

However, that anecdote, though fair, does not describe the whole Russell. He had immense courage, deep if selective compassion, and generosity, huge energy and limitless interests, plus a

sense of fun. Where Russell was, laughter was never far away — nor rage, either. I was the youngest person present at the famous meeting in Kingsley Martin's flat described by Moorehead, which led to the founding of CND. As I recall, Russell said little, but sat sucking his pipe. When, however, a furious row broke out between Denis Healey and Jack Prentley over the significance of the word "realistic", what Saunderson called Russell's "byways laugh" rang out loud and clear. "Splendid, splendid!" he said.

That is the word: Russell might be wretched, unscrupulous, even ridiculous at times, but there was always a hint of splendour about his spirit and character. It is well conveyed in Moorehead's book, which readers will find more entertaining than anything on the Booker shortlist.

(26)

DEATH OF EDWIN WILSON

This Associated Press obituary appeared in many newspapers, including the Chicago Tribune, March 29, 1993, sect. 2, p. 7. Is anyone aware of what, if any, relationship existed between Russell and Edwin Wilson?

Edwin Wilson, a founder of American humanism

SALT LAKE CITY (AP)—Edwin H. Wilson, a founder of American humanism and a prominent Unitarian Universalist minister, died Friday. He was 94.

Mr. Wilson was the first editor in 1928 of The New Humanist magazine and the first editor in 1941 of The Humanist. He was also a primary author of both "A Humanist Manifesto" in 1933 and "Humanist Manifesto II" in 1973.

Mr. Wilson was a pastor in a

number of Unitarian churches, including the First Unitarian Church in Salt Lake City from 1946 to 1949.

In 1941 Mr. Wilson formed, along with philosopher John Dewey and others, the American Humanist Association. In 1964 he founded the Fellowship of Religious Humanists, an independent affiliate of the Unitarian Universalist Association.

He was named Humanist of the Year in 1979 by the American

Humanist Association. Other recipients of the award have included Carl Sagan, Margaret Sanger, Jonas Salk, Isaac Asimov, Margaret Atwood, Ted Turner and Kurt Vonnegut.

The humanist manifestos characterized the universe as "self-existing" and defined religion as the actions, purposes and experiences that are humanly significant, said the Rev. Barbara Hamilton-Holway of the South Valley Unitarian Universalist Society.

Survivors include two sons.

(27)

NOTES FROM AMERICAN LIBRARIES

A publication of the American Library Association, American Libraries for January 1993, pp. 70-71 included two bits of news that may relate to Russell studies.

"The Rare Book and Special Collections Library at the University of Illinois/ Urbana-Champaign (277 Main Library, 1408 W. Gregory, Urbana, IL 61801) has been home to the renowned H.G. Wells Archive since the 1950s, but at the time of the initial acquisition, numerous letters and other items of a particularly private nature were retained by the family. Now acquired by the library, these coveted materials constitute a purchase that will finally enable scholars to fully access Wells's complex life and its effect on his writings." We look forward to learning if the collection holds Russell-related materials.

"...a new National Security Archive Documents Reader, the Cuban Missile Crisis, 1962, makes previously secret and extremely sensitive papers available to the book-reading public for the first time....\$25 from National Book Company, Keystone Industrial Park, Scranton, PA 18512 (1-56584-019-4, 92-53734)." Again, there may be something here directly or indirectly related to Russell.

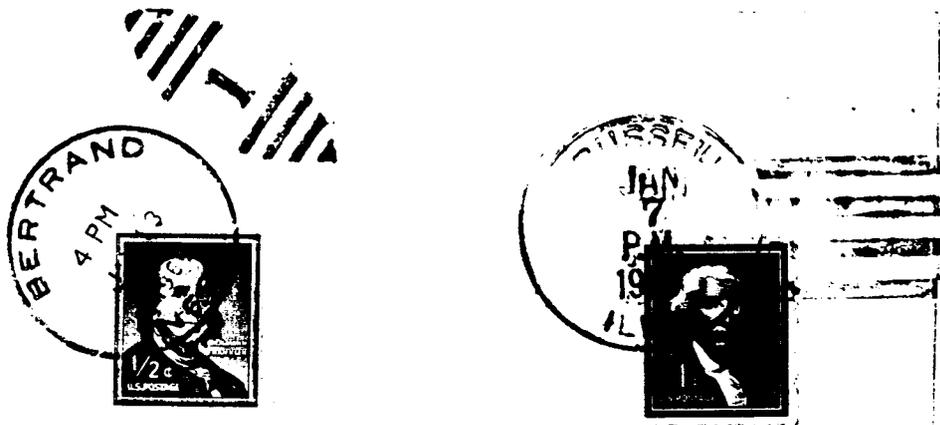

(28)

MORE PHILATELIC RUSSELL

RSN, No. 76, November 1992 reproduced a topical postal cover, autographed by "Bertrand Russell," bearing U.S. post office cancellations from Bertrand, Missouri and Russell, Illinois. Sheila Turcon has provided us with another such hand-cancelled autographed topical cover reproduction, whose original is in the Russell Archives. As shown below, this cover has cancellations from Bertrand, Nebraska on January 13, 1960 and Russell, Illinois on January 7, 1960. According to Sheila, it was sent to Russell on February 17, 1960 by Steward S. Jurist of Brooklyn, New York. Apparently Mr. Jurist actually sent two such covers. Russell probably signed both, kept one (the one depicted), and returned the other to Mr. Jurist.

Sheila also corrected our earlier statement that only India had issued a Russell stamp. In addition to India, commemorative Russell stamps have been issued by Upper Volta and Granada. A future RSN issue will feature reproductions of these stamps.

Thank you, Sheila. Anyone else having more philatelic Russell information is encouraged to write to us.

RUSSELL SOCIETY NEWS

No. 79, August 1993

The Bertrand Russell Society

3802 North Kenneth Avenue Chicago, IL 60641-2814; U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Letters to Russell Society News, a quarterly issued in February, May, August, and November, should be addressed to Donald W. Jackanicz, Editor at the above Chicago address.

For information about The Bertrand Russell Society or to become a member, write to John Lenz; BRS Vice President; 316 Kyle Avenue; College Station, TX 77840; U.S.A.

FROM THE PRESIDENT

Michael J. Rockler, President, The Bertrand Russell Society

As a teacher educator, I often focus on ways to help teachers understand that the behavioral paradigm--an idea popularly known as "behavior modification"--is a limited one for understanding the process of teaching and learning. This model is widely accepted in American teacher education; it was also one embraced by Russell in his first book--Education and the Good Life. When Russell published this volume he was deeply involved in the early childhood education of his first two children, John and Katherine. He apparently had become enamored with behaviorism after reading the works of John B. Watson who was an early proponent of stimulus-response psychology.

Russell ultimately abandoned behaviorism as an educational system. This occurred, in part, because of his experience at the Beacon Hill School and, in part, because of his discovery of Freudian psychology. This change in outlook is reflected in his second book on education--Education and the Social Order. Russell's changed perspective can also be seen in the myriad of other writings on education which BR included in most of his books written for popular consumption (books he called "potboilers").

Russell's views on education were debated by Marvin Kohl and me at the recent annual meeting in San Diego. Those who attended had an enjoyable time. The participants found it pleasant to share long walks for food, great ideas and wonderful company. Harry Ruja presented over sixty slides as he illustrated Bertrand Russell's life in photos at the annual banquet. Two of his daughters were in attendance to see Harry receive the BRS Award. Hal and Joanne Walberg did a marvelous presentation of a reader's theater based on Russell's autobiography. If you weren't in San Diego, you missed an excellent ~~meeting~~ ^{meeting}.

Plan now to attend the 1994 BRS meeting. It will be a joint conference with Free Inquiry and Canadian and International Humanists. The meeting will be held in July 1994 in Toronto. Exact dates and place will be announced later. I hope to see everyone at this special meeting of the Bertrand Russell Society. It is not too early to begin making plans for next summer. Members of the Society who would like to present papers at this meeting should contact me at my new home address: 14213 Chesterfield Road; Rockville, MD 20853. I look forward to hearing from you and to seeing you in Toronto.

(2)

THE 1993 AND THE 1994 ANNUAL MEETINGS

The Russell Society held its 1993 Annual Meeting on the campus of the University of California at San Diego, Friday, June 18-Sunday, June 20. A variety of presentations and activities provided a memorable weekend

experience for those members and guests who attended. The fine San Diego weather, a pleasant campus atmosphere, and the opportunity to interact with others interested in Russell added further to the meeting's success. Our thanks are extended to President Michael Rockler who planned the meeting.

Among the Annual Meeting highlights were:

Paper presentations by Timothy Madigan, "The Will to Believe vs. the Will to Doubt"; Nicholas Griffin, "Lady Ottoline"; Tyler Roberts, "Russell, the Individual, and Society"; Stefan Andersson, "Bertrand Russell's Search for Certainty in Mathematics and Religion"; John Shosky, "Russell and the Contemplation of Philosophy"; Dennis Darland, "What Is Mathematics About?". (Paper abstracts appear elsewhere in this issue.)

A discussion-debate between Marvin Kohl and Michael Rockler on Russell's philosophy of education and other concerns.

A "readers' theater" presentation titled Bertrand Russell Speaks His Mind by Hal and Joanne Walberg. (For more information, refer to the abstracts elsewhere in this issue.)

Presentation of three awards: (1) The BRS Service Award to Marvin Kohl; (2) the BRS Book Award to Nicholas Griffin for The Selected Letters of Bertrand Russell, Volume 1, The Private Years, 1884-1914; (3) the BRS Award to Harry Ruja followed by his "Russell's Life in Photos" presentation.

The Society Business Meeting and the Board of Directors meeting.

Group meals; somewhat lengthy (though pleasant) walks between lodgings, the meeting room, and the dining facility; the Red Hackle Hour at a Mexican restaurant; and the festive Banquet.

More information about the Annual Meeting will be found in the following pages. But now is the time to start thinking about our next Annual Meeting to be held July 8-10, 1994 in Toronto, Canada (exact site to be announced later). The 1994 Annual Meeting will differ from most previous ones by (1) occurring in July rather than June and (2) being held in conjunction with the meetings of two other organizations, i.e. the Humanist Association of Canada and the International Humanist and Ethical Union.

Planning for the 1994 BRS Annual Meeting (and the HAC and IHAEU meetings) is in its early stages. However, if you are interested in submitting an Annual Meeting presentation proposal (a formal paper, a discussion session, a workshop, or whatever), please contact President Michael Rockler (14213 Chesterfield Road; Rockville, MD 20853; U.S.A.). He will be very happy to hear from you.

Toronto is only about 50 miles from Hamilton, home of the Bertrand Russell Archives at McMaster University. A group visit to the Russell Archives is a possibility. An individual trip to the Russell Archives may be in order for those working on Russell research. In any event, being so close to Hamilton is an added reason for coming to the BRS Toronto meeting next year. November's RSN will have more preliminary information on the BRS 1994 Annual Meeting.

(3) MINUTES OF THE 1993 BERTRAND RUSSELL SOCIETY ANNUAL MEETING

Donald W. Jackanicz, Secretary

The 1993 Annual Meeting of The Bertrand Russell Society was held on the campus of the University of California at San Diego, Friday, June 18-Sunday, June 20. Except as noted, events took place in Room 150 of the University Extension Campus building complex.

Friday, June 18

The meeting was called to order at 7:30 p.m. by President Michael Rockler. Following general announcements, President Rockler presented the BRS Service Award to Marvin Kohl. Timothy J. Madigan then read his paper, "The Will to Believe vs. the Will to Doubt." Gladys Leithauser, head of the Book Award Committee, then presented the 1993 BRS Book Award to Nicholas Griffin for The Selected Letters of Bertrand Russell, Volume 1, The Private Years, 1884-1914, after which Prof. Griffin read his paper, "Lady Ottoline." The session was recessed at 9:45 p.m. The Board of Directors meeting was then held outside the Muir College Apartments.

Saturday, June 19

President Rockler reconvened the meeting at 8:30 a.m. Presentations were made by the winners of the first Prizes for Papers competition: Tyler W. Roberts, "Russell, the Individual, and Society" and Stefan Andersson, "Bertrand Russell's Search for Certainty in Mathematics and Religion." The next paper, "Russell and the Contemplation of Philosophy," was read by John Shosky.

With President Rockler in the chair, the Society Business Meeting began at 11:15 a.m. Vice President John Lenz summarized the events of the previous night's Board of Directors meeting. Treasurer Dennis Darland reported a Treasury balance of \$5,308.96. President Rockler provided information about the July 8-10, 1994 BRS Annual Meeting to be held in Toronto in conjunction with meetings of the Humanist Association of Canada and the International Humanist and Ethical Union. Mention was made that Russell Society News editor Donald Jackanicz would like to step down from that position and that a new editor is therefore needed. Vice President Lenz spoke about the Prizes for Papers program and encouraged members to publicize this annual competition. A general discussion ensued concerning how to increase the BRS membership. The Society Business Meeting was adjourned at 11:50 a.m.

The meeting was reconvened by President Rockler at 2:00 p.m., when Hal Walberg and Joanne Walberg presented a "readers' theater" version of the monodrama Bertrand Russell Speaks His Mind. Marvin Kohl and Michael Rockler then read separate papers, respectively "Russell and the Elimination of Fear" and an unnamed paper, that in part related to Russell's educational theories. The session was adjourned at 4:45 p.m.

The Red Hackle Hour took place at Los Torritos Restaurant, about one mile from the University Extension Campus, beginning at 5:30 p.m. Attendees then reassembled for the Banquet at 7:00 p.m. at the University's Third College Restaurant at La Casa. Following the meal, Marvin Kohl presented the 1993 BRS Award to Harry Ruja, who afterward gave an intriguing slide lecture titled "Russell's Life in Photos." The Banquet ended at 9:15 p.m.

Sunday, June 20

President Rockler reconvened the meeting at 9:00 a.m., and Dennis Darland presented his paper, "What Is Mathematics About?" Donald Jackanicz then led a workshop discussion of Russell's essay "A Philosophy for Our Time," which appears in Portraits from Memory. (Another scheduled speaker, Gonzalo Garcia, who was to have read a paper titled "Did Bertrand Russell Think of Himself as a Pacifist?," was unable to be present.) In the absence of President Rockler, the meeting was adjourned by Board of Directors Chairman Marvin Kohl at 12:10 p.m.

(4)

MINUTES OF THE 1993 BERTRAND RUSSELL SOCIETY BOARD OF DIRECTORS' MEETING

John Lenz, Acting Secretary

The Board of Directors convened, together with other interested members, al fresco on the campus of the University of California, San Diego, at 10:15 p.m. on Friday, June 18, 1993. Chairman Marvin Kohl chaired the meeting. John Lenz took the minutes as Donald Jackanicz attended to some of our cars which were the unfortunante victims of vandalism.

The reading of minutes from the previous meeting was waived.

President Michael Rockler expressed concern that the Society's membership had dropped to 230 or 240 members. We agreed to conduct a review of our advertising policy in cooperation with Lee Eisler. Tim Madigan suggested The Humanist of Canada as a possible new journal to advertise in.

On the motion of Treasurer Dennis Darland, the Board voted to move the Society's checking account to Lincoln, Nebraska, where Dennis will soon be moving. This entails closing the existing account near Dennis' current residence.

Marvin Kohl reported that a professor in India (about whom not enough was known at present) was nominated for the BRS Award. It was agreed to refer this to the Award Committee.

There was a desire to continue the "Prize for Papers" program. Nicholas Griffin suggested that students would benefit from a later deadline.

In discussion, a deadline of April 1 was agreed upon. A possible name-change, such as the "Younger Scholars Program," was considered but left to the discretion of the committee.

The current slate of officers was re-elected: Board Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Vice President/Information, Lee Eisler; Secretary, Donald Jackanicz; Treasurer, Dennis Darland.

The Board decided to hold the 1994 Annual Meeting in Toronto in conjunction with the meetings of the Humanist Association of Canada and the International Humanist and Ethical Union. Austin, Texas was proposed for 1995 provided that John Lenz is still living in that area to make the arrangements.

Michael Rockler introduced the proposal of the CIGNA Company to sell insurance through the BRS, with the Society to receive a percentage of all premiums sold. He stressed the Society's need to promote its financial health. Several Board members voiced their reservations, and the consensus was to not pursue this matter.

Marvin Kohl reported on Thom Weidlich's proposal to organize a mock trial of the City College case for a future annual meeting. This will be considered further.

Michael Rockler proposed raising dues in two categories, "Student" and "Limited Income," to \$20. Both are currently \$12.50 and have not been raised in some time, and a high percentage of members claims one of these two categories. The current rate hardly meets our costs for the newsletter and Russell subscriptions. Dennis Darland seconded this motion, and it passed unanimously. It was also decided to request a copy of a student ID for membership in the "Student" category, in accordance with common practice.

The meeting was adjourned at 11:55 p.m.

(5)

PRIZES FOR PAPERS COMPETITION

A sheet titled "Announcing Prizes for Papers" accompanies this RSN issue. As the sheet indicates, this is the second year for the Prize for Papers competition, which replaced the former BRS doctoral and masters grants program.

We congratulate the two 1993 Prize winners, Tyler Roberts and Stefan Andersson, who presented their papers at the June Annual Meeting in San Diego. Congratulations, too, go to Alex Lo and Santosh Makkuni, who received Honorable Mentions in the competition.

The Prizes for Papers announcement will be mailed to a number of universities, colleges, and organizations in Canada and the United States. The high cost of mailing prevents us from sending announcements to institutions in other countries, but this is indeed intended to be an international competition.

All BRS members are encouraged to publicize the Prizes for Papers competition at universities, colleges, and other appropriate institutions in their area.

If you have questions about this program, please contact BRS Vice President John Lenz (Department of Modern and Classical Languages; Texas A & M University; College Station, TX 77843-4238; U.S.A.).

(6)

NEWS ABOUT THE NEWSLETTER

1. Contributions Sought. All members and interested non-members are invited to submit materials to Russell Society News editor Donald Jackanicz (3802 North Kenneth Avenue; Chicago, IL 60641-2814; U.S.A.) for possible newsletter use. If in doubt as to their appropriateness, nevertheless please send in your materials. Of particular interest are your original Russell-related book reviews, short essays, letters, questions for the membership, etc. Thanks.

2. How to Help the BRS Save on Postage Expenses. As the majority of BRS members have U.S. addresses and since the newsletter is prepared in Chicago, we are fortunate to be able to use inexpensive U.S. third class non-profit organization mailing rates for most of our mailings. If you are moving, we would very much appreciate receiving early word of your new address. This will insure getting your newsletter to you without unnecessary delays and in some instances without costing the BRS additional postage. When a newsletter sent to a U.S. address is returned to Chicago because of an address change, we must pay both the first class postage due on the return and, as a courtesy to the member that will speed things up, first class postage on the replacement mailing. This procedure ends up costing the BRS considerably more postage money than would otherwise be the case if members who have or who are about to move would promptly let us know their new address. Thanks to thoughtful members who have helped with this in the past and who will do so in the future.

3. A NEW NEWSLETTER EDITOR IS NEEDED. Donald Jackanicz, who succeeded Lee Eisler as Russell Society News editor, would like to step down from this position. Don, who has edited eight BRS newsletters over two years, hopes to be able to devote more time to other pursuits, including some relating to Russell and the BRS. Until his successor is found, Don will continue as editor, but he would strongly prefer for his successor to be decided on by early 1994. If you are interested in assuming this role of considerable importance in maintaining the BRS's identity in the period between annual meetings, please contact Don (address above) or President Michael Rockler (14213 Chesterfield Road; Rockville, MD 20853; U.S.A.). It is quite a task to produce RSN every three months, but it is work well worth doing.

(7)

ANNUAL MEETING PRESENTATION ABSTRACTS

Six of the persons making presentations at the June 18-20, 1993 BRS Annual Meeting in San Diego provided these presentation abstracts. (There are only five abstracts as two of the six presenters made a joint presentation.)

1. Marvin Kohl, "Russell and the Elimination of Fear"

Russell's claim is that all fear is bad; that fear is the primary emotional-attitudinal evil because it produces the most detrimental kind of helplessness and unhappiness; and that all fear (both conscious and unconscious) can be eliminated. This paper agrees that fear is often a great enemy against which we must do primary battle. But it presents evidence which suggests that fear may be much more intractable than Russell would have us believe.

2. Tim Madigan, "The Will to Believe vs. The Will to Doubt"

Bertrand Russell was concerned that William James' doctrine of "the will to believe," which held that people have a right to believe what satisfies them provided there is no evidence against this, could lead to unsatisfactory consequences for both the individual and for society as a whole. While Russell's caveats are themselves difficult to prove empirically (many people seem to function very well adhering to beliefs they cannot prove), one can still admire his defense of honesty and the virtue of seeking the truth.

3. Harry Ruja, "Russell's Life in Photos"

The illustrated lecture by Harry Ruja presented photos of Russell at various significant moments in his life. There was first a portrait of him at two years of age when he had already lost (or was about to lose--there is some uncertainty as to the exact date of the photograph) his mother, followed two years later by the death of his father, and two years after that by the death of his grandfather, at age 86. This experience at an impressionable age of the successive deaths of members of his immediate family may well have produced in his temperament a lifelong propensity to anticipate disaster, indeed even the end of life on this planet. This tendency was reinforced by the spectacle of civilized nations during the years 1914-1918 sacrificing their youth to national pride and ambition.

Counteracting this dark element in Russell's temperament was the love and care he received from his grandmother, a woman of remarkable intellectual accomplishments and liberal views.

Photos were shown of Russell standing in front of the Bow Street Court where he was tried twice for obstructing the government's military goals. We saw him with his wives on different occasions soon after his first marriage, in China with the woman who was to become his second wife, with his third wife during the difficult days when his moral fitness to teach at CCNY was challenged, and with his fourth wife trying together to arouse public opposition to nuclear weapons and nuclear war. Samples were exhibited of the work of various political cartoonists and photographers who were fascinated by his unconventional political roles, his profile, and his attachment to his pipe.

Russell angry, Russell anxious and apprehensive, Russell energetic and upbeat, Russell affectionate, Russell happy--the gamut of his emotions was exhibited in the illustrations.

4. John Shosky, "Russell and the Contemplation of Philosophy"

Students always ask, with great justification, "How does one do philosophy?" Perhaps because the methodology is so highly personal to many philosophers, educators ask them to study the history of philosophy and then hope that these students will uncover a set of common approaches, usually in terms of themes and results. But reading about how others do philosophy has only a limited application, and the history of philosophy is sometimes a diversionary tactic, offered up to substitute for a real answer to this simple, straightforward question. Students are asking for a methodology in order to learn how to do philosophy, and instead we often train them to be philosophical historians or critics, opening the door for Foucault, de Man, and Derrida to turn criticism into philosophy. Russell, so often accused of inconsistency, was rather most consistent in following a productive methodology. I argue that there are seven common methodological themes. Based on his constant premise that knowledge is possible, and that the truth can be known, Russell asks us to 1) assume a posture of dispassionate inquisition, 2) formulate testable beliefs, 3) utilize a process of philosophical analysis (putting problems under a "logical microscope," and shaving problems and solutions down to their most elementary, necessary constituents with Occam's razor), 4) use the techniques of logic whenever appropriate ("logic is the essence of philosophy"), 5) redirect the emotions to embrace a love of mankind and a love of wisdom, 6) exercise reasonable tolerance (opening the door to new ideas without embracing philosophical rubbish), and 7) set aside ample time for philosophical contemplation, remembering that there is no substitute for hard work. If this paper is successful and accurately reflects his methodology, it could be offered as Russell's answer to the

student's perennial question -- How does somebody do philosophy?", and it could help that student to become a philosopher instead of only a historian or a critic.

5. Hal and Joanne Walberg, Bertrand Russell Speaks His Mind

The Walbergs presented an hour long 'readers' theater' version of a script for a monodrama, Bertrand Russell Speaks His Mind, constructed from the Russell corpus. The final version of the script is intended for a fully staged theatrical production to be performed by a graduate student in Theater Arts at Mankato State University at some future time. In the 'BRS-San Diego' version, Russell addressed the themes of mysticism and logic, war and peace, doubt and faith, and youth and old age. Russell was characteristically profound in his remarks about men, women, sex, love, the quest for certainty, burglars, officers-of-the-court, religious prophets, philosophers, and other essentially comic subjects.

BRS AWARD PRESENTATION TO HARRY RUJA

At the June 1993 Annual Meeting, BRS Board of Directors Chairman Marvin Kohl presented the 1993 BRS Award to Harry Ruja. We would again like to salute Harry for his years of Russell scholarship. Here is the text of Marvin's presentation ceremony remarks:

We have all felt, and benefited from, Harry Ruja's presence. He has been a robust member of The Bertrand Russell Society since 1974; a board member, board chairman, Life Service Award recipient, program participant, and frequent contributor to the Russell Society News.

Harry has had a distinguished academic career: BA with honors in philosophy, UCLA, 1933; MA, University of Chicago, 1934; Ph.D., Princeton University in 1936. In 1955, he published Psychology for Life, one of the best psychology textbooks of its time; edited Mortals and Others, Bertrand Russell's American Essays in 1975; and is co-author, with Kenneth Blackwell, of two forthcoming volumes entitled A Bibliography of Bertrand Russell. He is the author of many reviews, letters, and articles. My own work was influenced by his paper "Russell on the Meaning of 'Good'," one of the four works cited by Paul Edwards in his Encyclopedia of Ethics article on Bertrand Russell.

Few men more naturally abhor cognitive exaggeration. Like Russell, he passionately advocates going by the evidence and foregoing belief where adequate evidence is lacking.

Most important, Harry is a living example of a highest kind of courage. The kind of courage described by Russell as the ability to

control the impulse of panic fear, and to continue working calmly and rationally in the face of danger and great physical adversity.

It is with admiration and much affection that I present this plaque on behalf of the Society. The inscription reads

The Bertrand Russell Society Award to Harry Ruja
In recognition of
His distinguished contributions to Russell scholarship,
Devotion to the ideal of rationality,
And his inspirational fortitude.

GORDON HALL ASKS FOR HELP

We received this June 10, 1993 letter from Gordon I. Hall (P.O. Box 4193; Sevierville, TN 37864; USA). If you can be of help, please write to him.

As a new member of the BRS I have had occasion in my readings and in those of AHA which I have also joined to come across the name of Prometheus on several occasions. Do you know of any other contrarian publishers who might be persuaded to accept an unsolicited manuscript with a distinct humanistic bent?

If you are unable to suggest someone, could you put me in touch with someone who could? Your help in this matter is very much appreciated.

Sincerely,

GORDON I. HALL

(10)

WHO WAS IAN DRYDEN?

Bob Davis located this Ian Dryden obituary in a June 1993 Los Angeles area newspaper. Note the statement that Dryden was once BR's private secretary.

■ **Ian Dryden; International Photojournalist**

Ian Dryden, 48, international photojournalist whose work was exhibited in the United States, Mexico, England and Scotland. Born in London and brought up in Wales, Dryden studied engineering and architecture in Edinburgh. After a year as private secretary to Bertrand Russell, he delved into photography. Moving to the United States, he worked as a staff photographer for the San Diego Union and then the Los Angeles Times, leaving in 1985 to become a free-lancer. He worked as company photographer for many theater groups including the LA Actors Theater Center, San Quentin Drama Workshop and the San Diego Dance Theater. On May 30 in Cambridgeshire, England, of lung cancer.

The obituary does tell us who Dryden was, but what more is known of his BR connection? No Dryden index references appear in BR studies we checked. Does anyone have more information on Ian Dryden?

(11) BOARD OF DIRECTORS NOMINATIONS SOUGHT

We admit it. We should have had this "Board of Directors Nominations Sought" article in the May issue so that a directors election ballot could have been in this August issue. Doing so, in turn, would allow for the election results to be announced in the forthcoming November issue. Yes, it is our error, but here is how to resolve this problem.

We now invite members to nominate themselves or other members for 3-year Board of Directors terms beginning January 1, 1994. Eight directors are to be elected. (There are 24 elected directors, each with 3-year terms, of whom one-third are elected each year; in addition, BRS officers are ex-officio directors.) The ballot will appear in the next RSN, i.e. the November issue. In 1994, we will revert to the time-honored tradition of doing this in a more timely manner.

The duties of directors are not burdensome. They are occasionally asked their opinion about some BRS issue by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. A brief statement about the candidate should accompany a nomination. Send nominations to the newsletter: BRS; 3802 North Kenneth Avenue; Chicago, IL 60641-2814; U.S.A.

The directors whose terms expire at the end of 1993 are Irving Anellis, Bob Davis, Bob James, Hugh Moorhead, Chandrakala Padia, and Harry Ruja. (Due to an anomaly, only six--not eight--terms are expiring.) Each of these directors is eligible for reelection.

Remember--nominations are being sought. Let us hear from you.

(12) A NEW BOOK AND A NEW FILM ABOUT WITTGENSTEIN

We thank Steve Shafer for informing us about the appearance of a book, Wittgenstein: The Terry Eagleton Script, The Derek Jarman Film (London: British Film Institute, 1993) from whose cover the following is quoted. Russell is among the characters portrayed. We will report more on this book and this film in the November RSN.

Wittgenstein, Eagleton, Jarman--an astonishing montage of names: the greatest philosopher of the twentieth century, the leading Marxist critic of his generation, and the most controversial British film-maker ever. The result is one of the most brilliant films ever made: biography, social history, philosophy lesson. One film, two scripts. This book includes both Eagleton's original screenplay and the very different film that resulted from it.

(13) TREASURER'S REPORT

Treasurer Dennis J. Darland submitted this report for the quarter ending June 30, 1993.

Beginning Balance, April 1, 1993	\$7,556.46
Income

(15) COMMENTS FROM LOUIS K. ACHESON JR.

At the June 1993 Annual Meeting, Don Jackanicz led a workshop discussion on Russell's essay "A Philosophy for Our Time," which appears in Russell's book Portraits from Memory. Louis K. Acheson Jr., who participated in the discussion, accepted Don's invitation to formalize his comments, shown below.

A Philosophy for Our Time
(Comments on a Essay by Bertrand Russell)

Russell begins by stating that "the first thing philosophy does or should do is to enlarge intellectual imagination." He also suggests that science helps man to escape from a local perspective.

Russell talks about different pictures of the universe. Some philosophers have thought there is nothing in the world but mind, that physical objects are really phantoms. Others have thought that there is nothing but matter and that what we call "mind" is only an odd way in which certain kinds of matter behave. Russell suggests that practice in appreciating these different world pictures stretches the mind and makes it more receptive of new and perhaps fruitful hypotheses.

I want to comment on how the science of quantum mechanics is changing our perspective on man's place in the universe. Quantum scientists have been probing ever deeper into the nature of physical reality since Russell wrote these words in the 1950s. And the deeper they go the more it appears that man is an integral part of the shape the universe takes on its innermost level. Man, and more specifically consciousness, is not just "something accidental and trivial in a space-time continuum", as Russell here suggests that science might conclude.

The first person to suggest that quantum theory implies that reality is created by human consciousness was not some crank on the fringes of physics but the eminent mathematician John von Neumann, in his quantum bible Die Grundlagen. Numerous articles and books are being written today attempting to show that the model that most clearly describes what physicists are now finding is that reality is more understandable in terms of a space-time-consciousness (or space-time-spirit) continuum than just a space-time continuum. I must add that not all physicists believe this.

One of the things that bothers me about the position of humanists generally, as evidenced in such publications as Free Inquiry, which was distributed at the present conference, is their "certainty" that there is no such thing as a spiritual dimension in which man interacts with the universe. I'm skeptical of this position. I am not talking about theology here, not about concepts of God, only about the way in which men interact with each other and with the universe.

I strongly agree with Russell's views, expressed elsewhere, on the

generally harmful effects that organized religions have had throughout history, but I feel the humanists are throwing out the baby with the bathwater through failure to understand the underlying spiritual nature of the universe.

I reiterate Russell's assertion that the first thing philosophy should do is to enlarge intellectual imagination.

LETTER FROM PAUL M. PFALZNER

In response to book reviews reproduced in RSN, No. 78 (May 1993), Paul M. Pfalzner wrote this letter to the RSN editor:

1993-06-01

...

Dear ... [Editor],

As someone born in Vienna, I am not greatly amused when a prominent Austrian is identified as German. It's almost as galling as transmuting a Canadian into an American

In RSN 78, Ludwig Wittgenstein is referred to as "an unknown German" at least three times in two different reviews. It is true that this appellation seems to be taken from a 1911 letter Bertrand Russell wrote to Ottoline Morrell. A footnote might have been appropriate to point out Wittgenstein's true nationality, since Russell was very well aware of this fact, see p. 98, vol. 2 of the Autobiography ("I knew Wittgenstein first at Cambridge before the War. He was an Austrian...").

An unrelated further comment: When Russell castigated British Prime Minister Harld Macmillan and U.S. President Kennedy as being "worse than Hitler", he was not trying for a "sound-bite" (Vizinczey's review p. 21) or "could obviously not be relied on to think or talk sensibly" (Paul Johnson's odious review, p. 24), but expressed his deep revulsion at their willingness to use atom bombs in a world conflagration.

Sincerely,

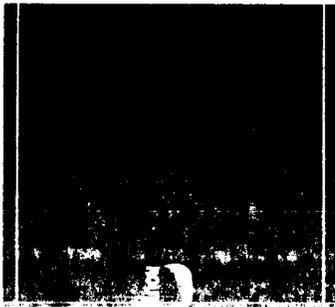

PAUL M. PFALZNER

(17)

CONRAD RUSSELL ON ACADEMIC FREEDOM

Steve Shafer informed us of the availability of Conrad Russell's book, Academic Freedom, published this year in paperback by Routledge (xi, 119 pp.). We congratulate Lord Russell on the appearance of his fine volume, whose front and back covers are shown below. Lord Russell is an Honorary Member of The Bertrand Russell Society.

Academic FREEDOM

'...a brilliant book, sparkling, hard, rock-like...I greatly enjoyed it.'

Mary Warnock

'Lord Russell's *Academic Freedom* examines this venerable and much studied issue with refreshing insight, candour and uncommon even-handedness. It is a contribution of no small consequence to the field of higher education in general and will be particularly helpful to those engaged in the funding, governance and administration of universities in the commonwealth countries and in United States of America.'

David Pierpoint Gardener, former President of the University of California

'This book is an extraordinarily lucid account of what academic freedom means and of its importance for the academic world...It could not be more topical.'

Lord Grimond

The ideal of academic freedom is the cornerstone of higher education. Increasingly however, State control has encroached upon the Universities' traditional freedoms. Conrad Russell, uniquely experienced and knowledgeable, confronts this controversial clash between University and State. By examining the rights and conflicting demands of the two, Professor Russell redefines the powers of both.

Have Universities the right to run their own affairs? What duties do Universities owe to the State? Have Universities the right to public money? What are the limits of the State's power to control academic freedom? *Academic Freedom* addresses these questions and more in an informed historical and philosophical account of the nature of academic freedom.

Conrad Russell is Professor of British History at King's College, University of London and a member of the House of Lords.

STROMBERG REVIEWS PADIA BOOK

Dr. Wayne H. Stromberg of the Foreign Language Laboratory of San Diego State University submitted this review of Chandrakala Padia's Liberty and Social Transformation: A Study in Bertrand Russell's Political Thought.

Liberty and Social Transformation: A Study in Bertrand Russell's Political Thought. Chandrakala Padia. New Dehli: Heritage, 1992. i-xii; 1-140; bibl. 141-146; index 147-151.

Professor Padia's book on Russell's political philosophy seems to fill a lacuna in the literature on Russell rather nicely. She examines the range of Russell's political views from the age of seventeen until his last writings on politics, and provides a very useable introduction, not only to Russell's thought on political matters, but to views recently advertised in the literature on his writings in politics and political philosophy. Her apparent audience is educated laymen and others who seek such a survey.

Russell is not generally regarded as a political philosopher. Padia indicates that in fact he was the author of a novel version of liberalism, one which departed from the familiar views exhibited in the works of Locke, Mill, or Bentham. Russell's political views rest on a (fairly rudimentary) psychology of human impulse. The virtue of the concept of impulse in his thought, Padia contends, is that with it Russell may "build a bridge between individual and collective ends, initiative and social order, freedom and authority. All good things, for him, arise out of impulse." (39) So do a number of other things, it seems; for instance, impulses may be destructive and warlike, and may accordingly influence the behavior of individuals and states. Impulses provide a kind of motive energy for human desire and action when they are modified or directed by conscious thought; thus, impulse and conscious thought seem to be the primary drivers of human behavior.

Creative impulses are apparently distinguished by the fact that what is created (a work of art or craft, a novel, an historical tome) is accessible to all. Possessive impulses, in contrast, tend to restrict access to creations, inventions, and the like. Creative impulse is essential to the good life, for that life is, for Russell, something of a celebration of the nonacquisitive: it is a "blended functioning of instinct, mind, and spirit," where mind is impersonal thought, and spirit is impersonal feeling.

These views lead Russell to a staunch defense of liberty, but not via quite the same defense of individualism as we see in (for instance) Mill. For if the expansion of man's creativity is the goal of social life, then the state may play a positive role in promoting creative impulses. Where Mill saw the state as (most often) a regrettable intruder

in the marketplace of ideas, Russell's views would have it that the state should assume the role of nourishing and supporting the creative element in human nature. With his comparative emphasis on creation and production, there is some de-emphasis of acquisition and the analogy of the marketplace. With his emphasis on the role of nourishing the creative impulse which society may play, there is a devaluation of the conception of society as a congeries of morally independent and autonomous beings. (And these are among the reasons why it is difficult to imagine some of Russell's ideas--a "vagabond wage" for artists, for instance--coming from Mill.)

This short book is a success at most of what the author sets out to accomplish. The survey of the relevant arguments in the literature is very good and very helpful; the book (and especially its first and last chapters) is quite useful for this. The bibliography is a very good guide to sources. Padia raises substantive points, primarily on Russell's views on impulse and on the comparison of Russell with Mill and other liberal theorists. Occasionally it's easy to wish she had said more: the book would be improved by inclusion of materials on the fate of theories of impulse and drive in contemporary psychology. Such criticisms aside, she has met her apparent objectives very well.

It is pleasant to note that the book displays very few errors in mechanics and format. The index could use improvement here and there; for instance, Russell's critics are listed under "Criticisms of Russell" but are not otherwise included, so a reader who wishes to review the author's remarks on Antony Flew's criticisms will find no listing under "Flew."

(19)

RUSSELL IN THE MANUSCRIPT MARKET, I.

Autograph Catalogue No. 4 of Main Street Fine Books and Manuscripts, (301 South Main Street, Galena, IL 61036), issued in early summer 1993, includes this Russell entry on page 23:

127. Russell, Bertrand (1872-1970). British philosopher and mathematician awarded the 1950 Nobel prize for literature. ANS [Autograph Note Signed], 1 p, 5 3/4" x 6 1/2", The Commander Hotel letterhead, Cambridge, MA, 1940 Nov. 23. Addressed to Mr. Upton. Very good. Very small show-through in center from tape stain on verso.

Regards a lost letter; regrets having no photograph to send. Comes with book-weight picture of Russell.

POCH SUZARA ON RELIGION AND SCIENCE

8 May 23, 1993

BAGONG BUHAY

EDUCATION

Science and religion

By POCH SUZARA

Science is a tool. It is a human invention. It is not perfect; but it works. It can be misused. It can heal in detail; but it can also kill wholesale. But thus far, it is the best tool we have for understanding the world around us and therefore understanding ourselves. Indeed, we do science and with it we improve our lives.

Science is self-questioning and a self-correcting enterprise. It is on-going and applicable to everything. It has two simple rules: First: there are no sacred truths, no sacred books; all assumptions must be critically examined; argument from authority is worthless. Second: whatever is inconsistent with the facts must be thrown out the window or revised.

Behind science are simply the scientists. When science is misused, however, it is often misused by ignorant men and women. But if religion had welcomed science instead of waging war against her during the centuries of the Spanish inquisition - imprisoning, punishing, torturing, and executing by burning alive or hanging men of science and other thinkers - surely, today, in the religious community, there should be less fear and ignorance about what science is all about.

Can science and religion work together under mutual cooperation for the benefit of mankind? Can science, which is always tentative, ever be compatible with religion, which is always dogmatic? How can religion that closed the human mind with fear tolerate science that opened up the human mind with courage and curiosity? The suppression of uncomfortable ideas may be commonplace in religion, but it is not a path to knowledge; it has no place in the business of science.

It is the practice of theologians to laugh at science because it changes. "Look at us," they say, "what we asserted at the council of Nicea we still assert: whereas what the scientists asserted only two or three years ago is already forgotten and antiquated." Men who speak in this way, according to Bertrand Russell, have not grasped the great idea of successive approximations. When a change occurs in science, as, for example, from Newton's law of gravitation to Einstein's, what had been done is not overthrown, but is replaced by something slightly more accurate.

Pope John Paul II said that: "Science can purify religion from error and superstition; religion can purify science from idolatry and false absolutes." But upon what grounds can religion purify science from idolatry and false absolutes when there is no such thing as idols or false absolutes in science? There is nothing sacred in science; She rejects final truths. Science is a never-ending process. "The scientific temper of mind," wrote Bertrand Russell, "is cautious, tentative, and piecemeal; it does not imagine that it knows the whole truth, or that even its best knowledge is wholly true. It knows that every doctrine needs emendation sooner or later, and that the necessary emendation requires freedom of investigation and freedom of discussion.

Scientists do not castigate; for the sake of scientific accuracy, they instead liberate. In the scientific community, no scientist is damned for such things as heresy or blasphemy.

Past wars have been declared because of religious conflicts and disagreements. In scientific disagreements, however, what is declared is not war but open discussion, further experimentation, deeper analysis, more research, and closer observation, if not reformulation of mathematical equation.

Science gives us knowledge. Religion, on the other hand, should give us wisdom so that we may use knowledge wisely. But religion has failed to do so because she fears knowledge, especially the growth of knowledge. How then can religion hope to purify science of anything?

Everything in this world is connected with everything else in a delicate and complex web of inter-relationship. Indeed, science tells us that each and every one of us are all part of nature and that nature is part of us.

Religion tells us the exact opposite - that we are apart from nature. And that this world, the world of people and nature and the flesh is depraved and unworthy to those who seek the religious life. The natural world is merely a stopover on our journey to the next world. Therefore the less attention placed on it, but the more anticipation placed on God's kingdom, the better. The purpose of religion is not to achieve things, but to seek salvation.

Again, religion tells us that after death our bodies will turn into dust. Science entirely agrees. But sci-

ence is only some four hundred years old; but, she has already proved herself far more beneficial than religion has been to mankind.

The science of medicine alone can attest to that fact. Religion says that faith can move mountains. Science says that it is not necessary to move mountains as it is more important to remove the mountain of fear and ignorance and superstition off our way of life.

Religion, however, will not evaporate; we shall go on looking for something greater than ourselves, that we may love and respect. But science has already proved to us, in more ways than one, that the human family, our country, this world - our planet - are all bigger and much greater than we

are. Therefore, if we hope to survive as a species, those are the beauties that we should love and respect.

And science, with its power of reconstruction, or total destruction of life itself, has given us choices today: either we all begin to learn to live together in peace and in love with one another as a human family in this world; or, we can all die together and carry on human stupidity finally into infinity.

(Author's note: I would like to acknowledge that in writing this article, I have taken much from Bertrand Russell's SCIENTIFIC OUTLOOK and THE IMPACT OF SCIENCE ON SOCIETY; also, from Carl Sagan's COSMOS; and from WILL Durant's THE PLEASURES PHILOSOPHY.)

This recent article, incorporating themes from Russell's books The Scientific Outlook and The Impact of Science on Society, was written by Poch Suzara, founder and head of the BRS Philippine Chapter.

WE CELEBRATE THE BIRTHDAY OF BERTRAND RUSSELL
 THE 20TH CENTURY'S VOLTAIRE --
 WHOSE WISE AND WITTY WORDS
 ON THE CONDUCT OF LIFE --
 AND
 ON UNDERSTANDING THE WORLD --
 HAVE ENRICHED OUR LIVES

NOW LET US RISE AND RAISE OUR GLASSES
 TO HIS MEMORY

[ALL RISE AND RAISE THEIR GLASSES]

TO BERTRAND RUSSELL

An interesting feature of the evening was a page prepared by Kate, headed "May 18th's Place in History." It is reproduced (reduced in size) below, and well worth looking at.

We hope to announce the 1994 birthday celebration in the February 1994 Russell Society News, with the idea of reaching a larger audience.

HAPPY BIRTHDAY BERTRAND ARTHUR WILLIAM RUSSELL !!
 Saturday - May 18th, 1872

 May 18th's PLACE IN HISTORY

NEWS FROM AND ABOUT LEE EISLER, III

Steve and Sue Shafer, whose family lives in the Allentown, Pennsylvania area, sent us this July 26, 1993 clipping from the Allentown Morning Call. We are happy to see Lee, his new book, and The Bertrand Russell Society receive publicity in this way. (L.V. stands for Lehigh Valley.)

L.V. man's book coming out on Bertrand Russell

By TIM BLANGGER
Of The Morning Call

Center Valley's Lee Eisler, a founding member of the Bertrand Russell Society, will have his work, "The Quotable Bertrand Russell" (\$16.95; 336 pp.) published next month by Prometheus Books.

Eisler, who worked on the book for several years, spoke about it in a story on the Russell society that appeared April 5, 1990, in A.M. Magazine.

The society promotes the ideas of Russell, a noted British philosopher who won the Nobel Prize for literature in 1950 and wrote on various topics, from politics to religion to mathematics. Russell was an early supporter of the anti-nuclear movement in Great Britain.

Eisler, who is listed as the book's editor, said he wanted to compile a book of Russell's quotations on a variety of subjects, to make the philosopher's ideas more accessible. A hardcover book containing Russell quotations was published several years ago, but that cost \$30. It no longer is in print.

Eisler's book is set up in a question-and-answer format. A series of questions, and Russell's responses, are listed under 150 topics, such as math, civilization and Marx.

RUSSELL IN THE MANUSCRIPT MARKET, II

Catalogue No. 70 of David Schulson Autographs (11 East 68th Street; New York, NY 10021), issued in late spring 1993, has this BR entry on page 40:

127. Russell, Bertrand. (1872-1970). English author, mathematician, and philosopher; awarded Nobel Prize for Literature (1950). Signed original charcoal drawing of this controversial thinker, ca. 1960, by the noted artist Swamy, small 4to. Drawn in brown charcoal. He is shown bust-length in old age....Exceptional for display. Very attractive. \$500.00.

such a striking young woman, and thought that perhaps something more than admiration was being offered. Asquith and Cramb made advances, and were rebuffed. The archbishop, I'm glad to say, restrained himself.

Ottoline's first real love affair was with the doctor-writer Axel Munthe. She was 24, unmarried and footloose in Italy; he was 40, an attentive lover until her religious intensity frightened him off. Later, after her marriage, there were others: the painters Augustus John and Henry Lamb, perhaps Roger Fry and—most scandalously and explosively, of course—Bertrand Russell. In none of these affairs does Ottoline's primary motive seem to have been sexual. Seymour tells us, in the saddest sentence in the book, that "Ottoline did not have any real enthusiasm for sex." She was simply mentor-collecting with a difference.

Ottoline never explained what she was doing, but there is an interesting theoretical account of this sort of sex-in-the-head in the journal of another extraordinary woman of the time, Beatrice Webb. "Friendship," she wrote,

between particular men and women has an enormous educational value to both (especially to the woman). Such a friendship is practically impossible (or, at any rate, impossible between persons who are attractive to each other—and, therefore, most remunerative as friends) without physical intimacy; you do not, as a matter of fact, get to know any man thoroughly except as his beloved and his lover—if you could have been the beloved of the dozen ablest men you have known it would have greatly extended your knowledge of human nature and human affairs.

But, she added, "there remains the question whether, with all the perturbations caused by such intimacies, you would have any brain left to think with?"

Beatrice Webb never put her theory into practice; Ottoline Morrell did. Not with a dozen men, but with at least half a dozen, and for the same reason: she fell in love with their minds. She talked religion with the archbishop, French poetry with Cramb, art with John, philosophy with Russell. With some she also made love, but unenthusiastically. Of her feelings for Russell, who was the great love of her life, she wrote in her memoirs: "For many years I had thought of him as the greatest intellect living, and a very important and wonderful man." But she added: "To my shame, however much I was thrilled with the beauty and transcendence of his thought, I could hardly bear the lack of physical attraction." Poor Russell. Poor Ottoline.

Seymour goes on at some length about the men in Ottoline's life; but I wonder if

they are really of great importance, except as symptoms of her appetite for art and for thought. She was not a courtesan, after all; she was a hostess, a patron, a friend. Maybe, as Webb suggested, sex was the only available route to what she desired; but it was not the journey that impelled her.

If the story of her love life is full and detailed, that is partly because she confided unwisely in her friends, who turned it into Bloomsbury gossip, and partly because she wrote too many letters, which survive in surprising quantities. If she hadn't written 1,500 letters to Russell (which he kept), if Russell hadn't written 2,500 letters to her (which she kept), this biography would be shorter, and better balanced. And what would we have lost? Only the assignations and the heavy breathing: not the essential Ottoline.

Who, then, was she? There is an acute answer to that question in a letter from Lawrence to Ottoline, written near the end of his life, in 1928. By then Ottoline had given up Garsington and moved to a modest house in London, where she underwent an operation for cancer of the jaw that left her face disfigured. In her depression she wrote to her old friend (and sometimes enemy) for comfort; and Lawrence replied:

Don't say you feel you're not important in life. You've been an important influence in lots of lives, as you have in mine; through being fundamentally generous, and through being Ottoline. After all, there's only one Ottoline. And she has moved one's imagination.... Ottoline has moved men's imaginations deeply, and that's perhaps the most a woman can do. And in the world today, full of women, how rare to find one that can move the imagination!

It is a very Lawrentian sort of comforting—patronizing, self-centered, but very kind and very perceptive.

Ottoline Morrell lived for another decade, less splendidly, deaf and ailing, but still Ottoline, still entertaining, still dressing like no one else, still extravagant and affectionate. It was during these last years that her friendship with Virginia Woolf grew close, and when she died it was Woolf who wrote the obituary for the *Times*. It is a touching piece, full of praise for Ottoline's originality and courage, her humility, generosity and sincerity, with fond memories of her strange, exotic appearance, the stir she made simply by walking down a street, "like a Renaissance princess listening to inaudible music while the passers-by stared." Like Lawrence's letter, it is a celebration of Ottoline simply for being herself.

To tell the story of such a woman, a great lady who, as Woolf put it, created her own world, seems a straightforward

enough task: you simply write the kind of biography that critics say is replacing the novel, a lively narrative with a beginning, a middle and an end, and some reversals and revelations along the way. You don't have to make the life illuminate the works, or reveal the social dynamics of the culture or the spirit of the time; you just have to tell it. Miranda Seymour has done that, and done it well. One of her virtues is her sturdy partisanship: from the first page it is clear that Ottoline is not only the subject of this book, she is also its romantic heroine, and Seymour will be loyal to her, in spite of the follies and the ridicule. This seems to me the right posture for a biographer, at least in this case; it is better, certainly, than the pretense of a bloodless objectivity. The job here is to rescue Ottoline from Bloomsbury gossip and triviality, and to restore her eccentric splendor.

SAMUEL HYNES is the author most recently of *A War Imagined: The First World War and English Culture* (Collier Books).

Companionships of encouragement

The life of Lady Ottoline Morrell, the exuberant Englishwoman around whom circled a host of famous writers, artists and intellectuals

Ottoline Morrell:

Life on the Grand Scale
By Miranda Seymour
Farrar, Straus & Giroux, 452 pages, \$30

Reviewed by Judith Dunford
An author who is at work on her second novel

Six feet tall, exuberantly red-haired, plumed, hatted, draped, bejewelled, prancing on high-heeled red shoes that made her even taller, powdered and trailing clouds of scent—this was Lady Ottoline Morrell. If she is remembered at all today, it usually is as a parenthesis to the people she knew and called her friends.

And she knew everybody—writers, painters, philosophers, Yeats, Siegfried Sassoon, Joseph Conrad, Henry James, Augustus John, Virginia Woolf—the artistic and intellectual galaxy of the period. Unlike them she had no great gifts, not as a writer or painter, or much of anything else.

What she could do and did with the greatest verve and passion was what she called "helping." Most often it meant bringing people together among the vivid gardens and the elegant colors of Garsington, her country house, to strike sparks against one another. There the young could meet their heroes and be inspired, the established lions could roar, and at the end of the day all could be light, charm and gaiety.

With her height, her eccentric clothes, her religiousness and her earnestness in the presence of The Great, she was easy to mock. She was caricatured, almost always harshly, in novels by D.H. Lawrence, Aldous Huxley, Osbert Sitwell, Graham Greene and many others whom she entertained and for whom she exerted herself.

Painters loved to paint her, sometimes in her famous rope of pearls that had once belonged to Marie Antoinette.

She was the lover of some of the best men of her generation, most famously Bertrand Russell. Their love was deep, central to them. It lasted nearly all their lives, in one way or another. Yet it was a strange match.

Russell was sexually charged, wanted her as a mistress and, for years, to be the mother of the child he longed for. She was physically repelled by him (she confided to her journal that he had bad breath) and usually preferred raptures over rocks and trees to those in bed.

She was fervently religious, in a vague, nature-worshipping way; he was skeptical as befitted the co-author of "Principia Mathematica." He stormed, she resisted. What held them together for so many years was a companionship of encouragement.

They corresponded constantly, feverishly, sometimes four times a day. Later, during the war, they strengthened one another in the steadfast pacifism that isolated them in a very small group of war resisters. Garsington became a haven for the like-minded who were not otherwise popular in what started as a popular war, and Lady Ottoline could hardly do enough for them.

What a life! She was born in 1873 (Russell liked to call the two of them the last Victorians), the niece of the Duke of Portland. When her father, next in line for the title, died, it went to her half brother. Still young and unmarried, he was happy to move his widowed stepmother and family with him to his estate.

The house had suffered from neglect by the previous Duke, an eccentric in the English

mode who devoted himself to the construction of tunnels under the grounds, one of which was wide enough to allow two carriages to pass. Ottoline's mother was asked to direct the long and taxing renovation, leaving her six-year-old girl free to roam the rotted floors and the jungly garden and to begin a lifelong passion for playing dress-up by helping herself to the priceless antiques, some of them Elizabethan, left carelessly about.

She grew up beautiful and shy, miserable in the Duke's society with its hound-and-hare small talk. When the Duke married and no longer needed them, she and her mother lived and traveled together. Ottoline served as companion, devoted nurse and general doormat to a woman quickly descending into invalidism.

She was repaid for her selflessness to a mother she adored by mysteriously being left out of her will, an injustice of which she was unaware until after many years of assuming, and living as though, she were rich. She was not.

When she married, it was a little down socially, an escape from the confines of the expected. He was Paul Morrell, whose own mother, a friend of Henry James, had been the model for the avaricious Mrs. Gereth in "The Spoils of Poynton." He was handsome and dull, a man who offended his parents with his failure at the family firm of solicitors, his liberal politics, his stand against the war.

Ottoline wanted to admire him. She encouraged him, propped him up in a political career that was brave, arduous and slightly pathetic. He was extraordinary in tolerating his wife's numerous liaisons; he himself had little or no sexual interest in her, preferring relentless

Tribune photo illustration

skirt-chasing that was broad enough in scope to include attempts at the glacial, bisexual Virginia Woolf. He wanted a son and had two, both out of wedlock.

When Lady Ottoline died, there was an outpouring from friends and foes, admirers and backstabbers, of recollections of her astonishing generosity. If she took a fancy to you or felt she

SEE 'OTTOLINE', PAGE 9

'Ottoline'

CONTINUED FROM PAGE 7

might do you some good, no expense of energy or money was too great. She was paradise for freeloaders, but also for gifted people whom she fed and sheltered and set free to work.

She could be silly, yet she was often sublime. She cared about the poor and uneducated, and although she could retreat into great-ladyhood when pressed, she was not a social snob or (amazingly, for her time and condition) an anti-Semite.

Her presents could embarrass even the shameless; she might send expensive furniture, rugs, jewels. Yet she was a dreadful mother to her only daughter. She was prey to what seems to the jaded modern eye a lifelong tendency to stress-related hypochondria, forever dropping out

for "cures," many of them at the hands of quacks. Yet when the boom was finally lowered, in the form of bone cancer, which required the horribly disfiguring removal of all her teeth and most of her jaw, she was dauntless.

'She could be silly, yet she was often sublime.'

Miranda Seymour is the first of Lady Ottoline's biographers to have access to all her papers, and they have persuaded her to see her subject in a new light—perhaps a little too much. Some of the book has the partiality of a parent in the principal's office explaining vehemently why it isn't her child's fault. Still, Seymour has given us a delicious, fascinating account of what must be one of our century's most likable characters.

 279 "Bertie and the Bomb." BBC. 1984. 40'.

Miscellaneous:

- 300 "The Conscience of Wisdom." CBC. 1962. 62'.
 301 "Sinfonia Contra Timore" by Graham Whettam. Orchestral composition
 dedicated to Russell. 1972. 27'.

BRS Library Book News:

Bertrand Russell and the Origin of the Set-Theoretic Paradoxes by Alejandro Garciadiego has been published by Birkhauser. Irving Anellis will be reviewing this volume for Russell Society News.

The paperback edition of Lester Denonn's Bertrand Russell's Dictionary of Mind, Matter, and Morals has been reissued by Citadel Press for \$9.95.

Russell and Analytic Philosophy, a collection of new essays, will be published by the University of Toronto Press in the fall of 1993.

Introduction to Mathematical Philosophy and Our Knowledge of the External World were reissued by Routledge in June. The paperbacks are \$15.95.

Books for Philosophers, Catalog Number Ten, is available from Attic Owl Books; Box 1802; New Sharon, ME 04955. 600 items.

Dan McDonald has donated a copy of British Winners of the Nobel Literary Prize to the Library.

(29)

A TIDBIT FROM HARRY RUJA

My grandson caught my attention immediately when he mentioned that he had heard Russell's name mentioned on a ROCK MUSIC VIDEO. I asked him to play it for me, and when he did I heard the reference to Russell myself. Karl Wallinger (I never heard that name before), a rock musician from the group "World Party," said this at the outset: "In making this record, there was a book that was sort of the major influence on the atmosphere in my mind, and [it] was a book by a man named Bertrand Russell who was an incredibly rationalistic and logical man. He basically answered a lot of questions in a very practical way without romancing the issue." Did I find logic and rationality in the music and lyrics that followed? No comment.--Harry Ruja.

RUSSELL SOCIETY NEWS

No. 80, November 1993

The Bertrand Russell Society

3802 North Kenneth Avenue Chicago, IL 60641-2814; U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Letters to Russell Society News, a quarterly issued in February, May, August, and November, should be addressed to Donald W. Jackanicz, Editor at the above Chicago address.

For information about The Bertrand Russell Society or to become a member, write to John Lenz; BRS Vice President; 316 Kyle Avenue; College Station, TX 77840; U.S.A.

FROM THE PRESIDENT

Michael J. Rockler, President, The Bertrand Russell Society

Russell stated his views on religion clearly and unequivocally. A secular humanist, he believed that religion often preached cruel falsehood that was ultimately harmful to human development. Russell focused his energy on making life better in the here and now and he rejected any belief in immortality. In Religion and Science, he wrote:

...belief in immortality can...claim no support from science, and such arguments as are possible on the subject point to the probable extinction of personality at death. We may regret the thought that we shall not survive, but it is a comfort to think that all the persecutors and Jewbaiters and humbugs will not continue to exist for all eternity. We may be told that they would improve in time, but I doubt it.

Russell's perspective on religion will be part of a debate between Professor John Novak and me at the annual meeting of the Bertrand Russell Society which will be held next year, July 8-10, in Toronto. This combined conference with American and Canadian humanists will be located near Hamilton, Ontario where the Russell Archives are stored at McMaster University. As part of the program, a trip by bus to McMaster will be available.

Please come to this very special annual meeting. Because it will be held jointly with the humanist organizations, we anticipate a larger gathering than is usually the case for the meetings that we have been holding in June. This will give us an opportunity to share Russell's ideas with more people and perhaps recruit new members into the BRS.

Plan now to attend the annual meeting. If you have regularly participated in BRS meetings, I am sure you will enjoy this special one which will take place in a hotel, convenient and comfortable for everyone. If you have never attended an annual meeting, the special nature of this one will be an ideal beginning. I look forward to seeing everyone in July. I would be delighted to meet those of you who have never attended a summer conference. You will have a great time and enjoy the company of friends who have a deep respect for Russell as a person and as a scholar. See you in Toronto!

I have recently completed reading The Quotable Bertrand Russell published by Prometheus Press and edited by Lee Eisler. It is a delightful book which uses a question and answer format to bring together some of Russell's most interesting perspectives in a single volume. Reading Russell is always enjoyable and the approach used by Lee Eisler provides readers with the opportunity to experience Russell in a unique context. I recommend The Quotable Bertrand Russell to everyone. Lee has done an excellent job of editing and making Russell available in a new and interesting way. Buy the book and bring it to Toronto. Lee will be happy to sign it for you.

(2)

BRS BUSINESS

1. 1994 Dues are Due. We hope you will decide to renew your BRS membership for 1994. Everyone's renewal dues--including first year members--are due January 1, 1994. (There is one exception: those who joined in October-December 1993; their next dues payment will be due January 1, 1995.)

Please refer to and use the yellow sheet accompanying this issue. Please mail your dues, payable to "Bertrand Russell Society" in U.S. funds, to: Bertrand Russell Society; 3802 North Kenneth Avenue, Chicago, IL 60641-2814; U.S.A.

Thank you for renewing...and, if possible, for renewing soon!

2. 1994 Annual Meeting. The ~~next~~ BRS Annual Meeting will be held in Toronto, Canada, July 8-10, 1994 in conjunction with meetings of the Humanist Association of Canada and the International Humanist and Ethical Union. We hope you will be able to attend. The exact meeting site, program details, and other relevant information will be provided in the February and May 1994 RSN issues. McMaster University in Hamilton, home of the Bertrand Russell Archives, is about 50 miles from Toronto. This would therefore be a good opportunity to combine a BRS annual meeting with Russell Archives research.

3. New Newsletter Editor Needed. As reported in the last RSN, Donald Jackanicz would like to step down from the position of RSN editor. If you are interested in becoming his successor, please contact him (3802 North Kenneth Avenue; Chicago, IL 60641-2814; U.S.A.) or BRS President Michael Rockler (14213 Chesterfield Road; Rockville, MD 20853; U.S.A.). We would be happy to hear from you.

4. Do We Have Members in Michigan and Ohio? Rana Mitra, who joined the BRS in August 1993, would like to become acquainted with other BRS members residing in Rana's home state of Michigan and also in Ohio. If you are interested in contacting Rana, please write to Rana Mitra; 402 Whitney Drive; Rochester Hills, MI 48307; U.S.A.

5. BRS Award and BRS Book Award. Nominations are sought from BRS members for these awards. Please send BRS Award nominations to Prof. Marvin Kohl; Department of Philosophy; 715 Maytum Hall; SUNY at Fredonia; Fredonia, NY 14063; U.S.A. Please send BRS Book Award nominations to Prof. Gladys Leithauser; 122 Elm Park; Pleasant Ridge, MI 48069.

