Donald W. Jackanicz, President
3802 N. Kenneth Ave.
Chicago, IL 60641 U.S.A.

11 July 1983

President Ronald Reagan
The White House
Washington, DC 20500

Dear Mr. President,

The Board of Directors of the Bertrand Russell Society has adopted the following resolution which I am now respectfully submitting to you. An identical letter has been sent to President Andropov.

The Bertrand Russell Society, believing that any use of nuclear weapons will lead to unlimited use of nuclear weapons and probable end of the human race, is in favor of a mutual, verifiable nuclear freeze, leading to a gradual reduction and eventual elimination of nuclear weapons, and urges the leaders of the major nuclear powers to pursue this path.

Sincerely yours,

Donald W. Jackanicz

NEW MEMBERS

(24) We are very glad to welcome these new members:

LUCIA ADAMS/535 N. Michigan Av./Chicago, IL 60611
CARRIE BARTELL/Box 131/Palmer Lake, CA 80133

FROTH

- (26) Vanity Fair (May 1983, pp.141-144) has a section, "FLASHBACKS 1928, Celebrated Couples in the pages of Vanity Fair"...where" both partners are workers in the same art..." The 10 couples pictured include Douglas Fairbanks and Mary Pickford, Lynn Fontanne and Alfred Lunt, Bertrand and Dora Russell. The caption under the Russells reads: "The Russells are both keen sociologists, audible liberals and (unless choked off by some such panic as recently frightened Wisconsin) inordinate lecturers."

The Wisconsin incident, as we recall it: the University of Wisconsin cancelled Dora's invitation to speak there, presumably because of her immoral character or views or something. Would Dora kindly amplify?

(Thank you, JOHN SCHWENK)

CONTRIBUTIONS

- (27) We thank these members for their contributions to the BRS Treasury: JEAN ANDERSON, POLLY & WHITFIELD COBB, KATHY FJERMEDAL, DON JACKANICZ, JOHN TOBIN. Much appreciated!

- (28) We ask those members who can afford to, to contribute money to the BRS Treasury. The need is considerable.

Please send what you can. Any amount is welcome. No sum is too small to be useful.

Send it c/o the newsletter, address on Page 1, bottom. Thanks!

PROMOTING THE BRS

Frank Page's good idea. Here is a way to invite inquiries about the BRS -- inquiries are the essential prerequisite to acquiring new members -- and at very little cost.

There is good reason to want to acquire more members: we are now not self-supporting. Dues do not cover the cost

of operating. We are dependent on contributions (which are often slim) to make ends meet. The number of BRS members hovers between two- and three-hundred. If we can get that figure up to 500, we will no longer need to think of ourselves as on the endangered species list.

This is Frank's good idea:

Public Libraries usually have a bulletin board or wall on which public notices may be posted (with the Librarian's permission, of course.)

If BRS members were to post the BRS Fact Sheet in their local libraries, we think it would surely produce inquiries. That is decidedly worth doing.

The BRS Fact Sheet appears on the next page (Page 19). If you will photocopy it and install it in your local library, you will be taking the first step toward moving us up to sound financial ground...for the modest cost of a photocopy.

As we know, a journey of a thousand miles begins with the first step.

Won't you take the first step?

You will?

Thank you very much!

ELECTION OF DIRECTORS

(31)

We vote for Directors. Please use the ballot at the end of this newsletter. We are to elect 9 Directors, to bring the total number of Directors up to 24, the maximum allowed under our current Bylaws. There are 12 candidates. You need not sign your ballot, if you prefer not to. These are the candidates:

JACK COWLES (NY), member since 1976, retired naval officer. Served in Pentagon, with co-finger on the button. Anti-war informant to Senator Fulbright, after Tonkin Gulf incident, which caused Navy to blacklist him. Took BR's lecture course in Philosophy at UCLA, 1940. BRS Director 1979-1981.

ALI GHAEMI (Virginia), member since 1979, BRS Director, law student, with a degree in political science. He is Iranian; interested in applying BR's political philosophy to the current state of affairs. Member of AI, US Ass'n of the US, Society for Iranian Studies, various national and Islamic groups, etc. A published author; also interested in philately, reading and tennis.

DAVID GOLDMAN, M.D. (NY), member since 1979. Clinical Assistant Professor of Psychiatry at NYU Medical School, Lecturer in Psychiatry at the Columbia University Psychoanalytic Center. Notes false psychologizing in current nuclear strategies...and, influenced by BR, served on Executive Board of NY Chapter of Physicians for Social Responsibility, organized their 1982 symposium "Preparing for Nuclear War", recently published.

DONALD W. JACKANICZ (Illinois), member since 1974, BRS Director, present BRS President, former BRS Secretary, former BRS Librarian, student of history (Ph.D. Candidate); employed by Social Security Administration.

STEVE MARAGIDES (Illinois), member since 1976, BRS Director, attended 6 of the last 7 Annual Meetings. Attorney; moved the BRS from Georgia to Illinois, donating his legal services. Degrees: Journalism (Northwestern), Law (University of Illinois).

FRANK PAGE (Ohio), member since 1977. CPA. A dedicated Russellite since the 1920s. "Since Russell has been a great influence on my intellectual and social outlook, I would consider it a duty as well as a privilege to serve on the Society's Board."

CHERIE RUPPE (Washington), member since 1980, BRS Director, BRS Secretary. Associate member: Pugwash, Federation of American Scientists, Union of Concerned Scientists; Fellow of Endangered Wildlife Trust of So. Africa; Member, Whale Protection Fund, Northwest Ballet Association.

PAUL ARTHUR SCHILPP (Illinois), BRS Director, BRS Honorary Member, recipient of the first BRS Award (1980), creator and editor of "The Library of Living Philosophers", Distinguished Research Professor of Philosophy (Emeritus) at Southern Illinois University, and much more.

WARREN ALLEN SMITH (Connecticut), member since 1977, BRS Director, former BRS Vice-President. Member: American Humanist Association, British Humanist Association, Mensa. Former book review editor, "The Humanist" (USA), high school teacher (English), recording studio owner.

TOM STANLEY (Vermont), member since 1977, salesman of electronic wares and antiquarian bookseller, collector of first editions. Active in local peace movements for the past 5 years. Interested in support for the gifted child.

Continued on Page 20

Fact Sheet

THE BERTRAND RUSSELL SOCIETY, INC.

(30)

General aims: to foster a better understanding of Russell's work, and to further his purposes by promoting ideas and causes he believed in.

Some specific areas of interest: promoting Russell's writings; encouraging new scholarly and popular writings on Russell; presenting Russell's ideas as attractive, rational alternatives to alienation, cynicism, and mysticism; opposing misuses of science and technology; spreading Russell's views, which deal with virtually all the problems facing modern, from how to be happy to how to work for nuclear disarmament.

Why people join: most members join (they have told us) for one or more of five reasons: to learn more about Russell; to be in touch with other admirers; to work for things Russell worked for; to discuss Russell's work with others; to do something useful for others via the BRS.

Academia: Although the BRS is not a scholarly society, one of its aims is to encourage Russell scholarship. A number of professional philosophers are BRS members. A BRS symposium is held each year at the annual meeting of the American Philosophical Association (Eastern Division). A BRS grant is awarded annually to a doctoral candidate. Symposia papers and the grant-recipients' dissertations are available from the BRS Library.

BRS Library lends films and tapes of Russell, as well as books by and about him. A limited number of books are offered for sale.

How the BRS functions: the BRS meets once a year. Other contacts between members are usually by mail or phone. Committees are formed to work in specific areas (see below). Four BRS newsletters, "Russell Society News", go to members, as does the periodical, "Russell", published by the Russell Archives at McMaster University (Hamilton, Ontario).

Committees: the Science Committee keeps members informed about selected scientific issues. The Philosophers Committee promotes scholarly writings by professional philosophers through its annual symposium at APA. The Human Rights Committee is specially interested in the plight of professional people abroad. The Awards Committee selects recipients for the annual BRS Award (see next item).

BRS Award. Past recipients: PAUL ARTHUR SCHILPP (1980), creator and editor of "The Library of Living Philosophers". STEVE ALLEN (1981), creator of the PBS-TV series, "Meeting of Minds"... "in the service of public enlightenment." HENRY W. KENDALL (1982), Chairman, Union of Concerned Scientists, for combatting unbridled technology, including nuclear. JOSEPH ROTBLAT (1983), organizer of the first 23 Pugwash Conferences, bringing East and West together, to diminish the nuclear peril.

Degree of member-activity: members may be as active or as inactive as they wish to be. Some are very active; some wish merely to be kept informed. No matter. Anyone interested in Russell will be welcome as a member.

For more information, write to:

Dept. FP
The Bertrand Russell Society, Inc.
RD 1, Box 409
Coopersburg, PA 18036

KATHARINE TAIT (Massachusetts), BRS Founding Member, BRS Director, Honorary Member, first BRS Treasurer, author of "My Father, Bertrand Russell" (NY: Harcourt Brace Jovanovich, 1975).

DAN WRAY (California), member since 1975. Playwright and filmmaker (with Master's degrees in English and Theatre), his plays have been produced in NY, Los Angeles, and in the mid-West. Interested in history, especially in the effect of modern ideologies on states in conflict.

Please vote! Why not right now? Use the ballot on the last page. Results will be announced in the November newsletter.

VOLUNTEER NEEDED

(32) To all BRS members in the USA:

The BRS needs someone who can help with paperwork.

We are dividing it, so that two members will now do what formerly one member did.

Formerly, one member answered inquiries (asking for information) about the BRS, and also enrolled new members when they applied for membership.

Now these 2 jobs are split up. One person (Carol Smith, Co-Chairman of the Membership Committee) will answer inquiries, and the new volunteer will enroll new members.

The work, though not difficult (the procedures have been worked out) is absolutely essential. In sum, the job is simple but important.

This is probably a job for someone who has worked in an office and enjoys doing paperwork.

If you decide to volunteer, you will become a Co-Chairman of the Membership Committee.

You will need some shelf-space (or floor-space) to store printed material that is sent to new members.

The work should not take much more than an hour a week, on average, after becoming acquainted with it, and after processing a backlog of new member applications.

You should not volunteer unless you are prepared to stay with it for at least 2 years.

We need you! How about it?

Please reply to Volunteer, RD 1, Box 409, Coopersburg, PA 18036

(We are limiting this appeal to members in the USA. Outside the USA, postage costs are considerably higher.)

- (34) Friends of Robert G. Ingersoll advise that the dates of the Ingersoll Sesquicentennial Festival and Freethought Fair in Peoria (RSN38-37) are August 11-13. Participants in the Freethought Fair will include the Freedom From Religion Foundation, The American Humanist Association, Religious Freethinkers from California, 2 state chapters of The American Atheist Association, American Rationalists, and The American Civil Liberties Union. Prometheus Press will show a new reprint of "Ingersoll: Immortal Infidel" by Roger Greeley (1977). The Lyceum at Bradley University will offer talks by Gordon Stein, David Anderson, Raymond Fischer, among others. Two downtown hotels offer special Ingersoll Sesquicentennial rates of \$30: Continental Regency, down from \$55, Ramada Inn, down from \$45. The Friends' address is: PO Box 5082, Peoria, IL 61601.

- (35) Hemlock — which we reported on at some length last issue (RSN38-39) — seeks members. →

- (36) The Institute of International Education offers internships:

INTERNATIONAL HUMAN RIGHTS INTERNSHIP PROGRAM

The Institute of International Education has been provided with funding for a 1984-85 continuation of the International Human Rights Internship Program. The internship program was formerly based at the University of Minnesota.

Purposes of the Program: 1. To provide individuals with practical training in international human rights implementation; 2. To support the efforts of international human rights organizations; and 3. To strengthen the network of trained human rights activists.

The program has in the past arranged internships with such organizations as the International Commission of Jurists, Amnesty International, U.S.A., the Interfaith Center on Corporate Responsibility, the Inter-American Commission on Human Rights of the OAS and more than two dozen other organizations in Geneva, London, New York, Washington, D.C. and other cities. The renewed program will endeavor to arrange placements with similar organizations. A description covering the activities of several organizations will be provided to applicants.

Qualifications of Interns: The primary criterion for selection of applicants will be their interest and expected ability to pursue international human rights efforts during the internship period and beyond.

Applicants should be in graduate school or have received a graduate degree, although applicants with an undergraduate degree only will be considered in exceptional circumstances. It is expected that most, if not all, of the interns will have previously received some practical experience or academic training in international human rights—regardless of the field of such work, e.g., law, international relations, journalism, political science, history, anthropology, etc. The program is not limited to individuals from the United States, and persons from other countries are encouraged to apply.

Internship Grants: The actual amounts of the internship grants will take into account such factors as the length of the internship, the cost of living in the organization's locale, and expected travel expenses. Because of the limited funds available, the individual grants will be of a subsistence nature, averaging approximately \$10,000 per year. Between ten and twelve internship grants will be awarded.

Applications and Information: The deadline for completed applications is September 30, 1983. Final decisions on internship grants will be made by the Board of the internship program. Grants will be announced during December 1983. Internships will begin in January 1984 or during the months following. The internships will ordinarily be of a year's duration, although in exceptional cases, shorter internships will be considered.

Requests for application forms and other inquiries should be sent to:

International Human Rights Internship Program
918 16th Street, N.W. (8th Floor)
Washington, D.C. 20006
U.S.A.

1983 MEETING (CONTINUED)

(38) Minutes of the Annual Meeting →

(39) Minutes of the Board's Meeting ↓

The Annual Meeting of The Bertrand Russell Society, Inc., an Illinois corporation, was convened at 8:10 P.M., June 24, 1983, at McMaster University, Hamilton, Ontario, Canada. Members present were MARGARET COBB, WHITFIELD COBB, JACK R. COWLES, DENNIS J. DARLAND, ROBERT K. DAVIS, LEE EISLER, PAUL GARNIC, MARY W. GIBSON, DAVID GOLDMAN, DAVID S. HART, DONALD W. JACKANICZ, MARVIN KOHL, CLAYTON LETHBRIDGE, JOHN R. LENT, ROBERT LOMBARDI, STEVE MARAGIDES, JAMES E. McWILLIAMS, FRANK V. PAGE, PAUL M. PALMER, STEPHEN J. REDHARDT, THOMAS J. STANLEY, JOHN VAN WISSEN, ELIZABETH VOGT, HERBERT G. WOYT, BOB WALLACE.

President DON JACKANICZ, presiding, informed the members of what had happened since the 1982 Annual Meeting in Los Angeles, including changing The Bertrand Russell Society from a Georgia corporation to an Illinois corporation, revising the Bylaws (still in process), and planning for the 1983 meeting.

DENNIS DARLAND gave the Treasurer's Report, showing the present balance to be \$3,364.69.

LEE EISLER, Vice-President/Information, asked the members to send items of interest to him, for possible publication in the newsletter.

DON JACKANICZ stated his thanks to BOB DAVIS for eight years of outstanding service as President of the ERS. The statement was followed by resounding applause. LEE EISLER asked that the minutes mention the applause.

DON JACKANICZ read JACK BAGSDALE's letter which asked the ERS to endorse a nuclear freeze. There were arguments for and against the proposal. Arguments against it: it would politicize the ERS; this would endanger the ERS's tax-exempt status; the Ragsdale letter was vague and unclear, not specifying unilateral or bilateral, verifiable or non-verifiable; the small number voting should not presume to speak for the entire ERS; members favoring the freeze should speak as individuals rather than have the ERS take a position on the issue. Arguments for it: whatever other resolutions might be inappropriate for the ERS to endorse, the nuclear freeze resolution was certainly one that ER would have endorsed, and a society bearing his name should endorse it; endorsement would not jeopardize the ERS's tax-exempt status (according to DAVID GOLDMAN), if the ERS educates the public rather than lobbies Congress; the issue of nuclear war is too important to ignore. The members did not vote on the nuclear freeze resolution. (However, at a later Board meeting, a newly worded freeze resolution was approved. See 394)

LEE EISLER moved that the ERS undertake to collect suitable information about ER, with a view to interesting a movie-maker in making a film on ER. Many incidents in ER's life are dramatic, and might provide material that a screen-writer could use in writing a good script, incidents such as the CCNY affair, the Vietnam era peace activities, the going to jail, etc. The plan is to invite all ERS members, through the newsletter, to participate in this project by sending in incidents they think suitable for film treatment. (See 14). The motion carried.

The 1983 Annual Meeting of The Bertrand Russell Society was adjourned.

Submitted July 17, 1983

Steve Maragides, Jr. c.
Steve Maragides, Acting Secretary
For Cherie Ruppe, Secretary

The Board of Directors of The Bertrand Russell Society, Inc., an Illinois corporation, met at 10:00 A.M. Friday, June 24, 1983, at McMaster University, Hamilton, Ontario, Canada. Directors present were DENNIS J. DARLAND, ROBERT K. DAVIS, LEE EISLER, DAVID S. HART, DONALD W. JACKANICZ, MARVIN KOHL, STEVE MARAGIDES, and JAMES E. McWILLIAMS. In the absence of HARRY RUJA, the Board elected DON JACKANICZ as Acting Chairman. In the absence of CHERIE RUPPE, the Board elected STEVE MARAGIDES as Acting Secretary.

The location of the 1984 Annual Meeting was discussed. Part II of a 2-year Conference — jointly sponsored by the Bertrand Russell Editorial Project (at McMaster University) and The Institute for the History and Philosophy of Science and Technology (at the University of Toronto) — is scheduled for late June 1984 at the University of Toronto. It will be on ER's technical writings. It was thought appropriate that there be a ERS presence at the Conference. Therefore BOB DAVIS moved (and MARVIN KOHL seconded) that the ERS hold its 1984 Annual Meeting in Toronto to coincide with the Conference. The motion carried.

Since ER's technical writings might not be of interest to all ERS members, who are not professional philosophers, it was also decided that the ERS would mount a separate program (including ER films) for that weekend, to provide ERS members with an alternative to the technical talks.

[The 1984 Program Committee will consist of Don Jackanicz, Marvin Kohl and Bob Davis. Ed]

HARRY RUJA recommended that the ERS Doctoral Grant offer be made more widely known through ads in "The Journal of Philosophy" (USA) and "Mind" (UK). The Information Committee will look into this.

DON JACKANICZ advised the Board that the Bertrand Russell Society was now an Illinois corporation (the Georgia corporation having been dissolved) with federal tax-exempt status.

DON JACKANICZ moved that JACK BAGSDALE be named ERS Librarian. LEE EISLER seconded. Jack Ragsdale was named ERS Librarian by acclamation.

BOB DAVIS has, for a long time, been trying to get 3 ER essays published together in an inexpensive edition: "Why I Am Not A Christian", "What I Believe", and "What Is An Agnostic". Bob reports that it now seems likely that Prometheus Press will publish it, though the price may not be as low as Bob would have liked. MARVIN KOHL offered to help with the project.

BOB DAVIS informed the Board the Professor Joseph Rotblat would not be present to accept the 1983 ERS Award because of a foot injury. Bob showed the Board the Award plaque that Professor Rotblat will receive.

DON JACKANICZ expressed the opinion that the general membership of the ERS should be encouraged to nominate candidates for the annual ERS Award, and that the deadline should be December 1st for the Award of the following year.

JACK BAGSDALE's letter to the Board, advocating that the Bertrand Russell Society endorse a nuclear freeze, was read by Don Jackanicz.

The Board of Directors turned to the election of officers. DON JACKANICZ was re-elected President. MARVIN KOHL was elected Vice-President. DENNIS DARLAND was re-elected Treasurer. BOB DAVIS was re-elected Vice-President/Special Projects. LEE EISLER was re-elected Vice-President/Information.

The meeting was recessed until the evening of Friday, June 24, 1983.

The Board of Directors of The Bertrand Russell Society reconvened Friday evening, June 24, 1983. Directors present were JACK R. COWLES, DENNIS J. DARLAND, ROBERT K. DAVIS, LEE EISLER, DAVID S. HART, DONALD W. JACKANICZ, MARVIN KOHL, STEVE MARAGIDES, JAMES E. McWILLIAMS, and STEPHEN J. REDHARDT.

LEE EISLER moved that members be forbidden to use the ERS name in correspondence with the media or with prominent persons without the permission of the ERS President or Board. The motion failed to carry.

The Board re-elected CHERIE RUPPE Secretary.

The Board recessed until Saturday, June 25, 1983

The Board reconvened on Saturday, June 25, 1983. HARRY RUJA assumed his duties as Chairman. The Board continued to discuss the use of the ERS name by members.

LEE EISLER moved that official ERS stationery be used only for official business. The motion carried.

LEE EISLER moved that members be allowed to use unofficial (members') ERS stationery for all unofficial purposes. The motion carried.

A motion was made to allow any member to say, in a letter, that the writer is a member of The Bertrand Russell Society. The motion carried.

STEVE REDHARDT moved that no member shall represent himself as speaking on behalf of The Bertrand Russell Society unless he has been authorized to do so by the President or the Board of Directors of The Bertrand Russell Society. The motion carried.

Attention was again focused on JACK BAGSDALE's request that the ERS endorse a nuclear freeze. DON JACKANICZ moved that the ERS endorse a nuclear freeze. KEN SHACKWELL seconded. STEVE REDHARDT moved to table the motion; BOB DAVIS seconded. The motion to table carried. The meeting recessed to noon, Sunday, June 26, 1983.

The Board reconvened at noon, Sunday, June 26, 1983 to consider endorsing a nuclear freeze. LEE EISLER moved that the following be adopted: "The Bertrand Russell Society, believing that any use of nuclear weapons will lead to an unlimited use of nuclear weapons and probable end of the human race, is in favor of a mutual, verifiable nuclear freeze, and urges the leaders of the major nuclear powers to pursue this path." DON JACKANICZ seconded. The motion carried.

The Board asked DON JACKANICZ, ERS President, to send a copy of this resolution to the leaders of the two major nuclear powers. The meeting of the Board of Directors of The Bertrand Russell Society, Inc., an Illinois corporation, was adjourned.

Submitted July 17, 1983

SUMMARY OF OPPORTUNITIES

(42)

Attention, you members who want to DO something. Here are 7 things to do that you've read about in this newsletter:

- . Write your 2 Senators and Congressman on the need for a Congressional Assessment Center for Accidental War.(5)
- . Act on Frank Page's good idea for getting inquiries about the BRS. (29)
- . Volunteer for the Membership Committee's Co-Chairman's job (32)
- . Send us your ideas for the Film Project (14).
- . Tell Alex Dely about your skills, for his skills bank.(4)
- . Ask Alex for his packet on US human rights groups, one of which you might wish to join. (4)
- . Suggest candidates for the 1984 BRS Award. (16)

MEMBERSHIP LIST

(43)

The list is in 2 parts. Part I lists those who were members on June 1, 1983. (This list was distributed at the 1983 meeting at McMaster.) Part II lists members who have joined since June 1, 1983. Please check your name and address, and notify us of any errors. This list is provided solely for your personal use, and is not to be given to non-members.

List of members: Part I

INDEX

- (44) Highlights (1). 1983 Meeting (2). Officers report: President Jackanicz (3), Acting Secretary Maragides (3.5,38,39), Treasurer Darland (40,41). Committee reports: Human rights (4), Science (5). BRS at APA: report on 1982 (6), call for papers for 1983 (7). ER & Popper on Einstein (8). BR Editorial Project (9). BR misrepresented by Runes (10a), Solzhenitsyn (10b), Hook (10c). ER on nuclear warmongers (11). Runes's brief biography of ER (12). ER bust at the Hirschhorn (13). Film Project (14). BRS Award: 1983 (Rotblat) press release (15), 1984 candidates wanted (16). BRS Doctoral Grant: 1983 recipient (Pineau) (17), 1984 offer (18). Creationism: "Only a Theory" (19), "Scientists Confront Creationism" (20). News about members: McDonald (21), Suzara (22). Letter to Reagan, Andropov (23). New members (24). Address changes (25). Vanity Fair's couples, 1928 (26). Contributors thanked (27). Contributions solicited (28). Page's good idea (29). BRS Fact Sheet (30). Candidates for Director (31). Volunteer needed (32). Other organizations: Freedom From Religion Foundation (33); Friends of Ingersoll (34); Hemlock (35); Institute of International Education (36). For sale: members' stationery (37). Minutes: Annual Meeting (38), Board's Meeting (39). Treasurer's Reports: 1st quarter '83 (40), 2nd quarter '83 (41). 7 opportunities to act (42). Membership list (43). Index (44). Ballot (45). Call for papers for 1984 (46).

LAST MINUTE ITEM

- (45) Call for papers for 1984 Annual Meeting, on the topic, "Was Russell Religious?" The papers will be read and discussed at the 1984 BRS Meeting at Toronto, as part of the BRS's own program for that weekend. If you'd like to submit a paper, send 3 copies of it — typed, double-spaced — to Bob Davis, 2501 Lake View Av., Los Angeles, CA 90039, for review by the Program Committee.

Another thing scheduled for the BRS's own program in June 1984 will be a workshop on "Russell and Your Own Views of Marriage", chaired by Marvin Kohl. Sounds good!

RUSSELL SOCIETY NEWS

No. 40

November 1983

- (1) Highlights: Date of '84 Meeting (2). Program of BRS at APA, '84 (7). Russell maligned (11). BRC making ER TV-film (13). Hirschhorn photo of Epstein BR bust (16). Pugwash Newsletter (17). 9 Directors elected (31). 6-Year Index (41). An asterisk in the left column indicates a request. Index is at the end.

ANNUAL MEETINGS

- (2) 1984. The BRS Meeting is scheduled for June 21-24. We will probably be housed in Trinity College, University of Toronto. See (4).
- (3) 1983. Jim McWilliams took good pictures at the '83 Meeting, at McMaster, and made attractive layouts. We've put it all into a binder which will wind up in the BRS Library, and be available for viewing at the '84 Meeting.

REPORTS FROM OFFICERS

(4) Vice-President Marvin Kohl reports:

The 1984 BRS Meeting will take place in Toronto, June 21-24. It is timed to coincide with the Conference on Russell's Technical Writings.

In addition, we expect to have a workshop on "Russell and Your Own Views of Marriage", and a session devoted to the question, "Was Russell Religious?"

If interested in the workshop or in presenting a paper on the nature of Russell's religiosity, let me know (Philosophy, SUNY at Fredonia, Fredonia, NY 14063). Please send an outline of the paper by December 1, and the paper (in triplicate, 20 minutes reading time) by April 1, 1984

(5) Treasurer Dennis J. Darland reports:For the quarter ending 9/30/83:

Balance on hand (6/30/83).....	3562.69
Income: 29 new members.....	480.00
7 renewals.....	152.50
total dues.....	632.50
contributions.....	85.00
sale of RSN, books, stationary, etc.....	28.38
total income.....	745.88
	<u>4308.57</u>
Expenditures: Information and Membership Committees.....	1418.53
"Russell" subscriptions.....	774.00
Other.....	40.00
total spent.....	<u>2232.53</u>
Balance on hand (9/31/83).....	2076.04

(6) Vice-President/Special Projects Bob Davis reports:

He will be in England November 3-16. With Don Jackanicz, he will attend Wilberforce Council's Freedom Concert in Royal Albert Hall (London Philharmonic) on November 6 (RSN37-31). Also with Don, he hopes to be able to present the BRS Award plaque to Joseph Rotblat in person. He plans to visit Dora, Peter Cadogan, and then on to Oxford to look for old books.

BRS Library: Jack Ragsdale, Librarian, 4461 23rd St., San Francisco, CA 94114

Please note: renewal dues are due January 1, 1984. Regular \$22.50, couple \$27.50, student \$12.50. Plus \$7.50 outside USA, Canada, and Mexico.
*Exception: renewal dues of members who joined in December 1983 are not due until January 1, 1985.

REPORTS FROM COMMITTEES

Philosophers' Committee (David E. Johnson, Chairman):(7a) 1983 Program, ERS at American Philosophical Association (Eastern Division) Meeting, December 1983:

I. Russell on Names. Jane Duran, Hamilton College

Commentator: Alfred Guy, University of Baltimore

II. Russell's Contribution to the Study of Nuclear War. Douglas P. Lackey, Baruch College, CUNY

Commentator: Douglas McLean, University of Maryland Center for Philosophy and Public Policy

Chair: David E. Johnson, U.S. Naval Academy

(7b) 1984 Call for Papers:

The Bertrand Russell Society announces a call for papers to be presented at its meeting at the Eastern Division of the American Philosophical Association in December 1984. Papers may be on any aspect of Russell's Philosophy. They should have a reading time of about one half an hour and should be submitted in triplicate, typed and double spaced with an abstract of not more than 150 words. The name of the author, with his address and the title of his paper, should be submitted on a separate page. The submission deadline is May 15, 1984 and the papers should be sent to David E. Johnson, Chairman, Philosopher's Committee, The Bertrand Russell Society, Sampson Hall, U.S. Naval Academy, Annapolis, MD 21402. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

(7c) New Chairman David E. Johnson succeeded Ed Hopkins as head of this Committee earlier this year. At our request, he has provided a brief biographical sketch: "I am married, with 2 sons, ages 12 and 14. Ph.D. in 1965 from the University of Iowa, Iowa City, on P. F. Strawson and how his philosophy relates to aspects of Russell's thought. I am currently Professor of Philosophy at the U. S. Naval Academy. My research interests tend towards issues of peace and war, and professional military ethics. My hobbies include sailing, hiking and bicycling. I engaged in post-doctoral research and translation at the University of Gothenburg, Sweden, in 1966-7."(8) Science Committee and Human Rights & International Development Committee (Alex Dely, Chairman):

Alex chairs both of these Committees. There is occasional overlapping of the work of the 2 Committees, as shown in the 4-page Circular of July 1983, reproduced in miniature on the next page.

The Circular has brought a number of responses -- from Costa Rica, India, Togo, and Zaire, for example -- as well as from the International Defense and Aid Fund for Southern Africa, a non-governmental organization accredited at the United Nations, which provides legal defense for victims of unjust laws in Southern Africa and aid and support for their dependents.

Serving on the HR/ID Committee are ERS Members Paul Pfalzner, Lucille Zarse, and James Zeithaml.

Other Human Rights activities deal mostly with efforts to help individuals:

- . Anatoli Martchenko, prisoner in the USSR. The Comité Martchenko, headquartered in Lausanne, is working for his liberation.
- . Lev Dyatlovitsky, imprisoned in the USSR. The Committee on the International Freedom of Scientists of the American Physical Society, is working on his behalf.
- . Miguel Angel Mayala Buffa, imprisoned in Uruguay. He is a Prisoner of Conscience for whom Tucson Group 88 (of Amnesty International) is working.
- . Friends of the Filipino People are asking for Congressional hearings on the Philippines, and want no more aid to Marcos, and cancellation of Pres. Reagan's proposed trip to the Philippines.

"The Accidental War book (RSN38-8) is still the #1 priority for the Science Committee," writes Alex. "A first draft has been sent to certain members of Congress and to the Pentagon for review. Senators Hart & Kennedy are awaiting our study results before calling Congressional hearings. Book should be done by December."

...the good life is one inspired by love and guided by knowledge

THE BERTRAND RUSSELL SOCIETY, INC.

July 1983

CIRCULAR

To: All Third World Development/Relief Organization Staff

From: Bertrand Russell Society Science and Human Rights and International Development Committees

Re: Free Consulting Services

Many of our Society's Members or Associates have in the past been associated with Third World development/relief as well as human rights groups in volunteer consultant roles. Organizations like OXFAM USA, Volunteers in Technical Assistance or Amnesty International are however already overburdened with technical requests and/or cannot effectively merge the human rights issue with the technology assistance issue. In addition, due to the great political/economic crises in South/Central America and Asia, and serious droughts in Africa, our members as well as those of other professional organizations are being inundated with requests for cheap technical assistance by government agencies, rural development workers, missionaries as well as local scientists.

What can we do?

Since most of our scientists and engineers, as well as human rights workers can use the resources of their academic institutions in some 20 countries, we can hereby offer free consulting services in the following areas:

- rural planning and education
- subsistence agriculture
- economic cooperatives in energy
- farm tool engineering (low cost machinery)
- agricultural/industrial waste/by-products disposal and/or recycling
- organic gardening
- agricultural chemistry
- irrigation and water storage technology
- small business organization
- developing international grant proposals
- solar energy powered communications systems
- personal- and micro-computer applications
- community training in urban planning

-2-

-translation of educational materials from/to English, French, Spanish, Dutch, German (concentrating in secondary, university and vocational education)

- rural electrification
- solar- and wind-energy applications in general
- range management and soil conservation
- land use/environmental impact studies
- food preservation technology
- energy efficient housing construction
- technology transfer
- sanitary engineering
- how to deal with international institutions

In addition our members can write/edit/review technical documents in the following fields: appropriate technology, chemical engineering, civil engineering, energy policy, geology, physics and technology assessment. Our members are also willing to act as representatives of Third World educational groups to U. S. trade and professional organizations. We will also gladly serve on technical feasibility study panels.

Finally, our members worldwide are willing to use their influence with their respective governments if appropriate to correct serious human rights violations. We are registered with the Embassies of 40 Third World nations in Washington, D. C. as well as with the Agency for International Development and the U. S. Department of State. We have written technical briefing papers for 4 U. S. Congressional committees.

What have we done?

In the past two years, our members have participated free of charge in the following projects among others:

- Wind Energy Data Collection via Microcomputer for the Republic of Seychelles (in cooperation with VITA)
- 120-pump drinking water system for a 120 village region in Southern Togo (in cooperation with the government of Belgium)
- experimental seed farm in Togo (in cooperation with the government of Belgium)

-3-

- organization of a scientific journal/book collection system to be forwarded to Third World universities (ongoing)
- helped establish a mission school in Les Andes Santiago (Chile)

Human Rights

We also use our leverage of this free assistance with the respective governments to try to obtain improvements in the human rights records and quality of the democratic institutions. In cooperation with Amnesty International and many other organizations, we have in the past year been active in:

- the Philippines (freedom of the press case with 29 journalists)
- Tran (prosecution of Bahai's)
- South Africa (press censorship)
- Turkey (massacres of Kurds)
- Guatemala

How to Apply

If you are part of or know of a group working in Asia, Africa or Central/South America in a missionary/Peace Corps./development organization capacity, and can make good use of one of the abovementioned 22 free services, please send a letter, consisting of:

- a description of your group/project
- a statement of the problem to be solved (as quantitative as possible)
- resources available in the Third World community (monetary, manpower, natural resources, skilled workers, etc...)
- assistance desired (for example, engineering designs vs. an actual product)
- time deadline.

to: Alex Dely, Chairman, BRS Science and International Development Committees
 Home: 6150 E. 31st Street, Tucson, Arizona 85721, United States of America
 Office: Physics Department, University of Arizona, Tucson, Arizona, 85721, United States of America

Phones: (602) 747-3188
 (602) 884-6990 (messages only)
 (602) 621-6821 (messages only)

-4-

We will respond within one week and indicate how we can be of help. Should we be unable to help, we will transfer your case to another volunteer group within a qualified trade/professional group.

Feel free to convey this message, as to the availability of our free services, to other Third World organizations which might be in need of this type of assistance.

This is the 4-page Circular of July 1983 referred to in (8), on the previous page

(9)

ER'S WRITINGS STUDIED

ER's writing style analyzed. Since ER's Nobel Prize was in Literature, it is not surprising that some enterprising researcher — possibly a doctoral candidate — should be studying his writing style. This is how the publisher — Verlag Peter Lang, AG, of Berne, Frankfurt and New York — announces the new book:

Jackson, Mary Louise

STYLE AND RHETORIC IN BERTRAND RUSSELL'S
WORK

Frankfurt/M., Berne, New York, 1983. 234 pp.

European University Studies: Series 14, Anglo-Saxon Language and Literature. Vol. 116

ISBN 3-8204-7855-8

pb. sFr. 53.-

A thorough examination of Bertrand Russell's language is the object of this study. Since this is the first major analysis of his writing style, examples taken from a wide spectrum of his writings are examined. Structurally the investigation begins by treating individual vocabulary and then moves on to larger structural units, covering such areas as figurative language and description. The final chapter deals with his rhetoric, discussing his methods of persuasion and the logic of his arguments. This careful analysis of his writings is significant in that it sheds new light on interesting aspects of Russell's character.

Contents: Language Composition — Figurative Language — Patterns of Description — Generalities and Clichés — Rhetoric.

ER QUOTED

(10)

ER on religion. From the Los Angeles "Atheists United Newsletter" of October 1983

They are also going to publish a leaflet a month. Last month's leaflet, "Einstein's Views on Religion" has had a lot of positive response, they say. One of the leaflets now being drafted is, "Bertrand Russell's Views on Religion".

Their address: Box 65706, Los Angeles, CA 90065

(Thank you, Bob Davis.)

● RADIO SHOW

Atheists United is now heard on KPFK (90.7 FM) every Thursday morning at about 7:15 am thanks to the efforts of Ed Peters (Vice President), Lee Carter, Kevin Dooley and Richard Hathcock.

On October 27 we will have a very unusual broadcast, a new interview with Bertrand Russell on Religion. In this program Russell's best replies to the most frequently asked questions on religion will be aired. The Q & A were assembled by Al Seckel, our resident Russell scholar, from interviews and writings of BR. Lee Carter interviews Russell, the greatest philosopher of the 20th century. Russell died in 1970, but he has been resurrected by an extraordinarily talented mystery impersonator who will entertain us at the Winter Solstice Party. Don't miss him!!

ER MALIGNED

(11)

We wonder whether any of you became angry, as we did, on reading Professor Shalom's attack on ER, in "Russell" (Winter 82-83, pp/ 45-50).

It is evident that the Professor is a man with a grudge, a grudge he has held onto for 22 years, so far.

He is replying to a letter that ER sent him. What is unusual is that he is replying in 1982 to a letter sent him in 1960. And he is enjoying sweet — and long deferred — revenge.

He attacks Russell the philosopher, which is fair enough; but he also attacks Russell the man. Instances:

"...this letter of yours [is] just one more of your innumerable and, of course, masterly obiter dicta flourished around for the benefit of your admirers..."

Come, come, Professor! Are you really asking us to believe that Russell — co-author of the landmark Principia Mathematica, recipient of the Order of Merit, the Nobel Prize, the Sonning Prize, the Kalinga Prize, etc. — was that hungry for extra approval and applause?

"It is of course convenient for you to think in terms of Wittgenstein's supposed 'hatred' for your introduction [to the Tractatus] ...but I'm inclined to think...it was because you realized...that you just did not understand what Wittgenstein was getting at...that it was you who came to 'hate' Wittgenstein's influence..."

Now you are saying, in effect, that Russell's capacity for self-deception was such that he got the thing backwards, i.e., it really wasn't Wittgenstein who hated Russell's introduction, it was Russell who hated Wittgenstein's influence. We wonder how many will be persuaded by this not-quite-masterly obiter dictum, Professor.

"But as a matter of fact, you must have known this perfectly well when you wrote me that letter."

Now, Professor, you are telling us that Russell was intellectually dishonest, a concealer of evidence. Russell's dedication to the pursuit of truth wherever it might take him, and his hatred of hypocrisy, are as well established as anything about him. A low blow, Professor, and a foolish one.

In 1982 Russell had been dead for 12 years, and was not available to defend himself against posthumous character assassination. But it must be said that it was generous of Professor Shalom, despite his less-than-cordial feelings toward Russell, to end his reply with the hope that Russell is "posthumously healthy". It would be ungenerous to question his sincerity.

BR'S INFLUENCE

(12) Helen Caldicott is the animating force behind the Physicians for Social Responsibility,

an antinuclear coalition that now numbers 20,000 doctors, medical students and health workers, and 12,000 others concerned with "The Final Epidemic".

Her "commitment to human survival", inspired in part by her love for her own children and her work with children born with cystic fibrosis, was sparked by the example of Bertrand Russell, "a man who faced up to the dangers of the atomic age and, despite all odds, dedicated himself of ridding the earth of nuclear weapons."
Current Biography, October 1983, pp. 9,10.

(Thank you, Don Jackanicz)

PROMOTING BR

(13) BBC is making a film about BR, for TV. This is what they've told us about it:

We are mainly concentrating on Russell and the peace movement in the 1960s, although for him campaigning for peace wasn't new. We'd like to assess his legacy in terms of the revived anti-nuclear movement of the 1980s. The film is planned for release at Easter next year.

Last issue we invited you to contribute to a film project, by suggesting incidents in BR's life that might lend themselves to dramatic presentation (RSN39-14). If you have anything to suggest, especially if related to the * 1960s, now is the time to send it to us, for forwarding to the BBC.

(14) Peace News (Nottingham, England) carried our Joseph Rotblat press release in its issue of August 3, 1983, and kindly sent us the issue.

(15) The Humanist (Sept./Oct. 1983) picked up highlights of our Joseph Rotblat press release, in its section, "Worth Noting". (Thank you, Don Jackanicz)

EPSTEIN BUST OF BR

(16) At the Hirschhorn. We mentioned previously that the Epstein bust of BR is on exhibit at the Hirschhorn Museum and Sculpture Garden, Smithsonian Institution, Washington, DC. The photo (next page) was taken by the Museum as a result of our request for a photo. They have given us permission to reproduce it in the newsletter. We very much appreciate what they have done. Unfortunately, our printing process does does not do justice to the photo.

NUCLEAR WAR

(17) McNamara on "first use", from the New York Times (9/15/83, p. A27):

Inviting War

By Robert S. McNamara

Even if the "first use" of nuclear weapons is not to NATO's advantage, does not the threat of such use help deter a Soviet nuclear attack and would not the removal of the threat increase the risk of war?

The problems associated with a first use seem clear enough. The launching of strategic nuclear weapons against the Soviet homeland would lead almost certainly to a response in kind which would inflict unacceptable damage on Europe and the United States — it would be an act of suicide. The threat of such an action, therefore, has lost all credibility as a deterrent to Soviet conventional aggression. One cannot build a credible deterrent on an incredible action.

Many observers in both the United States and Europe, however, believe that the threat of first use is an effective deterrent. It is not that NATO would coolly and deliberately calcu-

late that a strategic exchange made sense, they explain, but rather that the dynamics of the crisis would literally force such an action — or so Soviet leaders would fear.

In this view, the Russians will perceive a considerable risk that conventional conflict will lead to the use of battlefield weapons, which will lead in turn to theater-wide nuclear conflict, which will inevitably spread to the homelands of the superpowers. So long as the escalation is perceived to be likely to proceed smoothly, the logic continues, then the Warsaw Pact will be deterred from taking the first step — the conventional aggression — that might start the process.

The flaw in this argument, I believe, is in its view of how NATO is likely to act. More and more Western political and military leaders are coming to recognize, and are publicly avowing, that even the use of battlefield nuclear weapons in Europe would bring greater destruction to NATO than any conceivable contribution they might make to NATO's defense. There is less and less likelihood, therefore, that NATO would authorize the use of any nuclear weapons except in response to a Soviet nuclear attack. As this diminishing prospect becomes more and more widely perceived — and it will — whatever deterrent value still resides

in NATO's nuclear strategy will diminish still further.

Moreover, preparing for tactical nuclear war limits NATO's ability to defend itself conventionally. Nuclear weapons require special security precautions and special command, control and communications arrangements. They thus limit the flexibility with which units can be deployed and military plans altered. In addition, since most of the systems that would deliver NATO's nuclear munitions are dual-purpose, some numbers of aircraft and artillery must be reserved to be available for nuclear attacks and thus would not be available for delivering conventional

munitions. Most important, though, the reliance on nuclear threats for deterrence makes it more difficult to muster the political and financial support necessary to sustain an adequate conventional military force.

To the extent, then, that the nuclear threat had deterrent value, it is because it in fact increases the risk of nuclear war.

Moreover, this is a double threat — for Soviet predictions of the risk could lead them to initiate nuclear war themselves. Preparing themselves for the possibility of NATO nuclear attacks would make it more difficult for them

to mount a successful conventional attack, raising the incentives for a nuclear offensive. And if they believe that NATO would indeed carry out its nuclear threat — as a matter of deliberate choice or not — the Russians would have virtually no incentive not to initiate nuclear war themselves.

The costs of whatever deterrent value remains in NATO's nuclear strategy are, therefore, substantial. Could not equivalent deterrence be achieved at lesser "cost"? I believe the answer is yes. Compared to the huge risks that the alliance now runs by relying on increasingly less cred-

ible nuclear threats, recent studies have pointed to ways by which the conventional forces may be strengthened at modest cost.

Having spent seven years as Secretary of Defense dealing with the problems unleashed by the initial nuclear chain reaction, I do not believe we can avoid serious and unacceptable risk of nuclear war until we recognize — and until we base all our military plans, defense budgets, weapons deployments and arms negotiations on the recognition — that nuclear weapons serve no military purpose whatsoever. They are totally useless — except only to deter

one's opponent from using them.

This is my view today. It was my view in the early 1960's.

At that time, in long private conversations with successive Presidents — John F. Kennedy and Lyndon B. Johnson — I recommended, without qualification, that they never initiate, under any circumstances, the use of nuclear weapons. I believe they accepted my recommendation.

Do we favor a world free of nuclear weapons? If so, should we not recognize that such a world would not provide a "nuclear deterrent" to Soviet conventional aggression? If we did

live without such a deterrent then, why can't we do so now — thereby moving a step toward a non-nuclear world?

Robert S. McNamara was Secretary of Defense from 1961 to 1968 and president of the World Bank from 1968 to mid-1981. This article is adapted from a longer essay in the fall issue of Foreign Affairs

(18) **Pugwash** — the series of conferences conceived by BR and administered by Joseph Rotblat (for the first 23 years) with the aim of reducing the nuclear peril — will have its next session in December, in Geneva. Here is the Pugwash Newsletter that appeared (as an advertisement) in the Bulletin of the Atomic Scientists (November 1983). (Thank you, Bob Davis)

INSIDE PUGWASH NEWSLETTER

Special newsletter for Bulletin readers on the Pugwash conferences

Nov. Vol. 1 No. 3

RECENT CRISIS

The last few months have shown how international events with great short-term impact can have serious, negative effects on high-profile, high level disarmament negotiations. These negotiations — delicate and difficult at the best of times — are too often at the mercy of politics. And when world survival hangs in the balance, the dangers of such crises are very grave.

This is not a new problem for the Pugwash movement. There were problems of equal gravity 27 years ago, when Einstein and Russell issued their famous call: "There lies before us, if we choose, continual progress in happiness, knowledge, and wisdom. Shall we, instead choose death, because we cannot forget our quarrels? We appeal, as human beings to human beings; Remember your humanity and forget the rest."

DEALING WITH THE CHILL

In response to that call, the Pugwash movement began. Eminent scientists from East and West came together to try to find solutions that would stave off the imminent nuclear holocaust. They worked quietly, removed from the crises that from time to time chill the relationships between nations, and remind us all how perilously close the clock is to midnight.

Pugwash has contributed to, or been crucial in, the development of solutions to many of the most pressing problems preventing nuclear disarmament. Many of these break-throughs have been detailed in this space in past months.

But there is another way in which Pugwash has contributed. In all truly successful negotiations the *size que non* is the development of trust between the parties. As well, equally important, is the ability of the

negotiators to come up with new creative solutions that transcend the old dead ends. Speaking of Pugwash's ability to provide such opportunities, John P. Holdren of the University of California at Berkeley recently wrote:

The Pugwash meetings have provided a mechanism for direct person-to-person contact and candid off-the-record communications between well-connected Soviets and Americans during a quarter century in which, often, official communications between the two governments were strained and ineffective. That both sorts of communication have been going on in Pugwash for so many years, moreover, with many well-active individuals having participated for two decades or more, has permitted the mutual education process to be both cumulative and increasingly informal and effective over time. The long-standing contacts that have been developed in this way are themselves an asset that can be (and has been) used on short notice when quick, high-level, but unofficial communication seems essential.

In practice, Pugwash meetings have proved useful both for generating new insights and for exposing new people to old ones — for expanding the number of people familiar with the details of key problems. Many are the Pugwash participants, in fact, who having been involved because of one sort of expertise or set of interests, became fascinated with some other topic raised at the meeting and went on to do important work on it.

AT GENEVA IN DECEMBER

There is no doubt that the Pugwash movement is — right now — vital in the maintenance of world peace. The forthcoming meeting in December on Nuclear Forces in Europe, which will be held in Geneva, may be crucial in providing just the kind of contact John Holdren was writing about.

Now, Pugwash needs your help. By providing support for Pugwash you will help make possible the Geneva meeting. And, equally important, you will become a part of the Pugwash movement — just when you are needed most. Don't delay. Send your cheque (tax deductible) to the address below before the end of the month. Your help may make the difference.

Please enroll me as a Friend of Pugwash and send me summaries of its major meetings. I enclose \$100 as my 1983 contribution.

Please enroll me as an associate member of Friends of Pugwash and send me digests of its important meetings.

I enclose \$ _____

BR BIBLIOGRAPHIES

(19) **Werner Martin** is the author of "Bertrand Russell, A Bibliography of his Writings 1895-1976" (Hamden, CT: Linnet Books, 1981). "Martin's work is an enumerative, rather than descriptive, bibliography, compiled from the National Union Catalog, the British National Bibliography, the Cumulative Book Index, and Index Translationum. Available from The Shoe String Press, PO Box 4327, Hamden, CT 06514. \$27 + \$1.50 postage," says Tom Stanley, whom we thank for this item.

RELIGION

(20) From the New York Times (10/25/83, p. A1), excerpts:

Judge Voids Minute of Silence in Jersey's Schools

By ALFONSO A. NARVAEZ
Special to The New York Times

NEWARK, Oct. 24 — A New Jersey statute mandating a minute of silence for public school students at the beginning of classes for "quiet and private contemplation or introspection" was declared unconstitutional today by a Federal judge.

In a 41-page opinion, Judge Dickinson R. Debevoise of Federal District Court ruled that the statute, which was enacted in December when the State Legislature overrode a veto by Governor Kean, infringed on First Amendment guarantees of the separation of church and state.

"I think a showing has been made that New Jersey's minute of silence does jeopardize the religious liberties of members of the community and

breaches the proper degree of separation between the spheres of religion and government," Judge Debevoise wrote.

He added that he found the purpose of the measure to be "religious not secular" and that it was an "obvious attempt to cross the forbidden line."

Judge Debevoise acted in a suit brought by attorneys for the American Civil Liberties Union of New Jersey, which challenged the law as a veiled attempt to circumvent a ruling by the United States Supreme Court that officially sanctioned prayer or Bible readings in the public schools were unconstitutional.

* * * * *

"Does Not Pass Muster"

In today's ruling, Judge Debevoise noted that in a number of cases in the

past, the courts had ruled that a law was constitutional "if its principal or primary effect neither advances nor inhibits religion and if it does not foster an excessive government entanglement with religion."

"The statute under review does not pass muster under any of these criteria," he said.

During a four-day trial last month, attorneys for the Legislature argued that the statute had a secular purpose, in that it provided students with a transition from nonschool activities to school work, but Judge Debevoise said "all the evidence points to the religious intent of this enactment."

He said that once the Governor's veto had been overridden and the court challenge of the statute had begun, "Bill 1084 became a statute in search of a secular purpose."

The lawsuit was filed on behalf of Jeffrey May, an Edison science teacher, among others. He had been threat-

ened with disciplinary action for refusing to conduct the moment of silence.

Judge Debevoise said the measure both advanced and inhibited religion.

"It advances the religion of some persons by mandating a period when all students and teachers must assume the traditional posture of prayer of some religious groups and during which times those who pray in that manner can do so," the judge said.

Negative Effects Seen

He added that it inhibited religion because there were those who felt that mandated prayer was no longer prayer and because, by mandating a minute of silence, the measure precluded participation by those whose form of prayer included chanting, movement and sound. He said that in addition there were those who professed no religious beliefs and for whom any form of prayer was offensive.

Judge Debevoise said the statute

would promote excessive government entanglement with religion, because it would tend to promote divisiveness among religious groups and would force school officials to take action.

"A required moment of silence would put children and parents who believe in prayer in the public schools against children and parents who do not," the judge said.

He noted that some students in the Princeton School District, who felt that the minute of silence constituted enforced prayer, had threatened to engage in disruptive behavior, while in other districts parents were forced to decide whether to have their children submit to an exercise that violated their beliefs or have them separate themselves from their classmates during the minute of silence.

NEWS ABOUT MEMBERS

- (21) Len Cleavelin & Judith Gividen are in the Philippines. He is in the Naval Legal Services Office, as defense counsel for sailors and Marines before courts-martial and administrative discharge boards. She is doing some freelance consulting for the office, to streamline their record-keeping and docket control in the Int'l Law Dept. "We are pretty well insulated on base here, and recent political disturbances haven't affected us too much." They expect to be there for 2 years.
- (22) Alex Dely is in his 2nd year of Law School, and teaches one 5-credit introductory-physics-for-engineers class at Arizona University. "The flood only ate some of our property. Home and health were spared. We were quite lucky. Busy with clean-up, though."
- (23) Alejandro ("Alex") Garciadiego writes: "I really enjoyed myself at Cambridge [England]. Now I am working for the Mathematics Dept. of the Faculty of Science of the National University [of Mexico] as a full-time Professor. I will be able to teach and research the history and philosophy of mathematics." He hopes to see us at the next Conference [Toronto, June 1984].
- (24) Don Jackanicz is going to Europe, November 3-17. First, to London, where, with Bob Davis, he will attend the Wilberforce Council's Freedom Concert, and, if arrangements can be made, present the 1983 ERS Award plaque to Joseph Rotblat in person. Then on to West Germany with a railpass, making many stops including East and West Berlin.
- (25) Steve Reinhardt spent 3 weeks hiking in the Caucasus. Wish he'd tell us more.
- (26) Cherie Ruppe has been on an expedition in the People's Republic of China. "Have flown over nothing but sand for 2 days, to arrive in Kashgar in the Kingjiang Province. Large Russian and Mongolian influence here — nomadic people, mainly Moslem. 13 nationalities make up the Province. We travel 2 more days by truck, then pick up our 15 camels, and begin climbing K-2. We hope to get over 20,000 feet if we don't run into too many obstacles. We're the first people into this area." A few days later, another postcard: "This is the most brutally harsh environment you can imagine, peopled by the most colorful, open, happy people you can imagine — making a herculean effort to eke out a living from this mountainous desert wasteland. We failed in our attempt to be first to reach K-2 base camp from the China side, as unseasonably hot weather flooded the rivers and our camels couldn't make the last, most treacherous crossing."

From her October 24th letter: "I'll be commuting to Sydney, Australia, for the next 6-8 months while I decide whether to move there permanently."

OBITUARY

(29) Herb Campbell died on June 11th, his widow, Frances, advises. He was a semi-retired River Captain when he joined the BRS in 1974. Years before, he and ER had become partners (sort of) by consumating a gigantic transaction, according to the September 1974 newsletter (NL3-65). "It seems that ER had written that he collected rivers, but that his collection contained only Eastern rivers (Ganges, Yangtze, etc.) and he offered to trade with someone who had Western rivers." I, as a River Pilot, offered him a trade -- Mississippi, Orinoco, Amazon, etc. ER accepted suggesting that they both might jointly own all the rivers -- a proposal which Capt. Campbell found entirely satisfactory.

CONTRIBUTIONS

- (30) Contributors. Correction: contributor. Yes; that's right; contributor. There was only one contributor to the ERS Treasury during the whole 3-month period! That's not good; and it's not good enough, if we are to survive in the long run. Dues covered only 58% of our expenses last year, and last year was not unusual. Think about it. Then * contribute what you can. Send it c/o the newsletter, address on Page 1, bottom
- Let us not fail to thank our unique contributor. Thank you, JACK RAGSDALE, for demonstrating what should be done.
-

ELECTION OF DIRECTORS

- (31) 9 Directors were elected, or re-elected, for 3-year terms starting 1/1/84: JACK COWLES, DAVID GOLDMAN, DON JACKANICZ, STEVE MARAGIDES, FRANK PAGE, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, KATE TAIT. We liked all 12 candidates, but could use only 9. We hope the other 3 will consider being candidates again next year. The votes were tallied by Lee Eisler. The count was verified by Don Jackanicz.
-

NEWSLETTER MATTERS

- (32) Mailing-label mishap. The printer made the mailing-labels for the August newsletter on a new copying machine. All the labels looked all right, but in fact the ink on some did not harden sufficiently, and rubbed off in handling, in the mail. The Post Office returned 9 they could not read. We deciphered 6, and re-mailed them. We still have 3 with labels completely blank, no clue as to whose — at least one from Canada. If you didn't receive the August newsletter (RSN39), please let us know. Very sorry.
-

FOR SALE

- (33) Members' stationery, 8½ x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell". On the bottom: "**Motto of the Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid. Order from the newsletter, address on Page 1, bottom.
-

CORRECTIONS

- (34) Professor David Pears of Oxford attended the McMaster Conference in June, and as an Honorary ERS Member should have been listed with the other ERS members in the August newsletter (RSN39-2a). We greatly regret the omission, and thank Steve Maragides for alerting us to it.
- (35) Ramon Carter Suzara had his name misspelled on the membership list (RSN39-43). This is the correct spelling. Sorry!
-

ABOUT OTHER ORGANIZATIONS

- (36) Friends of Robert G. Ingersoll held their Festival and Freethought Fair as scheduled (see RSN38-37 and 39-34) on August 11-13. Here are excerpts from their NEWSLETTER TEN, August 1983:
- . At the request of the Friends of Ingersoll, Illinois Governor James Thompson declared August 11, 1983 Robert G. Ingersoll Day.
 - . Next year the Ingersoll Festival will be in Peoria again, on August 11-12.
 - . Roger Greeley's dramatic characterization of Ingersoll pulled a full house to its feet with a rousing ovation.
 - . Perhaps the best way to describe the Freethought Fair is to list the organizations in attendance: Freedom from Religion Foundation, American Rationalists, Bob Black-Bookseller, American Civil Liberties Union, American Atheists, Prison Atheist League, Atheists United, Society of Evangelical Agnostics, Religious Freethinkers, Thomas Paine National Historical Society, and the American Humanist Association.

A final item from NEWSLETTER TEN:

FOUR DISRUPT FESTIVAL AND ARE BARRED FROM 1984 CELEBRATION

VULGAR LANGUAGE AND DISORDERLY CONDUCT IN GLEN OAK PARK NEAR THE INGERSOLL STATUE BY FOUR INDIVIDUALS HAS CAUSED THE BOARD OF DIRECTORS TO BAR THEM FROM NEXT YEAR'S INGERSOLL FESTIVAL.

ALTHOUGH ALL FOUR ARE MEMBERS OF AMERICAN ATHEISTS, THE ORGANIZATION IS NOT EXCLUDED; NOR IS ANY OTHER MEMBER OF AMERICAN ATHEISTS BARRED. THE FOUR WHO WILL NOT BE PERMITTED TO RETURN ARE MADALYN O'HAIR, JON MURRAY, TOM JACKSON, AND LARRY CARTER.

Society for Humanistic Judaism ran this ad in the New York Times Book Review (9/11/83, p. 50) →

**YOU DON'T HAVE TO BE
RELIGIOUS TO BE JEWISH.**

**THERE IS MORE THAN ONE
JEWISH TRADITION.**

Judaism is more than a religion. It is a four thousand year old culture. It has a secular dimension, a secular history, secular roots. Einstein and Freud are as much a part of it as Moses and Akiba. Throughout Jewish history there has been a non-establishment pragmatic humanistic tradition living alongside the official one. Most Jews, without knowing it, embrace it. You too may be part of this **other** secular tradition.

Humanistic Judaism is the quarterly journal of a movement in Jewish life which embraces this **other** tradition.

Send \$15 for an annual subscription or for information write to:

Society for Humanistic Judaism

(38)

Hemlock, in its Quarterly (Issue 13, October 1983), deals with double suicide. You recall that Hemlock is "a society supporting active voluntary euthanasia for the terminally ill". This issue includes Norman Cousins's article on the double suicide of Henry Van Dusen, a prominent Protestant theologian, and his wife. "The news of the self-inflicted death of the Van Dusens was profoundly disturbing to all who attach a moral stigma to suicide and regard it as a violation of God's laws. Dr. Van Dusen anticipated this reaction. He and his wife left behind a letter...that could represent the beginning of a reconsideration of traditional religious attitudes toward self-inflicted death." Hemlock's address: PO Box 66218, Los Angeles, CA 90066

PUBLICATIONS

(39)

Free Inquiry, the excellent humanist quarterly edited by Paul Kurtz, in its Fall 1983 issue, lists "humanist heroes" in its "Humanist Pantheon": PROTAGORAS, SOCRATES, ARISTOTLE, EPICURUS, LUCRETIUS, EPICURETUS, CARNEADES, MONTAIGNE, SPINOZA, VOLTAIRE, HUME, DIDEROT, THOMAS PAINE, THOMAS JEFFERSON, JEREMY BENTHAM, JAMES MADISON, JOHN STUART MILL, CHARLES DARWIN, GEORGE ELIOT, ERNEST RENAN, MARK TWAIN, SIGMUND FREUD, JOHN DEWEY, ROBERT INGERSOLL, CLARENCE DARROW, JANE ADDAMS, MARIE CURIE, BERTRAND RUSSELL, MARGARET SANGER, ERICH FROMM. (Thank you, Bob Davis.)

6-YEAR INDEX (1978-1983)

The BRS was founded at a meeting in NYC, February 8-10, 1974. The first index -- the 4-YEAR INDEX (1974-1977) -- appeared in BRS Newsletter #16 (November 1977). The second index -- this 6-YEAR INDEX (1978-1983) -- covers the BRS's next 6 years. Together they index the 40 newsletters issued during the first 10 years of the BRS.

This Index can be used as an aid in reviewing BRS activities during the past 6 years.

Look up COMMITTEES for a listing of all committees.

Look up a specific committee, the SCIENCE COMMITTEE for example, to find its activities during the past 6 years.

Look up OTHER ORGANIZATIONS to see the many other organizations we have heard from.

NEWS ABOUT MEMBERS reports on activities that have no connection with the person's membership in the BRS, with occasional exceptions.

Headings appear in CAPITAL LETTERS. Items are listed in chronological order under each heading. Cross-references appear in CAPITAL LETTERS. An item may appear more than once, under different headings.

Under RUSSELL, BERTRAND, items are collected in these categories:

.assessments of his work	.international affairs	.quoted or referred to
.biographies	.miscellaneous	.sex
.comments about him	.misrepresentations	.wit and humor
.honors	.notable remarks	.writings, interviews, speeches, letters, i.e., total output
.influence on particular individuals	.personality	

* Please report errors and omissions. 17-21 means Newsletter 17 (RSNL7), Item 21

* * * * *

ADDRESS CORRECTIONS & CHANGES. See NEW ADDRESSES

ADLER, MORTIMER. Debates ER (1941) claiming the objectives of education should always be the same everywhere, and (1942) that science (knowledge) without philosophy is not enough for leading a good human life. 17-21

ADVERTISING. See MEMBERSHIP COMMITTEE

ALI, MUHAMMAD. ER phones him to express admiration for Ali's refusal to be drafted to fight the Viet Cong. 21-12

AMERICAN HUMANIST ASSOCIATION (AHA) letter of 1/8/81, setting up conference to counter attacks on freethought from the Radical Right. 29-3d

AMERICAN PHILOSOPHICAL ASSOCIATION. See PHILOSOPHERS' COMMITTEE

AMERICAN PSYCHOLOGICAL ASSOCIATION. Readers of "APA Monitor" requested 244 copies of Peter Cranford's paper, "ER's Relevance to Psychology", offered free through monthly ads. 20-38

AMNESTY INTERNATIONAL wants signatures on petition for Presidential Commission on capital punishment. 26-43
Petition is included in RSN26. 26-43

ANNUAL MEETINGS

1977. Bill Young enjoyed the '77 Meeting, in Los Angeles. 17-3

1978 Meeting will be held at McMaster, May 19-21. 17-2

1978 Meeting arrangements. How to reserve. 18-50
1978 Meeting described. 19-2. Minutes 19-49, 50.

1978. Abstract of Ruja's talk, "ER's Antisemitism" 19-48

Davis, on ballot, asks members about possible Meeting in England. 19-53c

1979 Meeting, arrangements. 21-2

1979 Meeting, NYC, June 1-3, described. 23-3

1978. 2 papers presented at '78 Meeting are in "Russell" (29-32, '78), by Spadoni and Leithauser. 23-6

1980. We will vote for time & place of Meeting. Points favoring Chicago. 23-7

1980 Meeting, Chicago, June 20-22, described. Highlights of Denonn's and Cranford's papers. Jackanicz on ER in Chicago. Davis on 4 kinds of war. Nuclear

panel of 6. BRS Award to Schilpp. 27-2

Review of past meeting sites: NYC 74, 75, 76, 79; LA 77; Hamilton 78; Chicago 80. 27-3

1980. Committee reports at Meeting: Information, Philosophers', Membership, Science: 27-5, 6, 7, 8

Meeting expenses are deductible for officers, directors, chairmen, committee members. 27-33 29-4a

1980. Photo of Schilpp receiving BRS Award plaque from Jackanicz. 29-29

1981 arrangements. How to reserve. 29-47

Nominations wanted for 1982. 32-14

Award to Kendall (1982), press release, and request for 1983 nominations. 35-12
Award to Rotblat (1983). 38-32
Rotblat press release. 39-15
1984 candidates wanted. 39-16

AYER, A.J. ER in his 60s was not arrogant, did not talk down. 17-22
ER on using the Bomb on Russia. 17-25
Captivated by ER's doctrine "that it is undesirable to believe a proposition when there is no ground whatever for supposing it true." 18-11 (James Reston used this "Russell Doctrine" in his column. 16-17)
TLS reviews Ayer memoirs (1977), comparing him with ER. 18-12

Accepts invitation to become Honorary Member. 19-51

Members approve Honorary Membership. 20-12,32
Sine qua non of philosophers is reality. 20-19
Comments on ER's attack on Strawson to Ved Mehta. 21-19
His biography in "Encyclopedia of Philosophy". 21-25
Speaks at U Delaware's 50-Year Retrospective in Philosophy (1979). 24-27

AZIMOV, ISAAC, minibiography of ER. 29-12

BALLOTS. See DIRECTORS. See VOTES BY MAIL BALLOT

BEACON HILL SCHOOL. Joy Corbett Ray's recollections, at 1978 Meeting. 19-2

BERNSTEIN, JEREMY. See FUN & GAMES

BERTHON-PAYON, JACQUELINE. Named Co-Chairman, Membership Committee (8/81). 31-14

Elected Vice-President, 1982. 35-2

BERTRAND RUSSELL ARCHIVES, at McMaster University, Hamilton, Ontario

Blackwell, Archivist, comments on ER biography in Encyclopedia Britannica, 14th Ed. 17-24

William Ready, McMaster Librarian, raised \$100,000 from Canada Council and \$25,000 from Cyrus Eaton (McMaster alumnus) for original ER purchase for the Archives. 19-2

Its advantages as a site for BRS meetings. 19-3

Berthon-Payon is sad for England as Canada gets ER's library. 19-21

BR Editorial Project will publish everything ER ever wrote (except his books) in 28 volumes, one every 9 months. Final volume in year 2000. 39-9

BERTRAND RUSSELL MEMORIAL (bust of ER in Red Lion Square, London).

Dora is promoting it. 20-3

Memorial Committee meets, 3/5/79: Brockway, Cadogan, Dora, Ayer. Invited to join: Ryan, Scott, Calder, Gilmour, Wooton. Sculptor: Marselle Quinton. 22-3

Appeal for funds, signed by Ayer, Brockway, Cadogan, Calder, Dobson, Gilmour, Dora, Willis, Wooton. 25-22
Cranford asks \$3 of each BRS member, to fulfill \$1000 guarantee he made to the Committee. 26-4

BRS sent the Appeal to 25 American publications. NY Review of Books and The Humanist will run it. 26-17

BRS contributors: Banner, Cleavelin, Cranford, Davis, Eisler, Jackanicz, Lamont, Neilands, Pastor, Stander. 26-17a

BRS Contributors: Canterbury, W. & M. Cobb, Cowles, Darland, Denonn, Eastman, Freer, B. Goldman, Green, Jessen, Page, Ragsdale, C. Smith, Stone, Tobin, Vogt, Yuccas, T. & J. Zaccane. 37-34

Unveiling date set: October 23, 1980. Background of the Memorial Project. Donors thanked and invited to attend. BRS has received \$1032, mostly from

members. 28-11

BRS contributors: Berthon-Payon, Entwistle, Hart, Hofer, Hyman, Leithauser, McKenzie-Goodrich, Wm. Valentine. Non-member contributors: Douglas F. Fraser, Ernest L. Snodgrass. 28-39

The Memorial Ceremony, according to The Times (London). 28-48a

Dora's speech at the Ceremony. 28-48b

Davis describes the event. 28-48c

Davis's remarks at the Ceremony. 28-48d

Announcement of the unveiling. 29-11.

Photos. 29-29

BRS contributor: Page. 29-36

Better photo of Dora and ER bust, supplied by The Times, via Cadogan. 30-11

Contributions still needed, to pay for bust. 30-12

Non-member contributor: Baylor L. Johnson. 30-39

Cadogan writes that the BRS contribution was "most rewarding both financially and psychologically". But another 200 pds. is still needed. 31-15

BRS contributors: Berthon-Payon, Cranford, Eisler, Jackanicz, McWilliams, Page, Wm. Valentine. 31-42

BRS contributor: D. Roberts. 35-29

BERTRAND RUSSELL PEACE FOUNDATION, Nottingham, England

May strike Ironside medallion, if there is interest. 17-46

Donates "Hazards of Nuclear Power", published by Spokesman

Books, its publishing arm, to the BRS. It contains

"The Politics of Nuclear Energy" by Alan Roberts, and

"Nuclear Disaster in the Soviet Union" by Zhores

Medvedev. 18-39

Edith obituary, written, and sent to us, by Ken Coates. 18-42

Investigates human rights in West Germany. 18-49

Lawsuit is pending between Foundation and Russell family, Cranford reports. 20-3

Their press release on their West Germany investigation. 20-47

The Russell Press, Nottingham — presumably part of the Foundation — prints Amnesty International's briefing papers. 20-48

Ken Coates' letter to The Times (London) wants Nikolai Bukharin given his due for writing the "Bill of Rights" section (and probably more) of the USSR Constitution. 21-39
"Statement on a Nuclear Free Zone...from Poland to Portugal" 26-36

Bulletin of the Atomic Scientists prints Statement, above, endorses END (European Nuclear Disarmament) Campaign. 29-20

4th Russell Tribunal (1980), on rights of Indians in North, Central, and South America. 29-42

Eliz Young's letter is against END Campaign. 30-45

Ken Coates objects to Young's objections. 31-48

Young responds to Coates. 35-37

Russell Committee Against Chemical Weapons, Nottingham, presumably a branch of the Foundation,, issues "The Threat of Chemical Weapons" (nerve gas), which triggers responses. 34-7b

Ken Coates sends "working paper" for Berlin European Disarmament Convention starting 5/9/83. Also trying to arrange hearings on Lebanon situation. 37-39

BERTRAND RUSSELL SOCIETY AFFAIRS. See BRS AFFAIRS.

BLACKWELL, KENNETH. See BERTRAND RUSSELL ARCHIVES

BOOK LENDING/BORROWING. A BRS member may own, and might lend, a book you cannot find in bookstore or library. 36-22

BOOK REVIEWS

"Bear Russell, Dear Jourdain" by I. Grattan-Guinness, reviewed by Lester Denonn. 17-51

"Part of My Life: The Memoirs of a Philosopher" by A.J. Ayer, reviewed by John Sturrock, of Times Literary Supplement. 18-12

"The Tamarisk Tree" by Dora Russell. 5 reviews from Book Review Digest 1975. 18-40

"The Tamarisk Tree 2" reviewed in The Times, 1980. 26-26

"Nuclear Nightmares" by Nigel Calder. Reviewed in NYTimes Book Review Section and in The Progressive (1980). 29-34
E. P. Thompson calls it good but inadequate. 32-41

"Bertrand Russell and His World" by Ronald Clark. Reviewed

- in Publishers Weekly and the Village Voice(NY).32-12
- "Refusenik:Trapped in the Soviet Union" by Mark Azbel, reviewed by Freeman Dyson. 32-14

 Jessen, Maggi, Peterson, Ruja, St. John, Sass,
 Schwenk, C. Smith, Suzara, Van Wissen. 37-21
 Contributions requested. 37-22
 Davis, Figueredo, D. Goldman, Jackankcz, Taint. 38-24
 Contributions solicited. 38-25
 J. Anderson, W & P. Cobb, Jackanicz, Tobin, Fjermedal.
 39-27
 Contributions urged. 39-28
 Ragsdale (the only contributor). 40-30
- CONWAY HALL
 Dora gives a bit of its history. 23-29
- CORBETT, JOY. See BEACON HILL SCHOOL
- CORRECTIONS
 D.F. Pears should have been listed with other BRS
 members present at McMaster, June 1983. 40-34
 Ramon Carter Suzara's name was misspelled. 40-35
- COUSINS, NORMAN
 Comments on ER, in his book, "Human Options." 36-42
- CRANFORD, PETER. BRS Founder, Director (1974-1982),
 President (1974-1976), Chairman (1976-1982).
 Chairman's Report (2/78) mentions "the science of
 applied philosophy". 17-5
 Cleavelin questions whether philosophy, including
 applied philosophy, is amenable to scientific
 method. 18-21
 His letter to "Guns & Ammo" is, by implication,
 against gun control. 18-24
 Chairman's Report (5/78). 18-51
 Chairman's Report (8/78). Trinity has a plaque for ER.
 Dora works on her autobiography, and on a book on
 Beacon Hill School. 19-4
 Chairman's Report (2/79). Trip to England. Meets Dora
 Cadogan, Scott, Brockway. 20-4
 244 requests to date (10/24/78) for his paper, "ER's
 Relevance to Psychology", offered free via year-
 long ads in APA Monitor. 20-38
 His paper, "The Possibilities of Compossibility" 21-19
 Suggests the BRS collect paradoxes. Sends some. 21-33
 Chairman's Report (5/79). ER Memorial Committee is
 founded, in London. 22-3 See BERTRAND RUSSELL
 MEMORIAL
 Chairman's Report (8/79) on BRS weaknesses, but which
 should not cause great concern. 23-9
 Chairman's Report (2/80) interpreting ER's first
 letter to Ottoline. 25-6
 Chairman's Report (5/80) asks each member to contribute
 \$3 to Bertrand Russell Memorial (London). More on
 compossibility. 26-4
 Chairman's Report (5/81) still more on compossibility.
 30-3
 Chairman's Report (8/81) on the 1981 Meeting. 31-7
 Chairman's Report (11/81) on the Sutcliffe expulsion,
 expulsion procedures, and Plant's letters. 32-6
 His book, "How To Be Your Own Psychologist," reviewed
 by Davis. 32-28 Feature story excerpt. 30-51
 Davis, on Cranford taking liberties with the Bylaws.
 35-34
 Board's resolution, thanking him for all he had done
 for the BRS. (He had resigned as Chairman and
 Director.) 35-35
 His letter of 8/5/82, "...lengthy hospital stay, and
 convalescence which limits my activities." 35-36
- Davis describes Cranford's actions during past year, which
 alienated Directors. 35-37
 See NEWS ABOUT MEMBERS
- CRAWSHAY-WILLIAMS, RUPERT
 His obituary wrongly called ER's dwelling a "mansion", says
 Davis, who calls it a "cottage". 18-35
- CREATIONISM
 Campus Crusade for Christ wants "creation science" (an
 oxymoron) taught along with evolution. 26-20
 Humanist Ass'n of San Diego will start quarterly,
 "Creation/Evolution". 27-20
 "Creationism on the Rise" reports Discover (10/80). 28-18
 Reagan favors teaching creationism with evolution in
 public schools. 28-19
 "The Folks Who Hate Darwin" in The Dial (Channel 13, NYC)
 (9/80). 28-19, 20a,b
 "Against Creationism" NYTimes Op Ed, by Ben Bova of Omni. 28-22
 "Darwin is on the Run" says Gould in People. 29-21
 Hochinger on the Segraves case. 30-22
 Imaginary memo from Galileo to Darwin; both had Bible problems.
 30-23
 Farce letter to Washington Post editor twits creationists.
 30-34
 Segraves case, California: evolution should be presented
 as theory not dogma. 31-20
 Arkansas law, requiring "balanced treatment" of evolution
 and creationism, overturned. Gould comments. Darrow on
 the Scopes trial (1925). Hechinger on bad effects on
 textbook publishers. 33-18
 Free Inquiry symposium, "Science, the Bible, and Darwin". 33-43
 Falwell's Liberty Baptist College biology graduates, who
 learn the "scientific basis for biblical creationism",
 can be certified as teachers in VA. public schools. 34-16
 Poll finds Americans split on creation idea. 36-12
 NY schools bar 3 textbooks as poor on explanation of
 evolution. 36-13
 Shanker's ad column: Are creationists aping USSR (Lysenko)?
 36-14
 "Abusing Science: The Case Against Creationism" by Kitcher,
 reviewed. 36-20
 Louisiana law voided, requiring public schools to teach
 creationism along with evolution. 37-12
 "Only a Theory", Dunne in Harvard Magazine. 39-19
 "Scientists Confront Creationism", Godfrey, ed., reviewed. 39-20
- DARLAND, DENNIS J.
 Appointed Treasurer. 25-40
 See TREASURER'S REPORTS
- DAVIS, ROBERT K. Director (1974-) Vice-President (1974-1976)
 President (1976-1981), Vice-President/Special Projects
 (1982-) Founding member.

Donates her dissertation to the Library. 18-28
Gives paper on ER's interest in the Faustian theme, at 1978 Meeting. 19-2
Proposes BRS Book Award. 19-50d
Uses ER's "Power" and "Education and the Good Life" in her class. 23-16
- LIBRARY COMMITTEE Chairman: Don Jackanicz (1974-1983)**
Jack Ragsdale (1983-)
Committee Report. 17-54
Recent acquisitions. 17-55
Leithauser donates her dissertation. 18-28
Committee Report (lengthy). 19-47
Audio material listed. 20-6
Recent acquisitions; books for sale; films for rent. 20-38...41
Fees on above films: \$10, \$20, \$25 + \$50 deposit. 21-32
Efforts to acquire films. Library services available. 23-12
Have new ER film for '80 Meeting. Lenz will assist. 25-35
Library owns these 7 films. 26-27
New Co-Librarian, Jack Ragsdale. (5/80). 27-30
Discount on Library of Living Philosophers volumes in print. 27-31 28-43
Films, tapes and books to lend, books for sale (5/81) 30-35
New price list for books by and about ER. 31-27
7 ER films for rent, and prices. 33-35
Books for sale, new prices. 34-25
65 new books, gift of D. Jackanicz. Library asks members to donate books. 37-5
38 books to lend. 38-20
Library Campaign. Donate books you are probably not going to re-read, etc. 38-21
Ragsdale named Librarian (ie, Chairman). 39-2c
- LOCAL BRS CHAPTERS OR MEETINGS**
Time-Life ER film shown at Philosophy Club (Cal. State U.) 17-38
L.A. group meets (9/80). 28-25
L.A. group meets at Davis's house (11/80) 29-3
L.A. group meets at Claremont College (2/81). 30-4
L.A. group picnics in the park (8/11). 32-20
- MARAGIDES, STEVE. Director (1982-)**
Donated his services, moving the ERS from Georgia to Illinois. 38-27
Writes Minutes of the 1983 Meeting and Board Meeting as Acting Secretary. 39-38, 39
- MARX, KARL**
Why Marx aimed to improve the lot of the working class, though he had not come out of it. 22-10
What Marx failed to foresee, according to Hook. 38-12
See RUSSELL, BERTRAND (Writings)
- MEDVEDEV, ZHORES**
Tells how to live long. 17-6b
Speaks about 1957-58 nuclear disaster in the USSR, at BRS Seminar, UC Berkeley (1977). 17-13
His "Nuclear Disaster in the Soviet Union" is published by Spokesman Books. 18-39
His "Nuclear Disaster in the Urals" is published by Norton. Reviewed. 23-14
His letter to Neillands. 23-14
US physicists dispute nuclear disaster claim, to counter use of it by anti-nuclear advocates. 24-6
Medvedev was right. There was a disaster in the Urals. 26-18
- MEETINGS. See ANNUAL MEETINGS.**
- MEMBERSHIP ANALYSIS AND STATISTICS**
164 members, by countries of residence (1978). 17-43
164 members, by number of years of membership. 17-44
ERS has 200 members (1978). 19-31
- MEMBERSHIP COMMITTEE** Lee Eisler, Chairman.
Co-Chairman Bev Smith reports on 23 new members in 1st quarter, 1978. 18-6
Report to 1980 Meeting on advertising and recruiting. 19-50b
P.K. Tucker is new Co-Chairman (2/80). 25-40
Advertising in 9 periodicals produces 50 inquiries and 8 enrollments per month, average. 27-6
Will try to reach membership of 500, to be self-supporting, with increased advertising. 28-2
Jacqueline Berthon-Payon is new Co-Chairman (8/81). 31-44
1982 advertising in 12 publications. 33-9
Changes in 1982 advertising schedule. 34-6
Carol Smith is new Co-Chairman (11/82). 36-43
- MEMBERSHIP LIST**
1978 list distributed with RSN18. 18-45
1979 list. 22-40
1980 list. 26-41
1981 list. 31-51
1982 list. 36-41
1983 list. 39-43
- MEMBERSHIP RENEWALS**
All dues due July 1st (1979). 22-23. Restated 24-43
Highly visible colored sheet, saying dues are due, sent with RSN26. 26-32
New dues due-dates: January 1st (1982). 33-2
See DUES
- MEMORIAL. See BERTRAND RUSSELL MEMORIAL (under "B")**
- MINUTES**
1978 Meeting. 19-49, 50
1979 " 23-58, 59
1980 " 27-40, 41
1981 " 31-53, 54
1982 " 35-34, 35
1983 " 39-38, 39
- MOORE, G.E.**
Comments on his relations with ER. 23-21
Brand Blanchard on Moore and ER. 27-15
- MURRAY, GILBERT**
"A 56-Year Friendship" by ER. 36-39
- MUSEUM OF PHILOSOPHY**
At Pace University, NYC, will try to bring philosophy to all, including high schoolers. 33-16
Moves to Hunter College, NYC. 36-11
- "MY FAVORITE RUSSELL"**
Schilpp's: "A Free Man's Worship". 27-16
Denonn's: "The Aberley Papers". 28-8
Popper's: "The Problems of Philosophy" and "Mysticism & Logic" 29-8
Davis's: "Freedom vs Organization, 1814-1914". 30-34
Moorhead's: "Sceptical Essays". 32-29
- NEILLANDS, J.B. Founding Member. Director (1974-1982). Chairman, Science Committee (1974-1979).**
Calls Carter's energy policy a disaster. Wants Regents (UCal) to stop nuclear research at Los Alamos & Livermore. 24-24
Attends American Chemical Society meeting. Taking leave of absence to write (1979). 24-29
Nobel Foundations funds symposium in Sweden, "Ethics for Science Policy". Neillands attends. 19-12 20-8
Text of Neillands's speech at above symposium. 26-22
- NERVE GAS**
Dely states case against nerve gas. 34-7a
Russell Committee on Chemical Weapons (Nottingham). 34-7b
- NEW MEMBERS WELCOMED**
17-41 18-29 19-29 20-33 21-26 22-20 23-41 24-32
25-33 26-24 27-27 28-33 29-30 30-31 31-38 32-25
33-23 34-21 35-26 36-18 37-18 38-18, 50 39-24 40-27
- NEWS ABOUT MEMBERS**
Allendorf, Fred, has received a NATO-NSF postdoctoral

NEWS ABOUT MEMBERS (continued)

- fellowship for research in evolutionary genetics. 20-23
- Ashkenazy, Irvin, has article on Sea Lions in Westways Magazine(3/79). 22-14
- Bacard, Andre, would like to meet Bay Area members. 31-33
- Bae, Dong-In, travels from West Germany to McMaster for 1978 Meeting. 19-2
- Objects to Pres. Carter's planned trip to S. Korea. 23-31
- Asks that papers presented at Meetings be printed in RSN, to benefit those who cannot attend. 26-28
- Gets doctorate from UCologne, dissertation quotes ER's & Dora's "Prospects of Industrial Civilization", that nations will compete for raw materials instead of markets. 38-13
- Banner, Adam Paul, gets Consumer Products Safety Commission's agreement that wood & coal stove mfrs. must give safety information. 29-23
- Going to Haiti for several months, to start flashlight battery factory. 31-34
- Block, Amy, gets Ph.D. in nutrition, will do field work Ecuador. 25-30
- Boggs, Kevin, gets BA in microbiology from UFlorida, will do graduate work on nitrogen fixation. 35-19
- Carlson, Alfred J., Jr., M.D., Board Certified Pediatrician, studies for Master's in Philosophy at Villanova. 35-20
- Cleavelin, Leonard, attends Northwestern Law School this Fall ('79). 23-32
- Finds law "mildly unpleasant". Quotes Darrow: "I was told as a child that anyone could become President, and I am beginning to believe it." 29-24
- Accepts commission in US Navy Judge Advocate General's Corps. 31-35
- Will marry Judith Anne Gividen 7/31/82, days after taking exams. 34-17
- ENS. JAGC, USNR, stationed at Great Lakes, IL. Takes Bar Exams in Feb. '83. Summer at Naval Justice School, Newport, RI. 36-17a
- In the Philippines for 2 years, starting Fall '83. 40-21
- Clifford, Harry, writes Newark Star-Ledger about Einstein's 4 great discoveries. 23-33
- Cobb, Whitfield & Polly: their wedding rings are inscribed "Inspired by Love and Guided by Knowledge". 21-18
- Have oil portrait of ER over their fireplace. 28-27
- Cranford, Peter, expects to describe ways to influence people, in Manchester. 23-34
- Publishes his own book, "How To Be Your Own Psychologist." 28-28 30-26
- Excerpt from newspaper story on his book. 30-51
- See CRANFORD, PETER
- Daly, Alex, describes his summer activities at Fermilab, Chicago. 23-35
- Teaches physics at UArizona, will start Law School. 35-21
- Law School, 2nd year, teaching physics, spared serious flood damage(11/83). 40-20.5
- See SCIENCE COMMITTEE. See HUMAN RIGHTS COMMITTEE
- Denonn, Lester. His 5000 volume library is for sale. 19-32
- His library has over 2100 books by, about, or referring to ER. 22-15
- Finds many references to ER in his current reading. 23-23
- See DENONN, LESTER
- Dimitt, Frances, reports on hyperactivity to APA. 17-32
- Donadio, Alberto, moving from Colombia to Switzerland for a year. 20-24
- Edwards, Paul. His monograph, "Heidegger & Death -- A Critical Evaluation", will appear on Monist, dedicated to "ER -- enemy of humbug and mysticism." 22-16
- Eisler, Lee, on entering hospital for minor surgery, is asked his religion. "Agnostic." "Have they got a church in Coopersburg?" 27-22
- Ellis, Albert, co-authors, with W.J.Knaus, "Overcoming Procrastination." 19-23
- Garciadiego, Alejandro, recipient of 1982 ERS Doctoral Grant, completes dissertation, sends copy to Library. 38-14
- Now a professor, in Mexico, teaching and researching history and philosophy of Mathematics. 40-22
- Gir6n, Francisco B., a Salvadorean, at Hamburg U., wants to correspond, would like answers to his questions about El Salvador. 34-18
- Now at University of Strathclyde, Glasgow. 38-18
- Gividen, Judith Anne, married Leonard Cleavelin recently, retains maiden name, works in personnel dept. 36-17b
- Hart, David S., reports on his 5 months at Cambridge, England. 30-27
- Hedeman, Ed, spokesman for War Resisters' League, speaks of plans to disrupt registration for the draft (NYT). 27-23
- Hopkins, Ed, stops teaching highschool math, programs computers at Univac for Godard Space Flight Center. 20-25
- Jackanics, Don, with brother John, visits UTexas, Austin, which has 1700 ER letters to Ottoline, etc. 30-28
- To Europe, November 1983. 40-23
- See JACKANICZ, DON
- Kohl, Marvin, has letter in The Humanist, claiming that ER pursues truth, not different kinds of truth. 37-13
- Tells why (in Free Inquiry) he views abortion as a mixed good. 38-15
- See KOHL, MARVIN
- Lamont, Corliss, runs ad in Sunday NYTimes, "Outrageous campaign against Wilfred Burchett", Guardian journalist. 17-34
- Wins lawsuit against CIA for opening his mail. 18-25
- Runs ad on centenary of John Keats' birth, whom he knew personally. 19-24
- Publishes his new Basic Pamphlet, "Immortality -- Myth or Reality?" 19-36a
- Wins \$2000 from US, for CIA's illegally opening his mail. 19-36b
- Letter to NYT defending secular humanists against Moral Majority attacks. 31-24
- Donates \$1 million to Columbia Law School, to endow Chair of Civil Liberties. 37-14
- Davis reviews his book, "Yes To Life", 1981. 33-26
- His "Lover's Credo, Poems of Romantic Love" ad in NY Review of Books. 38-16
- See LAMONT, CORLISS
- Leiber, Justin, now Associate Professor, Philosophy, UHouston. 20-26
- Excerpt from his science fiction novel, "Beyond Rejection", is included in "The Mind's I" by Hofstadter & Dennett. 33-20
- Leithauer, Gladys, donates copy of her dissertation to Library. 18-28
- Moves from Wayne State U (Detroit) to UMichigan (Dearborn). Uses ER's "Power" in her class. 21-20
- Reports on use of "Power" and "Education and the Good Life" in class. 23-16A
- Lenz, John, collects rare books and Russell-related books. 25-31
- Loeb, Don, leaving Brandeis for UMichigan Law School. 21-21
- Malatesha, R.N. ("Malt") seeks job in neuropsychology. 18-27
- Gets job at Oregon State U (Corvallis) as Research Prof. 20-27
- Gets NATO grant to conduct Int'l meeting on neuropsychology and cognition. 24-28
- McDonald, Dan, notices points of similarity between 2 dissimilar men, ER and Somerset Maugham. 39-21
- McWilliams, Jim, decides horseshoeing school is not for him, is writer-editor for U.S. Govt. 17-36
- About to quit his govt. job, pays his dues while he still has money. 20-28
- Photographs the 1982 Meeting. 35-5
- Photographs the 1983 Meeting at the McMaster Conference. 40-3
- Nechvatal, Joseph, exhibits drawings in NYC and LIC. 32-21
- His mural, with soundtrack, in Baltimore. 34-19
- His works on view and for sale, in NYC. 37-16

- Neilands, J.B., shows ER film to audience of 30. Pays copyright holder \$50 to make tape of it. 29-37
See NEILANDS, J.B.
- Pitt, Jack, in Europe on a sabbatical. 23-37
See PITT, JACK
- Powell, Kathryn, is working for an M.A. in Int'l Affairs, at American U., Washington, DC. 24-30
- Primm, Sally, conducts 2-hour talk show on religion on Colorado Springs radio. Is AHA counselor. 35-22
- Ragsdale, Jack, has letter in AHA newsletter (Free Mind) on phoney deathbed conversions of freethinkers. 37-16
See RAGSDALE, JACK
- Reinhardt, Steve, tells about his trip to Nepal. 17-37
Describes his trip to Nepal with Sierra Club. 25-32
See REINHARDT, STEPHEN See TREASURER'S REPORTS
- Ruppe, Cherie, goes on expedition to climb K-2 with camels, in People's Republic of China. 40-25
- Russell, Conrad, Reviewer says he diverges sharply from every specialist of the past century, in his "Parliaments and English Politics, 1621-1629" 29-28
Makes quick trip to McMaster to lecture to History Dept. 27-34
- Russell, Dora Black, bemoans advance of technology in schools; is writing book on technological age; 2nd volume of autobiography is published. 28-29
Her letter to the Guardian (UK), 1981: Americans are not our "dear cousins". Why don't USA and USSR get together? 33-21
The war against USSR in its infancy, "a great blunder of History". She appears as a "witness" in "Reds" (movie). 33-27
See RUSSELL, DORA BLACK
- Salmon, Nathan U., leaves Princeton for UCalifornia (Riverside), as Associate Professor, Philosophy. Ad for his book, "Reference and Essence". 35-23
- Schilpp, Paul Arthur, will not retire to California; too expensive. reappointed emeritus, Southern Illinois U. 28-30
Gives Commencement Address, at S I U (5/82). 35-25
See SCHILPP, PAUL ARTHUR
- Sutcliffe, John, writes paper, "New Manchester School Manifesto on Heuristic Psychology". 23-29
See SUTCLIFFE, JOHN
- Suzara, Ramon Carter, has article in Philippine News (San Francisco) on dangerous competition between capitalism (USA) and communism (USSR), quoting Russell-Einstein Manifesto. 39-22
- Tamimori, Kouji, His favorite hobby is mountain-climbing; will climb Mt. Yari. 20-29
- Vogt, Herb & Betty, visit Holy Land, etc. 34-20
- Young, Bill, reports his pleasure in attending the 1977 Meeting, in his SEA Journal. 17-3
Reports on his trip, Fall, 1981. 33-22

- NEWSLETTER**
New name is "Russell Society News". 17-58
Please submit items single-spaced, with clean typeface. 19-40
RSN is printed in smaller type. 19-41
Philosophy beginners could ask questions in proposed RSN section. 20-46
Una Corbett's letter to newspaper quotes RSN item. 24-23
New RSN series: "My Favorite Russell". See MY FAVORITE RUSSELL. 27-10
Please notify when you move, to save us money. 32-38
- Please send items you think might be suitable for RSN. 35-33
Notify us if page is missing; we will replace. 36-28
Mailing-label mishap; notify us if RSN39 (August) was not received. 40-32
- NUCLEAR POWER**
"Hazards of Nuclear Power", published by Spokesman, donated by Ken Coates. Contains "The Politics of Nuclear Energy" by Alan Roberts, and "Nuclear Disaster in the Soviet Union" by Zhores Medvedev. 18-39
Dely, new Science Committee Chairman, favored nuclear power a year ago, now is moderately opposed. 24-5b
3 Los Alamos staff physicists dispute Medvedev's Urals-nuclear-disaster theory, presumably because US anti-nuclear people could cite it as showing hazards of nuclear power. 24-6 Medvedev's theory is correct. 26-18
Union of Concerned Scientists know the real danger of nuclear power. Support them! 28-24
Medvedev's Urals-nuclear-disaster gets on TV's "60 Minutes". 29-19
- NUCLEAR WAR/WEAPONS**
Soviet Academician Markov on danger (to all) of nuclear war (1977). Hard-liner Richard Pipes scoffs at idea that nuclear war would be suicidal. 18-14
"How to Eliminate the Threat of Nuclear War", Essay Contest, Bulletin of the Atomic Scientists. Award, \$5000. 27-19
Russell-Einstein Manifesto, 25th Anniversary Statement from Science Council of Japan. 28-16
Pugwash 1980, as viewed by Alex Dely. 29-5b
Abbie Hoffman, in the 1960s, was triggered into action by pictures of ER's big ban-the-bomb crowds blocking traffic. 29-15
Bulletin of the Atomic Scientists prints and endorses ER Peace Foundation's campaign for European Nuclear-Free Zone. 28-5b
Nigel Calder's "Nuclear Nightmares" reviewed. 29-34
Rotblat views today's situation, 25 years after Russell-Einstein Manifesto. 30-19
ER interviewed by Playboy (1961). 31-12
James Reston quotes Henry Kendall (USC Chairman) and George Romanoff, Romanoff quotes ER. 32-21
Lifton on "psychic numbing" — "Why Aren't We More Afraid of the Bomb?" 31-22
Frize essay (27-19 above), by Michael Shuman, is in Library. 31-32
Quakers offer NUCLEAR MORATORIUM button (1931) 31-49
150,000 in London rally against the Bomb. 32-18
Yukawa's "The Absolute Evil", at 1980 Pugwash Conference. 32-17
E.P. Thompson's "The End of the Line"; founder of END; strengths and weaknesses of Calder's "Nuclear Nightmares".
ER's foreword to Cook's "The Warfare State". 32-42
31st Pugwash Conference, 1981. Scientists from 40 countries urge freeze. 32-16
Dely's paper, "Nuclear Weapons: Perceptions vs. Realities." 33-15
Young criticizes Coates' END, in The Bulletin of A.S. 33-37
Babst's paper, "Assessing Overall Consequences of Nuclear War", is about earthquakes, tidal waves, contamination. 35-9
ER's speech in House of Lords (1945) and the b.g. 35-14
CBS Roundtable, 1959, "The Future of Man", with ER on panel. 35-38
Press release, "Risk of Nuclear War by Accident..." based on paper by Dely & Babst. 36-4
Pugwash reports that 97 Nobel scientists call for freeze. 36-9
Buchwald's "Cap's Last Laugh: Winnable Nuclear War." 36-10
ER's "Scientists and World Peace" (1964). 37-8
US Catholic Bishops oppose nuclear arms. 37-10
Tom Wicker: "War By Accident". 37-34
Book Review of Lifton's "Indefensible Weapons" and "Nukespeak" by Hilgartner, Bell & O'Connor. 37-35
Working paper for forthcoming European Nuclear Disarmament (END) Conference, in May 1983, in Berlin. 37-39
Linus Pauling reads Russell-Einstein Manifesto to science teachers (1966). 37-40
Rathjens pays final tribute to Kistiakowsky, especially for his efforts vs. nuclear war. 38-6
Rotblat's 1972 book on the Pugwash Conferences. Excerpt. 38-7
Ohio State U's 1960 Merzhon Report on accidental nuclear war. ER's introduction to English reprint. 38-8
"The Official Government Nuclear Survivor's Manual" (blank pages). 38-9

- "Conference on No First Use", presented by Council for a Livable World. 38-31
 Solly Zuckerman reviews books by George Kennan and Robert Sheer. 38-43
 Carl Sagan's "To Preserve A World Graced by Life", from Council for a Livable World. 38-45
 "Frightened for Humanity", statement by 70 scientists who worked on the Manhattan Project, at Los Alamos. 38-48
 ER on nuclear warmongers. 39-11
 BRS freeze resolution letters, to Reagan & Andropov. 39-23
 McNamara on "First Use". 40-18
- OBITUARIES**
 Edith, Countess Russell, ER's 4th wife, in the Daily Telegraph (UK). 17-52
 Rita Haun, wife of Jim Haun. 17-53
 Edward B. Cochran, of Tiburon, CA. 27-38
 Will & Ariel Durant, by Davis. 33-36
 Dietrich Moeller, of Waterloo, Ontario. 37-25
 Herb Stahl. 38-33
 Felix de Cola's last letter to L.A. Times quotes ER. 38-46
 Herb Campbell. 40-29
- OFFICERS**
 Officers terms will start the following January 1st. 19-49h
 1978 officers: Chairman, Cranford; President, Davis; Vice-President, Warren Smith; Treasurer, Reinhardt; Secretary, Jackanicz. 19-49g
 1979 officers: same officers reelected. 21-37
 1980 officers: same except Reinhardt, at his request. Treasurer's spot is open. 23-3
 1980 new Treasurer is Dennis Darland. 25-40
 1981 officers: Chairman, Cranford; President, Davis; Vice-President, Ruja; Treasurer, Darland; Secretary, Jackanicz. 27-2a
 Officers terms to start as soon as elected (6/81). 31-6a
 1982 officers: Chairman, Ruja; President, Jackanicz; Vice-President, Berthon-Payon; Treasurer, Darland; Secretary, Ruppe. 2 new offices: Vice-President/Special Projects, Davis; Vice-President/Information, Eisler. 35-2
 1983 officers: President, Jackanicz; Vice-President, Kohl; Treasurer, Darland; Secretary, Ruppe; VP/Special Projects, Davis; VP/Information, Eisler. (Ruja had been elected for 2 years in 1982.) 39-2c
- O'HAIR, MADALYN MURRAY** (head of American Atheists)
 Featured in NYTimes Review of the Week story. 19-19
 Cleavelin gives credit for school prayer case, but she goes overboard wanting to remove "Saint" from "St. Louis". 21-17
 Debates Fundamentalist Harrington regularly, as part of a "roadshow". 22-17
 Barred from 1984 Ingersoll Festival and Free Thought Fair, for vulgar language and disorderly conduct. 40-36
- OPEN BOOK, THE.**
 See KAYE, MARVIN
- OPINION**
 Sutcliffe dislikes TV's "Holocaust". 23-28
 Phyllis Shlafly calls The Bomb "A marvelous gift given to our country by a wise God." 35-17
- OPPORTUNITIES** (to help the BRS)
 7 opportunities. 39-42
 3 more opportunities. 40-41
 See VOLUNTEERS
- OTHER ORGANIZATIONS**
 La Biennale di Venezia, 1977. Exhibition on Eastern European countries. Iron Curtain writers denied exit visas by their governments. 17-60
 Science for the People issues pamphlet "3-Mile Island Disaster". 23-54
 CAPP, Committee Against Physical Prejudice, fights bigotry based on personal appearance. 23-57
 Humanists-Mid-South are organizing an AGA chapter. 24-46
- Fellowship of Religious Humanists sponsors The Institute for Humanist Leadership. Speakers: Unitarian minister, 2 rabbis, 5 professors, including Paul Kurtz. Celebrate John Dewey Day and Charles Darwin Day. 24-47
 Int'l League for Human Rights collects signatures for Andrei Sakharov. 26-35
 Stanford Against Conscriptio (SAC) opposes Pres. Carter's call for registration. 26-37
 American Atheists hold annual convention in Detroit, 1980. 26-38
 Humanist Ass'n of San Diego will start quarterly "Creation/Evolution" to counter threat to teaching of science. 27-20
 Union of Concerned Scientists (UCS) perceives the danger of nuclear power, deserves our support. 28024
 Center for War/Peace Studies seeks members, \$20 per year. Impressive sponsors. 29-43
 Fellowship of Reconciliation and American Friends Service Committee issue Open Letter on Man's peril. 33-38
 American Atheists hold 1982 meeting in Washington. Scheduled speakers: Isaac Azimov, Ralph Ginsberg, Albert Ellis. 34-33
 Croatian National Congress (in exile) alleges Yugoslav oppression, offers documents. 34-34
 Hemlock states its aims. 34-25
 Society for Humanistic Judaism. 34-36
 Voice of Reason. 34-37

- PAPERS** Does not include papers given at BRS Meetings.
 "BR's Relevance to Psychology", Cranford's paper, offered free to readers of APA Monitor, through yearlong ads, had 244 requests by 10/24/78. 18-16
 "A Plea for Philosophical Commitment" by Cleavelin & Evans, for 1978 undergraduate philosophy conference. 18-47
 "ER as Precursor of Social Change" by McKeown. 19-48
 "The Possibilities of Compossibility" by Cranford. 21-19
 "ER and Social Economics" and "Manifesto of the New Manchester School of Social Economics" by Sutcliffe. 22-11
 "How To Avoid Nuclear War" by Dely & Moreland, submitted to Bulletin of A.S. essay contest, is in Library. 29-5d
 "Assessing the Consequences of Nuclear War" by Babst deals with earthquakes, tidal waves, contamination. 35-9
 See SCIENCE COMMITTEE
- PARADOXES**
 Cranford sends some, invites others. 21-33
 Our distinction between paradoxes of meaning and paradoxes of behavior. 22-29a
 Many paradoxes, mostly amusing. 22-29b

- Don Quixote's paradox of man crossing bridge. 23-44
 More paradoxes. 23-45,46
 The Cretan paradox is not a paradox of meaning, says Nick Griffin. 23-47
 Little old lady on how to avoid the crush leaving church. 24-38
 Re violence in Ireland: "What is the purpose of their insanity?" 24-39
 Jeremy Bernstein on ER and the barber who shaves only men who do not shave themselves. 24-40
 IBM slip: "This page was intentionally left blank" 25-36
 More paradoxes 27-32
 "He who understands nothing but chemistry does not understand chemistry properly." 30-37
 Two rules: "Never use the word, 'always'." "Always avoid the word, 'never'." 33-28
- PAULING, LINUS**
 Reads Russell-Einstein Manifesto to science teachers, 1966. 37-40
- FEARS, DAVID F.**
 Expresses willingness to become Honorary Member. 29-30
 Members approve, by mail ballot. 21-24
- PENRHYNDEUDRAETH (in Wales)**
 The empty house, after deaths of ER and Edith. 24-16
- PHILOSOPHERS**
 Ayer's view. 20-19
- PHILOSOPHERS' COMMITTEE**
 Leiber reports on ERS at APA, Washington 1977. 17-14
 ERS at APA, Washington, 1978: program, abstracts. 20-2,9, 10
 Call for papers for ERS at APA, 1979. 20-11
 ERS at APA, 1979: program, abstracts of papers. 24-8,9
 Johnson reports on ERS at APA, NYC, 1979. 26-7
 Members who wish to comment on papers, at ERS at APA, notify Chairman Ed Hopkins. 26-8
 Adwinding supply of papers for ERS at APA. 27-7
 ERS at APA, Boston, 1980: program, abstracts. 28-4,5
 ERS at APA, Philadelphia, 1981: program. 31-11
 Call for papers, for ERS at APA, 1982. 32-10
 ERS at APA, Baltimore, 1982: program. 35-8
 Johnson, new Chairman, reports on ERS at APA, 1982. 39-6
 Call for papers for ERS at APA, 1983. 39-7
 ERS at APA 1983: program. 40-7a
 Call for papers for ERS at APA, 1984. 40-7b
 See **PHILOSOPHERS' CORNER**
- PHILOSOPHERS' CORNER**
 2 more dissertations on ER added to the 62 listed in RSN15-16. 17-15
 Dissertations ## 17, 25 and 30 (of the 62 listed in RSN15-16) should be ordered from Canada. 17-16
 The difficulties of getting a job teaching philosophy. 22-7
 NYU has program for jobless humanities Ph.Ds to prepare them for careers in business. 25-11
 "Analysts" win over "Pluralists" in election of APA officers. 29-17
 Austin agrees with ER's cryptic reply to Strawson. 29-18
 APA and Interamerican Society of Philosophy announce Tenth interamerican Congress of Philosophy at Florida State U. Theme: human rights. 31-3
 World Congress of Philosophy will meet in Montreal, 1983. 31-2
- PHILOSOPHERS' RING, THE CASE OF**
 A "Sherlock Holmes" tale, "by Dr. John H. Watson, unearthed by Randall Collins" (NY: Crown, 1978). 22-34
 Don Roberts cites some sources for events in the book. 23-30
 Ruja faults it for inaccuracies. 27-29
- PHILOSOPHY IN HIGH SCHOOL COMMITTEE**
 Headed by Cleavelin. 23-30
 Cleavelin's ideas on what such a course should be. 23-13
 Cleavelin finds Law School leaves no time for the Committee, alas. 26-5.
 Museum of Philosophy at Pace U, NYC, will try to bring philosophy to all, including high schoolers. 33-16
- Museum of Philosophy moves to Hunter College, NYC. 36-11
- PIPES, RICHARD**
 "The proposition that thermonuclear war would be suicidal for both parties has been used by the Russians largely as a commodity for export." Quoted in Bulletin of A.S. 18-14
- PITT, JACK** Founding Member. Secretary (1974-1978)
 Secretary's Report. 18-54
 Reports on his Scholarship Award Committee (ancestor of the Doctoral Grant.) 19-49d
- POPPER, KARL**
 Would accept Honorary Membership. 20-31
 Honorary Membership approved, by mail ballot. 21-24
 His biography in Encyclopedia of Philosophy (1967). 22-19
 Koester, editor of "Stern", Hamburg, reviews the man and his work. 32-24
 "The Self and its Brain" by Popper and Eccles, reviewed by Nobel Laureate Medawar. 34-23
 "In Pursuit of Truth", Levenson, ed., and Convocation, "The Open Society and its Friends", NYC, 1982. 35-24
 Says he was greatly influenced by Einstein. 39-8
- PRESIDENT'S REPORTS**
 See CRANFORD. See DAVIS See JACKANICZ
- PRINCIPIA MATHEMATICA** by ER & Whitehead
 "The Making of the Micro" by C. Evans, 1981. 36-5
 Hofstadter tells what Gödel did, in "Gödel, Escher & Bach". 36-4
- PROMOVING ER AND THE ERS**
 Cranford's paper, "ER's Relevance to Psychology" promotes ER and the ERS name to readers of APA Monitor, and especially to the 244 who requested the paper. 20-38
 English friends advise using events, speakers, public meetings to promote the ERS. 20-16 (Note: press releases on ERS Awards and Doctoral Grants go to major universities and relevant publications.)
 Suggestion: post ERS Fact Sheet in local libraries. 39-29,30
 Rotblat's ERS Award appeared in Peace News (Nottingham, UK) and The Humanist. 40-14,15
 Hirshhorn exhibits Epstein's bust of ER. 39-13 40-16
 See **MEMBERSHIP COMMITTEE** See **INFORMATION COMMITTEE**
- PUBLICATIONS RECEIVED**
 "A Chronicle of Human Rights in the USSR", excerpt. 17-5e
 "World Peace News" from The American Movement for World Government, with distinguished editorial board. 18-46 25-45
 "Other Minds", newsletter of Rationalist Humanist Ass'n, St. Louis, MO 19-43
 "Humanist Quest for Truth" newsletter of AHA, Colorado Branch, and Freedom From Religion Foundation. Free 19-44 25-43
 "Die Fackel" (The Torch) prints ER Peace Foundation's press release on its investigation in West Germany. 20-47
 "Die Fackel", from the Korean Bertrand Russell Society, ERS member Dong-In Bae, Founder and President. 20-49
 "The Separationist", a "Magazine of Freethought and Church/State Separation". 22-38
 "WIN Magazine", weekly from the War Resisters League. 23-27
 "The San Diego Humanist" from Humanist Ass'n of S.D. 25-44
 "Islamic Revolution". Subtitle: Dimensions of the Movement in Iran". 26-39
 "The Churchman", liberal, religious humanism. 29-44
 "Exploring the Bible", monthly, Explores "ible unsympathetically. 29-45
 "Adelante", in Spanish, from anti-Castro Cubans in U.S. 29-46 33-39
 FFRF Newsletter, from Freedom From Religion Foundation. 30-46
 "Tranet", "Transnational network of appropriate/alternative technologies," a quarterly newsletter. 30-47
 "New Masline Outlook", proposed book, in planning stage. 30-48
 "Humanistic Judaism" from "The Society for Humanistic Judaism" 31-50
 "A Socialist Calendar", large, handsome, commemorates events in socialist history. 33-40
 "The Moral Minority", from Moral Minority/The Real Majority, Inc. 32-38
 See **OTHER ORGANIZATIONS**
- PUGWASH**
 The situation today (1980) 25 years after the Russell-Einstein Manifesto, as viewed by Rotblat. 30-19
 Scientists at 31st Pugwash Conference (1981) urge freeze. 32-16

- Yukawa's talk at 30th Pugwash Conference, "The Absolute Evil". 32-17
 Pugwash 1982, 25th Anniversary, comments by Flora Lewis and by Fox Butterworth. 35-16a,b
 How the Senate Internal Security Committee viewed ER, and how ER viewed the Committee (1961). 35-16c,d
 Pugwash Council reports call for freeze by 97 Nobel scientists (1982). 36-9
 "Scientists and World Peace" by ER (1961). 37-8
 "Scientists in the Quest for Peace: History of the Pugwash Conferences" by Joseph Rotblat. 38-7
 Pugwash Newsletter. (11/83). 40-17
- QUAKERS**
 They offer a "Nuclear Moratorium" button for sale (1981). 31-49
- QUESTIONS & ANSWERS**
- Q14 (Eisler): Who was Ferenczi, quoted by Bellows in "Humboldt's Gift"? 15-18
 A14 (Cleavelin): A follower of Freud. 17-48
 Q15 (Jackanica): Wants information on ER references in 2 movies: "The Best Man", by Gore Vidal, and "Taxi Driver". 19-35
 A15 (Korbin): in "The Best Man", a character says, "ER says 'People in a democracy tend to think they have less to fear from a stupid man than from an intelligent one.'" 20-36
 Q16 (R. Edwards): Wants information on debate between ER and Anthony Flew. 19-36
 A14 (Sutcliffe): Flew says there was no debate. 20-37
 Q17 (Donadio): Did ER say, "All medicine should be thrown out at sea, only the fish would suffer"? 21-28.
 A17 (Eisler): Dr. Oliver Wendell Holmes (father of Justice Holmes) said it. 24-31
 Q18 (Davis): Did ER say, "California -- the ultimate segregation of the unfit", as the L.A. Times reports? 21-29
 Q19 (Davis): Did ER say, "If you had my brain, you would find the world a very thin, colorless place," as a book review claims?
 A19 (Eisler): ER said it to Virginia Woolf at a dinner party. 40-26
 Q20 (Ingalls): Alan Watts says ER "put down a fifth of Scotch daily." Did he? 21-31
 Q21 (Cobb): Are there retirement homes for atheists, agnostics, etc.? 25-27
 Q22 (Ragsdale): Did ER write something like "2 and 2 are about 4"? 27-25
 A22 (Korbin): "...there are probably 4 apples on the table," says Wittgenstein. 28-31
 A22 (Engelman): "...probably 4 apples on the table." 30-29
 A22 (Lombardi): "The outcome of this discussion is that mathematics does not have that exactness to which it apparently lays claim, but is approximate like everything else." ER in "The Art of Philosophizing" 31-37
 Q23 (Polish doctoral candidate): Did ER have any contact with Husserl or opinion about his phenomenology? 32-22
 A23 (Lansdell): ER referred to it as a monumental work. 33-23
 Q24 (Ragsdale): Where does ER say, "Once you understand that life is horrible, horrible, horrible, you can get on with living and be happy with it." 37-11
 A24 (Foti, Carter, Davis): in "ER, Passionate Sceptic" by Alan Wood. 38-17
- RADICAL RIGHT**
 Davis reviews Ericson's "American Freedom and the Radical Right". 36-21
- RAGSDALE, JACK**
 Named Co-Librarian (1980). 27-30
 Elected Director (1982-1984). 32-32
 Named Librarian. (1983). 39-2c
- RATHJENS, GEORGE**
 Pays farewell tribute to Kistiakowsky. 38-6
- RATIONALITY**
 The Carter Administration, after 1 year, has less faith in the "rationality of the system," says Jody Powell. 18-19
 "The Invasion of the Pseudoscientists" in NYTimes. 18-9
 Professor proposes remedy for easy acceptance of cults. 21-16
- READY, WILLIAM**
 Rounded up the money to buy the Russell Archives. 19-2
- REAGAN, RONALD**
 His policies are viewed in Cognitive Dissonance letter. 31-32
 His paraphrase of "Better dead than Red." 38-10
- RECOMMENDED READING**
 Tobin: "Classics of Free Thought", Paul Blanchard, ed., 36 authors, including ER. 18-37
 Ken Coates: "The Politics of Nuclear Power" by Alan Roberts, and "Nuclear Disaster in the USSR" by Zhores Medvedev. 18-39
 Cleavelin: "Letters from the Earth" by Mark Twain. 19-37
 Cranford: "Lady Ottoline's Album". Pictures of her circle. 22-33
 Fjernald: "The Case of the Philosophers' Ring, with Sherlock Holmes", by Randall Collins. 22-34
 Harper, Stanley: "What Is The Name of This Book?" by Raymond Smullyan. 24-37
 Eisler: "Gödel, Escher & Bach" by Douglas Hofstadter. 29-32
 "Cyril Burt, Psychologist" by L.S. Hearnshaw. A scientist who faked the evidence. 29-33
 Jackanica: "Ludwig Wittgenstein: Personal Recollections", Ruth Keesa, ed. Recollections of some who knew him. 32-27
 Davis: "Yes To Life" by Corliss Lamont. Autobiographical. 33-26
- RECORDS & TAPES**
 Archives has copy of ER's Warsaw Ghetto Memorial Speech. 26-9
 See LIBRARY
- RED HACKLE WHISKEY (ER's brand)**
 Source of Red Hackle, in Chicago (1980). 26-3b
- REDS (movie)**
 Recommended. 33-27a
- REINHARDT, STEPHEN.** Director (1976-) Treasurer (1976-1979)
 See TREASURER'S REPORTS See NEWS ABOUT MEMBERS
- RELIGION/ATHEISM/AGNOSTICISM**
 ER called a "Christian by osmosis" in L.A. Times. 18-10.
 "Atheism survives but debate is dead" NYTimes. 19-19
 Christianity vs. Atheism -- O'Hair-Harrington roadshow. 22-17
 "Am I An Atheist or an Agnostic?" by ER 22-26
 First Int'l Exhibition of Literature for non-believers, Stockholm U. (9/79). 23-56
 "It is immoral to be a Christian" -- a tongue-in-cheek(?) argument. 25-23
 Are there retirement homes for atheists, agnostics, etc.? 25-27
 "Fundamentalism Reborn -- Faith and Fanaticism" by Martin Marty. 27-42
 5 reasons why we (editorial "we") oppose fundamentalism. 28-17
 Secular Humanism Declaration attacks rise in fundamentalism. 28-21
 "A Christian America" -- "Christians are in conflict with those who believe in nothing beyond themselves." 28-23
 "Vatican opens study on clearing Galileo" of heresy for arguing that the sun, not the earth, was at the center of the universe. 29-22
 "The Evolution of Conscience" by Ralph Newman, praised by Marty, Algernon Black. 30-33
 "We're no holier for our holy war!" -- Marty. 31-27
 Jesse Helms wants US Govt. to act in accordance with "instructions from Mt. Sinai" 31-29
 The "churchman's splendid poem (advt.)" uses Gettysburg Address format. 31-31
 "Religion in American Politics," symposium sponsored by Free Inquiry. Speakers: Boorstin, Connager, Sam Ervin, Kurtz, Larus, Sen. Weicker, Jr. 37-36
 Reagan: "Better dead than Red" paraphrase. 38-10
 Bay Area survey: Christian 41%, Mystic/Spiritualist 22%, Humanist 19%, Agnostic 11%, Jewish 3%, Atheist 1%, other 3%. 38-11
 Judge voids minute of silence in NJ schools. 40-20
 See CREATIONISM
- RENEWALS.** See MEMBERSHIP RENEWALS
- REQUESTS FROM MEMBERS**
 Cleavelin seeks information on undergraduate philosophy clubs. 17-27

- Carolyn Wilkinson seeks writings by Edith Finch Russell (ER's 4th wife), especially biography of Carey Thomas, President of Bryn Mawr College. 20-52
- ROBERTS, ALAN. His "The Politics of Nuclear Energy" is published by Spokesman. 18-39
- ROTBLAT, JOSEPH
Excerpts from his book, "Scientists in the Quest for Peace: A History of the Pugwash Conferences." (1972) 38-7
He receives the 1983 ERS Award. 38-32
Press release on the Award. 39-15
- RUJA, HARRY
On ER's "Anti-Semitism". 19-48
Elected a Director (1979-1981). 20-12
"ER on Israel". 23-60
Elected Vice-President, 1981. 27-2a
Re-elected a Director (1982-1984). 32-32
His Vice-President's Report. 33-5
Elected Chairman, 1982. 35-2
- RUPPE, CHERIE
Elected Director (1981-1983). 28-6
Elected Secretary, 1982. 35-2
Re-elected Secretary, 1983. 39-2c
See NEWS ABOUT MEMBERS
- "RUSSELL" (publication) needs an additional \$2.50 per subscription. We will vote on increasing dues by \$2.50. 35-30
\$2.50 dues increase approved.
- RUSSELL ARCHIVES.
See BERTRAND RUSSELL ARCHIVES
- RUSSELL, DORA BLACK. Honorary Member. ER's 2nd wife, mother of Kate and John
5 reviews from Book Review Digest (1975) of Volume I of her autobiography, "The Tamarisk Tree". 18-40
Cranford's report on Dora (1978). 19-4
Dora and ER Memorial (London) proposal. Takes Cranford to Parliament. 20-3
Believes in protests by private groups rather than by governments. 21-4
Accepts Honorary Membership. Members had previously approved, unanimously, at 1978 Meeting. 21-23
Dora on Cadogan and on Conway Hall. 23-29
Agrees with Cadogan, it will take more than cool-headed negative rationalism to persuade people to accept the aims of the Nat'l Secular Society's new Manifesto. 25-28
"The Tamarisk Tree" reviewed, The Times (London). 26-26
Dora's remarks at the Memorial unveiling ceremony. 28-48b
Picture of Dora and the bust. 30-11
Wisconsin withdraws invitation to speak (1928). 32-23
"Challenge to Humanism" in The Freethinker (UK) (1982). 33-42
Letters to The Guardian (UK) on socialism, etc. 34-40
"The Soul of Russia and the Body of America" (1921), with her 1982 Introduction. 36-16
Writing a book on the years 1945-50, and origins of the Cold War. Someone should research ER's 70 BBC talks, to see if he actually did favor using nuclear weapons on Russia. 37-3
Vanity Fair (5/83) lists ER and Dora among its celebrated couples of 1928, along with Mary Pickford and Douglas Fairbanks, Alfred Lunt and Lynne Fontanne, etc. 39-26
- RUSSELL, EDITH FINCH. ER's 4th wife.
Davis's comments on her death. 17-6d
Formal card announcing her death. 17-52b
Her death, as reported in the Daily Telegraph (UK). 17-52b
Her obituary in The Tribunes (UK), written by Ken Coates, Director of the ER Peace Foundation. 18-42
- RUSSELL-EINSTEIN MANIFESTO
Linus Pauling reads it to science teachers (1966). 37-40
- RUSSELL ON X
Short papers wanted, "Russell on X" (X = history, religion, censorship, etc., etc.) 28-10
"Russell on Ethics" by Philip Stander 29-16
"Russell on Marx" by David Hart. 30-14
"Russell on Education" by Bruce Romanish. 30-15
"Russell on Morality" by Lee Eisler. 30-;6
List of many more "Russell on X" possibilities. 30-17
"Russell on Evolution" by Fred Allendorf. 31-16
"Russell on History" by Philip Stander. 31-17
- RYLE, GILBERT
His assessment of ER's influence, at the Aristotelian Society, soon after ER's death. 29-13
- RUSSELL, BERTRAND
Assessments of his work:
Sociologists can still learn much from BR. 19-15, 46
"ER's Liberalism" by Alan Ryan in BBC Listener. 20-15
Nicolas Walter challenges Cadogan's views on ER. 24-25
Brand Blanchard's assessment. 27-15
Gilbert Ryle's assessment at Aristotelian Society. 29-13
W.I. Matson on ER's Ethics. 28-14
Jesuit Frederick Copleston assesses ER. 34-15
- Biographies:
14th Edition of Encyclopedia Britannica (1930) and Blackwell's comments. 17-24
13th Edition of Encyclopedia Britannica (1926). ER loathed it, and no wonder. 18-9
Was Sanger sarcastic in 14th Edition, above, in saying ER's religious views were the result of the wisdom of the Court of Chancery (which set aside ER's parent's will which would have had ER raised by agnostics)? 18-22
Columbia Encyclopedia (1975). 21-11
People's Almanac #1 & 2 have 3 sections on ER (& many errors). 25-16b
The Listener (BBC) by Anthony Howard. 26-10
100 Most Important People in the World (1970) by Donald Robinson. 25-17
Davis points out errors in People's Almanacs and in Robinson. 26-11
Modern Maturity provides a 4-line biography. 26-12
Baumgartner disagrees with many things Howard says. 28-13
Azimov's Biographical Encyclopedia of Science and Technology. 29-12
The Making of the Micro, by Christopher Evans (1981). 36-8, 37
Pictorial history of Philosophy by Dagobert Aune (1979). 39-12
- Comments about ER:
Ayer: "Perhaps at his age, ER has a right to make up his mind about a book without reading it." 21-19
Emma Goldman, on ER in Russia, 1920. 35-10
Senate Internal Security Committee's conclusions: "... among the sponsors and initiators of the Pugwash Conferences were individuals who have displayed a sharp, unreasonable, and sustained hostility to the U.S., its representatives, institutions and policies." 35-16c
Norman Cousins's remarks. 36-42
CCNY trial. What ER was called at this trial. 38-22
- Honors:
India's ER stamp (1972). 21-13 22-25
Kalinga Prize, for popularization of science, 1957. 24-20
Sonning Prize, for advancement of European civilization, 1960. 25-21
ER Memorial, Red Lion Square, London, 1980. 25-22
See BERTRAND RUSSELL MEMORIAL
Tom Paine Award, 1962. 33-45
The Humanist includes ER in its "Humanist Pantheon" of humanist heroes. 40-38
Note: ER's honors also include the Nobel Prize for Literature, 1950 and the Order of Merit (UK) at about the same time.
- Influence on particular individuals:
Jimmy Carter took 5 books from Plains, GA to the White House. One was ER's "A History of Western Philosophy". 18-13
B.F. Skinner turned to behaviorism as a result of ER's account of Watson's work. 24-15
Abbie Hoffman was triggered into action as a result of seeing ER's big ban-the-bomb crowds blocking traffic in Trafalgar Square. 29-15
G.E. Moore: "... I certainly have been more influenced by him than by any other philosopher." 23-21

John Van Wissen, BRS Member, was liberated by ER's writings. 33-12
 John Lennon remembers ER and the H-Bomb, "and the reason we were rock-and-rollers is that the Bomb might go off any minute." 33-13
 3 inquirers (for information about the ERS) express their indebtedness to ER. 35-11
 Helen Caldicott was inspired, in part, to make her "commitment to human survival" by ER's example. 40-12

International affairs:

USSR suppression of Jewish culture. 20-18
 US support of tyranny and corruption in Iran (1966) 27-11
 US aggression in Vietnam. 36-38

Interviews:

See RUSSELL, BERTRAND, Writings (Interviews)

Miscellaneous:

"Life of William Lord Russell" (1819) by Lord John Russell (BR's grandfather) gives family's early history. 17-6c
 BBC-TV plans film on ER, must get funds first. 23-2
 Allen & Unwin's ER's "Autobiography", Vol III, better quality than Simon & Schuster's, can be ordered from England. 24-35
 Rex Stout, a BR friend. 27-14
 ER's "Guided Tour of Intellectual Rubbish" performed. 29-9 34-14 36-38
 New Republic ad (1926) for Russell-Durant debate. 30-10
 Sexist ER wrote Alys, "No woman's intellect is really good enough to give me pleasure." 30-13
 His favorite hymn as a boy: "Weary of earth and laden with sin..." 34-11
 ER's "Science and Values" read over Pacifica radio station (1982). 34-12
 Epstein bust of ER on exhibit at Hirschhorn, Washington, DC (1983). 39-13 Photo. 40-16
 Vanity Fair (1983) includes ER & Dora among its celebrated couples of 1928. 39-26
 BBC-TV's film on ER will be ready by Easter 1984. 40-13
 Werner Martin's bibliography on ER, 1981. 40-19

Misrepresentations:

It was claimed that ER said: "Socrates was greater than Christ because he did not have the cruel and sanguinary instincts of that hallucinating Jew." 36-6
 ER did rank Socrates higher than Christ, says Harry Ruja, but without derogatory language. 38-42
 Rumea, Solzhenitsyn, and Hook all misrepresent ER as having said, "Better Red than dead." 39-10
 Shalom's attempt at posthumous character assassination. 40-11

Notable remarks:

"We must proceed in the spirit of unyielding despair." 19-14
 American Heritage Dictionary, defining "impulse", gives this example: "Respect for the liberty of others is not a natural impulse in most men." 24-18
 "The good life is one inspired by love and guided by knowledge." 25-20

Nuclear war/weapons:

See NUCLEAR WAR/WEAPONS

Personality: (What others said he was like as a person)

Mortimer Adler: in a Russell-Adler debate, ER displayed "great wit rather than wisdom" 17-21
 A.J. Ayer: ER "did not talk down." 17-22
 Will Durant, on ER's amorous inclinations. 17-23
 Dora: "...his cheek, wit, activism and recklessness." "In his very old age, became dictatorial, and cut off from his old friends." 21-4
 S.P. Rosenbaum: In fiction, ER was "treated as a satiric or at least ironic figure." 23-22
 Virginia Woolf: "Bertie is a fervid egoist — which helps matters." 24-14

Peter Cranford, clinical psychologist, speculates about ER, based on ER's first letter to Ottoline. 25-6

Quoted or referred to:

Denonn cites many references to ER in his recent reading. 23-23
 Forbes: "The good life is one inspired by love and guided by knowledge." 25-20
 San Francisco Chronicle: "The happy life must, to some extent be a quiet life. It is only in an atmosphere of quiet that joy can live." 26-13
 Los Angeles Times: "Mathematics is the science in which you don't know what you are talking about nor whether what you say is true." 26-14
 Forbes: "The secret of happiness is this: let your interests be as wide as possible and your reactions to things and persons that interest you be as far as possible friendly rather than hostile." 26-15
 UN Newsletter: "William James used to preach the Will to Believe. I should wish to preach the Will to Doubt... the wish to find out, which is the exact opposite." 26-16
 Forbes: "Whenever one finds oneself inclined to bitterness, it is a sign of emotional failure." 27-12
 Gannet's "Today" (Florida): "I think all the great religions of the world — Buddhism, Hinduism, Christianity, Islam and Communism — both untrue and harmful." 27-13
 Forbes: "Men who are unhappy, like men who sleep badly, are proud of the fact." 28-9
 Forbes: "It is possible to live in so large a world that the vexations of daily life come to feel trivial, and that the purposes that stir our deeper emotions take on something of the immensity of our cosmic contemplations." 28-9
 Doonesbury (cartoon). 28-12
 Forbes: "It is the preoccupation with possessions, more than anything, that prevents man from living freely and nobly." 29-10
 Los Angeles Times, Letter to the Editor: "The best authorities are unanimous in saying that a war with hydrogen bombs is quite likely to put an end to the human race..." 30-20
 AHA 1981 Desk Calendar (May page): "The conviction that it is important to believe this or that, even if a free inquiry would not support it, is one which is common to almost all religions and which inspires all systems of state education." 30-21
 Forbes: "A sense of duty is useful in work but offensive in personal relations." 31-14
 On a tombstone: "The great use of a life is to spend it for something that outlasts it." 34-13
 Felix de Cola's last letter to the Los Angeles Times: "I am dying and unafraid, and with ER I say, 'I think our own hearts can teach us no longer to look around for imaginary supports, no longer to invent allies in the sky, but rather to look to our own efforts to make this world a fit place to live in instead of the sort of place that the churches, in all these centuries, have made it...' " 38-46
 Forbes: "To be able to fill leisure intelligently is the last product of a civilization." 38-49
 Forbes: "Change is one thing, progress another. 'Change' is scientific, 'progress' is ethical; change is indubitable, whereas progress is a matter of controversy." 38-49
 See KAYE, MARVIN ("Guided Tour")
 See RUSSELL, BERTRAND, Misrepresentations

Sex:

Gore Vidal and Lord Longford disagree about the morality — and the consequences in other areas — of ER's sex life. 30-25

Wit and humor:

"Hell is where the motorists are French, the policemen German, and the cooks English." 19-13
 "People in a democracy tend to think they have less to fear from a stupid man than from an intelligent one." 20-36

Why ER had never written about Aesthetics: "Because I don't know anything about it...though that is not a very good excuse, for my friends tell me it has not deterred me from writing on other subjects." 27-15

Writings:(includes speeches, interviews, comments, i.e., ER's total output)

Advice:

ER's 10 Commandments (1930). 20-13
 "A Liberal Decalogue" — another 10 commandments (1951). 20-14
 "The good life is inspired by love and guided by reason" (fortune cookie). 22-9
 "Never use a long word when a short one will do." 25-14
 "What life has taught me." 30-8

Autobiography:

Volume II reviewed in Book Week. 23-19
 ER and the Apostles. 38-5

Bibliographies:

Harry Ruja's survey of bibliographies(1979).23-20
 Werner Martin's bibliography,1981.40-19

Capitalism:

Power stations that can exploit. 23-24

China:

Some traits in the Chinese character. 24-12

Democracy:

Education for Democracy. 17-18

Education:

The Sham of American Education. 24-11
 The above, originally called, "The American Intelligentsia", was longer, is now in "ER's America". 25-12
 Leithauser uses "Power" and "Education and the Social Order" in her college freshman English course. 23-16A

Einstein:

On Einstein (BBC). 39-8

Fanaticism:

Scepticism and Tolerance, (1918) BBC talk. 35-18
 Fanaticism and Tolerance,(1959) BBC interview. 37-37

Forewords:

to Corliss Lamont's "Freedom is as freedom does". 30-9
 to Fred J. Cook's "The Warfare State". 32-42

Future, the:

The Future of Man(CBS TV symposium,1959) 35-38
 The Future of Mankind. BBC Interview. 37-37

Honors:

Presentation of the Kalinga Prize (1957) for popularizing science, & ER's response. 24-20
 Presentation of the Sonning Prize (1960), for the advancement of European civilization, and ER's response. 25-21

Immortality:

"Do We Survive Death?" is assigned reading in Va. Commonwealth U. course. 17-20

Individual, role of:

"The Role of the Individual"(1959),BBC Interview. 37-37

Interviews:

Playboy Interview, by Norman MacKenzie (1963). 31-12
 CBS TV Symposium, "The Future of Man" (1959). 35-38
 Merv Griffin Interview (1965), much on Vietnam. 36-38
 BBC Interviews (1959) by Woodrow Wyatt: What is Philosophy? Religion. War & Pacifism. Communism & Capitalism. What is happiness? Nationalism. The Role of the Individual. Fanaticism and Tolerance. The Future of Mankind. 37-7,37
 Redbook: Tom Robbins (age 14) interviews ER (age 92). 37-38
 BBC Interview (1967) on Einstein. by G.J. Whitrow. 39-8

Jewish affairs:

Exchange of letters on suppression of Jewish culture in USSR. 21-14

Speaks at 10th Anniversary of Warsaw Ghetto Uprising. 25-15

Russell Archives have complete version of Warsaw Ghetto speech. 26-9

ER supported Zionism, says Jewish Post (Winnipeg) (1981). 34-10

See ANTI-SEMITISM

Kennedy Assassination:

ER accepted the conspiracy theory, with 13 pages in his Autobiography III. 22-8

Marriage:

My Own View of Marriage. (1928). 32-3

Marx, Marxism:

Marxism, a suitable punishment for the illiberality of well-to-do anti-Semites. 22-10a

Why Marx aimed to help the working class, though he did not come from it. 22-10b

ER's "German Social Democracy"(1896) called one of the most important books written before WWI. 23-18

Morality:

Taboo Morality (BBC Interview). 37-7

Murray, Gilbert:

"A 56-Year Friendship". 36-39

Nationalism:

"Nationalism" (BBC Interview). 37-7

Nuclear war/weapons:

Statesmen's euphemisms for mass killing. 25-13

Speech to the House of Lords (1945) on the danger. 35-14

"Scientists and World Peace" (1964). 37-8

Introduction to Gershon Report on accidental nuclear war (1960). 38-8.

On nuclear warmongers. 39-11

See NUCLEAR WAR/WEAPONS

Oil shortages:

On inevitable future oil shortages (1931). 25-37

Personalities:

Mohammed Ali. 21-12 22-28

Joan Baez. 24-17

Philosophy:

What is Philosophy? (BBC Interview,1959). 37-37

Principia Mathematica:

Gödel proved that it did not achieve what ER and Whitehead thought it did. 23-17

Psychology:

Why Marx aimed to help the working class, though he did not come from it. 29-7

What is Happiness? 29-7

On the evils due to fear. 33-11

What is Happiness? (BBC Interview, 1959). 37-7

Power (BBC Interview, 1959) 37-7

Religion/Atheism/Agnosticism:

Am I An Atheist or an Agnostic? 22-26

Preface tells what ER would write differently today (1923), 21 years after writing "The Free Man's Worship" (1902). 30-7

Religion (BBC Interview,1959). 37-7

Scientific Method:

Nature and Origin of Scientific Method (BBC talk, 1948. 34-9c 35-18

The State and the Family:

Supersession of the family by the state would make sex love more trivial, encourage triviality in personal relations, and make it harder to care about what happens after one's death. 25-19

USA:

The Myth of American Freedom. 32-5

ER responds to the Senate Internal Security Committee's report (unfavorable) on Pugwash and himself. 35-16d

Writing style:

His writing style analyzed in new book. 40-9

SAGAN, CARL

His "To Preserve a World Graced by Life" (from nuclear destruction) is mailed with RSN38. 38-45

SCHILPP, PAUL ARTHUR

"My Favorite Russell" is "The Free Man's Worship". 27-16
 Receives 1980 ERS Award. 27-17
 Proposed for Honorary Membership. 27-26
 Honorary Membership approved. 28-32
 See NEWS ABOUT MEMBERS

SCIENCE

Lewis Thomas: "We need more and better science." 19-20
 SCIENCE COMMITTEE Chairman: J.B. Neillands (1974-1979):
 Alex Dely (1979-)
 Zhores Medvedev reports nuclear disaster in USSR, at
 BRS seminar. 17-13
 Neillands proposes short-wave radio network for science
 societies of the world. 17-7
 Neillands speaks at Nobel Symposium on "Ethics for
 Science Policy". 19-12 20-8
 Neillands give supper for Vietnamese physics professor.
 21-8a
 Neillands reviews the past and wants to step down as
 Chairman. 22-4
 Medvedev's letter to Neillands, on his "Nuclear Disaster
 in the Urals", published by Norton. 23-13
 Sutcliffe proposes Dely as Neillands's successor.
 Directors will vote on it. 23-15
 Dely, new Chairman, tells his plans, asks for input.
 24-5a
 Dely has file of 1000 items on environment and pollu-
 tion; invites use of it. 25-10
 How non-technical people should read the highly tech-
 nical alternative theory of elementary particles
 (next item, 26-40). 26-6
 "An Alternative Theory of the Constitution of Matter"
 26-40
 Dely's "The Social Responsibility of Scientists and
 Laymen". 27-9
 Dely seeks volunteers to write popular versions of his
 paper (previous item, 27-9)
 Dely views the ERS and the Science Committee's future.
 29-5a
 Pugwash 1980 and what ERS members ought to do about
 nuclear weapons. 29-5b
 Dely gets \$2500 grant from Arizona Research Laborator-
 ies to use as he sees fit. 29-5c
 Dely & Moreland write, "How To Avoid Nuclear War" for
 essay contest. 29-5d
 Dely is working on "peace" efforts, and hazardous
 waste management in Arizona. 30-50
 Dely reports on oppressed scientists, toxic substances.
 Kate Tait volunteers. 31-10
 Dely provides more on Pugwash '81; opposes weakening
 Clean Air Act; sends kit to 40 members on Soviet
 Jewish physicist refusenik. 32-9
 Dely report discusses projects, to establish Nat'l
 Peace Academy, and to establish academic program in
 colleges for study of peace and conflict
 resolution. 33-10
 Dely paper, "Nuclear Weapons: Perceptions and Realities."
 33-15
 Dely report: against chemical weapons (nerve gas).
 34-7a
 2 Dely papers: "Civil Defense, and Updated Policy
 Analysis" and "Dept of Defense Influence in
 University Research". 34-7c
 Babst paper, "Assessing Overall Consequences of
 Nuclear War" (earthquakers, tidal waves,
 contamination.) 35-9
 "Growing Probability of Accidental Nuclear War" by
 Dely and Babst, Congressional briefing paper.
 36-4
 "Accidental Nuclear War Assessment Center," paper by
 Dely and Babst. 36-4
 Sends 6 briefing papers to Congress on accidental
 nuclear war; paper promotes Congressional accident-
 al nuclear war assessment center; 2 calls for
 information and co-authors — on accidental
 nuclear war assessment, and on nuclear weapons
 treaty verification methods. 37-6

Federation of American Scientists wants US and USSR leaders
 to visit, and learn about, each other's country. 38-4
 "Congressional Assessment Center for Accidental War", a
 paper for ERS members to photocopy and send to their
 3 people in Congress. 39-5
 Int'l Development Circular (July 1983) and some responses;
 Accidental War book is in work. 40-8

SCOTT, REV. MICHAEL

Cadogan calls him a "living saint", a rational theologian. 20-3

SECULAR HUMANISM

See HUMANISM

SMITH, CAROL R.

Named Co-Chairman, Membership Committee (11/82). 36-43

SMITH, WARREN ALLEN

Elected a Director (1978-1980). 16-12

Reviews Whettam's Symphony Against Fear (Contra Timore). 18-48

Possibility of putting the Symphony on LP. 19-49a

Elected Vice-President, 1978. 19-49g

Whettam LP too risky, beyond our resources. 20-6

Elected Vice-President, 1979. 21-37

Elected Vice-President, 1980. 23-3

Elected a Director (1981-1983). 28-6

SOLZHENITSYN, ALEXANDER

Misrepresents ER as having said, "Better Red than dead." 39-10

SUTCLIFFE, JOHN

Has 2 papers related to applied philosophy, "Ismology" and

"Psychology, Suggestion, and Influence." 19-18

With his mother, meets Cranford and Dora. 20-3

Shares Berthon-Payon's sadness that ER's papers left England.
 20-21

Asks Flew if he ever debated ER. Answer: no. 20-37

2 papers, "ER and Social Economy" and "Manifesto of the New
 Manchester School of Economics." 22-11

Says Cadogan is a transcendental idealist and not like BR. 22-13

Many papers on his "New Manchester School". 23-39

Expulsion proposed. The case against him. 28-41

Expelled. 29-6a

Cranford favors letting Sutcliffe appeal expulsion. 32-6

Davis opposes appeal. 32-7a

Ray Plant's disclaimer. 32-43

Board votes "no appeal". 33-32

TAIT, KATHARINE RUSSELL ER's Daughter Honorary Member

Treasurer (1974-1975) A Director since 1974

Re-elected a Director (1981-1983). 28-6

Volunteers, in response to Science Committee request,
 as abstractor for Canadian Journal of Peace Research

Abstracts. 31-10(2)

TAX-DEDUCTIBLE EXPENSES

Members who are professionals or who are essential to the

conduct of the Meeting can treat cost of attending meetings

as a deductible expense on federal tax. 25-5 29-4a

UNIVERSAL HUMAN RIGHTS COMMITTEE

See HUMAN RIGHTS COMMITTEE

USA

"The Soul of Russia and the Body of America." by Dora (1921)

with her introduction (1982). 36-16

USA/USSR

Reagan paraphrase of "Better dead than Red." 38-10

USSR

"The Soul of Russia and the Body of America" by
Eora (1921), with her 1982 introduction. 36-16

VIDAL, GORE

Judge resigns after censure for attending lecture by
Vidal for benefit of 24 men awaiting trial for
sex crimes involving adolescent boys.. 22-18

His views on Reagan, and on ER's sex life. He got most
hate-mail after saying, on Donahue (TV), that he
was an atheist. 30-25

His play, "The Best Man", quotes ER: "People in a
democracy tend to think they have less to fear
from a stupid man than from an intelligent
one."

VOLUNTEERS

Volunteer wanted for fund-raising. 20-45 21-36 22-32

New Treasurer wanted (8/79). 23-11

Co-Librarian wanted. 23-12

3 volunteer for fund-raising: Makinster, Fjermedal,
McVeigh. 23-50

3 jobs open (11/79): Treasurer; Co-Chairman, Membership
Committee; Co-Librarian. 24-42

3 jobs filled: Treasurer, Darland; Co-Chairman, Member-
ship Committee, Tucker; Co-Librarian, Lenz. 25-40

Membership Co-Chairman needed (5/81). 30-42

New Membership Co-Chairman: Berthan-Payon (8/81). 31-44

" " " : C. Smith (11/82) 36-27

" " " for enrollments only. 39-32

VOTES BY MAIL except election of Directors

For time and place of 1979 Meeting. 19-3, 53b

On possible meeting in England, Book Award, Folly Award,
19-53c

On honorary membership for Ayer, Edwards. 19-53d

Results of vote: 1979 Meeting in NYC, June; Ayer, Edwards
approved. 20-12

Other results of RSM19 ballot. 20-50

On honorary membership for Pears, Popper. 20-54

Pears & Popper approved. 21-24

On time and place of 1980 Meeting; on use of "Chair-
person"; on raising dues; on Dely for Science
Committee Chair. 23-51a, 62

Results of vote: Chicago, June; "Chairperson" out;
dues raised; Dely is Chairman. 24-10

On time and place of 1981 Meeting; on honorary membership
for Schilpp; on future Meeting in London.. 27-44

Results of vote: McMaster in June; Schilpp approved; London
Meeting possible. 28-6

On expulsion of Sutcliffe; on changing "Travel Scholarship".
28-50

Results of vote: Sutcliffe expelled; "Travel Scholarship"
changed to "Doctoral Grant". 29-6

On raising dues, for higher cost of "Russell". 35-40

Results of vote: dues raised by \$2.50

See DIRECTORS

WARS/PACIFISM

ER's 4 kinds of pacifism and 4 kinds of war. 28-7

WHETTAM, GRAHAM

His Symphony Against Fear reviewed by Warren Smith. 18-48

His Symphony is played at 1978 Meeting. 19-2

Possibility of issuing LP of the Symphony. 19-49

LP of Symphony is financially risky, beyond our resources.
20-6 24-4

WICKER, TOM

"War By Accident". 37-34

WILBERFORCE COUNCIL FOR HUMAN RIGHTS

See OTHER ORGANIZATIONS

See HUMAN RIGHTS

WITTGENSTEIN, LUDWIG

"Philosophical Investigations" called one of the 100 most
important books of Western Literature since World War I.
23-18

"Ludwig Wittgenstein, Personal Recollections" of 6 persons
who knew him. Jackanicz recommends it. 32-27

Same book reviewed in Boston Globe. 34-24

Jeremy Bernstein's spoof on Wittgenstein in The New Yorker.
33-29

WOOLF, VIRGINIA

"Bertie is a fervid egoist -- which helps matters." 24-14

ZETETIC, a publication opposing pseudoscience.

It is mentioned in "The Invasion of the Pseudoscientists".
18-20

ZUCKERMAN, SOLMI

Reviews Kemman's "The Nuclear Delusion" and Sheer's "With
Enough Shovels". The review provides an excellent history
of the arms race. 38-43

Pipes objects to Zuckerman's calling him "a notorious
anti-Soviet hardliner," and Z's response. 38-44

OPPORTUNITIES

(41) Summary of opportunities. Here are 10 things that you've read about in this newsletter or the previous one
that you might wish to do, and that would benefit the ERS:

- . Do a paper on "Was Russell Religious?". Submit an outline of it by December 1st, or soon after. (4)
- . Send suggestions for the BEC-TV film on ER. (13)
- . Make a contribution to the ERS Treasury. (30)
- . Take another look at the 7 opportunities listed in the last issue (RSN39-42).

VP on TV (17). 3 Letters to Editors (18-20). The BR Editorial Project's first volume reviewed (25). Reports available to Directors (31). BR's Tom Paine Award, 1962 (40). Einstein on God (42). BRS Award to Dora (49). An asterisk in the left column indicates a request. Index at end.

MEMBERSHIP RENEWAL

(2) Last call for 1984 dues. Everybody's dues were due on January 1st (except those who enrolled during December 1983.) If you have not yet paid your dues, please do.

If your dues have not been received by the end of February, you become a non-person -- a dreadful fate; we do not recommend it.

Dues are \$22.50 regular, \$27.50 couple, \$12.50 student. Plus \$7.50 outside the USA, Canada, and Mexico. Please mail dues, in U.S. dollars, to 1984, RD 1, Box 409, Coopersburg, PA 18036

Why risk the dreadful fate? Do it now.
Thanks!

ANNUAL MEETING (1984)

(3) Professor Winchester, Coordinator of Russell Conference '84, has sent this information. You may write to him, as he suggests, for information on registration and accommodation. Or you may decide to wait for the May BRS newsletter, which will provide it, including how to make a reservation, how to get there, where to check in, where to register, etc.

The BRS will provide some sessions parallel to the technical sessions.

Plan to come if you can!

Bertrand Russell's Early Technical Philosophy, 1895-1922

A conference on Russell's early technical philosophy will be held at Trinity College, University of Toronto, June 21-24, 1984.

The conference is sponsored by the Russell Editorial Project of McMaster University and co-sponsored by The Institute for the History and Philosophy of Science and Technology at the University of Toronto and the Higher Education Group at The Ontario Institute for Studies in Education. The conference will cover Russell's work on the foundations of Geometry, his plans for an encyclopaedia of the sciences, his work on Leibniz, the early logical manuscripts, the Principles, philosophical issues relating to Principia (the paradoxes, the axiom of choice, the theory of descriptions, the theory of types), his early work on theory of knowledge, philosophy of science, and logical atomism. Among the participants will be A. J. Ayer and W.V.O. Quine. The annual meeting of the Bertrand Russell Society will coincide with the conference.

The registration fee for the conference will be approximately \$40.00 (Can) and accommodation can be arranged in Trinity College, Toronto. For information on registration and accommodation, please write to Ian Winchester, Coordinator of the Russell Conference '84, The Ontario Institute for Studies in Education, Suite 9-196, 252 Bloor Street West, Toronto, Ontario, Canada, M5S 1V6.

There is still room for some parallel sessions. For those interested in contributing a paper, please send an abstract to the above address.

(4)

TEN

A 10th Birthday this month for the ERS -- founded at a meeting, called by Peter Cranford, in NYC, February 8-10, 1974.

At age 5 -- in February 1979 -- we asked how we were doing. This is how we answered (RSN21-2):

We're doing pretty well, but there's plenty of room for improvement.

Here are some of the things we have done during the first 5 years of our existence:

- . tapped existing reservoirs of Russell admirers, and enabled them to be in touch with one another;
- . grew to a membership of over 200 (222 at last count);
- . acquired distinguished honorary members;
- . presented a ERS symposium at the annual American Philosophical Association convention, every year for the past 5 years;
- . held a ERS symposium for psychologists attending the American Psychological Association's annual meeting in 1976;
- . propagandized against chemical weapons, nuclear weapons, and uncontrolled technology;
- . set up a ERS Library that lends books, films, tapes;
- . surveyed U.S. colleges and universities for courses on ER;
- . established a ERS Travel Grant, to enable a scholar to visit the Russell Archives;
- . offered books by and about ER for sale;
- . issued a list of books by ER, sorted into categories;
- . held 5 annual meetings: 3 in NYC, 1 in Los Angeles, 1 in Hamilton;
- . issued 20 newsletters;
- . printed or reprinted a number of short articles, book reviews, recollections;
- . reproduced a list of 62 (+2) dissertations on ER.

Here's why we say there's room for improvement:

- . Fund-raising: we haven't yet raised a penny except from our own members.
- . The ERS Award, first proposed in July 1975, has never been awarded. A new attempt will now be made to organize for it.
- . The ERS Travel Grant has never been awarded, although funds to cover the first of these Awards are on hand.
- . Applied Philosophy. There have been efforts to apply some of ER's views to everyday living, but nothing has come of them as yet.
- . Local chapters. Several chapters were started and seemed to be going well, but none has been heard from in quite a while.
- . Universal Human Rights Committee has done virtually nothing. It now exists in name only, and has no chairman.

Now at age 10 we ask the same question: how are we doing? Are we doing better than we were 5 years ago?

Here are the pluses and minuses:

Have we improved in fund-raising?

NO. We still haven't raised a penny except from our own members, and even that has fallen off a good bit. (Members, please note!)

Have we gotten better about the Bertrand Russell Society Award?

YES. There have been 4 Awards in the past 4 years: Paul Arthur Schilpp in 1980; Steve Allen in 1981; Henry W. Kendall in 1982; and Joseph Rotblat in 1983.

What about Travel Grants (now called Doctoral Grants), have we done any better?

YES, 4 Grants in the past 5 years: Kirk Willis in 1979, Steven J. Livesey in 1980, Alejandro Garciadiego in 1982, and Lois I. Pineau in 1983.

Have we made progress in Applied Philosophy (or in Philosophy in High School)?

NO. These committees exist in name only.

What about local chapters, are they prospering?

NO. A Los Angeles group met a few times in 1980-81; otherwise there has been no activity.

Has the Universal Human Rights Committee been functioning?

YES. Now called the Human Rights and International Development Committee, it offers technical assistance to Third World countries in the belief that this may give leverage in cases of human rights abuses.

Have we anything else to crow -- or eat crow -- about? Yes:

- . The ERS Book Award, proposed by Gladys Leithauser in 1978, has never been made, nor have we made serious efforts to do so. We should.
- . The ERS Folly Award, proposed by Nick Griffin in 1978, has never been bestowed. This should be approached cautiously, but if suitable folly can be found, it might garner useful publicity for the ERS, and be amusing to boot. Give it thought!
- . We continue to present a ERS session every year at the December convention of the Eastern Division of the American Philosophical Association.
- . We collected over \$1000 for the ER Memorial in London (a bust of ER in Red Lion Square).

- . We maintained close relations with the Russell Archives.
- . We had input to the House Appropriations Subcommittee Hearings on Dept. of Defense appropriations for 1984.
- . The size of our membership list is disappointing. We hover between 200 and 300 members, year after year. Many join each year; many leave. We would like to have 500 members in order to be self-supporting and not dependent on contributions.

Anything else?

Yes.

We survived.

REPORTS FROM COMMITTEES

(5a) Science Committee (Alex Dely, Chairman):

The Science Committee submitted 4 papers, chiefly on accidental war, to these hearings →

The papers are given 38 pages in this public record of the hearings.

Alex reports many media requests for information on the accidental war issue.

(5b) Human Rights/ International Development Committee (Alex Dely, Chairman):

Alex has written a 12-page report on the activities of this Committee, which he will send on request (6150 E. 31st, Tucson, AZ 85711.)

22-146 O

BY BERTRAND RUSSELL

(6) BR, versifier. From "The Humanist", 1953, Number 5 (with thanks to BOB DAVIS and HERB VOGT):

The Prelate and the Commissar

BERTRAND RUSSELL

(A comment on Paul Blanshard's *Communism, Democracy and Catholic Power*)

The Prelate and the Commissar
 Were walking hand in hand:
 They wept like anything to see
 Much laughter in the land:
 "If this could but be turned to tears,"
 They said, "it *would* be grand!"

"If seven Priests with seven spics
 Purged it for half a year,
 Do you suppose," the Prelate said,
 "That they could purge it clear?"
 "I think so," said the Commissar,
 And did not shed a tear.

"O Workers, come and walk with us!"
 The Prelate did beseech.
 "A pleasant walk, a pleasant talk,
 Along the briny beach:
 We cannot do with more than four,
 To give a hand to each."

And four young Workers hurried up,
 And many more behind:
 Their coats were brushed, their brains were washed,
 Their thoughts were clean and shined—
 And this was odd, because, you know,
 They hadn't any mind.

"The time has come," the Prelate said
 "To talk of many things:
 Of bombs—and ships—and aeroplanes—
 Of presidents—and—kings—
 And how to make the sea grow hot—
 And give policemen wings."

"A sacred book," the Prelate said,
 "Is what we chiefly need:
 Rubrics, and commentators, too,
 Are very good indeed—
 Now, if you're ready, Workers dear,
 We can begin to feed."

"It seems a shame," the Prelate said,
 "To play them such a trick.
 After we've brought them out so far,
 And made them trot so quick!"
 The Commissar said nothing but
 "The butter's spread too thick!"

"O Workers," said the Commissar,
 "You've had a pleasant run!
 Shall we be trotting home again?"
 But answer came there none—
 And this was scarcely odd, because
 They'd starved them every one.

This original poem by Bertrand Russell, "The Prelate and the Commissar," was written by the distinguished British philosopher as a commentary on Paul Blanshard's *Communism, Democracy and Catholic Power*. Like Mr. Blanshard, Lord Russell believes that Roman Catholicism is not a necessary bulwark against communism, and he has had the courage to say so in unmistakable language. Three years before he produced this parody on "The Walrus and the Carpenter," Lord Russell said in a lecture at Columbia:

It is dangerous error to think that the evils of communism can be combated by Catholicism. The evils of communism may be outlined as follows: adherence to a rigid and static system of doctrine, of which part is doubtful and part demonstrably false; persecution as a means of enforcing orthodoxy; a belief that salvation is only to be found within the church and that the True Faith must be spread throughout the world, by force if necessary; that the priesthood, which alone has the right to interpret the Scriptures, has enormous power, physical east of the Iron Curtain and spiritual over the faithful in partibus; that this power is used to secure an undue share of wealth for the priesthood at the expense of the rest of the population; and that bigotry, and the hostility that it engenders, is a potent source of war.

Every one of these evils was exhibited by the Catholic Church when it had power, and would probably be exhibited again if it recovered the position it had in the Middle Ages. It is therefore irrational to suppose that much would be gained if, in the defeat of communism, Catholicism were enthroned in its place.

(7)

BR REVISED

But whodunit? CHERIE RUPPE writes:

Our Humanists of Seattle were discussing "Marriage and Morals", and found an interesting difference in different editions.

In the Liveright paperback, 1970, p. 266 — also in the Bantam paperback, 1959, p. 180 — BR says:

It seems on the whole fair to regard negroes as on the average inferior to white men, although for work in the tropics they are indispensable, so that their extermination (apart from questions of humanity) would be highly undesirable.

The Unwin paperback, 1976, p. 171, has BR say:

There is no sound reason to regard negroes as on the average inferior to white men, although for work in the tropics they are indispensable....

Considering that the first version would not have been at all extraordinary, even for BR, in 1929, and that the sentence doesn't make much sense in the second version, I tend to think that the change was made by Unwin, not BR.

* Does anyone know?

BR QUOTED

(8)

Did "Forbes" get it right? In their issue of 11/21/83, p.356, they offer this quotation:

The biggest cause of trouble in the world today is that the stupid people are so sure about things and the intelligent folks are so full of doubts.

WHITFIELD COBB (to whom we are indebted for all this) says: "It just doesn't (to me) have that succinct clarity and punch which I associate with BR."

To which we add our own doubts that BR would have used that folksy word, "folks".

Whit says, "For years I have 'quoted' from my own memory this version: 'The trouble with the world is the stupid are cocksure and the intelligent are full of doubt.'"

Whit next came across this by W. B. Yeats:

The best lack all conviction, while the worst are full of passionate intensity.

He asks: (1) What is the printed source of the BR quote, and the exact wording? (2) Is it likely that BR is indebted to Yeats for this thought?

* What do our learned friends at the Archives think?

BR INTERVIEWED

(9)

Ved Mehta, in "Fly and Fly Bottle" (Columbia University Press, 1983, pp. 39-45, pb.) calls on BR:

Next day, I walked round to Chelsea to have a talk with Earl Russell at his house. He opened the door himself, and I instantly recognized him as a philosopher by his pipe, which he took out of his mouth to say, "How do you do?" Lord Russell looked very alert. His mop of white hair, swept carelessly back, served as a dignified frame for his learned and animated eyes — eyes that gave life to a wintry face. He showed me into his ground-floor study, which was sandwiched between the garden and the street. It was a snug room, full of books on a large number of subjects: mathematics, logic, philosophy,

history, politics. The worn volumes stood as an impressive testament to his changing intellectual interests; they were wedged in with rows of detective stories in glass-fronted Victorian bookcases. "Ah!" he said. "It's just four! I think we can have some tea. I see my good wife has left us some tea leaves." His "ee" sounds were exaggerated. He put a large Victorian kettle on the gas ring. It must have contained little water, for it sang like a choir in a Gothic cathedral. Russell ignored the plain-song and talked, using his pipe, which went out repeatedly, as a baton to lead the conversation. Now and again

he reached out to take some tobacco with unsteady fingers from a tin. When we were comfortably settled with our tea, he began interviewing me. Why was I concerned with philosophy when my life was in peril? I should jolly well be doing something about the atomic bomb, to keep the Russians and Americans from sending us all up in flames. Anyone might personally prefer death to slavery, but only a lunatic would think of making this choice for humanity.

At present, when he wasn't working on nuclear disarmament, he used detective stories for an opiate. "I have to read at least one detective book a day," he said, "to drug myself against the nuclear threat." His favorite crime writers were Michael Innes and Agatha Christie. He preferred detective stories to novels because he found that whodunits were more real than howtodoints. The characters in detective stories just did things, but the heroes and heroines in novels thought about things. If you compared sex scenes in the two media, in his sort of pastime they got into and out of bed with alacrity, but in the higher craft the characters were circumspect; they took pages even to sit on the bed. Detective stories were much more lifelike. The paradox was that authors of thrillers did not try to be real, and therefore they were real, while the novelists tried to be real and therefore were unreal. The things we most believed to be unreal — nuclear war — might turn out to be real, and the things we took to be the most real — philosophy — unreal.

The savior in him was eventually tamed by the tea, and the elder statesman of philosophy reminisced a bit about Moore and Wittgenstein, his Cambridge juniors, and said a few caustic words about today's philosophers in Oxford and Cambridge. "I haven't changed my philosophical position for some time," he said. "My model is still mathematics. You see, I started out being a Hegelian. A tidy system it was. Like its child, Communism, it gave answers to all the questions about life and society. In 1898 (how long ago that was!), well, almost everyone seemed to be a Hegelian. Moore was the first to climb down. I simply followed him. It was mathematics that took me to logic, and it was logic that led me away from Hegel. Once we applied rigorous logic to Hegel, he became fragmentary and puerile."

I asked if he had based his system of mathematical logic on the belief that language had a structure.

"No, it is not so much that I believe language has a structure," he said. "I simply think that language is often a rather messy way of expressing things. Take a statement like 'All men are mortal.' Now, that has an unnecessary implication when stated in words; that is, that there are men, that men exist. But if you translate this statement into mathematical symbols, you can do away with any unnecessary implication. About Moore — the thing I remember most was his smile. One had only to see it to melt. He was such a gentleman. With him, manners were everything, and now you know what I mean by 'gentleman.' To be Left, for example, in politics just 'wasn't done.' That was to take something too seriously. I suppose present-day Oxford philosophy is gentlemanly in that sense — it takes nothing seriously. You know the best remark Moore ever made? I asked him one time who his best pupil was, and he said 'Wittgenstein.' I said 'Why?' 'Because, Bertrand, he is my only

pupil who always looks puzzled.'" Lord Russell chuckled. "That was such a good remark, such a good remark. It was also, incidentally, very characteristic of both Moore and Wittgenstein. Wittgenstein *was* always puzzled. After Wittgenstein had been my pupil for five terms, he came to me and said, 'Tell me, sir, am I a fool or a wise man?' I said, 'Wittgenstein, why do you want to know?' — perhaps not the kindest thing to say. He said, 'If I am a fool, I shall become an aeronaut — if I am a wise man, a philosopher.' I told him to do a piece of work for me over the vacation, and when he came back I read the first sentence and said, 'Wittgenstein, you shall be a philosopher.' I had to read just a sentence to know it. Wittgenstein became one. When his 'Tractatus' came out, I was wildly excited. I think less well of it now. At that time, his theory that a proposition was a picture of the world was so engaging and original. Wittgenstein was really a Tolstoy and a Pascal rolled into one. You know how fierce Tolstoy was; he hated competitors. If another novelist was held to be better than he, Tolstoy would immediately challenge him to a duel. He did precisely this to Turgenev, and when Tolstoy became a pacifist he was just as fierce about his pacifism. And you know how Pascal became discontented with mathematics and science and became a mystic; it was the same with Wittgenstein. He was a mathematical mystic. But after 'Tractatus' he became more and more remote from me, just like the Oxford philosophers. I have stopped reading Oxford philosophy. I have gone on to other things. It has become so trivial. I don't like most Oxford philosophers. Don't like them. They have made trivial something very great. Don't think much of their apostle Ryle. He's just another clever man. In any case, you have to admit he behaved impetuously in publicly refusing a review of the book. He should have held it over for two years and then printed a short critical review with Gellner's name misspelled. To be a philosopher now, one needs only to be clever. They are all embarrassed when pressed for information, and I am still old-fashioned and like information. Once, I was dining at Oxford — Exeter College High Table — and asked the assembled Fellows what the difference between liberals and conservatives was in their local politics. Well, each of the dons produced brilliant epigrams and it was all very amusing, but after half an hour's recitation I knew no more about liberals and conservatives in the college than I had at the beginning. Oxford philosophy is like that. I have respect for Ayer; he likes information, and he has a first-class style."

Lord Russell explained that he had two models for his own style — Milton's prose and Baedeker's guidebooks. The Puritan never wrote without passion, he said, and the cicerone used only a few words in recommending sights, hotels, and restaurants. Passion was the voice of reason, economy the signature of brilliance. As a young man, Russell wrote with difficulty. Sometimes Milton and Baedeker remained buried in his prose until it had been redone ten times. But then he was consoled by Flaubert's troubles and achievements. Now, for many years past, he had learned to write in his mind, turning phrases, constructing sentences, until in his memory they grew into paragraphs and chapters. Now he seldom changed a word in his dictated manuscript except to slip in a synonym for a word repeated absent-mindedly.

"When I was an undergraduate," he said, sucking his pipe, "there were many boys cleverer than I, but I surpassed them, because, while they were *dégagé*, I had passion and fed on controversy. I still thrive on opposition. My grandmother was a woman of caustic and biting wit. When she was eighty-three, she became kind and gentle. I had never found her so reasonable. She noticed the change in herself, and, reading the handwriting on the wall, she said to me, 'Bertie, I'll soon be dead.' And she soon was."

(Thank you, Bob Davis)

After tea, Lord Russell came to the door with me. I told him about my intention of pressing on with my researches at Oxford. He wrung my hand and chuckled. "Most Oxford philosophers know nothing about science," he said. "Oxford and Cambridge are the last medieval islands — all right for first-class people. But their security is harmful to second-class people — it makes them insular and gaga. This is why English academic life is creative for some but sterile for many."

EAST-WEST TENSIONS

Pugwash — the series of conferences conceived by BR and administered (for the first 23 years) by Joseph Rotblat — continues. This newsletter appears (as an advertisement) in the January 1984 issue of The Bulletin of the Atomic Scientists.

Professor Rotblat received the 1983 Bertrand Russell Society Award, as most of you know.

Since BR was probably the first person of some eminence — outside the scientific community — to speak out against the nuclear peril, a cause to which he devoted the last 25 years of his life, it is highly appropriate that EPS members who wish to further BR's purposes support Pugwash activities. The coupon shows how to do so.

(Thank you, BOB DAVIS)

INSIDE PUGWASH NEWSLETTER
Special newsletter for Bulletin readers on the Pugwash conferences

Jan. vol. 1 no. 5

IMPORTANT CONFERENCES SCHEDULED FOR 1984

As the new year begins, we are all thankful that another year has passed without the ultimate disaster — nuclear war. Yet more and more of our most knowledgeable scientists, thinkers and statesmen are predicting that this nightmare will soon be upon us... that it is only a matter of time. That is why the plans of Pugwash for the coming year are all the more important.

Current plans for 1984 include:

- 44th Pugwash Symposium, "Conventional Warfare", Denmark, early in 1984
- Tenth Pugwash Workshop on Chemical Warfare, Geneva, first quarter of 1984
- 45th Pugwash Symposium, "Political Conditions and Obstacles for Peace and Security in Central Europe, Federal Republic of Germany, May 1984
- Tenth Pugwash Workshop on INF and START, Geneva, June 1984
- 34th Pugwash Conference, Sweden, July 1984
- 46th Pugwash Symposium, "African Security", (tentative) last quarter of 1984
- 47th Pugwash Symposium, "Latin American Security", (tentative) last quarter of 1984

FAST ACCOMPLISHMENTS REASON FOR HOPE

The Pugwash meetings remain one of the most fruitful means to achieve international agreements... and to stave off nuclear war.

This has been true from the beginning of Pugwash — from the first gathering, in response to the 1955 Einstein-Russell manifesto. That meeting, held in Pugwash, Nova Scotia, at the height of the cold war, was attended by twenty-two eminent scientists.

These included: 7 from the United States, 3 each from the Soviet Union and Japan, 2 each from the United Kingdom and Canada, and 1 each from Australia, Austria, China, France, and Poland and by 3 younger participants who served as staff.

Since that time there have been well over 100 conferences, symposia, and workshops involving well over 2,000 people. Generally, the annual conference is attended by about 125, and the smaller workshops and symposia involve 20-50.

The accomplishments of these meetings, held in various countries but officially connected to no single nation or interest group, have been truly astounding.

Discussions in Pugwash meetings have often had a direct and frequently crucial influence in the negotiation of arms control agreements such as the Nuclear Test Ban Treaty of 1963; the Nuclear Non-Proliferation Treaty of 1968; the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on their Destruction of 1972; and the Anti-Ballistic Missile (ABM) Agreement of 1972. Pugwash exchanges have also helped to lay the groundwork for the Strategic Arms Limitation Talks (SALT), the Conference on Security and Cooperation in Europe (CSCE), and the Mutual Balanced Force Reduction (MBFR) talks.

KEEPING IT ALIVE

There is no doubt of the importance of Pugwash, particularly now, when we are all well aware that no issue, no need, no other danger looms so large, or matters so much. If we fail to prevent nuclear disaster, then all our other great successes and achievements will come to nothing. If we succeed, it will be the greatest success of all.

Your help is needed in this task. To keep Pugwash movement alive, and to make possible the crucial meetings of 1984, financial support **must** come from people like you, people who understand the issues and the dangers we face. BULLETIN readers such as yourself. That is why the Pugwash scientists appeal to you to become part of the movement, today. Please join the Pugwash movement by supporting, and helping to finance the 1984 meetings. Simply fill out the form below and send it to the address on the coupon. Pugwash is small and its survival is precarious. Your single contribution will make a vital difference. Please — send it today.

Please enroll me as a Friend of Pugwash and send me summaries of its major meetings. I enclose \$100 as my 1984 contribution.

Please enroll me as an associate member of Friends of Pugwash and send me digests of its important meetings.

I enclose \$ _____

Make check payable to AEPFF, Pugwash and mail to William M. Swartz (Chairman, Finance Committee, Pugwash Conferences on Science and World Affairs), 1430 West Wrightwood Avenue, Chicago, Illinois 60614. All contributions are tax deductible.

ON NUCLEAR WAR

(11) Nuclear winter. An editorial in The New York Times (11/6/83, p. 20E):

The Winter After the Bomb

Even a limited exchange of nuclear weapons will so blot out the sun with smoke and soot, a group of scientists asserted last week, that life for the survivors will be almost impossible in the ensuing dark and cold. . . . Paramount Pictures has just released "The Testament," a movie about life after The Bomb. . . . In two weeks, ABC will broadcast "The Day After," a movie about a typical American city following a nuclear strike.

Why this deluge of restating the obvious? Doesn't everyone know by now that nuclear disaster is hazardous to human health? Surely every sensible person everywhere believes preventing it is the world's most important cause.

The hard question is how, and the settled, if crude, answer is nuclear deterrence. Deterrence works because it is based on horror. What different policy is desired by those who now agonize about the extent of the horror? There's no visible alternative to deterrence, no matter how ghastly the ways nuclear war would kill.

Yet there is one justification for the rush of profiles in apocalypse: some people's persistent conviction that some nuclear war would not kill everyone, that some nuclear war is survivable, even winnable. Cavalier statements from the Reagan Administration about fighting nuclear war are in part to blame. For instance, officials once took a noisy interest in civil defense with shovels. But such ideas hide an important issue, one raised by the scientists who are predicting nuclear winter: Perhaps relatively few nuclear explosions are needed to trigger terminal effects.

Nuclear destruction may be measured in megatons of explosive power. The Hiroshima bomb contained far less than one megaton. The United States and the Soviet Union now possess weapons totaling about 12,000 megatons. In 1975, the National Academy of Sciences examined the probable effects of

a nuclear exchange involving 10,000 megatons.

The Academy concluded that would have no more effect on climate than the eruptions of large volcanoes, which inject similar amounts of dust into the high atmosphere: "At most, a 0.5°C deviation from the average, lasting for a few years, might be expected." The consensus now emerging is that ground temperatures would drop well below freezing. Why the change?

Because until last year, no one thought about soot. It's no secret that Hiroshima and Nagasaki burned, yet scientists calculating climatic effects thought only of the dust from pulverized rocks and buildings, not of the soot and ash caused by fire. Being more absorbent, these particles block sunlight far more effectively.

The scientists who spoke last week were describing a study that should not be confused with science; it has not yet been published or properly checked. Nonetheless, their conjectures seem in line with parallel studies, including a second effort by the National Academy of Sciences.

The conjectures suggest that an exchange involving only 100 megatons could cause catastrophic changes in climate if it incinerated 100 cities. The sun would be almost totally blotted out through at least the northern hemisphere, land and water would freeze, only narrow strips along the coastlines would be habitable and those would be ravaged by violent storms.

From such studies, some threshold megatonnage may be definable above which climatic disaster is likely. Such a figure should temper the casual talk of nuclear war-fighting capability.

And while scientists argue about soot and sunlight, the public may wonder what other effects of nuclear war have not yet been taken into account. Defining degrees of destruction is not an empty exercise so long as there are those in the United States or the Soviet Union who believe there is any point in ever risking nuclear war.

(12) On "The Day After", as reported in The New York Times (11/21/83, p.A19):

Scientists Say TV Film Understates Possible Devastation of Nuclear Attack

By WILLIAM J. BROAD

The real thing could be worse, much worse. If anything, the nuclear holocaust depicted in the television drama "The Day After" is an understatement, according to recent scientific studies.

Even limited nuclear strikes against a few cities involving perhaps as few as 100 one-megaton bombs, less than one percent of the world's nuclear arsenal would set in motion global changes far more hostile to life than previously anticipated, with clouds of soot and smoke plunging the planet into a winter so bitter and a darkness so extensive that the day after might not arrive for months, scientists say.

Caught in a frigid night with no apparent end, survivors, if any, would doubtless face great hardship. And although the movie broadcast by ABC-TV last night focused on the people of Lawrence, Kan., other semirural areas might face even greater devastation. According to studies by the Federal Emergency Management Agency, an attack against this country of 5,000 megatons, about 2,000 less than the total Soviet arsenal, would cause the state of Missouri, which is downwind from hundreds of missile silos that are prime Soviet targets, to suffer far greater doses of radioactive fallout

than Lawrence. Most of the East Coast could also be expected to sustain greater devastation.

The 12.5 kiloton atomic bomb dropped by the United States on Hiroshima, Japan, in 1945 carried the explosive equivalent of 12.5 thousand tons of TNT. More than 68,000 people were killed and 76,000 were injured within three miles of the blast site, where the population density was less than that of New York City. In contrast, some military analysts have suggested that a Soviet strike against New York City today could involve 18 one-megaton warheads, the equivalent of 18 million tons of TNT. Each one-megaton blast would be 80 times more powerful than the Hiroshima explosion.

Film Sanitizes Bombs' Effects

"The Day After" ends with the statement, "The catastrophic effects you have just witnessed are, in all likelihood, less severe than the destruction that would occur."

That assertion is generally regarded as correct by a wide range of researchers and scientists in and out of Government. It is borne out not only by the film's sanitized portrayal of burns, shock, and radiation sickness — vomiting and diarrhea are omitted — but

also by new studies of what would happen to the earth itself.

Burning cities, for instance, could send up enough soot and smoke to block 95 percent of the sun's light, cooling much of the planet to sub-freezing temperatures.

"Things would be pitch black in target areas within a few days," said Dr. Carl Sagan, a Cornell astrophysicist and one organizer of a recent conference on the effects of nuclear war. "You wouldn't be able to see your hand."

Onset of Freezing Global Night

A nuclear war would stop or impair photosynthesis in plants for months, and possibly as long as a year or more. People who survived heat, blast, radiation, and fallout might freeze or starve to death.

"The concept of smoke effects did come up in the 1960's but was dismissed, probably because there were fewer warheads and thus less concern about the global effect of fires," said Dr. Michael MacCracken, an atmospheric scientist at the Lawrence Livermore Laboratory in California, one of the nation's top facilities for the design of nuclear weapons.

In addition to global night, the ABC-

TV film downplayed the consequences of fire, smoke and resulting toxins for individuals. In the film, the farmhouse above the basement fallout shelter did not catch fire. But wood dwellings near a targeted city might burst into flame, suffocating or poisoning many occupants of basement shelters. In Dresden during the firebomb raids in World War II, about 135,000 Germans died due to inhalation of hot gases, carbon monoxide and other toxins released by the flames.

Stale Air Is Major Issue

"The Day After," in its understated way, did not allude to a seemingly minor but critical issue of life in fallout shelters — stale air. "In warm weather," say the writers of Nuclear War Survival Skills, a publication of the Oak Ridge National Laboratory, "large volumes of outside air must be pumped through most fallout or blast shelters if they are crowded and occupied for a day or more. Otherwise, body heat and water vapor from occupants will raise the temperature-humidity conditions to dangerously high levels." There is also the critical issue of trying to remove the radioactive fallout and toxic gases.

The question is whether anyone

emerging from a well-built shelter would want to inhabit the world. According to the recent Conference on the Long-term, World-wide Consequences of Nuclear War, a group of 600 American and foreign scientists who met this month in Washington, D.C., living things would be threatened by ultraviolet radiation when the sun finally peeked through clouds of soot, dust and smoke. This glaring light, as depicted in "The Day After," can hinder the growth of crops and, in humans, can suppress the immune system and cause blindness. It falls on the earth when the atmospheric shield known as the ozone layer has been damaged, as would be the case after a large-scale nuclear war.

The conference suggested that the ultimate result of a large-scale cataclysm would be the extinction of a significant portion of the earth's animals and plants. In the Northern Hemisphere there might be no human survivors, while in the South all that might remain would be small bands of hunters and gatherers, the scientists say.

(13) More on nuclear winter, from The New York Times (12/26/93, p.A15):

SPECIALISTS DETAIL 'NUCLEAR WINTER'

2 Articles Discount Survival
in Southern Hemisphere if
Cities in North Are Hit

By WALTER SULLIVAN

Detailed arguments for the hypothesis that a catastrophic "nuclear winter" might result from concerted missile attacks on major cities and be followed by the annihilation of much, if not all, of the human species have been presented for the first time in a scientific journal.

Two articles on the subject written by teams of authors representing many specialties appear in the Dec. 23 issue of Science. They elaborate on arguments presented at a conference held in Washington on Oct. 31 and Nov. 1.

An article on biological effects states: "In any large-scale nuclear exchange between the superpowers, global environmental changes sufficient to cause the extinction of a major fraction of the plant and animal species on the earth are likely. In that event, the possibility of the extinction of Homo sapiens cannot be excluded."

The other article presents the basic

"nuclear winter" hypothesis, which sees much, if not all, of the world plunged into darkness by a pall of smoke suspended in the stratosphere. This would cause widespread and prolonged freezing of the earth's surface, even in midsummer.

After the nuclear winter hypothesis was described at the original conference, a Pentagon official was quoted in the journal as saying, "So what?" He said that the Government already knew nuclear war would be devastating and that the real question was how to prevent it.

Effects of Attacking Cities

The report places special emphasis on the effects of concerted nuclear attacks on cities. Smoke produced in the widespread conflagrations would be carried aloft by the intense updrafts of fire storms, carrying great volumes of smoke into the stratosphere, according to the analysis.

In contrast to dust that would be thrown up by explosions in rural areas, the article points out, smoke particles are highly efficient absorbers of sunlight. The stratosphere would therefore become far warmer than normal and the region below, shaded from sunlight, would become very cold. Global air circulation would be fundamentally altered, creating violent storms.

Contrary to earlier belief, it is argued, the smoke would rapidly spread into the Southern Hemisphere. This is based on data from the Solar Mesosphere Explorer Satellite, which monitored the spread of volcanic dust thrown up by the eruption of El Chichon

in Mexico early in 1982.

Although the volcano is at 14 degrees north latitude, within about seven weeks, 10 to 20 percent of the material it had thrown into the stratosphere had moved into the Southern Hemisphere.

It was previously believed the air circulation systems of the two hemispheres were sufficiently independent to allow only slow atmospheric exchange between hemispheres. It had been assumed that people in the Southern Hemisphere would be relatively immune from the effects of a nuclear war in the north.

Recently discovered evidence that the impact of an asteroid may have caused the extinction of the dinosaurs and many other species 65 million years ago is cited to support the view that a heavy load of smoke particles in the stratosphere could have a similar effect. The asteroid is thought to have exploded and thrown vast quantities of material into the upper atmosphere.

Loss of Sunlight

Particularly damaging, according to the analysis of biological effects, would be a nuclear attack whose smoke blocked out sunlight in spring and summer months, when trees, crops and other vegetation are vulnerable to severe cold.

Tropical vegetation has no tolerance to cold at any time of the year. Furthermore, the seeds of trees there are so short-lived that they could not regenerate forests after an extended period of darkness. "If darkness or cold temperatures, or both, were to become

widespread in the tropics," the article said, "the tropical forests could largely disappear."

"This would lead to extinction of most of the species of plants, animals and microorganisms on the earth, with long-term consequences of the greatest importance for the adaptability of human populations," it continued.

In an editorial preceding the articles, William D. Carey, publisher of the journal, comments: "It has been a very good thing for the integrity of science, and a sign of courage, that some 40 scientists of high standing have gone public with their considered estimates of the global atmospheric effects and long-term biological consequences of nuclear war."

Despite Vatican admonitions that scientists think twice before devoting their talents to weapons of mass destruction, Mr. Carey said, "Scientists are justified in doing what is necessary to offset the unmistakable progress of an unpredictable adversary." Nevertheless, he added, in the application of new knowledge, scientists must also consider "the consequences of violence."

"It says a good deal for the emergence of the scientific conscience," he continued, "that, in a difficult age of superpower hatreds and technological gusto, the present warning is timely, unvarnished and stark." Mr. Carey is executive officer of the American Association for the Advancement of Science, which publishes Science.

(14) NATO government head questions first use! Before now, many have spoken against NATO's current strategy which includes the first use of nuclear weapons in case Soviet troops invade Europe and cannot be stopped by non-nuclear means.

Last issue, for instance, we presented Robert McNamara's arguments against first use (RSN40-17). Secretary of Defense from 1961 to 1968, he certainly knows what he is talking about. But he is not currently in a position of authority.

Now at last it has happened! The Prime Minister of a NATO country has said it. He is Prime Minister Trudeau of Canada, and he deserves our thanks. Here is how The New York Times reported it (2/2/84, p. A3):

Trudeau Assailed for Remarks on NATO

By MICHAEL T. KAUFMAN
Special to The New York Times

OTTAWA, Feb. 1 — Prime Minister Pierre Elliott Trudeau has run into a storm of criticism at home for remarks he made in Europe last weekend questioning the fundamental assumption of the North Atlantic alliance's nuclear strategy.

