- (28) "The Harvard Guide to Influential Books", Devine, Dissel, Parrish, eds. (NY: Harper & Row, 1986). Subhead: "113 Distinguished Harvard Professors Discuss the Books That Have Helped to Shape Their Thinking." This is an exciting book. If you want to find books worth reading, this is the place to look. The professors tell why particular books were important to them.

Occasionally a second-rate book will have first-rate consequences: "I read this [book] early in high school... In retrospect, it is an outrageously romanticised description of important distinguished scientists, written in a familiar style for young impressionable highschool students." He was young and apparently impressionable. The book led him into medicine and science. He wound up as Professor of Medicine at Harvard Medical School, after having worked on the molecular biology of cancer, and been Dean of Harvard's School of Public Health. "For me it was an important book in my decision to go into medicine [and]...research in medicine." The book? "Microbe Hunters" by De Kruif.

About 500-600 books are listed, in all. Professor Quine's list includes BR's "Introduction to Mathematical Philosophy" and "Our Knowledge of the External World". B. F. Skinner's list includes BR's "The Problems of Philosophy".

NEWSLETTER MATTERS

- (29) Future RSN Editor sought. Editor Lee Eisler has this to say:

I am not stepping down as editor of Russell Society News...yet. But I am not immortal. Some thought must be given to my successor. Who will be the next editor? There are 3 requirements for the job: you must really want it, you must be able to write, and you must be able to afford the time. The possession of a word processor makes the job easier; however, it can be done with a typewriter; that's how I did it for many years.

- * If you are interested in exploring the possibility, write or phone me [RD 1, Box 409, Coopersburg, PA 18036. (215)346-7687]. If you could come and visit me, that would be even better; much better, in fact. (I can put you up overnight.) Perhaps you would like to be editor for for a single issue, to try it out, to see how it goes. Perhaps we can figure out a way for you to do part of an issue. Let us discuss it.

BOOK REVIEW

(32) "Bertrand Russell" by PAUL GRIMLEY KUNTZ (New Haven,CT: Twayne, 1986), reviewed by MARVIN KOHL. This review appears in Choice (October 1986, p. 322).

Elizabeth R. Eames, in "Bertrand Russell's Theory of Knowledge" (CH, Jan '70) argues that the underlying principles which have remained constant in Russell's thought from the time of his abandonment of idealism are his analytic method, empiricism and realism. In this Twayne publication, Kuntz (Emory University) develops the latter theme. Although there is the antimetaphysical Russell who believes that knowledge about the ultimate nature of reality cannot be obtained, the author suggests that Russell was a fascinating kind of metaphysical realist. In "Bertrand Russell: The Passionate Sceptic", Alan Wood maintained that Russell was a passionate sceptic because he wanted to be a passionate believer. According to Kuntz, Russell was both a passionate sceptic and a passionate believer, a man who thought that belief ought to be suspended when there is a lack of evidence, but who, nonetheless, waged a fierce and neverending war against what he believed to be evil, sought to achieve impersonality in both reason and emotion, and was absolutely devoted to truth. Russell also has his failures: he does not proceed (like Whitehead) to finish his metaphysical system; he believes in real good as contrasted to real evil, yet consistently maintains that all normative questions are beyond the realm of knowledge; he outlines a new theory of virtue but fails to fill in the necessary details. Although he maintained that "the most valuable aspect of any person is his personal religion," Russell will probably be remembered as one of the great patron saints of secular humanism. A beautiful book for academic readers describing the Janus-faced genius as well as his limits.

THE RUSSELL SOCIETY LIBRARY
Tom Stanley, Librarian

Audio-Visual:

The Society has purchased a VHS cassette of Russell's 1959 appearance on the CBC's "Close-Up" television program. Interviewed by Elaine Grand, Russell discusses his childhood, the threat of nuclear war, democracy, Einstein, the emancipation of women and his religious views. Very little of the material is covered in the other films in our collection. I expect we'll be screening this at the 1987 annual meeting. Run time: 29 Minutes

We are indebted to the archivist of Sddeutscher Rundfunk in Stuttgart for an audio cassette of Katharine Tait's broadcast, "Portrait of the Father as Philosopher". (#230, 29 Minutes). An English transcription was published in Russell: N.S., Vol. 5, no.2. In German.

Professor Costigan's 1986 lecture on Russell is available on audio cassette #229. (100 Minutes). This is an excellent introduction to Russell's life and work.

Print:

We've received a review copy of THE PHILOSOPHY OF LOGICAL ATOMISM AND OTHER ESSAYS, Volume 8 in The Collected Essays of Bertrand Russell. We need a reviewer for this volume as well as for the previous title in this project, CONTEMPLATION AND ACTION 1902-1914.

* Any volunteers?

Peter Cranford gave the Library 15 copies of his BERTRAND RUSSELL ON COMPOSSIBILITY. A few have been reserved for circulation; the remainder have been sent to various organizations in the U.S. and Canada. Peter is particularly interested in getting the booklet noticed in the press and the word 'compossibility' into the language. If you have any suggestions please write to him at 205 Simmons Place, Augusta, GA 30907.

Our copy of the videotape, "The 'People For' Story" was a gift from Lee.

Videotapes:

Videotapes may be borrowed for \$4 per cassette. Canadian members should direct their orders to Rick Shore, 3410 Peter Street., Apt. 305, Windsor, Ontario, Canada N9C 1J3.

WANTED

- (34) A BR Correspondence Course? Tom Stenson wondered whether there were university courses on BR by correspondence. Tom Stanley checked this in Peterson's Guide; the answer is No. Would any of our professional philosophers undertake to write a correspondence course on Russell? Or, alternatively, how about a Home Study Course on Russell? — on his views on a variety of topics...citing specific readings where Russell's views on this and that can be found. This sounds like a good idea. Doesn't one of our learned friends in philosophy wish to undertake it?

CORRECTIONS

- (35) KUNTZ, not KURTZ. In the new-books-to-lend section of the Library report (RSN51-29), we listed the author of "Bertrand Russell" as Paul Kurtz. It should have been Paul Kuntz. Apologies to both. With thanks to eagle-eyed KEN BLACKWELL.

ABOUT OTHER ORGANIZATIONS

- (36) Canadian Institute for International Peace and Security issues a handsomely printed periodical. Its name is "Peace and Security" and there are 12 pages of text in English. Turn it over, so that what had been the back cover is now the front cover, and its name is "Paix et Securite" and there are 12 pages of text in French. Articles in the Autumn 1986 issue include "India and the Bomb", "After Grenada", "Canada's Press," as well as "L'Inde et la Bombe", "Les Lendemain de la Grenade", "La Presse Canadienne". Upcoming Events for October and November include: Consultative Group on Disarmament; Colloquium: "La paix est possible"; Workshop on Peace Education; International Youth for Peace and Justice Tour; Author's Workshop on Comprehensive Test Ban; Journee nationale de la paix; Roundtable on El Salvador; The True North Strong and Free? Apparently well-financed, the Institute lists 30 Public Program Grants, totaling \$213,000, and 5 Research Grants totaling \$27,000, for the First Quarter 1986-87. Their address: 307 Gilmour St., Ottawa, Ontario K2P 0P7.

- (37) **Fundamentalists Anonymous**, inspired by Alcoholics Anonymous, seeks to liberate individuals (who wish to be liberated) from stunting and stultifying beliefs. PO Box 20324, Greeley Square Station,, NY NY 10001. (212) 696-0420. [The address is supplied by Freedom Week, "a militant freethinkers' newsletter, circulated at no charge to all who request it, supported by donations from well-wishers." PO Box 84116, San Diego, CA 92138.]

NUCLEAR AFFAIRS

- (38) This ad ran on the Op Ed page of the New York Times (7/27/86), with thanks to CORLISS LAMONT and BOB DAVIS:

ARE NUCLEAR WEAPONS KILLING US ALREADY ?

Even if we never use the bomb again, with the continued production of nuclear weapons we are poisoning ourselves with radioactivity leaking into the earth, the water, and the air.

The Hanford Nuclear Reservation in southeast Washington State is one of the largest and oldest nuclear facilities. Hanford produced the plutonium for Trinity, the world's first nuclear bomb, and for thousands of nuclear weapons since.

■ *Much of Hanford's 570 square miles has become thoroughly contaminated by radioactive and chemical waste.* By 1982, 12 million cubic meters of the nuclear reservation's soil had become so contaminated with plutonium that the U.S. Department of Energy's (DOE) own guidelines required that the soil be transferred to an underground waste facility. Rather than dispose of the contaminated soil, the DOE raised *by ten times* its own guidelines for allowable plutonium concentrations in the soil. With the stroke of a pen, plutonium-contaminated waste became low-level waste, and plutonium continues to accumulate in Hanford's soil.

■ In 1984, a Washington State official estimated the amount of plutonium in Hanford's defense waste to be approximately 3,030 pounds. If a mere teaspoon of plutonium, about three ounces, were spread among the entire population of the earth, it would exceed the DOE's "permissible" lifetime body-burden limits for all five billion of us.

■ Radioactively and chemically contaminated ground water is seeping from the Hanford Reservation into the Columbia River. Although Hanford is 300 miles inland, by 1978 radioactivity from its plutonium reactors had been detected on the Pacific continental shelf *from southern Canada to northern California.*

■ Over the past four decades Hanford has released into the atmosphere over 1 million curies of thyroid-seeking iodine-131, a known carcinogen. Until this year, these releases were never announced to the American public. On December 2, 1949, Hanford officials intentionally released 5 thousand curies of iodine-131 in a "planned experiment," details of which are still being withheld. By comparison, the Three Mile Island accident released an estimated 15 curies.

■ An independent panel has studied Hanford's 23-year-old N-Reactor and concludes that "the similarities between Chernobyl and Hanford are substantial and make a Chernobyl-type accident at Hanford a distinct possibility, while the differences tend in general to make the N-Reactor more, rather than less, dangerous than its Soviet counterpart."

The silent, gradual radioactive contamination of the earth already threatens us with disease and potential genetic destruction - dangers that may, in the end, be as harmful as nuclear war itself.

These and many other facts about the Hanford Nuclear Reservation are being brought out and publicized by the Hanford Education Action League (HEAL), a group of research scientists, investigative reporters, and concerned citizens in Washington State.

HEAL is supported by the Peace Development Fund and the Pacific Peace Fund, public foundations that raise money and grant it to hundreds of citizen groups throughout the U.S. working for a safe and peaceful world. We urge you to become fully informed about *all* the risks of producing, deploying, and potentially using nuclear weapons, and we invite you to support the Funds' effort to bring the nuclear arms race to a halt. **You can help make a difference.**

For more information and suggestions for how you can help, please write:

Margaret E. Gage, *Executive Director*

P.O. Box 270
Amherst, MA 01004
413-256-0216

Your tax-deductible contribution is welcomed. Checks should be made out to the Peace Development Fund.

- (39) On Descartes. In 1942-43, CBS had a weekly radio program called "Invitation To Learning," which consisted of unrehearsed conversation among 3 people, Mark Van Doren and two others. On this particular occasion the two guests were Jacques Barzun and BR. What follows is a transcript, from "New Invitation To Learning," Mark Van Doren, ed. (NY: Random House, 1942):

Van Doren: The full title of Descartes' essay, you remember, is *Discourse on the Method of Rightly Conducting the Reason and Seeking Truth in the Sciences*, but one notices immediately upon starting to read the essay that it has narrative form; it is cast, as Descartes himself says, in the guise of a tale. Mr. Russell, does it seem to you that this fact is purely accidental in its interest, or has Descartes been assisted in saying what he wants to say by assuming the posture of a narrator?

Russell: I think it assists him very greatly to say what he has to say. It helps the reader to be interested, and it helps the reader to be able to follow the chain of thought. Most philosophers are extraordinarily dry and very dull; Descartes is neither dry nor dull, and that is very largely because he doesn't confine himself to strict logic, but puts in picturesque material of a biographical sort.

Barzun: I should go farther, Mr. Russell, and say that for me the autobiographical element is the only value I find in the essay. It is interesting to note that the present title is a second choice. The essay was first called *History of My Mind*, and it was the preface to three purely scientific essays. I've often thought that if authors kept to their first titles less dangerous consequences would follow. In the present case we are misled into thinking that here is a discourse on method. I, for one, find no method whatsoever propounded in the essay.

Van Doren: Doesn't he at least propound a method which, according to him, came to him while he was lying in bed?

Russell: I disagree radically with what you say. A great deal of what he has to say about method is extremely good; I have found it valuable myself.

Barzun: But perhaps it's only the putting into somewhat rigid form of rather ordinary and self-evident rules: how to avoid mistakes. Certainly the account he gives of how he arrived at his method is unconvincing to me. I don't believe that he went through this process at all.

Russell: Oh, I dare say not! A great deal of that is just picturesque talk. But it's talk of a sort that helps you to understand what he means; therefore it's justifiable.

Barzun: It helps us to understand, but it formed a school of Cartesians who really believed that all this had happened.

Van Doren: I take the narrative form to be more than accidental. It seems to harmonize with the method itself. The impression finally given by the essay is that there is a truth about things which can be discovered in time. At first there is nothing and then there is something—the discovery of a principle of philosophy becomes in Descartes by implication almost a creation of the world.

Russell: You're both very unfair to Descartes.

Barzun: Well, you go ahead.

Russell: He says he's going to have nothing except what is clear and distinct. That is not having nothing.

Barzun: Well, he does say that after his education, for which he was properly grateful, he found that he had to undo it all. That is a common enough experience, but then he goes on to say that the first step was the achievement of a *tabula rasa*. Unlike Locke, who started the infant with a *tabula rasa*, Descartes achieved his with great effort, and then came the clear and distinct ideas. Why are those ideas valid, according to Descartes, Mr. Russell?

Russell: Because he was a mathematician. Of course it won't do as a method in empirical matters at all. But it does do in mathematics, and he was primarily a mathematician; all his remarks are those of a mathematician, and in mathematics it is, after all, the clear and distinct that the mathematician trusts to.

Barzun: That's where my objection comes in, because after setting aside the truths of poetry and literature and art and morals he leaves us only with mathematical truth, which, as I hope you'll admit, is truth about something conceived and not something existent. Yet at the end of the essay he invites us to consider physiology and medicine and the practical arts.

Russell: All that historical explanation is also historical justification. In his day mathematics was the chief machine for discovering facts about nature, and it did discover the most important facts, as in the case of Galileo who was a mathematician. He discovered things about the world, and mathematics was his instrument for doing it.

Barzun: But isn't there a kind of misleading uniformity in the attempt to make a very successful science in one realm apply to other realms?

Russell: It certainly is, and we see that now. Now, I think, his method isn't the right one, because on the whole the mathematical part of the job has been to a great extent done. But in his day it hadn't.

Barzun: But it has taken us three hundred years to get over this little essay of sixty pages. That's where my animus originates.

Russell: It goes back further than that. It goes back to Plato. The undue emphasis on mathematics goes back, in fact, further than Plato. It goes back to Pythagoras; Pythagoras is the villain of the piece.

Barzun: You are admitting then that there is a villain in the piece!

Russell: Well, he's become a villain. For two thousand years he was a saint.

Barzun: In other words, Descartes must have the credit of repeating a great error—is that your position?

Russell: Well, the thing has become an error. It was not an error in his day.

Barzun: I'm afraid I must agree with you there, but there is a further objection in my mind, and that is the tone and temper of the man and the *Discourse*. He was a singularly unamiable, vain, malicious, timid person whose ideas could appeal only, it seems to me, to the narrowest and most sectarian of philosophic minds.

Van Doren: You say he was both vain and timid. Would there be any difficulty in reconciling those two terms, or do you mean both?

Barzun: I hadn't thought of it, but I mean both.

Russell: They are quite easy to reconcile. Newton was both, obviously. But I don't agree with you. When one reads most philosophers they're mostly much worse than he is in all these respects. Philosophers are perhaps a narrow-minded sect.

Barzun: Oh, I don't know! I think if you take a man like Berkeley or Locke you find a fuller, richer atmosphere. I suppose we can overdo this point of the atmosphere of a philosopher, but I think it has a great influence historically.

Van Doren: I find Aristotle to be less vain, if vain at all, than Descartes, and for this reason. He seems to begin with the assumption that a world already exists, a world which is very thick and full about him, a world that he did not create and did not conceive himself. Descartes has the air of being the first, or at any rate the only man. Nothing shall be before him; he wants to clear away all former conceptions and all former ways of talking, so that there will be complete barrenness and emptiness and dryness in the world.

Russell: Well, I wish he'd done it more subtly. The trouble was merely that he didn't do it enough. The world was encumbered with rubbish in his day, intellectual rubbish, and the first thing was to be a scavenger, to get it all out of the way.

Van Doren: When the world is full of rubbish, which it always is, of course, thank God—I much prefer a world full of rubbish to an empty one—isn't the wisest thing to do to order that rubbish?

Barzun: Or a corner of it!

Van Doren: If you can.

Russell: Well, it isn't the custom, if you want to build a fine public building, to leave all the ruins of some previous buildings there; you clear them away.

Barzun: Now we fall back into one of Descartes' metaphors—

Russell: We do!

Barzun:—in the introduction, and we come upon one of his major inconsistencies. First he divides the world into thought on the one hand and matter on the other, and that is a cleaning-up process in itself, since his matter is simply extension and his thought is whatever he finds by the test of clarity and distinctness. But then on top of that he brings in the established social order and a curious set of mixed morals—ethics—partly stoical, partly epicurean. At bottom he is profoundly indifferent, it seems to me, to everything except his few leading principles, which can lead in any direction without producing much result.

Van Doren: His morals, incidentally, he explicitly calls provisional. That is to say, they are temporary morals which he will adhere to until the moment when he knows everything. In Part Three of the *Discourse*, you will remember, he says: pro tem, I shall observe the following rules, not because I think they conduce necessarily to right living but because they are the safe ones to follow; they are the rules that will get me into the least trouble. First, I shall obey the laws and customs of my country if only to escape notice and be left free to think. Then I shall be as firm and resolute in my action as possible; that is to say, not knowing yet what is true, nevertheless, when I do see a course of action or a course of thought, I shall take it straight away—here is the metaphor once again—as a man lost in a forest should do. A man lost in the middle of a forest should keep going in one direction, because anything is better than remaining in the middle of the forest. Then, third, I shall be something of a stoic: I shall try to conquer myself rather than fortune, I shall not ask for things which I cannot have. He is nowhere more contemptuous of morals than here where he assumes that they are but ways of being safe.

Russell: But, look, I must stand up to this. When you come to what he really does feel you learn that he has the most passionate desire to be of use to the human race—to be of use through the discovery of knowledge, which was the way in which he could be most useful. I very much doubt whether any other manner of life that he could have adopted would have made him as useful as he was.

Barzun: But wouldn't you admit that he was perhaps a little bit too adroit and diplomatic, not only in his relations to life but in his writings? For example, many of his contemporary critics said that it is very well to divide thought from matter for purposes of science, but that surely they must unite in the human organism: the mind and the body are connected. There is then a third original idea, which is the union of soul and matter and we feel it or sense it through the senses; but we have to go to his letters to a princess who was interested in philosophy in order to learn that, just as we have to go to other letters and other writings to discover that he believed in the value of the emotions and the passions, that he thought they were all perfectly good, provided that they were used in moderation—which contradicts his stoicism. We have to go again to his letters to discover that he was—oh, almost a Christian Scientist. He said that he had

been cured of early tuberculosis by looking on the bright side of things, which simply does not go with the image of Descartes as we see him historically.

Russell: I quite agree, of course, but that is so with any man. Any man, if you take him in his letters, where he's discoursing more or less accidentally, doesn't have the same statuesque appearance that he does when he writes his great works; that's just common humanity.

Van Doren: We don't mean to be as savage as we sound. We're expecting you to annihilate us within the next few minutes. Descartes' claim that he is doing good in the world interests me a great deal. He says, to me if you please, that he is doing me good. Well, that reminds me of my failure ever to believe a scientist when he tells me that he is in the world to do me good. I do not find that he is very much interested in me. I am not, you understand, being personal now; I am putting myself in the place of any human being. I find a curious lack of warmth in his voice as he says he wants to do me good. What he really wants me to believe is that if I shall agree with him—

Barzun: He will tolerate you!

Van Doren: He will tolerate me.

Russell: Let's take this up. It's perfectly true that the pure man of science, as such, is not actuated by philanthropy directly, but he knows perfectly well that the outcome of what he does is likely to be beneficial. Let's take, say, a man who is doing medical research. He is not interested in patients because he's not dealing with them; he is engaged in discovering a method by which others can deal with patients.

Van Doren: I wonder how much good a man like Descartes could do medicine in view of the fact that he distinguished body and mind as sharply as he did? It strikes me as possible that all the good one could do in medical experiment might not balance the harm done by that distinction.

Barzun: And I, for one, am certainly not requiring philanthropy in scientists. They should do things for the ordinary, good enough human reason that they're interesting and ultimately valuable, without any particular love for this or that group of human beings. But the reason I feel so strongly against Descartes—I might as well reveal it—is that his insistence on method has had a bad influence on science and more particularly on French education. It has led, it seems to me, to an over-emphasis on the formal side of all thinking, to organization on a mechanical basis, rather than on the organic unity of thought and the capacity for insight. Now, Descartes was not without insight but he trampled it underfoot. His four rules are simply scaffolding, of very little importance in actual use and of very great harm in the sequel.

Van Doren: What are those four rules, by the way? Have you found them useful, Mr. Russell?

Russell: His four rules may as well be set forth. Never accept anything not known to be true or clear and distinct. Divide difficulties into as many parts as possible. Proceed from the simple to the complex. Make complete enumerations to be sure that nothing is omitted. Now, the second and third especially—divide difficulties into as many parts as possible and proceed from simple to complex—I personally have found it always necessary to insist upon with advanced students who were beginning research. Unless they were very able they tended to take vast problems far beyond their powers, and I find Descartes' rules exactly what one has to tell them.

Barzun: Of course, simple and complex are terms relative to almost any single subject matter, and it is possible to lose the view of the whole through looking at detail. I can take an example from Descartes' own life. He wrote his *Meditations*, of which

the full title was *Meditations in Which Are Proved the Existence of God and the Immortality of the Soul*, and, as usual, he sent the manuscript to his friend and critic, Father Mersenne, who read it and said: "It's splendid, but there isn't a word in it about the immortality of the soul!" So that Descartes's enumeration there was imperfect. I don't blame him for that. Geniuses have often made those silly errors. But it shows that he didn't use his method.

Russell: He proved the soul was immaterial and forgot to stick in that what was immaterial is immortal.

Van Doren: Possibly, Mr. Russell, the greatest defect of the higher learning today is that students are too much discouraged from considering hard subjects. If I were going to reform graduate schools, for instance, in the United States, I should begin by insisting that students be encouraged to begin in a very large field and then refine it. There is too much suspicion of the capacities of students. This seems to be a direct result of Descartes's own thought, whose scorn of anything except the clear and the distinct, which often became in his mind the small, means that the capacities of students have actually diminished with the failure to occupy them with larger things.

Russell: There is a compromise at that point, which I think is important. When one is engaged upon a smaller matter it should always be in its relation to a large one and because of its relations, not in itself.

Van Doren: That is precisely, it seems to me, where we can see one unfortunate result of Descartes. Take his discussion of God, which might be considered unessential to an explanation of his method, but which I think is very interesting. He pays all sorts of lip service to God, insists that God exists, and indeed spends time proving that He exists; yet what he is really proving is that after one has said all that one can forget God. God started the world, to be sure, and it is now working as He started it going, or as any mathematician might have started it going; Descartes almost says: "I could have done the same thing. I have proved the world to be exactly what it ought to be because it is intelligible to me." That is his test of existence, namely, intelligibility.

Barzun: It is a reduction of experience to something much more abstract and limited.

Van Doren: I don't want to be fantastic, but why wouldn't it be a good thing to expect students to begin with the contemplation of God? We act as if we thought they should begin with a worm.

Russell: Supposing you do begin with the contemplation of God—I should still uphold Descartes, and say that here he sees a large subject that can be divided into heads which can be taken one at a time.

Barzun: I should be perfectly willing to arrive with Descartes at any conclusions that seem to be useful in physics and mathematics, if he would be wholly candid. But, for example, he never tells us except in letters that the main ideas of his philosophy occurred to him when he was twenty-three in a dream, in a series of dreams on one single night in the year 1619. Instead of that, he gives us the wholly false and "public" view that you can arrive at truth by sitting down in a porcelain stove, as he did, and excogitate truth.

Van Doren: That's curious behavior for a scientist, isn't it?

Russell: I don't think it is. He confesses once that you may happen to hit upon the truth in dreams, especially, he says, in matters that are purely intellectual, and I think that's as much as you can expect of him. If he had come before the public and said that something was revealed to him in a dream it wouldn't have had the right effect.

Barzun: No, but he wouldn't have had to say that. He would have had to say that upon the basis of glimmerings acquired in a dream, his ideas were thought out and verified. I'm comforted,

however, by the fact that history took its revenge upon him. When he died in Stockholm, since he was an infidel in a Protestant country, he was buried first in the cemetery devoted to children who die before attaining the age of reason.

Van Doren: How did he happen to die, by the way?

Russell: He died of getting up early! He never used to get up till twelve o'clock, in the middle of the day. Then he went to teach Queen Christina of Sweden, and she insisted on his getting up at five in the morning in the Arctic winter. The poor man died of it.

Van Doren: How soon? How many mornings?

Russell: Oh, in a little time. He died the first winter.

Van Doren: Mr. Russell, I wonder if Mr. Barzun and I have not exaggerated the influence of Descartes and rendered too malicious an account of his thought.

Russell: I do not think Mr. Barzun has exaggerated his influence in France. I, too, if I were French, might agree with all he says. But in other countries his influence has been less, and I think one may say of any man, however great and good, that his influence is bad—everybody's influence is bad if it's great.

Barzun: A very philosophical principle!

Van Doren: Will you go on to elaborate that?

Russell: Yes. It produces a set of disciples who repeat what the man has said instead of thinking. And so Descartes, by the mere fact that he had a great influence, undoubtedly became harmful in France. So would anybody else who had a great influence, but, if you contrast him with the scholastics who went before, I think he was better.

Barzun: And he did start Locke on his path. It was a very different path, but Descartes was the necessary stimulus. And the *Discourse*—I don't want to be misunderstood—remains a wonderful piece of autobiographical writing. Wonderful if only in this: that every sentence has at least two or three intentions and must be deciphered before one quite gathers where Descartes stands and what he wants his readers to believe.

Van Doren: What kind of sentence does he write, Mr. Barzun?

Barzun: In France he is considered one of the first modern prose writers. He writes a rather long and tortuous and complex sentence, but one perfect in its fulfillment of hidden meanings. He's a malicious writer.

Van Doren: But also delicate.

Barzun: A very delicate writer.

Van Doren: Do the translations manage to convey all that is there?

Barzun: They tend to break it up into smaller units of prose that spoil his rhythm.

Van Doren: I have not read him in French, although it is clear to me, as I read him in English, that he must have these qualities. However, I suspect them rather than find them.

Barzun: It is interesting that at the end of the autobiography he says that he wants a subsidy. He was thinking ahead to the large foundation, I think, that supports scientists without asking them to produce anything definite.

Russell: I'm not sure that he didn't want them to produce anything. He certainly wanted a subsidy. He wanted it solely for the purpose of experiments.

Van Doren: I think it would be fair, Mr. Russell, to ask you to read something from Descartes.

Russell: I'll read the last paragraph of his *Discourse on Method*, which will give one, perhaps, a better all-around picture of him than what we've been saying. He says:

"In conclusion, I am unwilling here to say anything very specific of the progress which I expect to make for the future in the sciences, or to bind myself to the public by any promise which I am not certain of being able to fulfill; but this of me I will say,

that I have resolved to devote what time I may still have to live to no other occupation than that of endeavoring to acquire some knowledge of Nature, which should be of such a type as to enable us therefrom to deduce rules in medicine of greater certainty than those at present in use; and that my inclination is so much opposed to all other pursuits, especially to such as cannot be useful to some without being hurtful to others, that, if, by any circumstances, I had been constrained to engage in such, I do not believe

(Thank you, TOM STANLEY)

that I should have been able to succeed. Of this I here make a public declaration, though well aware that it cannot serve to procure for me any consideration in the world, which, however, I do not in the least affect; and I shall always hold myself more obliged to those through whose favor I am permitted to enjoy my retirement without interruption than to any who might offer me the highest earthly preferments."

ABOUT BR'S VIEWS

(40) Russell's Delight" is the title of an article in the *New Statesman*, 24 November 1961, by David Marquand. It presents a point of view about the way BR thought about people. With thanks to TOM STANLEY.

"What delighted me about mathematics", Bertrand Russell writes in one of the autobiographical essays in *Fact and Fiction**, "was that things could be proved". A few pages earlier, in an essay on the way in which he was taught English history, he tells us:

The instruction that I had in this subject was unadulterated indoctrination with as little attempt at impartiality as under any totalitarian regime. Everything was treated from the Whig point of view, and I was told, only half in joke, that history means "his-Tory".

These two passages contain the essence of Lord Russell's politics.

By inheritance and childhood training, he is a Whig; by intellectual inclination and habit, a mathematician. As a Whig, justly proud of belonging to one of the greatest of the great Whig houses, he conceives it his duty to defend his version of the Good Old Cause against the clamour of the mob and the machinations of its rulers. As a mathematician, he cannot shake himself free of the assumption that the cause is to be discovered by a process of abstract reasoning, set out as logically and as precisely as possible. Like most pure scientists, he assumes that the most important and difficult aspect of a problem is the discovery of its theoretical solution, and he imagines that once the theoretical solution has been found only stupidity or malevolence can prevent its being put into effect. Like his great Whig ancestors, he unconsciously postulates as his model of political behaviour an assembly of equals rationally discussing problems of common concern. Both inclinations are profoundly undemocratic. Both unfit him for the manoeuvres and compromises of mass politics. Both seem to me, in certain ways, salutary.

Perhaps as a result of his Whig upbringing, Lord Russell has little sympathy for those in a different tradition; and, as he showed in his *History of Western Philosophy*, he is apt to treat those for whom he has little sympathy with monstrous flippancy. Worse still, his failure to sympathise with those in a different tradition leads to a failure of understanding. At bottom, he believes that all political leaders should behave like Lord John Russell or, failing

that, like Lord Palmerston. He is prepared to admit that most contemporary leaders do not, in fact, behave in this way; but one never feels that he realises why they behave as they do, or even that he is particularly interested in finding out. When they fail to reach the standards he sets for them, he writes them off as wicked or irrational, without trying to understand them in their own terms or even to guess what they are likely to do next. In spite of his magisterial attempt to do the Russians justice, he shows little sign of understanding how men who believe that history is on their side are likely to behave. As a result, in spite of the verve and wit with which it is described, his world is curiously two-dimensional - inhabited by ghosts with anecdotes attached to them, not by men.

In part, this may be due to his mathematical education. Indeed, the disadvantages of a pure scientist's approach to politics have rarely been shown more clearly than in the pieces on nuclear disarmament in *Fact and Fiction* and in his new book, *Has Man A Future?*† In both, the argument is clear and logical, presented with icy calm. Russell's case is a surprisingly moderate one. He admits that it would be unfortunate if either the Soviet Union or the United States were to give up nuclear weapons before the other had done so; he recognises that in the long run, peace can only be preserved by a world government possessed of overwhelming force, and in the short run by a multilateral disarmament agreement; he wants Britain to give up her nuclear weapons not only because nuclear weapons are in themselves evil, but because he estimates that Britain would be marginally safer as a result and because he believes that she would have greater political influence as a neutral than she has at present. In other words, Lord Russell differs from the official leadership of the Labour Party on one item alone. He believes that Britain would have more influence as a neutral than she has now; Mr Gaitskell and his colleagues believe the opposite. This is an empirical question which can, at least in principle, be decided by looking at the facts.

Yet Lord Russell does not examine the facts. Indeed, he does not even examine the arguments of those who disagree with him.

To him, Macmillan and Gaitskell are simply wicked or stupid. He is no more prepared to argue with them than a professor of mathematics would be prepared to argue with a student who denied that two and two make four. This, I think, explains why Russell, whose arguments are more moderate than those of many orthodox supporters of the CND, should have adopted such immoderate methods. To him, the case for British unilateralism and neutralism is self-evident. If others do not accept his argument, it can only be either because they are deliberately perverse or because they have been systematically bamboozled. It is irrelevant that his own position is in fact separated from that of the official leadership of the Labour Party by a relatively slim margin, to say that two and two make four and a half is as bad as to say that they make 18. Thus even the tiniest differences are exaggerated into fundamental points of principle, so much so that one doubts whether Lord Russell would admit that there is much to choose between Canon Collins and the Pentagon. The world is divided into those who see that two and two make four, and those who don't.

This mathematical approach to politics also robs Russell's positive arguments of much of their value. In *Has Man A Future?*, for example, he argues that peace can only be preserved by a world government, and that a multilateral disarmament agreement offers the most hopeful path towards a world government. This seems to me to make perfect sense; and I doubt whether any leading politician in the West, with the possible exception of President de Gaulle, would disagree. But the really important, and supremely difficult, aspect of disarmament is not the remote prospect of a comprehensive disarmament agreement but the working out of acceptable first steps which would put neither side at a military disadvantage. This aspect does not seem to interest Lord Russell. What excites him is the goal; the path towards it is a secondary matter. In politics, however, it is the first steps which count. It is true that Lord Russell would himself admit this, in theory. In *Has Man A Future?* he lists a number of useful first steps: stopping nuclear tests, stopping the spread of nuclear weapons, an

agreement to stop manufacturing nuclear weapons, the control of satellites, and so on. All of these are sensible proposals, and if they were adopted the world would be a far safer place. But all of them involve immense difficulties - technical difficulties as well as lack of goodwill. Yet in Russell's book the proposals are dismissed in a few pages. Russell would probably reply that this is a short book, and that he could not cover the whole field adequately. But in that case why not omit the platitudes about world government; and concentrate on the really important question of how limited disarmament agreements can be reached in a climate of suspicion and hatred?

These are sizable faults, and they have deprived Lord Russell of serious influence as a politician. In the long run, however, it is not as a politician that he must be judged but as a moralist. Here his influence has been almost entirely beneficial. His intellectual intolerance and ruthlessness, and the imaginative audacity which accompany them, have inspired generations of young people; the over-simplification of his arguments, even his refusal to take his opponents seriously, have immense educational value. Russell's systems for putting the world to

rights have little practical influence in the short run, since they never take sufficient account of the difficulties. But they do at least set people thinking.

Most salutary of all, it seems to me, is his Whig attitude to authority. The greatest achievement of the Whig aristocracy was to strip Power of its magic. The Crown was transformed from a symbol of divine right into a political convenience; the Church ceased to be God's vicar on earth and became a prosaic piece of social machinery. The Whigs were frequently corrupt, but at least they never cloaked their rule in supernatural trappings. Their attitude to authority can be narrow and selfish, but it is never in the slightest degree reverent. To the Tory, the State is a mystic communion between the dead, the living and the unborn. To a certain kind of democrat, it embodies the majesty of the sovereign people. To the Whig, it is merely a useful device. Those set in authority are men like himself, to be treated with respect only if they earn it, and with bland derision if they do not.

These attitudes pervade Lord Russell's political writings. They derive, as he makes clear in the autobiographical sections of

Fact and Fiction, from his upbringing. Nineteenth-century history, he tells us, was not something one read about in books; one learnt it from those who had taken part in it. As a result, he escaped the sense of 'individual impotence' that mass society engenders.

Great events had not the impersonal and remote quality that they have in the books of historians. Throughout the nineteenth century these events intimately concerned people whom I knew, and it seemed to me a matter of course that one should play some part in the progress of mankind . . . I believed, in my very bones, hardly consciously but all the more profoundly, that one should aim at great achievement in the full conviction that such achievement is possible.

These are, of course, intensely, almost offensively, aristocratic attitudes. It seems to me that the real task of socialism is to democratise them. A world of Bertrand Russells would, no doubt, be intolerable; but a world in which his attitude to authority was general would be a great deal better than the present one.

BY BERTRAND RUSSELL

- (41) Limerick, from "The Penguin Book of Limericks," Parrott, ed. (NY: Viking, 1986):

There was a young girl of Shanghai,
Who was so exceedingly shy,
She undressed every night
Without any light
Because of the All-Seeing Eye.

- (42) DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
elected for 3-year terms, as shown

1985-87: JACQUELINE BERTHON-PAYON, BOB DAVIS, ALEX DELY, ALI GHAEMI, HUGH MOORHEAD

1986-88: LOU ACHESON, KEN BLACKWELL, JOHN JACKANICZZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, CARL SPADONI TOM STANLEY

1987-89: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, DON JACKANICZ, STEVE MARAGIDES, FRANK PAGE, MICHAEL ROCKLER, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA

- (43) OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

Chairman, Harry Ruja; President, Marvin Kohl; Vice-President, John Lenz; Treasurer, Dennis J. Darland; Secretary, Don Jackanicz; Vice-President/Information, Lee Eisler

THE MEMBERS VOTE

- (44) 11 Directors elected. The following candidates were elected or re-elected Directors, for 3-year terms starting 1/1/87: JACK COWLES, WILLIAM K. FIELDING, DAVID GOLDMAN, DON JACKANICZ, STEVE MARAGIDES, FRANK PAGE, MICHAEL ROCKLER, CHERIE RUPPE, PAUL ARTHUR SCHILPP, WARREN ALLEN SMITH, and RAMON SUZARA.

Originally there were 12 candidates for 11 openings. One of the candidates withdrew for personal reasons, leaving 11 candidates for 11 openings. All 11 have been elected.

Only about 1 member in 6 used the ballot -- not a good showing. We thank those who did use it: RUBEN ARDILA, WALTER BAUMGARTNER, VIVIAN BENTON-RUBEL, HAROLD BLAIR, ROBERT CANTERBURY, HARRY CLIFFORD, BOB DAVIS, WILLIAM FIELDING, TING-FU HUNG, DON JACKANICZ, JOHN JACKANICZ, TED JACKANICZ, ADAM JACOBS, KEN KORBIN, SCOTT KURHAN, JOHN LENZ, PAUL LOGEMAN, STEVE MARAGIDES, CARL MILLER, LUCIO PRIVITELLO, STEVE REINHARDT, SIGRID SAAL, CAROL SMITH, CARL SPADONI, PHILIP STANDER, RAMON SUZARA, MIKE TAINT, JOSE VELASCO, CAROLYN WILKINSON, VINCENT WILLIAMS + 15 UNSIGNED BALLOTS.

We expect to see many more members voting next year.

RUSSELL SOCIETY NEWS

No. 53

February 1987

- (1) Highlights: 1987 Meeting reservations (2). BRS Doctoral Grant endangered (29). Star Wars: BR's prevision (8); the politics of SDI (17); Will Star Wars work? (18). Linus Pauling on Reagan & arms control (16). Seckel's Skeptics (19). Soupy people (9). An asterisk in the left column indicates a request. The Index is at the end.

REPORTS FROM OFFICERS

- (2) Chairman Harry Ruja reports:

Please make your reservation for the 1987 meeting. As you know, we will meet in San Diego, June 19-21, and stay at El Conquistador, a residence hall at the University of San Diego, at very modest cost (RSN52-4). Clip and use the Reservation Coupon on the blue front cover of this issue.

The sooner you make your reservation, the better, because it will enable BOB DAVIS and me to plan ahead and make better arrangements for seating and eating, etc.

* To help us: use the blue Reservation Coupon today, if you possibly can.

- (3) Vice-President John Lenz reports on a trip to the UN:

On Thursday, October 30, Dr. David Goldman, Ted Jackanicz, and I visited the U.N. to hear a panel on disarmament held for the benefit of non-governmental organizations (such as the BRS). The Under-Secretary-General for Disarmament chaired a discussion between three sub-ambassadors and negotiators--men from the U.S. and USSR, and a woman from Sweden--entitled, "What hope for the future? An assessment of recent developments in the field of disarmament."

The exercise proved to be a perfect example of what prevents an agreement on disarmament between the two superpowers.

The day's theme came out in the questioning. The American was asked whether he would agree to negotiations not based on "linkage." "Linkage" in this context means that arms negotiations are necessarily linked to demands for changes in the other party's foreign and domestic policies.

The American ambassador (named, I think, Lovitch or Lowitz) began attacking Soviet restrictions on freedom of the press, and lack of free emigration. The audience murmured and the Soviet ambassador responded in this vein: "I know there are many difference between our countries. I know the differences better than you do, having lived in your country for fourteen years. Some problems you have solved, we have not. Then, again, we have no homeless like I see here every day. But I will tell you one thing. On the issue of war and peace, there is no difference between the Soviet and the American people."

Applause. Did the American take up the challenge? That was too much to ask. He went on, in even more bitter terms, about the necessity for changing the Soviet system as a prerequisite for arms talks. It was shocking. The audience collectively murmured and shook its head.

Years ago, Russell insisted (at times) that it was American unwillingness to reach an agreement which impeded arms talks. That was the unfortunate lesson to be learned at first hand from our visit to the U.N., as I saw it. The obstinacy of the administration, which had given such orders to its ambassador, was revealed and discredited before an impartial international audience.

- (4) Treasurer Denis Darland reports on the full year 1986 (38).
-

REPORTS FROM COMMITTEES

- (5) Philosophy Committee (David E. Johnson, Chairman):

The BRS held its customary session at the annual meeting of the American Philosophical Association (Eastern Division), in Boston, on December 28, 1986. As reported earlier (RSN51-37), this was the program:

Program

Chair: Jan Dejnozka, U. S. Naval Academy

Paper: "An Extension of Russell's Analysis of Physical Objects"
Gary Legenhausen, Texas Southern University

Commentator: Russell Wahl, Idaho State University

Paper: "Russell on the Utility of Religion: Copleston's Critique"
Marvin Kohl, NY State University College at Fredonia

Commentator: Anthony Lisska, Denison University

Abstracts of the two papers:

An Extension of Russell's Analysis of Physical Objects

Russell's criticism of the category of substance was founded on two beliefs: that modern science had made the notion of substance an anachronism, and that a metaphysics of substances is untenable by the standards of empiricism. Russell proposes that the notion of an individual substance should be replaced by a four-dimensional view of objects as a series of events. While the four-dimensional view of objects can be used to replace claims about the persistence of substances through time, counterfactual claims about substances cannot be easily replaced by counterfactual claims about event series. It is suggested that modal claims may be treated analogously to temporal claims by means of a suitable modification of Russell's proposal.

Russell on the Utility of Religion: Copleston's Critique

Frederick Copleston claims that "to look for a profound philosophy of religion in his [Bertrand Russell's] writing, would be to look in vain." He suggests that the lack of profundity may be due to the fact that Russell "never tried systematically to dissociate what he regards as valuable in religion from theological belief." According to Copleston, if he had more carefully focused upon the utility of religion, he might possibly have had second thoughts about his position. I think this objection indicates more about Copleston's beliefs than about the nature of Russell's. Contra Copleston, I will show that Russell did systematically dissociate what he regarded as valuable in religion. In addition, I will suggest that -- although he became famous in his later years as the great patron of non-theistic humanism -- Russell once did have a profound Platonic philosophy of religion, a philosophy eloquently expressed in "The Essence of Religion".

BY BERTRAND RUSSELL

- (6) What Hope for Man? is the title of BR's 3rd talk over Australian radio, on July 16, 1950.

The hopes and fears of our times are alike due to the operation of new science and new technology upon old human nature, which is not changing as fast as circumstances require.

But in this broadcast I shall be concerned with hopes, not with fears; I shall be concerned to say what good things may happen if there is a modicum of wisdom in the conduct of human affairs. I do not pretend that there is any way of arriving at the millenium. Human life cannot be made a matter of unalloyed bliss, but the permissible hopes are very considerable, and it is these that are my theme.

Scientific technique can confer two kinds of benefits: it can diminish bad things and increase good things. Scientific technique can abolish poverty and excessive hours of labour; whether it does so or not depends upon

whether it co-exists with democracy. Where it does not, as in Russia, it may be used to facilitate despotism; to spread forced labour; to fasten a new form of serfdom upon the population, and to increase social and economic inequality. In the West, fortunately, the growth of industrialism has coincided with the growth of democracy. It is possible now, if the population of the world does not increase too fast, for one man's labour to produce much more than is needed to provide a bare subsistence for himself and his family. Given an intelligent democracy not misled by some dogmatic creed, this possibility will be used to raise the standard of life. It has been so used to a certain extent in Britain and America, and would have been so used more effectively but for war. Its use in raising the standard of life has depended mainly upon three things: democracy, trade unionism and birth control. If these three things can be extended to the rest of the world as it becomes industrialized, and if the danger of great wars can be eliminated, poverty can be abolished throughout the whole world and excessive hours of labour will no longer be necessary anywhere, but without these three things, industrialism may create a despotic slave state like that in which the Pharaohs built the pyramids.

If a good world is to be created and sustained, a certain kind of mental disposition will have to be widely diffused. This disposition will have to be partly intellectual and partly a way of feeling. There must be in many the desire to know the important facts, and in most an unwillingness to give assent to pleasant illusions; there must be an absence of fanaticism and a realization that our beliefs may be mistaken. This unfanatical temper involves certain sacrifices. If you believe some dogmatic creed with such intensity that you are prepared to face martyrdom, you can live a happy life and even enjoy a happy death if it comes quickly; you can inspire converts; you can create an army; you can stir up hatred of opposing dogmas, and generally you can seem immensely effective. I am constantly asked: what can you, with your cold rationalism, offer to the seeker after salvation, which is comparable to the home-like comfort of a fenced-in dogmatic creed. To this the answer is many-sided. In the first place I do not say that I can offer as much individual happiness as is to be obtained by the abdication of reason; I do not say I can offer as much happiness as is to be obtained from drink or drugs, or amassing great wealth by swindling widows and orphans. It is not the happiness of the individual convert that concerns me, it is the happiness of mankind. If you genuinely desire the happiness of mankind, certain forms of ignoble personal happiness are not open to you. If your child is ill and you are a conscientious parent, you accept the medical diagnosis, however doubtful and discouraging; if you accept the cheerful opinion of a quack and your child consequently dies, you are not excused by the pleasantness of your belief in the quack while it lasted. If people loved humanity as genuinely as they love their children, they would be as unwilling in politics as in the home to let themselves be deceived by comfortable fairy tales. All fanatical creeds do harm. This is obvious when they have to compete with other fanaticisms, since in that case they promote hatred and strife, but it is true even when only one fanatical creed is in the field. It can not allow free inquiry, since this might shake its hold; it must practise some form of persecution of those who dislike fanaticism; it must oppose intellectual progress; it must give power to a caste professionally devoted to the maintenance of the intellectual status quo and to a pretence of certainty where in fact there is no certainty.

There are certain things that our age needs, and certain things that it should avoid. It needs compassion and a wish that mankind should be happy; it needs the desire for knowledge and the determination to eschew pleasant myths; it needs, above all, courageous hope and the impulse to creativeness. The things that it must avoid, and that have brought it to the brink of catastrophe, are cruelty, greed, competitiveness, search for irrational subjective certainty, and what Freudians call the death wish.

The root of the matter is a very simple and old-fashioned thing, a thing so simple that I am almost ashamed to mention it, for fear of the derisive smile with which wise cynics will greet my words. The thing I mean — please forgive me for mentioning it — is love, Christian love, or compassion. If you feel this, you have a motive for existing, a guide in action, a reason for courage, an imperative necessity for intellectual honesty. If you feel this, you have all that anybody should need on the way of religion. Although you may not find happiness, you will never know the deep despair of those whose life is aimless and void of purpose, for there is always something that you can do to diminish the awful sum of human misery.

I will say a few words about the connection of compassion with intellectual honesty. There are several different attitudes that may be adopted towards the spectacle of intolerable suffering. If you are a sadist, you may find pleasure in it; if you are completely detached, you may ignore it; if you are a sentimentalist, you may persuade yourself that it is not as bad as it seems; but if you feel genuine compassion you will try to apprehend the evil truly in order to be able to cure it. The sentimentalist will say you are coldly intellectual, and that, if you really minded the sufferings of others, you could not be so scientific about them. The sentimentalist will claim to have a tenderer heart than yours, and will show it by letting the suffering continue rather than suffer himself. The men who made the Munich surrender would pretend (a) that the Nazis didn't go in for pogroms, (b) that Jews enjoy being massacred. And fellow-travelers maintain (a) that there is no forced labour in Russia, (b) that there is nothing the Russians find more delectable than being worked to death in an Arctic winter. Such men are not 'coldly intellectual'.

The most disquieting psychological feature of our time, and the one which affords the best argument for the necessity of some new creed, however irrational, is the death wish. Everyone knows how some primitive communities, brought suddenly in to contact with white men, become listless, and finally die from mere absence of the will to live. In Western Europe, the new conditions of danger in which we exist are having something of the same effect. Facing facts is painful, and the way out is not clear. Nostalgia takes the place of energy directed towards the future. There is a tendency to shrug the shoulders and say 'Oh well, if we are exterminated by hydrogen bombs, it will save a lot of trouble'. This is a tired and feeble reaction, like that of the late Romans to the barbarians. It can only be met by courage, hope, and a reasoned optimism. There is good basis for hope.

Leaving on one side, for the moment, the danger of war, the average level of happiness, in Britain as well as in Australia and America, is higher than in any previous community at any time. Moreover, improvement continues whenever there is not war. We have therefore something important to conserve.

And Britain and America between them have the highest level of scientific and technical skill. There is reason to hope that this skill may find an adequate defence against bombs, in which case the whole outlook for mankind would be radically improved. We ought to be devoting the best available brains to this end.

What I do want to stress is that the kind of lethargic despair which is now not uncommon is irrational. Mankind is in the position of a man climbing a difficult and dangerous precipice, at the summit of which there is a plateau of delicious mountain meadows. With every step he climbs, his fall, if he does fall, becomes more terrible; with every step his weariness increases and the ascent grows more difficult. At last there is only one more step to be taken but the climber does not know this, because he cannot see beyond the jutting rocks at his head. His exhaustion is so complete that he wants nothing but rest. If he lets go, he will find rest in death. Hope calls: "One more effort — perhaps it will be the last effort needed." Irony retorts: "Silly fellow! Haven't you been listening to hope all this time, and see where it has landed you". Optimism says: "While there is life there is hope." Pessimism growls: "While there is life there is pain." Does the exhausted climber make one more effort, or does he let himself sink into the abyss? In a few years those of us who are still alive will know the answer.

Dropping metaphors the present situation is as follows. Science offers this possibility of far greater well-being for the human race than has ever been known before. It offers this on certain conditions: abolition of war, even distribution of ultimate power, and limitation of the growth of population. All these are much nearer to being possible than they ever were before. In Western industrial countries, the growth of population is already almost nil; the same causes will have the same effect in other countries as they become modernized, unless dictators and missionaries interfere. The even distribution of ultimate power, economic as well as political, has been nearly achieved in Britain, and other democratic countries are rapidly moving towards it. The prevention of war? It may seem a paradox to say that we are nearer to achieving this than ever before, but I am persuaded that it is true.

In the past, there were many sovereign states, any two of which might at any moment quarrel. Attempts on the lines of the League of Nations were bound to fail, because, when a dispute arose, the disputants were too proud to accept outside arbitration, and the neutrals were too lazy to enforce it. Now there are only two sovereign states: Russia (with satellites) and the United States (with satellites). If either becomes preponderant, either by victory in war or by an obvious military superiority, the preponderant Power can establish a single Authority over the whole world, and thus make future wars impossible. At first this Authority will, in certain regions, be based on force, but if the Western nations are in control, force will as soon as possible give way to consent. When that has been achieved, the most difficult of world problems, will have been solved, and science can become wholly beneficent.

What stands in the way? Not physical or technical obstacles, but only the evil passions in human minds: suspicion, fear, lust for power, hatred, intolerance. I will not deny that these evil passions are more dominant in the East than in the West, but they certainly exist in the West as well. The human race could, here and now, begin a rapid approach to a vastly better world, given one single condition: the removal of distrust between East and West. I do not know what can be done to fulfill this condition. Most of the suggestions that I have seen struck me as silly. Meanwhile the only thing to do is to prevent an explosion somehow, and to hope that time may bring wisdom. The near future must be either much better or much worse than the past; which it is to be will be decided by the whim of a few individuals in the Kremlin. This may sound unscientific, but it is true.

- (7) The Challenge To Religious Orthodoxy is the main title of the following article in The Spectator (November 15, 1930). Then comes this statement:

[In this series men and women presenting the outlook of the younger generation have been invited to express their criticism of organized religion in order that their views may be answered from the Christian standpoint. Such criticism, well and ill informed, is common, and we hold that it should be met by those best qualified to do so. This week Mr. Bertrand Russell writes on "Religion and Happiness". Next week his article will be answered by Canon Elliott.] Our thanks to KEN BLACKWELL and BOB DAVIS.

Religion and Happiness

By BERTRAND RUSSELL

I DO not propose to consider whether the Christian religion is true or false, since most of its modern apologists have ceased to advance arguments for its truth, and confine themselves as a rule to the contention that it is useful. "Useful" is a vague term. I am ready to admit that the Churches are still useful for the promotion of militarism, economic injustice, superstition, persecution and insanity. I am not ready to admit that they are useful for the promotion of human happiness.

Let us begin with war. The Kaiser, the Emperor Francis Joseph, and the Tsar, were deeply religious men; the parties that supported their warlike policies in their respective countries before August 1914 were the parties that stood for Christianity, while the party that stood for peace was the Socialist party, which was officially atheistic. To this day, in every European country except Russia, the Churches are in close alliance with militarism. Individual Christians, it is true, sometimes

prefer the teaching of Christ to that of His Church, but they are too few to be politically important. The same must be said of the Quakers, who are admirable but few.

Take next the question of economic injustice. At present one man enjoys every luxury merely because he is the son of his father, while another man has to work all his days for a bare subsistence. This state of affairs is old, but cannot commend itself to a sensitive conscience. Attempts to change it have occurred ever since the Middle Ages, but have always been opposed by the hierarchy. At the present time these attempts are embodied in Socialism and Communism, both of which throughout the Continent are opposed by official Christianity, and are in consequence anti-Christian. In America, even in the North, the Churches opposed the abolition of slavery until a short time before it was achieved. It would be difficult to point to any social injustice anywhere which the Churches have not supported as long as they dared.

Take next the question of superstition. The opposition of the Church to the teaching of Galileo is a well-worn theme upon which I shall not enlarge. But in our own day there are a number of false beliefs, especially in matters connected with sex, which the Churches do their best to keep alive, and it is still commonly held by them that children cannot be taught right living except by the help of lies on various physiological questions. The view that false beliefs may be necessary to virtue is a very dangerous one, and those who hold it must be regarded as in this respect enemies of civilization.

I come next to the question of persecution. Many Christians imagine that religious persecution is no longer practised except in Russia. In this belief they are indulging in a curious self-deception. In the majority of professions it is impossible for an avowed atheist to obtain posts which would be open to men professing any branch of Christianity. In fact, the great majority of freethinkers find it necessary to give no public expression to their views. The treatment of Christians in Russia, which has roused vehement protests, is little worse than the treatment of avowed freethinkers in England.

Or consider again such a matter as the marriage laws. Practically every churchman, with the exception of Dean Inge, holds that the State ought to enforce upon Christians and non-Christians alike the views of marriage which are held by Christians. For example, Christians hold that a marriage should not be dissoluble on the ground of insanity; consequently, those who are free from this piece of sadism are nevertheless liable to be tied for life to insane partners. This is because the Church holds that it has a right to inflict its rules of morals upon men and women who consider its teaching in this respect to be nothing but diabolical cruelty.

Or take again the question of birth control. Here likewise the Churches do all that lies in their power to prevent non-Christians from acquiring knowledge which Christians consider it better to be without. By this means they succeed in wrecking the health and happiness of countless thousands of men and women, and in bringing into the world large numbers of diseased and unhappy children. This also is persecution.

Through their opposition to new knowledge the Churches have become an obstacle to the prevention of insanity. On the one hand, they con- cern birth control, even when one or both parents suffer from venereal

disease, or from heritable mental disorder; on the other hand, they encourage the teaching of what they choose to call morality by means of threats so terrifying as frequently to produce a greater or less degree of insanity in young people. They are, of course, not aware of the consequences of their actions, but they would not be able to remain unaware of these consequences if they had not so diligently practised the art of closing their minds against unwelcome knowledge.

I shall be told that I ought not to judge religion by the Churches, but by the saints. This I entirely deny. There have been saints of every religion and of none, but when one is considering religion as a social phenomenon one must consider its effects upon society and not upon a few rare individuals. Now religion, like everything else, only becomes powerful through organization, and an organized religion is a Church. A collection of persons organized upon the basis of a creed must necessarily oppose any new discovery that tends to prove their creed false. Nor is it possible to organize a Church except upon the basis of a creed. A creed may, it is true, involve no supernatural elements, but it must at the least teach that certain ways of behaving are to be commended and certain others are to be condemned. Even this minimum of creed is likely to be falsified by new knowledge. We should all admit nowadays that during a plague it is unwise for great crowds to assemble in Churches to pray that the plague might not spread, yet in the Middle Ages this opinion would have been considered impious. In a large number of ways the opinions of official Christianity on moral questions are now known to be not such as to promote human happiness. Nevertheless, organization and tradition are sufficiently powerful to prevent the new knowledge from becoming politically effective. The fundamental objection to traditional religion is that its appeal is chiefly to fear. Belief in God serves a twofold purpose: on the one hand, to inspire fear in the evil-doer; on the other hand, to diminish fear in the man who lives virtuously. In either case the efficacy of the belief depends upon the existence of fear. The less fear a man has in his soul the less he will be influenced by belief in God. The same thing applies to belief in immortality. The asceticism from which no form of Christianity is free also has its psychological roots in fear. Every form of Christianity condemns what it calls "mere" pleasure. Why? This is a question which hardly any Christian has ever faced, since it has not occurred to him that it could be asked. Obscurely in the unconscious lurks the belief that God is a jealous God and does not wish us to enjoy life too much lest we should cease to be anxious for heaven. I know that the objection to pleasure is rationalized by means of all kinds of arguments to show that it is socially harmful. Few of these arguments have any validity; on the contrary, there are very powerful arguments to show that absence of instinctive pleasure produces an instinctive rage, which rationalizes itself as a persecuting morality. All the fiercer creeds from which spring strife and organized cruelty are associated with asceticism. The Churches hold, for example, that it is desirable by military training to teach University students how to destroy life, while preventing them as far as possible from knowing how to create it. Could anything more perverse be imagined? Is it not clear that those who formulated such a doctrine must have been inspired by hatred of life?

For all these reasons I hold that whoever desires to promote human happiness should do what lies in his power to destroy the belief in organized religion.

BR, PROGNOSTICATOR

- (8) Star Wars. "Note this prevision of Star Wars," writes KEN BLACKWELL, "from BR in Common Sense and Nuclear War (1959, p. 17)":

By means of electronic computers, they [satellites] can be timed to rain death upon enemy regions, while suspending this useful activity during their passage over friendly territory. Such weapons will be enormously expensive, but on each side it will be argued: 'if the enemy may have them, we must set about having them too.'

BR ON PEOPLE

- (9) Soupy. From "The Life of Bertrand Russell" by Ronald W. Clark (NY:Knopf, 1976) p.508, concerning His Majesty's offer of the Order of Merit:

The offer had been some time in coming. Whitehead had been made a member of the Order in 1945 even though he had emigrated to the United States two decades earlier; Eddington, whose strong pacifist feelings might have been considered a bar, in 1938. However, Russell had been consoled by the fact that most O.M.s were pillars of the Establishment and that many were what he described as "soupy". "We used the word 'soupy' to characterise people and temperaments which came down on the supernatural side," says Crawshay-Williams, "not merely in the religious field but in all fields: anti-determinist, for instance, in history and biography; believing in vitalism and Mind; in innate wickedness, in Absolute and eternal verities; and so on."

BR, WRITER OF LETTERS

- (10) Displayed in a window, the window of the Argosy Bookstore, at 116 E. 59th Street, NYC, is the following letter. Nanette Scofield noticed it there last month, and kindly made this copy, which she sent to us:

Bertrand Russell Peace Foundation
7 May 1965

Mr. Norman Thomas
112 East 19th Street
New York New York 3
U.S.A.

Dear Mr. Thomas,

Thank you very much for your letter of April 10. I should wish to take up the case of Mr. Sjahrir and should be grateful if you were able to give me some more information about him.

I am encouraged to hear of your efforts to obtain a cease-fire in Vietnam and the withdrawal of American troops from the Dominican Republic.

With best wishes,

Yours sincerely,

Bertrand Russell

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

BR, MATHEMATICIAN

(12) BR at MIT, as reported in this letter:

MASSACHUSETTS INSTITUTE OF TECHNOLOGY
CAMBRIDGE, MA. 02139

2-363
DEPARTMENT OF MATHEMATICS

HEADQUARTERS 2-236
(617) 253-4381

3 December 1986

Dear BRS,

Here are my dues for 1987.

BRS members might be amused to hear that M.I.T. now has a computer named Russell, accessible worldwide through standard computer network connections. It's a Sun 3 Workstation which I bought for my research in applied mathematics. In the Math. Dept. here there is a network of computers, each named after a mathematician. I decided to name this one Russell — but not primarily because of his mathematics, I have to admit.

Anyone with access to the Arpanet can send me a message at

Int&russell@mit-athena

This machine has fully as quick a mind as Bertie, but less of a sense of humor.

Yours sincerely,
Nick Trefethen
L. N. Trefethen

ABOUT BERTRAND RUSSELL

(13) A. J. Ayer in "More of My Life" (London: Collins, 1984 p. 52-53)...with thanks to HARRY RUJA:

All this may suggest that Russell became tetchy in his old age but that would not be true. He had always been vehement in his opinions, and perhaps not always entirely fair to his intellectual and moral adversaries, but at the time of which I am writing, when he was in his late seventies and eighties, and indeed in all the years that I knew him, he retained his keenness of intellect and readiness for entertainment; and his wit, the breadth of his knowledge, and his astonishing memory, not least for the experiences of his youth, made him the best of company. He was indeed capable of being mischievous. For instance I remember a party in my flat to which the actress Bunty Howard, who had worked with me in British Security Co-ordination during the war, asked whether she might bring a young protégée of hers whom she had selected for a leading part in a film. The girl was still being educated at a convent and the nuns were doubtful as to whether she should be allowed to attend a party at which so wicked a man as Bertrand Russell would be present. In the end they gave her permission but supplied her with a list of questions to put to Russell if she conversed with him. The girl, who was remarkably pretty, arrived with her list of questions and managed to corner Russell. Some moments later his dry voice rose above the hubbub of conversation. 'The Pope,' he was saying, 'the Pope! He is paid his salary for telling lies.' I never discovered whether this was reported back to the nuns.

PROMOTING BR/BRS

- (14) BR at Muhlenberg. We showed the videotape of CBC's 1959 "Close Up" interview of BR to faculty and students of the Philosophy Department of nearby Muhlenberg College (Allentown, PA), on November 13, 1986. About 25 attended. There were 7 requests for information about the BRS. One of the faculty members, Pat Spang, had been a BRS member some years ago. The videotape had been acquired recently through the efforts of TOM STANLEY; he described its contents in RSN52-33.

Enrollment is up for philosophy courses, we were told. This indicates -- obviously -- an increased interest in philosophy. Does the present parlous state of the world turn some to religion, others to philosophy?

ANTI-NUCLEAR 1958

- (15) The following comes from The [London] Observer (10 March 1958, No. 8698, p. 9), with thanks to HARRY RUJA.

Nuclear Table Talk
MEN AGAINST THE BOMB
by Pendennis

The Campaign for Nuclear Disarmament has risen up almost as quickly and uncontrollably as the mushroom-shaped cloud itself. Last week it reached a new public with the appearance on television of the horror-play by its chief propagandist, J. B. Priestley

The movement is not easy to analyse, for it contains several contradictory themes and personalities, with some of the officers out of step with the rank and file. Even its origins are a little muddled. A series of events last year precipitated the agitation -- the volte-face of Mr. Bevan, the Sputnik, the Windscale accident, and finally -- and perhaps most important -- the Kennan lectures.

Three Arguments

It was during the Kennan Lectures that an important meeting took place at the flat of the editor of the "New Statesman", Kingsley Martin, which helped to pave the way for the campaign. Among the guests were Lord Russell, now the president and top thinker of the campaign; J. B. Priestley and his wife, Jacquetta Hawkes; P. M. S. Blackett, Professor of Physics at Imperial College; George Kennan; and Denis Healey, M. P. (the last two were concerned with disengagement rather than the H-bomb campaign.)

At this meeting it became clear that there were three separate lines of argument for the abolition of the H-bomb: one was the pure pacifist argument (e.g., the Rev. Donald Soper, Canon Collins or Dr. Alex Comfort); one was the scientific argument (e.g., Russell and Blackett) -- that H-bomb tests and armaments were far more dangerous than politicians realised. The third, and perhaps the most important, was the politico-military argument, that H-bomb warfare was impractical and misconceived, and that Britain gained nothing by arming for it, even as a deterrent (e.g., King-Hall).

146, Fleet Street

Soon after this gathering, the left-wing opponents of the H-bomb came together with the pacifists, who had already been campaigning to abolish nuclear weapons tests. An executive committee of the new campaign was formed, with Canon Collins as its chairman.

Headquarters were set up at 146, Fleet Street, above a fairly ye olde tobacconist, in an atmosphere of cardboard and linoleum. The organisation was taken over lock, stock and barrel from the pacifists and anti-tests people. The organising secretary is a businesslike veteran campaigner, Mrs. Peggy Duff, late of Save Europe Now and Abolition of Capital Punishment.

The three strands of thinking -- pacifist, scientific and politico-military -- became intertwined, a little untidily, in the new campaign.

Squabbling Pacifists

Of the three it is the pacifists who represent the core of the movement, but there is (as is the way with pacifists) a good deal of squabbling within the temples of peace.

The best-known pacifist body is the Peace Pledge Union, which was founded by such well-known Thirties Figures as Dick Sheppard and Aldous Huxley, and which still operates from a dingy Bloomsbury office. Its simple policy is summed up in its pledge (which 140,000 people have signed since it was founded in 1936): "I renounce war and refuse to support or sanction another."

The P.P.U. has nothing whatever to do with the famous Peace Ballot of 1935, with its 10 million signatures, which was organised by the League of Nations Union. The Peace Ballot was not, in fact, a pacifist document -- it supported disarmament by international agreement and collective security. The P. P. U. regarded it more as

a War Ballot.

As an organisation, the P.P.U. is not very keen about the Campaign for Nuclear Disarmament, which they regard as full of half-measures and wrong arguments. They advocate a change of policy, not a change of weapons. But several of their members, such as Donald Soper and Alex Comfort, have taken part in the Campaign.

High Priest

The most formidable scientific opponent of the bomb, and High Priest of the movement, is Lord Russell: his own campaign began in earnest in 1955, when he collected the names of top scientists, including Einstein, for a letter to heads of State.

Russell's views about wars have modified considerably during his eighty-five years. When the First World War broke out -- he was then forty-two, and already a major philosopher -- he was a public opponent of the war, for which he was imprisoned and sacked (temporarily) from Trinity, Cambridge. At the same time, he stated in a pamphlet that there were certain kinds of war that he would support.

He supported the Second World War after he realised the full ruthlessness of Hitler, and he said he would have fought if he had been young enough. After that war he believed for a time that an atomic war was preferable to conquest by Russia. It was the invention of the H-bomb, and the knowledge that smaller nations would eventually acquire it too, which have pressed him to his present stand.

Military Spokesman

Probably the most persuasive military spokesman for the campaign is Sir Stephen King-Hall, whose new book, "Defense in the Nuclear Age," is the military manual of the movement.

He is a short, forceful man of sixty-five, with a magnificent carrying voice. He combines a formidable naval background -- his father, grandfather, and uncle were all admirals, and he himself served in the Navy until 1929 -- with a pre-war political stand which was impressively rebellious. He was increasingly worried by the thought of war while he was in the Navy. But he later used all his energies, including his "News Letter" (which he founded in 1936) to attack the Nazi regime -- so much so that he was accused by politicians like Sir Samuel Hoare of being a "warmonger".

His present absorption in the H-bomb derives partly from his pre-war preoccupation with disarmament, and partly from his life-long interest in "psychological warfare" -- a phrase which he popularised. His policy of renouncing the H-bomb is (unlike that of his pacifist or more left-wing colleagues) essentially part of his concept of the cold war.

Lord Russell differs from Sir Stephen on one important point: he believes that non-violent resistance is useless against a determined totalitarian regime.

No Dinner Jacket

While the campaign in London and the provinces is sometimes inclined to be emotional, the undergraduates are, on the whole, more rational, and sceptical of what they call the "Old Woollies." Oxford, as usual, is the most vigorous -- partly because it is predominantly Chbomb (Cambridge is much more Tory), partly because of its closer links with London.

The president of the Oxford campaign, the twenty-six-year-old All Souls don, Charles Taylor, is typical of nothing in particular, except perhaps French Marxist-Catholics, with whom he is in sympathy. He is a brilliant French-Canadian philosopher who looks like an ice hockey champion and talks as if he burns.

At the time when he should have taken up his fellowship at All Souls, the Hungarians revolted, and "Chuck" Taylor (he is never called Charles) rushed to Vienna to work for the refugees for four months, receiving imploring letters from the Warden. Back at All Souls (where he refuses to wear a dinner-jacket) he became the moving spirit behind the "Universities and Left Review", an intelligent but sometimes obscure periodical which likes its Socialism strong, with a Marxist tang. But Taylor has with him on his crusade a surprisingly broad front, including Tories.

Mikardo and Co.

Marching alongside, but not necessarily in step with, the anti-bomb Campaign, is the left-wing of the Chbomb Party, roughly represented by "Victory for Socialism." It is the latter who have collaborated, in a curious partnership with the pure pacifists, to organise the Aldermaston March for Easter. Some of the Chbomb leftists come fairly close to fellow-travelling, and their programme usually includes East-West trade, weakening of the Anglo-American alliance and opposition to German rearmament -- policies which do not necessarily fit in with the other campaigners.

The most important figure in the Victory for Socialism is Ian Mikardo, who has partially filled the gap left by Bevan. Unlike some of the more dignified thinkers in the anti-bomb movement, he has been a well-known trouble-maker since he was elected to the House in 1945; he also has a v

Mikardo and Co.

Marching alongside, but not necessarily in step with, the anti-bomb Campaign, is the left-wing of the Labour Party, roughly represented by "Victory for Socialism." It is the latter who have collaborated, in a curious partnership with the pure pacifists, to organise the Aldermaston March for Easter. Some of the Labour leftists come fairly close to fellow-travelling, and their programme usually includes East-West trade, weakening of the Anglo-American alliance and opposition to German rearmament -- policies which do not necessarily fit in with the other campaigners.

The most important figure in the Victory for Socialism is Ian Mikardo, who has partially filled the gap left by Bevan. Unlike some of the more dignified thinkers in the anti-bomb movement, he has been a well-known trouble-maker since he was elected to the House in 1945; he also has a very successful professional life in Ian Mikardo and Co., industrial consultants.

Tailpiece

H-bomb talk

Haltwhistle and District W.V.S. Darby and Joan Club held a meeting in the Church Hall on Monday when two new members were welcomed.

Mrs Robison, Centre Organiser, W. V. S., gave an interesting talk on the Hydrogen Bomb.

Mr. Heslop, a new member of the club, sang and played a selection of tunes on his mouth organ. "Haltwhistle Echo and Weekly News."

ANTI-NUCLEAR TODAY

- (16) Linus Pauling on Reagan's efforts to control nuclear armaments, as it appeared in UU World (11/15/86), a Unitarian publication...with thanks to TOM STANLEY:

Of life, of lies, a call to action

By Linus Pauling

There is little doubt among scientists today that our civilization would be destroyed in a nuclear war. Discussion during the last few years about nuclear winter has shown that in addition to deaths by blast, fire, immediate radiation effects and fallout, survivors of the war would probably all die of cold, starvation, and pestilence.

In my Nobel Peace Prize lecture in 1963 I asked if there were not some actions that could be taken to decrease the existing great danger of outbreak of nuclear war. It was a tragedy, I said, that so much of the world's wealth is wasted on militarism. Most of the economic problems we have suffered in recent years has been the result of wasting so much money.

Glenn Seaborg and I recently participated in a press conference at which Seaborg, former head of the Atomic Energy Commission, said that the Soviet Union was eager to make a comprehensive bomb-test treaty, but that the Administration had instructed US negotiators not to agree to such a ban, which would hamper the development of new weapons.

In April, 1986 President Reagan refused to meet with Chairman Gorbachev to discuss such a treaty. Paul Warnke, former negotiator at these talks, said that "since 1981 the Reagan Administration has made it clear that

they have no interest in a comprehensive test ban. This is a lost opportunity to curb the arms race."

[This article was written prior to President Reagan's meeting with Chairman Gorbachev in Iceland in October, 1986.]

For a while I was willing to excuse President Reagan and to accept the apologies of others in the White House who would say "The President misspoke himself, but it doesn't really matter." But on January 16, 1984 I heard him state: "Over the past 10 years, the Soviets devoted *twice as much* of their gross national product to military service."

This is a clever statement, cleverly worded to mislead almost all hearers, who will conclude that the Soviet Union is spending twice as much on military expenditures as we are. Reagan should have added that the gross national product of the Soviet Union is only half what ours is—and so military expenditures are essentially the same in the two countries.

This is not a trivial matter—it involves wasting hundreds of billions by misleading the American people.

On April 18, 1986 a letter appeared in *The New York Times* by Roland J. Wall, with the headline "Of Whoppers, Tales and Mr. Reagan." Mr. Wall criticized an editorial referring to "America's 'good-natured' acceptance of President Reagan's fondness for whoppers."

"It is bad enough we have a head of state who consistently gets his facts wrong on public statements and that we have a public so hoodwinked by hype

that it gives this habit 'good-natured' acquiescence," Mr. Wall wrote. "It is worse by far that the nation's foremost newspaper gives Mr. Reagan's misstatements, misinterpretations and outright lies the wholesome sounding, down-home label of 'whoppers.'"

Not so long ago an old friend of mine died, at age 82—George Kistiakowski. George had worked in the explosives division of the National Defense Research Committee during World War II and afterward was head of the explosives division at Los Alamos. Later he was science advisor to President Eisenhower. Upon retiring he devoted himself to working for world peace.

His last article said that the construction of the first atomic bomb began the alliance between nuclear physics and what was to become known as the "military industrial complex."

"As one who has tried to change these trends, working through official channels, I tell you as my parting words: *Forget the channel!* There is simply not enough time before the world explodes. Concentrate instead on organizing a mass movement for peace such as there has not been before. The threat of annihilation is unprecedented."

And so, Kistiakowski told us, we must now take unprecedented action to save the world.

I believe the world can be saved, that it exists *to be saved*. But to save it we must have the great mass movement recommended to us by an old friend.

- (17) The politics of SDI is discussed in John Tirman's chapter in a new book from the Union of Concerned Scientists (UCS), "Empty Promise: The Growing Case Against Star Wars". Tirman was formerly senior editor at UCS. Here are excerpts from his chapter, parts of which appeared in Nucleus (Winter 1987), the UCS quarterly:

What are the rationales driving Star Wars? Four clear tendencies seem apparent in the administration's subrosa ideology that account for the great risks and costs the government is willing to undertake to pursue space-based missile defense.

The first of these is the hope to dominate outer space militarily. Space has been viewed as the "new high ground," an advantageous position from which one or the other of the superpowers could gain a stronghold.

A second motive behind SDI involves an attitude towards the Soviet Union, a posture of noncooperation and competitiveness that extends into every sphere of US-USSR relations. Those who knew Star Wars would cost hundreds of billions of dollars and that the Soviets would have to react, possibly with commensurate expense, foresaw an economic rivalry that the United States was bound to win. The Soviets simply cannot keep up with America, this argument reasons, and the already stressed Russian economy will be disabled by the space arms race. The United States will have the pleasure of harassing the Soviets with superior technology and, perhaps, a public relations edge as well. At the same time the U.S. defense industry will benefit handsomely, with an accelerated shift of national resources from social needs to military use. It is doubtful that economic considerations originated the Star Wars effort, but it is likely that they have energized many in the administration and, of course, the industry. More certain, however, is the view that harassing the Soviets is a legitimate tactic, and SDI looms as a quite intimidating form of harassment that does in fact force the Soviet leadership to choose among limited options of response.

In both of these thrusts -- the drive to dominate space and to badger the Soviets -- another rationale is apparent. That is the unwavering preference for the use of technology as the main tool of policy. The United States seemingly innate talent for invention and innovation presents military opportunities simply not available to the relatively backward Soviets; with the high-tech revolution, moreover, the technology gap has widened. So SDI is embraced as the culmination of a resilient American tendency to rely on science and engineering to solve problems of all varieties. It is welcomed, too, as an initiative that -- regardless of its fate -- will spin off all sorts of techniques usable in defense. The more significant utility, however, bears on the Soviet rivalry: by leveraging this technical virtuosity, the United States can establish a permanent state of military superiority. This attitude not only employs technology as the elixir of policy-making, but as the antidote to its poisonous alternative: diplomacy.

It is no secret that the Reagan presidency is marked by an undiluted disdain for arms control. Throughout the 1980s, the United States stance toward critical arms issues -- strategic weapons, intermediate-range nuclear forces (INF) in Europe, the comprehensive test ban, and ASAT -- has been obstreperous. Even existing treaties -- SALT II and the ABM Treaty, in particular -- have been under relentless assault. The administration's hostility to arms reduction and restraint as the modus vivendi of superpower relations is now so well documented and virtually accepted in Washington that it would be naive not to draw very direct connections between Reagan's febrile drive for military superiority and the Strategic Defense Initiative. The president and his top advisors must, of course, pay lip service to the notion of nuclear disarmament: the desire for arms control is simply too strong in American political culture to ignore.

(18) What? More on Star Wars? Yes. It is probably the most important of all current issues.

Here are excerpts from an article in Discover (a publication of Time, Inc. that deals with science for the layman) titled, "Will Star Wars Work? It Isn't a Question of Technology"...written by Thomas Powers.

A broad agreement on reducing nuclear arms seemed heart-breakingly close in Iceland, right up to late afternoon on Sunday, October 12. It wasn't just military hardware that hung in the balance, but the whole notion that negotiated agreements might do what technology has conspicuously failed to do -- make us safe.

Gorbachev insisted that everything else depended on a ten-year extension of the 1972 ABM treaty strictly interpreted to ban testing of space-based defense systems outside the laboratory. Reagan refused. "In effect," the President said in a televised speech the following night, "he was killing SDI."

The impasse had nothing to do with any of the open questions about Star Wars: Will it beggar the country? Will it work? Will it make the Soviet-American strategic balance more dangerous even if it does work? The real barrier to agreement was bedrock American suspicion of treaty paper as a substitute for military strength.

But nothing could hide the fact that the two countries had come within reach of a political solution to the worst military dangers of their rivalry, that no matter how much hard bargaining over details might remain to be done, the agreements in principle had been made. And nothing could hide the fact that Star Wars -- the ultimate search for a "magic bullet" -- was the sticking point.

The progress of Star Wars in the last three and a half years has been fitful at best, and Reagan's dream of a defensive system that would protect cities as well as hardened military targets like missile silos and communications centers has been quietly revised.

For one thing, Reagan now seems to be the only member of his administration who continues to believe the shield can be extended to protect [more than] ICBM installations.

[Powers then tells about various technologies that have been abandoned, such as the switch from "orbiting nuclear-pumped x-ray lasers" to ground based lasers, electronic rail guns, a technology still in its infancy, and a new mission for particle beam weapons.]

But the biggest problem facing a comprehensive Star Wars system is software — the program that superfast computers would use to manage raw intelligence and direct a response in the 20 or 30 minutes between launch in the Soviet Union and their impact in the U.S. The size and complexity of this program dwarfs by many orders of magnitude anything ever attempted. Computer programs are notoriously prone to bugs — unpredictable results from seemingly routine instructions in unanticipated circumstances. It often takes longer to debug programs than to write them, and some bugs don't show up for years. One study by AT&T, which uses complex programs to manage communications systems, discovered 300 serious errors for every thousand lines of computer code.

Until last year, the managers of the Star Wars program confidently predicted they would be able to write a battle-management program requiring at least 10 million and perhaps 100 million lines of code. Last December an eight-member study panel for the Pentagon reported that software was the "paramount strategic defense problem" and urged the SDI Organization to write its battle-management program before it built any hardware, reversing the usual approach. The panel predicted the job could be done, but warned that programmers would have a hard time with the twin problems of "complexity and testability." The surest way to detect program errors is to run the program; in the case of Star Wars, this would require a full-scale Soviet attack.

These and other difficulties prompted one member of the software study group to resign. He later told a Congressional hearing there was just no way to write a battle-management program free of the danger of "catastrophic failure" during an actual attack. [The one member was David Parnas. See RSN52-20.]

[Powers deals with a number of other aspects of Star Wars, including the reasons why Gorbachev opposes it so strongly. You may wish to read the entire article (Discover, December 1986)].

RATIONALITY

(19) Skeptics at work, as reported in the Los Angeles Times (Sunday, 1/4/87, p 1), with thanks to BOB DAVIS:

No Doubt About It — They're True Skeptics

By EDMUND NEWTON, *Times Staff Writer*

It's a virtuoso performance. Joe Nickell, tweedy, professorial, supremely self-confident, in front of a Caltech lecture audience, is disparaging the renowned Shroud of Turin as a fraud.

He quotes from the Gospels. He throws out scientific citations. He theorizes with crushing conviction. He marches through a provocative slide show, ending with a shot of the shroud's now-famous bearded visage.

The purported face of Jesus winks.

Nickell is implacable. Like a musketeer in brown herringbone, the University of Kentucky professor slices and slashes, seeming to demolish the controversial claim that the shroud is the authentic burial cloth of Jesus, reducing it to so much shredded wastepaper.

Various teams of researchers have studied the shroud, a number of inquiries are still in progress and the debate over its authenticity continues to raise doubts in the minds of many researchers—but not in the mind of Nickell.

"The evidence against it is so utterly devastating," he concludes, "it's worse than the Hitler diaries."

The audience of about 300, gathered on a Sunday afternoon for the monthly meeting of the Southern California Skeptics, applauds lustily. This is what they're here for: to witness for the umpteenth time a malaise of muddle-headedness dispersed by the cool wind of logic, giving a hard-edged clarity to the afternoon.

"This guy tells a good story," says one skeptic, a tense, grizzled man, with his sneakers laced upside down.

For restless intellects, the skeptics are the hottest show in town these days. If you want a seat at the organization's regular meeting on the second Sunday of every month, you'd better arrive early at the Baxter Lecture Hall, where the lectures can target anything from

Erich von Daniken's far-out theories about astronauts having landed on earth in prehistoric times to the latest fad in the human potential movement, from seances to the Bermuda Triangle, from UFOs to ESP.

"It's a breath of fresh air," said one ebullient member, a former high school science teacher who declined to give her name. "A great percentage of the population just believes a lot of unsubstantiated garbage. Here, they don't accept nonsense."

Debunking Fire-Walking

Two years ago, the organization even held a fire-walking demonstration, setting up a bed of burning coals on the Caltech sports field and inviting members to walk through barefoot.

The idea was to debunk self-help groups claiming to teach people how to gain control of their mental and physical health, with fire-walking as the litmus test of their system's validity.

Anybody can do it, said the lecturer, because the touch of a foot cools the embers faster than the skin heats up. Besides, he said, fire-walkers often walk on wet grass, giving bare feet an insulating layer of moisture.

Southern California Skeptics has 1,800 members, cerebral, inquiring people who do not like to be told how to think, according to the group's leaders.

Why Challenge Authority?

Al Seckel, who organized the group in January, 1985, says that one of his favorite jokes sums up the contentious, challenging spirit of the organization. It goes like this: Intellectual 1: Challenge authority!

Intellectual 2: Why?

The members come from all walks of life, says Seckel, an intense graduate of Cornell in physics and math, who took leave from Caltech, where he was a candidate for doctoral degrees in both relativistic astrophysics and biochemistry, to start Southern California Skeptics.

"We've got cab drivers, housewives, magicians, Nobel laureates, you name it," he said, though the former science teacher added that the group "tends towards Caltech-ers."

Among the members are Edwin Krupp, director of the Griffith Observatory; Frances Crick and Roger W. Sperry, both Nobel laureates in medicine; William Jarvis, president of the National Council Against Health Fraud; and James Randi, a magician.

Subscription to LASER

For \$25 a year (\$15 for students and senior citizens), members get invitations to all of the group's events and a subscription to the organization's bimonthly magazine, LASER (Los Angeles Skeptics Evaluative Report), which exposes the latest fallacies, hoaxes, myths, intellectual fads and pseudo-scientific notions.

"Though there is rarely a careless, half-baked remark at a lecture, this is not an organization of 'nerds and academics,'" insisted Seckel.

"It's a fun group," he said. "From what I hear, it's the social place, the pick-up joint. People have a blast."

"But many seem to be serious-minded people who have wrestled with some destructive irrationalities in their lives."

"I come from a background of fundamentalist Christianity, where people could claim to be saved or born again yet still talk about 'raggers,'" said Timothy Rutt, an editor of accounting publications who was attending his first lecture. "People aren't using their critical faculties nowadays. We have faith healers running for president, and strange claims are the order of the day."

Robert Kasold, a teacher of computer programming who has been going to Southern California Skeptics lectures since the beginning, said he worried about people believing in superstitions.

"I'm concerned, particularly about all the people in the L.A. area being taken advantage of," he said. "I have a very dear friend who believes faithfully in astrology. She believes there are adverse days for doing things, and she has great faith in predicting personality matches based on the moment of birth."

The point is not just to debunk, says the group's chairman, Al Hibbs, who recently retired as the senior staff scientist in the Jet

Propulsion Lab technology and space department.

"The real point is to show people how they can go about checking out things for themselves," he said. "Ordinary people can check the validity of some very strange propositions."

Seckel, 28, worries that Southern California Skeptics, which is loosely affiliated with the national Committee for the Scientific Investigation of Claims of the Paranormal, will be perceived as a bunch of negativists.

'Look at Real Mysteries'

"Why not look at the *real* mysteries, the ones for which there's at least some evidence?" he said, citing the black hole theory as an example. A black hole, scientists believe, is a star that has collapsed under its own gravitation and is so

dense that not even light can escape from it. "Look at the . . . the idea that time slows down as you enter it, that a watch is going to move at a different rate for an outside observer than for someone in a black hole," Seckel said. "Or how about the idea that you age infinitesimally more slowly on the first floor of a building than on the top floor?"

For many, the organization offers a counterbalance to an endemic "anti-science attitude," Seckel said.

"A lot of people think science is about making atomic weapons or super computers," he said. "People suffer from technophobia. They feel impotent. We're trying to teach science in a way that's understandable to the public."

The organization's primary pur-

pose, however, is just to stimulate thought, Seckel said.

Emphasis on Education

"People can do fire-walking," he said. "But how can they do it? Things usually have an explanation. "I want to get people to start thinking about things themselves, as opposed to just telling them the solution," he said. "You can't lose weight by watching other people diet. You have to do it yourself."

Under Seckel's guidance, the emphasis has been largely on education.

Recently, for example, Southern California Skeptics board member and Caltech physics professor Murray Gell-Mann got 72 fellow Nobel Prize winners to petition the U.S. Supreme Court to reject a Louisiana law calling for "balanced treatment" of evolution and creationism

in public school science classes.

"Creation sciences," the laureates said in a friend-of-the-court brief, "strips our citizens of the power to distinguish between the phenomena of nature and the supernatural articles of faith."

'Can't Attack Faith'

The words could have served as part of the group's statement of principles. It's not that Southern California Skeptics, which has a standing offer of \$10,000 for anyone who can prove the existence of the supernatural or the paranormal, wants to destroy people's deeply held beliefs, Seckel insists. It's that they want to disprove spurious scientific claims, said Seckel.

"You really can't attack faith," said Hibbs. "It's when people say that there's scientific evidence for their ideas that our antennae go off."

RELIGION

See "The Challenge to Religious Orthodoxy" (7).

- (20) Does God exist? Rabbi Sherwin Wine doesn't think so. His new book, "Judaism Beyond God: A Radical New Way To Be Jewish", is reviewed in Religious Humanism (Winter '86) by its book review editor, Robert Marshall. Wine is founder of the Society for Humanistic Judaism, and Rabbi of the first Humanistic Jewish congregation (in Farmington Hills, Michigan.) Some excerpts from the review that deal with this question:

In the Detroit area, where Rabbi Wine has been magnificently controversial for a quarter-century, his chief detractors argue that Humanistic Judaism threatens Jewish survival. Wine shows understanding for their concern...then proceeds to turn the whole argument of his critics inside out.

The standard argument is that unless Judaism focuses on a deity, it is doomed.

Ah, says Wine, look what Yahveh has done to the Jews. "A surviving remnant is not testimony to a just God." "The Jewish people, whose official establishment proclaimed for over two thousand years that Jewish history is a testimony to the presence of God, is, indeed, the strongest testimony to the absence of God." "The people who supposedly discovered 'God' were the painful witnesses to the fact that divine justice did not exist. In the history of no other nation were experience and ideology so far apart."

"Rabbinic Judaism gave Yahveh a vested interested in the Jews. They were his earthly advertising...It seems irrational that Yahveh should choose to advertise himself through the experiences of a bunch of 'losers'.

Thank you, BOB DAVIS.

- (21) From the New York Times (11/2/86, E2):

Verbatim: Bigotry, 1818

'your sect by it's sufferings has furnished a remarkable proof of the universal spirit of religious intolerance, inherent in every sect, disclaimed by all while feeble, and practised by all when in power. our laws have applied the only antidote to this vice, protecting our religious as they do our civil rights by putting all on an equal footing. but more remains to be done.'

Thomas Jefferson

in a letter written in 1818 to Mordecai Noah, a Jewish diplomat, and sold at auction last week for \$396,000.

DORA

(22) From the publication, National Student (December 1985) [London], with thanks to STEVE REINHARDT:

STATE OF THE ART

THE SEARCH FOR LOVE, LIFE AND
FREEDOM

Dora Russell, Progressive educator, pacifist, socialist, poet, champion of women's rights, advocate of sexual freedom has at last emerged from the shadow of her husband Bertrand Russell to review the century she helped to shape.

WORDS: Peter Culshaw

With some media pundits arguing that youth rebellion is dead, and that the average 19 year old is a prematurely middle-aged fogey, and others talking hopefully of a 'new wave of radicalism', I made an excuse, left the debate and went to interview the oldest rebel I've ever met, a 90 year old grandmother who lives near Lands End.

You might have seen Dora Russell talking about 'free love' in the film *Fleds* (also on video - the revolution is now available in two formats). And the surname might be a clue - for 12 years she was married to Bertrand Russell, the great freethinker, trouble-maker and CNDer, and until recently she's tended to be seen in his shadow. But several recent TV appearances, and the publication of the *Dora Russell Reader*, her magnum opus *The Religion of the Machine Age* and this autumn's launch of the third volume of her autobiography *The Tamarisk Tree* have focussed more attention on her.

The *Machine Age* book has a curious history. She inked the contract for the book in March 1932, but it was over 80 years before it saw the light of day. If that seems a rather excessive amount of time to write a book, there are one or two mitigating circumstances. For one, she hasn't spent her life stuck in libraries. As her friend HG Wells said to her "Bertie thinks, I write and you do." A full list of her activities would be exhausting just to read - especially if your A.Q. (Activism Quotient) is of the annual-stroll-around-Hyde-Park-against-the-bomb variety.

A short resumé would have to include her pacifism in World War One, campaigning for birth control and women's rights in the '20s, setting up a revolutionary progressive school mainly run by the pupils (occasionally the School Council would vote to abolish all the rules, but a few days later usually got bored because nothing happened and the decision was reversed), helping to found the Conservation Society and, 30 years pre-Greenham, organising a women's Peace Caravan to Russia.

Her three-part autobiography is perhaps the best introduction to the wit and wisdom of Dora Russell. The first volume, at times, reads like a thriller, such as when she smuggled herself onto a Norwegian pleasure steamer to get herself to Russia immediately after the revolution, at a time when all visits to Russia were banned by the British Government.

The book also contains Dora's impressions of trips to China and America in the early twenties. It was during her visit to Russia that she realised with dismay that the attempts of individuals like her acquaintance Alexandra Kollontai, Lenin's left-hand woman, to press for women's rights and to give the revolution a more human face were being gradually brushed aside. She wrote a pamphlet *The Soul of Russia and the Body of America*

© 20 NATIONAL STUDENT DECEMBER 1985

which became the first chapter of *The Religion of the Machine Age*.

"When I went to America I saw technology being treated like a religion" she explains "In Russia I found what I thought was the spirit that could animate the running of the machine, but I could see the comrades thinking that society would run like a machine and everyone would fit into their proper place. I began to argue that the industrial machine had become a religion with two sects, Capitalism and Communism."

It was a message that neither Left nor Right wished to hear, and she became embroiled in various campaigns but "Convinced that most of the things that I had prophesied had come true, I picked up the threads a few years ago - and asked - what is behind our machine worship?" The resultant *Machine Age* tome is a hugely ambitious work that stretches across 6000 pages, an attempt at a 'history of consciousness'. She finds there is a more receptive audience for her ideas now, as her work explores many of the themes developed by various recent political currents - the new feminism, animal rights and the emergence of a 'Green' movement.

Her daughter mentioned that there is quite a stream of tourists who visit Dora's cottage. She has a theory that because we rebel against our parents, in some ways we have more in common with our grand-parents. "I got on well with my grandmother. She always encouraged me and said I could do anything."

She really does have an extraordinary, panoramic view of the century and a radical point of view you won't find in many of the textbooks "I had great misgivings about America being brought into the First World War. When they were all stuck in the mud in Flanders, they should have called a truce, and we might have had a united Europe. Instead we called in the Americans to smash up the Germans, which was the main cause of the Second World War. And not promoting friendly relations with Russia was the biggest mistake of the century - I've spent my life fighting to end the Cold War."

Apart from needing a hearing aid, and suffering from arthritis, Dora is full of spirit and very on the ball "It's not so bad being old" she muses "I would have dearly loved to go to some of the Greenham demonstrations though - I wasn't worried about being arrested, but the Police arranged it so you had to walk about four miles to get there, and I can't even make it to the nearest post-box."

She retains a sense of mischief, which extends to comments of sexual peccadilloes of her contemporaries such as HG Wells.

"He believed in sleeping with anyone he could get to bed with him" or

Bernard Shaw "he was quite wrong about sex. I don't believe he ever even slept with his wife."

But she's not entirely happy with the results of the freer attitudes towards sex that she helped pioneer "I'm glad the fear and ignorance of sex has gone, but the only disadvantage of birth control was that it enables women to treat sex in the same mechanical way men are able to. There's more sex today, but probably less love. It applies to other areas too - a lot of women's libbers of today are trying to fit into the man-made civilisation."

Dora has had her share of hard times on her personal life, too. Her split from Bertrand Russell was acrimonious. He may have been a champion of women's rights but on the domestic front "I suppose you would call him a chauvinist" she says.

"Bertie did his best to keep up with the modern trends" she notes in *Challenge to the Cold War*, the recently published diary volume "it is not surprising he felt overstrained and reverted to type". Bertrand Russell's 'type' being from an old-fashioned aristocratic upbringing.

The mystery that surrounds the death of her lover, the novelist Paul Gillard, who was a communist, has never been cleared up "I'm convinced it was either the fascists or British Intelligence" she states. Her son Roddy died a couple of years ago, and her other son, John, had a severe breakdown. It was this son who inherited Bertrand's title and made one of the most remarkable speeches ever made to the House of Lords. Among other things, he advocated the banning of the CIA, the abolition of prisons, suggested that "everyone should become aristocrats", there should be more naked bathing, and that the running of the country should be put in the hands of those under thirty "because they have more compassion".

Dora is still writing at 90, sending in letters to papers putting forward her views, which are unorthodox enough to offend dogmatic followers of most political persuasions, and annoying the Establishment, who have been keeping a wary eye on her ever since during the First World War she wasn't allowed to go walking near the sea with Bertrand Russell, because it was felt, as 'subversives', they might start signalling classified secrets to enemy ships.

She laughs off my question of whether she has any remaining ambitions. "What I'd really like to do is some redecorating about the house" she chuckles "But I never seem to have the time. Time is the most precious thing when you're my age, you know".

© The Religion of the Machine Age published by RSP. The Tamarisk Tree, her diaries Vols 1,2,3 are published by Virago. Lord John Russell's speech has been reprinted by Open Road Press, 2 Berrymore Crescent, London W11. (Said 21 and SAE)

NEWS ABOUT MEMBERS

- (23) Irving Anellis advises of a planned Special Session on Bertrand Russell as part of this year's program of the Canadian Society for History and Philosophy of Mathematics, at McMaster University. Tentative date: 5/24/87. To contribute a paper, contact Albert Lewis at the Bertrand Russell Editorial Project, MacMaster. He is doing a survey of Russell studies in the USSR, and this summer will attend the 8th International Congress of Logic, Methodology and Philosophy of Science, in Moscow.
- (24) Cherie Ruppe (17114 N.E. 2nd Place, Bellevue, WA 98008) is buying a new house with "the world's greatest view", and offers for sale "the perfect 3-bedroom townhouse" in Bellevue, WA.
- (25) Ed Tanguay would like to communicate with other members through the mail. He is a technical consultant and computer programmer for a firm of CPAs. He is interested in philosophy, among other things. His address: 530 Oliver St., Conway, AR 72032.
- (26) Paul Kurtz is elected IHEU co-chairman. BOB DAVIS called our attention to this story in *Free Inquiry* (Winter 1986/87, p.20):

The IHEU

The International Humanist and Ethical Union (IHEU) has more than three million members and is a coalition of more than sixty secular humanist, rationalist, free-thought, and atheist organizations in twenty-two countries. The early sponsors of the IHEU, which was founded in 1952, were also instrumental in the founding of the United Nations. They included Sir Julian Huxley (the first head of UNESCO), Lord Boyd Orr (first head of the World Food Organization), and Brock Chisholm of Canada (the first head of the World Health Organization).

The IHEU publishes the journal *International Humanism* and provides a platform for the exchange of ideas of particular interest to humanists. The IHEU sponsored the Catholic-Humanist Dialogue (with the cooperation of the Vatican) and the Marxist-Humanist Dialogue, which was held in Eastern Europe and which was attended by dissenters.

Elections at the Eleventh Congress of the IHEU, held in Oslo, Norway, from August 3 to 7, 1986, resulted in three new cochairmen. They are (left to right) Paul Kurtz, editor of *FREE INQUIRY* and professor of philosophy at the State University of New York at Buffalo; Rob Tiel-

man, head of the Dutch Humanist League and professor at the University of Utrecht; and Svetozar Stojanovic, editor of the international journal *Praxis* (published by Oxford University Press) and professor of philosophy at the University of Belgrade.

The IHEU is headquartered in Utrecht, the Netherlands. It convenes international congresses every four years. For information on becoming a member or subscribing to its journal, write to: IHEU, Oudkerhof 11, 3512 GH, Utrecht, the Netherlands.

- (27) Warren Smith sends his customary yearend letter, which we're always glad to get. He's one of the busiest guys we know. Here's part of his letter; sorry, we cannot show Greta Garbo's pool.

1 January 1987

Dear Lee,

Greetings! Last year in my Winter Solstice letter, I implied that big changes were forthcoming. I'll now try to bring you up-to-date and hope you'll have written me as much about what's new with you.

- Roger Sharp of Channel 2, who had just done a story on my Adam Smith club, died before the program could be aired. But what a genial man!
- I won a tax-free \$7,500 award "for excellence in private enterprise education" from the Freedoms Foundation at Valley Forge because of my concept
- After 32 years of teaching English at New Canaan (Connecticut) High School, I accepted their offer and took early retirement. New Canaan (which is where Jack Paar and David Letterman still live) has certainly been a major influence in my life, and I will (not snail) miss it greatly.

He's back to running his Variety Recording studio full time (he started it in 1948), and time does not hang heavy on his hands.

- (28) Eric Nelson, high school senior, says, "We do just about nothing in my physics class, very disappointing. Can you suggest some books in physics?" Please send your book suggestions c/o the newsletter for forwarding to Eric.
-

BRS DOCTORAL GRANT

- (29) Failure. To state it inelegantly, we flopped...in our aim of raising \$500 among ourselves for the 1987 Doctoral Grant. Had we succeeded, we would have met the condition for collecting another \$500 from an anonymous donor. Then we would have had the \$1000 needed for a 1987 BRS Doctoral Grant.

We didn't come close. We didn't even reach the 5% mark.

We sometimes hear brave talk about what the BRS does, or would like to do, for the general good. The Doctoral Grant is one of the very few things the BRS does for non-members. Also, the Grant gives a modest assist to Russell scholarship, a BRS aim. We think there ought to be a real effort to hold onto the Doctoral Grant, which otherwise will disappear.

Strong measures are needed.

We propose that all dues be raised \$5, starting in 1988, which will provide the needed \$1000 a year.

* Agreed?

Prices are postpaid. Books are paperback unless otherwise indicated.
 Please send check or money order, payable to the Bertrand Russell Society,
 to the Russell Society Library, Box 434, Wilder, VT 05088

Audio-Visual:

Warren Allen Smith has provided the Library with cassette copies of Graham Whettam's SINFONIA CONTRA TIMORE- *Symphony Against Fear*. Dedicated to Russell, it was first performed in his presence on February 25th, 1965. Whettam's ON BERTRAND RUSSELL- AND A SYMPHONY, which was issued as a ten page supplement to Newsletter #15, is also available for loan.

New books to lend:

119. THE DORA RUSSELL READER Beverly Earles's review will appear in a future NEWS. In print at 7.95/paper. Methuen, Inc. Correction: see ().
120. THE RELIGION OF THE MACHINE AGE by Dora Russell In print at 27.95/cloth Methuen, Inc.
- 121 " Who Wrote Bertrand Russell's WISDOM OF THE WEST? " by Carl Spadoni
An offprint from The Papers of the Bibliographical Society of America
The author
- 122 THE PHILOSOPHY OF LOGICAL ATOMISM, edited and with an introduction by David Pears In print at 7.95/paper. Open Court

New sale book:

The Library has a few copies of the BERTRAND RUSSELL MEMORIAL VOLUME for sale. This 488 page volume was published in 1979 in the Muirhead Library of Philosophy series and consists of 26 essays on Russell's philosophy, logic, ethics and politics. Most of the contributions are technical and so would be of limited interest to many members. Two notable exceptions are Anthony Flew's "Russell's Judgement On Bolshevism" and Benjamin Barber's "Solipsistic Politics: Russell's Empiricist Liberalism".

The price for Ken Blackwell's THE SPINOZISTIC ETHICS OF BERTRAND RUSSELL has increased from 20.00 to 30.00

FUN & GAMES

- (33) BR's game. You recall BR's lesson in how to make comparisons (RSN48-40):

I am firm. You are obstinate. He is a pig-headed fool.

MARGE MIGNACCA comes up with these:

I am cautious. You're suspicious. He is paranoid.
I am frugal. You're a tightwad. He's a miser.

- (34) Trivia. Q: Who took a B.A. in philosophy at Yale, and then went on to become a radio idol as a crooner, in the late 20s and 30s...and what were the songs he made famous (and vice versa)?

A: Rudy Vallee, singing "I'm just a vagabond lover", "My time is your time", "The Maine Stein Song", "If I had a talking picture of you."

With thanks to STEVE REINHARDT.

BRS BUSINESS

- (35) Our warm thanks to the BRS members -- the largest number ever to do so -- who recently made contributions to the BRS Treasury when renewing membership. They checked a membership renewal category that included a contribution. We list them here...and apologize for our stupid computer which often chops up names at the end of a line.

LOUIS K. ACHESON, JAY ARAGONA, DONG-IN BAE, MICHAEL EMMET BRADY, POLLY COBB, WHITFIELD COBB, ANGELO A. D'ALESSIO, DENNIS J. DARLAND, ROBERT K. DAVIS, LEE EISLER, DAVID GOLDMAN, ARTTIE GOMEZ, DONALD GREEN, THOMAS J. HARRIS, JR. USN/RET, WALTER MOORE HENRITZE, CHARLES W. HILL, DONALD W. JACKANICZ, ADAM JACOBS, HERBERT C. LANSDELL, PHILIP M. LE COMPTE, JOHN R. LENZ, MARTIN LIPIN, MICHAEL H. MALIN, STEVE MARAGIDES, HUGH MCVEIGH, RALPH A. MILL, GLENN R. MOYER, SANDRA MOYER, ERIC S. NELSON, PAUL M. PFALZNER, STEPHEN J. REINHARDT, MICHAEL J. ROCKLER, HARRY RUJA, CHERIE RUPPE, TIMOTHY S. ST. VINCENT, JOHN R. TOBIN, CLIFFORD VALENTINE, ELEANOR VALENTINE, RONALD H. YUCCAS.

(36) Contributions are still welcome, which is possibly the understatement of the year. As you will discover elsewhere in this issue, the BRS had a bank balance (on 12/31/86) of \$953, and unpaid debts (liabilities) of \$1327. That means we start the new year, 1987, \$374 in debt. So please contribute whatever you can whenever you can. Thanks!

(37) Renewal Honor Roll. This year more members than ever before paid their dues ahead of time, that is, before January 1st. We thank these early bird renewers for making life a little easier...and apologize again for our computer's stupidity.

LOUIS K. ACHESON, J. M. ALTIERI, JEAN ANDERSON, TRUMAN E. ANDERSON, JAY ARAGONA, RUBEN ARDILA, J. BR QUOTED (MAYBE)

(39) Reader's Digest, Italian Edition, is considering quoting this sentence from BR's "In Praise Of Idleness":

"The wise use of leisure, it must be conceded, is a product of civilization and education."

Thank you, DON JACKANICZ.

FOR SALE

- (40) Members' stationery, 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "**Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid. Order from the newsletter, address on Page 1, bottom.
- (41) Winter Solstice cards: American Atheists (POB 2117, AUSTIN, TX 78768) offers a fine collection of these alternatives to Christmas cards, advises ARTTIE GOMEZ.
- (42) Freedom From Religion Foundation offers this attractive stationery for brief letters. The back of what is shown here is blank, for your message.

Bertrand Russell
(1872-1970)

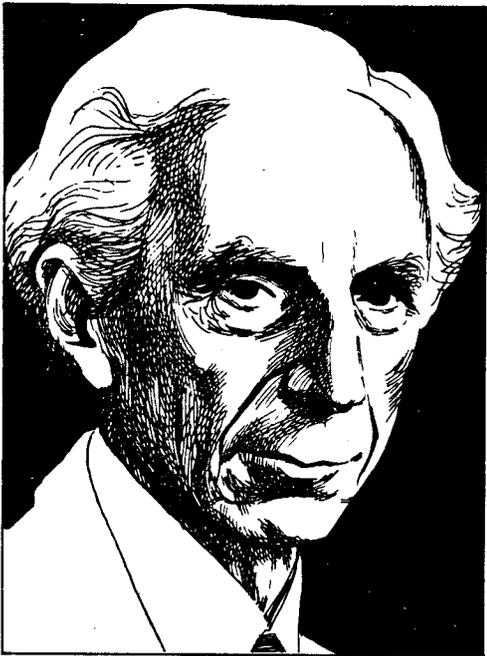

"A good world," Bertrand Russell wrote, "needs knowledge, kindness, and courage; it does not need a regretful hankering after the past, or a fettering of the free intelligence by the words uttered long ago by ignorant men."

"Bertie" to friends, Russell, during his 98 years, did all he could to add to human knowledge and to inspire kindness. The British mathematician, philosopher and social activist authored 75 books, including *Why I Am Not A Christian*. He launched headlong into a life of radicalism in his 40s as a pacifist opposing World War I. He spent his last years courageously working for nuclear disarmament.

Russell's unflinching rationalism spared no absurdity that crossed its path; his wit and puckish charm continue to enchant readers and thinkers.

"I believe that when I die I shall rot, and nothing of my ego will survive. I am not young, and I love life. But I should scorn to shiver with terror at the thought of annihilation. Happiness is nonetheless true happiness because it must come to an end, nor do thought and love lose their value because they are not everlasting."

FREETHOUGHT SERIES, Number 10, 1986
Freedom From Religion Foundation, Inc.
P.O. Box 750, Madison, Wisconsin 53701
Drawing by Karen Fogel

Thank you, RONALD YUCCAS.