6. Prizes for Papers. BRS Vice President John Lenz, who administers our Prizes for Papers program, informed us that Prof. Elizabeth Eames of Southern Illinois University and Dr. John Shosky of Alexandria, Virginia have agreed to assist him with Prizes for Papers work. Elsewhere in this RSN issue is a reprint of the 1993-1994 Prizes for Papers announcement. If you are eligible, please consider making a submission. As a reminder, the deadline for submissions is April 1, 1994.

DEATH OF PAUL ARTHUR SCHILPP

We regret to inform BRS members of the death of Paul Arthur Schilpp on September 6, 1993. The September 10, 1993 New York Times obituary below provides a sketch of his professional life.

Prof. Schilpp will be long remembered for his celebrated creation, "The Library of Living Philosophers." The Russell volume in this series, which appeared in 1944, remains an important publication in Russell studies.

The first BRS Award was presented to Prof. Schilpp in June 1980 during the BRS's annual meeting held at the University of Chicago. During his acceptance speech, Prof. Schilpp discussed his relations with Russell and his regard for Russell's philosophical work and social criticism. Members who attended that meeting will recall his charming personality and his use of good humor to get across his points. Subsequently Prof. Schilpp accepted an honorary BRS membership and was repeatedly elected as a BRS Director.

Stephen Reinhardt, who supplied the obituary, offers these recollections of Prof. Schilpp: "I first ran into Schilpp when I attended a talk he gave in Chicago one evening at the downtown campus of Northwestern University. It was probably toward the end of 1947. I was a first-year law student at NU (but more interested in philosophy). I don't remember the subject of his talk, though it may have had to do with Einstein, because I bought that volume in the Living Philosophers series."

If you have reminiscences of Prof. Schilpp that you would like to share, please consider sending them to the newsletter.

Paul A. Schilpp

Philosophy Professor, 96

CARBONDALE, Ill., Sept. 9 (AP) — Paul A. Schilpp, a former professor of philosophy at four colleges, died on Monday in St. Louis. He was 96.

The cause was respiratory failure, his family said.

Professor Schilpp was the creator of the "Library of Living Philosophers," a 21-volume series featuring the ideas of what were described as the 20th century's greatest thinkers.

Professor Schilpp, a former president of the American Philosophical Association, had been a consultant in philosophy to the Encyclopedia Britannica for more than 30 years.

He taught at the College of Puget Sound in Washington, the University of the Pacific in California and Northwestern University in Evanston, Ill., before arriving at Southern Illinois University in Carbondale in 1965. He retired in 1982.

He is survived by his wife, Madelon, and six children.

(4) TREASURER'S REPORT

Treasurer Dennis J. Darland submitted this report for the quarter ending September 30, 1993.

Beginning Balance, July 1, 1993	\$5,758.15
Income	
Membership Renewals	152.50
New Memberships	137.50
Meeting Fees	1,002.95

Interest	16.72
Miscellaneous	84.50
Total Income	+1,478.22
Expenses	
Membership and Information Committee	1,210.84
Russell Subscriptions	2,714.00
BRS Library	44.42
Miscellaneous	95.60
Total Expenses	-4,064.86
Final Balance, September 30, 1993	\$3,171.51

(5) ABSTRACT OF NICHOLAS GRIFFIN PAPER

At the June 1993 BRS Annual Meeting in San Diego, the BRS Book Award was presented to Nicholas Griffin for his editorial work on The Selected Letters of Bertrand Russell, Volume 1, The Private Years, 1884-1914. Following the award presentation, Prof. Griffin read his paper, "Ottoline." He has now kindly provided this abstract of his paper, which will soon appear in the Russell journal.

A review of Miranda Seymour's excellent new biography Ottoline Morrell: Life on the Grand Scale together with some reflections on her life and her relationship with Russell. Seymour's book ends the Bloomsbury caricatures of Ottoline as an absurd figure of fun and reveals a serious, well-interested and somewhat tragic figure behind the society hostess facade.

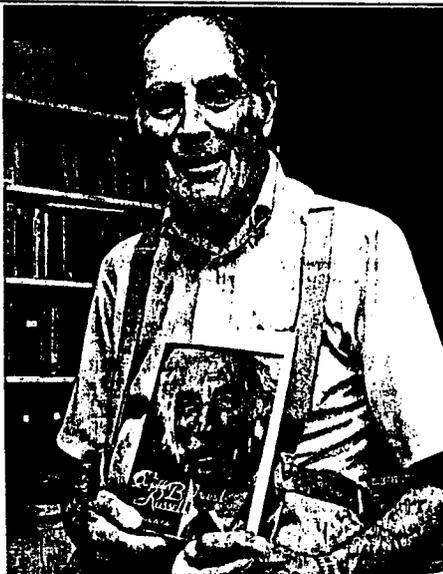

(6) REVIEW OF THE QUOTABLE BERTRAND RUSSELL

This book review of Lee Eisler's The Quotable Bertrand Russell appeared in the September 28, 1993 issue of The Intelligencer, a newspaper published in Doylestown, county seat of Bucks County, Pennsylvania in which Lee's hometown of Coopersburg is located. Lee informed us that in 1971 the reviewer, Daniel C. Church, wrote a review of Lee's earlier book, Morals Without Mystery. We heartily recommend The Quotable Bertrand Russell. If you cannot locate a copy through your local library or bookstore, you may order a copy from Lee for \$12.71. (That's 25% off the regular price and includes postage!) To buy, send a check or money order to Lee Eisler; 1664 Pleasant View Road; Coopersburg, PA 18036.

Russell fan: Philosophy not his bag

This is a fabulous book. I think I know something about Bertrand Russell, but the man wrote 89 books. This offers selections from many of them, and in a way that you'd almost think Russell was on Larry King Live.

Warren A. Smith - book reviewer and Secular Humanist Society member

Author Lee Eisler holds a copy of his book, "The Quotable Bertrand Russell."
(Staff photo by E. Sisco Lachliver)

By Daniel C. Church
Staff Writer
British philosopher-citizen Bertrand Russell set a daunting standard for would-be biographers. Consider this snippet from his 1945 work, "Philosophy of the Western World": *A stupid man's report of what a clever man says is never accurate, because he unconsciously translates what he hears into something he can understand. I would rather be reported by my bitterest enemy among philosophers than by a friend innocent of philosophy.* Fortunately, Lee Eisler of Pleasant Valley must not be a stupid man. When Eisler in 1989 published a summary of Lord Russell's ethical stance, Russell dispatched a note calling the work a "well-written short presentation of the kind of morality I believe in and advocate."
Nor is he enemy or philosopher. "I am not a philosophy buff," Eisler explains. "I am addicted to Russell's philosophy. If he says something, I'm inclined to accept it." Still, nearly 25 years later, the retired advertising copywriter has been perhaps more cautious. As its title suggests, "The Quotable Bertrand Russell" published this summer by Prometheus Books relies on Russell's own words in treating subjects as far-ranging as Africa and writing.
To better sample the sweep of Russell's interests, Eisler has organized selections drawn from dozens of sources into a question-and-answer format. The editor, however, has posed the questions, to create an organizational frame keyed to an introduc-

tory table of topics.
Warren Allen Smith, a book reviewer and active with the Secular Humanist Society of New York, considers this approach highly successful. "This is a fabulous book," says Smith, a member also of the Bertrand Russell Society which Eisler helped establish.
"I think I know something about Bertrand Russell, but the man wrote 89 books. This offers selections from many of them, and in a way that you'd almost think Russell was on 'Larry King Live.'"
Certainly, the range of Russell's writing is more than formidable, given his voluminous correspondence. Born in 1872, the grandson of a two-time prime minister, he still was a precocious commentator until days prior to his death at age 88.
Eisler, too, has logged an appropriate period of time on Russell. His introduction came with Russell's work entitled "The Scientific Outlook."
"Then I was retired and looking for something, so I again started reading Russell," he says.
As someone who crafted words, he appreciated Russell's spare style. "I was delighted by his prose," he recalls. "You never have a complex sentence. It just moves along in a lovely way."
Whenever he encountered an engaging passage, he recorded the reference or quote on a file card. "Finally," he says, "I had a lot of cards, so I hit on this idea of asking a question of which a particular quote would be an idea."
The focus throughout falls not on Rus-

sell's revolutionary investigations of mathematics and logic, but rather on his extensive writings for private citizens. This, Eisler notes in his introduction, was also what engaged the Nobel awards committee which selected Russell in 1950 for the Prize in Literature.
The landmark "Principia Mathematica," Eisler says, rebuffed Russell. "He thought it hurt his mind," he adds.
More to his tastes were the application of his uncommon sense on a range of topics unsetting to an audience wedded to personal Victorian morals and societal morality.
"He was a socialist, so the business community didn't like him," Eisler says.
"He was an atheist, so the religious community didn't like him. He was an early feminist."
One example of the last Russell hangs on the interior of Eisler's library, a political poster from an unsuccessful bid early this century for a House of Commons seat. It bears the satirical text: "No Thanks My Dear. You Mind the Baby and Leave Politics to Me. I'm Going to Vote for Chaplin and the Empire."
Time, however, was to prove Russell's ally here as it did with such other discordant issues as the nuclear disarmament and sexual freedom. But, Eisler notes, time similarly has muffled a voice that challenged several generations to test assumptions.
"He had a lot of good ideas that are not generally known," Eisler laments. "This 'quotable' book is an effort to spread his

ideas a little better.
"If someone else had done this book, it certainly would have been different. This book reflects my interests."
Among Eisler's samples:
• *We love our compatriots and we hate foreigners. Of course, we love our compatriots only when we're thinking of foreigners. When we're forgotten foreigners, we don't love them so much.*
• *On the one hand, philosophy is to keep us thinking about things that we may come to know, and on the other hand to keep us modestly aware of how much that seems like knowledge isn't knowledge.*
• *Plato possessed the art to dress up liberal suggestions in such a way that they deceived future ages, which admired the "republic" without becoming aware of what was involved in its proposals. It has always been correct to praise Plato, but not to understand him.*
• *Suppose you were unjustly accused of murder. The lawyer pays all the expense of proving that you did the murder, and you, out of your own pocket, have to pay the expense of proving that you didn't, and that seems hardly fair.*
• *The three main extra-rational activities in modern life are religion, war, and love, all these are extra-rational, but love is not anti-rational, that is to say, a reasonable man may reasonably rejoice in its existence.*
• *Hell is a place where the police are German, the motorists French... and the cooks English.*
The book can be ordered through area booksellers.

MORE QUOTABLE BR REVIEWS

We are pleased to reproduce these two additional reviews of Lee Eisler's The Quotable Bertrand Russell. The single column one on the left appeared in The Chattanooga [Tennessee] News, August 8, 1993. The double column review in the center and on the right ran on p. 14 of the October 1993 issue of Pique, the newsletter of the Secular Humanist Society of New York. Among things to note in the latter review is the reference to Lee having been the longtime editor of Russell Society News.

By KARIN GLENDENNING
Book Editor

Science is what you know, philosophy is what you don't know.
Bertrand Russell

Quotable Russell

Lee Eisler has taken some of philosopher, mathematician and humanist Bertrand Russell's most pithy observations and arranged them as answers to his own questions in this new book, The Quotable Bertrand Russell Prometheus Books, \$16.95).

Russell wrote and spoke on a broad range of subjects and received the Nobel Prize in 1950 for his writings designed for "ordinary citizens." He had much to say on almost any topic from aggression to beliefs to morality to war and this volume gives ready access to his often irreverent but, just as often, sensible views.

His definition of philosophy: "My own view would be that philosophy consists of speculations about matters where exact knowledge is not yet possible. It is not definite knowledge, for that is science. Nor is it groundless credulity, such as that of savages. It is something between these two extremes: perhaps it might be called 'the art of rational conjecture.'"

BOOK REVIEWS

Eisler, Lee, ed., *The Quotable Bertrand Russell*
(Buffalo: Prometheus, 336 pp., 1993,
\$16.95)

Anyone who enjoys Bertrand Russell's work, or has a few of the 89 books written over his 98 years on earth, needs this new work. Since Lee Eisler has pored over not only all those books but also numerous articles, interviews, and stories in the media, recording Lord Russell's salient thoughts on subjects from A to Z.

Under Africa, for example, the reader learns that, although Africans mistakenly attribute their problems to exploitation by the white man, their main problem is actually growth of population (and the 1951 citation is then cited in parentheses by Eisler). Under W (sorry, no Z's) for Women, the reader finds what the status of women was in Sparta (peculiar); whether women have achieved freedom from male dominance today (a little); what effect Christianity has had on the status of women (by its emphasis laid upon sexual virtue, it made woman the temptress, the cause of sin, and an object of degradation); and what methods were used to make sure that women remained virtuous (their virtue was secured by segregating them, not trusting them with any inward self-control, and educating them to have a horror of sexual intercourse outside marriage).

Other of the 162 subjects covered: Anti-Semitism; Catholicism; Confucius, death, democracy, dogmatism, euthanasia, fanaticism, freethought, God, Hegel, history, Islam, Jews, Kant, logic, love, Marx, Parmenides, philosophy, politics, polygamy, population, psychology, Pythagoras, racism, reason, religion, Rousseau, Russia, sex, sin, skepticism, Socrates, values, war, wisdom, world government.

The real beauty of the collection is that Eisler presents Russell's views as if they were answers to questions. For example, Eisler asks the question, "How would you define religion, Lord Russell," then quotes a 1920 book in which Russell writes, "By religion I mean a set of beliefs held as dogmas, dominating the conduct of life, going beyond or contrary to evidence, and inculcated by methods which are emotional or authoritarian, not intellectual." It's almost as if we're reading a transcription of Russell on CNN's Larry King Live.

Picture, for example, Russell on some imaginative interviewer's show being asked, "How would you describe Hell, Lord Russell?" Probably fortified with a swig of Red Hackles, his favorite drink, the British aristocrat looks into the camera, smiles, and in an accent sure to delight American viewers responds, "Hell is a place where the police are German . . . the motorists French . . . and the cooks English.

(Oh, that's a quote cited as from *Russell Society News* #19, which Eisler long edited before his recent retirement.)

(8) RUSSELL IN THE MANUSCRIPT MARKET

Issued in late Summer 1993, Catalog 71 of David Schulson Autographs (11 E. 68th St.; New York, NY 10021) included these two Russell-related entries among its various manuscript items for sale.

118. RUSSELL, BERTRAND. (1872-1970). British philosopher, mathematician, social reformer, and pacifist.

A.L.S. [autograph letter signed] on personalized address stationery, 4to [quarto, approximately 11 x 8½ inches], Marioneth, January 6, 1948.

He thanks his correspondent for having sent "Forster's review" and complains about a mistaken address. "It is not the case that I live in Trinity...people...assume that I must have quarrelled with my wife which is the opposite of the truth. I live in London to which I shall return in a week...." This charming letter with references to fellow writer, E.M. Forster (1879-1970), is signed, "Russell." \$275.00

150. WOOLF, VIRGINIA. (1882-1941). English author.

A.L.S. on "Tavistock Square" stationery, 2 pages on one 8vo [octavo, approximately 8 x 5 inches] sheet, London, holograph envelope postmarked December 5, 1935.

She writes to Mary Fisher, daughter of her cousin, Herbert Fisher. She invites Mary to dinner. "What a rage for the stage has set in.... What has become of the older Virginia.... Don't, of course, bother to dress...." Signed, "Virginia Woolf." On verso she writes a long postscript about the philosopher and mathematician Bertrand Russell (1872-1970) who was awarded the Nobel Prize in Literature in 1950. "I've just heard from Bertie Russell (he refuses to be Earl) that he is writing something about great grandpapa Pattle who shot out of a tub. He wants any facts...if your father has any please bring them too. B.R.'s grandmother brings him...letters...which B. is editing...." She does not sign the postscript, but ends by saying, "Excuse my scrawl." Superb association to Bertrand Russell. \$1,850.00

(9) BR T-SHIRTS FOR SALE

Bertrand Russell T-Shirt: To order one, write to Historical Products and request an order form, which gives the many options (long or short sleeve, etc.). Address: Historical Products; P.O. Box 604; Barre, VT 05641.

(10)

STEFAN ANDERSSON ON BR AND CERTAINTY

Stefan Andersson of the Department of Theology, Lund University, Lund, Sweden was one of the first two winners of the BRS's Prizes for Papers competition. He read his prize-winning paper, "Bertrand Russell's Search for Certainty in Religion and Mathematics," at the June 1993 Annual Meeting. Due to space constraints, we can here provide the text of only two excerpts--the first and last paragraphs. We hope Stefan will in time see the entirety of his fine paper appear in a scholarly journal.

Bertrand Russell's Search for Certainty in Religion and Mathematics

The main purpose of my thesis is to describe and discuss the development of Bertrand Russell's search for certainty in religion and the development of his search in mathematics. These developments will be seen in the context of the development of some ideas of religion, philosophy, science, mathematics and logic from the time of the French Revolution to our present days. The overall perspective of my thesis is grounded on the impact of three very important collections of texts. I am thinking of Aristotle's work on logic, Euclid's Elements and the Bible. These three collections of texts have had an enormous influence on the way philosophers and theologians in the West have interpreted and expressed their experiences. And they are still very important, although some of their authority has been seriously questioned by a lot of people. This is particularly true about the Bible. Less people have seen any reasons to question the logic of Aristotle and the geometry of Euclid, but their ideas also came under criticism during the nineteenth century. The ideas contained in these three collections of texts made up the overall frame of reference in which Bertrand Russell became an independent thinker. Russell's intellectual development can be described as an emancipation from inherited old dogmas concerning logic, geometry and religion....

When Russell turned eighty years old he wrote about his earlier life and said: "I wanted certainty in the kind of way in which people want religious faith. I thought that certainty is more likely to be found in mathematics than elsewhere." ["Reflections on My Eightieth Birthday" in Portraits from Memory, New York, (1956) 1969: 54.] These two sentences can be seen as a short summary of the relation between Russell's search for certainty in religion and mathematics. Alan Wood also quoted these words in his unfinished book on Russell and his comment was: "I believe the underlying purpose behind all Russell's work was an almost religious passion for some truth that was more than human, independent of the minds of men, and even the existence of men." [My Philosophical Development, London (1959) 1975: 192.] What Russell so ardently desired from an early age to the end of his life was nothing more and nothing less than the truth, the whole truth and nothing but the truth, even if the truth was a rather depressing one compared to his initial hopes. But his energy and devotion for finding certainty is impressive and inspiring for those who still are searching.

(11) DEATH OF DEBIPRASAD CHATTOPADHYAYA

Kamal Bhattacharya of Calcutta, India recently informed us of the death on May 8, 1993 of philosopher Debiprasad Chattopadhyaya. According to Mr. Bhattacharya, Prof. Chattopadhyaya was a "great admirer and follower of Bertrand Russell....His death was mourned by the entire nation [of India] and was widely covered by the media." Below are two articles about Prof. Chattopadhyaya that appeared in The [Calcutta?] Sunday Statesman, May 9, 1993, pp. 1 and 3.

COLUMN ONE

Debiprasad Chattopadhyaya dead

Professor Debiprasad Chattopadhyaya, noted academician and philosopher of international repute, died at the SSKM Hospital on late Saturday morning after a brief illness. He was 75 and is survived by his wife and two daughters.

An author of several books on Indian philosophy, science and

society and history of science and technology. Prof. Chattopadhyaya was associated with several research institutions in India and abroad. He was a member of the German Academy of Sciences and was the first Indian to be awarded the D.Sc. (honoris causa) from the Academy of Sciences, Moscow. — Staff Reporter.

(Obituary on Page 3)

OBITUARY

Debiprasad Chattopadhyaya

IN 1991, critic Robert Temple in his review of Professor Debiprasad Chattopadhyaya's book, *History of Science and Technology in Ancient India, Vol II*, wrote, "This is one of the saddest books ever written about the history of science. For never has a culture so satisfactorily stifled scientific progress as Hindu culture. The smug self-satisfaction of the devout — and they nearly won a recent election — has put a wet blanket over generation and generation of brilliant men of science... If India continues to allow religion to have the upper hand over science, then the tales told by Chattopadhyaya will have sequels, and India will relapse into the Stone Age. That, frankly, is his message".

The messenger breathed his last on Saturday morning in a city hospital, surrounded by his family, friends, relatives, students and admirers.

Born on November 19, 1918, Prof. Chattopadhyaya graduated from Calcutta University with a First Class First in philosophy in 1939. He carried out his post-graduate work under the supervision of the late Professor S. N. Dasgupta.

After teaching philosophy for more than two decades in several

colleges in Calcutta and Bombay, Prof. Chattopadhyaya worked as a visiting professor at several universities nationwide. His expertise in Indian philosophy and his emphasis on the study of the history of science and technology, came as a valuable guide to thousands of students and researchers trying to understand the complexities of development of knowledge in India.

He delivered lectures on philosophy and history at several centres of academic excellence including Humboldt University in Berlin, Moscow University, the Indian Institute of Science, Bangalore and the ~~Indian Institute~~ Institute of Advanced Study, Simla.

In 1987, he was elected "National Fellow" of the Indian Council of Philosophical Research. Among his major publications were *Lokayata: A study in Indian materialism* (1959); *Indian philosophy: a popular introduction* (1964); *Science and society in Ancient India* (1977); *What is Living and what is Dead in Indian philosophy* (1976); *Indian Atheism* (1980); *History of Science and Technology in Ancient India* (Vol I, 1986 and Vol II, 1991) and *Tagore and Indian philosophical heritage* (1984).

He is survived by his wife and two daughters.

(12)

MORE ON IAN DRYDEN

RSN, No. 79 (August 1993), section 10, page 11 reproduced a short obituary of Ian Dryden. What was chiefly noteworthy in the obituary was this line: "After a year as private secretary to Bertrand Russell, he delved into photography." We asked whether anyone could supply more information on this Russell-related figure.

Our thanks to Harry Ruja, who unearthed these informative details.

The Ian Dryden you ask about...is listed in Blackwell and Spadoni's Catalogue of the Second Archives of Bertrand Russell. There we learn that between 1966 and 1970 he corresponded frequently with BR, Edith, and Farley. In 1970 he sent condolences to Edith on BR's death, and she answered him.

All these letters are in the Russell Archives, but they are all embargoed except the exchange with Edith following BR's death.

Anyway, the claim in the obit that Dryden had a connection with BR is confirmed. I thought to call the photo dept. of the San Diego Union, but Dryden must have left quite a while ago and probably no one there will remember him, but you might try the Los Angeles Times.

Since he died at age 48, he must have been born in 1945 (or thereabouts); so he was with BR in his early 20s.

(13)

RUSSELL IN THE COMICS

Thanks to Bob Davis, who sent us this amusing August 31, 1993 comic strip. You'll find BR's name somewhere in the third frame.

9 CHICKWEED LANE By Brooke

RUSSELL'S ELEVATOR FOR SALE

Kenneth Blackwell of the Bertrand Russell Archives, McMaster University received this letter from the current resident of Russell's last home. The elevator in that house is for sale! Should you be in the market for such a unique Russell artifact, contact Kenneth Blackwell at the address shown. He will do what is possible to get you in touch with the current elevator owner. For the record, the Russell Archives has decided not to make the purchase.

Dr Kenneth Blackwell
 McMaster University
 Hamilton
 Ontario
 Canada L8G 4L6

August 23rd 1993.

Dear Dr Blackwell,

I happen to be living in
 Bertrand Russell's old house in Penrhyn-
 deudraeth, N. Wales. We have been doing
 some renovations to the house and in the
 process we have had the ^(Bertrand Russell's Elevator) lift removed &
 are now looking for a home for it. I am
 wondering whether you would be interested
 in buying it for the archives, or whether
 you know of anyone else (possibly of the
 Bertrand Russell society!) who might be?
 It was installed in 1967, three years before he
 died & has not been used since, so it has had
 very little wear. It was recently serviced by the
 manufacturers Hammond & Champness, measures
 3 feet x 3 feet x 6 feet 3 inches with a carrying load of 350 LB
 and a 0.75 horsepower engine. We are asking
 £ 800 for it, and it would be necessary to
 renew the rollers at a cost of £ 500, -but as new
 lifts of this type cost £ 13,000 this is a bargain!
 I look forward to hearing from you as soon as
 possible.

yours sincerely
 Miss Gillian Smithson

BRS LIBRARY

The Society Library sells and lends books, audiotapes, videotapes, and other materials by and about Russell. Please direct Library inquiries and requests to Tom Stanley; Box 434; Wilder, VT 05088.

The following lists books for sale. H-cloth, otherwise paperback. Prices are postpaid. Please send check or money order (U.S. funds only) payable to "Bertrand Russell Society" to Tom Stanley.

Books by Bertrand Russell:

<u>Appeal to the American Conscience</u>	\$3.15
<u>Authority and the Individual</u>	7.95
<u>Has Man a Future?</u>H.....	8.00
<u>History of the World in Epitome</u>	1.00
<u>In Praise of Idleness</u>	7.95
<u>My Philosophical Development</u>	7.95
<u>Political Ideals</u>	7.95
<u>Power: A New Social Analysis</u>	5.50
<u>Principles of Social Reconstruction</u>	7.95
<u>Roads to Freedom</u>	6.50

Books by Other Authors:

<u>Bertrand Russell, 1872-1970</u>	\$1.50
<u>Bertrand Russell's America, Vol. 2, 1945-1970</u> edited by Barry Feinberg and Ronald Kasrils.....	9.95
<u>Essays on Socialist Humanism in Honor of the Centenary of B.R.</u>H...	9.00
<u>Into the Tenth Decade: A Tribute to Bertrand Russell</u>	5.00
<u>Liberty and Social Transformation: A Study in Bertrand Russell's Political Thought</u> by Chandrakala Padia.....H..	11.50
<u>The Life of Bertrand Russell in Pictures and His Own Words</u>	6.75
<u>Mr. Wilson Speaks 'Frankly and Fearlessly' on Vietnam to B.R.</u>	2.00

(16)

BOOK NEWS FROM TOM STANLEY

BRS Librarian Tom Stanley shares this book news with RSN readers:

Caroline Moorehead's Bertrand Russell: A Life was published by Viking on October 21 at \$30. A review copy may be borrowed from the BRS Library.

The Spokesman Press has reissued Russell's The Problem of China. A copy of the paperback edition, priced at £8.95, is in the BRS Library.

(19) ELECTION OF BRS DIRECTORS

The full BRS Board of Directors consists of 24 directors elected by the BRS membership and the five ex officio BRS officers (President, Vice President, Vice President/Information, Secretary, and Treasurer). Eight of the 24 are elected each year. Terms are for three years, beginning January 1 following the election. It is now time to conduct the annual election.

All members are asked to vote. Please use the ballot on the last page of the newsletter. Please vote today! To be valid, ballots must be received at the specified Chicago address by December 31, 1993.

Please help the BRS choose its future leadership. Thank you for participating.

(20) BRS OFFICERS

Chairman of the Board of Directors

Marvin Kohl; 715 Maytum Hall; State University of New York; Fredonia NY 14063.

President

Michael J. Rockler; 14213 Chesterfield Road; Rockville, MD 20853.

Vice President

John R. Lenz; 316 Kyle Avenue; College Station, TX 77840.

Vice President/Information

Lee Eisler; 1664 Pleasant View Road; Coopersburg, PA 18036.

Secretary

Donald W. Jackanicz; 3802 North Kenneth Avenue; Chicago, IL 60641.

Treasurer

Dennis J. Darland; 1965 Winding Hills Road (1304); Davenport, IA 52807.

(21) BRS INFORMATION PAMPHLET AND PRIZES FOR PAPERS

On the following three pages is a copy of the new information pamphlet now being used to answer inquiries about the BRS and membership in it. If you would like a few copies of the actual pamphlet to distribute to interested persons, please write to Don Jackanicz (3802 North Kenneth Avenue; Chicago, IL 60641).

Following the three pamphlet pages is a single page reproducing the text of the 1993-94 Prizes for Papers competition announcement. The full announcement was distributed with RSN, No. 79 (August 1993) and was recently mailed to Philosophy Department chairmen at numerous selected colleges and universities.

THE BERTRAND RUSSELL SOCIETY

3802 North Kenneth Avenue
Chicago, Illinois 60641-2814; U.S.A.

Founded in 1974, The Bertrand Russell Society seeks to foster a better understanding of the life, work, and writings of Bertrand Russell (1872-1970) and how his contributions relate to today's world.

As a philosopher, mathematician, educator, social critic, and political activist, Russell authored over 70 books and thousands of essays and letters addressing a myriad of topics. Awarded the Nobel Prize for Literature in 1950, Russell was a fine literary stylist, one of the foremost logicians in philosophical history, and a gadfly for improving the lives of men and women.

This leaflet introduces The Bertrand Russell Society and its programs. You are invited to consider joining the Society and participating in its work. To join, please use the accompanying membership application.

SOME SPECIFIC RUSSELL SOCIETY AIMS

- To provide a forum for the ongoing discussion of Russell's work.
- To make Russell's views better known as they deal with virtually all the modern world's problems, from how to be happy to how to work for nuclear disarmament.
- To encourage new scholarly and popular writings on Russell.
- To present Russell's ideas as attractive, rational alternatives to alienation, cynicism, and belief in the supernatural.

WHY PEOPLE JOIN THE RUSSELL SOCIETY

Most people join (they have told us) for one or more of five reasons:

- To learn more about Russell.
- To be in touch with others having similar interests.
- To promote ideas and causes Russell thought important.
- To discuss Russell's work with others.
- To do something useful for others via the Russell Society.

A number of members are professional philosophers and educators in other fields. But most members are of the general public and of diverse backgrounds. Anyone interested in Russell is welcome as a member.

ANNUAL MEETINGS

The Russell Society holds a three day annual meeting featuring scholarly and popular presentations about Russell and related subjects, a business meeting, a reception, a banquet, and ample opportunities for interaction with fellow attendees. Usually scheduled in June in a university setting, annual meetings have taken place in New York, Washington, Chicago, Los Angeles, San Diego, Toronto, and Hamilton, Ontario, site of the Bertrand Russell Archives at McMaster University. Past speakers have included historians Will and Ariel Durant; philosophers Corliss Lamont and Paul Kurtz; Paul Arthur Schilpp, creator of "The Library of Living Philosophers"; scholar Margaret Moran; and U.S. Congressman Neil Abercrombie.

OTHER RUSSELL SOCIETY ACTIVITIES

- Publication of *Russell Society News*, a quarterly newsletter.
- Support of Russell scholarship in various ways, such as administering a "Prizes for Papers" program for undergraduates and professionals (graduate students, junior academics, and non-academics).
- Operation of the Society Library that lends and sells Russell-related items.
- Annual participation in American Philosophical Association meetings.
- Bestowing awards for books and to meritorious individuals and organizations. Awardees have included Steve Allen, philosophers Elizabeth Ramsden Eames and Nicholas Griffin, People for the American Way, and Planned Parenthood Federation of America.

MEMBER ACTIVITIES AND BENEFITS

Members are encouraged to attend annual meetings and otherwise to take part in Russell Society affairs, as in serving on a committee, making an annual meeting presentation, or undertaking some special task. Members may be as active or inactive as they wish. Some are very active. Some wish merely to be kept informed. No matter.

Members receive *Russell Society News* in February, May, August, and November and McMaster University's *Russell: The Journal of the Bertrand Russell Archives* semiannually. Other member benefits include use of the Society Library and election voting rights.

MEMBERSHIP PARTICULARS

Membership categories and annual dues in U.S. dollars are (1) Individual, \$35; (2) Couple (two persons at the same address), \$40; (3) Student, \$20; (4) Limited Income Individual, \$20; (5) Limited Income Couple, \$25. To these amounts should be added \$10 for members outside the U.S.A., Canada, and Mexico and \$4 for members in Canada and Mexico.

Membership is on an annual basis. Renewal dues are due January 1. For administrative simplicity, new memberships are retroactive to January 1, and a new member will be sent the same number of publications (four newsletters and two journals) as any member. The one exception is for new members joining in October-December; their first "year" lasts through December of the following year.

BERTRAND RUSSELL: A BIOGRAPHICAL SKETCH

Born in 1872 into British aristocracy and educated at Cambridge University, Russell gave away his inherited wealth. But in 1931 he inherited and kept an earldom. His multifaceted career centered on work as a philosophy professor, writer, and lecturer.

Russell was an author of diverse scope. His first books were *German Social Democracy*, *An Essay on the Foundations of Geometry*, and *A Critical Exposition of the Philosophy of Leibniz*. His last books were *War Crimes in Vietnam* and *The Autobiography of Bertrand Russell*. Among his other especially noteworthy titles are *Principia Mathematica* (with A.N. Whitehead), *Sceptical Essays*, *The Conquest of Happiness*, and *A History of Western Philosophy*.

Russell was involved, often passionately, in numerous controversies of his time. For example, he supported suffragettes, free thought in religion and morals, and world government; he opposed World War I and the Vietnam War, nationalism, and political persecution. He was jailed in 1918 for anti-war views and in 1961 for his anti-nuclear weapons stance.

He married four times and had three children. With Dora Russell he founded the experimental Beacon Hill School. Russell knew or worked with many of the most prominent figures in late 19th and 20th century philosophy, mathematics, science, literature, and politics.

Active as a political and social critic until his end, Russell died in 1970, aged 97.

BERTRAND RUSSELL QUOTED

"The good life is one inspired by love and guided by knowledge." (Motto of The Bertrand Russell Society.)

"Three passions, simple but overwhelmingly strong, have governed my life: the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind."

"I wish to propose for the reader's favourable consideration a doctrine which may, I fear, appear wildly paradoxical and subversive. The doctrine in question is this: that it is undesirable to believe a proposition when there is no ground whatever for supposing it true."

"The governors of the world believe, and have always believed, that virtue can only be taught by teaching falsehood, and that any man who knew the truth would be wicked. I disbelieve this entirely. I believe that love of truth is the basis of all real virtue, and that virtues based upon lies can only do harm."

"An individual human existence should be like a river--small at first, narrowly confined within its banks, and rushing passionately past boulders and over waterfalls. Gradually the river grows wider, the banks recede, and the waters flow more quietly, and in the end, without any visible break, they become merged in the sea, and painlessly lose their individual being. The man who, in old age, can see his life in this way, will not suffer from the fear of death, since the things he cares for will continue."

From *The Atlantic Monthly*, October 1993, pp. 123-124, 126-130:

Aristocratic Rebels

by Hermione Lee

BERTRAND RUSSELL: A LIFE
by Caroline Moorehead.
Viking, \$30.00.

OTTOLINE MORRELL:
LIFE ON THE GRAND SCALE
by Miranda Seymour.
Farrar, Straus & Giroux, \$30.00.

BERTIE AND OTT: The Movie. Why hasn't it been made? We've had Derek Jarman's *Wittgenstein* and Sally Potter's *Orlando*. And now—Peter Greenaway's *Garsington*? Think of it. The starring roles: two of English history's most cerebral, intense, and physically mismatched adulterous lovers, the diminutive, chinless, lecherous, aristocratic, iconoclastic philosopher, with his bright eyes and hyena laugh and mannered speech, and the immense, flame-haired, huge-nosed, huskily booming and whispering hostess, oozing with spiritual and emotional largesse. Parts to die for. Dudley Moore and Anjelica Huston? Woody Allen and Eleanor Bron? And the supporting cast! The ruthlessly abandoned wife, sad, awkward, desperate Quaker Alys, and the dotting husband, handsome, unstable, promiscuous, devoted Philip Morrell. And all that famous crowd of Apostles and Bloomsberries, poets and politicians and philosophers! What walk-on roles! Virginia Woolf, lethally watchful, equivocating friend to Ottoline, describing Russell as a "luminous vigorous mind . . . attached to a flimsy little car, like that of a large glinting balloon." Darkly demonic Ludwig Wittgenstein, Russell's possessive pupil and philosophical conscience. Ottoline's rival lover, the smoldering erotic painter Henry Lamb, sulking on the sidelines. D. H. Lawrence, disgusted, acrimonious, and vengefully satirical; Siegfried Sassoon, T. S. Eliot, Mrs. Eliot, Katherine Mansfield, Shaw, Lenin, Charlie Chaplin . . . And the settings! Peppard Cottage, the little Morrell country house near Henley; Garsington Manor, Cotswold stone jewel set within, orientally high-colored stage set within, seething with jealous talents; Trinity College, Cambridge;

Bedford Square; the House of Commons . . . And the dialogue! "I feel just filled with utter thankfulness for you and worship. Darling darling Bertie." "My love for you is as deep and boundless as the sea. I cannot tell you how great it is, but I know you know. Yours in utter devotion, B." No: perhaps it would all be too much of a good thing—too much idiosyncrasy, too much color, too much period Englishness.

These two biographers handle the much-too-muchness of their subjects in different ways. (One difference is in naming: Moorehead, writing of a public man, speaks of "Russell"; Seymour, dealing with a private life, of "Ottoline.") Both have a great deal of new material: Miranda Seymour rescues Ottoline's emotional and candid memoirs from the reverential widower's expunging hand, and Caroline Moorehead has profited from a mass of unpublished papers, particularly those of Russell's wives and mistresses. Ottoline's biographer is concerned with helping her escape from the standard image of "a bizarre and overbearing aristocrat who tried to get into intellectual society"—an image for which Seymour largely blames the Bloomsbury group (though I think Lawrence is as much responsible). She wants to replace the much-caricatured grotesquerie of Ottoline in later years—maligned by Clive Bell as a haggard old wreck in her dirty finery—with a younger Ottoline, beautiful, adventurous, and original. So she tends to be effusive and chatty (about "Ottoline's spectacularly bad press," about "sex and religion" as "a famously heady brew," and so on). In her enthusiasm for Ottoline's generosity, sensitivity, and audacious spirit, her lack of snobbery and her valiant fight against lifelong illness, Seymour pours onto the page a marvelously fresh and intimate portrait that changes one's feelings toward this grandly unconventional woman.

Caroline Moorehead has a harder job, I think. She has some solid (male) precursors (lives of Russell have been written by Ronald Clark, Alan Wood, and Alan Ryan, and a fine life of Wittgenstein by Ray Monk). She has to pace herself for a very long haul, from the Boer War to the Vietnam War, with her man prominently and influentially involved in all the major world events in between. She has to deal with the broad shifts in liberal thinking in this century and to decide to what extent

Russell's intellectual development is formative, or paradigmatic, of the age. So she must trace, in their context, his evolving and changing commitments to pacifism, socialism, progressive education, passive resistance, and disarmament. She must make us understand the links between his fervent atheism, his belief in the possibility of social reconstruction (at once optimistic and grimly realistic), and his repudiation, as a logician, of idealism and his conviction that all knowledge rests on empirical evidence. And she is dealing with a much less sympathetic, as well as a much more intelligent, character, and has had to decide when to take offense.

Fortunately, she steers clear of the current fashion for pejorative, witch-hunting biographies and lets Russell's frequent awfulness—outstanding even by contemporaneous standards—speak for itself. As in: "If only he [Bernard Berenson] would not permit himself the physical liberties which Jews indulge in of touching one and putting their hands on one's shoulder and so on." Or: "Who is that Jew at Oxford?" (referring to the philosopher A. J. Ayer, whom Russell knew quite well). Or, referring to Lytton Strachey's homosexuality: "diseased and unnatural." Or, on eugenics in *Marriage and Morals* (1929), recommending sterilization for "feeble-minded women" whose offspring would be worthless to the country.

"Controversial stuff," Moorehead comments meekly, choosing not to be outraged by her outrageous subject. There is, after all, quite enough witch-hunting going on within this story of a lifetime's resistance to authority. It starts with Russell's ostracism by, and dismissal from, Cambridge for his pacifism in the First World War, and his imprisonment in 1918 for advocating peace with Germany. It continues in 1940 with a savagely censorious American campaign of moral indignation against his appointment to a chair ("a chair of indecency") at the City College of New York, and it ends with his week's prison sentence, at the age of eighty-eight, for "inciting the public to disobedience" at the Hyde Park Campaign for Nuclear Disarmament rally of 1961.

In the American conflict Russell's inextricable egotism and heroism are seen at their most vivid. His attitude toward the States—characteristic of many upper-class British intellectuals—was one of mingled scorn and greed. "If I

ever want to come here again," he observed on a visit to America in the 1920s, "please remind me not to: the people are horrible, and the beastliness of the country makes me miserable." But he was happy to return on lecture tours for ever larger fees, even as his criticisms of the country (first aired in an *Atlantic Monthly* piece in 1915, urging America to take a firmer stand against the "warring governments" of Europe) became more and more extreme. They culminated, in his nineties, in his vitriolic opposition to the Vietnam War and his obsessive attacks on American domination of the world:

Whenever there is hunger, wherever there is exploitative tyranny, wherever people are tortured and the masses left to rot under the weight of disease and starvation, the force which holds down the people stems from Washington.

This intemperance may well have taken its tone, Moorehead suggests, from the influence of the sinister protégé, Ralph Schoenman, Russell acquired in his old age. And yet much of what Russell said about America was right. After he was driven from his post in New York by public outcry, he drew analogies between Nazism and the opponents of academic freedom in America. The comparisons were prophetic of the McCarthyism to come. And what politically correct campus would now applaud the anti-Semitic, womanizing Bertrand Russell to a chair?

WITH SUCH AN incomparable mixture of integrity, idiosyncrasy, and arrogance on her hands, Moorehead does well to maintain a moderate tone. Her descriptions of Russell tend to be given in voices other than her own. A young American meeting him when Russell was twenty-two, in 1895, said, "He gave me a feeling of intense mental life almost unrivalled in my experience. Ideas simply leaped from him." Beatrice Webb described him in her diary a few years later as dark-haired, bright-eyed, nervous, alert, quick, intellectually audacious, and a delightful talker, with no tolerance for bores or for "other people's emotions." Norbert Wiener, the German-American philosopher prodigy, at Cambridge in 1913 called him a "keen, cold, logical machine." In 1918 a fellow noncombatant summed him

up as "very childlike in his engrossment with his own emotions, virtues, vices, and the effect he has on other people. The oddest mixture of candour and mystery, cruelty and affection."

And so the exasperating personality—cold, vain, cranky, charming, utterly confident of his own rightness, blazingly energetic and relentlessly clearheaded—is carefully established, and nowhere more emphatically than in this version, by Colette O'Neil (the actress Lady Constance Maleson, his lover, on and off, for more than thirty years): "When BR really wants anything, he lets NOTHING WHATEVER stand in the way of getting it. He has always been like that."

When Moorehead deals with Russell's work as a philosopher, she is somewhat dutiful and flat, though clear enough on his collaboration with Alfred Whitehead, his shift away from George Moore, and his troubled intellectual relationship with Wittgenstein, who detested his popularizing self-help books, including *The Conquest of Happiness*. (Although this was timely for a postwar audience looking for "a new philosophy of life," Wittgenstein called it a "vomitive.") Moorehead does communicate the mental excitements of a man for whom the discovery of Euclid at eleven ("one of the great events of my life, as dazzling as first love") and a sudden revelation in early manhood of the answer to Kant's question "How is geometry possible?" were milestones in his inner life.

But she does best with the outer life, the active expressions of Russell's powerful will: his self-assertive marital and sexual behavior, and his analogous, but more admired, intransigent and anti-authoritarian acts in the public sphere. Russell's peculiar childhood—the early deaths of his radical, aristocratic parents, and his Victorian religious upbringing by his grandmother, the puritanical widow of Lord John Russell, in the grand and gloomy Pembroke Lodge—clearly has a great deal to answer for in his later relationships. Moorehead isn't overbearingly psychoanalytical: she deals quietly, for instance, with Russell's fears of inherited insanity in his family (an affliction that indeed affected the desperately unhappy lives of his son and his granddaughters). She gives the facts simply of Russell's cruelty to his first wife: his notorious moment of disenchantment ("I went out bicycling one

afternoon and suddenly realized that I no longer loved Alys"), their horribly prolonged breakup ("So as not to feel overpoweringly irritated, Russell decided to stop looking at her"), Alys's self-disgust, and her wretched later life, fifty years spent hoping for his return.

Russell's minor liaisons—his irresponsible flirtation with the unstable Vivien Eliot, his ruthless shedding of the unhappy American girl Helen Dudley ("I broke her heart")—are coolly presented. Moorehead cannot quite remain neutral about Russell's exploitation of the remarkable Colette, whom he left and returned to and left, over and over again, from 1916 to 1949. ("If you leave me," she wrote once, "I'll not kill myself . . . I'll still love you as I'm loving you now; but I shall not tell you what is in my heart. I know that we belong together. If you don't know it, there is nothing I can do." There was no reply.) But she evenhandedly shows how bitter his second wife, Dora, could be (their divorce, for all their vaunted principles of sexual freedom and equality, was viciously recriminatory) and how "difficult and dislikeable" was his young third wife, "Peter" Spence. Russell's contradictions—sexual greed and puritanism,

commitment to educational reform and inability to bring up his own children happily, belief in equal rights and the demoting of women's intellectual capacities—come across infamously.

There's some comedy, too, not least in Russell's attempts at fatherhood (after the birth of his first child he wrote to Wittgenstein: "At first he looked exactly like Kant, but now he looks more like a baby"); and he told his children, in later years, to lean out of the car window and shout "Your grandfather was a monkey!" at passers-by, "to convince them of the correctness of Darwin's theory of evolution") and in Russell and Dora's managing of the permissive 1920s Montessori-style Beacon Hill school. Here children of progressive middle-class intellectuals were sent to develop their "spirit of enquiry." Stories of Dora's quests for chamber pots in primary colors, her instructions to the staff to let the children swear and flick butter at the ceiling during mealtimes, and her school plays ("Thinking in Front of Yourself," in which the hero, Youth, makes his life choices among a worker, a "modern" woman, and a factory owner), or of Russell's concern for the children's bowel movements ("considered so im-

portant that Russell himself would sit on the lavatory, his trousers round his ankles, surrounded by children on their pots. When these tipped over, as they often did, no fuss was made"), have a particularly English flavor to them. That sort of affected, well-meaning, privileged bohemianism runs all the way from William Morris to Dartington Hall and the Green Party.

MOOREHEAD IS in no doubt that the love affair with Ottoline was one of the most important things that ever happened to Russell, and she quotes him saying in his autobiography, "She made me less self-centered, and less self-righteous . . . She made me less of a Puritan."

The great quarrel between them was over belief, an issue that shows up the differences between these two biographers. Moorehead talks mildly of Russell's worrying away at the question of faith and realizing that either Ottoline would have to "abandon her dependence on her God" or he would "have to find some compromise acceptable to them both." She notes that the novel they wrote together, about a young man searching for a faith, *The Perplexities of*

John Forster, was not a great success and was almost immediately repudiated by Russell as "too sentimental." But Seymour makes much more of Ottoline's spiritual grip on Russell, and argues that in the religious debate between them he moved a long way from his earlier sense of "cosmic loneliness." She puts more emphasis, too, on the battle for dominance over Russell's mind between Wittgenstein and Ottoline: "If Wittgenstein had had his way, Russell would never have written a word about religion and morals; if Ottoline had been allowed to have hers, he would have written about nothing else." It's characteristic of Seymour to go for the more dramatic interpretation. (When Ott and Bertie were reunited after his American trip in 1914, Moorehead writes, "their fondness for each other" was undiminished; Seymour's version is, "Their sexual relations now entered a new phase of blazing intensity.") But her case for a profound influence that was later played down by Russell looks plausible.

And they had strong affinities. They were both intensely eager for material to sink their teeth into, but Ottoline's passion for experience, as Miranda Seymour vividly demonstrates, went into

society, relationships, faith, imaginative intimacies with artists, interior design, clothes—all things that left Russell cold. They were both vain exhibitionists who didn't care for convention. They had both had odd, grand childhoods. Ottoline spent a solitary, pious, undereducated youth in Bolsover Castle (home in the seventeenth century to the literary Duchess of Newcastle, Ottoline's role model), shadowed by a tribe of unsympathetic aristocratic relatives. Throughout her adolescence she looked after her depressed invalid mother. This all makes painful reading. They both dedicated themselves to the cause of conscientious objectors in the Great War. Seymour waxes eloquent on Ottoline's hospitality at Garsington to intellectuals and artists turned farm laborers, and the mockery and satire she got in return: "My chief mistake has been to be too kind to people who have abused it and have tried to live on us." They were both incompetent parents. For all her partiality, Seymour cannot disguise Ottoline's lack of sympathy for her daughter, Julian (she was the survivor of twins, and it was the much-wanted son who had died), whom she was always accusing of selfish, sulking ingratitude, stu-

pidity, and cruelty, but who just wanted to be more ordinary than her mother. Ott and Bertie's love affair was ardent but sexually incompatible: at first she found him physically unattractive (especially because he had bad breath, resulting from untreated pyorrhea), and she "had a horror of sexual frankness." Eventually his infidelities and his demands made her unhappy; but after the affair ended, the friendship remained. Seymour argues strongly for Ottoline's sensuality and attractiveness. But in her marriage of companionship (Philip Morrell satisfied himself elsewhere, producing—to Ottoline's dismay—two illegitimate children by two women at nearly the same time) and in her affairs she seems to have been more interested in minglings of souls than of bodies. Whenever she fell in love—with the much older fashionable doctor Axel Munthe, who seduced her when she was twenty-four, with Henry Lamb and Siegfried Sassoon, and with Russell—she paid a price for her susceptibility, as Russell did not. Seymour has discovered, from the uncensored journals, only one affair that fulfilled her, and this was with "Tiger," a young gardening boy at Garsington. (Seymour sus-

pects that this extraordinary liaison may have filtered through to Lawrence and provided a hint for *Lady Chatterley's Lover*.) But poor Tiger died of a brain hemorrhage in Ottoline's arms, the week before Virginia Woolf was due to arrive for a weekend at Garsington. Woolf observed that Ottoline's mood was "low in tone."

WHAT UNITES Ottoline Morrell and Bertrand Russell historically is that for all their bold modernity, they were figures in transition, leftovers from a previous era. When Russell, at sixty-six, composed a (greatly premature) obituary for himself, he wrote that his life "had a certain anachronistic consistency, reminiscent of that of the aristocratic rebels of the early nineteenth century. . . . He was the last survivor of a dead epoch." In the late 1920s, when he and Ottoline still met regularly as friends, he compared them to "two shipwrecked Victorian mariners adrift in the twentieth century."

These anachronistic aristocrats and the world they remind us of should not be sentimentally lamented or idealized. But the couple did share a quality that makes them admirable, for all their absurdities and their self-admiration. "Conventionality is deadness,"

Ottoline wrote in her diary in 1907. "Your life must break bounds set by the world." And, in 1929, "I know I have given love, affection, interest and sympathy. It has often been trampled on, abused or misunderstood and derided, but that doesn't matter. . . . Self-satisfaction is death." Writing to her in 1918, Russell imagined what he would like a future biographer to say of him.

I existed from my own centre, many things that I did were regrettable, I did not respect respectable people, and when I pretended to do so it was humbug. . . . I hated hypocrisy and lies; I loved life and real people, and wished to get rid of the shams that prevent us from loving real people as they really are.

George VI, on giving Russell the Order of Merit in 1949, remarked, "You have sometimes behaved in a way which would not do if generally adopted," and Russell replied, "How a man should behave depends upon his profession. A postman, for instance, should knock on all the doors in a street at which he has letters to deliver, but if anybody else knocked on all the doors, he would be considered a public nuisance." Both Ottoline and Russell knocked on a good many doors. The quality they shared was courage. □

Designing Woman

OTTOLINE MORRELL
Life on the Grand Scale
By Miranda Seymour
(Lanar, Simon & Schuster,
\$29.95 pp.)

Reviewed by
Georgina Jones-Davis

When D. H. Lawrence first published "Women in Love" in 1920, he never doubted that his wife and friends—Evelyn, Katherine Mansfield and Julia Middleton Murray—appeared thinly disguised as the major, sometimes repellent characters. One of the cruelest portrayals in the book is that of Lawrence ("Birkin's" discarded lover Hermione Roddice, with her ang-song, languorous, affected drawl) (Think of the evvie Eleanor Bron, who portrayed Hermione in the movie version, singing out "It sounds like Megaloman-NEE-A!"). Hermione is the classic aesthete, whose eccentric, deliberate mannerisms make her young house guests squirm in discomfort and embarrassment, suppressing giggles.

"Your passion is a lie," Birkin informs Hermione in front of his future love, Ursula. Frieda ("Helen's" passion at all, it is your will. It's your bullying will. You want to clutch things and have them in your power. . . . You haven't got any real body, any dark sensual body of life. You have no sensuality. You have only your will and your conceit of consciousness, and your lust for power, to know."

Poor Ottoline Morrell, the real life prototype for Hermione. She just had that kind of affect on people. They thought she was controlling and ludicrous. Nobody tried harder to be kind, supportive, to strive intellectually or be loved than Ottoline. Yet nearly everyone she counted on as a friend poked fun at her behind her back.

What did Lady Ottoline Morrell do to merit this \$30, 452-page biography? It is enough to have been personally acquainted with nearly every important writer or artist of her time? Taken Bertrand Russell as a lover? Belong to the British aristocracy? (Her brother was a duke.) To have been one of the founders of England's Contemporary Art Society? Introduced a fictional British public to the Ballet Russe?

Ottoline is referred to in the biographies, letters and memoirs of every member of the Bloomsbury group. And she loomed herself—often to her own horror—appearing in the novels of her numerous "friends," in brush than disguises. The best known may be Lawrence's Hermione Roddice, but not to be overlooked are Aldous Huxley's Priscilla Wimbush in "Carnegie Teslow," Lady Caroline Bury in Graham Greene's "It's a Battlefield," Osbert Sitwell's parody of her as Lady Septuaginta Goodley in "Triple Fugue," and Walter Turner's devastating portrait of one Lady Caraway in "The Aesthetes." In "Bridgeshead Revis-

Jones-Davis is an assistant book reviewer.

ited" Evelyn Waugh has Anthony Blanche "wander aloud to Charles Ryder whether or not he should accept his Sunday invitation to Garsington," the Morrells (Oxford home where shy, tongue-tied students mingled with famous artists and writers).

Ottoline Bentinck was born on June 16, 1873, the only daughter in an upper-crust English family. She matured into a gangly young woman, six-foot-tall (at the turn of the century!) with a cascade of thick red hair, a large nose and protruding chin. She was considered an exotic beauty in her time. (Russell described her face in his memoirs as "horsy" and he had been her lover and a loyal friend.)

Ottoline knew her appearance was unusual, so with aristocratic panache, she developed a bold style uniquely her own. Her vividly colored gowns might be inspired by a Velasquez painting or the Russian Ballet. She sported enormous hats (one had little rodents perched on the brim.) Well into old age, she sailed into rooms in billows of satin, silk, embroidery, magnificent materials skimpily sewn into theatrical costumes.

She married badly. Hansome Philip Morrell was a failed attorney who aspired to liberal politics, for years alienating Ottoline's conservative titled family.

They had one daughter, Julian. Ottoline proved to be an uninvolved, less than ideal parent, not so different from other people of her background and class.

Philip turned out to be a serial philistree with no sexual interest in

his wife. Ottoline, in her innocence, thought he lacked a sex drive. "Every woman in Bloomsbury was claiming to have been eyed by Philip or propositioned by Bertie [Russell]," Seymour writes. "Not to have received their attention was to seem unattractive."

It was terrible loneliness, not sex, that drove Ottoline into the arms of men outside her marriage. One can hardly accuse her of adultery; she was so starved for affection.

Bertrand Russell fell madly in love with her. She could not reciprocate his physical passion, however. Despite that, they were lovers on and off for seven years. Philip, carefully covering up his own dalliances, practically blessed Ottoline's affair with Russell. Once, when the Morrells took an eight-day holiday, Philip left midway in the week on the same day that Russell was due to arrive. The two men diplomatically took different trains.

Ottoline's main accomplishments in life rested in her various supportive roles as patroness, surrogate mother, lover, friend, therapist, confidante, buyer and publicist, to England's most talented painters and writers before and during the first World War.

Garsington became a regular, celebrated headquarters for the arts set. Weekends in the country, turned into months in the country, as artists such as Henry Lamb (briefly a lover) and Dorothy Brett moved into cottages on the Garsington estate.

The lineup of house guests might include Aldous Huxley, Katherine

Lady Ottoline Morrell, 1912. From "The Waking Dream: Photographs of the First Century" (Metropolitan Museum of Art).

Mansfield and John Middleton Murray, Lytton Strachey and Carrington, Virginia and Leonard Woolf, Vanessa Bell and Duncan Grant. They would use the studios and bedrooms to work in, stroll the gorgeous Italian garden and nearby woods, enjoy stimulating company over long dinners. (During the war years, a few young men enjoyed protection as conscientious objectors doing government-sanctioned work on the Garsington farms.) And then Lytton Strachey would write letters to fellow Bloomsburians about the appalling plumbing, miserable food and boorish company at the Morrells. Yet, like the others, he continued to accept invitations, even as he did his best to ravage Ottoline's reputation.

Tensions developed between Ot-

detail she prevents is exhausting, perhaps even to the author herself.

For example, Ottoline had euded her 6-year-old daughter, Julian, to a hospital in Switzerland, fearing the child had developed tuberculosis. Julian will grow up, Seymour asserts, convinced that her mother dislikes her, an early feeling "strengthened when she discovered that she was to spend most of her first year back in England under her Aunt Frederica's roof as gunna-a-week boarder." Unfortunately Seymour never returns to this fascinating point.

Ottoline, for all the rich detail of her interior decorating, apparel, bathing habits, letters and journals, remains a dusty relic of another era. It is as if Seymour has captured her in a series of stately, sepia photographs. For a moment we can look into her face and catch a glimpse of who she is; then her personality recedes behind the details.

Ottoline never intended to be an open book to anyone. She was incapable of revealing her innermost feelings and thoughts to family or friends. Even her own journals contain evasions, for they were written with Philip's eye in mind and she carefully edited out certain references and events.

And Philip obviously posed to a problem to Seymour. She writes of him, "Philip remains a stumbling block, a handsome, shadowy character whose words are seldom reported and whose personality remains veiled."

Yet reading "Ottoline Morrell, Life on the Grand Scale" awakes one an accurate, colorful and cluttered portrait of early 20th-Century England and the Bloomsbury circle.

And anyone with a passion for reading lives will wonder as we move further into the Electronic Information Age, how biographers

will be written about the present in our own time, as letters are replaced by phone calls and faxes, and journals are secreted away on fragile, floppy discs that won't speak to the futuristic computer programs of 21st-Century biographers.

(23) AN IMAGINARY BR-OTTOLINE MORRELL CONVERSATION

Thanks to John Lenz for this submission:

The following comes from a New Yorker article about the British playwright Alan Bennett (by Stephen Schiff, September 6, 1993, p. 92). This is part of the growing genre of popular, silly, romanticized literature about Russell (and Wittgenstein too).

... In "Forty Years On," his hit 1968 play about a daft historical pageant in an English public school, two of the students (one riding on top of the other) dress up as Lady Ottoline Morrell, while a housemaster impersonates Bertrand Russell. What follows is a kind of post-Wittgenstein vaudeville:

Ottoline: Oh, Bertie.

Russell: Yes, Ottoline.

Ottoline: I had an accident yesterday. One of my breasts popped out of my frock.

Russell: Oh? Which one? ...

Ottoline: It was while I was playing bridge with Queen Alexandra. Fortunately I was playing my cards very close to my chest so no one noticed.

Russell: I don't think you have ever appreciated, Ottoline, the saving qualities of elastic.

Ottoline: Do you ever have the same problem?

Russell: Mutatis mutandis, no. But then I have led a very sheltered life. I had no contact with my own body until the spring of 1887, when I suddenly found my feet. I deduced the rest logically.

It may be hard [the article continues] to imagine sitting through two hours of such arch frivolity....

Comments: Do the two students impersonating Ottoline, piggyback, make an obscure reference to what BR called her "horsy" face?

BR didn't use Latin!

The playwright misses a chance to make more fun of a Russellian epiphany. (The final joke is only about logic.) -- Did Bertie find his feet while bicycling?

The reviewer is equally silly. How is the language "post-Wittgenstein"? (Modernist, yes.)

BALLOT

Eight Directors are to be elected for 3-year terms starting January 1, 1994.

Normally there would be at least nine candidates for the eight directorships. However, at this time there are only six nominees. In addition, write-in votes can be considered.

Make a checkmark next to the names of the six nominees for whom you wish to cast your vote. You may also specify between one and eight write-in names. In any case, if you vote for more than eight candidates, your ballot will be invalid.

- () IRVING ANELLIS
- () ROBERT DAVIS
- () BOB JAMES
- () CHANDRAKALA PADIA
- () PAUL PFALZNER
- () HARRY RUJA

Write-in votes: _____

Comments on any topic are welcome:

Your name (optional) _____ Date _____

Please remove this page and fold it as indicated on the other side. It is addressed and needs no envelope. It does need a stamp (29¢ in the U.S.A.). Ballots must be received at the specified Chicago address by December 31, 1993.

Thank you for voting--and for voting early.

FROM THE PRESIDENT

Michaal J. Rockler, President, The Bertrand Russell Society

Plan now to attend this year's annual meeting which will take place in Toronto from July 7 to July 10; it will be co-hosted by The Council for Democratic and Secular Humanism and the Humanist Association of Canada.

On Thursday, July 7, The Bertrand Russell Archives at McMaster University will be open to those who wish to spend time there. Russell Archivist Ken Blackwell is looking forward to providing an interesting program for visitors from the conference. Hamilton is an easy drive from Toronto. On Thursday evening, the BRS board will meet; this will be followed by a reception in which BRS members can meet and socialize with members of the other co-hosting groups.

On Friday morning, a plenary session will address "The Positive Reach of Humanism--An Agenda for the Twenty-first Century." This will be followed by lunch and a special luncheon speaker. In the afternoon there will be concurrent sessions which will involve members of the Russell Society. Papers will be read by the recipients of the 1994 Young Scholar Awards. Friday evening will be unstructured so attendees can enjoy the sights of Toronto on their own.

Saturday's opening plenary session will focus on Russell's theme of the good life. The Bertrand Russell Society will be represented by Gladys Leithauser on this panel. Lunch will be followed by additional concurrent sessions including a debate between John Novak and myself on Dewey versus Russell on religion. The Society business meeting will also take place on Saturday afternoon.

Saturday evening will begin with the traditional Red Hackle Hour and will end with an Awards banquet. Paul Kurtz will make a major address.

Sunday morning's plenary session will be followed by an optional trip to Buffalo to visit the headquarters of Free Inquiry.

The meeting will take place in the Chestnut Park Hotel--a reasonably priced facility which will be an improvement on the usual university dormitory experience.

Registration details are included in this newsletter. I would like to see everyone in Toronto because this joint meeting will be an enjoyable one. Come support the work of Bertrand Russell on this special occasion.

Also in this newsletter is a membership renewal application. The majority of last year's members have renewed but there are many who have not. If you were an early renewer, I would like to thank you for your continued support. The Bertrand Russell Society depends on its members for its

continued existence. The only funding the Society has are dues and donations.

I would like to offer special thanks to the many members who included a contribution to the Society with their dues. Such contributions ease the way of the Society in meeting its financial obligations. Our major expenses include the BRS newsletter, the cost of subscriptions to Russell, and the subsidy we provide for the annual meeting.