The controversy over the Prime Minister's remarks has also led to the issuance through the United States Embassy here of an unusual State Department response saying Mr. Trudeau "has repeatedly expressed privately and publicly his full support for NATO's strategy of deterrence."

Mr. Trudeau, who is currently in Rumania as part of his initiative to limit nuclear arms, touched off the controversy Saturday. During a symposium on international security held in Davos, Switzerland, he asked publicly whether any United States President would actually order a nuclear strike on the Soviet Union if Soviet troops moved on Western Europe.

This first-strike assumption, sometimes referred to as a flexible response, has been the principle on which

strategic deterrence has been built, and while its validity has been debated by such figures as Henry A. Kissinger and Robert S. McNamara, no head of a NATO Government had raised it in a public forum.

A Question of Credibility

Most of the criticism aroused by Mr. Trudeau dealt not so much with the substance of the remarks as with the fact that he made them and that by doing so he ran the risk of eroding the alliance's solidarity and credibility.

"Sometimes the Prime Minister forgets that his country is a part of the alliance," said Sinclair Stevens, the opposition critic on military issues, who led the attack on Mr. Trudeau in Parliament. That attack essentially followed the line set by Raymond Barre the former French Prime Minister who along with Kenneth W. Dam, the United States Under Secretary of State argued with Mr. Trudeau at the Davos panel.

At that meeting, after Mr. Dam disputed Mr. Trudeau's contention that United States missile stockpiles in Eu-

rope were increasing, Mr. Trudeau said he had meant only to suggest that it was the quality of the weapons rather than their numbers that were rising, and then he added, "Incidentally, it draws us into the whole question of whether the NATO overall strategy is still the right one."

The Canadian leader, who had just finished a visit to Prague and who on Monday became the first head of government of a NATO country to set foot in East Berlin, said that the alliance's two-track policy — to deploy missiles while pressing for arms agreements with the Soviet Union — was based on the assumption that the United States nuclear arsenal could and would be committed if there was an invasion by Soviet conventional forces. Mr. Trudeau said this assumption was now being questioned.

French Leader Challenged

When Mr. Barre said that the open debating of this issue would lead to "neutrality and pacifism" in Europe and reduced credibility in the alliance, Mr. Trudeau responded: "Let me ask you about your credibility, Mr. Barre.

Do you think the President of the United States, in answer to an overrunning of Europe by conventional forces, will want to start World War III, an atomic war? You have to believe that in order not to have a credibility gap?"

Mr. Barre answered sharply, "I will never put the question because if I put the question, there is no longer credibility." Mr. Barre took the position that questioning such issues in public debate could lead Moscow to regard NATO as a less than united alliance.

This was echoed in Parliament here on Monday. One Conservative leader said it was a principle of any strategic alliance to "keep your adversary in doubt" over possible responses and not debate them in public.

The Davos exchange has led the Conservative opposition to make its first direct challenge to the Prime Minister's peace initiative, which until now has not been dealt with as a partisan issue. It also marked the first time during the three-month peace initiative that Mr. Trudeau had departed from his affirmation of the treaty organization's two-track policy.

It took courage for the head of a NATO country to say publicly what he said. He may pay a price for having done it.

RELIGION AND ITS ADVERSARIES

(15) Lapsed vivisectionist. From The New York Times (10/25/83):

Archbishop-Scientist Wrestles With It All

By PHILIP M. BOFFEY

WHEN John Staplyton Habgood started studying and teaching science at Cambridge University more than three decades ago, he had what he considers his first religious experience — the realization that the kinetic theory of gases describes quite elegantly and accurately what the properties of a gas will be.

"It was one of the beautiful things that you are constantly finding in science," recalls Dr. Habgood. "An experience of beauty, of order and of mysteries revealed."

But gradually, as he earned his doctorate in physiology at Cambridge and became a lecturer in pharmacology, Dr. Habgood came to feel that something was missing in his scientific training. Science achieved its enormous practical successes, in his view, by narrowing its focus, dealing primarily with things that can be measured or weighed, and excluding human values as much as possible. "In science, you deliberately cut out all the interesting human things," says Dr. Habgood, "so we are left with this hard, meaningless, valueless universe and we recoil in shock if we think that's all there is."

So Dr. Habgood abandoned a promising scientific career and switched to theological studies instead. He was ordained as an Anglican priest in 1954 and climbed steadily upward in the Church of England, holding posts as curate and parish priest, vice principal and principal of theological colleges, and, for the last 10 years, Bishop of Durham.

Last week, at the age of 56, he officially became Archbishop of York, the second-ranking prelate in the Church of England. He is perhaps the highest-ranking prelate anywhere with a professional background in science.

Few theologians or scientists in the modern world have a more profound understanding of the fundamentals of both science and religion or have wrestled as hard in their own lives to reconcile the conflicting dictates of these two bodies of thought.

Take the theory of biological evolution, which Dr. Habgood considers so well established that it is "the only conceivable basis for modern biology." But he also acknowledges that the theory is troublesome for theologians because it contends that chance events causing genetic changes play a major role in evolution.

"The large element of chance," he says,

"does create difficulties about interpreting it as the work of a loving creator."

Nevertheless, Dr. Habgood manages to do just that, partly by noting that evolution is not completely random — there are only certain directions it can take — and partly by noting that theology itself practically demands that a certain amount of unplanned freedom be built into the process. Otherwise, he says, it is difficult to explain all the waste and tragedy and evil in the world or why a loving creator would deliberately exterminate whole species of life in the course of evolution.

Similarly, Dr. Habgood has little difficulty reconciling relativity theory, or the indeterminacy of quantum mechanics, or artificial intelligence with his religious beliefs.

Essentially, he considers science and religion two kinds of knowledge at opposite ends of a spectrum. Science is precise, articulate knowledge gained by asking only those questions that can be answered. Religion is groping, partial, inarticulate knowledge about the mysteries of existence, gained partly through personal

insight in grappling with the enormous philosophical problems posed by the experience of being alive.

Religion often goes wrong, he says, when it tries to become quasiscientific, or to dispute science on its own ground by pitting Scripture against scientific discoveries.

But scientists often go wrong as well, he adds, when they try to apply their scientific methods to theological questions.

Dr. Habgood finds, for example, that many science graduates are theologically naive — so determined to find clarity and certainty and evidence in their religion that they fall easy prey to fundamentalist theology, where Scripture becomes their data base and everything else is deduced logically from it.

Thus fundamentalism, the Christian theology most in conflict with science today, nevertheless attracts a surprising number of scientists as adherents, says Dr. Habgood. He attributes this to their "desire for more clarity and orderliness than perhaps religion can ever give us."

Even in the absence of direct conflicts between the doctrines of science

and religion, Dr. Habgood believes science has indirectly undermined religion by helping people to solve problems with technology "rather than by kneeling down to pray about it."

Science and technology also shield most people nowadays from close contact with dying relatives or with the world of nature, he adds, thus depriving them of experiences that used to alert people to a religious dimension in life.

And modern technology, in the form of blaring radio and television sets, deprives people of the silence and solitude in which many once found spiritual depth, he believes.

Dr. Habgood warns that scientific education can be "a narrowing experience" that can "impoverish a developing personality." But these narrowing effects are often mitigated, he adds, by the fact that "most scientists do fairly back jobs in large

commercial research establishments" where the work is so boring that they "humanize" themselves with outside activities in nonscientific spheres.

Although Dr. Habgood admires the success of science and "enjoys technology for its own sake," he believes it is dangerous to give scientists a blank check to do whatever they please. Some areas of science, he thinks, need to be controlled for ethical reasons, a view bound to disturb the many scientists who believe in an unfettered quest for knowledge.

Dr. Habgood accepts in vitro fertilization to help a husband and wife achieve a successful pregnancy, but he opposes sperm donors, surrogate mothers and long-term freezing of embryos because technology, in those cases, separates the normal loving relationship between two people from the act of creating a child. He calls such techniques "humanly and Chris-

tianly undesirable."

Dr. Habgood also believes that genetic engineering poses "grave problems" for the future. He believes a good case can be made for using genetic engineering to repair defects that cause disease. But he is opposed to "a whole range of further tinkering" that might lead to "manmade human beings."

He finds it "very frightening" that genetic engineering may put "so much power into the hands of a few human beings who have mastered these techniques."

"This is where religious instincts rebel against too much human power," he adds, "because ultimately, religiously, our lives are in the hands of God."

Animal experiments are another area in which Dr. Habgood feels science may have to be restrained. Although he did many animal experiments at Cambridge and describes

himself as "the only Archbishop who has held a vivisection license," he believes there has been "unnecessary carelessness with animal life" and that "some tightening up of the law" is needed. Christianity itself "has not got a very enviable record" in animal protection, he acknowledges, largely because it concentrates on the value of human life and tends to devalue animal life.

On nuclear power, Dr. Habgood concludes that the current fission reactors are acceptable but that proposed breeder reactors are not, because their fuel can be too easily used to make bombs. He opposes the neutron bomb, a nuclear weapon that would kill people without destroying buildings and vehicles, because it would erode the psychology of deterrence that prevents all-out nuclear war. But he does not favor "unrealistic abandonment" of all nuclear weapons at this stage.

Dr. Habgood blames Christianity as well as science for environmental and conservation problems. Christianity, by teaching man's dominion over nature, encouraged exploitation of resources, he says, whereas the current view among leading ecclesiastics and conservationists is that man should exercise a caring stewardship over nature.

Dr. Habgood has written two major books embodying his perspectives, "Science and Religion" (1964) and "A Working Faith" (1980). He says his books and addresses have generally been well received by both theologians and scientists. But the British Broadcasting Corporation rejected a radio script in which he planned to praise a book that described how human values are built into the human biological system at a subconscious level. The broadcasting pundits, he acknowledges, thought the idea was too outlandishly preposterous to air.

We think BR would have agreed with Dr. Habgood's statement: "In science you cut out all the interesting human things, so we are left with this hard, meaningless, valueless universe."

Where ER and Dr. Habgood differ is in what they did next, to find the values they sought. Dr. Habgood turned to religion; BR turned, not to the supernatural, but to a system of ethics (i.e., values) based on human desires.

ER, asked whether his system satisfied him, answered: "No. But other people's satisfy me still less."

(16) Fake deathbed conversions, from a Letter to the Editor of "The Humanist" (November/December 1983, p.10):

I was most interested to read Jack Ragsdale's comments ("Letters to the Editor," January/February) about the supposed deathbed conversions to Christianity of George Bernard Shaw and Bertrand Russell. His comments were in response to my letter to the *Johannesburg Star* (republished in *Free Mind*, November/December 1982) in which I had

done my best to refute a story that Charles Darwin, in the last year of his life, had rejected his own theory of evolution and become a Christian.

I have started collecting stories of alleged deathbed recantations by famous atheists and agnostics and would welcome any help. So far, in addition to Darwin, Shaw, and Russell, I have Voltaire (*American Athe-*

ist, January 1982, p. 16), Herbert Spencer, Thomas Paine, and Robert Ingersoll (*American Atheist*, July 1982, p. 22). (Richard Smith tells us that Ayn Rand (*American Atheist*, July 1982, p. 26) was one well-known figure about whom stories of such recantation did not circulate!

Does anyone know of any comprehensive article on this phenome-

non? Or can anyone help to add to my list?

For Jack's letter: RSN37-16

(Thank you, Bob Davis)

COINCIDENCE DEPT.

- (17) VP on TV. In November we asked BRS VP Marvin Kohl if he could review Doris Portwood's book, "Common Sense Suicide: The Final Right" (published by Hemlock and Grove Press, 1983). He said he could and he did.

On January 15th, a Sunday night, we turned on television to see what David Suskind was offering (on Channel 5, NYC). The topic was suicide, and the panelists were Marvin Kohl, Doris Portwood, and Derek Humphry, Hemlock's founder. There were 2 other panelists, a smug rabbi and a dogmatic doctor, both on the wrong side of the issue (we're biased). Feelings ran high, at times. The discussion held one's attention.

Apparently it was mere coincidence that Marvin had written a review (not yet published) of Ms. Portwood's book, and later appeared on the Suskind program with her.

The Kohl review of the Portwood book appears in this issue, Item 27.

LETTERS TO EDITORS

- (18) Harry Clifford, in the Star-Ledger (Newark, NJ) 12/10/83: →

- (19) Peter Cranford, in the Chronicle-Herald (Augusta, GA): ↙

I should like to draw attention to what I believe are the most important aspects of Rev. Jesse Jackson's visit to Syria.

The negotiations were successful because they were in line with Bertrand Russell's idea of compossibility — that is, they were mutually advantageous.

Jackson had an opportunity to demonstrate his ability as a viable presidential candidate, to expand his political base, and to achieve a humanitarian goal.

Assad had an opportunity to make a face-saving move toward conciliation, to affirm Syria's genuine liking for Americans — as recently documented by the journalist Robert Kaplan — and to win international good will at little cost.

Thus the meeting was compossible — of mutual advantage to all parties — and such a situation is almost automatically successful. Compossibility is exchange, give and take. Christian love and cooperation as opposed to retaliation that breeds further retaliation. Compossibility is at the heart of the free-enterprise system and is the cause of its success through billions of daily exchanges of goods and services. Compossibility is the only alternative to saber-rattling and certain nuclear war.

I hope that you can assist in making the idea of compossibility better known.

Peter G. Cranford, Ph.D.
1500 Johns Road

Like the proverbial sword of Damocles, the very real threat of nuclear war is figuratively suspended by a single hair over the collective heads of mankind. The situation is very fragile. How long must this continue? Will the imminent deployment of hundreds of American missiles on European soil, and a hundred MX missiles somewhere in the United States constitute the ultimate deterrent and prevent "the unthinkable" from happening? Many qualified experts do not think that it will.

Must the awful threat of nuclear war continue until we are all destroyed, or until such time as the leaders of the two superpowers meet face to face and agree to put an end to the insane arms race, and do all that is possible to establish more peaceful relations?

The existing tragic impasse between the U.S. and USSR can be attributed largely to mutual fear and mutual mistrust. With 33 U.S. military bases around the world — some not far from the Soviet Union — it seems that we can feel pretty secure, but we continue the proliferation of nuclear weapons, and the Soviets do the same. The probability that a nuclear conflict could start due to an accident or computer error becomes greater the more weapons we have in our respective arsenals. There have been false alerts in the past that could have led to universal disasters, i.e., the unthinkable.

Some 1,500 American physicists, including 22 Nobel laureates, have just issued a call to halt the arms race. Will the powers that be take affirmative action to assure survival of humankind?

In 1963, the English philosopher and mathematician Bertrand Russell wrote the following concerning peaceful coexistence: "We are told by fanatics on both sides that peaceful coexistence is impossible because the other side is so wicked. This was said in the conflicts between Christians and Mohammedans, and in the contests between Catholics and Protestants. In the one case, it took seven centuries to learn the possibilities of coexistence. In the other case, it took 130 years. Nowadays, the lesson must be learned more quickly if there are to be any left to learn it."

Harry W. Clifford,
East Orange

SPEAK FOR 'SURVIVAL'

To the Editor:

In Westgate Mall Saturday, I overheard one woman say to another: "But he knows more than we do. He's got information we don't have ..."

Yes, he knows more than the rest of us. He gets his information not only from the media (as we all do), but also from close advisers, from the CIA, from the Pentagon, from ambassadors and technical people and people on special assignments and commissions.

Let's see how he used all the extra information available to him in the case of National Defense.

He told us there was a window of vulnerability. That scared us. It helped him sell his great arms build-

up to Congress and to the public; and it made Congress agree to accept enormous budget deficits to pay for the build-up. Before that, it had helped him get elected President.

And it was false! There is no window of vulnerability. Don't take my word for it. His own Scowcroft Commission said so, in April '83. (That's the Reagan-appointed commission that came out in favor of the MX missile that the president very much wants.)

The window of vulnerability is a theory that the US is vulnerable to a first strike — a surprise attack — by Russian missiles that would destroy our missiles in their silos and leave us unable to retaliate. According to this theory, the Russians might be tempted to strike first. Therefore we need our own first strike weapon, the MX, as a

counter to theirs.

But the theory is false. In the highly unlikely event that all our land-based missiles were destroyed, we could still retaliate with obliterating effectiveness. A single one of our Trident submarines can target every Russian city of over 100,000. And we have many Tridents. Not to mention our nuclear-armed bombers.

As the Scowcroft Commission put it (in stilted Pentagonese): "Different components of our strategic forces should be assessed collectively and not in isolation."

So the president, with all the extra information available to him, did not assess the situation correctly. He made a bad decision, and it triggered an escalation of the arms race.

He would no doubt defend his deci-

sion by saying he is making America stronger. But we are not the safer for it. Just the opposite. We — and the Russians — are now adding to the 50,000 nuclear weapons already in existence.

Survival — the prevention of nuclear war — is too important to depend on theories voiced by experts and their superiors, no matter how much extra information is available to them. We all have to get into it, and make our voices heard. Write your congressman and senators, saying what you think of the arms race. It can make a difference; in many situations, it already has.

BOOK REVIEWS

The Philosopher as a Young Man

THE COLLECTED PAPERS
OF BERTRAND RUSSELL

Volume One: Cambridge Essays, 1888-99.
Edited by Kenneth Blackwell and others.
Illustrated. 554 pp. Boston:
George Allen & Unwin. \$70.

By Sidney Hook

THIS is the first volume of a monumental edition of all "the shorter writings" of Bertrand Russell, regardless of whether they have been previously published. It is to be followed by two series. The first, Volumes 2 to 11, will contain papers on philosophical, logical and mathematical themes. The second, beginning with Volume 12 and running to a much larger number, will be devoted to writings that reflect the encyclopedic array of Russell's interests, which made him very much a man of his times. The first series is concerned with eternal themes, the second with transient practical affairs. There is a certain irony in the fact that before he died in 1970, Russell concluded that the eternal world, even with its radiant mathematical beauty, is trivial, while some of our own problems are of transcendent importance.

The editors of this publishing project are to be congratulated on what promises to be a magnificent achievement. When brought to completion, it will have made available all the material necessary, with the exception of Russell's voluminous correspondence, to enhance our understanding of his views.

The early writings collected in the first volume make it clear that the young Bertrand Russell was not a prodigy or a stormy petrel. They reveal immense intellectual abilities, great acuteness and a capacity for *jeu d'esprit* but nothing comparable to his later achievements. What is surprising in one whose matchless intellectual courage commanded the admiration even of those who sometimes deplored his lack of common sense is to find the extent of his inhibitions in concealing from his paternal grandmother and others of his immediate family the agonizing doubts about God and immortality he confided to the "locked diary" he kept from 1890 to 1894. His silence is all the more striking because of the unhappiness these doubts caused him before he settled into a comfortable agnosticism.

This seems to be the only occasion on which he refrained from publicly taking a principled position on any subject lest it grieve or alienate those near or dear to him. When I knew him, he seemed the most uninhibited person I had ever met, both about himself and about others. The only people about whom he was reticent were some of the Cambridge Apostles, that secret elite order of the highest intellectuality and in many cases of what one of its younger members, Lytton Strachey, once called the "Higher Sodomy."

Several things about this first volume are noteworthy. Russell's style has clarity and precision, except when he speaks of the General Will and the harmony of the whole. This was in the phase when he was still under the influence of Hegel and Hegel's late Victorian disciples. But not until much later did his writing reach that level of felicity, simplicity and distinction that led T. S. Eliot to characterize him as the greatest master of English philosophical prose since Hume. Until then, only F. H. Bradley would have been in the running, although if color and vitality are taken into account, the palm should go to William James.

Second, these Cambridge essays testify to Russell's early, continued and all-absorbing concern with social affairs and mathematics. And of these interests, the first was the earliest and the longest-lasting. His first published book was "German Social Democracy" (1896), followed the next year by "An Essay on the Foundations of Geometry." It seems to me that the

Sidney Hook is emeritus professor of philosophy at New York University and senior research fellow at Stanford University's Hoover Institution on War, Revolution and Peace. His most recent book is "Philosophy and Public Policy."

brevity of both books would have justified their inclusion in this volume. (The first one will appear in Volume 12 and the second in Volume 2.) A case can be made that there is greater continuity between Russell's social views (except for his ambiguous pacifism), from his first reflections on socialism and Marxism to his riper evaluations of their validity, than between his early and later philosophies of mathematics. In view of recent developments in West Germany, his analysis of German Social Democracy can still be read with profit.

There are two other items that may be of interest to those concerned with Russell's subsequent life and the consistency of his ideas.

The first is a brief essay he wrote at the age of 25 under the pen name of Orlando. It is entitled "Self-Appreciation" and was originally published in *The Golden Urn*, a short-lived periodical edited by Logan Pearsall Smith, Russell's brother-in-law, with the collaboration of Bernard Berenson. The significance one attaches to it depends on what relevance one believes the details of personal life have to the origin, meaning and validity of a thinker's ideas. For my own part, I regard such details as completely irrelevant to science, mathematics and technical philosophy, and even with regard to social and ethical philosophy, I am loath to acknowledge any essential connection. Only when a person puts himself forward as an educator or sage or denounces the wickedness of those who disagree with him do his personal conduct and beliefs have a qualified bearing.

Among other things, Russell confessed that the most attractive figures to him in history were Spinoza and the German socialist Ferdinand Lassalle, a rather improbable conjunction. More arresting are some of his other avowals. "I am quite indifferent to the mass of human creatures," he wrote; "though I wish, as a purely intellectual problem, to discover some way in which they might all be happy. I wouldn't sacrifice myself to them, though their unhappiness, at moments, about once in three months, gives me a feeling of discomfort. . . . I believe emotionally in Democracy, though I see no reason to do so. . . . I believe in several definite measures (e.g. Infanticide) by which society could be improved. . . . I

live most for myself. . . . I care for very few people, and have several enemies — two or three at least whose pain is delightful to me. I often wish to give pain, and when I do, I find it pleasant for the moment. . . . Psychologically, sin has a meaning to me, and I love to see sinners punished. Logically I can find no meaning for the word Sin."

Anyone reading this or Ronald Clark's "Bertrand Russell and His World" or even the reminiscences of Russell's daughter may find it difficult to accept at face value the self-appreciation expressed by Russell in the opening sentence of his "Autobiography": "Three passions, simple but overwhelmingly strong, have governed my life: the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind." Of these, judging by the record, the second was the strongest and sincerest, although it had its limits when he wrote about the United States in his later years.

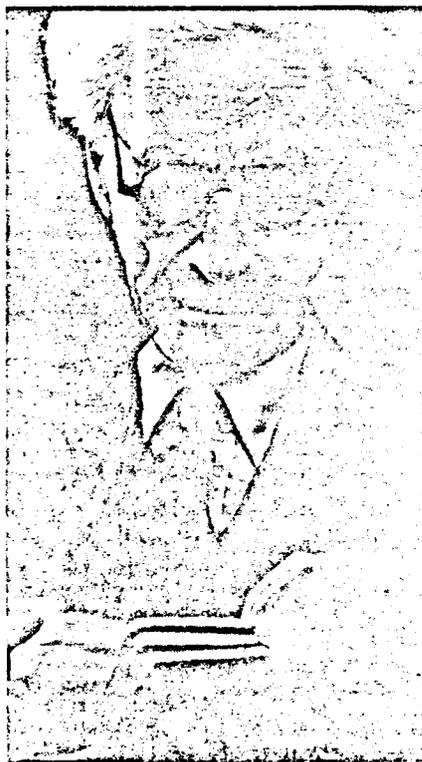

OF greater significance to the understanding of Russell's views is the conception of socialism he expressed in a lecture in 1896. Although the text is missing, its drift is apparent from its title and a brief newspaper summary. It is entitled "Socialism as the Consummation of Individual Liberty." This idea is a clue to the most important of his writings on social themes. To his everlasting credit, he showed the true face of Communism behind its rhetorical mask in "The Practice and Theory of Bolshevism" (1920), which in key respects is as topical today as the day it was published. Despite some of his latter-day detractors, Russell never subscribed to Communism, even when some of his actions contributed to the triumph of Communist regimes. Indeed, the record shows that the intensity of his opposition to Communism was so strong he sometimes forfeited a good deal of popularity. During the euphoria after Stalingrad about the Soviet Union as a democratic ally, he outraged audiences by contending that the military victory of the Red Army against the Reichswehr no more established the virtues of Communism than the victory of the czarist army over Napoleon established the virtue of serfdom.

Sometimes his opposition carried him beyond the bounds of common sense. In 1948, when the United States offered, through the Baruch-Lilienthal proposals, to surrender the monopoly of atomic weapons to an international authority instead of using it to roll back the Red Army from Central and Eastern Europe, as the Kremlin feared, Russell foolishly urged that the Soviet Union be given an ultimatum to accept these reasonable proposals or be atom-bombed. Even as late as Sept. 27, 1953, in his 82d year, after the detonation of the hydrogen bomb, Russell wrote in *The New York Times*, "Terrible as a new world war would be, I still for my part would prefer it to a universal Communist empire." He overlooked the fact that until there is multilateral disarmament, a reliable deterrent will obviate the simple choice between war or surrender.

As if to prove that the opposite of a foolish position can be just as foolish, a few years after he had urged that the Soviet Union be given this dire ultimatum, he declared in a famous interview with an American correspondent, "I am for controlled nuclear disarmament but if the Communists cannot be induced to agree to it, then I am for unilateral disarmament even if it means the horrors of Communist domination." Such statements could only increase the Kremlin's determination to reject reasonable controls for disarmament, controls that must include mutual on-site inspection.

In the long perspective, Russell will be numbered among the immortals more for his contributions to philosophical analysis than for his judgments of the political scene. There is hardly a major theme in the foundations of logic and scientific method and the traditional disciplines of philosophy (with the exception of esthetics) that he did not illumine. He has profoundly affected the thought of three generations of philosophers. He is not a philosophic hedgehog who saw one thing clearly but a fox who saw many different things but, unfortunately, only one at a time. He sought simplicity in everything but did not distrust it sufficiently. His evolution from neo-Hegelianism to neo-Kantianism to Platonic realism to logical atomism and empiricism

Bertrand Russell, at 81, in 1953.

Young Philosopher

Continued from preceding page

and the final reversion to ontology in his last major philosophic work, "Human Knowledge," testify not to inconsistency but, as this first volume of the "Collected Papers" already demonstrates, to his intellectual honesty and resolute pursuit of truth. It revealed an amazing imaginative fertility and capacity for seeing and interpreting "what there is" from different points of view. (There were inevitably some blind spots; his greatest failure was his misunderstanding of John Dewey and his caricature of American pragmatism.)

Russell relates that in 1897, while walking alone in the Tiergarten in Berlin, he was struck with a vision that left him with a resolution to write two series of books, "one abstract, growing gradually more concrete; the other concrete, growing gradually more abstract. They were to be crowned by a synthesis, combining pure theory with a practical social philosophy." Russell on his 80th birthday thought he had succeeded in all but the final synthesis. Some critics, however, doubt that he

completed either series and attribute his failure to relying too much on abstractions to solve the problems of practical reason. His conception of reason is so abstract or mathematical that when it comes to human values — the heart of policy — he jettisons them into the realm of the purely subjective, in which the arbitrament of difference can be only through force. "To proclaim the ends of life," he writes, "is not the business of science — it is the business of the mystic, the artist and the poet." But when the vision of Ezra Pound or T. S. Eliot is set against that of Whitman and Shelley, whom Russell once admired, how does one rationally decide between them? He never made that clear.

Russell jumps too soon from the conflict of values in problematic situations to the counterposing of allegedly irreconcilable ultimate values. There is a long way to go until then. He rejects the view that from the standpoint of practical reason, these values may be penultimate. Even if it turns out that in the absence of a shared interest, values may not be universal, they may still be objectively relative, justified by their consequences for the interests involved. What justifies values is their relation to present or anticipated interest, not the brute fact of their triumph. And if they are defeated by the

brute force of a hostile interest unwilling to live and let live, they do not thereby lose their justification.

As for the first volume of the "Collected Papers," a natural question for a prospective reader is what fresh light it casts on Russell's life and thought, over and above what is revealed in the 60-odd volumes of his published work — especially his "Autobiography" — and in secondary sources like Ronald Clark's biography and Paul Levy's "Moore: G. E. Moore and the Cambridge Apostles." The answer is, very little of significance, except possibly to someone contemplating another biography of Russell or intent on ferreting out details of his personal behavior of presumed importance in explaining his subsequent ideas or attitudes. For one thing, he soon abandoned the philosophic idealism of his undergraduate and early graduate years. For another, there are no great secrets disclosed in these early writings or tidbits to delight the prying analyst, not even in the locked diary. The volume marks the beginning of a notable scholarly enterprise, but I think anyone unfamiliar with Russell's subsequent intellectual development and tempestuous personal life could not reasonably have predicted them on the basis of these early writings. □

Professor Hook quotes ER as saying, "Terrible as a new world war would be, I still for my part would prefer it to a universal Communist empire." The statement appears in an article by BR in *The New York Times Magazine* (9/27/53, starts on p. 10; also in "The Basic Writings of Bertrand Russell", Egner & Denonn, eds. NY: Simon & Schuster, 1961, pp. 688-692). It is titled "What Would Help Mankind Most?" The article does not advocate war against the USSR, as the quotation, out of context, might imply; it advocates a conference of all the great powers for the purpose of avoiding "the destruction that might be expected in a new world war," and proposes rules for such a conference.

You might wish to recall A. J. Ayer's comments on BR's talk of war against the USSR. We repeat part of an earlier newsletter item (RSN17-25, Feb. '78), which is an excerpt from Ayer's book, "Part of My Life". p. 301:

He had long held the view that the only remedy for the evils of nationalism lay in the establishment of a world government and he then believed that the only practical way in which this could come about was through the hegemony of the United States. Though there was much that he disliked in its political and social climate, he still preferred it to that of Soviet Russia; but this counted with him for less than the fact that the Americans possessed the atomic bomb, while the Russians did not. He was convinced that it would be enough for the Americans to threaten the Russians with the bomb, without actually using it. This did not, however, absolve him from holding the view that in the last resort its use would be justified. In later years, when he was leading the campaign for nuclear disarmament, he forgot that he had ever taken this view and admitted that he had done so only when it was shown that he had expressed it in print. His critics naturally accused him of inconsistency, but they could have been wrong. Taking, as he did, a predominantly utilitarian view of politics, he could have argued that so long as only one power possessed this superior weapon, the evil resulting from its limited employment, though very great, would be outweighed by the probable longer-term good; when two rival powers possessed it, the harm done by their each employing it would almost certainly be greater than any good that could be expected to result. But while Russell might have accepted this argument theoretically, I doubt if he would have been ready to see it put into effect. His reason was often in conflict with his emotions, and this is most probably an instance in which his emotions would have prevailed. If it had come to an issue, I think that he would have recoiled from the infliction of so great an immediate evil, even with the prospect of its leading to a greater good. It was because I believed this at the time that I did not on this point take him wholly seriously.

Principia Russell

Bertrand Russell's America:
1945-1970
by Barry Feinberg and Ronald Karrils
South End Press, \$10.00

By Frank Gallo

THERE is no quicker method to persuade someone not to read a book than to advertise it as a collection by an eminent philosopher. These great scholars, it is well known, do not achieve their eminence by writing books either compelling or readable.

Bertrand Russell, however, is history's exception to this rule. In a life lasting nearly a century, Russell was jailed twice for civil disobedience (once at age 90), married four times, was hounded out of an appointment at the College of the City of New York, and received the Nobel Prize for Literature.

The latter was awarded for Russell's authorship of more than 70 books, ranging in complexity from the three-volume *Principia Mathematica* to *The Conquest of Happiness*. But however complex the subject matter, the prose was invariably as clear as a window pane.

Barry Feinberg and Ronald Karrils have now compiled a second volume of the British philosopher's writings on America, spanning the years from 1945 until Russell's death in 1970. The book is divided into two sections, the first containing a narrative interwoven with quotes from Russell's books, articles, speeches, letters and television appearances, and the second composed of the texts of 21 articles by Russell on America. Russell's primary concerns during these years were nuclear warfare and the Vietnam War, but the collection also records Russell's thoughts on civil rights, Joe McCarthy's reign of terror, JFK's assassination, the Rosenberg executions, and other abuses of freedom in this country.

At the close of the Second World War, Russell's opinion of America was at its apogee: "Every country has its defects, but in relation to the world, I believe those of America to be less than those of any other country." Lecture tours throughout this country were so successful that a wit remarked that one would have thought sex symbol Jane Russell was on tour. NBC launched its first TV interview series with a half-hour portrait of Russell in 1952.

The mutual admiration between Russell and America was short-lived. Alarmed by America's increasing belligerence abroad and its witch hunts within, Russell castigated both the government and the liberals who he thought were too lax in defending liberty. Arguing against the idea that freedom should be curtailed in order to preserve it, he said, "I cannot agree that the first

step in a war for liberty should be the surrender of what you say you are fighting for." And if the reactionaries punished suspected communists by sterilization, Russell sardonically remarked, liberals would be sure to insist on an adequate right of appeal.

More than any other single human being, Russell founded the anti-nuclear peace movement. Within weeks after Japan's surrender, he warned of the peril of nuclear weapons to mankind unless vigorous action was taken. Russell's efforts culminated in his involvement in the 1962 Cuban missile crisis, when his cabled pleas for sanity to both Kennedy and Khrushchev were answered by the Soviet leader. Russell had the highest praise for Khrushchev's decision to remove the missiles, a move which averted war but caused the Premier to lose face. As for Kennedy, Russell thought his threat of war simple madness and the height of American hypocrisy. "If nuclear bases are intolerable in Cuba they are intolerable everywhere," he said.

Halfway around the globe, American assertion of power, primarily in Vietnam, was meeting with somewhat less success. As early as 1963, Russell challenged both America's right to wage war in Southeast Asia and her conduct of it. By that time, however, the 90-year-old philosopher had been dismissed by "respectful" opinion in this country as a senile dupe of the communists.

The 1954 Geneva Conference held after the French defeat in Vietnam had called for elections in that country. Eisenhower, while refusing to sign these agreements, professed to accept and abide by them—commitments the United States reneged on by blocking elections and replacing France as a colonial power in Vietnam. Moreover, like Reagan's policy in Nicaragua, the government attempted to disguise its role. "One of the most important aspects of this war has been that the United States pretended for many years that no such war was taking place and that the war which was not taking place was not being conducted by Americans," Russell emphasized.

"Unlike most social thinkers, Russell advanced alternatives and then tried to show how they could be attained. In some cases he went further..."

When the war escalated under President Johnson, Russell became convinced that his anti-war writings by themselves were not enough. Declaring that America's leaders would have to stand before the dock of history as surely as the Nazis at Nuremberg, Russell organized an International War Crimes Tribunal in 1967. In response, Secretary of State Dean Rusk said disdainfully that he had no intention of "playing games with a 94-year-old Briton." When the reports about the massacre at My Lai surfaced, however, Russell's charges could not so easily be scoffed at.

Apart from Vietnam and the arms race, this collection is also valuable for Russell's insights into American character and society. We Americans like to think that we are hard-boiled realists, but Russell observed that this pose really masks a more fundamental naivete: "Americans for the most part are unable to face reality except in a mood of cynicism. They have a set of ideal rules which they imagine that a virtuous politician would obey, but the rules are such as would cause any man to be out of politics in a week. Consequently, it is recognized that no politician can be virtuous according to the nominal code. It follows, so at least the average American concludes, that a politician cannot be justly blamed whatever crimes he may commit." We have seen this pattern again and again (with the exception of Watergate), most recently in the collective ho-hum given by the public to Reagan Administration scandals in the Environmental Protection Agency and in the 1980 Presidential campaign.

Russell also noted the ridiculousness of a moral code which frowned upon sex while simultaneously seeking to constantly titillate sexual feeling through advertising. But it is through his comments on liberty that this Briton most clearly enabled the American mind to see the chasm between our ideals and practices. To those who said that the witch hunts were merely an aberrant phase, he replied that it was impossible to have such an environment for more than a decade without profound effect. When Americans said that political persecution was still the exception rather than the rule, Russell pointed out, "When Dreyfus was sent to Devil's Island the world was shocked, and it was not considered that a Frenchman was giving an adequate defense if he said, 'Oh, but you ought to mention all the French Jews who are not in Devil's Island.'"

Although he never ceased to think of the American people as humanity's best hope for the future, Russell refused to truckle before double standards. Napoleon was a barbarous weapon not made innocuous by the fact that U.S. leaders claimed they were using it to defend freedom. Franco of Spain was a dictator when the Nazis backed him, and his regime was not improved when American presidents called him a bulwark of freedom.

The last 20 years of Russell's life marked a shift in his public role. While Russell never eschewed activist politics if he thought action necessary—he was jailed for three months for his opposition to World War I—he spent most of his life trying through his writing to demonstrate a progressive vision of the future not bound by the dogmas inherent in religion, Marxism or nationalism. These books examined nearly the entire range of human activity: *On Education, The Impact of Science on Society, Prospects of Industrial Civilization, Marriage and Morals, Why I Am Not a Christian, Power, The Analysis of Matter*, etc. After his death, *Time* magazine described his collected works as the modern equivalent of the Bible.

What was particularly striking about his writings beyond their incisive analyses of the past and present was their *constructive* vision. Unlike most social thinkers, Russell advanced alternatives and then tried to show how they could be attained. In some cases he went further, as in his establishment of an alternative school with his wife Dora.

During the 1950s, he gradually changed from social thinker to social activist and critic because of what he called "mankind's peril." In that role, he wrote another activist in 1952. "Those of us who feel that we belong to minorities which are more or less impotent almost inevitably become bitter and quarrelsome and querulous. I always find it difficult in situations of that sort to remember that it is more important to be persuasive than to say the things that give pleasure to oneself... I sometimes feel that you are in danger of falling into controversial errors of which I myself am constantly guilty." It was advice which Russell was often to stray from in his later years. During the Vietnam War, his exaggerations and thunderbolts delivered with the tenor of a Biblical prophet could only have alienated many Americans whom he wished to persuade. But if he strayed from the truth at times in defending freedom during the fierce political struggles of the 1960s, that is as nothing weighed in the balance against those who either stood by and watched or those who actively engineered the deaths of hundreds of thousands in Vietnam.

When nearly 80, Bertrand Russell was awarded the Nobel Prize for Literature in 1950. It would have been perfectly natural for him to retire. Instead he spent the next 20 years doing what he could to achieve peace and freedom in America and the world—and bringing upon himself mostly vilification in the process. But in those 20 years he proved himself a far more worthy descendant of the Revolutionary War patriots than, unfortunately, any American in recent years. ■

Frank Gallo is press secretary of Americans for Democratic Action.

- (27) "Common Sense Suicide: The Final Right" by Doris Fortwood (Los Angeles: Hemlock Society; New York: Grove Press, 1933, \$8.00). Reviewed by Marvin Kohl.

The Rationality of Suicide.

Ms. Portwood has written a readable and most useful introduction to the problem of voluntary death. She provides valuable information about suicide and the law, and a rather delicious chapter on the so-called religious taboo. She correctly reminds us that the decision we make in choosing death is ours to make, that we give up our autonomy too easily when we become old and weak, and that it is time to talk and know more about the phenomenon of suicide.

Ms. Portwood presents a largely personal philosophic point of view and does so with great charm. Moreover, her advocacy of suicide as a rational method of problem-solving is well-intended, often lovingly done. The question is whether good intentions are enough. Russell, as most of us know, maintained that "Neither love without knowledge, nor knowledge without love can produce a good life." The same, I believe, is true of a satisfactory suicide policy. When it comes to vital life decisions, love must be supported by the best knowledge available. And what does this knowledge indicate? The best evidence indicates that suicide is sometimes rational, but most often not; that most acts of suicide are not the rational solution. Typical adolescent suicide and cases of the chronically depressed in which external conditions do not seem to warrant self-judgment of death are perhaps the best examples.

Let us, nevertheless, recognize the rationality of some acts of suicide. Let us say that a society that refuses to allow its members to exit when their lives are irreparably blasted by the infirmities of existence is neither a just nor a benevolent society. There is, however, another side of the coin. Having reasons is not sufficient. What is needed are good reasons, reasons or evidence which will adequately show that the act in question is the preferable means of problem solving, the best means of protecting the interests of the individual in question. By all this I mean to stress not the motive but the resulting act. I mean to stress the need to reasonably know, and not merely believe, that the act in question is the preferable solution.

A further emendation should be mentioned. It is not sufficient to say, as Portwood does, that suicide must neither be raised to the heroic stature it enjoyed under the Romans, nor be embraced with the frantic delight of the primitive Christians. A more adequate description of the problem would have added that there is a vital difference between those who threaten or attempt suicide as a cry for help and those who want to exit from life because they feel helpless or hopeless and have reasonable evidence that their life is irrevocably meaningless. More important, a life that is, in balance, unhappy is not necessarily an empty life. It still may possess opportunity for great moments of satisfaction. So that exiting from an unhappy life is one thing, exiting from an irrevocably meaningless existence another.

Of course, it is true that it is possible for a sane or non-chronically depressed person, thinking logically, to set off the intolerable aspects of his or her life against the chances for betterment and find the result weighted on the side of death. Indeed, some kind of rational calculation is often possible and always desirable. But why a simple balance sheet? Why say, as Portwood does (pp.34-35), that a slight tipping of the scales is sufficient? Is the choice of death sufficiently like buying a garment, where other things being equal, the color determines the choice? I think not. Existence is not always a good. Bare biological life is neither the primary good nor death the greatest evil. But if we follow the logic of Portwood's argument, then we seem to be committed to encouraging most or at least too many human beings to commit suicide. For if one should choose death when life merely tips to unhappiness, and if most human beings have lives which are, in balance, unhappy, then it appears to follow that most human beings should end their lives.

CONTRIBUTIONS

- (28) The BRS is grateful to the following members for their much-appreciated contributions to the BRS Treasury: CRANFORD, DAVIS, EISLER, GIBBONS, HARDING, HOOPES, REINHARDT, RUJA, CAROL SMITH, SUZARA, TOBIN...and KATHY FJERMEDAL, who hardly ever misses a month.
- (29a) Reminder that the BRS could use some of your money. Not all of it; not even most of it; just some of it: we don't mean to leave you strapped. Isn't there some you can spare? Have the satisfaction of helping to support something you think worthwhile. Mail what you can spare — any amount, big or small — to the BRS Treasury, c/o the newsletter, address on Page 1, bottom
- (29b) Further suggestion to those who can: how about following Kathy Fjermedal's fine example, and sending something every month. Can you do it? \$5 a month? \$10? \$1? Whatever you can. Just get the monthly habit. Nothing is too small to be useful.

DUES SURCHARGE

- (30) Canada and Mexico. It costs us no more to mail a letter to Canada or Mexico than within the USA. But the same is not true of newsletters. Thanks to our non-profit status, the last newsletter, for example — RSN40, November 1983 — cost less than 6¢ per copy mailed to members living in the USA; but to members in Canada and Mexico, the postage was 54¢ each. Had the issue weighed more than 3 ounces — which happens occasionally — postage would have been 71¢. The non-profit rate applies only within the USA.

We mention this so that our Canadian and Mexican members will understand why we will ask them to pay an extra \$2 per year, starting in 1985. It will just about cover costs.

BRS BUSINESS

- (31) Directors, please note: 4 kinds of reports/papers are available to you. Please let us know which ones interest you. They would be routed to you, and you, in turn, would re-mail them to the next person on the list.

Each year we start from scratch. Even though you have been receiving, say, the Membership Status Report, please request it again if you want to continue to receive it.

These are the 4 items:

- A. MEMBERSHIP STATUS REPORT. Gives the names of new members, of members who have renewed, of members who have dropped out, of members with new addresses. Also tells the number of current members, and the number of inquiries and enrollments during the past month. Issued monthly.
- B. ADVERTISING SCHEDULE. Tells which publications we advertise in, and the dates of the issues. Issued twice a year.
- C. REPORT ON PAST YEAR'S ADVERTISING AND PROPOSAL FOR THE FOLLOWING YEAR. Issued yearly.
- D. MEMBERS' QUESTIONNAIRES. Issued as they are received (more or less) from new members.

Send a postcard — with your name, and the letters (A,B,C,D) that indicate which ones you want to look at — to Reports, RD 1, Box 409, Coopersburg, PA 18036.

Thanks.

INVITATIONS

- (32) Michal Bonino, 23, B.A. (U. of Pittsburgh) would like to correspond. His interests include these topics that BR deals with: religion, morality, sexuality and marriage, ethics, literature and education. 4925 Friendship Av. (4), Pittsburgh, PA 15224

- (33) Christopher Fulkerson, 29, would like to meet other members in the Bay Area "for whatever discussions we are interested in/capable of." He is a conductor, composer, and is interested in many things. Assorted degrees, including Ph.D. (UC Berkeley.) 882 33rd Av, San Francisco, CA 94121. 668-9834.
-

MISC.

- (34) Fake. A number of members wrote saying they hoped we had recovered from our illness. We didn't deserve their sympathy; we have not been ill.

Last issue, we wrote — on the yellow sheet — "Unexpected illness has caused the delay" (in mailing some material to new members.) It is true that illness caused the delay, but it wasn't our illness, it was someone else's.

We're sorry we caused concern, and we promise: no more false alarms. To those who wrote: thank you very much.

FOR SALE

- (35) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge." Bertrand Russell". On the bottom: "Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets. Order from the newsletter, address on Page 1, bottom.

ABOUT OTHER ORGANIZATIONS

- (36) Hemlock — "a society supporting active voluntary euthanasia for the terminally ill" — features the following article in its "Hemlock Quarterly" (January 1984):

Mrs. Bouvia's sad mistakes are lessons

Every caring person has sympathy with Mrs. Elizabeth Bouvia, the 26-year-old woman in Riverside General Hospital, California, who wants to be allowed to stay in hospital while she starves herself to death.

Mrs. Bouvia was born with cerebral palsy and is virtually a quadriplegic. She suffers from arthritis and her condition is slowly deteriorating. "I no longer want to live in this condition," she says.

For three months she has fought a much-publicized battle in the courts to be allowed to stay in hospital, asking not for help in dying but the medical care which she needs anyway. Because the hospital and the courts believe this would be assisting a suicide, (assistance is a crime; suicide is not) Mrs. Bouvia has lost her fight. As this newsletter goes to press early in the new year, she sits in a hospital bed being force-fed. Her four attorneys employed by the ACLU plan ways to stop this and further appeals.

The Hemlock Society's position can

By Derek Humphry

only be intellectual because we know merely what we read of the case. Final judgements can only be made by Mrs. Bouvia or those very close to her.

It seems to us that mistakes were made from the start. She checked herself into the psychiatric wing of a hospital which would be bound to thwart her suicide. She gave interviews and sought attorneys.

In the world euthanasia movement we have seen similar cases over the years. When developed as has Mrs. Bouvia's, they have always ended unsatisfactorily. The courts, for all their willingness to do right, have an appalling record of failure when involved in death-and-dying cases. Karen Ann Quinlan, for instance, is alive eight years after that celebrated court case.

Publicity in such cases is self-defeating for the individual. He or she becomes so closely observed and criticized that even the kindest, most law-abiding helper is at risk.

Mrs. Bouvia told the Los Angeles Times (1/3/84): "I deplore the media circus it has become.....I have gotten lost in all this."

Hemlock view in similar cases is that a person terminally ill, or severely handicapped and deteriorating, has the individual right to end it all, after careful consideration of the circumstances and options.

But it is a very private action, certainly inappropriate at this stage in a hospital because both current law and medical ethics forbids assistance. Hemlock believes that if you have a loved one or close friend who is willing to help upon request, if needed, then that is your business.

The integrity of the decision, planning and absolute discretion are the only way to justified euthanasia.

- (37) New Zealand Nuclear Free Zone Committee's newsletter (Oct/Nov 83) claims that over 50% of New Zealanders live in 68 nuclear-free zones. Local bodies have declared their communities to be NWFZ, Nuclear Weapons Free Zones. It is "a symbolic act, as central government retains the power to wage war and contract into nuclear weapon alliances such as ANZUS..." Their address: PO Box 13541, Christchurch 9, New Zealand
- (38) Croatian National Congress (in exile) has sent us 8 1983 issues of "That's Yugoslavia", all of which state grievances against the Yugoslav government.
- They also sent a 42-page pamphlet, "The Croatian National Question — Yugoslavia's Achilles Heel", which reproduces an interview that Dr. Marko Vasselica gave to West Germany's "Der Spiegel" (August 1980), and for which they say Dr. Vasselica was sentenced to 11 years at hard labor.
- We have mentioned the Congress before (RSN34-34). Their address: PO Box 3088, Steinway Station, NY NY 11103.
- (39) "The Humanist" — published by The American Humanist Association — is sponsoring an essay contest. See the ad, next page.

THIRD ANNUAL NORTH AMERICAN ESSAY CONTEST

FOR YOUNG MEN AND WOMEN OF GOODWILL

If you are age twenty-nine or under and have substantial concern for humans and the future, you are invited to share your thoughts and vision

TOPICS: Humanistic revolutions are now underway in education, the environment, criminal justice, biotechnology, health care, feminism, population growth control, and nuclear disarmament, to name a few. What changes in thinking and feeling will any or all of these revolutions necessitate, and how can one foster more humanistic action and attitudes?

George Orwell used 1984 as a fictional benchmark to warn against totalitarian control of freedom of thought. Do you feel that predictions such as Orwell's are coming true? Do you find reasons for optimism? Why or why not?

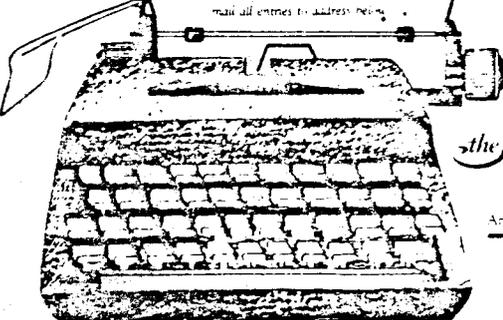

PRIZES: This year prizes will be awarded in two separate age categories—those entrants nineteen and under and those twenty through twenty-nine. Cash awards for both categories will be **FIRST PRIZE—\$500; SECOND PRIZE—\$250; MULTIPLE THIRD PRIZES—\$50.**

If with your submission you mention a teacher, librarian, Jean, or advisor (with mailing address) as instrumental to your having entered your essay, and if you are a winner, we will recognize that individual with a special award of \$50.

PROCEDURE: Please state your birth date (age of entrant and category entered will be determined by age at time of postmark of submitted entry) • Manuscripts must be typed, double-spaced, and not exceed two thousand words • Entries must be postmarked before July 15, 1984 • A panel of distinguished judges will review the entries • Winners will be notified in November 1984 • *The Humanist*, which reserves the first right of publication, will publish winning essays • Entries will not be returned.

ER HONORED

(40) The Tom Paine Award, of the Emergency Civil Liberties Committee, went to ER in 1962. This is his acceptance message, published in "The Reporter" (January 1963):

You honour me in a way I deeply appreciate. Tom Paine symbolises for Americans the articulation of a radical consciousness that human welfare and intellectual integrity depend upon courageous insistence upon freedom for men and women. Freedom can not effectively exist where it is understood to mean no more than the toleration of occasional differences about matters which are of small importance.

Disputes, for example, about the comparative merit of consumer produce or the total of farm expenditure may be cited as examples of freedom, but only by those who are dead to its life and deaf to its death. The vision of Tom Paine was that of a serious public involvement in the direction of those affairs which affected peoples' lives. He struggled for the right to partake in radical change and in the constant debate as

to how the good life might be provided for to the American people.

Values and great beliefs live on after their institutional expressions have ceased to live. So it is with the nominal civil liberties enjoyed today either by Americans or by citizens of other countries.

Thousands of years of human effort, of great suffering, of unique achievement are in daily jeopardy because the absence of the freedom striven after by Tom Paine prevents men from forestalling consummate folly.

Today, the exercise of power is so remote from the daily lives of men and women, and the control of the very springs of thought so concentrated in the hands of those sycophantic to power, that freedom is increasingly an abstraction with which we are deluded.

Delusion takes the form of public incanta-

tion over values and beliefs which are dishonoured even as they are invoked. President Kennedy speaks of human freedom as he takes actions which may condemn hundreds of millions of human beings to agonising death. Future generations are forfeited to the paranoia of those who compulsively act for garrison states.

So it is that power possessed by the few condemns us all to futile death and empties our formal rights of meaning or of visible life. Only to the extent that we are able to remove those who would perpetrate this crime against humanity can "freedom" be seriously our possession or our right.

I feel honoured in a way I do not find easy to acknowledge. I am an Englishman and so was Tom Paine by birth. I believe that human freedom and the civilised ends to which that freedom was to have been

directed, are not spoken for by the Governments of either of our two countries. I find it difficult to express the feelings I have upon receiving this award because I know how Tom Paine would feel about the country he left and the nation he helped to found.

The pity of it. The disgrace to all that is best in man's long odyssey. The intolerable affront to the dignity of us all, contained in the readiness to annihilate whole continents in pursuit of the insane dictates of power.

If there is one message, one sentiment I should wish to give to you, it is that I can not bring myself to believe that mankind is so base that none of his representatives will struggle for a more excellent way of life, no matter the chances of success. Thank you for your honour to me. We share the conviction that the struggle must go on.

BR CELEBRATED

(41) The Sierra Club ran the following ad in Scientific American (June 1974). We reproduced the ad in Newsletter #3 (September 1974), and perhaps it is time to run it again.

25 years ago, Bertrand Russell said that governments should have a third primary aim after security and justice. It is conservation—conservation of the earth's natural resources.

Welcome to the club, Bertrand Russell

Scientist, mathematician, philosopher, writer—and conservationist. We have an idea that if Bertrand Russell's long life had lasted even longer, today he could well be a member of the Sierra Club. Most certainly he would agree with our principles, which he recognized full well a quarter of a century ago.

Russell understood the limitations of natural resources. He understood this at a time when our resources seemed infinite. In those years, conservation was generally regarded as a dream, but to Russell it was a necessity.

The Sierra Club was formed in 1892 to conserve and protect the wilderness that man had been subduing for centuries. Our focus now is the wholeness of the habitat for mankind and for all living things. That is our purpose today—developing an ethic to make the world fit for living.

The Sierra Club works in a tradition of strong, decisive action to achieve such a world. We work in realistic ways. We lobby effectively for sound legislation. We take legal action to enforce it. We inform and educate. And we ask for expertise from people who understand the

principle of conserving the natural values that sustain life itself, our soils, our oceans and estuaries, our air and water. We want people who share our goal of protecting the biological and physical foundations of living.

As a reader of this publication, you are likely to be one of those people.

We would welcome you to the Club.

Sierra Club

Actually, BR was speaking out for conservation earlier than the Sierra Club ad says — as early as 1916, in "Principles of Social Reconstruction", Chapter IV (U.S. title: "Why Men Fight"), as Ken Blackwell pointed out in Newsletter #4 (November 1974).

(Thank you, John Wilhelm)

RELIGION

(42) Einstein on God, from Atheists United's Newsletter (January 1984), PO Box 65706, Los Angeles, CA 90065:

Dear Mr. Einstein:

10 June 1945

I had quite a discussion last night with a Jesuit-educated Catholic officer on various questions related to religion, during the course of which he made certain statements regarding you which I tend to doubt. To clear my mind on the subject I would appreciate it a great deal if you would comment on the following points:

He said that you were once an atheist. Then, he said, you talked with a Jesuit priest who gave you three syllogisms which you were unable to disprove; as a result of that you became a believer in a supreme intellect which governs the universe. The syllogisms were: A design demands a designer; the universe is a design; therefore there must have been a designer. On that point I questioned the universe being a design; in evolution I see an explanation of the complexity of plant and animal life; laws of repulsion, etc., can account for the motion of the planets; and a consideration of the infinity of the universe can account for any complexity not covered by evolution, by the laws of chance alone. But even if there was a "designer", that would give only a re-arranger, not a creator; and again assuming a designer, you are back where you started by being forced to admit a designer of the designer, etc., etc. Same as the account of the earth resting on an elephant's back - elephant standing on a giant turtle; turtle on turtle on turtle, etc.

Anyway, he said that was enough to convince you of the existence of a supreme governor of the universe. Point Two was: "Laws" of nature (gravitation, etc.) exist; if you have a law, you must have a law-giver; the law-giver was God. Sounds like an exercise in semantics to me. Admitting the existence of the universe, whether there was a "god" or not, something would happen; if all of the matter fell together into a ball, you would have the "law" of "attraction" or something similar. The "laws" he refers to here seem to be mere statements of fact, not laws which would imply an intelligent law-giver.

He could not remember the third syllogism; however if the story is accurate, you probably do. He also stated that evolution was today a completely disproved theory; my impression does not hold that. While Darwin's conception of "survival of the fittest" has been generally disproven (I think; I admit I know little about current theory in the field), I have the impression that evolution is today one of the basic concepts in the biological world. Am I right?

My present philosophy agrees in the main with the position of the Humanists, expressed by the American Humanist Association. I was under the impression that you were associated with the movement, which is what led me to doubt that you were convinced by the above arguments into believing in a "supreme intellect which governs the universe." I would greatly appreciate a short letter clarifying the situation. My friend, with whom I had the argument, said he would appreciate a copy of the letter sent to this address: Ensign Edward J. Glinden, USMS, 1450 46th Avenue, San Francisco, California.

Very sincerely yours,

Ens. Guy H. Raner, Jr. (C)L USNR
USS BOUGAINVILLE (CVE 109)

July 2nd, 1945

Dear Mr. Raner:

I received your letter of June 10th. I have never talked to a Jesuit priest in my life and I am astonished by the audacity to tell such lies about me.

From the viewpoint of a Jesuit priest I am, of course, and always have been an atheist. Your counter-arguments seem to me very correct and could hardly be better formulated. It is always misleading to use anthropomorphic concepts in dealing with things outside the human sphere — childish analogies. We have to admire in humility the beautiful harmony of the structure of this world — as far as we can grasp it. And that is all.

With best wishes,

yours sincerely,

Albert Einstein

Sept. 25, 1949

Dear Dr. Einstein:

This letter is written in reference to a letter you sent me dated July 2nd, 1945...

I considered your letter in the nature of a strictly personal communication and have never permitted any of it to get into any publication, although I have shown it to a few personal friends. Last summer, in a seminar on Historical Criticism and Historiography at the University of Southern California, I mentioned your letter to a fellow classmate, who remarked that such a letter is of historical value, and that I should get your permission to publish it at some future date, if the need should arise. Have you any objection to its future publication, if an occasion should ever arise making publication possible?

I feel that the forces which seek to compel a belief in superstitious religion -- for the same reasons that Franco seeks to compel such a belief -- are very strong, and that today they would like to start a "holy war" against Russia. Though I have no more respect for Communism, which appears to have become a religion rather than a tentative philosophy in Russia, I feel that any "holy crusade" by either side would have no result other than the destruction of civilization. I will enclose a fantastic little leaflet which was circulated around the University of Southern California this summer as an indication of one type of inflammatory religious propaganda extant. A few years ago, I noted that Hearst ran a series in his Sunday papers purporting to show that scientists really believe in a supernatural faith, and he included an article by you which, although it gave no evidence of such faith, yet was furnished with a headline which would indicate to the casual reader that you were as faithful as the Pope himself. In the event of any future attempt to align you with the forces of superstition, I feel that your letter will serve as good ammunition for a reply.

There is only one part of your letter which might be interpreted in a way which might weaken its effect. You say that "From the viewpoint of a Jesuit priest I am, and have always been an atheist." Some people might interpret that to mean that to a Jesuit priest, anyone not a Roman Catholic is an atheist, and that you are in fact an Orthodox Jew, or a Deist, or something else. Did you mean to leave room for such an interpretation, or are you, from the viewpoint of the dictionary, an atheist, i.e., "one who disbelieves in the existence of a God or Supreme Being"?

I conducted a poll of the 18 students in the graduate seminar on Historical Criticism, to determine their religious attitudes, in view of the fact that the textbook, Shotwell's "History of History", treats Jewish and Christian historiography as susceptible to the same errors that Egyptian, Greek, and Roman historiography are. Although a certain amount of confusion was apparent in the answers, it appeared that all had read the text, and that 2 were atheists, 3 were agnostics, 10 were Deists, and the remaining three had orthodox religious beliefs -- 2 were Roman Catholic, and the third was a Reformed Jew.

This was, however, a highly select group. Such polls taken in high schools have indicated that about 95% of the students held orthodox religious opinions, reflecting more accurately, I believe, general opinion, which indicates a long, uphill climb before the mists of superstition give way to a more humanistic outlook.

Sincerely yours,

Guy H. Raner, Jr.

September 28, 1945

Dear Mr. Raner:

I see with pleasure from your letter of the 25th that your convictions are near my own. Trusting your sound judgment I authorize you to use my letter of July 1945 in any way you see fit.

I have repeatedly said that in my opinion the idea of a personal God is a childlike one. You may call me an agnostic, but I do not share the crusading spirit of the professional atheist whose fervor is mostly due to a painful act of liberation from the fetters of

religious indoctrination received in youth. I prefer an attitude of humility corresponding to the weakness of our intellectual understanding of nature and of our own being.

Sincerely yours,

Albert Einstein

(Thank you, Bob Davis)

PUBLISHING

(43) Dodd, Mead knuckles under. From The New York Times (9/1/83, p. C17):

Publisher Rejects 'Offensive' Books

By HERBERT MITGANG

Dodd, Mead & Company, the 144-year-old New York trade-book publisher, has canceled two novels advertised in its fall 1983 catalogue and withdrawn a volume of verse that is already in print. Dodd, Mead was ordered to take these actions by its parent company, Thomas Nelson Inc. of Nashville, the world's largest Bible publisher, which considered some language in the books objectionable.

After being set in type, "Tip on a Dead Crab" by William Murray and "Skim" by Thomas Henege will not be published by Dodd, Mead, which was acquired a little more than a year ago by Thomas Nelson. In addition, about 5,000 copies of "The Devil's Book of Verse," edited by Richard Conniff, are not being shipped from Dodd, Mead's warehouse, on orders of Nelson.

Lewis W. Gillenson, president of Dodd, Mead, said that Nelson had insisted that certain "four-letter words, excessive scatology and language that took God's name in vain" had to be eliminated before the books could be published. Mr. Gillenson said that Sam Moore, president of Nelson, had asked him to "publish books that will not have offensive language in them." Executives in Nashville were not available for comment.

The language considered not acceptable by Nelson included words or word combinations that used God, Christ or Jesus as expletives. Mr. Gillenson said that an executive of Nelson told him it was all right to print "damn" but not "goddamn." The four-letter word for copulation was forbidden, but the four-letter word for defecation was permitted.

'Censorship,' Say Authors

The authors and their agents described the action as "censorship"

and refused to make any changes in their books. Mr. Gillenson declined to call Dodd, Mead's refusal to publish "censorship;" he described his orders as a desire to save Nelson from embarrassment because its executives were "deeply involved in the Christian movement." Mr. Gillenson added, "This makes them look like bigots, but they're not — they're not book burners."

Dodd, Mead has informed John Cushman, agent for Mr. Henege, and Helen Brann, agent for Mr. Murray, that the two novelists could keep their advance money. In addition, Dodd, Mead will turn over the type and graphic designs of the unpublished books to the authors.

Mr. Murray, who writes "Letters From Italy" for The New Yorker and has written nine novels, said "Tip on a Dead Crab" is about people who live by gambling on horses.

'One of My Mildest'

"This is one of my mildest books," he said. "They should have seen my novel 'Malibu,' which had some steamy sex scenes. I'm laughing now, but I'm still mad. The 20 words they wanted changed in the new book were not in themselves of great artistic importance. But it's the ethics and morality of forcing changes that's wrong — no writer should put up with it. Of course, it's censorship."

Mr. Murray continued: "When I was first told that all I had to do was change 20 words, I said, 'Let me sleep on it.' But then I thought: 20 words today, tomorrow a chapter. Who are these people to censor my book?"

Mr. Cushman said that his client, Mr. Henege — it is a pen name; his real name is Albert F. Gillotti, and he is a vice president of Banker's Trust in Europe — had been asked to remove the word "goddamn," which appears a number of times in his manuscript. Mr. Henege responded

through his agent that he would not tolerate changes in "Skim," a thriller about international banking and political corruption.

Mr. Gillotti said: "When the accountants or salesmen who head conglomerates can tell an editor of a publishing subsidiary what he cannot accept for publication because the book might interfere with the stream of revenues from another part of his business — cigarettes, say, or food additives — then I fear for the future of independent thought in the United States."

Verse From Dryden to Porter

"The Devil's Book of Verse," published Aug. 1, is a collection of poetry ranging from John Dryden to Cole Porter. Its editor, Mr. Conniff, a senior editor at Geo magazine, said there were objections to two poems. One by Ezra Pound, "Ancient Music," uses "goddamn" 10 times; the second, by an unknown author, contains four-letter words — to which Nelson did not object — but contains "goddamn."

Mr. Gillenson had asked Mr. Conniff to permit pages with the two offending poems to be removed from the book before it left the warehouse. Mr. Conniff said he refused to do so.

According to BP Report, a book-publishing newsletter, Nelson feared that its competitors in the religious-book field would call attention to Dodd, Mead's "offensive books" and damage the company's reputation with Christian booksellers.

Nelson acquired the faltering trade-book house in April 1982 for \$4.5 million. Dodd, Mead's backlist is considered to be its most valuable editorial property. A fresh effort was being made to acquire modern works of fiction, but several New York literary agents yesterday expressed doubts that they would submit novels to Dodd, Mead in the future.

(44) Birthday message in the Minority of One, June 1963:

For Bertrand Russell on
Reaching Ninety-One
(May 18, 1963)

You ought to be dead, you wrinkled knight.
Senility alone explains this jamming of
Trafalgar.

Quixote madness this lecturing to heads of
state.
Oh sad day, when English lords lose Nobel
Prize decorum.
Your day of combat's done. Put down your
lance.
Let younger hands take up this work.

(Thank you, Cphelia Hoopes)

It's they who now must choose to live or
die.
Yet, I suppose, this sage advice is wasted.
You'll go on being a grand old gander
a crazy wrinkled champion.
The very best this West can offer.

—Dan Georgakas

OBIT.

(45)

How LIFE remembers RR, who died on February 2, 1970. The following is probably from an early February 1970 issue of LIFE (which was then a weekly). Unfortunately we cannot do a good job of reproducing the superb pictures that accompanied the text; we thought it better to omit them.

AN ILLUSTRIOUS 'LIFE OF DISAGREEMENTS'

Lord Bertrand Russell, the philosopher, mathematician and intellectual gadfly of the Western world who died last week at 97, liked to refer to his career as a "life of disagreement." That locution was, like all his language, precisely correct. A lifelong quest for truth susceptible of proof drove him to question everything and everybody, produced a body of writing that won him the Nobel Prize for Literature in 1950 and made him the outstanding skeptic of his time. The child Bertrand, orphaned at 3, showed no tendencies toward skepticism until he was 4. Then, he once told an interviewer, after hearing the story of Little Red Riding Hood, he dreamed he had been eaten by a wolf and found he was not in heaven but in the wolf's stomach. The questioning never stopped thereafter. In 1961 when he was nearly 89, he led sit-down demonstrations against the H-bomb. At his death Russell was still campaigning against nuclear weapons, racial discrimination, war in general and the Vietnam war in particular.

A fierce opponent of nuclear weapons, Russell led a sit-down protest outside the Defense Ministry in London in 1961.

In 1950, 10 years after he had been judged unfit to teach at New York's City College because of his writings, which were called "lecherous, libidinous, lustful, venereous, erotomaniac, aphrodisiac, irreverent, narrow-minded, untruthful and bereft of moral fiber," Lord Russell won the Nobel Prize for Literature.

(Thank you, Ophelia Hoopes)

One of the most prolific of thinkers (65 books, hundreds of essays, countless remarks), Bertrand Russell turned his mind to every conceivable concern of man. Some examples from writings and interviews:

"Two very different things caused my interest in philosophy. On the one hand, I wanted to understand the principles of mathematics. I observed that all the proofs of mathematical propositions that were taught me were obviously fallacious. They didn't really prove what they said they did, and I wanted to know whether there is any truth in the world that is known. I thought if there is any it probably is mathematics, but it is not in mathematics as I was taught it. The other thing that made me interested in philosophy was the hope I might find some basis for religious belief. In the mathematical part of my hopes I was fairly satisfied, but in the other part, not at all."

"The skepticism that I advocate amounts only to this: (1) that when the experts are agreed, the opposite opinion cannot be held to be certain; (2) that when they are not agreed, no opinion can be regarded as certain by a nonexpert; and (3) that when they all hold that no sufficient grounds for a positive opinion exist, the ordinary man would do well to suspend his judgment."

"Boredom is a vital problem for the moralist, since at least half of the sins of mankind are caused by the fear of it."

"I think freedom is not a panacea. In the relationship between nations there ought to be less freedom than there is. To some degree this applies to modern education too. I think that some progressive schools certainly have more freedom than you ought to have. Both in education and in other matters, I think that freedom must have very definite limitations, where you come to things that are definitely harmful to other people, or things that prevent you yourself from being useful, such as lack of knowledge."

"Every man would like to be God, if it were possible; some few find it difficult to admit the impossibility."

"The greatest influence toward effecting monogamy is immobility in a region containing few inhabitants. If a man hardly ever has occasion to leave home and seldom sees any woman but his wife, it is easy for him to be faithful. . . . The next greatest assistance to monogamy is superstition: those who genuinely believe that 'sin' leads to eternal punishment might be expected to avoid it. . . . The third support of virtue is public opinion. Where, as in agricultural societies, all that a man does is known to his neighbors, he has powerful motives for avoiding whatever convention condemns. But all these causes of correct behavior are less potent than they used to be. Fewer people live in isolation; belief in hell-fire is dying out; and in large towns no one knows what his neighbor does."

"Male domination has had some very unfortunate effects. It made the most intimate of human relations, that of marriage, one of master and slave, instead of one between equal partners."

ON REAGAN

(46) Mr. Harriman sums it up, in The New York Times (1/1/84, p. E13):

If the Reagan Pattern Continues, America May Face Nuclear War

By W. Averell Harriman

For three years, I have refrained from directly criticizing the President of the United States. I have been reticent because I believe that America must stand united before the world, particularly in the face of our foremost adversary, the Soviet Union. I also believe a President should be given fair time to pursue his goals and test his policies. In this sense, politics should stop at the water's edge. But this cannot mean that all criticism should be muted indefinitely, no matter how wrong a President may be or how critical the world situation may become.

President Reagan has had his fair chance, and he can no longer expect Americans to support policies that make our relationship with the Soviet Union more dangerous than at any time in the past generation.

This is the grim result of Reagan Administration diplomacy: If present developments in nuclear arms and United States-Soviet relations are permitted to continue, we could face not the risk but the reality of nuclear war.

To be silent in this situation is not patriotic but irresponsible. In the last month, nuclear arms negotiations have collapsed. Communication of all kinds between the United States and the Soviet Union has broken down; instead, we have propaganda barrages and the spectacle of the leaders of the two mightiest nations on earth trading insults, as if they had no more serious obligations than their own personal pride and political survival.

Flush with the polls and the overwhelming victory of 6,000 Americans over 600 Cubans on Grenada, the Administration now shows every sign of drawing the wrong lesson from that experience and risking defeats of a proportion it seemingly cannot even imagine.

Day by day in the Middle East, the Administration sinks further into a quagmire, committing American lives and American honor with no clear policy, no certain plan and, indeed, no obvious concern for the day when American soldiers and Soviet soldiers come face-to-face, no longer safely separated by the buffers of distance and surrogate military forces.

Moreover, Lebanon is only the most immediate trouble spot. Around the world, possible points of conflict and escalation become more volatile than ever as each superpower, in today's deteriorating situation, may be tempted to confront rather than to compromise, to treat every test as a measure of national will. The destruction of the South Korean airliner by the Soviet Union last summer provided chilling proof of the increasing potential for miscalculation and misunderstanding. Events can too readily overwhelm common sense and human safeguards.

These trends by themselves would be cause enough for worry, but they take place against the backdrop of a nuclear arms race rapidly escaping out of control — and dangerously passing the point of no return.

Within a few years, both the United States and the Soviet Union will have in place intercontinental missiles interpreted each by the other as instruments of a massive first strike. Within a span of months, both nations will put shorter-range nuclear missiles nearer each other's territory, missiles capable of striking critical command and control centers with flight times so short that caution may be the first casualty of some future crisis.

As if this were not sufficient, thousands of nuclear-armed cruise missiles will soon be stationed on American submarines, to be followed by thousands more carried on Soviet ships, or hidden, in uncountable numbers, in the vast expanse of the Soviet Union. These cruise missiles will pose extremely difficult challenges to arms control verification and they will vastly complicate our ability ever to achieve the nuclear reductions both American and Soviet leaders say they seek.

Perhaps the most tragic trend — because it is so avoidable — is that the arms race is about to be launched into space. Anti-satellite weapons will constitute a continuing threat to early warning, reconnaissance and communications satellites — all critical to our security and vital to preventing nuclear war by accident or miscalculation.

The Administration's "Star Wars" defense scheme will mean more than the destruction of three solemn arms control treaties — the Limited Test Ban, the Outer Space Treaty and the Anti-Ballistic Missile Treaty — that have served our security so well. It will mean that both sides will accumulate thousands more offensive weapons to overcome whatever defenses they each might devise. It promises security that is beyond our capability to provide and thus plays cruelly on the fear and the hope of every citizen. It promises a technological shield when the solution is in ourselves — in serious negotiation and mutual restraint.

It is always easy for Americans to blame the Soviet Union, and no American — no matter how much he or she desires a safer world — should lose sight of the fact that the Soviet Union does indeed bear a heavy responsibility for where we are today. But blaming the Soviet Union, which has been the single-minded indulgence of this Administration since the first day it took office, is not a strategy or a policy. It will not reshape the Russian nation; it will not bring down the Iron Curtain; and, above all, it

will not reduce the nuclear threat that hangs over every American.

Anyone can assail the Soviet Union for the failure of Soviet-American relations. But we must demand more of our President, who, after all, is elected not to preside over failure but to find an acceptable solution even in the face of formidable problems. The unfortunate truth, however, is that we are now witness to more than a Presidential failure to act or an Administration's lack of policy. President Reagan and his Administration bear their own heavy measure of responsibility for the situation we face today.

No President in the nuclear age, strengthened abroad as was Mr. Reagan by the consensus at home for a strong national defense, secure politically on the right and the left for the endeavor of arms control, has had such an opportunity to reverse the nuclear arms race. Yet this opportunity has been squandered. And all Americans hoped that when he took office his past opposition to arms control would end. Yet the record of three years has betrayed these hopes.

Despite his campaign pledge to the nation that "as President, I will immediately open negotiations on a SALT III treaty," Mr. Reagan waited more than 17 months before even beginning to talk with the Soviet Union about such an agreement. Since then, the pace of negotiation has been to put it politely, tepid; the discussions have been punctuated by long recesses, and there have been no significant results. All that has been done is to rename SALT, to call it Start; the talks have now stalled indefinitely.

The negotiations on intermediate-range nuclear forces in Europe have collapsed completely. In the most promising initiative during those talks, the so-called "walk in the woods" proposal, our negotiator, a veteran hardliner in dealing with the Soviet Union, was repudiated by the Administration for trying too hard to reach a workable compromise that actually would have been greatly to our advantage.

Indeed, the behavior and the proposals of the Administration in both the strategic and European nuclear discussions have raised serious doubts in the minds of many about whether there ever was any intention to reach any reasonable agreement. Negotiations have been treated as a forum for propaganda, an occasion for invective, a mask to cover new deployments and an arena to gain advantage — rather than as a path to

human survival on this planet. This is a most shortsighted policy, for its outcome will simply be more missiles in Soviet hands — scarcely a sensible program for America's security.

The SALT II treaty, negotiated by three Presidents — two of them Republicans — was rejected by this Administration, with the President's own counselor saying, "We feel there is no legal or moral commitment to abide by SALT I and SALT II," international law to the contrary. Apart from its effect on the negotiating climate with the Soviet Union, this rejection means that almost 300 Soviet missiles and bombers that would have been destroyed under the terms of SALT II still are targeted on our cities and towns. What should have remained at worst an irresponsible election slogan was elevated to the level of a national policy, ushering in a new era of strategic instability.

Other actions amplify my deep concern about the course that the Administration has taken.

Despite the mounting threat of nuclear terrorism and the spread of nuclear weapons to more nations, the Administration has rejected the imperative of nuclear nonproliferation, and in fact has undercut important initiatives of previous Republican and Democratic Presidents. The goal of a comprehensive nuclear test ban — a prerequisite to effective nonproliferation and an objective of every other President since Dwight D. Eisenhower — has been summarily discarded. The President will not even discuss the control of space weapons with the Soviet Union.

The issue of verification — so central to arms control — has been blurred by the Administration. Serious problems with Soviet compliance have been submerged in irresponsible charges, innuendo and leaks. The objective, instead, should be to clarify questionable Soviet behavior and insist on compliance — not to exploit these concerns in order to further poison our relations, repudiate existing agreements, or, worse still, terminate arms control altogether.

Additionally, even the instruments with which our Government carries on the business of arms control have been degraded. Long-time opponents of arms restraint have been put in charge of policy making. American delegations have arrived at the Geneva negotiations empty-handed, then waited weeks to receive formal negotiating instructions. Fifteen months after taking office, the Administration could not agree on an opening position to take in strategic

arms talks. Three years after taking office, the Administration still does not have a policy on verification. This lack of professionalism presents a stark contrast with the precision and purpose of our adversaries — and, insignificant though it may appear to some, it speaks volumes about attitude and commitment. That is what disturbs me most of all.

It will not be easy to undo these three years of nuclear irresponsibility, or to free both nations from excessive pride, or to control new weapons while we set about the task of controlling all weapons. But we are obliged to try with every ounce of strength we can muster, lest our generation of Americans be the first to imperil the legacy of life it has given.

I am convinced that Soviet leaders desire serious negotiations. Such negotiations will not be easy; they will involve, as they always have, a hard-headed struggle to improve the national security of both countries. Nor need they signal our approval of other Soviet actions, such as the invasion of Afghanistan or the repression in Poland. Their object, despite the irreconcilable ideologies of our two nations, is the common goal that nuclear weapons have made a necessity: the prevention of nuclear war.

I am also convinced that constructive agreements to reduce nuclear arms, to make their use less likely, are possible — even at this late date. The Limited Nuclear Test Ban of 1963, after all, came after the Cuban missile crisis and years of tension in Berlin. Both sides, however, must want an agreement. Each side must be willing to seize on what is positive in the other's proposal rather than be paralyzed by the least favorable elements presented by each. Both sides must be willing to work for an agreement that will serve our mutual advantage. This essential change in attitude alone could be the catalyst for progress.

To put it plainly, President Reagan must be ready and willing to negotiate; he must want progress even more than he wants to berate the Soviet Union.

I am convinced that we must engage ourselves now in this fundamental choice about our future — and that is why I write as the New Year begins. We must demand a new effort to prevent war, not to prepare for it. A leadership for peace can be the finest expression of America's dream. We dare not fail. We are only human beings, subject to all the mortal perils of life, all the temptations to power; but, at the same time, in our very humanity, we must seek to pass on to our children and grandchildren not fear, but hope; not an arms race, but arms control; not the death of the earth, but a better and safer world.

W. Averell Harriman, former Ambassador to the Soviet Union and to Britain, has been an adviser to five Presidents and was chief negotiator of the 1963 Limited Test Ban Treaty.

BY BERTRAND RUSSELL

(47) From The Minority of One (December 1963), with thanks to Ophelia Hoopes:

WILL MAN SURVIVE?

An examination of recent history discloses that nations change friends and foes "like partners at a dance." Yet for the sake of a passing relationship we are ready to destroy civilization.

By Bertrand Russell

The danger with which man is faced today derives not only from the love of power which motivates those who possess it. It follows as well from the moral debauchment of the people of nation-states after two world wars, and from a total failure of imagination. At the time of the first world war, sheer greed induced great powers to pursue their own economic destruction, preparing the way for Nazism and for the collapse of Czarist Russia. This led to the advent of the Soviet Union. In that war the enemies of England and the United States were Germany and several Balkan states. Japan was a tacit ally. Russia was an enemy and an ally in the same war. Nearly forty million people were killed. In the Second World War, Germany was again an enemy. Japan became an enemy and Russia was an enemy and an ally in the same war, but in reverse order. Almost as many people died in the Second World War as in the First. Within two years of its conclusion, the Germans and Japanese were allies and the Russians were the enemy.

We change enemies like partners at a dance. The angel of one year becomes the unspeakable devil of the next. And populations march to the slaughter as enthusiastically or apathetically as before.

This depressing behavior has been accompanied by steady deterioration in our moral sensibility. When the airplane was first introduced into warfare, people were horrified and thought it incomparably wicked. Soon it became accepted. When it was used to kill civilian populations the users were thought to have gone so far as to produce a worldwide moral revulsion against them. The saturation bombings of Hamburg and Tokyo were sheer raids of terror and indiscriminately killed the civilian inhabitants. The atomic bombings were treated with fear and dismay and, again, voices were heard assuring us that this was the end of warfare. We now speak of "megacorporates", "overkill", "kill-ratios" and of exterminating entire nations in an instant. This is no gradual change or difference in degree. The world is different than it was in a more fundamental way since air bombings first evoked horror.

We believe in indiscriminate mass murder. We believe in genocide. We believe in the elimination of whole peoples. It is proudly proclaimed. The common parlance of our time bespeaks our willingness to do this. Each Atlas missile base is an American Auschwitz and all Americans know it. This also is true of each Soviet missile. There are now stockpiled in the United States three hundred thousand million tons of T.N.T. As stated by Dr. Linus Pauling (November TMO), in order to exhaust the stockpile of

both the United States and the Soviet Union, all the explosive power employed during the entire length of the Second World War would have to be used every single day for one hundred forty six years. All of this insane arsenal for global butchery is justified, by the powers concerned in moral terms. What could be more obscene than this?

The testing of nuclear weapons over the years has poisoned the atmosphere of the planet. Did those countries who committed this act against man consider their own reaction should Kenya and Tanganyika have poisoned the germ plasm of future generations in the course of a border dispute? But the United States Government speaks of international law and the Soviet Government complains of exploitation.

What moral right have we who live today to deprive future generations of life? Could you who read this article justify a decision by Marc Antony, in the course of his quarrel with Octavius, that the latter was evil and contested his power and, therefore, he would exterminate mankind? Through the ages fanatical contests for power have occurred, and deeply held ideologies have given vent to great cruelty. The Crusades, the spread of Islam, Attila, the Mongols and Genghis Khan, the Religious Wars between Catholics and Protestants—all these conflicts have caused suffering and death. Would anyone maintain that it would have been justifiable to stop life for all living at the time whether contestants or not; would anyone hold that life should have ended in 300 B.C. or 1,000 A.D.?

Is it right that all of man's history, his art, his culture, his hope of life and his capacity for love are to end because a technician makes an error or because Americans fear Russians and Russians fear Americans? It is too infantile and too psychopathic, too degrading and unworthy of civilized adult men and women. How can we say that there is nothing we can do because "the other" is wicked! The evil we see is no more than a reflection of our own behavior.

It is understanding of the enormity of our present action and our daily lives that is needed if man is to survive. Fifty thousand years of human history and the breath of life are in the balance. We devote each hour many millions to killing, to the promotion of arms. Two-thirds of mankind lives at subsistence level.

I do not single out Americans in the

above reflections. I should, however, like to bring certain facts to the attention of Americans because they concern Americans in particular. It is said that individual freedom is valued by the West.

Why then do those countries which comprise the Western arms alliance consist almost entirely of ruthless tyrannies? Why do the most corrupt and poverty-stricken regimes of Asia, the Middle East, Southern Europe and Latin America compose the "free world"? Is it because individual liberty or the welfare of human beings are honored in Thailand, South Vietnam, South Korea, the Philippines, Taiwan, Iran, Turkey, Iraq, Pakistan, Jordan, Saudi Arabia, Greece, Spain, Portugal, France, West Germany, South Africa, or the Latin American dictatorships? Is it because American industry is favored in those countries?

It is said that war by accident is not going to take place. Is it realized that each day 50,000 aircraft are detected on NORAD, which is limited to computers which must transmit information in microseconds? Is it known that radar can not distinguish natural phenomena from missiles?

It is said that the Russians will not agree to inspection or controls over disarmament. Do Americans know that the Russian disarmament proposals require early agreement in principle to general disarmament and to Russian admittance of "thousands of United Nations inspectors on Soviet soil before any reduction of armaments is started"? The Soviet proposals call for internationally recruited inspection teams to be placed in every country before any measures of disarmament are begun. "These inspectors could control on the spot: the disbanding of 60% of Russian manpower, one hundred percent of the means of delivery of missiles and all other carriers." Why, then, do we lie about each other and suppress the truth?

I should wish Americans also to understand what the Cold War and the arms race have done to the institutions of the United States. Five years ago, in 1958, the value of property owned outright by the Defense Department was 160 billion dollars. This figure did not include property leased to the Department or dependent upon buildings of the Department for its value. The Defense Department owns over thirty-two million acres within the United States.

The budget for 1962 called for seventy cents out of every one hundred to pay for past wars and present war preparations. Military financial assets are triple the combined holdings of U.S. Steel, American Telephone and Telegraph, Metropolitan Life Insurance, General Motors and Standard Oil. Three times as many people work for the Defense Department as in all the

above corporations and their subsidiary firms.

Military power and the power of large industry merge because the top personnel are interchangeable. Billions of dollars are provided by the military and are fulfilled in military and quasi-military contracts. To take one year, in 1960, 21 billion dollars were spent on military goods. Yet this vast sum was a fraction of the military budget for 1960. To take three corporations, General Dynamics, Lockheed and Boeing, each received over one billion dollars in one year for military contracts. General Electric and North American Aviation received over 900 million dollars.

Who made these awards? Public men who only shortly before doing so were top executives in the very industries receiving the contracts. When military officers have campaigned for a particular weapon produced by a given corporation they have

retired to the board of directors of that corporation.

There are now over 1,000 such retired officers over the rank of major in the top one hundred corporations. These one hundred corporations divided sixteen billion dollars in one single year. The list of officers includes 251 generals and flag-rank officers. General Dynamics has 187 retired officers, 27 generals and admirals and a former Secretary of the Army.

Major war contractors have dispersed sub-contracts as well to every part of the American economy and society. The Defense Department hires over three and one-half million people and in addition another four million people work in defense industries.

In many important cities fifty per cent of manufacturing jobs consist of missile production. In San Diego it is 83%. In Los Angeles over half of all jobs depend on

defense expenditure. *In the United States of America as a whole, between one-quarter and one-third of all economic activity hinges upon military expenditure.* It is expected to reach fifty per cent shortly.

Preparations for mass murder affect every food store and petrol station. They affect each industrial worker and each politician. They affect the entire nation. The psychological, political and economic implications are very grave. When a great nation, any nation, makes unimaginable slaughter part of the fabric of its national life, its people are harmed more deeply than they may understand. Will man survive? I should rather ask, "Has man the will to survive?" I believe that when the facts in this article become generally known, discussed and politically important in American public life, there will be more hope than this dark age can now provide.

LAST MINUTE ITEM

(49) 1984 BRS Award to Dora. Dora is, of course, Dora Black Russell, now approaching her 90th birthday (in April.)

Here are a few of the things Bob Davis mentioned in proposing this Award (a proposal that was approved unanimously): aside from having been BR's wife, and mother of their two children (John & Kate), Dora visited China with BR (in 1921) and when he became gravely ill there, nursed him back to health. She and BR jointly wrote "The Prospects for Industrial Civilization" (1923); later they jointly started the Beacon Hill School (1927). She has been a tireless worker for liberal causes for some 60 years. (70?) (80?) She initiated, sponsored, and was a major backer of the BR Memorial in Red Lion Square, London (1980). There is much, much, much more.

If Dora accepts the Award, which will be offered to her, the plaque will read:

The 1984 Bertrand Russell Society Award
to
Dora Black Russell

for sharing Bertrand Russell's concerns,
collaborating in his work, and
helping to preserve his legacy

RUSSELL SOCIETY NEWS

No. 42

May 1984

(1) Highlights: Annual meeting arrangements (2). Dora accepts (34). Leiber reviews Cambridge Essays (18). Director nominations wanted (38). Dyson's Weapons and Hope reviewed (14,16). Dyson on Rotblat (25). Library's new list of books to lend (26). BR's War Crimes Tribunal, according to Scheer (13). Barnes' case vs. vs. BR (35). Reports: Philosophers' Committee (6); Sciences and Human Rights Committees (8) Index is at the end.

ANNUAL MEETING (1984)

(2) The time, June 21-24. The BRS Annual Meeting is timed to coincide with a Conference on Russell at Trinity College, Toronto. The Conference is jointly sponsored by the Russell Editorial Project (at McMaster University), The Higher Education Group, Ontario Institute for Studies in Education, and The Institute for the History and Philosophy of Science and Technology (at University of Toronto).

The Conference is titled: "Bertrand Russell: His Early Technical Work". Last year's Conference, at McMaster University, was on Russell's non-technical ("humanistic") writings.

The Program. The Conference begins with a reception on Thursday evening, June 21st. There will be 9 or 10 talks on Friday and Saturday, starting at 10 A.M; and a panel discussion Sunday noon, the 24th. W.V.O. Quine will speak at the banquet Friday evening, at the U. of T. Faculty Club.

Some expected participants, and their topics:

Sir Alfred Ayer	Panel Discussion
I. Grattan Guinness	Russells Logical Manuscripts
Alastair Urghart	Russell's Ramified Theory of Types
Nick Griffin	The Proposed Encyclopedia of the Sciences
Bob Tully	Neutral Monism
Joan Richards	The Foundations of Geometry
Michael Bradie	Russell's Scientific Realism
Daniel O'Leary	Propositional Logic in the Principia

The BRS Meeting will be held Saturday evening at 7:30, when no Conference talks are scheduled.

Costs. The Conference fee of \$45 (Can), \$35 (U.S.) covers talks, coffee breaks, Friday night banquet, and Saturday lunch. (Other meals are available at Trinity's Buttery Cafeteria and at public restaurants on Bloor Street, within a few blocks of Trinity.) Single rooms are \$23 (Can), \$18 (U.S.) per night; a limited number of single rooms and double rooms are available at \$15 (Can), \$12 (U.S.) per night per person. Rates include linens, tax, etc. These figures may change somewhat, depending on the rate of exchange on June 21st, but are suitable as deposits.

To make a reservation, do 4 things: (1) Have a check or money order for the Conference fee — \$45 (Can), \$35 (U.S.) — made out to OISE (Russell Conference '84). (2) Have a check or money order for one night's lodging — \$23 (Can), \$18 (U.S.) or \$15 (Can), \$12 (U.S.) — payable to Trinity College. (3) Specify which nights you want the room (Thursday? Friday? Saturday? Sunday?) (4) Send it all to Professor Ian Winchester/OISE, Suite 9-196/252 Bloor St. West/Toronto, Ontario/ Canada M5S 1V6.

How to get there: Like the old recipe for rabbit stew which starts, "First catch your rabbit..." we are saying, "First get to Toronto Airport." There are 3 ways of getting to Trinity College from the Airport:

- (1) Gray Coach bus, Airport to Islington Subway, fare \$2.75. Take Islington Subway (90 cents), Bloor West Line, to St. George. Exit at Bedford Street end of station, walk one block south on Devonshire to Trinity College.
- (2) Airport Limousine, to Trinity. \$21 one way.
- (3) Taxi, to Trinity. \$22 (approx.) one way.

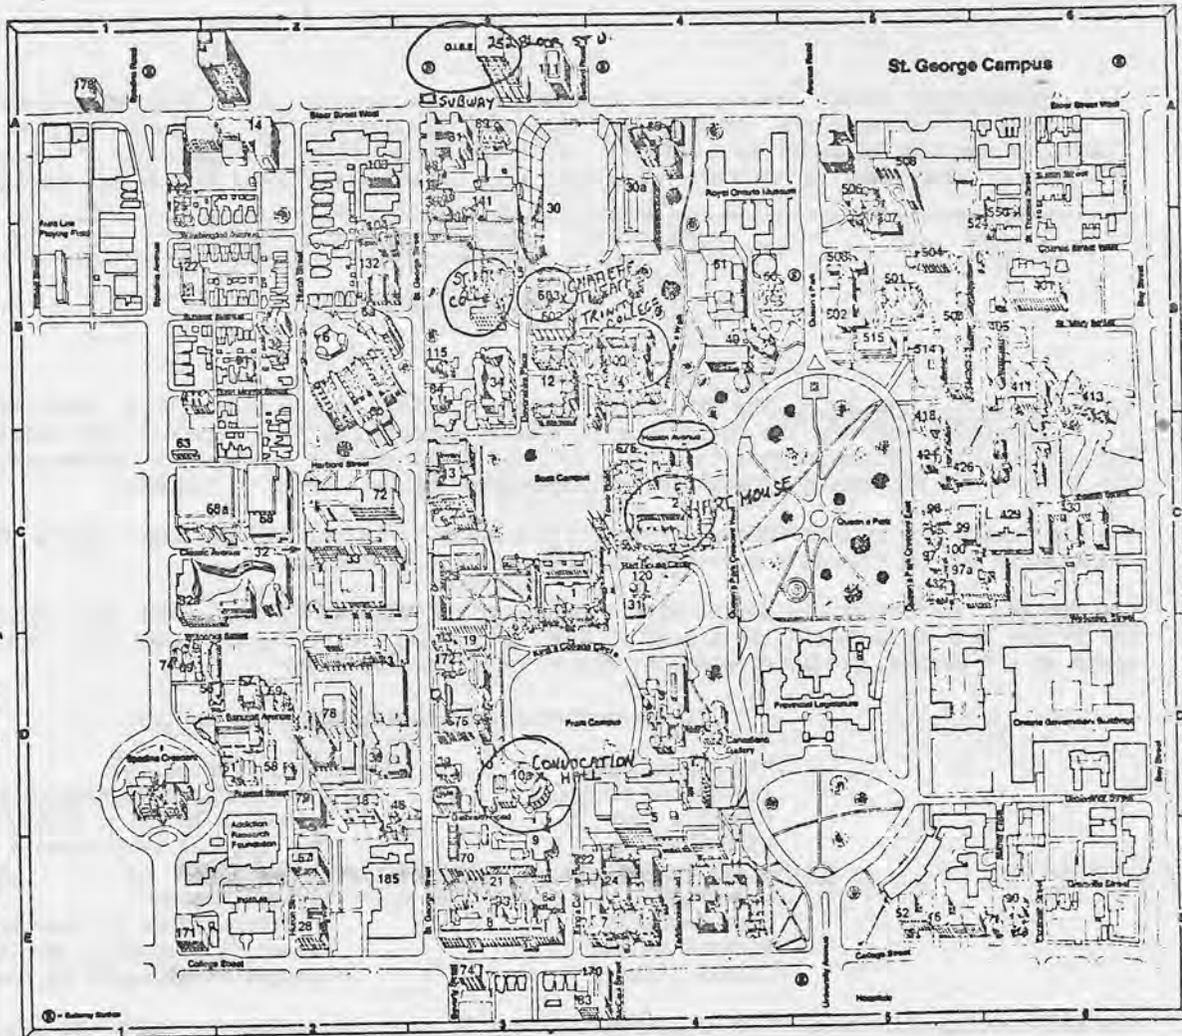

On arrival at Trinity College: Check in at the Porter's Office at the main entrance of the College facing south on Hoskin Avenue, up to 11 P.M. Trinity College consists of only 2 buildings, the older College itself, and the new Gerald Larkin Building (classrooms, offices, Buttery Cafeteria). See map on next page.

Come if you can!

- (3) Tax-deductible expenses. Some BRS members are entitled to deduct — on the federal income tax — the cost of travel, lodging and meals, to attend the Annual Meeting. These members fall into 2 groups: (a) professionals — including philosophers, educators, psychiatrists, psychologists, etc. — who benefit in the field of their professional competence through membership in the BRS; (b) essential members, whose presence is essential to the conduct of the Meeting. This includes Directors, who elect Officers at the meeting; Officers who conduct the meeting; Officers, Committee Chairmen and Committee Members who report to the Meeting. Keep receipts for your expenses, and a copy of the Meeting's program.

REPORTS FROM OFFICERS

(4) President Don Jackanic reports:

Now is the time for all of us to be making travel plans for the June Toronto Russell Conference/BRS Annual Meeting. Last year's Meeting, which coincided with last year's Russell Conference (at McMaster University), was a good one, and we expect this to be a good one too. I earnestly suggest that every member consider making the trip, especially those who don't have to travel a great distance to get there. In past years, some members have crossed a continent or an ocean to participate; that's something that most of us — who don't live that far from Toronto — ought to keep in mind.

Dora Russell's 1984 BRS Award acceptance letter appears elsewhere in this issue (34). We are pleased that the Award can be thought of as part of the celebration of her 90th Birthday. It was my unforgettable pleasure to have met her briefly in London, at the unveiling of the BR bust in Red Lion Square. Those who want to learn more about this remarkable woman should read The Dora Russell Reader: 57 Years of Writing and Journalism, 1925-1982, London: Pandora Press, 1983. It contains 15 articles and excerpts from longer works on historical, political and feminist topics. As her acceptance letter says, she continues to write. I look forward to her next book.

American Humanist Association held its 1984 Annual Conference in Washington, April 20-22. I attended 2 sessions, and enjoyed being there, particularly for the following: (1) Presentation of awards to Stephen Jay Gould, paleontologist and evolutionary theorist, and Isaac Azimov, the celebrated polymath and author whose output long ago overtook Russell's in number of books published. Both men spoke eloquently yet humorously about their work and the menace of creationism. Asimov in particular endeared himself to a totally receptive audience by telling of the lengthy fundamentalist-oriented letters he often receives, explaining how he must renounce his views or suffer bitter after-death consequences. In response, Azimov jots off a terse postcard message quoting a powerful biblical passage stressing tolerance and humility. (2) A talk by Actor Dana Andrews on "How I Became A Humanist." Andrews, now 75, gave his autobiographical review, which interested me considerably because of both the philosophical and film-history references. (3) An hour long "Evening with Albert Einstein", in which Actor David Fenwick, appropriately costumed, presented a lecture which sometimes seemed to be taking place in 1950 when it wasn't in 1984. He did a convincing job, stressing Einstein's commitment, along with Russell's, to strive for peace in the nuclear age before it is too late.

(5) Treasurer Dennis J. Darland reports:

For the year ending 12/31/83:

Balance on hand (12/31/82).....	521.35
Income: 90 new members.....	1517.50
195 renewals.....	3842.48

bank charges.....	3.91
other.....	66.61
total spent.....	2309.69
	<u>2309.69</u>
Balance on hand (3/31/84).....	3053.60

REPORTS FROM COMMITTEES

(6) Philosophers' Committee (David E. Johnson, Chairman):

The Philosophers' Committee sponsored a meeting in conjunction with the Eastern Division of the American Philosophical Association, in Boston on December 28, 1983, from 10 A.M. to noon. An average of 30 persons attended. One paper was read, and commented on, each hour of the meeting.

The first paper, "Russell on Names," was by Jane Duran of Hamilton College. She described a shift in Russell's views on names from the time of "The Philosophy of Logical Atomism" to An Inquiry Into Meaning and Truth. Russell shifted from the demonstratives "this" and "that" being names, to names picking out or referring to bundles of qualities. The difficulty of referring to something which

cannot be completely described in terms of percepts is obviated, and the problem of the continually changing designation of "this" vanishes. Sets of qualities and relations also satisfy the ontological requirements of contemporary science. The resulting epistemology involves the establishment of non-inferential propositions, i.e., first-person statements about percepts.

The commentator, Professor Fred Guy of University of Baltimore, argued that Russell could not rationally solve the problems he dealt with in epistemology, and in ethics acted on beliefs he could not show to be well-founded. Specifically, Guy argued that Russell's belief that the world does not depend on our awareness is shown to be irrational on his own methods. Much like some medieval philosophers, Russell's mind takes him so far, and then his beliefs take over. Guy proposed the following logical demonstration of his point: Naive realism leads to physics; if physics is true, naive realism is false; so if naive realism is true, it is false, and therefore false.

The second paper, by Douglas Lackey of Baruch College, CUNY, was titled, "Russell's Contribution to the Study of Nuclear War." He drew lessons both from what Russell said and from what he did not say. The gaps in Russell's treatment of the subject help us recognize the historic limitations of even the most enlightened mind. Russell's lapses here do not compare with Aristotle's defense of slavery, Hume's remarks on the imbecility of Negroes, Rousseau's condescensions about women, Hegel's rhapsodies about the purifying effects of war, or Heidegger's endorsement of the Nazi program. Russell's ideas about nuclear war occur in four phases:

I. The speech on nuclear war before the House of Lords on 28 November 1945 in which he predicted (i) that atomic weapons would soon become more destructive and cheaper to produce; (ii) that a fusion bomb would be constructed, and (iii) that the secret of the atomic bombs could not be kept.

II. 1946-48, the anti-Soviet phase with proposals for a preemptive nuclear strike against the Soviet Union.

III. 1949-1962, the even-handed denunciation of the Cold War ("in which Russell made an enduring contribution both to world peace and to the study of nuclear strategy"),

IV. The anti-American phase, from Cuban missile crisis in 1962 to Russell's death in 1970.

In Phase III, his great innovation was to compare the nuclear standoff and the Cold War with the game of Highway Chicken. His omission (in Common Sense And Nuclear War) was to overlook a decreased chance of nuclear war through development of mutual deterrence. Lackey then speculated about the applications of the points in the 1915 essay, "War and Non-Resistance" to the contemporary nuclear scene and whether unilateral disarmament would be feasible on those terms.

The commentator was Douglas McLean of The Center for Philosophy and Public Policy at the University of Maryland. He deferred on Russell's exegesis and focused on (i) the analogy of the game of chicken, and (ii) some of the policy suggestions. McLean argued that "Chicken" was not as good an analogy for the present superpower standoff as the game, "Prisoner's Dilemma". In both, rationality undermines cooperation. On policy, McLean argued that, no nation desires a genuine international authority to secure peace. Further, an authority with strong enforcement powers looks as frightening as the world in which security is based on deterrence. Finally, unilateral nuclear disarmament depends on knowing whether or not the Soviet Union would be deterred from aggression against us by consequences other than nuclear retaliation — economic, political, and otherwise. McLeans' own "wild suggestion" was to sell Cruise Missiles to the Soviets "because, being mobile, they would be invulnerable to the dangers of a counterforce first strike potential. This would restore the currently threatened stability of classical deterrence that is the goal of the policy of mutual assured destruction. We could then proceed to try to achieve meaningful negotiations. Failing that, he endorses unilateral reductions on a smaller scale.

ABOUT BR'S VIEWS

- (7) Unilateral Disarmament according to Hook. In Sidney Hook's review of Cambridge Essays, 1888-99 (RSN41-25), he quotes this statement by BR:

I am for controlled nuclear disarmament but if the Communists cannot be induced to agree to it, then I am for unilateral disarmament even if it means the horrors of Communist domination.

We wrote Professor Hook, saying we had liked his review, and learned things we had never known before, including the Russell statement, above.

We asked him for the date of issue of the New York Times in which the statement appeared. Here is his answer:

This sentence was not published in the New York Times. It was made to Joseph Alsop, the newspaper correspondent, and was the occasion of my exchanges with Bertrand Russell in the New Leader in 1958 which continued for some time...R. himself in the course of the correspondence acknowledges he made it but implies he was tricked into doing so and that I misunderstood his real intent.

You may also be interested in my article, "Bertrand Russell: Portrait from Memory," in the March issue of ENCOUNTER MAGAZINE, LONDON. Your library probably subscribes to this magazine. If not, it should.

P.S. You seem to be unaware of Ronald Clark's biography of Russell. I recommend it.

Too bad he added that P.S. It detracts from his credibility. Did he really think we were unaware of Clark's biography?

(8) Science Committee & Human Rights/International Development Committees (Alex Dely, Chairman);

A press conference will take place, as described in the opening paragraphs of the following announcement:

THE UNIVERSITY OF ARIZONA
TUCSON, ARIZONA 85721

DEPARTMENT OF POLITICAL SCIENCE
315 SOCIAL SCIENCES TEL (602) 621-7600

Dear -----

The Project on Defense and American Society, in conjunction with the local chapter of the Federation of Atomic Scientists, the American Friends Service Committee and Alex Dely, co-author of the forthcoming book, Accidental Nuclear War: The Growing Peril are planning an information session for the press and the general public to take place on Saturday morning May 26, 1984 at a place to be announced, in Tucson.

We are providing this open forum to bring to the attention of the press and public the consequences to our national security of the decreasing time for decision making that new strategic policies and the deployment of new Euro-strategic weapons represents. The session will include a description of new weapons (USSR and US), the nature of the command-and-control systems; recent errors and computer-related accidents; and review proposals by the French and by Senators Goldwater and Hart for the establishment of crisis control communication centers.

As for the Human Rights/International Development Committee: The Bolivia Project is taking shape. Paul Pfalzner is doing a medical needs assessment, Terry Hildebrand is working on the urban/regional planning aspect, and Adam Paul Banner is looking at cottage industry development (mineral based), as the Bolivian highlands are rich in many strategic minerals. I oversee the paperwork. We send out about 10 packages a month with blueprints for agricultural applications of easy-to-make solar systems (passive), photovoltaics, solar ponds and windpower. Many South American groups are requesting computer information. Since our University has thousands of such items, I photocopy batches and send them on.

BRS LIBRARY

(9) The BRS Library Campaign is lagging. Please give it your best efforts. This is what we said about it a year ago, in RSN38-21:

We think the BRS Library ought to own a copy of every book BR ever wrote, and every book written about him or his work.

That's a big order.

Perhaps you can help us work our way toward achieving it.

If you have a book by or about BR that you've read and are not likely to read again soon, if ever, please donate it to the Library. If you have several copies of the same book, perhaps in different editions, please donate one of them. This will make it available to all our members. If the book you donate is out of print -- as some books by BR are -- it will be specially welcome.

If there's a book by BR that's a particular favorite of yours, and that you'd like to see reach more people, buy it -- if you can -- and donate it to the Library.

In a future issue we expect to list the books by BR that the Library does not own, along with their a current prices, in case you wish to send money to the Library for the purchase of a particular book.

Help us fill the gaps -- there are many! -- in the BRS Library. Send books to the BRS Library, address on Page 1, bottom. Book postage: 1st lb. 63 cents; thereafter 23 cents per lb.

- (10) Thompson on Bradley, in the Dartmouth Alumni Magazine (March 1984, p. 15):

La condition humaine

NO PLACE TO HIDE, 1946/1984
by David Bradley '38.
Foreword by Jerome B. Wiesner.
University Press of New England,
1983. 217 pp., \$18.00 cloth,
\$8.95 paperback.

The most extraordinary thing about this wise, lucid, and beautifully-written book is that it has been so long out of print. First published in 1948, it met with instant attention. But then attention flagged: as T. S. Eliot warned us, "humankind cannot bear very much reality." It is now republished with an even wiser, temperately-expressed, yet anguished, epilogue.

In 1948 David Bradley was a young medical officer assigned to monitor the Radiological Safety program at the Bikini Tests, "Operation Crossroads," an extraordinary naval laboratory of radiological hazard whose findings (together with those of Hiroshima and Nagasaki) still offer us some of the most sombre data ever collected.

What is remarkable is this book is not the scientific evidence preserved in a daily "log" (even today some of the monitoring is classified as secret), but the fact that the event found, in David Bradley, a chronicler with the compassion and command of language to

match its historical significance. It is the log of a poet as much as of a medical man. Monitoring radioactivity on the rocks of Cherry, a small atoll ("even the great Pacific itself cannot wash out a roentgen of it"), Bradley had time to pause and cast a reflective eye over the whole scene:

The lagoon side of little Cherry has more to tell of the Bikini tests than incidental radioactivity. There the full story of man's coming is spread out on the beach: boxes, mattresses, life belts, tires, boots, bottles, broken-up landing craft, rusting machinery and oil drums, all the crud and corruption of civilization spread out over the sands, and smeared over with inches of tar and oil.

Bradley's observant eye had time to notice these things: time also to notice the comedy of all great military operations (the vast difference between the pomp and professions "for the record" and the haphazard exigencies of execution), as well as the tolerant comedy of human relations within a military structure in which most of the performers felt themselves to be misfits playing roles.

Yet if there were roles being played, there was nevertheless, a dreadful reality as backdrop. Hiroshima punctuated history with a question-mark. *No Place to Hide* is balanced at that mo-

ment of questioning, and looks directly into the question itself. In his 1948 prologue, Bradley wrote: "Bikini is not merely a ravaged and useless little atoll deep in the Pacific. Bikini is our world." The conclusions that he drew then, 35 years ago, do not require the revision of one syllable or comma today. He knew all about *The Fate of the Earth*, and he warned us about it then, although we did not listen. "It is not the security of a political system but the survival of the race that is at stake in the indiscriminate use of atomic energy for political coercion." And the problems, as he listed them then, are those that tower above us today: (1) There is no real defence against atomic weapons; (2) There are no satisfactory countermeasures and methods of decontamination; (3) There are no satisfactory medical safeguards for people of atomized areas; (4) The devastating influence of the Bomb and its unborn relatives may affect — through radioactivity — the land, and its wealth and people, for centuries.

To have seen this, in 1948, might seem to have left David Bradley with little more to say in his Epilogue of 1983. Yet he has found the words for the historical moment once again, and has shown that the poet still co-exists with the doctor. The simple, powerful images which display the human predicament — "a solitary spark, so far as

we know, among the numberless lights and queer electrical sounds of black space" — summon us once again to deal with our times and our responsibility to the future. Even the doctor's optimism refuses to admit defeat: "Come, Ivan, let us meet and try again. I'll bring the quahogs. You bring the vodka."

It is the very humanity of this book which recommends it to the reader. Bradley pierces the veils of ideology and of partisan national or political sentiment: he confronts us with a human, and not a local, issue. And in a new appendix, he offers a guide to the dangers of radioactivity in which his literary skills combine with his scientific expertise to create an account so lucid that every reader (even my own unscientific self) can understand what needs understanding. These virtues commend the book as the essential starting-point in any non-partisan course in "peace studies," placing the issues in a way which is, in one moment, both academically respectable and relevant to every human interest.

E. P. THOMPSON

E. P. Thompson, one of the leaders of the nuclear disarmament movement in Europe, is the author of The Making of the English Working Class. He spent the summer term of 1983 at the College as Visiting Professor of History and Montgomery Fellow.

FOR SALE

- (11) Existence of God debate between BR and F. C. Copleston, S.J., took place on the BBC in 1948. A portion of it — "The Argument from Contingency" — is available on cassette from Gould Media, Inc., 44 Parkway West, Mt. Vernon, NY 10552. \$15 plus \$5 service charge on orders under \$50. About 15 minutes of actual debate. These 2 men — one an agnostic, the other a Jesuit — respected each other greatly, as is evident from the 3 chapters on BR in Copleston's *A History Of Philosophy* (RSN34-15) and from BR's remark reported in Ronald Clark's *Life of Bertrand Russell* p.497, that "one can criticize Copleston for having become a Jesuit, but not for the detailed consequences of being one."

Gould offers cassettes on philosophy and on literature and would no doubt sent their literature to anyone interested. The BR-Copleston audio cassette will be in the BRS Library.

- (12) Members' stationery, 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "*Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets. Order from the newsletter, address on Page 1, bottom.

BR ON THE INTERNATIONAL SCENE

- (13) BR and the (Vietnam) War Crimes Tribunal, according to Robert Scheer, in "Ramparts" (May 1967). Starts on next page.

I was ambivalent about taking the train that cold February day up past the surly coastal towns and trailer camps of North Wales to Penrhyndeudraeth, where I was to interview Lord Bertrand Russell. The prospect of meeting Russell was exciting enough, but as I respect his work, I didn't relish the possibility of having to send back an interview with a man I fully thought could be mad. Perhaps mad is too harsh a word, but it is in the spirit of most journalistic accounts of Russell's activities.

The American press works continuously away at its captive audience, and I had come, despite myself, to accept the plausibility of our media's recent and massive denigration of Russell. The object of the attack was his call for an International War Crimes Tribunal on America's actions in Vietnam. The bleaker accounts had it that Lord Russell was all but stuffed and under the control of a wicked puppeteer — the American Ralph Schoenman, whose only passion was a hatred of the country which had raised him. The more responsible New York Times merely inquired editorially if "this unsavory business [is] the work of Bertrand Russell, or, in reality, that of Ralph Schoenman? Some will say it makes no difference whether the aged philosopher has become a mere stooge of a bitter propagandist; but it adds a poignant touch to this episode that the answer cannot be known."

I was intrigued by the harshness of the Times' language and the mystery it implied. Since I had come to think of Lord Russell as a kind of international ombudsman concerned with the dangerous global games played by the more recognized heads of state, I was disturbed by the charges. And then, too, why didn't one ever hear any answers to the questions posed by the Times?

It was tea time when I arrived at the old Welsh home with its magnificent view of an agriculturally useless valley, rocky but beautifully green. Chris Farley, one of Russell's aides, ushered me into the Lord's sitting room, the one with the flower-print chair. Farley functions as Russell's personal secretary and spends more time with him than does Ralph Schoenman, who is usually trotting around the world somewhere, as he was that day. Russell had not yet descended from the upstairs room where he does most of his work, and I began to scan the bookcases lining the walls, one third of which were entirely filled with his own contributions.

One of the volumes, The Practice and Theory of Bolshevism, had established Russell as a staunch anti-communist. He persisted in this view during the years that followed its publication, which allowed Life magazine on Russell's 80th birthday in 1952 to excuse his occasional transgressions. In a flattering editorial entitled, "A Great Mind is Still Annoying and Adorning Our Age," Life held: "No intellectual in the world has a better anti-communist record; he went to Russia in 1920 and called the turn in The Practice and Theory of Bolshevism so accurately that the book could be reissued unchanged and unchallengeable 20 years later."

But that was 15 years ago, and I was reflecting on the ups and downs of the Lord's relations with the Luce empire when he shuffled into the sitting room to shake hands and offer me China tea and the sandwiches which had been set out on the little table near the fireplace. He was older and weaker looking than I had expected from those fiery pictures of him that one sees. There is some initial shock in recognizing that the man is, after all, to be 95 years old this May. His body is marked by the fragility of age, his walk is more shuffle than stride, and as he goes up and down the staircase, it seems a point of pride for him to rely on the bannister and shun all assistance. It is also clear that he tires easily. But once one is over the impact of Russell's age, it seems a remarkable thing that he has held up so well. There is none of the nervous shaking or doubled-up posture that is associated with the old. The famous Russell head juts out aggressively, just as it does on the bust in the hallway, and when he speaks, his voice dominates the listener and is uncomfortably lucid.

Russell dictates most of his books, and his logic is quite clear, as I discovered as we talked. But he is terribly shy, and that quality combined with his age cause him to speak in a low, distant tone. I was told that his interviews frequently remain on this level, which may account for some of the negative press reports.

After adjusting my little Japanese tape recorder, I began by asking Russell the inevitable question: why was he no longer as hostile to communism as he was in The Practice and Theory of Bolshevism? He answered: "Well, I think that communism now is a very much better thing than it was in 1920. It was in 1920 that I condemned and in 1920 it was already the embodiment of whatshisname— Stalin. I visited the Soviet Union in 1920 and they all seemed to have a kind of personal bitterness, and, well, a punitive psychology, which is not the right one."

Russell's attitude toward the Soviet Union began to shift with the death of Stalin and the liberalization under Khrushchev. He told me: "It is the effect of Bolshevism that it entirely depends on the individual leader. You think it doesn't, but in fact it does. The Soviet government under Khrushchev was a very different thing from the Soviet government under Stalin." I interjected that the Soviet government had suppressed the Hungarian uprising and that Russell had condemned him rather severely for that. He replied, "Yes. Well, I thought it deserved condemnation." And as the old man went on, one was drawn into his world of terribly simple logic and moral consistency.

Professor Sidney Hook and others who now attack Russell had been pleased with his earlier indictment of the Russians. Those Cold War intellectuals had loved Russell on Hungary, but when he came to turn the same moral and logical guns on U.S. involvement in Cuba and Vietnam, they pronounced him a "non-person."

This was the main issue in Bernard Levin's article on Russell which appeared in the New York Times Sunday Magazine, on February 19 of this year. Levin, a hawkish English intellectual, was outraged at Russell's refusal to use a double standard in his judgments of the Cold War. The article bore none of the usual marks of obvious restraint which has been the Times' most saleable commodity.

What, then, has happened to Russell, grandson of one of Queen Victoria's most distinguished Prime Ministers ...relentless critic of communism in theory and practice, friend and associate through three-quarters

of a century of many — perhaps most — of the world's greatest statesmen, writers, thinkers?

How has it come about that a man possessed of one of the finest, most acute minds of our time — of any time — has fallen into a state of such gullibility, lack of discrimination, twisted logic and rancorous hatred of the United States that he has turned into a full-time purveyor of political garbage indistinguishable from the routine products of the Soviet machine?

Could Levin have been serious in accusing Russell of "rancorous hatred" in the sentence in which he himself uses the words "full-time purveyor of political garbage"? But Levin is serious, as are the New York Times, the London Times, Newsweek, Look, and Time, which have scorned Russell and held him in contempt.

What the critics cannot accept, psychologically or politically, is Russell's bent for defining the U.S. role in Vietnam as analogous to the German occupation of Czechoslovakia, the French colonialists in Algeria, and the Russians in Hungary.

Levin could hardly be expected to accept this analogy since he had co-signed a letter to the London Times some weeks before his New York Times article was printed, which offered "unequivocal support" for the U.S. position in Vietnam.

It is certainly his prerogative to offer himself up in that way, but it strikes me as dishonest for him to pretend that his support for the war has nothing at all to do with his criticisms of Russell. It is worth noting here as typical of a favorite ploy of Russell's critics who prefer to dwell on the "unreasonableness of Russell's style" rather than confront the issues which he has raised.

Some of the criticism has been humorously beside the point. A recent article in Look magazine developed a psychological critique of Russell, centering on his personal relations. The magazine wrote of Russell's ties with his wife: "In her youth Russell had preferred her sister. She was 52, he was 80, when at last her dream came true." Which is a significant detail, no doubt, but a spokesman for Russell's office pointed out that Lady Russell had no sister.

Russell remains unperturbed by his critics and responds only when it serves to extend his forum, as is the case with his innumerable letters to the press. He is deadly serious about the Vietnam war and keeping the peace, and regrets that he does not have as much time as he used to for indulging the more obvious apologists. I reported on Sidney Hook's most recent criticisms of Russell and he answered: "Well, I never...I can't be bothered with Sidney Hook." And when I asked why there are so many attacks on him, Russell responded, "I suppose they think I'm effective. I cannot see any other reason, but it is the only thing that encourages me."

Since Russell has been accused of being myopic about the government of North Vietnam and simplistic in his support for its position vis à vis the United States, I found the following exchange with his assistant, Chris Farley, interesting.

FARLEY: In underdeveloped countries — for example, Ho Chi Minh in North Vietnam has power in a small country, but he has devoted nearly all that state power to development programs, to education, housing, agriculture, that sort of thing. That's not a very dangerous form of state power, do you think, sir?

RUSSELL: "No, except for the Vietnamese."

Russell then went on to argue that although the North Vietnamese had been beleaguered by the West and "I support them because of that," their rigorous development programs had been overemphasized. It was the same mistake the Russians had made earlier: "You see, the Russians in 1920 and following years developed their military entirely, and the result was that when they finished they were all militarists."

Russell has been attacked by many in the peace movement for allegedly having abandoned his earlier concern with the dangers of nuclear war, great power rivalry and chauvinism to the peace. He was quite clear in refuting this assertion:

I think that nuclear war is the greatest peril facing the world. I think it is a greater peril than communist dictation or conservative dictation, and I should certainly oppose anything that would involve a difficult nuclear war...On the whole I think people make too much of the difference between nations. I think the Americans are bad. I think the Russians are bad. I think the Chinese are bad. I think everybody has some badness in them, and I think as they get more power it will get worse. I can't be too enthusiastic about any scheme that involves one power to be given greater power than another.

But, for all his generalizations, in Russell's view, the United States is currently the excessive power in the world. Russell was very shaken by the lengths to which the U.S. was willing to go during the Cuban missile crisis to express that power. He was, of course, rather centrally involved in that dispute, becoming at one point a middle man in the exchange between Kennedy and Khrushchev. The behavior then of the Americans — coming as it did after the Bay of Pigs and the increased involvement in Vietnam — convinced him that the United States had assumed primary responsibility for the continuation of the Cold War..

Russell's political categories all deal with power and the personalities who have misused it. In viewing the America of the '50s, he recalls that he disliked John Foster Dulles most of all: "He was a plain prosecutor. It was quite simple. You could have put him in the place of Robespierre, or you could have put him in the place of Bloody Mary. As long as there was someone to prosecute, he was very happy." And his counterpart in the '60s is Lyndon Johnson: "I think he is just an ordinary murderer."

When asked if the United States currently bears the major blame for the continuance of the Cold War, he replied;

"Yes I do...but that's just talk. I think the Cold War, is essential to the success of the American people on top, and they have to keep it up into a hot war if necessary. They can't live without it because nothing else will keep them in power. They are in power because they are able to fight those wicked communists, and then the wicked communists have a purpose. Otherwise America would go liberal."

While he holds the Americans responsible for the current impasse and condemns them vociferously for the Vietnam war, Russell retains his libertarian suspicions of any governmental power: "I don't really feel inclined to favor any party or nation, or anybody at present -- they all seem to be ruffians." Assuming my best college debater stance, I challenged him as to whether he would include the National Liberation Front (Viet Cong) with those he placed in the category of ruffians. H replied: "No, not including them, but they haven't been in power. The big nations, the ones that have power, all seem to engage in betraying one another."

Towards the end of our session Russell apologized. "I'm afraid I've given you a very inconclusive interview, but I can't help that because my views are inconclusive. We've come out of one crisis into another." Which, I think, adequately sums up the problem of the two Russells. There have always been two: Russell in contemplation, and Russell in combat. Events of the past ten years have forced him to be in sustained combat while the world reality has changed so rapidly that neither he, nor his peers, has had time to work out a systematic overview or grand theory. Russell has been forced to rely heavily on the political liberalism of the last century. And it is difficult to readily encompass the problems of revolution, underdevelopment and nuclear violence within that frame-work. The one principle that does clearly apply is that of self-determination, and Russell clings to it with ferocity. He supports the NLF against the Americans because the NLF is fighting for self-determination in Vietnam, whereas the Americans are neo-colonials.

Strangely enough Russell has turned out to possess a great deal of intellectual humility. This, perhaps, is one of the reasons he surrounds himself with youthful aides in the twilight of his life. Contrary to reports in the press, Russell was not "captured" by these young men. It is quite clear he chose them, and primarily for their intellectual as well as physical vitality. They include David Horowitz, author of Free World Colossus and Shakespeare: An Existential View. He is energetic and humorous and has a great deal of difficulty keeping his creative and prolific outpouring within any specific intellectual or political boundaries. They also include Chris Farley, a solid, hardworking Englishman who was assistant editor of the respectable English publication Peace News before joining Russell's staff.

Though Russell's aides are certainly more inclined toward Marxism than their chief, and more radical left than liberal, they are not as entirely predictable as American press reports would have it. (Even the Olympian London Economist allows that Russell's young men "do not fit the conspiracy theory of history.")

The aides commute between the house in Wales and the London office of the Bertrand Russell Peace Foundation. The entire organization is terribly amateurish and amazingly poorly financed for what is supposed to be a worldwide operation. For all the talk of puppeteers, the fact is that very often Russell does not have any assistants on hand at all. Often they are needed in the London office because the staff there is so thin.

The Bertrand Russell Peace Foundation is run out of two dilapidated rooms on Shavers Place, and one could boost the efficiency of the operation a good deal by donating a decent Xerox machine. It is sad to think that people throughout the world expect this one-woman office to save the peace, and ironical that it has actually done a better job of it than the more highly endowed peace operations throughout the world.

In addition, the Peace Foundation has become a sort of world ACLU, but one which relies on tough letters from Russell to various heads of state in place of legal briefs. A casual visitor to the Foundation office gets the impression that every time an Iranian peasant, a Russian poet or a Chicago negro is harassed that a call is placed to the Peace Foundation.

Any discussion of the Peace Foundation would be incomplete without the political attitudes of Ralph Schoenman, who is the most influential of Russell's aides-de-camp, and has figured so prominently in the American press's criticism of Russell.

Schoenman's politics began with his undergradulate years at Princeton, where he was beaten up by his fellow classmates for attempting to integrate the eating clubs. He had been drawn to Princeton because H. H. Wilson, who taught there, had developed a reputation for independent radicalism. Schoenman recalls that Wilson later told him, "You have an innate capacity for erecting brick walls and using your head as a battering ram." This remains as good a capsule description of Schoenman's politics and personality as one can provide.

The young Schoenman read Russell voraciously and, as he records in an autobiographical sketch, "was determined to acquire the Russell touch -- to become deft and light and devastating." But whereas Russell's iconoclasm was developed within the bosom of the English Establishment, his writings were used by an alienated Schoenman "to do battle with America's cruelty, crassness and impenetrable, superior manner of the chosen Princetonian." It is a phrase which captures his shrillness. Both men are intensely active and involved -- but Russell's activity seems part of a natural flow, whereas Schoenman's has a forced intensity which breaks all rhythm.

Schoenman has met many heads of state, and is even rumored to have run a country or two for brief periods, yet he seems a perpetual intruder. It is Russell's letters of recommendation, Russell's intercession and Russell's correspondence which pave Schoenman's way. Without the majesty of Russell, Schoenman would have the appearance of a hustler. But the appearance would not be accurate.

Schoenman may be thoroughly obnoxious and insolent, as most people who meet him seem to conclude, but he is committed. Russell is one of the few people who can actually stand him, and it is a source of wonder in the British peace movement that Russell is able to spend so many hours in his presence. Perhaps Russell recognizes that much of Schoenman's insolence is warranted. Most people "sell out" their convictions short of

risking all. Schoenman seems to risk all several times a month, every month of the year.

He pops up continuously in the most obscure countries with barely legal papers (the United States government has called for his passport several times), an easy target as he plunges determinedly into the hottest sectors of local political life. He slips in and out of countries where he could easily be detained, and has probably demonstrated more courage in the James Bond sense than the most covert operator in the CIA. He is well informed about the specifics of the political scene in various countries, and in particular about the United States' role there. Knowing too much of this sort of thing can make one terribly hard-bitten, and Schoenman is that. But he hangs tough, and perhaps that's what Russell was looking for in April of 1960 when Schoenman first approached him for a job. The British peace movement was mushy at that point, and Russell was working towards firmer ground from which to resist the compromisers.

Schoenman came to play an important role because he pushes himself hard (literally 18 to 20 hours a day), is a totally committed radical, bears enormous respect for Russell's work, is bright and easily informed, and in general has the sort of activist's energy which a 95-year-old man must find complementary.

Russell and his chief aide hardly share a common philosophical base, but they do share a sense of immediacy about the world crisis, alarm about the enormous power of the United States and a disgust at the uses to which it is being put throughout the world — particularly in Vietnam. Schoenman and the other Russell aides hold a variant of Lenin's theory of Imperialism — the United States is the most advanced capitalist nation and controls and exploits the world, Vietnam being a striking example of this.

Russell's own view is closer to Lord Acton than to Lenin. He holds that every national power is a danger to world peace and that the United States and the Soviet Union have switched roles in the Cold War. In the first years following the second world war, Stalin's Russia was the most aggressive nation and therefore rightly had to be contained, even as Russell once suggested, with the threat of nuclear weapons. But with destalinization, the Russians ceased to be so threatening and the ensuing years brought McCarthyism, Dulles, the Bay of Pigs, and finally Vietnam, with Johnson replacing Stalin as the major threat to world peace.

There are real differences, however, in the basis of their positions and certainly in matters of rhetoric. Those close to the operation claim that Russell gets to see or hear every statement issued in his name. But the pace is at times frantic, and one can imagine hurried calls from the London office to Wales that do not receive the consideration they deserve. The most glaring example of this was Russell's message to the Tri-Continental Conference in Cuba which took a pro-Chinese line in the Sino-Soviet dispute. Russell agrees with Schoenman's position that the Russians are eager to compromise with the West, but he is not as disapproving of this as his aide, for his own fear of accidental nuclear war is more conducive to compromises of this sort.

However, Russell did personally chew out the Russian ambassador for his country's failure to "adequately support" the Vietnamese. His position on the question is not consistent. The problem is that the enormous power of the United States can be used to blackmail the rest of the world into accepting the political status quo, involving a moratorium on revolution in exchange for one on nuclear war. But for most of the underdeveloped countries, the political status quo assures an economy of desperate poverty and hopelessness. Russell refuses to barter the right of revolution for "peace", but he remains enormously concerned with the threat of nuclear destruction.

The documents issued over Russell's signature are consistent as to content, but there are clearly two styles. The statements drafted and worked over by Russell have elegance, logic and restraint while Schoenman's are terribly crude. It would be better if Lord Russell issued fewer statements.

Schoenman has done Russell a serious disservice in his handling of the mass media. He is petty, overprotective and embittered, qualities least fortunate in a PR man. And his judgment is bad. For all his protection, some of the worst reporters slip through while more objective ones are kept at arm's length. There was even a very fat man from Chicago who arrived at the Russell home unannounced and managed somehow to fall, literally, on Lord Russell who was walking in the garden. Because of Russell's age it was a serious incident, but the fat man from Chicago slipped away unquestioned.

There can be no doubt that in their relationship, Schoenman has had an impact on Russell's thinking and that Russell has, during this period, moved toward a more radical and more anti-American stance. But it is terribly parochial for Americans to assume that this is because Russell has been manipulated rather than because of what has happened to America during the past six years. The '50s are remembered by most of us, correctly or not, for Korea, Hungary and Berlin — for Stalin and the vestiges of Stalin. But the '60s are Cuba and Vietnam, and it is during the '60s that Russell has become increasingly anti-American. Russell is a voracious reader of the press and has a steady stream of visitors of all political persuasions. It is impossible that Schoenman could have made up or denied Russell relevant facts. Nor would it have been necessary. If Russell had selected an assistant who attempted to soften the implications of the United States position in Vietnam, he would have verbally cut him up and sent him packing. In the New York Times article criticizing Russell, Levin states the relevant question: "Russell is not senile... What Russell puts his hand to, he believes. What we have to decide is why he believes it..."

Throughout this century and a good portion of the last, Russell's thin, reedy voice has called the powerful to task for their excesses, and his War Crimes Tribunal is in that spirit. It is the fight he loves best, and one can imagine him up at eight with this first morning tea, shuffling about in slippers, dictating at a furious pace his calls to conscience and letters to heads of state and the London Times, urging that the logic of the matter be considered. It is a pace that is maintained with the aid of four Red Hackle Scotches, Metrecal, and innumerable cups of tea (he is no longer permitted solids) until after ten at night, when the Lord often arises from his bed to add a particularly incisive point before the day's mail is sent out.

The irony is that for all the vaunted Marxism of some of the leaders of the War Crimes Tribunal — Ralph Schoenman, Jean-Paul Sartre, Vladimir Dedijer, Isaac Deutscher and others — it is nevertheless an event which falls squarely within the English liberal political tradition. The standards to be used are those of Western "democracies"— the Geneva Convention, the Nuremberg Trials, and the Kellogg-Briand Pact. The very act of lone intellectuals, devoid of the power of party, movement, or state, "judging" the real powers that be should appear somewhat ludicrous to an old European Marxist. But the official call to the War Crimes Tribunal is in a language more reminiscent of the great documents of Western democracy.

We command no state power; we do not represent the strong; we control no armies or treasuries. We act out of the deepest moral concern and depend upon the conscience of ordinary people throughout the world for the real support — the material help, which will determine whether people in Vietnam are to be abandoned in silence or allowed the elementary right of having their plight presented to the conscience of Mankind.

Russell himself supplied the basic "material" help for the Tribunal by lending it the \$200,000 advance which he received from the American publishers, Atlantic-Little Brown, for the rights to his autobiography. In his initial statement about Vietnam to the Tribunal, he said:

As I reflect on this work, I cannot help thinking of the events of my life, because of the crimes I have seen and the hopes I have nurtured. I have lived through the Dreyfus case and been party to the investigation of the crimes committed by King Leopold in the Congo. I can recall many wars. Much injustice has been recorded quietly during these decades...I do not know any other conflict in which the disparity in physical power was so vast. I have no memory of any people so enduring or of any nation with a spirit of resistance so unquenchable.

Lord Russell is joined on the Tribunal by Jean-Paul Sartre, who is its executive president. These two great philosophers respect each other for mutual integrity and courage, but not for their philosophies. Sartre is notably absent from Russell's *A History of Western Philosophy*. Russell is of course totally unappreciative of Sartre's Marxism, or of any other variety. When interviewed by NBC on his 80th birthday, he remarked: "Marx pretended that he wanted the happiness of the proletariat. What he really wanted was the unhappiness of the bourgeois, and it was because of...that hate element that his philosophy produced disaster."

Sartre, for his part, considers Russell to be one of the best of the bourgeois thinkers, and lets it go at that.

The attitude of the various members of the Tribunal towards their colleagues is a mixture of wariness and admiration. When Russell appeared at the first meeting of the Tribunal with most of its members present, he turned to one of his aides and asked, "Which one do you suppose will abandon us first?" Sartre accepts the work of the Tribunal as useful but not revolutionary. In an interview which appeared in the English *New Left Review* he stated, "We have been reproached with petty bourgeois legalism. It is true, and I accept that objection."

Sartre's defense of the Tribunal involves a notion of "limits". "The whole problem is to know if, today, the imperialists are exceeding the limits...Our Tribunal today merely proposes to apply to capitalist imperialism its own laws."

In the process Sartre then accepts, as do the other members of the Tribunal, what he defines as "an international jurisprudence which has slowly been built up." In this sense, it is Russell who has influenced the Marxists and not the other way around, for the notion of international jurisprudence would seem to conflict with that of class struggle and revolutionary ethics.

The Tribunal is not concerned with pronouncing on the wisdom of the war in Vietnam, which is properly the subject of political analysis and polemic; it is concerned with whether specific acts of the United States have violated the international law which American society itself has accepted and applied freely to others. One of the major charges leveled against the Tribunal by the Western press centers on its refusal to judge the NLF as well as the Americans. The response of the Tribunal has been that a resistance movement, almost as a matter of definition, cannot commit war crimes. Sartre has stated:

I refuse to place in the same category the actions of an organization of poor peasants, hunted, obliged to maintain an iron discipline in their ranks, and those of an immense army backed up by a highly industrialized country of 200 million inhabitants. And then, it is not the Vietnamese who have invaded America nor who have rained down a deluge of fire upon a foreign people. In the Algerian war, I always refused to place on an equal footing the terrorism by means of bombs which was the only weapon available to the Algerians, and the actions and exactions of a rich army of half a million men occupying the entire country. The same is true in Vietnam.

It seems to me that the critics of the Tribunal have difficulty accepting not the logic of this argument, but the analogy. For surely they would not have had the Nuremberg Commission investigate the resistance fighters of the Warsaw Ghetto, or the Dewey Commission the behavior of the victims of Stalin's purge. Obviously, Levin and others who support the war in Vietnam cannot accept this analogy, but they would be more honest to argue about that than the lack of "neutrality" on the part of the Tribunal members.

The Tribunal has done important work, particularly by sending teams to North Vietnam to investigate the effect of the American bombing. It was through the work of one such team that the world learned of the extensive use of "pineapple" and "guava" fragmentation bombs against the civilian population of North Vietnam. At the time, the Defense Department denied it was using such weapons, but it has recently owned up.

But the Tribunal has to date failed in its potential for confronting America with the enormity of its actions in Vietnam. The responsibility for this failure must be traced to the poor organization of the Tribunal, which has

fallen into the nightmarish world of little left sects and, in the center of all the confusion — and apparently enjoying every minute — is Ralph Schoenman.

The Tribunal offices in London and Paris are in very bad condition. The four members of the London staff spent the better part of the afternoon of my visit in a room of cracked green paint fixing the inevitable mimeograph machine on which so many hopes rested.

Given the poverty and limited manpower of this operation, I hesitate to make any criticisms, particularly of Ralph Schoenman, who has struggled to hold the whole thing together. But he has also been its worst enemy. He is the sort of political organizer who determines the purity of his organization by its ability to resist members.

The whole operation of the Peace Foundation and the War Crimes Tribunal has been devoid of cadres. One member of the Foundation defined it as a political party of four. The Paris and London offices of the Tribunal until recently had no more than 25 volunteers between them. These were drawn almost exclusively from one of the Trotskyist groups and from a splinter of the Paris Maoists who, as is the nature of such people, tended to fight inordinately and were constantly walking out. At one point in March, when I was in Paris, there simply was no working staff in the office. It would seem that Schoenman's whole method of operation is geared to driving out anyone who will not be subjected to his discipline.

The tension between Schoenman's sectarianism and the broader purposes of the Tribunal as publicly defined by Russell and Sartre broke out into the open last March, when Paris members of the Tribunal asserted their prerogatives. The members of the Tribunal, outside of Russell, are generally critical of Schoenman, and the main work of the Tribunal is now in Paris. Schoenman has been barred from entering France by the De Gaulle government.

This is probably the only organization of its kind in which the "big names" do the bulk of the work. Isaac Deutscher, the biographer of Stalin and Trotsky; Vladimir Dedijer, who is Tito's biographer; and Giselle Hamini, the beautiful French woman who is Sartre's lawyer and Simone de Beauvoir, meet every second or third weekend for the work sessions which set the policy of the Tribunal. Sartre himself has been more intimately involved than in any political activity since the Algerian war.

It is strange company for Lord Russell, who began his century of life on the knees of Gladstone and ends it by writing letters to Vladimir Dedijer, the Yugoslav communist partisan, concerning the failure of the leaders of the West to retain their reason. The journalists who came to query Russell at the Tribunal's press conferences were irritated that he did not accept questions and shuffled off after reading his text. They indicted him in their articles the next day for rudeness. Why were they not irritated with the other famous democrats of Russell's time who had left him to stand alone before the klieg lights burning his old eyes, to once again confront madness with logic? Perhaps it is the century that has been rude to Lord Russell by failing his hopes so completely that in the weariness of 94 years he was forced to travel once again the five bone-shattering hours from Wales to London to "prevent the crime of silence."

On the rare occasions when the mass media in America have been inclined to criticize the war in Vietnam, their critique has been marginal. Vietnam has always been referred to as that "dirty little war," something we were "dragged into," an "aberration," the result of a series of "mistakes." We can't take Russell, for he tells us that this is arrant nonsense, that we in fact bear total responsibility for Vietnam. And, as he reminds us in almost daily incantations, it was United States financing which made possible the return of French colonialism between 1948 and 1954 when we put Diem in power, which instituted the strategic hamlet program of putting the Vietnamese peasants in "camps," and which has systematically obliterated the countryside of North and South Vietnam.

It is a war nurtured within the Cold War bureaucracy which, like any other bureaucracy, must justify its activities in a perfectly "reasonable" and matter-of-fact tone. Even company critics like Arthur Schlesinger and James Reston talk of the anguish of the President and the loneliness of his decision-making, and newspaper editors universally shore up the image of American innocence by depicting the plight of a President who has been forced to wage war because the enemy will not let him wage peace. And this is actually believed.

Well, Lord Russell has cut through all that with his War Crimes Tribunal and, like it or not, there now exists an alternative frame of reference in which to place the specific incidents of the war. We are a people who with complete equanimity judged Khrushchev the Butcher of Budapest, but must now seek to destroy the reputation of a man who passes similar judgment upon us. We charge Lord Russell with having "betrayed" the values of Western civilization, with having been "captured," because we cannot accept the concept that it is we who are the "betrayers" and the "captured."

Lord Russell, the godson of John Stuart Mill, will die the quintessence of the democratic citizen — the Citizen Terrible. If in his last years he is "anti-American" and must now judge our President a murderer, then it is not his actions that ought to be scrutinized, but our own. We have lost face with Lord Russell and all the bombs of the B-52s will not change that.

* * * * *

Robert Scheer wrote the article, above, in 1967. In 1982 he wrote *With Enough Shovels*, about which Solly Zuckerman wrote (RSN38-43): "But the whole concept of a nuclear war is nonsense, and the purpose of Mr. Scheer's book is to reveal the degree of nonsense it is. If the subject were not as serious as it is, parts of the book could be read as a skit on the Reagan administration's foreign and defense policies." Mr. Scheer might be said to be specializing in American Presidents who make disastrous decisions. (Thank you, DON JACKANICZ)

BOOK REVIEWS

(14) *"Weapons And Hope"* by Freeman Dyson (NY: Harper & Row, 1984). Reviewed here in "Science 84" (May 1984). It had previously run in *The New Yorker* in 4 weekly installments starting 2/6/84. For another review see (16). For an excerpt from a Dyson interview, see (27). For Dyson's remarks on Joseph Rotblat, see (25).

WEAPONS AND HOPE by Freeman Dyson, Bessie/Harper & Row, \$17.50.

In one sense, Freeman Dyson's powerful new book, *Weapons and Hope*, is as much about deafness as it is about strategic thinking, military technology, moral outrage, and the peril of nuclear war. Not organic deafness but the mental, sociological sort that takes place when persons, political parties, or governments find themselves either unwilling or incapable of listening to their opponents. Thus afflicted, the task of perceiving meaning and intention, let alone making peace, becomes doubly difficult. Familiar examples abound. It takes great effort for evolutionists and fundamentalists, Republicans and Democrats, Arabs and Jews, and, most critical of all these days, Soviets and Americans to talk. Each of these groups will claim that they are willing to reason, to negotiate, to compromise. And yet, and yet. Differences mount, reactions rigidify, and swords cross. The deafness becomes thundering.

"I write because I live in two worlds," says Dyson early on in his book, "the world of the warriors and the world of the victims." Straddles them, he means. "One week," he goes on, "I listened to Helen Caldicott [a leading freeze activist] in Princeton. The next week I listened to General So-and-so in Washington. Helen and the general live in separate worlds. In a few minutes of conversation I cannot explain Helen's message to the general or the general's message to Helen. If Helen and the general ever tried to talk directly to each other, it would be a dialogue of the deaf."

If life has made Dyson bipolar, this is approximately how it happened: Born in England. Operations research for Bomber Command of the Royal Air Force in World War II. Professor of physics at the Institute for Advanced Study in Princeton since 1953. Consultant in recent years to the U. S. Department of Defense and the Arms Control and Disarmament Agency. Published, in 1979, *Disturbing the Universe*, a scientific autobiography. Equally significant, in addition to his scientific work,

Dyson has reared five daughters, a son, and a stepdaughter. Undoubtedly, his family—as well as his wide reading in the humanities, judging from his last book and this one—qualifies him for membership in the world of victims, just as his war and government work and his knowledge of mathematics and physics make him privy to the world of warriors.

Weapons and Hope does not attempt to predict. Rather it seeks to prevent. (Surely there can be little doubt as to what it seeks to prevent.) Thus, unlike Jonathan Schell's *Fate of the Earth*, it does not concentrate on describing nuclear horror. Rather it is analytic and prescriptive, a practical search for a way to coax the superpowers to phase out nuclear weapons and save the world. To his everlasting glory, Freeman Dyson never did think small.

To accomplish his quest, Dyson plunges into the evolution of modern weapons technology—from mules to jeeps to tanks; from the ponderous megatonnage of warheads in the days when bigger meant better to the ultra-accurate varieties of today, our Pershings and the Russians' SS-20s. And also into the societal milieu in which such evolution was and is fostered, focusing on the World Wars and their aftermath. Accordingly, his book is divided into three major sections: tools, people, and concepts.

By tools he means weapons, both offensive and defensive, including shelters. Here we are introduced to the economic and technical dynamics by which weapons development reciprocates with perceived needs of security, resulting in what is popularly known as the arms race. This is a contest that features obsession, folly, and surprise. No one in the 1950s, not even J. Robert Oppenheimer, dreamed that hydrogen superbombs would give way to smaller bombs of lower yield. Ironically, that is precisely what took place. It did so because military planners ran out of targets (Why use 10 megatons when a tenth of a megaton would do the job?), the accuracy of missiles improved, and new delivery systems tilted the balance

of costs toward low-yield weapons. The race didn't stop, of course; it merely produced more efficient means. Meanwhile, over the same period, the U. S. embraced a predominantly offensive posture—deterrence—having decisively rejected both an antiballistics missile network and bomb shelters.

But where weapons lend potency to the clouds of war, it is people who either whip those clouds into storms or attempt to dissipate them. In this section we meet many of the human actors: the generals and the diplomats, the scientists and the poets, the scholars and the statesmen. We know most of them: Napoleon and Metternich, Rupert Brooke and Wilfred Owen, T.E. Lawrence and Remarque, Tolstoy and Gandhi, Einstein and Oppenheimer, Marshall and Kennan, Jodl and Balck. Balck? One of the more remarkable contrasts drawn in this richly populated section is between Alfred Jodl, Hitler's chief of military operations, and Hermann Balck, a Prussian field commander of the same vintage. "Jodl and Balck," writes Dyson, "exemplify two styles of military professionalism, the heavy and the light, the tragic and the comic, the bureaucratic and the human. Jodl doggedly sat at his desk, translating Hitler's dreams of conquest into daily balance sheets of men and equipment. Balck gaily jumped out of one tight squeeze into another, taking good care of his soldiers and never losing his sense of humor. For Jodl, Hitler was Germany's fate, a superhuman force transcending right and wrong. Balck saw Hitler as he was, a powerful but not very competent politician." In other words, the difference between soldiering as a cult and as a profession. One is fanatical, the other honorable.

Finally, the weapons and the people have interactively produced the concepts that have made the world as vulnerable to Armageddon as it currently is, the mind-sets that make for selective deafness, the strategies by which we collectively live or die. Like the individuals that have shaped our history and policies, the concepts are by now all too

familiar. U. S. policy is currently dominated by two of them—"assured destruction" and "limited nuclear war." The Soviets operate with "counterforce," which says that to survive as a society you destroy the enemy's weapons and military capacity, not necessarily the citizenry itself. To these, Dyson suggests and examines four alternatives: "nonviolent resistance," the active pacifism practiced by Gandhi; "nonnuclear resistance," which is unilateral nuclear disarmament but with vigorous deployment of nonnuclear weapons; "defense unlimited," a massive shift of emphasis from offensive to defensive weaponry; and, last, Dyson's own preference, "live-and-let-live," a compromise between fighting nuclear war and unilateral disarmament. While it may sound simplistic and even Messianic, the concept is respectable among arms controllers where it is known technically as "parity plus damage-limiting." Dyson summarizes it this way: "We maintain the ability to damage you as badly as you can damage us, but we prefer our own protection to your destruction." Put another way: "We prefer live Americans to dead Russians." Presumably Russians prefer live Russians to dead Americans. Practically, it means using nuclear weapons only as bargaining chips and negotiating them all the way down to zero. Instead of the standoff of deterrence, it makes a more inviting path down which to bargain.

Dyson's advocacy of this concept is at once passionate and stringent, at once human and scientific, like his book. *Weapons and Hope* signals that it may yet be possible for the warriors and the victims to communicate. Despair is counterproductive. That is why Dyson uses as an epigraph a quote from the Pastoral Letter of Catholic Bishops last year: "Hope is the capacity to live with danger without being overwhelmed by it; hope is the will to struggle against obstacles even when they appear insuperable." To this, one can only add the hope that Dyson's book will be taken to heart by the Adelmans and Gromykos, the Reagans and Chernenkos.

BR QUOTED

(15) Source of Forbes' BR quote. RAMON CARTER SUZARA may have found the answer to WHITFIELD COBB's question about the cause of trouble in the world today (RSN41-8). Ramon quotes from *New Hopes For A Changing World*, p.5:

One of the painful things about our time is that those who feel certainty are stupid, and those with any imagination and understanding are filled with doubt and indecision.

(16) "Weapons And Hope" by Freeman Dyson, as reviewed in the New York Times Book Review (4/8/84, p. 7):

Making the World Safe for Conventional War

WEAPONS AND HOPE

By Freeman Dyson

340 pp. New York:

A Cornelia & Michael Bessie Book / Harper & Row. \$17.95.

By Michael Howard

I CHOSE the title 'Weapons and Hope' for this book," Freeman Dyson writes on his first page, "because I want to discuss the gravest problem facing mankind, the problem of nuclear weapons." The spirits sink slightly. Is this yet another of those works, of which Jonathan Schell's was the most publicized and Lewis Thomas's "Late Night Thoughts" the most recent example, that explain our predicament to us in beautiful prose, tell us how stupid we all are and exhort us to repent without being very specific as to what we should actually do about it?

For many pages of Mr. Dyson's book the spirits remain sunk. We are treated to some autobiographical information about his boyhood in Britain in the 1930's; about his experience as an amazingly youthful scientific adviser to the R.A.F. Bomber Command in the 1940's; to some heart-rendingly cheerful letters written home by Mr. Dyson's uncle from the trenches in World War I; and to interesting anecdotes about his contacts with the professional military, the "Peace Movement" and sundry Russians. As layer after layer of this wrapping is peeled off, one begins to wonder whether there is really anything very solid in the middle. To ask a currently popular question: Where's the beef?

I can reassure the reader: There is beef in this package, and the wrappings are not simply wrappings but part of the sustenance. By the end of the book Mr. Dyson, a professor of physics at the Institute for Advanced Study in Princeton, has put forward one clear and valuable principle to guide all those interested in arms control, and one interesting and controversial concept that will at least provoke discussion. In the course of doing so, he provides an excellent layman's guide to the problems and concepts of nuclear deterrence and talks a great deal of sense about that most misunderstood and complicated problem, "arms races."

Mr. Dyson starts by defining two relevant and mutually antagonistic cultures — what he calls somewhat misleadingly "the warriors" and "the victims." "The warriors" in his terminology are all those tough-minded policy makers and strategic analysts in and around the defense establishment who manipulate the calculus of power. "Warrior" is a misleading term, since the members of this group are as eager to avoid war as anybody else; but they do believe that this can be done only by working within the existing framework of power politics. Their cry therefore is, "Don't Rock the Boat!" "The victims" on the other hand are those more concerned with the consequences than the causes of war, with the destruction war inflicts than with the political rationale for that destruction. Their cry is "Ban the Bomb." Exchanges between the two groups, when they occur, are largely dialogues of the deaf.

Mr. Dyson speaks both languages and understands both cultures; indeed, anyone who has worked on weapons technology, has a wife and family and works in a university is bound to. He can appreciate the contribution that each group makes to an understanding of the issues. "In the short run, if you want to influence events, you must work within the establishment," he writes. "In the long run, if you work within the establishment, you will not change things fundamentally." The weakness of the establishment is that it has no idea how to change a situation that in the long run is likely to be catastrophic — and indeed usually has no great de-

sire to do so. The weakness of the "Peace Movement" is that it fails to provide convincing solutions to the immediate and genuine problems with which the establishment has to deal. How can we reconcile the near-sighted with the far-sighted and produce total vision?

Mr. Dyson would achieve this synthesis by converting the military to nuclear disarmament, and this is the major goal he sets in his book. "It is not enough to organize scientists against nuclear war," he writes, "we need captains and generals against nuclear war." This should not be difficult: Most captains and generals, like most people, are already "against" nuclear war; but they need to be shown how to achieve their objective of providing national security without it. To do this, he says, they should disengage themselves from the heresy that has ruined them and so much of the world over the past 70 years — the assumption that military effectiveness can be equated with the capacity to deliver massive destruction. Mr. Dyson writes feelingly about his experiences serving with a bomber command to which huge resources had been diverted from more orthodox means of warfare, and whose objectives he considers to have been immoral, unattainable and ineffective. (This is a view I do not altogether share. The fact that from 1942 onward the Germans had to concentrate their air resources on protecting their cities meant that Allied surface forces enjoyed a freedom of operation without which they might not have been able to land on the Continent at all.) The desire to develop bigger and nastier nuclear bombs and aim them at the opponent's cities, he sees as the logical development of this heresy, and as a derogation from the military ethic he learned from his father and his uncle to admire — practical, workaday, committed, ingenious, above all economical — the ethic he sees embodied in the military skills of the blitzkrieg.

Today, Mr. Dyson writes, too many people "have

come to take it for granted that the deployment of nuclear weapons on a massive scale is essential to the security of their countries. They identify nuclear destructive power with national security and so become trapped in the cult of destruction." But with the development of technology this need no longer be necessary, he points out; in fact, the whole trend of weapons development in the past 25 years has been away from weapons of mass destruction toward those of greater accuracy, maneuverability and precision. Indeed, if in 1949, Mr. Dyson suggests, a treaty had been signed between the United States and the Soviet Union banning the fabrication of hydrogen bombs and had been faithfully observed by both parties, "the weapons deployed by the United States . . . would not have been noticeably different from those which we are now deploying." The multi-megaton weapons of the 1950's were phased out of service almost as fast as they were phased in.

THE whole thrust of the arms race, he argues, is now toward miniaturization and accuracy to produce Davids rather than Goliaths, and if this continues "there is a chance we may see not only H-bombs but nuclear weapons of all kinds gradually becoming obsolete. . . . We will have a far better chance of achieving nuclear disarmament if the weapons to be discarded are generally perceived to be not only immoral and dangerous but obsolescent."

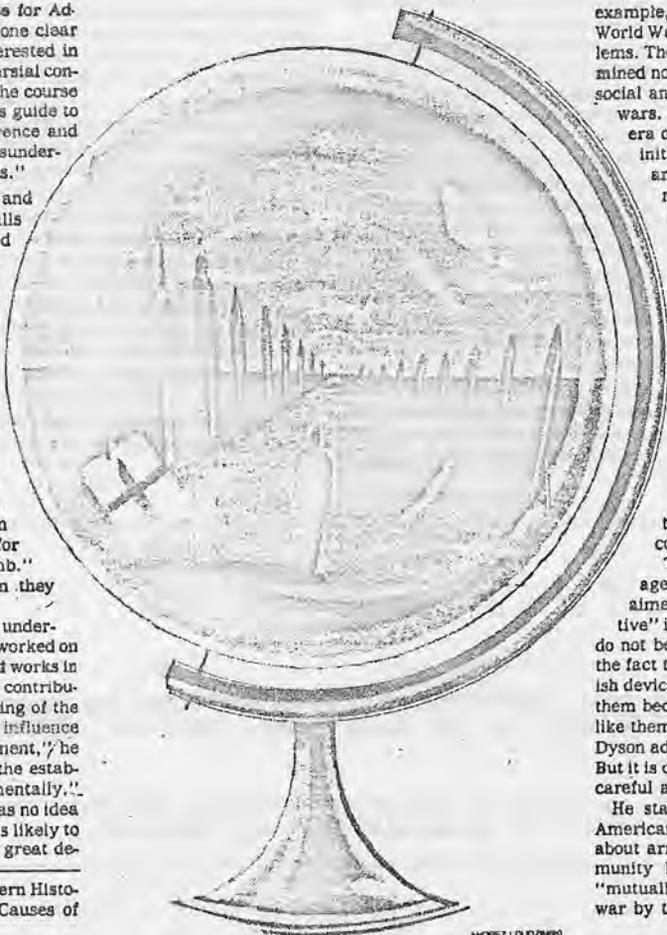

The object therefore, Mr. Dyson argues, should be not to "stop the arms race" but to guide it intelligently, to produce weapons with which the military can exercise its legitimate skills rather than blow the world up. He suggests indeed that "modern technology is taking us back towards the eighteenth century, towards the era when small professional armies fought small professional wars."

This is not an unfamiliar goal — it was expounded, for example, by B. H. Liddell Hart in his writings before World War II — but it is one with which I have two problems. The first is that limitations on warfare are determined not only by available technology but also by the social and political culture of the peoples fighting the wars. Political not technological changes ended the era of limited war, and the social transformations initiated by the American and French Revolutions are not reversible by technology. The second is more deeply troubling and I suspect will be more widely shared: Do we really want to make the world safe for conventional war — and if we did, how long would it take for war to become renuclearized?

This is a problem Mr. Dyson himself quite explicitly recognizes. "It is not obvious," he writes, "that [a nonnuclear world] would be more stable or less dangerous than the world in which we are living now." And he maintains that this is something that needs to be carefully considered. I do not profess to know the answer to this question, and I entirely accept that non-nuclear war at its worst is preferable to nuclear war at its mildest. My own fear is that the two are not so easily separable, and that we could end up with the worst of both worlds.

The principle, however, that we should encourage "technological development deliberately aimed towards making nuclear weapons unattractive" is one with which few would quarrel — though I do not believe Mr. Dyson gives sufficient attention to the fact that the people who today find these nightmarish devices "attractive" are not military men who like them because they are destructive but politicians who like them because they are cheap. The "concept" Mr. Dyson advocates is, however, rather more contentious. But it is carefully thought through and deserves equally careful attention.

He starts by explaining with great care why the Americans and the Russians disagree so profoundly about arms control. The American arms-control community believes fundamentally in the principle of "mutually assured destruction," i.e., the deterrence of war by the certainty that whoever provoked it would

Michael Howard is Regius Professor of Modern History, Oxford University, and author of "The Causes of Wars" among many other works.

Making the World Safe

suffer as terribly as his victim and that neither would "win." The Russians, still profoundly affected by their own wartime experience, are determined at all costs to survive, as they have survived before and, if war comes, to fight it as best they can. They see the nuclear weapons of both sides as weapons, not as deterrents. Mr. Dyson succeeds in reconciling the apparently irreconcilable positions of the diplomat and historian George Kennan and the historian Richard Pipes. Like Mr. Kennan, he believes that the Russians' historical experience gives them a mortal dread of another war, whether nuclear or conventional; but like Mr. Pipes, he thinks, if war came, that that historical experience would nerve them to try to fight it through regardless of losses — and further, if they were convinced that it was coming, to strike a pre-emptive blow in order to cripple their adversary.

It is this Soviet will and capacity to pre-empt, Mr. Dyson says, that renders invalid all American "war fighting" doctrines. "Our war fighters," he writes, "with their elaborate plans of limited war have never been able to face the fact that Soviet doctrine of massive pre-emption makes such plans meaningless. Our arms controllers with their fixation on assured destruction have never been able to understand that the driving force of Soviet policy is a determination to survive, and that this deeply rooted will to survive makes assured destruction impossible." It is this incompatibility of concepts that has wrecked arms-control negotiations in the past and will continue to wreck them in the future. For "so long as the Soviet Union refuses to agree to assured destruction, Soviet counterforce weapons and Soviet civil defense will continue to create alarm in American minds, and doubts about the assurance of assured destruction will persist. So long as doubts about assurance persist, our assured-destruction weapons will be considered insufficient and arms-race stability will continue to elude us."

In Mr. Dyson's view, we should ourselves move closer to the Russian position: "The danger of nuclear war can be reduced by an explicit recognition on both sides that counterforce targeting is inevitable as long as nuclear weapons continue to exist." Further, he believes that, like the Russians, we should plan to save as many lives

A Physicist's 'Destiny'

THE NEW YORK TIMES/WILLIAM SAUNDERS
Freeman Dyson.

goes. He first began to do so in 1941 after being recruited by C. P. Snow to do research for the Royal Air Force when Britain was under siege by the Luftwaffe. In 1957, the physicist became an American citizen.

Occasionally, he serves as a consultant for the Defense Department. At one time he was against the test ban treaty, then came out in favor of it. Asked to define the central theme of his new book, "Weapons and Hope," Mr. Dyson said, "Nuclear weapons have lost any military justification and are purely political. The problem is the weapons that already exist. We have to learn to live without them." — Herbert Mitgang

as possible without attempting the impossible task of estimating how many that is likely to be, much less basing any plans on that estimate. "There is no way, short of actually fighting a nuclear war, to find out whether anything worth preserving would survive it. . . . The effects of accurate and inaccurate weapons are equally incalculable." But we should be more concerned about saving American lives than destroying Russian — not so as to "prevail" in a nuclear conflict, but in order to move away from the existing unstable situation, which gives each side the maximum reason for mistrusting the other, toward a defense-dominated equilibrium, or what Mr. Dyson terms a situation of "live and let live."

This is the "concept" Mr. Dyson wishes to see displacing such existing and inadequate ones as assured destruction, nuclear war fighting or unilateral disarmament. As he explains it, "We maintain the capacity to damage you as badly as you can damage us, but we prefer our own protection to your destruction." This would involve the development of nonnuclear anti-ballistic missile systems and their substitution for offensive nuclear missiles; this would be "like the substitution of precision-guided munitions for tactical nuclear weapons in Europe, a giant step in the direction of sanity." The MX missile would be scrapped. Strategic forces (unspecified) would be maintained, "making sure that they are as invulnerable as possible to Soviet attack and that they are not aimed at anything in particular" (emphasis added). The American plans for actually fighting nuclear war (the so-called SIOP) would continue to exist, "but the weapons will no longer be poised for its instant execution."

Well, there's the beef, and it should certainly nourish a lively controversy. Mr. Dyson sketches in the problems and implication of his proposals with a very broad hand. Strategic forces "not aimed at anything in particular" is an idea that I for one find difficult to assimilate, and the proposed abandonment of the hard-won agreement limiting anti-ballistic missile emplacement, welcome as it may be to the Reagan Administration, will infuriate most advocates of arms control. Mr. Dyson will need to spell out his ideas with much greater clarity if they are to be taken seriously by military strategists. It is not enough to shrug off the difficulties, as he does, by blandly asserting, "If we decide on moral and political grounds that we choose a defense-dominated world as our long-range objective, the diplomatic and technological means for reaching the objective will sooner or later be found." If things were as simple as that, we would have achieved general and complete disarmament many years ago.

But the flaws in the concept should not blind us to the value of Mr. Dyson's principle — to use technology to guide the arms race constructively, away from nuclear weapons of mass destruction toward conventional weapons systems that could be used with skill and precision by professionals so as to cause the least possible damage. So long, that is, as such a development does not lead anyone to believe — as the blitzkrieg led Hitler to believe — that he could once again win in a quick conventional war. □

BR REVISED

(17) BR on negroes. Last issue Cherie Ruppe reported that different editions of Marriage and Morals — the 1970 Liveright paperback and the 1976 Unwin paperback, for instance — did not have BR saying the same thing about negroes. (RSN41-7)

Cherie wanted to know who made the change, the author or the publisher? 3 BRS members provided the answer.

TOM STANLEY and RAMON CARTER each referred us to p.431 of The Life of Bertrand Russell by Ronald W. Clark:

...when it was about to be reprinted yet again Russell wrote to Stanley Unwin noting, "It has been drawn to my attention that on Page 209 of Marriage and Morals I say, "It seems on the whole fair to regard negroes as on the average inferior to white men." I wish in any future reprint to substitute for the words: "It seems on the whole fair", the words "There is no sound reason".

CALVIN MCCAULAY quotes from page 114 of Dear Bertrand Russell, Feinberg and Kasrils, editors:

[from a letter to BR] ...do you still consider the negroes an inferior race, as you did when you wrote Marriage and Morals?

[BR's response] I have never held Negroes to be inherently inferior. The statement in Marriage And Morals refers to environmental conditioning. I have had it withdrawn from subsequent editions because it is clearly ambiguous...

Calvin goes on to say: "As a black member of the BRS, I thought it my duty to rush to Lord Russell's defense."

BOOK REVIEWS

- (18) Cambridge Essays 1888-99, Volume 1 of "The Collected Papers of Bertrand Russell", ed. Kenneth Blackwell, et al, Russell Editorial Project, McMaster University (London: George Allen & Unwin, 1983). Cloth - \$70. 650pp. Reviewed here by JUSTIN LEIBER, Philosophy Department, University of Houston, Houston, TX 77009. (It was reviewed in the last newsletter by Sidney Hook. RSN41-25).

This is a most satisfactory beginning to the undoubtedly definitive collection of Russell's papers that is expected to amount to twenty-eight volumes. Very sensibly, the editors have chosen first to publish this volume, which contains a number of early unpublished papers, and the seventh volume, due June 1984, which contains The Theory of Knowledge, the 1913 Manuscript, the only unpublished book length piece.

Perhaps the most powerful impression that this first volume makes is how thoroughly false is the easy supposition (a similar mistake is often made about Noam Chomsky) that Russell began by thinking and writing about mathematics, logic, and philosophy, and then gradually, perhaps in fits and starts propelled by circumstance (e.g. World War One), descended into education, economics, and politics. As George Santayana summarized Countess Russell, who directed Russell's education until he went up to Cambridge University, "Bertie must be preserved, pure, religious, and affectionate; he must be fitted to take his grandfather's place as Prime Minister and continue the sacred work of Reform." As with many such preservation plans, matters went rather differently. Religion was perhaps the first to go: purity, reinforced by the shyness engendered by his solitary upbringing, persisted considerably longer. Indeed, this very shyness, which gradually developed a protective layer of iconoclastic clarity and wit, is perhaps all that prevented Countess Russell's plan. So instead of another John Russell we had another Voltaire who was also a distinguished mathematical logician.

Among the many helpful appendices of this volume is a list Russell kept of the books he read 1891-1902 (starting shortly after he entered Cambridge at eighteen). Interestingly, literary works remain predominant throughout. The philosophers with at least five entries, F. H. Bradley, Descartes, Kant, Leibniz, J. S. Mill, and Plato, are equalled by Jane Austin, Robert Browning, Lord Byron, Thomas Carlyle, Gustav Flaubert, Elizabeth Gaskell, Edward Gibbon, George Meredith, John Milton, Walter Pater, W. M. Thackeray, and A. N. Tolstoi, and exceeded greatly by Ibsen, Henry James, Shakespeare, Shelley, and Turgenev (whose name Russell spells in four ways and whose books Russell apparently read in German).

The first part of this volume begins with "Greek Exercises," comments written while still at Pembroke Lodge, in English concealed in Greek letters. By the second page we find the sixteen year old Russell writing,

I hold that, taking free will first to consider, there is no clear dividing line between man and the protozoon. Therefore if we give free will to man, we must give it also to the protozoon. This is rather hard to do. Therefore unless we are willing to give free will to the protozoon, we must not give it to man. This however is possible, but it is difficult to imagine, if, as seems to me probable, protoplasm only came together in the ordinary course of nature, without any special providence from God, then we and all living things are simply kept going by chemical forces and are nothing more wonderful than a tree... (p. 5).

We also see the Liberal aristocratic character of Pembroke Lodge in,

Argyll alludes to a very strong argument against immorality, which is the inseparable connection of brain and mind. I think this almost makes it plain that the mind retains memory only by storing up motions or possible motions of atoms of the brain, which by being let loose, or by some arrangement or other now quite beyond science, produces recollection. I am getting quite resigned now to the idea of extinction after death, were it not for the restraint upon my speaking out which it imposes... Also it makes goodness a much finer thing, as it takes from it all possibility of reward beyond internal satisfaction. For this reason also it makes goodness harder to practice, and is therefore not a religion I should wish to spread among the masses, who might relapse into excesses of immorality. (p. 13).

The rest of the first part consists of essays written for his tutor at Southgate, a cramming school for his entrance exams to Cambridge. These short set pieces are concerned with political and economic topics, they relate Liberal views, and they suggest considerable reading in political economy, including Adam Smith, Ricardo, Malthus, Spencer, J. S. Mill, and contemporary political debate.

The second part is largely "A Locked Diary," mostly written during 1890, the year he entered Trinity College to study mathematics, though it contains entries from 1893-94, mostly concerned with Alys Smith, whom he met in 1889, and to whom he also wrote the next entry, "Marriage" (1893), attempting, with apparent success, to convince her that a feminist rationally might marry in a deplorably male chauvinist environment. Shortly after joining the Cambridge Moral Sciences Club in 1891, Russell had moved that "Women should be admitted to equal political rights with men."

The third part consists of papers read to the Cambridge Apostles between 1893, when Russell began graduate work in philosophy at twenty-one, and 1899, when he left the group. The first argued that political views were invariably held for sentimental rather than rational considerations, and the second argued for the admission of women to the Apostles. In the last of these we find Russell's prose with its characteristic flare,

To maintain that "Home Sweet Home" gives less pleasure than a Bach fugue, would only be possible for one in bondage to a theory. Nor shall I adopt the really radical puritanical view, that beauty is good neither as means nor as end, but it is an invention of the fiend to tempt us to damnation. Though this is a view I have much sympathy with, and should like, outside the Society, to advocate. (p. 116)

Parts four and five consist of graduate philosophy papers on epistemology and the history of philosophy and on ethics. The first group are set pieces written for James Ward and for G. F. Stout. They are particularly concerned with Bacon, Hobbes, and Descartes, and they show a careful appreciation of these philosophers and of their differences, without displaying the views we have come to associate with Russell. Sidwick set most of the ethics papers. These generally stem from the Utilitarian tradition, though they show the influence of G. E. Moore, and they are particularly interesting because, while Russell continued to write about ethics, he rarely subsequently addressed such a professional audience. The sumptuous Annotations provide the comments made by Russell's professors.

Parts six and seven consist of Russell's first professional publications, on geometry and on political economy. The geometric papers appearing in *MIND* and the *Proceedings of the Aristotelian Society*, defend an a priori Kantian view of the common properties of Euclidian and non-Euclidian geometries. The political economy papers, also written in 1895-96, reveal the commitment to socialism and the quantity of research that was soon to lead to the publication of Russell's first book, *German Social Democracy*. These papers, of which only one has been previously published in English, also suggest a practical interest in political activity and an active and critical engagement with Fabian and Marxist thinking. Nonetheless the man was still diffident and where not visibly so, witty and iconoclastic. I quote from the lightest of these, "The Uses of Luxury,"

There is a well-worn argument for equality of fortunes, much in favor with Socialists on account of its extreme individualism and atomism. This argument says, that the richer a man is, the less pleasure he can get out of a given amount of money; whence, by a brief and apparently conclusive piece of mathematics, we prove irrefutably that equal division gives the greatest aggregate happiness.

I am far from denying a certain scope to this argument. If, for example, you had a box of chocolate creams to distribute among eighty children, you would do better to distribute them equally all around, than to make one child ill with the whole box, and the others envious. But if your eighty children were psychological novelists, it might be ultimately for the good of everyone to give them a taste of such poignant emotions as envy and indigestion... We may urge, as a possibility, that even if the aggregate of brute happiness, for the moment, were increased by equal division, there would be such a loss in the complexity and variability of individual lives as would counterbalance the mathematical gain. For human beings cannot safely be treated as separate atoms, and our argument took no account of such exquisite pleasures as Dr. Watts must have felt in thanking God that he was rich while others were poor. (p. 320)

So Countess Russell lost her Prime Minister and we gained our Voltaire.

ON NUCLEAR WAR

- (19) On The New Kopit Play, musings by William McPherson in the Washington Post (4/16/84 approx.) The play's full title is, "End of the World with Symposium to Follow."

Being more caught up in the old day-to-day, I don't spend a lot of time brooding about the end of our little world. The rain seems depressing enough this morning, not to mention the IRS, without throwing in eschatology and its attendant dreadful events as well—which, barring divine inspiration, can be only speculation in any case.

The Day of Judgment is something I'd rather not speculate about, lacking the sublime confidence in my personal fate that some of my brethren possess, and I'm late with my income tax as usual. Not that Armageddon will affect the Internal Revenue Service. Filed under "Planning Ahead Department" is a yellow clipping from one of my colleagues that describes what the tax system might look like under various nuclear war scenarios. No need to go into the details, except to note that taxes will be collected. (But then, the mail will be delivered, too, provided you've thought to fill in the emergency change-of-address form. You may, after all, want to receive your refund from the IRS. The

Post Office has a 300-page plan telling how the whole thing will work, with priority at last given to first-class mail. I've not read the document.)

Looking on the bright side, if this really is "the terminal generation," as the Rev. Jerry Falwell suggested in an article in the Outlook section April 8 ("Does Reagan Expect a Nuclear Armageddon?"), and if you happen to be, like the Rev. Falwell, one of the saved, well then you may be driving to the post office with your tax return when—suddenly—the trumpet sounds and whoosh, you've gone up not in a nuclear blast but in the Rapture, leaving the others to fry—or deliver the mail. That's one eschatological view, anyway, and perhaps it will lessen the congestion on Key Bridge as all those Georgetowners strike out for Virginia under the government's emergency relocation program, provided they're raptured before they hit the bridge. (Or—dark thought—maybe the numbers of the saved are a little thin in Georgetown.) In any event, the true believers need not worry about nuclear

war or Armageddon because, as Falwell said, "we're going up in the Rapture before any of it occurs." In the words of Revelation, "Then I saw a new heaven and a new earth for the first heaven and the first earth had passed away."

Lucky them. But for those of us who may be stranded in the here and now, and who prefer to interpret the words of Revelation as more metaphorical than strictly prophetic, there is another kind of rapture that goes beyond the pleasure principle and is of more grave concern. It is the rapture caught—mordantly, and, I thought, brilliantly—in Arthur Kopit's play "The End of the World" at the Eisenhower Theater: the apocalyptic, seductive rapture of doom with all the beguiling—and equally seductive—logic that makes the unthinkable thinkable, and the impossible possible—like the Escher print in which the viewer is led, by the trickery of art, to believe what he knows to be untrue: that the water flows endlessly downhill and up, "a fail-safe, built-in breakdown machine" (the playwright's words).

"The End of the World" is about nu-

clear proliferation, but it is not a tract or a polemic; it is, rather, a totally believable and far from simplistic presentation of the irrefutable (and as irrefutably lunatic) logic that could bring us, in a moral system, to an immoral end: not a "pre-emptive strike" but "anticipatory retaliation." The difference, you may perceive, is largely semantical. Nonetheless, the play will give no more comfort to the proponents of a nuclear freeze than it will to those who believe in the possibility of a rational, limited, tactical nuclear war. It asks the question, "Why do we need more nuclear weapons?" And it answers it, not with the madness of a Dr. Strangelove but with the best available logic from the best available minds—minds which turn out to be oddly like Escher's, as visionary, as seductive and as brilliantly paradoxical. "They don't believe what they know," the protagonist says.

"The primal sin of scientists and politicians alike," the physicist Freeman Dyson says, "has been to run after weapons which are technically sweet." He wrote in "Disturbing the Universe" that "some-

where between the gospel of norvicle and the strategy of mutual assured destruction there must be a middle ground... which allows killing in self-defense forbids the purposeless massacre of innocents." Somewhere there must be. I do know where it is, nor does Arthur Kopit. But he does know something about the irrefutable glitter of the apocalyptic which is both its horror and its allure, he gives comfort to no one, except the comfort of laughter, which is real enough. And he knows something about rapture too, not the rapid transit of Rev. Falwell with its happy ending for some, but rapture of evil and death, which, in words of the play, is "very, very seductive."

George Bernard Shaw's theory "Back to Methusalem" was that people die because they want to die. The guiling quality of apocalyptic thinking is that it solves all problems. It's not like rapture—the rapture of the dead which is, of course, deadly.

The writer is a member of editorial page staff.

NEWS ABOUT MEMBERS

(20) Dong-In Bae has returned to South Korea from West Germany, where he had been given political asylum and had been living for a number of years. "The Korean Government had been hesitant about allowing me to return. They gave permission only when one of my friends, a member of Parliament and of the governing party, vouched for me. I have settled in Chuncheon, where I got a lectureship. When the slow bureaucratic process is finally completed, I expect to be a professor. I will give 'Introduction to Sociology' on Tuesdays, 'Theory of Social Welfare' and 'Introduction to Anthropology' on Wednesdays. I find this work very meaningful. I am also deeply conscious that it is a matter of great responsibility.

"As for the Korean Bertrand Russell Society: it is no longer incorporated (in accordance with the members' wishes, and my own). The group still exists in Germany, though it is smaller and its ability to fulfill its aims more limited. I think a few active members will continue to publish "The Torch".

"The Government here, as a sign of liberalization, has given autonomy to the universities, starting the beginning of March. Whether it will result in positive effects, I can hardly say, but I certainly welcome the political direction in which it points; but I do not think that it alone is enough to bring about a democratic social order in this country.

"I have had no difficulties, such as repressions by the CIA or any other authorities in my personal every-day life because of my political activities in Germany. Personally, I am content with my new job and my new life, and especially with this calm city of Chuncheon, called the Vienna of Korea, with its relatively clean air, few cars on the streets, beautiful rivers, lakes and mountains. I bicycle to the University and enjoy it, just as in Cologne."

(21) Adam Paul Banner is getting married (probably is married by now). He and his bride will move to Ann Arbor in the near future. "I have at long last been able to practice Lesson Number Two in life. What is Lesson Number Two? How not to forget Lesson Number One. What is Lesson Number One? How to be patient with life, with self, and with others..."

(22) Francisco Giron B. has returned to his native El Salvador, after studying in Hamburg and Glasgow for the past several years. He writes (1/30/84): "Last week the fourth congressman of the rightist political party, "ARENA", was murdered. Some PDC congressmen have also been killed, through this almost 4-year-old war. This disproves the argument of the Marxist-Leninists that to participate in the elections would be suicide for those belonging to their party. There is indeed the danger of getting killed for taking part in the electoral process, but this chance is equally high for those in the right, center or far left.

"Being a social democrat myself, I do not support PDC or ARENA; yet I consider it my obligation to expose the vices of the Marxist-Leninists, vices best described by Bertrand Russell in his short essay, 'Why I Am Not A Communist.'"

(23) Jim McWilliams tried his hand at driving a big rig (for big money, we assume.) It was not a success, from Jim's point of view. He suffered. Excerpts from his letters:

My third day on the road, headed north toward Fort Worth, Texas, at 4:30A.M. The lout I was riding with turned the truck over at 65 miles per hour. He went to the hospital and I went on another truck. I felt like quitting but wanted to recoup the money I borrowed to go to the truck driving school.

My second week on the road I got into a blizzard while driving through Chicago during the evening rush hour. Not much later that night, I was stuck in a snowbank on a closed highway in Ohio.

I'm paid only 9 1/2 cents a mile, and for the last 24 hours I've been sitting in a cold, bleak terminal yard here in Baltimore, eating 80 cent doughnuts and making no money.

[After driving in New England] I had always felt I would not want to live up here in this cold country, and now I know it. I am weary of snow- and ice-covered highways, of truck stops and freight yards filled with mud, diesel and slush. This is no life at all. It is a nightmare.

Runmaging through a bag of dilapidated paperbacks and waste paper here in the driver's lounge, I found a coverless copy of The Autobiography of Bertrand Russell, 1872-1914. How it got here, I'll never know. I am reading in the "Appendix: Greek Exercises." We have felt much alike, he and I. He says, in "Childhood", "What stays in my mind is the impression of sunshine." And earlier, "I grew accustomed to wide horizons and to an unimpeded view of the sunset. And I have never since been able to live happily without both." It is what I have known and wanted and, when this nightmare is finished, it is what I will have again, sunshine and wide horizons, in South Texas.

I have just retired from over-the-road trucking. My advice is: What ever you do, don't keep on truckin'. I'm not coming to the meeting in Toronto. I have to go to summer school and work on my teaching certification. Anyway, after this past winter, I do not want to see the Midwest and the Northeast for a long time.

(24) Warren Allen Smith has been his usual remarkably active self. His year-end letter mentions that: he will attend his Minburn (Iowa) High School's summer reunion; he is into his 35th year as high school teacher (English); he continues, with Fernando Vargas, to operate his recording studio; he continues to be active in Mensa's investment club, as stock selection chairman -- to mention some of the ways in which he manages to pass the time. "The West Indian I've been tutoring for over three years had to drop out of

Manhattan College because of money problems, so (despite the fact that he'd once stolen a TV set from me) I let him move in with me in Stamford — he's now on his feet, working as a chauffeur for a Mobil exec. (and as an assistant for their 18-year-old blind and retarded 'son' whom they picked up on the streets of Iran years ago — what an inspiring act on their part!), and this past week I've helped him register as a Democrat, and get his driver's license in Connecticut. If everything works out, he'll be paying 1/3 of my rent and supplying some welcome noise around the place..."

HONORARY MEMBERS

(25) Freeman Dyson on Joseph Rotblat, in The New Yorker (Feb. 20, 1984, p. 67):

Some of the people who worked under Oppenheimer at Los Alamos asked themselves afterward, "Why did we not stop when the Germans surrendered?" For many of them, and for Oppenheimer in particular, the principal motivation for joining the project at the beginning had been the fear that Hitler might get the bomb first. The Germans had a large number of competent scientists, including the original discoverers of nuclear fission; and a secret German uranium project was known to exist. The danger that Hitler might acquire nuclear weapons and use them to conquer the world seemed real and urgent. But that danger had disappeared by the end of 1944, when it became known that the German uranium project had not progressed far enough to make the manufacture of bombs a serious possibility. Nobody imagined that Japan was in a position to develop nuclear weapons. So the primary argument that persuaded British and American scientists to go to Los Alamos had ceased to be valid long before the Trinity test. It would have been possible for them to stop. They might at least have paused to ask the question whether in the new circumstances it was wise to go ahead to the actual production of weapons. Only one man paused. The one who paused was Joseph Rotblat, from Liverpool, who, to his everlasting credit, resigned his position at Los Alamos and left the laboratory in December, 1944. Eleven years later, Rotblat helped Bertrand Russell to launch the Pugwash movement, an informal international association of scientists dedicated to the cause of peace. From that time until today, Rotblat has remained one of the moving spirits of Pugwash.

This excerpt is from a 4-part New Yorker series now published in book form. The book is reviewed in this issue (14,16).

BRS LIBRARY

(26) Books to lend. BRS Librarian JACK RAGSDALE lists the books on the next page. No charge for borrowing. Borrower pays postage both ways. Please send postage (in any form) when requesting books; any excess will be refunded in stamps. A schedule of postage within the USA is shown; those outside the USA can determine the weight from the postage schedule: 37 cents represents 2 oz (first class); 63 cents, 1 lb. (book); 86 cents, 2 lbs. (book). Beyond that, better consult Jack; his address is on Page 1, bottom. We will list books for sale in a future issue.

When no author is named, the work is by BR. The donor's name appears at the end.