- (43) DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
elected for 3-year terms, as shown

1985-87: JACQUELINE BERTHON-PAYON, BOB DAVIS, ALI GHAEMI, HUGH MOORHEAD

1986-88: LOU ACHESON, KEN BLACKWELL, JOHN JACKANICZZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, CARL SPADONI TOM STANLEY

1987-89: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, DON JACKANICZ, STEVE MARAGIDES, FRANK PAGE, MICHAEL ROCKLER, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA

The 6 BRS officers are also directors, ex officio,

BOOK REVIEW

- (44) The Dora Russell Reader, "57 years of writing and journalism, 1925-1982," Dale Spender, ed. (London: Routledge and Kegan Paul, 1983), reviewed by BEVERLEY EARLES. (Our thanks to TOM STANLEY.)

Nicholas Walter, Company Secretary of the Rationalist Press Association, recently wrote of Dora Russell that although she had been remembered by way of many obituaries "yet her freethought activity was almost universally ignored..." (*New Humanist*, Summer 1986). This is a conclusion to which I had come after considerable research into the life and works of this remarkable woman who was poet, historian, educator, peace maker, feminist and humanist intellectual. Nevertheless it has to be said that those who have attempted to give Russell her due have been the Rationalist Press Association over a period of several decades and, more recently, Dale Spender.

In the *Dora Russell Reader* Spender has included selections which tend to highlight the feminist aspect of Russell's work. However insofar as Russell's feminism reflects her critique of the history of Western Civilization and of Descartean thought in particular, *The Reader* gives one a taste of the insights, vision and motivation behind more than fifty seven years of both writing and social action in a range of areas.

Those of us who are familiar with current trends in feminist thought are shown that without a doubt Russell was some fifty years or so ahead of her time. Among other selections Spender includes *Hypatia* (1925) in its entirety and selections from *The Right to be Happy* (1927) and *In Defence of Children* (1932). In these works Russell declares that women's liberation does not have to do with being freed to work in the public work place in the manner of the male of the species. Equality did and does not mean uniformity. For Russell, the feminism of the suffragists and that of the sixties and seventies paid the price of denying essential differences between male and female and, in particular, the importance of motherhood. Russell's aim is to promote emancipation in such a way that women will be forced neither to become male clones nor to "have it all" by a social tradition that deems problems of family versus outside workforce as purely personal. But she is just as concerned to emancipate men from what she regards as a dehumanising life style characterised by a low level of emotional experience and involvement. The latter has been particularly obvious in family life and has served to foster both dispassionate and destructive attitudes which now threaten the very existence of the species. For Dora Russell it is no accident that under such conditions women and mothers should be the ones to take defiant stands for peace in the face of male opposition.

What does all of this add up to? The need for women to fulfill the rational side of their natures and men the emotional side of theirs, birth control, the right to abortion, flex time, maternal and paternal leave, the right rather than the privilege to send young children to high quality nursery schools and, above all, the recognition that children have the right to grow up in peaceful and loving conditions which foster the development of a fully integrated personality.

Russell's views were not popular in the twenties and neither are they now. Indeed feminists such as Erica Jong and Betty Friedan who are currently advocating ideas along similar lines have by no means always received a favourable reception from the feminist movement - they have been deemed as "selling out" to the reactionary voices in society. It is both interesting and instructive to notice that the trend of thought which Jong, Friedan and others represent shows that Russell lived long enough to see important feminist arguments move full circle.

Spender has included a number of selections which were hitherto unpublished in English. These are a sample from some sixty articles which Russell wrote for the Spanish Periodical *El Sol* during the period in which she was running Beacon Hill school. Also included is a chapter from an unpublished book giving an account of the "Women's Caravan of Peace" which she organised in 1958 and which was possibly the first effort of its kind. The "Caravan" was an arduous trip of goodwill throughout Western and Eastern Europe at a time when peace groups showed little if any concern whatsoever to bring down the barriers of the Cold War. Russell writes that the women received no support either financially or psychologically from peace and labour movements in the West and that the whole enterprise was regarded with suspicion as to motive and disbelief as to accomplishment. For the full story of the "Caravan" one needs to read the third volume of her autobiography *The Tamarisk Tree* vol. 3. *Challenge to the Cold War*. Virago, 1985.

The *Dora Russell Reader* has the disadvantages of any volume of its kind in that full development of argument and breadth of interests cannot be fully presented. One important area which is largely missing is that of education. Russell's perspective on life was expressed in specific ideas on what and how children should be educated and many of these notions were integrated with those of Bertrand and put into practice at Beacon Hill school. Another omission from the reader is the inclusion of any of the countless articles which Russell wrote as scientific correspondent for Eastern Block publications of the British Ministry of Information during World War II. During this part of her career Dora was able to participate in bridge building exercises between Western and Eastern Europe which meant so much to her.

In spite of the inevitable presence of gaps, Spender does present the main thrust of Russell's thinking and life concerns and fans of Bertrand will notice points of both similarity and difference with that eminent philosopher and social activist. This is not the place to argue for Dora's distinct individuality in relation to Bertrand but it should be plain to anyone who reads Spender's selections that she was a thinker and humanist in her own right. Dora's analysis of what it is to be human in both a masculine and feminine way provided her with her own particular understanding of both the perennial and day to day concerns of living. It is we who are the poorer if we ignore what she has to say.

ABOUT OTHER ORGANIZATIONS

- (45) Humanist Association of Canada. For the first time, a joint HAC/American Humanist Association annual congress is being planned, in Canada for June 26-28...in downtown Montreal, close to McGill University. This item and the next one are from HAC's Winter Newsletter 1986-7...with thanks to PAUL PFALZNER.
- (46) The Oslo Humanist World Congress. Here is a brief report by HAC President Pfalzner:

Seven Canadians were among the more than 500 participants from 25 countries attending the 1986 Humanist World Congress in Oslo this summer. The five-day program, with its main theme, Humanists Say Yes To Life, was excellently organized around the three Congress sub-themes of Self-Respect, Human Solidarity and Survival, with stimulating and even radical addresses given by such speakers as Marilyn French, noted US author and feminist, Johan Galtung, Norwegian sociologist and internationally known peace researcher, Prof. Gerald Larue, Dr Lily Boeykens of Belgium, and M.I. Spetter, USA. Sir Hermann Bondi, President of the British Humanist Association, noted mathematician, astrophysicist and science advisor in the UK, gave an incisive opening address on humanism. Certainty not being a human characteristic, he noted, "the absurd certainty of most religious and certain political creeds is not for us", and exclusivity he held to be incompatible with humanism, implying that, for example, societies of secular humanist lefthanded chessplayers would be undesirable.

Ms French, in her address, argued that Western thought had been "set on a course of dangerous delusion" as a result of Aristotle's distinction between the necessary and the volitional realms of existence -- assigning laborers, mechanics, slaves, as well as women and children to the necessary, and "free propertied men" only to the volitional. This fateful concept has led, over time, to a disregard, a despisal, of everyday life and work, resulting in the low value given to physical needs, to the body, to women and their work, to pleasure in life, and, conversely, exalting the mind, abstract thought, lack of emotion, an elite of naturally superior men, and power. To escape from these distortions, Ms French advocated a life for all human beings directed -- not to gaining power -- but to achieving felicity, satisfaction and pleasure.

Gerald Larue, professor emeritus of religion, reviewed the origins of apocalyptic thought, as part of Christian belief, arising from aspects of Jewish historical experience under the despotic rule of King Antiochus IV. Professor Larue stressed that "biblical apocalyptic thinking is a destructive, divisive notion coming from a destructive, divisive book, the Bible... -- one of the most pessimistic and negative collections of writings in human history" -- the story of a god whose failures drove him repeatedly to anger with his creatures, a god requiring absolute, blind obedience and who thus instilled irresponsibility for human well-being in his faithful. These outmoded and harmful beliefs needed to be abandoned and replaced by truly human understanding and concern. "We cannot accept a religion that tells us the future is fixed and pre-determined." Human beings must cultivate their rationality, and accept that "science gives us proof without certainty, while religion claims to give certainty without proof."

CORRECTION

- (47) Ronald Yuccas was inadvertently omitted from the list of members (RSN51-35). He is indeed a member, in good standing, and has been for 7 years. Our error; very sorry. His address: 812 Morven Court, Naperville, IL 60540.

THE RUSSELL ARCHIVES

- (48) No pictures or posters. The Archives at McMaster have advised that they do not have pictures or posters of BR for sale, except for people doing research. Duplicating archival photos is costly, complicated and may possibly damage the originals.

PHILOSOPHY

- (49) From "The Whys of a Philosophical Scrivener" by Martin Gardner (NY: William Morrow, 1983,) p 29...with thanks to TOM STANLEY:

When I was an undergraduate philosophy student at the University of Chicago I attended a seminar given by Bertrand Russell. Carnap, then a professor at Chicago, went to these sessions and often engaged Russell in spirited debates which I only partly comprehended. On one occasion they got into a tangled argument over whether science should assert, as an ontological thesis, the reality of a world behind the phaneron. Carnap struggled to keep the argument technical, but Russell slyly turned it into a discussion of whether their respective wives (Russell's new wife was knitting and smiling in a back-row seat) existed in some ontologically real sense or should be regarded as mere logical fictions based on regularities in their husbands' phaneron.

The next day I happened to be in the campus post office, where faculty members came to pick up mail. Professor Charles Hartshorne, a whimsical philosopher from whom I was then taking a stimulating course, walked in, recognized me, and stopped to chat.

"Did you attend the Russell seminar yesterday?" he asked. "I was unable to go."

"Yes," I said. "It was exciting. Russell tried to persuade Carnap that his wife existed, but Carnap wouldn't admit it."

Hartshorne laughed. Then, by a quirk of fate, he walked Carnap to get his mail. Hartshorne introduced us (it was the first time I had met Carnap; years later we would collaborate on a book); then, to my profound embarrassment, Hartshorne said: "Mr. Gardner tells me that yesterday Russell tried to convince you your wife existed, but you wouldn't admit it."

Carnap did not smile. He glowered down at me and said, "But that was not the point at all."

FOREIGN AFFAIRS

- (50) Ramon Suzara, who had been living in the USA during the Marcos regime, writes from the Philippines:

It's great to be back home with my people. I'm having a wonderful time. I'm particularly happy to be residing once more at the place where the Philippine branch of the Bertrand Russell Peace Foundation had its office.

I believe that Cory Aquino is the best bet for this country in the short run. Though she's very religious, she is also honest, sincere, and not one of those stupid politicians. But what I think this country needs in the long run is a Fidel Castro -- a leader who uses much of his head and very little of his knees. The lofty ideals of religion, if they are to be beneficial, must be fulfilled in this life, and not in the next, as there may not be any.

BELIEFS

- (51) What BR's favorite scientist believes, from "What I Believe", Mark Booth, ed. (Firethorn Press, 1984)..with thanks to BOB DAVIS. The believer? Albert Einstein.

Strange is our situation here upon earth. Each of us comes for a short visit, not knowing why, yet sometimes seeming to divine a purpose.

From the standpoint of daily life, however, there is one thing we do know: that man is here for the sake of other men -- above all for those upon whose smile and well-being our own happiness depends, and also for the countless unknown souls with whose fate we are connected by a bond of sympathy. Many times a day I realize how much my own outer and inner life is built upon the labours of my fellow-men, both

living and dead, and how earnestly I must exert myself in order to give in return as much as I have received. My peace of mind is often troubled by the depressing sense that I have borrowed too heavily from the work of other men.

I do not believe we can have any freedom at all in the philosophical sense, for we act not only under external compulsion but also by inner necessity. Schopenhauer's saying – "A man can surely do what he wills to do, but he cannot determine what he wills" – impressed itself upon me in youth and has always consoled me when I have witnessed or suffered life's hardships. This conviction is a perpetual breeder of tolerance, for it does not allow us to take ourselves or others too seriously; it makes rather for a sense of humour.

To ponder interminably over the reason for one's own existence or the meaning of life in general seems to me, from an objective point of view, to be sheer folly. And yet everyone holds certain ideals by which he guides his aspiration and his judgment. The ideals which have always shone before me and filled me with the joy of living are goodness, beauty, and truth. To make a goal of comfort or happiness has never appealed to me; a system of ethics built on this basis would be sufficient only for a herd of cattle.

Without the sense of collaborating with like-minded beings in the pursuit of the ever unattainable in art and scientific research, my life would have been empty. Ever since childhood I have scorned the commonplace limits so often set upon human ambition. Possession, outward success, publicity, luxury – to me these have always been contemptible. I believe that a simple and unassuming manner of life is best for everyone, best both for the body and the mind.

My passionate interest in social justice and social responsibility has always stood in curious contrast to a marked lack of desire for direct association with men and women. I am a horse for single harness, not cut out for tandem or team work. I have never belonged wholeheartedly to country or state, to my circle of friends, or even to my own family. These ties have always been accompanied by a vague aloofness, and the wish to withdraw into myself increases with the years.

Such isolation is sometimes bitter, but I do not regret being cut off from the understanding and sympathy of other men. I lose something by it, to be sure, but I am compensated for it in being rendered independent of the customs, opinions, and prejudices of others, and am not tempted to rest my peace of mind upon such shifting foundations.

My political ideal is democracy. Everyone should be respected as an individual, but no one idolized. It is an irony of fate that I should have been showered with so much uncalled-for and unmerited admiration and esteem. Perhaps this adulation springs from the unfulfilled wish of the multitude to comprehend the few ideas which I, with my weak powers, have advanced.

Full well do I know that in order to attain any definite goal it is imperative that *one* person should do the thinking and commanding and carry most of the responsibility. But those who are led should not be driven, and they should be allowed to choose their leader. It seems to me that the distinctions separating the social classes are false; in the last analysis they rest on force. I am convinced that degeneracy follows every autocratic system of violence, for violence inevitably attracts moral inferiors. Time has proved that illustrious tyrants are succeeded by scoundrels.

For this reason I have always been passionately opposed to such regimes as exist in Russia. The thing which has discredited the European forms of democracy is not the basic theory of democracy itself, which some say is at fault, but the instability of our political leadership, as well as the impersonal character of party alignments.

What is truly valuable in our bustle of life is not the nation, I should say, but the creative and impressionable individuality, the personality – he who produces the noble and sublime while the common herd remains dull in thought and insensible in feeling.

This subject brings me to that vilest offspring of the herd mind – the odious militia. The man who enjoys marching in line and file to the strains of music falls below my contempt; he received his great brain by mistake – the spinal cord would have been amply sufficient. Heroism – command, senseless violence, the accursed bombast of patriotism – how intensely I despise them! War is low and despicable, and I had rather be smitten to shreds than participate in such doings.

Any such stain on humanity should be erased without delay. I think well enough of human nature to believe that it would have been wiped out long ago had not the common sense of nations been systematically corrupted through school and press for business and political reasons.

GOVERNMENT/POLITICS

(52) From the (Sunday) New York Times, 1/25/87, p. E7:

PETITION TO THE PRESIDENT OF THE UNITED STATES

THE CIVIL LIBERTIES CAMPAIGN AGAINST SECRECY IN GOVERNMENT — THE RIGHT TO KNOW

Dear Mr. President:

We respectfully urge you to resign your office for the following reasons:

ACTS OF WAR

You have engaged in acts of war against Grenada, Libya and Nicaragua. You thereby violated the Constitution, the War Powers Act, the Neutrality Act, international law, the U.N. and O.A.S. charters, our 1926 Treaty of Amity with Nicaragua, as well as the Nuremberg Charter and Judgment establishing "Crimes Against the Peace."

THE RULE OF LAW

The United States enjoys the world's respect for its leadership in establishing the International Court of Justice for the settlement of international disputes. You reversed this salutary course by refusing to obey the Court's decision that you cease the military attacks upon Nicaragua which the Court found had violated our 1926 Treaty and international law, and by your refusal to continue our 1946 acceptance of the Court's jurisdiction.

SECRECY, DECEPTION AND DISINFORMATION

You concealed from Congress and the American people your military actions against countries such as Nicaragua with whom we were at peace. You supported the Contras, untruthfully asserting as your purpose the interdiction of the passage of arms to Salvador; your true objective, as the Court's decision reveals, was to overthrow the Nicaraguan government.

THE SALE OF ARMS TO IRAN AND THE DIVERSION OF PROCEEDS TO THE CONTRAS

By Executive order the delivery of arms to Iran is illegal. You urged the countries of the world to embargo such deliveries. You criminally prosecuted persons for violating the Executive order yet you were secretly selling arms to Iran, thus violating the very laws you were sworn to uphold. Simultaneously, you were supplying Iraq with military surveillance data. Thus, your claim that you sought peace in the Mid-East is unbelievable. In addition, your Attorney General has admitted that the proceeds of the Iranian sales were in part diverted to illegal uses such as military aid to the Contras.

FAILURE TO DETERMINE THE FACTS

Attorney General Meese failed to take precautions to preserve the evidence of administration wrongdoing, some shredded by Lt. Col. North. You did not direct him and Admiral Poindexter to tell Congress what they know with respect to Iran and Nicaragua. You failed in your duty to have them as employees account to you as employer. These steps were required to carry out your promise to reveal the facts to the American people.

THE "PRIVATE" SECTOR OF CONTRA AID

You expressed approval of "private" military aid to the Contras when Congress forbade government aid. It now appears that your Administration may have actively participated in these efforts through Col. North's connection with these groups while on the National Security Council, and through the many former government employees like General Secord who were involved both in arms sales to Iran and aid to the Contras.

YOUR RESPONSIBILITY

As Chief Executive, it was your responsibility to prevent such illegal conduct. Enough has now been revealed to suggest that Congressional investigations and an independent prosecutor will uncover the facts which you and your administration have attempted to conceal.

Notwithstanding our various allegations, you would win back the respect of the American people by resigning your Presidency, thus restoring our country to its rightful prestige.

Einstein -- continued from Page 24

The most beautiful thing we can experience is the mysterious. It is the source of all true art and science. He to whom this emotion is a stranger, who can no longer pause to wonder and stand rapt in awe, is as good as dead: his eyes are closed. This insight into the mystery of life, coupled though it be with fear, has also given rise to religion. To know that what is impenetrable to us really exists, manifesting itself as the highest wisdom and the most radiant beauty which our dull faculties can comprehend only in their most primitive forms - this knowledge, this feeling, is at the centre of true religiousness. In this sense, and in this sense only, I belong in the ranks of devoutly religious men.

I cannot imagine a God who rewards and punishes the objects of his creation, whose purposes are modelled after our own - a God, in short, who is but a reflection of human frailty. Neither can I believe that the individual survives the death of his body, although feeble souls harbour such thoughts through fear or ridiculous egotism. It is enough for me to contemplate the mystery of conscious life perpetrating itself through all eternity, to reflect upon the marvellous structure of the universe which we can dimly perceive, and to try humbly to comprehend even an infinitesimal part of the intelligence manifested in nature.

May 1987

- (1) Highlights: Prize Contest: win a good book (32). Annual Meeting (23,34). Candidates for Director wanted (7). BR's awards and honors (5). Speak of the Devil (28). Farley reminisces (15). An asterisk in the left column indicates a request. The Index is at the end.

BY BERTRAND RUSSELL

- (2) Ten. We are reprinting the following because we think it ought to be looked at every so often. 9 years have gone by since we found it in BR's Autobiography, Volume III (S&S:1969) and ran it (RSN20-14). It first appeared in the New York Times Magazine of December 16, 1951, where it was called "A Liberal Decalogue". This is how it appeared in The Humanist (July/August 1982). (Thank you, CHERIE RUPPE.)

BERTRAND RUSSELL'S TEN COMMANDMENTS

- | | |
|---|--|
| <p>1. Do not feel absolutely certain of anything.</p> <p>2. Do not think it worth while to produce belief by concealing evidence, for the evidence is sure to come to light.</p> <p>3. Never try to discourage thinking, for you are sure to succeed.</p> <p>4. When you meet with opposition, even if it should be from your children, endeavor to overcome it by argument, and not by authority, for a victory dependent upon authority is unreal and illusory.</p> <p>5. Have no respect for the authority of others, for there are always contrary authorities to be found.</p> | <p>6. Do not use power to suppress opinions you think pernicious, for if you do the opinions will suppress you.</p> <p>7. Do not fear to be eccentric in opinion, for every opinion now accepted was once eccentric.</p> <p>8. Find more pleasure in intelligent dissent than in passive agreement, for, if you value intelligence as you should, the former implies deeper agreement than the latter.</p> <p>9. Be scrupulously truthful, even when truth is inconvenient, for it is more inconvenient when you try to conceal it.</p> <p>10. Do not feel envious of the happiness of those who live in a fool's paradise, for only a fool will think that it is happiness.</p> |

BR QUOTED

- (3) Better than victory, from Parade Magazine (2/1/87, p.2), -----> with thanks to WHITFIELD COBB and DON JACKANICZ.

Q Who is the author of this simply marvelous and unforgettable quotation: "There is something better than victory, and that is the avoidance of war"?—Adrian Thompson, Springfield, Ill.

A Those memorable words have been credited to the late Bertrand Russell—British philosopher, mathematician, writer and winner of the Nobel Prize in literature in 1950.

BY BERTRAND RUSSELL

(4) My Impressions Of Australia is the title of BR's fourth talk over Australian radio, on August 23rd, 1950

At the end of my eight weeks in Australia I have formed some impressions, but, being gathered in so short a time, they are, of necessity, very superficial, and likely to be in many points mistaken. There is one thing, however, about which I am confident that I am not mistaken, and that is your great kindness to visitors. Everywhere I have received generous hospitality, and I have experienced every wish to make my tour a pleasant one. For this I wish to thank all who have contributed to so pleasant a result.

It is natural to an Englishman to compare Australia with the United States. I had expected to find great similarities, but, in fact, I have been more struck by the differences. It has seemed to me that Australians on the whole are happier than Americans. They do not seem to have the same restless itch to be always doing something else or being somewhere else. No doubt American restlessness is bound up with American energy and enterprise, and it is possible that if Australia were inhabited by Americans, its resources would be developed more rapidly, but if so, this result would be dearly purchased at the price of universal discontent. The possibilities of development in Australia seem to me to be enormous. I think that some of the inhabitants of your big cities are perhaps insufficiently aware of the possible importance of vast undeveloped rural regions. I am in no degree opposed to industrial development in Australia, but the importance of your continent in relation to world economy must be as a producer of food and wool, in regard to both of which there is likely to be an increasing world shortage. The very little that I have been able to see of your northern regions has persuaded me that by means of science and collective enterprise, they can be made immensely more productive than they are at present. It has been said by some that these regions cannot be developed by white labor alone. I do not believe this. White men living in your tropical north seem just as healthy, as well developed and vigorous, as those who live in the south.

I have been struck by a curious difference between individual feelings and technical necessities, particularly in your more sparsely populated areas. People's feelings are those of pioneers. They believe in individual enterprise, and in what they can achieve by their own energies. In America a hundred years ago when the West was being conquered, this mentality was largely adequate. There was abundance of timber and water; a man could build his own log house, and, as soon as the ground was cleared, he could raise crops. But in Australia the situation is different. Only by very great capital expenditure can its resources be developed. The Snowy Mountains irrigation project -- to take a well-known example -- requires an expenditure which is beyond that of private capital. Throughout the sparsely populated districts, road, rail, and air communications are vital, but cannot be expected to yield private profit. The admirable flying doctor service, which is mainly supported by those who use it, requires a government subsidy, which, I should have thought, ought to be larger than it is. The scientific study of possibilities is evidently a matter to be undertaken at Government expense, and while something is being done in that direction, I am sure that much more could be done with profit to the community. The individual Australian pioneer is in all these ways [more] dependent upon the Government than the pioneers of other regions in former times. He is more impressed by activities which the Government forbids than by those which it makes possible. I think perhaps this attitude is wholesome since it prevents unnecessary encroachments upon individual liberty, but it can be carried too far if it involves refusal to vote public money where public enterprise is essential.

If your resources are to be developed as they should be, you require, side by side with technical developments, a corresponding increase of population. This is necessary also on other grounds: if Australians are to hold their own as a white man's outpost on the borders of Asia, they can hardly hope to be successful while their population is no larger than that of London. From the point of view of defense, as well as from that of development, there should be energetic encouragement of immigration on a large scale, even though this may involve considerable capital expenditure. A European who has never been in your country does not easily realize the difficulties involved in your geographical position, and I count it among the benefits I have derived from my time among you, that I am more aware of your international problems than I was before. A long term solution of these problems is only possible by a parallel development of technical progress and large scale immigration.

No country is perfect, and you will, I am sure, bear with me if I mention some matters in which I think improvement is possible.

I have had some opportunity of studying the treatment of the aborigines in Australia, and while I am aware that this is rapidly improving, there seems to me to be still room for a considerable advance. Both popular feeling and the police seem unwilling to grant to the aborigines elementary rights of justice. Their tribal organization is largely dissolved, their best lands have been taken from them, and many of them are left helpless through no fault of their own. This places a heavy responsibility on white men, and those who are endeavoring to fulfill this responsibility deserve, I think, more cooperation from the general public than they are apt to receive.

Another thing in which I think there is much room for improvement is your sources of public information. There has been a general belief in Australia in recent years that England was in a bad way, and that people were suffering from an insufficiency of food. The truth is that the average inhabitant of England has been receiving more adequate nourishment during the last few years than at any previous period in history. This misinformation which has been disseminated in Australia has been part of a deliberate propaganda against the

Labour Party. The Labour Party in England, when it came to power in 1945, was faced with a very difficult situation, which it coped with vigorously and honestly without too much regard for popularity. I wonder how Australians who believe that England has been in a bad way account for the fact that so few of those who desire to settle in Australia are English? It is true that now, owing to the threatening international situation, England will be obliged to revert to a regime of austerity from which it had emerged, but there would certainly be no less austerity if a different Government were in power.

One of the most noteworthy characteristics of the modern world is increasing integration. It is less and less possible for communities to live to themselves. In old days a village could live on its produce with very little relation to the outside world; but now this sort of thing is impossible. In the early Eighteenth Century in England, roads were almost impassable, but were the only means of communication between different places. In such a community local feeling could develop without much harm, but few villagers needed a knowledge of world conditions. Now all this is different. The profit to be derived from sheep or cattle depends upon the export trade, and export depends upon complicated conditions of currency and trade agreements. Remote regions are utterly dependent upon means of communication, and will be more and more dependent upon large scale irrigation works and upon scientific research. Since watersheds have no respect for State boundaries, large irrigation works are likely to require action by the Commonwealth Government. Local feeling, whether in a city, a district or a State, is liable to become an obstacle to development, and the functions of the Commonwealth Government will, for technical reasons, almost inevitably increase. Beyond the confines of Australia, the fortunes and the very lives of Australians may depend upon distant events -- upon the fortunes of war in Europe or the Middle East. For good or for ill, the world has to be thought of as a unity. An atom bomb dropped on New York might be as fatal to Australia as an atom bomb dropped on Sydney. We have to learn to make our thoughts less parochial than they used to be -- not that we should cease to love our own country, whichever it may be, but that we should realize more fully than some of us do how the fate of our own country is linked to that of others. This is the sort of thing that could be taught in schools and in the course of instruction in history. I think all this could be taught in a way to give the Australians an increased sense of their individual and collective importance in the history of the human species. Civilizations which owe their origin to Western Europe have discovered a way of life in many ways better than any that former times have known, and this is especially notable in Australia. You have in Australia no great poverty. You have opportunities of enterprise for all who are energetic and vigorous. You have a vast country to be conquered. You have freedom and democracy, and a high level of general education. You have diffused throughout the population various good things which in former times were the privilege of a fortunate minority. If our Western way of life were to become general, these advantages could in time extend to all parts of the world. But if the world is to revert to a form of government in which the few can tyrannize over the many, as happens wherever the Russians have control, mankind would lose -- perhaps for centuries -- the possibility, which now exists, of making the whole world as happy as Australia is already. You Australians have a great part to play as pioneers, not only in the development of your continent, but in pointing the way to a happier destiny for man throughout the centuries to come. This is a noble ambition, and I should wish to see it inspiring your national life and the thoughts and hopes of the young. I am a firm believer in your capacity to play your part in this great work, and I leave your shores with more hope for mankind than I had before I came among you.

[Thank you, TOM STANLEY]

HONORS

- (5) O.M. As you may recall, we have at times past reported on honors awarded to BR. For the presentation speech that accompanied BR's Nobel Prize for Literature, 1950, see NL7-52. He received the Prize for being a "brilliant champion of humanity and free thought". BR's response on this occasion became a chapter, "Politically Important Desires," in his book, "Human Society in Ethics and Politics". BR received UNESCO's Kalinga Prize -- "for the interpretation and dissemination of science" -- in 1951. The presentation speech, and BR's response, can be found in RSN24-20. The Sonning Prize -- "for the advancement of European civilization" -- went to BR in 1960; the presentation speech, and BR's response, are printed in RSN25-21.

All this is prelude. We wanted to print the citation that accompanied BR's Order of Merit (O.M.).

No luck. There isn't any citation.

But the quest wasn't entirely fruitless. We learned that the Order was founded in 1902, is awarded "in recognition of eminent services rendered in the armed services, or toward the advancement of art, literature and science. It is open to both sexes. Except for honorary members from overseas, the Order is limited to 24 persons." Some current Members: Sir Isaiah Berlin, Sir William Walton, Professor Dorothy Hodgkin, Mr. Henry Moore. We found this information in an excellent 28-page booklet, "Honours and Titles in Britain" (1952), which was sent us by the British Information Services, NYC. The news that there isn't any citation was sent us by Sir Edward Ford, K.C.B., K.C.V.O., Secretary and Registrar, the Order of Merit. His address is Central Chancery of the Orders of Knighthood, St. James Palace, SW1A 1BG. Using the booklet, we found that K.C.B. is for Knight Commander of The Most Honourable Order of the Bath, and K.C.V.O. for Knight Commander of The Royal Victorian Order.

PUGWASH

- (6) The 14th Pugwash Workshop on Nuclear Forces was held in Geneva, Switzerland, on 13 and 14 December, 1986...specifically to explore ways to reduce the danger of accidental nuclear war. 34 scientists and public and military figures from 15 countries took part as individuals, not as representatives of their governments or other agencies. What follows are excerpts from the "Statement of the Pugwash Executive Committee", which was sent to us by the Pugwash office, and received on 3/8/87. [Most BRS members will recall that the Pugwash movement was started by BR in 1957.]

Starting a nuclear war would be likely to lead to national suicide and global catastrophe, and therefore could not be justified by any rational purpose or recommended by any responsible leader. Consequently, nuclear war is unlikely to be started by rational leaders who correctly perceive the consequences of their actions.

The most probable initiators of nuclear war are irrational acts, mistakes, and malfunctions. Irrational leaders or groups may come into control of nuclear weapons. Leaders who are ordinarily rational may act irrationally under the intense pressures of a crisis or simply may fail to correctly perceive the consequences of their actions. And mechanical or electronic malfunctions may precipitate chains of events leading to nuclear war in spite of corrective actions -- or in concert with irrational or mistaken actions -- by the human participants in the process. These are the dangers commonly combined under the heading of "accidental nuclear war".

The only way to eliminate completely the chance of nuclear war is to abolish nuclear weapons.

The systems employed by the major powers to maintain control over their nuclear weapons in peacetime and in war (denoted C³I, for Command, Control, Communications, and Intelligence) are complex, sophisticated, and largely secret. It is difficult even for experts to understand all their facets -- and to discover and correct their weaknesses. Because they are largely secret, the peer review that roots out errors in other technical fields is absent in this one, and the dangers residing in the potential interactions of the C³I systems of different countries are unlikely to come to light at all.

Weaknesses in C³I systems are more dangerous during crises than when international relations are calm and stable. C³I components are known to have malfunctioned, but few if any [occurred] during a major international crisis. People in a crisis are likely to be rushed, frightened, tired, and confused. Layers of safety hardware may be peeled away deliberately to bring the weapons to a higher state of readiness for use on short notice.

Mutual fear of pre-emptive attack magnifies the danger. If either side believes its retaliatory forces are vulnerable to pre-emptive attack, it has an incentive to put those forces in a state of high alert, and, if an attack seems to be under way, to try to use them before they are destroyed... a hair-trigger posture.

The "modernization" of nuclear forces on both sides has aggravated the fears of pre-emptive attack, [which] has tended to increase the danger of accidental nuclear war. Development of nuclear weapons systems with high accuracy, short flight times, and numbers sufficient in theory to attack the retaliatory forces of potential adversaries, contribute to the fear that is so dangerous.

The ultimate dangers of this sort will ensue if countries decide that short-warning-time threats to their retaliatory capacity require that the response be completely automated, relying on computers and pre-programmed reactions with no time for significant human participation.

Space-based or pop-up "defensive" weapons would have to be activated almost instantly on detection of enemy launch, and their activation for defensive purposes could not be distinguished from their activities for suppressing the defenses of the adversary as part of a pre-emptive attack. These systems also would pose the threat of nearly instantaneous destruction of space-based and ground-based C³I systems. Their deployment therefore could hardly fail to stimulate the complete automation of the processes for starting a nuclear war, intolerably increasing the chance that such a war would start by electronic accident. Once such weapons were in place, it is hard to see how an automated hair-trigger posture could be avoided even in periods of international calm.

The most essential immediate steps toward reducing the danger of accidental nuclear war are: (1) stopping the nuclear arms race, which in the name of "modernizing" nuclear forces continues to lead to dangerous deployments; (2) initiating a process of deep reductions in nuclear arsenals, with emphasis on removing first those weapons with high capability for counterforce attack; (3) avoiding permanently the weaponization of space.

The proposals that emerged from the Reykjavik meetings -- combining deep and rapid cuts in strategic nuclear forces, removal of U.S. and Soviet intermediate-range missiles from the European region, and recommitment of both sides to strict adherence to the Anti-Ballistic Missile [ABM] Treaty of 1972 for at least ten years -- offer a highly promising approach to the most fundamental problems...and do not require the Reagan Administration to give up research on strategic defenses.

ELECTION OF DIRECTORS

- (7) Nominations for Directors, please. We wish to elect 5 Directors this year, for 3-year terms starting 1/1/88, which will give us a total of 24 elected Directors. The August newsletter will provide a ballot for voting. In this (May) newsletter we seek candidates who will be on the ballot.

We are asking you to nominate candidates. Any member may nominate any other member to be a Director-candidate.

If you wish to be a candidate yourself, notify the Elections Committee and someone will probably nominate you.

The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something, by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. The cost of attending meetings is (federal) tax-deductible for Directors.

We would like to have more than 5 names on the ballot, so as to give members a choice.

A brief statement about the candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.

Directors whose terms expire in 1987 are JACQUELINE BERTHON-PAYON, BOB DAVIS, ALI GHAEMI, HUGH MOORHEAD. They are eligible for re-election.

We urge last year's candidates who were not elected to try again this year.

- * TO NOMINATE SOMEONE -- or to volunteer yourself -- write the Election Committee, c/o the newsletter, address on Page 1, bottom.

BRS AWARD NEWS

- (8) Anthony T. Podesta, President and chief spokesman of People For The American Way, which won the 1986 BRS Award, will be stepping down in May 1988, according to this story -- sent us by DON JACKANICZ -- in the Washington Post (2/2/87). He accepted our Award in person, at our 1986 annual meeting in NYC, spoke briefly, and showed a videotape, "The 'People For' Story" showing the excesses of the religious far right. (That videotape is now in the Russell Society Library.)

Unusual Exit For Leader of Liberal Lobby

Anthony T. Podesta, who cultivates an unconventional approach as president of People for the American Way, is leaving the organization in characteristic style.

Podesta has given notice 16 months before a planned departure in May 1988, saying that he wants to give the liberal lobby enough time "to figure out what they want to do in the post-Podesta era."

Podesta, a Democrat who has run the media-oriented group since television producer Norman Lear founded it in 1980, gave no hint of what he would do next. "I'm by nature a nomad . . . I've never before stayed any place for more than 18 months," Podesta said. "I'll spend the next year figuring out what I want to do when I grow up. I don't have any particular game plan."

Art Kropp, a former staffer for the Republican National Committee and now the group's chief fundraiser, will take over day-to-day management of the group as executive vice president. Podesta will

concentrate on public speaking and long-range planning.

Under Podesta, People for the American Way has grown into the best-financed advocacy group on the left, one that frequently clashes with the Reagan administration. The group, which specializes in First Amendment and religious freedom issues, has raised record amounts of cash with letters attacking Attorney General Edwin Meese III and television evangelists Jerry Falwell and Marion G. (Pat) Robertson. Its budget has nearly doubled to almost \$10 million in the last two years.

Podesta, who worked for the

1980 presidential campaign of Sen. Edward M. Kennedy (D-Mass.) and was a volunteer for 1984 vice-presidential candidate Geraldine A. Ferraro, said he has been approached by some 1988 White House aspirants, including former senator Gary Hart (D-Colo.) and Sen. Joseph R. Biden Jr. (D-Del.), but does not plan a full-time job in politics.

Despite occasional reports of friction involving the excitable Podesta, staff members say the delayed departure was his idea. "I don't think it's good to have a permanent staff bureaucracy in public-interest groups," Podesta said.

BOOK REVIEW

- (10) "Bertrand Russell" by PAUL G. KUNTZ (Boston: Twayne, 1986) is reviewed here by Flemish philosopher, William A. de Pater, of Katholieke Universiteit Leuven [Louvain]. This review will also appear in "Review of Metaphysics". For a brief review by MARVIN KOHL, see RSN52-32. It has also been recommended reading (RSN51-24.)

The main thesis of this book is that "we find in Russell more system than he is given credit for, and indeed more than he even knew he had" (p. 135). With this the author opposes the current interpretations, which chop Russell's philosophy in pieces without any connection. The basic notion is that of "order" (long Russell's preoccupation), defined in Russell's terms as asymmetrical and transitive connexity. This serial relation would be omnipresent for Russell: in thought and reality, both cosmological and political (pp.41-43). Yet the author is not blind to the fact that "not only did Russell constantly alter his theories of truth; at any period of development we can find him taking both sides to illuminate the problem in a dialectical way" (p. 28). Thus Russell's journey may have gone in different directions (p.12), but what incited him was always "his concern with objective truth and with the explicit virtues of the liberal humanitarian" (Preface). So the unity of his work may have to do also with Russell's staying faithful to himself.

Thus the first chapter sets out which were the rebellions which inspired Russell's writings and actions (rebellion against parental authority, against the identification of pleasure with evil, against military patriotism, inequalities created by birth, and religion as reinforcing these evils); it ends with Russell looking back on his long life, finding that he had made many mistakes, but still sticking to the ideals which motivated these rebellions.

The second chapter sketches Russell's quest for certainty; it contains sections on belief, universals, and truth (with a nice argument against the pragmatic theory of truth, p.26). In "The New Logic of Relations" the author points to the central place of Russell's otherwise neglected article in *Mind*, 1901: "On The Notion of Order": here the basis is laid for his achievements in mathematical logic. In this same chapter some technical terms, needed for the concept of "order", are explained. Thus "connexity" means that in a field, ordered by relation R, any two terms, say x and y, are related either as xRy or as yRx . In the case of order, this implies that for any term there must be one and only one place where it can occur (p.34). The difficulty with Russell's definition of order is, as Mr. Kuntz remarks, that it is too narrow: it applies to linear order only, not to the cyclical one (like that of the seasons, where in a sense winter is a successor of itself, such that besides asymmetry there is symmetry). Kuntz notes some other oddities as well: the basic disorder in the world as problematic for Russell's "order-realism" (he is not a substance-realist), and his neglect of the causal order (till in the forties he concentrated on the spatial and temporal orders). The first oddity can be overcome by defining order more broadly, namely in terms of "structure", i.e., as a pattern (or more specifically: as a similarity) of relations. So Chapter Four follows with an exposition of logical atomism, which is based on the structural similarity between language and the world (an inference Russell later thought fallacious). The stress is here on the method, namely that of "relational analysis" (p.60), and with this on paradoxes and their solutions, such as the theory of types and that of descriptions versus proper names. Chapter Five then fills in the metaphysical aspect; it turns out that Russell not only criticized all previous metaphysics, but also what is called "antimetaphysics". He did not succeed however in producing a metaphysics of cosmic order: he had too much of the Anglo-American inhibition for such an endeavor, he failed to unite after having distinguished, and he came too late to recognize the role of causality (pp.89-92). Yet he sometimes dropped his "anxiety for metaphysics", e.g., in 1928 when he came close to Whitehead's system (cf. pp.93 and 163 note 23).

The next two chapters are an exposition of Russell's ethics and political philosophy. Here again he is a victim of his dichotomizing, *in casu* between fact and value: only during some short periods he succeeded in giving more objective foundations than only desires for what he saw as the ideal life, summarized as "love guided by knowledge". Kuntz rightly spots the problem: how can one be an emotivist in ethics, and yet teach morality? Much of what Russell said in these areas (and the fact that he said it) can be explained by his Puritan upbringing and temper; but its fanaticism was most of the time (except his last years because of the lack of time left and the bigness of the dangers) mitigated by the skepticism which he professed as the first command of his "Liberal Decalogue": "Do not feel absolutely certain of anything" (p.11). For Russell the great evils were poverty, war, stupidity, annihilation, and bad religion (pp. 120 and 136); the main virtues are vitality, courage, sensitiveness and intelligence (pp.129-132 form pleasant reading about these virtues and what blocks them).

Chapter Eight, finally, tries to guide the reader through "the labyrinth of Russell's religion". His occupation with religion turns out to be more moral than theological. Being an austere intellectual, Russell could not arrive at an ultimate ground of order: God. Yet he was constant in holding that the most valuable aspect of any person is his personal religion, and that it is a grave defect to have none (p.135). Good religion is motivated by hope and love (p.150). His fighting is against bad religion, which he sees embodied in the churches, which, instead of making the world better, brought cruelty, timidity, and stupidity (*ib*). As a Puritan he had to denounce hypocrisy (p.140); that his wholesale attack on the churches was based on the fallacy of selecting instances should be explained from the same source (p.151).

Perhaps Kuntz has overemphasized the importance of order or structure, although Russell did make inferences from the structure of language to that of the world, thought of mankind as an organic whole, and replaced substances by bundles of properties. But except in the first case, the structures are not very specified, and I can scarcely see Russell's logic (and so his analysis) as "relational". Yet the author is right in

stressing the unity of Russell's thought. Thus the latter's revolt against monism and idealism is not only a question of real external relations, pluralism and the correspondence theory of truth: it is also a revolt against the idealist's metaphysical optimism, which led the Christian thinkers who adopted it to deny the existence or seriousness of evil (p.143). Already the subtitle of Russell's "History of Western Philosophy" ["And Its Connection with Political and Social Circumstances from the Earliest Times to the Present Day] (making connection with political and social circumstances) should have made clear that his humanistic convictions are not that isolated from his ontology or even logic (p.117). Much of his ethics is dominated by epistemological questions (e.g., whether there can be truth in ethics) and vitiated by the same errors he committed elsewhere (notably in his dichotomizing). So although in my opinion Russell's political and ethical convictions do not follow from his metaphysics or logic, there is more coherence in his philosophy than scholars, blinded by the varying of Russell's standpoints, have thought. Kuntz has done well in introducing us into the whole of Russell (only the exposition on logical atomism should have been a bit more concrete). His book is relatively small, but extremely well documented, and yet not difficult to read. Perhaps because it is well ordered.

GOVERNMENT/POLITICS

(11) NECLC continues to focus on Reagan Administration abuses, in -----> the New York Times (3/22/87, p.E6). (shown here reduced in size)

THE AMERICAN PEOPLE'S RIGHT TO KNOW

NO MORE AMERICAN MONEY FOR MURDER, DESTRUCTION AND TERRORISM!

REMOVE ALL U.S. MILITARY PERSONNEL AND BASES FROM CENTRAL AMERICA

To President Ronald Reagan:

Since 1981, the U.S. has covertly constructed or developed in Central America nine military bases, fourteen airfields, a highly sophisticated intelligence apparatus and other military support facilities. Under environmental, climatic and terrain conditions similar to Nicaragua's, over 70,000 troops, Army Reservists and National Guard have been trained in continuous military maneuvers in Honduras. 7,500 more National Guard are scheduled to be trained in 1987.

We demand that you stop all covert activities throughout Central America and especially the C.I.A.'s secret war against Nicaragua through the savage and terrorist Contras, who have wantonly killed thousands of innocent civilians, nearly half of whom are children, and have destroyed schools, hospitals and medical units. Mr. President, your shocking hypocrisy is clearly seen in your pretense to oppose terrorism in Europe and the Near East, but to openly support it by giving all possible aid to the Contras.

In so doing you flout international law and the decision of the World Court condemning the American aggression against Nicaragua and the scandalous tactics of the C.I.A.

Now the United States faces another crisis with your calling on Congress to appropriate an additional \$105 million for the Contras to buy weapons. This unjustified and immoral plan must be halted.

We propose the following steps in response to the crisis:

1. — Abolish all U.S. covert actions,
2. — End the use of military solutions as substitutes for diplomacy and support the Contadora process for Central America,
3. — Strengthen Congressional oversight and control of Executive war-making powers,
4. — Cut off all military and economic aid to the Contra terrorists, and
5. — Abide by the principles of constitutional government, most importantly the strict observance of domestic and international law. This includes the still existent Treaty of Friendship, Commerce and Navigation between the United States and Nicaragua.

- (12) "The Persecution of the Jews. What Can We Do?", by Bertrand Russell, appeared in The Berwick Mercury [Berwick-on-Tweed, England] on July 9, 1938. It had come to the Berwick Mercury from "a little known service that sent columns to provincial newspapers," says KEN BLACKWELL, to whom we are indebted for this article.

To understand our age, as it appears almost everywhere from the Rhine to the Pacific, it is necessary to go back to earlier times. At the end of the wars of religion, in the seventeenth century, men discovered that life is more agreeable if there is general toleration than if nations are divided into hostile factions bent on destroying each other. Christian sects gave up mutual persecution, the belief in witchcraft suddenly ceased, and in one nation after another, torture was abandoned as a recognized part of judicial procedure. Jews, like other minorities, profited by the decay of fanaticism, although they continued to suffer severe disabilities in Russia till 1917 and slighter ones in Germany till 1918. Everyone supposed that persecution was a thing of the past; the Spanish Inquisition roused retrospective horror even in the most devout Roman Catholics.

In the painful age in which we live, hardly anything is more horrible or more discouraging than the renewed persecution of the Jews. The sufferings which are inflicted on them wherever the Nazis have power are, in one respect, worse than those of former ages, for, in the past, it was, at least nominally, the religion, not the race, that was persecuted. Jews who outwardly became converts to Christianity escaped from oppression, except in Spain, where the Inquisition attempted by torture to prove the insincerity of conversions. But when, as now, it is the race that is persecuted, no escape is possible except by emigration. The German government professes to desire that German Jews should leave the country, but at the same time, it makes this impossible for most of them, since intending emigrants are first deprived of all their property, and then for permission to emigrate, are charged twenty-five percent of the property they no longer have. The result is that only those Jews can emigrate who have well-to-do friends or relations abroad, and then only by helping the finances of the State which is persecuting them.

Minorities abroad

Many Germans, perhaps a majority, no doubt, deplore the more extreme cruelties perpetrated against the Jews; nevertheless, most of them support the government which not only inflicts intolerable legal disabilities, but encourages unofficial sadistic outrages on the part of its criminal partisans. From what has happened in Austria, we know what would happen if Germany obtained control in the Sudeten district of Czechoslovakia. Whatever grievances the Germans in those districts may have, they are utterly insignificant in comparison with the misery which the Nazis would, if they could, inflict upon Jews, Socialists and Communists who now profit by the liberality of the Prague government. Such questions cannot be reckoned by counting heads. That millions should have put up with slight political disabilities is not so grave an evil as that hundreds should suffer the extreme of torture and agony. So long as Germans treat their Jewish minority as they do at present, they have no right to make demands on the behalf of German minorities in other countries. There is, from our point of view, no justification for treating such minorities badly; but from the point of view adopted by the Germans in dealing with their minorities, there is every justification.

Speaking historically, such liberties as are enjoyed by individuals and subordinate groups in countries which practice toleration were originally won by majorities in conflict with unpopular governments, especially kings. It was in order to combat the despotic acts of monarchs, that the doctrine of the Rights of Man was invented, and when governments became popular the doctrine was forgotten. But the oppression of a minority by a majority is no better, except numerically, than the oppression of a majority by a minority. The doctrine of the Rights of Man may be indefensible in its absolute theoretical form, but as a practical precept for the prevention of injustice and oppression it has been highly beneficial. It was forgotten when the evils against which it was directed appeared to have been overcome; but as soon as it was forgotten, the old evils reappeared.

A government which is enthusiastically supported by a large majority of the population is a great danger, particularly if it has won its popularity by an organized appeal to hatred. This is one of the chief merits of democratic government, that at all times not much less than half the nation are opposed to the men in power, and free to criticize them. In the hang-the-kaiser election of 1918, we saw what an appeal to hatred can do in our own country; but owing to free speech and parliamentary institutions the effect was temporary. There is no way of preventing occasional fits of insanity in nations, but it is only by a dictatorship that recovery can be prevented.

Tolerance: Not Hatred

What, in actual fact, can we do to help the Jews who are victims of Nazi cruelty? In the first place, we can bring pressure to bear upon our own government to be hospitable to refugees, and not too niggardly in granting them permission to earn a living among us. In the second place, we can and should proclaim our horror of Nazi wickedness, and our contempt for Nazi stupidity, which is pursuing exactly the same course that brought Spain to grief in the sixteenth and seventeenth centuries. But I do not think that our dislike of the Nazis should make us willing to risk a great war. It is war and its aftermath that has made Germany fierce, and the next great war is likely to have the same effect upon us. In the course of defeating the Nazis in war, we shall acquire much of Nazi mentality, and even if they are defeated, their philosophy will triumph. It is only in peace, by propaganda and by readiness for economic cooperation wherever possible, that the outlook of the Nazis can be defeated.

At the time of the Tokyo earthquake, the inhabitants of that city turned upon the Koreans living there and massacred them, not because they supposed those harmless folk had caused the disaster, but because terror and misery made them wish to massacre somebody. We and the French spread terror and misery throughout

Germany in the years after the armistice; they could not massacre us, so they turned upon the Jews. It was a gesture of insanity; but if, as I firmly believe, terror and misery caused the insanity, it will not be cured by another dose of the same poison.

NOTES ON NUTTINESS

- (13) [This is a new section in the newsletter. Members are invited to send in instances of nuttiness that they come upon.]

Martin Gardner on Shirley McLaine. Gardner has earned his scientific credentials. He edited a column in Scientific American for years, and has written many books including, recently, "The Whys of a Philosophical Scrivener", and, not so recently, "Fads and Fallacies in the Name of Science" (NY:Dover1957).

In "The New York Review of Books (4/9/87), Gardner writes about McLaine's recent book, "Out On A Limb" (Bantam):

In "Out On A Limb", it is David Manning, a young occultist, who initiates Shirley into a smorgasbord of fashionable paranormal beliefs. Shirley later disclosed that David is a composite of "four spiritual men", each claiming to have known extraterrestrials from the Pleiades. The book swarms with occult shibboleths: energy vibrations (of which love is the highest), Karma, other dimensions, auras, OBEs (out-of-body experiences), synchronicity, ESP, precognition, holism, Atlantis, Lemuria, UFOs, the Shroud of Turin, and a hundred others.

...

Shirley and David face the surf on a Malibu beach, arms outstretched like Jesus on the cross. They repeatedly shout in unison, "I am God!"

...

David, who never gets mad, quotes Mayan as saying that if you want to get to the fruit on a tree, you have to go out on a limb.

...

Back in the Big Apple, in a taxi with Bella Abzug, Shirley tells about asking Maria, a Peruvian psychic, whether Bella will get the Democratic nomination for mayor she is seeking. No, said Maria, it will go to a "tall man with no hair and long fingers." Oy Vey! Could this be Ed Koch?

...

But Shirley McLaine's obsession with herself is accompanied by a canny (and highly profitable) capacity to touch the same qualities in the America public. All four of her autobiographies are available in a boxed set, and she is now working on a fifth. Who can guess what new astral adventures she will have to report? What will she learn next from Ram and other friendly spooks, from the occult junk books she keeps reading? Miss McLaine is now on a tour through sixteen cities, giving weekend seminars (\$300 per person) on how to get in touch with your Higher Self. She is also teaching how to heal yourself by visualizing colors -- blue for throat problems, orange for the liver, green for the heart, yellow for solar plexus.

Rationality, where art thou?

Want more nuttiness? We've only scratched the surface. It's all there in that splendid issue of the New York Review of Books.

BR RECOLLECTED

- (15) Christopher Farley reminisces, at the Bertrand Russell Centenary Celebrations at McMaster University, on October 12, 1972. Farley had been BR's secretary, and is a Director of the Bertrand Russell Peace Foundation. Autobiography III (NY:Simon & Schuster, p. 228) reveals BR's high opinion of Farley. The following is taken from Humanist in Canada, No. 23, with thanks to TOM STANLEY:

Many pieces of advice and wisdom which, over the years, I gleaned from Bertrand Russell crowd into my memory at this time. Two of them, pointing in different directions, may be appropriate to this occasion. "Do not be solemn," he urged. "Observation of life shows one that solemn people are generally humbugs." On another occasion he advised: "In the company of foreigners, do not attempt a joke. It is sure to fail." And so I commence, not too solemnly and — alas! — not too humorously either.

When a man of Bertrand Russell's stature dies near the end of his 98th year, his centenary is not yet the occasion to attempt a definitive assessment of his life and influence. In Russell's case two particular problems remain. First, he was such a prolific writer over eight decades in many lands that his papers are still being discovered, collected, or made available. Secondly, we are still too close to his own lifetime to view impartially all the controversies in which he continued to engage at such an advanced age. The future of the nuclear arms race, the relationships of the superpowers, and the conflict in Indo-China continue to dominate world politics.

If I forego the temptation to offer an assessment of Russell's life, I must equally decline to present a biographical sketch. Russell's life was so long and full and varied, his vitality so great, that I could not begin to do justice to it. Russell himself faced something of this problem. On his 95th birthday he began to publish his Autobiography, and it soon became clear that three volumes would still leave much unstated, however often he could refer to at least 60 other books which he had already written. Here, therefore, I must settle for something very much less ambitious than an assessment or even a sketch.

Unlike the Renaissance, our own age conditions us to beware of excellence in diverse fields. Russell has staked such a large claim to enduring fame in mathematical logic and philosophy that there is a danger that the whole man may be overshadowed in history by one part of his achievement. My purpose here, then, is to introduce one or two facets of Russell's life and character which may help to suggest the full measure of his stature.

Disillusionment and isolation

At the age of 18, in 1890, Russell went up to the University of Cambridge. His adolescence had been preoccupied in considerable part with doubts about religion and the search for indubitable knowledge. "What I most desired," he explained of his hopes of Cambridge, "was to find some reason for supposing

mathematics true." In his second year he was invited to join a small discussion society, the Apostles. "We took ourselves perhaps rather seriously," Russell recalled, "for we considered that the virtue of intellectual honesty was in our keeping. Undoubtedly, we achieved more of this than is common in the world, and I am inclined to think that the best intelligence of Cambridge has been notable in this respect." Russell went so far as to claim for Cambridge that "the one habit of thought of real value that I acquired there was intellectual honesty." There was, however, earlier evidence of it in his childhood. At the age of 11, with his brother Frank as tutor, Russell was introduced to Euclid, but was disappointed to discover that Euclid started with axioms. "At first," Russell recalled, "I refused to accept them unless my brother could offer me some reason for doing so, but he said: 'If you don't accept them we cannot go on'. As I wished to go on, I reluctantly admitted them pro tem."

When the first world war broke out, shattering the Victorian liberal optimism which Russell had largely shared, one of his many sorrows was to discover that "even at Cambridge, intellectual honesty had its limitations." "I had supposed," he wrote about the war, "that intellectuals frequently loved truth, but I found ... that not ten per cent of them prefer truth to popularity." And he recalled one intellectual friend who "went out of his way to write about the wickedness of the Germans, and the super-human virtue of Sir Edward Grey."

In 1907 Russell had stood for Parliament, unsuccessfully, as a women's suffrage candidate, and encountered an irrational popular opposition which warned him of the gulf between pre-war Cambridge and political life. Soon afterwards, he had tried to be nominated as a Liberal candidate for Parliament, but it came to nothing when he informed his interrogators of the local Liberal Association that not only was he an agnostic, but he and his wife would not be willing to attend church occasionally.

Russell's honesty was fundamental to his character, and so it had to be, because throughout his life it lost him friends, comfort and recognition. By the time of the first world war, when he had completed the most demanding and financially unrewarding of his technical work, Russell gave away the last of his inherited income because he felt it inconsistent with his purposes. Thereafter he lived by his pen and by lecturing, though, at times, in conditions of great financial insecurity.

Near the end of his life, he one day received a letter which he felt con-

tained a dishonest proposition. At once he dictated a brief reply and having signed it immediately, he instructed me to take it straight to the post office. Unaccustomed to such a practice, I hesitated in the doorway. Russell became visibly distressed. It was clear that he did not think his house quite clean until the offending correspondence had been answered and filed away.

It is difficult to see how such a man could have endured the discipline, deceptions and hypocrisy of a life in politics. Repeatedly his honesty and scepticism led him into an isolation which no politician can afford, by making him unpopular with orthodox opinion or powerful interests. In the struggle for votes for women, the opposition he encountered was greater even than the hostility he met in World War I. In 1914 he lost overnight nearly all his Liberal friends, and despite his doubts on the effectiveness of opposition to the war, he felt that "for the honour of human nature those who were not swept off their feet should show that they stood firm." This road led to the loss of his lectureship at Trinity College Cambridge and finally to jail. In 1916 he wrote a leaflet published by the 'No Conscription Fellowship' and was alarmed to find that those who distributed it were sent to prison. He at once wrote to The Times to admit his authorship, and as a consequence was fined one hundred pounds. At the great meeting in Leeds to celebrate the Kerensky revolution of February 1917, Russell, always avoiding the easy speech, devoted his remarks not to Russia but to the men in prison at home. He visited Russia shortly after the revolution and immediately lost most of his socialist friends by publishing a book of balanced criticisms. In 1927 he founded a progressive school and suffered much misrepresentation of its aims and methods. For his writings on Marriage and Morals he was judicially hounded out of City College, New York, and, for a time during World War II was peniless and taboo throughout the United States. His agnosticism, often provocatively formulated, enraged established opinion, but he managed also to upset some agnostics by urging the need for more Christian love. His call for nuclear disarmament in the 1950s put him outside the mainstream of the NATO-dominated politics of his country. In his 90th year he was back in Brixton prison, trying to find some means to warn man of impending annihilation. Undaunted, early in 1963, when most people in the West had no knowledge of events in Indo-China, he started a public campaign against the policies of the United States in Vietnam. Four years later he launched his

International War Crimes Tribunal, whose cautious findings were soon overtaken by the publication of the Pentagon Papers and the admission of massacres.

In case we are tempted to dismiss lightly the public abuse which Russell suffered throughout most of his adult life, it is worth recalling the terms in which the *New York Times* attacked him in May 1967 in a feature article at the time of the War Crimes Tribunal. Entitled "Corpse on Horseback," the article likened Russell to a mediaeval Moorish king who died on the eve of battle, but whose stiffened corpse was dressed, bound astride a warhorse and led against the enemy to encourage the troops. The article went on to describe Russell as a "relic", "led into battle as a totem," "a decrepit symbol," surrounded by "several mediocrities playing the role of yes men." The tribunal, "stagemanaged" in Russell's name, was a "pretence", a "shoddy farce" with "nonentities who nodded approval." "The great philosopher," the article continued, "simply outlived his own conscious ideas and became clay in... unscrupulous hands." Russell was "an automatic sounding board for Communist drumbeats," a hero who had become "his own tomb", talking "like a zombie", a "wasted peer whose bodily endurance outpaced his brain," and "an unthinking transmission belt for the most transparent Communist lies," who had "thrown over all objectivity."

Russell felt such wounds deeply, not because his vanity was affected, but because such abuse was a cheap and effective means of reducing the public significance of his work. About a year later, in the middle of conversation, he asked me suddenly what I should like to see in my obituary notice. When I protested that nobody was ever likely to read or write my obituary, he persisted. "It's your duty," he explained. "If you believe in anything important, it's your duty to get a good obituary for it." This sense of public duty was very strong in Russell, as was to be expected from his Whig aristocratic ancestry; to be a Russell was to be a radical in public life. Russell received many visitors at his home in his later years. The most damning criticism I ever heard him make of any of them after their departure was: "A pleasant fellow, but utterly lacking in public spirit."

In his childhood, his Puritan grandmother, Lady John Russell, who was responsible for his upbringing, gave Russell a Bible and inscribed on the flyleaf some favourite texts. One of these was: "Thou shalt not follow a multitude to do evil." It was an admonition which Russell might have written himself. What has been less widely recognised, however, was that Russell was not a lot better at following a multitude to do good. Here, in a passage which tells us so much about Russell, is his description of London on Armistice night, 1918:

"Late into the night I stayed alone in the streets, watching the temper of the crowd, as I had done in the August days four years before. The crowd was frivolous still, and had learned nothing

during the period of horror, except to snatch at pleasure more recklessly than before. I felt strangely solitary amid the rejoicings, like a ghost dropped by accident from some other planet. True, I rejoiced also, but I could find nothing in common between my rejoicing and that of the crowd. Throughout my life I have longed to feel that oneness with large bodies of human beings that is experienced by the members of enthusiastic crowds. The longing has often been strong enough to lead me into self-deception. I have imagined myself in turn a Liberal, a Socialist, or a Pacifist, but I have never been any of these things, in any profound sense. Always the sceptical intellect, when I have most wished it silent, has whispered doubts to me, has cut me off from the facile enthusiasms of others, and has transported me into a desolate solitude. During the War, while I worked with Quakers, non-resisters and Socialists, while I was willing to accept the unpopularity and the inconvenience belonging to unpopular opinions, I would tell the Quakers that I thought many wars in history had been justified, and the socialists that I dreaded the tyranny of the state. They would look askance at me, and, while continuing to accept my help, would feel that I was not one of them. Underlying all occupations and all pleasures I have felt since early youth the pain of solitude."

I read aloud to Russell this passage from his *Autobiography*, for the reading aloud of anything that gave pleasure was a continuing part of his life. "Was it really so?" I asked. "Oh yes. A little voice would ask me: 'You don't really believe that, do you?' And I didn't."

Doubts

With a constant stream of visitors, and in the thick of unorthodox plans, Russell was in a peculiarly good position to observe some of the weaknesses of frailer men. These often took the form of excessive vanity — a little of which he thought to be normal — or cowardice, which he thought despicable. He received many promises of support for his public work which evaporated. One visitor went so far as to agree with his actions but excuse himself on the grounds of what his friends might think. Russell was never again able to bring himself to take that visitor seriously. Of course many came to see Russell to satisfy their own vanity, and he knew it. They dined out for months on stories of tea with Russell, and often the stories came back to him, sometimes in recognisable form. "Every man," Russell observed on human vanity, "would like to be God if it were possible: some few find it difficult to admit the impossibility."

What troubled Russell more than human frailty were doubts about the effectiveness of his own actions. By the time he had been sent to prison in World War I, he had come to feel that he had done what he could against the war and there was little point in continuing. In his later years, he saw his public work as "a puny effort against vast forces", and sometimes questioned its value.

When, on occasions, he told me he was not certain if such work had any value, I could only reply that if he really believed that, he would not be living as he did. "I suppose that is so," he would say, but something of the doubts lingered. Many strangers wrote to him from all over the world to thank him for writing his books. "They have changed my life," was a phrase which frequently recurred. This too encouraged Russell, and in case he overlooked the value of his writings, I moved all his own published works, which occupied five shelves in his library, from their modest place, tucked away behind his usual chair, and placed them opposite him.

Fame

But this is to see Russell out of perspective. He survived years of abuse with amazing resilience, and lived to see almost all his unconventional views become widespread or conventional — from support for women's suffrage to opposition to the war in Indo-China. His influence was worldwide, making him a legend in his own life-time. This he achieved without once holding political office, and usually without even the help of a university chair. On different occasions, Russell sent me to Hiroshima and Nagasaki, Auschwitz and Hanoi. I found there that the school children talked of him, while their parents saw him as some secular saint who might deliver 20th century man from his tormentors. In many nations without civil liberties or dominated by powerful neighbours, Russell was regarded as a national hero. I saw something of this in Greece at the funeral of the murdered Member of Parliament, Gregory Lambrakis. Political demonstrations were forbidden, but a quarter of a million Athenians turned out for the funeral procession with prolonged cries of "Russell, Russell." In 1968, with his usual foresight, he had appealed publicly to Brezhnev weeks in advance not to intervene militarily in Czechoslovakia. When the tanks rolled into Prague, his name became a household word there, and during the censorship was used as a form of shorthand to reveal what the Czech speaker really wished to say. The first day I arrived in Hanoi, in 1964, I found myself in a reception of many hundreds of foreign visitors. Almost immediately the Prime Minister came through the crowd and I learned later that he had asked to be informed of the arrival of Russell's emissary. For 20 minutes Pham Van Dong discussed in perfect French his study of Russell in Paris in his youth, and of his gratitude that such a man should tell the West what was happening to his people. Russell indeed corresponded with dozens of heads of state, and was far better known than many of them. In all such activity he was sustained by his hopes for the future, his vision of man's potential dignity, the love of his family and friends and the gratitude of strangers.

Throughout his life Russell frequently gave great alarm to those who imagined superficially that he held with them an identity of views in a given

field. We may see this clearly from his writings on socialism.

He accepted the orthodox socialist view of the alienating and dehumanising nature of capitalism, and of the need for economic justice. "Except slavery," he said, "the present industrial system is the most destructive of life that has ever existed." And he made much fun of the sanctity of private property under capitalism:

"We may distinguish four chief sources of recognised legal rights to private property: (1) a man's right to what he has made himself; (2) the right to interest on capital which has been lent; (3) the ownership of land; (4) inheritance. These form a crescendo of respectability: capital is more respectable than labour, land is more respectable than capital, and any form of wealth is more respectable when it is inherited than when it has been acquired by our own exertions." Russell's advocacy of social change was scarcely moderate. "What our modern society needs," he urged, "is not a little tinkering here and there, nor the kind of minor readjustments to which the existing holders of power may readily consent, but a fundamental reconstruction, a sweeping away of all the sources of oppression, a liberation of men's constructive energies, and a wholly new way of conceiving and regulating production and economic relations." He saw the chief defect of the capitalistic system in its denial not of economic justice but of any outlet for the creative impulse.

Justice as an end in itself, he argued, "contains no source of new life". He wrote mockingly of the "old type of Marxian revolutionary socialist" who ignored problems of life after the inauguration of the millennium, and who "imagined that, like the prince and princess in a fairy story, they would live happily ever after." "While I am," he explained, "as convinced a socialist as the most ardent Marxian, I do not regard socialism as a gospel of proletarian revenge, nor even primarily as a means of securing economic justice. I regard it primarily as an adjustment to machine production demanded by considerations of common sense, and calculated to increase the happiness not only of proletarians, but of all except a tiny minority of the human race." The continuation of large-scale industry, which Russell saw as inevitable, need not hinder the growth of industrial democracy: "there is no reason why their government should be centralised and monarchical." State socialism without industrial democracy led straight to the tyranny of bureaucracy. In a socialist society, what was important was to give the largest measure of freedom to initiative and vitality, to emphasize creativity and reduce concern about possessions. To ignore such considerations was to ignore the danger to liberty from the State. It was in part his prediction, before the October revolution, of the disaster of state socialist forms of organisation, which led him to welcome so enthusiastically the Czechoslovak "Spring" of 1968, the concept of "socialism with a human

face" was reasserted as the objective.

Education

Russell's concern for liberty and creativity similarly informed his approach to education. In the Twenties, when he began to have children and consider their education, he could find no school of which he wholly approved. With typical thoroughness he gave up almost everything to found his own school where prudery and religious instruction were absent; restraints on freedom were minimal but scholastic instruction was held to be important. Unfortunately, he recalled, his school had more than its fair share of problem children and far more than its fair share of problem parents.

The ideal character, he held, was based on four characteristics: "vitality, courage, sensitiveness, and intelligence. I do not suggest," he added, "that this list is complete, but I think it carries us a good way. Moreover, I firmly believe that, by proper physical, emotional and intellectual care of the young, these qualities could all be made very common."

The task of a liberal education was "to give a sense of the value of things other than domination, to help to create wise citizens of a free community, and through the combination of citizenship with liberty in individual creativeness to enable men to give to human life that splendour which some few have shown that it can achieve."

This led Russell to his key to happiness: "A life lived in ... the spirit that aims at creating rather than possessing has a certain fundamental happiness, of which it cannot be wholly robbed by adverse circumstances. This is the way of life recommended in the Gospels, and by all the great teachers of the world. Those who have found it are freed from the tyranny of fear, since what they value most in their lives is not at the mercy of outside power." Such unorthodox views did not allow Russell to be a great respecter of many educational institutions which he frequently assailed with his wit. As an undergraduate at Cambridge, he was persuaded that lecturers were "a wholly unnecessary part of the university." He claimed to derive no benefit from lectures, and vowed to himself that when he became a lecturer he would not suppose that lecturing did any good. "I have kept this vow," he added.

But he went far further than this. "Men who allow their love of power to give them a distorted view of the world," he wrote, "are to be found in every asylum: one man will think he is the Governor of the Bank of England, another will think he is the King, and yet another will think he is God. Highly similar delusions, if expressed by educated men in obscure language, lead to professorships of philosophy; and if expressed by emotional men in eloquent language, lead to dictatorships."

Reading Russell's letters and essays gives enormous satisfaction and joy. First there is the beauty of his prose. In

his youth he had been strongly influenced by the style of his lay godfather, John Stuart Mill. He soon found that he could write with scarcely any revision by contemplating his subject and then allowing it a period of "sub-conscious incubation". In time "it would germinate underground until, suddenly, the solution emerged with blinding clarity, so that it only remained to write down what had appeared as if in a revelation." This made him a most lucid writer and populariser of scientific ideas. He had one favourite example of execrable prose which he dreamed up for a work on sociology:

"Human beings are completely exempt from undesirable behaviour patterns only when certain prerequisites, not satisfied except in a small percentage of actual cases, have, through some fortuitous concurrence of favourable circumstances, whether congenital or environmental, chanced to combine in producing an individual in whom many factors deviate from the norm in a socially advantageous manner."

This Russell translated as follows:

"All men are scoundrels, or at any rate almost all. The men who are not must have had unusual luck, both in their birth and in their upbringing."

Russell added, typically, that any professor who used his translation instead of the original would be dismissed.

But there is far more to Russell's essays than his Nobel prizewinning prose style and clarity. He allowed himself the broadest canvas, stood conventional ideas on their head, illustrated his themes with the widest range of knowledge; he leaves his reader confident that he could have written with authority, interest and wit on almost anything. He also had almost uncanny predictive abilities which preserve much of his writing from becoming dated; his books continue to be much in demand. Here is a sentence from 1916 which sounds far more like a contribution to the debate on the defence of the environment a full half-century later: "Our present system is wasteful of human material ... The same is true of material resources—the minerals, the virgin forests and the newly developed wheatfields of the world are being exhausted with a reckless prodigality which entails almost a certainty of hardship for future generations."

As a writer, Russell continues to make a memorable impression on readers in many lands. But it was as a conversationalist that he was most convincing that one was in the company of genius. When he died in 1970, the Prime Minister of the day, Harold Wilson, whom Russell had criticised so severely in office, found himself faced with the problem of what to say, just as King George VI before him had done when awarding Russell the Order of Merit. Wilson's speechwriter saved the day by pointing to Russell's brilliance in conversation. One is tempted to ask how Wilson knew of this, for he met

Russell only once for some 10 seconds. It was in the summer of 1964 when Wilson was looking for votes. Since Russell as a member of the House of Lords was debarred from voting, the conversation was necessarily brief.

Russell's conversation when he relaxed at home was the delight of all who shared it. His vast knowledge of literature, much of which he had committed to memory, and of history reflected a lifetime's reading and his appreciation of both beauty and knowledge. Shakespeare's sonnets, Gibbon, Milton, Shelley and Dante flowed with particular fulness in the company of hundreds of poets, essayists and playwrights. Then there was always the hope that Russell would produce a portrait from memory. These were not so frequent, because he was never a name-dropper, but if the conversation turned naturally to a personal friend, one could be treated to a dazzling recollection. William James, John Dewey, Moore, Gilbert Murray, D.H. Lawrence, Conrad, the Webbs, Shaw, Wells, Keynes, Tynbee, Einstein — Russell knew them all, and so many more. He could also produce the most unusual pieces of information, and long quotations from the Old Testament (complete with verse numbers) or from childhood hymns. But he was also a good listener. Many were the times I complained that he was reckless with the hours he gave to listen to strangers, but he would have none of it, for this was his means of keeping up with public opinion, and he kept up uncommonly well. Russell remained shy throughout his life, but once he got to know a person he would regale him with his wit, which gave enormous pleasure, not least to Russell.

One wide misunderstanding of Russell's life is that thousands of people through the press came to think of him as a distant, aloof, Cassandra-like figure, forecasting in solemn tones nuclear doom for the human race. The truth was very different: he was always joking. His love of irony, his sense of the absurd and his hatred of humbug combined with the amazing speed of his brain to produce a flow of brilliant epigrams and aphorisms which often left the listener reaching for his notepad or at least content to make the conversation a monologue. The extraordinary part of it was that, although he also had a fine stock of well-worn jokes, both they and his instant epigrams were always relevant to the discussion. Here are a very few which I noted over his last 10 years:

"To win the Nobel Peace Prize, one must make statements which are at least 10 years too late to be useful."

"The difference between machines and human beings is that machines are subject to error."

"The Prime Minister is preserving the House of Lords as a first step to making the Premiership hereditary."

"Sir Moses Montefiore retired in 1824, and I later came to know him."

"I cannot think how anyone who has had anything to do with education can believe that all men are equal."

"The lady's father ruined himself by the pursuit of fast women and slow horses."

"There is a very fine passage in Gibbon which refers, I believe, to St. Thomas. Gibbon enumerates his vast wealth acquired after taking his vow of poverty, and adds 'I forget the consequences of his vow of chastity'."

Finally, a note I made only nine days before Russell's death:

"People's opinions are not dictated by their virtues but by their circumstances."

Often I felt that there was more of the poet than the politician in Russell. On the eve of his departure to Russia in 1920 he wrote to Lady Constance Malleson:

"I know that no good thing is achieved without fighting, without ruthlessness and organisation and discipline. I know that for collective action the individual must be turned into a machine. But in these things, though my reason may force me to believe them, I can find no inspiration. It is the individual human soul that I love — in its loneliness, its hopes and fears, its quick impulses and sudden devotions. It is such a long journey from this to armies and states and officials, and yet it is only by making this long journey that one can avoid a useless sentimentalism."

Russell's reluctance to make that "long journey" was in part because he felt it to be a journey to a spiritual death, to a world of politics dominated by acquisitiveness, vanity, rivalry and love of power. It was a dilemma he never resolved satisfactorily, though he found many ways of stating it: "Only kindness," he wrote in 1924 in reply to Haldane's optimism on the future of science, "can save the world, and even if we knew how to produce kindness, we should not do so unless we were already kindly."

Seven years later Russell returned to these themes: "The lover, the poet and the mystic," he wrote, "find a fuller satisfaction than the seeker after power can ever know, since they can retain the object of their love, whereas the seeker after power must be perpetually engaged in some fresh manipulation if he is not to suffer from a sense of emptiness. When I come to die I shall not feel that I have lived in vain. I have seen the earth turning red at evening, the dew sparkling in the morning, the snow shining under a frosty sun; I have smelt rain after drought, and have heard the stormy Atlantic beat upon the granite shores of Cornwall. Science may bestow these and the other joys among more people than could otherwise enjoy them. If so, its power will be wisely used. But when it takes out of life the moments to which life owes its value, science will not deserve admiration, however cleverly and however elaborately it may lead men along the road to despair."

Russell's character was dominated by his courage, vitality and wit. He was gentle, shy, modest, even vulnerable. Cruelty he hated, and he felt deeply the pains of others. He himself radiated that "kindly feeling" which he held to be the hope of the world, and received

affection because he gave it so fully. He clearly loved every minute of life, and gave his time and money, when available, with an almost reckless generosity. "Psychologists," he once told me, "would say that's proof of how much I love money." Liberated from the Puritanism of his childhood, he was happy but self-disciplined and highly productive. He took great joy in impulse and mental delight, and was uncomfortable when not close to nature. He would stop anything to watch the slow setting of the sun, and insisted on living in houses with wide horizons. He was genuinely tolerant, not in any paternalistic manner, and delighted in the company of the young. Strikingly he practised what he preached, so that there was no dichotomy between his public and private lives. He was not a man to guard secrets from the world; when he came to hold beliefs or approve practices, his impulse was to publish them. In the preface to his book *The Conquest of Happiness* he wrote: "All that I claim for the recipes offered to the reader is that they are such as are confirmed by my own experience and observation, and that they have increased my own happiness whenever I have acted in accordance with them."

The life of Bertrand Russell was of epic proportions. His maternal grandmother took tea regularly in Florence with the widow of the Young Pretender, Bonnie Prince Charlie, whose cause failed in 1746. His grandfather visited Napoleon on Elba. History, it was said in the family, ended in 1815; after that it was gossip. Russell grew up at the centre of public affairs, expecting to meet the politicians and men of letters of his day. He had friendships and debates with hundreds of the most eminent literary, scientific and political figures of his lifetime. In his chosen fields he achieved fame at an early age, becoming a Fellow of the Royal Society when only 36. In Moscow he interviewed Lenin and Trotsky after their revolution, and he lectured to the young Mao Tse-tung in Peking. His vitality as a traveller, controversialist, writer and friend of the oppressed, were prodigious and enduring; he published more than 20 books after his 80th birthday. If men continue to walk this planet much of his work will be read with benefit a hundred years from now. The prescience of much of his general writing, constantly reprinted without alteration, shows him far ahead of his times.

Throughout his life he sought not only to clarify his ideas but to gain their acceptance by publics and by men of power. He intervened repeatedly in public affairs. No sacrifice was too great, whether it invited ignominy or imprisonment, to further the cause of reason, to diminish cruelty, or to increase the happiness of his fellow men.

For those who knew him well, the totality of his life was greater than the sum of its parts. He gave his friends a memory of a life of genius which they treasure. The dignity and beauty of his life followed closely his own definition of the good life: one "inspired by love and guided by knowledge."

BR, LETTER WRITER

- (16) A thank-you note. A friend of ours, Jean Hollyman, who had taken pictures of BR IN 1947, for a magazine, afterwards received this note:

27, Dorset House,
Gloucester Place,
LONDON, N.W.1.

21st January, 1947.

Dear Friend (whose name I cannot decipher),

It was very kind of you to send me some pipe cleaners, and you are right in thinking that they are very difficult to get in this country. You were also right to employ a typewriter rather than handwriting, if I may judge by your signature, which completely baffled me.

I enjoyed the occasion on which we met more than I usually enjoy being "shot".

Yours sincerely,

Bertrand Russell

ASSESSMENTS OF BR

- (17) RAMON CARTER SUZARA spent the Marcos years in the USA, and is now back in Manilla. This is an article by him as it appeared in Manilla's Chronicle Magazine of September 11, 1962:

"**EVERYBODY** knows," wrote Bertrand Russell in *The ABC of Relativity*, "that Einstein did something astonishing, but very few people know exactly what it is that he did." The same can be said of Lord Russell himself. Widely acclaimed as a world renowned mathematician and one of the greatest of living philosophers, he is also one of the most misunderstood and bitterly maligned. Many of those who are familiar with his mathematical and philosophical works and appreciate his prolific contribution to that body of knowledge have joined the multitude of mediocres and philistines in degrading his political attachment to world peace, democracy, and socialism. Their attitude seems to stem from either of two basic assumptions: that Russell the mathematician and philosopher is competent, while Russell the political thinker is amateurish; or, that Russell the political thinker is the product of old age.

The second assumption derives mainly from an insufficient familiarity with the man and his ideas. Before the First World War, Russell produced books on which his intellectual reputation

was based: *The Foundation of Geometry*, *The Philosophy of Leibniz*, *The Principles of Mathematics*, and, in collaboration with Alfred North Whitehead, *Principia Mathematica*, which consumed most of Russell's intellectual energy.

Militant Pacifism

But as early as the First World War, Russell had recognized that a lot of his "rational ideas" were wrong and that most men were not so rational as he believed. The War plunged him into a shock of despair and horror. But his mood passed from passive despair into active opposition to the war: he enlisted as a member of the "No-Conscription Fellowship," the main organization of the pacifist and anti-war propaganda. Rather than prove sheer animal courage in the battlefield of the unjustifiable "war of prestige" among nations, he chose to demonstrate moral courage by his refusal to enlist and made a public appeal to his countrymen to do so. He took up the banner of militant pacifism and thus had his first open clash with the homicidal instincts of those who ran his

country's Government. Amidst the ridicule of the mob, he was sent to jail for his beliefs.

But those who do not know and deliberately ignore this episode in Russell's life are unable to understand why, at the height of his academic fame, he should lend his prestige to the struggle against political persecution and belligerent policies. Using as the absolute measure of "reasonableness" their own moral cowardice and herd mentality, Russell's detractors have called him senile in order to diminish his appeal to the conscience of the civilized world.

There is a gross misconception in the first assumption that Russell the mathematician and philosopher is competent, while Russell the political thinker is amateurish. The fact is, Russell abandoned mathematics for philosophy because his philosophy was always and is related with politics and social life.

Shaking the Foundation

Having lived from childhood in the realms of abstract thought and incessantly in search of "certainty" in knowledge, he began to question certain principles in mathematical laws. In *Principia Mathematica*, Russell fulfilled his wishes, for the calculated result of that book was that it shook the foundation of mathematics accepted ever since the time of Pythagoras. Russell pointed out existing mathematical and philosophical "contradictions" and succeeded in reducing mathematics to logic. In logic he showed that there are many more forms of "inferences" than Aristotle had taught. Thus Russell became a world renowned mathematician. But when people also ask why Russell is also one of the greatest logicians, the simple reply is that he also showed how little logic can do.

Before the War, Russell's attitude to mathematics was expressed in an article called "The Study of Mathematics": "Mathematics, rightly viewed, possesses not only truth, but supreme beauty—a beauty cold and austere, like that of sculpture, without appeal to any part of our weaker nature, without the gorgeous trappings of painting or music, yet sublimely pure, and capable of stern perfection such as only the greatest art can show. The true spirit of delight, the exaltation, the sense of being more than man, which is the touchstone of the highest excellence, is to be found in mathematics as surely as in poetry."

But after shaking the foundation of mathematics, he was disappointed at not finding "certainty," partly because of technical reasons but precisely because of his political thoughts.

Farewell to Math

In later years, in *My Philosophical Development*, he wrote:

"Mathematics has ceased to seem to me non-human in its subject matter. I have come to believe, though very reluctantly, that it consists of tautologies. I fear that, to a mind of sufficient intellectual power, the whole of mathematics would appear trivial, as trivial as the statement that a four-footed animal is an animal. I think that the timelessness of mathematics has none of the sublimity that it once seemed to me to have, but consists merely in the fact that the pure mathematician is not talking about time... One effect

of [the First World] War was to make it impossible for me to go on living in a world of abstraction. I used to watch young men embarking in troop trains to be slaughtered in Somme because generals were stupid. I felt an aching compassion for these young men, and found myself united to the actual world in a strange marriage of pain.

All the high-flown thoughts that I had had about the abstract world of ideas seemed to me thin and rather trivial in view of the vast suffering that surrounded me. The non-human world remained as an occasional refuge but not as a country in which to build one's permanent habitation."

An author of more than sixty books, Russell wrote on subjects ranging from mathematics, logic, and philosophy to religion, ethics, war, economics, and politics. He wrote a book in 1917 called *Political Ideals*, and most probably the assumption that he is an amateurish political thinker derives from it.

Quotable Russell

Undoubtedly, the homicidal maniacs will judge it as amateurish. But let us see its validity in the light of the following quotations from the book:

"Political ideals must be based upon ideals for the individual life. The aim of politics should be to make the lives of individuals as good as possible. There is nothing for the politician to consider outside or above the various men, women and children who compose the world... The world is full of preventable evils which most men would be glad to see prevented. Nevertheless, these evils persist, and nothing effective is done toward abolishing it."

"The [First World] War has come as a challenge to all those who desire a better world. The system which cannot save mankind from appalling disaster is a fault somewhere, and cannot be amended in any lasting way unless the danger of great wars in the future can be made very small."

"But war is only the final fruit of an evil tree. Even in times of peace, most men live lives of monotonous labour, most women are condemned to a drudgery which almost kills the possibility of happiness before youth is past, most children are allowed to grow up in ignorance of all that would enlarge their thoughts or stimulate their imagination. The few who are more fortunate are rendered illiberal by their unjust privileges, and oppressive through fear of the awakening indignation of the masses. From the highest to the lowest, almost all men are absorbed in the economic struggle: the struggle to acquire what is their due or to retain what is not their due. Material possessions, in fact or in desire, dominate our outlook, usually to the exclusion of all generous and creative impulses. Possessiveness—the passion to have and to hold—is the ultimate source of war, and the foundation of all ills from which the political world is suffering. Only by diminishing the strength of this passion and its hold upon our daily lives can new institutions bring permanent benefit to mankind."

On Nationalism and Internationalism

In the same book, he wrote about national independence and internationalism:

"A man does right, as a rule, to have his

thoughts more occupied with the interests of his own nation than those of others, because his actions are more likely to affect his own nation. But in time of war, and in all matters which are of equal concern to other nations and to his own, a man ought to take account of the universal welfare, and not allow his survey to be limited by the interest, or supposed interest, of his own group or nation."

... "The matter in which the interest of nations are supposed to clash are mainly three: tariffs, which are a delusion; the exploitation of inferior races, which is a crime; pride of power and dominion, which is a schoolboy folly."

... "So long as hatred, suspicion, and fear dominate the feelings of men toward each other, so long we cannot hope to escape from the tyranny of violence and brute force. Men must learn to be conscious of the common interests in which the nations are divided. It is not necessary, or even desirable, to obliterate the differences of manners and customs and traditions between different nations. These differences enable each nation to make its own distinctive contribution to the sum total of the world's civilization."

... "The international spirit which we should wish to see produced will be something added to love of country, not something taken away. Just

as patriotism does not prevent a man from feeling affection for his own country. But it will somewhat alter the character of that affection. The things which he will desire for his own country will no longer be things which can only be acquired at the expense of others, but rather those things in which the excellence of any one country is to the advantage of all the world. He will wish his own country to be great in the arts of peace, to be eminent in thought, to be magnanimous and just and generous. He will wish it to help mankind on the way toward that better world of liberty and international concord which must be realized if any happiness is to be left to man. He will not desire for his country the passing triumphs of a narrow possessiveness, but rather the enduring triumph of having helped to embody in human affairs something of that spirit of brotherhood which Christ taught and which the Christian churches have forgotten. He will see that this spirit embodies not only the highest morality, but also the truest wisdom, and the only road by the nations, torn and bleeding with the wounds which scientific madness has inflicted, can emerge into a life where growth is possible and joy is not banished at the frenzied call of unreal duties, whatever pain and self-sacrifice they may involve. Life and hope for the world are to be found only in the deeds of love."

THE RUSSELL SOCIETY LIBRARY
Tom Stanley, Librarian

(18) Books to lend:

When no author is indicated, the work is by Bertrand Russell. The donor's name appears at the end.

1. History of Western Philosophy. Jack Ragsdale.
2. Mysticism and Logic.
3. Bertrand Russell's Best. Ramon Suzara.
4. An Outline of Philosophy. Ramon Suzara.
5. Autobiography of Bertrand Russell, Vol.1. Ramon Suzara.
6. Let Me Die Before I Wake. by Derek Humphery.
7. Essay on Bertrand Russell. edited by E. D. Klenke. Bob Davis.
8. Morals Without Mystery. by Lee Eisler. Author.
9. Authority and The Individual. Don Jackanicz.
10. Autobiography of Bertrand Russell (in 1 Vol.). Don Jackanicz.
11. Bertrand Russell 1872-1970. Don Jackanicz.
12. Bertrand Russell - A Life. by Herbert Gottschalk. Don Jackanicz.
13. Education and the Social Order. Don Jackanicz.
14. Effects and Dangers of Nuclear War. Don Jackanicz.
15. Essays on Socialist Humanism. Don Jackanicz.
16. German Social Democracy. Don Jackanicz.
17. Icarus or The Future of Science. Don Jackanicz.
18. The Impact of Science on Society. Don Jackanicz.
19. An Inquiry into the Meaning of Truth. Don Jackanicz.
20. In Praise of Idleness. Don Jackanicz.
21. Has Man a Future. Don Jackanicz.
22. Justice in Wartime. Don Jackanicz.
23. National Frontiers and International Cooperation. by Zhores Medvedev. Don Jackanicz.
24. My Philosophical Development. Don Jackanicz.
25. Political Ideals. Don Jackanicz.
26. Principles of Social Reconstruction. Don Jackanicz.

27. The Practice and Theory of Bolshevism. Don Jackanicz.
28. Roads of Freedom. Don Jackanicz.
29. Sceptical Essays. Don Jackanicz.
30. Secrecy of Correspondence Is Guaranteed By Law. by Zhores Medvedev.

Books for sale: these are listed in the February newsletter (RSN53-32). Add the pamphlet, BERTRAND RUSSELL AS A PHILOSOPHER by A. J. Ayer (his 1972 British Academy lecture.) Limited supply. 2.95 postpaid.

(19) New Library member:

New member Irving Anellis has offered to serve on the Library Committee. Irving studied with Morris Weitz, wrote his doctoral thesis under logic historian Jean van Heijenoort, and has worked as a research associate at the Russell Project. In addition to informing us of new work on Russell's technical philosophy and obtaining offprints for the Library, Irving will occasionally review books for the NEWS. Look for his review of The Philosophy of Logical Atomism and Other Essays in a future issue.

HUMANISM

- (20) ROY TORCASO answers Rev. Pendley's questions, in the Free For All page of the Washington Post (4/4/87, A19)... with thanks to DON JACKANICZ.

No, Humanists Don't Have a 'Clergy'

The Rev. Howard V. Pendley III raises some worthwhile questions in his tract ["Who Are Secular Humanism's Clergy? How Are They Ordained?" Free for All, March 28]. As a member of the Humanists' "clergy," I will endeavor to provide information that, apparently, has eluded Pendley all these years.

Although we do not use the term clergy, the Humanists do, in fact, have individuals duly appointed to serve the pastoral needs of all persons, not alone Humanists, atheists or other groups of Freethinkers. The title used is "counselor," and we perform rituals for all rites of passage, naming ceremonies, weddings (one scheduled soon) and memorial services. We do not use the term ordained, preferring, instead, the word "invested," and counselors are appointed by the Division of Humanist Counseling, a department of the American Humanist Association.

Applications are examined by a committee, and those selected to be counselors are appointed on the basis of their education, knowledge, special training and experience. They are chosen for their capability, talent and willingness, their care, concern and compassion for their fellow human beings. Counselors have a wide variety of skills

and experience, including PhDs. There are several AHA counselors in the area.

Where are the Humanists' houses of worship? In our hearts. It is not necessary to enter a church to be reverent. Go forth into the cathedral of open sky and "list to Nature's teachings." What hymns do Humanists sing? None. Since a hymn is usually a song of praise or adoration (of God), and because most Humanists do not believe in God, Humanist music consists of songs and compositions that excite the human spirit and give joy, encouragement or solace, as the occasion requires.

What holy books are read by Humanists? We ponder the writings of great thinkers, such as Robert G. Ingersoll, Thomas Paine, Thomas Jefferson, James Madison, Julian Huxley, Bertrand Russell, Corliss Lamont (and thousands of other authors dedicated to the enrichment of the lives of people). Also, The Humanist magazine has many thought-provoking articles dealing with practically every problem facing humanity.

So what is Humanism? First, it is far older than Christianity. It is a philosophy or way of life whose followers conduct their lives with a very high degree of individual and personal responsibility, and this without any fear of hell or any

thought of reward in heaven. Humanists are persons of moral character. You will never find an atheist or a Humanist threatening or trying to intimidate Christians or attacking their places of business due to a difference of opinion. On the contrary, Christians have harassed unbelievers unmercifully for endeavoring to protect the "wall of separation." Also, Christians have destroyed thousands of dollars' worth of property and placed at risk dozens of lives, even murdered those with whom they disagreed.

There are a great number of people in this land and across the whole world who have escaped from the chains of superstition of conventional religion, but they dare not "come out of the closet" lest they be shunned, ostracized or even subject to physical attack by the pious.

There is a continuing debate among Humanist members as to whether Humanism is a religion. If any inference is drawn from these words that it is, that is in the mind of the reader. It is not my intent to reclassify the philosophy of Humanism.

—Roy R. Torcaso

The writer is president of the Humanist Association of the National Capital Area.

THE ORIGIN

- (21) Senator J. Bennett Johnston, of Louisiana, addressed the Senate at some length on this occasion. Here is just a little of what he had to say, from the Congressional Record of August 4, 1986 (p.S10238):

Mr. President, I think the situation is much clearer now than it was when star wars burst upon the consciousness of people in the U.S. Senate and across America.

The first question I think we sought to ask, Mr. President, is: How did it come about? How do we find ourselves today debating the question of the level of funding of star wars, debating this new issue about whether we make nuclear weapons impotent and obsolete? Did it begin with a group of our best scientists who came up with this great idea or did it start somewhere else?

Interestingly, Mr. President, star wars began not with the Joint Chiefs of Staff, not with DARPA, or the Research and Development Assistant Secretaries, or with the scientists at Lawrence Livermore Lab or elsewhere. Star wars began with Ronald Reagan.

Mr. President, on March 4, 1985, Newsweek did an interview of the President of the United States. They asked him where star wars came from. The President said:

It kind of amuses me that everybody is so sure I must have heard about it, that I never thought of it myself. And the truth is, I did.

Mr. President, I like President Reagan. The American public likes President Reagan. I think he is the most, for whatever else you can say about President Reagan, he is the most personally successful President, perhaps, in the history of this country; if not the greatest communicator, then he ranks up there with Roosevelt in the two or three best communicators we have ever had. He is a man of strong principle and ideology and there are a lot of other things you can say about President Reagan that are

good, much of which I agree with.

But, Mr. President, anybody who says that the President of the United States is noted for his technological process, for his ability to understand and make judgments in weapons systems, if that man is here in this Senate then I would like to see him and hear him and talk to him. I have never heard that charge or that accusation made. And yet it was the President himself who made this great decision about star wars.

Mr. President, he thought up the basic concept but with whom did he consult in writing the momentous star wars speech, the speech that launched a thousand contracts?

Now, Richard Perle, the top nuclear strageist in the Pentagon, heard about it 2 days—2 days—before it was televised. Paul Nitze, the chief arms control adviser, learned of the speech the very day it was given. The Secretary of State, Mr. President, was not consulted at all. George Keyworth, the chief science adviser to the President, received 5 days' warning. We are told that Keyworth would have gotten less notice but someone cautioned: "How can the President go on the tube directing a major, high technology initiative and tell his science adviser nothing?" based upon which he received 2 days' notice.

Mr. President, the Joint Chiefs of Staff received 2 days' notice of the star wars speech—the Joint Chiefs of Staff. The Pentagon's chief scientist, Assistant Secretary of Defense for RDT&E, Dick DeLauer, learned of the

speech 9 hours before it was delivered.

The reporter who interviewed the participants noted: "Both proponents and opponents of star wars agree that it was not carefully considered."

George Keyworth, the President's Science Adviser, described his immediate reaction to notice of the impending speech in these words. If I may quote, this is the President's Science Adviser George Keyworth:

Give me time. It's big. Give me time.

Most people saw the speech very close to (the time of) delivery, and most—myself included, incidentally—had the same reaction: My god, let's think about this some more. Let's think about the implications for the allies. Let's think about what the Soviets are going to think. Let's think about what's technically feasible. Let's think about what the scientists are going to think. Let's think about the command and control problems.'

But, then, of course, Mr. President, there was not time, when George Keyworth was given only a couple of hours, the Joint Chiefs only 2 days, Dick DeLauer no notice at all, and so it goes, there simply was not time. The strategy, Mr. President, was very simple: Most top officials would not learn of the proposal until they had no choice but to support it.

What it came down to, Mr. President, was if you supported President Reagan, you supported SDI. And if you did not, you did not support SDI, which meant you would not be around in the administration. So it has been very clear, Mr. President, that star wars came down as a proposal full-blown, risen from the ashes of quick consideration and was presented to those in the administration on the basis of "take it or leave it."

ABOUT OTHER ORGANIZATIONS

- (22) Church of the Larger Fellowship. We don't ordinarily give space to church news. (Did someone say, "Thank God!"...?) But we think there are good reasons to lend support to the Unitarian Universalists. We think they'd be on the same side as we -- they would be our allies -- on most issues. Neither its ministers nor its members are required to hold any particular doctrine; the Church has adopted no creed; and differing opinions on religion are tolerated.

They are starting something new: the Church of the Larger Fellowship (CLF)... "organized to minister to religious liberals who are isolated for geographic or other reasons." A piece of their literature has the headline, HOW DOES IT FEEL TO BE THE ONLY UNITARIAN UNIVERSALIST IN TOWN? The titles of some of the cassettes in their lending library give an indication of their openness, their lack of rigidity: Bertrand Russell; Why I Am Not A Christian; Dialogue (Beattie - Kurtz); Dialogue (Beattie - Wine); Happy Birthday, Copernicus; Humanism in the New Testament; Why I Am A Humanist; Prospect for Humanism/Bertrand Russell; Religion Without God is Possible; Secular Humanist Declaration; Communicating the Humanist Message (Kurtz); six cassettes of Robert Ingersoll; and much more.

For information, write Church of the Larger Fellowship, Unitarian Universalist, 25 Beacon St., Boston, MA 02108. (Thank you, TOM STANLEY)

ANNUAL MEETING (1987)

- (23) The time and place: June 19-21, at El Conquistador, a residence hall at San Diego State University (not the University of San Diego, as was incorrectly stated in the Feb newsletter.)

It would be well to have eaten supper before registering (at 6:30pm) because the program (34) does not mention supper on Friday.

And now for the commercial, by HARRY RUJA:

- * The program promises to be an interesting one. If you send in your reservation early enough, I can send you a flyer issued by the Visitors Bureau illustrating some of San Diego's attractions. Plan to come. I think you'll find it worthwhile. [Or double your money back.]

How to get there. We will sleep and eat at El Conquistador (locally known as El Conk), located at Montezuma Av. and 55th St...next to the San Diego State University campus...and about 15 miles east of the major SD airport (Lindbergh). It has no official connection with SDSU.

BY BUS:

Friday. Bus #2 to to 30th St. & Adams Av. Transfer to Bus #11 going east, to 55th & Montezuma. Fare \$1, 50¢ with Medicare card. (Driver will not make change but will accept paper dollar.) Last #2 Bus leaves airport East Terminal at 10:06pm; last #11 leaves at 10:55pm, arriving El Conk at 11:06pm

Saturday. Bus #2 to 11th Av. and Broadway. Take Bus #15 or 15A to College Av. and El Cajon Blvd. Take #36 or 36A to San Diego State University Transit Center, corner Campanile Drive and Hardy Av. Walk 2 short blocks south to Montezuma, and 1 long block west to 55th St. Last #36 leaves College Av. and El Cajon at 9:56pm.

Sunday return to airport: Bus #43 from SDSU Transit Center to 5th Av. and Broadway. Walk across street and transfer to #2 going west on Broadway. Last #43 leaves at 5:37pm.

Lost? Call bus company (233-3004) or El Conk (286-2030) or (as last resort) HARRY RUJA (469-4887.)

BY CAB:

Fare about \$20. Fare varies from cabbie to cabbie; inquire! Yellow Cab permits dividing fare among passengers.

BY CAR:

From the North: Take I 5, to I 805, to I 8 (eastbound), to College Av. offramp, to Montezuma. Right on Montezuma, and on to 55th St. Free parking in lot behind El Conk (tall bldg. S side of Montezuma.)

From the East: I 8 west to College Av. offramp, etc.

From the South: I 5 north to I 8 east, etc.

From the West: use your water wings.

RECOMMENDED READING

- (24) "The Space Of One Breath" by Brad Leithauser discusses chess, computer chess, and artificial intelligence, in an article in The New Yorker (3/9/87, p. 41). You don't have to play chess -- or know anything at all about chess...or about computers, for that matter -- to find it engrossing. It deals with technical matters with great dexterity from an cultured layman's point of view. As articles go, it is a long one -- about 16 full pages of text, net, after deducting the space taken up by ads -- and it isn't a bit too long, in the opinion of Lee Eisler, who recommends it highly. Incidentally, the author, who recently wrote a highly praised first novel, happens to be the son of a BRS member, Gladys Leithauser.

BRS BUSINESS

- (25) Contributions welcome. Enjoy the satisfaction of knowing that you are helping to keep the wolf from the BRS door. Send a few bucks to the BRS Treasury (c/o newsletter; address on Page 1, bottom). No amount is too small; or too large, for that matter. Send what you can. Thanks.

PROMOTING BR'S PURPOSES

(26)

Beyond War: To Whom We Are Beholden

What has evolved on our planet is not just life, not just grass or mice or beetles or microbes, but beings with a great intelligence, with a capacity to anticipate the future consequences of present actions, with the ability even to leave their home world and seek out life elsewhere. What a waste it would be if, after four billion years of tortuous biological evolution, the dominant organism on the planet contrived its own annihilation.

No species is guaranteed its tenure on this planet. And we've been here for only about a million years, we, the first species that has devised the means for its self-destruction. I look at those other worlds, cratered, airless, cold, here and there coated with a hopeful stain of organic matter, and I remind myself what an astonishing thing has happened here. How privileged we are to live, to influence and control our future. I believe we have an obligation to fight for that life, to struggle not just for ourselves, but for all those creatures who came before us, and to whom we are beholden, and for all those who, if we are wise enough, will come after us. There is no cause more urgent, no dedication more fitting for us than to strive to eliminate the threat of nuclear war. No social convention, no political system, no economic hypothesis, no religious dogma is more important.

Carl Sagan, in Ethical Weekly (3/8/87) of the Ethical Society of St. Louis, with thanks to STEVE MARAGIDES.

CREATIONISM

- (27) The Louisiana Statute and its implications, as described AL SECKEL in "The Skeptical Inquirer" (Winter 1986-1987, pp.147-158)...with thanks to TOM STANLEY.

SCIENTIFIC EDUCATION in the public schools of the United States is once more under attack. The Supreme Court is about to consider the constitutionality of a Louisiana statute that would require public schools to vitiate their presentation of modern science by presenting a thinly veiled religious construct as a comparably scientific approach to explaining nature. In discussions of the history of the universe or of the earth or of life or human beings, any consideration of "evolution science" (as the statute calls it) would have to be offset by a presentation of "creation science." The latter is a concoction, based on religion, that offers "scientific" justifications for belief in the literal truth of the creation stories of the Bible.

The case is of great importance for science education not only in Louisiana but throughout the country, and it therefore has great import for science itself. The statute represents a bald attempt to bring the content of science

under ideological control and to warp the presentation of information developed in a score of scientific disciplines, from cosmology and astrophysics to paleontology, biochemistry, and even linguistics.

The Southern California Skeptics (SCS), the largest local group associated

Al Seckel is executive director of the Southern California Skeptics.

with the Committee for the Scientific Investigation of Claims of the Paranormal (CSICOP), has led a highly effective effort to inform scientific organizations and individual scientists about the nature and urgency of the case and to enlist their participation in an *amicus curiae* brief that asks the Court to declare the Louisiana statute invalid. The brief includes among its signatories 24 scientific organizations (including CSICOP) and 72 winners of

the Nobel Prize in the fields of Physics, Chemistry, Medicine or Physiology. It attacks the statute's mischaracterization of creationism as science and represents the largest group of Nobel laureates ever to support a single statement on any subject. Furthermore, this is the first time that so large and respected a group of scientists has joined together to publicly challenge the constitutionality of a statute, making this brief a document of historical importance.

First, some background. The creationist movement is closely aligned with what has been called "evangelical fundamentalism." For example, the Creation Research Society, a leading association of creationists, requires its members to subscribe to an explicitly fundamental "statement of belief." The Louisiana statute marks the culmination of decades of fundamentalist efforts to change the way science is presented in the public schools.

Certainly the most famous battle in the ongoing struggle took place in the 1920s, when Tennessee prosecuted John Scopes for teaching evolution in the public schools. Despite the renowned efforts of defense attorney Clarence Darrow, Scopes was convicted. His conviction was later overturned on a technicality, but the Tennessee law prohibiting the teaching of evolution remained on the books for another forty years. During that period, creationists maintained a strong influence over the content of public school textbooks. Rather than inviting confrontation with creationist activists, many textbook publishers chose to ignore or minimize the importance of evolutionary theory and its power as a scientific theory.

In the 1960s, the Supreme Court was finally called upon to evaluate several practices of critical significance to the creationists. In 1962 and 1963, an almost unanimous Court held that the Establishment Clause prohibits state-sponsored school prayer. And, in 1968, the Court struck down an Arkansas statute that prohibited the teaching of evolution—a statute very similar to the one in Tennessee under which Scopes had been convicted.

During the 1960s, in response to the clarification of constitutional law, the creationists—under the leadership of Henry Morris and Duane Gish—accelerated the dissemination of what is variously known as "scientific creationism" or "creation science." The objective was to describe the Genesis account of creation in a way that might appear sufficiently "scientific" to be usable in the public school classroom. Primarily through the efforts of the San Diego-based Institute for Creation Research, a vast literature of "creation science" emerged.

A number of states then considered whether the new form of creationism ought to be incorporated in public school education. Legislators in at least 17 states have introduced bills calling for the teaching of creationism. In 1977, the Indiana Textbook Commission adopted a creationist biology textbook. However, when the religious content of the book was brought to light, a local court held that its use would violate the Establishment Clause.

Creationist efforts to obtain legislation requiring "balanced treatment" of creationism and evolution in public schools later came to fruition in the passage of an Arkansas statute. After a lengthy and expensive trial featuring numerous expert witnesses, that statute, too, was held unconstitutional.

In 1981, the Louisiana legislature passed a law requiring "balanced treatment" of evolution and "creation science" in the public schools. The law provides that both evolution and creation be taught as "theory" rather than as "proven scientific fact." A group of parents, teachers, and organizations immediately challenged the law as a violation of the Establishment Clause. "In other cases, the so-called Establishment Clause has been construed to forbid the teaching of religion in the public schools.

The Louisiana case came before a federal district judge in that state who ruled that creationism is a religious belief and that teaching "creation science" in the public schools would therefore violate the Constitution. (Technically the judge ruled on a motion for summary judgment, deciding that he did not need to hold a trial since there were no disputed issues of fact and the only questions for decision were purely legal ones.) Louisiana appealed to the United States Court of Appeals for the Fifth Circuit, which affirmed the district court's decision. Louisiana asked the entire Fifth Circuit to rehear the case, but the request for rehearing was denied by a vote of 8 to 7. Louisiana then exercised its right to have the United States Supreme Court review the Fifth Circuit decision, and on May 5, 1986, the Court announced that it had taken jurisdiction over the appeal.

The Supreme Court ordinarily has a fair amount of discretion in deciding which cases it will hear, but has much less discretion when a federal court strikes down a state law. In those cases, the Court can decline to review the decision only if there is "no substantial question" about its correctness. In this case, at least four of the nine Justices concluded that Louisiana had raised a "substantial" question, but the Court does not disclose which four Justices or

their arguments. It is reasonable to speculate, however, that the Justices who voted to hear the case were concerned about why the District Court had ruled "creation-science" to be religious without holding a full-blown trial.

When the newspapers published the Supreme Court's decision to hear this case, I contacted my friend Jeff Lehman, who had recently clerked for a Supreme Court Justice and now works for the Washington law firm of Caplin & Drysdale, to find out more about the decision and what SCS could do to help. After learning that an *amicus* brief is the proper way for independent outsiders to present their views to the Supreme Court, I went to the SCS Board of Directors, and they agreed to help put together and fund a brief on behalf of the scientific community on the issue of the teaching of evolution and "creation science." Meanwhile, Jeff approached fellow Caplin & Drysdale lawyer Beth Kaufman (knowing of her expertise on the Establishment Clause) and together they got Caplin & Drysdale's agreement to provide its legal services gratis. SCS board member and Nobel laureate physicist Murray Gell-Mann (a CSICOP Fellow) agreed to send letters to the U.S. Nobel laureates in science and medicine, and to other scientific organizations, asking for their participation and support of the brief. The SCS *amicus* brief thus began to evolve.