If you have not renewed, I urge you to do so. In a world constantly bombarded by what Russell called "the herd instinct," the need to maintain an organization dedicated to the work of perhaps the greatest rationalist of the twentieth century remains critical. Please send in your dues payment today if you have not already done so. Help provide for the continued work of keeping Russell scholarship viable. I look forward to hearing from you.

(2)

CONRAD RUSSELL ON RELIGION

CONRAD RUSSELL

IT SEEMS superfluous to tell readers that I was not brought up a Christian. My early memories include such things as listening to my father's debate with Father Coplestoné, when I was eight. I remember, too, my father's amusement at a fan letter which claimed that "the Jesuit's morbid pronunciation of 'Gud' robbed me of all belief in said being". I was familiar, from an early age with such awkward questions as where Cain's wife came from. Yet, at the same time, I grew up aware of religion as a language in which people have described experience which is not confined to the religious, and with a good working knowledge of the Bible as a document to be read in the same spirit as Herodotus or Homer. I have known for as long as I can remember that the Devil can quote scripture.

Like many others, I began to experiment with other ideas around the age of fifteen, but, though I was tempted by religion for a while, I could not square the world as I saw it with an omnipotent and benevolent creator. The move back to the denial of religion with which I started was helped by a growing awareness of the monopolist tendency in most forms of organised religion. That awareness has been constantly deepened by my work as a historian. Samuel Butler was quite right that the Civil War was one in which people tried:

To prove their doctrine orthodox
By apostolic blows and knocks.

Since the itch to intolerance is so deep in the human being, a doctrine which gives us divine excuses for indulging it is very harmful indeed. The State Department, in 1990, decided that the troubles in the Caucasus were less serious than those in the Baltic, because they were "only religious". They could not have been more wrong. The urge to monopoly is very near the essence of religion. Unfortunately, it is not confined to the religious.

These thoughts of Conrad Russell (BR's son, the 5th Earl Russell) on religion appeared in the February 1994 issue of New Humanist, a publication of the Rationalist Press Association.

We are indebted to Tim Madigan of the Council for Democratic and Secular Humanism for providing this article to us.

It might also be noted that the original article included an attractive photograph of Conrad Russell.

(3)

ON PAUL ARTHUR SCHILPP

RSN 80, November 1993, reported on the death on September 6, 1993 of Paul Arthur Schilpp, a BRS Board member, celebrated philosopher, and editor of "The Library of Living Philosophers." BRS member Steve Maragides sent us this clipping from the Winter 1994 issue of Northwestern Perspective [Northwestern University, Evanston, Illinois], p. 40. Steve noted that he was pleased to see that this obituary specifically mentioned the BRS Award among Prof. Schilpp's many honors.

Paul A. Schilpp (G22), 96, of Carbondale, Ill., internationally renowned philosopher and author and former professor of philosophy at Northwestern (1936-65), Sept. 6, 1993. A distinguished professor emeritus at Southern Illinois University at Carbondale, Schilpp was honored in 1989 by the American Philosophical Association for his 21-volume *Library of Living Philosophers*. He created the series to definitively

explore the ideas of the 20th century's great thinkers, including Albert Einstein, George Santayana, John Dewey, Bertrand Russell and Jean-Paul Sartre.

Schilpp's books include three written during his tenure at Northwestern: *Kant's Praecritical Ethics*, *The Quest for Religious Realism* and *Contemporary Morality*. Among dozens of honors received throughout his career were the

Gold Medal of Phi Beta Kappa, the Bertrand Russell Society Award, lectureships both in the United States and abroad and honorary degrees from Kent State University, SIUC and Springfield College in Massachusetts.

He is survived by his wife, Madelon Golden Schilpp (CAS45); daughters Margot, Erna Bimson (CAS40) and Marjorie Goodere; and sons Erich, Robert and Walter.

(4)

REMINISCENCES OF PAUL ARTHUR SCHILPP

In RSN 80, we invited readers to consider submitting reminiscences of Prof. Schilpp to the newsletter. We are happy now to be able to offer this memoir by BRS member Shohig Sherry Terzian of Los Angeles. Ms. Terzian was Librarian and Director of the Mental Health Information Service of the Neuropsychiatric Institute of the University of California at Los Angeles from 1961 to 1986. She was also a faculty member of the UCLA Department of Psychiatry and Biobehavioral Sciences. Following her memoir is Prof. Schilpp's October 13, 1950 letter to Ms. Terzian. This letter is illustrative of Prof. Schilpp's pleasant, conversational writing style. Also noteworthy is the list of "Library of Living Philosophers" volumes either published or in preparation as of 1950. Our thanks to Ms. Terzian.

Dr. Paul Arthur Schilpp: My Reminiscences

By Shohig Sherry Terzian

The news of the death of Dr. Paul Arthur Schilpp has brought back many memories of my association with him in connection with the Santayana volume in "The Library of Living Philosophers" series. And I even had

a chance to discuss something about it with Bertrand Russell!

To back track to 1939, I learned that "The Library of Living Philosophers" had been initiated with a volume on John Dewey and that the second volume would be on George Santayana with Dr. Schilpp continuing at the helm as Editor. He was seeking contributors which impelled me to drop him a line at Northwestern University, expressing my interest and offering my services.

Looking back over the years, I realize that it was quite forward of me to do it but I couldn't resist, considering my experiences. I had written my honors' thesis at Radcliffe on George Santayana which received honorable mention in the Sohler Prize of Harvard's Department of English. And Santayana had done me the honor to read my thesis personally and offer constructive comments which inspired me, of course. It led to some exchange of letters and I aimed to visit him in Italy. I was finally able to take time out to travel to Europe from my home in New York City.

But a reminder that the year was 1939. No sooner did I land in Paris than the infamous Hitler-Stalin Pact was signed and war became imminent. I spent most of my time trying to book passage to NYC on the few available ships instead of being stranded in wartime Europe like so many Americans. I made it back to NYC and soon afterwards met Dr. Schilpp.

His letter was full of warmth and encouragement. He had been delighted to hear from me and suggested a meeting at Columbia University at a special function honoring John Dewey. It was an exciting experience for a novice like me working at a beginner's job at Columbia to mingle with leaders in philosophy. Dr. Schilpp immediately appraised my qualifications as a possible contributor to the Santayana volume. Even though I wasn't yet an academic, nevertheless I offered a background that would suit his needs. Of course, I had been exposed to the writings of Santayana and worked in a library at Columbia which meant, to Dr. Schilpp, that I could contribute as a bibliographer of a comprehensive listing for the Santayana volume, the second in "The Library of Living Philosophers" series.

Dr. Schilpp was a born dedicated teacher and, as I was to learn later, teaching meant a great deal to him. Time was of the essence since the volume was to appear in 1940; I had a full-time job but after my European experiences, and disappointment in not meeting Santayana, I overcame various obstacles with Dr. Schilpp's direction. He couldn't offer me a salary but I was to submit bills for miscellaneous expenses. After all, mine was a labor of love. Even though I wasn't yet an academic, I was on the fringe and it certainly became a learning experience.

Dr. Schilpp kept in constant touch and answered my queries promptly. And he proved to be an amazing sleuth for over a decade later, he tracked me down in Los Angeles with the same warmth and enthusiasm. It had to do with a second revised edition of the Santayana volume. Between Septem-

ber 1950 and the following year when the volume finally appeared, we must have exchanged double the amount of correspondence! For Dr. Schilpp was to be "more than 10,000 miles away from home working on the Radhakrishnan volume of our LIBRARY." "It would give me a good deal of mental satisfaction and relief," he added, "if I could know that this particular job of the Santayana bibliography was in your good hands."

Interestingly enough, Dr. Schilpp contributed an essay to The Courage to Grow Old (New York, Ballantine Books, 1989) which is entitled "At 92." It is the last contribution in a book edited by Phillip Berman containing reflections of 41 prominent seniors. He reiterates his love of teaching and hopes to be remembered as a teacher. In my own case, he taught me to tackle a tough assignment virtually alone but in an area which meant a great deal to me. And it gave me the greatest pleasure to have the honor of relating it to Bertrand Russell whom I met unexpectedly when he was involved in a controversy at the City College of New York.

The segment of City College was located in my old neighborhood, on East 23rd Street in Manhattan where I had often roller skated up and down the block. This time, I was entering to crash whatever lecture was taking place honoring Lord Russell. Instead, he appeared while I was waiting from him. Without fear or trepidation, I went directly up to him, introduced myself, shook his hand, and started talking to him about my work on Santayana! Bertrand Russell was so serene, so charming, such a good listener. Yes, he agreed, Santayana was a great man, a great philosopher, and he wished me success in my future work on him. I shall always remember and will feel indebted to Dr. Paul Arthur Schilpp for his encouragement and assistance in my early start.

The bibliographic citations are as follows: Schilpp, Paul Arthur, ed. The Philosophy of George Santayana. Evanston and Chicago, Northwestern University, 1940 (Library of Living Philosophers, vol. 2), "Bibliography of the Writings of George Santayana: 1880-1940" (with Index), pp. 607-678. 2nd ed., New York, Tudor Publishing Company, 1951, "Bibliography of the Writings of George Santayana: 1880-1951," pp. 607-690. Another edition: LaSalle, Illinois, Open Court, 2nd ed., 1951, 2nd printing, 1971.

Bertrand Russell's essay is entitled "The Philosophy of Santayana." His whereabouts are given as Fallen Leaf Lodge, Lake Tahoe, California. Santayana's lengthy reply to all of his critics in the volume is called "Apologia Pro Mente Sua." In referring to Russell's essay, Santayana states that "as was to be expected, his well-known incisiveness and wit have been softened by kindness, and also enlightened by old acquaintance. He can interpret my writings by his direct knowledge of my ways...." Dr. Schilpp included a facsimile of page one of Santayana's "Apologia" and as an addendum, a facsimile page of Santayana's letter of October 21, 1940 to him about his review thereby concluding the "Apologia." It was exciting to be a part of an important volume which Dr. Schilpp succeeded in creating against wartime restrictions and obstacles and I, for one, will continue to feel grateful to him for the invaluable experience.

THE LIBRARY OF LIVING PHILOSOPHERS, INC.

- The Philosophy of Karl Jaspers
- The Philosophy of Jacques Maritain

Miss Shohig Terzian
359 South Cochran Avenue
Los Angeles 26, California

My dear Miss Terzian:

Thank you very much indeed for your kind and prompt letter of October 10th, to which I hasten to reply.

First of all, let me congratulate you on your good sense in choosing such a wonderful climate and state for your more permanent place of abode! (Having lived for thirteen years in California, myself, I know what I'm talking about.)

Needless to say, I am delighted to know that you will be so kind as to undertake the arduous task of bringing the Santayana Bibliography up to date for us for the second edition. It is good for me to know that this task is in the same careful and interested hands which did such an excellent job in the first edition.

Unfortunately, I am afraid that we will not be able to allow you too much time for this undertaking. Since September 10th, the Tudor Publishing Company of New York City have become the printers and distributors of our series, and it is they who will not only publish all future volumes of our LIBRARY, but will also reprint volumes in the series now out of print. According to the latest word I have from them, they are hoping to publish the Santayana volume in February, 1951. If this schedule should actually be lived up to, I imagine that they would have to have all material for the Bibliography by December 15th, the latest. Is this going to rush you too much?

As to your request concerning the manuscript of Domination and Powers, let me merely say that I know that Santayana is reading proofs on this at present. My guess is that it will do no good to ask him personally for the likely date of publication of the book. I shall, therefore, write a note directly to Santayana's publishers in New York (Scribner's) and ask them for the likely date of publication. As soon as I have this information, I shall forward it to you.

Unfortunately, it is almost certain that our journey to India will go via Europe, and I shall, therefore, not be able to avail myself of the pleasure of seeing you in L.A.

Thanking you again for your kind helpfulness and continued cooperation, I remain, as ever,

Cordially and gratefully yours,

PAS:js

EDITORIAL ADVISORY BOARD: George P. Adams (U. of California), Fritz Kaufmann (U. of Buffalo), Cornelius Krueé (Wesleyan University), Richard P. McKeon (U. of Chicago), Arthur E. Murphy (Cornell University), Herbert W. Schneider (Columbia University).

(5) CAN YOU HELP FIND A BR EDUCATION BOOK?

Sharon Morrison (1650 Barnes Mill Road; #2412; Marietta, GA 30062; USA), who recently joined the BRS, asks for help in locating a copy of Russell's On Education, Especially in Early Childhood (British title), also known as Education and the Good Life (U.S. title). Ms. Morrison writes, "I have had a search from a [book] service for over 6 months and am still in search. I had a copy and one of my professors lost in on a plane! I've been heart-broken since 1990 over it and wanted to know if you could help me." Can you help her?

(6) THE JULY 1994 ANNUAL MEETING

In 1994 the BRS departs from its customary annual meeting mid-June date. This year the annual meeting will take place in Toronto, Ontario, Canada from Thursday, July 7 through Sunday, July 10. Mark your calendars! And make plans to attend now!

Another major difference this year is that the BRS annual meeting will be held in cooperation with The Council for Democratic and Secular Humanism (CODESH) and The Humanist Association of Canada. We are indebted to Tim Madigan and other CODESH officials for assisting us with this year's annual meeting planning and registration work.

Please be sure to read/reread BRS President Michael Rockler's comments on page 2 concerning the annual meeting. Then please review the meeting announcement/registration form accompanying this newsletter. Another reduced-size copy is provided below for your reference after you have mailed in your registration form. MORE DETAILS IN THE MAY 1994 RSN. SEE YOU IN TORONTO!

You are cordially invited to attend the 2nd meeting of the Coalition for Secular Humanism, Atheism, and Freethought
"The Good Life - A Humanist Perspective"

The good life is one inspired by love and guided by knowledge. -Bertrand Russell
 Co-Hosted by: The Bertrand Russell Society, The Council for Democratic and Secular Humanism, and The Humanist Association of Canada

Thursday, July 7, to Sunday, July 10, 1994
 at the Chestnut Park Hotel, Toronto, Ontario, Canada
 (in the heart of downtown Toronto)

CONFERENCE PROGRAM

THURSDAY, JULY 7

- 2:00 P.M. - 5:30 P.M.: Humanist Association of Canada General Meeting
- 5:30 P.M. - 7:30 P.M.: Russell Society Board Meeting
- 7:30 P.M. - 11:00 P.M.: Welcoming Reception

FRIDAY, JULY 8

- 9:00 A.M. - NOON: PLENARY SESSION: "The Positive Reach of Humanism: An Agenda for the 21st Century"
- NOON - 2:00 P.M.: Luncheon (speaker to be announced)
- 2:00 P.M. - 5:00 P.M.: 4 Concurrent Sessions (Reflecting the interests of Coalition groups)
- 5:00 P.M. - 6:30 P.M.: CSHAFT Board Meeting
- 6:30 P.M. - ? : Toronto on your own

SATURDAY, JULY 9

- 9:00 A.M. - NOON: PLENARY SESSION: "What is the Good Life? A Coalition Perspective"
- NOON - 2:00 P.M.: Luncheon (speaker to be announced)
- 2:00 P.M. - 5:00 P.M.: 4 Concurrent Sessions (Reflecting the interests of Coalition groups)
- 6:00 P.M. - 7:00 P.M.: Red Heckle Hour (Bertrand Russell's favorite scotch will be served)
- 7:00 P.M. - 10:00 P.M.: Awards Banquet: Keynote Speaker - Dr. Robert Buckman, Host of TV-Ontario's *Vital Signs*.

SUNDAY, JULY 10

- 9:00 A.M. - 11:00 A.M.: CLOSING SESSION
- 8:30 A.M. - 8:00 P.M.: Optional bus trip to *Free Inquiry* headquarters, Prometheus Books, SUNY Buffalo Campus, and Niagara Falls.

"The Good Life: A Humanist Perspective"

YES, I (we) plan to attend "The Good Life: A Humanist Perspective"

Early registration for _____ person(s).
 \$50 U.S. / \$65 Canadian (\$60 U.S. / \$75 Canadian after June 1) per person.

Friday Luncheon for _____ person(s). \$20 U.S. / \$22 Canadian per person.

Saturday Luncheon for _____ person(s). \$20 U.S. / \$22 Canadian per person.

Saturday Banquet for _____ person(s). \$30 U.S. / \$40 Canadian per person.

Sunday Bus Trip to Buffalo for _____ person(s). (includes lunch and visit to Niagara Falls)
 \$40 U.S. / \$50 Canadian per person.

ABOUT THE RUSSELL JOURNAL

One of the best things about BRS membership is that each member receives the semiannual publication Russell: The Journal of the Bertrand Russell Archives. For many years edited by Russell Archivist Kenneth Blackwell, Russell is a distinguished scholarly production featuring articles, book reviews, and research news. The BRS is pleased to enjoy a good relationship with the Russell Archives and to further Russell scholarship by increasing the distribution of Russell.

The latest issue (New series, vol. 13, no. 1, Summer 1993) appeared in January 1994. It offers a variety of fine scholarly articles and other features.

From time to time the BRS receives inquiries from members about their mailings of Russell. Sometimes an inquiry is based on a member not having received an issue that has been published and is due to him or her. Usually this situation results either from a postal problem or because the BRS has not been able to inform the Russell Archives in a timely manner about a new member, the late renewal of a current member, or an address change. Sometimes, though, members may be inquiring somewhat too soon. It is not unusual in scholarly periodical publishing for a particular issue to appear a considerable time after the scheduled time, i.e. one or more months following the month, season, or year specified on the issue. Editing, printing, and mailing a scholarly journal is a complex undertaking, and there can be numerous good reasons for publication delays. In the case of the Russell Archives, whose staff has been reduced to one (the editor), there were recently special difficulties. But help has been enlisted outside the department, and Russell will soon be back on schedule.

In any case, Russell is published and mailed by the Russell Archives and the McMaster University Library Press, not by the BRS. Members should therefore address any inquiry relating to problems with their journal mailings to

The Editor, Russell
Bertrand Russell Archives
McMaster University Library
Hamilton, Ontario L8S 4L6
Canada

The BRS thanks all members for their cooperation on this matter.

(8)

"THE HOUSE OF LORDS IS AN ANACHRONISM"

Thanks to Thom Weidlich for alerting us to the November 9, 1993 Wall Street Journal article (pp. 1, 10), "Noble Lifers; The House of Lords Is an Anachronism that is without Peer; Even Scandal Can't Unseat Members, a Diverse Lot, Still Mostly a Men's Club; Unaccountable No-Accounts." The lengthy article briefly refers to Bertrand Russell and quotes Conrad Russell.

(9) BOARD OF DIRECTORS ELECTION RESULTS

We thank all members who mailed in Board election ballots. Eight Board members were elected for three year terms beginning January 1, 1994. These six were elected as their names were on the ballot and each received many votes:

IRVING ANELLIS
PAUL PFALZNER

ROBERT DAVIS
CHANDRAKALA PADIA

BOB JAMES
HARRY RUJA

These two were elected through write-in votes:

NICHOLAS GRIFFIN

JOHN SHOSKY

Congratulations to our new or reelected Directors! We hope to see them--as well as all other Directors and many other BRS members--at our July 1994 annual meeting in Toronto.

(10) DEATH OF JOHN SOMERVILLE

We regret to report the death of John Somerville on January 8, 1994. Dr. Somerville received the 1987 Bertrand Russell Society Award (incorrectly referred to below as the Bertrand Russell Peace Award). We thank Robert Davis, who furnished this obituary from the Los Angeles Times.

■ **John Somerville; Peace Activist, Philosopher**

John Somerville, 88, internationally known philosopher and peace activist who earned the Bertrand Russell Peace Award and the Gandhi Peace Prize. Born in New York City, Somerville earned three degrees from Columbia University and taught three decades at the City University of New York before moving to Southern California in 1967. Five of his 10 books on peace and philosophy were translated into Swedish, Danish, German, Russian and Japanese. Somerville coined and publicized the word *omnicide* as a warning against nuclear bombing. In his 70s, Somerville switched to writing plays, including "The Crisis," which dealt with ethical issues involved in President John F. Kennedy's handling of the 1962 Cuban missile crisis. He won the Gandhi award given by the Connecticut-based group Promoting Enduring Peace in 1986 and the Russell award earlier. Somerville founded several peace organizations, including International Philosophers for Prevention of Nuclear Omnicide. On Jan. 8 in San Diego.

(11)

HUMCOM XIV

News has reached us of HUMCON XIV, sponsored by the Alliance of Humanist, Atheist, and Ethical Culture Organizations of Los Angeles, to be held September 30-October 2, 1994 in Long Beach, California on the Queen Mary. Steve Allen is scheduled to participate. For more information, telephone Reuben Heller in Long Beach at 310-271-9989. It will be a shipload of freethinkers!

(12) 1994 MEMBERSHIP RENEWALS AND CONTRIBUTIONS

Many thanks to those members who renewed their memberships for 1994 in a timely manner. Doing so helps us reduce our paperwork and the need to remind members to renew. But if you haven't renewed for 1994, this February RSN is being sent to you as a courtesy and as a renewal reminder. If you haven't renewed, please refer to the "Bertrand Russell Society 1994 Membership Renewal Coupon" accompanying this newsletter.

We also would like to express our great appreciation to the following members who included a contribution with their renewal dues. Thanks to each of you!

(13) WALTER ARNSTEIN'S INTERVIEW WITH RUSSELL

Members Whitfield Cobb, David J. Meltz, and Steve Shafer brought to our attention Walter L. Arnstein's article, "My Interview with Bertrand Russell," appearing in The American Scholar, vol. 63, no. 1, Winter 1994, pp. 123-129. Dr. Arnstein is a Professor of History and Jubilee Professor of the Liberal Arts and Sciences at the University of Illinois at Urbana-Champaign. Among his other noteworthy publications is the book The Bradlaugh Case concerning the problems faced by Charles Bradlaugh, Member of Parliament, who was nearly denied his seat in 1880 because of his freethinking views. Dr. Arnstein's BR interview occurred on March 25, 1957, while he was researching Bradlaugh materials in Britain and decided to approach Russell himself on his knowledge of Bradlaugh and related matters. The article is well worth reading and should be available in many larger public and university libraries.

(14) RUSSELL EPIGRAPH IN CIVIL WAR BOOK

Bob Womack's Call Forth the Mighty Men (Bessemer, Alabama: Colonial Press, 1987), a book about the U.S. Civil War, uses this BR quotation as an epigraph: "But war is only the final flower of an evil tree."

BRS LIBRARY

We thank Tom Stanley, BRS Librarian, for preparing this report.

The Society library sells and lends books, audiotapes, videotapes, and other materials by and about Russell. Please direct BRS library inquiries and requests to Tom Stanley, Box 434, Wilder, VT 05088.

The following lists books for sale. H-Cloth, otherwise paperback. Prices are postpaid. Please send check or money order (U.S. funds only) payable to the "Bertrand Russell Society" to Tom Stanley.

By Bertrand Russell:

Appeal to the American Conscience [Out. of. Stock].....	\$9.15
Authority and the Individual.....	7.95
Has Man a Future?.....	H..8.00
History of the World in Epitome.....	1.00
In Praise of Idleness.....	7.95
My Philosophical Development.....	7.95
Political Ideals.....	7.95
Power: A New Social Analysis.....	8.95
Principles of Social Reconstruction.....	7.95
Roads to Freedom [Out. of. stock].....	6.50
Sceptical Essays.....	8.95

By Other Authors:

Bertrand Russell, 1872-1970.....	\$1.50
Bertrand Russell's America, Vol. 2, 1945-1970 edited by Barry Feinberg and Ronald Kasrils.....	9.95
Essays on Socialist Humanism in Honor of the Centenary of B.R.....	H..9.00
Into the Tenth Decade: A Tribute to Bertrand Russell.....	5.00
Liberty and Social Transformation: A Study in Bertrand Russell's Political Thought by Chandrakala Padia.....	H.11.50
The Life of Bertrand Russell in Pictures and His Own Words.....	6.75
Mr. Wilson Speaks 'Frankly and Fearlessly' on Vietnam to B.R.....	2.00

Recent acquisitions of materials available for loan:

Bertrand Russell's Philosophy of Logical Atomism by Wayne Patterson.
"Russell's philosophy of logical atomism has had a major influence on the development of analytic philosophy. The essential features of this atomism were presented in eight lectures delivered by Russell in 1919. This book is an exposition of those lectures for readers with minimal philosophical training, the aim being to provide a sound understanding of the problems which Russell addresses as well as an awareness of the acceptability of his proposed solutions. Easily grasped examples are used to aid the exposition, but over-simplification of difficult problems is avoided." 364 pp. 1993 Peter Lang Publishing, 62 West 45th Street, New York, N.Y. \$29.95.

Bertrand Russell's Philosophy of Education by William Hare. (Audiocassette)
In "Twentieth Century Philosophy of Education", edited by Hare. Includes essays on Dewey, Scheffler and Peters. 60 Minutes. Available from School of Education, Dalhousie University, Halifax, Nova Scotia B3H 3J5. \$12.95 pp.

Russell and Spinoza: Free thoughts on the love of God by Frans van Zetten.
20 pp. 1991 Stiff paper wraps. Available from Eburon, Postbus 2867, 2601 CW Delft, Netherlands. \$7.00 postpaid.

"Joseph Conrad and Bertrand Russell: New Light on their Relationship" by Owen Knowles. Offprint from Journal of Modern Literature. 15 pp.

"Bertrand Russell's Search for certainty in religion and mathematics" by Stefan Andersson. Prize paper read at the 1993 annual meeting. 13 pp.

"Russell, The Individual and Society" by Tyler Roberts. Prize paper read at the 1993 annual meeting. 16 pp.

INCOME TAX NEWS FOR U.S. BRS MEMBERS

Although the BRS membership includes people from numerous countries, a substantial majority resides in the United States. For the information of these U.S. members, we provide this U.S. Internal Revenue Service notice summarizing new rules for documenting charitable contributions, such as contributions to the BRS. In accordance with these new provisions, the BRS will gladly send a letter of acknowledgement to any U.S. member contributing \$250 or more in a given year.

Charitable Contributions - Substantiation and Disclosure Requirements

UNDER THE NEW LAW, CHARITIES WILL NEED TO PROVIDE NEW KINDS OF INFORMATION TO DONORS. Failure to do so may result in denial of deductions to donors and the imposition of penalties on charities.

Legislation signed into law by the President on August 10, 1993, contains a number of significant provisions affecting tax-exempt charitable organizations described in section 501(c)(3) of the Internal Revenue Code. These provisions include: (1) new substantiation requirements for donors, and (2) new public disclosure requirements for charities (with potential penalties for failing to comply). Additionally, charities should note that donors could be penalized by loss of the deduction if they fail to substantiate. **THE SUBSTANTIATION AND DISCLOSURE PROVISIONS APPLY TO CONTRIBUTIONS MADE AFTER DECEMBER 31, 1993.**

Charities need to familiarize themselves with these tax law changes in order to bring themselves into compliance. This Publication alerts you to the new provisions affecting tax-exempt charitable organizations. Set forth below are brief descriptions of the new law's key provisions. The Internal Revenue Service plans to provide further guidance in the near future.

Donor's Substantiation Requirements

Documenting Certain Charitable Contributions. — Beginning January 1, 1994, no deduction will be allowed under section 170 of the Internal Revenue Code for any charitable contribution of \$250 or more unless the donor has contemporaneous written substantiation from the charity. In cases where the charity has provided goods or services to the donor in exchange for making the contribution, this contemporaneous written acknowledgment must include a good faith estimate of the value of such goods or services. Thus, taxpayers may no longer rely solely on a cancelled check to substantiate a cash contribution of \$250 or more.

The substantiation must be "contemporaneous." That is, it must be obtained by the donor no later than the date the donor actually files a return for the tax year in which the contribution was made. If the return is filed after the due date or extended due date, then the substantiation must have been obtained by the due date or extended due date.

The responsibility for obtaining this substantiation lies with the donor, who must request it from the charity. The charity is not required to record or report this information to the IRS on behalf of donors.

The legislation provides that substantiation will not be required if, in accordance with regulations prescribed by the Secretary, the charity reports directly to the IRS the information required to be provided in the written substantiation. At present, there are no regulations establishing procedures for direct reporting by charities to the IRS of charitable contributions made in 1994. Consequently, charities and donors should be prepared to provide/obtain the described substantiation for 1994 contributions of \$250 or more.

There is no prescribed format for the written acknowledgement. For example, letters, postcards or computer-generated forms may be acceptable. The acknowledgement does not have to include the donor's social security or tax identification number. It must, however, provide sufficient information to substantiate the amount of the deductible contribution. The acknowledgement should note the amount of any cash contribution. However, if the donation is in the form of property, then the acknowledgement must describe, but need not value, such property. Valuation of the donated property is the responsibility of the donor.

The written substantiation should also note whether the donee organization provided any goods or services in consideration, in whole or in part, for the contribution and, if so, must provide a description and good-faith estimate of the value of the goods or services. In the new law these are referred to as "quid pro quo contributions."

Please note that there is a new law requiring charities to furnish disclosure statements to donors for each quid pro quo donation in excess of \$75. This is addressed in the next section regarding Disclosure By Charity.

If the goods or services consist entirely of intangible religious benefits, the statement should indicate this, but the statement need not describe or provide an estimate of the value of these benefits. "Intangible religious benefits" are also discussed in the following section on Disclosure By Charity. If, on the other hand, the donor received nothing in return for the contribution, the written substantiation must so state.

The present law remains in effect that, generally, if the value of an item or group of like items exceeds \$5,000, the donor must obtain a qualified appraisal and submit an appraisal summary with the return claiming the deduction.

The organization may either provide separate statements for each contribution of \$250 or more from a taxpayer, or furnish periodic statements substantiating contributions of \$250 or more.

Separate payments are regarded as independent contributions and are not aggregated for purposes of measuring the \$250 threshold. However, the Service is authorized to establish anti-abuse rules to prevent avoidance of the substantiation requirement by taxpayers writing separate smaller checks on the same date.

If donations are made through payroll deductions, the deduction from each paycheck is regarded as a separate payment.

A charity that knowingly provides false written substantiation to a donor may be subject to the penalties for aiding and abetting an understatement of tax liability under section 6701 of the Code.

Disclosure by Charity of Receipt of Quid Pro Quo Contribution

Beginning January 1, 1994, under new section 6115 of the Internal Revenue Code, a charitable organization must provide a written disclosure statement to donors who make a payment, described as a "quid pro quo contribution," in excess of \$75. This requirement is separate from the written substantiation required for deductibility purposes as discussed above. While, in certain circumstances, an organization may be able to meet both requirements with the same written document, an organization must be careful to satisfy the section 6115 written disclosure statement requirement in a timely manner because of the penalties involved.

A quid pro quo contribution is a payment made partly as a contribution and partly for goods or services provided to the donor by the charity. An example of a quid pro quo contribution is where the donor gives a charity \$100 in consideration for a concert ticket valued at \$40. In this example, \$60 would be deductible. Because the donor's payment (quid pro quo contribution) exceeds \$75, the disclosure statement must be furnished, even though the deductible amount does not exceed \$75.

Separate payments of \$75 or less made at different times of the year for separate fundraising events will not be aggregated for purposes of the \$75 threshold. However, the Service is authorized to develop anti-abuse rules to prevent avoidance of this disclosure requirement in situations such as the writing of multiple checks for the same transaction.

The required written disclosure statement must:

- (1) inform the donor that the amount of the contribution that is de-

ductible for federal income tax purposes is limited to the excess of any money (and the value of any property other than money) contributed by the donor over the value of goods or services provided by the charity, and

- (2) provide the donor with a good-faith estimate of the value of the goods or services that the donor received.

The charity must furnish the statement in connection with either the solicitation or the receipt of the quid pro quo contribution. If the disclosure statement is furnished in connection with a particular solicitation, it is not necessary for the organization to provide another statement when the associated contribution is actually received.

The disclosure must be in writing and must be made in a manner that is reasonably likely to come to the attention of the donor. For example, a disclosure in small print within a larger document might not meet this requirement.

In the following three circumstances, the disclosure statement is not required.

- (1) Where the only goods or services given to a donor meet the standards for "insubstantial value" set out in section 3.01, paragraph 2 of Rev. Proc. 90-12, 1990-1 C.B. 471, as amplified by section 2.01 of Rev. Proc. 92-49, 1992-1 C.B. 987 (or any updates or revisions thereof);
- (2) Where there is no donative element involved in a particular transaction with a charity, such as in a typical museum gift shop sale.
- (3) Where there is only an intangible religious benefit provided to the donor. The intangible religious benefit must be provided to the donor by an organization organized exclusively for religious purposes, and must be of a type that generally is not sold in a commercial transaction outside the donative context. An example of an intangible religious benefit would be admission to a religious ceremony. The exception also generally applies to de minimis tangible benefits, such as wine, provided in connection with a religious ceremony. The intangible religious benefit exception, however, does not apply to such items as payments for tuition for education leading to a recognized degree, or for travel services, or consumer goods.

A penalty is imposed on charities that do not meet the disclosure requirements. For failure to make the required disclosure in connection with a quid pro quo contribution of more than \$75, there is a penalty of \$10 per contribution, not to exceed \$5,000 per fundraising event or mailing. The charity may avoid the penalty if it can show that the failure was due to reasonable cause.

Please note that the prevailing basic rule allowing donor deductions only to the extent that the payment exceeds the fair market value of the goods or services received in return still applies generally to all quid pro quo contributions. The \$75 threshold pertains only to the obligation to disclose and the imposition of the \$10 per contribution penalty, not the rule on deductibility of the payment.

FROM WARWICK T. HARRISON

Member Warwick T. Harrison wrote to us on December 4, 1993. Here are excerpts from his letter. Would anyone want to respond to the points he raised?

I am writing this to tell you of 2 things with which I disagree with Russell's views. He was an extremely great man and definitely right about most things....

The 2 points on which I disagree with him are these:

Russell says, somewhere in his writings, "Why shouldn't the universe always have been there?" Well, now we know it wasn't! There was a "Big Bang" that scattered all the galaxies and gas clouds across space....

The second point I disagree with Russell is his non-belief in something after death....I myself...[have] had a "death experience," and it was wonderful! I'll never forget it....

...Everything I have ever read of Russell's makes complete sense to me, except the 2 points I have made above. He was an extremely great man, and I admire him greatly. I do not believe in the supernatural--only in Lord Russell and in science in general. But even Russell speaks of our spiritual values, and so do I!

MAKING BR INTO AN AMERICAN

Bob Davis sent in this clipping from a recent Barnes & Noble book catalog. It is a listing of two books, including Caroline Moorehead's Bertrand Russell: A Life. Note that the blurb indicates that Russell was "one of America's greatest thinkers." Bob writes, "B & N has made BR an American!"

NEW! IDEAS OF THE GREAT PHILOSOPHERS by W.S. & M.L. Sahakian. This examination of philosophical thought is divided into 5 sections: Epistemology & Logic; Ethics & Philosophy of Life; social, political, & legal philosophy; the philosophy of religion; metaphysics; and schools of thought. (Dover) 196pp. HC 1985148 Only from B&N: \$6.98

NEW! BERTRAND RUSSELL by C. Moorehead. The definitive biography of the controversial Nobel Prize-winning philosopher, mathematician, antiwar activist, and "free love" advocate. Based on unpublished papers & many interviews, this is an incisive portrait of one of America's greatest thinkers. (Viking) B&W photos. 608pp. HC 8163745 Pub. \$30.00 NOW \$27.00

(20)

KEEPING BR BRITISH

Unlike the above ad, this ad from Dover Books doesn't mention anything right or wrong about Russell's nationality. The catalog page on which this book and sixteen other titles by other authors are described, in the category of "Science," leads off with "Nobel laureate Bertrand Russell's classic on mathematical philosophy and other important works in new Dover editions." It's gratifying to see Russell's work lead the list of these authors including Ptolemy, James Jean, Alfred Ayer, and Linus Pauling.

INTRODUCTION TO MATHEMATICAL PHILOSOPHY

Bertrand Russell \$6.95

Seminal work by great modern philosopher and mathematician focuses on certain issues of mathematical logic Russell felt invalidated much traditional and contemporary philosophy. Topics include number, order, relations, limits and continuity, propositional functions, descriptions and classes, more. Clear, accessible excursion into the realm where mathematics and philosophy meet. Preface. Editor's note. viii + 208pp. 5 1/2 x 8 1/2. (USO)

RAYMOND LEPPARD ON TRINITY AND RUSSELL

The celebrated English conductor, harpsichordist, and music editor Raymond Leppard's new book, Raymond Leppard on Music: An Anthology of Critical and Personal Writings (Thomas P. Lewis, editor; White Plains, New York: Pro/Am Music Resources, Inc., 1993, 668 pp.) includes a sections of reminiscences about life at Trinity College, Cambridge. Leppard studied there from 1948 to 1952. Here is a sampling of three page 388 paragraphs, including references to Russell and thoughts on the academic and social atmosphere of post-World War II Cambridge.

Crucial to the scheme of things was the participation of the senior members, and my memory is that the Fellows of Trinity were, at the time, a good deal more conscientious about it than in later years. They were almost all readily available, and many of them entertained regularly in their rooms. The most regular meetings were, of course, in the weekly supervisions or seminars, but the extra-curricular meetings were often just as rewarding, and, in retrospect, I think the Fellows I knew were very generous with their time.

Trinity High Table really did have the most distinguished history of any college in virtually all the disciplines and, though it was beginning to fade after the war, the reputation of its intellectual standard was still very high, and deservedly so. G.M. Trevelyan was Master and the shades of G.E. Moore, Bertrand Russell and J.J. Thompson were in evidence everywhere. Bertrand Russell came to dine sometimes, and I remember being invited to meet him after hall by, I think, Harry Holland, who didn't much like him. I can't remember anything he said, only the beaklike nose, the hair, the nasal voice, and the physical movements remarkably agile in one so old.

The point about High Table was that you saw its members constantly about the college, and could very easily see and speak with them more intimately whenever the need arose. They, almost all, felt an obligation to be available and take an interest in the undergraduates with whom, for one reason or another, they came in contact. Nor did they overdo it--they were just there and part of the place.

RUSSELL AND THE RUSSELLS IN THE COLUMBIA ENCYCLOPEDIA

A new edition of The Columbia Encyclopedia has appeared (Fifth edition; New York: Columbia University Press, 1993, 3,048 pp.). This superb book is perhaps the finest one volume English language reference work. Among the 21 articles covering persons, families, and places named Russell (e.g. basketball player Bill Russell, astronomer Henry Norris Russell, singer/actress Lilian Russell, and U.S. Senator Richard B. Russell) are these relating to Russell [English noble family], Bertrand Russell, John Russell, and William Russell, appearing on pages 2,375-2,377.

Russell, English noble family. It first appeared prominently in the reign of Henry VIII when **John Russell, 1st earl of Bedford**, 1486?–1555, rose to military and diplomatic importance. He was lord high steward and lord keeper of the privy seal under Henry VIII and Edward VI, was created 1st earl of Bedford in 1550, and had a part in arranging the marriage of Mary I to Philip II of Spain. He died possessing great wealth and lands, which have remained in the family until the 20th cent.; these now include Woburn Abbey and large parts of Bloomsbury in London. His son, **Francis Russell, 2d earl of Bedford**, 1527?–1585, was an influential privy counselor under Elizabeth I and president of the council of Wales. **Francis Russell, 4th earl of Bedford**, 1593–1641, was the most important opponent of Charles I in the House of Lords and was the brightest hope for reconciliation between king and Parliament when he suddenly died in 1641. He also began the draining of the Fens. **William Russell, 5th earl and 1st duke of Bedford**, 1613–1700, fought first for Parliament and then for the king in the civil war. His son was Lord William Russell (see separate article). In 1694, when his son's attainder was reversed, the 5th earl was made duke of Bedford, a title that had been held in the 15th cent. by John of Lancaster, brother of King Henry V. **John Russell, 4th duke of Bedford**, 1710–71, was one of the politicians who attacked Robert Walpole and served in the cabinets of Henry Pelham, duke of Newcastle, Lord Bute, and George Grenville. He was the leader of a faction of Whig politicians, known as the Bedford group, which had considerable electoral power. **Francis Russell, 5th duke of Bedford**, 1765–1802, was a follower of Charles James Fox and one of the friends of the prince of Wales (later George IV). His criticism of Edmund Burke's pension elicited Burke's *Letter to a Noble Lord* (1796). Bedford was a notable stockbreeder. One of the most outstanding members of the family was the 5th duke's nephew, **John Russell, 1st Earl Russell** (see separate article). His grandson **Bertrand Russell** (see separate article) became 3d Earl Russell. **John Robert Russell** became 13th duke of Bedford in 1953. See various studies of the family to 1771 by Gladys Thomson, especially *Two Centuries of Family History* (1930); Christopher Trent, *The Russells* (1966).

Russell, John Russell, 1st Earl, 1792–1878. British statesman; younger son of the 6th duke of Bedford, known most of his life as Lord John Russell. He became a Whig member of Parliament in 1813 and soon began his long career as a liberal reformer. He worked for Catholic Emancipation, leading the attack on the Test and Corporation acts, which were repealed in 1828. As paymaster general in the ministry of the 2d Earl Grey, Russell helped prepare and introduce the REFORM BILL of 1832. His advocacy of the reduction of Irish church revenues helped bring down the Whig government in 1834, but when the Whigs returned to power (1835), Russell became home secretary and later secretary for war and the colonies (1839). In the meantime he had given the name to the newly emerging LIBERAL PARTY and become one of its chief spokesmen. Russell led the opposition during the second ministry (1841–46) of Sir Robert Peel and, following the repeal of the corn laws (which Russell supported), succeeded him as prime minister. During his ministry Russell used public works, grants, and other relief to help the Irish during the potato famine and supported the bill (1847) that limited the working day to 10 hr for many laborers. In 1851 he demanded the resignation of his foreign secretary, Viscount PALMERSTON, for his unauthorized approval of Napoleon III's coup d'état in France, and the following year Palmerston helped secure the fall of Russell's ministry. Russell served (1852–55) in Lord Aberdeen's coalition government and represented (1855) England at Vienna in an unsuccessful conference to end the Crimean War. He was reconciled with Palmerston and, as his foreign secretary (1859–65), vigorously advocated neutrality in the American Civil War and supported the Risorgimento in Italy. He had been made an earl in 1861 and became prime minister again on Palmerston's death in 1865. For many years an advocate of further parliamentary reform, he attempted to push through a new Reform Bill, but the bill was defeated and caused the fall of his ministry in 1866. Among Russell's literary and historical writings are a translation of Schiller's *Don Carlos* and biographies of Lord William Russell (1819) and of Charles James Fox (3 vol., 1853–57). See his *Recollections and Suggestions, 1813–1873* (1875); early correspondence (ed. by Rollo Russell; 2 vol., 1913) and later correspondence (ed. by G. P. Gooch; 2 vol., 1925); biographies by Spencer Walpole (2 vol., 1889, repr. 1968) and John Prest (1972); W. P. Morrell, *British Colonial Policy in the Age of Peel and Russell* (1930, repr. 1966).

Russell, Lord William, 1639–83, English statesman; younger son of the 1st duke of Bedford. He entered Parliament in 1660. Contempt for the dissolute court and fear of Roman Catholicism and of France led him to join the opposition to Charles II. However, he was prepared to negotiate (1678) with his relative, the marquis de Ruvigny, agent of Louis XIV, for aid to secure the dissolution of Parliament and the overthrow of the earl of DANBY. In the excitement over the Popish Plot (1678) he joined the 1st earl of SHAFTESBURY in demanding the indictment of the duke of York (later James II) and in pressing the bill to exclude him from the succession. With the temporary Whig success he became (1679) a privy counselor, but he was arrested (1683), tried, and convicted of treason for his supposed implication in the RYE HOUSE PLOT. Executed in 1683, he was exonerated by the reversal of attainder under William III.

1. **Russell, Bertrand Arthur William Russell, 3rd Earl, 1872–1970**, British philosopher, mathematician, and social reformer, b. Trelleck, Wales. He had a distinguished background: His grandfather Lord John Russell introduced the Reform Bill of 1832 and was twice prime minister; his parents were both prominent free-thinkers; and his informal godfather was John Stuart Mill. Orphaned as a small child, he was reared, despite his parents' wishes to the contrary, by his paternal grandmother under stern puritanic rule. That experience, although failing in its intended effect, powerfully affected his thinking on matters of morality and education. Russell studied at Trinity College, Cambridge (1890–94), where later he was a fellow (1895–1901) and a lecturer (1910–16). It was during this time that he published his most important works in philosophy and mathematics, *The Principles of Mathematics* (1903) and, with A. N. Whitehead, *Principia Mathematica* (3 vol., 1910–13), and also had as his student Ludwig WITTGENSTEIN. World War I had a crucial effect on Russell: until that time he had thought of himself as a philosopher and mathematician; although he had arrived at pacifism before that time, it was in reaction to the war that he became passionately concerned with social issues. His active pacifism at the time of the war inspired public resentment, caused him to be dismissed from Cambridge, attacked by former associates, and fined by the government (which confiscated and sold his library when he refused to pay), and led finally to a six-month imprisonment in 1918. From 1916 until the late 1930s, Russell held no academic position and supported himself mainly by writing and by public lecturing. In 1927 he founded with his wife, Dora, the experimental Beacon Hill School, which influenced the founding of other schools in Britain and America. He succeeded to the earldom in 1931 and in 1938 began teaching in the United States, first at the Univ.

2. of Chicago and then at the Univ. of California at Los Angeles. In 1941 he went to teach at the Barnes Foundation in Merion, Pa., following the cancellation of his appointment to the College of the City of New York as a result of a celebrated legal battle occasioned by protest against his liberal views, particularly those on sex. These views, much distorted by his critics, had appeared in *Marriage and Morals* (1929), where he took liberal positions on divorce, adultery, and homosexuality. In 1944 he was restored to a fellowship at Cambridge. In 1950 he received the Nobel Prize in Literature. Prior to World War II, in the face of the Nazi threat, Russell abandoned his pacifist stance; but after the war he again became a leading spokesman for pacifism, and especially for the unilateral renunciation (by Great Britain) of atomic weapons. In 1961 his activity in mass demonstrations to ban nuclear weapons led once more to his imprisonment. He organized, but was unable to attend, what was called the war crimes tribunal, held in Stockholm in 1967, presided over by Jean-Paul Sartre, and directed against U.S. activities in Vietnam. Almost until his death he was active in social reform. Throughout his life his dissent had scorned easy popularity with either the right or the left. Untamable, he had profound trust in the ultimate power of rationality, which he voiced with an undogmatic but quenchless zeal. Philosophically and ethically Russell's thought grew in reaction against the extremes he encountered. He answered the idealism of F. H. Bradley and J. M. E. McTaggart with a logical atomism founded on a rigorous empirical base: he was deeply convinced of the logical independence of individual facts and the dependence of knowledge on the data of original experience. His emphasis on logical analysis influenced the course of British philosophy in this century. One of his most important notions was that of the logical construct, the observation that an object normally thought of as

3. a unity was actually constructed from various, discrete, simpler empirical observations. The technique of logical constructionism was first employed in his mathematical theory. Under the influence of the symbolic logic of Giuseppe Peano, Russell tried to show that mathematics could be explained by the rules of formal logic. His demonstration involved showing that mathematical entities could be "constructed" from the less problematic entities of logic. Later he applied the technique to concepts such as physical objects and the mind. Although he came to have misgivings about logical atomism and never assented to all the propositions of empiricism, he never ceased trying to base his thought—mathematical, philosophical, or ethical—not on vague principle but on actual experience. This can be seen in his pacifism as well as in his philosophy: he objected to specific wars in specific circumstances. So, in the circumstances preceding World War II he could abandon pacifism and, following the war, resume it. Similarly, in ethics he described himself as a relativist. Good and evil he saw to be resolvable in (or constructed from) individual desires. He did distinguish, however, between what he called "personal" and "impersonal" desires, those founded mainly on self-interest and those formed regardless of self-interest. He admitted difficulties with this ethical stance, as well as with his logical atomism. As much as anything, his thought was characterized by a pervasive scepticism, toward his own thought as well as that of others. As with his philosophical stance, Russell's positions on social issues grew as a reaction against extremes in his own experience. He believed that cruelty and an admiration for violence grew from inward or outward defects that were largely an outcome of what happened to people when very young. Pacifism could not be effected politically; a peaceful

4. and happy world could not be achieved without deep changes in education. "I believe that nine out of ten who have had a conventional upbringing in their early years have become in some degree incapable of a decent and sane attitude toward marriage and sex generally." His objections to religion were similarly based. What he tried to draw attention to was the destructiveness of accepting propositions on faith—in the absence of, or even in opposition to, any evidence. "The important thing is not what you believe, but how you believe it." The person who bases his belief on reason will support it by argument and be ready to abandon the position if the argument fails. Belief based on faith concludes argument to be useless and resorts to "force either in the form of persecution or by stunting and distorting the minds of the young whenever [it] has the power to control their education." If Russell's logic was not always unassailable, his life showed that ethical relativism could be combined with a passionate social conscience and that passionate commitment could be stated without dogmatism. In his autobiography (3 vol., 1967–69) Russell summarized his personal philosophy by saying, "Three passions, simple but overwhelmingly strong, have governed my life: the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind." A BR ORATORIO

BRS member Richard Fallin has sent news of an oratorio by Marek Harris titled "A Free Man's Worship," based on Russell's writings. Here are excerpts from Richard's letter:

It is with great pleasure that [I inform you that the oratorio] is near completion. The text was suggested to Mr. [Marek] Harris by myself. At first he wanted to write a shorter work on another text, Russell's Ten Commandments. I thought this would be a better text. My friend is a trained classical composer who never read any Russell until he met me....The work when completed will be almost two and a half hours long. All of the voice parts have been written. He is now working on the rest. It should be a most interesting work. I hope it will not take too much more time to finish.

For more information, contact Richard Fallin (153 W. 80th St.; Apt. 4A; New York, NY 10024-7108). Here are the text titles he provided.

ORATORIO: "A FREE MAN'S WORSHIP"

music by Marek Harris

text by Bertrand Russell

1. "To Doctor Faustus".....	bass solo
2. "The Endless Praises".....	bass solo with chorus
3. "For Countless Ages".....	chorus
4. "And From the Monsters".....	tenor solo
5. "There is a Hidden Purpose".....	tenor solo with chorus
6. "But he doubted".....	chorus
7. "And God Smiled".....	chorus
8. "Such, in outline".....	quartet and chorus
9. "How, in such a world".....	alto solo and chorus
10. "To him alone".....	chorus
11. "The savage, like ourselves".....	duet
12. "The trembling believer".....	trio
13. "As morality grows bolder".....	chorus
14. "In some Hidden Manner".....	quartet
15. "The world of fact".....	chorus
16. "The answer to this question".....	duet and chorus
17. "Let us admit that".....	chorus
18. "The opposition to fact and ideal".....	bass solo and chorus
19. "And thus freedom comes".....	chorus
20. "The necessity of renunciation".....	duet
21. "There is in resignation a further good element".....	chorus
22. "For the young, there is nothing unattainable".....	women's chorus
23. "We must learn".....	men's chorus
24. "For not by renunciation alone".....	soprano solo
25. "Haunting foreshadowings of the temple".....	soprano solo
26. "Except for those rare spirits".....	alto solo and chorus
27. "When, without the bitterness".....	trio
28. "In all the multiform facts of the world".....	chorus
29. "Of all the arts".....	quartet and chorus
30. "Happy those sacred ramparts".....	duet, quartet, and chorus
31. "The beauty of tragedy".....	bass solo
32. "This is the reason".....	tenor solo and chorus
33. "The life of Man".....	chorus
34. "United with his fellow men".....	quartet and chorus
35. "Brief and powerless is Man's life".....	chorus

ORWELL ON BR'S POWER

Tom Stanley kindly provided this review by George Orwell of Russell's 1938 book Power: A New Social Analysis. Originally appearing in the January 1939 issue of Adelphi, the review was reprinted in The Collected Essays, Journalism and Letters of George Orwell, volume 1.

If there are certain pages of Mr Bertrand Russell's book, Power, which seem rather empty, that is merely to say that we have now sunk to a depth at which the restatement of the obvious is the first duty of intelligent men. It is not merely that at present the rule of naked force obtains almost everywhere. Probably that has always been the case. Where this age differs from those immediately preceding it is that a liberal intelligentsia is lacking. Bully-worship, under various disguises, has become a universal religion, and such truisms as that a machine-gun even is still a machine-gun even when a "good" man is squeezing the trigger--and that in effect is what Mr Russell is saying--have turned into heresies which it is actually becoming dangerous to utter.

The most interesting part of Mr. Russell's book is the earlier chapters in which he analyses the various types of power--priestly, oligarchical, dictatorial and so forth. In dealing with the contemporary situation he is less satisfactory, because like all liberals he is better at pointing out what is desirable than at explaining how to achieve it. He sees clearly enough that the essential problem of today is "the taming of power" and that no system except democracy can be trusted to save us from unspeakable horrors. Also that democracy has very little meaning without approximate economic equality and an educational system tending to promote tolerance and tough-mindedness. But unfortunately he does not how we are to set about getting these things; he merely utters what amounts to a pious hope that the present state of things will not endure. He is inclined to point to the past; all tyrannies have collapsed sooner or later, and "there is no reason to suppose (Hitler) more permanent than his predecessors."

Underlying this is the idea that common sense always wins in the end. And yet the peculiar horror of the present moment is that we cannot be sure that this is so. It is quite possible that we are descending into an age in which two and two will make five when the Leader says so. Mr Russell points out that the huge system of organized lying upon which the dictators depend keeps their followers out of contact with reality and therefore tends to put them at a disadvantage as against those who know the facts. This is true so far as it goes, but it does not prove that the slave-society at which the dictators are aiming will be unstable. It is quite easy to imagine a state in which the ruling caste deceive their followers without deceiving themselves. Dare anyone be sure that something of the kind is not coming into existence already? One has only to think of the sinister possibilities of the radio, state-controlled education and so forth, to realize that "the truth is great and will prevail" is a prayer rather than an axiom.

Mr Russell is one of the most readable of the living writers, and it is very reassuring to know that he exists. So long as he and a few others like him are alive and out of jail, we know that the world is still sane in parts. He has a rather eclectic mind, he is capable of saying shallow things and profoundly interesting things in alternate sentences, and sometimes, even in this book, he is less serious than his subject deserves. But he has an essentially decent intellect, a kind of intellectual chivalry which is far rarer than mere cleverness. Few people during the past thirty years have been so consistently impervious to the fashionable bunk of the moment. In a time of universal panic and lying he is a good person to make contact with. For that reason this book, though it is not so good as Freedom and Organisation, is very well worth reading.

RUSSELL IN THE MANUSCRIPT MARKET

In its Catalog 72, Winter 1994, David Schulson Autographs (11 E. 68th St.; New York, NY 10021) advertised this April 21, 1944 BR letter, priced at \$300.

The lectures are not otherwise contracted for and I shall be glad to give permission for you to reprint them if the financial aspect can be satisfactory....You say you are willing to pay the New Leader \$500, but I do not understand what part of this payment would come to me....Bertrand Russell.

BOOK REVIEWS

Our thanks to Linda Egendorf, Bob Davis, and Tim Madigan, who provided these reviews of Caroline Moorehead's Bertrand Russell: A Life.

Bertrand Russell: At the limits of intelligence

Bertrand Russell:
A Life
By Caroline Moorehead
Vintage, 596 pages, \$30

Reviewed by Richard Stern
An author whose most recent book is "One Person and Another: On Writers and Writing"

Scene: Pembroke Lodge, the estate given to the former prime minister, Lord John Russell, by Queen Victoria ("the giant paperweight that for half a century sat upon men's minds"—H.G. Wells). Time: 1863. Persons: Frank Russell, 18, on school holiday from Winchester, and his 11-year-old brother, Bertie, educated at home under the severe eyes of the widow Lady Russell, mother of his long-dead father (who'd barely survived his young wife).

Frank has given Bertie his first lesson in Euclid. Bertie asks why he should simply accept the axioms. That's the way it is, says Frank, and if you don't like it, no more lesson. But Bertie did like it, and, decades later, wrote of his "delight in the power of deductive reasoning ... the restfulness of mathematical certitude" and above all "the belief that nature operates according to

mathematical laws, and that human actions, like planetary motions, could be calculated if we had sufficient skill," an insight that suggested to him that he might be, after all, intelligent. "This was," he wrote in his wonderful autobiography, "one of the great events of my life, as dazzling as first love."

Intelligence. Russell expressed and stood for intelligence for nearly all his almost century-long life. At first, it was concentrated on mathematics and logic. His 10-year attempt—with his old tutor, Alfred North Whitehead—to pare down the axiomatic foundation of mathematics was perhaps his single greatest intellectual effort. (Not his most remunerative: He calculated that he and Whitehead had made "minus fifty pounds"—their contribution to publication costs—for the "Principia Mathematica.") After it, the intelligence spread over more topics than any other modern thinker touched. Here are some of the titles of Russell's books: "ABC of Relativity," "Authority and the Individual," "Lectures," "The Democratic Ideal," "Common Sense and Nuclear Warfare," "Education and the Social Order," "Foreign Policy of the Entente," "Impressions of America," "Marriage and Morals," "Portraits from Memory,"

"The Problem of China," "Satan in the Suburbs" (fiction), "The Status of Women," "War Crimes in Vietnam," "Why I Am Not a Christian."

There are thousands of articles, speeches, lectures, letters. Russell stood for Parliament, founded and helped his second wife run a pioneering school, spoofed, cracked and debated on radio and television. Galvanized in his 90s by the Vietnam war, as he had been in his 70s and 80s by the fear of nuclear destruction, he played a role in an international tribunal (somewhat less gloriously than the one he'd played during the Cuban missile crisis of 1962, when Khrushchev used him as a public conduit for his more rational views). Explaining, clarifying, coordinating, mocking, rejoicing, condemning, Russell appealed to enlightenment, was enlightenment. Yet.

Scene: Isola Bella off the Sicilian coast. Time: Russell is about 80. Persons: Young painters, children and grandchildren of Russell's friends. A picnic, fish grilled on hot stones, much wine, music. The spy old earl chasing the girls and kissing them, declares, "I'm as drunk as a lord, but then I am one."

"Philosophers and mathematicians in

love are exactly like everyone else," Russell wrote one of the many women in his life. "Except, perhaps, that the holiday from reason makes them passionate to excess."

It was partly "glands," partly solitude, the unendurable "loneliness of the human soul" that drove Russell from the isolation of his orphaned childhood to the joys of love and companionship. Whether it was talking with the Apostles (the famous 12 talkers self-selected at Cambridge) or charming the children at his school, bringing his students at Chicago, California, Harvard, Oxford or wherever, home for good booze and talk, organizing protest groups of every sort or trying and failing to settle in with his wives and children, Bertrand Russell lived gregariously, as gregariously as his 18th Century counterpart, Voltaire. He surrounded himself with intelligence, welcomed it when it sought him out. From the amazing logic-obsessed genius Wittgenstein, who broke with him over his "womanish" popularizing, to the woman who thanked God for his work only to be told that the remark suggests "that he has infringed my copyright," Russell existed for others in courtesy, wit, receptive comprehension, clarification, charm and erotic liberty.

That his work is now read largely for the beauty of his style or for its historical interest, that the causes he championed are either lost in the fabric of modern life or discarded as irrelevant

ones, that two of his four marriages ended in bitter fury and that his children were broken by their upbringing might seem to confirm the gloom, pessimism and irrationality that were near the core of the joy, passion and clarity that he celebrated.

This new biography chronicles the scandals—political, erotic, domestic and intellectual—that broke out of and around this remarkable man. Drawing on newly available letters of his wives, mistresses, friends and publisher as well as conversations with his survivors, it is a descriptive menu of the extraordinary table Russell set. Among its many wonderful finds is this bit of a letter to Gaius Brennan, one of the many women Russell loved (though, in this rare instance, didn't—probably—sleep with):

"I wish I believed in a timeless Platonic world where whatever has held a momentary existence in the stream survived timelessly in heaven. The moments of ecstasy in love, of sudden intellectual insight, of intoxicating glory in storms on a rocky coast... I should like to think of them as forever part of the universe. But that is mysticism and folly, born of old fear. If we must die, let us die sober, not drunk with pleasant lies. I should like to end gloriously... like a Shakespeare hero; it is shocking to think that as the bomb bursts I shall be wondering how to find the money for next month's bills."

BIOGRAPHY

From sex to set theory: the dual life of Bertrand Russell

BERTRAND RUSSELL

By Caroline Moorehead, Viking 596 pp. Illustrated \$30

By Alan Ryan

Bertrand Russell was one of the most extraordinary figures of the 20th century. He was not the only philosopher to be jailed for protesting his government's nuclear weapons policies - but he was certainly the only one to suffer such a fate at age 89. He was not the only philosopher to lose his job as the result of pressure from students' parents, but he was certainly the only one to have his teaching of logic denounced as "lecherous, libidinous, lustful, venerous, erotomaniac, aphrodisiac, irreverent and narrow-minded," as his was by the New York court that overturned his appointment to City College in 1940.

It isn't as though Russell's main claim to fame is that he was a sexual revolutionary and a pacifist jailbird. He was one of the greatest philosophers of the past 300 years. The contrast between the Russell who spent a decade writing "Principia Mathematica" - the massive work on the foundations of mathematics that he later claimed had been read by six people in the entire world - and the Russell who wrote "Marriage and Morals," married four times and went to jail twice is so extreme that one might think he must have been twins. But Russell himself set out to lead two different audiences.

He found his mission early. He was walking in the Tiergarten in Berlin in 1894 when he had a vision of his future. He would write two series of books, one beginning with the most difficult issues in philosophy, the other beginning with social problems. One series would ascend from Earth to heaven, the other descend from heaven to Earth. As Caroline Moorehead says at the

end of her extremely engaging and well-written account, when Russell died 76 years later, he had done exactly what he set out to do. He had some 83 books in print, on topics from sex to set theory.

Russell was dismissive of the Nobel Prize for literature that he was awarded in 1950 and said he wished the committee had given him a prize for philosophy. There is no such prize, and this was grudging of him. He made abstract subjects intelligible to a wide public and brought a philosopher's insights to political issues with a literary skill that leaves academics breathless with envy. He could use that skill unfairly, to make opponents look silly; he could carry himself away on the tide of his own eloquence and say foolish things. He could not be dull or write boringly.

Writing about Russell is both difficult and easy. The difficult task is to explain to a lay audience the attraction of his work as a logician. Moorehead wisely skirts technical issues and contents herself with Russell's own explanations of what he had wanted: Like many other mathematicians, he hoped to find a timeless and absolute truth about the world in the heart of logic. When he came to believe that logic was, in the last resort, a matter of human convention, he lowered his sights and turned to politics, education and social reform as more immediate contributions to human happiness.

The Russell of these adventures is Moorehead's subject. He is not an intellectually demanding one, but since he was at the heart of English literary and intellectual life, a halfhearted - and rather disliked - frequenter of Bloomsbury, it takes a deft hand with sources and a light touch with the private quarrels and enthusiasms of the English upper classes to tell the story well. Moorehead is well equipped for the job. Among other things, she is a model of tact and good sense in discussing Russell's mar-

riages (the first three of which ended very messily and unhappily). She doesn't take sides; sympathizes with misery, accepts a good deal of folly as part of the human condition; and only raises an eyebrow at the discrepancy between Russell's mastery of logic and his rather weak grasp of the realities of other people's lives.