1. History of Western Philosophy. Jack Ragsdale.
2. Mysticism and Logic.
3. Bertrand Russell's Best. Edited by R.E. Egner. Ramon Suzara.
4. An Outline of Philosophy. Ramon Suzara.
5. Autobiography of Bertrand Russell, Vol.1. Ramon Suzara.
6. Let Me Die Before I Wake. by Derek Humphry. The Author.
7. Essay on Bertrand Russell. Edited by E.D. Klemke. Bob Davis.
8. Morals Without Mystery. by Lee Eisler. Author.
9. Authority and The Individual. Don Jackanicz.
10. Autobiography of Bertrand Russell (in 1 Vol.). Don Jackanicz.
11. Bertrand Russell 1872-1970. Don Jackanicz.

TOWARD NUCLEAR DISARMAMENT

(27) A Dyson Interview in the Washington Post (4/9/84, B1) throws some light on Dyson's remarkable ability to reconcile apparently irreconcilable points of view. In his new book Weapons And Hope, he demonstrates that he understands the outlook of each of the two adversaries, the the military and the peace movement, the "warriors" and the "victims", as he calls them — something no one else, as far as we know, has been able to do. What's more, he threads his way through all the arguments and shows how the opposing positions can eventually be reconciled, and a non-nuclear world achieved. Quite a feat!

Here is a brief excerpt from the Washington Post interview:

At first, his sci-clan loyalties led to hawkish pronouncements like the one he wrote for Foreign Affairs in 1960: "Any country which renounces for itself the development of nuclear weapons, without certain knowledge that its adversaries have done the same, is likely to find itself in the position of the Polish Army in 1939, fighting tanks with horses." But by the mid-'70s, he was calling that statement "a desperate attempt to salvage an untenable position with spurious emotional claptrap" and arguing (in "Disturbing the Universe") that "somewhere between the gospel of nonviolence and the strategy of mutual assured destruction there must be a middle ground . . . which allows killing in self-defense but forbids the purposeless massacre of innocents."

The conciliatory syntax is pure

Dyson, who is never more comfortable than when wrapped in seeming antitheses. He first gained fame in his twenties by reconciling two apparently contradictory accounts of quantum electrodynamics and later tried to do the same for spin waves. "Oh yes. Physics is full of this idea of complementarity, which was the gospel according to Niels Bohr—that in order to understand something, you needed to look at it from two antithetical points of view." And "that style of description is very much a habit with me, so it's sort of natural to describe things that way outside of physics." As in the new book, which he begins by observing that the nuclear debate is divided into "warriors" and "victims" and that "my task is to explain them to each other, to fit together the split halves of our world into a single picture."

"Disturbing the Universe", referred to above, is Dyson's earlier book.

RELIGION

(32) O'Hair is gloomy, as reported in the New York Times (4/20/84, p. A10):

Leader of Atheist Center Sees U.S. Heading Into 'Legally Bound Theocracy'

By ROBERT REINHOLD

Special to The New York Times

AUSTIN, Tex., April 16 — Madalyn Murray O'Hair walked out to the parking lot of her American Atheist Center here and pointed at the six-foot fence topped with three strands of barbed wire and then at the front window. "We had 11 bullet holes in that window, our truck window was broken out several times, our tires punctured and they poisoned our beautiful palm trees with salt water," she scowled, shaking her head. "Christian people are nasty."

The sense of siege hanging over the center on the northwest side of this capital city of Texas, deep in the Bible Belt, is symbolic of the growing defensiveness of her atheist movement at a time of renewed entry of religion into American political and governmental affairs.

Just over 20 years ago, Mrs. O'Hair won a landmark Supreme Court decision that outlawed the recitation of officially sanctioned prayers in the public schools as a violation of the First Amendment ban on establishment of an official religion. But today, long after she thought the battle was over, Mrs. O'Hair watches with dismay as new attempts are made to reintroduce prayer into the schools through a constitutional amendment, as the Supreme Court approves a city-sponsored Nativity scene in Pawtucket, R.I., and as the Reagan Administration appoints an Ambassador to the Vatican.

She Sees a Legal Theocracy

"I think church-state separation in the United States has been absolutely wiped out and we are headed into a legally bound theocracy that you would

not believe," she said. "And as we head into that I feel more and more people are dropping away from religion."

This Easter weekend, with a flair for the provocative symbols that has marked Mrs. O'Hair's long crusade against what she sees as the "evil" forces of religion and idolatry, the American Atheists will hold their 14th annual convention in Lexington, Ky.

The convention will have much to discuss. And Mrs. O'Hair, not exactly a shrinking violet, seems almost to warm to the prospect of a new fight against what she sees as the pernicious intrusion of the church into public matters: school prayers, tuition tax credits for parents of parochial school pupils, tax exemptions for church property, the use of religious symbols on currency, and crusades against abortion and sex education.

But her strategy, she said, has changed. Her sharpest weapon, the judicial system, has been blunted. "We have totally abandoned lawsuits now," she said. "The courts are absolutely inhospitable to us. There's no way we can win."

What has changed in 20 years? "We have moved into a reactionary phase in our politics," she said. "It is totally reflected in our courts. Tell me any minority group that's having a good time. We cannot go to the President after Roosevelt. The legislative branch has always been under the domination of religious groups."

They Promise Big Ratings

Her new strategy is "education"; that is, publicity. "We have decided it is necessary for us to get on television," she said, and a regular television "forum" is shown on 32 cable outlets in the country. In addition, with a nose for controversy, the atheists distribute a "media handbook"

that promises radio and television producers that an atheist speaker will "1. make those phones ring, 2. boost your ratings, 3. bring in the mail."

"I have been on more television and radio programs than other other person in the United States over this 20-year period," Mrs. O'Hair said, with characteristic understatement. "And there has been more written about me."

Not all of it has been flattering. Her combative approach has alienated some potential allies among religious groups that profess a belief in church-state separation, including the Seventh-day Adventists, Southern Baptists and Jews, and even some fellow atheists and agnostics. She has called the Bible an "idiotic" book and offended many Jews by her anti-Zionism.

Such allies are unwanted, Mrs. O'Hair says. "When you get down to the nitty gritty," she said, "and we say to a church, O.K., you want to play church-state separation, let's you voluntarily start paying an equivalent of what your taxation should be, they head for the door. They do not care to be involved with us at all, because we mean church-state separation. The Seventh-day Adventists have the greatest reputation as separatists. But they took more land from the U.S. Government tax-free after World War II. Thirty percent of all privately owned land is owned by churches and church institutions. What does that mean for my taxes?"

Small Donations Rise

Have her members been galvanized by the religious upsurge? Mrs. O'Hair refuses to disclose membership figures. "We don't want to play numbers games because it is not important," she said. She said that nearly all support came from "grass

roots" memberships at \$40 each, \$15 for students and the elderly, and from small donations, which she said did seem to have increased in recent months. The center occupies a 32-room, 7,215 square-foot building and employs 11 people.

Mrs. O'Hair speaks out against almost every aspect of American government. Among the Democratic Presidential candidates, she notes that former Vice President Walter F. Mondale is a minister's son, Senator Gary Hart has a divinity degree and the Rev. Jesse Jackson is a minister. And, she points out, President Reagan regularly invokes religious themes to support his policies.

Behind all this she sees the culmination of nearly 40 years of anti-Communism. "After World War II," she said, "the U.S. Government said to the Christian community, 'We want you as allies, we're going to be Christian good guys, Christian capitalists in the white hats and we are going to be fighting the dark and nasty atheistic Communists.' And it worked."

Recently, Mrs. O'Hair said, Larry Flynt, the publisher of Hustler magazine, offered to sign over his assets, reportedly worth \$300 million, to the Atheist Center. While she said she did not endorse pornography, Mrs. O'Hair supports Mr. Flynt's testing of the limits of free expression.

Mrs. O'Hair said she and her son, Jon Murray, considered the offer for a month but declined. "Religion is the reason for the perversion of human sexuality, with the sin and fear and guilt," she said, "There would be no pornography if sex were just as open as food. So we had this choice of profiting from the effect or fighting the cause of it. I admit to insanity. Think what I could do with \$300 million — I could make the Supreme Court eat their decisions."

We think there's a lot in what O'Hair says, but why does she have to say it the way she does? Why kick the Seventh Day Adventists in the teeth — who are on her side for separation of church and state? Too bad she doesn't follow George Bernard Shaw's advice to social reformers: one thing at a time. "If you are campaigning against women's high heels, be sure to be wearing a smart hat."

(33) Epicurus puts the question this way →

(Thank you, HUGH McVEIGH)

HOW COMES EVIL?

Either God wants to abolish evil,
and cannot;
Or he can, but does not want to;
Or he cannot, and does not want to.

If he wants to, but cannot,
he is impotent.
If he can, but does not want to,
he is wicked.
If he neither can, nor wants to,
He is both powerless and wicked.

But if God can abolish evil,
and wants to,
Then how comes evil into the world ?

BRS AWARD

(34) Dora accepts the offer of the 1984 BRS Award (RSN41-49), we are delighted to report. Here is her letter of acceptance:

Corn Voel
Porthcurno
Penzance
Cornwall TR19 6LN

5 March 1984

Donald W Jackanicz
The Bertrand Russell Society Inc
901 6th St SW — 712A
Washington
DC 20024
USA

Dear Donald Jackanicz

Thankyou very much for your letter of 23 February saying that the Bertrand Russell Society wishes to present me with their award. I feel this to be a very great honour and thank you and the Committee very much.

I doubt very much if my age will permit my coming to America. I am physically fit, but find travel difficult and tiring; I cannot walk far and almost need a wheelchair.

The other difficulty is commitments to writing here at home, which must be done - the third autobiography is not yet finished, due to the fact that the BBC and ITV have been visiting me with camera teams and taking up my time and energy.

I do thank you all very much. I would like to meet you, but I don't think this will be possible. I would like to congratulate the Bertrand Russell Society on the very fine work which it has done and is continuing to do.

Yours very sincerely

Dora Russell

Dora Russell

BR ATTACKED

(35) By Albert Barnes. After the CCNY incident, BR gave a series of talks at the Barnes Foundation. In the foreword to his best-seller, *A History of Western Philosophy*, BR wrote, "This book owes its existence to Dr. Albert C. Barnes, having been originally designed and partly delivered as lectures at the Barnes Foundation in Pennsylvania." Barnes owned a patent medicine, Argyrol, which had made him rich. Barnes fired BR in 1940. BR sued for breach of contract, and won. "Barnes then published this pamphlet in his own defense, to show just cause for his firing of BR. BR stated that, 'No doubt it was good reading.'" We are indebted to AL SECKEL for the remarks in quotation marks, as well for the pamphlet, which follows:

THE CASE OF Bertrand Russell vs. Democracy and Education

by
ALBERT C. BARNES

Two years ago the newspapers of three continents informed their readers that Bertrand Russell had been ousted from a highly paid job and named me as the person responsible. More recently the same papers reported that Mr. Russell had won his suit for alleged breach of contract. *What they have not reported is that we were never given an opportunity to present in Court the circumstances which led to Mr. Russell's dismissal.* The purpose of this pamphlet is to put on record publicly the facts responsible for a serious break in the most vital strands in the fabric of American life.

My own connection with Mr. Russell's career began in 1940. In February of that year he was appointed Professor of Philosophy at the College of the City of New York, and a bitter public outcry immediately arose that Mr. Russell was morally unfit to teach, that his appointment was a civic outrage. On March 30, Justice John E. McGeehan, of the Supreme Court of New York, voided the appointment, chiefly on the ground that Mr. Russell was an open advocate of immorality. Largely through political chicanery, Mr. Russell was *denied the right of his day in Court.* Convinced that this constituted a flagrant violation of the Bill of Rights, John Dewey and eight other scholars representing the Committee for Cultural Freedom prepared an account of the facts and the law involved, which appeared in a book entitled "The Bertrand Russell Case." To this I contributed a Foreword; also the cost of publication.

In this Foreword I wrote:

"The book is simply the record of an inquiry into the facts of the case—an inquiry conducted by specialists qualified to examine its manifold aspects and to relate their findings to the principles of justice, law, humanity, and common decency, as these are set forth in the Constitution of the United States and in the Bill of Rights."

This Foreword, as quoted, is equally applicable to the present case; and the recital which follows is prompted by the same concern for justice and a full airing of the facts that prompted the book in question when Mr. Russell was the victim.

The plight of Mr. Russell, deprived by Justice McGeehan's decision of the constitutional right to a fair trial, came at a moment when the Barnes Foundation had decided to supplement its courses in the appreciation of art by a systematic course in the historical and cultural conditions under which the traditions of art developed. Mr. Russell's early training in philosophy, his knowledge of the history of ideas, and his gifts of exposition seemed adequate qualification for the position to be filled. Though I knew of Mr. Russell's propensity for getting himself embroiled with established law and order, and was aware that after brief engagements at Harvard, Chicago, and the University of California he had been permanently retained nowhere, I decided to take the risk of recommending him for the position at the Barnes Foundation. My friend, Professor Dewey, wrote to Mr. Russell to inquire whether he would be interested and, upon his receiving a favorable reply, I went to California to discuss the matter with Mr. Russell himself.

I explained fully to Mr. Russell that for more than twenty years we had been conducting a plan of adult education, putting into practice, by means of scientific method, the conceptions propounded in Dewey's classic volume, "Democracy and Education"; I told him that we employed the same method, not of authority handed down from above but of free discussion, in which staff and students participated

by pooling their knowledge and endeavoring to achieve a genuinely shared experience. I told him that at a weekly staff meeting the teachers discussed problems presented by their students; that applicants for classes had to be approved by the Board of Trustees, and that those selected were required to attend classes regularly and were expelled if their behavior interfered with the rights of any other student.

Having thus put before Mr. Russell the program of the Foundation and the functions of its teachers, I asked if he approved and if he wished to become a member of the staff. He replied emphatically that he did approve and that it would be "a pleasure, a privilege and an honor" to be identified with the program. The plan outlined to coordinate Mr. Russell's course with those already in operation at the Foundation would take five years to complete, including preparation of a book embodying Mr. Russell's lectures. He asked for a contract to cover the entire five-year period and we agreed upon six thousand dollars as yearly salary. Four days after a contract embodying these terms was executed, Mr. Russell wrote me: "You have made the most enormous difference to my peace of mind and power of work—more than I can possibly express."

About a month later, Mr. Russell called at my office and told me that he would be compelled to abandon popular lecturing if he were to do his work for us properly, but that the sacrifice of income involved would present him with a serious financial problem. When I asked him exactly what the amount of the sacrifice would be, he told me that it would be two thousand dollars a year, and added that he was sick and tired of popular lecturing and wished to devote all his energies to serious work. Upon my further inquiry whether he meant that if I could arrange for an increase in his salary from six to eight thousand dollars he would agree to discontinue all popular lectures and give the time thus saved to work for the Foundation, he eagerly assented, reserving only the right to deliver, "a very occasional lecture to some university audience." On this basis, his salary was increased to \$8,000.00 per year. Four weeks later he wrote me, "I look forward to a quiet life without popular lecturing, which I hate."

In my conversation with Mr. Russell in California, I had particularly emphasized the fact that our educational program was a joint enterprise, involving participation by all the members of our staff as well as our students. Accordingly, I arranged for a meeting of Mr. Russell and our other teachers at the earliest possible moment after he assumed his duties. The result of this meeting was completely barren: Mr. Russell showed not the slightest interest in what the other teachers were doing, or desire to acquaint them with his plans for his own course, or the purposes he intended to carry out in it. He evidently had no conception of what was implied in a cooperative undertaking and no desire to find out. This was our first intimation of the shape of things to come.

During the first five months of his stay at the Foundation, Mr. Russell lectured for the most part extemporaneously, with reference to his manuscript chiefly for topics or to quote *verbatim*. He was fluent, vivacious and witty, and the students were attentive and interested; on the other hand, he never attempted to relate the content of his lectures to the students' interest in art, and certainly not in the slightest degree to what they learned in our other courses. He lectured only once every week, from October 1 to May 31 each year. He was in the habit of entering the building just in time for the start of his one-hour lecture at quarter after two, devoting never more than fifteen minutes to answering questions after the class, and then leaving the building immediately. Never did he mingle with the students on informal terms or encourage those who were shy to ask him questions in individual conversation, or seek to discover angles of approach that they might find interesting or enlightening.

In one of his lectures, when a question of morals was raised, Mr. Russell roundly asserted that issues involving ultimate moral or social values could not be settled by the use of scientific method, but only by a "bash on the head"—by violence or terror. Nothing better illustrates Mr. Russell's substitute for scientific method than his procedure whenever a question relating to religion or morals came up for discussion. When, for example, he discussed the Jewish rituals, it was in a tone of ridicule and derision; and on one occasion he related with great gusto a story about an anonymous book, the thesis of which was that "the three greatest impostors in history were Moses, the Virgin Mary, and Jesus Christ." Mr. Russell added, gleefully, that since the author of the book is not known, "I would now like to put in my claim for its authorship."

In one of his books, Mr. Russell refers to a type of condescension "which delicately impresses inferiors with a sense of their own crudity." It was this manner of condescension which served as Mr. Russell's "bash on the head" to intimidate and reduce to silence anyone who might be disposed to submit his opinions to discussion. By it he established a reign of terror which isolated him from his students as effectively as he had already isolated himself from his colleagues.

Almost immediately upon Mr. Russell's arrival in Philadelphia, and before he assumed his duties at the Foundation, it became apparent that there was a disturbing factor in the situation of which we had had no previous inkling. This factor was Mr. Russell's wife. At the outset she made it known to us that she is "Lady Russell." Her demeanor contained more than a suggestion of imperiousness, and her manner with the members of the staff made it apparent that she expected to exercise distinctly unusual prerogatives. She arrogated to herself the right to attend classes without complying with the usual formalities, and at whatever time suited her own convenience. On one occasion she burst into the building and created a scene by a loud and imperious command to one of the members of the Board of Trustees. This tantrum was one of a series of disturbing events which began soon after Mr. Russell's course started and recurred frequently.

A rising tide of complaint from members of the class testified that the normal management of the Foundation's affairs was being disrupted by her disorderly conduct—to put it mildly. A written report given to Mr. Russell called his attention to recorded details of this impossible situation and its lamentable incongruity with an educational program designed to embody equal rights for all. His reply was that he had not shown the complaint to his wife and that he hoped the matter would go no further—a reply which gave the impression that fear of his wife's reaction to the complaint deterred him from informing her about it, and that no remedial action could be expected from him.

Several months later, Mrs. Russell's continued defiance of law and order necessitated official action by the Board of Trustees. She was informed that—"The Foundation has never been a place where people may drop in occasionally, at their own volition, nor is any person whosoever allowed to do things that interfere with the rights of others or are harmful to the Foundation's interests."

Her reply to this was a tirade composed of arrogance, rage and self-pity. Mr. Russell's contribution to the incident was a curt and incisive note in support of his wife. The correspondence closed with a reminder to Mr. Russell that "when we engaged you to teach, we did not obligate ourselves to endure forever the trouble-making propensities of your wife." The question thus forced upon us was to settle whether autocracy or democracy was to prevail in the conduct of the Foundation's affairs. It was settled by a formal notice to Mrs. Russell to stay away from the Foundation.

With this dismissal of his wife, a steady deterioration in the quality of Mr. Russell's lectures set in. His manner in the classroom lost its animation and grew perfunctory, even apathetic. More and more he merely read from his manuscript, and more and more what he read consisted of matter accessible to all in standard works of reference. Often he spoke so fast that a skilled stenographer could not take accurate notes of what he said. During the discussion period after the class he was increasingly disposed to answer questions with a chuckle, a wisecrack, or a reply which subjected the questioner to ridicule.

The result showed quickly in the attendance figures, and became constantly more unmistakable. Absences multiplied; more and more members withdrew entirely from the class; it was the better students who went, the poorer who stayed. By December of 1942, of the sixty selected students originally admitted, only eleven were left.

Shortly after the beginning of the second year of his course, a fresh development came to light which compelled us to review the whole situation of which Mr. Russell was a part. It will be remembered that a few weeks after Mr. Russell was engaged and the amount of his salary fixed, his annual salary was increased by two thousand dollars, in consideration of which he was to discontinue popular lecturing after April 1, 1941, when a contract for popular lectures expired. Now we learned that at a time subsequent to that date Mr. Russell had gone back to popular lecturing; not to giving, in the terms he had used in his letter to me, "a very occasional lecture to some university audience," but to widespread popular lecturing even though, after his salary had been increased, he had written me, "I look forward to a quiet life, without popular lecturing, which I hate."

With this gross breach of contract in mind, we began to consider the question of his dismissal from the staff, but delayed action for several months while we submitted the entire evidence to a group of distinguished authorities in ethics and law. The legal experts' opinion was that he had broken his contract by popular lecturing and by his upholding of Mrs. Russell's disorderly conduct. The ethical support of the legal opinion was based upon Mr. Russell's performance as a member of the Foundation's teaching staff; that is, he never made any efforts to bring what he was doing into fruitful relationship with the work of his colleagues; his lectures appeared to be a task for him and had been a dreary ordeal for those who had abandoned the class; he had made not a single contribution to the solution of problems confronting the rest of the teaching staff or to the organization as a whole. Never, in short, did Mr. Russell in any manner or degree identify himself with the Foundation's program of democracy in education. His appearance for one hour and fifteen minutes, once a week, for which he received two hundred and fifty dollars each time, amounted to punching a time clock in order to obtain an inordinately large paycheck. Finally, in December, 1942, we decided that the farce could go on no longer and he was dismissed.

* * * * *

The foregoing recital sets forth the circumstances under which Bertrand Russell joined the staff of the Barnes Foundation, the conditions to which he agreed at the outset, and the failure on his part to live up to those conditions which resulted in his dismissal. A brief summary now of the aims and methods of the Foundation's educational program will reveal the conflict between Mr. Russell's autocratic and authoritarian attitude toward life and the democratic and scientific attitude on which the Foundation's program has always been based.

The account of this program which follows consists of a simplified statement of the fundamentals of the philosophy of John Dewey as applied to education. This system rests on the axiom that the indispensable elements of the democratic way of life—scientific method as intelligence in operation, art, education—are all bound together in a single organic whole. To put the matter in other terms, all genuine experience is intelligent experience, experience guided by insight derived from science, illuminated by art, and made a common possession through education. This conception has implications of the most far-reaching import. When the common experience which ought to be the birthright of all human beings is broken by barriers of ignorance, class-prejudice, or economic status, the individual thus isolated loses his status as a civilized human being, and the restoration of his wholeness is possible only by reestablishment of the broken linkage.

Applied to the field of education, this conception implies that the prevailing academic methods of instruction in art are misdirected from the very beginning. What the student needs to know is not how men of genius produced immortal masterpieces long ago, but how in the world that his own eyes show him he can discover more and more of what lends

color and zest to what he does from day to day. The masterpieces have their indispensable function, but it is the function of guiding and training the student's own perception. Not of standing in remote isolation as objects of worship or occasions for gush.

The misconception which identifies art with what is remote, high-flown or artificial is paralleled by another which confines science to the laboratory or lecture-hall. If the chemist is thought of as operating exclusively with balances and test-tubes, the astronomer as helpless without a telescope, or the historian as a reader of volumes or manuscripts in a library, the essential factor of scientific procedure is lost sight of. Science is science not because laboratory apparatus or words of a technical vocabulary are employed, but because observation and reflection are joined and correlated by methods that have proved themselves to be illuminating and fruitful. The problems with which science is concerned originate outside the laboratory—in the fields which must be tilled, the swamps that must be drained, the epidemics that must be controlled, the refractory human beings whose acts and purposes must be harmonized for the sake of a good social order. As the problems crystallize, possible solutions take form in the realm of hypothesis, and it is in the laboratory that these receive their first experimental test; but the testing is never complete until the course of reflection has flowed out into the world again, and human activities there have been given a wider scope and a richer meaning.

Education is growth, the development of the faculties with which every normal child is born. Growth is gradual, fostered only by means of communication between the individual and his world. Education provides an orderly progression of the means by which the avenues of communication are gradually widened in scope. It is a never-ending process that extends from the cradle to the grave. "Gradual" means a succession of steps or stages. If the learner attempts to vault over the stages through which natural growth inevitably proceeds, the result is pretense or self-deception, sham erudition masquerading as "culture." It is a view only too widely prevalent that what is "common" is commonplace, and hence contemptible; that distinction consists in avoiding and despising the common; and this is the view that inevitably leads in practice to the gentility which is only another name for vulgarity. In contrast, any work which proceeds from real living has its own integrity and dignity and whether it succeeds or fails never sinks into the meretricious or tawdry.

The interconnection of science and art becomes more fully apparent when we consider them both as means of communication, as indispensables in all educational movements. Born, as we all are, helpless and speechless and dependent upon others for all the necessities of life, we must acquire slowly and gradually the capacities which make life more than a sum of vegetative and animal processes. As the utterly self-centered and uncomprehending infant develops, the chaos which is his world begins to take on

order and to mirror the objective world which lies about him. He learns to relate his cries, wails and random movements to what the things, and especially the persons, in his environment *do* to him. At some point in his growth he grasps the difference between things, which simply affect him, and persons who communicate with him. Throughout the rest of his life he elaborates the distinction. He learns that he must not treat persons as things: this is the dawn of morality. He learns that a more penetrating, a more comprehensive grasp of things enables him to do with them what he could never do by his untutored impulses: this is the dawn of science. He learns, for example, that with particular tones of his voice, gestures, combinations of words, he can make others aware of what he sees with his mind's eye: this is the dawn of art.

Morality, science, art, all alike, are forms of communication, possible only through the sharing of experience which constitutes civilized living. In its widest sense, education includes all of them; but only if education is conceived, not in the conventional sense, as preparation for life, but as living itself. To have conceived education thus, and to have developed the conception until it covers the whole field of human experience, has been the supreme achievement of John Dewey—an achievement rarely paralleled in scope in the entire history of education.

* * * * *

The foregoing consideration makes it possible to state briefly the case against Bertrand Russell. If education is designed to enrich the experience of the student by making him an active participant in the widest and deepest experiences which art, science, and civilization have developed, then Bertrand Russell contributed little or nothing to the education of his class. The reason for his failure was that he himself had no conception of democracy as a sharing in significant experience. The history of ideas about which he lectured was a history of abstractions torn from their human context, with not the slightest recognition of the concreteness of experience throughout all its history. In the religious and moral history of the past Mr. Russell could see mainly an occasion for derision and contempt. Above all, he felt so little share in the desire of his students to relate the things he was talking about to their own experience, that the fear of his ridicule froze on their lips the questions that they would have liked to ask. If they learned anything whatever of democracy in education from him, it was because he presented them with the perfect example of its antithesis.

School Prayer vs. the Atheist Child's Civil Right

To the Editor:

The debate over the return of organized prayer to public schools has been disappointing for the silence of a group that ought to be among the most vocal: the atheists. Unfortunately, atheism is a political anathema, unjustly associated with Communism and immorality in the minds of most Americans, so that atheists

hesitate to assert their rights for fear of public denunciation and scorn.

Proponents of school prayer claim that we all worship the same God, and ought to do so together in the classroom. Opponents object that no meaningful form of worship can be found that would satisfy everyone. While this objection is surely valid, the claim of atheists is far stronger.

Religious freedom includes the right to accept or reject any religious doctrine, including the existence of a God. To protect this freedom, we must not allow the state to encourage or discourage any particular religious belief. Any official sanction of organized prayer in public schools violates the religious freedom of atheists and must be prohibited. Of

course, individual students may pray in school on their own time, but no figure of authority should encourage or discourage such prayer. Then no student's rights will be violated.

Some people argue that in a democracy we must respect the wishes of the majority; if the majority wants school prayer, so be it. But democracy means more than just majority rule, which can lead to oppression of minorities.

This has happened to blacks in America, Jews in Nazi Germany and various minorities in today's Iran.

To prevent such tyranny, the Constitution establishes strict limits on the application of majority rule. The basic civil rights of a minority must be respected, no matter how small the group or how unpopular its opinions. And one of these rights is that of an atheist to his or her beliefs.

It is sad to see our country moving away from these principles. The Supreme Court has decided that government may spend tax money to display religious symbols in public places and to pay armed services chaplains. Now some people would see the state coerce atheist children (they do exist) to pray to a God in which they do not believe.

ON DISARMAMENT TALKS

(37) From the New York Times (2/13/84, E19):

McLEAN, Va. — President Reagan has started his re-election campaign with a public-relations attempt to demonstrate that he and his Administration have been serious about controlling nuclear weapons and reducing the risk of nuclear war. But this public-relations blitz does nothing to change President Reagan's dismal record on the nuclear war issue, which is critical to our survival.

The blitz began with the President's own deceptively placatory speech designed to convince our allies that he really wished accommodation with the Soviet Union. Next, Paul H. Nitze, his negotiator for intermediate-range nuclear forces talks at Geneva, and then Edward L. Rowny, his strategic arms reduction talks negotiator, appeared in print and on television, arguing that the Administration's negotiating positions were sound and flexible. Secretary of State George P. Shultz said in Stockholm on Jan. 17 that Washington was ready "for early progress" once arms control negotiations were resumed.

In fact, the President deserves scant credit for any improvement in his arms control policy. Only under pressure from people in this country and Europe did he initiate any arms control negotiations. The talks on intermediate-range forces were started 10 months into his term and then only at European leaders' insistence — demands generated by the public outcry over the forthcoming deployment of Pershing 2 and cruise missiles. The strategic arms reduction talks were not begun until 17 months after Mr. Reagan took over and again only as a result of widespread American public alarm among freeze-movement activists, physicians, scientists, lawyers and other concerned organizations.

What in fact has the President done to curtail the arms race?

• He postponed indefinitely the ne-

Herbert Scoville Jr., former assistant director of the Arms Control and Disarmament Agency and Deputy Director of Central Intelligence, is president of the Arms Control Association.

Poor Record on Arms

By Herbert Scoville Jr.

negotiations on a comprehensive test ban treaty even though these talks had been supported by every Republican and Democratic President since Dwight D. Eisenhower. The need to do more nuclear testing was cited as the reason for putting off the talks.

• He sent the Threshold Test Ban and Peaceful Nuclear Explosion Treaties, signed by Presidents Richard M. Nixon and Gerald R. Ford, back to Moscow for revision.

• He refused to resume discussion on limiting anti-satellite weapons and, instead moved with high priority to begin testing an advanced weapons system for destroying Soviet space vehicles.

• He proposed vast and expensive programs for ballistic missile defense systems, which could require abrogation of the Anti-ballistic Mis-

begun, the Russians have predictably broken off negotiations and begun to pursue an equally misguided course — deploying more missiles aimed at Western Europe. The only ray of light in these talks was the so-called walk-in-the-woods of Mr. Nitze and his counterpart, Yuli Kvitsinsky, in which the chief American negotiator privately offered to postpone deployment of the Pershing 2 missiles. Yet, in the aftermath of this unofficial move, the director of the Arms Control and Disarmament Agency, Eugene V. Rostow, was forced to resign for his "overzealousness."

The Administration has been required to modify its original proposal several times under Western European pressure, yet it still has not faced up, even implicitly, to the real roadblock in these negotiations — the

date has been set for their resumption. In this case, too, our initial negotiating position was clearly unacceptable — and would have decreased American security had it been accepted. Its primary weakness — that it would have increased the vulnerability of the weapons by which both the Americans and Russians deter a first strike and thus would have made a nuclear war more likely — was recognized by the bipartisan commission on the MX missile. The American position was subsequently modified, but as long as Mr. Reagan insists that the MX and the Trident 2 missiles be the mainstays of the American force, he will be undermining the stability of the nuclear balance.

Now Mr. Rowny has expressed optimism that the Russians will soon return to the table and negotiate seriously. Yet he admits that our proposals, which he recently discussed with President Reagan, are no different from those presented last October and that the Russians have shown little interest in them. In fact, Yuri V. Andropov's death makes it even more unlikely that talks will be resumed.

Mr. Rowny also proclaims that Washington is at last willing to discuss trade-offs of Soviet and American advantages in certain classes of weapons. Such trade-offs are, of course, the essence of any successful arms control negotiations, and yet it is only after three years in office that Mr. Reagan is prepared to discuss such a deal.

Given this record of delayed action, cover-ups and political posturing, it is hardly surprising that the American people are skeptical about the President's seriousness about arms control. The President was successful in getting some gullible Congressmen to support the procurement of MX missiles because they did not want to be blamed for his arms control failure. But in the absence of any negotiations, it is unlikely that he will be equally successful in counting the American people in this election year. This explains his real concern about the suspension of all nuclear weapons talks with Moscow.

sile Treaty of 1972, the Outer Space Treaty of 1967 and the Limited Test Ban Treaty of 1963.

Negotiations have been used not merely to cover inaction in real arms control but also to justify the procurement of new nuclear war fighting weapons as bargaining chips.

The President's original position at the intermediate-range forces talks — the so-called zero option for eliminating all Soviet nuclear weapons aimed at Europe in exchange for American agreement to forego the deployment of cruise and Pershing 2 missiles — was palpably nonnegotiable, and Administration spokesmen admitted that they expected no encouraging Soviet response until after the Pershing 2 and cruise missiles were deployed in Europe.

Now that such deployment has

British and French strategic nuclear weapons aimed at the Soviet Union. It is not surprising for the Soviet Union, the only country in the Eastern bloc with nuclear weapons, to be unwilling to ignore these forces — 162 missiles being modernized with multiple warheads. Only now, when the Russians have broken off the intermediate-range forces talks and removed Mr. Reagan's cover for failure to deal seriously with this problem, has the Administration given even the slightest indication of being willing to merge talks about intermediate-range forces with negotiations about reducing intercontinental weapons — a possible politically acceptable tactic for dealing with this thorny issue.

The strategic arms reduction talks are also headed nowhere — Mr. Rowny's optimism notwithstanding. No-

ELECTION OF DIRECTORS

(38) Nominations for Directors, please. We wish to elect 8 Directors this year, for 3-year terms starting 1/1/85, which will give us a total of 24 Directors. The August newsletter will provide a ballot for voting. In this (May) newsletter we seek the candidates who will be on the ballot.

We are asking you to nominate candidates. Any member may nominate any other member to be a Director-Candidate.

If you wish to be a candidate yourself, notify the Elections Committee and someone will probably nominate you.

The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something, by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. The cost of attending meetings is tax-deductible for Directors.

We would like to have more than 8 names on the ballot, so as to give members a choice.

A brief statement about the candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.

Directors whose terms expire in 1984 are JACQUELINE BERTHON-PAYON, BOB DAVIS, ALEX DELY, LEE EISLER, HUGH MOORHEAD, JACK RAGSDALE, and HARRY RUJA. They are eligible for re-election.

To nominate someone -- or to volunteer yourself -- write the Election Committee, c/o the newsletter, address on Page 1, bottom.

RUSSELL SOCIETY NEWS

No. 43

August 1984

- (1) Highlights: Volunteer needed (36). 1984 Annual Meeting in Toronto (2,49,50). Two anti-nuclear letters (24). 4 books reviewed (13,25,26). New BRS Book Award; nominations wanted (8). Members to vote on revised bylaws (54). Doctoral Grant doubled (9). Hook's portrait of BR (6). Tapes to lend (28). Membership list (51). Time to vote (34,54). Index (53). An asterisk in the left column indicates a request.

(2)

ANNUAL MEETING (TORONTO, 1984)

This report is in 3 parts. Part 1: The Conference. Part 2: The Society's Annual Meeting. Part 3: The Board's Annual Meeting.

Part 1, the Conference. It was titled "Russell Conference 84". It was sponsored by the Russell Editorial Project (at McMaster University), The Higher Education Group, Ontario Institute for Studies in Education, and the Institute for the History and Philosophy of Science and Technology (at University of Toronto). It dealt with BR's early technical work.

Here is the program:

RUSSELL CONFERENCE 1984
On Russell's Early Technical Philosophy

Trinity College, University of Toronto
June 21-24, 1984

Thursday, June 21 Registration and Reception

3:00-3:00 Registration 3:00-3:00 at Trinity College, Porter's Lodge,
at 6 Hoskin Avenue
Reception 7:00-8:00 in Senior Combination Room, Trinity College

ALL CONFERENCE SESSIONS IN IGNATIEFF THEATRE, TRINITY COLLEGEFriday, June 22 Welcome, General Remarks and Information on the Conference

9:30-10:00 Welcome and Information on Conference - Ian Winchester
Opening Remarks and Welcome - Kenneth Hare, Provost of Trinity
The Russell Editorial Project - Richard Rempel, Director

Session I: From the Foundations of Geometry to Leibniz

10:00-11:00 Russell's Conception of Philosophy - John Slater (Toronto)
11:00-11:15 Coffee
11:15-12:30 Russell's Foundations of Geometry - Joan Richards (Brown)
12:30- 1:30 Lunch: The Quadrangle, Trinity College
1:30 - 2:30 The Tiergarten Programme - Nick Griffin (McMaster)
2:30 - 3:30 The Picture of Physical Science in 'Leibniz' and 'the Principles' -
Ian Winchester (OISE)
3:30 - 3:45 Coffee
3:45 - 4:45 The Roots of Russell's Discovery of the Paradoxes in Logic and Set
Theory - Greg Moore (Stanford)
7:00 - 10:00 Banquet: The University Faculty Club, 41 Willcocks Ave.
Speaker: W. V. O. Quine
(All registrants and participants)

Saturday, June 23Session II: Early Work on the Theory of Knowledge and the Philosophy of Mind

9:00 - 10:00 Russell's Scientific Realism - Michael Bradie (Bawling Green)
10:00-11:00 Neutral Monism - Bob Tully (Toronto)
11:00-11:15 Coffee
11:15-12:15 Russell's Re-Evaluation of Meigong - Janet Farrell-Smith
(U. Mass.)

Session III: Philosophy of Logic and Language From the Principles to Principia

1:30 - 2:30 The Propositional Logic of *Principia Mathematica* and Some of
Its Forerunners - Daniel O'Leary (Maine)
2:30 - 3:30 Russell's Zigzag Path to the Ramified Theory of Types -
Alasdair Urquhart (Toronto)
3:30 - 3:45 Coffee
3:45 - 4:45 Russell's Logical Manuscripts: An Apprehensive Brief -
I. Grattan-Guinness (Middlesex Polytechnic)
4:45 - 5:45 Extension to Geometry of *Principia Mathematica* and Related
Systems - Martha Harrell (St. John's)
6:00 - 7:30 Supper - Open
7:30 - 10:30 The Bertrand Russell Society, General Meeting in the Boardroom,
The Ontario Institute for Studies in Education, 222 Bloor St. W.

July, 1984-85

Secretary: Margaret Macgregor in the Room 401

President: John W. Mackenzie, 1001 Centre Drive, Suite 401, Toronto, Ontario

President Elect: Don Hart

Chairman of the Board: Alex Ayres

Chairman of the Executive: John W. Mackenzie

Chairman of the Finance: John W. Mackenzie

Chairman of the Public Relations: John W. Mackenzie

Chairman of the Social Activities: John W. Mackenzie

Chairman of the Technical: John W. Mackenzie

Chairman of the Women: John W. Mackenzie

Chairman of the Young: John W. Mackenzie

Chairman of the Students: John W. Mackenzie

Chairman of the Faculty: John W. Mackenzie

The locale was the University of Toronto, with its handsome English-university-style buildings. From the attractive green campus, you would never guess that it is located in the center of a great city.

The facilities were excellent. All IES members were housed in the same building, located just across the street from the site of the Conference. The IES Annual Meeting was held in the splendid Conference Room at the Institute (GRUB). We were indebted to Prof. M. WINTERER (who, we are happy to report, joined the IES during the Conference) and to his colleagues at the University of Toronto for many courtesies.

23 members were there: KEN SHAWWELL, JOHN PALE, FIONIS O'NEILL, BILL EASTMAN, LEE EISLER, ALBERTO GARCIALAZCO, DAVID HART, DON SWENICZ, HARVIN KUBO, CLAUDE LEHMANN, ALAN LING, ARTHUR LEWIS, BOB LOMAX, STEVE MARSHALL, HUIH MORGAN, DAN O'LEARY, TRACY PATE, PAUL RAYLOR, STEVE REINHARDT, HARRY ROO, DAVID SPANGLI, and JOHN VAN ALSTIN; plus two who joined during the Annual Meeting, STEVEN ANDERSON and IAN WINCHESTER. Also present were Honorary Members PAUL DALL and A. J. MITZ, the latter as a participant in the Conference.

Part 2, the Society's Annual Meeting, here are highlights. The Minutes provided more details (49).
 • KEN MARSHALL reported that the task before us is clearly ill. President Becklake will write a letter to his wife, Bess.

• FRANK O'NEILL reported that the IES is solvent, with a year-end balance of \$1734.41.

• LEE EISLER reported on a questionnaire he had sent to dropouts, that had brought some of them back.

• BOB MARSHALL moved that we send letters to world leaders, mostly against nuclear weapons. The motion carried (in part).

• STEVE MARSHALL moved that a 1986 Meeting in Britain be seriously considered. The motion carried.

• HARRY WINCHESTER moved that the amount of the IES 1985 third grant will be doubled, to \$1000 in 1985.

• BOB also granted the resolution, as had a letter from PAUL ARTHUR SCHLIER.

• PAUL RAYLOR raised the critical question for 1984-85, and invited members to submit names for the new IES book award.

• JOHN VAN ALSTIN moved that we thank IAN WINCHESTER for planning the Conference and providing us with excellent facilities. The motion carried, with warm applause.

• IAN WINCHESTER will place his notices (and in journals read by educators, at no cost to the IES).

Part 3, the Board's Annual Meeting. Here are highlights. For more, see the Minutes (50).

• The IES Technical Grant was increased from \$200 to \$2500, for 1985.

• The IES Book Award will be given for the first time in 1985. Members should submit books for consideration.

• The work of the Human Rights/Intellectual Development Committee (Alex Daly, Chairman) was authorized for another year.

• JOHN JACKNICO was named the IES Corporate Agent in the State of Illinois.

• Society Officers were elected for 1984-85.

• Board Officers were elected for 1984-85.

• Proposed revised Bylaws for the Society were reviewed, and will be submitted to the members for approval.

• Revised Bylaws for the Board were submitted to the Board, reviewed, and approved.

REPORTS FROM OFFICERS

(3) President Don Jacknico reports:

With the fine 1984 Annual Meeting behind us, we can now look forward to a June 1985 Annual Meeting in Washington, DC. I had hoped 1985 would see us making plans for an Annual Meeting in Britain. To that end, I contacted representatives of the Universities of Cambridge, Oxford, and London, and also received encouragement from Dora Russell. Such a Meeting, I feel, is feasible. Perhaps in 1986 it will happen.

At this time I ask all members to note the last we heard in June 1985 on their calendars, to consider the possibility of attending the '85 Meeting, and to inform me of agenda proposals, including proposals to present a paper. I would also benefit from hearing your thoughts on a 1986 Meeting in Britain.

I would like to thank Lee Eisler and Steve Reinhardt who worked with me to review and suggest improvements in the Bylaws. There are 2 sets of Bylaws, the Board's and the Society's. The proposed changes in both sets were reviewed at the Toronto Meeting. The Board formally adopted its own new Bylaws, subject to the Society's approval of the new Society Bylaws. Such work can be technically demanding, and at times may require renewal theology, but it can result — as I trust it has in this case — in a firmer organizational basis for the Society.

Hearty thanks, too, go to Jack Ragsdale who has headed the BRS Library for the past several years. He has decided to step down from his post as BRS Librarian, and now we must find a successor. If you might be interested, let me know. (901 6th St., SW(712A)/Washington, DC 20024).

REPORTS FROM COMMITTEES

(4) Philosophers' Committee (David E. Johnson, Chairman):

The Bertrand Russell Society announces a call for papers to be presented at its meeting at the Eastern Division of the American Philosophical Association in December 1985. Papers may be on any aspect of Russell's philosophy. They should have a reading time of about one half-hour, and should be submitted in triplicate, typed and double-spaced, with an abstract of not more than 150 words. The name of the author, with his address and the title of the paper, should be submitted on a separate page. The submission deadline is May 15, 1985, and the papers should be sent to David E. Johnson, The Bertrand Russell Society, Sampson Hall, U.S. Naval Academy, Annapolis, MD 21402. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

The above announcement appears in journals read by professional philosophers.

BR, WRITER OF LETTERS

(5) A 1963 letter, with thanks to OPHELIA HOOPES:

From: The Earl Russell, O.M., F.R.S.,
 PLAS PENRHYN,
 PENRHYNDEUDRAETH,
 MERIONETH.
 TEL. PENRHYNDEUDRAETH 249.
 28 September 1963

Mrs. Mary E. Edling,
 Recording Secretary,
 Everglades Chapter,
 American Humanist Association.

Dear Mrs. Edling,

Thank you very much for your letter. I should wish to send the following message:

"The danger of dogma and of cruelty which results from dogma is best illustrated by the "Holy War" now being conducted by the United States and the Soviet Union. The two sides have stockpiled the equivalent of 320,000 million tons of T.N.T. To exhaust this arsenal of death it would be necessary to employ all of the destructive power used in the Second World War each day for 146 years.

The United States has stockpiled as well 130,000 nerve gas bombs, which, if used, would eliminate life on the land areas of the earth eight times over.

All of this barbaric cruelty is the result of the dogma which obsesses men concerning the "evil" of the Power designated as the enemy of the moment. Free thought entails the responsibility to challenge cruel myths. I hope you will carry on this struggle which is essential to the survival of mankind."

With best wishes,

Yours sincerely,

Bertrand Russell
 Bertrand Russell.

ABOUT BERTRAND RUSSELL

- (6) "A Portrait from Memory". We are indebted to KEN BLACKWELL for alerting us to the following article by Sidney Hook, which ran in "Encounter" (U.K., March 1984). It is sometimes fascinating and sometimes nasty, with the kind of nastiness sometimes found in gossip columns. Hook is clearly ambivalent about BR. As he says, "O. all the persons I have known, the one I have come closest to hero-worshipping has been Bertrand Russell." Nevertheless, he accused BR of anti-Semitism and of being a "spokesman for appeasement and surrender to Communism", in an article in "Commentary" (July 1976) (RSN NL12-62). Hook is an ex-Communist, a reformed sinner, so to speak, who — as often happens with reformed sinners — swings to the opposite pole: after leaving the Communists, become an anti-Communist hard-liner. He says: "So long as we keep our guard up and do not capitulate [to Communism] as Kennan or Russell would have us do...etc." (RSN39-10)

The Hook article follows, after a brief excerpt from Ken Blackwell's Editor's Notes in "Russell" (Vol.4, no. 1. Summer 1984, Page.v).

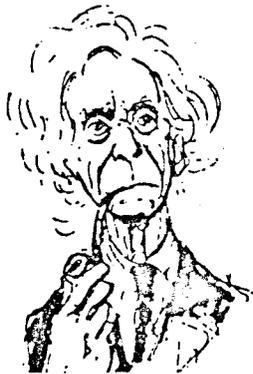

Editor's notes v

Sidney Hook's "Portrait from Memory". In the March 1984 issue of *Encounter* there is an essay by Sidney Hook on Russell's character. Hook knew Russell well over a period of twenty years and before that, as early as WWI, had been influenced by Russell's *Justice in War-Time*. The essay reveals many fascinating details about Russell, although to Hook "they seem too irrelevant to Russell the philosopher". This material will reappear in Hook's forthcoming autobiography. I have had the opportunity of editing a transcript of Hook's 1953 BBC discussion with Russell on "The Nature of Liberal Civilization". By this time their disagreements were becoming sharper, and Hook came to regard Russell's political writings as "even surpass[ing] the political libels of the Communists in the darkest days of the

Cold War". The story of Russell's concern over McCarthyism has yet to be investigated thoroughly, though a start has been made in Volume 2 of Feinberg and Kasrils' *Bertrand Russell's America*. His dictation of the early 1950s—which I am currently indexing—includes this advice in a letter of August 1952 to a Mr. Latey, who had asked him for assistance in studying the threat to U.S. civil liberties: "There is another thing that you must be on your guard against. Unpopular opinions, if avowed, make it almost impossible to earn a living, but economic as opposed to legal penalties are usually ignored by those who maintain that America is a free country." Also helpful in understanding Russell's conception of economic as opposed to political terror is a large file of F.B.I. documents on Russell, acquired through Harry Ruja at the suggestion of John Slater.

Bertrand Russell

A Portrait from Memory

THERE ARE SOME individuals of whom it would not be unjust or even unkind to say that they had outlived themselves. They do not have to be historical personages. We all know men and women who have become so transformed by age and experience that they no longer exhibit those distinctive traits of thought, feeling and character that have defined their personality in our recollection of them. Their physical presence blurs the memory of what they used to be. I am not referring to any pathological changes associated with premature senility. The individual is as rational and coherent as ever but the pattern of judgment and behaviour is so different from what we have been accustomed to that we could easily imagine we are hearing or observing another person.

Bertrand Russell used to say that Socrates was the luckiest of men. He died at the right time and in the right way for a noble cause. And had Russell died at about the same age as Socrates there would have been no puzzle to decipher about his subsequent judgments and behaviour. No one who knew him during the first 80 years of his life would have thought it conceivable that before he died Russell would hail the régime of the ruthless Communist dictator Ho Chi Minh as the hope of progressive mankind, or lavish fawning compliments on Nikita Khrushchev, who crushed the Hungarian Revolution, as a token of his high regard during the Cuban missile crisis which Khrushchev precipitated by introducing nuclear weapons into Cuba.

I have already written a critique in my *Philosophy and Public Policy* (1980) of this sad chapter in Russell's life and shall not discuss his final years except peripherally. The Bertrand Russell who meant so much to me has little in common with the shrill and querulous anti-American who was quite prepared (or so he said) to accept the horrors and terror of universal Communist domination should the Kremlin refuse reasonable measures of disarmament. The image of the Bertrand Russell I shall write about still lives in me (and only the personal and philosophical influence of John Dewey was greater).

I HAVE NEVER BEEN a hero-worshipper, not even when young. Of all the persons I have known, the one I have come closest to hero-worshipping has been Bertrand Russell. This was not because of his moral traits but purely because of his intellectual virtues among which his matchless courage, expounding and defending unorthodoxies in theory and practice, was the most inspiring. My ardour and boundless admiration were all the more remarkable because, except for a brief interlude towards the end of my undergraduate studies, when I was attracted by the earlier vintage of his Platonic realism, I have never shared Russell's philosophical views.

My first encounter with Bertrand Russell was in his role as a publicist. As a student in a New York City high school, embattled with all my heart and soul against United States

participation in World War I, I stumbled upon Russell's *Justice in War Time*. Atrocities-mongering against the Germans was at its height, and Russell's cool demolition of the myths about Teutonic frightfulness against Belgian children and other horror stories confirmed my scepticism of wartime propaganda. His passionate lucidity and dedication to the truth sustained me in the difficult years immediately after the Armistice when it was extremely hazardous to life and limb in the United States publicly to espouse the socialist cause, which was automatically equated with being "pro-German" and "anti-American", and then with "Bolshevism."

My first glimpse of Bertrand Russell in the flesh came from the gallery of Carnegie Hall in 1924 when he debated with Scott Nearing on the desirability of a Communist revolution in the

West. Nearing's simplistic mind failed to grasp the force and logic of Russell's argument. So much so that, fortified by the applause of a partisan audience consisting mostly of Communist sympathisers (the hard-core members were just emerging from the underground to form the then Worker's Party), Nearing imagined that he had carried off the honours. He remained simple-minded to the end of his days.

My second glimpse of Russell was at the dinner in honour of my teacher, Morris R. Cohen, in the fall of 1927—a dinner arranged to protect Cohen from anticipated administrative reprisals at the hands of the President of the College of the City of New York (CCNY), Frederick B. Robinson. The issue was Cohen's intellectual independence and support of the agitation of his son, Felix, a student leader, against compulsory military training (ROTC). In a burst of political and collegial solidarity with Cohen all the speakers and celebrants exaggerated Cohen's philosophical stature and pedagogical gifts.¹

Russell, who was in New York that fall, was approached to serve as one of the speakers. He had never heard of Morris R. Cohen (Harold Laski to the contrary notwithstanding) and wanted to know why he should speak at a dinner in Cohen's honour. He was not impressed by the report of Cohen's intense intellectual admiration of him or of the academic political atmosphere at CCNY. But when he was told that he would receive a fee of \$50 for some brief remarks, he promptly accepted with the observation: "Those are fifty good reasons!" Some of Cohen's philosophical reprints were left with him and at the dinner he made a clever little speech saying that he had discovered that he had something in common with Cohen, that they were both members of one of the smallest minorities in the world, viz. those interested in symbolic logic. (Cohen's interest in the subject at that time was actually quite peripheral.) Cohen himself was deeply moved by Russell's presence. I shall never forget, however, the look of unfeigned astonishment on Russell's face when Cohen in his reply turned to Russell and said: "If any man has been my philosophical Allah, it has been Bertrand Russell." Those of us who had studied with Cohen knew that his tribute was quite genuine. Although Cohen was neither a disciple nor a devotee of any of Russell's doctrines, whether in mathematics or epistemology, his homage to Russell as a thinker was unqualified. Those of his students who had not, like myself, already acquired this admiration on their own, absorbed it from Cohen, so to speak, by classroom osmosis.

MY FIRST FACE-TO-FACE MEETING with Russell took place in the spring of 1930—I am not sure of the exact date—at the home of V. F. Calverton whose daughter, Joy, was a student at Russell's school in England. Because of my own inhibitions at the time, the meeting was a shattering experience. Calverton, a literary entrepreneurial talent, knew and cultivated everybody of importance in those days. Aware of how I felt about Russell—he had gone out of his way to arrange the meeting—he may have been trying to impress me with the degree of his familiarity with Russell.

¹ Cohen, by the way, believed every word that was said of him that night. The rest of his life was bathed in the afterglow of its euphoria. Incisively critical of all large claims, sceptical with a devastating humour of all rhetorical exaggeration by or about others, Cohen took the holiday tributes rendered him as literally true.

² Commentary (New York), September and November 1952.

I arrived before Russell did. He appeared a few minutes later. No sooner had we been introduced than Calverton turned to him and said: "Well, you old s.o.b. What have you been up to? I was in the 'john' with Joy the other day. Do you know what she told me after she watched me peeing? 'Daddy, Uncle Bertie's wee-wee is larger than yours.'"

"Bless her little heart", Russell responded without turning a hair, "for her generous commendation."

"Well", grumbled Calverton with a kind of mock indignation, "I hope she's learning more than this kind of biology."

The rest of the details of this bantering colloquy were lost on me. Russell complained about the financial cost of the school and the difficulties of recruiting new children. I made several efforts to change the conversation, but they were turned aside. Calverton, who regarded me as somewhat of a prude because I had expressed disdain for his sexual excursions—in this area he was 30 years ahead of his time—seemed to enjoy my

discomfiture. Russell puffed away on his pipe until the time came for him to leave for another appointment. Calverton promised to arrange another meeting for philosophical conversation, but it never came off. My guess at the time was that Russell hadn't even heard my name and I was therefore somewhat surprised, when my *Towards the Understanding of Marx* was published in London a few years later, to learn from Calverton that Russell had written to him about its reception.

I GOT TO KNOW Russell rather well on the occasion of the disgraceful incident of the cancellation of his teaching post at CCNY in 1940. The Committee for Cultural Freedom, of whose Executive Committee I was co-chairman, called a public meeting on Russell's behalf and organised a large protest movement that resulted in many letters to the press and wide editorial support for him. It was of no avail because of Mayor Fiorello La Guardia's defection from the liberal principles he had previously mouthed. After Russell lost his post at CCNY, John Dewey arranged for him to give lectures at the Barnes Institute of Fine Arts at Merion (Pennsylvania). I have described elsewhere² the incidents that led to Albert C. Barnes' animosity towards Patricia, Russell's third wife, and then towards Russell himself who in the circumstances had to stand by his wife. It ended in Russell's peremptory dismissal and a period of acute financial distress for him. By this time, having arranged for some lectures for Russell at the social-democratic Rand School where I acted as a kind of educational advisor, I learned from Russell himself the details of the rift. I was wholeheartedly on the side of Russell, having met Barnes and been repelled by his ruffianly treatment of anyone who took issue with him. I advised Russell, who in these matters was an innocent, on how to behave in order to have a watertight legal case against Barnes. (Having served on the Council of the American Association of University Professors a few years earlier, I had learned a great deal about procedure.)

I arranged weekly lectures for Russell at the Rand School, met him when he came in from Pennsylvania, spent the day with him, and dined with him before the lecture. Russell loved parties, and after his lecture we would go to the homes of Greenwich Village friends; Russell, drinking freely, would hold forth on topics I fed to him out of my insatiable curiosity concerning his past life and thought. Russell enjoyed every minute of it although years later he complained that I made him talk philosophical shop, which on similar social occasions in England was taboo. I often arranged, at considerable inconvenience to some of my friends—Herbert Solow, Houston Peterson, and others who were infected by my protective enthusiasm for Russell—for Russell to spend the night in New York. I once took him home to Brooklyn, but the trip was tiring for him. As Chairman of the "Conference on Methods in Science and Philosophy", I built a programme around him where he could confront Reinhold Niebuhr in a discussion of naturalism. Niebuhr took evasive action by writing his paper on "The Naturalism of F. J. E. Woodbridge", whose views were unfamiliar to Russell. But the discussion was sharp and exciting, although Russell complained that the basic terms like "faith" and "naturalism" were not precisely defined.

It was at this Conference that I unwittingly overheard some strong words between him and Patricia, who seemed to be concerned about his overtaxing himself. Russell was excessively sensitive about any behaviour towards him that seemed to take considerate notice of his age. He would sometimes react to a point of rudeness towards anyone who out of ordinary, conventional kindness treated him as an "oldster." The only time he lost his temper with me was when I tried to carry his Gladstone bag the six blocks from the subway station in Brooklyn to my home. Since I was 30 years younger and sported only a portfolio, it seemed natural for me to carry it. "Don't treat me like an old man", he growled, elbowing me vigorously away from his bag. Judging by his flirtatious behaviour towards any comely woman around who was impressed by his reputation or conversation, he certainly didn't act like an old man.

FOR ALMOST A YEAR I saw more of him than of anyone else among my friends; we talked mostly philosophy and some politics, and I drew him out (long before he wrote about them) on the philosophers of the past whom he had known, questioning him on details of articles he had written (of which I was an

avid reader) and about which his memory was surprisingly fresh and accurate. During all this time, I never heard him repeat himself on any matter of substance, although subsequently he wrote about the persons and incidents he discussed in almost the same words he used when talking about them with me. His spontaneous conversation had the same coherent structure, incisiveness, wit, and brilliant finish as his published prose. (The only thing I found disconcerting was that he laughed uproariously at his own jokes.)

It was intellectually the most exciting year I had ever experienced, although I confess it was not give-and-take, but mostly take, on my part. Russell seized every opportunity I provided to hold forth to admiring audiences. He once said to me: "I have never been made a fuss over before—I must say, it's rather pleasant." His remark at the time seemed odd to me. I assumed that as the greatest mind in England, he had always been lionised. Looking back, it now appears to me that he was enjoying some emotional recompense for the bitter experience of the First World War years, for his alienation from friends like Alfred North Whitehead (his co-author of the great *Principia Mathematica* of 1910) which grieved him deeply, and especially for the searing experience of the débâcle at CCNY and the injustice suffered at the hands of Albert Barnes which brought to fever heat his latent anti-American prejudices. Otherwise it would be difficult to explain why a man so painfully and meticulously truthful about himself should, in reporting events in America, deliberately and maliciously invent and exaggerate incidents that even surpassed the political libels of the Communists in the darkest days of the Cold War. (I shall cite examples below.)

PERHAPS WHAT GAVE RUSSELL the greatest intellectual pleasure and satisfaction was the celebration I arranged for his 70th birthday at the Hotel Brevoort at the bottom of Fifth Avenue. He had never had a *Festschrift* (the Schlip volume had not yet appeared), and his 60th and 65th birthdays had gone unheralded and unremarked. It was a comparatively small and cosy affair. Patricia, his lustrous redhaired wife, was among the few wives present—very much *Lady Russell*, chain-smoking cigarettes out of a miniature pipe. I had invited about 25 philosophers from the metropolitan region, all of whom greatly admired Russell regardless of their technical disagreements. (Because John Dewey had sided with Barnes, I know he would not attend even if he were invited.) After coffee and liqueurs had been served, we went around the long table twice, each philosopher putting a question to Russell about problems and difficulties in his views. I had briefed the participants on the procedure, and each one came well prepared.

How I regret that no record was kept! Russell was at the top of his form. The wine and the atmosphere gave him an exhilaration that intensified his normal effervescence. My recollection of the philosophical upshot of that evening was that it consisted of a kind of repudiation of all varieties of platonism and positivism, of epistemological dualism, of pacifism and utilitarianism, and a wry disavowal of the rhetoric of the "Free Man's Worship." The one or two political questions elicited Russell's unqualified opposition and fear of Communism despite the growing popularity of the Soviet Union as a wartime ally in the war against Hitler. He glossed over the fact that he had been in favour of the Munich settlement. Although a sceptical empiricist, there was no intimation that Russell would subscribe to the ontological assumptions subsequently developed in his book on *Human Knowledge* (1948).

The party broke up late. Everybody had enjoyed it, Russell most of all. Patricia, who had always held me at arm's length as a grubby little commoner, was particularly gracious. She had antagonised most of those present by explaining that she was anxious to get back to England as soon as possible because she feared that Conrad, her son by Russell, on whom Russell doted as his Benjamin (he once sadly told me that his children by Dora, his second wife, had turned out disappointingly), would acquire "that atrocious American accent." Most outraged of all at this remark was William Pepperil Montague, an unrecognised Platonic realist, and an indigenous American who happened to speak English with an impeccable Oxford accent.

After the dinner, Russell invited my wife and me to his apartment at the Brevoort to have a nightcap. Russell was in a most mellow mood. He had enjoyed the evening immensely. But he soon turned dour, and then angry. I had casually remarked that some of the evening's discourse reminded me of

Plato's *Symposium*, and the conversation turned to the nature of love. Patricia asserted with more than her usual vehemence that all love, and especially romantic love, was based on pity. My wife and I demurred at this arbitrary view, and so did Russell with a few gruff words. He then lapsed into a moody silence, his jaws clamped on the stem of his pipe, as Patricia kept insisting in a rising voice on her viewpoint and denying that she had confused, as I suggested, compassion with love. The atmosphere became tense and painful, and we took leave as quickly as we could, fearing that our innocent observation would provoke a conjugal quarrel. It was not so much the absurdity of the sentiment Patricia voiced that angered Russell but what it revealed about her feeling for him which clashed with the image of himself as an irresistible gallant.

AS SOON AS HE COULD, Russell (invoking his status as a member of the House of Lords) returned to England and to a succession of triumphs that meant more to him than any honours the United States could bestow. Having surrendered his near-pacifism, he had caught up with the Establishment.

Russell had a profound love of England and especially of the English countryside. When I asked him why he was so eager to return to England he told me that he wanted to be buried there. He talked about the English past, speaking with less than his

Subsequently I was to learn on good authority that this was because Russell himself, despite his advanced age, was pursuing anything in skirts that crossed his path, and that he was carrying on flagrantly even with the servant girls, not behind Patricia's back but before her eyes and those of his house guests.

customary harshness of its social abuses and social inequality. I recall him once defending, to my amazement, the institution of monarchy as a symbol unifying the country in a common loyalty beyond the strife of party faction. He had words of praise for Winston Churchill and his Elizabethan prose, which surprised me in view of some of his previous pronouncements on Churchill's "warmongering."

AFTER HE RETURNED TO England, I met Russell on three other occasions. Once he came to Columbia to deliver some lectures on "The Impact of Science on the Modern World." At a dinner tendered to him, he had asked Irwin Edman, then Chairman of the Philosophy Department, to invite me because his time was short in the US and we otherwise would not have met. I had heard his lecture which contained the same stale version of his attack on pragmatism that he had published almost 40 years earlier, and took issue with him on the ground that he was quite unfair to the actual texts of Peirce, James, and Dewey. I had been tempted to challenge Russell's remarks about pragmatism from the floor of the crowded lecture theatre: but knowing that we were to meet for dinner and fearing that my language would be too hard and indignant, I foolishly and uncharacteristically remained silent as did the rest of my colleagues at Columbia. Russell, who didn't want to talk about philosophy at dinner, claimed that William James and John Dewey were no clearer in their replies to his criticism than in their original papers. He spoke about how busy his life had become in England, welcomed as he was everywhere and in continual demand for speeches and articles. He also spoke glowingly about his son, Conrad, and indicated (with a frankness that had always made me uncomfortable when he discussed intimate details of his mother's and father's and his own sex life) that he was having some difficulties with Patricia. I was too embarrassed to press him but I gathered that there was another man on the scene.³

The second meeting with Russell was in Amsterdam at the XIth International Congress for Philosophy in 1948. I presented a paper and read one by John Dewey as his proxy. I hadn't expected Russell to appear and when we met I was surprised at the change in him. He seemed extremely nervous and irritable, and spoke with greater rapidity than usual. For the first time he grasped my arm as we spoke, and was obviously under tension. He said almost in passing that Patricia had gone off to Italy with someone, taking Conrad with her. We spent most of the Congress days together. It was as if he could not be alone. Although lionised by the participants, he seemed to be unacquainted with any of them. I was surprised to discover that Gilbert Ryle had never met Russell. When I introduced them I noticed Russell eyeing him with a kind of appraising glance, as if he were taking his intellectual measure. During the course of the sessions Russell and I sat side by side.

We were intrigued by the presence of a huge figure with a Mosaic beard that swept down to his waist. He seemed to personify the presence of philosophical wisdom as he nodded or shook his head at the speakers' remarks. The only time I saw Russell smile at that Congress was when Professor Beth, one of the Congress organisers, informed us in reply to our inquiry that the bearded Socrates happened to enjoy a reputation as the leading abortionist in Amsterdam.

Whether it was because of his personal mood or intense political conviction, Russell let fly at the only official Communist spokesman present—a certain Kolman, originally Czech but nurtured in Stalinist Russia, who was purveying the Zhdanov line about "bourgeois philosophy in the service of imperialism", and who made some passing reference to Russell's view urging the US to atom-bomb the Soviet Union if it refused to accept the Acheson-Lillenthal proposals for international control and inspection of all sources of atomic energy. Commenting on Kolman's paper, Russell said: "Go back and tell your masters in the Kremlin that they must send more competent servants to carry out their programmes of propaganda and deceit..." So vitriolic was Russell's rejoinder that it won some sympathy for Kolman not only among certain fellow-travellers but even among politically opportunistic Americans who always tried to keep in delicate balance their appreciation of both totalitarianism and democracy.

RUSSELL apparently recovered his psychological poise after his return to England. Patricia returned to him: he was awarded the Nobel Prize and received many other accolades of fame. For a few years after, our relations continued to be friendly. I induced him to accept the first Honorary Chairmanship of the Congress for Cultural Freedom, organised in 1950 in West Berlin. When Hugh Trevor-Roper wrote his flagrantly unfair account of the Berlin Congress, picturing it as a meeting of manic anti-Communists who allegedly wanted to treat Communists in the same way as Communists were treating non-Communists, Russell accepted my version of what had occurred and declined to resign.

THE THIRD AND LAST TIME I met Russell was in London in the fall of 1953. By this time Patricia had finally left him, and refused to let him see Conrad. After the divorce Russell married his fourth wife, an American woman who, I suspect (together with his daughter, who had married a clergyman and lived near Washington), was the source of some of his bizarre views about what was occurring in the United States. Russell had begun to take an increasingly critical attitude towards America and published articles implying that "reaction" was in the saddle. I wrote once or twice protesting against his exaggerations. For this and other reasons, and partly out of fear of presuming, I did not even let him know I was in England. Much to my surprise, the Third Programme of the BBC got in touch with me and proposed a debate or discussion on "American Democracy and Freedom." There were some difficulties about timing, but we finally met. Russell was quite general in his remarks about the danger of mass democracy to freedom. I took the line of my pamphlet entitled *Heresy, Yes—Conspiracy, No*. Tapes of the exchange exist.

After the BBC programme was over, Russell invited my wife and me to a late lunch at Hatchets where we gradually warmed to each other until the level of "the old days" was reached and we gossiped away merrily, with Russell, as usual, doing most of the talking. He did indicate that he was not altogether satisfied with what he said during our exchange, but he pursued the matter no further. We talked about local British politics, his trip to Stockholm, and other matters. He made no mention, for once, of Patricia.

What was memorable about the occasion was to see Russell in his element. Already at the BBC studio, people had bowed and scraped when he appeared. Their tone of voice changed when they addressed him. When the taxi rolled to a stop at Hatchets, the doorman ushered him out with a "Yes, m'Lord", and "The usual, m'Lord?" came in rapid fire from the head waiter, the waiter, the wine waiter, and others who clustered about us. Russell was quite well known at Hatchets. The meal was too sumptuous for our appetites. Russell insisted on liqueurs and cigars—for once forgoing his pipe. I could not help reflecting on the contrast between the present and the lean years a decade ago. Not long before, Russell had received one

of England's most coveted awards, the Order of Merit. He entertained us with an account of his visit with the King, and he mimicked the King's stuttering comment warning in a friendly fashion about the dangers of living an adventurous and unconventional life. "It was on the tip of my tongue," Russell recalled, "to say to him: 'Your Majesty is quite right—as you Majesty's brother learned some years ago'..."

I twitted him about his new-found respectability, unsought as it had been. "How the world moves! I never expected that you would end up dying in the odour of sanctity." He laughed and replied: "Don't fear, Hook. In a few days I shall lose my respectability once more..." Hook, do you know how abominably cruel the English laws are on homosexuality? I'm planning to come out and blast them." And he went off on a long disquisition concerning how oppressive they were. He must have been aware of the character of these laws for many years, and he himself had made some disparaging remarks about homosexuals in the past without deploring their lot or protesting the cruel laws against them. I couldn't help feeling that he was looking for another cause to preserve his role as a perpetual dissenter now that he was no longer an outsider. Before Russell managed to make a public statement on the issue, a few English bishops came out for the repeal or modification of the laws and took the headlines. Lost causes in Great Britain were getting scarce. A few years later, I believe, the Wolfenden Report was published and, in due course, the obnoxious laws were repealed.

After lunch we took a taxi to Richmond Park where we walked in the October sunshine as Russell pointed out the house in which he had spent his early childhood. His mood was quite nostalgic, and he spoke about his grandmother and especially his brother (of whom on other occasions he was wont to speak with bitterness) with some gentleness. Towards twilight, we walked to his flat where he prepared tea for us, complaining about the undrinkable tea he had been served in the United States. We were aware that there was someone else in the flat who seemed to help set out with invisible hands the materials. When we arrived at his flat, Russell had murmured something about his wife being indisposed, and I thought it was she who was hovering in the background, either

It was obvious that Russell had not anticipated having lunch or tea with us when he came to the broadcast. That had been arranged through third parties carrying messages between us as if we were principals in a championship boxing event. After our meeting, however, as I made polite inquiries about his writing plans, some sentimental recollection of our past meetings, or perhaps the presence of my wife whom he seemed to like (and who had never shared my awe of him and was given to pert and uninhibited comments on his stories), must have thawed his initial and rather distant reserve. He soon lapsed into the old pattern of gossipy, infectious gaiety with less than the usual irreverence and sting. We parted once more on the friendliest of terms, but I was acutely aware of the emergence of sharp political differences between us concerning what was happening in the United States. On the few occasions during the afternoon when I tried to tell him that someone was misinforming him about the cultural climate, and that there was much less "intellectual repression" in the United States than when he visited, he turned aside what I said with the observation that I was judging the whole country by what was happening in relatively enlightened places like Eastern universities. He, however, it seemed to me, was judging the whole of the United States either by some isolated incident sensationalised by the press (like the demand of a senile old lady in the mid-West that the tales of Robin Hood "who robbed the rich to pay the poor" be removed from the local library, on the ground that he was a Communist) or by some scare stories of McCarthyism. Although Russell granted that most of the Americans he had met were liberal, he was convinced that the overwhelming majority were either active supporters of Senator McCarthy, whom he tended to equate with Hitler and Stalin, or had been completely cowed by him. It was clear to me that in the back of his mind Russell was debating the episodes at CCNY and the Barnes Institute to the contrary account of the United States as a whole.

In the *Manchester Guardian* (30 October, 1951) Russell asserted that the United States was just as much a "police-state" as Germany under Hitler and Russia under Stalin. He explicitly declared that in the United States "nobody ventures to pass a political remark without first looking behind the door to make sure no one [is] listening. If by some misfortune you were to quote with approval some remark by Jefferson you

would probably lose your job and find yourself behind bars. . . . Russell was even willing to stake money on his [] about the United States. He bet Malcolm Muggeridge f. . . . and that Joe McCarthy would become President of the United States, but when he paid it off after McCarthy died in disgrace, he didn't alter his views. If anything he became more vitriolic.

Even after McCarthy had been utterly repudiated by Congress, the law courts, and the people—he had always been defied by the universities—Russell continued to believe that the United States was in the fierce grip of a reign of terror exercised through the FBI. Although he did not explicitly always say that the United States was an outright Fascist country, his descriptions suggested it. In 1956, shortly before the FBI arrested and jailed Kaspar, a racist rabble-rouser, for encouraging violation of a Federal court order, Russell wrote in the preface to the English edition of Corliss Lamont's *Freedom Is as Freedom Does*: "Anybody who goes so far as to support equal rights for coloured people, or to say a good word for the UN is liable to a visit by officers of the FBI and threatened with blacklisting and consequent inability to earn a living." This brought a sharp criticism from Norman Thomas, the socialist leader who had led the fight for civil liberties in the US, protesting that Russell's exaggerations were hardly distinguishable from outright falsehoods (*New Leader*, 7 January 1957). Russell remained unmoved.

Within a few years, with the development of nuclear weapons, he returned once more to his old pacifist position, although, to do him justice, he had never been an absolute pacifist. Fearful that the Krenlin would never accept reasonable proposals of inspection to ensure multilateral disarmament, he publicly proclaimed that if the Communists refused to accept reasonable proposals, the West should disarm unilaterally "even if this meant the universal triumph of Communism and all its evils." Considering just how evil Russell had believed Communism to be this was quite a turn-about. It was at this point that I ventured publicly to criticise his position, and our debate on this and allied issues continued for some years in the pages of the *New Leader*, at the time an organ of democratic Socialism under the editorship of Sol Levitas. I exchanged a few letters with him before that. In his replies he found my criticism of his fantastic accounts of the American scene "unsatisfactory." As time wore on, he became more and more rabidly anti-American, accusing the United States of planning deliberate genocide, and going as far as to say that he was prepared to believe the old Communist canard that the United States had waged "germ warfare" in Korea. Towards the end he accepted, as gospel truth, atrocity stories about the US military compared to which the stories of German atrocities in Belgium, that had once caused him to blaze with indignation, were very mild indeed.

AT THIS POINT I return to the period when I first became acquainted with Russell, i.e., when the Committee for Cultural Freedom rushed to his defence against the efforts of the Catholic and Protestant hierarchy, who were using as a cat's-paw Mrs Kay, a Jewish housewife in Queens, to deprive Russell of his post at the CCNY. Mrs Kay, as a taxpayer, applied to the courts for an injunction to prevent Russell from teaching, on the grounds that the morals of her daughter (who was a student at Queens College) might be impaired if Russell were permitted to teach symbolic logic to the undergraduate students at CCNY, twenty or more miles distant. Her evidence consisted of certain passages cited out of context from Russell's *Marriage and Morals* (1929).

The inside story of the Russell appointment was told to me by Morris R. Cohen who together with Harry Allen Overstreet had retired from CCNY, leaving it without any distinguished philosophical figure. The remaining senior man who held the rank of an associate professor feared that the appointment of an able outsider to a full professorship—one of the senior [] social lines or "slots" had been dropped—would stand in [] of his own promotion to that post. Whereupon, aware of the fact that Russell was crowding 68, and that retirement at CCNY was mandatory at 70, the associate professor who was Acting Chairman extended an invitation to Russell to join the Department with the rank of full Professor. His colleagues, who had nothing to lose and were aware of the distinction that Bertrand Russell's name gave their truncated department, endorsed the invitation. By the time Russell would have retired, the associate professor, who had published little or

nothing of value, hoped to have in the works a book he was editing (consisting of contributions by other well-known philosophers) which would justify his own promotion. Cohen told me that despite his great admiration for Russell, he himself, when apprised of the contemplated appointment, had advised against it on the grounds that the students at the College were hardly prepared to profit from Russell's high-powered lectures, and that Russell himself would not feel at home among them. I confess I was taken aback by Cohen's judgment and disagreed with it. It seemed to me that whatever the students got out of Russell's lectures—and they certainly would have had to reach for them—Russell's presence by itself would shake up the department and certainly enliven the local philosophical scene.*

At the time, Russell was teaching at the University of California at Los Angeles. As he subsequently told me, he was more than content there, enjoying himself in the company not only of easy-going sun-worshipping students but of Aldous Huxley and his circle, who treated him with veneration as an intellectual guru, and also of culturally aspiring Hollywood starlets. He was earning \$6,000 a year; CCNY offered him \$7,000. When I asked him, after listening to his dithyrambic account of his life at UCLA, why in the world he gave it all up for "a lousy \$1000", he replied that Patricia was extravagant and spent more money than he earned. None the less, he admitted that just as soon as he got wind of the opposition to his appointment at CCNY, he tried to withdraw his resignation from UCLA. But, according to his story, the administration at

* Professor Philip Wiener, to whom I have related Cohen's version of why Russell was invited (and who was then in the Department of Philosophy) denies it. Professor Lewis Feuer, who at that time was in the Department, also questions the validity of Cohen's account to me. Since Cohen was not present during the deliberations of the Department, his view was based on his reading of the events.

UCLA had suddenly been alerted to his radical proclivities in politics and other areas, and refused to accommodate him despite the intervention of his colleagues. Russell had no alternative but to accept the offer from CCNY—never expecting, however, that it would culminate in such a disastrous dénouement.

Despite his personal disapproval of Russell's appointment, Morris R. Cohen fought manfully alongside John Dewey, then Chairman of the Committee for Cultural Freedom, and the rest of us on Russell's behalf. We had no difficulty in winning the literate and articulate organs of public opinion to Russell's side. *The New York Times* gave editorial support. We succeeded in arousing educators and administrators of other institutions of higher education to the dangers to academic freedom and integrity posed by the effort to bar Russell from teaching. I was able to induce the conservative Chancellor of New York University, Harry Woodburn Chase, to come out in strong condemnation of the action against Russell, but after some hesitation he vetoed my recommendation that New York University invite Russell to join the staff of the Graduate School of Philosophy. "It would seem like a provocation to Bishop Manning and to the Catholic Church", he lamely explained to me.

The action against Russell was sustained in the lowest New York court by an illiterate Tammany politician who had received his judgeship as a political reward and whose opinion in the case makes hilarious reading. Informed legal judgment was unanimous that when the Corporation Counsel of New York City appealed against the decision of Judge McGeehan to the court of higher instance, the case against Bertrand Russell would be thrown out. Everyone was surprised to discover that the Corporation Counsel did not appeal against the verdict. We subsequently learned on the best of authority that the Corporation Counsel had been ordered by the Mayor not to lodge an appeal. The Mayor at the time was none other than "the little flower", Fiorella La Guardia (who as Fusion candidate had defeated Tammany Hall in 1937 and who was running for re-election in 1941). Afraid that he might lose the Catholic vote if Russell was reinstated, he betrayed a liberal tradition much more important to the lives and minds of free men than any of his famous municipal reforms.

RUSSELL WAS MORE THAN A LITTLE PUZZLED by my zeal in his behalf, especially after the quarrel with Albert C. Barnes developed. He was aware that my philosophical allegiance was publicly pledged, so to speak, to John Dewey,

and that Dewey and I were personally quite close. He also learned that in consequence of Barnes's enmity toward me, which flared up when Barnes discovered that I was openly helping and advising Russell, a temporary rift had arisen between Dewey and me. Barnes had written me that the issue between him and Russell involved belief in "democracy as a way of life." Barnes tried to convince Dewey that I had betrayed both democracy as a way of life and Dewey himself in my lectures on contemporary philosophy at the New School. He had sent one of his secretaries to take notes at some of the sessions, an edited version of which he sent Dewey. Although Dewey professed to be amused by Barnes's "shenanigans", especially his misreading of the report of his philosophically illiterate secretary, I myself felt that Dewey was much too indulgent towards Barnes. The notion of Barnes as a protagonist of "the democratic way of life" was fantastic to anyone who was aware of his brutal and feudal arrogance towards anyone who disagreed with him. Dewey used to bail him out of some of the worst scrapes he got into as a result of abusing and insulting people, by getting Barnes to make amends.³

With respect to Russell, Dewey admitted that Barnes had no legal case but insisted that he had a moral one because Russell had violated the terms of an oral contract not to lecture elsewhere. What Barnes had omitted to tell Dewey was that Russell had specifically exempted the acceptance of invitations from professional philosophical associations; and Barnes had agreed. Anyone who knew the two men could hardly be in doubt as to who was telling the truth. Although Russell was capable of the wildest exaggerations and untruths when writing about a people or a nation for political purposes, he was much too proud ever to lie where he himself was concerned. If anything, he was on the contrary much too uninhibited in revealing truths about himself. One could say of him what he himself once said of G. E. Moore: "The only lie Moore ever uttered was in reply to a question I once put to him: 'Moore, do you always tell the truth?' To which he answered: 'No.'"

Russell's puzzlement about my championship of his cause grew to a point that led him once to ask me outright why I had embroiled myself to the extent I had. For once too shy to tell him what his courage during the First World War had meant to me in my most impressionable years, I played up my resentment of Barnes's bullying. But the fun and intellectual excitement of the association with Russell undoubtedly were influences just as strong. I was gripped by an intense intellectual curiosity about the stages of his philosophical development and the occasions and causes of his dramatic shifts from one position to another. His conversation, even when largely a monologue, was absolutely brilliant. His discourse (which covered almost all fields of knowledge, high and low) was a sheer delight, full of arresting insights, striking phrases and unexpected observations. He had a prodigious memory, an inexhaustible stock of stories and anecdotes, unfailingly relevant to some point he was making, and an ability to recite not only extensive passages from the great poets of the past but also the most obscene limricks which he attributed to Dante Gabriel Rossetti and his circle but some of which, I was convinced, were original with him.⁴ He would tell me things I never knew before about John Stuart Mill, his godfather, and about T. S. Eliot whom he had known in the dark days of Eliot's despair before his conversion to Christianity.

Russell had often been befriended in the past when in need. But he had developed, probably on the basis of some unhappy experiences, an ill-concealed hostility against being put under obligation to anyone. Sooner or later, he implied, those who had helped him, especially if they were women, expected something of him in return. He found this quite annoying even if all they wanted was praise or compliments, for Russell had always been extremely chary of lavishing praise on anyone or anything unless he felt it was deserved. After a while, he seemed convinced that my help, whatever it was worth, was really disinterested. On several occasions, one of the few times he did repeat himself to me, he would say, after a hearty laugh at one of his own quips or a witty *bon mot* I had provoked by dredging up some person or incident from his past for him to comment upon: "Do you know, Hook, what I like about you? You don't expect anything of me!" This was perfectly true. The only thing I ever asked of him was to autograph a portrait picture of himself taken by Sylvia Solow, the photographer. He did this cheerfully, obviously most relieved that he was not being asked to inscribe it with anything more than his signature.

The fact that Russell realised that I had no expectations made it easier for me to ask him questions about anything, to challenge positions he had taken in the past, or his judgments on men and events, and even to criticise, sometimes sharply, some things that he did or failed to do during the period that I knew him. He never seemed to resent any of my questions, which were limited only by my own inhibitions. He, on the other hand, was completely and embarrassingly uninhibited. He volunteered confessions about his sexual powers, and

³ That was how he explained to me his relationship with Barnes—as if Barnes were an overgrown shaggy grizzly bear who really meant no harm when he embraced people. The real Barnes to Dewey was the man of aesthetic genius and remarkable sensibility from whom he had learned most of what he knew about European art and painting

⁴ I recall one of them which he recited with glee:

*There was a young girl from Aberystwyth
Who took sacks to the mill to fetch grist with,
But the miller's son, Jack,
Laid her flat on her back,
And united the things that they pissed with.*

related matters about which I would no more have inquired of him than I would of my own father. He seemed always on the prowl when attractive and vivacious young women were around and he assumed that my interest in extracurricular matrimonial activity was as keen as his own. On occasions I was rendered speechless by his unsolicited advice on how to "smoke" a girl and what to do after one made her. "Hook", he once advised, "if you ever take a girl to an hotel and the reception clerk seems suspicious, when he gives you the price of the room have her complain loudly, 'It's *much* too expensive!' He's sure to assume she is your wife. . . ." At another time when I commented on his remarkable memory, he mildly demurred and observed that it was not what it used to be. Seconds later, as if to illustrate his point, he turned to me and asked: "Hook, what's been the most embarrassing moment of your life?" Without waiting for a reply from me, he went on, "Mine was the failure to remember at breakfast the name of an attractive woman to whom I had made ardent love the night before. I really knew it, of course, but it came to mind too late!" Like George Bernard Shaw, Russell apparently was an eloquent vocaliser in his love-making ecstasies.

ONE THING I FOUND I could not do was to argue with Russell about basic philosophical issues. I was more interested in drawing him out. Whenever he did develop a philosophical position in answer to some difficulty I raised, he was so fluent, subtle, and detailed that my rejoinders seemed little more than stuttering comments. I have never been at a loss for words with anyone else and no one else ever affected me this way, not even Morris Raphael Cohen, who was a merciless polemicist and with whom I often crossed swords. It was only when we talked philosophy that I felt tongue-tied with Russell. Until we engaged in written debate, I would not have been surprised if, in his heart of hearts, Russell had regarded me as an amiable person with a tenth-rate mind consumed by an insatiable curiosity about his past which he was perfectly willing to supply. At any rate, it must have appeared to him a fair exchange for the fuss-and-feathers made over him and especially the parties he so much enjoyed. To be sure, he was sometimes put out to find his *tête-à-tête* with some luscious girl interrupted by a query about whether he still believed in the theory of types, or what he thought of Henri Poincaré or Couturat or Gödel, or why he felt so strong an animus against Lenin or G. B. Shaw, or whether there was any truth in the rumour that Cyril Joad, one of his minor philosophical critics, was his natural son—a flattering rumour which Russell attributed to Joad himself. But although sometimes surprised, Russell was never really annoyed or at a loss for an answer that more often than not provoked some merriment in himself and others. George Santayana somewhere says that Russell laughed like an hyena, but although I have never heard an

⁷ Incidentally, Russell's stories about Santayana left little doubt that even in his younger days Santayana had been a suppressed prissy queen and a prig. He gave Santayana full credit, however, for convincing him of the untenability of his Platonic theory of value but he lacked appreciation of the great wisdom of Santayana's masterpiece, *The Life of Reason*.

hyena laugh, I doubt it, for Russell's laugh was infectious if one understood what he was laughing about.⁷

Because Russell was perfectly himself with me, I saw sides of him that I would in retrospect have preferred not to have seen, although they have no bearing upon the quality of his mind and the magnificence of his achievements. There is hardly a philosophical doctrine of Russell's which he himself had not abandoned or which critics, armed with methodological tools that he originally forged, have not rendered questionable. Yet his life-work as a whole exemplifies that perpetual quest for knowledge and self-understanding that one associates with the great philosophical tradition. Intellectually, there are many Bertrand Russells—testifying to his venturesomeness, originality in outlook, and ingenuity in the execution of detail. He could restate stale and familiar positions on the perennial problems of philosophy in a way that made them seem fresh and challenging. He was not a "hedgehog" who saw only one great thing, but a "super-fox" who could turn himself inside out to glimpse different visions in a pluralistic world.

Russell was a great mind, and a great man if greatness of mind is enough to ensure greatness in a human being. But it is not enough. Hobbes was a great mind but not a great man; Spinoza was a great mind and a great man. Had I known Russell only by his writings, I would have unhesitatingly classified him with Spinoza and other great minds who were great human beings. Knowing him in other ways, there were three things about him that prevented me from doing so.

The first was Russell's vanity. He once told me that whenever he met a man of outstanding intellectual reputation, his first unuttered reaction was: "Can I take him, or can he take me?" He was most fearful of John Maynard Keynes, but he got over it. He greatly respected Whitehead's intellectual powers and was aware of canniness or shrewdness behind the fox-grandpa benignity of manner that made him a "dear old soul" to adoring Americans. He felt that Whitehead's thought had been derailed by his cosmic and social piety. He was fond of G. E. Moore, and admired the purity of his character, but exclaimed with some asperity after reading Moore's criticism of his theory of descriptions that he had always suspected that Moore had missed his calling: "He should have been a classics scholar!" Moore had used thousands of words—almost fifty printed pages—to correct the defects in Russell's analysis of "Scott was the author of *Waverley*." His chief criticism was that Russell was wrong in saying that if Scott was the author of *Waverley* this meant that Scott must have written *Waverley*. For Scott could have *dictated* it! This was not only minute philosophy; it was trivial. Russell was irritated and frustrated by Moore's unconcealed dislike of him, but was not deeply hurt by it.

He was caustic about John M Taggart primarily for political reasons, and regarded C. D. Broad, despite his immense abilities, with distaste. He once referred to him as an "intellectual bully" with "the malice of his kind", and agreed with the appraisal by Susan Stebbing, made in a conversation with me during the 1930s, that Broad was "absolutely the first second-rate mind in contemporary philosophy." There was hostility in the glance with which Russell sized up Gilbert Ryle when I introduced them, which he subsequently gleefully indulged in when Ryle unfortunately announced to the world that he would not permit Ernest Gellner's first book to be reviewed in *Mind* because of its offensive personal tone towards the ordinary-language analysts for ignoring the genuineness of some great philosophical problems.

While at Barnes's Institute, Russell had begun writing his *History of Western Philosophy* which in some ways tells more about Russell than many of the figures he discusses. When he talked about the progress of the book (which was not seldom) I got the impression that, somewhat like Hegel, he was rating his predecessors with respect to how close they had come to anticipating Russellian truths. He had an unalloyed admiration for Albert Einstein as a physicist but did not take his philosophical excursions seriously, nor, at least in the period I knew him, Einstein's post-War appeasement politics. He made no secret of his intellectual contempt for all politicians.

Although Russell suffered unpopularity in some quarters for his role as a political dissenter, he enjoyed that role immensely. There was more than a touch of exhibitionism in the riskless sit-downs of his last years when he made well-publicised gestures to "Ban the Bomb" that were as futile as they were ill-advised. I once wondered aloud to him whether his temperamental bias towards nonconformity and dissent was an expression not so much of intellectual courage as of the aristocrat's disdain of the commoner and his desire to *épater le bourgeois*. He replied with a disarming frankness: "Hook, I think you have got something there. . . ."

Despite occasions when he employed the rhetoric of modesty, I never sensed the presence of any genuine intellectual humility in Russell. He knew he was first-rate and assumed you knew it too. That is why he was also free of tincture of intellectual arrogance. He never behaved like Morris R. Cohen who would *tell* you how extraordinary he was or how brilliant others (like Einstein) thought he was, and then cover up his shocking display of conceit by proclaiming: "Blessed are those who are not modest, for they shall not have to devise measures to call attention to their modesty. . . ."

Russell's vanity about other than intellectual matters was more quaint than offensive. When I once told him that I refused to accept Max Eastman's challenge to a public debate on the meaning of Marx, to be chaired by John Dewey, unless I had a guarantee that not more than half of the audience would be made up of women, he murmured with a sly grin: "You surprise me. Eastman doesn't seem so formidable. I'd take him on at any time for any woman's favour." Russell was then close to seventy. (My guess is that even in Russell's prime this would have been a fair boast were Max Eastman on the scene, except perhaps with some blue-stockings.) One day in a rare, depressed mood, he suddenly turned to me and observed without any preliminaries, "Hook, don't let anybody ever tell you about the consolations of old age and the serenity that comes from the release from desire." I mentioned something about Tolstoy and Gandhi. "Hypocrites both!", he snorted. This was the only negative judgment he ever made of Tolstoy. Concerning Gandhi he was always mordantly critical. I never could determine whether Russell's hypertrophic sexual activity was more a matter of aspiration than of power. The memories of his passions seemed to feed his desires. Coddly enough, Russell's final rift with Patricia, his third wife, when he was approaching eighty was (according to her letter to Freda Utley) a direct result of his refusal to make a pledge of mutual marital fidelity which she proposed. That was the last straw for Patricia who had suffered humiliation enough because of Russell's roving eye and affections. To do him justice, Russell had tried to live up to his own conception of ideal marriage—"monogamy with romantic episodes." But he had underestimated the strength of the jealousy of women in love. And when the shoe was on the other foot, he admitted he had underestimated the strength of his own jealousy.

THE SECOND TRAIT that I found hard to take in Russell was his greed. I was shocked to find what Russell was prepared to do for a little money, and often do unnecessarily, for with a little effort he could have raised the funds in other, less objectionable ways. He always seemed strapped for money and tended to blame it on Patricia's extravagance which seemed hardly plausible to me. He left UCLA for CCNY for a measly sum he could easily have earned by giving a few extra lectures. The real source of his quarrel with Albert Barnes was his wife's detestation of Barnes, her stiff-arming of him, and her foolish (because uninformed) running-down both of Barnes's private art collection and his judgment about modern painting. Barnes first tried to bar her from Russell's lectures on the ground that her knitting was distracting the class. Russell naturally tended to stand by his wife and got the class to vote that Patricia's knitting was unobjectionable, which only intensified Barnes's fury. He then used as a means for further harassment Russell's desire to earn a little more money through commercial lectures. Russell's salary at the Barnes Institute was the same as at UCLA. Barnes offered Russell an extra \$2,000, provided Russell did not lecture elsewhere for money. Russell agreed, but made an oral exception for academic appearances. Barnes untruthfully denied he had consented to the oral exception.

Although Russell was perfectly within his rights and his behaviour could not be legally or morally faulted, he showed poor judgment. His position at the Institute was a sinecure, created especially for him at John Dewey's personal request. He could have easily earned by writing what he did by doing. When he became aware of Barnes's search for a private get rid of him, evident in Barnes's objection to his lecturing elsewhere, he could have forsworn commercial lecturing while at the Barnes Institute without exacting a compensating emolument. But the lure of quick, ready cash was hard to resist. There were other occasions when this was apparent.

At the height of the controversy at CCNY, I chanced across an article headlined on the cover of an issue of *Glenn* magazine, entitled "What to Do If You Fail in Love with a

Married Man—by Bertrand Russell.” I expostulated with him on the grounds that this was not the place and time for him to be writing on these themes when his case was still undecided in the and when we were attempting to counteract the a-inspired campaign against him—as a sex-obsessed and prurient old man—by stressing his international eminence as a scientific scholar and profound philosopher.

“Why did you do it?”, I asked.

“I did it for \$50”, he replied.

“We could have given you the money ourselves”, I retorted, speaking for the Committee. “if you needed it that badly.”

Russell bridled and reddened. “I’m tired of hearing people talk that way but who do nothing. Meanwhile my obligations continue to be heavy. Whatever assets I have are tied up in England because of the War.” When he cooled off he promised not to write pieces like that again. I assured him I could easily get serious books for him to review that would earn much more than \$50.

The article itself contained quite sensible advice on what a young woman should do if she fell in love with a married man. (It advised that she move away!) But to me the real shocker about the article was Russell’s avowal, a few days later, that he had not written the article at all. He had only signed it—Patricia had written it! Some time later I expressed surprise to him at finding a book, by an author of whom Russell had spoken rather disparagingly, advertised “with an introduction by Bertrand Russell.” Russell had not altered his judgment of the author’s competence. “Why, then, did you write the introduction?” I inquired. “For fifty dollars”, he replied.

He would not agree that it was unfair to readers, who would naturally assume that Russell approved of the book and its author. “When they read the book they will see that it contains no praise”, he countered. “But they will have already bought the book by then”, I objected, “probably on the strength of your introduction.” I cannot recall the words of his laughing rejoinder, but my distinct impression is that he felt that the experience would enhance their discretion or caution in the future.

There were occasions on which his attitude towards money was out of keeping with his principled moral positions. He once told my wife and me that a relative had become an Orthodox Jew, or rather had undergone the ritual of conversion, in order to inherit some money from her Orthodox Jewish father-in-law—although, Russell assured us, she was as secular-minded as he was himself. When we expressed doubt about the moral propriety of such action, Russell stoutly defended her right to act as she did and made us feel as if we were rather simple-minded members of the Rationalist Society.

There was another incident that involved his friend and publisher, W. W. Norton, whom Russell would occasionally visit and of whom he had spoken warmly several times as someone who had befriended him in the past. After he had conceived of making a book of his lectures on “The History of Western Philosophy”, Russell wrote to Norton asking for a contract and a substantial advance. Norton was willing to publish the book but was doubtful whether it would sell (in the light of Will Durant’s phenomenal success, this was a bizarre judgment), but sent an advance of \$500, “for friendship’s sake.” Russell then sent off a letter of inquiry to Simon & Schuster, whom he had referred to as “vulgar publishers” because of the character of some of their advertisements. The return mail brought a cheque for \$2,000 as an advance even before the contract was drawn up. He then returned the cheque of \$500 to Norton, breaking off all personal relations with him on the grounds that he didn’t want an advance “for friendship’s sake.” Russell related the story with gusto as if he had scored a triumph. Although I knew from personal experience that “friendship” with publishers was a rather tenuous sort of thing, I could not help feeling that Russell had treated Norton rather

shabbily.

FINALLY, ANOTHER TRAIT of Russell’s gradually came to light. I reluctantly came to the conclusion that Russell’s religion of truth overlaid a strong streak of cruelty. There are some truths which, when they are gratuitously told, are not expressions of a desire for knowledge or justice but an expression of cruelty. Russell was not unaware of this in others. It was Shaw’s cruelty that aroused Russell’s intense moral indignation even more than his cynical apologies for Mussolini, Hitler, and Stalin. But Russell himself would often and needlessly deliver himself of the most devastating things about some individuals, and enjoy it.

“Whatever happened to W.C.?” I once asked him. “He was discovered molesting little girls and disappeared from England”, he replied, going off into a gale of laughter. The man in question had been of great help to Russell when Russell had been threatened with jail. At another time, out of the blue: “Hook, did you ever read William Temple’s article in *Mind* on Plato’s theory of ideas? No? Well, he traces it back, with all the flourishes of scholarship, to the Greek practice of pederasty. Now wasn’t that a peculiar article for the future Archbishop of Canterbury to write? . . .” The implication was plain. I looked up the article; Russell was right as usual.

I must admit that I enjoyed Russell’s sallies at other people’s expense even when I felt somewhat uncomfortable. But in retrospect I wondered what moved him. His short stories are macabre in their monotonous exposure of human cruelty and hypocrisy but they are told with relish rather than compassion. He seemed convinced that any man who passed as a good man was really a fraud. Sensitive readers of Russell’s *Autobiography* will have been revolted by the cruelty of some of its pages, not only his account of his treatment of the infatuated young woman who followed him to England but particularly by the reproduction of a letter from a harmless German savant who after making some contributions to the philosophy of mathematics had become insane. Publication of that letter was like jeering at a cripple.

What seemed worse to me was Russell’s insensitiveness to his own unwitting cruelty when it was called to his attention. Usually chary of ever praising a book or manuscript on solicitation, Russell had made an exception and had written to Oxford University Press lauding Alfred Tarski’s outstanding contributions to the foundations of logic and mathematics. The publishers used a few sentences from Russell’s letter as a jacket blurb. Few people take blurbs seriously or literally. But as soon as Russell saw the blurb and became aware that Tarski was teaching at Harvard that year, he wrote a letter to C. I. Lewis (then Chairman of the Department) and requested that he call a meeting of the entire department and read a declaration from Russell to the effect that his remarks about Tarski’s contributions were not to be taken literally or as derogating in any way from A. N. Whitehead’s superior achievements. Tarski was present and felt completely humiliated. I learned about the incident from Ernest Nagel, to whom Tarski had bitterly complained. When I related the incident to Russell and described Tarski’s hurt, Russell was altogether unmoved. “My withers are completely unwrung”, he said (or words to that effect). “The blurb was unjust to Whitehead.” It is quite true that Russell had a special regard for Whitehead and felt that ever since Whitehead had lost his son in the First World War, he had kept him at arm’s length despite genial references to him in public.⁴ Whatever the reason, it did not justify Russell’s letter publicly downgrading Tarski—at that time a Jewish-Polish refugee smarting from lack of adequate recognition. A simple note to Whitehead would have sufficed to clear up matters, in the unlikely event that Whitehead had seen the blurb and in the unlikely event that he had taken umbrage at it. There was no need for Russell to make a federal case of it. Nor did it suggest itself to C. I. Lewis that he was not under the slightest obligation to carry out Russell’s request. It

is testimony to the professional respect and awe in which Russell was held by American philosophers, despite all the McGeehans and Barneses, that no one ever thought of not complying with his request.

THERE IS ONE LAST bite of toothless malice on Russell’s part that I record with sorrow. Our published exchange over the “Better Red than Dead” line of post-War appeasement he advocated had been sharp but not vindictive. After he organised the Viet Nam War Trial of the United States in which the verdict was announced before the “trial”, I wrote a critical analysis of his position in the *New Leader*, to which he had often contributed and in which our several exchanges had previously appeared. Russell made no rejoinder but in the third volume of his *Autobiography* he refers to my article as having appeared in a periodical that had been charged (falsely, let it be said) with having once accepted a subvention from the Chinese Nationalist régime years ago. Whatever the imputation was for contributors to the *New Leader*, and I see no relevant one, it extended to all contributors including Russell himself (who, in contradistinction to most other contributors at the time he wrote, used to receive \$50 for his pieces even when they were reprinted from elsewhere). Years earlier he had referred to his “pleasant connection with the *New Leader* extending over many years.” There is no doubt, unfortunately, that in Russell’s own mind there was an intent to smear me rather than make a reasoned reply to my criticisms. Although towards the end of his life there is some evidence that he did not write all the things that appeared under his name,⁵ I do not believe that this malicious footnote appeared without his knowledge and approval.

THERE ARE MANY OTHER THINGS I could say of Bertrand Russell the man. And yet they seem so irrelevant to Russell the philosopher, and (except for the last years of his life when he welcomed the victory of Communist North Viet Nam) to Russell the fighter for human freedom. It is as a philosopher that he should be and will be remembered.

It is not the greatest tribute one can pay to a philosopher to say that he is never dull. For there have been great philosophers who often are dull, like Aristotle and Kant. Nor is it a sufficient sign of great philosophy to be clear and lucid. Russell’s prose has been compared by T. S. Eliot to that of David Hume’s. I would rank it higher, for it had more colour, juice, and humour. But to be lucid, exciting and profound in the main body of one’s work is a combination of virtues given to few philosophers. Bertrand Russell has achieved immortality by his philosophical writings. Everything else about him is of little consequence, except for its passing human interest.

⁴ On the basis of advice received from friends at Cambridge, I volunteered information to Russell that, judging by what was actually said at the informal get-together with students and colleagues at the Whiteheads, it was Mrs Whitehead who was the source of the coolness to Russell, not Whitehead himself. Russell insisted, however, that he knew better.

⁵ In his *Bertrand Russell and the World* (1981), Ronald Clark records an incident involving the “editorial” activities of Russell’s personal secretary, Ralph Schoenman (p. 110):

“Russell intervened in the Cuban crisis which threatened to bring America and Russia to the brink of nuclear war. As an American blockade of the island appeared imminent a statement was issued to the press from Plas Penrhyn. As typed it began, ‘Mankind is faced tonight with a grave crisis. This was altered in Schoenman’s hand to: ‘It seems likely that within a week you will all be dead to please American madmen.’ On Russell’s suggestion, ‘a week’ was altered to ‘a week or two’, but otherwise the statement was issued as Schoenman had altered it.”

- (7) The Nobel Presentation Address was given by Anders Österling, Permanent Secretary of the Swedish Academy, on the occasion of the awarding of the Nobel Prize to Bertrand Russell in 1950. We printed this Address in the July 1975 newsletter, and perhaps it’s time to take another look at it (next page). It is followed by remarks by Kjell Strömberg. With thanks to LOU ACHESON for reminding us about it as well as providing the text.

THE GREAT WORK on Western philosophy which Bertrand Russell brought out in 1946, that is, at the age of seventy-four, contains numerous characteristic reflections giving us an idea of how he himself might like us to regard his long and arduous life. In one place, speaking of the pre-Socratic philosophers, he says, "In studying a philosopher, the right attitude is neither reverence nor contempt, but first a kind of hypothetical sympathy, until it is possible to know what it feels like to believe in his theories, and only then a revival of the critical attitude, which should resemble, as far as possible, the state of mind of a person abandoning opinions which he has hitherto held."

And in another place in the same work he writes, "It is not good either to forget the questions that philosophy asks, or to persuade ourselves that we have found indubitable answers to them. To teach how to live without certainty, and yet without being paralyzed by hesitation, is perhaps the chief thing that philosophy, in our age, can still do."

With his superior intellect, Russell has, throughout half a century, been at the center of public debate, watchful and always ready for battle, as active as ever to this very day, having behind him a life of writing of most imposing scope. His works in the sciences concerned with human knowledge and mathematical logic are epoch-making and have been compared to Newton's fundamental results in mechanics. Yet it is not these achievements in special branches of science that the Nobel Prize is primarily meant to recognize. What is important, from our point of view, is that Russell has so extensively addressed his books to a public of laymen, and, in doing so, has been so eminently successful in keeping alive the interest in general philosophy.

His whole life's work is a stimulating defense of the reality of common sense. As a philosopher he pursues the line from the classical English empiricism, from Locke and Hume. His attitude toward the idealistic dogmas is a most independent one and quite frequently one of opposition. The great philosophical systems evolved on the Continent he regards, so to speak, from the chilly, windswept, and distinctive perspective of the English Channel. With his keen and sound good sense, his clear style, and his wit in the midst of seriousness, he has in his work evinced those characteristics which are found among only the elite of authors. Time does not permit even the briefest survey of his works in this area, which are fascinating also from a purely literary point of view. It may suffice to mention such books as the *History of Western Philosophy* (1946), *Human Knowledge* (1948), *Sceptical Essays* (1948), and the sketch "My Mental Development" (in *The Philosophy of Bertrand Russell*, 1951); but to these should be added a great number of equally important books on practically all the problems which the present development of society involves.

Russell's views and opinions have been influenced by varied factors and cannot easily be summarized. His famous family typifies the Whig tradition in English politics. His grandfather was the Victorian statesman John Russell. Familiar from an early age with the ideas of Liberalism, he was soon confronted by the problems of rising socialism and since then he has, as an independent critic, weighed the advantages and

disadvantages of this form of society. He has consistently and earnestly warned us of the dangers of the new bureaucracy. He has defended the right of the individual against collectivism, and he views industrial civilization as a growing threat to humanity's chances of simple happiness and joy in living. After his visit to the Soviet Union in 1920 he strongly and resolutely opposed himself to Communism. On the other hand, during a subsequent journey in China, he was very much attracted by the calm and peaceable frame of mind of China's cultivated classes and recommended it as an example to a West ravaged by wild aggression.

Much in Russell's writings excites protest. Unlike many other philosophers, he regards this as one of the natural and urgent tasks of an author. Of course, his rationalism does not solve all troublesome problems and cannot be used as a panacea, even if the philosopher willingly writes out the prescription. Unfortunately, there are—and obviously always will be—obscure forces which evade intellectual analysis and refuse to submit to control. Thus, even if Russell's work has, from a purely practical point of view, met with but little success in an age which has seen two world wars—even if it may look as if, in the main, his ideas have been bitterly repudiated—we must nevertheless admire the unwavering valor of this rebellious teller of the truth and the sort of dry, fiery strength and gay buoyancy with which he presents his convictions, which are never dictated by opportunism but are often directly unpopular. To read the philosopher Russell often gives very much the same pleasure as to listen to the outspoken hero in a Shaw comedy, when in loud and cheerful tones he throws out his bold retorts and keen arguments.

In conclusion, Russell's philosophy may be said in the best sense to fulfill just those desires and intentions that Alfred Nobel had in mind when he instituted his Prizes. There are quite striking similarities between their outlooks on life. Both of them are at the same time skeptics and utopians, both take a gloomy view of the contemporary world, yet both hold fast to a belief in the possibility of achieving logical standards for human behavior. The Swedish Academy believes that it acts in the spirit of Nobel's intention when, on the occasion of the fiftieth anniversary of the Foundation, it wishes to honor Bertrand Russell as one of our time's brilliant spokesmen of rationality and humanity, as a fearless champion of free speech and free thought in the West.

My lord—Exactly two hundred years ago Jean Jacques Rousseau was awarded the prize offered by the Academy of Dijon for his famous answer to the question of "whether the arts and sciences have contributed to improve morals." Rousseau answered "No," and this answer—which may not have been a very serious one—in any case had most serious consequences. The Academy of Dijon had no revolutionary aims. This is true also of the Swedish Academy, which has now chosen to reward you for your philosophical works just because they are undoubtedly of service to moral civilization and, in addition, most eminently answer to the spirit of Nobel's intentions. We honor you as a brilliant champion of humanity and free thought, and it is a pleasure for us to see you here on the occasion of the fiftieth anniversary of the Nobel Foundation. With these words I request you to receive from the hands of His Majesty the King the Nobel Prize for Literature for 1950.

IN 1950 the Swedish Academy had two Nobel Prizes to award, since the one for 1949 had been held in reserve. Everyone expected that one of the two would go to Sir Winston Churchill. The former Prime Minister of Great Britain had just published the third volume of his masterly epic on World War II, and he had several enthusiastic supporters in the Academy itself. Another very prominent candidate was Pär Lagerkvist, the Swedish poet, dramatist, and novelist, who had been

proposed that year by all the Scandinavian literary societies. There was no shortage of other distinguished candidates, English, French, and American, some of whom were later to carry off the Prize. Having agreed on William Faulkner for the 1949 Prize, the Swedish Academy made a choice farther afield and awarded its 1950 Prize to an outsider who had been proposed that year for the first time, Bertrand Lord Russell, the English philosopher.

1928, the year in which Henri Bergson received the Prize, no philosopher had been chosen. The elderly English peer was now nearly eighty. Unlike his French predecessor, he did not show great artistic imagination in his style of writing, but he was very well known and popular as the witty and elegant developer and popularizer of the empirical, humanist philosophy of the great English thinkers of the eighteenth century,

Locke, Berkeley, and Hume. He also had an affinity with the no less influential utilitarians of the nineteenth century, Jeremy Bentham, John Stuart Mill, and Herbert Spencer.

We know that Herbert Spencer was particularly appreciated by Alfred Nobel, who would have been gratified to see him receive the first Nobel Prize for Literature, for which he had in fact been a candidate and a very prominent one. No doubt the Swedish Academy, on very

good grounds, wanted to mark the fiftieth anniversary of the Nobel institution by paying tardy and discreet homage to the world of ideas represented by Russell as well as by Spencer.

According to the brief published account of the reasons for this choice, the Nobel Prize of 1950 was awarded to Bertrand Russell "in homage to his philosophical work, which is as rich as it is important and which makes him rank as

a defender of humanity and the freedom of ideas." The Committee's advisor was a professor of philosophy at Stockholm University, and after a detailed analysis of Russell's vast philosophical, scientific, historical, sociological, and political works he came to the conclusion that Russell compared favorably with the other "non-literary" writers--Monismen, Eucken, and Ferguson—who had previously been honored with the Nobel

Prize for Literature. If the Swedish Academy wanted to honor the intellectual culture of England in the same way, it could not have chosen a worthier representative than Bertrand Russell.

Anders Osterling, the permanent secretary of the Swedish Academy, did not spare his praise in awarding the Prize to the noble lord.

Lord Russell did not make a formal acceptance at the award ceremony but on

the following day he gave a public lecture on the current trends in world politics. He reaffirmed his unshakable faith in human intelligence, the only thing capable of making this world in which we live a better one. It should be remembered that this profession of optimistic faith was composed and spoken at the moment when a new struggle with far-reaching repercussions had just broken out--the Korean war.

BRS BOOK AWARD

- (8) Nominations wanted for the 1985 BRS Book Award. This Award was proposed by Gladys Leithauser some years ago. We will follow this procedure: (1) Members may nominate books they feel have great merit; the books should deal with some aspect of BR's life, work, times, or causes. (2) The Book Award Committee will evaluate the nominations, and recommend a book to the members. (3) The members will vote their approval or disapproval of the recommendation, or perhaps indicate their preference among several recommended books.

The members of the Book Award Committee are Gladys Leithauser, Hugh Moorhead, and Harry Ruja.

Please send your nominations to the newsletter (address on Page 1, bottom) for forwarding to the Committee.

BRS DOCTORAL GRANT (1985)

- (9) Now \$1000. The value of the BRS Doctoral Grant has been doubled. In 1985 the recipient will receive \$1000. The aim of doubling the amount is to stimulate greater interest in the Grant. In announcing the 1985 Grant, we will mention that the Grant is open to non-members as well as members of the BRS, and that the money could pay for typing a dissertation, traveling to the Russell Archives for research purposes, or for any purpose whatever.

ON NUCLEAR WAR

- (10) "Man's Peril" was BR's now famous BBC talk at Christmas 1954 about the danger to mankind of a nuclear war. It became the basis of the Statement (also known as the Russell-Einstein Manifesto) which BR had invited eminent scientists from both sides of the Iron Curtain to sign. They had done so. And they also attended a press conference on July 9, 1955 at which BR read the Statement and answered the press's questions. What followed, 2 years later, was the first of the Pugwash Conferences, attended by scientists from both sides of the Iron Curtain. The Library has a tape of the press conference, #213 (28).

The radio talk was also the basis of an article for Saturday Review (4/12/55), with a new title, "Man's Duel With the Hydrogen Bomb." The text reproduced here is from "Humanitas International Human Rights Committee" (Spring 1984), which uses the Saturday Review version. "Man's Peril" is included in BR's Portraits From Memory and in The Basic Writings of Bertrand Russell. Here it is, with thanks to HERB VOGT and ALEX DELY:

Twenty-nine years ago, Bertrand Russell warned of the grave dangers the world faced if it continued to arm itself with nuclear weapons. His visionary article on "Man's Duel With the Hydrogen Bomb" appeared in the April 12, 1955 issue of The Saturday Review. When I recently discovered that magazine in a rack of discarded periodicals at the Menlo Park Library, I read the article and discovered that, despite the vast changes that have occurred over the past three decades, Russell's analysis held up very well indeed. It is interesting to note that his recommendation that the neutral nations act as mediators between the Soviets and the Americans has long been ignored, but has, in the past few years, stimulated new interest. Apart from the nature of Russell's specific recommendations, however, the article is most striking for two reasons: the elegance with which Russell presented the nature of the problem he perceived in 1955, and the irony with which we must view his unheeded warning three decades hence. It is a warning, we feel, that cannot be repeated often enough.

—Jim Wake

Editor, Humanitas newsletter

I am writing not as a Briton, not as a European, not as a member of a Western democracy, but as a human being, a member of the species Man, whose continued existence is in doubt. The world is full of conflicts: Jews and Arabs; Indians and Pakistanis; white men and Negroes in Africa; and, overshadowing all minor conflicts, the titanic struggle between Communism and anti-Communism.

Almost everybody who is politically conscious has strong feelings about one or more of these issues. But I want you, if you can, to set aside such feelings for the moment and consider yourself only as a member of a biological species which has had a remarkable history and whose disappearance none of us can desire. I shall try to say no single word which should appeal to one group rather than to another. All, equally, are in peril, and, if the peril is understood, there is hope that they may collectively avert it. We have to learn to think in a new way. We have to learn to ask ourselves not what steps can be taken to give military victory to whatever group we prefer,

for there no longer are such steps. The question we have to ask ourselves is: What steps can be taken to prevent a military contest of which the issue must be disastrous to all sides?

The general public, and even many men in positions of authority, have not realized what would be involved in a war with hydrogen bombs. The general public still thinks in terms of the obliteration of cities. It is understood that the new bombs are more powerful than the old and that, while one atomic bomb could obliterate Hiroshima, one hydrogen bomb could obliterate the largest cities such as London, New York, and Moscow. No doubt in a hydrogen-bomb war great cities would be obliterated. But this is one of the minor disasters that would have to be faced. If everybody in Lon-

danger zone.

No one knows how widely such lethal radioactive particles might be diffused, but the best authorities are unanimous in saying that a war with hydrogen bombs is quite likely to put an end to the human race. It is feared that if many hydrogen bombs are used there will be universal death—suddenly for a fortunate minority, but for the majority a slow torture of disease and disintegration.

I will give a few instances out of many. Sir John Slessor, who can speak with unrivaled authority from his experiences of air warfare, has said: "A world war in this day and age would be general suicide"; and has gone on to state: "It never has and never will make any sense trying to abolish any particular weapon of war. What we have got to abolish is war." E. D. Adrian, who is the leading English authority on nerve physiology, recently emphasized the same point in his address as president of the British Association.

He said: "We must face the possibility that repeated atomic explosions will lead to a degree of general radioactivity which no one can tolerate or escape"; and he added: "Unless we are ready to give up some of our old loyalties, we may be forced into a fight which might end the human race." Air Chief Marshal Sir Philip Joubert says: "With the advent of the hydrogen bomb, it would appear that the human race has arrived at a point where it must abandon war as a continuation of policy or accept the possibility of total destruction." I could prolong such quotations indefinitely.

Many warnings have been uttered by eminent men of science and by authorities in military strategy. None of them will say that the worst results are certain. What they do say is that these results are possible and no one can be sure that they will not be realized. I have not found that the views of experts on this question depend in any degree upon their politics or prejudices. They depend only, so far as my researches have revealed, upon the extent of the particular expert's

knowledge. I have found that the men who know most are most gloomy.

Here, then, is the problem which I present to you, stark and dreadful and inescapable: Shall we put an end to the human race; or shall mankind renounce war? People will not face this alternative because it is so difficult to abolish war. The abolition of war will demand distasteful limitations of national sovereignty. But what perhaps impedes understanding of the situation more than anything else is that the term "mankind" feels vague and abstract. People scarcely realize in imagination that the danger is to themselves and their children and their grandchildren, and not only to a simply apprehended humanity. And so they hope that perhaps war may be allowed to continue provided modern weapons are prohibited. I am afraid this hope is illusory. Whatever agreements not to use hydrogen bombs had been reached in time of peace, they would no longer be considered binding in time of war, and both sides would set to work to manufacture hydrogen bombs as soon as war broke out, for if one side manufactured the bombs and the other did not, the side that manufactured them would inevitably be victorious.

On both sides of the Iron Curtain there are political obstacles to emphasis on the destructive character of future war. If either side were to announce that it would on no account resort to war, it would be diplomatically at the mercy of the other side. Each side, for the sake of self-preservation, must continue to say that there are provocations that it will not endure. Each side may long for an accommodation, but neither side dare express this longing convincingly. The position is analogous to that of duelists in former times. No doubt it frequently happened that each of the duelists feared death and desired an accommodation, but neither could say so, since, if he did, he would be thought a coward. The only hope in such cases was intervention by friends of both parties suggesting an accommodation to which both could agree at the same moment. This is an exact analogy to the present

position of the protagonists on either side of the Iron Curtain. If an agreement making war improbable is to be reached, it will have to be by the friendly offices of neutrals, who can speak of the disastrousness of war without being accused of advocating a policy of "appeasement." The neutrals have every right, even from the narrowest consideration of self-interest, to do whatever lies in their power to prevent the outbreak of a world war, for, if such a war does break out, it is highly probable that all the inhabitants of neutral countries, along with the rest of mankind, will perish. If I were in control of a neutral government, I should certainly consider it my paramount duty to see to it that my country would continue to have inhabitants, and the only way by which I could make this probable would be to promote some kind of accommodation between the powers on opposite sides of the Iron Curtain.

I, personally, am of course not neutral in my feeling and I should not wish to see the danger of war averted by an abject submission of the West. But, as a human being, I have to remember that, if the issues between East and West are to be decided in any manner that can give any possible satisfaction to anybody, whether Communist or anti-Communist, whether Asian or European or American, whether white or black, then these issues must not be decided by war. I should wish this to be understood on both sides of the Iron Curtain. It is emphatically not enough to have it understood on one side only. I think the neutrals, since they are not caught in our tragic dilemma, can, if they will, bring about this realization on both sides. I should like to see one or more neutral powers appoint a commission of experts, who should all be neutrals, to draw up a report on the destructive effects to be expected in a war with hydrogen bombs, not only among the belligerents but also among neutrals. I should wish this report presented to the governments of all the Great Powers with an invitation to express their agreement or disagreement with its findings. I think it possi-

ble that in this way all the Great Powers could be led to agree that a world war can no longer serve the purposes of any of them since it is likely to exterminate friend and foe equally and neutrals likewise.

As geological time is reckoned, Man has so far existed only for a very short period—1,000,000 years at the most. What he has achieved, especially during the last 6,000 years, is something utterly new in the history of the Cosmos, so far at least as we are acquainted with it. For countless ages the sun rose and set, the moon waxed and waned, the stars shone in the night, but only with the coming of Man that these things were understood. In the great world of astronomy and in the little world of the atom, Man has unveiled secrets which might have been thought undiscoverable. In art and literature and religion some men have shown a sublimity of feeling which makes the species worth preserving.

Is all this to end in trivial horror because so few are able to think of Man rather than of this or that group of men? Is our race so destitute of wisdom, so incapable of impartial love, so blind even to the simplest dictates of self-preservation that the last proof of its silly cleverness is to be the extermination of all life on our planet? For it will be not only men who will perish, but also the animals and plants, whom no one can accuse of Communism or anti-Communism.

I cannot believe that this is to be the end. I would have men forget their quarrels for a moment and reflect that, if they will allow themselves to survive, there is every reason to expect the triumphs of the future to exceed immeasurably the triumphs of the past. There lies before us, if we choose, continual progress in happiness, knowledge, and wisdom. Shall we, instead, choose death, because we cannot end our quarrels? I appeal as a human being to human beings: remember your humanity, and forget the rest. If you can do so, the way lies open to a new Paradise; if you cannot, nothing lies before you but universal death.

A brief description, and activities 1984-85.

The Pugwash Conferences resulted from the Bertrand Russell - Albert Einstein Manifesto of 1955 calling upon scientists of all political persuasions to gather in conference and devise ways to avoid the danger of nuclear war. These Conferences - from the first Conference in Pugwash*, Nova Scotia, in 1957 until today - have attracted the most respected representatives of the scientific communities, notably from the East and the West, and have created an important bridge between scientists of opposing political viewpoints which has been maintained for over 25 years.

Since 1957 more than 100 Pugwash Conferences, Symposia and Workshops, with the participation of over 2 000 natural scientists, scholars and various experts from all over the world, have been held in closed meetings in an atmosphere of free and informal discussion, without publicity and official responsibilities. The major findings have been transmitted to high levels of governments, the United Nations, and leaders of the world scientific community, as well as to the public.

Pugwash meetings have also made an important contribution towards establishing co-operative links between scientists from the industrial North and the underdeveloped South, aimed at removing the threats to peace which are a consequence of the growing gap between the affluent and the needy portions of the world, and the arms trade and militarism which affect many of these countries.

Discussions in Pugwash meetings have often had a direct and some times a crucial influence in the negotiation of arms control agreements, such as the Nuclear Test Ban Treaty of 1963; the Clear Non-Proliferation Treaty of 1968; the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on their Destruction of 1972; and the Anti-Ballistic Missile (AMB) Agreement of 1972. Pugwash exchanges have also helped to lay the groundwork for the Strategic Arms Limitation Talks (SALT), the Conference on Security and Cooperation in Europe (CSCE), and the Mutual Balanced Force Reduction (MBFR) talks.

Because of the private, unofficial and informal manner in which they are conducted, it is difficult to measure precisely to what extent the Pugwash Conferences, Symposia and Workshops have been contributing to the solution of the vast and complex problems on their agenda. It is clear, however, that Pugwash has succeeded in providing an effective channel of communication between scientists of widely different political and social views for discussing highly controversial matters, often of a military or political nature, by finding a common approach based upon scientific objectivity and mutual respect.

*1) Pugwash, a fishing village in Nova Scotia, was the venue of the 1st Conference by invitation of Cyrus Eaton (1884-1979), Canadian benefactor.

Pugwash has identified major problems arising from scientific and technological innovation and has directed attention to them at an early stage. There is good reason to believe that in some cases conclusions drawn from meetings have had a direct influence on the decision-making process by national governments involved in actual or potential conflicts, particularly with relation to arms control and disarmament.

A case in point is the problem of intermediate-range nuclear forces (INF) in Europe and their relation to general strategic nuclear forces. Following the NATO decision of December 1979 to introduce Pershing IIs and ground-launched cruise missiles by the end of 1983, unless agreement on the problem of INFs was achieved before then, Pugwash initiated in January 1980 a series of Workshops to discuss this problem and the relation to general strategic forces. By December 1983, nine such Workshops were held in Geneva. These meetings are known to have exerted an influence on official negotiations, for example the promulgation by the USSR of a no first-use policy, a temporary moratorium on the deployment of INFs capable of reaching Western European countries, and an offer to remove nuclear battlefield weapons from a defined zone.

Other examples of recent Pugwash efforts include the chemical weapons field where particular attention has been given to problems of verification of destruction of stockpiles and on non-production of weapons, and to the investigation of allegations of use. Amongst the measures for crisis prevention and management proposed by Pugwash is space surveillance satellites for peace-keeping purposes under the aegis of the United Nations.

Although the main thrust of Pugwash's efforts is aimed at avoiding nuclear war by influencing favourably the formulation of nuclear and other military and political policies in the upper echelons of governments and alliances, for example on nuclear weapon-free zones in the Nordic, Central Europe and Balkan regions, it also recognizes the need to reach other population groups in seeking support for its goals. An example of this is the 1982 Pugwash Declaration signed by 111 Nobel laureates in the natural sciences, which outlines specific steps and calls upon all members of the world's scientific community, all governments and all peoples to help remove the threat of nuclear war. This declaration, issued in Warsaw on the 25th anniversary of the founding of Pugwash, was one of the first public statements by a large group of influential scientists calling for a "standstill freeze" on nuclear arsenals and a stop to the development of new weapons technologies. Pugwash has long stood for "no use" of nuclear weapons in conflicts under any circumstances, and for large cuts in existing nuclear arsenals leading to comprehensive nuclear disarmament.

Pugwash will continue its unique role in working towards comprehensive disarmament and ultimately general and complete disarmament.

- (12) Hats off to Harold Willens, the man who put the nuclear freeze movement on the map. He was Chairman of the California Nuclear Freeze, which proved that people really wanted a freeze and that therefore the freeze movement had to be taken seriously. (The Quakers were there first, of course. They usually are. They had been calling for a "nuclear moratorium" before the word "freeze" took over, but not too many people heard them.) According to Willens, the most influential people in America are business executives, and therefore the way to bring about change is to convince business executives that a particular change is desirable. Years ago he had founded Business Executives Against the Vietnam War. Discussing his new book The Trintab Factor, in a radio interview, he said this:

Years ago the Ford Motor Company built a car called the Edsel. They put hundreds of millions of dollars into it, and then they realized they had misread the market and it was a mistake. If they had been too stubborn or too fearful to admit a mistake, there would be no Ford Motor Company alive today. That's what we have to do as a country. We have to say, "Nobody can win the nuclear arms race. We've been carrying it on for almost 40 years, and it's clear that one side catches up with the other and both sides come closer to the edge of doom. And so, it's an Edsel. Let's scrap it. Let's find another way."

Willens offers another way, in 5 steps, the first 4 of which (he says) "amount to an incremental weapons freeze." We recommend his book. The interview excerpt, above, comes from "In The Public Interest" (March 1984/ Vol.12, No.3), newsletter of "The Daily Nationwide Radio Voice of the Fund for Peace".

- (13) "The Day After World War III" by Edward Zuckerman (NY:Viking) was reviewed in Newsweek (7/9/84, p. 72) by Walter Clemons. This is his review:

In case of nuclear attack, the U.S. Postal Service is prepared to trace the displaced (and dead) by issuing postage-free emergency change-of-address cards. Your local post office already has them. In its surreal absurdity, this detail stands out among many well-meaning bureaucratic lunacies Edward Zuckerman has gleaned from the files of the Federal Emergency Management Agency (FEMA), which coordinates planning for a postattack society.

Meticulously researched, sardonically written, "The Day After World War III" is more frightening than doomsday tracts like Jonathan Schell's "The Fate of the Earth" and Helen Caldicott's "Nuclear Madness, which portray nuclear war as a global cataclysm. While the civil-defense professionals and military planners in Zuckerman's book mostly pay lip service to the idea that nuclear war is undesirable, they are contemptuous of those who find it unthinkable. Nuclear war "would be a mess," Gen Louis Giuffrida of FEMA said in 1981. "But it wouldn't be unmanageable to the extent that we had a plan."

The plans are more comprehensive than we realize. They range from an order freezing wages, prices and rents -- ready for signing as the President circles above the fallout in his specially modified 747 -- to a revised tax system under which, if employers are unable to issue W-2 forms, the IRS may 'forgive' income tax and substitute a 30% sales tax. The have-a-nice-day cheeriness of the documents sometimes lapses into unavoidable gloom when such subjects as the smell of corpses in fallout shelters are addressed, but optimism prevails. Life underground can be brightened by group singing and board games, a shelter-management guide advises, and "Arts-and-crafts products can be shown and admired."

Zuckerman traces the change from the post-Hiroshima belief that "this thing is so terrible...that there may not be any more wars," as Gen. "Hap" Arnold said in 1945, to an increasing confidence in the feasibility of limited nuclear war. By studying the "Ivy League" exercise conducted by the Reagan administration in 1982 and by interviewing Strategic Air Command officers, Zuckerman is able to provide a detailed scenario for a nuclear war that might begin with the release of "a relatively small tactical nuclear weapon" by the United States, perhaps only as a warning. Defense Secretaries Harold Brown and Caspar Weinberger have both admitted doubts as to whether a limited nuclear exchange could remain limited, and the Soviets have declared it impossible. "But policy debates are beside the point," Zuckerman observes, "The operational plans for limited nuclear war fighting have been made, and in place, for years."

Illogic: Zuckerman tells us in a reasonable tone where we seem to be heading. He does not suggest that nuclear-freeze marches will change anything. But the absence of exhortation in "The Day After World War III" has an eloquence of its own. Instead of the blinding flash of apocalyptic extinction, he invites us to consider nuclear war, as its most optimistic planners envision it. With the possible exceptions of Edward Teller and Phyllis Schlafly ("The atomic bomb is a marvelous gift that was given to our country by a wise God"), the book contains no hissable villains. Zuckerman patiently untangles the illogic of bureaucrats and strategists acting in good faith. "What if FEMA were right about everything?" he asks. If only 45 million Americans were killed outright (FEMA's most hopeful estimate), only 20 million more suffered sublethal radiation sickness, only a few million of those who survived their shelter stays died of cancer later on, "and the world did not end? And things were nearly normal in Argentina and New Zealand? Would nuclear war be acceptable then?" As Zuckerman outlines the busy planning for such a war, one is aroused to rage.

CREATIONISM

- (14) Creationism loses a round, thanks to the fine work of People for the American Way, as reported in the New York Times (4/15/84):

TEXAS DROPS CURB ON SCIENCE BOOKS

Limit on Teaching Evolution
Lifted After Threat of Suit

By ROBERT REINHOLD
Special to The New York Times

EL PASO, April 14 — The Texas Board of Education today repealed a decade-old rule that required textbooks used in the state's public schools to describe evolution as "only one of several explanations" of the origin of human beings and to present it as "theory rather than fact."

Critics had charged that textbook publishers had to water down their treatment of evolution in books sold all over the country if they wanted to sell

textbooks in Texas. Texas spends about \$65 million a year on texts, making the state the fourth largest market in the country.

But, there was disagreement over what effect the repeal would have.

Lawsuit Was Threatened

"This is going to free publishers to write about science accurately, unhampered by religious dogma," said Michael Hudson, the Texas coordinator for People for the American Way, a national anticensorship group that had petitioned for today's change and threatened to sue if it was not made.

"It undoes 10 years of creationist influence on textbook content and it will spill over into every state," Mr. Hudson said.

"It won't make a bit of difference," countered Norma Gabler of Longview, Tex. She and her husband, Mel, representing the fundamentalist religious view of creation, have long exerted a powerful influence on the approval of textbooks in Texas and were the authors of the original evolution rule.

"This is rule by intimidation and threat," she said, referring to Mr. Hudson's group. She added that textbooks had not changed much under the rule and still presented evolutionary theory.

"They still show hunched-over men moving up to man from monkeys and fishes coming out of the water," she said. "If you want to believe you came from a monkey, that's fine, but I don't."

All textbooks in Texas must be approved by the state board in a procedure similar to that in 17 other states, most of them in the South and Southwest.

The move today, taken reluctantly, came a month after the state's Attorney General, Jim Mattox, declared the requirement on evolution an unconstitutional intrusion of religion into state matters. He indicated then that he would not defend the board against an expected lawsuit challenging the rule, and members of the board said today they had no choice but to repeal it.

Moreover, the board has been under heavy pressure from many Texas political and business leaders, uneasy over criticism of Texas schools.

The repeal came on a voice vote of the 27-member board with only one audible dissent. The panel then unanimously approved a new provision stating, without mentioning evolution, that "theories should be clearly distinguished from fact and presented in an objective educational manner."

The rule did not forbid the teaching of evolutionary theory or require any mention of creationism in texts. But books mentioning evolution were required to print a disclaimer identifying evolution "as only one of several explanations of the origins of mankind" and must "avoid limiting young people in their search for meanings of their human existence."

The rule also compelled text writers to "ensure that the reference is clearly to a theory and not to a verified fact."

In his ruling last month, Attorney General Mattox said, "The inference is inescapable, from the narrowness of the requirement, that a concern for religious sensibilities rather than a dedication to scientific truth was the real motivation for the rules."

- (15) Creationism may or may not lose this one. The American Arbitration Ass'n arbitrator had not yet made his ruling, at the time this story appeared in the New York Times (2/21/84, p.A14):

Drama on Scopes Trial Is Barred From Class

Special to The New York Times

ST. LOUIS, Feb. 20 — To some, it seems like the Scopes monkey trial all over again. James Dickerson, a teacher in a nearby suburb, has been trying for a year and a half to show his students a fictionalized movie account of the 1925 case in which another teacher, John T. Scopes, was arrested when he agreed to challenge an old Tennessee law prohibiting the teaching of Darwin's theory of evolution.

Mr. Dickerson is an earth science teacher at Oakville Junior High School in the Melville School District south of here. In November 1982 he announced plans to show the 1960 movie "Inherit the Wind" to 300 students in his class. The school district's assistant superintendent at the time, Donald C. Hoefelmann, said school officials would not allow the movie to be shown because it

was historically inaccurate, poked fun at religious beliefs and was not appropriate for an earth sciences class.

Tracy and March in Film

Mr. Hoefelmann, who now works for an investment company, said he knew the decision would cause controversy. "Everyone knew it was going to be volatile," he said. "We all put a lot of thought into it."

The movie featured Spencer Tracy as a character based on Clarence Darrow, who was the attorney for Scopes, a teacher in Dayton, Tenn., and Fredric March as a character based on William Jennings Bryan, who was in effect a special prosecutor for the state of Tennessee.

Mr. Dickerson said the film would supplement class material on creation-

ism and evolution. But he said the school's principal, Ronald Paul, said no to his request in November 82.

Decision Not Binding

In January 1983 Mr. Dickerson appealed to Thomas L. Blades, the Melville Superintendent, who upheld the principal's decision. Efforts at compromise were unsuccessful, and Mr. Dickerson then took the matter to the Melville Community Teachers Association. The association and the school administration were unable to agree on an arbitrator, and the American Arbitration Association assigned one. The arbitrator heard the case early this month and is to rule in the next several months.

But school district officials do not have to follow the arbitrator's decision.

If they do not, the teachers association might sue to force a settlement, said Michael Skinner, grievance chairman for the association.

The whole dispute hints at censorship, said Joyce Armstrong, executive director of the American Civil Liberties Union of Eastern Missouri. It was the A.C.L.U. that pressed Scopes to challenge the Tennessee law 59 years ago and hired Darrow to represent him.

"I would think the school district would be on very shallow ground," she said. "School officials have a certain control over the curriculum, but then it reaches a point of academic freedom."

Meanwhile, the original stage version of "Inherit the Wind" with Hal Linden in the role based on Clarence Darrow is to open in a St. Louis area theater March 23.

ON EDUCATION

- (16) "Neill and Russell" from Neill Of Summerhill: The Permanent Rebel by Jonathan Croall (NY: Pantheon, 1983 pp.158-160,167), with thanks to TOM STANLEY:

Russell and his second wife, Dora, had two children coming up to school age. She too was unhappy about existing schools, in particular their rigid timetables and intense competition. She was active in various movements for reform, but found that even the pioneer schools, though certainly more humane places than conventional public or state schools, did not go far enough: 'Nearly all the new type of schools, though outside state jurisdiction, were in tune with the established beliefs, psychology and customs as to conduct and class; they were not seeking to upset the social system.' In the belief that there would be other parents 'like ourselves who desired radical changes in education', she and Russell decided to start their own school. The idea, as the first prospectus made clear, was to produce 'not listless intellectuals, but young men and women filled with constructive hopefulness, conscious that there are great things to be done in the world, and possessed of the skill required for taking their part.' There was to be no corporal punishment; attendance at lessons was to be voluntary; there was to be frank and full discussion about difficult topics such as sex and religion; and both the rules and the timetable were to be decided upon by a School Council.

In preparation for opening the school, the Russells did some homework on the ideas of certain pioneers. One of their children spent some time in a Montessori day school in London. Both were taken for a half-day to the open-air nursery school in Deptford run by Margaret McMillan, while their parents talked with its creator, and observed the environment which she had created, aiming to allow children room to move and play. The Russells studied the theories of psychologists such as Freud and Adler, and the educational ideas of Piaget, Froebel and Pestalozzi. And, in 1927, Russell arrived in a Minerva limousine to stay for a week at Summerhill. The staff 'sat at the feet' of the two men as they discussed the problem children at the school. Though the great mathematician dropped in on some lessons, there was disappointment that he missed one in particular, as Neill wrote in a letter of 26 May just after the visit: 'I have it on my conscience that I docked you of that Maths lesson. Especially so when I learnt that Mrs Barton [Jonesie] was annoyed at me for not bringing you in. It transpired that she had a specially brilliant lesson that day. I think therefore that you'll have to come back again . . . bringing your wife next time.'

One night, when he and Russell went for a walk together, Neill defined the difference between the two of them: "'Russell,' I said, 'if we had a boy with us now you would want to tell him about the stars while I would leave him to his own thoughts.'" He laughed when I added: "I maybe say that because I know damn all about the stars anyway.'" Neill was certainly right to see a fundamental difference in their attitude to children, despite the fact that he and Russell shared many views about the deficiencies of conventional schooling. The difference had first become clear when the two men had initially made contact by letter the previous year. But to some extent it was obscured by two qualities in Neill which were to be a source

of amusement, puzzlement and irritation to many involved with Summerhill: a streak of mild if harmless snobbery, which allowed him to be impressed by titles and eminence; and a very Scottish respect for learning, which sat somewhat uneasily with a genuine hatred of 'book learning'. When Russell sent Neill a copy of his *On Education*, at about the time *The Problem Child* was being published, Neill wrote back saying that it was 'the only book on education that I have read that does not make me swear. All the others are morals disguised as education.' He ignored the fact that he had made similar comments on earlier books by Edmond Holmes, Norman MacMunn and Caldwell Cook during his *New Era* period. Here he confesses himself impressed by Russell's knowledge: 'To me the most interesting thing about your book is that it is scholarly (nasty word) in the sense that it is written by a man who knows history and science. I am ignorant of both and I think that my own conclusions come partly from blind intuition.' Only in a very tentative manner does he point to a difference between them: 'Possibly . . . I attach more importance to emotion in education than you do.'

This was indeed a crucial difference, and one that was underlined by Russell in a letter to H. G. Wells a year after his visit to Summerhill. In trying to persuade Wells to help raise an extra £1000 a year to keep his and Dora's school going, Russell wrote:

I believe profoundly in the importance of what we are doing here. If I were to put into one single phrase our educational objects, I should say that we aim at training initiative without diminishing its strength. . . . You will realise that hardly any other educational reformers lay much stress upon intelligence. A. S. Neill, for example, who is in many ways an admirable man, allows such complete liberty that his children fail to get the necessary training and are always going to the cinema, when they might otherwise be interested in things of more value. Absence of opportunity for exciting pleasures at this place is, I think, an important factor in the development of the children's intellectual interests.

The distinction is clear: while Neill aims to release the emotions, Russell wants to train the mind. In anyone else Neill would have attacked this attitude, since it falls clearly into his category of 'moulding' adults at work. In the *New Era* days he had several times criticised the 'high lifers' of the progressive movement for placing Shakespeare above Charlie Chaplin, and trying to force their cultural values on children. Yet there is no direct evidence that Neill was overtly critical of Russell in this sphere.*

Neill certainly kept in touch for as long as Russell stayed with the school. When he left in 1931, Neill found in Dora Russell someone who was able to give him rather more practical support, and whose ideas were closer to his own. Like Neill, she was critical of other progressive schools for limiting self-government to older children, feeling that an undesirable

advocated by the diehards. Can't we get up a league of heretical dominions called the 'Anal'-ists?

The week before, he had outlined his apprehension in more serious and graphic terms:

'You and I will have to fight like hell against having a few stupid inspectors mucking about demanding why Tommy can't read. Any inspector coming to me now would certainly be greeted by Colin (aged 6) with the friendly words, 'Who the fucking hell are you?' So that we must fight to keep Whitehall out of our schools.'

In April 1931 Neill and Mrs Lins decided to do some walking on the South Downs, and Neill suggested that they might call in at Beacon Hill 'and enjoy a blasphemous conversation on parents'. Russell replied that he and Dora would be 'overjoyed' at the prospect, and afterwards wrote to Neill: 'Your visit here was a bright moment to us both. There are so few people to whom one can talk without tedious explanations.' Neill replied the next day: 'Yes, we said the same about you two . . . how fine to talk to people you haven't to explain and defend with'; and some months later he told Russell: 'Wish we could have a yarn again. You are one of the few people I like to talk to and hear talk. The other educational blokes and blokeses are simply not there. They have ideals, bless em.'

The arrival of Beacon Hill and Dartington Hall produced a surge of interest in the more libertarian progressive ideas. Neill, Curry and the Russells found themselves referring to each other interested teachers, parents and visitors, and comparing notes on their virtues and deficiencies. Neill was grateful to be able to pass on some of the increasing numbers descending on the school, as he confided to Curry in December 1932: 'Fact is that crowds of people come round asking for jobs, and to get rid of them I say sweetly, Now there is Dartington Hall. What about applying there? Sometimes I send them on to Beacon Hill; most of them I send to hell; but not audibly.' Yet Neill was both patient with and helpful to many who were looking for a job, especially any who he felt were 'genuine cases who want the new ideas and hate the old schools in which they teach.'

deference to authority might have become ingrained by that age. She believed that 'a child going on the rampage at the age of four or five would do less harm to himself and to others than in adolescence, while in so doing he would at the same time begin to evolve his own self-restraint and control.' Under the influence of Margaret McMillan, she placed much emphasis, as Neill did, on the child's need for free play. Over the next few years, when she ran the school without Russell, she aimed to let the children express themselves through unorganised play as well as through drama, art and movement. Though at first she felt unable to go all the way with Neill's libertarian ideas - 'it seemed to me that he might be too much concerned with a negative revolt against what he now condemned, rather than with a positive statement of what should be put in its place' - after a few years she came to the conclusion that his approach was a necessary one, since 'the gulf between the old and the new was too wide to bridge by compromise'. By the middle of the 1930s, Neill was telling her that he and she were 'the only educators'.

* * * * *

Neill took delight in speaking his mind to Russell, having quickly got beyond the formality of addressing him as 'Mr Russell'. There is an element of mischievousness in their correspondence, as Russell with dry wit and Neill with warm humour compare notes on the inadequacies of fellow-pioneers, government departments, parents, inspectors and visitors.

In December 1930 Neill looked ahead with some trepidation to the outcome of the deliberations of a new Committee on Private Schools, which seemed likely to recommend more stringent rules and regulations for schools outside the state system. He told Russell of his fears:

They will call in all the respectable old deadheads of education as expert witnesses (Badley and Co.) and unless men of moment like you make a fight for it we (the out and outer Bolshies of education) will be ignored. Then we'll have to put up with the nice rules

NEWS ABOUT MEMBERS

- (17) DEAN BABST, member of Alex Dely's Human Rights/Int'l Development Committee, and co-author with Alex and 2 others, of Accidental War, The Growing Peril was the subject of a feature story in the Sacramento Bee, (Sunday, 3/11/84). The article, which identified Dean as a "61-year old retired criminologist", was mostly about the Growing Peril, which is perhaps summarized by the following paragraph: "In the 1950s, Defense Early Warning gave the world's leaders 12 hours or so to determine whether a radar blip was bird or bomber and decide whether to counterattack. Today, reaction time is down to about 7 minutes, said Babst."
- (18) DONG-IN BAE, who told us he had returned to South Korea from West Germany (RSN42-20), has been named Associate Professor, Department of Sociology, College of Humanities and Social Sciences, Kangweon National University, Chuncheon, and it keeps him very busy!
- (19) ADAM PAUL BANNER has also been busy: married on April 12th; sold one house, acquired another; with wife, Adele, took 8000 mile trip via Canada to California, and back to Michigan; saw children and grandchildren; received tentative appointment as "Executive Director" of the Third World group publishing "Approtech", Journal of the Int'l Ass'n for the Advancement of Appropriate Technology for Developing Countries. "Do not know how far we can go. As usual, funds are lacking, and perhaps a long term plan. In any case I am where I want to be, ready to write about Third World development in terms of the iceberg syndrome - everything looks beautiful, but oh! so rotten underneath."
- (20) JOHN LENZ, the new BRS Secretary, has received a Fellowship in Classical Studies from Columbia University.
- (21) HERB VOGT writes (6/3/84): "I feel great, but I'm a cancer patient at present. I had quite an operation (exploratory laparotomy)...lymph nodes are cancerous as well as prostate. However, I'm hoping for the best (mind over matter) & have resumed normal activities. Stay healthy. Herb". We join him in hoping for the best! His address: 2101 S. Atlantic Av. (307)/Cocoa Beach, FL 32931.

(24) Letters to the leaders of the nuclear superpowers, the result of proposals made by BOB LOMBARDI ():

THE BERTRAND RUSSELL SOCIETY, INC.

Donald W. Jackanicz, President
 901 6th St. SW--#712A
 Washington, DC 20024 USA

26 June 1984

President Ronald Reagan
 The White House
 Washington, DC 20500

Dear President Reagan,

At its 1984 Annual Meeting, the Bertrand Russell Society adopted the following resolution which I am now respectfully submitting to you. Identical letters have been sent to President Konstantin Chernenko, Senator Howard H. Baker, Jr., Senator Robert C. Byrd, and Speaker Thomas P. O'Neill, Jr.

Resolved, that there shall be a bilateral, verifiable, nuclear weapons freeze; a denunciation of any attempt to deploy nuclear and anti-satellite weapons in outer space; a call for a return to arms talks, if not a summit meeting; and a call to ban all chemical weapons; and that the United States shall withdraw Pershing II missiles from Europe; negotiate with the Soviet Union to ban cruise missiles; and prevent further appropriations for MX missiles.

Sincerely yours,

Donald W. Jackanicz

THE BERTRAND RUSSELL SOCIETY, INC.

Donald W. Jackanicz, President
 901 6th St. SW--#712A
 Washington, DC 20024 USA

26 June 1984

President Konstantin Chernenko
 Central Committee of the Communist Party
 4 Staraya Ploshchad
 Moscow
 USSR

Dear President Chernenko,

At its 1984 Annual Meeting, the Bertrand Russell Society adopted the following resolution which I am now respectfully submitting to you. Identical letters have been sent to President Ronald Reagan, Senator Howard H. Baker, Jr., Senator Robert C. Byrd, and Speaker Thomas P. O'Neill, Jr.

Resolved, that there shall be a bilateral, verifiable, nuclear weapons freeze; a denunciation of any attempt to deploy nuclear and anti-satellite weapons in outer space; a call for a return to arms talks, if not a summit meeting; and a call to ban all chemical weapons; and that the United States shall withdraw Pershing II missiles from Europe; negotiate with the Soviet Union to ban cruise missiles; and prevent further appropriations for MX missiles.

Sincerely yours,

Donald W. Jackanicz

BOOK REVIEWS

- (25) "Accidental Nuclear War: The Growing Peril", as reviewed in "Humanist in Canada" (Summer 1984). The reviewer (PAUL PFALZNER) and 2 of the authors (DEAN BABST and ALEX DELY) are BRS members.

ACCIDENTAL NUCLEAR WAR: THE GROWING PERIL

by Dean Babst, Alex Dely, David Krieger,
and Robert Aldridge

June 1984, Peace Research Institute,
Dundas, Ontario, paper, 2 vols., \$5 each.

Reviewed by PAUL PFALZNER

This review is based on pre-publication material provided by Dr. David Krieger, President, Nuclear Age Peace Foundation, Santa Barbara, California.

Unless the current direction of the arms race is changed, accidental nuclear war is a certainty. It is only a matter of time. Such is the terrifying conclusion drawn by the authors of this first comprehensive study of the complexities and uncontrolled dynamics of modern arms technology and strategy.

As described in their fully-documented report, the probability of accidental nuclear war is increasing for the following reasons:

- Decreasing time for decision making

The opportunity for a war to start by misjudgment, miscalculation or false alarm has greatly increased. The time available to the United States or the Soviet Union for deciding whether or not to launch a nuclear attack has diminished from 12 hours in the 1950's to less than 8 minutes today. This is all the time available for identifying and confirming whether an object is an approaching missile or not, and for deciding whether to launch nuclear missiles in response.

- Sneak attack weapons being planned

The present crucially short time for decision-making is becoming increasingly meaningless as the number of weapons systems designed to attack without warning grows. The US is spending more than \$100 billion for B-1B bombers, for Advanced Technology Bombers, and for more than 9000 cruise missiles, over 5000 of these being nuclear. Other countries are now building similar weapons. Cruise missiles and stealth bombers are designed to evade radar and strike with no warning.

- False warnings

There can be little doubt that all countries with strategic

warning systems have false alarms. During one 18-month period, the US had 147 false alarms, with one lasting a full six minutes. The false alarm experience of other countries is not known. Could the first false alarm that triggers a country to launch missiles, ignite a global exchange?

A number of US Congressional and General Accounting Office reports are concerned about the US warning system. A congressional committee chaired by Sen. Jack Brooks claims that "the severe and potentially catastrophic deficiencies found in the nation's missile-attack warning system are a result of significant and long-term management failings within the Air Force and Joint Chiefs of Staff". Yet a Department of Defense "Fact Sheet" (1983) describes the warning system as "very good". Could we have a false sense of security?

- Arms build-up increases first-strike apprehensions

As weapons systems grow increasingly accurate and powerful, fears of a first strike also increase. Because of growing weapons-complexity and secrecy, it is difficult for countries to determine with any accuracy the strength of their opponents. A country may strike first because it believes that an opponent is gaining an overwhelming superiority. From the Soviet point of view, the refusal by the NATO countries to reciprocate a nuclear no-first use pledge is bound to be seen as deliberately provocative.

- Growing number of countries with nuclear weapons

As the number of countries with nuclear arms increases (India, Israel, South Africa, etc.), the probability of nuclear war increases:

- the nearer countries are to each other, the less warning time they have for assessing a threat or false alarm
- since it takes fewer weapons to destroy a small country, it may respond more quickly to a threat or false alarm
- a local nuclear war may go global by accident. A nuclear exchange anywhere could create communications chaos and cause other countries to believe they are under attack.

Other destabilizing scenarios discussed by the authors include:

- how the arms race in space increases chances of accidental war
- how the growing complexity and workload of strategic warning systems may be making their tasks impossibly

difficult

- how accidents and illnesses of national leaders can contribute to dangers
- how terrorists could trigger a nuclear war
- how weapons unreliability and accidents increase the peril
- how biological and chemical weapons can lead to greater insecurity.

It is clear that looking in isolation at each of the separate ways an accidental war could start may greatly underestimate the total magnitude of the danger.

The authors consider some ways to halt the otherwise inevitable drift into disaster. There needs to be a far greater sense of urgency to obtain at the very least a nuclear freeze and an initial arms reduction agreement, before further destabilizing technology becomes available. The US and SU need to be assessing each major planned change in weapons systems or policy to determine whether or not it increases the dangers of accidental war. Suggestions for establishing Accidental-War Assessment Centers are given by the authors. Does it make any sense to spend thousands of billions of dollars for arms and to know so little about the greatest threat to our existence?

Since increasing concern about accidental nuclear war could help prevent it, we also need to assess the reasons for low public awareness. Here lies an enormous challenge. Can the catastrophic danger of an accidental war be made so clear to humanity that there results a great surge in public consciousness demanding the abolition of all nuclear weapons? How content are you to make little or no effort to prevent the destruction of the earth as an inhabitable planet for human beings?

Clearly, in the face of these horrifying dangers, all posturing and self-serving hectoring and posturing can only be seen as the ravings of madmen.

We owe thanks to the (Canadian) Peace Research Institute — neglected and starved for funds for so long — for sponsoring this book by the four US authors. We should also note that two of the authors, Dean Babst and Alex Dely, are members of the Bertrand Russell Society, whose Science Committee chaired by Dely contributed to this project over the last 2 years. David Krieger has recently contributed an article on peace issues to *Humanist in Canada* (No. 68, Spring 1984).

- (26) ARSENAL: Understanding Weapons in a Nuclear Age by Kosta Tsipis and THE ABOLITION by Jonathan Schell, reviewed by Freeman Dyson, in *Science* 84 (June 1984):

These two books about nuclear weapons are superficially as unlike as two books could be, but alike in some of their basic preconceptions. Before examining them individually, it may be useful to examine the preconceptions they share.

All American thinking about nuclear weapons is strongly influenced by two popular myths. One myth says that nuclear weapons were decisive in bringing World War II to an end. The second myth says that if Hitler had got nuclear weapons first he could have used them to conquer the world. Both myths were believed by the scientists and statesmen who built the first nuclear weapons. They are still believed by most Americans today. Since we cannot explore the might-have-beens of history we cannot know for sure whether these myths are true.

I believe that both myths are false. Of course I cannot prove it. But it is impor-

tant to look at the myths with a skeptical eye and to consider how different our view of nuclear weapons might have been if Hitler had in fact got them first. Suppose that the Americans had neglected to push nuclear weaponry seriously and that the Germans had pushed as hard as possible. Hitler might have had a bomb by 1943 at the earliest and perhaps a few tens of bombs by 1945. What difference would it have made? London and Moscow would no doubt have shared the fate of Hamburg and Dresden. Perhaps a few square miles of New York would have been demolished. A lot of people would have been killed. But it seems highly unlikely that the arrival of Russian soldiers in Berlin and of American soldiers in Tokyo would have been substantially delayed. Hitler's bombs would neither have changed the grand strategy of the war nor lessened our determination to fight it to a finish. What

would have been changed is our post-war perception of nuclear weapons. Forever afterward we would have seen nuclear weapons as contemptible, used by an evil man for evil purposes and failing to give him victory. The myth surrounding nuclear weapons would have been a myth of contempt and failure rather than a myth of pride and success.

It is important for Americans to go through the mental exercise of looking at nuclear weapons as if they had been Hitler's weapons rather than ours, because this exercise enables us to come closer to seeing nuclear weapons as they are seen by Soviet citizens. To understand Russian strategy and diplomacy, it is necessary for us to distance ourselves from our own myths and to enter into theirs. An understanding of Soviet views is the essential first step toward any lasting amelioration of the danger in which the world now stands.

Arsenal and *The Abolition*, though they differ greatly in subject matter and style, are both aimed at educating the American public on the facts of the nuclear predicament. In *Arsenal*, Kosta Tsipis, a physicist at the Massachusetts Institute of Technology, explains in moderately technical language the characteristics of various weapons. He begins with a detailed account of nuclear explosions and their effects, then describes the main nuclear weapon delivery systems, and ends with a discussion of the apparatus of missile defense and antisubmarine warfare and intelligence gathering. His explanations are clear and, with minor exceptions, accurate. He firmly refuses to go beyond explanations. He is not taking a political stand. In *The Abolition*, Jonathan Schell, a staff writer for *The New Yorker*, is advocating a particular political solution to the problem of nuclear weapons. He proposes a formal abolition treaty, with

a withdrawal clause that explicitly defines and regulates the right of every country to rebuild nuclear armaments if the treaty is violated. He is concerned with human attitudes, not with technical details.

The books have different starting points. Tsipis starts from the technical facts of weaponry. Schell starts from the Pastoral Letter, "The Challenge of Peace: God's Promise and Our Response," approved in 1983 by a solemn conclave of American Catholic bishops. Tsipis says we must get the facts straight before considering political remedies. Schell says we must get the moral foundations straight before building political superstructures. Their statements do not contradict each other. If a political arrangement is to be durable, it must pay attention both to technical facts and to ethical principles. Technology without morality is barbarous; morality without technology is impotent. But in the public discussion of nuclear policies in the United States, technology has usually been overemphasized and morality neglected. It is time for us now to redress the balance, to think more about moral principles and less about technical details. Tsipis gives us an up-to-date version of a familiar story. Schell gives us a challenge to conventional wisdom. Schell's thesis is harder for us to accept and therefore more necessary for us to

listen to. The roots of our nuclear madness lie in moral failures rather than in technical mistakes.

Schell and Tsipis share a common weakness: Their thinking is permeated by American nuclear myths. Both of them accept without serious question the idea that nuclear weapons are militarily decisive. Both of them equate military effectiveness with destructive power. Neither of them examines critically the military purpose of nuclear weapons or the possible missions for which they might be used. Schell's case for the feasibility of abolishing nuclear weapons would be stronger if he treated them with less respect. The hope of successful abolition becomes more realistic if it is understood that nuclear weapons are absurd rather than omnipotent.

As an example of Schell's overrating of nuclear weapons, consider his discussion of the alleged restraint of the United States during the years when we held a monopoly of nuclear weapons. Schell writes, "The United States not only did not immediately annihilate the Soviet Union but did not even seek any drastic change in Soviet policy—by, for example, using nuclear blackmail to force the Soviet Union out of Eastern Europe." The idea that we could have annihilated the Soviet Union with our meager supply of bombs is totally unreal, and there was never a time when

nuclear blackmail would have had much chance of success. Stalin himself said, "The nuclear weapon is something with which you frighten people with weak nerves." Stalin did not suffer from weak nerves. His perception of the function of nuclear weapons was more realistic than ours.

Tsipis likewise shows little respect for Soviet points of view. Both authors write within a narrow framework of American-style calculation and American strategic doctrine. Tsipis' emphasis on gross destruction as a criterion of weapon effectiveness and Schell's talk of "immediately annihilating the Soviet Union" are both symptoms of a peculiarly American insensitivity to the realities of war. Soviet military writers don't write in such a cold-blooded way about numbers of casualties and don't make the mistake of supposing that nuclear weapons alone are militarily decisive. In an odd way, Soviet nuclear doctrines come closer than ours to the point of view of the Catholic bishops. Soviet doctrine, like the Catholic bishops', forbids deliberate targeting of civilian populations, forbids the first use of nuclear weapons, and rejects deterrence as an ultimate strategic goal. The Soviet Union offered to negotiate an abolition treaty in 1946 and the United States rejected it. Schell goes through a long argument to prove that his program of an abolition treaty can be

made consistent with the American doctrine of deterrence. His case would be stronger and his treaty more negotiable if he would drop the insistence on deterrence and make the treaty as simple as possible. Perhaps the best way to achieve an abolition treaty would be to pick up the negotiation of the Soviet proposal where we left it in 1946.

Tsipis and Schell both conceive nuclear weapons to be an invincible force of which we should be mortally afraid. Stalin knew better. If we are to succeed in abolishing nuclear weapons, it is not enough to be mortally afraid. We shall have a better chance if we understand that nuclear weapons are useless and dangerous toys—which we are free to discard if our nerves are strong.

I have dwelt at some length on the weaknesses of Tsipis and Schell. They share these weaknesses with almost all American experts who write about nuclear weapons. Their strengths are their own. Tsipis' strengths are a lucid style and a firm grasp of technical details. Schell's strengths are a bold vision of the future and a moral conviction that will move mankind to make his vision come true. If we can combine Tsipis' technical competence and Schell's prophetic zeal with a more skeptical attitude toward American strategic dogmas, we shall have the essential ingredients for a hopeful future.

The Day After World War III by Edward Zuckerman is reviewed elsewhere in this issue. See (13).

BRS LIBRARY

- (27) BRS Library Campaign. As we've said before (RSN42-9), we think the ERS ought to own every book BR ever wrote. What could be more appropriate? Here is a list, prepared by BRS Librarian JACK RAGSDALE, of BR's books that the Library does not own. Can you send the Library any of these books?

The ABC of Atoms
The Analysis of Matter
The Analysis of Mind
The Amberley Papers
Bertrand Russell Speaks His Mind

The Collected Stories of Bertrand Russell
Common Sense and Nuclear Warfare
On Education
An Essay on the Foundations of Geometry
Essays in Analysis

The Good Citizen's Alphabet
Fact and Fiction
New Hopes for a Changing World
Nightmares of Eminent Persons
Our Knowledge of the External World

Philosophical essays
Portraits from Memory
Power
The Philosophy of Leibniz
Principia Mathematica

The Principles of Mathematics
The Problem of China
Religion and Science
Satan in the Suburbs
The Scientific Outlook

Understanding History and Other Essays
Vital Letters of Russell
War Crimes in Vietnam
Which Way to Peace?
Wisdom of the West

- (29) Recommended. JACK RAGSDALE says this about a Phil Donahue program with Gore Vidal as its guest: "Vidal appears before an audience of Chicago housewives full of religion, astonished at meeting a real live atheist, wanting to condemn him, but ready to save him, if at all possible. The result is one hour of cool wit and good humor." We are indebted to AL SECKEL for removing the commercials and adding a Jonathan Miller interview to the tape. This VHS Video Cassette (#260A) is available from the Library.

TRIVIA

- (30) Bertie at Dartmouth, from the New York Times Magazine (5/13/84, p. 86) →

Dartmouth's philosophy department offers students studying logic either the choice of supplementing their classwork in the traditional manner or independently using a program called Bertie (Bertrand Russell's nickname). "We did a controlled experiment and found that those who used the computer did better," says associate professor James Moor.

CONTRIBUTIONS

- (31) Our thanks to these members who have recently made contributions to the BRS Treasury: DAVID GOLDMAN, CHARLES HILL, JOHN MAHONEY, KEITH THOMPSON, and DAN WRAY.

- (32) We have failed to bring the message home to most members. The message: contributions to the BRS Treasury are essential to our financial well-being as an organization. Contributions have lagged seriously. We have beat the drum in every issue of the newsletter but only a few have heard it. Can you hear it now? No? How loud must we bang the drum? Louder? Louder? LOUDER? STILL LOUDER? Let us restore the quiet. Help us do it...by writing a check -- for, say, \$10 or whatever you wish to send -- to the BRS Treasury, and mailing it. We are talking of course to members who can afford to do this, and do not wish to discomfort those who cannot, whose membership we value equally highly. Mail your check -- those who can afford to -- to BRS Treasury c/o the newsletter, address on Page 1, bottom.

BRS BUSINESS

- (33) Revised Bylaws, or more properly, proposed revised Bylaws, have been developed by the Bylaw Committee, whose members are Don Jackanicz, Steve Reinhardt, and Lee Eisler.

The original Bylaws, under which we currently operate, have been unsatisfactory in a number of ways. While it is probably not possible for any set of Bylaws to provide detailed procedures for all possible contingencies, the revised Bylaws are clearly an improvement, and reflect our experiences of the past ten years. They are, for example, more precise in these areas: the various kinds of membership, expulsion procedures, duties of Officers and Chairmen.

To become effective, the revised Bylaws must be approved by a majority of the members voting. Please read the revised Bylaws (47) and then use the ballot at the end of this newsletter to indicate whether you approve.

ELECTION OF DIRECTORS

- 4) Please vote. Use the ballot at the end of this newsletter, to vote for Directors. BRS Officers are ex-officio members of the Board; that is, they become Directors automatically as a result of being Officers. This year we need to elect 6 Directors, to maintain a total of 24 Directors. These are the candidates:

JACQUELINE BERTHON-PAYON (Claremont, CA), currently a Director, member since 1978, former Vice-President, former Co-Chairman/Membership Committee. An "instant convert" to BR upon reading The Will To Doubt; and has since given away great numbers of Bertrand Russell's Best (Egner, ed.).

BOB DAVIS (Los Angeles), Founding Member, BRS President (1974-1982), former Vice-President and VP/Special Projects, currently a Director, business proprietor, former high school teacher.

ALEX DELY (Tucson), currently a Director, member since 1976, Chairman of Science Committee and Human Rights/International Development Committee, co-author of Accidental War: The Growing Probability and 4 papers submitted to Congressional Hearings on Dept. of Defense Appropriations, occupying 38 pages in the official record (RSN41-5a).

ALI GHAEMI (McLean, VA), member since 1979, Director (1981-1983), 2nd year law student, interested in Russellian philosophy applied to politics of the Third World; author published in various political, religious and humanities journals; affiliated with human rights, civil right and int'l studies groups; publisher of special reports and books dealing with culture, history, business/economics and arts of Third World countries, with particular emphasis on Islamic and Middle Eastern countries.

HUGH MOORHEAD (Chicago), member since 1976, currently a Director, Chairman of BRS Doctoral Grant Committee, Professor of Philosophy, Northeastern Illinois University (Chicago).

DAN WRAY (Hollywood), member since 1975. Playwright and filmmaker (with Master's degrees in English and Theatre), his plays have been produced in NY, Los Angeles, and in the mid-west. Interested in history, especially in the effect of modern ideologies on states in conflict.

We suggest you turn to the last page and vote right now for the candidates.

FOR SALE

- (35) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "*Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid. Order from the newsletter, address on Page 1, bottom.

VOLUNTEER WANTED

- (36) BRS Librarian. As noted elsewhere (3), Jack Ragsdale is stepping down as BRS Librarian, after much fine work. If you wish to consider becoming the new Librarian, these are the requirements: (1) you will need space to store the materials, that Jack says will be shipped in 6 or 7 medium-sized cartons; (2) you would send the newsletter a list of items that members may borrow or buy. (There are 4 lists per year, one for each issue of the newsletter. The 4 lists are: books to lend, books for sale, tapes to lend, films for rent. These lists already exist; you would bring them up to date.) (3) You would mail to members the items that they wish to borrow or buy.

Actually there is not a great deal of activity in the Library. There are relatively few orders. We'd like to see more; maybe there will be more, as the Library acquires more books and tapes.

Please don't apply for this opening unless you expect to stay with it for quite a few years, for several reasons, one of which is that the cost to the BRS of shipping 6 or 7 heavy cartons is considerable.

On the other hand, if you love books, do apply. You'll not only be doing something useful for the Society, you'll also be keeping yourself from running out of good books to read for a long time.

Apply to Don Jackanicz/901 6th St. SW(712A)/Washington, DC 20024.

ABOUT OTHER ORGANIZATIONS

- (37) Center for War/Peace Studies (218 E. 18th St., NY NY 10003), in its Global Report No. 16 (March 1984), asks, "Are Circuits About to Blow a Fuse?", referring to the "present archaic international system", and citing various current crisis situations in the world. Its sponsors include Eliz. Mann Borgese, Stuart Chase, Norman Cousins, Alva & Gunnar Myrdal. It favors the Binding Triad proposal to amend the U.N. Charter. Here is an excerpt (with thanks to BOB DAVIS):

The present precarious international situation appears at least in part to stem from the confrontational attitude of U.S. President Reagan, and with luck that problem may be solved by 1985. But the underlying problem is that the international system is ultimately based on war, so it is only natural that mass violence occurs regularly. The time in human history has come to convert from a war system to a peace system. But how to do it?

There are many who argue that the way is simply to disarm, either unilaterally or by multilateral treaty. However, this approach treats armaments as the fundamental difficulty, whereas they are in reality more a symptom of the core problem—unlimited national sovereignty. As long as nations feel that they have no way to settle disputes with other states when negotiations fail other than by threat or use of force, they will insist on maintaining their armed might. Theoretically, the U.N. Security Council might fill this political vacuum between failed negotiations and war, but the veto power of the snarling superpowers makes this unworkable. In legal disputes, the World Court could bridge this void; however, there is no accepted body of world law applicable to the cases that today are threatening and causing wars. The U.N. General Assembly, with its one nation, one vote system of decision-making, is too politically skewed to be of significant help; moreover, its decisions are not binding.

It is this analysis that led the Center for War/Peace Studies to advance the Binding Triad proposal for global decision-making. Regular readers will know that the Binding Triad system would amend two articles of the United Nations Charter so as to make General Assembly resolutions binding, not recommendations as at present, provided they were approved by the three simultaneous majorities of the Triad. Counting in each case only those present and voting, the first majority requires two-thirds of the countries; the second, nations representing two-thirds of the population; the third, members representing two-thirds of the contributions to the regular U.N. budget. Under the Binding Triad the General Assembly could employ peacekeeping units to implement its decisions,

but use of military force would remain the prerogative of the Security Council. And of course the Assembly would be bound by the Charter's proscription of any interference into the internal affairs of a state.

By now, the Binding Triad system has been given some rather rigorous test runs. For the past three years, each October during the U.N. General Assembly session, the CW/PS has organized simulated working groups on various international issues at its Conference on Global Decision-Making at Lake Mohonk, New Paltz, N.Y. We invite a busload of diplomats (including Americans and Soviets), U.N. Secretariat members, international journalists, and other experts to this singularly beautiful lakeside hotel for a weekend of hard work in seeking solutions to pressing problems on the basis of the Binding Triad system. We have the Binding Triad computer and computer programmer on hand so that the working groups at the end of their deliberations can put the vote they project on their resolution into the computer to determine whether it could win the three required majorities.

In 1981 we had working groups on arms control/disarmament and Afghanistan; in 1982 we ran two working groups on the Middle East, both with the same mandate, so that we could compare the results of two groups working independently, and one working group on North-South (rich-poor) talks; in 1983 our three simulations were on outer space, Antarctica and Lebanon. (Originally, the latter was to have been on the hypothetical case of civil war in the United Democratic Republic of Problema that is threatening to escalate to nuclear war between Greater Alphamania and Greater Betamania, but at the last minute it was changed to Lebanon at the suggestion of Ambassadors Amre Moussa of Egypt and Victor Gauci of Malta.)

In my opinion, all eight working groups turned out products that were at least marginally better than those that actually have come out of the U.N. on the same issues, and in some cases—notably Afghanistan, the Middle East (Israeli-Palestinian conflict), Lebanon, and Antarctica—the resolutions were markedly superior to those that emerged from the real-life world organization.

- (38) Croatian National Congress (PO Box 152 — Midtown Station/NY NY 10018) is again charging that the Serbian majority in Yugoslavia is oppressing the Croatian minority. "An Open Letter To the U. S. State Department" claims that the U.S. is collaborating with "the Yugoslav government in persecuting the opponents of the inhumane and totalitarian Yugoslav regime." A letter to the Editor of the New Yorker claims that the author of a recent article on Yugoslavia relied "exclusively on Serbian sources, within Yugoslavia or in the U.S., or on the obedient apparatchicks of other nationalities."
- (39) Friends of Robert G Ingersoll, in their Newsletter 13, provide the schedule of the Ingersoll Festival (August 11 & 12), which includes the 2nd Annual Freethought Fair, and Roger Greeley's performance as Ingersoll, speaking Ingersoll's own words, from Greeley's book, "The Best of Robert Ingersoll" (Prometheus Books). Their address: PO Box 5082, Peoria, IL 61601.

- (40) Freedom From Religion Foundation has issued this attractive little folder (4 1/4 x 5 3/8). The other side is blank, and serves as stationery, for short notes. Their address: Box 40, Asbury, NJ 08802.

THOMAS PAINE

A lover of liberty, freethinker Thomas Paine (1737-1809) is best known for his political writings and for his resolve to change "the sentiments of the people from dependence to Independence and from the monarchial to the republican form of government." Without the pen of Thomas Paine, said one contemporary, the sword of Washington would have been wielded in vain.

A self-proclaimed deist, Paine still is vilified for his book *The Age of Reason*, an unabashed analysis of the bible which Paine labelled "a history of wickedness that has served to corrupt and brutalize."

Organized religion, Paine wrote, was "set up to terrify and enslave" and to "monopolize power and profit." He repudiated the divine origin of Christianity on grounds that it was too "absurd for belief, too impossible to convince and too inconsistent to practice."

"I believe that religious duties consist in doing justice, loving mercy, and endeavoring to make our fellow creatures happy," he wrote. "I do not believe in the creed professed by the Jewish Church, by the Roman Church, by the Greek Church, by the Turkish Church, by the Protestant Church, nor by any church that I know of. My own mind is my own church."

Paine Portrait by Jo Kotula

FREETHOUGHT SERIES, Number 3, 1981
Freedom From Religion Foundation, Inc.
P.O. Box 750, Madison, Wisconsin 53701

With thanks to LUCILLE ZARSE

The Foundation has just published "Reason, the Only Oracle of Man" by Ethan Allen (1784), "the first Freethought work in the New World" (10 years before Tom Paine's "The Age of Reason"). It has been "translated" from Allen's highly abstruse metaphysical language into readable everyday English. 16 pages.

- (41) Hemlock Society, (PO Box 66218/Los Angeles, CA 90066). Its 8-page "Hemlock Quarterly" (Issue 16, July 1984) includes (1) an announcement of the Second National Voluntary Euthansia Conference in Santa Monica, California, February 8-9, 1985; (2) an article, "Pros and cons of suicide literature"; (3) books for sale; and more. Membership in Hemlock Society, \$15 per year, includes the Quarterly.
- (42) Humanist Ass'n of San-Diego's monthly publication, "The San Diego Humanist" (July) devotes its front page to Robert Ingersoll. PO Box 86446, San Diego, CA 92138.
- (43) International Campaign — Orlov and Shcharansky has very broad academic support, including about 40 Nobel laureates, many heads and top administrators of universities (including Theodore Hesburgh, President of Notre Dame and Michael Sovern, President of Columbia), many members of the Royal Society (England), of l'Académie des Sciences (France), of the Royal Society of Canada, and of many organizations (including United Steelworkers of America, Canada). Orlov is a physicist, Shcharansky a computer scientist, both being very badly treated by the Soviet government for their human rights activities.
- To help this Campaign, write: The Ambassador (name not needed)/Embassy of the U.S.S.R./capital city of your country), saying what you think of the treatment of Orlov and Shcharansky. For information about other ways you can help, write Nick Griffin/ RR #1, Troy/Ontario, Canada LOR 2E2.
- (44) Palestine Human Rights Campaign, issued a Conference Statement (May 12, 1984) on "the crisis of Palestinian human and national rights" covering 5 topics; U.S. network of various groups; a reassessment of U.S. Middle East policy; a call for "trialogue" among American Christians, Muslims and Jews; the negative stereotyping of Palestinians and other Arabs in U.S. media; and international investigation into the Ansar Prison Camp. Their address: 220 S. State St., One Quincy Court, Suite 1308, Chicago, IL 60604
- (45) World Federation of Right to Die Societies, in its World Right-to-Die Newsletter (Issue No 4, May 1984) lists the 26 right-to-die societies in the world. There will be an International Conference of right-to-die societies in Nice, France, September 20-23, 1984. Newsletter Editor Derek Humphry's address: Hemlock Society, PO Box 66218, Los Angeles, CA 90066.

- 46) National Emergency Civil Liberties Committee ran this ad (shown less than half original size) in the New York Times (5/13/84, p.E7):

Who is running the country?

"The President has asked us to back his foreign policy. Bill, how can we back his foreign policy when we don't know what the hell he is doing? . . . This is an act violating international law. It is an act of war."
— Sen. Barry Goldwater to CIA Director William Casey, April 9, 1984

"There is a lot of talk about not trying to overthrow the government, but the facts speak for themselves. Unless you're trying to do this, why else would you mine their harbor?"
— Sen Patrick Leahy

In early April, the press revealed that the Central Intelligence Agency was directly involved in mining Nicaraguan harbors. Senators Goldwater and Moynihan accused the Administration of concealing from their Senate committee the information about covert activities required by law. While members of Congress expressed outrage, the rest of us were left wondering "who is running the country: The President? The C.I.A.? The Pentagon?" Whatever became of government by and for The People? What happened to the open government we were promised after the Watergate break-ins and cover-ups?

From the invasion of Grenada to the not-so-secret war in Nicaragua, we see abuses of executive power and the exercise of an invisible government. This violates the American people's right to know.

We believe that there can be little doubt that this executive misconduct constitutes "high crimes and misdemeanors." Nor is Congress blameless in this matter. The press seems to know more about what is happening than does Congress. In its disinterest in the existence of both covert

and overt war Congress has abdicated its constitutional responsibility to the American people.

The National Emergency Civil Liberties Committee demands an end to President Reagan's dictatorial abuses of executive power, to covert activities and secrecy in government. And we say that it is time the people know who is running the country. If you agree, join with us to bring an end to the invisible government.

BYLAWS OF THE BERTRAND RUSSELL SOCIETY, INC.
Revised June 1984

Page 1 of 3

Article I. Name

The name of this organization shall be The Bertrand Russell Society, Inc. It may also be referred to as "the Society" or "the BRS".

Article 2. Aims

The aims of this Society are: (1) to promote interest in the life and work of Bertrand Russell; (2) to bring together persons interested in any aspect of the foregoing; (3) to promote causes that Russell championed.

Article 3. Motto

The Society's motto shall be Russell's statement: "The good life is one inspired by love and guided by knowledge."

Article 4. Power and Authority

Ultimate authority resides in the Members. The Members elect the Directors. The Directors elect the Officers. The Officers make decisions and take action.

Article 5. Membership

Section 1. General. Membership in the Society shall be open to all persons and organizations interested in Bertrand Russell and the Society's activities. Types of membership shall be: Individual, Couple, Student, Limited Income, Life, Organization, and Honorary. Dues shall be set by the Board of Directors, and are to be paid annually. Life members shall pay dues only once in an amount set by the Board. Honorary members pay no dues. Life and Honorary memberships are for life unless terminated for cause, as specified hereafter.

Section 2. Individual Membership. Individual membership shall be available to all persons.

Section 3. Couple Membership. Couple membership shall be available to two persons sharing the same mail address. Each person shall have one vote; 2 mail ballots shall be sent, but only one copy of other Society mailings.

Section 4. Student Membership. Student Membership shall be open to any student enrolled in an educational institution and who is less than 25 years old.

Section 5. Limited Income Membership. Limited Income Membership shall be available to a person who, as the name implies, is living on a limited income.

Section 6. Life Membership. Life Membership can be conferred on any person who meets the minimum dues set by the Board of Directors for Life Membership.

Section 7. Honorary Membership. Honorary Membership may be conferred on a person who has been nominated by a member and approved by two-thirds of the Directors voting, after having met one or more of the following conditions: (1) is a member of Bertrand Russell's family; (2) had worked closely with Russell in an important way; (3) has made a distinctive contribution to Russell scholarship; (4) has acted in support of a cause or idea that Russell championed; (5) has promoted awareness of Russell or of Russell's work; (6) has exhibited qualities of character (such as moral courage) reminiscent of Russell. Honorary Members have the same rights and responsibilities as Individual Members, but they pay no dues.

Section 8. Organization Membership. Membership of organizations — such as libraries, associations, corporations — is available upon payment of dues and approval of the President. Dues shall be higher than for a Couple. Organizations may not vote or be on the Board. Only one copy of Society mailings shall be sent.

Section 9. Conditions of Membership. Application for membership shall be made in writing, submitting name, address, and correct amount of dues. The Board may refuse an application, in which case the President must notify the applicant within 30 days, stating why the application was turned down.

Membership terminates when a member fails to pay dues, resigns, dies, or is expelled.

Any member — including Life or Honorary — may be expelled for seriously obstructing the Society's business, misappropriating the Society's name or funds or acting in a way that discredits the Society. The expulsion procedure consists of 5 steps:

Step 1. A formal expulsion proposal shall be presented in writing to the Board by any member.

Step 2. The Board shall examine the evidence. If a majority of the Board Members voting decides, either by mail ballot or at a meeting, that expulsion may be appropriate, the matter will be submitted to, and decided by, the members. This shall be done by mail, or at an Annual Meeting if one is scheduled within 2 months.

If it is to be done by mail:

Step 3: The case against the member shall be presented in the next newsletter or by a special mailing.

Step 4. In the following newsletter, or in a second special mailing, the accused member shall present a defense against the charge. A ballot shall be included in the second newsletter or second special mailing, so that members can vote on whether to expel.

If the expulsion process takes place at an Annual Meeting:

Step 4'. The equivalent of Steps 3 & 4 shall be followed, that is, the case against the member shall be presented, after which the accused shall present his defense; and then the members present shall vote on whether to expel.

The President shall notify the accused member as soon as the result of the vote is known.

Article 6. The Board of Directors

Section 1. Responsibilities. The Board of Directors (also referred to as "the Board") shall be responsible for Society affairs and policy, and shall elect the Officers. The Board shall be subject to these Bylaws and to the Bylaws of The Board of Directors of The Bertrand Russell Society, Inc.

Section 2. Constitution. The Board shall consist of not less than 6 nor more than 24 members. Society Officers are ex-officio Members of the Board. Elected and ex-officio Board Members shall have the same rights and responsibilities.

Members may nominate candidates for the Board, or volunteer to be nominated as candidates. Directors are elected to 3-year terms that start on January 1 of the following year; one-third are elected every year. Directors may be reelected. If a Director dies, resigns, or is expelled, the Board may fill the unexpired term with any member.

Article 7. Officers

Section 1. General. The Society shall have the following Officers: President, Vice-President, Treasurer, and Secretary. There may also be other Vice-Presidents whose duties shall be specified by the Board. Officers shall be at least 18 years old and shall have been members for at least one year. They shall be elected by a majority of the Directors present and voting at the Board's Annual Meeting. An Officer's term of office lasts until the next election of Officers, the following year. No one shall hold more than one Office at a time, except that the same person shall be Secretary of the Society and Secretary of the Board. An Officer may be removed or suspended by a majority of the Board members voting. An Officer may resign by notifying the Chairman of the Board in writing. If an Office becomes vacant, the Board shall elect a successor to fill the unexpired term. If an Officers is temporarily unable to serve, the Board may elect a temporary replacement.