To help familiarize the lawyers with the past works of "creation science" groups, I put them in touch with SCS member William Bennetta, who has spent several years investigating and writing about "creation science." Bennetta, armed with boxes of material, flew to Washington. In short order, he was able to give Kaufman and Lehman the flavor of the entire controversy.

An *amicus* brief may articulate any particular view its supporters wish to express; it need not and should not make all of the possible arguments in the case. Since the ACLU would be discussing the Establishment Clause decisions and their bearing on this case, it was decided to focus on the issues that scientists would consider important in order to make a meaningful contribution with the *amicus* brief.

Ultimately, the brief focused on two issues. First, drawing on the wealth of "creation science" writings now available, the brief sought to prove to the Court that "creation science" embodies certain religious ideas that come from Genesis: that a divine Creator created the universe and life from nothing; that all the "kinds" of plants and animals were created at once and no "kinds" have ever evolved into other "kinds"; that a worldwide flood caused the formation of fossils and all other geological and paleontological phenomena; and that the universe and life are less than 10,000 years old.

In the Louisiana law that the Supreme Court will assess, "creation science" has been fully sterilized. The law prescribes "balanced treatment" for "evolution science" and "creation science," but it does not describe "creation science" at all. It says only that "creation science" comprises the "scientific evidences for creation"; it says nothing to suggest what "creation" may mean. The state of Louisiana denies that the "creation science" of the statute is linked to religion, denies that it corresponds to orthodox "creation science," and denies that it is anything more than a preoccupation with "origin through abrupt appearance in complex form." That phrase, or some variation of it, appears in affidavits that were devised for the state *after* the statute had been passed and had been challenged in a lower federal court. The state asserted that "creation science" did not involve these concepts; the SCS brief shows that the "creation science" of the statute can be nothing but the "creation science" of fundamentalists, the state's representations notwithstanding. Furthermore, the brief argued that the "abrupt appearance" construct is not a sufficiently well defined alternative to orthodox "creation science." It fails to define a concrete alternative to evolution; accordingly, it is implausible that the Louisiana legislature intended the Act to embody it rather than orthodox "creation science." Therefore, the sterilized "abrupt appearance" construct can only be understood as a post hoc explanation created for the purpose of defending this unconstitutional Act.

The second argument proceeds by offering the Court a careful distinction between scientific fact and theory. Facts are properties of natural phenomena; theories are naturalistic explanations for a body of facts. The brief explains that this distinction permeates *all* of science, not merely those areas governed by the theory of evolution. By requiring that evolution be taught as "theory," while permitting *other* scientific theories to be taught as "proven scientific fact," the statute deprecates evolution. By singling out one topic of science (so-called "origins") for special treatment, the legislature conveyed the false message that the prevailing theory of "origins"—evolutionary theory—is less robust than all other theories in science. If the Court can understand this distinction between fact and theory, it will understand that the act could not have been intended to promote academic freedom, but rather was intended to

disparage evolution because of its conflict with certain religious beliefs.

Because of the historic importance of this brief and of the case itself, it was decided to hold a news conference in Washington at the National Press Club on the date of filing. Representing the brief and the issue of "creation science"/evolution were 1972 Nobel laureate biochemist Christian Anfinsen; Harvard paleontologist and CSICOP Fellow Stephen Jay Gould; geneticist Francisco Ayala, chairman of the National Academy of Sciences Section of Population Biology, Evolution, and Ecology; and SCS Executive Director Al Seckel. Beth Kaufman and Jeff Lehman were also present. Gell-Mann, Gould, and Ayala read prepared statements. (See texts.) Approximately 70 members of the press attended: reporters from all the major wire services, television and cable news networks, major newspapers, and news magazines, as well as representatives from the major scientific, legal, and educational publications. The story was widely reported all over the United States and was front-page news throughout the state of Louisiana.

The purpose in holding a news conference was not simply to advertise the brief but also to focus public attention on how important proper scientific education is to the welfare of this country. In their statement of interest in the brief, the scientists explain that, while it is important that science education accurately portray the current state of substantive scientific knowledge, it is even more important that science education accurately portray the premises and processes of science. They contend that teaching religious ideas mislabeled as "science" is detrimental to scientific education: "It sets up a false conflict between science and religion, misleads our youth about the nature of scientific inquiry, and thereby compromises our ability to respond to the problems of an increasingly technological world. Our capacity to cope with problems of food production, health care, and even national defense will be jeopardized if we deliberately strip our citizens of the power to distinguish between the phenomena of nature and supernatural articles of faith."

The range of scientific expertise found among these Nobel laureates indicates that they perceive more than just the theory of evolution to be at stake. As even the creationist writings reveal, evolutionary biology is intertwined with other sciences, ranging from nuclear physics and astronomy to molecular biology and geology. Therefore, although the creationist campaign is advertised as merely an assault on evolution, it is in fact an attack on the full sweep of scientific knowledge. Moreover, by challenging the methodology of evolutionary biology, the creationists also challenge the methodology of all of modern science.

It is because of the creationists' broad attack on science that the brief was able to attract such wide support in the scientific community. Earlier attempts to rally these scientists against the Reagan Administration's Strategic Defense Initiative, often called the Star Wars program, failed miserably. Arno Penzias, who shared a Nobel Prize in 1978 for his work in discovering cosmic radiation, supporting the "big bang" theory of the universe, called the

unified action on creationism unusual and said that he could not imagine any other issue receiving support from such a broad range of Nobel laureates. Among the other Nobel signers of the friend-of-the-court brief were people with whom he often had violent arguments on other issues. Penzias said.

According to Val Fitch, who won the prize in Physics in 1980 for helping to explain the predominance of matter over antimatter in the universe, the action was a defense of the integrity of science. "When scientific method and education are attacked, the laureates close ranks and speak with one voice," he said. The Louisiana law earned this unprecedented opposition because "it defies all scientific reason," Fitch said.

The brief was filed on August 18, 1986. Oral arguments will be heard around January, but a decision may not be issued until June or July 1987. As usual with cases involving religion, this case will have impact far beyond the state lines of Louisiana. If the Supreme Court affirms the lower courts' decisions in this case, other states will know that similar statutes would be considered unconstitutional. If it were to reverse, the creationists would enjoy a devastating propaganda victory (even though the case itself would continue in the lower courts).

Both sides in the controversy admit that the SCS brief will receive more attention than the many other friend-of-the-court briefs that flood court clerks' offices. "It's got to make the Supreme Court sit up and take notice," said Martha Kegel, executive director of the ACLU's Louisiana chapter. "I think it shows the impact of the case to the scientific and academic communities," she said. "There's the realization that this law, if allowed to stand, will have a detrimental effect on scientific education and academic freedom."

Kendall Vick, the Louisiana assistant attorney general, said it is difficult to gauge how much effect the brief will have. But in most cases, he said, "unless it is a very significant brief by a group like this or the solicitor general or attorney generals of all the states, [one of these briefs] doesn't have much impact."

If next summer the Supreme Court rewards our efforts with a victory, we should not be lulled into complacency. Often school boards or even individual teachers institute religion in the classroom either in ignorance of or in spite of its unconstitutionality. These actions are far less visible than a state statute; they will continue unless involved parents and community members complain about them. It is the responsibility of each of us to ensure that the Constitution is not thwarted in this way.

Postscript: A tremendous amount of effort was spent in preparing this brief; we thank the many volunteers who made this effort successful in so short a time (two and a half months). We would also like to thank those individuals and groups who made contributions to help defray the expenses, including CSICOP, which generously donated \$2,750. •

CURRENT ATTITUDES

(28) Meet some fellow Americans, courtesy of the New York Times (4/13/87, B9 [benign?]):

By DENNIS HEVESI

The Devil is not only responsible for the fall of the Rev. Jim Bakker and the troubles facing the nation's television ministry; he is an active, negative force at work in the universe who is constantly tempting human beings, many followers of the television evangelists believe.

And while the Devil is not the horned and pitchfork-bearing caricature of evil, most of those followers say, they believe he is a spirit created by God so humanity can struggle through great tribulation toward the coming of heaven on earth.

Those views were expressed in a follow-up to a New York Times-CBS News Poll conducted two weeks ago in response to the adultery scandal involving Mr. Bakker and his PTL Ministry.

That survey indicated that the 505 respondents who said they "made a point of watching" one or more of seven well

known evangelists were evenly divided about whether "the Devil was responsible for the troubles" of Mr. Bakker. Forty-three percent said the Devil was responsible and 43 percent said he was not.

For example, Carlos Velez, a 46-year-old claims agent for the Long Island Rail Road who lives in Rockville Centre, L.I., believes the Devil "took possession" of Mr. Bakker.

"I do believe that there is a Devil," said Mr. Velez, a Catholic. "When the Devil takes somebody's mind and he has no willpower, the Devil can control him."

"Here's a man running this, you can call it an empire," Mr. Velez said of Mr. Bakker. "He has everything going for him. All of a sudden this young woman comes along. He sees an opportunity. I believe the Devil took possession of him. It can happen to anybody." Janee Holdaway, 27, who works in a

foam rubber factory in High Point, N.C., concurs. "I feel, like any person who reads their Bible, that the Devil tempts people," she said.

But Mrs. Holdaway, a member of the Pentecostal Holiness Church, voiced ambiguity about where to place responsibility, and in doing so raised the theologically critical issue of free will.

"I feel he was tempted by her," Mrs. Holdaway said of Mr. Bakker and the secretary with whom he had the affair. "But he wasn't made to do anything he didn't want to do. He could either sleep with her or walk away. He's responsible."

Mr. Bakker has contended that the woman, Jessica Hahn of West Babylon, L.I., seduced him in a Florida hotel in December 1980. Miss Hahn has said through an adviser that she yielded only after drinking drugged wine.

Mrs. Holdaway wondered whether the Devil wasn't ultimately to blame.

"He is a spirit that can make you do things that you normally wouldn't do," she said. "So, here we are back to square one. Who is responsible?"

And if God created everything, including the Devil, then is God responsible for evil?

For Rod Sladek, 31, a real estate salesman from Albany, the answer — seen as part of a higher plan — is yes.

"God creates everything and gives us all free will," said Mr. Sladek, who is Catholic. "And He allows us to be individuals, as opposed to robots. He could have created us as slaves that would only worship. But he gave us options."

"Right now, we're in the midst of a spiritual war between the kingdom of God and the kingdom of Satan," Mr. Sladek continued. "And we're losing. I think that if you look into the prophecies of Jesus you'll find that the events happening today have been foretold, and this is the beginning of the birth pangs of the great tribulation, which will eventually usher in the kingdom of Christ."

Mike Bell, 26, a communications systems analyst from Decatur, Ga., sees the Devil in terms of an "opposing force, a negative spirit."

"God created the Devil as being a good force," said Mr. Bell, a Baptist. "But the Devil wanted too much power and, as a result, he ended up, turning against God."

Satan's Personal Reality

Such a "personalized" interpretation of the Devil as a negative spirit or force — independent of, though influencing,

human action — is valid, according to Dr. Carl F. H. Henry, a theologian at Trinity Evangelical Divinity School in Deerfield, Ill.

"There has been insistence in evangelically orthodox circles on the personal reality of Satan," Dr. Henry said. "You've got to say that Jesus affirmed the reality of the personal Satan as a rebellious angelic creature, as did the Old Testament prophets, the New Testament apostles and the greatest Christian theologians."

"If the moral principle of 'the good' can be grounded in a personal, invisible spirit — that is God — why cannot the principle of evil likewise be grounded in a personal demonic spirit?"

The Rev. Ronald Thiemann, dean of the Harvard University Divinity School, however, sees limitations to such personalizations.

Dr. Thiemann said he sees evil existing on three levels: As "personalized evil, as natural evil, such as earthquakes, and as a kind of structural evil, which is spawned by human activity but somehow takes on a life of its own and infiltrates organizations and systems. Nazism, of course, is the classic case."

"If we limit our view to talk of the Devil," he said, "then we're going to fail to identify some of the most terrifying expressions of evil. The danger of focusing on the Devil is that we personalize and thereby trivialize the enormous social power of evil."

Bob Cash, 55, of Oklahoma City, holds to the personalized view of the Devil. "He's a spirit, and he's real," he

said.

Mr. Cash has difficulty coming to terms with the incapacitating pain he still suffers from an automobile accident 16 years ago.

When asked if the Devil caused the accident, he replied: "I wouldn't be a bit surprised. He's probably behind it."

"If I had a choice to go to heaven right now," Mr. Cash said, "I'd rather be where all that peace is instead of all this pain. Why didn't I get to go on? That's what I've always wondered; what's the lesson I was supposed to learn?"

In the end, the only answer for Mr. Cash is faith. "I'm not going to question God," he said.

And that is how he views the Jim Bakker affair. "There surely is some kind of good to come out of it," he said. "Somebody will get the right experience or the right answer."

The right answer for Lydia Mayo is summed up in one word: Forgiveness.

"Of course, it's wrong when you do these things," said Miss Mayo, a Baptist who is 65 and lives in Newport News, Va. "But I think some people just use this as an alibi: 'The Devil made me do it.'"

"It's not like I can see the Devil walking down the street. Just like I can't see God. To me, the Devil comes in people, in our actions. Actions that God is not pleased with. We have all come short of the glory of God. Some people said that Jim Bakker, because he is a minister, shouldn't have done it. But I can forgive him, if the Lord can."

WANTED TO BUY

- * (29) "Essay on the Foundations of Geometry" by Bertrand Russell, any edition in reasonably good condition at a reasonable price. Dr. Irving H. Anellis, 110 McDonald Drive, #8-B, Ames, IA 50010-3470.

INVITATION TO WRITE

- * (30) Sailor. "Because of making my living at sea and seldom being home, most of my relationships are maintained through letters. To a sailor, one of the most important things in life is mail: people to write to and receive mail from; especially people with whom you have a common bond and interest." So writes a new member who enjoys reading Science, History, Philosophy and Theology. He is: QM2 Thomas Bollin, USN; USS Arthur W. Radford (DD-968); FPO New York 09586-1206. [QM2 = Quartermaster 2nd Class]

ABOUT OTHER ORGANIZATIONS

- (31) Free Inquiry, the publication, will hold its annual conference on September 11-13, 1987 in Washington, D.C. It will focus on "The Roman Catholic Church and Humanism." To find out more: Box 5, Buffalo, NY 14215-0005.

PRIZE CONTEST

Win a good book, a Russell book

10 books, 10 winners

5 copies of each of the following:

Bertrand Russell on God and Religion

edited by BRS Member Al Seckel

published in 1986 by Prometheus Press of Buffalo, NY

Five copies donated by them to the BRS
in support of this contest

Bertrand Russell

by BRS Member Paul Grimley Kurtz

published in 1986 by Twayne Publishers of Boston

Five copies donated by them to the BRS
in support of this contest

Purpose of the contest:

to help the BRS acquire new members

How to enter the Contest:

1. Talk with people you know about the BRS, and if they seem interested in the possibility of joining, send us their names and addresses and we will send them several pages of information about the BRS. Also state which of the two books you would prefer, if you should be one of the winners.
2. When one of your people enrolls, we will credit you with one point.
3. When the contest ends, each of the 10 members with the most points wins a book. We will ship the books according to the stated preference, to the extent possible.
4. The contest will end December 31, 1987.

Send your new-member-prospects to the newsletter, address on Page 1, bottom.

You help the BRS
by winning a book

Stay with it!

If you like this contest, credit MARVIN KOHL. It was his idea. He arranged for the books, too.

(33)

DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.

elected for 3-year terms, as shown

1985-87: JACQUELINE BERTHON-PAYON, BOB DAVIS, ALI GHAEMI, HUGH MOORHEAD

1986-88: LOU ACHESON, KEN BLACKWELL, JOHN JACKANICZZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, CARL SPADONI TOM STANLEY

1987-89: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, STEVE MARAGIDES, FRANK PAGE, MICHAEL ROCKLER, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA

The 6 BRS officers are also directors, ex officio,

PROGRAM (ANNUAL MEETING)

(34) The Program: (tentative)

Friday, 19 June 6:30 p.m. Registration. Informal Reception
 7:30 Call to order. Announcements
 7:45 DON JACKANICZ, "Bertrand Russell: the San Diego Connection"
 8:15 Film: CBC Close-Up Interview
 9:00 Break
 9:30 Board of Directors meet. All members welcome. RICHARD WILK's proposal for a Russell Prize
 10:30 Recess

Saturday, 20 June 8:00 a.m. Breakfast
 8:30 MARVIN KOHL, "Locating the Primary Good"
 9:30 Break
 9:45 MICHAEL ROCKLER, "Russell on Education"
 10:30 Break
 10:45 Talk
 11:30 Business Meeting of the Society
 12:30 Lunch

2:00 p.m. AL SECKEL, "Bertrand Russell on Ethics, Sex and Marriage"
 2:45 Break
 3:00 MICHAEL CARELLA, "Mysticism and Logic, a Second Look"
 4:30 Break
 5:00 Red Hackle Hour
 6:30 Banquet
 9:00 Board Meeting. All members welcome

Sunday, 21 June 8:00 a.m. Breakfast
 9:00 JOHN LENZ, "Russell and the Greeks"
 10:00 Film: Bertie and the Bomb
 11:00 SAM LABSON, "Russell on the Scientific Spirit"
 12:30 Checkout

P.S. To reserve a room for the June 19-21 Meeting, send your check to El Conquistador, 5505 Montezuma Road, San Diego, CA 92115, for 48.50 for single room with all meals; or 42.50 (per person) for double room with all meals; or 18.50 for meals only (all meals including banquet.) "All meals" means 3 meals Saturday, breakfast Sunday.

BY BERTRAND RUSSELL

(35) How to oppose Apartheid, from "Dear Bertrand Russell", Feinberg and Kasrils, eds. (Boston: Houghton Mifflin, 1969. pp. 53-54):

Russell replies to a correspondent who is opposed to the Apartheid regime in South Africa but who is equally opposed to violent forms of struggle.

27 November 1964

DEAR MR. HOUGHAM,

Thank you very much for your letter which I read with care. I think it probable that non-violent action will not succeed in altering the regime in South Africa. As with most industrial totalitarian countries, organized revolution is extremely difficult and non-violent resistance even more so. The regime in South Africa makes open opposition impossible and, therefore, minimises the opportunities of organized non-violent opposition. Having said this, however, I should point out that it is very difficult to stop violence once it begins. The Algerian revolution cost one and a half million lives out of a population of 8 million. Comparable disaster in Britain would involve the lives of 6 million people and a devastation of the entire country. The end result is a government dependent upon its army and it is because victorious revolutions invariably succeed through the discipline of a determined guerilla army that they soon enter a Bonapartist phase. To answer your queries specifically:

1. It is presumptuous for those of us not faced with conditions such as those which obtain in South Africa to determine the form of struggle. I believe our efforts in Britain should be concentrated on making known the nature of the regime and on mobilising

public opinion so that the British Government can be induced to apply pressure. I do not believe anti-apartheid organisations should dissociate themselves from nationalist movements advocating violence.

2. In the event of outbreak of violence in South Africa, the campaign for external pressure of an economic order should be stepped up. United Nations intervention is rarely beneficial because the U.N. itself is so much the centre of Cold War power politics. Until this ceases to be true, intrusion of the U.N. will mean little more than the introduction of American power into the area concerned. This was evident in the Congo. If Nationalist movements seek assistance from Cold War powers, it will, without doubt, increase the danger of world war. There is no remedy other than seeking economic sanctions against the offending governments. The longer pressure against the government of South Africa is delayed, the more dangerous and violent the explosion will be. There is no escaping this. Western investments in South Africa are colossal. If the government is tolerated by those who hold these investments until the final explosion of violence, the situation will be even more grave.

In short, the task of those seeking to oppose apartheid is to work for the maximum pressure against the regime from the outside. There is no way to remove the spectre of violence short of that. Violence is endemic where governments of this order hold sway.

Yours sincerely,
 BERTRAND RUSSELL

ABOUT BERTRAND RUSSELL

THE TALK OF THE TOWN

Notes and Comment

BERTRAND RUSSELL is dead at ninety-seven, and for more than a week now we have been thinking about him, off and on, with pleasure and gratitude. Russell did away with much nonsense in his lifetime, and he even managed to do away with the nonsense of being mourned. It is impossible to grieve for the ending of a life so deeply filled, to want more of a man still capable, right to the end, of outrageousness, moral candor, and seven double Scotches a day. Few men of our time have managed a longer or more public or more self-explained life, and few, it seems now, are less susceptible to neat memorialization. How is one to summarize a mind whose most persistent habit was a distaste for summary, a resistance to all final conclusions? It was this habit, perhaps, that made Lord Russell's recent three-volume autobiography something of a disappointment at first. The accounts of his famous, breathtaking expeditions to the highest mathematical ranges and most distant philosophical pampas, of his triumphant crossings of the political and pedagogical high seas seem skimpy and inattentive; each journey completed mattered less to him than the journey about to be undertaken, and also mattered less than the changes of mind and of friends and of passions that the voyager, forever open and forever being surprised, experienced along the way. This fervent, even arrogant naïveté invited the laughter of the well-informed and the rage of the certain. In recent years, it was popular to speak of him with a

condescending sadness ("the poor old boy"), because he persisted in publicly calling this country despicable, excessively powerful, warlike, and comparable in its foreign policy to Nazi Germany. Clearly, this was going too far, yet Russell always went "too far." He was guilty of too many opinions, too many recantations, too many jailings, too many love affairs, too many marriages, too many professions. Often, though, what had seemed ridiculous or excessive at the time looked more nearly essential later on, and in the end, in his tenth decade, it could be noticed that the central concerns of his lifetime—the utter necessity of peace, the universal reaching out for love, a compassion for all human suffering—were precisely the concerns of the youngest and most hopeful generation on earth.

A colleague of ours told us the other day that he had interviewed Russell for his college newspaper back in 1939. "We had tea at the Ritz in Boston," he said. "And then we had dinner there, too—just the two of us. I still can't quite believe it. He was sixty-six and famous, obviously with an empty evening to fill, and I was a freshman and I didn't know *anything*. I don't remember what we talked about, but he kept the conversation going and saw to it that I got a good story for the paper, and he paid for the dinner, too. Looking back on it afterward, I realized, of course, that *he* had interviewed *me*. And then, years later, I began to understand that he had been willing to spend all that time with me simply

because he was far more interested in my mind than I was. I think this is the ultimate compliment."

We have heard also of a more recent dinner conversation with Lord Russell, on the occasion of his ninetieth birthday. A London lady, a friend of ours and his, sat next to him at his party, and over the soup she suggested to him that he was not only the world's most famous atheist but, by this time, very probably the world's oldest atheist. "What will you do, Bertie, if it turns out you've been wrong?" she asked. "I mean, what if—uh—when the time comes, you should *meet* Him? What will you say?" Russell, the lady told us, was delighted with the question. His bright, birdlike eyes grew brighter as he contemplated this possible future dialogue, and then he pointed a finger upward and cried, "Why, I should say, 'God, you gave us insufficient evidence!'"

The joy of Bertrand Russell is that he died, so to speak, unfinished—still changing, still wondering, still unsolenn and incautious, still skeptical, still asking not the last question but the one after that. These qualities, it occurs to us, are perfectly suitable not only for a philosopher but also for a journalist, a statesman, a student, a teacher, an artist, a mother, a rock musician, a weather forecaster, a recluse, an activist, a gardener, a minister, or a man-about-town. They are suitable, in short, for each of us and for every occupation, and Bertrand Russell, if we are to sum him up after all, seems to fit best into that rarest of all occupations, the exemplar.

From the issue of 2/20/70.

- (3) Toynbee niffed, according to these Letters to the Editor of Look Magazine (6/27/67), with thanks to HERB and BETTY VOGT:

TOYNBEE ON RUSSELL

I want to draw your attention to two passages in Miss Flora Lewis's article *The Tragedy of Bertrand Russell* [Look, April 4]. . . . They were based on a conversation between her and me that I had agreed to have with her on the express condition . . . that everything that I said to her would be off the record. . . . The meeting was then arranged, on this condition, by Dr. Myers [U.S. Cultural Attaché in London] and his colleague the Press Attaché at the Embassy, Mr. Pettus. Neither they nor I had any doubts that Miss Lewis clearly understood that everything that passed between us was off the record, so I talked with complete frankness. I made four points: (i) that Lord Russell was an aristocrat and had an aristocrat's self-confidence in upholding his own views against all comers; (ii) that he was a noble character who had an intense concern for the future welfare of mankind. . . . ; (iii) that at 95 he still had the vitality of youth; (iv) that . . . he also had the provocativeness of youth, and that . . . this reverse side of his lasting youthfulness sometimes led him into taking action that seemed to

his friends likely to produce the opposite results from those at which he and they were aiming.

I illustrated my last point by telling her that I myself had recently been embarrassed by receiving from Lord Russell an invitation to serve on his tribunal for passing judgment on American action in Vietnam. I said that my reaction was that the setting up of the tribunal would be likely to stiffen the American government's and people's will to pursue the war. . . . So I was not going to serve on the tribunal. I told Miss Lewis I felt that I could not write to Lord Russell a letter, declining his invitation, without explaining my reasons, and that I could not bring myself to . . . lecture a man who was much older and very much more distinguished than me about how he should act. I had, therefore, left the invitation unanswered, as the lesser evil.

As we were leaving the Embassy, Miss Lewis said to me: "I may publish, may I not, the fact that you left Lord Russell's invitation to you to serve on his tribunal unanswered?" I said: "Certainly not; this, like everything else that I have told you, is off

the record." I was so much upset by this that I went at once to Dr. Myers and told him what had happened. He went after Miss Lewis [and] obtained from her a reconfirmation of her assurance that everything I had said was off the record.

In the article which she gave to Look, Miss Lewis has committed the following offences: (i) she has published what she had promised, twice over, to keep off the record; (ii) she has published, in particular, the very thing that she asked my leave to publish, and for which I explicitly refused my permission; (iii) she has revealed my identity by describing me, without naming me, on one page and then mentioning me by name on another page. . . . ; she has put into my mouth, between quotation marks . . . words, insulting to Lord Russell, that suggest that my reaction to his invitation had been contemptuous, whereas she knew . . . that my feelings for Lord Russell, which led me to leave his letter unanswered, were respect and affection.

ARNOLD J. TOYNBEE
Stanford, Calif.

As Professor Toynbee says, he was the source of the statement. He was one of several British scholars of great renown with whom I spoke at length, explaining that I planned an article. Their views were surprisingly similar. They were critical of Lord Russell's recent stands, though they opposed U.S. actions in Vietnam, and they declined to put their names to their opinions. There is some irony in that. Lord Russell has never hesitated to speak his mind about anyone, friend or foe. But I understood that affection and the deepest sense of British courtesy was an important reason for the restraint, and I think the passage to which Professor Toynbee refers makes this clear. The other question is propriety of publication. It is no secret from Lord Russell or many others that more people were asked to participate in the tribunal than accepted. I carefully did not name Professor Toynbee in any connection with his views on Lord Russell or the tribunal, as he requested. If I nonetheless came too close to identifying him for others, I apologize.

FLORA LEWIS

- (4) Psychohistory studies the behavior of an individual, and uses psychological theories to explain the behavior. That's what ANDREW BRINK has done in "Bertrand Russell: The Angry Pacifist", an article in "The Journal of Psychohistory" (Volume 12, No. 4, Spring 1985.)

The Journal identifies Andrew Brink this way:

Professor of English and an Associate Member of the Department of Psychiatry, McMaster University, Hamilton Ontario. He is an editor of the "Collected Papers of Bertrand Russell", the author of "Creativity and Repair", and has contributed an earlier Russell article to this journal.

Andrew Brink is also a long-time member of the BRS. Here is his article:

Bertrand Russell: The Angry Pacifist

ANDREW BRINK

Reflection on Bertrand Russell's biography raises the question whether he was indeed the pacifist he claimed to be. Unrealistic sainthood can be asked of any pacifist, but in Russell's case there are indications that he was no pacifist at all while maintaining the stance of one. I refer to the discrepancy between the public profession of pacifism, beginning with the First World War and private fantasy and behavior. Can Russell's politics of pacifism be faulted for having been at variance with his own violent urges, or is there a principle by which his pacifism can be authenticated? From the Boer War to Vietnam Russell was consistently sensitive to the suffering caused by war; only now with accumulated biographical evidence can we begin to explain how this tormented man became one of the twentieth century's most effective advocates of peace. It is important to speculate about how his grief and rage were converted into socially useful forms yet left evidence of their source in psychological conflict.

So far historians lack the concepts to describe Russell's attitude to war. In her study of Russell's part in the No Conscription Fellowship during the Great War Jo Vellacott finds insufficient "evidence of a positively pacifist outlook" developing between his "conversion" of 1901 and the outbreak of war in 1914.¹ She recognizes Russell's own

violent streak, and notes a tendency through the experience of war "towards an integration of the different sides of personality";² but there is no theory to explain what occurred.³ Thomas C. Kennedy writes more bluntly that Russell was "never a pacifist," because his stance was less due to personal faith than it was political.⁴ Let us see whether psychobiography helps to clear up this matter.

The Great War drew from Russell some of his most urgent statements about the need to control hostility in its collective form. He reacted with horror to the killing in what Henry James called "the plunge of civilization into this abyss of blood and darkness . . .".⁵ In "Why Nations Love War" (1914) Russell saw in public zest for armed conflict the most serious obstacle to pacifism, and he outlined the psychological issue. The same people who deplored the evil of war seemed to enjoy it, the result of "an instinctive disposition of human nature," "the instinct of every gregarious animal to cooperate with members of its own herd and to oppose members of other herds."⁶ He also discussed the needs of urban people for excitement, the lust for power and fear of domination by an enemy, along with the appealing selflessness of military service. Each reason for war is hard for the pacifist to answer, but Russell proposed, as William James had done, a moral alternative to war in which instinctive hostility is deconditioned by using appropriate stimuli, with sport serving as a substitute for lethal contests. Thus Russell turned to psychology to address the problem of removing war, but the war continued and he pressed for moral ways to resist its ravages. In "The Philosophy of Pacifism" (1915) he advocated passive resistance which "would discourage the use of force by arousing a sense of shame in the aggressive nation, and also by the fact that it would be found able to preserve whatever is worth preserving in the life of the nation which had the courage to employ it."⁷ Russell was never an absolute pacifist: in "War and Non-Resistance" (1915) he made clear that he did not favor the views of the Quakers and Tolstoy that "it is always wrong to employ

force against another human being." But he advocated limiting the use of force and questioned the justifiability of armed self-defence. Only force within a neutral rule of law as "in a central government of the world" should be sanctioned. These are surely the opinions of a sensitive, responsible and far-seeing thinker shocked by modern war into finding its remedy. Yet it was wittily remarked by A.E. Housman that "If I were the Prince of Peace, I would choose a less provocative Ambassador," so aggressive was Russell about his anti-war opinions. As is well known, he was dismissed in 1916 from his lectureship at Trinity College, Cambridge having been found guilty under the Defence of the Realm Act for his part in the "Everett Leaflet" which supported the rights of conscientious objection. In 1918 he went to prison for six months for having published further remarks about the war "likely to prejudice His Majesty's relations with the United States of America."

Russell was a more or less militant pacifist from that time on. During the 1920s and 30s his popular essays frequently refer to the danger of another European war. For instance, in 1924 he wrote: "Those of us who do not wish to see our whole civilization go down in red ruin have a great and difficult duty to perform—to guard the door of our minds against patriotism."¹⁰ But by 1939 he knew that the Nazi tyranny had to be resisted by force. "I remained in favour of peace until shortly before the outbreak of the Second World War when I became convinced that peace with Hitler was impossible."¹¹ Even through that struggle Russell thought of himself as "still a pacifist in the sense that I think peace the most important thing in the world."¹² With the rise of east-west tensions, Russell became a nuclear disarmament willing to use civil disobedience to put before the public the vastly increased dangers of war fought with nuclear weapons. As he said in "Man's Peril" (1955), "Shall we put an end to the human race; or shall mankind renounce war?"¹³ At the end of his life he opposed the American presence in Vietnam, and insured that his opposition to war would outlive him by setting up a Peace Foundation.

II.

In his *Autobiography* Russell attributes his pacifism to "a sort of mystic illumination" which occurred in February, 1901 at age 29. It resembled the "subconsciously maturing processes" described by William James in his chapter on "Conversion" in *The Varieties of Religious Experience*.¹⁴ The *Autobiography* seems to build up to this climactic experience, taking its reader through childhood losses and compensations, a solitary adolescence in his grandfather's upper class household, the satisfactions of Cambridge, engagement and marriage, to the intellectually stimulating events of September 1900, "the highest point of my life." In August Russell had attended a conference in Paris where the logician Giuseppe Peano provided him with techniques for analyzing mathematics. But from triumphs in mathematical logic Russell plunged "into the darkest despair that I have ever known" caused by intellectual and emotional problems compounding each other (I, 145). This introduces the main crisis of his moral life, the conversion precipitated by hearing the classicist Gilbert Murray read from his translation of Euripides's *Hippolytus*, which, as he later said, brought out what is "noble and beautiful in sorrow," a "consolation" to those who lack a religion (I, 156). The conversion happened when Russell returned from Murray's reading to find Evelyn Whitehead, the wife of his mathematical collaborator, A.N. Whitehead, in the paroxysms of an angina attack. Russell led her three year old son away from the scene.

She seemed cut off from everyone and everything by walls off agony, and the sense of the solitude of each human soul suddenly overwhelmed me . . .

Suddenly the ground seemed to give way beneath me, and I found myself in quite another region. Within five minutes I went through some such reflections as the following: the loneliness of the human soul is unendurable; nothing can penetrate it except the highest intensity of the sort of love that religious teachers have preached; whatever does not spring from this motive is harmful, or at best useless; it follows that war is wrong . . . that the use of force is to be deprecated, and that in human relations one should penetrate to the core of loneliness in each person and speak to that. (I, 146)

Russell claims that the conversion made him "a completely different

person," no longer concerned "only for exactness and analysis" but caring for beauty and for the lives of others (I, 146). It was an "emotional set-back" but with enormous potential for his future as a social critic (I, 147). The term "Pacifist" is used to describe his new state of mind. There followed "an intense interest in children, and . . . a desire almost as profound as that of the Buddha to find some philosophy which should make human life endurable" (*Ibid.*). The essence of this philosophy would be the renunciation of use of force.

Bennett and Nancy Simon cogently argue that the psychodynamic meaning of this change was Russell's identification with the three year old Whitehead boy whose mother's life was visibly threatened by the angina attack.¹⁵ Russell's own parents had died before he reached age four, and it is likely that their deaths were inadequately mourned, leaving him with a legacy of grief, anger and loneliness. The Whiteheads were intimate acquaintances and so he could not overlook their sufferings which awakened in him unresolved conflict. Having re-experienced his anxiety in regressing to reactions to the loss of his own parents, Russell was forced to alter his view of life's meaning to one of tragedy and suffering. As he put it in "The Return to the Cave:" "We are all orphans and exiles, lost children wandering in the night . . ."¹⁶ But feelings of radical separation must be sublimated if we are to endure: "So out of pity grows service, out of service grows love, and out of love grows wisdom and the power of endurance," as he wrote in an untitled paragraph of *The Pilgrimage of Life*.¹⁷ Russell's new world picture is most eloquently presented in "The Free Man's Worship" (1903) where he argues that while the universe seems to care nothing for our struggles, we must learn to care about our fellow men by acquiring the tragic view of life:

In the spectacle of Death, in the endurance of intolerable pain, and in the irrevocableness of a vanished past, there is a sacredness . . . in which . . . the sufferer is bound to the world by bonds of sorrow.¹⁸

Russell came to dislike such lyric language, but he never disavowed its message that because lonely suffering is the tragic law of life, we should not increase the suffering of our fellow human beings. This became the foundation of his politics of pacifism and, however much he altered his ethical theorizing and adjusted pacifist principles to political realities, the conversion always remained a major reference point.

I have suggested that Russell's acquiring a tragic view of life, what he called the "religion of sorrow," was a product of a "creative illness."¹⁹ While the term leaves something to be desired, it connotes a process of long incubation of moral unrest leading to a discovery of a universal application benefitting humanity. The discovery is invariably surrounded by repressed infant and childhood conflicts which at last are organized into a vision of how social good may be promoted. The moment of reorganization is precipitated by relaxation after intense intellectual effort, when subcurrents of obsessional thinking surface and form meaning. A new stage of moral growth is initiated, with matters too private for words being "converted" into an urge for public reforms. For Russell the conversion of 1901 released him from regressive longings for refuge in pure Platonic essences, from Pythagorean mysticism of number, into a new politics of human concern. The first result was to renounce British Imperialism and become pro-Boer. Consistently thereafter, with each new armed conflict, Russell saw it for the suffering it caused, not just for its political rights and wrongs.

But can so large an effect as his life-long pacifism be attributed to a brief five minute "conversion," and what of the credibility of his statement that "I had become a completely different person"? (my italics) People are reluctant to accept as genuine such claims to instant and complete moral change. (This is not just because "conversion" is now rare among intellectuals—it implies a prior condition of radical disjunction between thought and affect, common among such Victorians as John Stuart Mill and Havelock Ellis who are known to have had secular conversions. Russell the logician had indeed been an affectless "thinking machine" who found release from Victorian inhibitions.) Doubts arise because of Russell's stormy personal life revealed in the *Autobiography*, examined by the biographer Ronald Clark (1975) and lavishly documented in Russell's still mainly unpublished private correspondence. With all that is known of Russell's complicated affairs with women, with four marriages and three divorces, it is impossible to see

him as a modern "saint." So tormented are his feelings about women that it is unlikely that his popular writings on marriage and sexual morality, will ever again be read purely for their "ideas." Russell the sexual freedom fighter reveals especially in the letters he left to posterity, the intense interpersonal conflicts which wounded many of the women with whom he had begun the most "ideal" of relationships. Feminists point to the case of Helen Dudley whom Russell lured from America back to Britain only to abandon, which contributed, he allows, to her later insanity (I, 213-14). The "conversion" which enjoined him to "penetrate to the core of loneliness in each person and speak to that" therefore looks suspect in the light of his promiscuous sexual strivings, with their implicit aggression.

World War I only accentuated his antagonism to Puritan repressiveness, which he thought had led to venting the rage which made war. Anticipating the slogan "make love not war," he wrote "that only through the diffusion of instinctive joy can a good world be brought into being" (II, 39), an evidence of the uncritical Freudianism he had been introduced to about this time. In 1916 Russell began one of his most serious affairs, with the actress "Colette," Lady Constance Malleon. In this adventure with a younger woman he pressed further the liberation of the senses begun in his affair with Lady Ottoline Morrell, the inspired hostess of Bloomsbury fame. Pacifism in wartime made him feel both more an outsider in a jingoistic society and more boldly idealistic about how society should be reorganized for a warless world, especially through early education. Writing at his most Lawrentian in the Preface to *Principles of Social Reconstruction*, Russell said, "I consider the best life that which is most built on creative impulses, and the worst that which is most inspired by love of possession."²⁰ It all sounds naive, even unconsciously duplicitous, when possessiveness is thought of in terms of the sexual jealousies Russell believed need not hamper his urges.

To what extent was Russell the victim of his own confusion about love and violence? In the light of his sexual aggressiveness, and other more intellectual forms of anger, should the conversion be seen as mainly specious? It is in the conjunction of grief and rage, reactive to developmental factors, that I believe Russell's importance as a "pacifist" lies. However fast the conversion faded, it seems to have been an authentic reparative closure of Russell's split ego, a healing vision of pity for human suffering and his most powerful instruction to give care.²¹ That contrary psychological factors, unrealized by Russell, prevented carrying through his design to relieve human loneliness and to renounce the use of force should not disqualify the intention. (Russell never sought analysis, relying mainly on what he could piece together for himself and confide by letter to his women in a sort of autoanalysis.) The reasons he gave for the conversion therefore seem not to have been the only or even the main ones. Let us look at the violent trend in Russell's personality.

III

At the end of his life an admirer described Russell as "gentle, shy, modest, even vulnerable. Cruelty he hated, and he felt deeply the pains of others. He himself radiated that 'kindly feeling' which he held to be the hope of the world. . . ."²² But recollections of earlier encounters show something different. Sidney Hook points to "a strong streak of cruelty": Russell "would often and needlessly deliver himself of the most devastating things about some individuals, and enjoy it," as Hook remembers from his days in New York in the 1940s.²³ These were difficult times for Russell but, even after the conversion, Russell had showed hostility of an intensity not usual in pacifists. In 1903, when his reputation as a logician was established, Russell enjoyed showing his powers: John Maynard Keynes reported of an evening gathering that "for hours on Saturday night Russell wiped the floor with a man called Leonard Hobhouse—a most superb display."²⁴ In a depressive fantasy Russell could do worse than this. Writing to Gilbert Murray (whose poetic reading had moved Russell to his conversion) he confessed:

I have been merely oppressed by the weariness and tedium and vanity of things lately: nothing stirs me, nothing seems worth doing or worth having done: the only thing that I strongly *feel* worth while would be to murder as many people as possible so as to diminish the amount of consciousness in the world. These times

have to be lived through: there is nothing to be done with them."²⁵

The *Autobiography* gives evidence that Russell had difficulty controlling his violent impulses. Speaking of an adolescent friend called Fitzgerald, Russell says:

I came to hate him with a violence which, in retrospect, I can hardly understand. On one occasion, in an access of fury, I got my hands on his throat and started to strangle him. I intended to kill him, but when he began to grow livid, I relented. I do not think he knew that I had intended murder. (I, 44)

Commenting on the anxieties that surrounded his first marriage in 1894 to Alys Pearsall Smith, Russell reviewed the "tragedies" in his family which made procreation seem dangerous.

The fears generated . . . have never ceased to trouble me subconsciously. Ever since, but not before, I have been subject to violent nightmares in which I dream that I am being murdered, usually by a lunatic. I scream out loud, and on one occasion, before waking, I nearly strangled my wife, thinking that I was defending myself against a murderous assault. (I, 85-6)

More than a reminiscence of a disordered uncle who had committed such a murder (I, 31), this event suggests repressed hostility to women. The impression is supported by a later remark:

I remember . . . a day after three weeks of marriage, when, under the influence of sexual fatigue, I hated her and could not imagine why I had wished to marry her. (I, 124)

The marriage gradually lapsed with Alys becoming depressed at her husband's unresponsiveness and rejection. The journal Russell kept from 1902 to 1905 is a moral balance sheet in which pity for her vies with his mounting dislike of all her ways. He sees, yet deplores, the possibility of escape "into more or less flirtatious relations with women I don't respect."²⁶ Both hope of erotic deliverance and mistrust of women appear in this statement.

The strength of Russell's ambivalence about love and hate is evident in confessional letters to Lady Ottoline Morrell. In 1911 she had induced what Russell called a second conversion, enlarging his sensibility after the ascetic controls that had permitted the writing of *Principia Mathematica*. In Lady Ottoline, Russell found a woman to whom he could impart the tumult of his desires and aversions; he appealed to her to witness his inner violence, and yet eventually she too lost his confidence and was replaced.

I think sometimes you think it is only peccadillos I am afraid of, but it isn't; it is the big violent crimes—murder and suicide and such things. I don't know what is the right way to deal with this violence in me—I know it is bad, but it is bound up with good things so intimately that it is hard to disentangle.²⁷

Russell was trying to work through with her his obsessive-compulsive violence and make real the cleansing purity of perfect love. Writing to her in Paris the next day, he complains of the separation and cautions her against "praising Desire again": it is a "fierce fiend" and "very near to cruelty", as though erotic love were some sort of punishment he had to hand out to his women. Then follows one of the most alarming confessions made anywhere in the letters, but one also showing insight and the protective function of reason:

I do wish I could get inside your skin and know what it feels like to be you. Sometimes I think I know, and sometimes I think I don't. I doubt if even you know how nearly I am a raving madman. Of all the characters I ever read about in fiction, none was so intimate to me as Raskolnikov. It is only intellect that keeps me sane; perhaps this makes me overvalue intellect as against feeling. I remember when I wanted to commit murder, the beginning was a sudden picture (I hardly have pictures at ordinary times) of a certain way of doing it, quite vivid, with the act visible before my eyes; it lived

with me then for ever so long, always haunting me; I took to reading about murders and thinking about them, and always with that picture before me. It was only hard thinking that kept me straight at that time—the impulse was not amenable to morals, but it was amenable to reasoning that this was madness."

That Russell occasionally suffered from what seem like thought disturbances, from flights into science fiction-like fantasies of destruction, appears in a letter to Lady Ottoline of the next year in which he speaks of the "fanatic" being in conflict with the "lover."

Vast visions haunt me—I see the whole human race ringed about with fire, in a vast alchemist's crucible that produces a few quintessential jewels from the ashes of the holocaust. I know this is madness . . . melodramatic rubbish—but although my intellect tells me it is absurd, I still go on feeling the same way. My love for you gets entangled in this world of delirium . . ."

A certain amount of self dramatization appears in these letters, but mainly they should be taken as true portrayals of the lover's states swinging between ecstasy and sometimes suicidal wishes, with stabilizations always being sought and sanity a constant quest. An instance of the struggle for consistency of purpose is suggested by the following remarks to Lady Ottoline:

I have been too fierce, too violent, too destructive—something of the cruelty of the ascetic has been in me—but Dearest these things will melt away . . .

I am filled with utter love and longing for service—to bring happiness, to bring relief from pain—oh if I could. I hate the furious persecutor in me—but he is terribly vital. I try to be kind in a common way—yet I do strangely little for others."

Russell's self-monitoring love letters are the confessions of a continuing "creative illness" in which the discovery of humanistic pacifism remained on trial. The precariousness of his pacifism became apparent to the more astute observers. D.H. Lawrence, with whom Russell had a brief and catastrophic intellectual relationship when they both rebelled against the barbarity of World War I, saw the angry "fanatic" in Russell more clearly than did any of his co-workers in the peace movement. Russell candidly reports in his *Autobiography* Lawrence's remarks which at the time had devastated him:

When I objected to war because of the suffering that it causes, he accused me of hypocrisy. "It isn't in the least true that you, your basic self, want ultimate peace. You are satisfying in an indirect, false way your lust to jab and strike. Either satisfy it in a direct and honourable way, saying 'I hate you all, liars and swine, and am out to set upon you,' or stick to mathematics, where you can be true—But to come as the angel of peace—no, I prefer Tirpitz a thousand times in that role." (II, 22)

To remark on Lawrence's own unappeasable anger is not to deny truth to his insight. But the observation is only partially accurate, and it fails to account for Russell's mentality being quite different from the warrior's which sees reality only in power relations. The conversion went a long way toward controlling the rage of which Russell had reason to be afraid; an empathizing tragic sense suffused his view of politics, making him a highly unusual figure in our century of violence.

IV

I believe that the Simons are correct to associate Russell's pacifism with contacting in the conversion his repressed grief for loss of parents; however they mistake the main source of his aggressiveness. They also miss much of the detail of his struggle for its containment. Russell's feelings about afflicted women, especially mothers such as Mrs. Whitehead, were not all pitying identification—though of course identification can be a hostility-reducing defense. Russell was indeed compelled by women's suffering but, as noted, he felt strong ambivalence, even outright hostility, when his idealizations of them were unsettled. The love

letters sometimes find him making mothers of lovers only to decide that the woman is coming too dangerously close. The Simons say that aggression is connected with object loss, thinking of the frustration of a seeming abandonment and the guilt carried over from the three year old who might have thought he caused the deaths of his parents. There is some truth in this—early separations do cause protest, before causing despair and detachment in the absence of adequate substitute caregiving. But the actual dynamics are speculative. It is certain, however, that great frustration and rage were engendered in Russell's relations with his principal substitute parent, his grandmother who took him in about age four at Pembroke Lodge. Of Lady John Russell, the Simons say only that she was "peculiar" and sexually repressive, though she had advanced anti-imperialist opinions, among other strong views, which must have influenced Russell. To analyse the complicated character of this gifted aristocratic woman would take an essay in itself; the biography by her daughter and Desmond MacCarthy is too adulatory to catch her power to control others along with the love she inspired.

Russell was raised almost entirely by women, both relations and servants, the main exceptions being the influences of his brother Frank and his Uncle Rollo. His grandmother stimulated his intellect and dominated his moral being. She had an "intense care for my welfare" (I, 22) and he was "passionately devoted" to her, as he told Alys in a letter of 18 Feb. 1894. A frequent companion and a determined teacher in childhood was his spinster aunt, Agatha. With the death of his grandfather, the former Prime Minister, his grandmother focused hopes for continuation of family eminence on the six year old Bertie. She oversaw his education and took a direct part in honing his intellect and inculcating a sense of moral and social responsibility. Her design for his life was increasingly at variance with his own, and when he decided to marry the American Quaker, Alys Pearsall Smith, she bitterly opposed it. She appears to have been what Matthew Besdine calls a "Jocasta Mother" who, in the absence of a fulfilling love life of her own, focuses affect hunger on the child. The result is a "fused symbiosis, with no effective father to help in the child's separation, self-differentiation and growth towards maturing autonomy and identity." Elsewhere Besdine writes, "as the Jocasta mother continues the symbiosis on into the Oedipal period and beyond, the child, young adult and adult, experiences love and intimacy as a contaminated, incestuous, guilty bondage. It forever undermines his human relationships." He gives a profile of this type of personality, a constellation which, to some extent, describes Russell, though of course he had a modicum of male influence from elder brother and uncle.

Such Jocasta-reared children have a definite character structure marked by an unresolved Oedipus problem, the fear of love, strong ambivalence in human relations, strong paranoid trends, a tenuous ability to conform or accept authority, an underlying sense of guilt and masochism, a strong homosexual component, latent or overt, and high ambitions. . . . He is usually above average intellectually, may have unusual gifts and talents and frequently provides the leadership in rebellious movements. It is the personality found most frequently in geniuses and extraordinary achievers."

Not all of these attributes might apply, and each needs careful discussion and qualification. The main issue here is the frustration-caused aggression of a degree of Jocasta mothering and how Russell dealt with it constructively by becoming a pacifist instead of an angry demagogue.

The conversion helped to release Russell from bondage to his grandmother's internalized wishes that he become great in her way. She had a masculine side, ambitious for political achievement, though she was also an unworldly Victorian moralist with strong religious preoccupations. Russell's conversion established moral imperatives of his own, relieving his almost schizoid sense of isolation which led him toward mysticism rather than her evangelicalism. By means of the conversion he contacted the feminine, caring part of himself—the residue of his caring mother, who had also been a social reformer. His social purpose thus organized itself around a deeper center of grief and compassion for loss. It may further be conjectured that the conversion validated a reaction formation against his frustration and rage with the Jocasta over-control of his grandmother's many years of close supervision. When it is unseemly to express resentment against such a parent substitute, a more devious course is followed, reversing resentment into profession of love. Reaction formation is a well known defensive concomitant of the obsessional

personality. In the *Autobiography* Russell's grandmother's portrait is astringently written (I, 20f) compared to the brief, glowing sketch of his dead mother as "vigorous, lively, witty, serious, original, and fearless" as well as being "beautiful" (I, 15). (His father is less flatteringly remembered.) Clearly the ideal past had more appeal than recollections of his actual upbringing. Not surprisingly it was always the *ideal* lover Russell sought and remained with until the problem of intimacy and commitment arose. Ambivalence toward women was thus doubly involved in the turn toward "peace" in 1901. Pain and pity over loss of parents, particularly the idealized mother, sensitized him to all human suffering, while an insecure reaction formation toward his grandmother empowered the destructive side of his romantic and erotic relations with women.

This is a point raised by the psychoanalyst Harry Guntrip in "Sigmund Freud and Bertrand Russell." Impressed by Russell's conversion insight into schizoid loneliness, Guntrip argues that if Russell had been able to build theoretically on this insight, he could have been a greater theorist than Freud who got only to the level of Oedipal analysis. However Guntrip is misled in thinking that Russell's wife Alys had been mainly a "protective bulwark" against his schizoid loneliness, and that, with the conversion, "quite suddenly the secret schizoid isolated core of him, which could neither love nor relate, erupted and destroyed his marriage."³⁴ There are two reasons for the implausibility of this: first, Russell's empathy in the conversion was not entirely with Mrs. Whitehead. She was isolated, "cut off from everyone and everything by walls of agony..." (I, 146), while he identified with her three year old son whom he led away—thereby forming a lasting bond as a sort of suffering double. (Significantly for Russell's reconstruction in the *Autobiography*, the boy was a casualty of war in 1918.) Thus there was less an eruption than an acknowledgement of Russell's own vulnerability when his dreaded feelings of ultimate separation and loss were portrayed by Mrs. Whitehead and her son. The "loneliness of the human soul" indeed felt "unendurable" to one whose mourning for his dead parents seems to have been incomplete (I, 146).

As a post-Freudian interested in the therapy of schizoid states, Guntrip is rightly impressed by Russell's insight, but he overstates the case in attributing the sudden rejection of Alys to it. Barbara Strachey Halpern clarifies by saying that Russell's emerging revulsion against Alys and her family was reflected in Alys's despair of November 1901 and that "by January Bertie was aware that his love for Alys was dying."³⁵ The sudden conversion of 10 February 1901 indeed resembles his later sudden realization that he no longer loved Alys, but they are not causally linked. While Russell claims that "I had no idea until this moment that my love for her was even lessening," it is fair to say that the feelings had been long incubating but that Russell was reluctant to admit that his unconventional and hard-bought marriage was about to crumble. Halpern writes, "clearly his claim of total ignorance was unjustified..."³⁶ It seems that rather than a schizoid eruption destroying his marriage, there was a break-through of hostility to controlling women which builds up in the Jocasta-reared male—a point which, if Guntrip had had the biographical evidence before him, he would undoubtedly have reconsidered.

Unable to accept the full strength of his angry feelings toward controlling women, Russell "converted" these feelings into the conviction that "the use of force is to be deprecated," the pacifist credo which is a problematic stance in the politics of the "real world." It is little wonder that Russell's pacifist love of humanity always had a lofty generality about it, and that he was often at odds with himself as to how to make applications. (The most notorious instance was his equivocation over advocacy at the end of World War II of threatening a nuclear strike against the U.S.S.R. to prevent an arms race.) It is difficult to connect the microcosm of childhood feelings with policies and actions later adopted by so public a figure as Russell. Yet without such attempts there is little chance of understanding how, for instance, he could so strongly advocate women's suffrage from about 1906—standing as a suffrage candidate in the election of 1907—and yet be so cruel in his alienation from Alys who was also active in social reform. Nor is it otherwise easy to see how Russell's idealizing amours, as with "Colette," were tied into his compulsion to advocate peace in the midst of war.

To some extent Russell knew what he was up against in managing his own anger. He certainly must have been thinking about it when in 1919 he wrote "On 'Bad Passions,'" a paper on "the treatment of impulses

recognized as undesirable, such as anger, cruelty, envy, etc." Russell argues that simple thwarting will not control these passions which are apt "to break out with a violence all the greater owing to repression." Following the Freudian Stanley Hall, Russell agrees that much good work is actually fueled by anger, but that this is undesirable. Anger needs to be socially controlled by rewards and punishments, but most of the discussion is of intellectual and artistic sublimations of rage, a "tigerish fury" which otherwise "would have to vent itself on human beings."³⁷ While Russell advocates sublimation, he knows that the most creative personalities such as Beethoven's are always in some degree oppressive to others. He could be speaking for himself, and here there is at least a delineation of his own dynamic set in a moral framework.

Russell's own writings show him to have been examining psychological mechanisms related to reaction formation as having socio-political applications. As early as "Gentleness" in *The Pilgrimage of Life* (c. 1902) he wrote that as "each separate person . . . is an end in himself," power relations must be renounced, but that this is difficult." In *Power: A New Social Analysis* (1938) he argues that "the tendency to cruel forms of idealism is increased by unhappiness in childhood, and would be lessened if early education were emotionally what it ought to be."³⁸ Many popular essays direct remarks to reforming early education in ways that reduce the strivings to implement hidden aggression by grasping for power. Several essays have shrewd psychological analyses exactly on the points which had troubled him most. In "Leisure and Mechanism" (1923) he wrote, "a great deal of morality is a cloak for hostility posing as 'true kindness,' and enabling the virtuous to think that in persecuting others out of their 'vices' they are conferring a benefit."³⁹ By 1928 he was unmasking the pretensions of power-seeking: "very many people, and among them a majority of those who achieve positions of eminence, have deep down in their unconscious a kind of rage and hatred against the world for something it has refused them."⁴⁰ By this time Russell was well read in the psychologies of Freud and the behaviourist John B. Watson, by whose theories he sought to understand the perceptible drift toward another world war. Rage was seen as an outcome of fear, and unable to find its true object, it tyrannizes over those who appear weak. "Ungovernable rage is a psychological aberration, and should be treated by the psychiatrist; it is a mark of disease rather than wickedness," he had decided in 1931.⁴¹ Russell warned of the "deep-seated psychological troubles of envy or unconscious hatred, which may lead [persons] to take pleasure in the thought of war or revolution."⁴² As he wrote in "Transforming Anger" (1934):

In virtue of the transference of anger, cruelty, oppression, violence and hatred spread in ever-widening circles from the centres of power toward the circumference. Conversely, when those who have power use it humanely there is a gradual though slower growth of humanity in those who have less power. It is a mistake to think of cruelty and hate as inseparable from human nature.⁴³

It is interesting that, for all his own struggle against anger, Russell was optimistic about its control in society. Had he forgotten his murderous fantasies, or did he believe that by bringing them to light they could be made manageable? His educational experiment from 1927 at Beacon Hill School attempted to educate for a warless world, but he had to allow that, as there were many "problem children," he had continually to intervene "to stop cruelty" (II, 154). Nonetheless, he went on warning about war and urging that reason prevail in its avoidance. He saw clearly that only by studying historical and political dynamics, beginning with the unconscious wishes of leaders and their groups, could the world be saved from ever more destructive armed conflicts. His psychology of warmaking is piecemeal and rudimentary, there being no sustained analysis of it since Russell came late to the theories of Freud and others. He should be credited, however, with seeing the necessity to shift from bland liberal Victorian progressivism into the tougher forms of analysis necessitated by the mechanized barbarities of our century which serve dehumanized political systems.

In "What I have Lived For," the prologue to his *Autobiography*, Russell says that his life has been governed by three passions: "the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind."

Love and knowledge . . . led upward toward the heavens. But

always pity brought me back to earth. Echoes of cries of pain reverberate in my heart. Children in famine, victims tortured by oppressors, helpless old people a hated burden to their sons, and the whole world of loneliness, poverty and pain make a mockery of what human life should be. I long to alleviate the evil, but I cannot, and I too suffer. (I, 13)

He does not explain why he suffered, nor are aggression and conflict mentioned as internal factors militating against pity. Russell was a flawed moralist, torn by love and hate from which he sought deliverance by impersonal service to humanity. Like many obsessional personalities, he was hyper-moral—forced by the war in his ego to be always vigilant lest he destroy more than he could create. As he confided to Lady Ottoline: "All my life, except a short time after my marriage, I have been driven on by restless furies, flogging me to activity and never letting me rest, till I feel often so weary that it seems as if no more could be borne."⁴⁴ Neither love, nor mysticism nor service could entirely free him from the ferocity of contrary emotions, and reaction formation as a defense against unwelcome destructive impulses was an unsteady compromise. The legacy from Victorian moralism compelled Russell to do good to mankind, in general, but the ambivalent sensualist in him often did harm in actual relationships. It is a mistake to try to reduce the greatness of great men to their problems of childhood alone, but all factors leading to their contributions deserve study. We know that two other leading modern pacifists, Tolstoy and Gandhi, struggled against sensuality and decided that self-discipline and austerity were needed if non-violence was to be a reality. Russell admired Tolstoy much more than Gandhi, but both of them went to extremes of self-denial he could not accept. Russell's secularism thrust him into the age of psychology which does not have saints in the traditional sense. By recording in letters and autobiography his struggles with inner violence, Russell sought to be understood for the imperfect being he was. He probably would have agreed that his social optimism sometimes outran his psychological mandate, yet it seemed better to preach hope than the reverse:

In a war using the H-bomb there can be no victor. We can live together or die together. I am firmly persuaded that if those of us who realize this devote ourselves with sufficient energy to the task, we can make the world realize it.⁴⁷

Exact formulas for reducing conflicts between superpowers trading paranoid projections are scarce in Russell's writings. It was as a moral pathfinder in international politics that he tried to function at the end of his life. Perhaps behind his optimism was the knowledge that he himself mainly had been able to control the very sorts of hostile impulses that darkened relations between nations. He knew imaginatively what nuclear war would be like, having lived a lifetime with such a potential in his own divided ego. Nuclear war appeared to be a form of despairing mass suicide, the personal form of which he often mentions as a way out of his intolerable conflicts. But as far as is known, Russell never attempted suicide, always trying to reaffirm life. In old age he preached the sort of "conversion" to a pacifist solution that may well have saved him from suicide as a young man. The habit of confession, of "always talking" no matter what happened, served him well. People with less turmoil, and capacity to reflect on it, are unlikely to see quite so clearly the perils of our late twentieth-century situation.

SOURCE FOUND

- (5) Science vs. Religion. We were looking for the source of the statement, "Science provides evidence without certainty. Religion provides certainty without evidence." (RSN54-37).

PAUL PFALZNER says "it appears to be attributed to Ashley Montague, and was quoted by Gerald Larue at the Oslo World Humanist Congress last August, in the form: Religion gives us certainty without proof; Science gives us proof without certainty."

JOHN TOBIN also credits Ashley Montague. The statement appears in an article in The American Rationalist (November/December 1986), in the form: Science is proof without certainty. Religion is certainty without proof. The article is titled, "Are Science and Religion Incompatible?" by Gordon Stein. The statement appears on p. 55, last paragraph.

Our thanks to Messrs. Pfalzner and Tobin.

ANNUAL MEETING (1987)

- (6) The 14th Annual Meeting was held in San Diego on June 19-21.

28 BRS members attended: LOU ACHESON, GUNJI BAGLA, DENNIS DARLAND, PAOLO DAU, BOB DAVIS, PRADEEP DUBEY, LEE EISLER, RICHARD FRANK, BERND FROHMANN, CHARLES GREEN, TIM HARDING, DON JACKANICZ, JOHN JACKANICZ, MARVIN KOHL, JOHN LENZ. STEVE MARAGIDES, JIM MCWILLIAMS, CHANDO PADIA, FRANK PAGE, STEVE REINHARDT, MICHAEL ROCKLER, HARRY RUJA, CHERIE RUPPE, AL SECKEL, BETTY VOGT, HERB VOGT, RICHARD WILK, BILL YOUNG.

15 guests were also present: Smita Bagla, Rashmi Kala Agrawal, Steven A. Allen, Stephen Blount, Alison Braswell, Cy Dalin, Daniel H. Harris, Herb Hayward, Betty Labson, Sam Labson (one of the speakers), Mark Levy, Louis Mazzarella, Helen Page, Beverley J. Schwab, Susan Wingfield.

For a report on what happened in San Diego, please see the MINUTES OF THE 1987 ANNUAL MEETING (7) and the MINUTES OF THE BOARD OF DIRECTORS ANNUAL MEETING (8).

There are 2 aspects of meetings like ours. (1) There is the pleasure of seeing old friends again, and of meeting new ones. (2) There is the exposure to new ideas presented in the papers at the meeting. If you didn't attend the meeting -- and most of you didn't -- you did not experience (1); but you can still experience (2); the postman can deliver it: audio cassettes of the 7 talks -- and also the papers -- given at the Meeting are available from the Russell Society Library, address on Page 1, bottom.

To conclude: the program and the facilities were excellent. Hats off to HARRY RUJA, who put it all together...and so inexpensively!

MINUTES

(7)

MINUTES OF THE 1987 ANNUAL MEETING

The 1987 Annual Meeting of The Bertrand Russell Society, Inc. was held from June 19 to June 21 at the El Conquistador residence hall, 5505 Montezuma Road, San Diego, California, adjoining the campus of San Diego State University. Unless otherwise noted, all events took place in the first floor study lounge.

Friday, June 19, 1987

The meeting was called to order at 7:45 p.m. by Harry Ruja, Chairman of the Board of Directors. Following words of welcome by Chairman Ruja and President Marvin Kohl, each attendee was asked to introduce himself or herself and to sign a registration list. Donald W. Jackanicz then presented his paper, "Russell in San Diego." Following a short break, Bernd Frohman spoke on "The Multiple Dimensions of the Russell Bibliography." The meeting was recessed at 10:00 p.m. The Board of Directors gathered at 10:10 p.m. for the first session of its Annual Meeting.

Saturday, June 20, 1987

The meeting was reconvened at 9:00 a.m. by Chairman Ruja. Marvin Kohl presented his paper, "Locating the Primary Good,"

which was followed, after a short break, by Michael Rockler's presentation, "Russell on Education." During the viewing of a videotape, Bertie and the Bomb, the second session of the Board of Directors meeting was held in the second floor lounge. After these separate sessions, President Kohl took the chair to conduct the Annual Society Business Meeting. He summarized the proceedings of the two Board of Directors sessions, asked for suggestions for the 1988 Annual Meeting program, and restated his support for gift memberships as a means of increasing BRS membership. Treasurer Dennis Darland delivered a financial report. No old or new business was raised by members. The meeting was recessed at 12:05 p.m.

The meeting was reconvened by Chairman Ruja at 2:08 p.m. Chairman Ruja praised the work of Russell Society News editor Lee Eisler and reminded members that a tentative successor is being sought for this post. Al Seckel then read his paper, "Russell on Ethics, Sex, and Marriage," after which Paolo Dau spoke on "Russell's World-View, 1903." Following a short break, Chandrakala Padia presented her paper, "Bertrand Russell on Impulse: Lewis' Critique." The meeting was recessed at 5:45 p.m.

At 6:00 p.m. the Red Hackle Hour was held in Rooms 201 and 203 and was hosted by Lee Eisler, John A. Jackanicz, and Donald W. Jackanicz. At 7:00 p.m. a Banquet was held in the dining hall. The following award presentations were made by Chairman Ruja and President Kohl:

--To Kenneth Blackwell, the 1987 BRS Book Award

--To Linus Pauling, a BRS Lifetime Achievement Award
 --To John Somerville, the 1987 BRS Award

Dr. Somerville then addressed those gathered on his reminiscences of Russell and on the subject of omnicide. The meeting was recessed at 9:10 p.m. The Board of Directors met at 9:25 p.m. in the second floor lounge for its third and final session.

Sunday, June 21, 1987

The meeting was reconvened at 9:05 a.m. by Chairman Ruja. President Kohl expressed the BRS's appreciation for Chairman Ruja's work in planning the 1987 Annual Meeting. John Lenz then presented his paper, "Russell and the Greeks," after which a videotape, Bertrand Russell, Closeup, was viewed. Following a short break, Sam Labson read his paper, "Russell and the Scientific Spirit." The meeting was adjourned at 11:40 a.m.

(8)

MINUTES OF THE BOARD OF DIRECTORS ANNUAL MEETING

The 1987 Annual Meeting of The Bertrand Russell Society, Inc. Board of Directors was held from June 19 to June 20 at the El Conquistador residence hall, 5505 Montezuma Road, San Diego, California, adjoining the campus of San Diego State University.

Friday, June 19, 1987

The meeting was called to order by Chairman Harry Ruja at 10:10 p.m. in the first floor study lounge. The following Board members were present: Louis K. Acheson, Robert K. Davis, Dennis J. Darland, Lee Eisler, Donald W. Jackanics, John A. Jackanics, Marvin Kohl, John R. Lenz, Steve Maragides, Frank V. Page, Stephen J. Reinhardt, Michael J. Rockler, Harry Ruja, and Cherie Ruppe. Chairman Ruja described his publicity efforts for the Society Annual Meeting. Informally considered and rejected was a proposal to purchase an audiotape of Chairman Ruja's KPBS-FM interview for \$25.00. It was informally agreed that outside groups may request permission to distribute promotional materials at BRS annual meetings, but that representatives of such groups may not speak at a BRS annual meeting unless so scheduled on the program. The recent work of the Awards Committee was reviewed. The respective merits of plaques and scrolls were discussed. Lee Eisler moved that a scroll with a revised version of his wording for the Linus Pauling Lifetime Achievement Award be substituted for Robert K. Davis's wording appearing on the previously procured plaque. This motion was rejected by the vote of No--9, Yes--1, Abstain--4. The meeting was recessed at 11:07 p.m.

Saturday, June 20, 1987

The meeting was reconvened by Chairman Ruja at 10:45 a.m. in the second floor lounge. The fourteen Board members named above were present. Discussion began with a consideration of financial matters, including annual meeting costs, speaker honoraria, and funding for the doctoral grant. Lee Eisler moved that dues be raised \$5.00 for the individual and family

membership categories. This motion was accepted by the vote of Yes--9, No--4, Abstain--1. Treasurer Dennis J. Darland reported the BRS checking account balance to be \$5,768.99. He continued that present unpaid liabilities consisted of approximately \$1,500.00 for Russell subscriptions and approximately \$600.00 for newsletter expenses. Discussion then turned to the doctoral grant. Lee Eisler moved that the doctoral grant be revived in 1988 in the amount of \$1,000.00. This motion was accepted by the vote of Yes--11, No--0, Abstain--3. Attention was next turned to the site of the 1988 Annual Meeting. The possible sites reviewed by President Kohl were Columbia University and the New School for Social Research in New York City, the State University of New York at Buffalo, and the State University of New York College at Fredonia. Robert K. Davis moved that President Kohl be empowered to determine the New York State location for the 1988 Annual Meeting. This motion was accepted by the vote of Yes--11, No--0, Abstain--3. The meeting was recessed at 11:30 a.m.

The meeting was reconvened by Chairman Ruja at 9:25 p.m. in the second floor lounge. The fourteen Board members named above were present. In six separate motions, Steve Maragides moved that the following incumbent officers be reelected:

--Harry Ruja, Chairman of the Board of Directors
 --Marvin Kohl, President
 --John R. Lenz, Vice President
 --Lee Eisler, Vice President/Information
 --Dennis J. Darland, Treasurer
 --Donald W. Jackanics, Secretary (Society and Board of Directors)

These motions were accepted by acclamation. Discussion turned to the 1988 BRS Award. Chairman Ruja, in his capacity as Chairman of the Awards Committee, moved that Paul Kurtz be offered the 1988 BRS Award. The six Awards Committee members present--Robert K. Davis, Lee Eisler, Donald W. Jackanics, Marvin Kohl, John R. Lenz, and Harry Ruja--unanimously accepted the motion. It was informally accepted that a biographical information sheet on Russell should be developed and that one or more Russell photographs should be reproduced for BRS use. The meeting was adjourned at 10:00 p.m.

ELECTION OF DIRECTORS

- (9) Time to vote. We will elect 5 Directors, bringing the total up to 24. They will serve 3-year terms starting 1/1/88. Use the ballot at the end of this newsletter. Big Brother says, "Don't put it off. Do it now." Big Brother is watching.

Here are 8 candidates. Vote for 5.

TRUMAN E. ANDERSON, JR. (Denver, CO), BRS member since 1975. Oilman/philosophy lover. Majored in philosophy at U/Minnesota; now in his forties, a part-time graduate student in philosophy at U/Colorado. "I doubt that I would have acquired so great an interest in philosophy without Bertrand Russell." Married, 3 children.; oil business executive.

IRVING H. ANELLIS (Ames, IA), Assistant Editor of "Philosophia Mathematica", and former Research Associate in History of Mathematics, Bertrand Russell Editorial Project, McMaster University. Ph.D. in Philosophy. Member, Russell Society Library Committee. Author of many published articles on Russell and mathematics. For more, see (28)

ADAM PAUL BANNER (Ann Arbor, MI), Chairman, BRS Int'l Development Committee; former BRS Director; BRS member since 1979; degree in Physics and Chemistry from U/Evansville; carbon & graphite chemist. A volunteer, helping develop a chemical transportation toxic spill program for local county authority. Active in MARS (military amateur radio service), tornado watch, etc. Exec. Director, Int'l Appropriate Technology Ass'n, based at U/Michigan, Ann Arbor. For more, see (14).

JACQUELINE BERTHON-PAYON (Claremont, CA), currently a Director, member since 1978, former Vice-President, former Co-Chairman, Membership Committee. An "instant convert" to BR upon reading The Will To Doubt; and has since given away great numbers of Bertrand Russell's Best (Egner, ed.).

BOB DAVIS (Los Angeles), Founding Member, BRS President (1974-1982), former Vice-President and VP/Special Projects, currently a Director, business proprietor, former high school teacher.

JAMES E. MCWILLIAMS (Holly Ridge, MS), member since 1974, AHA, ACLU, Sierra Club, Fulbright scholar (India). Describes self as "occasional teacher (English, German), farmer, storekeeper". Has attended all meetings, and photographed many.

HUGH MOORHEAD (Chicago), member since 1976, currently a Director, Chairman of BRS Doctoral Grant Committee, Professor of Philosophy, Northeastern Illinois University (Chicago).

KATE TAIT (Salisbury, CT), BRS Founding Member, BRS Director 1974-86, Honorary Member, first BRS Treasurer, author of "My Father, Bertrand Russell" (NY:Harcourt, Brace, Jovanovich, 1975), daughter of Dora Russell.

BY BERTRAND RUSSELL

- (10) The World As I See It is the title of another of BR's 6 talks over Australian radio in 1950-51. The date of this broadcast was July 2, 1950.

Science has had two opposite kinds of effect upon our view of man and his place in the universe. On the one hand, it has immensely increased our power in regard to anything near the surface of the earth; on the other hand, it has enlarged our conception of the size and age of the universe beyond anything imagined in pre-scientific times.

Dante thought that the universe consisted of ten spheres, all having the earth for a centre, and all revolving about the earth once in every twenty-four hours. These spheres were so small that, in his poem, he visited them all in the course of a single day. In his time, it was thought that the universe had only existed for five or six thousand years. Everything was small and human and easy. There was none of the vast cold emptiness to which the modern astronomer attempts to accustom us, and there were not the abysses of geological and astronomical time developing with inconceivable slowness, before the physically insignificant episode of life began on our little planet. Modern telescopes have shown that the universe is of enormous size and is probably growing rapidly bigger, although at the same time, reasons have been found for believing that the universe is not infinite but that, as on the surface of the earth, if you travel always in the same direction, you will ultimately return to your starting point.

There is a great deal of matter in the universe, but there is a great deal more of empty space. The nearest of the fixed stars is at a distance of about four light years from us, which comes in miles to twenty-five million millions. Stars are much commoner in our neighborhood than they are in most regions. The sun and all the stars that can be seen with the naked eye form part of the Milky Way, which consists of about three hundred thousand million stars. Beyond the Milky Way, after vast spaces of complete emptiness, there are similar clusters of stars called nebulae. The distance from one nebula to the next is about two million light years, and a light year is about six million million miles. About thirty million of these nebulae are known, but no doubt bigger telescopes in time will show more. The most distant that can be seen at present are so far off that light takes about five hundred million years to traverse the intervening distance. That is to say, what we see now is what was happening all that long time ago.

We have no means of knowing whether life exists anywhere throughout this vast system, except on our own planet. There is good reason to think that life does not exist on any other planet of the solar system, and that the immense majority of stars have no planets. Life therefore is certainly a very rare phenomenon, and from an astronomical point of view, a very trivial one. It depends for its possibility upon a temperature lying within a narrow range between heat and cold, and upon a fortunate juxtaposition of the right gasses, liquids and minerals. If the universe has a purpose, it is difficult to suppose that this could be concerned with anything so small and so rare and so fortuitous as life.

Nevertheless, for us who are alive and cannot travel far from the surface of the earth, life, and especially human life, is necessarily of paramount interest. Men of science have become so clever at manipulating the little backwater that we inhabit, that those who forget astronomy are inclined to attribute to man a degree of power which he does not possess. Astronomers tell us that the sun may explode one fine day, and when that occurs, we shall all be turned into gas before we have time to know that anything has happened. Such reflections are wholesome as an antidote to overweening scientific pride. I think the belief that man is omnipotent is one of the most dangerous delusions of our time. It becomes especially dangerous when it is embodied in an absolute ruler, in whom it takes the form of saying, "I am omnipotent. Such a mentality leads quickly to dictatorship.

What the astronomers have done to increase our knowledge on a large scale, the nuclear physicists have done to increase our knowledge of what is minute. Living bodies consist of cells, cells consist of molecules, molecules consist of atoms, and atoms consist of little particles of a few kinds, electrons, positrons, neutrons and some others. It has been found that matter and energy can be transformed into each other. It used to be thought that matter was indestructible, but we now know that matter can be turned into heat, and that the sun is losing mass at a great rate. When an atom bomb explodes, there is less matter in the world afterwards than there was before, what is lost having been turned into light and heat.

There has been a rapid increase in our knowledge of the physical and chemical conditions of life, and many organic compounds can now be made in the laboratory. It seems highly probable that in time it will be possible to make living organisms, though they would no doubt be very minute. We can already say that, considered as a material and observable phenomenon, life is no longer mysterious.

Perhaps the most astonishing thing about the progress of science is its rapidity. It is thought that the earth has existed for about three thousand million years, and that life began about seventeen hundred million years ago, mammals about sixty million years ago, anthropoid apes about ten million, and man about one million. Civilization began about six thousand years ago, and science about three hundred years ago. Considering what these three hundred years have done to increase knowledge and transform human life, it is obviously impossible to guess what the future revolutionary effects of science may be. I could wish, however, that scientific education, instead of dwelling more and more on technique as it has been doing, would devote some part of its attention to enlarging the scope of our imagination, to making us realize the vastness of the world and the minuteness of all human concerns. The world is full of hostile groups with hot passions that seem to themselves important. Jews and Arabs, Hindus and Moslems, Communists and anti-Communists each imagine that their hatreds have cosmic significance, and that they are engaged in a fight between God and the devil, though it is not clear which side is God's and which is the devil's. A little of astronomy makes such a view a trifle absurd. When men clash with other men, they do only what matter could do. From the point of view of power, man might seem minute and almost insignificant, but from another point of view, man still has pre-eminence. In what is known to us of the universe, he is pre-eminent in knowledge, in art, in the capacity for reflection, in the power of acquiring contemplative wisdom, and in the recording and handing down of experience.

It is such things that make the glory of man, not hate and war and extermination. Contemplation of the non-human world is part of the acquisition of wisdom, on the one hand, and saves us from overweening pride in human power; and on the other hand, it promotes an increasing awareness of the excellences that are exclusively human. It is to these excellences -- knowledge, co-operation, creation of beauty, and an awareness of the value of the individual life -- that a wise man will devote his efforts. In all conflict between rival groups, there is something that would be laughable if it were not tragic, something of foolish self-assertion and ignorant conceit. Man has his own glory and his own splendor. When we forget size and power, man is no longer insignificant, but when he boasts of his power, he offers only a pitiful spectacle to what ever gods may bend their ironic gaze upon him. To help in these realizations is the most effective contribution of physical science to human wisdom.

Science, I repeat, has always had two very different purposes: on the one hand, it has aimed at increasing power. Bacon at the opening of the modern era proclaimed the maxim that knowledge is power, and in a thoroughly British practical spirit, advocated science because of the power that it gives. But power in itself is not necessarily good. It is good in the hands of good men, and bad in the hands of bad men. In these days of the atom bomb, it is scarcely necessary to emphasize that power can be bad. I think that if the power which we obtain from science is to be used wisely to enrich human life, rather than to destroy it, the other aspect of science, the aspect in which it is considered solely as knowledge, needs to be remembered more than it sometimes is at present.

Man is not merely active, he is also contemplative. The primitive shepherds who watched the stars and laid the first foundations of astronomy, were not seeking aids to navigation, of which they knew nothing. They were impressed by the splendor and majesty of the heavens, which they studied because they were impressed. Knowledge has a value which is quite independent of what it enables us to do. This value is in the realm of contemplation, not in the realm of action. I do not think action can be wise unless it has its foundation in contemplation. Action for the sake of action soon becomes frantic and more or less insane. This kind of insanity is a disease to which the modern world is prone, and the cure for the disease lies in contemplation and in the pursuit of disinterested knowledge. In the restlessness of continual doing there is no wisdom. If we are to achieve the wisdom that the world needs, it must be through the contemplation of something less terrestrial and less temporary than the unquiet deeds of men.

(11) "Democracy's Influence on University Education", from Dartmouth Alumni Magazine (January 1960):

EDUKATION is a vast and complex subject involving many problems of great difficulty. I propose, in what follows, to deal with only one of these problems, namely, the adaption of university education to modern conditions.

Universities are an institution of considerable antiquity. They developed during the twelfth and thirteenth centuries out of cathedral schools where scholastic theologians learned the art of dialectic. But, in fact, the aims which inspired universities go back to ancient times.

One may say that Plato's Academy was the first university. Plato's Academy had certain well-marked objectives. It aimed at producing the sort of people who would be suitable to become Guardians in his ideal Republic. The education which Plato designed was not

in his day what would now be called "cultural." A "cultural" education consists mainly in the learning of Greek and Latin. But the Greeks had no need to learn Greek and no occasion to learn Latin. What Plato mainly wished his Academy to teach was, first, mathematics and astronomy, and, then, philosophy. The philosophy was to have a scientific inspiration with a tincture of Orphic mysticism.

Something of this sort, in various modified forms, persisted in the West until the Fall of Rome. After some centuries, it was taken up by the Arabs and, from them, largely through the Jews, transmitted back to the West. In the West it still retained much of Plato's original political purpose, since it aimed at producing an educated elite with a more or less complete monopoly of political power. This aim persisted, virtually un-

changed, until the latter half of the nineteenth century. From that time onwards, the aim has become increasingly modified by the intrusion of two elements: democracy

Copyright 1959, Editorial Projects for Education, Inc. All rights reserved. See Page 3 for a description of EPE, Inc.

and science. The intrusion of democracy into academic practice and theory is much more profound than that of science, and much more difficult to combine with anything like the aims of Plato's Academy.

Until it was seen that political democracy had become inevitable, universal education, which is now taken for granted in all civilized countries, was vehemently opposed, on grounds which were broadly aristocratic. There had been ever since ancient times a very sharp line between the educated and the uneducated. The educated had had a severe training and had learnt much, while the uneducated could not read or write. The educated, who had a monopoly of political power, dreaded the extension of schools to the "lower classes." The President of the Royal Society, in the year 1807, considered that it would be disastrous if working men could read, since he feared that they would spend their time reading Tom Paine. When my grandfather established an elementary school in his parish, well-to-do neighbours were outraged, saying that he had destroyed the hitherto aristocratic character of the neighbourhood. It was political democracy—at least, in England—that brought a change of opinion in this matter. Disraeli, after securing the vote for urban working men, favoured compulsory education with the phrase, "We must educate our masters." Education came to seem the right of all who desired it. But it was not easy to see how this right was to be extended to university education; nor, if it were, how universities could continue to perform their ancient functions.

The reasons which have induced civilized countries to adopt universal education are various. There were enthusiasts for enlightenment who saw no limits to the good that could be done by instruction. Many of these were very influential in the early advocacy of compulsory education. Then there were practical men who realized that a modern State and modern processes of production and distribution cannot easily be managed if a large proportion of the population cannot read. A third group were those who advocated education as a democratic right. There was a fourth group, more silent and less open, which saw the possibilities of education from the point of view of official propaganda. The importance of education in this regard is very great. In the eighteenth century, most wars were unpopular; but, since men have been able to read the newspapers, almost all wars have been popular. This is only one instance of the hold on public opinion which Authority has acquired through education.

Although universities were not directly concerned in these educational processes, they have been profoundly affected by them in ways which are, broadly speaking, inevitable, but which are, in part, very disturbing to those who wish to preserve what was good in older ideals.

It is difficult to speak in advocacy of older ideals without using language that has a somewhat old-fashioned flavour. There is a distinction, which formerly received general recognition, between skill and wisdom. The growing complexities of technique have tended to blur this distinction, at any rate in certain regions.

There are kinds of skill which are not specially respected although they are difficult to acquire. A confectionist, I am told, has to begin training in early childhood, and, when proficient, he possesses a very rare and difficult skill. But it is not felt that this skill is socially

useful, and it is, therefore, not taught in schools or universities. A great many skills, however, indeed a rapidly increasing number, are very vital elements in the wealth and power of a nation. Most of these skills are new and do not command the respect of ancient tradition. Some of them may be considered to minister to wisdom, but a great many certainly do not.

But what, you will ask, do you mean by "wisdom"? I am not prepared with a neat definition. But I will do my best to convey what I think the word is capable of meaning. It is a word concerned partly with knowledge and partly with feeling. It should denote a certain intimate union of knowledge with apprehension of human destiny and the purposes of life. It requires a certain breadth of vision, which is hardly possible without considerable knowledge. But it demands, also, a breadth of feeling, a certain kind of universality of sympathy.

I think that higher education should do what is possible towards promoting not only knowledge, but wisdom. I do not think that this is easy; and I do not think that the aim should be too conscious, for, if it is, it becomes stereotyped and priggish. It should be something existing almost unconsciously in the teacher and conveyed almost unintentionally to the pupil. I agree with Plato in thinking this the greatest thing that education can do. Unfortunately, it is one of the things most threatened by the intrusion of crude democratic shibboleths into our universities.

The fanatic of democracy is apt to say that all men are equal. There is a sense in which this is true, but it is not a sense which much concerns the educator. What can be meant truly by the phrase "All men are equal" is that in certain respects they have equal rights and should have an equal share of basic political power. Murder is a crime whoever the victim may be, and everybody should be protected against it by the law and the police. Any set of men or women which has no share in political power is pretty certain to suffer injustices of an indefensible sort. All men should be equal before the law. It is such principles which constitute what is valid in democracy.

But this should not mean that we cannot recognize differing degrees of skill or merit in different individuals. Every teacher knows that some pupils are quick to learn and others are slow. Every teacher knows that some boys and girls are eager to acquire knowledge, while others have to be forced into the minimum demanded by Authority. When a group of young people are all taught together in one class, regardless of their greater or less ability, the pace has to be too quick for the stupid and too slow for the clever. The amount of teaching that a young person needs depends to an enormous extent upon his ability and his tastes. A stupid child will only pay attention to what has to be learnt while the teacher is there to insist upon the subject-matter of the lesson. A really clever young person, on the contrary, needs opportunity and occasional guidance when he finds some difficulty momentarily insuperable. The practice of teaching clever and stupid pupils together is extremely unfortunate, especially as regards the ablest of them. Infinite boredom settles upon these outstanding pupils while matters that they have long ago understood are being explained to those who are backward.

This evil is greater the greater the age of the student. By the time that an able young man is at a university, what he needs is occasional advice (not orders) as to what to read, and an instructor who has time and sympathy to listen to his difficulties. The kind of instructor that I have in mind should be thoroughly competent in the subject in which the student is specializing, but he should be still young enough to remember the difficulties

that are apt to be obstacles to the learner, and not yet so ossified as to be unable to discuss without dogmatism. Discussion is a very essential part in the education of the best students and requires an absence of authority if it is to be free and fruitful. I am thinking not only of discussion with teachers but of discussion among the students themselves. For such discussion, there should be leisure. And, indeed, leisure during student years is of the highest importance. When I was an undergraduate, I made a vow that, when in due course I became a lecturer, I would not think that lectures do any good as a method of instruction, but only as an occasional stimulus. So far as the abler students are concerned, I still take this view. Lectures as a means of instruction are traditional in universities and were no doubt useful before the invention of printing, but since that time they have been out of date as regards the abler kind of students.

It is, I am profoundly convinced, a mistake to object on democratic grounds to the separation of abler from less able pupils in teaching. In matters that the public considers important no one dreams of such an application of supposed democracy. Everybody is willing to admit that some athletes are better than others and that movie stars deserve more honour than ordinary mortals. That is because they have a kind of skill which is much admired even by those who do not possess it. But intellectual ability, so far from being admired by stupid boys, is positively and actively despised; and even among grown-ups, the term "egghead" is not expressive of respect. It has been one of the humiliations of the military authorities of our time that the man who nowadays brings success in war is no longer a gentleman of commanding aspect, sitting upright upon a prancing horse, but a wretched scientist whom every military-minded boy would have bullied throughout his youth. However, it is not for special skill in slaughter that I should wish to see the "egghead" respected.

The needs of the modern world have brought a conflict, which I think could be avoided, between scientific subjects and those that are called "cultural." The latter represent tradition and still have, in my country, a certain snobbish pre-eminence. Cultural ignorance, beyond a point, is despised. Scientific ignorance, however complete, is not. I do not think, myself, that the division between cultural and scientific education should be

nearly as definite as it has tended to become. I think that every scientific student should have some knowledge of history and literature, and that every cultural student should have some acquaintance with some of the basic ideas of science. Some people will say that there is not time, during the university curriculum, to achieve this. But I think that opinion arises partly from unwillingness to adapt teaching to those who are not going to penetrate very far into the subject in question. More specifically, whatever cultural education is offered to scientific students should not involve a knowledge of Latin or Greek. And I think that whatever of science is offered to those who are not going to specialize in any scientific subject should deal partly with scientific history and partly with general aspects of scientific method. I think it is a good thing to invite occasional lectures from eminent men to be addressed to the general body of students and not only to those who specialize in the subject concerned.

There are some things which I think it ought to be possible, though at present it is not, to take for granted in all who are engaged in university teaching. Such men or women must, of course, be proficient in some special skill. But, in addition to this, there is a general outlook which it is their duty to put before those whom they are instructing. They should exemplify the value of intellect and of the search for knowledge. They should make it clear that what at any time passes for knowledge may, in fact, be erroneous. They should inculcate an undogmatic temper, a temper of continual search and not of comfortable certainty. They should try to create an awareness of the world as a whole, and not only of what is near in space and time. Through the recognition of the likelihood of error, they should make clear the importance of tolerance. They should remind the student that those whom posterity honours have very often been unpopular in their own day and that, on this ground, social courage is a virtue of supreme importance. Above all, every educator who is engaged in an attempt to make the best of the students to whom he speaks must regard himself as the servant of truth and not of this or that political or sectarian interest. Truth is a shining goddess, always veiled, always distant, never wholly approachable, but worthy of all the devotion of which the human spirit is capable.

CONTRIBUTORS

- (12) We thank the following members for their contributions to the BRS Treasury: DEBORAH BOHNERT, BOB DAVIS, TIM HARDING, CORLISS LAMONT, JUSTIN LEIBER, GLADYS LEITHAUSER, SUSANA MAGGI, JOHN MALITO, FRANK PAGE, ROBERT L. SMITH, and MARK WEBER.

CONTRIBUTIONS SOUGHT

- (13) Reminder. Help keep the wolf away from the door. Help make sure the BRS stays in business. How? Send a contribution to the BRS Treasury...whatever you can spare...much or little. Make Treasurer Dennis Darland smile! Send it to him c/o the newsletter, address on Page 1, bottom.

REPORTS FROM COMMITTEES

(14) International Development Committee (Adam Paul Banner, Chairman):

This Committee is currently working on two projects. One involves a cottage industry manufacture of cosmetic grade beeswax, for Bangalore, India. The other, in the planning stage, is for the development of activated carbon for Pakistan. We would welcome any overseas cottage industry project(s) involving literature and technical assistance.

Adam Paul is described in the Tranet 1985-86 Members' Directory in the following way. (Tranet is an organization which, among other things, promotes cooperation rather than competition in dealing with others.)

Retired industrial chemist, served as volunteer in Thailand, Korea, Turkey, Costa Rica and Haiti (1978-83). Now Chairman of the International Development Committee of the Bertrand Russell Society. Philosophy echoes that of Dr. Ary Borde, Haitian public health specialist, who has written, "I think that what Americans, or people that want to help, should not do is to come and do for us. They should find Haitians that can do the job -- and help them do it." Radio amateur (WB8TQR), active in computer packet radio development.

(15) Philosophers Committee (David E. Johnson, Chairman):**1987 MEETING**

In New York City on December 28, 1987, at 9:00 a.m., the Bertrand Russell Society will sponsor a meeting in conjunction with the Eastern Division of the American Philosophical Association. Our session will consist of two papers with commentary. The topics and personnel are quite varied, and the program promises to be very valuable for those interested in Russell scholarship. The program:

Chair: Panayot Butchvarov, University of Iowa

First Paper: "Russell's Robust Sense of Reality: A Reply to Butchvarov", by Jan Dejnozka, United States Naval Academy.

Commentator: Stewart Umphray, St. John's College.

Second paper: "On What Is Denoted", by Russell Wahl, University of Idaho.

Commentator: Justin Leiber, University of Houston.

1988 MEETING

Call For Papers -- to be presented at its session at the annual meeting of the APA (Eastern Division) in December 1988 -- is announced by the Bertrand Russell Society. Papers may be on any aspect of Russell's philosophy. They should have a reading time of about one-half hour, and should be submitted in triplicate, typed and double-spaced, with an abstract of not more than 150 words. The name and address of the author and the title of the paper should be on a separate page. The deadline is April 1, 1988. Papers should be sent to David E. Johnson, Chair, Philosophers Committee, the Bertrand Russell Society, Sampson Hall, U. S. Naval Academy, Annapolis, MD 21402-5044. For the return of papers, please enclose a stamped, self-addressed envelope.

Still More Papers. The Society has been encouraged to participate in the Pacific Division Meetings of the American Philosophical Association, in Portland, Oregon, in March 1988. Doing this would be desirable, because it would expose Russell's ideas to a new academic audience. But we already have a problem getting sufficient papers for our December meetings. If someone in the BRS wishes to submit a paper for the Portland meeting, please submit it before October 1, 1987 to the Annapolis address above.

(16)

DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
elected for 3-year terms, as shown

1985-87: JACQUELINE BERTHON-PAYON, BOB DAVIS, ALI GHAEMI, HUGH MOORHEAD

1986-88: LOU ACHESON, KEN BLACKWELL, JOHN JACKANICZZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, CARL SPADONI TOM STANLEY

1987-89: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, STEVE MARAGIDES, FRANK PAGE, MICHAEL ROCKLER, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA

The 6 BRS officers are also directors, ex officio

BR QUOTED/MISQUOTED

(17) Detective story in 2 parts:

Part I (an excerpt from RSN41-8): Did Forbes get it right? In their issue of 11/21/83, p.356, they offer this quotation: "The biggest cause of trouble in the world today is that the stupid people are so sure about things and the intelligent folks are so full of doubts."

WHITFIELD COBB (to whom we are indebted for this) says: "It just doesn't (to me) have that succinct clarity and punch I associate with BR." To which we add our own doubts that BR would have used that folksy word, "folks".

Part II comes in a letter from HARRY RUJA, our intrepid tracker-downer, who writes, "In an essay called 'Stupidity Rules', which appeared in four Hearst-chain newspapers, May 10, 1933, this sentence appears: 'The fundamental cause of the trouble is that in the modern world the stupid are cocksure while the intelligent are full of doubt.' That's the original of which Forbes had published a mutilated version," says Harry. Whitfield's hunch was correct.

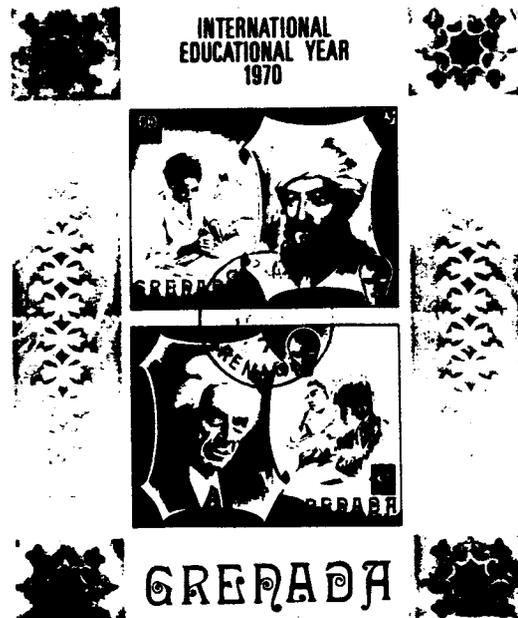

HONORS (CONT.)

- (18) O.M. Last time we reported that BR's Order of Merit -- unlike other awards he had received -- had not been accompanied by a citation (RSN54-5). We are indebted to Sheila Turcon -- Archives Cataloguer of The Russell Archives -- for supplementing our report with the following:

I read with interest your article on the O.M. We have the decoration here in the Archives along with the "citation" that accompanied it. This reads, in part, "George the Sixth ... to our right trusty and right well-beloved cousin Bertrand Arthur William Earl Russell Fellow of the Royal Society/Greeting/whereas we have thought fit to nominate and appoint you to be a member of our Order of Merit We do by these Presents grant unto you the Dignity of Membership of our Said Order ...". The document carries the Seal of the order and is signed "George R". It is dated 9 June, 1949. The decoration itself contains the sovereign's initials on one side and "For Merit" on the other. Russell wore it to the Nobel ceremonies in 1950. His recollection of the ceremony at Buckingham Palace is in the Autobiography.

- (19) Stamp issued by Granada, for International Educational Year 1970. ----->
Our thanks to VINCENT DUFAUX WILLIAMS.

(The other guy is Maimonides.)

- 224 Bertrand Russell Speaking (1959)
- 225 Man's Peril. BBC Broadcast (1954)
- 226 On Nuclear Morality (1962)
- 227 Appeal to the American Conscience (1966)
- 228 CBC Interview on Vietnam (1965)
- 229 Professor Costigan. "Bertrand Russell" (1986) 2 cassettes
- 230 "Portrait of the Father as Philosopher". A broadcast by Katharine Tait. (In German)
- 231 CBC "Close-Up" Interview (1959)
- 232 Sinfonia Contra Timore by Graham Whettam. Dedicated to Russell (1965)
- 233 Rev. Paul Beattie. "Bertrand Russell" (1975)
- 234 Marvin Kohl. "The Primary Good" (incomplete)
- Michael Rockler. "Bertrand Russell on Education"
- Al Seckel. "Bertrand Russell on Ethics, Sex and Marriage" (incomplete)
- Paolo Dao. "Bertrand Russell's World View, 1903"
- Chandrakala Padia. "Bertrand Russell on Impulse: Critique of John Lewis"
- John Lenz. "Bertrand Russell and the Greeks"
- Sam Labson. "Bertrand Russell and the Scientific Spirit"
- Talks at the 1987 annual meeting. 4 cassettes

Misc.:

We are indebted to Harry Ruja for the cassettes of the 1987 annual meeting talks, and to the Church of the Larger Fellowship for the Paul Beattie tape.

Essays in Analysis has been added to our sale list. This volume was edited by Douglas Lackey and contains a bibliography of all known works, published and unpublished, by Russell on subjects in logic. Allen & Unwin, 1973, cloth, \$6.50 Postpaid.

Russell's The Philosophy of Leibniz has been reissued by Longwood Publishing Group, 27 South Main Street, Wolfeboro, N.H. 03894. Cloth \$27.50, Paper \$12.50. Irving Anellis has offered to write a review for the NEWS.

C.W. Kilmister's Russell is available from the Scholar's Bookshelf for \$12.95+\$3.00 handling. List price: \$27.50. Item 74954. Marvin Kohl's review is in RSN 49. The Scholar's Bookshelf, 51 Everet Drive, Princeton Jct., N.J. 08550.

Postcards of the portrait in RSN 53 are available for \$5.00 per set of 15. FFRP, P.O. Box 750, Madison, WI 53701.

OBIT.

- (23) Robert E. Egner, the Russell scholar who co-edited "The Basic Writings of Bertrand Russell" (1961), has died, according to word from ROBIN ATLAS, confirmed by Egner's son, Dick. Professor Egner also edited "Bertrand Russell's Best. Silhouettes in Satire" (1958). His co-editor on "The Basic Writings" was Lester E. Denonn.

FOR SALE

- (24) Members' stationery, 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "*Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid. Order from the newsletter, address on Page 1, bottom.

(25) LINUS PAULING AWARD**JOHN SOMERVILLE AWARD****LINUS PAULING GETS BERTRAND RUSSELL SOCIETY LIFETIME ACHIEVEMENT AWARD****JOHN SOMERVILLE RECEIVES THE 1987 BERTRAND RUSSELL SOCIETY AWARD**

The Bertrand Russell Society's Lifetime Achievement Award has gone to Linus Pauling, unraveller of the mystery of chemical bonding, campaigner for peace and against nuclear weapons, and the only person ever to win two unshared Nobel Prizes. But that's not all.

Actually, it is difficult in limited space to do justice to Professor Pauling's wide-ranging accomplishments. His 1939 book, "The Nature of the Chemical Bond", is still the classic in the field, and has gone through several editions. It explains the several ways in which atoms combine to form molecules, which was the basis for his Nobel Prize in Chemistry (1954).

After the war he became deeply concerned about the dangers of fallout from nuclear weapons tests. In 1958 he presented a petition to the United Nations, on testing, and signed by more than 10,000 scientists. When the US-Soviet limited test ban treaty was achieved, he was awarded the Nobel Peace Prize (1967).

Here are just a few of the many, many Pauling honors: the Langmuir Prize (1931) and the Lewis Medal (1951), both firsts, from the American Chemical Society; the U. S. Presidential Medal for Merit (1948); the International Lenin Peace Prize, from the Soviet Union (1972).

Pioneer in chemistry, experimenter in human physiology; teacher, lecturer, researcher, author; campaigner for peace and against nuclear weapons -- the cause to which Bertrand Russell devoted the last 25 years of his life; recipient of medals from both sides of the Iron Curtain; unique winner of two unshared Nobel Prizes: at its 1987 annual meeting, this year in San Diego, the Bertrand Russell Society is honored to salute the possessor of this remarkable record of continuous and continuing achievements.

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970), logician, philosopher, social reformer, Nobel Laureate. Some Society members are professional philosophers; the majority are members of the general public. Membership is open to anyone interested in Russell. For information, write LP, RD 1, Box 409, Coopersburg, PA 18036.

The 1987 Bertrand Russell Society Award has gone to John Somerville for his efforts to alert mankind to the threat of complete and irreversible destruction ("omnicide") posed by nuclear weapons. Russell himself had devoted the last 25 year of his life to this same cause.

Long a worker for peace, Professor Somerville has written many books on the subject, including one that drew praise from Albert Einstein, and another that was jointly written with Mohandas K. Gandhi. His documentary play, "The Crisis: True Story of How the World Almost Ended", about the 1962 Cuban Missile Crisis, was produced in Japan and Sweden.

He coined the term, "omnicide", because he says "war" is completely inappropriate to describe what will happen if the present arsenals of nuclear weapons are used. In all "wars" of the past, most members of the human race survived; with today's nuclear weapons, none will.

He was recently chosen for the Gandhi Peace Award. Earlier Award recipients include Eleanor Roosevelt, Linus Pauling, Benjamin Spock, Wayne Morse, U Thant, Helen Caldicott, Corliss Lamont, and Robert Jay Lifton.

He is founder and President of International Philosophers for the Prevention of Nuclear Omnicide (IPPHO); Co-Founder and American President of the Union of American and Japanese Professionals Against Nuclear Omnicide; Chairperson of the National Campaign for a Policy of No First Use of Nuclear Weapons, endorsed by 500 members of the National Academy of Science, 30 members of Congress, and 40 Nobel Laureates.

Professor Emeritus of Philosophy at the City University of New York, John Somerville will receive the Bertrand Russell Society Award plaque on June 20th, at the annual meeting of the Bertrand Russell Society, held this year at San Diego State University.

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970), logician/philosopher/social reformer, Nobel Laureate, and possessor of one of the seminal minds of this century. Some Society members are professional philosophers; most members are not. Membership is open to anyone interested in Russell. For information, write JS, RD 1, Box 409, Coopersburg, PA 18036.

INVITATIONS TO CORRESPOND**(26) Letter-writing.** These two members would like to correspond with other members.

(27) KENNETH BLACKWELL AWARD

KENNETH BLACKWELL RECEIVES THE BERTRAND RUSSELL SOCIETY'S 1987 BOOK AWARD

The Bertrand Russell Society's 1987 Book Award has gone to Kenneth Blackwell, for The Spinozistic Ethics of Bertrand Russell (London: Allen & Unwin, 1985). In the words of one reviewer, it "is without doubt the definitive study of Russell's knowledge of, and debt to, Spinoza."

Russell often expressed his admiration for Benedict de Spinoza, the Dutch philosopher (1632-1677). As early as 1897, at age 25, Russell wrote, "I think Spinoza and Lessalle attract me as much as any one in history." Nearly fifty years later, in his History of Western Philosophy (1945), he wrote, "Spinoza is the noblest and most lovable of the great philosophers."

Dr. Blackwell has an extraordinarily intimate knowledge of Russell's writings, having begun to deal with Russell's papers during Russell's lifetime, at Russell's home in Wales. He later helped prepare Russell's Autobiography for publication. Still later, he shepherded Russell's papers from Britain to Canada, where he now presides over them as Archivist of the Russell Archives, at McMaster University, Hamilton, Ontario. He is also Editor of Russell, the Journal of the Bertrand Russell Archives, which he established.

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970), logician, philosopher, social reformer and Nobel Laureate. Membership is open to all. For information, write KB, RD 1, Box 409, Coopersburg, PA. 18036.

DOCTORAL GRANT ANNOUNCEMENT

Announcing
The Bertrand Russell Society's
1988
\$1000 DOCTORAL GRANT

The Bertrand Russell Society will award a Doctoral Grant of \$1000, to help defray expenses of a currently enrolled doctoral candidate in any field whose proposed dissertation best gives promise of dealing in a significant way with the thought, life, or times of Bertrand Russell.

The candidate is required to send to the Society:

- (1) an abstract of the theme of the dissertation and of the plan of study;
- (2) a letter from the chairman of the candidate's department which states that all work for the doctorate has been completed except the dissertation, and that the topic of the dissertation has received academic approval;
- (3) a letter from the dissertation advisor evaluating the applicant and the plan of study;
- (4) a statement, in the candidate's covering letter, indicating that if the candidate is awarded the Grant, he/she will provide the Society, at its expense, with a copy of the complete dissertation as approved by the candidate's department.

Applications and supporting documents should reach Professor Hugh S. Moorhead, Chairman, Philosophy Department, Northeastern Illinois University, 5500 N. St. Louis Avenue, Chicago, IL 60625, by May 1, 1988. The recipient will be announced in June 1988.

Please note that the candidate may be enrolled in any field. Past Grants have been awarded to candidates in the fields of History, Mathematics, and Philosophy. Candidates might also come from English, Education, Sociology, and Psychology.

ABOUT INDIVIDUAL MEMBERS

(28) IRVING ANELLIS writes that he plans "to speak on Russell on infinitesimal analysis at the 8th International Congress on Logic, Methodology, and Philosophy of Science in Moscow, USSR, in August '87."

(29) KEN BLACKWELL tells how he became the Russell Archivist, in "Humanist in Canada" (No. 23):

When I finished university in 1965 I was at a loss what to do, so I decided to travel for a year in Europe. On the way I stopped at major university and city libraries across the U.S. in connection with a bibliography of Russell I had been compiling as a hobby.

Once in London I did more research on Russell at the British Museum. Then I gave it up and went to Paris for four months. After Paris I made a tour of the Continent. The country that charmed me most was Bulgaria, although the Plovdiv Public Library, where I spent a delightful afternoon, didn't have any Russells in its card catalogue.

I wound up the tour in Ireland, and was on my way through North Wales to London and thence home, with still no career in mind, when I decided to visit Russell's little town, called Penrhyn-

deudraeth. After a few days I was sufficiently mesmerized by thoughts of seeing Russell — a philosopher perhaps as great as Plato — to dial Penrhyn 242. I was accorded a minute's interview with the Great Man.

Actually the interview was highly embarrassing and I temporarily concluded that people shouldn't disturb famous old warriors. But as I left the house I chatted with his young American secretary. When he found I knew something about Russell's writings, and had checked with Russell, he asked me to tea that afternoon. The tea lasted three incredibly short hours. Russell was witty, lucid and inquiring. For example, I asked him what he thought of de Gaulle, who had just visited Russia. He said: "Well, I don't know. What do you think of him?"

A few days later I was hired to sort his papers, which were in his basement and about to be put on the market. This lasted about four weeks. In the spring of 1967, I began working for Russell's London literary agent and helped prepare the Autobiography for publication.

The papers were sold to McMaster in March 1968. As I was familiar with the dozens of cabinet drawers and trunks and was free and eager to go to Canada, William Ready, the librarian, hired me to oversee the shipping of the papers from Britain and then to set them up in proper archival fashion at McMaster. Since then this work has absorbed me almost completely. Experience has not borne out my barber's comment that I must be very brave to defend the opinions of an atheist ban-the-bomber like Bertrand Russell!

(30) MARVIN KOHL, who teaches Philosophy at SUNY (Fredonia, NY), has given prizes to several of his students. The prizes: student memberships in the BRS.

- (31) STEVE MOLENAAR is bringing light to the community of Willmar, Minnesota, in which he lives. He says that the Baptist head librarian of the local public library "bears partial responsibility for the backwardness of this farming community.