But Russell is irresistible, and Moorehead has had a happy time writing about him. It was an astonishing life. He was born in 1872, the grandson of the Lord John Russell who pushed through the Reform Act of 1832, and was brought up by "granny" after his radical parents died. The moment he reached Cambridge, it was clear he was amazingly talented; he could never be confined to the academy. He stood for Parliament in 1907 as a women's suffrage candidate - eager, as always, to embarrass those who would not stand up for an unpopular cause. In the First World War, he threw away his Cambridge career to campaign against the war.

Much of the '20s and '30s was spent embroiled in marital, emotional and financial discord. He had decided long before - on a bicycle ride, he implausibly claimed - that he did not love his first wife, Alys Pearson Smith; after years of celibacy and "Principia Mathematica," he embarked on a long affair with Lady Ottoline Morrell. After the war, he married Dora Black, with whom he had two children and a school; the progressive school's hopeless finances forced him to lecture endlessly in the United States, and to contract with the Hearst papers for streams of short articles on such topics as the modern cinema, whether philosophers should smoke cigars and whether schoolteachers could wear lipstick. That marriage collapsed in the 1930s, and he married again. His third wife, Patricia (Peter) Spence, seems never to have settled to her role, and nobody was surprised when she walked out in

1949. In 1952, he married Edith Finch, and finally enjoyed 17 years of quiet bliss.

The postwar Russell is the one Americans remember: the one who fought for the nuclear test ban treaty, who lectured President Kennedy on Cuba and who set out on a campaign against US involvement in Vietnam of such ferocity that the late C. L. Sulzberger was provoked to write an op-ed essay in The New York Times characterizing the 91-year-old Russell as a "corpse on horseback." I. F. Stone more kindly called him a "world ombudsman." Like everyone who has written on the subject, Moorehead finds these last years somewhat painful.

It was widely thought at the time that Russell's "secretary," Ralph Schoenman was the true author of much that appeared over his signature, and Moorehead lends credibility to that suspicion. Schoenman, a left-wing graduate student from Princeton, came to visit Russell in 1960; he first stayed to tea, then stayed to manage Russell's affairs for eight years, in the course of which he destroyed innumerable old friendships, wasted large amounts of money, hampered every good cause with which he was involved and made Russell look ridiculous. Moorehead shares the universal relief that almost the last thing Russell wrote was a memorandum explaining why he had finally broken with Schoenman. It was at least an indecent spectacle when a near-illiterate graduate student filled with the hysterical sentimentality that so disfigured the anti-Vietnam left could seize the pen of the man who had years before debunked all such nonsense in his underread essay on "The Superior Virtue of the Oppressed." One of the pleasures of Moorehead's account is the clarity with which it shows why.

Alan Ryan's "Bertrand Russell: A Political Life" (Hill and Wang, 1988) has just been reissued in paperback by Oxford.

Behind The Mind, A Life

BERTRAND RUSSELL

A Life

By Caroline Moorehead Viking 596 pp. \$30

Reviewed by Michael Sheldon

The joys of philosophical speculation were not always apparent to the various wives and children of Bertrand Russell. Dora, the second of his four wives, complained that he gave too much thought to the human race and not enough to his own family. Their daughter, Kate, agreed, lamenting that he was too distant and unsympathetic, and that his private failings cast doubt on his public pursuit of universal moral truths. "Reason, progress, unselfishness, a wide historical perspective, expansiveness, generosity, enlightened self-interest, I had heard it all my life, and it filled me with despair."

In this thoughtful and well-researched biography Caroline Moorehead is fascinated by the contrast between Russell's noble mind and his often insensitive heart.

Philosophers will learn nothing new from her discussions of the man's work, but students of human nature will find something instructive in every chapter. She provides the best portrait yet of Russell's private world, which teemed with problems as complex as any in his books. Admirers of his work may criticize her biography for focusing too much on the life, but it seems impossible to do justice to both. He wrote too much and lived too long.

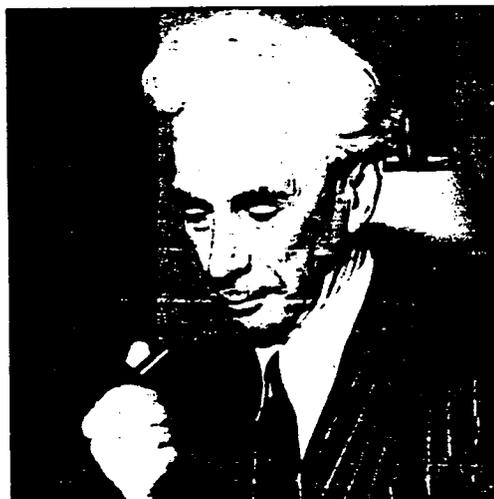

WHEN HE WAS BORN, IN 1872, Britain was at the height of its power, and the political stage was dominated by Gladstone and Disraeli. When he died, in 1970, Richard Nixon was the leader of the Western world. In this great span of life Russell was often in the middle of major events. He was too old to fight in the First World War, but his vehement stand against the wholesale slaughter earned him a six-month term in Brixton jail. Fifty years later he was helping to organize demonstrations against the Vietnam War. In his prime he was a friend of Joseph Conrad and H.G. Wells, and in old age an implacable enemy of Lyndon Johnson and Dean Rusk.

In politics Russell enjoyed playing the outsider, the lone wolf fighting unpopular battles, and he was occasionally guilty of waging a protest partly for the pleasure of provoking the establishment. Like many people who are born into positions of wealth and power—he was heir to an earldom—he liked to thumb his nose at privilege without giving it up himself. And as a man who was celebrated for thinking and writing, he was happy to know that he could also be a man of action from time to time, regardless of how ineffective the action

might be. But he was not one to back down when his political courage was tested, and this biography gives ample evidence of that fact.

During the First World War, he was subject to constant harassment because of his pacifism. He was ridiculed in the streets and in the press, he was expelled from his lectureship at Cambridge University, and the government banned him from lecturing in certain areas of Britain. None of this deterred him, and he continued to speak out until he was finally locked-up in the last year of the war. His comments on the insanity of the fighting will always be worth remembering. "War develops in almost all a certain hysteria of destruction—self-destruction, among the more generous, but still destruction. We have to stand out against the hysteria, and realize that Life, not Death (however heroic), is the source of all good."

IT WOULD BE SATISFYING TO think that this wisdom came from a man who was wise in all things, but peace and harmony were rarely present in his private life. His affection for others could suddenly turn cold, and he was capable of destroying relationships, with the calm, methodical precision of a robot. His marriage to Dora began with an ide-

Bertrand Russell

alistic commitment to an open relationship, but it ended with masses of court documents after Russell decided to leave her for another woman and to fight her for custody of their children. This prolonged battle merely served to turn his older son against him. "It was a rot-

ten deal," the son later remarked of the acrimonious divorce and custody battle.

Russell's callousness and his flirtations with other women drove his first wife, Alys, to contemplate suicide. "If only I could die—it's such a simple solution," she wrote in her

diary. Reflecting on the end of marriage, he wrote to a friend: "I have made a mess of my private life. I have not lived up to my ideal. I have failed to get or give happiness." The main reason for this failure can be found in the next sentence of his letter: "Year by year work has become a more essential outlet to my rage for perfection."

AS THIS BIOGRAPHY DEMONSTRATES in many places, Russell's "rage for perfection" was his greatest strength and his greatest weakness. It made him an eloquent idealist, and it made him violent towards others when they were inevitably found wanting in relationships with mere human beings. It seems an occupational hazard for sagacious every description. Even with their intelligence, they tend to look one simple piece of wisdom something that George Orwell best in his great essay on "The Essence of Being Human" that one is prepared in the end to be defeated and broken up by which is the inevitable price of attaining one's love upon other individuals."

Michael Sheldon is writing a biography of Graham Greene.

The Contradictory Life of Bertrand Russell

Bertrand Russell

A Life, by Caroline Moorehead. Viking, \$30.

By Robert Signer

There can be no book more painful to read in the last decade of the 20th century than Caroline Moorehead's enthralling biography of philosopher Bertrand Russell.

Painful, because his was a life of equal parts pain and love, and the world he worried so hard to create has yet to be. Enthralling, because Moorehead, an experienced biographer and human rights writer, concentrated on the interpersonal elements of Russell's long life, and what that said about his public life and England's.

His life was characterized by enthusiasm but usually shattered friendships and academic relationships, temporary love affairs, flawed marriages, outright hatred by many people both ordinary and famous, and endless controversy over his opinions and public statements.

Aside from his controversial global ideas, Russell expressed distressing opinions about eugenics in his book *Momentary Mind*, published in 1929, when he was 57; that his racist biographers, Moorehead included, have yet to explain adequately or, if possible, to refute. These include the legitimacy of sterilizing "feeble-minded" women and the notion of "the inheritance of poverty" as a biological matter rather than a legal one.

Russell also wrote in the book that Negroes are "on the average inferior to white men, although for work in the tropics they are indispensable." He retracted the latter opinion in some later editions, but the damage was done.

His previous comments about Jews persuaded Leonard Woolf that Russell was anti-Semitic. "He has the tongue of a witty, acutulous and far from hamstrung astider," Woolf wrote.

Through it all, Moorehead demonstrates, Russell was for the most part gentle, accommodating, scrupulously honest of expression and uncondemning to either the young or the old-born. He had countless devoted admirers of his essays, including women and some of his colleagues at Cambridge University, eventually forgive him for speaking his mind.

He won the Nobel Prize in Literature in 1950, the same year that Ralph Bunche of the United States won the Nobel Prize for Peace. It could have been a shared prize, for other than his personal objectives, Russell's culminating goal at the close of his life was to empower the moral force of words to prevent the continuation of the fastest race through nuclear warfare, even at the expense of his reputation. He also strongly favored a form of world government to enforce peace, particularly in the nuclear age.

Having embraced the pacifist view of the Labor Party in 1914, he tore up his membership card in 1966 to protest the Vietnam War. From the Cuban missile crisis of 1962

Bertrand Russell: Equal parts pain and love.

until his death, he was an unyielding critic of U.S. foreign policy. His speeches and statements during these years often crossed the line into inflammatory rhetoric, earning him the enmity of many leaders in the Kennedy and Johnson administrations, if not necessarily of his former enemies in the Soviet Union.

eminently in Moorehead's very readable book. The chapters read like mature essays on the British and American intellectual aristocracy. The pages are peopled by such greats as Alfred North Whitehead, with whom Russell wrote *Principia Mathematica*, and the philosopher George Moore and Ludwig Wittgenstein, each of whom played an important part in Russell's life. T. S. and Vivian Eliot and Joseph Conrad are in these pages, as are D. H. Lawrence, Albert Einstein and Ottaviano Morrell, the literary hostess.

There are also portraits of each of Russell's four wives, Alys Pearson Smith, Dora Black, Patricia ("Patsy") Spence and Edith Finch.

Russell wrote more books, articles and letters than any one mortal could read in an ordinary lifetime, with the possible exception of a devoted biographer like Moorehead or Ronald W. Clark, whose biography was published in 1976. Besides Russell's works about philosophy, both academic and personal, he wrote about art and marriage, women's suffrage, religion and everything else that interested him, sometimes unashamedly to make money to support his standard of living and his family.

This is the first American publication of Moorehead's book, which was published in England nearly a year ago to great acclaim. As good as Moorehead's book is, there are problems that would require a longer book. She could have taken better advantage of her opportunity. Her subject's contradictions were mad-

dening, and cry out for understanding, even allowing for his long life and voluminous expounding of words. He was anti-Bolshevik and anti-Stalin. Moorehead says he advocated threatening Russia with American nuclear bombs to ensure Western nuclear domination, an assertion that differs from Clark's description of the same event; what over Russell's exact intentions, during the Cuban missile crisis he felt no qualms about opposing to Soviet Premier Nikita Khrushchev's response may have helped defuse the nuclear trigger. Puzoski, during the 1920s he told an audience in China that he was a Communist, although he didn't live as a Communist, and he wrote to an American professor in 1948 to say that "Communism must be wiped out."

There is no mention of Russell's statements smearing an Israeli air attack on Egypt two days before his death in 1970. There is little about Russell's precise opinions about Jews and anti-Semitism. We don't learn from that book what, if anything, Russell had to say about the Holocaust, and one wants to know more about Russell's changed opinions, and whether he ever changed his opinion, than the brief references we find in these pages.

There is one appalling lapse of taste in Moorehead that will not be repeated here. Finally, there are too many "momentous" moments or calamitous turning points that turn out to be neither momentous nor calamitous.

Robert Signer, an Arlington, Va., journalist, is at work on a volume of poetry.

A Voluble Presence in the World

What Bertrand Russell said made a difference, but his latest biographer concentrates on what he did.

BERTRAND RUSSELL

A Life, by Caroline Moorehead. Illustrated. 586 pp. New York: Viking, \$30.

By Denis Donoghue

He was a great and good man," the philosopher A. J. Ayer wrote of Bertrand Russell, but he would, wouldn't he, being one of Russell's disciples in the last years. Great, maybe; good, I'm not sure.

The standard biography is "The Life of Bertrand Russell" (1973), by Ronald W. Clark, supplemented and qualified by Katharine Tait's "My Father Bertrand Russell" (1976). For her "Bertrand Russell" Caroline Moorehead has had the advantage of new material: further letters, diaries of wives and lovers, and the business correspondence of Russell's principal publisher, Sir Stanley Unwin. Some of this material became available only two years ago. The archives of published and unpublished letters are vast. Ms. Moorehead has never had to work as hard as a biographer; her previous books in that genre deal with Freya Stark and the Hollywood impresario Sidney Bernstein, staple lives by comparison with Russell's.

Ms. Moorehead has added the burden of a good deal of concentrating on Russell's domestic and public life. "This book is about Russell's character and ideas," she writes, "about his friends and the women he loved, about the causes he fought for and the armor of wonder and eloquence he brought to everything he touched."

The excellent Russell's academic business letters arise on biographical events, but she avoids getting into the thickets of the "Principia Mathematica" that Russell wrote in collaboration with Alfred North Whitehead and published in three volumes between 1910 and 1913, and the early essays in mathematics and logic, in which Russell's reputation as a brilliant mind was based. "I should like the run of his headpiece," Virginia Woolf said to her diary, admiring little else of him. Ms. Moorehead has chosen to deal with Russell mostly as a voluble presence in the world, with his public actions, his personal and actual life.

She has Russell's authority for making his choice. In July 1942 he wrote "Reply to Criticisms" and effectively separated ethics from philosophy: "The only matter concerned with ethics that I can regard as properly belonging to philosophy is the argument that ethical propositions should be expressed in the optative mood, not in the indicative. Where ethics is concerned, I hold that, so far as fundamentalists are concerned, it is impossible to produce conclusive intellectual arguments. When two people differ about (say) the nature of matter, it should be possible to prove either that one is right and the other wrong, or that both are wrong, or that there are insufficient grounds to warrant any opinion. In a fundamental question of ethics I do not think a theoretical argument is possible. I do not therefore offer the same kind of defense for what I have said above as I do for what I have said on logical or scientific questions."

What Russell says of ethics applies also to religion and politics; none of these has a theory as its ground, and is the articulation of a vision, a faith, a desire or a preference. Reasons for them come afterward, and are sought to give them an appearance of cause. A philosopher may speak on all these matters, but in different tones of voice. To clarify the point, in the same essay, Russell distinguished between Leibniz and Spinoza: Leibniz's intellect "was highly abstract and logical; his greatest claim to fame is as an inventor of the infinitesimal calculus." One may read Spinoza "in order to learn how to live, but not Leibniz." Russell started out as a philosopher in Leibniz's mode, but he soon decided to tell people how to live. His model in this decision was Locke, whom he declared "at least as important as the founder of philosophical liberalism as he is as the founder of the empirical theory of knowledge." There was also the example of Russell's godfather, John Stuart Mill — philosopher, public man, forceful in the ways of social and political life. Ms. Moorehead has little to say about Russell the analytic philosopher, adept of symbolic logic, but much about Russell telling people how to live, what to do.

If Russell had held strictly to the distinction he made between ethics and philosophy, he would have written in two different styles. In one, he would have worked toward conclusions in mathematics and philosophy by a due process of definition and analysis; in the other, he would have conducted himself as an amateur and expressed in the optative mood his beliefs on religion, marriage, sex, free love, politics, war, nuclear disarmament, economics and education. But he didn't. He delivered those beliefs with an air of professional confidence, as if he assumed that they would withstand any degree of analysis. Few of them would. T. S. Eliot, reviewing Russell's "Why I Am Not a Christian," was right to note that despite the "why" in the title, Russell did not bring reasons into the case. Russell, he said, "has a wholly unerring prejudice in favor of freedom, kindness and such things, and the same unerring prejudice against tyranny and cruelty."

Ms. Moorehead's book is good on Russell's aristocratic background, his private schooling, his years in the Cambridge of Whitehead, Ellis McGarrig and G. E. Moore, his friendships with Wittgenstein, Joseph Conrad, D. H. Lawrence and Eliot, his campaign to keep Britain neutral in World War I. She is correctly severe on Russell for his relations with women. He married four times and acted honorably, it appears, only with

his fourth wife, Edith Finch. His most enduring lovers were Lady Ottoline Morrell and Lady Constance Macneuse. He slept with many women, including Marjorie Macfield, Helen Dudley, Cleve Hudson, Miriam Brukner and (probably) Barry Fox and Eliot's wife, Vivienne. Ms. Moorehead says he "never really felt that women were his equal, not because he was inferior to be occasionally brilliant — he thought very few men his equal either — but because women, by definition, were less intelligent. True, he championed female suffrage, but that was because he felt it to be morally right, not because he was so much interested in the domestic needs and social aspirations of ordinary women."

She doesn't note any what might be saying, that in recent relations Russell had the morals of a post. But I must acknowledge that the women in his life continued to live long after they had felt the blows of his cruelty. There's an accounting for wrongdoing.

The final chapters make painful reading. It is wretched to see a superior mind stumbling to July after World War II. Russell — who lived just a few months shorter of 88 years (he died in 1970) — became famous. In 1948 he was honored with Britain's Order of Merit, in 1950 he was awarded the Nobel Prize in Literature. He became a member of the House of Lords and broadcaster on the BBC radio program "The Brain Trust." In 1957 he worked hard for a good cause; that the British Government should consent to withdraw its nuclear deterrent. If Britain were to abandon H-bombs, he maintained, the Government could work for an agreement between the Soviet Union and the United States that no one else should have the bombs, a first step toward their general abolition. At one point Russell denounced both the Soviet Union and the United States on the question of nuclear bombs, but he soon concentrated his hatred upon the United States of Eisenhower, Johnson, Dean Rusk, John Foster Dulles and Kennedy. "Whenever there is hunger," he said, "wherever there is exploitative tyranny, whenever people are tortured and the masses left to rot under the weight of disease and starvation, the force which holds down the people rises from Washington." Whenever, wherever? Some after that outbreak, Russell spoke on Vietnam radio, urging American soldiers to stop fighting.

In 1967 Russell set up the International War Crimes Tribunal to hear evidence of American atrocities in Vietnam. "War Crimes in Vietnam," a collection of his articles and pamphlets, gives his version of the situation. He arranged that Jean-Paul Sartre and the Yugoslav partisan Vladimir Dedijer would run the tribunal. The first session was held in Stockholm, the second in Ronkide, near Copenhagen. Russell didn't even pretend to be impartial. America was found guilty and denounced. Russell dreamed of making the tribunal a permanent court. Meanwhile he was a political dandy and a puppet in the hands of Ralph Schoorman, an American graduate student at the London School of Economics, who entered Russell's life on July 21, 1960, when he volunteered to put new life into one of Russell's crusades, the Campaign for Nuclear Disarmament, and virtually Svengalied him. Ms. Moorehead narrates these events splendidly.

When I think of the last years of Russell's life and read "War Crimes in Vietnam," I go back for release and pleasure to the early work collected in "Essays in Analysis" (1973) and read the famous essay "On Denial" and then G. E. Moore's analysis of it and try to work out what is evaded by the statement that "the King of France is dead." It is not crucial to my life to hear the answer, but at least I come upon Russell when I most like to find him. □

Friday

**GOD'S MORAL
INTEGRITY**

READ:
Nahum 1:1-8

The Lord avenges and
is furious. . . . The Lord
is good. . . . and He
knows those who trust
in Him. —Nahum 1:2,7

THE BIBLE IN ONE YEAR:
□ Leviticus 8-10

God gives us a free will and usually doesn't stop us from carrying out our wrong choices. But He does hold us accountable, and He will judge us.

In Nahum's day, the Ninevites were a cruel people who committed unbelievable atrocities. But the prophet assured the Israelites that God saw the wickedness of those people, was angered by it, and would justly punish them.

I'm thankful that God possesses that kind of moral integrity. It gives me reason to trust Him to keep all His promises, and it assures me that He will right all the wrongs of history. —HVL

*Sometimes it seems that sin's ignored
And evil has its way;
But don't be fooled, God's eyes aren't closed;
He'll judge us all someday. —Spr*

**GOD'S JUDGMENT MAY NOT BE IMMEDIATE,
BUT IT IS INEVITABLE.**

WILL THERE BE ANOTHER BABY BERTRAND?

BRS Vice President John Lenz recently received this E-Mail message, which, he writes, "attests to Russell's continuing influence as a spiritual father."

What happen[ed] is my wife and myself are expecting a child in March and we just can't decide on the name....Once my father-in-law, who is a philosopher, suggest[ed to] me the name Bertrand. He said Bertrand Russell is a great philosopher and today's computer is based on his philosophy. I didn't take it too seriously, I even thought that he misspelled it (Bertram) until I realized there is such a Society. So I suppose Bertrand Russell is somebody. I am just wondering if you can send me some information about him and your Society...so that I can decide on the name of my baby....

K.C. Chan; School of Mechanical and Manufacturing Engineering;
University of New South Wales; New South Wales; Australia

You are cordially invited to attend the 2nd meeting of the
Coalition for Secular Humanism, Atheism, and Freethought
“The Good Life - A Humanist Perspective”

The good life is one inspired by love and guided by knowledge. -Bertrand Russell

Co-Hosted by: The Bertrand Russell Society, The Council for Democratic and Secular Humanism,
and The Humanist Association of Canada

Thursday, July 7, to Sunday, July 10, 1994
at the Chestnut Park Hotel, Toronto, Ontario, Canada
(in the heart of downtown Toronto)

CONFERENCE PROGRAM

THURSDAY, JULY 7

2:00 P.M. - 5:30 P.M.: Humanist Association of Canada General Meeting
5:30 P.M. - 7:30 P.M.: Russell Society Board Meeting
7:30 P.M. - 11:00 P.M.: Welcoming Reception

FRIDAY, JULY 8

9:00 A.M. - NOON: PLENARY SESSION: “The Positive Reach of Humanism: An Agenda for the 21st Century”
NOON - 2:00 P.M.: Luncheon (speaker to be announced)
2:00 P.M. - 5:00 P.M.: 4 Concurrent Sessions (Reflecting the interests of Coalition groups)
5:00 P.M. - 6:30 P.M.: CSHAFT Board Meeting
6:30 P.M. - ?: Toronto on your own

SATURDAY, JULY 9

9:00 A.M. - NOON: PLENARY SESSION: “What is the Good Life? A Coalition Perspective”
NOON - 2:00 P.M.: Luncheon (speaker to be announced)
2:00 P.M. - 5:00 P.M.: 4 Concurrent Sessions (Reflecting the interests of Coalition groups)
6:00 P.M. - 7:00 P.M.: Red Hackle Hour (Bertrand Russell's favorite scotch will be served)
7:00 P.M. - 10:00 P.M.: Awards Banquet: Keynote Speaker - Dr. Robert Buckman, Host of TV-Ontario's Vital Signs.

SUNDAY, JULY 10

9:00 A.M. - 11:00 A.M.: CLOSING SESSION
8:30 A.M. - 8:00 P.M.: Optional bus trip to *Free Inquiry* headquarters, Prometheus Books, SUNY Buffalo Campus, and
Niagara Falls.

YES, I (we) plan to attend “The Good Life: A Humanist Perspective”

- Early registration for _____ person(s).

Residents of the United States please make checks payable and return to *Free Inquiry*, Box 664, Buffalo, NY 14226. To charge by phone call 1-800-458-1366, or fax to 716-636-1733.

Residents of Canada, please make cheques payable and return to the Humanist Association of Canada 116 Ravenscrest Drive, Etobicoke, Ontario M9B 5N3.

RUSSELL SOCIETY NEWS

No. 82, May 1994

The Bertrand Russell Society

3802 North Kenneth Avenue Chicago, IL 60641-2814; U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Russell Society News is a quarterly issued in February, May, August, and November. This issue was edited by Donald W. Jackanicz at the above address. For information about The Bertrand Russell Society or to become a member, contact the same Chicago address. However, beginning immediately, letters concerning Russell Society News should be addressed to the new Editor, Dennis Darland at the following address: Dennis Darland; 1965 Winding Hills Road; #1304; Davenport, IA 52807; U.S.A.

FROM THE PRESIDENT

Michael J. Rockler, President, The Bertrand Russell Society

I have recently read Paul Kurtz's new book Toward a New Enlightenment, edited by Tim Madigan and Vern Bullough. I have also read Caroline Moorehead's biography of Russell and Steven Rockefeller's John Dewey, Religious Faith and Democratic Humanism. All three volumes can be related to one another.

Caroline Moorehead, who will receive the BRS Book Award at the annual meeting in Toronto, has written a balanced biography of Russell which examines his life professionally, personally and intellectually. Rockefeller's volume presents a useful overview of Dewey's career, focusing on Dewey's intense religious views which evolved over time.

There exist, of course, many similarities between Russell and Dewey. Both men, whose lives overlapped, were giants in their time. Their interests and effects went well beyond philosophy into the realms of politics and social policy where both were able to exercise their influence in significant ways. Both were liberal thinkers who sought a more equitable world society.

Rockefeller's examination of Dewey's religious views is interesting; Dewey began his career as a committed Christian theist and ended his life by thinking of himself as a religious humanist.

Russell, of course, embraced secular humanism at a very early age and never sought to reconcile his position with the religious views of the masses. Russell rejected all propositions for which there could be no evidence. He was never able to tolerate the notion of teaching falsehood. He came to the conclusion that religion in general and Christianity in particular had no utility. Humankind would be better off, he believed, if it gave up its belief in the existence of a supernatural realm. Russell's best known book about religion is Why I Am Not a Christian. Dewey's most remembered book on religion is A Common Faith. The two titles suggest a great deal about the perspective of these two philosophers with regard to religious orientation.

Paul Kurtz's book samples his many writings over a considerable period of time. It is an excellent work which can serve as a definitional volume for contemporary secular humanism. Kurtz has coined the term "transcendental temptation" by which he indicates that for many persons, including rationalists who are secular humanists, there seems to exist a need for some kind of spiritual identity which transcends human existence.

Having read both Moorehead's Russell and Rockefeller's Dewey, it seems to me that one way of characterizing the religious difference between Russell and Dewey is to note that Russell was able to overcome the transcendental temptation and live a full humanist life while Dewey was not. The difference may lie in the difference between Dewey's Vermont youth and Russell's upbringing-

ing in Britain. Or it may be the case that Russell's ability to stand alone was greater than Dewey's.

John Novak, of the John Dewey Society, and I will debate Russell vs. Dewey on Religious Belief in July at the annual meeting. This special conference is being cosponsored by the Canadian Humanists and the Council for Democratic Secular Humanism. I hope you can attend this meeting which should be one of the best BRS gatherings ever. Details are contained elsewhere in the newsletter. Register now. I look forward to seeing you this summer.

MICHAEL ROCKLER REVIEWS CONRAD RUSSELL BOOK

BRS President Michael Rockler's review of Academic Freedom by Conrad Russell appeared in Free Inquiry, vol. 14, no. 2, Spring 1994, p.58. We again salute Lord Russell on his new book.

Academic Freedom, by Conrad Russell (London and New York: Routledge, 1993) 119 pp., cloth \$49.95. Bertrand Russell would enjoy reading his son Conrad Russell's recent book, *Academic Freedom*. In this volume the current Lord Russell presents a concise and convincing case for an academic world exempt from government interference. In 1988 England's Parliament adopted an education act that limited academic freedom. Russell's book is a response by one who is both an academic—he is a member of Kings College and a professor of British history at the University of London—and a member of the House of Lords.

Conrad Russell states that universities have an independent sphere of judgment that must remain free from government intervention. He argues further that while professors swear no Hippocratic oath, they do have a set of professional values to maintain and defend. This independent sphere of scholarly judgment and the existence of scholarly values form the basis of Russell's argument for academic freedom.

He maintains that universities must support research even though it is costly and does not always lead to productive outcomes. Academic freedom requires that professors be at liberty to pursue whatever kind of inquiry they find valuable. The university must protect academics from the intolerance of the public. The need to do this is part of Russell's argument for the granting of tenure to qualified academics.

Russell also discusses the limits of academic freedom. Academics cannot

falsify references or engage in plagiarism. Universities have the right to protect themselves against "willful error perpetrated deliberately for the sake of advancing a cause or a career." In addition, Russell argues that "the taking of money for teaching and research also imposes a duty to engage in those activities."

The actions of the Thatcher government and the current policies of Prime Minister John Major prompted Russell to write this volume. While it deals specifically with issues emanating from those governments, it also presents a strong argument for the need to maintain, strengthen, and support the autonomy of academics. This is the only true guarantee of free inquiry in the academic world. Russell has written a volume well worth reading.

—Michael J. Rockler is professor of interdisciplinary studies at National-Louis University and president of the Bertrand Russell Society.

1994 ANNUAL MEETING

The 1994 Annual Meeting of The Bertrand Russell Society will be held Thursday, July 7 through Sunday, July 10 in Toronto, Ontario, Canada at the Chestnut Park Hotel, 108 Chestnut Street in downtown Toronto.

This year's meeting differs from previous meetings in at least two ways: (1) the BRS is cooperating with The Council for Democratic and Secular Humanism (CODESH) and The Humanist Association of Canada in planning and holding a joint meeting; (2) there will be events over four days, rather than the usual three days. As well, the 1994 meeting will see a return to a hotel site, rather than the kind of university meeting room and dormitory housing arrangement used in recent years.

Shown below is the latest meeting schedule. Note that there are general program events as well as those devoted to BRS concerns. The program offers diversity and includes topics and formats not seen before in BRS meetings.

Coalition for Secular Humanism, Atheism and Freethought 1994 CONFERENCE PROGRAM

THURSDAY, JULY 7

- 5:30- **Bertrand Russell Society Board Meeting**
7:30 P.M.:
6:00- **Humanist Association of Canada General Meeting**
7:30 P.M.:
7:30-
11:00 P.M.: **Welcoming Reception**

FRIDAY, JULY 8

- 9:00 A.M.- **PLENARY SESSION**
NOON: **"The Positive Reach of Humanism: An Agenda for the 21st Century"**

Moderator: Thomas Flynn, Senior Editor, FREE INQUIRY
Paul Kurtz, Editor, FREE INQUIRY
Peter Smith, President, Humanist Association of Canada
Michael Rockler, President, Bertrand Russell Society
Jane Wynne-Wilson, Co-President, International Humanist and Ethical Union
Jack Massen, Treasurer, The Atheist Alliance

- NOON- **LUNCHEON** (optional)
2:00 P.M.: *Speaker:* Nicholas Griffin, professor of philosophy, McMaster University: **"Bertrand Russell as a Critic of Religion"**

- 2:00- **CONCURRENT SESSIONS**
5:00 P.M.: 1. **"Humanism and Ethics"**
Harry Stopes-Roe, Former President, British Humanist Association
Terry Miosi, Executive Director, Toronto Learning Centre
Paul Cliteur, President, Humanistisch Verbond (Netherlands)

2. **"Dealing with the Religious Right"—A Workshop**
Facilitator: Marie Castle, Vice President, Atheist Alliance

FRIDAY, JULY 8, cont'd.

3. **"Humanism and Spirituality"**
Pat Duffy Hutcheon, Sociologist and Educator
Thomas Flynn, Senior Editor, FREE INQUIRY
Rupert Raj-Gauthier, Secretary, Humanist Assoc. of Canada
4. **"Bertrand Russell Society"**
John Shooky, Professor of Philosophy, American University
Papers by winners of Bertrand Russell Society Essay Contest
Marvin Kohl, Professor of Philosophy, SUNY Fredonia, "Russell and the Good Life"—A Workshop

5:00 P.M.-
UNTIL: **TORONTO** (on your own)

SATURDAY, JULY 9

- 9:00 A.M.- **PLENARY SESSION**
NOON: 1. **"What is the Good Life? A Humanist Perspective"**

Moderator: Timothy J. Madigan, Executive Editor, FREE INQUIRY
Gladys Leithasser, Board Member, Bertrand Russell Society
Albert Lyngseth, Prof. of Philosophy, Florida Atlantic Univ.
Philip Jones, President, CSHAFT
Gordon Stein, Editor, *The American Rationalist*
Norm Allen, Exec. Dir., African Americans for Humanism

- NOON- **LUNCHEON** (optional)
2:00 P.M.: *Speakers:* Rob Tielman, Co-President, International Humanist and Ethical Union, and Levi Fragell, editor, Norwegian *Humanist*: **"International Humanism in the 21st Century"**

- 2:00- **CONCURRENT SESSIONS**
5:30 P.M.: 1. **"Nonreligious Ceremonies: A Discussion"**
Christos Tzanetakos, Pres., Atheist Alliance
Jane Wynne-Wilson, Co-President, IHEU

SAT., JULY 9, cont'd.

2. **"John Dewey vs. Bertrand Russell on Religious Belief"**
Timothy J. Madigan, Executive Editor, FREE INQUIRY
Michael Rockler, President, Bertrand Russell Society
John Novak, Professor of Education, Brock University
3. **Young Adults Workshop (ages 14-30): "What is the Good Life?"**
Facilitator: Elizabeth Welsh, Continuing Education Department, Brock University
4. **Humanism Online:**
Promoting freethought through computers
Facilitator: Greg Erwin, Pres., Humanist Association of Ottawa

- 6:00- **Red Hackle Hour**
7:00 P.M.: (Bertrand Russell's Favorite Scotch)

- 7:00- **AWARDS BANQUET**
10:00 P.M.: **Keynote Address**
Dr. Robert Buckman, Host of TV-Ontario's VITAL SIGNS: **"Twice Around the World and Still Stupid"**

ROBERT BUCKMAN

Dr. Buckman's hilarious anecdotes, combined with important information on a wide range of health care issues, make him one of the most sought after speakers on the continent. He is the author of five books, has starred in and cowritten three television series and hosts TVO's *Vital Signs*. He is a medical oncologist at Sunnybrook Hospital and an associate professor at the University of Toronto.

SUNDAY, JULY 10

- 8:30 A.M.- **BUS TRIP** (optional)
8:30 P.M.: Visit to FREE INQUIRY and Prometheus Books headquarters and SUNY Buffalo Campus, Amherst, New York; and Niagara Falls (Includes Lunch)

Other events are also being planned.

Make your plans to attend now! Please refer to the annual meeting announcement and registration form attached to this newsletter.

Early registration per person is \$50 U.S./\$65 Canadian. After June 1 registration per person is \$60 U.S./\$75 Canadian. There are optional group meals and an optional bus trip to Buffalo/Niagara Falls.

Canadian residents should make their checks/cheques payable to Humanist Association of Canada; 116 Ravenscrest Drive; Etobicoke, Ontario M9B 5N3.

U.S. and other non-Canadian residents should make their checks (U.S. dollars, please) payable to Free Inquiry; P.O. Box 664, Buffalo, NY 14226-0664.

MasterCard and Visa chargecards may also be used--see the registration form.

For additional meeting information, please write to one of the addresses above. You may also telephone Free Inquiry (CODESH) toll free at 1-800-458-1366.

A special rate has been arranged for at the Chestnut Park Hotel: \$79 Canadian per night for a single/double room. To receive this rate, call the hotel at 1-416-977-5000 and mention "Humanist Conference." Here are descriptions of our hotel appearing in two recent guidebooks:

Chestnut Park Hotel...A newer 520-room hotel on the edge of Chinatown close to City Hall and the Eaton Centre. Most amenities, including an indoor pool and fitness facilities, are available. Doubles \$180. [Toronto: The Ultimate Guide, Margaret and Rod MacKenzie (San Francisco: Chronicle Books, 1992), pp.337-338.]

Chestnut Park Hotel...Brand new (February 1989) 522-room hotel by City Hall's Nathan Phillips Square. Complete recreation facilities include indoor pool, health club and gymnasium. One of the world's few hotels to be connected to a museum--the Canadian Museum for Textiles, with ceremonial cloths, carpets, etc. from around the world, with emphasis on China. Moderately priced. [Essential Toronto, George Bryant (Lincolnwood, IL: Passport Books, 1994), p.80.]

Toronto has much to offer visitors. Our hotel location will put meeting attendees in the middle of downtown, close to many of the city's main attractions. For more information about Toronto, contact Metropolitan Toronto Convention and Visitors Association; 207 Queen's Quay W.; Suite 509; Box 126; Toronto, Ontario M5J 1A7; telephone 1-800-363-1990. For information about the Province of Ontario, contact Ontario Ministry of Tourism and Recreation; Queen's Park; Toronto, Ontario M7A 2R9, telephone 1-800-268-3735.

Also remember that Toronto is only about fifty miles from Hamilton, site of The Bertrand Russell Archives on the campus of McMaster University. If you would like to combine attendance at the BRS annual meeting with a pre- or post-meeting research visit, we suggest you contact in advance Dr. Kenneth Blackwell; Bertrand Russell Archives; McMaster University Library; Hamilton, Ontario L8S 4L6.

WE LOOK FORWARD TO SEEING YOU IN TORONTO!

BR VISITS NORMAN THOMAS'S HOUSE

Our thanks to Tom Stanley, who located this excerpt from Leader at Large: The Long and Fighting Life of Norman Thomas by Charles Gorham (New York: Farrar, Straus and Giroux, 1970, pp. 68-69.

Thomas was becoming well-known throughout the socialist, labor, and liberal world and the mellow old house on Eighteenth Street [in New York City] was opened, over the years, to many famous men and women. Among them was Bertrand Russell, who held advanced ideas on education and child-rearing. Norman was busy in his office and Violet [Thomas's wife] seized the chance to talk with Lord Russell about her own children.

"How old are they?" asked the distinguished philosopher. Violet rattled off the children's ages, in ascending order. Russell shook his head and his white mane waved. "They are all older than two," he said. "It's too late to recommend anything." Violet laughed.

BRS LIBRARY

BRS Librarian Tom Stanley submitted this two-part report.

The Society library sells and lends books, audiotapes, videotapes, and other materials by and about Russell. Please direct BRS library inquiries and requests to Tom Stanley, Box 434, Wilder, VT 05088.

The following lists books for sale. H-Cloth, otherwise paperback. Prices are postpaid. Please send check or money order (U.S. funds only) payable to the "Bertrand Russell Society" to Tom Stanley.

By Bertrand Russell:

Appeal to the American Conscience.....	\$3.15
Authority and the Individual.....	7.95
Has Man a Future?.....H..	8.00
History of the World in Epitome.....	1.00
In Praise of Idleness.....	7.95
My Philosophical Development.....	7.95
Political Ideals.....	7.95
Power: A New Social Analysis.....	8.95
Principles of Social Reconstruction.....	7.95
Sceptical Essays.....	8.95

By Other Authors:

Bertrand Russell, 1872-1970.....	1.50
Bertrand Russell's America, Vol. 2, 1945-1970 edited by Barry Feinberg and Ronald Kasrils.....	9.95
Essays on Socialist Humanism in Honor of the Centenary of B.R.....H..	9.00
Liberty and Social Transformation: A Study in Bertrand Russell's Political Thought by Chandrakala Padia.....H..	11.50
The Life of Bertrand Russell in Pictures and His Own Words.....	6.75
Mr. Wilson Speaks 'Frankly and Fearlessly' on Vietnam to B.R.....	2.00

Recent acquisitions of materials available for loan:

Russell and Analytic Philosophy, edited by A.D. Irvine and G.A. Wedeking. This anthology had its origin in a conference held at the University of British Columbia in June of 1991. Of the sixteen papers, only three have been previously published. "It is, I think, the best book of this sort on Russell's philosophy that I have read and I think I have read them all"- Prof. John Slater. 424 pp. 1994 University of Toronto Press, 10 St. Mary Street, Suite 700, Toronto, ON M4Y 2W8. Review copy.

Bertrand Russell: A Political Life by Alan Ryan. A new paperback edition published by Oxford University Press. Review copy.

"My Interview with Bertrand Russell" by Walter Arnstein". Offprint from The American Scholar. 7 pp.

Index to Russell: The Journal of the Bertrand Russell Archives, published in issue No. 20 (1971-75), No. 40 (1976-81), N.S. Vol.5, no.2 (1981-85), and N.S. Vol. 10, no.2 (1986-90). 17pp.

Troublesome People: The Warriors of Pacifism by Caroline Moorehead. Advance uncorrected proof. 1987.

Bertrand Russell and the British Tradition in Philosophy by D.F. Pears. Vintage paperback.

MORE REMINISCENCES OF PAUL ARTHUR SCHILPP

We thank BRS member Warren Allen Smith of New York City, who submitted the following article.

In response to the request for further reminiscences of Paul Arthur Schilpp, I received the following letter dated 27 August 1956 after writing for a clarification of what humanism meant to him:

Humanism, to me, connotes an emphasis on man as both the end and goal of all human endeavor as well as upon the essential dependence of man upon himself in the processes of individual growth and of social development and progress. I believe, in other words, that man has to work out his own (individual and social) salvation with fear and trembling, yes, but also with courage, insight, and caring. Such working out need not preclude, however, man's making use, in this process, of any and all avenues of approach open to him: the use of nature and of natural laws as he comes increasingly to understand these, as well as the use of his intellectual, moral, aesthetic and spiritual powers as he learns to develop and understand these. In terms of method and procedure I suppose I would fit mostly into the category of naturalistic humanism.

But, in terms of metaphysical considerations, I would rank as a theistic humanist. So long as man is--in the areas of ultimates--still as largely ignorant as he is today, and in view of man's obviously finite nature and even more finite (and limited) knowledge and comprehension, it seems to me the height of human arrogance for finite man to want to rule out God. Such procedure reminds me of the attempt, on the part of the mosquito, to rule out the possibility of man because the mosquito never has met a man and, if it had met one, could, obviously, neither explain nor understand man. But I cannot grant that theistic humanism of necessity must be held "within the framework of a supernaturalistic philosophy." If there is a God, He must have some nature, which will be "natural" to Him as human nature is natural to man (or dog-nature is natural to a dog). God, in order to be God, must, I suppose, be thought of as superhuman; but this implies no more that He is supernatural than the fact that man is supervegetative implies that man is supernatural. God is merely beyond finite man's finite grasp--as indeed are many natural phenomena events yet in this atomic age. I would insist, therefore, that my theistic humanism is a type of naturalistic humanism.

Everything that has ever been achieved in human history has been achieved by man (from the sub-beastly atrocities of war and other forms of head-hunting to the highest achievements of human hands, heart, mind, and spirit). Though man is finite, the latent capacities of his nature are so nearly limitless that no man can actually imagine or even dream what man may yet be able to achieve. If he will marshal

and use the best powers of his rational, moral, and spiritual capacities in the building of a better world of human understanding, appreciation, freedom, and love.

In response to a similar 1951 request, Bertrand Russell was humorously succinct and quite unlike Schilpp in his outlook:

You ask me whether I call myself a Scientific Humanist or a Naturalistic Humanist. I am not in the habit of giving myself labels, which I leave to others. I should not have any inclination to call myself humanist, as I think, on the whole, that the non-human part of the cosmos is much more interesting and satisfactory than the human part. But if anybody feels inclined to call me a Humanist, I shall not bring an action for libel.

In 1956, Russell wrote again:

I do not object to your classifying me as a "naturalistic humanist," though it is not a description I should ever think of calling myself. When I have to describe my own philosophy I call myself a "logical atomist." I have read the material that you sent with your letter, but I have nothing to add except that my reason for not liking the word "humanist" is that I regard human beings as a trivial accident which would be regrettable if it were not so unimportant.

In short, Schilpp echoed the theistic humanism found in his Human Nature and Progress (1954) and in his This Is My Faith (1956). Russell remained the philosophic naturalist as found in his Why I Am Not a Christian (1957).

RUSSELL ON E-MAIL AND INTERNET

Here is more from Warren Allen Smith, this time concerning Russell and e-mail.

Individuals wishing to join a Bertrand Russell e-mail club (for the sinful purpose of zapping religion and philosophy chat-line rooms) are invited to direct their computer modems to the following: SecularHum@AOL.com. Or write your e-mail address to me at 31 Jane Street (10-D), New York, NY 10014. From the responses received, I will then compile an initial directory for publishing here in the newsletter.

For more information about Russell on e-mail and Internet, refer to Russell: The Journal of the Bertrand Russell Archives, vol. 13, no 1, Summer 1993, p. 4 and vol. 13, no. 2, Winter 1993-94, pp. 115-116.

(9)

LETTER FROM CARL A. WESTMAN

BRS member Carl A. Westman of Newington, Connecticut wrote to us in late April about four matters discussed in the February 1994 RSN: our July 1994 Toronto meeting, Warwick T. Harrison's letter, the "BR in Our Daily Bread" article, and the Treasurer's Report. Here is the text of his most welcome letter.

Thanks to you, and Michael Rockler, for getting the February 1994 Russell Society News out to me. I especially appreciate the information on the Annual Meeting, although I cannot be sure I can attend. I hope so, though!

I am pleased to hear that the accommodations will be in a hotel, as opposed to a dormitory. However, I found it curious that the meeting was billed as the "2nd meeting of the Coalition for Secular Humanism, Atheism, and Freethought." If I recall correctly, Russell was an agnostic, rather than an atheist, and often recommended to avoid feeling certain over anything. I suppose this attitude might run somewhat counter to atheism. But this is a small matter.

How fortunate that we have forum for exchanging ideas on Russell! I enjoyed Warwick T. Harrison's interesting letter. If each member delineated the points over which they agreed with Russell and the points they disagreed with, I think most of us would also agree with the vast majority of his writings. I, too, have found but a few points over which I disagree with Russell, but this is because he emphasized a set of values and philosophical speculation, rather than a list of facts.

Because of this, I found Mr. Harrison's comment regarding the universe interesting: "Well, now we know it wasn't [always there]!" I didn't know the Big Bang theory has achieved such universal acceptance that it is now accepted as fact. If it is still a theory, I think it best to treat it as such.

With regard to his second point, life after death, I though it unusual to distance oneself from a belief in the supernatural, but believe in life after death. I haven't had a "death" experience, but have come close to drowning once. All I recall is gradually losing consciousness; moreover, if I did experience anything unusual, I might conclude that the mind does unusual things when deprived of oxygen.

The comments on Russell in Our Daily Bread were typically myopic. Again, Russell was not an atheist, as they claim. Also, it was the notion of the Almighty inflicting eternal punishment that he found distasteful, not the notion of punishment alone. After a few hundred thousand years of inflicting torture upon a sinner, I would think the Almighty would be able to have made his point, don't you? After that, it does sound a bit sadistic.

Your treasurer's report indicates the membership is quite small. I hope we can grow it, and not let it gradually decline as the years since Russell's life grow.

I'll close now with the hope that I can attend the Annual Meeting and meet many BRS members.

Sincerely,

CARL A. WESTMAN

(10)

LETTER FROM PAUL M. PFALZNER

In response to Warwick T. Harrison's letter appearing in the February 1994 RSN, we also were pleased to receive this letter from BRS member Paul M. Pfalzner of Ottawa, Ontario.

Bertrand Russell's saying "why shouldn't the universe always have been there?" cannot be faulted inspite of the Big Bang theory; Russell's remark makes no dogmatic claim but merely allows a reasonable possibility. Big Bang is not a proven fact; it is simply the best known of various current cosmological models; other theories, such as the Chaotic Inflationary Universe of Hawking, Linde et al. are equally able to model the distribution of matter while allowing for a more plausible universe going through an infinite series of big bangs and big crunches.

As for the "afterlife," George Santayana's remark, "having been born is a poor augury for immortality" would seem to challenge any individual's alleged "death experience" as having any bearing on life after death! A great deal more testable evidence is required for such a claim!

(11)

GREAT DELIGHT IN DISCOVERING THE BRS

Over time we receive a variety of inquiries about the BRS, RSN, and related matters. If someone asks about the BRS and membership, we routinely send our introductory pamphlet and membership application. In mid-April we received such an inquiry from Tae Son Chong of Alexandria, Virginia. He opened his letter with this fine sentence: "To my great delight I have discovered that not only a periodic publication is out in circulation concerning Bertrand Russell, but that a society exists devoted to his illustrious work, as well."

(12) FROM POCH SUZARA, BRS PHILIPPINE CHAPTER

Our thanks to Poch Suzara of the BRS Philippine Chapter in Manila, who wrote this letter to RSN and also gave us a copy of his "Christianity, values and development" letter that appeared in Manila Standard, January 3, 1994.

Mr. Warwick T. Harrison disagrees with Russell's "why shouldn't the universe always have been there?" [See RSN 81, February 1994, p.14 and other letters in this RSN issue.] Warwick says, "now we know it wasn't! There was a "Big Bang" that scattered all the galaxies and gas clouds across space...."

My reply: After the big bang it was called the big universe; before the big bang it was a tiny universe. A few astronomers call it the cosmic egg. But an egg is a universe in itself. Russell was right--the universe has always been there.

His second point of disagreement is Russell's non-belief in something after death. Mr. Warwick, your death experience was not about death but about life since you are still very much alive today. Perhaps you can give us more evidence. Remember Russell was always concerned, and this is something he reiterates again and again, that our beliefs should accord with the evidence for them.

But here's a disagreement mentioned by Anthony Kenny, an authority on the philosophy of Thomas Aquinas. He says: "Bertrand Russell accused Aquinas of not being a real philosopher because he was looking for reasons for what he already believed. It is extraordinary that that accusation should be made by Russell, who in the book Principia Mathematica takes hundreds of pages to prove that two and two make four, which is something he had already believed all his life." (The Great Philosophers by Bryon Magee, p. 66).

Hollywood movies have been made about the life and times of Pasteur, John Smith, Babe Ruth, Lou Gehrig, Stanley and Livingston, Curie and many many others including Gandhi. What about BERTRAND RUSSELL? Are we disciples, followers, admirers, believers, students, relatives, friends, associates of Bertrand Russell doing him service and honor by just keeping him in archives? I ask again: when are we going to explore possibilities of making a film story about this great man? How else can we expose his greatness to the whole wide world today and get on with the BERTRAND RUSSELL SOCIETY on scale as worldwide as it can be?

Christianity, values and development

We are not the masters of Bible lessons; we are the victims. Bible teachings have yet to develop minds and hearts. Otherwise, after four centuries of biblical guidance, why are we today — as a people — impoverished spiritually and — as a nation — bankrupt morally?

Other Asian countries are not Christian; they have never been inspired by Christian teachings, and yet they have values: love of country, love of family, love of discipline, love of honest work, the love of education. Indeed, they have a sense of nationhood under love of industries. They even manufacture the cars, trucks, and motorcycles that we import yearly. We drive such imported vehicles like maniacs in our streets and highways.

The Bible says: "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you. For every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened." Matt. 7:7.

Well, after 400 years of asking, seeking, and knocking, these are the results in the Philippines today: We hardly have rights. We hardly have employment. We hardly have common decency. We hardly have discipline. We hardly have law and order. We hardly have maintained streets and highways. We hardly have public health and sanitation. In fact, we hardly have a government. But we do have in plentiful supply faith in our values.

Ask: If our values were in fact values, how come today we are trying to learn from our Asian neighbors, instead of they trying to learn from us? How come in the business of nation building they glow, while we have yet to grow?

Bertrand Russell wrote: "It is odd that modern men, who are aware of what

science has done in the way of bringing new knowledge and altering the conditions of social life, should still be willing to accept the authority of texts embodying the outlook of very ancient and very ignorant pastoral or agricultural tribes. It is discouraging that many of the precepts whose sacred character is thus uncritically acknowledged should be such as to inflict much wholly unnecessary misery. If men's kindly impulses were stronger, they would find some way of explaining that these precepts are not to be taken literally, any more than the command to "sell all that thou hast and give to the poor."

We blame one another for our failures to carry on traditional Philippine values. But as ignorance prevents its own enlightenment, we are unable to question the validity of these values. Indeed, values are supposed to help, and not hinder, the development of self-reliance, independence, and creativity demanded by changing reality. What our so-called values have contributed thus far is the failure of reason, and therefore the failure of maturity.

In the modern world today, thanks to our biblical values, if we are not waiting for miracles from heaven to save us as a people, we are looking for saviors from foreign countries to save us as a nation.

NEWS FROM CONCERNED PHILOSOPHERS FOR PEACE

The February 1994 Concerned Philosophers for Peace newsletter included these two items. (RSN 81, February 1994 previously noted John Somerville's death.) For information about Concerned Philosophers for Peace, contact Dr. Laurence Bove; Walsh University; 2020 Easton Street NW.; North Canton, OH 44720-3396.

John Somerville (1905-1994). With regret I [Executive Secretary Joseph Kunkel] report the death of John Somerville on January 8. We have lost a friend and an indomitable peace advocate. John authored several books and plays on peace themes at a time when such writings were not in vogue. He was particularly active on the international scene during the long years of the cold war. There he founded the International Philosophers for the Prevention of Nuclear Omnicide. He is survived by his wife of 64 years, Rose. We shall miss his dedication.

Call for Papers for Villanova. The seventh annual conference of Concerned Philosophers for Peace will be held at Villanova University, which is near Philadelphia. The conference will begin at 9:00 Friday morning September 30 and conclude late Sunday evening October 1, 1994....The theme of the conference is "Peacemaking." It ranges from domestic conflict resolution to humanitarian intervention....Send [proposals] to Joseph Betz; Department of Philosophy; Villanova University; Villanova, PA 19085.

Your Turn

Scientific method not only path to truth

By Dennis Patrick Slattery

San Antonio recently was treated to a free Forum on Arthritis and Rheumatology, sponsored jointly by the American College of Rheumatology and the South Central Texas Chapter of the Arthritis Foundation. About 300 arthritis sufferers or family members, including myself, learned about the various symptoms and ways of treating many forms of these crippling and painful diseases that afflict millions of children and adults.

I wish, however, to comment on one of the final speakers in the series who wanted to inform us, I thought initially, of alternative forms of medicine other than those that come directly from the scientific community. The presentation, however, rather quickly and humorously at first, became a defense of scientific method and how we should not question it.

First, the speaker showed us slides of the covers of several supermarket tabloids with headlines like: "Diet Can Cure Arthritis," or "There is a Cure for Arthritis," headlines, he proposed, that offer false hopes for those suffering the disease's ravages. Then to the punchline: He offered as an illustration a slide of a diploma, awarded by a group called the National Consultants of American Nutritionists to those members who have gained respectable standing and have "earned" such a certificate. The certificate conveys on one the mantle of expert on diet and nutrition, ostensibly perhaps to help people

ANOTHER VIEW

We encourage our readers to express opinions on issues of their choice in "Another View." Send contributions to Another View, Express-News, P.O. Box 2171, San Antonio 78207-2171. Articles must be accompanied by a daytime telephone number and a brief occupational identification and should not be longer than 800 words. Articles are subject to editing for clarity, length, taste and legal reasons.

gain belief or cure from degenerative diseases through what they eat and avoid.

The good doctor went on to inform us that by simply filling out a questionnaire and sending in a fee, that one could become a national consultant in this organization. So he and his wife did enroll, not themselves or any of their children; so, the name on the diploma he showed us was Goldie Panush, their family dog.

Next slide, please. Here is Goldie by her food dish, a stack of books on the floor, and of course, the diploma dutifully framed and leaning against the wall. Enter the canine nutritionist, ready to dispense advice. Goldie apparently met all of the questionnaire's requirements for good nutritional potential, even answering yes to the question: "Have you ever attended a college?" Yes, Goldie had matriculated in a junior college course on "Obedience Training," and alas, according to its owner, had failed. Justifiable laughter from the audience.

The point of the story, was that, yes, there

are sham outfits that will award anything to anyone if only a check is cut forthwith. And, yes, credentials, as we all know, are sometimes bogus, but, the speaker warned us: "Life isn't so simple." The way to truth, rather, is through a method of seeing the world that began in the 17th century and has been with us ever since, for good or for ill: the scientific method as the way to truth.

The scientific method works, as you know, through slow, laborious, carefully experimental designs to an established end in which a hypothesis is offered, then affirmed or refuted by "the evidence," according to the speaker.

The implication of the talk was that the scientific method is the only way to truth, a feeling that I had confirmed by one of the last slides which showed a quote from the esteemed mathematician and philosopher, Bertrand Russell. It read: "What science cannot tell us, mankind cannot know."

What I found disturbing about the speaker's certainty is that it was contradicted in several ways by other speakers. For example, an earlier rheumatologist told us that the evidence about arthritis in the 1950s was that when the disease was painful, the patient was sent to bed forever. Now, the evidence says do exercises, aerobic workouts, move the joints, keep flexibility and take certain drugs to help with swelling and pain.

Again, at our lunch table after, a fine rheumatologist fielded dozens of questions from 10 of us, pointing out often that "some evidence suggests this, while others believe

that" about the nature of auto-immune diseases like osteoporosis, osteoarthritis, rheumatoid arthritis, lupus and other painful ailments. So what seems proven in one area or era is then disproved later. Hardly a way to inspire confidence in certainty.

As I was driving home from the sessions, I listened on National Public Radio to a respected physician discussing the onset of breast cancer in men. His comment that "we don't know why some women get breast cancer while others don't," inaugurated his later observations that so much is uncertain, so much contradictory about what we discover in science and medicine.

What I found difficult to accept by the owner of Goldie is the absolute way he spoke about the scientific method, and that other forms of discovery and treatment — such as acupuncture, herbal medicine, or Chinese ways of understanding the body, for example — are unworthy in this mysterious world of disease. An uncertain science was passed off to us as "all-knowing," or at least the only way of knowing. I think it is dangerous, or at least naive, to have Bertrand Russell as one's only patron saint. There are other models of discovery and treatment for disease as well as other ailments in the human condition that should not only be considered but perhaps given their own symposium.

Dennis Patrick Slattery is professor of literature and writing at Incarnate Word College.

(15)

BR ET AL. IN PHILOSOPHY OF LANGUAGE COURSE

The current University of Chicago non-credit continuing education catalog gives this description of a course titled "Philosophy of Language."

What is it for words to mean what they do? What is the relationship between language and the world? How is linguistic communication possible? The philosophy of language attempts to answer these and other general questions about the nature of language and meaning. This course is intended as a general introduction to the field and will focus on three issues: (1) meaning—how meaning is distinguished from the things we do with words and how it relates to truth; (2) reference and belief—how words manage to refer to objects in the world and why all accounts of reference

seem incompatible with how we attribute beliefs to others; (3) the nature of language--the extent to which the meaning of a word may depend upon the belief system of which it is part, and whether the meaning of public expressions must ultimately depend upon a system of private meanings (a language of thought). Readings will include both classic essays by Frege, Russell, Tarski, Wittgenstein, Quine, and Austin and more recent work by Grice, Searle, Davidson, Putnam, Kripke, and Chomsky. No prior knowledge of philosophy is presumed. Instructor: Richard Rosenblatt's research and writing focus on the contemporary philosophy of language, epistemology, and the philosophy of mind. \$215. March 28-June 6 [1994].

**BERTRAND RUSSELL'S PHILOSOPHY
OF LOGICAL ATOMISM**

By Wayne A. Patterson

Pages and format: 364 pp. 6 x 9 (Paperback)
 ISBN: 0-8204-1235-X Official U.S. pub. date - August 1, 1993
 Price: \$29.95
 Series: American University Studies, Series V, Philosophy, Vol. 89

The Book: Bertrand Russell's philosophy of logical atomism has had a major influence on the development of analytic philosophy. The essential features of this atomism were presented in eight lectures delivered by Russell in 1919. This book is an exposition of those lectures for readers with minimal philosophical training, the aim being to provide a sound understanding of the problems which Russell addresses as well as an awareness of the acceptability of his proposed solutions. Easily grasped examples are used to aid the exposition, but over-simplification of difficult problems is avoided.

The Author: Wayne Patterson obtained his first degree in pure mathematics at the University of Toronto. Following a Master's degree at the same university he travelled to Australia and was subsequently awarded a Ph.D. in philosophy at the University of Melbourne. He is currently Senior Teaching Fellow at the National University of Singapore and has recently obtained a Diploma in Artificial Intelligence from the University of Edinburgh.

REVIEW OF MOOREHEAD BR BIOGRAPHY

Our thanks to Tim Madigan for alerting us to this review of Caroline Moorehead's Bertrand Russell, appearing in Wilson Quarterly, Spring 1994, pp. 86-87. The review author is not identified.

BERTRAND RUSSELL: A Life. By Caroline Moorehead. Viking. 596 pp. \$30

In 1961, an 89-year-old Bertrand Russell was sent to jail for protesting the nuclear policies of the British government. He had been the object of controversy before. In 1940, the New York court that overturned his appointment to City College denounced his logic lectures as lecherous, libidinous, lustful, venerous, erotomaniac,

aphrodisiac, irreverent, and narrow-minded. No easy man to live with, he married four times, often wreaking emotional havoc on his wives and children.

Bertrand Russell was also a Nobel Prize-winning philosopher who wrote 83 books, including *Principia Mathematica* (1910), and set the shape of philosophy in the English-speaking world. Though the contrast was rather extreme, both Russells were Russell.

As Moorehead relates in her engaging biography, Bertrand Russell (1872-1970) did not know how to be dull. He brought a philos-

opher's insights to issues ranging from nuclear warfare to the use of cosmetics by schoolteachers, and did so with a literary skill that leaves most other writers green with envy. Even his technical philosophy is full of vivid touches. Moorehead, a British journalist, wisely skirts the impossible task of explaining the foundations of mathematics. Instead, she sticks to what drove Russell to study such things—a longing for the timeless and absolute truth about the world, which he thought lay in logic. She also explains how he abandoned his first and highest love. Ludwig Wittgenstein, his one-time protégé, persuaded him that logic was no more than a matter of human convention; after civilized Europe plunged into World War I, Russell lowered his sights and looked to politics, education, social reform, and more enlightened attitudes toward sex and marriage as the route to human happiness.

Russell's childhood was a gloomy one. His radical parents died when he was a small child, and he was brought up by his elderly grandmother and assorted governesses. Lady Russell tried to keep Bertie pure. She failed. He met and after many battles married Alys Pearsall Smith—like his fourth and last wife, a daughter of Philadelphia and Bryn Mawr. This all fueled his later passion for sexual enlightenment. Paradoxically, Lady Ottoline Morrell, who became his mistress in 1910 and effected his liberation, did not much care for sex with Bertie; it was his mind she fell in love with.