Section 2. The President. The President shall be the Chief Executive Officer, coordinating the work of other Officers and Committees. Other Officers and Committee Chairmen shall consult the President about their activities, and submit a written report on their activities to him one month before the Annual Meeting, with a copy to the Chairman. The President shall promptly inform the Chairman of any major decisions. After the Board has selected the site and time of the next Annual Meeting, or of a Special Meeting, the President shall be responsible for making all Meeting arrangements, including compiling the Meeting's agenda. The President shall chair the Meeting. The President shall report regularly, through the BRS newsletter.

Section 3. The Vice-President. The Vice-President becomes President if the President's Office becomes vacant; and assumes the office temporarily if the vacancy is temporary. The Vice-President shall assist the President as requested.

Section 4. The Secretary. The Secretary shall: (1) record the minutes of Society and Board meetings; (2) handle Society and Board correspondence; (3) maintain a permanent file of Society and Board Bylaws and other corporate documents, including minutes of Society and Board meetings, Officers' and Committee Chairmen's reports, newsletters, correspondence; (4) maintain a permanent record of Society and Board decision, rules, motions made and carried; (5) have custody of the Society's corporate seal.

Section 5. The Treasurer. The Treasurer shall: (1) keep records of money received and spent; (2) safeguard Society funds; (3) invest funds, with Board approval; (4) submit an annual budget to the Board; (5) submit quarterly and annual reports, for publication in the BRS newsletter.

Section 6, Other Vice-Presidents. The Office of "Vice-President/..." may be created and filled by the Board. There is no connection between this Office and that of the Vice-President.

Article 8. Committees

Section 1. General. There shall be standing (permanent) and ad hoc (temporary) Committees. Each shall have a Chairman, and may have a Co-Chairman and other members. A member may serve on, or chair, more than one Committee. Committee Chairmen shall consult with the President about their activities, and describe them in a written report to the President one month before the Annual Meeting, with a copy to the Chairman.

Section 2. Committees. The Board shall establish standing and ad hoc Committees, and appoint their Chairmen who, in turn, appoint Committee Members. Each Committee shall provide the Secretary with a written statement of Committee aims and procedures.

Article 9, Meetings

Section 1. Annual Meetings. The Society shall hold an Annual meeting, at a time and site determined by the Board and in time to give the members at least 2 months' notice of the Meeting. As to time: it should suit the convenience of as many members as possible. As to site: it should be either (a) near locations of special interest to the BRS, or (b) near population centers having many members. Any member may propose agenda items, in writing, to the President, in advance of the Meeting. At Meetings, items may be added to the agenda with approval of the majority of the members present. Six members constitute a quorum.

Section 2. Special Meetings. Any member may write to the Chairman requesting a Special Meeting, claiming that an emergency exists requiring immediate action. The Chairman shall decide whether the request merits consideration by the Board; if it does, the Chairman shall promptly inform the Board, which shall decide, within 3 weeks, by mail ballot, whether, when and where to hold a Special Meeting. The Special Meeting shall be held no later than 6 weeks after the Chairman's initial receipt of the request. The Chairman shall announce the Special Meeting to all members by letter, as soon as possible. A quorum shall consist of the members present.

Section 3. Board of Directors Meeting. The Board shall hold its Annual Meeting during the Society's Annual Meeting and at the same site. The Board may also hold Special Meetings, in accordance with its own Bylaws. Board Meetings shall be open to Society members.

Article 10. Publications

Section 1. Newsletter. The Society shall publish a newsletter at regular intervals.

Section 2. Other Publications. The Society may authorize other publications.

Article 11. Voting

Section 1. General. All Members, other than Organization Members, shall be entitled to vote. All votes shall have equal value. Members may vote by proxy. In contests of more than 2 candidates or choices, a plurality shall be sufficient.

Section 2. Voting by Mail. Voting may be by mail. Ballots shall be sent to all eligible members, either in the BRS newsletter or by special mailing. The deadline for the return of ballots shall be not less than 3 weeks from the date ballots are mailed by first class mail, not less than 4 weeks if mailed third class. Ballots must go first class to Canada and Mexico, and by airmail to other foreign countries. Mail ballots shall be tallied by the Elections Committee, and verified by the Secretary. Ballots for the Board's voting by mail shall be tallied by the Chairman, and verified by the Secretary; the Chairman may designate a substitute for the Secretary.

Article 12. Amendments to these Bylaws

Voting to Amend at a Meeting. These Bylaws may be amended at a Society Meeting by a majority vote of those members present and voting.

Voting to Amend by Mail. These Bylaws may also be amended by mail ballot. The proposed changes, with supporting arguments, will appear in the BRS newsletter or a special mailing. In the following BRS newsletter or second special mailing, other views, including opposing views, will appear, along with a mail ballot. To pass, the Amendment must be approved by a majority of the ballots cast.

(48)

BYLAWS OF THE BOARD OF DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
Revised June 1984Article 1. Responsibilities and Obligations

The Board of Directors (also referred to as "the Board") has these responsibilities: (1) to set policy for the Society's affairs, and (2) to elect Officers of the Society and of the Board. The Board has these obligations: to be governed by these Bylaws and by the Society's Bylaws.

Article 2. Membership

Membership shall be in accord with Article 5 of the Society's Bylaws.

Article 3. Officers

Section 1. The Chairman. The Chairman shall be elected by a majority of the Directors present and voting at the Board's Annual Meeting. The Chairman's term of office shall start as soon as elected, and shall run till the next election, at the Annual Board Meeting the following year. The Chairman may be reelected. The Chairman presides at Board Meetings, and rules on procedure.

If the Chairman is absent, the Directors may elect an Acting Chairman. If the Office of Chairman is vacant, the Directors shall elect a new Chairman as soon as possible, at an Annual or Special Meeting or by mail ballot. The votes shall be tallied by the Acting Chairman and verified by the Secretary. The Chairman may be removed from office by a majority of Directors present and voting at a Meeting, with the Secretary presiding.

Section 2. The Secretary. The Secretary shall be elected by a majority of the Directors present and voting at the Board's Annual Meeting. The Secretary's term shall start as soon as elected, and shall run till the next election, at the Annual Board Meeting the following year. The Secretary may be reelected. The Secretary of the Board and the Secretary of the Society shall be the same person. If the Secretary is absent from a Meeting, the Chairman shall appoint an Acting Secretary.

Article 4. Voting

Voting shall be in accord with Article 11 of the Society's Bylaws, except as follows: the Chairman's vote counts as one except in a tie, when it counts as two.

Article 5. Committees

Committees may be created by the Board, to perform Board functions, and shall follow Board instructions.

Article 6. Meetings

Section 1. Annual Board Meetings. The Board shall meet annually, at some time during a Society Annual Meeting, and at the same site. Society Members may attend Board Meetings.

Section 2. Special Board Meetings. A Special Board Meeting shall be called by the Chairman when at least three Directors request it, stating the purpose. In choosing the time and site, the Chairman shall aim to achieve the largest possible attendance by Directors.

Section 3. Agenda. The Agenda for Board Meetings shall be prepared by the Chairman. Additions to the Agenda may be made by any Director, with the concurrence of the Chairman.

Section 4. Quorum. The quorum for any Board Meeting is 3 Directors.

Article 7. Amendments to Board Bylaws

Any Director may propose an amendment.

At an Annual or Special Meeting, a majority vote of the Directors present and voting shall carry the proposed amendment.

When an amendment is proposed to the Chairman, in writing, between Meetings, the Chairman shall decide whether to hold the proposal for the next Meeting or put it to an earlier vote by mail. For voting by mail, the Chairman shall promptly notify the Directors by a special mailing of the proposed amendment, with supporting arguments, requesting opposing arguments by 21 days after the date of mailing. Thereafter, the Chairman shall mail the opposing arguments, and a ballot, to the Directors, with a voting deadline of 21 days after the date of mailing. The votes shall be tallied by the Chairman, and verified by the Secretary, who shall notify the Directors of the outcome.

MINUTES OF MEETINGS(1984)

(49)

Minutes of the Society's Meeting

The Eleventh Annual Meeting of The Bertrand Russell Society, Inc., was convened at 7:30 p.m. on Saturday, June 23, 1984, in the Board room of the Ontario Institute for Studies in Education, at 252 Bloor St. W., Toronto, Ontario, Canada. Members present were KEN BLACKWELL, DENNIS DARLAND, BILL EASTMAN, LEE EISLER, ALEJANDRO GARCADIIEGO, DAVID HART, DON JACKANICZ, JOHN LENZ, BOB LOMBARDI, STEVE MARAGIDES, HUGH MOORHEAD, DAN O'LEARY, FRANK PAGE, PAUL PFALZNER, HARRY RUJA, STEVE REINHARDT, JOHN VAN WISSEN...and STEFAN ANDERSSON and IAN WINCHESTER who joined the BRS at this Meeting. Guests were also present: Jane Lenz, Abe Najjar, Mrs. Frank Page, Lois Pineau, Robert Tully.

President DON JACKANICZ presided. DAVID HART read the 1983 Minutes, which were accepted. DON read a letter from Dora Russell which expressed appreciation of the BRS's work (RSN42-34), and a letter from Honorary Member PAUL ARTHUR SCHILPP generous in its praise of the May newsletter (RSN42), with its excellent 1967 report on the War Crimes Tribunal, by Robert Scheer.

KEN spoke of the serious illness of Honorary Member LESTER DENONN, and of Lester's contributions to Russell studies and to the BRS. Ken's motion, that President Jackanicz write a letter to Bess Denonn on behalf of the BRS, was seconded, and carried unanimously.

DENNIS DARLAND gave the Treasurer's Report. The ERS is solvent.

LEE EISLER, VP/Information, told of his sending a questionnaire to members who had dropped out, in an effort to find out why. A number of the dropouts renewed membership. He also asked members to send him items they come across in their reading, for possible use in the newsletter.

IAN WINCHESTER, of OISE, offered to place notices about the BRS in journals which reach educators, and at no cost to the BRS.

HUGH MOORHEAD praised the newsletter, and echoed Professor Schilpp's words ("It is an admirable piece of work and I want to send you [DON] and the editor my personal congratulations and commendations. Actually it is a superb piece of work..."). STEVE MARAGIDES brought a formal motion of praise for LEE'S work, which was seconded by Hugh, and carried unanimously, with hearty applause.

Hugh reported that the Doctoral Grant Committee had doubled the amount of the Grant. Formerly \$500, it will be \$1000 in 1985. He noted with pleasure that two past Grant recipients were present at the meeting: Alejandro Garcadiiego and Lois Pineau.

HARRY RUJA, Chairman of the Board, reported that the following have been elected (or re-elected) as Society Officers: DON JACKANICZ, President; DAVID HART, Vice-President; DENNIS DARLAND, Treasurer, JOHN LENZ, Secretary. MARVIN KOHL is the new VP/SPECIAL PROJECTS, replacing BOB DAVIS, who stepped down. Next year's Meeting will be either Dearborn or Washington. [It will be Washington.] The Bylaws have been revised, and will be submitted to the membership for approval. (See 33). Harry invited members to submit nominations for a new BRS Book Award. (See 8).

STEVE MARAGIDES moved that the Board seriously consider a 1986 Meeting in Britain (seconded by HUGH MOORHEAD), which among other things would provide the possibility of visiting Dora. KEN suggested having a trip to Britain for those interested, in addition to the regular meeting the same year in North America. Steve's motion carried.

FRANK PAGE asked about the possibility of arranging for the publication in paperback of KATE TAIT'S My Father, Bertrand Russell. HUGH noted the prohibitive cost of such a venture.

JOHN VAN WISSEN moved that we thank IAN WINCHESTER for his work in planning RUSSELL CONFERENCE '84, which we were attending, and for providing excellent facilities. IAN was thanked with warm applause.

BOB LOMBARDI proposed that the BRS President send letters to world leaders mostly on the subject of nuclear weapons. DAVID HART seconded. A number of objections were raised: the poor response to last year's letters (STEVE M.); the difficulty of reaching a consensus in the Society (HUGH); the newsletter could be used to canvass the membership (HUGH & HARRY) or urge individual appeals to Congressmen (JOHN V.). BILL EASTMAN & LEE urged the BRS to send the letters. "If the Russell Society cannot publicly state its position on the issue to which Russell devoted the last 25 years of his life, we ought to quit and go home."

HARRY moved for a vote on the proposals one by one. The motion carried.

The following parts of Bob's proposal were approved:

The letters will go to President Reagan, Chairman Chernienko, House Speaker Tip O'Neill, Senate Majority Leader Howard Baker, and Senate Minority Leader Jim Wright, urging the following:

1. a bilateral, verifiable nuclear freeze

2. A denunciation of attempts to employ any weapons in space.
3. A return to arms talks.
4. No funding for the MX missile.

The following parts did not carry: withdrawal of Pershing II missiles from Europe; withdrawal of U.S. forces from Central America; condemning the mining of Nicaraguan harbors; congratulating Lowell Weicker for his role in defeating the school prayer amendment in the Senate. Decision deferred on the following: a ban on chemical weapons, a call for Soviet withdrawal from Afghanistan.

The Annual Meeting of The Bertrand Russell Society was adjourned.

Submitted July 10, 1984

John Lenz, Secretary

Minutes of the Directors' Meeting

The Board of Directors of The Bertrand Russell Society, Inc., met in 4 separate sessions, on June 23 & 24. The following report summarizes what took place in all 4 sessions. The actual minutes, written by DON JACKANICZ (with another set by DAVID HART) are in the keeping of BRS Secretary JOHN LENZ. Directors present at some or all of the sessions were: DENNIS DARLAND, LEE EISLER, DAVID HART, MARVIN KOHL, DON JACKANICZ, STEVE MARAGIDES, HUGH MOORHEAD, STEVE REINHARDT, HARRY RUJA. In the absence of BRS Secretary CHERIE RUPPE, DON JACKANICZ was appointed Acting Secretary by Chairman Harry Ruja.

The BRS Doctoral Grant was increased from \$500 to \$1000. Lee Eisler cited the lack of applications for the \$500 Grant; \$500 was probably too small an amount of money to be interesting. After some discussion, and confirmation that there is enough money in the BRS Treasury to cover the \$1000 Grant, the increase was approved. The amount and conditions of the Grant will be reconsidered next year.

The BRS Book Award will be given for the first time in 1985. It had originally been proposed by Gladys Leithauser some years ago. There was discussion as to whether the Award should go only to a book that deals directly with BR or his work or could also go to one that furthered some cause that BR had thought important, such as the abolition of nuclear weapons. No final decision on this question was taken. The Book Award Committee will consist of GLADYS LEITHAUSER, HUGH MOORHEAD, and HARRY RUJA. Members are encouraged to nominate books as candidates for the Book Award.

The BRS Award Committee consists of HARRY RUJA, DON JACKANICZ, BOB DAVIS, & LEE EISLER. Members, please submit candidates for the Award.

The Human Rights/International Development Committee's work was considered. Lee Eisler played a tape of a phone conversation he had had with its Chairman, Alex Dely, in which Alex had answered a number of questions Lee asked. Lee told Alex he intended to let the Board hear the tape. The Board decided to authorize the Committee to continue its present work for another year, and to inform Alex that it is "imperative that he be present at the 1985 Board Meeting, to discuss the work of his Committee."

The Society's Corporate Agent in the State of Illinois is now JOHN A. JACKANICZ, as a result of STEVE MARAGIDES motion, carried unanimously.

Society Officers for 1984-1985 were elected or re-elected by the Board: DON JACKANICZ, President; DAVID HART, Vice-President; DENNIS DARLAND, Treasurer; JOHN LENZ, Secretary. The Office of Vice-President/Special Projects, which had been held by BOB DAVIS, who stepped down, is offered to MARVIN KOHL (who was absent from this session).

Board Officers for 1984-85 were elected or re-elected by the Board: HARRY RUJA, Chairman; JOHN LENZ, Secretary.

Bylaw revision. A Bylaws Committee -- consisting of DON JACKANICZ, STEVE REINHARDT, and LEE EISLER -- had been working on proposals for revised Bylaws for many months. Their proposals were approved by the Board, after some modifications were made. The proposed revised bylaws will be submitted to the members for their approval (33).

MEMBERSHIP LIST

The list is in 2 parts. Part I lists those who were members on June 1, 1984. It was distributed at the 1984 Annual Meeting, in Toronto. Part II lists members who have enrolled since June 1st. Please check your name and address and notify us of any errors. This list is provided solely for your personal use, and is not to be given to nonmembers without permission from the President. Part I is on the next 3 pages, followed by Part II.

RUSSELL SOCIETY NEWS

No. 44

November 1984

- (1) Highlights: BBC documentary, "Bertie and the Bomb" (14). BR vs. Hook on unilateral disarming (11 1/2 pages) (16). 1984 BRS Award to Dora Russell (19). BRS newsletters in Library of Congress (35). Accidental war petition (10). Voting results (11). Why contribute? (33). 1985 BRS \$1000 Doctoral Grant announcement (22). Newsletter copyrighted (34). The index is at the end. An asterisk in the left column indicates a request.
-

COMING EVENTS

- (2) On Sunday, December 2nd, Al Seckel gives a talk (with slides) on BR, in Santa Barbara. For more, see (21)
-

ANNUAL MEETING (1985)

- (3) Washington, D.C. is the place, June 21-23 is the time, the next-to-last weekend in June. Mark it on your calendar; include it in your plans...and in your budget. Don Jackanicz, whose arrangements for the 1980 Chicago meeting made it an outstanding one, is again in charge of arrangements, so...expect a lot! The programs for the annual meetings of the past 2 years were devised by the 2 Russell Conferences in Canada; the 1985 Annual meeting will be the first in 3 years in which the BRS puts on its own program. More to come.
-

REPORTS FROM OFFICERS

- (4) President Don Jackanicz reports:

* The search for a new BRS Librarian has ended in the appointment of Tom Stanley. I would like to welcome him to this position while again thanking his predecessor, Jack Ragsdale, for a job well done these last several years. By making diverse and often rare materials more readily available, The BRS Library helps keep Russell's work and views known to the academic and general communities. Its activities have also been an important part of the BRS's aim of disseminating information on Russell to wider audiences. In the future I anticipate a growing role for the Library, and I invite all members to write to Tom and me concerning the Library's mission and how to foster its performance to an even higher level.

* Work continues on planning the June 21-23, 1985 Annual Meeting to be held in Washington, D.C. The precise meeting place has not yet been chosen, though the likely site would be one of the area universities or hotels. Negotiations are now being conducted. Any member interested in making a presentation should write to me at the earliest convenience as the program is gradually being compiled. Suggestions for program items and agenda proposals for the Society Business Meeting should also be directed to me. And, of course, I very much hope each member is seriously considering attending. The next newsletter will contain further details on meeting plans.

* Negotiations for the annual BRS Award and your views on the proposed 1986 BRS Annual Meeting in Britain are also welcomed. Now is the time for your input.

- (5) Vice-President David Hart reports:

* Lee Eisler has once again earned the gratitude of all BRS members, this time for his fine work in getting a videotape of the BBC's "Bertie and the Bomb". It is available from the BRS Library, and we might all think about how we could present it to various audiences. Many colleges have groups that work to promote a nuclear freeze. Student groups are always glad for any chance to hold a meeting; they would likely welcome someone who wants to show our videotape. In addition, even in this era of darkness, there are still a few colleges that have an ecology club. They too might have an interest in our videotape. Most

*Russell Society News, a quarterly (Lee Eisler, Editor): RD 1, Box 409. Coopersburg, PA 18036

Copyright 1984 The Bertrand Russell Society, Inc.

groups like to have outside visitors. So in thinking of prospective viewers, we need not limit ourselves to those groups to which we belong. Many churches have peace groups that do very good work; we ought not to ignore this potential source of interest.

In reading over the questionnaires returned by our new members, I am again and again surprised to learn how some casual event has set off a wholehearted interest in Russell. Russell is how own best advocate, if only people can be made aware of his work. Perhaps our videotape will be the small event that awakens curiosity and sends someone off to a bookshop or library, eager to read anything Russell wrote.

(6) Vice-President/Special Projects Marvin Kohl reports. His review of Russell's Cambridge Essays 1888-99 appeared in Choice (April 1984, p 242). Here it is:

An extraordinary volume that should delight both the scholar and the general intelligent reader. For the scholar there are Russell's early and shorter writings on economics, epistemology, and logic; a bibliography and general index; and 127 pages of annotation and textual notes. For the general reader there are essays about the nature of ethics, politics and utilitarianism. In addition (and simply a delight to read), there is the diary of a 16-year-old arguing about the nature of religion and religious belief and, as a special bonus, a reading list containing 758 entries. The biographical material will be of special interest to those adolescent readers searching for a model or intellectual hero. A must for all college collections, and highly recommended for general libraries who wish to have the partial autobiography of a man who is clearly one of the greatest, if not the greatest, intellectual of our century.

[The reviewer's copy of this volume, furnished to us by the publisher, Allen & Unwin, is available from the BRS Library. Handle with care; it is a \$70 volume.]

Treasurer Dennis J. Darland reports:

(7a) For the quarter ending 6/30/84:

Balance on hand (3/31/84).....	3053.60
Income:	
13 new members.....	246.45
62 renewals.....	1232.50

REPORTS FROM COMMITTEES

(8) Library Committee (Tom Stanley, Librarian):

The Library is in process of being shipped to Vermont. I expect it will be intact, and orders processed, by the time this issue arrives. Please excuse any delays that have occurred during the transition.

"Bertie and the Bomb", the BBC documentary, is our latest acquisition. We have four copies of this VHS cassette, three of which are on loan. If anyone has a specific date when they would like to view it, please notify me at once.

The Librarian's appeal (RSN43-27) has elicited a very generous donation of books from Al Seckel. Also worth noting, we have The Collected Papers of Bertrand Russell, Vol 1 (Cambridge Essays, 1888-1899). [See (6)]

[For more news about the Library, see (12-15)]

(9) Philosophers' Committee (David E. Johnson, Chairman):

Program
of
THE BERTRAND RUSSELL SOCIETY, INC.
at the December 1984 Meeting
of the Eastern Division of
THE AMERICAN PHILOSOPHICAL ASSOCIATION

TIME: December 28, 1984. 10:00 to 11:50 a.m.

PLACE: The New York Hilton Hotel, Nassau Suite A

PAPER: "Knowledge By Description"
Russell Wahl, Wabash College, Crawfordsville, IN

COMMENTATOR: Justin Leiber, University of Houston .

CHAIRMAN: David E. Johnson, U. S. Naval Academy

* * * * *

ABSTRACT OF RUSSELL WAHL'S PAPER, "KNOWLEDGE BY DESCRIPTION"

This paper examines Bertrand Russell's notion of knowledge by description and explores two questions: whether it is really correct to say a person can have merely descriptive knowledge of a thing, and whether truths can be known about things known only by description. I argue that Russell's original intention in introducing this notion was to account for the possibility that truths could be known about things with which one is not acquainted. This is the case despite some of Russell's later claims that such things as Piccadilly, physical objects and other things which are known only by description are really logical constructions of things known by acquaintance. Far from being a consequence of the position in "On Denoting" and "Knowledge by Acquaintance, Knowledge by Description," this more constructivist view actually conflicts with it in some respects.

(10) Science Committee (Alex Dely, Chairman).

Instead of a formal report, Alex submits (1) his article, "Accidental War", that appeared in a University of Arizona publication (Fall '84), and (2) a related petition about accidental war. We suggest that you photocopy the petition, get signatures, and mail it to the address given. Alex has drafted an "Accidental Nuclear War Prevention Act", which has been submitted to Congress, and your petitions with signatures might be helpful. The article and the petition are on the next page.

THE MEMBERS VOTE

- (11) Results of the vote: The Bylaws revised in June 1984 were approved. All candidates for Director were elected or re-elected for 3-year terms starting 1/1/85: JACQUELINE BERTHON-PAYON, BOB DAVIS, ALEX DELY, ALI GHAEMI, HUGH MOORHEAD, DAN WRAY. The ballots were tallied by Lee Eisler, and the count was verified by Secretary John Lenz, as required by Article 11, Section 2 of the new Bylaws.

BRS LIBRARY

(12) New Librarian is Tom Stanley, book lover, book collector, and book seller (specializing, with his wife, in used and out-of-print books, as STANLEY BOOKS.) A 7-year BRS member, he says they "finally settled in Vermont where I had hoped to make a living selling books. After starving at this, I found employment selling [electronic equipment], and my wife took up teaching. Our business only allows us the luxuries, like buying a set of the Collected Papers." He is a member of two local "peace" groups, the Vermont Archeological Society, the Vermont Historical Society, and the Vermont Antiquarian Booksellers Association. In his free time, he enjoys Bach and hiking with his daughter. We welcome him warmly to his new post. His address is on Page 1, bottom.

(13) 7 Films for rent, listed below with rental prices, may be borrowed by BRS members and responsible non-members. All are 16mm. black and white. A \$75 deposit is required, to be refunded when the film is returned, less the cost of shipping and insurance. Films are rented for one week, except when other arrangements are made with the Librarian. When ordering, specify the date when the film is wanted. If you know of any other films in private collections, other libraries, or broadcasters' files, please tell Librarian Tom Stanley about it. His address is on Page 1, bottom. Here are the films:

1. Bertrand Russell Discusses Philosophy
2. Bertrand Russell Discusses Power.
3. Bertrand Russell Discusses Mankind's Future.
4. Bertrand Russell Discusses the Role of the Individual.
5. Bertrand Russell Discusses Happiness.

Each of the above runs for 13 1/2 minutes. BR is interviewed by Woodrow Wyatt (1959). The interviews are transcribed in the book Bertrand Russell Speaks His Mind (Greenwood, publisher). The audio portion of #1 is available on LP "Bertrand Russell Speaking" (Caedmon TC-1149). Rental: \$25 plus \$75 deposit per film.

6. Bertrand Russell.

Runs 39 minutes. BR is interviewed by Romney Wheeler on his 80th Birthday (1952). A transcript can be found in Atlantic Monthly (August 1952, pp. 51-54). Rental: \$40 plus \$75 deposit.

7. The Life and Times of Bertrand Russell.

Runs 40 minutes. Produced by the BBC for BR's 90th Birthday Celebration (1962). BR is interviewed, and so are several prominent British figures. Main emphasis is on the threat of nuclear war and BR's efforts to diminish it. Rental: \$40 plus \$75 deposit.

(14) "Bertie and the Bomb". The BRS Library has acquired a VHS videotape of this 40-minute BBC TV program that was shown in Britain in April and very well received. (We've seen the laudatory press clippings. We've also seen "Bertie and the Bomb" itself. Not to be missed!) It has not been seen on US or Canadian TV, so we have something unique, at least for the moment. It deals mainly with BR's opposition to nuclear weapons. Two BRS Award recipients appear in it: Dora Russell and Joseph Rotblat.

You may wish to borrow it from the BRS Library to show to your group or organization. If you do this, mention that it has been provided by the Bertrand Russell Society; and anyone wishing information about the Society (by mail) should give you his name and address.

If you show it to a group, please send us brief report: name of group (if any), size of audience, how many asked for information about the BRS, and audience reaction.

One limitation on its use: don't get carried away and offer it to a local TV station. We do not have BBC's permission for that.

Technical note: the tape has been recorded at a slow speed. Some videotape players play it correctly, some do not. Try it out to make sure it plays on your player.

As reported last issue (RSN43-28), there is no charge for borrowing tapes. Borrower pays for postage and \$50 worth of insurance both ways, ordinarily. But in this case, if you are showing "Bertie" to a group, the BRS will share the cost, will pay it going out; you pay it coming back. If you are not showing it to a group, please send \$3 with your order for one-way postage and \$50 insurance; any excess will be refunded in stamps. Order from BRS Library, address on Page 1, bottom.

(15) Vidal on audiotape. Last issue, JACK RAGSDALE recommended a videotape (#260A) of Gore Vidal on the Donahue show (RSN43-29). Since many more people have audiotape players than have videotape players, we made an audio cassette copy of the video. The audiotape turns out to be excellent...like an unusually good radio show. Available from the BRS Library.

BR ON UNILATERAL NUCLEAR DISARMING

(16a) In Sidney Hook's review of Volume I of Collected Papers of Bertrand Russell (RSN41-25), he quotes BR's statement, "I am for controlled nuclear disarmament, but if the Communists cannot be induced to agree to it, then I am for unilateral disarmament even if it means the horrors of Communist domination."

We wrote Professor Hook and asked for the source of the statement (RSN42-7), and he responded: "It was made to Joseph Alsop, the newspaper correspondent, and was the occasion of my exchanges with Bertrand Russell in the New Leader in 1958 which continued for some time... R. himself in the course of the correspondence acknowledges he made it but implies he was tricked into doing so and that I misunderstood his real intent."

We have read the 1958 newspaper article by Joseph Alsop from which Professor Hook extracted one sentence. It shows, we believe, that this one sentence, standing alone — taken out of context, the context being everything that BR said on that occasion — misrepresents BR's position. The part is not the whole.

Here it is; judge for yourself. (We are indebted to HARRY RUJA for telling us where to look for the Alsop article, and to the Hawaii Star-Bulletin for supplying it, from its issue of 2/21/58):

(16b) Bertrand Russell Gives an Opinion On How to Survive in Nuclear Age

By JOSEPH ALSOP
LONDON, Feb. 21—The room is colorlessly comfortable, without character except for the superb view of the Thames through the wide windows.

The room's inhabitant suggests a particularly spry bird. The nose is beaklike; the shock of white hair is a superb crest, and even the voice, high, dry and sometimes a little harsh, is decidedly avian.

Such is Lord Bertrand Russell at the age of 85 and in the midst of his inexhaustible career's new phase as a most powerful influence on British and world opinion.

STILL GOING STRONG

None with any sense of history can first encounter Bertrand Russell without a spasm of downward incredulity.

There he still is, yet say to yourself, yet he said his ABCs to the man who moved Britain's reform bill of 1832 and reached the Prime Ministership before Palmerston.

The grandfather, Lord John Russell, bore the largest single share of the responsibility for ushering England into the new democratic age; and in order to do so, he helped drive from office the men who beat Napoleon.

MANY FACETS

The grandson has been a dozen things—great philosopher, great logician, First World War pacifist, Second World War anti-Nazi and always a passionate libertarian

and a passionate anti-Communist.

But now his life and work are dedicated to a vigorous crusade to ban the nuclear weapons at all costs.

Age has not dimmed the power of his mind or increased his appetite for self-delusion, either.

What sets Bertrand Russell altogether apart from the vast majority of his fellow crusaders is mainly his honesty in facing hard facts and hard choices.

SURVIVAL OF THE RACE

"I am for controlled nuclear disarmament," he says briskly, fixing his caller with an eye that is almost hypnotically sharp.

"I am for any negotiations, any first steps, any efforts that may promote understanding—anything, in short, that may bring controlled disarmament a little nearer.

What is at stake is simply the survival of the human race; for if we go on as we are going, we risk a nuclear

war, and the human race will not survive such a war."

There is something in him—something perhaps of those "ancestral voices prophesying war" that Coleridge heard in his dream—that makes one reluctant to interrupt the flow of his explanation.

THE HARD DECISION

But the question has to be asked: "What if the Soviets cannot be induced, by any imaginable effort, to agree to controlled nuclear dis-

armament?"

"Then," he says, with sharp emphasis, "personally am for unilateral nuclear disarmament. It is a bitter choice. I have thought much about it, and I do not think I deceive myself about its nature.

"Unilateral disarmament is likely to mean, for a while, Communist domination of this world of ours.

"As you know very well how I feel about the Communist system, my choice may surprise you—and mind you, I speak only for myself, not for anyone I am working with, and with little hope of persuading others.

ULTIMATE CHOICE

"But if the alternatives are the eventual extinction of mankind and a temporary Communist conquest I prefer the latter.

"It would be inexpressibly horrible, but it would not endure, anymore than Genghis Khan's altogether horrible empire endured.

"And the end of the human race on earth is, after all, an absolutely irreversible event."

He mused for a while after stating his ultimate choice. Then he began to set forth his arguments that "sane men among the Soviets must be just as disturbed as sane men on our side to find themselves in this prison of the balance of terror."

VARIOUS SCHEMES

We have not really tried, he kept repeating; we have

not really tried to reach agreement by sensible stages and equal concessions.

And so he fell to analyzing, in great detail and with much shrewdness, the various schemes for first disarmament steps, disengagement in Europe, closing the nuclear club, and all the other expedients now so much discussed.

At the close, he was asked another question: whether he did not think that it was better to maintain the "balance of terror" until the Kremlin gave stronger proof it was ready to negotiate.

And to this he replied again, "I tell you, if we go on as we are going much longer, we risk the end of the human race."

CONTRASTING ERAS

As one left the simple room, the mind's eye held a vision of the grandfather's time—Wellington's dispatch rider driving furiously into London with the Waterloo-won standards of Napoleon's guards poked out of the carriage window.

And to make the contrast in time, the mind's ear held the echo of the dry, precise old voice of the grandson, setting forth his alternatives for the H-bomb age as he grimly perceives them.

You may think his advice altogether wrong, as does this reporter; but this was still a voice deserving to be heard and carefully considered in the final judgment.

- (16c) Hook's 1984 misrepresentation of BR's position on Communism, in his review of "Collected Papers", is not new. He has done it often. He recently said, "So long as we keep our guard up and do not capitulate, as Kennan and Russell would have us do..." (RSN39-10c). Hook accused BR of being a "spokesman for appeasement and surrender to Communism", in an article in Commentary (July 1976) (RSN41-6).

Let us look at the 1958 New Leader articles that Professor Hook refers to.

(16d)

A FOREIGN POLICY FOR SURVIVAL
by Sidney Hook
in The New Leader April 7, 1958

American foreign policy has been in a state of crisis ever since the end of World War II. The crises have been partly of this country's own making. It has made error upon error, all based upon the failure to understand the nature of the Communist threat. It sacrificed essential political principles in the military struggle against Nazi totalitarianism. It demobilized its troops in Europe too soon. It failed to use its monopoly of atomic power to effect world disarmament and international control of nuclear weapons. It withdrew its troops from Korea, practically inviting Communist aggression. It fought the Korean War against the Chinese under self-imposed limitations. It liquidated the war short of victory when the Communist Chinese were in retreat. It stood idly by when Soviet troops slaughtered the Hungarian freedom fighters, who were actually the allies of the West.

* * * * *

Shortly after the first atomic bomb was exploded, Elmer Davis responded to the call for one world with the retort: "No world is better than some worlds." It is possible to panic the West by a picture of the universal holocaust a nuclear war would bring, to panic the West to a point where survival on any terms seems preferable to the risks of resistance. The pages of history show that moral integrity in extreme situations is often the highest political wisdom. The struggle against totalitarianism is not only a political struggle but also a moral one, which limits the extent to which we can carry appeasement. If Hitler had commanded the weapon resources of the Soviet Union, would we have yielded to one Munich after another until the world was one vast concentration camp? I hardly think so. Those who are prepared to sacrifice freedom for peace and for mere life will find after such sacrifice no genuine peace and life unfit for man. Paradoxical as it may sound, life itself is not a value. What gives life value is not its mere existence but its quality. Whoever proclaims that life is worth living under any circumstances has already written for himself an epitaph of infamy. For there is no principle or human being he will not betray; there is no indignity he will not suffer or compound.

Sometimes those who should know better seem to ignore this. Bertrand Russell recently declared in an interview with Joseph Alsop that, if the Communists could not be induced to agree to reasonable proposals for controlled nuclear disarmament, he would be in favor of unilateral disarmament even if this meant Communist domination of the entire world. Although he stated the view as only his own, the fact that he made it public is tantamount to an advocacy of a policy sure to be widely interpreted in the West and in the Kremlin as one of complete capitulation to Communist intransigence.

It is with a feeling of great personal sadness that I observe Bertrand Russell urge that, to avoid the risk of war, we in effect haul down the colors of freedom and moral decency to save mankind for Communist rule. After all, we cannot be certain that the terror of Communism will not endure or be followed by something worse. "Oh! what a noble mind is here o'erthrown!" The man who in The Free Man's Worship was prepared to defy the very cosmos and "the trampling march of unconscious power," in order to sustain the ideals of human freedom come what may, now sinks on unwilling but still bended knees before Khrushchev at the thought of the danger of universal destruction.

Bertrand Russell's career as a counselor to mankind, here as in some of his observations about the United States as a police state, proves that all the mathematical logic in the world is not a substitute for common sense. In so many words, he says: "I am for controlled nuclear disarmament, but, if the Communists cannot be induced to agree to it, then I am for unilateral disarmament even if it means the horrors of Communist domination." When they listen to sentiments like this, why should the Soviets consent to controlled nuclear disarmament? All they need do is wait and the world will be given to them on a platter to do with as they will. Why should they compromise? Not knowing whether they will survive our resolution to fight if necessary for freedom, they may be tempted to accept reasonable proposals. But words like Russell's tell them that all they need do is sit tight, make threats, and wait for us to come crawling to them disarmed. It is like saying to a ruffian or burglar: "You let me alone and I'll let you alone, but if you insist on not letting me alone, you can have your way with me. If you find my lock too difficult to force, be patient and I shall remove it." This is almost a provocation to the burglar to make the most extreme demands and reject any reasonable settlement. Russell's words express a dubious political morality and a bad strategy. They bring about the very intransigence among the Communists that he uses as the justification for capitulation.

[Hook's article continues, but without further reference to Russell. End of excerpt.]

(16e)

WORLD COMMUNISM AND NUCLEAR WAR
By Bertrand Russell
in The New Leader May 26, 1958

Dr. Sidney Hook's article, "A Foreign Policy for Survival" (NL, April 7) contains much with which I am in agreement — more, I think, than Dr. Hook realizes. Before embarking upon controversial matters, I will emphasize the extent of agreement by repeating a statement, the first three paragraphs of which were originally made by the American Nobel Anniversary Committee and subsequently published, with the addition of the last paragraph, in many countries on both sides of the Iron Curtain:

"Negotiations between East and West with a view to finding ways of peaceful coexistence are urgently desirable. Certain principles should govern such negotiations: (1) Any agreement arrived at should as a whole be not advantageous to either party; (2) it should be such as to diminish causes of friction; (3) it should be such as to diminish the danger of a more or less inadvertent outbreak of nuclear warfare.

"The procedure I should wish to see adopted would be, first, a meeting at the highest level between the governments of the U.S. and the USSR, not intended to reach binding agreements but to explore the possibility of a compromise which both powers would accept. The negotiations involved should be secret until the possibility of such compromise had been established. If such a compromise seems feasible, it should be recommended by both parties to the other powers of NATO and the Warsaw Pact.

"If an agreement is to be successful in averting the risk of nuclear warfare, it must provide for the destruction of nuclear weapons and the cessation of their manufacture under the guarantee of inspection by an agreed neutral authority. It must also provide for the removal of all alien troops from agreed territory including, as minimum, East and West Germany, Czechoslovakia, Poland and Hungary — Germany not to remain in NATO or the above satellites in the Warsaw Pact. The Countries in Eastern and Western Europe must be free to adopt whatever form of government and whatever economic system they may prefer.

"I have been dealing with measures that are imminently necessary if the risk of a great war is to be diminished. But in the long run, the only solution which will make the world safe is the establishment of a World Government with a monopoly of the major weapons of war. The world is not yet ready for such an institution, but it may be hoped that experience will gradually convince men of its necessity."

It will be seen that the statement is very similar to the first part of Dr. Hook's article. Where he and I disagree is as to the advisability of an ultimate resort to nuclear war if the Communist powers cannot be contained by anything less. Both Dr. Hook and I are concerned with possibilities which we respectively think improbable. Dr. Hook maintains that even if his policy led to the extinction of human life, it would still be better than a Communist victory. I maintain, on the contrary, that a Communist victory would not be so great a disaster as the extinction of human life. He admits that his policy might lead to the one disaster, though he does not think that it would. I admit that the policy which I advocate might lead to the other disaster, though I, again, do not think that it would do so. We are agreed that both these extreme consequences are somewhat hypothetical, and we are also agreed that both of them would be disasters. We differ only as to which of them would be the greater disaster.

Before arguing this question in impersonal terms, there are some observations of a more personal kind that may help to clear the ground. Those who oppose the policy which I advocate insinuate that it is inspired by personal cowardice. A moment's reflection would show them that such a supposition is absurd. Neither universal Communist domination nor the extinction of the human race is likely to occur before I die a natural death. I do not, therefore, have to consider whether I should most fear my nuclear disintegration or my slow torture in an Arctic labor camp. At my age, views as to the not immediate future are necessarily impersonal.

Another thing which is insinuated is that I am surreptitiously favorable to Communism. One might as well accuse Dr. Hook of wishing to see the human race exterminated. Obviously he does not wish the one and I do not wish the other. We both admit that both would be disasters. We differ only, I repeat, as to which would be the greater disaster.

I cannot but deplore the passage in which Dr. Hook laments my supposed moral downfall. It is not by such arguments that difficult issues can be decided. He does not seem aware that it would be easy to make a retort in kind and to accuse him of being a super-Caligula. But argumentation in this vein is an obstacle to rationality. I shall, therefore, abstain from it, and I wish that he would do likewise.

I come now to an impersonal consideration of the issue. There are here two quite distinct matters to be discussed: First, what is the likelihood that the policy which I advocate would lead to the universal domination of Communism? And, second, if it did, would this be worse than the ending of human life? It is the second question that I wish to examine, since the first involves difficult political and psychological considerations as to which differences of opinion will inevitably persist.

Dr. Hook asserts that "Bolshevism is the greatest movement of secular fanaticism in human history." I will not dispute this, but is there not also fanaticism in the attitude of Dr. Hook and of the powerful men who agree with him? Human history abounds in great disasters. One civilization after another has been swept away by hordes of barbarians. The Minoan-Mycenaean civilization was destroyed by savage warriors whose descendants, after a few centuries, became the Greeks whom we revere. When the Mohammedans swept over the greater part of the Eastern Roman Empire, it seemed to Christian contemporaries that the civilization of the regions which they conquered was being destroyed, and yet, before long, it was the Arabs who mainly preserved the heritage of antiquity. Genghis Khan was quite as bad as Stalin at his worst, but his grandson Kublai Khan was a highly civilized monarch under whom Chinese culture flourished.

The men who think as Dr. Hook does are being un-historical and are displaying a myopic vision to which future centuries are invisible. A victory of Communism might be as disastrous as the barbarian destruction of the Roman Empire, but there is no reason to think that it would be more disastrous than that event. While the human race survives, humaneness, love of liberty, and a civilized way of life will, sooner or later, prove irresistibly attractive. The progress of mankind has always been a matter of ups and downs. The downs have always seemed final to contemporaries, and the ups have always given rise to unfounded optimism. Western Europe in the year 1000 gave no promise of the renaissance that began some centuries later. The human spirit throughout Western Christendom was as narrowly imprisoned as it was in Russia under Stalin. Any person who supposes that the evils of Communism, if it achieved a supremacy, would last forever is allowing himself to be so limited by the heat of present controversies as to be unable to see their similarity to equally virulent controversies in the past or to realize that a dark age, if it is upon us, like the dark ages of the past, will not last forever.

Dr. Hook says quite truly that life, in itself, is not of value. It gives, however, the only possibility of any value. I cannot applaud the arrogance of those who say: "If the next century or so is to be such as I (if I were alive) would find unpleasant, I shall decide that not only this period but all future time shall be destitute of life." Nor can I wholly admire the kind of "courage" which is advocated by Dr. Hook and others who think like him, which has, in large part, a vicarious character somewhat detracting from its nobility. I have nothing to say against the man who commits suicide rather than live under a regime which he thinks is evil, but I do not feel much approval of the man who condemns everybody else to death because he himself does not find life worth living.

I have tried to keep this discussion on a rational rather than an emotional plane, but I cannot resist giving expression to my final judgment, which is that to risk the end of human life because we regard Communism as evil is fanatical, defeatist and pusillanimous in the highest possible degree.

A FREE MAN'S CHOICE
by Sidney Hook
in the New Leader May 26, 1958

It is a debater's stratagem, unworthy of Bertrand Russell's great gifts, to assert that I called his personal courage into question in criticizing the policy he advocates as one of surrender to Communism. It was his political judgment I criticized, not his character. Indeed, despite his praiseworthy declaration that arguments in the impersonal mode will best clarify our disagreements, it is he who descends to the use of personal epithets. I shall not follow him. I ask only that he stop pretending that anyone is charging him with cowardice or that any politically literate person believes he favors Communism. He no more favors Communism than that democratic Western statesman who appeased Hitler, out of fear of war, favored Fascism. Nonetheless they were the assisting architects of the ruin of millions.

The issues between us are two. The first Russell wholly avoids, even though it is my main point and by far of greater political weight. Russell has declared to the entire world that, if the Soviet Union refuses to accept reasonable proposals for international disarmament, the West should disarm unilaterally — even at the cost of the universal reign of Communist terror. I criticized this view as helping to produce the very situation in which we may have to choose between capitulation to Communist tyranny or war.

I find bewildering Russell's claim that the four paragraphs he cites in his rejoinder are "very similar" to the first part of my article. These paragraphs are worth precisely nothing when coupled with his present advice. They flatly contradict it. The first principle he recommends to govern negotiations between East and West is: "Any agreement arrived at should as a whole be not advantageous to either party." Excellent! Then he broadcasts to the world: If the Kremlin refuses to make such an agreement, the West should disarm unilaterally. Why, then, should the Kremlin enter into any such agreement or abide by it if it does? Russell's position today constitutes positive encouragement to the Communist leaders to be unreasonable and thus inherit the world without a struggle.

Let us not deceive ourselves: It is obvious that the leaders of the Soviet Union are keeping a sensitive watch on the pulse of public opinion in Western countries. It is not for nothing that the man whom they called "the running dog of imperialism," and who still despises their tyranny, is now built up in their controlled press as the "true friend of peace." Throughout the world, Communists are infiltrating into the pacifist

movement whose non-pacific demonstrations they often spark. I am convinced that the growth of pacifist and neutralist sentiment in the West was at least partly responsible for the Soviet Union's withdrawal from the sessions of the UN Disarmament Commission, where reasonable proposals along the lines of Russell's paragraphs could be considered; its hardening attitude along the political front; its repudiation of the Geneva agreement on Germany; its recent UN veto of the proposal for Arctic inspection. Such actions may also be based on the hope that a position like Russell's will undermine the West's resolution to resist aggression.

Arguments from history are rarely decisive, but I think it is fairly well established that the appeasement of Hitler -- not only Munich but the mood that nothing could be worse than war -- encouraged Hitler in his aggression. I go further. Even if in my heart I agreed with Russell (as I do not) that in the ultimate event, capitulation to Communism was a lesser evil than the risks of war, I should regard it as a piece of unmitigated political foolishness to proclaim it. We live in a contingent world. What we do, even sometimes what we say, counts. Especially important are the policies we advocate. For, to the extent that they influence human action, they influence future events. Russell's proposal is tantamount to playing with all the cards face up against a shrewd and ruthless gambler with a hidden hand. When the stakes are human freedom, it is irresponsible to play a game which invites the Kremlin to bluff us into submission with threats of atomic blackmail. The Soviets are just as vulnerable to us as we are to them.

The Soviet leaders belong to the human race, too. For them survival is an even more important value than for many in the West. That is why I am convinced that ultimately they are more likely to consent to reasonable proposals for a peaceful settlement once they are persuaded that we will fight rather than surrender, than if they are persuaded by Russell and others that we will surrender rather than fight. This is the crucial point which Russell has completely ignored.

Santayana somewhere defines a fanatic as one who, having forgotten his goal, redoubles his efforts. Among my goals are freedom and peace. That's why I believe that all nations should freely choose their economic and political systems. That is why I have never advocated a preventive war for the sake of peace, as Russell did in 1948, when the West had a monopoly on atomic power. He was wrong then in urging that the Soviet Union be forced, by atomic bombs if necessary, to yield to a world government. (Many A-bombs could have the effect of a few H-bombs.) He is wrong now in urging capitulation on the West because the Soviet Union has the hydrogen bomb. He went too far in one direction; he now goes too far in the other, as if he were atoning for his earlier extremism. In both cases, he underestimated the political and psychological elements in the situation and overestimated the technological ones.

I do not see why a policy which seeks to confine the fanaticism of Bolshevism by taming it with the fear of failure should be called fanatical. As well say that a man who believes in tolerance and is therefore intolerant of those who manifest intolerance is himself intolerant. On the contrary, assuming belief to be a habit of action, a person who is tolerant of a show of intolerance does not really believe in tolerance. If the West follows the foreign policy I have advocated, it will not have to choose between capitulation to Communism or war. This is the choice Russell's proposal forces us into. It seems to me today that the probability of Communism destroying human liberty everywhere is considerably greater than the probability, if it comes to war, of human life being destroyed everywhere -- particularly if we keep up scientific inquiry into defense.

After all, just a few short years ago, Russell declared that the destruction of the whole of Europe was not too great a price to pay in order that "Communism be wiped out." There were some who regarded this position as "fanatical, defeatist and pusillanimous," since such a war if prolonged might have had a disastrous effect on the human race. It may be that today, if the scientists of the free world rally to the cause of freedom's defense and not to the cause of Russell and unilateral Western disarmament, discoveries will be made which will counteract some of the lethal after-effects of weapons. In that case, even if the Kremlin forces a war on the West, it may be repelled without the destruction of all human life or even the whole of Western Europe. It is an error to assume that a balance of armaments or even an armaments race inevitably makes for war. There is a risk, of course. The important thing, therefore, is to see to it that the potential aggressor never is certain that he can win. But this is precisely what Russell's policy prevents us from doing.

Suppose now we were confronted with the limiting case: choice between the horror of Communism for some hundreds of years and the end of human life. Here every lover of freedom and of life is on uncertain and tragic ground. One cannot be sure that at the decisive moment the situation will look the same. Yet every compassionate person, including Russell, feels that there is a limit in suffering and ignominy beyond which the whole human enterprise comes into moral question. The problem is where to draw the limit. At present, I cannot, like Russell, find grounds in history for reconciling myself to the first of the above alternatives. Some of my reasons are:

- 1) In the past, the triumphs of barbarism were local, not universal. Today, a Communist world would be a tightly knit despotism of fear without sanctuaries, without interstices to hide, without possibilities for anonymity.

- 2) In the past, tyrants ruled with a primitive technology. The possession today of refined scientific techniques increases immeasurably the extent and intensity of terror ruthless men can impose on those they rule. A Communist world could easily become a scientific Gehenna -- something incomparably worse than the destruction of the Roman Empire by the barbarians.

- 3) I cannot regard the achievement which in the past has sometimes followed the triumph of cruel tyrants as worth the price in torture and agony that preceded it. To me, the splendor and glory of the court of

Kublai Khan were not worth even one of the many pyramids of human skulls his grandfather, Genghis Khan, heaped up in carving out his empire. And a few years ago I believe Bertrand Russell would have agreed with me. If the triumph of Hitler were a necessary condition for a new renaissance, what anti-Fascist would be willing to pay the price?

4) It is not at all unlikely that factional struggle will break out again either at the Communist center or periphery among the political gangsters who rule the Communist world. In such an event, thermonuclear weapons of even more destructive power than those we know may be used to end men's miserable lives, and all the additional agony and terror would have been in vain.

5) It is no arrogance on my part to propose to the generation of the free that they follow a policy of resistance rather than surrender, any more than it is arrogant for Russell to propose surrender rather than resistance. But perhaps he means it is arrogant for any generation of men to make a decision which will prevent the future generations of the yet unborn to have their chance and make their choice. I must confess that I have some difficulty with this notion of obligation, as if it implied there were millions of souls extending into eternity waiting to be born. I do not share this theology. If there are such souls, they may perhaps become embodied elsewhere.

Communists have always argued that it is justified to bury several generations, if necessary, in order to fertilize the soil of history for a glorious future to be enjoyed by the still unborn. In some respects, Russell's argument is similar except that, as an opponent of Communism, he puts the glory much further into the future. Cosmic optimism, however, seems no more credible to me than historical optimism.

Morally, those who are unborn cannot reproach us for denying them the bliss of birth in a Communist world but those who already exist, our children and grandchildren, may curse us for turning them over to the jailers of a Communist 1984 in which, brainwashed and degraded, they are not even free to die until their masters give them leave. There are more horrors in the Communist heaven or hell than Russell seems aware of.

There is an air of unreality about this phase of the discussion. It is improbable that Englishmen who refused to knuckle under to Hitler and his V-2 bombs will seriously consider doing so to Krushchev and his more powerful bombs. If they did, the United States and Canada would still remain staunchly opposed to Communist tyranny. The discussion seems fanciful, almost bizarre, because only if we accept Russell's position or one similar to it will the enemies of freedom be emboldened to confront us with the momentous choice of total surrender or total war. Human life may be destroyed by accident or by the maniacal whim of a dictator, against which there is no safeguard -- even by surrender. But, if it is destroyed by war, it will be because our foolishness will tempt the enemy to forget his mortality.

In conclusion, I wish to repeat that nothing I have written is intended in any way as a reflection on Bertrand Russell, a man and philosopher whom I have usually admired even when I have strongly disagreed with him. I impugn only his political intelligence in this grave crisis of human freedom. I lament the fact that he has capped a lifetime of gallant opposition to despotism with the unsound recommendation that we unconditionally surrender to the cruellest tyranny in human history.

FREEDOM TO SURVIVE
by Bertrand Russell
in The New Leader July 14, 1958

My discussion with Sidney Hook in your pages has not given a clear picture of what my position is. I do not blame Dr. Hook for this. I have been led into a purely academic issue as if it were one of practical politics. Everybody knows that neither the U.S. nor the USSR will disarm unilaterally. The question of whether either would be wise to do so is, therefore, no more than an exercise in theoretical ethics. Speaking practically, and not theoretically, what I advocate is that methods should be sought of, first, lessening the East-West tension and then, negotiating agreements on vexed questions on the basis of giving no net advantage to either side. Such negotiations, if they are to be satisfactory, must include the mutual renunciation of nuclear weapons with an adequate system of inspection.

It is true that I advocate practically, and not only theoretically, the abandonment of the H-bomb by Britain and the prevention of the spread of H-bombs to powers other than the U.S. and the USSR. I do not consider that unilateral renunciation of British H-bombs would have any measurable effect upon the balance of power, and I do consider that the acquisition of H-bombs by many powers will greatly increase the danger of nuclear war. This makes the question of British renunciation of H-bombs quite distinct from that of general unilateral disarmament by one of the two camps.

The question at issue between Dr. Hook and myself arises only if all attempts at negotiation fail. Dr. Hook speaks as though I wished the United States Government to announce that it is prepared to give way at all

points and suggests that I have no such wish as regards the Soviet Government. I think this question is quite unreal since, whatever might be the part of ideal wisdom, it is certain that neither side will surrender completely to the other. However, since the question is considered important, I will do my best to restate my opinion more unmistakably.

To eliminate emotional factors I shall speak of two power blocs, A and B, leaving it completely undetermined which of them is Communist and which anti-Communist. The argument proceeds on the hypothesis that, if there is a war between the two blocs, the human race will be exterminated. It further supposes a situation in which one of the two blocs is so fanatical that it prefers the ending of mankind to a rational compromise. In such a situation, I think that the less fanatical bloc, if it had the welfare of mankind in view, would prefer concession to warfare. I should say this equally to both sides.

There are those in both camps who think that the extermination of the human race would be a smaller evil than the victory of the "enemy". I regard this view, whether held by A or by B, as insane. Dr. Hook and some of Mr. Krushchev's supporters agree when it is held by one side, but not when it is held by the other. The opinion which I have expressed that it would be better to yield than to indulge in a nuclear war is addressed to both parties equally, and I do not think it likely to have any more influence on the one side than on the other.

The argument that you cannot negotiate successfully if you announce in advance that, if pressed, you will yield, is entirely valid. If I were the government of either A or B, I should make no such announcement. But this has no bearing on the purely academic question of what it would be wise to do if the completely desperate situation arose. I must, however, once more insist that the view in favor of avoiding nuclear warfare even at great cost is one which applies to both sides equally and which, as far as I can judge, is no more likely to be adopted by one side than the other. It is entirely unjust to regard the opinions that I have expressed as more useful to the one side than to the other.

So much for defense. I pass now to attack.

Dr. Hook begins his rejoinder by a lofty rejection of personalities to which, his readers are led to suppose, I was the first to descend. He relies on their forgetting his crocodile tears expressed in his lament, "Oh! What a noble mind is here o'thrown!" I am compelled to think that criticisms of him are "personalities," whereas criticisms of me are impersonal declarations of Truth.

Throughout his article, he gives his readers to understand that it is only to the West that I proclaim the view that submission would be better than nuclear war. In fact, I proclaim this to both sides equally, and my advocacy of this view has been published as widely in Communist countries as in the United States. He will retort: "Bah! You don't suppose the Communists will listen to you." I reply: "Pshaw! I don't suppose that America will listen to me either."

He points out that "the leaders of the Soviet Union are keeping a sensitive watch on the pulse of public opinion in Western countries." Of course they are; and of course the West keeps an equal watch on opinion in Communist countries. He supposes that my advocacy of peace, though it may have some influence in the West, can have none in the East. This is contrary to all the evidence I have been able to obtain. I do not attribute any very great influence to my efforts to diminish East-West tension, but I have reason to think that this influence has been quite as great in the East as in the West.

Dr. Hook says: "If the West follows the foreign policy I have advocated, it will not have to choose between capitulation to Communism or war." This is at least equally true of the foreign policy which I advocate. I do not believe that either side wants a nuclear war, and I think a modicum of sanity on both sides will prevent it. The question at issue between Dr. Hook and me would arise only if one side lacked this modicum of sanity.

Dr. Hook's reasons for supposing that, if Communism conquered the world, its bad features would persist indefinitely are, to my mind, completely untenable. The worst features of Communism have been developed under the influence of fear and would almost certainly grow less if fear were removed. He points out that "in the past, tyrants ruled with a primitive technology." But it was no less effective for being primitive. He alludes to Genghis Khan's pyramids of heads, which were just as thoroughgoing as Auschwitz. It is an example of his slippery methods of controversy when he says that "the splendor and glory of the Court of Kublai Khan were not worth even one of the many pyramids of human skulls his grandfather, Genghis Khan, heaped up." I had never maintained that they were. What I had said was that they gave reason for hope that a bad regime might improve — which is a very different thing.

Another example of his dubious controversial methods is his argument that we owe no obligation to generations that, if his policy is followed, will never be born. He says: "I do not share this theology." There is, as he perfectly well knows, and knows that I know, no question of theology involved. The question involved is whether it is likely to be worth-while that future generations should exist. It is not a question of "rights," since obviously the non-existent have no "rights". But I am sure Dr. Hook, in his calmer moments, will admit that "rights" are not a fundamental ethical conception.

Dr. Hook is guilty of curious inconsistencies which are an indication of his fanaticism. He says: "Communists have always argued that it is justified to bury several generations, if necessary, in order to fertilize the soil of history for a glorious future to be enjoyed by the still unborn." His own position is that it is justified to bury not several generations but all future generations, not in order that they may enjoy a glorious future but in order that they may have no future at all. This is an immeasurable exaggeration of the

very fault for which he criticizes the Communists.

I should like to correct a misunderstanding promoted, I think, by a report of an interview in which only a small part of my thought was expressed. I think that, with wise statesmanship on the part of the West, it will not be at all difficult to avoid both nuclear war and surrender. What I advocate in practice, and not as the outcome of an artificial logical dilemma, is a conclusion of agreements between East and West admitting the inevitability of co-existence and the disastrous futility of war. I wish both sides to realize that war cannot achieve anything that either side desires, and that, in consequence, points in dispute can only be settled by negotiation.

Dr. Hook is in the habit of proclaiming that he values freedom. On this point, however, he deceives himself. He does not think that those who prefer life under Communism to death should be free to choose the alternative they prefer. Not only the inhabitants of Communist nations but the inhabitants of all the uncommitted nations, are denied by him the most elementary freedom, which is freedom to choose survival. The view that No World is better than a Communist World, or that No World is better than a Capitalist World, is one that is difficult to refute by abstract arguments, but I think that those who hold it should question their right to impose their opinion upon those who do not hold it by the infliction of the death penalty upon all of them. This is an extreme form of religious persecution, going far beyond anything that has been advocated in previous human history.

* * * * *

BERTRAND RUSSELL RETREATS
by Sidney Hook
in The New Leader July 7-14, 1958

The attentive reader will have observed that Bertrand Russell has retreated from the position he took in his interview with Joseph Alsop. This was the occasion of my original criticism. He was not talking into the wind. His words were reported all over the world. They came with an impact of brutal intellectual and political shock in democratic countries. Nevertheless, although the wire services were always available to him, he neither retracted nor qualified what he said until this discussion began. Nor, as is obvious from his tone, has he welcomed the opportunity to clarify his stand.

Normally I should have been content to leave his reply unanswered. It is in effect an admission that it was politically foolish to have declared that, in the event the Kremlin refuses to negotiate on reasonable terms, the West should disarm unilaterally "even if it means the horrors of Communist domination." The issues, however, are so momentous and Russell's recent views about them have done so much harm to the free world, that I feel I must continue the discussion. Perhaps if I eschew poetry (the line from Hamlet was directed only at his political judgment) and irony (the reference to theology!), he will understand me better even if he agrees with me less.

First of all, it is disingenuous for Russell now to maintain he was not advising the West, including the U.S. Government, to disarm unilaterally and risk the triumph of Communism, and that he was merely engaging "in no more than an exercise in theoretical ethics." The very language of his interview with Alsop, as well as his first reply to me in THE NEW LEADER of May 26, shows how false this is. In the former, he proposed "unilateral disarmament" if the Kremlin continued to be unreasonable. What has this got to do with theoretical ethics? In the latter he stated that there are two matters at issue: First, what is the likelihood that the policy I [Russell] advocate would lead to the universal domination of Communism?" He refused to discuss it but admitted it involves "political and psychological considerations." These, indeed, are of the very essence. The matter at issue is certainly not one merely of theoretical ethics.

Even if it were, Russell would still be wrong. Whatever does he imagine "theoretical ethics" to be? All theoretical ethics has an indirect bearing on practical life and conduct. For it is concerned not only with the nature of the right and the good but with what actions are right and what things are good and which should be preferred when they conflict. Russell would be the first to point out that the theoretical ethics of certain groups -- e.g., which teach that if it is impossible to save the life of both the pregnant mother and the child, the mother should be sacrificed -- sometimes has important and fateful bearings upon practice. Similarly, is there any doubt that belief in Russell's "theoretical" proposition, that capitulation and the risk of Communist domination with all its barbarity should be preferred to war and the risk to human survival, tends to undermine the will to resist Communist aggression? Russell is so absolutely convinced of the validity of his proposition in theoretical ethics that he believes that only the insane can disagree with him. Why, then, does he not accept the responsibility for its practical effects?

Second, Russell asserts that "The question at issue between Dr. Hook and myself arises only if all attempts at negotiation [between the West and the USSR] fail." He is wrong again. The primary issue between us is whether Russell's position will contribute to the failure of those negotiations and whether mine will contribute to their success. Russell's belated second thoughts indicate that he, too, now believes it was not practically

wise to declare what he did in his interview. The inferences I and others drew from his interview were perfectly legitimate. Further thought, I hope, will convince him that the Kremlin is less likely to risk aggression if it believes the West will resist to the end than if it is persuaded that Russell's proposition in "theoretical ethics" will guide the West's actions. Only if Russell admits this are our remaining differences minor.

In this connection, I wish to challenge the truth of Russell's contention that he offered his "ideal wisdom" to both sides impartially. He has emphatically not addressed the Communists and advised them that, if the West refused to be reasonable in its negotiations, the Kremlin should unilaterally disarm even if it meant the triumph of the free world. What has been published in Communist countries and the neutralist world on this particular choice has been only his advice to the West, as expressed in his Alsop interview, with no corresponding specific advice to the Communists. As I read the evidence, Russell's recent efforts to diminish East-West tensions have helped disarm psychologically only the West and strengthened the position of the Communist world as well as the resolution of the Kremlin to pursue its present tack. Some of the atomic scientists of West Germany have cited his position as justifying their abandonment of defense research in nuclear weapons. Russell should know that the absence of a free press and of any possibility of freely expressed dissent makes it impossible for him to have any appreciable influence in the Communist world the Kremlin is not willing to let him have. He refers to public opinion in the Soviet Union on which "the West keeps an equal watch." There is no public opinion in the Soviet Union except the opinion of the Kremlin.

That Russell can believe that his influence has been "quite as great in the East as in the West" is simple wishful thinking. Without intending it, he has made more difficult the tasks of the Western governments which fear that the Kremlin desires renunciation of all atomic weapons, even of defense, so that it can overwhelm the free world with seas of Soviet and Chinese soldiery. Without intending it, he has made easier the campaign of propagandistic deception by Communist regimes which play off, whenever they can, politically naive men of intellectual distinction, as well as mindless millionaires like Cyrus Eaton, against the policy of the West. That policy has been weak but it has been genuinely peaceful.

This is ignored in the Olympian intellectual posture taken by Russell toward the hypothetical case of the two power blocs. It is a fundamental mistake to treat the problem as if it merely involved abstract mathematical relationships between two anonymous blocs, instead of the historical relations between the Communist bloc and the Western bloc only one of which threatens the peace of the world. The foreign policy of the West, and of the U.S. in particular, has been deficient in many respects and I have been among its unremitting critics. But all we need do is call the roll of aggression in East-West relations -- Eastern Europe, Czechoslovakia, the blockade of West Berlin, Korea, Hungary -- to determine who threatens whom. It is unrealistic in the extreme therefore to draw a simple equation between two power blocs in the abstract if we wish to predict their behavior or propose a reasonable policy.

Third, Russell's illustration of the two power blocs supposes, as he says, that one of them is fanatically insane. This removes it still further from any relevance to the present situation. The rulers of the Kremlin are not insane. They are determined men with nerves of steel, wonderful actors of surpassing skill in duping the politically unwary. "Agreements are like piecrusts. made to be broken" is one of their maxims. But they have never taken an aggressive move until they thought that victory was surely in their grasp. Their basic doctrine, their operational code and their historical behavior all confirm this. To be sure, they are ruthless and fanatical and can play a waiting game. Their cat-and-mouse gambit toward Tito shows they will never stop trying to destroy the slightest deviator. Just because they are sane, however, they must never be encouraged to think that the West will not resist. Despite his intent and present disavowal, this is precisely what Russell's "ideal wisdom" encourages them to think. The greater the number of people in the West who accept and proclaim this piece of "ideal wisdom," the greater grows the danger of appeasement and war. I do not fear Krushchev's insanity but his shrewdness, made all the more formidable by the foolishness of those who underestimate it.

I come now to Russell's "ideal wisdom" -- the "purely academic issue" he believes has no practical consequences. Russell's wisdom comes into play, he repeatedly reminds us, only if one side lacks "a modicum of sanity." If the Communists attack, shall we resist and probably go down fighting, or shall we surrender?

In my rejoinder I said: "Here every lover of freedom and of life is on uncertain and tragic ground. One cannot be sure that at the decisive moment the situation will look the same [as now]." I believe I am open to argument on this point, but at present I am not persuaded that a choice of resistance, even if it threatens the probable destruction of the human race, is morally worse than a surrender to those who lack, in Russell's own supposition, even a modicum of sanity. Indeed, if they lack a modicum of sanity I fear all the more the tortures and cruelties they can impose on the living generations -- the only ones who count -- in weighing the scales of joy and pain, dignity and human degradation whose balance determines basic moral judgment.

Russell impugns my sanity because I do not agree with him. But surely in principle everyone can imagine a situation in which to prefer the non-existence of mankind to its continued torture would be to choose a lesser evil. For example, if as a result of some mutational change, a universal and incurable ailment caused men to die in slow agony, would it be wrong to prefer a world without man? I vaguely recall a conversation with Russell or a passage from his writing in which he expressed the view that a world without human beings sometimes seemed preferable to him than one in which bloodthirsty sadists ruled. Such preferences, like my own, may be irrational. I am not so fanatical as to have closed my mind on the subject.

It is at this point that Russell brings in the hope of the future and reminds us that the agony of present

generations may be followed by improvement. "Genghis Khan," he wrote, "was quite as bad as Stalin at his worst, but his grandson Kublai Khan was a highly civilized monarch under whom Chinese culture flourished."

In my criticism I did not contest the possibility of improvement, I denied, what is essential to Russell's argument, that it was necessarily worth the price. To which Russell retorts with indignation: "[Hook] says that 'the splendor and glory of the Court of Kublai Khan were not worth even one of the many pyramids of human skulls his grandfather, Genghis Khan, heaped up,' I had never maintained they were. What I said was that they gave reason for hope that a bad regime might improve -- which is a very different thing."

Of course it is a very different thing. But Russell misses my point, which is that it is not enough to sustain his position. For unless it is believed that these possible improvements are worth the price paid in suffering and submission to Genghis Khan, there would be no justification for choosing to endure his tyranny rather than ending human history. It is not enough for Russell to believe that no dark age lasts forever, that after Communism triumphs for some hundreds of years, there may be improvements.

He must also believe that the anticipation of these possible improvements is worth to the living the agony and, to use his own words, "the horrors of Communist domination." Otherwise his recommendation makes no sense, even as a proposition in theoretical ethics!

This argument is solid and straightforward: if Russell finds it "slippery," it is only because of the burden of the position he is defending. I am puzzled to explain Russell's failure to see that in order to justify submission to Moscow, he cannot stop short with believing that there may be improvements in the distant future but must also believe that the expectation of these improvements is worth the cruelties and indignities which will follow submission in the present. (*Mutatis Mutandis*, the same logic holds in relation to Genghis and Kublai Khan.) I suspect his lapse at this point flows from a natural and creditable reluctance to drain the cup of appeasement to its bitter dregs.

Russell may retort (1) that in time Communism may be followed by much greater glories than those of the Court of Kublai Khan, and that these glories are worth the price of submission to Moscow; and (2) that, as he actually says, "the worst features of Communism have been developed under the influence of fear and would almost certainly grow less if fear were removed."

Let us consider the second point first. If the worst features of Communism have developed under the influence of fear of the outside world, how account for the fact in the early years, when seven invading armies stood on Soviet soil, political and cultural terror was not as widespread or severe as when the Soviet Union was subsequently free of invaders and at peace? The entire history of Communist Russia (and China!) makes Russell's generalization dubious. Cruelty and arbitrariness are indigenous to the very system of totalitarian Communism, and the fear in the hearts of the Soviet rulers is not so much of the free world as of their own oppressed people. Further, Russell ignores my argument that it is likely that future Titos and Maos and Stalins will war on each other and use the existence of differences in Communist states as pretexts for their organized cruelties. I grant that some things may grow better, but I am not sanguine that the worst features of Communism will grow less, or sufficiently less to justify Russell's recommendation to surrender to universal torture rather than to resist. Perhaps under Communism, in time, greater glories will develop than those of the court of Kublai Khan. But the probability is just as great that greater infamies will also develop.

Russell taxes me with inconsistency where there is none. I criticized the Communist view which cruelly sacrifices existing generations for a glorious future to be enjoyed by the still unborn. To which Russell retorts: "His own position is that it is justified to bury not several generations but all future generations, not in order that they may enjoy a glorious future but in order that they may not have any future at all. This is an immeasurable exaggeration of the very fault for which he criticizes the Communists."

This contains a serious misstatement and another logical lapse. The misstatement conceals the fact that I justify my choice of resistance rather than of surrender only in terms of the experiences of the existing generations, not future generations. And the ground of my choice is not that existing generations will escape any future but that they will escape a future of torture and infamy which Russell admits will be theirs if they submit to "the horrors of Communism." The error in logic arises from Russell's failure to note that, since on my argument there are no future generations whose desires need be considered, I cannot sensibly be criticized for trying to bury them. I have not returned to the ontology of Plato and the early Russell. My argument is addressed only to the present generations. They must make the choice -- only their desires, wishes, fears and hopes count. This is as far away as anyone can get from the Communist position, Russell to the contrary notwithstanding.

Even more misleading is Russell's statement that I am denying to those who prefer life under Communism, whether in Communist or neutralist countries, freedom to choose the alternative they prefer. I have no quarrel with those who live in Communist countries -- only with their dictators who seek to impose the yoke of bondage on other peoples. To say that because I urge resistance to aggression I do not believe in freedom for those who wish to live under Communism, is as absurd as to charge Russell, because he urged resistance to Hitler, with not believing that those who preferred a peaceful life under Fascism should be free to make their choice. Hitler was morally responsible for the fate of the victims of the resistance against him. The rulers of the Kremlin are morally responsible for the consequences of the resistance to their aggression.

Russell's argument would make every rebel in history who believed in resistance to injustice a fanatic who

wanted to deprive others of their freedom of choice. Of course, it is the barest tautology that if two choices are mutually exclusive, where one is taken the other cannot be. By the same token, should not those who prefer to resist aggression be free to choose the alternative they prefer? Russell's choice excludes theirs as much as theirs excludes his.

It is from this tautology that Russell derives the remarkable conclusion that I am guilty of "an extreme form of religious persecution" because, forsooth, resistance to the Kremlin will deprive those who want to live under Communism of their chance to do so. This is a surprising comment from one who, like the rest of us, supported a war against Fascism in which the victims of Allied air raids were deprived of "their freedom to choose survival." Was this religious persecution? Was Russell guilty of "religious persecution" in advocating a preventive war against Russia and declaring that the destruction of the whole of Western Europe was not too great a price to pay in order that Communism be wiped out? Would he not have deprived the victims of their freedom to choose survival?

Russell, of course, does not believe in religious persecution. Nor do I. That he can make the charge betrays the atrophy of his sense of proportion.

In my article, "A Foreign Policy for Survival," I advanced a policy of military disengagement in Central Europe and other troubled areas of the world under certain guarantees. Although I believe we were remiss in not making proper political use of the atom bomb when we enjoyed a monopoly, I have never advocated an aggressive or preventive war. "If we can keep the free world," I wrote, "from falling into the trap set by the Kremlin and preserve peace by increasing its power and readiness, we can then rely upon the processes of education, the force of example, the contagion of free ideas, the gradual osmosis of the great traditions of the West gradually to soften, to liberalize, to round off the edges of the totalitarian regimes of the world until their own people rally their energies to overthrow their oppressors and establish the democratic governments necessary to establish one free world republic."

I am convinced that most of the people behind the Iron Curtain deplore the position taken by Russell in his interview with Alsop and which Russell himself has now modified. Despite this, and his earlier statement that he agrees much more with my article than I think, I am under no illusion that, with all his hedging and tacking, Russell's position on foreign policy is like mine. Granted the need for continuous effort to negotiate a reasonable settlement with the Kremlin, the troublesome questions arise when we ask: If the Communists seize West Berlin, should the free world resist? Or if West Germany is invaded? Or the rest of Western Europe? Or England? As distinct from Russell, I believe the free world should declare it will resist wherever the Communist world resorts to force, and to declare it in such a way that the Kremlin has no doubt it will resist. There will then be no war.

No man can win freedom and peace unless he conquers his fear of death. No nation can preserve its freedom unless it is willing to risk destruction in its defense. To do otherwise is to break faith with those who died to keep it free.

The free society, from Pericles to the present, has survived because it has valued some things more than survival, because its vision of human excellence, dignity and joy has made some kinds of life unworthy of man. Bertrand Russell is one of the great moulders of the traditions of the free society. In disagreeing with him strongly on a matter of policy, we nonetheless honor the values and visions he has served during a long life and which he has taught us to cherish.

[End of article]

* * * * *

(161) The year of these exchanges, 1958, came just one year after the first Pugwash Conference -- Russell's great idea and great achievement in the real world of nuclear weapons. Pugwash, as you recall, was a breakthrough; it brought together for the first time eminent scientists from both sides of the Iron Curtain, to discuss ways to diminish the nuclear peril. The 1958 Conference was the first of many Pugwash Conferences. They paved the way for the Salt Talks and the Limited Test Ban Treaty that banned nuclear tests above ground (1963). The Pugwash idea has not died; Pugwash Conferences continue to take place on a regular basis.

Cyrus Eaton, Hook's "mindless millionaire", financed the first Conference, which met in Pugwash, Nova Scotia, Eaton's' birthplace.

We have given a lot of space to these exchanges between Hook and Russell because we thought them important and interesting.

Were you persuaded by Sidney Hook? By Bertrand Russell? Tell us your reactions to these articles, for possible inclusion in a future newsletter.

Here is our reaction, for what it's worth: We think that BR just couldn't bear the thought that the human enterprise might come to an end. That all of man's great achievements in the arts and sciences, the inspiring examples of certain lives, the prospect of a happy and exciting future for all mankind that enormous advances in knowledge could bring into being...that all this might disappear forever, along with all human beings, and all other living things...might disappear into thin air...vaporized...leaving no trace... He just couldn't bear it. He refused to give up; he fought for survival, constantly seeking ways to make his fellow human beings become aware of the nuclear danger, and do something about it. And he did this at a time in his life -- his 80s and 90s-- when most men are content to take things easy.

* * * * *

- (16j) It appears that our hunch about what motivated BR -- in his exchanges with Hook -- was not too far off the mark, as we discovered later, on reading Page 147 in BR's Autobiography III (New York:Simon & Schuster, 1969), which BOB DAVIS had sent. Here it is:

I had a controversy with an American philosopher named Sidney Hook at this time that was one which both of us found difficult to conduct on logical lines. He was a Menshevik who had become apprehensive of Russia ruling the world. He thought this so dreadful that it would be better the human race should cease to exist. I combatted this view on the ground that we do not know the future, which, so long as Man survives, may be immensely better than the past. I instanced the times of Genghiz Khan and Kublai Khan, separated by only a generation, but one horrible, the other admirable. But there were plenty of contrary instances that he could have adduced, in view of which a definite decision was impossible. I maintained, however, that any chance of a better world depended upon hope, and was on this account to be preferred. This was not a *logical* argument, but I thought that most people would find it convincing. Several years later, Hook again attacked me publicly, but this time in such a manner that no comment from me was necessary. It amused me, however, that for his defence of "freedom" and his attack on my views on Vietnam, he chose as his vehicle a journal later admitted to be financed by the Central Intelligence Agency.*

*The *New Leader* received \$3,000 from Chiang Kai-shek's treasury for publishing an article hostile to China. Later it prepared the book *The Strategy of Deception: A Study in World-Wide Communist Tactics* and was secretly paid \$12,000 by the U.S. Government. When the U.S. Information Agency asked a House Appropriations Sub-Committee to increase its allowance for "book development" from \$90,000 to \$195,000, the Agency assured the legislators that the funds would go for books "written to our own specifications" and having "strong anti-Communist content" (*The New York Times*, May 3, 1964).

BR QUOTED

- (17) Parents and Teachers for Social Responsibility (Moretown, VT) pamphlet has this lovely quote on its front cover:

"...the world has sprouted a weird sense of security and a warped sense of morality. Weapons are sheltered like treasures while children are exposed to incineration."

Bertrand Russell

(Thank you, TOM STANLEY)

THE BRS AWARD

- (18) 1985. Award nominations wanted. Please nominate the person you think should receive the 1985 Bertrand Russell Society Award, and state your reasons. Candidates for the Award should satisfy at least one of the following conditions:
- . worked closely with BR on an important project (Joseph Rotblat 1983)
 - . furthered some cause or idea that BR thought important (Henry Kendall 1982)
 - . promoted Russell scholarship (Paul Arthur Schilpp 1980)
 - . enhanced the public's appreciation of BR (Steve Allen 1981)
 - . exemplifies some quality of character that distinguished BR
 - . closely related to BR (Dora Russell 1984)

Please send your nomination(s) c/o the newsletter (address on Page 1, bottom), for forwarding to the BRS Award Committee.

- (19) 1984. Dora Black Russell is the recipient of the 1984 BRS Award. The press release, shown below reduced in size, was mailed 9/15/84 to about 25 American, Canadian and U.K. universities, U.S. scholarly journals, and in the U.K.: The New Statesman, The Tribune, The Listener, The Times, The Guardian, The Observer.

<p>Lee Eisler, VP/Information The Bertrand Russell Society, Inc. RD 1, Box 409 Coopersburg, PA 18036 215-346-7687</p>	<p>For immediate release September 15, 1984</p>
<p>DORA RUSSELL RECEIVES THE 1984 BERTRAND RUSSELL SOCIETY AWARD</p>	
<p>The 1984 Bertrand Russell Society Award has gone to Dora Black Russell, social critic, champion of women's and children's rights, campaigner for liberal causes for more than 60 years.</p>	
<p>The Award is given to a person who in an important way is linked to Bertrand Russell or to a cause he took great interest in. Dora Russell qualifies abundantly. She was Russell's second wife, mother of their two children, co-author with him of "The Prospects of Industrial Civilization", co-founder with him of the Beacon Hill School, and much, much more. In the early 1920s, she gave up a Fellowship at Girton College, Cambridge, to go to China with him, and on their return, she helped him in 2 election campaigns when he was Labour candidate for Chelsea. In October 1980 a memorial bust of Russell was unveiled in Red Lion Park, London; it was her idea, she promoted it, and underwrote its cost.</p>	
<p>The Award plaque reads: "For sharing Bertrand Russell's concerns, collaborating in his work, and helping to preserve his legacy".</p>	
<p>The light that emanates from the lady is of her own making and is not the reflection of someone else's. If she had never met Bertrand Russell we still would have heard from her. Along with Margaret Sanger and Marie Stopes, she</p>	
<p>was in at the beginning of the fight for birth control, unworthing the startling fact that it was "four times as dangerous to bear a child as to work in a mine... man's most dangerous trade." 60 years ago, she campaigned for 6 weeks paid maternity leave before and after childbirth.</p> <p>She has written books about public affairs and social attitudes that needed changing: <u>Hypatia: Or Woman and Knowledge</u> (1925) was written in reply to an attack on feminists. One reviewer said it should be banned because it said that women should enjoy sex. <u>The Right To Be Happy</u> (1927) said that the social basis of society should rest not on abstractions but on the biological needs of human beings. <u>In Defense of Children</u> (1932) was primarily on the status and rights of children, they being, like women, an oppressed class. <u>The Religion of the Machine Age</u> (1981) is a study of the dangers of the mechanical and technological society. <u>The Tanarisk Tree</u> is her autobiography, Volume I (1975), Volume II (1980). Many of her earlier writings are collected in <u>A Dora Russell Reader</u> (1983).</p>	
<p>The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970). It is not a scholarly society, though a number of scholars belong to it, and is open to anyone interested in Russell. For information about the Society, write BRS Information, RD 1, Box 409, Coopersburg, PA 18036, USA.</p>	

If you see this Award mentioned in any publication, please let us know about it.

SPREADING BR'S VIEWS

- (20) English teachers spread the word. A number of BRS members have told us that they were first introduced to Bertrand Russell's writings in college courses in English. An essay by Bertrand Russell -- contained in an anthology -- would be assigned reading.

We asked GLADYS LEITHAUSER, who teaches English at University of Michigan-Dearborn, if she could give us the names of some anthologies containing essays by BR. She obliged with these recommendations:

. A World of Ideas: Essential Readings for College Writers. Ed. Lee A. Jacobus. New York: St. Martin's Press, 1983. Contains "A Free Man's Worship"

. The Conscious Reader: Readings Past and Present. Ed. Caroline Shrodes, Harry Finestone, Michael Shugrue. New York: Macmillan, 1978. Contains "If We Are To Survive This Dark Time..."

. Fields of Writing: Readings Across the Disciplines. Ed. Nancy R. Comley et al. New York: St. Martin's Press, 1984. Contains "Touch and Sight: the Earth and the Heavens."

. The Little Brown Reader, 3rd ed. Ed. Marcia Stubbs and Sylvan Barnet. Boston: Little, Brown, 1983. Contains "Work".

Gladys writes: "I have other anthologies on the shelf with selections from BR, but some of the volumes are older. I was looking for up-to-date anthologies to recommend." Anyone wanting more anthologies may write Gladys Leithauser, Humanities Dept., University of Michigan-Dearborn, 4901 Evergreen Road, Dearborn, MI 48128 .

Incidentally, she has used not only essays by BR, but also whole books, "Power" and "Education and the Social Order". She reported on her experiences with these in RSN23-16. She has also used "The Rise of Science" from History of Western Philosophy, "The Mathematician's Nightmare" from Collected Stories, and the opening essay from Autobiography III (the three forces that shaped BR's life).

- (21) Al Seckel spreads the word. Al, who gave an absorbing talk, "BR and the Cuban Missile Crisis", at the BRS 1982 annual meeting in Los Angeles, often appears before groups, talking about BR.

He will give a talk, "The Life and Wisdom of Bertrand Russell", illustrated with slides, on Sunday, December 2nd, at the Unitarian Society, 1535 Santa Barbara Street, Santa Barbara, CA at 7:30 pm.

Al gave a talk on October 25th, at a meeting in Los Angeles sponsored by the Humanist Society of Friends (an AHA affiliate). His talk served as an introduction to a showing of the BBC's "Bertie and the Bomb," which Al described as "a 40-minute documentary, featuring film clips and interviews with Bertrand Russell, including his debates with Edward Teller, father of the 'H-bomb'." He told the audience that the videotape had been made available "through the generosity of the BRS." 7 persons signed a sheet of paper headlined FOR INFORMATION ABOUT THE BERTRAND RUSSELL SOCIETY SIGN HERE. The BRS sent them information by mail.

At a June meeting in San Diego, sponsored by the First Unitarian Church, the Humanist Fellowship, and the BRS, Al gave a slide-lecture, "The Life and Wisdom of Bertrand Russell". By the end of the meeting, 8 persons had signed up for information about the BRS.

Al is not only spreading the word, he is also helping the BRS acquire new members.

THE 1985 BRS DOCTORAL GRANT

- (22) This 1985 announcement was sent to some 25 American, Canadian and U.K. universities, and to scholarly journals, in September.

"The good life is one inspired by love and guided by knowledge"

THE BERTRAND RUSSELL SOCIETY, INC.

Please post September 15, 1984

Announcing
The Bertrand Russell Society's
\$1000
1985 DOCTORAL GRANT

The Bertrand Russell Society will award a Doctoral Grant of \$1000 to a currently enrolled doctoral candidate in any field whose proposed dissertation best gives promise of dealing in a significant way with the thought, life or times of Bertrand Russell.

The Grant is unrestricted. It might, for instance, be used for travel to the Russell Archives (in Canada), or for typing the dissertation.

The candidate is required to send the Society:

- (1) an abstract of the theme of the dissertation and of the plan of study;
- (2) a letter from the chairman of the candidate's department which states that all work for the doctorate has been completed except the dissertation, and that the topic of the dissertation has received academic approval;
- (3) a letter from the dissertation adviser evaluating the candidate and the plan of study;
- (4) a statement, in the candidate's covering letter, indicating that if the candidate is awarded the Grant, he/she will provide the Society, at its expense, with a copy of the complete dissertation as approved by the candidate's department.

It is not a requirement that the candidate be a member of the Bertrand Russell Society, as some have thought. Most past recipients have not been members.

The application and supporting documents should reach Professor Hugh S. Moorhead, Chairman, Philosophy Department, Northeastern Illinois University, 5500 N. St. Louis Avenue, Chicago, IL 60625, by May 1, 1985. The candidate selected will be notified in June 1985.

If you see this Grant announcement mentioned in any publication, please let us know about it.

ON NUCLEAR DISARMAMENT

(23) AP, in the San Diego Union (10/11/84)----->

What is interesting about this item is that it is exactly what BR had advocated for years, for these reasons:

. British nuclear capability, small when compared with that of the superpowers, makes no significant contribution to the armaments of the West; it merely serves to make Britain a target for Russian missiles.

. Britain, unarmed, could use her very considerable experience in diplomacy to help bring about peaceful solutions to conflicts.

. British reluctance to give up nuclear weapons is based on pride, on reluctance to believe that Britain is no longer a major power on the world stage.

(Thank you, HARRY RUJA)

British Laborites back nuclear disarmament

Associated Press

BLACKPOOL, England — The opposition Labor Party voted overwhelmingly yesterday to unilaterally scrap Britain's nuclear weapons, expel U.S. cruise missiles and close U.S. nuclear bases if the party wins power.

The vote came on the third day of the socialists' annual conference in this northwest England resort and marked the party's most radical commitment yet to unilateral nuclear disarmament.

The conference rejected a resolution that would have committed Labor to closing all U.S. bases in Britain, where 25,000 U.S. troops and scores of planes, ships and submarines are based.

Party defense spokesman Denzil Davies told cheering delegates that the unilateral disarmament policy was "both morally right and militarily sound."

Former Prime Minister James Callaghan and other party moderates pleaded in vain for the conference to reject a policy plank

they said would rupture the North Atlantic Treaty Organization.

"What is proposed, however laudable, can have the impact of destabilizing the present situation ... by opening up a Pandora's box," said Callaghan, whose 1976-79 administration lost power to Prime Minister Margaret Thatcher's Conservatives. Callaghan made a similar appeal on the eve of the vote.

"We are not Holland, we are not Belgium, we are not Denmark. We are one of the main pillars of the alliance," said Callaghan.

But Labor Party leader Neil Kinnock and most labor union leaders and party activists supported the commitment to dismantle Britain's nuclear arsenal.

The Labor party suffered its worst defeat in 50 years in June 1983, when it ran on a platform of scrapping Britain's Polaris nuclear missiles, canceling Britain's order to update them with the U.S. Trident system, and banning U.S. nuclear weapons from Britain.

NEW MEMBERS

(24) We take pleasure in welcoming these new members:

ON EAST-WEST TENSIONS

(26). Pugwash. Here is the October issue of the monthly "Inside Pugwash Newsletter", which describes itself as the "Special newsletter for 'Bulletin' readers on the Pugwash conferences". ["Bulletin" is "Bulletin of the Atomic Scientists". The Newsletter is not part of the editorial content of the "Bulletin"; it is an advertisement.]

We repeat what we said in February (RSN41-10):

Since BR was probably the first person of some eminence -- outside the scientific community -- to speak out against the nuclear danger, it is highly appropriate that BRS members who wish to further BR's purposes support Pugwash activities. The coupon below shows how to do so.

(Thank you, BOB DAVIS)

134 Scientists from 40 countries

Eastern bloc, Western and third world scientists meet and talk in Sweden

The 34th Pugwash Conference on Science and World Affairs met in Björkliden, Sweden this summer. The conference came at a crucial time. As the statement issued after the conference made clear:

The Conference took place at a time of rising tensions in international relations and seemingly poor prospects for halting and reducing the worldwide build-up of nuclear and conventional weapons. At such times -- with official East-West and, in many respects, North-South relations at a dangerous low point -- the Pugwash approach of building understanding and seeking solutions through off-the-record discussions among influential scientists and public figures takes on increased importance.

Statement claims an erosion of security

In its statement put out following the conference, the Pugwash council stressed that recent deployments of nuclear weapons by the US and the USSR increase the danger to everyone and decrease our security. Not only are we threatened by the increase in the numbers of weapons deployed, "far in excess of those needed to guarantee devastating retaliation", but the risk of catastrophe is heightened by the qualitative characteristics of these weapons: combinations of multiple warheads, short flight time, and ease of concealment from verification.

The scientists also pointed out that these trends were undermining what had already been achieved with such great difficulty: a worldwide realization that deterrent forces are adequate and attention must be turned to reversing the nuclear arms race.

How to stop these threatening trends

As always at Pugwash meetings, the scientists worked to identify the nature of the dangers we face, and the trends which, if unchecked, will lead to disaster. They also turned their attention towards concrete solutions: steps which might be taken by the nations from which these scientists come, and which would help resolve the current crisis.

The Pugwash scientists are uniquely placed to do such work. They are eminent men and women of science, respected by their peers. As well, most are in positions which allow them to communicate their ideas and their views, and the views of their Pugwash colleagues to their own governments. This unique combination provides both for fruitful talks in an atmosphere of trust among member scientists, and for communication of what has been learned to powerful government leaders at home. All this can be achieved without the public posturing and political manoeuvring which are currently hindering arms talks.

In the report issued after the meeting at Björkliden, Sweden, the Pugwash Council sets out concrete measures which, if implemented, could lead to a great improvement in the current situation.

These measures, you can be sure, are now being discussed at the highest levels of government in the countries from which the members come. Thus the influence of the Björkliden conference may be one of the key factors working to mitigate against the dangers of the current situation.

If you would like to be involved in the Pugwash movement your help would be most welcome. In fact, your involvement could make a real difference.

As a Pugwash supporter, you will receive the Pugwash Council statement so you can read for yourself the non-public conclusions and recommendations of the Björkliden meeting. And in the future, you can receive reports of the workshops and meetings held regularly, where the real, concrete breakthroughs frequently occur.

In order to get these reports, and to help Pugwash, you need only become a Friend of Pugwash. Your support will make a significant difference to a movement which is now crucial to our survival. And you will be kept informed, month by month, of events as they develop.

Simply fill out the form below, and become part of Pugwash -- today.

Please enroll me as a Friend of Pugwash and send me summaries of its major meetings. I enclose \$100 as my 1984 contribution.

Please enroll me as an associate member of Friends of Pugwash and send me digests of its important meetings.

I enclose \$ _____

Make check payable to AEPFF, Pugwash and mail to William M. Swartz (Chairman, Finance Committee, Pugwash Conferences on Science and World Affairs), 1430 West Wrightwood Avenue, Chicago, Illinois 60614. All contributions are tax deductible.

BRS BUSINESS

- (27) Directors, please note. 4 kinds of reports/papers are available to you. Let us know which ones interest you. They would be routed to you, and you, in turn, would mail them to the next person on the list.

These are the 4 items:

- A. MEMBERSHIP STATUS REPORT. Gives the names of new members, of renewing members, of ex-members. Also gives new addresses, the number of current members, and the number of inquiries and enrollments during the past month. Monthly.
- B. ADVERTISING SCHEDULE. Tells which publications we advertise in, and the dates of the issues. Twice a year.
- C. RESULTS OF CURRENT YEAR'S ADVERTISING and Proposal for Next Year. Yearly.
- D. MEMBERS' QUESTIONNAIRES. Issued as accumulated during the year.

To get any or all of the above, send a postcard with your name and any or all of the letters (A,B,C,D) to the newsletter, address on Page 1, bottom.

DUES ARE DUE

- (28) TO ALL MEMBERS: Everybody's renewal dues are due January 1, 1985 (with one exception; see below). The January 1st due-date applies to all members, including those who joined recently.

TO NEW MEMBERS -- members who joined the BRS anytime during 1984: the rest of this memo is for you.

We know from experience that new members sometimes feel put upon when asked to pay dues again after less than a year of membership. We understand that. We will explain why we use the present system, and we hope that our explanation will be found persuasive.

In the previous system, a new member's dues covered 12 full months of membership. That was good for the member but bad for the BRS. It required us to notify each member individually -- on the anniversary date of enrollment -- that the next year's dues were due. And we had to follow up on each member individually, to see whether dues had in fact been paid. This went on throughout the whole year. It was cumbersome to administer. It provided many chances for errors. And it took a lot of time. In fact, it took more time than we had available. That's why we had to make a change.

The present system is easier to administer, produces fewer errors, and takes less time. Everyone's dues come due on the same date, January 1. Simple.

We don't think that the new member whose first year of membership is less (sometimes considerably less) than 12 months has been short-changed in any important way. He/she has received just as much BRS material (and after reading it, knows just as much about the BRS) as the member who joined in January.

Granted, the system is not perfect. For instance, a member who joins after June, and who might want to attend the BRS annual meeting the following June, cannot do so in his first year of membership, though he could have under the old system. However, since this member could attend the June meeting in his 2nd year of membership, and since about 90% of the members do not attend meetings anyway (because, unfortunately, it costs money to go to meetings), this kind of shortcoming is not likely to carry much weight.

All new members (except those who enroll in January) have an initial membership period that is shorter than a year. This happens only once -- in the first year. Thereafter, dues come due every 12 months, on January first.

There is one exception to all the above: members who join in December 1984 (they do not receive the 1984 newsletters) will not pay their first renewal dues till January 1, 1986. It's virtually the same as if they had enrolled the following January (1985).

Here is the 1985 dues schedule: Regular 22.50, Couple 27.50, Student 12.50, Limited Income 12.50; plus 7.50 outside USA, Canada and Mexico; plus 2.00 for Canada and Mexico. In US dollars.

Please mail your dues to 1985, RD 1, Box 409 Coopersburg, PA 18036.

If you want to make our life a bit easier, send your dues soon. Thanks!

RECOMMENDED READING

- (31) Adam Paul Banner greatly admires Deschooling Society and Medical Nemesis by Ivan Illich, which he says are "well worth your time. The footnotes on each page of [of Medical Nemesis] are the equivalent of another book...and are very revealing."
-

THE BRS BOOK AWARD

- (32) 1985 nominations wanted. Please nominate any recent book you feel has considerable merit, and tell why you think so. The book should deal with some aspect of BR's life, work, times, or interests. The Book Committee will evaluate the nominations, and recommend a book to the members for their approval. For a few more details, see RSN43-8. 3 nominations have already been received. Please send your nomination(s) soon, c/o the newsletter, address on Page 1, bottom.
-

ON FINANCES

- (33) Please consider making a contribution to the BRS Treasury.

Why? Because we need to acquire many more new members in order to become secure financially. To acquire many more new members, we need to do more advertising (so that more people will know of our existence.) And to do more advertising, we need more money.

Furthermore, our costs are going up.

So it's not hard to understand why we have a need for extra money.

And when we do become secure financially, it will greatly increase the probability of our long-run survival.

Help if you can. Send us some extra money, whatever you can afford to. No sum is too small to be useful, but send as much as you can spare.

Send it c/o the newsletter: RD 1, Box 409, Coopersburg, PA 18036

And accept our thanks!

NEWSLETTER MATTERS

- (34) Copyright. This issue and all future issues of Russell Society News will be copyrighted.

Washington's War

DEADLY GAMBITS

The Reagan Administration and the Stalemate in Nuclear Arms Control.
By Strobe Talbott.

380 pp. New York: Alfred A. Knopf. \$17.95.

By McGeorge Bundy

A Trident submarine.

wait only on Mr. Reagan's defeat or retirement, you should read the book a second time and think again.

Mr. Talbott, the diplomatic correspondent for Time magazine, has had a seat in the inner enclosure of the Washington policy-making arena throughout the Reagan years. It is evident from his account that just about everyone in the Government has talked with him privately about the bureaucratic intrigues, the White House compromises and the false fronts of seriousness that have passed for policy making on arms control under Mr. Reagan. People hoping for a good press like to talk to the man from Time, and Mr. Talbott has been able to get through to the realities behind the Reagan screen of slogans. The result is an account of

McGeorge Bundy is a professor of history at New York University and was Special Assistant to the President for National Security Affairs, 1961-1966.

CONTACT/ALON REININGER
A Pershing II missile.

If you think that Ronald Reagan has been serious about nuclear arms control, or that he has understood his own decisions, or that the prospect for a good agreement with the Soviet Union in a second Reagan Administration will be bright, then you owe it to yourself to examine with care Strobe Talbott's "Deadly Gambits," a masterly account of the Reagan record on this subject. If you think the Soviet Government is not a major part of the problem, or that American error began only in 1981, or that good agreements

Over Arms Control

recent events that historians will be using for years to come.

Even when the official documents are published, Mr. Talbott's work will remain important because he persistently and skillfully addresses the very issue that internal documents so often fail to illuminate: who is trying to do what to whom and why? His account is richly detailed; his heroes and antiheroes live and breathe, and the book has a splendid index. The people in the Reagan Administration will find it easy to look themselves up, and not many will like what they read, but it all rings true, and nearly all of it comes from them.

Mr. Talbott has two main tales to tell. The first concerns the negotiations on new American missiles for Europe — the intermediate-range nuclear forces talks (INF). The notion that there should be a new land-based force with expanded ability to reach Soviet targets was developed by the Carter Administration, reacting with foolish cleverness to exaggerated European concerns that could have been met in much less divisive ways by a stronger and more self-confident Administration. President Reagan inherited a difficult double commitment — to deploy 572 warheads beginning late in 1983, and in the meantime to negotiate with Moscow for an agreement that might allow a smaller deployment or perhaps none at all. It is not surprising that the newly installed experts of the Reagan Administration found themselves divided on the choice of tactics. The dominant view, from start to finish, was that no good agreement with Moscow was likely, and most of the major battles within the Administration were contests over what would or would not look good enough to sustain the Western alliance in its decision for deployment.

The two assistant secretaries principally involved, Richard Burt of the State Department and Richard Perle of the Pentagon, differed fiercely on tactics, Mr. Burt preferring an

Continued on page 34

A B-52 bomber.

appearance of responsiveness and Mr. Perle eternally fearful that by some soft-headed blunder an agreement might actually be reached. Mr. Talbott's account shows us how Mr. Perle won most of the skirmishes in this contest while Mr. Burt won the war, successfully obtaining a sufficient show of flexibility to sustain European support for the initial deployment when and where it counted most — in 1983 in West Germany, Great Britain and Italy.

Much more important, and told in "Deadly Gambits" with extraordinary sympathy and authority, is the story of the lonely effort of Paul Nitze to reach a real agreement. As our chief negotiator on this issue in Geneva, Mr. Nitze went a country mile beyond his instructions and single-handedly framed a proposal which in essence offered the Soviets the abandonment of the American weapons they disliked most — 108 Pershing II ballistic missiles with ranges not far short of Moscow and a delivery time of less than 10 minutes — in return for (1) Soviet acceptance of some 300 American cruise missiles, subsonic in speed, and (2) a considerable reduction in existing levels of Soviet deployment. This proposal, refined with his Soviet counterpart,

Yuli Kvitsinsky, in the famous walk in the woods near Geneva in July 1982 and taken by each of them to his Government as a possible package deal, has been the one moment of bilateral seriousness in the Reagan years.

BUT the very forces in Washington that had driven Mr. Nitze to the bold and even arrogant choice of negotiating without instructions shot him down when the bureaucratic battle was joined. After Washington's rejection came Moscow's, which may well have been foreordained in any event by the reluctance of Soviet leaders to agree to anything that would give Soviet sanction to any American deployment at all. Those whose main concern all along was simply to hold the alliance together owe a great debt to Soviet rigidity and heavy-handedness. The Soviet Foreign Minister Andrei Gromyko forgets nothing but he learns very little. Mr. Talbott's account does not leave us astonished at Mr. Nitze's failure, only at both the imaginative force and the unrealistic optimism of his effort.

If the negotiation on Euromissiles was inherit-

ed, the posture of the Reagan Administration on reduction of strategic weapons in the Strategic Arms Reduction Talks (START) has been all its own work. Here again the bureaucratic battles were clamorous, but Mr. Talbott demonstrates plainly that no one of any rank ever dared to put forward where Ronald Reagan could see it a proposal that the Soviet Government might conceivably accept. Everyone in the Administration appears to have found it necessary to make it a basic premise that the only desirable strategic agreement would be one that forced major reductions in the two largest Soviet intercontinental forces, while leaving all the new strategic programs of Secretary of Defense Caspar Weinberger essentially unconstrained. Nothing approaching a negotiation ever took place.

The Administration has its share of dumbbells and doctrinaires on these matters, but it also has many members bright and honest enough to recognize that, in the words of Mr. Reagan's most nearly independent adviser, Brent Scowcroft, "START is a non-starter." After making this remark, General Scowcroft did his best to produce some improvements by the unlikely process of bargaining be-

tween members of Congress and the President, but Mr. Talbott correctly notes the wholly marginal character of the complex and ill-defined changes that resulted.

Given the general mind-set of the Reagan Administration, these results are less surprising than the extraordinary intensity of the bureaucratic contest among Mr. Burt and Mr. Perle and others for their preferred versions of what was never negotiable. When Mr. Burt says, "I really want to win this one," he is not talking about a victory over the Russians or over nuclear danger; he is talking about winning the President's approval for the particular unworkable proposal he prefers. And when Mr. Perle says triumphantly, "We're going to zero-out [Soviet] heavies," he is not talking about a real reduction in Soviet forces but about his success in pushing a proposal that he knows the Soviets will never accept; he wants a paper victory. The difference between the two men is that for Mr. Perle it is a clear sign of softness to ask whether any proposal is negotiable, while for Mr. Burt, on START if not on INF, negotiability does remain an unconfessed — and in these years unachievable — objective.

Why, one may ask, is Mr. Talbott so intent on the result-free bureaucratic warfare between these two determined intriguers? Partly, of course, it is Washington's fascination with political gossip, and indeed gossip on nuclear policy is seldom trivial. Read all about it. Read how Richard Burt joined forces with the Joint Chiefs of Staff to get approval of a proposal for keeping missile-launchers few and vulnerable on both sides, a proposal that correctly seemed preposterous to both Paul Nitze the hawk and Paul Warnke the dove from the Carter years. Read how Richard Perle regularly enlisted the underinformed but fervent advocacy of his chief, Caspar Weinberger, to win the President's nod for a stiffer stand — "Cap has a point."

Above all, read how Ronald Reagan himself repeatedly betrayed his ignorance of the most elementary issues. His first START proposals would have required the Russians to reduce their two principal missile forces by two-thirds, but when he put them forward he did not know that the Soviets might think them unbalanced; no one had told him. He was also unable at any time to say just what was good about missiles on submarines. In a press conference in 1982 he said these missiles could be recalled and to Congressmen in 1983 he said they didn't have nuclear warheads. At one level, this is a riveting account of infighting for the approval of "a detached, sometimes befuddled character."

At a second level, the book teaches larger lessons. Mr. Talbott shows us just what happens to nuclear arms control when the interest and attention of the President are concentrated not on the substance of the matter but on what will sound good to Americans. On sounding good, Mr. Reagan is a certified expert, and on his own terms it cannot be said at this writing that he has failed. To most Americans over the last three years, his public proposals have seemed fair enough. Why not propose, late in 1981, a zero option for the Euromissiles — zero for both sides? In the judgment of Alexander Haig, then his Secretary of State, the proposal was "absurd" because it called for the Soviets to abandon hundreds of weapons already deployed in return for the cancellation of a smaller American force that was only on the drawing boards. But it sounded all right to the public. Moreover, when you want to make a plausible pitch for a bad position with a clear conscience, it probably helps not to understand things very well. If way down deep you prefer

arms to arms control, it is a presentable appearance and not a negotiable reality that you want.

In this sense, the nasty little struggles that Mr. Talbott recounts may have led to just the barren but presentable postures that Mr. Reagan really wanted. When he insists on keeping the Pershing II missile against Mr. Nitze's advice, is it not because he truly does believe in these American "fast-flyers"? When he keeps the fine print deeply secret in his first START proposals, so that their imbalance will not show, is it not plain that he is governed by how things look? When he later begins to use changes in the START proposals as the political shield in Congress for his MX-in-Minuteman, is it not because he really does prefer what he calls the Peacekeeper (this name for MX is the only one he can't make stick) to any particular posture in Geneva? Is he not really quite content that START should be a non-starter, as long as he can put the blame on Moscow? Is that not exactly what we see him doing in October 1983, a month before the Soviet walkout: "The door to an agreement is open. All the world is waiting for the Soviet Union to walk through." It was palpable nonsense, but it sounded good at the time.

When the Soviets did walk out in November, the President did look good by comparison. Nor can anyone make that Soviet action mainly Mr. Reagan's fault. The Soviet Government had accepted that with a vengeance the invitation to make trouble that was issued by the Carter two-track decision, and unless Mr. Kvitsinsky's walk with him meant more than Mr. Nitze now believes, they never made up their minds to accept any arrangement but the one Mr. Reagan skillfully described as one-half of his zero option — zero for the Americans. While Moscow's bitter rejections of the Reagan offers in START are more defensible, they themselves offered nothing much better in reply. The Soviet Government we encounter in this book is not an easy partner; its negotiators are shrewd, secretive, tricky and loyal to their country's "habit of defining its security in a way that makes other states feel insecure." They are no more interested than Americans in giving up advantages bought and paid for. They are real Russians, and Mr. Talbott, the translator of Nikita Khrushchev's memoirs, understands them well.

No matter who is President in 1985, these difficult Russians will be there, and it will not be easy to make agreements with them that the American people and the Senate will approve. Anyone who thinks that Ronald Reagan's is the only way to fail should remember the fate of SALT II under his three predecessors.

Mr. Talbott attempts no comparison of Mr. Reagan and his present challenger; Walter Mondale is not mentioned, and the wholly different approach to arms control that he advocates is not examined. So this book alone is no guide to a comparative judgment of the candidates. The best it can do for us in this election season is to help us consider what Mr. Reagan himself might do about arms control in a second term. Would he still insist on concessions the Russians simply will not make? Or might he decide to bargain in earnest, as he has so often in the past with domestic opponents? We know that our last two-term President, Dwight Eisenhower, changed course in just this way on just this subject in his last four years. Some of Mr. Reagan's more zealous supporters are said to fear that he too may change in this same way.

But other observers reach an opposite conclusion, noting the threat posed by his programs to the

limits of the SALT II treaty — unratified but still observed — and still more the potential for direct conflict between his Star Wars program and SALT I, which directly prohibits the defensive systems for which he has called.

On the evidence of Mr. Talbott's book, the fears of the zealous seem excessive. Mr. Reagan's words have been the words of an ardent advocate of arms control, but in his heart he seems to be most in sympathy with the men who mistrust the whole notion. To Richard Perle and Caspar Weinberger (who should be listed in this order on this subject), the path to safety is in competition, not agreement, in widening the arms race and not limiting it. Mr. Reagan does not seem to share their intense passion or their deep mistrust of the bargaining process, and I do not find it hard to believe that he would very much like a good agreement with his name on it; Presidents do. But there is a good agreement in relatively easy reach right now — on antisatellite weapons — and I doubt if the President knows it or has anyone nearby to tell him plainly what is wrong with the objections of the Perles and the Weinbergers. In his recent speech at the United Nations he continued to tie the discussion of this opportunity to the reopening of the dead-ended talks on strategic weapons; a serious diplomacy could do better.

Indeed, the U.N. speech, on the evidence so far, conforms to the pattern exposed in "Deadly Gambits": it is more forthcoming in appearance than in reality. The rhetoric is that of a man of peace, and Mr. Talbott's book allows us to recognize the use of the word "framework" as a victory for Secretary of State George P. Shultz and the State Department's believers in real negotiations. But the President's specific proposals remain those of the hard-liners. It is most unlikely that Soviet leaders will think him forthcoming when he insists on adding to the unratified treaty on underground nuclear testing a requirement for on-site inspection that was correctly seen as unnecessary by that old softie Richard Nixon when he signed that treaty in Moscow 10 years ago. It is a safe bet that the internal bureaucratic battle over the eventual content of the "framework" still lies ahead, and so far there is no reason to suppose that Mr. Shultz will win.

The final lesson is more clear-cut. A President who truly wants progress in arms control cannot have it by living above the bureaucratic fray. If Mr. Reagan wins a second term and decides to take arms control seriously, he will have to change his way of work. Without strong and determined executive leadership, no Administration has ever reached any arms control agreement. The internal conflicts that inescapably beset this topic in the Pentagon and elsewhere are too strong to be resolved into negotiable proposals by merely bureaucratic bargaining, especially when the most determined infighters are also the most ardent enemies of agreements. Either the President himself, or some senior colleague to whom he clearly gives his trust, must take the lead, and on substance, not slogans. If a re-elected Ronald Reagan should choose this path, he would have many formidable advantages. What he approved the Senate would endorse, and he could survive the anger of the most determined superhawk.

But can he truly change his way of work as well as his priorities? Or is it more likely that we will get another four years of plausible flimflam at the top and ruthlessly effective resistance to all remotely negotiable proposals at lower levels? Read this book and decide for yourself. □

CORRECTIONS

- (38) Dan McDonald was inadvertently left off of the June 1984 membership list (RN43-51). Dan is a 1974 member — there aren't many! — and we don't think that's a proper way to treat a 10-year member. Or any other member. Our apologies.

ABOUT OTHER ORGANIZATIONS

- (39) Americans for Religious Liberty is the new name of The Voice of Reason. Their literature includes a fact sheet about ARL, "Which Vision for America?", an article by Edd Doerr, "Will Religious Liberty Survive the 1980s?" reprinted from Religious Humanism (Spring 1984), and "A New Constitutional Convention: Threat to the Bill of Rights". Their address: PO Box 6656, Silver Spring, MD 20906. (Thank you, BOB DAVIS)

- (40) Greenpeace. From the New York Times (9/2/84, p. 7):

Greenpeace: Global Gadfly For Ecology

By JO THOMAS

Special to The New York Times

LONDON, Sept. 1 — When the French cargo vessel Mont Louis sank a week ago off the Belgian coast with a cargo of uranium, authorities initially announced that the ship was carrying only medical supplies. The first indication the ship was carrying radioactive material came from the French office of Greenpeace, the environmental group.

The announcement grew out of a continuing effort by the group to gather information about the production and international trading of uranium, which Greenpeace believes is best left in the ground.

According to Peter Wilkinson, a member of the board of Greenpeace International, the discovery of what was actually aboard the Mont Louis grew out of a hunch. When the organization's French office realized the Mont Louis was the sister ship of the Borodine, which regularly carries radioactive products between France and the Soviet Union, "we made some inquiries," Mr. Wilkinson said. "One person admitted the ship was carrying nuclear material."

Looking for Another Shipment

He said he is hoping for as much luck in detecting a forthcoming shipment, approved by the United States, of plutonium from France to Japan.

"If it went by sea, which looks likely, imagine a worst case in which the ship could sink on a rocky coast and break up," he said. "There are 600 pounds of plutonium — enough to kill 270 billion people," he said. "We've announced that we are going to try to stop it."

In the 13 years since Greenpeace was formed in Vancouver, Canada, it has been called the Don Quixote of environmental groups, tilting at toxic waste dumpers and at whaling ships from small rubber boats, dyeing baby seals green to make them unfit for slaughter, releasing balloons in Leningrad urging, "Soviet Union: Stop the Atomic Tests!"

An Active Summer

This is what Greenpeace protesters did this summer:

They dressed up as penguins and climbed the front of the offices of a French organization that is promoting an airstrip in a particularly sensitive part of the Antarctic.

They climbed the highest chimney in Europe, part of a coal-fired power plant complex near Helmstedt, West Germany, in a protest over acid rain.

They partially blocked the discharge pipe of the Ciba-Geigy chemical company at Tom's River, N.J. in protest over discharges of organic compounds into Barnegat Bay.

They tried to plug a pipe discharging sulfuric acid into the St. Lawrence

River in Quebec.

They climbed the Statue of Liberty to hang a banner saying, "Give Me Liberty from Nuclear Weapons — Stop Testing."

The protesters had their difficulties. The French police arrested and beat up the penguins, and the Canadians were arrested on charges of committing mischief. But they had garnered the publicity that Greenpeace feels is essential.

After Attention, Lobbying

"We use action," said David McTaggart, a founder and chairman of the organization, "and once there's attention, we move into lobbying."

In 1972 Mr. McTaggart and two other men sailed 3,000 miles from New Zealand to the Pacific atoll of Mururoa, where the French planned a series of atmospheric atomic tests. They sailed inside the 200-mile security zone and floated within sight of the balloon that was to carry the bomb, until their boat was rammed by a French minesweeper and towed to shore.

Mr. McTaggart returned a year later, when the French boarded his boat. "They beat me up," he said. "I was blinded in one eye for a long time. I went back to Canada and sued the French Government." At the same time, he recalled, New Zealand began patrolling the area in protest at the tests, and the French discontinued them.

Greenpeace International, which has its headquarters in Britain, has 30 offices in 15 countries. It has four boats and employs its own crews and scientists. This year's budget will be about \$12 million.

Private Donations

"All our support comes from the public," Mr. McTaggart said, adding that most donations are \$5 and \$10. "We don't get any grants. We have to be absolutely nonpolitical. We attack the left, the right, and the center, and no one with the organization is allowed to run for political office."

"We attempt to bridge the gap between the Audobon Society and the Sierra Club and the more radical grassroots groups," said Steve Sawyer, an American. "But we're hardly a middle-of-the-road group."

"We draw the line at violence," Steve McAllister, another American, said. "We don't fight cops, break things up, or blow things up. In the case of whales, we get between the whales and the harpoon. Or we plug a pipe and maintain a vigil. We force the issue to the public's eyes."

Mr. McTaggart's confrontation with the French authorities in the South Pacific led him to believe the approach would work. "There was an image of a big nuclear bomb and a little wooden boat," he explained. "You can talk of Gandhi and all that. But if you can see this huge steel navy grinding along, a little piece of sand can get caught in the machinery and bring it to a halt. Our philosophy is to put yourself between the problem in a nonviolent way."

"We're not suicidal," he said. "We want to draw attention to something, and we know what our plan is years in advance. It's easy to say, 'I want to clean the whole world up,' but all our goals are just possible and can be got to."

- (41) North American Committee for Humanism met in NYC at the N.Y. Society for Ethical Culture August 24-46, 1984. BOB DAVIS attended. There were reports and papers by NACH President Sherwin Wine (Society for Humanistic Judaism), Edward Ericson, (former leader, New York Society for Ethical Culture), John Hoad (Leader, St. Louis Ethical Society), David Clarke (Student, Humanist Institute), Roger Greeley (Minister, Peoples Church of Kalamazoo), Maxine Greene (Professor, Teachers College, Columbia University), Robert Hemstreet (Minister, Flushing Unitarian Church, Queens), Joseph Fahey (Director, Peace Studies Institute, Manhattan College). Roger Greeley punctured several "pervasive and pernicious myths, long regarded by millions as guideposts in American life: that most early American settlers came to enjoy religious freedom; that the founding fathers were god-fearing Christians; that religious freedom reflects the will of the majority. "Most of the religious dissidents came to the New World to escape British tyranny and created a new tyranny of their own." And most of the founders were "highly individualistic men who hardly fit any Fallwellian stereotype of the good Christian." To inquire about Conference papers, write Editor-Elect Gordon Stein, 2114 Marine Street, Santa Monica, CA 90405.
- (42) Palestinian Human Rights Committee. We now get regular mailings from this organization. The latest mailing, of October 17th, starts off "Dear PHRC ACTION ALERT NETWORK..." and deals with 3 issues: (1) the Al-Jnaid Prison ("Israel's new high tech prison"), where conditions are said to be unsatisfactory; (2) the closed An-Najah University, that they wish to see re-opened; and (3) alleged distortions of Palestinian issues in the American press. It tells its readers whom to write to, in the Amnesty International manner, and also lists coming events. The 5-page mailing, complete with visual symbol of an upraised hand, is put together with skill. It could achieve some results. Their address: 220 S. State St., One Quincy Court (1308), Chicago, IL 60604
- (43) World Affairs Bookstore calls itself "The Largest Unknown World Affairs Bookstore in the Midwest". It is a project of the World Without War Council -- Midwest, with offices in Berkeley, New York, Seattle, and Portland. Its August 1984 order form lists 33 books on "Nuclear Weapons, Nuclear War, and U.S. National Security Policy". Their address: 421 S. Wabash Av., Chicago, IL 60605.

- (44) People For The American Way ran a full-page ad in the (Sunday) New York Times Review of the Week (9/23/84, p. 24E). Three-fourths of the page pictured a stone tablet with the words: "Thou shalt not mix Church and State. THE CONSTITUTION. CHAPTER 1, VERSE 1." Here is the accompanying text:

"The Constitution of the United States is a marvelous document for self-government by Christian people. But the minute you turn the document into the hands of non-Christian people and atheist people, they can use it to destroy the very foundation of our society. And that's what's been happening."—Televangelist Pat Robertson. Founder, The Freedom Council

"The idea that religion and politics don't mix was invented by the Devil to keep Christians from running their own country."—Televangelist Jerry Falwell. Founder, The Moral Majority

For 200 years, our Constitution has guaranteed religious freedom. But today there is a spectre of powerful voices arguing that they have a divine mandate to mix church and state and destroy the freedom guaranteed by the wall of separation between church and state.

Religious bodies demand that their sectarian beliefs, dogma and doctrine become the law of the land. For everyone.

Political organizations claim to speak for God. Ultra-fundamentalists declare that only born-again Christians should be elected to

public office. Those who dare to disagree with their political platform are branded anti-God, anti-family, satanic, infidels, or secular humanists.

Leading public officials claim a biblical mandate to govern. They debate faith instead of policy. They confuse disagreement with sin and evil. To favor separation of church and state is to be "intolerant of religion" or "anti-religionist."

Debate, dissent and diversity have become un-American activities.

The result: Moral McCarthyism. We must not remain silent. We must fight back to preserve freedom.

America is about freedom of speech and belief. The separation of church and state. Our country was started by people who fled here from lands where religious diversity was restricted, not respected.

America is about respecting our different religious and political beliefs. In America, there are no religious tests for public office.

Political leaders can speak about religion and religious leaders can speak about politics. The First Amendment guarantees both.

But when politics is transformed into a theological battle between the "sinners" and the "saved," open

debate and religious liberty are jeopardized.

Religion has flourished in America because of the separation of church and state. Religion is a matter of private conscience. But freedom of religion is a constitutional commandment.

People For The American Way
1424 16th Street, N.W., Room 605

OPPORTUNITIES

- (45) Summary of opportunities. Here are 11 things to do that would benefit the BRS. All have been mentioned in this issue of the newsletter. Can you do some of them? Please look over the following list and lend a hand wherever you can.

- . Mark the date of the 1985 annual meeting on your calendar. (3)
- . Offer suggestions for Library activities. (4)
- . Offer to do something on the program, at the '85 annual meeting. (4)
- . Select a group you can show "Bertie and the Bomb" to. (5,14)
- . Notify Librarian Tom Stanley, if you want "Bertie and the Bomb" for a specific date. (8)
- . Photocopy the petition (Page 4), get signatures, and mail it off. (10).
- . Nominate someone you think worthy of the 1985 BRS Award. (18)
- . Notify us if you see the Dora press release (19) or the Doctoral Grant announcement (22) in any publication.
- . Send money to Pugwash, if you can. (26)
- . Pay your dues! (28)
- . Check the zipcode list for nearby BRS members. (29)
- . Nominate a recent book for the 1985 BRS Book Award. (32)

And know that we appreciate your help.

CONTRIBUTIONS

- (46) Our thanks to these members for their recent contributions to the BRS Treasury: ADAM PAUL BANNER, CHRISTOPHER BOYLE, BOB LOMBARDI, JERRY DEAN PEARSON.

MEMBERSHIP RENEWAL

- (2) Last call for dues. Everyone's dues are due (except those who joined during December 1984.)

You have to pay your dues so that we can pay our expenses.

Please pay, if you haven't. For role models, see next item (3).

Dues: 22.50, regular; 27.50, couple; 12.50, student under 25; 12.50, limited income. Plus 7.50 outside the USA, Canada and Mexico. Plus \$2 for Canada and Mexico. In US dollars only.

* Please mail dues to 1985, RD 1, Box 409, Coopersburg, PA 18036.

Thanks.

- (3) Honor Roll. As you know, everyone's dues are due January 1st. But not everyone pays by January 1st. Some renew -- eventually. Some do not renew until reminded. Some do not renew until notified that they are about to become non-persons. But there are some who renew IMMEDIATELY, and they have our warm thanks. Here they are -- on our Honor Roll. They renewed by December 15th.

JEAN ANDERSON, VIVIAN BENTON-RUREL, DAN BOND, FERNANDO BOTERO, POLLY COBB, WHITFIELD COBB, GLENNA CRANFORD, PETER CRANFORD, STEVE DAHBY, ALEX DELY, MONIKA DEPPEN, KENNETH DIAMOND, LEE EISLER, ALBERT ELLIS, ALEJANDRO GARCIA-DIAGO, PAUL GAFFIG, ARTTIE GOMEZ, DAVID GRUBBS, CHARLES HILL, OPHELIA HOOPES, JAMES HOOPES, MARVIN KOHL, HERBERT LANGDELL, PHILIP LE COMPTE, HERMAN LEFKOWITZ, JUSTIN LEIBER, H. BR AND THE ATOM BOMB

- (4) On atom-bombing Russia. Did BR think it was a good idea to atom-bomb Russia under certain circumstances? Yes. See next item.
- (5) From "The Bulletin of the Atomic Scientists" (October 1946), with thanks to Harry Ruja:

THE ATOMIC BOMB AND THE PREVENTION OF WAR

..Bertrand Russell

Mr. Russell in transmitting this manuscript wrote us an interesting note indicating that it had been refused by five American periodicals of wide circulation. (It has appeared in the English journal POLEMIC.) In offering it to the Bulletin -- which he reads "with interest and attention" -- Mr. Russell trusted us to cut it if necessary without distorting his views.

We publish the article in full in the belief that Mr. Russell automatically deserves an American audience and that the Bulletin reader is sufficiently discriminating to profit from articles which he does not necessarily endorse.

THE IMPACT OF ATOMIC WAR

The atomic bomb has set a problem to mankind which must be solved if any tolerable existence is to be possible for the human race. The problem is that of abolishing large-scale war, not at some distant future date, but quickly, before there has been time for another vast conflict to break out.

If the next great war were to occur within the next two or three years, it would probably lead to a quick victory for the United States and its allies, since no other Power would have atomic bombs. But if there is no war in the near future, there will have been time for Russia to manufacture atomic bombs -- and not only Russia, but many other nations, great and small. It must be assumed that bombs will soon become much cheaper and much more destructive than those dropped on the Japanese. In addition to bombs there is the possibility of spraying large regions with radioactive substances which will exterminate all life in their neighborhood. Given a little carelessness, life on this planet may be made impossible.

It is to be expected that, if war comes, it will begin with a surprise attack in the style of Pearl Harbor. The aggressor will hope for a knock-out blow so severe as to make retaliation impossible. If Great Britain were the target, it is probable that this hope would be realized, for Great Britain is peculiarly vulnerable to atomic attack, owing to the smallness of its area and the density of its population. It is to be expected that during the first day or two London, Glasgow, and all the major centers of population will be wiped out; industrial production will be paralyzed, and about half the inhabitants will perish. To carry on the war after such a blow would be impossible.

The situation will be slightly less catastrophic, though still appalling, if the attack is directed against the United States. In the first 24 hours, New York, Washington, Chicago, and all the main centers of population will cease to exist, President and Congress will have undergone a diabolic alchemy, and a considerable percentage of the inhabitants of the United States, including most of those who are important in industry, will perish. The bomb will be borne by rockets, and it will be a matter of guesswork to infer what government is responsible. Some of the survivors will clamor for peace at any price, while others will proclaim that they would rather die than submit to so foul a blow. If the nation's store of atomic bombs has been successfully safeguarded, probably the resisters will prevail; there will be fierce revenge, many nations will be drawn in, and destruction will continue until disorganization makes the further manufacture of atomic bombs impossible. If one side succeeds first in this aim, it may consider that it has won a victory, but it will be a "victory" far more disastrous to the "victor" than any defeat known to history.

THE COST OF PREPAREDNESS

Let us consider for a moment what will be involved in the meantime in safeguarding atomic bombs and rockets. It will be necessary to keep their location secret, which will mean virtually a prison camp for those who work in connection with them. It will involve a constant suspicion of treachery, leading to a prohibition of foreign travel for all but the most highly trusted public servants, as already in Russia. It will involve a complete cessation of freedom for all scientific workers whose activities have any bearing on the warlike utilization of atomic energy. It will require apparatus and crews always ready, day and night, to retaliate upon whoever is considered the most probably enemy, as soon as there is any report of an atomic bomb being dropped. These crews must be told that, in a crisis, they are not to wait for orders, since the statesmen and the higher command will probably be wiped out. In the atmosphere of mutual suspicion thus generated diplomats will meet to discuss such important questions as who is to have the oil of Persia or the tin of Malaya; as they talk, they will be wondering which side will get in first with its Pearl Harbor. Sooner or later, nerves will give way, and the explosion will occur.

If utter and complete disaster is to be avoided, there must never again be a great war, unless it occurs within the next few years. Is it possible to establish a system which will secure this result before we suffer the penalty of our folly and our cleverness?

THE PERMANENT PREVENTION OF WAR

It is entirely clear that there is only one way in which great wars can be permanently prevented, and that is the establishment of an international government with a monopoly of serious armed force. When I speak of an international government, I mean one that really governs, not an amiable facade like the League of Nations, or a pretentious sham like the United Nations under its present constitution. An international government, if it is to be able to preserve peace, must have the only atomic bombs, the only plant for producing them, the only air force, the only battleships, and, generally, whatever is necessary to make it irresistible. Its atomic staff, its air squadrons, the crews of its battleships, and, its infantry divisions, must each severally be composed of men of many different nations; there must be no possibility of the development of national feeling in any unit larger than a company. Every member of the international armed force should be carefully trained in loyalty to the international government.

The international government must have a monopoly of uranium, and of whatever other raw materials may hereafter be found suitable for the manufacture of atomic bombs. It must have a large army of inspectors who must have the right to enter any factory without notice; any attempt to interfere with them or to obstruct their work must be treated as a *casus belli*. They must be provided with aeroplanes enabling them to discover whether secret plants are being established in empty regions near either Pole or in the middle of large deserts.

The monopoly of armed force is the most necessary attribute of the international government, but it will, of

course, have to exercise various governmental functions. It will have to decide all disputes between different nations, and will have to possess the right to revise treaties. It will have to be bound by its constitution to intervene by force of arms against any nation that refuses to submit to the arbitration. Given its monopoly of armed force, such intervention will be seldom necessary and quickly successful. I will not stay to consider what further powers the international government might profitably possess, since those that I have mentioned would suffice to prevent serious wars.

PEACE THROUGH POWER ALLIANCES

There is one other method by which, in theory, the peace of the world could be secured, and that is the supremacy of one nation or of one closely allied group of nations. By this method Rome secured the peace of the Mediterranean area for several centuries. America, at this moment, if it were bellicose and imperialistic, could compel the rest of the world to disarm, and establish a world-wide monopoly of American armed force. But the country has no wish for such enterprises, and in a few years, the opportunity will be gone. In the near future, a world war, however terrible, would probably end in American victory without the destruction of civilization in the Western hemisphere, and American victory would no doubt lead to a world government under the hegemony of the United States -- a result which, for my part, I should welcome with enthusiasm.

But if, as seems more likely, there is no world war until Russia has an adequate supply of atomic bombs, plans for world peace will have to reckon with Russia and America as roughly equal Powers, and an international government, if it is to be established before the outbreak of an utterly disastrous war, will have to be created by agreement rather than by force.

Short of actual force, however, the government of the United States, with the support of Great Britain and a number of other Powers, could do a great deal toward the creation of an international government. An alliance could be formed, consisting in the first place of all North and South America, the British Commonwealth, France, Belgium, Holland, Scandinavia, and Spain (after dealing with Franco). This alliance should proclaim certain international purposes, and declare its willingness to be joined by any other Power that subscribed to those purposes. There should be both military and economic inducements to join the alliance: military, in that the alliance as a whole would undertake the defense of all its members; economic, in a lower tariff for trade within the alliance than for trade with countries outside it, and also in advantages as regards loans and access to raw materials. There should be a gradual increase in the closeness of the alliance, and a continually greater amalgamation of military resources. Every possible effort should be made to induce Russia to become a member of the alliance. In this way international government might grow up gradually.

PEACE THROUGH THE UN

There is, however, a strong body of opinion which favors a different course. Instead of trying to create a strong organization which would at first not include Russia, those who favor this opinion prefer a weak organization, the United Nations, of which Russia is already a member. If this is to be anything more than a weak evasion of the problem, it must be supplemented by a vigorous attempt to alter the constitution of the United Nations. At present, there is machinery for preventing Finland from attacking Russia, but none for preventing Russia from attacking Finland. There is, in fact, nothing to hinder a Great Power from waging aggressive war, whether against another Great Power or against a small defenseless neighbor. The only wars prevented by the organization of the United Nations are those that are not at all likely to occur.

If the United Nations Organization is to serve any useful purpose, three successive reforms are necessary. First, the veto of the Great Powers must be abolished, and majorities must be declared competent to decide on all questions that come before the organization; second, the contingents of the various Powers to the armed forces of the organization must be increased until they become stronger than any national armed forces; third, the contingents, instead of remaining national blocks, must be distributed so that no considerable unit retains any national feeling or national cohesion. When all these things have been done, but not before, The United Nations Organization may become a means of averting to great wars.

All this may seem Utopian, and perhaps it is. Politicians and diplomats are trained in evasion and ambiguity; most of them will prefer to offer a sham which can be obtained with little effort rather than an effective measure that is sure to encounter strenuous opposition, but they will dress up the sham so skillfully that many people will be deceived. Those to whom the survival of mankind is more important than victory in the next election must strive to enlighten the public while there is still time, and perhaps we can succeed.

The men of science, to whom politics is an alien art, find themselves suddenly faced with great responsibilities which they do not know how to fulfill. By their discoveries they have put immense powers, for good or evil, into the hands of ordinary men who have not the training required for a rapid change in age-old mental habits.

The political world is complex, and understanding nuclei is no help in understanding diplomacy. But the same intelligence which enabled physicists to understand nuclei will enable them to understand politics, provided they realize that the problems are complex and that slap-dash solutions will not work.

"THE BIG TWO"

Although people speak of the "Big Three" or the "Big Five", there are in fact two Powers, the United States and the U.S.S.R., which far surpass all others in strength. Other Powers are, some of them, satellites of the one, some of the other, some hesitantly neutral. All other important Powers, including Great Britain, are, I

think, prepared to acquiesce in the limitations of national sovereignty that are called for by the atomic bomb. This is not owing to any superior wisdom, but because their national sovereignty is already at the mercy of the Big Two. (E.g. the British have to submit to Bretton Woods and the Chinese, unless vigorously supported by America, to the loss of Port Arthur and the South Manchurian Railway.) The problem of establishing an international authority is therefore a problem of which the solution rests with America and Russia.

Russia, since it is a dictatorship in which public opinion has no free means of expression, can only be dealt with on the governmental level. Stalin and Molotov, or their successors, will have to be persuaded that it is to the national interest of Russia to permit the creation of an effective international government. I do not think the necessary persuasion can be effected except by governments, especially the government of the United States. Nor do I think that the persuasion can be effected by arguments of principle. The only possible way, in my opinion, is by a mixture of cajolery and threats, making it plain to the Soviet authorities that refusal will entail disaster, while acceptance will not.

THE EDUCATION TASK IN AMERICA

Persuasion in the United States, where there is freedom of propaganda, is a different matter. If things do not go as we might wish, the fault is not with the politicians, though they get the blame; the fault is with public opinion, to which the politicians, as democrats, quite legitimately give way. What is needed is an immense campaign of public education. The average America voter, very naturally, is annoyed by the way in which the follies of Europe and Asia compel America to go to war; in his emotions he is an isolationist, even when hard facts have convinced his reason that isolationism is no longer practicable. He wishes the Atlantic were still as wide as in Washington's day, and is apt to forget the arguments against isolationism whenever business is prospering.

To meet this difficulty it is necessary to bring home, not only to administrators or Congressmen, but to the average American citizen, the dangers to which, within a few years, America will be exposed, and the impossibility of warding off the dangers except by a partial surrender of sovereignty. The first reaction of nine people out of ten will be to urge that America should have more bombs than anyone else, so that an attack by any other nation would be obviously folly. The fallacy in this point of view must be made plain to all and sundry. It must be pointed out that America has already been involved in two world wars as a direct result of the fear of being involved: both in 1914 and in 1939 Germany would not have gone to war if America had pronounced in advance against neutrality. It must be made clear that the same thing would inevitably happen again: a war between Russia and China, or between Russia and Great Britain, would be sure to involve the United States. Next, the utter disaster of an atomic war must be made clear, and it must be demonstrated that there is no defense against a surprise attack. Finally, it must be proved that there is no hope in a Kellogg Pact, declarations of universal good will, or paper prohibitions of the use of atomic bombs. All this must be set forth in speech and in writing throughout the length and breadth of the land, by men having no motive except public spirit and the hope that the world in which they have lived may still exist in their children's time.

If such a campaign is to succeed, it requires three things: a definite programme, an organization, and the enthusiasm of a great moral crusade. Without this last nothing can be achieved, for although, from a purely rational point of view, self-preservation is a sufficient motive for all that needs to be done, self-preservation alone will not overcome the obstacles of rational thinking that are presented by ancient habits of hatred, suspicion, and envy. We shall have to realize that what injures a foreign nation does not necessarily benefit our own. We shall have to learn to feel a little uncomfortable if we wallow in plenty while millions die of hunger and cold. We shall have to feel that domination brings less happiness than cooperation, and that mutual hostility, which was always wicked, has now become suicidal folly.

But I would not have it thought that our campaign should be mainly negative or based entirely on an appeal to fear. The appeal to fear has its function, especially in providing an initial shock which may compel attention. But the ultimate and most valid appeal should be to hope. There is no need of great wars, no need of the horror of populations reduced to utter misery, harried and starved in a vast campaign of retribution. There is no reason why poverty and want should continue anywhere in the world. There is no reason why national education, in almost every country, should encourage false beliefs which promote warlike feeling. There is no reason why increase in the efficiency of production should be used, not to raise the standard of life, but to increase the proportion of human effort that is devoted to mutual extermination. All these evils depend for their continued existence upon war, and the national hostilities bred by the fear of war. If once the fear of war were removed, the whole human race could quickly attain a level of happiness and well-being surpassing that of the most fortunate in any earlier time. If the atomic bomb shocks the nations into acquiescence in a system making great wars impossible, it will have been one of the greatest boons ever conferred by science.

But it is time to return from these high hopes to the very different world in which for the present we have to live. I shall assume that such a campaign as I have indicated has had [will have?] a considerable measure of success in America and Great Britain. (It will encounter less opposition in Great Britain, because the British realize that Great Britain will be wiped out in the next great war, if it occurs.) It remains to ask ourselves what, in that case, we ought to do about Russia.

ANGLO-AMERICAN POLICY TOWARDS RUSSIA

The policy most likely to lead to peace is not one of unadulterated pacifism. A complete pacifist might say: "Peace with Russia can always be preserved by yielding to every Russian demand." This is the policy of appeasement, pursued, with disastrous results, by the British and French Governments in the year before the war that is now ended. I myself supported this policy on pacifist grounds, but I now hold that I was mistaken.

Such a policy encourages continually greater demands on the part of the Power to be appeased, until at last some demand is made which is felt to be intolerable, and the whole trend is suddenly reversed. It is not by giving the appearance of cowardice or unworthy submission that the peace of the world can be secured.

In dealing with the Soviet Government, what is most needed is definiteness. The American and British governments should state what issues they consider vital, and on other issues they should allow Russia a free hand. Within this framework they should be as conciliatory as possible. They should make it clear that genuine international cooperation is what they most desire. But although peace should be their goal, they should not let it appear that they are for peace at any price. At a certain stage, when their plan[s] for an international government are ripe, they should offer them to the world, and enlist the greatest possible amount of support; I think they should offer them through the medium of the United Nations. If Russia acquiesced willingly, all would be well. If not, it would be necessary to bring pressure to bear, even to the extent of risking war, for in that case it is pretty certain that Russia would agree. If Russia does not agree to join in forming an international government, there will be war sooner or later; it is therefore wise to use any degree of pressure that may be necessary. But pressure should not be applied until every possible conciliatory approach has been tried and has failed. I have little doubt that such a policy, vigorously pursued, would in the end secure Russian acquiescence.

THE CONSEQUENCES OF FAILURE

The issue is the most momentous with which mankind has ever been faced. If it is not solved, war will exterminate the civilized portion of mankind, except for such remnants as may have been engaged in exploring the Arctic Continent or investigating the theology of Tibetan Lamas. These will be the few to reestablish civilized communities. If mankind, in the course of a millenium or two, slowly climbs back to its present intellectual level, it is to be presumed that it will again inflict a similar catastrophe upon itself. If any of the things that we value are to survive, the problem must be solved. How it can be solved is clear; the difficulty is to persuade the human race to acquiesce in its own survival. I cannot believe that this task is impossible.

- (6) I. F. Stone on BR on the Atom Bomb. This seems like a good time to take another look at some of what I. F. Stone said at the Russell Centenary Celebration, at McMaster in 1972. What follows is from "Russell: the Journal of the Bertrand Russell Arch-ives" (Summer 1981. pp. 15-20):

He predicted in the 1936 obituary that he was going to sit out the next war, and so he did. He went to America and didn't come back to England until late in the war. He didn't change his position until May 1940, after the European war started,¹⁰ and I think that this coloured his position in the next period. You know how the life of Oliver Wendell Holmes (the father of the justice) was very much affected by his experience in the American Civil War. (Our Civil War is one of the few wars that Russell discussed in his 1916 book *Justice in War-Time*: he says that it was a war of principles, and it was to some degree; not enough, unfortunately, but to some degree). Holmes said: "Not to take part in the great struggles of your time is not to have lived." It is a hard saying for men like Russell, for a lot of us who in our smaller ways are like Russell, because to stand aside from the madness out of the desire to perpetuate human sanity certainly has its validity; and yet not take part in the struggle is not to live, and it was in many ways a great hour for England. Then we have Russell coming back to England and, as if belatedly, taking an anti-appeasement position *vis-à-vis* the Soviet Union, which brings us to this dark corner of the Westminster Address in November of 1948, which unfortunately was not a minor aberration.

Going back over the records, there are about a dozen articles that really called for preventive war, beginning within ten days of the dropping of the bomb on Hiroshima when Lord Russell had an article in the I.L.P. Socialist paper, the *Glasgow Forward*.¹¹ There is a strong resemblance between the Westminster speech, the transcript of which was published in *Nineteenth Century and After*,¹² and the speech made by Churchill at Llandudno at the Conservative Conference earlier that month, in which Churchill called for a showdown with Russia now while we have the bomb and before they have it. There is an illuminating passage, because it shows the delusions to which we are all subject, in another of the articles Russell wrote at that time. You know the Romans had a wonderful saying: "nothing too much". And one can have too much even of reason, strange to say. The application of undue rationality to human affairs sometimes leads to very horrible

conclusions. Not because rationality is wrong, or there is something wrong with rationality, but because every rational analysis, by the very nature of the case, is an abstraction from and a simplification of an enormously chaotic and complex situation of perpetual interaction with so many imponderables and so many unknowns, that for us merely to think about it requires us to abstract-out a tremendous amount of living reality. I know in Jewish affairs the Stern Gang, who were not right-wing terrorists like the Irgun, but left-wing terrorists like the Narodnicks in Russia and very, very rational, and therefore very, very lunatic, had themselves a remarkable syllogism. They said: "Look, Hitler and we are both against the British Empire, a common enemy; Hitler and we both want to get the Jews out of Europe; therefore, we are allies against the British." It was *meshuga*. It was mad. It was impeccable logic, and it was crazy. And it stands as a warning if after you construct a beautiful syllogism, a beautiful truth, and then something ought to be done that is necessary, though horrible—if there's a "horrible" in it, don't do it. Forget it. Put it off. Procrastinate. Don't be rational. Don't be logical. And to have even Russell, who was so incisive and so astringent, so clever, so ungiven to taking even reason too seriously on most occasions, say during one of these preventive war speeches (this was for the New Commonwealth, a British Society for the Promotion for International Law and Order, presided over by the Right Honourable Winston Churchill), to have Lord Russell say, in the autumn of 1947, "The argument that I have been developing is as simple and as unescapable as a mathematical demonstration". (God help us! Down with mathematics!) "I will summarize it", as he continued, "in the following propositions:

1. Mankind can not long survive, in this age of scientific warfare, unless great wars can be prevented.
2. The only way to prevent great wars is to create a single government possessing a monopoly of the more formidable weapons.
3. The first step in this direction—for which governments and public opinion are ready in most parts of the world—is the creation of

an international authority for the control of atomic energy. [That was the Baruch Plan.]

4. This step has been advocated by the United States and resisted by Russia.
5. If Russia's resistance can be overcome by diplomatic pressure, full international government may come peacefully by gradual degrees.
6. Diplomatic pressure is more likely to succeed if many nations join in it than if it is left to the United States.
7. If diplomatic pressure fails, war, sooner or later, is inevitable. [Beware of the word "inevitable".]
8. If there is war, it will be less destructive if it comes soon than if it comes late, and if many nations support the United States than if few do so.
9. If there is war, the main issue should be the creation of an international government; and if this is its outcome, the next great war may be the last. [How many dreamers have said: Just give us one more war, one more blood-letting, and then we will be in paradise.]
10. If peace can be made secure, there is every reason to expect that mankind will be happier than ever before; if not, unhappier.

This momentous issue is to be decided during the next few years by the collective will of mankind. No issue of equal importance has faced our species since it emerged from the ape.¹³

But this, I must say, with all due respect for the memory of our very great friend, and one of the greatest men that ever lived, was monkey business. It is very interesting that, in the last few months, the American government has released more of the secret documents dealing with what to do about atomic energy, and last year they released some of the preliminary documents.¹⁴ To read them against the background of the debate in which Churchill and Lord Russell and the Labour Party and so many people engaged in proposing preventive war makes you realize the prospect of the destruction of our planet made it seem logical and rational—why not drop one more bomb on Russia before it is too late, and make them consent to world government and save mankind from what's coming? It is all very logical and rational. I must say that out of the secret documents the man who comes out best is Henry L. Stimson. Stimson pleaded with Truman; he said the Russians will have a bomb within four to twenty years, there is no secret about it. (Actually they got it in four years and one month.) Let's give them the secret. It isn't much to give anyway; see what they can do with it, and try to negotiate an entente with which we can rebuild the world after the war. And that was the course of wisdom.

In Russell's writings you will find, foreshadowed before they happened, the Baruch plan and the Truman doctrine. Now Russell had a curious love affair with our country. He both loved it and hated it. He was fascinated by it and repelled by it. As a British aristocrat and a Whig, he felt that America and Russia were both going in the same direction towards a mass-production, industrial civilization, a danger to individuality. But very early, at least as early as his book with Dora Russell on *The Prospects of Industrial Civilization*,¹⁵ he felt (and this idea kept recurring in his work) that perhaps it was hopeless to try to bring about international order by voluntary consent. For justice in ancient times there had to be a Rome; as Roman power established itself, Roman citizenship spread, and you had a real *pax Romana*—in which Spaniards, Yugoslavs, and North Africans all felt they were *cives Romani*, Roman citizens. You had Spanish emperors, and even a Yugoslav Serbian emperor late in the empire. Russell felt that America was the country that would have the preponderance of power and could force a *pax Americana* on the world. The idea reappears in his 1936 book, and it reappears in his writings after the war. He also outlined the idea of NATO. As a matter of fact, when he had that accident in Norway in 1948 when he had to swim through the icy water at Trondheim, he was in Norway on behalf of the British

Government to speak to students and try to win Norway for NATO. Finally, in despair, he felt that the only way to bring about an international order was to have America impose it on the world, and that if it was going to be imposed, it would be better to impose it before Russia got the bomb and get it over with. It is a horrible idea, and it shows how all of us are fallible, even the greatest of us, but when you read the documents, you really understand it better. You appreciate his anguish.

In the *Nineteenth Century and After* they printed not only the transcript of Russell's speech but the text of the questions afterwards and the answers he gave. This was at his request because he felt he had been "widely misrepresented in the press", and wrote to various newspapers to say so.¹⁶ Unfortunately he was *not* misrepresented, I am sorry to say. Let's look at the transcript of the question period. I think there is no better way to honour our friend, our great friend, than to fearlessly examine weak spots in his own career for the lessons they hold for the future of mankind. He himself would have done so with any great man he revered. One of the questions was:

Had not Lord Russell a more encouraging message to give to young people? Two succeeding generations had been desolated by war. Was all that he could offer to a third generation yet another devastating war? It seemed a most hopeless and gloomy prospect to be offered by so brilliant and distinguished a speaker. It was a deplorable picture for young people to have to contemplate.

The reply did not really deal with it:

Earl Russell replied that he had come to tell the truth as he saw it, and while he agreed that the picture was a gloomy one as far as the immediate future was concerned, he thought that we should prefer to face facts. For the present state of the world other people, not he, were responsible and he could not help it. He was sorry that he could not give a more hopeful survey, but it would not have been a true one.¹⁷

If you read an early article after Hiroshima that Lord Russell wrote for the *Forward* on the question of what would be the future of Russian-British relations,¹⁸ you would see that he himself should have seen the answer. He pointed out that from the time of the Crimean War until the naval race with Germany that foreshadowed the First World War, British policy was obsessed with the supposed Russian danger to India and that, after the War, the old psychosis of the Russian bear revived until once more Germany was strong enough to endanger England. He might very well have thought *that* first of all (one of the great delusions of the time).

I must say in the new documents that came out in March, which very few scholars have noticed and little has been written about, there is a long document by our Joint Chiefs of Staff with much to do about the new world. But there is not a goddamn word about the atom bomb, and you might think they were still running the horse cavalry. They had universal military training, and all the bases they wanted around the world, including Saigon, but the atom bomb just passed right over their heads. The idea that it required new tactics, new strategy, new formations, new kinds of armed forces, just wasn't there. They were still speaking about the Civil War and Sherman's march through Georgia. But there is a document by General Groves, who ran the Manhattan project which developed the atom bomb, and he was quite a troglodyte. He used to call Robert Oppenheimer his "white Jew" to show his liberal attitude. Groves said that if mankind only knew the power in this bomb, they would rise up and demand an end to war.¹⁹ But his own formula was that America should impose its power on the world and destroy the atomic plans of any other country that might be making a bomb and have a worldwide espionage system. The Baruch plan, if you look at it carefully, was a phoney. I must say that in *The Nation* I had a piece called "Atomic Pie in the Sky"

that analyzed it when it came out, and I still think the analysis holds up today.¹⁹ What was phoney about it was that it was asking the Russians to handle all their resources and factories through an American-dominated commission, on the promise that in stages, and at some future date, they would get the secret of the bomb, but not the right to produce it. It really meant handing over the control of the Soviet Union to another power, many of whose leaders were thinking of preventive war, as Churchill was and even as Russell was. There is a document newly released that puts the giving of the bomb as perhaps in seventy-two months, which would be six years after taking over the uranium mines and the atomic plants in the Soviet Union and other countries. Now the Russians got the bomb in four years and one month, which was better than waiting for Baruch. Of course Nixon's recent visit to Moscow is really the fruit of meeting brutality with brutality in this brutal world, and it paid off, I am sorry to say. So that on closer examination, even then without the secret documents, the real nature of the plan should have been clear to Russell.

REPORTS FROM OFFICERS

(7) President Don Jackanicz reports:

Work on the June 1985 Washington meeting goes on. In the May ~~REN~~ full details will be available. For now, I feel we can all look forward to a good meeting, and I very much hope for a sizeable member turnout. If you are planning on attending, it is not too early to make travel plans. Accommodations will be available near the meeting site (more on that in May). Of course the attractions of a city like Washington will also contribute to a decision of making the trip. If you have agenda items to be considered for the Society Business Meeting, please write to me as soon as possible. Any proposals or suggestions you may generally have for the meeting should also be addressed to me.

As the meeting program has not yet been finalized, there may yet be room for an interested member to make a formal presentation. If you would like to participate in this way, please contact me with your proposal.

I again urge each member to consider making a nomination for the BRS Award. Recipients in past years have been well chosen and in one instance--in 1980 with Paul Arthur Schilpp--the awardee was able to attend an Annual Meeting. The Award Committee will be making its decision well in advance of the June meeting, so the time for you to act is now.

In late March I will make a trip to Britain to investigate further the possibilities of holding a future BRS meeting in an appropriate setting such as Cambridge or London. Such a meeting has been discussed for some time and perhaps 1986 will be the year. The advisability of meeting in Britain has been questioned as the majority of our membership is American and Canadian. But there is also a substantial amount of support. Having exchanged letters with British contacts this past year, it is now time to learn more in person about meeting facilities, possible co-sponsorship, etc. I will report my findings to the Society and the Board of Directors in June. Member comments and suggestions on this issue are welcome.

REPORTS FROM COMMITTEES

(8) Library Committee (Tom Stanley, Chairman):

I have certainly not found my short tenure as Librarian burdensome. Only three requests for audio tapes and six requests for video tapes have arrived since November. I enjoyed making back up copies of the cassettes and am looking forward to hearing from any member who can suggest sources for additional A/V material.

On the grounds that our films are irreplaceable and subject to stress when used, we are withdrawing them from circulation. They will be reserved for use at annual meetings or other special occasions. All except one are available on VHS format tape. We now have several copies of each, but I would like to request that you limit your requests to one or two items.

In order to recoup some of the expense involved in purchasing films and in keeping our inventory of books for sale current, we will now levy a fee for borrowing tapes:

Videotapes.....4.00 PP. Borrower pays return postage/insurance
 Audiotapes.....1.00 PP. Borrower pays return postage/insurance not necessary

In the past we rented films for \$25-\$40. The use of the same material on cassette will contribute about \$2.50 to the Library.

Since most of the films are interviews I have dubbed audio cassettes of each. Two other interviews are available thanks to Nathan Salmon and Lee:

- 217 Donahue Interviews Gore Vidal. Also Jonathan Miller Interview
- 218 BBC'S "The Life and Times of Bertrand Russell"
- 219 Woodrow Wyatt Interviews Russell.
- 220 Speaking Personally: Bertrand Russell. John Chandos's interview.
- 221 BBC'S "Bertie and the Bomb"
- 222 David Susskind speaking with Russell

W.W. Norton has donated a copy of Bertrand Russell and His World for our lending library. We hope to be able to offer Norton's Russell titles in the near future.

Contemplation and Action: 1902-1914, Volume XII of the COLLECTED PAPERS OF BERTRAND RUSSELL, should be available April-May 1985

RELIGION

(9) Mark Russell's prayer, from the Congressional Record.

Our Father or Mother, who are either in heaven, nirvana, Mecca or Salt Lake City, hallowed be thy name. Thy kingdom come, thy will be done, providing thy will is that America is always the big winner over the foreign heathen. Give us this day our daily white bread, black bread, Italian bread, Jewish rye, English muffins or tacos, and a quarter-pounder with cheese and large fries to go. And lead us not into temptation, or into school buses that take us to neighborhoods where the kids are different. For thine is the kingdom and the power and the glory, especially for people who still use words like "thine".

(Thanks to "Humanist Quest for Truth Newsletter", Jane Conrad, Editor, PO Box 625, Brighton, CO 80601.)

RECOMMENDED READING

(10) James Maki is not making recommendations; rather, he is requesting them:

I would like to see the members send in a list of the best 10 books they have read, other than books by BR, and regardless of whether in or out of print. Then have the Society make them available to the members.

- * Not a bad idea. How about telling us your Best Ten? And if it's fewer than 10, that's OK; we'll take what we get. Send the names of your Best Ten (or Less) to the newsletter, address on Page 1, bottom.

ABOUT BERTRAND RUSSELL

- (11) Classical? The following remark, sent to us by JOHN WILHELM, appeared in Humanist Century & Calendar (August 1984, p.3):

Would Bertrand Russell ever have developed his intellect to its fine-honed heights had he not had a full classical education?

We asked HARRY RUJA whether he thought BR had had a "full classical education"?

Doubtful. He probably studied some Latin and Greek in his youth, but he rarely refers to Latin & Greek authors in his writings. He kept a journal in English written in Greek letters (to keep his thoughts hidden from his elders) but not in Greek, which I'm sure would have been beyond him. He was fluent in both French --and German; he lectured and answered questions impromptu in French, and reviewed many long and tough books in German, in the 1900s. He also knew some Italian. But Latin and Greek?...very doubtful.

He was well read in literature and could recite long passages from poems he favored from memory. Details of what he read are given in Collected Papers-I (pp. 347 ff.) Over a hundred are in French or German. There is only one in Latin -- a mathematical treatise by Gauss. None of the Greeks are represented except Plato -- in translation. There's a lot of Browning, Shelley, Shakespeare, Marlowe, Henry James, and a great variety in various areas -- but "classical"?

Keep in mind that in his last three years at Cambridge, he concentrated on math, and in his fourth on philosophy ("Moral Tripos").

As for what 'honed' his mind: (1) genes, (2) association with elders almost exclusively all through his childhood, and (3) solitude for uninterrupted study and reflection.

Q.E.D.

P.S. in "Bertie and the Bomb," you can hear BR saying, "I never liked the classics. Mathematics is what interested me."

- (12) Toronto editorial, 1931. Here is a portion of an editorial with a memory of the past, in the Toronto Daily Star (December 14, 1931, p. 2), with thanks to Harry Ruja:

A Hundred Years Ago and Now

Bertrand Russell lectured in Massey Hall on Saturday evening and it is interesting to note that on the same date one hundred years ago, December 12th, his illustrious grandfather, Lord John Russell signed the Reform Bill which brought about so many changes in the life of the British people.

The century that intervenes has witnessed no greater changes in British life than in the mental outlook of the Russells, for it would surely have been difficult for Lord John to imagine himself having a grandson with the opinions and beliefs of Bertrand. It must amuse the grandson, too, to look back upon a grandfather with the untroubled, conventional mind of Lord John.

To a daily newspaperman a hundred years is a long period of time, and naturally so, for in that time a vast number of newspapers are put forth. But to a philosopher like Bertrand Russell a century is but a brief space in that long flow of human events in which the tendencies of mankind slowly reveal themselves, take on meaning, and are seen to gain a possible direction and a perceivable purpose.

As regards news the century that intervenes between the one Russell and the other has given a prodigious output. The parliament in England, from being the most exclusive club in the world, is so changed that miners have come up out of the ground to be cabinet ministers. One prime minister has come from the home of a blacksmith and another from the home of a Welsh cobbler.

Lord John Russell, signing one hundred years ago Saturday the Reform Bill from which so many changes have come -- and one of the greatest of changes being the change in the Russells -- directs interest to another similar event. In the cablegrams of Saturday came the news that the Harcourt family is in difficulties through three successive deaths on which succession duties taxes had to be paid -- and it was Sir William Harcourt who fathered this succession duties tax nearly half a century ago.

etc.

HUMANISM

(13) From the Washington Post (1/10/85, A19):

Department Proposes Rule to Curb Teaching of 'Secular Humanism'

Controversial Term Remains Undefined

By Felicity Barringer
Washington Post Staff Writer

The Education Department, following legislation approved by Congress last summer, has proposed a rule prohibiting school districts from spending certain earmarked federal funds on any course that a district "determines is secular humanism."

However, the proposal, which defines several other concepts ranging from "magnet school" to "minority group," offers no guidance on what it means by "secular humanism."

The rule, and the law that spawned it, apparently represent the federal government's first official use of the term—used pejoratively by some fundamentalist and conservative groups to describe everything from atheism to Darwinism—since a footnote to a 1961 Supreme Court decision included "secular humanism" on a list of religions that "do not teach what would generally be considered a belief in the existence of God."

A group of liberal constitutional rights activists is trying to stir up opposition to the rule by bringing it to the attention of the press and public. But Democratic congressional aides familiar with the negotiations over the law argue that the very lack of a definition makes the prohibition harmless. One aide to its author, Senate Labor and Human Resources Committee Chairman Orrin G. Hatch (R-Utah), calls the debate "a tempest in a teapot."

In a comment to the Education Department, Anthony T. Podesta, executive director of People For the American Way, said, "Now, with a federal law that uses the term [secular humanism] without defining it, the Department of Education is making local school districts even more vulnerable to attack from those who have a history of using the charge of 'secular humanism' to oppose anything they don't like about public education."

In a pamphlet entitled "Is Humanism Molesting Your Child?" for example, a Fort Worth, Tex., parents' group described secular humanism as a belief in "equal distribution of

America's wealth . . . control of the environment, control of energy and its limitation . . . the removal of American patriotism and the free enterprise system, disarmament and the creation of a one-world socialistic government."

According to Ed Darrell, a press spokesman for Hatch's committee, secular humanism "is almost a term of art. You get into value education and a bunch of touchy-feely stuff that came out in the '70s. Conservatives object because these things may get in the way of a Christian education . . ."

"That's a long way of saying there's no quick definition for it," he added.

Podesta's group, which was founded by television producer Norman Lear, urged the Education Department to define the term, saying it is unfair to place that burden on school districts. In comments on the regulation, he said, "Educators, scholars and theologians [could] share their research and views on the hoax of 'secular humanism.'"

But Paul Salmon, executive director of the American Association of School Administrators, said he was pleased "the department made the right judgment in allowing local school districts to define secular humanism."

Still, Salmon said he was "distressed that the federal government is trying to affect instructional programs . . . They're trying to get a philosophical base for dealing with, oh God, everything from abortion to prayer . . . People who criticize secular humanism are very fond of saying teachers are secular humanists."

The prohibition appears in a section of the Education for Economic Security Act that earmarked \$75 million in grants over two years for "magnet schools" in districts undergoing desegregation efforts. Many of these districts lost millions of dollars in federal funds as a result of 1981 block-grant legislation.

That section of the law was drafted by Hatch, and, according to his aides, originally included a long list of prohibitions that were designed, in the words of one aide, "to focus the money on real, concrete

academic subjects like biology or physics or real vocational subjects like auto repair, and to get away from the softer social engineering kinds of things."

However, according to Democratic and Republican congressional aides, most of the prohibitions were eliminated during a meeting between Hatch and Democratic Sens. Thomas F. Eagleton (Mo.) and Daniel Patrick Moynihan (N.Y.). For weeks before that June meeting, the pair of Democrats had blocked the legislation until they could win more aid for school districts such as St. Louis and Buffalo that were in the midst of massive, court-ordered desegregation efforts.

When the meeting was over, the only prohibition on curricula that remained in the bill was the one concerning "secular humanism."

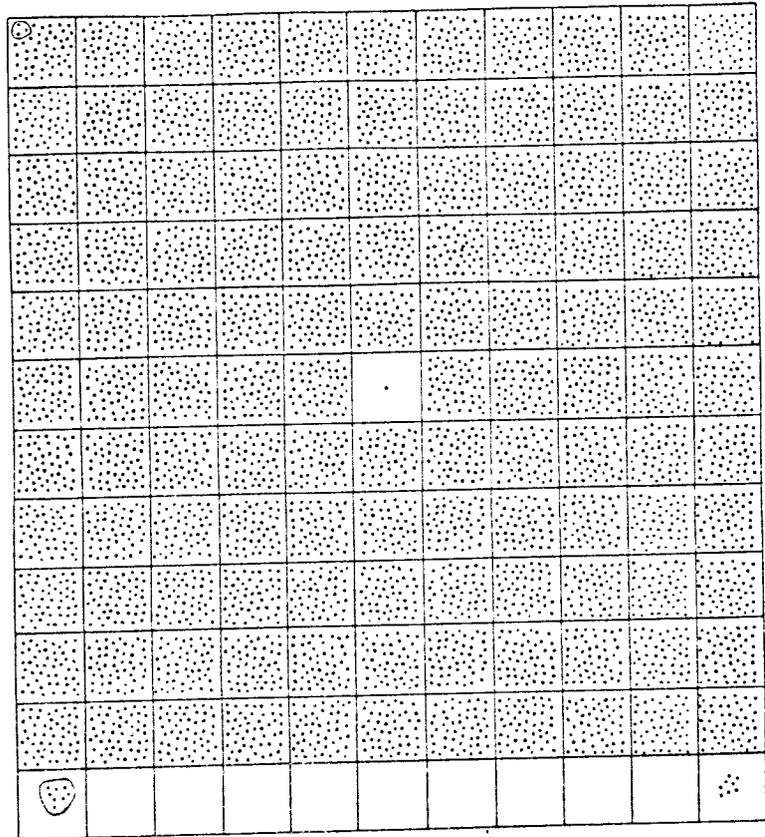

In a statement issued this week, Moynihan said, "This was legislation essential to the desegregation of our schools. Preventing money for courses on secular humanism was a prime condition for Sen. Hatch's approval. Neither I nor anyone in that [meeting] room know of any school district that teaches secular humanism. I'm not sure anyone knows what secular humanism is . . . Certainly no schools affected by this legislation" teach it.

"It should have had a definition . . . probably in the law," said a legal aide to Hatch. "But I don't necessarily think it was a mistake to prohibit it . . . In part it's a symbolic thing. It has put the federal government on record saying that federal funds should not be spent on propagandizing an atheistic philosophy to our kids. If Mr. Lear doesn't like it, tough noogies."

Another Hatch aide, Ed Darrell, pointed out that the proposed rule lets school boards decide what a course using "secular humanism" might be. "School boards depend on sane, reasonable people running them," he said. "There is no definition you can build into federal law that can keep crazy people from misinterpreting things . . ."

The absence of a working definition, he said, "was a glitch. But with a little luck it won't be a serious glitch."

NUCLEAR AFFAIRS

(14) Horror story, told without words →

The words merely tell what the picture represents, but they do not tell the story. The picture tells the story.

For more about Willens, see RSN43-12.

(Thank you, Bob Davis)

THE PLUTONIUM LINK

Plutonium is the most important common denominator between nuclear power and nuclear weapons. A typical 1,000-megawatt nuclear plant discharges every year, within its spent fuel, about 250 kg of plutonium. Less than 10 kg is needed to make a nuclear weapon.

Plutonium, which does not exist in nature, can be separated out from the other waste products in spent fuel by reprocessing the fuel. Reprocessing is delicate because of the intense radioactivity of the materials, but it does not require great technological sophistication. This technology is being developed by a number of potential nuclear weapons states, including India, Pakistan, and Argentina.

On current plans, up to 2,000 metric tons of plutonium will be created in nuclear power plants worldwide by the end of the century (enough for perhaps 300,000 nuclear weapons), and at least 600 metric tons of this plutonium will be separated through reprocessing. This quantity is three times the world's present inventory of military plutonium.

Alternatively, uranium-235 can be used in making a nuclear weapon. The technology required to produce weapons-grade uranium—enrichment of naturally occurring uranium from less than 1 percent uranium-235 to more than 90 percent—is high technology of a very sophisticated order, and about three times as much uranium as plutonium is required to make a bomb. Nevertheless, enrichment technology is being developed by such countries as South Africa and Pakistan, and its spread constitutes a serious proliferation threat.

(15)

1 Nuclear Weapons Chart
The chart above shows the world's current firepower as opposed to the firepower of World War II. The dot in the center square represents all the firepower of World War II—3 megatons. The other dots represent the world's present nuclear weaponry, which equals 6,000 World War II's or 18,000 megatons. The United States and the Soviets share this firepower with approximately equal destructive capability.

The top left-hand circle enclosing 9 megatons represents the weapons on just one Poseidon submarine. This is equal to the firepower of three World War II's and enough to destroy over 200 of the Soviet's largest cities. We have 31 such subs and 10 similar Polaris subs.
The circle in the lower left-hand square enclosing 24 megatons represents one new Trident sub with the firepower of eight World War II's. Enough to destroy every major city

in the northern hemisphere. The Soviets have similar levels of destructive power.
Just two squares on this chart (300 megatons) represent enough firepower to destroy all the large- and medium-size cities in the entire world. (U.S. Senate staff have reviewed this chart and found it to be an accurate representation of the nuclear weapons arsenal.)
— From *The Trident Factor*, by Harold Willens (William Morrow)

← From "Nucleus" (Fall 1984, p.6), published by the Union of Concerned Scientists.

- (16) End of the World? Edward Zuckerman -- author of "The Day After World War III" (RSN43-13) -- muses on the possible consequences of that war, according to various experts...in New York Times (November 25, 1984, op ed page):

The End-of-the-World Scenarios

By Edward Zuckerman

All of those currently debating whether a nuclear war would be followed by a catastrophic "nuclear winter" agree on one thing -- that their scientific conclusions have important political consequences. And they are happy to point them out. Nuclear winter presents "a real danger of the extinction of humanity," Carl Sagan has written in the journal *Foreign Affairs*. Therefore, we must move "as rapidly as possible to reduce the global nuclear arsenals below levels that could conceivably cause the kind of climatic catastrophe and cascading biological devastation predicted by the new studies."

Edward Teller, writing in *Nature* magazine, agrees that "scientific knowledge of the after-effects of a nuclear war... is of great importance in making political decisions." But he urges caution in rushing to act on the basis of the nuclear winter studies, his own evaluation finds those studies so full of "omissions and uncertainties" that the prospect of nuclear winter "must be considered dubious."

What we are witnessing here is a political argument in the guise of a scientific argument. In an article about nuclear winter in *Parade* last year, Mr. Sagan warned again of human extinction -- and provided readers with the addresses of organizations working for a nuclear freeze.

(The *Parade* article omitted most of the qualifying statements included in the scholarly paper upon which it was based.)

Mr. Teller, who wrote an article for *Reader's Digest* in 1982 debunking what he called the "dangerous myth" that a nuclear war "would end life on earth," has for decades supported the development of new nuclear weapons, supported civil defense and actively opposed nuclear arms control agreements.

This pattern is an old one. Ever since the bombing of Hiroshima, scientists and others have put forward mechanisms by which nuclear explosions might bring about the end of the world. The poisoning of all life by radioactive fallout and the depletion of the earth's protective ozone layer have preceded nuclear winter among the end-of-the-world scenarios. Other scientists (usually including Mr. Teller) have teamed up to rebut each of these forecasts. A 1979 report co-authored by Jack O. Greene, the former director of post-attack research for the Federal Defense Civil Preparedness Agency, concluded that no probable nuclear war "could induce gross changes in the balance of nature" as great as those already wrought by human civilization, such as tilting the prairies, irrigating deserts and "even preventing forest fires."

All of those participating in the end-

of-the-world debates have access to precisely the same scientific evidence. The evidence is necessarily inconclusive. No one can know what the long-term, worldwide effects of a massive nuclear war would be. Yet the end-of-the-world camp and the life-will-go-on camp volley back and forth, citing one inconclusive study against another.

These differing interpretations of identical evidence may be explained by the fact that someone with a strong opinion about the likelihood of post-attack ozone depletion, say, will usually have an equally strong opinion about the MX missile. Those preaching the dangers of ozone depletion are attempting to win converts not only to their theories of exo-atmospheric chemistry but also to their views about strategic doctrine and deterrence.

Those who minimize the effects of nuclear war tend to have opposite views. "The decision to resist aggression by nuclear war requires a diplomacy which seeks to break down the atmosphere of special horror which now surrounds the use of nuclear weapons, an atmosphere which has been created in part by skillful Soviet 'ban-the-bomb' propaganda," Henry A. Kissinger wrote in 1957. Similar views are expressed today.

Politics thus run steadily beneath the surface of every debate about the effects of nuclear weapons, and it is

here, in their politics, that the doom-sayers are steadily correct. All who oppose the nuclear arms race are doing important work. But those who oppose it by asserting that any nuclear war would be the end of the world are resting their argument, unnecessarily, on shaky ground. There is no need to hold to debatable -- and thus distracting -- predictions of total doom to make a convincing case against nuclear war and against the policies of the Reagan Administration and its predecessors that have made nuclear war more likely.

For what if the debunkers of doomsday were somehow shown to be correct? What if we knew for a fact that the most wildly optimistic estimate of the effects of nuclear war (that of Federal civil defense authorities) was accurate, and just 45 million Americans would be vaporized or burned to death or burned under collapsed buildings or slashed by flying glass or condemned to a horrible lingering death from radiation sickness? And only 20 or 30 million more would suffer sublethal radiation sickness or broken bones or disfiguring burns or other injuries? And only a few million of those who survived the war would die of cancer later? But the world would not end. And life would be nearly normal in Uruguay and New Zealand.

Would nuclear war be acceptable then? Would there be any less need to rein in the arms race? □

INSIDE PUGWASH NEWSLETTER

Special newsletter for *Bulletin* readers on the Pugwash conferences

January vol. 2 no. 5

Pugwash sees possibility of nuclear freeze

Factors converging

As we reported in this space last month, the 10th Pugwash workshop and the first on "Proposals for a Nuclear-Weapons Freeze" has been held in Geneva.

In attendance were 47 prominent scientists and military advisors from all the key nations in the nuclear arms race, including China, the Federal Republic of Germany, France, the U.K., the USA, and the USSR, as well as participants from Belgium, Denmark, Finland, Hungary, Ireland, Italy, Poland, and Switzerland.

In their statement, issued after the workshop, the participants declared that there was now a greater possibility of achieving a nuclear freeze than there had been previously. This was due, they stated, to the convergence of several key factors:

- essential equivalence in the overall nuclear forces of both sides
- high technical capabilities on each side for venturing the compliance of the other with a freeze agreement
- small potential gain from any clandestine activity that could escape detection
- new information leading to a higher degree of public concern with the risks of nuclear war

Finding the freeze practical

The scientists stressed that the nuclear freeze idea was finding more and more adherents because it was comprehensive -- it relied on the stopping of testing, production, and deployment of bombs, warheads and delivery vehicles of all types. Because of this comprehensiveness, the idea escaped two major problems that have prevented the success of arms control for decades:

- over-specialized negotiations leading to endless disputes about the boundaries of the negotiations themselves
- channeling of the arms race into those weapons categories not yet covered

Timing is crucial

The statement went on to point out how important timing

will be to the implementation of a freeze. It said:

Crucial to both the desirability and achievability of a nuclear freeze are two aspects of its timing. First, as much of the freeze as possible should be put in place as early as possible, to achieve its purpose of cutting off dangerous developments and building rather than allowing them to continue while negotiations drag on. Second, the freeze must be understood to be an initial measure, beyond which deep and strident negotiations in nuclear forces are to be sought. This approach dispenses of the objection that the status quo is much too dangerous to freeze permanently into place.

Proposing the freeze as an interim measure of say 2 to 3 years' duration initially, has the further merit of reducing concerns that untraced or clandestine activities could gradually upset the nuclear equilibrium while the freeze is in force. A period of 2 or 3 years is, at the same time, long enough to represent a meaningful interruption of dangerous trends and to permit meaningful progress toward longer-term solutions, while short enough to maintain the pressure on decision-makers to work out these longer-term solutions promptly.

Suggestions about what can be done right away

The statement went on to discuss what measures might be taken right away, with little or no further negotiation. The importance of this part of the statement cannot be underestimated. After all, present at these discussions were key military planners, and scientists close to the decision-makers in their own governments. Thus the ideas put forth and debated have had a full and fair hearing by all interested parties, in an atmosphere of mutual trust and respect.

This kind of proceeding is what has made Pugwash so successful in actually getting things done.

Influence and action

For thirty years the informal meetings of prominent scientists called Pugwash have been one of the few forces actually accomplishing anything -- actually making concrete breakthroughs in de-escalating the arms race and staving off the nuclear armageddon.

You know how perilous is our current situation; now, more than ever the work of Pugwash is crucial to our survival. Please, today, become a friend of Pugwash, and make possible the continuation of this work. By doing so you will contribute directly to one of the most important activities now going on -- and to the future of all of us.

Pugwash is worth supporting, aside from the fact that it was conceived and founded by BR, with the help of Joseph Rotblat----->

	<input type="checkbox"/> Please enroll me as a Friend of Pugwash and send me summaries of its major meetings. I enclose \$100 as my 1984 contribution.	Make check payable to AEPF, Pugwash and mail to William M. Sawitz, Chairman, Finance Committee, Pugwash Conferences on Science and World Affairs, 1450 West Wrightwood Avenue, Chicago, Illinois 60614. All contributions are tax deductible.
	<input type="checkbox"/> Please enroll me as an associate member of Friends of Pugwash and send me digests of its important meetings.	
I enclose \$ _____		Name _____ Address _____ City _____ State/Zip code _____

(18) Too much nuclear? Some BRS members have said they think the newsletter gives too much space to nuclear affairs.

We recall the incident in which a reporter asked BR, wasn't he being fanatical, always talking about the danger of nuclear weapons? BR answered, "It's hard not to be fanatical. The issue is so large."

BR thought the issue the most important of all possible issues, and spent the last 25 years of his life working on it, starting with his 1945 House of Lords speech (RSN35-14).

* What's your opinion? Do you think we are spending too much time on nuclear affairs? Write the newsletter, address on Page 1, bottom.

FUN

(19) "Gödel's Doom". First, some background. As most of you know, BR believed that mathematics was a branch of logic. He -- and Alfred Whitehead -- set out to prove it, in Principia Mathematica (1910) ... and they thought they had done so. But in 1930 along came Gödel's Theorem, which proved it couldn't be done.

But don't hurry to throw away your copy of Principia. Although it did not accomplish the desired proof, it was a landmark work, and helped lay the groundwork for the logic of computers.

The following is from a letter from Dr. Warren L. Semon, Director of Systems and Information Science, Syracuse University, and Chairman of the Editorial Board of COMPUTER. His letter is reproduced in BRS Newsletter #3 (Sept. 1974, p.24)

In summary, it is true that workers in computing machine design are indebted to previous workers in logic and hence obviously to Russell for the monumental "Principia".

From A COMPUTER PERSPECTIVE by the office of Charles and Ray Eames, Harvard University Press, 1973, these remarks:

In 1910 "Principia Mathematica" by Bertrand Russell and Alfred N. Whitehead presented the idea that logic is the foundation of all mathematics. It develops the calculus of propositions, solving equations in terms of statements that are either true or false. (p. 121)

The methods of symbolic "true or false" logic described by Russell and Whitehead were, in 1937, shown to have practical application to the design of electrical circuits, in Shannon's thesis, "Symbolic Analysis of Relay and Switching Circuits." (Caption to a picture of Principia Mathematica) From BRS Newsletter #3 (Sept 1974, p. 7)

So much for background. Now for some fun...and a change of pace: a science fiction story that takes Gödel's Theorem into a wholly different realm.

Gödel's Doom

A WORK OF FICTION
BY GEORGE ZEBROWSKI

"So what are you going to beg time for now?" I asked as Witter slid in across from me in the cafeteria booth. A thin, hyper type, he folded his hands in front of my coffee and said, "It's an experiment I want to run on the new AI-5." He spoke very precisely, very insistently, as usual. "I've been haunted by it all my life, but now it can actually be done."

"What do you mean?" I asked, picking up my coffee, afraid that he would knock it over.

"Well, previous Artificial Intelligences were too slow and not capable of complex inference. The question is how much time can you give me?" He brushed back his messy brown hair.

"How much do you need?" I sipped the coffee, sensing his restrained excitement. Witter had always been a valuable worker, so I had to listen and try to keep him happy, within reason, despite his nervous enthusiasms. But he was never satisfied with merely testing equipment and programs for industrial applications.

"I don't know," he said cautiously. "A lot maybe. More than a couple of days."

I put down my coffee, irritated. "You don't know? Can't you estimate?"

"Nope. I'd better explain."

"Go ahead."

"You know about Gödel?"

"I know Gödel's proof, but tell me from scratch. You might be doing some illegal reasoning."

He leaned forward as if he were going to tell me a dirty story. "Well," he said, lowering his voice, "you're familiar with the conclusion that no machine-like entity that proceeds by clearly defined mechanical steps can complete any system that is rich enough to generate simple arithmetic—that is, make it a consistent system in which we could not come up with new, true, and still unproven propositions, in fact ones that would be unprovable in the system, yet clearly true."

"I know, math can't be mechanized."

"Not completely mechanized. We've done it to a remarkable degree..."

"What else is new?"

"Well, if Gödel's proof is true, and human minds can regularly generate true but unprovable propositions in

any potentially self-consistent system, then mechanism, or determinism, does not apply to us."

"But what is it that you want to do, Witter?" I was only half listening. It was late in the day. The cafeteria was nearly empty and the newly polished floor was a large mirror; our booth seemed to float on it.

"Well," he said, "I want to give the new Artificial Intelligence the command to complete mathematics."

"What?" I suddenly saw what he was getting at.

"Don't you see? We can do an experiment that might settle the nature of the universe—whether we live in a hard determinism or a soft one in which free will is possible."

I smiled, feeling superior. "But we know Gödel was right. Math can't be completed. He gave a powerful formal proof, one in which you can't have it both ways."

Witter, who had been looking away as we spoke, turned his head half around and fixed me with one glassy brown eye. "Come on, Bruno. Why not run the experiment anyway?"

I shrugged and sat back, looking around. "As you said, it might take a long time—forever, if Gödel's right."

"Maybe," he said, finally looking at me with both eyes. The combination of the blue and brown eyes had always given me the creeps. "According to Gödel, the computer will crank out mathematical statements forever, and we'll never know if the body of the system is a complete one. But if it is complete, then our AI will finish it off in some finite period of time. It's the fastest system ever developed, able to do involved operations that might take centuries otherwise."

"No matter how fast it is, we won't disprove Gödel. He proved that independently of all need to do experiments! Now I know why you want a lot of time. We won't live long enough to learn the result, even if you're right, which you can't be." I started to get up.

"Look," he insisted, "why not do the experiment? If we live in a hard determinism, as so many believe, then it's already true—the AI will complete math or any system we give it. But if Gödel is right, the AI-5 will run on forever, unable to complete."

"We don't have forever. You've gone bonkers."

"Why don't we do it? We can do the experiment! Look, for the first time an experiment involving pure logic and math may yield knowledge of the world outside!"

That part appealed to me, but I saw a way of being perverse. Was he presenting me with a choice or dictating that I authorize the experiment?

He smiled, anticipating my thought. "Either there's free will, or you're fated to let the experiment be done."

I sighed. "But there's still the matter of how long it will take, Felix. AI-5, no matter how fast it is, may keep running and we won't be able to tell whether it's an un-completable process or just a very long one."

He shrugged. "Aren't you willing to take the chance?"

"This just doesn't make any sense to me at all."

He smiled again. "But it gets to you, doesn't it? My point holds. Why not do it? Just to see. How often in the history of math or logic has there been a chance to do pure theoretical work that might reveal something about the real world?"

"But it's doomed to fail!"

He nodded. "Probably, Bruno, I'll grant you that. But even so, the experiment will be historic. Purely mathematical and empirical at the same time."

"Romantic mathematics. I call it."

"Or Kant's synthetic a priori!"

I'd read some of that metaphysical junk, and he seemed to be stretching it. Sure, synthetic meant acquiring new knowledge, and a priori meant that it wasn't derived from experience, strictly speaking, but from reasoning. Our experiment would give us new knowledge of the universe through nonempirical means. "But you're cheating," I said. "Whatever you call it, using the AI means only doing an empirical experiment."

He cocked one eyebrow and gave me a crazed stare with his blue eye. "Would you say that it would be more empirical if we did it by pencil and paper? That's all Gödel had to work with."

"Okay, I guess I'll have to say that there are no purely a priori activities. Even using the mind alone is a way of reaching out into the universe. What we call experi-

ments are merely corroborations. Einstein himself said that if the experiments didn't come out as he expected, then he'd pity the God who made the universe that way."