"In surveying our library, I found 964 books on Christianity, one on humanism, and one on atheism. Those on humanism and atheism were hostile. Similarly there were 7 periodicals on Christianity and none on humanism or atheism.

"Through threats of a suit on censorship, I persuaded them to subscribe to THE HUMANIST. I then donated gift subscriptions to the following, much to their dismay: FREE INQUIRY, CREATION/EVOLUTION, RUSSELL SOCIETY NEWS, RUSSELL (journal), FREETHOUGHT TODAY, AMERICAN ATHEIST, HUMANISM TODAY, NEW HUMANIST, THE WORLD, CHURCH/STATE, THE SKEPTICAL INQUIRER, AMERICAN RATIONALIST, BIBLICAL ERRANCY.

"In addition, I donated 4 books on atheism, and a set of the 21 "Rights of Americans" handbooks from the ACLU.

"I checked Minnesota's community college library system and found, if I remember correctly, about 257 books by Bertrand Russell. In Willmar's community college, there were none."

Steve goes on to say: "I persuaded the library to subscribe to The Humanist, making the case that the library was practicing censorship and violating the Library Bill of Rights (as adopted by the American Library Association), by not including any non-Christian magazines. A bit of prompting in the form of a letter from the Minnesota Civil Liberties Union, at my request, may have helped. (Another source of help could be the American Library Association in Chicago.)

"True activists may wish to do more for their community. With imagination, opportunities present themselves. Look for local civil liberties violations that may interest your regional chapter of the ACLU. I found three such items in Willmar: a church-run building on public property, a public hospital chaplain paid \$40,000 per year out of city funds, and censorship at the public library. Another place to look is the church page of the local paper. Ours has a "Pastor's Corner" column in which I have been trying to have the Unitarians represented. A piece written by the Assistant Minister of the First Unitarian Society of Minneapolis was turned down because the editor did not consider it sufficiently inspirational. I would also recommend writing Letters to the Editor occasionally, when local views need to be challenged."

Doesn't this give you an idea? Wouldn't you like to give your local library a subscription to Russell Society News? We'll give you a special rate: \$10 per year. Or you can ask us to send your copy of RSN to your local library, at no cost to you. (Then you can read it at your library.) First, you would have to show your library a copy of RSN and ask whether they would accept a gift subscription from you.

- (32) RAYMOND PONTIER gives a weekly sermon/talk at the Lakeland Unitarian Universalist Fellowship (in Wayne, NJ) of which he is Minister. His May 17th talk was on Bertrand Russell; the reaction to it was "most positive and enthusiastic." It is a good introduction to BR; a transcript is available from the Russell Society Library. Ray says, "Unitarian Universalists are truly kindred spirits with Bertrand Russell, having a primary focus on individual freedom and the centrality of reason."

ABOUT OTHER ORGANIZATIONS

- (33) Free Inquiry's Sixth Annual Conference (Sept 11-13) will throw Secular Humanists and Roman Catholics into the arena and let them fight it out, with a few Evangelicals tossed in for good measure. This should be interesting! Excerpts from the announcement follow; for additional information -- including costs and reservations -- write directly to FREE INQUIRY, PO Box 5, Buffalo, NY 14215.

FREE INQUIRY's sixth annual conference promises to be perhaps the most unique it has sponsored to date. Never before have Roman Catholic theologians engaged in lengthy dialogue with secular humanists about issues of concern to the general public: the church and politics, the role of the papacy, church doctrine on reproductive freedom, the role of women.

The conference will also focus on issues of vital importance to secular humanists: the Alabama and Tennessee textbook cases will be debated with two evangelist lawyers, and humanist views of morality and sexuality will be discussed. Finally, on Sunday there will be discussions and workshops on how to build humanist institutions in a positive and constructive way.

SECULAR HUMANISM, ROMAN CATHOLICISM: CONFRONTING THE CONTEMPORARY WORLD

- (34) SEA, The Society of Evangelical Agnostics, founded and run by WILLIAM H. (BILL) YOUNG, "has just recently been dissolved after 12 years and about 1150 members. I just ran out of energy and time," says Bill, "and felt that I wanted to devote my efforts more to the Cedar Springs Library and have a little time for other things. I plan to write a brief history, tentatively titled, 'Twelve Years At SEA'."

Cedar Springs Library, 43378 Cedar Springs Road, Auberry, CA 93602, is a free-thought library. Among its holdings is a complete set of Russell Society News.

Here is what may be the final memo from SEA:

RIPPLES

The Society of Evangelical Agnostics provided a loose-knit fellowship for many persons over the years. However, many SEA members also had connections with other organizations. Now that SEA has been dissolved, you especially may want to contact some or all of them.

NATIONAL MEMBERSHIP ORGANIZATIONS AND PUBLICATIONS IN WHICH SEA MEMBERS HAVE HAD LEADERSHIP ROLES:

- American Humanist Association 7 Harwood Drive, Amherst, NY 14226 THE HUMANIST and FREE MIND
- Atheists United 14542 Ventura Blvd. Suite 211, Sherman Oaks, CA 91403
- Committee for the Scientific Investigation of Claims of the Paranormal Box 229, Central Park Station, Buffalo, NY 14215 SKEPTICAL INQUIRER
- Council for Democratic and Secular Humanism 3159 Bailey Avenue, Buffalo, NY 14215 FREE INQUIRY and the SECULAR HUMANIST BULLETIN
- Fellowship of Religious Humanists Box 278, Yellow Springs, Ohio 45387 RELIGIOUS HUMANISM and THE COMMUNICATOR
- Freedom from Religion Foundation Box 750, Madison, WI 53701 FREETHOUGHT TODAY
- Independent Atheists Box 4123, Oak Park, IL 60303-4123 THE INDEPENDENT ATHEIST
- Rationalist Association 2001 St. Clair Avenue, St. Louis, MO 43188 THE AMERICAN RATIONALIST Also provides BOOK SERVICE-AR

OTHER PUBLICATIONS WITH NATIONAL DISTRIBUTION EDITED BY SEA MEMBERS:

- BIBLICAL ERRANCY 3158 Sherwood Park Drive, Springfield, OH 45505
- CREATION/EVOLUTION P.O.Box 146, Amherst Branch, Buffalo, NY 14226-0146
- ESSAYS FOR A FREE REPUBLIC P.O. Box 417, West Side Station, Worcester, MA 01602
- Freethinkers Box 30544, Santa Barbara, CA 93105 Publishes occasional papers.
- HUMANIST QUEST FOR TRUTH Box 625, Brighton, CO 80601
- JOURNAL OF FAITH AND THOUGHT Church Street & Trinity Place, Montclair, NY 07042
- MONKEY'S UNCLE! 224 Parliament Dr., Greenville, SC 29615
- THEISTIC EVOLUTIONISTS' FORUM 224 Parliament Dr., Greenville, SC 29615

There are many other national organizations to which SEA members belonged, but in which, as far as is known, none had leadership roles. They include:

- Alcoholics Anonymous - AmPhysSoc - American Atheists - American Civil Liberties Union - American Farmland Trust - American Friends Service Committee - American Gay Atheists - Americans for Religious Liberty - Americans United for Separation of Church & State - Amnesty International - Association for Humanistic Psychology - Audubon Society - Bertrand Russell Society - Beyond War - Center for the Study of Democratic Institutions - The Churchman Associates - Common Cause - Educators for Social Responsibility - American Ethical Union - Fellowship of Reconciliation - Friends Committee on Legislation - Friends of Ingersoll - Fundamentalists Anonymous - Handgun Control, Inc. - Hemlock Society - International Humanist and Ethical Union - Mensa - National Organization for Reform of Marijuana Laws - National Organization for Women - People for the American Way - Planned Parenthood - Populist Party - Sierra Club - Union of Concerned Scientists - Unitarian Universalist Association - Unitarian Universalist Service Committee - War Resisters League - Women's International League for Peace and Freedom - World Peace News.

The addresses for most of these organizations should be available at most libraries. If you need an address and cannot find it, contact the Cedar Springs Library, Box 515, Auberry, CA 93602, which has published this list as a continuation of one published by SEA.

BR'S PUBLISHER

(36) From McMaster Courier, 5/26,87, p.10, with
thanks to IRVING ANELLIS ----->

At McMaster: Rayner Unwin poses beside bust of Bertrand Russell in Mills Memorial Library.

Publisher of Russell papers visits McMaster

The publisher of the Bertrand Russell papers, Mr. Rayner Unwin, was on campus May 6 to meet with members of the Russell Editorial Project.

Mr. Unwin stopped off at McMaster while on a three-day tour of Toronto and Hamilton to promote the 50th anniversary of the publishing of J.R.R. Tolkien's *The Hobbit*.

Sir Stanley Unwin, founder of Unwin publishing, first started publishing the works of Bertrand Russell in 1916 during the First World War.

At that time Russell was in jail as a conscientious objector to the war and no large publishing house was interested in his works. The senior Unwin was just starting out in the publishing business and approached Russell with an offer to publish his works.

"Russell was delighted," said Mr. Unwin, "and we have been publishing Russell's works ever since. My father and Russell grew old together."

Unwin Hyman has published four volumes of Bertrand Russell's papers and expects to continue publishing them well into the year 2000.

(37)

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

Chairman, Harry Ruja; President, Marvin Kohl; Vice-President, John Lenz; Treasurer, Dennis J Darland; Secretary, Don Jackanicz; Vice-President/Information, Lee Eisler.

RUSSELL SOCIETY NEWS

No. 56

November 1987

- (1) Highlights: 1988 meeting plans (4). Dues are due (5). BRS at APA: the program (8); the abstracts (40). Treasurer Darland seeks successor (6). Directors elected (34). Anellis in Moscow (15). New Seckel book reviewed (27). Why Sass applauds BRS Award to Somerville (20). Jacobs disrobes in public (17). Nuclear matches (22). Lamont, BR & Singer on Free Will (24). Reviews of Duffy's novel about Wittgenstein (28-31). Wittgenstein spoof (32).

BY BERTRAND RUSSELL

(2) A Memorable Answer.

Q: Many say they would rather be dead than red. How would you respond to that, Lord Russell?

A: I'd ask them if they think they're the only people in the world. I myself would certainly rather die than live under a communist tyranny...or indeed any other tyranny, but I don't think that on that ground, I have a right to say that every inhabitant of [say] India should die. I have no right to say that they should die for my convictions. And of course you must remember that exactly the same feelings exist among earnest communists. The earnest communist will feel that he would rather die than live in a capitalist world. Well, those sentiments are foolish when you extend them beyond yourself. You have a perfect right to sacrifice your own life...you do not have a right to sacrifice the life of the whole of mankind. (CBC's Closeup Interview, 1959)

(3) An Imaginary Interview.

Q: Why did Aristotle call man a rational animal?

A: His reason for this view was one which does not now seem very impressive; it was that some people can do sums.

It is in virtue of the intellect that man is a rational animal. The intellect is shown in various ways, but most emphatically by mastery of arithmetic. The Greek system of numerals was very bad, so that the multiplication table was quite difficult, and complicated calculations could be made only by very clever people. Nowadays, however, calculating machines do sums better than even the cleverest people. As arithmetic has grown easier, it has come to be less respected.

This is an Imaginary Interview because the interview never took place, it was only imagined. The question is an invented question. The answer is an excerpt from Russell's writings. Q: Why not simply present the excerpt by itself, standing alone? Why introduce it with a question? A: The Question & Answer format is a way of focusing attention on one small part of Russell's large output...much as a magnifying glass can focus attention on one small part of a large map. The Q & A format also promotes interest in what Russell had to say on this particular topic.

The excerpt comes from "An Outline of Intellectual Rubbish", originally published as one of Haldeman-Julius's Little Blue Books (1943), reprinted in "Unpopular Essays" (1950), and in "The Basic Writings of Bertrand Russell" (1961).

ANNUAL MEETING (1988)

- (4) June 17-18-19. Please note it on your calendar. That's when we will have our 1988 Annual Meeting...at SUNY College at Fredonia, NY (about 35 miles from Buffalo, the nearest airport. SUNY = State University of New York). BRS President Marvin Kohl, who teaches Philosophy at SUNY/Fredonia, chose the site and the dates. He is in charge of making arrangements, and has sent out a call for papers. The meeting's title: "1988 Bertrand Russell Conference on Happiness and the Important Things of Life." Keynote Speakers are Paul Kurtz ("Mr. Secular Humanist") and Ken Blackwell ("Mr. Russell Archives"). Start saving your pennies, and come!

1988 DUES ARE DUE

- (5) TO ALL MEMBERS: Everybody's renewal dues are due January 1, 1988. The January 1st due-date applies to all members, including first-year members (except those who joined in December 1987).

Here is the 1988 dues schedule: Regular, \$30; couple, \$35; Student and Limited Income, \$12.50. Plus \$7.50 outside U.S., Canada, and Mexico. Plus \$2 for Canada and Mexico. In US dollars.

Please mail dues to 1988, RD 1, Box 409, Coopersburg, PA 18036.

If you want to make our life a little easier, send your dues soon. And if we receive them before January 1st, you'll find your name on the Renewal Honor Roll.

Thanks!

TO FIRST YEAR MEMBERS -- members who joined any time during 1987; the rest of this item is for you.

We know from experience that new members sometimes feel put upon when asked to pay dues after less than a year of membership. We understand that. We'll tell you why we do it this way.

In the previous system, a new members's dues covered 12 months of membership. That required us to notify each member individually -- on the anniversary date of enrollment -- that the next year's dues were due. And we had to follow up on all members, to see whether dues had in fact been paid. This went on throughout the whole year. It was cumbersome, provided many chances for error, and took a lot of time. In fact, it took more time than we had. We had to make a change.

The present system is easier to administer, produces fewer errors, and takes less time. Everyone's dues come due on the same day, January 1st. Simple!

We don't think that the new member whose first year of membership is less (sometimes considerably less) than 12 months has been short-changed in any important way. He/she has received just as many newsletters (and knows as much about the BRS) as the member who joined in January.

All first-year members (except those who enroll in January) have a first-year membership period that is shorter than a year. Thereafter, the yearly membership period is always a full 12-months.

The one exception: new members who joined in December 1987. Their renewal dues are not due till January 1, 1989.

REPORTS FROM OFFICERS

- (6) Treasurer Dennis Darland wants to -- and is entitled to -- step down, after keeping track of BRS finances for 8 years. We are greatly indebted to him for the first-rate job he has done. He will continue to serve as Treasurer until we find a successor.

We now seek that successor. Dennis has been doing the record-keeping on his Apple II+ computer...and has most generously offered to make it available to the next BRS Treasurer.

If you have a talent -- and a liking -- for this kind of work, let us hear from you, and mention your qualifications. Please write c/o the newsletter, address on Page 1, bottom.

REPORTS FROM COMMITTEES

- (7) Membership Committee (Lee Eisler, Chairman):

Unfortunately for us, the publication, Free Inquiry, will stop having classified ads. It is unfortunate because it was our best buy, both in number of new members recruited and in cost.

This is additional reason for us to keep looking for publications that might be right for our ads.

If you know of any such publication, please send your suggestion to the Newsletter, address on bottom of Page 1.

(8) Philosophy Committee (David Johnson, Chairman):

The Philosophers' Committee of the Bertrand Russell Society will sponsor a session on Russell's philosophy from 9 to 11 a.m. on December 29, 1987, in the Embassy Room of the Sheraton Centre Hotel in New York City. This session, consisting of two papers with commentary, is in conjunction with the Eastern Division meetings of the American Philosophical Association. The program is as follows:

Chair: Professor Payanot Butchvarov, University of Iowa.

Paper: "Russell's Robust Sense of Reality: A Reply to Butchvarov", Professor Jan Dejnozka, United States Naval Academy, Annapolis, Maryland.

Commentator: Stewart Umphrey, Tutor, St. John's College, Annapolis Maryland.

Paper: "On What is Denoted", Professor Russell Wahl, Idaho State University, Pocatello, Idaho.

Commentator: Professor Justin Leiber, University of Houston, Houston, Texas.

BY BERTRAND RUSSELL

- (9) "Divorce By Mutual Consent" was BR's contribution to "Divorce" (NY: The John Day Co., 1920, pp. 13-18; re-printed as a Haldeman-Julius Little Blue Book, #1582, "A Liberal View of Divorce").

BERTRAND RUSSELL

Divorce by Mutual Consent

ON few matters is there such diversity of law and custom as on divorce. The Catholic Church is opposed to divorce entirely, on no matter what ground. The Soviet Republic allows divorce on the application of either party. The Scandinavian countries permit divorce by mutual consent. Britain admits only one ground, namely, adultery.

Within the United States divorce laws differ widely. The law of New York State is the same as that of Britain. South Carolina has no divorce: Nevada is nearly as liberal as Scandinavia.

Can we find any principle by which to judge between these varying customs?

Clearly the interests of children provide the main argument against too easy divorce. When a marriage is childless, the State has no interest in its permanence, and it ought to be dissoluble on the application of either party.

When there are Children

Children are the one purpose of marriage, and no one should be tied to a union which fails in this respect. But when there are children, the matter is more complicated. Divorce is apt to inflict psychological damage upon children, but at least equal damage results from quarrels between parents and an atmosphere of hostility in the home.

There are, therefore, two opposite sets of considerations between which a balance must be struck.

I do not think that adultery, by itself, should be a ground for divorce. A large percentage of husbands, and a not inconsiderable percentage of wives, are occasionally and more or less casually unfaithful, particularly during enforced separations, without any desire to break up the home or any cessation of mutual affection.

Public Opinion

In such cases it is the duty of the other partner to be tolerant, and not to attach undue importance to a passing incident.

The excessive jealousy which at present

makes such an attitude difficult would be less difficult to control if it were not encouraged by public opinion, which regards it as not merely justifiable but positively virtuous.

The most usual ground for divorce ought to be one which at present is allowed in few countries, namely, mutual consent. The law of Britain, like that of New York State, lays it down that there shall be no divorce if both parties desire it. This is inherently absurd: there is nothing that makes a marriage of which both husband and wife are weary, better worth preserving than one which still seems good to one of the parties.

Moreover, as every one knows, the law gives rise to evasions and perjuries: the great majority of divorces are, in fact, obtained by mutual consent, though lawyers and judges have to pretend ignorance of this fact.

It would be far better to bring the law into conformity with what is really done, since it is impossible to bring practice into conformity with the theory of the law.

Official Adultery

Another advantage of mutual consent is

that it avoids the necessity for a public quarrel and for the vilification of the "guilty" party. The official adultery to which men have to submit in order that their wives may divorce them is a sordid business, and not the sort of thing that the law ought to demand and promote as it does when adultery is the sole ground for divorce.

Moreover, if mutual consent is admitted questions of alimony and custody of the children can be settled out of court by private treaty between husband and wife, the court being merely called upon to sanction whatever agreement has been reached.

There is a fear that divorce would become commoner if mutual consent were permitted, but this fear appears to be groundless; Sweden, which permits this cause, has a much lower divorce rate than America.

For these reasons I should advocate mutual consent as the ground wherever neither party has any special and unusual defect.

There remain, however, such matters as insanity, crime, and dipsomania. The failure to recognize these grounds for divorce is an intolerable cruelty, not only to the husband or wife, but also to the children. Perhaps insanity is the clearest case.

Our Moralists

Our moralists are so much concerned that divorce shall only occur as punishment for sin that they have quite lost sight of the paramount consideration, namely, the welfare

of children. They argue that since it is not wicked to be mad it ought not to be a ground for divorce.

Thus men and women find themselves tied to partners who ought not to have access to the children, and commanded to have no more children unless they choose a lunatic for the other parent. This law can be understood on the hypothesis that it was made by lunatics, but on no other.

Very similar considerations apply to serious crime. If children have a gaol-bird for their father, their welfare is not furthered by decreeing that their mother must be tied to him for life.

Dipsomania, when it is sufficiently pronounced to need medical treatment in a home, and even when it only goes as far as habitual drunkenness, is a thing from which children should be shielded.

In all such cases, the refusal to allow the marriage to be dissolved is wanton cruelty, and cannot be justified on any human or humane ground. Those who believe that religion enjoins such unnecessary suffering must have cruelty in their hearts, or else be incapable of freeing themselves from traditions that descend from a less merciful age.

As in Scandinavia

While I hold that the legally permitted grounds for divorce ought to be extended as widely as they are in Scandinavia, I hold, nevertheless, that, as a matter of private morality, parents ought to be slow to resort

to divorce except for grave cause.

The way to secure this, however, is not by harsh laws, but by making parents more conscious of their obligations towards children, and of the need of mutual forbearance resulting from these obligations.

If a marriage brings lifelong happiness, so much the better; but even if it does not, conscientious parents will hesitate to subject their children to the emotional strain and nervous damage too often entailed by separation or violent disagreement. This is a matter for the individual conscience, and no good purpose is served when the law compels men and women to pretend to a degree of virtue that they do not possess.

Existing Laws

To sum up: Where there are no children, divorce should be obtainable at the request of either party. Where there are children, the usual ground should be mutual consent; other grounds should be insanity, grave crime, habitual drunkenness, and certain other diseases. Adultery *per se* should not be a ground.

Existing unduly severe laws can only be amended where there is a dominant political party not appealing for support to any of the Churches. This means that in English-speaking countries the most that can be hoped is the maintenance of the *status quo*, at any rate for many years to come.

We shall be fortunate if we escape reactionary changes designed to please the Catholic Church.

- (10) Hopes for Australia in a Hundred Years is the title of the last of BR's 6 radio talks over Australian radio in 1950-51. It was broadcast April 2, 1951, after BR had left Australia. Our great thanks to TOM STANLEY for locating the 6 talks, and to the Australian Broadcasting Company for making them available to us.

What will Australia be like a hundred years from now?

In a dyspeptic mood, it would be easy to make gloomy prophecies. One might suppose that Asia had burst its dams, that a long war on Australian soil between Chinese and Indians had been decided in favor of the former by enlisting Papuans and Bornese head-hunters, and that these men, after the exhaustion of a long struggle, had remained masters of the situation.

I could easily think of dozens of other dyspeptic forecasts, but since the future is unknown, we have a right to dwell on more cheerful possibilities, and this is what I shall do.

I shall assume that Australia remains a white man's country, and that, by the help of science, its potentialities are developed to the utmost. In that case it would be reasonable to expect a population of about a hundred million, all of them materially comfortable, and all enjoying the physical minimum that is necessary for happiness. I do not suggest that all will be happy; there will, no doubt, be some people who will find happiness intolerably boring, and will devote themselves to being a plague, both to themselves and to their friends. But I think there should be a law to the effect that on the sworn testimony of ten persons that Mr. A has made them miserable, Mr. A should be compulsorily subjected to the attention of a psychiatrist, who should himself be exempt from the operation of this law.

I would not, however, entrust the promotion of cheerfulness solely to psychiatrists. I should see to it that young people had lots of fun, and old people lots of leisure. Everybody in country places should have a helicopter, and every house should have a comfortable landing stage. Even if you lived a hundred miles from your nearest neighbor, it would be quite easy to drop in on him for a chat when you felt so disposed. At appropriate distances there should be centres containing cinemas, dance halls, swimming pools, and all the other apparatus of bliss. I imagine an enormous increase in irrigation, and a considerable consequent increase in afforestation, which will gradually have a softening effect upon the climate. I think we may also hope that by that time it will be possible to make rain. The right to make rain will have to belong exclusively to the

Commonwealth Government, otherwise each state will complain that its neighbor is condemning it to drought. I can imagine general elections turning on the question of how much rain there shall be, for obviously those in the country will have more desire for rain than the city dwellers. I see no reason why country life, enlivened by broadcasting, television, and perhaps even a few books, should be dull or monotonous. If at any time it became so, a helicopter brigade could be organized to descend upon Canberra with huge banners saying "We Want Rain".

Your cities, some of which are already beautiful, could easily be the finest in the world since they have magnificent sites and abundant space. If the price of wool continues to soar, it will become increasingly difficult to get rid of your surplus wealth, and one of the best ways would be the creation of metropolitan splendour.

A population which is to profit by leisure and physical ease needs a high standard of education, not only of a technical sort, but also in more cultural matters. There is every reason to hope that Australia may, with time, become a great centre of art and music, and literature and the drama.

The old world has become too crowded; it is nothing but an alternation of police regulations and cosmopolitan hotels. Imagine Odysseus travelling over the route which, in his day, contained Calypso and Circe, and Scylla and Polyphemus. What would he find now? Nothing but armies and policemen and Cook's Tours. These do not promote great poetry, or stimulate the imagination. During the little time that I spent in Australia I found the existence of great spaces incredibly liberating. If I did not meet Calypso and Circe, that was entirely my fault. They are emanations of the imagination, and I am sure the right sort of traveler would find them in the Out Back as easily as Odysseus found them in their islands. There is no limit to the adventure that will be open to Australian men in the helicopter age.

They will be able to choose between the South Pole and the summits of New Guinea mountains. They can, by the use of scientific magic, become monarchs in New Caledonia or prophets in Patagonia. In fact, the possibilities of adventure will be limited only by the poverty of imagination, and there will be no need for anybody to be ground down by the dull monotony of industrial life. I do not, of course, mean that there will not be industrialism, but I do mean that mechanical toil need never be the whole of anyone's life. I have a friend of very great scientific ability who spends half his life in factories and the other half in scientific research. This kind of life is somewhat difficult at present, but in Australia of a hundred years hence it could be easy and not uncommon.

Most of us live still under the oppression of long centuries of gloom. Toil from morning till night, uncertainty as to tomorrow's daily bread, fear of enemies, fear of natural cataclysms -- these things have made the background of our thoughts and feelings the emotions that emerge in nightmares, the possible horrors that make us hate our neighbors, and the brooding sense of sin that darkens the brightest moments. All this I should wish to see eliminated from the unconscious. For all this, which was once the inward mirror of unavoidable outward problems, is now, thanks to science and scientific technique, something no longer justified by anything in physical nature, but only by an antiquated human psychology. If we were all cheerful, we should have every reason to be cheerful. It is only because so many of us are gloomy that gloom is forced upon us. The world in which we live is, in fact, one in which there are many reasons for gloom. A large proportion of our thoughts, and more than half of our income, is devoted to preparations for killing each other. Not that we expect to get any good out of killing each other. We know perfectly well that those who are unlucky enough to survive will be worse off than before. What is wrong is only that there are so many people in the world who believe that other people wish to kill them, and who, therefore, wish to kill the other people. This is all silly and comes of teaching people that they ought to be frightened and miserable. If we were all taught to be bold and cheerful, nature would never teach us the opposite, provided we made adequate use of modern knowledge and skill.

And so, if I had control of the education of children in the happy Australia that I am imagining, I should from the very beginning do everything possible to leave their natural joy of life undimmed. I should let them spend most of their waking day in a spacious environment, open to the air whenever the weather permitted, in which there would be no valuable objects they must not break, no pre-occupied adults whom they must not disturb by their noise, no sharp objects upon which they must not cut themselves, and generally as little need as possible to any "don't". In the home, this is impossible. There are knives with which children must not cut themselves, there are clocks that they must not smash, there are grown-ups whom they must not distract beyond a point. In a spacious nursery school rightly constructed, there need not be these restrictions. One restriction, it is true, would remain: the children must not be allowed to torture each other. But that is an essential necessity of social life, and one which is in no degree diminished by liberation from bondage to nature.

A great deal of education could be made much pleasanter than it is at present by teaching children things that they think worth knowing. This is a matter of educational skill. If you begin with some entirely practical problem that the child can easily apprehend, such as, say, constructing a bicycle, you can gradually introduce him to theory as an essential factor in the production of practical results. In time, especially if the child is intelligent, he will willingly accept a considerable amount of drudgery so long as he is persuaded that it is necessary to the end in view.

This applies to the arts as well as to science. When I was young children were made to learn stock pieces of poetry by heart, with the result that they hated poetry and associated the names of the poets concerned with intolerable boredom. But if you set a group of children to acting Shakespearean comedy, each will see some point in learning his part, and they will go through a great deal of work not only without reluctance, but

with positive enjoyment. The same sort of thing applies to singing. There is a simple rule -- Shakespeare wrote to give pleasure, not to give pain, and adults who use him to inflict pain are insulting his memory. If you do not enjoy Shakespeare, you had better let him alone. There is no more reason to read him, if you dislike him, than for eating oysters if you find the taste disgusting. But if you remember that Shakespeare was written to be acted, you will be astonished by the number of children who will enjoy him.

I should teach children history chiefly by means of the cinema. They will remember it twenty times as well as if they had learned it from a book. Gloomy adults dislike this method because it is not unpleasant. But I cannot accept the view that the main purpose of education is to teach children to endure suffering.

I suppose the most interesting part of history for the people that we are considering will be the hundred years that for us are still in the future. I imagine the children of Australia being taught that their ancestors came from a place called Europe, now mostly desert, but in former times fertile, and even, in a sense, more or less civilized. This queer place, they will learn, was cut in two by an imaginary line down the middle, and the people on each side of the line were carefully taught to hate and fear the people on the other side. One fine day they started killing each other with the most exquisite scientific skill, and dropping poison on the ground from the clouds so that crops would no longer grow. The consequence is that this part of the world is now only interesting to archeologists, who have to go in special clothes and boots made to screen them from radioactivity. Fifty years ago, so these children will be taught, some rash archeologists left off their nose bags while they slept. These men all perished, and nowadays the nose bags are more firmly attached. On Sundays the children will be taught the moral of this piece of history.

Perhaps, who knows, Australia may be the one island of civilisation left in the world. I can imagine Australian scientists surrounding their continent with a radioactive Barrier Reef warranted to kill any rash traveler approaching from without. Australians themselves will have discovered ways of protecting themselves from lethal emanations, so that they alone will be able to travel freely. However I think it possible that civilisation may survive in some other places, for instance, the Fiji Islands and the Antarctic Continent, which by that time will have been made warm by means of radioactivity.

These possibilities, however, are fantastic. I do not think it soberly probable that the rest of the world will do so badly as I have been suggesting. Still less, I fear, would it be possible for Australia to thrive if the rest of the world were in ruins. What would you do with your wool if there was nobody outside Australia to buy it? The fortunes of Australia are, in fact, very intimately bound up with the rest of the world. In particular, the defense against Asia can never be secure until Asia is prosperous. When the populations of India and China are as well off as that of Australia, then, and not till then, Australia will have no reason to fear the envy of more populous neighbors. No part of the world in our day can shut itself up and say, "I will live for myself without regard for others." The last country that really hoped to do this was Tibet, but now Peking has replaced Lhasa, and the Holy Prophet Marx has replaced Buddha.

In the unified world in which, while our kind of civilisation persists, we must all live, Australia has certain important possibilities of leadership. First and foremost, because you have a large almost virgin continent with which to experiment; second, because the problem of Asia, of which the solution is imperative, is one which touches you nearly, and in regard to which you have experience; and third, because you are a vigorous, energetic and hopeful race, whose adventurousness has not been damped by failure or disaster. For all these reasons, in my visions of the next hundred years, I find that Australia contributes a very large part to the total of my hopes.

ABOUT BERTRAND RUSSELL

(11) George Steiner on Bertrand Russell, in *The New Yorker* (8/19/67):

ON Winston Churchill's eightieth birthday, an English journal of opinion sent felicitations to "the second greatest living Englishman." The panache and impertinence of the compliment lay in the omitted premise. But to logicians and radicals the missing name rang clear: it was that of Bertrand Russell. And the implicit judgment may stick. Indeed, it may reach well beyond English life. It looks as if the presence of Russell will come to inform the history of intelligence and feeling in European civilization between the eighteen-nineties and the nineteen-fifties as does that of no other man. As

no single presence has, perhaps, since Voltaire's.

The parallel is both obvious and deep. It springs from the actual wrapper of this handsome book, "The Autobiography of Bertrand Russell" (Little, Brown), with its portrait of Russell made in 1916. His hair is close-folded in the manner of an eighteenth-century wig, the nose is beaked and Voltairean, the lips are sensuous but faintly mocking. Like Voltaire, Russell has lived long and made of this fact a statement of values both festive and stoical. His published work has been immense, an outrage to the sparsities of the modern manner; it comprises some

forty-five books. His correspondence has been even larger. Like Voltaire's, it has touched directly on every nerve of its century. Russell has debated philosophy with Wittgenstein and fiction with Conrad and D. H. Lawrence, he has argued economics with Keynes and civil disobedience with Gandhi, his open letters have provoked Stalin to a reply and Lyndon Johnson to exasperation. And, like Voltaire, Russell has sought to make of language—his prose is as supple and lucid as the finest of the classic age—a safeguard

against the brutalities and mendacity of mass culture.

It may be that Russell's range is ampler than Voltaire's, although no single work he has produced cry-

tallizes a whole sense of the world as does "Candide." Only logicians and philosophers of science are qualified to assess the contribution of Russell's "Introduction to Mathematical Philosophy" and of "The Principles of Mathematics," which he completed in 1903. Together with the "Principia Mathematica," published in collaboration with Whitehead between 1910 and 1913, these books retain a commanding vitality in the history of modern logical investigation. They anticipate many of the notions that are proving most fruitful in contemporary symbolic logic and information theory. Pure logicians are a rare species. In his capacity for sustained analytic calculation, in his ability to use codes of significant order less encumbered than is ordinary speech by the waste and opacities of customary life, Russell is a peer of Descartes and Kurt Gödel.

Russell's "History of Western Philosophy," much in the forefront when he received a Nobel Prize in literature in 1950, is *haute vulgarisation* in the best sense. It marches briskly from Anaxagoras to Bergson. It brims with an implicit confidence in the mortality of nonsense. Russell's book on Leibniz is dated but remains interesting for the comparisons it invites between his own appetite for omniscience and that of the great polymath and rival of Newton. "Our Knowledge of the External World," based on the Lowell lectures Russell delivered in Boston in 1914, remains perhaps the best introduction to his philosophic style and sinuous empiricism. The problems raised are as old as Plato; this means that attempted solutions are less vulnerable to fashion than in other branches of philosophy. We are an epistemological animal, asking both whence and whither but knowing neither, unable to prove that we do not inhabit a long dream. Russell beautifully charts the strangeness of our condition. He does so again, though less incisively, in "The Analysis of Mind." Had he produced nothing but these books of philosophic argument and history of ideas, his place would be distinctive.

But the shock of world war and radical changes in his own personality greatly extended and complicated Russell's natural range. Since 1914 there have been few areas of social policy, of international relations, of private ethics that he has not dealt with. His critique of our mores begins in the world of William Morris and Tolstoy; it outlives that of Shaw and Freud; it is active and more irritant than ever in that of Stokely Carmichael. He has sought to plan "The Conquest of Happiness"—whatever the title of the particular discourse or tract. He has spoken as warmly as Montaigne "In Praise of Idleness" and reverted time

and again, with the sense of a riddle unsolved, to "Marriage and Morals." He has given the world notice of "Why I Am Not a Christian" but written with a poetic tact alien to Voltaire of the claims of mysticism, of that abrupt logic of the human spirit when it is in a state of rapture. Russell's more immediately political studies and pamphlets would fill a shelf. He inquired early into the "Practice and Theory of Bolshevism" and addressed his uneasy sympathies to "The Problem of China" (another interest shared with Voltaire) long before the present crisis. His study of the "Prospects of Industrial Civilization" relates him to the thought of R. H. Tawney, while his repeated pleas for passive resistance and universal disarmament ally him to that of Danilo Dolci. The dreamer and the engineer have also been present in Russell's genius. He is a utopian of the short term, a man waking, even at ninety-five, from the simplicities of his dreams and refusing to believe that these cannot bring instant melioration to the morning. The title of one of Russell's tracts, "Has Man a Future?," sums up his quest. The mark of interrogation stands for a persistent skepticism, for a streak of resigned sadness. But the old fox's entire life, marvellous in its diversity and power of creation, has been a striving for a positive answer.

Russell seems to have kept a close record of that life almost from the start—certainly from the moment he went to Cambridge, in October of 1890, and realized that he possessed gifts out of the ordinary. Like Voltaire, Russell has seen his own person move into the light of the historical; time and eminence have in part taken him from himself, and he has watched over the process with ironic precision. "My Philosophical Development" remains an intensely readable record of his passage from Kantian idealism to a kind of transcendental empiricism that I would call Pythagorean ("I have tried to apprehend the Pythagorean power by which number holds sway above the flux"). The "Portraits from Memory," which resembles and at times completes Keynes's "Essays in Biography," tells of some of the luminous encounters in Russell's career, and recaptures, so far as any book can, the casual ceremony of intellectual life in the Cambridge of G. M. Trevelyan and Lord Rutherford, of G. E. Moore and E. M. Forster. The formal act of autobiography has grown naturally out of a life so constantly examined. Parts of this volume were assembled and dictated in 1949, other parts probably in the early nineteen-fifties. The material dealt with extends from February of 1876, when the orphaned four-year-old younger son of Lord and Lady Amberley arrived at Pembroke Lodge, the home of his grandparents, until August of 1914, when the forty-two-year-old mathematical logician, Fellow of Trinity College and of the Royal Society, was about to opt for intransi-

gent pacifism and break with much of the world he had adorned. The narrative consists of seven chapters, each followed by a selection of relevant letters. This Victorian device works admirably. Often the letters move subtly against the grain of a much later remembrance, and the dialogue between letter and recollection yields a caustic footnote. Thus, Russell could write to Lucy Martin Donnelly on April 22, 1906, about some of his most abstruse, fiercely taxing endeavors in mathematical logic, "My work goes ahead at a tremendous pace, and I get intense delight from it," whereas Earl Russell, O.M., remarks, forty-five years later, that "It turned out to be all nonsense."

Bertrand Russell was born and brought up an aristocrat. He was the grandson of a Prime Minister and cousin or nephew to a covey of military, diplomatic, and ecclesiastical worthies. Forebears who had visited Napoleon at Elba or defended Gibraltar during the American wars were animate shadows in the nursery. This was the England of espaliers and velvet lawns, of lord and servant. In these opening pages there are dizzying vistas of time. The reader of this review and the writer are, in the allowed sense of the word, contemporaneous with a man who silenced Browning at a dinner party and who, when left in tête-à-tête with William Gladstone, heard cascade upon him the dread pronouncement "This is very good port they have given me, but why have they given it me in a claret glass?" Those now living can seek out a man, still alert, whose servants and early acquaintances clearly remembered news of Waterloo. This is startling enough in itself. But in Russell's case the fact that he came of age in a world almost totally vanished from our grasp, that he belonged to the most confident elite in modern history (the Whig aristocracy of Victorian England), is more than a virtuoso trick of long life. Russell is marked to the very limits of his later radicalism by his origins.

This memoir does nothing to soften his native hauteur. "But what can a charwoman know of the spirits of great men or the records of fallen empires or the haunting visions of art and reason?" he asked Gilbert Murray in 1902, and went on, "Let us not delude ourselves with the hope that the best is within the reach of all, or that emotion uninformed by thought can ever attain the highest level." In February of 1904, Russell ventured "to a remote part of London" to lecture to the local branch of the Amalgamated Society of Engineers. His comment at the time was characteristic: "They seemed excellent people, very respectable—indeed, I shouldn't have guessed they were working men." Russell grew into one of the genuine mutineers of modern history; his fusillades against capitalism, great-power politics, and the cant of the Establishment have been fierce and prolonged. Pity for the human condi-

tion has burned in him till it has all but consumed reason: "Children in famine, victims tortured by oppressors, helpless old people a hated burden to their sons, and the whole world of loneliness, poverty, and pain make a mockery of what human life should be." He has gone to prison, lost academic appointments, and risked ostracism on behalf of his outraged compassion. But Russell's Jacobinism is high Tory; it springs from the certitude that birth and genius impose both the right and the obligation of moral precept. "Echoes of cries of pain reverberate in my heart," says Russell. One wonders whether he is not deceiving himself; the echo chamber lies higher, the pity, like Voltaire's, is cerebral. Fundamentally, Russell's politics of protest seek to realize the hope, so articulate in the small, vibrant coterie of Apostles to which he belonged at Cambridge, that humanity might be elevated to a just plane of social and hygienic well-being so that the elect, the pursuers of beauty and truth, could fulfill their lives without bad conscience. American democracy, argues Russell, is egalitarian and philistine. Thus, it has made room for neither intensity nor loftiness of feeling; "indeed, loftiness of feeling seems to depend essentially upon a brooding consciousness of the past and its terrible power." True politics are the art of securing elbowroom for the best; they will alleviate the squalor in the world at large that embarrasses or dissipates the life of the mind. Russell's pity has often been sharp-edged, a weapon against those who would crowd too near his sensibility.

This aristocratic misericord and a betraying preference of the abstract over the disorder of the personal underlie the general tone of the "Autobiography." They are explicit in what have rapidly become its two most notorious episodes. "I have sought love, first, because it brings ecstasy," writes Russell, "ecstasy so great that I would often have sacrificed all the rest of life for a few hours of this joy. I have sought it, next, because it relieves loneliness—that terrible loneliness in which one shivering consciousness looks over the rim of the world into the cold unfathomable lifeless abyss." But the search not infrequently appears to have brought ruin to others. Russell's first marriage, to Alys, the sister of Logan Pearsall Smith, began in exultation. Russell's recollection of an early visit to his beloved, in January of 1894, when London lay snowbound and "almost as noiseless as a lonely hill top," has the gentle force of Tolstoy's autobiographical narrative of Levin's visit to Kitty near the start of "Anna Karenina." But the marriage was built on a weird code of sexual reticence that soon produced cruel tensions. In March of 1911, Russell fell in love with Lady Ottoline Morrell, a woman celebrated in the lives and careers of a generation of English poets and politicians. "For one night" with her Russell felt ready to pay the price of scandal and even murder. The end of his marriage to Alys is recounted thus:

I told Alys that she could have the divorce whenever she liked, but that she must not bring Ottoline's name into it. She nevertheless persisted that she would bring Ottoline's name in. Thereupon I told her quietly but firmly that she ever took steps to that end, I should commit suicide in order to circumvent her. I meant this, and she saw that I did. Thereupon her rage became unbearable. After she had stormed for some hours, I gave a lesson in Locke's philosophy to her niece, Karin Costelloe, who was about to take her Tripos. I then rode away on my bicycle, and with that my first marriage came to an end. I did not see Alys again till 1950, when we met as friendly acquaintances.

After his term at Harvard, Russell went to Chicago to stay with an eminent gynecologist and his family. He had met one of the daughters briefly at Oxford. "I spent two nights under her parents' roof, and the second I spent with her." It was agreed secretly that the young woman should join Russell in England. By the time she arrived, in August of 1914, world war had broken out. Again, Russell's narrative should be quoted in full:

I could think of nothing but the war, and as I had determined to come out publicly against it, I did not wish to complicate my position with a private scandal, which would have made anything that I might say of no account. I felt it therefore impossible to carry out what we had planned. She stayed in England and I had relations with her from time to time, but the shock of the war killed my passion for her, and I broke her heart. Ultimately she fell a victim to a rare disease, which first paralysed her, and then made her insane. In her insanity she told her father all that had happened. The last time I saw her was in 1924. . . . If the war had not intervened, the plan which we formed in Chicago might have brought great happiness to us both. I feel still the sorrow of this tragedy.

There is a terrible coldness in both the style and the feelings expressed—a chill, dismissive lucidity in the Augustan manner. In some measure this may result from the detachment of an old man's remembrance. But surely the problem lies deeper. Like Voltaire or perhaps like the Tolstoy of the later years, Bertrand Russell is a man who loves truth or the lucid statement of a possible truth better than he does individual human beings. His ego is of such turbulent richness that egotism makes a world. To it another human person, however intimate, has only provisional access. Russell has recorded at least one definite mystical experience. It took place in 1901 after he had heard Gilbert Murray read part of his translation of Euripides' "The Hippolytus." He traces to the formidable moment of illumination, of clear trance, that ensued a few hours later his lasting views on war, education, and the unendurability of human loneliness. He emerged convinced "that in human relations one should penetrate to the core of loneliness in each person and speak to that." The conviction was no doubt sincere, but little in this "Autobiography" bears it out. A more pertinent text would seem to be the chapter on "The Ideal" in G. E. Moore's "Prin-

cipia Ethica," a work that profoundly influenced Russell's early development; it is "the love of love," which Moore commends "as the most valuable good we know." Set beside the vividness of that realization, love for the actual beloved seems a more pallid joy.

Yet it would be unfair to consider solely what is lofty and bone-chilling in this book. The "ancient glittering eyes are gay." Russell recalls how he read Lytton Strachey's "Eminent Victorians" in jail: "It caused me to laugh so loud that the officer came round to my cell, saying I must remember that prison is a place of punishment." Lunacies and matching asperities out of another age, in an idiom almost extinct, abound: "When the Junior Dean, a clergyman who raped his little daughter and became paralysed with syphilis, had to be got rid of in consequence, the Master went out of his way to state at College Meeting that those of us who did not attend chapel regularly had no idea how excellent this worthy's sermons had been." Russell, like many English dons, is a virtuoso of the undercut. A hilarious vignette of philosophic and personal pomposities in the Cambridge, Massachusetts, of 1914 is capped by the gentle notice that "There were limitations to Harvard culture. Schofield, the professor of Fine Arts, considered Alfred Noyes a very good poet." A snapshot of Keynes finds him "carrying with him everywhere a feeling of the bishop in *partibus*."

The ironies, moreover, are more than donnish. They deepen to a stream of doubt so erosive that it undermines Russell's own initial values and sweeps before it the science in which he had achieved greatness and the world in which he was most at home. This demolition from within is the high adventure of the first volume (Russell is at work on a second). The labor of abstruse argument that went into the "Principia Mathematica" left Russell exhausted. He reports with absolute candor that his powers of close mathematical reasoning weakened after 1913. It was not mathematical logic alone, however, that weakened its hold. In February of 1913, Russell wrote to Lowes Dickinson a sentence that effectively dooms the criteria of elegant feeling, of academic communion that had dominated his own life until then: "But intellect, except at white heat, is very apt to be trivial." Both the failure of his marriage and the example of Tolstoy lie behind that statement. But so does a precise local circumstance. In the same letter, Russell refers to one greater than himself in philosophy and the analysis of meaning. He reports that Ludwig Wittgenstein, a new arrival from Vienna and Manchester, has been elected to the Apostles "but thought it a waste of time. . . . I think he did quite right, though I tried to dissuade him." The concession is momentous. As the long summer of European civilization drew to a close, Russell outgrew the luxuries of spirit he had prized

most. He was to emerge from the war as one set on the road that has led to the Russell International Tribunal in Stockholm.

The myopia, the frivolous malice of many of Lord Russell's recent political pronouncements are revolting. The changes of heart—it was Bertrand Russell who not so very long ago advocated a preventive nuclear strike

against the Soviet Union—are risible. Yet even in error and garrulous simplification there is a fierce zest of life, a total gift of self to the claims of ideas and the demands of human conflict. When the whole story comes to be written, it may well appear that few men in history, certainly few in our tawdry age, have done more to dignify the image of life set down by

Russell sixty-four years ago:

Often I feel that religion, like the sun, has extinguished the stars of less brilliancy but not less beauty, which shine upon us out of the darkness of a godless universe. The splendour of human life, I feel sure, is greater to those who are not dazzled by the divine radiance; and human comradeship seems to grow more intimate and more tender from the sense that we are all exiles on an inhospitable shore.

BRS AWARD WINNER NEWS

- (12) John Somerville, BRS Laureate, speaks his mind on Col. North, in Churchman/Human Quest (October 1987)...with thanks to TOM STANLEY:

WHAT YOU NEED TO DO TO MAKE OLLIE NORTH A HERO

To make Oliver North a hero, you need above all to forget, and then to pretend.

Forget Hitler and World War II in which the Soviet Union was Hitler's greatest enemy and our greatest ally who sacrificed most in human lives for the allied victory. Forget that when the chips were down, it was German Nazism and Italian Fascism against the Western democracies and Soviet communism, with our very lives and future at stake.

Forget that the allied victors set up, by mutual agreement, an organization called the United Nations with a completely democratic Charter of principles and processes, subject always to agreed democratic methods of amendment, for the peaceful and legal settlement of international disputes.

Forget that under this Charter, all the states-members, whether capitalist or communist, religious or atheist, have equal right to exist, to compete, and to expand. Forget that if Hitler had won there would have been no future for either "democracy" or "communism".

Forget that the U.N. has an International Court of Justice, which we insisted upon, for the purpose of judging all questions concerning the breaking of international law. Forget that the International Court of Justice has ruled that our mining of Nicaragua's harbor was an illegal act of war against the sovereign state of Nicaragua.

Pretend that our own country is not committed by treaty signature to the Charter of the United Nations. Pretend that our own law does not mandate that any treaty the U. S. government signs becomes a binding part of U. S. law. Pretend that Nicaragua is not a fellow member of the United Nations, with as much right to prefer communism, if it wishes, as we have to prefer capitalism.

Pretend that our country is legally and morally committed to a holy worldwide crusade which has branded the Soviet Union as an international outlaw and communism as an international crime with which it would be sinful for us to live in peaceful coexistence and peaceful competition. Pretend that this imaginary and illegal crusade forces us to create and support military efforts to overthrow the legal government of Nicaragua.

Pretend that when such military support by U. S. Government officials is forbidden by explicit laws of our own country, it is true patriotism for a lieutenant colonel to lie to our own Congress, not only to break the law he took a special oath to obey, but to suggest that others who reject such conduct and policies are less than patriotic.

Then after you have forgotten all that you must forget, and pretended all that you must pretend, you will be an Ollie North hero-worshipper, with peace of mind and a clear conscience.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

- (13) Chairman, Harry Ruja; President, Marvin Kohl; Vice-President, John Lenz; Treasurer, Dennis J Darland; Secretary, Don Jackanicz; Vice-President/Information, Lee Eisler.

BY BERTRAND RUSSELL

- (14) BR tells why he resorted to civil disobedience, in his statement of 9/12/61, as reported in Peace News (9/15/61)...with thanks to TOM STANLEY:

PEACE NEWS, September 15, 1961—7

Russell's statement

Tuesday, 12th Sept.

IF the Court permits, I should like to make a short statement as to the reasons for my present course. This is my personal statement, but I hope that those who are accused of the same so-called crime will be in sympathy with what I have to say.

It was only step by step and with great reluctance that we were driven to non-violent civil disobedience.

Ever since the bomb was dropped on Hiroshima on August 6th, 1945, I have been profoundly troubled by the danger of nuclear warfare. I began my attempt to warn people by entirely orthodox methods. I expressed my fears in a speech in the House of Lords three months after the bombs were dropped on Japan. I called together scientists of the highest eminence from all parts of the world and am now Chairman of their periodic meetings. They issue wise and reasoned reports concerning nuclear warfare, its probable disastrous results, and ways of preventing its occurrence. No newspaper notices these reports and they have no effect either on Governments or on public opinion. The popular Press minimises and ridicules the efforts of those

working against nuclear warfare, and television, with rare exceptions, is closed to us. In recent months one television company, and only one, offered me two minutes for general platitudes, but when I said I should wish to speak on Berlin the offer was withdrawn.

★

It has seemed to some of us that, in a country supposed to be a democracy, the public should know the probable consequences of present Great-Power policies in East and West. Patriotism and humanity alike urged us to seek some way of saving our country and the world. No one can desire the slaughter of our families, our friends, our compatriots and a majority of the human race in a contest in which there will be only vanquished and no victors. We feel it a profound and inescapable duty to make the facts known and thereby save at least a thousand million human lives. We cannot escape this duty by submitting to orders which, we are convinced, would not be issued if the likelihood and the horror of nuclear war were more generally understood.

Non-violent civil disobedience was forced upon us by the fact that it was more fully reported than other methods of making the facts known, and that caused people to ask what had induced us to adopt such a course of action. We who are here accused are prepared to suffer imprisonment because we believe that this is the most effective way of working for the salvation of our country and the world. If you condemn us you will be helping our cause, and therefore humanity.

NEWS ABOUT MEMBERS

- (15) Irving Anellis in Moscow.

I am pleased to report that my recent trip to Moscow was both enjoyable and professionally rewarding. I was in Moscow from 11 to 24 August, although the 8th International Congress of Logic, Methodology and Philosophy of Science lasted only from 17 to 22 August. Part of the rest of my time was spent sightseeing. I learned during my visit that our Soviet colleagues very deeply appreciate any indication of sincere and serious interest of Western colleagues in their work.

During the Congress, I spoke on the foundations of infinitesimal analysis, specifically on "Russell's problems with the calculus," based on Russell's published and unpublished writings of the period 1896-1897. A Russian summary of my talk was given by Mikhail Kisel of the Soviet Academy of Sciences' Institute of Philosophy. Later, Dr. Kisel told me that our Soviet colleagues are familiar with Russell as a neo-Hegelian, as a social and political writer, and, of course, as a logician; he added, however, that the material which I

had presented in my talk was quite new to him and his colleagues. As perhaps a consequence, Dr. M. I. Panov of Moscow State University requested that I permit a Russian translation of the transcript of my talk to be published in one of the volumes of the collection of papers of the Philosophical-Methodological Seminars which he edits, and I readily consented.

BRS members may be interested to learn that I found several copies of a very recent Russian-language edition of Russell's Why I Am Not A Christian on the bookshelf in the home of one of my Soviet colleagues. The volumes were bound in a rich tan leather, with golden lettering on the spine.

Also of interest in connection with Russell was a tour of the Lenin apartment museum in the Kremlin which was arranged by the Congress organizers. The Lenin apartment is located in the Building of the Council of Ministers of the USSR, the center of the Soviet government, and participation in this tour was consequently limited and by invitation only. The office of Lenin's apartment (Russell did not visit or describe the living quarters) is today much the same as it was when visited by Russell in 1920 and as described in Russell's The Practice and Theory of Bolshevism: "Lenin's room is very bare; it contains a big desk, some maps on the walls, two book-cases, and one comfortable chair for visitors in addition to two or three hard chairs." Our guide mentioned that Lenin was visited in this room by peasants, workers, political leaders, representatives of various foreign lands, writers, cultural leaders; but she did not any - neither Russell nor any others - by name.

- (16) Dong-In Bae, a BRS member since 1975, returned in 1984 to his native South Korea. He had earned his Ph. D. in Germany, which had given him political asylum for many years, and was now a Professor, teaching Anthropology and Sociology at Kangweon National University, in Chuncheon. We sent him a clipping from the New York Times, and he responded this way in his letter of 6/12/87:

Thank you very much for your letter of June 1st enclosing the statement signed by the members of the American National Assembly and sent to President Chun Doo Hwan, an excerpt from the New York Times of May 31, 1987. I whole-heartedly endorse the statement, too. On May 4th I myself signed a similar declaration together with 39 professors at our Kangweon National University here in Chunchon; we organized it very carefully; we had to keep the small "movement" in absolute secret until it could be made known publicly in the news papers. At last, in spite of massive pressures from the university administration - the president of our University urged several professors (including myself) involved in the movement to stop it - we succeeded it to be published. But we did not yet succeed in the basic political democratization in our Korean society.

As you are well informed, more than 1400 professors signed and published their common opinion opposing President Chun's unilateral declaration of April 13th to prohibit debate regarding change of the constitution. These protests are growing in their number and intensity; other social groups and occupational associations are joining in the movement for rapid constitutional change. - For example, literary artists, fine artists, film makers and stars, drama/theater artists, dentists, medical doctors, women's organizations, some part of trade unions etc.

On June 10th, there were two big events: the one is the convention of the ruling party, especially for the nomination of Ro Tae Woo (the military friend of Chun) as their presidential candidate, and the other a nation-wide protest meeting against the Chun-government. The government declared the latter as illegal. This people's legitimate meeting could not be held because of the government's violent interruption by means of severe traffic control, house arrest and throwing of tear bombs. Chun's regime started with military violence in 1980, more exactly since the assassination of Park Chung Hee (Oct. 26, 1979) and exists until now on the basis of only the state apparatus of violence (mainly military police). I think there is no ground

of its continuous existence in the Korean society: no legitimacy could and can be recognized for his regime. A state power became a system of violence, an inhuman, antidemocratic and barbarous system. This system traditionally helped the American government to be maintained. In this sense I am very glad to see a quite different aspect of the American people in the clear expression of the Congress members for the rapid "return to democracy in Korea", which you let me know concretely.

Until now there is no indication of retaliation from the Chun's regime toward the above-mentioned professors signed. So I am well personally. too.

(17) Adam Jacobs disrobes in public, much to his credit.

From the Rutgers Law Record, Special Robe Supplement (a student publication of the Rutgers School of Law, Newark, NJ):

Printed below is the text of the circulating petition. See Adam Jacobs 87 for information or to sign on.

The undersigned members of the Class of 1987 will not wear graduation robes. Instead, we intend to recover that portion of the graduation fee allocated therefor, and advance the sum to a homeless fund established by Essex-Newark Legal Services.

We do this because:

1. At a time when the gap between rich and poor is growing wider, we wish to show our commitment to the needs of those less fortunate than ourselves.
2. Though the temperature will be comfortable at the ceremony, many people in Newark go without adequate clothing in the wintertime. Our robes, unnecessary for our comfort, symbolize the warmth we wish to give to our fellow citizens at that time.
3. We wish to do away with needless formality. Though we appreciate the communality that a sea of black robes suggests, we feel a more meaningful expression of communality can be effected through an act that includes those outside our class.

The Newark Star Ledger (6/1/87) included the following in reporting on the Law School's Graduation Day:

Graduate Adam Jacobs, 24, of Newark, who asked fellow students to abandon their gowns, estimated the program raised \$500 for the city's homeless. He explained he was motivated to initiate the drive to help the homeless during his work for Rutgers Legal Aid, where he met people who lived on the streets without winter coats or spent days in public buildings because they had nowhere else to go.

Adam writes: "I believe the campaign to disrobe discussed here roughly falls under Russell's 8th Commandment. Passive agreement certainly was the easier course...but some of us chose instead to dissent, intelligently, I think." We agree.

[Russell's 8th Commandment: Find more pleasure in intelligent dissent than in passive agreement, for, if you value intelligence as you should, the former implies deeper agreement than the latter. RSN54-2]

- (18) Herb Lansdell asks: Is there someone who could write an imaginary letter from BR to Reagan? It could be a good item FOR the NY Times or Washington Post op ed page.
- (19) John Lenz's paper, "Russell and the Greeks", presented at the June meeting, will appear in a future issue of "Russell", slightly revised. John presented it as "Bertrand Russell, Gilbert Murray, and the Greeks" at Columbia, on September 28th.
- (20) Bob Sass was particularly delighted to learn that Professor John Somerville received the 1987 BRS Award. He tells why:

Dr. Somerville was one of my professors of philosophy during the late 1950's at Hunter College, now part of the City University of New York. He was an inspiring teacher who had enormous influence on his students during the cold war years. He was also most generous with his time. For instance, I continued my studies in philosophy with him upon graduation. He would assign me readings and take time to meet with me on week-ends to discuss them. At that time, I was working full-time in the labour movement.

It was, in part, because of his book Philosophy of Peace that I became President of the Sane Nuclear Policy Club at Hunter College, 1958-59. I, thereafter, read Russell's work in this area and continued reading and studying Russell ever since. My wife and I started an alternative school when we came to Saskatchewan in 1969. I was, of course, inspired by Russell's writing on education.

When I became Deputy Minister of Labour in the Province of Saskatchewan, 1973-1982, I again found insight and guidance from Russell's writings on politics, ethics and the right organization of industry.

I immediately became a member of the Bertrand Russell Society on learning of it and now I will have the opportunity to attend my first BRS annual meeting in San Diego. I look forward to the presentation of the award to Dr. Somerville. He is a most worthy recipient of the BRS award because of his devotion to world peace, and because of his inspiration as a teacher.

- (21) Ramon Suzara isn't exactly enthusiastic about the way things are going in the Philippines. Here are the relevant parts of his letter of 8/31/87:

I live in a mad world. The only time I enjoy mental health is whenever I read Russell; or, whenever I hear from fellow-Russellians.

Presently, I'm taking a seminar on Real Property Administration. This is given by the Philippine Association of Building Administrators in cooperation with the International Institute of Building Management. Soon, I hope to manage one of the buildings here in the financial district of Makati.

The Philippines, far from being on the road towards civilization, is in fact developing into another "Beirut" in Southeast Asia. The 5th attempt last few days ago to overthrow the Cory government has failed. But more attempts will come in the near future. Indeed, the peace and order situation throughout the Philippines is degenerating with each passing day. On Sundays, everybody pretends to love one another. During the weekdays, however, there is hate, cruelty, exploitation, hypocrisy, and violence. But prayers are uttered over and over again - the love of God will grace the Philippines - in the meantime, the military is expected to remedy the mess. Alas, the military itself is part of the mess.

What is alarming here for me is that the born-again Christian movement is spreading fast and wide. The Bible is still the only book considered for moral guidance. The average Filipino has yet to acknowledge that moral guidance derived from the Bible has produced not social nor political sanity, but disorganized madness. Russell was right: - "Religion encourages stupidity and an insufficient sense of reality." And I might add that in the Philippines - religion cannot cure our troubles because our troubles cannot cure religion.

What is truly sad here is that almost everybody is waiting for more miracles. What seems more important is that Cory Aquino is more religious than Marcos and Imelda who left this country in ruin. And Marcos and Imelda are still religious.

The Bible says in 1John 2:15 "Do not love the world or things in the world." This piece of Biblical teaching has been faithfully obeyed by the majority of the Filipinos. That is why, I suppose, for the most part Filipino Christians are seldom attracted by human intelligence as they are always distracted by divine stupidity. Indeed, loving God up in heaven while hating to explore genuine possibilities of loving one another down here on earth has insured not only contempt for this world, but also insanity.

Surely the Philippine government today is trying to accomplish the higher standard of living for the whole nation. What it fails to realize, however, is that with the accomplishment of

the higher standard of thinking - the higher standard of living will be easier for everybody. In the meantime, Christianity in the Philippines continues to invent the damned soul, and continues to sell eternal salvation. The price is too much to pay: - the mindless surrender of the self via the mutilation of the intellect.

ON NUCLEAR WEAPONS

(22) A Letter to the Editor of the New York Times (7/18/87, p.26):

Just Call It Playing With Nuclear Matches

To the Editor:

In opposing the "abolition of nuclear weapons" in "More Straight Talk for NATO" (editorial, June 15) you argue, "Nuclear weapons remain a necessary part of deterrence." You speak of the need to build the necessary public support for deterrence. Pity that you do not explain that both the quality and quantity of our nuclear arsenal have little to do with deterrence.

For as Robert S. McNamara, the former Secretary of Defense, has observed, deterrence requires only a few hundred nuclear bombs. Our thousands of nuclear weapons, many of them designed for first-strike and war-winning - not war-detering - purposes, have only heightened tension between the superpowers and made nuclear war by accident frighteningly likely.

Your belief that nuclear weapons offer "a great benefit to mankind" (editorial, Aug. 25, 1986) rests on the further belief that "because of the nuclear shadow" the United States and the Soviet Union "have enjoyed 40 years of peace." This undocumented and unproved assumption neglects to mention that in the judgment of the authoritative Bulletin of the Atomic Scientists the nuclear-arms race has brought the world to the brink of nuclear holocaust.

You are of course right in noting that United States and Soviet troops have "never met in combat" in the last 40 years. But why does it follow that The Bomb is responsible for this?

John Foster Dulles, W. Averell Harriman and other post-World War II

American leaders agreed privately that the Soviet Union had no intention of overrunning Western Europe or the world. It can be argued that our development of thousands of bombs targeting every Soviet military, industrial and population center, and our secret plans to launch them in a pre-emptive strike, were part of a policy that resulted in the tragic Vietnam War.

It is important to recall that we deployed atomic bombs against the Russians and initiated the nuclear arms race, not to deter aggression, but rather to destroy the Russians in the war that many of our leaders said was inevitable. Deterrence was a rationale for a military policy that the United Nations and most of the world's religions have judged unacceptable. As Adm. Gene R. La Rocque has pointed out, deterrence was an afterthought, a theory "to help justify our nuclear weapons," which our leaders had put in place in order to achieve "worldwide military dominance."

Since you have learned to love The Bomb, one can understand your unhappiness with what you call the "growing public antagonism to nuclear weapons." Might it not be possible that the public understands better than you do that weapons so frightful and dangerous, so susceptible of being used as a result of mechanical or human error, provide a treacherous and unreliable deterrence to war? EDWARD PESSEN
New York, June 30, 1987

The writer is Distinguished Professor of History at Baruch College and the City University Graduate School.

PHILOSOPHY

- (24) *Free Will* is discussed by CORLISS LAMONT in "The Assurance of Free Choice" (Basic Pamphlet #27, Box 42, NY NY 10025). Here is part of the discussion:

FREEDOM OF CHOICE

When the fatalistic Mohammedan fighters in the motion picture *Lawrence of Arabia* wanted to persuade Colonel Lawrence of the impossibility of one of his proposed military ventures in World War I they said, "It is written." To which Lawrence's spirited answer was always, "Nothing is written." And the film in each case proceeds to show how he carried out the venture against immense odds.

Actually, Lawrence was not right, nor were the Arabs. The truth is that in human life there is a great deal that is inexorably determined ("written") and a great deal that springs from man's free choice ("free will" in traditional terminology). Both Lawrence and the Arabs made the mistake of considering these concepts, freedom of choice and determinism, to be mutually exclusive, as if there must be universal determinism or absolute freedom. Philosophers, too, have sometimes made the same error.

In modern times man has gained enormous control over nature by discovering a multitude of scientific laws and then using them to his own advantage.

Those laws represent determinism and are always the expression of if-then relations or sequences. If the temperature drops to 32 degrees Fahrenheit, then water freezes into ice. Fortunately, many human functions, such as breathing and the circulation of the blood, are automatic and deterministic. At the same time an individual functioning on the level of intellectual deliberation can exercise true freedom of choice in deciding between two or more genuine alternatives that confront him.

I want to emphasize the word "alternatives" because it expresses a key concept in the analysis of freedom of choice. It was the psychoanalyst and author Erich Fromm who suggested that Bertrand Russell, Britain's greatest philosopher of the twentieth century, was not a determinist as usually thought, but an "alternativist who sees that what is determined are certain limited and ascertainable alternatives." I wrote to Earl Russell in 1968, quoting Fromm's comment and added:

"Now this fits in precisely with my own viewpoint. Opposing extremes to which Sartre goes on this question, I claim that free choice is *always*

limited by one's heredity, environment, economic circumstances and so on. Those are the deterministic elements in the picture. But beyond them, though established by them, are real alternatives among which a man can choose. That is where freedom of choice comes in.

"You have usually been classified as a determinist," I went on to say. "But if Fromm's remarks are correct, as well as my interpretation of them, you are by no means a total determinist and have been misunderstood."

Russell promptly replied: "I am in broad agreement with what you say about the free will question. Anything one says on this is sure to be wrong! It is difficult to find a form of words, and the difficulty is due to linguistic problems. There are no laws of nature that make the future certain. Any scientific investigator would always have to assume determinism as a working hypothesis, without complete belief or complete denial. *I cannot be described as a determinist*, and my views are closer to yours than to Sartre's." [My italics. — C.L. Aug. 16, 1968.]

We give the last word to Yiddish-author and Nobel Laureate Isaac Bashevis Singer:

Q: Do you believe in Free Will, Mr. Singer?

A: We have to. We have no choice.

BOOK REVUES

(27) Al Seckel's latest book is reviewed by BOB DAVIS:

BRS Member Al Seckel has edited another book of Russell's essays to complement last year's "Bertrand Russell on God and Religion". This year's effort, "Bertrand Russell on Ethics, Sex and Marriage," is published by Prometheus Press at \$14.95.

The format is the same. Al republishes 25 essays of Russell's, grouped into 5 sections. A 26th essay, "Morality and Instinct", written in 1926, is published here for the first time. The 25 are either essays or chapters from his books, such as "Marriage and Morals," that you are very likely familiar with, and will enjoy reading again, or they are from periodicals which you probably are not familiar with. So you get to re-read old favorites and some new material. Not a bad deal, that.

Of special interest to me was the first section, "Ethics", which contains five philosophical essays on ethics. That is to say, what is ethics, what is ethical knowledge (if such there be), and how does one think about ethics. Those of you who enjoy reading philosophy that is accessible to the layman will certainly enjoy this section, as well as the other sections, "Moral Rules", "Sexual Morality", "Marriage and Divorce", and "Happiness".

When I was growing up in rural Iowa 20 some years ago, it was a rather repressive moral climate, especially about sex. I found BR's writings, especially "Marriage and Morals", to be very helpful in dealing with my environment and forging a rational, reasonable code of behavior. Later, when I moved to California, I found everybody decidedly ho-hum about his writings on this topic and not at all impressed. That is because basically what he was saying was very standard for urban, modern people.

One lesson of BR's that they seemed to miss, though, was the lesson of responsibility. BR preached freedom with responsibility, not license -- a point we frequently need to remind his critics of.

Now, with the recrudescence of fundamentalism and their nit-wit views on sexual morality, I think that BR's views are becoming relevant again, and regaining their power. This might be a very good book with which to review your own thinking on this topic. Better yet, it might make a good gift to some young person who is confused by the current tumult on the topic.

Reading Russell helps people to learn to think for themselves in a rational fashion. And that, I firmly believe, is the best antidote to obscurantist nonsense.

(28) Wittgenstein, as portrayed in "The World As I Found It", a novel by Bruce Duffy...reviewed in The Washington Blade (9/25/87):

Philosopher for the age of anxiety

by Dennis Drabell

The tortured genius is a virtual cliché, but there was nothing commonplace about Ludwig Wittgenstein. His talents and traumas epitomize some of the highs and lows of the 20th century. He could fix anything mechanical, design a flawless and original house, and poke holes in the philosophy of one so brilliant as Bertrand Russell. He was never comfortable as an assimilated Jew; he suffered agonies over his homosexuality; and, because he was persuaded that his mysticism could not be reduced to words, he insisted that some of his most ardent followers misinterpreted him and that the real importance of his philosophy lay in what it left unsaid.

This self-torturer is the central figure of Bruce Duffy's ambitious, absorbing first novel, *The World As I Found It* (Ticknor & Fields, \$19.95). Russell himself plays a strong supporting role, as does George Edward Moore, the Cambridge don whose enlightened hedonism electrified the Bloomsbury Group. The three men represent not just different philosophies but

divergent styles of sexual fulfillment: Russell the restless womanizer; Moore the sexually retarded *naif*, who bumbles his way through a late courtship to a tranquil and enduring marriage; Wittgenstein the cruising snatcher of furtive sex in public parks.

From birth Ludwig was conditioned to be one of Austrian steel tycoon Karl Wittgenstein's few failures: his sons. The oldest two, both homosexual, committed early suicide. A third was a patent fool. Another was Paul Wittgenstein, a technically proficient if not emotionally expressive pianist. Then there was Ludwig, the brightest of all, who disappointed his father profoundly when he left home to study philosophy in England instead of entering the family firm.

Karl Wittgenstein is Duffy's most inspired portrait—a monster of overbearing perfectionism. When his son-in-law Rolf turns out to be the likeliest inheritor of the business, Karl loads him down with the same preternatural impressiveness formerly reserved for his feckless sons. Though Rolf might occasionally say something shrewd, it was, observes Duffy's omniscient narrator,

still a little, well... off the mark. Not through any intrinsic fault of his, Karl Wittgenstein would affably suggest. After all, Rolf could hardly be held accountable

for the fact that he still lacked seasoning... Still less could Rolf compensate for lacking that comprehensive and indeed synoptic view that came with more years than he, unfortunately, would ever have, because Karl Wittgenstein would always have more years and, moreover, would carry to his grave the wisdom that worked in the days when the world truly worked as it should...

In a speechless death-scene as moving as any in Tolstoy, the cancer-ridden Karl forgives his Ludwig for failing him (which in this case is tantamount to forgiving him for existing) while Ludwig forgives his father for being insufferable.

The World As I Found It also succeeds at sketching complex philosophies without muddying the narrative line. In this classroom scene, Moore is applying his renowned common sense to those skeptics who have gone so far as to deny the reality of the material world. "And let us also ask ourselves," Moore chirps, "how it is possible that *material* philosophers have held that *material* objects do not exist. For, after all..."

Here Wittgenstein interjects: "Whether I am material or immaterial—why should this affect the truth of what I say? If something is true, then it is true."

Stunned, Moore—ever the practitioner

of humility and candor—replies: "I had not considered that objection, but it is certainly a serious objection and perhaps reduces my statement from an argument that holds water to a more or less interesting point that only sprinkles a little water."

Despite his book's length (546 pages of small type), Duffy, who lives in Takoma Park, slights the later Wittgenstein, who returned to philosophy after a long stint as a grammar-school teacher and a short one as an architect. Nor does Duffy bring to life the few perfunctory scenes where Wittgenstein is sexually active: Russell's pursuits of the opposite sex are far more vivid and convincing, though somewhat peripheral to the book's main channel.

But these are minor flaws in a novel that manages to shed light on contemporary philosophy, intellectual comradeship and rivalry, assimilated Jews, and the relationship between gifted fathers and gifted sons—while at the same time losing a steady stream of gossipy entertainment. The truest measure of the book's value is that it explains more clearly than the philosopher himself ever did why he put so much stock in what he left unsaid.

(29) But not all critics agree on the merits of Duffy's "The World As I Found It". Here is a review by Carlin Romano, in Book World (9/27/87):

Bruce Duffy, a 34-year old writer from Takoma Park [is not the] first to recognize that Ludwig Wittgenstein -- the giant of 20th Century philosophy and the central figure of Duffy's "The World As I Found It" -- pursued truth a little too colorfully to be left on the non-fiction shelf.

Iris Murdoch's first novel, "Under the Net" (1954), featured a barely disguised portrait of him in Dave Gellmann, anti-metaphysician. Austrian writer, Thomas Bernhard retooled Wittgenstein as a suicidal mathematician in his novel, "Correction" (1975). Randall Collins, in "The Case of the Philosopher's Ring" (1978) [RSN22-34], dispatched Sherlock Holmes to probe the theft of Wittgenstein's brain.

The man plainly attracts novelists like fleas. And the reason is simple -- he was a walking soap opera.

Born in 1889 in Vienna, the son of steel magnate Karl Wittgenstein, Wittgenstein bounced on Brahms's knee as a child. As a young man, his brilliance in logic led him to study with Bertrand Russell in Cambridge, where Russell called him "the most perfect example I have ever known of genius as traditionally conceived."

Wittgenstein's ideas about language's link to the world seemed to jibe with Russell's, and Russell tried to make him a disciple. But Wittgenstein resisted. Haughty, eccentric and obsessive, he clashed with both Russell and G. E. Moore, both of whom believed that philosophical work should end at 5 p.m.

Indeed, Wittgenstein's personal life teemed with unconventionality. Three of his brothers committed suicide, and Wittgenstein often threatened the same. He renounced his fortune and lived in Spartan lodgings. He disparaged philosophy and urged admirers to leave it. According to one controversial biography, W. W. Berley III's "Wittgenstein", he was a self-loathing homosexual, given to bouts of promiscuous cruising that revolted him.

During World War I, he fought in the Austrian Army and wrote the only book published in his lifetime, the "Tractatus". After the war, he decided to teach children in elementary school in Austrian villages. The so-called "later Wittgenstein" rejected the "early" one's theories, writing that all philosophers could do was identify "bumps" that the understanding suffers by "running its head up against the limits of language." He died in 1951, hugely influential.

Duffy's ambitious approach fully exploits the known facts on Wittgenstein, Russell and Moore, imagining anything necessary to fill in the gaps. "The World As I found It" should be welcomed as manna by many readers starved for intellectual content in their fiction. But a book that strives as hard as Duffy's to be literature also asks to be judged by high standards. Here, alas, it fails.

Because Duffy regularly bloats his story with the beliefs and histories of minor characters, the book lacks "the severe criteria of harmonious balance" that Duffy recognizes in Wittgenstein's own work. "The World As I found It" pans from Wittgenstein to Russell to Ottoline Morrell (Russell's mistress) to David Pinsent (Wittgenstein's friend) to Pinsent's mother to D. H. Lawrence to Dora Russell to Russell's mistresses and even, most ludicrously, to the dog at Russell's school, Beacon Hill.

Duffy, in short, can't seem to decide where he wants to go with his material. The novelist who chooses a great thinker as his protagonist usually has a tool for a client -- we expect an ulterior message. Duffy's is unclear.

An even more damaging misstep is Duffy's wordiness, deeply antithetical to the elegant styles of his three philosophical stars. At one point, Duffy's Moore tells Wittgenstein, apropos of the "Tractatus", that "it seems as if it was painful for you to say even one more word than was necessary to express your meaning." Duffy, instead, regularly wallows in poetic overkill while straining after epiphanies: "Now the picture of his life cast his shadow across the world. Bitterly, he thought of how fiercely he had fought to save himself. And for what? Flatulent heart. Fraudulent life. The shadow ran through a sieve, spilling lies in the vain hope of distilling even a few grains of truth."

Elsewhere, when not dyeing his thinkers purple, Duffy encases them in prosaic packages. Typical is this size-up of Wittgenstein: "The irony was that he was at the height of his intellectual powers, and he knew it, which should have been liberating but was instead a sorrow, when he saw how little had been achieved for all his efforts." The man who asked what is left when we "subtract the fact that my arm goes up from the fact that I raise my arm," did not think in such clichés.

Our thanks to DON JACKANICZ.

- (30) Did Carlin Romano's review turn you off? Peter Meisel's review may turn you on. Here it is (and it looks like a Sunday NY Times Book Review review)...with thanks to KEN KORBIN:

By Perry Meisel

WHEN the wealthy and cultivated young Ludwig Wittgenstein burst upon the hermetic world of Bertrand Russell and G. E. Moore at Cambridge in 1912, three lives were changed forever. The Viennese Wittgenstein struck even Russell as perhaps more than his match. The unflappable Moore shared in a fierce but collegial relation that survived two world wars. As a combatant in the Austrian Army late in World War I, Wittgenstein completed the only book he saw fit to publish during his lifetime, "Tractatus Logico-Philosophicus" (1921). Returning to Cambridge in 1929, he began to question his own assumption in the "Tractatus" that the study of language could yield systematic rules, preferring instead to delight in the indeterminacies of linguistic reference, and composing, among other works, "Philosophical Investigations," published in 1953, two

years after his death.

So alluring is Wittgenstein's appeal that it has stirred Bruce Duffy, a writer who lives in suburban Washington, to produce a historical novel centered on Wittgenstein and his English friends. Its sweeping arrangement of fact and fancy is vivid, passionate and funny. Mr. Duffy adheres faithfully enough to the outlines of Wittgenstein's life as we know them (a full-scale biography has yet to be completed), although his book is really an accomplished orchestration of the spheres of Russell's urbanity, Moore's domesticity and Wittgenstein's wanderlust that is organized around three key points in Wittgenstein's experience — his first years at Cambridge, his service in World War I and his return to England.

• • •

Mr. Duffy intersperses his absorbing narrative with deft flashbacks that fill in the pasts of all three men (the death of Wittgenstein's father in Vienna is probably the novel's most extraordinary sequence). He

writes with great wisdom about love, work and fame, painting, raucously humorous and uncommonly moving portraits of his three principals. Russell stews deliciously in his inwardness; Moore gobbles his meals at high table at Trinity with such methodical relish that his philosophical hedonism is explained more convincingly than it is in most academic accounts.

The rendering of Wittgenstein is more dramatic and less naturally inward, testimony to his daunting intractability as both a man and a thinker. Wittgenstein's melancholy narcissism was so profound that it frequently turned into its opposite — the feeling that he hardly existed at all. In reply to a friend's request to take his photograph, Wittgenstein remarks: "You may develop your film & find no image whatsoever."

THE novel's title comes from a passage in the "Tractatus" ("If I wrote a book called *The World As I Found It*, I should have to include a report on my body") that

concludes with the difficult statement that such a book would be "a method of isolating the subject, or rather of showing that in an important sense there is no subject." Mr. Duffy exemplifies Wittgenstein's point both by apprehending him within a matrix of social contexts, and by dramatizing the elusiveness of subjectivity in the dream of a world he fashions with a prose that aspires to a combination of visionary expansiveness and postmodern terseness.

There are, to be sure, a few hitches. Bertrand Russell did not, *pace* Mr. Duffy, split infinitives. Nor did Lytton Strachey have a booming voice — it squeaked. There are also some lapses into melodrama — a visit to a Yiddish theater in Vienna, a family friend-turned-Nazi and Wittgenstein's painful acknowledgment of his Jewish roots at the onset of World War II. Such moments aside, Mr. Duffy's is an achievement in both fiction and historiography which deepens Wittgenstein's mythology and should attract a wider audience to it. □

- (31) Don't go away; we haven't finished with Loodvig; can you sit still for one more? This review is by Richard Eder, in The Book Review, of the L.A. Times (with thanks to BOB DAVIS):

Here are nearly 550 pages of a most unusual, even preposterous venture: a novel constructed out of the lives, the thoughts, the appetites, the egos and the very toenails and pocket watches of the philosophers Ludwig Wittgenstein, Bertrand Russell and G. E. Moore.

It is hard to know which is more outsized; the talent of Bruce Duffy, the author, or his nerve. Sometimes they are the same thing, sometimes not. Duffy is a superb writer though not always a prudent one. The successes of "The World as I Found It" are astonishing; its defeats are less astonishing, given its ambition, though perhaps they are not always necessary.

"Passion" may be more accurate than "ambition." This is Duffy's first novel, and he is equipped to be a very fine novelist and perhaps more; but in this case, he is novelizing in the service of a passion that both makes this an extraordinary book and sometimes gets in its way.

Duffy introduces plenty of philosophy, as clearly as possible; particularly in the case of Wittgenstein, the major character, and Russell, his patron and antagonist. But his purpose — and much of the astonishing success — is to write about thought as one of the vital signs of life.

He makes vivid characters out of the three men, and he makes their ideas traits of these characters. With Wittgenstein, ideas are energy, ego and a mystical will to prevail. With the arrogant and insecure Russell, they are the will to maneuver. With the gentle Moore, they are the will to give way to any better argument.

A great deal more than diplomacy is war by other means. Poetry — read Robert Lowell's biography — is war by other means. Cooking and seduction are wars by other means. Philosophy, Duffy tells us, is war (or with Moore, conscientious objection) by other means.

The author asserts in a brief preface that he has used the principal lines of the three lives — diaries and letters are freely quoted — but that he has transposed and invented details. It is a novel by texture, to put it roughly, and a triple biography by plot; real bones with a fictional skin and a large life. It is a fusion that suggests Jacques Maritain's phrase: "The dreamers of what is true."

Duffy's Wittgenstein, son of a rich and overbearing Viennese steel magnate, comes to Cambridge as a young man to study under Russell. He is a most unabashed disciple; before long, he is subjecting Russell's work on mathematical logic to devastating criticism.

The book recounts their collaboration and growing differences; it portrays quite brilliantly Russell's fascination with the younger man whose rigorous logic is voiced with a prophet's certainty. Best of all, it gives a subtle picture of a philosopher's mixture of excitement and agony at being overborne by a deeper mind.

In one of many witty vignettes, the author has Russell telling Ottoline Morrell, his Bloomsbury lover, of how he destroyed the work of the German philosopher Gottlob Frege; and of Frege's cordial acknowledgments. Lady Morrell is mystified by Russell's complacency. "He is in your debt," she says ironically. The real irony, of course, is that it was Frege who sent Wittgenstein to study with Russell.

Philosophic dueling provides some of the book's most exhilarating moments. There is a superbly comical and instructive scene that has Russell, Wittgenstein and Moore — who throughout is a kind of balance-wheel between the others — attending a Cambridge discussion group toward the end of their lives. Wittgenstein stalks out after one speaker accuses him of picking up a poker to threaten him; Russell shrieks with frustration at seeing his rival depart before he can tackle him.

Moore is sketched rightly, but what emerges is a stunningly graceful portrait. He is an innocent with large appetites. Duffy writes several splendid pages that describe Moore making his prodigious way through an enormous and greasy Cambridge meal. His late-life courtship of a student is funny and touching; later, Duffy provides a brilliant account of how their marriage balances her need for intimacy and his for abstraction.

Russell's portrait is less subtle — as Russell himself was less subtle — but it is vastly entertaining. Duffy gets full measure of his restlessness, the need for attention that made much of his philosophizing rather shallow, his egotism and his perpetual philandering. The school that

he runs with his feminist wife is a wacky mixture of the earnest and the cock-eyed. Russell interviews the new woman teachers and urges them, in gravely paternal tones, to sleep with him.

Duffy can so please us with a phrase that some of the pleasure rubs off on the character. Describing Russell's snobbish one-upmanship, he calls him "master of the seemingly good-natured slight, fraught with elan and bonhomie, which fizzed up like a fatal heartburn in the person slighted."

Wittgenstein is the book's center both of gravity and energy. He is the figure with whom Duffy risks the most, achieves a lot, and sometimes fails. Where the other two appear and disappear, suiting the author's firework rhythms, with Wittgenstein, a full-scale fictional

biography is attempted.

His childhood in the oppressive pre-World War I wealth of Vienna is spelled out. So is the overbearing presence of his enormously successful father. Meals are described, course by rich course, and concerts and family gatherings are presented with a steamy weight that makes "Buddenbrooks" seem like a French farce.

Wittgenstein's burdens are set out: the suicide of his two older brothers, his guilt over concealing his Jewishness, his homosexuality. There are long sections on his ordeal in the World War I trenches, and his spells of brooding rustication in Norway, and later as a village schoolteacher in Austria.

It is an impressive, tormented portrait. It succeeds by dint of

cumulative detail in suggesting convincing parallels between the strains and ambiguities of Wittgenstein's life, and the extraordinarily severe—and paradoxically liberating—restrictions he put on the meaning and uses of language.

In truth, the biographical detail is excessive; it weighs down and distorts the rich intellectual and emotional play in the lives and strivings of the three philosophers. If much of the writing is quite marvelous, there are whole pages of routinely presented facts and expository intellectual history. Duffy's formidable fictional ability to bring moments and characters to life raises novelistic expectations that are frequently dashed by the "and then . . . and then . . ." plodding of the biographical form.

It is, of course, an easy way out

for a reviewer to suggest that more editing would have helped. Clearly, it would have had to be administered by a manic energy equivalent to the author's. No doubt, quite a bit was done, in any case, and perhaps exhaustion set in.

Still, if its mid-section and later sagging is a problem, "The World as I Found It"—a Wittgenstein phrase suggestive of his passionately provisional approach to reality—is a treasure-house, even if unwieldy. It would take a much longer review to suggest the variety of ungroomed pleasures to be found in it, along with the complex and moving portrait of a man whose intellectual energy burned like an acid so pure and corrosive that there was no container it could rest in. ■

PHILOSOPHY?

(32) Wittgenstein skewered. A spoof from the Village Voice (6/16/87 p.62), with thanks to WARREN SMITH.

STARRING ROBERT STACK AS
LUDWIG WITTGENSTEIN IN

The Unspeakables

Tonight's Episode: The Al Camus Story

BY FRANCIS LEVY

WALTER WINCHELL (VOICEOVER)
Despite the passage of strict Prohibition laws, illegal manufacturers of meaningless terms continued to flourish and operate....

The offices of Ludwig Wittgenstein and the Unspeakables in Cambridge, England. The sound of typewriters pecking. Wittgenstein studies a blank sheet of paper. Bert Russell looks puzzled by something as he walks over to Wittgenstein's desk.

RUSSELL
I've been working on this mind/body thing, but I haven't come up with any leads.

WITTGENSTEIN
Have you talked with that Arendt girl?

RUSSELL
Claims she knows nothing about it. I've got an idea she's formulating something, though.

WITTGENSTEIN
I'd put a tail on her.

RUSSELL
One of my men's staking out the New School right now.

WINCHELL (V.O.)
Paris in the '30s was fast becoming a hotbed for the manufacture and distribution of inflated ideas. An influx of

self-proclaimed thinkers was reaching epidemic proportions. One of the most dangerous was the notorious Al Camus. In his eagerness to foist unverifiable opinions on an unsuspecting public, Camus had established a clandestine network of mom-and-pop operations. Ludwig Wittgenstein and the Unspeakables were called in when local authorities could no longer cope with the problem.

Ludwig Wittgenstein's Paris hotel room. Name tags are attached to all objects. The chair is labeled "chair," the sofa, "sofa," etc. On a wall is the motto: "There are no innuendos." Wittgenstein is awakened from his sleep by the ring of the phone. He flips on the light and picks up the receiver. The label "man" is attached to his forehead.

A. J. Ayer, another of Wittgenstein's Unspeakables, is standing in a phone booth on the Boulevard Saint Germain. Several Frenchmen in berets sit in the nearby café Aux Deux Magots, a well-known hangout for the loquacious, and eye him suspiciously.

AYER
You'd better get over here as fast as possible, Ludwig!

WITTGENSTEIN
What's up?

AYER
I'd describe it, if it were possible. You

know what I mean?

WITTGENSTEIN
I don't, but okay.

A Left Bank speakeasy, the "I 'n' Thou" run by the infamous Marty Buber. Words like "freedom," "fate," and "mankind" flow freely. Erich Fromm, a young student who works nights as a waiter, carries an ice bucket to Susanne K. Langer. The bucket contains a copy of Henri Bergson's Time and Free Will.

LANGER
I won't say existence precedes essence.

FROMM
We can quibble later. Al needs words.

Ludwig Wittgenstein and his Unspeakables burst through the doors of the "I 'n' Thou." There are screams and cries of "I've lost my place" as philosophical treatises fall to the floor.

WITTGENSTEIN
All right, lay down your nouns.

In the back room of the "I 'n' Thou" Al Camus is fingering a copy of Spinoza, unaware of the clamor outside. Jack Sartre and his sidekick Simone face him across a small candlelit table.

SARTRE
We'll give your people Being and Nothingness however they want it, installments, paperback, Book-of-the-Month Club. You name it.

CAMUS
That's awful generous of you, Jack. That's enough words to keep a speak-easy like the "I 'n' Thou" going for a year... What's the price?

Sartre looks to Simone, who looks back at him and nods.

SARTRE
(nervously)
You got to give up your relativism.

CAMUS
With you it's always choices, choices, choices.

Books for sale from McMaster:

My Own Philosophy by Bertrand Russell. 30 pp. Printed for McMaster by the Cambridge University Press. Edition limited to 600 numbered copies. 4.00
Catalogue of the Centenary Exhibition 40pp in stiff cover. 17 full-page illustrations. 1.00

Russell in Review, edited by Thomas and Blackwell. Proceedings of the Centenary celebrations. 268pp. Cloth 12.00

Intellect and Social Conscience: Essays on Bertrand Russell's Early Work, edited by Moran and Spadoni. Proceedings of the conference on Russell's early non-technical work held at McMaster in June 1983. 238pp 7.00

Orders should be addressed to McMaster University, Mills Memorial Library, 1280 Main St. West, Hamilton, Ontario, L8S 4L6. Prices are in Canadian dollars, payable to McMaster University Library Press.

New books to lend:

New books to lend:

132. Bertrand Russell and the Scientific Spirit by Sam Labson, Bertrand Russell on Education by Michael Rockler and Bertrand Russell on Impulse by Chandrakala Padia. Papers read at the 1987 annual meeting.
133. Bertrand Russell on Ethics, Sex, and Marriage, edited by Al Seckel. Prometheus Books.
134. Ottoline: The Life of Lady Ottoline Morrell by Sandra Darroch. Hugh McVeigh
135. The Philosophy of Bertrand Russell, edited by Paul Arthur Schilpp. Third edition with corrections and emendations to the bibliography. Tom Stanley

Misc.

Irving Anellis has been compiling a bibliography of journal articles on Russell and his technical work. Copies are available from the Library for a S.A.S.E.

The publisher's list price for Bertrand Russell as a Philosopher has doubled to 5.50. We have a limited supply for 2.25 PP.

THE MEMBERS VOTE

- (34) 5 Directors elected. The following were elected or re-elected Directors, for 3-year terms starting 1/1/88: IRVING ANELLIS, BOB DAVIS, JIM MCWILLIAMS, HUGH MOORHEAD, KATE TAIT.

The election was close. There were no way-out-front winners nor far-behind losers. We hope that those not elected this year will try again next year.

We are not proud of the poor "turnout". Many more of you did not vote than did. Too much trouble, eh? Now hear this: Next year we expect to make non-voters suffer from a mysterious malady caused by a low tech device the identity of which we will not reveal. Take heed.

ABOUT OTHER ORGANIZATIONS

- (35) NECLC, The National Emergency Civil Liberties Committee, chaired by CORLISS LAMONT, is having a Bill of Rights Dinner at the Sheraton Centre Hotel, NYC, on 12/4/87, at which time it will present several awards, including its Tom Paine Award to Paul O'Dwyer. Alas, rights come expensive these days; \$75 per person. NECLC publishes a good-looking 16-page bi-monthly, "Rights", for its members. The July/Sept issue discusses the Hamilton College case, Col. North, the Sanctuary Movement, a recently discovered early draft of the Bill of Rights...and reviews "Reagan's America" and "Life In A Vacuum (J. Edgar Hoover)". NECLC, 175 Fifth Avenue, NY NY 10010.

RECRUITING

- (36) Can you help? Here is an application form that will enable BRS members to help us recruit new members. If you know someone -- a friend, acquaintance or relative -- who might become interested in the BRS, remove this application form (using a scissors) and mail it to the prospective member. (You could paste it onto a postcard.) Help us build up our membership, so that we become more secure financially; that is the key to long-term survival as an organization. With thanks to DEWEY WALLACE for suggesting this.

Dear _____

I am delighted to be a member of the Bertrand Russell Society and I think you would be delighted too, if you were a member...learning more about this remarkable man and his great ideas.

To find out more about the Society, send them a postcard, and they will send you their "Information Packet". Mail to RSN, BRS, RDI, Box 409, Coopersburg, PA 18036.

Sincerely, _____

§

- (37) Money. We are after your money. Not all of it. Not even most of it. Just a bit of it -- actually, only a tiny fraction of your net worth...like ten bucks...or twenty-five...or more...or less. It can help put the BRS on a sounder footing financially, it can help keep the BRS going for many years to come. Help us build up a reserve, for a great future...and a long one.

Send a contribution to: BRS Treasury, RD 1, Box 409. Coopersburg, PA 18036...and accept our grateful thanks.

ABOUT OTHER ORGANIZATIONS

- (38) FFRF, Freedom From Religion Foundation, offers attractive freethought literature. We reproduced their Bertrand Russell notecard in February (RSN53-42). Here are several more notecards; they fold in the center; the other side is blank, for your message. Also available as postcards. FFRF offers tapes, books, mugs, bumperstickers, etc. You might wish to write to them, requesting their list of "Freethought Products" .

Margaret Sanger

An ardent freethinker, Margaret Sanger (1883-1966) worked most of her adult life for women's freedom. She wrote: "No woman can call herself free who does not own and control her own body. No woman can call herself free until she can choose consciously whether she will or will not be a mother."

In a tribute to Margaret Sanger, British author H. G. Wells once wrote: "Alexander the Great changed a few boundaries and killed a few men. Both he and Napoleon were forced into fame by circumstances outside of themselves and by currents of the time. But Margaret Sanger made currents and circumstances. When the history of our civilization is written, it will be a biological history and Margaret Sanger will be its heroine."

Clarence Darrow (1857-1938)

"I don't believe in God because I don't believe in Mother Goose," Clarence Darrow said. "An Agnostic," he defined, "is a doubter."

The passionate defense attorney, dubbed "the attorney for the damned" by journalist Lincoln Steffens, was a life-long crusader: for freethought and labor rights, against capital punishment and segregation. Darrow's unorthodoxy ran in the family; his own father had been the "village infidel."

In 1925 in the infamous "Monkey Trial," he defended (for free) John Scopes, a science teacher in Dayton, Tennessee accused of the "crime" of teaching evolution. "Education," Darrow said, "was in danger from the source that always hampered it—religious fanaticism."

During Darrow's dramatic speech before the Court, he said: "If today you can take a thing like evolution and make it a crime to teach it in the public school . . . After a while, Your Honor, it is the setting of man against man and creed against creed until, with flying banners and beating drums, we are marching backward to the glorious ages of the 16th century when bigots lighted fagots to burn the men who dared to bring any intelligence and enlightenment and culture to the human mind."

In 1929, Darrow coauthored with Wallace Rice an anthology *Infidels and Heretics*.

ROBERT GREEN INGERSOLL (1833-1899)

Freethought flowered in the United States in the latter half of the 19th century, and its best known advocate was Robert Green Ingersoll, a lawyer and Civil War officer, who travelled the continent for 30 years, speaking to capacity audiences. Although his repertoire included some 30 topics, including lectures on Shakespeare, Voltaire and Burns, the largest crowds turned out to hear the famous orator denounce the bible and religion.

Ingersoll was immensely popular, and his speaking fees ranged as high as \$7,000 in an era of low wages and no income tax. Reportedly, he once attracted 50,000 people to a lecture in Chicago—40,000 too many for the Exposition Center.

The personal friend of three United States presidents, he was famous for his hospitality and devoted to his wife and daughters. He became one of the best known men of his time. His statue stands in Glen Oak Park in Peoria, Illinois where he practiced law for 20 years.

- (39) Pugwash. A quick briefing, for recent members who may not know about Pugwash: The first Pugwash meeting was initiated by BR in 1957. It broke the ice, bringing scientists from both sides of the Iron Curtain together for the first time, to discuss the danger to the world of nuclear weapons. The meeting was held in Pugwash, Nova Scotia, birthplace of Cyrus Eaton, wealthy Canadian/American industrialist, who financed it. The Pugwash meeting, and those that followed it, led to the Limited Test Ban Treaty of 1972. The Pugwash organization continues to meet regularly.

The following talks were given at the Twenty-Second Pugwash Conference on World Affairs: "Scientists and World Affairs," at Oxford, England, September 1972, and were printed in the official "Proceedings". (Thank you, TOM STANLEY.)

Patricia Lindop

BERTRAND RUSSELL AND PUGWASH

In recalling Bertrand Russell's role in past and future activities of Pugwash, I am sure our President Alfvén will agree that we are not simply "repainting old idols".

When we discussed the plans for this Conference over 3 years ago with Lord Russell in Wales, we had every confidence, from the lively interest which he showed, typified by his economy of pertinent questions, and his relaxation during periods of unproductive chatter, that he would be here - celebrating his centenary.

I feel we can still celebrate Russell's centenary, as so much of his initiative and interventions, and his discreet withdrawals when he thought it appropriate, have helped to fashion the past, and I hope will still play a significant role in fashioning future Pugwash activities.

His two main characteristics of foresight and rebellion are reflected in Pugwash. With his foresight, the ability to integrate scientific data with logic, he saw faster and more realistically the future consequences of current weapons development. In 1945 in the House of Lords, he foresaw the development of the H-bomb. But more important, he detected its inevitability in the role of the scientists' obsession to reach out to the frontiers of his field, coupled with the contemporary inability of military or government leaders to understand the implications of such a development.

It was this dilemma of how to bridge the educational abyss between scientists, the public and ultimately the governments, that led to his broadcast in 1954, "Man's Peril". The impact of his clarity of thought, coupled with his rasping voice, evoked such a widespread response, that Russell then concentrated his efforts on what international scientists could and should do, and essentially how, to overcome the crescendoing crises. To do this, he sought advice and help from many scientists and scientific bodies, but insisted always on the individual's part in any corporate effort, rather than as part of a federation of scientists group.

His second major characteristic, which would have been further strengthened in the light of government actions in most parts of the world, was one of rebellion. His was not the rebellion born of youth, but one which matured into a burning rebellion as he became older. It was based on years of watching the petty, the greed, and the gross stupidity destroy the cream of several generations.

It was recognition of the positive characteristics of rebellion, that created an empathy between Lord Russell and Professor Rotblat. Lord Russell was fully aware that a 'foreigner' (albeit British for over a decade!) had entered the confines of a medical fraternity, established in 1123! That a mere physicist should publicly and effectively show his concern for survival of mankind in the context with which clinicians showed concern for the survival of one patient, was received by his Institution first with horror, and then in later years, following public acceptability of his role, by approbation.

Thus two rebels, totally unlike, treated with respect the efforts and sacrifices of the other. It was this mutual respect which allowed an atraumatic transition from Pugwash activities to wider spheres, which Mr. Farley will mention. Russell delighted us on our last visit to him in relation to this Conference; he dryly chuckled, that "with my recent phase of quietness, away from the public eye, perhaps I could be considered respectable enough to take part in Pugwash at Oxford."

Unfortunately, this increasing attribute of rebellion which grew over the eighth and ninth decades of his life was not sufficiently instilled into the Pugwash Movement. It is an attribute which we need so much in the future if we also are to mature, and not simply to senesce.

Whilst Russell recognized the need for a "balancing act" when Pugwash scientists essentially needed to have the ear of their governments, if their first priority, the halting of the nuclear arms race, were to be effective, he was more than sceptical about the easy protective wall behind which Pugwash actions and people

could be standing still, without anyone really noticing! This was, perhaps, an over reaction to Pugwash "respectability" - which could be expected from a man, who was at the same time humble and arrogant.

And how well this dual description fits Pugwash!

The individual scientists are humble when realizing the task of pitting their efforts against the arms-race industry, with a viability of its own, of which even the major governments are afraid. Many Pugwashites visiting new countries must surely feel humility about the very high opinion held by people outside Pugwash, for what Pugwash can achieve; when we are each aware of the very minor steps made in many important fields.

But Pugwash has its arrogance - and justifiably so.

It has tackled problems in the international political arena, by a scientific method, both disregarding and recognizing the ideological or national protocol. If its achievements can never be enumerated, it has caused the world to see the pretensions and insincerity of diplomatic negotiations; and has removed partly from the politician's armamentarium, the use of inaccurate or selected scientific data, as it had suited their own cause. Recent examples of this were the data agreed between scientists of East and West relevant to discussion of an underground test ban treaty, or on the prohibition of production or use of biological agents in war. Less happily, against these achievements, we have had little impact on the ABM or MIRV developments; under cover of which fester inhuman conflicts in Vietnam, the Middle East, Central Africa, Northern Ireland, India, Pakistan and Bangladesh.

In talking about Russell in relation to our task at this Conference - to see where, how, or even whether, we should go forward, I recall a phrase from his autobiography. He was defending his outspoken opposition to the U.K. action over Suez, and his public silence about the Hungarian situation in 1956. His defence was that it was necessary to contribute to solving important areas of conflicts or injustice, about which there was perhaps an unclear or unvoiced public opinion; rather than to be one more voice to swell the unanimous protests current at that time about the other conflict.

Pugwash too must follow this example of selecting areas to which, by expert study, and foresight arising from our scientific expertise in the best use of information, it can make a real impact. Where major concerns currently in vogue, such as the quality of the environment, family planning and food production, higher education for developing countries etc., are being studied by a myriad of other organizations, Pugwash must use the incisive selective processes which Russell possessed - and with a twinkling eye and grating voice pick out a unique weakness in the system, or a solution to a mire which has bogged down a major programme; and concentrate on that.

We must all wish Russell was here, not only to honour him, but because he was the one man I know who could have brought young scientists into the Movement, gently ridiculing their fears for losing a career by taking part in social responsibility and by reassuring them from his multitude of lives, about the evanescence of what in the young seems essentially permanent; and convincing them - perhaps even by citing Pugwash - of the enduring characteristics of groups of people who genuinely devote themselves to trying to ensure mankind's survival.

A. J. Ayer

BERTRAND RUSSELL

Your Chairman has asked me to say a few words to you, not about Bertrand Russell's philosophy - which would, indeed, be difficult to summarize in a few minutes - but about his personal character. My qualification for doing this is that

I was not only his philosophical disciple, but a fairly close personal friend of his for over thirty years. He had been a hero of mine ever since, at the age of seventeen, I first read his Sceptical Essays with their very characteristic opening sentence "I wish to propose for the reader's favourable consideration a doctrine which may, I fear, appear wholly paradoxical and subversive. The doctrine in question is this: that it is undesirable to believe a proposition when there is no good reason whatever for supposing it true" - and I first met him about ten years later, shortly before the war, when he came to Oxford to give a series of lectures. I can no longer remember any details of these lectures but I think they were probably a trial run of the William James lectures which he gave at Harvard in 1940 and published under the title of *An Inquiry into Meaning and Truth*. Apart from the lectures he held fairly regular discussions with a small group of the younger philosophy dons and one or two of us got to know him personally. He seemed to me then to have in a high degree a quality which I have found in some other great men, notably in Einstein, but by no means in all, that of being able to talk to much younger and much less distinguished people as though he could learn something from them. In Russell's case, this was by no means just a teacher's trick. He genuinely valued your opinion, and was genuinely pleased if you admired his work. He was not lacking in moral or intellectual courage - no man less so - but he was surprisingly sensitive to criticism and surprisingly diffident about his own achievement.

I don't remember seeing him during the war, the greater part of which he spent in the United States, where he had a pretty rough time - there was the disgraceful episode of his being judicially pronounced unworthy to take up a professorship at the City College of New York - but I saw a great deal of him in the decade following the war. We were both associated with a short-lived review called *Polemic*, and he used to come regularly to the meetings of a society which I organized in London and called the *Metalogical Society*. It was a group of philosophers and scientists with which he felt very much at home. He did not at all like the direction philosophy then seemed to be taking, partly because of its neglect of science. He was, I think, also a little hurt by the tendency of linguistic philosophers to disparage his work or at least to subordinate it to that of Moore and Wittgenstein. I am glad to say that this is no longer the fashion. He is coming and will, I believe, continue to be seen as the greatest philosopher of his time.

In his later years, I saw less of him, partly because he spent most of his time in North Wales - partly because his intense involvement in political action left him less time for his friends, but whenever one did see him he was still the most wonderful company, gay, quick, imaginative, humorous. He had the most astonishing memory; scraps of verse that he had learned as a child, details about the persons he had known - and he had known almost every prominent person that you could think of right back to Gladstone and Disraeli - scientific theories, tidbits of history, almost everything stayed in his head. The only man I have known to match him in this respect was J. B. S. Haldane. Haldane was even more of a polymath but his talk was more impersonal.

If I had to pick out Russell's salient characteristics I should name his wit, his courage and above all his physical and intellectual vitality, both of which lasted well into his old age. His courage, I think, owed something to his being an aristocrat, and he was consciously an aristocrat in spite of his political opinions. The Russells are a very grand family - the present Duke of Bedford has described his ancestors as holding themselves a little higher than God - and this helped Bertrand Russell not to be a respecter of persons. He was always courteous but never abashed. There was also, together with his hedonism, a strong strain of Puritanism in him. For all his rejection of, and indeed hostility to, the Christian religion, the text which his grandmother wrote in the flyleaf of the Bible which she gave him when he was a boy - "Thou shalt not follow a multitude to do evil" - was one of the mainsprings of his life.

His wit comes out strongly in his writing. There is something Gibbonian in the elegance of his style. For example: "The Doukhobors refused military service, but thought it proper to dance naked all together round a camp fire: being persecuted for the former tenet in Russia, they emigrated to Canada where they were persecuted for the latter." *Le style c'est l'homme*, and Russell was in many ways an eighteenth century figure, a man of the Enlightenment. I remember, about ten years ago, walking round the Hermitage Museum in Leningrad with a Russian philosopher and coming upon a bust of Voltaire. "Ah", said my companion, "the eighteenth century Bertrand Russell." When I repeated this to him, Russell was pleased and flattered. In fact, if anything, the comparison flattered Voltaire. Voltaire was equally courageous and witty and vital, and a much better writer of fables, but Russell was by far the more profound thinker, and, I believe, the better man. So long as your Society exists, and I see no immediate prospect of its becoming redundant, I am sure that you will continue to honour his memory.

C. Farley

THE LAST DECADE OF RUSSELL'S LIFE

Very near the end of his life, I asked Lord Russell for his evaluation of the birth of the Pugwash Movement. Was it not, I suggested tentatively, an organization firmly rooted in the liberal tradition, which did not herald any dramatic development? At once Russell vehemently rejected this view. Such an erroneous suggestion on my part completely misunderstood the temper of the mid-1950s; at that time many politicians were claiming openly that there was no role for reason in international affairs, and that all that other politicians understood was naked force. In such circumstances, to demonstrate the possibility and value of international meetings of scientists of differing ideologies marked a fundamental change in the way that the world could contemplate foreign relations in the nuclear age. I had, Russell, concluded, gravely underestimated the significance of Pugwash, and failed to recognize the distinction between the acceptance of potential annihilation and the emergence of some hope.