He was amazingly clever and loved Cambridge, but he could never be confined to the academy. He ran for Parliament in 1907 as a women's suffrage candidate, fighting for a seat he could not win in order to stick up for an unpopular cause. In 1916 he threw away his Cambridge career to campaign against the war. Trinity College dismissed him from his lectureship, and in 1918 he was jailed for insulting an ally. (He said the U.S. Army would stay on in Europe after the war to shoot striking workers.)

In the 1920s and '30s he wrote important essays on socialism, the fate of the Soviet Union, appeasement, and the nature of power, but emotional discord bulked larger. In 1921 he married Dora Black, had two children, and opened a school—Beacon Hill. Its finances demanded constant lecture tours in the United States and short

articles for the Hearst newspapers ("Going to the Cinema," "Should Philosophers Smoke Cigars?," "Who May Wear Lipstick?"). The marriage broke up in the early 1930s. He then married Peter Spence, a woman 30 years younger than he. She left him in 1949. Finally, in 1952 he married Edith Finch and experienced 17 years of quiet bliss: an interesting but not edifying record. Moorehead only occasionally raises an eyebrow at the discrepancy between Russell's mastery of logic and his weak grasp of the realities of other people's lives.

The post-1945 Russell is the one Americans remember. This Russell fought for the Nuclear Test Ban Treaty, wrote to John Foster Dulles and Nikita Khrushchev to demand nuclear disarmament, lectured John Kennedy on Cuba, and led a last, bitter campaign against the Vietnam War. Moorehead is pained by the way Russell was taken over by Ralph Schoenman during this final crusade. Schoenman was a left-wing graduate student at the London School of Economics who came to see Russell in 1960; he stayed to tea, then to manage Russell's affairs for the next eight years. He destroyed innumerable old friendships, wasted large amounts of money, hampered every good cause with which he was involved, and made Russell look ridiculous. Moorehead shares the universal relief that almost the last thing Russell did was break with Schoenman and write a memorandum explaining why. Can we decently say that a rip-roaring atheist like Russell redeemed himself? We can certainly rejoice that he died as clear-headed as he had lived.

SKEPTICAL BELIEFS

We recommend to you Skeptical Beliefs, newsletter of the Committee for the Scientific Investigation of Claims of the Paranormal. Subscription rates: \$15, one year; \$28, two years; \$35, three years. Write to CSICOP; P.O. Box 703; Buffalo, NY 14226-0703. Vol. 4, no. 1, March 1994, from which the following article comes (p. 6), includes a Carl Sagan article titled "Basketball's Lessons for Science" and other noteworthy material.

Inklings

Thinking by Numbers

Lewis Jones

I once asked Bertrand Russell how he could justify his claim that the universe was round. He said, "Because mathematics has proved it so." I am as dissatisfied with that response now as I was then.

After all, this was the same Bertrand Russell who defined mathematics as the subject in which we know neither what we are talking about nor whether what we are saying is true. Mathematics is concerned with relations between things, not with the things themselves. It is a network of bridges between the islands of reality: you might know every last detail about a bridge, but this will tell you nothing about the islands that it connects.

On a different occasion, Russell spelled it out more elaborately: "Pure mathematics consists entirely of assertions to the effect that, if such and such a proposition is true of *anything*, then such and such another proposition is true of that thing. It is essential not to discuss whether the first proposition is really true, and not to mention what the anything is, of which it is supposed to be true."

Yet there are still those who speak of mathematics as a positive force, bending events to its will. Time travel, and effects that precede their causes, are held to be valid because "there is nothing in mathematics that forbids them" (although there is nothing in mathematics that rules out the universe being regulated by a pink blanchmange, either).

The endpoint of your calculations may tell you that the number of workers required to dig a ditch is $\sqrt{49}$. Out here in the real world, you would then just send out for seven ditch-diggers. The alternative solution of minus seven we would just throw away as of no practical value, but there are those who would soon be off on a search for these phantom workers. ("There is nothing in mathematics that forbids it.")

"Mathematics shows that it must be true." This is the unspoken (and sometimes even the spoken) assumption backing many a paranormal claim. Dame Chance is thought of as stalking the world, very much in the way that Dame Nature was once imagined, adjusting here and correcting imbalances there. J. B. Rhine decked out his "Extra-Sensory Perception" with tables of probable errors, deviations, antichance values, and probability integrals. "Modern Experiments in Telepathy," by S. G. Soal and F. Bateman, gave us an appendix containing 60 pages of mathematical analysis. In the wake of Soal's fraudulent experiments, none of it was worth a button.

It is worth bearing in mind Charles S. Peirce's standpoint—that probability refers to propositions about events, not to the events themselves. It assesses how likely you are to be right in what you say. It is a measure of what you know. Your estimation of the composition of water will differ according to whether you believe that (a) the world consists of four elements—fire, water, earth, and air; or (b) there are 92 elements to choose from; or (c) water is a combination of two elements (or three, or four, or whatever), and so on, *ad infinitum*.

Dame Chance does not impress her will upon electrons so as to prevent their having both momentum and location. The constraint is upon your knowledge, not upon the particle. As the

mathematician Henri Lebesgue felt obliged to admit: "No discovery has been made in mathematics, or anywhere else for that matter, by an effort of deductive logic."

Ptolemy had no illusions about his theories of astronomy: He knew full well that his mathematical descriptions happened to fit his observations, but they were not intended as an explanation of what astronomical bodies were and what they were doing. When there were alternative ways of expressing the results, he just chose the simplest.

Newton, too, in the *Principia*, confesses, "I here design only to give a mathematical notion of these forces, without considering their physical causes and seats."

B. F. Skinner saw the danger clearly: "The formula $s = \frac{1}{2}gt^2$ does not govern the behaviour of falling bodies, it governs those who correctly predict the position of falling bodies at given times."

There was a time when mathematics was the handmaiden of science. But Morris Kline, professor emeritus of mathematics, made the complaint that "most mathematicians of the past hundred years have broken away from science. They know no

"The difference between mathematical thinking and scientific thinking is that at every stage the scientific thinker checks that the predicted result holds up in the real world."

science, and what is more, are no longer concerned with the utilization of mathematical knowledge."

"If potential application is the goal," he points out, "then as the great physical chemist Josiah Willard Gibbs remarked, the pure mathematician can do what he pleases, but the applied mathematician must be at least partially sane."

John von Neumann, too, issued a warning almost a half a century ago: "As a mathematical discipline travels far from its empirical source . . . it is beset with very grave dangers. It becomes more and more pure aestheticizing, and more purely *l'art pour l'art*."

The difference between mathematical thinking (or even logical thinking) and scientific thinking is that at every stage the scientific thinker checks that the predicted result holds up in the real world. There are many everyday instances in which mathematical assertions don't work out in particular circumstances. One raindrop plus one raindrop makes only one raindrop. A half-glass of alcohol and a half-glass of water will give you only 90 percent of a glass of vodka. Three tablespoons of water and one tablespoon of salt do not give you four tablespoons of anything.

Statistics in themselves cannot show cause and effect. In a parapsychology experiment, claims of results that have the odds astronomically against them may suggest something unexpected to look into, but cannot tell you what that is. Cheating and sloppy experimental protocols and claims for the undefined psi—they can all produce impressive but indistinguishable odds.

Alas, in certain quarters, mathematicians are likely to continue to be accorded almost reverential status. For a real-life example, I return you to Bertrand Russell: "I was told that the Chinese said they would bury me by the Western Lake and build a shrine to my memory. I have some slight regret that this did not happen, as I might have become a god, which would have been very *chic* for an atheist."

Lewis Jones is a science writer in London.

(19) WALTER LIPPMANN ON BR AND BIRTH CONTROL

We would like to express our appreciation to Steve Maragides, who found this Russell reference in Walter Lippmann's A Preface to Morals (New York: MacMillan Company, 1929), pp. 298-299.

The uncompromising logic of birth control has been stated more clearly, I think, by Mr. Bertrand Russell than by anyone else. Writing to Judge Lindsey during the uproar about companionate marriage, Mr. Russell said:

I go further than you do: the things which your enemies say about you would be largely true of me. My own view is that the state and the law should take no notice of sexual relations apart from children, and that no marriage ceremony should be valid unless accompanied by a medical certificate of the woman's pregnancy. But when once there are children, I think that divorce should be avoided except for very grave cause. I should not regard physical infidelity as a very grave cause and should teach people that it is to be expected and tolerated, but should not involve the begetting of illegitimate children--not because illegitimacy is bad in itself, but because a home with two parents is best for children. I do not feel that the main thing in marriage is the feeling of the parents for each other; the main thing is cooperation in bearing children.

In this admirably clear statement there is set forth a plan for that complete separation between the primary and secondary function of sexual intercourse which contraception makes possible.

(20) FROM HARRY RUJA

Here are two interesting items received recently from former BRS Board Chairman Harry Ruja.

Bertrand Russell on Israel (addendum) by Harry Ruja. I read a paper with this title at a meeting of the Society, June 1979, in New York. RSN ran an abstract of it in the August 1979 issue (p. 24), and the paper appeared in full in Midstream, February 1980. Recently I had occasion to look through The New York Times for 23 Feb. 1970. There, on page 21 was BR's denunciation of Israel as an "aggressor" in the Middle East, but on page 26 of the same issue was an editorial entitled, "To Stop Murder in the Sky." That editorial by the editors of the Times was occasioned by an Arab bombing attack on the 21st on a Swiss plane headed for Israel resulting in the death of all aboard. If BR had lived just a few more weeks, he might have recognized this ironic juxtaposition as an instance of reality invalidating rhetoric.

Re: RSN 81. In the Feb. issue of RSN, you quote from a Time article in which the author says that tyranny does not necessarily produce nobility in the tyrannized. This idea come from BR's essay, "The Superior Virtue of the Oppressed," which first appeared in The Nation, 26 June 1937 and was reprinted in BR's Unpopular Essays, 1950.

(21)

GREETINGS FROM PAKISTAN

BRS Vice President John Lenz has received belated 1994 New Year's greetings addressed to the BRS from The Movement for Constitutional Monarchy in Pakistan. We thank that organization for its good wishes and extend the BRS's greetings to them.

(22)

STUDENT PUGWASH USA

John Lenz also provided us with information about Student Pugwash USA, an organization having a noteworthy link with Russell. The Eighth International Student Pugwash USA Conference will be held at Johns Hopkins University, Baltimore, Maryland, June 12-18, 1994. For further information, contact Nicky Short; Student Pugwash USA; 1638 R Street NW.; Suite 32; Washington, DC 20009; telephone 202-328-6555. Here are excerpts from a SP/USA flier.

Student Pugwash USA, a national, educational, non-profit organization based in Washington, DC, is dedicated to building a commitment among young people to integrate social concerns into their academic, professional, and personal lives. Our programs, which are non-partisan and non-advocacy, stress the resolution of critical global challenges through informed decision making and the responsible use of science and technology. Through a variety of interdisciplinary activities, focusing on leadership development and interactive learning, Student Pugwash USA educates young people on the relevance of science and technology to their own lives, and on its ability to shape the future of the global community.

Founded in 1979, Student Pugwash USA takes its name from the Pugwash Conferences on Science and World Affairs, which began in 1957 in Pugwash, Nova Scotia, as a response to the development of the Hydrogen bomb. The Conferences were organized at the behest of Albert Einstein and Bertrand Russell, co-authors of a manifesto which urged that scientists from around the world come together to seek peaceful solutions to conflicts in a world forever changed by weapons of mass destruction.

[Areas of interest include] peace and security, environment, energy, health and medicine, biotechnology, population and development, information technologies, industrial competitiveness, access and equity issues.

(23)

NEW RSN EDITOR WITH NEXT ISSUE

This is the last Russell Society News issue being edited by Donald Jackanicz. Dennis Darland is succeeding Don as editor beginning with RSN No. 83 for August 1994.

Lee Eisler was the first RSN editor, editing Issue 1, March 1974 through Issue 71, August 1991. The newsletter was originally simply referred to as BRS Newsletter. Since Issue 17, February 1978 the name has been Russell Society News or RSN. Lee was one of the founders of The Bertrand Russell Society in 1974 and has played a major role in BRS affairs over the years. His long editorship of RSN brought many years of Russell-related news to BRS members and interested non-members. When the BRS holds its annual meeting, it is always a pleasure to see Lee once again. He has been among the most active forces in keeping interest in Russell alive.

When Lee decided to step down as RSN editor, Don was asked to take over this duty on a temporary basis. Don has edited Issue 72, November 1991 through Issue 82, May 1994. He generally used Lee's newsletter format and tried to retain at least some of Lee's style. For some time Don has sought to be replaced as editor. Now, with a designated successor, Don intends to spend more time on a number of his other activities, including some relating to Russell.

Many BRS members know Dennis Darland. And those who don't actually know him are touched by his other BRS work. Dennis has been BRS Treasurer for many years, processing our dues payments, keeping financial and member records, and in other ways interacting with the membership and officers. Without Dennis's fine work as Treasurer, the overall smoothness of BRS operations would have been much less so. Now Dennis has volunteered to take over editing RSN, thereby making yet another long-term contribution to the BRS's viability.

You, as a BRS member, are therefore respectfully asked to support Dennis's BRS and RSN work as follows:

Send to him news about Russell, Russell-related matters, and any other concerns that you feel might be worthwhile for RSN. Editing RSN is not the hardest job in the world, but it can be a challenge independently locating relevant, interesting material without the help of others. When members make submissions (letters, news items, brochures, clippings, etc.), those members are more actively involved in the BRS. As well, the editor's job is made somewhat easier and certainly more fulfilling because of the involvement of other people.

Direct letters about RSN and any other general BRS matters to him. If necessary, Dennis will forward your letter to the appropriate RSN officer.

If you are able to attend the July 1994 Annual Meeting in Toronto (and we hope you will), say hello to him and give him your thoughts about RSN.

Best wishes, then, to Dennis Darland in his new role as RSN editor. And, from Donald Jackanicz, thanks to all those who helped him produce eleven RSNs.

RUSSELL SOCIETY NEWS

No. 83, August 1994

The Bertrand Russell Society
3802 North Kenneth Avenue
Chicago, IL 60641-2814; U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "*The good life is one inspired by love and guided by knowledge.*"

Russell Society News is a quarterly issued in February, May, August, and November. For information about The Bertrand Russell Society or to become a member contact the Chicago address above. Russell Society News is edited by Dennis J. Darland. Letters concerning it should be addressed to: Dennis J. Darland; 1965 Winding Hills Road; #1304; Davenport, IA 52807-1358; U.S.A.; e-mail: djdarland@bix.com.

(1)

FROM THE PRESIDENT
Michael J. Rockler

The 1994 annual meeting, held in conjunction with CSHAFT, was a great success. One of the BRS concurrent sessions was attended by more than 100 persons. Nick Griffin, winner of two BRS book awards, spoke at the Friday luncheon to the entire gathering. This kind of audience has not been typical at recent BRS meetings; hopefully our participation in this joint event will result in some new membership applications for the Russell Society.

An interesting issue arose in several of the sessions in regard to a contemporary philosophic movement which is called "postmodernism"--a development opposed by many humanists in the United States and Europe. In Toward a New Enlightenment, Paul Kurtz argues his case for the limits of postmodernism.

Perhaps humanists ought to be more open-minded in their approach to postmodernism. While there are certainly aspects of this movement which are problematic (e.g. a retreat from internationalism to more intense nationalism) there are also ways in which postmodernism can add to an understanding of the world. The Enlightenment provided much for contemporary life. It strengthened rationalism in a way that serves humankind well when it is applied to solving human social problems. However, the Enlightenment view of science is an outdated one. Newtonian physics has lost its validity; some contend that even Einstein can be seen as the final chapter in Newtonian physics.

Postmodernism is consistent with contemporary science which posits an open-ended universe containing uncertainty and apparent chaos. This view has implications for education as well as for religion. Schooling must focus on process in order to enable learners to create their own goals--a perspective advocated by Dewey. Newtonian physics is consistent with the existence of a creator. Postmodern science provides a rationale for atheism and agnosticism by demonstrating that the universe has always existed.

Bertrand Russell died before postmodernism had developed in its present form. However it seems clear that Russell would not resist postmodern science since he understood and supported the evolutionary nature of scientific knowledge. Postmodernism resists the misapplication of technology to teaching. It opposes overreliance on technology-assisted instruction. Teaching depends on human contact between students and teachers and as well as the social interaction that occurs between teachers. Russell would certainly have accepted this proposition and support for it can be found in his writings on education.

Russell taught skepticism which provides philosophical support for the open-ended nature of postmodernism. As desirable as it might be, certainty is hardly ever available. Russell knew this and hopefully the humanist critics of postmodernism will learn it as well.

Lee Eisler, a founding member of BRS and longtime Vice President for Information was honored by the board by being named "Vice President Emeritus." Lee has provided much for the development of BRS; this honor recognizes his contribution.

Dennis Darland becomes the editor of the BRS newsletter with this issue. I would like to wish him well in this endeavor; I encourage everyone to help produce the newsletter by providing Dennis with material.

BRS board chair Marvin Kohl will begin a sabbatical soon in Hong Kong. I know that everyone in the Society hopes that Marvin will have a profitable year.

(2) MINUTES OF THE 1994 BERTRAND RUSSELL SOCIETY ANNUAL MEETING

Donald W. Jackanicz, Secretary, The Bertrand Russell Society

The 1994 Annual Meeting of The Bertrand Russell Society was held at the Chestnut Park Hotel, 108 Chestnut Street, Toronto, Ontario, Canada from Thursday, July 7 through Sunday, July 10. The meeting was held in conjunction with meetings of The Council for Democratic and Secular Humanism (CODESH) and The Humanist Association of Canada (HAC).

Thursday, July 7

The Board of Directors met in a single session in the second floor Victoria Room from 5:30 to 7:25 p.m. Refer to the separate "Minutes of the 1994 Bertrand Russell Society Board of Directors' Meeting." A welcoming reception for attendees from the three organizations was held from 7:30 to 11:00 p.m. in the twenty-fifth floor Tokyo/Hong Kong/Singapore Rooms.

Friday, July 8

The three organizations held a plenary session in the lower level Mandarin B Room from 9:00 a.m. to 12:00 noon. Titled "The Positive Reach of Humanism," the session featured these speakers: Thomas Flynn, Senior Editor, Free Inquiry; Paul Kurtz, Editor, Free Inquiry; Peter Smith, President, Humanist Association of Canada; Michael Rockler, President, Bertrand Russell Society; Jane Wynne Willson, Co-President, International Humanist Ethical Union; Jack Massen, Treasurer, The Atheist Alliance.

From 12:00 Noon to 2:00 p.m., a luncheon session was held in the lower level Mandarin A Room. Kenneth Blackwell, Archivist of the Bertrand Russell Archives, introduced Nicholas Griffin, Professor of Philosophy at McMaster University, who spoke on "Bertrand Russell as a Critic of Religion."

Four concurrent sessions were held from 2:00 to 5:00 p.m. Of these, CODESH and HAC sponsored sessions titled "Humanism and Ethics/Humanism and Postmodernism," "Dealing with the Religious Right-A Workshop," and "Humanism and Spirituality." The BRS's session was held in the second floor Vancouver Room. Vice President John Lenz introduced the four speakers: John Shosky, Professor of Philosophy at The American University, "Propositions Without Proof"; Jason Holt, "On Russell's Construction of Mind"; Todd Hughes, Russell and Pitcher on Propositions"; Marvin Kohl, Professor of Philosophy at the State University of New York at Fredonia, "Russell and the Good Life-A Workshop." Mr. Holt and Mr. Hughes were the winners of the 1994 Society Essay Contest.

Saturday, July 9

A second plenary session was held from 9:00 a.m. to 12 Noon in the lower level Mandarin B Room. The session, titled "What Is the Good Life? A Humanist Perspective," featured these speakers: Timothy J. Madigan, Executive Editor, Free Inquiry; Albert Lyngzeitson, Professor of Philosophy at Florida Atlantic University; Nicholas Griffin; Philip Jones, President CSHAFT; Gordon Stein, Editor, The American Rationalist; Norm Allen,

Executive Director, African Americans for Humanism.

The luncheon session, meeting from 12:00 Noon to 2:00 p.m. in the lower level Mandarin A Room, was titled "International Humanism in the 21st Century," and featured these speakers: Paul Kurtz; Rob Tielman, Co-President, International Humanist Ethical Union; Levi Fragell, Editor, [Norwegian] Humanist.

Three concurrent sessions were held from 2:00 to 5:00 p.m. Of these, CODESH and HAC sponsored sessions titled "Nonreligious Ceremonies: A Discussion" and "Humanism Online: Promoting Freethought through Computers." The BRS's session was held in the second floor Victoria Room and was titled "John Dewey vs. Bertrand Russell on Religious Belief." Timothy J. Madigan introduced the two speakers, BRS President Michael Rockler and John Novak, Professor of Education at Brock University, who respectively defended Russell's and Dewey's points of view.

At 4:15 p.m., immediately following the end of the Dewey-Russell session, the Society Business Meeting was convened, with President Michael Rockler in the chair. Secretary Donald Jackanicz was asked to summarize the business considered by the Board of Directors on July 7. Dennis Darland was thanked for his willingness to become the new Russell Society News editor. Nicholas Griffin explained how he and his wife could produce Russell/BRS tee shirts for a fundraising program; various aspects of his proposal were discussed. John Lenz suggested sending a complete set of Russell Society News to the CODESH library; Donald Jackanicz will arrange for this. The meeting was adjourned at 4:52 p.m.

From 6:00 to 7:00 p.m. the Red Hackle Hour was held in the lobby adjoining lower level Mandarin A and B Rooms. Attendees from the three organizations participated.

Afterwards, a Banquet was held in the combined Mandarin A and B Rooms. HAC President Peter Smith was master of ceremonies. He introduced BRS President Michael Rockler, who spoke briefly to thank all those who had cooperated to make this joint meeting successful. President Rockler then introduced Donald Jackanicz, who announced the winner of the 1994 Bertrand Russell Society Book Award: Caroline Moorehead for Bertrand Russell: A Life. (As Ms. Moorehead could not be present, her award plaque is being shipped to her.) The audience was then entertained for some twenty minutes by magician/humanist Henry Gordon. Lastly, HAC President Peter Smith presented his organization's annual award to Dr. Robert Buckman, an oncologist, Canadian television personality, and Professor of Medicine at the University of Toronto, who delivered an amusing talk titled "Twice Around the World and Still Stupid." The banquet concluded at 10:00 p.m.

Sunday, July 10

Three optional concurrent excursions were offered to attendees: (1) sponsored by HAC, from 9:25 a.m. to 4:45 p.m., a bus trip to Kleinburg, Ontario to view the McMichael Art Collection; (2) sponsored by CODESH, from 8:30 a.m. to 8:30 p.m., a bus trip to Niagara Falls and Buffalo, New York to visit CODESH headquarters; (3) sponsored by McMaster University and the BRS, from 1:00 to 5:00 p.m., a visit to the Bertrand Russell Archives in Hamilton, Ontario.

(3) MINUTES OF THE 1994 BERTRAND RUSSELL SOCIETY
BOARD OF DIRECTORS' MEETING

Donald W. Jackanicz, Secretary, The Bertrand Russell Society

The Board of Directors met in a single session on Thursday, July 7, 1994 in the second floor Victoria Room of the Chestnut Park Hotel, 108 Chestnut Street, Toronto, Ontario, Canada. The meeting was called to order at 5:30 p.m. by Chairman Marvin Kohl. Board members attending part or all of the session were Kenneth Blackwell, Dennis Darland, Linda Egendorf, Lee Eisler, Nicholas Griffin, Donald Jackanicz, John Lenz, Tim Madigan, Stephen Reinhardt, Michael Rockler, and Warren Allen Smith.

Chairman Kohl reported that he had received a 1994-95 Fulbright grant to pursue philosophical research in Hong Kong. Otherwise in his opening remarks, he emphasized the need to stimulate membership growth.

President Michael Rockler, Vice President John Lenz, and Vice President/Information Lee Eisler had no reports. Secretary Donald Jackanicz was not called on to read the 1993 minutes. Treasurer Dennis Darland reported a \$4,771.37 checking account balance and a \$355.55 savings account balance. As of July 7, there were 206 individual or couple dues-paying members, 22 Benares Chapter members, 18 Philippine chapter members, and 10 honorary members. One year ago, there were 243 dues-paying members.

Donald Jackanicz nominated the current Society officers for reelection but with the following title change for one position: from Vice President/Information to Vice President Emeritus/Information. The unanimously reelected officers are Board Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Vice President Emeritus/Information, Lee Eisler; Secretary, Donald Jackanicz; Treasurer, Dennis Darland.

Discussion turned to future annual meeting sites. Chairman Kohl expressed the view that effective meeting planning is best served by having meeting sites chosen two years in advance. President Rockler moved to hold (1) the 1995 annual meeting at the Columbia Inn in Columbia, Maryland on either Friday, June 16-Sunday, June 18 or Friday, June 23-Sunday, June 25 and (2) the 1996 annual meeting in Chicago sometime between June and October at a precise location to be determined through the work of Donald Jackanicz. This motion was unanimously accepted.

Chairman Kohl then asked Prof. Louis Greenspan of the Bertrand Russell Editorial Project (BREP), McMaster University to speak about the present BREP funding situation. Prof. Greenspan outlined the great economic difficulties faced in working toward the completion of the multi-volume series and asked the Society to consider helping in a fund-raising campaign. Among the points Prof. Greenspan explained was that the Social Science and Humanities Research Council of Canada has offered to match contributions raised from outside sources, such as contributions received from or channeled through the Society. In discussion, the Board agreed that the following measures are appropriate: (1) the newsletter will include a notice soliciting contributions for the BREP; (2) the Society membership list will be made available to the BREP so that McMaster University can send contribution solicitation letters to Society members; (3) it was agreed that a new solicitation letter would be prepared, evaluated by Kohl and, if ok, co-signed by Kohl and Thomas M. Daly, Development Officer, BREP, (4) the BREP is invited to provide further information to the Board about BREP funding needs; (5) with this additional information, the Board can decide on any other possible Society action.

Discussion then passed to the possibility of offering new honorary memberships to meritorious individuals in accordance with Bylaws provisions. Chairman Kohl appointed Warren Allen Smith to chair a committee to examine honorary membership issues, including proposing potential candidates. Donald Jackanicz volunteered to be on the committee. Chairman Kohl stated he would appoint a third committee member.

The final matter considered was how to increase membership. Chairman Kohl suggested reevaluating the Society's advertising techniques, especially the periodicals in which advertisements are placed. President Rockler then announced that he had asked Donald Jackanicz to work with him on a program to stimulate membership growth.

The meeting was adjourned at 7:25 p.m.

(4) BERTRAND RUSSELL SOCIETY
TREASURER'S REPORT
2nd Quarter 1994
Dennis J. Darland, Treasurer

Beginning bal	\$4472.27
INCOME	
Contributions	\$80.00
Interest	\$1.32
Library Income	\$89.35
Meeting Fees	\$0.00
Misc Income	\$0.00
New Members	\$242.50
Renewals	\$1048.00
TOTAL	\$1461.17
EXPENSES	
Library Expense	\$13.53
Meetings	\$140.00
Memb & Info	\$651.67
Misc Expenses	\$0.66
RUSSELL Sub	\$0.00
TOTAL	\$805.86
Final bal	\$5127.58

(5) BOARD OF DIRECTORS NOMINATIONS SOUGHT

We now invite members to nominate themselves or other members for 3-year Board of Director terms beginning January 1, 1995. Eight directors are to be elected. (There are 24 elected directors, each with 3-year terms, of whom one-third are elected each year; in addition BRS officers are ex-officio directors.) The ballot will appear in the next RSN, i.e. the November issue.

The duties of directors are not burdensome. They are occasionally asked their opinion about some BRS issue by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. A brief statement about the candidate should accompany the nomination. Send nominations to the BRS Secretary: 3802 North Kenneth Avenue; Chicago, IL 60641-2814; U.S.A.

The directors whose terms expire at the end of 1994 are Louis Acheson, Kenneth Blackwell, John Jackanicz, David Johnson, Justin Leiber, Gladys Leithauser, Stephen Reinhardt, and Thomas Stanley. Each of these directors is eligible for reelection.

Remember-- nominations are being sought. Let us hear from you!

(6) Dr. John Somerville : My Remembrances
by Shohig Sherry Terzian

Dr. John Somerville was a star speaker at the International Conference on General Semantics held at the San Francisco State College in August, 1966. He delivered a paper on "Language and the Cold War" which held special relevance to an audience that included participants from all over the world. The Soviet Union was well represented which was unusual for its time and I recall discussing its impact with Dr. Somerville soon after we met. In fact, we covered a multitude of subjects including, of course, Bertrand Russell and my lifelong interest in George Santayana, an international philosopher of renown. Dr. Somerville heard me out, offering some down-to-earth suggestions on Santayana as a world figure. For Dr. Somerville felt deeply that a worldwide view was imperative for our very survival as human beings.

We both expressed admiration for Dr. S. I. Hayakawa who had organized this conference on his home ground. It was stimulating and truly a learning experience, we agreed. I had become aware of Dr. Hayakawa's work as it related to my field inasmuch as he was visiting professor at the Menninger Clinic when I began my work at UCLA's Neuropsychiatric Institute in the Spring of 1961. As we were winging our way back to LA, the Watts Riots were headlining the news and I kept recalling Dr. Somerville's astute analyses.

In 1980 I was invited to participate in an International Conference on the Holocaust and Genocide to be held in Tel Aviv, Israel in June, 1982. I wasn't too surprised to discover that Dr. Somerville was on the organizing committee which was headed by Nobelist Elie Wiesel. Dr. Somerville was on the program virtually every day. He conducted a workshop on nuclear weaponry and ecocidal technology: the extension of the threat of the holocaust and genocide to all humankind. Following a session on nuclear omnicide and ecocide: the new face of genocide, he summed up his premise that omnicide was the new face of genocide.

It was noted that Dr. Somerville was co-founder and president of the American Section of the Union of American and Japanese Professionals Against Nuclear Omnicide, that he was consultant to UNESCO and the author of The Philosophy of Peace which had an introduction by Albert Einstein.

In effect, Dr. Somerville was alerting world powers of the very reality of omnicide especially during nuclear races. According to the World Federation Association, he was acknowledged as the originator of the word 'omnicide.' The Gandhi Peace Award which he received had previously been given to such luminaries as Mrs. Eleanor Roosevelt, UN Secretary General U Thant and Dr. Helen Caldicott.

On Father's Day, Sunday, June 19, 1987, Dr. Somerville led a drive for a nuclear weapons freeze at a peace and disarmament vigil and rally held on the grounds of the Federal Building in West LA. He was then chairman of the California campaign for a no-first use initiative. Sponsored by the Alliance for Survival, he joined forces with Dr. Richard Saxon, president of the LA Physicians for Social Responsibility.

In recent years we exchanged correspondence and he graciously sent me inscribed copies of some of his publications. Dr. Somerville was a humanist in the truest sense of the word. He was soft-spoken, firm but gentle even when discussing earthshaking issues. And he was the perennial philosopher who practiced what he taught: ad astra per aspera.

LETTER FROM KEVIN STUART BRODIE

June 16, 1994

Dear BRS News:

After having received my first two issues of the newsletter, I am delighted to have joined. It is most comforting to read the words of individuals who regard Russell as highly as I do. I would like to comment on a couple of items in the May issue, and make a request of the readers, if it could possibly be passed on.

On the letter from Poch Suzara: if Anthony Kenny thinks that the only thing going on in Principia Mathematica is an attempt to prove that $2+2=4$, then he should do everyone a favor and stick to Aquinas.

Also, I agree with Mr. Suzara that a film on the life of Russell is past due. In the meantime, however, we should not overlook Michael Gough's terrific performance as BR in Derek Jarman's Wittgenstein. And for those who may not have had a chance to see Manufacturing Consent: Noam Chomsky and the Media, you have not had the opportunity to note the very large poster of Russell on the great linguist's MIT office door.

And speaking of the esteemed professor Chomsky, I come to my request. I have been searching painstakingly for a copy of his Problems of Freedom and Knowledge: The Russell Lectures. Are there any members out there with a suggestion on how I could go about obtaining a copy for myself, to keep? Or, are there any members who own a copy and would be willing to part with it for a price? My name, address, and phone number are listed below.

That's it for now. Thanks, and keep up the good work.

Sincerely,
Kevin Stuart Brodie

NEWS FROM MARVIN KOHL

Marvin Kohl has received an award as Fulbright Senior Teaching and Research Scholar at Hong Kong Baptist University, 1993-1994. The award is designed to allow time for research, teaching, and helping to develop The Centre for Applied Ethics. The Centre for Applied Ethics is a rather new institution which was officially opened two years ago. It aims at providing practical guidance on matters of daily life and relating it to a vision of the "good life" as a whole. The Centre strives to stimulate ethical thinking on all levels of society and to connect this thinking with a spiritual vision which is fostered by Christian, Chinese, and Humanist perspectives. Marvin's address (from September 1, 1994 to June 30, 1995) is: The Centre for Applied Ethics, Hong Kong Baptist University, 224 Waterloo Road, Kowloon, Hong Kong. His E-mail address is: Marvin@BC750.HKBC.HK The fax is: 011-852-339-7379.

LETTER FROM DAVID M. DAUGHARTY

16 North Washington Court
Cheney, WA 99004-2375
May 19, 1994

Editor

Bertrand Russell Society NEWS

This writer wishes to commend the Editor of the BRS News for publishing several reviews of Bertrand Russell, A Life by Caroline Moorehead, published by Viking Press. The reviews were enjoyable to read but confirm suspicions that reviewers often bring their preconceived ideas of the way the world is to their commentary. This critic of the reviews will hopefully be less guilty than the critics of the above book.

All of the reviews commended Moorehead for her scholarship concerning the social and political life of Russell, however some thought she should have included more material detailing his intellectual writings. Russell scholars and members of BRS know his intellectual life is being carefully and well documented by the people at the Russell Archives as well as by those who use the archives as a resource. It is appropriate the intellectual writings about Russell be left to the professional philosophers and mathematicians who are already publishing excellent material.

It appears that several of Moorehead's critics wanted to beat up on Russell rather than discuss the book, thus the reason for the writer's comment about critics in the opening paragraph. For example, the undated review appearing in the New York Times Book Review strove mightily to show how Russell was foolish, duped and did not understand the Viet Nam war. This writer, who was beginning his career as an academic at a small state college in 1965, believed and still believes Bertrand Russell was absolutely correct in his assessment of this conflict. There were many of us on campuses all over the United States, not quite qualifying as "an American graduate student," opposing this terrible and unholy war. None of the many people involved in the anti-war movement with this writer were "virtually Svengalied" by Ralph Schoenman.

Alan Ryan in The Boston Sunday Globe, January 2, 1994 was not much less severe in his treatment of the relationship between Russell and Schoenman. He condemns Schoenman for making Russell "look ridiculous" and destroying many of Russell's old friendships. He also supports the contention that Schoenman wrote many of the articles that appeared over Russell's signature. Lord Russell addresses this criticism in his Autobiography vol. 3, page 235 where he states;

"In point of fact, what goes out over my name is usually composed by me. When it is not it still presents my opinion and thought. I sign nothing --letters or more formal documents -- that I have not discussed, read and approved."

If Russell was "Svengalied" he may not have known how terrible these pieces were if they were indeed bad. It is difficult for me to believe that a man possessing Russell's intellect and acumen would have deteriorated mentally to the place where he would not realize he was being duped.

As for Russell's condemnation of the United States in the final years of his life, he again states as paraphrase "that he came to realize it was this country and not the Soviet Union that was the great evil in the world." He points out the many instances where the United States has supported repressive regimes in the name of stopping communism. If this author has any quarrel with the positions Russell adopted vis-a-vis the United States, it is his support of the "police" action in Korea. None of the reviews of Moorehead's book addresses his position during this conflict. Is that because he looked upon that action favorably? When a person considers the actions of the United States in this last decade in Grenada, Panama and the Persian Gulf it does seem if a country does not agree with the us it may incur our wrath as Russell noted. Finally might I be so bold to suggest if the critics of Moorehead's book wish to criticize or make comments about Bertrand Russell's actions, they would most probably be welcome at the Russell Archives where they could do their own scholarly research thus putting their commentary on a firmer ground.

Sincerely,
David M. Daugharty

(10) Peace Symbol

This symbol appeared in the June-November 1993 issue of Hadassah Magazine, the organ of the Women's Zionist Movement Organization of the U. S. As you see it combines the Jewish star, the Islamic crescent, and the symbol for peace made famous by BR's demonstrations against nuclear war.

REVIEW OF CHANDRAKALA PADIA'S BOOK

The following review appeared in The Review of Politics.

TAKING BERTRAND RUSSELL SERIOUSLY

Chandrakala Padia: *Liberty and Social Transformation. A Study in Bertrand Russell's Political Thought*. (New Delhi: Heritage Publishers, 1992. Pp. 151. \$10.00.)

Bertrand Russell has never been my cup of tea. What I have read of him I found entertaining but not particularly persuasive: here I think of his works on why he decided against marriage and why he never decided for Christianity. Russell relied too heavily on narrowly rationalist construals, I decided. Then, too, there was the matter of his bombast during the 1962 Cuban Missile Crisis and his showy proclamation of "war crimes tribunals" against the United States during the Vietnam era. But Chandrakala Padia, a young Indian political philosopher, has persuaded me that Russell is a worthy subject of her attention and that he deserves to be taken seriously as a political philosopher. What Chandrakala has accomplished in this tightly argued volume is a sustained brief in Russell's behalf against his detractors.

Briefly, Chandrakala argues that Russell challenges both the liberal tradition, as embodied in Locke and Mill, and the Marxist alternative. What Russell hoped to accomplish, she claims, is to create a doctrine "capable of striking a balance between anarchy and dominion, initiative and social cohesion, and freedom and organisation" (p. iv). Although Russell's work in logic, his argument with Wittgenstein, and his overall philosophic career are rather well documented, less encountered is his attempt to meld into a coherent political philosophy the insight that human beings are both "social" and "solitary" (p. 15). How to do justice to these twin force fields of human existence? Russell builds his case through appeals to *impulse* as well as reason. Impulse, for Russell is something more than an instinct but less than a clear-cut imperative. Reason he construes as a "harmonizing" force in line with his conviction that pure philosophical truth can and must be

attained in a way free from "the tyranny of prejudice," including ethical desiderata (p. 18).

Yet ethics must enter the picture in a manner that is appropriately weighty, not merely subjectivist. At this juncture Russell becomes a philosopher of action promoting a strong view of human liberty as constitutive of human dignity. This liberty cannot be absolute, but justifications for limiting liberty must be carefully proffered and selective. The "welfare of others," a rather vague phrase, to be sure, can be called upon as a limit to liberty, for example (p. 25). Russell struggled throughout his life and work, Chandrakala insists, between the clarion call to libertarian aims, on the one hand, and the counter-claims of the well-being of the whole, on the other. He fretted about excessive concentrations of power even as he insisted the state had a positive and not merely, or only, a negative role to play. For Russell, the taming of individual liberty for some common good is no unacceptable intrusion into the realm of the self, for the good of the wider social whole is also one's own good, that is, the good of the "gregarious" aspect of the self.

Chandrakala convincingly argues that Russell was neither inconsistent nor murky in his embrace of liberty and comity. Although she does not do this, one might tax him with naïveté in presuming that the multiple goods he endorses might be capable of full realization. But that is another matter. There is certainly nothing incoherent *per se* in endorsing individual liberty and hoping to tame that liberty (without calling upon state coercion for the task) in the name of a social good, most importantly, justice. Russell attempts to accomplish this task by giving liberty and justice free reign over different spheres: "the sphere of justice is the external condition of a good life, the sphere of freedom is the personal pursuit of happiness or whatever constitutes the individual's conception of well-being" (p. 36, quoting Russell).

This is an interesting book, drawing together the disparate pieces of Russell's political-philosophic writings. It is, for example, helpful to find encompassed in a single chapter a précis of his critiques of both capitalism and state socialism. Although he remained to the end of his life an advocate of a form of socialism, he feared and opposed "state ownership" by contrast to "communal ownership" within the framework of a democratically structured polity (p. 81). Chandrakala writes: "A true liberal society, as he saw it, would not emerge merely by transforming the means of production, but by emancipating the individual from the sordid clutches of his own possessive instincts. Thus, Russell sought a kind of spiritual regeneration through socialism" (p. 85). The collapse of such hopes no doubt tells us at least as much about ourselves, at century's end, as it does about Russell's political project.

Chandrakala concludes her critical summary and interpretation of Russell's work by taking apart and reassembling his views on war, peace, and world government. Here I confess to finding Russell altogether unpersuasive, but Chandrakala offers up a clear brief in Russell's behalf, not so much with the aim of conversion as explication. Let me note here, in conclusion, that political philosophy is an enterprise much less institutionally secure and rewarded in India and many other societies than it is our own more

Chandrakala, to find appropriate interlocutors and interested publishers. I commend her for her persistence and I hope this book finds its audience.

—JEAN BETHKE ELSHTAIN

Dispensing Tea and Sympathy

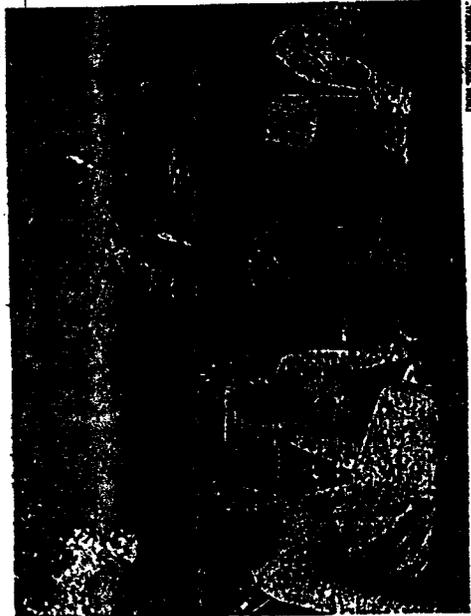

**OTTOLINE MORRELL,
Life on the Grand Scale**
By Amanda Seymour
Farrar, Straus and Giroux. 451 pp. \$30
By Michael Sheldon

TALL AND REGAL, Lady Ottoline Morrell surrounded herself with objects of rare beauty, collecting everything from peacocks and paintings to poets and philosophers. At Garrison Manor, her country house in Oxfordshire, she cultivated a circle of friends who seemed to be drawn from a "who's who" of English literature. She was on close terms with Joseph Conrad and Henry James in their later years, and had a keen eye for new talent, giving generous support to the early careers of such writers as T.S. Eliot, Aldous Huxley and D.H. Lawrence. Her reputation for encouraging young authors was so great that Virginia Woolf once remarked, "Since Helen of Troy I don't think any woman can have launched so many ships."

But some people were not always grateful for her patronage. Although she was enormously helpful to Lawrence, he felt that she was too possessive and eventually turned on her. Partly through the encouragement of his jealous wife, Frieda, he attacked Ottoline by creating a harsh caricature of her as the neurotic, overbearing Hermione in *Women in Love*. She was deeply hurt by the word, and though Lawrence apologized to her near the end of his life, the powerful fictional portrait has convinced many readers that the real woman must have been as bad as the imaginary one.

In this immensely readable and carefully researched biography, Miranda Seymour

Michael Sheldon is writing a biography of Graham Greene.

From left: Ottoline Morrell, Alfred Dreyfus, Lytton Strachey; Dances Grant and Vanessa Bell (1918)

Ottoline Morrell in 1913

needed. She could be pretentious and petty, but her sense of compassion was great, and she was never a condescending patron. At Garrison, she tried to make everyone feel at home, showing equal kindness to obscure students and famous authors. The novelist Henry Green never forgot the magical effect of her hospitality during his first visit to her home as a college student: "For an undergraduate to come over to Garrison or to be entertained as each one was in company with the older people staying there... was his first glimpse of the world outside and his first contact with literature and intellects not built up around dons or university life."

A literary life independent of universities is something England still offers, but which America has lacked since at least the 1950s. If it does nothing else, this delightful book serves as a forceful reminder of how important it is to resist the lure of howling centers of influence that have nothing to do with the bureaucratic world of universities where the pressures for conformity are often too strong to resist. Ottoline's great gift to her literary friends was to show them that books were a necessary part of life and did not belong merely to the confines of schoolrooms or libraries.

As a study of literary life, Seymour's book sparkles, giving us intriguing backstage glimpses of writers who are not so famous that we sometimes overlook the flesh-and-blood reality of their lives. T.S. Eliot is an especially vivid figure in this book, fretting over his troubled marriage to his first wife, Vivien, and turning to Ottoline for sympathy and advice. He is not the great Nobel laureate yet, but simply a disturbed young man caught in a bad marriage and looking desperately for a way out. Ottoline's letters provide a harrowing picture of Vivien Eliot's decline into madness, including descriptions of her use of ether to control her nerves. On one visit to the couple, Ottoline found their place "reeking of ether" and was amazed to see Vivien propping up and down, alarming her as if he was a dog.

Thanks to this book, I will never think of Eliot's "The Waste Land" in quite the same way again. For the first time, I see what is meant in that haunting line, "My nerves are bad tonight. Yes, bad."

has cleared away many of the false impressions about her subject and has given us a fresh, sympathetic look at a woman with exciting tastes and great passions. The ballad of the Duke of Portland, Ottoline grew up surrounded by all the trappings of aristocratic glory in the last years of Victoria's reign, but her mind was never aroused by the conventional interests of her class. She was devoted to art and literature, and enjoyed living in a bohemian fashion, dressing extravagantly in loose dresses with bright scarves flying in all directions. When she ventured into the streets of Oxford, she always turned for a second look at her extraordinary figure. Her face hidden by a broad-brimmed hat swathed in chiffon, her high-arched shoes peeping out from the billowing skirts of a long summer dress.

She became, in Seymour's phrase, "a magnet for egotists," but she had the good taste to recognize the ones with real talent, and to them she was unflinchingly loyal, using her influence and wealth to advance their careers in a world that was largely hostile to their ideas and ambitions. When the British government banned Lawrence's *The Re-*

low and the Public, Hensman burned the first edition, it was Ottoline who engineered a campaign in the novel's defense, forcing the government to answer embarrassing questions in public. And when the young Tom Eliot needed money, it was Ottoline who did not hesitate to give him what he

(15) Memorial to Abraham Kaplan - Thanks to Harry Ruja

Abraham Kaplan, 1918-1993

MEMORIAL MINUTES

139

Irving Copi now offers reflections on his 60 year association with Abraham Kaplan: Abe Kaplan and I transferred into Duluth Central High School in 1931, from different junior high schools. We met at try-outs for the debating team. Our friendship grew during a time when Abe was in more of a hurry to graduate than I was. In fact, he graduated in the spring of 1933, whereas I graduated a full year later. He was captain of the debating team in 1932-33, I in 1933-34.

When he graduated, he went to Duluth Junior College for two years. During his first year there, he and a sophomore student won the National Junior College Forensics tournament. Largely as a consequence, he was awarded a "full-ride" scholarship to the College of St. Thomas in St. Paul, Minnesota, which had a tradition of sponsoring winning debating teams. Away to colleges in different cities, Abe majored in Chemistry while I majored in Mathematics. During our summer vacation in Duluth, Abe and I would do a lot of Philosophy. One summer we went through Kant's *Critique of Pure Reason*. Another summer we read a good deal of Marx and Engels.

When Abe graduated from St. Thomas, he yearned to go on to graduate school, not in Chemistry but in Philosophy. Though Duluth was in the depths of the depression—along with the rest of the country—a number of public spirited Jewish business men contributed a modest but sufficient amount of money to allow Abe to go on to graduate work in Philosophy at the University of Chicago. There he was greatly influenced by Rudolf Carnap. Still at the University of Michigan, I was much influenced by C. H. Langford. Abe and I corresponded at length—representing as best we could the views of our teachers, who were in vigorous disagreement with each other.

When it was announced that Bertrand Russell would lecture at the University of Chicago during the 1938-39 academic year, I determined to join Abe at that institution. During the summer of 1938, we spent a lot of time together imagining the excitement of the year to come. We planned to enroll in both Russell's and Carnap's seminars and to achieve some kind of synthesis of British Analytic Philosophy with Logical Positivism. We even went so far as to compose limericks to write on their respective blackboards for their first class meetings. For Russell we composed:

Discouraged from saving the masses,
Defamed for depraving the lasses,
He kicked off his traces,
Came here of all places
Where he's teaching the class—of all classes!

Our effort for Carnap was much inferior, a modification of a rather well-known somewhat bawdy limerick:

There was a young fellow named Dave,
Of logical syntax a slave,
He said, I admit
My distinctions lack wit,
But think of the troubles they save!

When Russell arrived at his seminar room he noticed that his blackboard was not clean and simply erased our poem. When Carnap arrived at his much smaller seminar room, he picked up the eraser to clear the blackboard. But hearing the groans of students who wanted him to respond, he read the "poem" and did his best to reply. "And who is this Dave?" was the best he could offer.

Carnap, along with Professor Senior of the Chemistry department, and some other professors, attended all of the meetings of Russell's seminar, engaging in serious discussion there with Russell. One day in his apartment in Chicago he pulled a leather bound volume from his bookcase telling us that it was the most precious book he possessed. We examined it with awe. It contained all of the major propositions of Whitehead's and Russell's *Principia Mathematica*, copied out in Russell's own hand. Carnap explained that after the war he was unable to find any copy of *Principia*; this led him to write Russell asking where he could find that book. Russell thereupon copied out the many pages of formulae that Carnap had bound.

Later, Abe and I told Russell about that, seeking to diminish the slight antagonism that we sensed between the two great men. Russell smiled and said that between the extravagant pricing set by Cambridge Press and the German postwar inflation, there probably had been too few Deutschmarks in all of Germany to buy the books.

Abe and I collaborated on a term paper for the Russell seminar. When we asked Russell's approval, he said, "What grades could I give you if it is an A paper? Would a C for each of you be all right?" Happily he was only joking, and indeed he was so pleased with our seminar exercise that he encouraged us to publish it, which we did in *Mind*. Later he discussed it in his book *An Inquiry Into Meaning and Truth*, which was pretty exciting for a couple of graduate students!

I was best man at Abe's wedding but the war years separated us. After World War II we occasionally visited each other at each other's homes, his in Los Angeles, mine in Ann Arbor. We were together in a 1950 Rockefeller sponsored project on Philosophy of Language at the University of Michigan, as were two of his prize students from UCLA, Alexander Sesonske and Stanley Cavell. Later in 1963, Abe accepted an invitation to teach regularly at the University of Michigan. In the late 1960's, at the height of the Vietnam war protests, student radicals disrupted many classes at Michigan, including one of Abe's. He was unhappy over that incident, and even more unhappy over the University's indifference to it. A few years after that, he left the United States altogether to accept a professorship at the University of Haifa, welcoming a chance to perform "aliyah," a return to Israel. As a member of a very pious Jewish family, he was delighted to move himself, his wife and two daughters to Israel.

After his (compulsory) retirement from the University of Haifa, he spent quite a bit of time lecturing in the United States, at various universities, several in California. He enjoyed renewing old friendships there, and finally died there of a massive heart attack.

Abe was a good friend to his colleagues at several universities, and an inspiration to many generations of students. He will be missed.

Corruption by education

By POCH SUZARA

Here's the simple way to put the individual on the road toward corruption. Take one otherwise normal child and let's teach him to believe the following:

* To believe that he is guilty of the original sin and therefore humiliated until he has no pride, dignity, or self-respect.

* To believe that faith is always better than reason and therefore there exist fantasy solutions to real problems.

* To believe that prayer is more reliable than thinking, working, exploring or discovering.

* To believe that the worship of saints is more virtuous than upholding the ideals of human brotherhood.

* To believe that this life is but a painful transition to the better life to come after death.

* To believe that it is not necessary to try and improve the human conditions on this earth since there is a heaven in the hereafter.

* To believe that it is not important to save minds and hearts as what is more essential is to save souls.

* To believe that myths and miracles are more comforting than science and the scientific way of thinking.

* To believe that the revealed truths need not be revealed as the mysteries of God are beyond human understanding.

* To believe that love of God counts more than love of country and love of fellow-citizens.

* To believe that he must always be good, even if he will

be good for nothing since God will always provide.

* To believe that pain, suffering, misery, poverty and squalor are part of God's good will.

* To believe that success in life can only be measured in terms of money.

* To believe that real values are only those that are imported from developed countries, especially the values of foreign investments in the Philippines.

* To believe, finally, that no matter what sin or what crime he will commit anytime, as long as there is no unbelief, there is — available from God at any time — forgiveness of sin and crime.

Then let's congratulate ourselves. We have just set the foundation for corruption for the individual. We have also created an ideal Christian, a

person who no longer respects himself and can no longer respect anything. One who does not love himself cannot love anything. If he hates himself, he hates the world.

Do this to millions of persons by systematically conditioning them from childhood with their utter sense of worthlessness, their unspeakable burden of sin. And the stage is set for the society of corruption.

Indeed, the real cause of corruption in the Philippines is not lack of discipline. On the contrary, it is discipline based upon stupid beliefs. Alas, because of the power of education, we Filipinos have no faith in the best of man's capacities. We have no faith in the best of man's capacities. We have no faith in science and the scientific way of thinking. But we do have deep faith

in childish fairy tales which is the worst of man's incapacities.

What we fear we call faith; and what we do not understand we call divine wisdom. In the meantime, we continue to live under a culture of corruption; the worst of it is the corruption of human intelligence.

Corruption in government? Corruption in the courts? Corruption in the hospitals? Corruption in church? Corruption in big business? Indeed, such establishments are all headed by college graduates. But never mind that. Look at the corruption in our schools, colleges, and universities — they too are managed by college graduates. Aren't they?

We are all born ignorant, not corrupt. In the Philippines, we were made corrupt by education.

FOOD FOR THOUGHT

*"Better build schoolrooms for
the 'the boy,'
Than cells and gibbets for
'the Man'"*

-- Elisa Cook

RUSSELL SOCIETY NEWS

No. 84, November 1994

The Bertrand Russell Society

3802 North Kenneth Avenue; Chicago, IL 60641-2814; U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Letters to Russell Society News (a quarterly issued in February, May, August, and November) should be addressed to Donald W. Jackanicz, Editor at the above Chicago address. For information about The Bertrand Russell Society or to become a member, write to the same address.

FROM THE PRESIDENT

Michael J. Rockler, President, The Bertrand Russell Society

I recently read Stefan Andersson's In Quest of Certainty: Bertrand Russell's Search for Certainty in Religion and Mathematics up to "The Principles of Mathematics (1903)"--a book I found interesting, enlightening and one I thoroughly enjoyed. Andersson, who received the Young Scholars Prize at the annual meeting in San Diego, examines Russell's early philosophical development with special emphasis on ways in which he believes that BR sought to find certainty.

An interesting aspect of the book is the discussion of the role of religion in Russell's family; Andersson examines the views of BR's parents, grandparents and those of BR's brother Frank. Andersson notes the parallel development of Bertrand's religious views with those of his father, Lord Amberley. (Interestingly both father and son were forced to postpone marriage at the insistence of Russell's grandmother who in effect was mother to both father and child.)

Andersson goes on to trace Russell's experiences at Trinity College and the ways in which the young BR was affected by those around him. Russell, according to Andersson, was strongly influenced by the neo-Hegelians. Ultimately, Andersson argues, BR took Kant as the starting point for his later thinking.

Andersson argues that in his early years Russell waivered between an idealistic and an empiricist position. Russell, of course, ultimately opted for a perspective based on the scientific method tempered by rationalism and logical atomism.

Stefan wrote this book in English even though it is a thesis written for a Swedish university. One wonders how many American students would choose or could choose to write their dissertations in a foreign language!

Stefan Andersson's book is excellent and I commend it to members of the Society who wish to further understand Russell in a well written and thoughtful volume.

I have a problem with Stefan's argument that Russell's involvement in mathematics can be seen as having been derived from "religious yearnings and impulses." Andersson goes so far as to claim that Russell's autobiography conceals the importance of religion in BR's early life. This argument is similar to one made by Paul Kuntz in his biography of Russell.

I think the entire record of Russell's life demonstrates that he very early on became a secular humanist (though he would not have used the then as yet uncoined term) and remained staunchly anti-religious until his death. It is hard for me to reconcile his strong embrace of secular humanism with

any tendency toward religious yearnings.

I invite members of the BRS to read Stefan Andersson's work and reach their own conclusions about his hypothesis.

The 1995 annual meeting will be held June 30 through July 2 in Columbia, Maryland at the Columbia Inn. The cost of hotel accommodations will be U.S. \$79.00 per night, double or single. Two persons sharing a room will thus pay less than the cost of staying in a university dormitory.

I anticipate an interesting meeting in a pleasant setting. The Columbia Inn is situated on a small lake near a shopping mall. Come for the meeting and stay over in Maryland at the same reasonable rate. Then spend the 4th of July in nearby Washington. Enjoy the holiday in the most unique Fourth of July atmosphere in the United States.

See you in Columbia.

NEWS ABOUT THE NEWSLETTER

This issue of Russell Society News (No. 84) was edited by Don Jackanicz, who also edited Issues 72 (November 1991) through 82 (May 1994). BRS President Michael Rockler has asked Don also to edit future Issues 85 (February 1995) and 86 (May 1995). Beginning with Issue 86 (August 1995) President Rockler intends to assume the editorship.

Thus, in connection with forthcoming Issues 85 and 86, as well as matters relating to present Issue 84, please direct comments, questions, and letters to the editor to Don at the following address: Donald W. Jackanicz; Russell Society News; 3802 North Kenneth Avenue; Chicago, IL 60641-2814; U.S.A.

As always, we are most interested in hearing from BRS members and non-members who read this newsletter. In particular, we ask you to submit any original or reproduced Russell-related material you feel of potential use in RSN. Not every submitted item can be used, owing to various editorial considerations. But we do want to hear from you and thank you for your interest and help.

Special appreciation and thanks are owed to Dennis Darland, who volunteered to edit RSN Issue 83 (August 1994). He carried on in the tradition established in 1974 by Lee Eisler, the first and longtime RSN editor. Thank you, Dennis, for having kept RSN on track!

Dennis Darland continues his work as BRS Treasurer and coordinator of membership records.

(3)

BRS BUSINESS

1. 1995 Annual Meeting. As described above by BRS President Michael Rockler, next year's BRS Annual Meeting will be held Friday, June 30 through Sunday, July 2, 1995 in Columbia, Maryland, U.S.A. at the Columbia Inn. Columbia, about half-way between Washington, D.C. and Baltimore, Maryland, is one of the most successful planned cities in the United States. The Columbia Inn will provide hotel and meeting facilities making our meeting pleasant, convenient, and economical. More annual meetings details are forthcoming in the February 1995 RSN. For now, though, mark your calendar and plan on taking part!

2. 1995 Dues Are Due. With the coming of the new year, we would like to thank all BRS members for participating in our organization in 1994 and to invite you to renew your membership for 1995. To renew, please use the sheet stapled in front of the first page of this issue. We very much appreciate those members who thoughtfully renew early to reduce the recordkeeping work of BRS Treasurer Dennis Darland. 1995 dues are due from all current members except for the following: (1) honorary members; (2) life members; (3) new members who joined in October, November, or December 1994; (4) former members who rejoined in July-November 1994 in connection with the special mailing they received. Thanks again to all members and particularly now to those renewing.

3. Contributions. We realize there are many worthy causes and organizations competing for our contributions. But if your end of year giving allows it, please consider increasing the level of your membership category when renewing your BRS membership for 1995. Separate contributions to the BRS in any amount are always appreciated. Member contributions, in addition to regular dues, help the BRS pay for the mailing of this newsletter, the annual meeting, the annual "Prizes for Papers" program, the BRS Award and BRS Book Award, and other BRS activities. If you can help, we sincerely say thank you.

4. Award Nominations. Each year the BRS makes two awards: (1) The Bertrand Russell Society Award to an individual or organization connected in a worthy way to Russell, Russell studies, or causes with which Russell identified; (2) The Bertrand Russell Society Book Award to an author or organization for excellent writing, editing, or scholarship in book form relating to Russell. When possible, awardees attend the annual meeting, adding much to the meeting weekend. Members should always feel free to make nominations for either award. Please send nominations and a short supporting statement to BRS President Michael Rockler; 14213 Chesterfield Road; Rockville, MD 20853; U.S.A.

5. Board of Directors Election. This RSN issue includes a ballot for the election of eight directors to sit on the BRS Board of Directors for three years beginning January 1, 1995. Any member may be nominated or nominate himself/herself for a directorship. Directors are asked to attempt to attend annual meetings, vote in person or by mail on Board business, and otherwise to make their opinions known to the Board on BRS matters. For now, though, all members are asked to vote--and vote early--in this election. Thank you.

(4)

TREASURER'S REPORT

BRS Treasurer Dennis J. Darland submitted the following report for the third quarter of 1994 ending September 30:

<u>Beginning Balance</u>	\$5127.58
<u>Income</u>	
Interest	\$ 1.35
New Members	309.00
Membership Renewals	320.50
<u>Total Income</u>	\$ 630.85
<u>Expenses</u>	
BRS Library	\$ 122.59
Annual Meeting	1005.38
Membership/Information	1516.87
Miscellaneous	61.46
<u>Total Expenses</u>	\$2706.30
 <u>Final Balance</u>	 \$3052.13

(5)

RUSSELL IN THE MANUSCRIPT MARKET

This listing appears on p. 5 of the Summer 1994 autograph/manuscript catalog of Max Rambod; Suite 371; 9903 Santa Monica Boulevard; Beverly Hills, CA 90212; U.S.A. Be sure to note the unusual spelling of BR's last name.

20. **RUSSEL, BERTRAND.** (1872-1970) English Nobel Prize winning Philosopher and Mathematician. A champion of pacifism, peace and social reform. TLS, March 20, 1961, 1p. The year this letter was written, Russel was imprisoned for civil disobedience during the Campaign for Nuclear Disarmament. The letter reflects some of his political dissent: *"...I am at present very definitely unpopular with most Americans and, in any case, a protest will be more effective if it comes from an American than if it comes from an alien. I suggest that you draw up a letter and get as many signatories for it as you can. The signatories should all be American non-Communists..."* Great content referring to his pacifist activities. Signed "Bertrand Russel". \$225

(6)

DEATHS OF LINUS PAULING AND KARL POPPER

Late summer saw the deaths of two honorary BRS members, Linus Pauling on August 19 and Karl Popper on September 17. Each lived a long, full life of many accomplishments. The BRS was proud to have been connected with these men. We invite members to submit reminiscences of Pauling and Popper for future RSNs. For now, these two Chicago Tribune obituaries, respectively dated August 21, 1994 (sect. 2, p. 8) and September 19, 1994 (sect. 2, p. 9) briefly comment on their lives and contributions.

Linus Pauling; won 2 Nobel Prizes

New York Times News Service

Linus C. Pauling, a brilliant chemist and an untiring political activist who received one Nobel Prize for chemistry and another for peace, died Friday at his ranch in the Big Sur area of Northern California. He was 88.

The cause was cancer, said Steve Lawson, chief executive officer of the Linus Pauling Institute of Science and Medicine in Palo Alto, Calif.

Mr. Pauling received the prize for chemistry in 1954, as a result of his research into the nature of the chemical bond, the force that gives atoms the cohesiveness to form the molecules that in turn become the basis of physical matter.