"Okay, Bruno. I know you know more than most section chiefs, but are we going to do it or not?"

So we ran the experiment, if you could call it that. Witter was right about one thing. If Gödel's proof was somehow wrong, and we could complete even one system on our fast AI, then a lot of people would have to do a lot of rethinking in the groundwork of logic and math.

But I knew damn well that Gödel couldn't be wrong. Formal proofs do not fail easily. It would be a mistake of some kind if our AI-5 showed that completeness in a significant system was achievable.

All right. We both wanted to see what would happen if we tried it. We pieced the time together from a dozen other projects when people would be away or on vacation.

It was Friday night, after hours. We would be alone until Monday. I sat down at the keyboard and tapped in the command. Witter was sitting next to me, staring up at the bank of screens.

The AI began its run, building arithmetic up out of baby talk. Soon it was all going by in a blur, but the AI showed no sign of slowing down.

"There is one danger," I said as we sat back and waited. "If the AI can't complete arithmetic, it will sift through larger and larger banks of information..."

"It can handle infinite amounts of data," Witter replied.

"Yes, but the power needed for that, Witter, the power! The cost!"

He shook his head. "Don't shout. That won't happen. It will all be over in a few hours at most."

But the AI-5 kept running. An hour went by.

"It's not going to stop, Felix. It can't. Gödel was right. But even if he was wrong, it may take more than our lifetimes to prove it."

"Take it easy, Bruno. Go polish the floor, or something." He was too serene.

Another hour went by. Witter stared at the screens, hypnotized by the blurred flow. Rivers of reasoning ran from their headquarters to a new ocean of well-formed propositions, and still the ocean was not filled; it would never be filled.

As I looked around at the clean right angles of the room, at the symmetrical terminals and easily accessed units, I began to think that maybe Witter was slightly stupid, that he didn't understand simple logic or the idea of a proof. Gödel's paradoxical conclusion could not be broken, unless it wasn't a double bind to begin with, because you can't have it both ways. Something was very wrong with Felix Witter.

And yet, I wanted him to have a point. This was an experiment, a recourse to more than personal opinion; it could do more, in principle, than reasoning, prediction, or guesswork. Set a powerful genie to do the impossible—not because you think the genie can do it, but because you can ask, and it has the power to do all that's possible. So why not ask, just to see; human beings have

always been suspicious of mere reasoning, no matter how powerful. Suddenly I wanted to see Gödel fall, to see the pride and arrogance of mathematicians crumble.

But as we watched the AI-5 chase the mirage, there was no sign of an end, no slowdown at all.

"I'm hungry," I said. "Want a pizza?"

He nodded without looking at me. I got up, went out into the hall, and called it in from the wall phone. Then I alerted the security guard downstairs and asked him to leave it out on a cart in front of our workroom.

"We may have to stop it," I said hours later, "even if it's close to completion." Though the pizza had been very bad, I thought as I eyed the empty boxes on the cart, a full stomach had taken some of the romance out of what we were doing. "We can't tie up all this power and time indefinitely. It's using more every minute, and it'll be no ass if we can't justify it."

"No!" Witter shouted maniacally. "It may be very close."

I burped, waiting for my heartburn to subside. The AI-5 hummed along.

"We can continue from this point onward at another time," I insisted.

"Be quiet!"

I reached over to stop the run. Felix grabbed my hand and pinned it to the panel.

"What's wrong with you?" I demanded.

"Just a few minutes more," he said, fixing me with his mismatched eyes. "We're at the edge of a major discovery!"

"Felix, this can't be done." I struggled to free myself, but his strength was that of a true believer.

"Be still, you fool," he said harshly. "Don't you see? This will be the culmination of our careers. We'll never match this no matter how hard we work. Gödel is one of the supreme monuments of mathematics, marking the limits of human minds. If we topple him..."

"You may not like what you get," I said, twisting my arm. "If his proof is right, then mechanism is false and minds are not machines. They escape the completeness of the purely mechanical. But if Gödel is wrong, then we're automatons! I'd rather not know."

He shook his head. "There's even more to it than that, Bruno."

"What?" I was breathing very hard, unable to free myself.

"We're opening up the very vitals of reality."

I had to laugh. "By manipulating man-made symbolic structures? You need a bucket of cold water to soak your head in. Let me go!"

"Completion may be only a few minutes away. Do you want to stop and then wonder what might have been?" He tightened his grip.

"But you can't know how far along it is!"

He let go of my hand and seemed to cool down, and I found I didn't have the heart to reach over and stop the run.

"You're right," he said, "I'm sorry. It probably is all for nothing."

I massaged my hand. The AI continued its work run. "Don't feel too bad about it," I managed to say. "It was a nice idea, but it had to confirm Gödel. I'm glad we're not machines."

He was shaking his head. "You don't understand. There's no reason to fear that. It's not a problem."

"What isn't?"

"Free will," he said as the AI-5 stopped its run.

Witter and I looked at each other, then at the main screen. It read:

SYSTEM CAPABLE OF GENERATING ARITHMETIC COMPLETE

"It's a mistake of some kind," I said. Something strange seemed to pass across my eyes. I sat back, expecting to lose consciousness as the tension got to me. "Maybe," Witter was saying, "but we can test to see if it's a mistake."

"How?" I heard myself ask, even though I knew the answer.

"By trying to make a true statement that is not prov-

able in the system. As long as the AI can show us that we can't make such a statement by proving it, then the system is complete."

We tried for the next 12 hours. I was relieved that our prime AI was no longer running a huge power draw. Witter brought a smaller AI on line and had it question the alleged complete system achieved by the AI-5. It failed to come up with a single true proposition that was not provable in the complete system.

"There's no question about it," Felix said finally.

"There's only one thing left to do," I replied. "We've got to run the whole thing again."

Witter looked at me, smiled strangely, then sat down and gave the command.

As the AI-5 began its second run at Gödel, Witter turned to me and said, "Funny about determinism. I always think of it as stuff outside me, pushing at my skin. But I feel free inside. When that second run finishes, we'll be certain that we're living in a hard determinism. No choice is our own, if we've understood the word correctly. Even our decision to run the AI-5 again was not made freely. We're automatons. No avoiding the conclusion, Bruno."

He was baiting me, I was sure. "But we resist the notion. Doesn't that suggest something?"

He shrugged. "That we're free in our minds but not in our actions. We can envision alternatives, but whichever one we pick is determined, right up through an infinite future."

"Witter, I thought you were intelligent. There can't be such a thing as unconditioned freedom. There are always initial conditions—necessary and sufficient conditions for every choice. Otherwise we could perform miracles, make happen things that are uncensored. The existence of free will cannot violate causality."

He grimaced at me and I felt stupid. "Yeah, I know all that. But do we have the freedom to choose between alternatives?"

"I think we do. Physical conditions make us both the determined and determinators in our own right. Things affect us and we affect them. Determinism goes right down into us, into our consciousness and will, and we send it back out. I couldn't prove it to you without a physiologist, though."

The AI-5 was still running its second completion smoothly. If it succeeded, then it might be that we were living in a universe where even choice among alternatives was an illusion.

Witter looked at me suddenly. "I wonder if our running this program can have an effect on the universe we live in?"

"What are you talking about?" I asked. He seemed to have a mind like a break dancer.

"Maybe our attempting what Gödel said was impossible can change the universe?"

"I don't think so, Felix. But there are other things you might like to consider."

He took a deep breath. "What's that?"

"Well, we began with the idea that no finitary deductive system can complete a rich, self-consistent system. But what if the AI-5 is not a finitary deductive system? Assume it can work outside the limits of the human mind, which is all that Gödel may have charted. It was all he could demonstrate because he had only his own mind to work with."

Witter nodded. "I see what you mean. If our AI reaches completion, then it follows, perhaps, that it's not a finitary deductive system, and we can draw no conclusions about the nature of the universe."

I smiled. "Right. And we don't have to worry about being automatons, or that our sense of inner freedom is a mirror trick of some kind. Free will is a special case of determinism. It's determinism from the inside. The means of determinism are also those of free will."

Witter was watching the screen with a worried look

on his face, as if he now expected the AI to fail. It didn't matter one way or the other, if what I had said was true.

"Unconditioned free will would be omnipotence," I continued, "and that's an absurd state to be in. No law, no causal structures. It's just a conceptual extreme, like infinities."

"Something is working against us," Witter said softly.

"What do you mean?"

He gripped the panel. "It won't come out the same way twice," he replied.

"You're still mistaking the maps for reality," I said.

"Look at the time, you fool! It's almost as long as before. If the AI doesn't repeat its completion in the same time, it will run on forever."

"So what. We have the first completion in memory, step by step, for whatever it's worth."

He swiveled his chair and glared at me. His eyes were bloodshot and had dark circles around them. The whole experiment, I saw, was eating up his entire energy. "You don't see, do you?" he said. "You think in terms of tricks of language, ways of speaking... you can't imagine worlds dying and others supplanting them. You don't give a damn about anything except apportioning time and keeping other administrators happy."

"What are you talking about, Felix? I'm here with you, and we're doing what you wanted. Have you lost your mind?" I almost felt hurt, as if he were questioning my loyalty.

He pointed to the clock on the wall. "Look, time's up and our AI is still running."

"So what? It was a fluke the first time, a mistake. You can't beat Gödel, and it wouldn't matter if you could."

He laughed. "You still don't see!"

"No, I don't."

The AI-5 was still running.

"It will run forever this time. Our decision to run the experiment puts us at a great juncture between possible universes. We collapsed the wave function reaching our minds."

"What are you saying?" I demanded.

"Proving that our universe was deterministic threw us into a freer one. Gödel proved his work in the wrong universe. Here the AI will run forever. But if we stop it and start again, something even stranger might happen."

"You're off the deep end now," I said, feeling sorry for him.

"We might be moving across a whole series of universes, drawing closer to the unconditional omnipotence that has the true freedom to be everything..."

"Yeah, and can't become anything in particular. That's what I was saying. Witter, wake up. We have the other program. Go see for yourself. That system was completed. In this one there's obviously some kind of difficulty. Neither result means a thing. Get that through your stupid head!" Mathematicians were all idealists to some degree or another, always secretly believing in the literal existence of infinities, numbers, and tortured geometries. Witter was no exception.

He shook his head and smiled. "There's nothing in the memory, Bruno. See for yourself. Go ahead, punch it up."

I leaned forward and punched in the order. Nothing came up. I went into search mode. Still nothing.

"We've left that universe behind," Witter said.

"It's got to be here," I said.

The screen remained blank.

"You erased the memory!" I shouted.

"I did not," he replied softly, and I knew he was telling the truth.

I glanced at the food cart; it winked out of existence. "Did you see that?" I asked.

"Bruno!" Witter shouted. "We've escaped a totalitarian cosmos. We're free!"

"Relatively," I said, shaken.

He was looking at me strangely, and I saw that both his eyes were now brown. As the AI-5 continued its endless run into a free infinity, I feared what we would find when we went outside...

NEWS ABOUT MEMBERS

- (20) Dong-In Bae sends New Year greetings to the Society from South Korea. He's been so busy, he hasn't had time to read the last newsletter, but hopes to do so during winter vacation. This semester he will lecture 12 hours a week, on 4 subjects.
- (21) Dan Bond -- responding to our inquiry -- has sent us a letter of a kind we don't expect to get very often:

Holy Spirit Parish

1396 Lynnhaven Parkway
Virginia Beach, Virginia 23456-2798
468-4600

January 17, 1985

Lee Eisler
The Bertrand Russell Society, Inc.
PO 1, Cox 403
Cooperburg, PA. 18036

Dear Lee:

Thanks for your letter of January 2, 1985. My ordination to the Catholic priesthood last May 12 completed my most recent, and I expect final, career change. I studied theology at St. Mary's in Baltimore from 1980 until 1984 when the requisite degrees were awarded.

Lee, I think you would appreciate my feeling that much of my life has been spent trying to identify points of contact between the ordinary human experience and the transcendental reality -- i.e., those special sacred moments in life when virtually every person is convinced something very important, and out of the ordinary, is happening. To a great extent, of course, these experiences depend upon the receptivity of the subject person -- our attitudes need to be open, not closed, trusting, not doubtful. Science is limited by its requirement of skeptical objectivity and cannot fully address these moments of subjective experience.

My approach and methodology has been a little unorthodox, Lee. After doing my philosophy studies at William & Mary I vowed in 1958 to climb out of my 18 year ivory tower disposition and to work actively in the life of the world. Until 1966 I worked in restaurant and resort hotel management. In 1966 I made a major switch of career to data-processing. I had first reviewed all the primary available literature on cybernetics. The next fourteen years I spent in another service sector, the Virginia Division of Motor Vehicles Information Services, as manager of research, of operations and as administrator of information systems. During all of this, my original priority was not lost and I became increasingly able to see for myself and to verify the reality of a part of the human condition which we are poorly equipped to talk about and communicate. Although the language used by the church often leaves much to be desired, it is at least in the process of changing its language and the church would offer me the best setting from which to speak about the subject and to act out the principles which are implied by it. Along the path certain mentors have had a profound effect on my studies: in particular Marshall McLuhan, Buckminster Fuller, Ivan Illich and Paolo Soleri. Each of these theologians, philosophers and men of the world reached conclusions about the more-than-ordinarily expressed human capabilities of all peoples. As Fuller would say, we are more than the mere sum of our parts, we have an omni-directional synergistically operative future in universe.

My present work in Holy Spirit parish at Virginia Beach is very satisfying and allows me to grow and expand still more, and in ways that I pray will be useful to others.

I am not certain. See that this story will be pertinent to the readers of the newsletter. I'll leave that evaluation to you. Print as much as you like.

I want you to know too that what I find fascinating about Wustall is his restless energy, his clarity of thinking and expression, and his very human ability to be occasionally wrong — not to mention his somewhat more than human ability to admit his errors and accept himself. A good model.

Sincerely yours,

(Rev.) Dan Bond

(22) Alberto Donadio writes from Bogota, Colombia:

I work as an investigative reporter with El Tiempo, the leading newspaper in this country. The year I spent in Geneva (1979) working for the International Commission of Jurists is memorable to me. The ICJ is a small and very effective human rights organization. It is not as well known as Amnesty International, a behemoth in the human rights field, but it does marvelous work.

Last month I published a book called "Por que cayo Jaime Michelsen?", on the exploits of Colombia's former top private banker, now a fugitive living in Key Biscayne, Florida. The book did very well: half the edition was sold in the first month of publication. Last year my first book, "Banqueros en al banquillo", also on banking scandals, was on the best-seller list for several weeks. Some 20 banks and finance companies have collapsed in Colombia since 1982 for reasons having to do with fraud and other forms of criminal mismanagement.

Don't you classify me as a millionaire author, let me point out that authors here make very little. It's not like in the U.S. I wish I could make a living writing books. Although the two I have written have been local best-sellers, I could hardly buy a used car with the royalties. Still, I have a contract to co-author a third book, on pesticides.

* If any member reads Spanish and is improbably interested in banking scandals in Colombia, I'll be happy to mail him the books.

(23) Gladys Jaitzaber teaches English literature at UMichigan, and it rubbed off on her son, Brad. His first novel, "Equal Distance", just published by Knopf, got a lengthy, glowing review by Anatole Broyard (and the author's picture) in the NY Times Book Review (12/30/84, p.4). Cause for celebration.

(24) Nathan Salmon has been the recipient of the 1984 Gustave O. Arlt Award in the Humanities, a considerable honor, as indicated by the letter from The Council of Graduate Schools in the United States (next page).

REPORTS FROM OFFICERS

October 19 1984

Professor Nathan U. Salmon
Department of Philosophy
University of California, Santa Barbara
Santa Barbara, California 93106

Dear Professor Salmon:

It is a great pleasure to inform you that you have been designated as recipient of the 1984 Gustave O. Arlt Award in the Humanities.

As you may know, the Gustave O. Arlt Award is given each year to a young scholar teaching in the humanities at an American university who has earned the doctorate within the past five years and who has published a book deemed to be of outstanding scholarly significance. The Award Committee was unanimous in its decision that your book *Reference and Essence* published by the Princeton University Press in 1982 clearly met the criteria for scholarly excellence.

You might be interested in some short quotes from supporting letters that were received by the Committee.

"It is, in my opinion, the best explication and examination of the theory of direct reference and its philosophical implications that has been written."

"I sincerely believe that Salmon's work will turn out to be one of the most important contributions to this area of research to appear in this decade."

"...the subtlety of Salmon's nuanced and sophisticated argument is unmatched by writers on similar topics who are Salmon's seniors by many years."

"Philosophically, the book is of great importance and the scholarship is impeccable."

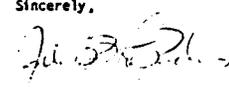

Page Two
Professor Nathan Salmon
October 19, 1984

"In my view, Salmon's book shows the mastery, clarity and judgment of a senior scholar combined with the enthusiasm and creativity of youth. Both substantively and methodologically *Reference and Essence* moves the discussion of reference and of essence to a new and higher plane."

The Award itself consists of a suitably inscribed certificate, a check for \$1,000 and a formal presentation made at the Annual Meeting of the Council of Graduate Schools of the U.S. This meeting will take place December 5-8, 1984 at the Capital Hilton Hotel in Washington, D.C. and the presentation of the Arlt Award will be made a lunch on Friday, December 7. The travel expenses you incur in attending this meeting will be reimbursed by the Council of Graduate Schools.

It was a pleasure to talk to you on the telephone and inform you firsthand of this Award. I will look forward to meeting you in December.

Sincerely,

Jules B. Lapidus
President

CONTRIBUTIONS

- (26) Fourth Quarter Results. If you want to see how we are doing — as givers — take a look at the Treasurer's Report (25). There you will see a figure of \$15 for contributions. \$15 is not the average contribution per member. It is the grand total of all contributions from all members for the 3-month period ending December 31st. A grand total of \$15. It sets a record: the wrong kind.

Can we not do better?

Don't we need to?

Think about it. No psychic numbing, please.

- * No contribution is too small to be useful. We also welcome large contributions.

Thanks.

BR ON THE INTERNATIONAL SCENE

- (27) JFK to BR, during the Cuban missile crisis (with our thanks to Don Jackanicz and the National Archives and Records Service, Kennedy Library, Boston):

October 26, 1962

Lord Bertrand Russell
 Penrynysudraeth
 Merioneth County
 Wales, England

I am in receipt of your telegrams.

We are currently discussing the matter in the United Nations. While your messages are critical of the United States, they make no mention of your concern for the introduction of secret Soviet missile weapons into Cuba. I think your attention might well be directed to the burglars rather than to those who have caught the burglars.

John F. Kennedy

Al Seckel discusses this response by JFK to BR's telegrams, in the latest "Russell" (Winter 1984-85).

BR INTERVIEWED

- (28) BR at 80 This is a transcript of the Romney Wheeler interview, as it appeared in Atlantic Monthly (August 1952, pp. 51-54). The BRS Library has the interview on film ("Bertrand Russell", RSN44-13), on VHS videotape, and on audio tape.

A LIFE OF DISAGREEMENT

An Interview with Bertrand Russell

WHEELER. — Lord Russell, as you celebrate your eightieth birthday, we'd like you to tell us what you think you have learned and what you think you will never learn in your career as a philosopher.

RUSSELL. — Well, there are some things that I don't think I shall ever learn and indeed I hope I shall never learn. I don't wish to learn to change my hopes for the world. I am prepared to change my beliefs about the state of the world, but not my hopes. About that I wish to remain constant. I think we might call the subject of our talk "Eighty years of changing beliefs and unchanging hopes."

It's very difficult for anybody born since 1914 to realize how profoundly different the world is now from what it was when I was a child. The change

has been almost unbelievable. I try as best I can, despite my years, to get used to living in a world of atom bombs; a world where ancient empires vanish like morning mist, where we have to accustom ourselves to Asiatic self-assertion, the Communist menace. The world is altogether different from what it was when I was young. It's an extraordinarily difficult thing for an old man to live in such a world. I was born in 1872. My parents died when I was still an infant. And so I was brought up by my grandparents.

WHEELER. — Can you tell us something about your grandfather?

RUSSELL. — Yes. He was born in the early years of the French Revolution. He was a member of Parliament while Napoleon was on the throne.

As common with Fox, he thought English hostility to Napoleon was excessive, and he visited Napoleon in Elba. It was he who introduced the reform in 1801 which started England on the road towards modernity. He was Prime Minister during the Crimean War, during the Revolutions of 1848. I remember him quite well. But as you can see, he belonged to an age that now seems rather remote.

The world in which I was young was a solid world, a world where all kinds of things that have now disappeared were thought to be going to last forever. It didn't dawn on people that they might cease. English people have certainly regarded English naval supremacy as a law of nature. Britannia ruled the waves. It didn't occur to us that that

might stop.

WHEELER. — Even with Bismarck?

RUSSELL. — Bismarck was regarded as a rascal and we thought of him as a sort of uneducated farmer. But it was assumed that the influence of Goethe and Schiller would gradually bring Germany back to a more civilized point of view. Moreover, we thought of Germany as only a land power — it had no navy; and in fact we weren't at all afraid of Germany. Political opinion was more favorable to Germany than it was to France at that time. Bismarck himself compared Germany and England to an elephant and a whale, each formidable in its own element but no danger to each other. That was how we felt. We were not afraid of Bismarck at all. It was thought that there was going to be ordered progress throughout the world. Gradually every country was going to take to parliaments. There was going to be a bicameral legislature and two parties and it was all going to be exactly like England everywhere all over the world.

My grandmother used to laugh because one time she said to the Russian Ambassador, "Perhaps some day you will have a parliament in Russia." He said, "God forbid, my dear Lady Russell." Except for the first word, the Russian Ambassador of the present day might give the same answer. But that was the assumption. It was all going to be orderly and all quite nice.

The atmosphere, apart from politics, was one of puritan piety — very great piety, very great austerity. We always had family prayers at eight, and before family prayers I had to do half an hour's practice at the piano, which I hated. Although there were eight servants in the house, the food was always of the utmost simplicity, and if there was anything at all nice, I was not allowed to have it because it was not good for children to eat nice things. For instance, there would be rice pudding and apple tart. The grownups had the apple tart and I had the rice pudding. There was extreme austerity in all those ways. My grandmother, until she was over seventy, would never sit in an arm-chair until after dinner. Never. It has almost gone out, that sort of austere living by well-to-do people, which in those days was very common.

WHEELER. — When did you get to Cambridge?

RUSSELL. — I got to Cambridge when I was eighteen, and that of course was a new world to me completely. I for the first time met people who, when I said anything that I really thought, didn't think it absurd. I had learned at home to say almost nothing about what I really thought. My people had a horror of philosophy which interested me, and they would say every time philosophy was mentioned: "Philosophy is summed up completely in these two questions. What is matter? Never mind. What is mind? No matter." And at about the sixtieth repetition of this remark I ceased to be amused by it. When I got to Cambridge it was a great comfort to me to find people who didn't regard philosophy as absurd, so that I was very, very happy when I first got to Cambridge. I quickly got to know a great many people who became my life-long friends. Most of them, I am sorry to say, are dead now, but those who are still alive are still my friends.

WHEELER. — You started with mathematics, didn't you, and then moved to philosophy?

RUSSELL. — That is so, yes. I did three years' mathematics and one year's philosophy at Cambridge. I had done only mathematics before going to Cambridge.

WHEELER. — What caused your interest in philosophy?

RUSSELL. — Well, two things — two very different things — caused my interest in philosophy. On the one hand, I wanted to understand the principles of mathematics. I observed that all the proofs of

mathematical propositions that were taught me were obviously fallacious. They didn't really prove what they said they did, and I wanted to know whether there is any truth in the world that is known. I thought, "If there is any, it probably is in mathematics, but not in mathematics as I have been taught it." So I tried to find out some truth there. The other thing that made me interested in philosophy was the hope I might find some basis for religious belief.

WHEELER. — And did you find it?

RUSSELL. — No. In the mathematical part of my hopes I was fairly satisfied, but in the other part no, not at all. For a time I found certain satisfaction in the Platonic eternal world of ideas, which has a sort of religious flavor, but then I came to the conclusion that that was nonsense and I was left without any satisfaction, except for my desires. It remains so. So that as far as that goes, philosophy proved a washout to me, but not as a technical basis for mathematics.

WHEELER. — Wasn't it about here that you entered into what you call a life of disagreements?

RUSSELL. — Yes. I disagreed first with my people both about mathematics and about philosophy. They cared only about virtue. Virtue, they said, was the only thing of importance in the world. Mathematics was unimportant because it had no ethical content, and philosophy was positively pernicious because they thought it undermined virtue. So that on that point I had a strong disagreement with my people. It was solved by my living among academic people who did not take that view, so that I got again into a circle of people among whom I was quite at home.

But that was brought to an end by the first World War, when I took a pacifist line. I was against the first war. I was not against the second. Some people think that this is an inconsistency, but it isn't. I never, during the first war, said that I was against all war. I said I was against that war. And I still hold that view. I think the first war was a mistake. I think if that hadn't happened, you would not have had Communists, you would not have had the Nazis, you would not have had the second World War, you would not have had the threat of the third. The world would have been a very much better place, I think. Germany at the time of the Kaiser was not uncivilized. There was a certain amount of suppression of opinion, but less than there now is everywhere except in England and Scandinavia. So it really wasn't very bad. For propaganda purposes the Kaiser's government was represented as dreadful, but that was only talk. It wasn't really true.

WHEELER. — Your opinions today in regard to Russia are not altogether friendly. Did you always feel that way about the Bolsheviks?

RUSSELL. — Yes, and that caused another violent disagreement. Owing to my pacifism during the first war, I had become estranged from what you might call conventional people, and then I went to Russia in 1920 and found that I abominated the Soviet government. They were dreadful people — dreadful people already and becoming more so. I then had to break with all people who had endured my pacifism who liked Russia, or thought they did, so that I was left in a great isolation at that time. However, I escaped some of the pain of it by going to China, where I spent a very happy

year. I liked the Chinese very much, and there I found people that I could agree with, that I could like.

WHEELER. — Any conclusions about China?

RUSSELL. — Oh, I don't know about conclusions. I don't think I came to any particular conclusions. I continued to think as I had thought before, that democracy is the best form of government where it

will work. It didn't work very well in China. It wasn't working at all. And one could see that it wouldn't work there. They hadn't the political experience. But I thought it would work there in time and I dare say it would have if circumstances had been a little more propitious.

WHEELER. — On your return, the focus of your interest changed, did it not?

RUSSELL. — Yes, owing to the birth of my two elder children, I became very much interested in education — especially, at first, education in the very early years. I didn't altogether like the progressive schools, though in some respects I thought them much better than the older ones. But there are some things about progressive schools, at least about most progressive schools, that I didn't feel were right. I thought they didn't pay enough attention to instruction. It seems to me that in our technically complex world you cannot play any important part unless you have a very considerable amount of actual knowledge, and I don't think that most children will acquire much knowledge unless there is a certain amount of discipline in the school. I think the real discipline required for acquiring knowledge ought to be insisted upon and isn't sufficiently insisted upon in a good many modern schools that I know.

WHEELER. — Did you change any of your opinions in that regard?

RUSSELL. — I suppose to some degree. I tried running a school of my own because I wasn't satisfied with other schools. I haven't the talents of an administrator and I wasn't satisfied with the school that I tried to run. Fortunately just about that time a certain modern school that I was interested in became, I thought, quite good enough, and I was satisfied with that. I have, I suppose, changed my opinions, not only about education, but about many things, as a result of seeing what people do.

I think that freedom is not a panacea for all things. I think there are a good many matters in which freedom should be restrained, some of them matters in which it is not sufficiently restrained at present. In the relations between nations there should be less freedom than there is. To some extent this applies to modern education too. I think that some progressive schools certainly have more freedom than they ought to have. There are some freedoms that I think are desirable in education. Now in the old-fashioned school, if a child does a mean word, it is thought worse than if he commits an unkind action, and that seems absurd.

I think that the unkind action matters more. In that sort of way I don't like the old-fashioned way. I also think that children should be free to explore the facts of life to a degree that they're not allowed in an old-fashioned way. I think there should be free speech. There are a number of things that I like very much about modern education; but both in education and in other matters, I think freedom must have very definite limitations — for example, when things that are definitely harmful to other people are involved, or things, such as lack of knowledge, that prevent you yourself from being useful. Those are respects in which I suppose I should lay less stress on freedom than in former times.

WHEELER. — Do you still believe in the importance of abstract philosophy?

RUSSELL. — That's a very difficult question. I have myself a passion for clarity and exactness and sharp outlines. For some reason that I never understood, that makes people think that I have no passions, that I am a cold fish. I don't know why, but it does cause people to think so. I don't myself think that's altogether just. That's neither here nor there. But I do like clarity and exact thinking and I believe they are very important to mankind, because when you allow yourself to think inexactly, your prejudices, your bias, your self-interest, come

in ways you don't notice, and you can do bad things without knowing that you're doing them. Self-deception is very easy. For that reason, I do think clear thinking is immensely important. But I don't think philosophy in the old-fashioned sense is quite the thing the world needs nowadays. I think the needs of the world are different.

WHEELER. — Just what do you feel today's needs are?

RUSSELL. — Needs depend, of course, on what a person's capacities are. But if I were now at this moment a young man, whether in England or in America, I should not take to philosophy. I should think there were other things better to take to. If I had the necessary capacity, I think I would be a physicist. If my capacities didn't run in that direction, I should think that history, psychology — mass psychology especially — theory of politics, things of that sort, would be much better to work at than pure philosophy. And it's that sort of thing that I should take to if I were now young.

WHEELER. — Lord Russell, what do you think the world needs to reach this happier state?

RUSSELL. — I think there are three things that are needed if the world is to adapt itself to the industrial revolution. The troubles we are suffering now are essentially troubles due to adapting ourselves to a new phase of human life — namely, the industrial phase; and I think three things are necessary if people are to live happily in the industrial phase. One of these is world government. The second is an approximate economic equality between different parts of the world. And the third is a nearly stationary population. I'd like to say a little about each of these.

As to world government. The world government should be, of course, a federal government, leaving a very great deal of freedom to the individual national governments, with only those things controlled by the world government which are absolutely necessary for the avoidance of war. The most important and the most difficult of these is armed forces. All the important weapons of war will have to be in the hands of the international government and of it alone. When that happens, war will become practically impossible; and if war were impossible, mankind could go ahead. If war is not impossible, every advance in scientific technique means an advance in mass murder and is therefore undesirable. But if world peace were once achieved, the situation would be just the opposite.

Now I come on to the question of approximate economic equality. As things stand at present, Western Europe and still more the United States of America have high standards of life. On the whole, the great majority of their people live fairly comfortably from the material point of view. Asia, on the other hand, lives in very great poverty. So does most of Africa. And the moment people are sufficiently educated to be aware of these facts, the inevitable result is a great development of envy in the poorer parts of the world. That envy is the cause of unrest and inevitably makes world peace precarious. The only way of dealing with it is to produce approximate economic equality. Of course it's a long story, but it can be done.

The third point, about population, is very vital indeed. The food supply of the world tends at present to diminish through the denudation of the soil. It also tends to increase through various technical advances; but those two about balance, so that on the whole food produce, as it were, does not increase appreciably. That means that unless everybody is to be very poor, there must be not more people to be fed, not many more, than there are now, and therefore you have got to get approximate equality of population and approximately stationary population. Otherwise those parts of the world where the population increases fast will want to go to war with those where it increases slowly.

WHEELER. — That raises the problem of Asia.

RUSSELL. — Well, Asia first of all has risen to the point of education — some Asians have — where it is not prepared any longer to be subservient to the white man. It hasn't noticed that Russians are white. If it had, it would have taken a different line, but it seems to think that Russians are yellow or black or some other color, and I think our propagandists ought to be mainly devoted to saying only Russians also are white. I believe that would be the effective propaganda to use in Asia, but

I'll pass that point by. Asia clearly is going to equality with the white man, and it's perfectly futile, absolutely futile, for the white man to resist that game. It will infallibly win — infallibly — and we ought to concede it graciously at once before we are driven to it to concede complete equality in Asia. But if Asia is not to overwhelm the rest of the world with a vast flood of population and poverty, Asia must live up to its responsibilities

and must learn the sort of thing we have learned in the West, which is how to maintain a roughly stationary population. If they can't learn that (and I fully believe they can learn and learn quickly, much more quickly than people think) they will not have won their claim to equality.

WHEELER. — Lord Russell, speaking as of today, can you see the influence of any one philosopher more than any other one?

RUSSELL. — I suppose in recent years the most important influence has been Marx — if you can dignify him with the name of philosopher. I should hardly like to dignify him so myself, but I suppose he must count in the list and he certainly has had more influence than anybody else.

WHEELER. — For those of us who reject Marx, can you offer any positive philosophy to help us toward a more hopeful future?

RUSSELL. — Well, you see, I think one of the troubles of the world has been the habit of dogmatically believing something or other, and I think all these matters are full of doubt and the rational man will not be too sure that he is right. I think that we ought always to entertain our opinions with some measure of doubt. I shouldn't wish people dogmatically to believe any philosophy, not even mine. No, I think that we should accept our philosophies with a measure of doubt. What I do think is this: that if a philosophy is to bring happiness, it should be inspired by kindly feeling. Marx pretended that he wanted the happiness of the proletariat. What he really wanted was the unhappiness of the bourgeois, and it was because of that negative element, because of that hate element, that his philosophy produced disaster. A philosophy which is to do good must be one inspired by kindly feeling and not by unkindly feeling.

WHEELER. — Summing up, Lord Russell, do you feel there is hope for the world today?

RUSSELL. — Yes, I do. I feel it very strongly, but how far that is a rational conviction, if one is temperamental, I can't say. I do most strongly feel that there is hope. There may be very dreadful times ahead of us, I dare say there are, but I still believe, I believe most firmly, that through whatever pain and suffering, mankind will emerge from these dreadful things and will emerge into some world that will be happier than any world that has existed in the past. I am firmly persuaded of that. What I don't know is how long it will take.

REPORTS FROM COMMITTEES

(29) Philosophers Committee (David E. Johnson, Chairman):

The BRS's annual session -- at the Eastern Division meeting of the American Philosophical Association -- was held on December 28th, at 10 a.m., in the New York Hilton Hotel.

David Johnson, of the Naval Academy, chaired the session. The paper was delivered by Professor Russell Wahl of Wabash College, Crawfordsville, Ind. The commentator was Professor Justin Leiber of the University of Houston.

Professor Wahl explored two questions: Whether it is really correct to say a person can have merely descriptive knowledge of a thing, and whether truths can be known about things known only by description.

He argued that Russell's original intention in introducing the notion of knowledge by description was to account for the possibility that truths could be known about things with which one is not acquainted. This is the case despite some of Russell's later claims that such things as Piccadilly, physical objects and other things which are known only by description are really logical constructions of things known

by acquaintance. Far from being a consequence of the position in "On Denoting" and "Knowledge by Acquaintance, Knowledge by Description," this more constructivist view actually conflicts with it in some respects.

Professor Leiber had few critical comments, asking instead whether or not Russell just changed his view, on what we can be acquainted with, from his position in The Principles of Mathematics. Further, Leiber asked whether, in "On Denoting", Russell was just using "Scott" illustratively, and not as a genuine proper name. Wahl responded that by 1911 Russell had changed his view on acquaintance, but not on whether knowledge is only of objects of acquaintance. The exchange by the principals was followed by lively discussion from the floor.

Professor Johnson then spoke about a problem these Russell Society sessions (now in their 11th year) were having. He found it hard to understand why so few papers were being submitted -- at a time when people are looking for employment and/or trying to become tenured.

There was a discussion about whether or not to change the format, with the consensus being that formal papers with discussion was the preferred style.

Deadline for submission of papers is May 15th for the meeting the following December. Members of the * Society are encouraged to submit papers or to encourage friends engaged in Russell scholarship to do so.

The session ended with concluding remarks by Professor Leiber, titled "The Responsibility of the Profession: the Case of Russell and Wittgenstein". Leiber argued that for him Russell is a better model of how a philosopher should be engaged in the world (for instance, going to jail for his convictions), whereas Wittgenstein represents a danger that our profession faces (namely turning inward from the larger world.) What the profession has done is to treat Wittgenstein much more favorably than Russell, to the extent of developing a personality cult around the former. Leiber also discussed the personal relations between the two men, stressing how Russell repeatedly went to bat for Wittgenstein and in turn was treated shabbily by Wittgenstein. These remarks provoked a lively discussion, which carried the group to the end of the two-hour session.

FOR SALE

(30) Books:

BOOKS FOR SALE FROM THE BERTRAND RUSSELL SOCIETY LIBRARY

- This list and prices are current as of January, 1985. The discounts given provide considerable savings, especially for certain titles which are often difficult to locate.
- Prices include postage and other shipping costs.
- "H" indicates hardbound edition. No notation indicates paperbound.
- Please remit by check or money order, payable to The Bertrand Russell Society.
- Send orders to : Tom Stanley, Russell Society Library, Box 366, Hartford, Vermont, 05047.

ABOUT OTHER ORGANIZATIONS

- (34) The Bertrand Russell Peace Foundation, which was founded by BR to work for peace and human rights, is asking for some help in dealing with its annual deficit. Here is how Ken Coates puts it:

Founding President: the Earl Russell, OM, FRS (1872-1970)

 The Bertrand Russell Peace Foundation Ltd.

Bertrand Russell House,
 Garscote Street,
 Nottingham NG7 4ET,
 England (Reg. Office)
 Reg. No. 891690 (England)
 Telephone 0602 784514
 Cables: Russfound Nottingham

2nd November, 1984.

Dear Mr. Russell,

As an admirer of Bertrand Russell, we think you will not mind receiving this letter, which comes from the Foundation which he established in 1963.

It has been no easy task to carry on Russell's work for peace and disarmament in the years which have followed his death. The arms race has run away with the two great nuclear powers, so that the number of nuclear weapons now emplaced around the world outnumbers even the wildest fears of 1970. The worsening of relations between East and West is accompanied by growing conflicts within the bloc systems themselves. As a result of the efforts of the non-aligned countries, the 1978 Special Session of the United Nations did make workable proposals for nuclear disarmament, but all of these were nullified last year when, at the Second Special Session in New York, the nuclear powers were able to reverse engines away from any kind of disarmament.

At the beginning of this decade, the Russell Foundation helped to launch an Appeal for European Nuclear Disarmament, which has brought together all the major peace movements in Europe, and very representative groupings from the United States as well. As a result of this work, the Russell Foundation is in demand all over the world, and finds that its telephone and communications bills increase at the same moment that its income is being reduced. Although we have accumulated a quite remarkable range of contacts and expertise, we find ourselves in the situation that there is a shortfall in our income of approximately £20,000 each year. If we can't meet this shortfall, we shall have to cut back our operations at precisely the moment when they are becoming more effective than ever before. This would be a desperately bad service to the memory of our founder.

* Can you help us? Any donations will be very gratefully received. If you could undertake a regular annual donation, this would be even more useful, in enabling us to budget sensibly.

If you would like to have further information about the Foundation, or lists of our publications and activities, please do not hesitate to write. We will be delighted to answer any of the questions which may occur to you.

Yours sincerely,

Ken Coates

**THE WORLD COURT
AND THE
RIGHT TO KNOW**

**An Open Letter to
the American People**

In his Inaugural Address January 20 President Reagan spoke eloquently of the great American ideals that he and his fellow-citizens must strive to uphold. Yet only two days previously the President had directed that the U.S. Government take no further part in the World Court proceedings dealing with Nicaragua's suit against the United States for violating international law by supporting paramilitary attacks by rebels in Nicaragua and by mining its harbors. This dishonorable boycott of the World Court betrays America's historic ideals for international peace and for the rule of law throughout the world. President Reagan is clearly a man of many contradictions.

As Anthony Lewis states in his excellent article on Presidential powers without accountability (*New York Times*, Op-Ed Jan. 21), "The Reagan Administration feared that the court proceeding would bring out the facts of its aid to terrorist activities and focus attention on its violation of treaties." Thus the U.S. withdrawal from World Court jurisdiction means that President Reagan is again trying to avoid accountability by concealing the truth and is violating the American people's basic civil liberty, *the right to know*.

BOOK REVIEWS

- (38) *Theory of Knowledge* by Bertrand Russell. The 1913 manuscript, edited by Elizabeth Ramsden Eames in collaboration with Kenneth Blackwell. Allen & Unwin, 1984. 258p ill (The Collected Papers of Bertrand Russell, 7) Reviewed by Marvin Kohl, SUNY College at Fredonia. (CHOICE Jan '85 Philosophy)

Russell never completed this book, and of the 16 chapters he did complete saw fit to publish only the first 6. The major virtues of this resurrected book are the almost paradigmatic way Russell proceeds to justify his claim that some beliefs are self-evident; his useful, often brilliant characterizations of the nature of human understandings, belief, and knowledge by acquaintance; and Elizabeth Eames introduction which provides both an overview of Russell's epistemological development and an explanation of why he did not complete the manuscript. But one reason why it may be of limited contemporary interest is that many empiricists now hold that intuitive self-evidence of nonlogical beliefs cannot possibly be claimed to yield indubitable knowledge. CHOICE urged (Apr '84) that Volume 1 was essential for all college collections and highly recommended it for general libraries who wished to have a partial autobiography and other fascinating information about a man who is clearly one of the greatest, if not the greatest, intellectual, of our century. This reviewer still thinks that the collection as a whole should prove to be a major editorial achievement. But for libraries limited to purchasing individual volumes, the present book is recommended only for graduate collections.

CREATIONISM

- (39) From the Washington Post (11/24/84, p. A11):

In School, Science Seems to Be Leading Creationism

'It Looks as if the Tide Has Turned,' Evolutionist Says

By Bocyce Rensberger
Washington Post Staff Writer

Even though the theory of evolution continues to prompt vigorous controversies among scientists, most of its backers agree that they seem to be winning their battle against religious creationism.

Despite attempts by religious fundamentalists to force the teaching of biblical creationism in public schools, advocates of evolution theory say that no state still enforces such laws.

"It looks as if the tide has turned," said Karl Fezer, who edits a pro-evolution newsletter that circulates among a growing number of scientists and others fighting creationism.

Fezer, a biology professor at Concord College in Athens, W.Va., and others credit the turnaround to two factors.

One was a Supreme Court decision that declared Arkansas' so-called equal-time law unconstitutional. In that case, the court

agreed with the American Civil Liberties Union, which had filed suit, that a state law requiring schools to teach biblical creationism illegally favored one religion. The court also ordered the state to pay ACLU's court costs.

The decision cost Arkansas about \$500,000, a factor evolutionists say may have discouraged other states from passing "equal-time" laws and facing similar suits, despite mounting pressure from the religious right.

The second factor has been a reversal in the fortunes of scientists who volunteer to debate creationists in public forums.

For many years, creationists challenged evolutionists to debate them before college audiences and community groups.

"The scientists who volunteered to take them on usually figured it would be easy to beat somebody who was just quoting the Bible," Fezer said. As it turned out, the creationists were skilled debaters with well-honed lines of argumentation that the scientists could not

immediately counter. By their own admission, the evolutionists were roundly beaten in the minds of the spectators.

When it became apparent that such forums helped sway public opinion, several scientists elected to study the creationist positions and prepare the documentation needed to refute them. They proved successful, winning more and more debates.

"The creationists aren't so interested in debating anymore," Fezer said.

Evolutionists also point to a more concrete victory. The state school board in Texas, a bastion of religious fundamentalism, was declared unconstitutional by the state attorney general and replaced by a board more receptive to the teaching of evolution. The move followed a report critical of the quality of public education in Texas by a commission headed by industrialist Ross Perot.

The new board recently completed its selection of textbooks for use by the state's schools. Of the five biology texts approved, none

offers a word about biblical creation.

"This was a real turnaround," said Wayne Moyer of People for the American Way, a Washington-based organization active in textbook censorship cases. "For the first time, we felt that science was on the inside and creationism was on the outside."

Moyer and Fezer said that although organized creationism is less conspicuous, many of its advocates remain active on local school boards.

Moyer said this pressure was being met by growing numbers of citizen groups protesting textbook censorship to local school boards. Moyer said his organization has more than 120,000 members nationwide.

"All in all, I would say the situation is markedly better than it was just a couple of years ago," he said. "Schools are getting back to teaching science as science."

BOOK REVIEWS

- (40) Rowse doesn't like Russell. From the Wall Street Journal (1/15/76), a review of "The Life of Bertrand Russell" by Ronald W. Clark, "The Tamarisk Tree" by Dora Russell, and "My Father, Bertrand Russell" by Katharine Tait. With thanks to Paul Garwig. Reviewer: A. L. Rowse.

These three books under review give us all, and rather more than all, that one needs to arrive at a proper estimate of the life and work of Bertrand Russell, one of the supposed sages of our time. But why should anyone have supposed him a sage? That is the problem. Why should people have been so ready to follow anyone so obviously erratic, so wrong-headed and irresponsible in every sphere in which he pontificated?

Wherein lay the appeal? That question is easier to answer. Russell had all the appeal of extreme intellectual vivacity, sparkling intelligence and wit, a naughty sense of fun, an irresistible charm for women. He was tremendously good company, never a dull moment with him all his 98 years -- what a record! -- as these witnesses testify. Whatever one thinks of Russell's views and his record, this makes him fascinating to read about.

Mr. Clark's is, in a sense, the official biography based on the immense Russell archive and all the sources -- some 2000 letters to Lady Ottoline Morrell alone -- and yet the interest never flags. Mr. Clark's portrait of the man and narrative of the extraordinary career are fair and reliable: he presents Russell as Oliver Cromwell wished to be painted, "warts and all." The other two books, by Russell's second wife Dora, and their daughter Kate, corroborate the picture. The young Gorton don at Cambridge (Eng.), upon whom Bertie pressed marriage in the hope (fulfilled) of having children, has not always presented a dignified front to the world -- I remember her speaking at Oxford in the last stage of pregnancy -- but her autobiography gives a much better impression: courageous and gallant, generous, full of spirit and spunk. Evidently, from her Bertie got as much as he gave: he met his match. Their daughter's book -- a convert to Christianity, after all -- tells the story of the effect of all this free-thinking, of modernist theorizing about morals and society, upon the progeny in spreading unhappiness, alarm and despondency all around.

One can appreciate the fun and stimulus, even the charm, of Bertie's company, provided one did not have to live with it. But why regard him as a sage, a reliable guide or mentor in regard to anything?

The author of "The Conquest of Happiness" simply created much unhappiness for others. As the second most important woman in his life -- after Ottoline -- his mistress for years, Lady Constance Malletson, wrote: "A man exhausting other men by his intellect; exhausting women by his intensity; wearing out his friends; sucking them dry, passing from person to person, never giving any real happiness -- or finding any." (I hope he found it, all passion spent, in his eighties and nineties.)

The author of guides to "Marriage and Morals," and the education of children, admitted in his autobiography that he had "failed as a parent" and that he was "blinded by theory."

"Anybody could have told me this in advance," he says blithely; there he puts his finger on the source of the trouble -- but of course he would never take telling, he remained as cocksure and arrogant as before, though convicted again and again of having been wrong.

Bertrand Russell is the most outstanding example in our time of the wrong-headedness of doctrinaires and the damage they can do. He was wrong over the first German war -- though he never admitted it -- as his change of front over appeasement and the second German war showed. Of course he was in favor of peace, but why should that have been crowned by a Nobel Prize? We are all in favor of peace, some of us more so than Russell, who advocated a war against Russia, taking advantage of the nuclear bomb at the time, and then said he had forgotten all about it! Why take the political views of such a man seriously?

He was completely wrong about Cuba, as President Kennedy brought home to him: "Your attention might well be directed to the burglars rather than to those who have caught the burglars."

Russell's original reputation was made in mathematical logic and analytical philosophy: he should have stuck to those -- but they did not qualify him as any guide in morals or politics, history or sociology. For one thing, arrogant aristocrat as he was -- as these books bring out -- he did not understand human beings very well. So he was the last person to provide for their well-being -- a mixture of genius and folly, little ordinary common sense.

No philosopher myself, I begin to have my doubts as to the value of the philosophy when Russell himself lays down, "The belief that metaphysics has any bearing on practical affairs, is a proof of logical incapacity." He himself regarded the 10 years that he and Whitehead spent on "Principia Mathematica" as a blind alley, leading nowhere. The philosopher Broad pointed out that Russell changed his philosophy every three years or so. And a young Oxford critic has summed up that Russell left no philosophical masterpiece, "but, instead, umpteen flawed and superseded books."

Then why did they give him a Nobel Prize? I can only suppose from the leftist slant vitiating that award. I can think of far better candidates: Robert Frost and Samuel Eliot Morrison, for poetry and history. Those are at any rate real subjects.

As a Cornishman I cannot but be pleased by the lyrical enthusiasm Russell and his family felt for their

home in Cornwall, by the coast near Land's End. They all have nostalgic descriptions of summer days there, bathing in those paradisaal beaches they had very much to themselves in those days before trippers and coachloads of tourists. All the same it is significant that the Russells never made any real contact with Cornish people or the life of Cornwall going on outside their ken. Somehow, wherever they were, they were outsiders, doctrinaire foreigners, alienated from the common stream of humanity -- yet always prepared to lay down the law about it.

RUSSELL SOCIETY NEWS

No. 46

May 1985

- (1) Highlights. Annual meeting arrangements (31). BR on Schoenman (5). Dyson on East-West tensions (2). Stromberg's Fromkin Lecture (9). Freeman interviews BR, 1959 (10). Olum's good advice (6). The Index is at the end. An asterisk in the left column indicates a request.

ON EAST-WEST RELATIONS

- (2) Dyson on how to get along with the Russians. We think Freeman Dyson is always worth listening to. (For several reviews of his remarkable book, "Weapons and Hope", see RSN42). He was interviewed on TV recently, by Conchita Pierce, on March 24, 1985, over Channel 4 (NYC). This is how it went:

[Today we talk with world-renowned physicist Freeman Dyson, who wrote "Freedom and Hope" because he wanted to discuss the greatest problem now facing mankind, the nuclear arms race, and he wanted to discuss it from a human rather than a technical point of view.

[He's trying to build a communications bridge between those who build and deploy weapons -- he calls them the warriors -- and the rest of us, whom he calls victims. He comes to us today as a combination of warrior and victim. Let's first take the concept of warrior.]

That means of course not just the people in the Pentagon, it also includes a lot of my professional friends at the universities, people who are professionals in arms control, for example, who look on the thing as an intellectual exercise. They're just as much warriors as the soldiers.

[And in looking at it as an intellectual exercise, is it more figures, is it more assured computer readouts?]

No I wouldn't say that. But it is a discipline, and it is part of their culture to talk very coolly and not to get emotional about it.

[In doing that, what do you think they lack?]

Very often of course, these are wonderful people. They've contributed a great deal, but still the world they live in somehow isn't the real world because it's too abstract. So I have great disagreements with them about strategic doctrines, for example, because their doctrines never seem to take into account the reality of the world -- what a messy world it is -- and what different kinds of people there are in it.

[And yet they are part of this world, so why don't they take in the reality?]

Well, it's hard, if you're sitting at the university, and reading books all the time, it's not the same thing as being out there, living it. I am of course interested in these negotiations which are just starting and I'd like first of all just to say, let's not expect anything to happen. It's probably not going to happen. That's not bad. It's important to talk with the Russians whether or not a treaty comes out of it.

[Why do you say, let's not expect anything?]

Because we have to be very patient. Negotiating is always very slow. The best treaty we ever got, since World War II, was the Austrian State Treaty, which most people have never even heard of. To my mind that was much more important than most of these other things that are more famous. The Austrian State Treaty was about people, not about weapons. And it got the Russians out of Austria, and established Austria as a neutral and independent country. The results have been wonderful. Austria has prospered ever since, and Russia has accepted the situation with grace. I find that a triumph. The reason it happened was because we were very patient. The negotiations went on more or less for about ten years, and it was done quietly, without any great fuss, and in the end a very good treaty came out. That's the kind of thing we should hope for. We're not going to have a treaty in a hurry.

[As we are looking at the news in Geneva, what should we watch for? Is it just an exercise in futility? You're not suggesting that.]

No, but if something serious is being done, it has to be done quietly. So we shouldn't expect either side to talk. If they start negotiating in public it means the thing isn't serious. That's been the trouble all along with many of our negotiations. If you start telling the public what you're saying at the table, it means you're not really talking to the people across the table, you're talking to the people back home.

[Do you have a choice when the public clamors so much to know what's happening?]

Yes, you have to learn to hold your tongue and keep quiet. That's something we find difficult. The Russians of course are better at that.

[You've explained the concept of warrior. Now explain the concept of victim, and how that differs, because you want a bridge between the two.]

A victim is somebody who feels the evil of nuclear weapons in her bones. The victims seem to end up being female, though that's not always true. The more effective spokesmen of the anti-nuclear movement are women for some reason or other. I think it's just that somehow they do have a better way of looking at things. It's anyway different. You start from a gut feeling, real total disgust and horror at the idea of nuclear weapons. That's what I mean by being a victim. It's somebody who approaches the thing from a moral point of view rather than from an intellectual point of view.

[You're saying that the warriors who are planning all of this cannot hear the victims.]

They sometimes do but on the whole not. It tends to be a dialog of the deaf. The warriors tune out any kind of emotional language because that's the way they're trained and the way they operate. And the victims tend to tune out the more technical discussions, the real horse-trading that has to go on in international negotiations, because to them that's kind of trivial and sordid, and hasn't anything to do with the real issue. That's a caricature of the two sides, but to some extent it's true.

[You're optimistic that the dialog will open?]

Well, that's one thing that I hope for. I think it has opened to some extent. We've seen in the last few years a definite rise of popular political activists against nuclear weapons, which I find very healthful. It's not only in this country, but it's happened in many other countries too. I think we're seeing a very slow convergence of these two points of view, and what one has to have in the end is a policy that satisfies both.

[You've said that when a real discussion is going on, it's not going to be going on in public.]

Right.

[When you heard the concept of Star Wars, what was your reaction?]

Well, it's a misrepresentation of what President Reagan actually said. What is called the Star Wars program is a research program. It's not anything you can point to and say, this is it. We don't yet know what it is. It's a program for investigation which will be on a long time scale, to find out whether defense against nuclear missiles actually is feasible or not, or what kind of defense is feasible. So the program as it exists is about one-third technical nonsense, about one-third military nonsense, and maybe one-third things that might ultimately make sense. The trouble is, those are things are wrapped up in a fog of secrecy; neither we nor the Russians have a chance to see how little substance there is in much of it.

[Is it arrogance or concern for survival that prompts us to propose it?]

It is a concern for survival, and ...if you actually read what Mr. Reagan said on March 23, 1983, 2 years ago, when he first proposed this program, you can see that moral conviction had a big part in it. He just was horrified, and I think quite rightly, that he might one day be forced into that situation where he has to press the button to exterminate tens of millions of people. He said, isn't there a better way? Isn't there some way we can defend ourselves rather than avenging ourselves? And I think he's right. The moral conviction that he started from I support. The only trouble of course is that the thing has been distorted out of all recognition by the technical people so that it's been presented to the public as a grand, grandiose system of laser battleships and death rays and all kinds of idiotic stuff which makes no sense technically or militarily.

[And yet the technical people are always there. That's one of the problems, isn't it.]

Yes. There are of course, good technical people in the program, and some of the program I think is very good. There's a hard core of stuff which makes sense, mostly ground-based. That's old fashioned rockets, old-fashioned radar, computers and stuff, which in fact might actually work, but of course the real problems are not with the death rays in the sky, the real problems are data processing, target discrimination, rather mundane things. That's where the real guts of the program is.

[Do we try to deal with the Russians in our own image rather than as they really are?]

I don't know if that's true. The only one of the negotiators whom I know is General Rowny. He has a pretty good working contact with Russians. He's been negotiating for quite a long time. I think he understands what Russians are like, he understands them as humans. I wouldn't say that the negotiators are unaware of the human aspects of the thing, after you've negotiated for a few years, of course you understand.

Americans are profoundly ignorant about the rest of the world, particularly about the Soviet Union. They have been through some terrible wars, and other catastrophes, much more than we have. They've learned that you can't calculate what will happen...that war, and peace also, is chaotic and incalculable. But you do survive somehow or other, if you're tough and if you hang on and hang on, you survive, and that, somehow, is very deep in their culture and I think we have to respect that. So they will not ever be happy with our notion of assured destruction, which is very much part of our strategic doctrine, not the whole of our doctrine but part of it. And the idea that we can somehow live in a state of stable equilibrium forever by knowing that we can assuredly destroy the other side if they do something bad is something I don't think the Russians really understand or accept. For them the important thing is survival and I think it always will be. So what they are doing is building whatever weapons they find appropriate to survive, and that of course doesn't look right from our point of view. It's hard to come to any sort of agreement about numbers of weapons as long as we don't have a feeling for the concepts on their side, and they don't have a feeling for the concepts on ours.

[Would communication be better if diplomats played a bigger role?]

I don't know. Hard to tell. Maybe they could do the job. I sometimes have the feeling we would get along better if the soldiers on both sides talked to each other. The soldiers have more in common than the political people. The soldiers understand things sometimes very well. They after all live in the real world. They know what war is like, better than we do. So I don't necessarily think it would be such a bad thing to have them negotiate. General Rowny is an example, as a soldier who negotiates. And most of the Soviet negotiators are in fact military people.

I think I am by many standards a hawk. I do believe that military strength is important. I think nuclear weapons are a very small part of military strength. And in a way the worst thing about these Geneva negotiations is that they are sort of addressed to not very relevant problems. They're addressed to these esoteric questions about numbers of weapons and whether or not you have particular warheads or particular weapons and where they're put, and things of this sort. To my mind those are sort of third rank problems.

First rank problems are, What's the political future of Germany? Couldn't we have a deal about Germany like the deal we had about Austria? That to my mind should be problem No. 1.

[Unified Germany?]

No, I wouldn't unify Germany, I would neutralize Germany. Have 2 neutral states, more or less as they are now, except they don't belong to the alliances, and they don't have nuclear weapons. That would be a magnificent treaty, but we are not going to negotiate that. It's not on the agenda, and won't be for a long time.

What else? I would like to get rid of a great number of nuclear weapons in a more drastic fashion than

anybody's talking about. "Live and let live" is sort of my slogan. It implies — it has something of the Star Wars philosophy in it — that we should try to defend ourselves, but with non-nuclear weapons.

[How optimistic can one be? When the Russians get the SS 20, then we then go into Cruise and Pershing missiles, deploying them in Europe. Because they have the SS18 that can carry 8 to 10 warheads, we feel we must have the MX. It's match for match]

That will always be so. There is always this tit for tat in the arms race. I don't find that so bad. The arms race is in fact grinding to a halt, although people aren't aware of it. We haven't increased the number of weapons substantially in the last 20 years. The Soviet Union has, but that's mostly catching up with us. The way things are now, it's very minor changes that are going on. What is the MX? It's a hundred missiles altogether. It's a small addition to the force. It really doesn't change things in any appreciable fashion, both from a military point of view and from a political point of view — it's a sort of a minor thing. The same is true of the Pershing 2. As far as I'm concerned the Pershing 1 and the Pershing 2 are more or less the same.

The major things directly concern people rather than just weapons. And it concerns who is doing what to whom. I think conversations about weapons are important, but more important are the conversations that go on in the background. For instance, there's a thing called the Joint Consultative Commission which is a joint committee of Americans and Russians that gets together every 6 months to discuss strategic negotiations, particularly to implement the treaties we already have. These discussions are very quiet and on the whole have gone very well. The Russians will only talk on a business-like level if they are sure the thing is going to be kept secret. That kind of thing is more important probably than what goes on in public.

Another thing we ought to be talking about much more is crisis management; setting up things that are more robust than the hotline so that we can deal with each other when we get into a stupid crisis. The most likely ways wars begin is through some local crisis in some part of the world that we haven't been thinking much about....mostly Third world. It could be also in Europe or in Korea or some other place. Anyway we should have some organization in being for getting together with the Soviet Union for sorting things out on a rapid time scale when bad things happen. They've done it very well in the Mediterranean, with the 2 fleets, because in the Mediterranean you have Soviet ships and American ships all the time almost bumping into each other, and they have now worked out a system of traffic control more or less so that when bad things happen, when ships almost collide, when they almost start shooting at each other, the naval officers on the 2 sides actually get together and sort it out.

[Are you comfortable with the President as President?]

Well, that's a complicated question. I don't want to make a political speech, I mean I'm...I happen to agree with him about that [Star Wars]. I disagree with him about lots of other things. The nice thing about the President is that he seems to get what he wants, which is always a great advantage, so that if he did want an arms control treaty, it would almost certainly get through the Senate. I think that's extremely valuable. To have a President who has the political savvy to get a treaty through the Senate and get it ratified is extremely important.

[And for all those who think the President might be wrong?]

Of course he can be wrong. I mean he's wrong about all kinds of things. I think his views about foreign affairs are usually highly unrealistic. Nevertheless if he could get us a treaty, I'd be very grateful.

[If his views about foreign affairs are unrealistic, foreign affairs is not unrelated to concepts of defense and peace.]

Eisenhower was in some ways a very similar character, and he got us a very fine treaty. It was Eisenhower and John Foster Dulles who got us this Austrian State treaty. They were 2 hawks, if ever there were, so just because a person is a hawk, it doesn't mean that they're necessarily wrong.

[If someone were to describe you, if they did not know you, what would they say?]

I'd leave that to other people, I don't want to indulge in any false modesty. I'm a scientist who tries to dabble in politics. That's really all I am.

BR ASSESSED

- (3) Annan on Russell. In his book, "Leslie Stephen. The Godless Victorian", reviewed in the New York Times (12/26/84, p. C22), Noel Annan says this about BR:

Bertrand Russell was the most original British philosopher since Hume and the greatest British logician since Occam, but when he considered moral and social problems he still wrote as if they could be solved by the simple application of reason without a thought for the structure of society and its institutions ... his prose resounded with imprecations against men for behaving irrationally. He wrote as if Max Weber had never lived.

Thank you, PAUL GARWIG.

BR MENTIONED

- (4) Espionage novel. "Bertrand Russell makes a cameo appearance in the espionage novel, The Shadow of the Moth (NY: St. Martin's/Marek) by Ellen Hawkes and Peter Manso. The setting is Bloomsbury, Garsington, London and Paris. I enjoyed reading it," says KEN KORBIN, "but hesitate to strongly recommend it. It was pleasant light reading."

BR ON SCHOENMAN

- (5) The Memorandum. Toward the end of the 1984 BFC documentary, "Bertie and the Bomb," comes an interview with Ralph Schoenman, BR's one-time secretary and general assistant. Schoenman comes through as an intelligent, competent, forceful person — which he no doubt is. Russell, in his Autobiography, tells of Schoenman's many useful and even remarkable achievements in the anti-nuclear and anti-war movements.

There began to be rumors that Russell was old and senile, that Schoenman was manipulating him, that Schoenman was the real author of statements being palmed off as Russell's, etc. Typical of the treatment that Russell received in the American press is the following from the New York Times of May 12, 1967. C. L. Sulzberger is a distinguished foreign affairs reporter, a member of the family that owns the newspaper, and not considered extreme in his views. This appeared on the editorial page:

Foreign Affairs: Corpse on Horseback

By C. L. SULZBERGER

PARIS—If a medieval Moorish king died on the eve of battle, retainers would dress his stiffened corpse, bind it astride a warhorse, and lead it against the enemy to encourage the troops. The system worked well and was adopted by the Spaniards when El Cid fought the Moors.

Now we find the relic of Bertrand Russell, this century's most distinguished philosopher, led into battle as a totem for the extreme left. The charger carrying the 84-year-old logician's intellectual remains is his young friend, an American expatriate named Ralph Schoenman.

Behind the Symbol

The forces marshaling behind this decrepit symbol are headed by Jean-Paul Sartre, famous existentialist. They include Sartre's companion, Simone de Beauvoir, and several mediocrities playing the role of yes men.

This strange cast has just produced a sorry morality play in Stockholm whose purpose was to convict—not try—the United States for war crimes in Vietnam. Of course, the Swedish performance wasn't a "trial" and there was no properly constituted "court." The meaning was propagandistic, not judicial.

The production, adroitly stage-managed by Schoenman in Russell's name, pretended it would examine "evidence" impartially. A Yugoslav member of the "tribunal" Vladimir Dedijer, told the Ljubljana newspaper Vjesnik last September: "The court will also hear witnesses from America: American soldiers who have seen with their own eyes what is going on in Vietnam. . . . This is no mutiny of European intellectuals against America."

This was pretense. Long before proceedings began Sartre, as chief "judge," pronounced the accused guilty by stating there was "only one victim in this war, and that is Ho Chi Minh." The "tribunal" refused to hear several North Vietnamese deserters including a colonel.

It rejected a Swedish lawyer's offer to defend the Americans. It scorned the suggestion that a professor of international law appear as an impartial expert. Two U.S. journalists who had been in Vietnam offered to testify; their credentials were destroyed.

In contrast the "tribunal" invited six North Vietnamese prosecution witnesses, including the President of Hanoi's Supreme Court and a boy said to have been burned by American napalm. President Johnson and Secretary Rusk were personally

insulted. Surprisingly, the Stockholm Government remained silent although it is a Swedish legal offense to affront leaders of governments with which relations are maintained.

The tragedy implicit in this shoddy farce is not accurately represented by Sartre, who has been working his way back to the political east ever since he broke with Moscow over the Hungarian uprising. Nor is the tragedy accurately represented by the nonentities who nodded approval of their existentialist patron. The tragedy comes with Russell himself.

Human Echo Chamber

The great philosopher simply outlived his own conscious ideas and became clay in Schoenman's unscrupulous hands. The man who, two generations ago, wrote "The Practice and Theory of Bolshevism" is now an automaton sounding board for Communist drumbeats. Twenty years ago he wanted Washington to threaten war on Russia if the latter wouldn't agree to internationalize nuclear weapons. After hiring Schoenman he assailed Kennedy and praised Khrushchev during the Cuban missile crisis.

It is pitiable when a hero becomes his own tomb, and in the case of Lord Russell it is not hard to see when the internment

occurred. Schoenman joined him as secretary in 1960. Since then the philosopher has talked like a zombie. He announced that the Warren Commission report "covers its authors with shame."

Invulnerable to the N.L.F.

Douglas Pike, in his stinging book "Viet Cong," writes: "No individual within the Communist bloc or without was of more value to the N.L.F. [political expression of the Vietcong] in its externalization efforts than Bertrand Russell, the British philosopher. . . . That he should have become such an unthinking transmission belt for the most transparent Communist lies. . . . That he should have thrown over all objectivity and accepted on an unsubstantiated basis virtually all statistics and statements supplied him by the N.L.F. is one of the great intellectual tragedies of our times."

This tragedy cannot fairly be laid at the door of the washed peer whose bodily endurance outpaced his brain. Schoenman has simply proved himself an adept operator. Russell is no more accountable for the Stockholm farce enacted in his name than were the dead Moors so accountable for battles they no longer understood but into which their swaying corpses were borne.

BR says: "What I came only gradually to appreciate, what could only emerge with the passage of time, was his difficulty in putting up with opposition, and his astonishingly complete, untouchable self-confidence." (Autobiography III, p. 149)

Russell eventually fired Schoenman.

Because of the gossip and the rumors, Russell wrote a memorandum on Schoenman. Russell did not write it for publication, but to make it available for setting the record straight. It appeared in New Statesman, 11 September 1970 (a few months after BR's death). Here it is, with thanks to HARRY RUJA:

THE RUSSELL MEMORANDUM

(This is the full text of the document which Bertrand Russell dictated and approved two months before his death. It clarifies the history of his relationship with Ralph Schoenman)

I am writing this memorandum concerning Ralph Schoenman, not necessarily for publication, but for reference in case any of my actions in relation to him should be called in question by him or, possibly, by his friends, or by anyone else. In part I am writing it for my own satisfaction since I have been told that he 'has it in writing that I am senile' — the implication being that whatever I now do or say in regard to him is said or done, in reality, by someone else using my name. This is not true. My relations to him have been mine from our first meeting when he came to see me at Plas Penryn towards the end of July 1960, to the time of my letter breaking off relations dated 19 July 1969.

My general analysis of his character is given on page 109 ff. of the Allen and Unwin edition of the third

volume of my autobiography. In it I tried to give my first impressions of him, both pro and con, and to indicate what I later discovered. In the first draft of this analysis I was somewhat more adversely outspoken than in the published version, which I toned down partly to avoid both the possibility of libel and the difficulties of recriminations and long-winded 'evidence' and 'defense', and partly because I did not wish to injure him in any way or his position in working for causes that seem to me to be just.

I had said in the first draft that I found him 'surprisingly unlicked'. I found him not only impetuous but 'aggressive and entirely undisciplined and I realized that these characteristics might well make him seem a "dangerous young man".' as I had been warned that he was, 'to anyone of whom he did not approve.' I early recognized his lively instinct for self-dramatisation, his swashbuckling assumption of the importance of his own role at the centre of the stage. His conviction of the unshakeable belief in the penetration and breadth of his understanding were obvious. I did not for some time, however, grasp the closely related characteristic of his utter incapability of imparting reliable information. His reports of people's reactions and his observations were — and unfortunately, I fear, still are — very often excessively and misleadingly incorrect and his quotations must always be verified. I was impressed by his courage, both moral and physical although it too often flouted necessary caution and resulted in unnecessary provocation. And I was impressed by his generosity in helping anyone of whom he thought well or thought to be suffering injustice, although it often led to useless waste of effort and money, both of which might have been far more advantageously spent.

Were I to list his kindnesses to me, the list would be very long and would include many generous deeds that must have cost him dear in worry and work. I found the quickness of his mind, although it made for considerable superficiality and glibness, immensely refreshing, as I did his sense of fun and absurdity and irony, although this often created difficulty, unrestrained as it was by any sense of decorum. In fact, in a world made up largely of people who act, if at all, only on second or more thoughts and guard themselves well with subsidiary clauses, his companionship was as welcome as a delicious fresh breeze on a muggy day. The drawbacks and faults that I found were, I both hoped and thought, such as would be tempered, even erased, by time and experience. They seemed to me to be the outcome of his prodigious driving energy. I underestimated because, certainly in the early years of our acquaintance, it was rarely shown in my presence, the extreme irritability that sometimes accompanies such quick energy. Only after considerable time did I come to appreciate, as I said in the first draft of my autobiography, 'the essential intolerance of opposition and the ruthlessness of his rush towards whatever happened to be his immediate objective'. I did not understand in him at first 'the ascendancy of the ego over intelligence' which has prevented him from profiting by his experience or his recognized mistakes. He has not grown up — only grown older and more rigidly confirmed in all his characteristics. He has amassed a great deal of experience, but it remains a mass of experience. The pattern of his thought and attitude and action remains the same. I have had occasion to call his attention to this fact increasingly often. He himself sometimes alluded to it in deference to my criticisms.

To the admirable obverse of Ralph's characteristics there is always the reverse to be feared. His optimism, for instance, is invaluable. It permits him to see the practicability of ideas that anyone less hopeful would not even attempt to carry out and to inspire others to work for these ideas. His persistent determination to justify his optimism supports him through setbacks that would discourage most people. But these qualities, so admirable in some respects, are disastrous in other ways. They are in large part responsible for his marked tendency to act as if gestures of support and half-hearted promises of financial help are firm promises which will be confirmed and to count upon them as if they were already confirmed. They are also in large part responsible for his firm belief that if he but tries long and hard enough he can extract support from even the most reluctant target. This, in turn, led to his prolonging the many travels and visits that he made on my behalf or on that of the Foundation to twice, or much more, the length that they had been planned to take. And, in its turn, this extension of his term of absence from my or the Foundation's daily work has left his colleagues to carry on activities that he began but of which he had not fully informed them because he expected to return in time to deal with them himself. Moreover, as he moved about with speed and often with no prior notification to his colleagues, it was impossible to obtain information from him quickly, if at all. As his journeys became more and more frequent during the years that he was working for the Foundation he became more and more difficult to work with. And the fact that the 'promises' and 'important things' that he was accomplishing so seldom bore observable fruit, tended to bewilder and dismay and ultimately discourage his colleagues.

Linked to, and perhaps causing, this failure to bring promises and schemes to fruition is his failure to retain the respect or liking of most of those with whom he has had any sort of protracted relationship. He has drawn many people into the work of the Foundation. He has inspired many others, some of them of public distinction, to see the work of the Foundation, as I do, as potentially important to the world. But those who have been drawn in gradually drop out or, because they are led to emulate his extravagances, have had to be sacked. Often after several meetings with those who at first were ready to help us he has lost their sympathy by his importunities and exaggerations, arrogance and bad manners.

His self assurance, which enabled him to carry through transactions that would have been impossible without it, also permitted disastrous displays of tactlessness and offensive importunities. These displays were increased by the limelight shed upon our part in the Cuban affair. It inflated his ego more than I at the time realised. When, for instance, he went to China, on my behalf at the end of 1962, or the beginning of 1963, he took it upon himself to teach the Chinese whom he met the folly, as he considered it, of the moralities and customs inculcated by their Government. At the first interview given to him and his companion by Premier Chou En-lai they were received most courteously and the Premier was friendly and helpful. At their second interview they were received coldly and severely chided for their behavior and tactless indiscretions while in China. As their sponsor, naturally, I was rendered suspect. To my distress and to the grave embarrassment of our work I have never been able to recover the warmth and friendliness formerly accorded me by the Chinese Government.

On the other hand, it was necessary to balance against Ralph's infamous folly in China the fact that he had gone there bearing a message from Nehru which might have provided a way out of the entanglements of the Sino-Indian Border Dispute. Against great odds, he and his companion had managed to reach Nehru and obtain this message from him. And they had also obtained the backing of Mrs. Bandaranaike, then Prime Minister of Ceylon. No one else, I believe, would have done this. No one else would have believed in the possibility of doing it or had the persistence and hardihood to achieve it. It provides an obvious example of the dichotomy of Ralph's work, admirable up to a point, but finally ruined by impetuous egotistical folly.

Discourteous Stupidity

Again, I remember that on one of his visits to Israel for me he was given an interview by the Prime Minister, Ben Gurion. He took it upon himself to lecture the Prime Minister on his and the Israeli Government's shortcomings, a lecture naturally resented by its recipient. He told me of this, as he told me of the Chinese episode, upon his return and I pointed out that I thought he had been greatly at fault. He agreed with me. I optimistically believed that he would not repeat these quite uncalled-for rude provocations.

The lack of good manners was obvious both in very important matters such as I have just recounted and in small daily give and take. Discipline was abhorrent to Ralph and he revolted from it instinctively, whether it was administered from without or was recognisably called for from within. No rudeness to someone of whom he disapproved was flinched from by him. No engagement for a fixed time, whether made with an elderly or distinguished pundit or one of his friends could be kept on time. He was unable to restrain himself from taking over the conversation if it seemed to be going as he did not wish. Sometimes this was extremely unfortunate. I remember two occasions in particular when this happened. Once when an old friend, with whom I had worked closely and had had many vehement discussions, came to see me concerning our joint work and disagreed with me, Ralph drew the unhappy impression that I was being brow-beaten and not being treated with due deference. Finally, my friend remarked angrily that he had come to see me and not to see Ralph. In the end, I had to ask Ralph to leave us. On another occasion, Ralph believed that I did not hear correctly what was being said by an American acquaintance. He undertook to reply, himself, to all questions put to me until my acquaintance, like my friend, pointed out that the questions were addressed to me. Both these unwarranted intrusions caused considerable trouble. In spite of my remonstrances, I do not think Ralph ever understood the discourteous stupidities of which he had been guilty. The basis of them was perhaps the amiable one, from my point of view, of a wish to protect me, a wish that sometimes led him into fulsome follies or worse, as it did at the end of my speech at the London School of Economics in February 1965. The wish sprang, I still think, at least in part from a genuine affection for me, and, possibly, admiration, as did his other fulsome flatteries. I am by no means immune to flattery. It is so rare as to be sweet in my ears. But if it is very obvious, it can only be irritating and embarrassing. And his was too often so obvious as to make me feel a fool. At first I thought that this was the result of sincere feeling and of his desire to please me, but later I realised that it was also an indirect way of inflating his own ego. On all occasions he used my reputation and any weight that my name might carry to support his own views. And he had a vastly inflated opinion of my importance.

Ralph could not, of course, resist the limelight, even in small and silly ways, and even against my expressed wishes. Towards the end of June 1965, a lobby against our government's support of U.S. policy in Vietnam was held in the House of Commons. Ralph wished me to attend it. I did not want to do so, as it seemed that my views on the Vietnamese War were very well known and that there were plenty of others who would attend the lobby. Finally, however, I gave way to his pleas on condition that, since it was a very serious occasion, I should go quietly and as one of many. Ralph acceded to this condition. When, however, we reached the House of Commons, he produced a large sign that he insisted my being photographed holding. He then proceeded, like a monkey on a stick, to climb all over the motor car in which we had driven up in order to flout the police — I forget now how and why. It was all quite foolish and undignified, and I was ashamed. Again, after his ostracism by the British Government, he appeared here — his last visit — done up in a preposterous 'disguise' late one evening. It did not occur to him that in doing so he was exposing me to the charge and penalties of harbouring someone forbidden entry to Britain. He simply could not resist flamboyant showing off.

Telegram to Khrushchev

It was after the Cuban crisis that I began to see more clearly than I had done the effect of the reverse side of Ralph's good qualities. He found himself at that time at the centre of the events in which I took part and have related in my book Unarmed Victory and came to regard himself as having been indispensable to me at the time. Perhaps he was. Perhaps I should never have sent the telegram that gave Khrushchev an opportunity to send his open letter of withdrawal had it not been for Ralph's encouragement and work or for the telegram that he sent to Khrushchev for me in the early hours of 26 October 1962. By well after midnight I had become very tired by the stress of the day. I went to bed after a long discussion with Ralph and after arranging what might be done in various eventualities. I exacted a promise from him that he would wake me if anything further transpired before breakfast. He did not wake me, but woke my wife to obtain her backing in sending a further telegram to Khrushchev, the possibility of which we had discussed. It was sent, and when I woke, I approved of its having been sent. It did not occur to me that Ralph had done more than a good secretary should have been expected to do in the circumstances. I did not know until considerably later that he was most indiscreetly and inaccurately putting it about, or perhaps allowing it to be put about, that the correspondence at that time was all initiated and accomplished by him. At first I did not believe this of him, but reports coming through the years giving chapter and verse concerning this and similar indiscretions have convinced me that he is not to be trusted where his ego is concerned. I am now forced to believe that he has made it incorrectly evident that he, or to a lesser extent, others have been entirely responsible for various writings and statements published by me since our acquaintance began. Whether he has ever claimed to have written Unarmed Victory or not, I do not know. He was out of the country at the time of its writing and, when he returned to London, I

asked him to verify and supply certain facts that I needed. In reply he sent me a long account of the whole affair from his point of view, a book, which he had written. My wife and I spent a day in concentrated search for the few facts that I needed. It was the culmination of his tendency to write full length reports of his impressions instead of the factual notes required of him. Since that egregious performance, he has improved in this respect, in regard to my work at any rate. For my answer to the charge that anyone else, other than I, has written my letters or publications or opened and replied to letters from my correspondents see Page 164 of the Allen and Unwin edition of Volume III of my autobiography.

Ruining my Reputation

Complaints, all couched as jokes, came to me in the early days as often as might be expected from the people upholding our civil disobedience work. Ralph would, they said, try to bully them into doing what he thought right by saying that he was speaking as my secretary and voicing my wishes. This, I gather, moved them less than he thought it should. Not till the year following the establishing of the Foundation did I receive serious complaints of him save from people who did not in any case like what we were trying to do. Always, when any complaints of him came to my notice, I discussed them with him and more often than not he admitted them, promising reform and thereafter referring to my criticisms and his determination to defer to them.

After the establishment of the Foundation in September 1963, however, the unfortunate traits of which I have spoken became steadily more marked. I began to receive serious complaints from his colleagues and others who were sympathetic to our work. At the end of January, 1964, two of his colleagues called upon me at Plas Penrhyn to beg me to expel him from his position in the Foundation as my secretary. They spoke for themselves and three other colleagues. Their charges had three main bases: (1) that Ralph was ruining my reputation by telling people that he was responsible for what purported to be my work; (2) that he was playing fast and loose with funds obtained on the ground that they were to be used for my work for peace; (3) that his attitude was dictatorial and his intolerance of opposition intolerable. For these charges they presented chapter and verse. I asked the two who had come to see me and the other three colleagues to put their charges in writing. They did so, and with their letters gave me some precise knowledge that I had not before possessed. I was grateful to them for troubling to do this. Neither they nor any of Ralph's other associates in the work had, up to this time, made to me any serious or precise complaints. When asked why not, they all said, in various ways, they had not wished to distress me. They did not seem to realise that by delaying they had put me into a very false position and one that would inevitably harm our work if and when I tried to extricate myself from it. They had hinted at dissatisfactions but had never given me any information with which to face Ralph. I could now, and did tackle Ralph about the matters that they had brought up. He either denied the charges and the evidence for them in toto or explained what the 'evidence really sprang from'. In view of his rebuttal of the charges, his promise to reform in one case (the charge of wasting money and energy on ill-planned journeys) and, especially, the fact admitted by all his colleagues, that there was no one else who could take his place and carry on his work, I did not repudiate him. Moreover, I had strong reasons to doubt the reliability and even the capability of most of the complainers. I now suspect that these 'reasons' may have been carefully provided by Ralph himself! The most reliable and capable of Ralph's colleagues were unwilling at that time to bear the unpleasant consequences of plain speaking, although later they were driven to do so. Their reluctance has done great harm both to me and, what is worse, to our work.

Ralph's Uproar

Among the first serious complaints that I received from anyone not working with us followed the Peace Conference at Helsinki in July 1965. On July 15 I received a telegram signed by the 'Delegation of Federal Republic of Germany' saying: 'Speech of your personal representative caused uproar. Strongly rejected by audience. Tremendous provocation of Peace Congress. Bertrand Russell Peace Foundation discredited. Essential you dissociate yourself from Schoenman and his speech. Friendly greetings.' (The stops, absent in the telegram, are added by me.) Needless to say, I was exceedingly disturbed by this. As I knew nothing of what had gone on at the Congress, however, I felt that I must await further news and, especially, Ralph's version of the matter, before taking any action. Following the Conference, I received many conflicting reports. Towards the end of July I replied to one correspondent:

Thank you for your letter of 26 July and its enclosure. It was kind of you to write expostulating with me directly about the difficulties at Helsinki. As I was not there, I find it hard to straighten out the conflicting reports that have come to me. The statement that you enclose (which she said in her letter was the speech which caused a great deal of disturbance) was a message from me. From all that I can gather I make out: that it was not this message but a later speech by Mr. Schoenman that caused the difficulty. At any rate, the final resolution adopted by the Congress seems to me admirable — but not the first that they adopted after the first meeting. It seems to me just possible that strong obstructionist methods were needed to make the change between the first and the final resolution possible. If so, I am glad that they were taken, though I am sorry that the Foundation has to bear the burden of the disapproval of some of the delegates. As to whether the same end could have been achieved by another and more acceptable manner, I should think probably it could have been, but I was not there, I repeat, in the heat of conflicting points of view. I am glad that you found the Conference a success from many points of view.

From this reply, it may be understood how tangled, apparently prejudiced, and often mistaken the criticisms were. Those who upheld Ralph's action were hardly clearer. What I made of it all at the time, the above letter indicates. Moreover, as I have said above, the resolution of which I approved was adopted by the Conference after, and not before Ralph's uproar and was probably owing to it.

A month later, a woman scientist, who had done very commendable work in Britain for international peace, wrote to my wife criticising Ralph's actions at the Conference very severely. She had not herself been present and

based her remarks upon those of a delegate who did not himself complain to me. All these criticism I took up with Ralph when he returned. He replied that he had gone to Helsinki not only as my representative but also as an appointed delegate in his own right. He said that, apart from reading my message, he had made it clear that he was acting and speaking not as my representative but as himself. He was 'convinced' — a favorite word of his — that had he not acted and spoken as he did, the Chinese delegates would have had short shrift. He was convinced that the Conference had been rigged by the Americans against the Chinese. It seemed to me, as I told him, that even if this were so, he might have achieved his end by restraining his temper and being very much more tactful and quiet. He agreed reluctantly that possibly this was so and that he would try not to commit such impetuous and provocative errors again.

A few weeks later I received a long letter from a friend, who had also been a delegate at Helsinki, describing Ralph's actions and describing how fantastic and fanatical they had appeared to be and, consequently, how harmful to our work. They destroyed, she said, much goodwill towards it and achieved only an immediate and Pyrrhic victory for Ralph's point of view. Again I discussed these matters with Ralph, pointing out clearly that, while the end that he had wished to achieve might have been praiseworthy, his methods of achieving it had been altogether deplorable. He countered by saying that no other methods would have been effective. I disagreed. He promised again to be less violent and ill-mannered in future.

Is Russell Senile?

I received a long letter from this same friend a year later. She had been in London for six weeks, during which time, she said, no fewer than 26 people, all of whom were sympathetic to my own work, had remarked on the way in which my 'image was being tarnished' and my friends alienated by 'Ralph's unfortunately arrogant personality plus attitudes and methods which are all too often open to question, I am told, from the standpoint of ethics'. These people had asked: 'What is the hold this man has over Russell? Is Russell now senile and unable to make his own decisions and so is accepting whatever is put before him? How is it Ralph seems to overrule Russell to continue doing the things Russell himself has personally repudiated?' To my request for specific facts backing up these charges, I received no reply and they continued to seem quite unreal to me.

A month or two later in this same year, I received a letter of resignation from one of the Directors of the Foundation. In it he said:

My sympathies and engagement in your work and the aims of the Foundation are what they always were. I feel as strongly about the war in Vietnam as ever. I think that the Bertrand Russell Peace Foundation with the extraordinary example of your life and work could become the most important independent intellectual force in the world today.

The reason for my resignation is personal. I feel that Ralph Schoenman has captured the Foundation and turned it into a monolithic expression of his own limited interests and abilities.

Before my resignation becomes official, I would strongly urge that an independent group examine Mr. Schoenman's competence to continue further his sole leadership of the Foundation. I also feel that an independent group of accountants should make a report to the board of directors concerning both income and disbursement over the last three years.

Believe me, Lord and Lady Russell, that resigning at this moment is painful. I also find it painful to be unable to conclude the film about you which I have begun. I have notified Schoenman of this on four separate occasions in writing. I believe that the raw materials of the film, as now unedited, is of great value. As of today, Schoenman has not answered any of my letters concerning its disposition. I feel that it is improper for me to continue physical ownership of the negative and film. Will you be kind enough to let me know what should be done with it.

Auditing the Accounts

I should at that time willingly have consulted accountants and an independent group of individuals as to Ralph's administration of funds and general competence. But where could I find such a group? As to the matter of the film, Ralph and his colleagues told quite a different story from that told above. We were finding it difficult to extract the film from its maker in spite of many letters to him asking to have it sent to the Foundation.

Until that time, though I had received other complaints, few had given me precise information that could not [be], and was not, explained away by Ralph. A good example, and a very nice letter of this sort, came from a young man unknown to me in May, 1967:

I have an unusual letter to write, so may I in advance beg your patience and forgiveness.

I have been engaged in the activities of the Hampstead CND and the Camden Committee for Peace in Vietnam during the past two years, and more recently, Hampstead Labour Party.

Inside and outside committees I have met a great many people holding a great many views, although naturally almost all fall within that part of the spectrum called the Left. I have found however two things that almost everybody has in common, one is a profound respect for you, the other is dislike of Ralph Schoenman.

I certainly have no doubts concerning his dedication to your work. It is his public presentation that is in question. I wish I could give you specific examples of what I mean but this is very difficult. There is a certain conceit, a certain unwarranted hostility towards people that goes ill with his position. My impression of Mr. Schoenman is general, as are the impressions of most people, but such as it is, it is a bad one. I would not presume to write to you thus were I alone in this feeling.

I am vague on the cause, perhaps I can better illustrate the effect. I have a friend who holds a very responsible position, has a most pleasant disposition, and excellent opinions. I remarked to him on the photograph of you on your veranda in the "Observer" earlier this year. He agreed with me, an excellent picture, but added that Ralph Schoenman was probably just out of sight propping you up. He was half in jest, but others make similar remarks, and are serious. The spite or cynicism of such remarks is not directed at you but at Mr. Schoenman.

My purpose is to bring to your attention something that I find very disheartening. Had I not met many other persons who share my opinion, I would not presume to write to you.

I must say I intend no harm or calumny to Mr. Schoenman, but knowing how widespread my feeling is, I think it has to be of some importance.

I hope you will not think me impertinent for I am, sir, with the greatest respect, yours most faithfully.

Such generous and obviously sincere criticisms as the foregoing were extremely disturbing and carried entire conviction. But it was quite impossible to make Ralph understand them. His reply was to the effect that anyone who worked with energy for the ends that I desired would be more than likely to incur such criticism. And it seemed to me that there was a good deal of truth in this reply. I could only beg Ralph to be gentler and more tolerant in his presentation of our views and beliefs.

Display of Egoism

As I watched the development of the War Crimes Tribunal in 1967 doubt became even stronger in my mind. Ralph was appointed Secretary General of this Tribunal. I watched his doings with greater objectivity than I had been able to do formerly since he was acting, not as my secretary or representative, but as an executive of an organisation which I entirely supported though in the running of which I took no active part. I had been increasingly aware for some time that, though Ralph was invaluable in developing an idea to the point of practicability, he was disastrous to that idea when he attempted, himself, to carry it out. This belief was confirmed by his actions as Secretary General and by the unnecessary quarrels and muddles largely created, I understood, by him. Again, the dichotomy was visible: it is quite possible that the Tribunal would never have got off the ground had it not been for his intense efforts; but had his efforts been accompanied by even a little restraint and considered planning and with less provocation to those who did not approve of his methods or of the Tribunal itself, the latter might have accomplished as great — and it was great — a work as it did with far less cost in human frustration and futile work as well as in money.

I felt that his display of egoism and flouting of advice, especially of advice given by his colleagues, at this time and in the following months when he flew about the world, as it seemed to me, heedlessly, rendered him only a liability to the Foundation. But the Foundation had become, in November 1966, a limited company. The change had my entire approval. The company was administered by directors of whom I was not one. I had no executive position in it. It was, consequently, no part of my business to retain or to dismiss Ralph except as my secretary. And he ceased to be my secretary in 1966.

I felt that Ralph should be dismissed from the Foundation. I had for some time insisted that he should not speak either as my secretary or my representative except on such occasions as we had specifically agreed that he should do so. I reiterated this in a letter in 1966. He assured me that he honoured this decision of mine. I constantly heard and read of his having made pronouncements as my secretary or representative. He pointed out that this was not his fault, that in spite of his denials, others took it for granted that he was still my secretary. Perhaps this was true. In any case I could do no more than urge him to make it very clear that he was not speaking or acting for me. I felt that I might or might not agree with what he said or did. I wrote to him in 1967 on this subject in categorical terms such as I had used only in speech theretofore.

The Directors of the Foundation company were not even yet fully convinced that he could no longer be useful to the work and was harming it. I had frequent discussions with some of them about the matter. They appeared to feel that it would make their position as colleagues of Ralph more difficult were I myself to break with him. They feared also, I learned, that if I did so, he would retaliate in ways that would not only hurt my feelings but would harm my work. I did not know at this time that this was one, and perhaps the chief, of their reasons for their cooler than lukewarm reception to my wish to break with him. Nevertheless, I now think I should have broken with him several years ago. Instead, I temporised. I made a grave tactical mistake: in my desire to put my attitude towards him and my criticisms quite clearly before him and yet in no way harm the efficiency of his work as the directors had made me feel I might do, I agreed with my wife that she should make the criticisms to him in my presence and that I would merely agree with them. It was a foolish plan. Unfortunately, his assurance was such that he took refuge in the belief that my wife was persuading me to oppose and mistrust him. I soon realised that all I was doing by this roundabout method was confirming in him the very characteristics that I most deplored. When, in 1969, I learned of what I had not suspected hitherto, that, consciously or, again, through over-optimism he was indulging on behalf of the Foundation in what can only be termed dishonest means of accumulating funds for his work. I could no longer continue to support him in any way.

Financial Unscrupulousness

He was without authority, selling the rights of books, refusing to send on funds owing to the Foundation in London, attempting to divert funds payable to it from the sale of my archives, insisting that English tax laws be flouted, and employing other such discreditable means. Perhaps I should have recognised this tendency towards financial unscrupulousness in Ralph earlier, for I had had occasion to remonstrate with him a number of times when it seemed to me that he was sailing very close to the wind. For instance, he arranged with the editor of one journal to pay a certain sum for the right to publish statements and articles by me hitherto unpublished. He then sent these articles and we received the money for them. But he sent them to other journals which occasionally, owing to their dates of appearance, published them before the editor with whom we had made the original contract could get them out. Naturally, this editor was angry. And so was I. I quarrelled with Ralph about it, but failed to convince him. At the time I felt I had to support Ralph. I now feel I was mistaken in this.

During the past two years, since he has been forbidden entrance to Britain, he seems to have been attempting to carry out his ideas without reference to the advice and needs of his colleagues in the Foundation. Certainly he has flouted my criticisms, paying no attention to them save to pronounce them all biased. His actions have reinforced the confirmation that the War Crimes Tribunal has given to my belief as to where his value lay when he was still valuable. But his actions since 1967 have become so egregious that he appears to me no longer to have any value in carrying on the work that I believe the Foundation to be engaged in and which I think should be done. It is for his colleagues to give the facts of their difficulties in working with him. My own reasons for breaking with him I have tried to make clear in this memorandum and to indicate to a slight degree in my autobiography. I have given them directly to Ralph himself in the past, especially on the few occasions when he has visited me here in the last three or four years. I have referred to them in my last letters to him, copies of which I think are in my files along with other correspondence addressed to me by him and others. I am particularly sorry to have had to make this open breach with Ralph because I fear that it will distress his parents whom I both like and respect — unless of course they can take refuge in the belief that I have been persuaded, or even forced, to make it by my wife and the other wicked people who surround me.

Definitive Break

The question of cardinal importance that has been put to me is why I did not break with him earlier. I did not do so because, until the last few years, he was the only person who could and would carry out the work that I thought should be done. The balance of his accomplishments over his drawbacks has only gradually been reversed. His faults and mistakes were of less importance than his ability to turn vision into practicable effect and his courage and optimism in carrying out our ideas. When, sometime after the Cuban debacle, he finally took the bit in his teeth and later careered away unrestrained as Secretary General of the War Crimes Tribunal, I became increasingly doubtful of his usefulness to the work and remonstrated with him both frequently and severely. Since his methods, however, have become importunately open to question and, consequently, intolerable, during the last two years, and during the last year can only be termed dishonest, I have felt it necessary to make a definitive break with him.

I did this in my letter to him of July 1969, to which I received no reply. Towards the end of November 1969, I was obliged to write again in an endeavor to extract an undertaking that he would cease using my name or my wife's as he has been doing to support his own work. And in the past few days, I have found it necessary to prepare a public statement of repudiation, since I must, if possible, dissociate myself and my wife from all Ralph's actions in the minds of all men who will listen.

Russell

Postscript:

Had I seen the letter which Ralph wrote to two of his co-directors on 29 June 1968, earlier, I would have unhesitatingly broken definitely with him at once. But I was not shown this until late in November 1969. It is a preposterous document. But in it he presents his point of view on our association at length. It therefore deserves examination. In it he objects to what I said of him in my autobiography on the ground that it is 'a betrayal of all the years I have devoted to the Foundation and to Bertie, years in which I have worked flat out and at the risk of life for twenty hours a day'. Possibly he is referring to the first draft of my autobiography. I was, and still am, unaware of any occasion upon which he risked his life either for my sake or that of the foundation. If he is referring to his travels in Africa, the dangerous part of those were made without authorisation from either me or the Foundation. The same is true if he is referring to his second journey to Bolivia where he got himself imprisoned and shot at. In both cases, he was begged to return to London or to stay in London as he had been away many weeks longer than had been intended and all the work of the Foundation was held up by efforts to straighten out what he had begun and abandoned. Much of the rest of his letter, three closely typed pages, is a diatribe against my wife who, he states, has been waging a campaign against him. In the course of this he utters nonsense, saying that 'she has tried to deny me help of the Foundation when I have been in prison or in need of assistance to recover my passport. She has manoeuvred to prevent my return to Britain and when I did return she put out a vicious Press statement dissociating Bertie from me which only a miracle prevented the bourgeois press from blowing up into a major scandal'. All this is, of course, untrue. She has often helped Ralph and would have helped him in prison had there been anything that she could have done for him. She has never put out a Press statement of any sort, vicious or otherwise. Moreover, he says that 'she has harassed and bullied and tormented Bertie to secure his acquiescence in her efforts'. I have never been bullied or harassed or tormented by her. The idea is ludicrous. And in point of fact, she felt optimistic about Ralph for a longer time than I did. Ralph thinks that it was she who made me demand that he should not be my secretary. The muted and barely existent public

support of Bertie for me when I have been in grave danger and now banned from Britain' is owing to her. And her nefarious actions culminate in 'harmful' remarks that I make about him in my autobiography. I had been under the impression that I had helped Ralph as much as I could and I do not think that I have been ungenerous to him in my autobiography.

There follows in this letter a long, very revealing paragraph. He sums it up in the introductory sentence: 'the truth is that every major political initiative that has borne the name of Bertrand Russell since 1960 has been my work in thought and deed.' He continues, naming what he considers these major political initiatives. To all this he says I have agreed enthusiastically. I have referred to my wife's evil campaign against him 'with anguish', assuring, even crying. This is entirely the figment of his imagination. He himself, he says, has been 'trapped in the dilemma of not tearing him (that is me) apart by fighting Edith'.

I should ask Ralph to reflect on his own past speeches concerning the duties of a good secretary. And also upon the number of times that I have urged him to work and to publish in his own name. Further, I should ask him to compare the paragraph about my wife on page 5 (Allen and Unwin edition) in the preface written by him in the book which he edited entitled Philosopher of the Century. It was first published in 1967. I entirely subscribe to what he says in that paragraph, as does my wife. But I should think that the change that he finds to have taken place in one year, 1967-8, would seem even to Ralph to be unlikely. I suppose that he has invented my wife's campaign as a face-saving device against my criticisms. There is no slightest danger, and never has been, of my being torn apart by conflicts between my wife and Ralph.

This letter leaves me with the impression that Ralph must be well established in megalomania. The truth is, I suppose, that I have never taken Ralph as seriously as he liked to think I did. I was fond of him in the early years. But I never looked upon him as a man of parts and weight and much individual importance.

NUCLEAR AFFAIRS

- (6) Don't let the experts intimidate you! Don't get snowed by technical talk...numbers of missiles, numbers of warheads, delivery systems, first strikes, hardened silos, SS20s, Minutemen, Midgetmen, etc., etc., etc.

That's the message from Dr. Paul Olum, who worked on the Manhattan Project in Los Alamos, and is now President of the University of Oregon:

You don't need to know all the technical details to be informed. I think you know enough when you know that two of our nuclear submarines will carry 480 warheads and there are only 200 Russian cities over 100,000. If we wanted to aim them at cities we could destroy all their cities with two of our nuclear submarines which are mobile and essentially invulnerable. We do have overkill...It seems to me, the information you need you have. You don't need all the technical details.

This remark was made during an excellent Phil Donahue show, in December 1984. The participants -- Dr. Olum, Herbert York, and Peter Weyden -- discussed Weyden's new book, "Day One", about the building of the first atom bomb.

NEWS ABOUT MEMBERS

- (7) Walt Coker is attempting to put together a book on Bertrand Russell and A. S. Neill as models of progressive educators. He would like to correspond about research for this project. PO Box 3164, Scottsdale, AZ 85257

- (8) George Kaye has been reading "The Lost Half-Century", an essay (in "A Hoard for Winter", Columbia University Press, 1962) by Dean Emeritus Virginia Gildersleeve of Barnard "which sadly notes that nearly all books and newspapers printed in America...are on paper whose chemical composition dooms [them] to disintegration within 20 to 100 years. [She] regretfully contrasts their passing with some of her treasured volumes printed in the 16th Century, and even the recently found Dead Sea scrolls from 2000 years ago. To whom can we entrust the selection of what shall survive, she asks.

"The question assumes the existence of something worth preserving...Consider all the wasted words that wend their way to the printer. Do they deserve a second chance...?"

"...our best current hope is the chemical decomposition of paper. What we need is a law requiring that all other laws be written on paper guaranteed to last no more than 2 years, or at most 5. [And the same for] newspapers, magazines, best-selling fiction, etc., etc." [Except, of course, certain newsletters. Ed.]

BR CELEBRATED

(9)

The Morris Fromkin Memorial Lecture, was given by ROLAND N. STROMBERG at the University of Wisconsin-Milwaukee on November 4, 1981. We present it here ... but without the 8 1/2 pages of footnotes, which we will lend on request. We show where the footnotes belong: (*1) indicates Footnote 1, (*2) indicates Footnote 2, etc.

A man who lived 98 years, who wrote some 75 books and several thousand articles, as well as 50,000 or so letters (*1), who has frequently been called the philosopher of the century, or the twentieth century Voltaire, whose range extended from The Principles of Mathematics and Outline of Philosophy through Power and Authority and the Individual to Marriage and Morals and The Conquest of Happiness was truly a philosopher in every sense of the word. But he was also historian, journalist, educationalist, religious controversialist and, of course, especially relevant for our purposes, reformer, social critic, political gadfly. He was a man, too, who lived a most interesting life, whether we consider the four marriages, the several other major love affairs, and how this private life intertwined in fascinating ways with his creative life and his varied intellectual concerns; or whether we think about the man who especially in his later years became a sort of independent world power, firing off letters to world leaders (Krushchev, Kennedy, U Thant) at every international crisis — and getting replies.

My topic as accepted by the Fromkin Lecture Committee proposed to use this extraordinary person as a means to the definition or clarification of the meaning of "social justice and human rights," the Fromkin theme, especially with reference to his extensive American experiences. The Fromkin Lectures on the theme of Social Justice and Human Rights in the United States (*2), though they have discussed many interesting subjects have never, during the dozen years of their existence, addressed the question of the meaning of the term social Justice, I hoped to fill this gap. Not by an abstract formal analysis, but rather, as befits a historian, by looking specifically at a philosopher and activist who — a pure philosopher of the highest quality and significance — also addressed himself copiously to social and political issues; and who moreover involved himself actively in many political causes throughout his life. It seemed a plausible goal. I do not know whether I have been able to reach it. But I have had fun — a tribute to the compelling vitality of Bertrand Russell, which makes studying him an exciting adventure.

The extent of Russell's political/social interests is revealed by the number of his non-philosophical writings, which became more dominant as his life wore on. Of his first ten published volumes, nine were philosophical or mathematical. But of the next 64, only 12 were of this sort. Analysis of his books by content reveals that roughly a third were on philosophical or scientific subjects, another third political, social, or economic; the remaining third belong to a miscellany that includes of course religion and autobiography (he loved to write about himself, to an extent that may justify Virginia Woolf's description of him as a "fervid egotist" (*3)); also two volumes of short stories, and historical writings. (Russell valued history highly and wrote it well if with a certain Voltairian carelessness about mere fact: a characteristic citation ran "I remember reading this once in a book which I hope was accurate"! "On the Value of Scepticism," 1947.)

Russell's interest in politics and social or economic issues actually goes back to his earliest years. He said that but for the accident of obtaining a fellowship in mathematics/philosophy, he might have been an economist (*4). He wrote some early tracts as a free-trade economist. His first book (1894) was about the German Social Democratic Party. His interest in politics was manifested in the United States in 1896 when during his first American visit he got excited about the Bryan-McKinley election. A period of desperate unhappiness in his first marriage, to the American Quakeress Alys Pearsall Smith, accompanied an immersion in mathematical studies. He said that adolescent impulses to suicide had been cured by mathematical work (*5) and it would seem that when he was happy, especially in love, he turned more to his social ideas and projects. An almost mystical experience in 1901, connected with the illness and suffering of Evelyn Whitehead (wife of his colleague and collaborator Alfred North Whitehead) he regarded as a major turning point in his life, leading him to abhor suffering and cruelty, to experience that "unbearable pain for the suffering of mankind" which at the beginning of his Autobiography he named as one of the three passions dominating his life.

In 1903-1904 he entered into the debate about protectionism in Great Britain, raised by Joseph Chamberlain, and took part in a parliamentary campaign. "The beginning of a more endurable life for me was my time in politics last Winter," he wrote in 1905 in the diary he was then keeping, mostly to record the unhappiness of his marriage. (*6) "I suppose he will always be popping out of his cloister into the world," his father-in-law observed at this time; and so he did. The Evelyn Whitehead experience led to a conversion to anti-imperialism. (*7) In 1907, he ran for Parliament as a votes-for-women candidate. In 1910 he campaigned for Philip Morrell, husband of Lady Ottoline Morrell with whom he was about to embark upon a passionate love affair; this was the time of the great political battle over the budget and the power of the House of Lords. It is true that during these years (c. 1900 to 1910) Principia Mathematica, his chief claim to philosophical immortality, which he co-authored with Whitehead, absorbed more of his energies than any other purely philosophical topic ever did. But World War I was to arouse his political instincts to the fullest, as he dropped everything for his long battle against the prevailing war spirit, which cost him his fellowship at Trinity College, Cambridge, and ultimately a not altogether unpleasant term in jail.

At this time he produced books on Justice in Wartime and Principles of Political Reconstruction. From that point on, it is fair to say, social reconstruction, politics, reform, never ceased to dominate his life. We must notice a split between Russell's philosophical thinking and his ethical or political views. Russell

generally held that pure philosophy has little or nothing to do with moral values and with one's actions as a reformer or political activist. It was in fact a hallmark of the revolution in philosophy at Cambridge that Russell participated in early in the century, that philosophy should be strictly scientific, and that science has nothing to say about values as ends. "Philosophy throughout its history," he wrote in his History of Western Philosophy, has consisted of two parts inharmoniously blended"; the failure to separate the scientific, factual, from the ethical or political "has been a source of much confused thinking." Indeed, the belief that metaphysics has any bearing on practical affairs is proof of logical incapacity." (*8) The genuinely scientific philosophy, Russell wrote in 1914, "must not hope to find an answer to the practical problems of life." (*9) Reason can only advise as to means; as Russell puts it, "There is no such thing as an irrational aim except in the sense that it is impossible of realization." (*10) Sharply separating the scientific from the moral in order to gain precision and clarity the Analytical philosophers were forced to abandon the latter realm to personal taste which cannot be argued about. A judgment of disapproval is just a cry of distaste, "I disapprove of adultery," or of economic greed, is exactly like "I hate spinach or "I can't stand rock music." In Russell's own typically puckish way of putting it, to say, "I don't like the Emperor Nero" is to say "Nero - o fie!" All judgments of value are based, in the last analysis, upon emotion." (*11) It is true that Russell was never very happy with his writings on ethics (*12); and around World War II, along with many others, he struggled to define a more objective standard. "I could not bring myself to think that Auschwitz was wicked only because Hitler was defeated." But, he added, "the ghosts of Hobbes and Thrasymachus...seemed to jeer at me and say I was 'soft'." (*13) In 1922 he wrote that "to apply moral terms to human beings...to call them knaves and scoundrels or what not -- is unscientific," which to Russell meant totally unacceptable. (*14)

The paradox is that he himself freely and profusely did just that, calling everybody in power from Lord Grey to Harold Wilson a scoundrel. (*15) He acknowledged the contradiction: "I have suffered a violent conflict between what I felt and what I found myself compelled to believe" about ethics. (*16) But in general he was content to follow his impulses on questions of value. Paring away the moral element to make philosophy more scientific meant leaving morals, in effect, to unreason, and Russell pretty consistently accepted this. He agreed with David Hume that "Reason is and ought to be the slave of the passions." In answer to a question concerning the source of his political commitments, the old Russell wrote that "If you saw a child drowning, you would try to save it and would not wait for some -ism to persuade you that it was worth saving." (Unlike the student of the ancient Greek philosopher who left his master in the ditch because he could think of no valid reason to help him!) "I see the human race drowning and have an equally direct impulse to save it." (*17) Years earlier his friend and lover Constance Malleson, watching him at a meeting, said that "he seemed detached in mind and body -- but all the furies of hell raged in his eyes." Russell could no more resist those furies than he could silence his superb logical-analytical gifts. The two enormous energies resided in the same slight body of this passionate sceptic, and at times pulled him in opposite directions. It is ironic that the rationalist philosopher was, for that very reason, a creature of impulse and instinct in his political responses -- a source, most students would agree, of serious flaws as well as much strength.

This tendency to choose causes emotionally and uncritically, adopt and defend them passionately while putting at their service his immense dialectical gifts, may be a questionable method. It seems typical of many modern intellectuals, who are searching for a faith as well as looking for chances to exercise their intellectual gifts. The point here is that it seems appropriate to look for Russell's conception of justice and rights less in his formal philosophy than in his life, actions, and non-philosophical writings. We cannot divorce the conception from the man; we can only point to Russell and say "look at the man, look at the life; there is your definition."

I would like for a few moments to pay respects to the second part of our title, reminding you of Russell's long and close connection with the United States. Two of his four wives were American. His visits of 1896 and 1914, when he taught at Harvard (with T. S. Eliot as one of his students), and lectured also at Madison, Ann Arbor, Chicago, were followed by some years in the 1920s when Russell became a familiar figure on the American lecture circuit. He made the rounds in 1924, 1927, 1929, and 1931. He lectured in Milwaukee, interestingly enough, of the very date of this lecture, November 4, in 1927. The Milwaukee Journal of that date ran a front page story about the man who had recently debated with Will Durant on "Is Democracy a Failure?" (Russell thought it was not) and who that morning addressed the Wisconsin Teachers Association on "Education and the Good Life." (He also spoke in the evening at St. Johns's Church on "England's Political Situation.") At a time when headlines proclaimed "Teapot Dome Case Declared Mistrial" and "Most radio sets still battery operated," as well as "Daddy Browning Dances His Nights Away, never thinking of girl Peaches who is gone," Russell chose to allude to Chicago Mayor Bill Thompson's assaults on "unpatriotic history", urging the teachers to stand fast for "truth first" against prejudice. It was certainly a characteristic message.

Russell's purpose on these tours was simple enough, it was to make money. He was at this time dependent for his income on lectures, book sales, and journalism. Perhaps we no longer remember that the U.S. lecture circuit was once second only to the marriage market as a means of transferring wealth from the New World to the Old. It was the same motive that led Russell to write a column for the Hearst newspapers, 1932-1935, after the Depression dried up the springs of lecture fees and book sales. Having made himself into an accomplished public speaker, and adopted that persona of sardonic iconoclasm that became his trademark, Russell was a great success as a public speaker. He wrote, "America persecutes Americans for the opinions it hires foreigners at great expense to express." (*18) These lectures contained much not only of Russell's social philosophy, and his views on world affairs, but also, especially during the 1929 tour, his daring excursions into free love, open marriage, "preliminary partnerships." In the 1920s Russell had children by his second wife, Dora, turned his thoughts to education, and established an experimental school. He found himself in need of money to finance the school as well as support his family. He made some \$10,000 on the 1927 tour, no mean sum (one

would have to multiply by eight or ten for the present equivalent), in addition to spinning off books like The Conquest of Happiness which threatened to make Bertrand Russell the Dear Abby of his day.

In September, 1938 Russell returned to the United States, partly to avoid the coming war, partly because he had yet another wife, another child, and new money needs. He was appointed visiting professor for a term at Chicago, then professor at UCLA for three years. In 1940 he received what he thought was a permanent appointment at City College of New York, whereupon he resigned from the California post, prematurely as it turned out. What followed became one of the most celebrated of American academic cases. A colleague at this university who was a student at CUNY in the early 1960s told me recently that echoes of the Russell case could still be heard then. Attacks on the appointment as a "chair of indecency," a threat to public morals, offering atheism and the morals of the barnyard in the guise of philosophy emanated chiefly from Roman Catholics. Like Socrates, Russell was held to be a corrupter of youth. The attacks were answered by those who saw in this movement "an attack upon the liberal democratic tradition," one which "imperils the whole structure of intellectual freedom upon which the American university rests." (*19) There was great excitement, mass rallies, manifestoes, editorials, petitions. It was a true cause célèbre. Russell's friends deplored clerical fanaticism and held academic freedom to be at stake. (An appointment approved by the Board of Regents was revoked by the State Supreme Court acting on the suit of a citizen who had a child at the University.) His works were described in the brief filed by the opponent of his appointment as "lecherous, libidinous, lustful, venerous, erotomaniac, irreverent" and also, she added, "bereft of moral fiber"

Russell noted that with this affair "I seem to have recovered with the radicals the ground had lost by disliking Stalin." For it should be noted that for all his socialist dislike of capitalism, Russell ever since his visit to the Soviet Union in 1920 was a fairly consistent foe of what he saw almost from the beginning as a betrayal of the freedom he so passionately believed in. (*20) So in the fellow-traveling days of the 1930s his standing among modish intellectuals was somewhat ambivalent. Seldom did he join the crowd, even when it was an unorthodox crowd.

In the event, Russell lost his fight and was denied his chair; in part because greater things were in the air; the second world war in Europe broke out in earnest, and Russell, who had earlier been an "isolationist" and an "appeaser," out of simple shrinking from war, changed his mind and supported this war against Hitlerism. With great clarity, as always, Russell in 1936 had seen the alternatives as submission to Hitler or war — and opted for submission (*21) But he could not sustain this position. He nevertheless stayed in the United States during the war, teaching at Harvard, then at the Albert Barnes Foundation run by the eccentric Philadelphia millionaire and art collector, with whom Russell soon violently quarreled and ended in court; and at the Rand School. It was while with Barnes that he wrote the popular History of Western Philosophy, said to be the leading seller of all his books. He was then 73, but his career had hardly begun, one might say; certainly his greatest fame lay ahead, also his most notable involvements with the USA.

It is probably a common view that Russell never had anything good to say about the United States, but that is not quite true. One might build a theory of a love-hate relationship, reflected in the marriage and then rejection of the first wife, and the final marriage to a rather anti-American American. If in the World War I years and in the 1960s Russell frequently inveighed against American "imperialism" (he was jailed in 1918 primarily for an outrageously anti-American remark), he also wrote in 1922 that "If any one Power is to be supreme in the world, it is fortunate for the world that America should be that one" (*22). He said similar things in World War II, and after, e.g., "I look to the Empire of America for the best hopes that a distracted world permits" (he certainly much preferred us to the USSR), and "Every country has its defects, but in relation to the world, I believe those to be less than those of any other country." (*23) Even on the cultural plane amid many scathing comments on the "absolutely unbelievable conventionality" in the United States, the appalling combination of Puritanism and technology, the lack of anything except "the bare unmitigated fight for financial success," Russell could also say that the intellectual level of students was higher at Chicago than at Oxford, that Americans were doing the best work in philosophy, that the U.S. might overcome cultural sterility to "create the new forms appropriate to modern life." (*24) Russell, who liked American movies and was an omnivorous reader of detective novels, was rather less a cultural snob than one might think — much less so, for example, than George Santayana whom he reproached for a lack of respect for the common man. (*25) In a characteristic ambivalence, Russell in 1938 remarked that "Life in America is both more violent and more vital than life in England; what is bad is worse, and what is good is better." (*26) These are rather random samples from a large amount of material on this subject. (*27) What Russell most disliked about American civilization was a facet of his leading passion, his love of free and bold speech, individuality and dissent. The tyranny of the majority in the USA disturbed him as much as earlier it had bothered that other liberal European aristocrat, Alexis de Toqueville.

For several reasons, including the deterioration of his third marriage as well as the New York and Philadelphia contretemps, Russell was not happy in the United States during his 1938-44 stay. He returned home to receive his Trinity College post back, to inhabit the rooms Newton once lived in, and to become a world figure.

The world fame which came to him after 1950, when he became an octogenarian and then nonagenarian wonder, stemmed in part from success on British television, where Russell exhibited his amazing quickness of intellect (Brains Trust); from being awarded the Nobel Prize in 1950; and of course from the series of political causes with which he was associated, most notably (from 1954 on) the campaign for nuclear disarmament. His professional philosophical reputation somewhat declined as he grew a bit out of date and out of touch; he

scorned the new linguistic school, based on the later turn of his one-time pupil and friend Ludwig Wittgenstein. But of course he became an internationally known sage and an oracle to whom people wrote from all over the world and to whom statesmen were to render tribute.

Our task is to isolate his conception of social justice and human rights. If we seek what Russell specifically said about "justice," we find that this was not one of the topics he most often or fully addressed. Philosopher T. V. Smith, in a review of one of Russell's books, observed that

Truth is Russell's god. He has little to say of Beauty, and less to say of Goodness and Justice. (*28)

This is relatively true, I think. What aroused Russell most was intellectual error. Truth and justice, indeed, overlap. In 1914, Russell felt a sense of outrage primarily at the unfairness with which Germany was treated. "Every tale against Germany is believed -- there is no hint or trace of justice or mercy." "I suffer most from the absence of any attempt at justice, at imagining how matters look from the German side." (*29) Justice in Wartime was the title he gave to his war essays. So, if truth was his god, it entailed justice in the sense of intellectual fair play, seeing and stating all sides of a controversy and judging it fairly. Elsewhere, one of his few specific discussions of justice begins by construing justice as meaning "desert," and contrasting it with equality. "Justice" is, paradoxically, unjust in the sense of allowing some to have more than others, perhaps not altogether deservedly. (How can we measure services to the community, weigh the musician's claim against the merchant's, the professor's against the lawyer's?) Pure equality is not workable, but inequality must be justified by its effects: "I think, therefore, that one should say that the principle of justice demands equality except in so far as inequality can be proved to be socially useful." (*30) (By equality Russell here means equality of condition, not opportunity.)

Russell does not pursue this very far, but he would seem to have come close to the most celebrated recent formulation of a theory of justice, that of John Rawls (*30A), who argues that inequality (of access to primary goods) may be justified if it helps the least advantaged: inequality meaning giving a special advantage to some. There is a difference in that Rawls rejected utilitarianism, to which Russell pretty consistently held: actions are justified by their results, in maximizing human welfare, (Utility is a rival principle to "justice" in a sense: we do not ask about an act primarily where it is "just" but whether it secures the most happiness.) I must leave this matter to the philosophers; but there does seem to be a resemblance in that both Rawls and Russell urge equality unless inequality can be shown to be beneficial to society. Russell held that claims to the bare minimum of freedom -- he specified food, drink, health, housing, clothing, sex, and parenthood -- should override any other claims. (*31) As examples of the fact that minimal standards of justice were not yet realized in the world, he cited radical inequalities, injustices to women (he instanced denial of equal pay for equal work); and inheritance of wealth.

But "I would tell the truth whatever the consequences for human beings" (*32) The first of Russell's two greatest social passions was the passion for truth, for liberty of opinion, diversity of opinion, open discussion, "untrammelled debate," "equal facility for all opinions." This essential liberalism was a relic of his aristocratic Whiggism, reaching far back in the proud Russell line to the ancestor who had lost his head opposing the tyranny of the Stuarts in the seventeenth century, and extending to the John Stuart Mill influence transmitted via Russell's mother, Kate Arberley. It was nourished in the Cambridge of his early years, when Russell participated in the revolt against Victorian orthodoxy that embraced the Bloomsbury Circle. It included dislike of popular hysteria as well as state control.

His closest book to a systematic treatise on politics was Power, in which was reflected a fear of, as well as a preoccupation with, repression as the most important factor in human affairs. The fear of unchecked power also colored his socialism; it perhaps also produced it, but it qualified it. Russell's leading reproach against capitalism was that, as he thought, it concentrated too much power over politics and opinion in the hands of an economic oligarchy; power in private hands subverts political democracy and threatens liberty of thought. (*33). This was also his foremost criticism of Russian Communism. "The most dangerous features of communism are reminiscent of the medieval church. They consist of fanatical acceptance of doctrines uncritically, and savage persecution of those who reject them." (*34) He said he agreed with John Dewey that having with difficulty emancipated himself from one orthodoxy, he was not about to shackle himself with another. And (1951) "In the Soviet Union human dignity counts for nothing." (*35) What turned this Soviet Union's regime from a hopeful liberator of mankind into a greater tyranny than any that ever existed, he said, was its ignoring the principle that the State must be limited by law which protects the individual from arbitrary and irresponsible power. "It is the abandonment of democracy that I find particularly disastrous." He occasionally expressed fears that under any kind of socialism "powerful officials" would inherit all the oppressive habits of the capitalists; his socialism was anti-statist, leaning toward the guild variety at one time, and always toward social democracy. (*36). "I do not believe that the economic changes advocated by socialists will, of themselves, do anything towards curing the evils we have been considering," he declared (the evils being popular credulity, misinformation, propaganda -- enemies of the free mind.) (*37)

Russell's libertarianism was at the root, too, of the rather unsuccessful experiments in education -- maximum liberty and freedom from authoritarian constraints for children, which seems at times to have turned the school at Beacon Hill into pandemonium. If proper educational methods were adopted, Russell then believed, "one generation would suffice to solve all our social problems." He did not seem to find the secret. But the aim was to "cure people of the habit of believing propositions for which there is no evidence." (*38)

The other persistent political theme in Russell was internationalism, extending from the free-trade enthusiasm of his youth to the insistence in old age that there must be a single world government, the sole alternative

to terrible global death from nuclear weapons (even if, as he alternatively posed, the world government was imposed by the US or by the USSR.) His commitment to freedom of discussion even faltered in the presence of this goal, for he occasionally said that the teaching of nationalism should be prohibited or banned from education. (*39) In Education and the Social Order (1932) he wrote that "establishment of an international authority sufficiently strong to impose its settlement of disputes upon recalcitrant states" is the most important of all reforms, I find no sign that he ever wavered from this opinion. His Hobbesian realism convinced him that this would never come about by mere power of opinion or human virtue -- Russell generally thought of human nature in no flattering terms -- so he was prepared to see it established by force of arms. "I do not say this is a pleasant prospect" but it is a necessity. (*40) This conviction led him into some characteristic extremisms, such as the famous advocating of preventive war against the Soviet Union in 1947, if they did not accept internationalization of atomic energy, and later forgetting or denying that he had ever said this ("I had, in fact, completely forgotten that I had ever thought a policy of threat involving possible war desirable...I read these [statements] with amazement. I have no excuse to offer.") (*41); or, by 1958, holding that a world government brought about by the Soviets would be preferable to no world government. In 1933 he had written that "terrible as a new war would be, I still...should prefer it to a universal communist empire." (*42) The hydrogen bomb changed his mind.

Russell's twin passions of free thought and international government,, to save the world from a final destructive war, reenforced by his mystically based hatred of cruelty and suffering, came together in his last great crusade, the one that earned him both world fame and obloquy. He forced himself on the BBC in 1954 to point out that the world was on the brink of nuclear disaster from the new and more terrible weapons and delivery systems, the H-bombs and missiles. He did not really have any answer to the cruel dilemma of the balance of terror (*43); but he was convinced that it must be talked about. He set in motion the Pugwash conferences to bring Soviet and Western scientists together for discussion. He created the Campaign for Nuclear Disarmament to bring the issue to the streets (still very much alive as recent headlines remind us). Later he was prepared to advocate civil disobedience as a means of arousing the public. The armaments issue took precedence over all others; for, unless we survive, there can be no just society or any other kind. The only cure for it that he knew was discussion and controversy, forcing the issue before the attention of an apathetic public and attacking it with information.

He became an embattled and controversial public figure. Sometimes he was more thin-skinned than one would suppose. At least three times he brought or threatened to bring law suits against those who ventured to answer his epithets in kind. One of these involved the eminent scholar Robert Conquest, who had reproached him for declaring that there were no Soviet missiles at all in Cuba in 1962, it was all a fable made up in Washington (*44). A newspaper columnist enraged Russell by remarking that the Earl ought to issue just one statement, namely that he is "in favor of any act calculated to render the West helpless in the face of international Communism," and then shut up. (*45)

So it no doubt seemed at times to many people. Russell asserted that Kennedy and Macmillan were "much more wicked than Hitler." (April 1961) He later claimed that the Vietcong was non-communist ("a non-communist popular front"). (*46). But emphatically it is not true that Russell in his last years criticized only the West. The record clearly shows that his protests went in all directions. (*47) To Nikita Krushchev, with whom he exchanged long letters, Russell denounced the sentencing of Pasternak's friends in 1961, and later he protested to other Soviet leaders over the treatment of Soviet Jews and other political prisoners. He protested to Tito the imprisonment of Djilas. He filed complaints with Cuba and Rumania, as well as Greece, Portugal, Turkey, Algeria, whenever there was abridgement of free speech. This commitment to intellectual freedom comes through as an authentic belief, beyond all political expediency. And this is rare indeed. It is rare, it seems to me, to find anyone who will denounce all cases of injustice and oppression; people's indignation is amazingly selective. Those who burn with indignation at the situation in El Salvador or South Africa usually have nothing to say about Afghanistan or Poland. If it was a matter of intellectual freedom, Russell always was moved to righteous wrath regardless of the offender, whether Communist, of whatever variety, or non-Communist. A rare and noble trait, I submit.

Bertrand Russell's idea of social justice and human rights, then, included the vision of the fearless, free intelligence doing battle with the idiosyncy of the world. Lord Acton once wrote of "the vast tradition of conventional mendacity; Russell agreed with this though he would, perhaps, have preferred "stupidity." It is the solemn humbug of the world that inflicts suffering; Hannah Arendt's banality of evil would have pleased Russell. "Nice people are the ones who have nasty minds," he wrote in an essay on "Nice People". Nice people are cruel as well as stupid. Russell once said he was prepared to believe anything bad about the police, regardless of the evidence! He accepted the Mark Lane line on the Kennedy assassination, he was certain of the innocence of the Rosenbergs, etc. This conspiratorial mentality, this uncritical belief in the wrongness of whatever authority and Establishment affirmed, may well be a Russell defect; but his belief that important truths are suppressed by conspiracies of silence was what motivated him to speak out.

"The evils of the world are due to moral defects quite as much as to lack of intelligence," he once wrote, "But the human race has not hitherto discovered any method of eradicating moral defects; preaching and exhortation only add hypocrisy to the previous list of vices. Intelligence, on the contrary, is easily improved by methods known to every competent educator. Therefore until some method of teaching virtue has been discovered progress will have to be sought by improvement of intelligence rather than of morale." (*48) The scientific method, the scientific temper, which "is capable of regenerating mankind and providing an issue for all our troubles," as he once wrote, (*49) is applicable to fact not values. The most troublesome contradiction I find in the life and thought of the twentieth century's greatest all-around philosopher is that this view of salvation by the critical intelligence, which he so often preached and which is so

compatible with his fundamental philosophical position, is something that he did not in the end live up to. It was not "the improvement of intelligence" that he represented in his last years, for he was gullible, often factually wrong in his appraisal of world affairs, and almost hysterically emotional. He was, rather, a moralist and a prophet, an accuser condemning the wickedness of a world whose leaders he claimed were deliberately bent on the extermination of the human race. (*50)

The cleavage between fact and value, science and morals, is a dilemma not alone of Russell's, but of our age, which he mirrored so well. It has been so ever since Nietzsche (a philosopher whom Russell, so far as he knew him, intensely disliked, but whom in fact he resembles in many ways) pointed out the death of God. "The sense of the world must lie outside the world," Ludwig Wittgenstein observed. "In the world everything is as it is and happens as it does happen. In it there is no value." The scientific world-view neither praises nor condemns. Yet never has there been so much condemnation as in our age of science.

But I am not here to criticize Russell so much as to call him to your attention. First, the man — the long, interesting and illustrious life, the incredible energy, the passionate idealism and the lightning-quick razor-sharp brain — Dionysus and Apollo superbly if not always harmoniously combined. (*51) Second, the significant connection with the United States over the years, including much more than I had time to tell of, down to the attempt to hold a trial of the war crimes of the United States in the Vietnam War. Lastly, the long search for social justice and human rights, which led him in and out of prison, into the streets as well as the chambers of the great — and which intensified as his long life went on. It is a life and quest that we will not soon forget.

Stromberg Lecture

Twelfth Annual Morris Fromkin Memorial Lecture

Bertrand Russell, America, and the Idea of Social Justice

ROLAND N. STROMBERG
Professor of History
The University of Wisconsin—Milwaukee
Recipient of the 1981 Fromkin Research Grant

Wednesday, November 4, 1981
3:30 P.M.
Union Cinema

The Public is cordially invited to attend. • Reception follows.
Sponsored by the Fromkin Memorial Collection of the Golda Meir Library, The University of Wisconsin—Milwaukee.

BR INTERVIEWED

- (10) Freeman Interview. John Freeman of the BBC interviewed BR in March 1959. Here is the transcript, as it appears in the appendix to The Future of Science (NY: Philosophical Library, 1959). It will also offer relief to those who are suffering from too much small print.

I observe that the date I attributed to my death is 1962, which is coming ominously near, and begins to cause me some alarm.

Freeman:* Well, before you feel too much alarmed, let us examine this obituary which was written in jest and see how true it really is. To start with, let's go back to the distant past. What is your very earliest memory, Lord Russell?

Russell: I suppose my very earliest memory is tumbling out of a pony carriage when I was two years old, and my earliest at all vivid memories are of arriving at the house of my grandparents, Pembroke Lodge, in Richmond Park, after

* John Freeman is the B.B.C. correspondent who conducted this interview.

the death of my father, who died when I was three.

Freeman: How did you come to be in the care of your grandparents? Your mother had also died?

Russell: Yes, she also. She died when I was two.

Freeman: Do you have any memory of your parents?

Russell: Very little. I remember nothing of my mother. I remember my father once giving me a leaflet printed in red letters, and the red letters pleased me.

* * *

Freeman: Were you always a skeptic from small childhood or did you believe in the conventions?

Russell: Oh, I wasn't a skeptic when I was very young, no. I was very deeply religious and lost my conventional beliefs very slowly and painfully. I remember that when I was four years old they had

just been telling me the story of little Red Ridinghood, and I dreamed that I had been eaten by a wolf, and to my great surprise I was in the wolf's stomach and not in heaven.

Freeman: This was the beginning perhaps of skepticism?

Russell: Yes.

Freeman: Tell me, did you say your prayers when you were a child?

Russell: Oh, yes.

Freeman: When did you cease doing that?

Russell: I suppose when I was about twelve or thirteen.

Freeman: Do you think now that you had a happy childhood?

Russell: More or less. It was very solitary. I had one brother who was seven years older than me and I had little to do with him. Otherwise I didn't have much to do with other children, so that it was a solitary childhood, but it was not unhappy.

Freeman: Looking back now, with all the learning that you have acquired since, would you say that some feeling of insecurity was one of the spurs to intellectual action?

Russell: I don't quite know. I think it's a possible spur. I think there are others of a different sort; pure ambition will sometimes do it.

Freeman: Were you obsessed at a tender age with a sense of guilt or sin?

Russell: Oh, yes. They asked me one day what was my favorite hymn and I

chose 'Weary of earth and laden with my sin.'

Freeman: At what age was that?

Russell: Six years old. The things I felt guilty about were — oh, eating blackberries when I had been told not to, and I remember once when at family prayers my grandmother read about the prodigal son, I said to her afterwards: "I know why you read that today: it was because I broke my jug."

Freeman: Do you think now, looking back, that there is any really unfortunate legacy you carried out of your childhood?

Russell: Yes, I do. The family attitude, certainly on matters of sex, was morbidly puritanical.

Freeman: Now, let us turn to your schooling.

Russell: My grandmother didn't approve of public schools. She was very unconventional in her outlook, and she thought they were a sort of conventional institution.

Freeman: Would you have liked a more conventional education?

Russell: No, not at the time. I was quite satisfied, and I think looking back I'm still satisfied, because I learned a great deal more than I should have done at any school.

Freeman: What sort of learning, at that age? Did you, for instance, study the classics?

Russell: To a certain degree. I was never fond of the classics. Mathematics was what I liked. My first lesson in mathematics I had from my brother, who started me on Euclid, and I thought it the

most lovely stuff I'd ever seen in my life. I didn't know there was anything so nice in the world. But I remember that the first lesson was a disappointment because he said: "Now, we start with axioms." I said: "What are they?" and he said: "Oh, they're things you've got to admit although we can't prove them." So I said: "Why should I admit them if you can't prove them?" and he said: "Well, if you won't we can't go on." And I wanted to see how it went on, so I admitted them *pro tem*.

Freeman: How did you educate your own children?

Russell: I educated them in various ways: I tried to find modern schools, but I think that there are some things in what's called progressive education that I like and some that I don't like; and I never found exactly what I should like.

Freeman: Did you send any of your own children to an ordinary public school?

Russell: Yes, my youngest son went to Eton.

Freeman: And was that successful?

Russell: Yes, quite successful.

Freeman: What was it that first provided you with the incentive to become a mathematician?

Russell: I liked it for a number of reasons: in the first place, the sheer pleasure which is the sort that people get from music or poetry – it just delighted me. And then, apart from that, I thought that mathematics was the key to understanding the universe, and I found all sorts of everyday things explained by means of mathematics. I remember I had a new tutor once who didn't know how much I knew, and I spun a penny, and he said: 'Do you know why that penny spins?' I said: 'Yes, because I make a couple with my fingers,' and he said: 'What do you know about couples?' I said: 'Oh, I know all about couples!'

Freeman: How old were you then?

Russell: I must have been twelve or thirteen.

Freeman: Have you found on the whole in your own life that the pursuit of either mathematics or philosophy has given you some sort of substitute for religious emotion?

Russell: Yes, it certainly has. Until I was about forty, I should think. I got the sort of satisfaction that Plato says you can get out of mathematics. It was an eternal world, it was a timeless world, it was a world where there was a possibility of a certain kind of perfection, and I certainly got something analogous to religious satisfaction out of it.

Freeman: What period of your life, or rather what episode in your life, led you to turn again: from philosophy, to some extent, into social work and politics?

Russell: The first war. The first war made me think 'It just won't do to live in an ivory tower. This world is too bad. We must notice it.' I thought, as a politician, and I still think, that it would have been very much better for the world if Britain had remained neutral and the Germans had won a quick victory. We should not have had either the Nazis or the Communists if that had happened, because they were both products of the first World War. The war would have been brief; there would have been nothing like so much destruction.

Freeman: Have you ever had a moral objection in principle to killing?

Russell: Oh, no. I don't like any kind of general rule like that.

Freeman: How much in fact did you actively campaign against the first World War?

Russell: As much as I could. I went all over the place, making speeches, and I did everything I could to help the conscientious objectors. I wrote about it wherever I could.

Freeman: Did you have a sort of public notoriety as an unpopular figure or were you regarded as just a crank?

Russell: I wasn't actually pelted with rotten eggs, but I had an almost worse experience. I was at a meeting of pacifists at a church and it was stormed by a mixture of colonial troops and drunken viragos. The drunken viragos came in bearing boards full of rusty nails, with which they clamped everybody on the head, and the colonial soldiers looked on and applauded them, and the police looked on and did nothing. Women had all their clothes torn off their back and were badly mauled, and the viragos with rusty nails were just about to attack me – I didn't quite know what one did about this – when somebody went up to the police and said: 'Look, you really ought to stop these women, you know, he's a distinguished writer.' 'Oh,' said the police. 'Yes, he's a well-known philosopher.' 'Oh,' said the police. 'And he's the brother of an earl!' And then the police rushed and saved me.

Freeman: Was this the time that you went to prison?

Russell: No, this was earlier.

Freeman: What exactly did you go to prison for?

Russell: For writing an article. I was convicted on the ground that this article was 'intended and likely to cause bad relations between England and the United States,' because I pointed out how United States troops were used as strike-breakers and it was thought I oughtn't to have done that.

Freeman: Were you tried by a jury or by a magistrate?

Russell: By a magistrate in London. And he said this was 'the most despicable crime.' He sentenced me to six months. Originally it was six months as an ordinary criminal, and then on appeal it was altered to six months in the First Division.

Freeman: Which meant more lenient treatment?

Russell: Oh, very much. It's a profound difference.

Freeman: Do you think, looking back, that Trinity College behaved either wisely or justly in depriving you of your Fellowship at the time of your own trial and imprisonment?

Russell: No, certainly not, especially as they did it while the case was *sub judice*. You see, all the younger Fellows had gone to war and the government of the college was left to the old boys, and the old boys said, 'We must do our bit - we can't fight, we're too old,' and their bit was to get rid of me!

Freeman: Something very similar to that, of course, happened in the second World War, when your appointment at the College of the City of New York was terminated. What actually did happen?

Russell: Oh, in the second World War I was completely patriotic, I supported the war, and I was entirely orthodox in my views about that.

Freeman: Nevertheless you were thrown out of another college?

Russell: Ah, but that was for quite different reasons. That was on the ground of my views about marriage and morals.

Freeman: But your views must have been known when you were appointed to the College of the City of New York?

Russell: Oh, yes. Civilized people didn't mind them, but there was a whole rabble in New York of uneducated Irish people, and they had completely ignorant views.

Freeman: What happened to you when you lost your job in New York? Did you have another job to go to in America?

Russell: I didn't know I should have. I was completely ostracized. No newspaper

would print a word I wrote, no magazine would print a word, no hall would allow me to lecture in it, so that I was cut off from all my means of livelihood, and I couldn't get any money out of England at that time because of currency regulations, and so I was expecting to starve. I had three children whom I was educating, two of them at the university and one younger, and I expected we should all suffer very badly; and we should have done but for a certain man called Dr. Barnes who came to my rescue and gave me a job.

Freeman: Is that the only time in your life that you've ever been really short of money?

Russell: Most of my life I've only had just enough, and the rest of my life I've generally had just enough with a certain security; but at that time I really did not know how I was going to carry on my children's education.

Freeman: Could I ask you, because it's of interest to the background of the academic life generally, were you left a fortune by your family, or have you earned all you've had all your life?

Russell: I was left a certain amount of money. When I came of age I had capital that brought me in about £600 a year, and then I became a socialist and I came to the conclusion that I ought not to live on inherited money, and I got rid of my capital gradually to various causes which I thought important. Since then I've lived entirely on my earnings.

Freeman: Looking back now on all the causes that you have especially championed throughout your working life, do you think your advocacy has been on the whole successful?

Russell: It depends entirely upon what things you're thinking of. My views on what you may call sexual questions have, I think, been immensely successful - I mean, the world has moved that way; and to a very great extent on education, too. And one of the things that I used to be enormously interested in was equality of women, and that of course has been com-

pletely successful. Also I was from an early time a socialist and there is a great deal of socialism in England now and I'm glad of it. So that I have had a fair measure of success; but in other things of course not at all.

Freeman: Do you think that on the whole the fanatics in the world are more useful or more dangerous than the skeptics?

Russell: Oh, much more dangerous. Fanaticism is the danger of the world, and always has been, and has done untold harm. I might almost say that I was fanatical against fanaticism.

Freeman: But then are you not fanatical also against some other things? Your current campaign, for instance, in favor of nuclear disarmament - would you encourage your supporters to undertake some of the extreme demonstrations that they do undertake and isn't that fanaticism?

Russell: I don't think that's fanaticism, no. I mean, some of them may be fanatical, but I support them because everything sane and sensible and quiet that we do is absolutely ignored by the press, and the only way we can get into the press is to do something that looks fanatical. The worst possibility is that human life may be extinguished, and it is a very real possibility; but assuming that doesn't happen, I can't bear the thought of many hundreds of millions of people dying in agony, solely because the rulers of the world are stupid and wicked.

Freeman: Is it true or untrue that in recent years you advocated that a preventive war might be made against communism, against Soviet Russia?

Russell: It's entirely true, and I don't repent of it. It was not inconsistent with what I think now. What I thought all along was that a nuclear war in which both sides had nuclear weapons would be an utter and absolute disaster. There was a time, just after the last war, when the Americans had a monopoly of nuclear

weapons and offered to internationalize nuclear weapons by the Baruch proposal, and I thought this an extremely generous proposal on their part, one which it would be very desirable that the world should accept; not that I advocated a nuclear war, but I did think that great pressure should be put upon Russia to accept the Baruch proposal, and I did think that if they continued to refuse it might be necessary actually to go to war. At that time nuclear weapons existed only on one side, and therefore the odds were the Russians would have given way. I thought they would, and I think still that could have prevented the existence of two equal powers with these means of destruction, which is what is causing the terrible risk now.

Freeman: Suppose they hadn't given way, would you have been prepared to face the consequences? You would have used these weapons on the Russians in spite of the words you have used to me about their horror?

Russell: I should. They were not, of course, nearly as bad as these modern weapons are. They hadn't yet got the hydrogen bomb, they had only the atom bomb (and that's bad enough, but it isn't anything like the hydrogen bomb). I

Thank you, TOM STANLEY.

thought then, and hoped, that the Russians would give way, but of course you can't threaten unless you're prepared to have your bluff called.

Freeman: Do you look back to the nineteenth century on the whole with nostalgia and regret?

Russell: It all depends on what you're thinking about. The world was much more beautiful to look at than it is now. Every time I go back to a place that I knew long ago I think how sad it is. One piece of beauty after another is destroyed, and that I do profoundly regret. But when it comes to ideas, there's immensely less humbug than there was, and that I rejoice in.

Freeman: Have you written an autobiography?

Russell: I have, yes.

Freeman: Are you going to allow it to be published in your lifetime?

Russell: No, not till I'm dead. In the first place because it won't be complete until then, and in the second place because there are all sorts of things that ought not to be said too soon. It may even have to wait some time after I'm dead -- I don't know.

Freeman: One last question: suppose, Lord Russell, that this film were to be looked at by your descendants in 1,000 years' time, what would you think it worth telling that generation about the life you've lived and the lessons you've learned from it?

Russell: I should like to say two things, one intellectual and one moral. The intellectual thing I should want to say to them is this: when you are studying any matter or considering any philosophy, ask yourself only what are the facts and what is the truth that the facts bear out. Never let yourself be diverted either by what you would wish to believe or by what you think would have beneficent social effects if it were believed. But look only at what are the facts. The moral thing I should wish to say to them is very simple. I should say love is wise, hatred is foolish. In this world, which is getting more and more closely interconnected, we have to learn to put up with the fact that some people say things that we don't like. We can only live together in that way and if we are to live together and not die together we must learn a kind of charity and a kind of tolerance which is absolutely vital to the continuance of human life on this planet.

BR AND THE ATOM BOMB

- (13)
- Another opinion.
- Last issue we reprinted I.F. Stone's disapproving view of BR's apparent willingness in 1946 to atom-bomb Russia, if necessary, to bring about world government. HARRY RUJA disagreed with Stone. This is how he expressed his disapproval of Stone's disapproval, in the May 1973 issue of "Humanist in Canada":

Did Stone Come To Praise Russell? Whether that was a nettle I.F. Stone got hold of at the Russell centenary conference at McMaster or just some limp spaghetti can only be decided, I suppose, when his speech is printed and his evidence evaluated. But what mystified me when I listened to him in Hamilton last October and watched the reactions of the audience — and still mystifies me — is how Stone could consider himself, and be considered, an admirer of Russell while accusing him of having advocated dropping atom bombs on Russia without provocation and in time of peace.

When I disputed Stone's interpretations and declared that he was at best praising Russell with faint damns, I was shouted down by the 1,000 other Russell "admirers" in the auditorium.

As a child, Stone told us, he went body into dark corners and found nothing to fear; now Stone goes into the "dark corners" of Russell's career and finds a bloodthirsty monster, recklessly egging America on to mass destruction of the inhabitants of one of the most populous countries on earth.

I myself am skeptical that the corner is as "dark" as Stone supposes. Rather, Stone seems simply to be projecting the ideology of confrontation politics on to Russell's words instead of appreciating them as a determined, perhaps even a desperate, attempt to take advantage of a unique opportunity to establish an authentic world government and thus assure peace for future generations, perhaps even saving mankind from extinction. If, as Stone insists, Russell was proposing diabolical measures in the indulgence of rancor against the

Soviet Union, then why does he not call him a devil and withdraw from the company of Russell-admirers?

Stone entitled his address "Bertrand Russell as a Moral Force in World Politics". How ironic in the light of its content! The noble title does greater justice to the man than the speech did. When one brings to mind some of the events in Russell's long public life which this characterization fits — from his denunciations in 1914 of the liars, fools, and brutes who embroiled his country in what ironically came to be called 'The Great War' to the challenge within our own memory to Lyndon Johnson to stand trial as a war criminal for his devastation of the land and people of Vietnam — one cannot help feeling pangs of disappointment that Stone chose instead to misconstrue, as a bit of fantastic cold-war jargon, what,

in context, is a realistic, cold-sober analysis of the prospects for peace and the likely ways of achieving it! His performance, in the light of what it could have been, must strike the candid observer as petty, perhaps even malicious, a travesty on the nobility of the man we had come together to honor.

Let the reader judge for himself by examination of some of Russell's writings of the period. See, e.g., "The Outlook for Mankind", Listener, 13 March 1947, 37, 370-2; "The International Bearings of Atomic Warfare," United Empire, January 1948, 39, 18 - 21; "There Is Just One Way To Peace," Maclean's, 1 January 1948, #1 (1), 7-8, 33-5; "The Future of Mankind," Unpopular Essays, London & New York, 1950.

ABOUT BR'S WRITINGS

- (14)
- The Lure.
- We don't know anything about Jacob Needham except that he teaches youngsters and has written a book. The book is titled, "The Heart of Philosophy", and here is a bit of it, with thanks to MIKE TAINT:

have tried asking people about their own adolescence: What was the most important book for them when they were young? What turned them on to serious ideas? I ask them that because I have been scrutinizing every book in my library trying to find at least the right readings to start with. But every book or author mentioned is one I have already considered and rejected. Spinoza? Too difficult. Hermann Hesse? Too sentimental. Plato? Of course, but not to begin with; they will have heard too much about him from other sources. Grimm's fairy tales? Rich with real ideas, but teenagers are still too close to childhood to approach them freely. Nietzsche? Camus? Too subjective. Kierkegaard? Too subtle — and also, although anyone with a search can see he is as far as possible from being conventionally "religious," young people would be too distracted by the Christian language of Kierkegaard: one can't begin with Kierkegaard. The Stoics — Epictetus and Marcus Aurelius? No, although I myself had been deeply moved by them when quite young. Examining Epictetus again two months ago, I

was disappointed by the moralizing tone that the Victorian translations had put into his writings. Moralizing in any form is the kiss of death in pondering great ideas.

So I have thought again of how I first became interested in ideas when I was young. What author first helped me? The answer surprises me: Bertrand Russell.

Had anyone advised me to start my class with Russell, I would have dismissed the suggestion out of hand. I had not even considered his work over the summer — Bertrand Russell, lucid, witty, skeptical, a principal founder of modern logical analysis who approached the great questions of philosophy with little more than a very sharp pencil in his hand; Russell, who brought into the twentieth century the faith of the Enlightenment in scientific method as the model of understanding; who could dispose of Plato in a paragraph, or the whole of the religious traditions of mankind in a brief and amusing chapter. No, not Russell.

Then how to explain the immense impact that his writings had

on me when I was sixteen? Although he cleverly tears at every ancient and medieval metaphysical doctrine, I did not feel clever or even wish to be clever after reading him. Although he demonstrates the logical flaws in the Western idea of God, he did not shake my belief in the existence of a Creator—on the contrary. Master of the modern scientific canons of knowledge, he pictures man as a wisp of consciousness in an immense, indifferent universe that will inevitably snuff out his life and the very memory of his life on earth. Then why did I keep turning to his books for the very thing I would wish to bring to my own students—a sense of man's enduring place in a greater scale of reality?

I remember to the day and hour the first time I read Russell. It was shortly after the start of my third year in high school. I had just earned my driver's license and on Sunday mornings I used to take the family car and drive out of the city in order to be by myself in some wooded area. On the seat next to me was a pile of books representing the week's foraging in the public library. I remember that at that time I was very taken with the novels of Thomas Hardy; their austere representation of the human condition confirmed, in some sweet way, my own loneliness. This time, among the books beside me was one I had picked off the library shelf without thinking too much about it: *Human Knowledge: Its Scope and Limits* by Bertrand Russell.

I mentioned loneliness, but I don't mean to imply anything beyond what many, if not most, adolescents experience in our culture as a result, I believe, of their not being sufficiently occupied. This problem takes on a colossally destructive dimension, however, when it exists within the confusion that has now spread everywhere about the nature and function of the family. To my mind, the question exists in the following form. The family is the matrix of the growth of feeling in man. Modern psychological theories of the family have concentrated mainly on the emotions of loving acceptance and personal warmth. Traditionalists stress its function of inculcating moral values and a sense of responsibility. Others speak of preparing the child "for life," and there are countless other theories as well as numerous experiments being tried throughout the modern world with different forms of the family. But something seems to me to be left out in all these views of the role of the family, and this something has to do with the true range of feeling that is possible for man and necessary for his complete development. Father and mother: Sooner or later in every individual life something must take their place, something that is not external. In a grown-up man, what is the source of aspiration and love of self? What guides one's own individual struggle for Being in a grown-up man? From what place in oneself comes authentic shame and authentic pride? And to what, and with what quality, are the impulses of reverence and honor directed in a grown-up man? These are not rhetorical questions and I hope I will not be misunderstood if I tentatively propose an answer: As a child loves father and mother, so the man may come to love truth.

That particular Sunday was especially dreary for me. The Sunday boredom had set in even before noon. By the time I parked the car near an especially beautiful stretch of the Wissahickon

Creek north of Philadelphia, I was encased in self-pity. On the way, I had tuned the radio to whatever music would support this emotional state, and now I regarded all the beauty around me through its lens. Anything to intensify it, anything to bring emotion of any kind. It was the only way I could feel alive. Surely, that is the fundamental meaning of the boredom that begins to be such a dominant fact of life when we are young: the yearning for emotion. Out of this yearning come many things—including some forms of crime.

I picked up a book and began to read—it was Hardy's *Jude the Obscure*, perfect for the mood I was in. But right beneath it was the Russell book, and the title, *Human Knowledge*, drew me. While enjoying the crushing sorrows of poor Jude, my mind kept wandering to the title of Russell's book. I soon put down Hardy and took up Russell.

I stayed glued to that book for the next three hours without even thinking of lunch. Why? What happened?

I wasn't able to follow much of Russell's sophisticated thought about science and human experience. So there was no question of this teenager agreeing or disagreeing with his point of view. Something much more important and elemental was taking place in me. Russell spoke about human language and I realized that language exists—I spoke language. I read language; poetry and novels and books, and perhaps music and art were also language. He discussed space and time, and I realized that space is all around me, that everything exists in space; and time flows everywhere. I am in it, everything is in it—but what is it? And there is ethics; my worries and problems—were they not ethics? And there is mind—I have mind and I have a body, and everything I see is a body, but where is the mind? My loneliness dissolved: it simply dried up as the various aspects of myself were presented to me as objects of inquiry in the large world. I knew then that there exists something that one might call *clarity*. I knew it as a feeling, a wish. It was an entirely new feeling and yet, at the same time, strangely intimate and warm. Critics of the contemporary era often speak of the sense of alienation and cosmic loneliness produced by the modern emphasis on the scientific attitude. They have their point, but it has no weight when placed against the first taste of objectivity toward oneself. There is nothing cold about it. On the contrary, then and only then did I first begin to feel that there is a home for man behind the appearances of this happy/unhappy world. I could not read many more novels after that in my adolescence. I never even finished *Jude the Obscure*.

So now I look upon this summer's efforts to prepare my course as somewhat beside the point. I have been worrying too much about the content of the course and not enough about the search that needs to be brought to all philosophy, no matter what its content. I don't agree with Russell; I believe his vision of reality is shallow, his concepts of human nature and knowledge lead nowhere. Yet his is a greater mind than my own, and I once needed to listen to it.

Today is September 10 and in two hours I meet with my young class for the first time. I feel that I am back at square one. Yet, for some reason, I am not nervous about it anymore.

CONTRIBUTIONS

- (15) We acknowledge with thanks the contributions made by the following members to the BRS Treasury during the past six months: MICHAEL BRADY, STEVE DAHLBY, ALICE DARLINGTON, BOB DAVIS, LEE EISLER, DAVID GOLDMAN, BILL GREGORY, CHARLES HILL, OPHELIA & JAMES HOOPES, DON JACKANICZ, HERB LANSDELL, HERMAN LEFKOWITZ, GLADYS LEITHAUSER, SUSANA MAGGI, JIM MCWILLIAMS, STEVE REINHARDT, HARRY RUJA, CAROL SMITH, CARL SPADONI, TIMOTHY ST. VINCENT, TOM STANLEY, RAMON SUZERA, HERB & BETTY VOGT, JOHN WILHELM, VINCENT WILLIAMS, JUDITH & TERRY ZACCONE.

THE SUBJECT

- (16) Does the subject of money bore you, excite you, or neither? It doesn't bore or excite us either. We just want the BRS to have enough of it to be able to move forward.

For instance, we'd like to acquire a lot more members, not because bigger is necessarily better but because — in this case — the greater the number, the greater the financial stability. And that is a prerequisite for our long-run survival as an organization.

BUT...

To acquire more members:

- . We'd have to advertise more. That takes money.
- . We'd have to make surveys. That takes money.
- . We might wish to hold contests, and offer prizes. That takes money.
- . We might think of other things to do, to stimulate interest in the BRS. They will all take money.

Furthermore, results are not guaranteed. We might spend the money and not get results. We can hardly afford that now.

BUT...

If we had some extra money, we could afford to take some chances. We could afford to go after a substantial number of new members.

That's why we would like to have some extra money ...for the serious business of trying to increase our membership...and our life-expectancy.

- * If you think this makes sense, and you'd like to lend your support, here's how to do it: when you've got some money to spare, send it along to the BRS Treasury, c/o the newsletter, address on Page 1, bottom. We'll put it to good use. Thanks!
-

BRS LIBRARY NEWS

- (17) Librarian Tom Stanley reports:

Book sales have picked up considerably since the list was printed in RSN 45. A few are now unavailable from the publishers. We have these additions:

Into the Tenth Decade demy 4to, wraps, Spokesman Press

"A handsome brochure, profusely illustrated, prepared in honor of Russell's 90th birthday. An essential addition to all Russell libraries."3.00

Appeal to the American Conscience 8pps, fold-out format, demy 4to, Spokesman
A 1966 statement on the war in Vietnam2.00

The Incompatible Prophecies: An Essay on Science and Liberty in the Political Writings of Bertrand Russell by Louis Greenspan. Stiff wraps, Mosaic Press

"written in a distinctive, lucid style and based on exhaustive research, this book should provoke much debate in the growing literature of Bertrand Russell." A review of this item by Barry Ruja is in Russell: 33-344.00

I'd like to suggest that each of us donate a Russell book to our local library. Many of them will acknowledge the gift with a bookplate: "Given by the Bertrand Russell Society"

Merv Griffin has agreed to donate a video-cassette of his 1965 interview with Russell. Dealing almost exclusively with the war in Vietnam, the bulk of this talk was printed in RSN 36. I have not as yet received the tape, but it will certainly be available for the annual meeting.

We are indebted to UNESCO for their donation of four photos of B.R. at the Kalinga Prize Award ceremony.

- (18) Books to lend:

When no author is indicated, the work is by Bertrand Russell. The donor's name appears at the end.

1. History of Western Philosophy. Jack Ragsdale.
2. Mysticism and Logic.
3. Bertrand Russell's Best. Ramon Suzara.
4. An Outline of Philosophy. Ramon Suzara.
5. Autobiography of Bertrand Russell, Vol.1. Ramon Suzara.

NEARBY MEMBERS

- (19) A new service. Occasionally a member has asked us whether other members lived nearby. In the past, we haven't been of much help. But now things are different, thanks to a computer. We can provide the names and addresses of other members who live in your state, or in a nearby states. If this is of interest, write the newsletter (address on Page 1, bottom), naming the states.

RECOMMENDED READING

- (20) Ten Best Books. We invited members, at JAMES MAKI'S suggestion, to list their 10 favorite books by authors other than Russell (RSN45-10). Here are some responses:

George Kaye:

1. James L. Adams, "Conceptual Blockbusting", 2nd ed. (NY:Norton, 1979)
2. Kenneth L. Higbee, "Your Memory: How It Works & How to Improve It" (Englewood Cliffs, NJ:Prentice-Hall, 1977)
3. Gilbert Highet, "Man's Unconquerable Mind" (NY: Columbia Univ. Press, 1954. (esp. pp 3-45)
4. Wayne C. Booth, ed., "The Knowledge Most Worth Having" (Univ. of Chicago Press, 1967. (esp pp. 1-28, 109-202, papers by Booth, Platt, Scott, Redfield, McKeon)
5. Will & Ariel Durant, "The Lessons of History" (NY:Simon & Schuster, 1968)
6. Mortimer Adler & Charles Van Doren, "How To Read A Book" (NY: Simon & Schuster, 1972)
7. Isaac Asimov, "Asimov's Biographical Encyclopedia of Science and Technology" ((NY: Doubleday, 1982)
8. The World Almanac, annual (NY:Newspaper Enterprise Ass'n)
9. Ronald Gross, "The Independent Scholar's Handbook" (Reading, MA:Addison-Wesley, 1982)
10. John Bear, "How To Get The Degree You Want" (Berkeley, CA: Ten Speed Press, 1982)

Adam Paul Banner:

"Books that I would recommend to our membership as worthy of reading in terms of personal understanding... The ivory tower economic and educational researchers have accurately diagnosed the world's economic woes as their patient died."

1. Paolo Lionni and Lance. J. Klass, "The Leipzig Connection" (Portland, OR: Heron Books, 1980)
2. Ivan Illich, "Deschooling Society" (NY: Harper & Row, 1983)
3. Ivan Illich, "Medical Nemesis" (NY:Pantheon Books, 1976)
4. Lansing Lamont, "Campus Shock"

John Wilhelm. "My favorite book":

Alfred Korzybski, "Science and Sanity: An Introduction to Non-Aristotelian Systems and General Semantics", available from Institute of General Semantics, PO Box 517, Ridgefield, CT 06877

Ken Korbin

1. "The Fall". by Albert Camus
2. "The Plague" by Albert Camus
3. "Steppenwolf" by Herman Hesse
4. "Time Must Have A Stop" by Aldous Huxley
5. "Messiah" by Gore Vidal
6. "A Movable Feast" by Ernest Hemingway
7. "Eyeless in Gaza" by Aldous Huxley
8. "The Benefactor" by Susan Sontag
9. "The Erasers" by Robbe-Grillet
10. "The Lake" by Kawabata
11. "Blind Date" by Jerzy Kosinski

James Maki

1. "The Life Triumphant" (1908) by James Allen
2. "As A Man Thinketh" (1890) by James Allen
3. "A Philosophy of Solitude" (1933) by John Cowper Powys
4. "The Meaning of Culture" (1929) by John Cowper Powys
5. "Reflections of a Lonely Man" (1903) by A. C. McClung
6. "Wayside Wisdom" (1909) by E. M. Martin
7. "The Pleasures of Life" (1890) by Sir John Lubbock
8. "The Art of Thinking" (1961) by Dagobert D. Runes
9. "The Life of the Bee" (1901) by Maurice Maeterlinck
10. "Signs and Seasons" (1886) by John Burroughs

Keith Thompson

"Soldiers" by Rolf Hochhoff. "This 3-act play illuminates the moral issues of total war with an exactitude that only great theatre aspires to...That no production of this play has been staged in conjunction with the disarmament debate seems a gross oversight."

ELECTION OF DIRECTORS

- (22) Nominations for Directors, please. We wish to elect 9 Directors this year, for 3-year terms starting 1/1/86, which will give us a total of 24 Directors. The August newsletter will provide a ballot for voting. In this (May) newsletter we seek the candidates who will be on the ballot.

We are asking you to nominate candidates. Any member may nominate any other member to be a Director-Candidate.

If you wish to be a candidate yourself, notify the Elections Committee and someone will probably nominate you.

The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something, by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. The cost of attending meetings is tax-deductible for Directors.

We would like to have more than 9 names on the ballot, so as to give members a choice.

A brief statement about the candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.

Directors whose terms expire in 1985 are LOU ACHESON, KEN BLACKWELL, LESTER DENONN, DAVID HART, MARVIN KOHL, JIM MCWILLIAMS, STEVE REINHARDT, AND CAROL SMITH. They are eligible for re-election.

- * To nominate someone — or to volunteer yourself — write the Election Committee, c/o the newsletter, address on Page 1, bottom.

NUCLEAR AFFAIRS

- (23) Do nuclear affairs get too much space in the newsletter? That's what we asked you in the last issue (RSN45-18).

MICHAEL TAINT says: "I think that the PSN treatment of the nuclear issue is right on the nail. From personal experience (ie., I'm a former Titan II missile crew commander) I can tell you there's no greater issue facing humanity today. I think the BRS should continue to discuss the topic."

PRESIDENT DON JACKANICZ'S REPORT

- (24) Work continues on planning the 1985 BRS Annual Meeting. If you have never attended an Annual meeting, why not make this your first? If you have attended one, you know how rewarding the experience can be, of meeting many persons approaching Russell from different perspectives, of participating in presentations, discussions, and

other program events, and of joining together to study/celebrate/criticize/evaluate/defend/attack/interpret the life, work and times of Russell. I ask each member to review the meeting announcement-reservation form and to consider taking part. We will be meeting in Washington, DC at Georgetown University and The American Film Institute. The program is diverse, the setting attractive, the cost reasonable; the decision is yours.

In early April I visited Britain with the intention of learning more about the possibility of holding a future Annual Meeting there. I had originally considered several meeting sites, but the appropriateness of Cambridge is obvious. During my visit, I became convinced that Trinity College would be the ideal setting. I was well received at the Trinity Bursar's Office. Officials there readily agreed that a Russell Society meeting at Trinity would be a welcome event. The one difficulty is that the popularity of conferences at Trinity requires reserving time and space two to three years in advance. So the earliest BRS Annual Meeting in Cambridge would be in 1987 or 1988!

I have previously heard from some members in support of a Britain Annual Meeting. Others have expressed disagreement with the proposal chiefly because of the time and expense for our members, who are mostly American and Canadian. Between now and the June 1985 Meeting, I would very much appreciate receiving additional opinions from members. When the BRS Board of Directors, which is responsible for choosing future meeting sites, meets this June, I will submit all such opinions.

While at Trinity College's Wren Library, I had the privilege of seeing on display an original Russell manuscript, fine examples of medieval manuscripts, Newton's books, and the Capell collection of Shakespeariana. In London, I again visited the bust of Russell in Red Lion Square, and can report that it is weathering well.

ABOUT OTHER ORGANIZATIONS

- (25) * I.A.T.A. -- The International Appropriate Technology Association -- has issued a call for papers for its Symposium, titled "Problems and Promises in Appropriate Technology", to be held in the Fall of 1986. Its Executive Director, BRS Member ADAM PAUL BANNER, can be contacted at I.A.T.A., 603 East Madison Street, Ann Arbor, MI 48109.

- (26) Palestine Human Rights Campaign was "established in 1977 to secure internationally recognized human rights for the Palestine people..." It issues a monthly newsletter -- physically attractive and very well written -- and the enemy is Israel. Here is the start of the March editorial:

Israeli occupation policy has consistently relied on collaborators who could be armed and set against the local population. The collaborators are generally petty criminals or political hacks with no popular support; in either case, they are artificial creations of Israel. In the West Bank, the collaborators are known as the Village Leagues; in south Lebanon they call themselves the South Lebanon Army (SLA).

In south Lebanon, we are now watching the Israeli response to the categorical failure of its surrogates, the SLA, to control and intimidate the local population.

Israel's vicious 33-month occupation of south Lebanon has united the people there in a classic guerrilla war against the occupier. Unprepared for guerrilla warfare, Israel placed its faith in the SLA, only to see it completely disintegrate when Israel announced its plans to withdraw from Lebanon.

Their national office is 220 S. State St., Suite 1308, Chicago, IL 60604. There are also offices in Seattle and Washington, DC.

FOR SALE

- (27) Members' stationery, 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "**Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid. Order from the newsletter, address on Page 1, bottom.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

- (28) Chairman, Harry Ruja; President, Donald W. Jackanicz; Vice-President, David S. Hart; Treasurer, Dennis J. Darland; Secretary, John R. Lenz; Vice-President/Special Projects, Marvin Kohl; Vice-President/Information, Lee Eisler.

DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
elected for 3-year terms, as shown

- (29) 1982-84: LOU ACHESON, KEN BLACKWELL, LESTER DENONN, DAVID HART, MARVIN KOHL, JIM MCWILLIAMS, STEVE REINHARDT, CAROL SMITH
- 1983-85: DAVID GOLDMAN, DON JACKANICZ, STEVE MARAGIDES, FRANK PAGE, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, KATE TAIT
- 1984-86: JACQUELINE BERTHON-PAYON, BOB DAVIS, ALEX DELY, ALI GHAEMI, HUGH MOORHEAD, DAN WRAY
-

BR HONORED

- (30) The Kalinga Prize for the popularization of science was established by UNESCO in 1951, with funds provided by Mr. H. Patnaik of India. BR won it in 1957. In other years it has gone to Julian Huxley, Gerard Piel, Eugene Rabinowitch, and Margaret Mead, among others. We reported on the 1957 event in some detail, in the November 1979 issue (RSN24-20), but had no photo. Here at last is a photo of BR receiving the Kalinga Prize (one thousand pounds sterling, and a UNESCO gold medal), from Professor P. Auger, Director of the Department of Exact and Natural Sciences of UNESCO, with Dr. L. Evans, Director General of UNESCO, looking on. Our thanks to UNESCO for supplying the photo, and to TOM STANLEY for obtaining it from UNESCO.

RUSSELL SOCIETY NEWS

No. 47

August 1985

- (1) Highlights: Money crisis (2). Time to vote (10,41). Denonn dies; his meeting with BR in 1943 (4). BR & current issues (3). Three recipients: BRS Award (19); BRS Book Award (16); Doctoral Grant (17). Thompson dismantles Star Wars (20). Secular H*m*n*sm (21). Leiber reviews Volume 7 (14). Index on next to last page. An asterisk in the left column indicates a request.
-

MONEY CRISIS

- (2) A false alarm? We don't think so. What could happen soon is the total exhaustion and closing down of the BRS Treasury. And without money to operate...well, you can guess what would close down next. We are not too far from that right now.

We are not crying "Wolf!"

There are a number of reasons why the BRS purse is virtually depleted. Expenses are up (postage, printing, advertising.) Contributions are down. The rest is simple arithmetic.

We're sorry to start a newsletter with a piece of bad news, but let there be no psychic numbing about our financial condition.

If you think the BRS is a worthwhile enterprise...and worth saving...do something about it. SEND A CONTRIBUTION c/o the newsletter, address on Page 1, bottom.

NEW

- (3) BR and current issues. This will be a new section in the newsletter — a result of suggestions made at the June meeting — in which members say what they think BR's position might have been about various topics in the news. It can be any topic. Just say what you think BR might have said, and say why. What might BR have said about the Quinlan case?...right-to-life?...sanctuary movement?...highschool for homosexuals?...Star Wars?...Reagan position on apartheid?...Japan's success with consumer goods, and loss of American jobs? etc.,etc. Be reasonably brief. Write c/o the newsletter.
-

OBITUARY

- (4) Lester Denonn is dead, after "two full years of devastating illness," according to a letter from his wife, Bess. Lester was an Honorary Member, a distinguished lawyer and author of a number of legal books and articles, an appreciator and bibliographer of Russell's writings, editor (with Robert Egner) of "The Basic Writings of Bertrand Russell" (1961), editor of "Bertrand Russell's Dictionary of Mind, Manners, and Morals" (1952), and more. The Harvard Law School Library's "Bibliography of the Works of Lester Denonn" lists a full page of articles and books on legal and philosophical subjects. Lester was the owner of what may be the largest private collection of books by and about Russell in the world.

This year the BRS created a special award in his honor, and expressed its high regard for him in a plaque that read as follows:

A BERTRAND RUSSELL SOCIETY SPECIAL AWARD
TO
LESTER E. DENONN
1985

for lifelong devotion to Russell and his writings
and notable contributions to Russell scholarship

Word of this proposed tribute was sent in advance to Bess Denonn. She wrote that "Lester is very ill... When I read your letter [which contained the tribute] to him he seemed very pleased. In fact it appeared to stimulate him..."

Here is a re-run of Lester's delightful recollection of a few hours he spent with BR in 1943. We originally ran it in 1977 (NL14-16).

At the suggestion of Professor Schilpp of Northwestern University, for whose Library of Living Philosophers I am preparing a bibliography of the works of Bertrand Russell, I have been in communication with Russell from time to time about the project. His recent series of lectures on Monday evenings in New York City gave me the opportunity of suggesting a meeting. His response was characteristically crisp: "Your letter reached me after some delay. I am afraid I probably couldn't manage dinner, but I could come to your office next Monday (Feb. 16, 1942) between 3 and 3:30, and give as much time as might be necessary. If however your work makes that impossible, I will try to manage a later hour on a later Monday. Yours sincerely (signed) Bertrand Russell."

The eventful Monday arrived but no Russell and finally at about quarter to four Mr. Russell was announced and in a few seconds was before me -- all to myself. I had seen him but twice before, on the lecture platform at Cornell in 1924 and in Brooklyn in 1938. It was the same Russell I had seen, but an older man, frailer looking than his height on the dais led one to believe, but vigorous and hearty nonetheless, with unforgettably roguish, piercing blue eyes, that punctuated every remark, and the distinguished shock of white hair that crowns the familiar angular photographs.

He apologized for being late, stating that he had miscalculated the time it would take to reach my office. He strode to the window to enjoy the view and pass a few pleasantries about the shipping [apparently Lester's office window provided a view of New York harbor] -- or lack of it -- and then indicated that he was ready to get down to business. He wanted to see how far I had progressed with the bibliography.

Before handing him my notebook, I remarked how thoroughly ashamed I was to sit down with him, since my Mother's maid had told me it was no honor to meet him. "Why that fellow ran a nudist camp in England, and what's more, they called him Barney, that's what they did." He shrugged his shoulders, realizing that the Barney was a lot of "Blarney," and merely commented that the newspapers -- or some of them -- had seen fit to print wholly unmitigated lies about him.

He opened the looseleaf and turned to 1895, to a note on his article, "The Logic of Geometry", appearing in "Mind". "I remember that well," he said. "Except for an earlier review, that was the first time that my name appeared in print as an author, and you know how an aspiring author is impressed by his first appearance in print."

He then read carefully line after line, year after year, commenting not infrequently on entries he had forgotten, and recalling other possible sources for items. He was throughout extremely helpful in making suggestions.

Many of the books and articles struck forgotten chords that played first upon his eyes with merry twinkles and then tripped with droll laconic phrases into anecdotes sounded in rich English accent.

"Haldane on Infinity." I remember that well. It was the custom for members of the Aristotelian Society to tear each other's papers apart unmercifully. Not knowing that the members had decided that it would be unbecoming to follow this practice with their president, a distinguished cabinet minister, I sat intently writing notes for refutation. When Haldane had finished, old Shadworth arise to move the vote of thanks but was too weak to continue. Imagine my consternation when they turned to me to make the motion. I did so, but rushed home with my notes to get the criticism off my chest. Hence the article."

"Proposed Roads to Freedom'. You know, that was called 'Roads to Freedom' in England, but my publishers thought it was safer to call it 'Proposed Roads,' in America."

"Cambridge articles? Oh, yes, I remember the controversy about one in which I tried to show that it was necessary to lie in order to become ordained in the Church of England. I caught one of the professors of Church History in a glaring inconsistency on a point of church history."

"Articles in the Britannica? Why, of course. The Britannica came out with an edition during the last war in which the article about me painted me as a horrible fellow. When after the war, they invited me to write on mathematical philosophy, I answered that I learned from their prior edition that I was scarcely a fit person to become a contributor. A long letter of apology followed promptly."

"Weekly syndicated articles in the Hearst newspapers? You know, a writer has to make his living by his bad writing, so that he can continue at what he thinks is his good writing."

"On Denoting' -- I think that was my best work. I have expressed the ideas better subsequently, but that represents the field -- on description -- in which I believe most will say is my most significant contribution."

"You will notice that I always spell Leibniz without the 't'. If there had been German birth certificates in his day, they would have shown the 't', but since he wrote mainly in French, he himself indicated the name

most frequently without it."

"Jourdain's 'The Philosophy of Mr. B*rr*nd R*ss*ll'. That was a curious work containing many direct statements of mine. Jourdain, poor fellow, suffered from paralysis. I would go to see him frequently and bring him all sorts of mental gymnastics, such as, 'First, the idea slipped my mind and then it went clean out of my head. Where was the idea between the two events?' It seems that Jourdain took them all down and got them out in book form, adding some others that he picked up elsewhere."

"Articles on China? A missionary once told me that one of my articles criticizing the English government's treatment of the Chinese had saved the lives of many Englishmen in the days when the anti-foreign difficulties were rife. The Chinese figured that if one Englishman could write that way, maybe all the English weren't so bad. But the English government didn't like the article very much anyway."

We had arranged a very interesting program early in our meeting. He wanted a little time out for an Englishman's regular afternoon tea while I signed my mail; then he would like about three-quarters of an hour to review his lecture notes for the evening and then, in answer to a repeated invitation, "he probably could manage dinner," so long as he could get to his lecture a few minutes before the scheduled hour.

At five he left and returned shortly after half past. One of the boys chanced to be in the reception room when he returned. I introduced him to Russell and commented that he had heard him some years ago in a debate with John Cowper Powys. "Oh, I remember that debate. It was on marriage. I agreed with Powys on one point -- that marriage has something to do with the difference between men and women."

I then took him on a short tour of the office, explaining what he had gathered from some of the telephone calls that had interrupted us, that the firm represented one of the large commercial banks of the city. "You know, no doubt, that I don't particularly like bankers," he said. He seemed a little perplexed at the fact that I should have shown such devotion to his works as evidenced by the large library of over sixty volumes that I have acquired and all the time I have spent on his bibliography, when my surroundings seemed so foreign to his social and political views. [By 1979 those "sixty volumes" had grown, according to Bob Davis, to "thousands of books and articles collected for over fifty years" (RSN21-5).] I acknowledged that I differed with him and added that, perhaps, my views were less remote from his than those of some of my colleagues. He seemed amused at this response and satisfied to let the point drop -- for the time being.

Before returning to my room, I offered him a separate room for his lecture review but he said that that would be unnecessary. His notes were in longhand. He read them silently and carefully, with his ever faithful pipe aglow. "I can't think without it." Now and again he made a few changes. In order not to make him conscious of my presence, I sat preparing my contracts lecture for the next evening. He later explained that he always reviews his thoughts this way before a lecture and then is able to talk without reading from his notes, except now and then. Frequently he talks from a bare outline.

When he had finished, we repaired to Ye Olde Chop House on Cedar Street. He commented very favorably about the place. "It reminds me of an inn in London, I was the only Englishman who went there. They made it for Americans."

His running rapid-fire comments delighted me as it must have some of the guests at the intimately close tables, as his rich English voice was unmistakably arresting.

"Will Durant? Charming fellow. Writes beautifully, but never has a fact correct -- not even my father's name."

"Whitehead? I am sure that we differ from each other on many points, but we have refrained from printing our disagreements. Yet I remember one occasion when I lectured on solipsism at a meeting at which he was chairman. I said I could not subscribe to the doctrine as I could not believe that I had created all that existed in the world, especially not the many pages of Mr. Whitehead that I could not understand."

He said that he had been in all of the United States on lecture tours except Florida, Georgia, and South Carolina. This remark was prompted by my explanation of the reason why my family was presently in Florida. "I am very sorry to hear about the mastoid trouble your children have had. My two older children were also operated on for mastoids. I remember the night when one was taken to the hospital. I had to debate with a bishop. I don't like bishops, but I particularly didn't like this one. He argued that all human suffering was caused by sin. I could scarcely understand how my little five-year-old boy could have sinned so much."

"Talking about bishops -- you know my disinterested view of the so-called Bertrand Russell case is that it was an outrage. Even if I had not been concerned in it, I would still think it was an outrage. They used to say a lot about Tennessee." His eyes twinkled. [This is probably a reference to the trial in Tennessee of Scopes, who was found guilty of the crime of teaching evolution.]

He asked me whether I differed from his philosophic position -- again intimating that my surroundings bespoke wide divergence from his political ideas. I said that I had just finished a book still in typescript in which I developed an epistemological idealism along with a metaphysical realism, which I presumed was opposed to his realism. "On the contrary,:" he said, "if you are influenced by critics who mistake my views and place me with the realists, then you will think so, but if you attend closely to my arguments, you will

see that I haven't been an epistemological realist since 1905. My latest book should convince you of that."

He explained that he was lecturing once a week at the Barnes Foundation on the history of thought from Thales to today. He is carefully planning these lectures in preparation for a lengthy work on the history of human thought in its social and cultural background.

On the way to the lecture hall, he harked back to his perplexity at my choosing him for my philosophic labors in my philosophy hobby. I explained that insofar as hero worship was concerned, that I had a hero in the late Justice Oliver Wendell Holmes who, although not a systematic philosopher, stirred me deeply by the trend of his thinking. He stated that he could readily understand why an American lawyer interested in philosophy could feel that way about Holmes but that he was still curious about himself. I said I could not better express my views about him than I had done on previous occasions when I had said that I felt his to be the most catholic mind ("small 'c'," he interjected) that I knew through which I could view the currents of contemporary problems.

By this time we had reached his destination. He made sure not to mix up the books we had alongside of us. I had Laird's "Theism and Cosmology", and the philosopher had — a detective story. He got agilely out of the taxi, and as he swung around to enter the lecture hall, he turned back and said, "Be sure to tell your Mother's maid that I am neither so wicked, nor for that matter, so red as I am painted." ("Recollections of Three Hours with Bertrand Russell" originally appeared in "Correct English", Vol.44, No. 1 — December 1943.)

BULLETIN BOARD

- (5) Unaffiliated philosophers: If you have a PH.D. in Philosophy and are not teaching (and are not emeritus), and would like to be listed in the Directory of American Philosophers (1986-87 edition), send your name, address, highest degree earned, and area of interest in philosophy to: Directory of American Philosophers, Philosophy Documentation Center, Bowling Green University, Bowling Green, OH 43403. Note deadline: September 1, 1985.

1985 ANNUAL MEETING (WASHINGTON, D.C.)

- (6) The 12th Annual Meeting was held on the agreeable campus of Georgetown University. "the oldest Catholic institution of higher learning in the United States", founded 1789 in George Town. (That's George III, the King we love to hate.) The facilities were excellent, thanks to DON JACKANICZ's meticulous planning. We were lucky in the weather: sunshine and no excessive heat (which is possible in Washington in June).

25 BRS members attended one or more sessions: POLLY COBB, WHITFIELD COBB, BOB DAVIS, MONIKA DEPPEN, LEE EISLER, THOMAS FRINK, DAVE GOLDMAN, ARITIE GOMEZ, DAVID HART, DON JACKANICZ, HERB LANSDALL, GLADYS LEITHAUSER, JOHN LENZ, STEVE MARAGIDES, JEFFREY MESHINSKY, HUGH MOORHEAD, STEVE REINHARDT, HARRY RUJA, PHIL SHAPIRO, JOHN SHOSKY, TOM STANLEY, ROY TORCASO, CLIFFORD VALENTINE, ELEANOR VALENTINE, HERB VOGT.

A number of non-members also attended some sessions: Joe Briggs, Steve Carson, Daniel Deppen, Bruce Law, Dennis LeClair, Cleve Lunceford, Margaret Moran (a guest speaker), Gwen Stanley, Kathleen Stanley.

The following officers were elected or re-elected for one-year terms: Chairman, Harry Ruja; President, David Hart; Vice-President, Marvin Kohl; Secretary, John Lenz; Treasurer, Dennis Darland; VP/Information, Lee Eisler.

The program included: Margaret Moran on "Bertrand Russell's Protest Against the First World War"; Harry Ruja on "Russell Bibliography"; a panel discussion by Bob Davis, Lee Eisler, David Hart, and David Johnson on the future of the BRS; Don Jackanicz reading Carl Spadoni's paper — Carl was busy becoming a father — "The Folly of Bertrand Russell's The Wisdom of the West [which BR did not write]. All of this — except the panel discussion — was audio-taped, and the tapes will be available from the Russell Society Library. Several Russell films were also shown.

There was a Red Hackle Hour before the Banquet — thanks to Don's prevision and provision, Red Hackle no longer being available in the USA. Did you know that Herb Vogt is a superb jazz pianist?

Sunday morning buses took us to the American Film Institute, at the JFK Center for the Performing Arts, where we saw the following films; "Bertrand Russell Discusses Philosophy", "In the Nuclear Shadow; What Can the Children Tell Us?", "The War Game" (BBC), "Life and Liberty...For All Who Believe", and "Bertie and the Bomb" (BBC).

There was a Society Business Meeting; here are highlights. The Minutes (40) provide more details.

- . Past President Bob Davis chaired the meeting.
- . Don Jackanicz told about visiting Cambridge, England, for a possible future BRS meeting there. Cambridge is booked till 1988.
- . Dennis Darland reported on the state of the BRS Treasury: it's empty.
- . Dues are raised: Regular \$25; Couple \$30; Student and Limited Income unchanged at \$12.50
- . Harry Ruja thanked Carol Smith for her excellent work as Co-Chairman of the Membership Committee for the past 3 years. [She is now stepping down, succeeded by William K. Fielding.]
- . Harry announced that the BRS newsletter is now in the Library of Congress (including all back issues), and will be listed in the Library's Serials catalog.
- . The 1986 Annual Meeting will probably be in NYC in June. [The next-to-last weekend is June 20-22.]

The Board held its Annual Meeting and discussed the following. For more details, see the Minutes (39).