This spontaneous and spirited defence of the international conferences on science and world affairs was based in part upon Russell's recognition of the appalling threat of nuclear warfare, eloquently expressed in his broadcast of Christmas 1954 on "Man's Peril in the Nuclear Age", and in the later Russell/Einstein Manifesto. It was also rooted in an internationalism which he had developed since the turn of the Century. Expressions of this are to be found in dozens of his books. Here, for example, is a brief extract from 1917: "Until lately (wrote Russell) I was engaged in teaching a new science which few men in the world were able to teach. My own work in this science was based chiefly upon the work of a German and an Italian. My pupils came from all over the civilized world: France, Germany, Austria, Russia, Greece, Japan, China, India and America. None of us was conscious of any sense of national divisions. We felt ourselves an outpost of civilization, building a new road into the virgin forest of the unknown. All co-operated in the common task, and in the interest of such a work the political enmities of nations seemed trivial, temporary and futile."

Although his internationalism never wavered, Russell came to take a decreasing role in the organization of which he was for some time President and Chairman of the Continuing Committee. He was soon confident that the Pugwash Movement had become what he called "part of the respectable progress of scientific relations with international affairs". He sensed also a certain solidification of the Movement, an institutionalization of its work which endangered the zeal of the infant body. And he recognized that although Pugwash was importantly a non-governmental organization, not all its scientists had an identical relationship to their government. As one of the main purposes of Pugwash was to help persuade governments to change their policies, this might limit the opportunities available.

His interest turned increasingly to additional plans for persuading Governments to turn back from the road to mutual destruction. "In the course of these fresh endeavours", he recounts in the final volume of his Autobiography, published only 3 years ago, "I felt that I had become rather disreputable in the eyes of the more conservative scientists." (This is hardly surprising, for in his 90th year Russell was again sent to prison for his principles). It was a particular pleasure for Russell, therefore, that shortly afterwards, when he rose to address the 1962 international conference in London, he was given a standing ovation by all the scientists present.

Immediately after Russell's description in 1917 of his teaching of mathematical logic, which I quoted earlier, he wrote: "But it is not only in the somewhat rarefied atmosphere of abstruse science that international co-operation is vital to the progress of civilization. All our economic problems, all the questions of securing the rights of labour, all the hopes of freedom at home and humanity abroad, rest upon the creation of international good-will."

In his last decade, Russell wanted to be free to develop a series of activities in such areas, embracing not only the cold war and modern weaponry, but much else. He advocated unilateral nuclear disarmament for Britain, he practised civil disobedience. He developed an extraordinary range of correspondence with Heads of State and informed citizens of about half the nations of the earth. He established the Bertrand Russell Peace Foundation to assist in much of this work, and its activity continues. He came to the defence of political prisoners and victims of the cold war in dozens of countries. He criticised theories of spheres of influence, and the economic relations of Western industrialized nations to newly independent states. Weeks before tanks entered Prague in August 1968, he appealed publicly to Mr. Brezhnev not to intervene militarily in Czechoslovakia.

Above all, from early in 1963 he became preoccupied with the policies of the United States Government in Indo China, which he characterized as aggression. In 1966 he established an international tribunal to examine the conduct of the war in Vietnam, and its findings were soon overtaken by enlightened public opinion in every country, and dwarfed by publication of the Pentagon Papers and the trials of U.S. servicemen for war crimes.

Russell gave himself unstintingly to such work with astonishing energy, and in the face of much abuse, some 30 years after he might have retired. His elaboration of his central concerns for social responsibility, for justice and for the liberation of the creative capacities of every person, endures as an extraordinarily rich contribution to thought and action in our century. This is, moreover, part of a living tradition. Those who cannot even have read Russell now unconsciously develop his insights. The distinguished Soviet geneticist, Dr. Zhores Medvedev, has recently situated Russell's early concern for supra-national science in its modern technological context by emphasizing the imperative need for a greater international "is now expanding so rapidly that there is no country, however large, that can support by itself investigations into all the problems which lie at the basis of the development of its economy, industry, agriculture, medicine and so on, especially as these investigations become ever more costly and complicated. A national closed system in any field of science appears stupid and absurd ... The slogan, to

'overtake and outstrip', which is still as senseless as ever, is used in an economically ruinous manner in the sense of doubling, repeating and achieving what has already been achieved, and not as an attempt to take part in the world-wide differentiation and world-wide specialization, which is possible only if co-operation is really free. ."

Modern technology, says Dr. Medvedev, thus makes Russell's approach irresistible, though such an international division of labour is far from operating in some crucial areas, not least the defence of the environment.

Russell's prescience too often made him a man far ahead of his time. Those of us who come after him, and now celebrate his centenary, will find in his life much to enrich our own knowledge, understanding and happiness. But if we here seek a memorial to Bertrand Russell, he would have none - save the successful outcome of these proceedings.

PHILOSOPHY

(40) BRS at APA 12/29/87: Abstracts of the Papers:

"Russell's Robust Sense of Reality: A Reply to Butchvarov" by Jan Dejnozka

This paper is a reply to Professor Panayot Butchvarov's recent article entitled "Our Robust Sense of Reality".¹ Critical of Russell from a Meinongian viewpoint, Butchvarov raises a deep ontological question concerning the Russellian critique of Meinong: Just what is the "robust sense of reality" Russell accuses Meinong of lacking when Meinong claims that "There are things of which it is true to say that there are no such things?"² It is more fundamental than the standard semantic question: What is the meaning or proper use of Russell's existential quantifier?³ Butchvarov claims that: (i) Russell's existential quantifier needs a more fundamental conception of existence to determine its applicability in specific cases. (ii) For Russell this conception is that: CON. All things exist. (iii) But CON begs the question against Meinong's theory of objects.⁴ (iv) And CON unravels because all genuine concepts (including existence) are classificatory. (v) A determining conception of existence as identifiability is a preferable Meinongian alternative to Russell's CON.

I shall accept claim (i) but shall reject claims (ii)-(v). My rejection is largely based on three points which are indispensable to understanding Russell's views: (1) Russell does not use the word "real" and its synonyms ("exists," "is actual," "has being") univocally, but in three senses. These senses are not rival theories or given at different times by Russell. They are related parts of one theory given in one broad period, 1905-1918. They are perhaps best seen working together in the single work, "The Philosophy of Logical Atomism". (2) In one of these three senses Russell is a neglected major early proponent of the "No entity without identity" sort of theory advocated by Quine, the later Wittgenstein, and Butchvarov himself. (3) It is this sense, and not CON, which is Russell's conception of existence that governs the applicability of his existential quantifier. So that claim (v)'s conception of existence as identifiability, far from being an alternative to Russell, is very close to Russell's own view.

It is easily understandable why Butchvarov neglects the three points I just mentioned: they seem to be neglected in the whole literature on existence

and identity. This is probably because identifiability has been associated at most with Russell's theories of sense-data and of logical fictions, and not with his theory of denoting. This has led to a neglect of how these three theories fit together.

"On What Is Denoted" by Russell Wahl

Recently, Professor Hintikka has argued that Russell's views on denoting and quantification require that the quantifiers in epistemic contexts range only over objects of acquaintance, and that Russell was therefore committed to the view that denoting phrases denote only objects of acquaintance. Hintikka gives two arguments for this conclusion, one involving Russell's claim that his theory of denoting entails his principle of acquaintance, and the other involving a puzzle similar to those Russell offered in "On Denoting. Hintikka suggests a modification of Russell's view which employs two types of quantifiers with different value ranges.

I argue that Russell's theory of denoting requires that the quantifiers range over all objects whatsoever, and that both of Hintikka's arguments fall. It is neither necessary nor desirable to add the different types of quantifiers to Russell's theory. It is not clear that this addition is needed even when Russell's theory of proper names is rejected.

SCIENCE

- (41) Technology Review article in the May/June 1987 issue, by Robert C. Cowan, Science Editor of the Christian Science Monitor...with thanks to BRS Science Committee Chairman WILLIAM K. FIELDNG:

DURING the annual ritual of congressional budget hearings, space scientists and high-energy physicists have been trekking to Capitol Hill to protect and, if possible, increase their shares of the federal pie. This year, the physicists are asking for a particularly expensive item—a \$4.4 billion supercolliding superconductor (SSC), which would be the most powerful particle accelerator in the world.

This time the scientists' well-reasoned pleas for more money may not prevail. Even without the overarching concern for the federal deficit, their requests would be in trouble. Something more fundamental than shifting budget priorities is involved.

The cost of doing frontline research in these fields has grown 10-fold in the past 15 years. In fact, you could say that the fields of big science have undergone a metamorphosis. The scale on which they now must operate has grown so vast that no single nation can afford to meet their legitimate needs.

Space science is a victim of its own success. The pioneering missions of the 1960s and 1970s opened new research frontiers at costs of hundreds of millions of dollars. The sophisticated missions needed to follow up on those early discoveries run to over a billion dollars apiece. In addition to the \$1.4 billion Hubble Space Telescope, now awaiting launch, other components of the "Great Observatory Series" remain a top funding priority for astronomers. They include the \$1 billion Advanced X-ray Astrophysics Facility (see "X-Ray Astronomy Past and Future," page 66), and the Gamma Ray Observatory and Space Infrared Telescope Facility at \$500 million each.

All these observatories, which would be launched and serviced by shuttle astronauts, need extensive ground support. The annual operating and maintenance costs for the Hubble telescope are estimated to

be \$150 million. The other observatories would require similar operating budgets, and this is to say nothing of the new planetary probes and the next phase of Earth-observing satellites.

At this writing, the National Academy of Sciences Space Science Board was nearly ready to publish its recommendations for missions to be launched from 1995 to 2015. Projects in the astronomy and astrophysics category alone would need an annual budget of \$1 billion to \$1.5 billion. NASA's science and applications budget—which has been about \$1.5 billion—simply can't handle such projected increases. And it's unrealistic to expect it to do so. The cost of doing space science in a comprehensive way has grown beyond the means of a single nation.

New Accelerators Standing Idle

American high-energy physicists are facing similar frustrations. They're elated over the Reagan administration's willingness to fight for the SSC, which would boost the energy level for studying particle collisions some 20-fold and may reveal new interactions among quarks, the subatomic constituents of protons and neutrons. But since Congress hasn't fully funded the operation of existing accelerators, the physicists' dreams may be just that. Were Congress to approve the SSC, which is not certain, they could gain another front-rank facility without the money to make the most of it.

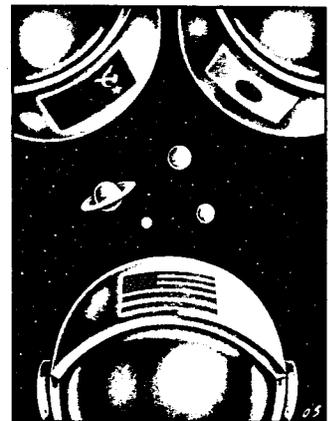

Consider Fermilab at Batavia, Ill. Its new \$500 million Tevatron has begun smashing protons and antiprotons together at a total collisional energy of 1,800 billion electron volts. That's the highest laboratory energy now available for studying proton particle interactions. Yet Fermilab struggles to exert research

leadership with a fiscal-1987 operating budget of only \$171 million rather than the \$191 million requested. It's the difference between being able to run the lab full tilt and having to curtail operations.

Major Tevatron experiments already planned are proceeding. But related studies, planning for new experiments, and general engineering design work is suffering. Because of the budget cuts, Fermilab Director Leon Lederman was forced to make the center's first layoffs ever. The staff has been reduced through normal attrition by 150 people as of March 1. "We're just praying we can keep this machine on right through the fiscal year," Lederman says.

Burton Richter, director of the Stanford Linear Accelerator Center (SLAC), cannot even hope for that much. SLAC's newly completed machine stands ready to provide the world's most energetic electron-positron interactions at collisional energies of 100 GeV. That's one of the highest energies available for studying this type of particle. However, the accelerator will be able to run only for three months or less this year because Congress cut SLAC's 1987 budget from a requested \$115 million to \$88 million.

To quote Lederman, an outspoken proponent of the SSC, starving the operating budget is "no way to bring on a world-class machine." Yet that's exactly what could happen if Congress approves the SSC without adequate provision for the operating costs. The annual operating budget of the SSC is estimated at \$270 million. At this point, there isn't even a 1988 budget provision for the \$35 million needed to continue developmental studies if Congress authorizes the project. The Department of Energy says it will redistribute funds already requested for other budget items. But if that means rejiggering the high-energy physics budget, it would

No single country can afford to pursue every big project in space and particle physics.

probably further crimp Fermilab and SLAC operations. It could also starve particle physics research elsewhere.

Obviously, the United States can no longer afford to pursue every line of space and particle-physics research that scientific and technological advances allow. Neither can any other country. Roald Sagdeev, director of the Space Research Institute in Moscow, says "there is a great deal of necessity to join efforts" in exploring the solar system. He adds, "I hope that at a certain point we could merge with this part of the American program."

Proponents of the SSC also seek foreign partners. DOE Secretary John Herrington speaks hopefully of sharing 25 to 50 percent of costs. SLAC's Burton Richter considers 15 to 25 percent more realistic. Even that substantial a contribution is unlikely, given the past track record of this country's participation in international projects. (For more information, see page 4 of the January 1986 issue.)

More recently, NASA has tried to restrict the kinds of research the European Space Agency and Japan will conduct on the "international" space station, even though these countries are contributing 20 percent of the cost of its development. Needless to say, this has rankled our Japanese and European partners. They find the Defense Department's desire to do military research on the station even more

offensive. As NASA Administrator James C. Fletcher remarked earlier this year, he found himself having to negotiate "adverb by adverb" to sustain a cooperative relationship.

The United States should fully face its need for research partners. Its tendency to dominate such partnerships is outdated. A new humility is in order. True partnerships mean sharing benefits as well as costs. And

where the venture is pursuit of basic knowledge that no single country can afford, the benefits of partnership outweigh parochial concerns. If the United States wants to remain in the forefront of space research and high-energy physics, it should subordinate parochial tendencies to this larger purpose and seek all the international help it can get. □

ASSESSMENTS OF RUSSELL

"Bertrand Russell: Liberalism, Science and Religion" by Charles L. Bowden. Reprinted with permission from Religious Humanism (Winter 1984), with thanks to its Editor, Paul Beattie, and to STEVE MARAGIDES, who let us know about it.

Bertrand Russell lived ninety-seven years and wrote and spoke for about seventy of those years. The scope of his writings was vast and the changes of some of his philosophical views over time were considerable. Nevertheless, certain of his positions have an enduring and consistent relevance to a scientifically compatible religious life. Even though Russell eschewed ties with formal religion, many of his writings were either on the subject of religion, or were pertinent to it from a liberal, humanistic perspective.

Russell always placed liberalism in a political framework, set off by a socio-cultural background. He viewed most civilizations as inexorably passing through phases. An initial rigid, superstitious political system gradually relaxes, with a consequent period of creativity and optimism, balanced by the remaining best features of the original social order. As the old traditions and mores crumble, disorder ensues, to be followed by a new dogmatic political system. The attitude of liberalism is an attempt to escape from this endless oscillation: "The essence of liberalism is an attempt to secure a social order not based on irrational dogma, and insuring stability without involving more restraints than are necessary for the preservation of the community."

This article is dedicated to the memory of Wade Richmond, 1966-1984.

Russell observed that liberalism was inherently tied to commerce, especially across countries:

The reasons for the connection of commerce with Liberalism are obvious. Trade brings men into contact with tribal customs different from their own, and in so doing destroys the dogmatism of the untravelled. The relation of buyer and seller is one of negotiation between two parties who are both free; it is most profitable when the buyer or seller is able to understand the point of view of the other party.

The Liberal creed, in practice, is one of live-and-let-die, of toleration and freedom so far as public order permits, of moderation and absence of fanaticism in political programmes. Even democracy, when it becomes fanatical, as it did among Rousseau's disciples in the French Revolution, ceases to be Liberal; indeed, a fanatical belief in democracy makes democratic institutions impossible, as appeared in England under Cromwell and in France under Robespierre. The genuine Liberal does not say "this is true," he says "I am inclined to think that under present circumstances this opinion is probably the best." And it is only in this limited and undogmatic sense that he will advocate democracy.¹

Russell was an outstanding interpreter and critic of philosophers and science, and of the dynamic interrelationships between the two. Aristotle is an example. Aristotles' metaphysics, Russell tells us, may roughly be described as Plato diluted by common sense. Russell's dealing with Aristotle's famous doctrine of the golden mean illustrates his wit and acerbity. Aristotle asserts that every virtue is a mean between two extremes, each of which is a vice. Aristotle seeks to prove this tenet by examining various virtues. Courage is a mean between cowardice and rashness; proper pride between vanity and humility; and so on. Russell points out a number of characteristics, such as truthfulness, that do not fit this model. He then comments that there was once a mayor who had adopted Aristotle's doctrine. At the end of his term of office,

he made a speech saying that he had endeavored to steer the narrow line between partiality on the one hand and impartiality on the other:

I conclude that the Aristotelian doctrines with which we have been concerned in the chapter are wholly false, with the exception of the formal theory of the syllogism, which is unimportant. Any person in the present day who wishes to learn logic will be wasting his time if he reads Aristotle or any of his disciples. None the less, Aristotle's logical writings show great ability, and would have been useful to mankind if they had appeared at a time when intellectual originality was still active. Unfortunately, they appeared at the very end of the creative period of Greek thought, and therefore came to be accepted as authoritative. By the time that logical originality revived, a reign of two thousand years had made Aristotle very difficult to dethrone. Throughout modern times, practically every advance in science, in logic, or in philosophy has had to be made in the teeth of the opposition from Aristotle's disciples.¹

Russell's handling of comparative religion is effective largely because he sets his analysis in historical context. In his discourse on St. Thomas Aquinas, Russell points out that Aquinas's sharp and clear use of reason is time and again insincere, since he already knows what he believes to be the truth before he begins to philosophize. As an example, Aquinas advocates the indissolubility of marriage on two bases: (1) that the father is useful in education of the children because he is more rational than the mother; (2) he is the stronger parent, and thus better able to inflict punishment. Russell comments that a modern educator could readily refute each of these arguments, but a follower of Aquinas would not likely cease to believe in the position, because the real foundations for the belief are not the ones alleged.

Russell wrote incisively on science, especially physics and astronomy. Much of this appeals to me because it deals with a major issue of our times: how do we convey what the scientific method is and familiarize the nonscientist with some of the workings of science and technology? In this century perhaps only Jacob Bronowski has addressed this issue with near equal effectiveness. Russell reminds us that in 300 B.C. the Greeks recognized that the earth revolved around the sun. The shadow that fell upon this understanding until the Renaissance was in many ways a political one. Russell writes:

Two great men of the time, Archimedes and Apollonius, complete the list of first-rate Greek mathematicians . . . after these two men, though respectable work continued to be done, the great age ended. Under the Roman domination the Greeks lost the self-confidence that belongs to political liberty, and in losing it acquired a paralyzing respect for their predecessors. The Roman soldier who killed Archimedes was a symbol of the death of original thought that Rome caused throughout the Hellenic world.¹

The Copernican hypothesis that finally appeared in the seventeenth century had, Russell reminds us, not the merit of truth, but of simplicity: "In view of the relativity of motion, no question of truth is involved."

A related development of the seventeenth century involved Galileo. At the time it was thought, even by educated persons, that a projectile fired horizontally would move horizontally in a straight line for a while, gradually lose its speed, then finally and suddenly fall vertically. Galileo showed that, apart from the resistance of air, horizontal velocity would remain constant, in ac-

*Russell Society News, a quarterly (Lee Eisler, Editor): RD 1, Box 409, Coopersburg, PA 18036
Russell Society Library: Tom Stanley, Librarian, Box 434, Wilder, VT 05088

cordance with the law of inertia. To this would be added a vertical velocity, according to the law of falling bodies. A simple calculation shows that the consequent course is a parabola. This is an example of a principle of dynamics that proved immensely fruitful, namely, that when several forces act simultaneously, the effect is as if each acted in turn.

But the story doesn't simply end there as an educational exercise. The philosophical consequences of this and similar scientific work of the seventeenth century were profound. Animism was removed from the laws of physics. Movement had been thought a sign of life, and Aristotle's unmoved movers were considered the ultimate source of all motion in the universe. All this was changed by Newton's first law of motion. As the projectile story indicates, lifeless matter, once set in motion, will continue to move forever unless stopped by some external cause. Another change resulting from developments in the seventeenth century was man's place in the universe. Anyone might still believe that the heavens exist to declare the glory of God, but no one could let that belief get in the way of an astronomical calculation.

The triumphs of science revived human pride. The ancient world and the Middle Ages had been obsessed with a sense of sin. To be humble before God was both right and prudent, for God would punish pride. It had been believed that only greater and greater humility would avert such calamities. It became impossible to remain abjectly humble when people were achieving such triumphs. As for damnation, surely the creator of so vast a universe had something better to do than think of sending men to hell for minute theological errors.

Russell liked Heraclitus, Machiavelli, Spinoza, and Locke. If there is a common thread that holds them together, it is this: that each drew comparatively modest conclusions after a broad survey of many facts, in contradistinction to the many philosophers who build a vast edifice upon a pinpoint of logical principle.

Russell's own philosophical effort seems to me too much a creature of his times and his efforts to deal with them. Indeed, his remarkable familiarity with the past seems fuelled by his efforts to escape his own unhappy present. He was reared in near solitary confinement in a dank, dark country manor house. He persisted in his implacable opposition to war and armaments even when he was, in the eyes of many of his supporters, wrong. His lecherous sexuality contributed to the unhappiness of his first three marriages.

What I return to most often among Russell's myriad writings are his observations on the conduct of our daily lives:

A good way of ridding yourself of certain kinds of dogmatism is to become aware of opinions held in social circles different from your own. When I was young, I lived much outside my own country—in France, Germany, Italy, and the United States. I found this very profitable in diminishing the intensity of insular prejudice. If you cannot travel, seek out people with whom you disagree, and read a newspaper belonging to a party that is not yours. If the people and the newspaper seem mad, perverse, and wicked, remind yourself that you seem so to them. In this opinion both parties may be right, but they cannot both be wrong. This reflection should generate a certain caution.

Be very wary of opinions that flatter your self-esteem. Both men and women, nine times out

of ten, are firmly convinced of the superior excellence of their own sex. There is abundant evidence on both sides. If you are a man, you can point out that most poets and men of science are male; if you are a woman, you can retort that so are most criminals. The question is inherently insoluble, but self-esteem conceals this from most people.¹

Time and again Russell poked fun at intellectual rubbish:

There is a certain attitude about the application of science to human life with which I have some sympathy, though I do not, in the last analysis, agree with it. It is the attitude of those who dread what is "unnatural." Rousseau is, of course, the great protagonist of this view in Europe. In Asia, Lao-Tze has set it forth even more persuasively, and 2,400 years sooner. I think there is a mixture of truth and falsehood in the admiration of "nature," which it is important to disentangle. To begin with, what is "natural"? Roughly speaking, any thing to which the speaker was accustomed in childhood. Lao-Tze objects to roads and carriages and boats, all of which were probably unknown in the village where he was born. Rousseau has got used to these things, and does not regard them against nature. But he would no doubt have thundered against railways if he had lived to see them. Clothes and cooking are too ancient to be denounced by most of the apostles of nature, though they all object to new fashions in either. Birth control is thought wicked by people who tolerate celibacy, because the former is a new violation of nature and the latter an ancient one.²

He also spoke about the importance of optimism, political tranquility, and public wealth: "The Victorian Age, for all its humbug, was a period of rapid progress, because men were dominated by hope rather than fear. If we are again to have progress, we must again be dominated by hope."³

Russell was a heroic figure, not at all fully likeable, in some small way because he lived so long. Yet, his description of the stages of a person's life merits our reflection and serves as a fitting close:

In an old man who has known human joys and sorrows, and has achieved whatever work was in him to do, the fear of death is somewhat abject and ignoble. The best way to overcome it—so at least it seems to me—is to make your interests gradually wider and more impersonal, until bit by bit the walls of the ego recede, and your life becomes increasingly merged in the universal life. An individual human existence should be like a river—small at first, narrowly contained within its banks, and rushing passionately past boulders and over waterfalls. Gradually the river grows wider, the banks recede, the waters flow more quietly, and in the end, without any visible break, they become merged in the sea, and painlessly lose their individual being. The man who, in old age, can see his life in this way, will not suffer from the fear of death, since the things he cares for will continue. And if, with the decay of vitality, weariness increases, the thought of rest will not be unwelcome. The wise man should wish to die while still at work, knowing that others will carry on what he can no longer do, and content in the thought that what was possible has been done.⁴

APRIL 20 1967

THE LISTENER

The influence of Bertrand Russell

a broadcast discussion

Stuart Hampshire is Professor of Philosophy at Princeton University and the author of 'Thought and Action', 'Freedom of the Individual', etc.

Norman St John-Stevan, O.M., was formerly on the staff of 'The Economist'. His publications include 'Life, Death and the Law' and 'Law and Morals'

Baroness Stocks has served on various government committees. She is Vice-Chancellor of Liverpool University. Her publications include 'The Industrial State' and 'History of the Workers' Educational Association'

Robert Kee, who was chairman of this discussion, is the author of 'A Crowd is Not Company', 'A Sign of the Times', etc.

Robert Kee: I hope we may be able to make some sort of assessment of the value of Bertrand Russell's amazing life and I think in talking of the man who has always insisted so admirably on frankness between human beings, we need have no fear of speaking frankly. Stuart Hampshire, how important would you say Bertrand Russell has been as a philosopher?

Stuart Hampshire: I think that without possible question he is one of the three or four greatest philosophers writing in the English language in this century; he stands in the line of tradition of British empiricism which goes back to Locke, Berkeley, Hume, and Mill. He has two distinct aspects as a great philosopher. In part he invented and developed the beginning of mathematical logic in a modern sense and with a modern range. He was not alone in this field, but he was the central figure. Secondly, in respect of theory of knowledge and the traditional problems of philosophy, he has set the questions which other philosophers have discussed; other philosophers who might be thought of as his peers, such as Moore and Wittgenstein, defined their position in relation to him, and I think this is true of the whole English-speaking world. He is a great philosopher who has contributed specific technical inventions within philosophy which are permanent acquisitions of knowledge. Lastly, he has set the example and provided the material on which others work. I don't think it could possibly be disputed that he is a great thinker.

A great popularizer

Norman St John-Stevan: I would add that apart from being a great thinker and a great technical philosopher, he is a great popularizer as well; I suppose one of the philosophic works most widely read in England is his *History of Western Philosophy*. I think what he has besides his technical brilliance and original thought is this ability to communicate. He has a vivid gift for putting over to a lay audience general philosophic notions.

Kee: We are coming on to the interesting question of whether or not his influence as a public figure has been proportionate to his academic influence. What do you think about that, Lady Stocks?

Lady Stocks: I think it has, partly because he is, as Mr St John-Stevan said, a popularizer. I am no philosopher, but when I read his essay on *A Free Man's Worship* I felt that here was something I could understand and that illustrates his whole attitude to life. I can't think why people described him as an atheist. His attitude appears to me to be religious—agnostic, but certainly not atheist.

Kee: But has he really influenced the way in which our society has developed?

St John-Stevan: I don't think that he has had a particularly profound effect on the public life of our times. People are fascinated by his personality, by his honesty, but his ideas strike many people as being slightly mad, and I think that the place he will be accorded in history, leaving aside the philosophic contribution, is in the gallery of great English eccentrics.

The bane of loneliness

Hampshire: I think that his gift for communicating with a wide public, which is evident both in his writing and his broadcasting, arises from a deep feature of his own character which he has remarked on in his autobiography; namely, what he calls the bane of solitude and loneliness. For him, philosophy was always a matter of finding the meaning of life and overcoming this sense of loneliness

which he felt as a child, and this is for most people the psychological root of an interest in philosophical questions, a sense of 'can I not find what is the meaning of life or the purpose for which we're here?'. Lady Stocks has just said that he is in a certain sense a religious man; if this means somebody who raises that kind of question, then it is evident that he is, even though he denies the existence of God. But I would prefer to call this a genuine philosophical temperament. He gives an example to people of clear, free thought which they find encouraging, even where the conclusions at which he arrives are unconvincing. So I think that he has in that way had a great influence.

One other point that I would like to make concerns what he said about Soviet Communism very early, when there was a strong disposition among persons of his point of view, radical thinkers in general, naturally enough to sympathize. He saw what others have come to acknowledge, the brutality which was somehow built into the system from the beginning, and very courageously stated this in a vivid form, I think in 1921. This seems to me to have been the only occasion on which one can say that he had a very great influence.

Kee: What about all the great causes and the crusades with which he has identified himself, such as the emancipation of women, radical reform of sexual attitudes? Have these in fact taken place because of him or simply contemporaneously with his thought?

Lady Stocks: My first memory of him was as a great feminist, working with his first wife and with the whole movement of women's emancipation; I think that was part of his inheritance of Victorian Whig Liberalism. If you read the Amberley letters, you find he didn't know his parents, he had no opportunity to do so, but there is a great deal of his parents in him, both of them: their rather sceptical attitude and their tremendous belief in equality. They were fundamentally democratic and he inherited that, and I think that he did give a real sort of academic respectability to the movement of women's emancipation. He sacrificed quite a lot for it; he hated by-elections and politics and canvassing and all that sort of thing, but he did it in a good cause.

Prophetic role in public life

St John-Stavas: His role in public life, it seems to me, has been a prophetic one. He has not, I think, been endowed by nature with what Walter Bagehot calls the prowling faculties which are essential if you are going to have political influence on men; ~~but he has to make~~ whole series of compromises which he himself was never in fact willing to make. This gives him a great strength, in that he has always allowed himself to be himself, which no politician in fact can do; you can only allow yourself to be yourself to a certain extent.

Lady Stocks: There was his interesting deviation between the wars, on free education, and in that I think he was a leader. He and his second wife, Dora, wrote books on education, in fact they put it into practice, they actually ran a school. It may be that that was in harmony with other movements in education—J. H. Badley's and in its extreme form, of course, A. S. Neill's—but his books on education did have a considerable influence. They cease to have it because I think the educational world has digested as much of that as it wants, in fact a little too much.

St John-Stavas: He suggested that undergraduates should have childless marriages—that is one of the things I remember about his contributions to education—to help them in their studies. Don't you think that is typical of the sort of idea he threw out and which really has had no influence at all?

Lady Stocks: I'd like to think it hadn't. But he had a very unhappy, frustrating childhood; he was, I should think, very much inhibited in the early part of his life sexually, and it was not until much later, after his first marriage had broken down, that he began to find what he describes as 'ecstasy' in love; but the astonishing thing is that though it may have produced moments of ecstasy—undoubtedly it really did, to judge from his own accounts of it and those of his second wife—it did not produce the solace of his loneliness, which continued, according to himself, until the very end of his life, when apparently he has found a relationship which meets his need.

St John-Stavas: But what a very odd conception of love that is.

Lady Stocks: It is, to my mind.

St John-Stavas: It all seems to me to be defined in very personal, rather selfish terms, because as I see the essence of love it is, something quite different, it's caring for other people. One may be moved by ecstasy to do certain things, and ecstasy is very nice if it happens to come along, but I don't think that's the essence of love at all; at least, it wouldn't be my idea of love.

Lady Stocks: It isn't mine. Love may have that element of ecstasy in it, in the case of two married people, but it does involve also a kind of permanent mutual trust which we sometimes see when married people grow old together in perfect contentment with one another. He doesn't seem to have experienced that. I think in a way as a lover he was a failure. He made at least two women very unhappy.

Kee: Aren't we really expecting too much of a professional philosopher if we expect him to be one in this other sense, of knowing all about love and being able to explain it to us?

Lady Stocks: I wouldn't have expected it of a great philosopher, but he does claim it himself.

Hampshire: No, I don't think he does claim that at all. What I think he does is hold open the field of debate and suggest that all these issues, which are treated as ones which cannot be intellectually considered, can be intellectually considered. There are some, Lawrence is one, who are shocked by discussing the emotions in his intellectual terms at all. There are others who are shocked by the degree of self-revelation which occurs in Russell's *Autobiography* and the degree of frankness that he shows in portraying his own relations with his wife and with others. But no one can doubt there's an absence of triviality about his discussion of these things—he may be mistaken but it is clear that this openness gives him a role which no one else in our time has had. It is significant, for example, that he says in his *Autobiography* how much he despises Bernard Shaw, because of his vanity; he felt Shaw played with these issues. With Russell there is a possibility of public discussion at a deep level of issues about which people consider one cannot think clearly. This is his real public influence. I agree that he has had no great influence on practical politics; and that for the simple reason that he has never undertaken political analysis: in current discussions of the Vietnam war, where I agree to some degree with his conclusion, he never analyses the forces that are at work and why we are in this situation.

Ineffectual in public affairs

Kee: He does, however, claim very specifically to be taken seriously in public affairs. He said somewhere in this *Autobiography* that after '*Principia Mathematica*' he abandoned mathematics and philosophy for international affairs, as if this was going to be his serious work. It seems odd if a man of such undoubtedly enormous intellect should turn out to be so ineffectual in public affairs.

St John-Stavas: I don't find that odd at all. One would expect somebody who had made his main business philosophy to be ineffectual in public affairs. One wouldn't expect him in fact even to want to take part in public affairs. What is interesting about Lord Russell is that he obviously does passionately want to take part in public affairs and it is this passion that has driven him on; but I don't think he is taken seriously in English public and political affairs. I don't think people in the House of Commons, for example, are asking themselves 'What has Bertrand Russell said?' He may have influence as a manifestation of conscience as such. He may also have influence in a negative way in that he may be used by other people for their own purposes—the Russians for example—but I don't think he could possibly lay any tenable claim to having profound political influence in our times.

Hampshire: But ought we to assume that philosophers are out of place in public affairs? I mean Plato, Aristotle, Spinoza, Hume, Locke, most of the great philosophers, ~~and~~ and so on,

have simultaneously concerned themselves with ultimate moral issues and public affairs. It's hard to see how these two could fall apart.

St John-Stavas: They haven't been very successful in their participation in public affairs. If I may take ~~him~~ for example, I think it was a great mistake of his to enter parliament; he had no influence in parliament in practical affairs, and it merely distracted him from doing the things which he was good at, which was advancing his own philosophy and thinking.

Lady Stocks: But he did write a book ~~about~~ ~~liberty~~. When I re-read that book I think it's really in a way the last word on the conception of political and social liberty. I mean today I think it is a text-book.

St John-Stavas: Well, could you point to a comparable book which Bertrand Russell had written which you put in that category?

Lady Stocks: No, I can't.

St John-Stavas: Could you, Stuart Hampshire?

Hampshire: No, I don't think Russell has ever quite attained that kind of intimacy with politics, and I agree that he has the type of intellect which greatly over-simplifies political problems. When he turns to considering specific issues he presumes that you can become certain about them in a kind of way that you can become certain about mathematical problems or propositions of logic. For example, in the 'Face to Face' interview, when John Freeman suggests there is something rather odd about his view on the atomic bomb^o, he says: 'Well, it's consistent with my other views'; and to introduce here only this logical notion of consistency seemed to me to show somehow a lack of real political thinking.

Kee: Perhaps that is why he is virtually ineffectual in public affairs; perhaps you can't operate there with precise surgical analysis on every single issue, as you do in philosophy.

St John-Stavas: He has not brought that to his political life at all, and I think, in so far as his political activities have influenced men politically, I quite agree with Stuart Hampshire, it's because they are not something that is coming out of the top of his head, they are coming from his nature, and the contradictions in his nature—which I suppose one could say are explained in this book, going back to his lonely childhood. I think it is precisely because they are a reflection of his nature that they do fascinate people and move people; this is the impact of personality on personality. Where he in fact brings in his logic, you get these mad ideas like a preventive war against Russia.

Hampshire: The first book he ever wrote, which was the first course of lectures at the

^o The suggestion he made in the late forties that the U.S. should threaten Russia with nuclear attack to deter her from developing her own nuclear weapons.

London School of Economics is called *German Social Democracy*, which has the best early discussion of Marxist theory in the English language. The second book was on *Foundations*

Mill

On Liberty

of *Geometry*. We should get it all wrong if we gave the impression somehow that he was a great philosopher who turned to politics: the two have always been equally deep in his nature. Russell has never been academic; he has not been confined in a university, except for very short periods; and this gives him, as it were, a de-institutionalized setting, which enables him to speak as a human being to great numbers of persons, and they may not agree, but they feel that this is a dignified phenomenon which offers hope.

Lady Stocks: One thing that I think endears him to the normal young intellectual, is that he can get tremendously bet-up about a cause, and say what to many of us appear rather foolish things.

A master of communication

St John-Stavas: And he is, of course, a master of communication, isn't he? Although he feels passionately, the passion is contained within a very controlled literary form. Listening to him broadcast one is moved by the beauty of the language and the precision of the language, as much as by anything else.

Hampshire: He has a rather superstitious attitude to the power of argument and the power of words, in the sense that in the *Autobiography* he explains, for example, the failure of his first marriage, or the point of breakdown, in terms of propositions that he came to believe about his wife and about her relation to her mother and so on. You feel that his own emotions are already built into the argument; this is very rare in people.

Kee: There is one very strange thing, isn't there, in this *Autobiography*, and that is the contrast between the serenity of the way in which he is talking about his life and the actual emotional turmoil he is often describing. He is constantly saying in clear, precise, subdued tones that he went through an appalling emotional experience. He describes the failure of his first marriage, for instance, in almost horrifyingly clipped and dry tones, which are often very amusing.

Lady Stocks: But he analyses the faults he finds in his wife.

St John-Stavas: Of course he has reached a degree of peace and serenity, and therefore I suppose he is looking back on experience which almost perhaps belonged to another person, which he himself has in fact transcended. But I think also he is saved, to a great extent, from being in fact destroyed by these passions and emotions by a sense of proportion which comes out very much in his sense of humour. He is in fact capable of laughing at himself as well as at other people; this sharp and malicious sense of humour which he has is a very real part of him and has formed a regulator in his life which is of great value.

Kee: D. H. Lawrence, of course, found his pacifism psychologically very suspect. He wrote to Russell: 'You are simply full of repressed desires which have become savage and anti-social, and they come out in this sheep's

clothing of peace propaganda'. Do you think there is anything in that?

Lady Stocks: No, I really don't give weight to anything D. H. Lawrence said about anybody: he was a curious, tortured, pathological creature. He never had the sort of intellectual contacts that Russell had; he didn't know what they were like.

St John-Stavas: I think it is merely a piece of Freudian invective.

Hampshire: I should like to say something in favour of Lawrence: there is a truth, I think, here, that Russell does in his *Autobiography* and elsewhere sometimes describe himself as descending among ordinary mortals in a slightly godlike way. There is a description of him staying in a hotel in which he comments, writing to somebody, on the other people in the hotel, very much as if he had alighted among ordinary men. There is a sort of paradox here, because he is marvellous at addressing ordinary men and ordinary men like there to be godlike figures. Lawrence pointed to his cerebral way of talking about the emotions; Lawrence is perfectly right that one cannot so talk truthfully about them, as we have rather suspected over Russell's description of his marriage. One has a feeling the truth can't be like this; that you cannot put emotional relationships into these witty, short sentences; and that this is a kind of Spinozistic or godlike view of oneself which he has to some extent.

St John-Stavas: And he does say himself, doesn't he, that he can't identify with the people supporting the causes he believes in: that again I think is an expression of this intense individuality, which cuts him off from other men and therefore doesn't make him an effective political leader of men.

Lady Stocks: I think that was in a way intellectual honesty: lots of people feel like that when they go into popular causes with less intellectually distinguished people than themselves.

St John-Stavas: Where I think he has been significant is in the third part of the *credo* he gives in the prologue of the *Autobiography*, his compassion, his pity. This is a strain of feeling which can be pushed out of ordinary day-to-day politics, and the fact that he does feel so strongly about these issues—he feels compassionately for the people suffering in Vietnam—is a very useful contribution, reminding people that what is being involved here in these political conflicts are the sufferings of ordinary men and women.

Lady Stocks: I think that is his greatest contribution, and it comes out very clearly in that first volume of his *Autobiography*. I have in mind particularly a series of letters he wrote to an American woman friend who had lost her dearest friend and companion and fellow-worker. His letters to her were so superbly understanding, compassionate. He really feels as she feels, and I think he has

that capacity. I think that is where his great influence today lies with the young. They may not agree with sitting down outside the American Embassy and much that he says about President Johnson, or whatever it may be, but they do feel that here is an old man, nearing the end of his life, who cares tremendously about them and the world that they will live in and that he will not live to see.

St John-Stewas: I think that is true, and I am tremendously attracted by this unquenchable optimism. This is what young people see. Also, if I may put a further gloss on what Lady Stocks has said, I think they are attracted by him because he is such an iconoclast. Young people like someone who is throwing bricks at idols, particularly when it's an old thrower who can give the throwing some respectability.

Hampshire: Yes, but the throwing of the

bricks and the iconoclasm has at the back a certain pessimism as well, not only optimism, which gives it a depth and genuineness to which people respond. In his broadcasts you can hear that it is not the kind of iconoclasm of a bright man who has bright thoughts on current issues. Far from it: there is a sense that it is extremely difficult to maintain any tolerable form of human life. I think he has always felt this very strongly.

St John-Stewas: One of the great losses of the future will be if it becomes impossible to produce another person like Russell: he is a whig through and through, and he is one of the great justifications for whiggery.

Hampshire: I think his greatness is just in showing what a human being can do: his marvellous energy and intellectual invention have few parallels at all in our century.

THE NUCLEAR PREDICAMENT

(5) From the New York Times, 1/2/88, p. 23:

'Elephant Repellent'

By John A. Osmundsen

"Thank heaven for nuclear weapons," Prime Minister Margaret Thatcher of Britain seems to say every time she reminds us that Europe has been free of war for the past 40 years, attributing that circumstance, erroneously and without substantiation, to the existence of nuclear weapons.

The same canard is promulgated by the columnist George Will and other conservatives and also by many liberals and arms-control experts who would like nothing better, in their heart of hearts, than to see the world completely free of nuclear weapons but know that that's not possible. Another canard.

What's important about getting these things right is that if allowed to persist such misapprehensions could gravely influence the next summit meeting on the reduction of strategic nuclear weapons.

Take the first canard, a porous syllogism at best. There has been no war in Europe in the 40 years that nuclear weapons have been around; therefore, nuclear weapons have prevented war. That, however, bears a disturbing resemblance to the argument used by a Brooklynite who, when asked why he called a purple powder that he sprinkled around his house "elephant repellent," replied, "Well, you don't see any elephants around here, do you?"

To sense the poverty of the nukes-prevent-war-in-Europe argument,

John A. Osmundsen is writing a book that deals with paradoxes of the nuclear age.

one need only notice that they have not prevented wars elsewhere. And none was ever used even where they might have turned the tide (South Korea, Vietnam, Afghanistan) without risking nuclear retaliation to the potential users' homelands. Why?

The reason is simply that the expansion and growth of nuclear warfare, if it breaks out, cannot be deliberately limited or controlled; virtually every military expert who has played a computerized nuclear war game has expressed astonishment at how fast things got out of control, some saying they were never able to

That still leaves 40 years of peace in Europe to account for. If not nukes — the rational equivalent of elephant repellent — then what explains it?

Could it be that the North Atlantic Treaty Organization and Warsaw Pact haven't gone to war simply because they haven't wanted to, because there has been no reason to do so, because there is every reason not to do so, because there has been nothing to be gained and much to be lost, irrespective of the real though minimal risk that things might escalate — but only accidentally — into the nuclear realm? It certainly couldn't be otherwise.

This brings up canard No. 2 — that nuclear disarmament is not possible. Well, if no use whatever of nuclear weapons can ever be justified rationally, why not just get rid of them? Because, the canardiologists say, you can't ever be sure someone won't hold some back, and there's always the threat of nuclear terrorism, say, from an Iran or a Pakistan.

That argument, however, does not address the rational unusability of nukes, nor does it acknowledge the vast range of very persuasive non-nuclear modes of deterrence (including chemical and biological) that could, if necessary, be used to render intolerable punishment for a nuclear attack by a mindless despot or a maniac.

The bottom line is that there is no use for nukes, their very existence threatens all humanity as nothing ever has before and they can be eliminated from the face of the earth, as President Reagan often says is his fondest dream. All we have to do is shoot down all the canards of folly and start thinking clearly about getting, as they say, our real duckpins all in a row. □

Addressing canards of the nuclear age.

prevent it from running away to totality. Thus, any use of nuclear weapons risks ending in global holocaust, and that means that there is no way at all of ever rationally justifying their use.

Thus, if there is no sane or sensible way of using nuclear weapons without putting humanity at risk — and there is none, as all nuclear-war experts know in their bones, whether or not they will openly acknowledge this perplexing truth even to themselves — then nuclear weapons can't be used. And if they can't be used, then they cannot have prevented war in Europe for the past 40 years.

- (6) The San Diego Union ran this New York Times News Service item "about the time of our June meeting," says JIM MCWILLIAMS, who sent it to us:

MIT post-nuclear outlook is grim

New York Times News Service

NEW YORK — In a major challenge to the government's position on the long-term effects of nuclear war, a new study concludes that a limited attack on the United States, involving only 1 percent of the Soviet nuclear arsenal, could set off a collapse of the U.S. economy that would last for decades.

Federal officials say that the study is flawed and that recovery from even large attacks could take place in years, not decades.

The study, by the Massachusetts Institute of Technology, said an attack aimed only at liquid fuels and their distribution points could cripple transportation, energy production and key industries, damaging the nation's economy so thoroughly that most of the population would die of starvation in months.

The survivors, it said, would be reduced to "near-medieval levels of existence" for decades.

However, the Soviet Union is even more vulnerable, the study added.

MIT's study, titled "Nuclear Crash," was based on four years of computer simulations of nuclear attacks and their consequences.

The computer instructions used were a modification of a model originally developed for the Federal Emergency Management Agency, which plans relief measures for war and natural disasters. The prevailing government view is based more on experts' analysis than on computer models.

Dr. Kosta Tsipis, senior author of the study and

Continued from A-21

director of MIT's Program in Science and Technology for International Security, said: "The usual assumption is that the economy recovers. But this program shows it will not recover even 25 to 30 years after an attack."

Officials with the federal agency faulted the MIT study. Paul K. Krueger, the agency's assistant associate director for mobilization resources, said he had not seen the study but that the underlying set of computer instructions, supplied to the agency in 1980 by a government contractor, was abandoned in 1984 after "a lot of criticism from other government departments that it was unrealistic."

Tsipis said the computer model had been tested extensively for accuracy at MIT and improved with the aid of its creators. He said the government had abandoned the model because its results conflicted with the government's public positions.

Krueger vigorously denied this. The 136-page study reached these conclusions:

- The economy would be unable to "shake off" the effects of an attack on petroleum supplies. At best the nation could regain about a third of its productivity over a quarter-century.

- The Soviet Union would be no better off than the United States and could be more vulnerable to long-lasting effects from a nuclear attack because its petroleum industry is more concentrated.

- The superpowers could achieve the goal of deterring attacks with drastically fewer nuclear arms.

- President Reagan's plan for a defense against enemy missiles might not protect the nation from lasting economic collapse even if the defense prevented 99 percent of incoming warheads from reaching their targets.

- Civil defense measures would be largely futile.

The government's position through several administrations has been that either superpower would recover from nuclear attacks consisting of several hundred nuclear weapons.

In 1982, Thomas K. Jones, deputy undersecretary of defense for strategic and theater nuclear forces, was quoted as saying the United States could fully recover from an all-out nuclear war with the Soviet Union in two to four years.

"If there are enough shovels to go around, everybody's going to make it," he said, referring to simple fallout shelters dug in the ground. Jones left the Pentagon in 1985.

Jim thinks the BRS ought to have an award "for guys like Jones. We should award him a shovel to cover himself up with." The BRS Dumbbell Award?

- (7) Seismic Data Show 117 Secret U.S. Atom Tests was the headline on a front page story in the New York Times on 1/17/88. The tests took place during the past 25 years. The figures resulted from an analysis of seismic data about earth tremors that has been publicly available for years. It came from the Natural Resources Defense Council, "widely recognized as having extensive expertise in seismic studies. It recently participated with Soviet scientists in monitoring American and Soviet nuclear test sites."

The report was part of the proceedings at the International Scientific Symposium on a Nuclear Test Ban, held in Las Vegas on January 15-16. The Symposium was a project of the Council on Economic Priorities, International Physicians for the Prevention of Nuclear War, Natural Resources Defense Council, Physicians for Social Responsibility, Sierra Club, and Union of Concerned Scientists.

"The findings could potentially shift moderates in Congress to accept a test ban, since it suggests that even the smallest tests could be detected," said Representative Edward J. Markey.

HUMANISM

- (8) Music Critic's highest compliment. After hearing the Bach Choir of Bethlehem sing Bach's B-Minor Mass, Music Critic David A. Reed, of the Bethlehem Globe-Times, had this to say:

Hearing such devotional music sung with such dedication easily puts this secular humanist into a willing state of suspension of disbelief.

PUGWASH

- (9) 30th Birthday. From The Chronicle-Herald, Halifax, Nova Scotia, 7/11/87, p.25, with thanks to JOHN LENZ:

Pugwash Thinkers celebrate 30th year

By ISABELLE TIBBLES
Truro Bureau

PUGWASH — Nine scientists from around the world met Friday at Thinker's Lodge, Pugwash, for a three-day informal conference to review the past, present and future of the Pugwash movement.

The Pugwash Conferences on Science and World Affairs began 30 years ago when scientists realized the potential danger of nuclear developments. The aim of the first and subsequent conferences was to appraise dangers arising from the development of weapons and to prevent a nuclear war.

"We were worried, particularly because the hydrogen bomb was just released," said Joseph Rotblat, professor emeritus of physics at the University of London, England.

Prof. Rotblat is the "father" of the Pugwash conferences, said Mrs. Cyrus Eaton, widow of Cyrus Eaton, a Nova Scotia-born Cleveland industrialist who sponsored the Pugwash conference.

Prof. Rotblat, one of the original conference participants in 1957, worked on the atom bomb during the Second World War.

"We felt responsible to a large extent for creating man's destiny. ... We wanted to help the rest of

the world and prevent a catastrophe."

But, he said, 30 years later the human race is still in danger but on a different scale. "Therefore our main objective has not been achieved."

"(But) We have survived 30 years without nuclear war and we believe to a certain extent this is due to our efforts."

Prof. Rotblat said one result of the Pugwash Conferences is that leaders and decision makers have been educated "that neither side can win a nuclear war — it would be suicidal."

He said future dangers have changed in part from past dangers and "inadvertent nuclear war," is now the main concern.

"We must eliminate nuclear weapons all together and this can't be done overnight. This is still the task for Pugwash after 30 years."

About 2,400 scientists from 84 countries participate in various Pugwash conferences and over the years 7,000 scientists have taken part in various workshops focusing on the survival of human kind.

A formal meeting will be held from September 1 to 6 in Austria and about 200 people will participate.

From the Chronicle-Herald, Halifax, Nova Scotia, 8/12/87, Voice of the People (Letters to the Editor) page:

Russell's idea

To The Editor:

Sir, — I have been sent a clipping of the story on the Pugwash Thinkers by Isabelle Tibbles, in your issue of July 11, 1987, page 25.

It's a pretty good story, but it does omit one thing that might be thought relevant: the name of the person who initiated the Pugwash Conferences, the person whose idea it was (in 1957) to have a Pugwash Conference in the first place. That was Bertrand Russell.

This does not detract in any way from the great part played by Professor Rotblat. In your story, Mrs. Eaton calls Professor Rotblat "the father" of the Pugwash Conferences. I suggest that the father was Russell, and Rotblat the midwife who made it all come out right. This society has the highest regard for Professor Rotblat. It awarded him its 1983 Bertrand Russell Society Award. Here are excerpts from the 1983 press release on that award:

"The 1983 Bertrand Russell Society Award has gone to Joseph Rotblat, nuclear physicist, anti-nuclear advocate, Secretary General of the Pugwash Conferences for the first 17 years (1957-1973) ... and currently active on the Executive Committee, also Chairman of the British Pugwash Group."

The Pugwash Conferences were a breakthrough in East-West relations.

They brought scientists from both sides of the Iron Curtain together for the first time to discuss the nuclear peril. The conferences led to the SALT talks and to the partial Test Ban Treaty, that banned tests above ground. (1963). As Bertrand Russell said, "... it showed that real cooperation could be achieved among scientists of extremely divergent ideologies and apparently opposing scientific, as well as other, views."

The conferences were Russell's idea. But Russell was 85 and in poor health, unable to attend the first conference (in Pugwash, Nova Scotia). As a result, it was Joseph Rotblat who organized it, as well as the following 22 Pugwash Conferences.

The award citation reads: "For presiding at the birth of the Pugwash Conferences, and nurturing their growth, to develop areas of agreement between East and West so as to diminish the nuclear peril."

In Bertrand Russell's eyes, Professor Rotblat "... can have few rivals in courage and integrity ... If ever the nuclear peril and allied evils are eradicated and international affairs are straightened out, his name should stand very high among its heroes."

ABOUT BERTRAND RUSSELL

(10) Kate finds a parallel. From the New York Post, 1/21/76, with thanks to HARRY RUJA:

Love and Genius

From "My Father Bertrand Russell" by Katharine Tait (Harcourt Brace Jovanovich, 202 pp., \$8.95).

When I studied Goethe, in college, the professor taught us to connect each creative burst with a new love affair: Goethe drew the life of his poetry from his loves, then moved on and left them. Sometimes I think my father was like that. Perhaps it is a characteristic of great men, who must follow their gift regardless of consequences. And he says himself: "I have known no woman to whom the claims of intellect were as absolute as they are to me, and wherever intellect intervened, I have found that the sympathy I sought in love was apt to fail."

PHILOSOPHY

(11) Philosophical dispute gets 3 columns on the front page of the New York Times, 12/29/87:

Philosophical Rift: A Tale of Two Approaches

By RICHARD BERNSTEIN

Charles Sherover, who teaches philosophy at Hunter College, speaks in a sort of paradox about certain other philosophers. All too often, he says, those who were accepted into the ranks of the philosophers in America were not what he calls "philosophically inclined."

"You're much more likely to find philosophically inclined people outside of philosophy," Professor Sherover said, "because if you are philosophically inclined, you've probably been excluded."

Dr. Sherover's paradox, vehemently rejected by his targets, well reflects an argument taking place among American philosophers, sowing discord within the ranks of the 6,000 or so members of the American Philosophical Association, a group that rarely makes headlines but is, presumably, engaged in the task of examining the very foundations of Western thought.

Bogged Down in Logic

Some philosophers like Professor Sherover, already organized into a group whose members call themselves pluralists, met in Cambridge, Mass., last month and formed a new organization, The Society of Philosophers in America, to combat what they believe is the control over the field exercised by what they see as a highly technical subspecialty, the Anglo-American analytical school.

Underlying the pluralists' activities is the belief that philosophy, bogged down in a stress on logic, language, and empirical data, has lost its vocation of addressing the big questions asked by perplexed mankind: what is being? Is reality what our senses perceive? Does the universe have purpose?

Instead, the pluralists maintain, philosophy has come to mimic the sciences, striving to attain new clarity over what the big questions mean, with the result that philosophy has departed from the sort of informed speculation that gave it its appeal over the centuries.

The analysts themselves not only disagree with this conclusion, but some

Charles Sherover
Hunter College

"You're much more likely to find philosophically inclined people outside of philosophy, because if you are philosophically inclined, you've probably been excluded."

The New York Times, August 1, 1987

Ruth Barcan Marcus
Yale University

"It's not just fake history, it isn't even history," she said of the pluralists' version of philosophy's changes. "The tradition up to Kant was analytical. It was one of addressing questions in a careful way and giving reasons for one's point of view."

dismiss the way the pluralists pose the problem. They deny, for example, that there is even such a thing these days as an analytic school, and they claim that their own work, even if sometimes highly technical, marks a continuation of more than 2,000 years of rigorous

The dispute among philosophers is not the sort of thing that heats up public emotions, although it echoes disputes in other fields. Economics is one example where higher and higher degrees of specialization have alienated not only members of the public but some specialists as well. Philosophy, moreover, even if no longer followed as avidly by nonphilosophers as it was in centuries past, does provide the foundation of many other disciplines, establishing grounds for judging ethical

principles and claims to know the truth.

In this sense, underlying the position of Dr. Sherover and his allies is their concern, rejected by their opponents, that philosophy itself has drifted from the center of intellectual life to a technical periphery, with the result that Western civilization has been impoverished.

"The problem arises when it comes down to saying that a certain way of

Philosophical Turmoil: A Tale of Two Approaches

Continued From Page A1

doing philosophy is the only way, and if you don't do it that way you don't do it at all," John E. Smith, a professor at Yale and a Sherover ally, said of what he views as the analysts' domination of the field.

"Tillich," Professor Smith went on, referring to Paul Tillich, the theologian, "said that you can put up no trespassing signs, but that doesn't stop people from trying to answer the great questions in any way they can." In short, Professor Smith is saying, if the philosophers fail to do philosophy, others, perhaps untrained in the major traditions, will. "People are going to look for answers whether the analysts like it or not."

Attempt to Restore Legitimacy

The pluralists' meeting in Cambridge last month marked a new step in a quarrel that has been marinating for nearly a decade, ever since they founded their first organization, known as the Committee for Pluralism in Philosophy in the late 1970's. Their purpose, as they explain it, was not to create a new orthodoxy, but merely to restore legitimacy to the several schools of thought obscured by what they regarded as the analysts' domination of the major academic departments.

But, the argument pitting the pluralists against the analysts goes back much further, at least until early this century when philosophy took a major turning, originally in Vienna. That is where the school of logical positivism, the ancestor of the Anglo-American analytical school took form. The new line of thought, originated and developed by the likes of Rudolph Carnap, Bertrand Russell and Ludwig Wittgenstein, and centered eventually in England, put a stress on logic and the methods of science, dismissing earlier philosophy as portentous verbiage.

Metaphysics Is Attacked

This group held that the age-old metaphysical questions were meaningless, since an analysis of the language

Some see philosophy framed by logic and language; others still pursue the big questions

used to frame them showed them to be nonsensical. Earlier philosophers' statements about ethics and morality, for example, were only expressions of the philosophers' emotions or opinions; they had no grounding in logic or empirical fact. In other words, metaphysics, which had been the philosophical motor for two millennia, was meaningless.

"What the analysts said really was that the classical questions of philosophy were really questions about language," Arthur Danto, a professor of philosophy at Columbia University, said. "The idea was that there was a frontier that you could drive back by an ever more refined linguistic analysis."

A recent issue of Harvard Magazine gave an example of this sort of thing drawn from Willard Van Orman Quine, considered by many to be the current titan of American philosophy. The question was one of the big ones in metaphysics — the definition of being. Professor Quine's Anglo-American analytical answer: "To be is to be the value of a bound variable" — a difficult concept to explain briefly.

Disdained as Airy and Fuzzy

Professor Smith, Professor Sherover, and others dismiss this sort of thing as a bright but empty game played by the dreaded SMAG, the Singleminded Analytical Group, and they promote a return to the more freewheeling, literary traditions of Europe, where Nietzsche, Heidegger and Sartre provided a more soulful alternative to the

analysts' brainy but dry logic. Many of the anti-analysts refer to themselves as Continentals. They in turn are disdained by some of the analysts as fuzzy, airy, ignorant of the empirical data, and more attached to feeling than to thought.

But here it becomes complicated, in particular because some philosophers dismiss the idea that there is a genuine intellectual quarrel taking place, or even that pluralists' definition of the issue is accurate. At Yale, for example, Ruth Barcan Marcus, cited by many of the pluralists as a major champion of the analytic school, denies that hardcore analysts exist these days, or that the philosophical establishment has ceased asking the big questions.

"It's not just fake history, it isn't even history," she said, speaking of the pluralists' version of philosophy's changes. "The tradition up to Kant was analytical. It was one of addressing questions in a careful way and giving reasons for one's point of view."

"There was also a close connection between philosophy and science," she said, dismissing a common pluralists' charge that the analysts, whether they exist as a category or not, pretentiously mimic the sciences. "Plato's Academy bore the inscription: 'Those who have not studied mathematics shall not enter here.' Leibnitz invented the calculus. Spinoza wrote up his Ethics like geometry. Nobody is more analytical than Descartes. They had tremendously high standards of clarity and a healthy regard for good reasons."

Who Are the Nitpickers?

What's more, Professor Marcus went on, the pluralists are beating a straw horse, because, while logical positivism, with its stress on the meaning of words, may have had its day and still exerts its clarifying influence, the analytical approach itself has become far

more multifaceted than before. The pluralists complain of dry, empty nit-picking, she said, but they cannot identify any of the nitpickers by name because they do not exist.

"I'll tell you what the issue is," she said. "There are some people whose notion about philosophy is that it is something that you do. There's some issue — knowledge, truth, the meaning of good — and they try to answer philosophical questions about it. Then there are a whole lot of other people who write about other philosophers, who interpret their work. A lot of the people who call themselves pluralists are interested in studying other people's work."

Professor Marcus's point is that the prestige departments — such as those at Berkeley, Harvard and Princeton — hired from the group that "does philosophy" leaving the resentful others on the sidelines, from where they have mounted a political counter attack.

Indeed, one result of the dispute is that philosophers group themselves behind their favored candidates for office in the American Philosophical Association, which is holding its annual meeting in New York this week. When caucusing and voting is not taking place, there is still time to discuss such weighty matters as epistemology in the age of neurosurgery and conceptions of causality.

The pluralists, by good organizing have, since 1980, gotten some of their candidates elected to the presidency of the association and this has led to some complaints about sheer numerical majorities dominating the profession rather than standards of scholarly excellence. The pluralists, however, are unrepentant.

"The feeling was," Professor Sherover said, "that analytical philosophy had taken control of philosophy and the only way to counter that was by a political counter-offensive."

NEWS ABOUT MEMBERS

(12) Adam Jacobs, who recently disrobed in public (RSN56-17), is having some fun with a Fully Certified Guarantee.

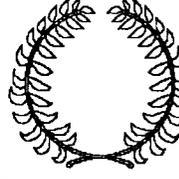

It was inspired, he says, by a line in BR's "Why I Am Not A Christian".

With Rutgers School of Law behind him, he is now an Attorney at Law, and Law Clerk to a judge in New Jersey.

Guarantee

Fully Certified

The bearer of this certificate is unconditionally guaranteed the following:
When You Die, You Rot.

This certificate may be redeemed at any cemetery. See your local funeral director for details. Void where prohibited by religion. Neither Jesus Christ, nor members of his family are eligible for this offer.

B. Fredonia: A Geo Brief

The State University of New York College at Fredonia is located within the village of Fredonia in the heart of northern Chautauqua County at Exit 59 of the New York State Thruway, halfway between Buffalo, NY and Erie, PA. This largely residential village is distinguished by beautiful tree-lined avenues, the warmth of its citizens, and a deeply-rooted history. The neighboring city of Dunkirk is located on the shores of Lake Erie.

The campus is about 50 miles from the Buffalo Airport. Rental cars are available, but there is no direct bus service from the airport. A van service can be arranged at a modest fee, if there is sufficient interest and a reasonable focus of arrivals and departures.

The area is a glorious place to vacation at this time of year. It has a number of attractions. Lake Erie (1/2 mile away) offers opportunities for swimming, fishing, and boating. Although the Nationally-known Chautauqua Institution does not begin its full program of plays, operas, concerts, and lectures until June 25, it will be open for visitors and there may be a pre-season concert. The Ontario, Canada cities of Toronto and Niagara Falls are just a few hours away and Buffalo, the "City of Good Neighbors," boasts such fine facilities as the nationally-known Albright Knox Art Gallery and the Kleinhans Music Hall, home of the Buffalo Philharmonic Orchestra.

please let me know if you have any special needs or interests.

THE NUCLEAR PREDICAMENT

(14) Anti-Nuclear, with chorus and orchestra, reviewed by WARREN SMITH:

Trinity Mass, by James Yannatos, a requiem mass conducted by the composer with the Harvard-Radcliffe Orchestra [Sonory Publications, 9 Stearns St., Cambridge, Massachusetts 02138, \$10.—a 90-minute cassette].

No, the "trinity" of the title is not a theological reference. Trinity was J. Robert Oppenheimer's code name for the first atomic bomb test in the New Mexico desert. The present orchestral work with libretto is a forceful, artistic plea for the immediate international reduction of weapons.

The pacifistic work was written in 1983 by James Yannatos, of Harvard's Department of Music. In 1986 it was performed first at Harvard, then at the Cathedral of St. John the Divine in New York City.

Fans of Bertrand Russell will be favorably impressed by the 33 sources which Prof. Yannatos uses for the libretto of his requiem mass. These include, for example, anti-war observations from 1990 B.C. (by the King of Heracleopolis); Biblical quotations; Aztec, Seneca, and Winnebago sayings; a Negro spiritual; words of Hiroshima survivors; quotes from Churchill, Eisenhower, T. S. Eliot, Kazantzakis, and Roethke; a World War II Air Force bombardier; and expressions from scientists working on the Atom Bomb in Los Alamos.

The non-musician will find the work a pleasant cerebral collage of atonality and inspiringly complex musicianship. The libretto itself is a compilation well worth the cost of the cassette.

The musician will wish he had attended the Harvard premiere or what must have been a memorable performance in the New York City cathedral, with Jason Robards as narrator.

First off, the Harvard-Radcliffe orchestra masterfully performs the work. The premiere also included the following: the Harvard-Radcliffe Collegium Musicum; the Radcliffe Choral Society; the Harvard Glee Club; the Bach Back Bay Chorale; and the Youth Pro Musica (in New York, the Brooklyn Boys' Chorus). Narrator is Robert J. Lurtsema, and featured singers, all top-rate, are Lucy Shelton, Milagro Vargas, Jon Humphrey, Sanford Sylvan, and Robert Honeysucker.

The prologue, with American Indian references to the beauty of nature, is followed by a "day of wrath" with an ironic use of Beethoven's 9th Symphony combined with reflections on war and Hiroshima. Part 3, a "credo in redutio ad absurdum," features children singing about the cold, old men "with their fingers on the button." Part 4, "Sanctus," combines a Negro spiritual's message about "when the stars begin to fall" with a Winnebago saying, "Holy Mother Earth,/The trees and all nature/Are witnesses/Of your thoughts and deeds." Part 5, the epilogue, uses Biblical quotations along with a paraphrase of Einstein's 1931 address to the California Institute of Technology. In every way, the music stands out as a major selection, not just an accompaniment for a libretto.

No reference is made to Russell, but it can safely be stated that he would have agreed with the composer-conductor's theme of pacifism. The stature of the music he certainly would have recognized and enjoyed, also. Although the work has been played on WBAI and other classical radio stations, it deserves a wide international audience. Society members might well request their local stations to play the work, recommending that the cassette be purchased if it is not in their library. Or members might well contribute such a cassette to their favorite station.

Bertrand Russell Society members would do well to be present whenever and wherever the work is next performed. Meanwhile, I can think of no similar composition with quite so broad a scope as well as so noble a purpose.

Warren signs his review as President of Variety Recording Studio, more fully identified by this letterhead:

PHILOSOPHY?

- (15) Applied Philosophy (Wall Street version) in the New York Times of 1/13/88, p D2:

Economic Scene | Leonard Silk

Learning Caution The Hard Way

ALTHOUGH the London stock market remains "jittery and skittish," as one highly placed Government economist put it yesterday, there is a growing belief on London's Wall Street that the danger of another market crash is receding. That belief was strengthened by the ability of equity markets here and around the world to withstand the shock of last Friday's plunge in the New York stock market, when the Dow Industrials fell 140 points.

"We had our fingers crossed," said Ian Harwood, chief economist of S. G. Warburg & Company, an investment bank, "but, thank heavens, there was no rerun of Black Monday."

Why not? First, Mr. Harwood said, because this time there was little fear that the Fed would raise interest rates. "Before the October crash," he added, "there was deep anxiety that the Federal Reserve would hike rates, raising the specter of recession." This time the Bank of England, most other European banks, the Bank of Japan and the Fed all stepped in to support the dollar, with no threat of higher interest rates.

Second, Mr. Harwood said, the big institutional investors decided that stocks were no longer overvalued as they had been before the October crash. As the Greek philosopher Heraclitus put it about 500 B.C., you never swim in the same river twice — and it is a different market now from what it was before Oct. 19.

Indeed, an American economist, M. Louise Curley, a consultant to Scudder, Stevens & Clark, investment advisers, turns to a different philosopher

to explain why the markets have not repeated the Oct. 19 crash. She finds a hint in the German philosopher Immanuel Kant (1724-1804), specifically in his Categorical Imperative. In Kant's murky formulation, the Categorical Imperative states: "Act only according to a maxim by which you can at the same time will that it should become a general law." This may be translated as: Never adopt a principle of action that you would not be prepared to see everyone else adopt.

The Presidential commission that investigated the Black Monday market collapse, headed by Nicholas F. Brady, has stressed the role that program trading played in causing the market to plunge by a record amount. But institutions have now presumably learned that, acting in their individual self-interest, they can be severely damaged when other institutions act as they did.

Rational self-interest dictates that they stop behaving in such a short-sighted way — that is, in the mistaken belief that they can operate in isolation from other institutional investors with similar

programmed strategies for buying futures and selling stocks at their current prices.

The Categorical Imperative implies that different rules of behavior must be found in their own and the general interest. The British may have a better fix on those principles, because the British Broadcasting Corporation has run a television series on "The Great Philosophers," including Kant. As Geoffrey Warnock, principal of Hertford College of Oxford University, expressed it on the air, Kant sought to show that the "essential requirements of morality are really built into the concept of rationality itself." Any rational being, Kant declared, has to recognize those requirements as binding.

But is the stock market rational? It may take further punishment before the market players recognize that their self-interests are bound up in the common interest. The sharp fall in the Dow Jones industrial average in New York on Friday, without a sign of outside cause, may imply that the Kantian lesson has not yet been learned. But Monday suggested that the big institutions in New York and around the world are still learning.

The experts in London feel that the markets are learning caution the hard way.

John von Neumann and Oskar Morgenstern, in their seminal book "The Theory of Games and Economic Behavior," have given Kant's lesson modern form. They demonstrated that the individual economic actor must recognize that he is involved in a multi-player or multi-firm game, in which the actions of others can make his own play self-destructive if he does not anticipate what others will do. The individual player, they counsel, needs to find a strategy that maximizes his gains while minimizing his risks. The learning process required to master "mini-max" strategy is painfully proceeding in London, New York and other financial capitals.

RATIONALITY

- (16) Hemlock gives drug dosage table "only for the information of members of the National Hemlock Society for possible self-deliverance from a future terminal illness and used in conjunction with the material found in the book, 'Let Me Die Before I Wake'." "Keep this document in a secure, private place".

The table gives the generic names, trade names, lethal dose, and the toxicity of 18 drugs, as well as the quantity needed.

There are a number of footnotes, and advice such as this: "If you are considering taking your life because you are unhappy, cannot cope, or are confused, please do not use this table, but contact a Crisis Intervention Center or Suicide Prevention Center. Look in the telephone book, etc."

Membership in the National Hemlock Society is \$20 a year, \$15 for low-income persons over 60. PO Box 66218, Los Angeles, CA 90066-0218.

NEWSLETTER MATTERS

- (17) Back Issues of Russell Society News are available, and for sale, at \$7.50 for any year (includes USA postage.) No charge for borrowing; borrower pays USA postage both ways, \$3.75 for any year. Foreign postage is higher in both cases. Order from the newsletter, address on Page 1, bottom.

RELIGION

- (18) "Politics in the Name of God", from the Christian Science Monitor, 11/4/87, or Bad News for Freethinkers, with thanks to JOHN TOBIN:

GLOBAL PHENOMENON

POLITICS IN THE NAME OF GOD

By Robin Wright
Special to The Christian Science Monitor

THE political activism of diverse and disparate religions, an increasingly influential factor worldwide, is taking shape as a broad and enduring phenomenon in the late 20th century.

The emergence of religion in politics is a coincidental trend, and far from cohesive. Among various movements — such as resurgent Islam, liberation theology, fundamentalist Judaism, and Sikh activism — there are more differences than similarities in flash points, tactics, and goals.

Yet the trend is evolving in similar ways and over some similar issues that suggest common themes with long-term consequences, according to a cross section of sociologists, political analysts, regional specialists, clergymen, and psychologists interviewed. Among the similarities:

- Many of the movements, which generally grew up around intellectuals, theologians, or activist cells on the fringe of politics, are now moving into the mainstream, even though they remain in the minority.

- By the 1980s, it had begun to look as though a revival of religion, one with important implications for political life, was under way everywhere," said Harvard Divinity School theologian Harvey Cox in his book "Religion in the Secular City."

- "Today," he added in an interview, "it's a tidal movement, and it's not going to go away."

- Even in the United States, religion has penetrated into mainstream politics. The evangelical vote is now part of presidential campaign lingo. And for the first time, both parties have clergymen — Republican Pat Robertson and Democrat Jesse Jackson — who are major contenders for the presidency.

- In Egypt, the Muslim Brotherhood became the largest legal opposition party in last April's legislative elections. In Brazil, 34 evangelical congressmen are campaigning to prevent the new constitution from listing Roman Catholicism as the state religion.

- Many movements, initially prominent mainly because of their opposition activities, are gaining greater legitimacy by diversifying roles and institutionalizing their movements, often in constructive ways.

- With US funding, a Polish church group is planning a \$10 million agricultural project to help private farms update machinery and finance water and sewage projects in villages. Islamic groups in Egypt now provide social services, such as good-quality education, at little or no cost to families.

- Catholic "base communities" in Nicaragua provide self-help economic projects as well as Bible study, while US evangelicals have reportedly estab-

lished 19 schools serving 18,000 children in El Salvador.

As religious groups further entrench their roles in the political and social system, several are in the process of ensuring they will be long-term players. Specialists interviewed almost unanimously agreed that religion will be an increasingly important force in politics well into the next century.

- Religious movements are increasingly bold in challenging both left- and right-wing regimes as well as democracies. In Tibet, Buddhist monks led protests in September against Chinese communist rule. The protests disintegrated into the province's worst rioting since a 1969 nationalist uprising.

- In the Philippines and Haiti, the Catholic clergy played major roles in the February 1986 overthrows of two notorious right-wing dictators. Under the latest Central American peace plan, the Salvadorean government's talks with rebels are held under church auspices. In Nicaragua, Miguel Cardinal Obando y Bravo heads the National Reconciliation Commission that will oversee compliance with the plan.

- Both superpowers have been cowed by Islamic *mujahideen* (holy warriors) who are ready to die to rid their lands of outside influence. The US withdrew its Marines and special envoys in 1984 under pressure from Lebanese Shia. For eight years, Soviet troops have been bogged down in Afghanistan in a seemingly unwinnable war against predominantly Sunni zealots.

- The result is that religious components, which do not neatly fit either rightist or leftist labels, have added a volatile new dimension to the modern political spectrum.

- Though the US and Soviet Union both have politicized religious movements, the trend is most vibrant in the developing world — the more than 100 nations ranging from thriving newly industrialized states to impoverished countries, most of which have been independent only since World War II.

- As elsewhere, religious activism in the third world has been played out in different ways and on diverse issues. But among young or underdeveloped nations, it also serves a similar need to establish an independent identity, a factor that will be examined further in this series. Activism is now even widespread in unlikely places, and it is often not limited to a single faith.

- In Asia, Singaporean politics has recently been stirred by leftist Catholic, fundamentalist, Protestant, and Islamic groups. Buddhist monks in Sri Lanka have been at the forefront of demonstrations since July to protest a peace treaty orchestrated by India. Indonesia is reportedly now expressing concern about a political over-kill from Malaysia's Islamic resurgence.

- In Africa, Angola's Marxist regime is being challenged by a fledgling

Christian revival. In historically Catholic Latin America, evangelical Protestant groups, whose message and motive are staunchly anticommunist, now claim 20 percent of Honduras's population and a wide following among Nicaragua's contra rebels.

- Though each movement is still most active in local issues, many are also challenging the era's dominant political and economic themes, including the current emphasis on a bipolar world carved up between superpowers, and on modernization — combining secularism and science — as the most effective channels to human progress.

INDEED, the conflict between modernity and morality is a particularly prevalent common denominator, analysts say. "Modern scholarship tends to see zealotry as a retrogression into primitivism," said Dr. Ashis Nandy, a social theorist at New Delhi's Center for the Study of Developing Societies. "On close look it turns out to be a byproduct of modernity."

- That does not mean that the devout of any faith, including Iran's religious *mullahs*, are anti-modern. It instead signifies a challenge to the status quo and to the current era's priorities.

- Many religious activists "hold that the underlying malaise of today's world stems from its loss of faith. They complain that secularism, fed by mindless gadgetry and tasteless urban hypertrophy, has made our lives trivial and vacuous and our world a wilderness of hollow men, lacking depth of transcendence," Mr. Cox explained.

- In the US, for example, the revival emerged against the backdrop of the '60s counterculture, a period marked by student rebellions, increased drug use, soaring divorce rates, and campaigns to legalize abortion. The sense of national might and right was also shattered by the Vietnam war. "In this climate of perceived moral collapse, a new politicized fundamentalism arose to meet the national challenge," said Wade Clark Roof, a University of Massachusetts sociologist, in his book "Prophetic Religions and Politics."

- In the third world, modernizing has also become synonymous with Westernizing, or imitation that ignores or challenges ancient cultures. Technological or scientific advancement became subtly interwoven with acceptance of foreign codes of conduct and morality, both with a secular veneer.

- In Iran, the Shah was toppled in part because of his attempts to mold Persia, one of the oldest civilizations, into a third-world version of a Western industrialized nation, from the way people dressed to the type of development planned. Ayatollah Khomeini referred to it as "Westoxication."

- Asked in 1986 by Time magazine what the US did best, Zambian Presi-

dent Kenneth Kaunda said, "You have developed your science and technology in an admirable way, but I am not sure that you use these wonderful achievements in this... field in the interest of man, as God wants us to do."

- Brown University sociologist Paget Henry commented: "Religion contributes a powerful antidote to the assault of Westernization and modernization on peripheral societies."

- Religion's emergence as a powerful political force has thus generally grown out of social and political uncertainty when governments or societies have failed to provide acceptable or workable solutions. In several areas where religion is a growing force, the political climate is ripe for transition.

DURING the transition, religion can play three roles. First, the continuum of various faiths, which have survived centuries and outlived hundreds of political dynasties, provides ideals by which to determine goals. Second, religions offer alternatives, either for action or for systems of government.

- Third, religion can offer physical or psychological sanctuary, particularly where legitimate opposition is banned. In one-party states or dictatorships, the church, mosque, temple, and synagogue often become the last refuge for those seeking a better secular life.

- All major monotheistic religions preach equality and justice, making them natural allies in opposing tyranny. They also usually have the resources, facilities, and infrastructure with which to organize. Religions, untainted by failure in the modern era, have thus supplied a context through which to pursue and, in some cases, fight for alternative ways of life.

- In tracing the trend, another striking feature is the similarity in the evolution and timing. In most cases, the seeds for religion's larger role in politics were sown in the 1960s.

- In the 1970s, the movements picked up steam, but began to fragment over tactics and goals. Comparatively moderate fundamentalists began to be supplanted by extremists, or religious activists joined forces with revolutionary movements. Both were evident in an explosion of militancy, particularly in the third world, at the decade's end.

- While politicized religions remain minority movements in all regions, their numbers often belie their impact. For, in the 1980s, they have become among the most energetic and dynamic players in world politics.

Robin Wright is a senior associate at the Carnegie Endowment for International Peace.

POLITICS

- (19) Laird Wilcox -- who in 1987 published "Guide to the American Left" and "Guide to the American Right", \$24.95 each, postpaid -- provides this background on himself:

The Wilcox Collection of Contemporary Political Movements

Laird Wilcox, editor of the directories and bibliographies listed above, is founder of the WILCOX COLLECTION ON CONTEMPORARY POLITICAL MOVEMENTS in Kenneth Spencer Research Library at the University of Kansas. The WILCOX COLLECTION, established in 1965, occupies over 1,500 feet of shelf space and contains some 5,400 books and pamphlets, 4,100 serial titles, 500 audio tapes and files on over 7,500 organizations on the American Left and the American Right. Included are advertisements, broadsheets, posters, flyers, correspondence and catalogs. The collection is housed in temperature and humidity controlled conditions and is regularly used by scholars and researchers. Laird Wilcox is active in civil liberties causes, edits CIVIL LIBERTIES REVIEW, and is a frequent speaker and guest lecturer.

We admire his Newsletter #9. Here it is:

What is Political Extremism?

By Laird Wilcox

Extremism Defined!
Content versus Style!
Problems of Objectivity!
Human Fallibility!
Traits of Extremists!
The Common Thread!

Roger Scruton, in the Dictionary Of Political Thought (Hill & Wang, New York, 1982) defines "extremism" as:

"A vague term, which can mean:

1. Taking a political idea to its limits, regardless of 'unfortunate' repercussions, impracticalities, arguments and feelings to the contrary, and with the intention not only to confront, but also to eliminate opposition.
2. Intolerance towards all views other than one's own.
3. Adoption of means to political ends which show disregard for the life, liberty, and human rights of others."

This is a very fair definition and it reflects my experience that "extremism" is essentially more an issue of style than of content. In the twenty-five years that I have been investigating political groups of the left and right, I have found that many people can hold very radical or unorthodox political views and still present them in a reasonable, rational and non-dogmatic manner. On the other hand, I have met people whose style was shrill, uncompromising and distinctly authoritarian although their views were relatively conventional, or at least within the political mainstream. The latter demonstrated a starkly extremist mentality while the former demonstrated only ideological unorthodoxy, which is hardly to be feared in a free society such as our own.

I don't mean to imply that content is entirely irrelevant. People who tend to adopt the extremist style most often champion causes and adopt ideologies that are essentially "fringe" positions on the political spectrum. Advocacy of "fringe" positions, however, gives our society the variety and vitality it needs to function as an open democracy, to discuss and debate all aspects of an issue and to deal with problems we may otherwise have a tendency to ignore. I think this is the proper role of radical movements, left and right. The extremist style is another issue altogether, however, in that it seriously hampers our understanding of important issues, it muddies the waters of discourse with invective, fanaticism and hatred, and it impairs our ability to make intelligent, well-informed choices based on a comprehensive survey of all the facts and all points of view.

Another, perhaps more popular, definition of "extremism" is that it represents points of view we strongly disagree with, advocated by someone we dislike intensely, whose interests are contrary to our own!! In point of fact, political ideologues often attempt definitions of extremism which specifically condemn the views of their opponents and critics while leaving their own relatively untouched, or which are otherwise biased toward certain views but not others. To be fair, a definition must be equally applicable across the entire political spectrum.

The terms "extremist" and "extremism" are often used irresponsibly as epithets, "devilwords" to curse or condemn opponents and critics with! I find, however, that the extremist style is not the monopoly of any sector of the political spectrum. It is just as common on the "left" as it is on the "right," and sometimes it shows up in the political "center" as well. Other belief systems, such as religions, often adopt an extremist style, too.

TRAITS OF "EXTREMISTS":

In analyzing the rhetoric and literature of several hundred "fringe" and militant "special interest" groups I have identified several specific traits that tend to represent the extremist style. I would caution you with the admonition, however, that we are all fallible and anyone, without bad intentions, may resort to some of these devices

from time to time. But with bonafide extremists these lapses are not occasional and the following traits are an habitual and established part of their repertoire. The late Robert Kennedy, in *The Pursuit Of Justice* (1964), said: "What is objectionable, what is dangerous about extremists is not that they are extreme, but that they are intolerant. The evil is not what they say about their cause, but what they say about their opponents."

1. **Character Assassination.** Extremists often attack the character of an opponent or critic rather than deal with the facts and issues he raises or debate the points of his arguments. They will question his motives, qualifications, past associations, values, personality, mental health and so on as a diversion from the issues under consideration.
2. **Name calling and labeling.** Extremists are quick to resort to epithets (racist, subversive, pervert, hater, nut, crackpot, degenerate, Un-American, Anti-Semite, Red, Commie, Nazi, Kook, etc.) to label and condemn an opponent in order to divert attention from his arguments and to discourage others from hearing him out.
3. **Irresponsible sweeping generalizations.** Extremists tend to make sweeping claims or judgements on little or no evidence, and they have a tendency to confuse similarity with sameness. That is, they assume that because two (or more) things are alike in some respects they must be alike in all respects! Analogy is a treacherous form of logic and its potential for distortion and false conclusions even when the premises are basically correct is enormous.
4. **Inadequate proof for assertions.** Extremists tend to be very fuzzy on what constitutes proof for their assertions. They also tend to get caught up in logical fallacies, such as *post hoc ergo propter hoc* (assuming that a prior event explains a subsequent occurrence simply because of their "before" and "after" relationship). They tend to project "wished for" conclusions and to exaggerate the significance of information which confirms their prejudices and to derogate or ignore information which contradicts them.
5. **Advocacy of double standards.** Extremists tend to judge themselves in terms of their intentions, which they tend to view generously, and others by their acts, which they tend to view very critically. They would like you to accept their assertions on faith but they demand proof for yours. They also tend to engage in "special pleading" on behalf of their group, because of some special status, past association or present disadvantage.
6. Extremists tend to view their opponents and critics as essentially evil. Their enemies hold opposing views because they are bad people; immoral, dishonest, unscrupulous, mean-spirited, bigoted, cruel, etc., and not merely because they may simply disagree, see the matter differently, have competing interests or are perhaps even mistaken!
7. Extremists tend to have a Manichean worldview. That is, they tend to see the world in terms of absolutes of good and evil, for them or against them, with no middle ground or intermediate positions. All issues are ultimately moral issues of right and wrong or desperate issues of survival. Every event and development is seen as potentially pivotal in the clash of forces. Their slogan tends to be "he who is not with me is against me!"
8. Extremists very often advocate some degree of censorship and repression of their opponents and critics. This may range from an active campaign to keep them from media access and a public hearing, as in the case of blacklisting, banning or "quarantining" dissident spokesmen, or actually lobbying for repressive legislation against speaking, teaching or instructing the "forbidden" information. They may attempt to keep certain books out of stores or off of library shelves or card catalogs, discourage advertising with threats of reprisals, keep spokesmen for offending views off the air, etc. In such instances the goal is not to win, but to win by any means possible. Extremists would prefer that you listen only to their point of view and discourage objective comparisons.
9. Extremists tend to identify themselves in terms of who their enemies are, who they hate and who hates them! Accordingly, they often become emotionally bound to their enemies, who are often competing extremists on the opposite pole of the ideological spectrum or perhaps dissidents from their own camp. They tend to emulate their enemies in certain respects, adopting the same style and tactics to a certain degree. Even "anti-extremist" groups often exhibit the extremist style in this regard, especially with respect to censorship and repression of dissent.
10. Extremists are given to argument by intimidation. That is, they frame their arguments in such a way as to intimidate others into accepting their premises and conclusions. To disagree with them, they imply, is to ally oneself with the devil or give aid and comfort to the "bad guys." This ploy allows them to define the parameters of debate, cut off troublesome or embarrassing lines of argument, and keep their opponents on the defensive.
11. **Wide use of slogans, buzzwords and thought-stopping cliches.** For many extremists simple slogans substitute for more complex abstractions in spite of a high level of intelligence and sophistication. Shortcuts in thinking and reasoning matters out seem to be necessary in order to appease their prejudices and to avoid troublesome facts and embarrassing counter-arguments. Buzzwords and cliches are commonplace in the extremist repertoire.
12. **Doomsday thinking.** Extremists often predict dire or catastrophic consequences from a situation or from failure to follow a specific course, and they exhibit a kind of "crisis-mindedness." It can be a Communist takeover, a Nazi revival, nuclear war, currency collapse, worldwide famine, drought, earthquakes, floods or the wrath of God. Whatever it is, it's just around the corner unless we follow their program and listen to their special insights!
13. Extremists often claim some kind of moral or other superiority over others. Most obvious are claims of general racial superiority -- a master race, for example. Less obvious are claims of ennoblement because of alleged victimhood, a special relationship with God, membership in a special "elite" or revolutionary vanguard. They also take great offense when one is "insensitive" enough to dispute these claims or challenge their authority.
14. Extremists tend to believe that it's OK to do bad things in the service of a "good" cause. They may deliberately lie, distort, misquote, slander or libel their opponents and critics, or advocate censorship or repression in "special cases" involving their enemies. This is done with no remorse as long as it's useful in defeating the Commies or the fascists (or whoever!) Defeating an "enemy" becomes an all encompassing goal to which other values are subordinate. With extremists, the ends often justify the means.
15. Extremists tend to place great value on emotional responses. They have a reverence for propaganda, which they may call education or consciousness-raising. Consequently, they tend to drape themselves and their cause in a flag of patriotism, a banner of righteousness or a shroud of victimhood! Their crusades against "enemies" may invoke images of the swastika, the hammer and sickle or some other symbol, as the case may be. In each instance the symbol represents an extremely odious concept in terms of their ideological premises. This ploy attempts to invoke an uncritical gut-level sympathy and acceptance of their position which discourages thoughtful examination of their premises and the conclusions which they claim necessarily derive from them.
16. Some extremists, particularly those involved in "cults" or religious movements, including but hardly limited to, fundamentalist evangelical Christians, militant Zionist Jews, members of the numerous "new age" groups and the followers of certain "gurus," claim some kind of supernatural, mystical or divinely-inspired rationale for their beliefs and actions. Their willingness to force their will upon others, censor and silence opponents and critics, and in some cases to actively persecute certain individuals or groups, is ordained by God! This is surprisingly effective because many people, when confronted by this claim, are reluctant to challenge it because it represents "religious belief" or because of the sacred cow status certain religions have for some people.

THE COMMON THREAD

Extremist traits tend to have three things in common:

1. They represent some attempt to distort reality for themselves and others.

2. They try to discourage critical examination of their beliefs, either by false logic, rhetorical trickery or some kind of intimidation.
3. They represent an attempt to act out private, personal grudges or rationalize the pursuit of special interests in the name of the public welfare.

CAUTION!

Remember, human beings are imperfect and fallible. Even a rational, honest, well-intentioned person may resort to some of these traits from time to time. Everyone has strong feelings about some issues and anyone can get excited and "blow off" once in awhile. Most of us still retain our basic common sense, respect for facts and good will toward others. The difference between most of us and the bonafide extremist is that these traits are, once again, an habitual and established part of their repertoire. Extremists believe they're doing the right thing when they exhibit the extremist style in the service of their cause!

ONE FINAL NOTE!

The truth of a proposition cannot be inferred merely from the manner in which arguments in its behalf are presented, from the fact that its adversaries censor and harass their opponents, or because they commit any other act or combination of acts suggested in this essay. Ultimately, the truth of any proposition rests on the evidence for it. To impeach a proposition merely because it is advocated by obvious "extremists" is to dismiss it *ad hominem*, that is, because of who proposes it. The fact is that "extremists" are sometimes correct -- sometimes very correct -- because they often deal with the hot issues, the controversial issues many people choose to avoid. So, before you perfunctorily write somebody off as an "extremist" and close your eyes and ears to his message, take a look at his evidence. It just might be that he's on to something!

PLAY REVIEW

(20) Turing. BOB DAVIS reports:

In November I was in New York for a few days and one of the things I did was attend, with a friend, the new English play, "Breaking the Code" starring Derek Jacobi (of "I, Claudius" fame). I thought a little review for the RSN was in order. BR is mentioned once in the play, although that is not the reason for this review.

The play is based on a book that came out a few years ago, called "Alan Turing and the Enigma Machine". It combined a lot of discussion of mathematics, philosophy, and computers. Turing is considered to be the inventor of computers. He is also the man who broke the German Enigma code in WWII, and therefore one of the most important individuals involved in Britain's survival and Germany's defeat. He was also a homosexual at a particularly harsh time to be one. Worse probably is that his sexual activity crossed class lines, which in Britain was, and still is, a serious breach of the social code. Had he stayed in Cambridge, he probably would have been all right, but he moved to the University of Manchester. In Manchester he was tried for his behavior, and put on a drug rehabilitation program (one result of which was that he grew breasts). Finally, in 1954, he committed suicide by eating an apple dipped in cyanide. (His favorite movie had been "Snow White".)

The play explains this story. It melds his personal story with ideas of math and philosophy and the invention of the computer. The main reason I mention it for Russellites is the unusual play of ideas in the script and, most importantly, the fact that ideas and thinking are good and interesting in themselves. One reason it succeeds is that it is a very good script, written by someone who makes ideas and the love of ideas come to life in everyday words. Even in a Broadway theatre, this intellectualizing, for want of a better description, held the crowd and got an enthusiastic response. (I must admit there were three gentlemen behind us who were grouching about no entertainment in the play, and left at intermission, presumably in search of a little T & A elsewhere.)

The other reason this play held the crowd was the powerful acting of Jacobi. He really seemed to be into this role and became Alan Turing. He so seemed to be in love with ideas that the audience went along with him and seemed to fall in love with ideas too.

Afterwards we went backstage and met Jacobi, which was a real treat. Since Wittgenstein was mentioned repeatedly in the play, I told Jacobi naughty stories about him as gotten from the notorious biography by W. W. Bartly III. Jacobi seemed to enjoy them immensely, telling me that I had "informed the performance for tomorrow".

So if you're in New York, I recommend this play; after all, I helped "to inform it".

NEWS ABOUT MEMBERS

BOOK REVIEW

- (22) A hatchet-job on A. J. Ayer. Ayer's "Wittgenstein", reviewed by Arthur C. Danto, who teaches philosophy at Columbia University. From the Washington Post's Book World, 8/18/85, p.1, with thanks to DON JACKANICZ.

A. J. Ayer earned an early notoriety through a polemical and abrasive essay in analytical philosophy, his "Language, Truth and Logic" of 1936. Though he later patronized this as very much a young man's book, Ayer remains, half a century later, largely committed to its once incendiary thesis: that metaphysics is nonsense; that propositions are meaningful only if verifiable through sense experience; that, though nonsense by this severe criterion, moral propositions have a kind of "emotive meaning" in that they express the feelings of those who utter them; and that philosophy has no task beyond elucidating the language and concepts of the natural sciences. His writings have brought him considerable respect in the form of important professorships at London and Oxford, as well as a knighthood. And they are throughout marked, as is this book, by an unfailing acuity and lucidity, an engaging urbanity and a wry wit, but also, it is perhaps not too harsh to add, an unmistakable philistinism. Sir Alfred is numb to any writing he finds exotic, mystical, religious, or -- well -- metaphysical. This means, in the present book especially, that a certain class of utterances distinctive of its subject is ruled out by him as oracular nonsense.

The subject of this book, Ludwig Wittgenstein, is by common recognition one of the great philosophical thinkers of this century and perhaps of any century. Ayer, however, restrained his enthusiasm for Wittgenstein -- "My admiration for him falls short of idolatry" -- places him nevertheless "second only to Bertrand Russell among the philosophers of the Twentieth Century." One would be hard pressed to identify more than two or three others as belonging to this restricted set -- Heidegger certainly, Sartre probably, Dewey possibly -- for philosophical genius remains rare even in a period in which philosophical competence can seldom have been higher or attained by so many. The literature on Wittgenstein, whether direct as commentary, or indirect, as must be virtually everything written in English by philosophers since his work became known, is simply immense. And Ayer is as considerable a philosopher as any who have applied themselves to describing what Wittgenstein achieved as a thinker. Yet he is less qualified than many, in part through temperament, but also in part because he holds strong views on a good many of the issues to which Wittgenstein addressed himself, and which he feels constrained to defend against him.

"Language, Truth and Logic" derived from certain views taken up from Wittgenstein by the Logical Positive school of philosophy to which Ayer belonged. And a central tenet of Ayer's theory of knowledge, the existence of private languages, was singled out for attack in a celebrated section of Wittgenstein's "Philosophical Investigations". This book has, in consequence of its author's relationship with his subject, an air of setting the record straight, of taking Wittgenstein's thoughts up one by one, testing them against Ayer's own philosophical views, to see, on balance, how many survive and how many are simply wrong. In a way, it reads like a tutor's extended remarks on the papers of an immensely gifted but lamentably erratic pupil. The soul of Wittgenstein is screened out by this format.

Wittgenstein's writings fall into two main periods, with the central texts of each devoted to aspects of the philosophy of language. The "Tractatus-Logico-Philosophicus" of 1922 ought to show how language must be if it is to represent the world, and how the world must be if language is to represent it, as well as the limits of the sayable. The "Philosophical Investigations", published posthumously in 1953, rejects the picture of language as representational completely, contending that languages go with certain forms of life, and that meaning is a matter of use, of what those who belong to a form of life do with the sentences they understand. But each of the books also expresses certain powerful, one might say mystical, intuitions, about the deepest concerns of the self. The two main works are written in radically different styles: the "Tractatus" sets down seven theses, together with remarks and observations of varying degrees of importance, and each is given a kind of numerical value. The "Investigations" is composed of a sequence of brief dialogs between the narrator and an intimately addressed objector. There is scarcely a line in either book which is not dense with philosophical excitement, poetry, urgency and passion. And the thoughts expressed are at times so unusual, so powerful and unexpected as to leave the reader stunned. To be sure, the writing is often obscure, and often wrong when it is clear, but no study of Wittgenstein for a general audience can be adequate that does not convey an intense philosophical personality thinking at the limits of thought about those limits. Totting up scores and misses is not the way to do this.

Readers will enjoy the deft and amusing biographical sketch with which Ayer's book opens. They will profit from the concluding essay on Wittgenstein's influence, which is charmingly parochial, like a piece of family history, since Ayer writes from personal experience about those, himself included, who actually knew this fierce and original man. One can never seriously disrecommend a book by A. J. Ayer, but this one will be of primary interest to those who are interested in him, and are anxious to know what his views on specific theses of Wittgenstein are. But this means that readers not conversant with the recent history of theories of meaning, truth and knowledge, will find the discussion distant and abstract. If one wants to know about Wittgenstein, then better simply to read him. One will get quickly lost, but in compensation, one will be moved and exalted. Perhaps the time to take this book up is when one is lost; but he pays a price for putting oneself in Professor Ayer's hands, and the sense of having found one's way may be an illusion. He himself is not always right, but sorting out the right from wrong belongs to the further literature of the subject.

MEMBERSHIP STATISTICS

(25) 300. On January 11th, 1988, CHARLES SLOAN enrolled as a new member. That was a significant event for the BRS because Charles became the 300th member. Never before has the BRS achieved a current membership list of 300. We like to think it won't stop at 300. No reason why it should.

BOOK REVIEWS

- (26) "The World As I Found It" by Bruce Duffy -- which is mainly about Wittgenstein, but also brings in Russell and Moore -- was reviewed last issue (RSN56) by four reviewers. Two of our members reacted to the book; one of them knew Russell intimately: his daughter, Kate.

Kate Tait writes:

Having read in Russell Society News several favourable reviews of Bruce Duffy's book, "The World As I Found It", I feel I must write to tell you that it is an ATROCIOUS book, the worst kind of mixture of fact and fiction, jumbling together real facts and writings with the inventions of the author's hideous mind. He does not hesitate to attribute to these great men mean actions, petty emotions, and shallow thoughts quite unworthy of them; not that they were faultless, far from it, but their faults were not the ones Duffy imagines. As I feared, the reviewers take as true the inventions as well as the facts, enabling them to have a comfortably condescending view of these after all too human men. Yet it is not their imperfections that I mind so much; it is the ugliness of the ones he ascribes to them, and the triviality of the thoughts he puts into their heads. Do urge your reader not to buy the book.

Steve Reinhardt writes:

"I bought the book in August, when I heard it discussed on National Public Radio. To put it mildly, I did not care for the book. Russell, Moore and Wittgenstein were presented, not as characters, but caricatures lacking any depth and subtlety. It would be interesting to learn how other members feel."

Readers, you have been warned!

FINANCES/MONEY MATTERS

- (27) Treasurer's Report for the year ending 12/31/87:

Bank balance on hand (12/31/86).....	953
Income: New members.....	1722
Renewals.....	5906
total dues.....	7628
Contributions.....	127*
Library sales and rentals.....	355
Misc.....	149
total income.....	8259
	9212
Expenditures: Information & Membership Committees.....	2745
Library expense.....	218
Subscriptions to "Russell".....	2247
Meeting.....	237
Misc.....	100
total spent.....	5547
Payment of 1986 liability.....	1327
Bank balance on 12/31/87.....	2338

*The 127 shown above is not a true measure of contributions; it is far too low. Most donations are made in the form of dues payments that are higher than "regular" dues. EG, a Sustaining Member, who pays \$50 in dues, is actually making a \$20 contribution, which is not reflected in the 127 figure.

DUES

- (28) Last Call for Dues. Do you know what happens to people who don't pay their renewal dues? They become Non-Persons. They vanish. They are gone. Ugh! We won't labor the point. We think you got the message. Act now.

MEMBERS CONTRIBUTE

- (29) We thank GREGORY LANDINI and HERB LANSDELL for their contributions during the latter half of 1987...and the following early renewers who included their 1988 contributions in their dues payments: LOU ACHESON, JAY ARAGONA, DONG-IN BAE, MICHAEL BRADY, POLLY & WHITFIELD COBB, ANGELO D'ALESSIO, BOB DAVIS, RONALD EDWARDS, LEE EISLER, WILLIAM FIELDING, ARTIE GOMEZ, DONALD GREEN, CHARLES HILL, DON JACKANICZ, RICHARD JOHNSON, HERB LANSDELL, GLADYS LEITHAUSER, JOHN LENZ, MARTIN LIPIN, GLENN & SANDRA MOYER, NICK PACINO, STEVE REINHARDT, MICHAEL ROCKLER, HARRY RUJA, WARREN SMITH, JOHN TOBIN, HERB & BETTY VOGT, DEWEY WALLACE, MICHAEL WEBER, CHARLES WEYAND, and VINCENT WILLIAMS. You are indeed helping, all of you.

FINANCES

- (30) Peter Cranford has been thinking about our money problem -- the problem of building up a substantial bundle of cash, which will make our long-term survival as an organization more likely. He is not setting down specifics; rather, he is suggesting concepts. He writes:

You might consider setting up a special money fund whose sole purpose would be to generate more money, and to do this ad infinitum - in pyramid fashion. Emory University has just done this to the point where it rivals Harvard and Texas [in endowment]. Just to ask for it may not be strong enough. Perhaps you might examine the packets James Roosevelt sends out. He justifies his requests to the elderly in long and effective letters. You might use seed money to develop a mailing list of those most apt to contribute.

We thank Peter for his suggestions, and will see what we can do with them.

Ladies and Gentlemen: start thinking!

Harder!

BOOK REVIEW

- (31) Volume 8. A technical paper for people who don't like technical papers. That's how we think of IRVING ANELLIS's superbly written review of Volume 8 of McMaster Editorial Project's "The Collected Papers of Bertrand Russell." Even though you probably won't understand all of it, we think you'll be pleased with what you do understand. Here it is:

THE LOGICO-LINGUISTIC TURN - RUSSELL'S REVOLUTION IN PHILOSOPHY:
A Review of John G. Slater (editor), Bertrand Russell, The Philosophy of Logical Atomism and Other Essays, 1918-19, Volume 8, The Collected Papers of Bertrand Russell, London, Allen & Unwin, 1986; xl + 418 pp.

Technical philosophy has, since its inception with the ancients, undergone a number of revolutionary changes, both with regard to its subject-matter and its methodology. These words, and the words which follow, may be controversial; but the profound changes which Russell's work contributed to philosophy and the philosophical method in the twentieth century are universally acknowledged, and constitute a revolution in philosophy.

Ancient philosophy was fundamentally metaphysical in its interests and speculative and rationalistic (i.e. syllogistic or Aristotelian) in its methodology. In this sense, ancient philosophy extended well into the sixteenth and early seventeenth centuries. During the Renaissance, natural philosophy or physics broke away from speculative philosophy and became an empirical and mathematical science in the hands of Galileo, Newton, and others. The philosopher of science in the age of the Renaissance was Francis Bacon. However, it was Descartes who turned the revolution in technical philosophy in the seventeenth century. Under the leadership of Descartes, philosophy became fundamentally epistemological in its interests and psychological or phenomenalist in its corresponding methodology, depending upon whether one was an idealist or an empiricist.

From the middle of the nineteenth century onwards, mathematical logic emerged as a new branch of mathematics, beginning with the work of Boole, Peirce, Schröder and others in algebraic logic, and, in the last quarter of the nineteenth century, with the development of axiomatic presentations of quantification theory pioneered by Frege, Peano, and Russell. These two trends in logic were united by Whitehead and Russell in their Principia Mathematica, and modern mathematical logic, or "logistic" as it was first called, came into existence. With the new mathematical logic in place, philosophers acquired a new and powerful tool for investigation. Mathematical logic acquired the status of an "ideal language" because of its analytical power to grammatically parse propositions into function and argument rather than into subject and predicate whenever the complexity of the structure of propositions required this exceptionally deep level of dissection. At the same time, mathematical logic incorporated the old classical syllogistic with its subject-predicate structure, as a fragment which would likewise be available as a tool of dissection. Russell was the first of the modern or twentieth-century philosophers, and he undertook, as such, to employ logical or linguistic analysis to his subjects. The papers in this volume represent his first precipitous steps. The work of the logical positivists of the Vienna Circle and of various other sympathetic philosopher-scientists to develop and use logical and linguistic analysis for the investigation of the logical structure of experience, of physical reality, and even of language itself, would follow a decade later, in the later years of the 1920s.

During the period in which the papers in this volume were written, the Principia was already just in place, and Russell undertook the arduous struggle to develop a scientific philosophy whose methodological tool would be the grammar of linguistic and logical analysis. The title essay in this collection is Russell's most famous and exemplary piece in which a detailed exposition of logic forms a prelude to a rather brief discussion of the logical analysis of problems of metaphysics (making a nice anticipation of Carnap's proclamation of "The elimination of metaphysics through the logistic analysis of language").

Philosophical problems once were rather inelegantly described to me as a bowl of spaghetti; so intertwined are the strands that one cannot pick up one strand without picking up the whole. Mathematics is commonly described as a pyramid in which more advanced fields of mathematics are built upon lower mathematics, algebra on arithmetic, analysis on algebra and geometry, etc.. We can express these concepts in more modern terminology, less colorful but more elegant, in terms of parallel processing and linear processing. In a description of the scientific philosophy which uses mathematical logic and linguistic analysis as tools, both of these similes apply at once.

Russell's earliest and most prominent concerns, after completion of his work on the foundations of geometry (1896) were with / physics in particular with the physics of solid mechanics, with special attention to the geometric foundations of Newtonian dynamics and the motions of rigid bodies. In the years immediately after completion of the Essay on the Foundations of Geometry, Russell explored the possibility of making a transition from geometry to physics, through the intermediacy of a "transition from geometry to dynamics" (see My Philosophical Development, New York, Simon and Schuster, 1959, pp. 44-45, for example). His goal was to establish in physics the same kind of certainty that had traditionally been associated with geometry. After a visit to the Cavendish laboratory where he studied the work of James Clerk Maxwell on gas kinetics and electro-dynamics, Russell reflected, in a letter to Philip Jourdain that "what is philosophically in the principles of dynamics belongs to problems of logic and arithmetic" (Letter to P. E. B. Jourdain of 15 April 1910; quoted p. 132, in I. Grattan-Guinness, Dear Russell - Dear Jourdain, London, Duckworth, New York, Columbia University Press, 1977). Russell's aim was to develop an axiomatic presentation of physics in terms of a small number of physical primitives. His goal was not unlike that of David Hilbert, who, having provided an axiomatization of geometry general enough to accommodate both Euclidean geometry and non-Euclidean geometries, sought next to provide an axiomatization of physics (Hilbert's sixth problem, the mathematical treatment of the axioms of physics, with work in foundations of geometry having suggested the need "to treat... by means of axioms, those physical sciences in which mathematics plays an important part; first of all, the theory of probability and mechanics"). Important work towards this goal began in the mid-1930s, some thirty-five years after the problem was first stated by Hilbert in 1900; the first notable success being the axiomatization of quantum mechanics by the development by Birkhoff and von Neumann of a quantum logic. The next steps occurred in the 1950s, when mathematicians such as Wightman turned their attention to the axiomatization of quantum field theory, and Anellis in the late 1970s showed that quantum logic was a one-dimensional model for an n-dimensional spacetime calculus for the Riemann-Minkowski 4-dimensional manifold. In the first decade of the twentieth century, both Russell and Hilbert, who followed the same path in their identification of the problem of the axiomatization of physics, found that their logical tools were not yet sufficiently developed for such an enterprise. Both men were led, having once formulated the problem, to development of mathematical logic as an axiomatic system, and to attempt to use their new logic as the foundation for the construction of all of mathematics. Thus it was that in 1910, Russell, with the assistance of Whitehead, undertook work on the Principia.

In 1913, after completing work on the three-volume Principia, Russell resumed his "search for a starting-point which would permit him to begin translating some of the propositions of physics into the symbols of mathematical logic" (pp. xii-xiii, "Introduction" of the present volume). The search was found to lead in turn to questions about philosophical and scientific methodology and about knowledge of the physical world in general and of matter in terms of sense-data in particular. This is the underlying theme of the works collected, in Part I of the present volume, under the heading "Theory of Knowledge and Philosophical Method." All of the pieces included here, among them the well-known article of 1914 on "The Relation of Sense-Data to Physics", have previously been published.