In 1962, at age 61, Mr. Pauling received the Nobel Peace Prize. The award's citation acclaimed him for his work since 1946 "not only against the testing of nuclear weapons, not only against the spread of these armaments, not only against their very use, but against all warfare as a means of solving international conflicts."

Mr. Pauling was also said to have provided powerful impetus to others in achieving what many

came to regard as the medical discovery of the century. That was the determination of the structure of DNA (deoxyribonucleic acid), the genetic material in living organisms.

To those who eventually won the race to solve DNA, Mr. Pauling was seen at the time as the closest rival. Had he been the victor, he, no doubt, would have been the recipient of a third Nobel Prize.

Mr. Pauling's scientific genius was accompanied by a strong penchant for dissent. He touched off a debate among scientists in his later years, for example, by vigorously advancing that vitamin C, if taken in large-enough doses, would build up the immune systems in humans and protect them against infectious diseases.

In the 1950s, he was a primary shaper of the anti-nuclear-testing movement and he was actively involved in the anti-war movement in the 1960s.

By the time Mr. Pauling received the chemistry prize at the age of 63, he had long been recognized as a chemist's chemist. By the age of 80, he had already published 80 papers based on original chemical research and had risen

to a full professorship at the California Institute of Technology.

Mr. Pauling's grasp of the nature of chemical bonds and molecular structure was so formidable that Albert Einstein, whom he met that year, said he would have to "brush up on the subject" of chemical bonds before again attempting to engage the young Pauling in a conversation.

In 1939 Mr. Pauling published "The Nature of the Chemical Bond," a book that won worldwide recognition among scientific researchers as a landmark work.

Throughout the 1930s, Mr. Pauling used quantum mechanics, the theoretical framework used to explain the structure of the atom and the motion of atomic particles, to investigate chemical bonding. He asserted that the "resonance," or internal vibrations of atoms, gave molecules their cohesiveness.

While Mr. Pauling was winning international plaudits as a theoretical chemist, he was also developing a reputation as a scientist with a social conscience. But some critics believed he sometimes overlooked national concerns in advocating social policies and in other actions.

Philosopher Karl Popper, 92; major foe of totalitarianism

REUTERS

LONDON—Sir Karl Popper, one of the 20th Century's most respected philosophers, died at the age of 92 in a south London hospital Saturday after a long illness.

The Austrian-born thinker's views on liberty had a profound impact on contemporary political ideas. His passion for the process of science and hatred for Marxism among other totalitarian systems influenced world leaders.

Adherents to his ideas, which also included a rejection of historical determinism and distinctions between science and pseudo-sciences, became known as "Popperians."

As a professor of logic and science at the London School of Economics at the University of London from 1949, he influenced students there for two decades.

In his best-known work "The Open Society and Its Enemies," published in 1945, Mr. Popper criticized philosophical systems with totalitarian political implications from Plato to Karl Marx.

His most controversial book, "The Poverty of Historicism," which came out in 1957 rejected historical determinism. The philosopher Bertrand Russell hailed it as "a vigorous and profound defense of democracy."

Mr. Popper was born into an intellectual family in Vienna in 1902.

Mr. Popper, who once described himself as "the world's happiest philosopher," received international praise for his works and was knighted by Queen Elizabeth in 1965.

He led a quiet life with his schoolteacher wife Josefine Anna Henninger. She died 1965.

(7)

DEATH OF MAMATA BARUA

We were saddened to learn of the June 3, 1994 death of BRS member Mamata Barua. Professor Barua was deeply involved in Russell studies in the Department of Philosophy at Cotton College, Guwahati, India. The story of her life is recounted in these reduced size excerpts from a 32 page memorial booklet.

Mamata : Reminiscences

Dr. Kalyan Kr. Bagchi,
Professor of Philosophy,
VISWA BHARATI UNIV.

"Whom the Gods love die young". This truth dawned upon us with all its bitterness and darkness when Mamata Barua expired. She was admitted to the hospital with cerebral haemorrhage. She fought; But Dame Luck discharged the blunderbuss on her!

Coming of a very liberal and cultured family of Assam, Mamata shaped herself culturally, educationally and psychologically so well that she acquired the best of the humanistic and the liberal tradition of Assam's cultural life. A brilliant graduate of the University of Guwahati, Mamata rose to the position of the Head of the Department of Philosophy, Cotton College, Guwahati. Married to Professor Bhaben Barua of the University of Guwahati who is himself a poet, Mamata had deep aesthetic sensibilities. A member of the Russell Society of America, Mamata found in the less formal Russell an echo of her humanistic concern. This led her to undertake research on "Russell's Philosophy of Man (A Study of Russell's Humanism)". Her well-armed Ph. D thesis on Russell's Humanism could see the light of the day within a year or so. But alas, that was not to be!

I have fond memory of the many sittings I had with her when she discussed with me her Ph. D work which I had been supervising after she got herself registered at Viswa Bharati University, Santiniketan. It appeared to me that her Ph.D dissertation was not merely the product of her academic interest; it had deep springs in her humanistic concerns. And while at Santiniketan, she tried to imbibe the best of the Viswa Bharati tradition. I could feel that, in her academic interests and aesthetics intellect and humanism, the head and the heart combined so well that whoever met her could not but be impressed. It is a pity that she could not live long enough to bring into fruition what God had given her.

May her soul rest in peace.

Santiniketan
June 6, 1994

3

Prof. Mamata Barua, my loving 'Nobow'

— Niren Barua

From 28th May to 3rd June there was a heavy rush of visitors to the Gauhati Neurological Research Centre. My loving 'Nobow' Prof. Mamata Barua, the head of the dept. of Philosophy, Cotton College, and the wife of Prof. Bhaben Barua, the renowned Assamese poet and critic, was admitted to that hospital with cerebral haemorrhage. The moment she was taken to the hospital, the doctors arranged artificial respiration and brought back her grasping breath to normalcy. Except for her eyes which were fixed and dilated and body reflexes which were absent, she had shown all the signs of a living human being in sound sleep. Her blood pressure, pulse, kidney etc. were normal. A brain scan was done without any loss of time. Nobody was mentally prepared to believe the finding - Brain dead! Due to some unexplainable reasons all the coils of her brain died instantly. From that moment till the evening of 3rd June she was in 'coma' for nearly 160 hours — perhaps to allow her innumerable well wishers relatives, colleagues and students to have a last look at her. It was really a very cruel moment when the doctor's whispered to us that she would show all the signs of a dead person the moment the artificial respiration was discontinued and she would never regain her consciousness even if it was continued and the choice was ours. We secretly knew that there was no point in witnessing any more this medical magic of making a dead person inhale and exhale for days and even months. Yet we were not at all prepared to tell the doctor to stop the magic and murder her who was breathing and whose blood pressure, pulse and kidney were normally functioning. Hoping against hope we sent the scan report to some renowned Neurologists of U.S.A over Fax expecting an optimistic reply. The reply did come. Since her haemorrhage was of grade V there was nothing that could be done. The medical magic automatically came to a stop on 3rd June at 5:15

4

p.m. and she breathed her last.

Born in Sylhet on 5 March 1946 Mamata Barua spent her early childhood in such Upper Assam areas as Dibrugarh, Sadia, Jajpur, Dumduma, Sibsagar etc. When her father late Tankeewar Das — a Govt. Officer was transferred to Sichaer Mamata had to appear her M.E. Examination in the Bengali medium. She did wonderfully well in the examination even with the sudden change of medium. She passed her Matriculation Examination from Dibrui and stood first among the successful candidates of the Dibrui Sub-Division. From B.N. College she passed the P.U. Examination securing very high percentage of marks and a rank among the first ten. After studying her B.A. in Cotton College for a brief period she passed her B.A. with honours in Philosophy from Karimganj College in 1966. In 1968 she passed the M.A. in Philosophy with the first position in the First class under Gauhati University.

It was in 1969 that she joined the Philosophy dept. of Cotton College and in December 1970 was married to Bhaben Barua of Gauhati University, the renowned Assamese poet and critic. It is known to all that Bhaben Barua is a voracious reader and a poet and intellectual with a serious mission in life. Getting married to an intellectual like Barua means that the wife will have to either sacrifice some of her petty longings and cheap taminine habits and traits or will have to divorce him. Luckily for Barua he had found in his beloved wife Mamata the opportunity and the virtues of a wonderful wife. The moment she became a wife she knew that she would have to shoulder some extra responsibilities as a housewife so as to help her husband pursue his mission with full devotion and without any distraction. She knew the worth of her husband's as a poet and intellectual. In fact she had to run the house and to keep the house hold choir in perfect tuning almost by, herself without disturbing her husband's way of life. But that doesn't mean that she became a common type housewife whose only duty in life was to make arrangements for feeding the stomachs, washing dishes, pressing school uniforms and booking gas cylinders. She could never neglect the cry and the hankering of her soul. In fact her association with her husband helped her a great deal to bring out the creative and the intellectual self which was there inside her. She shaped herself culturally, educationally and psychologically so well that she acquired the best of the humanistic and the liberal tradition of Assam's cultural life.

In time she gave birth to two children — Aniker and Arpan. From

5

their childhood she made her best endeavour to help them grow up in an atmosphere surcharged with love, affection, finer tastes and feelings. When both of them were old enough to shoulder some of their own responsibilities she thought of doing research in Western Philosophy — "Bertrand Russell's Philosophy of Man". In 1990 she visited U. K. Scotland and U.S.A. along with her husband and there she visited some famous Universities like Oxford, Cambridge, Durham, Rice, Columbia, Harvard, Houston, Vanderbilt etc. In some of these famous University libraries she collected materials for her research project. After her return from the west she enrolled her name as a Ph.D. student in Viswavarati University under the guidance of Dr. Kalyan Kr. Bagchi. Her Ph. D. dissertation was not merely the product of her academic interest; it had deep springs in her humanistic concerns.

Her Ph.D thesis could see the light of the day within a year or so but alas, that was not to be!

In 1991 she became a Professor and in the next year after being the Head of the dept., she gave the final shape to the newly opened P.G. Section of her dept. She also founded along with some others the Cotton College Philosophical Forum in 1993, and was actively associated with "Muktochara", a cultural organisation. As the secretary of this organisation women wing she came into close contact with personalities like Sija Aral Prava Das, Dr. Tilottoma Roy Choudhury, Jayashri Phoney, Malati Basua and many others. She was also one of the founder member of Assam Philosophical Forum.

Mamata Barua was a dignified lady with a magnetic personality. Whoever met her couldn't but be impressed. A very devoted and sincere Professor she was loved and adored by all her students and colleagues. An ardent student of Bertrand Russell and a member of the Russell Society of America, she had a liberal outlook and a progressive mind. She was out and out a woman, a devoted wife, a loving mother, an unselfish soul and also an ideal 'tohu'. She never hesitated to offer help and to find out ways to settle issues right whenever she saw someone facing crisis in life. There were occasions on which her sensitive mind got a serious jolt and her heart a unnumbered snock when she saw all her sincere efforts to settle someone's shattered conjugal life go in vain.

How lucky I was to have such a dignified lady as my 'Nobow' and how unlucky to miss her in such a tragic way! I pray to God not only to make her soul rest in peace but also to make her again my 'Nobow' in my next life — if only people are really reborn!

6

(8) FROM A BIOGRAPHY OF BOOTHBY

Steve Shafer located the following passage in Robert Boothby: A Portrait of Churchill's Ally by Robert Rhodes James (London and New York: Viking, 1991), p. 455. Boothby, a noteworthy figure in British politics who died in 1986, is among Russell's friends appearing in the film The Life and Times of BR.

Boothby had never had any religious faith and was sceptical of those who did, especially those who tried to foist their bigotries on others. Burns and Fox were his favourites; the Calvinists were his implacable foes. 'For better or worse we are here,' he once wrote, quoting another. 'Involuntarily, I admit, and that alone is enough to damn the whole business.' In supporting Bertrand Russell in 1963 he wrote to the editor of the Evening News: 'The truth, Sir, is that life, as such, has no meaning or purpose. All we can hope to do is to make the best of it. And I hope you have the guts to print this letter.'

(9) BRS LIBRARY

The Society library sells and lends books, audiotapes, videotapes, and other materials by and about Russell. Please direct BRS library inquiries and requests to Tom Stanley, Box 434, Wilder, VT 05088.

1. Books for sale H-Cloth, otherwise paperback. Prices are postpaid. Please send check or money order (U.S. funds only) payable to the "Bertrand Russell Society" to Tom Stanley.

4. Book news

Thoemmes Antiquarian Books will no longer be issuing an annual Bertrand Russell Bulletin. The extensive stock of Russell books and pamphlets has been incorporated into their handsome antiquarian and second-hand book catalogs. Copies of Bertrand Russell Bulletin No.37, 420 items, are available from the library for \$1.00. Serious collectors should contact Thoemmes at their new address: 11 Great George Street, Bristol BS1 5RR.

Two paperback re-issues from Routledge are now available in the States: Philosophical Essays at \$10.95 and Human Knowledge at \$22.95. The Practice and Theory of Bolshevism has been re-issued by Spokesman, £5.95 paper, £20.00 cloth.

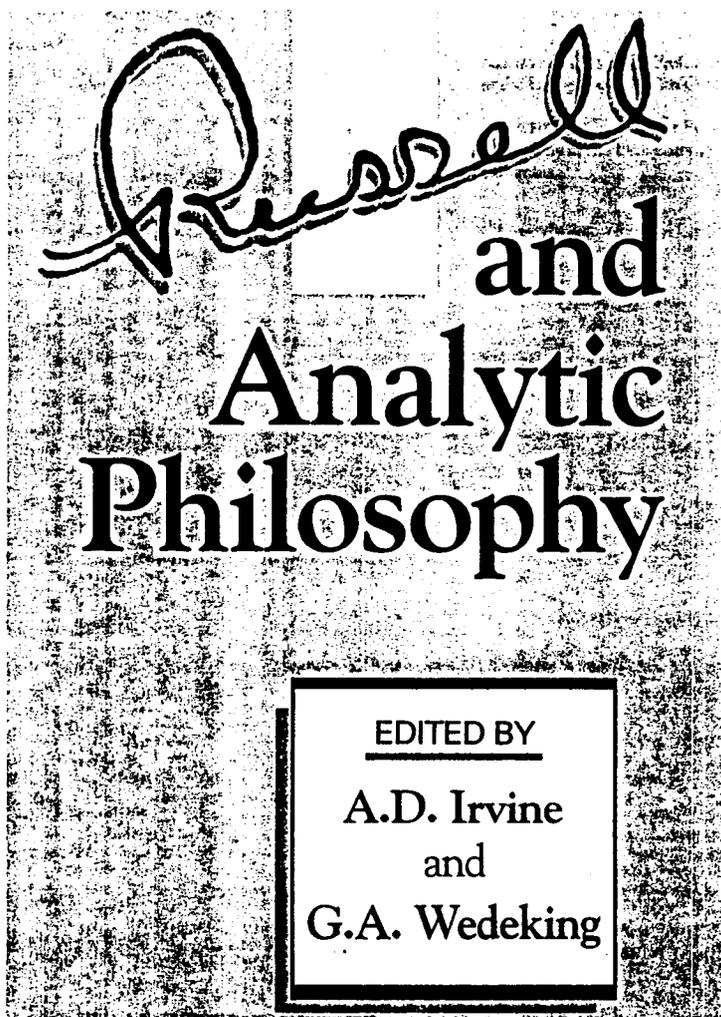

Paul Hager, author of the recently published Continuity and Change in the Development of Russell's Philosophy, arranged to have the library receive a review copy. We are also indebted to Prof. Hager for a copy of the 1979 issue of the Proceedings the Russelian Society in which his "Russell Resurrected" was published.

The library has a limited supply of Griffin's The Selected Letters of Bertrand Russell, Vol. I for sale at 50% off the list price.

RUSSELL AND ANALYTIC PHILOSOPHY

Below is part of the dustjacket for Russell and Analytic Philosophy, A.D. Irvine and G.A. Wedeking, editors (Toronto: University of Toronto Press, 1993). Among this volume's articles is Nicholas Griffin's "Terms, Relations, Complexes." Prof. Griffin of McMaster University was recipient of the BRS Book Award in 1992 and 1993.

Russell and
Analytic Philosophy

Edited by
A.D. Irvine and G.A. Wedeking

In a century rich in the development of philosophical ideas, Bertrand Russell stands pre-eminent. Especially in the philosophy of language, formal semantics, logic, the philosophy of mathematics, and the history of philosophy, developments can be traced directly to Russell. Along with Frege, he set the stage for new thought in analytic philosophy in the twentieth century.

This anthology of essays by contemporary philosophers is a sampling of recent important work on both Russell and his influence. Most of the studies are interpretive. Some place Russell within his historical context; others probe the internal tensions that often underpin his intellectual growth. In total, these essays make the reader cognizant of the legacy of intellectual thought which Russell contributed to this century.

The anthology is divided into four parts: Denoting, Names, and Descriptions; Mind and Unity; Logicism and Logic; and the Beginning of Analytic History. The contributors are Simon Blackburn, Alan Code, Michael Detlefsen, Nicholas Griffin, Graeme Hunter, Peter Hylton, Gregory Landini, Bernard Linsky, William Lycan, Jean-Pierre Marquis, Stephen Neale, Michael Pakaluk, Judy Pelham, Francisco A. Rodríguez-Consuegra, Mark Sainsbury, Stuart Shanker, and Robert Tully.

LETTER FROM CAROLINE MOOREHEAD

We received this pleasant thank you letter from Caroline Moorehead of London, author of Bertrand Russell: A Life and recipient of the 1994 BRS Book Award.

Sep. 4...Thank you so much for the magnificent plaque. I was most honoured to receive it and am only sorry that I could not come to Canada this summer. With very many thanks and best wishes. CAROLINE MOOREHEAD

(12) SHARON MORRISON SAYS THANK YOU

RSN No. 81 (February 1994), Item 5 reported on Sharon Morrison's difficulty in locating a copy of Russell's On Education, Especially in Early Childhood/Education and the Good Life. This story has a happy ending. Here is Ms. Morrison's recent letter.

I just wanted to say thanks to all the dear, caring people in this group who helped me locate my long lost book--On Education. Several people let me know of copies and I even got a book sent to me--no charge. There are some people left in this world who have that compassion that Russell was all about. I am currently a Ph.D. student in educational psychology at the University of Connecticut. I would love to have the opportunity to explore the pedagogical issues and curriculum that founded the beginning of the Beacon Hill School. I'm not sure where to turn other than the library but if you know of a good contact in the Society--let me know....Again, many thanks to the respondents to my book search. Sincerely, SHARON MORRISON

(13) EDINBURGH HUME MEMORIAL

The Saltire Society, a Scottish cultural organization, is leading an effort to erect a statue of philosopher David Hume in his home city, Edinburgh. An estimated 100,000 pounds must be raised. If you would like to make a contribution for this purpose or if you would like more information about this project, please write to The Saltire Society; 9 Fountain Close; 22 High Street; Edinburgh EH1 1TF; United Kingdom. The Hume Society has kindly offered to accept contributions from U.S. donors wishing to make a tax deductible donation, which will be forwarded to the Saltire Society. Such contributions should be made payable to "Hume Society" and mailed to The Hume Society; Department of Philosophy; Occidental College; Los Angeles, CA 90041; U.S.A. Please specify in your letter that your contribution is intended for the Edinburgh Hume memorial. Some years ago, the BRS cooperated in the successful effort to erect a Russell sculpture in Red Lion Square, London. Considering Russell's high regard for Hume, in the same spirit, please consider making a contribution to the Edinburgh Hume memorial.

(14)

RUSSELL, COUNSELOR TO TRUCKDRIVERS

Thank you, William Jones, for locating this Russell reference in Trucker's Connection, vol. 8, no. 8, August 1994, p. 11. We are happy to see a BR quotation used to support the point of view expressed in this article. This quotation, in this seemingly unlikely source, also suggests how the search for Russell references can lead one into some unexpected territory.

VIEW POINT

BY DAN GLEASON

DRUGS AND ALCOHOL: CRIME OR DISEASE?

The main feature article in this issue is about beating drugs and alcohol.

Drug and alcohol use is a problem in all segments of our society. Thankfully, truckers don't seem to have any more problem with drugs or alcohol than any other occupation or profession. Drug and alcohol use appears to mirror the rest of the population. The CDL has helped to get a lot of problem drinkers, pill poppers and other drug users out from behind the wheels of trucks and off of the American highways and streets.

Drinking and driving, or using other controlled substance, is a crime and is especially harmful to the trucker—not to mention the motoring public who rides with him. But the inability to stop using drugs and alcohol is a disease.

Alcoholics and drug addicts are not weak, they do not lack will power. They have an allergy to alcohol, or a physical and mental addiction to a drug.

While alcoholics and drug addicts are sick and should be treated as ill people, drunks and drug users should not be coddled, either. Remember how in the old days people used to say, "He couldn't help it, he was drunk."

Being drunk or on drugs does not excuse you from responsibility for your behavior. I was in a restaurant/bar not long ago, watching the N.B.A. playoffs, when a fellow in a drunken stupor two stools down reached around his friend and, for no particular reason, tried to push me and grab my shirt. I called the manager. His friend pleaded, "Excuse him, he's drunk."

Hey, if he can't control himself, he shouldn't drink.

We hope all problem drinkers and drug users get help. But we should also remember the message that today's more stringent laws on driving under the influence of alcohol or drugs send to us loud and clear: You are responsible for your actions, drunk or sober, high or straight, and that's the way you're going to be treated in court. That's the way you should also be treated on the streets.

Yet, we need compassion for the addict, the recovering addict, and for those who need help. We should make it possible in the workplace for them to seek help and get it, and to take the stigma and fear of being fired from their jobs out of the equation. Make it easy to get help if they need it. ■

QUOTE OF THE MONTH

"DRUNKENNESS IS TEMPORARY SUICIDE...A MOMENTARY CESSATION OF UNHAPPINESS."

— BERTRAND RUSSELL

(15)

BR IN "CHRISTIAN PHILOSOPHY" CHAPTER

Thanks again to William Jones, who located another BR reference--and a rarely seen BR photograph--in George McCready Price's book, The Predicament of Evolution (Nashville: Southern Publishing Association, 1925). These two pages (pp. 111-112) appear in Chapter 11, "Christian Philosophy." The two illustrations form quite a juxtaposition. As William Jones wrote to us, "Needless to say, George McCready Price does not like Russell's ideas." For the record, this book's title page identifies Price as Professor of Geology at Union College, Nebraska.

Christian Philosophy

111

is. The cross on Mount Golgotha is an everlasting testimony to the universe that sin is a horrible thing; that when allowed to run its course it will turn angels into demons and men into mere tools of demons.

But the cross also proves that God really loves His creatures. It proves that evil and sin are not due to any fault on God's part; and it shows how much God himself is willing to give up in order to make His children happy. Evil men and evil angels have constantly charged God with being a tyrant; the cross

Underwood
Bertrand Russell

refutes this, and also shows how God handles this great rebellion. And while neither the Bible nor a rational philosophy gives us any promise that *all* of God's creatures can be won back by such an exhibition of limitless love, the former does testify that by this method of God in dealing with rebellion, the universe will ultimately be more secure, more happy, and more completely loyal to their Creator than if this horrible nightmare of sin had never occurred. This final outcome is the ultimate justification for God's running the risk of such

a condition as the present, by originally creating beings with moral freedom, with the power to serve God or not to serve Him.

A Nightmare of Despair

We have now considered *two* of the *three* great problems of philosophy. The one remaining is the problem of a future life.

"If a man die, shall he live again?" cried the afflicted patriarch; and for the many thousands of years since then this question has been asked by multitudes of the children of men, who could not see beyond the portals of the tomb.

Listen to the despairing wail of one of our cleverest modern writers, one born to little less than royal luxury and culture, but who has rejected the Christian hope for the despair of evolution as a world-process:

112

Predicament of Evolution

The women at the tomb. Men will live again because Christ rose from the dead.

"Brief and powerless is man's life; on him and all his race the slow, sure doom falls pitiless and dark. . . . The life of man is a long march through the night, surrounded by invisible foes, tortured by weariness and pain, towards a goal that few can hope to reach, and where none may tarry long. One by one, as they march, our comrades vanish from our sight, seized by the silent orders of omnipotent Death."—*Bertrand Russell, "Mysticism and Logic," p. 66.*

Thank God, the Christian is not haunted by any such nightmare of despair. He knows in Whom he has be-

lieved, and is persuaded that He is able to keep that which has been intrusted to Him against that day.

And yet, it seems to me that we are in danger of losing sight of the central idea of that blessed future life; for throughout the New Testament this future immortality is always centered in the resurrection.

There are two or three texts in the New Testament that, if taken by themselves, might seem to teach the immediate reward of the saints at death. On the other hand, scores of passages far more plain and clear dwell upon the resurrection of the body as the key to the future life. It is at the resurrection that we become immortal; it is then that this mortal puts on immortality; it is then that we meet with the loved of all the past ages; it is then that we become like our blessed Lord, for we shall see Him as He is. And I cannot think that it is safe to dwell so intently on two or three (confessedly ambiguous) passages that seem to

(16)

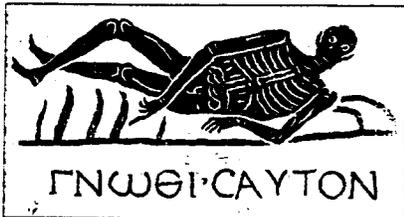

"Old Questions, New Answers"

This book review of Jostein Gaarder's Sophie's World: A Novel about the History of Philosophy and Gareth B. Matthews's The Philosophy of Childhood appeared in The Boston Sunday Globe, October 30, 1994, pp. B14-B16. It is refreshing to see a mass circulation American newspaper offering such an article on quasi-philosophical and philosophical books of note. If anyone has read the Gaarder book, we are curious to be informed whether Russell in some way figures in the literary account of the major philosophers of Western history.

Chore offered natural law; Apollo's temple ornamented, "Knew thyself": Then an axe, we each order from above.

Even in our cynical age, some authors still tackle the issues that vexed philosophers of old

Old questions, NEW ANSWERS

New answers to the old questions that vex philosophers

PHILOSOPHY
Continued from Page B14

the earliest Greek philosophers, including Anaximander, Parmenides, Heraclitus and Democritus. Next the Sophists, then Socrates, Plato and Aristotle, the Cynics, Stoics, Plotinus and many others.

Alberto moves on to early Christian and medieval philosophers (Augustine, Thomas Aquinas), then the scientific thinkers of the Renaissance (Galileo, Newton and Kepler). He continues through Descartes, Spinoza and the British empiricists (Locke, Hume, Berkeley). A critical turning point is Kant, followed by Hegel and Kierkegaard. In the modern age come Marx, Darwin, Freud, the existentialists. Finally, Alberto covers the philosophical dilemmas of modern particle physics and cosmology.

One would think it impossible to cover all this ground in one book in a way that would work an entertaining reading. It does work, though, because Alberto's lectures are clear, brief and mounted upon an underlying mystery: Who is he and why is he doing this? Midway through the book, a radical shift occurs and strange things begin to happen: Little Red Riding Hood makes an appearance, as well as Winnie-the-Pooh and Lewis Carroll's Alice, Adam and Eve, Noah and several Walt Disney characters. The book's, and history's, central philosophical question deepens: Can we trust what our senses tell us and our reason concludes? And closely related: What are the limits of sense and reason, and can anything lie beyond those limits?

Jostein Gaarder is a philosophy teacher, and this brilliant, improbable book displays his pedagogical gifts. He is a wooden novelist, however. Characters are thin and indistinguishable, dialogue is unbelievable and sometimes gratuitous and empty. Even with these faults, the grace, clarity and wit with which Gaarder surveys and makes us care about 3,000 years of philosophical development are impressive and admirable.

PHOTO BY G. WALTER HANFERT FOR THE BOSTON GLOBE

What strikes the attentive reader is how little the basic questions change. The discoveries of contemporary cosmology - the Big Bang, the expansion of the universe, relationships of time, space, matter and energy - bring us back to the questions that the Greeks asked and children still ask: What came before the beginning? What is beyond that which is? Is the universe accidental or the result of a plan? How do we know that what we perceive is real?

Gaarder presents this sweep of intellectual history in the form of verbal explanations to an adolescent. That keeps the exposition on a level of reasonably limited detail. But it also reminds us that a feel for philosophy, a quest for it, requires a sense of wonder, which is absent in childhood. Sophie's intellectual receptivity is not yet impaired by the cares of adult life: She can hardly wait for each lesson.

The mind of the child also concerns Gareth Matthews' eloquent and thoughtful essays in "The Philosophy of Childhood." Matthews is a philosophy professor at the University of Massachusetts at Amherst, and has written several books

on children's rights. In this book he raises a question that Gaarder implicitly answers: Do the philosophical sensibilities of children have any serious value? Or are they of no value because they come from immature minds?

Matthews' view is that children's philosophical interests are not only valuable and profound but also sadly perishable. He writes, "My hypothesis is that, once children become well settled into school, they learn that only 'useful' questioning is expected of them. Philosophy then either goes underground... or else becomes totally dormant."

Matthews writes that one child's question, "Mama, are we live or are we on video?", raises an issue that has troubled philosophers for millennia: How do we know that we ourselves, and what we perceive, are not a dream? When Matthews' 4-year-old daughter once asked him how the family cat got flea, and he answered that she got them from another cat, and that cat got them from another cat, and so on, his daughter said, "Daddy, it can't go on like that forever; the only thing that goes on like that forever is numbers." She was posing a problem that has perplexed thinkers from Aquinas to Einstein. Five-year-old Krutin expressed an appreciation for letters: "Cause if there was no letters, there would be no sounds, there would be no words; if there was no words, we couldn't think; and if we couldn't think, there would be no world." That final statement puts Krutin in the company of Parmenides and Kant.

Matthews does not maintain that children are better thinkers and philosophers than adults; they lack systematic analytical training. His argument, principally with Piaget and those who compare the infancy of an individual to the primitive history of mankind, is that children are authentic beings (they are "naïve," as Kant would say) whose artistic and intellectual gifts are valuable in their own right. They are not merely potential

grown-ups.

Gareth Matthews writes that adults who would do philosophy have much to learn from children. "Much of philosophy involves giving up adult pretensions to know," he writes. "The philosopher asks, 'What is time, anyway?' when other adults assume, no doubt unthinkingly, that they are well beyond the point of needing to ask that question.... In important part, philosophy is an adult attempt to deal with the genuinely baffling questions of childhood."

Today when he teaches Aristotle or Thomas Aquinas to university students, Matthews writes, "I try to locate the questioning child in me and my students. Unless I do so, the philosophy we do together will lose much of its urgency and much of its point."

Put another way: To be fully human, and to feel our continuity with 3,000 years of philosophical inquiry, we need to put ourselves into Sophie's world.

OTHER READINGS

New books on philosophy:
"A Pinch of Philosophy: Anecdotal Epigrams" by Stanley Cavell (Harvard, \$26). Defending the validity of one's own voice, by the Cabot Professor of Aesthetics and the General Theory of Value at Harvard.

"The Oxford History of Western Philosophy," edited by Anthony Kenney (Oxford, illustrated, \$39.95). A more thorough and minute analysis of Gaarder's pantheon, with many more names. Richly illustrated.

"Fido Etc.: The Problems of Philosophy and Their Resolutions" by Roy Blumkin (Verco, \$18.95). A complex account through history, defending a realist position. 1

SOPHIE'S WORLD
A Novel about the History of Philosophy
By Jostein Gaarder. Translated, from the Norwegian, by Per Pettit, Helen, Farrer, Steven and Ginn. 464 pp. \$18.
THE PHILOSOPHY OF CHILDHOOD
By Gareth B. Matthews. Harvard. 160 pp. \$18.95.
By David Mahagan

The century's heaps of bodies and bleached bones have tainted old ideas about the dignity of man. Shakespeare's effusion "What a piece of work is a man! How noble in reason... in action how like an angel! in apprehension how like a god!" today elicits a snort or bitter laughter.

That cynicism has spread to the study of philosophy, the ancient idea that it is proper, worthwhile and possible for man to reflect on the fundamental nature of reality and his rightful role in it. Cynicism eviscerates philosophy. It is rarely a required course in liberal arts colleges. Let a student tell her parents she plans to major in philosophy, and groans will follow. What a waste, they say - pondering angels on the head of a pin. Better to study science (itself only a branch of philosophy), law, business, public relations or sports medicine.

So it is surprising, and exhilarating, to encounter stimulating, inventive books that address anew the ancient questions with en-

thusiasm.

Jostein Gaarder's "Sophie's World" and Gareth B. Matthews' "The Philosophy of Childhood" are very different books with one thematic link: the minds of children. "Sophie's World" - a best seller in Scandinavia and Germany - is unlike any other novel in this or other years. Though it is rudimentary as fiction, its depth of learning, its intelligence and its totally original conception give it enormous magnetic appeal.

Fourteen-year-old Sophie Amundsen, who lives with her mother in a large Norwegian town, finds an unsigned note in her mailbox: "Who are you?" A second note follows: "Where does the world come from?" A day later, a longer note appears, this one explaining why philosophy matters. For Sophie, it is the beginning of an unsolicited course in the history of philosophy.

"How was the world created?" the anonymous philosopher asks. "Is there any will or meaning behind what happens? Is there a life after death? How can we answer these questions? And most important, how ought we to live?"

The mysterious philosopher eventually reveals himself, up to a point. His name is Alberto Knox. Over the succeeding 300 pages, he presents and explains to Sophie the major philosophers in Western history:

PHILOSOPHY, Page B16

(18) BR APPEARS IN "METAPHRENIA" CARTOON

Thank you, Steve Shafer, for submitting this curious, though not particularly humorous, cartoon appearing in the November 18, 1994 issue of Diversions, a newspaper directed to University of Illinois at Urbana-Champaign students!

(19)

ANNOUNCEMENT OF HAGER VOLUME ON RUSSELL

The "1994-95 New Books and Journals in Philosophy" catalog of Kluwer Academic Publishers (101 Philip Drive; Norwell, MA 02061; U.S.A.; telephone 617-871-6600) includes this announcement of Paul J. Hager's newly published study, Continuity and Change in the Development of Russell's Philosophy.

Continuity and Change in the Development of Russell's Philosophy

by Paul J. Hager, *University of Technology, Sydney, Australia*

This book represents the first detailed attempt to trace the fundamental unity that lies within all of Russell's philosophical work, as well as the reasons behind those limited orderly changes that did, in fact, occur within it. The main thesis of the book is that there is a lot more continuity in Russell's philosophy than has been usually acknowledged, and that the major changes that do occur are much more orderly than Russell's reputation for erratically changing his views allows. Drawing on a wide selection of Russell's own statements, a general account of Russellian analysis is developed which shows it to have a highly organized structure, which he consistently applies throughout all of his post-idealist philosophising.

This book is addressed primarily to serious students of Russell's philosophy, and is suitable for use in both postgraduate and undergraduate courses on Russell's philosophy generally, on specific aspects of his work, or on analytic philosophy in the twentieth century. However, the book is written clearly enough to be read by the many general readers interested in finding out more about Russell's philosophy.

FROM HARRY RUJA

Past BRS Chairman Harry Ruja submitted this noteworthy mini-report:

Stephen Jay Gould, a Harvard biologist, contributes a monthly column to Natural History. In its September [1994] issue (vol. 103, no. 9, p. 12), he makes this reference to BR:

Among the organizing dualities of our consciousness, change and constancy stand out as perhaps the deepest and most pervasive. Heraclitus said that we can't step twice into the same river, while his contemporary Pythagoras tried to extract invariance from the world's overt complexity by discovering simple regularities in number and geometry--a scholar's dream pursued, as by Bertrand Russell in our day, when he included among the three passions of his life, "I have tried to apprehend the Pythagorean power by which number holds sway above the flux."

The passage from BR is quoted from The Autobiography of Bertrand Russell, vol. 1, 1967, "What I Have Lived For."

The passage from Heraclitus continues: "because fresh waters are always flowing in upon you."

(22)

NEWS ABOUT WITTGENSTEIN AND MOORE

This brief article appeared in The [London] Daily Telegraph, November 10, 1994, p. 15.

Think on

Cambridge was filled with philosophers last weekend when surviving friends of Ludwig Wittgenstein turned out to open the new home of the Wittgenstein Archive. Sir Eduardo Paolozzi turned up, and took the opportunity to explain to the guests some of his sculptures in the garden. Meanwhile, Theodore Redpath, a pupil of Wittgenstein in the Thirties and now a don at Trinity Cambridge, recalled a story about Wittgenstein's contemporary G.E. Moore.

When Moore went to Buckingham Palace to collect his OM [Order of Merit] in 1951 he left his wife outside the gates in a taxi. Afterwards, neither party was happy. As Redpath disclosed: "When Moore came out after the ceremony his wife was complaining that the meter was working overtime. And he was grumbling that the king had never heard of Wittgenstein."

SWING AND STANLEY ON BR

Thanks to Tom Stanley for providing these two reminiscences of Russell, respectively from Raymond Swing's "Good Evening!": A Professional Memoir (New York: Harcourt, Brace & World, 1964) and Louis Stanley's Public Masks and Private Lives (London: Quartet Books, 1986). The BR photograph on the next page also comes from Stanley's book and was taken by him.

I also must register a fairly close acquaintance with Bertrand Russell, not attributable to his interest in me, but to his having established an experimental progressive school with his wife at that time, Dora. We wanted a progressive school for our children, being somewhat alarmed by what we knew about discipline in the so-called public schools in Britain. On inquiry we found that the Russell school was to use the country home in Hampshire of Bertrand's brother, the Earl of Russell, and that part of the house was available to us to rent as a home. This simultaneous solution of the two problems of residence and school was irresistible, and we moved in. As tenants of Lord Russell, we soon were on cordial terms with him and enjoyed many a rewarding conversation with him.

Bertrand Russell was only a part-time schoolmaster, giving some attention to the older children, none of whom was beyond primary-school age. He was a fascinating instructor, as our own children testified. But the responsibility for the school lay with Mrs. Russell and two young women teachers. The school was conducted according to themes of freedom, which Mr. and Mrs. Russell ardently believed in. It was a small boarding school, with day students from the district, and was attended by children from intellectual homes, but it did not last beyond its first year.

Naturally, I was impressed by the privilege of knowing Bertrand Russell, already recognized as one of the great intel-

lects of his era. I dutifully read everything of his I could understand, and I am sure I always showed him the highest respect. I cannot, however, say that he had the slightest respect for me, not, I believe, on account of my personality, but simply because I was an American. The anti-Americanism prevalent in Britain in recent years had not set in. Bertrand Russell's anti-Americanism was his own. I might say he did not so much dislike Americans as scorn them. He made an exception of my wife, to whom he always showed gallantry, but I had no benefit from that. He never concealed his arrogance from me. Later Bertrand Russell was to spend years in the United States. He was to marry a young and beautiful American after divorcing Dora Russell. He was to receive appreciative honors from American intellectuals, and a generous stipend for his lecturing services. But I am not aware that these mitigated the scorn he felt for Americans.

I do not mean to disparage Bertrand Russell's greatness. Most men whom the world regards as great have had their strong likes and dislikes, their weaknesses along with their strengths. I do not even call it a shortcoming for a man of Bertrand Russell's stature to have so much disliked Americans. There were excusable reasons for such a dislike.

After the Russell school closed, two of my children, Peter and Sally, went to Dartington Hall, another progressive school. This was in Devonshire and had been founded by Mr. and Mrs. Willard Straight, whose money also founded the *New Republic*. Mrs. Straight was an American. She and her husband had many interests. Dartington Hall was not only the seat of a first-rate progressive school, but an experiment in progressive agriculture.

That Russell sparkled in challenging company was emphasized at a small dinner-party when guests included Sir John Clapham, gentle of voice and of a strangely veiled shyness; Harold Laski, whose rasplike vitality reflected the incompatibility between his personality and character; the reserved Field-Marshal Lord Ironside, imbued with democratic convictions and an autocratic temperament; and the sensitive-minded Bishop Stephen Neill, who was denied the seat of Canterbury because of ill-health. Russell was in a serious mood. His critical penetration flashed intermittently, but touched the vital spots in any argument. Occasionally he wielded a different humour. He laid about him with the blade of good humour. He played Porthos to Laski's Aramis, who told him he was an intellectual gaffly on the rump of an alluient society, continually asking awkward questions, often giving the wrong answers, and continually changing his mind. Russell's retort was that any honest man had to adjust theories to events as in 1920 when a visit to Russia caused him to modify his views on socialism, having seen the corruption inherent in the communist system. He was always convinced as to the rightness of his theories and as such had to act on what he believed to be true. There was always a strong case for each position at the time.

Ironside raised a question he had long wanted to ask. What prompted Russell in 1914 to be a pacifist and supporter of conscientious objectors? In reply Russell said that he had resisted the war on intellectual grounds. He wanted to try the method of non-resistance to aggression in the belief that it would disorganize the Germans. Ironside commented that such a foolish theory showed that Russell was no realist and less of a psychologist than logician. Clapham said that Russell at times sustained opinions ludicrously incompatible, believing in the utmost freedom for every human being, at the same time demanding that the will of the individual should be subordinated to the good of the community. The sparring between Neill and Russell ended in stalemate. Russell was a firm atheist who believed there is no God and no life after death. He was interested in impersonal objective truth which was just as elusive as religious faith and felt it was better for Churchmen to preach the virtues of tolerance and denounce the vices of cruelty and bigotry rather than advocate the unprovable.

Ironside asked Russell to refresh his memory on the reason for his jail sentence. He replied that it was for writing an article in *The Tribunal* in which he was critical of the United States army and was able to read the actual wording from a well-thumbed note in his wallet. It read, "The American garrison which will by that time be occupying England and France, whether or not they will agree

efficient against the Germans, will no doubt be capable of intimidating strikers, an occupation to which the American Army is accustomed at home." Laski commented that if such views were still accountable in law, the prisons would house many distinguished names. Russell said that imprisonment had its compensations. Whilst in jail he wrote his *Introduction to Mathematical Philosophy* as a semi-popular version of *Principia Mathematica*.

There was another side to Bertrand Russell, far more lighthearted. Physically he was small; Lytton Strachey used to say that he belonged to the dangerous class of great gnomes; but he was never overlooked. Women found him attractive. With four wives to his credit, it was clearly mutual. At any party he was always surrounded by the prettiest women fascinated by the charm of this white-haired man with birdlike head and laugh like the yaffle of a woodpecker. His talk was usually dry but passionate, voice slightly donnish and clipped, sparkling wit and gleams of malice as might be expected from an advocate of free love, the rights of women, trial marriages and new methods of education that included a personal experiment aiming to prove the value of the utmost freedom for every human being. With his wife they had a school for children who could do whatever they pleased. In an intellectual free-for-all conversation there were invariably flashes of Russell's dislike of parents, policemen, schoolmasters, judges and the English public school system, prefaced by a dry pleasant smile.

An interesting aspect about Bertrand Russell was that the thought of death never seemed to bother him. Such was his mental and physical energy that age was ignored. Maybe this atheistic conviction made it seem irrelevant. There was no last-minute conversion. Even at ninety-six his views had not changed, if anything they had become hardened. He regarded all forms of religion as false and harmful. He did admit that the thought of dying loomed large when a plane in which he was travelling to Norway crashed and ditched him in an icy sea, but the indignation was caused at the thought of his demise at the early age of seventy-six. Towards the end he almost welcomed death as the final confirmation of his theories and the possibility of proving the bishops wrong, though a wistful aside hinted it would be comforting to make contact in a future state when possibly memories might survive. It was wistful thinking. Bertrand Russell's ivory tower was like a Norman keep or one of the towers at San Gimignano, built to keep enemies out, and perhaps with inadequate recognition of its power to keep the owner in, even against his will. He was content, like the young Newton, to wander through strange seas of thought, alone.

Bertrand Russell, one of the most brilliant mathematicians of the century

BR AND JACK DEMPSEY?

Our thanks to Ted Jackanicz who spotted this October 2, 1994 New York Times Magazine (p. 2) article. Note the Russell reference in the third column. BR and Jack Dempsey!?!?!?! In any event, author Frank Gannon has given us something to think about.

THE NEW YORK TIMES MAGAZINE

SUNDAY, OCTOBER 2, 1994

ENDPAPER

Seeking Certitude

BY FRANK GANNON

It's hard to make a convincing argument for the existence of God anymore. If you rely on the old-fashioned "cosmological principle," you usually end up bumbling for words in front of some near-stranger, saying something like, "Everything that exists, exists because it had some prior cause that, in turn, caused it to exist. Therefore, there's probably a God. I'm sorry. Can I get you anything from the kitchen?"

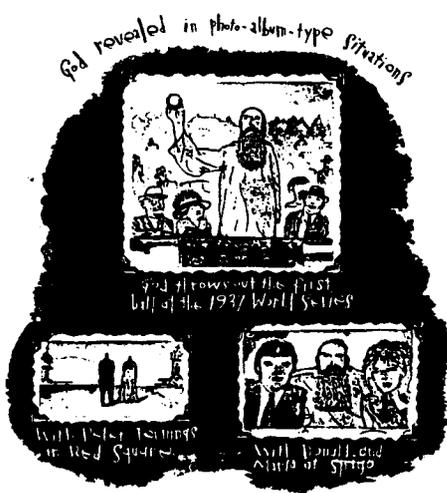

What do you say when the near-stranger points out that many things that exist — New Jersey, for instance — do not have a cause? What do you then say when the stranger points out that "Baywatch" is the most popular television show in the history of human civilization? What then? How to answer the question that seems to defy human understanding?

One might say that watching "Baywatch" is not an inherently evil thing to do, like, for instance, justing after someone named Flossie. One might even go so far as to say that one's daily life on earth is a testimony to an active God who actually enjoys "Baywatch" on an occasional basis and thinks that he might be attracted to someone named Flossie.

No matter who you are, or how many pens you have in your pocket, after a while the search for the verifiable existence of God gets tougher. God reveals himself in mysterious ways. You have to pay attention. Sometimes he's in photo-album-type situations (with Peter Jennings in Red Square, with Dick Clark, with Donald and Marla at Spago — Spago?).

AND WHAT ABOUT MIRACLES? ARE they evidence of a God who occasionally breaks the rules for certain people? One does hear the word "miracle" used in a reckless fashion. Sole survivors of brutal, flesh-rendering train wrecks are often termed "miraculous survivors." Consider the Miracle Mets of 1969. Did God really suspend the laws of physical matter 25 years ago? Hey, if you believe that, why don't you compose a T-shirt that says so? On the surface, it seems almost too easy to think this way. But still, those nagging, eternal doubts stand next to you and whisper in your ear.

Frank Gannon is a freelance writer living in Georgia.

"O.K., Mr. Scientist," they say, "How did Pat Sajak ever get his own talk show?" Was that, in the words of Aquinas and my insurance company, an act of God? Explain that one, man of science, while you polish your electron thing.

Clearly, no sane person dismisses these questions lightly. Something in the human mind says it's hopeless: The existence of God is something that human beings can never entirely discount, or entirely prove. Why torture yourself trying to answer a question like that? Get a hobby. Work out regularly. Eat low fat. Forget about what Yeats called "vague immensities." And while you're at it, forget about meeting one of the Laker Girls. And forget about meeting Yeats. He's dead. Read the paper.

Yet something deep in your soul says, Go ahead. Seek the ultimate answers. Maybe the human brain can actually "know" some transcendent divinity. Yeah. Good one. Don't hurt yourself, O.K.?

Perhaps our lives are a series of stages or stops that lead us, finally, to some transcendent state. When I was young, I felt that I could completely disappear from other people if I shut my eyes very tightly. Today, physicists say that what I thought I was doing was wrong, i.e. impossible. You can't really disappear that way. But I say, who are physicists to speak of what is wrong and right? I thought they were supposed to be scientists, for heaven's sake. Now they have nothing better to do than ruin a little kid's charming Christmas delusion with their pointless adherence to big shiny machines with little blinky lights? Is that what they think is rationality? Judging a child? Is that what you do, Mr. Scientist? Because if it is, I know a lot of people who wouldn't mind slapping you around, Egghead.

Sorry. I don't like to get that upset. Nobody does.

That brings us to another overwhelming question. Why is it that we, apparently unlike any other species on the planet, insist on seeing certain things as right or wrong, good or bad, moral or immoral, flossam or jetsam, marvelous or s'marvelous?

Even more interesting is the fact that all human beings more or less agree about what is moral. There are certain exceptions, of course, the most famous being the classic good-bad dichotomy that formed such a vital part of Bertrand Russell's radio debate with Jack Dempsey. Russell, the famous advocate of epistemological monism, pointed out that Dempsey's definition of good owed way too much to Plato's conception of virtue, and Dempsey, in response, beat the hell out of Russell, finally folding him over with a vicious left hook to the midsection.

However, despite the wide variety of human cultures, it is remarkable to note that if you borrow something and don't give it back, almost all humans agree that you should stop being so sloppy about things because that wasn't the way you were raised.

It seems that those who choose to read divine significance into improbable coincidences are just pretending. Let's pretend there is a God, goes this line of alleged reasoning, then we can pretend that God took those snow tires out of your garage.

One can only remember the words of Nicolai Hartmann, who said, in his famous reply to Heidegger, "Try that with me, Martin, and I'll make you look like a Georges Seurat painting. Only real close up." ■

CHRISTMAS AT PEMBROKE LODGE

In mid-November, Don Jackanicz paid a brief visit to Pembroke Lodge, Russell's boyhood home, located in Richmond Park in west suburban London. A nearby sign reads, "Pembroke Lodge and Gardens: The lodge and its gardens date back to the 18th century and were privately owned until the 1940's, notably by the Russell family. Bertrand Russell, the philosopher, lived in the house during his early life." Richmond Park is a beautiful, well used, large public park. Pembroke Lodge now houses a small cafeteria with patrons being seated in two ground floor rooms; restrooms are upstairs. One can walk around freely outside and to some degree inside. It's well worth the time. If you happen to be in England in December, why not consider a Christmas lunch at Pembroke Lodge as described on this menu that also quaintly depicts the building.

BALLOT

Eight Directors are to be elected for 3-year terms starting January 1, 1995. There are nine candidates for the eight directorships.

Place a check or x next to the name(s) of the one to eight nominees for whom you wish to vote. You may also specify between one and eight write-in names. In any case, if you together vote for or write-in names for more than eight persons, your ballot will be invalid.

Please remove this page and fold it as indicated on the other side. It is addressed and needs no envelope. It does need a stamp (29¢ in the U.S.A.). To be counted, a ballot must be received at the specified Chicago address by January 10, 1995.

Thank you for voting--and for voting early.

- () LOUIS ACHESON of Encino, California, U.S.A.
- () KENNETH BLACKWELL of Hamilton, Ontario, Canada
- () JOHN JACKANICZ of Chicago, Illinois, U.S.A.
- () DAVID JOHNSON of Annapolis, Maryland, U.S.A.
- () JUSTIN LEIBER of Houston, Texas, U.S.A.
- () GLADYS LEITHAUSER of Pleasant Ridge, Michigan, U.S.A.
- () STEPHEN REINHARDT of Wilmington, Delaware, U.S.A.
- () THOMAS STANLEY of Wilder, Vermont, U.S.A.
- () KEVIN TUCKER of Wheaton, Maryland, U.S.A.

RUSSELL SOCIETY NEWS

No. 85, February 1995

The Bertrand Russell Society

3802 North Kenneth Avenue; Chicago, IL 60641-2814; U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Russell Society News is a quarterly issued in February, May, August, and November. Letters to RSN should be addressed to Donald W. Jackanicz, Editor at the above Chicago address. For information about The Bertrand Russell Society or to become a member, write to the same address.

(1)

FROM THE PRESIDENT

Michael J. Rockler, President, The Bertrand Russell Society

I always find it interesting and enjoyable to reread Russell's popular writing. One reason I think this is the case is that many of the issues Russell addressed are still contemporary problems; this makes reading his works relevant to everyday life.

Russell wrote often about the problem of population in the world. He was concerned that the number of people on earth was growing too quickly--particularly in nations that were experiencing poverty.

In Marriage and Morals, Russell wrote:

...that being so, we have no reason, from an economic point of view, to desire that population should increase. Those who feel this desire are usually inspired by motives of nationalistic materialism, and the increase of population that they desire is not to be a permanent one, since it is to be wiped out as soon as they can get the war at which they are aiming.

In New Hopes for a Changing World, Russell again addressed the issue of population:

...those who urge that by means of technical advances a continually growing population can remain prosperous for an indefinite period are evidently incapable of appreciating the properties of geometric progression. If population continues to increase, however slowly, it must ultimately surpass any assigned limit. Naturally this is impossible, since there is a limit to what the earth can yield;....

The rate of population growth was a concern of Russell which has become even more relevant since his death twenty-five years ago this February.

This June at the annual meeting (details of which are discussed elsewhere in the newsletter) the Bertrand Russell Society Award will be given to Zero Population Growth in recognition of their ongoing struggle to bring a rational Russellian approach to the growth of population. The Award will be given at the annual banquet. A representative of ZPG will accept the Award and present the annual banquet address.

This year the annual meeting will be held at the Columbia Inn in Columbia, Maryland--a suburb of the District of Columbia. Those staying at the Inn, which is situated next to a small lake across from a shopping mall, can stay on at the special conference rate for a few days and thus be able

to be in Washington for the Fourth of July. Fireworks in the Nation's Capital are the most elaborate in the United States.

Why not plan now to attend the annual meeting? It will be a wonderful experience and can become the capstone of a summer vacation in one of the most exciting American cities.

I hope to see everyone in Maryland. Make your reservation today. You will have a good time and your presence at the meeting will strengthen the Society.

TREASURER'S REPORTS

BRS Treasurer Dennis J. Darland submitted these reports for the fourth quarter of 1994 and for the entirety of 1994. Note that these reports do not take 1995 membership renewal payments or 1995 contributions into account. "BREP Contrib" = contributions to the Bertrand Russell Editorial Project. "RUSSELL Sub" = subscription costs for Russell: The Journal of the Bertrand Russell Archives.

1995 ANNUAL MEETING

The 1995 annual meeting of The Bertrand Russell Society will be held Friday, June 30 through Sunday, July 2 in Columbia, Maryland, U.S.A. at The Columbia Inn Hotel and Conference Center. It is our hope that every BRS member will at least consider the possibility of participating and that many will indeed be present.

The latest tentative program schedule is as follows:

Friday, June 30, 1995

- 4:00 - 6:00 p.m. Registration
- 6:00 - 7:30 p.m. Dinner (on your own)
- 7:30 - 7:45 p.m. Welcoming remarks
- 7:45 - 8:45 p.m. Awarding of Book Award; recipient's presentation
- 8:45 - 9:45 p.m. Peter Stone, "Problems of Power in Russell's Politics"
- 9:45 - 11:00 p.m. Board of Directors meeting (all members welcome)

Saturday, July 1, 1995

- 8:00 - 9:00 a.m. Registration
- 9:00 - 10:00 a.m. John Shosky, "Multiculturalism, Authenticity, and Enlightened Self-Interest: Bertrand Russell and the Quest for Political Recognition"
- 10:00 - 10:15 a.m. Coffee break
- 10:15 - 11:15 a.m. Michael J. Rockler, "Russell and Education: Russell's Debt to Locke"
- 11:15 - 12:15 p.m. Bertrand Russell Society business meeting
- 12:15 - 2:15 p.m. Lunch (on your own)
- 2:15 - 3:15 p.m. Timothy Madigan, "Russell and Dewey on Inquiry"
- 3:15 - 3:30 p.m. Coffee break
- 3:30 - 4:30 p.m. First presentation by Paper Prize Competition winner
- 4:30 - 5:30 p.m. Free time
- 5:30 - 7:00 p.m. Red Hackle Hour
- 7:00 - 9:30 p.m. Banquet; awarding of BRS Award; recipient's address

Sunday, July 2, 1995

- 9:00 - 10:30 a.m. James Alouf, "Bertrand Russell as Teacher Educator"
- 10:30 - 10:45 a.m. Coffee break
- 10:45 - 11:30 a.m. Second presentation by Paper Prize Competition winner
- 11:30 - 12:15 p.m. To be announced
- 12:15 p.m. Closing

Columbia, Maryland is situated about half-way between Washington, DC and Baltimore, Maryland. The Columbia Inn lies 25 miles from downtown Washington, 20 miles from downtown Baltimore, 15 miles from Baltimore/Washington International Airport, 30 miles from Washington National Airport, and 47 miles from Dulles International Airport. A modern hotel and conference facility, The Columbia Inn has ten wooded lakeside acres, 289 guestrooms, full hotel ser-

6/30 5344 9:30 11:10 1569 7BNG CONF
 10:09
 11:10
 JJ

vices, and covered garage parking. Dining, shopping, and entertainment sites are nearby.

Meeting registration is being handled by the BRS. Hotel reservations are being handled by The Columbia Inn.

To register for the meeting: Please refer to the top of the blue sheet attached to this RSN issue. The per person fee of U.S. \$85.00 covers registration, coffee breaks, the Red Hackle Hour (reception featuring BR's favorite drink), and the Banquet. Those whose registrations are received by June 12 may register at the reduced per person fee of U.S. \$75.00. Please make checks or money orders in U.S. funds payable to "Michael J. Rockler". Write "BRS" on the check memo line. Mail the form and payment to: Michael J. Rockler; 14213 Chesterfield Road; Rockville, MD 20853; U.S.A. The Banquet will have a chicken entree; if you have a special dietary request, inform Dr. Rockler when registering by mail. Annual meeting questions and comments also should be directed to Dr. Rockler.

To reserve a room at The Columbia Inn: Please direct your inquiry to: The Columbia Inn Hotel and Conference Center; 10207 Wincopin Circle; Columbia, MD 21044; U.S.A.; telephone 800-638-2817 or 410-730-3900. June 12 is the deadline for receiving the special nightly rate of U.S. \$79.00 plus 10% tax. This rate applies to either a single or double room. Mention "Russell Society" to qualify for this reduced rate. The Columbia Inn should also be contacted for additional information about its facilities and directions by car, train, bus, or air.

The next RSN issue will include updated information about the annual meeting. But, in the meantime, we suggest you mark your calendars, fill out and mail the blue form with your payment, make your hotel reservation, and look forward to three memorable days of Russell-related activities. Remember, too, to act soon to take advantage of the reduced early registration fee and special hotel rate--the June 12 deadline applies to both.

(4)

BRS BUSINESS

1. 1995 Membership Renewals. Thanks to all members who renewed their BRS membership. We trust you will find your BRS membership to be worthwhile in 1995. Those members who have not yet renewed are being sent this RSN issue as a courtesy. If you have not yet renewed, please read the bottom of the blue sheet attached to this RSN issue, complete the form, and mail it with your payment to the Chicago address shown. We do want you to remain with us!

2. Address Corrections. Please take a moment to look at the address label used to get this RSN issue to you. If there is need for a correction, please let us know. Thank you.

3. Board of Directors Election. We appreciate the effort taken by many members in voting in the Board of Directors election. The following persons were elected for three year terms beginning January 1, 1995: Louis Acheson, Kenneth Blackwell, John Jackanicz, David Johnson, Justin Leiber, Gladys Leithauser, Stephen Reinhardt, Thomas Stanley. Elsewhere in this issue is a list of all directors and officers. Later this year another election will be held for directors whose three year terms begin on January 1, 1996. It is not too early to be nominated or to nominate oneself as a candidate in that election. Letters of nomination may be sent to the newsletter. Directors are expected to make a reasonable effort to attend BRS annual meetings and from time to time to give their opinions about matters under Board consideration.

4. Contributions. We would like to acknowledge, with thanks, the monetary contributions made by many members who renewed their BRS membership for 1995. Through such contributions, our organization can undertake activities not fully covered by regular dues payments. Our thoughtful contributors were:

Jay Aragona
Cheryl Bascom
Michael Emmett Brady
James Bunton
Whitfield Cobb
Current Wisdom, Inc.
David M. Daugharty
Dong In Bae
Linda Egendorf
Earl G. Hansen
David S. Hart
Donald Jackanicz
Robert James
Allan Kramer
Gregory Landini
Gladys Leithauser
Jill Lenz
John Lenz
Stephen J. Reinhardt
Michael J. Rockler
Harry Ruja
John F. Schaak
Warren Allen Smith
Shohig Sherry Terzian
Kevin Tucker
Robert E. Wallace
Ronald Yuccas

5. Award Nominations Sought. Each year the BRS makes two award presentations at the annual meeting: (1) The BRS Award, to an individual or organization whose activities relate in a special way to Russell or have been undertaken in a Russellian way; (2) The BRS Book Award, to an author or authors whose recent publication stands out as an excellent example of contemporary Russell scholarship. Nominations for either award may be directed by members to BRS President Michael Rockler; 14213 Chesterfield Rd.; Rockville, MD 21044; U.S.A.

(5)

BRS LIBRARY

The Society library sells and lends books, audiotapes, videotapes, and other materials by and about Russell. Please direct BRS library inquiries and requests to Tom Stanley, Box 434, Wilder, VT 05088.

1. Books for sale H-Cloth, otherwise paperback. Prices are postpaid. Please send check or money order (U.S. funds only) payable to the "Bertrand Russell Society" to Tom Stanley.

By Bertrand Russell:

Appeal to the American Conscience.....	\$3.15
Authority and the Individual.....	7.95
Has Man a Future?.....H.	8.00

ON PAULING AND POPPER

RSN No. 84 (November 1994) reported on the deaths of BRS honorary members Linus Pauling on August 19, 1994 and Karl Popper on September 17, 1994. We renew the invitation for readers to submit reminiscences of these men for future issues. Below are an interesting letter from Pauling to former RSN editor Lee Eisler and the New York Times (Associated Press) Popper obituary, September 16, 1994, p. 54. We regret that the New York Times obituary for Pauling, though well worth reading, is too long for reproduction here.

LINUS PAULING INSTITUTE of SCIENCE and MEDICINE

Telephone: (415) 327-4064

16 May 1986

Mr. Lee Eisler
The Bertrand Russell Society, Inc.
RD 1, Box 409
Coopersburg, PA 18036

Dear Mr. Eisler:

I am glad to accept the invitation to me to become an honorary member of the Bertrand Russell Society.

I was interested to see that you quoted a statement from Russell's autobiography. This statement is not correct. Russell wrote to me, asking me to sign the manifesto. Because I was traveling or for some other reason my answer was delayed until after the first announcement had been made. I think that by this time Russell had forgotten that he had invited me to be a member of the original group, and thought that I was volunteering.

Sincerely,

LP:dm

Sir Karl Popper Is Dead at 92; Philosopher of 'Open Society'

CROYDON, England, Sept. 17 (AP) — Sir Karl Popper, a philosopher who was a defender of democratic systems of government, died today in a hospital here. He was 92.

He died of complications of cancer, pneumonia and kidney failure, said a manager at the hospital in this London suburb. Sir Karl was born in Austria but had worked in England since 1945 and lived near London.

Much of his work concerned science and the uncertainty of knowledge. But it was as a defender of democratic systems and an opponent of Marxism that Sir Karl was most widely known.

His book "The Open Society and Its Enemies," published in 1945, has been called one of the most influential books of the century. It was responsible for the widespread use of the phrase "open society."

Sir Karl argued that communism and fascism were philosophically linked.

In England, where he spent much of his career, his ideas and those of two economists, Frederick Hayek and Milton Friedman, provided the intellectual framework for the Conservative Party of former Prime Minister Margaret Thatcher. He was a professor of Logic and Scientific Method at the London School of Economics from 1949 to 1969.