- . Alex Dely resigned from his 2 committees (Science, and Human Rights/Int'l Development) and recommended Adam Paul Banner to succeed him on the latter.
- . Two things helped bring the BRS Treasury down to its present sad state: (1) the Doctoral Grant was raised in 1985 from the previous \$500 to \$1000; (2) the 1985 Annual Meeting was unusually expensive, including an unanticipated \$400 insurance charge required by the University.
- . Dave Goldman (psychiatrist) kindly offered to deliver the 1985 BRS Award plaque to the recipient, Robert Jay Lifton (psychiatrist), whom he knows, and about whose work he spoke with great admiration.
- . A special award was approved for Lester Denonn, in recognition of his lifelong devotion to BR and BR's writings, and his contributions to Russell scholarship.
- . The first BRS Book Award went to the 5-member Editorial Board of Cambridge Essays, 1888-99, which is Volume 1 of the planned 28 volume series, "The Collected Papers of Bertrand Russell". Margaret Moran accepted the scroll on behalf of the Editorial Board.
- . To eliminate possible misunderstanding, the one word, "elected" was inserted into the Bylaws, to make clear that there can be a maximum of 24 elected Directors, plus the BRS Officers, who are ex-officio Directors.
- . The decision was made not to copyright the newsletter.
- . The Doctoral Grant Committee (Hugh Moorhead, Chairman) has selected Linda Benthin (of McMaster University) as the recipient of the 1985 Award. There will be no future Doctoral Grant until the BRS gets on firmer financial footing.

OUTGOING PRESIDENT JACKANICZ SPEAKS

- (7) With the 1985 Annual Meeting past and the 1986 Annual Meeting in its early planning stage, I would like to thank all who participated in this year's successful Meeting and to suggest that all members consider attending next year. I'll certainly be there in 1986.

I had the responsibility of organizing this year's Meeting, and I do owe a debt of appreciation to those of you who helped the BRS and me in various ways before and during the Meeting weekend. I was pleased to learn that those attending seemed to think the site, program and accommodations were agreeable.

As BRS President for several years, I attempted to carry on our activities following the excellent example of my predecessor, Bob Davis. Now we have chosen a new President, David Hart, who I feel will lead us well. I will continue actively participating in BRS affairs, and look forward to a period of further growth for the BRS.

REPORTS FROM COMMITTEES

- (8) International Development Committee (Adam Paul Banner, Chairman):

As the new Chairman, I am happy to report that files are being copied and related papers are in transit to me, at 2143 Medford (Apt.11), Ann Arbor, MI 48104. (I welcome phone calls after 11 pm EDT:313-971-3138.)

Retiring Chairman Alex Dely will continue to support current projects and/or insure an orderly transfer of efforts. The Committee can be proud of its JOURNAL DISTRIBUTION PROJECT, with its simple and effective method of transferring technical data to support groups in South America and in Africa. We will continue with this project, and will accept requests for specific journals, using our contacts with industry, membership and libraries.

We have issued a call for papers, letters and reports to discuss technology transfer to developing countries, for successful long-lasting projects (of which there are too few)...with the aim of avoiding mistakes made in earlier efforts by N. G. O., World Bank, A.I.D., VITA, and governmental groups including the U.S. Peace Corps. The questions to be discussed are: How can we improve technology transfer? Why have we failed in so many areas?

All members who wish to join in supporting our efforts will be welcome. We also welcome requests for cottage industry technology, and will try to secure technical assistance and limited funding for selected projects.

[Retiring Chairman Alex Dely has stepped down because of extraordinary outside demands on his time which could not be avoided.]

- (9) Philosophers Committee (David E. Johnson, Chairman) has issued a notice to publications read by professional philosophers:

The Bertrand Russell Society announces a call for papers to be presented at its meeting at the Eastern Division of the American Philosophical Association in December 1986. Papers may be on any aspect of Russell's philosophy. They should have a reading time of about one half-hour, and should be submitted in triplicate, typed and double-spaced, with an abstract of not more than 150 words. The name of the author, with his address and the title of the paper, should be submitted on a separate page. The submission deadline is May 15, 1986, and the papers should be sent to David E. Johnson, The Bertrand Russell Society, Sampson Hall, U.S. Naval Academy, Annapolis, MD 21402. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

ELECTION OF DIRECTORS

- (10) Please vote. Use the ballot at the end of this newsletter. We need to elect 9 directors, to bring the total of elected directors up to 24. We have an unusually fine list of director-candidates this election, as you can see. There are 15 candidates; vote for 9. Here they are:

LOUIS K. ACHESON, JR. (Encino, CA), 7-year member, a BRS Director since 1983. 33 years with Hughes Aircraft, now Senior Scientist (aerospace engineer and systems analyst); on NASA space projects for past 13 years. World Federalists, Worldview Exploration Seminars, Int'l Cooperation Council (now Unity-in-Diversity Council). As teen-ager, read "Selected Papers of Bertrand Russell" and has been hooked on Russell ever since.

TRUMAN E. ANDERSON, JR. (Denver, CO). 11-year member. Oilman/philosophy lover. Majored in philosophy at U/Minnesota; now at age 40 a part-time graduate student in philosophy at U/Colorado. "I doubt that I would have acquired so great an interest in philosophy without Bertrand Russell." Married, 3 children.; oil business executive.

ADAM PAUL BANNER (Ann Arbor, MI), new Chairman, BRS Int'l Development Committee; former BRS Director; degree in Physics and Chemistry from U/Evansville; carbon & graphite chemist. A volunteer, helping develop a chemical transportation toxic spill program for local county authority. In MARS military amateur radio service, tornado watch, etc. Exec. Director, Int'l Appropriate Technology Ass'n, based at U/Michigan, Ann Arbor.

KENNETH BLACKWELL (Hamilton, Ont.), a Founding Member of the BRS, a BRS Director since its founding in 1974. He is Archivist of the Russell Archives, and Editor of the publication, "Russell".

WHITFIELD COBB (Blacksburg, VA). 8-year member (with wife, Polly). Began reading Russell in 1930; became agnostic and pacifist; drafted as conscientious objector 1942-46. Incorporated "inspiration of love and guidance of knowledge" into the (Quaker) wedding vows, and engraved in the wedding rings. Retired from teaching math and statistics in 1976.

WILLIAM K. FIELDING (Ware, MA), Co-Chairman, BRS Membership Committee. During WWII, was shipyard layout man, job-instructor, shipfitter on Liberty Ship construction in Maine, Coast Guard boats in NJ. After WWII, draftsman, engineering aide, and land-surveyor. Studied electronics, became Master Technician, ran own sales and repair business for 20 years; retired in 1980. Taking college courses toward degree; Mensa member. Studied music performance and composition. Has had verses published. "Trying to live as a secular individual in a world that seems rooted in superstition." A great-grandfather.

JOHN JACKANICZ (Chicago), registered agent of the BRS in Illinois (where the BRS is incorporated); 7-year member; brother of Past President Don Jackanicz, whom he occasionally assisted in BRS affairs. Graduate of U/Illinois. Age 37.

DAVID JOHNSON (Annapolis, MD), Chairman, BRS Philosophers Committee; organizes annual BRS session at American Philosophical Association (Eastern Division) meeting. Professor of Philosophy, U.S. Naval Academy. Dissertation on Russell and Strawson. Research and teaching currently focus on ethical issues in peace and war.

JUSTIN LEIBER (Houston, TX), 10-year member, Professor of Philosophy at U/Houston; Ph.D., Chicago; B. Phil. Oxford (student of A. J. Ayer). Author, Noam Chomsky: A Philosophical Overview; Structuralism; Can Animals and Machines Be Persons?; a number of journal articles; novels include Beyond Rejection, and The Sword and the Eye. Several times chair of BRS sessions at APA, also commentator on three occasions. Now, guest editor, special issue of Philosophical Forum, comparing Russell and Wittgenstein as contrasting examples of what the philosopher should be in relation to the larger society.

GLADYS LEITHAUSER (Pleasant Ridge, MI), 9-year member, originator of BRS Book Award and Chairman of its Committee. Teaches technical writing at U/Michigan-Dearborn. Ph.D., Wayne State U. Dissertation on Russell; also several Russell articles. (Dissertation is in the BRS Library, Item 52, RSN46-18)

JAMES E. MCWILLIAMS (Holly Ridge, MS), 12-year member. AHA, ACLU, Sierra Club, Fulbright scholar (India). Describes self as "occasional teacher (English, German), farmer, storekeeper". Artful photographer, e.g., photos of BRS meetings (RSN35, p.3; RSN40-3).

STEPHEN J. REINHARDT (Wilmington, DE), a 12-year member; attends every annual meeting. Was BRS Treasurer for many years, and has been a Director since 1976.

MICHAEL ROCKLER (Camden, NJ) is new to the BRS but not to BR. "I am Chairperson of the Department of Education of Rutgers University. I have taught in various institutions of higher education since 1963. I am a member of the American Humanist Association and I became familiar with the BRS through them. Russell has been an intellectual hero of mine all of my adult life, having first encountered his work as an undergraduate student of philosophy at the University of Minnesota. I plan soon to begin a book on Russell and education."

CARL SPADONI (Hamilton, Ont.), 8-year member, former Assistant Archivist at the Russell Archives (McMaster University), and Editorial Associate of the publication, "Russell". Now an Archivist at Health Sciences Library, McMaster University, and a member of the Board of Consultants of "Russell". His doctoral dissertation discusses Russell's earliest philosophy. Co-Editor of Intellect and Social Conscience: Essays on Bertrand Russell's Early Work. Has written extensively on Russell's life and thought.

TOM STANLEY (Hartford, VT), BRS Librarian. 9-year member. Book lover, book collector, book seller. Proprietor, with his wife, of Stanley Books, specializing in used and out-of-print books.

6 of the above candidates — all of whom are well qualified to serve as BRS Directors — are not going to be elected. Some win, others lose; that's the nature of the beast. We hope that those who do not win this year will allow us to list them again next year.

BR QUOTED

- (11) Forbes is still at it. As you probably know, Forbes Magazine has a page of quotations in every issue, titled THOUGHTS ON THE BUSINESS OF LIFE. They've been doing it for years, and they'll sell you a 2-volume boxed set of "Thoughts" for \$24.95. BR appears often on this page. Here is the latest, from the issue of 12/17/84.

Rules of conduct, whatever they may be, are not sufficient to produce good results unless the ends sought are good.

Thank you, PAUL GARWIG.

- (12) The Wall Street Journal had a nice column on Rudolph Penner, the new head of the Congressional Budget Office, which has to live with the massive federal deficits we now have. From its issue of 3/13/84:

Anyone who lives on a daily diet of deficits must have a sense of humor if he is to retain his sanity, and Rudy surely fills the bill. He expressed a desire for a moderate buildup in defense spending and commented that some military spokesmen seemed to be going a bit too far.

"Sometimes," he said, "they seem to be taking their cue from that defense expert, Mae West, who once said, 'Too much of a good thing can be wonderful.'"

"Bertrand Russell," he said, "once remarked that people would rather commit suicide than learn arithmetic. That seems to be particularly true in Washington." Thank you, ALBERTO DONADIO

- (13) The New York Times Book Review recently added a page titled NOTED WITH PLEASURE. It provides a selection of very short excerpts from many sources. This excerpt appeared on 2/24/85, p39.; it is taken from the Autobiography, Volume II, p. 35 (Little Brown hardcover edition) →

'I Have Loved a Ghost'

ANDREW BUCHART

The spiritual loneliness of the philosopher who can experience only abstractions is wistfully described by Bertrand Russell in "The Art of Autobiography in 19th and 20th Century England," by A. O. J. Cockshut (Yale University Press).

Underlying all occupations and all pleasures I have felt since early youth the pain of solitude. I have escaped it most nearly in moments of love, yet even there, on reflection, I have found that the escape depended partly upon illusion. I have known no woman to whom the claims of intellect were as absolute as they were to me, and wherever intellect intervened, I have found that the sympathy I sought in love was apt to fail. What Spinoza called "the intellectual love of God" has seemed to me the best thing to live by, but I have not had even the somewhat abstract God that Spinoza allowed himself . . . I have loved a ghost, and in loving a ghost my inmost self has become spectral . . . my most profound feelings have remained always solitary and have found in human things no companionship. The sea, the stars, the night wind in waste places, mean more to me than even the human beings I love best, and I am conscious that human affection is to me at bottom an attempt to escape from the vain search for God.

BOOK REVIEW

- (14) Volume 7, reviewed by Justin Leiber, Philosophy Department, University of Houston, Houston, TX 77004:

The Collected Papers of Bertrand Russell, Volume 7, The Theory of Knowledge: The 1913 Manuscript, edited by Elizabeth Ramsden Eames in collaboration with Kenneth Blackwell, Allen & Unwin. (\$50 in cloth from Allen & Unwin, Inc., 9 Winchester Terrace, Winchester, MA 01890).

This publication is a philosophical event of great importance, and the background of its composition and neglect is a tragic menage au trois in which Russell plays a role of extraordinary humility and Wittgenstein, of extraordinary arrogance.

In actual printing this follows the first volume in this distinguished series. The first volume contained some unpublished early writings. This volume contains a 350 page book-length manuscript that Russell wrote in May and June of 1913, one which anticipates some of the views of "Lectures on Logical Atomism." The first 142 pages appeared as six articles in the Monist in 1914 and 1915. We learn from Russell's letters to Lady Ottoline Morrell in May, 1913 that he was quite pleased with the work, which he saw as the first, analytic portion of a major work that was

also to have a constructive second part. We learn in the June letters that Ludwig Wittgenstein, who had already condemned Russell's non-technical The Problems of Philosophy as a "shilling shocker," criticized the work "with the greatest severity...an event," Russell later wrote Ottoline Morrell in 1916, "of first-rate importance in my life, and effected everything I have done since. I saw he was right, and I saw that I could not hope ever again to do fundamental work in philosophy. My impulse was shattered, like a wave dashed to pieces against a backwater."

As the masterful and subdued introduction by Professor Eames suggests, Russell wished his projected major work both to embrace the traditional experiential and introspective problems of epistemology and to attend to the logico-linguistic problems in the foundations of logic and mathematics that Russell himself had done more than anyone to make a center of philosophical attention. His interest in then addressing the former may have owed something to his relationship with Lady Morrell, while his respect for the latter was personified, perhaps unfortunately, in his impassioned former student Wittgenstein.

It is not clear which parts of the manuscript Wittgenstein read and it is possible that he commented on a verbal rehearsal of it. It is clear that they had several discussions. Wittgenstein wrote to Russell on June 18th, 1913, that "I can now express my objection to your theory of judgment exactly: I believe it is obvious that, from the proposition 'A judges that (say) a is in the Relation R to b,' if correctly analysed, the proposition 'aRb.v.~aRb' must follow directly without the use of any other premiss. This condition is not fulfilled by your theory."

To unpack Wittgenstein, "aRb.v.~aRb" (aRb or not aRb) is a logical truth and what Wittgenstein labeled a tautology. In the view Wittgenstein then held and continued to hold at least through the publication of the Tractatus in 1919, all logico-mathematical truths are tautologies and, as such, are pseudo propositions in that nothing in experience can ever falsify them. "aRb" is presumably an atomic proposition, truth or false depending on whether or not a bears the relation R to b. To put the matter experientially, as Russell tried and Wittgenstein scorned him for trying, we might imagine that a and b are particular reddish bits of immediate sensory experience and R is the relation of similarity. Since Wittgenstein held that all tautologies were latent in the logical form of any proposition (for they are not something added to the world), he was insisting that in the very judgement that "aRb" one must also be saying that "aRb.v.~aRb" along with, one presumes, all other tautologies. From a logical point of view there is, as Russell of course appreciated, much to be said for this claim. To give another example, from "p" (take this to abbreviate aRb) it follows that "not (not-p)" and also that "not (not (not (not-p)))" and also that "not (not (not (not (not (not-p))))" and so on as long as you like, given that the number of nots is even. From a psychological, or traditional experiential and epistemological, viewpoint, however, this seems extraordinarily implausible as an account of what one thinks in judging that two bits of sensory experience are similar. Wittgenstein himself of course wholly avoided giving any sort of psychological account: the psychological account had to conform to the logico-linguistic requirements, and there was nothing a philosopher could, or should, say about it beyond that.

While Russell did not return to the 1913 manuscript, he soon returned to the attempt to weld together the psychological approach of traditional empiricism with the

new logico-linguistic one. As late as Inquiry into Meaning and Truth (1940) we find him struggling to give a plausible psychological and introspective account of judgement, affirmation, negation, and so on, one which can cohere with the requirements of a purely logical account. By that time few philosophers followed him in this, language having come to seem the very essence of thought rather than a medium for its expression. Perhaps we are now in a position to see this as a mistake, but we lack Russell, that is we lack someone with the audacity, energy, authority, and breadth of expertise to knit up our introspective experience and with its symbolic realizations.

BR'S COMMON SENSE

- (15) "Common Sense and Nuclear Warfare" (1959) is "the best, or at any rate, the most eloquent, piece ever written on the threat of nuclear war," writes PHILIP LECOMPTE, M.D. BR "...makes the comparison to an epidemic, which was later used by the Physicians for Social Responsibility for their book, 'The Final Epidemic'. His proposal for an International Commission of Conciliation is essentially a blueprint for the Palme Commission, which appeared years later.

"I cannot agree with Douglas Lackey ("Russell", Winter 1984-85) that the book is deficient in not analyzing the the value of mutual deterrence. After all, Lackey gives BR credit for the analogy to the game of 'Chicken', which in itself suggests the perils of deterrence."

We thank Philip LeCompte for the following excerpts — pp. 11-13 and p. 88 — from the Simon & Schuster hard cover 1959 edition.

It is surprising and somewhat disappointing that movements aiming at the prevention of nuclear war are regarded throughout the West as Left-Wing movements or as inspired by some -ism which is repugnant to a majority of ordinary people. It is not in this way that opposition to nuclear warfare should be conceived. It should be conceived rather on the analogy of sanitary measures against epidemics. The peril involved in nuclear war is one which affects all mankind and one, therefore, in which the interests of all mankind are at one. Those who wish to prevent the catastrophe which would result from a large-scale H-bomb war are not concerned to advocate the interests of this or that nation, or this or that class, or this or that continent. Their arguments have nothing whatever to do with the merits or demerits of Communism or Democracy. The arguments that should be employed in a campaign against nuclear weapons are such as should appeal, with equal force, to Eastern and Western blocs and also to uncommitted nations, since they are concerned solely with the welfare of the human species as a whole and not with any special advantages to this or that group.

It is a profound misfortune that the whole question of nuclear warfare has become entangled in the age-old conflicts of power politics. These conflicts are so virulent and so passionate that they produce a widespread inability to understand even very obvious matters. If we are to think wisely about the new problems raised by nuclear weapons, we must learn to view the whole matter in a quite different way. It must be viewed, as some new epidemic would be viewed, as a common peril to be met by concerted action.

Let us take an illustration. Suppose that a sudden outbreak of rabies occurred among the dogs of Berlin. Does anybody doubt that Eastern and Western authorities in that city would instantly combine to find measures of extirpating the mad dogs? I do not think that either side would argue: 'Let us let the dogs lose in the hope that they will bite more of our enemies than of our friends; or, if they are not to be let completely loose, let them be muzzled with easily detachable muzzles and paraded on

leashes through the streets so that, if at any moment the "enemy" should let loose its mad dogs, instant retaliation would follow.' Would the authorities of East or West Berlin argue that 'the other side' could not be trusted to kill its mad dogs and that, therefore, 'our side' must keep up the supply as a deterrent? All this is fantastically absurd and would obviously not occur to anybody as a sane policy, because mad dogs are not regarded as a decisive force in power politics. Unfortunately, nuclear weapons are regarded, quite mistakenly, as capable of securing victory in war; and because they are so regarded, few men think of them in a manner consonant with sanity or common sense.

Let us take a, perhaps, more apt illustration. In the fourteenth century the Black Death swept over the Eastern hemisphere. In Western Europe it destroyed about half the population, and in all likelihood it was about equally destructive in Eastern Europe and in Asia. In those days, there did not exist the scientific knowledge necessary to combat the epidemic. In our day, if there were a threat of such a disaster, all civilized nations would combine to combat it. No one would argue, 'Perhaps this pestilence will do more harm to our enemies than to us'. Anybody who did so argue would be considered a monster of inhumanity. And yet neither the Black Death nor any similar pestilence has ever offered as terrible a threat as is offered by the danger of nuclear war. The countries of NATO, the countries of the Warsaw Pact, and the uncommitted countries have precisely the same interest in this question. The same interest, in fact, as they would have in combating a new Black Death. If this were realized by the statesmen and populations of East and West, many difficulties which now seem insuperable, or nearly so, would disappear. I am, of course, supposing that the point of view which I am advocating would be adopted by both sides equally. Given a sane and sober consideration of what is involved, this harmony on the problems of nuclear weapons would inevitably result. It would not be necessary to invoke idealistic motives, although they could be validly invoked. It would be necessary only to appeal to motives of national self-interest.

Many of my critics, though they are in the habit of proclaiming that they value freedom, on this point deceive themselves. They do not think that those who prefer life rather than death, even under Communism or under Capitalism, as the case may be, should be free to choose the alternative that they prefer. Not only the inhabitants of Communist nations—or of Capitalist nations—but the inhabitants of all the uncommitted nations are denied by them the most elementary freedom, which is freedom to choose survival. The view that No World is better than a Communist world, or that No World is better than a Capitalist World, is one that is difficult to refute by abstract arguments, but I think that those who hold it should question their right to impose their opinion upon those who do not hold it by the infliction of the death penalty upon all of them. This is an extreme form of religious persecution, going far beyond anything that has been advocated in previous human history.

THE 1985 BRS BOOK AWARD

- (16) BRS Book Award, given for the first time this year, has gone to "Cambridge Essays, 1888-99", Volume I of the planned 28 volumes of "The Collected Papers of Bertrand Russell". This vast editorial project is being conducted at McMaster University, which is also the site of the Russell Archives. The project will include all of Russell's writings except his books.

Volume I was reviewed for the newsletter by Justin Leiber (RSN42-18). It was reviewed by Sidney Hook, in the New York Times (Sunday) Book Review (1/29/84, p.7) (RSN41-25). Both reviews give the volume high praise, and both made special mention of the list of books that Russell read during the years 1891-1902.

An attractive certificate, representing the BRS Book Award, read as follows:

THE BERTRAND RUSSELL SOCIETY BOOK AWARD
for 1985
to the Editors of
Cambridge Essays, 1988-99

Cambridge Essays 1888-99 edited by Kenneth Blackwell, Andrew Brink, Nicholas Griffin, Richard A. Rempel, and John G. Slater (London: Allen & Unwin, 1983) is a compilation of Russell's earliest writings. Only seven of the forty-nine papers included have been previously published. The volume exhibits the wide range of interests which Russell displayed for long periods throughout his long life: religion, economics, politics, ethics, epistemology, history of philosophy, philosophy of mind, mathematics, and logic. The editors labored diligently and ingeniously to explain the many cryptic and recondite allusions in the papers. The volume reproduces in full the long list of books Russell read over a twelve year period, throwing invaluable light on the formation of his cast of mind. It spells out the textual methods the editors used and the principles they followed and makes thus a significant contribution to bibliographical science. A distinguished addition to the Russell corpus.

The certificate was accepted by Margaret Moran at the BRS Banquet, on behalf of the Editors of Volume I.

* We encourage members to submit candidates for the 1986 Book Award.

THE BRS DOCTORAL GRANT

- (17) The 1985 Recipient is Linda Benthin, of McMaster University. "Her dissertation, 'Bertrand Russell's Peace Activities 1954-1962', will study Russell's political dissent, peace activities and thought during the 1950's and early 1960's. It will analyze the writings produced by his urgent campaign to increase public awareness of the danger of nuclear war and to mobilize enlightened protest." The Grant is for \$1000.

BR HONORED

- (18) Stamps. J.A.P.O.S. (Journalists, Authors and Poets on Stamps) advises us that "...so far Grenada, India, St. Lucia and Upper Volta have issued Bertrand Russell stamps. You should be able to buy them at local stamp stores."

Their Secretary, Gustav Detjen, Jr., adds: "...there may be some among your members who would be interested in learning more about stamps issued to honor Bertrand Russell. They may also be inclined to support the issuance of additional stamps." Their address: 154 Laguna Court, St. Augustine Shores, FL 32084.

We reproduced the India stamp in RSN21-13. It was issued on 9/16/72, during the hundredth year after BR's birth (RSN22-25).

THE BRS AWARD

- (19) Robert Jay Lifton has received the Bertrand Russell Society Award for 1985. The BRS press release -- shown below, reduced in size -- tells the story.

The John Jay College of Criminal Justice -- of the City University of New York -- issued its own press release (shown next page, also in reduced size), which the Associated Press picked up, and which was used by about 30 newspapers (so far). Some of the newspaper items appear, next page.

ROBERT JAY LIFTON RECEIVES THE 1985 BERTRAND RUSSELL SOCIETY AWARD

The 1985 Bertrand Russell Society Award has gone to Robert Jay Lifton -- Distinguished Professor of Psychiatry and Psychology, John Jay College of Criminal Justice, The Graduate School of the City University of New York -- a pioneering explorer of certain dark areas of the mind.

The Award plaque reads: "For throwing new light on the nuclear threat, by showing how the human mind deals with it...and fails to."

Sometimes the human mind deals with the threat by embracing illusion -- the illusion that the more nuclear weapons we have, the more secure we are. Lifton calls this "nuclearism" -- the dependence on nuclear weapons to counter the danger caused by nuclear weapons.

Sometimes the human mind deals with the threat by ignoring it. Lifton calls this "psychic numbing" -- the way we refuse to think seriously or for long about the nuclear problem because the consequences of nuclear war are too horrible to contemplate. As he says, "The bomb impairs our capacity to confront the bomb."

Professor Lifton also describes the damage that nuclear weapons do to us continuously, daily, simply by existing. As a New York Times book reviewer put it "...the images of massive annihilation wrought by technology now

provide a major context for our lives and profoundly disturb our psyches and social relations. These images have destroyed our sense of biological and cultural connection, leaving us without traditional sources of meaning for our lives." Why, for instance, plan for the future when there may not be any?

Professor Lifton is the author or co-author of 19 books, 61 original reports (at last count), and many, many reviews and brief articles. A partial list of his numerous psychological research interests includes: behavior in extreme situations (holocaust, war, Hiroshima survivors); mass executioners (Auschwitz, Nazi doctors); aspects of war and peace; and attitudes toward nuclear weapons.

It was his work in opposing nuclear weapons that specially appealed to the Bertrand Russell Society, for Russell himself had devoted the last 25 years of his life to the same cause...as in his speech to the House of Lords (1945); his BBC radio talk, "Man's Peril" (1954); his assembling of eminent scientists from both sides of the Iron Curtain (for the first time) to sign the "Russell-Einstein Manifesto" on the dangers of nuclear warfare (1955); his Pugwash Conferences, which began in 1957, attended by the same scientists, and which led to the Salt Talks; and his books, "Common Sense and Nuclear Warfare" (1959) and "Has Man A Future?" (1961).

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970). A number of members are professional philosophers, but most members are not, and membership is open to anyone interested in Russell. For information, write KL, RD 1, Box 409, Coopersburg PA 18036.

JOHN JAY PROFESSOR WINS BERTRAND RUSSELL AWARD

Robert Jay Lifton, Distinguished Professor of Psychology and Psychiatry at John Jay College, has been awarded the Bertrand Russell Society Award for 1985. Dr. Lifton won the prize for his pioneering work in exploring the mass psychological implication of extreme situations, such as the threat of nuclear war and the Chinese Cultural Revolution.

The Bertrand Russell Society Award is presented annually by a company of admirers of the British philosopher to a person whose work reflects his spirit. Dr. Lifton's work in opposing nuclear weapons brought his work to the Society's attention. The award plaque reads: "For throwing light on the nuclear threat, by showing how the human mind deals with it...and fails to." Dr. Lifton believes people respond to the nuclear threat by embracing illusions that contradict logic and by finally ignoring a possibility too horrible to contemplate.

Dr. Lifton is the author of 19 books and numerous articles. Most recently, he was awarded the Martin Luther King Memorial Prize for his anthology *In A Dark Time*, a collection of essays about war, peace and hope.

ON NUCLEAR STRATEGY

Star Wars. We almost didn't print the following because it's about the nuclear problem, and we know that some of you out there think we already give too much space to that topic. We are printing it, however, because we don't think you ought to be deprived of the pleasure of reading E. P. Thompson's astringent assessment of Reagan's pipe dream. Here it is, from *The Nation* (3/9/95), and with thanks to BRUCE THOMPSON:

Not even Jonathan Swift could have imagined so savage a satire on human endeavor as Star Wars. With his Strategic Defense Initiative, Ronald Reagan proposes that in some twenty-five years, after expending some hundreds of billions of dollars, American technology will emerge with an impermeable shield against antiballistic missiles.

In his March 1983 speech unveiling Star Wars, the President, in a rhetorical aside, said that when the system was perfected the United States would generously reveal all its technology to the Soviet Union so they, too, could have an impermeable shield. However, it is not yet certain that Reagan will still be President in the year 2010. He could, no doubt, circumvent the U.S. Constitution, but he might have difficulty circumventing his own.

It was generally assumed that Reagan's aside was jocular. As Theodore Draper wrote in *The New York Review of Books* for February 14, "It would be necessary to blow up the Pentagon to make its guardians give away such a priceless military treasure." (In her speech to Congress on February 20, Prime Minister Margaret Thatcher said she hoped "British scientists will share in this research." If she is counting on the "special relationship" between the United States and Britain, she has apparently forgotten her recent lesson in its one-way character—but I shall take up the reason for her abrupt volte-face on Stars Wars a little later.)

And so President Reagan has solemnly proposed that at astronomical cost, an astral venture will be set in motion to achieve an end—the blocking of each side's missiles—that could be achieved tomorrow, at no cost at all, by a rational agreement by both parties to disarm. His proposal belongs to the psychopathology of ideology and not to rational strategy at all. Before we come to that, let us inspect its purported rationality.

The view of independent scientists—those who are not in Pentagon-related employment and who do not stand to gain from the research bonanza—is that the Star Wars project cannot work. In a letter to *The Wall Street Journal* on January 2, Hans Bethe and five other eminent American scientists summed up their major objections, which fall under several headings:

Underflying. It would be possible to get under the shield using cruise missiles, low-altitude warplanes or suitcase bombs.

Overwhelming. It would be possible to saturate a defense system with multiple attacks, insuring that a proportion of the missiles would get through. (Even 5 percent of 10,000 missiles would be enough to devastate either superpower.)

Outfoxing. While one side was building a Star Wars system the other side would have ample time to devise countermeasures of decoys and penetration aids.

Cost. Up to \$1 trillion for implementing only the first major phase.

Soviet pre-emption. The Soviet military (or whoever has been nominated as the enemy in 2009) would perceive such a shield as giving the United States immunity, enabling it to launch a first strike, and would be tempted to "retaliate first."

Those objections are made on the assumption that Star Wars would be technologically feasible. As far as I can understand (Prof. John Charles Polanyi gives a clear beginner's guide to the subject in *The Nuclear Crisis Reader*, edited by Gwyn Prins), antisatellite weapons are certainly feasible, and until recently the Soviet Union may have led in this field; weapons orbiting in space are a gruesome possibility; and at great cost, defenses against ballistic missiles might also prove feasible—with, of course, the aforementioned underflying, overwhelming and outfoxing gaps.

But long before the hypothetical, semi-impermeable shield was in place, the project would go through intermediate stages. As Under Secretary of Defense for Policy Fred Iklé remarked at a secret session of the Senate Armed Services Committee last year, "As you move toward deployment of the full system, there are some intermediate steps which have intermediate utility. . . . Components of a multi-tiered defense could become deployed earlier than a complete system."

Those components relate to what is known as point defense: a collaboration of highly developed radar, infrared sensors, interceptor missiles and so on, which would protect specific targets against incoming intercontinental ballistic missiles. A Defense Department pamphlet published last April predicted that point defenses might be available between 1990 and 2000. That is a great relief. We are all in favor of defense. But what is the point of point defense? Which points would it defend? Well, really sensitive targets, of course: the missile silos at Grand Forks, North Dakota, and the arcana of national security and command, control, communications and intelligence facilities. Cities? People? You're joking! Point defense could cover select areas up to a radius of thirty miles. Thus, for some years the good folk of Middle America would undergo a period of "intermediate utility" in which their missiles were protected but they were not.

Never mind. As *The New York Times* remarked at the end of a tortuous February 7 editorial, "Even a partial defense must be better than no defense." Amen, says common sense. What then of one of the superpowers' rare negotiating successes, the ABM Treaty of 1972, which very severely limited any such defenses to two systems on each side? Perhaps it was because such defenses were impracticable at the time. But the official reason given for this upside-down logic (defenses are threatening but missiles give security) was that ABM systems are destabilizing. They strike at the very heart of deterrence theory: the assurance of mutual threat.

A great many NATO warriors and media wizards have been assuring us for years that deterrence theory has biblical authority. Britain's Secretary of State for Defense Michael Heseltine has told us that it is the only thing that, for the past thirty years, has held up the sky. Whatever else Star Wars explodes, it has exploded deterrence theory. Several distinguished professors are having to rewrite their undergraduate class lectures, which is an insufferable indignity.

The Times assures us, in the same editorial, that the "campaign" against the Strategic Defense Initiative is "Soviet inspired." That is a strange claim, since the first sign of that campaign—when Reagan unveiled Star Wars—was hilarity in the American scientific community. That could not have been orchestrated by the K.G.B. because the K.G.B. has never been known to laugh. The Russians, however, have reason not to find Star Wars funny. They have been pushing ahead

with their own space experiments, but a massive arms race in space is something their stretched economy does not need.

More than that, the intermediate utility of point defense would put the Russians at a disadvantage. Soviet land-based ICBMs would take thirty minutes to reach the United States. That gives time for satellite and radar identification, and for X-ray lasers and interceptors to go to work. But U.S. forward-based missiles in Europe, such as the Pershing 2s, need travel only a few minutes to their destinations. Thus, point defense would be simpler for the United States than for the Soviet Union.

The reaction of the members of the North Atlantic Treaty Organization to Star Wars fell short of gratitude. At first sight, and at second sight, it seemed a bum deal. They suspected a retreat to Fortress America. If America alone had a shield, they reasoned, then the Soviet Union, since it could not retaliate against the United States, would take it out on the allies. If both sides had shields, Europe would be a no-man's land, with laser-zapped nukes falling on their heads.

Moreover, as the London *Guardian* has asked, if both superpowers are protected by domes, "What thereafter becomes of the British and French nuclear deterrents?" The answer, which the *Guardian* unaccountably overlooked, is that those two countries could point them across the Channel and use them to deter each other. But all those lovely nukes, including Hades and Trident, would cease overnight to be deterrents to the Soviet Union and would become mere irritants. That irritated Prime Minister Thatcher so much that with uncanny temerity, she allowed herself, in the course of her recent meeting in Moscow with Mikhail Gorbachev, to express her concern about an arms race in space.

I am now at liberty to reveal the sequel to this petty treason. The Prime Minister flew on to Beijing and thence took off for a lunch date with President Reagan on December 22. While she was over the Western Pacific, Reagan, who had been informed of her impertinence, cabled the plane: either Thatcher must eat her words or she must take her lunch at McDonald's. Thatcher ate her words, first on the plane and then with the President, who had them served up to her like sausages on a waffle with maple syrup.

In return for her renewed fealty, Reagan issued all his European allies a very large public waffle, to the effect that the impermeable shield or dome or umbrella would be extended over them too. That nonsensical promise was not worth the spit that issued with it, but the loyal governments and their servile media are now swimming around happily in the spittoon.

Reagan will exact a small political price for his waffle. As an article in the July/August issue of *Arms Control Today* pointed out, while interceptor systems against intermediate-range missiles (such as SS-20s) might be feasible in Europe, the interceptors "would have as little as three to ten minutes to detect, identify, track, target and attack incoming warheads." Such a quick reaction would require "an automated and automatic US ABM response," such as a launch-on-warning system. "There will be no time to work through NATO's established consultative channels. European political authorities thus will be effectively removed from any active role in decisions concerning nuclear war on their own soil." The dome turns out to be an automated system for the extinction of European autonomy.

Thus far, I have been speaking not about the impermeable shield, which is impossible, but about intermediate utilities: the bits of space and interceptor technology that are feasible and that we may well get. Obviously, they would create fearsome new dangers, instabilities and tensions. The fact that the Soviet military is already tensing up against Star Wars is not, as *The Times* supposes, an argument in its favor. It enhances the dangers. But as I said earlier, Reagan's policy belongs not to rational strategy but to the psychopathology of ideology. How is that?

Nations do not normally lay heavy burdens on their taxpayers and inflate the national debt just to humor the fan-

tasies of a leader. There must be either some hidden agenda or some ideological delirium here. I detect both. The hidden agenda is in two forms. First, the proposal has been pushed by those whom Lord Zuckerman has called "the alchemists of the laboratories" and the very powerful arms lobby whose lips are drooling with the prospects of fat order books for the next twenty to thirty years. Such a project will acquire "institutional momentum," as Hans Bethe and his fellow scientists point out in their letter to *The Wall Street Journal*. "When a trillion dollars is waved at the US aerospace industry, the project will rapidly acquire a life of its own—independent of the validity of its public justifications." It has already spawned a major interest group. It is a juggernaut which will roll on.

But even that powerful lobby, which is not yet a majority shareholder in the U.S. economy, could not sell the Pentagon a package of rubbish whose costs competed with the more credible demands of the armed services. The components of Star Wars that the Pentagon really wants are the intermediate utilities, such as point defense for their silos and MX missile bases, and stations and weapons in space that might give the United States clear superiority. The talk of an impenetrable shield is strictly cosmetic—a P.R. operation.

Yet the project also has life within American ideology. *The Times*, in its tormented editorial, acclaims President Reagan as a profound strategist, more farsighted than his chiefs of staff, wiser than the "East Coast establishment" with its "fashionable dissent," more informed than his own scientific community. That is codswallop. The President is no strategist; he cannot tell an ICBM from an ABM. He is a superbly successful populist politician who can tune a policy like a guided missile and home it in on the prejudices of Middle America.

Ideologically, Star Wars represents the ultimate breakdown of deterrence theory, an attempt by the U.S. nuclear establishment to return to the womb of Hiroshima. Ever since the Soviet Union achieved nuclear parity, the members of that establishment have become increasingly fretful. They possessed this huge bludgeoning and blackmailing power—which, however, they could never use—and the world was beginning to tumble to the fact. For a decade they have been trying this and that trick to regain nuclear "superiority," but each of those has been impious.

Delving into their memories, President Reagan and his friends recalled those blissful years from 1945 through 1950, when the United States had the bomb and the Other did not. It is out of their frustration with the present and their memories of that golden sanctuary of the past that the ideological and political drive of Star Wars has come. Let us abolish the Other's bomb! Let us secure the moral ends of America with an impermeable shield! Let us once again be able to threaten a world that cannot retaliate! Once the solution has been found, then money and know-how must be able to bring it about.

The Star Wars ideological delirium is attuned to all the worst traditions of American right-wing populism. With astonishing simplicity it combines isolationism ("They can't get us") with external menace. It combines the citizen's faith that whatever America does must be moral, and that the bomb is God's gift to protect the Free World, with the old American preference for fixing things by technological means rather than by political resolution. It massages the American ego by intoning homilies about saving humanity and saving millions of lives, while drawing humanity into a new dimension of danger.

We should not dismiss this as mere politicians' talk, as cynical rhetoric to cover more limited objectives. Star Wars, with its high-tech sheen, encodes ideological forces that act on their own. The President himself may be a true believer.

When the most powerful nation on earth crawls back into an ideological womb it means that an epoch is coming to an end. It is a terrifying signal of our human predicament. This combination of material avarice (the arms lobby) and ideo-

logical self-delusion may prove to be the terminal dementia of the nuclear age.

There will never be an impermeable shield against nuclear evil. There is—and there has been for forty years—only one shield against chaos: that pitifully weak and yet somehow indestructible shield of the human conscience. It is as full of holes as a sieve, but it has held off chaos for forty years. It is time to put it in repair. □

E.P. Thompson is a vice president of the Committee for Nuclear Disarmament. A collection of his essays and creative writing, The Heavy Dancers, and also a reply to critics of the peace movement, Double Exposure, will be published next month by Merlin Press.

SECULAR H*M*N*SM

- (21) The Washington Post (1/10/85, A19) told the story — reported in RSN45-13 — of Sen. Hatch's rule prohibiting federal school districts from spending certain earmarked federal funds on any [school] course that a district "determines is secular humanism".

Secular humanism was not defined. The Post story continues:

The rule, and the law that spawned it, apparently represent the federal government's first official use of the term — used pejoratively by some fundamentalist and conservative groups to describe everything from atheism to Darwinism — since a footnote to a 1961 Supreme Court decision included "secular humanism" on a list of religions that "do not teach what would generally be considered a belief in the existence of God."

...

In comment to the Education department, Anthony T. Podesta, Executive Director of People For the American Way, said, "Now, with a federal law that uses the term [secular humanism] without defining it, The Department of Education is making local school districts even more vulnerable to attack from those who have a history of using the charge of 'secular humanism' to oppose anything they don't like about public education."

In a pamphlet entitled "Is Humanism Molesting Your Child?", for example, a Fort Worth parents' group described secular humanism as a belief in "equal distribution of America's wealth...control of the environment, control of energy and its limitation...the removal of American patriotism and the free enterprise system, disarmament and the creation of a one-world socialistic government.."

The New York Times thought that things had gone too far, and ran the following editorial in its (Sunday) Review of the Week section (5/19/85, p.20E):

The Horrors of Secular Humanism

A new amendment slid quietly into the Education for Economic Security Act last year. It prohibits the use of Federal magnet school funds for "any course of instruction the substance of which is secular humanism."

At the same time, a 1978 Hatch amendment requiring schools to obtain parental permission before giving pupils psychological tests was broadened to the point of vagueness at the urging of groups led by Phyllis Schlafly. The purpose, again, was to ban secular humanism.

What, one may be forgiven for wondering, is secular humanism?

According to our dictionary, *secular* means "of or relating to worldly things as distinguished from things relating to church and religion." *Humanism* means "any system of thought or action based on the nature, dignity, interests and ideals of man." Put them together and you get ... well, we don't quite know, but it doesn't sound like something to keep away from kids.

Oh, but it is, insist organizations like the Moral Majority, Christian Voice and Pro-Family Forum. They say secular humanism is anything that is anti-God, anti-American and anti-family. The precise definitions are up to the individual.

In Hillsboro, Mo., for instance, a parents' group, fearing secular humanism, protested the showing in school of the movie "Romeo and Juliet."

In Cobb County, Ga., the school superintendent circulated a memorandum to teachers restricting classroom discussion on several topics, including evolution, communism and "valuing." In Maryland, a Coalition of Concerned Parents on Privacy Rights has distributed a letter citing the broadened Hatch regulations as requiring parental permission for 34 categories of classroom practices and materials. Among them are autobiographical assignments. Strictly speaking, to ask a student to write about "What I did on my summer vacation" would require a letter from home.

"I think about what I'm doing twice," a Texas teacher once told The Times. "Is there anything controversial in this lesson plan? If there is, I won't use it. I won't use things where a kid has to make a judgment." Parents who put their trust in the public schools now may find great holes in the education they provide, thanks to other parents waving the club called secular humanism.

Since definitions are so subjective, we'd like to suggest our own. Let secular humanists be people who believe that ignorance is the poorest armor. That keeping a careful eye on education ought not to mean rewriting history or expurgating science. That religious beliefs should not be forced on public schools. No educator would have anything to fear from secular humanists like that. Fortunately, they far outnumber their antagonists.

The Times editorial was followed by these 3 Letters to the Editor:

Secular Humanism and Mr. Justice Black

To the Editor:

In "The Horrors of Secular Humanism" (editorial, May 19), you combine a dictionary definition of "secular" with a dictionary definition of "humanism" and, putting them together, as you say, don't quite know what it means.

Emanating ambiguity in all directions, "secular humanism" is, nevertheless, a term that originated in a 1961 United States Supreme Court decision and that means, paradoxically, religious humanism. In the case in point, *Torcaso v. Watkins* (367 U.S. 488, June 19, 1961), an appointee to the office of notary public in Mary-

land was refused a commission to serve because he would not declare his belief in God and was, accordingly, barred from office by a provision of the state constitution.

The Supreme Court reversed this decision, 9 to 0, with seven justices concurring in the opinion of Associate Justice Hugo L. Black and two justices concurring in the decision without opinion. Justice Black said that neither a state nor the Federal Government "can aid those religions based on a belief in the existence of God as against those religions founded on different beliefs."

In a footnote Justice Black added: "Among religions in this country which do not teach what would generally be considered a belief in the existence of God are Buddhism, Taoism, Ethical Culture, Secular Humanism and others."

Among the authorities cited was a lower-court case involving an organized group of humanists who held regular Sunday services that resembled church services — but there was no God.

Did the expression "secular humanism" spring fully grown from the head of Mr. Justice Black? I have not found any earlier use of it. I don't know how or why he came to employ it, but I do know and believe that our discussion of the amendment to the Education for Economic Security Act, which was the subject of your editorial, should start with "*Torcaso v. Watkins*."

MORRIS EARLE

New Haven, Vt., May 24, 1985

Who First Used the Words 'Secular Humanism'?

To the Editor:

In reply to Morris Earle's question "Did the expression 'secular humanism' spring fully grown from the head of Mr. Justice Black?" (letter, June 9), I can answer that Associate Justice Hugo L. Black repeated the term as it was used in an amicus curiae brief submitted by the American Humanist Association in *Torcaso v. Watkins* (367 U.S. 488, June 19, 1961).

The remainder of the Justice's footnote, in which he speaks of "religions in this country which do not teach what would generally be considered a belief in God," summarizes the historical perspective introduced in an amicus brief submitted by the American Ethical Union in the same case.

A memorandum I wrote for the legal committee of the Ethical Union for an earlier case was reused as a basis for this part of the amicus brief in *Torcaso*.

Later, my memorandum, in a more polished form, was published as "Roots and Relatives of 20th-Century Humanism" in the journal *Religious Humanism*, August 1976 (pages 146-152).

It is perhaps unfortunate that a term originally used by one group of humanists to distinguish itself from other groups of humanists should now have become a term of political reproach to be used widely as a condemnation of those Americans who do not share the religious views of a minority that seeks to be seen as a majority.

JOSEPH L. BLAU

New York, June 8, 1985
The writer is professor emeritus of religion at Columbia University.

To the Editor:

As the attorney who argued Roy Torcaso's case before the Supreme Court, I can perhaps shed some light on the term "secular humanism."

In my brief to the Court, I urged, and the Court agreed, that denial of a notary public license to one who refused to take an oath that he believes in the existence of God violated the First Amendment's ban on laws respecting an establishment of religion or prohibiting its free exercise. Mr. Torcaso was an atheist and probably knew no more than I then did what was meant by "secular humanism."

In my brief I stated further that not all religions were based on a belief in the existence of a personal God. "The First Amendment," I said, "protects the Buddhist, Ethical Culturist and other nontheists no less than the Protestant, Roman Catholic and Jew."

What came out of this was footnote 11 of Justice Black's opinion. "Among religions in this country, however," he wrote "which do not teach what would generally be considered belief in the existence of God are Buddhism, Taoism, Ethical Culture, Secular Humanism and others."

Had I anticipated that the term would be used in the Education for Economic Security Act, I would have kept my mouth shut and not urged it in my argument or included it in my brief. I am certain that Justice Black, author of the Court's monumental opinion in *McCollum v. Board of Education*, which barred religious instruction in public schools, would never have sanctioned such use.

LEO PFEFFER
Central Valley, N.Y., June 4, 1985

We are pleased that Roy Torcaso is a member of the club — and has been for 5 years. He attended the recent June meeting. His firm, Ace Bookkeeping and Tax Service, is located in Wheaton, MD.

NEWS ABOUT MEMBERS

- (22) David Hart, newly elected BRS President, became a father on April 1st, with a little help from his wife, Celeste. It's a girl, Caitlin.
- (23) John Lenz intends to have a meeting in his NYC apartment in the Fall, for members in the area who wish to come. "I will be a teaching assistant for ancient Greek at Barnard College of Columbia University. This summer I am participating in a dig in Greece. Visitors welcome! Come and visit me in Paros from July 15 to August 22."
If interested in John's Fall meeting, send him a postcard saying so (511 W. 112th St, Apt 7, NY NY 10025.)

FOR SALE

- (24) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge." Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid. Order from the newsletter, address on Page 1, bottom.

RUSSELL SOCIETY LIBRARY

(25) Librarian Tom Stanley reports:

Members who attended the annual meeting had an opportunity to examine a display of Lester Denonn's contributions to Russell scholarship, documents relating to the history of the Society, and a selection of our sale books.

Harry Ruja gave an enthusiastic talk on the trials and joys of compiling the Russell bibliography. Our few remaining copies of his Mortals and Others were snapped up for Harry to inscribe, so this title is temporarily out of stock. He presented me with a tape of a 1961 Russell address to the CND (No. 223)

Arrangements were made to have the papers recorded and, with the single exception of Carl Spadoni's, these will soon be available from the Library. "The Folly of Bertrand Russell's Wisdom of the West" will be available after it is published.

Katherine Zarker, Vice President of Allen & Unwin, has donated a review copy of Theory of Knowledge, Vol. VII in the Collected Papers. Her continuing support of the lending library is appreciated. We are also indebted to Philip LeCompte, Daniel McDonald, and Craig Magee for their recent donations. Lists of the Library's holdings, compiled for the meeting, are available from the Librarian. (Address, page 1)

We now offer these fine titles from W.W. Norton:

Bertrand Russell and His World by Clark. "In this new study he makes use of a wide collection of illustrations, a large number of which have rarely or never been published." 12.00 PP, Cloth

Power: A New Social Analysis "Power, Russell maintains, is the fundamental concept in the social sciences and, like energy, it must be regarded as continually passing from one form into another." 5.50 PP, paperback

The Scientific Outlook "Increase of science is not enough to guarantee progress, though it provides one of the ingredients which progress requires." 5.50 PP, paperback

AUDIO CASSETTES

Cassettes may be borrowed for \$1 per tape. Canadian members should direct their orders to Rick Shore, 3410 Peter St., Apt. 305, Windsor, Ont., N9C 1J3 Canada.

RECOMMENDED READING

- (26) Adam Paul Banner recommends "Challenge to American Schools", John H. Bunzel, ed. (NY:Oxford University Press,1985). Eleven essays on "The case for standards and values,"from U/Michigan,Harvard, Stamford, UC/Berkeley,Vanderbilt,etc. "One of the better efforts."
- (27) John Lenz recommends Turing's Man:Western Culture in the Computer Age by J. David Bolter. "It is a perfect synthesis of science and humanism, and takes account of Russell's contributions in this area."

More Ten Best. Following JAMES MAKI's suggestion, we've invited members to give us a list of their 10 favorite books (excluding books by Russell). Some of these lists appeared last issue (RSN46-20). Here are some more:

(28) Whitfield Cobb:

1. M. D. Conway, "Idols and Ideals" (1877)
2. G. B. Shaw, "Major Barbara" (1905)
3. R. G. Collingwood, "Speculum Mentis" (1924)
4. E. D. Martin. "The Meaning of a Liberal Education" (1926)
5. C. E. S. Wood, "Heavenly Discourse"(1927)
6. James Hiltonm "Lost Horizon" (1933)
7. Jacques Barzun, "Science, the Glorious Entertainment". (1964)

(29) John Harrison:

1. R. Buckminster Fuller, "Critical Path"
2. " " " " "Synergetics"
3. Frances Moore Lappe, "Diet for a Small Planet"
4. Erich Fromm, "the Art of Loving"
5. W. Lance Bennet, "News: The Politics of Illusion"
6. Abbie Hoffman, "Soon to Be a Major Motion Picture"
7. Raymond Smullyan, "Alice in Puzzleland"
8. Fritjof of Capra, "The Tao of Physics"
9. Stuart Brand, "The Last Whole Earth Catalog"
10. Subgenius Foundation, "The Book of Subgenius" (McGraw Hill, 1983)

(30) Don D. Roberts:

1. Charles Pierce, Volume 5 of "Collected Papers" (Harvard University Press, 1934), the pragmatism papers
2. " " " " "Lowell Lectures of 1903" (a new edition will come from Indiana University Press)
3. David Hume, "Treatise of Human Nature"
4. " " " " "Enquiry concerning Human Understanding"
5. Chu Hsi and Lu Tsu-Ch'ien (ed. Chan), "Reflectios on Things at Hand", the neo-Confucian anthology (Columbia University Press, 1967)
6. Douglas Hofstadter, "Gödel, Escher, Bach" (Basic Books, 1979)
7. Howard DeLong, "A Profile of Mathematical Logic" (Addison-Wesley, 1970)
8. Jorge Luis Borges, "Ficciones" (Grove Press, 1962) or "Other Inquisitions" (U. of Texas Press, 1964) or "Labyrinths" (New Directions, 1962) or ...
9. Mark Twain, "Fables of Man" (U. of California Press, 1972)
10. Here I have to squeeze in Plato, Aristotle, Cervantes, Conan Doyle, Burton's edition of "The Book of a Thousand Nights and a Night", Piaget...hm, 10 books is far too few.

ABOUT OTHER ORGANIZATIONS

- (33) Atheists United Inc. If any of you atheists out there have been looking for an atheist organization, but are turned off by Madalyn Murray O'Hair, perhaps you should look into Atheists United. Their literature impresses us. We like the quiet, self-confident look of their "Freethought Datasheets". The majority were authored or co-authored by BRS Member Al Seckel; we like that too. The tone of the text is matter-of-fact...and persuasive. The truculent, chip-on-the-shoulder tone of the combative Ms. O'Hair is absent. In addition to the Freethought Datasheets, their publications include Atheists United tracts ("The Atheist Ethic", "Finding Peace") "Atheist Tourguide to the U.S.", and a number of cassettes, and books. "We welcome your inquiries about Atheism or about membership in Atheists United, PO Box 65706, Los Angeles, CA 90065. Dial-an-Atheist (213)254-4914."
- (34) Friends of Robert G. Ingersoll will hold its 1986 Annual Festival in Dresden, NY, Ingersoll's birthplace, and their 1987 Festival in Washington, DC jointly with the Thomas Paine National Historical Society, celebrating Paine's 250th Birthday. A new 94-page book by Mark Plummer, "Peoria's Pagan Politician" — that details "Ingersoll's transformation from a Douglas Democrat to a Radical Republican,, from a novice lawyer to a prominent attorney, and from an armchair philosopher to the leading 'theological anarchist'" — can be ordered from University Libraries, Western Illinois University, Macomb, IL 61455, for \$3.95.
- (35) PRO-Peace will conduct a Great Peace March, and invites applications (to be returned by October 15, 1985) to Suite 301, 8150 Beverly Blvd., Los Angeles, CA 90048. These are the conditions: You must be available from mid-February to mid-November 1986. You must be able to average 15 miles walking distance daily. You must be willing and able to camp outdoors each night. No drugs or alcohol will be allowed on the March. They have a 4-page statement, dated 2/21/85, telling their whole story. (Thank you, PAT ROBINSON)
- (36) United Nations has a Department for Disarmament Affairs. It issues a 16-page "newsletter of the world disarmament campaign" (we have Volume 3, Number 1, January 1985); a 40-page booklet, "Fact Sheet No 29, United Nations Information Materials on Disarmament, including list of libraries and information centres receiving UN publications." (It tells us that in Chicago, for example, the Library of International Relations, and the Joseph Regenstein Library at U/Chicago get UN materials. So does the Thimphu Public Library, in Thimphu, Bhutan.) The booklet also lists many Disarmament studies and reports, Fact Sheets, posters, films and video tapes. We happen to have the "Cost of the Arms Race" poster, which highlights some telling facts: \$1 billion = 28,000 jobs in military goods and services, or 57,000 jobs in personal consumption industries, or 71,000 jobs in education. For every soldier the average world military expenditure is \$20,000; for every schoolchild the average public education expenditure is \$380. Their address: Dept for Disarmament Affairs, United Nations, NY NY 10017. (Thank you, TOM STANLEY)
-

CONTRIBUTIONS RECEIVED

- (37) We are grateful to the following members for their donations to the BRS Treasury...especially grateful in view of the present state of our finances: WHITFIELD COBB, BOB DAVIS, LEE EISLER, MARY GIBBONS, DAVE GOLDMAN, DON JACKANICZ, and JOHN TOBIN.
-

MINUTES

(39)

MINUTES OF THE MEETINGS OF THE BOARD OF DIRECTORS

The Board met twice: on on Friday, June 21, 1985 at 10:30 pm, in the Auditorium of Georgetown University's Intercultural Center, in Washington, DC; and on Saturday, June 22, 1985, at 5:30 pm, in the Lounge of Darnall Hall, Georgetown University. Both meetings are combined in these Minutes

LEE EISLER reported that ALEX DELY had resigned as Chairman of his two committees, the Human Rights/International Development Committee, and the Science Committee. Lee read parts of Alex's letter describing the useful work of the HRIDC and recommended Adam Paul Banner as his successor. The Board decided to offer the post to Banner. [Banner later accepted the offer.]

DENNIS DARLAND, Treasurer, reported that the BRS was due to run out of money in July, and that something had to be done about it. President DON JACKANICZ said that this year's meeting was expensive, especially in comparison with the past two years, when we attended Russell Conferences sponsored by the Russell Archives and had virtually no meeting-expenses.

The Board discussed ways of raising money: Dues had not been raised in several years, although postal rates and other expenses had risen. STEVE MARAGIDES moved that dues be raised to \$25 for individuals, and \$30 for couples. The motion carried. Student and Limited Income dues remain unchanged at \$12.50. Other money-saving or money-raising suggestions included: (1) Holding Annual Meetings jointly with other groups, such as, e.g., the Ethical Culture Society of NYC; (2) having several kinds of optional member-categories at higher dues rates (such as, say, Friend \$35, Special Friend \$50, Patron \$75, Sponsor \$100, Benefactor \$250, Associate \$500, Life Member \$1000); having one higher-dues-rate category, say, Sponsor @ \$50, that receives the newsletter by

First class mail and/or a packet of members' stationery.

HUGH MOORHEAD reported that his Doctoral Grant Committee had selected Linda Benthin of the History Department of McMaster University for this year's \$1000 grant.

DON JACKANICZ suggested our considering having biennial meetings, to save money. BOB DAVIS said he preferred giving up the Doctoral Grant. The Board decided unanimously to suspend future Doctoral Grants until the BRS is financially able to resume them.

Next year's Officers were discussed. DON said he had become too busy to continue as President. He nominated DAVID HART, for whom there was unanimous approval. HARVIN KOHL was appointed Vice-President. Re-appointed were DENNIS DARLAND as Treasurer, and JOHN LENZ as Secretary. The office of Vice-President/Special Projects was dropped.

LEE EISLER moved that we pass a resolution thanking CAROL SMITH for her excellent work as Co-Chairman of the Membership Committee for the past three years; STEVE MARAGIDES seconded, and the motion passed unanimously. Lee also spoke in praise of BOB DAVIS'S work as President for five years.

DAVE GOLDMAN offered to present the BRS Award plaque to Robert Jay Lifton, whom he knows (and about whose work he spoke eloquently later that evening, at the Banquet.)

A Special Award plaque, honoring LESTER DENNON for his lifelong devotion to BR's writings and his contributions to Russell scholarship, was viewed before sending it to Bess Denonn.

HARRY RUJA announced that the new BRS Book Award was to be given to the five-member Editorial Board of "The Collected Papers of Bertrand Russell" for Volume I of the planned 28-volume series. The Award was represented by a handsome calligraphy scroll (which Margaret Moran later accepted at the Banquet, on behalf of the Editorial Board.) The Board approved the Book Award Committee's choice. There was discussion as to whether the Board or the 3-member Committee should have final say, in future; this was left open; but in any case, the Committee should make its choice before the Annual Meeting.

Harry felt that the Book Award should always go to a work of Russell scholarship, as distinguished from the BRS Award, which goes to an individual for his work on a cause dear to Russell, such as peace or anti-nuclear activity. Lee was not in favor of this limitation.

Lee proposed a one-word amendment to the Bylaws, inserting the word "elected". The Board approved unanimously. The Bylaws now read that there can be a maximum of 24 elected Directors in addition to the Officers, who are ex-officio Directors.

The Board decided not to copyright the newsletter. It does not wish to prevent others from using material in the newsletter.

Several members were impressed by the Questionnaires returned by new members, and wished to make use of the information. Lee Eisler suggested having a committee to follow up on the interests expressed by new members. No action was taken on this.

RICK SHORE, of Windsor, Canada, was appointed to aid TOM STANLEY, BRS Librarian.

Secretary JOHN LENZ read last year's minutes.

DON reported having visited Britain to explore the possibility of a future meeting there. Cambridge University is booked until 1988. DORA RUSSELL would be glad to meet with us. In a letter she praised the Society's newsletter and thanked us for our work.

DON sent five letters to people important in world politics, in compliance with the motion passed at last year's meeting. The four Americans responded only with form letters, the Soviets not at all. Don doubts that the letters accomplished anything other than saying where we stand.

DON is trying to get tapes of three TV shows that BR appeared on: The Merv Griffin Show (1965) [a description of which — from Griffin's Autobiography — appeared in RSN36-38], David Susskind (1962), and Meet The Press (1951). Don is also getting the FBI file on BR. He is stepping down as BRS President.

DENNIS DARLAND gave the Treasurer's Report. Gloomy. BOB DAVIS announced the new dues that had been voted at the Board meeting.

HARRY RUJA reported what the Board had considered and taken action on. He said we would make the Doctoral Grant award this year, but that future years were in abeyance. He thanked CAROL SMITH for her past services. He said that the BRS newsletter was now in the Library of Congress, and listed in their Serials Catalog. DON and HARRY both asked members to nominate candidates for future BRS Awards.

Librarian TOM STANLEY said there was very little borrowing from the Library. See his report, elsewhere in this newsletter.

Regarding the 1986 Annual Meeting: BOB DAVIS favored New York. He also advocated giving the BRS Award to someone who can receive it in person.

Ways to deal with the money-shortage were discussed. Suggestions included: attracting new members by local advertising, and/or distributing the BRS fact-sheet to universities; improving the membership renewal rate (ie, fewer dropouts) through more internal dialog.

* * * * *

Both sets of Minutes were submitted by John Lenz, Secretary, on July 1, 1985.

(40) MINUTES OF BERTRAND RUSSELL SOCIETY MEETING

The Twelfth Annual Meeting of the Bertrand Russell Society, Inc. was convened on Saturday, June 22, 1985, at 9:15 am in the Auditorium of Georgetown University's Intercultural Center, in Washington, DC.

Past President BOB DAVIS chaired the meeting. President DON JACKANICZ opened the meeting by thanking the University for making its facilities available.

RUSSELL SOCIETY NEWS

No. 48

November 1985

- (1) First things first: Dues are due (2). The Money Situation (4). Science Committee Chair vacant; volunteer wanted (6). 9 Directors elected (3). And some other things: BR's CND talk at Manchester, 1959 (9). Why mathematicians worry (12). Galbraith on Reagan (25). Fun & games (40). National Academy of Sciences on creationism (44). The Index is at the end (49). An asterisk in the left column indicates a request.

1986 DUES ARE DUE

- (2) TO ALL MEMBERS: Everybody's renewal dues are due January 1, 1986. The January 1st due-date applies to all members, including first-year members (but not those who joined in December 1985.)

Here is the 1986 basic dues schedule (but be sure to see Item 4): Regular, \$25,; couple, \$30; Student under 25, \$12.50; Limited Income, \$12.50. Plus \$7.50 outside US, Canada and Mexico. Plus \$2 for Canada and Mexico. In US dollars.

Canadian Members: To avoid paying too much or too little, pay in US dollars. We found (when going to Toronto in 1984) that the cheapest way to send US dollars to Canada was by US Postal Money Order; much cheaper than using a bank. Perhaps the same is true in the other direction. We suggest investigating the cost of sending US dollars via Canadian Postal Money Order.

Please mail dues to 1986, RD 1, Box 409, Coopersburg, PA 18036 USA

* If you want to make our life a bit easier, send your dues soon. Thanks!

TO FIRST YEAR MEMBERS — members who joined any time during 1985: the rest of this item is for you.

We know from experience that new members sometime feel put upon when asked to pay dues again after less than a year of membership. We understand that. We will explain why we use the present system, and we hope that our explanation will be found persuasive.

In the previous system, a new member's dues covered 12 months of membership. That was good for the member but bad for the BRS. It required us to notify each member individually — on the anniversary date of enrollment — that the next year's dues were due. And we had to follow up on each member individually, to see whether dues had in fact been paid. This went on throughout the whole year. It was cumbersome to administer, provided many chances for error, and took a lot of time. In fact, it took more time than we had. That's why we had to make a change.

The present system is easier to administer, produces fewer errors, and takes less time. Everyone's dues come due on the same date, January 1st. Simple!

We don't think that the new member whose first year of membership is less (sometimes considerably less) than 12 months has been short-changed in any important way. He/she has received just as many BRS newsletters (and after reading them, knows just as much about the BRS) as the member who joined in January.

All first-year members (except those who enroll in January) have an initial membership period that is shorter than a year. This happens only once — the first year. Thereafter dues come due every 12 months, on January first.

There is one exception to all the above: members who join in December (1985). Their renewal dues are not due till January first the year after next (1987). They do not receive the current year's newsletters (1985). They will receive next year's newsletters (1986). It is virtually the same as if they had enrolled the following January (1986).

THE MEMBERS VOTE

- (3) Results of the vote. The following candidates were elected or re-elected Directors, for 3-year terms, starting 1/1/86: LOU ACHESON, KEN BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, CARL SPADONI, TOM STANLEY. We liked all of the candidates, but had only 9 openings. The votes were tallied by Lee Eisler, for the Election Committee. The count was verified by John Lenz, BRS Secretary.

*Russell Society News, a quarterly (Lee Eisler, Editor): RD 1, Box 409, Coopersburg, PA 18036
BRS Library: Tom Stanley, Librarian, Box 434, Wilder, VT 05088

THE MONEY PROBLEM

(4) In debt. For the first time in its 12-year history, the BRS owes more money than it has. You can confirm this by looking at Treasurer Dennis Darland's 3rd quarter report (Item 7).

There is no need to panic. The BRS is not about to go under...BUT we do think we need to do something about it.

We reported on the money crisis last issue (RSN47-2). 20 members responded gallantly (we'll mention their names in a moment) and they have our gratitude.

But more must be done, and by more members. A good time to do it is now, at membership renewal time. When you * send in your 1986 dues -- and please send them soon, it saves work and expense -- include an extra amount as a contribution. One way to do this is to choose a membership category which you consider appropriate in your circumstances.

Here are membership categories:

- Regular Member \$25.
- Contributing Member \$35(\$10 contribution)
- Sustaining Member \$50(\$25 contribution)
- Supporting Member \$75(\$50 contribution)
- Sponsoring Member \$100(\$75 contribution)
- Patron Member \$101 to \$999(\$76+ contribution)
- Life Member \$1000.....(\$975 contribution)

We know that every member cannot afford an extra contribution, but we ask those who can to do so...and to consider with care how much extra they can give.

We are confident about your response.

Everybody's 1986 dues are due January 1st (except members who enrolled during December 1985). That's not far off. Why not do it now?

* * * * *

Our appreciation and thanks go to these members who responded to the August appeal: NEIL ABERCROMBIE, WHITFIELD COBB, BOB DAVIS, LEE EISLER, PAUL GARWIG, ARTTIE GOMEZ, DAVE GOLDMAN, DAVID HART, DON JACKANICZ, JOHN JACKANICZ, CONNIE JESSEN, JUSTIN LEIBER, TERRY LOCKHART, STEVE MARAGIDES, FRANK PAGE, STEVE REINHARDT, GREG SCAMMELL, JOHN TOBIN, ELEANOR VALENTINE, VINCENT WILLIAMS, JAMES WOODROW.

(5) Letter from Chairman Harry Ruja:

Dear Fellow BRS members:

Our organization is noble in its goals but modest in its size and modest also in its membership dues. This latter modesty has created a problem for us in these days of rising costs. Rather than increasing dues, we'd prefer for those members who can afford it to make contributions to our Treasury.

In the light of outstanding bills and anticipated expenses, our Treasury is approximately \$1,000 short. Are there 20 of you out there who could each contribute \$50? That would stabilize our financial health and enable us to continue on the paths we all consider important. Ours is a unique organization. If we don't do what we do, it won't be done. Let's not let that happen.

CHAIRMAN WANTED

(6) Science Committee Chair is vacant; volunteer wanted. As reported in the last issue (RSN47-39), Alex Dely has resigned -- [because of unavoidable outside demands on his time] -- as Chairman of his two committees, the Science Committee and the Human Rights/International Development Committee (name now shortened to International Development Committee.) ADAM PAUL BANNER has become Chairman of the latter; we now need a new Chairman for the former.

If you wish to volunteer for this post, please write to Chairman Harry Ruja (c/o the newsletter, address on Page 1, bottom) and mention your qualifications.

BR'S INFLUENCE ON OTHERS

- (8) Jacques Cousteau was asked: "Who's been the greatest influence on you?" Here is his answer (with thanks to WHITFIELD COBB):

My mother, of course. But I think Bertrand Russell is my idol. He has written pages I will never forget. His work for me is the fantastic combination of a scientist, a good writer, a humane character who loved women, life, who had the courage to go to prison for his ideas. I think he was a great man. The perfect combination. A complete man.

Calypso Log, Vol.12, No. 2 (June 1985)

BY BERTRAND RUSSELL

- (9) BR's CND talk at Manchester, May 1, 1959, "is entirely different from the version in Fact and Fiction," says HARRY RUJA, who ought to know. "This version [from a tape made at the time, and supplied to us by Harry and TOM STANLEY] has never been published in its entirety, though Manchester Guardian (2 May 59) and Peace News (8 May 59) printed excerpts." Here it is complete, for the first time, transcribed from the tape:

Lord Simon, Ladies and Gentlemen: I am very happy indeed to be here to see and to address this splendid meeting in this historic hall. I am leaving to subsequent speakers most of the detailed aspects of our movement and what we stand for, and I want in what I have to say to confine myself to the most general aspects of the whole problem.

Man, like other meat-eating animals, is considerably addicted to ferocity, and always has been. But unlike most carnivora, his ferocity is mainly directed against his own species. That is a peculiarity of the species to which we have the misfortune to belong. I think that in the past, although people had been as ferocious as they knew how to be, and have done each other as much harm as they could, there were limits to their skill, and the harm they could do each other was not enough to wipe out the species. But now things are different. Now that same degree of ferocious feeling, which has always existed, is capable of wiping out the whole human race. And we've got to face, therefore, that unless we can learn to feel less hatred of each other, we cannot go on.

The race cannot survive unless it learns a greater degree of toleration and of mutual kindness. I think that perhaps it may be that if there were to be a nuclear war tomorrow, some people would survive. I believe there would be people still perhaps in Patagonia and the Falkland Islands. There might be some survivors if there were war tomorrow. But you've got to remember that unless we can stop the habit of war, scientific skill will go on inventing worse and worse things; you will have bacteriological war, chemical war, you will have H-bombs more destructive than we have now, and there is very little hope, very little hope, for the future of the human race unless we can manage to find some way of putting an end to this mutual destructiveness, which now can no longer achieve any of the objects that in the past some ferocious men did achieve.

We need new ways of thinking and new ways of feeling, both, feeling just as much as thinking. We need to learn to think of other human beings as potential allies and not as active enemies. We need to learn not to hate. It's a difficult lesson, after all the millenia during which we have allowed our bad passions to run rampant, but we've got to learn it if we want the human race to continue. I think this is a gradual matter. I don't think we can hope that the habits of many thousand years can be changed in a moment. And I think we will have to approach the matter slowly, and those of us who feel strongly will have to learn not to be discouraged by the slowness of our success. I feel convinced that we can succeed, and I think it's only a question of going on and on, putting the case, putting it to everybody, to all and sundry on every possible occasion, and I think in that case we shall win over mankind to allow itself to go on existing.

In the meantime, the only thing that we can do, until we've converted the governments of the world, is to try to find expedients to prevent the world from stumbling into war accidentally, as it easily may do if present policies continue. I think the danger of a great nuclear war is much greater than the governments of the world allow us to know. They must themselves know but they don't want us to know, because if we did, we should say, "We won't have any more of this policy. It won't do!" And so they try to keep us quiet, and keep us ignorant and contented.

Now there are all sorts of ways in which a great war might begin. You know of course that there are missiles carrying H-bombs, there are planes carrying H-bombs floating about, at any moment ready to go off. Now take perhaps not a very probable thing, but a possible one, one of these might meet a meteor and blow up. Well, of course, it would be supposed that that was not a meteor but an enemy missile, and instantly there would be general nuclear war. The policy is based upon this argument, that the attacker will have an enormous advantage and therefore each side assumes that the attack will come from the other side. We in the West we should never attack -- never, never, -- and of course the Russians say, "We should never attack -- never, never." But each side thinks the other will. They have instant readiness. The idea is that everybody must be ready at every moment to fire off an H-bomb, and you can't wait for orders from Washington or London or Moscow, because it's assumed that they will be wiped out already and that therefore you can't have central direction. And somebody on the spot will have [said], "Go ahead," and perhaps from an entire misconception, thus a general war in which we all perish. Now of course you will say, "Well, meeting a meteor is not very probable." I agree, it isn't. But there are a great many other ways in which things might occur. There might, for instance, be a mistake in reading radar signals. That is quite a possible thing, a purely technical mistake, which might make the people think that an enemy attack was coming along. Well, there again, they would reply instantly, because it's understood that you can't wait. If you wait, you'll be destroyed yourself; you have to go at once. And so it might easily happen.

And there's another possibility, which I think we must face, and it is this: the people who have the control of these terrible weapons have a constant nervous strain, especially since they've been told everywhere that they can't, in an emergency, rely upon orders from headquarters but must act on their own initiative. I think that nervous strain is very likely to drive somebody over the edge to the point where he goes a little mad, and if one single man in charge of one of these weapons goes mad, the whole world goes up. It's a terrible risk that we're running from day to day, and I think if people realized how great the risk is, they would say, "We must have some other sort of a policy." On the contrary, instead of saying, "Let us make the

risks less," we [are] saying, "Let us make them greater." They're doing everything in their power to increase the risk of general war. I say this quite deliberately because the policy is at present to give the H-bomb to other powers besides the three that at present have them. The H-bomb is desired by France, by Germany, by Sweden and Switzerland. And they are all, if present policies continue, pretty sure to have them before long. And do you suppose that if they have them, China will be content to be left out? Obviously not. And if you give it to all these, why not to everybody? And before you know where you are, you will find every state in the world has its H-bomb. And that will enormously increase the danger of unintended general war. And that is one of the great objects that we have in view, to prevent the spread of H-bombs to powers that don't have them at present. And in order to secure that end, we say, Britain ought to be willing to give up the H-bomb which it at present has.

You will realize that there's another danger when H-bombs are spread all over the world, it is the danger of mutiny. In some one of these countries, it is just conceivable that the government may not be wholly wise -- such things have occurred -- now you may get resistance to a government which is not wholly wise, you may get mutiny, you may get resistance to the mutiny, you may in that way very likely get a whole war started. I don't know how many of you remember that the First World War was entirely started by a certain terrorist organization in Serbia. And a terrorist organization that got hold of an H-bomb, well, there you are, that's the end. And that is very likely to happen if you allow these H-bombs to be spread over the world.

I read an article in the Bulletin of the Atomic Scientists, an American magazine which tells you what scientific people in America think. This article is by Professor Orear, who is Professor of Physics at Cornell University, and he goes into the question of the risk of war very carefully indeed, and concludes that within the next ten or twenty years war is much more probable than not, if present policies continue. He says our present policy involves a practically infinite risk. I don't think anybody who goes into it can deny that, and I do quite seriously believe, and I should like you all to believe too, that unless the governments of both East and West change their line of policy, the human race will not exist at the end of the present century. I say that quite deliberately. I think it's a very terrible thing to contemplate.

Governments are optimistic or pessimistic as may suit their purposes. We can't believe the pronouncements of governments. Take this question of the tests. There are two vexed questions about the tests. The one is, how much harm is done by fallout, and the other is, how possible is it to detect tests? On the former questions, the governments are optimistic. They say, "O, it doesn't do very much harm, you know. Yes, some thousands of children will be idiots, but what of that? We can't be bothered with a little thing like that," and they take altogether a very optimistic view of the harm done by fallout. But when you come to the detecting of tests, they take a pessimistic view. They say, "O no, I know that the scientists have all agreed that we could detect them, but what of that? We can't believe what the scientists say." So on that, they're pessimistic. And they always take the view that encourages mass murder. It's a terrible thing about governments, but they will not believe the things that are necessary to believe if you are going to take sane measures to prevent this appalling holocaust with which we are threatened.

[Interruption from a heckler in the audience]: "Bertrand Russell, you are a traitor! The League of Empire Loyalists denounce you as a traitor, for your subservience to atheistic bolshevism!"

Who do you think is the greater traitor? The man who wishes to see some people left alive in this country or the man who pursues a policy that means that they must all die? [Much applause]

No, if there are any traitors, it is the people who want us to go on with this suicidal policy, not the people who want it stopped. We have to stop all wars, and that is the thing that people have got to realize. Even if we had the immeasurable measure of success that we got all H-bombs, all atomic weapons, destroyed, and an agreement to inspect each other so that they weren't [hidden], even then, if a war should break out, each side would of course at once set to work to manufacture nuclear weapons. And so you won't be safe until you've got some method by which you can prevent war from occurring at all. That's a long job. [Applause]

Some people say -- and I daresay the gentleman who accused me of being a traitor might be one of them -- that it's a cowardly thing to want to survive. Heroes face death with equanimity; they don't mind dying for a cause. Now I'm prepared to die for a cause if it's going to do any good, but I don't quite see the nobility of saying that everybody else is to die too. [Laughter & applause] Now let us take a concrete case -- suppose a nuclear war broke out. It's pretty certain that they would spare at least one bomb for Manchester, and if a bomb were dropped upon the center of Manchester, everybody who was in the street would be killed at once; but the less fortunate people who were indoors would probably have some hours or days or perhaps even weeks of intolerable agony and would die at last. Do you think really that as you watched your children dying and realized that that was the end of all hope, do you think you would feel you'd been heroic for bringing that about? I don't. It doesn't seem to me a good form of heroism at all.

I think there's one more thing I want to say that is a more hopeful thing. I don't think that we should let ourselves be hypnotized by fear of the terrible things that may happen. We should also dwell, and dwell even more, upon the good things that are entirely possible if once this terror was swept away. If you could get the world to agree that the interests of different nations -- nine-tenths at least of their interests -- are identical, and only the remaining one-tenth is not. Consider first, the interest in survival; that is an interest which we all have in common; we all perish or we all survive. Or take again other things: Industry and Agriculture and Art and Science and all the whole host of things in which -- if once people stopped hating each other -- they would see that their interests are identical. We are blinded by competition, and the bad emotions competition produces. If only we could realize that we are all one family, with one

identity of interest, and if East and West could come to feel that, there would be a possibility of a new joy in human life such as there as never been since man began. There would be a possibility of real happiness, real flowering of the human spirit, and we could devote ourselves to the good things that man is capable of, instead of this devilish business of inventing ways of mass destruction. I think there is a possibility, a possibility which is perhaps made greater by the horribleness of modern weapons, that men may come to realize their common interests and the futility of the strife that has existed hitherto. I think if that should happen, the world would enter a period of splendor and happiness and joy such as has never existed since there were men on this earth. [Applause]

(10) The CND carries on, as reported in the New York Times (10/27/85. p.3):

100,000 in London Protest Arms Race

By JO THOMAS

Special to The New York Times

LONDON, Oct. 26 — More than 100,000 antinuclear protesters took part in a five-mile march through London to Hyde Park today in a demonstration that was designed to press the superpowers to end the arms race.

"With all the support for the Thatcher Government, sometimes you feel you might as well give up," said Cressida Evans, a University of London student who was among 20,000 people who sat on the grass to form a giant human peace symbol. "Then you come to something like this, and you see all these thousands and thousands of people."

The march today, which was organized by the Campaign for Nuclear Disarmament, was held in tandem with a mass rally in the Hague, in which the Dutch antinuclear movement presented the Government with petitions against the deployment of cruise missiles there. In six days' time, Prime Minister Ruud Lubbers is to make a final decision on whether to put 48 of the American missiles in the Netherlands. The two rallies were connected by telephone.

The organizers of the London march had declined to make any predictions about the turnout. By midafternoon they put the number at between 100,000 and 120,000, slightly less than half the 250,000 who turned out in October 1983 on the eve of the deployment of the first cruise missiles in Europe.

Organizer Is 'Delighted'

Dan Smith, deputy chairman of the Campaign for Nuclear Disarmament here, said he was "delighted." "From our point of view," he said, "we are a movement that has grown very fast in the early 1980's and is now consolidating."

The march today wound its way along the five-mile route, past the visa section of the Soviet Embassy — the closest the police would allow it to come to the embassy building — and later past the American Embassy, silent and dark on a Saturday afternoon.

People brought babies, banners and toys, cardboard missiles and larger-than-life caricatures of the Russians, the Americans and Prime Minister

Protesters marching through London yesterday in a demonstration against nuclear weapons.

Agence France-Press

Margaret Thatcher. There were clowns and jugglers. There were also Japanese, passing out photographs of the victims of the bombings of Hiroshima and Nagasaki. From the looks of the crowd, most of them were born after these bombs, and many looked too young to remember the peace marches of the 1960's.

The demonstration, which included a four-minute "die-in" and a four-minute sitdown, ended with music and speeches in Hyde Park. Although cries of "Ronnie! Ronnie! Ronnie! Out! Out! Out!" were common, the French Government also came in for strong criticism for its nuclear testing in the Pacific and for the sinking of the Greenpeace vessel Rainbow Warrior.

Julia Green, a college lecturer who said she had come from Bath to London for her first peace march, said, "I

thought it was time to stand up and be counted."

"There's a passionate feeling among young people that we need to make our voices heard," she said. "It's no accident that millions of people are starving, and we're spending millions of pounds on arms."

Peter Dunford, a painter with a punk haircut who had come to London from Sidmouth, said: "The Government's the Government, and they make the laws. But if the Government doesn't want war, why do they spend all this money on weapons?"

There were no speakers from Britain's political parties at the rally, and no American speakers. Those who spoke came from Britain's peace camps and the antinuclear movement, which advocates independent nuclear

disarmament.

A Gallup poll conducted for the Campaign for Nuclear Disarmament between Sept. 25 and 30 found that 46 percent of a national sample of 972 people opposed a British defense policy based on the possible use of nuclear weapons. The margin for error was not specified. The result cheered the leaders of the antinuclear movement, who say they feel their battle is to change public opinion.

Joan Ruddock, who is chairman of the Campaign for Nuclear Disarmament in Britain, said: "Our message to the people of Britain, indeed the people of the world, is simply this: You must make a choice, nuclear race or human race, for we have exposed the myth that they can co-exist."

FOR SALE

(11) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell". On the bottom: "**Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid. Order from the newsletter, address on Page 1, bottom.

MATHEMATICS

(12) What do mathematicians worry about? The following excerpts -- from a NOVA program titled "A Mathematical Mystery Tour", broadcast on PBS on 3/5/85 -- throw some light on that question. The numbers in brackets [] are page numbers of NOVA transcript # 1208.

Narrator [1]

For over a decade, Bertrand Russell tried to find certainty through mathematics by reducing it to logic. In his massive work, Principia Mathematica, it took him 362 pages to prove that one plus one equals two.

Twenty years later, another mathematician, Kurt Gödel, proved that mathematics would never be completely certain.

GREG MOORE [12]

Now, in Aristotle, you have essentially the notion of syllogism, an example of which would be, all men are mortal, Socrates is a man, therefore Socrates is mortal. And it was thought that all reasoning could be put in one or other form of syllogism. That all reasoning, even in mathematics, was of this type. With Frege, you have the first real understanding that all reasoning in mathematics is not of this sort, that there are kinds of reasoning there that need some other modes to describe it, and that these modes can be made very precise, and that given the precision, arithmetic will then be found to be part of the logic.

NARRATOR

At this point Bertrand Russell enters the story.

GREG MOORE

Just as the second volume of Frege's master work on this subject was about to appear in print, Bertrand Russell, who at that time is a rather young and not well known philosopher, writes to Frege, saying that he's read some of his work and found it very interesting, and, by the way, he's found this paradox which he is not able to solve.

NARRATOR

Russell's paradox concerns set theory, but it can be told as a story about a librarian who is ordered to compile a catalogue of every book in her library.

As she's finishing, she's struck by a thought -- should she include the catalogue itself in the catalogue? It is, after all, a book.

She decides not to.

The national librarian receives such catalogs from all the libraries in the country, some yellow, where the librarian has listed the catalog itself; some blue, where they haven't. Now he has the awesome job of compiling a master catalogue of the blue ones, the ones which don't list themselves.

But on thinking about it, he realizes it is impossible, because what does he do with the master catalogue itself? If he doesn't list it in itself, then it will not be complete. But if he does, it's an error, because then it's no longer a catalogue of catalogues which don't list themselves..

Why should Russell have thought this paradox so important?

It was because the most general way of thinking about any mathematical object was in terms of collections or sets of them. A catalogue of books is, in principle, no different from a set of numbers. Ironically, the effort to be logical was leading mathematicians not to certainty as they had come to expect, but to uncertainty.

The ideas of both logic and sets were so fundamental to mathematics, that to run into such a contradiction at this level of mathematics was very worrying -- the whole enterprise might be built on sand.

GREG MOORE

Frege was absolutely devastated by this and regarded it as essentially destroying his life's work. Frege and Russell then corresponded, and Frege put forth various possibilities of the solution. Russell also did so, but Frege was never the same after that.

NARRATOR

Russell, however, remained optimistic that his paradox could be resolved and that logical certainty would be restored. For the next decade or so, with Alfred North Whitehead, he labored to produce the Principia Mathematica. This massive work sought to deduce all of mathematics from basic principles of logic.

It takes a while to get going, some 362 pages before they could prove that one plus one equals two.

IVOR GRATTAN-GUINNESS [14]

Nobody'd done anything on the scale of the detail that Principia Mathematica constitutes. I mean, you have 2,000 pages of what looks like wallpaper most of the time. At times there's hardly a prose word on the page. And he must have had mounds of manuscript all over the place. The sort of thing can happen, oh dear, you

make a slip proving proposition 47.275; have you made the same slip anywhere else? You could easily spend a morning checking things like that. I can understand exactly how it must have broken him, producing this thing. Russell himself only intermittently worked on it thereafter. In fact, he said it broke him intellectually, he wasn't as sharp after it as he had been before.

Narrator

But was the scheme a success?

IVOR GRATTAN-GUINNESS

What Russell and Whitehead do in Principia Mathematica is sort of get ready to do mathematics without really ever getting as far as doing some mathematics. In a way the work is like some vast overture to an opera which never got written.

NARRATOR

Russell himself wrote: "I wanted certainty in the kind of way in which people want religious faith. I thought that certainty is more likely to be found in mathematics than elsewhere...and after some 20 years of very arduous toil, I came to the conclusion that there was nothing more that I could do..."

NARRATOR [17]

By 1930 mathematicians from Russell to Hilbert were trying to restore certainty to mathematical reasoning -- but a young mathematician was to shock them all by proving that it could never be done.

In 1931, an Austrian mathematician, Kurt Gödel, published a theorem in logic which demolished Hilbert's program to resolve contradictions.

Gödel's Incompleteness Theorem showed that mathematics would always remain plagued by paradoxes of a sort. There would always be questions that mathematics could not resolve.

MICHAEL ATIYAH

So this completely demoralized, undermined his whole program of laying the foundations of mathematics. There's a lot of discussion going on ever since, about what the foundations of mathematics are -- how you should set them up. And because this initial program failed, most working mathematicians take a more pragmatic attitude. They say, well, if we can't achieve ultimate certainty about mathematics by providing foundations, that's no reason for us to stop doing mathematics. Physicists get along quite happily, although their foundations are much shakier than ours. So most mathematicians go along quite happily with their mathematics, even though they know that in some deep, ultimate sense, the foundations are perhaps a little uncertain.

NARRATOR

Just as Einstein transformed physics, Gödel changed mathematics forever.

REPORTS FROM COMMITTEES

(13) International Development Committee (Adam Paul Banner, Chairman):

Work is in progress in evaluating a request for technical assistance on a Solar & Wind Energy Technology Project from Br. Matthew F. C., Northern Luzon Ass'n. for the Disabled, Inc., Maryheights, Baguio City, Philippines.

The Society of Science for People, India, under the direction of Mr. A. Jagadeesh, has requested back issues in sets of technical journals in the area(s) of Alternative Energy Sources, Electronics, "Science", "Nature", and Scientific American. Any BRS Members able to respond to this request, please advise this Committee. NOTE: Duplicate sets will be most welcome as they have a number of technical libraries in desperate need of this valuable support. I have been informed that the data on technical subject reviews of published literature is invaluable. Please address all items to: Mr. A. Jagadeesh, Society of Science for People, 2/210 Nawabpet, Nellore 524 002, Andhra Pradesh, India.

"The Crowded Earth" by Pranay Gupte, 1984, is recommended for a fresh, accurate view of people and their needs on every continent. I do rate this book as most valuable to assess today's developing needs.

As a source text of current development trends in the area(s) of development, the journal, "Adult Education and Development", of the German Adult Education Association, Rheinallee 1, 5300 Bonn 2, Federal Republic of Germany, is provocative on issues in adult education.

This Committee will welcome any exchanges of papers on aid to developing countries addressing positive and/or negative results.

BY BERTRAND RUSSELL

- (14) Post War World Council "concerns itself with matters of foreign policy, with a crusade for universal disarmament under effective international control, coupled with a war on the world's poverty, in which lie the seeds of true world government. This newsletter is written by Norman Thomas, chairman of the Council, with special reports by individuals from time to time."

[The preceding, and the following, come from the Council's January 1961 newsletter. Our thanks to DON JACKANICZ for providing it.]

(The following article was written for the PWWC by Bertrand Russell, who has recently undertaken, in cooperation with Rev. Michael Scott, the organization of the Committee of 100 in Great Britain. The Committee's purpose is to organize non-violent resistance to nuclear war and to manufacture and use of all weapons of mass destruction by any power. It demands unilateral nuclear disarmament by Britain as a first step to all-around disarmament.)

For all sane men the leading problem in the present international world must be the prevention of an all-out nuclear world war. In discussing this problem, it is important to separate what can be done by the two giants from what can be done by their allies and satellites and by neutrals. What should be done by the two giants is obvious to all who are not blinded by fanaticism. They should agree to the abolition of all weapons of mass destruction and to a stringent system of inspection which might, with advantage, be largely or wholly in the hands of neutrals. They should further agree that certain chosen neutrals should be invited to suggest the solutions of all questions in dispute between East and West, these solutions as a whole to be such as would give no net advantage to either side.

At the present time, although Khrushchev appears more or less willing to agree to some solutions of this kind, the United States, so far, has shown no such willingness. Disarmament conferences have invariably proved futile, and, although neither side is blameless in this respect, I am afraid that the West has a larger share of blame than the East.

What, in these circumstances, should be the policy of allies, especially Britain, of the United States? Two different arguments are advanced in favor of Britain's participation in NATO: one is that the British are less exposed to danger from Russia while America is bound to come to their defense than they would be if they were neutral; the other is that membership of NATO enables the British Government to have influence with the United States Government which it would not have as a neutral. I believe both these arguments to be invalid.

As regards safety from Russian attack, it is clear that the Russians could in, at most, an hour exterminate the whole population of Britain by the use of, at most, two percent of their nuclear armament. Would the United States, after this had happened, think it worthwhile to extend the carnage to the rest of the human race although it would be too late to give any help to the British? I have been persuaded, chiefly by the writings of Mr. Herman Kahn, that the United States would probably not intervene. What is more, no sane person ought to wish that a massacre of fifty million people should be regarded as a reason for the massacre of all the rest. The supposed protection offered by NATO to the population of Great Britain is, therefore, illusory. In fact, membership of NATO increases British peril, since it gives Russia a motive for attacking Britain which would be absent if Britain were neutral. And, further, Mr. Kahn's argument shows that British membership of NATO adds nothing to the security of the West and that British neutrality would not damage American security. So much for the argument as to safety.

The argument as to influence on American policy is, to my mind, equally fallacious. Britain, as a member of NATO with American forces in occupation, is as powerless in shaping the policy of the West as Poland is in shaping the policy of the East. Sometimes this is a blessing — for example, at the time of the Suez Expedition when America restrained Britain from persisting in a criminal folly — but, whether a blessing or a curse, the fact remains that, as a member of NATO, Britain's influence on American policy is negligible.

Opponents of British neutralism are apt to argue that this is a narrowly and selfishly isolationist policy. This is the exact opposite of the truth. It is because we wish Britain to be able to play a worthy part in leading mankind out of its present perils that we urge British neutrality and British nuclear disarmament. Experience since 1945 has shown that so long as conferences are confined to the protagonists of East and West there is no hope of a useful outcome. Each side arrives at the conference with a program; each is too proud to listen to the other's program; each feels that it is more important to avoid climbing down on some minor point than to secure the continued existence of mankind. The most practicable way of escaping from this deadlock is to have conferences begin with proposals by a bloc of neutrals which each side could accept without loss of face. I would like to see Britain, as a neutral, joining with other politically mature neutrals in the work of conciliation between East and West. It is only as a neutral that Britain can contribute effectively to the work of reconciliation, and it is only through conciliation that the human race can be saved from extinction.

As to what is to be hoped in the United States, the most immediate and important task for all friends of Man is to combat the fanaticism which would suggest that we have to choose between the end of Man and the victory of Communism. In the first place, this is an entirely false way of stating the problem. There is no reason whatever to suppose that the easing of East-West tension and the abolition of nuclear weapons can only be achieved on terms which imply Communist victory. In the second place, even if Communist regimes were as

horrible as they are said to be by their most extreme opponents, a Communist world would still leave the possibility of hope for the future which a world of corpses would not. I think it should be made clear that the supposed ideological conflict is, consciously or unconsciously, insincere. The West is supposed to be fighting for freedom, but the most ardent advocates of the fight for freedom are also the most ardent advocates of the suppression of such freedoms as the West still enjoys. A nuclear war, if it leaves survivors at all, will necessitate a stringent discipline, not only during the few days while it lasts, but in the subsequent period of striving to keep alive the miserable and starving remnant. It is not by war that freedom can be preserved. Only by an increase of security is the preservation of freedom possible. This is clear to all genuine friends of freedom, but not to those who for the sake of what they choose to call "The Free World" advocate a degree of mental and physical regimentation which makes rigid orthodoxy all but imperative.

The world is not to be saved by hatred and violence [but by] tolerance and the realization that only secure peace can bring anything good to any portion of the population of the planet.

BR & WASHINGTON

(15) Welcoming Speech of DON JACKANICZ at the annual BRS meeting this past June, at Georgetown University:

Russell never lived or taught in Washington nor had any connection with Georgetown University. (What might he have said about our holding our meeting at an institution operated by the Catholic Church?)

What, then, were Russell's connections with Washington? Here are some of them:

As a letter-writer, Russell had few equals. The number of letters he sent off to Washington government offices, non-government organizations, and publications is uncertain; but it must have been very large. Among the most dramatic were those to two Presidents -- to Wilson in 1916, a letter sensationally smuggled into the United States, and for a time a front page news story; and to Kennedy, the series of letters and telegrams concerning the Cuban Missile Crisis and other diplomatic issues. In 1960 Russell responded -- to a writer's accusation of his "years of making like an intellectual idiot" advocating "total surrender" to Communism -- as follows:

Your letter consists of vulgar abuse. The remark about crawling on my belly to Moscow is an invention of my opponents, if it has ever been made at all. Nonetheless, if I thought that such a feat were within my powers at the age of eighty-eight and would have any effect towards preserving my compatriots or any human beings, from imminent destruction by means of nuclear warfare, I should endeavor to do it, though I fear that I should also have to crawl to Washington.

A few years later, in 1965, Russell went further in criticizing American activities when he wrote:

In every part of the world the source of war and of suffering lies at the door of U. S. imperialism. Wherever there is hunger, wherever there is exploitative tyranny, wherever people are tortured and masses left to rot under the weight of disease and starvation, the force which holds down the people stems from Washington.

For opinions such as this, his activities over the years, and the proclivities of its longtime Director [J. Edgar Hoover], The Federal Bureau of Investigation maintains in Washington a file on Russell. I have submitted a Freedom of Information Act request to receive photocopies of this file. My request has been approved, but processing is very slow.

Not all of Russell's associations with Washington were so serious or controversial. Some were comical. In his Autobiography Russell recounted the following 1944 episode:

There was therefore nothing to keep us in America except the difficulty of obtaining a passage to England. This difficulty, however, seemed for a long time insuperable. I went to Washington to argue that I must be allowed to perform my duties in the House of Lords, and tried to persuade the authorities that my desire to do so was very ardent. At last I discovered an argument which convinced the British Embassy. I said to them: "You will admit this is a war against Fascism." "Yes," they said; "And," I continued, "you will admit that the essence of Fascism consists in the subordination of the legislature to the executive." "Yes," they said, though with slightly more hesitation. "Now", I continued, "you are the executive and I am the legislature and if you keep me away from my legislative functions one day longer than is necessary, you are Fascists." Amid general laughter, my sailing permit was granted then and there!

In 1950 Russell returned to the United States on yet another lecture tour. Washington and vicinity had been included before on such trips, but now Russell had another reason for coming here: his daughter, Katharine, was residing here, and his son-in-law was working at the State Department. Katharine reminisced about this 1950 visit in her book, My Father, Bertrand Russell, as did Alastair Cooke in his book, Six Men. Cooke accompanied Russell from New York City to Washington by train, a journey of several hours, and recounts a number of anecdotes. The next year, 1951, Russell again visited the United States -- his last American trip -- and again included Washington on his itinerary. The Washington highlight, in addition to visiting Katharine and his recently born grandchild, was the October 28, 1951 interview on Meet The Press, the celebrated NBC TV program. We are attempting to obtain a film or transcript of this interview.

Turning lastly to the world of books and ideas, Russell is well represented in Washington, most impressively, as one would suppose, in the world's largest library, the Library of Congress. Although the collection of Russell materials here is not as large as the Russell Archives' or those of a number of private collectors, it does include some remarkable Russell items. Looking up Bertrand Russell in drawer number 3,858 of the Library of Congress's approximately 8,000 main card catalogs, one finds 427 cards for materials by and about him. In addition, there are 172 entries in the computer catalogue covering materials added since 1981, the year the card catalog was closed to new card entries. And there is an abundantly rich periodical collection to examine. One will find hard-to-locate original editions, such as An Essay on the Foundations of Geometry and Which Way to Peace. Then there are noteworthy translations -- for example, Marriage and Morals in Hebrew and Polish, Authority and the Individual in Hindi, and German Social Democracy and The History of Western Philosophy in Chinese.

Rarities are also represented: Bertrand Russell, the Social Scientist, a 40-page 1973 booklet of essays by Indian scholars published by what sounds like a relative of the BRS, the Bertrand Russell Supranational Society; Russell's brother's 1923 autobiography, entitled My Life and Adventures; Rex vs. Bertrand Russell, a transcript of Russell's 1918 trial, and the literary collection, "Thinking in Front of Yourself and Other Plays Written and Acted by the Children of Beacon Hill School, 1927-1933". Also in the Library's collection are books written or edited by BRS members: Sir Alfred Ayer, Lester E. Denonn, D. F. Pears, Dora Russell, Paul Arthur Schilpp, Katharine Tait, Lee Eisler, and Harry Ruja. One of the latest entries is Kenneth Blackwell's 1985 book, The Spinozistic Ethics of Bertrand Russell. And we are happy to know that the Library of Congress now holds a complete set of Russell Society News, as well as the Russell Archives' journal, "Russell".

ABOUT BERTRAND RUSSELL

- (16) BR at 90. "Into the Tenth Decade", published in connection with the celebration of BR's 90th Birthday, provides this tribute (with thanks to HARRY RUJA):

Bertrand Russell is perhaps today the outstanding figure in the intellectual world. And I say Figure deliberately, for even in his physique he strikes the imagination as a man out of the common. Who in the world of letters ever displayed a more striking and apter physique de l'emploi? His face, carved in living wood, is still now, when he is in sight of 90, as vigorous as his ever youthful mind; and his features, deep blue eyes, long sharp nose, thin set mouth, vast open forehead, and the white aureole of his mane, are so full of life that not content with staying there to be looked at they seem to spring forward at the observer.

There is intellect in that forehead, wit in those eyes, inquisitiveness in that nose . . . But watch that mouth, and how its commanding upper lip overwhelms the lower one—it is strong, wilful, uncompromising, and it does not accept surrender.

This is a great Englishman. Of the Englishmen, he possesses the most valuable qualities: above all that sense of public service which makes him accept as a matter of course a struggle for the common good without regard for his own convenience or comfort.

But this in many ways typical Englishman is also an erratic Englishman, almost an anti-type; for whoever saw an Englishman interested in logic? While logic is the dominant intellectual passion of this great Englishman. And if from the scientific point of view this passion for logic ensures for Bertrand Russell a lasting name in the history of human thought, in the realm of practical political life it tends to drive him to extreme positions so close to anarchy that his more sedate countrymen are at times prone to take him for a crank.

Not very typically English either in his universality, Russell is a kind of modern Voltaire. Less religious even than the King of Wits, and nearly as witty, he is more passionate, more ardently possessed even than Voltaire was, of a desire for freedom and a detestation of every form of tyranny. We may or may not agree with his views on nuclear disarmament, but who would not admire the nobility of his service to that cause and his willingness to go to prison rather than surrender his right to defend it? Russell, by his mere existence, honours England and all mankind. For a Spaniard he stands as the nearest incarnation of Don Quixote accessible to an Englishman.

SALVADOR DE MADARIAGA

BR QUOTED

(17) George Selous has been collecting quotations for a long time. He has just put them into a book, "The Great Thoughts" (published by Ballentine Books, 1985), and this is his section on BR, pp. 361-363 (with thanks to TOM STANLEY):

BEKIR AND RUSSELL (Lord Russell) (1872-1970) British mathematician, philosopher

Philosophical Essays (1903)

That man is the product of causes which

had no provision of the end they were achiev-

ing, that his origin, his growth, his hopes, his

fears, his love and his belief, are but the out-

come of accidental collisions of atoms, that

no fire, no incense, no intensity of thought

and feeling, can preserve individual life be-

yond the grave, that all the labors of the ages,

all devotions, all the inspirations, are destined

by brightness of human genius, are destined

to extinction in the vast death of the solar sys-

tem, and that the whole temple of Man's

achievement must inevitably be buried be-

neath the debris of a universe in ruins—all

these things, if not beyond dispute, are, yet so

nearly certain, that no philosopher which re-

jects them can hope to stand. Only within the

scaffolding of these truths, only on the firm

foundation of unyielding despair can the soul's

habitation henceforth be safely built.

I abandon the struggle for private happi-

ness, to expect a cessation of temporary de-

struction, and this is the free man's

comprehension of fate, for fate itself is sub-

merged by this mind which leaves nothing to be

purged by the purifying fire of Time.

„Free Man's Worship“

Marriage and Morals (1929)

The psychology of adultery has been falsi-

fied by conventional morals, which assume, in

persons cannot coexist with a serious affection

for another. Everybody knows that this is un-

true.

Love as a relation between men and women

was riddled by the desire to make sure of the fu-

ture of children.

To fear love is to fear fate, and those who

kill the life are already three parts dead.

Morality in sexual situations, when it is free

from superstition, consists essentially of respect

for the other person, and unwillingness to use

that person solely as a means of personal grati-

fication, without regard to his or her desires.

The fact that an opinion has been widely

held is no evidence that it is not utterly absurd;

indeed in view of the silliness of the majority

of mankind, a widespread belief is more often

likely to be foolish than sensible.

The Conquest of Happiness (1930)

Freedom is a vital problem for the moralist,

since at least half the sins of mankind are

caused by the fear of it.

CH. IV

Unpopular Essays (1950)

Empiricist Liberalism (which is not uncon-

parable with democratic socialism) is the only

philosophy which can be adopted by a man

who, on the one hand, demands some objec-

tive evidence for his beliefs, and on the other

hand, desires human happiness more than the

prevalence of this or that party or creed.

„Philosophy and Politics“

Dogmatism and scepticism are both, in a

sense, abolitive philosophies; one is certain of

knowing, the other of not knowing. What phi-

losophy should dispense is certainty, whether

of knowledge or ignorance.

„Philosophy for Laymen“

It was no longer occupied men's thoughts

and energies, we could without a generalism,

put an end to all serious poverty throughout

the world.

„The Future of Mankind“

Fortraits From Memory (1956)

It would now be technically possible to

unify the world, abolish war and poverty also-

gether, if men desired their own happiness

more than the misery of their enemies.

Education and the Good Life (1926)

The teacher should love his children better

than his State or his Church; otherwise he is

not an ideal teacher.

Pl. I, ch. 2

Men fear thought as they fear nothing else

on earth—more than death. Thought is sub-

versive, and revolutionary, destructive and ter-

rrible; thought is merciless to privilege.

Established institutions, and comfortable hab-

itations, thought is anarchic and lawless, indifferent

to authority, careless to the well-trodden wisdom

of the ages. Thought is great and

and is not afraid. Thought is great and

swift and free, the light of the world, and the

chief glory of man.

But if thought is to become the possession of

the many, and not the privilege of the few, we

must have done with fear. It is fear that holds

men back—fear that their cherished beliefs

should prove delusions, fear lest the insti-

tutions by which they should prove harmful,

fear lest they themselves prove less worthy to

the respect then they have supposed them-

selves to be.

Pl. II

Sceptical Essays (1928)

The fundamental argument for freedom of

opinion is the doubtfulness of all our belief. If

we certainly knew the truth, there would be

nothing to be said for teaching it.

When the State intervenes to insure the inde-

pendence of some doctrine, it does so because

there is no conclusive evidence in favor of that

doctrine.

It is clear that thought is not free if the

profession of certain opinions make it impossi-

ble to earn a living.

I am myself a disserter from all known reli-

gions, and I hope that every kind of religious

belief will die out. I do not believe that, on the

balance, religious belief has been a force for

good. . . . I regard it as belonging to the in-

tellectuality of human reason, and to a stage of de-

velopment which we are outgrowing.

Understanding Human History

„Free thought“ means thinking freely.

To be worthy of the name (freethinker) he

must be free of two things: the force of tradi-

tion, and the tyranny of his own passions. No

one is completely free from either, and in the

measure of a man's emancipation he deserves

to be called a free thinker.

Throughout a period of about 1200 years

every Christian country in Europe condemned

free thinkers to be buried at the stake. In Mo-

hammadan countries . . . they were subject to

abhorrence to the mob.

[F]or even now a known freethinker suffers

serious disabilities, and has more difficulties

making a living than the man who is reputed

to accept the teachings of the Church.

(God and Satan alike are essentially human

figures, the one a projection of ourselves, the

other of our enemies.

That they [the dogmas of religion] do little

harm is not true. (Opposition to birth control

makes it impossible to solve the population

problem and therefore postpones indefinitely

all chance of world peace.

Practically all philosophers of any intellec-

tual eminence are openly or secretly freethink-

ers.

The American Revolution . . . was led by

freethinkers, Washington and Adams, just as

most of their followers accepted.

Hetical views arise when the truth is un-

certain, and it is only when the truth is inter-

dicted that consistency is invoked. . . . [I]f it

is difficult to find anything really certain outside

the realm of pure mathematics and facts of

history and geography.

„The Value of Free Thought“

Mythicism and Logic (1925)

Mathematics possesses not only truth, but

some supreme beauty—a beauty cold and aus-

tere, like that of sculpture.

IV

What I Believe (1925)

I do not pretend to be able to prove that

there is no God. I equally cannot prove that

Zeus is a fiction. The Christian God may ex-

ist, so may the Gods of Olympus, or of ancient

Egypt, or of Babylon. But no one of these hy-

potheses is more probable than any other: they

lie outside the region of even probable knowl-

edge, and therefore there is no reason to con-

sider any of them.

The Autobiography of Bertrand Russell (1967)

Three passions, simple but overwhelmingly

strong, have governed my life: the longing for

love, the search for knowledge, and unbecom-

ing pity for the suffering of mankind.

and pain make a mockery of what human life

should be.

Main, even if he does not commit scientific

suicide, will perish ultimately through the lat-

ent use of water or air or warmth. It is difficult to

believe that Christianity needed so vast a sac-

ring for so small and transitory a result.

Apart from the minutiae and hierarchy of

the human species, I cannot feel that it is a

worthy climax to such an enormous predic-

„The Fall of a Rationalist.“ BBC broadcast, 1953

1. Do not feel certain of anything.

2. Have no respect for the authority of oth-

ers, for there are always contrary authorities to

be found.

6. Do not use power to suppress opinions

you think pernicious, for if you do the opin-

ions will suppress you.

7. Do not fear to be eccentric in opinion,

for every opinion now accepted was once ec-

centric.

„The Ten Commandments.“ The Independent,

1965

The scientific attitude of mind involves a

sweeping away of all other desires in the inter-

est of the desire to know—it involves suppres-

sion of hopes and fears, loves and hates, and

the whole subjective emotional life, until we

become subordinated to the material, without bias,

without any wish except to see it as it is, and

determined by some relation, positive or nega-

tive, to what we should like it to be or to what

we can easily imagine it to be.

„The Place of Science in a Liberal Education.“ The

New Statesman, May 24, 1930

„Cause is one that cannot have any valid-

ity. . . . If anything must have a cause, then

God must have a cause. If there can be any-

thing without a cause, it may just as well be

the world as God.

Science . . . has forced its way step by step

against the Christian religion, against the

churches, and against the opposition of the old

precepts. Science can help us to get over this

caused fear in which mankind has lived for so

many generations.

Address, „Why I Am Not a Christian.“ Bartsch

„Town Hall, March 6, 1927

The first dogma which I came to disbelieve

was that of free will. It seemed to me that all

notions of matter were determined by the laws

of dynamics and could not therefore be influ-

enced by human wills.

The basis of international morality is man's

propensity to fear and hatred. This is also the

basis of economic disputes, for the love of

power, which is at their root, is generally an

embodiment of fear. Men desire to be in con-

trol because they are afraid that the control of

others will be used unjustly to their detriment.

The same thing applies to the field of sexual

wives over husbands, which is conferred by the

law, is derived from fear of the loss of posses-

sion.

Combination, Living Philosophies (1931)

I admit that the love of God, if there were a

God, would make it possible for human beings

to be better than is possible in a Godless world.

Letter to Louis Dickinson, September 22, 1904

LIFE.

Broadside, written for Trafalgar Square Meeting,

Cuban missile crisis, printed in Newsweek,

October 27, 1969

Patrolism is the willingness to kill and be

killled for trivial reasons.

My own view of religion is that of Lucie-

thus. I regard it as disease born of fear and as

source of untold misery.

There is therefore no escape from the

choice that lies before us. Shall we renounce

war, or shall we bring our species to an end?

These quotations, attributed to Russell, appeared

after 1970 in the New York Times, Saturday

Review, and The Nation

All quotations dated 1903-1959 were confirmed by

Land Russell in a letter concluding, „I am glad to

know that you are doing such a book as you mention

and I like the selection of quotations from me.“

THE NUCLEAR PREDICAMENT

- (18) Joan Kroc. It's no longer news, but deserves to be remembered, that Joan Kroc — wealthy widow of McDonald's founder, Ray Kroc, and owner of the San Diego Padres — bought full-page ads condemning the arms race. The ad appeared in The New York Times, The Wall Street Journal, and 21 other major newspapers, and cost over \$400,000.

"I think we need to do everything we can, in every way we can, to prevent a holocaust. This was something I could do. I hope it will raise the awareness level of people and get them actively involved," she said.

The ad consists of quotes from a speech against the arms race: "Every gun that is made, every ship that is launched, every rocket fired, signifies, in the final sense, a theft from those who are cold and not clothed. This world in arms is not spending money alone. It is spending the sweat of its laborers, the genius of its scientists, the hopes of its children..." It was from a 1953 speech by President Eisenhower.

Although the quotation does not specifically mention nuclear armaments, it comes from an impeccable source. Hence its impact.

It ran on Memorial Day, which was also the first day that the arms talks in Geneva resumed.

- (19) Rotblat. As you may recall, Freeman Dyson paid a great tribute to Joseph Rotblat...and for good reason:

Many of the scientists who had gone to work on the Manhattan Project (at Los Alamos) — to create the first nuclear bomb — did so out of fear that Hitler might get the bomb first. After Germany was defeated, that fear had become groundless, and they could have chosen to stop working on nuclear weapons...but did they? No, they didn't...except for one man: Joseph Rotblat, who "to his everlasting credit, resigned his position at Los Alamos and left the laboratory in December 1944," says Dyson. (RSN42-25)

Rotblat himself tells how it happened ("Joseph and the Bomb?"), in the August 1985 issue of The Bulletin of the Atomic Scientists (with thanks to BOB DAVIS):

Leaving the bomb project

A nuclear physicist responsible for helping design the atomic bomb tells for the first time why he decided to leave Los Alamos in 1944.

by Joseph Rotblat

WORKING ON THE Manhattan Project was a traumatic experience. It is not often given to one to participate in the birth of a new era. For some the effect has endured throughout their lives; I am one of those.

This essay is not an autobiography; it describes only my involvement in the genesis of the atomic bomb. All extraneous personal elements are left out, but their exclusion does not mean that they are unimportant. Our hopes and fears, our resolutions and actions, are influenced by an infinite number of small events interacting with each other all the time. Because of this, each of us may react differently to

Joseph Rotblat is emeritus professor of physics at the University of London, St. Bartholomew's Hospital Medical College. A founder of the Pugwash Conference on Science and World Affairs, he was its secretary general for 17 years and is currently chairman of the British Pugwash Group.

the same set of conditions. The experience of every Los Alamite is unique.

AT THE BEGINNING of 1939, when the news reached me of the discovery of fission, I was working in the Radiological Laboratory in Warsaw. Its director was Ludwik Wertenstein, a pupil of Marie Curie and a pioneer in the science of radioactivity in Poland. Our source of radiation consisted of 30 milligrams of radium in solution; every few days we pumped the accumulated radon into a tube filled with yllium powder. With this minute neutron source we managed to carry out much research, even competing with Enrico Fermi's prestigious team, then in Rome, in the discovery of radiumclides. Our main achievement was the direct evidence of the inelastic scattering of neutrons; my doctoral thesis was on that subject.

In the earlier experiments on inelastic scattering we used gold as the scatterer. By the end of 1938 I had begun to experiment with uranium, so when I heard of the fission of uranium, it did not take me long to set up an experiment to see whether neutrons are emitted at fission. I soon found that they are — indeed, that more neutrons are emitted than produce fission. From this discovery it was a fairly simple intellectual exercise to envisage a divergent chain reaction with a vast release of energy. The logical sequel was that if this energy were released in a very short time it would result in an explosion of unprecedented power. Many scientists in other countries, doing this type of research, went through a similar thought process, although not necessarily evoking the same reaction.

In my case, my first reflex was to put the whole thing out of my mind, like a person trying to ignore the first symptom of a fatal disease in the hope that it will go away. But the fear gnaws all the same, and my fear was that someone would put the idea into practice. The thought that I myself would do it did not cross my mind, because it was completely alien to me. I was brought up on humanitarian principles. At that time my life was centered on doing "pure" research work, but I always believed that science should be used in the service of mankind. The notion of utilizing my knowledge to produce an awesome weapon of destruction was abhorrent to me.

In my gnawing fear, the "someone" who might put it into practice was precisely defined: German scientists. I had no doubt that the Nazis would not hesitate to use any device, however inhumane, if it gave their doctrine world domination. If so, should one look into the problem to find out whether the fear had a realistic basis? Wrestling with this question was agonizing, and I was therefore glad that another pressing matter gave me an excuse to put it aside.

This other matter was my move to England, where I was to spend a year with Professor James Chadwick in Liver-

pool, on a grant to work on the cyclotron which was then being completed there. This was my first trip abroad, and the upheaval kept me busy both before the journey in April 1939 and for some time afterward, because I spoke very little English, and it took me a long time to settle down.

Throughout the spring and summer the gnawing went on relentlessly. It intensified with the increasing signs that Germany was getting ready for war. And it became acute when I read an article by S. Flugge in *Naturwissenschaften* mentioning the possibility of nuclear explosives.

Gradually I worked out a rationale for doing research on the feasibility of the bomb. I convinced myself that the only way to stop the Germans from using it against us would be if we too had the bomb and threatened to retaliate. My scenario never envisaged that we should use it, not even against the Germans. We needed the bomb for the sole purpose of making sure that it would not be used by them: the same argument that is now being used by proponents of the deterrence doctrine.

With the wisdom of hindsight, I can see the folly of the deterrent thesis, quite apart from a few other flaws in my rationalization. For one thing, it would not have worked with a psychopath like Hitler. If he had had the bomb, it is very likely that his last order from the bunker in Berlin would have been to destroy London, even if this were to bring terrible retribution to Germany. Indeed, he would have seen this as a heroic way of going down, in a *Götterdämmerung*.

My thinking at the time required that the feasibility of the atom bomb be established, one way or the other, with the utmost urgency. Yet I could not overcome my scruples. I felt the need to talk it over with someone, but my English was too halting to discuss such a sensitive issue with my colleagues in Liverpool.

In August 1939, having gone to Poland on a personal matter, I took the opportunity to visit Wertenstein and put

my dilemma before him. The idea of a nuclear weapon had not occurred to him, but when I showed him my rough calculations he could not find anything scientifically wrong with them. On the moral issue, however, he was unwilling to advise me. He himself would never engage in this type of work, but he would not try to influence me. It had to be left to my own conscience.

The war broke out two days after I returned to Liverpool. Within a few weeks Poland was overrun. The stories that Hitler's military strength was all bluff, that his tanks were painted cardboard, turned out to be wishful thinking. The might of Germany stood revealed, and the whole of our civilization was in mortal peril. My scruples were finally overcome.

BY NOVEMBER 1939 my English was good enough for me to give a course of lectures on nuclear physics to the Honors School at Liverpool University, but by then the department's senior research staff had disappeared: they had gone to work on radar and other war projects. I had, therefore, to approach Chadwick directly with an outline of my plan for research on the feasibility of the atom bomb. His response was typically Chadwickian: he just grunted, without letting on whether he had already thought of such a plan. Later I learned that other scientists in the United Kingdom did have the same idea, some of them with similar motivation.

A few days later Chadwick told me to go ahead and gave me two young assistants. One of them presented a problem. He was a Quaker and as such had refused to do war work. He was therefore sent to Liverpool University for academic duties—but was diverted to work with me on the atom bomb! I was not allowed to reveal to him the nature of our research, and I had qualms of conscience about using him in such an unethical way.

The main idea which I put to Chadwick was that for the atom bomb the chain reaction would have to be propagated by fast neutrons; otherwise it would not differ much from a chemical explosive. It was therefore important to measure the fission cross-section for fast neutrons, the energy distribution of fission neutrons, their inelastic scattering, and the proportion of those captured without producing fission. It was also relevant to find out whether stray neutrons might cause a premature start of the reaction, which meant determining the probability of spontaneous fission of uranium.

We built up a small team of young but devoted physicists and used the cyclotron to tackle some of these problems. Later we were joined by Otto Frisch who measured the fast neutron fission cross-section for uranium-235. I had the idea of using plutonium, but we had no means of making it.

As a result of these investigations, we were able to establish that the atom bomb was feasible from the scientific

point of view. However, it also became clear that in order to make the bomb a vast technological effort would be required, far exceeding the manpower and industrial potential of wartime Britain. A top-level decision was reached to collaborate with the Americans. And so I found myself eventually in that "wondrous strange" place, Los Alamos.

IN MARCH 1944 I experienced a disagreeable shock. At that time I was living with the Chadwicks in their house on the Mesa, before moving later to the "Big House," the quarters for single scientists. General Leslie Groves, when visiting Los Alamos, frequently came to the Chadwicks for dinner and relaxed palaver. During one such conversation Groves said that, of course, the real purpose in making the bomb was to subdue the Soviets. (Whatever his exact words, his real meaning was clear.) Although I had no illusions about the Stalin regime—after all, it was his pact with Hitler that enabled the latter to invade Poland—I felt deeply the sense of betrayal of an ally. Remember, this was said at a time when thousands of Russians were dying every day on the Eastern Front, tying down the Germans and giving the Allies time to prepare for the landing on the continent of Europe. Until then I had thought that our work was to prevent a Nazi victory, and now I was told that the weapon we were preparing was intended for use against the people who were making extreme sacrifices for that very aim.

My concern about the purpose of our work gained substance from conversations with Niels Bohr. He used to come to my room at eight in the morning to listen to the BBC news bulletin. Like myself, he could not stand the U.S. bulletins which urged us every few seconds to purchase a certain laxative! I owned a special radio on which I could receive the BBC World Service. Sometimes Bohr stayed on and talked to me about the social and political implications of the discovery of nuclear energy and of his worry about the dire consequences of a nuclear arms race between East and West which he foresaw.

All this, and the growing evidence that the war in Europe would be over before the bomb project was completed, made my participation in it pointless. If it took the Americans such a long time, then my fear of the Germans being first was groundless.

When it became evident, toward the end of 1944, that the Germans had abandoned their bomb project, the whole purpose of my being in Los Alamos ceased to be, and I asked for permission to leave and return to Britain.

WHY DID OTHER scientists not make the same decision? Obviously, one would not expect General Groves to wind up the project as soon as Germany was defeated, but there were many scientists for whom the German factor was the main motivation. Why did they not quit when this factor ceased to be?

I was not allowed to discuss this issue with anybody after I declared my intention to leave Los Alamos, but earlier conversations, as well as much later ones, elicited several reasons.

The most frequent reason given was pure and simple scientific curiosity—the strong urge to find out whether the theoretical calculations and predictions would come true. These scientists felt that only after the test at Alamogordo should they enter into the debate about the use of the bomb.

Others were prepared to put the matter off even longer, persuaded by the argument that many American lives would be saved if the bomb brought a rapid end to the war with Japan. Only when peace was restored would they take a hand in efforts to ensure that the bomb would not be used again.

Still others, while agreeing that the project should have been stopped when the German factor ceased to operate, were not willing to take an individual stand because they feared it would adversely affect their future career.

The groups I have just described—scientists with a social conscience—were a minority in the scientific community. The majority were not bothered by moral scruples; they were quite content to leave it to others to decide how their work would be used. Much the same situation exists now in many countries in relation to work on military projects. But it is the morality issue at a time of war that perplexes and worries me most.

Recently I came across a document released under the Freedom of Information Act. It is a letter, dated May 25, 1943, from Robert Oppenheimer to Enrico Fermi, on the military use of radioactive materials, specifically, the poisoning of food with radioactive strontium. The Smyth Report mentions such use as a possible German threat, but Oppenheimer apparently thought the idea worthy of consideration, and asked Fermi whether he could produce the strontium without letting too many people into the secret.

He went on: "I think we should not attempt a plan unless we can poison food sufficient to kill a half a million men." I am sure that in peacetime these same scientists would have viewed such a plan as barbaric; they would not have contemplated it even for a moment. Yet during the war it was considered quite seriously and, I presume, abandoned only because it was technically infeasible.

AFTER I TOLD Chadwick that I wished to leave the project, he came back to me with very disturbing news. When he conveyed my wish to the intelligence chief at Los Alamos, he was shown a thick dossier on me with highly incriminating evidence. It boiled down to my being a spy: I had arranged with a contact in Santa Fe to return to England, and then to be flown to and parachuted onto the part of Poland held by the Soviets, in order to give them

the secrets of the atom bomb. The trouble was that within this load of rubbish was a grain of truth. I did indeed meet and converse with a person during my trips to Santa Fe. It was for a purely altruistic purpose, nothing to do with the project, and I had Chadwick's permission for the visits. Nevertheless, it contravened a security regulation, and it made me vulnerable.

Fortunately for me, in their zeal the vigilant agents had included in their reports details of conversations with dates, which were quite easy to refute and to expose as complete fabrications. The chief of intelligence was rather embarrassed by all this and conceded that the dossier was worthless. Nevertheless, he insisted that I not talk to anybody about my reason for leaving the project. We agreed with Chadwick that the ostensible reason would be a purely personal one: that I was worried about my wife whom I had left in Poland.

And so, on Christmas Eve 1944, I sailed for the United Kingdom, but not without another incident. Before leaving Los Alamos I packed all my documents—research notes as well as correspondence and other records—in a box made for me by my assistant. En route I stayed for a few days with the Chadwicks in Washington. Chadwick personally helped me put the box on the train to New York. But when I arrived there a few hours later, the box was missing. Nor, despite valiant efforts, was it ever recovered.

The work on the Manhattan Project, as I said at the outset, has had an enduring effect on my life. Indeed, it radically changed my scientific career and the carrying out of my obligations to society.

The work on the Manhattan Project, as I said at the outset, has had an enduring effect on my life. Indeed, it radically changed my scientific career and the carrying out of my obligations to society.

Work on the atom bomb convinced me that even pure research soon finds applications of one kind or another. If so, I wanted to decide myself how my work should be applied. I chose an aspect of nuclear physics which would definitely be beneficial to humanity: the applications to medicine. Thus I completely changed the direction of my research and spent the rest of my academic career working in a medical college and hospital.

While this gave me personal satisfaction, I was increasingly concerned about the political aspects of the development of nuclear weapons, and particularly the hydrogen bomb, about which I knew from Los Alamos. Therefore, I devoted myself both to arousing the scientific community to the danger, and to educating the general public on these issues. I was instrumental in setting up the Atomic Scientists Association in the United Kingdom, and within its framework organized the Atom Train, a travelling exhibition which explained to the public the good and evil aspects of nuclear energy. Through these activities I came to collaborate with Bertrand Russell. This association led to the foundation of the Pugwash Conferences where I met again with colleagues from the Manhattan Project, who were also concerned about the threat to mankind that has arisen partly from their work.

After 40 years one question keeps nagging me: have we learned enough not to repeat the mistakes we made then? I am not sure even about myself. Not being an absolute pacifist, I cannot guarantee that I would not behave in the same way, should a similar situation arise. Our concepts of morality seem to get thrown overboard once military action starts. It is, therefore, most important not to allow such a situation to develop. Our prime effort must concentrate on the prevention of nuclear war, because in such a war not only morality but the whole fabric of civilization would disappear. Eventually, however, we must aim at eliminating all kinds of war.

* * * * *

Joseph Rotblat received the 1983 Bertrand Russell Society Award.

"There lies before us, if we choose, continual progress in happiness, knowledge, and wisdom. Shall we, instead, choose death, because we cannot forget our quarrels? We appeal, as human beings to human beings: remember your humanity and forget the rest."

—from the Bertrand Russell-Albert Einstein manifesto, which prompted the creation of Pugwash.

(20) Pugwash. This ad appeared in the August 1985 issue of The Bulletin of the Atomic Scientists.----->

As you may know, Pugwash brought scientists from both sides of the Iron Curtain together for the first time, in 1957, which led to the Limited Test Ban Treaty, the Non-Proliferation Treaty, and the SALT Talks.

We regret that we cannot reproduce the color of the original.

(Thank you, BOB DAVIS)

Detail of painting, "Light through Morning Rain," by Lisa Gronow

Forty years ago, scientists asked themselves how they would inform governments and the public of the urgent need to stop the spread of nuclear weapons. The *Bulletin of the Atomic Scientists* was born of that concern. Pugwash, founded in 1955, offers a complementary forum by gathering scientists from throughout the world to discuss issues of global import.

Now more than ever, open dialogue as provided by the *Bulletin* and Pugwash can provide a key to international understanding. And you can make a difference. Your generous contributions have allowed Pugwash to provide a window of hope in the tradition of Russell and Einstein.

Please send your tax-deductible donation to AEPF, Pugwash, c/o William M. Swartz (Chairman, Finance Committee, Pugwash Conferences on Science and World Affairs), 1430 West Wrightwood Avenue, Chicago, Illinois 60614. Yearly memberships in Pugwash are \$100; contributions of any amount are gratefully received to help support the conferences.

Hope through understanding

(21) From the New York Times Book Review (10/20/85,p.7):

STAR WARRIORS

A Penetrating Look Into the Lives of the Young Scientists Behind Our Space Age Weaponry.

By William J. Broad.
Illustrated. 245 pp. New York:
Simon & Schuster. \$16.95.

By Jeremy Bernstein

I THINK it is inevitable that one's attitude toward the men — there are no women — described in William J. Broad's book "Star Warriors" will be conditioned by one's attitude toward their enterprise — the Strategic Defense Initiative, known widely as "Star Wars." I feel, therefore, obligated to state mine from the outset. I think that "Star Wars" is a consummate, mindless folly.

Although I am a physicist, I do not base this judgment on any arcane scientific consideration. I have simply asked myself — and often — two questions. First, suppose one of the "experts," one of the "Star Warriors" depicted in this book, were to tell us that a system of defense against missiles (a shield) had been developed that could intercept all — or some high percentage — of incoming offensive missiles. Could anyone responsible for the defense of this country possibly afford to believe him? After all, such a system can never really be tested before an atomic war. So how could any responsible government base its security on it? The answer is, I think, that no one, in any literal sense, would believe him, and no one has any intention of replacing the present deterrent strategy with an untestable nuclear shield. Hence "Star Wars" becomes, in fact, just another weapons system, and an extremely uneconomical one at that.

On the other hand — and this is the second question — could anyone responsible for the security of the Soviet Union afford not to believe him? Here, again, the answer is clearly no. This means that constructing such a leaky nuclear shield will surely cause an escalation in the offensive arms race as the Russians work to penetrate it.

These considerations seem so obvious to me that it is hard for me to understand why they are not obvious to everybody, including the people working on the project itself. The great value of this book is that it makes clear that the people working on the project — the actual "Star Warriors" themselves — have essentially the same doubts about it that I do. What Mr. Broad, a science news reporter for The New York Times, did was to travel to Livermore, Calif. — the site of the Lawrence Livermore weapons laboratory, which Edward Teller was instrumental in founding in 1952 — and spend time

Jeremy Bernstein is a professor of physics at the Stevens Institute of Technology and an adjunct professor at Rockefeller University.

there as a neutral observer with the group of scientists who are actually trying to make the project work.

President Reagan is fond of saying, when asked about the capacities of the proposed "Star Wars" system, "I am no scientist, but . . ." Well, here are the scientists, and this book is what they have to say. As to whether a leak-proof nuclear umbrella will be produced — the pugative goal of this enterprise — Mr. Broad was not able to find a single scientist who said to him that the system would work.

Here is a typical comment from one of the scientists at Livermore. Andy Weisberg, whom Mr. Broad describes as a 29-year-old "computer whiz," says: "God only knows how effective the defensive system would be. It can never be tested — certainly not in the kind of rate saturation we're talking about." Mr. Broad also talked to 29-year-old Peter Hagelstein, one of the inventors of the atomic bomb-powered, X-ray laser that is supposed to be the cornerstone of the system. Note well that this laser is powered by atomic bombs. These people, whatever their oxymoronic rhetoric about "weapons of life," are in the business of designing and building atomic bombs.

Their use of language has, for me, the miasma of *déjà vu*. In the late 50's — when I was about their age — I was briefly employed as a consultant at the RAND Corporation. My group was in the business of designing and interpreting hydrogen bomb tests in the upper atmosphere. One of the notions was to use these explosions to plant charged particles in the upper atmosphere, which would, it was claimed, destroy incoming enemy missiles. The tests had wonderful-sounding names like Star Fish and Blue Gill; one of the schemes was even called Project Sunshine. There were Cassandras, such as the astronomer Bernard Lovell, who warned about environmental damage. We had discussions in which we tried to show that Mr. Lovell was talking nonsense — which was difficult because he wasn't. In the end the enterprise was abandoned for the absurdity it was. It gave me a rather jaundiced view of "experts" when it comes to the effects of nuclear weapons.

Mr. Hagelstein says: "With respect to whether ["Star Wars"] will make war less likely, I doubt that, I mean in terms of man's drives. You're not going to stop war; it would be very nice if we could develop a defensive network that would blow away all Soviet ICBMs [intercontinental ballistic missiles]. . . . But I don't think we could take out all of them. Even if we could,

that would not stop war or get rid of the nuclear threat, people living what they are." Then what . . . Heaven's name are these people doing and why are they doing it?

There are of course various reasons for people doing anything. Some of Mr. Broad's subjects express concerns about the Russians, which range from the reasonable to the paranoid. Mr. Hagelstein, who, it seems, falls somewhere in the middle, reports to Mr. Broad that he had read Aleksandr Solzhenitsyn's "Gulag Archipelago," which his colleagues claimed "made a discernible difference in his attitude toward work on nuclear weaponry." Rod Hyde, one of the weapons designers Mr. Broad interviewed, says, "Working here is fine by me because I don't trust the Soviets worth beans." I might add that this level of discourse among the people Mr.

Broad interviewed is not atypical, and it makes parts of the book slow going. This is not the author's fault, but it is a pity he was not around at the time of Los Alamos. Can one imagine Robert Oppenheimer, Hans Bethe, Richard Feynman, Victor Weisskopf, Niels Bohr or even Edward Teller saying, "Working here is fine by me because I don't trust Adolf Hitler worth beans"?

Most of Mr. Broad's subjects — like so many scientists — do what they do simply because, like Mount Everest, it is there. Mr. Hagelstein, for example, notes, "Until 1980 or so I didn't want to have anything to do with nuclear anything. Back in those days I thought there was something fundamentally evil about weapons. Now I see it as an interesting physics problem." When he first came to the laboratory, Mr. Hagelstein tells the author, it "made quite an impression, especially the guards and barbed wire. When I got to the personnel department it dawned on me that they worked on weapons here, and that's about the first I knew about it. I came pretty close to leaving. I didn't want to have anything to do with it. Anyway, I met nice people, so I stayed. The people were extremely interesting. And I really didn't have anywhere else to go."

The question "Why do they work on it?" troubled Mr. Broad. He finally concluded that "strategic defense was not a good idea. Originally I had dismissed the critics. After all, they had a vested intellectual interest in the nuclear status quo, in many cases having helped create it." But the conversations turned him around. "It was not a vision of scientific futility that gave me pause. . . . Rather, it was learning something of the strategic instabilities and great expense associated with a move to partial defense." []

ON RELIGION

(22) Ingersoll, as reported in Newsletter 16 (August 1985) of the "Friends of Robert G. Ingersoll" (POB 5082, Peoria, IL 61601):

In 1872, after Ingersoll delivered his lecture, "Gods", to a local audience, a group of appreciative citizens purchased an expensive service of silverware as a gift. The Peoria Daily Transcript printed Ingersoll's extemporaneous remarks of March 27, 1872:

Gentlemen: To say that I am gratified and proud, so far as expressing my real feelings are concerned, is about the same as saying nothing. A hundred years ago, in any country where Christians had the power, a man, for the expression of my sentiments, would probably have been burned as Calvin burned Servetus, with a slow fire, fed with green wood, while people who prayed for their enemies would have made mouths at his heroism, or jeeringly imitated his cries of pain.

For the expression of my sentiments, fifty years ago, even in this republic, a man would have been mobbed and imprisoned by Christians who carried out the fugitive slave law and made a whipping post of the cross of Christ.

impossible to forget the sufferings endured by the pioneers in the sacred cause of freedom.

Tonight I can see Galileo in his cell. I see the flames creeping around the grand Bruno. Through the smoke I see his white intrepid face. I am looking at Savonarola, and I hear the shouts of the christian mob when the fire reaches his serene eyes. I see Wightman at the stake. I see pious people piling fagots about him and I see ministers of God trample upon his charred remains. I see Leighton pursued, whipped, mutilated and imprisoned. I see him, by christian outrage, driven to insanity and tortured to death while a maniac. I see LaBarre burned to ashes for an indignity offered to a statue. I see thousands of infidels in prison. I see their families in want. I see courts tearing children from fathers and mothers in the name of religion, and everywhere, I see the friends of intellectual liberty dispised, ostracised and insulted... But the world is better now, and we are reaping the priceless harvest of the heroic acts of all the ages.

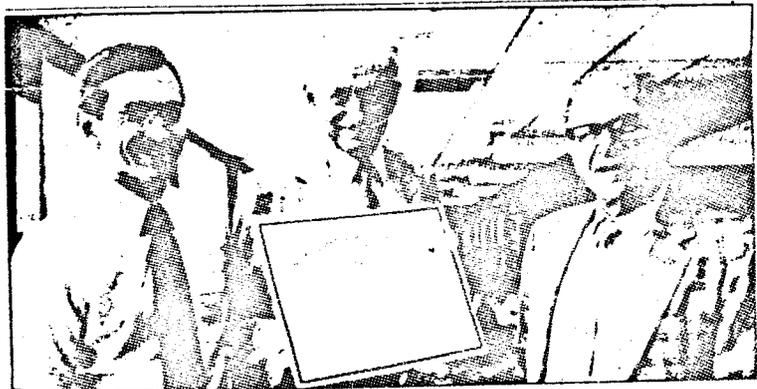

... I have no idea that you agree with me in many of my religious, or rather, irreligious opinions, but I know that you believe in liberty of thought and speech, and for that you have my thanks and respect.

Although the intrinsic value of your gift is great, still that is as nothing when compared with the reason for which you gave it.

...

Ingersoll's remarks, above, come from the book, "Peoria's Pagan Politician" by Mark Plummer, in the Western Illinois Monograph Series, available for \$3.95 from Administration Office, University Libraries, Western Illinois University, Macomb, IL 61455.

AT THE RUSSELL ARCHIVES

(23) From The Courier (9/10/85),
published at McMaster University...
with thanks to KEN BLACKWELL ----->

First book award: Dr. Harry Ruja, right, presents The Bertrand Russell Society Book Award to Professor John Passmore, centre, in the Russell Archives. Dr. Kenneth Blackwell, left, is Russell Archivist and one of the editors of the project.

Russell Editorial Project receives first book award

The Russell Editorial Project has been honored with the first Bertrand Russell Society Book Award. Dr. Harry Ruja, Chairman of the Board of Directors of the Bertrand Russell Society Inc. presented the award to Professor John Passmore (National University of Australia, Philosophy) general editor of the project. Professor Passmore accepted on behalf of his colleagues which included the editors: Dr. Kenneth Blackwell (Russell Archivist), Dr. Andrew Brink (English), Dr. Nicholas Griffin (Philosophy), Dr. Richard Kempel (History) and Dr. John Slater (University of Toronto, Philosophy). The project includes all of Russell's writings except his books. Professor Passmore called the award "a monument to Canadian scholarship" and added that the support staff played a large role in the success of the work. The award was given for Volume One on "The Collected Papers of Bertrand Russell". The volume was the first of a proposed set of 28 of the British philosopher's unpublished works being edited by an academic team at McMaster.

Lord Russell's papers, library and memorabilia have been at the University since 1968. The first volume was the "Cambridge Essays, 1888-99" (London: Allen & Unwin, 1983), a compilation of Russell's earliest writings. Only seven of forty-nine papers included had been published previously. The volume shows the wide range of subjects that interested the philosopher-mathematician during his long (1872-1970) life. The volume also reproduced the long list of books Russell read over a 12-year period, which helps to understand what shaped his mind. The society also awarded the \$1,000 Bertrand Russell Society doctoral grant to McMaster's Linda Benthon, of the History Department. Ms Benthon's dissertation, "Bertrand Russell's Peace Activities 1964-1962" will study Russell's political dissent, peace activities and thought during the 1960s and 1960s. The work will analyze the writings produced by his urgent campaign to increase public awareness of the threat of nuclear war and mobilize enlightened protest.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

Chairman, Harry Ruja; President, David S. Hart; Vice-President, Marvin Kohl; Treasurer, Dennis J. Darland; Secretary, John R. Lenz; Vice-President/Information, Lee Eisler.

OPINION

- (25) Galbraith. As we remember it, Max Eastman defined wit as humor which also makes a point. Here is a recent sample of Galbraith's wit, from the New York Times op ed page (9/27/85, A31):

Reagan's 'Facts' — Artistic License

By John Kenneth Galbraith

CAMBRIDGE, Mass. — For a country with a major theatrical tradition — films, stage, television — we are singularly deficient in our understanding of Ronald Reagan.

Mr. Reagan is our first President from our theatrical tradition, and he is from its most impressively American form, the motion picture. In this tradition one does not ask whether the script conforms to reality; that is a denial of the art. The script has an imaginative dimension of its own; the script is the reality.

So, inevitably, after a lifetime in this tradition, it is for Ronald Reagan. And, in consequence, no one should suppose that in his observations on radio, television and in that extraordinary Washington theater, the Presidential press conference, he should be expected to conform to fact. That would be a denial of his art.

Accordingly, and in keeping with this art form, it is natural and even inevitable that the President should call the South African Government reformist in intent; or say that segregation there has disappeared; or assert that the market will solve all

problems, including population control and farm distress in Iowa. Also that he should say that some sturdy independent souls do prefer to sleep on warm street grates, that food-stamp recipients are given to walking out with the food and a bottle of vodka, that the deficit is irrelevant, that more income will cause the rich to work harder and less income will do the same for the poor, that Managua is a terrorist dagger pointed at the heart of Montgomery, Ala., that the Strategic Defense Initiative will provide an umbrella over us all, and that the arms race isn't a race but merely a belated effort to come abreast of the evil empire. These have been elements of the President's script; those who challenge these propositions do not understand the role of theater in our time.

But with a moment's reflection, they surely will. "Gone With the Wind," "It Happened One Night" and "Knut Rockne — All American" all had their imaginative departures.

John Kenneth Galbraith is professor emeritus of economics at Harvard University.

Shakespeare took similar liberties with "Macbeth" and "Henry IV," as did George Bernard Shaw with Joan of Arc and Professor Higgins. This is the nature of theater; this — high art and not low fact — is the guiding light of Ronald Reagan.

What is beyond belief is the failure to understand this by the men around the President. Every other day they, and especially the White House spokesman, Larry Speakes, bring him down to fact. There is even White House reference to damage control. They do not realize — no one, it appears, has told them — that they are dealing with an art form. At the theater, Mr. Speakes would feel moved to get up after every act, maybe every scene, and offer a correction. It would be a major intrusion on art, as it is on Ronald Reagan's theater. The President and all who understand the separate integrity of the script should speak sternly to Mr. Speakes.

The American public, more acute in these matters than the men around the President, knows or senses that it is theater. And, in the manner of men and women who go to plays or the cinema or watch "Dallas," they find the President's script more agree-

able and diverting, less grim and worrisome than the dull circumstances of everyday life. Thus the President's high standing in the polls.

However, a warning is in order as regards other politicians and particularly members of Congress. Ordinary everyday Senators and Representatives cannot and should not suppose themselves to be accomplished in the President's art. Not Alfonse M. D'Amato, not Bill Bradley, not Arlen Specter, who was once, as a prosecuting attorney, thought to have such possibilities, not even Daniel Patrick Moynihan. Accordingly, for them and for their pedestrian colleagues, the script and reality converge, fact remains fact. On South Africa, taxes, deficits, Social Security, acid rain, waste sites and steps back from a nuclear exchange, they must expect to be held by their voters to hard and often harsh reality. The President's escape and his appreciative audience are not for them. As one consequence, we must expect continuing, perhaps increasing, tension between the White House and the unfortunates in Congress who, not being artists, are accorded no artistic license. This I cannot say I wholly regret. □

- (26) Reston. If you share our feelings about our President, this column by James Reston — from the New York Times Review of the Week (10/27/85, p.E23) — may appeal to you:

Reagan at the U.N.

What he could have said, but didn't

WASHINGTON
President Reagan has an odd habit of evading things he can do and concentrating on things he can't possibly do. His speech at the 40th anniversary of the United Nations is merely the latest evidence in point.

It was well within his power to get his divided Administration together on a settled arms control policy. This was expected of him before he went to the U.N. and a month before his Geneva meeting with the Soviet leader, Mikhail Gorbachev.

No such policy was disclosed at the U.N. for the simple reason that no such policy exists. Instead, the President diverted attention from the arms issue to the settlement of regional disputes and human-rights violations in Afghanistan, Angola, Cambodia, Ethiopia and Nicaragua.

There is nothing wrong with linking the settlement of disputes to the control

of nuclear weapons. In fact, the Charter of the United Nations provides a perfect justification for doing so. The main principle of the Charter is in Article 2, Paragraph 4:

"All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations."

Instead of sticking to this sound principle, Mr. Reagan delivered a provocative sermon, glorifying the U.S. record and the capitalist system while denouncing the Soviet record and the Communist system.

In his approach to the summit meeting, Mr. Reagan apparently has two things in mind:

First, if he sticks to his "Star Wars" space-defense policy and demonstrates by testing that he can "hit a fly in the sky" — as Mr. Khrushchev used to boast Moscow could do — that would force concessions from Mr. Gorbachev.

Second, by raising the issue of the settlement of disputes in which the U.S.S.R. is in violation of Article 2, Paragraph 4, of the Charter, but not those in which the U.S. is in violation, Mr. Reagan hopes to blunt the force of Mr. Gorbachev's tricky offer to cut se-

lected nuclear weapons by 50 percent and negotiate a comprehensive test-ban treaty.

There are many experts in the nuclear field who believe that a ban on the testing of all weapons would be the most effective brake on the arms race, and that it would be infinitely easier to negotiate and verify than all the other complicated schemes so far proposed.

But Mr. Reagan has shown no interest in a comprehensive test ban. His mind runs to fantastic schemes that could not possibly be put in place until long after he has finished his second term. This is true not only in the field of foreign affairs but at home.

He has, for example, presided over the largest budget deficit in the history of the Republic and proposes to deal with it not by raising taxes and cutting deeply into expenditures, but by talking endlessly about a constitutional amendment to compel a balanced budget, which he knows he'll never get.

That, however, is the way he is. He is not only the greatest escape artist since Houdini, but is an escapist who prefers fantasy to reality.

He started his speech to the delegates at the U.N. by recommending that the dreams of the past be tempered by a new realism. But it's clear that he has no knowledge or memory of the first days of the U.N.

Those of us who were present at the creation in San Francisco cannot forget that from the first day of that conference, members had no illusions that the five permanent members of the Security Council, with their vetoes and their blocs, would agree to act in accordance with Article 2, Paragraph 4.

President Reagan has never been a great believer in the U.N., partly because the Communist and third-world blocs have used it to vilify the United States. He has good reasons for resentment.

It should not be forgotten, however, that bloc voting was not invented by the Russians but by the United States, and precisely during the San Francisco conference, where the U.S. officials who rounded up the votes for Washington were none other than Adlai Stevenson, Nelson Rockefeller and Thomas Finletter.

If the 40th anniversary of the U.N. was not a howling success, it was probably due partly to the fact that 40 is not the happiest of birthdays. At 20 you know you can wipe out human stupidity. At 30, you still think you can do it if people will just get out of your way.

But at 40 you know they won't. Maybe at the 50th or 60th some other leaders will make the "fresh start" Mr. Reagan talked about. We sure could use one in Washington. □

NEWS ABOUT MEMBERS

- (27) Michael Balyeat, who first joined the BRS in 1978, has now rejoined after two years at the University of Heidelberg. He is pursuing a Masters Degree in Modern European History at San Francisco State College.

Walter Moore Henritze is "looking for a set of Harper Torchbook series on Russell wherein one volume criticizes and in the other Russell replies. I lost my set." His address: 127 Peachtree St., 808 Candler Bldg., Atlanta, GA 30303.

[John Lenz adds this: "The Philosophy of Bertrand Russell", Paul A. Schilpp, editor, a volume in "The Library of Living Philosophers", contains criticism and replies.]

Don Jackanicz has become a Sales Associate in the real estate firm of Shannon and Luchs, in addition to his regular job at the Library of Congress.

Herb Lansdell is on the trail of Red Hackle. As newer members may not know, Red Hackle was BR's brand of Scotch whisky [England spelling]. Hapburn & Ross, Ltd., of Glasgow, Scotland -- proprietors of Red Hackle -- answered his inquiry this way:

Unfortunately we do not currently have national distribution in the United States and the only source of supply at present is :- Flanagan Enterprises, Inc., 16565 N.W. 15th Av., Miami, FL 33169. Flanagan's sell Red Hackle through their chain of "Big Daddy" liquor stores throughout Southern Florida and they might possibly be able to arrange deliveries to you in Maryland. [Herb lives in Maryland.]

John Lenz went to Greece this past summer on an archaeological expedition. "People often asked, 'What is there to find?' I can report that, yes, there are still things to be found in Greece -- every day.

"I participated with other students from several countries in excavations conducted by the Greeks on the island of Paros. A lovelier setting could not be imagined. We dug on a steep hill, containing a Mycenaean palace (1200 B.C.), and overlooking a beautiful bay. In the trench I led, on a plateau near a temple of Athena c. 700 B.C., we found a large 8th Century B.C. building complex. Numerous small pieces of art and pottery were within what remained of the well-built schist-stone walls. Sites such as ours reveal the early history of town-planning and the growth of city-states, at a time and place undocumented in written records (the Greeks were just them inventing the alphabet).

"Every part of Greece is a lesson in history. Ancient architectural remains can be seen built into farmhouses or small churches, or simply lying in the fields...Remains of Venetian castles are scattered on Paros...On Naxos, I saw such a Medieval settlement still inhabited by the descendants of the Venetians. My greatest thrill came when a small farmer on Paros, in whose fields we had discovered ancient remains, came out to rebuke us. Then, appeased by a Greek speaker, he related to us the history of this area. It was the local tradition, passed down from before the Classical Age of Greece; 'and tradition never lies.' We believed him; it fit in with the little we had pieced together."

Cherie Ruppe has gone to Borneo "to work as a volunteer researcher at the Orangutan Research and Rehabilitation Center in Tanjung Puting Reserve in S. Central Kalimantan Province. Except for leeches, mosquitoes, snakes and crocodiles, it should be a paradise."

Carl Spadoni, whose son, Paul, was born on July 26th, says, "I naturally believe that he is perfect, quite unlike Bertie, who was 'very fat and very ugly'."

The Stanleys (Tom and Gwen and Kathleen) have moved from Hartford to Wilder (both Vermont). Bigger house, more room.

Ramon Carter Suzera took offense at our unflattering words about Madalyn Murray O'Hair last issue (RSN47-33). We are glad to let him speak in defense of the lady. Here are excerpts from his letter of 9/12:

You are quite right. Mrs. O'Hair is not above criticism. She certainly has her imperfections. We all do. But my point is, her imperfections are quite harmless, far less dangerous than the imperfections of those she has been, and still is, in daily battle against -- the superstitious primitives who promote not democracy but theocracy in America.

Where would atheism and atheists in America be today, if Mrs. O'Hair -- a woman, a wife, a mother and a grandmother -- had simply preferred to spend her time at tea parties?

Let us be glad that Mrs. O'Hair is not only an atheist, but an aggressive one, who -- for the past 23 years, with her son, Jon, and granddaughter, Robin -- has borne the principal brunt of hatred and terrorism generated by the bitter struggle in America for freedom, not of, but from, religion.

Mrs. O'Hair does not live in a peaceful home, like you and me. She and her family live in a fort. Nevertheless, despite the brutal forces and great odds against her, this remarkable woman has successfully shaped an institution -- the American Atheist Center -- with a base that's already well-established, and a message to all atheists, to persevere in the hard and bitter fight, because the light of reason shines brightly at the end of the dark tunnel of religion.

- (28) Neighbors. We've made up a list of BRS members living in the USA; they are listed according to zip code. Members whose names are nearest to yours live nearest to you. The list could reveal some nearby neighbors.

We doff our hat to Warren Smith; we are indebted to him for the zipcode idea. A year ago, Warren worked up the same kind of list; he did it the hard way: with scissors and paste, good eyesight and patience; he cut up the BRS membership list into individual names, re-assembled the names in zipcode order, and pasted them onto several sheets. Whew! He wanted to find out whether any BRS members lived nearby, and he thought other members might like to know the same thing. Well, after all his careful work, we made the awful mistake of printing it too small to read without a magnifying glass, and even with one it wasn't exactly easy to read. (RSN44-29)

The new list is legible and does, we think, do justice to Warren's idea. We asked a computer to do the work, and it did.

We are not printing the list in the newsletter because it may not be interesting to enough members to justify its 5 pages. We will lend the list on request. Write to the newsletter, address on Page 1, bottom.

RECOMMENDED READING

- (29) Adam Paul Banner recommends "Silicon Shock, The Menace of the Computer Invasion" by Geoff Simons, 1985. "...what is not recognized by the average individual is that high-tech computers can generate fear, addiction, phobia, and compulsive neurosis. A new insidious psychological phenomenon in human society, ie, computerphobia/cyberphobia." In essence, a society disease that can destruct...the affliction of the high-tech era.

More Ten-Best. Members are invited to list their ten favorite books, excluding books by Russell. For previous lists, see RSN46-20 and RSN47-28/29/30. Here is another:

- (30) Eric Sean Nelson:

1. J.-P. Sartre, "Being and Nothingness"
2. John Dewey, "Experience and Nature"
3. C.G. Jung, "Modern Man in Search of a Soul"
4. Erich Fromm, "Anatomy of Human Destructiveness"
5. Jorge L. Borges, "Labyrinths"
6. Thomas Paine, "The Rights of Man"
7. Franz Fanon, "The Wretched of the Earth"
8. Dee Brown, "Bury My Heart at Wounded Knee"
9. Nandi Jordan, any poetry

MORE ABOUT BOOKS

- (31) Books Wanted or offered. JOHN LENZ met with London BRS Member, Dr. WALTER LESSING, who would like to see members trade books, through "Books Wanted" and "Books Offered" listings in the newsletter.

OK. We will have these listings. Send your wants and offerings to the newsletter, address on Page 1, bottom.

- (32) "The Encyclopedia of Unbelief," edited by Gordon Stein, with foreword by Paul Edwards, is being published by Prometheus Books. It is, in effect, an anthology of the writings of everybody who ever had anything to say about agnosticism, atheism, freethought, humanism, and skepticism: Bruno, Spinoza, Locke, Hume, Kant, Comte, Spencer, Haekel, Feuerbach, Dewey, Santayana, Freud, Reich, Russell, Sartre, A. J. Ayer, Sidney Hook, and others.

There are biographies of Charles Bradlaugh, Annie Besant, Voltaire, Diderot, Lenin, Darrow, Ingersoll, Paine; and articles by Isaac Asimov, Hazel Barnes, Germaine Bree, Paul Edwards, Anthony Flew, Paul Kurtz, Richard Martin, Martin Marty, Kai Nielsen, and James Randi, among others.

750 pp., in 2 volumes, clothbound. \$99.95. (Thank you, BOB DAVIS.)

BRS AUTHORS

- (33) Paul Kuntz's "Bertrand Russell" will probably be published in February. The first chapter is titled, "Bertrand Russell: Hero of Free Thought".

- (34) Dora Russell's "The Religion of the Machine Age" has been published in America (Boston: Routledge & Kegan Paul, \$27.95 cloth.) British Book News says it is "a woman's-eye history of male thought [that] connects the great problems of our time -- the continued domination of women by men in every society, the uncontrolled exploitation of the earth by industrial and post-industrial technology, and the threat of nuclear extinction...this book will appeal to questioning minds of both sexes."
- (35) Roland Stromberg's "European Intellectual History Since 1789", 4th Edition, has just been published by Prentice-Hall.

BRS PUBLICITY

- (38) "Bertie" at Muhlenberg. The 1984 BBC documentary, "Bertie and the Bomb", was shown at Muhlenberg College (Allentown, PA) on October 22nd, under the auspices of the Muhlenberg Philosophical Society and MAPA (a Muhlenberg political activist group). We distributed BRS Fact Sheets and had a sign-up sheet for those wanting

further information about the BRS; 9 signed. 28 persons attended -- more than expected; some had to stand. After the screening, we answered questions from the audience. There was applause at the end, for "Bertie".

- (39) Gödel's Doom", a science fiction story by Ed Zebrowski, ran in our February issue (RSN45-19). In return for the author's favor of letting us run the story, we were glad to be able to do a small favor for him, by writing a letter to his Editor at POPULAR COMPUTING. This is what we wrote; it appeared in the July 1983 issue. Perhaps it earned some publicity for the BRS.

IN OUR FEBRUARY ISSUE. WE EXPERIMENTED WITH OUR FIRST COMPUTER SCIENCE FICTION PIECE, "Gödel's Doom" by George Zebrowski. According to your letters and the results from the Reader Feedback section (which appears on the Reader Service card in the back of the magazine each month) the story simultaneously was one of the best-liked and least-liked ar-

ticles we have run.

I found "Gödel's Doom" a marvelously interesting story. I don't read much science fiction, but I found this story so engrossing I kept dinner waiting half an hour (which my wife still hasn't quite forgiven) until I finished it.

What makes it a particularly interesting story to the Bertrand Russell Society is that it's about Gödel's

theorem—which demolished what Bertrand Russell and Alfred North Whitehead thought they had proved in *Principia Mathematica*, that mathematics is a branch of logic.

Gödel's theorem did not prevent *Principia Mathematica* from being useful. As you probably know, it helped lay the groundwork for the logic used in computers. Specifically, it developed a calculus of proposi-

tions, solving equations by statements that are either true or false. In 1937 this kind of logic made the jump from theory to electrical circuitry when Shannon applied it to the design of electrical circuits, in his thesis, "Symbolic Analysis of Relay and Switching Circuits."

—LEE EISLER
VICE PRESIDENT, INFORMATION
BERTRAND RUSSELL SOCIETY
COOPERSBURG, PA

FUN & GAMES

- (40) I am firm. In a game on the BBC radio program, The Brains Trust, ER offered an example of the way to make comparisons:

I am firm. You are obstinate. He is a pig-headed fool.

Wouldn't you like to try your hand at it? Make up a set of comparisons ("I am _____. You are _____. He/she is _____.") and send them to the newsletter.

For instance:

I am brave. You are foolhardy. He is suicidal.

Try it!

With thanks to TOM STANLEY.

Newsletter address on Page 1, bottom.

ABOUT OTHER ORGANIZATIONS

- (41) Albert Einstein Peace Prize Foundation (1430 West Wrightwood Avenue. Chicago, IL 60614) will name Willy Brandt as Peace Laureate of 1985, at a luncheon in Washington, D.C. on November 13th -- 6 days before the Reagan-Gorbachev meeting. Mr. Brandt will speak on the moral issue involved in nuclear weaponry and on vital alternatives to nuclear force.

- (42) Nuclear Age Peace Foundation's Accidental War Prevention Newsletter starts out this way:

Since an intentional nuclear war would be suicidal, the major way a nuclear war could start is by accident, e.g. mistake, false alarm, misunderstanding, or miscalculation...Most of the world's efforts and resources are being spent to prevent an intentional war rather than an accidental war.

The newsletter lists conferences and meetings, books and articles, and activities of individuals; all deal with the danger of accidental war. Coordinator of Accidental War Studies is BRS Member Dean Babst (7915 Alma Mesa Way, Citrus Heights, CA 95610). The Foundation (1187 Coast Village Road, #123, Santa Barbara, CA 93108) seeks members and support.

- (43) War Resisters League, founded over 60 years ago, is offering its 1986 Peace Calendar and Appointment Book, "with an introduction by Susan Brownmiller, and a Collection of Quotations on War, Peace, and Social Justice", on the theme, "The Pen Is Mightier Than The Sword". 128 pages, 5 1/2 x 8 1/2, wirebound. \$6.75; 4 for \$25. Order from: WRL, 339 Lafayette St., NY NY 10012.

CREATIONISM, ETC.

- (44) Senator Hatch spreads the word. We have taken note of Senator Hatch's aversion to secular humanism (RSN45-13; RSN47-21), as reported in the New York Times and Washington Post. In an appearance on a Donahue TV program -- sorry, we don't have the date -- the Senator offered evidence that awful things were going on in the schools. Here is his evidence; he read it to the Donahue audience. We taped it.

Science and Creationism
A View from the National Academy of Sciences

Scientists, like many others, [view] with awe the order and complexity of nature. Religions provides one way for human beings to be comfortable with these marvels. However the goal of science is to seek naturalistic explanations of phenomena; and the origins of life, the earth and the universe are to scientists such phenomena. within the framework of natural laws and principles and the operational rule of testability. It is therefore our unequivocal conclusion that creationism with its accounts of the origins of life by supernatural means is not science. It subordinates evidence to statements based on authority and revelation. Its documentation is almost entirely limited to the special publications of its advocates. And its central hypothesis is not subject to change in the light of new data or demonstration of error. Moreover when the evidence for creationism has been subjected to the test of the scientific method, it has been found invalid.

It was sent to every one of the 40,000 school districts in the country.

We are grateful to Senator Hatch for providing this statement, which we hadn't known about.

- (45) California, OK! We read, some time ago, that textbook publishers were knuckling under to the demands of religious fundamentalists, by watering down or completely eliminating references to evolution (which is anathema to fundamentalists.)

It. was therefore gratifying to come across these items in the New York Times: (1) an item in the Review of the Week, 9/15/85, p.6E (at right), and (2) an editorial, 9/17/85, p.A30 (below).

How to Make Schoolbooks Smarter

By flatly rejecting two dozen science textbooks submitted for use by seventh- and eighth-graders, California's board of education has sent a powerful message to schoolbook publishers that the movement for educational excellence is serious. The action is particularly welcome in the wake of years of acquiescence by school boards and publishers to pressures from the right and left that have produced a "dumbing down," in Education Secretary William Bennett's term, of textbooks in science and other fields.

In California the issue came to a head because of the board's determination that, even after discussions with publishers, science textbooks submitted for its approval gave inadequate treatment to the scientific theory of evolution for junior high courses in life science.

Textbook publishers have tried to escape con-

trovery by catering to the lowest common denominator. Now, as interest in educational reform and higher standards spreads, the conflict between avoiding controversy and publishing quality material has become stark, in every subject area. Bill Honig, the California superintendent, rightly notes: "It's not just science books. It's history, literature. We're raising the ante." For example, according to People for the American Way, an organization that monitors textbook censorship, no literature anthology published in the country today contains Shakespeare's "Romeo and Juliet" unexpurgated.

That's why the vote in California, the largest textbook market, so deserves praise, and emulation in other states. For all their rush to accommodate, textbook publishers know that dumbing down is dumb. By also making it unprofitable, the California board has done something smart.

California Rejects Science Textbooks

At a hearing of the California Board of Education last week, religious fundamentalists complained about passages on evolution in textbooks. But when the board unanimously rejected all the science books offered for the seventh and eighth grades, the backers of creationism were hardly pleased.

The board said publishers, to skirt controversy, had "watered down" and "systematically omitted" thorough discussions of evolutionary theory. The state invited seven publishers of what it thought were the best books to revise them to include more about evolution.

Bill Honig, the state's Superintendent of Public Instruction, said the vote would be felt nationwide. Publishers try to follow California's wishes, he said, because it makes up such a large share of the textbook market. Last week's action alone affects \$25 million in annual science book sales.

"We must send a message to the publishing industry that we cannot tiptoe around certain subjects just because they are controversial," said Mr. Honig.

The creationists, who say there is scientific proof of the Biblical version of creation, suffered another setback last year when the Texas Board of Education repealed a rule requiring texts to describe evolution as only one theory of the origin of humanity.

Thanks:

We are indebted to Rick Shore for a tape of Bertrand Russell Speaking (#224). This Caedmon recording, now out-of-print, consists of four of Woodrow Wyatt's 1959 television interviews: What Is Philosophy?, Taboo Morality, Religion, and Fanaticism And Tolerance. Tape #219 contains four additional interviews from this series: The Role Of The Individual, What Is Happiness?, Power, and The Future Of Mankind.

Lee gave the Library a tape of Ellen Gilchrist reading the prologue to BR's Autobiography. This short excerpt from NPR's Morning Edition has been appended to " Sound Portrait of Bertrand Russell " (#212).

Publishers contribute books:

I've received four volumes from three publishers for our Lending Library. The state of our Treasury precludes our stocking these titles for sale. If you order direct from the publisher, please mention Russell Society News.

The tape of Russell's CND speech (#216) is a particularly valuable addition to our collection since it was not issued for sale. The meeting was announced in the April 25th issue of the New Statesman and mentioned in Clark (p.563):

But it was as a speaker, armed at all points and virtually uninterrupted, that Russell was of greatest use to the movement. He could deal devastatingly with a heckler as he demonstrated during a Manchester meeting early in the campaign. Lord Simon, Canon Collins and A. J. P. Taylor were among the speakers, but Russell was the star. At one point he was interrupted by a young man who shouted, "Bertrand Russell, you are a traitor. The League of Empire Loyalists denounce you as a traitor, for your subservience to atheistic bolshevism." Russell did not refer to his well-known and life-long hatred of bolshevism, or its denunciation in the book he had written before the interrupter was born. "Instead," says one of his audience, "he responded in kind and in his wrath was terrible to behold. Drawing himself up to his full height he extended a skinny finger in the direction of the heckler and said, very loudly and very crossly indeed, 'You silly young man! Which of us, I ask you, is the greater traitor: you, who apparently wish everybody in the world to die, or I, whose only desire is that ~~some~~ people should remain alive?' There was no reply.

New address of The Russell Society Library: Box 434, Wilder, VT 05088.

AWARDS

- (48) Two 1985 Award plaques are shown here, as photographed by JIM MCWILLIAMS. The third 1985 Award -- the Book Award -- has a lot of text that would barely be visible in this small scale; its text appears in RSN47-16.

RUSSELL SOCIETY NEWS

No. 49

February 1986

- (1) Highlights:. Brainwash, American style (19). BR on civil disobedience (10); on atomic energy control, 1947 (9); on Israel's use of force in Palestine (37). Plot Hatch hatched unhatched (17). Nobel Laureates on the nuclear peril (14). The Index is at the end. An asterisk in the left column indicates a request.
-

COMING EVENTS

- (2) The Conference on the Danger of Accidental Nuclear War... May 26 - 30, 1986...at the University of British Columbia. For information, write Prof. Michael D. Wallace, Chairman, Organizing Committee, Dept. of Political Science, The University of British Columbia, #472-1866 Main Mall, Vancouver, BC, Canada V6T 1W5.
- (3) IPPNO. International Philosophers for the Prevention of Nuclear Omnicide will hold its First International Conference in St. Louis, MO (April 30-May 4, 1986). The 5-day Conference will be held in conjunction with the annual meeting of the American Philosophical Association (Western Division). The general theme is "Philosophy and the New Problem of Nuclear Omnicide." The organization's aim is to promote international co-operation among philosophers, irrespective of their political viewpoints, in theoretical discussions and agreed practical actions directed toward the prevention of nuclear homicide. IPPNO is open to professional philosophers and all others interested in the contribution of philosophy to the cause of peace. Contact: IPPNO, 1426 MERRITT DRIVE, EL CAJON, CA 92020 U.
[From the Disarmament Newsletter, published by the Dept. of Disarmament Affairs of the United Nations, United Nations, NY NY 10017, with thanks to TOM STANLEY.]
-

MONEY

If we seem to be talking a lot about things that involve money -- like renewal dues and contributions to the BRS Treasury -- it's because we don't have enough of it to be able to afford the luxury of not talking about it.

- (4) Last call for dues. Everyone's dues are due (except those who joined in December 85.) If you haven't yet renewed, please do so without delay. Remember, non-renewers become non-persons. Ugh!

Dues: \$25, regular; \$30, couple; \$12.50, student under 25; \$12.50, limited income. Plus \$7.50 outside USA, Canada and Mexico. Plus \$2 for Canada & Mexico. US dollars only.

If you are in position to make a extra contribution when you renew, see the higher membership categories in RSN48-4

Please mail dues to 1986, RD 1, Box 409, Coopersburg, PA 18036.

- (5) Renewal Honor Roll. As you know, renewal dues are due on January 1st; but for one reason or another, many members miss that due-date. This creates uncertainty and concern. It also causes the extra work and expense of mailing renewal follow-up notices. So we'd like to express our thanks to some early-bird renewers.

We salute the following members. They all renewed before 1986. We call this our Renewal Honor Roll: JEAN ANDERSON, TRUMAN ANDERSON, JAY ARAGONA, RUBEN ARDILA, ADAM PAUL BANNER, WALTER BAUMGARTNER, FRANK BISK, HOWARD BLAIR, MICHAEL BRADY, JAMES BUXTON, ROBERT CANTERBURY, DENNIS CHIPMAN, DONG JAE CHOI, GLENNA CRANFORD, PETER CRANFORD, STEVE DAHLBY, DENNIS DARLAND, ROBERT DAVIS, RONALD EDWARDS, LEE EISLER, ALBERT ELLIS, GRAHAM ENTWISTLE, RICHARD FRANK, FRANK GALLO, ALEJANDRO GARCADIAGO, PAUL GARWIG, SEYMOUR GENSER, ALI GHAEMI, ARTTIE GOMEZ, DONALD GREEN, JOHN HARRISON, CHARLES HILL, JAMES HOOPES, OPHELIA HOOPES, ARVO IHALAINEN, RAMON ILUSORIO, DONALD JACKANICZ, JOHN JACKANICZ, DAVID JOHNSON, MARVIN KOHL, KENNETH KORBIN, CORLISS LAMONT, HERBERT LANSDELL, PHILIP LE COMPTE, JOHN LENZ, ARTHUR LEWIS, DON LOEB, JONATHAN LUKIN, JOHN MAHONEY, MICHAEL MALIN, STEVE MARAGIDES, GLENN MOYER, SANDRA MOYER, ERIC NELSON, DANIEL O'LEARY, PAUL PFALZNER, NAGABHUSHANA REDDY, STEPHEN REINHARDT, VERA ROBERTS, MICHAEL ROCKLER, JOSEPH RODERICK, KERMIT ROSE, HARRY RUJA, CHERIE RUPPE, PAUL SALTMARSH, ROBERT SASS, GREGORY SCAMMELL, LEONARD SCHWARTZ, JOHN SCHWENK, RICHARD SHORE, JOHN SHOSKY, WARREN SMITH, WAYNE SMITH, JOHN SONNTAG, PHILIP STANDER, THOMAS STANLEY, THOMAS STENSON, ROLAND STROMBERG, RAMON SUZARA, JUDITH TOUBES, LLOYD TREFETHEN, RICHARD TYSON, CLIFFORD VALENTINE, ELEANOR VALENTINE, TOM WEIDLICH, CALVIN WICHERN, JOHN WILHELM, VINCENT WILLIAMS, RONALD YUCCAS.

And incidentally -- or perhaps not so incidentally -- 38% of the Honor Roll Renewers made an extra contribution to our beleaguered Treasury at the same time that they renewed, by selecting a membership category. See (6).

- (6) Our warm thanks to the following members for making an extra contribution to the BRS Treasury. In most cases, they did so by their selection of a membership category. JAY ARAGONA, DONG-IN BAE, ADAM PAUL BANNER, HOWARD BLAIR, DENNIS CHIPMAN, STEVE DAHLBY, DENNIS DARLAND, BOB DAVIS, LEE EISLER, GRAHAM ENTWISTLE, ARTTIE GOMEZ, DONALD GREEN, CHARLES HILL, JAMES HOOPES, OPHELIA HOOPES, DON JACKANICZ, JOHN JACKANICZ, DAVID JOHNSON, MARVIN KOHL, CORLISS LAMONT, HERBERT LANSDELL, PHILIP LE COMPTE, JOHN MAHONEY, STEVE MARAGIDES, GLENN MOYER, SANDRA MOYER, DANIEL O'LEARY, PAUL PFALZNER, STEVE REINHARDT, MICHAEL ROCKLER, HARRY RUJA, SIGRID SAAL, PAUL SALTMARSH, and RONALD YUCCAS.

BY BERTRAND RUSSELL

- (7) House of Lords discuss Atomic Energy Control (April 30, 1947). [Recall that in 1947, America had a monopoly on the atomic bomb.] The discussion starts with The Lord Archbishop of York asking (at 2:58pm) what progress has been made toward securing international control of atomic energy, mentioning the enormous damage done by a single atomic bomb at Hiroshima. Several other members speak, and (at 4:33pm) BR speaks:

Earl Russell: I listened with the most complete and absolute agreement to the speech of the most reverend Primate, so much so that I nearly decided not to speak at all, because it seemed there was not much left that I wanted to say, but in the course of the debate some points have arisen about which I would like to speak. Like the most reverend Primate and the noble Viscount Lord Samuel, I read the verbatim report of Mr. Gromyko's speech, but I must confess that I did not draw from it quite such optimistic conclusions as those drawn by the noble Viscount opposite. It seemed to me that Mr. Gromyko was trying to make the most of certain concessions, although he was aware throughout that the concessions he was making were not such as would serve the purpose we have in view, and that he would make concessions only if he knew they would not do any good. That was the impression I received from his speech, and that raises the whole essential problem, which seems to me to be so extraordinarily difficult.

I must say that I am surprised at the paucity of interest in this question in this country, because, after all, it is perhaps more vital to this country than to any other in all the world. The interest in this subject in America is very much greater than it is here. I suppose that is partly because the Americans feel a sense of responsibility in the matter; but at any rate they are very much more alive to all the issues than the general public in this country. Here I find, for instance, even the Council of British Atomic Scientists prepared to acquiesce or so it seems to me in an attitude which is one of hopeless pessimism. They say, in a Report issued last January:

"It must be admitted that an effective system of control acceptable to all concerned is a very doubtful proposition in the present state of distrust between nations, since it must contain, at least in embryonic form, a measure of world government. It is felt by some of our members that we can scarcely expect any effective agreement on the control of atomic energy at the present time."

If that really is the last word to be said in the matter, then I think our situation is entirely hopeless, because so far as there is peace in the world at the present time it only exists because one nation has atomic bombs. As soon as a number of nations have them, there will no longer exist the only motive for peace which, in the absence of the idealism we should all like to see, is fear. Fear is the one thing that is preserving us at the present time. If we are to preserve the peace of the world beyond the time when America ceases to have a monopoly of the bomb, which is not very distant, it must be done by having the bomb completely controlled by some one authority, and it cannot then be a national one. The period during which it can be a national authority is necessarily brief, and if the control does not pass straight from a national authority to an international authority, then we shall inevitably get an atomic war. We all know what that involves, and it is not necessary to go into it. It seems to me, therefore, that we have only this brief time in which somehow or another to establish international control of atomic energy. I entirely agree that controlling atomic energy alone is not enough, and that ultimately we must have an international authority which can prevent war. But it is a step, and the machinery that's required in the one case is similar to the machinery needed in the other.

It could grow, and it would be an object lesson, showing what could be done in the way of international control. But, and this is a question to which I should very much like to know the answer, what is to be done, in view of the objections that Russia seems to have to any kind of international control? Are we simply to sit down under those objections? Presumably we should try every method of persuasion that we can, and make every concession that is not a concession of something vital, in the hope of producing some agreement. But if all that fails, as I am inclined to think it will, and Russia, for example, still continues to object to any adequate or sufficient inspection, what are we then to do? Are we to do what I think would have to be done in that case, namely to try to organize all the nations of the world which are in favour of international control into a somewhat tight alliance, giving them all the advantages that America at present possesses, and trying then to frighten Russia into joining that association, with all the privileges it would entail? Or are we to go on leaving Russia outside, with the certainty that if we do so an atomic war will result. It is a very difficult choice.

I should very much like to know both what is the attitude of our own Government, and what is the attitude of the American Government. I cannot here and now find out the attitude of the American Government but one does see that they seem to be drifting very fast towards an attitude which will lead towards coercion. In fact, I was told only recently by a man just returned from America that in that country any person who favours the United Nations is labelled as a dangerous "Red." That is going very far, but it seems to be happening. I confess that I cannot have much faith in the United Nations, and never have had since the veto was decided upon, because so long as you preserve the veto it is nothing but a debating society where you meet and exchange opinions. What people's opinions are does not matter, because they go on as if they had not met. I think it would be necessary to create a tighter organization of nations who are prepared to forego the veto, an organization which should be open to anybody, which might gradually bypass the veto and arrive at the same results as if the veto had been abandoned. I do not see what else is to be done if we are to establish a real international government; and if we do not establish an international government then it is the end of everything.

We have only a few years in which this can be done, and I think it would involve something rather like an attempt to coerce the Russians, because I do not believe that they would willingly submit to inspection. From all we know of Russia, inspection is the one thing they cannot stand, and I do not think they will accept it willingly. They allow inspection of a factory which is dubbed a factory for the creation of atomic energy, but not a factory which is dubbed something else. That is what Mr. Gromyko said, and it does not amount to very much. It only means one has to put a different label over the factory and it is safe from inspection. Do you think you will get the Russians to acquiesce at all easily in what is necessary? I hope with all my heart that they will, but I do not expect it.

Then the question arises, how much pressure of one sort or another it will be proper to use against them in order to compel them to act in a way which, quite clearly, is as much to their interest as to ours, because I am persuaded that they are completely mad and foolish in their opposition to this scheme. This is in the interests of mankind and ought not to be measured in national terms at all. Can man go on existing in the way he has, or is he to become a hunted animal? That is not a nationalist question; it is not a question of Russian interests, American interests or British interests. It is a question of human interests. If only the Russians could see it in that light we might be able to get some agreement with them. But I have very grave doubts as to whether it will be possible. In the absence of that, I think the question will arise as to what degree of coercion it would be right and proper to apply.

And, as we now know, BR was in favor of using "any degree of pressure that may be necessary", which could well include the atom bomb. (RSN45-5)

BY BERTRAND RUSSELL

(8) From The New Statesman (February 17, 1961. p. 245), with thanks to TOM STANLEY:

Civil Disobedience

BERTRAND RUSSELL

This week-end Bertrand Russell and other demonstrators who accept the tactic of civil disobedience will take part in an unlawful protest against the Polaris missile in particular and nuclear policy in general. For reasons stated at length in this journal last week we do not believe that either his assumptions or the tactics he advocates are correct in present circumstances, but we believe that he should have a full opportunity to explain his position.

There are two different kinds of conscientious civil disobedience. There is disobedience to a law specifically commanding an action which some people profoundly believe to be wicked. The most important example of this case in our time is conscientious objection. This, however, is not the kind of civil disobedience which is now in question.

The second kind of civil disobedience, which is the one that I wish to consider, is its employment with a view to causing a change in the law or in public policy. In this aspect, it is a means of propaganda, and there are those who consider that it is an undesirable kind. Many, however, of whom I am one, think it to be now necessary.

Many people hold that law-breaking can never be justified in a democracy, though they concede that under any other form of government it may be a duty. The victorious

governments, after the Second World War, reprobated, and even punished, Germans for not breaking the law when the law commanded atrocious actions. I do not see any logic which will prove either that a democratic government cannot command atrocious actions or that, if it does, it is wrong to disobey its commands.

Democratic citizens are for the most part busy with their own affairs and cannot study difficult questions with any thoroughness. Their opinions are formed upon such information as is easily accessible, and the Authorities can, and too often do, see to it that such information is misleading. When I speak of the Authorities, I do not think only of the politicians, whether in office or in opposition, but equally their technical advisers, the popular press, broadcasting and television and, in the last resort, the police. These forces are, at present, being used to prevent the democracies of western countries from knowing the truth about nuclear weapons. The examples are so numerous that a small selection must suffice.

I should advise optimists to study the report of the committee of experts appointed by the Ohio State University to consider the likelihood of accidental war, and also the papers by distinguished scientists in the proceedings of Pugwash Conferences. Mr Oskar Morgenstern, a politically orthodox American defence expert, in an article reprinted in *Survival*, Volume II, Number Four, says: 'The probability of thermonuclear war's recurring appears to be significantly larger

than the probability of its not occurring.' Sir Charles Snow says: 'Speaking as responsibly as I can, within, at the most, ten years from now, some of those bombs are going off. That is the certainty.' (*The Times*, 28 December 1960.) The last two include intended as well as accidental wars.

The causes of unintended war are numerous and have already on several occasions very nearly resulted in disaster. The moon, at least once, and flights of geese, repeatedly, have been mistaken for Russian missiles. Nevertheless, not long ago, the Prime Minister, with pontifical dogmatism, announced that there will be no war by accident. Whether he believed what he said, I do not know. If he did, he is ignorant of things which it is his duty to know. If he did not believe what he said, he was guilty of the abominable crime of luring mankind to its extinction by promoting groundless hopes.

Take, again, the question of British unilateralism. There is an entirely sober case to be made for this policy, but the misrepresentations of opponents, who command the main organs of publicity, have made it very difficult to cause this case to be known. For example, the Labour correspondent of one of the supposedly most liberal of the daily papers wrote an article speaking of opposition to unilateralism as 'the voice of sanity'. I wrote a letter in reply, arguing that, on the contrary, sanity was on the side of the unilateralists and hysteria on the side of their opponents. This the newspaper refused to print. Other unilateralists have had similar experiences.

Or consider the question of American bases in Britain. Who knows that within each of them there is a hard kernel consisting of the airmen who can respond to an alert and are so highly trained that they can be in the air within a minute or two? This kernel is kept entirely isolated from the rest of the camp, which is not admitted to it. It has its own mess, dormitories, libraries, cinemas, etc., and there are armed guards to prevent other Americans in the base camp from having access to it. Every month or two, everybody in it, including the Commander, is flown back to America and replaced by a new group. The men in this inner kernel are allowed almost no contact with the other Americans in the base camp and no contact whatever with any of the inhabitants of the neighbourhood.

It seems clear that the whole purpose is to keep the British ignorant and to preserve, among the personnel of the kernel, that purely mechanical response to orders and propaganda for which the whole of their training is designed. Moreover, orders to this group do not come from the Commandant, but direct from Washington. To suppose that at a crisis the British government can have any control over the orders sent from Washington is pure fantasy. It is obvious that at any moment orders might be sent from Washington which would lead to reprisals by the Soviet forces and to the extermination of the population of Britain within an hour.

The situation of these kernel camps seems analogous to that of the Polaris submarines.

It will be remembered that the Prime Minister said that there would be consultation between the US and the UK governments

before a Polaris missile is fired, and that the truth of his statement was denied by the US government. All this, however, is unknown to the non-political public.

To make known the facts which show that the life of every inhabitant of Britain, old and young, man, woman and child, is at every moment in imminent danger and that this danger is caused by what is mis-named defence and immensely aggravated by every measure which governments pretend will diminish it - to make this known has seemed to some of us an imperative duty which we must pursue with whatever means are at our command. The Campaign for Nuclear Disarmament has done and is doing valuable and very successful work in this direction, but the press is becoming used to its doings and beginning to doubt their news value. It has therefore seemed to some of us necessary to supplement its campaign by such actions as the press is sure to report.