The "problem of matter" for Russell was "the usual way of referring to the problem of providing philosophical foundations for physics" (p. xi, this volume). In consequence of the revision of the problem as an attempt to provide an axiomatization of physics, the "problem of matter" evolved into "the search for a logical construction from... particular facts of sense and general logical truths; ...and [from] specific memories and the testimonials of others" (p. xv); in other words a logical construction, in the sense of Carnap, of the world on the basis of sensory experience of material reality (logische Aufbau der Welt). This is the root of Russell's work on sense-data. This work led to Russell's work on "The Philosophy of Logical Atomism" as an attempt to explore the logical foundations of epistemology and to give a logico-linguistic analysis of meaning, and to his work on an analysis of mind as a study of the structure of knowledge and belief, with a logico-linguistic analysis of propositions as semantic carriers of meaning, and with behavioral psychology as a scientific form of psychology based upon sense-data (sensations and events) as alternative to neutral monism as the Jamesian doctrine that the "stuff" of the universe, organized in one way by a certain set of laws of causality, yields matter, and in another way by a different set of causal laws, yields mind, and that there is, therefore, no consciousness.

Part III of the present volume is given over entirely to Russell's 1918 Monist papers on "The Philosophy of Logical Atomism". The papers collected in Part IV under the heading "Towards the Analysis of Mind", includes the well-known paper of 1919 "On Propositions: What They Are and How They Mean". With the exception of nine "Manuscript Notes" written in 1919 and several of the appendices, all of the pieces found in this volume have previously been published. These include the several book reviews, collected in Part II, on a number of widely scattered philosophical topics, technical and popular, written by Russell for various magazines and journals between 1913 and 1919. Of these reviews, the one on Norman Kemp Smith's Commentary to Kant's "Critique of Pure Reason" of 1918 is of especial interest, if for no other reason than that Kemp Smith's monumental volume remains to this day an essential and vital tool of Kant scholarship.

Like all of the books in this series of Russell's Collected Papers, the present volume contains all of the apparatus that are making this series the serious critical edition that it is becoming, including the careful textual notes and helpful annotations, as well as the Russellian "Chronology", the informative "Introduction" and "Headnotes" that present the historical setting for the papers in the volume. A scholarly edition is not a critical edition, however. A critical edition differs, I submit, from a scholarly edition only in that the former admits a greater leeway in the intrusion of interpretation within the context of the setting of the historical stage. The author of the "Introduction" to this volume seems to this reviewer to have come dangerously close to crossing the very thin line between interpretation and historical stage-setting, in particular in connection with the discussion of the impact which Wittgenstein's criticisms of the first draft of Russell's Theory of Knowledge had on Russell's "re-thinking of logical atomism" (pp. xvi-xx). But that may be more a matter of opinion than of fact.

More interesting and fruitful of discussion in regards interpretation is the question of what kind of mathematician Russell might have made - good, bad, indifferent - had he continued his technical work in mathematics and mathematical logic after completing work on the Principia rather than turning to philosophy. This is a question which arose in the wake of Nicholas Griffin's talk on "Russell at Cambridge, 1890-93: Russell's Mathematical Education" during the Special Session on Bertrand Russell at the Canadian Society for History and Philosophy of Mathematics meeting (Abstract #13, p. 5, SCHPM/CSHPM 13th Annual Meeting, McMaster Univ., Hamilton, Ont., May 25-27, 1987, Programme), in which Griffin explored Russell's studies as a background and explanation for Russell's "early misadventures in the philosophy of mathematics." In "The Philosophy of Logical Atomism", Russell wrote (p. 166 of this volume; also quoted p. xxiii) that the confusion of symbols with the things for which they stand "is especially likely in very abstract studies such as philosophical logic, because the subject-matter that you are supposed to be thinking of is so exceedingly difficult and elusive that any person who has ever tried to think about it knows you do not think about it except perhaps once in six months for half a minute. The rest of the time you think about the symbols, because they are tangible, but the thing you are supposed to be thinking about is fearfully difficult and one does not often manage to think about it. The really good philosopher is the one who does once in six months think about it for a minute. Bad philosophers never do." If Russell's description here of the "good philosopher" is meant to be self-referential, then I suggest that Russell would not have made a very good mathematician, if Hadamard's thesis, that mathematicians mentally picture mathematical objects and their relations with other mathematical objects, rather than, in the creative stages, manipulate the symbols for these objects. The role of symbols arises later, in the effort to express and communicate one's mathematical ideas. Indeed, it has become almost a truism recently that one major reason why it is so difficult for the creative mathematician to teach mathematics to the verbally-oriented student and equally so difficult for the non-mathematical student to learn mathematics is that the mathematician can "see the mathematical concept with great clarity but cannot express it in plain English," since "mathematical concepts... may prove to be... only imperfectly translatable into spoken or written English" (Charles A. Weiner, "Mathematicians and the Laws of Natural Selection", Chronicle of Higher Education, 11 Feb., 1987, p. 43). For such a mathematician, the symbolic representation is a natural and comfortable intermediate between the conceptualization and the natural language communication of the concept. Thus, if Russell found it more difficult to operate with mathematical objects or concepts than with their symbolic representations, then he was already at some disadvantage. This may perhaps also partially explain why Russell, after completing his work on the Principia, took a philosophical turn on his way to - or away from - work on the axiomatization of physics, while Hilbert and his col-

leagues, even before completing their work in foundations of mathematics, turned their attention to the foundations of physics and why the mathematical heirs of Hilbert, particularly Birkhoff and von Neumann among them, made important progress in the axiomatization of physics.

Many of Russell's "early misadventures in mathematical philosophy" occurred in 1896 and 1897, when Russell made his first attempts to understand Cantorian set theory. When in June 1983 this reviewer reported, at an American Mathematical Society conference on Axiomatic Set Theory, on Russell's first inglorious attempts to understand Cantorian set theory (published as I. H. Anellis, "Russell's Earliest Reactions to Cantorian Set Theory, 1896-1900," in J. E. Baumgartner, D. A. Martin, S. Shelah (editors), Axiomatic Set Theory, Contemporary Mathematics 31 (1984), 1-11), many of those present suggested, in view of Russell's misunderstandings, that perhaps those of his works of the period which remained unpublished - and which are bound for inclusion in volume two of the Collected Papers - should best be left unpublished. Further discussion led to the concession that publication, after all, would be worthwhile, first of all for the value of the historical record and secondly as an example of the lesson that, with patient and diligent work, one could refine and improve one's understanding of difficult concepts of logic, and even become a leader in the field. In the case of an excellent critical edition such as we are being provided by the Russell Editorial Project, as exemplified in the present volume, these arguments in favor of publication carry even greater weight.

The present volume, however, is far from perfect, and thus there are a number of perhaps minor points which a reviewer is duty-bound to make. Thus, for example, we must note that the name "Windeband" on p. 404 of the "Bibliographical Index" should be "Windelband" and for the sake of consistency, "Alexander, S." and "Lossky, N. O." in the bibliographical index should have been rendered "Alexander, Samuel" and "Lossky, Nikolai" respectively, since all of the other authors whose names are listed are designated by their given names following their family names. More subtle but also more serious is a statement in the headnote to appendix IV, which contains the text of a letter of Nathalie A. Duddington addressed to Russell, to which Russell referred in the text of "The Philosophy of Logical Atomism" (p. 222; see the annotation on p. 352). In the headnote to Duddington's "Letter on Existence" of 1918, it is said that "her letters reveal that she regarded herself as something of an expert on the minds of the Russians" (p. 329). The tone of this statement, even despite the editorial recognition of Duddington as an advocate of the work of the Russian philosopher N. O. Lossky, suggests that the editor is sceptical of Duddington's self-proclaimed expertise. It must be noted, however, despite the editor's apparent scepticism, that Western students of Russian literary history owe an important debt to Duddington for her translations into English of many Russian literary classics, including such relatively obscure works as Goncharov's Oblokov, a work well-known in Russia but almost totally ignored in the West.

NEWSLETTER MATTERS

- (32) A 14-Year Index of Bertrand Russell Society newsletters, covering the first 14 years of the Society's existence, 1974 through 1987, has been put together. It runs to over 30 pages, has nearly 1800 entries. Buy it from the newsletter, \$5 postpaid (within the USA.) Borrow it from the Library, \$2 for postage (within the USA.) Newsletter and Library addresses are on Page 1, bottom. Postage outside the USA is higher.

Videotapes to lend:

Videocassettes may be borrowed for \$4 per cassette. Canadian members should direct their orders to Rick Shore, 3410 Peter Street, Apt. 305, Windsor, Ontario, Canada N9C 1J3.

- 260 Donahue Interviews Gore Vidal. Also, a Jonathon Miller Interview.
 261 Steve Allen's "Meeting of the Minds". (Bertrand Russell, Thomas Jefferson, St Augustine, Empress Theodora)
 262 BBC's "The Life and Times of Bertrand Russell". Produced by the BBC as part of Russell's 90th birthday celebration. A documentary, it uses a biographical format which concentrates on the threat of nuclear war and Russell's work to prevent such folly. Includes interviews with Russell and several prominent British intellectuals.
 NBC's "Bertrand Russell". Interviewed by Romney Wheeler, Russell deals with autobiographical, philosophical, and political topics.
 263 Woodrow Wyatt Interviews. Five short television interviews: "Bertrand Russell Discusses Happiness", "Bertrand Russell Discusses Philosophy", "Bertrand Russell Discusses Power", "Bertrand Russell Discusses the Role of the Individual", and "Bertrand Russell Discusses Mankind's Future".
 264 BBC's "Bertie and the Bomb". A documentary about Russell's last years and his involvement with the early years of the Campaign for Nuclear Disarmament. Interviews with friends and contemporaries.
 265 "Bertrand Russell". A lecture by Professor Giovanni Costigan of the University of Washington. An introduction to Russell's life and work.
 266 The 'People For' Story'.
 267 CBC "Close-Up" Interview. Interviewed by Elaine Grand, Russell discusses his childhood, the threat of nuclear war, Einstein, the emancipation of women and his religious views.

BOOK REVIEW

- (34) "The Devil and Dr. Barnes" by Howard Greenfield in the Washington Post (1/17/88).

[In the foreword to his "History of Western Philosophy", Russell wrote, "This book owes its existence to Dr. Albert C. Barnes, having been originally designed and partly delivered as lectures at the Barnes Foundation in Pennsylvania." Barnes fired Russell in 1940. Russell sued for breach of contract, and won. Barnes then published a pamphlet in his own defense, to tell why he fired Russell. The pamphlet is reproduced in RSN42-35.]

The review (with thanks to DON JACKANICZ):

By Carlin Romano

WHAT SHOULD we make of collectors? To be sure, our attitudes depend partly on what they collect. According to the *Guisness Book of World Records*, Helge Friholm of Soborg, Denmark owns 44,217 bottle caps, with no rivals in sight.

Fanatics of this sort usually drive one to speculation about the collecting impulse itself. Was Freud right that adult hoarding grows out of the child's delight in resisting toilet training? Should all sociopathic collectors be sentenced to classes in recycling? Whatever our conclusions, we tend to regard such people, fondly, as gentle crackpots.

Not so the "collector" who gets to put "art" before that word. Here a different figure jumps to mind. The cagey investor. The cultivated gallery sleuth. The enlightened patron.

Carlin Romano is the literary editor of The Philadelphia Inquirer.

Philadelphia's Dr. Albert C. Barnes (1872-1951) may best be remembered as America's missing link between the crackpot and connoisseur classes of collectors. Founder of the world-famous Barnes Foundation collection of modern art in Merion, Pa., the irascible former chemist came to acquire an almost equally widespread reputation for rudeness, eccentricity and paranoia.

In a tempestuous lifetime, he managed to acquire some 200 Renoirs, nearly 100 Cézannes, 60-odd Matisse and many other illustrious works. At the same time, he successfully estranged Bertrand Russell, T.S. Eliot, Alfred Stieglitz and other cultural giants while fighting lifetime feuds with powerful institutions like the University of Pennsylvania and the Philadelphia Museum of Art.

Writing in *The Devil and Dr. Barnes* 36 years after his subject's death, Howard Greenfield, best-known for biographies of Puccini and Caruso, realizes that many of

his subject's firefights now count as historical minutiae. What remains is a peculiar personality and idiosyncratic institution, and Greenfield offers a balanced account of Barnes' career, conceding to him his achievements while castigating him for his boorishness.

Like previous biographers, Greenfield attributes much of Barnes' angry, domineering personality to his destiny as an outsider forever trying to be an insider, a self-made "thruster" frustrated by his inability to dent Philadelphia's old-money, Main Line cultural institutions. Born to a lower-middle class family in the Philadelphia neighborhood that later produced Rocky, Barnes graduated from the University of Pennsylvania's medical school at 20, then struck it rich through the co-development of Argrol, a medical antiseptic.

By 1910, with his business running smoothly, Barnes turned to collecting art. His first purchases came with the help of a high school friend and painter, William Glackens,

who in 1912 headed to Paris with \$20,000 of Barnes' money to buy new work. Over the next few decades, many other artists and dealers would become Barnes' sidemen, but never more than that. Barnes soon established a reputation as a decisive, indefatigable gallery and studio crawler. In time, his shrewdness in acquiring Impressionist and post-Impressionist masterpieces made him the foremost American collector of modern art—a French magazine dubbed him the "Medici of the New World."

To house his growing collection, he set up the Foundation in 1925 (four years before the Museum of Modern Art) as an "educational institution," not a museum. Barnes appointed philosopher John Dewey—one of the few friends he never alienated—his director of education. For decades Barnes would call upon Dewey's prestige to bolster his projects, and Barnes needed the backup support, because his crudeness and dogmatism gradually repelled many journalists, critics,

dealers, academics and museum officials.

As a collector, Barnes often embodied the ugly American businessman. Gertrude Stein complained that he would "literally wave his cheque book in the air." He bragged about bargains and crowed over owning "the old masters of the future."

As a pedagogue, Barnes vehemently opposed historical and biographical approaches to art, as well as the treatment of art as a plaything and diversion for socialites—he permitted no receptions at the Foundation. Fond of formalist theories of art such as those of critic Roger Fry, Barnes drew on them in his own books, which included *The Art in Painting* (1925). Teachers at the Barnes Foundation had to follow the party line.

Perhaps least popular was Barnes' behavior as owner of one of the world's great private collections—he proved himself a whimsical, nasty, grudge-holding administrator. He refused to lend paintings for exhibitions and enjoyed denying access to critics and scholars while admitting untutored working people. According to Greenfeld, young James Michener three times failed to gain entrance when he wrote to Barnes as a Swarthmore student, but won an invitation when he posed as a Pittsburgh steelworker. It took legal action by the state to open the collection to the public for several days a week.

THROUGHOUT his life, Barnes "could detect a slight—real or imagined—a mile away. He usually responded with belliger-

ence. When *The Saturday Evening Post* ran an article entitled "The Terrible-Tempered Dr. Barnes" in 1942, Barnes rode up and down the Main Line, ripping down advertising posters for the series and inserting a seven-page rebuttal into issues on sale.

Greenfeld also offers many examples of Barnes' notorious venom as a letter-writer. To R. Sturgis Ingersoll, a Philadelphia Museum of Art trustee, he wrote, "I was already familiar with your reputation in Paris as a boob to whom the dealers could sell any worthless picture so long as it bore the name of a well-known artist." When Le Corbusier sent a friendly letter to Barnes, it was returned unopened, "with the word 'merde,' written in large letters on the envelope."

In the end, Barnes the outsider

made sure he would remain so. He amended the Foundation bylaws to guarantee that none of the Philadelphia-area institutions he resented—among them its art museum—would ever win control of the Foundation after his death.

According to Greenfeld, both the world-class philosophers who played a major role in Barnes' life, Dewey and Bertrand Russell, analyzed him identically—as proprietor of a massive "inferiority complex." Greenfeld's portrait helps frame the irony of this formalist connoisseur who veered too close to the crackpot side of his obsession. We wind up remembering not what Barnes collected, but what he brought with him to the chase. ■

RENEWAL HONOR ROLL

- (35) Once again a new record has been set for early renewals. 127 members paid their 1988 dues before January 1st, 1988. We thank these early birds for getting the membership-renewal-process off to a good start. Here they are: LOU ACHESON, IRTISHAD AHMAD, J. M. ALTIERI, JEAN ANDERSON, TRUMAN ANDERSON, JAY ARAGONA, DONG-IN BAE, ADAM PAUL BANNER, CHERYL BASCOM, WALTER BAUMGARTNER, VIVIAN BENTON-RUBEL, JACQUELINE BERTHON-PAYON, HOWARD BLAIR, MICHAEL BRADY, JAMES BUXTON, ROBERT CANTERBURY, POLLY COBB, WHITFIELD COBB, JACK COWLES, GLENNA CRANFORD, PETER CRANFORD, JIM CURTIS, ANGELO D'ALESSIO, BOB DAVIS, PAUL DODNA, PRADEEP DUBEY, BEVERLEY EARLES, RONALD EDWARDS, LEE EISLER, BRENDA FREEDMAN, FRANK GALLO, ALEJANDRO GARCIADIEGO, SEYMOUR GENSER, MARY GIBBONS, ARTTIE GOMEZ, CHARLES GREEN, DONALD GREEN, ROSS GUFFY, JOHN HARPER, DON HERNANDEZ, LYLA HERNANDEZ, ROBERT HICKS, CHARLES HILL, MARK HOGAN, JAMES HOOPES, OPHELIA HOOPES, TING-FU HUNG, ARVO IHALAINEN, DON JACKANICZ, JOHN JACKANICZ, TED JACKANICZ, SHIRLEY JESPERSEN, RICHARD JOHNSON, LARRY JUDKINS, KENT KLATZKIN, KEN KORBIN, PAUL KORNACKI, HENRY KRAUS, PAUL KUNTZ, PAUL KURTZ, HERB LANSDELL, GLADYS LEITHAUSER, JOHN LENZ, WALTER LESSING, ARTHUR LEWIS, MARTIN LIPIN, DON LOEB, PAUL LOGEMAN, JONATHAN LUKIN, CHARLES MAGISTRO, STEVE MARAGIDES, LESLIE MARENCHIN, WILLIAM MCKENZIE-GOODRICH, HUGH MCVEIGH, JIM MCWILLIAMS, STEVE MOLENAAR, BRIAN MOLSTAD, GLENN MOYER, SANDRA MOYER, MARK OAKFORD, JACK OTT, NICK PACINO, PAUL PFALZNER, RAY PONTIER, NAGABHUSHANA REDDY, STEVE REINHARDT, DON ROBERTS, JOHN ROCKFELLOW, MICHAEL ROCKLER, HARRY RUJA, CHERIE RUPPE, SIGRID SAAL, NATHAN SALMON, GREGORY SCAMMELL, JOHN SCHWENK, JOANNA SERVATIUS, ARSHAD SHERIF, JOHN SHOSKY, MIRON SKY, WARREN SMITH, JOHN SONNTAG, PHILIP STANDER, ROGER STANKE, TOM STANLEY, RAMON SUZARA, SHOHIG TERZIAN, JOHN TOBIN, LLOYD TREFETHEN, HENRY VAN DYKE, WALTER VANNINI, FERNANDO VARGAS, BETTY VOGT, HERB VOGT, RUSSELL WAHL, DEWEY WALLACE, JR., MICHAEL WEBER, TOM WEIDLICH, DONNA WEIMER, EDWARD WEISMAN, CHARLES WEYAND, CALVIN WICHERN, JOHN WILHELM, RICHARD WILK, VINCENT WILLIAMS, JAMES WOODROW, BILL YOUNG, RONALD YUCCAS.

RUSSELL SOCIETY NEWS

No. 58

May 1988

- (1) Hilites: Annual Meeting (2,20). BR on happiness, 1924 (5). Kohl on BR on happiness, 1984 (7). A great Humanist ad (41). BR in *Encyclopedia Americana* (10). Gore Vidal on monotheism (3). How to stay sober without God (21). A latin question (9). Candidates for Director wanted (29). Two volunteers needed (30). Humanist World Congress (40). *Nuclear Alert* (17). An asterisk in the left column indicates a request. The Index is at the end.

ANNUAL MEETING (1988)

- (2) Late news: Please tell Marvin Kohl soon as possible (716-673-3495) the time of your arrival at Buffalo Airport. A special BRS van, Airport to Fredonia, is tentatively scheduled for 3:30pm, Friday, June 17. The new, revised Program, the Fredonia geo brief, the revised Registration/Reservation Form, and information about the "What is Happiness?" Panel: it's all there in Item (20) of this newsletter. Suggestion: see it now.

RELIGION

- (3) Gore Vidal, from a talk to the American-Arab Antidiscrimination Committee, Suite 500, 4201 Connecticut Avenue NW, Washington, DC 20001, telecast by C-Span on 3/15/88.

Monotheism means one god. Religions are reflections of organizations of men on earth. They do not come before man. Man comes before the religion. Monotheism is saying it's a totalitarian religion. All authority is concentrated in one god. What does this mean on earth? One King. One Pharoah. One Pope. One Bishop. Power. Authority. All questions are answered by the book and only certain people can get through it. And then they impose their will, the most totalitarian.

Western Europe, from whose tradition I come -- I come from an old Latin family, from the old Roman Empire -- had no such thing as the idea of a single god...some people thought there was, others thought there was not...but not until the 4th Century and Constantine, did it become a state religion, and if you didn't believe it, you were killed, or at least were in grave trouble. There were many different cults. It never occurred to anybody that there was just one...and only one group, one people, had The Truth. What arrogance!

The most successful part of the world for 2000 years was China. That's Confucianism. They did not have one god and the Hindus did not have one god. It was pluralism -- as simple as that. One of Confucius's disciples came up to him once -- his real name was Master Kung -- and said: "Master Kung, if you could sum up all of human wisdom in one phrase, what would it be?" This is the 5th Century before Christ. Confucius said it would be, "Do unto others as you would have them do unto you."

George Bernard Shaw's contrarian view about the Golden Rule comes to mind: "Don't do unto others as you'd have them do unto you. Their tastes may be different."

COMMENT

- (4) From the Humanist Association of Canada newsletter (January 1988):

QUOTED

“DONALD REGAN left as White House chief of staff in 1987 and was replaced by Howard Baker. The transition went smoothly, with no loss of ineptitude. — Alan Abelson, in *Barron's*”

RUSSELL ON HAPPINESS

- (5) How to be Free and Happy (NY: The Rand School of Social Science, 1924) presents a talk given by BR, "delivered under the auspices of 'FREE YOUTH', official organ of Young People's Socialist League at Cooper Union, New York City, on May 24th, 1924." With thanks to JOHN LENZ.

Ladies and Gentlemen: The subject upon which I am supposed to be talking to you tonight is a very modest and easy subject—"How to Be Free and Happy." I do not know whether I can give you a recipe, like a cook book recipe, which each one of you can apply. I do want, this last time that I am speaking in America, to say a few things which I believe firmly and consider, as far as my own experience goes, very important, and which I have not had much occasion, in previous talks, to say in this country.

Perhaps there may be some of you here, and certainly there are many elsewhere, who will say that the whole answer to my question "How to Be Free and Happy" is summed up in one simple sentence—"Get a good income!" (Laughter.) That is an answer which I think is generally accepted. If I put that forward I should have won the assent of every one that is not here. (Laughter.) However, I think that it is a mistake to imagine that money, that income, is a very much more important thing in producing happiness than it actually is. I have known in the course of my life a great many rich people, and I can hardly think of one of them who appears to be either happy or free. I have known a great many people who were extremely poor—they also could hardly be happy and free. But in the intermediate realms you find most happiness and freedom. It is not great wealth or great poverty that brings most happiness.

My impression about it is this: that when you are talking of the external conditions of happiness—I am going to talk mostly of the conditions in your own mind, about the internal conditions—a person must have, of course, enough to eat and the necessities of life and what is needed for the care of children. When you have those things you have as much as really contributes to happiness. Beyond that you only multiply cares and anxiety. So that I don't think enormous wealth is the solution. I should say, for the external conditions of happiness, that in this country, as far as the material problem of the production of goods is concerned, you have quite solved it. If the goods that are produced were distributed with any justice, that certainly would be a real contribution towards happiness. Your problem here is two-fold. It is first a political problem:

to secure the advantages of your unrivalled production for a wider circle. On the other hand, it is the psychological problem of learning how to get the good out of these material conditions that have been created by our industrial age. That, I think, is where we modern people have failed most—on the psychological side, on the side of being able to enjoy the opportunities which we have created. I think that this is due to a number of causes.

I should attribute it partly to the effect of Puritanism in decay. Puritanism in its heyday was a conception of life which filled people's minds and made them in their way happy. Anything which fills people's minds makes them happy. But people nowadays don't believe in the Puritan way; they retain certain principles which are connected with Puritanism, though not perhaps quite obviously. They have, in the first place, a certain kind of moral outlook, that is, a tendency to be looking out for opportunities to find fault with others, a tendency to think that it is very important to keep up certain rules of conduct. There are a number of old, inherited taboos and rules which people don't think about but simply go on with because they always have been there. These do not touch the core of the matter. The thing that has survived most out of Puritanism is a contempt for happiness—not a contempt for pleasure, a contempt for happiness! You find among rebels a very great desire for pleasure but a very small realization of happiness as against pleasure, and that has gone through our whole conception of pleasure and of happiness.

For ages the Puritan outlook was devoted to making people think that pleasure was a base thing, and because of that belief the people who were not base did not devote themselves to producing the better forms of pleasure, such forms as art, etc., and pleasure, therefore, became just as base as the Puritans said it was. And that evil has tended to survive. It tends to be still the case that the nations, such as yours and mine, which have gone through this Puritan phase are unable to get happiness and even to get pleasure—pleasure that is not trivial. It is only the less worthy forms of pleasure which survive in spite of that Puritan domination. I think that perhaps that is the main reason why Puritanism, wherever it has existed, has proved itself so very destructive of art, because art, after all, is the pursuit of a certain kind,

probably the most supreme and perfect kind, of pleasure; and if you think of pleasure as bad, art is bad. That is one thing that we owe to Puritanism.

Another thing that we owe to it is the belief in work. In America I have spent most of my time in preaching idleness. I made up my mind when I was young that I would not be restrained from preaching a doctrine merely because I have not practised it. I have not been able to practice the doctrine of idleness, because the preaching of it takes up so much time. (Laughter.) I don't mean idleness in the literal sense, for most people, the great majority of us white people, don't enjoy sitting in the sun and doing nothing; we like to be busy. What I mean by idleness is simply work or activity which is not part of your regular professional job. Under the influence of this dogma, Puritanism has forced us to retain in our operative beliefs the notion that the important part of our life is work. That, at any rate, applies to the major portion of mankind: that the important part of what we do is getting on in our business, and getting a fortune which we can leave to our descendants, and they, in turn, get a larger fortune to leave to theirs. This whole business has taken the place of living for Heaven, for in the old Puritan days we tried to forego pleasures in this life in order to get to Heaven.

Heaven has disappeared, but the idea of living in order to leave a large fortune has not disappeared, and the kind of a life which is required for the one purpose is much the same that is required for the other—the foregoing of enjoyment for the sake of future benefits. That we have retained from the old Puritan outlook, and that, I think, is not in its modern form a very fine or noble thing. In the old days there was something splendid about it, but in this modern form it is not anything that we should particularly admire, and for the sake of it we do forego everything that would make life civilized, free and happy.

By the way, let me tell you what I have often noticed when I have been travelling on the continent of Europe, where there are beautiful objects of art. I have seen the middle-aged American business man being dragged about by his wife and daughter in a condition of almost intolerable boredom, because he was away from his office. It would be a better thing if, instead of getting concentrated upon work, people had larger interests. If we had a good social system we ought none of us

have to work more than four hours a day. (Applause.) Well, I am very glad to get that response from you, but when I made this remark to some other audiences in America a thrill of horror went through them and they said to me: "What on earth should we do with the other twenty hours?" I felt, after that, that this gospel very much needed preaching.

It is really a terrible thing to get the human being with all his capacities—to get him into blinkers with such a narrow outlook that he can only run along one little path. It is a disfigurement of the human being—it is something that every person who wants to see growth finds intolerable. A population of stunted human beings is growing up, shut out from the pleasures of human companionship, the pleasures of art, the pleasure from all the things that really make life worth living. Because, after all, to struggle all your days to amass a fortune is not really an end worthy of anyone.

I don't want to suggest to anyone that pleasure, mere pleasure, is an end in itself. I don't think it is, and, indeed, I think that the effect of the Puritan morality has been to emphasize pleasures at the expense of happiness, because, as base pleasures can be got more easily, they are less controlled by the censorship of official morals. We all know, of course, the sort of way in which the ordinary person who does not live up to the official morality of his time fails to do so: he seeks those ways which are most frivolous and have the least value in their own selves. That always will be the effect of a morality which is preached but not practised.

I think the Chinese have shown their wisdom by having an official morality which can be practised. We in the West who have adopted the opposite plan, we have prided ourselves upon the extraordinary magnificence of the morality we profess, and thought that excused us from practising it. I think that if we are going to have a true morality, if we are going to have an outlook upon life which is going to make life richer and freer and happier, it must not be a repressive outlook, it must not be an outlook based upon any kind of restrictions or prohibitions; it must be an outlook based upon the things that we love rather than those that we hate. There are a number of emotions which guide our lives, and roughly you can divide them into those that are repressive and those that are expansive. Repressive emotions are cruelty, fear, jealousy; expansive emotions are

such as hope, love of art, impulse of constructiveness, love, affection, intellectual curiosity, and kindness; and they make more of life instead of less. I think that the essence of true morality consists in living by the expansive impulses and not by the repressive ones.

What I am saying has, I am afraid, very revolutionary consequences to which I cannot hope to win the assent of everyone. There will be many who think that my deductions are not deductions to be accepted. For example, love and jealousy are—the one expansive and the other repressive. Now, in our traditional morality, when you subject it to psychological analysis and see whence it has sprung, you will all have to admit that jealousy has been the main-spring; it has been jealousy that has given rise to it. I don't myself feel that it is very probable that a code rising in that way and from that source can be the best possible. It seems to me far more likely that one arising out of the positive emotions would be better than one arising out of the negative, and that such restrictions as would have to be placed on freedom should arise out of affection or kindness for other persons, and not out of the sheer repressive emotion of jealousy. If you apply that principle it leads to a better development of character and more wholesome type of person, a person freed from many of the cruelties which limit the conventional moralist.

There is a very strong element of cruelty in traditional morals—part of the satisfaction which every moralist derives from his morality is that it gives him the justification for inflicting pain. We all know that the infliction of punishment is to a great many people delightful. There was once a prime minister who travelled from Constantinople to Antioch, and spent there eight hours watching his enemy being tortured. I think that the impulse towards pleasure in the suffering of others is one which arises through people thwarting their natural emotions, through the fact that they have not been able to find a free outlet for their creative impulses.

I do not positively know whether that is really the basis of a great deal of cruelty, but I cannot help thinking that an enormous mass of the cruelty that we see in the world is from unconscious envy. That is a very deep-seated feeling in human nature, and when you have a nice, convenient code to embody it, of course it is very popular.

I don't know whether I can quite convey to you the kind of way in which it seems to me that one can live most happily. I find things in the Gospels which illustrate the sort of thing I mean—not texts which are very often quoted, but, for example, "Take no thought what ye shall eat, or what ye shall drink, or wherewithal ye

shall be clothed." If you really lived upon that principle—which, by the way, forbids all discussion of the Volstead Act—you would find life very delightful. There is a certain kind of liberation, a certain kind of care-free attitude, which, if you can once acquire it, makes you able to go through the world untroubled, not distressed by all the minor annoyances that arise. The gist of the matter is to be rid of fear. Fear lies very deep in the heart of man; fear has been the source of most religions; fear has been the source of most moral codes; fear is our instincts; fear is encouraged in our youth, and fear is at the bottom of all that is bad in the world. When once you are rid of fear you have the freedom of the universe. Of course, you all know about the sort of dark superstitions of more barbarous ages, when men, women and children were sacrificed to the gods out of fear. This superstition we see to be dark and absurd, but our own superstitions do not strike us in the same light. Now, I am not prepared to say that no great disaster can ever overtake us, but I say this, that the fear of those things that might overtake us is a greater evil than the things themselves, and it would be far better to go through life not fearing, and come to some disaster, than go through life creeping, wise, and cautious, and burdened—never having enjoyed life at any moment and yet dying peacefully in your bed.

I think we want our lives to be expansive and creative, we want to live to a very great extent upon impulse; and when I say impulse I don't mean every transitory impulse of every passing moment—I mean those major impulses that really govern our lives. There are in some people great artistic impulses, in others scientific, and in others this or that form of affection or creativeness. And if you deny those impulses, provided that they do not infringe upon the liberty of another, you stunt your growth. I know, for instance, any number of men who are Socialists, and who spend their lives as journalists writing for the most conservative papers. These men may get pleasure out of life, but I don't believe that it is possible for them to get happiness. Happiness is at an end for any man who denies himself one of those fundamental impulses about which life ought to grow.

I should say precisely the same thing about the private affections. Where a really strong or powerful affection exists, the man or woman who goes against it suffers the same kind of damage—it is the same kind of inner destruction of something precious and valuable; all the poets have said so: We have accepted it when it was said in verse, because nobody takes verse seriously, but if it is said in prose and in public we think it is very dreadful.

I don't know why everybody is allowed to say a host of things in private that he is not allowed to say in public. I think it is about time we said the same things in public that we say in private. (Applause.) Walt Whitman, in praise of the animals, says: "They don't grunt and sweat over their condition—not one of them is respectable or unhappy throughout the whole world." I must say I have a very great affection for Walt Whitman. He illustrates what I mean—how the man who lives expansively lives in a kindly way; how he is free from cruelty, from the desire to stop other people from doing what they want.

idea into one's head—that every artificial morality means the growth of cruelty. Of course, we cannot live like Walt Whitman's animals, because man has foresight and memory, and, having foresight, he has to organize his life into a unit. That is where we develop our superstitions. And you know quite well that it would not do if you followed each whim without a certain amount of discipline, and I don't want you to think that there is not a need of discipline. There is, but it should be that discipline that comes from within, from the realization of one's own needs, from the feeling of something which one wishes to achieve. Nothing of importance is ever achieved without discipline. I feel myself sometimes not wholly in sympathy with some modern educational theorists, because I think that they underestimate the part that discipline plays. But the discipline you have in your life should be one determined by your own desires and your own needs, not put upon you by society or authority.

Authority comes from the past and the old, and, speaking to a League of Free Youth, I suppose I need not speak, at my time of life, with that respect which I might be expected to show to it, because the old, although they are supposed to be wise, are not necessarily wise. We learn a great deal in youth and forget a great deal in age. We are at our maximum at 30; at 30 we are at the moment when we learn at the same rate at which we forget. (Laughter.) After that we begin to forget faster than we learn; so if we do have to have authority I should have a council composed of persons of 30, but on the whole I think we can do much better without authority in those matters which do not directly affect the rest of the world.

Of course, it is your affair if you murder someone, but it is his affair also; so you cannot object to someone coming to interfere with your murdering him. But in those acts which affect ourselves it is absurd that the State or public opinion should have any voice at all. In the private relations of life society should take no part whatsoever—that is a matter for

the individual. The welfare of children is, of course, a matter in which the community is concerned. It is not at present enough concerned. About children: you want that there should be enough, but not too many; you want them to be healthy and educated. Those are the things that the State should see to. At present it sees to some and not to others. All those things are affairs for the State. But where children are not involved, it seems to me that all interference is an impertinence—the State has no business in the matter whatsoever. Now, I don't want to talk only about that issue, because there are many other directions in which the same kind of thing applies. It applies, above all, in the aesthetic side of life. We in our industrial civilization have taken over from Puritanism, from Christianity, a certain utilitarian outlook, a certain belief that our acts should not be for their own sakes, for what they are now, but for a certain distant end. Things get to be judged by their uses and not by their real values. That is death to the aesthetic side of life, for the beauty of anything consists in what the thing is in itself and not in its uses.

I admit the sphere of the utilitarian, but not in judging of artistic matters. I find that we seem to have lost not only in the world of art—that is generally admitted—but we have lost something also in human companionship, in friendship, through not having so great a sense of intrinsic quality as we used to have. A man tends to be judged by what he does, and that is quite a different thing from the intrinsic quality of him; and so you will find that when a man has become a celebrity, everybody knows that what he says is very wonderful, whereas in his youth, when he was not recognized as a celebrity, he may have said far more wonderful things without being noticed. The excellence of a man's remarks, even if he is not famous, should be recognized; as well as vice versa.

In our private relations we all get so busy that we have not time to develop affections for others as they deserve to be developed; we have not time for sympathy, the understanding for all those things that make the beauty of human relations, because we all are so busy, and when we are not busy we are tired. (Laughter.) You have in this country, on the average, if the goods produced in this country were divided equally, much more than anybody needs for happiness, and it would be possible to live on a very much smaller amount of work and yet have enough; you could then develop and cultivate those things that make for happiness. You would have freedom. A man does not have freedom if he has to indulge all day in an activity which is not one he likes; that is as bad as a treadmill. We cannot always be doing delightful things, but we

Bertrand, We've known for some time that Russell is one of the people that computer design is indebted to (NL3-30). And that MIT has a computer named Russell, so named by NICK TREATHEN of the MIT Math Department (RSM3-12). Now we learn that there's a computer language named Bertrand, described in Constraint Programming Languages: Their Specification and Generation by William Leier (Reading, MA: Addison-Wesley, 1988). Here is the first paragraph of a description of it, with thanks to ANGELO D'ALFESSIO:

This book presents a general-purpose language called Bertrand (after Bertrand Russell), which is a solution to the problem of building constraint-satisfaction systems. Bertrand is a rule-based specification language — a constraint-satisfaction system is specified as a set of rules and is automatically generated from those rules. Bertrand allows new constraints to be defined, and also has a form of abstract data type.

DENNIS DARLAND adds that there's an article on Bertrand in AI Expert (February 1988).

BR AND COMPUTERS

I think that in the advanced industrial nations a better kind of private happiness is probably the thing that is most wanted. More important even than political and economic reconstructions is the realization of the things that really make for human happiness. We should not be so ready to go to war if our lives were happier. It is to my mind quite an amazing thing to see the extraordinary fecklessness in the modern world of what you might call the will to live. There is a will to work, but not a will to live; you don't find that the prospect of wholesale destruction is considered intolerable. You don't find that people are willing to sacrifice money and power in order that they may be rid of the menace of war; they don't really want to be rid of it. A happy nation would not be willing to sacrifice life, health and happiness for the idle business of fighting, and possibly winning. (Applause.) This comes because our lives are too collective and too little individual. We, living as we do, are of the utmost importance. But we can't do that. In such a world material things will not be the important ones. You will have to settle, in a Socialist community, whether the community is to work an extra hour a day and have an extra motor-car for each member. In such a community as that the spiritual goods will be more important, will get through the collective community. The

If you are a member of a nation: I want my nation to be powerful—then you are destroying the individual. You become oppressive, because whether your nation is of people and you set to work to regulate your neighbor. It is the individual that is important. You will think that, perhaps, is an odd thing for a Socialist to say. I believe the material side of life has got to be given over to Socialist organization, but I believe that because I think the material side of life is the least important. So long as you have not enough to keep your life tolerable, material things are all-important—in most European countries there is such dire poverty that material things are of the utmost importance. But we can't do that. In such a world material things will not be the important ones. You will have to settle, in a Socialist community, whether the community is to work an extra hour a day and have an extra motor-car for each member. In such a community as that the spiritual goods will be more important, will get through the collective community. The

collective community will give you your daily bread and your daily tasks. You hesitate you can devote, if you like, to other work, or football or movies, or whatever. I am sometimes asked: How can you ensure that people will use their leisure well? I don't want to ensure it. You are still in the realm of unkind morality, of undue pressure of the community upon the individual, when you raise such a problem. As long as leisure is not used in any way to damage other people, it is a matter for the individual. Well, then, I say in the spiritual world we want individualism. It is in the material world that we want Socialism. We have Socialism now in the spiritual world and we have individualism now in the material world. (Laughter and applause.) What you are to think, how you are to manage your emotions, are supposed to be matters for the State to settle; but whether you are to have enough to eat, that is not a matter of the State—there the social principle of liberty comes in. It has been put in exactly the wrong place. The thing that I am saying to you is really, after all, exactly what all great religious leaders have said, that the soul of man is the important thing. And that is the great thing to learn. The great thing is to feel in yourself that the soul, your own thoughts, your own understandings and sympathies, that is the thing that matters and that the external outward of decor he is unimportant so long as you have enough to keep you going and to keep you alive. It is because we are so immersed in competitiveness that we do not understand this simple truth. I have been talking rather lightly to you, but the thing that I mean is something important.

meanly living and a real kind of liberation—being free in this world, free of the things that happen to you no longer worry you, the things that occur no longer seem to matter. There is a kind of fire that can live in the soul of every man and woman, and when you have that you don't care any longer about the little things of which our lives are so full. You can live in that way—you can live freely and expansively. You will find that when you let those fears drop off you are closer to others, you can enjoy friendship in a different degree. The whole world is more interesting, more living—there is something there that is infinitely more valuable. Whoever has once tasted it knows that it is infinitely better than those things gotten by other methods. It is an old secret—it has been taught by all teachers and been forgotten by their priests: it is that secret of being in close contact with the world, of not having the walls of self so rigid that you cannot see what is beyond. The moralist is concerned to think "How virtuous I am," and he also is an egoist like the rest. It is not in that world of hard ignorance that you will find the life that is happy and free. It is in the kind of life where you have lost fear because a little hurt is worth enduring—it comes from the knowledge of the fact that there is something better than the avoidance of hurt—there is the securing of a kind of intense union with the world, like a personal affection and yet universal. If you can achieve that you will know the secret of a happy life.

MORE ON HAPPINESS

- (7) Kohl on Russell on Happiness. MARVIN KOHL, who is organizing the 1988 Annual Meeting (coming in June, at Fredonia, NY), has chosen as its theme: *Happiness and the Important Things in Life*. It seems highly appropriate, therefore, to run his article, *Russell and the Attainment of Happiness* in this issue, which comes just before the Meeting. The article originally appeared in *International Studies in Philosophy* 16:3 (1984) 14-24. (We omit 3 pages of footnotes, and will lend them on request.)

In this paper I propose first to bring together the central aspects of Russell's theory and examine his notion that happiness depends upon having and appreciating reasonably continuous success at satisfying one's basic needs and correlate interests. Secondly, I wish to examine the pessimist charge that happiness is not attainable largely because of man's unavoidable fear of death. Here I shall suggest that Russell's meliorism successfully parries this and related objections. Thirdly, I shall look at the problems involved in determining exactly what happiness is, in particular, whether or not Russell's characterization, if it is an accurate one, increases the probability of the inattainability of happiness. The answer to be arrived at here is relevant to his claim that, "an occurrence is 'good' when it satisfies desire."¹ My thesis is that, while Russell's rich but loose characterization does raise difficulties, it is a vital part of what may be called an emerging process satisfaction utilitarian social ethic.²

I

Let us begin with his distinction between two sorts of happiness, plain and fancy. The first is open to any human being, the other is not. Plain happiness requires the having of a central purpose which guides one's life. It also requires that this purpose be end-specific, that it permit progressively increasing success, and that the individual find both joy and worth in this central task.³ In other words, plain happiness (perhaps best called "having a meaningful life") is, according to Russell, the result of having a certain kind of purposeful life. Fancy happiness, on the other hand, is a mixed mode caused by a more complex set of conditions and, as a rule, is defeated by the existence of contrary conditions. Russell does not explain the relationship between plain and fancy happiness, taking it for granted that the former is easily obtainable and an almost necessary condition for the latter. More often than not, he simply refers to "fancy happiness" as "happiness."⁴

Aside from changes in the social system required to promote happiness⁵ or personal catastrophe, ordinary day-to-day unhappiness is largely caused by mistaken views of the world, mistaken ethics, and mistaken habits of life. On the other hand, ordinary men and women

can achieve happiness, with only a small amount of external prosperity, if they have good health, a cheerful disposition and a sound philosophy of life. . . .⁶

Omitting saints, lunatics, and men of genius, ordinary people need, for their happiness, certain fairly simple conditions, which with a little wisdom in economics and politics, could be fulfilled for almost everyone. I put first purely physical conditions—food and shelter and health. Only when these have been secured is it worth while to consider psychological requisites.⁷

In *The Conquest of Happiness* Russell provides what is perhaps his most complete single description of the requisite general conditions.

Happiness . . . depends partly upon external circumstances and partly upon oneself. . . . Certain things are indispensable to the happiness of most men, but these are simple things: food and shelter, health, love, successful work and the respect of one's own herd. To some people parenthood also is essential. Where these things are lacking, only the exceptional man can achieve happiness. . . .⁸

In short, happiness depends on a combination of internal and external causes. It depends upon having and appreciating reasonably continuous success at satisfying one's basic needs and correlate interests.

Notice that Russell also maintains that what is at issue is not universal happiness but the happiness of most persons. Thus, he insists that he is not talking about the happiness of exceptional individuals but only about most ordinary men and women. "Our problem," he writes, "is to preserve instinctive happiness for the many, not only for a privileged few."⁹

II

Three of the more interesting charges against Russell are: first, he assumes that because happiness seems desirable, it must also be obtainable; second, that since man's consciousness and fear of death are unavoidable for all who minimally think about life, that they are, in particular, the most serious threat to human happiness; third, that since Russell is an "apostate pessimist," he passes too lightly over the problem of pessimism.¹⁰ Let us consider Schiller's charges, starting with the last point.

It is difficult to say whether or not "apostate pessimist" is an accurate label. I am inclined to believe it is not. If Schiller's criticism is based upon Russell's position in *A Free Man's Worship*, as I suspect it is, then he is in error because that work is not so much the expression of pessimism as it is the rejection of optimism. And it does not follow that the rejection of optimism entails pessimism. Apparently Schiller believes, as perhaps many do, that optimism and pessimism are logical complements. But this is not the case.

Pessimism, according to Russell, is the philosophy of life which holds that the world is essentially evil and that, because of this, life is ultimately not worthwhile. Non-pessimism is roughly that class of beliefs which, for a variety of reasons, deny that the world is essentially evil. Thus, a non-pessimist may be an *optimist* or a *meliorist*. An optimist is someone who generally holds that the world is essentially good. A meliorist, on the other hand, is someone who maintains that neither the evil nor the goodness of the world appear to be ultimately determined and, most important, that man therefore has both the freedom and the power of aiding in the world's betterment. The meliorist generally holds that it is possible, if man chooses to make the effort, to make the world a better place to live. Given this frame of reference, Russell emerges as the great prophet of melioristic humanism and *A Free Man's Worship*. I suggest, is best *intellectually* interpreted as an attempt to determine the rational limits of that meliorism.

Another possible source of confusion is the distinction between being intellectually and being temperamentally a pessimist. One can, I think, make a reasonable case for Russell being a temperamental pessimist during much of his early adulthood. His relative isolation from other children, his social isolation due to his mathematics study, his alleged unrequited love for Mrs. Whitehead, and his "natural" shyness—all may have contributed to his tendency to emphasize the negative, and to prehend the world with an attitude of relative despair. In this sense, there is some truth to Schiller's charge. However, it is important to realize that there is little evidence to show that this mode of emotional response was intellectually grounded or was the result of the kind of dispassionate rational scrutiny typical of Russell—and much evidence that it was not. Even though Russell may have been a temperamental pessimist during the early adult season of his life, he did not (even at that time) confuse that disposition (which resulted from poor education and a largely unhappy social environment) with the truth about the external world. I have already suggested that *A Free Man's Worship*, when scrutinized from an intellectual point of view, is definitely melioristic, or at least ends upon that note.

In *The Conquest of Happiness*, he stresses the point that "reason lays no embargo upon happiness" and that the pessimists are "unhappy for some reason of which they are not aware, and this unhappiness leads them to dwell upon the less agreeable characteristics of the world in which they live."¹¹ And in *The History of Western Philosophy*, he maintains that "from a scientific point of view, optimism and pessimism are alike objectionable" and that "belief in either pessimism or optimism is a matter of temperament, not of reason."¹² Meliorism, on the other hand, is not predominantly a matter of temperament.

It rests, or at least Russell's particular version appears to rest, on the following claims:

- (1) Judgments that there are certain states of affairs are judgments of fact.
- (2) Whether or not certain states of affairs—the inevitability of death, the shortness of certain lives, our relative lack of power over external nature, etc.—are evils is a matter of value judgment.
- (3) Even if we conclude on the basis of correct valuation that there is a long list of evils that are (almost as a rule) beyond our power, it does not follow that life is not worthwhile.
- (4) The reason is that we create our own values. And it is because we create our own values that, whatever plight the world may be in, we can decide, rationally decide, to accept what cannot be changed, change what we can and should, and enjoy both our limited powers and the sheer experience of being alive.

In a sense we have replied to the "terror of death" argument. According to Russell, "the wise man will be as happy as circumstances permit, and if he finds the contemplation of the universe painful beyond a point, he will contemplate something else instead."¹³ Similarly, the wise man is not motivated by irrational fears, and it is as irrational to fear death as it is to fear the realities of life. Fear is the great enemy. It "should not be overcome not only in action, but in feeling; and not only in conscious feeling, but in the unconscious as well."¹⁴ It is possible "to educate ordinary men and women that they should be able to live without fear."¹⁵ And once fear is eliminated and rational courage is substituted, personal death will appear a trivial matter.¹⁶ "The secret of happiness is to face the fact that the world is horrible, horrible, *horrible* You must feel it deeply, and not brush it aside You must feel it right in here"—(Russell said) hitting his breast—and then you can start being happy again."¹⁷

The basic question is whether Russell is right in holding that it is possible to educate ordinary men and women that they should be able to live without fear at least of death. Pessimists, like Tolstoy and Schiller, seem to be claiming that it is impossible to do so, that death, so to speak, is a natural, if not ontological, terror. Common sense and the evidence indicates the contrary to be true. Attitudes toward dying and death are malleable.¹⁸ And while it is probably an exaggeration to say that we can come to view personal death as a trivial matter, Russell seems to be correct in holding that the terror of death and irrational fear can be eliminated.

Russell believes that a combination of meliorism and a long view of things provide a sufficient antidote to thwart the paralysis of utter despair. Man can be educated and is capable of growth. Man not only can improve his lot in life but, even after very bad times, he resumes his movement towards progress. Two of Russell's most revealing statements occur in the context of an evaluation of Spinoza's philosophy. I shall quote them at length.

The problem [of the wicked having power] for Spinoza is easier than it is for one who has no belief in the ultimate goodness of the universe. Spinoza thinks that if you see your misfortunes as they are in reality, as part of the concatenation of causes stretching from the beginning of time to the end, you will see that they are only misfortunes to you, not to the universe, to which they are merely passing discords heightening an ultimate harmony. I cannot accept this: I think that particular events are what they are and do not become different by absorption into a whole. Each act of cruelty is eternally a part of the universe; nothing that happens later can make that act good rather than bad, or can confer perfection on the whole of which it is a part.

Nevertheless, when it is your lot to have to endure something that is (or seems to you) worse than the ordinary lot of mankind, Spinoza's principle of thinking about the whole, or at any rate about larger matters than your own grief, is a useful one. There are even times when it is comforting to reflect that human life, with all that it contains of evil and suffering, is an infinitesimal part of the life of the universe. Such reflections may not suffice to constitute a religion, but in a painful world they are a help toward sanity and an antidote to the paralysis of utter despair.¹⁹

In a similar vein, he writes:

If bad times lie ahead of us we should remember while they last the slow march of man, checked in the past by devastation and retrogressions, but always resuming the movement towards progress. Spinoza, who was one of the wisest of men and who lived consistently in accordance with his own wisdom, advised men to view passing events "under the aspect of eternity." The child lives in the minute, the boy in the day, the instinctive man in the year. The man imbued with history lives in the epoch. Spinoza would have us live not in the minute, the day, the year or the epoch, but in eternity. Those who learn to do this will find that it takes away the frantic quality and misfortune and prevents the trend towards

madness that comes with overwhelming disaster. Spinoza spent the last day of his life telling cheerful anecdotes to his host. He had written: 'A free man thinks of death least of all things, and his wisdom is a meditation not of death but of life.' And he carried out his precept when it came to his own death.²⁰

To sum up: Russell did not think death was an obstacle to happiness because, like the stoics, he saw little point in fearing what cannot be conquered. He was by nature and intellectual conviction opposed to fear. And he held a melioristic and long view of things, which allowed him to view passing events under the aspect of eternity and to view man, in general, as instinctively driven toward growth, always resuming the movement toward progress.

III

Even the most casual reading of Russell reveals the importance of happiness. Not only does the intelligent and vigorous individual desire happiness but the protection and nurturing of this end is a major purpose, if not the most important purpose, of the major institutions in a properly run society. The basic aspects of social life—education, politics, the good life itself—requires an intimate understanding of the nature of life satisfaction. The general aim of education is to provide a solid basis for happiness. "Happiness in childhood is absolutely necessary to the production of the best type of human being."²¹ The same is true of politics. "The most important purpose that political institutions can achieve is to keep alive in individuals creativeness, vigour, vitality, and the joy of life."²² Again Russell writes that "a wise humanity, in politics as elsewhere, comes only of remembering that even the largest groups are composed of individuals, that individuals can be happy or sad, and that every individual in the world who is suffering represents a failure of human wisdom and of common humanity."²³ More important perhaps, happiness contributes to goodness and not vice versa. The good life is a happy life. "I do not mean," he explains, "that if you are good you will be happy; I mean that if you are happy you will be good."²⁴ Thus, unlike thinkers who hold that morality is a (or the condition) for happiness, Russell maintains that happiness, though not identical with morality, is, as a rule, a necessary condition.

The difficulty is that if happiness is a general ideal and necessary condition for morality, and if it is not some clear and distinct idea, then the situation is problematic. For it is one thing to offer the reader recipes for happiness, and to purport that all that is claimed for them is that they have increased one's own happiness.²⁵ It is another to maintain that happiness is one of the major human ends as well as a necessary general condition for morality, and then proceed to offer seemingly different and unclear recipes. Thus, we have the charge that Russell's characterization is too rich, too loose. And the more complex argument that because of this looseness, because the nature of the goal is unclear, happiness is generally less attainable.

What I wish to suggest is that this characterization is deliberate in that Russell believed that the available evidence indicated that his conception of happiness allows for the maximum of growth and the achievement of happiness for the greatest number of persons. This point, I think, had best be elaborated.

One of the most striking features of Russell's account of happiness is his belief that the word "happiness" can be correctly used to denote almost any kind or level of satisfaction and that "the great practical importance of psychology will come in giving ordinary men and women a *more just conception* of what constitutes human happiness."²⁶ For Russell, the central meta-question is: What is a more just way of conceiving of the kind of life satisfactions we wish to subsume under the name of happiness if we wish to minimize suffering and maximize the major modes of life satisfaction?

Russell's answer, in bold outline, is as follows: First, it must be a goal that enables men to fully taste what ordinary men might generally be expected to achieve in life—health, love, interesting work, perhaps parenthood. Second, the goal must be such as to provide for zest and the sense of accomplishment, two features that generally accompany earned success. This means that the task must be neither too difficult nor too easy. The price of aiming too high, of having unrealistic expectations, is necessary defeat and pointless frustrations. The price of aiming too low is boredom and the emasculation of vigor and zest.²⁷ Hence, a just conception of happiness requires that man aim high enough to allow for continual growth and the tasting of the fullness of life, yet

low enough to avoid a general sense of futility.

To be more specific: When happiness is properly understood and is the end that actually motivates men, men will desire the things heretofore mentioned. This does not imply a general standard for happiness.²¹ Nor does it imply a fixed standard.

All Utopias that have hitherto been constructed are intolerably dull. Any man with any force in him would rather live in this world with all its ghastly horrors, than in Plato's Republic or among Swift's Houyhnhnms. The men who make Utopias proceed upon a radically false assumption as to what constitutes a good life. They conceive that it is possible to imagine a certain state of society and a certain way of life which would be once and for all recognized as good, and should then continue for ever and ever. They do not realize that much of the greater part of a man's happiness depends upon activity, and only a very small remnant consist in passive enjoyment. Even the pleasures which do consist in enjoyment are only satisfactory, to most men, when they come in the intervals of activity. Social reformers, like inventors of Utopias, are apt to forget this very obvious fact of human nature. . . . Every vigorous man needs some kind of context, some sense of resistance overcome, in order to feel that he is exercising his faculties.²²

Not only does happiness require activity, not only is it probably an indispensable part of happiness to be without something one wants, but "happiness, if it is to have any depth and solidarity, demands a life built round some central purpose of a kind demanding continuous activity and permitting of progressively increasing success."²³

An important illustration of this point occurs in his discussion of having a so-called ideal income. Russell writes:

it is not the amount of your income that makes you happy, but its rate of increase. The man who enjoys life is the man who, with habits adjusted to one standard of life, finds himself continually in a position to adopt a slightly higher standard. That is why, on the whole, England was happy under Queen Elizabeth, and America is happy at the present time.²⁴

Again:

The important question, in regard to happiness . . . is not the absolute amount of one's income, but its augmentation or diminution.

Perhaps a very rapid increase, by altering one's habits and one's social milieu, may not be altogether a source of contentment, but a continual rise of (say) ten percent, every year is likely to bring the nearest possible approach to perfect bliss. . . . Above all, he has the feeling of being a successful man, since circumstances adapt themselves to his wishes, he acquires an illusion of omnipotence, than which nothing is more delightful.²⁵

As the passages which I have just cited show, Russell's treatment of the question concerning the attainability of happiness is subtle and differs significantly from those who hold that happiness consists in having prospered. Russell concludes that felicity consists not in having prospered, but in *prospering*. That the best way to "attain" happiness is not to attempt to capture it, not to be completely successful, but to have a variety of ends, preferably ones rooted in instinct which permit progressively increasing success. Since continuous growth is an indispensable condition for happiness and since the happiness of each of us depends upon the well-being of the whole of mankind, a conception of happiness that protects against remediable suffering and allows for maximum continuous growth and the achievement of life satisfactions for the greatest number is the most just and nearly correct view.

BR, WRITER OF LETTERS

- (8) On Pauling's visit: Russell's letter of 9/5/58, from the book, *The First Cuckoo: Letters to The Times since 1900*, (London: Allen & Unwin, 1976), with thanks to TOM STANLEY:

I am writing to report an incident which must bring shame to all who value the fair name of Britain. The incident concerns the dealings of the Home Office with Dr Linus Pauling, a very distinguished native-born American, Honorary Fellow of the Royal Society, recipient of honorary degrees from the Universities of Oxford, Cambridge, and London, Nobel Prizeman, and well known throughout the scientific world as a man of outstanding intellect and integrity. He came to the United Kingdom on August 31 for two main purposes, to deliver an address which he has been invited to give on September 15 at the Kekulé Symposium of the Chemical Society of London and to address a meeting organized for the Campaign for Nuclear Disarmament which is to take place on September 22.

On arrival at London Airport he was separated from the other passengers by the immigration authorities, and his son, who had come to meet him, was refused information as to whether he had arrived. He was closely questioned as to the purposes of his visit. When he mentioned the Chemical Society, he was asked whether he had any evidence that they had invited him. He replied that the evidence was in his baggage which was in the customs shed, and asked whether they accused him of lying. At the moment, they did not answer; but at a later

stage they made this accusation. At first they said that he must leave the United Kingdom on September 15. He pointed out that this made his address to the Chemical Society impossible, and they reluctantly extended his permit to the next day, September 16. They stated as the ground of their action: "We do not admit people to Great Britain who come principally to take part in public meetings, especially when against Government policy."

This action by the British authorities is shocking. First, for the gross discourtesy of subjecting a man of great intellectual eminence, who has been honoured by many learned bodies in this country, to insult at the hands of ignorant officials. In the United States McCarthyism has lost its vigour, but one is compelled to believe that it is being taken up in this country.

Second, if Government policy is as stated to Dr Pauling, free speech has been abandoned and the only freedom left is that of supporting the Government.

Third, on the particular issue of nuclear weapons the Government have laid themselves open to very damaging criticism. It will be said that they know their policy to be such as no well-informed person could support. Apparently their watchword is: 'Democracy, yes, but only ignorant democracy, for our policy is one which no well-informed democracy would tolerate.'

QUESTIONS & ANSWERS

- (9) For our learned members, a question from PAUL PFALZNER:

CUPIDINE HUMANII INGENII, LIBENTIIUS OBSCURA CREDUNTUR

BR BIOGRAPHY

- (10) The Encyclopedia Americana tells it this way, in Volume 23 of the 1984 Edition. Thank you, TOM STANLEY.

RUSSELL, Bertrand Arthur William (1872-1970), British philosopher, mathematician, Nobel Prize-winner, and political activist. One of the most productive writers and thinkers of his time, Russell gained an unusually wide international readership not only in scholarly circles but among the general public.

Russell was born in Trelleck, Wales, on May 18, 1872, the second son of Viscount and Lady Amberly, who both died when he was three years old. He was raised by his grandmother, Lady Russell, wife of Lord John Russell, who had twice been prime minister. The young Russell was educated by tutors at her home near Richmond. Precocious and lonely, he read prodigiously. He began to study geometry at 11, found it "indescribably delicious," and for the next three decades found his chief satisfaction in mathematics. At 18 he entered Trinity College, Cambridge, to study mathematics and then philosophy. His brilliance was recognized, and after graduation he became a fellow of Trinity College in 1895. Soon he began to publish his important books in philosophy.

Russell's inheritance provided him with an income for a time, but bit by bit he gave it away to political causes. Thereafter he lived on earnings from lecturing, from periods of teaching (for example, Cambridge, 1910-1916; University of Chicago, 1938), and from his writings.

The first three of Russell's four marriages ended in divorce. He had three children. In 1931, on the death of his elder brother, he succeeded to the family earldom. In 1949 he received the Order of Merit and in 1950 was awarded the Nobel Prize for literature.

Work on the *Foundations of Mathematics*. In 1900, Russell became convinced that the laws of logic should be expressed in symbols and that mathematics is really a branch of logic, contrary to what most philosophers had believed. In the next year he made his famous discoveries concerning the newly developing field of set theory. In *The Principles of Mathematics* (1903), he presented the rich but as yet ill-systematized results of this intensely creative period of thinking.

Russell had already begun collaborating with Alfred North Whitehead, and after long years of labor they produced their monumental treatise *Principia Mathematica* (1910-1913). In this book they organized symbolic logic into systematic form, with postulates from which theorems were strictly deduced. They then undertook to demonstrate how the concepts of arithmetic and algebra can all be defined purely in terms of concepts of logic, and how the laws of these branches of mathematics can be deduced merely from the postulates of logic. The *Principia* was of epoch-making importance to philosophy because of its new view of the status of mathematical knowledge and the impetus it gave to the development of mathematical logic.

Views in Philosophy. Russell neither founded nor wedded himself to any definite philosophical movement. During his early years at Cambridge he embraced the then dominant philosophy of Absolute Idealism, with its romantic doctrines that reality is all one logically unified whole and that the physical world really consists of nothing but mind. In 1898 with the aid of G. E. Moore, who had been a fellow student at Cambridge, he totally rejected it and adopted what he called Logical Atomism (according to which there are many separate, logically independent facts) and

Realism (the doctrine that the physical world is independent of mind). Also, he long held that there is an additional world of "universals"—a realm of nonmental, nonspatial, eternal entities rather like Plato's "forms," which provide us with our knowledge of self-evident truths. Although Russell came to be sympathetic in many ways toward the tradition of British Empiricism, he never accepted its claim that all knowledge is based on experience.

With Moore, Russell originated the influential idea that "analysis" (studying definitions of concepts) is an important method for philosophy. But as a result of his work with Whitehead, he came to feel, as Moore did not, that the correct method in metaphysics and the theory of knowledge was to "replace inferred entities by logical constructions." This method required the use of logic to invent definitions by which inferred (hence, dubious) things could be explained away in terms of things with which we are directly acquainted. In a series of books starting with *Our Knowledge of the External World* (1914), Russell worked to develop theories by which physical objects and minds (which he regarded as inferred entities) could be treated as logical constructions out of elements that supposedly were more ultimate and better known. The philosophical theories he developed during this middle period were ingenious but, as he himself admitted, far from successful.

During his later years, Russell turned back toward the less abstruse Realism of his earlier period. His last original work in philosophy was *Human Knowledge* (1948). Russell had always disapproved of Pragmatism; nor did he care for Logical Positivism when it arose. After World War II he was unsympathetic toward the "ordinary language philosophy" current at Oxford and toward the influential later teachings of his former pupil Ludwig Wittgenstein.

Moral and Social Views. After World War I, Russell gave increased attention to moral and social issues. He became convinced that puritanical attitudes toward sex were a great cause of human unhappiness as well as a source of people's fierce pro-war sentiments. In *Marriage and Morals* (1929) he advocated trial marriage and easier divorce, and wrote tolerantly of adultery and homosexuality. These views excited the opposition of religious people that later led to a notorious court decision (1940) barring Russell from a professorship at the City College of New York.

In the 1920's the birth of his two older children turned Russell's thoughts toward education. With his second wife, Dora Black, he directed the Beacon Hill School (1927-1934), a progressive school in which children were encouraged to speak and act uninhibitedly. He gave his views of education in *Education and the Social Order* (1932).

Political Views and Activities. Russell was a socialist who cherished individual liberty. "I dislike communism because it is undemocratic and capitalism because it favors exploitation," he said. He never held public office, although he ran for election to Parliament three times (1907, 1922, 1923).

Russell's attitude toward war was that of a selective pacifist. Regarding Britain's entry into World War I as a disastrous political blunder, and sickened by the belligerent attitude of the public, he opposed the war in writing and in speeches. In 1918 his antiwar activities finally led to six months' imprisonment. He did not

British Nobel Prize Winner Bertrand Russell's career combined philosophy, mathematics, and politics.

oppose World War II, however, for he reluctantly concluded that nazism was a menace to civilization that could be stopped only by force.

After 1945, Russell saw nuclear disarmament as imperative. Before the Soviet Union developed its own nuclear arsenal, Russell believed that the West should use the threat of preventive war to compel the USSR to agree to permanent nuclear disarmament. With the acceleration of the nuclear arms race, he later concluded that Britain should become neutral in the Cold War.

During the mid-1950's, Russell worked through "The Committee of 100" and later through the Bertrand Russell Peace Foundation. He participated in demonstrations, and in 1961—at the age of 89—was jailed for seven days after being arrested in London at a sitdown protest against nuclear weapons.

Russell bitterly opposed U. S. intervention in Vietnam and was convinced that the United States was committing atrocities there. This belief led him to sponsor an unofficial "War Crimes Tribunal," which met in Stockholm in May 1967 and pronounced U. S. leaders guilty of crimes against humanity. His *Autobiography* was published that year. He died at his home in Penrhyn-draeth, Merionetshire, Wales, on Feb. 2, 1970, in his 98th year.

Russell's stature as a philosopher is unsurpassed among 20th century thinkers. An austere philosopher of mathematics, a passionate advocate of rationality, a wittily skeptical enemy of dogmatic and emotional thinking, a prophet of sexual freedom, an antiwar activist—Bertrand Russell combined all these elements and more.

FOR SALE

- (11) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "*Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid in U.S.A., Canada & Mexico. Order from the newsletter, address on Page 1, bottom.

PROMOTING BR/BRS

- (12) Have you a complete set of RSN? Here is a suggestion that you may wish to act on: if you own all issues of the BRS newsletter -- Issue #1 through Issue #58 -- consider offering it to your local library. It's a bit of a plus for a library to have a complete set. The Library of Congress has one. Bill Young's Cedar Springs Library (in Auberry, CA) has one. And your own local library can have one too -- if you give the word.

The Library of Congress will show, in its literature, libraries that have complete sets. That's another plus for a local library. The following newsletter item shows how it would be shown.

So, if you've got one, and rarely refer to it, why not offer it to your local library? Even if you do refer to it occasionally, you would still have access to it. You could be doing a scholar -- and the BRS -- a good turn.

Think about it. Please let us know, if you do it. (With thanks to HARRY RUJA for the suggestion.)

- (13) RSN in LC. Russell Society News was listed (as shown below) in a recent issue of *New Serials Titles*, which is published by the Library of Congress.

"This is a very valuable listing for us," says HARRY RUJA, "since most libraries order their catalog cards from LC [Library of Congress] (saving themselves the formidable task of doing their own cataloging), and if they use this card, they will file it under Russell, Bertrand, 1872-1970--Periodicals, in addition to filing it under the Bs as Bertrand Russell Society. Hence, anyone who looks up BR in the card catalog of the local library will be directed, if he searches through all the BR cards, to our publication.

"The letters DLC represent District of Columbia, Library of Congress [and indicates that DLC has a complete set of Russell Society News]. LC is committed to listing all the libraries which have various periodicals."

Thus, if a member donates his/her complete set of RSNs to the local library, as suggested in the previous newsletter item, that local library's code will be shown in this listing alongside DLC.

"Interest in RSN may increase significantly if it is widely and easily available -- and LC is the best agent to get this done."

PROMOTING BR'S PURPOSES

- (14) From the *New York Times* (3/19/88):

Doctor-Assisted Euthanasia Should Be Legal

To the Editor:

As one who feels strongly that the right to die is as sacred as the right to live, I object to Mark Siegler's use of loaded words to espouse his views in "The A.M.A. Euthanasia Fiasco" (Op-Ed, Feb. 26). Assisting a terminally ill patient to die peacefully without further pain is vastly different from saying a physician "deliberately killed another doctor's patient."

In my opinion, the Journal of the American Medical Association can-

not be accused of acting irresponsibly by publishing the article "It's Over, Debbie" without attribution. Indeed, the journal's editors should be commended for preserving the anonymity of the young doctor who told the story. If his identity were revealed, there is no question he would be prosecuted and prevented forever from practicing medicine. He could wind up in jail -- or worse. And for what? For acting humanely and jeopardizing his own career to help a suf-

fering human being?

Dr. Siegler acknowledges fears about dying in hospitals, becoming dependent on others and whether or not doctors will provide adequate relief of pain and suffering even for the terminally ill. But his solution, relying on physicians to "convince the public that its fears ... will be addressed in a more humane and considerate way," is nothing less than fatuous.

As a member of the Hemlock Society, I applaud the organization's at-

tempt to legalize doctor-assisted euthanasia -- not suicide, Dr. Siegler, if you please -- but merciful assistance in terminating hopelessly painful existence. If California residents approve a referendum legalizing euthanasia, I hope it will prove an inspiration to pursue the same objective in other states. This holds infinitely more promise than waiting for the medical profession to come to grips with reality.

BR'S INFLUENCE

- (15) Ozmon. We found his story so engaging that we didn't mind the difficulty of reading the very poor photocopy. It appeared in *Phi Delta Kappan* 52, No. 3 (Nov. 1970), pp. 146, 152-3. 1970 was the year that BR died; perhaps the news of BR's death triggered Ozmon's recollections. With thanks to HARRY RUJA.

BERTRAND RUSSELL: SOCRATES OF OUR AGE (1872-1970)

I first met Bertrand Russell in 1951. He had come to the University of Virginia, where I was an undergraduate philosophy major, to speak on the subject of a "Happy Man in a Happy World." He was then 79, and though I had seen several pictures of him, including some film clips, he appeared shorter and frailer than I had imagined.

A friend who was pursuing a pre-med program at William and Mary College had driven 120 miles from Williamsburg to hear Russell that evening. We had both attended a rather bad Roman Catholic school, and our revolt against that kind of education, as well as concern with our own intellectual development (and certainly our intellectual motivation), were due in large measure to the man we

HOWARD OZMON (4635, Columbia University, Chapter) is professor of education at Virginia Commonwealth University, Richmond. He is the editor of Contemporary Critics of Education (Interstate Printers, Danville, Ill., 1970, \$3.95), which includes a section on Bertrand Russell.

were to see and hear that evening. We had read just about everything we could get our hands on by Russell since our freshman year in high school, and Russell seemed to teach us both intellectually and emotionally — though our parents and teachers never could. We particularly relished his dethroning of the greats like Aristotle, St. Thomas, and Hegel, as well as his opposition to status quo concepts like conventional marriage, the gray-flannel-suit syndrome, and racial inequalities.

We liked him too because he was a fighter. We were familiar with the attacks made on his views about free love, had heard him denounced from pulpits because of his views on religion, and knew how he had consistently argued against man's right to make war, despite social ostracism and imprisonment. Indeed, this frail gentleman from England had already turned us on, and no LSD trip could equal the excitement of hearing him in person. We knew, too, that there were several Baptist ministers in the audience, as well as ministers from other local denominations who had driven hundreds of miles just to face this devil in the flesh, and we looked forward to

some fiery exchange. After all, this was the man who had written such statements as:

I say quite deliberately that the Christian religion, as organized in its churches, has been and still is the principal enemy of moral progress in the world.

And on another occasion:

It is possible that mankind is on the threshold of a golden age; but, if so, it will be necessary first to slay the dragon that guards the door, and this dragon is religion.

Russell's appearance on stage was an electric one, with his mane of flowing white hair and a thin pipe clenched tightly between his teeth. He stood alone on the stage and spoke to the topic for only a short time. Then he invited questions. Many of the listeners had questions, half of them hostile and half of them friendly.

Many of the questions were bluntly and emotionally delivered, such as, "Sir, are you an atheist or not?"

Whether Russell had previously decided or whether he sensed the antagonism of many in the audience, this was a night in which he decided to cool it. For an hour and a half he parried every question and answered on his own terms, pausing only from time to time to take a thoughtful puff on his pipe. It was obvious that he had come into the Bible Belt neither to excite nor to offend, but mostly to show that he did not have horns and a pitchfork (a point on which there had been considerable doubt). Needless to say, my friend and I were greatly disappointed. We had expected a fierce battle, knowing that our mentor could take them all on with one hand; yet he had decided against it. It was logical for us to guess, I suppose, that Russell felt that his audience already considered him too extreme, and that nothing would be gained by appearing to be more extreme until they had grasped the ideas that preceded it.

Despite our disappointment in the talk, we still had his writings — those wonderful writings filled with humor and love and intellect, writings that made you want to become a philosopher even if you were a plumber. We had known from previous experience with authors that they seldom equaled

in appearance what their writings portended them to be. So we accepted the view that Russell was a great writer but a poor speaker.

It had been only a year before, however, that Russell had won the Nobel Prize for literature, and it was only much later that we heard on record the wonderful speech he delivered in Stockholm. It was everything that his talk at the University of Virginia was not. He was witty, glamorous, and intelligent, and proved for all time that he was indeed as much a speaker as he was a writer. Russell had them rolling in the aisles in Stockholm, and this helped to point out, I think, the complex personality of a man who can be at times both logical and emotional, and serene or buoyantly gay. A man to be reckoned with, and above all, a man.

For those who deplore the fact that this is no longer a world in which knights-errant exist, for one where there is room for both heroism and excitement, I would like to say that Bertrand Russell proved time and time again that life today is no less exciting or heroic than it ever was. In his own lifetime he championed causes that would have made a Lancelot retreat and pursued the morality of issues beyond the reach of even a Sir Galahad. Russell's entire life interested and enthralled us because he was not only a great thinker, but a thinker who deigned to put his ideas into practice in order to both educate and chide his fellow man. Like Socrates, he was the gadfly of his time, and though he was often swatted, he was never out of the fight for long.

In 1927 Russell and his wife, Dora, opened a school for young children called Beacon Hill. In addition to their own son and daughter, the Russells had as students some 18 other boys and girls between the ages of four and 11. At Beacon Hill the Russells tried to lay down a basis for a modern education by combining the best in teaching methods, diet, psychology, and curriculum. The Russell school was somewhat similar to A. S. Neill's Summerhill, and Russell seems to agree with Neill that suppression of the child's basic impulses during childhood may well result in ill effects in his adult life. The Russell school encouraged self-government and freedom with the child learning how to

free himself from dangerous impulses that might carry over into adult life. Russell stated the germs of his educational ideas in a fascinating little book entitled *On Education* or as it appears in its American title, *Education and the Good Life*.

In 1938, Russell came to the United States and taught, first at the University of Chicago and then at the University of California at Los Angeles. In 1940 he accepted an invitation from the Board of Higher Education in New York City to join the department of philosophy at City College. He was denied an opportunity to fill this post, however, by a judge who rendered void his appointment on the basis that it was his duty to protect the health, safety, and morals of the public. From 1941 to 1943 he lectured for the Barnes Foundation in Philadelphia, but Dr. Barnes, head of the foundation, dismissed him on January 1, 1943, with three days' notice. This time Russell brought action for a wrongful dismissal and won. In 1944 he returned to Britain and was reelected a fellow at Trinity College. In 1949 he was elected an honorary fellow of the British Academy and also won the highly coveted Order of Merit. In 1950 he was awarded the Nobel Prize for literature, and the committee awarding the prize cited Russell as one of the most brilliant spokesmen of rationality and humanity in our time — a fearless champion of free speech and free thought in the West.

Russell was an outstanding crusader for peace, and for a number of years served as the head of the Bertrand Russell Peace Foundation. He spoke and wrote continuously against war as a way of solving human problems, and he campaigned vigorously for peace for over 60 years. In 1961, at the age of 89, he was sent to jail for his participation in a campaign for nuclear disarmament. In 1967, at the age of 95, he wrote an article entitled "War Crimes in Vietnam" in which he attacked the United States for its military actions in Vietnam, and he served on a war crimes tribunal which accused the United States of aggression in Vietnam.

In 1964, Paterson State College in Wayne, New Jersey, where I was teaching, suspended seven students because they campaigned to have more democratic procedures on campus, including the right to have political organizations. Another philosophy teacher and I stood up for the suspended students, and we worked until we got them readmitted. Although we did manage to get the students back in — with the aid of a lawyer and other pressures — we found that our own contracts had not been renewed for the coming year,

as we had been told that they would be prior to the suspension of the students. When the students heard of this outrage they immediately held one of the early sit-ins in the 1960's, sitting in Hunziker Hall for over 36 hours, which was even more astounding when one considers that most of the students were females. One student wrote a letter to Bertrand Russell explaining the situation to him, and the Super Batman, always able to smell injustice and seeking to right wrongs no matter how far away and how small a locality, sent off a few terse letters attacking the college administration for their arbitrary and dictatorial attitudes, while defending the other philosophy teacher and myself. The college administration remained adamant despite the fact that this was the first time a Nobel Prize winner had ever taken cognizance that there was such a school in New Jersey, and we went on to accept better positions elsewhere. But Russell, we felt, had really shown his mettle by championing the right of so small a cause in so significant a place.

Russell believed that children are "born with only reflexes and a few instincts" which are neither good nor bad. It is up to the parent to see to it that the child has the kind of environment that will promote the development of good habits, which hopefully will become almost automatic. The best way to encourage this, Russell felt, is by setting a good example for children to follow. When the child sees the parent saying one thing and doing another, he becomes confused and hostile. Russell was one who practiced his beliefs and encouraged others to do likewise.

He believed that children have a normal desire to please their parents and elders, but that when they are faced with hypocrisy on the part of parents, or when parents try to force children to behave in a prescribed manner without their really accepting it, that they revolt against authority. Russell felt that rather than force children to behave in such and such a way, we should help to develop the child's habits so that he naturally chooses desirable behavior patterns. One of the desirable behavior patterns that Russell promoted was encouraging a child to stick with a task until it is completed. Although he recognized that a child's attention span is very limited, he felt that the child needs to be encouraged to remain with a task for longer and longer periods and encouraged to develop many worthwhile interests that occupy his time in a useful way. The development of many interests creates a built-in motivational factor that helps to assure

continual effort toward learning.

Although Russell refrained from stating his educational proposals as universal for all children and believed that children should choose studies that they are interested in, he did feel that the parent can aid the process through sympathy, patience, understanding, and love, and thus prepare the child for the more formalized education to follow.

Once the parent has encouraged and developed the child's interests and curiosity, the teacher is now the one to channel the curiosity of the child in constructive ways. Although the teacher, like the parent, should not force his interests and values upon the child, he should be ready to provide the child with information, advice, and the kinds of materials the child needs to pursue that interest. Although a teacher should not dictate interests, Russell did feel that a good teacher can stimulate the students or the class toward desirable goals without engendering rebellious feelings on the part of the child. Russell also pointed out that in the welter of ideas that face a child, he is very prone to accept the views of his parents, teachers, or society as the authoritative ones and to be critical of views which oppose such ideas. For that reason he felt that it is quite important that the child be encouraged away from dogmatism by learning that there are at least two sides to every question, and this can only be done, he felt, by having a teacher who is both fair and open-minded.

At Beacon Hill, Russell had the children abide by disciplinary rules because the children had either made the rules or because they could understand their reasonableness. He did not like the establishment of codes of behavior that children don't want to obey or have to obey without knowing why. Russell sought to establish the kind of school where respect for the child took precedence over the common practice of requiring respect from the child.

When one looks at Russell's educational ideas, he sees many of the Dewey proposals for education: child-centeredness, capturing the motivation of the child, an awareness of instincts, learning by doing, education for character and social reconstruction, and so on. Although many readers of Russell have overreacted to his criticisms of Dewey's general philosophy, and though there may be some serious differences here, I do not find great differences between their educational philosophies. Although Russell's views on education were never formalized to the extent that Dewey's were, they still represent the kind of attitude that

we tend to call progressive.

Russell died on February 2, 1970. He would have been the very first to tell you that he made mistakes, that he changed his mind about things, but after all, even at 97 one is still growing, and Russell was never afraid to change his opinion or to step into a new arena. Although he is often considered the founder of the recent linguistic movement in philosophy, his growing interests caused him to leave it behind and to step forward into

broader spheres of interest.

His extensive education and interests, as well as his concern for truth, justice, and brotherhood, encouraged him to speak out time and time again on controversial issues, not only on issues pertaining to sex and religion, but political issues involving Cuba, Berlin, Czechoslovakia, and Vietnam.

When the definitive history of the twentieth century is written, it will pay little heed to most politicians,

generals, and the show-business personalities we read about daily in the public press. But I feel certain that Russell will have an honored place as one who always tried to make us examine what we were doing, and who often suggested an alternative course of action. Though he was often treated with scorn and ridicule, I think that one day we shall say of him, as Plato said of Socrates, that of all the men of his time, he was the bravest, the justest, and the wisest. □

THOUGHTS

(16) Soul comes from the pen of ELEANOR VALENTINE:

They say a soul is indestructible
Even by hemlock or cyanide.
It cannot self-destruct or be destroyed.
It goes winging its way onward.
We imagine so, believing it is possible,
Wondering if it is provable.
I must think, does some fossil inspire this reverie?
And what has become of its primitive soul?
It lived in the ocean, they say,
Which by some upheaval became Highland Beach.
They think so from the evidence,
Without actually being Jehovah's Witnesses.
I don't myself know who they are —
Some sort of surveying scientists
From the Department of Mental Health,
Presumably accredited. I didn't check it out.

THE NUCLEAR PREDICAMENT

(17) Nuclear Alert is the International Accidental Nuclear War Prevention Newsletter, edited by former BRS member Dean Babet. The current issue (Winter 1987-88) can scare the hell out of you.

Here are excerpts:

ACCIDENTAL WAR PREVENTION PLANS

• An agreement establishing "nuclear risk-reduction centers" was signed between the Soviet Union and the United States in September 1987. The centers, which will be in Washington and Moscow, will exchange information on matters such as an accidental missile launch or a commercial nuclear accident like the Chernobyl reactor fire that might be misinterpreted. The centers will act as "high-tech supplements" to the Washington-Moscow hotline.

• The U.S. European Command has a contingency plan that sets out ways of preventing a nuclear war from being started by a rogue commander or the accidental deviation from a flight plan. It allows even a junior serviceman's calls to be routed directly to the national command center in Washington if a nuclear weapons accident or incident threatens to trigger a war. Using a communications code called PINNACLE, the caller would send a message known as NUCFLASH over any available communication means. A copy of the plan (Conplan 4367) was

obtained under the Freedom of Information Act by Dr. Peter Wills of the New Zealand branch of Scientists Against Nuclear Arms and was reported in the newspapers of England, West Germany and New Zealand but not in the U.S. Why is the U.S. mass media so sound asleep to these dangers? A copy of the plan (document) is available upon request from the Nuclear Age Peace Foundation.

A nuclear explosion in space, whether accidental or by revolutionaries, would generate an electromagnetic pulse (EMP) that could blackout communications over a vast area. In such a situation, how would military callers send NUCFLASH messages?

• China would like to make positive contributions towards the prevention of accidental nuclear war according to Mrs. Chen Liming who spoke in detail on "Accidental Nuclear War: Causes and Precautions" (Pugwash Newsletter, January 1987.)

• India and Pakistan have reached an agreement in principle not to attack each other's nuclear installations. This confidence-building measure for reducing accidental war danger deserves codification in a formal agreement (*Arms Control Today*, Nov. 1987).

MASS DENIAL

General reluctance to think about nuclear war dangers, permits the following type perils to grow:

• The number of fuses that could trigger a nuclear war is growing as the number of nations with nuclear weapons increases. By their example, the U.S. and Soviet Union have been leading this growth.

• As time available for war decision decreases, each threatened nation's trigger finger becomes more itchy. Time now allowed is only 4 to 7 minutes, in some crises. "Star Wars" defense systems would reduce decision time still further.

• As each nation refines its weapons systems (e.g. first strike and stealth weapons), the trigger fingers of all threatened nations become more nervous. If deep arms reduction agreements are not achievable, an unintentional nuclear war is a certainty because the current arms race is a time bomb with many fuses.

Fortunately, many people are becoming uneasy about the direction of the arms race. In order to change direction in world thinking, we first need to become dissatisfied with the direction we are going. The more the danger is known, the more

nations can work together to prevent or limit a local war from going nuclear and global. In order to help increase awareness, this Newsletter is being sent to all nuclear powers as well as many other nations for their leaders to share with their military specialists and scientists.

The Intermediate-Range Nuclear Forces (INF) agreement between the Soviet Union and the United States is encouraging because it increases decision time in some situations. Also it is a helpful first step in moving toward further arms reduction agreements.

CUBAN MISSILE CRISIS

Reflections On The Cuban Missile Crisis by Raymond Garthoff (Brookings Institution, 1987), describes misunderstandings which occurred during the crisis, any one of which could have produced a nuclear war.

- A U.S. spy, Col. Oleg Penkovsky, sent a prearranged signal before he was arrested—that the Soviet Union was about to launch a nuclear attack. The CIA chose to disregard it.
- The U.S. Air Force was ordered to an unprecedented level of alert, DefCon 2, on Oct 24, 1962. The alert was transmitted to Strategic Air Command forces in plain English rather than code because the commanding officer, Gen. Thomas Power, wanted to flaunt U.S. nuclear superiority.
- A U-2 reconnaissance plane over Cuba was shot down on Oct. 27 which nearly led to reprisals. Evidence suggests the Cubans rather than the Soviets shot down the plane. President Kennedy's specific order for no reprisal reached the operational level almost too late to call off the strike.

Fortunately in 1962, there was much more time for assessing warning signals and unexpected events and a nuclear war did not occur

TERRORISTS AND PROLIFERATION

The U.S. Department of Defense released a report in November 1987 that said there is a growing risk that terrorists could steal radioactive materials to build nuclear weapons. The report, prepared for Congress, estimated that in the 1990s up to 300 shipments of weapons-grade plutonium—10 times the current level—will leave Europe each year.

Libyan leader Gadhafi told university students last June that the Arab world must develop or obtain an atom bomb for its defense and "should drop it" on anyone that threatens its independence.

LAUNCH ON WARNING CAPABILITY

Dr. Clifford Johnson, a Stanford University computer professional, alleges in a court suit that the Secretary of Defense is operating a "Launch On Warning Capability" which takes the power to declare war away from Congress and the President. Dr. Johnson says that computers can launch on warning under the current plan. This is so because after sensors register the flight of missiles, we become wholly dependent upon a "Computer-in-Chief" to recognize the statistical pattern and estimate the probability of attack, quickly enough to advise and execute a responsive launch of Minuteman and MX missiles prior to a predefined "use them or lose them" deadline. He is being assisted in the appeal of his suit by the Bay Area Lawyers Alliance for Nuclear Arms Control and the Computer Professionals for Social Responsibility.

ACCIDENTS AND MISTAKES

Each nation could do much to help arouse world public support for arms reduction agreements if they reported some of their serious accidents, false alarms and miscalculations.

- Young computer hackers in West Germany broke into the U.S. National Aeronautics and Space Administration computer network last summer and gathered secret information on space shuttles and rocket failures. It was reported the youths had

the ability to paralyze the entire network.

- The U.S. Air Force hurriedly parked an armored car atop a Minuteman III silo in Wyoming after the nuclear missile inside gave off false signals suggesting it was about to launch. "The theory, according to the spokesman, is that the cover is blown aside so rapidly that a vehicle parked atop it with brakes off will be left hanging in thin air and then drop straight down, in hopes of keeping the launching missile from going anywhere." This recently reported event occurred four years ago. (*San Jose Mercury News*, Oct. 29, 1987)
- Two separate Minuteman III tests at Vandenberg Air Force Base on 6-25-87 and 7-12-87 each went awry and were destroyed in flight, raining burning debris over the South Pacific.
- An unarmed Minuteman II missile was destroyed because of technical problems seconds after lift-off from Vandenberg Air Force Base on 11-9-87 spraying fiery debris across the sky.
- Poland apologized in June 1987 for the accidental shelling of a West German ship during maneuvers in the Baltic Sea.
- A \$4 million fuel tank on the last U.S. Atlas-Centaur rocket was damaged in a July 1987 accident that will delay launching of the rocket for up to a year. Four men were injured.

STOCK MARKET CRASH

The U.S. stock market crash of Oct. 19, 1987 dramatically illustrates how computerized early warning systems feeding on their own alerts can trigger a disaster. One investment banker said, "Whether the 'launch on warning' programs were responsible for the market collapse is debatable, but there is no question they exacerbated it." (*Newsweek*, November 2, 1987) In a similar manner, could the computerized early warning systems of nations such as the U.S., Soviet Union, Britain, France, or China when triggered by a sudden crisis, interact with each other's warning systems stepping up alert levels until some nation mistakenly launches nuclear missiles?

NEWS ABOUT MEMBERS

- (18) John Lenz, BRS Vice-President, has been awarded a Fulbright grant in order to spend the academic year 1988-89 in Greece. He will be at the American School of Classical Studies in Athens, writing his dissertation. He has also been invited to be a supervisor on an American excavation in eastern Crete. We offer congratulations.
- (19) Herb Vogt and Bette went to a recent meeting of the Springfield College Alumni Association, and noticed this quotation attributed to BR in the local paper, *San Antonio Light*, of April 11th:

Even in civilized mankind, faint traces of monogamous instinct can be perceived.

Do you think BR could have said that? We do.

Herb also enrolled his son, Lee Arno Vogt, in the BRS, which gives us our first second-generation member.

(20)

ANNUAL MEETING (1988)
(continued)

Theme of the Meeting:

HAPPINESS AND THE IMPORTANT THINGS IN LIFE

Program: Friday, June 17

4-6pm	Registration
6-7:30	Dinner
7:30-8:30	Welcome, Presentation of 1988 BRS Book Award, and Movie
8:30-9	Tea and Coffee
9:00 on	Board of Directors Meeting. (All members welcome.)

Saturday, June 18

7:30-8:45	Breakfast
9:00-10:15	Paper: Kenneth Blackwell, McMaster University, "Russell's Theory of Happiness"
10:15-10:30	Tea and Coffee
10:30-11:45	General Meeting (BRS Members' Business Meeting)
12:00-1:00	Lunch
1:00-3:00	Panel: "What is Happiness?"
3:00-6:00	Movie, Tours or Free time
6:00-7:00	Red Hackle Hour
7:00	Banquet
8:00	Presentation of 1988 BRS Award to Paul Kurtz, of SUNY at Buffalo: "The Meaning of Life"

Sunday, June 19

8:00-9:15	Breakfast
9:30	Paper: Robert James, President, AHA of NJ: "Out of the Night — Russell's Struggle Against the Weight of of Rudimentary Grief"
10:30	Paper: Lee Nisbet, Medaille College: "Russell's Theory of Happiness: A Pragmatic Critique"
11.45	Snack and Farewell

The "What is Happiness?" Panel. The literature concerning happiness is long and complex. Several authors have asked what happiness is, some tried to teach us how to achieve it. Aristotle and Bentham are in the first category, Epictetus and Russell seem to be primarily in the second. This panel will focus on what is (or ought to be) referred to by the word "happiness" and the extent to which one can profitably talk about the necessary conditions of a happy life. After the presentation, there will be time for feedback and questions from the audience. Panelists include Raymond Belliotti, Kenneth Blackwell, Robert Davis, Randall Dipert, and Marvin Kohl (Chair).

Fredonia: A Geo Brief. The State University of New York (SUNY) College at Fredonia is located within the village of Fredonia, in the heart of northern Chatauqua County, at Exit 59 of the New York Thruway, halfway between Buffalo, NY and Erie, PA. This largely residential village, with its beautiful tree-lined avenues, has a deeply-rooted history. The neighboring city of Dunkirk is located on the shores of Lake Erie.

The SUNY Campus is about 50 miles from the Buffalo Airport. There is no regular Airport-to-Fredonia bus. Rental cars are available. Try to arrive for a BRS-arranged 3:30pm van, Airport to Fredonia, fare \$10. If not possible, phone Marvin (716-673-3495) for alternative arrangements.

Registration/Reservation Form, for Campus Housing and Meals.

- . double room, 2 nights, cost per person, \$25
- . single room, 2 nights, \$40
- . meals (five, including Banquet) \$55
- . Banquet (Chinese) \$18

Circle the amount enclosed

Single room and meals, \$40 + \$55 = \$95.....	\$95
Double room and meals (2 persons), \$50 + \$110 = 160.....	\$160
Banquet only, \$18.....	\$18

NO RELIGION

- (21) How to stay sober without God, from *Free Inquiry* (Spring 1987, Vol. 7, No. 2):

Since its inception in 1935, Alcoholics Anonymous (AA) has helped legions of individuals recover from alcoholism. But there are between ten and fifteen million alcoholics in the United States, according to its own statistics, who don't attend AA meetings. No doubt many of these are skeptics, agnostics, secular humanists, deists, pantheists, atheists, and freethinkers who cannot in honest conscience accept AA's concept of an intervening God or "Higher Power" in their lives.

To be sure, AA does claim to welcome for membership anyone with a desire to stop drinking, but its *Big Book* puts an insurmountable philosophical obstacle in the way of many. "The alcoholic," it reads, "at certain times has no effective mental defense against the first drink. Except in a few rare cases, neither he nor any other human being can provide such a defense. His defense must come from a Higher Power." In addition, AA's understanding of alcoholism itself is damagingly out of date. Clinical studies have established that there is no such thing as an "alcoholic personality." Alcohol is "selectively addictive"—nonalcoholics don't have a patent on willpower, they simply do not become physiologically addicted to the drug. Yet AA's *Big Book* reflects none of these new scientific findings and continues to depict alcoholics as childish personalities and emotional cripples. By pinning the blame on the alcoholic's flimsy spiritual spine, AA tends to increase his or her feelings of guilt and shame.

Newly sober alcoholics, who are hanging onto their fragile lives as tightly as they can, may be ready to consider any philosophy or religion, no matter how debasing, incorrect, or personally unsavory it is. I call this the "grateful syndrome." For instance, I came to my position of unbelief gradually, as a sober alcoholic. But I was too timid—indeed, too terrified—to challenge the group, lest I lose my precious sobriety.

Today AA officially recognizes agnostics and atheists—after many years of passionate campaigning by its non-religious membership—in controversial meetings called "We Agnostics." Although the Lord's Prayer has been deleted, these liberal gatherings are, in reality, good old AA meetings, loaded with religion, superstition, and mysticism.

So where can secular alcoholics go for group support without sacrificing their integrity and conviction?

In Los Angeles, in November 1986, I convened a Secular Sobriety Group. We rely on rational intelligence and human emotions and have shown by the success we've had so far that one need not be mystical to be merry, or go from grog to God in order to refuse a drink.

We've been meeting in a local Parks and Recreation facility every Monday evening at eight o'clock. Our gatherings there are informal; to provide a relaxed atmosphere, they're lit by candles. We have neither dues nor fees and ask only for small donations to help defray the costs of room rental, coffee and light snacks, printing, and mailing.

The Secular Sobriety Group (SSG) has been publicized in a number of area newspapers and on local radio stations—at no charge because of our nonprofit, grass-roots status. The response has been most gratifying: We have been receiving an average of two telephone calls a day. The callers range from recovering alcoholics (and their family members) to humanist therapists inquiring on behalf of alcoholic clients, all in search of an alternative approach to AA and other religious alcohol-and-drug-addiction support groups.

Alcoholics attending our group meetings cover a broad spectrum, from the newly sober to those of us who have been sober for many years. Members include carpenters, social workers, actors, office clerks, athletes, nurses, and schoolteachers. We are keeping the structure of our meetings loose and

dogma-free. We simply stress the life-and-death necessity of alcoholics' staying sober, and we encourage one another to cultivate an internal freedom from alcohol and other mind-altering drugs—no matter what happens in our lives that might contribute to a relapse.

Some of our members prefer anonymity; others offer their full names, telephone numbers, and even business cards.

Although we welcome *all* alcoholics to our meetings, our approach is especially attractive to the nonreligious.

Lives are being saved, extended, made fruitful. There are no gods or goblins at our meetings. No belief in a "Higher Power" or adherence to any party line is required for sobriety. Our bond is a human one, natural but not supernatural, and so is our health and success. We value free thought over mind-control and over mindlessness. Yet most of all we celebrate and support all alcoholics in achieving and maintaining sobriety, regardless of their belief or non-belief.

As a sober alcoholic since April 24, 1978, this is all quite exciting to me.

MATHEMATICS

(25) "The Dangers of Abstraction" by Joel E. Cohen, in the *Wall Street Journal*, 4/19/87, p. 29, with thanks to DON JACKANICZ:

Mathematics is a Dr. Jekyll and a Mr. Hyde. Computers, the visible instruments of mathematics, are all around us. Yet stories of the remoteness of mathematics and of mathematicians are legion. For example, C.N. Yang, a Nobel laureate in physics, once explained the difference between a physics book and a mathematics book. A physics book is one you can't read after the first page. A mathematics book is one you can't read after the first sentence.

Not all mathematicians think their subject is so remote. In 1983, in their first book, "The Mathematical Experience," Phillip J. Davis and Reuben Hersh humanized mathematics as an activity of passionate, fallible men and women. The book told what it feels like to do and love mathematics. It won the 1983 American Book Award in Science. Properly understood, mathematics, the fearsome Mr. Hyde, became a lovable uncle.

In a new book, "Descartes' Dream: The World According to Mathematics" (Harcourt Brace Jovanovich, 321 pages, \$19.95), Messrs. Davis, professor of applied mathematics at Brown University, and Hersh, professor of mathematics at the University of New Mexico, report on the practical Dr. Jekyll: the mathematics of business and industry, medicine and law, government and war.

In business, for example, mathematics helps design the bodies of autos and aircraft to reduce air turbulence, helps

schedule manufacturing, analyzes the failures of parts, suggests how to inventory spares, optimizes distribution to points of sale, helps set finance charges for credit sales and so on. Mathematics continues to contribute to the growth of national productivity in almost every sphere of life in technologically advanced countries.

Descartes and Leibniz dreamed in the 17th century that all human actions could be guided by mathematical reasoning. They would be amazed to see how much of their dream is true today.

Unlike Descartes and Leibniz, but like many humanists of the past and present, Messrs. Davis and Hersh fear that mathematics has penetrated our lives too far. Their fear derives from the secret of mathematics' success, abstraction.

Mathematics replaces complex processes or situations with symbols and simplified rules for manipulating those symbols. The symbols and the rules ignore everything about the real world except what is essential to the mathematician's or scientist's purpose. Scientists use mathematical abstractions to figure out the consequences of their assumptions. They can also test their assumptions by comparing mathematically derived consequences with observable reality. The symbolic abstractions that replaced falling bodies, planets, chemical and biological processes have given people astounding power.

When the purpose of the abstraction is to deal with people, however, there are potential dangers. "The final intent of the application of mathematics to people," the authors write, "is to be able to compare two individuals or groups of individuals; to be able to arrive at a precise and definitive opinion as to which is taller, smarter, richer, healthier, happier, more prolific, which is entitled to more goods and more prestige, and ultimately, when this weapon of thought is pushed to its logical limits and cruelly turned around, which is the most useless and hence the most disposable . . . Whenever we use computerization to proceed from formulas and algorithms to policy and to actions affecting humans, we stand open to good and to evil on a massive scale."

Messrs. Davis and Hersh suggest that "advanced mathematization, through abstraction and subsequent loss of meaning, played a role" in the Holocaust. "It is no accident that the great evils of the period 1933-1945 were perpetrated in a country that was the world leader in theoretical science and mathematics . . . Numbers, tattooed on the arms of the victims, reduced them to the level of branded cattle." Beneath the bedside manner of the mathematical Dr. Jekyll lurks a Faust.

This mathematical self-flagellation is absurd. Replacing individuals and groups by abstractions is an older and deeper part of human experience than mathematics. The Chosen People fight the Amalekites.

Armies distinguish enemies and allies, privates and generals. The law recognizes classes of creditors, stockholders and debtors. Hospitals, universities, corporations and unions all deal with people abstractly.

The problem lies not in using mathematics to approximate features of people, as the authors suggest, but in using the inadequate mathematics of falling bodies, planets, chemicals and chromosomes to approximate people poorly. Here I betray my optimism and sympathy for Descartes' dream.

The computer, drudge extraordinaire, is as happy storing 10 million numbers, to characterize Johnny Jones, second grader, as it is storing only his IQ. The challenge is to choose the numbers wisely and to comprehend them. Once the human population outgrew the face-to-face group of a few dozen individuals, there was no escaping the masks we put over others' faces. With better mathematics and better instruments of mathematics, we can try to give those masks human features.

This is Mathematics Awareness Week. The new book by Messrs. Davis and Hersh could be just your number. If it's half wrong, it's at least half right, and that's better than most books on the subject.

Mr. Cohen is professor of populations at Rockefeller University.

(26)

GOVERNMENT/POLITICS

NECLC puts a spotlight on the Reagan Administration's lax enforcement, or non-enforcement, of laws in situations that might reveal illegal actions by government agents or work against Administration goals, such as the defeat of the Sandinistas. This ad appeared in the Sunday New York Times (3/20/88, p. E7), shown here reduced in size.

THE F.B.I. INVADES U.S. LIBRARIES

LIBRARIANS UPSET BY ATTEMPTED SURVEILLANCE

Americans concerned with Civil Liberties and especially with academic freedom should be alarmed at a campaign recently undertaken by the Federal Bureau of Investigation known as The Library Awareness Program. This Program is part of a national counter-intelligence effort and aims to persuade librarians at public and university libraries throughout the United States to help the F.B.I. in tracking down foreign spies or other intelligence agents who may be using the libraries. It is clearly an effort to turn librarians into Government informers.

Columbia University, the New York Public Library and the New York Library Association became incensed at the F.B.I.'s new policy and termed it "an intrusion on the privacy and academic freedom of library users." One method of surveillance advocated by the F.B.I. is for a librarian to hand over the names of foreign students or other foreigners, together with the titles of books borrowed by them. Apparently anyone reading Karl Marx or other radical writers would then be in for a lot of trouble.

In an authoritative article on Sept. 18, 1987, The New York Times reported: "F.B.I. agents have asked librarians in New York City to watch for and report on library users who might be diplomats of hostile powers recruiting intelligence agents or gathering information politically harmful to United States security. The initiative has upset library officials."

The Columbia Library, when approached by two F.B.I. agents in June, 1987, refused to cooperate in any way with the Library Awareness Program. Later, on October 1, the Intellectual Freedom Committee of the American Library Association issued an advisory statement attacking the F.B.I. and alerting librarians to the "unwarranted government intrusions upon personal privacy" that threaten "the First Amendment right to receive information." The Committee called the F.B.I. snooping an "unconscionable and unconstitutional invasion of the right of privacy of library patrons." It stated that "libraries are not extensions of the 'long arm of the law' or of the game of Big Brother."

We defenders of civil liberties denounce the F.B.I. Library Awareness Program as an outrageous and cynical violation of the Bill of Rights.

Write your Senators and Representative, and Director William S. Sessions of the F.B.I. These unconstitutional activities should be stopped.

THE AMERICAN PEOPLE'S RIGHT TO KNOW

OPEN LETTER TO PRESIDENT RONALD REAGAN

Dear Mr. President:

The Reports of the Tower Commission and of the Special Committees to investigate the Iran-Contra debacle have left open important questions for the American people. As President, you have the constitutional power to secure the answers to these questions:

1. Did the Department of Justice obstruct the Miami Assistant U.S. Attorney's investigation of military operations by the Contras against the government of Nicaragua with whom we had a treaty of peace?
2. Did your Administration support and fail to prosecute violations of the Voorhis Act, 18 U.S.C. 2386, which requires registration of organizations subject to foreign control and engaging in political and military activity in the case against Nicaragua?
3. Should the Contras have registered under the Foreign Agents Registration Act?
4. Did the Contras engage in drug sales and if so, were United States government agencies including the National Security Council and the C.I.A. aware of such activities and did they assist in or conceal such drug traffic?
5. Did the indisputable removal and theft of documents in the files of the National Security Council and the destruction of others as described in the Iran-Contra report, violate our laws intended to preserve such documents in the U.S. government files, 18 U.S.C. 641, 654, 2071 and 3042?
6. Did such removal, theft and destruction constitute an obstruction of justice under 18 U.S.C. 1505 since they occurred during an on-going investigation conducted personally by the Attorney General?

NATIONAL EMERGENCY CIVIL LIBERTIES COMMITTEE

DORA

(27) Dora Who? A Tribute To Humanism's Other Russell, by BEVERLEY M. EARLES, from *The Humanist* (Nov/Dec 1987):

Most of us know that history books are a department of politics and prejudice. Some of us agree with Bertrand Russell that objectivity is indeed a delusion, a delusion shared by lunatics. Certainly, humanists understand only too well what it is to have the humanist tradition omitted from historical records and public consciousness. It all has to do with the attempt to bend the facts of history to the beliefs and values of the guardians of civilization. If humanists are lucky, they make it as far as the footnotes or else something we don't recognize as humanism is publicized by a raving religious right. Many a respected encyclopedia continues to suggest that true humanism was stone cold dead by the year 1800. Well, if the funeral for humanism was held in the year 1800, then each self-proclaimed humanist since that date is a resurrected fossil.

But, as the saying goes, people who live in glass houses really ought to draw the curtains. We humanists, if nobody else, have written up our own history, including that since 1800, and any objective lunatic can see that our history of ourselves presents humanism mostly as a history of ideas. The life has been sucked out of it and there is barely a woman discussed in any depth.

Dora Russell lived a tireless, passionately defiant humanistic life from her first college days through her death in 1986 at the age of ninety-two. Recently, no less than four television documentaries were made about her as one of the great women of our century. Obituaries appeared in the *New York Times* and *London Times*. However, Englishwoman though she was, you won't find her discussed in even the British books on humanism and freethought. I discovered, and Nicholas Walter, the managing director of the Rationalist Press Association, agrees, that Dora Russell's "free thought activity was almost universally ignored." The Rationalist Press Association, incidentally, was the notable exception in all this.

The question is why? Why was she passed over? I suggest the following as principal reasons. First, Dora Russell did not have personal recognition high on her list of priorities. Second, humanists have not always had a strong conception of women as authorities. Third, humanism has had a tendency to concentrate on the contribution of scholarly ideas rather than deeds. And fourth, we have not looked past the giant personage of Bertrand Russell, to whom Dora was married for twelve years.

Of all four points, it is the last that I wish to stress and that is relevant to an anecdote told about freethinkers Sidney and Beatrice Webb, founders of the socialist Fabian Society in Britain and the London School of Economics. The story has it that as a couple they always agreed on fundamental public

matters and that, not surprisingly, such total harmony intrigued people. One day, Beatrice Webb was asked to account for it. She explained that she and Sidney had agreed early in their married life always to vote alike on great issues. One partner decided which way they voted and the other partner decided which were the great issues.