His book "The Poverty of Historicism," another attack on Marxism, was published in 1957.

Sir Karl questioned the idea that there were inexorable laws of human history, believing history to be influenced by the growth of knowledge, which is unpredictable.

He presented his arguments about science in his first book, "The Logic of Scientific Discovery," published in 1934.

He argued that science does not proceed through verification, but through making bold, competing conjectures, exposing them to rigorous tests and eliminating those that have been refuted.

He said decades later that "next to music and art, science is the greatest, most beautiful and most enlightening achievement of the human spirit."

During the 1960's, Sir Karl came to be labeled a reactionary. He said that his views had been misrepresented.

"Criticism of my alleged views was widespread and highly successful," he said. "I have yet to meet a criticism of my views."

Karl Raimund Popper was born in

Sir Karl Popper

Associated Press

Vienna, the son of a prominent liberal lawyer, Simon Popper, who was a doctor of law at the University of Vienna, where Karl was educated. His mother was a pianist, Jenny Schiff Popper.

He was the son of Jews but was christened in a Protestant church. As World War II approached, he left Austria with his wife, Josefina, for New Zealand. There he became senior lecturer in philosophy at Canterbury College in Christchurch.

He came to London in 1945 to accept the post at the London School of Economics.

Karl Popper began his opposition to Marxism during his youth in Vienna, soon after World War I.

After considering himself a Communist for a few months, he witnessed a confrontation between Vienna police and young unarmed socialists trying to rescue some Communists from the police station. The police fatally shot several of the young people.

He said that while a Marxist would have accepted that such deaths might be necessary on the road to revolution, he could not.

In a 1992 interview with The Sunday Times in London, he remarked on the collapse of the Marxist states of Eastern Europe.

"I will not except to say, 'I told you so.' I just knew that these were beastly regimes and I kept saying so. That is all."

Sir Karl's wife died in 1985. He had no children.

Russell Society News
c/o Donald W. Jackanicz
3802 North Kenneth Avenue
Chicago, IL 60641-2814

To the Editor:

I read with pleasure David M. Daugharty's letter in the RSN No. 83. While I enjoyed Moorehead's biography of Russell, I wonder if she too quickly cast off Russell's activities in his final decade of life as being primarily orchestrated by Ralph Schoenman. Consider the fact that Schoenman is hardly mentioned in Feinberg and Kasrils' Bertrand Russell's America: 1945-1970. However, if Russell felt compelled to write a 7,500 word memorandum clarifying his relationship with him, then Schoenman's relative absence from Feinberg and Kasrils' book seems rather conspicuous. The key to understanding the extent of Schoenman's influence may be in the memorandum itself, but I have been unable to find it published. Moorehead's notes are a bit confusing; can it be found in Ronald W. Clark's The Life of Bertrand Russell? Can other RSN readers help?

With regard to Russell's stand on Vietnam, I must first confess a degree of ignorance. I was *born* during the Vietnam War (1967), and have not read extensively on the history of the conflict. However, having read many of Russell's works, I would offer two observations. First, and most importantly, Russell's stand on the war was entirely consistent with the values he advocated throughout his life. As Daugharty notes from personal experience, Russell was not an isolated old dupe for opposing the war.

The second observation concerns Russell's handling of the War Crimes Tribunal. I do not contest its findings (in fact, the evidence I *have* seen supports them; compare Crimes of Obedience by Kelman and Hamilton). However, criticisms of its impartiality seem justified. One concern is obvious, but hardly Russell's fault: no defense was offered by the U.S. However, even the balance of the proceedings lacked some qualities I think an impartial inquiry would have. The jurors appear to have been hand-picked, at least in part, by Russell. Also, Russell made several statements prior to the proceedings that indicated that he was convinced, prior to hearing any formally submitted evidence, that the U.S. was guilty as charged. This could have influenced his jurors. Also, Russell tended to give full credibility to reports from those who were predisposed to his own prior opinion. Fortunately he mitigated this by extensively using press reports from papers that were not opposed to the war.

My point is that Russell had strayed far from his own first commandment "Do not feel certain of anything." He hardly seemed like the same person who wrote:

The scientific attitude of mind involves a sweeping away of all other desires in the interest of the desire to know -- it involves suppression of hopes and fears, loves and hates, and the whole subjective emotional life, until we become subdued to the material, without bias, without any wish except to see it as it is, and without any belief that what must be determined by some relation, positive or negative, to what we should like it to be or what we can easily imagine it to be.

It is *this* part of Russell that I sensed missing in his later years. Whether a dupe of Ralph Schoenman or not, I cannot say; nevertheless, his late writings took on a tinge of surety, which may have been what truly disappointed some of his admirers.

I would be very interested in the thoughts of fellow RSN readers on these matters, whether in a reply to the editor or directly to my address above.

In RSN No. 84, I noted Sharon Morrison's letter mentioning Russell's On Education. I had spoken with Sharon about a copy I had located, and we intended to correspond. I could not locate her at UConn before I moved to TN (Sharon, I am interested in corresponding with you on Russell's theories and experiments in education. Please write or call me at the address above.).

Sincerely,

Carl A. Westman

RUSSELL'S ONLY PUBLIC APPEARANCE

(10)

BLACKWELL/RUJA BR BIBLIOGRAPHY REVIEWED

We offer congratulations to Kenneth Blackwell (Russell Archivist at McMaster University) and Harry Ruja (former BRS Board Chairman) on the appearance of their three volume work, A Bibliography of Bertrand Russell. This undated (December 1994 of January 1995?) review by Ray Monk in The Observer Review, p. 16 is the first of what we expect to be numerous complimentary reviews.

Politics, logic and adultery: if **BERTRAND RUSSELL** wrote about it, it's all in the files in Hamilton, Ontario. *Ray Monk* is astounded by an extraordinary bibliophile

The spirit and the letter

In a book published in 1974 called *The Link: the Extraordinary Gifts of a Teenage Psychic*, a curious conversation is recorded between Matthew Manning, the teenage psychic of the title, and the spirit of Bertrand Russell. 'Do you still believe that there is no life after death?' asks Manning, perhaps somewhat redundantly, to which Russell's spirit (determined, no doubt, to avoid an insoluble paradox) replies that, as a matter of fact, his views on the immortality of the soul have undergone a fairly drastic change since he found himself to be existing after his death. 'The universe is deathless,' the deceased Russell declares, 'because having no infinite self, it stays infinite.'

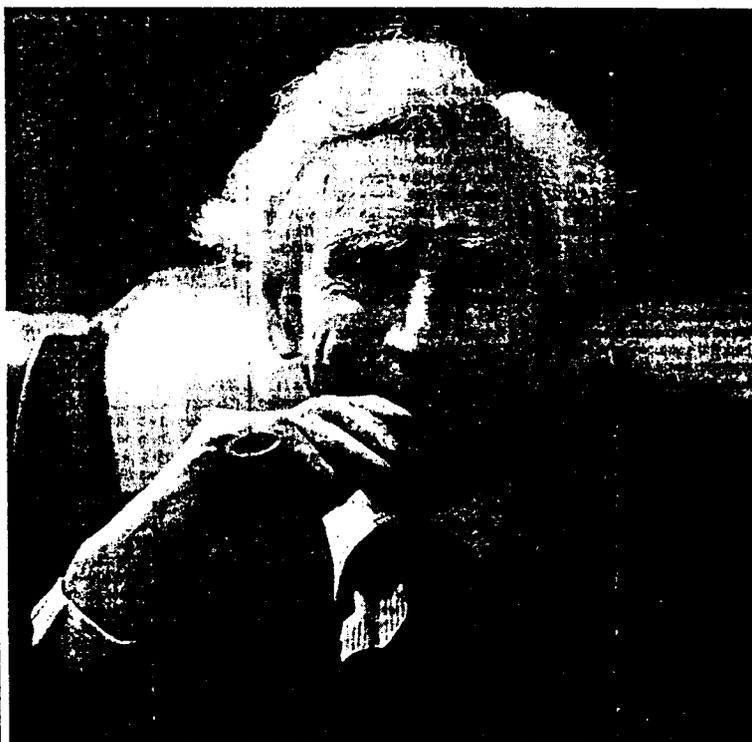

In the ordinary course of events this implausible exchange might have been lost and forgotten years ago, but it has now achieved a kind of immortality by being preserved (albeit in a section headed 'Spurious Publications') in *A Bibliography of Bertrand Russell*, a monumental three-volume set that seems certain to remain the definitive reference work on its subject for many generations to come. Indeed, it provides what is surely one of the most complete records of a writer's work ever compiled.

As well as listing all those things that have been falsely attributed to Russell (quite an undertaking in itself), it records, with an attention to detail that borders on the fanatical if not the insane, over 3,000 publications that are indubitably Russell's work. The result is an astonishing testament, both to Russell's awe-inspiring productivity and to the equally wondrous diligence of the bibliography's editors, Kenneth Blackwell and Harry Ruja.

It is the result of more than 30 years' work, which began in the early Sixties when Kenneth Blackwell, then an undergraduate student of philosophy in Canada, became interested in Russell and decided, with the reckless optimism of youth, to make a list of all Russell's publications.

By coincidence, Russell was at that time trying to find somebody to make a detailed catalogue of all his manuscripts - he had decided to sell his papers to the highest bidder in order to raise funds for the recently established Bertrand Russell Peace Foundation - and when, in the summer of 1966, Blackwell visited England and got in touch with him for help with his bibliographical research, Russell immediately enlisted him as a kind of live-in archivist.

For three weeks, Blackwell

worked in the basement of Russell's house in North Wales, putting into some kind of order the enormous collection of manuscripts and correspondence which Russell, then 94, had amassed over an extraordinarily prolific lifetime.

It was the beginning of an association between Blackwell and Russell's papers that has remained unbroken to the present day. Wherever the papers have gone, Blackwell has gone too. At the end of his three-week spell working in Russell's basement, the archives were sent to London to be catalogued, and Blackwell went with them to work for Continuum, the company employed to produce the catalogue.

With the Bertrand Russell Peace Foundation casting its net ever wider in its scrutiny of the dangers to world peace, and the War Crimes Tribunal beginning its work of indicting the United States for its crimes in Vietnam, these were heady days for those associated with Russell, and Blackwell did not remain immune from the intoxicat-

ing sense of involvement with world politics that prevailed among the Russell circle. 'Most of us felt,' he once told me, 'that, like Russell, we could make a difference.'

In the course of writing a biography of Russell, I have got to know Blackwell quite well, and when I once referred, with slight mockery, to Russell's habit of formulating his own personal foreign policy - 'I'm rather displeased with India at the moment,' he told one journalist who came to interview him - Blackwell exclaimed: 'We all did in those days!'

Being at the centre of this somewhat fantastic whirl of political activity served to increase still further Blackwell's dedication to both Russell and his work, and when, in March 1968, the archive was sold to McMaster University in Hamilton, Ontario, Blackwell - by now almost part of the collection - went with it. He has been there ever since, serving as Russell Archivist and continuing his quest to find and describe every book, article, and blurb that Russell ever wrote, every film and

Total record: 'I'm impressed,' said Russell, 'but I don't think it's worth it'

record he made, every speech and interview he gave (posthumously or otherwise) and even every snatch of his conversation that is recorded in the work of others.

Nothing is too trivial or too ephemeral to be beneath Blackwell's consideration. When, for example, he heard that, in one of Tony Hancock's 'Half Hours', Hancock was to be seen lying on his bed reading Russell's *History of Western Philosophy*, he immediately took steps to acquire a video of the programme for the archives.

Blackwell was not alone in his determination to detail Russell's entire publishing record. While he was in London, he learned that Harry Ruja, a Professor of Philosophy at San Diego State University, was on the same mission. After a short period of competition, the two did the only sensible thing and joined forces. 'Harry,' Blackwell says, 'is the only person who will pursue a bibliographical

lead longer, or harder, than I.' Anyone who has seen Blackwell at work will struggle to imagine someone more tenacious.

The question that must be asked, however much both Ruja and Blackwell have banished it from their minds, is whether a complete list of Russell's work really justifies the effort involved. Russell himself was in no doubt that it was not. 'I am impressed,' he told Blackwell, when he saw the number of things Blackwell had listed in 1966, 'but I don't think it's worth it.'

But when, in March 1945, he was asked what he had published since the previous June, he mentioned just one article on nationalism, and remarked: 'Otherwise I have published nothing to speak of. This "nothing", we can now see from Blackwell and Ruja's work, includes no fewer than 14 articles in newspapers and magazines, ranging from an analysis of political and military 'spheres of influence' in *The New Leader* to a discussion of 'What Makes a Woman a Fascinator?' in *Vogue*.

Of course, to the author of *Principles of Mathematics* and the co-author of *Principia Mathematica*, such pieces were practically nothing. And yet it is good to have them all duly recorded and listed, for they highlight what it is that makes Russell's huge corpus of work unique in the history of philosophy and literature: its truly astonishing diversity.

His early work on logic and mathematics has an importance in the development of philosophy comparable to the work of Kant, Locke, Hume, Wittgenstein or any of the other towering figures in the Western tradition. But the man who wrote 'On Denoting' - an article that has long been required reading for every undergraduate student of philosophy - was also the author of urgent comments on current affairs such as 'Has Man a Future?', of elegant and witty essays like those collected in *Scriptural Essays*, and of atrociously inept fiction like *Satan in the Suburbs* and *Nightmares of Eminent Persons*. He was a regular contributor - to glossy magazines like *Esquire*, *Vogue* and even, on occasion, to *Playboy* - of articles like the one he wrote for *New York's Glamour* magazine in 1943 on 'What to do if you Fall in Love with a Married Man'.

It is an amazing body of work, and, if this new bibliography forces us to realise how much dross a great philosopher is capable of writing, it also enables us to appreciate, perhaps for the first time, the full scope of Russell's achievement.

A Bibliography of Bertrand Russell edited by Kenneth Blackwell and Harry Ruja (Routledge £250)

(11)

JOHN SLATER ON RUSSELL

Below is an announcement from Thoemmes Press of Bertrand Russell by John G. Slater. The thirteen chapter titles are "A Sketch of His Life"; "Logic and the Foundations of Mathematics"; "Scientific Method in Philosophy"; "The Theory of Descriptions: An Example of His Method in Use"; "Metaphysics: 'The Skeleton of the World'"; "Epistemology: 'A Map of the Theory of Knowledge'"; "Ethics: The Ground for Moral Rules"; "Religion: A Sceptic's Testament"; "Political Theory: Liberal and Democratic"; "Political Activism: His Duty to His Family"; "The Importance of the Study of History"; "The Proper Role of Education in the Life of the Child"; "Some Thoughts on His Achievements".

NEW FROM THOEMMES PRESS

Bristol Introductions

A New Series edited by Ray Monk, University of Southampton

Bristol Introductions are short original texts that aim to present challenging perspectives on philosophical themes, using non-technical language. These books are intended to be of interest to both the new student and the more advanced scholar. Beginning with John Slater's book on Russell, future volumes in the series will explore the connections and tensions between philosophy and other disciplines.

BERTRAND RUSSELL

John Slater

With a Preface by Ray Monk

This book is intended as an introduction to Bertrand Russell and his views in a variety of fields. In addition to being one of the most important logicians and philosophers of this century, Russell was also, for a very long time, one of its most prominent public figures, and his influence on his time was not confined to academic subjects. Nearly all of his seventy-odd books, including some whose positions are now rather clearly dated, are still, or were until very recently, in print, a continuing tribute both to the attraction of his views and to the grace and polish of his literary style for which he was awarded the Nobel Prize in Literature in 1950.

From a long list of possibilities nine areas have been selected for discussion. Pride of place must go to his work on the foundations of mathematics and to the philosophical method which he developed as a consequence of his successes in that field. This he used to tackle metaphysical and epistemological problems, a sampling of which are included. To provide the reader with examples of the more popular side of his work, there are discussions of positions he defended in the philosophy of religion, political philosophy, history and education. One of the dominant themes of his life, and the one for which he was widely, and at times notoriously, known, was his political activism. Like his grandfather, Lord John Russell, before him, there was hardly a public controversy on which he failed to bestow an article or a pamphlet, often a very provocative one.

Occasionally he paid a heavy price for his intervention: he twice served time in prison for his political activities. In addition to these areas Russell contributed to many others, but this sample provides the reader with a good idea of the scope of the influence he had on his age. If the predicate 'polymath' is to be applied to anyone in our century, it surely applies to him. It is painful to have to omit discussion of any part of his work, but this book will have done its work if it leads its readers to explore his own writings for topics of special interest to them. If they do, they will find him a delightful author to read, and one whose opinions and the defence of them are bound to provoke thought, a cause very dear to Russell's heart.

Professor John Slater, widely acknowledged to be the greatest authority on Russell's printed writings, has been teaching at the University of Toronto since 1964. His principal interest has always been the philosophy of Russell. He has been closely associated with the Russell archive at McMaster University and has been instrumental in the edition of the Russell Papers of which eight volumes of a projected thirty have been published, three of which were edited by him. Professor John Slater also formed the largest collection of printed Russelliana in existence which is now in the Fisher Rare Books Library at the University of Toronto.

WELLS BIOGRAPHY BR REFERENCE

For those interested in matters pertaining to H.G. Wells, Shaw, the Bloomsbury Group, the Fabians, and BR, here is an excerpt from Michael Coren's The Invisible Man: The Life and Liberties of H.G. Wells (New York: Atheneum, 1993), pp. 132-135. Our thanks to Linda Egendorf.

he called for an American blockade of the Germans, so as to starve them into submission. As when he was a boy in Kent, the glamour and glitter of war made his head swirl with images which belied reality.

Various friendships were twisted or broken by Wells' attitudes during the war, but no rupture received more publicity than that with George Bernard Shaw. Ever since the Fabian campaign Wells and Shaw had tiptoed along a thin, crooked line between strained friendship and downright contempt. They had walked well and successfully. Now Wells learnt that Shaw's attitude towards the war was that of informed cynic. Nobody was entirely correct, he believed, but he and his family happened to be resident in Britain and hence did not desire a German victory. He playfully compared the combatants to pirates. Late in 1914 Wells wrote an article in the *Daily Chronicle* on the subject of Scandinavia's role in Northern Europe, and referred to Shaw's muddle-headedness. This was the spark for the latest episode in the debate. Shaw soon replied:

There is a point at which Mr Wells' mind gives way. There are two symptoms. One of them is the now familiar and apparently inevitable English symptom of a kind of breakdown; a sudden and unprovoked attack on me. Mr Wells, without a word of warning, calls me muddle-headed. Muddle-headed! Mel Bernard Shaw! the man whose clarity England can often hardly bear! I ask you - I Well no matter . . .

He went on to eviscerate Wells' argument about Swedish intentions and aspirations, and as in past disputes to make Wells appear as a callow amateur, this time badly versed in diplomacy.

Wells' reply was long and heartfelt. His letter claimed that Shaw was a mischief-maker, an attention-seeker, an eclectic gatherer of second-hand theories and opinions, an irresponsible and shallow man. He continued:

The first thing he does almost invariably in his controversies, if one may give his displays so dignified a name, is to create a serio-comic atmosphere, the Shavian atmosphere, by wild boasting about his mental clarity and facetious abuse of his antagonist. My mind he declares is 'giving way' and so on. At this the well trained Fabian spinster smiles almost maternally and prepares for the next phase of the 'intellectual treat'. This is a carefully untruthful statement of the antagonist's position.

in condemning and ostracizing him. There were many within the anti-war movement who refused to speak to Wells ever again and took every opportunity they had to slander him and blacken his character. They could not forgive him for describing their resistance to the popular mood as a 'scream of extreme individualism'; they would not forgive him for achieving so much acclaim by his actions during the war. Some of the Fabians and certain members of the Bloomsbury group were particularly venomous; writing some forty years after the events, Bertrand Russell still dipped his pen with malice:

Wells was assailed in the Press . . . for his advocacy of free love. He replied somewhat heatedly that he had not advocated free love, but had merely prophesied possible effects of new ingredients in the atmosphere without saying whether he thought these effects good or bad. This seemed to me disingenuous, and I asked him, 'Why did you first advocate free love and then say you hadn't?' He replied that he had not yet saved enough money out of royalties to be able to live on the interest, and that he did not propose to advocate free love publicly until he had done so . . . After this I did not see much of him until the First World War had ended. In spite of his previous attitude about war with Germany, he became exceedingly bellicose in 1914 . . .

The war represented a watershed in Wells' life. Not only had he altered his political positions, but he had also taken on a new attitude in his personal and social affairs. He seemed to age quickly in the early years of the war, taking on a haggard look not previously noticeable. In the past most of Wells' friends, and some of his enemies, remarked on his seemingly eternal youthfulness; his features and demeanour were often boyish, they remarked, in spite of regular bouts of physical pain and the onslaught of diabetes and stomach ulcers. He drew up a new will in 1914, and asked Robert Ross to be his literary executor. He and Jane placed their sons Gip and Frank, now thirteen and eleven years old, in Oundle boarding school, and settled into the now completed home, renamed Easton Glebe.

This was a relatively good period for the partnership of Wells and Jane, a time when they saw much of one another and appeared to relish the duties and obligations of master and mistress of a sizeable country home. At various stages in his life Wells felt an overwhelming need to play the roles of husband and father and to

I say 'carefully untruthful'; he does not err, he deliberately distorts. In this instance he declares that I think that Germany is holding out Finland as a bait to Sweden and so on. It is nothing to Mr Shaw that I did not suggest anything of the kind; the glib falsehood is necessary in this case and he utters it with as light a conscience as if, instead of offering rubbish as international politics, he was introducing a panacea at a fair.

This was an angry and hurt H.G. Wells. He had never fully recovered from his drubbing at the hands of Shaw and the Fabians. This was more than a dozen years later; Wells had achieved so much in his life, yet those same people still dared treat him with suspicion, even patronizing dismissal. For his part, Shaw was genuinely disturbed by Wells' political posturings. The difference was that the eternally self-confident Shaw could hide his feelings behind humour and contrived indifference; Wells was rarely, if ever, capable of such disguise. In this respect Wells was the more honest of the two men and certainly deserves some sympathy. He had not been brought up to play what Shaw saw as the 'great game' of witty insults and pithy attacks. Arnold Bennett was certain that he once saw Wells cry after a morning of quarrelling with Shaw, partly because he was sorry for himself but mostly because of sheer desperation and an inability to fight back with the same weapons. Wells' life-long protestations that he was at heart just a simple man were to a certain extent true.

The conflict deepened when Shaw published 'Common Sense About the War' in the *New Statesman*. The series of articles poured scorn on the allied effort, claimed that the war was merely an excuse for the British to take on their long-term imperial rivals, and urged the rank-and-file military to rebel and shoot its leaders. Wells hit back:

Mr Shaw is one of those perpetual children who live in a dream of make believe and the make believe of Mr Shaw is that he is a person of incredible wisdom and subtlety running the world . . . an idiot-child screaming in a hospital, distorting, discrediting, confusing, and at the end, when it is all over, we shall have voluminous pamphlets and prefaces explaining how modestly and dexterously he settled the Prussian hegemony and rearranged Europe.

The argument simmered throughout the war, but although Shaw came close to it, he never completely lost his temper with Wells and refused to forsake his former friend or join with others

return to Jane and the family home. The new will and bouts of poor health certainly brought on such a phase. Wells' autobiography lovingly and proudly reproduces photographs of the building of the house and of the interior of the study. Easton Glebe was comfortable and informal, capacious and aesthetically pleasing. Twelve bedrooms meant that guests could be accommodated, and the house was rarely free of them. As if to deny the effects of advancing age Wells planned intricately organized games of hockey and volleyball, and a full-size tennis court was built for those less enthusiastic about team sports. He was determined and merciless when he played sport, particularly if his opponents were younger than him - there was something to prove. The Wells house was a gathering place, a meeting place, a recreational think-tank. Jane worked hard on the garden and in supervising the kitchen. For a while the household was a content, even happy one.

Arnold Bennett was a frequent visitor, a friend now of Jane as well as Wells. He recorded in his inimitable journals a stay with his friends in October 1915.

Left home at 10 a.m. and drove over slippery roads in a Scotch mist to Little Easton. I walked with Wells in the park at dusk. Stag rutting season. All the bucks were roaring like lions, and we were somewhat intimidated. Two of them made a show of fighting, but funk'd it. Before this, original ball games in the arranged barn, in front of which a farmyard and cesspool had been turned into a very slightly sunk garden with bathing tank in the middle. Immense park, belonging to Lady Warwick, and practically wasted for useful purposes. And there must be hundreds such. 'It ought to be taxed out,' said H.G.

Lady Warwick was something of a patron. She had long been a friend of Wells, had supported him financially when times were particularly difficult and had also acted as his champion in polite society. She was at the centre of a political and artistic set which numbered Fabian writers, labour politicians and fashionable novelists among its members, and she relished their controversial views and heated exchanges. She was often at Easton Glebe and invariably brought some of her followers with her. The Wells house was in turn at the centre of a small literary community. Journalists R.D. Blumenfeld and J. Robertson Scott, editor of *The Countryman*, were neighbours, and author H. de Vere Stacpoole

HUGO BLACK AND RUSSELL

U.S. Supreme Court Justice Hugo Black is the subject of Roger K. Newman's Hugo Black: A Biography (New York: Pantheon Books, 1994). Here is a reduced-size one page excerpt (p. 448) discussing Black's study of philosophers including Dewey and Russell. Thanks to Tom Stanley for this item. Also below for a bit more historical information are a photograph of Black and the first paragraph of the article about him appearing in The Oxford Companion to the Supreme Court of the United States, Kermit L. Hall, editor in chief (Oxford and New York: Oxford University Press, 1992), pp. 72-75.

448

HUGO BLACK

for getting to the bottom of things. Intellectually he had a kitten's curiosity. He was hellbent on truth and intent on understanding. Only then could the practical idealist move to reform most efficiently.³

Philosophers helped in the pursuit. Certain types of technical philosophy gave Black problems. "Hegel's and Kant's works have always been a little difficult reading for me," he confessed. But public-spirited philosophers were different. Black acknowledged the influence of John Dewey's functional approach: "My daughter has frequently told people that if they want to find out what I think they should go to Dewey's works." In a different way Bertrand Russell also influenced Black. When he went in for a hernia operation in September 1956, he was on a Russell reading binge. He took several Russell books to the hospital and was talking about Russell to the doctors and nurses as they wheeled him into the operating room. By the time he left a week later he had the hospital staff reading and discussing Russell.

Black read more in the years after Josephine's death than at any other time. He was a man of regular habits—the same meals each day (light breakfasts and lunches, but a normal-size dinner), the same routine each evening, watering his garden before steak for dinner, then working on an opinion afterward—and he set aside a certain amount of time for reading daily. He kept a pile of books by his bed, and the reading lamp over it burned a hole in the mattress. To him it was part of his job. He continued his regular summer reading program focusing on specific topics. One summer it was all of Dickens and Scott. In the summer of 1950 he read all of Macaulay. The next year he told a clerk to go to a certain part of one of Macaulay's books, where he would find something on bills of attainder; Black put it in the opinion. He was necessarily selective in his reading: he enjoyed novels but read fewer over the years, as he felt he could more fruitfully spend his thinking time on books from which he could gain knowledge, perspective or understanding.⁴

No modern figure supplied any more of those qualities than Thomas Jefferson. He was Black's "number one, number two and number three" historical hero, noted Hugo, Jr.—and had been since law school. "There are few things that have been written about Jefferson that are not interesting," Black said. He practically downed Jefferson whole. And although Jefferson's cup of libertarianism was chronically overflowing, Black did not even ask him before replenishing his supply. To Black, Jefferson epitomized the mellow respect and tolerance that are the heart of democracy, as Black's underlinings

Black, Hugo Lafayette (b. Harlan, Ala., 27 Feb. 1886; d. Bethesda, Md., 25 Sep. 1971, interred Arlington Cemetery, Arlington, Va.), associate justice, 1937-1971. Black's humble origins as the son of a storekeeper in rural Clay County, Alabama, offered little basis for optimism about his future career. His two-year undergraduate law program at the University of Alabama and brief tenure as a Birmingham police court judge were equally discouraging. But his intelligence and sheer determination—traits inherited largely from his beloved mother—enabled Black to overcome the tremendous odds his background posed. By the early 1920s he was elected to the first of two terms in the U.S. Senate; and in August 1937 he became Franklin D. Roosevelt's first appointee to the Supreme Court, a position he held for thirty-four years until his retirement in September 1971, a week before his death.

CHOMSKY'S PHOTOGRAPH OF RUSSELL

Noam Chomsky's latest book, Keeping the Rabble in Line (Monroe, Maine: Common Courage Press, 1994, 319 pp., \$12.95), is a series of interviews with David Barsamian. This description appears on the backcover: "From one of the world's most formidable political cartographers, a map to the emerging global economic regime[.] In these interviews, Noam Chomsky outlines his views on a wide range of pressing issues including: global warming; free trade and international capital; health care; fascism and the structure of corporations; China, trade and human rights; a comparison of Chiapas and South Central Los Angeles; gun control and the death penalty; the deterioration of intellectual culture; the democracy deficit; the politics of the information highway." This two page excerpt (pp. 144-45), in reduced-size print, concerns Russell.

KEEPING THE RABBLE IN LINE

Keeping the Rabble in Line

INTERVIEWS WITH
DAVID BARSAMIAN

told me this was what his kids were saying, what did I think he ought to do? Usually I didn't answer. This once I said, if you want me to tell you the truth, I'll tell you the truth. I told him what I thought. About a week later I got a message signed Labor Committee Intelligence Service: our Intelligence Service has learned that you're spreading rumors about the party. You have one week to clear yourself of these charges. I threw it into the waste basket. Shortly after their newspaper started coming out with crazed attacks. The funniest one was a pamphlet they put out for the Bicentennial, July 4, 1976. It was called "Terrorist Commanders." It had on the front a picture of me and Marc Raskin. It was quite amusing. It was about how the two of us run the KGB and the CIA and the PLO and the Queen of England and whoever else was in their conspiracy at the time. They said we were planning to put atom bombs in major U.S. cities at the time of the Bicentennial. I got it in August, a month after. Usually these end-of-the-world people, when it doesn't happen they have some reason. But they were still predicting it a month after it didn't happen. That was put on the windshield of my car with a death threat scribbled on it. I won't go into the details of what happened next. I didn't hear from them for a while. Since then it's similar things.

DB *Anyone who comes to visit your office at MIT will see a very large black and white photograph of Bertrand Russell in the hallway next to your door. What's the story behind that photograph?*

He's one of the very few people that I actually admire. I did have a big photograph of him. The office

Class

was vandalized during the Vietnam War years. A sauerkraut bomber. One of the things that was destroyed was that picture. Somebody succeeded in putting up another one.

DB *So does Russell exemplify the responsibility of intellectuals?*

Nobody is a hero, but he had a lot of very good characteristics and did a lot of things that I admire.

DB *You do endless rounds of interviews, and I certainly inflict a fair share of them on you, how do you keep awake, much less sustain interest? What constitutes a good interview? What engages you? The questions are interminable, and usually the same.*

They're not always quite the same. And I have to rethink things anyway. These are very important and interesting topics, and as long as people are interested in them, I'm going to keep talking about them.

DB *You can stay awake?*

Most of the time.

DB *Thank you.*

(17) DID RUSSELL BORROW COMPASSION FROM CHRISTIANITY?

Thanks to Steve Shafer for bringing this article (Chicago Tribune, January 22, 1995, section 4, pp. 1, 5) to our attention. The article discusses Jewish and Christian notions of compassion for the poor in the context of today's debate on U.S. political and social issues. The article's Russell reference, a quotation from Michael Novak of the American Enterprise Institute, reads "Bertrand Russell, the atheist mathematician and writer, pointed out honestly that he borrowed the idea of compassion from Jesus, as wise humanists do." Would any RSN reader care to substantiate or refute Novak's claim?

Winds of change seem unlikely to cool off our compassion for poor

By Paul Galloway

In the approaching debate on welfare reform, it's a virtual certainty that no one will challenge the principle that society has a responsibility to its unfortunate.

It is a principle that is central to the world's three major monotheistic religions and so deeply embedded in our national consciousness and culture, so much a part of our national ethic, that no one in public life will question it, conservative or liberal, Republican or Democrat, believer or nonbeliever.

To the followers of Judaism, Christianity and Islam, God is adamant: The individual and the community are required to help the weak and the poor, the sick and the hurt, the impaired and the uprooted.

Indeed, the holy books of these faiths and the commentaries of their sages could be viewed as a "Contract with Humanity," a magnanimous theological counterpart to the GOP's vaunted political document, "Contract with America."

For government, God is in the details—coming up

Paul Galloway is the Tribune's religion writer.

with a method of defining the needy and rendering aid that is fiscally sound and yet consistent with the country's beliefs about benevolence.

Even the lawmakers who seek to impose limits of financial assistance to unwed mothers, for example, will declare they are acting for the good of the recipients as well as the taxpayers by freeing them from the bondage of dependency.

While some may doubt the sincerity of such avowals, SEE COMPASSION, PAGE 5

Compassion

CONTINUED FROM PAGE 1

it's likely that few of us will pause to look back through the centuries and consider how remarkable it is that our legislators—and almost everyone else, for that matter—at least pay lip service to the ideal of caring for those in need and how stunningly radical this idea once was.

"Probably the most important thing that Judaism and Christianity introduced into the world was the notion of the fundamental equality of all human beings—rich and poor—in the eyes of God, who sees through wealth and status straight to the human heart," says Michael Novak, who holds a chair in religion and public policy at the American Enterprise Institute in Washington.

"No one thought like that in Greece or Rome or Egypt or anywhere else," he says. "Philosophers then embraced inequality. Plato saw the leaders of society as gold, people at the next level as silver, but many to him were like lead, people with 'slavish emotions' who deserved to be slaves."

A corollary of the Judeo-Christian doctrine of equality was the need for compassion and outreach. "The Hebrew prophets talk about caring for the widow and the poor and sick," Novak says, "and Jesus intensifies that, saying, 'What you do for the least of these, my brethren, you do for me.'"

"Even atheists have accepted this Jewish and Christian ideal. Bertrand Russell, the atheist mathematician and writer, pointed out honestly that he borrowed the idea of compassion from Jesus, as wise humanists do."

Six centuries after Christ, the prophet Muhammad began to receive revelations from God, which are contained in the Koran and which mandate generosity in strong, absolute terms.

"A pillar of Islam is *zakat*, which is alms-giving," says Ghulam-Haider Aasi, professor of religious studies at American Islamic College. "It is obligatory. You must share part of your wealth with the needy. Further, a just society or government also provides for the unfortunate and assures that all are provided food, education and health care."

Because Judeo-Christian tenets are far more entwined with Amer-

ican history than those of Islam, it would perhaps be instructive for members of Congress and state legislatures, before wrestling with welfare, to reflect on these traditions, their origins and development.

■ **Judaism:** "In our religion, it is an obligation to give generously, through tithing and taxation, to help the less fortunate," says Rabbi Stuart Altshuler, pastor of

'In ancient Rome and Constantinople, there were doles to the poor, but they were given to keep the masses quiet and prevent rebellion, not out of compassion.'

Author Justo Gonzalez

Beth Hillel Congregation in Wilmette. "Our God commands that we do not turn away from the orphan, the widow, the abandoned, the needy. The Hebrew word for this charity is *tzedakah*, which means justice."

Says Carol Davidson, coordinator for community outreach at the Jewish Theological Seminary of America: "We are told in no uncertain terms that *tzedakah* is one of the most important commandments we can follow. It is not voluntary. You are forbidden from turning away from need."

■ **Christianity:** "There's a tradition in Hebrew law in the Old Testament where the landowner is forbidden to reap his grain more than once. What was missed was to be left for the poor. It belongs to them. To go over the land again is to steal from the poor," says Justo Gonzalez, author of "The History of Christianity" and "Faith and Wealth."

"Almost all the ancient writers in the early Christian church picked up that tradition, declaring that whatever Christians do not need belongs to the poor. This was an act of justice, not charity. It was considered theft not to give to the poor, and homicide, if a person in need died because someone neglected his duty to give."

"In ancient Rome and Constantinople, there were doles to the

poor, but they were given to keep the masses quiet and prevent rebellion, not out of compassion."

Granted, Judaism and Christianity dictate that individuals and communities give to those in need, but what about the state's responsibility?

Says Davidson of the Jewish Theological Seminary: "Judaism has had an uneven relationship with governments. When Israel was occupied by Rome, we had a poor relationship, as we've had in other countries where we have been mistreated. In America, which has been open and accepting, Judaism endorses our supporting the needy through welfare with our taxes."

Says Gonzalez: "The New Testament was written by Christians for Christians when Christians had no clout with governments, so it says practically nothing about the obligation of the state to the poor."

"The Old Testament, on the other hand, was written in different circumstances. When Israel had autonomy and resources, the prophets repeatedly speak of the obligations of the king to judge for the poor. They don't expect the king to be evenhanded; they expect him to be an advocate for the poor."

"Does the state have an obligation to help the needy? The short answer is yes," says Charles Wilber, professor of economics at the University of Notre Dame who was an adviser to the U.S. Roman Catholic bishops' 1986 pastoral letter, "Economic Justice for All."

"Roman Catholicism is fundamentally communitarian," Wilber says. "We believe we have obligations to our neighbor as individuals and as members of a community in establishing policies and institutions that enable all of us to participate."

"We believe the best way to do this is starting at the lowest level. Individuals and families should provide for themselves. If unable, then the next level of help should be the parish or church, then the neighborhood association, the county, the state. Finally, the federal government must take on responsibility."

"So yes, we are obligated both as individuals and citizens to be our brother's keepers. The question is finding the best way to do it."

(18)

STUDS TERKEL, INTERVIEWER OF RUSSELL, ET AL.

The February 1995 issue of *The Atlantic Monthly*, pp. 99-100, carried this article about actor/author/interviewer Studs Terkel and newly issued audiotapes of some of his most notable interviews. Note both the Russell-related paragraph in column four and the company Russell has in the clever drawing. Thanks to John Jackanicz and Tim Madigan who spotted this article.

RECORDINGS

A Voice for the Underdog

Studs Terkel's vanishing kind of decency is on display in a taped sampling of his radio show

FOR forty-two years, five hours every week, Studs Terkel has been the host of a music and interview show on WFMT, a Chicago radio station. In the six hours of *Four Decades With Studs Terkel* (four cassettes, High-Bridge, \$25.00) there are conversations with forty literary, musical, and intellectual figures, ranging from Dorothy Parker

to Mahalia Jackson to Bertrand Russell—but no politicians. Why? "They're so dull," Terkel told me when I talked to him recently. "Now, if I could have interviewed Bob La Follette, Senator Norris, or Eugene V. Debs..." His cigar-ured voice trailed off, his point made.

Terkel's parents operated a residential hotel for men near Chicago's club and

theater district, and young Louis (that's Studs's real name) grew up in the vivid thick of opera, jazz, blues, and drama. After graduating from the University of Chicago Law School, Terkel became an actor. While he was a member of a Works Projects Administration writers' project, he also appeared in the first production anywhere of *Waiting for Lefty*, Clifford Odets's play about America in hard times. He played Joe, a tough cabdriver—a role for which his city-guy voice suited him. Terkel talks "city" the way Ross Perot talks "country."

Indeed, for Terkel, talking city was the way up. It got him on 1940s radio serials—he was Butch Malone, gangster, on *Ma Perkins*, and again a gangster on *The Romance of Helen Trent*—and then it made him the DJ of his own music show, *The Wax Museum*, on which he played jazz, folk, opera (hamming up the libretti), and the blues. "I was the first white guy to play Mahalia Jackson," he told me proudly. An acting job followed in an early television series called *Studs's Place*, a live *Cheers* set in a Chicago restaurant. "We did TV Chicago-style," he said. "Improvising." Though the show was a hit, his sponsors—Manor House coffee—were nervous about Terkel's politics. "I had signed my name to all kinds of petitions in the thirties and forties," he explained. "I was against Jim Crow, for rent control, for 'Friendship With Our Wartime Ally'—the Soviet Union. Some of the originators and circulators of those petitions were Communists or fellow travelers: the enemy within, in the early fifties. A deputation from his sponsors called on him. Things could be made right if he would issue a statement saying he had been "duped" into signing. "But I wasn't duped. I was against Jim Crow!" It wasn't principle that kept him from recanting, he said. It was vanity: "I was too smart to be a dupe!" He was blacklisted from both commercial radio and TV. And of course it was principle.

Jobless, Terkel heard Woody Guthrie's voice purring from his radio one night. That was the station for him. He called, asking if he could work there. It was WFMT.

FOR an author, being a guest on Terkel's show is uniquely gratifying: not only has Terkel read your book but he has dog-eared pages and scored passages throughout. In a content-driven business he appreciates style. He loves good writing. This comes through in his interviews on these tapes with Eudora Welty, Arthur Miller, Isaac Bashevis Singer, Toni Morrison, and Tennessee Williams, who tells Terkel that he is drawn to incomplete people—"people that have problems, people that have to fight for their reason." People like Blanche DuBois. Illustrating Nietzsche's idea of the eternal return, Singer tells Terkel that he feels they met in a past life. "You think we've been here before?" Terkel asks, his ham-and-egg materialism edging his voice with incredulity. "I think so," Singer replies, adding, with Benynesque comic timing, "I'm not so sure if we had an interview on the radio before." Terkel has Norman Maclean read the last, haunting passages of *A River Runs Through It*. Garry Willis reads from George Washington's farewell address, and Margot Fonteyn from her book on the history of dance, delightedly quoting to Terkel an early nineteenth-century writer in the *London Times* on the waltz: "this lascivious intertwining of the limbs."

Bertrand Russell, interviewed in the midst of the Cuban missile crisis, sounds so much like one of Dickens's squirrely-voiced old men—Scrooge, say, or the Aged P. from *Great Expectations*—that you cannot take his apocalyptic musings any more seriously than his pithy solution to the planet's ills: "The first requisite is world government, with a monopoly of all the major weapons of war; . . . great diminution of fanaticism; and . . . a raising of the level of the underdeveloped countries. Ultimately everybody should be at least as well off as people are in the United States." That answer conveys volumes about the Victorian world in which Lord Russell was reared—its firm grasp of first principles, its unshakable confidence. There is a similar historical suggestiveness in this 1972 exchange with Daniel Ellsberg:

Q: "When was *Pentagon Papers* first published?"

A: "June 13, 1971, a million tons of bombs ago."

Terkel asks Andrés Segovia why he decided to play the guitar and not "established instruments" like the violin and the

piano. Segovia replies in musically accented English that the pianists and violinists in his village were "very meedeocre." So bad, in fact, that a friend came to describe the piano as "a rectangular monster—he yells when we touch his teeth." Mortimer Adler is pompous. Barry Lopez is too lofty for Terkel: Lopez insists that hunting is a spiritual activity; Terkel asks, What about hunger? Busy Leonard Bernstein has to catch a plane. James Baldwin inhales, eloquently. Kenneth Tynan is wonderfully quotable. Zero Mostel and Mel Brooks are hilarious. Music leaves the talk and serves as a border between one talker and another. And there is the voice and persona of Studs Terkel.

WHAT is special about that voice? This: it is a voice for the underdog, a voice that often registers laughter but never derision. It has been a long time since I heard another radio voice so liberal and humane and yet so rooted. When the African-American poet and author Maya Angelou, in a moving interview, tells of how her grandmother was called by her first name by "the poor white trash" who farmed her land, I wondered, Will Terkel let that pass? Not a chance: "Victims themselves, victims themselves," he interjects, and Angelou, to her credit, quickly agrees. You can count on Terkel for that kind of decency. At a time when mockery and hatred of difference rule the radio dial, poisoning the hearts of America against pity and compassion in this era of majoritarian right-wing populism, Terkel's humanism and tolerance, his generosity of feeling, are worth a full-throated cheer. His social perceptions flow from his literary and musical culture, not from political correctness. Style, language, story, rhythm, voice, tone, laughter: these aesthetic qualities, these properties of language and music, have made him feel more. Feeling more, he sees more. Seeing more, he cares more. The arts and humanities, his example suggests, are the proper stuff of character education. Certainly they have wrought a beautiful character in him. (Terkel's eighth oral history, *Coming of Age*, will be published by The New Press in the fall.) ☐

Interviewees depicted on page 99, clockwise from top left: Mel Brooks, Zero Mostel, Andrés Segovia, Margot Fonteyn, Bertrand Russell, James Baldwin, Arthur Miller, Maya Angelou, Eudora Welty, Tennessee Williams, Toni Morrison, Isaac Bashevis Singer, and Leonard Bernstein.

RUSSELL SOCIETY NEWS

No. 86, May 1995

The Bertrand Russell Society

3802 North Kenneth Avenue; Chicago, IL 60641-2814; U.S.A.

The Bertrand Russell Society was founded in 1974 to foster a better understanding of Russell's work and to promote ideas and causes he thought important. The Society's motto is Russell's statement, "The good life is one inspired by love and guided by knowledge."

Russell Society News is a quarterly issued in February, May, August, and November. Beginning June 1, 1995, letters to RSN should be addressed to Michael J. Rockler, Editor at 14213 Chesterfield Road; Rockville, MD 20853; U.S.A.

FROM THE PRESIDENT

Michael J. Rockler, President, The Bertrand Russell Society

Russell discussed the nature of democracy in many of his writings. I recently read "What Is Democracy?" in Fact and Fiction. This essay, like so much of Russell, remains relevant for anyone who seeks clear and rational writing about the nature of democracy.

Russell writes that democracy is valuable because it can prevent large scale atrocities; this Russell sees as the first and greatest merit of democratic governance. Russell, at the time of this writing (about 1950), believed that democratic process could prevent the kind of excesses then occurring in Stalin's Soviet Union. Whether Russell continued to believe this during the Vietnam war is difficult to say. Eventually democratic resistance did end that war--one which Russell vehemently opposed.

Democratic societies, Russell argued, are controlled by the people most affected by war and would therefore be less likely to favor armed conflict. Once a conflict begins, however, democracies are more likely to win the war because they usually only occur when there is popular support. Again the results of the Vietnam war support Russell's perspective since that conflict never really had wide popular support.

Russell also believed that democracy enhanced intellectual freedom--a quality not found in despotic regimes. A democratic society, Russell argued, is more likely to practice toleration. This is the case because majority rule must recognize the rights of the minority. Democracy must find a balance between individual initiative and the need to submit to the views of the majority.

In other writings, Russell was troubled by the human tendency toward the "herd instinct." This aspect of human nature could lead persons astray and cause them to follow leaders and causes which were ultimately irrational. Russell felt, however, that the democratic paradigm had the best chance of holding this tendency in check.

One of Russell's major concerns is the possibility that democratic societies could by majority rule curtail individual liberty. This concern is one of the themes of Russell's book on teaching and learning, Education and the Social Order.

I thoroughly enjoyed reading this essay and others in Fact and Fiction which I purchased recently on a trip to the Russell Archives at McMaster University. Tim Madigan and I enjoyed seeing Ken Blackwell and Sheila Turcon and once again being in the presence of so much Russell material.

Ken Blackwell will attend the annual meeting (details of which are described elsewhere in the newsletter) and receive the BRS Book Award on

behalf of himself and Harry Ruja. I hope that many members can join us on the weekend preceding the Fourth of July in Columbia, Maryland for the opportunity to study Russell's works and socialize with other kindred Russell spirits.

On a personal note, this will be the last column that I write as President of the BRS. This summer at the board meeting, I intend to step down from the presidency which I have now occupied for six years. I hope to become the new editor of the newsletter and in that role continue to communicate with the members of the BRS.

I hope you can join us for the annual meeting. I look forward to seeing all of you.

(2)

1995 ANNUAL MEETING

The following is in part an update of information appearing in RSN, No. 85 (February 1995) and in part a repetition of material in that issue.

The 1995 annual meeting of The Bertrand Russell Society will be held Friday, June 30 through Sunday, July 2 in Columbia, Maryland, U.S.A. at The Columbia Inn Hotel and Conference Center. It is our hope that you will decide to join us.

The latest revised tentative program schedule is as follows:

Friday, June 30, 1995

- 4:00 - 6:00 p.m. Registration
- 6:00 - 7:30 p.m. Dinner (on your own)
- 7:30 - 7:45 p.m. Welcoming Remarks
- 7:45 - 9:00 p.m. Awarding of the 1995 BRS Book Award to Kenneth Blackwell and Harry Ruja; acceptance speech by Kenneth Blackwell
- 9:00 - 11:00 p.m. Board of Directors meeting (all members welcome)

Saturday, July 1, 1995

- 8:00 - 9:00 a.m. Registration
- 9:00 - 10:00 a.m. John Shosky, "Multiculturalism, Authenticity, and Enlightened Self-Interest: Bertrand Russell and the Quest for Political Recognition"
- 10:00 - 10:15 a.m. Coffee break
- 10:15 - 11:15 a.m. Michael J. Rockler, "Russell and Education: Russell's Debt to Locke"
- 11:15 - 12:15 p.m. Bertrand Russell Society business meeting
- 12:15 - 2:15 p.m. Lunch (on your own)
- 2:15 - 3:15 p.m. Timothy Madigan, "Russell and Dewey on Inquiry"
- 3:15 - 3:30 p.m. Coffee break
- 3:30 - 4:30 p.m. First presentation by Paper Prize Competition Winner

4:30 - 5:30 p.m. Free time
5:30 - 7:00 p.m. Red Hackle Hour
7:00 - 10:00 p.m. Banquet; Awarding of BRS Award to Zero Population Growth;
Banquet address by Susan Weber, ZPG Executive Director

Sunday, July 2, 1995

9:00 - 10:00 a.m. James Alouf, "Bertrand Russell as Teacher Educator"
10:30 - 10:45 a.m. Coffee break
10:45 - 11:30 a.m. Second presentation by Paper Prize Competition Winner
11:30 - 12:15 p.m. Peter Stone, "Problems of Power in Russell's Politics"
12:15 p.m. Closing

Columbia, Maryland is situated about half-way between Washington, DC and Baltimore, Maryland. The Columbia Inn lies 25 miles from downtown Washington, 20 miles from downtown Baltimore, 15 miles from Baltimore/Washington International Airport, 30 miles from Washington National Airport, and 47 miles from Dulles International Airport. A modern hotel and conference facility, The Columbia Inn has ten wooded lakeside acres, 289 guestrooms, full hotel services, and covered garage parking. Dining, shopping, and entertainment are nearby.

Meeting registration is being handled by the BRS. Hotel reservations are being handled by The Columbia Inn.

To register for the meeting: Please refer to the blue sheet accompanying this RSN issue. The per person fee of U.S. \$85.00 covers registration, coffee breaks, the Red Hackle Hour (reception featuring BR's favorite drink), and the Banquet. Those whose registrations are received by June 12 may register at the reduced per person fee of U.S. \$75.00. Please make checks or money orders in U.S. funds payable to "Michael J. Rockler". Write "BRS" on the check memo line. Mail the form and payment to: Michael J. Rockler; 14213 Chesterfield Road; Rockville, MD 20853; U.S.A. The Banquet will have a chicken entree; if you have a special dietary request, inform Dr. Rockler when registering by mail. Annual meeting questions and comments also should be directed to Dr. Rockler.

To reserve a room at The Columbia Inn: Please direct your inquiry to: The Columbia Inn Hotel and Conference Center; 10207 Wincopin Circle; Columbia, MD 21044; U.S.A.; telephone 800-638-2817 or 410-730-3900. June 12 is the deadline for receiving the special nightly rate of U.S. \$79.00 plus 10% tax. This rate applies to either a single or a double room. Mention "Russell Society" to qualify for this reduced rate. The Columbia Inn also should be contacted for additional information about its facilities and directions by car, train, bus, or air.

For information about area tourism, contact (1) Washington Convention and Visitors Association; 1212 New York Avenue NW.; Washington, DC 20005-3992; telephone 202-789-7000; (2) Maryland Office of Tourism Development; 217 East Redwood Street; Baltimore, MD 21202; telephone 800-543-1036.

We very much look forward to having you with us in Columbia in June!

(3) TREASURER'S REPORT

BRS Treasurer Dennis Darland submitted the following report for the first quarter of 1995.

Opening Balance January 1, 1995	\$2,395.09
Income	
Renewal Dues	5,276.05
New Member Dues	537.50
Contributions	636.00
Library	202.15
Interest	2.21
Total	<u>6,653.91</u>
Expenditures	
Newsletter	1,267.09
Russell subscriptions	2,518.50
Advertising	800.00
Library	199.57
Other	46.38
Total	<u>4,831.54</u>
New Balance March 31, 1995	4,217.46

(4) RUSSELL IN THE MANUSCRIPT MARKET--I

Here is a Russell manuscript notice appearing in early 1995 in catalog 3 from Gerard A.J. Stodolski, Inc.; 555 Canal Street; Manchester, NH 03101. On the same page are listings for Napoleon I, Wernher von Braun, and Diego Rivera.

113. RUSSELL, BERTRAND. (1872-1970). British philosopher, mathematician and political reformer. Autograph Letter Signed, "Bertrand Russell", on his imprinted Telegraph House / Harting, Petersfield stationery. Two pages, octavo. May 10, 1937. To "Dear Berlin". Russell writes: "I am sorry I omitted to keep you up to date. The Chicago plan fell through, and I have no intention of leaving England; on the contrary, I have just bought a house at Kiddington, and shall be inhabiting it as soon as it is habitable. I accepted the invitation to lecture after Xmas. I should enjoy reading a paper to the Philosophical Society if it could be on a topic connected with my lectures; I should hardly have time to prepare one on some other topic. I shall be here till September 29, and should be delighted if you would come for lunch and or tea. I can't ask any one to stay, as we are packing up and dismantling. I don't know how soon I shall be at Kiddington, but probably about October 10th. I am afraid I am too busy to come to London, and my wife is busy at Oxford with plumbers, decorators, etc. So do come here for the day -- any day, if you will phone to arrange it. Yours sincerely, Bertrand Russell". Fine condition. 425.00

(5)

BRS Business

1. Annual Meeting. Elsewhere in this issue is quite a bit of information about the June 30-July 2, 1995 BRS Annual Meeting to be held in Columbia, Maryland. Here, though, is yet another invitation for you to consider attending the meeting. A variety of presentations and other activities have been planned to make the weekend a worthwhile one for all interested in Russell. If you have attended an annual meeting before, you have a good idea how fulfilling doing so can be. If you have not attended before, let 1995 be your first and find out for yourself. We predict you'll be favorably impressed!

2. Contributions. Many thanks to the following members who recently made monetary contributions to the BRS when renewing their membership for 1995:

Jesus M. Altieri-Rodriguez
Walter Baumgartner
Richard Fallin
Charles W. Hill
Paul Kurtz
Michael H. Malin
James McWilliams
Virginia Ramsey
Timothy S. St. Vincent
Charles L. Weyand

3. Membership Information. Enclosed in each regular May 1995 RSN mailing is a copy of our information brochure and membership application. May we suggest that you pass the brochure on to a friend or colleague whom you know to be interested in Russell or related topics? We are always interested in increasing our membership. Your thoughtful help might bring in one or more new members. Thank you.

4. News About the Newsletter. This is the last issue of Russell Society News to be edited by Donald Jackanicz. Beginning with RSN No. 87, August 1995, Michael J. Rockler will become the new editor. As President of the BRS for several years, organizer of recent annual meetings, contributor to RSN and a variety of other publications, and someone very knowledgeable of Russell and Russell studies today, Michael is an excellent successor to Don.

Don, in turn, would like to acknowledge with appreciation the years of service to the BRS provided by Lee Eisler, who was the first and by far the longest serving newsletter editor. Recognition also is due to Dennis Darland, who substituted for Don in editing RSN No. 83, August 1994.

While Michael is considering introducing certain changes to the newsletter's style and format, he would be pleased to hear from members on any matter relating to RSN. If you plan to attend the June 30-July 2 Annual Meeting, please feel free to talk with him on this. You may also write to him at 14213 Chesterfield Road; Rockville, MD 20853; U.S.A. That address should also be used effective June 1, 1995 for contacting RSN, including for submitting letters or other materials to the editor. Michael looks forward to hearing from you.

(6)

BRS LIBRARY

The Society library sells and lends books, audiotapes, videotapes, and other materials by and about Russell. Please direct BRS library inquiries and requests to Tom Stanley, Box 434, Wilder, VT 05088.

1. Books for sale H-Cloth, otherwise paperback. Prices are **postpaid**. Please send check or money order (U.S. funds only), payable to the "Bertrand Russell Society" to Tom Stanley.

By Bertrand Russell:

Appeal to the American Conscience.....	Spokesman	\$3.50
Authority and the Individual.....	Unwin-Hyman.....	7.95
Has Man a Future?.....	Allen & Unwin.....	H..8.00

BRS AWARD TO ZERO POPULATION GROWTH

At the June 30-July 2 annual meeting the BRS Award will be presented to Zero Population Growth for its work on a concern of great interest to Russell. Accepting the award will be Susan Weber, ZPG Executive Director, who will speak about her organization and the population challenge we all face. Although the article below (Chicago Tribune, February 20, 1995, sect. 1, p. 3) does not mention ZPG, it does begin to describe the magnitude of our collective problem.

Population nearing limit, some warn

Scientists fear no one is listening

By Jon Van
TRIBUNE STAFF WRITER

ATLANTA—Population growth threatens worldwide starvation and strife in the next several decades, researchers warn, but they acknowledge that few people take them seriously because false alarms have been sounded before.

In reports to the annual meeting of the The American Association for the Advancement of Science, researchers said that Earth's supply of arable land and petroleum reserves are strained beyond capacity, and further population growth will hasten the day of massive shortages.

For example, one researcher said, America's abundant food supply is produced on 470 million acres of arable land, or about 1.8 acres per person. The land produces enough food to feed the nation's 260 million people and export food to other countries.

But at the current growth rate of 1.1 percent, the country can expect its population to double in 60 years, said David Pimentel, a professor of ecology at Cornell University.

Urbanization as well as erosion and other predictable developments will reduce America's available cropland to 290 million acres by the year 2050 at a time when the population has ballooned to 520 million, Pimentel said.

That works out to just over half an acre per person, he said, which isn't nearly enough to support the nation's current diet and lifestyle.

Worldwide, things look even bleaker, he said. Today there is only about two-thirds of an acre of arable land to support each person, and, at current growth rates, that will dwindle to one-third of an acre in 2050.

Despite these projections, Pimentel said, people seem disinclined to become concerned about the perils of population growth.

"It's a nickel-and-dime kind of problem," he said. "Quality of life just erodes a little bit at a time. We're already seeing it in the United States where personal income for 80 percent of the people has been stagnant or dropping for the last decade.

"But nothing dramatic has happened yet, and without a crisis people are seemingly unable to act."

Failure of people or policymakers to perceive the threat of overpopulation is crucial, according to Vanderbilt University anthro-

'People who receive aid or who see their countrymen emigrate to the United States get the message that this is a world of plenty and the future is bright, so they can have large families.'

Virginia Abernethy
Vanderbilt anthropologist

pologist Virginia Abernethy, because people limit their family size only when they hold a pessimistic view of the future.

The widely accepted notion that people will limit family size as they become prosperous has failed to work consistently, Abernethy said, but policymakers continue to believe it.

The net effect of foreign aid and open immigration is to fuel worldwide population growth rather than to diminish it, she said.

"People who receive aid or who see their countrymen emigrate to the United States get the message that this is a world of plenty and the future is bright, so they can have large families," Abernethy said.

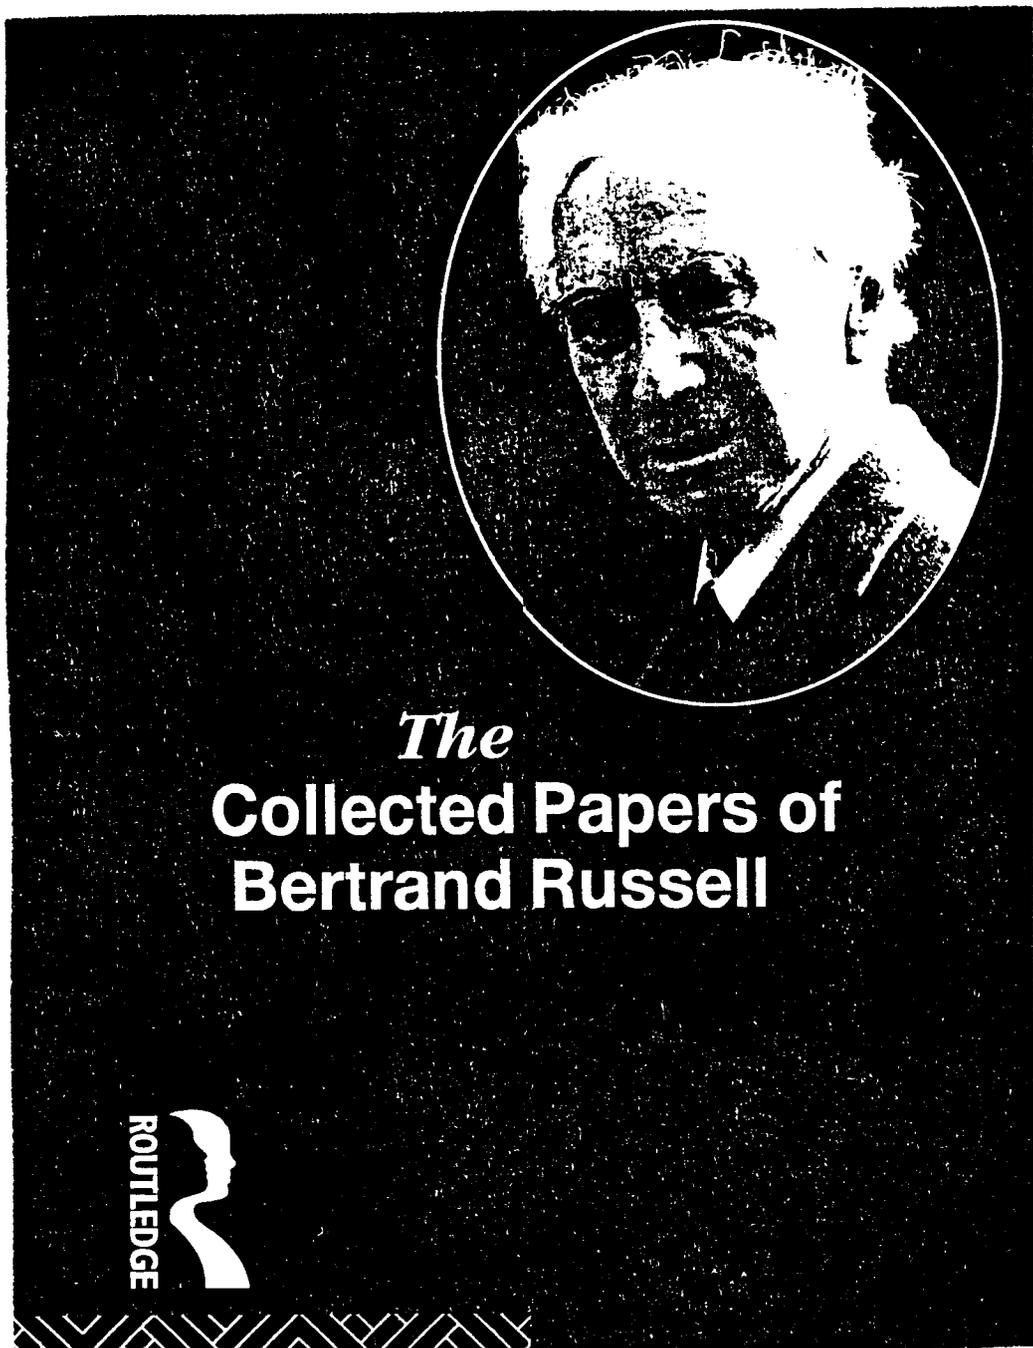

Although the message of scarcity in the face of population growth has a common-sense ring to it, most economists reject it because it was proved false in the early days of classical economics, said Kenneth Townsend, an economist from Hampden-Sydney College in Virginia.