There is another, and perhaps even more important reason, for the practice of civil disobedience in this time of utmost peril. There is a very widespread feeling that the individual is impotent against governments, and that, however bad their policies may be, there is nothing effective that private people can do about it. This is a complete mistake. If all those who disapprove of government policy were to join in massive demonstrations of civil disobedience, they could render governmental folly impossible and compel the so-called statesmen to acquiesce in measures that would make human survival possible. Such a vast movement, inspired by outraged public opinion, is possible; perhaps it is imminent. If you join it, you will be doing something important to preserve your family,

Friends, compatriots, and the world.

An extraordinarily interesting case which illustrates the power of the Establishment, at any rate in America, is that of Claude Eatherly, who dropped the bomb on Hiroshima. His case also illustrates that in the modern world it often happens that only by breaking the law can a man escape from committing atrocious crimes. He was not told what the bomb would do and was utterly horrified when he discovered the consequences of his act. He has devoted himself throughout many years to various kinds of civil disobedience with a view to calling attention to the atrocity of nuclear weapons and to expiating the sense of guilt which, if he did not act, would weigh him down. The Authorities have decided that he is to be considered mad, and a board of remarkably conformist psychiatrists have endorsed that official view. Eatherly is repentant and certified; Truman is unrepentant and uncertified. I have seen a number of Eatherly's statements explaining his motives. These statements are entirely sane. But such is the power of mendacious publicity that almost everyone, including myself, believed that he had become a lunatic.

In our topsy-turvy world those who have power of life and death over the whole human species are able to persuade almost the whole population of the countries which nominally enjoy freedom of the press and of publicity that any man who considers the preservation of human life a thing of value must be mad. I shall not be surprised if my last years are spent in a lunatic asylum - where I shall enjoy the company of all who are capable of feelings of humanity.

"...the report of the committee of experts appointed by the Ohio State University to consider the likelihood of accidental war..." referred to above, is the Mershon Report of 1960. It was published in England the same year, with an introduction by BR. The introduction is reproduced in RSN38-8.

- (9) An Introduction to "Freedom Is as Freedom Does: Civil Liberties Today" by Corliss Lamont. It was written for the book's first English edition and the second American edition (1956).

It is a pleasure to have the opportunity of introducing to the British public Mr. Corliss Lamont's book Freedom Is as Freedom Does. The book is an admirable epitome of the various forms of attack on personal liberty that have been taking place in America in recent years. So far as I am able to judge, Mr. Lamont is wholly reliable as to facts, and he has shown good judgment in selecting from an enormous mass of material. Every friend of freedom ought to lay to heart what he has to say. This applies not only to Americans, since there is no country where liberty may not be endangered.

All countries (except perhaps Holland and Scandinavia) are liable to waves of hysteria, though the extent of the damage caused by such waves differs greatly in different places. France had such a wave in 1793 and in a lesser degree, during the Dreyfus case. Germany had it in the worst possible form during the time of Hitler. Russia had it under Stalin. And America has had it three times, in 1798, in 1919-20, and since the outbreak of the Korean War. Let us not flatter ourselves that Britain is exempt. From the accession of Charles I until the Revolution of 1688, hysteria of all kinds -- left wing, right wing, religious and economic -- was rife. In reading what has happened in America since 1950, I constantly feel as if I were reading about England under the Stuarts. Congressional committees are the counterpart of the Star Chamber, and Senator McCarthy seems like a reincarnation of Titus Oates, who invented the Polish Plot. Nor is it necessary to go back so far. In the days of the French Revolution, when the mob sacked Dr. Priestley's house and the Government employed spies and agents provocateurs to ferret out sympathizers with the Jacobins, England was not unlike what America has been lately. The younger Pitt, if he found himself now in Washington, would feel quite at home. I think it important that English readers should remember such facts and should not react to what is amiss in America by smug complacency. I think it also important to remember, in protesting against loss of liberty in America, that the loss in Russia was very much greater and that the defects of the American system afford no argument in favour of the Soviet dictatorship.

In spite of these provisos I cannot deny that some of the facts about the anti-Communist hysteria in America are utterly amazing. Who would have guessed that the "Girls Scouts Handbook," a work intended to instruct what we should call Girl Guides in their duties, was savagely criticized because it praised the United States Public Health Service and spoke favourably of the United Nations, "the handiwork of that arch-traitor, Alger Hiss"? So severe was the censure that a correction had to be immediately issued omitting the

offending matter.

Perhaps the most valuable chapter in Mr. Lamont's book is the one called "Police State in the Making." The Federal Bureau of Investigation (FBI) has been steadily building up its power and spreading terror far and wide. It has 130 million finger-print cards and a system of indexing them of which it is enormously proud. Only a minority of the population do not appear in a police dossier. Members of the FBI join even mildly liberal organizations as spies and report any unguarded word. Anybody who goes so far as to support equal rights for coloured people, or to say a good word for UN, is liable to be visited by officers of the FBI and threatened, if not with prosecution, at least with black-listing and consequent inability to earn a living. When a sufficient state of terror has been produced by these means, the victim is informed that there is a way out: if he will denounce a sufficient number of his friends as Communists, he may obtain absolution.

As in Ancient Rome and modern Russia, this system has produced its crop of professional informers, mostly men who once were Communists and who now denounce others at so much a head. These are generally men over whom the Government holds the threat of prosecution for perjury for having at some time denied they were ever Communists. They are safe so long as they continue to do the dirty work demanded of them, but woe betide them if they repent. One of them, Matusow, after securing the conviction of a number of innocent people, went before a Federal judge and recanted. For this the judge said he would give him three years in prison. Although Matusow won this case on appeal, the Government currently is prosecuting him on another charge, that of perjury, for statements he made in his general recantation.

The police have, for many years, shown a complete disregard for the law and, so far as I can discover, no Federal policeman has ever been punished for breaking the law. The whole terrorist system would break down if one simple reform were adopted: namely, that criminals should be punished even if they are policemen.

The evils of the system have not failed to be condemned by some who cannot be accused of subversive opinions. This is true especially of the Federal judiciary. For example, as Mr. Lamont relates, The Federal Court of Appeals in San Francisco objected to the Government's "system of secret informers, whisperers and talebearers" and went on to say: "It is not amiss to bear in mind whether or not we must look forward to a day when substantially everyone will have to contemplate the possibility that his neighbours are being encouraged to make reports to the FBI about what he says, what he reads and what meetings he attends." On the whole, however, such protests from "respectable" citizens are distressingly rare. The persecution of minority opinion, even when not obviously connected with Communism, is a thing which has not been imposed from above but suits the temper of most men and receives enthusiastic support from juries.

At first sight, it seems curious that a great and powerful country like the United States, which contains only a handful of Communists, should allow itself to get into such a stage of fright. One might have expected that national pride would prevent anything so abject, but such a view would be one which could only be suggested by a false psychology. We are all of us a mixture of good and bad impulses, and it is almost always the bad impulses that prevail in an excited crowd. There is in most men an impulse to persecute whatever is felt to be "different." There is also a hatred to any claim of superiority, which makes the stupid many hostile to the intelligent few. A motive such as fear of Communism affords what seems a decent moral excuse for a combination of the herd against everything in any way exceptional. This is a recurrent phenomenon in human history. Whenever it occurs, its results are horrible. There is some reason to hope that Russia is past the worst in this respect. When McCarthy fell into disfavour, it seemed as if persecution in the United States might diminish. So far the improvement has been less than one might have hoped. But improvement has begun, and it would be no excess of optimism to think that it will continue, and reach a point where men of intelligence and humane minds can once more breathe an atmosphere of freedom. If this comes about, books such as Mr. Lamont's will have served an immensely important purpose.

(With thanks to CORLISS LAMONT and BOB DAVIS.)

ABOUT BERTRAND RUSSELL

- (10) Mary Berenson: A Self Portrait from Her Life And Letters, edited by Barbara Strachey (New York: Norton, 1983) is the source of these excerpts (for which we are indebted to TOM STANLEY):

To Alys Pearsall Smith · 8 November 1894 Paris

He [Bertie Russell] certainly has an A no l 'Thinker', and I consider it is an immense thing for thee to marry such a truly intellectual, thoughtful man. He has an *all round* brain, that works well on every subject. I look forward to years of real joy in his companionship, of genuine 'stimulation'. Higher praise I could scarcely give, because I consider a really fine brain implies a fine character. He is a brick. And *such* a dear.

To Bernhard Berenson 26 August 1898 Friday's Hill

I had an amusing talk with Alys and Bertie last night. Alys says she hates men and despises conversation as a waste of time and thinks smoking is a 'filthy habit'. But she adores Bertie, and so has fashioned her life to be occupied chiefly in these three things. But it is quite true, I fancy, and it accounts for the queer icy streaks one comes across in her every now and then. She even prefers sewing to whist. I wonder if, *à la longue*, even Love can bridge over such fundamental differences between her and Bertie. Bertie says that he has resigned himself to being *always bored* after he is about 30. 'At home, even?' Alys asked. 'Especially at home' Bertie answered remorselessly.

To Bernhard Berenson 17 July 1900 Friday's Hill

Bertie is teaching them Euclid, but alas my beautiful dream of their coming in contact with a 'first-class mind' is upset by the sordid fact that this first-class mind doesn't know how to impart its knowledge, and the poor things are in a perfect maze of miserable bewilderment. For their first lesson he gave them *fifteen* propositions, and they scarcely understood one, poor things! Mother tried to speak to Alys about it, because of course it is an *awful* way to teach, and it makes the children hate the subject. But Alys wouldn't listen to a word, and it was useless.

To Bernhard Berenson 22 March 1908 Oxford

We were talking about Val*, and his utter abhorrence of the 'intellectual' and 'moral' milieu in which he finds himself, Val being merely a stupid commonplace normal boy. Alys said she felt the incongruity very much and wished she and Bertie could 'sometimes relax from their high intellectual and moral tension'. 'But we never do' she said. Ray and Karin and I, and even Mother, exchanged appalled glances.

* Val Worthington, a cousin whose education was being paid for by Bertie Russell.

BR QUOTED: A SUPPLEMENT

- (11) George Seldes provided an interesting collection of BR quotes in his recent book, "The Great Thoughts," which we ran in our last issue (RSN48-17). Here is a supplement, in the form of a letter from HARRY RUJA to Ballantine Books:

Your publication, The Great Thoughts by George Seldes, has no doubt attracted much favorable attention, not the least reason for which is that its compiler celebrated his 95th birthday last month!

The section on Bertrand Russell was of special interest to me since Russell has been my chief research interest for 25 years. I met some beloved friends among Seldes' choices as well as some new acquaintances. I noticed, however, a few problems with the citation of sources. Some of the information was too skimpy to be of much help to those who might want to read in its entirety the essay from which the extract was taken, and some was in error.

I provide you, for what value it might have, with the relevant supplementary information:

The extracts from Marriage and Morals come, in sequence, from Chaps. 3, 19, 11, and 5.

The extract from Portraits from Memory comes from the essay, "From Logic to Politics".

"Men fear thought..." and "But if thought is to become..." are not from Education and the Good Life but rather from Why Men Fight, 1916, Chap. V.

The extracts from Sceptical Essays are from Chaps. XIV and XII.

The title is not Understanding Human History but Understanding History, 1957.

The extract from Mysticism and Logic is from the essay, "The Study of Mathematics."

What I Believe is found in its entirety in The Basic Writings of Bertrand Russell, 1961.

"The Faith of a Rationalist" was published in The Listener, 29 May 1947.

"The Ten Commandments" appeared in The New York Times Magazine, 16 December 1951, and is reprinted in The Autobiography of Bertrand Russell, vol. III, 1969, Chap. I.

"The Place of Science..." , which was first published by The New Statesman in 1913, appears also in Mysticism and Logic, 1918.

"Why I Am Not A Christian", 1927, is reprinted in the book by the same name, 1957.

The letter to Lowes Dickenson appears in Autobiography, vol. I, 1967, Chap. VI

The full text from which "Only Protest..." was taken is in Unarmed Victory, 1963, Chap. 2.

"Patriotism..." is from Chap. XIII of Sceptical Essays, 1928.

"My own view..." is from the essay, "Has Religion Made Useful Contributions to Civilization?" in Why I Am Not A Christian, 1957.

"There is therefore..." is from The Nation, 18 June 1955.

Sincerely yours,

Harry Ruja, Ph.D.
Professor of Philosophy, Emeritus

THE NUCLEAR PREDICAMENT

- (12) The clear and present danger, as expressed by the two 1985 Nobel Peace Prize Laureates (The New York Times, 12/11/85, p.A10):

Speeches By Two In Oslo

Special to The New York Times

OSLO, Dec. 10 — Following are the speeches here today by Dr. Yevgeny I. Chazov and Dr. Bernard Lown, accepting the 1985 Nobel Peace Prize on behalf of International Physicians for the Prevention of Nuclear War:

Chazov Address

Ladies and gentlemen, dear colleagues, I am convinced that today is a great and exciting day not only for the members of our international movement but also for all physicians on our planet, regardless of their political and religious beliefs. For the first time in history, their selfless service for the cause of maintaining life on earth is marked by the high Nobel Prize.

True to the Hippocratic oath, we cannot keep silent knowing what can be the final epidemic — nuclear war — bring to the humankind. The bell of Hiroshima rings in our hearts not as funeral knell but as an alarm bell calling out to actions to protect life on our planet.

We were among the first to demoli-

ish the nuclear illusions that existed and to unveil the true face of nuclear weapons — the weapons of genocide. We warned the peoples and governments that medicine would be helpless to offer even minimal relief to the hundreds of millions of victims in nuclear war.

However, our contacts with patients inspire our faith in the human reason. Peoples are needful of the voice of physicians who warn them of the danger and recommend the means of prevention.

Prescription for Survival

From the first days of our movement we suggested our prescription for survival, which envisaged a ban on tests of nuclear weapons, a freeze, reduction and eventual elimination of nuclear weapons, non-first-use of nuclear weapons, ending the arms race on earth and preventing it from spreading to outer space, creation of the atmosphere of trust between peoples and countries, promotion of close international cooperation.

Let us recall the words of the remarkable French author Antoine de Saint-Exupéry who said: "Why should we hate each other? We are all in one, sharing the same planet, a crew of the same ship. It is good when dispute between different civilizations gives birth to something new and mature, but it is outrageous when they devour each other."

Confrontation is the road to war, destruction and end of civilization. Even today, it deprives the world's

peoples of hundreds of millions of dollars which are so badly needed for solving social problems, combating hunger and diseases. Cooperation is the road to increased well being of peoples and flourishing of life.

Medicine knows many examples when joint efforts of nations and scientists contributed to successful combat against diseases such, for instance, as smallpox.

The five years of International Physicians for the Prevention of Nuclear War were not all roses. We had to cope with mistrust, skepticism, indifference and sometimes animosity.

Physicians' Rose

Our aspirations are pure: from times immemorial the physician was and remains the one who dedicates his life to the happiness of fellow men. And we are happy that today broad public and, what is specially important for the cause of peace, the Nobel Committee show high appreciation of the noble and humane endeavors of each of the 140,000 physicians persistent in their work to prevent nuclear war.

For this, we are grateful to the committee. The award of the Nobel Peace Prize to our movement invigorates all the forces calling for the eradication of nuclear weapons from earth.

We are thankful to numerous public, political, state and religious figures all over the world for their support of our movement and our ideas.

It was physically impossible to

reply in writing to everyone; therefore, I use this opportunity to express my sincere gratitude to all who sent their warm congratulations.

At this moment I recall the telegram I received at the time of our first congress in the U.S from an ordinary woman in Brooklyn. It was short: "Thank you on behalf of my children."

As adults, we are obliged to avert transformation of the earth from a flourishing planet into a heap of smoking ruins. Our duty is to hand it over to our successors in a better state than it was inherited by us.

Therefore, it is not for fame, but for the happiness and for the future of all mothers and children, that we, the International Physicians for the Prevention of Nuclear War, have worked, are working and will work.

Lown Address

Your majesty, your royal highness, Mr. Chairman, colleagues in the International Physicians for the Prevention of Nuclear War, friends, distinguished ladies and gentlemen, Mr. Aarvik's remarks are deeply moving and focus profoundly on the essential problems of our age.

Dr. Chazov and I are filled with deep emotions of gratitude, of humility and of pride as we accept this most prestigious prize on behalf of our movement.

We are both cardiologists and usually speak about the heart. Today, we speak from the heart.

If we are to succeed in our goal of ridding military arsenals of instruments of genocide, we need the extraordinary energizing strength that comes when mind and heart are joined to serve humankind.

We physicians who shepherd human life from birth to death have a moral imperative to resist with all our being the drift toward the brink. The threatened inhabitants on this fragile planet must speak out for those generations yet unborn, for posterity has no lobby with politicians.

The official announcement of the Nobel Committee on Oct. 11th commended I.P.P.N.W. for performing "a considerable service to mankind by spreading authoritative information and by creating an awareness of the catastrophic consequences of atomic warfare."

The statement continued, "This in turn contributes to an increase in the pressure of public opposition."

The distinguished award honors physicians of our movement, who are responsible for such noteworthy accomplishments. It empowers more than 135,000 members worldwide with a new élan and determination to prevent what cannot be cured.

This new-found inspiration is demonstrated by the presence here in Oslo of more than 200 members, many of whom have traveled from halfway around the world, from far-away Australia, Latin America, Bangladesh and Japan, representing 38 of our 41 national affiliates.

The enormous prestige of the Nobel Prize provides a unique opportunity for further mobilizing and educating a still larger public. Thus, the reason for awarding this prize will be enhanced by receiving the prize.

The committee's citation took note of the "awakening of public opinion," and the thought was expressed that this new force can "give the present arms-limitation negotiations new perspectives and new seriousness."

Much has transpired since to provide reason for guarded optimism. At the meeting in Geneva three weeks ago, the leaders of the two great powers affirmed their determination to prevent nuclear war. They have expanded Soviet-American exchange to promote a wide-ranging dialogue essential to foster understanding and to build trust. Cooperation on any scale is far preferable to relentless confrontation.

Summits like those in Geneva promote hope. But hope without action is hopeless. Our enthusiasm for the positive spirit in these deliberations must not blind us to the absence of genuine progress toward disarmament.

Holding the World Hostage

Seventy nuclear bombs are being added weekly to world arsenals. We physicians protest the outrage of holding the entire world hostage. We protest the moral obscenity that each of us is being continuously targeted for extinction. We protest the ongoing increase in overkill. We protest the expansion of the arms race to space.

We protest the diversion of scarce resources from aching human needs.

Dialogue without deeds brings the calamity ever closer, as snail-paced diplomacy is outdistanced by missile-propelled technology. We physicians demand deeds to implement further deeds, which will lead to the abolition of all nuclear weaponry.

We recognize that before abolition can become a reality, the nuclear arms race must be halted. At our fourth congress in Helsinki 18 months ago, I urged a policy of reciprocating initiatives, the process compelled by popular understanding and public pressure.

As the first medical prescription, the I.P.P.N.W. endorsed the cessation of all nuclear testing. Our analysis leads to the inescapable conclusion that nuclear testing has a central role in the development of new, more sophisticated and ever more destabilizing weapons.

From this world podium, we call upon the Governments of the United States and the Soviet Union to agree to an immediate mutual moratorium on all nuclear explosions, to remain in effect until a comprehensive test ban treaty is concluded.

A moratorium is verifiable, free of risk to either party, simple in concept yet substantive, has wide public support and is conducive to even more dramatic breakthroughs.

On Nov. 21, an overwhelming majority of members of the United Nations favored amending the limited test ban treaty to make it comprehen-

sive. If enacted, a moratorium will begin unwinding the potential doomsday process.

Right to Survival

We physicians have focused on the nuclear threat as the singular issue of our era. We are not indifferent to other human rights and hard-won civil liberties. But first, we must be able to bequeath to our children, as Mr. Aarvik so passionately and potently expressed, the most fundamental of all rights, which preconditions all other: the right to survival.

Alfred Nobel believed that the destructiveness of dynamite would put an end to war. He deeply believed that the tragic reality of mass carnage would achieve results which all the preachments of peace and good will had so far failed to achieve. His prophecy now must gain fulfillment.

Recoiling from the abyss of nuclear extermination, the human family will finally abandon war. May we learn from the barbaric and bloody deeds of the 20th century and bestow the gift of peace to the next millennium. Perhaps in that way we shall redeem in some measure respect from generations yet to come.

Having achieved peace, in the sonorous phrase of Martin Luther King, who spoke from this very podium here 21 years ago, human beings will then "rise to the majestic heights of moral maturity."

PUGWASH

(13) Pugwash Jr., as reported in the Bulletin of the Atomic Scientists (December 1985), with thanks to BOB DAVIS:

Student Pugwash 1985

by Sumit Ganguly and David Hart

CONCERN FOR the larger social good is alive and well on campus, especially among the group of talented and articulate young people who came together for the Student Pugwash International Conference last June 23-29 at Princeton University. Carrying the theme of "Science, Technology, and Individual Responsibility" from its 1985-1986 program's focus on careers and responsibility into its fourth biennial meeting, the student-run organization drew 90 participants from 25 countries, carefully selected for their interest and previous work on conference topics, to explore individual decision-making on complex issues.

Student Pugwash draws its inspiration from the Russell-Einstein Manifesto and the Pugwash Conferences on Science and World Affairs, and, like the "senior" Pugwash, works to shed light on critical issues by creating dialogue that transcends national and disciplinary boundaries. National Student Pugwash offices are now operating in Canada, the United Kingdom, West Germany, Finland, and Bulgaria. U.S. activities are coordinated from Washington, D.C., with 22 campus chapters. Groups at MIT and Cornell have already undertaken ambitious alternative-jobs fairs in keeping with the current theme of careers and individual responsibility. The Washington Center recently published the *Technology and Society Internship Directory* to provide stu-

dents with access to opportunities for hands-on experience in the world of science and technology decision-making.

While student papers formed the agendas for small working groups which met throughout the conference week, the students were joined by senior participants from government agencies, universities, international organizations, and corporations. The working groups focused on the following issues:

- individual rights in the information age;
- setting priorities for agricultural genetic engineering;
- energy and poverty;
- toxics in the world's workplaces; and
- making choices about the military uses of space.

As might be expected, the last topic generated the most heated discussions, not only on technical feasibility and strategic implications of the Strategic Defense Initiative, but also on the ethical dimensions of the project and the responsibilities of the scientists involved.

The individual's role in the arms race, in fact, emerged as a central issue for all conference participants. The debate

Sumit Ganguly is an assistant professor of international relations at Michigan State University in East Lansing. David Hart is the conference director for Student Pugwash in Washington, D.C.

was stimulated especially by a showing of the film *The Day*

After *Trinity* and the ensuing discussion on the lessons of the Manhattan Project for SDI researchers. Henry D. Smyth, the first U.S. ambassador to the International Atomic Energy Agency, argued that modern researchers, like those who dissented during the project's final days, should make their opinions known to political and military leaders. Josephine Stein, a graduate student from MIT, noting that many young weapons researchers lack the broad background and international understanding that benefited the nuclear pioneers, urged scientists and technicians to broaden their education and to educate others.

MIT physics professor Philip Morrison established an intriguing framework for these issues in his keynote address, contending that the universalizing force of science is incompatible with the parochial influence of national loyalty. With the threat of nuclear annihilation sharpening this tension, Morrison urged students to take responsibility for "the shared tasks of preservation." Jerome Wiesner reinforced this message: "The human soul cannot prepare for extinction and focus on creative social evolution simultaneously—and that is what so many of the professionals fail to understand."

Not everyone agreed. Herbert Leifer of Rockwell International argued that "good technology, carefully used, can help us to reach political solutions that would not other-

wise be available." Mark Rabinowitz of the Strategic Defense Initiative Organization administered "reality therapy" in the form of a standard SDI briefing.

Openness in science, in both corporate and university settings, was chief among the other issues explored in conference plenary sessions. Carl Etnier, a Cornell undergraduate, revealed startling preliminary findings of a survey of Cornell's science and engineering faculty indicating that nearly one-third would agree to limit access to, delay, or alter publications at the request of a sponsor. Etnier pointed out that while such practices violate university policies, the policies are little known or enforced, and he called on students to exercise vigilance and encourage continuing public debate on the issue.

The international diversity of the students—Soviet students attended this year for the first time—and the intensity of their personal contacts are important to the larger aim of building a network of leaders committed to considering the ethical and social dimensions of scientific and technical decision-making. Student Pugwash alumni are already finding their way into policy-making institutions. As the movement grows, such conferences may have great long-term effects on the formulation of institutional, corporate, national, and international policies. □

(14) Pugwash Jr. multiplies, as reported in this ad in the Bulletin of the Atomic Scientists (February 1986):

Student/Young Pugwash

The first Student/Young Pugwash conference was held at the University of California, San Diego in 1979. Attended by students from other parts of the world, this conference led to the establishment of Canadian Student Pugwash in 1979, and the formation of Student Pugwash USA and the Bulgarian Young Pugwash Group in 1982. Student Pugwash groups were then set up in Finland (1983), and in the FRG and the UK (1984).

Aims

Student/Young Pugwash groups, which are structured along the same lines as Pugwash in the form of national groups, have several purposes. One objective is to complement 'senior' Pugwash efforts by fulfilling a primarily educational role in alerting the academic community on university campuses and the public to important issues surrounding the impact of science and technology on society, notably in the prevention of nuclear war and of armed conflicts in general. Other social issues of concern to students and young professionals involving science and technology also receive attention. In addition, these groups create a source of potential young recruits for Pugwash.

Activities

Following the 1979 conference in San Diego, USA Student Pugwash held conferences at Yale University (1981), the University of Michigan (1983) and Princeton University (1985), with some 90 national and international students and high level senior experts attending each conference. In 1985, national conferences were also held by the Bulgarian and Canadian groups on questions of peace and war and science and society. Local chapters on a dozen campuses in the USA and Canada have sponsored meetings in their respective universities on related issues. The task of encouraging the formation of young Pugwash groups in various countries is actively pursued and coordinated by the Pugwash office in Geneva. One occasion for assisting this endeavour is provided during the annual Pugwash conferences to which a dozen or so representatives from present and prospective young Pugwash groups are regularly invited.

Helping Young Pugwash

Pugwash needs your assistance in order to help create a peaceful future we are all striving for. Contributions on any level will be most welcome. Become a Friend of Pugwash by filling out the form below today and help us in this vital work.

- Please enroll me as a friend of Pugwash and send me summaries of its major meetings. I enclose \$100 as my 1986 contribution.
 - Please enroll me as an associate member of Friends of Pugwash and send me digests of its important meetings.
- I enclose \$ _____

Make check payable to AEPPF, Pugwash and mail to William M. Swartz (Chairman, Finance Committee, Pugwash Conferences on Sciences and World Affairs), 1430 West Wrightwood Avenue, Chicago, Illinois 60614. All contributions are tax deductible.

SECULAR HUMANISM

- (15) Plot Hatch hatched unhatched. As you may recall, Senator Hatch doesn't like secular humanism, and he hatched a plot against it: he tacked Section 509 onto the Education for Economic Security Act; it prohibited school districts from spending certain funds on courses that teach "secular humanism". Secular humanism was not defined; each school district could define it as it pleased. Right wing fundamentalists could use "the charge of 'secular humanism' to oppose anything they don't like about public education," according to Anthony T. Podesta, Executive Director of People for the American Way. (RSN45-13) (RSN47-21)

Happy ending. The National Emergency Civil Liberties Committee (CORLISS LAMONT, Chairperson) tells us that:

NECLC's lawsuit against the Federal Government and the Department of Education maintained that this prohibition, specifically sponsored by Senator Orrin Hatch, constituted a violation of the First Amendment by federally mandating the censorship of a particular set of ideas.

We are pleased to inform you that the offensive language has been deleted from the 1986-1987 Magnet School Bill.

The Secular Humanist Bulletin (January 1986), published by Free Inquiry, tells it this way:

SECULAR HUMANIST VICTORY

Hatch's Anti-Humanist Law Dies with Whimper

Utah Senator Orrin Hatch's amendment to the Education for Economic Security Act, which bars federally funded magnet schools from teaching secular humanism but never defines the term, is dead. Congress quietly excised Section 509 -- all 17 words of it -- from the bill before voting to renew it for another year. President Reagan signed the revised bill into law on November 26.

Hatch forced inclusion of the anti-humanist clause in 1984. A 1985 news story made the amendment public and precipitated a flurry of opposition, including a lawsuit brought by Isaac Asimov and a coalition of other humanists. The government responded to the pressure by dropping the language with almost no public comment.

DISSENTING OPINION

- (16) Brainwash, American style. We are rightly proud of the free press in America. It can print (or broadcast) whatever it wishes to, and report on whatever it sees. But does it see what it observes?

Noam Chomsky doesn't think so, and says so in *The Progressive* (October 1985). Who is Chomsky? This is how *The Progressive* identifies him:

Noam Chomsky is Institute Professor at the Massachusetts Institute of Technology. Among his many books is "The Fateful Triangle." This article is adapted from a speech he delivered last December at the Community Church of Boston. A similar article by the author, "1984: Orwell's and Ours," appears in a recent issue of *The Thoreau Quarterly* (Department of Philosophy, University of Minnesota).

Chomsky gave the first Russell Lectures -- in honor of Bertrand Russell -- at Trinity College, Cambridge in 1971. The lectures were published in the *Cambridge Review*, Cambridge, England, in 1971, and in book form as Problems of Knowledge and Freedom (New York: Pantheon Books, 1971).

Those are some of Chomsky's credentials. Here is the *Progressive* article, which is titled, "The Bounds of Thinkable Thought":

In May 1983, a remarkable incident occurred in Moscow. A courageous newscaster, Vladimir Danchev, denounced the Soviet invasion of Afghanistan in five successive radio broadcasts. This aroused great admiration in the West. *The New York Times* commented accurately that this was a departure from the "official Soviet propaganda line," that Danchev had "revolted against the standards of double-think and newspeak."

Danchev was taken off the air and sent to a psychiatric hospital. He was returned to his position last December. A Soviet official was quoted as saying that "he was not punished, because a sick man cannot

be punished." In the West, all of this was understood as a glimpse into the world of Orwell's 1984. Danchev was admired for his courage, for a triumph of the human will, for his refusal to be cowed by totalitarian violence. In Paris, a prize was established for a "journalist who fights for the right to be informed."

What was remarkable about Danchev's radio broadcasts was not simply that he expressed opposition to the Soviet invasion and called for resistance to it, but that he called it an "invasion." In Soviet theology, there is no such thing; rather, there is a Russian *defense* of Afghanistan against bandits operating from Pakistani sanctu-

aries and supported by the CIA and other warmongers.

Implicit in the coverage of the Danchev affair by Western media was a note of self-congratulation: It couldn't happen here. No American newscaster has been sent to a psychiatric hospital for calling an American invasion "an invasion" or for calling on the victims to resist.

We might, however, inquire further into just why this has never happened. One possibility is that the question has never arisen because no American journalist would ever mimic Danchev's courage, or could even perceive that an American invasion of the Afghan type is in fact an in-

vasion or that a sane person might call on the victims to resist. If this were the case, it would signify a stage of indoctrination well beyond any achieved under Soviet terror, well beyond anything Orwell imagined.

Consider the following facts: In 1962, President Kennedy sent the U.S. Air Force to attack rural South Vietnam, where more than 80 per cent of the population lived, as part of a program intended to drive several million people to concentration camps (called "strategic hamlets") where they would be surrounded by barbed wire and armed guards and "protected" from the guerrillas whom, we conceded, they were willingly supporting.

The direct U.S. invasion of South Vietnam followed our support for the French in their attempt to reconquer their former colony, our disruption of the 1954 "peace process," and a terrorist war against the South Vietnamese population that had already left some 75,000 dead. In the following years, the United States resisted every attempt to arrive at a peaceful settlement. In 1964 it began to plan a ground invasion of South Vietnam which took place in early 1965, accompanied by bombing of North Vietnam and intensified bombing of the South. The United States also extended the war to Laos, and then to Cambodia.

The United States protested that it was invited in, but as the London *Economist* recognized in the case of Afghanistan (never in the case of Vietnam), "an invader is an invader unless invited in by a government with a claim to legitimacy," and outside the world of newspeak, the client regime established by the United States had no more legitimacy than the Afghan regime established by the Soviet Union. Nor did the United States regard this government as having any legitimacy; in fact, it was regularly overthrown and replaced when its leaders appeared to be insufficiently enthusiastic about U.S. plans to escalate the terror, or when they were feared to be considering a peaceful settlement.

The United States openly recognized throughout that a political settlement was unacceptable, for the simple reason that the "enemy" would win handily in a political competition. The conflict had to be restricted to the military dimension, where the United States could hope to reign supreme. In the words of Douglas Fike, now head of the Indochina archives at Berkeley and much revered in mainstream journalism as one of a new breed of "non-ideological" scholars, the South Vietnamese enemy "maintained that its contest with the [U.S.-installed government and the] United States should be fought out at the political level and that the use of massed military might was in itself illegitimate" until forced by the U.S. "to use counterforce to survive."

For the past twenty-two years, I have been searching for some reference in mainstream journalism or scholarship to an American invasion of South Vietnam in 1962 (or ever), or an American attack against South Vietnam, or American aggression in Indochina—without success. There is no such event in history. Rather, there is an American *defense* of South Vietnam against terrorists supported from outside (namely, from Vietnam), a defense that was unwise, the doves maintain.

In short, there are no Danchevs here. Within the mainstream, there is no one who can call an invasion by its proper name, or even perceive the fact that one has taken place. It is unimaginable that

any American journalist would have publicly called upon the South Vietnamese to resist the American invasion. Such a person would not have been sent to a psychiatric hospital, but he would surely not have retained his professional position and standing. Note that here it takes no courage to tell the truth, merely honesty. We cannot plead fear of state violence, as followers of the party line can in a totalitarian state.

It is common now to deride any analogy between the Soviet invasion of Afghanistan and the U.S. invasion of Grenada, and indeed they differ radically in scale and character. A comparison with the U.S. invasion of South Vietnam would be more appropriate, but is inconceivable within the mainstream.

A kind of opposition to the Vietnam war did develop in the mainstream, of course, but it was overwhelmingly "pragmatic," as the critics characterized it, distinguishing themselves from the "emotional" or "irresponsible" opponents who objected to the war on principled grounds. The "pragmatic" opponents argued that the war could not be won at an acceptable cost, or that the goals were not clear, or that errors were made in execution. On similar grounds, the German general staff was no doubt critical of Hitler after Stalingrad.

How has this remarkable subservience to the doctrinal system been achieved? It is not that the facts were unknown. The devastating bombing of northern Laos and other attacks were suppressed by the media—these are called "secret wars," meaning that the Government keeps them secret with the complicity of the press—but in the case of the American assault on South Vietnam, sufficient information was always available. The realities were observed, but not seen.

American scholarship is particularly remarkable in this respect. The official historian of the Kennedy Administration, Arthur Schlesinger Jr., regarded as a leading "dove," does, indeed, refer to aggression in 1962. "1962 had not been a bad year," he writes in his history *A Thousand Days*. "Aggression [was] checked in Vietnam." That is, the year in which the United States undertook direct aggression against South Vietnam was the year in which aggression was *checked* in Vietnam. Orwell would have been impressed.

Another respected figure in the liberal pantheon, Adlai Stevenson, intoned at the United Nations that in Vietnam we were combating "internal aggression," another phrase that Orwell would have admired; that is, we were combating aggression by the Vietnamese against us in Vietnam, just as we had combated aggression by the Mexicans against us in Mexico a century earlier. We had done the same in Greece in the late 1940s, Stevenson went on to explain, intervening to protect Greece from "the aggressors" who had "gained control of most of the country," these "aggressors" being the Greeks who had led the anti-Nazi resistance and whom we succeeded in removing with an impressive display of massacre, torture, expulsion, and general violence, in favor of the Nazi collaborators of our choice.

The analogy was, in fact, more apt than Stevenson—apparently a very ignorant man—was likely to have known. As always, the American posture is defensive, even as we invade a country half way around the world after having failed to destroy the political opposition by large-scale violence and terror.

A closer look at the debate that did develop over the Vietnam war provides some

lessons about the mechanisms of indoctrination. The debate pitted the hawks against the doves. The hawks were those, like journalist Joseph Alsop, who felt that with a sufficient exercise of violence we could succeed in our aims. The doves felt that this was unlikely, although, as Schlesinger explained, "We all pray that Mr. Alsop will be right," and "we may all be saluting the wisdom and statesmanship of the American government" if the U.S. succeeds (contrary to his expectations) in a war policy that was turning Vietnam into "a land of ruin and wreck." It was this book that established Schlesinger as a "leading war opponent," in the words of Leslie Gelb.

There is, of course, a possible position omitted from the fierce debate between the hawks and the doves which allegedly tore the country apart during these trying years—the position of the peace movement, which saw the war not merely as a "mistake," but as fundamentally wrong and immoral. To put it plainly, war crimes, including the crime of launching aggressive war, are wrong, even if they succeed in their "noble" aims. This position does not enter the debate, even to be refuted.

In mainstream academic circles, it would have been difficult to find a more committed critic of the war than John King Fairbank of Harvard, the dean of American Asian scholars, who was considered so extreme as to be a "comsymp" or worse in McCarthyite terminology. Fairbank gave the presidential address to the American Historical Society in December 1968, almost a year after the Tet offensive had converted most of the corporate elite and other top planning circles to dovemod. He was predictably critical of the Vietnam war, in these terms: This is "an age when we get our power politics overextended into foreign disasters like Vietnam mainly through an excess of righteousness and disinterested benevolence."

The doves felt that the war was "a hopeless cause," we learn from Anthony Lake, who resigned from the Government in protest against the Cambodia invasion. All agree that it was a "failed crusade," "noble" but "illusory" and undertaken with the "loftiest intentions," as Stanley Karnow puts it in his best-selling companion volume to the PBS television series on Vietnam, highly regarded for its critical candor. Those who do not appreciate these self-evident truths, or who maintain the curious view that they should be supported by some evidence, simply demonstrate thereby that they are emotional and irresponsible ideologues, or perhaps outright communists. They are outside the spectrum of thinkable thought.

All of this illustrates the genius of democratic systems of thought control, which differ markedly from totalitarian practice. Those who rule by violence tend to be "behaviorist" in their outlook. What people may think is not terribly important; what counts is what they do. They must obey and this obedience is secured by force. The penalties for disobedience vary depending on the characteristics of the state.

In the Soviet Union today, the penalties may be psychiatric torture, or exile, or prison, under harsh and grim conditions. In a typical U.S. dependency such as El Salvador, the dissident is likely to be found in a ditch, decapitated after hideous torture; and when a sufficient number are dispatched, we can have elections in which people march toward democracy by rejecting the Nazi-like D'Aubuisson in favor of Duarte, who presided over one of the great mass murders of the modern period (the necessary prerequisite to democratic

lections, which obviously cannot proceed while popular organizations still function).

Democratic systems are different. It is necessary to control not only what people do, but also what they think. Since the State lacks the capacity to ensure obedience by force, the threat to order must be excised at the source. It is necessary to establish a framework for possible thought that is constrained by the principles of the state religion. These need not be asserted; it is better that they be presupposed.

The critics reinforce this system by tacitly accepting these doctrines and confining their critique to tactical questions. To be admitted to the debate, they must accept without question the fundamental doctrine that the State is benevolent, governed by the loftiest intentions, adopting a defensive stance, not an actor in world affairs but only reacting—though sometimes unwisely—to the crimes of others.

If even the harshest critics tacitly adopt these premises, then, the ordinary person may ask, who am I to disagree? The more intensely the debate rages between the hawks and doves, the more firmly and effectively the doctrines of the state religion are established. It is because of their notable contribution to thought control that the critics are tolerated, indeed honored—that is, those who play by the rules.

These distinctions between totalitarian and democratic systems of thought control are only rough approximations. In fact, even a totalitarian state must be concerned about popular attitudes and understanding. And in a democracy, it is the politically active segments of the population, the more educated and privileged, who are of prime concern. This is obvious in the United States, where the poor tend not even to vote, and more significant forms of political participation—the design and formulation of political programs, candidate selection, the requisite material support, educational efforts, or propaganda—are the domain of privileged elites.

Three-quarters of the population may support a nuclear freeze, and some may even know that this is official Soviet policy as well, but that has no impact on the policy of massive government intervention to subsidize high-tech industry through a state-guaranteed market for armaments, since no serious alternative is available in the system of political economy. Popular resistance to military aggression does serve as an impediment to the planners, as has been evident in the last few years with regard to Central America. But such resistance, while sometimes effective in raising the costs of state violence, is of limited efficacy as long as it is not based on understanding of the forces at work and the reasons for their systematic behavior, and it tends to dissipate as quickly as it arises.

At the same time, a frightened and insecure populace, trained to fear Soviet demons and Third World hordes, is susceptible to jingoist fanaticism. This was shown dramatically by the Grenada invasion. The United States is again "standing tall." President Reagan proclaimed after 6,000 elite troops managed to overcome the resistance of a handful of Cubans and Grenadians, and the reaction here could not fail to awaken memories of popular response when other great powers won cheap victories not too many years ago.

The more subtle methods of indoctrination just illustrated are considerably more significant than outright lying or suppression of unwanted facts, though the latter are also common enough. Examples are legion.

Consider, for instance, the current debate as to whether there is a "symmetry" between El Salvador and Nicaragua, each confronted with rebels supported from abroad who are attempting to overthrow the government. The Reagan Administration claims that in one case the rebels are "freedom fighters" and the government is an illegitimate tyranny, while in the other case the rebels are terrorists and the government is a still somewhat flawed democracy. The critics question whether Nicaragua is really supporting the guerrillas in El Salvador or whether Nicaragua has already succumbed to totalitarianism.

Lost in the debate is a more striking symmetry. In each country, a terrorist military force is massacring civilians, and in each country we support that force—the government of El Salvador and the *contras*. The significance of this symmetry is lost as we debate the accuracy of the government case, meanwhile continuing to labor under the mysterious collective amnesia that prevents us from seeing that there is little here that is new.

Or, to turn to another part of the world, consider what is universally called "the peace process" in the Middle East. Israeli-sponsored polls reveal that the population of the territories under Israeli military occupation overwhelmingly oppose the "peace process," regarding it as detrimental to their interests. Why should this be so? Surely of all the people in the region, they are among those who must be yearning the most for peace. But no journalist seems to have inquired into this strange paradox.

The problem is easily solved. The "peace process," as was evident at the time of the Camp David Accords and should be transparent in retrospect, was designed in such a way as to remove the major Arab military force, Egypt, from the conflict, so that Israel would be free to intensify settlement and repression in the conquered territories and to attack its northern neighbor. It is hardly a cause for wonder that the victims of the "peace process" overwhelmingly condemn and reject it.

In this case, too, it would be salutary to overcome our mysterious collective amnesia about the facts of recent history. Anyone who troubles to review the diplomatic record will quickly learn that there have been possibilities for peace with a modicum of justice for about fifteen years, blocked in every instance by U.S.-Israeli rejectionism. In the early 1970s, this rejectionist stance was so extreme as to block even Arab initiatives (by Egypt and Jordan) to attain a general peace settlement that entirely ignored Palestinian rights.

Since the international consensus shifted to adherence to a two-state settlement a decade ago, any such possibility has consistently been barred by the United States and Israel, which persist in rejecting any claim by the indigenous population to the rights that are accorded without question to the Jewish settlers who largely displaced them, including the right to national self-determination somewhere within their former home.

Articulate American opinion lauds this

stance, urging the Palestinians to accept the Labor Party program that denies them any national rights and regards them as having "no role to play" in any settlement, as Labor dove Abba Eban has said. There is no protest here, or even mere reporting of the facts, when the U.S. Government blocks a U.N. peace initiative, stating that it will accept only negotiations "among the parties directly concerned with the Arab-Israeli dispute," crucially excluding the Palestinians, who are not one of these parties.

Analogous rejectionist attitudes on the part of Libya and the minority PLO Rejection Front are condemned here as racist and extremist; the quite comparable U.S.-Israeli stance, obviously racist in essence, is considered the soul of moderation.

I will not proceed with further examples. The crucial point is that the pattern is pervasive, persistent, and overwhelmingly effective in establishing a framework of thinkable thought.

More than sixty years ago, Walter Lippmann discussed the concept of "manufacture of consent," an art that is "capable of great refinements" and that may lead to a "revolution" in "the practice of democracy." The idea was taken up with much enthusiasm in business circles—it is a main preoccupation of the public relations industry, whose leading figure, Edward Bernays, described "the engineering of consent" as the essence of democracy.

In fact, as Gabriel Kolko notes, "From the turn of the century until this day [the public mind] was the object of a cultural and ideological industry that was as unrelenting as it was diverse: ranging from the school to the press to mass culture in its multitudinous dimensions." The reason, as an AT&T vice-president put it in 1909, is that "the public mind . . . is in my judgment the only serious danger confronting the company."

The idea was also taken up with vigor in the social sciences: The leading political scientist Harold Lasswell wrote in 1933 that we must avoid "democratic dogmatism," such as the belief that people are "the best judges of their own interests." Democracy permits the voice of the people to be heard, and it is the task of the intellectual to ensure that this voice endorses what farsighted leaders know to be the right course.

Propaganda is to democracy what violence is to totalitarianism. The techniques have been honed to a high art, far beyond anything that Orwell dreamt of. The device of feigned dissent, incorporating the doctrines of the state religion and eliminating rational critical discussion, is one of the more subtle means, though more crude techniques are also widely used and are highly effective in protecting us from seeing what we observe, from knowledge and understanding of the world.

There are no Danchevs here, except at the remote margins of political debate.

For those who stubbornly seek freedom, there can be no more urgent task than to come to understand the mechanisms and practices of indoctrination. These are easy to perceive in the totalitarian societies, much less so in the system of "brainwashing under freedom" to which we are subjected and which all too often we serve as willing or unwitting instruments. ■

THE USA ON THE WORLD SCENE

THE NEW YORK TIMES, SUNDAY, OCTOBER 27, 1985

PRESIDENT REAGAN'S ASSAULT UPON THE WORLD COURT AND THE PEOPLE'S RIGHT TO KNOW

On January 18, President Reagan directed that our government take no further part in the World Court proceedings dealing with Nicaragua's suit against the United States for violating international law by supporting rebel paramilitary attacks and mining Nicaragua's harbors. This dishonorable boycott of the World Court was a betrayal of America's historic ideals of international peace and of the rule of law.

In October the Reagan Administration took another step backward, announcing that it will refuse to litigate any "political" cases before the World Court, a term our government will define as it pleases, from case to case. All disputes between nations are by their very nature political cases. Ours is the first nation therefore to radically undercut the Court's jurisdiction in international disputes.

The Administration's unilateral withdrawal from World Court jurisdiction in the Nicaragua case and the recent statement generally abrogating its jurisdiction flout the rule of law, and are attempts to avoid accountability to world opinion and to deny the American people's right to know.

- What are the real reasons underlying these extreme measures effected by our President?
- Are they but the prelude to further aggression?

Corliss Lamont, *Chairperson*
Edith Tiger, *Director*
Leonard B. Boudin, *General Counsel*

NEWS ABOUT MEMBERS

- (18) Gladys Leithauser has been editing "The Scientific Vision: A College Reader", soon to be published by Holt, Rinehart and Winston. Two BR pieces are included: "The Rise of Science" from "A History of Western Philosophy" and "The Expanding Mental Universe."
- (19) Richard Johnson will be working toward a teaching degree in Political Science and German at University of Utah, after he leaves the Army this Fall. Now with Army Intelligence (as a German Linguist), in Berlin. He generously says: "Please let the members know that if they need anything checked out (research) at Berlin's libraries, I am more than willing to do the footwork."
- (20) Paul M. Pfalzner was elected President of the Humanist Association of Canada/Association Humaniste du Canada in June '85.

- (21) Cherie Ruppe had been planning -- as reported here last issue (RSN48-27) -- to go to Borneo as a volunteer researcher at the Orangutan Research and Rehabilitation Center. She went. This is what happened, in her own words:

On October 4, 1985, I landed at Pankalun Buun Airport in Kalimantan Province, Borneo; part of a team of nine Earthwatch volunteers coming for the privilege of working with Dr. Biruté Galdikas at the Orangutan Research and Conservation Project in the Tanjung Puting Nature Reserve. Another 5 1/2 hours up the Sekonyer River from the village of Kumai via a single cylinder African Queen style boat would find us at Camp Leakey, the center of the project.

The Professor, as Dr. Galdikas is called, is a warm woman with a soft smile and gentle laugh, who has been living with her "men of the forest" (orang-utans) for over fourteen years. She loves sharing her knowledge of the rainforest and orang-utans, and has an uncanny gift for assessing our strengths and turning a blind eye to our weaknesses.

Our days were spent working on the research project, usually by either searching for or following wild orangutans. Two of us with a Dayak assistant would go into the rain forest and search until we found a wild orangutan. After finding one, we would follow it for three days taking the specific notes the Professor requested. On a "following" day we would get up at four a.m. and head into the rain forest in the dark to be at our orangutan's nest before she left it at daybreak. We would follow her, keeping our notes, until she nested at dusk, then make our way back to camp, marking our way to be followed in the dark the next morning. The assistants were uncanny in their ability to follow the markings in the dark. Sure enough, as day broke, we were always right under our orangutan's nest.

Some days were quite easy. Those were the days she stayed on dry ground, (or, more accurately, when she stayed in the trees that kept us on dry ground) and found a tree that was a particularly good food source. Then we would string up our hammocks under her tree for as much as an hour or two, and have a rest and bite to eat while keeping an eye on her. Other days she would rest very little, and spend most of her time over the swamps, which could be extremely fatiguing.

Fortunately, in the midst of a downpour she usually didn't care to move about any more than we did, so we could string up our hammocks and make a bit of a tent under our ponchos. The nice thing about the rain was the fact that it was so warm that getting wet wasn't particularly uncomfortable.

Operating concurrently with but separately from the research project is the conservation project. This mainly consists of providing a home for about 30 ex-captive orangutans and their offspring. The Professor's goal is not to rehabilitate the ex-captives back to the forest, as she estimates the rainforest already supports about the maximum number of orangutans that it can maintain. Her ultimate goal is to halt the poaching of orangutans, which her program has been very successful in doing. Though capturing wild orangutans (which is accomplished by killing a mother in order to take the baby) has been illegal for some time, the Indonesian government tended to turn its back on it, as once they confiscated one, they had no place to take it. They asked the Professor if she would take them in, and she agreed. Now that the government knows there is a home for the captives, they actively pursue the poachers, and confiscate the victims. As a result, the poaching has almost completely stopped.

The ex-captives nest in the rainforest at night and forage with various degrees of success during the day. Most of them return for at least one of the two (7:00 a.m. and 5:00 p.m.) feedings a day. Some of them spend more time than others around camp during the day foraging for whatever treats they can either beg or steal.

They also love to lather up with soap and shampoo, and several of them were always "hanging around" at the end of the dock waiting for their chance to steal one or the other from us when we went down for our daily mandi (bath). However, they were also quite content when we were willing to share a bit with them. They would get all lathered up, then lick off the bubbles. The main goal seemed to be a mouthful of bubbles.

The adolescent Supinah, by far the most mischievous, but irresistibly loveable and adorable ex-captive of the lot, has a beautiful thick coat of lustrous red hair, unusually long, graceful, tapered fingers, and a sweet face with distinctive pale circles around her eyes. She also has a distinctive way of hanging off of whatever she is holding onto that makes her easy to recognize even from a distance. She tends to seek out human companionship and attention more than most of the others, and is by far the gentlest one to play with. The males

also seem to find her attractive, and she is most receptive to their attentions. Like the jealous, ugly stepsisters, the other females, particularly Sisweyo, tend to chase and bite and ostracize her.

Brook, Patty, and Apollo Bob are three juveniles that had been brought in shortly before our arrival. Apollo Bob was very thin and sickly with diarrhoea. He sought only human companionship, and looked like a shriveled old man with his bald head and the way he always sat all hunched over with his head down and his arms folded over his belly. He tugged at all our hearts, and the Professor was not at all sure he was going to survive. However, by the time we left, he was much stronger, so feisty as to be a problem, and was starting to play in the trees like an orangutan.

Usually when a new infant comes in, one of the established females will adopt it and care for it as her own. However, no one would adopt Brook (male) and Patty, so they have adopted each other, and Mr. Mursiman sees to their separate feeding and makes sure they nest successfully at night. When we arrived they still had to be babysat, but by the time we left they were quite independent. Watching Mr. Mursiman with them was a joy. It was obvious these were his babies, and he took great pride in them.

Another most interesting adoption was Barbara. She was brought in about a year ago. No matter how hard they tried to get one of the females to adopt her, none of them would have a thing to do with her. The feeling was mutual. Barbara seemed to hate female orangutans, and male humans, and always latched onto the women in camp. Finally she and Rombe found each other. Rombe is an adolescent male who loves to wear things on his head. He picked her up and put her on his head, and they have been inseparable ever since. He cares for her as if he had given birth to her, even allowing her to suckle him. Her presence doesn't seem to hinder his sexual activities, but we all figure he may have a bit of trouble establishing his male dominance with a kid on his head!

Rombe is also a grabber, and loves to grab us as we walk down the pier to our mandi. He starts playing quite gently, but almost all of us have the bruises to prove that his "play" always disintegrates into a dominance test, and he has the strength of a sumo wrestler. One of his favorite dominance tests is a french kiss!

Curly is a 200 - 250 pound adult wild male who has been treating the camp to the pleasure of his company of late. Since the death of Achmad's baby, she has become receptive, and Curly is in hot pursuit. Not only was it a thrill to be so close to him, but also to hear his long calls. The long call is a most impressive call made by adult males to mark their territory, establish their dominance, and pursue a female. Sometimes it can last as long as four minutes, and is a sound one never forgets. We all shuddered at the thought of what Rombe will be like when he is Curly's size.

Two Indonesian words I will never forget are "rawa" for swamp, and "mandi" for bath. The main trail into the rain forest went right through the rawa, so we always started the day with a balancing act trying (usually unsuccessfully) not to fall off the striplings that were laid across it. We also spent much time pleading "No rawa!" to our orangutans as they led us into thigh deep water. At those times we would dream of the nice, cool mandi in the river awaiting us back at camp. The mandi was rather the social event of the day. One evening when I was having my mandi at the end of the dock with some of the assistants and other volunteers, one of the assistants suddenly looked up very puzzled, and said, "In North America when the rivers freeze, how do you have your mandi?" Now, tell me, how in the world do you explain indoor plumbing to someone whose only source of running water has been a river?

The first morning we were there Supinah raided the guest house while we were all at breakfast. She only took two things: my calculator, and my entire rubber bag full of food! What a haul: twenty-four meusle bars, a kilo of licorice, a kilo of nuts, and a kilo of dried fruit. It was the best haul she had ever made, and after that she was completely out of control. She just started ripping her way through the screening and there was no stopping her. Once she tore the handle off the door, and another time she ripped through the screen by the door, reached through, and removed the key from the lock. There she was in the trees with the key, and there we were locked in the guest house. The Professor finally had to put a dawn to dusk guard on her, MUCH to Supinah's displeasure. She could hardly get away with anything after that.

I only saw one snake while I was there, and it was busy swallowing a big frog. (Not to say that THEY didn't see ME.) The only real hazards seemed to be the Malay Sun Bears and the wild boars. A Malay Sun Bear had attacked a member of the previous team, so when we were searching we avoided the area near her den. However, the pigs were an entirely different matter. They hung around camp and were perfectly capable of attacking any one of us. Mr. Bobby was the biggest and most brazen of the group, and they are quite positive he is the one that killed ex-captive Achmad's baby. He constantly terrorized us, and one night at 2:00 a.m. he caught me at the latrine. I can tell you he stopped me mid-stream, and I went flying back to the guest house pulling up my knickers on the way!

Mr. Bobby had become enough of a threat that the Professor was finally driven, against her will, to request permission from the PPA (Park Authority) to kill him. Pak Bohap waited up for him one night and slew him at 1:00 a.m. with one thrust of his spear.

Our third night in camp it poured rain all night long, and poured off and on through the next day. It was the first of the rainy season, and must have flooded several varieties of critters out of their homes. I came home from the jungle feeling pretty smug that I had already become blasé about all the leeches crawling up my legs - only to find the guest house

overrun with flying termites. I thought the termites were a nuisance until we came back from the dining hall to find the guest house had been invaded by fire ants! These are nasty little beasts that sting like bees and move in armies of tens of thousands. Several of us got our share of bites on our feet as we were doing a St. Vitus' dance around the guest house. The assistants came scurrying over with a pail of kerosene and some brooms, and proceeded scrubbing the place down with kerosene - smoking all the while, of course! The minute the assistants would leave, the ants would start pouring back through the crevasses. Four scrubblings of kerosene finally convinced the ants to take a different route to wherever they were going.

By the time the rats invaded we were so exhausted, and they seemed such a minor problem compared to the fire ants, (our perspective was changing by the minute) that we decided they could share our humble home. We fell asleep to the sound of their gnawing, scratching, and scampering.

By the time we had been there for a week or so, our perspective had changed enough that when Miss Sally sat up in bed in the middle of the night and shouted, "Holy Christ!" no one even woke up. The next day she told us a rat had fallen off the rafter and landed on her face and got tangled in her hair trying to right himself. When no one responded to her shout, she decided she may as well lie back down and go to sleep!

Cherie and friend----->

RECOMMENDED READING

(24) Richard Johnson's Ten-Best has been honed down to seven:

1. The Brothers Karamazov
2. Of Human Bondage
3. Portrait of an Artist as a Young Man.
4. Crime and Punishment
5. The Magus (Fowles)
6. Stories of John Cheever
7. Stories of W. Somerset Maugham

For previous lists of Ten-Best, see RSN46-20, RSN47-28,29,30, RSN48-30.

BOOK REVIEW

(25) "RUSSELL" by Clive William Kilmister, St Martin's Press, 1985 (c 1984), as reviewed by MARVIN KOHL, in "Choice" (October 1985).

This work, intended to complement D. F. Pear's Bertrand Russell and the British Tradition in Philosophy (1967), describes the development of Russell's early thought and the intellectual context of his work on the foundations of logic and mathematics. It contains detailed and important analyses, including A Critical Exposition of the Philosophy of Leibniz (1900), An Essay on the Foundations of Geometry (1897), and Principia Mathematica (3v.,1910-13). Despite the title and the jacket blurb, little is said of Russell's less technical work, and only one chapter (and that the shortest) is devoted to the period from about 1927 to 1970. Kilmister maintains that there is an essential unity to Russell's thought, that once his early work is clearly set in its context and understood, all the rest falls into place as applications to general philosophy of mathematics. The other, perhaps less controversial, threads of argument running through the book are that Russell was primarily devoted to establishing the truth of foundations and that the most important ingredient of his later thought was the idea of basing a metaphysics on logic. Notes; no bibliography; a very short index. This book should be welcomed by graduate students and scholars interested in the development of Russell's thought or in the history of the foundations of logic.

["Choice" is published by the American Library Association and the Association of College and Research Libraries.]

BOOK REVIEW

(27) "ALFRED NORTH WHITEHEAD, *The Man and His Work*," Volume 1:1861-1910 by Victor Lowe. Reviewed by Anthony Quinton in *The New York Review of Books* (December 5, 1985). The following portions of the review are mostly those that deal with Russell. The review is titled, "The Right Stuff." (Thank you, BOB DAVIS.)

Alfred North Whitehead rumbles around in the intellectual history of the English-speaking world in the twentieth century like a loose bolt in a machine. He was made of the right stuff: a professional mathematician who turned into a professional philosopher who was also magnificently equipped with a general fund of humane learning in history (particularly church history) and in literature. He was in the right place: at Cambridge at the beginning of one of that great university's greatest periods, which was to run on until about 1950. He had the right connections: most of all in the form of his collaboration with his pupil Bertrand Russell in the ten years during which they worked on *Principia Mathematica* (1910-1913), the most influential work on formal logic since Aristotle's *Organon*. He was, particularly when he was between his late fifties and his mid-seventies, highly productive, publishing nine substantial books in that period.

* * * * *

Victor Lowe makes it clear that although Whitehead and Russell were in constant and fruitful touch during the composition of *Principia Mathematica*, a pronounced division of labor prevailed. Whitehead did the mathematics; Russell did the philosophy. Since the book excited philosophers but left mathematicians cold, it is not surprising that it has come to be thought of as primarily Russell's work, for all his counter-alphabetic position on the title page.

* * * * *

Whitehead's own writing is enlivened with some admirable epigrammatic flashes of perceptiveness and is as forceful and lucid as Russell's, but without the metallic super-

ficiality that often characterizes Russell's writing on the history of thought. But when he writes about philosophy itself, it is for the most part exceedingly turgid and obscure, a torrent of puzzlingly amorphous neologisms like "prehension" and "concrecence" and of ordinary words like "event," "occasion," and "object" used in some novel and greatly extended sense.

* * * * *

The chief intellectual interest of the early part of Whitehead's life is his association with Bertrand Russell, which began in 1889, when Whitehead persuaded his fellow examiners to give Russell a better scholarship than they had intended to. He arranged for people to get to know Russell when he arrived as a student the following year and revived his interest in mathematics when he had turned from it to philosophy in disgust at its current Cambridge form as the acquisition of a capacity to perform high-speed deductive tricks. In 1900 they went to a conference in Paris together. In their joint excitement at meeting the Italian mathematician Giuseppe Peano, the partnership was cemented that led thirteen years later to the last published of the volumes of *Principia Mathematica*. Peano, dissatisfied with the lack of rigor in much of mathematics, showed that its fundamental part, the arithmetic of natural numbers, could be set out as a rigorous axiomatic system, derivable from five axioms, and he devised a vastly more perspicuous notation than that of the still largely unknown Frege. This enchanted Whitehead, with his passion for generality, and Russell, with his passion for certainty.

The rest of this aspect of Whitehead's career is familiar from Russell's numer-

ous autobiographical accounts of it. The first decade of the century was an unhappy one for Russell, even if that of his greatest intellectual achievements. The paradox in set theory which he discovered in the summer of 1901 led to a long struggle, which continued until 1907, and to a version of his theory of types which was incorporated in *Principia Mathematica*. This intellectual travail was carried on in circumstances of deep personal unhappiness. At the time of his discovery of the paradox he realized he could no longer stand his wife Alys, and soon fell deeply in love with Evelyn Whitehead. Lowe does not believe either that Evelyn led

Russell on or that they became lovers. Certainly the matter never seems to have come out into the open for the four people involved. But it must be part of the explanation of the drifting apart of the two collaborators.

Throughout these years, Whitehead, true to form, was constantly praising and encouraging Russell, while with equal constancy adjuring him not to go too fast. Russell was certainly annoyed by Whitehead's unwillingness to show him the preparatory work he had done on the projected fourth volume of *Principia*. Whitehead's explanation of his secretiveness was that he did not want Russell to run off with his ideas and develop them in all sorts of half-baked and precipitate ways. That fear, which was not of theft but of misuse, was not unreasonable. Toward the principle of biding one's time Whitehead and Russell took directly opposite attitudes. Lowe's final comment on their collaboration is admirably just. "A wonderful thing about their collaboration," he says, "is the perfect preservation of the individuality of each partner, made possible by their mutual respect and affection."

Greenwood is selling their 1984 reprint of HAS MAN A FUTURE? for 27.50. The Library's copies are the Allen & Unwin first editions, in the dust jackets and with the errata slip tipped in. Only 8.00 Postpaid!

The Scholar's Bookshelf, 51 Everett Drive, Princeton Jct., N.J. 08550 is offering these volumes until April 30, 1986:

No. 70197 Bertrand Russell Memorial Volume, edited by Roberts. An analysis and assessment of the intellectual core of Russell's lifework in 26 major essays. 1979; 448 pages List price: 49.50 Sale Price: 16.95

No. 70317 Russell In Review; The Bertrand Russell Centenary Celebrations at McMaster University. An interdisciplinary selection of 20 papers on Russell's life and personality, his views on religion, education, and politics, his logic and his philosophy. List price: 40.00 Sale: 9.95

Minimum Order: 10.00 A flat rate of 3.00 Handling for any order.

(30) New books to lend:

DEWEY AND RUSSELL: AN EXCHANGE, edited by Samuel Meyer. 1984 Philosophical Library. 9.95

As Martin Gardner recently observed, "The two men frequently attacked each others views, each presenting such a caricature of the other's opinions that it was easy to make them seem absurd. An entire book could be devoted to this battle." Meyer has carefully selected representative writings from each philosopher's published responses and presented them as a debate.

Russellphiles will have already read and enjoyed Russell's remarks; They may be surprised to find Dewey just as witty (and occasionally unfair):

"This view is a repetition of a position he took long ago when, in 1922, he said that he found the "love of truth obscured in America by commercialism of which pragmatism is the philosophic expression." I remarked that the statement seemed to me to be "of that order of interpretation which would say that English neo-realism is a reflection of the snobbish aristocracy of the English and the tendency of French thought to dualism an expression of an alleged Gallic disposition to keep a mistress in addition to a wife; and the idealism of Germany a manifestation of an ability to elevate beer and sausage into a higher synthesis with the spiritual values of Beethoven and Wagner!"

BERTRAND RUSSELL, edited by Ann Redpath. 1985 Creative Education 8.95 In a commendable publishing venture, Creative Education is reprinting some of the contributions to Schuster's Living Philosophies, 1931. Russell outlines the forces which he believes have molded his

character, the social philosophy that developed from these forces, and his reasons for believing a world government is necessary. A short biography, rather hagiographic, rounds out an attractively produced volume.

The publishers have contributed copies of both volumes for our Lending Library. The Philosophical Library also donated a copy of their 1983 paperback edition of THE WILL TO DOUBT.

(31) Cassettes for sale and to lend:

Pacifica Radio Archive Educational Services, 5316 Venice Boulevard, Los Angeles, CA 90019 is offering these titles:

No. BB0597 ON NUCLEAR MORALITY. Russell brings his philosophical genius to bear on the nuclear question, discussing his famous letter to Einstein and evaluating the Pugwash meetings. 1962 32 Minutes 11.00

No. BB4013 BERTRAND RUSSELL'S WAR CRIMES TRIBUNAL. Russell outlines his plans for the Tribunal and appeals to Americans to take an active roll in support of the people of Southeast Asia. No date 29 Minutes 11.00

Add 3.00 for U.P.S. delivery for both cassettes. Copies will be available for loan from the Library.

(32) Special request:

I'd like to have a display of books and articles by members for our next annual meeting. If you have not sent a copy of your published work to the Library, now is the time! They need not deal with Russell or, necessarily, philosophy.

ABOUT OTHER ORGANIZATIONS

(33) Humanist Association of Minnesota (Asociacion Humanista de Minnesota) held a public meeting on December 5, 1985 at the David Jurgensen Residence, 806 West Lake Street #10, Minneapolis, MN. The subject was Part 2 of "Introduction to Humanism".

(34) PHRC, the Palestine Human Rights Campaign, sends newsletters and bulletins at monthly or bi-monthly intervals. It is interested in the indignities and pain allegedly inflicted on the Palestinians by the Israelis. It says it wishes to "reach out and educate the American public about attacks on Palestinian human rights carried out by Israel, a state supported and funded by the United States government." It is currently fund-raising to set up a system "to counter the Israeli government's [allegedly] powerful network of misinformation and cover-up..." The PHRC has a West Coast Office (811 North 45th, Seattle, WA 98107), an East Coast Office (PO Box 43344, Washington, DC), and a National Office (220 South State Street, One Quincy Court, Suite 1308, Chicago, IL 60604).

* * * * *

(35) We recall that, according to a full-page ad in The New York Times 16 years ago (2/23/70, p.21), BR sent a message to the delegates at the International Conference of Parliamentarians on the Middle East Crisis, meeting in Cairo on February 2, 1970.

Sending the message apparently was the last public act of BR's life. BR died on February 3, 1970.

The ad in the Times was signed by the Arab States Delegation, 405 Lexington Avenue, Suite 3711, New York, NY 10017.

Here are excerpts:

For over 20 years Israel has expanded by force of arms.

The aggression committed by Israel must be condemned...

The tragedy of the people of Palestine is that their country was "given" by a foreign power to another people for the creation of a new state. The result is that many hundreds of thousands of innocent people were made permanently homeless.

How much longer is the world willing to endure this spectacle of wanton cruelty?

It is abundantly clear that the refugees have every right to the homeland from which they were driven, and the denial of this right is at the heart of the continuing conflict.

- (36) "The Churchman", describes itself as "an independent journal of religious humanism, under the sponsorship of The Churchman Associates, Inc. It is edited in the conviction that religious journalism must provide a platform for the free exchange of ideas and opinions; that religion is consonant with the most advanced revelations in every department of knowledge; that we are in a fraternal world community; and that the moral and spiritual evolution of man is only at the beginning."

Two items in this newsletter -- "Why I am a Secular Humanist" (39) and "They Want War" (37) -- originally appeared in the January 1985 issue of The Churchman.

We are indebted to OPHELIA HOOPES for introducing us to The Churchman. Subscription \$10. Churchman Co., 1074-23rd Av. North, St. Petersburg, FL 33704.

ON WAR

'They Want War'

UNDER THE DISTRESSING influence of the Reagan landslide I went compulsively to the attic and picked up a book I read years ago, Erich Fromm's *Beyond the Chains of Illusion*. Like a man hypnotized I turned to a red-lined passage in which Fromm describes an indelible memory of World War I Germany: "My Latin teacher, who in his lessons during the two years before the war had proclaimed as his favorite maxim the sentence, '*Si vis pacem para bellum*' (if you want peace prepare for war), showed his delight when the war broke out. I recognized that his alleged concern for peace could not have been true. How was it possible that a man who always seems to have been so concerned with the preservation of peace should now be so jubilant about the war?" (Bertrand Russell noted the same phenomenon on the streets of London: mass jubilation when World War I was declared.)

Any relatively unbiased observer can see that most members of the present administration and many congressmen are dead ringers for Dr. Fromm's Latin teacher. They WANT war.

Walker Percy wrote, "War is better than Monday morning." Every-dayness and boredom are the enemies men hate worst of all. That's what crushed Mr. Mondale: Americans associated him with Monday morning. They know Reagan is bound for war but they don't care. Especially happy are the twice-born who see themselves holding a first-class cabin to heaven with tickets on the 50-yard line. There they can cheer gleefully as they watch the once-born writhe in agony beneath the nuclear fires of Armageddon.

As long as he has money in his pocket, the American man does not care where he's going. That means only a handful of congressmen (and a few concerned Americans) stand between "Monday morning" and Armageddon. Let us pray that we are able to hold off the raging hordes of war-lovers.

SECULAR HUMANISM (CONTINUED)

From The Churchman (January 1985):

WHY I AM A SECULAR HUMANIST

FOR IDENTIFICATION purposes only, I am a Baptist minister (Southern and American Conventions) whose career is summed up in four eastern North Carolina pastorates. I am also a secular humanist. And I don't wear two hats!

Please note that I said humanist. The "ism" messes things up. I am an American, but I do not believe in Americanism. I admire a scientist, but I will have nothing to do with scientism. I believe profoundly in Creation (God the Father Almighty, Maker of heaven and earth), but I reject creationism, and especially scientific creationism, as a contradiction in terms!

But if anyone calls me a secular humanist, I will reward him with blessings and not curses. Whatever opprobrium may be intended, I will not allow this to be an epithet of godlessness and infidelity. For my part, the Moral Majority is not going to get away with putting together two wonderful words that I regard as a thing of beauty and a joy forever and making them a witches' brew.

Consider the word "secular." In its original meaning it pertained to the age, the times, the world. Long before "secular" was used to distinguish the temporal from the eternal, the spiritual from the material, it denoted "this goodly frame, the earth." Thus the opening chapters of the Bible tells us that in the beginning God was involved in creating the secular, and we read that each time He caused something to come to be, He found that it was good. The psalmist therefore could sing that the "earth is the Lord's and the fulness thereof," and the Fourth Evangelist announce that God so loved the world that He sent His son into the world. Is there some way to remind the anti-secularists, who are so selective in their use of Scripture, of another text at this point: "For God sent not His son into the world to condemn the world but that the world through him might be saved"? We might all become born-again environmentalists if we pondered deeply the warning from the last book in the

By W. W. FINLATOR

"I proudly identify myself with civil liberties, social welfare, and environmental groups, and to my scandalized brethren of the faith, I am prepared blithely to reply: 'If this be secular humanist, make the most of it.'"

Bible: "Hurt not the earth, neither the sea, nor the trees."

And consider the word "humanist." Why are so many religionists afraid of it, and why should we abandon it to good people who write humanist manifestos? Humanist is biblical to the core. There is no better way to understand the stupendous doctrine of Incarnation ("The Word became flesh and dwelt among us") than the simple statement that the Divine became human. Why else would Jesus call himself "Son of man"? From an infant he grew in stature and mind, in favor with God and man, that is to say, in humanity. And there are far more references in his teachings to mercy, forgiveness, unselfishness, loyalty, humility — the things that make us fully human — than to prayer, heaven, hell, angels, and devils. In the universal prayer he left with us is the petition that the kingdom of heaven shall be enacted "on earth."

Few things have so shaped the direction of my ministry as reading the statement years ago by William Temple, Archbishop of Canterbury, that of all major religious faiths, Christianity was undoubtedly the most materialistic. It is a bold and unapologetic affirmation of the secular and the human, reminding us that what we do to and for another we do to God and that unless we love human beings whom we see, we cannot love God whom we do not see. This radical enlightenment came at a time when we were distancing ourselves from the Russians by calling their system atheistic and materialistic. Since then I have sung with increased

fervor and faith, "This is my Father's world."

Such liberating experiences as this have made me free to reach out to groups beyond the church that I regard as humanizing our life and time. I have therefore become a member of what the church in earlier ages designated the "secular clergy" in addition to the more officially sanctioned regular or "spiritual" clergy. I have never entertained a notion of forsaking religious observances, but I have often found that what Jesus called the "weightier matters of the law," justice, mercy, equity, are more espoused by groups outside the church. Hence I proudly identify myself with civil liberties, social welfare, and environmental groups, and to my scandalized brethren of the faith, I am prepared blithely to reply: "If this be secular humanist, make the most of it."

There is a final dimension in my secular humanist profession which I find so exciting, so relevant and so in need of, well, preaching today. That has to do with the Constitution of the United States which is a totally secular humanist document in spite of all the asseverations of the fundamentalists that our government is founded on Christian principles. Nowhere are God, Jesus, Christ, heaven, hell, forgiveness, creation, etc., mentioned in the Constitution. Religion is mentioned twice, and both times negatively, meaning it is out and that the new government would be religiously neutral. As a Baptist believing profoundly in church-state separation, how I love this!

But on the other hand, how gloriously humanist is this secular document. The new government was instituted with a solemn commitment to establish justice, insure domestic tranquility, promote general welfare, and secure the blessings of liberty. All this was to be the prime business of the government, and it sounds so

Dr. Finlator recently retired as minister of the Pullen Memorial Baptist Church, Raleigh, N.C.

humane. Furthermore, the people were guaranteed free speech and assembly and press, due process, equality under the law, privacy, protection from cruel and inhuman punishment, and all discrimination based on color or race or creed, and as to their reli-

gion, or non-religion, neither help nor hindrance from the government. Dear God in Heaven, what a wondrous secular humanist document for all Americans!

There is that inspiring story of one of the Founding Fathers in

Philadelphia replying to the question what kind of new government had he and his colleagues forged: "A Republican form, if we can keep it." My paraphrase, so poignant for our day, would be: "A secular humanist form, if we can keep it." *

BY BERTRAND RUSSELL

- (42) 1938. From "Dare We Look Ahead?" (NY:Macmillan, 1938), with thanks to TOM STANLEY:

SCIENCE AND SOCIAL INSTITUTIONS

★

THE EFFECTS of science on Social Institutions are only beginning. Science has been important in human life for three hundred years, and according to the astronomers life is to continue on this planet for about a billion years. If, therefore, I were to treat my subject in due proportion, I should spend the first millionth of a second on the effects of science hitherto, and the rest of the hour on its future effects. I will, however, make a somewhat less equitable division, and spend as much time on the past and present as on the future.

We may consider the effects of science under four heads: (1) Its effect on beliefs; (2) on war; (3) on production; and (4) directly on the minds and bodies of human beings.

The effect on beliefs, apart from certain effects on war, was the earliest of these. Science began to have recognized social importance at about the time of Charles II. The Merry Monarch founded the Royal Society as a cure for what was in those days called "enthusiasm," that is to say, fanatical religious belief. The world had had a considerable experience of creed wars, and Charles II, unlike his brother, was not prepared to suffer for any creed. He hoped that the scientific habit of mind would have the effect of making people less cocksure and less willing to endure martyrdom for their convictions. In this, on the whole, he was justified. All the different sects became milder at this time. Those Jesuits who were ardent disciples of Descartes were much less interested in persecution than the Jesuits of an earlier generation. Anglicans became bland and lost the fierceness of Laud. Nonconformists, having failed in their bid for supremacy, rapidly diminished in fanaticism. The kind of way in which Swift satirized the wars of religion would have been totally impossible before the accession of Charles II. In this change of the general temper science was, of course, only one factor, but it was an important one, as anybody may see in reading Pepys. In France science had, at first, the same kind of effect upon men's tempers

as in England, but after the suppression of the Jansenists Cartesianism fell out of favour in ecclesiastical circles, which, moreover, for a long time looked askance at Newton as a Protestant innovator. The consequence was that science became anti-clerical, and ultimately revolutionary. Napoleon cured it of this by giving it pensions, and from his time onwards science has been everywhere a recognized element in the social system. I must, however, make one exception; the third Reich, like revolutionary France, has decided that it has no need of savants. A few tame professors survive to perform the correct mumbo-jumbo, but, in the main, the scientific intellect of Germany is in exile.

The effect of science on belief is not now what it was at first. Originally, it was discoveries rather than inventions that were felt impressive, and the discoveries, since they disproved what had previously been supposed known, diminished rather than increased the amount of knowledge men believed themselves to possess. Now, on the contrary, it is inventions that cause the popular respect for science, which has come to be felt as a reliable kind of magic, by which our feeling of power is immeasurably increased. Originally, science fitted into the traditional contemplative conception of knowledge; now, conversely, it has caused knowledge to be conceived as essentially an instrument in practice.

The effect of science on war has been hitherto, perhaps, its most important effect. Persons who dislike war are apt to underestimate the importance of military technique in history, although at all times it has been a vital factor in great events. Men of science, from the beginning, have always recommended themselves to rulers by their power of being useful in war. Everybody remembers what Plutarch has to say about Archimedes at the siege of Syracuse. Leonardo, in applying for a job under the Duke of Milan, wrote at great length about his skill in the art of fortification, and added in a postscript that he could also paint a bit. Galileo occupied himself considerably with artillery, and it was probably cannon balls that caused him to work out the trajectory of a falling body. In the French Revolution all the scientists whose heads remained upon their shoulders occupied themselves feverishly with the problem of the manufacture of explosives. During the Crimean War, Faraday was appealed to by the War Office on the subject of poison gas. And in the present day,

as everyone knows, even the most pacifistic physicist or chemist can hardly avoid contributing something to the art of war.

At every stage, changes in the art of war have had important political repercussions. The invention of gun-powder destroyed chivalry and the impregnability of castles. In the seventeenth and eighteenth centuries the profession of the private soldier required more skill than it does at present; this was, therefore, the period of small professional armies, which could be recruited by monarchs without the need of any popular appeal. As the skill required in the private soldier became less, it became possible and therefore important to have large armies. For this purpose popular enthusiasm was a help, and the victories of the French Revolution are largely attributable to this cause. Modern war requires not only huge armies, but enormous numbers of munition workers. It cannot, therefore, be successful unless the nation is at one with the Government. This is the chief reason which has caused so many Governments to become more or less democratic. There are signs, however, of a new development, in which victory will depend upon scientific skill rather than upon numbers. Victory will go to the Government which can most successfully spread its poison gas and bacteria among the enemy. This is a problem rather of technical ingenuity than of man-power, and suggests for the future an oligarchy employing scientific experts. This change will facilitate the holding of power by minority dictatorships, whether Fascist or Communist.

Looking a little further ahead, it is to be expected that new-style tyrants will come to depend, like those of Greece and Rome and Bagdad, upon bands of mercenaries, but the mercenaries will be men of science. Sooner or later, as in those historical precedents, the mercenaries will see no reason to serve tyrants, and will seize power themselves. Whether the resulting scientific oligarchy will be pleasant or unpleasant, I do not venture to predict.

One of the difficulties of warfare in modern times has been that the generals and admirals, through being conservative in politics, have acquired a conservative outlook upon other matters also, and more particularly upon the technique of war. The Duke of Wellington objected to rifles as an innovation. The British Admiralty continued to construct men-of-war of wood, and to view steam with disfavour, for about half a century longer than they should have done. It was the American Civil War, conducted in the main by people who were not professionals, which led the way to the modern type of battleship. If I were conducting a war, I should insist that all the generals must be business men and all the admirals civil engineers; I should confine professional soldiers and sailors entirely to the lower ranks.

It is likely that during the next fifty years the importance of air warfare will exercise a decisive effect on politics. Owing to the fact that the aeroplane moves in three dimensions instead of two, attack is easy and defence hardly possible; moreover, the importance of the sea is enormously diminished, since it is probable that sea communications could not be kept open in time of war. For these reasons, war, if it occurs, will be more destructive than it used to be. It may therefore be assumed that in the

next war all the belligerents will destroy each other, with the result that the whole world will fall under the domination of the largest neutral, provided any important country has the sense to remain a spectator. In this way a world government may be brought about, and civilization may survive.

Modern war depends so much upon science, and science changes so quickly, that victory is likely to be more dependent upon scientific skill than upon any other single factor. It is scarcely possible that science, even on the purely technical side, can long flourish in the atmosphere of Nazi Germany. At present Germany still has the benefit of the scientific skill built up in past times, but it is to be expected that within twenty years, at latest, the lowering of the intellectual level since the accession of Hitler will cause a loss of military efficiency as compared with countries where intelligence remains more or less free. The very widespread belief that a totalitarian state is more efficient in war than one with a more liberal régime is, I believe, as complete a delusion as the analogous belief in absolute monarchy which existed in the time of Louis XIV.

The effect of science on production is such a hackneyed theme that I propose to say almost nothing about its more familiar aspects. There are, however, two matters in which science has not yet exercised its full effect, as to which I wish to say something. First: under the influence of nationalism, every state wishes to be as far as possible economically self-supporting. This is becoming increasingly feasible through the substitution of synthetic for natural products. Artificial silk is familiar; synthetic rubber, synthetic wood, synthetic wool, and so on, will follow in due course. There was a time when tropical countries were needed for the production of sugar; they are still needed for tea and coffee. But probably new drinks could be made out of the produce of the temperate zone, which advertisers could persuade us are just as nice as tea and coffee. International commerce is rapidly losing its importance, and is likely, unless nationalism loses its force, to have even less importance in the future than it has now. This is to be regretted, since, speaking historically, almost all intellectual and moral advance has been connected with commerce, which has a liberalizing effect, both by involving contact with foreign customs and because it is conducted on a basis of mutual advantage rather than of force. The Greeks, the Renaissance Italians, the Dutch, and the English owed their merits to commerce. The Japanese owe their demerits to the two and a half centuries during which all intercourse with foreigners was prohibited.

Secondly, the possibilities of science in relation to food production have, as yet, scarcely begun to be exploited. With existing knowledge, it would be possible, if it were desired, to produce all the food required in Great Britain on a small part of the soil of Great Britain. The Sahara, so I am informed by my friend Mr. Bernal, could be made fertile by the simple expedient of preventing the evaporation of dew. I suppose that something of the sort could be done in the interior of Australia. In a slightly more distant future there is the possibility of synthetic food, which would destroy the necessity for agriculture, and thus transform politics and social life.

One effect of science in relation to production has been made familiar by Marx, and that is the growth

in the size of economic organizations. But it is not only economic organizations, it is organizations of every kind that increase in size as a result of scientific technique. There is, it is true, one apparent exception. Since the Great War, states have tended rather to diminish than to increase in size, but this is due to nationalism, which cuts across the effects of science. If science could operate unchecked, it would soon produce a single world state.

I come now to what will almost certainly, in the future, be the most important of all the effects of science, namely, its direct operation upon man himself. Hitherto we have accepted man with his desires and capacities as a datum, and have used science to further the satisfaction of his desires, but we are beginning to understand how to treat man himself as a product which can be indefinitely modified by science. A man's character is formed by a great variety of causes: his congenital characteristics, his diet, his education, his social circumstances, and the social traditions in which he lives. It is clear that by diet and bio-chemical treatment a man's character can be completely transformed. If Carlyle's dyspepsia had been cured, how different his opinions would have been! If Luther had not suffered from constipation, he would have been less obsessed by the works of Satan. What can be done mentally to alter man is not less important than what can be done physiologically. We are beginning to understand the art of manufacturing opinions wholesale as we manufacture pins. The technique is not yet quite perfect, but it may be confidently hoped that within another hundred years almost every citizen of a state will have, on almost every subject, the opinions which the Government of that state wishes him to have. Education, the press, the cinema, and the radio are already being used to this end, but as yet they cannot be used so effectively as they soon will be. There is still a liberal tradition which has not died out, even in the most authoritarian states. There are older men who remember days of comparative liberty, and who may instil doubts into their children. The hypnotic technique is not yet perfect, and does not yet begin at a sufficiently early age.

The ritual is not yet so impressive as that of the Catholic Church. And Christianity is still able to offer some opposition to the new paganism. Moreover, economic circumstances as yet make it difficult to give people that degree of happiness which is necessary to ensure that they shall not become rebels. All these, however, are temporary difficulties. If the authoritarian state survives long enough, and if it has the good sense to listen to the advice of educators and advertisers, we may confidently expect that it will achieve a degree of uniformity of opinion among its subjects to which there has been nothing analogous in past history.

The congenital part of man is as capable of scientific manipulation as the part which is due to education. As yet the laws of heredity are not sufficiently ascertained to make eugenics completely reliable, but no doubt the necessary knowledge will be acquired before long.

In connection with eugenics, it is natural to consider a question which raises a doubt as to the stability of a scientific society. Throughout the last sixty years, education and industrialism have led to a fall in the birth-rate wherever they have reached a certain level,

and it is now clear that, even if there are no wars, the most civilized nations will rapidly dwindle in the next half-century, unless some revolutionary measure is taken to counteract this tendency. There is nothing mysterious about this. Some people like children, but there are other ways of spending men's money and women's time which most men and women prefer to school bills and pregnancy. Even the minority who would like a large family are apt to find the expense prohibitive. The more education is prolonged, and the more the life of the childless is made agreeable, the stronger become the reasons of self-interest against having children. Yet with the progress of science and technique the prolongation of education becomes increasingly important.

Such mild measures as the French Government, for instance, has been willing to adopt with a view to arresting the fall of the birth-rate, have proved totally ineffective. The German Government hopes to achieve the result by means of ignorance and poverty. But this method will not replenish the numbers of the governing class, which must sooner or later be submerged by a rising flood of semi-barbarous slaves. To preserve a scientific society, the supply of men who combine education with ability must be kept up. It is not at all clear that civilized communities will think this worth the necessary sacrifices, not only of money, but of ethical convictions. If they do not, our present level of scientific culture is biologically unstable, and must be expected to give place to a less sophisticated society.

We may, I think, if scientific societies survive, expect a change in ethical outlook, which has already begun, but is likely to proceed much further. Christianity allowed certain rights to the individual, and most of us still feel that there are some things which ought not to be done to a man for the sake of some public advantage. It might be said, for example, that the purpose of hanging murderers is to discourage murder, and that this effect is produced so long as it is believed that murderers are hanged. It does not matter, therefore—so it might be argued—whether we hang the right man or somebody else, so long as the public can be made to believe that we have hanged the right man. Such a point of view we feel to be shocking, but with the decay of the ethic we inherit from Christianity it may cease to be thought shocking by rulers. They will have a tendency to arrogate to themselves the characteristics of the Calvinist God, who was not guided by justice in His selection of the elect from among the reprobate. They may even find a justification of the *agent provocateur* in the theology of the supralapsarians, who held that God placed man in circumstances which made it certain that he would sin, in order that his Creator might have the opportunity of exercising the virtue of justice by punishing him. The psychology which the Calvinists attribute to God is that of absolute power devoid of benevolence, and unfortunately this is the very psychology which the opportunity of scientific manipulation tends to produce in the rulers of authoritarian states. And with this psychology goes a ruthless ethic.

The social effects of science applied to human beings may be expected to depend upon the form of government. As we have seen, this kind of science gives immense powers to rulers, and there is no reason to suppose that, where democracy does not exist,

rulers will use their powers benevolently. On the contrary we must expect that, as in the past, they will use their powers to make their own rule secure and to make its benefits to themselves as great as possible. This will apply to all States where there is not democracy, and it may be expected to be just as true in Russia as in Germany. On the other hand, where there is democracy the scientific power in relation to human beings is likely to be used for the general welfare, that is to say, to promote health and intelligence and the kind of education that leads to happiness without subservience. The more the manipulative powers of science are increased, the more important it becomes that government should be democratic, for the authoritarian state, if it continues, will almost inevitably develop a distinction of an upper and a lower caste, the upper caste having all the power, all the initiative, all the intelligence, and all the rewards above bare subsistence, while the lower caste, like domestic animals,

has a life of unrelieved toil, which it endures because of an artificially produced acquiescence. Such a society is politically possible, and could be stable. I think the chief reason for expecting it not to prevail is that it would probably be inferior to a free society in military efficiency, but this is a doubtful matter, and the danger is very real.

Men who think about a scientific society are apt to assume in its rulers the kind of benevolence which is found in many individual men of science. This, however, is a mistake. History shows that, in the main, governments are only benevolent when self-preservation compels them to be so, and not always even then. In any case, benevolence is a dangerous frame of mind, since it implies superiority to its object. The benevolent ruler will give to his subjects what he thinks they ought to want, not what, in fact, they do want. And it will be an axiom with him that respect for himself is an essential condition of their happiness. The power of manipulation which science gives thus involves psychological dangers which can only be guarded against by making a government sensitively responsive to public opinion. Science, since it makes life more organized and society more organic, necessarily increases the extent to which government interferes in the life of individuals. It therefore makes government a matter of greater importance than it has ever hitherto been, and also makes the avoidance of tyranny more difficult. It tends to encourage the manipulative outlook, which is a dangerous one. Science tends to transfer God-like attributes from heavenly to earthly rulers, and an increasing number of powers formerly attributed to God are placed by science in the hands of human beings. The result is an intoxication of power, which is very dangerous to sanity and stability. The man who finds himself transformed into a god has something of the mentality of a beggar on horseback; humility disappears, and, with it, wisdom.

Professor Joad has recently said (*New Statesman*, Oct. 2, 1937): "Dominated by science, men have come to believe that the understanding of causes will in itself enable them to alter results. The belief, so far at least as human beings are concerned, is a delusion. To understand why one is jealous, ill-tempered, or sadistic does not prevent one from being jealous, ill-tempered, or sadistic. It is not by

knowing more that men and women will be saved, but by becoming virtuous. Unfortunately, the recipe for the production of virtue is not known."

This is only a part of the truth. If you have defined virtue, the scientist, not perhaps at the present day, but before long, will be able to give you the recipe for producing it in other people. He will also give you the recipe for producing vice. What the

scientist cannot do is to define virtue and vice. Everything that has to do with values is outside the province of science. Given the power conferred by science, without a just estimate of values, the power will be used to produce bad effects. But what is a "just" estimate of values, and what are "bad" effects? Can I say anything more than that a "just" estimate is my estimate, and that "bad" effects are those which I dislike? To such questions, science as such can offer no answer. We may take a democratic view, according to which, in estimating values, all men count equally; or we may take an aristocratic view, according to which only a favoured minority are to count. I do not know of any way of proving that the democratic way is the right one. But as a matter of politics, it is clear that the aristocratic view must involve indefinite strife, since no one is going to concede willingly that he belongs to the negligible portion of mankind. It follows that, if the aristocratic view were general, it would involve the disappearance of the great majority of its adherents, and unless you are sure that you will not yourself belong to this majority, you will be unwise in adopting it. But such arguments are outside the realm of science.

The conclusion of this matter is comparatively simple. Science immensely increases the power possessed by governments of realizing their desires. If power is in the hands of a minority, science enables this minority to realize its desires. If it is in the hands of the majority, it gives the same facility to the majority. It cannot be assumed that power in the hands of a minority will be used to further the interests of the community as a whole, for all experience shows that oligarchies, unless under the influence of fear, tend to ignore the interests of their subjects. Therefore the more science enables governments to realize their desires, the more vital it becomes that government should be democratic.

There is one other matter, in connection with science and social institutions, on which something should be said, and that is the rate of change. Science hitherto, ever since it began to influence daily life, has produced a continually increased rapidity of change, and it is sometimes assumed that this is likely to continue indefinitely. I do not myself think so. There have been in history a few periods of rapid progress, interspersed with long periods of stagnation or retrogression. There was the prehistoric period when agriculture was invented, the early period of Egypt and Babylonia, the great age of ancient Greece, and the time from the Renaissance to the present day. At these various times certain portions of the human race made rapid progress, but progress is exceptional and stagnation has been the rule. I think it very doubtful whether science will ever permanently change this. It seems more likely that, after a revolutionary ferment, from which we are now suffering, some new stability will be achieved, and new science will almost cease to be

produced. One may expect, as the result of increasingly destructive wars, the establishment of a world government, which, in view of the horrors of the epoch immediately preceding its establishment, is likely to care more for stability than for anything else at all. One may assume that it will be able, from a military point of view, to ensure governmental stability for itself, and that it will set to work to inculcate a conservative outlook in the population of the world.

In the absence of the dangers of war, and assuming that economic competition has been done away with, there will not be the same practical stimulus to new inventions that there is at present, and the world may settle down as the Roman Empire did in the time of the Antonines. No doubt such immobility will not last for ever, but it is easy to imagine its lasting for a very considerable time. Or, alternatively, if no world government results, wars may so lower the level of civilization that men will no longer be able to master the scientific technique of our time, and that, as in the Dark Ages, they will look back upon the past with ignorant awe. But I cannot believe that, throughout the billion years which Sir James Jeans allows us, we shall continue the rate of scientific change which has been characteristic of the past hundred years. Sooner or later mankind will need a period of rest and recuperation, but I doubt whether any of us will live into that period.

In any attempt to forecast the future of scientific societies, we are met, as I have tried to show, by

two reasons for doubting their stability. The first is war, the second the declining birth-rate. It is fairly clear that mankind cannot remain scientific and survive unless large wars are altogether prevented; it is also obvious that wars can only be prevented by the creation of a single world State with a monopoly of armed force. As for the declining birth-rate, that can only be checked by measures which are financially unattractive and which also involve a considerable shock to our ethical convictions. Whether both those sources of instability can be eliminated is very questionable. But if they can be eliminated, there remain two forms of possibly stable scientific society, one democratic and the other oligarchic. Both will demand the control of all important economic matters by the State, but politically they will differ widely. In the democratic form, education will be general, and all will have equal economic opportunities. In the oligarchic form, political and economic power will belong to a governing minority, whose comfort and security will be the main purpose of the State, while the subject majority will be kept acquiescent by the combined operation of force, propaganda, and bio-chemistry (i.e. drugs). At the present moment, it is impossible to guess which of these two forms of scientific society will prevail, or even whether science will not prove self-destructive, and be replaced by a new barbarism. In the latter event, science will, no doubt, arise again in due course. Perhaps next time its victims will show more wisdom than our century appears to possess.

WE THANK

We would like to acknowledge our great debt to Tom Stanley, BRS Librarian and RSN well-wisher. He has been sending us excellent items for the newsletter for the past year and a half or more. A book lover and book dealer, Tom gets to see a lot of books; luckily for us, he keeps us in mind. This would have been a lot thinner newsletter, and we would have missed much good reading, but for Tom. Another reliable contributor to the newsletter is BOB DAVIS; no issue ever lacks one or more items from Bob. To Tom and Bob, we say: Many thanks! Vielen Dank! Grazie! Merci! Gracias!

(43)

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

Chairman, Harry Ruja; President, David S. Hart; Vice-President, Marvin Kohl; Treasurer, Dennis J. Darland; Secretary, John R. Lenz; Vice-President/Information, Lee Eisler.

(44)

FOR SALE

Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid. Order from the newsletter, address on Page 1, bottom.

TREASURER DENNIS DARLAND'S REPORT

(45) For the quarter ending 12/29/85

Bank balance on hand (9/30/85).....	258.58
Income: 12 New members.....	210.00
6* Renewals.....	94.00
total dues.....	304.00
Contributions.....	302.03

RUSSELL SOCIETY NEWS

No. 50

May 1986

- (1) Highlights: June 21st Annual Meeting arrangements (2). BRS Award to People For the American Way (15), (39). Warnke on Reagan and arms control (16). Proxmire on Star Wars (18). BR on China (6), on comets (7), on romantic love (11). "Bertrand Russell on God and Religion", Al Seckel's new book (8), reviewed (37). Linus Pauling on God the Creator (19). "An Appeal to Agnostics and Atheists" (20). Director nominations wanted (35). A member runs for Congress (21.5). An asterisk in left margin = a request. The Index is on the last page.
-

(2) ANNUAL MEETING (1986)

June 21st, NYC. This year's meeting is shorter and simpler than usual. And we're going to have something we've never had before: the winner of this year's Bertrand Russell Society Award accepting the Award in person. Something else is also new and different: the winner this year is not an individual but an organization -- People for the American Way -- founded a few years ago to oppose right wing fundamentalists, such as the Moral Majority, who are threatening our constitutionally guaranteed liberties. (More about that elsewhere in this issue. See Item 15.) Its President, Anthony T. Podesta, will accept the Award, and will give the evening's major address.

We meet for one day only, Saturday, June 21st. The meeting-place is the headquarters of the New York Society for Ethical Culture, 2 West 64th Street, at the corner of 64th Street and Central Park West. There'll be an afternoon session, from 1 to 5 and an evening session from 7 to 11. Nothing is scheduled between 5 and 7, giving people free time to have dinner in the neighborhood, which is close to Lincoln Center and its many restaurants. Or for simpler fare and economy: the YMCA at 5 West 63rd Street, quite nearby.

The Program.

AFTERNOON SESSION, in the Adler Study:

- 1:00 Doors open. Informal greetings.
- 1:30 Call to Order. Welcome. Announcements.
- 1:45 Society business meeting.
- 2:15 Film: "Bertrand Russell Discusses Happiness"
- 2:30 Marvin Kohl's paper, "Russell and the Attainability of Happiness", is reproduced in this issue (). An open discussion will be moderated by Professors Kohl and Hugh Moorhead.
- 4:00 Red Hackle Hour (New members: Red Hackle was BR's brand of Scotch Whisky.)
- 5:00 End of afternoon session.

Two hours free time -- from 5 to 7 -- for dinner in the neighborhood.

EVENING SESSION, in Ceremonial Hall:

- 7:00 Doors open.
- 7:30 Call to Order. Welcome. Announcements.
- 7:45 BBC-TV Film, "Bertie and the Bomb". (1984) Not seen in America.
NBC-TV FILM. "Bertrand Russell" (1950).
- 9:00 Break. (S-t-r-e-t-c-h)
- 9:15 Presentation of Special Award to Corliss Lamont
- 9:30 Presentation of Bertrand Russell Society Award to People for the American Way, represented by its President, Anthony T. Podesta. Mr. Podesta's talk will follow.
- 11:00 End of session.

Costs. There are none...except for your own personal expenses (lodging and meals.) There is no registration fee.

To reserve lodging. New York is full of hotels, and most of them are expensive. You must make your own arrangements, by writing or phoning in advance. Here are 3 places to stay, within easy walking distance of our meeting.

The Mayflower Hotel, 61st St. and Central Park West, NY NY 10023. 800-223-4164; 212-265-0060. Full service hotel. Single, \$107-137. Double, \$122-157. Suite, \$190-205. Courage! Keep reading.

Hotel Empire, Broadway & 63rd St., NY NY 10023. 800-221-6509; 212-265-7400. Full service hotel. Single, \$70-95. Double, \$85-110. Each additional person, \$15. Family room (up to 4), \$90-110. Suite, \$300. Read on.

Side YMCA, 5 West 63rd St., NY NY 10023. 212-787-4400. Economy accommodations with recreational privileges. (We remember a gymnasium & a swimming pool.) Single sans bath, \$26; with bath, \$38. Double sans bath, \$36, with bath, \$44.

Rates shown are per day, and do not include taxes and possibly other fees; best to inquire. For other lodging

suggestions, and NY tourism information, ask the New York Convention and Visitors Bureau, 2 Columbus Circle, NY NY 10019. 212-397-8200.

How to get there. If you are on the East Side of Manhattan, say Grand Central Station, take the 42nd Street Crosstown subway shuttle; it takes you to 7th Avenue and 42nd St. Do not exit from the subway system. Take IRT West Side Subway (local) up to "66th Street/ Lincoln Center" station, and walk to Central Park West and 64th Street.

If you are on the West Side, in the Port Authority Bus Terminal (42nd St. & 8th Avenue), take the Independent (8th Avenue) Subway to "Columbus Circle" station (Broadway at 59th St.) and walk 5 blocks to 64th St. Or take the bus on 8th Avenue, up to 64th St. and Broadway. (Some buses go up Central Park West, which starts at 59th St. Ask.)

Or take a taxi.

But no matter how you get there, GET THERE. And bring a friend (or several!)

- (3) Marvin Kohl's article, "Russell and the Attainability of Happiness," as it appeared in International Studies in Philosophy 16:3 (1984), is reproduced here. We have omitted the 32 footnotes, and will lend on request. The article will be the subject of an open discussion, moderated by the author and Hugh Moorhead, at the June 21st meeting.

RUSSELL AND THE ATTAINABILITY OF HAPPINESS

MARVIN KOHL

In this paper I propose first to bring together the central aspects of Russell's theory and examine his notion that happiness depends upon having and appreciating reasonably continuous success at satisfying one's basic needs and correlate interests. Secondly, I wish to examine the pessimist charge that happiness is not attainable largely because of man's unavoidable fear of death. Here I shall suggest that Russell's meliorism successfully parries this and related objections. Thirdly, I shall look at the problems involved in determining exactly what happiness is, in particular, whether or not Russell's characterization, if it is an accurate one, increases the probability of the inattainability of happiness. The answer to be arrived at here is relevant to his claim that, "an occurrence is 'good' when it satisfies desire."¹ My thesis is that, while Russell's rich but loose characterization does raise difficulties, it is a vital part of what may be called an emerging process satisfaction utilitarian social ethic.²

I

Let us begin with his distinction between two sorts of happiness, plain and fancy. The first is open to any human being, the other is not. Plain happiness requires the having of a central purpose which guides one's life. It also requires that this purpose be end-specific, that it permit progressively increasing success, and that the individual find both joy and worth in this central task.³ In other words, plain happiness (perhaps best called "having a meaningful life") is, according to Russell, the result of having a certain kind of purposeful life. Fancy happiness, on the other hand, is a mixed mode caused by a more complex set of conditions and, as a rule, is defeated by the existence of contrary conditions. Russell does not explain the relationship between plain and fancy happiness, taking it for granted that the former is easily obtainable and an almost necessary condition for the latter. More often than not, he simply refers to "fancy happiness" as "happiness."⁴

Aside from changes in the social system required to promote happiness⁵ or personal catastrophe, ordinary day-to-day unhappiness is largely caused by mistaken views of the world, mistaken ethics, and mistaken habits of life. On the other hand, ordinary men and women

can achieve happiness, with only a small amount of external prosperity, if they have good health, a cheerful disposition and a sound philosophy of life. . . .⁶

Omitting saints, lunatics, and men of genius, ordinary people need, for their happiness, certain fairly simple conditions, which with a little wisdom in economics and politics, could be fulfilled for almost everyone. I put first purely physical conditions—food and shelter and health. Only when these have been secured is it worth while to consider psychological requisites.⁷

In *The Conquest of Happiness* Russell provides what is perhaps his most complete single description of the requisite general conditions.

Happiness . . . depends partly upon external circumstances and partly upon oneself. . . . Certain things are indispensable to the happiness of most men, but these are simple things: food and shelter, health, love, successful work and the respect of one's own herd. To some

people parenthood also is essential. Where these things are lacking, only the exceptional man can achieve happiness. . . .⁸

In short, happiness depends on a combination of internal and external causes. It depends upon having *and* appreciating reasonably continuous success at satisfying one's basic needs and correlate interests.

Notice that Russell also maintains that what is at issue is not universal happiness but the happiness of most persons. Thus, he insists that he is not talking about the happiness of exceptional individuals but only about most ordinary men and women. "Our problem," he writes, "is to preserve instinctive happiness for the many, not only for a privileged few."⁹

II

Three of the more interesting charges against Russell are: first, he assumes that because happiness seems desirable, it must also be obtainable; second, that since man's consciousness and fear of death are unavoidable for all who minimally think about life, that they are, in particular, the most serious threat to human happiness; third, that since Russell is an "apostate pessimist," he passes too lightly over the problem of pessimism.¹⁰ Let us consider Schiller's charges, starting with the last point.

It is difficult to say whether or not "apostate pessimist" is an accurate label. I am inclined to believe it is not. If Schiller's criticism is based upon Russell's position in *A Free Man's Worship*, as I suspect it is, then he is in error because that work is not so much the expression of pessimism as it is the rejection of optimism. And it does not follow that the rejection of optimism entails pessimism. Apparently Schiller believes, as perhaps many do, that optimism and pessimism are logical complements. But this is not the case.

Pessimism, according to Russell, is the philosophy of life which holds that the world is essentially evil and that, because of this, life is ultimately not worthwhile. Non-pessimism is roughly that class of beliefs which, for a variety of reasons, deny that the world is essentially evil. Thus, a non-pessimist may be an *optimist* or a *meliorist*. An optimist is someone who generally holds that the world is essentially good. A meliorist, on the other hand, is someone who maintains that neither the evil nor the goodness of the world appear to be ultimately determined and, most important, that man therefore has both the freedom and the power of aiding in the world's betterment. The meliorist generally holds that it is possible, if man chooses to make the effort, to make the world a better place to live. Given this frame of reference, Russell emerges as the great prophet of melioristic humanism and *A Free Man's Worship*. I suggest, is best *intellectually* interpreted as an attempt to determine the rational limits of that meliorism.

Another possible source of confusion is the distinction between being intellectually and being temperamentally a pessimist. One can, I think, make a reasonable case for Russell being a temperamental pessimist during much of his early adulthood. His relative isolation from other children, his social isolation due to his mathematics study, his alleged unrequited love for Mrs. Whitehead, and his "natural" shyness—all may have contributed to his tendency to emphasize the negative, and to prehend the world with an attitude of relative despair. In this sense, there is some truth to Schiller's charge. However, it is important to realize that there is little evidence to show that this mode of

emotional response was intellectually grounded or was the result of the kind of dispassionate rational scrutiny typical of Russell—and much evidence that it was not. Even though Russell may have been a temperamental pessimist during the early adult season of his life, he did not (even at that time) confuse that disposition (which resulted from poor education and a largely unhappy social environment) with the truth about the external world. I have already suggested that *A Free Man's Worship*, when scrutinized from an intellectual point of view, is definitely melioristic, or at least ends upon that note.

In the *Conquest of Happiness*, he stresses the point that "reason lays no embargo upon happiness" and that the pessimists are "unhappy for some reason of which they are not aware, and this unhappiness leads them to dwell upon the less agreeable characteristics of the world in which they live."¹¹ And in *The History of Western Philosophy*, he maintains that "from a scientific point of view, optimism and pessimism are alike objectionable" and that "belief in either pessimism or optimism is a matter of temperament, not of reason."¹² Meliorism, on the other hand, is not predominantly a matter of temperament. It rests, or at least Russell's particular version appears to rest, on the following claims:

- (1) Judgments that there are certain states of affairs are judgments of fact.
- (2) Whether or not certain states of affairs—the inevitability of death, the shortness of certain lives, our relative lack of power over external nature, etc.—are evils is a matter of value judgment.
- (3) Even if we conclude on the basis of correct valuation that there is a long list of evils that are (almost as a rule) beyond our power, it does not follow that life is not worthwhile.
- (4) The reason is that we create our own values. And it is because we create our own values that, whatever plight the world may be in, we can decide, rationally decide, to accept what cannot be changed, change what we can and should, and enjoy both our limited powers and the sheer experience of being alive.

In a sense we have replied to the "terror of death" argument. According to Russell, "the wise man will be as happy as circumstances permit, and if he finds the contemplation of the universe painful beyond a point, he will contemplate something else instead."¹³ Similarly, the wise man is not motivated by irrational fears, and it is as irrational to fear death as it is to fear the realities of life. Fear is the great enemy. It "should not be overcome not only in action, but in feeling; and not only in conscious feeling, but in the unconscious as well."¹⁴ It is possible "to educate ordinary men and women that they should be able to live without fear."¹⁵ And once fear is eliminated and rational courage is substituted, personal death will appear a trivial matter.¹⁶ "The secret of happiness is to face the fact that the world is horrible, horrible, horrible . . . You must feel it deeply, and not brush it aside . . . You must feel it right in here"—(Russell said) hitting his breast—and then you can start being happy again."¹⁷

The basic question is whether Russell is right in holding that it is possible to educate ordinary men and women that they should be able to live without fear at least of death. Pessimists, like Tolstoy and Schiller, seem to be claiming that it is impossible to do so, that death, so to speak, is a natural, if not ontological, terror. Common sense and the evidence indicates the contrary to be true. Attitudes toward dying and death are malleable.¹⁸ And while it is probably an exaggeration to say that we can come to view personal death as a trivial matter, Russell seems to be correct in holding that the terror of death and irrational fear can be eliminated.

Russell believes that a combination of meliorism and a long view of things provide a sufficient antidote to thwart the paralysis of utter despair. Man can be educated and is capable of growth. Man not only can improve his lot in life but, even after very bad times, he resumes his movement towards progress. Two of Russell's most revealing statements occur in the context of an evaluation of Spinoza's philosophy. I shall quote them at length.

The problem [of the wicked having power] for Spinoza is easier than it is for one who has no belief in the ultimate goodness of the universe. Spinoza thinks that if you see your misfortunes as they are in reality, as part of the concatenation of causes stretching from the beginning of time to the end, you will see that they are only misfortunes to you, not to the universe, to which they are merely passing discords heightening an ultimate harmony. I cannot accept this; I think that particular events are what they are and do not become different by absorption into a whole. Each act of cruelty is eternally a part of the universe; nothing that happens later can make that act good rather than bad, or can confer perfection on the whole of which it is a part.

Nevertheless, when it is your lot to have to endure something that is (or seems to you) worse than the ordinary lot of mankind, Spinoza's principle of thinking about the whole, or at any rate about larger matters than your own grief, is a useful one. There are even times when it is comforting to reflect that human life, with all that it contains of evil and suffering, is an infinitesimal part of the life of the universe. Such reflections may not suffice to constitute a religion, but in a painful world they are a help toward sanity and an antidote to the paralysis of utter despair.¹⁹

In a similar vein, he writes:

If bad times lie ahead of us we should remember while they last the slow march of man, checkered in the past by devastation and retrogressions, but always resuming the movement towards progress. Spinoza, who was one of the wisest of men and who lived consistently in accordance with his own wisdom, advised men to view passing events "under the aspect of eternity." . . . The child lives in the minute, the boy in the day, the instinctive man in the year. The man imbued with history lives in the epoch. Spinoza would have us live not in the minute, the day, the year or the epoch, but in eternity. Those who learn to do this will find that it takes away the frantic quality and misfortune and prevents the trend towards madness that comes with overwhelming disaster. Spinoza spent the last day of his life telling cheerful anecdotes to his host. He had written: 'A free man thinks of death least of all things, and his wisdom is a meditation not of death but of life.' And he carried out his precept when it came to his own death.²⁰

To sum up: Russell did not think death was an obstacle to happiness because, like the stoics, he saw little point in fearing what cannot be conquered. He was by nature and intellectual conviction opposed to fear. And he held a melioristic and long view of things, which allowed him to view passing events under the aspect of eternity and to view man, in general, as instinctively driven toward growth, always resuming the movement toward progress.

III

Even the most casual reading of Russell reveals the importance of happiness. Not only does the intelligent and vigorous individual desire happiness but the protection and nurturing of this end is a major purpose, if not the most important purpose, of the major institutions in a properly run society. The basic aspects of social life—education, politics, the good life itself—requires an intimate understanding of the nature of life satisfaction. The general aim of education is to provide a solid basis for happiness. "Happiness in childhood is absolutely necessary to the production of the best type of human being."²¹ The same is true of politics. "The most important purpose that political institutions can achieve is to keep alive in individuals creativeness, vigour, vitality, and the joy of life."²² Again Russell writes that "a wise humanity, in politics as elsewhere, comes only of remembering that even the largest groups are composed of individuals, that individuals can be happy or sad, and that every individual in the world who is suffering represents a failure of human wisdom and of common humanity."²³ More important perhaps, happiness contributes to goodness and not vice versa. The good life is a happy life. "I do not mean," he explains, "that if you are good you will be happy; I mean that if you are happy you will be good."²⁴ Thus, unlike thinkers who hold that morality is a (or the condition) for happiness, Russell maintains that happiness, though not identical with morality, is, as a rule, a necessary condition.

The difficulty is that if happiness is a general ideal and necessary condition for morality, and if it is not some clear and distinct idea, then the situation is problematic. For it is one thing to offer the reader recipes for happiness, and to purport that all that is claimed for them is that they have increased one's own happiness.²⁵ It is another to maintain that happiness is one of the major human ends as well as a necessary general condition for morality, and then proceed to offer seemingly different and unclear recipes. Thus, we have the charge that Russell's characterization is too rich, too loose. And the more complex argument that because of this looseness, because the nature of the goal is unclear, happiness is generally less attainable.

What I wish to suggest is that this characterization is deliberate in that Russell believed that the available evidence indicated that his conception of happiness allows for the maximum of growth and the achievement of happiness for the greatest number of persons. This point, I think, had best be elaborated.

One of the most striking features of Russell's account of happiness is his belief that the word "happiness" can be correctly used to denote almost any kind or level of satisfaction and that "the great practical importance of psychology will come in giving ordinary men and women a *more just conception* of what constitutes human happiness."²⁶ For Russell, the central meta-question is: What is a more just way of conceiving of the kind of life satisfactions we wish to subsume under the name of happiness if we wish to minimize suffering and maximize the major modes of life satisfaction?

Russell's answer, in bold outline, is as follows: First, it must be a goal that enables men to fully taste what ordinary men might generally be expected to achieve in life—health, love, interesting work, perhaps parenthood. Second, the goal must be such as to provide for zest and the sense of accomplishment, two features that generally accompany earned success. This means that the task must be neither too difficult nor too easy. The price of aiming too high, of having unrealistic expectations, is necessary defeat and pointless frustrations. The price of aiming too low is boredom and the emasculation of vigor and zest.²⁷ Hence, a just conception of happiness requires that man aim high

enough to allow for continual growth and the tasting of the fullness of life, yet low enough to avoid a general sense of futility.

To be more specific: When happiness is properly understood and is the end that actually motivates men, men will desire the things heretofore mentioned. This does not imply a general standard for happiness.¹¹ Nor does it imply a fixed standard.

All Utopias that have hitherto been constructed are intolerably dull. Any man with any force in him would rather live in this world with all its ghastly horrors, than in Plato's Republic or among Swift's Houyhnhnms. The men who make Utopias proceed upon a radically false assumption as to what constitutes a good life. They conceive that it is possible to imagine a certain state of society and a certain way of life which would be once and for all recognized as good, and should then continue for ever and ever. They do not realize that much of the greater part of a man's happiness depends upon activity, and only a very small remnant consist in passive enjoyment. Even the pleasures which do consist in enjoyment are only satisfactory, to most men, when they come in the intervals of activity. Social reformers, like inventors of Utopias, are apt to forget this very obvious fact of human nature. . . . Every vigorous man needs some kind of contest, some sense of resistance overcome, in order to feel that he is exercising his faculties.¹²

Not only does happiness require activity, not only is it probably an indispensable part of happiness to be without something one wants, but "happiness, if it is to have any depth and solidarity, demands a life built round some central purpose of a kind demanding continuous activity and permitting of progressively increasing success."¹⁰

An important illustration of this point occurs in his discussion of having a so-called ideal income. Russell writes:

it is not the amount of your income that makes you happy, but its rate of increase. The man who enjoys life is the man who, with habits adjusted to one standard of life, finds himself continually in a position to adopt a slightly higher standard. That is why, on the whole, England was happy under Queen Elizabeth, and America is happy at the present time.¹¹

Again:

The important question, in regard to happiness . . . is not the absolute amount of one's income, but its augmentation or diminution.

Perhaps a very rapid increase, by altering one's habits and ones social milieu, may not be altogether a source of contentment, but a continual rise of (say) ten percent, every year is likely to bring the nearest possible approach to perfect bliss. . . . Above all, he has the feeling of being a successful man, since circumstances adapt themselves to his wishes, he acquires an illusion of omnipotence, than which nothing is more delightful.¹²

As the passages which I have just cited show, Russell's treatment of the question concerning the attainability of happiness is subtle and differs significantly from those who hold that happiness consists in having prospered. Russell concludes that felicity consists not in having prospered, but in prospering. That the best way to "attain" happiness is not to attempt to capture it, not to be completely successful, but to have a variety of ends, preferably ones rooted in instinct which permit progressively increasing success. Since continuous growth is an indispensable condition for happiness and since the happiness of each of us depends upon the well-being of the whole of mankind, a conception of happiness that protects against remediable suffering and allows for maximum continuous growth and the achievement of life satisfactions for the greatest number is the most just and nearly correct view.

TREASURER DENNIS DARLAND'S REPORT

(4) For the quarter ending 3/31/86

Bank balance on hand (12/31/85)	226.38
Income: 12 New members	222.50
148 Renewals	4158.37
	total dues 4380.87

BRS COMMITTEES

- (5) New Science Committee Chairman has been appointed by Chairman Harry Ruja. He is William K. Fielding, who can be reached at PO Box 218, Ware, MA 01082, or 413-967-4479. This is what we said about him as a candidate for Director last year. During WWII he was a shipyard layout man, job-instructor, and shipfitter; after WWII, a draftsman, engineering aide, and land-surveyor. Studied electronics, became Master Technician, ran own sales and repair business for 20 years. Retired in 1980. Now taking college courses. Mensa member. He'd like to hear what your scientific interests are.

BY BERTRAND RUSSELL

- (6) BR on China, 1951, in Saturday Review (8/4/51) and Saturday Review Reader (NY: Bantam Books, 1953), pp. 119-121, with thanks to TOM STANLEY:

BERTRAND RUSSELL

Russell feels confident that an ancient, venerable, and wise civilization will soon be seen again.

THERE is a pattern that runs through the history of China from the foundation of the Chinese Empire to the present day. The man who was called the "First Emperor," Shih Huang Ti, was not unlike a modern Communist. He abolished the feudal system, a thing which had to be done again by various subsequent emperors; he established a sort of military autocracy; he profoundly disapproved of the traditional culture of China, which, though it lasted until 1911, appeared moribund when he ascended the throne in 221 B.C.; he persecuted the literati, who were the apostles of this ancient culture, and he burned the books with the exception of such that dealt with medicine or agriculture; he built the eastern part of the Great Wall and attempted to transform his country into a rough militaristic state, instead of the urbane and cultured society produced by the Confucians. Nothing of his work survived except the political unification of China.

When he died the literati crept out of their retreats and established themselves at the court of his son, whom they persuaded to abdicate by various ingenious maneuvers. On a great state occasion when all the ministers were expected

to appear on prancing chargers one of them instead appeared on a camel. The young Emperor turned to the men around him and said, "Why is he on a camel?" "Camel, your majesty?" they replied in pretended bewilderment. "We see no camel." The more he protested the more they shook their heads. At last they tapped their foreheads and looked at each other with significant glances. After a few such incidents he became persuaded of his own insanity. The books were brought from their hiding places, and the reign of traditional scholarship was restored, to last for over 2,000 years.

The subsequent history of China has consisted of a series of dynasties, each founded by a strong man who put an end to a period of anarchy, each gradually becoming degenerate and giving place to a new time of disorder. Exactly the same pattern is being repeated in our own day. The Manchu dynasty after a glorious beginning fell gradually lower and lower and was overthrown in 1911. From that time onward there was the usual period of anarchy. But now the new strong man, Mao Tse-tung, is founding the new dynasty. Insofar as he resembles the First Emperor it is likely that his successor will suffer a fate similar to that

of the First Emperor's son. I find it quite impossible to believe that so skeptical and rational a race as the Chinese will long continue to submit to a foreign dogmatic orthodoxy. In fact their submission to the Russian ideology is to be regarded as a temporary measure in pursuit of the age-long resistance to foreign influences which has been characteristic of China. It may also be regarded as the renewal of the Boxer rebellion in 1900, which was a movement of protest against the "foreign devils," as white men were called. For the moment the Chinese feel that in alliance with Russia they can hold their own against the West. But if Russia makes any serious attempt to treat China as a satellite the anti-foreign passions of the Chinese will be very quickly aroused, and their Communism will be seen to be nothing but a veneer.

The Chinese have, it is true, twice submitted to alien conquerors: once in the time of the Mongols in the thirteenth century, and once again when the Manchus conquered China in the seventeenth century. But in each case the conquerors very quickly became assimilated and soon were more Chinese than the Chinese themselves. I find no difficulty in imagining a dour Russian coming from his dismal steppes into the lovely land of China and gradually having the hardness melted out of him, discovering at first with horror, but at last with acquiescent pleasure, that there is something to be said for civilization and tradition, and that possibly there is more in the ancient wisdom than the Chinese have accumulated through the ages than in the raw shrillness of an ill-tempered German exile. The Chinese are persuasive and insinuating to a quite extraordinary degree. They have their fierce moods: they are having a fierce mood at this moment. But their fierce moods pass, as they did when the First Emperor died. For my part, I loved the Chinese when I lived among them, and I cannot bring myself to believe that all these wonderful qualities that they derive from a tradition of civilization far longer than any known in Europe will disappear forever in obedience to the brutal doctrines of Moscow.

Great nations do not remain mad forever—except indeed the Russians, who were already mad under Ivan the Terrible and have remained so.

But the Chinese are not like this. At most times they are sane and wise, and I think there is every reason to hope that their present mood will not last. It is of course necessary to take account of it so long as it persists. But I feel sure the day will come when they will disappoint the Russians by their sanity. And I think we ought to keep our minds open for signs of this change of mood.

- (7) BR on Comets, with praise for Halley, from In Praise of Idleness (NY: Barnes & Noble, Inc., 1962). Our thanks to HARRY RUJA:

If I were a comet, I should consider the men of our present age a degenerate breed.

In former times, the respect for comets was universal and profound. One of them foreshadowed the death of Caesar; another was regarded as indicating the approaching death of the Emperor Vespasian. He himself was a strong-minded man, and maintained that the comet must have some other significance, since it was hairy and he was bald; but there were few who shared this extreme of rationalism. The Venerable Bede said that 'comets portend revolutions of kingdoms, pestilence, war, winds, or heat'. John Knox regarded comets as evidences of divine anger, and other Scottish Protestants thought them 'a warning to the King to extirpate the Papists'.

America, and especially New England, came in for a due share of cometary attention. In 1652 a comet appeared just at the moment when the eminent Mr Cotton fell ill, and disappeared at his death. Only ten years later, the wicked inhabitants of Boston were warned by a new comet to abstain from 'voluptuousness and

abuse of the good creatures of God by licentiousness in drinking and fashions in apparel'. Increase Mather, the eminent divine, considered that comets and eclipses had portended the deaths of Presidents of Harvard and Colonial Governors, and instructed his flock to pray to the Lord that he would not 'take away stars and send comets to succeed them'.

All this superstition was gradually dispelled by Halley's discovery that one comet, at least, went round the sun in an orderly ellipse, just like a sensible planet, and by Newton's proof that comets obey the law of gravitation. For some time, Professors in the more old-fashioned universities were forbidden to mention these discoveries, but in the long run the truth could not be concealed.

In our day, it is difficult to imagine a world in which everybody, high and low, educated and uneducated, was preoccupied with comets, and filled with terror whenever one appeared. Most of us have never seen a comet. I have seen two, but they were far less impressive than I had expected them to be. The cause of the

change in our attitude is not merely rationalism, but artificial lighting. In the streets of a modern city the night sky is invisible; in rural districts, we move in cars with bright headlights. We have blotted out the heavens, and only a few scientists remain aware of stars and planets, meteorites and comets. The world of our daily life

is more man-made than at any previous epoch. In this there is loss as well as gain: Man, in the security of his dominion, is becoming trivial, arrogant, and a little mad. But I do not think a comet would now produce the wholesome moral effect which it produced in Boston in 1662; a stronger medicine would now be needed.

(8) Al Seckel's new book,
as described here----->

Bertrand Russell On God and Religion

edited by Al Seckel

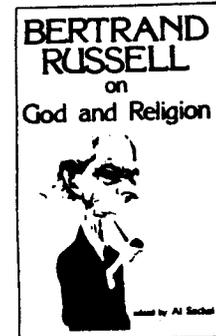

Bertrand Russell was without doubt one of the most productive and brilliant thinkers and writers of the twentieth century. The range of his critical inquiry is without parallel in contemporary Western culture. During his long lifetime (1872-1970) he was the recipient of countless awards for excellence, including the Nobel Prize for literature, which he won in 1950.

From the outset of his career, Russell struggled to uproot and expose the remnants of Puritanism's emphasis upon guilt, sin and moral condemnation.

Bertrand Russell On God and Religion is an exhaustive compilation of Russell's best essays on religion, freethought, and rationalism. Al Seckel has rescued many of Russell's writings from obscure pamphlets, chapters buried in books, and from out-of-print periodicals. The essays in this book demonstrate the full range of Russell's thinking on the subject of religion, which he defined as "as set of beliefs held as dogmas, dominating the conduct of life, going beyond or contrary to evidence, and inculcated by methods which are emotional or authoritarian, not intellectual."

Table of Contents: "The Life and Wisdom of Bertrand Russell" by Al Seckel; (Part I) "My Religious Reminiscences," "First Efforts," "Why I am Not a Christian," "What is an Agnostic?" "Am I an Atheist or an Agnostic?" "The Faith of a Rationalist." (Part II) "The Essence of Religion," "Religion and the Churches," "A Debate on the Existence of God," "What is the Soul?" "Mind and Matter in Modern Science." (Part III) "Science and Religion," "Cosmic Purpose." (Part IV) "An Outline of Intellectual Rubbish," "The Value of Freethought," "Sin," "Are the World's Troubles Due to Decay of Faith?" "Ideas that Have Harmed Mankind," "Ideas that Have Helped Mankind." (Part V) "Mahatma Gandhi," "The Theologian's Nightmare." Name and Subject Index.

ABOUT BR'S WRITINGS

(9) Aldous Huxley, on "The Relevance of Style", a chapter in "Bertrand Russell: Philosopher of the Century", ed. Schoenman (Boston: Little, Brown, 1967 pp. 91-94):

The Relevance of Style

There are three kinds of censorship—political, economic and stylistic. Political censorship is a prohibition to communicate unorthodox

ideas, and it is enforced (in the name, needless to say, of Truth, Justice and Morality) by policemen. Economic censorship is a reluctance to communicate unpopular ideas evoked in the minds of writers, editors, publishers, producers of plays and films, by the exorbitantly high and rising costs of communication. Stylistic

editorship is the inability to communicate anything adequately, and is due to the communicator's misuse of his native language.

About economic censorship there is nothing much that any single individual can do. That no serious periodical can now be printed and circulated without the assistance of an 'angel', that the publishers of books cannot break even on a sale of less than six or seven thousand copies, that to put on a play now calls for a massive investment of capital—these are facts which the philosopher can only deplore, not hope to change. But in regard to political and stylistic censorship the case is different. If he has had the luck to be born into a democratic society, he is free to argue the case for yet greater freedom. And even under a totalitarian dictatorship he retains a measure of stylistic freedom, and can say whatever he is permitted to say with precision and clarity.

By precept and in luminous practice, Bertrand Russell has fought unwearingly against political and stylistic censorship. 'I should make it my object', he says in his 'Essay on Education in Early Childhood', 'to teach thinking, not orthodoxy, or even heterodoxy. And I should absolutely never sacrifice intellect to the fancied interest of morals.' And here is what he has to say about one of those orthodoxies, which the censors impose and which any honest philosopher must refuse to teach—the twentieth-century orthodoxy of Communism. 'In relation to any political doctrine there are two questions to be asked: (1) Are its theoretical tenets true? (2) Is its practical policy likely to increase human happiness? For my part, I think the theoretical tenets of Communism are false, and I think its practical maxims are such as to produce an immeasurable increase of human misery.'

These clear, plain sentences are doubly liberating. They state the case for humane and realistic thinking against political censorship, and at the same time they are the denial of stylistic censorship.

Rationality and the common decencies have many enemies, and among those enemies must be counted, alas, all those would-be friends whose studied ineptitude imposes a stylistic censorship on the communication of their often excellent ideas. For those who care for the art of literature, and even for those who merely desire to be instructed, there are few experiences more depressing than the perusal of a learned journal. Natural scientists, social scientists, psychologists and even philosophers—how rarely do we find in their ranks a competent writer! Most of them censor their own productions by a style so abominable that they can hardly be read. Their grammar is bad, their syntax even worse than their grammar. To a wretchedly poor vocabulary they add, along with the indispensable technical terms of which every specialist feels the need, a heavy infusion of jargon and entirely superfluous neologisms. Jargon and neologisms obscure the sense of what is being said; but for the learned men who indulge in them, this does not matter. What matters, so far as they are concerned, is that jargon and neologisms constitute a private, esoteric language that sets them apart from the common herd of those who merely speak English. Better still, jargon and neologisms may foster, in the bewildered reader's mind, the illusion that some thought of exceptional profundity and importance is being expressed.

Eighty years ago my grandfather was lamenting the fact that students of literature were being made to spend less time on the great eighteenth century masters of style than on earlier authors whose sole merit was the merely historical one of having written in Middle English. More familiar with Hoccleve than with Swift or Hume or Berkeley, these students of Middle English were capable of writing only middling English. Today the middling English of last century's learned writing has become the abysmal English of the text books and the specialists' journals. The decline cannot be

attributed to an excess of medieval scholarship. The neologists and the jargon-mongers have not been bemused by too much learning in an irrelevant field; they are merely following a bad convention, merely imitating and hideously improving upon earlier neologists and jargon-mongers. Other models exist, of course; but the wish to seem profounder than they really are, the desire to be looked upon as the possessors of esoteric knowledge not available to the rest of us and expressible only in a private language known to a few initiates, overrides any desire for literary excellence or even plain comprehensibility. They continue to model themselves, not on Swift or Hume or that great continuator and enricher of the eighteenth-century tradition of clear and precise communication, Bertrand Russell, but on Professor X's monumental Introduction to Social Sociology, on Dr Y's latest paper in contribution to the Journal of Something-or-Other.

After an enforced diet of Introduction to Clinical Economics, Dr Y's latest Contribution to the Journal of Animal Metaphysics, after an enforced diet of Textbook sociology and psychological abstracts, what a blessed relief it is to read what Bertrand Russell has to say about politics, or psychology, or the conduct of life, or Nobel Prize Acceptance Speech! No jargon, not a single neologism. Nothing but plain English. There is no hiding behind obscurities, no pretending that the subject is understandable only by specialists and can be talked about only in a private language. Everything is perfectly clear and above-board. Of German scholars Bentley used to say that they dived deeper and came up muddier than any others. Bertrand Russell dives deep, but comes up every time as clean as a whistle. Here, for example, is a passage from his Nobel Prize Acceptance Speech:

'If men were actuated by self-interest, which they are not except in the case of a few saints—the whole human race would co-operate. There would be no more wars, no more armies, no more navies, no more atom bombs. There would be no armies of propagandists employed in poisoning the minds of Nation A against Nation B, and reciprocally of Nation B against Nation A. There would not be armies of officials at frontiers to prevent the entry of foreign books and foreign ideas, however excellent in themselves. . . . All this would happen very quickly if men desired their own happiness as ardently as they desire the misery of their neighbours. But, you will tell me, what is the use of these Utopian dreams? Moralists will see to it that we do not become wholly selfish, and until we do, the millennium will be impossible.

'I do not wish to end upon a note of cynicism. I do not deny that there are better things than selfishness, and that some people achieve these things. I maintain, however, on the one hand that there are few occasions upon which large bodies of men, such as politics is concerned with, can rise above selfishness, while, on the other hand, there are a great many circumstances in which populations will fall below selfishness, if selfishness is interpreted as enlightened self-interest. And among the occasions on which people fall below self-interest are most of the occasions on which they are convinced that they are acting from idealistic motives. Much that passes for idealism is disguised hatred and disguised love of power.'

It would be easy, fatally easy, to express these ideas in words and whole phrases borrowed from Freud and Pavlov, from Skinner, Sorokin, the Cyberneticists, and worked up, with a few neologisms, into a notable passage of learned jargon, a darkling hodge-podge, repellent and almost incomprehensible. But in this case the man who made the analysis and had the ideas was never tempted to become their stylistic censor. The philosopher is also a writer, the humanistic psychologist and social scientist knows English. How fortunate for us!

ABOUT BERTRAND RUSSELL

(10) The you-name-it. We had the radio on, late one evening, during the 1984 Presidential Campaign, and a man was talking but we weren't listening.

He caught our attention when we heard him say "...the most evil man of the Twentieth Century was Bertrand Russell."

We turned on our tape recorder. Later on we learned that we had been listening to Lyndon LaRouche. Here is a bit of it:

...it's been a policy which Russell published in the October 1946 issue of the Bulletin of Atomic Scientists. In that article, Russell made 2 points. First, Russell insisted that the nations, including the United States, must give up their national sovereignty. He demanded that a world government agency, with a monopoly of possession and use of nuclear arsenals, be established. Second, Russell proposed that if the Soviet Union refused to submit to the agreements to establish such a world government agency, that the United States and Britain must conduct preventive nuclear war against Russia. This war should begin as soon as the Anglo-Americans have sufficient arsenals of nuclear weapons to destroy the Soviet non-nuclear forces, and should occur before the Russians began to develop nuclear arsenals of their own. This preventive nuclear war policy of Russell's was adopted by the United States and Britain and remained in effect till the middle or late 1950s.

Russell began developing a second version of this strategic doctrine shortly after the death of Joseph Stalin, at the point the Russians were already building up an arsenal of fission weapons and had constructed a prototype of an H-bomb. Russell communicated messages to the new leaders in Moscow offering to cooperate with Moscow in setting up a world-wide empire, of which the Eastern part would be ruled by the Russian Empire, and the Western part some sort of World Federalists Dictatorship ruled over by the wealthy financial families of such places as New York, Boston, London and Switzerland.

....

McGeorge Bundy, Robert MacNamara, Maxwell Taylor, and Bundy's nasty-tempered National Security Counsellor, Henry Kissinger, among others, slipped Russell's agreements with Krushchev into the Kennedy Administrations's policies.

Since the late 1950s, for more than 25 years, Henry Kissinger has been one of the leading Soviet moles, working inside the policy-making processes of our government, working to help Moscow in keeping the United States in submission to those Pugwash agreements announced by Szilard in 1958.

....

To understand fully the policies of Kissinger and his kind, we must look at a second feature of the policies of such evil men as Bertrand Russell, H.G. Wells, and the [undecipherable] leader, Alastair Crowley, three men who did more to destroy the United States from within, with the help of the late Robert M. Hutchins, than perhaps anyone else. To understand the motives behind Russell's proposals to Khrushchev, one must know the bare facts about Russell's long-term utopian policies.

....

The essence of Bertrand Russell's purpose for the entire extent of his satanic adult life was the destruction of modern civilization and the creation of a miserable condition of feudalistic society to be ruled by the Anglo-Saxon race. Russell intended this to be a form of Utopia which was to be established by massive genocide against the darker skinned populations of the world, including such sections of humanity as those of Arab, Turkish, Greek, Italian and Spanish ethnic origins.

The preceding program was paid for by the LaRouche Campaign.

Like it?

BR's article in The Bulletin of the Atomic Scientists (October 1946), referred to above, can be found in its entirety in RSN45-5. It's worth re-reading.

BR QUOTED

- (11) Romantic Love. A chapter titled "Love and Romance," in the book, "Intimate Relationships, Marriage, and Family", by James C. Coleman and others (Indianapolis: Bobbs-Merrill Educational Publishing), starts off with the following quotation:

I believe myself that romantic love is the source of the most intense delights that life has to offer. In the relation of a man and a woman who love each other with passion and imagination and tenderness, there is something of inestimable value, to be ignorant of which is a great misfortune to any human being.

Our thanks to JIM MCWILLIAMS.

- (12) On thinking. From the Los Angeles Times Book Review (2/2/86, p.14):

Most people would die sooner than think -- in fact, they do.

Thank you, BOB DAVIS.

BR ASSESSED

- (13) Obituary in the Hindustani Times, 4 Feb 70, with thanks to HARRY RUJA:

'Advocate of Indian freedom'

New Delhi, Feb. 3 (UNI, PTI)—India today joined the world in mourning for Bertrand Russell, the British philosopher.

Prime Minister Indira Gandhi, in a message from Lucknow, recalled that Russell was "a friend of Indian independence" and said: "The death has taken away one of the greatest philosophers and rebels of history."

The West Bengal Assembly, in a rare gesture, adjourned early in homage to Russell. The adjournment, sought by a Marxist member, was supported by "new" Congress leader Siddharta Senkar Ray.

Former President Radhakrishnan described Russell as a genius who fought oppression and war.

Samyukta Socialist Party general secretary George Fernandes, in mourning him as "one of the greatest champions of individual liberty," said he had erred in his understanding of the Sino-Indian conflict.

The proceedings of the international seminar on Gandhi in New Delhi began today with a two-minute silence to pay homage to Bertrand Russell.

Mr Noel Baker, winner of the Nobel Prize for peace, began his address with a tribute to Earl Russell.

The All-India Peace Council and the Indian Association for Afro-Asian Solidarity paid homage to the memory of Bertrand Russell.

Mr C. Rajasopalachari said: "It is a matter for world grief that Bertrand Russell has passed out of the world of living great men. In many matters, there was no equal to him."

- (14) Obituary in the Daily Mail, Freetown, Sierra Leone (4 Feb 1970, p. 12), again thanks to HARRY RUJA:

Philosopher Bertrand Russell dies

Left wingers, pacifists, and intellectuals around the world yesterday mourned Lord Bertrand Russell, the British philosopher, mathematician and peace campaigner who died at his North Wales home aged 97

In New York, Ralph Schoenman, Bertrand Russell's former secretary, described the late Nobel Prize winner as "a good, kindly, generous and sweet man." Schoenman, who worked with Russell from 1960 until the American was banned from Britain in 1967, said in a statement from his home in Pennington, New Jersey:

I have been devoted to Bertrand Russell and for seven years had the most intimate and trusted relationship possible between two people. He was a good, kindly, generous and sweet man and his loss is for me intensely personal.

Schoenman, 34, is now director of the American Foundation for Social Justice and is connected with a group called Studies in the Third World.

In Tokyo, Japanese civil liberties lawyer, Kouji Morikawa, said Lord Russell was a man "who fought for peace and justice with energy which had no equal even in a youth."

In Melbourne, Mr. Robert Hawke, President of the Australian Council of Trade Unions, said: "Bertrand Russell has been a massive figure in the affairs of mankind this century. He will be remembered not only for his contributions in the wide range of intellectual disciplines but also for what he brought to the practical issues confronting his fellow men, including the overwhelmingly important question of international peace..."

In Canberra, Professor J. A. Passmore, Head of the Department of Philosophy in the Australian National University's Research School of Social Sciences, said Bertrand Russell had substantially created the new subject of mathematical logic.

THE BRS AWARD

- (15) People for the American Way has been chosen for the 1986 Bertrand Russell Society Award. The 2-page press release (next page) provides some details.

This is the first time that an organization rather than an individual has been the recipient.

People for the American Way will be represented at the June 21st BRS meeting (evening session) by its President, Anthony T. Podesta, who will receive the Award plaque and give an address.

Lee Eisler, VP/Information
The Bertrand Russell Society, Inc.
RD 1, Box 409
Coopersburg, PA 18036
215-346-7687

For release
June 7, 1986

"PEOPLE FOR THE AMERICAN WAY" RECEIVES THE BERTRAND RUSSELL SOCIETY AWARD

The 1986 Bertrand Russell Society Award has gone to People for the American Way — the organization founded by TV Producer Norman Lear to combat the efforts of right wing religious fundamentalists to chip away at constitutionally guaranteed American liberties. Bertrand Russell would have approved.

The Award plaque reads: "For exposing and opposing the current crop of self-appointed guardians of American morality and culture ...who wish to impose their views on the rest of us who do not share them."

People for the American Way (PFW) has been active in a number of areas, all related to basic American freedoms. Only a few of its many activities can be mentioned here.

PFW led the opposition to Herbert E. Ellingwood, who was slated to screen federal judicial candidates. Ellingwood's Christian fundamentalist speeches showed that he did not understand what is meant by separation of church and state. The Reagan Administration abandoned plans to nominate Ellingwood.

PFW helped create the climate in which California's Board of Education rejected 24 science textbooks for grossly inadequate treatment of evolution. And to show how far book censorship has gone, PFW named a score of books in ordinary circulation that — in particular communities — have been removed from schools, from libraries, or publicly burned. Today no school anthology of literature contains the original uncensored version of "Romeo and Juliet".

PFW succeeded in getting airtime on 48 TV stations — invoking the Fairness Doctrine — in order to reply to Falwell's so-called "religious" broadcasts in support of South Africa.

PFW has been called "the scourge of the censors" (Washington Post), and "the only group that is taking the evangelists to task" (New York Times). It is not against Christianity; it is for the liberties guaranteed by the American Constitution. A 200,000-member organization, its Chairman, John Buchanan, is an ordained Southern Baptist minister and former Republican Congressman from Alabama; its President, Anthony T. Podesta, is a former Justice Department prosecutor, political science teacher, and Director of Admissions at Barat College of the Sacred Heart (Lake Forest, Ill).

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970), logician/philosopher, social reformer, Nobel Laureate, and possessor of one of the seminal minds of this century. A number of Society members are professional philosophers, but most members are not. Membership is open to anyone interested in Russell. For information, write PFW, RD 1, Box 409, Coopersburg, PA 18036.

ON NUCLEAR DISARMAMENT

- (16) Warnke tells it like it is. The Committee for National Security held a meeting in Washington, DC, on February 19, 1986. The proceedings were televised by C-Span, and we stumbled onto it by chance. Paul Warnke, Chairman of the Committee, explained why we do not have a Comprehensive Test Ban (CTB).

There are reported reasons for not going for a Comprehensive Test Ban but they are not adequate to explain our reluctance to kick the habit. I think basically it is an addiction.

We've come near the brink of giving it up a couple of times but have always backed off. We came fairly close actually in 1963-64. We came very close in the early part of the Carter Administration, and the reason basically for not going ahead with it had nothing to do with verification, had nothing to do with the question of confidence in the reliability of the [weapons].

It's really a question of your security theory. As Dr. Sykes has pointed out, there is a school of thought that says we're better off going it alone, and that is the prevailing doctrine in the Reagan Administration. It always has been. It is expressed most articulately by Secretary of Defense Weinberger, who said in a recent speech, "We ought to abandon the previous reliance on arms control deterrence and secure our freedom from mutual vulnerability regardless of Soviet activities." So if you feel that you can, in fact, go it alone, then obviously you are not going to forego nuclear weapons tests.

But as I say, we have come fairly close in the past. It is quite clear that we can get a Comprehensive Test Ban if we want it. When we renewed the negotiations in June of 1977, I had 4 basic points that I was directed to include in any treaty:

One was, there would be no exceptions for peaceful nuclear explosions. The second was, the on-site inspection of suspicious seismic events. The third was, we wanted to have American seismic equipment on Soviet territory, and of course would accept Soviet seismic equipment on our territory; and the British would do the same. And the fourth one was, that the treaty would be one of indefinite duration. We did not want to have a guillotine clause. The Soviets wanted to have a treaty of quite a

fixed and fairly narrow limit because they wanted to bring in the Chinese and the French as well as the British and the United States.

By the end of 1977 the Soviet Union had agreed to all 4 of these points. We had agreed that the treaty would be of an indefinite duration. There would not be an exception for peaceful nuclear explosion, unless both sides agreed on some sort of a protocol that would permit it. They would accept American seismic equipment in "black boxes" on their territory. And they would give us on-site inspection.

We looked at that. We figured we were on the brink of getting a Comprehensive Test Ban, and we backed off. We backed off first of all with regard to indefinite duration. I had to go back to the Soviets and say, "Although you've now agreed to our position on indefinite duration, I now want it limited to 5 years." They accepted 5 years. I came back a couple of weeks later and said, "We could accept 3." And they began to wonder whether we were serious, and I began to wonder whether we were serious too.

Well, what were the reasons? They were basically political, certainly not scientific. Politically, it was thought in the Carter Administration that we could not overload the circuits; that if we pushed ahead and completed a Comprehensive Test Ban Treaty in 1978, that that might make it more difficult to get the Salt II Treaty through the Congress. And that therefore let us slow down the negotiations. And slow them down we did. They slowed to a crawl and then of course disappeared entirely at the beginning of the Reagan Administration.

The Reagan Administration has been entirely consistent in their position. In almost a paraphrase of St. Augustine's statement, which Dr. Garwin quoted earlier ["Dear God, make me chaste, but not now."] Gene Rostow very early in the Administration went to the Multinational Disarmament Conference and said that conditions were not now propitious for this worthy project, and that therefore we had decided not to pursue a Comprehensive Test Ban at that point. It was pointed out by some of the other countries that this was inconsistent with our commitment in the Limited Test Ban Treaty, under which we undertook to pursue a total end to all nuclear explosions for all time, and a similar commitment in Article 6 of the Non-Proliferation Treaty. But nonetheless, we have abandoned this commitment, and the Reagan Administration now says we need to test as long as we need nuclear weapons for deterrence. Well, since we will need nuclear weapons for deterrence during my lifetime, and the lifetime of everybody in this room, what that means is, no Comprehensive Test Ban. I think it's a mistake, but I think it's quite clear that this is the position of the Administration.

The question is, whether there is enough popular sentiment in favor of the Comprehensive Test Ban to change that position. [That will be] extraordinarily difficult to do. There is the feeling on the part of certainly the civilians in the Defense Department that arms control is a very, very weak reed in deed, and that we are much better off going ahead with our various offensive and defensive weapons.

We can't have it both ways. We'll either have arms control or we have an unrestricted nuclear arms race. The theory of some is that we would win an unrestricted nuclear arms race because of our superior resources and superior technology, that somehow we could spend the Soviets into submission. It's a nice theory. I don't know anybody who knows anything about the Soviet Union or about its leadership that believes it has any plausibility at all. If we go ahead, they'll go ahead. And the question is, will we be better off or worse off. I know where I come out. It's not where the Reagan Administration does.

* * * * *

Paul Warnke was formerly Chief Negotiator on the Tri-Lateral Commission on a Comprehensive Test Ban, and is now Chairman of the Committee for National Security (2000 P Street, N.W., Washington, DC 20036), which offers information on CTB.

(17) The Switch, according to Flora Lewis in the New York Times Review of the Week (2/23/86,E21). Here is the gist of what she said:

According to Flora Lewis, the Reagan people first resisted a ban on nuclear testing because, they said, they could not -- without on-site inspection -- verify that the Russians were not cheating. They ignored the fact that the Russians had agreed to on-site inspection as long ago as 1977, according to Warnke.

When Gorbachev told the 40-Nation Disarmament Conference in Geneva that Russia is agreeable to on-site inspection, the Reagan people switched their story. Now they say we must continue testing as long as we have to rely on nuclear deterrence, meaning until Star Wars provides an impenetrable shield against nuclear weapons. [Ha! Ha!]

Q: But why continue testing?

A: Because we have to know if the weapons are still reliable, say the Reagan people.

That question was asked in the Question and Answer period of the February 19th proceedings (). The correct answer: nuclear warheads do not need to be tested. They remain reliable because they are passive; they have no moving parts. However, if you wish to test them, you do so by taking them apart and examining them, not by exploding them. What may indeed need to be tested are the missiles which carry the nuclear warheads; but that does not require a nuclear explosion.

It all reinforces Warnke's assessment of the situation: the Reagan people do not want a test ban. They want to go it alone.

ON NUCLEAR STRATEGY

- (18) Star Wars thinking. Star Wars gives the U.S. a great advantage over the Soviets, even if it is never used — so goes the argument — because it forces the Russians to expend their limited resources on ways to cope with Star Wars...and since we are far richer in resources, it seems clear that this is a race we are bound to win. Right?

Wrong! says Senator Proxmire, and he tells why. This is how it appears in the Congressional Record of March 24, 1986:

Some will argue the United States cannot lose this race. After all do we not have the far stronger economy? Our gross national product is nearly twice that of the Soviet Union. And do we not have an overwhelming advantage over Russia in technology, especially in relevant military technology? We do. And does the United States not have a special advantage estimated as at 30 years or more over the Soviet Union in computer technology? Yes. That is true. And is it not true that the computer technology is at the very heart of star wars? It is. So does this mean that if the Soviets choose to run this race against this country, we can surely expect to win? The answer is a resounding "no."

The reason the answer is "no" was documented in spades at the time of the debate over ratification of the antiballistic missile treaty in 1972. It is the same today. This body—the U.S. Senate—agreed by an 89 to 2 vote in 1972 that a star wars system would not serve the interests of our country. Why? And why was the vote so decisive? After all, the antiballistic missile treaty had the single and simple purpose of preventing a race to produce a star wars antimissile defense by either superpower. That ABM vote was so decisive because Senators reached the overwhelming conclusion that an antimissile defense would cost \$10 or more to produce and deploy the star wars defense for every \$1 it would cost to overcome it. Is that principle still true? Will it still cost far, far more to defend against a nuclear attack than to instigate an attack against that defense? Absolutely. The principle still holds. It is even more true in 1986 than it was in 1972, and the advantage for the offense will be even greater 20 years from now and on into the future.

That means that the United States is engaging in exactly the wrong kind of race with the Soviet Union. We do

have the superior economy. We do have the decisive technological advantage. But because the Soviet Union will rely on defeating star wars by building a far less costly offensive nuclear system, it will need far less in economic resources and far less in technology to overcome whatever star wars system we deploy. To date the overall arms race between the Soviet Union and the United States has hurt the economies of both countries, but it has had a far more severe effect on the less productive and less technologically advanced Soviet economy.

To date that has been the case. How about the future? As the star wars program continues in this country, as the United States begins its heavy spending for the production of the hardware and the deployment and maintenance of the system, the burden on the American economy from this trillion dollar plus military increase will become far greater than the much lighter burden the Russians will bear to build the offensive nuclear arsenal to overcome our star wars defense. After all, much of that Russian nuclear offense is in place right now.

Some of the refinements to penetrate star wars are already underway in the Soviet Union with the Soviet's greatly stepped up cruise missile and submarine program. That program would underfly star wars with missiles launched from right off American shores. The missiles hug the ground, carry a map in their brain to fly around objects on land, have a range of 1,500 miles and fire warheads, each of which has an explosive force of up to 200,000 tons of TNT. If the arms race is massively stepped up by our star wars project, the Soviet Union will for the first time gain economic advantage from the arms race as well as military advantage from the easy superiority their nuclear offense can achieve over the star wars defense.

FREE-THINKERS

- (19) Linus Pauling on Donahue, 3/3/86. Excerpt:

[DONAHUE]: DO YOU BELIEVE IN GOD?

No.

THAT DISAPPOINTS THE AUDIENCE.

Yes. You know, I'm interested in ethics, morality. And so I derived a basic ethical principle in a scientific way. I can't take time to derive it now, theorem after theorem. It's essentially the principle of minimizing human suffering. Do unto others as you would have them do unto you. That's what I came out with.

THE GOLDEN RULE.

Yes, the Golden Rule.

AREN'T YOU IMPRESSED WITH THIS UNIVERSE NOW?

I surely am.

SO ISN'T IT JUST... THIS IS HARDLY THE TIME AND PLACE...IT SEEMS ALMOST INTELLECTUALLY LAZY NOT TO BELIEVE IN A PRIME MOVER.

Well, the universe is so wonderful, so intricate, so marvelous, that it's very hard for me to believe that it could exist, but to believe that there would be an intellect, it would have to be even more intricate, more marvelous, more complex.

AND THIS AUDIENCE THINKS THAT IT IS.

Yes, but that's harder to believe. Moreover I can't see any scientific evidence, or any evidence of any sort, credible evidence, that requires me to accept this idea. And of course it troubles me that so much suffering has been caused by religion. The wars, how many of the wars were religious wars. In this present time, the Catholics and the Protestants in North Ireland, half a dozen sects fighting each other in Lebanon. We need to have more respect for the Golden Rule, more confidence in Man's rationality. He behaves irrationally when violence and dogma operate.

- (20) "An Appeal to Agnostics and Atheists" asks them to come out of the closet, to forget their differences, to close ranks, and to speak up. This will enable others who share their views but are reluctant to let them be known, for fear of reprisals, to discover that they are not alone. And it will strengthen the position of all atheists and agnostics, in these days of militant fundamentalism.

Here are excerpts from the printed Appeal, considerably revised, edited, and shortened:

There are many atheists and agnostics who are not involved in supporting the views that they hold, and it is to them that this appeal is directed. If this should happen to apply to you, consider and reflect for a few minutes what a world of good it could do if you made it simpler and easier for others to hold the same views that you do. The world needs these ideas.

From stories told and read, it has generally been a difficult and painful religious experience to reach your beliefs. It is a shame that so many have to go through that experience. If it cannot be avoided, there should at least be helping hands; and there will not be enough helping hands until many more atheists and agnostics become active.

There are organizations that support your position, and that you, in turn, can support by joining. Some of them offer compatible society. So far there has been no easy way to find the names and addresses of these organizations, each one being more or less concerned with its own welfare and positions rather than having the general aim of furthering agnostic and atheistic aspirations. These organizations are listed at the end of this appeal. Some have a highly intellectual approach, appealing to the scientific and philosophical; others have a more emotional approach.

A hundred years ago, Robert Ingersoll made atheism or agnosticism powerfully appealing. Unfortunately today there is no such compelling voice speaking for atheists and agnostics.

What is there, then, to maintain atheistic and agnostic beliefs? Just the facts.

Western civilization has been plagued by a myth -- the myth of Jesus. Acceptance of Jesus as a historical character is an error.

[A number of paragraphs follow, that argue against the existence of Jesus and the existence of God or gods. We skip them.]

Atheists and agnostics do not agree with each other in all matters. The atheists feel that their approach to thinking about religion is superior to the agnostic's; and the agnostics feel just the opposite. That is most unfortunate! The atheists need the agnostics, and the agnostics need the atheists, if the environment is to be made safe for free-thinkers. It is more important that there be atheists and agnostics than that they agree. They should at least agree on that!

Here are the societies and organizations that support agnostics and atheists. You may wish to inquire about them.

American Atheists, PO Box 2117, Austin, TX 78768-2117

American Ethical Culture Societies, Dept. CF, 2 West 64th St., NY NY 10023

American Humanist Association, 7 Harwood Drive, Amherst, NY 14226.

Atheists United, PO Box 65706, Los Angeles, CA 90065

NEWS ABOUT MEMBERS

Some Viewpoints That May Be of Interest to You

The American Rationalist. Bi-monthly. \$6.00 yearly.
P.O. Box 994, St. Louis, MO. 63188.
Freethought brought up to date. Concise and timely
book reviews.

Free Inquiry. Published quarterly. \$15.50 yearly.
Box 5, Central Park Station, Buffalo, N.Y. 14215
Provides a forum for scholars and philosophers to present, in layman's language, the background information needed to understand the past and present controversies that have shaped and are shaping humanist thought and activities.

The Skeptical Inquirer, the official journal for The Committee for the scientific investigation of Claims of the Paranormal. Published quarterly. \$16.50 yearly.
Box 229 Central Station, Buffalo, N.Y. 14215
Explores the edges of science, giving much attention to parapsychology with stress on new ways of looking at our scientific research and methods.

The Bertrand Russell Society News. Published quarterly. \$25.00 yearly
R.D. 1, Box 409, Coopersburg, PA 18036
Deals with all facets of the life philosophy and very public activities of one of the great men of this century. There is a constant stream of articles published about Russell and his views. All are summarized by the experts reporting in the News. The Society holds an annual meeting and is represented at philosophical conferences held each year.

The SEA Journal. Published occasionally by the Society of Evangelical Agnostics.
"Advocating the application of the principles of agnosticism to all aspects of life," SEA is guided by the teachings of Thomas Huxley. An expression of interest and a contribution of \$1.00 or more sent to SEA, Box 515, Auberry, CA 93602 will put you in touch with a lively group of letter writers. William Young, a professional librarian, is administrator.

The Hemlock Quarterly. Published quarterly by the Hemlock Society.
P.O. Box 66218, Los Angeles, CA. 90066
The Quarterly supports active voluntary euthanasia for the terminally ill. The exutive director, Derek Humphry, has appeared on "60 Minutes," "The Donahue Show," "Good Morning America" and many other programs. Yearly membership, including The Quarterly, is \$20.00 (Seniors \$15.00)

Should you wish to see a copy of any of the above materials before investing, please write to:

Hugh McVeigh
311 State Street
Albany, N.Y. 12210

If convenient, please enclose \$.66 in stamps.

(21.5) Neil Abercrombie, now a Senator in the Hawaiian legislature, is running for U.S. Congress this Fall. Wouldn't you like to see a BRS member in Congress? Well, then, help him out. There are big bucks against him. Send your tax-deductible contribution, made out to "Abercrombie for Congress" to Abercrombie for Congress, 2721-A Puuhonua St., Honolulu, Hawaii 96822. Good luck, Neil!

(22) Al Seckel's book, "Bertrand Russell on God and Religion" has just been published by Prometheus Press. If you order it directly from him, he will autograph it. See ().

(23) Warren Allen Smith has won a \$7,500 Leavey Award from the Freedom Foundation of Valley Forge, Pennsylvania.

The Award recognizes Mr. Smith's concept that an effective time and place to teach about government and business is on the secondary school level and through an extracurricular Adam Smith Club.

He has been sponsor of such a club at New Canaan (Connecticut) High School for over twenty years, during which time students are given \$5,000 in scrip, are divided into different societies (one with a unicameral, others with parliamentary, dictatorial, and Marxist governing bodies, and one which is entirely anarchistic.) The students are allowed to use their capital any way they choose, thereby learning about The Establishment as well as how to invest in anything for which Wall Street supplies daily figures. Teachers as well as students are members, and upon occasion a student will sue a teacher in the club's court. Members who do not appreciate their money during a semester are expelled and must be repatriated if they choose to return. Recently the school's principal was expelled by the student Governor of the club. Those in Marxist societies may not invest as individuals, only as one of a total group. Those with a parliamentary government often choose as ruler a Queen or a Prince, who rules with the aid of a Prime Minister and Privy Council. Without specific instruction, the students soon learn about partnerships and corporations, puts and calls, marks and yen, point-and-figure charts. Ironically, the club never meets, but members may transact business throughout the school day, including long-term investing made over the summer.

Asked how he will spend the \$7,500, Mr. Smith responded much as the club's namesake, the 18th Century Scottish economist, might have: "I won't." Instead he is researching whether to invest the money in bonds, certificates of deposit, stocks, or mutual funds.

* * * * *

Warren says he is about to retire from teaching. "My plans are rather mixed at the moment. I'll probably be at my recording studio full time starting in summer, although I'd like to live 3 months in Sri Lanka, then move to Kuching, then to somewhere else until I get the feel of different societies...It's possible I'll become more active in BRS and other groups..."

(24) Ramon Suzara. Excerpts from his letter of 3/21/86, which might be titled "A Filipino-American speaks":

...what an ignominy it is for the beautiful State of Hawaii to grant asylum to a bunch of ugly culprits from the Philippines.

I'm quite elated, of course, that Marcos has finally been ousted and that Cory Aquino is now the new President of the Philippines... I hope she will be able to overpower the odds that will be playing against her leadership...

I cannot but feel, vicariously, the joys and hopes of a lot of my friends and relatives there. But as a student of Russell, I have my misgivings about the future of the Philippines.

...as soon as I see the Aquino Government begin to restructure the thousands of cathedrals and church buildings into housing tenements for the poor, it will not only change my life completely, but I will begin to believe, one more time, that God is indeed a Catholic. Moreover I will throw all my Bertrand Russell books out the window.

Cardinal Sin is now the spiritual advisor of the Aquino Government — the same Cardinal Sin who was the spiritual advisor of the Marcos Government — indeed the same Cardinal Sin whose main concern is not, certainly, the power of ideas and its free market, but the power of the Catholic Church over the minds and hearts of the majority, subjugated under a theocracy since the 15th Century. I ask: how is it possible for a true democracy to flourish in the Philippines in the 20th Century?

I am hoping that Cardinal Sin's power of prayer does not overwhelm "people power". If it does, the practice of praying will militate against the Filipino people's self-reliance and independence.

As for the Marcos crimes, it is simplistic to think that he alone is guilty of the horrors of recent years. He alone did not put himself into power; the system did. A great part of that system, commonly referred to as "U.S. interests" in the Western Pacific, are the military bases...which are considered vitally important for defending and advancing, not freedom and democracy, but US economic domination in the region. U.S. multi-national corporations have profited much from dirt-cheap Filipino labor. And when the workers and impoverished peasants protest, to advance their own interests, the threat of communism is readily invoked. As the U. S. Government supports whatever dictator, whatever repression, whatever brutality will best enhance U.S. interests, all that Marcos had to do was to insist to Washington that the alternative to his rule was communism...and billions of dollars poured into the Philippines.

[We hope that Ramon is unduly pessimistic about Cardinal Sin. When the crunch came, in the Philippines, the Cardinal sided, not with Marcos, but with Aquino.]

- (25) Mike Taint and his wife, Cheryl Den Broeder, have provided a baby brother, Alden, for their 2-year old son, Russell (who is named for BR). The 4 Taints will move to L.A., where Mike (Captain Michael Taint) will be Deputy Chief of Computer Systems, USAF Space Division.
- (26) Herb Vogt and Betty left for Budapest on April 29th, to visit old friends. Herb had spent a delightful year there in 1935-36. They sent us a cartoon, showing a minister delivering a sermon, which starts off this way: "I take as my text this morning line 34b of Form 1040, which deals with charitable contributions."

BOOK REVIEWS

- (27) "The Spinozistic Ethics of Bertrand Russell" by Kenneth Blackwell has been published by George Allen and Unwin (London, 1985). This review of it by Nicholas Griffin appeared in McMaster University's *The Courier* (1/21/86, p.9)... with our thanks to HERB LANSDELL.

McMaster archivist examines Spinoza's influence on Russell

The Spinozistic Ethics of Bertrand Russell
By Kenneth Blackwell
GEORGE ALLEN AND UNWIN, LONDON 1985

REVIEWED BY:
NICHOLAS GRIFFIN,
Associate Professor, Department
of Philosophy

Bertrand Russell, whose *Nachlass* forms one of the principal glories of the Mills Library, wrote voluminously over a period of more than seventy years on every topic under the sun.

Within this prolonged avalanche of words are several books and several scores of articles on what might be termed 'philosophy of life'. These range from parenthetical disquisitions in more technical works, through somewhat theoretical musings and essays (in the etymological sense of the word), to newspaper journalism of practical advice.

An important question raised by Russell's corpus is whether this body of material forms any sort of coherent whole. Those of us who would like to argue that it does are hampered by the sheer size of Russell's output, by its scattered and often fragmentary nature, and by the fact that Russell himself never tried to present a comprehensive, coherent account of his position (or, at least, abandoned unfinished such attempts as he made).

The prevailing view, unsurprisingly, has been that there is no coherent underlying world-view to hold the multifarious published record

together, that Russell is more like a consortium of journalists than a thinker with a single philosophy of life to advocate. Both sides, however, have been hampered hitherto by the fact that the necessary scholarship had not been done. And the scholarship had not been done because, in the first place, it was arduous and time-consuming, and, secondly, because the value of its outcome was doubtful.

If, indeed, it turned out that there was no underlying coherent position, then Russell's writings on the philosophy of life would not be worth the sort of detailed attention which alone could establish that fact.

Admiration

This situation changes a good deal with the publication of Kenneth Blackwell's study of Russell and Spinoza. A number of writers have commented on Russell's admiration for Spinoza, but none have hitherto had the fortitude seriously to pursue the question of whether this admiration had any intellectual foundation.

Blackwell, who is Russell Archivist at McMaster, has tackled this question and produced what is without doubt the definitive study of Russell's knowledge of, and debt to, Spinoza.

Future writers may doubt Blackwell's conclusions and challenge his assumptions, but they will remain indebted to his scholarship. Using the full range of archival resources, including private letters and published papers

as well as books, interviews and journalism, Blackwell compiles an exhaustive inventory of Russell's writings on Spinoza's.

Ethical position

I know of not a single reference by Russell to Spinoza which he does not consider, nor even where I would look for one. Russell first came to know and admire Spinoza's work as a student in 1894, and his admiration continued into his nineties. As Blackwell points out, no other philosopher except J.S. Mill had as long as positive influence on Russell as Spinoza.

The first part of Blackwell's book is taken up with assembling the necessary documentation. Part B is concerned with the interpretation and evaluation of the evidence. Blackwell shows that, starting in about 1910, Russell drew from Spinoza's work an ethical position which informed much of his moral writing until the end of his life.

The centre-piece of Russell's debt to Spinoza is Spinoza's concept of the intellectual love of God, a phrase which recurs again and again in Russell's writings.

Russell understood by it a contemplative reverence toward the universe, at once both mystical and intellectual, which brings one into harmony with the universe itself and with others who have the same emotion. Russell's understanding of the concept owes something to

the idealist philosopher H.H. Joachim's *Study of the Ethics of Spinoza* (1901).

It is significant, also, that among subsequent interpretations of Spinoza Russell's comes closest to that of another idealist philosopher, E.E. Harris's *Salvation from Despair* (1973). Although Russell's own idealist period was behind him when he incorporated Spinoza into his ethics, he saw Spinoza very much through the eyes of the British neo-Hegelian movement.

The intellectual love of God formed the basis for another important concept in Russell's ethics, that of self-enlargement. It was through the same contemplation of the wider world that the self, according to Russell, was able to transcend its concern with transitory and mundane matters and learned to harmonize its desires with those of others.

On the one hand, desires for those goods which could only be realized by the exclusion of others are transcended, weakened or eliminated. On the other, contemplation enables such desires which are not eliminated to be seen impartially, with the claims of others to the same or similar goods admitted on an equal basis with our own.

In recognizing the necessity of the natural order the self is able to overcome anxiety and anger and achieve a philosophic calm. This, for Russell, was the beginning of wisdom.

Blackwell traces this ethic

of self-enlargement to its roots in Spinoza and outlines the uses to which Russell put it throughout the remainder of his life. The task is as thoroughly and definitively done as one could hope for.

Certain problems

There remain, however, certain problems which warrant further discussion. They concern the relation of the ethic to Russell's higher-order views in theoretical ethics, on the one hand, and to his lower-level moral and political views, on the other.

Russell's theoretical ethics denies that there is such a thing as moral knowledge and asserts what Russell, perhaps too swiftly, took to be a corollary of this, that fundamental ethical principles were incapable of rational support. Thus, the status of his ethic of self-enlargement is left in doubt.

On the other side, a fairly natural question can be raised as to how an ethic of contemplation and philosophic calm can be accommodated to a life of moral engagement and political action, such as Russell's. Moreover, there are, it would seem, occasions on which anger was not just all right, but morally required.

Blackwell broaches these questions in his final chapter. He is to be congratulated on giving us in such detail a rich and hitherto large unsuspected of Russell's life and thought.

(28) Volume 12 of "The Collected Papers of Bertrand Russell", titled "Contemplation and Action", is reviewed by Sylvana Tomaselli in Books and Bookmen (Jan 1986)...with thanks to HARRY RUJA.

Occasional pieces

Sylvana Tomaselli

The Collected Papers of Bertrand Russell, volume 12: Contemplation and Action, 1902-14

edited by Richard A. Rempel, Andrew Brink and Margaret Moran
George Allen & Unwin, 612 pp; £48.00
ISBN 0 04920 078 x

'Every man,' wrote Coleridge, 'is born an Aristotelian, or a Platonist. I do not think it possible that any one born an Aristotelian can become a Platonist; and I am sure no born Platonist can ever change into an Aristotelian.' As a variation on this theme, Jonathan Miller told a Cambridge audience last year that theirs was the Platonist's haven, while Oxford fostered the Aristotelian. Cambridge, he boldly claimed, praised the contemplative life above all. Oxford, on the contrary, fixed its gaze, not on the heavens, but on London, alert to the possibility of participation and valuing the life of action.

Bertrand Russell gives the lie to both men's pronouncements. A Cambridge undergraduate and later a fellow of Trinity College, Russell did undoubtedly distinguish himself in the disciplines most extolled by Plato, philosophy and mathematics, but it scarcely needs reminding that he was a leading and active member of the Liberal circles which flourished in the Edwardian years. Born into the Whig aristocracy, his family's position and his friends would alone have ensured that reality was never kept at bay, had not the very frame of his character and the nature of his convictions constantly led him to engage directly in politics. The writings gathered in this book show him no less active than contemplative.

No apter title could therefore have been chosen for this 12th volume of

Russell's collected papers. Nor could one wish for these to be better edited, as not only does the general introduction provide a sense of context for what is a rather odd assortment of pieces - anything from letters to editors to short reviews - but each of these, in turn, are individually carefully introduced and most meticulously well-annotated. Indeed, everything from the print and format of the book to the appendices make it a pleasure to use.

Containing his non-technical writings over the period 1902-1914, it offers nine hitherto unpublished papers, including a 'Journal' covering the years 1902 to 1905, the 21 fragments of 'The Pilgrimage of Life', 'The Education of the Emotions', 'Dramatic and Utilitarian Ethics' as well as 'On the Democratic Ideal', 'The Status of Women', 'The Present Situation' and 'Address to the Bedford Liberal Association'. Amongst the published works, 24, including his writings on free-trade and a number of reviews haven't until now been easily accessible. But by no means all the texts are in any sense obscure, as the volume also contains such well-known essays as 'The Free Man's Worship' and 'Mysticism and Logic'.

What is assembled together thus ranges from revelations of Russell's intimate reflections on the nature of his feelings for his first wife Alys - for this is in the aftermath of the cycle ride during which he suddenly realised he no longer loved her - to his views on the proposed change in the Ordination Service of 1913. Russell is 30 in 1902 and this volume gives us so many snap-shots of his life up to the First World War. We see him successively unhappily married, seeking the meaning of life, finding a temporary refuge in mysticism, with Lady Ottoline Morrell, reading Spinoza, advocating the study of history, of mathematics, trying his hand at novel writing - *The Perplexities of John Fortice* (1912) - and making a case for a 'scientific philosophy' which would eliminate ethical considerations and thereby achieve objectivity. Russell must have failed to convince even himself of the viability of this project, unless he thought the case didn't apply to economics, for we find next a number of short

reviews which reveal him the disciple of the neo-classical economist, Alfred Marshall, defending free trade on moral as well as economic grounds and speaking of trusts as 'destroying liberty and corrupting our public life'. Then come the pieces devoted to the issues of equality, liberty and the status of women. Here, Russell is perhaps at his most admirable. This isn't so much because he took up the suffragists' cause, running in the Wimbledon by-election in 1907, the first person to run as a candidate for the National Union of Women's Suffrage Societies. Nor even because his arguments were particularly original on this subject. For just as his economics derived from Marshall's, so his politics and his views on the status of women were clearly inspired by those of John Stuart Mill. No, what warrants respect is his attempt not to divorce the issue of women's right to vote from that of adult suffrage, while being sensitive nonetheless to the tactical interests of the suffragettes. 'It is not,' he wrote, 'women as women that I want enfranchised, but women as human beings. And even poor women are human beings' (to Lucy Donnelly, 17 Nov 1909). Dividing women along the lines of the inequalities existing amongst men wasn't, in his view, any manner of progress.

Laudable as his efforts in relation to these concerns may have been, the Russell we meet in these pages isn't at his most intellectually impressive. This is perhaps his greatest period: *The Principles of Mathematics* (1903), 'On Denoting' (in *Mind*, 1906), *Principia Mathematica* (1910-13). But that is not the level of contemplation we are entitled to in this volume. The truth of the matter is that these papers are of some interest only because we know them to be the products of an otherwise splendid mind. The issues are still very much alive, but Russell's treatment of them, unlike Mill's, hasn't endured the passage of time. To be fair, however, few occasional pieces can be expected to make captivating reading 80 years after their publication. Perhaps it is unkind of us not to leave them in the shadow of Russell's more substantial works.

THE RUSSELL SOCIETY LIBRARY

(29) Books to lend. When no author is named, the work is by Bertrand Russell. The Donor's name appears at the end.

1. History of Western Philosophy. Jack Ragsdale.
2. Mysticism and Logic.
3. Bertrand Russell's Best. Ramon Suzara.
4. An Outline of Philosophy. Ramon Suzara.
5. Autobiography of Bertrand Russell, Vol.1. Ramon Suzara.
6. Let Me Die Before I Wake. by Derek Humphery.
7. Essay on Bertrand Russell. edited by E. D. Klemke. Bob Davis.
8. Morals Without Mystery. by Lee Eisler. Author.
9. Authority and The Individual. Don Jackanicz.
10. Autobiography of Bertrand Russell (in 1 Vol.). Don Jackanicz.
11. Bertrand Russell 1872-1970. Don Jackanicz.
12. Bertrand Russell - A Life. by Herbert Gottschalk. Don Jackanicz.
13. Education and the Social Order. Don Jackanicz.
14. Effects and Dangers of Nuclear War. Don Jackanicz.

15. Essays on Socialist Humanism. Don Jackanicz.
16. German Social Democracy. Don Jackanicz.
17. Icarus or The Future of Science. Don Jackanicz.
18. The Impact of Science on Society. Don Jackanicz.
19. An Inquiry into the Meaning of Truth. Don Jackanicz.
20. In Praise of Idleness. Don Jackanicz.
21. Has Man a Future. Don Jackanicz.
22. Justice in Wartime. Don Jackanicz.
23. National Frontiers and International Cooperation. by Zhores Medvedev.
Don Jackanicz.
24. My Philosophical Development. Don Jackanicz.
25. Political Ideals. Don Jackanicz.
26. Principles of Social Reconstruction. Don Jackanicz.
27. The Practice and Theory of Bolshevism. Don Jackanicz.
28. Roads of Freedom. Don Jackanicz.
29. Sceptical Essays. Don Jackanicz.
30. Secrecy of Correspondence Is Guaranteed By Law. by Zhores Medvedev.
Don Jackanicz.
31. The Tamarish Tree. by D. Russell. Don Jackanicz.
32. Mr. Wilson Speaks "frankly..." Don Jackanicz.
33. Marriage and Morals. Don Jackanicz.
34. Dear Bertrand Russell. Jack Ragsdale.
35. Education and The Good Life. Jack Ragsdale and Lee Eisler.
36. Human Knowledge: Its Scope and Limits. Jack Ragsdale.
37. Why I Am Not A Christian. Jack Ragsdale.
38. The Evolution of Conscience. Ralph Newman. Jack Ragsdale.
39. The Conquest of Happiness. Lee Eisler.
40. The ABC of Relativity. Lee Eisler.
41. Bertrand Russell, The Passionate Sceptic. by Alan Wood. Don Jackanicz.
42. Mortals and Others. Don Jackanicz.
43. Unarmed Victory. Don Jackanicz.
44. The Bertrand Russell Peace Foundation its aims and its work.
45. Yes to Life. by Corliss Lamont. The Author.
46. Russell. by A.J. Ayer. Ramon Suzara.
47. The Will to Doubt. Ramon Suzara.
48. The Life of Bertrand Russell. by Ronald Clark. Ramon Suzara.
49. The Problems of Philosophy. Ramon Suzara.
50. Unpopular Essays. Ramon Suzara.
51. Human Society in Ethics and Politics. Don Jackanicz.
52. Principles and Perplexities: Studies of Dualism in Selected Essays
and Fiction of Bertrand Russell. by Gladys Leithauser.
53. Photos, 1983 BRS Annual Meeting at McMaster University, June 24-26,
1983. Jim Mc Williams.
54. The Art of Fund Raising. by Irving Warner. Bob Davis
55. The Grass Roots Fundraising Book. by Joan Flanagan. Bob Davis
56. Dear Russell-Dear Jourdain. by I. Grattan-Guinness. Bob Davis
57. Why Men Fight. Bob Davis
58. Grants. by Virginia White. Bob Davis
59. Fund Raising for the Small Organization. by Philip Sheriden. Bob Davis.
60. The Grantsmanship Center Training Program. Bob Davis
61. Nonprofit Organization Handbook. by P.V. and D.M. Gaby. Bob Davis
62. Successful Fundraising Techniques. by Daniel Conrad. Bob Davis
63. The Foundation Directory. Bob Davis.
64. Great Americans Examine Religion. by Ralph de Sola. Jack Ragsdale.
65. But For The Grace of God. by Peter Cranford. Jack Ragsdale.
66. Godel, Escher, Bach. by Douglas Hofstadter. Lee Eisler.
67. The Collected Papers of Bertrand Russell, Vol. I. Cambridge Essays,
1888-99. Edited by Blackwell, et al. Allen & Unwin.
68. The Right to Be Happy. by Mrs. Bertrand Russell. Al Seckel.
69. Power, A New Social Analysis. Al Seckel.
70. Bertrand Russell, A Bibliography of his Writings, 1895-1976
Compiled by Werner Martin. Al Seckel.
71. Satan in the Suburbs. Al Seckel.
72. My Father, Bertrand Russell. by Katharine Tait. Al Seckel.
73. A Matter of Life. Edited by Clara Urquhart. Al Seckel.
74. Essays In Skepticism. Al Seckel.
75. The Problem of China. Al Seckel.
76. Russell On General Facts by Ausonio Marras and Russell, Frege, and
The "Meaning" of The Theory of Descriptions. Papers read at
the 1976 Meeting of the A.P.A.

77. Acquaintance and Naming: A Russellian Theme in Epistemology by Augustin Riska and Russell on the Essence of Desire by Raymond Frey. Papers read at the 1977 Meeting of the A.P.A.
78. On Russellian Clusters by Eugene Schlossberger and Repression in Bertrand Russell's "On Education" by Howard Woodhouse. Papers read at the 1978 Meeting of the A.P.A.
79. Definition and Description in Russell, 1900-1910 by Thomas Barron and Russell and Ontological Excess by D.A. Griffiths. Papers read at the 1979 Meeting of the A.P.A.
80. Russell On Logical Truth. by Nicholas Griffin. The Author
81. Bertrand Russell and the Origin of the Set-Theoretic Paradoxes by Alejandro Ricardo Garciadiego Dantan. The Author.
82. Bertrand Russell, America, and the Idea of Social Justice by Roland Stromberg. The Author.
83. The Relevance of Bertrand Russell To Psychology and Bertrand Russell's Conception of the Meaning of Life by Peter Cranford. The Author.
84. Dictionary of the Mind, Matter, and Morals. Edited by Lester Dennon. Tom Stanley.
85. Bertrand Russell Speaks His Mind. Tom Stanley
86. The Bertrand Russell Library of Lester Dennon. Tom Stanley
87. The Analysis of Mind. Tom Stanley
88. Religion and Science. Tom Stanley
89. Portraits From Memory. Tom Stanley.
90. The Scientific Outlook. Tom Stanley.
91. Wisdom of the West. Tom Stanley.
92. The Principles of Mathematics. Tom Stanley.
93. Bertrand Russell: Philosopher and Humanist. by John Lewis. Tom Stanley
94. The Good Citizen's Alphabet. Whitfield Cobb
95. War Crimes in Vietnam. Whitfield Cobb.
96. Introduction to Mathematical Philosophy. Whitfield Cobb.
97. The Prospects of Industrial Civilization. Whitfield Cobb.
98. Tractatus Logico-Philosophicus. by Wittgenstein. Introduction by Bertrand Russell. Whitfield Cobb.
99. Freedom Versus Organization. Whitfield Cobb.
100. Bertrand Russell and His World. by Ronald Clark. W.W. Norton.
101. The Final Epidemic: Physicians and Scientists on Nuclear War. Edited by Ruth Adams and Susan Cullen. Physicians for Social Responsibility.
102. Photos, Kalinga Prize Award Ceremony. Paris, January 28, 1957. UNESCO.
103. Theory of Knowledge: The 1913 Manuscript, Volume VII of the Collected Papers of Bertrand Russell. Allen & Unwin.
104. Common Sense And Nuclear Warfare. Philip LeCompte.
105. Late Night Thoughts On Listening To Mahler's Ninth Symphony. Lewis Thomas
106. Six Men. Craig McGee.
107. Bertrand Russell and the Pacifists in the First World War by Jo Vellacott. St Martin's Press.
108. Russell by C.W. Kilmister. St Martin's Press.
109. Contemplation And Action, Volume XII of the Collected Papers of Bertrand Russell. Allen & Unwin.
110. Bertrand Russell's America 1945-1970 by Feinburg and Kasrils The South End Press.
111. Dewey and Russell: An Exchange edited by Samuel Meyer. The Philosophical Library.
112. Philosophical Essays. Ramon Suzara.
113. Bertrand Russell: A Classified Bibliography by Harry Ruja. The Author.
114. Principles of Polemic in Russell by Harry Ruja. The Author.
115. Bertrand Russell edited by Ann Redpath. Creative Education, Inc.

There is no charge for borrowing books. The borrower pays postage both ways. Please note the one-way postage shown below, and remit twice that amount when returning the books.

One-way postage:

ELECTION OF DIRECTORS

(35) Nominations for Directors, please. We wish to elect 11 Directors this year, for 3-year terms starting 1/1/87, which will give us a total of 24 elected Directors. The August newsletter will provide a ballot for voting. In this (May) newsletter we seek candidates who will be on the ballot.

We are asking you to nominate candidates. Any member may nominate any other member to be a Director-candidate.

If you wish to be a candidate yourself, notify the Elections Committee and someone will probably nominate you.

The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something, by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. The cost of attending meetings is (federal) tax-deductible for Directors.