No doubt this is one means of arriving at the two-in-one ideal of marital bliss, and I suspect that a similar arrangement exists in the White House. But it is a means which I do not think most humanists would find acceptable because it offends our very precious sense of individuality. This being so, then, why do we not take more care when we look at the lives of others? Being married to Bertrand Russell posed a problem for Dora's affirmation of self, but she dealt with it by refusing to live in Bertie's shadow. With the notable exception of recent feminist writing and the media attention referred to earlier, however, that shadow has tended to cling. People say to me, "Well, being in the family of any celebrity always poses problems of self-identity." I agree with them but point out that sometimes we just don't bother to look further than the famous person in question. Even when it is all laid out for us to see, we don't always see it. John Stuart Mill openly credited much of the theory in *The Subjection of Women* to his partner, Harriet Taylor, and yet history and posterity continue to credit it entirely to Mill. I recently purchased a 1986 edition of *The Subjection of Women* from humanist publisher Prometheus Books. It does not mention Harriet Taylor as a collaborator, although other influences on Mill, such as Coleridge, Comte, and Wordsworth, are given due recognition. The copy on the cover of the book does say that here John Stuart Mill "strikes a powerful blow for women's rights."

Being Dora Russell meant having a publisher insist against her own wishes that her books be published under the name *Mrs. Bertrand Russell* and to find, even to this day, that her own books are occasionally catalogued under the name Bertrand Russell. It meant having the pioneering humanist school which she worked at tirelessly for sixteen years swiftly dismissed as a failure by critics who, almost without

exception, focus upon the first five years of the school's existence. These were the years when Bertie was there and who, upon leaving, declared the whole business a failure.

Despite being a loyal member of the Bertrand Russell fan club, I do not think that Bertrand Russell has the last word on Beacon Hill School. And it is worth remembering in this connection that he used to criticize philosophers who thought they could know facts simply by sitting still and thinking. Aristotle, he said, could have avoided the error of thinking women have fewer teeth than men by simply asking Mrs. Aristotle to keep her mouth open while he counted. Aristotle didn't do this, though, because he assumed he already knew. It is noteworthy that commentators on Beacon Hill School think they know all that is worth knowing or at least worth mentioning about it by behaving just like Aristotle. By today's standards, that is just plain ignorant.

Dora Russell stood in that fine humanist tradition of courage—courage to stand up for her convictions in spite of the herd and often in defiance of other opponents of the status quo. She was highly provocative. She infuriated men with her discussions of patriarchy; she infuriated feminists by arguing that there are a number of decisive differences between men and women that are to be embraced, not denied in misguided neuter thinking. She infuriated the guardians of the status quo

on just about everything—advocacy of free love, birth control, and abortion, running an atheistic humanist school that did not teach the greatness of the British empire. She was part of that enthusiastic band of intellectuals that incensed conservatives by praising the 1917 Soviet revolution, but she equally antagonized the left by unfashionably criticizing sexist practices of the revolutionaries.

She was a member of the committee out of which the Campaign for Nuclear Disarmament sprang and, in 1958, she organized a women's caravan of peace. This caravan toured Europe by truck and coach on a mission of goodwill to break down the barriers of the Cold War. Peace groups were antagonized because the caravan went through the Eastern bloc and ended with a splendid rally in the wicked Soviet Union. Prominent Western peace groups weren't going to have anything to do with that nonsense! So, deprived of the goodwill and financial assistance they had hoped for, the band of women set off on what turned out to be a very successful mission. They were enthusiastically received by dignitaries and women's groups throughout Europe, although they were arrested in Switzerland for taking part in an antinuclear demonstration. They were released on the condition that they not make speeches. "Switzerland was a peaceful country, [the authorities] said, not in need of people talking about peace," remembers Russell.

The difference between Dora's peace mission and so many others was that she and the other women thought that it should involve dialogue with peace groups on the "other side," with the so-called enemy. Such a dialogue was so successful in generating goodwill that, in fact, no one believed Dora's story when she returned to England. Fortunately for us, Dora's is the approach that now prevails, but, in 1958, critics thought that Dora and her band of women were either subversive or just plain crazy.

Philosophically, the central thrust of Dora Russell's ideas was based upon a critique of Cartesian thought. It is not widely known that Descartes, the revered father of modern philosophy, spent much of his time sleeping and avoiding women. For Descartes, the higher things of life—that is, mathematics and philosophy—could not coexist with a feminine presence. Mind and body were incompatible. In Russell's opinion, this patriarchal mind-body dualism of Descartes continues to have an enormous influence over our values and is both dehumanizing and life-denying in its effects on women and men alike. Insofar as the intellect and its work have been valued beyond that of the body and emotions, which has been the allotted domain of women, so each of the sexes has been alienated from an essential aspect of being human—the men from the nonrational aspect and the women from the rational. In the cause of liberation, then, Russell sought an integration of values that would free both sexes. She advocated more involvement for men in the nurturing process as one means of reducing this disproportionate degree of rationalism in the male mode of living. She sought to liberate women in such a way that they would have to forego neither motherhood nor career. The work of childcare is as important as the work of a physicist; proper nursery schools are a community responsibility, she said.

It is essential to realize that she said all this and acted upon it as early as the 1920s; if she had waited until such ideas could have become fashionable in feminism, she would not have expounded them until the late 1970s. She was fifty years ahead

of her time, and one now hears Betty Friedan, Erica Jong, and others echoing her views. Dora felt very intensely that mothers and children have been the most continuously oppressed human beings in the history of civilization. She helped formulate a slogan for the birth control campaign of the twenties which read, "It is four times as dangerous to bear a child as to work in a mine, and mining is man's most dangerous trade." She wanted above all to ensure a future for the generations of humanity born since the advent of the bomb, so she founded a Permanent International Committee of Mothers to work for this end.

From the very beginning, Dora wrote on highly controversial subjects, such as modern marriage, immortality, rationalism, and feminism—"things about which the English don't wish to hear," she said. She was a founding member of the League of Progressive Societies and Individuals, which included Julian Huxley, H. G. Wells, and Rebecca West among its members. The league very often met at Dora's school. No one else would have them because of their "outrageous" views and behavior—some of them were nudists. Dora continued her heavy involvement during this period with the Independent Labor party and the World League for Sex Reform. She was a founding member of the National Council for Civil Liberties in 1934 and of the Abortion Law Association. In 1954, Dora was asked to represent the Women's International Democratic Federation at the United Nations. At the time, the federation had 140 million members and had recently lost its nongovernmental organization status with the United Nations. When Russell came to New York to fight for reinstatement, she was issued one of the most restricted visas imaginable. She was considered a dangerous and subversive representative of communist front organizations and was not allowed outside of a two-square-mile area of Manhattan. This kind of treatment was not unfamiliar to her, however. Way back in the latter part of World War I, she and Bertie had been prevented from relaxing on the beach, as was their custom, because it was feared that while playing in

the sand they would send signals to enemy ships.

If one wanted to know how much one can cram into fulltime humanist living, one should read the three volumes of Dora Russell's autobiography, *The Tamarisk Tree*. The second volume includes a discussion of the kinds of things that went on at the Russells' humanist school. It also contains a sample of the plays which the children wrote, produced, and performed. The third volume contains so much detail about the war years and after that one critic wrote, "The future historians of Britain,

if he (or she) is to reveal the real life of our people, must go to Dora Russell's autobiography to learn the facts." Dora's papers will be going either to the International Institute for Social History in Amsterdam or the Cambridge University Library.

Dora Russell has a deserved claim to fame which she never sought herself—a claim not as Bertrand Russell's bohemian partner in his second marriage but as an individual in her own right. Along with famous and not-so-famous humanists, she embodies many of our ideals and must be safeguarded for present and

future generations. And if some of her ideas give you humanistic indigestion, an effect which she seems to have on most people at some point, it is worth remembering two statements made by one of the great freethinkers of all time, Robert Ingersoll. They are a reminder that we humanists, too, believe it or not, create our own sacred cows and spout our very own sanctimonious claptrap. Ingersoll said, "Heresy is a cradle. Orthodoxy is a coffin. . . . Heresy extends the hospitality of the brain to a new thought."

Dora's heresy is that she challenges

some of those dearly held principles which groups of humanists assume. She does not always make extensive arguments for them so much as she makes a series of pronouncements. This greatly irritates philosophical critics who conveniently forget that Bertie employed similar methods to great advantage.

It is essential for us to recognize the continuing relevance of what Dora has to say, and it certainly cannot be over-emphasized that, if Bertrand Russell is the only Russell you have read, then your treasury of humanist knowledge is not as rich as you might think. [E]

Dora Black Russell received the BRS Award in 1984, "for sharing Russell's concerns, collaborating in his work, and helping to perpetuate his legacy." She was the prime mover behind — and financial guarantor of — the memorial bust of Russell unveiled in London's Red Lion Park in 1980.

Thank you, TOM STANLEY.

CONTRIBUTORS

(28) We thank JUSTIN LEIBER and STEVE DAHLBY for their recent contributions to the BRS Treasury. Much appreciated.

ELECTION OF DIRECTORS

(29) Nominations for Directors, please. We wish to elect 9 Directors this year, for 3-year terms starting 1/1/89. This will give us a total of 24 elected Directors. The August newsletter will provide a ballot for voting.

- * We are asking you to nominate candidates (whose names will appear on the August ballot.) Any member may nominate any other member to be a Director-Candidate.

If you wish to be a Candidate yourself, notify the Elections Committee and someone will probably nominate you. The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something or other by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. The cost of attending meetings is (federal) tax-deductible for Directors.

We would like to have more than 9 names on the ballot, so as to give members a choice.

A brief statement about the candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.

Directors whose terms expire in 1988 are LOU ACHESON, KEN BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHEISER, STEVE REINHARDT, CARL SPADONI, TOM STANLEY. They are eligible for re-election.

- * We urge last year's candidates who were not elected to try again this year.

TO NOMINATE SOMEONE -- or to volunteer yourself -- write the Election Committee, c/o the newsletter, address on Page 1, bottom.

VOLUNTEERS WANTED

(30) BRS Treasurer sought. If you would like to consider becoming BRS Treasurer, Dennis Darland, who has been Treasurer for the past 9 years, will brief you on how he keeps the Society's books, and will lend you his Apple II+ on which to do it.

If you'd like to explore the possibility, write Dennis, c/o the newsletter, address on Page 1, bottom. Or phone 319-359-3930.

- * Newsletter Editor sought. We are looking for the next Editor of Russell Society News. If you like to write, and might wish to consider becoming Editor, let Lee Eisler hear from you (c/o the newsletter), to find out what the requirements are. Perhaps you will want to give it a try.
Live dangerously! Find out more! Let's hear from you.

INVITATIONS TO WRITE/MEET

(31) Tad Jones, a new member, is majoring in Bible and Religion at Harding University, Searcy, AR. He writes:

- * After a long period of intellectual and emotional struggle, Russell's *Why I Am Not A Christian* helped me to arrive at the decision to sever the yoke of Christianity. As a recent apostate at a Christian university, I am beset by well-intentioned defenders of the faith, and have no one to challenge and encourage me in my pursuit of truth. Truth alone is incentive enough to persist in my present direction, but correspondence with other lovers of wisdom would be greatly appreciated.

His address: 109 S. Oak, Apt. B, Searcy, AR 72143.

(32) Benito Rey is a Cuban who was on his way to the USSR, on behalf of the Cuban Government, when he jumped the plane in Gander and got political asylum in Canada. He asked to join the BRS, promising to pay dues when he got his work-permit and earned some money. We took a gamble that he would, and he did. He paid his dues with his first salary check, and also enrolled his wife, Aurora Almeida.

He is an electrical engineer. His work has been in digital and microprocessor equipment design for television (character generator, sub-titler system, etc.) His wife is an orthodontist.

Both wish to begin a new life in Canada, and would like to meet members. Their current address: 80 Deerpark Crescent, Brampton, Ont., Canada L6X 2T7. Phone: (work) 416-890-5200, (home) 416-450-8901.

RUSSELL SOCIETY LIBRARY
Tom Stanley, Librarian
Box 434, Wilder, VT 05088

Books to lend:

When no author is indicated, the work is by Bertrand Russell. The donor's name appears at the end.

1. History of Western Philosophy. Jack Ragsdale.
2. Mysticism and Logic.
3. Bertrand Russell's Best. Ramon Suzara.
4. An Outline of Philosophy. Ramon Suzara.
5. Autobiography of Bertrand Russell, Vol.1. Ramon Suzara.
6. Let Me Die Before I Wake. by Derek Humphery.
7. Essay on Bertrand Russell. edited by E. D. Klenke. Bob Davis.
8. Morals Without Mystery. By Lee Eisler. Author.
9. Authority and the Individual. Don Jackanicz.
10. Autobiography of Bertrand Russell (in 1 Vol.). Don Jackanicz.
11. Bertrand Russell 1872-1970. Don Jackanicz.
12. Bertrand Russell - A Life. by Herbert Gottschalk. Don Jackanicz.
13. Education and the Social Order. Don Jackanicz.
14. Effects and Dangers of Nuclear War. Don Jackanicz.
15. Essays on Socialist Humanism. Don Jackanicz.
16. Gaman Social Democracy. Don Jackanicz.
17. Icarus or the Future of Science. Don Jackanicz.
18. The Impact of Science on Society. Don Jackanicz.
19. An Inquiry Into the Meaning of Truth. Don Jackanicz.
20. In Praise of Idleness. Don Jackanicz.
21. Has Man a Future. Don Jackanicz.
22. Justice in Wartime. Don Jackanicz.
23. National Frontiers and International Cooperation. by Zhores Medvedev. Don Jackanicz.
24. My Philosophical Development. Don Jackanicz.
25. Political Ideals. Don Jackanicz.
26. Principles of Social Reconstruction. Don Jackanicz.
27. The Practice and Theory of Bolshevism. Don Jackanicz.
28. Roads of Freedom. Don Jackanicz.
29. Sceptical Essays. Don Jackanicz.
30. Secrecy of Correspondence Is Guaranteed By Law. by Zhores Medvedev. Don Jackanicz.
31. The Tamarisk Tree. by D. Russell. Don Jackanicz.
32. Mr. Wilson Speaks "frankly..." Don Jackanicz.
33. Marriage and Morals. Don Jackanicz.
34. Dear Bertrand Russell. Jack Ragsdale.
35. Education and The Good Life. Jack Ragsdale and Lee Eisler.
36. Human Knowledge: Its Scope and Limits. Jack Ragsdale.
37. Why I Am Not A Christian. Jack Ragsdale.
38. The Evolution of Conscience. Ralph Newman. Jack Ragsdale.
39. The Conquest of Happiness. Lee Eisler.
40. The ABC of Relativity. Lee Eisler.
41. Bertrand Russell, The Passionate Sceptic. by Alan Wood. Don Jackanicz.
42. Morals and Others. Don Jackanicz.
43. Unnamed Victory. Don Jackanicz.
44. The Bertrand Russell Peace Foundation its aims and its work.
45. Vas to Life. by Corliss Lamont. The Author.
46. Russell by A.J. Ayer. Ramon Suzara.
47. The Will to Doubt. Ramon Suzara.
48. The Life of Bertrand Russell. by Ronald Clark. Ramon Suzara.
49. The Problems of Philosophy. Ramon Suzara.
50. Unpopular Essays. Ramon Suzara.
51. Human Society in Ethics and Politics. Don Jackanicz.
52. Principles and Paradoxes: Studies of Dualism in Selected Essays and Fiction of Bertrand Russell. by Gladys Leithausen. Don Jackanicz.
53. Photos, 1983 BRS Annual Meeting at McMaster University, June 24-26, 1983. Jim Mc Williams.
54. The Art of Fund Raising. by Irving Warner. Bob Davis
55. The Grass Roots Fundraising Book. by Joan Flanagan. Bob Davis
56. Dear Russell-Dear Jourdain. by I. Grattan-Guinness. Bob Davis
57. Why Men Fight. Bob Davis
58. Grants. by Virginia White. Bob Davis
59. Fund Raising for the Small Organization. by Philip Sheriden. Bob Davis.
60. The Grantmanship Center Training Program. Bob Davis

Books wanted:

Principia Mathematica, Volume II, first edition. Dr. Walter Lessing, 50 F, Cornwall Gardens, London S.W. 7.

The Philosophy of Bertrand Russell edited by Schilpp. Any edition. Frank Page, 19755 Henry Road, Fairview Park, OH 44126

Bertrand Russell. A Collection of Critical Essays edited by Pears. Any edition. Tom Stanley, Box 434, Wilder, VT 05088

New books to lend:

139. "Le paradoxe de Russell dans des versions positives de la theorie naive des ensembles" by Roland Hinnion. 2pp Offprint
"Russell's Earliest Interpretation of Cantorian Set Theory, 1896-1900" by Irving Anellis. 31pp Offprint Irving Anellis.

140. Wisdom, The magazine of knowledge February, 1957. Three articles about Russell and Karsh portraits. John Rockfellow.

Misc:

Peace Archives: A guide to library collections is available free of charge to qualified scholars, research libraries, and institutions. World Without War Council, 1730 Martin Luther King, Jr. Way, Berkeley, CA 94709.

A catalog of audio cassettes on Religion and Philosophy is available from Audio-Forum, Suite A95, 96 Broad Street, Guilford, CT 06437. Among the items offered:

ECN222 Karl Popper: Theories and Ideas Popper's ideas are clearly explained both by himself and some of the most eminent 20th century thinkers. BBC production. \$10.95

SCN084 The Originators Assesses the contributions of Russell, Marx, Darwin, Popper, Darwin, Wittgenstein, Freud, Weber and Jung. Produced by the BBC. (2 cassettes) \$19.95.

Radio for Peace International is a one of a kind international short-wave station created by the World Peace University in Oregon and the University for Peace in Costa Rica. Programming consists of a mix of interviews, talk shows and dialogues, information exchange, news, plays and music, as well as courses from the two universities.

Current Operational Schedule:

0100-0400 UTC 7.375 MHz Weekdays
2100-0000 UTC 15.495 MHz Weekdays

For further information regarding programming contact RPPI, University for Peace, Apartado 88, Santa Ana, Costa Rica.

An expression of appreciation from JEAN ANDERSON: "I am sure that many BRS members have been aware of the efforts of Tom Stanley as Russell Society Librarian. Recent Library offerings have increased and diversified, and it remains remarkable that many items are available on loan. The new availability of videotapes makes that often debase medium regain worth — and genuine excitement. Clearly Tom Stanley has given our Library much of his thoughtful time and effort."

FINANCES

(34) Treasurer Dennis Darland reports on the quarter ending 3/31/88:

Balance on hand (12/31/87).....	2,287.31
Income: New members.....	312.00
Renewals.....	4650.68
total dues.....	4962.68
Contributions.....	32.50
Library sales and rentals.....	112.50
Misc.....	2.75
total income.....	5110.43
	7397.74
Expenditures: Membership and Information Committees.....	1548.77
Library expenses.....	108.85
Misc.....	7.53
total spent.....	1665.15
Bank balance on hand 3/31/88.....	5732.59

Contributions are actually larger than shown, and renewal dues smaller than shown, because many members, when renewing, combine their contributions with their renewal dues. For example, a regular member who renews as a "Sustainer", paying \$50, is actually making a contribution of \$20; it shows up here as dues, not as contribution. We will try to change this in future.

REPORTS FROM COMMITTEES

(35) Philosophers Committee (David E. Johnson, Chairman):

BRS at APA. The following report on the December 1987 session was prepared by Professor Jan Dejnozka:

The BRS sponsored a meeting on the philosophy of Bertrand Russell in conjunction with the meetings of the Eastern Division of the American Philosophical Association in New York City on December 26, 1987.

The session was chaired by Prof. Panayot Butchvarov of the University of Iowa.

The first half of the meeting was a paper by Prof. Jan Dejnozka of the U. S. Naval Academy entitled "Russell's Robust Sense of Reality: A Reply to Butchvarov". Both Butchvarov and Prof. Stewart Umphrey of St. John's College, Annapolis, MD, responded to the paper.

The abstract of Dejnozka's paper reads as follows.

"Professor Panayot Butchvarov argued in "Our Robust Sense of Reality," Grazer Philosophische Studien (26) 1986, that (1) Russell has no criterion of existence, (2) Russell cannot have, since he holds that all objects exist, and (3) identifiability indefinitely many times is a genuine, i.e., classificatory, criterion of existence. This criterion is Meinongian in that on it many objects do not exist. I reply that (1) and (2) are false and that (3) states Russell's own structural position. Most notably in "The Philosophy of Logical Atomism," Russell uses "exists" in three interrelated senses. In sense (i) all objects exist. In sense (ii) lone particulars (sense-data) are unreal and groups of correlated particulars are real things. In sense (iii) existence is a second-level property. It is sense (ii) which confounds Butchvarov. It effectively makes identifiability Russell's classificatory criterion of existence. Thus like Frege, but in a different way, Russell is a neglected major proponent of Quine's "no entity without identity" in the history of analytic philosophy."

Butchvarov's main point in his reply was that though Dejnozka was correct in his discovery or identification of sense (ii), the criterion provided by it is of limited interest. It is of interest only in the phenomenology of perception, and only to sense-datum theorists in that area. In his final comments Dejnozka agreed with this, but suggested ways to widen the interest of Russell's account.

Umphrey's main points in his reply were that Russell's sense

(i) of "exists" is not clearly articulated by Russell, and that this sense is not clearly a genuine notion of existence. In his final comments Dejnozka suggested ways of addressing both issues involving Parmenides, Plato, and Aristotle's Square of Opposition.

It is pleasing to be able to announce that this paper, along with the replies made to it will be forthcoming in Grazer Philosophische Studien (32) 1988. The replies were Panayot Butchvarov, "Russell's Views on Reality," and Stewart Umphrey, "The Meinongian-Antimeinongian Dispute Reviewed: A Reply to Dejnozka and Butchvarov".

The second part of the meeting consisted of a paper "On What is Denoted" by Prof. Russell Wahl of Idaho State University with a reply by Prof. Justin Leiber of the University of Houston.

The abstract of Wahl's paper reads as follows.

"Recently, Professor Hintikka has argued that Russell's views on denoting and quantification require that the quantifiers in epistemic contexts range only over objects of acquaintance, and that Russell was therefore committed to the view that denoting phrases denote only objects of acquaintance. Hintikka gives two arguments for this conclusion, one involving Russell's claim that his theory of denoting entails his principle of acquaintance and the other involving a puzzle similar to those Russell offered in "On Denoting." Hintikka suggests a modification of Russell's view which employs two types of quantifiers with different value ranges. I argue that Russell's theory of denoting requires that the quantifiers range over all objects whatsoever, and that both of Hintikka's arguments fail. It is neither necessary nor desirable to add the different types of quantifiers to Russell's theory. It is not clear that this addition is needed even when Russell's theory of proper names is rejected."

Prof. Leiber did not have any outstanding disagreements with Wahl, but made several amplifying comments. Perhaps, as another person suggested, Hintikka's views were a little odd to begin with and not very plausible. It was suggested in the audience discussion that Wahl's points were even more conclusive when considered with respect to what Russell named with his logically proper names, namely sense-data, as opposed to Wahl's example of Socrates.

- (36) Call for Papers. The Bertrand Russell Society announces a call for papers to be presented at its meeting with the Eastern Division of the American Philosophical Association in December, 1989. Papers may be on any aspect of Russell's philosophy. They should have a reading time of about one-half hour and should be submitted in triplicate, typed, and double-spaced, with an abstract of not more than 150 words. The name and address of the author should be submitted on a separate page. The submission deadline is April 1, 1989. The papers should be sent to David E. Johnson, Chairman, Philosopher's Committee, The Bertrand Russell Society, Sampson Hall, U. S. Naval Academy, Annapolis, MD 21402-5044. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

ABOUT OTHER ORGANIZATIONS

- (37) The Bertrand Russell Peace Foundation has sent an appeal (dated 12/87) called: *After the Summit: A Disarmament and Development Initiative (DDI)*. It aims -- as its name implies -- to promote disarmament and economic development throughout the world. It mentions specific problems, and asks for comments, for endorsement, and for donations. The full text of the 3-page appeal may be borrowed from the Russell Society Library, PO Box 434, Wilder, VT 05088.

CALL FOR PAPERS

- (38) IPPNO. BRS Laureate JOHN SOMERVILLE's International Philosophers for the Prevention of Nuclear Omnicide has issued this Call for Papers. ----->
*

At the XVIIIth World Congress of Philosophy, August 20-27, 1988, in Brighton, England, International Philosophers for the Prevention of Nuclear Omnicide will present symposium sessions on August 21 and August 24 on the topic, "Philosophy of Peace in the Nuclear Age: What Must We Do to Prevent Nuclear Omnicide?" Papers are limited to twenty minutes reading time, and will be followed by discussions. Abstracts may be sent in advance of papers. Address papers or abstracts to Secretariat, IPPNO, 1426 Merritt Drive, El Cajon, California 92020 as early as possible.

- (39) IPPNO reports (March 1988):

Our next big international step is of course our program at the XVIIIth World Congress of Philosophy, in Brighton, England this coming August. We have been granted twelve hours of program time for our multi-session symposium on the topic, "Philosophy of Peace in the Nuclear Age; What Must We Do to Prevent Nuclear Omnicide?" Exceptionally good international dialogue with us on this question is assured by the responses that have come from leading philosophers of peace in the other superpower and the third world.

These included P. N. Fedoseyev, Vice-President of the USSR Academy of Sciences, and his fellow philosopher in the Academy, I. T. Frolov, who, in reply to my inquiry, have promised to answer all questions concerning their new "perestroika," especially in its relation to world peace. In fact, so relevant did I find Gorbachev's recent full-length book, *Perestroika*, published by Harper & Row (whole sections of which could have been written by any one of us in the peace movement) that I made so bold as to invite Gorbachev himself to address and dialogue with us in Brighton, if his schedule should permit, and if not, to urge his wife, who holds her own higher degree in philosophy, to come in his stead. While this may be unlikely, it is not impossible. I sent a copy of the letter to Fedoseyev, whom I met on my first trip to the USSR in 1935. I had been sent by Columbia University as a post-doctoral research Fellow to investigate the theory and practice of Soviet philosophy, having first learned Russian. The investigation took two years, and I have remained in friendly touch (though clearly not always in agreement) with Fedoseyev ever since. He might possibly urge one of the Gorbachevs to come.

We have received definite acceptances from Kate Soper, the new British Chairperson of European Nuclear Disarmament (END), also from philosopher Stephen Tunncliffe, a leader of END's religious wing, Thomas Clough Daffern, British scholar who is proposing an all-European Section of IPPNO, James Saunders, head of Britain's International Institute of Peaceful Change, Adam Schaff, Poland's best known international philosopher and J. Kuczynski, Editor of Poland's best known philosophical journal, *Dialectics and Humanism*, D. Chattopadhyaya, India's best known Marxist philosopher, J. P. Atraya, Editor of the Indian *Darshana International*, Mourad Wahba of Egypt, President of the Afro-Asian Philosophy Association (AAPA), Mona Abousena, Rapporteur of the AAPA, J. Antuna, President of Spain's PAZ Y COOPERACION and C. Lopez de Letona, its secretary General, a representative of the African Peace Research Institute (APRI), based in Nigeria, which seeks to organize an African section of IPPNO among African universities, A. Abdel-Malek, head of Unesco peace and culture researches in Paris.

For USA philosophers our Call for Papers has appeared in a number of journals, including the Newsletter of Concerned Philosophers for Peace, the Journal of Philosophy and the national Bulletin of the APA, the January 1988 issue of which has a special announcement of IPPNO's U.N. Award and our Brighton Call for Papers. In addition, Ron Hirschbein organized a national mailing to all members of the APA (between six and seven thousand) of our Brighton Call along with the general membership information about IPPNO. This mailing was made possible not only by Ron's campus and colleagues, but by other campuses and colleagues, including, to date, those of Joe Kunkel, Stan Dundon, George Hampsch, Paul Allen and Joan Miller.

Papers and abstracts received from USA philosophers are (in blind reviewing process) being read and evaluated by Ron Glossop and Joe Kunkel. Ron Glossop conceived of and carried through a very strong application on behalf of IPPNO to the recently formed U. S. Institute for Peace, for travel funds for American philosophers to take part in the IPPNO program of the XVIIIth World Congress (Brighton), and to publish its proceedings, but the Institute could not help us. However, we can try again in relation to our Second (full-scale)

International Conference, scheduled and confirmed for Moscow in the latter part of June, 1989. At the suggestion of Joe Kunkel and George Hampsch, our Call for Papers for that Conference has already been formulated and begun to circulate.

Functionally relating to IPPNO and our Brighton program, and especially to the problem of our relations with the Soviet Union in the interest of world peace, Paul Allen has worked for some two years on his project SAVI (Soviet-American Visits and Interaction) which has now come to full fruition in the definite confirmation recently received by Paul from the Soviet hosts. As a first step, an American group of 12 will spend ten days in the Soviet Union in discussion, dialogue and observation just prior to the Brighton World Congress.

The Peace Messenger Award which IPPNO received from the Secretary General of the United Nations last year has now been followed by another mark of special recognition, in connection with the forthcoming (May-June, 1988) "Third Special Session of the General Assembly devoted to Disarmament." We have been notified that IPPNO has been selected by the U. N. General Assembly as one of the organizations that "will be given the opportunity to attend the public meetings of the special session and submit written and oral statements on matters related to the agenda." This welcome communication came from the United Nations Department for Disarmament Affairs. We are in process of ascertaining all the relevant details.

The one area that has lagged behind in IPPNO's general onward and upward movement has been publication. A year or so ago, we were on the point of completing an attractive and financially feasible arrangement with an outstanding international publisher for launching our Journal of International Dialogue. Unfortunately, the publisher's business is based abroad, and the disastrous fall of the US dollar interrupted the implementation of the arrangement, and has left it in a sort of limbo wherein we have some sixty papers from our First International Conference, the proceedings of which are eminently deserving of publication in whole or part. In addition to formal journal and proceedings publication, we have need of an international newsletter which would do for the international dimension of IPPNO what the CPP newsletter does so well for the national CPP. In view of our lack of budget, the ideal solution might come from some internationally minded campus willing to support the publication of such a newsletter. Any suggestions on this matter or any other will always be deeply appreciated.

Please also bear in mind that what IPPNO has been able to accomplish so far has entailed financial expenditures far beyond its income from dues, and that the balance has been made up only by personal donations of individual members. We really cannot thank them enough. Any donation you can make beyond the current 1988 dues will therefore also be deeply appreciated in all cases.

John Somerville
Co-Chair, IPPNO
Chair, USA Section

- (40) Tenth Humanist World Congress will meet July 31-August 4, 1988 at State University of New York at Buffalo (Amherst Campus). According to the announcement:

The Theme of the Congress: The Need for a New Global Ethic

As the twenty-first century approaches, humankind is faced with radical disruptions of its social institutions and of the planet's ecology. Yet the opportunity to usher in an era of unprecedented human achievement has never been greater. The very discoveries and changes that are now transforming our society provide us with the unparalleled means to improve human life.

Can we develop appropriate ethical values that will enable us to live together in harmony and enhance the conditions of life on this earth?

Our moral and ethical values were developed by nomadic and agrarian cultures thousands of years ago, values that were, by contemporary standards, based on outmoded ideas of the universe and human nature. Yet ancient tribal loyalties and nationalistic and ethnic chauvinism dominate large sectors of the world; the globe is still divided into nation-states, contending religious faiths, and ideological blocs.

Although we need to retain viable moral wisdom from the old faiths, we also need to develop contemporary principles that will serve post-modern civilization. If we are to achieve to the fullest of which we are capable as a species, we must

work toward a constructive, positive visualization of the next century; we must use the best methods of scientific inquiry to solve human problems.

We must foster the attitude that we are all part of a world community and that we have an ethical obligation to humankind as a whole, including a responsibility to generations yet unborn. As our world is transformed by discoveries in medical technology, biogenetic engineering, information transmission, and space travel, our need to live and work together in peace becomes ever more urgent.

The goal of this Congress is to offer answers to these questions: How can we build a twenty-first-century world community in which war and economic conflict, ecological despoilation; and racial, religious, and sexual rivalries are superseded? How can we improve the standard of living and health care and reduce excessive population growth worldwide? Is it possible to maximize human freedom and civil liberties while maintaining a genuine social concern for human welfare?

How do we develop a new global ethic, a humanism that is truly planetary in focus?

AL SECKEL is one of the Conference Participants. He will show a film on Bertrand Russell.

The Congress is sponsored by The International Humanist and Ethical Union (IHEU), described as follows:

The International Humanist and Ethical Union (IHEU) has more than three million members and is a coalition of more than sixty secular humanist, rationalist, freethought, skeptical, and atheist organizations in twenty-two countries. The early sponsors of the IHEU, which was founded in 1952, were also instrumental in the founding of the United Nations. They included Lord Boyd Orr (first head of the World Food Organization), Sir Julian Huxley (the first head of UNESCO), and Brock Chisholm of Canada (the first head of the World Health Organization).

The IHEU publishes the journal *International Humanist* and provides a platform for the exchange of ideas of particular interest to humanists. In addition, the IHEU has representatives at the United Nations and the Council of Europe. It is headquartered in Utrecht, the Netherlands. The IHEU convenes congresses every 2 years. For information, write to: IHEU, Oudkerkhof 11, 3512 GH, Utrecht, The NETHERLANDS or FREE INQUIRY Magazine, Box 5, Buffalo, NY 14215 USA.

For further information, write *Free Inquiry*, Box 5, Buffalo, NY 14215.

- (41) American Humanist Association. This splendid ad was given the prominence it deserves; it appeared on the back page of *The Review of the Week*, of the (Sunday) NY Times (4/24/88, C16). Original size 8 1/2 x 10 1/4.

A JOYOUS LIFE-AFFIRMING PHILOSOPHY THAT RELIES ON REASON, SCIENCE AND DEMOCRACY!

TEN BASIC PRINCIPLES OF HUMANISM

FIRST, Naturalistic Humanism believes in an ethics or morality that grounds all human values in this-earthly experiences and relationships and that holds as its highest goal the happiness, freedom and progress of all humanity in this one and only life. The Humanist watchword is compassionate concern for all men, women and children.

SECOND, Humanism, with its non-theistic view of the universe, rejects all supernatural belief as myth and considers infinite and inspiring Nature as the totality of existence. Human beings are evolutionary products in whom body and mind are inseparably conjoined, so that personalities can have no immortality or conscious survival after death.

THIRD, Humanism, with its ultimate faith in the human race, believes that we possess the power or potentiality of solving our own problems, primarily through reason, scientific method and democracy. In making decisions we can exercise free choice, however conditioned by heredity, education and economic circumstance.

FOURTH, Humanism was initiated by the ancient Greeks, such as Aristotle, more than 2000 years ago and incorporates in its synthesis the sound elements in other philosophies, including the Naturalistic viewpoints of John Dewey, George Santayana and Bertrand Russell.

FIFTH, while Humanism opposes all religious theologies, it embodies ethical ideals from various religions, especially Christianity. America and the world need nothing so much as precepts of the Ten Commandments, such as "Thou shalt not steal," "Thou shalt not bear false witness," and "That shalt not kill." And Jesus Christ in the New Testament gave voice to such Humanist hopes as social equality, human brotherhood and peace on Earth.

SIXTH, Humanism holds that the individual attains the good life by harmoniously combining personal satisfactions and continuous self-development with

significant work and other activities that contribute to the welfare of the community, the state, the country and the world at large. Useful work usually increases happiness.

SEVENTH, Humanism believes in the widest possible development of art and awareness of beauty, including appreciation of Nature's loveliness and splendor. There is no heavenly father in or behind Nature, but Nature is truly our fatherland. Humanists vigorously support legislation and other ecological efforts for the conservation of the environment. Our responsiveness to every sort of natural beauty evokes in us a feeling of profound kinship with Nature and its myriad forms of life.

EIGHTH, in world affairs, Humanism advocates a far-reaching program, in cooperation with the United Nations, that stands for international peace and understanding, the abolition of nuclear weapons and the elimination of all racial, ethnic and nationalist prejudices. Humanist organizations the world over cooperate through the International Humanist and Ethical Union.

NINTH, Humanism upholds full freedom of expression and civil liberties throughout all areas of economics, politics and culture. Reason and science are crippled unless they remain unfettered in the pursuit of truth. In the United States Humanists militantly support the fundamental guarantees of the Bill of Rights, stressing the basic People's Right to Know. And we remember that Jesus in religion and Socrates in philosophy were both courageous civil liberties martyrs.

TENTH, Humanism, in accordance with scientific method, encourages the unending questioning of basic assumptions and convictions in every field of thought. This includes, of course, philosophy, Naturalistic Humanism and the ten major points here outlined. Humanism is not a new dogma, but is a developing philosophy ever open to experimental testing, newly discovered facts and more rigorous reasoning.

RATIONALITY

(42) Hawking, in the New York Times (4/19/88, C5):

He sees "a gradual descent into wooliness."

By MALCOLM W. BROWNE

ARM Y chaplains used to tell their troops that "there are no atheists in foxholes," meaning that the hope for supernatural intercession can powerfully appeal to someone looking into the muzzle of an enemy's gun.

Actually, foxholes have always been populated by nonbelievers as well as the faithful, but no one doubts that fear and anguish can induce the suspension of disbelief. Scientists committed to objective measurement and rational inference have also sometimes sought solace in religion or mysticism.

The British physicist Oliver Lodge, for instance, whose study of relative motion prefigured Einstein's Special Theory of Relativity, became a mystic and spiritualist after the death of his soldier son in World War I. Lodge believed that an all-pervading "ether" extending throughout the universe linked everything together, effectively eliminating even the gap between life and death. It should

therefore be possible, he reasoned, for a living father to communicate with his dead son.

Mystical world views supposedly based on scientific ideas have been promoted in many recent books offering spiritual succor. In some, the reader is offered a kind of pantheistic cosmos in which personal identity merges with the infinite, and is thus immortal. A favorite theme of such proposals is that "fields" interconnect everything in the universe, providing, among other things, for extrasensory communication between minds. Quantum theory thus becomes the handmaiden of the supernatural.

But Stephen W. Hawking will have none of it.

Science and the Unfathomable

Dr. Hawking, regarded by colleagues as one of the greatest physicists of our age, specializes in time, gravity, black holes, the physical bases of existence and the origin of the universe. Few scientists have a better claim to having bridged the gulf between science and the unfathomable.

Dr. Hawking, moreover, has lived in a clinical foxhole for half of his 46 years. He is a victim of amyotrophic lateral sclerosis, confined to a wheelchair and incapable of moving, speaking, writing, or even holding up his

head unassisted. He expresses his thoughts by tapping a kind of telegraph key that operates a speech synthesizer, but even the act of tapping is becoming increasingly difficult for him. The disease is incurable, progressive and inevitably fatal.

Life for him is a continuous ordeal. During a recent visit to the United States from his home in Cambridge, England, he listened to plans an assistant had made for lectures and interviews the physicist was to attend the following day. "One more tomorrow," he wearily tapped.

But if Dr. Hawking has ever been tempted to seek comfort in mysticism, he has never let the impulse show.

In his latest studies of the nature of time, discussed in his new book, "A Brief History of Time," published by Bantam Books, Dr. Hawking uses a quantity called "i," the square root of minus one. This "imaginary" number has troubled mathematicians for centuries, because it cannot exist in reality; the square of any number, either positive or negative, is always positive, and therefore there can be no square root of a negative number. The German mathematician Leibniz defined "i" in a strikingly mystical way: he called it an "amphibeian between being and nonbeing."

Paradoxes in Quantum Theory

The fundamental tool of cosmology,

quantum theory, is filled with paradoxes that some philosophers have adapted to mystical notions. Dr. Hawking was asked in a recent interview whether he believed there was any real difference between mathematicians and mystics. He replied: "There is no sharp boundary, just a gradual descent into wooliness."

"Wooliness" of thinking, in Dr. Hawking's view, is a sin that science cannot tolerate. While some philosophers have argued that quantum theory offers a proof of the existence of God, Dr. Hawking takes mischievous pleasure in suggesting that the universe may have required no act of creation, in which case there is no need for a creator.

In any case, Dr. Hawking and other similarly minded scientists believe it is time to blow the whistle on those who would invoke the name of science to support the claims of parapsychology and mysticism. Even confronted by his own mortality, these thinkers contend, the scientist has no need for the supernatural.

John A. Wheeler, the theoretical physicist who coined the name "black hole," offered this assessment of the supernatural: "Above all, let us continue to insist on the centuries-long tradition of science, in which we exclude all mysticism and insist on the rule of reason." Anything else, he says, is "moonshine."

CONTRIBUTIONS

(43) Gentle Reminder. Are we too timid to ask you for money? Or too proud? Or too stupid?

None of the above (we trust).

* We are asking you to send a contribution to the BRS Treasury (c/o the newsletter), if you have money you can spare.

We'll put it to good use. We'll use it in an effort to increase the number of members...so that eventually -- when we have a larger membership -- we won't need to keep asking you for contributions. Won't that be great! No more coming to you -- like this -- hat in hand, asking for money. We think that's a goal worth working for.

Don't you agree?

Please do what you can to bring that time closer.

Thanks!

RUSSELL SOCIETY NEWS

No. 59

August 1988

- (1) **Highlights.** 1988 Annual Meeting (3). BR Editorial Project imperilled (2). Kurtz on life's meaning without God (4). Ayer on Russell (23). Magee on Popper (24). BRS Award to Kurtz (18). BRS Book Award to Kurtz (20). Brockway dead (30). 1989 Doctoral Grant announced (35). Director-Candidates for election; please vote (47). Humanists at work (26, 28, 29). Membership list (48). The Index is at the end, just before the ballot.

RUSSELL ARCHIVES PROJECT IN BIG TROUBLE

- (2) **Bad news for future Russell volumes.** The great Bertrand Russell Editorial Project at McMaster University -- which intended to publish everything BR had ever written (except his books), to be known as "The Collected Papers of Bertrand Russell", is in serious trouble.

The "Collected Papers" were to be published in 28 volumes, at the rate of one every 9 months, with the final volume appearing in the year 2000 (RSN 39-9). So far, Volumes 1, 7, 8 and 12 have been published; 2, 3, and 6 are near completion. Volume I of the bibliography should be published next year.

The 1980 Canadian Government grant has run out and apparently will not be renewed.

Five of the seven members of Ken Blackwell's research team have left. Only Ken and one assistant are now at the Archives. Ken's other archival duties take up his time, which prevents him from working on the important bibliography volume, now ready for the last stages of preparation. The BRS gave a \$1000 grant to the Editorial Project to assist in the preparation of those last stages.

The Editorial Project, when it was going full blast, had an annual payroll of several hundred thousand dollars. A new source of funding is sorely needed, to make more widely accessible, by means of books, the writings of one of the seminal minds of the last hundred years. Are there any financial angels out there?

ANNUAL MEETING (1988)

- (3) **The weekend meeting** was held on June 17-19 on the spacious campus of SUNY (Fredonia) -- with its unusual concrete buildings designed by I. M. Pei -- and presided over by BRS President, MARVIN KOHL, Professor of Philosophy at Fredonia. The theme of the meeting was "Happiness and the Important Things in Life." A BRS-chartered van transported people between the Buffalo Airport and Fredonia (about 50 miles).

24 members attended: STEFAN ANDERSSON, KEN BLACKWELL, ROBERT CANTERBURY, JACK COWLES, DENNIS DARLAND, BOB DAVIS, LEE EISLER, SUSAN ENDRESHAK, CLARE HALLORAN, ROBERT HICKS, DON JACKANICZ, ROBERT JAMES, MARVIN KOHL, PAUL KURTZ, STEVE MARAGIDES, ED MCLENATHAN, FRANK PAGE, HELEN PAGE, STEVE REINHARDT, MICHAEL ROCKLER, HARRY RUJA, BETTE VOGT, HERB VOGT, TOM WEIDLICH.

26 guests attended: Ray Belliotti, Evelyn Burton, Robert Cogan, Walter Doehring and wife, Andrea Domst, Thomas Donahue, Beth Estee, Janet Estee, Jill Harvey, Thomas Harvey, Lynn James, Aleksandra Kaczmarek, Kenneth Lucey, Tim Madigan, John Meerse, Arthur Nisbet, Dorothea Nisbet, Lee Nisbet, Lansing Pollock, Elizabeth Roberts, Tyler Roberts, Charles Schmitt, Thomas Shearon, Laselo Takno, Jolanta Wysocka.

The following officers were elected or re-elected for one-year terms, starting immediately: Chairman, Harry Ruja; President, Marvin Kohl; Vice President, Michael Rockler; Treasurer, Dennis Darland; Secretary, Don Jackanicz; VP/Information, Lee Eisler.

The events of the weekend included the following:

- . Presentation of the 1988 Bertrand Russell Society Award to Paul Kurtz. See press release, Item (18).
- . Presentation of the 1988 Bertrand Russell Society Book Award to Paul Grimley Kuntz, for his "Bertrand Russell". The Award was accepted by Michael Rockler for Professor Kuntz, who was out of the country. See press release, Item (20).
- . Presentation of a Service Award to Lee Eisler.
- . Ken Blackwell's talk, "Russell's Theory of Happiness".
- . Panel discussion, chaired by Marvin Kohl, on the topic, "what is Happiness?". Panelists: Raymond Belliotti, Ken Blackwell, Bob Davis, and Randall Dipert.
- . Paul Kurtz's talk -- the major address of the weekend -- "what is the Meaning of Life?" Item (4).
- . Robert James's talk, "Out of the Night -- Russell's Struggle Against the Weight of Rudimentary Grief".
- . Lee Nisbet's talk, "Russell's Theory of Happiness: A Pragmatic Critique."

For more details, see Minutes of the Annual Meeting () and Minutes of the the Board of Director's Meeting (). Some of the meeting's papers will be published in the next issue of Free Inquiry, of which, as you know, Paul Kurtz is Editor.

There was a Red Hackle Hour, as is customary, enjoyable as always, followed by a superb Chinese banquet against which all future banquets will be measured. One could not have anticipated this kind of excellence coming out of a college kitchen.

A historic architecture walking tour of Fredonia, conducted by Daniel Reiff (Chairman, Fredonia Art Department), and a screening of Russell interviewed by Woodrow Wyatt (BBC 1959) were optional events Saturday afternoon.

It was an excellent meeting, one of the best.

- (4) Without God. This is a somewhat condensed version of Professor Kurtz's 22-page paper, which he read at our June Meeting. Some sentences or parts of sentences, or words, have been dropped, in the interest of condensation. When words have been added, which is seldom, they are inside of brackets [like this.] We have usually retained the paragraphing of the original, but not always, because the original was written to be spoken, whereas this condensation is written to be read. A few other small liberties have been taken. The original — which Professor Kurtz has kindly made available to us — may be borrowed from the Russell Society Library.

Is Life Meaningful in a Universe Without God?

I

I am pleased that the Bertrand Russell Society exists to keep alive an appreciation for Russell's inquiring mind, the values that he espoused, and the social causes that he defended.

Although men are allegedly capable of rationality, we are corrupted by a powerful transcendental temptation which often overwhelms the open mind and seeks to anchor belief in a hidden and indescribable "ultimate reality".

Russell has observed: "Man is a rational animal — so at least I have been told. Throughout a long life, I have looked diligently for evidence in favor of this statement, but so far I have not had the good fortune to come across it..."

Russell's life was that of a heretic. He constantly questioned the sacred idols of the day: the engines of war, the structures of sexual morality, belief in God. His philosophical career was based on the use of rational analysis to examine the foundations of knowledge. He was concerned with achieving some degree of clarity and certainty about knowledge that could be supported by the evidence. He said, "I wish to propose...a doctrine which may, I fear, appear wildly paradoxical and subversive. The doctrine in question is this: that it is undesirable to believe a proposition when there is no ground whatsoever for supposing it true."

Russell was honest about his own beliefs, which he would modify in the light of criticism. Indeed, he was his own best critic, as his philosophical writings demonstrate. Alas, I fear that large sections of humanity consider Russell's doctrine dangerous and irrelevant to their passionate desires for Absolute Truth and Absolute Virtue. I am constantly dismayed by human perversity: belief systems that have no basis in fact and are logically incoherent continue to dominate human imagination — from A to Z, astrology to Zen Buddhism. Perhaps that is why philosophers from Socrates to Russell have been considered dangerous, for they have pursued free inquiry and have expressed some skepticism in their quest, while all too many people hunger for Absolute Convictions. Yet free thought and free inquiry are considered dangerous.

Russell remarked: "Men fear thought as they fear nothing else on earth — more than ruin, more even than death."

I want to focus on one question: Does life have meaning in a universe without God? — a question that Russell had himself addressed many times. Perhaps it is redundant to address this question again today, but it needs to be dealt with in every age, for it is a perennial question.

Theists maintain that without a divine order or purpose in the universe, life would be devoid of meaning. In his celebrated essay, "A Free Man's Worship," Russell describes the world that science presents, one that is purposeless and without God:

Amid such a world, if anywhere, our ideals henceforth must find a home. That Man is the product of causes which had no prevision of the end they were achieving; that his origin, his growth, his hopes and fears, his loves and his beliefs, are but the outcome of accidental collocations of atoms; that no fire, no heroism, no intensity of thought and feelings can preserve an individual life beyond the grave; that all the labors of the ages, all the devotion, all the inspiration, all the noonday brightness of human genius, are destined to extinction in the vast death of the solar system, and that the whole temple of Man's achievement must inevitably be buried beneath the debris of the universe in ruins -- all these things, if not quite beyond dispute, are yet so nearly certain, that no philosophy which rejects them can hope to stand. Only within the scaffolding of these truths, only on the firm foundation of unyielding despair, can the soul's habitation henceforth be safely built.

How, in such an alien and inhumane world, can so powerless a creature as Man preserve his aspirations untarnished?...In spite of Death, the mark and seal of the parental control, Man is yet free during his brief years, to examine, to criticize, to know, and in imagination to create. To him alone, in the world with which he is acquainted, this freedom belongs; and in this lies his superiority to the resistless forces that control his outward life.

Russell's own youthful response in that early essay suggests that we need to develop "cosmic piety", a kind of stoical acceptance of the universe. Yet his own life exemplified another posture. For although he surely appreciated the awesome majesty of the cosmic scene, he also exemplified Prometheus, who stole fire from the gods and bequeathed the arts and sciences to humankind. Russell stands as one of the great Promethean heroes of the 20th Century: defiant, impudent, courageous, true to his convictions, refusing to cower before the sacred cows that other men and women worshipped.

II

This age-old question of the ultimate meaning of life is with us still -- and we hear from students and lay persons, theologians and politicians, the following: "Life would have no meaning if God is dead."

It is the theist [not the humanist] who can find no ultimate meaning in this life, and who denigrates it. For him life has no meaning per se. This life here and now is hopeless, barren and forlorn; it is full of tragedy and despair. The theist can only find meaning by leaving this life for a transcendental life beyond the grave. The human world as he finds it is empty of "ultimate purpose" and hence meaningless. Theism is thus an attempt to escape from the human condition. To the theist, death is not real; it is not final and tragedy is not irreparable. Living in the world, unable to cope with its problems, dilemmas, and conflicts, the theist leaps beyond it into another world more akin to his fancy -- though the theist has not come up with a clear notion of what the soul does in eternal paradise.

The unseen God that Moses encounters on Mt. Sinai, Jesus on the cross crucified and resurrected out of the empty tomb, and Gabriel visiting Mohammed as a messenger of Allah and delivering the Koran, are all fanciful contrivances spun out of the web of human imagination. Belief in these tales provides a relief from reality.

Generation after generation have accepted the creed unquestionably. It has a powerful tradition and institutionalized clergy to support it. And there has been, historically, strong opposition to any heresy or dissent from this view. Vast efforts have been expended to perpetuate this myth and to allay any doubts of its validity. But it is, in the last analysis, the credulity of believers, who reject the reality of death and accept the belief in life after life, that makes this possible.

The theist who...insists that without some divine purpose life would be meaningless is not only masking his own insecurity...[but is also confessing that] he has little faith in his own unaided powers of reason, and fragile confidence in his ability to solve the problems of life on his own. The skeptic simply states that there is not sufficient evidence for the existence of a transcendent deity; and the idea that He created the universe to fulfill His plans is without any reasonable foundation.

If so, where does human purpose come from? Could life have any meaning under such conditions?

Russell asked, "What is the meaning of 'the meaning of life'?" He replied, "I suppose what is intended is some general purpose. I do not think that life in general has any purpose. It just happened. But individual human beings have purposes, and there is nothing in agnosticism to cause them to abandon their purposes."

Meaning is a relational concept. Something does not have "meaning" in itself in some isolated or abstract sense, or in the universe at large. Like virtue, it is related to some form of sentient life. To say that something has meaning implies that it makes sense or is significant to some conscious being. Sudden thunder and lightning are signs of an impending storm; they have meaning for an organism that may run for shelter. To say something has meaning implies that it means something -- in terms of response and understanding -- to someone.

The humanist asks: If the deity vacates the universe, would things still have meaning? Yes, but only in regard to living species. Natural events in the universe have no meaning in isolation or in themselves, but only for us (or other species). What is the meaning of a sunset, a meandering river, a volcanic eruption or a supernova that explodes far out in the Magellanic archipelago? They simply happen. A sunset does not occur so that the human species can enjoy its beauty. It is we who react to natural phenomena. We may of course read into them whatever we wish. They have the potential to be found beautiful or awesome, lonely or frightening. It is a conscious being who can express...the meanings he perceives in natural events.

What is the meaning of human life itself in the universe at large? Theists, who claim to derive meaning from God, are simply reading into nature their own conception of a deity. Since religion is a product of human imagination, woven from the materials of human passion — fears, forebodings, anxieties, hopes, yearnings, and dreams — God has meaning in the universe only insofar as we attribute meaning to Him. We wish he would answer our prayers, ease our pain and suffering, and save us from death. If we were to dispense with the idea of God, meaning would not collapse, because meaning is a human invention.

Creating Our Own Meanings

Life has no meaning per se, [but] it does present us with opportunities. These we can squander, retreat in fear [from], or seize with exuberance. The meaning of life is not to be found in a secret formula discovered by ancient prophets or priests. It can be discovered by anyone. The "ultimate" value for the humanist is the conviction that life can be found good in and for itself. The so-called secret of life is thus an open secret, capable of being deciphered by everyone.

It is found in the experiences of living: in the joy of a fine banquet, the strenuous exertion of hard work, the poignant melodies of a symphony, the satisfaction of an altruistic deed, the excitement of a sensuous orgasm, the elegance of a mathematical proof, the invigorating adventure of a mountain climb, the pleasure of quiet relaxation, the lusty singing of an anthem, the vigorous cheering of a sports contest, the reading of a delicate sonnet, the joys of parenthood, the pleasures of friendship, the quiet satisfaction of serving our fellow human beings.

It is [found] in the present moment of experience as it is brought to fruition, as well as in the memory of past experiences and the expectation of future ones. The meaning of life is that it can be found to be good and beautiful, and exciting on its own terms, for ourselves, for our loved ones, and other sentient beings.

It is found in the pleasures of creative activities, wisdom and righteousness.

One doesn't need more than that and hopefully one will not settle for less.

The meaning of life is tied up intimately with our plans and projects, the goals we set for ourselves, our desires and their fruition. We create our own conscious meaning; we invest the cultural and natural worlds with our own interpretations. We discover, impose upon, and add to nature.

Meaning is found in the lives of the ancient Egyptians, or in the ruminations of the ancient prophets of the Old Testament. It is exemplified by the Athenian philosopher standing in the Acropolis deliberating about the fate of the city-state. It is seen in the structure of the medieval town, built upon a feudal economy and a Christian cultural backdrop. It is experienced by the Samurai warrior in the context of Japanese culture, in the hopes and dreams of the Incas of Peru, by the native Watutsi tribes in Africa, and the exotic Hindu and Moslem cultures of India and southern Asia. And it is exemplified anew in modern post-industrial urban civilization of the present-day world, which gives us new cultural materials and new opportunities for adventure.

All of this illustrates the fact that human beings have found their meanings within the context of an historical cultural experience, and in [the way] they are able to live and participate within it.

The Tragic Sense

The theist may be a profound pessimist. None of this is enough, he says. Life, real life, by itself, is finally empty and devoid of purpose or meaning. He may reject the possibility of achieving happiness here and now. He is interested in spiritual values, and in his ultimate transcendental fate.

The despairing pessimist levels a basic indictment against life. He is crushed by evil in the world and what he considers to be original sin. For him the evils of life outbalance the goods. He focuses on the worst outcomes of our strivings and yearnings.

Let us examine the main lines of his indictment:

1. The Vale of Tears Argument. Life is full of suffering, pain and anxiety. It is not a source of laughter and joy, but of sorrow, tragedy, duplicity, cruelty, diseases, injustice, and evil. There is failure and disappointment. My children, my wife, are stricken ill; my fortune is lost; my novel is rejected. There are accidents, tragedies, and defeats. There is ongoing conflict and strife, war and violence, and hatred.

2. Human Beings Are Impotent. Most of the important things that befall us lie beyond our ability to prevent: a sudden disease, an unforeseen accident, or an unexpected anomaly. Life is ambiguous, full of contingent events. No one can fully predict the future or prepare for calamity. What will be; the tides of fate and injustice are such that they will overwhelm us. There is little we can do against them but submit and suffer. We can only apprehend with passivity the vastness of the universe, and, perhaps, by prayer, and supplication, be rescued from the worst tragedies that may befall us.

3. The Myth of Sisyphus. Life is full of endless repetition and hard work, and yet our gains never last. Sisyphus was condemned to push a large rock up a mountain, but was never able to complete his task, for when he reached the top, the stone rolled back and forced him to repeat the labor endlessly. We work hard and we toil, but there will be no final success or solution, no rest for our tired spirits and aching souls.

4. Schopenhauer's Dilemma. We fluctuate between restlessness and boredom. We are goaded by desires, we strive to achieve our ends; in the process we are uneasy. But when we do satisfy them, we are quickly satiated and ennui sets in. We see a beautiful woman and are energized; we conquer her and are satiated. There is never any surcease from the mad process, only a constant state of flux between two unfortunate extremes. Only Nirvana or nothingness can release us from the pounding of desire and the torment of dissatisfaction.

5. The Impermanence of Things. We discover that nothing is permanent or absolute; all things that come into being also pass away. The beautiful sapling grows into the splendid oak tree, but eventually dies. The young stallion becomes the decrepid old horse; the lovely young girl, the aged matron; the handsome youth, the senile and doddering old fool.

The child on the beach builds a palace of sand, but ocean waves soon swamp it. All institutions and constitutions eventually are consumed with time. The majestic architectural remains of the great civilizations of the past are today nothing but faded reminders of their once great grandeur.

The destiny of all human institutions is decay. In the long run, all the vibrant ideals that men and women have lived for will eventually disappear, for, from the eye of eternity, whatever we do now will dissipate and be forgotten.

6. The Finality of Death. In the last accounting, the most awesome reality facing us is our own eventual demise. The existential angst that each person faces is the fact that he and his loved ones will some day be buried (or cremated) and will disintegrate. From the standpoint of death everything appears meaningless. For what end all the yearnings and strivings, all of the hoping and cheering? Everything we have ever done in life will erode and be destroyed. From ashes to ashes, from dust to dust, we too will be submerged in the endless sea of time.

The theist finds these realities unbearable, and so postulates a God who will free him from the evil and tragedy he encounters. He extends all of his desire and dreams to another life in which there is no restlessness, no boredom, no impotence, no wickedness, but rather, ultimate permanence.

Given the propensity of humans to spin salvational tales of consolation, we seriously raise the question of whether we can live without our illusions. If we were to abandon them, would we be better able to cope with failure, defeat, impermanence, and death, and stand up to the real world? Can we humans summon the psychological resources and the courage to live on our own, and face the universe realistically? "But the universe is unjust," Russell replied. "The secret of happiness is to face the fact that the world is horrible, horrible, horrible...you must feel it deeply and not brush it aside...you must feel it right here" — hitting his breast — "and then you can start being happy again."

The humanist's rejoinder to the pessimist is optimism. Life is worth living! This is our only available option.

The real question is whether life is worth living without illusions of immortality. Unfortunately that question is not resolvable entirely by reason. There are rational arguments that one can present to the forlorn spirit crushed by events and unable to cope. [But will he/she respond to them? Or will he prefer] religion, a method of adjusting by escaping into reverie and unreality?

Being able to live as a humanist may simply be only a question of courage and motivation; and if motivation is gravely impaired, there may be little we can do to engender it. The ultimate courage is to be and to become, in spite of existential reality, and to overcome adversity, and exult in our ability to do so.

The Bountiful Joys

One can respond to the pessimists's catalog of the evils of life by presenting an opposing statement of its many possibilities of joy.

1. The Fullness of Life. The vale of tears is balanced by the summit of joys, the sorrows of life by its achievements, the depths of despair by the flights of success. If life has tragic dimensions, it also has intrinsically worthwhile experiences. Though we may suffer grief at some moments, at other times we experience humor and laughter, enjoyment and delight.

Although the priests remind us of the failures and defeats of human existence, humanists delight in fun, and we can savor and find pleasurable moments of experience. There is room in life for tears, but rather than submit to our fate, we can create a better life by exerting intelligence and effort, and by reducing or eliminating ignorance, hunger, deprivation, disease, and conflict. Many of the ills of life can be remedied and ameliorated; the goods can outweigh the evil, the tears can be balanced by joys.

2. Human Power. We need a proper sense of our own powers. Although there are some things that are beyond our ability to eradicate or control — like death — the history of civilization illustrates that fortitude and intelligence used wisely enable us to overcome adversities.

Earlier civilizations may have been unduly pessimistic about sin, corruption, and natural catastrophes; but science and technology enable us to understand the causes of phenomena and to find appropriate remedies for them.

To the primitive mind, there first appears to be no rhyme or reason to things. A flood washes away crops; a village starves. Perhaps we'd better sacrifice a child or a lamb to appease a god's anger, and hope that the gods will rescue us. A man feels the need to develop some notion of a divine order as a way to lessen his anxiety about the things he cannot control.

But we should recognize that although we may suffer misfortune, there is always the possibility of good fortune. It is by means of creative work that we can overcome adversity; we have the power that will enable us to change things for the better. We need to gather our resources after defeat and strive anew. Human will can ameliorate adversity. The future depends on perseverance, ingenuity, and the indomitable human spirit.

3. The Satisfaction of Striving. The myth of Sisyphus has exaggerated a dilemma, because there can be significant enjoyment and enrichment in working to reach our goals. Performing a task repeatedly need not be painful drudgery, but a source of satisfaction — as athletes discover in hitting or throwing or batting a ball for endless hours, in practicing for a sports contest.

4. Expectation and Realization. Schopenhauer's dilemma can be rebutted. His attitude expresses the reactions of a jaded sensibility. The exuberant attitude finds the opposite qualities in life. There are great and exciting expectations and desires that stimulate us to action, and there are great thrills in experiencing and striving for them. When we finally achieve our ends, there are joys of consummation, the immense gratification of quenching our thirst, satisfying our hunger, and releasing our passions. Moreover, once we have attained our goals, new and interesting ones always emerge. Thus we stand between the pleasures of expectation and the delights of realization.

5. Novelty. In answer to the argument of impermanence, one may respond that although it is true that nothing lasts, the efforts of earlier civilizations are not entirely forgotten. They remain in human memory, in the artifacts, works of art, books, and monuments that have survived. They have become part of world culture, and we appreciate and profit from them. Some good that we do may survive us, and future generations will perhaps be indebted to us for what we have bequeathed to them.

[Impermanence has its benefits.] There is always something new under the sun. We can see that in the world of manufactured objects, where we [may] await with great anticipation the latest brand or model. The splendid walnut tree eventually perishes, but there are new trees to replace it. Caesar may die, and all may mourn, but Augustus will reign. There is the excitement of something new — which may first shock us by its audacity. There is some virtue to impermanence. Nothing lasts forever, moans the melancholic. Yes, I reply, but how lovely are the new sprouts emerging to take their place!

6. The tree of Life: Last of all, we are reminded, are senility, death, and nothingness, which await every human being. That is a brute fact, and there is no escaping it. We can stave off death and prolong life by modern medicine, and in the future the human species may find new ways of extending life far beyond threescore and ten.

We are reminded of death by the pessimists; of life by the optimists. Given the fact of death, our main focus should be on life — not to pine about its termination, but to take every moment to be precious.

Life Is Worth Living!

My argument may fall on deaf ears. Some individuals have been so turned off by challenges and responsibilities that they find life distasteful, debilitating, and depressing. They are so weighed down by burdens that their only response is negativity; they are angry at the exuberant person; they resent mirth or laughter; they are always serious. Some may, in moments of desperation, contemplate suicide.

How do we respond to such individuals, who do not find life worth living? At some point, logic fails; we cannot prove anything to them by argument; the zest for living is instinctive and noncognitive. If it is absent, there may be some underlying physiological or psychosomatic malady gnawing at the marrow. Extreme depression may be physiological, even genetic, in origin. But its origin may also be found in the frustration of one's basic needs. It may have its roots in homeostatic imbalance, the repression of the sexual libido, the lack of love, friendship, or community, the failure of self-respect, the inability to find some creative work or a beloved cause to strive for, or the lack of wisdom. Presumably if these needs were satisfied, a person could grow and develop, and might find some creative basis for a meaningful and enriched life. If a man doesn't find life worth living, then perhaps he ought to put himself in a situation where he might.

Countless individuals have sung praises to life. They have eaten the forbidden fruit and have found it wholesome and nourishing; and in eating it we find that its secret is, that life is intrinsically good. This is the basic touchstone for the ethics of humanism.

Each person needs to create the conditions that will enable him to live richly and joyously. This, in the last analysis, is the purpose of all moral and ethical rules and regulations. They are good and right not only in themselves but also in their consequences — for what they make possible: wholesome, creative, happy lives.

The common moral decencies and responsibilities need to be respected as essential to the very framework of life in the community. But the test of an ethical system is also whether it enables individuals to live exuberantly.

Generation upon generation of human beings in the past have found life rewarding and generation upon generation no doubt will continue to do so in the future. The acts of creative living, including the sharing of life with others, is the summum bonum of the human condition. That is the response the humanist gives to the theist. There is nothing ultimate or absolute beyond the living of life fully: it is its own reward, and needs no justification beyond itself.

RELIGION

- (5) Adam Jacob wrote the following letter to the New York Times on 5/10/88:

Your paper should adopt the policy of not capitalizing the word "god," as is the custom in the Uruguayan press. (Beware of Evangelists, Pope Warns in Bolivia, N.Y.T. 5/10/88, p. A19) By choosing to capitalize this word, as it does even when describing this practice, the *Times* expressly sides with all forms of theism. Not capitalizing the word would constitute a more neutral approach, in keeping with the Spirit of Objectivity, the only deity to which a secular newspaper ought pay homage.

We liked the letter, even though we're not sure we agree with it. Apparently BR didn't agree with that usage, for in "Why I Am Not A Christian", he said God, not god.

The argument in favor of saying God, not god, is that people will know what you are talking about. If I say I don't believe in god, that is not remarkable, because even believers don't believe in god; they believe in God.

On the other hand, by saying god, it reminds readers of The Times that some people do not believe in God.

We'd be glad to hear some opinions on this.

- (6) Favorable Review of Nan Robertson's book, "Getting Better. Inside Alcoholics Anonymous." As the reviewer says, "Ms. Robertson might seem the ideal candidate to interpret this complex organization; as a reporter for the New York Times and a recovering alcoholic with 13 years of membership in A.A., she is both outsider and insider, uniquely situated to mediate between cynics and cheerleaders." The review appeared in the NY Times (Sunday) Book Review Section (5/1/88, pp 13-14).

Here is the excerpt:

Probably the most frequent criticism leveled at A.A. is the heavy-handed, repent-your-sins religiosity that some feel pervades the program. Ms. Robertson doesn't shrink from this charge; indeed, she reports the considerable evidence for it. The Lord's Prayer, she notes, is recited at nearly every meeting, a ritual that can be particularly trying for Jewish members, and passages are often read aloud from the "Big Book," the official A.A. manual that not only sounds like the Good Book but is liberally sprinkled with references to prayer and spiritual regeneration. And while many members insist that a belief in God is optional in A.A., the author quotes a woman with a different experience. "It's hard to be an atheist in A.A. . . . Outside of New York, particularly, there's that Big Book, 'even-the-most-confirmed-atheist-will-change' mentality. It is unspoken, but there."

But here Ms. Robertson exhibits her occasional tendency to cite substantial problems within A.A., then back off from serious analysis of their implications. The charge of excess religiosity is not simply the critique of a few nonbelievers; it has been leveled at A.A. throughout its half-century history by recovering alcoholics from diverse religious backgrounds and every region of the country. The level of discontent she documents deserves some vigorous probing into possible consequences: for example, to what extent might A.A.'s religious emphasis account for the little-discussed failure of 40 percent of fledgling A.A. members to stick with the organization? The author cites the issue of religion as "the most acceptable reason for dropping out,"

From The New York Times July 17, 1988, p.E9:

At Prayer

As part of his punishment for drunken driving, John Norfolk was ordered by a Maryland court to attend Alcoholics Anonymous meetings. But Mr. Norfolk, an atheist, found going to A.A. a bit too much like going to church. "They were praying and talking about God about half the time at the meetings I went to," he said. So he stopped going, saying the court order requiring him to attend was a violation of his right to freedom of religion. But if he didn't go to the meetings, the court said, he would be in violation of his probation and would have to serve 20 days in jail. The Maryland branch of the American Civil Liberties Union took up Mr. Norfolk's case, calling it "absolutely clear-cut." The case may be decided this week, and if Mr. Norfolk wins, Maryland and 34 other states may have to change how they deal with drunken drivers.

NEWS ABOUT MEMBERS

- (8) Steve Molenaar, you may recall, persuaded his local library -- which had 7 periodicals on Christianity and none on Humanism or atheism -- to subscribe to *The Humanist*. He did it by threats of a suit on censorship, plus a letter from the Minnesota Civil Liberties Union (RSN55-31).
- Now Steve advises that the Minnesota Civil Liberties Union has settled his suit against the local school board over the presence of a "Religion in Life Center" placed on school district property. As a result of the lawsuit, settled in the United States District Court, the Religious Center will leave school property by a certain date, and the Defendant School District must pay a \$5000 fee to the plaintiff's attorney.
- If we were reading this before a BRS meeting, it would surely be followed by a great round of applause for Steve. Take another look at RSN55-31, where Steve suggests ways to "look for local civil liberties violations that may interest your regional chapter of the ACLU."
- (9) Roy Torcaso is the Torcaso of "Torcaso vs. Watkins", a landmark 1961 U.S. Supreme Court case in which the Court ruled unanimously that states could not compel officeholders to declare belief in God.
- In that case, Roy's commission as notary public had been withheld because he said he did not believe in God. That's why he brought suit.
- Now he is bringing another suit. This time he's suing the State of Virginia, which has denied his application for authorization to perform marriage ceremonies as a Humanist Counsellor. Roy tells us that he has "started the appeal process".
- We hope to see history repeat itself.

BOOK REVIEWS

- (10) "Nuclear Fear", reviewed by Alfred Kazin on Page 1 of the New York Times (Sunday) Book Review (5/1/88). We are printing the full text, despite its length, because nuclear weapons were BR's chief preoccupation during the last 25 years of his life. He saw that the existence of nuclear weapons threatened the continued existence of the planet. BR is mentioned in the review.

Awaiting the Crack of Doom

NUCLEAR FEAR

A History of Images.

By Spencer R. Weart.

335 pp. Cambridge, Mass.:

Harvard University Press. \$29.50.

By Alfred Kazin

OVER Hiroshima, Aug. 7, 1945. The atomic bomb was called "Little Boy" and the B-29 the Enola Gay after the pilot's mother. The bomb was inscribed with autographs and derisive messages to the Emperor of Japan, some of them obscene. But for all the fun and games, the fearful power, terror, hopes and delusions released by Little Boy changed everyone, forever. The bomb gave the shape of life, outer and inner, an irreversible charge; a sense of fatefulness would now lie on all things. Forty-three years later we are still struggling -- often enough without knowing it, all too often in total resignation -- with every effect and implication of that change. For war, the state, for science and art; for language, for individual and mass psychology; for human destiny in the smallest particulars of health and well-being, to say nothing of human destiny as a whole in dependence on the very survival of the earth.

None of the military achievements and defeats in World War II, none of the horrors and disasters -- the Holocaust, the million dead and the cannibalism in besieged Leningrad, the fire bombing of Tokyo, Hamburg, Dresden, the Soviet occupation of Eastern Europe -- has such total, universal ap-

plication for the future as the use of nuclear fission as a weapon. The bomb was created -- because they believed that Hitler still had the scientists to create one -- by an interna-

tional team of leading physicists in the most concerted and accelerated effort in the history of science and technology. Los Alamos represents a frenzy of concentrated reasoning that makes one gasp at the powers of human intelligence, such a gathering of intelligence as has never been assembled by any government for social and health purposes. The atomic age ushered in such a reordering of our outer lives and inner selves that there is positively no end to the evidences that can be uncovered in the refrain of our fears, the pointlessness of most political speech, the atavism that ignites at the slightest rumor of a reactor malfunctioning, the mood swings and fashions of our culture, high and low.

THE physicist and historian Spencer R. Weart (born 1942) has gone beyond anyone else in collecting what I have called "evidences" and he calls "images." "Nuclear Fear: A History of Images" is a prodigious demonstration, item after item, of how Americans have responded to the new world of nuclear energy and its militarization. The new consciousness is revealed to be, under pressure, a very old, primitive, long-buried world of archaic images. Mr. Weart has been tireless in searching out even old movies, comic strips, forgotten best sellers, equally perishable military and official governmental pronouncements. The now unbelievable assurances and personal aggressions on the subject of bomb shelters, the heart-searchings of the Atomic Energy Commission's exemplary chairman David Lilienthal,

the anguished warnings in *The Bulletin of the Atomic Scientists*. And of course the know-it-all "strategists" who for many a day told us lesser folks just how nuclear war could be "contained" and even "won."

In a surprising moment of fatigue Mr. Weart confesses at one point "I cannot pursue every strand in the tangle." He has certainly done a lot of pursuing. Here, long before the discovery of radioactivity in 1896 or the recognition early in this century that elements could actually be "transmuted" as in the dreams of alchemists; before Werner Heisenberg almost exploded himself trying to develop a bomb for Hitler; before wartime America in its furious post-Depression energy built secret cities -- Los Alamos, Hanford, Oak Ridge -- here is Sir Isaac Newton suspecting that he was on the track of a great and ancient secret that might be the key to "something more noble, not to be communicated without immense danger to the world." Before 1839, the seemingly rational fantasies of a golden age through the peaceful uses of atomic energy were unfolded by H. G. Wells in "The World Set Free" and in the effusions of the chemist Frederick Soddy, working with the great Ernest Rutherford, who was shortly to discover the atomic nucleus. Rutherford grimly joked, Mr. Weart writes, that could a proper detonator be discovered, and an explosive wave of atomic disintegration be started, "some fool in a laboratory might blow up the universe unawares."

Even after the terrible weapon convulsed Hiroshima -- against the advice and in accordance with the fears of many who had actually thought up the bomb -- there persisted this flight of mind, on the widest scale, between the greatest hopes and the most frightening intimations of doomsday. Hope

and doom alike were directly encouraged by some Boris Karloff types of real-life mad scientist. Fantasies unlimited of "atoms for peace" vied with the despair of many Los Alamos veterans as the weapon they had given the Government came directly under the control of military commanders, even of individual pilots. Everything was acutely new, an emergency demanding a quick solution, everything seemed either a challenge or a menace as there got into the act not only the scientists and political leaders but the national security apparatus, the cold warriors and ex-leftists turned professional patriots, the sensationmongers, consolers and alarmists of the popular psychology industry. Despite the frantic efforts to shore up national "security," we were suddenly living with every conceivable manifestation of human insecurity.

Still, these seem to be not "images" but evident products of a society tormented as much by its hopes for limitless cheap energy as by its dread of the ultimate war. "Images" to me signify something positive and creative, as in art, rather than the mostly helpless happenings, fantasies and frights plentifully adduced here. The name of Dr. Carl Gustav Jung appears several times in this book and I suspect Mr. Weart has been much influenced by Jung's well-known thesis: we are ruled by images that are vestiges of ancient, long-discarded mythologies.

Near the conclusion of his book, when he struggles to offer some personal solution to the discords in us that grow vehement precisely because we dare not use the bomb, he finds some measure of hope in that reconciliation of opposites represented by the mandala, a mystical symbol of containment. One central theme of his book — the analogy between alchemy and the transmutation of elements on which nuclear energy is founded — clearly owes as much to Jung's allegorical use of alchemy as it does to the basis of nuclear science. The most advanced physics prying open the ultimate recesses of matter puts us in mind of the oldest legends, fears, myths and superstitions about the mad scientist destroying us in his determination to reach ultimate secrets of the universe.

"Nuclear Fear" is a good and useful book, an intellectual treat for anyone who still believes that there is such a thing as "the spirit of the age." An omnivorous and impressively close student of the ups and downs of public confidence in nuclear energy, Mr. Weart demonstrates that the many zigzags have never really modified the underlying fear of radiation, the incoherencies of public policy, the underlying sense of apocalypse. Note that the latter is the first Western example on such a scale since the Middle Ages. Yet it is the refrain of such urban commonplaces as The New Yorker's "Talk of the Town" comment that the Chernobyl disaster was "all that is given to us to know of the end of the world."

Such doomsday thinking is so common, especially among nonscientists, that a valuable feature of this book is Mr. Weart's effort to correct "images" that do not correspond to the facts. Dis-

cussing nuclear reactors and the halt just now of new nuclear power plants, Mr. Weart demonstrates just how much more harmful is the contamination from coal-burning plants. Despite the fright occasioned by the accident at Three Mile Island and the danger to much of Eastern Europe from the real disaster at Chernobyl, there has been no "credible maximum accident," no "China syndrome" corresponding to the tragedy at Bhopal, India, where a chemical cloud escaping from a pesticide plant killed over 2,000 people and damaged the health of 10,000 more. Yet as an element of contamination, "the radioactive atom remained supreme." The Russians seem to believe this. Since "Nuclear Fear" went to press, the astounding news from the Soviet Union is that the long-subdued citizenry may yet actually keep the Kremlin from building new plants.

• • •

When the first atomic bomb was test-exploded in the New Mexico desert before dawn, July 16, 1945, the fireball lighting up the valley so amazed the scientists themselves that some actually believed for a moment that the world was starting to blow up. An Army engineer, Brig. Gen. Thomas Farrell, cried "Jesus Christ, the longhairs have let it get away from them!" In the social and political sense the longhairs did let it get away from them. It got away — to the military — from the Atomic Energy Commission itself and farseeing men like David Lilienthal. It got away from physicist prophets like Leo Szilard, who as a precocious student in pre-1914 Budapest already imagined the possible reconstruction of the world through nuclear energy, but who after Hiroshima turned from physics to biology. Because certain commanders and even individual pilots by the 1950's had the ability to drop bombs on their own initiative, after 1961 the Kennedy Administration installed safeguard devices and also halted flights over the Soviet Union.

What, in the end, are we to think of the longhairs, the leading physicists, those Himalayas towering over our century, who for the most part displayed a humane and farseeing political vision of international control sadly lacking to the politicians and especially the defense intellectuals, those "whiz kids" whose chief contribution to debate was the pretense of imposing rationality on nuclear war? No other 20th-century story matches, for mental achievement and political failure, the story of Bohr, Fermi, Bethe, Peierls, Frisch, Feynman et al. — to say nothing of Oppenheimer — as related more awesomely than ever in Richard Rhodes's "Making of the Atomic Bomb."

Their achievement left marks on all of us that can be followed in "Nuclear Fear" like a catalogue *raisonné* of our age on exhibition. There is little to cheer over in the substance of "Nuclear Fear," and grateful as I am to Mr. Weart for reconstructing our recent history, I find insufficient and occasionally misleading the emphasis he puts on individual psychology rather than on social and economic factors. He suggests that their deprivation of early maternal support links such very different "apoca-

lyptic" thinkers as Mary Shelley, Frederick Soddy, Jack London, Philip Wylie, J. B. Priestley, Bertrand Russell, Dr. Helen Caldicott — all of whom, like the schizophrenic child in Doris Lessing's "Mary," have a background in which maternal care was abnormally lacking. Suggestive as it is to relate the "interior holocaust," as Mr. Weart sensationally puts it, to the turbulence of the atomic age, there is all too little here about the defense contractors — among whom I put so many "defense intellectuals" — actively promoting the fantasy of Star Wars.

It is the understatement of all time to speak, as Mr. Weart does, of ours as a "wrongly organized society" where "a person's normal will to dominate and harm could be entangled even with a crusade for rebirth." This sounds as if invisible powers had made the wrong decision in "organizing" society. Words soft and evasive. Equally so in my opinion is Mr. Weart's yearning, through the hypothetically healing symbol of the mandala, that the many opposites in all of us can be reconciled because the safety of the world ultimately depends on this.

SINCE Hitler convinced me of original sin, I am sympathetic to Mr. Weart's essentially religious belief that there is a fundamental unity to nature that must be recognized and realized in the human soul. It would seem to me that all the leading physicists must believe in that unity and that their researches prove it. But, alas, not all scientists and intellectuals favor such ancient idealism.

It was an American ex-physicist, Herman Kahn, who thought up a "Doomsday Machine," a vast computer wired up to a huge stockpile of hydrogen bombs, just to show how startling he could be. When the computer sensed that the Soviet Union had committed an act defined as intolerable, the machine would automatically set off the Doomsday bombs, covering the earth with sufficient radioactive fallout to kill billions of people. From the early 60's to the middle of the decade, Kahn worked out an elaborate theory of "escalation," conceiving of 44 "rungs of escalation" from "Ostensible Crisis" to "Spasm or Insensate War," with the rungs in between including "Harassing Acts of Violence," "Local Nuclear War," "Justifiable Counterforce Attacks," "Local Nuclear War — Exemplary," "Constrained Disarming Attack" and "Slow Motion Counterforce War."

There is too little about this extremism in "Nuclear War." Or about the many intellectuals and literary types who in the usual chatter of our day happily agree with Gertrude Stein — "In the twentieth century nothing is in agreement with anything else." Mr. Weart is not of that number. How could he be? He is a trained scientist, not an opinionmonger. And far from being a heartless "realist" like so many professional columnists whose knowledge depends on Washington gossip, he believes, without saying so, that we must love, starting with ourselves, or die. But not everyone who talks about heaven is going there. This is a true history of our age — a cutting, indispensable, deeply troubling book. I trust it will trouble you. □

(11) Dissent from (parts of) the Kazin review, above, which says:

Such doomsday thinking is so common, especially among nonscientists, that a valuable feature of this book is Mr. Weart's efforts to correct "images" that do not correspond to the facts. Discussing nuclear reactors and the halt just now of nuclear power plants, Mr. Weart demonstrates just how much more harmful is the contamination from coal-burning plants.

Now hold on! Coal-burning plants may do a lot of harm, and no doubt they do, but the maximum harm they can do is trivial compared to the maximum harm a nuclear facility can do, whether civilian or military. And even aside from accidents, we haven't yet found — and may never find — a safe place to get rid of the byproduct of nuclear power, plutonium, which is lethal for 100,000 years. Here's more to disagree with:

Despite the fright occasioned by the accident at Three Mile Island and the danger to much of Eastern Europe from the real disaster at Chernobyl, there has been no "credible maximum accident", no "China Syndrome" corresponding to the tragedy at Bhopal, India, where a chemical cloud escaping from a pesticide plant killed over 2,000 people and damaged the health of 10,000 more.

Doesn't that make you feel better about nuclear power? Aren't you glad that a nuclear facility was not responsible for all the people killed or damaged at Bhopal? Isn't it great that we have not yet had a "maximum credible accident" that could wipe out a continent or maybe all of us?

It may be that more people have been killed to date by non-nuclear catastrophes than by nuclear ones. How does that diminish the nuclear potential for omnicide?

Back to the drawing board, Mr. Weart. Or is it Mr. Kazin? Or both?

In spite of these reservations, "Nuclear Fear" looks like a book worth reading.

(12) Bob Davis on Ayer's "Wittgenstein":

A recent issue of RSN contained an item entitled "A hatchet-job on A. J. Ayer", and reprinted a review of Ayer's "Wittgenstein" by an Arthur C. Danto of Columbia University (RSN57-22). I was reading the book at that time and thought I would send in a counterpoint. I think the term "hatchet job" was a bit too strong, but it was a critical review and one I don't think particularly valid.

I have always found Ayer's books to be informative and enjoyable, and "Wittgenstein" is no exception. Ayer, like Russell, can write on difficult topics in philosophy in a way that we dilettantes can follow. In his introduction Ayer states that he is "attempting to give an account of the successive phases of Wittgenstein's thought" that would be acceptable to both the general reader and to his professional colleagues. I feel he has succeeded admirably, certainly from the general reader's point of view; I cannot speak for the other. I recommend the book very highly to those of you interested in reading philosophy.

Ayer makes mention of never having "adhered to the cult" of Wittgenstein, which is perhaps his real sin. Russell found the cult inexplicable, as do I. The text of this review suggests that the author may be part of that cult. He criticizes Ayer for testing Wittgenstein's views against his own, and suggests that "the soul of Wittgenstein is screened out" by this procedure. This is curious; whose views does he suggest Ayer use? Karl Popper's? Fear of loss of soul does not suggest valid philosophical concern.

I have read a good deal of Wittgenstein over the years; I don't want to claim to understand him very well. I am aware, however, that some of his thought, or perhaps more correctly, his procedure, has rubbed off on me. I think I am more conscious of language because of him. Of course, much of that is also due to Russell and Popper.

For some reason I get the urge to read something by Wittgenstein about once a year, and I usually feel I have wasted my time when I have finished. Ayer helps me understand much of Wittgenstein for the first time.

I first discovered how to read difficult philosophy from reading some of Russell's difficult texts. I just go ahead and read it and do my best, and I don't worry about things I don't understand. Later I read some other related item or a year later I re-read the book and I realize that I have come to understand much of it. Apparently, one's mind works on it subconsciously. And I usually enjoy the book even if I am a little bewildered when I first read it. This same process worked for me with Karl Popper.

But it never worked with Wittgenstein. I didn't enjoy the books, and I didn't seem to understand them next time around. So maybe Ayer will make that process a little easier now.

I think Ayer does offer an explanation as to why Wittgenstein is important and what he was about in his later philosophy. He says, on p. 142, that from Descartes to Russell, the central course of philosophy was theory of knowledge, and Wittgenstein was doing something different; he was pursuing the study of meaning. I am not competent to judge that issue but I have a sneaking suspicion that Ayer is right. Perhaps one of our "professional colleagues" can enlighten us on this.

At any rate, I highly recommend the book.

(13) Clark's "Life of Bertrand Russell", reviewed by Alan Ryan, in the Manchester Guardian Weekly, 16 Nov 1975, p.25:

Why Russell mattered

by Alan Ryan

THE LIFE OF BERTRAND RUSSELL, by Ronald W. Clark (Weidenfeld & Nicolson, £6.95).

Religious conversion is a familiar hazard of adolescence, and it takes a variety of guises; mine struck in the winter of 1956, amid the horrors of Suez and Hungary. It was provoked by reading A History of Western Philosophy, and its immediate impact on my life was that I was nearly expelled from school for over-enthusiastically explaining to the chaplain just what damage Bertrand Russell had done to the cosmological

argument for the existence of God.

This only strengthened my belief that the Blessed Trinity consisted of J. S. Mill, Bertrand Russell, and A. J. Ayer, a belief that I've never quite lost since. Empiricism, liberalism, atheism, and pacifism, defended in Russell's crackling prose conjured up an indistinct but immensely alluring vision of what it might be like to grow up rational. Only later could one appreciate how much of Russell's attraction lay in directions quite other than the purely intellectual.

The vein of romantic melancholy which constantly broke into his pop-

ular essays and which underpinned "A Free Man's Worship" had nothing much to do with advances in formal logic, but a lot to do with making Russell attractive to the young. He more than once wrote of his love of the cruel, indifferent sea, and the bleak uncaring mountains, of the comfort he took from the fact that the universe was not implicated in the miseries and follies of the human race. The boy who decided not to commit suicide only because he wished to know some more about mathematics' reappeared throughout Russell's life, and surely strikes a chord in anyone who feels the

sharp contrast between the natural serenity of the intellectual life and the chaos of the instincts.

Ronald Clark's life of Russell seems to me to be a great deal less successful in its treatment of Russell's intellectual life than in its treatment of his several marriages and many affairs — it is, in fact, a 750-page curate's egg, in which the parts that are not good are quite dreadful, but the parts that aren't bad are done rather well.

Its chief defect, and one which renders the first half of the book almost completely worthless, is that there is no attempt to explain just

what Russell's intellectual eminence rested on. In a lordly sort of way Mr. Clark notes at the end of the book that there are many studies of Russell's philosophy, done with varying degrees of competence; so there are, but there's precious little evidence that Mr. Clark has made much use of them.

His own account of Russell's ideas is the kind of thing that a casual reader would glean from Russell's *Autobiography* or *My Philosophical Development*, and the level of sophistication to which it attains is indicated by the way Mr. Clark confuses the *Theory of Types* with the *Theory of Descriptions*. We get an immensely detailed account of Russell's emotional career during the 10 years hard labour devoted to *Principia Mathematica*, but we rarely get a paragraph on the contents of that extraordinary work. No one who did not already know about the revolution in logic which had taken place during the nineteenth century would get any idea

of it or of Russell's place in it.

This unconcern with what Russell actually thought about the issues to which he devoted his life extends even to the more accessible works. Mr. Clark tells us that *Principles of Social Reconstruction* is probably Russell's best work in political theory — but he doesn't tell us what is in it, nor in what its superiority consists. No doubt one could defend Mr. Clark by pointing that this is a *life* of Russell, and that those who want to know about his ideas can go and read his book. But, this ignores the fact that the chief reason for being interested in Russell's life is the quality and importance of his ideas.

The damage this does to the book diminishes rapidly after 1930, when Russell's career as a heretical lay preacher on ethical, sexual, political and educational topics really got going. The story picks up when Mr. Clark embarks on Russell's career as a teacher, his exile in the United States, and his

post-war work for nuclear disarmament.

Mr. Clark is judicious and well informed about Beacon Hill school, and if he destroys one good story (the vicar's wife who exclaimed "Good God" on meeting a naked pupil and was politely told "There is no God" is mythical) he replaces it with several as good. His account of Russell's career in CND is excellent — his successes as well as his failures are noted, and the Schoenman debacle is not exaggerated — while he rightly reminds us of Russell's prescience in prophesying the horror of Vietnam.

The popular appeal of the book will, I suppose, rest on its revelation of Russell's tangled emotional affairs. Mr. Clark produces two new large accounts; the first is that Russell was deeply in love with Evelyn Whitehead, the wife of his collaborator on *Principia*, for several years after the failure of his first marriage; the second is that

his affair with Lady Constance Malleon did not fizzle out after five years but lasted on and off for half a century.

The intrinsic interest of Russell's love life is debatable; he said that philosophers in love were not interestingly different from other men in love, and Mr. Clark does little to shake that view. Mr. Clark's account is stronger on time-tables than on emotional insight, and nothing emerges which a much briefer account would fail to disclose. It is clear that like many other people, Russell found it hard to follow the excellent advice which his intellect devised; like many other people, he mistakenly thought that his own misery justified making his closest friends miserable; unlike many other people, he had an area of life in which energy, passion, and honesty were not destructive but productive. To learn more about him, we should need a subtler narrator than Mr. Clark.

- (14) Clark's Life of Bertrand Russell, reviewed by Patrick Nowell-Smith, in the *Toronto Star*, 22 Nov 1975, under the headline, "BERTRAND RUSSELL: AN ARISTOCRAT WHO WASN'T":

Bertrand Russell, who died five years ago at the age of 98, was one of the most remarkable men of the century.

He was also one of the most influential since, for good or ill, he was the grandfather of both the computer and of the permissive society.

He was also something of an enigma: an aristocrat of aristocrats, who never ceased to attack Establishments everywhere; he was jailed on 1916 for opposing World War I, and in 1961, aged 80, for civil disobedience.

This ice-cold intellectual was driven all his life by passions — for truth, for women, for peace. He could inspire devotion in women and return it in kind; but he could also, at an age when, according to North American mythology, sex is all over and done with, drop into bed with them as casually as other men drop into conversation.

Russell's own autobiography is a best-seller, which this new biography cannot replace, but Ronald W. Clark has made excellent use of the Russell Archives at McMaster University to provide a more objective account. Though he cannot match Russell's incisive wit and distinction of style, he can and does get us much nearer to the truth about Russell's private and public life.

Genuine Passion

For the fact is that, despite Russell's genuine passion for truth, the truth as he saw it was often vastly different from what others saw. For example, he wrote that it was "only for external and accidental reasons" that Lady Morrell did not become his mistress the first time they met. Her own account is different and more credible — she just didn't fancy him and did not want to jeopardize her husband's career.

Russell first emerged as a great public figure (he had long been known as a mathematician and philosopher) in 1950 with the award of the Order of Merit and of the Nobel Prize for literature. From then to the end of his life he devoted all his energies to saving the human race from what he believed to be the imminent disaster of a nuclear war.

It was not difficult for the man who, as a little boy, had romped on his grandfather's knee in the Cabinet Room, to fire off letters and telegrams to all the world's leaders, but it is hard to determine what influence, if any, he had on their policies. Nehru, Chou En-lai and many Third World leaders treated him with the greatest respect: Krushchev at least pretended to do so, but Russell never believed that it was his letter that caused Krushchev to back down in Cuba in 1962.

No influence

In the United States, Russell had no influence at all because the Americans, as usual, assumed that anyone who attacked their policies and denounced them as the greatest threat to peace must be a Communist.

Though the accusation of Communism was absurd, it was given some color by the activities of Ralph Schoenmann, Russell's left-wing American secretary. During the 60s, Russell's activities became more and more eccentric, unrealistic, even hysterical. Was he senile? How much of what was done in his name was really done by him? How much by Schoenmann?

The story is a complex one which Clark handles well, and he also prints as an appendix the long account that Russell wrote in 1969 of his relations with Schoenmann. That account at least puts paid to the idea that Russell was senile; at age 97 all the old penetration of thought and clarity of style were still there.

*

Nowell-Smith is Professor of Philosophy at York University. The "long account that Russell" wrote about Schoenman was presented in RSN46-5.

*

Here is part of KEN BLACKWELL's comment, in "Russell" (Winter 1975-6), p.22:

A new mythology? Russell as archetypal libertine

No one denies that the love of women had a major part in Bertrand Russell's life. He himself confessed he "would often have sacrificed all the rest of life for a few hours of this joy". However, many of the reviewers of Clark's Life treated Russell's love of women as if it had been his one dominant passion, and they often sacrificed the greater part of their space to this joy, as did the Sunday Times in their serialization of Clark's book. Perhaps the most extraordinary statement by a reviewer was that Russell "could also, at an age when, according to North American mythology, sex is all over and done with, drop into bed with [women] as casually as other men drop into conversation" (Patrick Nowell-Smith, Toronto Star, 22 Nov. 1971). This statement, while telling against the myth of geriatric sexuality, merely substitutes another myth. Some writers of letters to the London Times have tried to

(15) Clark's "Life of Bertrand Russell," reviewed in The Economist, reviewer not known.

THE ECONOMIST NOVEMBER 1, 1975

An aristocrat beneath the skin

THE LIFE OF BERTRAND RUSSELL

By Ronald W. Clark.

Cape/Weidenfeld and Nicolson.

766 pages. £6.95.

Biographers of Bertrand Russell—and there will be many of them—are saddled with the burden of the famous autobiography. How much of it should one quote, and upon how much of it should one rely? In this lucidly written and not uncritical book—the fruit of immense labour—Mr Clark says enough that is

new to entertain the reader familiar with Russell's own account of himself; but one sometimes wishes that certain episodes had been completed by the inclusion of key facts supplied by Russell. For example, in the story of his liaison with Lady Ottoline Morrell, it might have been illuminating to explain her slight physical aversion by the circumstance that the great lover suffered from pyorrhoea. Since he was as usual engaged in several affairs at the same time, this must have tempered ardour. Mr Clark is obliged to chronicle the major attachments, though the recital tends to pall; but he does not dwell to excess on the sexual details, which in other hands might have taken precedence. And at least Russell's amours were not

as a rule squalid. One suspects that much of his attraction for the public was due to an aristocratic bearing and outlook which, for all his populist doctrines, never left him. Mr Clark provides much evidence that this was so.

If you live into your 98th year, you have time to pursue several careers. There was the young logician and philosopher, whom some consider to be the most enduring Russell. There was the writer on public affairs, witty and controversial. There was the opponent of the first world war, who took a taxi to prison with a stock of learned books. There was the educationalist and organiser of a "progressive" school, who needed to engage in journalism against the clock to keep the experiment going. This resulted in several potboilers—"The Conquest of Happiness" and so on—of which Mr Clark thinks more highly than some others will do. There was the exiled academic in the United States during most of the second world war who brought down on his head a Puritan deluge unparalleled for viciousness and malevolence: he was accused of being "lecherous, libidinous, lustful, venerous, erotomaniac, aphrodisiac, irreverent, narrow-minded and bereft of moral fibre". There was the postwar pillar of

the British establishment, who gave place to the man who acutely embarrassed the establishment while attaining an extraordinary world fame. Although the last phase was clouded by the influence of his American secretary, Ralph Schoenman, and the antics of the International War Crimes Tribunal, the nonagenarian regained his independence and, though tottery and hard of hearing, remained clear-headed and incisive to the end.

Perhaps too much detailed consideration is given by Mr Clark to the nuclear protest movement, and not enough to Russell's personal life in the last and on the whole happiest period. And Mr Clark might have mentioned the incident in which, as one newspaper put it, Russell's "chicks came home to roost"—the sit-down protest on his own premises; and as to the insistence on Russell's continued hostility to religion, what about Russell's admission in the third volume of the autobiography that, on a visit to Greece in old age, "to my astonishment I felt more at home [in a little Byzantine church] than in the Parthenon"? But this is a solid, readable book, and, for its length, by no means expensive.

Our thanks to HARRY RUJA for all 3 reviews of the Clark book, as well as the Blackwell comment, above.

REPORTS FROM COMMITTEES

(16) International Development Committee (Adam Paul Banner, Chairman) reports:

This Committee is currently working on two projects in Africa, with "African Link" in Zambia. This is a new contact and request for assistance.

FOR SALE

(17) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." \$6 for 90 sheets, postpaid in U.S.A., Canada & Mexico. THE 1988 BERTRAND RUSSELL SOCIETY AWARD GOES TO PAUL KURTZ

Paul Kurtz, Professor of Philosophy at the State University of New York at Buffalo, is the 1988 recipient of the Bertrand Russell Society Award. The Award was presented on June 18th, during the Society's annual meeting, held this year at the State University of New York at Fredonia.

The Award cites "his long and honorable devotion to the welfare of secular humanism; his unconditional commitment to skepticism and Prometheanism, teaching, by word and deed, that intelligence demands that we should doubt what is doubtful, as well as disbelieve what is false; and that the essence of life itself is creative audacity."

It is difficult in limited space to convey the magnitude of Professor Kurtz's creativity and productivity; one can merely point to his prodigious output: 25 books, 61 chapters in books, 223 published articles, 40 book reviews, 128 papers for professional conferences, 48 newspaper and magazine interviews, and countless radio and TV appearances, including interviews with Phil Donahue, Ted Koppel, Mike Wallace, Barbara Walters. All this in addition to his teaching and editorial activities.

"Two passions have dominated my intellectual and professional life: (1) a commitment to critical intelligence -- I am skeptical of the false beliefs and mythologies that have motivated many other men and women -- and (2) a belief in the importance of human courage, particularly in defending reason in society, and in attempting to reconstruct ethical values so that they are more democratic and humane."

That is how he feels; and that is how he has acted. Among other things, he is Founding Chairman of the Committee for the Scientific Investigation of Claims of the Paranormal; Editor of Free Inquiry; Member, Editorial Board of the Skeptical Inquirer; former editor of The Humanist; Co-President of the International Humanist and Ethical Union. His books bear such titles as In Defense of Secular Humanism, A Skeptic's Handbook of Parapsychology, The Transcendental Temptation, A-Catholic/Humanist Dialogue, The Humanist Alternative, and Forbidden Fruit: The Ethics of Humanism.

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970), philosopher/logician, social reformer, Nobel Laureate, and possessor of one of the seminal minds of this century. A number of Society members are professional philosophers; most are members of the general public. Membership is open to anyone interested in Russell. For information about the Society, write PK, RD 1, Box 409, Coopersburg, PA 18036

THE 1988 BERTRAND RUSSELL SOCIETY BOOK AWARD GOES TO PAUL G. KUNTZ

This is the Press Release
about the 1988 BRS Book Award ----->

Paul Grimley Kuntz, Emeritus Professor of Philosophy, Emory University, has received the 1988 Bertrand Russell Society Book Award, for his "Bertrand Russell" (Boston: Twayne Publishers, 1986).

The Award cites "his distinguished study of Bertrand Russell, reminding us that Russell was both a passionate skeptic and passionate believer, a man absolutely devoted to intelligence, truth and liberal humanism."

Professor Kuntz's interests are remarkably diverse -- which perhaps has given him a valuable perspective in assessing the achievements of another individual also of remarkably diverse interests: Russell, who wrote about almost everything that exists (and even about things the don't, like the present King of France).

Professor Kuntz has written about -- or been involved, in one way or another, with -- aesthetics, philosophy, psychology, religion, the arts, philosophy of sport, creativity, metaphysics, contemporary culture, science, symbolic logic, church history, John Dewey, C.S. Pierce, Alfred North Whitehead, Bertrand Russell, Karl Popper, medieval studies, political and legal philosophy, phenomenology, existential philosophy, dialectical materialism, historicism, the notion of order; he is fair to good in German, French, Latin, Greek, Italian and Spanish. A notable diversity.

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970), philosopher/logician, social reformer, Nobel Laureate, and possessor of one of the seminal minds of this century. A number of Society members are professional philosophers; most are members of the general public. Membership is open to anyone interested in Russell. For information about the Society, write PGK, RD 1, Box 409, Coopersburg, PA 18036.

(21) BRS Book Award recipient PAUL G. KUNTZ tells us how he feels about Russell:

Bertrand Russell belongs to the age known in American philosophy as the "Golden Age." Because along with Peirce, Royce, James, Santayana and Dewey we include Whitehead, why should we not think of Russell as member of this distinguished company? A Golden Age of Anglo-American philosophy would include others, such as Bradley. British philosophers rejected Russell as much as Whitehead, but in different ways. Russell was cut down to the size of low aims of clear discourse and very limited technical problems. Let us, therefore, take Russell as a whole as our guide. Let us not cut him up into the fragmented pieces of overspecialized scholarship. "The good life is inspired by love and guided by knowledge." To be a rational and civilized person is to weigh ends as well as to calculate means. The Russell I know has no reluctance to appeal to "conscience," and his philosophy as a whole is devoted to the discovery of truth about the world.

I am deeply touched by your kindness in honoring my small book Bertrand Russell which sees in him the longest and most significant career in the history of philosophy. I knew that that was distinctly unpopular and would make my fellow philosophers smile, but one thing worth learning from Russell is courage to overcome our almost universal timidity.

We can recapture the original vision of surveying the world from the most concrete to the most abstract and from the most abstract to the most concrete. And when we do, we can see in Russell's positive and constructive morality, including virtues and commandments, something positive. If ethical theories collapsed, well then, my book says, find the basis of positive morality and reconstruct theory.

If old metaphysical systems are flawed with fallacies, well then, use the knowledge of what was false to say what is true. If churches have been false to great inspiration of saints, well then turn your back to the idols, and seek the essence of religion and search for what is truly worthy of worship.

Russell's career responds to the many ideologies that divide humankind and nations, and prevent humane solutions. Russell's philosophy gives us a stance independent of socialism, individualism, nationalism, authoritarianism, pacificism, etc. Russell at various times committed himself to one or another cause, but always with the ability to judge subsequently how he had misled himself.

Let me then cite the passage to which I tried to make my book faithful. It is the testimony of a man whose nobility rests in admitting how far he was from perfect. It could well be a general rather than a personal confession:

But beneath all this load of failure I am still conscious of something that I feel to be victory. I may have conceived theoretical truth wrongly, but I was not wrong in thinking that there is such a thing, and that it deserves our allegiance. I may have thought the road to a world of free and happy human beings shorter than it is proving to be, but I was not wrong in thinking that such a world is possible, and that it is worth while to live with a view to bringing it nearer. I have lived in the pursuit of a vision, both personal and social. Personal: to care for what is noble, for what is beautiful, for what is gentle; to allow moments of insight to give wisdom at more mundane times. Social: to see in imagination the society that is to be created, where individuals grow freely, and where hate and greed and envy die because there is nothing to nourish them. These things I believe, and the world, for all its horrors, has left me unshaken. (Aiii, 330)¹

1989 BRS AWARD AND BRS BOOK AWARD

- (22) Input wanted. Members are invited to submit candidates for the 1989 BRS Award and 1989 BRS Book Award.

The BRS Award goes to someone who meets one or more of the following requirements: (1) had worked closely with ER in an important way (like Joseph Rotblat); (2) has made an important contribution to Russell scholarship (like Paul Schilpp); (3) has acted in support of a cause or idea that ER championed (like Henry Kendall); (4) whose actions have exhibited qualities of character (such as moral courage) reminiscent of ER; or (5) has promoted awareness of ER or ER's work (like Steve Allen.)

The BRS Book Award goes to the author whose recent book throws new light on ER's life or work in an important way.

Let's have your suggestions, please! Send them c/o the newsletter, address on the bottom of Page 1.

HONORARY MEMBERS

- (23) Ayer. Russell is the subject of a talk by A. J. Ayer, given in 1972 before the British Academy, titled "Bertrand Russell as a Philosopher". Professor Ayer also gave it at the Russell Centenary Celebrations at McMaster University in 1972. He recorded it for the BBC. What follows is a transcript of the BBC version, available on audiocassette from Audio Forum, about which more below. A printed — and slightly amplified — version of the talk appears in "Proceedings of the British Academy, Volume LVIII." It also appears in "Russell in Review", eds. Thomas and Blackwell (Toronto: S,S,H & Co, 1976). Sir Alfred has been a BRS Honorary Member since 1978.

More than any other philosopher of our time, Lord Russell satisfied the popular conception of a philosopher as one who combined universal learning with direction of human conduct. He himself, no doubt with good reason, attached the greatest value to the work which he did on mathematical logic, both in its propositions and technical aspects. But the interest which he also paid to the theory of knowledge, the philosophy of mind, the philosophy of science, and to metaphysics in the form of a theory of being, was comparably rewarding.

In all these domains, Russell's work had a very great influence upon his contemporaries, from the beginning of the century up to the present day. In the English-speaking world, at least, there is no one, with the possible exception of his pupil, Ludwig Wittgenstein, who has done so much in this century, not only to advance the discussion of particular philosophic problems, but to fashion the way in which philosophy is practised.

As he relates in his Autobiography, Russell was led to his interest in propositions by his desire to find some good reason for believing in the truth of mathematics. Already, at the age of eleven, he had been introduced by his brother to Euclidean geometry. He had objected to having to take the axioms on trust. He eventually agreed to accept them only because his brother assured him that they could not make any progress otherwise.

But he didn't give up his belief that the propositions of geometry, and indeed the many other branches of mathematics, needed some ulterior justification. For a time he was attracted to John Stuart Mill's view that mathematical propositions are empirical generalizations, which are inductively justified by the number and variety of the observations that conform to them. This conflicted with the belief, which he was unwilling to relinquish, that mathematical propositions are necessarily true.

Taking the necessity that the propositions of formal logic are relatively unproblematic, he chose rather to try to justify mathematics by showing it to be derivable from logic. This enterprise, in which he had been anticipated by the German, Gottlob Frege, required first the discovery of a method of defining the fundamental concepts of mathematics in purely logical terms. And secondly, the elaboration of a system of logic that should be sufficiently rich for the propositions of mathematics to be deducible from it.

The first of these tasks was carried out, among other things, in "The Principles of Mathematics", which Russell published in 1903, when he was just over 30 years of age. And the second, in which he had the assistance of Alfred North Whitehead, in the 3 monumental volumes, "Principia Mathematica", which appeared between 1910 and 1913.

"Principia Mathematica" made a contribution of fundamental importance, not only to the semantic development of logic as a formal science, but also to the philosophy of logic. This comes out clearly in Russell's famous Theory of Descriptions, when he explains how definite descriptive phrases can meaningfully refer to non-existent entities, by showing that they do not operate as names; and his equally famous Theory of Types, where he disposes of a contradiction in the theory of classes, which he had himself discovered, by restricting the conditions under which a proposition can be held to be meaningful.

Russell's belief that the propositions of mathematics stand in need of justification, and his method of justifying them, by reducing them to propositions that apparently belong to another domain, are distinctive of his whole approach to philosophy.