Classical economists' dismal view of a world threatened by scarcity failed to take into account that technological innovations would expand resources exponentially, Townsend said. The difficulty today is that most current economists fail to reckon with limits of finite resources such as land and fuel, he said.

"When we had long lines at gas stations in the 1970s during the oil boycott, that got people's attention," Pimentel said. "But it didn't last after gasoline became plentiful again. A situation where you got permanent lines for gas and increased prices might get people's attention and hold it."

(8) "THE COLLECTED PAPERS OF BERTRAND RUSSELL"

The BRS is proud to announce that the 1995 BRS Book Award will be presented to Kenneth Blackwell and Harry Ruja for A Bibliography of Bertrand Russell, at the June 30-July 2 annual meeting. This three volume work, in whose production Sheila Turcon was also professionally involved, is one important part of the multi-volume "The Collected Papers of Bertrand Russell," being produced by McMaster University and the Routledge publishing company. For ordering information, contact Routledge Inc.; 29 West 35th Street; New York, NY 10001-2299; telephone 212-244-6412. Below are the cover sheet and information on individual volumes excerpted from a "Collected Papers" brochure.

The Collected Papers of Bertrand Russell, Volume 1

Cambridge Essays 1888-99

Edited by Kenneth Blackwell, Andrew Brink and Nicholas Griffin

'The first volume contains a great deal of varied and interesting writing from Russell's first decade as an independent thinker ... the great themes of God and freewill, immortality and conscience are rehearsed with charm and penetration ... Russell shows an exuberant delight in ingenious reasoning, expressed in the fewest possible words and in the least encumbered way, that was to remain with him a kind of trademark.' - Anthony Quinton, *The Times*

1983: 588pp

Hb: 0-04-920067-4; #A9409: \$135.00 [Can. \$181.95]

The Collected Papers of Bertrand Russell, Volume 2

The Philosophical Papers 1896-99

Edited by Nicholas Griffin and Albert C. Lewis

The 1896-1899 papers, few of which were published in Russell's lifetime, concentrates primarily on physics, arithmetic and the concept of quantity. Several views that later became well-known in his *The Principles of Mathematics* actually originate in his earlier work, and though incomplete, *An Analysis of Mathematical Reasoning*, forms a centrepiece of the volume.

1990: 672pp

Hb: 0-415-09863-7; #A9410: \$159.50 [Can. \$214.95]

The Collected Papers of Bertrand Russell, Volume 6

Logical and Philosophical Papers 1909-13

Edited by John G. Slater, with the assistance of Bernd Frohmann

The years covered by this volume of the *Collected Papers of Bertrand Russell* were among the most productive, philosophically speaking, of Russell's entire career.

1992: 682pp; illus. 1 frontispiece and 8 plates

Hb: 0-415-08446-6; #A9414: \$150.00 [Can. \$202.95]

The Collected Papers of Bertrand Russell, Volume 7

Theory of Knowledge: The 1913 Manuscript

Edited by Elizabeth Ramsden Eames and Kenneth Blackwell

'Russell's text is here presented with a careful historical introduction describing in detail ... the writing of the manuscript ... It is an impressively thorough and comprehensive piece by Russell which should earn the gratitude of all Russellian scholars.' - *Times Higher Education Supplement*

1984: 314pp

Hb: 0-415-10450-5; #A9415: \$150.00 [Can. \$202.95]

The Collected Papers of Bertrand Russell, Volume 8

The Philosophy of Logical Atomism and Other Essays 1914-19

Edited by John G. Slater

This volume collects together all of Russell's philosophical papers inspired by his work with Whitehead on *Principia Mathematica*.

1986: 418pp; illus.

Hb: 0-04-920074-7; #A9416: \$135.00 [Can. \$181.95]

The Collected Papers of Bertrand Russell

The McMaster University Edition

By any standards Bertrand Russell was a prolific writer. He was the author of seventy books in addition to over 2,500 shorter public writings, including scholarly papers, essays, magazine and newspaper articles, prefaces, introductions, forewords, political messages, letters and personal journals.

The editorial aim of *The Collected Papers of Bertrand Russell* is a complete, annotated edition arranged on the soundest principles. This arrangement is one that recognises the division between the technical writings on philosophy and logic and the other non-technical writings, and yet also succeeds in placing the material in approximate chronological order, so that the development of Russell's thought can be followed and the many interconnections between his popular and technical writings identified.

The entire series of volumes, when completed, will be indispensable to a thorough study of the intellectual development of one whose influence on his and our time has perhaps been greater than that of any other single individual. - P.F. Strawson, *Times Literary Supplement*

A Bibliography of Bertrand Russell **NEW**

I. Separate Publications II. Serial Publications III. Indexes

Kenneth Blackwell, Harry Ruja and Sheila Turcon, all at McMaster University, Ontario

From 1895, the year he published his first signed article, to four days before his death in 1970 when he wrote his last, Bertrand Russell was a powerful force in the world of mathematics, philosophy, human rights and the struggle for peace. During those years he published 70 books, almost as many pamphlets and over 2,000 articles, he also contributed pieces to some 200 books.

The availability of the Bertrand Russell Archives at McMaster University since 1968 has made it possible for the first time to compile a full, descriptive bibliography of his writings. The *Collected Papers* are based on it. Fully annotated, the *Bibliography* is textually oriented and will guide the scholar, collector and general reader to the authoritative editions of Russell's works. It includes references to the locations of all known speeches and interviews, and reproductions of the dust-jackets of Russell's books.

Blackwell and Ruja have cooperated for nearly 20 years on the new *Bibliography*. Lord Russell saw the extensive additions for it near the end of his life and declared: 'I am impressed.'

September 1994: 234x156: 1504pp; illus. plates

Hb: 0-415-11644-9; #B4525: \$455.00 [Can. \$613.95]

The Collected Papers of Bertrand Russell, Volume 3 **NEW**

Toward the 'Principles of Mathematics' 1900-02

Edited by Gregory H. Moore, McMaster University, Ontario

This volume shows Russell in transition from a neo-Kantian and neo-Hegelian philosopher to an analytic philosopher of the first rank. During this period his research centred on writing *The Principles of Mathematics* where he drew together previously unpublished drafts. These shed light on Russell's paradox. This material will alter previous accounts of how he discovered his paradox and the related paradox of the largest cardinal. The volume also includes a previously unpublished draft of an early attempt to solve his paradox, as well as the earliest known version of his generalised relation arithmetic. It contains three articles which have never previously been published in English.

March 1993: 234x156: 960pp; illus. 1 frontispiece, 8 plates and diagrams

Hb: 0-415-09405-4; #A9411: \$149.95 [Can. \$202.95]

The Collected Papers of Bertrand Russell, Volume 9

Essays on Language, Mind and Matter, 1919-26

Edited by John G. Slater and Bernd Frohmann

This volume contains Russell's reviews of and introductions to other philosophical works including his famous introduction to Wittgenstein's *Tractatus Logico-Philosophicus*.

1988: 704pp

Hb: 0-415-09917-X; #A9417: \$150.00 [Can. \$202.95]

The Collected Papers of Bertrand Russell, Volume 4 **NEW**

Foundations of Logic, 1903-05

Alasdair Urquhart, University of Toronto with the assistance of Albert C. Lewis, McMaster University, Ontario

This volume covers the period from the beginning of Whitehead and Russell's work on Volume 2 of the *Principles of Mathematics* to the critical discovery of the theory of descriptions in 1905. It contains a large number of unpublished manuscripts which give a vivid picture of Russell wrestling with the logical paradoxes, often unsuccessfully, as he tries out one foundational scheme after another. Previously unpublished work in the theory of denoting is included, which predates the famous article of 1905. This volume also gathers together several manuscripts on the so-called 'zig-zag' theory with which Russell attempted to provide a type-free foundation for mathematics. A number of reviews and survey articles are also published for the first time.

June 1994: 234x156: 796pp; illus. 8 plates, 4 line drawings

Hb: 0-415-09406-2; #A9412: \$150.00 [Can. \$202.95]

Forthcoming

The Collected Papers of Bertrand Russell, Volume 14

The No-Conscription Fellowship: Pacifism and Revolution, 1916-18

Edited by Richard Rempel, Louis Greenspan and Mark Lippincott, with the assistance of Beryl Haslam, all at McMaster University, Ontario

Volume 14 begins when Russell became the Acting Chairman of the No-Conscription Fellowship (NCF) very soon after the establishment of the Lloyd George coalition which signalled official British resolve to defeat Germany decisively. This uncompromising determination was matched by the German decision in January 1917 to initiate unrestricted submarine warfare. Volume 14 contains many short papers reflecting Russell's immediate responses to developments in the conflict as seen from his position as the most important political commentator for the official publication of the NCF, *The Tribunal*.

The No-Conscription Fellowship: Pacifism and Revolution, 1916-18 reveals how Russell continued to develop those patterns of political argument, rhetoric and activism which were characteristic of his work throughout his life.

June 1995: 234x156: 640pp; illus. 5 plates

Hb: 0-415-09410-0; #A9422: \$165.00 [Can. \$222.95]

The Collected Papers of Bertrand Russell, Volume 12

Contemplation and Action, 1902-14

Edited by Richard A. Rempel, Andrew Brink and Margaret Moran

'The Bertrand Russell Archive has as before, yielded some interesting unpublished material ... this volume lavishly footnoted, elegantly produced and a pleasure to read, is a real treat for anyone interested in Russell or in that strange remote country, Edwardian England.'

- Alan Ryan, *Times Higher Education Supplement*

1985: 654pp

Hb: 0-04-920078-X; #A9420: \$178.00 [Can. \$239.95]

The Collected Papers of Bertrand Russell, Volume 13

Prophecy and Dissent, 1914-16

Edited by Richard A. Rempel, Bernd Frohmann and Mark Lippincott

Bertrand Russell's shorter writings against British participation in the First World War from its outbreak until the formation of Lloyd George's coalition. It includes the fullest documentation yet of the continuing government attempts to stifle Russell, then regarded as Britain's most dangerous pacifist.

1988: 774pp

Hb: 0-415-10463-7; #A9421: \$150.00 [Can. \$202.95]

RUSSELL BOOKS FROM ROUTLEDGE

Here are excerpts from the current Routledge catalog, listing that publisher's excellent Russell offerings. In addition to books by BR and "The Collected Papers of Bertrand Russell," note the final title, Academic Freedom, by BRS honorary member Conrad Russell.

Bertrand Russell

Now in Paper Philosophical Essays Bertrand Russell

Bertrand Russell wrote most of his *Philosophical Essays* during the first decade of this century, a period when he was at the height of his creative energy in the realms of philosophy and mathematics. These seven essays display Russell's incisiveness and brilliance of exposition in the examination of ethical subjects and the nature of truth. They also mark an important stage in the evolution of Russell's thought.

[Can. Pb \$14.95]

New

Human Knowledge Bertrand Russell With an Introduction by John G. Slater

"It is the nearest thing to a systematic philosophy written by one who does not believe in systems of philosophy. Its scope is encyclopedic . . . a joy to read."
—Sidney Hook, *The New York Times*

Human Knowledge is Bertrand Russell's classic examination of the relation between individual experience and the general body of scientific knowledge. It presents a rigorous examination of the problems of an empiricist epistemology. This paperback edition includes a new introduction by John G. Slater.

1994: 540 pp
Pb: 0 415 08302 8: #B4573: \$22.95

New

Fact and Fiction Bertrand Russell

This collection of essays and stories by Bertrand Russell, the influential modern philosopher, is divided into four distinct parts. The first part is devoted to six essays on the books that influenced him in youth, broadly speaking from the age of 15 to the age of one. The writers whom he selects for discussion are Shelley, Turgenev, Ibsen, Milton, Gibbon, and the great mathematical writers. The second part of the book is devoted to essays on politics and education. The third part consists of advertisements, parables, nightmares and dreams, the dreams being recorded exactly as dreamt and in no way decorated or improved. The final section of the book contains 11 essays and addresses on peace and war, which include some of Russell's famous public pronouncements on nuclear war.

The Collected Papers of Bertrand Russell

Forthcoming

The No-Conscription Fellowship: Pacifism & Revolution 1916-18
Volume Fourteen

Bertrand Russell
Richard Rempel, Louis Greenspan,
and **Mark Lippincott** all at McMaster University, Hamilton, Ontario

Volume 14 of the *Collected Papers of Bertrand Russell* begins when Russell became the Acting Chairman of the No-Conscription Fellowship (NCF) very soon after the establishment of the Lloyd George coalition which signalled official British resolve to defeat German decisively. This uncompromising determination was matched by the German decision in January 1917 to initiate unrestricted submarine warfare. *The No-Conscription Fellowship: Pacifism and Revolution, 1916-18* reveals how Russell continued to develop those patterns of political argument, rhetoric and activism which were characteristic of his work throughout his life.

June 1995: 640 pp

New

A Bibliography of Bertrand Russell
Three Volume Set
Edited by **Kenneth Blackwell**

From 1895, the year he published his first signed article, to four days before his death in 1970 when he wrote his last, Bertrand Russell was a powerful force in the worlds of philosophy, mathematics, human rights and the struggle for peace. During those years he published 70 books, almost as many pamphlets and more than 2000 articles. He also contributed pieces to some 200 books. *A Bibliography of Bertrand Russell* has been compiled from the Bertrand Russell Archives at McMaster University which was

the source for the volumes in *The Collected Papers of Bertrand Russell* series.

The Collected Papers of Bertrand Russell

1994: 2120 pp: plates
Hb: 0 415 11644 9: #B4525: \$455.00
[Can. Hb \$613.95]

New

Toward the 'Principles of Mathematics,' 1900-02
Volume Three
Bertrand Russell
Edited by **Gregory Moore**

This volume shows Bertrand Russell in transition from a neo-Kantian and neo-Hegelian philosopher to an analytic philosopher of the highest rank. During this period, his research centered on writing *The Principles of Mathematics*. The volume draws together previously unpublished drafts which shed light on Russell's struggle to accept Cantor's notion of continuum as well as Russell's infinite ordinal and cardinal numbers. It also includes the first version of Russell's *Paradox*.

The Collected Papers of Bertrand Russell

1994: 960 pp: 1 frontispiece,
8 plates and diagrams
Hb: 0 415 09405 4: #A9411: \$149.95
[Can. Hb \$202.95]

Foundations of Logic, 1903-05
Volume Four

Bertrand Russell
Edited by **Alasdair Urquhart**, University of Toronto and with the assistance of **Albert C. Lewis**, McMaster University

This volume covers the period from the beginning of Bertrand Russell's work on Volume Two of the *Principles of Mathematics* to the critical discovery of the theory of descriptions in 1905. *Foundations of Logic* gives a vivid picture of Russell wrestling with the logical paradoxes, often unsuccessfully, as he tries out one foundational scheme after another.

The Collected Papers of Bertrand Russell

Academic Freedom

Conrad Russell, King's College, University of London

"In his passionate polemic . . . Conrad Russell points out . . . how academic freedom, consisting as it must in the ability to decide what and how to teach as well as what to study and say, is being eroded; how the principles of academic freedom and public accountability have come into conflict."
—*The Times Higher Education Supplement*

1993: 128 pp

HOW TO THINK ABOUT WEIRD THINGS

Our thanks to Steve Shafer for bringing to our attention How to Think about Weird Things: Critical Thinking for a New Age by Theodore Schick, Jr. and Lewis Vaughn (Mountain View, California: Mayfield Publishing Co., 1995). Martin Gardner's foreword calls this book "a clearheaded assessment of scientific realism." A number of Russell references are to be found. We regret that space does not here allow a more detailed description of this noteworthy book.

RUSSELL BOOKS FROM THOEMMES PRESS

The three titles described below are available from Thoemmes Press, Bristol, England. We note with appreciation that author Katharine Tait is an honorary BRS member and that author Kenneth Blackwell is the recipient--with Harry Ruja--of the 1995 BRS Book Award.

 WORKS RELATING TO BERTRAND RUSSELL

MY FATHER, BERTRAND RUSSELL*Katharine Tait*

My Father, Bertrand Russell allows a unique insight into a side of Bertrand Russell rarely considered – that of a father. Kate Tait, the daughter of Bertrand and Dora Russell, gives a personal account of life with the philosopher, describing a man of great warmth, charm and good humour. Her life with her parents and brother, John, at the holiday retreat in Cornwall and at Beacon Hill School is shown in fascinating detail, with Tait providing the reader with an intimate view of the personality of her father and his influence on her formative years. Touchingly written and beautifully described, Tait's account is a welcome access to the life beyond Russell's public image.

What was it like, having Bertrand Russell for a father? Was he stern, remote, analytical? ...What was he really like?

I have been asked such questions all my life and have struggled vainly to provide concise and honest answers. Two kinds of questions are mixed up here, and they need different kinds of answers.

'What was he like as a father' people ask. I can answer that with description: how he looked, what he said, what he ate for breakfast, what he did when we were bad. But 'What was it like having Bertrand Russell for a father?' involves much more: What was the atmosphere in our home? How did it affect us? How do I feel about it now, after so many years?

...We had a dog once who went on walks with us and chased after rabbits, following his nose. We, who walked upright and used our eyes instead of our noses, would see a rabbit run across the path ahead of us, while Sherry, running along with his nose to the ground, saw nothing, until suddenly he came upon the delicious scent of rabbit in his path. Being a dog bred more for looks than intelligence, he often went off in the direction that the rabbit had come, rather than that in which it had gone. We watched this performance with lofty amusement, despising the poor dog for his stupidity and his inability to use his eyes as we did. But secretly I identified with the dog and felt sorry for him, the recipient of our scorn. He was not really stupid, only a dog, behaving as a dog behaves.

That is what it was like, having Bertrand Russell for a father.

— From the Preface

'The complex human failings, as Katharine Tait makes clear, are as important a part of Russell as the very real nobility. With her intimate experience of Russell, she supplies the perspective ... We feel all the splendor, gaiety and charm of Russell, but also the selfishness and insensitivity ... A welcome access to this compelling and profoundly disturbing man.'

ISBN 1 85506 390 5 : 224pp : 1975 Edition : Pb : Publication October 1995 : £9.99

A DETAILED CATALOGUE OF THE SECOND ARCHIVES OF BERTRAND RUSSELL*Kenneth Blackwell and Carl Spadoni*

Bertrand Russell's literary legacy encompasses an enormous quantity of correspondence and manuscripts. Following the 'First Russell Archives' available in reference libraries around the world, Russell and his staff at the Bertrand Russell Peace Foundation continued to create new documents. These arrived at McMaster University some years after Lord Russell's death in 1970. They are now the subject of a separate book catalogue, prepared by Russell archivists Kenneth Blackwell, Carl Spadoni and other staff. It covers Russell's last half-dozen years of political activity.

ISBN 1 85506 162 7 : 464pp : Hb : 1992 Edition : £60.00

BERTRAND RUSSELL*John Slater*

With a Preface by Ray Monk

This book is intended as an introduction to Bertrand Russell and his views in a variety of fields. In addition to being one of the most important logicians and philosophers of this century, Russell was also, for a very long time, one of its most prominent public figures, and his influence on his time was not confined to academic subjects. From a long list of possibilities nine areas have been selected for discussion. Pride of place goes to his work on the foundations of mathematics and to the philosophical method which he developed as a consequence of his successes in that field. There are also examples of the more popular side of his work, with discussions of positions he defended in the philosophy of religion, political philosophy, history and education, and one of the dominant themes of his life – his political activism. This book will have done its work if it leads its readers to explore his own writings for topics of special interest to them. If they do, they will find him a delightful author to read, and one whose opinions and the defence of them are bound to provoke thought, a cause very dear to Russell's heart.

Bristol Introductions are short original texts that aim to present challenging perspectives on philosophical themes, using non-technical language. These books are intended to be of interest to both the new student and the more advanced scholar.

Future volumes in the series will explore the connections and tensions between philosophy and other disciplines.

RUSSELL CONFERENCE IN SOUTHAMPTON

We are pleased to provide this information about the July 14-16, 1995 "Russell and the Origins of Analytical Philosophy" Conference at Southampton University. We are also pleased to see several participants having links to the BRS.

The British Society for the History of Philosophy with sponsorship from Thoemmes Press announce a three-day International Conference on

RUSSELL AND THE ORIGINS OF ANALYTICAL PHILOSOPHY

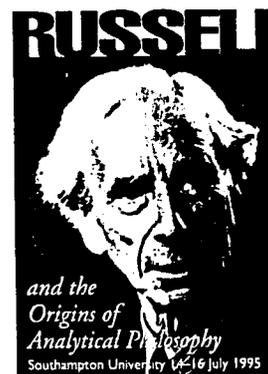

AT SOUTHAMPTON UNIVERSITY ON 14-16 JULY 1995

A distinguished list of participants from all over the world will be contributing a varied collection of papers, beginning with an informal after-dinner talk by Bertrand Russell's daughter, Katharine Tait.

The speakers will include:

- Ivor Grattan-Guinness (Middlesex University), the author of *Dear Russell - Dear Jourdain*
- Louis Greenspan (McMaster University), the author of *Incompatible Prophecies: Bertrand Russell on Science and Liberty*
- Anthony Grayling (Birkbeck College, London), the author of *Wittgenstein* and of a forthcoming study of Russell for OUP
- Nicholas Griffin (McMaster University), the author of *Russell's Idealist Apprenticeship* and the editor of *Russell's Selected Letters*
- Peter Hylton (University of Illinois), the author of *Russell, Idealism and the Emergence of Analytical Philosophy*
- C. W. Kilminster (King's College, London), the author of *Russell*
- Gregory Landini (University of Iowa), the author of a forthcoming book on Russell's Substitution Theory
- Ray Monk (Southampton University), the author of *Ludwig Wittgenstein: The Duty of Genius*, and of the forthcoming biography of Bertrand Russell, *Phantoms of the Dusk*
- Harold Noonan (Birmingham University), the author of *Personal Identity*
- Anthony Palmer (Southampton University), the author of *Concept and Object*
- Charles Pigden (University of Otago) the editor of a forthcoming collection of Russell's writings on ethics
- Francisco A. Rodríguez-Consuegra (Valencia University), the author of *The Mathematical Philosophy of Bertrand Russell* and of the forthcoming *Relational Ontology and Analytical Philosophy: Bertrand Russell and Bradley's Ghost*
- Mark Sainsbury (King's College, London) and Stewart Candlish (University of Western Australia), who will present a symposium on 'Russell's Theories of Judgment'

FOR FURTHER INFORMATION AND A REGISTRATION FORM, PLEASE CONTACT:
THE CONFERENCE OFFICER, THE UNIVERSITY OF SOUTHAMPTON,
SOUTHAMPTON, SO9 5NH (TEL: 0703 760260).

A REQUEST FROM CHINA

We usually don't print details about requests for BRS information. But this letter strikes us as particularly noteworthy. We will send Mr. Cui a BRS information brochure, a complimentary newsletter, and a letter, but perhaps members might be interested in writing directly to him.

Dear Sir:

May 2, 1995

My name is Zhaowen Cui. Bertrand Russell is my favorite philosopher. My penfriend once sent me a copy of Russell Society News. Through reading it, I want to learn more about Russell--his life, his ideas, his works....But I couldn't find more information about him in my area. I wish you could help me. So please send me information about the BRS. Thank you. Hope to hear from you soon. With best regards,

Zhaowen Cui
21 Dongjing Road; Beijing 100050; China

DUTCH HUMANISTS HONOR RUSSELL

Our thanks to Tim Madigan who informed us of an article titled "Bertrand Russell: Rebels filosoof vol passie" by Alice Brocksma, appearing in the Dutch publication, Humanist, no. 3, March 1995, pp. 10-17. The introductory page reproduced below is only suggestive of this substantial biographical article, which doubles as a review of Caroline Moorhead's 1993 book, Bertrand Russell: A Life.

Bertrand Russell

Bijna een eeuw oud werd hij: geboren in 1872 en overleden in 1970 - dit jaar precies 25 jaar geleden. Een lang, bewogen, vitaal en complex leven was het, vol rebellie en passie. Van huis uit wiskundige, raakte Bertrand Russell in de loop van z'n leven steeds meer betrokken bij de gebeurtenissen in de wereld. Hij had een brandend verlangen om de wereld bewoonbaar te maken en nam deel aan tal van campagnes tegen wat hij zag als onrecht of in strijd met de menselijke waardigheid. Zo leidde de

Russell-Einstein Verklaring tegen proeven met waterstofbommen (ondertekend door honderden geleerden) tot de Pugwash Conferenties. En met o.a. Sartre richtte hij het bekende Russell Tribunal op. Wie was deze humanist die hartstochtelijk maar ook met een grote dosis ironie en scepsis, streefde naar een betere wereld?

Een portret.

door Alice Brocksma

DEATH OF CORLISS LAMONT

We regret to announce the death of Corliss Lamont on April 26, 1995. Mr. Lamont was a long-time supporter of the BRS and, of course, numerous points of view and causes shared with Russell. This obituary appeared in Chicago Tribune, April 30, 1995, sect. 2, p. 6. We welcome readers to submit reminiscences of him for possible use in a future newsletter.

Corliss Lamont, 93; waged battles as civil libertarian

NEW YORK TIMES NEWS SERVICE

NEW YORK—Corliss Lamont, the socialist author, teacher and humanist philosopher who battled Sen. Joseph McCarthy, the CIA and other icons of authority in a lifelong fight for civil liberties and international understanding, died Wednesday in his country home in Ossining, N.Y. He was 93.

Born into wealth, the scion of the chairman of J.P. Morgan & Co., Mr. Lamont grew up with privilege, attended Phillips Exeter Academy and Harvard University like his father and might have had the life of a patrician on Wall Street. Instead, he cast his lot into the arena of radical causes.

In a career that spanned much of the century, Mr. Lamont wrote 16 books and hundreds of pamphlets.

He also served as a director of the American Civil Liberties Union for 22 years, was chairman of the National Emergency Civil Liberties Committee for 30 years, won court fights against censure by McCarthy and mail censorship by the CIA, ran twice for the U.S. Senate, opposed the Vietnam War and championed the Bill of Rights in countless forums.

"My final word is that, in the battles that confront us today for America's freedom and welfare, our chief aim as public-spirited citizens must be neither to avoid

Corliss Lamont in 1953

trouble, nor to stay out of jail, nor even to preserve our lives, but to keep on fighting for our fundamental principals and ideals," Lamont concluded in his memoirs, "Yes to Life" (1981).

NEWS OF THE BRS BENARAS CHAPTER

Here is an excerpt from a letter recently received from Chandrakala Padia on behalf of the BRS Benaras [India] Chapter.

My greetings to you from India....You will be very glad to know that the Benaras Chapter of the BRS is flourishing like anything. Recently I organized three seminars on Human Rights, Post Modernism, and Structural Readjustment Policy. I will be soon sending you the details of these seminars. Some new members have joined the Society [i.e. the Benaras Chapter] and a few old ones have left it on account of settling down in distant parts of the country. Its performance has crossed the boundaries of Benaras so two members from other parts of India have also joined.... Thanking you and with best wishes,

C. Padia
Political Science Dept.; Benaras Hindu University; Varanasi-221005; India

(17)

NEWS OF PATRICIA RUSSELL

Much time has passed since news was received about Patricia (Peter) Spence, Bertrand Russell's third wife. This welcome article brings us up to date. Thanks to Linda Egendorf who located this item in The [London] Sunday Times, July 24, 1994.

Missing wife of Bertrand Russell found 25 years on

by Annabel Heseltine

NOBODY could find her. Not even her son, the 5th Earl Russell, knew where she was, or if she was still alive. For more than 20 years, historians, authors and journalists have tried to track down the pipe-smoking third wife of Bertrand Russell, Britain's most influential 20th-century philosopher. Time and again the trail ran cold.

But yesterday Majorie Spence, who used to be known as "Peter" to her friends, was found safe and well, traced by The Sunday Times to a remote thatched cottage tucked away in the rolling hills of north Devon.

She is 83 years old, has changed her name to Patricia, lives alone with her pet sheepdog, and has little to do with her neighbours. "They call her 'the witch'," said Keith Pickering, a retired fireman who recalled once saving her after she had fallen in a stream. "Her wrist was all blue when I found her, but she didn't even say thank you."

Spence's discovery comes more than 25 years after she severed all links with her son Conrad. Her decision came after he settled a 17-year rift with his father, shortly before the philosopher's death in 1970.

Spence left her husband in the early 1950s after 15 years of marriage because she could no longer tolerate his womanising. She walked out on him after an unhappy holiday in Sicily when during a picnic he declared: "I am as drunk as a lord, but then I am one."

The couple divorced within two years and Conrad, then 15, initially went to live with his mother in a remote Cornish mill.

Bertrand Russell and Spence had met when she was his student at Oxford. She was a vivacious 25-year-old redhead when they married in 1936; he was 63.

The bizarre family rift was revealed publicly a week ago by Earl Russell in a brief newspaper interview in which he admitted he had no idea of his mother's whereabouts.

Caroline Moorehead, the biographer of Russell, a passionate opponent to war and

nuclear weapons, had succeeded in tracing Spence to a house in Oxford, but there the trail dried up.

The mystery ended yesterday at a West Country hamlet where she has lived for about 25 years. "I heard she was someone, but she made it clear that she didn't want anyone to know about it," said Roger Ward, the local postmaster. "She has taken everyone to court and is a great one with the letters. She comes down to the village once a week to fill up at the petrol station and buy the newspapers."

One neighbour recalled that Spence had moved to the cot-

Spence: an enigma even to her son

tage with Edna, a woman companion, who has since moved away. It was Edna who told some locals that Spence had once been married to Russell.

In the woods at the end of a long winding track Spence's cottage appears to slither off the edge of a small hill. The gate is padlocked and the house alarmed.

When Spence returned from walking her dog to find The Sunday Times waiting, she ran inside the house and locked the door. Her gardener later emerged to say: "She doesn't want to know you. She doesn't like people like you and she doesn't want to talk to you. She is not interested."

Yesterday Earl Russell, now 57, fell momentarily silent at his London home when he learned that his mother was alive and well. He said: "If she didn't want any more reporting on this, I would respect her wishes. I will say that for the record and leave it at that."

(18)

OLD BR PAPERBACKS REVISITED

A recent visit to a Chicago bookstore resulted in the discovery of a large quantity of 1950s-1960s American paperbacks, including multiple copies of Russell titles. Although the brownness and odor of forty year old acidic paper was obvious, these books were otherwise in fine condition. Their wordy, but attractive, covers were a treat to behold. Here are slightly reduced reproductions of two covers for The Conquest of Happiness (this printing 1952) and Bertrand Russell Speaks His Mind (this printing 1960). Note the latter's cover price is only fifty cents!

How to live the good life, the life of peace, health, and happiness.

The CONQUEST OF HAPPINESS
Bertrand Russell

THIS BOOK TELLS YOU HOW TO ACHIEVE PEACE OF MIND AND SUCCESS BY FOLLOWING ITS PRACTICAL ADVICE ON:

- The Sense of Sin
- How You Can Be Popular
- How to Cure Envy of Others
- How to Banish Worry and Fear
- How to Understand Your Family
- How to Enjoy Life, Love and Work
- How to Achieve Success Without Struggle

BERTRAND RUSSELL
Speaks His Mind

The Nobel Prize-winning philosopher, scientist and social critic brilliantly and frankly talks about the Nature of Happiness, War, Religion, the H-Bomb, Fanaticism, Birth Control, Communism vs. Capitalism, and the Future of Mankind

"A magnificent projection . . . of what used to be known in this country as cracker-barrel philosophy . . . It prickles a bit but how it stirs up the blood!"
—*Atlantic Monthly*

RUSSELL FROM A POLISH PERSPECTIVE

Our thanks to Andrzej Wilk who wrote to us as follows on February 28, 1995: "I take the liberty to submit for your files a copy of Rzeczpospolita--Polish Daily newspaper [Warsaw] in which was published my essay 'Płynący pod prąd' ('Swimming against the Tide') on the 25th anniversary of the departure of Bertrand Russell." Here is the complete text of Mr. Wilk's article appearing in that publication on February 18-19, 1995, pp. 13-14.

W 25-lecie śmierci Bertranda Russella Płynący pod prąd

ANDRZEJ WILK

Minęło właśnie 25 lat od odejścia Bertranda Russella. W Plas Penrhyn w Walli zakończyła się długa droga życiowa sławnego angielskiego arystokraty, który zasłynął jako buntownik, matematyk, filozof i publicysta, propagujący nowe koncepcje społeczne, etyczne i pedagogiczne. Zmarł człowiek czczony i wielbiony, ale również wielokrotnie szykanowany i oczerniany. W jego osobowości doszukiwano się zarówno cech szatańskich, jak i oznak świętości i mistycyzmu. Jego życiu i działaniom towarzyszyła wielokrotnie atmosfera sensacji i skandalu. A skandale — jak pisał w swoim czasie Wacław Nałkowski — są czynnikiem ewolucji.

Bertrand Arthur William Russel urodził się 18 maja 1872 roku. Wcześniej stracił rodziców. Opiekę nad wnukiem przejęli lord John i lady Frances Russell. John Russell był ministrem spraw zagranicznych i dwukrotnie premierem rządu brytyjskiego. Pokój, w którym bawił się mały Bertrand, był miejscem posiedzenia gabinetu, na którym zapadła decyzja o rozpoczęciu wojny krymskiej. „Wychowywał się tedy — pisał Tadeusz Kotarbiński — aż do wieku naturalnego pod okiem babuni, osoby religijnej, oddanej purytanizmowi.

Nie chodził do szkoły,

edukowali go guwernerzy i guwernerki, a bardzo pilnowano, by wszystko było w zgodzie z Biblią. Jedyne nauczyciela o tendencjach wolnomyślicielskich usunięto natychmiast, gdy wyszło na jaw, co ze sobą przynosi. Opatrzność, życie przyszłe, nieśmiertelność duszy indywidualnej — oto pojęcia, w których aurze dojrzywał i które stopniowo odrzącał własnym samotnym umysłowym wysiłkiem. Działo się to powoli, ale za to ze skutkiem stanowczym i trwałym”.

W okresie przeduniwersyteckim Russell nauczył się posługiwać w sposób klarowny i frapujący — bo nie obciążony szkolną manierą — ojczystym językiem. Od dzieciństwa interesował się matematyką i historią.

Pierwszą osobą, z którą Bertrand Russell zaprzyjaźnił się w Cambridge, był młody wykładowca, Alfred North Whitehead. Po ukończeniu studiów matematycznych Russell wspólnie z Whiteheadem postanowili napisać dzieło, w którym podstawy matematyki zostałyby wyprowadzone z zasad logiki.

Zamiast zaplanowanego jednego tomu, powstały trzy o łącznej objętości około dwóch tysięcy stron. Kolejne tomy „Principia Mathematica” ukazywały się w roku 1910, a następnie w 1912 i 1913. Wydawnictwo Cambridge University Press wyceniło, że „planowana strata”, związana z publikacją, wyniesie sześćset funtów. Połowę tej sumy wzięto na siebie. Dwieście funtów wyasygnowało Towarzystwo Królewskie (Royal Society). Pozostałe 100 funtów musieli zapłacić autorzy. Jest to znakomity przyczynek do oceny „efektywności ekonomicznej” badań podstawowych. Do pracy, która zajmowała kilkanaście godzin na dobę przez osiem miesięcy w roku, w ciągu dziesięciu lat Russell dopłacił „tylko” 50 funtów.

Jak pisał Ronald W. Clark — autor biografii Russella — „Principia Mathematica” przypominały pod pewnym względem „Kapitał” Karola Marksa. Wiele o nich mówiło, a mało kto je czytał. Wśród tych nielicznych byli członkowie stowarzyszeń naukowych w kilku krajach, które to stowarzyszenia problematycznie zawartej w „Principia Mathematica” poświęcały specjalne posiedzenia.

Wielkim wydarzeniem intelektualnym tamtych czasów były ogólna i szczególna teoria względności Alberta Einsteina. Russell zagłębił się w publikacje dotyczące obu tych teorii, odczuwając potrzebę zbadania filozoficznych konsekwencji rewolucyjnych zmian, dokonujących się w obrębie fizyki i kosmogonii. Nową fizykę poznał na tyle dokładnie, że stał się jej popularyzatorem. W 1923 roku ukazała się książka „The ABC of Atoms”, a w 1925 — „The ABC of Relativity”.

Były to — rzecz oczywista — „uboczne” produkty twórczości naukowej matematyka, który zajął się filozofią, a w szczególności teorią poznania.

FOT. ARCHIWUM

W 1914 roku ukazało się „Nasze poznanie świata zewnętrznego”. („Our Knowledge of External World”). W 1921 roku w „Analizie umysłu” Russell zakreślił wspólny obszar psychologii i fizyki. W „Analizie materii” (1927) przeprowadza analizę logiczną fizyki, charakteryzując głębiej różnice pomiędzy postzeganiem zdroworozsądkowym a percepcją wynikającą z fizyki. W książkach tych Bertrand Russell sformułował własną filozofię neutralnego monizmu, zwaną również logicznym atomizmem bądź też neutralizmem.

Przez pewien okres Russell podzielał poglądy George’a Edwarda Moore’a, który zapoczątkował kierunek znany obecnie jako brytyjska szkoła analityczna. Russell sądził, że nie ma ostrego przedziału pomiędzy materią a umysłem. Wielokrotnie powtarzał, że „materia jest mniej materialna, a duch mniej duchowy niż się zwykło uważać”.

W środowisku brytyjskiej arystokracji był Russell osobowością niezwykle. Wcześniej doszedł do przekonania, że wolność jest wartością najwyższą, b przewyższającą imperium brytyjskie. Jeżeliby wolność miała być zagrożona — głosił — to lepiej niech rozpadnie się imperium.

W początkach naszego stulecia matematyk z Cambridge staje się również konsekwentnym pacyfistą. Nie przekonuje go retoryka patriotyczna. Przed wojną światową przeciwstawia się poborowi do wojska.

Pisze artykuły antywojenne.

występuje na licznych wiecach i zebraniach. Przed jednym z wieców, dalek od Londynu, rozeszła się plotka, że prelegenci-pacyfści są po prostu niemiec

kimi agentami. Na salę wtargnął wzbudzony tłum. „Nieznani sprawcy” zaatakowali Russella. Policja nie reagowała. Jedna z miejscowych pacyfistek prosiła o interwencję, twierdząc, że człowiek znajdujący się w niebezpieczeństwie, to filozof znany na całym świecie. Policjanci nie reagowali. Jednakże, gdy usłyszeli, że brat owego sławnego filozofa jest hrabią, energicznie ruszyli do zaprowadzania porządku...

Brzmi to paradoksalnie, ale nonkonformizm Russella, jego skłonność do marszu „pod prąd” była w istotnej mierze skutkiem wychowania. Zwrócił na to uwagę Tadeusz Kotarbiński. „Babunia, o której mowa wyżej, pilnowała wprowadzić biblijnego wychowania młodego wnuka, ale jej pojmowanie religii zawierało czasem idee osobliwe. Brała ona bardzo serio hasło protestantów, akcentujących prawo każdego do rozumienia sakralnych tekstów po swojemu, wedle własnego rozumu i sumienia. Przy okazji którychś tam urodzin, wręczając solenizantowi w darze egzemplarz Pisma Świętego, zwróciła mu uwagę na pewne rady tam zawarte. Jakież to były wskazania? Żeby nie iść za głosem szerokich kół, jeśli źle czynią, i nie kierować się emocją lęku, lecz śmiało obstawać przy swoim. Więc już ona — to doprawdy nieoczekiwane — współdziałała, bodaj niechęcą, w urabianiu wychowanka na „rogatą duszę”.

Po rewolucji październikowej Russell pisze artykuły biorące w obronę bolszewików, w których widział realizatorów własnych koncepcji doskonalenia społeczeństwa.

W 1920 roku wraz z delegacją Partii Pracy udał się do Rosji Radzieckiej. W czasie kilkutygodniowego pobytu był niemiłe zaskoczony wystawnymi przyjęciami na cześć delegacji i uprzywilejowaniem rządzącej kasty w warunkach widocznej na każdym kroku nędzy. Irytująca i obraźliwa była dlań policyjna widoczność i kontrola.

Russell chciał spotkać się z Kropotkinem. Nie pozwolono mu na to. Został natomiast

przyjęty przez Lenina.

Po godzinnej rozmowie opuścił Kreml, rozczarowany. Lenin sprawił na nim wrażenie człowieka bezwzględnie i niezdolnego do myślowego wyjścia poza ramy uznawanej przez siebie doktryny. Zaskoczony był natomiast skromnym i bezpośrednim sposobem bycia Lenina.

Płynący pod prąd

W 1921 roku, po narodzinach pierworodnego syna, Russell napisał do Josepha Conrada Korzeniowskiego: „Chciałbym z pańskim przyzwoleniem nadać memu synowi imiona John Conrad. Mój ojciec miał na imię John, mój dziadek miał na imię John i mój pradziadek miał na imię John; a Conrad — to imię, które ma dla mnie szczególne znaczenie”. Joseph Conrad wyraził zgodę na uznanie go za ojca chrzestnego. Nadanie imienia chłopcu odbyło się bez formalnych uroczystości. Drugi syn Russella otrzymał imiona Conrad Sebastian Robert. W ten szczególny sposób upamiętnił Russell swą przyjaźń z Josephem Conradem, którego podziwiał za talent pisarski i „lśniącą szlachetność”.

6 marca 1927 roku w londyńskim Battersea Town Hall, na zebraniu zorganizowanym przez Towarzystwo Świeckie, Russell wygłosił odczyt „Dlaczego nie jestem chrześcijaninem?”, który później został przetłumaczony na kilkadziesiąt języków.

Uzasadniając swe stanowisko, Russell po kolei rozpatrzył teologiczne argumenty na istnienie Boga, z których żaden nie wydał mu się przekonujący. Sygnalizując swe wątpliwości na temat historyczności Chrystusa, oświadczył, że układ odniesienia jego rozważań o chrześcijaństwie stanowią ewangelie. Zdaniem Russella, Chrystus — podobnie jak Budda i Lao-Cy — był wielkim myślicielem, reprezentującym wysoki stopień doskonałości moralnej. „Sądzę, że w wielu sprawach zgadzam się z Chrystusem w większym stopniu, aniżeli praktykujący chrześcijanie. Nie wiem, czy mógłbym iść z Nim przez całą drogę. Mógłbym jednak iść z Nim znacznie dalej, aniżeli większość praktykujących chrześcijan” — pisał.

Po hitlerowskiej napaści na Polskę Russell-pacyfista dochodzi do przekonania, że pokój z Hitlerem jest niemożliwy, a wojna światowa — nieunikniona. Zmowa pomiędzy Hitlerem i Stalinem, a następnie radziecka napaść na Finlandię w listopadzie 1939 roku, utwierdzają go w przekonaniu, że jego

wrogość wobec bolszewizmu,

datująca się od 1920 roku, jest w pełni uzasadniona. Wrogość ta z czasem uczyniła Russella, który od marca 1938 roku wykładał w Stanach Zjednoczonych, coraz mniej popularnym. Zwłaszcza po rozpoczęciu akcji pomocy amerykańskiej dla Związku Radzieckiego. „Pomagamy dzielnej Armii Czerwonej, która utrzymuje wojnę daleko od brzegów Ameryki” — twierdził w przemówieniu radiowym prezydent F. D. Roosevelt, któremu zależało na zachowaniu poparcia społecznego dla jego polityki. A to oznaczało podsycanie proradzieckich nastrojów, a więc i sympatii dla „starego dobrego wujka Joe”, czyli Józefa Stalina. W takim klimacie antykomunizm Russella był — łagodnie mówiąc — nie na czasie.

Z drugiej strony, amerykańscy bigoci i obskuranci nie mogli zapomnieć Russellowi jego poglądów na temat małżeństwa, rodziny i wychowania oraz jego stosunku do religii. Udało im się zablokować mu drogę do stanowiska profesora logiki w College of the City of New York, dla którego to stanowiska Russell zrezygnował z wykładów w University of California. Po okresie sztyku i kłopotów materialnych w 1944 roku Russell powrócił do Anglii. Dzięki staraniom przyjaciół, odzyskał pozycję profesora Cambridge University. W Trinity College zamieszkał w pokojach zajmowanych niegdyś przez Newtona...

Początek zimnej wojny sprawił, że nieprzejednany antykomunizm Russella stał się jego atutem, nie zaś kłopotliwym obciążeniem.

W roku 1950 Bertrand Russell odbywał podróż po Ameryce. Jest to podróż triumfalna. W Nowym Jorku, gdzie dziesięć lat temu nie dopuszczono go do profesury, audytoria są zapelnione setkami studentów, wykładowców i dziennikarzy. W czasie tej podróży, w Princeton, Russell dowiaduje się z radia, że został laureatem literackiej Nagrody Nobla.

W okresie amerykańskiego monopolu atomowego Russell był zdania, iż sytuację tę należy wykorzystać dla zahamowania radzieckiego ekspansjonizmu. Sądził, że Stany Zjednoczone powinny być gotowe do prewencyjnego uderzenia jądrowego przeciwko ZSRR. W tym okresie prasa radziecka nazywała go „filozofem bestialstwa”, „podżegaczem wojennym” i „wilkiem w smokin-gu”.

Kiedy Związek Radziecki znalazł się w posiadaniu broni jądrowej, globalna sytuacja geostrategiczna uległa radykalnej zmianie. Russell, który lepiej niż inni rozumiał implikacje tej broni, głosił potrzebę międzynarodowej kontroli zbrojeń i rokowań, zmierzających do zakazu prób, a w dalszej perspektywie do całkowitego wyeliminowania broni jądrowej. Nie sądził, ażeby te cele mogły być osiągnięte przez samych polityków i dyplomatów. Dlatego też stał się animatorem i intelektualnym przywódcą ruchów społecznych. Pierwszy z nich — to ruch uczonych na rzecz zakazu eksperymentów z bronią jądrową, znany pod nazwą ruchu Pugwash. Został on zainaugurowany apelem Russella-Einsteina, pod którym złożyło podpisy wielu wybitnych uczonych, w większości noblistów.

Następnie odegrał poważną rolę w zainaugurowanej przez znanego pisarza J. B. Priestleya Kampanii na Rzecz Rozbrojenia Nuklearnego (CND). Z czasem uznał jednak, że organizacja ta jest mało skuteczna. Na początku lat sześćdziesiątych Russell stanął na czele tzw. Komitetu Stu, mobilizującego brytyjską i międzynarodową opinię publiczną poprzez wiece, organizowane w Londynie na Trafalgar Square i demonstracje przed ambasadami mocarstw, przeprowadzających eksplozje jądrowe.

Wcześniej, bo już w 1963 roku, widział szkodliwość amerykańskiego zaangażowania w Wietnamie.

W okresie kryzysu kubańskiego skierował listy i depeze do Kennedy'ego, Chruszczowa i Castro. Jednakże wpływ sędziwego filozofa na bieg wydarzeń był raczej symboliczny. Zdaniem Ronalda Clarka, niewielkie, ale odczuwalne skutki przyniosły zabiegi Russella, zmierzające do zakończenia wojny chińsko-indyjskiej w Himalajach. Zarówno Nehru, jak i Czou En-laj, odpowiadał na jego listy z wielką uwagą i przyjmowali jego wysłanników. Następca Nehru, premier Lal Bahadur Shastri, odwiedził 93-letniego Russella w Plas Penrhyn dla przedyskutowania stosunków indyjsko-chińskich i indyjsko-pakistańskich. Pewne skutki praktyczne miała również korespondencja Russella z arcybiskupem Makariosem w sprawie Cypru.

W centrum uwagi Russella, a następnie założonej przez niego fundacji pokojowej, znajdowały się również

kwestie praw człowieka.

Działania, podejmowane w obronie więźniów sumienia, były stosunkowo mało skuteczne. W odpowiedzi na interwencję Russella w Austrii zwolniono dziesięciu studentów irańskich, a w Peru i w Boliwii odzyskały wolność grupy więźniów politycznych. Szczególnym przypadkiem była sprawa Heinza

Brandta, przetrzymywanego w NRD-owskim więzieniu. Russell w liście do Waltera Ulbrichta wystąpił o jego uwolnienie. Gdy list ten pozostał bez echa, odesłał do Berlina Medal Ossietzky'ego, którym kilka lat wcześniej odznaczyły go władze NRD. To dopiero przyniosło zamierzony skutek.

W cyklu wywiadów telewizyjnych, nadawanych przez BBC w 1961 roku, twierdził, że nie podziela poglądu Marksa na temat zadań filozofa. Nie powinien on zmieniać świata, ale starać się go rozumieć. Tak sądził Russell-filozof.

Natomiast Russell-publicysta doszedł do przekonania, że ograniczanie się do filozofii w obliczu społecznych zagrożeń i kataklizmów byłoby niedopuszczalnym luksusem. Dlatego też zarysował własny program przebudowy społecznej, a więc ograniczania nierówności społecznych, rozwijania demokracji, eliminacji rasizmu i militarystyki.

Twierdził, że potrzebna jest powszechna oświata, a nie rewolucja. Oświata, sprzyjająca swobodnemu kształtowaniu jednostki ludzkiej, wolna od zapędów indoktrynacyjnych. Wiele russellovskich koncepcji oświatowych znalazło zastosowanie w Europie Zachodniej i Ameryce Północnej.

Russell uważany jest za propagatora doktryny tzw. społeczeństwa przyzwalającego, które stało się rzeczywistością w wielu państwach zachodnich, gdzie nastąpiło dostrzegalne zmniejszenie prudencji i zakłamania w sferze obyczajowej. Ale występujące w tych społecznościach anomalie, takie jak np. narkomania i osłabienie więzi społecznej, są zasadniczo sprzeczne z jego założeniami intelektualnymi i całą koncepcją rozwoju jednostki.

Na płaszczyźnie społecznej bowiem lord Russell był przede wszystkim obrońcą praw człowieka, a zwłaszcza praw i godności jednostki ludzkiej. Ten sceptyk i pesymista był człowiekiem wielkiej pasji i ogromnej aktywności. Budziło to ciągle zdumienie. Pesymiści, przeświadczeni, że niewiele można zrobić dobrego, zazwyczaj nie widzą powodu, aby podejmować jakieś gorącz-

kowe wysiłki. Tymczasem jego aktywność i energię pobudzała chęć przeciwstawienia się totalitarnym i autokratycznym formom rządzenia. Nie wierzył w „dobrych dyktatorów”, narzucających kolektywistyczne systemy kontroli i wymuszania posłuszeństwa. W 1961 roku przed kamerami BBC utrzymywał, że największym błędem komunizmu jest przeświadczenie, iż może istnieć dyktatura ludzi dobrej woli. Dobra wola z czasem ulatnia się, ale dyktatura pozostaje.

Mimo okrucieństw i zagrożeń, których jesteśmy świadkami, żyjemy w świecie coraz bardziej wyczulonym na przestrzeganie praw człowieka. Skompromitowały się systemy polityczne, zakładające podporządkowanie jednostki ludzkiej wymogom „dobra ogólnego”, zdefiniowanego przez dyktatorów i oligarchów. Nawet w społeczeństwach obciążonych tradycjami wschodniego despotyzmu wzrasta nacisk na rzecz ustanawiania instytucji i procedur demokratycznych oraz zwiększania zakresu swobód jednostki ludzkiej. Te zjawiska przybierają na sile wraz z zaawansowaniem gospodarczym i cywilizacyjnym.

Z drugiej strony, obserwujemy również tendencje represyjno-fundamentalistyczne, zmierzające do ograniczenia swobód jednostki, a zwłaszcza wolności słowa, do wymuszania zmian za pomocą terroru.

Zarówno pokojowe rewolucje demokratyczne w Europie Środkowej i Wschodniej oraz w RPA, jak i współczesny fundamentalizm, dostarczają argumentów na rzecz głoszonej przez Russella koncepcji przebudowy społecznej.

W świecie współczesnym godność jednostki i wolność słowa przestają być arystokratycznym przywilejem. Stopniowo stają się udziałem setek milionów ludzi. Przyczynił się do tego ów niezwykły arystokrata, który bez względu na konsekwencje — płynąc pod prąd — krok po kroku starał się uczynić świat lepszym dla każdego człowieka.

RUSSELL IN THE MANUSCRIPT MARKET--II

This Russell manuscript notice appeared on page 33 of the Winter 1994 catalog of Max Rambod; 9903 Santa Monica Boulevard; Beverly Hills, CA 90212. TLS = typed letter signed. Sharing space on the page with the Russell notice were listings for Spencer Tracy, Mother Theresa, and Barbara Stanwyck.

187. RUSSELL, BERTRAND (1872-1970)

3rd Earl. British Philosopher, Mathematician, and winner of the Nobel Prize for Literature. TLS, 8vo, 1p, November 10, 1954. Russell wrote on philosophy. He also campaigned for nuclear disarmament. He was arrested and even spent time in jail. In view of this, it is small wonder that he had to refuse to a request for some of his time. In part: "...I have too much on hand to compose a statement of the sort you suggest, but if you like look through my published works you may find something that you would think suitable...I am sorry not to be more cooperative, but my time is very much occupied." A fine addition to any collection related to literature, philosophy or peace.

DONALD KEENE ON RUSSELL

Thanks to Tom Stanley who provided this excerpt from On Familiar Terms: A Journey Across Cultures by Donald Keene (Kodansha International, 1994).

Among the other acquaintances I made during my first year in Cambridge was Bertrand Russell. This was his last year of teaching at Cambridge, and his lectures on modern philosophy were attended by a great many people, all resolved to tell their children at some future date that they had actually heard the great man lecture. After one of the first lectures of the term I went up to ask him to autograph a copy of his *A History of Western Philosophy*, which had been published a few years earlier. As it happened, I was the first in a fairly long line of people, each of whom had a book for him to autograph, and Lord Russell used my pen to sign them all. After the last person had gone away he realized that he had kept me waiting and, after apologizing, suggested that we have a beer together.

Needless to say, I was enchanted at the idea. We went to a nearby establishment and drank together for about an hour before he had to go off to dinner in Trinity College. I have unfortunately no recollection of what we talked about, but I was overjoyed when, after we had finished our beers, Lord Russell said something like, "Young man, I like your company. Let us have beer together after every lecture this term." And that is precisely what happened. Friends who saw me walking from the lecture hall to the hotel where we were to drink said that they had never seen anyone look so happy.

What was it that so captivated me? Of course, it was highly flattering to think that a great man had singled me out from among all the undergraduates attending his lectures as his drinking companion. But it was more than that. Bertrand Russell spoke with a pronunciation and a precise choice of words that made me think of eighteenth-century English literature. He would ask me searching questions, as if he were really interested in me, and when I asked him a question would consider it, as if it were worthy of thought. He was also quick to discover when I was only pretending to know something in the hope of keeping him from being disillusioned about me. For example,

on one occasion he asked, "You remember how *Henry V* begins, don't you?" "Of course," I answered, though my mind was a blank. I had read the play several times and the film with Laurence Olivier was one of my great favorites, but I simply could not recall that it opens with the Archbishop of Canterbury planning to save church lands by backing Henry V's invasion of France. "I see that you do not know how *Henry V* begins," Lord Russell said with a smile.

How I wish that I had kept a diary or even a memorandum of the substance of our conversations at that time! But I had always had such confidence in my memory that it never occurred to me that I might forget conversations that brought me so much pleasure. By accident, I still have a brief memo to myself on one conversation. Lord Russell told me about a Chinese student named Hsü whose teacher in China was distinguished both by his unusual knowledge of the classics and by the fact he had never taken a bath. When the teacher died, his family thought that he should be bathed before the funeral, but Hsü objected, "No, bury him whole!"

One conversation lingers with particular vividness. Lord Russell thought that the greatest danger to a lasting peace was Stalin, and that the Americans, while they still had a monopoly on the atomic bomb should use it on the Soviet Union to get rid of Stalin. People I have told of this conversation find it hard to believe. Lord Russell would be known as a passionate advocate of peace with the Soviet Union, and he was even credited with the slogan "Better red than dead!" I realize how unlikely it is that he should have expressed himself in such terms, but I have no doubt whatsoever that this is precisely what he said.

CSIKSZENTMIHALYI ACKNOWLEDGES RUSSELL

You might want to examine Mihaly Csikszentmihalyi's Flow: The Psychology of Optimal Experience (New York: Harper & Row, 1990). The paperbound edition (1991) back cover offers this summary:

For more than two decades Mihaly Csikszentmihalyi has been studying states of "optimal experience"--those times when people report feelings of concentration and deep enjoyment. These investigations have revealed that what makes experience genuinely satisfying is a state of consciousness called flow--a state of concentration so focused that it amounts to absolute absorption in an activity. Everyone experiences flow from time to time and will recognize its characteristics: People typically feel strong, alert, in effortless control, unselfconscious, and at the peak of their abilities. Both the sense of time and emotional problems seems to disappear, and there is an exhilarating feeling of transcendence. Flow: The Psychology of Optimal Experience reveals how this pleasurable state can, in fact, be controlled, and not just left to chance, by setting ourselves challenges--tasks that are neither too difficult nor too simple for our abilities. With such goals, we learn to order the information that enters consciousness and thereby improve the quality of our lives.

Russell would appear to have much in common with Csikszentmihalyi. On a biographical point, from 1938 to 1939 Russell was a University of Chicago philosophy professor, while Csikszentmihalyi has been a University of Chicago psychology professor for many years. But more importantly, the two seem to share certain philosophy of life positions. Below are a Russell-related passage from Flow (p. 93) and its corresponding endnote (p. 259), which are suggestive of the commonality of at least part of these two writers' thoughts.

Without interest in the world, a desire to be actively related to it, a person becomes isolated into himself. Bertrand Russell, one of the greatest philosophers of our century, described how he achieved personal happiness: "Gradually I learned to be indifferent to myself and my deficiencies; I came to center my attention increasingly upon external objects: the state of the world, various branches of knowledge, individuals for whom I felt affection." There could be no better short description of how to build for oneself an autotelic personality.

In part such a personality is a gift of biological inheritance and early upbringing. Some people are born with a more focused and flexible neurological endowment, or are fortunate to have had parents who promoted unselfconscious individuality. But it is an ability open to cultivation, a skill one can perfect through training and discipline.

The quotation from Russell was cited in an article in Self magazine (Mer-ser 1987, p. 147) [C. Mer-ser, "A Thoroughly Modern Identity Crisis"].

A RESPONSE TO MICHAEL NOVAK

RSN 85 (February 1995) included a newspaper article in which Michael Novak of the American Enterprise Institute is quoted as saying, "Even atheists have accepted this Jewish and Christian ideal. Bertrand Russell, the atheist mathematician and writer, pointed out honestly that he borrowed the idea of compassion from Jesus, as wise humanists do." We asked for readers to substantiate or refute Novak's claim. Here is a response from Poch Suzara of the BRS Philippine Chapter.

Did Russell Borrow Compassion from Christianity?

A quotation from Michael Novak reads "Bertrand Russell, the atheist mathematician and writer, pointed out that he borrowed the idea of compassion from Jesus, as wise humanists do." Let's compare words from Jesus and Bertrand Russell.

From Jesus: "If any man come to me and hate not his father, and mother, and wife, and children, and brethern, and sisters, yea, and his own life also, he cannot be my disciple." Luke 14:26.

From Russell: "In the modern world, if communities are unhappy, it is because they choose to be so. Or, to speak more precisely, because they have ignorances, habits, beliefs, and passions, which are dearer to them than happiness or even life. I find many men in our dangerous age who seem to be in love with misery and death, and who grow angry when hopes are suggested to them."

A great many people believe that Christ is the epitome of compassion. In fact, Lent season in the Christian world recalls how Jesus Christ, God -- the Son, saved mankind from sin by being subjected to intense humiliation and suffering that ended with His death on the Cross. What is ignored, however, is that this divine mission had accomplices: Jesus and Pontius Pilate both ignorant and stupid men created too in the image and likeness of God -- the father.

Mr. Novak: There is little difference between some of the goals of the Christian and the Humanist: both value helping their fellow man. But the Humanist is drawn to this goal out of unselfish love and compassion-- which arises from intelligence and education. For him, the ultimate goal in life is human happiness here and now. The Christian, however, is driven to it out of fear for his own eternal welfare. For the Christian, helping his fellow man is not an end in itself but only a means of saving himself from eternal perdition. The Humanist realizes that he could be mistaken about what is best for his fellow man; so he is willing to listen to criticism. The Christian cannot admit that his ideas of right and wrong might be mistaken, because to doubt would, again, imperil his immortal soul.

I write from the Philippines, the only Christian country in Asia. In this country, I regret to admit, love and compassion hardly exist; but we all love God up there by hating one another down here.

Of course we cannot do without Jesus. Who, if not Jesus, will forgive our sins against the Almighty? Who, if not Jesus, will forgive our crimes against society? Forgiveness here, and forgiveness there, and forgiveness everywhere seem to characterize the success of Christianity in the Philippines. Is this what compassion is about?

A MISCELLANY OF RUSSELL REFERENCES

(1) From Jeff Simon's The Buffalo [New York] News book review of Fighting Words, James Charlton, editor, July 17, 1994, p. G-6:

Bertrand Russell on William Wordsworth: "In his youth, Wordsworth sympathized with the French Revolution, went to France, wrote good poetry and had a natural daughter. Then he became good, abandoned his daughter, adopted correct principles and wrote bad poetry." That last is among my favorites. For all it lacks in jokiness, its shrewdness and terseness in assessing William Wordsworth's 80 years on earth can't be beaten.

(2) From David L. Chandler's The Boston Globe article on Norbert Wiener, "Not Your Ordinary Genius," November 28, 1994, pp. 25-26:

Soon after he [Wiener] earned his doctorate he went to England for post-graduate studies under philosopher Bertrand Russell, who wrote to a friend that "this youth has been flattered and thinks himself God Almighty....There is a perpetual contest between him and me as to which is to do the teaching.

(3) Thanks to Carl Westman for sending in this passage from the March 1995 A Common Reader catalog describing The Last Cuckoo: The Very Best Letters to "The Times" Since 1900:

This delightful collection of epistolary wit and wisdom, moral passion and common sense, eccentricity and idiosyncrasy reveals throughout the 20th century a kind of all-England town-meeting has been going on in The [London] Times' correspondence columns....One well-turned example of griping, for instance, comes from Bertrand Russell, who rails spiritedly against the unregulated dress of women at the Covent Garden Opera House ("this lady, whose hair was very black, had stuck over her right ear the pitiable corpse of a large white bird, which looked exactly as if someone had killed it by stamping on its breast, and then nailed it to the lady's temple, which was presumably of sufficient solidity to bear the operation").