We would like to have more than 11 names on the ballot, so as to give members a choice.

A brief statement about the candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.

Directors whose terms expire in 1986 are JACK COWLES, DAVE GOLDMAN, STEVE MARAGIDES, FRANK PAGE, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, and KATE TAIT. They are eligible for re-election.

We urge last year's candidates who were not elected to try again this year.

TO NOMINATE SOMEONE -- or to volunteer yourself -- write the Election Committee, c/o the newsletter, address on Page 1, bottom.

WANTED

- (36) Griffin Barry will be the subject of a book-length study by Leona Egan, Ph.D. She is interested in showing, among other things, his relation to the Provincetown Players, the celebrated theatrical group involved with Eugene O'Neill. Of more interest to us is the fact that Barry was an intimate friend of Dora Russell's, and father of her third child. There are many references to him in Dora's autobiography, "The Tamarisk Tree". Ms. Egan would appreciate hearing from anyone who knows anything about Barry. Her address, in spring and summer: 4471 MacArthur Blvd. (#103), Washington, DC 20007. 202-342-8332. At other times: PO Box 556, Provincetown, MA 02657.

BOOK REVIEW

- (37) "Bertrand Russell on God and Religion," Al Seckel, ed. (Buffalo: Prometheus Books, 1986) is reviewed by BOB DAVIS:

This new collection of Russell's writings should appeal to most, maybe all, BRS members. Edited by Al Seckel, it contains 19 separate articles by BR on religious topics.

For the past eight years, the BRS has been wanting a book like this, and now Al Seckel has satisfied that desire, and done an admirable job. Al, a BRS member, lives in the Los Angeles area, where he has done a lot of lecturing on Russell (including a talk he gave at our 1980 annual meeting, in Los Angeles.) The Humanist publishing house, Prometheus Books, is the publisher, with the promise of more to come.

This book is a joy to read. Seckel has included a good brisk biography of Russell to initiate matters. Then come the 19 articles by BR. The many pleasures of reading Russell are here -- the clear, forceful writing, the humor, the intellectual power. We also have the fun of reacquainting ourselves with old favorites, such as "Why I Am Not A Christian", "What Is An Agnostic?" "Sin", etc. These and other essays will be familiar to most members, but it is rewarding to have them gathered together in one collection, and re-read them after many years.

There are also a number of essays that Seckel found in periodicals which will be new to almost everyone. I found "Religion and The Churches", from "Unpopular Review" (April 1916), to be of great interest. In my own graduate work I had studied Russell's social thought during World War I; imagine, then, my delight at finding an essay from the period which was new to me. I enjoyed seeing how well it fit in with BR's 1915 Principles of Social Reconstruction (American title: "Why Men Fight"). Concerning religion, it has a less implacable tone than his later writings. Here he states what a "good" religion would entail; later he would write, "All religions are not only wrong but harmful."

For those wanting a chuckle or two, I would recommend "The Theologian's Nightmare" (from "Fact and Fiction", 1961), one of Russell's "Nightmares of Eminent Persons".

I first became acquainted with Russell as a teen-ager in rural Iowa, when I read "Why I Am Not A Christian" and "Marriage and Morals". I found them enormously liberating, in the local stultifying fundamentalist environment. I also discovered that I was not alone in finding Russell liberating. But when I moved to more cosmopolitan areas, I found that this was not the case -- because the values that Russell represented had more or less become the norm. Now, with the resurgence of fundamentalism and repressive morality, I predict that Russell's writings on these topics will regain their relevance. If you know someone, especially a young person, who is confused on these questions, I would strongly recommend Seckel's book as a gift.

The book is apparently selling very well. Seckel and Prometheus Books are working on a second volume, on morality. BRS members who buy this book are helping to support a very worthy undertaking. To have it autographed by Al, buy it directly from him. See ().

DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
elected for 3-year terms, as shown

- (38) 1984-86: JACK COWLES, DAVID GOLDMAN, DON JACKANICZ, STEVE MARAGIDES, FRANK PAGE, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, KATE TAIT
- 1985-87: JACQUELINE BERTHON-PAYON, BOB DAVIS, ALEX DELY, ALI GHAEMI, HUGH MOORHEAD
- 1986-88: LOU ACHESON, KEN BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, CARL SPADONI, TOM STANLEY.

BRS AWARD (CONTINUED)

(39) People For the American Way, from a feature story in the Washington Post (2/3/86,p.A3):

Norman Lear's Crusade Widens

Fight Over Religious Liberty Challenges Falwell's Fundamentalism

By Howard Kurtz
Washington Post Staff Writer

In 1980, Norman Lear experienced his first sustained exposure to the Rev. Jerry Falwell, and he did not like what he saw.

While doing research for a possible movie, Lear watched nearly 100 hours of Falwell's "Old Time Gospel Hour," the Rev. Pat Robertson's "700 Club" and other evangelical shows. He said he was so alarmed that he dropped the movie plan and made a 60-second commercial on religious intolerance. That led to the creation of People for the American Way.

Five years later, Lear's group has become a major force in the national debate on religious liberty, censorship, church-state relations and judicial independence. If yards of newsprint and hours of television time are any indication, People for the American Way has emerged as a preeminent spokesman on the left, fueled in part by a \$5 million budget that dwarfs those of most liberal advocacy groups.

While its publicity machine cuts a wide swath through Washington, the soul of Lear's organization remains its fervent opposition to Falwell's Moral Majority. This has produced a remarkably bitter and personal war of words between television producer and television preacher.

"Norman Lear is clearly anti-Christian," Falwell said. "I don't know of many Jewish people, who are anti-Christian. His whole vendetta is against everyone who is preaching the gospel...."

"I see an anti-Christian, anti-Reagan fire raging in his soul that's caused him to lash out at the president and the Pat Robertsons and Jerry Falwells of the world."

"I've tried to get the name of his synagogue so I could call his rabbi and find out what's bugging him," said Falwell, 52. "Maybe he doesn't have one. He's just got Christians in his craw."

Lear, 62, creator of such television series as "All in the Family," "Maude" and "Mary Hartman, Mary Hartman," responded in kind:

"There's nobody who knows me who thinks I'm either irreligious or antireligious. I have great concern anytime someone suggests that God smiles on him because he believes a certain way and doesn't smile on me."

"He would have to know, the way he talks about me, that... to an anti-Semite, a wealthy Jew is dif-

ferent from someone else who is wealthy. The Rev. Falwell trades in that in a consistent and smarmy fashion."

Lear's lieutenants declared a victory of sorts last month when Falwell announced that the Moral Majority was being submerged into a new lobby called the Liberty Federation. They expressed particular delight when Falwell told The Washington Times that he was "attempting to counter everything that People for the American Way... and other leftist organizations stand for."

How did this group quickly become the *beta noirs* of the religious right? At a time when conservative think tanks are dominating the Washington scene with a more legalistic and academic approach to public policy, People for the American Way uses the media to amplify its message.

The 200,000-member group does some lobbying, but its major weapons are books, videotapes, op-ed page articles and speakers who ply the lecture circuit. Whether castigating Falwell for religious intolerance, Attorney General Edwin Meese III for promoting ultraconservative judges or Education Secretary William J. Bennett for acting like a "secretary of evangelism," Lear's troops know how to gain.

While other activists may churn out legal briefs or cultivate allies in the administration, People for the American Way strives to be the most well-thumbed card in reporters' Rolodex files.

Anthony T. Podesta, the executive director, said his approach is "to get an editorial in The Philadelphia Inquirer or The Baltimore Sun. We raise hell in the Chicago Tribune and on MacNeil/Lehrer. We send material to 300 radio talk shows. We're out there in the Edwardsville, Ill., Gazette."

Podesta's reasoning is simple: "If separation of church and state isn't going to sell in Edwardsville, Ill., Washington is not going to save us."

Last summer, while President Reagan was preparing to name Herbert E. Ellingwood to head the office that screens potential federal judges, Podesta's staff prepared radio advertisements that attacked Ellingwood's outspoken brand of Christian fundamentalism and his record as head of the Merit Systems Protection Board. The nomination was not made.

Such assaults have not endeared

the group to conservative activists "I don't like their tactics at all," said Patrick B. McGuigan of the Free Congress Foundation. "They're feeding the mentality that you can't oppose people on the merits, that you have to pretend that they're moral lepers."

Loye Miller, a spokesman for Bennett, called the group "so shrill and predictably distorted that they deserve no credibility.... They are not taken seriously here."

Falwell describes the group as "an amazingly small organization" of closet Democrats. "If they could get 100 of their members in the same room, I'd like to see that," he said.

Falwell, whose Moral Majority claims 6.5 million members, said Lear's group frequently harasses him by writing to television stations that carry his program. People for the American Way said these are equal-time requests, but Falwell called it an attempt to force him off the air.

Other critics confess grudging admiration. "You have to concede their effectiveness," Justice Department spokesman Patrick Korten said. "They manage to get themselves quoted quite a lot."

Still, he said, "It's basically a PR operation" aimed at "creating the impression that there is some groundswell out there that would support their point of view. In fact, that groundswell is largely limited to the usual residue of liberal activists."

Ticking off names of Republican supporters, Lear rejects the notion that he has assembled a group of Democratic partisans. He said he took pains "to enlist mainline church leaders" in establishing the group after nearly 10,000 people dialed a toll-free number featured in his 1980 commercial.

"My credentials... were all wrong," Lear said. "I was a product of the Hollywood community; I was Jewish."

Lear points to such founders as the Rev. Charles Bergstrom, a leader of the Lutheran Council, and the group's chairman, former Baptist minister John Buchanan.

Buchanan, an eight-term Republican congressman from Alabama until the New Right helped defeat him in 1980, said he signed up because "most Americans don't like for preachers to tell them what is the Christian position on an issue."

Other directors range from Catholic University President William

Byron to actor Martin Sheen to National Education Association President Mary Hatwood Futrell. Lear's direct-mail specialist, Art Kropp, is a former fund-raiser for the Republican National Committee, and his latest appeal was signed by Sen. Lowell P. Weicker Jr. (R-Conn.).

Podesta, 42, admits to being a Democrat who did advance work for the 1980 presidential campaign of Sen. Edward M. Kennedy (D-Mass.) and for 1984 vice-presidential nominee Geraldine A. Ferraro.

Podesta also resists the liberal label, saying that "what we do is profoundly conservative. Conservatism the First Amendment heritage in this country is not a liberal agenda.... The people on the loony right think we're left-wingers."

People for the American Way spent much time last year attacking the Reagan administration. It mounted a media campaign accusing Meese, Falwell and Sen. Jesse Helms (R-N.C.) of trying to stack the federal judiciary with extremists and impose a right-wing litmus test on potential judges.

It issued a scathing report on Bennett's first 100 days in office, called "A Department at Risk." It urged dismissal of a Treasury Department official who answered a citizen's post card by calling him an "amazing, pathetic creature" for questioning that America is "a Christian nation."

The group also helped defeat an amendment by Sen. Orrin G. Hatch (R-Utah) that would have ended federal funding to school districts that teach "secular humanism." And it aired a documentary on book-burning, narrated by actor Burt Lancaster, that a Moral Majority official said "would make the propagandists of the Soviet Union and the Third Reich proud."

The anticensorship campaign is slowly moving the group's focus beyond the Beltway. In 1984, it helped persuade Texas, the nation's largest purchaser of school textbooks, to repeal a rule barring the use of books mentioning evolution. In recent weeks, staffers have been flying to tiny Church Hill, Tenn., to join a battle over school curriculum.

"You look for opportunities like that," Podesta said, "so that Newsweek then does a little blurb in 'Periscope' to show that the fight against secular humanism and evolution is not yet over."

THE FUND-RAISING BATTLE

A LOOK AT EACH SIDE'S LETTERS

People For The American Way

You may be aware that Jerry Falwell...and other ultra-fundamentalist ministers have been preaching a dangerous message of religious extremism to the American people...

"In a recent broadcast...Falwell said: 'Biblically sound textbooks must be written for every school child in every course of study. Our textbooks...are very humanistic and very riddled with anti-Christian philosophies'..."

"A massive, new crusade is now underway...an attempt to 'Christianize' America. To achieve the goals of this 'Christian Nation Movement,' leaders from the Religious Right—the Revs. Jerry Falwell, Jimmy Swaggart, Pat Robertson, along with Phyllis Schlafly, Jesse Helms and others—have targeted every vital institution basic to American life: 1) our public schools; 2) our federal courts; and 3) even public officials."

NORMAN LEAR

It seems that Mr. Lear, under the guise of being a patriotic, flag-waving American, is trying to brainwash the American public into believing the Moral Majority is a book-burning, pro-censorship organization which tries to deny people First American rights...Mr. Lear is raising funds right now to destroy us! And not only that, he has the networks and liberal press backing him as well! This makes him a real threat to us...

"This wealthy television mogul, who has deluged America with such anti-moral, anti-family programs as 'Mary Hartman, Mary Hartman,' has now launched a million dollar, anti-Christian ministers campaign of TV spots..."

"The man that some people believe to be the greatest threat to the American family in our generation...has successfully brought filth and sexual perversion into our living rooms and led the way to today's gutter programming."

JERRY FALWELL

THE WASHINGTON POST

What makes all this possible is money, which Lear's group raises through a time-honored technique: painting the opposition in fearsome colors. Lear aides monitor Falwell's every utterance with a "televangelist survey" that provides fresh grist for their fund-raising mill.

Lear, in turn, is a leading character in Falwell's fund-raising appeals. While direct-mail donations to conservative causes have been declining, the Moral Majority still raised \$7 million last year as part of Falwell's \$100 million empire.

Lear said that, after one Falwell mailing called him the number one threat to the American family, he received death threats from a man who turned out to have the letter taped to his wall.

While many believe that Lear, a prodigious fund-raiser, bankrolls People for the American Way, he donated just \$100,000 of its \$5 million budget last year. Nearly 20 percent comes from foundations, with the rest from individual donors responding to appeals that rarely fail to mention Falwell.

"They use me as a whipping boy," Falwell said. "I am to them what Ted Kennedy is to the right—I'm their means of raising money. If I were to die today, their organization would go out of business."

To that, Lear replied: "Look at his mail and how much it mentions me In his mailings, which are far more vitriolic than anything he says on the air, he suggests that anybody that disagrees with him is satanic."

BRS COMMITTEES (CONTINUED)

(41) Philosophers' Committee Chairman David E. Johnson reports:

On December 28, 1985, from 9:30 to 11:30 a.m. at the Washington (D.C.) Hilton, the Philosophers' Committee of the Bertrand Russell Society sponsored a session in conjunction with the Eastern Division meetings of the American Philosophical Association. The audience fluctuated from 10 to 18. The program as announced contained a panel by Marx Wartofsky and Justin Leiber on Russell and Wittgenstein, followed by Hugh Moorhead on "Bertrand Russell in War and Peace." By 9:45 Wartofsky had not appeared, so Leiber talked briefly about what would have been discussed were Wartofsky to have appeared: i.e., differences between Russell and Wittgenstein as role models for the profession (in relation to public affairs) and in how they were treated by the profession. The audience gave about five minutes of lively challenge to Leiber's presentation. Then we turned to Hugh Moorhead's paper. About fifteen minutes into this paper, Wartofsky popped in and announced that he had apparently scheduled himself for two panels simultaneously, and would stay with the other session.

Having clarified this confusion, we proceeded with Moorhead's paper, which was divided into a conceptual clarification of some of Russell's discussions on the topic. The focus of the latter part was on Russell's role as an educator of the culture in the factors leading in the direction of war (e.g., nationalism, patriotism, glory, fatalistic views of human nature, and disuse of reason), followed by his proposals that might lead to peace (quite a gamut over his lifetime). Russell's primary influence here, Moorhead argued, was among lay readers rather than among academicians. The paper concluded with an exhortation to the to hearers to advance Russell's work by starting with his view that war, man's ultimate absurdity, is indeed a philosophical problem.

OPINION

(42) I.F. Stone is interviewed in The Progressive (reprinted in the Utne Reader Oct/Nov 1984).

[We recall that Stone gave the closing public lecture of the Bertrand Russell Centenary Conference at McMaster University, in 1972. His topic was "Russell as a Moral Force in World Politics".]

Through six decades of history, I.F. Stone has established himself as the dean of dissident journalists in the U.S. A sports and local news beat reporter in the 1920's, Stone later became Washington, D.C. correspondent for PM, a New York "free-wheeling sheet" in the 1940's that "respected the intelligence of its readers." As publisher, editor and principal writer for I.F. Stone's Weekly, he became widely known for his iconoclastic reporting. The Weekly closed shop in 1972, and Stone now savors the time available for reading. The interview was conducted by Erwin Knoll, longtime friend to Stone and editor of The Progressive.

PROGRESSIVE: I've often heard you described as America's greatest muckraking journalist, but I seem to recall that you don't particularly like that title.

STONE: My God, I'm not the greatest. Henry Demarest Lloyd, the man who wrote *Wealth Against Commonwealth*—he was the greatest. But you're right about my not liking the word *muckraking*. It was coined as an insult to Teddy Roosevelt. It comes out of *Pilgrim's Progress*, and just as the terms of *Tory* and *Whig* were once insults but became respectable appellations in British politics, so *muckraker* has become more or less respectable. But the term really does a disservice to journalism. After all, you're not just raking muck, you're trying to help people understand what's happening in the society.

A good journalist has a fire in his belly and a duty to expose abuses.

PROGRESSIVE: Do you believe journalism is generally performing that function of help-

ing people understand what's happening? Is it doing it less well than it did when you went into newspaper work more than sixty years ago?

STONE: No, I think the press is better than it was in the 1920s. *The New York Times* was just godawful in the 1920s. Godawful! When I was a young man and Hoover was President, *The Times* had a Washington correspondent named Richard V. Oulahan who used to play medicine ball with Hoover almost every morning. And just about every day there'd be a front-page story in *The Times* that wasn't really a news story at all but a disguised editorial about what a great guy Herbert Hoover was. *The Times* is a far better paper today.

PROGRESSIVE: How would you define the

function of the press? What is it supposed to do?

STONE: The duty of the press is to inform the public and police the Government.

PROGRESSIVE: Isn't that a rather formidable mission to impose on what is, after all, a business enterprise?

STONE: That was Jefferson's ideal.

PROGRESSIVE: But Jefferson wasn't thinking about entrusting this mission to great conglomerate media corporations.

STONE: No, and he wasn't thinking about the electronic media, and all that can become a serious problem. You know, there's one good idea in the Soviet constitution: When Stalin's constitution was promulgated in the 1930s, he claimed it was better than the American constitution on freedom of the press because it provided that printing presses and other necessary materials should be made freely available to anyone who wished to express himself. Of course, he never obeyed it.

PROGRESSIVE: Do you believe there will ever be a society that provides that kind of freedom of expression?

STONE: I don't know. But if our media should be wholly swallowed up by big interests, the day may come when people will have to enact laws making printing presses and electronic time available to critics. . . .

The American press has a party line. It's not as bad as the Soviet press, it's not as rigid, but there is a defined realm of respectable discourse. If you cross over the bounds to the right or to the left—it's a little more flexible to the right than to the left, but it applies on both sides—then you don't have to write for the desk drawer or hide your writing under the bed, as in the Soviet Union, but you sub-

mit it to the American equivalent of *samizdat*—*The Progressive*, *The Nation*, *In These Times*. You're relegated to publications that reach only a small number of Americans. So the dissidents here are allowed to talk to each other, but they don't get a chance to talk to the wider public. And on television—my God, you almost never get to see anyone on the Left.

PROGRESSIVE: Given that—I don't want to call it bias—given that institutional inertia on the part of the mass media, how will we ever reach enough people in this country with enough information and analysis to bring about fundamental political change?

STONE: Well, we do—somehow. The system is not perfect, and it's not monolithic. There's a parable in the Gospel about the seeds that fall on stony places. Quite often you find in the daily newspaper bits and pieces of information that run counter to what I call the party line. They don't make the front page, and they're not amplified by editorial writers, columnists, speechmakers. They're not repeated, they're just dropped. If you're a careful reader, you pick up these droppings and develop their inferences, their meanings for your own audience. That's what you do in *The Progressive* and what I did in the *Weekly*.

A lot of it can be found right there in the press, and even more of it can be found in the public record—in Congressional hearings and debates, in official documents. For example, when [Senators Wayne] Morse and [Ernest] Gruening opened up on the Tonkin

“The American press has a party line . . . a defined realm of respectable discourse.”

Gulf resolution [authorizing full-scale U.S. military intervention in Vietnam], I covered it in the *Weekly*. It was all there in the *Congressional Record*, but nobody bothered to read it, and editors weren't interested enough to have reporters cover it. It didn't fit the party line—just as you don't get stuff in *Pravda* or *Izvestia* that tells the Russian people that the war in Afghanistan is a big mistake.

But the difference between the Soviet press and the American press is that if you look hard enough, here, you can find a lot of good stories. It's possible for people to keep informed. One reason the *Government* is so badly informed is that it has too damned many intelligence agencies. I mean that very seriously. There was a revealing moment when President Kennedy called in David Halberstam [of *The New York Times*] and General [Victor] Krulak of the Marines, who was head of intelligence for the military in Vietnam, and said, in effect, “Hey, you guys—I read Halberstam's reports in *The Times* and I read Krulak's secret reports and it reads like two different wars. Which is the real war?” Of course, the real war was being reported in *The Times* and *The Washington Post* and *The Wall Street Journal* and the phony war was the stuff that came in over the President's desk. It looked like the real stuff because it was stamped SECRET, but it was a

bunch of bullshit. . . .

Secrets play a very small part in human history. You don't come to understand what's happening by peeping through keyholes and seeing how a foreign leader goes to the toilet. In writing history or journalism—it's the same thing—you get to understand by looking at the fundamental struggles, the interests, the classes, the ideas that become facts, and you try to make sense of all that.

The virtue of a free society is that it doesn't have to depend on spies and secret police. Those people are all paranoid, trained to look for plots, but history is not made by conspiracies. An essential premise both of liberal philosophy—Locke, Milton, Jefferson—and of Marxist philosophy, which is also part of the English materialist tradition, is that history is not made by conspiracies. As the Declaration of Independence states, people will suffer great evils for a long time before they act to bring about change. Hazlitt has a wonderful essay on the French Revolution in which he makes the same point: People don't revolt until conditions become intolerable.

History is made by fundamental forces, not by dark conspiracies. Human beings are rational, to some degree, and that rationality gives hope, and we journalists are supposed to feed this rational element, to inform, to persuade, to illuminate, so people can make decisions on the basis of debate, and so that a government that's on a bad track can switch to a good track.

PROGRESSIVE: But how can you apply this enlightened, rational, but leisurely process of public deliberation to the threat of nuclear holocaust, which may confront us with the prospect of catastrophe not in a matter of years or months, but in perhaps days or even hours?

STONE: The public is very well informed on this. It's a mistake to think people are unaware of the danger. The latest figures in a poll commissioned by the Committee on the Present Danger, who are hawks and arms-race buffs, show that 81 percent favor a nuclear freeze, and 31 percent favor nuclear disarmament.

But the human race is trapped by its primitive instincts, the macho appeal of war, and the obsolescence of the nation-state system.

Man may now be an endangered species. We know that if a great change in climatic conditions requires drastic changes in the behavior of a species, it will probably die out. If the icecaps were suddenly to melt, polar bears would die out. No species seems to be able to adapt beyond a margin, and man may be in the same position. Unless he can free himself from his own primitivism, unless he can learn to master technology instead of being mastered by it, he's doomed.

That's not a question of capitalism or communism, but free society or dictatorship. All that is superficial and propagandistic; it's not the heart of the question. If our antagonists today were a republican Russia or a czarist Russia, it would make no difference at all in the arms race. After every great war, the victors square off against each other for the next one. This has to do with the trap created by human nature and the make-up of the international system.

PROGRESSIVE: How do we break out of this trap we've devised for ourselves?

STONE: By talking about it, agitating, orga-

nizing. The freeze movement is doing its best; it's a wonderful grass-roots movement—the most encouraging thing that's happened in the last ten years.

There's still hope, but the end could come at any time. Unless we get a freeze very soon, Moscow and Washington will both lose control of their own destinies. Then there's no more Constitution, no more Politburo, no time to get the President out of bed, no time for debate. With the advance of technology and the reduction of warning time, the good old days when we had thirty minutes' notice of an ICBM coming across the Atlantic are just about over. . . .

PROGRESSIVE: I've known you for a long time. Even when talking, as we are right now, about the most grim and threatening developments, I've always found you hopeful. You said just a moment ago, “There's still hope.” In 1953, several years before the Russians launched their first Sputnik, you saw clearly a danger that very few other people saw—the danger of space war—and you raised the alarm in the *Weekly*. Here we are, thirty years later, having advanced relentlessly toward that danger. How do you sustain your optimism? How can you still believe that we'll be able to get a handle on it?

STONE: History is not a totally fatalistic drama. People can change it at least a little bit, and they have a duty to try. Aristotle tells a wonderful story about how a defeated army in headlong flight suddenly begins to turn around and make a stand and fight. How does that happen? he asks, and this is what he says: One man decides he'd rather turn around and die than run—and he does. Then a second man follows him, and a third man, and a fourth man, and soon there's a whole knot of resistance, and before you know it the whole army has turned around and what looked like a defeat has become victory.

PROGRESSIVE: And you believe people can still turn the defeat we all face into a victory?

STONE: I think so, yes, though I wouldn't want to bet on it. But that's our duty. It's a citizen's duty—and a journalist's duty—to

“ . . . on television—my God, you almost never get to see anyone on the Left.”

fight. You never can tell, sometimes you win.

A friend once gave me a word of hope: He said, “You know, Izzy, if you keep on pissing on a boulder for about a thousand years, you'd be surprised what an impression you make.”

I never thought, at the time of the witchhunts, that I would live to see the day when J. Edgar Hoover would be recognized as the kind of jerk he really was, and when guys like me would find a certain amount of acceptance, if not applause. I never thought that would happen. Who would have thought that a Senate committee would expose the dealings of the CIA, the attempts to kill Fidel Castro, the dirty work against Salvador Allende? That was wonderful.

It's still a free society, but it'll become

less so if people don't have the courage to utilize it.

PROGRESSIVE: You've written about great moments in human history and about terrible moments, but you tend to remember the great moments more forcefully than the terrible ones, don't you?

STONE: Well, you have to remember both, and they're often so mixed up. Anatole France, who's unjustly no longer read, wrote a wonderful novel, *Les Dieux Ont Soif—The Gods Are Thirst*—which is really a handbook for the study of revolution. It's a portrait of a Jacobin, a terrible mixture of idealism, cruelty, brutality, love, humanity and inhumanity, justice and injustice—all in one personality that really summed up the whole French Revolution. It was a dreadful thing to live through the French Revolution, just as dreadful as the Russian Revolution, and it had the same admixture of idealism and horror and irrationality.

PROGRESSIVE: So we keep reinventing the wheel and painfully learning the things others learned before us. Don't you find even that discouraging?

STONE: No, you don't have to reinvent the wheel. The human race has learned a little bit. But the human being is still very much a caveman, and he figures that the solution to any problem is to get rid of that bastard across the valley, and that the only way to create peace is to get a bigger club and go in there and smash his brains out. That's deterrence. That's what Reagan wants to do to Russia. That's the "evil empire"—that other guy across the valley. . . .

PROGRESSIVE: We haven't talked about what you are learning from the Greeks.

STONE: What I learned from the Jews is more important. I'm in love with the Greeks, but when it comes to these problems we've been talking about, the Hebrew Prophets—and I include Jesus among them, and Marx, too, for that matter—have it all over the Greeks. There's no compassion in the Greeks. There's no respect for the lowly. Socrates never speaks of the wisdom of the poor and the humble, the wisdom that comes from sacrifice, experience, and suffering. For him, virtue is knowledge—but lots of knowledgeable people are pretty awful. You can be a great scholar and a bad human being, or ignorant and a wonderful human being.

You see, Christianity is a marriage of two diverse strains. One is the deeply democratic strain of the Hebrew Bible and the

Gospels—the strain that elevates the common man. Right at the beginning of the Bible you have God saying to the angels, "Let's make man in our image." So man was made in the image of God. That's a compliment; that doesn't demean him. It elevates him. It also says we all come from the same father and mother. So the idea of equality comes right out of those early chapters of the Bible. In the Peasant Revolt, when they finally got the Bible away from the Church and translated it so common people could read it, it spread revolution just as liberation theology is doing right now in Latin America.

Does Reagan know what he's doing with this religious issue? The Bible's a revolutionary document. The saying, "Sooner shall a camel pass through a needle's eye than a rich man enter into the gates of Heaven"—that's not in Karl Marx's *Das Kapital*, that's in the Gospels.

On the other hand, we have the neo-Platonic and hierarchical view of a society made up of orders—not just of classes but of rigid orders—and that idea, too, passed into Christianity. In that vision, the lower classes obey the higher classes, and the higher classes give the poor an occasional pat on the head and a beggar's mite.

It's the hierarchical strain we find in St. Augustine and in Calvin, who believe that if someone's rich and powerful, it shows he has grace. That's made to order for the ruling class, for the rich against the poor. But it's completely contrary to the Gospels. The Gospels are a *cri de coeur* of the poor.

PROGRESSIVE: What do you enjoy these days, Izzy? What do you do for sheer fun?

STONE: I read Greek poets, and other poetry. Hebrew poetry. I've been a pious Jewish atheist since my Bar Mitzvah, but I am pious, and at my age, every day is a gift from God. It's wonderful to hear the birds in the morning, and to see the trees, and to see babies.

There's so much to learn and so many things I haven't read and it's so much fun—just so damn much fun. I go to bed with a whole pile of books, and I check out things in the encyclopedia, and it's all one seamless web; human history and human destiny. I read *The Birds* of Aristophanes in Greek last year, and it was so joyful that it gave me a new appreciation of the birds outside my window. And the human race is like the birds, and its poets are the birds that sing. Somehow we transcend our fate, we tran-

scend death by poetry.

Imagine, you pick up a poet who lived more than 2,000 years ago—like Sappho—and she speaks to you with such immediacy, such power, such pride. And Homer is wonderful—he's just a mish-mash in English, but in Greek he's such a great artist. It's worth all the agony of learning Greek.

PROGRESSIVE: It seems to me that what we've been talking about all afternoon, in one way or another, is your pride in the human experience. You talk about history as something that was accomplished by a great team of which we are all members

STONE: Yes, that's right. You know there's a chorus in the *Antigone*, and very few scholars have stopped to think about what it really means: It's a celebration of the common man—of the wonders of learning how to sail and how to fish, how to hunt, how to communicate. It's a poem to man. Socrates and Plato demean the common man, but the playwrights celebrate him; they're very democratic—Aeschylus, Sophocles, and above all, Euripides.

I figure if you treat common people as dogs, as they did in ancient Rome, you make a rabble out of them. If you affirm the myth of equality, it's still a myth—but it gives people self-respect, and it makes them feel equal. That's what DeTocqueville recognized: Myths can be very creative.

Socrates and Plato always talked about the human community as a herd, but Aristotle talked about it as a *polis*—a civilization—and *koinonia*—a community. Civilization means people can live together in peace. We need a world *polis*.

It's madness to reach out to the stars and begin the great adventure of going to the moon and the planets and maybe beyond and still be divided here on Earth by all these stupid, anachronistic quarrels.

PROGRESSIVE: But you still hope.

STONE: Look, history is a tremendous symphony—music full of anguish and horror and discord, but there's also beauty in it. I wish kids would start studying history again. The whole history of the human race is fascinating. It's mostly dark, but then there are the bright spots. . . .

BY BERTRAND RUSSELL

- (2) The Committee of 100, from "A Matter of Life", Clara Urquhart, ed. (Boston: Little Brown, 1963) pp.189-196. Thank you, TOM STANLEY.

[For more BR on civil disobedience, see RSN49-8. For more on the Committee of 100, see Wethersfield (3), and Linus Pauling (4).]

THE Committee of 100, as your readers are aware, calls for non-violent civil disobedience on a large scale as a means of inducing the British Government (and others, we hope, in due course) to abandon nuclear weapons and the protection that they are supposed to afford. Many critics have objected that civil disobedience is immoral, at any rate where the government is democratic. It is my purpose to combat this view, not in general, but in the case of non-violent civil disobedience on behalf of certain aims advocated by the Committee of 100.

It is necessary to begin with some abstract principles of ethics. There are, broadly speaking, two types of ethical theory. One of these, which is exemplified in the Decalogue, lays down rules of conduct which are supposed to hold in all cases, regardless of the effects of obeying them. The other theory, while admitting that some rules of conduct are valid in a very great majority of cases, is prepared to consider the consequences of actions and to permit breaches of the rules where the consequences of obeying the rules are obviously undesirable. In practice, most people adopt the second point of view, and only appeal to the first in controversies with opponents.

Let us take a few examples. Suppose a physically powerful man, suffering from hydrophobia, was about to bite your children, and the only way of preventing him was to kill him. I think very few people would think you unjustified in adopting this method of saving your children's lives. Those who thought you justified would not deny that the prohibition of murder is *almost* always right. Probably they would go on to say that this particular sort of killing should not be called 'murder'. They would define 'murder' as 'unjustifiable homicide'. In that case, the precept that murder is wrong becomes a tautology, but the ethical question remains: 'What sort of killing is to be labelled as murder?' Or take, again, the commandment not to steal. Almost everybody would agree that in an immense majority of cases it is right to obey this commandment. But suppose you were a refugee, fleeing with your family from persecution, and you could not obtain food except by stealing. Most people would agree that you would be justified in stealing. The only exceptions would be those who approved of the tyranny from which you were trying to escape.

There have been many cases in history where the issue was not so clear. In the time of Pope Gregory VI, simony was rife in the Church. Pope Gregory VI, by means of simony, became Pope and did so in order to abolish simony. In this he was largely successful, and final success was achieved by his disciple and admirer, Pope Gregory VII, who was one of the most illustrious of Popes. I will not express an

opinion on the conduct of Gregory VI, which has remained a controversial issue down to the present day.

The only rule, in all such doubtful cases, is to consider the consequences of the action in question. We must include among these consequences the bad effect of weakening respect for a rule which is usually right. But, even when this is taken into account, there will be cases where even the most generally acceptable rule of conduct should be broken.

So much for general theory. I will come now one step nearer to the moral problem with which we are concerned.

What is to be said about a rule enjoining respect for law? Let us first consider the arguments in favour of such a rule. Without law, a civilized community is impossible. Where there is general disrespect for the law, all kinds of evil consequences are sure to follow. A notable example was the failure of prohibition in America. In this case it became obvious that the only cure was a change in the law, since it was impossible to obtain general respect for the law as it stood. This view prevailed, in spite of the fact that those who broke the law were not actuated by what are called conscientious motives. This case made it obvious that respect for the law has two sides. If there is to be respect for the law, the law must be generally considered to be worthy of respect.

The main argument in favour of respect for law is that, in disputes between two parties, it substitutes a neutral authority for private bias which would be likely in the absence of law. The force which the law can exert is, in most such cases, irresistible, and therefore only has to be invoked in the case of a minority of reckless criminals. The net result is a community in which most people are peaceful. These reasons for the reign of law are admitted in the great majority of cases, except by anarchists. I have no wish to dispute their validity save in exceptional circumstances.

There is one very large class of cases in which the law does not have the merit of being impartial as between the disputants. This is when one of the disputants is the state. The state makes the laws and, unless there is a very vigilant public opinion in defence of justifiable liberties, the state will make the law such as suits its own convenience, which may not be what is for the public good. In the Nuremberg trials war criminals were condemned for obeying the orders of the state, though their condemnation was only possible after the state in question had suffered military defeat. But it is noteworthy that the powers which defeated Germany all agreed that failure to practise civil disobedience may deserve punishment.

Those who find fault with the particular form of civil disobedience which I am concerned to justify maintain that breaches of the law, though they may be justified under a

despotic régime, can never be justified in a democracy. I cannot see any validity whatever in this contention. There are many ways in which nominally democratic governments can fail to carry out principles which friends of democracy should respect. Take, for example, the case of Ireland before it achieved independence. Formally, the Irish had the same democratic rights as the British. They could send representatives to Westminster and plead their case by all the received democratic processes. But, in spite of this, they were in a minority which, if they had confined themselves to legal methods, would have been permanent. They won their independence by breaking the law. If they had not broken it, they could not have won.

There are many other ways in which governments, which are nominally democratic, fail to be so. A great many questions are so complex that only a few experts can understand them. When the bank rate is raised or lowered, what proportion of the electorate can judge whether it was right to do so? And, if anyone who has no official position criticizes the action of the Bank of England, the only witnesses who can give authoritative evidence will be men responsible for what has been done, or closely connected with those who are responsible. Not only in questions of finance, but still more in military and diplomatic questions, there is in every civilized state a well-developed technique of concealment. If the government wishes some fact to remain unknown, almost all major organs of publicity will assist in concealment. In such cases it often happens that the truth can only be made known, if at all, by persistent and self-sacrificing efforts involving obloquy and perhaps disgrace. Sometimes, if the matter rouses sufficient passion, the truth comes to be known in the end. This happened, for example, in the Dreyfus Case. But where the matter is less sensational the ordinary voter is likely to be left permanently in ignorance.

For such reasons democracy, though much less liable to abuses than dictatorship, is by no means immune to abuses of power by those in authority or by corrupt interests. If valuable liberties are to be preserved there have to be people willing to criticize authority and even, on occasion, to disobey it.

Those who most loudly proclaim their respect for law are in many cases quite unwilling that the domain of law should extend to international relations. In relations between states the only law is still the law of the jungle. What decides a dispute is the question of which side can cause the greatest number of deaths to the other side. Those who do not accept this criterion are apt to be accused of lack of patriotism. This makes it impossible not to suspect that law is only valued where it already exists, and not as an alternative to war.

This brings me at last to the particular form of non-violent civil disobedience which is advocated and practised by the Committee of 100. Those who study nuclear weapons and the probable course of nuclear war are divided into two classes. There are, on the one hand, people employed by governments, and, on the other hand, unofficial people who are actuated by a realization of the dangers and catastrophes which are probable if governmental policies remain unchanged. There are a number of questions in dispute. I will mention a few of them. What is the likelihood of a nuclear war by accident? What is to be feared from fall-out? What proportion of the population is likely to survive an all-out nuclear war? On every one of these questions independent students find that official apologists and policy-makers give answers which, to an unbiased inquirer, appear grossly and murderously misleading. To make known to the general population what independent inquirers believe to be the true answers to these questions is a very difficult matter. Where the truth is difficult to ascertain there is a natural inclination to believe what official authorities assert. This is especially the case when what they assert enables people to dismiss uneasiness as needlessly alarmist. The major organs of publicity feel themselves part of the Establishment and are very reluctant to take a course which the Establishment will

frown on. Long and frustrating experience has proved, to those among us who have endeavoured to make unpleasant facts known, that orthodox methods, alone, are insufficient. By means of civil disobedience a certain kind of publicity becomes possible. What we do is reported, though as far as possible our reasons for what we do are not mentioned. The policy of suppressing our reasons, however, has only very partial success. Many people are roused to inquire into questions which they had been willing to ignore. Many people, especially among the young, come to share the opinion that governments, by means of lies and evasions, are luring whole populations to destruction. It seems not unlikely that, in the end, an irresistible popular movement of protest will compel governments to allow their subjects to continue to exist. On the basis of long experience, we are convinced that this object cannot be achieved by law-abiding methods alone. Speaking for myself, I regard this as the most important reason for adopting civil disobedience.

Another reason for endeavouring to spread knowledge about nuclear warfare is the extreme imminence of the peril. Legally legitimate methods of spreading this knowledge have been proved to be very slow, and we believe, on the basis of experience, that only such methods as we have adopted can spread the necessary knowledge before it is too late. As things stand, a nuclear war, probably by accident, may occur at any moment. Each day that passes without such a war is a matter of luck, and it cannot be expected that luck will hold indefinitely. Any day, at any hour, the whole population of Britain may perish. Strategists and negotiators play a leisurely game in which procrastination is one of the received methods. It is urgent that the populations of East and West compel both sides to realize that the time at their disposal is limited and that, while present methods continue, disaster is possible at any moment, and almost certain sooner or later.

There is, however, still another reason for employing non-violent civil disobedience which is very powerful and deserves respect. The programmes of mass extermination, upon which vast sums of public money are being spent, must fill every humane person with feelings of utter horror. The West is told that communism is wicked; the East is told that capitalism is wicked. Both sides deduce that the nations which favour either are to be 'obliterated', to use Khrushchev's word. I do not doubt that each side is right in thinking that a nuclear war would destroy the other side's 'ism', but each side is hopelessly mistaken if it thinks that a nuclear war could establish its own 'ism'. Nothing that either East or West desires can result from a nuclear war. If both sides could be made to understand this, it would become possible for both sides to realize that there can be no victory for either, but only total defeat for both. If this entirely obvious fact were publicly admitted in a joint statement by Khrushchev and Kennedy, a compromise method of coexistence could be negotiated giving each side quite obviously a thousand times more of what it wants than could be achieved by war. The utter uselessness of war, in the present age, is completely obvious except to those who have been so schooled in past traditions that they are incapable of thinking in terms of the world that we now have to live in. Those of us who protest against nuclear weapons and nuclear war cannot acquiesce in a world in which each man owes such freedom as remains to him to the capacity of his government to cause many hundreds of millions of deaths by pressing a button. This is to us an abomination, and rather than seem to acquiesce in it we are willing, if necessary, to become outcasts and to suffer whatever obloquy and whatever hardship may be involved in standing aloof from the governmental framework. This thing is a horror. It is something in the shadow of which nothing good can flourish. I am convinced that, on purely political grounds, our reasoned case is unanswerable. But, beyond all political considerations, there is the determination not to be an accomplice in the worst crime that human beings have ever contemplated. We are shocked, and rightly shocked, by Hitler's extermination of six million Jews, but the governments of East and West calmly con-

template the possibility of a massacre at least a hundred times greater than that perpetrated by Hitler. Those who realize the magnitude of this horror cannot even seem to acquiesce in the policies from which it springs. It is this feeling, much more than any political calculation, that gives

fervour and strength to our movement, a kind of fervour and a kind of strength which, if a nuclear war does not soon end us all, will make our movement grow until it reaches the point where governments can no longer refuse to let mankind survive.

- (3) Wethersfield -- a U.S. air and nuclear base in Britain -- was one of the targets that the Committee of 100 demonstrated against on December 9th, 1961. What follows is from BR's Autobiography III (NY:Simon & Schuster, 1969), pp. 164-5:

The immediate aftermath of the demonstration of December 9th was the charging of five leaders of the Committee under the Official Secrets Act of 1911. It was, from a layman's point of view, a curiously conducted trial. The prosecution was allowed to present its case in full, resting on the question as to whether it was prejudicial to the safety of the nation for unauthorized people to enter the Wethersfield air field with the intention of immobilizing and grounding the air craft there. The defence's case was that such stations as Wethersfield, like all the stations engaged in nuclear "defence" of the country, were in themselves prejudicial to the safety of the country. Professor Linus Pauling, the physicist, and Sir Robert Watson-Watt, the inventor of radar, who had come from the United States to give evidence as to the dangers of the present nuclear policy of which Wethersfield was a part, and I were kept hanging about for many hours. Then all our testimony, like that of other defence witnesses, of whom some, I believe, were not permitted to be called at all, was declared irrelevant to the charges and ruled out.

THE COMMITTEE OF 100 (CONTINUED)

- (4) Linus Pauling, 1962, as reported in Peace News, No. 1341, 9 March '62 (London), with thanks to HARRY RUJA:

Dr. Linus Pauling came to Britain last month to give evidence on behalf of the six members of the Committee of 100 at the Old Bailey Official Secrets Act Trial. His evidence, disallowed by the Judge, was read out at the Committee of 100 rally in Trafalgar Square two weeks ago. Because it contains facts which should be widely known, particularly in view of the proposed resumption of atmospheric tests at Christmas Island, we have reproduced Dr. Pauling's statement below.

An effective understanding of the meaning of preparation for nuclear war is denied the public. As a scientist I have devoted myself to a study of nuclear war, its consequences and the prospects of its occurrence. I drew up a petition which was signed by over 11,000 scientists from all over the world making these facts clear. I have lectured and written and I have campaigned to awake people and governments to the full meaning of the horror which awaits us all. I consider my evidence to be expert evidence and to be the result of the most thorough and persistent work.

My estimate of the US nuclear stockpile in 1961 was 100,000 megatons. A megaton is the equivalent of one million tons of TNT. The stockpile of the Soviet Union I calculate to be approximately 50,000 megatons. In 1945 the world's stockpile was roughly 100,000 tons of TNT. Since that time, the magnitude of the world's stockpile of nuclear weapons has doubled EACH YEAR. 150,000 megatons, the probable stockpile, corresponds to an average of 500 tons of high explosive for each person living on earth.

*

Eight-tenths of one per cent of this stockpile possessed by the Soviet Union would cause the death of all life in the British Isles. In a few years, the stockpile will be ten times as great. There will be hundreds of rockets carrying 100 megaton warheads. Four of these will mean the end of the British people and of Great Britain. An attack on the United States involving one-fifth of the Soviet stockpile, 10,000 megatons, would kill outright 94 percent of the American people. The remaining would be injured and radio-activated in an environment of total devastation, of rampant disease.

If the element Cobalt were added at small cost to these weapons the resulting radio-active Cobalt 60 would affect every living person. A 500 megaton Cobalt bomb is not expensive. The explosion of these bombs in ratio to the expected percentage of the stockpile used would yield 1000 roentgen for each human being on our planet. This is twice the amount required to kill a person by acute radiation sickness.

In my recent appeal to the United Nations, I said:

The world is now in great danger. A cataclysmic nuclear war may break out because of some terrible accident or of an explosive deterioration in international relations such that even national leaders will be unable to avert the catastrophe.

I say that we are moving rapidly toward the catastrophe of nuclear war. It is essential that everyone be aware of the magnitude of this catastrophe. Survivors will not remain alive very long in the radio-active wastelands that their countries become. At any given moment this can take place. I say this as a scientist. I say this as a man whose work forces him to examine the probabilities in events. Universal disarmament is now the essential basis for life and liberty for all people.

When the Soviet government resumed nuclear testing I made statements pointing out the meaning of this decision. I said that the stockpiles of nuclear weapons now in existence were great enough to destroy the human race. There is no defense against nuclear weapons and increasing the scale of attack cannot achieve this. There is no way of limiting war between great powers when great bombs exist and great governments are unrestrained in their militarism. The militaristic action of governments in resuming tests increases the danger of war enormously. In the name of science I appealed to the Soviet Government not to resume testing.

The surface tests conducted had the following consequences: 160,000 children will be born with gross physical and mental defects during the next few generations. The Carbon 14 produced will cause an estimated total of 4,000,000 stillbirths, embryonic, neo-natal or childhood deaths and children with physical and mental defects. These 4,000,000 victims will be spread out over some score of generations assuming the human race survives. The fission products will also damage human beings now living in such a way that between 200,000 and 1,000,000 will have their lives cut short by radiation-produced diseases such as leukemia. These numbers apply to the whole world. This results from the exploding of approximately 200 megatons.

That is the meaning of the Soviet resumption of tests. It compares with the consignment of Jews to the gas chambers. The horror of the present world crashes upon us as we speak and state the truth. How is it possible that this sort of alternative to a future of peace, international law and justice can be considered seriously by anyone as a rational alternative.

There is no alternative to peace.

It is not only the fear of world destruction that forces us to say this. It is also the matter of morality. I believe the people of the world cannot accept the idea of such a monstrously immoral action as that involved in waging a nuclear war. Billions will die or undergo agony. Civilisation will end.

My Government and the British Government will now resume tests. This is premeditated murder of millions of people. I have devoted my life to science and research. I believe in seeking truth. I cannot allow my life's work to be so employed. I came here interrupting my work to tell the truth. I came to give evidence on what is prejudicial to the safety and interest of mankind. I wish to remind you of the Unanimous Declaration of the Thirteen States of America of July 4, 1776:

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their creator with certain inalienable rights, that among these are LIFE, liberty, and the pursuit of happiness... That whenever any form of Government becomes destructive of these ends, it is the Right of the People to alter or abolish it and to institute new Government, laying its foundations on such principles and organizing its powers in such form as to them shall seem most likely to effect their Safety and Happiness...

I have been a supporter of the Committee of 100 and an international sponsor of the Committee from its very beginning. I took part in the demonstration of September 17, 1961, and I have never witnessed anything like it. I supported the demonstration at Wethersfield although at the time I was delivering a speech attacking the resumption of testing by the Soviet Government. I was in Moscow giving that speech and so could not attend. I wish to say to the six defendants and to Pat Pottle who so brilliantly and single-handedly defended humanity against the Governments of the world, "I am with you. You speak for me."

It is not only a privilege to oppose the death of man, it is not only a right to act on conscience and to work for the interest and safety of one's country, it is a moral duty and an imperative responsibility. Every man who participates in civil disobedience makes our survival that much more likely. The struggle goes on and we shall triumph.

RUSSELL & POPPER, WRITERS

- (5) Popper vs. BR. We know that BR's manuscripts show no revisions or corrections. His first draft was his final draft. He got it right the first time.

Those of us who are not like that -- and who have long been pained because of it -- can take comfort in these remarks by Karl Popper... from "Popper Selections," David Miller, ed., (Princeton University Press, 1985) p. 245. With thanks to BOB DAVIS.

Many years ago I visited Bertrand Russell in his rooms at Trinity College and he showed me a manuscript of his in which there was not a single correction for many pages. With the help of his pen, he had instructed the paper. This is very different indeed from what I do. My own manuscripts are full of corrections – so full that it is easy to see that I am working by something like trial and error; by more or less random fluctuations from which I select what appears to me fitting. We may pose the question whether Russell did not do something similar, though only in his mind, and perhaps not even consciously, and at any rate very rapidly. For indeed, what seems to be instruction is frequently based upon a roundabout mechanism of selection, as illustrated by Darwin's answer to the problem posed by Paley.

I suggest that we might try out the conjecture that something like this happens in many cases. We may indeed conjecture that Bertrand Russell produced almost as many trial formulations as I do, but that his mind worked more quickly than mine in trying them out and rejecting the non-fitting verbal candidates. Einstein somewhere says that he produced and rejected an immense number of hypotheses before hitting on (and first rejecting) the equations of general relativity. Clearly, the method of production and selection is one that operates with negative feedback.

- (6) *Russell at 80* (1952). From the Saturday Review Reader #2 (NY: Bantam, 1953), previously in the London Observer. With thanks to TOM STANLEY.

The Next Eighty Years

BERTRAND RUSSELL

With penetrating wit tempered by human understanding, one of the world's great thinkers speculates about the probable shape of the future.

THE eighty years of my life have been among the most eventful in the world's history. I cannot think of any other equally important period except the eighty years from the conversion of Constantine to the sack of Rome and the eighty years following the Hegira. The earliest public event that I can remember is the Russo-Turkish war of 1876-8, at the end of which Disraeli intervened to save the Turks from Russia and annexed Cyprus as his reward. The world of that day was almost unbelievably different from the world in which we are living. The Franco-Prussian war, which established the supremacy of Germany over France, ended the year before I was born. Compulsory education in England was enacted two years before my birth, and when I was young a very large proportion of wage-earners were still illiterate. Agricultural laborers earned ten shillings a week, on which they and their large families had to subsist as best they could. Queen Victoria, with the help of Disraeli, was beginning to recover the popularity that she had lost in the Sixties. The Kaiser was her grandson, and the Czar married her granddaughter. She dominated the sovereigns of Europe with grandmotherly severity. The British navy was supreme. The wealth of Britain was increasing by leaps and bounds. The rest of the world envied British stability, and everybody foresaw, with a minimum of doubt, a universal future of gradual and ordered progress.

But the course of events has not been quite what was expected by Queen Victoria and her ministers. Not only politically, but socially, there have been immense unforeseen revolutions. Perhaps the most notable and surprising of social changes has been the emancipation of women. The feminist movement began, so far as England is concerned, about the time of my birth as the queer eccentricity of a few intellectuals. For a long time it seemed as if it would never become more than this. Suddenly, at the beginning of the present century, the agitation in favor of women's equality spread from radical intellectuals to female wage-earners. At the end of World War I it achieved legislative triumph in America and Britain. And other nations quickly followed suit. From the point of view of an anthropologist, the suddenness of this change is amazing. It might have been expected to take five centuries instead

of which, as a powerful movement, it took twenty years.

The recognition of women's equality was part of a large general movement which substituted economic and political classifications in place of those of biology. The hereditary principle, which had been supreme in government, except in the United States, gradually lost its dominance. One country after another transformed itself from a monarchy into a republic. Brazil, China, Germany, and Russia were the most noteworthy examples. I find it difficult to recall that in my youth Brazil had an Emperor. China had had an Emperor since the dawn of history and yet the Empire proved completely powerless against the forces of republicanism. What happened to monarchs happened also to aristocracies the world over. The Russian aristocrats were dispossessed by the Russian revolution. The East Prussian Junkers, who had dominated Prussian policy for a long time, were tamed by the Nazis and suppressed by the Russians. The aristocracies of Hungary, Poland, and Rumania have vanished behind the Iron Curtain. The British aristocracy has been gradually dispossessed by means of death duties, which have insured that whenever a landed magnate dies his heir ceases to be a magnate. Modern dictators, unlike those of all former ages, make no attempt to secure the succession to their sons. Even in China, where filial piety and family solidarity had been the backbone of Confucian teaching for two thousand years, both are melting away in the heat of Communist propaganda. Everywhere, the individual is coming increasingly to feel himself a member of a class rather than of a family.

There are, of course, obvious economic reasons for this change. A peasant who has a small plot of land works it in conjunction with his wife and children, so that the family is a unit of production. But modern machine methods of agriculture require larger farms, which can no longer be worked by single families. There is the same sort of change in the transition from handicrafts to factories. And at a higher economic level, large companies with many shareholders have replaced the old family businesses. The family has also been weakened by the competition of the school. The children of immigrants in the United States give their loyalty very much more to their school than to their parents. In Russia this process must have happened in a much more catastrophic fashion than in America. The old peasants who hated the Bolshevik regime must have found their children indoctrinated with contempt for father and mother and respect for the utterly different outlook that has been inculcated by the State.

I incline to think that the weakening of the biological as-

pects of society is likely to prove a permanent feature of the modern world. The strength of the family in the past depended very largely upon the insecurity of children whose parents were not in a position to protect them. In the modern world, the State increasingly takes over the duties that formerly belonged to the father. The mother still has her place, but the father is becoming a shadowy figure.

There is still, it is true, one department in which biological considerations are powerful, that of race. The Nazis endeavored to make race a supreme consideration and, in pursuit of this reactionary ideology, they exterminated millions of Jews and invented ridiculous anthropologies. The Nazis have been overthrown, but racial ideas still dominate in South Africa and in the southern states of the USA. They used to dominate in the relations of white men to Asians. But now, owing to the weakening of white men by their battles with each other, white insolence in Asia is having to cease. I think it will not be long before it has to cease in regard to Negroes, for, if it does not, all Africa will become Communist. Even as regards race, therefore, biological ways of viewing social relations are likely to lose their force in the near future.

The father, the family, and the clan are all being replaced by the State, which is the residuary legatee of these antiquated authorities. I will not pretend to welcome this change. I am not in love with the State. And a society in which the State rules unchecked is likely to be drab, uniform, and bellicose. At any rate it will be bellicose until such time as there is a single dominant world state. But whether for good or ill, the tendencies of which I have been speaking seem quite irresistible unless, as a result of war, modern industrial methods collapse and the world returns to a more primitive economy. This, of course, may happen. The Roman Empire was to a great extent an economic unit. Wares from the Eastern Mediterranean abounded in Roman Britain. Travel from the Euphrates to Hadrian's wall was easy and for those days rapid. But when the Empire fell, the previous interdependence of its parts ceased. The roads became impassable, commerce was brought to an end by bandits, and each little region had to produce its own necessities. If great wars continue, the same thing may happen in the modern world and, in that case, all the trends of which I have been speaking will be reversed. But, on the whole, this seems scarcely probable. It is more likely, I think, that great wars will end in the victory of a great power, or alliance of powers, than that they will end in universal chaos. If they do not end in chaos, the sort of social changes that have occurred during the past eighty years are likely to be permanent and to be succeeded by further changes in the same direction.

The first half of my life was spent in an atmosphere of nineteenth-century optimism, while the second half has been spent in the era of great wars. In a large view, the great wars are an outcome of industrial competition between nations. Both wealth and military power depend upon industrial development, but a well-developed industrial technique, if it exists in many countries, produces more than the world can absorb and therefore leads to a cut-throat competition which is not conducted by the old orthodox economic methods but by fighting. If the world is to recover stability, it will be necessary that industrial development and production shall somehow be internationally regulated and controlled, since a world of unrestricted national industrial freedom must involve continuance of the devastating wars that have so far characterized this unhappy century.

I am myself a lover of freedom, but in a scientific world freedom needs certain limitations that were formerly unnecessary. It needs limitations especially in the economic sphere. I find myself on this point out of sympathy with many men who consider themselves lovers of freedom. I believe in freedom in matters of the mind, but in the sphere of material production I think that freedom is no longer possible without disaster. The men I have in mind hold exactly the opposite view. They are of the opinion that production should be free, but thinking should be confined within the narrow limits of some authorized orthodoxy. So long as this outlook prevails I do not think we can escape the prospect of a long series of great wars, each more devastating than the last. Only international cooper-

ation can bring great wars to an end, and international cooperation, if it is to be effective in this respect, will involve the international control of raw materials and the rationing of their use. We are as yet a long way from this, but when I think how much has happened in the eighty years of my life, I see no reason to doubt that equally astonishing things will happen in the next eighty years.

If scientific technique does not bring itself to grief by scientific warfare, various things may be expected during the next eighty years. I make little doubt that men will get to the moon. But, as the moon has no atmosphere, they will have to bring air with them and will not be able to stay long. It is a more serious matter to get to Venus or Mars. Mars, like the moon, has no atmosphere, or, at any rate, very little. Venus has an atmosphere, but they say it is poisonous. Mercury is too hot and the other planets too cold. So the rest of the solar system will not be much use from the point of view of over-population. But there is no known limit to what can be done on the surface of the Earth. Presumably all the present deserts will be made fertile. Presumably the Sahara will be full of populous cities, and the center of Australia will become a pastoral paradise. The Russians already have schemes for transforming Siberia by deflecting the waters of the Yenisei and raising mountain chains to keep off the north wind. The East coast of Canada suffers at present from a cold current, but they say that a wall built out into the sea for twenty miles from a suitable cape would cause the cold current to sink and make the winter in Labrador as mild as in England. I do not vouch for this statement, but if it is not valid, probably something very similar is. There is another possibility to be taken account of, which is that of manufacturing food chemically. There seems no good reason why we should continue to grow our food laboriously in soil and allow ourselves to be dependent on the vagaries of sun and rain. Why not make beefsteaks in factories? And flour in workshops? I dare say that food made in this way would not taste very nice, but in time people would get used to it and a little "real" food would still be produced for wedding feasts and the banquets of Heads of States. Some very rich men would occasionally issue invitations saying in one corner, "Decorations will be worn" and in the other corner "Real peas." The practical cessation of rural population produced by such a change will have profound social and political effects. Everybody will be intelligent and hysterical, which will produce a paradise for politicians.

There is another possibility which, if it is realized, will be even more revolutionary in its effects. Most things that are at present done by human beings can be done by robots. Mechanical brains are being rapidly perfected, and it is hoped that before long only experts will be able to distinguish them from live people. If we are to believe Dr. Norbert Wiener, we must expect that within the next fifty years at latest a fully equipped factory will need only one man to press the button. All the rest will be done by ingenious mechanisms. At shareholders' meetings nobody will know whether what he is sitting next to is a man or a mechanical stooge. This will make the work of management much easier, and if the machines can be taught to vote democracy will at last run smoothly. This perhaps is fanciful; but it is not fanciful that the labor movement, as it has existed since the Industrial Revolution, will of necessity be brought to an end. The armies of wage-earners who like their hours of labor limited and their hours of recreation extended, who demand increases of wages whenever there is an increase in the cost of living, will no longer be needed. Ninety-nine per cent of them can be drafted into the armed forces—though even this will be only a temporary outlet, since the robots will show a contempt for death that no human soldier can equal. We have been in the habit of thinking—at any rate, when we think as moralists—that people ought to be useful and that they show their usefulness by work. But if their work is no longer required, our whole ethical system will collapse and we shall no longer be able to say with any plausibility that it is wicked to enjoy oneself. The moralists will be forced to invent new unpleasant tasks to prevent that general diffusion of happiness which, as earnest men, we must all deplore. I have no doubt they will be equal to the task, and I think war is the method that they will employ.

So long as the human race is divided into two halves, each of which thinks the other half wicked, it can be

plausibly maintained that it is everybody's duty to cause suffering. If such a view is not to prevail, it will be necessary that our moral outlook should become more kindly than it has hitherto been, and that we should cease to find pleasure in thinking of this world as a vale of tears. In my more cheerful moments, I allow myself to hope that when the pressure of physical necessity is lifted there may be a general development of kindness and joy which will enable men to view with equanimity the pleasures of others because their own happiness will be secure. Such a world may perhaps come about in time. But in darker moments I am oppressed by the abysses of hatred, malice, and envy in the human heart, and I wonder whether man will ever permit himself the happiness that his intelligence has made physically possible.

We live in a moment of strange conflict. The human heart has changed little since the dawn of history, but the human mastery over nature has changed completely. Our passions, our desires, our fears are still those of the cave man, but our power to realize our wishes is something radically new. Man has survived hitherto because he was too ignorant to know how to realize his wishes. Now that he can realize them, he must either change them or perish. When we were children we were told fairy tales about magicians who granted three wishes. The people to whom this boon was vouchsafed were always silly in the stories and wished for something quite absurd. That is roughly the position of the human race in the present day. Caligula

wished that his enemies had only one head that he might execute them in one fell swoop. But they continued to have many heads, and he was thwarted. Our modern Caligulas manufacture hydrogen bombs, and are not thwarted. If man is to live with the new powers that he has acquired, he must grow up, not only in his mind but in his heart. He must face the painful truth that disaster to his neighbor whom he hates is not likely to bring happiness to himself whom he loves. The world becomes every day more unified technically and more disunified psychologically. I think that education, if it were wisely conducted, could do a very great deal towards remedying this state of affairs. Children could be taught in school that where the interests of different groups appear to conflict, the conflict is caused by useless and foolish passions which inspire false beliefs to the effect that one man's success must be another man's failure. Schools everywhere are dominated by national States and inspire in the young the beliefs which the rulers of States imagine to be useful. It is not an easy thing to educate the rulers of States. I knew a psychiatrist who said that he could cure Hitler in ten sittings, but unfortunately Hitler had no wish to be cured. I wish there were a method of kidnapping all Heads of States and keeping them together in a sanatorium controlled by wise men. But as that cannot be done, the issue must remain in doubt. I shall not see the issue, but I allow myself to hope that it may be happy.

For more of BR at 80, see the Rodney Wheeler interview. (RSN45-28).

(7)

ANNUAL MEETING, 1986

The 13th Annual Meeting took place in NYC on June 21st, at the spacious headquarters of the New York Society for Ethical Culture, 2 West 64th Street.

30 members attended one or both sessions: JANICE BOTTENUS, JACK COWLES, KENNETH DIAMOND, BEVERLEY EARLES, GRAHAM ENTWISTLE, RICHARD FALLIN, RICHARD GNALL, DAVID GOLDMAN, KEN KORBIN, SCOTT KURHAN, GLADYS LEITHAUSER, DON JACKANICZ, TED JACKANICZ, ADAM JACOBS, DAVID JOHNSON, CORLISS LAMONT, JOHN LENZ, JONATHAN LOBL, GRAHAME MAISEY, STEVE MARAGIDES, HUGH MCVEIGH, CARL MILLER, STEVE REINHARDT, MICHAEL ROCKLER, HARRY RUJA, CHERIE RUPPE, WARREN ALLEN SMITH, JOHN SCHWENK, ELEANOR VALENTINE, PHILIP STANDER, THOMAS WEIDLICH.

A number of non-member guests were present: Special Guest Bessie Denonn (widow of BRS Director and Honorary Member, Lester Denonn), Sydney and Silvia Aaronson, Linda DiDesidero, Julie Gricat, Dror Kahn, Felix Klein, Hilbert Schwartz, Nancy Spataro, and others. About 45 people attended the afternoon session (and its Red Hackle Hour), and about 60 the evening.

The following officers were elected or re-elected for one-year terms, starting immediately: Chairman, Harry Ruja; President, Marvin Kohl; Vice President, John Lenz; Treasurer, Dennis Darland; Secretary, Don Jackanicz; and VP/Information, Lee Eisler.

This is what took place during the afternoon and evening sessions:

- . A reading and open discussion of MARVIN KOHL's paper, "Russell and the Attainability of Happiness."
- . A screening of the 1984 BBC-TV production, "Bertie and the Bomb," which had not been seen in America.
- . A viewing of the BBC-TV videotape, "Bertrand Russell".
- . The presentation of a Special Award to CORLISS LAMONT. Mr. Lamont, introduced by JOHN LENZ, then spoke briefly on free choice, and on BR as a humanist.
- . The presentation of the 1986 Bertrand Russell Society Award to People for the American Way, represented by its President, Anthony T. Podesta. Mr. Podesta, introduced by BRS Chairman HARRY RUJA, spoke about his organization's work promoting separation of church and state, and excellence in education and in the federal judiciary. (They are currently opposing textbook censorship and the nomination of Mannion to be a federal judge.) He then screened a videotape, "The 'People For' Story", depicting, among other things, the excesses of the Far Right.

Both Award plaques are shown below.

At the Society's Business Meeting this is what happened:

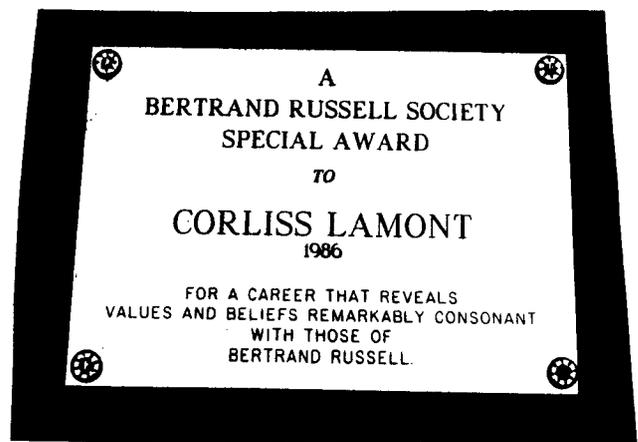

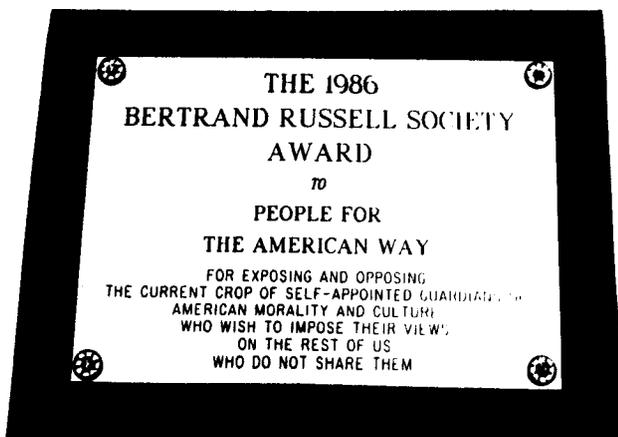

- . Don Jackanicz presided. Many members and non-members attended. Don reported the death of Honorary Member Dora Russell on June 1st, and the election of new Honorary Member, Linus Pauling.
- . Don reminded the members to send items about BR to Lee Eisler, for possible use in the newsletter.
- . Harry Ruja, responding to a question, said that the first volume of the comprehensive BR bibliography that he and Ken Blackwell are working on would appear at the end of 1987.

. David Johnson, Chairman, BRS Philosophers Committee, called for papers for the BRS session at APA in December 1987. See (37)

The BRS Board of Directors met, in 3 brief sessions, and acted as follows:

- . Elected officers for the following year, as reported above.
- . Selected San Diego as the meeting site for 1987, and NYC for 1988. Harry Ruja and Bob Davis will make the arrangements for 1987, Marvin Kohl will do the same for 1988.
- . Approved the creation of a committee to study the possibility of a future meeting in England.
- . Approved paying McMaster \$1 more for members' subscriptions to "Russell", if our Treasurer says we can afford it. The new price per subscription would be US\$7.
- . Approved buying a BR film that BRS Librarian Tom Stanley had located, costing \$150-200.

For more details on June 21st, see the minutes (27). A nice detail, not in the minutes: Warren Smith enjoyed talking with his old philosophy professor, Corliss Lamont.

NEWS ABOUT MEMBERS

- (8) Adam Paul Banner has been "very active locally [in Ann Arbor] as Hazardous Materials Coordinator for the county Office of Emergency Management. Also aided in giving two talks on Islam and Turkey via the Ottoman Empire, and am working on another presentation of the Armenian Question."
- (9) Harry Clifford, a member since 1975, will be 85 on October 12, 1986. Happy Birthday, Harry!
- (10) Peter Cranford, Founder and first President of the BRS, has written a little book with a big message that's worth paying attention to. It is called "BERTRAND RUSSELL ON COMPOSSIBILITY. A first step toward eliminating war." See Recommended Reading (25).
- (11) Paul Kuntz's new book, "Bertrand Russell," has just been published by Twayne Publishers, Boston. See Recommended Reading (24).
- (12) Justin Leiber has gone to Linacre College, Oxford, till mid-December, then back to Houston.
- (13) John Lenz will be in Greece again this summer, on "Paros Island, where I will be digging again: an idyllic spot in the middle of the Cyclades. I continue as a grad. student (this is not news), slowly; on another fellowship, a 'President's Fellowship,' from Columbia (my third lucky consecutive one), with a teaching assistantship in Greek history. Unfortunately, my work has slowed my Russell collecting to a halt, although I was able to purchase some Greek translations of Russell in Athens last year for my friend, John Slater (of Toronto)." As noted above, John was elected BRS Vice-President on June 21st.

- (14) Nathan Salmon on Frege's Puzzle, as described in this press release of June 3, 1986 from the University of California, Santa Barbara.

UCSB PHILOSOPHER LOOKS AT WHAT'S IN A NAME

Juliet, Shakespeare's star-crossed lover, is not alone in pondering, "What's in a name? That which we call a rose by any other name would smell as sweet."

Nathan Salmon, a UCSanta Barbara philosopher, has written an entire book about it.

The much ado is about language -- how the turn of a word or phrase comes to stand for a certain thing, and what the words in a sentence contribute to the information it contains.

While many people think of philosophy as a discipline bent on the pursuit of the "meaning of life" and other lofty cosmological speculations, today's mainstream analytic philosophers are somewhat removed from these classic philosophic questions and more likely to be found working with equations.

"Contemporary analytic philosophers have abandoned to poets the pursuit of the meaning of life, while claiming for their own the logicians's and semanticist's pursuit of the meanings of words," according to Salmon, a philosopher of language.

In his recent book, "Frege's Puzzle," Salmon looks at the information content of declarative sentences, a central topic in the philosophy of language. Using mathematical tools he attempts to find order in language and information by looking at how words, phrases and sentences represent things, facts or events.

"Symbolic logic provides a way of cataloging and categorizing the different kinds of words or expressions that make up sentences according to the type of role they play in reasoning," Salmon says.

Gottlob Frege, a late 19th Century German mathematician and philosopher, invented a philosophical puzzle that addressed what's in a name. According to another 19th Century philosopher, John Stuart Mill, a name's contribution to the information contained in a sentence is what the name stands for, a view Salmon calls the naive theory. Frege's puzzle challenges this theory.

The puzzle concerns the sentences, "the Morning Star is the Evening Star" and "the Morning Star is the Morning Star," which are the same except that the second sentence replaces the name, "the Evening Star," with "The Morning Star" -- two names that stand for the same thing, the planet Venus.

Frege argued that since the first sentence is informative and the second is not, the two sentences contain different information and, therefore, the names do not contribute what they stand for, Salmon says.

"Frege maintained that the sentences contain different information because our concept of the Morning Star is different from our concept of the Evening Star. He concluded that what a name contributes is not what it stands for but something like a concept of what it stands for, something that is apprehended."

Frege's puzzle has been taken by a vast majority of contemporary philosophers of language as a refutation of the naive theory. Salmon says. "A great deal of philosophical energy over the past 20 to 30 years has been focused on proposing alternatives to the naive theory, none of which have gained universal acceptance."

In his book Salmon defends a version of the naive theory in attempting to solve Frege's puzzle. He argues that Frege's two sentences contain the same semantically encoded information, namely that Venus is Venus, but differ in the information imparted.

"The first sentence, but not the second, imparts the information that the names 'The Evening Star' and 'The Morning Star' stand for the same thing," Salmon says. "That is why the first sounds informative and the second does not."

"When we grasp a piece of information there is a certain way in which you do this with the result that one could grasp or apprehend the same piece of information on two different occasions and not recognize it."

Salmon argues that a great deal of what has generally been taken for granted in the philosophy of language over the past few decades is either mistaken or unsupported, and much current research is focused on the wrong set of questions.

"Frege's Puzzle" is published by MIT Press.

- (15) Ramon Suzara. In March he wrote: "Effective May 1st, I'm being laid off with the 23 other Resident managers of the S.F. Housing Authority. Reaganomics has slashed the budget for public housing. The monies saved are needed for the Contras in Nicaragua. God Bless America!"

In mid-May he writes: "My employment has been extended. My tenants filed a petition at City Hall and then rallied en masse. One of them promised to commit suicide if I am dismissed. And when they threatened to go on a rent strike if I am let go, that stopped management. Perhaps I will be here till September or October. Then to Manila for the rest of this year. After which I will probably relocate in Honolulu to live and work there."

CURRENT PUBLIC ISSUES

THE WORLD COURT AND THE RULE OF LAW

On June 27, 1986, the International Court of Justice issued its judgment that our government's military and economic attacks on Nicaragua violated international law and the Treaty of Friendship Commerce and Navigation between the two countries.

The opinions and judgment of the Court are the first independent and impartial adjudication of the facts and of the controlling law. Yet, the Reagan Administration has announced that it will defy the Court's adjudication and judgment.

We, the American people, cannot accept our government's repudiation of the rule of law. It would violate our international obligations and lead to international anarchy.

On June 26, the House of Representatives regrettably voted to give military aid to the contras, and the matter is now before the Senate.

Such military aid would violate the Court's order that the Reagan Administration cease and refrain immediately from such unlawful action. Now that the American people and the Congress know the facts, it is a matter of national honor, as well as legal obligation, that the Administration should comply with the World Court's decision and act upon its reminder of the need of both parties to cooperate with the Contadora process. This will constitute a significant message to the world that America is returning to its traditional ideals of international peace and justice for all humanity.

ABOUT BERTRAND RUSSELL

- (17) Paul Kuntz offers this observation:

Most people think of the vices (cruelty, stupidity, jealousy, hate) which Russell opposed so vigorously, and therefore think of him as a great denier. But there are always in him, sometimes expressed with great passion, the virtues (kindness, intelligence, cooperative support, love). This needs therefore to be stressed.

- (18) Grahame Maisey offers "some thoughts on the happiness paper delivered at the meeting:

"Russell spent the first years of his life in a state of unhappiness, so he had to conquer happiness later on. His theme in child rearing and education reflects his early experience: training in self-confidence, bravery and independent attitude in order to allow the child to attain individual happiness at an early stage in life, and not need to conquer happiness later on."

RELIGION

[19] From FREE INQUIRY (Summer 1986, pp.54-55):

The Revolt Against the Lightning Rod

Al Seckel and John Edwards

A review of early opposition to the lightning rod is of interest because we may see how religious prejudice tends to prevent beneficial departures from customary behavior, even when there is evidence that the tradition-bound practices are useless or even dangerous.

For centuries Protestant and Catholic churches, basing their teachings on various texts in the Bible, taught that the air was filled with devils, demons, and witches. The great Christian scholar Saint Augustine held this belief to be beyond controversy. Saint Thomas Aquinas stated in his authoritative *Summa Theologica*: "Rain and winds, and whatsoever occurs by local impulse alone, can be caused by demons. It is a dogma that the demons can produce winds, rains, and rain of fire from heaven."¹

Martin Luther asserted that the winds themselves are only good or evil spirits and declared that a stone thrown into a certain pond in his native city would cause a dreadful storm because of the devils kept prisoner there. Even as recently as 1984, when the beautiful York Minster Cathedral was destroyed by lightning, conservative ministers claimed that God did it in anger over the recent appointment of a liberal bishop.

Christian churches tried to ward off the damaging effects of storms and lightning by saying prayers, consecrating church bells, sprinkling holy water, and burning witches. Lengthy rites were held for the consecration of bells, and priests prayed that their sound might "temper the destruction of hail and cyclones and the force of tempests and lightning; check hostile thunders and great winds; and cast down the spirits of storms and the

Al Seckel has contributed articles to *Free-thought Today* and various publications of *Atheists United*. He is also the editor of *Bertrand Russell on God and Religion* (Prometheus Books). John Edwards is an environmental scientist with the Air Force and a freethinker.

powers of the air."²

A sixteenth-century account of a bell consecration relates how the Bishop "sayde certen Psalmes, [and together, wherwith he washet the belle diligently both within and without, after wyppeth it drie, and with holy oyle, and then in it the signe of the crosse, and then he prayeth, that when they shall ryng or sounde that bell, all the discipletes of the devyll may vanyse away, hayle, thondryng, lightning, wyndes, and tempestes, and all untemperate weathers may be aswaged."³ (The idea of ringing church bells to dissipate tempests probably had its origins in "sympathetic magic" in that storms, which are

noisy disturbances in the atmosphere (produced by demons or the "powers of the air") are supposed to be counteracted by creating similar noisy disturbances in the air.)

Unfortunately, all these efforts were to no avail. The priests ought to have prayed for the bell-ringers who were frequently electrocuted while ringing the blessed bells. The church tower, usually the highest structure in the village or town, was the building most often hit, while the brothels and gambling houses next door were left untouched. In 1786 the Parliament of Paris even went so far as to issue an edict "to the many deaths it caused to those pulling the ropes."⁴ Several cities in Europe followed suit and declared the practice of ringing church bells illegal during storms, not so much to save lives, it must be admitted, but to abate noise.

One eyewitness to the damaging effects of lightning recorded: "Little by little we took in what happened. A bolt of lightning had struck the tower, partly melting the bell and electrocuting the priest; afterwards, continuing, [it had shattered] a great part of the ceiling, had passed behind the mistress, whom it deprived of sensibility, and, after destroying a picture of the Savior hanging upon the wall, had disappeared through the floor. . . ."⁵

Peter Ahlwards, the author of *Reasonable and Theological Considerations about Thunder and Lightning* (1745), accordingly advised his readers to seek refuge from storms anywhere except in or around a church. Had not lightning struck only the churches ringing bells during the terrific storm in lower Brittany on Good Friday, 1718?

The first major blow against these biblical superstitions about storms and lightning was struck in 1752, when Benjamin Franklin made his famous electrical experiments with a kite. The second and fatal blow was struck later in the same year when he invented the lightning rod. "One would think," wrote Franklin, "it was now time to try some other trick [to protect churches and homes];—and ours is recommended."⁶ With Franklin's scientific explanations of lightning, the question that had so long taxed the minds of the world's leading theologians, namely, "Why should the Almighty strike his own consecrated temples, or suffer Satan to strike them?" could finally be answered. Another question could also be answered in any reasonable discussion about the objects of the divine wrath "Why would God's punishment be directed so much at large trees, which no reasonable person could accuse of sin."

Since thunder and lightning were considered tokens of God's displeasure, it was

considered impious to prevent their doing full damage. John Adams noted in his diary a conversation with a Bostonian physician who began to "prate upon the presumption of philosophy in erecting iron rods to draw the lightning from the clouds. He railed and foamed against the points and the presumption that erected them. He talked of presuming upon God, as Peter had attempted to walk upon the water, and of attempting to control the artillery of heaven."⁷ This was despite the fact that in Germany, within a span of thirty-three years, nearly 400 towers were damaged and 120 bell-ringers killed.

In Switzerland, France, and Italy popular prejudice against the lightning rod was ignited and fueled by the churches and resulted in the tearing down of lightning rods from many homes, including one from the Institute of Bologna, the leading scientific institution in Italy. The Swiss philosopher Horace de Saussure had erected a rod on his house in Geneva in 1771, which had caused so much anxiety to his neighbors that he feared a riot. A lightning rod erected on June 15, 1754, on the house of Procopius Divis lasted untouched for six years, until the villagers tore it down in 1760. Apparently the initial cause of the hostility was a great drought that was attributed to the malign influence of the rod.

A 1780-1784 lawsuit over lightning rods gave M. de Vissery the right to have a lightning rod on top of his house in St. Omer despite the religious objections of his neighbors; this victory established the fame of the lawyer in the case, young Robespierre. The trial was also significant in that the leading scientists of France were drawn into the fray to defend the use of rods.

In America, the Reverend Thomas Prince, pastor of the Old South Church, blamed Franklin and his invention of the lightning rod for causing the Massachusetts earthquake of 1755. In Prince's sermon on the topic he expressed the opinion that the frequency of earthquakes might be due to the erection of "iron points invented by the sagacious Mr. Franklin." He goes on to argue that "in Boston more are erected than anywhere else in New England, and Boston seems to be more dreadfully shaken. Oh! there is no getting out of the mighty hand of God. For I cannot believe, that in the whole town of Boston, where so many iron points are erected, there is so much as one person, who is so weak, so ignorant, so foolish, or, to say all in one word, so atheistical, as ever to have entertained a single thought, that it is possible, by the help of a few yards of wire, to 'get out of the mighty hand of God.'"⁸

To quiet the Charleston populace who were alarmed at the possibility of incurring divine wrath as a result of erecting lightning rods, the *South Carolina and American General Gazette* suggested "raising lightning rods to the glory of God."⁹

It took many years for scientists to convince the priests to attach a lightning rod to the spire of St. Bride's Church in London, even though it had been destroyed by lightning several times. The priests' refusals prompted the following comment in a letter from Professor John Winthrop of Harvard University to Franklin: "How astonishing is the force of prejudice even in an age of so much knowledge and free inquiry. It is amazing to me, that after the full demon-

stration you have given . . . they should even think of repairing that steeple without such conductors."¹⁰

In Austria, the Church of Rosenberg was struck so frequently, and with such loss of life, that the peasants feared to attend services. Several times the spire had to be rebuilt. It was not until 1778, twenty-six years after Franklin's discovery, that the church authorities finally gave in and permitted a rod to be attached. Then all the trouble ceased.

A typical case was the tower of St. Mark's in Venice. In spite of the angel at its summit, the bells consecrated to ward off the devils and witches in the air, the holy relics in the church below, and the processions in the adjacent square, the tower was frequently damaged and even destroyed by lightning. It was not until 1766, fourteen years after Franklin's discovery, that a lightning rod was placed upon it; and the tower has not been struck since.

Had the ecclesiastics at the Church of San Nazaro in Brescia given into repeated urgings to install a lightning rod, they might have averted a terrible catastrophe. The Republic of Venice had stored in the vaults of this church several thousand pounds of gunpowder. In 1767, fifteen years after Franklin's discovery, no rod having been placed upon the church, it was struck by lightning and the gunpowder exploded. One-sixth of the city was destroyed, and there were estimates that more than three thousand lives were unnecessarily lost because the priests had refused to install the "heretical rod."

Such incidents as these, in all parts of Europe, had their effect. The ecclesiastical formulas for preventing storms and for consecrating bells to protect against lightning and tempests were still allowed to be practiced in the churches; but the lightning rod carried the day. There is no way of telling when church bells were last rung for the purpose of abating storms. There are probably still some isolated communities where the practice is still conducted. Christian churches were finally obliged to confess the practical supremacy of the lightning rod and the few theologians who stuck to the old theories and fumed against the rods and Franklin's attempts to "control the artillery of heaven" were finally silenced, like the lightning, by the supremacy of the scientific method.

BR, WRITER OF LETTERS

from: The Earl Russell, O.M., F.R.S.,

PLAS PENRHYN,
PENRHYNDEUDRAETH,
MERIONETH.
TEL PENRHYNDEUDRAETH 244

1 April, 1960.

Dear Mr. Wilk,

Thank you for your letter of February 24. I am very sorry that I have mislaid the reference that you ask for. I thought that it was in Henry C. Lee's History of Sacerdotal Celibacy, but I have not found exactly this in looking through the book. You will, however, find a number of much more shocking things in Chapter XXX of that book. I still hope to find the exact reference, but the book in which I hope to find it is in my house in London. I think you may find it in Coulton's Medieval Garner.

Yours truly,

Bertrand Russell

Bertrand Russell

(20) Richard Wilk says he has found this letter----->
"very helpful in my frequent discussions with Jesuit divines teaching at Loyola University in Los Angeles."

OBIT.

(21) Dora Russell, Social Activist & Wife of the Philosopher

PORTHCURNO, England June 1 (AP) — Dora Russell, a social activist and the second of the philosopher Bertrand Russell's four wives, died of a stroke at her cliff-top home in this Cornwall village. She was 92 years old.

Mrs. Russell, a lifelong campaigner for Socialist causes, was twice an unsuccessful candidate for Parliament for the Labor Party. In the 1920's she was influential in persuading the party to adopt contraception as a political issue.

She was later identified with the anti nuclear movement and appeared at a rally as recently as January at a British Air Force base. Lord Russell, who died in 1970, was the first president of Britain's Campaign for Nuclear Disarmament.

Mrs. Russell, the daughter of an Edwardian civil servant, was educated at Cambridge University's Girton College. She met the philosopher and mathematician when he lectured at Cambridge. They married in 1921 and had three children, all of whom survive her. The marriage ended in 1935.

←----- Dora Black Russell is dead, as reported in the New York Times (6/2/86, B4). For the fascinating story of a remarkable woman, see her autobiography, "The Tamarisk Tree", in 3 volumes (London: Virago Press, "a feminist publishing company"). She was the recipient of the 1984 Bertrand Russell Society Award, and an Honorary Member. Her two children by BR, John, the present Earl, and Kate, are also Honorary Members; our sympathy goes out to them. (Correcting an inaccuracy in the AP dispatch: she and BR had two children together, not three.)

The 1984 Award plaque reads: "For sharing Bertrand Russell's concerns, collaborating in his work, and helping to preserve his legacy." She was the moving force behind, and guarantor of, the bust of BR dedicated in Red Lion Square, London, in 1980.

ABOUT RUSSELL'S WRITINGS

- (22) Russell on Ethics, according to James Stalnitz, in "The Encyclopedia of Morals", ed. Vergilius Ferm (NY: The Philosophical Library, 1956)...with thanks to TOM STANLEY:

Russell, Bertrand

In ethics, as in other areas of philosophy, Bertrand Russell has not hesitated to change his mind about the most basic questions. Nowhere is his intellectual catholicity more conspicuous, for he has traversed all of the major positions in contemporary ethics in the course of his writings. However his contributions to ethics fall far short of the caliber of the work which has distinguished him in other fields. For the most part his ethics has been derivative from other thinkers. His first extended essay on the subject is, as Russell points out, "largely based on" Moore's *Principia Ethica* (1:p. 1, n.1). His most recent statement, though radically opposed to the theory presented in the earlier work, contains, as he says, "nothing startlingly original" (6:p. 7). And though he was among the first to advance an "emotive" theory in recent thought, this view is not elaborated systematically by Russell, so that it is simply asserted rather than argued and defended.

Russell (b. 1872), perhaps the best-known philosopher of this century, has not found rigorous thought in logic, epistemology and the philosophy of science to be incompatible with first-hand involvement in the vital social and political questions of his day. It seems clear that he has been less concerned with ethical theory than with such specific issues as education and peace and war, and with the advancement of his own well-known axiological ideal—creating, in a world alien to human values, a life for all mankind which will be directed by knowledge and informed by love and hope. His deep concern with the disputes and wars that have ravaged the modern world has, however, given direction to his ethical thought. "Ethics," he says, "is necessary because men's desires conflict."¹ As will be pointed out, all of his later writings have been addressed to the "political" questions how, if at all, value-disagreements can be adjudicated, and how the conflicting aspirations of different individuals and groups can be made harmonious with each other.

In the early essay, "The Elements of Ethics," referred to above, however, Russell denies that ethics is concerned with "practical" questions of choice

¹ Bertrand Russell, *A History of Western Philosophy* (New York, 1945) p. 779.

and conduct. In seeking knowledge it is numbered among the "sciences" (1:p. 2). "Good" or "intrinsic value" is the central concept in ethics, but, like Moore, Russell contends that it is indefinable. This is established by appeal to our "state of mind" when confronted with an ostensible definition of "good," which is not that of assent to a linguistic analysis of meaning (p. 9). Hence Russell can only "characterise" good as that which "on its own account ought to exist" (p. 5). Since goodness is an intrinsic property of things, Russell holds, in contrast to his later views, that it exists independently of our desires. Thus he seeks to preserve the common-sense conviction that disagreements concerning intrinsic value are meaningful. Though Russell says little about the cognition of values, he holds out the hope that "a very large measure of agreement on ethical questions may be expected to result from clearer thinking" (p. 57). He follows Moore in other particulars, e.g., the principle of "organic unities" (pp. 54-55).

He also takes over from Moore a teleological interpretation of "right" and with it the implication that judgments of right action are empirically confirmable. Russell wishes to take account, as any utilitarianism must, of the disparity between the actual consequences of the moral act and those which could reasonably have been anticipated, and to distinguish these further from the conscientiousness and praiseworthiness of the agent. Here, uniquely, his analysis is somewhat more detailed and revealing than *Principia*. The act which produces the greatest amount of good is the "most fortunate" act (p. 22). The act which is "objectively right" is that which "of all that are possible, will probably have the best consequences" (p. 25; cf., p. 57), though Russell does not hold consistently to the view that this is a definition (cf., pp. 25, 26). The "subjectively right" or "virtuous" act is that which the agent would judge to be right after considering the choice "candidly and with due care" (p. 28). The distinction can then be drawn between those agents whose conception of "objective rightness" is "erroneous" and those whose decisions are thoughtless or insufficiently reflective. In "Elements of Ethics," as in later writings (cf., 6:pp. 97-98), Russell espouses determinism, using the familiar argument that it is not this theory but that of "free-will" which renders moral deliberation and praise and blame, senseless and futile.

Many years after the publication of this paper, Russell testified² that he had been led to abandon the doctrines of the indefinability and objectivity of good because of the criticisms advanced against him by Santayana in the essay "Hypostatic Ethics."³ There Santayana had argued that value has no existence apart from human desire and interest, that morality is therefore based upon irrational preferences, and that Russell's theory, which is intended to make moral debate meaningful, actually issues in obscurantism and intransigent dogmatism.

In his succeeding writings, accordingly, Russell executes a volte-face. He now says that "it is we who create value, and our desires which confer value" (2:p. 17). No reasons can be given in justification of desire and conflicting desires for mutually incompatible ends are not amenable to rational argument (cf., 4:p. 139). Whereas science can determine the effectiveness of means for the attainment of some objective, it "cannot decide questions of value . . . because they cannot be intellectually decided at all, and lie outside the realm of truth and falsehood" (3:p. 243).

We remain confronted, however, with the most grievously "practical" of human problems—that the fulfillment of the desires of some individual, institution or nation demands the frustration of those of other persons or groups. We are therefore constrained to try to overcome the conflict of desires, if we are not to have recourse to violence. Though "proof" of the "validity" of any desire is, in the nature of the case, impossible, we may try to alter and re-direct desires so that they become more nearly inclusive and co-operative. "Only passion can control passion, and only a contrary impulse or desire can check impulse."⁴ Value-judgments attempt to serve just this function. Although they appear grammatically to be assertive, they are optative (cf., 5:p. 719): "this is good in itself" is equivalent to "would that

⁴ Bertrand Russell, *Principles of Social Reconstruction* (London, 1918) p. 12.

² Sellars and Hospers, eds: *Readings in Ethical Theory* (New York, 1952) p. 1, n.

³ George Santayana, *Winds of Doctrine* (New York, 1913) pp. 138-154.

everybody desired this" (3:p. 235; cf., 4:p. 247). Russell's "political" concern is made manifest by the fact that he never considers seriously any other of the possible "emotivist" analyses of the value-judgment. The judgment is always a hortatory injunction addressed by the speaker to those whose desires are parochial or divisive. Ethics, Russell says, "can have no importance" (2:p. 30) unless it directs human desire toward common goals. Hence he contends that even the foundational definitions of moral theory are persuasive in character: "When I say that the morality of conduct is to be judged by its probable consequences, I mean that I desire to see approval given to behaviour likely to realize social purposes which we desire" (2:p. 30).

Ethical judgments and ethical theory are, then, devices of social control comparable to educational institutions and legal codes. Although Russell calls his theory "subjectivistic" (3:p. 238), he has always recognized and insisted upon a salient feature of ethical discourse which other "subjectivists" have either ignored or denied viz., its impersonality. The ethical judgment, on Russell's translation, makes no reference to the speaker, but rather urges the kind of world which would permit the greatest possible satisfaction of any and all desires (4:p. 274). Russell does not, however, claim any greater validity or authoritativeness for such a judgment, other than the increase in persuasive force which is thereby gained. It is in this way that we seem to give universal importance to our

desires" (3:p. 233). But "the desire remains mine even when what is desired has no reference to myself."⁶

Russell's most extended treatment of ethics, recently published, suffers from an inner duplicity which can be understood in the light of his earlier works. *Human Society*, characteristically, places ethics in a social context: "One may lay it down broadly that the whole subject of ethics arises from the pressure of the community on the individual" (6:p. 124; cf., also, pp. 16, 60). Russell presents definitions of the chief ethical predicates which seem to constitute the foundations of a straightforward "naturalistic" theory: "good" is defined as "satisfaction of desire" (p. 55); the sole criteria of "better" are the number and intensity of desires; "right" conduct is that which, on the evidence, is likely to produce the greatest balance of good over evil" (p. 50; cf., also, pp. 125, 145). It follows that all axiological and moral judgments are, in principle, empirically verifiable. And it is then meaningful to say that one moral code is superior to another (cf., pp. 45, 128).

Recurrently, however, Russell abandons this position. The difficulty is no longer, as in the days of *Principia Ethica*, that of distinguishing between a definition and a "significant proposition." When Russell mentions this problem at all, his discussion is undeveloped and inconclusive (cf., pp. 72, 88). The difficulty arises, rather, for Russell, as for many contemporary ethicists, within the "pragmatic" dimension of language—these definitions

⁶ *History of Western Philosophy*: p. 116.

cannot "serve any purpose" (pp. 80-81) or they are of "no practical importance" (p. 84) unless they are efficacious in altering the motives to behavior. Merely to adduce evidence is frequently futile in the face of intractably partisan desires. Hence Russell thinks himself compelled to revert to the view that ethical judgments cannot be established factually (p. 25) and that they are significantly different from "scientific" propositions (pp. 88, 104-105). Though he seems, on the whole, more inclined here than in earlier writings, to the belief that moral judgments are meaningful and reasonable, he wavers between this view and its opposite, which he appears to believe is implied by the fact that ethical judgments are not coercive when addressed to those whose convictions are obdurate.

This inconsistency is never overcome by Russell; and it is fatal to the adequacy of his theory. It is the philosophical expression of the perplexity of a man whose courageous life-long struggle on behalf of a humane and liberal way of life has been beset by the implacable fanaticism and irrationalism of his time.

BY BERTRAND RUSSELL

- (23) BR in Australia (1950). Our enterprising Librarian, Tom Stanley, has obtained from the Australian Broadcasting Company, the transcripts of 6 radio-talks that BR gave in Australia between June and August 1950.

A few sentences from BR's Autobiography (NY: Simon & Schuster, 1969, Vol. III, p.19-20) may help set the stage:

At the end of June 1950, I went to Australia in response to an invitation by the Australian Institute of International Affairs to give lectures at various universities on subjects connected with the Cold War. I interpreted this subject liberally and my lectures dealt with speculation about the future of industrialism. There was a Labour Government there and, in spite of the fact that the hatred and fear of China and, especially, Japan, was understandably fierce, things seemed better and more hopeful than they appeared to become in the following sixteen years. ... I was taken to the capitals, and to Alice Springs, which I wanted to see because it was so isolated. It was a centre for agriculture and inhabited chiefly by sheepowners. I was shown a fine gaol where I was assured that the cells were comfortable. In reply to my query as to why, I was told: "Oh, because all the leading citizens at one time or another are in gaol." I was told that expectedly and regularly, whenever possible, they stole each other's sheep.

BR's first radio-talk was delivered June 25, 1950:

I'm ashamed to say that this is my first visit to Australia. As I have wasted the first seventy-eight years of my life in other parts of the world, I am very glad indeed to have an opportunity of rectifying this omission and I expect to learn a great deal during the weeks that I shall spend in your Continent.

I cannot at this moment give you my impressions of Australia as I have really only just arrived. I am, therefore, compelled to talk about matters in which Australia is connected with world events. A hundred years ago -- or even fifty years ago -- it might have been hoped by Australians that they would have been able to

keep out of the complications and tragedies of the old world. Technical causes have now made such a hope impossible.

Australia is integrated with the great problem of the world. It is not necessary to dwell upon this fact, which has been obvious to everyone since the Japanese were in Papua.

Australia, in spite of the defeat of Japan, continues to be faced by two closely related problems...one is the problem of preserving Australia as a White Man's country, and the other is the problem of not becoming a satellite of Russia.

These two, for the moment, are practically one problem, since Russian propaganda in Asia will invite the Asians to repeat the Japanese attempt with Russian assistance.

But in the long run they are different problems.

The problem of Russia is immediate. And the steps to be taken by Australia are essentially the same as those to be taken by all other countries of Western Civilisation.

The necessary steps are, by this time, pretty well recognized -- a combination of the Western Powers in a defensive alliance and simultaneous avoidance both of provocation and of appeasement. But when we look beyond the next few years, we are compelled to think out an Asiatic policy -- and this is by no means easy.

Misled by American ignorance, the West has taken an extraordinarily unwise line towards China.

The Government of Chiang-Kai-Shek was corrupt and reactionary, and refused all reforms -- even those most necessary to Chinese well-being.

In spite of this fact, the West supported it, and made it evident to the Chinese that their only choice lay between Reaction and Communism.

They chose Communism, and if we regret the choice we have only ourselves to blame. We must not repeat a similar error in other parts of Asia. Asia has undergone a great awakening. It contains vast populations of whom the immense majority are in abject poverty.

It will no longer acquiesce in a position of inferiority towards nations of European stock.

If we allow Communism to be identified with necessary reforms, we cannot hope, in the long run, to keep Asia on our side or even neutral.

I must, at this point, interrupt my argument to say that I think Soviet propaganda wholly dishonest and deceptive and that the benefits the Kremlin offers to Asia will disappear as soon as they have done their propaganda work.

We cannot, however, persuade Asia of this unless we genuinely offer something better than what Russia can give.

In India the sort of policy that I am recommending has been successfully carried through, so far as politics are concerned, though there remains an immense [amount of] work to be done on the economic side.

In the countries intermediate between India and China, including Indonesia, everything is still more or less in doubt.

Nehru speaks for these countries with a voice which is not quite that of Western Europeans, but from which, I think, Western Europeans have much to learn.

If we do not secure friendship of the countries of Eastern Asia we shall incur their enmity. And if we incur their enmity, we give an immense accession of strength to Russian Imperialism, disguised as a championship of the oppressed. We have made this mistake already in China, but I cannot believe that the bad results of American policy in China are irretrievable.

The Chinese are the most individualistic people of the world. They are also people with a very considerable national pride.

I am convinced that as soon as Moscow attempts to tighten the reins, Titoism will develop in China...provided that the West is not offering an irreconcilable hostility.

The problems of preserving Australia as a White Man's country depends, on the long run, upon a solution of the economic problems of Eastern Asia. India and China between them have about a hundred times the population of Australia. They are densely overpopulated and urgently desirous of opportunities of emigration.

Only force can keep them out of Australia until such time as their own economic problems have been solved. We ought, therefore, to do everything in our power to develop industry in Eastern Asia, and to see to it that the enormous gap which now exists between the standard of life in India or China and the standard of

life in Australia or the United States is progressively lessened.

This was the wholly admirable purpose of Truman's fourth point, but it does not look as if America would do anything effective to carry out his policy in this respect.

This is one of those cases, not so infrequent as many people think, where self-preservation demands doing good to our neighbors.

Men are so accustomed to rivalry and competition that they tend to think that whatever damages others must be an advantage to themselves. This happens to be untrue. And the case of Asian poverty is, perhaps, the most notable example of its untruth at the present day.

But at this point I must make a very important proviso. I do not wish to see the standard of life in backward countries raised by methods which involve lowering the standard of life in more developed countries.

We of our Western Civilisation have made certain discoveries of immense importance to ourselves at present and to all mankind in a foreseeable future. We have found out how to eliminate abject poverty almost entirely, how to diminish illness and the death rate to a degree that would have been inconceivable to our grandfathers, and how to give the material conditions of happiness, not only to a favored few, but to almost everybody.

These are new and immense boons, and I do not wish to see the way of life which has made them possible disappearing from the world.

We have, therefore, every right to be defensive as regards our own civilisation, and, in the long run, it is for the good of backward nations that we should be so, since the technical possibility now exists of gradually raising them to our economic level.

This brings me to another subject about which I hope to learn much while I am in Australia. The greater part of Australia at present is almost or quite barren. I am totally unable to believe that it is beyond the power of science to remedy this. If as much money and brains went into making Australia fertile as has gone into the construction of the atomic bomb and is going into the construction of the hydrogen bomb, I cannot but think that the result would be equally spectacular and considerably more beneficial to mankind.

The problem of making rain is on the verge of solution, and if all Australia could be made rainy, a large part of the problem would be solved.

There are, I know, other obstacles which are at the moment quite as grave as lack of rainfall. There are large areas where the soil lacks necessary ingredients.

But why should we sit down under such a circumstance? Have we not discovered how to transmute elements? Is there any reason why radioactive atoms should not be used to alter the chemical constitution of the soil in a beneficial manner?

I am speaking of something about which I am ignorant, and I have little doubt that most experts would pooh-pooh my hopes.

This, however, leaves me unmoved.

Experts always pooh-pooh whatever is two moves ahead, and confine their vision to what is one move ahead.

If Australia could support a population of fifty-million, the danger of being overwhelmed from Asia would be enormously diminished.

If I could control Australian policy, I should establish a college of highly skilled scientists of various different sorts, meteorologists, agronomists, nuclear physicists and so on, to be engaged permanently in a theoretical investigation of what is necessary to increase the fertile area of Australia. The men concerned should mostly be young. They should be temperamentally hopeful, they should be respected, because of their potential power.

We hear much nowadays about the evil effects of science, and the threat of radioactive disintegration.

These evil effects are due to the use that politicians make of science. But the same skill which shows us how to exterminate the human race, if that is what we want to do, can also show us how to make the desert blossom like the rose, if we have the common sense to prefer that.

It may be said that all the troubles from which the world is suffering are due to the fact that politics lag behind science.

Technically the world is unified. Politically it is divided into many separate nations and, above all, into two immensely powerful groups, each of which imagines that its own welfare is to be secured by the overthrow of the other. Whatever may have been true in the past, this is no longer true in our day.

I do not mean to suggest that in no circumstances is war necessary. It is only too easy to imagine behaviour

on the part of Russia to which it would be folly to submit. But in view of the two wars that we have already experienced, it must be obvious that even the victors at the end of a great war have a far lower level of well-being than they had at the beginning. War can only result from folly on one side, or on the other, or on both. Even when the folly of one side has forced war on the other, war can, at best, preserve certain things that we value. It cannot not positively be creative of good things.

We must therefore seek to avoid war if we can do so without treachery to what we value in our way of life.

And certainly one of the surest ways of avoiding war is to raise the economic level wherever we have power to do so. Communism thrives on misery, and if anywhere in the world we can produce prosperity, we have to that degree diminished the power of Communism, and we have done so not by creating a rival tyranny, nor by the threat of atomic extermination, but by measures which are good in themselves quite independently of the great conflict between Russia and the West.

We must not let our thoughts be warped by danger into a warlike or restrictive shape. We must, even in these difficult times, think constructively with a view to creation and not merely to preservation. So long as we think only of preservation we shall develop a Maginot Line mentality, and we shall seem to be surrendering initiative to the enemy.

When we see Communists attacking something which we know to be an evil, we must not, because they attack it, rush to its defence.

In some countries in Eastern Europe aristocratic landowners kept peasants miserable, without themselves doing anything useful.

The Bolsheviks abolished this state of affairs.

The West, I am sorry to say, while it had the power, did not.

It is this sort of thing that gives plausibility to Communist propaganda, because the Communists proclaim themselves the party of progress -- which, incidentally, they are not. Their opponents are too apt to think that every advocate of progress is more or less of a Communist.

This attitude has become regrettably common in America, not, I think in the Administration, but in Congress and in large sections of the population.

This is not the way in which we ought to think or feel. We ought to have a vision as dynamic, as hopeful as that of the most visionary Communists.

We ought to be vividly aware of what has been achieved in the West and could be achieved everywhere in the direction of freedom and well-being and economic justice.

We ought to be inspired by the clear possibility which modern technique opens to us of a far greater progress in these same directions, by the thought of a life free from fear, free from want, free from the appalling horror of war, in which the whole human family shall at last co-operate, and the foolish enmities of our time shall appear as the nightmare obsessions of a barbarous age. It is in the spirit of this hope, and because Communism makes such a hope impossible, that our propaganda should be carried on, and it is by such a hope that our lives should be inspired.

Only a little wisdom is required to create a world happier than that of any former time, but if that wisdom is to prevail it must be not through fear but through hope.

RECOMENDED READING

- (24) Bertrand Russell by Paul Kuntz (Boston: Twayne Publishers, 1986). Lee Eisler calls it an engrossing examination of BR's chief philosophical interests that pulls together a lot of loose ends that need pulling together. No philosophic jargon; highly readable. It will be reviewed by one of our professional philosophers, MARVIN KOHL, in a future RSN.
- (25) Bertrand Russell on Compossibility. "A first step toward eliminating war," by Peter Cranford (Augusta: Great Pyramid Press, 1985), a slim volume (28pp.), at a slim price (\$2), it tells how adversaries should deal with each other if they wish to get results: work in areas of agreement, rather than staying deadlocked over areas of disagreement. They should seek measures that are mutually advantageous. This may sound obvious, but is often ignored, as in examples cited by Cranford. Russell says somewhere that men -- foolishly -- would rather hurt their enemies than help themselves. This little paperback can help stop this kind of foolishness. You can order it from Great Pyramid Press, PO Box 2745, August, GA 30904. Recommended by Lee Eisler.

HUMANISM

(26) From the Washington Post (1/4/86), with thanks to DAN JACKANICZ:

Humanism Defined

"A Holy War for Young Minds" [front page, Dec. 30], telling about the attacks by fundamentalists, demands an answer from someone who knows something about humanism. As president of the local chapter of Humanists (the Humanist Association of the National Capital Area) and as the plaintiff in the litigation from which came the popular use of the term "secular humanism," I feel qualified to respond.

First, let me remind (or inform) the readers that the philosophy of humanism was developed by the ancient Greek scholars long before the time of Jesus, and is not of easy explanation. Barbara Parker, representing the organization People for the American Way, has aptly stated, "Trying to define secular humanism is like trying to nail Jell-O to a tree." In his book, "The Philosophy of Humanism," Cor-

liss Lamont writes: "To define twentieth-century humanism briefly, I would say that it is a philosophy of joyous service for the greater good of all humanity in this natural world and advocating the methods of reason, science, and democracy. While this statement has many profound implications, it is not difficult to grasp."

Some people ask, "If we discard the fear of punishment in hell, what is there to guide people in a sensible mode of living?" Well, I have a conscience, I have a mind, some degree of intelligence, a sense of reason and compassion. I hope and believe that most people are similarly equipped. This is all one needs in life to establish a code of conduct that will keep us on the straight and narrow. These faculties will enable a person to examine any ethical situation and, by applying

rational principles, arrive at a course of action that will ensure justice is done, that our behavior is honorable and responsible. We should not be distracted by fear of hell, and we should not be concerned about accumulating points to get into heaven, for these places exist only in the minds of those who have been taught to fear God.

Those who dislike humanists and humanism seem to take offense at our lack of belief in the supernatural. They seem to regard it as a personal attack upon them, yet we are not disturbed when a person asserts that he believes in God. It is nothing more than a difference of opinion. People who dislike humanists and allege that they have taken control of the public schools should remember that public schools are under the supervision of local boards of education whose members

are generally elected by the voters in the various districts. And the curricula and programs of the schools are established, or approved, by these school boards. I do not know of a single school board composed of humanists. Further, I will suggest that the quality of education in this land would be much higher if members of the school boards were humanists.

Those who dislike humanists and humanism impute great power to the movement. They flatter us. In a nation of more than 220 million "souls," fewer than 6,000 individuals are members of the American Humanist Association, the primary organization of humanists in North America. If we are able to exert some influence in the public marketplace of ideas, it is because the product is good.

ROY R. TORCASO
Washington

MINUTES

(27) Combined Minutes of the Business and Board Meetings of June 21st, as submitted by the (then) Secretary, John Lenz, June 28, 1986. We have omitted portions of the minutes that duplicate what has already been mentioned (7).

Hugh McVeigh questioned the granting of the BRS Award to People For The American Way, wanting to know what they had to do with BR. Phil Stander responded, saying they stood for First Amendment rights, Dave Goldman agreeing, and Don Jackanicz pointing to their anti-censorship stand. [BR was strongly against censorship, even of dirty postcards, "feelthy peectures".] Hugh then suggested Paul Kurtz for the Award. Steve Maragides thought that Hugh should volunteer for the Award Committee or nominate someone for next year's Award.

Carl Miller spoke movingly on BR's lifelong integrity.

Harry Ruja stated that, having stabilized our finances [have we?], we might consider reinstating the BRS Doctoral Grant, "one of the important objectives of the BRS". It has been \$1000 recently, until suspended last year for lack of funds. Harry thinks we need some philanthropy from committed members. Carl Miller suggested setting up a fund.

Warren Smith said each member could attempt to recruit new members from present acquaintances. Don Jackanicz suggested giving gift memberships to friends.

Marvin Kohl spoke about his paper, "Russell and the Attainability of Happiness" [which had been made available in advance, in the May newsletter] and then chaired a discussion of it, with many participating vigorously, including Dong Jai Choi, David Goldman, David Johnson, Carl Miller, Steve Reinhardt, Harry Ruja, and Phil Stander.

The Board voted approval of the suggestion that Committee Chairmen be appointed, not by the BRS Chairman, but by the BRS President, thus amending the Bylaws. [This appears to have been an error. This should have been a vote by the Members rather than by the Board, according to Article 1 of the BRS Bylaws.]

CONTRIBUTIONS

- (28) We thank the following members for making a contribution to the BRS Treasury: ALICE D. DU TOIT, DAVID GOLDMAN, WALTER MOORE HENRITZE, SUSANA IDA MAGGI, ROBERT SUMMERS, MARK WEBER, AND MICHAEL WEBER. Greatly appreciated! A reminder to others: please contribute to the BRS Treasury when you can. Send your contribution c/o the newsletter.

HOW TO ORDER:

Prices are postpaid. Paperback unless otherwise indicated. Please remit by check or money order, payable to the Bertrand Russell Society.
The Russell Society Library, Box 434, Wilder, VT 05088

- (30) Costigan videotape. History Professor Emeritus Giovanni Costigan (University of Washington, Seattle) gave a series of 6 weekly lectures on Humanism, this past May and June. He spoke about each of the following: Montaigne, Jefferson, Mill, Russell, Freud, and Einstein. CHERIE RUPPE attended and liked what she heard. What's more, she got us a videotape of the Russell lecture, which is now in the Russell Society Library, available for borrowing. Thank you very much Cherie!

- (31) DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
elected for 3-year terms, as shown

1984-86: JACK COWLES, DAVID GOLDMAN, DON JACKANICZ, STEVE MARAGIDES, FRANK PAGE, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, KATE TAIT

1985-87: JACQUELINE BERTHON-PAYON, BOB DAVIS, ALI GHAEMI, HUGH MOORHEAD

1986-88: LOU ACHESON, KEN BLACKWELL, JOHN JACKANICZZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, CARL SPADONI, TOM STANLEY

REPORTS FROM COMMITTEES

(36) International Development Committee (Adam Paul Banner, Chairman):

With much reluctance I am sad to have to report that no activity of merit can be shared with the BRS membership. "Appropriate Technology", instead of becoming an active verb now appears to have changed into a noun, as we realize our failure to deal with a developing country nationally instead of with a few, perhaps too few, elite. Developing temporary showplaces! The beliefs about current World Bank and IMF lending camouflage the truth that the profit money returning comes from funding new loans that are used to pay the interest on old loans, that some call "truly an epitome of voodoo economics..."

Current and very active progress recognizing the aforementioned failures has resulted in IRED Forum Networking. IRED is a group of international associations dedicated to development innovations via networks of over 500 partners. Their address and further individual data can be obtained from: IRED Forum, Casa 116, rue de Varembe', 1211 Geneva 20, Switzerland.

Your Intl. Dev. Comm. Chairman is seeking assistance to obtain more BRS Membership participation, and the development of active support programs in aid of cottage industry development.HELP!

[Paul will seek, from IRED Forum, a list of of potential projects that members can assist, on an individual basis.]

(37) Philosopher's Committee (David E. Johnson, Chairman):

The Philosophers Committee will be sponsoring a session on the philosophy of Bertrand Russell, in conjunction with the Eastern Division Meetings of the American Philosophical Association, in Boston in December, 1986. We were pleased to receive six papers to consider for the program. This is more than usual in the recent past.

The 1986 program is as follows:

"An Extension of Russell's Analysis of Physical Objects,"
by Gary Legenhausen of Texas Southern University

"Russell on the Utility of Religion: Copleston's Critique"
by Marvin Kohl, SUNY College at Fredonia

Commentators are yet to be announced.

* * * * *

The Bertrand Russell Society announces a call for papers to be presented at its meeting with the Eastern Division of the American Philosophical Association in December 1987. Papers may be on any aspect of Russell's philosophy. They should have a reading time of about one half hour and should be submitted in triplicate, typed and double spaced with an abstract of not more than 150 words. The name of the author, with his name and the title of his paper, should be submitted on a separate page. The submission deadline is April 15, 1987 and the papers should be sent to David E. Johnson, Chairman, Philosopher's Committee, The Bertrand Russell Society, Sampson Hall, U. S. Naval Academy, Annapolis, MD 21402. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

(38) Science Committee (William K. Fielding, Chairman):

In the April '86 issue of MIT's "Technology Review", Robert C. Cowen points to urgent need for closer integration of research efforts carried out under separate disciplines of physical and biological sciences. Considering the impact of atmospheric changes on the viability of microscopic organisms as a long-range threat to Earth's survival, Cowen calls for "a new professional discipline that combines both sciences. Such a confluence would come none too soon."

David Ehrenfeld's excellent -- and more psychologically oriented -- essay in California Magazine (August 1985) emphasizes disparate viewpoints of two disciplines:

It is as if [atomic physicist] Teller and I inhabit different universes with different fundamental laws. Or perhaps we see the same universe but with different organs of perception. Although we live on the same planet, the attributes of our environment that matter to each of us are worlds apart.

Specialization, simply as division-of-labor, has a long history in basic activities of our species; coordinating results of divergent pursuits has its parallel record. The only novel notions in these expressions of Cowen and Ehrenfeld (and others, increasingly) seem to lie in the expansion of the problem to global dimensions. What was formerly of merely tribal, provincial, or academic significance has now become an all-for-one, soon-or-never imperative. The consequences of ecological manipulation unavoidably become part of humanity's agenda-for-posterity; that should be obvious to any who will pause long enough to accept the reality and magnitude of the challenge: identify the problem, devise solutions -- or perish.

Getting people -- much less, Peoples -- pulling together toward a common betterment will be no easier than it has ever been.

Here is Stephen E. Toulmin, writing about Philosophy of Science in Encyclopedia Britannica (15th Edition, 1984 revision):

In practice, the case for unifying the theories and concepts of two or more sciences has to be considered afresh in every instance, and it can rarely be decided in advance whether or not such a unification will achieve anything useful for the sciences. Instead, one has to analyze the practical demands of the current problems in the different fields and see how far those requirements can be met by developing a unified explanatory treatment for all of the special sciences in question. The integration of the theoretical concepts achieved in the process will not consist solely in the formal running together of different propositional systems; more typically, it will require the development of a whole new pattern of theoretical interpretation.

So, where and how do we begin? An oblique answer may offer the most hope for us: let's stop mistaking gadgetry for civilization. The eighteenth-century fascination with technology, admittedly, led to advances in comfort for vast populations. But if we lack methods for peaceably consolidating material "progress", our prognosis becomes bleak. A microcomputer in Everyman's gameroom is not going to guarantee his future existence; only an ethical awareness, uncluttered with the rubbish of superstitions and ethnic biases, can possibly save man.

Fortunately, there have always been eclectic individuals with the wit and motivation enabling them to digest and resolve dichotomies. (Bertrand Russell, equally at home in the humanities as well as the sciences, was one of them.) Also, some of the old rigid lines are bending, even at the university level: Harvard seems to veer toward high-tech, while MIT announces that more attention to be paid to the humanities. Could it be that subliminal stirrings in the direction of mutual survival are building into a previously-undetected catalyst, such that East and West will be drawn into comprehension of universal needs -- and the twain shall meet?

Synthesis, not intransigence, holds the possibility of our continuity in the Cosmos.

ELECTION OF DIRECTORS

- (39) Time to vote. We will elect 11 Directors, bringing the total up to 24. They will serve 3-year terms starting 1/1/87. Use the ballot at the end of this newsletter. Big Brother says, "Don't put it off. Do it now." Big Brother is watching.

Here are 12 candidates. Vote for 11.

JACK COWLES (New York, NY), member since 1976, BRS Director 1980-82 and 1984-86. Retired naval officer; served in the Pentagon, with co-finger on the button. Anti-war informant to Senator Fullbright, after Tonkin Gulf incident, which caused Navy to blacklist him. Took BR's lecture course at UCLA, 1940.

WILLIAM K. FIELDING (Ware, MA). Chmn, Science Committee; CoChmn, Membership Committee. Retired from wage-slavery, liberated for study and writing. Lifelong autodidact. From draftsman, land surveyor, and electronic technician to proprietorship (electronic). Atheist, humanist, Mensan. Studying math, logic, philosophy, languages; and enjoys writing music and verse.

DAVID GOLDMAN, M.D. (New York, NY), member since 1979, BRS Director 1984-86. Clinical Assistant Professor of Psychiatry at NYU Medical School, Lecturer in Psychiatry at Columbia University Psychoanalytic Center. Notes false psychologizing in current nuclear strategies...and, influenced by BR, served on Executive Board of NY Chapter of Physicians for Social Responsibility.

DON JACKANICZ (Washington, DC), member since 1974, BRS Secretary 1978-81 & 1986, BRS President 1982-84, BRS Director 1978-1986. First BRS Librarian. History student (Ph.D. candidate). Employed by Library of Congress.

STEVE MARAGIDES (Granite City, IL), member since 1976, BRS Director. Attended 9 of the last 10 annual meetings. Attorney. Moved the BRS from Georgia to Illinois, donating his legal services. Degrees: Journalism (Northwestern) and Law (University of Illinois).

FRANK PAGE (Fairview Park, OH). BRS Director 1984-86, member since 1977. CPA. A dedicated Russellite since the 1920s. "Since Russell has been a great influence on my intellectual and social outlook, I would consider it a duty as well as a privilege, if re-elected, to serve on the BRS Board."

MICHAEL ROCKLER (Camden, NJ) chairs the Department of Education at Rutgers University. Has taught since 1963. Learned about the BRS through membership in the AHA. Working on a book on Russell and education. "Russell has been a hero of mine ever since I first encountered his work as an undergraduate in philosophy at University of Minnesota."

CHERIE RUPPE (Bellevue, WA), member since 1980, BRS Director 1981-86, BRS Secretary 1982-3, Member Pugwash, Federation of American Scientists, Union of Concerned Scientists, Fellow of Endangered Wildlife Trust of S. Africa, Member, Whale Protection Fund, Northwest Ballet Ass'n. Orangutang hugger (see picture RSN49-21).

PAUL ARTHUR SCHILPP (Carbondale, IL). Distinguished Research Professor of Philosophy (Emeritus) at Southern Illinois University, BRS Director 1983-86, BRS Honorary Member, recipient of the first BRS Award (1980), creator and editor of "The Library of Living Philosophers". And much more.

WARREN ALLEN SMITH (Stamford, CT), member since 1977, BRS Director 1978-1986, former BRS Vice-President. Member American Humanist Association, British Humanist Association, Mensa. Former book review editor, "The Humanist" (USA), high school teacher (English). Recording studio owner. Winner of the Leavey Award from the Freedom Foundation of Valley Forge (RSN50-23).

RAMON SUZARA (San Francisco, CA). Dropped out of highschool, expelled from De La Salle College (Philippines). "Then I hit my stride at the greatest university: a collection of books, especially Russell's, which made me realize the depths of my shameful ignorance. My mind was twisted with religious indoctrination; Russell untangled the mess for me. In '64 I helped set up the BR Peace Foundation, Philippine branch." [For more about Ramon currently, see (15).]

KATE TAIT (Salisbury, CT), BRS Founding Member, BRS Director 1974-86, Honorary Member, first BRS Treasurer, author of "My Father, Bertrand Russell" (NY: Harcourt, Brace, Jovanovich, 1975), daughter of Dora Russell.

(40)

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

Chairman, Harry Ruja; President, Marvin Kohl; Vice-President, John Lenz; Treasurer, Dennis J. Darland; Secretary, Don Jackanicz; Vice-President/Information, Lee Eisler.

(2) 1987 DUES ARE DUE

TO ALL MEMBERS: Everybody's renewal dues are due January 1, 1987. The January 1st due-date applies to all members, including first-year members (but not those who joined in December 1986.)

Here is the 1987 basic dues schedule: Regular, \$25;; couple,\$30; Student under 25, \$12.50; Limited Income,\$12.50. Plus \$7.50 outside US, Canada and Mexico. Plus \$2 for Canada and Mexico. In US dollars.

Canadian Members: To avoid paying too much or too little, pay in US rather than Canadian dollars. We suggest investigating the cost of sending money to the US by means of Canadian Postal Money Order. It may be the cheapest way.

Please mail dues to 1987, RD 1, Box 409, Coopersburg, PA 18036 USA

* If you want to make our life a little easier, send your dues soon. And if we receive them before January 1st, you will be on the Renewal Honor Roll.

Thanks!

TO FIRST YEAR MEMBERS -- members who joined any time during 1986: the rest of this item is for you.

We know from experience that new members sometime feel put upon when asked to pay dues again after less than a year of membership. We understand that. We will explain why we use the present system, and we hope you will find our explanation persuasive.

In the previous system, a new member's dues covered 12 months of membership. That was good for the member but bad for the BRS. It required us to notify each member individually -- on the anniversary date of enrollment -- that the next year's dues were due. And we had to follow up on each member individually, to see whether dues had in fact been paid. This went on throughout the whole year. It was cumbersome to administer, provided many chances for error, and took a lot of time. In fact, it took more time than we had. We had to make a change.

The present system is easier to administer, produces fewer errors, and takes less time. Everyone's dues come due on the same date, January 1st. Simple!

We don't think that the new member whose first year of membership is less (sometimes considerably less) than 12 months has been short-changed in any important way, He/she has received just as many BRS newsletters (and after reading them, knows just as much about the BRS) as the member who joined in January.

All first-year members (except those who enroll in January) have an initial membership period that is shorter than a year. This happens only once -- the first year. Thereafter dues come due every 12 months, on January first.

There is one exception to all the above: members who join in December (1986). Their renewal dues are not due till January first the year after next (1988).

(3) MONEY MATTERS

When money matters come up, the BRS is quite aware that money matters. It matters greatly. The BRS Treasury is not exactly awash in money.

We're not broke but neither are we rich. Or even comfortable. And certainly not relaxed.

We want to be sure that we always have enough to keep things going.

*Russell Society News, a quarterly (Lee Eisler, Editor): RD 1, Box 409, Coopersburg, PA 18036
Russell Society Library: Tom Stanley, Librarian, Box 434, Wilder, VT 05088

So when you pay your renewal dues, pick a membership category that's right for you (in your financial circumstances) and right for the BRS (in its financial circumstances).

Here are the categories:

Student member \$12.50
 Limited income member \$12.50
 Regular member \$25
 Couple \$30
 Contributing member \$35
 Sustaining member \$50
 Supporting member \$75
 Sponsoring member \$100
 Patron \$101 to \$500
 Benefactor \$501 to \$1000
 Life member \$1001 and up

Do what you can. We know that not every member can afford to make an extra contribution. We ask those who can to do so.

- * Use the yellow renewal coupon on the front of this newsletter.

Thanks!

ANNUAL MEETING (1987)

- (4) * Input wanted. This is a call for papers, and for your suggestions for talks at the Meeting. Send papers and suggestions to Harry Ruja, 4664 Troy Lane, La Mesa, CA 92041.

Here is a preview of arrangements: the Meeting will be held in San Diego the weekend of June 19-21. We will stay at El Conquistador, a "residence hall for students of San Diego State University." Costs seem modest: single room for both nights \$30, double \$24; \$18.50 for 3 meals Saturday, and Sunday breakfast. Cab fare from the airport is \$18. Bus fare 80¢; you must change buses. (Change buses and save \$17.20. We'll tell you which buses next issue.)

Harry is Professor Emeritus at the University. He adds this bit of propaganda:

Plan to come to San Diego for our Annual Conference June 19 to 21. Average temperature in sunny San Diego in June is 71 days, and a cool 60 nights. Rarely does it rain all summer long. [Query: Does it ever rain all summer long anywhere?] Comfortable modern accommodations have been secured for us near San Diego State University. I have examined the rooms. They are clean, cheerful, modern, spacious, each with adjoining bathroom (shared by the adjoining room.) The cost is rock bottom: \$15 day single, \$12 day double. Read these figures and weep, you Easterners, who must dig down deep for hotel or motel accommodations. Our meals will be served in the same complex, also at reasonable prices -- including the Saturday night banquet. The location is about 35 minutes from the airport by cab (\$18).

Since some of you may want to take an extended vacation, arriving early or leaving late, I suggest you write to the San Diego Convention and Visitors Bureau, 1200 Third Avenue, Suite 8245, San Diego, CA 92101, for information about area attractions. (For one thing, we're only 18 miles from the border with Mexico.)

Bob Davis and I are working up a program. We'd dearly love to have ideas from the membership. Anyone out there want to read a paper? Let me know. Send me your ideas.

REPORTS OF OFFICERS

- (5) President Marvin Kohl reports:

Our warm thanks to HARRY RUJA for making arrangements to hold the next Annual Meeting of the Society at San Diego State University, June 19-21, 1987. Please reserve these dates.

Volume 8 of The Collected Papers of Bertrand Russell, "The Philosophy of Logical Atomism and Other Essays, 1914-1919," is now available. The price is \$60. However, John Pershing of Allen & Urwin has agreed to extend a 20% discount to members who use the coupon (next page).

20% Discount Order Form

Please send me the following available volumes:

___ Volume 1 \$75.00
 ___ Volume 7 \$55.00
 ___ Volume 12 \$60.00
 ___ Volume 8 \$60.00

REPORTS FROM COMMITTEES

(6) Science Committee (William K. Fielding, Chmn):

Like the generation of computers that can be printing-out one completed program, while interactively executing another, Bertrand Russell must have incubated and expressed ideas in an ongoing "I/O" system not easily analyzed. But -- whether by choice or chance -- large areas of human concern seem to have remained outside this marvelous process.

Except for a few instances of mentioning music enjoyed (at a 1920 Shanghai lunch, in one case), Russell clearly displayed no intimate acquaintance with this or any of the visual or performing arts. (Bernard Berenson tried unsuccessfully to excite in the young BR some of his own appreciation of classical painting.) That no such blind-spots can be detected in most of his contemporaries -- Dewey, G.B.Shaw, Santayana, among many others -- makes it appear significant.

One lifetime is never enough of Time to allow inclusion of all the avenues available to a civilized mind. Priorities that lead to outstanding work in one or two fields have to displace other aspects of life that will seem of equal importance to people less strictly motivated. But, however much Bertrand Russell may be said to have been totally immersed in our Age, can it be that he also missed some of our deepest levels of fulfillment?

You may well ask what all this has to do with Science? Yet consider, please, that a mind shares the computer's limitation: output depends entirely upon the data-base programmed into Memory. Whatever unseen ferment takes place within a personality's central processing unit (brain), ultimate answers will be enriched by having a strong admixture of humanistic "bytes" embedded in it's language.

Because we in The Bertrand Russell Society aspire to sustain gains of a thinking-man's Thinker, I suggest that we reflect on the advantages of wholeness. If we digress too far into byways of ineffectual pacifism, armchair atheism and "incestuous" praise of one-another's writings, we could be losing something of value. We might better be about blending a flavor of esthetic awareness into our possibly too-rigid assessment of our late patron-saint.

For, among the wealth of homely lessons he left to us, one indicates that wit and humor are twins; he exemplified a scientific philosophy that transcended numbers and time, he tramped along remote lanes of a world not offended by laughter. All he lacked was Time itself, time to truly enjoy -- as fully as he understood -- Life.

And as we move toward the close of a century in which the "exact" sciences -- from quarks to quasars -- are becoming increasingly resistant to exact definition, science and art seem less discrete. Perhaps Bertie, glancing backward, should have thought to revamp his dictum: "...inspired by love, savoring creativity and guided by educated guesses."

BY BERTRAND RUSSELL

(7) My Philosophy of Life is the title of BR's 2nd talk over Australian radio, on July 9, 1950. Here it is:

If I am asked: "What do you value in human life, and why do you value it?" I cannot prove that my answer is better than another man's, as I could prove a proposition in mathematics. What I think I can prove is that, if men care for and aim at certain essentially very simple things, almost all will be happier and have a fuller life than they will if mankind is led astray by partial and combative aims, such as exploitation of other human beings, dominance over supposed inferiors, or victory in violent conflicts. On such grounds I can defend the belief that love is better than hate, that a society where there is diffused creative initiative is better than one composed of few masters and many slaves, and that, while what is of most value is to be found in the lives of individuals, the best individuals are those whose thoughts and feelings are linked to those of others -- intimately to family and friends, less intimately, but still importantly, to those of all mankind, not only in the present, but also in the past and the future.

It is this sense of integration with the life of mankind that gives value to the study of history. Men at first were few; they lived in fear of wild beasts and in constant danger of starvation; they had little leisure for the activities that distinguish man from the brutes. The life of the human species hitherto has been a gradual march out of precarious darkness and misery into the slowly increasing light of knowledge and security against the harsh dominion of niggardly Nature. The chief causes of this progress have been the technical improvements brought about by human ingenuity. Each great stage in technical advance, however has brought with it at first great evils which were unnecessary. Agriculture brought human sacrifice, slavery and absolute monarchy. In our day science and machine industry have led to such things as the totalitarian state and the atom bomb. A philosophy of life in our day must seek to dissociate science and machine production from such evils, as the liberal thought of the eighteenth century dissociated agriculture from serfdom and subjection. A philosophy of life in our day must be one adapted to machine industry, not merely to one of the earlier stages of human development.

Machine industry has compelled communities to be much more closely knit, and much more highly organized than societies of former times. It has made men much more interdependent, and has compelled those who value individual liberty to seek fresh interpretations of the old doctrines. The power that modern technique give men over their physical environment has tended to shift the generally established values, giving more emphasis to energy and enterprise, and less to humility and endurance. It is easy to carry this change too far, but up to a point it is valuable.

Philosophers are fond of producing endless muddles about ultimate ethical values and bases of morals. My own belief is that so far as politics and practical life are concerned, we can sweep aside all those puzzles and content ourselves with commonsense principles which no one in his senses would dispute. We all desire, and need, food and shelter and clothing. We all desire security from injury, whether at the hands of each other, or at the hands of nature. We desire happiness and the joy of life, and health, and we desire freedom from constraint in so far as this is compatible with social life. We do not all desire intelligence. I have known people who were perfectly content to have very little of it. But we must all recognize that a modern community cannot prosper unless a considerable amount of intelligence is to be found among its members. On these things I think we are all agreed. Our disagreements are not on what is good to have, but as to who shall have it. This last is not an ethical question unless we adopt some principle of justice. In the absence of some such principle, the question of who shall enjoy the good things is a military question. Why are white Americans richer than Red Indians? Because they have superior weapons of war. Why was Europe for several centuries able to exploit the riches of the East? Because Europe was superior in artillery. It has been a rule hitherto in every age and in every country, that the powerful were rich and the weak were poor. Sometimes legal systems have preserved traditional wealth for a time without the backing of superior power, but such a state of affairs has always been temporary. Now, owing to the greater interdependence of individuals and nations, the predatory practices which have come down to us from the past are no longer appropriate. A community in which everybody steals from his neighbor instead of doing an honest day's work, will soon reach the point where there is nothing left to steal. Internally, civilized nations have long ago realized this fact, but where relations between different nations are concerned, those who mention this fact are still considered paradoxical and unpatriotic. This is entirely due to the fact that tradition outweighs commonsense. I spoke a moment ago about food and shelter and security as things that we all desire. We seek these things in practice

by destroying each other's crops, bombing each other's houses and killing each other in vast battles, which is absurd, as the geometers would say.

This lack of commonsense may cause a cynic to smile, but it will cause a lover of mankind to weep. We have at last, through science and scientific technique, emancipated ourselves to a certain degree from bondage and nature. If we were wise we could now extract necessities and moderate comforts without excessive labor. But for our own evil passions, we could build a society of human beings who would be happy and free and creative. The good individual, as I conceive him, is one who is free to develop and grow, who, because he is free, is not envious and restrictive of others. His happiness is dynamic, not static; it lies in what he is achieving, not in what he passively enjoys. Owing to his creative freedom he has out-going emotions of generosity and kindness and affection, not the morbid thwarted malevolence of the man whose powers are allowed no scope. There is an intimate relation between the excellences of a society and the excellences of the individual. A good society is one that makes the existence of a good individual easy. It should give education in initiative and self-reliance; it should give both security and the opportunity for adventure; it should contain no poverty, no war, no slavery, whether physical or mental; it should be able to permit much freedom, because the individuals composing it would find adequate scope in co-operative activities, and in artistic or intellectual creation. I do not mean that there will be no longer need to restrain criminals; I mean that there will be so much scope for activities that are not criminal that few men will be tempted into crime. The world having all these excellences has become technically possible; nothing stands in its way except the evil passions of human beings, especially envy and hate and fear. Our very emancipation from slavery to nature has given to our evil passions a new scope and a new destructiveness. Never in human history has there been so great a possibility of good as at the present day, and never has there been so great a likelihood of appalling evil. This makes ours a very difficult time in which to live, and makes certain demands upon us, both individually and nationally, which in easier times would not be made.

In dangerous times, such as those in which we are living, certain virtues become difficult, but in proportion as they are difficult they are important. If our existence is to be useful rather than harmful, we must learn truthfulness in our thinking. This is difficult because much truth is painful, and because intellectual honesty makes it impossible to accept any easy nostrum. It is difficult also because it makes it almost impossible to be a wholehearted adherent of any Party. There is a cosy warmth in being one of a herd who are all of one mind, and their unanimity quiets our own doubts. But if you think for yourself you are not likely to discover any large group with whom you can agree about everything, and you will find some degree of mental loneliness unavoidable.

What is needed above all is courage. In many situations which occur in many countries at the present time, physical courage of the highest order is required. But for those of us who are more fortunate, courage is still required — moral and mental courage. We must face the dangers which confront mankind, and we must not let ourselves imagine that there are easy or simple solutions. For example, some people will tell you that all would be well if we all underwent a change of heart. I think this is quite true, but it is not a very useful truth, since we do not know how to bring about such a change of heart.

Courage is needed to retain a rational outlook when reason can offer no certainty of a happy outcome. Many people, under the influence of fear, are inclined to relapse into some form of superstition, or to advocate on our side the very same detestable regimentation which leads us to condemn totalitarian regimes, not perceiving that this is to suffer moral defeat before the contest has begun.

Meanwhile we must retain sanity, which is difficult if we brood too much over what is dark and tragic. Whatever may be in store for us and for the world, it is well that our leisure should be spent in enjoying whatever can be enjoyed without injury to others. There are still dewy mornings and summer evenings and the sea and the stars; there are still love and friendship and music and poetry. And when we need some consolation nearer to the stuff of our anxieties, it is always to be found by removing our gaze from the immediate foreground. There have been earlier cataclysms, but the spirit of man has survived. In spite of some alarmists, it is hardly likely that our species will completely exterminate itself. And so long as man continues to exist we may be pretty sure that, whatever he may suffer for a time, and whatever brightness may be eclipsed, he will emerge sooner or later, perhaps strengthened and reinvigorated by a period of mental sleep. The universe is vast, and men are but tiny specks on an insignificant planet. But the more we realize our minuteness and our impotence in the face of cosmic forces, the more astonishing becomes what human beings have achieved. It is to the possible achievements of Man that our ultimate loyalty is due, and in that thought the brief troubles of our unquiet epoch become endurable. Much wisdom remains to be learnt, and if it is only to be learnt through adversity, we must endeavor to endure adversity with what fortitude we can command. But if we can acquire wisdom soon enough, adversity may not be necessary, and the future of Man may be happier than any part of his past.

(Thank you, TOM STANLEY.)

(8) On Architecture. From The Rotarian, June 1937, with thanks to TOM STANLEY:

Every social system that has existed has had its appropriate type of architecture. Medieval castles make visible the pride of feudal barons; Venetian palaces display the splendors derived from commerce with the East; French chateaux and Queen Anne country seats represent the secure power of a courtly and civilized aristocracy.

With the French Revolution and the Industrial Revolution there goes a revolution in architecture. Old styles linger where the older forms of power linger: Napoleon adds to the Louvre, but his additions have a florid vulgarity which shows his insecurity. But the typical styles of the Nineteenth Century are two: the factory with its chimneys, and the rows of tiny houses for working-class families.

As one approaches London by rail, one passes endless streets of such dwellings, each inhabited by one family of small means. Each of these is a center of individual life; the communal life is represented by the office, the factory, or the mine, according to the locality. If an age is to be judged by the esthetic quality of its architecture, the last hundred years represent the lowest point yet reached by humanity.

The factory and the rows of small houses illustrate, between them, a curious inconsistency in our modern way of living.

While production had become increasingly communal, and is no longer, in its important branches, a matter for the single handicraftsman, our general outlook has become more individualistic. In the factory there is social life, which has produced the trade unions; but at home each family desires isolation. "I keep myself to myself," the women say. This feeling makes them endure, and even prefer, the separate little house, the separate little kitchen, the separate drudgery at house work, the separate care of children while they are not at school.

This type of architecture is connected with the status of women. In spite of feminism, the position of wives, especially in the working class, is not much changed from what it was. The wife still depends upon her husband's earnings, and does not receive wages although she works hard. Being professionally a housekeeper, she wants to have a house to keep. The desire to have scope for personal initiative, which is common to most human beings, has no outlet except in the home. The husband, on his side, enjoys the feeling that his wife works for him; moreover, his wife and his house provide more satisfaction for his instinct of property than would be possible with any different type of architecture.

All this would be changed if a woman's livelihood were not earned by the profession of wife and mother, but by some ordinary paid occupation. Already in the "middle class" there are enough wives who earn their living outside the home, to produce, in big towns, some approach to what their circumstances make desirable. If a woman has to work outside the home, she cannot cook or mind the children during the day; this requires communal kitchens and nursery schools. This, in turn, demands a type of architecture quite different from the sprawling streets of little villas that constitute an English or American suburb.

In the Middle Ages, communities of celibates produced a type of architecture which was satisfying and esthetically delightful. In England, monasteries and abbeys survive mainly as ruins to please tourists, but colleges, as Oxford and Cambridge, are still part of the national life, and retain the beauty of medieval communalism. In relation to the general population, the problem is to secure the same communal advantages without celibacy. This problem will not be solved until most women earn their living outside the home. But when this economic change has been secured, certain important and highly desirable architectural changes will become possible, and indeed almost inevitable.

Robert Owen, more than a hundred years ago, incurred much ridicule for his "cooperative parallelograms," which were an attempt to secure for wage earners the advantages of collegiate life. Although he was perhaps premature in this suggestion, it has since come nearer and nearer to what is practicable and desirable.

If I were dictator of town planning, I should pull down the squalid streets and separate houses, and substitute high blocks of buildings round three sides of a square, open to the sun, with a communal kitchen, spacious dining hall, another hall for amusements or meetings, and a nursery school in the center, which should be in the open air except during the bad weather.

The advantages of such a system of architecture would be many. To begin with the children: they would have wholesome food, provided in the nursery school according to the best principles of diet; they would have the companionship of children of their own age; they would have far more liberty of movement than is possible in a tiny home of the usual sort where grown-up work has to be carried on.

Rickets, now appallingly common, would disappear; the children would be freed from the nagging of an overworked mother; and their mental and physical development would be promoted by the freedom of the nursery school.

For women, the advantages would be quite as great. As soon as their children were weaned, they would be able to hand them over throughout the day to women specially trained in the care of young children. They would not have the business of buying food, cooking it, and washing up. They would, like their husbands, have hours of work and hours of leisure instead of being always busy. They would see their children in the mornings and the evenings, long enough for affection but not long enough for frayed nerves. And even the most affectionate adult is bound to find children trying on the nerves if there is never a moment's rest from their clamorous demands for attention.

Finally, for men and women equally, there would be an escape from the confinement of small rooms and sordidness into large public rooms, which might be as architecturally splendid as college halls. Beauty and space need no longer be the prerogative of the rich. There would be an end to the irritation that comes from being cooped up in too close quarters, a situation that too often makes family life intolerable.

Communal life decayed during the Nineteenth Century with the decay of institutions that had produced its traditional forms. But no community can remain healthy without communal life; and it must be the task of the immediate future to build up new forms more in harmony with the age.

And in building up these forms, architecture must play an essential part.

- (9) "The Unhappy American Way", from "Symposium", Arms & Locke, eds. (NY: Rinehart, 1955). It first appeared in The New York Times Magazine (6/15/52) as "The American Way (A Briton Says) Is Dour", and is reprinted in "Bertrand Russell's America, 1945-1970", Feinberg & Kasrils, eds. (Boston: South End Press, 1983).

It used to be said that English people take their pleasures sadly. No doubt this would still be true if they had any pleasures to take, but the price of alcohol and tobacco in my country has provided sufficient external causes for melancholy. I have sometimes thought that the habit of taking pleasures sadly has crossed the Atlantic, and I have wondered what it is that makes so many English-speaking people somber in their outlook in spite of good health and a good income.

In the course of my travels in America I have been impressed by a kind of fundamental malaise which seems to me extremely common and which poses difficult problems for the social reformer. Most social reformers have held the opinion that, if poverty were abolished and there were no more economic insecurity, the millennium would have arrived. But when I look at the faces of people in opulent cars, whether in your country or in mine, I do not see that look of radiant happiness which the aforesaid social reformers had led me to expect. In nine cases out of ten, I see instead a look of boredom and discontent and an almost frantic longing for something that might tickle the jaded palate.

But it is not only the very rich who suffer in this way. Professional men very frequently feel hopelessly thwarted. There is something that they long to do or some public object that they long to work for. But if they were to indulge their wishes in these respects, they fear that they would lose their livelihood. Their wives are equally unsatisfied, for their neighbor, Mrs. So-and-So, has gone ahead more quickly, has a better car, a larger apartment and grander friends.

Life for almost everybody is a long competitive struggle where very few can win the race, and those who do not win are unhappy. On social occasions when it is *de rigueur* to seem cheerful, the necessary demeanor is stimulated by alcohol. But the gaiety does not ring true and anybody who has just one drink too many is apt to lapse into lachrymose melancholy.

One finds this sort of thing only among English-speaking people. A Frenchman while he is abusing the Government is as gay as a lark. So is an Italian while he is telling you how his neighbor has swindled him. Mexicans, when they are not actually starving or actually being murdered, sing and dance and enjoy sunshine and food and drink with a gusto which is very rare north of the Mexican frontier. When Andrew Jackson conquered Pensacola from the Spaniards, his wife looked out of the window and saw the population enjoying itself although it was Sunday. She pointed out the scandal to her husband, who decreed that cheerfulness must cease forthwith. And it did.

When I try to understand what it is that prevents so many Americans from being as happy as one might expect, it seems to me that there are two causes, of which one goes much deeper than the other. The one that goes least deep is the necessity for subservience in some large organization. If you are an energetic man with strong views as to the right way of doing the job with which you are concerned, you find yourself invariably under the orders of some big man at the top who is elderly, weary and cynical. Whenever you have a bright idea, the boss puts a stopper on it. The more energetic you are and the more vision you have, the more you will suffer from the impossibility of doing any of the things that you feel ought to be done. When you go home and moan to your wife, she tells you that you are a silly fellow and that if you became the proper sort of yes-man your income would soon be doubled. If you try divorce and remarriage it is very unlikely that there will be any change in this respect. And so you are condemned to gastric ulcers and premature old age.

It was not always so. When Dr. Johnson compiled his dictionary, he compiled it as he thought fit. When he felt like saying that oats is food for men in Scotland and horses in England, he said so. When he defined a fishing-rod as a stick with a fish at one end and a fool at the other, there was nobody to point out to him that a remark of this sort would damage the sale of his great work among fishermen. But if, in the present day, you are (let us say) a contributor to an encyclopedia, there is an editorial policy which is solemn, wise and prudent, which allows no room for jokes. no

place for personal preferences and no tolerance for idiosyncrasies. Everything has to be flattened out except where the prejudices of the editor are concerned. To these you must conform, however little you may share them. And so you have to be content with dollars instead of creative satisfaction. And the dollars, alas, leave you sad.

This brings me to the major cause of unhappiness, which is that most people in America act not on impulse but on some principle, and that principles upon which people act are usually based upon a false psychology and a false ethic. There is a general theory as to what makes for happiness and this theory is false. Life is conceived as a competitive struggle in which felicity consists in getting ahead of your neighbor. The joys which are not competitive are forgotten.

Now, I will not for a moment deny that getting ahead of your neighbor is delightful, but it is not the only delight of which human beings are capable. There are innumerable things which are not competitive. It is possible to enjoy food and drink without having to reflect that you have a better cook and a better wine merchant than your former friends whom you are learning to cold-shoulder. It is possible to be fond of your wife and your children without reflecting how much better she dresses than Mrs. So-and-So and how much better they are at athletics than the children of that old stick-in-the-mud Mr. Such-and-Such. There are those who can enjoy music without thinking how cultured the other ladies in their women's club will be thinking them. There are even people who can enjoy a fine day in spite of the fact that the sun shines on everybody. All these simple pleasures are destroyed as soon as competitiveness gets the upper hand.

But it is not only competitiveness that is the trouble. I could imagine a person who has turned against competitiveness and can only enjoy after conscious rejection of the competitive element. Such a person, seeing the sunshine in the morning, says to himself, "Yes, I may enjoy this and indeed I must, for it is a joy open to all." And however bored he may become with the sunshine he goes on persuading himself that he is enjoying it because he thinks he ought to.

"But," you will say, "are you maintaining that our actions ought not to be governed by moral principles? Are you suggesting that every whim and every impulse should be given free rein? Do you consider that if So-and-So's nose annoys you by being too long that gives you a right to tweak it? Sir," you will continue with indignation, "your doctrine is one which would uproot all the sources of morality and loosen all the bonds which hold society together. Only self-restraint, self-repression, iron self-control make it possible to endure the abominable beings among whom we have to live. No, sir! Better misery and gastric ulcers than such chaos as your doctrine would produce!"

I will admit at once that there is force in this objection. I have seen many noses that I should have liked to tweak, but never once have I yielded to the impulse. But this, like everything else, is a matter of degree. If you always yield to impulse, you are mad. If you never yield to impulse, you gradually dry up and very likely become mad to boot. In a life which is to be healthy and happy, impulse, though not allowed to run riot, must have sufficient scope to remain alive and to preserve that variety and diversity of interest which is natural to a human being. A life lived on a principle, no matter what, is too narrowly determined, too systematic and uniform, to be happy. However much you care about success, you should have times when you are merely enjoying life without a thought of subsequent gain. However proud you may be, as president of a women's club, of your impeccable culture, you should not be ashamed of reading a low-brow book if you want to. A life which is all principle is a life on rails. The rails may help toward rapid locomotion, but preclude the joy of wandering. Man spent some million years wandering before he invented rails, and his happiness still demands some reminiscence of the earlier ages of freedom.

ABOUT BR'S WRITINGS

- (10) From Finland. To help you brush up on your Finnish, here is the first paragraph from Vapaa Ajattelijä (Jan. 1986):

Amerikkalainen The Bertrand Russell Society onmyöntänyt vuoden 1985 kirjallisuuspalkintonsa teoksen "Cambridge Essays, 1888-1899" toimittajille. Teos ilmestyi (London: Allen & Unwin, 1983) ensimmäisenä osana 28-osaisesta kokonaisuudesta "The Collected Papers of Bertrand Russell". Tätä mahtavaa kokoamis- ja toimitustyötä johtaa amerikkalainen McMaster-ylioposta, jossa myös sijaitsee Russellin työtä ja Russell-tutkimusta edistävä Russell Archives. Projekti käsittää kaikki Russellin kirjoitukset lukuunottamatta hänen kiirjojaan.

Thank you, I think, TOM STANLEY.

ABOUT BERTRAND RUSSELL

- (11) Schilpp on BR, 1970. About a month after BR's death, the Southern Illinois University newspaper, Daily Egyptian, asked SIU Professor PAUL A. SCHILPP what he thought of Russell.

"He was an iconoclastic skeptic and agnostic who never tired of seeking truth; happiness, both for himself and for all mankind; and a world of human understanding from which war would be forever banished." Paul A. Schilpp, distinguished visiting professor of philosophy and noted author of philosophy, made this observation in a recent interview about Russell and his acquaintance with him.

"My feeling is that his single greatest contribution was the fact that he was eternally questing. He was never satisfied. Many of my philosophical colleagues have criticized Bertrand Russell for the fact that they could never pigeonhole him. Every time they thought they had him caught, the next book would come out and he would be somewhere else.

"To my mind, this is greatly to his credit...if he changed his mind from one book even to the very next one, he'd go right ahead. And just too bad what he said in the last book -- he's going to say what he thinks now.

"To me he was the living representation of Faust, in which you're eternally seeking truth. And I think there is good evidence, even in his last three-volume autobiography, that he never claimed to have reached it."

Schilpp is the author of a 13-volume series of works entitled the "Library of Living Philosophers". One of the volumes concerns Russell and his writings.

"The two most humble men I ever met in my life, and who, because of their very great humility have affected me very profoundly, are the Alberts -- Albert Schweitzer and Albert Einstein.

"The two most opinionated, not to say actually conceited, philosophers I ever met in my life were George Santayana and Bertrand Russell.

"Now, since I used those adjectives, you can recognize that this is not anything I admire. I don't admire conceit. I'm perfectly willing to admit that in both cases they've every right to think highly of themselves because they were outstanding thinkers. And certainly in the case of Russell they've had a tremendous influence upon their generation.

"But...I would much rather sit at the feet of a Schweitzer or Einstein than at the feet of a Santayana or a Russell. Because however great a man's thoughts on philosophy may be, from my point of view the man is bigger than merely his thinking...

"Because I was going to do a volume on (Russell's) philosophy in my "Library of Living Philosophers", Northwestern University, when they invited him to address a mass audience in Orchestra Hall in Chicago...(they)asked me to introduce him.

"I think I probably spent more time on writing out that three or four sentence introduction than any introduction I can ever remember giving to anybody because, on the one hand, I wanted it brief and concise, and other the other hand, I wanted to be fair to the man. So I was very careful, and I gave him, I think, all of his due.

"But before that lecture was over I felt like eating my words, every last one of them. Because, whereas at the end of that lecture, I was asked by the university to give Lord Russell his check for \$1,000, for my money that particular lecture wasn't worth a nickel. I would swear to you that on that occasion Lord Russell didn't give the lecture even a thought until he got up on his feet.

"But then of course being how he was, and the people realizing who he was and expecting something from him, they ate it up alive. He was swaying them for tears and laughter as he pleased. But by the end of it, you

asked yourself, 'What did he say?' I felt he hadn't said anything. But the people just loved it. They had all paid \$1 a seat and they thought they'd gotten their money's worth 10 times over.

"I felt he was just playing to the galleries, and absolutely nothing but.

"On the other hand, the very next time after that he gave his famous series of lectures at the University of Illinois in Urbana-Champaigne and I went down from Evanston to hear him. And on that occasion... (he gave) a magnificent series of lectures. And earlier, before the Orchestra Hall event, he had given a lecture on the Evanston campus... which was very good.

"Just as is also true of some of his (lectures), some of his books were pot boilers written to satisfy his publisher and bring in some extra money. But after all, among his 60 books, I would say that 50 will live a long time. And you want to allow a man, when he writes 60 books, 10 that aren't up to snuff.

"I was invited to tea by Russell (in his Chicago hotel room at the time of his lecture)... and when I rang the bell, the governess of his little boy, Conrad, opened the door. As soon as I stepped in, I found the boy, about 18 or 20 months old, and Bertrand Russell romping around on the floor, which is a very human side of Russell.

"And when we did sit down to tea, the governess was treated just like a member of the family. She was sitting down to tea with us just as if she were a member of the family. So when Russell advocated democracy, he was practicing in his own life what he was preaching.

"The sad fact of the case is that outside of philosophy majors, relatively few of our students today are actually familiar with the man's name.

"Now that he's died, I think he'll become more well known... He will certainly belong aside people like Santayana, William James, and John Dewey. I think he will rate along with the giants of this century in philosophy.

"I don't see anyone really taking his place. But with Russell dead and John Dewey dead...

"I think the same sort of thing is going to happen which is already happening to Dewey. When Dewey first passed away, aside from merely noticing his death, he seemed to sort of pop out of sight. But he's already beginning to come back.

"I think this is what's likely to happen with Russell. In other words, this year -- his death year -- there'll be a good deal written and said and shown about Russell. And then I think people will tend to forget. Then those people who write master's theses and doctor's dissertations, in looking around for subjects, are going to uncover him again -- discover him again -- start all over. This I think is what's likely to happen."

Then he really isn't dead?

"No. This is very true. This is the immortality of people that are really influencing mankind. He's not dead, in the same sense that Plato isn't dead."

So at 97 Bertrand Russell died. And will live on.

Professor Schilpp is a BRS Honorary member, a BRS Director, and recipient of the first Bertrand Russell Society Award (1980). This article was written for the Daily Egyptian (3/7/70) by Paul L. Hayden. Uncovered -- discovered -- by HARRY RUJA, to whom goes our thanks.

- (12) Pearsall Smith on BR, from "Cyril Connelly" by David Pryce-Jones (NY: Tichnor & Fields, 1984) p. 99:

At Chilling during the summer, he found himself with Alys, younger sister and part-time housekeeper of Pearsall Smith -- in 1920 her husband, Bertrand Russell, had insisted upon a divorce, something to which she could not reconcile herself. 'Trouble with Bertie is two things,' so Cyril recorded in his diary, a verdict of Pearsall Smith's on this former brother-in-law of his, 'he must have something to hate so he goes into politics and someone to love so he has to make money in journalism. He has to love and he has to hate and (with gruff satisfaction) that's how he's chained to the wheel.' Thank you, BOB DAVIS.

REPORTS FROM COMMITTEES

- (13) Membership Committee (Lee Eisler, Chairman):

During 1986, the BRS has been running its small classified ad in BOSTON REVIEW, FREE INQUIRY, HARPER'S, HUMANIST, MENSA, NATION, NUCLEAR TIMES, and PROGRESSIVE. Results have been meager. During the first 9 months of 1986, 38 new members enrolled, 20 of whom are traceable to our ads: FREE INQUIRY produced 5, HARPER'S 5, MENSA 4, NATION 3, PROGRESSIVE 2, and HUMANIST 1.

If we divide the total cost of advertising by the number of traceable enrollments, we find that the average cost of acquiring the 20 new members in 1986 was \$44 per member (very high). In 1984, it was \$31; in 1985, \$24.

FREE INQUIRY and HARPER'S each produced 5 members, but the costs were very different: \$7 per member for FREE INQUIRY, \$53 for HARPER'S. We knew, from previous year's experiences, that the costs would be very different. So why didn't we just stay with low-priced FREE INQUIRY and drop high-priced HARPER'S? Because, if we had done so, we now would have 5 fewer members. And we need to acquire members.

(The average cost of a new 1986 member from all sources, traceable or not, is \$23.)

As you know, advertising is not an exact science; it works by trial and error. For instance, we tried BOSTON REVIEW; zero results; we struck out.

* We would like to try other publications. If you know of a publication you think might be suitable for the BRS ad, please let us know. But bear in mind the following:

If some well-intentioned benefactor offered to pay for a BRS ad in the New York Daily News, or the New York Times, and if we accepted the offer, we would probably get many requests for information; and it might bankrupt us. Every request we answer costs us about a dollar, and if we answered thousands of requests, we'd soon be broke.

Publications select audiences. People who read FREE INQUIRY — or HARPER'S — are different from those who read the tabloid NY DAILY NEWS...and are more likely to join the BRS. We advertise in magazines whose audiences (we think) include a higher proportion of potential BRS members.

So if you're about to suggest a publication, please keep this in mind.

In 1987, we will use substantially the same list of publications as in 1986. We drop BOSTON REVIEW, and add COLUMBIA JOURNALISM REVIEW and NEW YORK REVIEW OF BOOKS...and possibly publications that you may suggest.

BR IN POPULAR CULTURE

- (14) "Paradise Postponed" is a new PBS Masterpiece Theatre TV series in 11 episodes. The first episode, on 10/19/86, contained a sequence in which the Rev. Simeon Simcox was lying on a sleeping bag, after a 1958 Peace March, reading a book. JOHN TOBIN was pleased to see that the book was BR's "Human Society in Ethics and Politics".

BR QUOTED

- (15) "Men who are unhappy, like men who sleep badly, are always proud of the fact."
 "Of all forms of caution, caution in love is perhaps the most fatal to true happiness."
 Both from Forbes Magazine, the first on 6/16/86, the second on 6/30/86...with thanks to our trusty Forbes watcher, WHITFIELD COBB.

BR'S INFLUENCE

- (16) From "Portnoy's Complaint" by Philip Roth, with thanks to HARRY RUJA:
 What did Kay and I care less about than one, money, and two, religion? Our favorite philosopher was Bertrand Russell, our religion was Dylan Thomas' religion, Truth and Joy!... I finally had to tell her that I didn't seem to care for her any more. I was very honest, as Bertrand Russell said I should be.

1987 BERTRAND RUSSELL SOCIETY AWARD

- (17) * Nominations wanted for the BRS Award. Nominate someone you think deserves the Award, and say why. The nominee must meet one or more of these requirements: (1) is a member of Bertrand Russell's family; (2) had worked closely with Russell in an important way; (3) has made a distinctive contribution to Russell scholarship; (4) has supported a cause or idea that Russell championed; (5) has promoted awareness of Russell or Russell's work. Send your nomination to Harry Ruja, Chairman of the BRS Award Committee, 4664 Troy Lane, La Mesa, CA 92041.
-

BRS BOOK AWARD

- (18) * Nominations requested. If you wish to submit a candidate for the 1987 BRS Book Award, please send it to Dr. Gladys Leithauser, Chairman of the Book Award Committee, 122 Elm Park, Pleasant Ridge, MI 48069. It should be a recent book, not necessarily this year's, but probably not more than 5 years old. Tell why you think it deserves consideration.
-

BRS DOCTORAL GRANT

- (19) A conditional gift of \$500 toward the \$1000 Doctoral Grant has been offered anonymously, the condition being that we raise another \$500 ourselves.

As you may recall: we awarded Doctoral Grants in 1982, 1983, 1984, and 1985. The early Grants were for \$500, raised to \$1000 in 1985. However, no Grant is offered this year (1986) because we didn't have the money. And unless something is done about it, there will be no Grant in 1987 either. That would be a pity, because such grants are clearly a means of promoting Russell scholarship, which is one of the aims of our Society.

We now have a real opportunity to have a 1987 Grant. In a sense we are already half way there IF we can come up with the other half, the other \$500. That shouldn't be impossible; we ought to be able to meet that condition. If 100 members each give \$5, that will do it. Haven't we got 100 members who can spare 5 bucks? Some can spare even more than that; some will send \$25 or more. Send more if you can, to make up for those who can't.

- * Please send your tax-deductible Grant Contribution c/o the newsletter (address on Page 1, bottom). Contributions will be acknowledged.
-

ON NUCLEAR WAR STRATEGY

- (20) Star Wars software. This article, for which we are indebted to MIKE TAINI, appeared in American Scientist (Sept-Oct 1984, pp. 433-440) under the title, "On Software Aspects of Strategic Defense Systems." It was written by David Lorge Parnas, whose credentials appear at the very end.

The following are excerpts. The headings are the author's. Three dots ("...") indicate that text has been omitted. If an occasional term is unfamiliar, it won't matter; read on.

WHY SOFTWARE IS UNRELIABLE.

People familiar with both software engineering and older engineering disciplines observe that the state of the art in software is significantly behind that in other areas of engineering. When most engineering products have been completed, tested, and sold, it is reasonable to expect that the product design is correct and that it will work reliably. With software products, it is usual to find that the software has minor "bugs" and does not work reliably for some users. These problems may persist for several versions and sometimes worsen as the software is "improved." While most products come with an express or implied warranty, software products often carry a specific disclaimer of warranty. The lay public, familiar with only a few incidents of software failure, may regard them as exceptions caused by inept programmers. Those of us who are software professionals know better; the most competent programmers in the world cannot avoid such problems.

Analog systems form the core of the traditional areas of engineering. The mathematics of continuous functions is well understood. When we say that a system is described by continuous functions, we are saying that it can contain no hidden surprises. Small changes in inputs will always cause correspondingly small changes in outputs. An engineer who ensures, through careful design, that the system components are always operating within their normal operating range can use a mathematical analysis to ensure that there are no surprises.

When combined with testing to ensure that the components are within their operating range, this leads to reliable systems.

Before the advent of digital computers, when discrete state [ie, non-continuous] systems were built, the number of states in such systems were relatively small. With a small number of states, exhaustive testing was possible. Such testing compensated for the lack of mathematical tools corresponding to those used in analog systems design. The engineers of such systems still had systematic methods that allowed them to obtain a complete understanding of their system's behavior.

...With the advent of digital computers, we found the first discrete state systems with very large numbers of states...The mathematical functions that describe the behavior of these systems are not continuous functions, and traditional engineering mathematics does not help in their verification. This difference clearly contributes to the relative unreliability of software systems and the apparent lack of competence of software engineers. It is a fundamental difference that will not disappear with improved technology.

...Logic is a branch of mathematics that can deal with functions that are not continuous. Many researchers believe that it can play the role in software engineering that continuous mathematics plays in mechanical and electrical engineering. Unfortunately this has not yet been verified in practice. The large number of states and lack of regularity in the software result in extremely complex mathematical expressions. Disciplined use of these expressions is beyond the computational capacity of both the human programmer and current computer systems. There is progress in this area, but it is very slow, and we are far from being able to handle even small software systems...

WHY THE SDI SOFTWARE SYSTEM WILL BE UNTRUSTWORTHY

In March 1983, the President called for an intensive and comprehensive effort to define a long-term research program with the ultimate goal of eliminating the threat posed by nuclear ballistic missiles. He asked us, as members of the scientific community, to provide the means of rendering these nuclear weapons impotent and obsolete. To accomplish this goal we would need a software system so well-developed that we could have extremely high confidence that the system would work correctly when called upon. In this section I will present some of the characteristics of the required battle-management software and then discuss their implications on the feasibility of achieving that confidence....

1. The system will be required to identify, track and direct weapons toward targets whose ballistic characteristics cannot be known with certainty before the moment of battle. It must distinguish these targets from decoys whose characteristics are also unknown.
2. The computing will be done by a network of computers connected to sensors, weapons and each other, by channels whose behavior, at a time the system is invoked, cannot be predicted because of possible counter-measures by an attacker. The actual subset of system components that will be available at the time that the system is put into service, and throughout the period of service, cannot be predicted for the same reason.
3. It will be impossible to test the system under realistic conditions prior to its actual use.
4. The service period of the system will be so short that there will be little possibility of human intervention and no possibility of debugging and modification of the program during that period of service.
5. Like many other military programs, there are absolute real-time deadlines for the computation. The computation will consist primarily of periodic processes, but the number of those processes that will be required and the computational requirements of each process, cannot be predicted in advance because they depend on target characteristics. The resources available for computation cannot be predicted in advance. We cannot even predict the "worst case" with any confidence.

Each of these characteristics has clear implications on the feasibility of building battle-management software that will meet the President's requirements.

Fire-control software cannot be written without making assumptions about the characteristics of enemy weapons and targets....If the system is developed without the knowledge of these characteristics, or with the knowledge that the enemy can change some of them on the day of battle, there are likely to be subtle but fatal errors in the software.

...No large-scale software system has ever been installed without extensive testing under realistic conditions...The inability to test a strategic defense system under field conditions before we actually need it will mean that no knowledgeable person would have much faith in the system.

It is not unusual for software modifications to be made in the field. Programmers are transported by helicopter to Navy ships; debugging notes can be found on the walls of trucks carrying computers that were used in Vietnam. It is only through such modifications that software becomes reliable. Such opportunities will not be available in the 30-90 minute war to be fought by a strategic defense battle-management system.

Conclusion: All of the cost estimates indicate that this will be the most massive software project ever attempted. The system, has numerous technical characteristics that will make it more difficult than previous systems, independent of size. Because of the extreme demands on the system and our inability to test it, we will never be able to believe, with any confidence, that we have succeeded. Nuclear weapons will remain a potent threat.

WHY CONVENTIONAL SOFTWARE DEVELOPMENT DOES NOT PRODUCE RELIABLE PROGRAMS

The easiest way to describe the programming method use in most projects today was given to me by a teacher who was explaining how he teaches programming. "Think like a computer," he said. He instructed his students to

begin by thinking about what the computer had to do first and to write that down. They would then think about what the computer had to do next and continue in that way until they had described the last thing the computer would do. This, in fact, is the way I was taught to program. Most of today's textbooks demonstrate the same method, although it has been improved by allowing us to describe the computer's "thoughts" in larger steps and later to refine those large steps to a sequence of smaller steps.

This intuitively appealing method works well -- on problems too small to matter. We think that it works because it worked for the first program that we wrote. One can follow this the method with programs that have neither branches nor loops. As soon as our thinking reaches a point where the action of the computer must depend on conditions that are not known until the program is running, we must deviate from the method by labeling one or more of the actions and remembering how we would get there. As soon as we introduce loops into the program, there are many ways of getting to some of the points and we must remember all of those ways. As we progress through the algorithm, we recognize the need for information about earlier events and add variables to our data structure. We now have to start remembering what our data mean and under what circumstances are meaningful.

As we continue in our attempt to "think like a computer," the amount we have to remember grows and grows. The simple rules defining how we got to certain points in a program become more complex as we branch there from other points. The simple rules defining what the data mean become more complex as we find other uses for existing variables and add new variables. Eventually, we make an error. Sometimes we note that error, sometimes it is not found until we test. Sometimes the error is not very important; it happens only on rare or unforeseen occasions. In that case, we find it when the program is in use. Often, because one needs to remember so much about the meaning of each label and each variable, new problems are created when old problems are corrected.

[The author continues to examine his subject, discussing, among other things, "The Limits of Software Engineering Methods." "Artificial Intelligence and the Strategic Defense Initiative." ("Artificial intelligence has the same relation to intelligence as artificial flowers have to flowers. From a distance they may appear much alike, but when closely examined, they are quite different.")]

At one point the author says:

I am not a modest man. I believe that I have as sound and broad an understanding of the problems of software engineering as anyone that I know. If you gave me the job of building the system, and all the resources that I wanted, I could not do it. I don't expect the next 20 years of research to change that fact.

Here are his credentials:

David Lorge Parnas is Lansdowne Professor of Computer Science at the University of Victoria, in British Columbia, and Principal Consultant for the Software Cost Reduction Project at the Naval Research Laboratory in Washington, DC. He has taught at Carnegie-Mellon University, the University of Maryland, the Technische Hochschule Darmstadt, and the University of North Carolina. His special interests include programming semantics, language design, program organization, process structure, process synchronization, and precise abstract specifications. He is currently leading an experimental redesign of a hard real-time system, and is also involved in the design of a language involving new control structures and abstract data types. Address: Department of Computer Science, University of Victoria, P.O. Box 1700, Victoria, British Columbia, Canada V8W 2Y2.

But the story of Star Wars software is not the whole story. There's a story behind that story. It is the story of a man heeding the promptings of conscience. Parnas tells that story in *Common Cause Magazine* (May-June 1986, p. 32.) under the title, "Why I Quit Star Wars." Here are excerpts:

In May 1985 I was asked by the Strategic Defense Initiative Organization (SDIO), the group within the Office of the U.S. secretary of Defense that is responsible for the "Star Wars" program, to serve on a \$1,000 a day advisory panel, the SDIO Panel on Computing in Support of Battle Management. The panel was to make recommendations on a research and technology development program to solve the computer-related problems inherent in a space-based defense system. We were told that there were substantial resources available (billions of dollars over the next few years) and ad-

vised to consider large (expensive) programs.

Like President Reagan, I consider the use of nuclear weapons as a deterrent to be dangerous and immoral. If there is a way to make nuclear weapons impotent and obsolete and end the fear of nuclear weapons, there is nothing I would rather work on. However, two months after joining the panel I resigned. Since then I have become an active opponent of the Star Wars program.

My decision to resign from the panel was consistent with long-held views about the individual responsibilities of a profes-

sional, which I believe go beyond an obligation to satisfy the demands of an immediate employer. As a professional:

- I am responsible for my own actions and cannot rely on any external authority to make my decisions for me.
- I cannot ignore ethical and moral issues. I must devote some of my energy to deciding whether the task that I have been given is of benefit to society.
- I must make sure that I am solving the real problem, not simply providing short term satisfaction to my supervisor.

Many opponents of the Star Wars program, or the Strategic Defense Initiative

(SDI), oppose all military development. I am not one of them. I have been a consultant to the Department of Defense and other components of the defense industry since 1971. I am considered an expert on the organization of large software systems and I lead the U.S. Navy's Software Cost Reduction Project at the Naval Research Laboratory. Although I have friends who argue that "people of conscience" should not work on weapons, I maintain that it is vital that people with a strong sense of social responsibility continue to work within the military industrial complex. I do not want to see that power completely in the

hands of people who are not conscious of their social responsibilities.

My own views on military work are close to those of Albert Einstein. Einstein, who called himself a militant pacifist, at one time held the view that scientists should refuse to contribute to arms development. Later in his life he concluded that to hold to a "no arms" policy would be to place the world at the mercy of its worst enemies. His later writings supported limited arms development with strong limitations on how arms should be used. Neither a ceaseless arms race nor nuclear weapons are consistent with Einstein's principles. One of our greatest scientists, he knew that international security required progress in political education, not science.

From the beginning I wondered whether technology offered us a way to meet the president's goals. My own research has centered on computer software and I have used military software in some of my research. My experience with computer-controlled weapon systems made me wonder whether any such system could meet the requirements set forth by President Reagan.

I also had doubts about conflict of interest. I have a project within the U.S. Navy that could profit from SDI funding and I suggested to the panel organizer that this conflict might disqualify me. He assured me quite seriously that if I did not have such a conflict, they would not want me on the panel. He pointed out that the other panelists, employees of defense contractors and university professors dependent on Pentagon funds for their research, had similar conflicts. Citizens should think about such conflicts the next time

they hear of a panel of "distinguished experts."

The first meeting of the panel increased my doubts. In spite of the high rate of pay, the meeting was poorly prepared; presentations were at a dismayingly unprofessional level. Technical terms were used without definition; numbers were used without supporting evidence. The participants appeared predisposed to discuss the many interesting but soluble technical problems in space-based missile defense while ignoring the basic problems and "big picture." Everyone seemed to have a pet project of their own that they thought should be funded.

At the end of the meeting we were asked to prepare position papers on the problems that we saw. I spent the weeks after the meeting writing up my views and trying to convince myself that SDIO-supported research could solve the technical problems I had identified. I failed!

I could not convince myself that it would be useful to build a system that we did not trust. And if SDI is not trustworthy, the U.S. will not abandon the arms race. Similarly the USSR could not assume that SDI would be completely ineffective; seeing both a "shield" and missiles, it would feel impelled to improve its offensive forces to compensate for the defense. The U.S., not trusting its defense, would feel a need to build still more nuclear missiles to compensate for the increased Soviet strength. The arms race would speed up. Even worse, because we would be wasting an immense amount of effort on a system we couldn't trust, we would see a weakening of our relative strength. Instead of the safer world that President Reagan envisions, we would have a far more dangerous situation. Thus, the issue of our trust in the system is critical; it is

important that Americans understand why responsible leaders would never trust a "Star Wars" shield.

Before resigning I solicited comments from others and found nobody who disagreed with my technical conclusions. Instead, people told me the program should be continued, not because it would free us from the fear of nuclear weapons, but because the research money would advance the state of the art in our field. As it happens, I disagree with that notion, but I also consider it irrelevant. Taking money allocated for developing a shield against nuclear missiles—while knowing that such a shield is impossible—felt like fraud. I did not want to participate.

My next realization had to do with the way Star Wars is being sold to the public. Democracy can work only if the public is accurately informed, yet some of the statements made by SDIO supporters seem designed to mislead the public. For example, one SDIO scientist told the press that there could be 100,000 errors in the software and it could still work properly. Strictly speaking this statement is true: if one picks one's errors very carefully, they won't matter much. However, let's remember that a single error caused the complete failure of a Venus probe many years ago. I find it hard to believe that the SDIO spokesperson made his statement without being aware that it was misleading. Because of such disinformation, I decided to explain to the public that technology offers no magic that will eliminate the fear of nuclear weapons.

I have discussed my views with many individuals who work on SDIO-funded projects, and most of them do not disagree with my technical conclusions. In fact,

since the story of my resignation became public, two SDIO contractors and two Pentagon agencies have sought my advice. In other words, they do not doubt my competence.

Those who accept SDIO money, given its technical contradictions, make a variety of excuses. "The money is going to be spent anyway, shouldn't we use it well?" . . . "We can use the money to solve other problems." . . . "The money will be good for computer science."

The issue of SDI software was recently debated at a computer conference. While two of us argued, on the basis of software engineering theory and experience, that SDI could not be trusted, the two SDI supporters argued that this doesn't matter. Rather than argue about the computer science issues, they tried to use strategic arguments to say that a shield need not be considered trustworthy. One of them argued, most eloquently, that the president's "impotent and obsolete" terminology was technical nonsense, then suggested that we ignore what "the president's speechwriters" had to say and look at what was actually feasible. I had to remind myself that he was arguing in favor of SDI.

I believe in research; I believe that technology can improve our world in many ways; I also agree with Israeli scientist Prof. Makowski who wrote, "Overfunded research is like heroin, it leads to addiction, weakens the mind, and leads to prostitution." Many research fields in the U.S. are now clearly overfunded, largely because of Pentagon money. I believe we are witnessing the proof of Prof. Makowski's statement.

A man who gives up a \$1000-a-day job because of principle is — how shall we put it? — uncommon?

PHILOSOPHERS CORNER

- (21) Somewhat good news for philosophers. In 1979 we reproduced the New York Times' story on how hard it was for a professional philosopher to find a job as a full-time teacher of philosophy (RSN22-7). There were 135 applicants for a 2-year appointment, at \$13,000 a year, with no assurance of reappointment. The odds against getting the job were 135 to 1.

Be of good cheer, philosophers! Here's somewhat good news, from The Economist (4/26/86, p. 95):

Ever since 423 BC, when Aristophanes caricatured Socrates and his logic factory in "The Clouds", philosophers have been good for a laugh. They may now be good for other things, too. Philosophers are merging into the workaday world. Hospitals in New York State employ philosophers to advise doctors on life-or-death decisions. Philosophers have been hired to advise the state legislature in New Hampshire and prison authorities in Connecticut. They look at questions such as the disposal of nuclear waste and the problems of genetic engineering. Congress has four philosopher-interns to help senators crack conundrums.

Ethics — particularly medical ethics — has become a growth industry and, in America pre-eminently, it is linked at every point to the wider world. The links start at the universities, and run on into companies. Academic journals have titles like "Philosophy and Public Affairs" (Princeton) or the "Journal of Applied Philosophy" (University of Surrey). The Illinois Institute of Technology has its Center for the Study of Ethics in the Professions, the University of Maryland its Center for Philosophy and Public Policy.

Around such centers of learning, courses and conferences are multiplying. During the 1970s, 322 courses in business ethics sprang up at American universities and colleges. At Harvard's graduate school of business, for instance, philosophers lecture on pollution, consumer safety, the rights of employees and international business ethics.

It is not just that academic philosophers are profiting from a kind of luxury-goods market in ethics. Their pupils are finding that analytic training in philosophy can be an asset in business and this success in turn reflects back on the teachers of the world's oddest academic subject. Philosophy students do better in examinations for business and management schools than anybody except mathematicians — even better than those who study economics, business or other vocational subjects. Between 1964 and 1982, philosophy students scored at least five percentage points above average in admission tests for professional and graduate schools in America. No other subject matches that. Etc.

(Thank you, ELEANOR VALENTINE)

RELIGION

- (22) Hypocrisy, as described by "Critic" in the "London Diary" column of the New Statesman (9 May 1959):

When I write my classical "History of Hypocrisy" (the first of a trilogy of which the others will be "The Anatomy of Vanity" and "The Gentle Art of Fishing"), Exhibit A will be the South African government's reason for banning Bertrand Russell's "Why I Am Not A Christian." According to the government's handout (reported in the Johannesburg Star), the reason for the ban was that the book 'violated the principles of Christianity upheld in South Africa'.

(Thank you, TOM STANLEY)

- (23) "Biblical versus Secular Morality" is the theme of Free Inquiry's Fifth Annual Conference, held this year at the University of Virginia on 10/31 and 11/1. "The State of Virginia is fundamentalist territory, the stomping ground of Jerry Falwell and Pat Robertson...who want to use the Bible to remake America. They quote from the Bible daily, maintaining that it and it alone is the source of all knowledge and moral virtue," says Free Inquiry's Editor, Paul Kurtz. The topics to be discussed are: "The Origins and Impact of Biblical Ethics", "Biblical and Contemporary Views of Morality", "Religious vs. Secular Morality", and "Religion and Morals". The Conference will have taken place before this newsletter reaches you, but we thought you might like to know about it. Free Inquiry, a quarterly, \$18 a year: Box 5, Buffalo, NY 14215-0005.

NEWS ABOUT MEMBERS

- (24) Neil Abercrombie. Is the BRS on its way to becoming a Powerful Political Force in the USA? Consider:
 . Item #1: a BRS member runs for Congress, and is elected.
 . Item #2: the member becomes an ex-member.
 Where does that leave the BRS as a Powerful Political Force? Back in Square One.
 The member: Neil Abercrombie. He won a Special Election to fill a vacancy in Hawaii's First District. He'd like you to help him pay off his campaign debt of \$30,000. 2721-A Puuhonua St., Honolulu, HI 96822-9972.
- (25) Don Jackanicz deserves great credit -- TOM STANLEY reminds us -- for organizing the June 86 meeting on short notice, and doing it superbly well. David Hart had bowed out because of a sick infant, and Don stepped into the breach.
- (26) Robert Jay Lifton's new book, "The Nazi Doctors" (NY: Basic Books, 1986), was featured on Page 1 of the Sunday Book Review Section of the NY Times (10/5/86). These doctors reversed the doctor's role -- killing instead of healing. The review appeared under the heading, THEIR SPECIALTY WAS MURDER. Page 1 of the Washington Posts's Sunday Book Section also featured the book.

HONORARY MEMBERS

- (27) Linus Pauling. We were too low key last issue when we listed Professor Pauling among the New Members for the period (RSN51-32). Although we did include his name on the list of Honorary Members (RSN51, Page 25), we gave no evidence of our great delight in his acceptance of the title.

We are enormously pleased. The world's most eminent living scientist has honored Bertrand Russell's memory and the Society that bears his name. He is the winner of two Nobel Prizes, one of them the Nobel Peace Prize, and countless other honors. Clearly, his stature is not confined to the scientific community, as the following entry in "Who's Who in America" (1984-5) indicates (next page).

PAULING, LINUS CARL, chemistry educator; b. Portland, Oreg., Feb. 28, 1901; s. Herman Henry William and Lucy Isabelle (Darling) P.; m. Ava Helen Miller, June 17, 1923 (dec. Dec. 7, 1981); children: Linus Carl, Peter Jeffress, Linda Helen, Edward Crellin. B.S., Oreg. State Coll., Corvallis, 1922, Sc.D. (hon.), 1933; Ph.D., Calif. Inst. Tech., 1925; Sc.D. (hon.), U. Chgo., 1941, Princeton, 1946, U. Cambridge, U. London, Yale, 1947, Oxford, 1948, Bklyn. Poly. Inst., 1955, Humboldt U., 1959, U. Melbourne, 1964, U. Delhi, Adelphi U., 1967, Marquette U. Sch. Medicine, 1969; L.H.D., Tampa, 1950; U.J.D. U. N.B., 1950; LL.D., Reed Coll., 1959; Dr. h.c., Jagiellonian U., Montpellier (France), 1964; D.F.A., Chouinard Art Inst., 1958; also others. Teaching fellow Calif. Inst. Tech., 1922-25, research fellow, 1925-27, asst. prof., 1927-29, asso. prof., 1929-31, prof. chem., 1931-64, chmn. div. chem. and chem. engring., dir., 1936-58, mem. exec. com., bd. trustees, 1945-48; research prof. (Center for Study Dem. Instns.), 1963-67; prof. chemistry U. Calif. at San Diego, 1967-69, Stanford, 1969-74; pres. Linus Pauling Inst.