He was a consistent skeptic in the sense of holding that all our accepted beliefs are open to question. He conceived it to be the business of philosophy to try to set these doubts at rest. And he thought that the best way of setting them to rest was to reduce the propositions on which they bore to propositions which themselves were not doubtful to the same degree. Russell referred to this as an application of what he called the supreme maxim in scientific philosophizing: Wherever possible, logical constructions are to be substituted for inferred entities. An object was said by him to be a logical construction when the proposition in which it figures can be analyzed in such a way that in the propositions that result from the analysis, the object no longer appears as a subject of reference.

Russell carried this method to its fullest point in his book, "The Analysis of Mind", which was published in 1921. Largely following William James, he there maintained that both mind and matter are logical constructions out of primitive elements which were themselves neither mental nor physical. Mind and matter are differentiated by the fact that certain elements such as images and feelings entered only into the constitution of minds, and also by the operation of different causal laws. Thus the same concepts, when correlated according to the laws of physics, constituted physical objects, and when correlated according to the laws of psychology, helped to constitute minds.

Of the 71 books and pamphlets that Russell published in the course of his life, only about 20 could properly be classified as works of academic philosophy. The rest of them cover a very wide range, including as they do, autobiographical writing, biographical writing, books of travel, books on education, books on religion, works of history, popularizations of science, and even two volumes of short stories.

The largest single class consists of works on social questions and on politics. From these works it is apparent, as it was to anyone who knew him, that Russell held very strong moral convictions, but he was not greatly concerned with ethical theory. Apart from an early essay on the elements of ethics, which was written about 1910, and included in his "Philosophical Essays", his main contribution to the subject is to be found in his book, "Human Society in Ethics and Politics", in which the ethical part was written mainly in 1945 to 6, although the book wasn't published until 1954.

The definition of goodness which he proposed in this book is that an occurrence is good when it satisfies desire. In another passage, however, he suggests that effects which lead to approval are defined as good, and those leading to disapproval as bad. These definitions are perhaps to be reconciled by making the assumption that the effects which lead to approval are those that are thought likely to satisfy desire. This leaves it uncertain whether in calling something good I am to be understood as saying just that I approve of it, or that it is an object of general approval. And if it is just a question of my own approval, whether this is on the grounds of its satisfying my own desire, or its giving general satisfaction. Russell didn't distinguish between these possibilities. But in the main he seems to have held that in calling something good, I am stating, or perhaps just expressing, my own approval of it, on the ground that its existence is or would be found generally satisfying. Right actions then would be those that, on available evidence, are likely to have better effects in this sense than any other actions which are possible in the circumstances.

This comes close to utilitarianism, the main difference being that Russell didn't fall into the error of assuming that all desire is for pleasure. He was therefore able to admit that some pleasures seem to be inherently preferable to others, without giving up his principle that all forms of satisfaction are equally valuable in themselves. At this point, however, there was some discrepancy between his theory and his application of it. In practice he tended to look upon cruelty as inherently evil, independently of the satisfaction or dissatisfaction that it might cause; and he also attached an independent value to justice, freedom, and the pursuit of truth.

The value which Russell attached to freedom comes out clearly in his political writings. His concern with politics became increasingly practical, but he took a strong interest in political theory. Himself an aristocrat, he thought that a good case could be made for an aristocratic form of government in societies where the material conditions were such that the enjoyment of wealth and leisure was possible only for a small minority. In societies in which it was economically possible for nearly everyone to enjoy a reasonably high standard of living, he thought that the principle of justice favored democracy.

He said that though democracy did not insure good government, it did prevent certain evils, the chief of these being the possession by an incompetent or unjust government of a permanent tenure of power.

Russell was consistently in favor of the devolution of power, and disliked and distrusted the aggrandisement of the modern state. This was one of the reasons for his hostility to Soviet Communism, "The Theory and Practice of Bolshevism", the outcome of a visit which he paid to Russia as early as 1919. If he seemed to become a little more sympathetic to the Soviet Union towards the end of his life, it was only because he had then become convinced that the policies of the American government represented the graver threat to peace.

Russell's desire to diminish rather than increase the power of the state set him apart from the ordinary run of socialists. He was, however, at one with them, in wishing to limit the possession and use of private property, in seeing no justification for inherited wealth, and in being opposed to the private ownership of big businesses or of land. In his books, "Principles of Social Reconstruction" and "Roads To Freedom", which were published in 1916 and 1918 respectively, he displayed a certain sympathy for anarchism, but declared himself more in favor of Guild Socialism, a system which provided for workers' control of industry, and for

the establishment of two Parliaments, one a federation of trade unions and the other a Parliament of consumers, elected on a constituency basis, with a joint committee of the two acting as the sovereign body. Russell himself added the original proposal that a certain small income, sufficient for necessities, should be secured to all, whether they work or not; that the expense of children should be borne wholly by the community, provided that their parents, whether married or not, were known to be physically and mentally sound in all ways likely to affect the children; and that a woman who abandons wage-earning for motherhood ought to receive from the state as nearly as possible what she would have received if she had not had children. He did not discuss how these measures could be afforded.

In his later political writings, though he continued to seek means of curbing the power of the state, Russell was more concerned with relations between states than with questions of internal organization.

Regarding nationalism as the most dangerous vice of our time, he thought it likely to lead to a third world war which the use of atomic weapons would render far more terrible than any suffering the human race had previously known. The only assurance that he could find against the continuing threat of such a disaster was the institution of a world government which would have a monopoly of armed force. While it was obviously better that such a government be constituted by international agreement, Russell thought it more likely to come about through the superior power of some one nation or group of nations. It is for this reason, since it was essential to his argument that the change be peaceful, that he advocated unilateral disarmament. The difficulty was, it was no more probable that a world government would come about peacefully in this fashion than through international agreement. One cannot but admire the passion which Russell brought to the discussion of this question, and the concern for humanity which inspired him; but in his treatment of it, he seems both to have over-estimated the likelihood of global nuclear war and correspondingly under-estimated the merits of the traditional policy of maintaining a balance of power.

Russell's scientific writings on political and social questions don't have the depth of his contributions to theory of knowledge or the philosophy of logic, but they express the moral outlook of a humane and enlightened man, and they add to the lucidity which was characteristic of all his work a special touch of elegance and wit. His style contains echoes of Voltaire, to whom he was pleased to be compared, and of Hume, with whom he had the greatest philosophical affinity. Like Hume, he could be careless in matters of detail, especially in his later work. After the years of labor which he expended on "Principia Mathematica", he became impatient with minutiae. The hostility which he displayed to the linguistic philosophy which became fashionable in England in the nineteen-fifties was partly directed against the minuteness of its approach, partly also against its assumption that philosophy could afford to be indifferent to the natural sciences. In an age when philosophical criticism increasingly fettered speculation, his strength lay in the sweep and fertility of his ideas. Historically, he revived and continued the great tradition of British empiricism, the tradition of Locke, Berkeley, Hume, and of his own lay godfather, John Stuart Mill. He is its outstanding representative in the 20th Century.

Ayer's talk on Russell is included in the series titled "The Originators", on audiocassettes. Others in the series are Darwin, Freud, Jung, Marx, Popper, Weber, and Wittgenstein. The 8 talks, on 2 cassettes, cost \$19.95 plus \$1.00 postage, from Audio Forum, Suite ROC120, 96 Broad St., Guilford, CT 06437. Also in Library.

(24) Popper is a talk by Bryan Magee. It is another in the audiotape series, "The Originators". Sir Karl has been an Honorary Member since 1978.

In the same century in which a systematic attempt has been made to murder them all, the Jews of Central Europe have produced some astonishing geniuses: Freud, Einstein, Mahler, Schonberg, Kafka, Wittgenstein, to name half a dozen. In recent years the realization has begun to get around that another name is going to have to be added to this list, the name of Karl Popper. Like four of the six I just mentioned, Popper had to keep out of Central Europe after the onset of Nazism. And like Freud and Wittgenstein, he adopted England as his new home.

He's a philosopher, and like most philosophers of the front rank, he has a broad range. Many Nobel-Prize-winning scientists regard him as the greatest living philosopher of science. Indeed one of them, Peter Medawar, unambiguously describes him as the greatest philosopher of science there has ever been.

At the same time, Isaiah Berlin says he's the greatest living critic of Marxism. Popper's political philosophy is intimately related to his philosophy of science in the following way:

Marx claimed he had put socialism on a scientific basis. All the important political thinkers who follow Marx regard themselves as applying scientific method to political and social problems.

The nub of Popper's criticism of them is that they're wrong about what constitutes scientific method, and that this nullifies their whole position.

So this brings us to the question: What is scientific method?

Popper's revolutionary answer to this question is his seminal achievement, out of which almost all his other major contributions to philosophy have grown.

The traditional view of scientific method, which Popper has attempted to overthrow and replace, began with Francis Bacon at the beginning of the 17th Century, and was developed by the empirical philosophers of that and the following century. Its central notion is that scientific statements can be derived only from observation of the facts and from nothing else. Scientific laws, it was held, are arrived at in the following way: a scientist carries out carefully measured observations and experiments whatever his field is, and amasses a lot of hard, reliable data. Eventually this begins to reveal certain general features, and these in turn, suggest a theory, or a hypothesis, which link together and explain all all the facts. The scientist then tries to verify this theory by devising a crucial experiment, or set of observations, which will confirm it. If he succeeds he has established a new scientific law. The key to this whole process was held to be inductive reasoning, which of course is the opposite of deductive reasoning.

Deductive starts with general statements and then derives statements about particular things from them. For instance, all cows are female, the animal now in my backyard is a cow, therefore the animal now in my backyard is female. That's an example of valid deduction.

Induction goes in the reverse direction. It starts with statements about individual cows, and ends up with statements about cows in general.

Now it was held that all valid scientific reasoning was of this kind, so that all general statements in science were logically derived from specific factual observation.

But the 18th Century philosopher, David Hume, perceived a logical snag in all this, which no one else till Popper has been able to eliminate. It's quite simply this: a general statement cannot be logically derived from any number, however large, of individual statements. For instance, it so happens that every swan I've ever seen in my life has been white; but this doesn't prove that all swans are white; nor would it if I and others had made billions and billions of observations of white swans. I'm told that in Australia there are, as a matter of fact, black swans. But the point is, however many individual instances have been observed, you never can logically justify the jump from them to a universal statement. If scientific laws are universal statements, and they're supposed to be derived from individual observations and experiments, there arose the notorious problem of induction, a skeleton in the cupboard of both science and philosophy.

Reasoning from the particular to the general seemed to work in practice, because the whole of science appeared to be based on it successfully; but no one was able to come up with a logical explanation of why it worked.

What Popper has come up with is not a hitherto undreamt of explanation of why induction works, but the astonishing assertion that there's no such thing as induction at all. It's a myth. What led people into believing it was a confusion between logical and psychological processes. Addressing himself to the logic of the situation, Popper says, in effect: Look, take our statement, "All swans are white". We know this can't be verified by any number of observations of specific instances. This must mean then that scientific method can't be based on a search for verification or proof. On the other hand, although such a statement can't be verified, it can be falsified. One single observation of a black swan proves it to be false. We can test universal statements, not by trying to prove them true, but by trying to prove them false. But this means that only falsifiable statements are testable. There may be other sorts of statements which are true, but because we can't test them, we have no way of finding out whether they're true or not. And therefore they can't be said to be scientific.

I therefore proposed, said Popper, that we call only such theories scientific as are falsifiable.

Of the many startling consequences of this, I want to draw attention to three: First, how a theory is arrived at has no bearing on its scientific status. That depends on its ability to withstand tests. If a theory happens to have been arrived at by so-called deduction, that's merely a description of a psychological process. But it makes no difference. If I were a scientist who published a theory, the world would decide on its merits not by investigating how I arrived at it, but by testing the theory. And this is a process in which induction has no place. We test theories chiefly by deducing unexpected consequences of them, and then seeing if these happen, or rather, fail to happen. If they fail to happen, this is what experiments are for. And by this standard, psychoanalysis, to take an instance, turns out on examination to be unscientific.

This is by no means to say that it's valueless. Let me quote Popper here, from his book, "Conjectures and Refutations":

This does not mean that Freud and Adler were not seeing certain things correctly. I personally do not doubt that much of what they say is of considerable importance, and may well play its part one day in a psychological science which is testable; but it does mean that those clinical observations which analysts naively believe confirm their theory cannot do this, any more than the daily confirmations which astrologers find in their practice. And as for Freud's epic of the ego, the superego and the id, no substantially stronger claim to scientific status can be made for it than for Homer's collected stories from Olympus. These theories describe some facts but in the manner of myths. They contain most interesting psychological suggestions, but not in a testable form. At the same time, I realized that such myths may be developed and become testable. That is, historically speaking, all, or very nearly all, scientific theories originate from myths; and a myth may contain important anticipations of scientific theory. I thus felt that if a theory is found to be non-scientific — or metaphysical, as we might say — it is not thereby found to be unimportant or insignificant or meaningless or nonsensical, but it cannot claim to be backed by

empirical evidence in the scientific sense, although it may easily be, in some kinetic (??) sense, the result of observation.

A fashionable theory that fares much worse than psychoanalysis in Popper's hands is Marxism. Unlike psychoanalysis, Marxism turns out on examination to be genuinely scientific, because it really is empirically testable. Any number of falsifiable consequences can be deduced from it. The trouble is, a very large number of such consequences have now been falsified. In short, Marxism is a genuinely scientific theory which has now been proved to be false.

The second startling consequence I want to draw attention to is that science does not proceed from observation to theory, but rather, the other way around. We formulate theories and then test them by observation and experiment. Nor is some observation prior to any theory as such. On the contrary, some theory is presupposed by any observation. Failure to recognize this is the flaw in the foundations of the empirical tradition in epistemology, which Popper repudiates entirely. It's a subject on which he is trenchant and amusing.

The belief that science proceeds from observation to theory is still so widely and so firmly held that my denial of it is often met with incredulity. But in fact the belief that we can start with pure observations alone, without anything in the nature of a theory, is absurd, as may be illustrated by the story of the man who dedicated his life to natural science. He wrote down everything he observed and bequeathed his priceless collection of observations to the Royal Society, to be used as inductive evidence.

Twenty-five years ago, I tried to bring home the same point to a group of physics students in Vienna, by beginning a lecture with the following instructions: Take pencil and paper. Carefully observe and write down what you have observed. They asked, of course, what I wanted them to observe. Clearly the instruction, observe, is absurd; observation is always selective. It needs a chosen object, a definite task, an interest, a point of view, a problem; and its description presupposes a descriptive language, with property words. It presupposes similarity and classification, which in its turn presupposes interest, points of view, and problems.

The third startling consequence I want to draw attention to is that the refutation visited on Marxism, which I was talking about a moment ago, can happen to any scientific theory, however distinguished and prestigious it may be, however much a product of genius. Indeed a theory can only be considered scientific at all so long as it can be refuted. Thus we can never finally and definitely know a scientific theory to be true. For generations Newton's Laws were thought to be laws of nature, but after more than 200 years, they were superseded by Einstein's Theory of Relativity. The whole history of science is a history of superseded theories. We use a theory for as long as it fits all the known facts, survives all the tests to which it is put, and proves to be more useful in practice than any known alternative. It remains permanently open to replacement by a better theory. Let me quote Popper here again:

The empirical basis of objective science has thus nothing absolute about it. Science does not rest upon rock bottom. The bold structure of its theories rises, as it were, above a swamp. It is like a building erected on piles. The piles are driven down from above into the swamp, but not down to any natural or given base. And when we cease our attempts to drive our piles into a deeper layer, it is not because we have reached firm ground. We simply stop when we are satisfied that they are firm enough to carry the structure at least for the time being.

That quotation was from Popper's first and seminal book, "The Logic of Scientific Discovery". A great book, I think, but a bit on the technical side for most laymen. His classical attack on Marxism is contained in a book called, "The Open Society And Its Enemies", in two volumes, and therefore long, but completely accessible to the layman and very exciting to read. But at the age of 70, he published a new book called, "Objective Knowledge", containing startlingly original ideas which I barely touched on in this talk. And there's more in the pipeline. So anyone who embarks on the richly rewarding study of Popper's work will find himself participating in a still living, still growing philosophy, which the reader is as free as anyone else to extend and develop.

ABOUT BERTRAND RUSSELL

(25) Harry Clifford writes:

Three times in my life I have had the rare pleasure and privilege of hearing Bertrand Russell speak in public. The first time was in a debate with Will Durant on the question, "Is Modern Education A Failure?" Russell said "Yes", and advanced some logical reasons in support of his views. The second time was at the Community Church in New York. The third time is the one that is etched indelibly in my mind. It was when he gave a lecture at The New School in Manhattan in 1944. After the lecture, he answered questions, and autographed books with a pen he had borrowed from me. A young lady handed Russell a book, but when he opened it, he noticed something that made him exclaim, "This book is stolen!" The lady, who was somewhat embarrassed, explained, "No, I bought it second hand." "Oh," said Russell, "I thought it came from some public body," and proceeded to sign the book.

Harry's been around for a long time (born 1901), but not long enough. We wish him continued health and vigor!

HUMANISM

(26) From The (Allentown, PA) Morning Call, 5/28/88:

Rebutting faith in humanism as 'best way of life'

By REV. JOSEPH MOHR

A newspaper advertisement sponsored by the American Humanist Association tells its readers, "Humanism is the best way of life, creating joy and beauty in the here and now."

The association offers the public something more excellent than theistic religions and philosophies that allegedly neglect this life in favor of "pie in the sky."

The inference the readers of the advertisement are supposed to make is that religions are inferior if they are related to "supernaturalism as poetic myth."

Humanism, on the other hand, is realism based upon "sound principles of the traditional philosophies starting with the ancient Greeks and including much of the Judeo-Christian ethic." Some of the Ten Commandments are all right, as are some of Jesus' ideas and actions.

The humanism promoted by the American Humanist Association is described as non-theistic. That can mean anything from atheism, agnosticism, materialism, scientism to secularism, naturalism and deism.

It is difficult to comprehend why humanists assume theists do not know how to create "joy and beauty in the here and now." Don't humanists ever listen to the music of Bach and Handel, et. al., inspired by Christian faith, or view paintings and statues created by believers in a "poetic myth" or view magnificent cathedrals beyond compare?

Secularists are definitely wrong when they declare that Christian theists do not know how to make the most

of life here and now. What about the works of an Albert Schweitzer or a Florence Nightingale, who were devoted to the physical needs of the needy, or our hospitals originally sponsored by theists or our Salvation Army and the Red Cross?

Secularists evidently overlook the work of Christian missionaries throughout the world. Missionaries of years gone by may have made many mistakes when they were the tools of imperialism, but the missionary of today is a different breed. He is much concerned about telling his people that what they do in this world is important.

The missionary of today is improving the lives and environment of people in unenlightened countries. He or she is teaching natives how to read and write, how to improve sanitary conditions, how to care for the injured and ill, how to raise better cattle and food products and how to make the land more productive.

Secularists surely must know that in the entire histo-

ry of this world only an infinitesimally small percentage of human beings ever sold their homes and possessions and went to the mountaintop to await being translated into heaven.

Most Christians are greatly concerned about this world: to have a decent house in which to rear children, to have good food and clothing to make life comfortable, to support schools for their children, to found churches for the community.

The humanist advertisement quoted "Earth is Enough" by Edwin Markam:

"We men of Earth have here the stuff
Of Paradise — we have enough!
We need no other stones to build
The Temple of the Unfulfilled —
No other ivory for the doors —
No other marble for the floors —
No other cedar for the beam
And dome of men's immortal dream."

Well spoken, Markam, for no Christian cathedral was ever built with stones from heaven. The builders found marble, cedar, ivory right here on Earth — where else? Not a single nail or brick came down from heaven. The builders used what they found here exceedingly well, creating magnificent structures to the glory of the Eternal.

Where are the cathedrals of the secular humanists?

The Rev. Joseph Mohr is a free-lance religion columnist for *The Morning Call*.

LETTERS

■ 'Dark side of religion'

To the Editor:

I read Rev. Joseph Mohr's article on Humanism in *The Morning Call* of May 28 with considerable interest.

I am a Humanist, and I am in substantial agreement with what he says. It is what he fails to say that bothers me.

He says that much great art has been inspired by Christian belief. Who could disagree? I myself recently had the benefit of it; I heard a performance of a religious masterpiece — Bach's B minor Mass — performed by the Bach Choir in Bethlehem. Religious belief has inspired many laudable lives; Mother Teresa is a case in point.

But Rev. Mohr has nothing whatever to say about the dark side of religion. A great merit of Humanism is that it has no such dark side.

I am not going to dwell on past religious cruelties — the Inquisition, the massacres in various wars of religion, the killing of witches (which the Bible commands: Exodus 22:18).

It is the harm that religion is doing today that troubles me, and that Humanism avoids. Here are three current examples: Catholic doctrine forbids birth control even in countries without enough food to feed their present populations. Most religions forbid euthanasia even for terminally ill patients suffering agonies. Catholics and Protestants are killing each other in Ireland. That's just some of the harm religion is currently responsible for.

HUMANISM (CONT.)

- (28) Beverly Earles' Letter-to-the-Editor of The World (Nov/Dec 1987, p.3), Journal of the Unitarian Universalist Association:

Anthony T. Podesta (Jul/Aug) describes those publishers who remove both religion and evolution from textbooks as expressing the official religion of American textbooks, i.e., the religion of "fearful timidity." The official religion is not that of secular humanism after all, he suggests. I find it ironic in the extreme that Podesta should take this position, as People for the American Way has expressed nothing but "fearful timidity" with respect to the American Humanist Association (AHA). Whereas liberal religious groups are consulted and involved in a number of ways, People For has repeatedly refused to treat the AHA in like man-

ner even where the issue of humanism has been of central import. The approach has been one of "Yes, sure, we'll involve you" followed by total ignore. One of our representatives was eventually informed that it was "not politic" to involve the humanists.

Lawyers paid by People For did bring in Paul Kurtz, self-described "secular humanist" of high profile, to testify in the Alabama case. However they saw fit not to do the obvious - consult with the largest humanist organization in the United States.

Podesta says that "Hand may not be able to define secular humanism, but he sure knows it when he sees it." The same goes for People For.

Notice that Podesta does not himself define "secular humanism." Indeed the best that has been offered on this score has been the statement by People For that defining secular humanism is "like nailing jello to a wall."

These are facts that all humanists both within and outside of the UIA should be aware of. It is a profound mistake to imagine that People For is anything but timid and fearful with respect to humanism. It is "For" religious freedom on its own parochial terms only.

- (29) Hugh McVeigh deserves great credit for founding the (Albany, NY) Capital District Free Inquirers. Here is a recent bulletin:

Capital District Free Inquirers PICNIC Sunday, July 17 • 12 noon • Germantown

Our annual picnic is here! Join us at the Clermont State

Historic Site on Sunday, July 17, at 12:00. Clermont is in Germantown, NY, off of Route 9G, about 35 miles south of Albany. Bring your own food and drink. We have reserved a picnic site from 8:30 a.m. to sunset, so we should have plenty of time to eat, talk, and be congenial.

Remember, because of the picnic, there will be no July meeting. Our next regular meeting will be August 7 at the College of St. Rose.

Notes from the June meeting

• **New officers** - We elected a new slate of officers for 1988-89. The lucky winners are:

Secretary - Dennis Bender
Program Coordinator - Rene Bobone
Program Assistant - Bob Hall
Treasurer - Hugh McVeigh
Publications Secretary - Joanne Wagner
Development Coordinator - Scott Wright
Public Relations Secretary - Andy Meier (subject to approval at the August meeting)

The positions of Program Assistant, Development Coordinator, and Media Secretary are new positions, created to help spread the workload around through more members of the group. Andy Meier was contacted after the meeting and agreed to be the Media Secretary subject to approval.

• **Open Forum** - June was our second open forum, and once again the conversation was lively:

- Helen Rohr introduced the topic of CDFI's purpose, and the ensuing debate centered on whether our group should do more to reach out to the community and get more publicity for our events. Scott Wright warned against becoming too insular, and Jerry Pomeroy reiterated his belief that the group should become more politically active. Dennis Bender pointed out that any group needs a "critical mass" before it can move out into the community.
- Bob Hall brought up the New Age Movement and commented on how much money it makes and the threat it may pose to free thinking.
- Jerry Pomeroy spoke on mysticism and urged the group not to ignore people's need for the non-rational, the poetic, in life.
- Joanne Wagner suggested that blind faith in science can become another religion and that we must try to understand people's own theories about the natural world in order to present scientific explanations.

• **\$\$\$ Dues \$\$\$ are due again** - Yes, it's that time. If you are paying semi-yearly dues, July is the month for your \$12 payment.

The Capital District Free Inquirers

Capital District Free Inquirers (CDFI) is one of a confederation of locally-oriented, independent and autonomous groups comprising the FREE INQUIRY Secular Humanist Societies. This movement was initiated in the fall of 1986 by Paul Kurtz and the other editors of FREE INQUIRY magazine.

CDFI, founded in late 1986 by Hugh McVeigh, is a non-religious, non-profit, and strictly secular organization for those who share humanist values and commitment to rational and free inquiry, democracy, social concerns and fellowship.

Meetings

CDFI holds its meetings at the Campus Center Building of the College of St. Rose. At noon, an optional buffet lunch is available for \$5.50 in the 2nd floor President's Dining Room. The monthly program begins at 1 pm in the President's Dining Room.

Directions

The College of St. Rose is at 420 Western Ave, between Partridge and North Main. To get there from out of town, take I-90 to exit 5 (Everett Road), and turn south onto Everett. At the second light, turn left onto Central Ave. (Rt. 5). Continue through four lights and take a right onto N. Main; after three blocks take a left onto Western Ave. The campus is on your right.

Memberships

- Regular members pay \$24 dollars a year, payable in two \$12 installments in January and July. Dues entitle members to vote during business meetings and to receive the monthly newsletter.
- Sustaining members are those who donate \$50 or more in a year.
- Subscribers pay \$6 yearly to receive the newsletter only with no membership (this \$6 only covers our costs; we still need your membership)

Donations, Free Inquiry Subscriptions, Prometheus Book Orders

Besides regular dues, CDFI also solicits and gratefully accepts donations. Checks can be made out to Capital District Free Inquirers and sent to CDFI, in care of Hugh McVeigh, 122 Spring St., Albany, NY, 12203. (CDFI can raise funds by taking your FREE INQUIRY subscription and Prometheus Book Orders. Write us for information and catalogs.)

Suggestions

CDFI wants your suggestions for future speakers, topics or activities. Please contact Renato Bobone at (518) 374-1426, 1036 University Place, Schenectady, NY, 12308.

Mailing List

CDFI drops names from its mailing list after six months unless it gets a response from the recipient. If you would like to continue receiving this announcement, please write to CDFI at the address above.

Officers

Founder /Treasurer- Hugh McVeigh (122 Spring St; phone 518-436-4480)

OBIT.

- (30) Fenner Brockway, as reported in the New York Times (5/1/88, p.46), with thanks to BOB DAVIS and DON JACKANICZ for the reports in The Los Angeles Times and The Washington Post (both 4/30/88).

Lord Brockway, 99, Politician and Pacifist

LONDON, April 29 (AP) — Lord Brockway, a veteran socialist, pacifist and political writer who campaigned for Indian independence and championed African nationalism, died Thursday, his family reported today. He was 99 years old.

Lord Brockway died at Watford General Hospital in Hertfordshire, outside London, family members said. He had been in the hospital since April 19. The

family gave no cause of death.

Paying tribute to him, Neil Kinnock, the leader of the Labor Party, said, "Throughout the whole of this century, in Britain and in so many other countries, he was an inspiration to all who love liberty and work for socialism."

Archibald Fenner Brockway was born in Calcutta and educated at the School for the Sons of Missionaries. He was elected to the House of Commons as a Labor Party legislator in 1929.

Throughout his Commons career he campaigned for the abolition of the House of Lords, the unelected upper house of the British Parliament, on the grounds that it was a bastion of privilege. But in 1964 he accepted a life peerage from Queen Elizabeth II, which

gave him a seat in the House of Lords. He said at the time that he took the peerage reluctantly, but he joined debates in the House of Lords regularly.

Lord Brockway served five prison terms. Two terms, one at hard labor, resulted from his militant pacifism during World War I. The others stemmed from demonstrations against the hydrogen bomb and capitalism and in favor of African nationalism.

Calling himself a humanist but not an atheist, he once said: "I don't know if there is a God or an afterlife and I don't particularly worry about it. But if there is, the best way to prepare is to work for justice here now."

Lord Brockway is survived by his wife, Edith King, and five children.

- (31) Brockway and Russell are linked in many ways.

Brockway was Secretary of the No Conscription Fellowship during World War I, and was sent to jail for his No Conscription activities, as was Russell. (Russell had written a pamphlet distributed by the No Conscription Fellowship, headlined TWO YEARS HARD LABOUR FOR REFUSING TO OBEY THE DICTATES OF CONSCIENCE. Six men had been sent to jail for distributing the pamphlet. Russell made it known, through the Times, that he had written the pamphlet. He was convicted under the "defense of the realm" act, and sent to jail.)

In 1962, on the occasion of Russell's 90th Birthday — the circumstances of both men having changed considerably — Lord Brockway invited Earl Russell to a luncheon in his (Russell's) honor at the House of Commons. "I was somewhat nervous of this as it seemed unlikely to me that any Members of either House would turn up to do me honour... [I] stood at the door rather wistfully watching the Members fortify themselves with preprandial drinks. But, when the party began, it was pleasant and friendly, and I thought it generous of many of those present to be there." (Autobiography III, Simon & Schuster 1969 edition. See its index.)

Brockway was Chairman of the Appeal Committee that raised funds for the Russell Memorial, and presided over the unveiling ceremony in Red Lion Square, London, on October 23rd, 1980 (RSN25-22, 28-11).

- (32) Bob Davis remembers Lord Brockway:

Lord Brockway was a life peer, appointed by a Labour Government. Many may be surprised that he has only just now died, at the ripe age of 99. If one were capable of being frustrated at this stage of life, dying a few months before one's hundredth birthday ought to do it. It is one of those events that reminds one of Russell's comment in his auto-obituary, that it is severing a link with a very distant past. When Brockway was born, Victoria's reign still had 13 years to go; there were no autos, planes, radios, etc. Will the changes in our lifetime be as great as those he witnessed?

I met him once, at the 1980 dedication of the Russell Memorial bust in Red Lion Square. The Square is near the British Museum and next to Conway Hall, the headquarters of the British Humanist Society which had helped organize the Memorial. For history buffs, Red Lion Square is where the mob dragged Cromwell's decomposing body and hung it by the heels 2 years after his death.

Don Jackanicz had found out about about the unveiling ceremony at the last moment and phoned me from Chicago. We both literally jumped on planes and flew to London, arriving the morning of the event. We went to Conway Hall, where they were quite surprised to see us. Right before the ceremony started, Peter Cadogan, who was running things, said I should say a few words. So in front of a crowd that included Lord Brockway, Sir Alfred Ayer, Dora Russell, the Earl Russell, the Lord Mayor of London, etc., and suffering from jet lag, I prepared a few words in my mind.

The English speakers all spoke of him as a great Englishman, which of course he was. I thought that was fine, but felt we should also emphasize his international stature. So I made a few remarks to that effect — that BR was a great Earthian, etc. I intended, for my peroration, to give his quote from the 1954 BBC broadcast, "Man's Fate", that ends with, "Remember your humanity and forget the rest." Unfortunately, just at that point, the jet lag and the TV lights got to me, and I went utterly blank. Lord Brockway, who was 92 at the time, quickly chimed in *sotto voce* from behind me, and I was able to complete the quote.

Later, at the reception, Don and I were able to talk further with this interesting man, and it seems to me that he invited us for his 100th birthday celebration. They had had one for his 90th, much like BR's 90th celebration, and he had liked it so much, he wanted to do it again. He nearly made it!

- (33) John. From The Times (London), 12/18/87 ———>
p.159, with thanks to DON JACKANICZ

Russell death

Lord Russell, aged 66, elder son of Bertrand Russell, died on Wednesday after becoming ill on a train as he returned to his home at Penzance, Cornwall, from the House of Lords.

MINUTES OF THE JUNE 1988 MEETINGS

(34)

MINUTES OF THE 1988 ANNUAL MEETING

The 1988 Annual Meeting of The Bertrand Russell Society, Inc. was held from June 17 to June 19 in the Campus Center, State University of New York College at Fredonia, Fredonia, New York. Unless otherwise noted, all events took place in Room G106 of the Campus Center.

Friday, June 17, 1988

The meeting was called to order at 7:50 p.m. by President Marvin Kohl, who welcomed those gathered and requested each attendee to introduce himself or herself. President Kohl presented the 1988 Bertrand Russell Society Book Award to Paul Grimley Kuntz for his study, *Bertrand Russell*. Michael J. Rockler accepted the Award on behalf of Mr. Kuntz, who was unable to be present but whose letter of acceptance was read by President Kohl. A Service Award was then presented to Lee Eisler by Robert K. Davis, who spoke of Mr. Eisler's contributions to Russell studies and the Bertrand Russell Society. After the viewing of a videotape of *Bertrand Russell, Close-Up*, the 1959 CBC television interview program, the meeting was recessed at 8:45 p.m. Refreshments were informally served in the lounge area adjoining Room G106. The Board of Directors met at 9:20 p.m. for the first session of its Annual Meeting.

Saturday, June 18, 1988

At 9:05 a.m. the meeting was reconvened by President Kohl, who made introductory remarks about the meeting's program theme, "Happiness and the Important Things in Life." Kenneth Blackwell then delivered his paper, "Russell's Theory of Greatest Happiness," which had been renamed from the previously announced title, "Russell's Theory of Happiness." Following a short break, the Annual Society Business Meeting was conducted. Secretary Donald W. Jackanicz read the Minutes of the 1987 Annual Meeting, which were approved as read. In the absence of Treasurer Dennis J. Darland, President Kohl reported that the Treasury held approximately \$4,000. President Kohl also reviewed the events of the preceding night's Board of Directors session. No old business was raised. With the call for new business, Kenneth Blackwell was asked to speak on the funding problems of the Russell Editorial Project. (See the Minutes of the Board of Directors Annual Meeting for details.) In the other point of new business, Paul Kurtz informed

those assembled of the Tenth World Humanist Congress to be held in Buffalo, New York and which will include two sessions related to Russell on August 1 and 3, 1988. The meeting was recessed at 11:23 a.m. at which time the second session of the Board of Directors Annual Meeting was held.

The meeting was reconvened by President Kohl at 1:12 p.m. Chaired by President Kohl, a panel examined the question, "What Is Happiness?" Panelists included Raymond Belliotti, Kenneth Blackwell, Robert K. Davis, and Randall Dipert. Group discussion followed. The meeting was recessed at 2:50 p.m. For the balance of the afternoon, attendees were able to choose between viewing videotapes of the *Bertrand Russell Discourses...* interviews, participating in an architectural tour of central Fredonia, or pursuing individual activities.

The Red Hackle Hour began at 6:00 p.m. in the Topiary Tree dining room. In the same facility at 7:00 p.m. a Chinese Banquet was held, after which President Kohl introduced State University of New York College at Fredonia President Donald A. MacPhee, who gave a short welcoming address. President Kohl then thanked Board of Directors Chairman Harry Ruja for his recent undertakings and again recognized Lee Eisler for his years of service to the Bertrand Russell Society. President Kohl next introduced Paul Kurtz to whom he presented the 1988 Bertrand Russell Society Award. Mr. Kurtz briefly spoke about Russell and then delivered a paper entitled "The Meaning of Life." The meeting was recessed at 9:30 p.m.

Sunday, June 19, 1988

The meeting was reconvened by President Kohl at 9:32 a.m. Press releases on the awards to Paul Grimley Kuntz and Paul Kurtz were distributed. Robert James then delivered his paper, "Out of the Night--Russell's Struggle Against Height of Rudimentary Grief," which was followed by Lee Nisbet's presentation of his paper, "Russell's Theory of Happiness: A Pragmatic Critique." President Kohl offered concluding remarks on the topic of Russell and happiness and announced that Paul Kurtz had invited him to edit an issue of *Free Inquiry* to include selections from the 1988 Bertrand Russell Society Annual Meeting papers and presentations. Chairman Ruja rose to thank President Kohl for his Annual Meeting work. Kenneth Blackwell then expressed appreciation for the \$1,000 Bertrand Russell Society contribution to the Russell Editorial Project. The meeting was adjourned at 11:50 a.m.

MINUTES OF THE BOARD OF DIRECTORS ANNUAL MEETING

The 1988 Annual Meeting of The Bertrand Russell Society, Inc. Board of Directors was held in two sessions on June 17 and 18 in Room G106 of the Campus Center, State University of New York College at Fredonia, Fredonia, New York.

Friday, June 17, 1988

The meeting was called to order by Chairman Harry Ruja at 9:20 p.m. In addition to Chairman Ruja, the following Board members were present: Kenneth Blackwell, Jack R. Cowles, Robert K. Davis, Lee Eisler, Donald W. Jackanicz, Marvin Kohl, Steve Maragides, Frank V. Page, Stephen J. Reinhardt, and Michael J. Rockler.

The first point of business was to consider the financial problems of the Russell Editorial Project. Kenneth Blackwell reported that the 1980 Canadian government grant had expired and apparently will not be renewed, that McMaster University monetary support will continue only in a limited uncertain amount, and that positions previously occupied by a number of skilled and productive staff members have been eliminated due to a lack of funding. As a result, the editing and publication of most future volumes of *The Collected Papers of Bertrand Russell* is in jeopardy. Discussion began on ways in which the Bertrand Russell Society might aid the Russell Editorial Project, including the following possibilities: appealing to the British and Swedish governments, Cambridge University and Trinity College, Corliss Lamont, and the Estate of Cyrus Eaton; enlisting the help of Paul Kurtz; contributing \$1,000 as an unrestricted gift or as a matching grant; hiring a grant specialist. No formal motions or decisions were made during this session in connection with these proposals.

Discussion turned to the election of officers. In formal motions, Lee Eisler nominated Harry Ruja for Chairman of the Board of Directors, Steve Maragides nominated Marvin Kohl for President, Lee Eisler nominated Michael J. Rockler for Vice President, Steve Maragides nominated Lee Eisler for Vice President/Information and Donald W. Jackanicz for Society Secretary and Board of Directors Secretary, and Lee Eisler nominated Dennis J. Darland for Treasurer. Nominees Marvin Kohl and Michael J. Rockler informally agreed that, if elected, President Kohl would be responsible for the 1989 Annual Meeting program but not for matters related to transportation, accommodations, funding, etc., which would be the responsibilities of Vice President Rockler. Each nomination motion was unanimously accepted.

A site for the 1989 Annual Meeting was the next issue discussed. Chairman Ruja suggested the possibility of a meeting in Atlanta or another southern United States city. Donald W. Jackanicz remarked that considerable money could be saved if the Fredonia meeting model were followed, i.e. meeting at an institution with which a member is either affiliated or in a position to obtain preferential terms. Marvin Kohl explained the planning value of deciding meeting cities, though not necessarily exact sites, two years in advance and reported on his preliminary inquiries with the New School for Social Research and Columbia University. He continued that Columbia University's meeting and housing facilities are adequate and that one Columbia University faculty member, Professor Dennis Dalton, has expressed some interest in working with the Bertrand Russell Society on a meeting devoted to topics of war, pacifism, and nuclear disarmament. Donald W. Jackanicz briefly reviewed his 1986 inquiry regarding the possibility of hold-

ing that year's Annual Meeting at Columbia University. The merits of a New York City sited Annual Meeting were generally considered. It was finally moved by Robert K. Davis that President Kohl is to pursue the possibility of holding the 1989 Annual Meeting at Columbia University and is to report to the Board of Directors within two months from June 17, 1988. This motion was unanimously accepted. Informally agreed upon was that Kenneth Blackwell would investigate and report to President Kohl on the possibility of holding the 1990 Annual Meeting at McMaster University.

In the absence of Treasurer Dennis J. Darland, the Board was informally informed that the Treasury contained approximately \$4,000. Discussion of financial matters led to consideration of the doctoral awards program. Lee Eisler reported that Committee Chairman Hugh S. Moorhead had received no 1988 applications. Robert K. Davis suggested that money budgeted for the 1988 doctoral award might best be redirected to aiding the Russell Editorial Project. However, Marvin Kohl explained that one partially completed application had recently been submitted to him by Stephan Andersson, who was present at the meeting and who was invited to speak briefly about his academic work. Pending submission of a fully completed application by Mr. Andersson and any other applicants, it was informally decided to allow the doctoral awards program to continue in its present form.

Three other points of business were considered. Steve Reinhardt moved that a complimentary membership be provided to Roy Torcaso. Robert K. Davis moved that Librarian Tom Stanley be authorized to spend \$27 in Society funds to obtain an autotype of the January 15, 1939 University of Chicago Roundtable radio program, "Is Security Increasing?," in which Russell participated. Both motions were unanimously carried.

The meeting was recessed at 10:48 p.m.

Saturday, June 18, 1988

The meeting was reconvened by Chairman Ruja at 11:23 a.m. The same Board members were present as those who had been in attendance the preceding day.

Discussion exclusively concerned methods of aiding the Russell Editorial Project. Chairman Ruja moved that the Society should approach the British and Swedish governments to appeal for Russell Editorial Project financial support. Steve Maragides moved that Stefan Andersson (a citizen of Sweden, who was in attendance at this session and who is knowledgeable of the Russell Editorial Project) be authorized to represent the Society in correspondence with the Swedish government. Both motions were unanimously accepted. Marvin Kohl then moved that a \$1,000 grant, to be matched in an equal amount by McMaster University, be presented to the Russell Editorial Project for any use seen fit by the Russell Editorial Project. Donald W. Jackanicz moved that the McMaster University matching provision be removed from Marvin Kohl's wording, and Kenneth Blackwell moved that Marvin Kohl's wording be changed so that "for any use seen fit by the Russell Editorial Project" is replaced by "to assist in the preparation of the Russell bibliography." The Kohl motion, as altered by the Jackanicz and Blackwell amendments, was unanimously accepted. It was also informally agreed that Kenneth Blackwell is to confer with Paul Kurtz on publicity to increase awareness of the Russell Editorial Project's financial needs.

The meeting was adjourned at 12:05 p.m.

DOCTORAL GRANT

(35)

PLEASE POST

Announcing the 1989 BRS Doctoral Grant----->

Announcing
The Bertrand Russell Society's
1989
\$1000 DOCTORAL GRANT

The Bertrand Russell Society will award a Doctoral Grant of \$1000, to help defray expenses of a currently enrolled doctoral candidate in any field whose proposed dissertation best gives promise of dealing in a significant way with the thought, life, or times of Bertrand Russell.

The candidate is required to send to the Society:

- (1) an abstract of the theme of the dissertation and of the plan of study;
- (2) a letter from the chairman of the candidate's department which states that all work for the doctorate has been completed except the dissertation, and that the topic of the dissertation has received academic approval;
- (3) a letter from the dissertation advisor evaluating the applicant and the plan of study;
- (4) a statement, in the candidate's covering letter, indicating that if the candidate is awarded the Grant, he/she will provide the Society, at its expense, with a copy of the complete dissertation as approved by the candidate's department.

Applications and supporting documents should reach Professor Hugh S. Moorhead, Chairman, Philosophy Department, Northeastern Illinois University, 5500 N. St. Louis Avenue, Chicago, IL 60625, by May 1, 1989. The recipient will be announced in June 1989.

Please note that the candidate may be enrolled in any field. Past Grants have been awarded to candidates in the fields of History, Mathematics, and Philosophy. Candidates might also come from English, Education, Sociology, and Psychology.

PROMOTING RUSSELL'S PURPOSES
anti-censorship

(37) From The New York Times (6/5/88, p. 59):

PEN Issues Warning on Censorship

By HERBERT MITGANG

In a coming report on censorship commissioned by the American Center of PEN, the international organization of poets, essayists, editors and novelists sounds the alarm against what it says is an increasing number of First Amendment "violations and other forms of censorship in the United States."

The report, titled "Liberty Denied: The Current Rise of Censorship," is written by Donna A. Demac, a lawyer and professor of communications at New York University. It cites examples — some reported in the press and adjudicated in the courts — of interference with freedom to write, publish, teach and travel and to obtain material from the Government without harassment under the Freedom of Information Act.

"Whether private persons or Government feels offended, the problem is the same, namely, how to prevent those who would write nasty or discomfiting things from doing so," states the playwright Arthur Miller, a former international president of PEN, in a preface. "The consequences for the very fabric of a society are grave and at the present time are not at all settled in either liberal or responsible conservative opinion."

Frequently Named Books

The report includes a list called "the dirty dozen" — the books most frequently challenged in schools and libraries on religious, language, or moral grounds. The books, drawn from a survey to be published this summer by Dr. Lee Burreas of the University of Wisconsin, are: "The Catcher in the Rye," by J. D. Salinger; "The Grapes of Wrath," John Steinbeck; "Of Mice and Men," John Steinbeck; "Go Ask Alice," (anony-

mous); "Forever . . ." Judy Blume; "Our Bodies, Ourselves," Boston Women's Health Collective; "The Adventures of Huckleberry Finn," Mark Twain; "The Learning Tree," Gordon Parks; "My Darling, My Hamburger," Paul Zindel; "1984," George Orwell; "Black Boy," Richard Wright, and "The Canterbury Tales," Geoffrey Chaucer.

To support its statement that violations of the Constitution have increased since 1980, "Liberty Denied" cites the proliferation of cases of censorship and libel in the state and Federal courts; book bannings by boards of education; Federal Government classification of documents, and the difficulties of obtaining dossiers under the Freedom of Information Act because of tightened procedures by the Justice Department in the last few years.

Among the lawyers whose writings are used as evidence in the report are

Martin Garbus, author of "Traitors and Heroes," and Floyd Abrams. Mr. Abrams is quoted as saying that the Reagan Administration has "trumped" the First Amendment, explaining that "whatever it chose to do on the pretext of national security took precedence over competing constitutional considerations."

After declaring that censorship has increased during the Reagan Administration, the report concludes:

"Today the United States faces the significant challenge of restoring the traditions of free speech and diversity of information that have been eroded in the 1980's. It would be a tragic mistake to think that censorship in the country will automatically fade away with the next Presidential election."

Copies of "Liberty Denied" will be available next month at \$6.95 from the PEN American Center, 300 Broadway, New York 10012.

There ought to be no rules whatever prohibiting improper publications. I think that partly because stupid magistrates will condemn really valuable work because it happens to shock them.

"Bertrand Russell Speaks His Mind" (Bantam pb. pp. 55-56).

POLITICS/GOVERNMENT

(38) NECLC, The National Emergency Civil Liberties Committee (founded in 1951) has sent us a copy of "Rights" (March-May 1988), its 16-page publication that deals with The Reagan Administration's illegal actions. CORLISS LAMONT has written this introduction, which appears on Page 2 of "Rights":

Introduction

Amend It Or End It!

In 1947, the United States Senate and the House of Representatives became the proud parents of a baby monster called the National Security Act. This hydra-like law soon spawned demons of its own—terror pods like the CIA and the National Security Council. Under the umbrella of national security, these organizations have committed one crime after another in the name of democracy, ranging from intimidation and assassinations to the overthrow of democratically-elected governments and most recently a host of illegal shenanigans involving the Nicaraguan Contras.

However, in 1987, on the beast's 40th birthday, NECLC has struck back with a Contra-Hydra if you will—a traveling panel of experts, speaking out against the constitutional

abuses of the NSA. "Amend it or end it!" is the battlecry, and so far some important people are taking heed.

On Dec. 8, 1987, the first session took place in Washington, D.C. with Rep. Robert Kastenmeier acting as chair. Some 400 people attended the session, including representatives from such disparate groups as the House Armed Services Committee, the National Science Foundation, SANE and the National Association of Letter Carriers.

The second conference was held in Des Moines, Iowa on Jan. 28. The meeting was moderated this time by former FCC head Nicholas Johnson, now a professor of law at the University of Iowa. Guest speakers were George McGovern and Marcus Raskin of the Institute for Policy Studies. With 700 people in attendance this session was also hailed as a great success.

This issue of *Rights* carries excerpts from the speeches at both conferences, including those by Anna Nelson, Richard Barnet, Leonard Boudin and Morton Halperin at the Washington session and George McGovern in Des Moines. More meetings are in the planning stages. If your organization or community is interested in sponsoring such an event, phone NECLC at (212) 673-2040. The fight to slay the dragon and reclaim the Constitution has just begun!

"Rights" may be borrowed from the Russell Society Library, address on Page 1, bottom.

New and forthcoming:

The Philosophy of Bertrand Russell, Volume V in the 'Library of Living Philosophers', edited by Paul Arthur Schilpp. "This volume is one of the most significant documents on the thought of the giant of twentieth-century philosophy. Russell's 'Reply to Criticisms', supplemented by a 1971 'Addendum', displays his unrivalled clarity, perceptiveness, and scapel-like wit, on topics ranging from mathematical logic to political philosophy, from epistemology to the philosophy of history." 1988 reprint Available June. Cloth \$49.95 Paper \$24.95 Shipping and handling \$1.75. Open Court Publishing Company, Box 599, Peru, IL 61554

Essays on Language, Mind, and Matter, Volume IX in the 'Collected Papers of Bertrand Russell', edited by John Slater. "During the years 1919-1926, Russell was engaged in applying the techniques he had developed in the course of his work in logic and mathematics to philosophical problems. Much of the work collected in this volume is relevant to The Analysis of Mind and The Analysis of Matter." 650 pp. Available July. Cloth \$110.00 Postage \$2.00

Prophecy and Dissent 1914-16, Volume XII in the 'Collected Papers of Bertrand Russell', edited by Rempel and Moran. "Volume XIII comprises Russell's shorter writings against British participation in World War I from the outbreak of the conflict in August 1914 to the formation of the Lloyd George coalition government in December 1916." 704 pp. Available September Cloth \$125.00 Postage \$2.00 Allen & Unwin, Inc., 8 Winchester Place, Winchester, MA 01890

(42) New books to lend:

141. A 14-Year Index of Newsletters of the Bertrand Russell Society 1974-1987 compiled by Lee Eisler. Lee Eisler.
142. Russell and Engels: Two Approaches to a Hegelian Philosophy of Mathematics by Irving Anellis. Offprint. The author.
143. The Interpretation of Frege's Philosophy by Michael Dummett. Irving Anellis.
144. The Basic Writings Of Bertrand Russell, edited by Denonn and Egner. Stanley.
145. The Selected Papers of Bertrand Russell. Tom Stanley
146. New Hopes for a Changing World. Tom Stanley.
147. Understanding History. Tom Stanley
148. The ABC of Atoms. Tom Stanley.
149. The Analysis of Mind. Tom Stanley.

- (43) The Library of Living Philosophers, the series edited by PAUL SCHILPP, is available, as indicated below, from Strand Books, 828 Broadway NY NY 10003. Catalog S-1. Add US postage \$2.75 per volume. Unfortunately, the volume on Bertrand Russell is not offered here; it has been out of print in this edition for some time. It is again in print, in another edition, at a much higher price. See "New and forthcoming" above.

924. RUSSELL, Bertrand - HUMAN SOCIETY IN ETHICS AND POLITICS - Essay reflecting the philosopher's concern with human passions and their effect upon human destiny, seeking a compromise between the opposite poles of impulse and control while firmly establishing the symbiotic relationship between the two. Originally published 1954. Allen & Unwin. 1985. 239 pp. (p\$18.50) Strand price: \$7.95

878. POPPER, Karl - UNENDED QUEST - An intellectual autobiography by a giant of modern philosophy, bringing together his views on social science, economics, mathematics, and the arts with his uniquely open and socially relevant approach to philosophical theory. Open Court. 1982. 258 pp. Strand price: \$7.95

947. SCHILPP, Paul Arthur, ed. - ALBERT EINSTEIN: Philosopher-Scientist, Vol. 2 - This unique view of one of the 20th century's greatest scientific minds focuses on the philosophical aspects of his thought, with essays by distinguished scholars, and Einstein's own reply to his critics. Third edition. Open Court. 1970. Pbk. 447 pp. Strand price: \$6.95

940. SCHILPP, Paul Arthur, ed. - THE PHILOSOPHY OF BRAND BLANSHARD - A major study of a modern rationalist, whose thought has consistently run precisely counter to prevailing philosophical trends. Includes an autobiography, 30 critical essays by contemporary philosophers, each with a reply from Blanshard himself, and a full bibliography. Open Court. 1980. 1,142 pp. (p\$39.95) Strand price: \$17.95

941. SCHILPP, Paul Arthur, ed. - THE PHILOSOPHY OF RUDOLF CARNAP - An exhaustive study of one of the founders of Logical Positivism. Includes an autobiography, 26 critical essays, Carnap's replies to his critics, and a full bibliography. Open Court. 1963. 1,088 pp. (p\$44.95) Strand price: \$17.95

942. SCHILPP, Paul Arthur, ed. - THE PHILOSOPHY OF ERNST CASSIRER - Assessment of a great philosopher who believed that human creativity revealed the essence of man himself. Biographies, 23 critical essays, bibliography. Originally published 1949. Open Court. 1973. Pbk. 936 pp. Strand price: \$5.95

943. SCHILPP, Paul Arthur, ed. - THE PHILOSOPHY OF KARL JASPERS - A full assessment of the writings of a uniquely humanistic existentialist, who opened new avenues of thought in a variety of areas. Includes Jaspers' autobiography, including a recently discovered essay on Heidegger, plus essays by Hannah Arendt, Walter Kaufmann, Paul Ricoeur, and others. Open Court. 1981. 934 pp. (p\$39.95) Strand price: \$17.95

944. SCHILPP, Paul Arthur, ed. - THE PHILOSOPHY OF C.I. LEWIS - Consideration and evaluation of one of the seminal figures in American philosophy, including a revealing autobiography (completed just prior to his death in 1964), 26 critical essays by leading scholars with Lewis' reply, and a full bibliography. Open Court. 1968. 709 pp. Strand price: \$9.95

945. SCHILPP, Paul Arthur, ed. - THE PHILOSOPHY OF G.E. MOORE - Third revised edition. Consideration of every aspect of the thought of a philosopher who has been a major influence on his discipline for over half a century. Autobiography, 19 critical essays accompanied by an updated commentary by Moore himself, and bibliography. Open Court. 1968. 727 pp. Strand price: \$9.95

946. SCHILPP, Paul Arthur, ed. - THE PHILOSOPHY OF KARL POPPER - A massive, comprehensive look at the life and work of one of the outstanding modern philosophers, including his autobiography, 33 essays by leading scholars on the principles and questions inherent in Popper's writings, and careful and detailed replies to the critics. Open Court. 1974. 2-vol. set. (p\$39.95) Strand price: \$19.95

BRS AUTHORS

- (44) Andrew Brink, a long-time member of the BRS, is the author of "Bertrand Russell: The Psychobiography of a Moralizer", due to be published in November by Humanities Press International, Inc. \$39.95 in cloth, \$12.50 in paper. The book uses psychological theories to explain Russell's beliefs and behavior as the result of incidents in his early life. An earlier version of the present book appeared in "The Journal of Psychohistory" (Spring 1985) and in this newsletter (RSN55-4), under the title, "Bertrand Russell, the Angry Pacifist".

CONTRIBUTIONS

(45)

We thank DAVID GOLDMAN, PAUL KURTZ and SUSANA MAGGI for their recent contributions to the BRS Treasury. Greatly appreciated.

We ask those members who have not yet made a contribution to the BRS Treasury this year to think about doing so...and to do it, if they can afford it. Send contributions c/o newsletter, address on bottom of Page 1.

RUSSELL APPRECIATED

- (46) From "Wales and the World", Western Mail (11/9/62, p.6), with thanks to HARRY RUJA:

Tribute

FRIENDS and neighbours of Earl Russell at his home near Penrhynedraeth have launched a remarkable appeal.

They are asking for anyone grateful for Lord Russell's intervention in the Cuban crisis to send "subscriptions, whether in pennies, shillings, half-crowns or more" person-

ally to the earl, or in envelopes marked "Tribute" to the Midland Bank at Portmadoc.

Eight people have signed a letter which says: "Historians will discuss whether or not Bertrand Russell in fact did anything to save the world from ruin at that time.

"But beyond doubt it was his message to Mr. Krushchev and Mr. Krushchev's reply that brought us the first

moment of respite and relief. "Millions felt as Lord Russell did. Millions no doubt longed to send the appeals he sent. No other man had the authority that would make it possible he might be listened to.

"There must be many who feel that it is an honour to have him as a neighbour and who would wish to pay a tribute of gratitude and affection

to a man with so burning a dedication as to give all he has to the cause of peace—even to the last years of his long and honourable life."

~~Yesterday I spoke to Mr. Michael Burn of Minfordd, a former foreign correspondent of The Times, now an author~~

with a fishing business at Portmadoc.

Hailed from the wharf office, he drove half-a-mile round the harbour to take the telephone call.

'We decided to ask people to send money direct to Lord Russell if they wished because

we thought he would be touched by their thought,' said Mr. Burn. "Those who have signed the letter are friends of Lord Russell."

'We spoke to Lady Russell about it, but as far as I know Lord Russell has not been told of the fund yet.'

ELECTION OF DIRECTORS

(47) Please vote. Use the ballot at the end of this newsletter. We need to elect 9 directors, to bring the total of elected directors up to 24. There are 10 candidates; vote for 9. Here they are:

LOUIS K. ACHESON, JR. (Encino, CA), 10-year member, a BRS Director since 1983. 36 years with Hughes Aircraft, now Senior Scientist (aerospace engineer and systems analyst); on NASA space projects for past 16 years. World Federalists, Worldview Exploration Seminars, Int'l Cooperation Council (now Unity-in-Diversity Council). As teen-ager, read "Selected Papers of Bertrand Russell" and has been hooked on Russell ever since.

ADAM PAUL BANNER (Ann Arbor, MI), Age 67, is a retired industrial chemist. He has seen service as a Volunteer Executive for International Executive Service Corp, with service (1978-83) in Thailand, Korea, Turkey, Haiti, and Costa Rica. He currently is Chairman of the BRS International Development Committee.

KENNETH BLACKWELL (Hamilton, Ont.), a Founding Member of the BRS, a BRS Director since its founding in 1974. He is Archivist of the Russell Archives, and Editor of the publication, "Russell", and Editor of the Bertrand Russell Editorial Project.

JOHN JACKANICZ (Chicago), registered agent of the BRS in Illinois (where the BRS is incorporated); 10-year member; brother of Past President Don Jackanicz, whom he occasionally assisted in BRS affairs. Graduate of U/Illinois. Age 40.

DAVID JOHNSON (Annapolis, MD), Chairman, BRS Philosophers Committee; organizes annual BRS session at American Philosophical Association (Eastern Division) meeting. Professor of Philosophy, U.S. Naval Academy. Dissertation on Russell and Strawson. Research and teaching currently focus on ethical issues in peace and war.

JUSTIN LEIBER (Houston, TX), 13-year member, Professor of Philosophy at U/Houston; Ph.D., Chicago; B. Phil. Oxford (student of A. J. Ayer). Author, Noam Chomsky: A Philosophical Overview; Structuralism; Can Animals and Machines Be Persons?; a number of journal articles; novels include Beyond Rejection, and The Sword and the Eye. Several times chair of BRS sessions at APA, as well as commentator on other occasions. Has edited special issue of Philosophical Forum, comparing Russell and Wittgenstein as contrasting examples of what the philosopher should be in relation to the larger society.

GLADYS LEITHAUSER (Pleasant Ridge, MI), 12-year member, originator of BRS Book Award and Chairman of its Committee. Teaches technical writing at U/Michigan-Dearborn. Ph.D., Wayne State U. Dissertation on Russell; also several Russell articles. (Dissertation is in the BRS Library, Item 52, RSN46-18)

STEPHEN J. REINHARDT (Wilmington, DE), a 15-year member; attends every annual meeting. Was BRS Treasurer for many years, and has been a Director since 1976.

CARL SPADONI (Hamilton, Ont.), 11-year member, former Assistant Archivist at the Russell Archives (McMaster University), and Editorial Associate of the publication, "Russell". Now an Archivist at Health Sciences Library, McMaster University, and a member of the Board of Consultants of "Russell". His doctoral dissertation discusses Russell's earliest philosophy. Co-Editor of Intellect and Social Conscience: Essays on Bertrand Russell's Early Work. Has written extensively on Russell's life and thought.

TOM STANLEY (Hartford, VT), BRS Librarian. 12-year member. Book lover, book collector, book seller. Proprietor, with his wife, of Stanley Books, specializing in used and out-of-print books.

To repeat: the ballot is at the end of this newsletter. Why not use it right now?

MEMBERSHIP LIST, PART I
July 19, 1988

(48)

C = Committee Chairman D = Director O = Officer P = Past President

Notice: This membership list is provided solely for the personal use of BRS members, and is not to be given to non-members without written permission of the President.

BOOK OFFER

- (50A) "Selected Papers of Bertrand Russell". "I have an autographed copy, Selected and with a special introduction by Bertrand Russell, The Modern Library edition, 1927, with dust jacket. Should any of your members be interested in purchasing it, they may contact me with an offer," writes Muriel F. Borin, 53 Hampshire Road, Great Neck, NY 11023

(51)

BALLOT

9 Directors are to be elected for 3-year terms starting 1/1/89.

Make a checkmark next to each of the 9 candidates for whom you wish to cast your vote. If you vote for more than 9, it disqualifies the ballot. Information about the candidates is provided in (47).

- Lou Acheson, Jr.
- Adam Paul Banner
- Ken Blackwell
- John Jackanicz
- David Johnson
- Justin Leiber
- Gladys Leithauser
- Steve Reinhardt
- Carl Spadoni
- Tom Stanley

RUSSELL SOCIETY NEWS

No. 60

November 1988

- (1) Highlights: Dues are due 1/1/89 (15). New BRS chapter, at McMaster (10). Conrad Russell reviews book about his father (18). Directors elected (20). This issue co-edited by Ben Eshbach (2). Tenniel's Mad Hatter caricature (38). Vanunu blows the whistle. (8). The atheistic Rabbi's Humanistic Judaism (23). Reston's favorite BR proposition (7). The Index is on the last page (40). An asterisk in the left column indicates a request.
-

CO-EDITOR

- (2) We received the following from the Co-Editor of this issue of the newsletter:

"Greetings: This issue of the newsletter is being co-edited by me, Ben Eshbach. I am a student attending California State University at Northridge majoring in philosophy, and have made philosophy my primary interest for the past five or six years. I intend to teach philosophy eventually. My great interest in Russell is due, probably, to the diversity of his works. To pin him down in any one category is impossible! I am particularly fond of the philosophers of the Enlightenment (for their style and efforts against dogmatism), and the twentieth century analytic philosophers. Russell is, of course, both of these and much more.

Lee Eisler and I are working together from opposite sides of the North American continent on this experimental issue. Changes will be kept to a minimum. If you have any comments about this issue let's hear from you."

STATUE PROTESTED

- (3) Moses Statue Protested From The Times Union, Albany, N.Y., Saturday, June 25 1988. A letter to the Editor. Thanks to Hugh Mc Veigh.

To the Editor:

The June 17 Times Union printed a photo of a statue of Moses in Washington Park being "spruced up." As one who values freedom of religion, freedom from religion and a separation of church and state, I must strongly protest the placement of a religious symbol on public ground and maintained with public funds.

I realize this is not one of the larger issues of the day but am happy that one of our other basic rights, freedom of speech, guarantees me an opportunity to object with the hope of being heard in a public forum.

William Hansen, West Lebanon

FOR SALE

- (4) BR by Norman Rockwell. This is an oil painting that shows BR in 2 different moods: an angry mood (as at an anti-nuclear rally), and a wise and benign mood. Really quite attractive. Probably done from photographs, it appeared in the May 1967 issue of Ramparts. About 11.5 x 17 inches. Price \$5 postpaid. Says TOM STANLEY: "Since the first class postage comes to \$2.40, I think the price is quite reasonable. Thomas Rockwell has assured me that his father's portrait is not available as a postcard or poster." Order it from: Attention Henry, The Arlington Gallery, Arlington, VT 05250.

BY BERTRAND RUSSELL

- (5) Russell in Playboy, January 1964. This was not Russell's first appearance in Playboy. He had been interviewed in Playboy in March 1963. The interview appeared in RSN31 (Item 12), and was later reprinted in "The Playboy Interview" (New York: Playboy Press, 1981). We are indebted to ROBERT HICKS for the present article from the 1964 issue, p. 117.

THE CONFLICTING IDEOLOGIES OF EAST AND WEST

an eminent philosopher weighs the factors in today's critical balance of power

opinion By BERTRAND RUSSELL

THE TENSION BETWEEN EAST AND WEST has many forms and is supported by many very differing arguments. One of the causes of tension is supposed to be that the West has one ideology and the East has another. It is said in the West that the West is Christian, while the East is godless, and that the West loves freedom, while the East practices despotism, and that the West believes in self-determination for nations, while Russia is out for world conquest. A correlative set of beliefs exists in the Communist world: the West is said to entertain superstitions which help sinister influences to gain power; the vaunted freedom of the West is said to be only freedom for the rich and to have no purpose except exploitation. Communist countries call themselves "peace-loving" and are as persuaded of America's imperialism as America is of that of Russia. By means of these opposing beliefs, each side becomes persuaded that the other is wicked and that the destruction of the forces of evil is a noble work which must be performed at no matter what cost.

Although the ideological differences are sincerely believed by each party to justify its hostility to the other, I do

not myself believe that ideological questions play any important part in causing the tension between East and West. I think, on the contrary, that they are propaganda weapons designed to stimulate warlike ardor and to convert neutrals. Whenever, in past history, two approximately equal states have had much more power than any others, they have been hostile and have fought each other until both were too exhausted to remain formidable. France and Spain, England and France, Germany and England have all, in turn, followed this pattern until now all have rendered themselves nearly powerless, and the old facilities have been taken up by America and Russia. All these various struggles had their ideological aspect, but all were, in fact, caused by love of power. The rest is merely an elegant decoration.

The evidences for this thesis are not far to seek. Western propagandists tell us that the West has noble aims, whereas the East is materialistic. But one of the most persuasive arguments for an American invasion of Cuba is that, if Castro is allowed to remain, real estate in Miami will not be worth 50 cents an acre. Throughout Latin America, and in various other parts of the world also, American influence is devoted to keeping corrupt, cruel tyrants in power because they are more convenient for American capitalists to deal with.

I do not wish to suggest that one side has a monopoly on humbug. East Germany is called "The German Democratic Republic," whereas it is, in fact, a military dictatorship established by an alien military power in the course of suppressing a popular revolution. But, although Russian humbug exists, I do not think it has ever surpassed in cynical pretense the Western contention that the West stands for what it calls "The Free World." The West is ready to accept Spain and Portugal as allies although both these countries have a despotism as ruthless as that of Russia in the worst days of Stalin. Nor is it only in allied countries that America shows indifference to freedom. Modern develop-

ments of capitalism have placed immense power in the hands of great industrial corporations, and those who do not submit to their dictation find scant respect for liberty. This was much less the case in earlier times. Capitalists were less organized and were often engaged in competition with each other. Craftsmen and peasants had a certain degree of economic freedom such as is now possessed only by the great magnates of industry. Freedom of the press, which has always been a liberal slogan, has now become almost completely a sham. Newspapers with large circulations depend for solvency upon advertisements, and well-paid advertisements inevitably come almost wholly from the rich. It is true that in the Western world the press has a certain degree of legal liberty, but newspapers which oppose the Establishment cannot hope for large circulations, because they do not appeal to advertisers. The consequence is that the general public gets its news distorted and biased, and is kept in ignorance of many things which it is important that it should know. The most sinister example of this kind of distortion is the influence of the armament industry in repressing the facts about nuclear warfare, its probability and its destructiveness. In the West, the press is thus controlled by leading industrialists; in Russia, by leading politicians. The one system is no more democratic than the other.

There also is a tendency in the West to lay too much stress upon purely legal freedom and to ignore the economic penalties to which a man of unorthodox opinions is exposed. While he is a student at a university, he is spied upon by the authorities and, if his opinions are not wholly conventional, he finds, on leaving the university, that it is very difficult to secure a job. If he does succeed in this, he is liable to be harried by Congressional investigations which take up his time and are likely to leave him bankrupt. Is it to be wondered at that most men take pains to avoid such penalties?

I am not pretending that Russia is better in these respects. I am only con-

tending that "The Free World" has become, everywhere, a beautiful dream which can be honestly believed in only by those who are ignorant of modern facts—but these, unfortunately, constitute about 99 percent of the population.

It is ironic that the curtailment of freedom in the West has been chiefly due to the belief that the West is fighting for freedom. So long as East and West continue to regard each other as monsters of iniquity, freedom is sure to diminish in the West and will have difficulty increasing in the East.

This brings me to the question: What can be done to diminish the acerbity in the conflict of ideologies? Something can be done by an increase of social intercourse between East and West. But I do not think that anything very decisive can be done until ways are found of diminishing mutual fear. At present, most people on each side believe that the other may at any moment make a treacherous attack which will be utterly disastrous in its effects. This belief naturally engenders hatred of the other side. The hatred increases the other side's fear, and therefore the other side's armaments. The Russians talk about 100-megaton bombs, and we shudder and think how wicked they are. Our authorities, in return, boast of our numerical superiority in nuclear weapons. Each side, like a bragging schoolboy, says, "You're the ones who will be exterminated, while we shall survive." This is so childish that one would hardly have believed, in advance, that eminent politicians would talk such nonsense. And so, in a kind of deadly interchange, each increases its own danger in the attempt to decrease the danger of the other side. I do not see how this deadly spiral is to be overcome except by mutual disarmament. But there will not be disarmament until fear is lessened, and fear will not be lessened until there is disarmament. What can be done to find a way out of this tangle? Disarmament conferences keep on taking place, but it is understood on both sides that they are only a game to bemuse the populace and that

they must on no account be allowed to lead to any good result. All the people engaged in this dangerous game know perfectly well that sooner or later it will lead to disaster. Perhaps tempers will be frayed beyond endurance, perhaps nervous apprehension will come to be thought worse than what it fears, perhaps an accident or a mistake will plunge the world into nuclear war. All these things may not be very probable, but sooner or later, if there is no change in public policy, one or another of them is almost a certainty.

There is one quite simple thing which could be done, however, and which would make all the difference. Each side must acknowledge that the destruction on both sides would probably be about equal and that nothing that anybody desires would result. Each side should say to the other, "We have a common interest, which is to remain alive. We also have a common enemy, which is nuclear weapons. Let us conquer the common enemy and pursue our common interest in peace. Let us hate armaments instead of hating half of those who wield them. At present, both halves are mad, and each hates the other half for being mad. It is absurd that such a state of affairs should be prolonged by men with any shred of rationality."

I believe that if either Kennedy or Khrushchev were to stand up at a disarmament conference and make this speech, the world would rise to applaud him, and the merchants of death who at present govern our policies would slink away and hide to escape the common detestation which they have so amply earned. I shall be told that this is a foolish vision of an idealist out of touch with reality. Reality, I shall be told, is corpses. Anything else is an idle dream. Perhaps those who say this are right, but I cannot think so. I am persuaded that one eminent man, whether Russian or American, could, given courage and eloquence, convert the world to sanity and allow mankind to live in joy rather than perish in futile agony.

RUSSELL APPRECIATED

- (6) Jim Duncan was Professor of Radio and Journalism at Drake University (Iowa) from 1950 to 1981, when he retired from teaching. He continues to announce the Drake relays, which he has been doing ever since 1951. If Ronald Reagan was Iowa's best-known sports announcer in the 1940s, Duncan has been its best-known ever since. Drake Stadium's track has just been named after Duncan.

Shown the Russell Society newsletter, which he had not seen before, Duncan proved that in addition to being an athlete, he is a cogent intellectual. He wrote Director WARREN ALLEN SMITH (to whom we are indebted for all this information) as follows:

Russell appeals to me for two reasons. One is his quick acceptance of Wittgenstein, his recognition of the amazing genius of the man, even in a field in which he was untutored. In fact, Frege sent Wittgenstein to Russell, who was with G. E. Moore at Cambridge. Although Wittgenstein was perfectly happy with the professor-student relationship, within a matter of weeks Russell and Moore had changed it to three conferees. Knowing the pomposity of so many scholars of reputation, I feel this shows not only a very quick appreciation of rare talent, but a remarkable humanity as well.

My second pleasant observation of Russell is that he introduced me to the horrible wrong the Newtonians did Leibniz. In 1900 he had done "A Creative Exposition of the Philosophy of Leibniz". I had learned about Leibniz's monads in college philosophy, but had no idea the man died in disgrace. Isaac Newton developed a calculus; so did Leibniz. The Newtonians were so jealous of their turf that they brought charges against Leibniz at the Royal Academy, charges that he had plagiarized Newton. As Russell points out, he had not plagiarized; he had developed a better calculus, one much closer to the calculus taught today than Newton's. But the latter's followers had clout; their charges were enough to keep him from important royal commissions and to make him such a pariah that only one person was present at his burial. After reading Russell, I once did an investigation and paper on the matter. One of the world's great minds died in disgrace.

RUSSELL QUOTED

- (7) Reston loves this proposition (as indeed we all do.) He also did an earlier column on it, in 1977, which he titled, "Silly Season Samples" (RSN16-17). BR'S proposition first appeared in "Sceptical Essays" (1928), says BOB DAVIS. The current column is from The New York Times (8/29/30, p.A19), with thanks to CLARE HALLORAN.

Bertrand Russell, on the Candidates' Claims

By James Reston

WASHINGTON

If you'll excuse the pun, Vice President Bush is acting like a bush leaguer. He's running around the country telling selected audiences how marvelous he'd be in the majors, but he's always striking out or getting caught off base.

Bush made one solid hit during the big exhibition game in New Orleans, but ever since he's been in slump. He picked another busher as a pinch-runner, and then, what was even more embarrassing, defended that pinch-runner, Senator Quayle, on the grounds that "he didn't go to Canada, he didn't burn his draft card, and he damn sure didn't burn the American flag."

It was the most memorable recommendation since President Nixon said: "I am not a crook."

Bush praised the junior Senator from Indiana for being young, strong on defense and co-sponsor of the job-training act (without mentioning that

James Reston is the senior columnist of The New York Times.

the other sponsor was Ted Kennedy of Massachusetts), but by selecting another rich conservative for the Vice Presidential spot he handed the Democrats a couple of issues they didn't expect.

By not looking carefully into the implications of Quayle's military record, he revived the old argument that the influential rich minimized the dangers of having to fight in Vietnam, and by picking a wealthy golfer as his running mate he invited the Democrats to argue that this campaign was between the country and the country club.

There are sound reasons for debate on national security and other issues. Gov. Michael S. Dukakis has been emphatically vague on defense, but Bush has turned down the proposals for early debates with his opponent and wants to avoid them until late in September.

Meanwhile, the Vice President prefers to argue that he alone believes in the Pledge of Allegiance, and implies that Dukakis is unpatriotic because he vetoed a bill that would have compelled the teachers of Massachusetts to lead their classes in the pledge each morning.

Never mind that the United States

Supreme Court is against such compulsory pledges. It's an obvious baseball pitch, but George's fast ball is better than his control.

It's the old Harry Truman "give 'em hell" technique, but with two differences. Bush gives them "heck!" and he's giving it to them early. Truman waited until the last two weeks of his famous campaign 40 years ago before comparing Dewey to Hitler and Mussolini, but it helped turn things around when the voters had to vote before they had time to think.

This election, however, the voters will have time to reflect on Bush's arguments about the Pledge of Allegiance, prayer in the schools, abortion, "Star Wars," budget and trade deficits, child care, cabinet and judicial appointments.

Even with Bush's delaying tactics on debates, he will have to face Dukakis and the facts before a national television audience.

Meanwhile, the voters may wish to consider the value of skepticism, as proposed in another election long ago by Bertrand Russell.

The old man had some goofy ideas, but on elections he had something worth remembering: "I wish to pro-

His advice?
Don't believe anything that can't possibly be true.

pose for the reader's favorable consideration," he wrote, "a doctrine which may, I fear, appear wildly paradoxical and subversive. The doctrine in question is this: that it is undesirable to believe a proposition when there is no ground whatever for supposing it true."

Many such propositions are being put forward in this election by both Bush and Dukakis, with little or no truth to support them.

Dukakis is not unpatriotic and would not place the country's defenses in jeopardy, and the Vice

President knows it.

Likewise, Bush is not a prisoner of the Republican right wingers, as Dukakis implies, but is merely using them for his own election purposes.

The guess here is that they're both closet moderates, and even if they're not, Congress ultimately will force them back toward the middle. But Bush, especially, is playing the Reagan game. He is not thinking primarily about how to govern but how to get elected.

Ronald Reagan proved that it didn't matter so much what you said provided you smiled, tossed a few bones to the growlers on the right and denounced the Democrats and the Russians as scoundrels, in that order.

The Vice President doesn't smile but he swings just as hard, and the question is whether, after eight years of borrowing and spending, sunshine and deficits, the voters are going to swallow more of this voodoo politics? Bush is betting that they will, and maybe he's right.

But he shouldn't be fooled by his slight lead in the polls. People are beginning to laugh at the wrong places.

NUCLEAR AFFAIRS

- (8) BR would have approved -- of that we are quite certain. Vanunu chose to do the unpopular thing, because -- like BR -- he had great moral courage, and because -- like BR -- he viewed nuclear weapons as the ultimate evil. He felt obligated to fight against that evil...even more obligated than his obligation to his own country (Israel). Eminent fellow scientists plead his case, as reported in *The New York Review of Books* (June 16, 1988), with thanks to BOB DAVIS:

THE CASE OF MORDECHAI VANUNU

To the Editors:

Your readers may be interested in the enclosed appeal by twenty-seven scientists on behalf of Mordechai Vanunu, the Israeli nuclear technician who, on March 27, was sentenced by a military tribunal to eighteen years in prison for having made public information about Israel's nuclear capacity.

Rudolf Peierls

Oxford, England

AN APPEAL ON BEHALF OF MORDECHAI VANUNU

The vast arsenal of nuclear weapons in the world is a continuous threat to the survival of life on the planet.

Over the years, many people of conscience have sought to arouse world opinion to the grave danger posed to humanity by expanding nuclear weapons systems and their introduction to new areas of conflict.

As early as 1946, Albert Einstein appealed to humanity to place ahead of every consideration the moral imperative of active opposition to the imminent prospect of annihilation presented by the stock piling of nuclear weapons, their delivery systems and the willingness of governments to threaten their use.

"Henceforth," wrote Einstein in 1946, "every nation's foreign policy must be judged at every point by one consideration, does it lead to a world of law and order, or does it lead back toward anarchy and death? When humanity holds in its hand the weapon with which it can commit suicide, I believe that to put more power into the gun is to increase the probability of disaster."

Citing Bernard Baruch's declaration that the problem is not one of physics but of ethics, Albert Einstein stated in 1946, "In all negotiations, whether over Spain, Argentina or Palestine, so long as we rely on the threat of military power, we are attempting to use old

methods in a world which is changed forever." Albert Einstein urged scientists to carry these truths "to the village square." He summoned people of conscience to speak out no matter the magnitude of personal risk and concluded with the words

When we are clear in heart and mind -- only then shall we find courage to surmount the fear which haunts the world.

The Einstein declaration was taken up by the Emergency Committee of Atomic Scientists and signed by Linus Pauling, Harold Urey, Hans Bethe, Selig Hecht, Philip Morse, Thorfin Hogness, Leo Szilard and Victor Weisskopf.

By 1955, fifty-two Nobel Laureates added their voices in the Mainau Declaration, urging all "scientists of different countries, different creeds, different political persuasions," to speak out against the "horror that this very science is giving mankind the means to destroy itself." If nations, the Nobel Laureates warned, did not heed the moral imperative to renounce such weapons and their use, "they will cease to exist."

Men and women of science have, over the years, responded to a moral imperative, aware that they occupied a unique position as creators of knowledge which had enabled governments to forge weapons of mass murder.

Albert Schweitzer, in his Declaration of Conscience, said in 1957 to the Nobel Peace Prize Committee in Oslo, "A public opinion of this kind stands in no need of plebiscites...to express itself. It works through just being there.... The end of further experiments with atom bombs would be like the early sunrises of hope which suffering humanity is longing for."

In this same spirit, ninety-five Fellows of the Royal Society and thirty-six Nobel Laureates from twelve countries were among the 9,235 scientists from around the world who signed the petition to the United Nations initiated by Linus Pauling, opposing the testing of weapons of mass destruction.

For over forty years, men and women of

conscience have been stirred by the knowledge that the prospect of nuclear annihilation poses a moral imperative transcending lesser loyalties. Resistance to great evil, even when sanctioned by governmental authority, is its own justification. It is also the prerequisite to social advance.

The crime of Mordechai Vanunu is that he could not, in conscience, maintain silence about a program of nuclear weapons in his country and he spoke of this to a major newspaper. He was responding, in part, to the words of Bertrand Russell and Albert Einstein when they wrote,

We appeal as human beings to human beings: remember your humanity and forget the rest. If you can do so, the way lies open to a new paradise. If you cannot, there lies before you the risk of universal death.

We appeal to the Israeli court to recognize that Mordechai Vanunu is a man of conscience, deeply disturbed by his role in a nuclear weapons program, who first sought religious guidance and then decided to make public his concerns.

However the court may view a citizen's responsibility to the state, this act -- of making public the reality of Israel's nuclear program -- deserves the court's understanding and its perception of a moral imperative seized by scientists of conscience throughout the world.

No greater regard can be shown by the court for the decent opinion of humankind than by acknowledging the lonely courage of Mordechai Vanunu, who has acted from considerations of conscience.

We urge you to consider our appeal.

Hannes Alfvén, Nobel Laureate -- Physics, 1970; Fellow of the Royal Society; Edoardo Amaldi, Fellow of the Royal Society; Paul Beeson, M. D., National Academy of Science; Hans Bethe, Nobel Laureate --

Physics, 1967; Fellow of the Royal Society; signer of original Einstein Declaration; Owen Chamberlain, Nobel Laureate -- Physics, 1959; Subrahmanyan Chandrasekhar, Nobel Laureate -- Physics, 1983; Fellow of the Royal Society; Ragnar Granit, Nobel Laureate -- Medicine and Physiology, 1967; Fellow of the Royal Society; Robert Hinde, Fellow of the Royal Society; Dorothy Hodgkin, Nobel Laureate -- Chemistry, 1964; Fellow of the Royal Society; Thomas Kibble, Fellow of the Royal Society; S. E. Luria, Nobel Laureate -- Medicine and Physiology, 1969; Philip Morrison, group leader, Los Alamos, 1944-1946; Linus Pauling, Nobel Laureate -- Chemistry, 1954; Peace, 1962; Fellow of the Royal Society; Sir Rudolph Peierls, Fellow of the Royal Society; Francis Perrin, Grand Officer, Legion of Honor; former High Commissioner for Atomic Energy, France; John Polanyi, Nobel Laureate -- Chemistry, 1983; Fellow of the Royal Society; Edward Purcell, Nobel Laureate -- Physics, 1952; Carl Sagan; Abdus Salam, Nobel Laureate -- Physics, 1979; Fellow of the Royal Society; Frederick Sanger, Nobel Laureate -- Chemistry, 1958, 1980; Fellow of the Royal Society; Roger Sperry, Nobel Laureate -- Medicine and Physiology, 1981; Fellow of the Royal Society; Nikolaas Tinbergen, Nobel Laureate -- Medicine and Physiology, 1973; Fellow of the Royal Society; Charles Townes, Nobel Laureate -- Physics, 1964; Fellow of the Royal Society; George Wald, Nobel Laureate -- Medicine and Physiology, 1967; Viktor Weisskopf, group leader, Los Alamos, 1943-1947; signer of original Einstein Declaration; Torsten Wiesel, Nobel Laureate -- Medicine and Physiology, 1981; Maurice Wilkins, Nobel Laureate -- Medicine and Physiology, 1962; Fellow of the Royal Society

We nominate Vanunu for the 1989 BRS Award.

RELIGION

- (9) Jim Curtis on God vs. god:

Further to Item (5) in RSN59, I would like to reinforce Mr. Jacob's argument: the use of the capital letter 'G' in reference to the most commonly worshipped deity is not so much a case of subtle bias as it is of slipshod logic, because it assigns a specific identity to the word, thereby implying 'His' existence and rendering the statements 'I believe in God' and 'I do not believe in God' an affirmation or denial of a self-evident truth. It is as if one were to say: 'I believe (or not) in the sun.' The obvious solution is to place the article 'a' in front of the lower-case 'god'. Russell's choice of the upper-case is, I think, a rare instance of his deference for common usage overriding his usual syntactic precision.

LOCAL CHAPTERS

- (10) McMaster now has a BRS chapter, guided by KEN BLACKWELL. Here is the attractive announcement of its formation and its October 12th meeting:

THE BERTRAND RUSSELL SOCIETY

RUSSELL SOCIETY HAS FIRST
PANEL DISCUSSION OCT. 12

A local chapter of the Bertrand Russell Society has been formed to bring together all those interested in Russell Studies at McMaster. The usual format will be the panel discussion. The panels will feature not only McMaster scholars but also distinguished visitors researching in the Bertrand Russell Archives in the University Library.

The first panel, "FROM GEOMETRY TO POLITICS", concerns the remarkable correspondence of Bertrand Russell with the French logician Louis Couturat. The panel features Anne-Françoise Schmid of the Ecole Polytechnique Fédérale de Lausanne, the Université de Genève and the Université de Paris X, Nanterre. Funded by the Centre Nationale de la Recherche Scientifique de France, Dr. Schmid has spent three months at McMaster on her complete edition of the correspondence. She will offer some of the results of her research here before returning home on the 14th.

The other panelists, Drs. Gregory Moore (Mathematics), Richard A. Rempel (History) and Alasdair Urquhart (Philosophy, Toronto), are all editors of the *Collected Papers* who have drawn upon the correspondence in their editorial work. The moderator is Dr. Kenneth Blackwell, Russell Archivist.

Upcoming panel topics include "RYAN'S BOOK ON RUSSELL'S POLITICAL THEORY" and "RUSSELL ON CONTRADICTION". All are welcome to attend.

Wed., Oct. 12, 12:30 p.m. UH-317.

FOR SALE

- (11) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "*Motto of The Bertrand Russell Society, Inc." New reduced USA price, \$5 for 90 sheets, postpaid. Canada & Mexico still \$6. Order from the newsletter, address on Page 1, bottom.

NEWS ABOUT MEMBERS

(12)

Dennis Darland, BRS Treasurer, and Member Susan Endreshak were married in August. Our congratulations and best wishes!

Ben Eshbach is Co-Editor of this issue of the newsletter. He may in time become the next Editor. More about him in Item (2).

Paul Logeman says: "Lets have more activities in Southern California."

Carl Miller writes: "Proud and happy to be a member of the BRS. In 1928 I saw B. Russell and A.N. Whitehead together on stage of Lecture Hall at Harvard."

Benito Rey wrote this on his BRS ballot: "I knew Cuban Capitalism under Fulgencio Batista, and Cuban Communism under Fidel Castro. Now, at age 40, I may say that this is the first free election of my life!"

John Rockefeller: "I will be in the Department of Law at Trinity College [Dublin], working on a book on the parallels in repressive legal and representational maxims governing both Northern Ireland and South Africa. The common ground between Apartheid and the Diplock Courts of Northern Ireland are amazing. It is a very sad piece of work, to be certain." He will live in a staff flat this year, and hopes to take a farm outside of town next year.

Cherie Ruppe: "Am off this month [September] on my annual junket to Australia. Have experienced major burnout this year, and hope this will rejuvenate me."

Carl Spadoni has changed jobs at McMaster University. Formerly at the Health Science Library, he is now at the Research Collections Library, responsible for all archives (excluding the Russell Archives) and the post-1800 collection of rare books.

Ramon Carter Suzara: "I'm now building administrator of LT300 (417 units), the biggest condominium complex in the Philippines. It has 22 floors with 56,000 square meters of floor area. It's a piece of cake for me to manage."

Susan Berlin Vombrack, a Data Bank Analyst at Ford Aerospace, is working on a degree in Philosophy at Cal State, Long Beach. She says she may "create a special master's degree that combines philosophy and computer science. I would be interested to know if anyone has done that yet." Her address: 4126 Del Mar St., Long Beach, CA 90807.

Vincent Dufaux Williams: "Visiting Mexico quite often, I note many Russell titles (in Spanish) in bookstores. There is a bit of a [Russell] cult among University students. As a delegate, I attended the Easter Weekend Congress (XVII) in Bordeaux of the I.W.A. ((International Workers Association) or A.I.T. (Asociacion de Trabajadores), the main Anarcho-Syndicalist Movement worldwide.

(13)

CONTRIBUTIONS

We thank RAMON CARTER SUZARA for his recent contribution to the BRS treasury.

* We remind all of you that a good way to, as they say, feel good about yourself is to bolster the BRS Treasury with some of your hard-earned money. Any amount, even a little, is welcome. Send it c/o the newsletter, address on Page 1, bottom.

CORRECTION

(14) In reporting the serious money-shortage that will stop publication of most of the future volumes of the Bertrand Russell Editorial Project (RSN59-2) -- a total of 28 volumes had been planned -- we incorrectly referred to "Ken Blackwell's research team"; it isn't Ken's; it isn't anybody's, apparently; it's just there...or was till the money ran out. Dr. Louis Greenspan is Managing Editor of the Project (see photo and caption, Item 21.)

1989 DUES ARE DUE

- (15) TO ALL MEMBERS: Everybody's renewal dues are due January 1, 1989. The January 1st due-date applies to all members, including first-year members (except those who join in December 1988).

Here is the 1989 dues schedule: Regular, \$30; couple, \$35; Student and Limited Income, \$12.50. Plus \$7.50 outside U.S., Canada, and Mexico. Plus \$2 for Canada and Mexico. In US dollars.

Please mail dues to 1989, RD 1, Box 409, Coopersburg, PA 18036.

* If you want to make our life a little easier, send your dues soon. And if we receive them before January 1st, you'll find your name on the Renewal Honor Roll.

Thanks!

TO FIRST YEAR MEMBERS -- members who joined any time during 1988; the rest of this item is for you.

We know from experience that new members sometimes feel put upon when asked to pay dues after less than a year of membership. We understand that. We'll tell you why we do it this way.

In the previous system, a new members's dues covered 12 months of membership. That required us to notify each member individually -- on the anniversary date of enrollment -- that the next year's dues were due. And after that, we had to follow up on all members, to see whether dues were in fact paid. This went on throughout the whole year. It was cumbersome, provided many chances for error, and took a lot of time. In fact, it took more time than we had. We had to make a change.

The present system is easier to administer, produces fewer errors, and takes less time. Everyone's dues come due on the same day, January 1st. Simple!

We don't think that the new member whose first year of membership is less (sometimes considerably less) than 12 months has been short-changed in any important way. He/she has received just as many newsletters (and knows as much about the BRS) as the member who joined in January.

All first-year members (except those who enrolled in January) have a first-year membership period that is shorter than a year. Thereafter, the yearly membership period is always a full 12-months.

The one exception to all the above are those who join in December 1988. Their renewal dues are not due till January 1, 1990.

1989 BRS AWARD AND BRS BOOK AWARD

- (16) Input wanted. Members are invited to submit candidates for the 1989 BRS Award and 1989 BRS Book Award.

THE BRS AWARD goes to someone who meets one or more of the following requirements: (1) had worked closely with BR in an important way (like Joseph Rotblat); (2) has made an important contribution to Russell scholarship (like Paul Schilpp); (3) has acted in support of a cause or idea that BR championed (like Henry Kendall); (4) whose actions have exhibited qualities of character (such as moral courage) reminiscent of BR; or (5) has promoted awareness of BR or BR's work (like Steve Allen.)

THE BRS BOOK AWARD goes to the author whose recent book throws new light on BR's life or work or times in an important way.

* Please give it some thought! Send your suggestions c/o the newsletter, address on the bottom of Page 1.

BOOK OFFER

- (17) "Bertrand Russell", by Paul Kuntz, 1988 BRS Book Award Winner, is offered to BRS members by its publisher, G. K. Hall & Co., at 30% off the list price of \$14.95 = \$10.47. We would receive the book and re-mail it to you (add postage \$1.25, and mailing envelope, 75¢). To order, send \$12.50 to the newsletter, address on Page 1.

BOOK REVIEWS

- (18) Conrad Russell reviews a book about his father, in the London Review of Books, 1 September 1988, pp. 6-7, with thanks to KEN BLACKWELL:

It is only necessary to cite the cases of I Gwilym and Megan Lloyd George to show that a politician's biological heirs are not necessarily the infallible custodians of his or her political legacy. The fact that Alan Ryan's view of Bertrand Russell and my own are very closely similar is not, therefore, proof that we are both right. It is merely proof that our perceptions are compatible with a thorough knowledge of the evidence, and perhaps reason for suspecting that he and I view the evidence from fairly similar political standpoints.

It is particularly hard to have an authoritative grasp of a political legacy if that legacy meets either of two conditions, both amply fulfilled here. One is a very long life: much of the key part of the story we are here considering happened between twenty and thirty years before I was born, and on that, my view is inevitably second-hand and *ex parte*. Alan Ryan's search for consistency between Bertrand Russell's reactions to the First World War and his reactions to the Vietnam War seems to me entirely admirable and in the middle of the bat, but he and I must both allow for the fact that a book written, for example, by Lord Fenner-Brockway might have found a consistency of a different kind. In a political life of eighty years, the search for underlying consistency puts heavy pressure on the skill of selection, and the selection must in some degree reflect the prejudices of the selector.

The other condition which makes authoritative grasp of a political life difficult is if that life is lived in the light of the British liberal tradition, and extends through the hammer blows inflicted on that tradition in August 1914 and October 1917. That condition also is abundantly fulfilled here. Winston Churchill, in 1900, shrewdly observed that 'war is always bad for Liberals.' The fact that issues of war, defence and foreign policy tend to create confusion in the anti-Conservative opposition is not a new fact of the 1980s: it extends right back into the Liberal Party of the 19th century: it can be seen in the disputes of the last Gladstone cabinet about Dreadnoughts, and in Gladstone's correspondence with Granville about the future of Cyprus. The disputes the war created between Asquith and Lloyd George could have been foreseen in a party which combined the inheritances of Bright's Quaker Pacifism and Palmerston's imperial jingoism. It is more important still that the intellectual inheritance of liberalism, as developed by J.S. Mill, depended on a doctrine of progress which came perilously close to a belief in the perfectibility of man. It was this sort of moral optimism, a crucial element in Gladstonian Liberalism, which, along with innumerable soldiers,

Radical Heritage Conrad Russell

Bertrand Russell: A Political Life

by Alan Ryan.

Allen Lane, 226 pp., £16.95, 30 June, 0 7139 9005 8

was machine-gunned at Passchendaele and gassed at Ypres.

Bertrand Russell never believed in the perfectibility of man: a Victorian religious upbringing left roots which went too deep for that. Yet most of his politics, and a very large amount of his writing, depended on a belief in the potential for moral improvement of the human being—a belief on which the First World War inflicted an *almost* mortal injury. Alan Ryan understands this very well, and some of the most perceptive passages in the book deal with the way these nightmares were revived by the conduct of the Vietnam War in the Sixties. Everything he says on this subject is right, and yet, as a child of the post-Hiroshima age, Dr Ryan can never quite understand the depth of the faith which was threatened in August 1914.

It was in this wilderness that the ideals of socialism came to offer temptation: where men saw demons, Marxian Socialism offered a neatly-organised demonology. It is no coincidence that my father's 'Socialist phase' came in the decade after the First World War. The extent to which he did, and the extent to which he did not, succumb to this temptation provide some of the very best writing in the book. The answers, of course, vary sharply according to the date under consideration, and none of them are simple. Alan Ryan, discussing the difficulties of liberals in deciding what concessions were to be made to socialist critics, rightly says that 'Russell was never entirely sure what he thought about this.' He is also right in seeing the variations as being influenced by the extent of the current threat to pre-war liberal optimism: he is right in saying that in the Sixties, 'casting his mind back to 1914, he surely felt that the war in Vietnam was proof that western, civilised, rational, liberal, scientific man had reverted to something lower than the beasts.' This revived the sense of betrayal which August 1914 had created: I can remember him, I think in 1968, shifting from a denunciation of the Vietnam War to the remark that he could never again vote for the Liberals, because they were the party of Sir Edward Grey. That remark surely indicates what had been, in the technical sense, a traumatic experience.

One of the key temptations of socialism, to a former liberal optimist, was the belief that, as

Dr Ryan puts it, 'only socialism could avert another war.' Marx, in his attempts to link war to the development of capitalism, provided a generation with a way of explaining war without wholly abandoning the faith in human nature by which they had previously lived. The temptation was a very powerful one, and it is one to which Dora Russell, among others, seems to have succumbed. Yet Bertrand Russell could never entirely fall for this temptation, since he had seen through the intellectual pretensions of Marxism, and had published the results as early as 1896. Attitudes to his *German Social Democracy* are one of the litmus tests which sort one type of Russell admirer from another. To those who are devoutly of 'the left', it is one of his juvenilia, a work to be passed over in silence if possible. To Dr Ryan, it is 'neither stale nor out of date even now'. To my father himself, it was a verdict he could never forget, but whose comparative importance in his scheme of things varied almost infinitely according to the urgency of the dangers he saw from other quarters. Dr Ryan's understanding of this ambivalence runs all through his book: he says at one point that Bertrand Russell 'remained a liberal of a very recognisable kind', and at another, describes him as holding to 'traditional Lib-Lab ideas'. These statements are not identical, but both are correct in their contexts, and they describe the ambivalences, not only of one man, but of a very large proportion of a generation. These tensions were, of course, particularly acute in a man who was the godson of J.S. Mill, and had been brought up by a former Liberal prime minister on the belief that the word 'history' stood for 'his-Tory', but the recent work of Peter Clarke, for example, has shown how much these difficulties were part of the central experience of a generation.

The other great refuge of liberal optimism, in 1914 as in 1867, was education. It is hard to read Russell *On Education* without seeing that the subject was carrying a misplaced faith: education is a fine means of intellectual development, but he might more often have remembered when working on education his own Humean belief that 'reason is and ever must be the slave of the passions.' Education is a way of enabling us to justify things well: it is not a way of ensuring that we justify good

things. It is well worth encouraging for what it does do, not least for my father's deep (and justified) conviction that it can be fun, but some of the reaction against our educational system now in progress is the result of its failure to satisfy hopes which should never have been placed upon it. Education is no more able to make a reality of the perfectibility of man than the churches have been. Among all his many ventures, the attempt to run a school seems to have been one of the least successful.

Dr Ryan remembers very well that in discussing a 'political life' he is only discussing one among many lives. He is aware of the philosopher and of the mathematician, and of the constant cyclical progression between quiet work and reflection in his study, on the one hand, and vigorous public utterance, on the other. In choosing to write about one part of this combination, he has well understood the combination itself, and has never lost sight of the other half. Dr Ryan stresses that 'before 1914, politics was not his ruling passion.' Dr Ryan is also aware of the constant pressure to write for money, a pressure which accounted for a very large proportion of the output here discussed. Here, as with the impact of August 1914, Ryan is entirely correct in what he says, but perhaps has not imagined the full urgency of the situation as it appeared at the time. My father's situation in 1918 was not an enviable one: he was 46, and had just lost his job, suffered imprisonment and social disgrace, and was facing the failure of his marriage. He had, in effect, no inherited money left, and, it must have seemed, a very bleak future indeed. Many men have broken under stresses no greater than this, and that the writing which came out of it should sometimes have been done for effect is no more than, reasonably, we should have expected. His situation in 1941 was no more enviable: he was trapped in the United States by the outbreak of war, unable to get himself into England or his money out of it, again dismissed from an academic job in disgrace, and in difficulties even for money to pay the fare into New York to meet a publisher. I can still remember the day when Simon and Schuster came to lunch (and my own bewilderment that they turned out to be a single person), and the overwhelming relief in the household when they happily departed. The result was *The History of Western Philosophy*. The tension, and the urgency, which such recurrent situations gave to the act of writing are accurately described here, but their contribution to the strident note which sometimes appeared in his writing is even bigger than Dr Ryan suggests.

Yet this is not the whole story. It could be said of him, as was said of his grandfather,

that politics was his life-blood, and yet he was entirely apolitical.' Dr Ryan's comment on Bertrand Russell, that he 'was an apolitical liberal, perhaps even an anti-political liberal', is very close to a repetition of Dr Prest's judgment on his grandfather. He was, as Dr Ryan remarks, 'not an organisation man'. His one attempt at serious work inside an organisation, for the No Conscription Fellowship, was, perhaps, not as disastrous as he believed it, but it was not a conspicuous success. Some of the difficulty arose from the intensity of his conviction that 'thou shalt not follow a multitude to do evil': such a conviction, held strongly, does not make a committee man. In fact, the experience of joining the majority could alone be enough to make him uneasy: finding himself, in the late Forties, both famous and respectable, 'I began to feel slightly uneasy, fearing that this might be the onset of blind orthodoxy. I have always held that no one can be respectable without being wicked, but so blunted was my moral sense that I could not see in what way I had sinned.' The choice of the verb 'sinned' here should provoke thought on the experience of growing up a non-Christian in a devout Victorian household.

Yet there is more to it than this: he did not find committees exciting. He also held a different picture of political power from that of the classic committee man: his interest was always in changing the way people thought. To an active politician, the current stock of ideas provides the straw out of which he must make his bricks, and therefore is an important part of the constraints within which he operates. Bertrand Russell was always interested in changing basic ideas, rather than in the nuts and bolts of how ideas could be translated into action. He was to some extent right that the two tasks are not easy to double, but they were perhaps not quite as difficult to combine as a nonconformist conscience would have liked to think they were. Intellectual puddings have their proof in the compromising, and it is perhaps not quite fair to leave all the proof of one's own pudding to others.

These reflections are relevant to the final stage of his career, devoted to the issue of nuclear disarmament. Here his contribution was more that of a prophet than a politician: the basic insight was that nuclear weapons had so changed the nature of war that it could never again be used as an instrument of policy. This simple insight was one which changed the whole nature of foreign and defence policy, and at first it was very widely resisted indeed. It is now generally accepted, save by a few dissidents such as George Bush, and it is not easily remembered now quite how controversial this view was in the years up to about 1964. Securing general acceptance for this

view was his major, and significant, success. A second insight was that, because of the risk of error, panic, pre-emptive strike and the called bluff, if nuclear weapons were kept; they would sooner or later be used. On this, Bertrand Russell would have been entitled to use the argument he used against the Christians: that it was unfair that if they were right, they would be able to say, 'I told you so,' but if he were right, he would never be able to say: 'I told you so.' The difficulty of this argument was and is that it remains conjectural on both sides, and only a nuclear war or the disappearance of nuclear weapons can ever make it anything else. A third insight was that the nature of the political process was such that disarmament by multilateral agreement would simply never happen. On this, the record has so far borne him out, but it was here that the bulk of the argument should have been concentrated, and it was here that he did not succeed in understanding his opponents well enough to enter into a serious dialogue with them. Instead he was left with the Committee of 100, a classic case of 'the medium is the message.'

Twenty-eight years after that Committee was formed, it is painfully clear that it has done more to publicise the cause of civil disobedience than it ever did to publicise the cause of nuclear disarmament.

In discussing these issues, Dr Ryan is particularly good at setting them in a long-term context of Bertrand Russell's thinking, rightly stressing that his attitude to war was always consequentialist rather than straight pacifist: war was wrong because, and in so far as, it increased the sum of human misery. Dr Ryan also stresses the underlying belief in world government as the only possible remedy for a state of war of every nation against every nation. With these points, Dr Ryan brings out a good deal of underlying consistency which is very well presented. He devotes less effort to understanding Edith Russell, a person who deserves more admiration and respect than she has yet been given.

The Eighties are ideally the wrong decade to see the Sixties in perspective, and in another twenty years (if we are still alive), it will be much easier to assess the implications of the campaign against nuclear weapons than it is now. On other issues, 116 years after a man's birth is perhaps soon enough to begin an assessment of his achievements. The first thought to strike me here is the obvious paradox that his biggest achievements are those which, because of his success, we can now afford to regard as unimportant. That, of course, is not good for his reputation, and it is part of the explanation of why a prophet tends to be without honour.

One of the biggest changes of his lifetime, a

change to which he made a very large contribution indeed, is that the world has become safe for non-Christians. This is an area in which we easily forget the magnitude of change during his lifetime. The debate in which Randolph Churchill accused Gladstone of being an atheist for arguing that Bradlaugh, although an atheist, should be allowed to sit in the House of Commons was within my father's memory. Today, on the other hand, the right to affirm instead of taking an oath is so casually regarded that many unbelievers do not even feel the need to take advantage of it. We do not easily understand the fear attached to not being a Christian, even as recently as forty years ago. The issue is not dead, as this summer's debates in the House of Lords have shown extremely clearly. Yet, when I found that I was able to put a non-Christian case in those debates and emerge with a whole skin, I was aware that I was deeply in my father's debt.

The other area in which change has been so big that we tend to forget it is that of sexual morals. It is not easy now to remember the fear which, even very recently, was attached to any admitted departure from sexual regularity. The fact that Richard Crossman lost an Oxford fellowship for having a divorce, and was not the last fellow to do so, is one which is now received with general incredulity. The fact that it is now perfectly safe, for example, for a couple to admit that they live together when they have not gone through a ceremony of marriage is something for which my father deserves a great deal of credit. The fact that such couples, having established their right, so regularly live exactly like any other married couple merely makes the irony more pleasing. The coming of contraception, an issue which interested my grandfather before my father was even born, is something which can compete with industrialisation for the title of the biggest change in the social history of the past two thousand years. That a change so great should not always be met quite in the middle of the bat is no more than we should expect, but my father's contribution to freedom from fear in this area remains one to which the 20th century has a profound cause to be grateful.

The parallel concern with the emancipation of women, with which my grandparents were involved before my father was born, also deserves a mention. That issue is one which shows the strengths and weaknesses of the old liberal tradition. On the issues on which that tradition was strong, which are essentially those of rights, the battle has been fought and won. Women are now eligible for all the major political prizes, up to and including 10 Downing Street, and on that front a former

Women's Suffragist candidate could afford to be well content. Yet the success of the tradition has served to expose its incompleteness: the key issues which now affect women's status in the world are the complex of economic issues associated with equal pay and with child care, and these were the sort of issues on which neither my father nor the old liberal tradition had very much to offer.

At this point, some reflection is in order on the rival liberal and socialist claims to the radical inheritance. It is an inheritance my father made a large contribution to keeping alive, but I must take strong exception to Alan Ryan's description of him as 'one of the last great radicals'. Such a claim is 'grossly exaggerated', and will remain so unless or until nuclear war brings all our traditions to an end. The great weakness of the old liberal tradition was its excessive indifference to practical economic issues. This, as Peter Clarke has shown, was a weakness the 'new Liberalism' of the years before the First World War had almost got over when the war rudely interrupted the process, and the post-war realignment drained the Party of many of those who had learnt the necessary lessons. In the past thirty years, the Party has re-learned those lessons all over again, and the infusion of Labour-trained politicians from the SDP has fixed a change which was already substantially complete.

The Labour Party, on the other hand, is tied to a set of egalitarian assumptions which, in their extreme forms, have already proved unpalatable, and is wedged in the cleft stick of being able neither to deny them nor to assert them. It is wedded, by the basic notion that there is a thing called 'socialism', to ideas of class solidarity which have been empirically falsified, and to ideas of class hostility which have not increased the sum of human happiness. It has absorbed a large amount of the old radical tradition, and often represents it effectively. Yet, however little many of its members may be affected by them, it cannot, by the very existence of its socialist label, entirely extricate itself from that colossal wrong turning in the intellectual history of Europe which is represented by the body of ideas associated with Karl Marx. Over the past ninety years or so, the body of ideals that bear the label 'socialist' has shown far less potential for growth than those with the label 'liberal'. When that is recognised, my father's *German Social Democracy* may get the credit it deserves, and Alan Ryan's description of him as 'one of the last great radicals' be seen as being as premature as it really is. □

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

- (19) Chairman, Harry Ruja; President, Marvin Kohl; Vice-President, Michael J. Rockler; Treasurer, Dennis J. Darland; Secretary, Don Jackanicz; Vice-President/Information, Lee Eisler.

THE MEMBERS VOTE

- (20) 9 Directors elected. Originally, there were 10 candidates for 9 openings. Carl Spadoni notified us on 8/11 that he preferred not to stand for election. In other words, Carl withdrew, which left 9 candidates for 9 posts. Consequently, all the other Candidates have been elected: LOU ACHESON, ADAM PAUL BANNER, KEN BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, TOM STANLEY.

Only 14% of the members voted. Pretty awful! Even a U.S. Presidential Election gets more than 14%! We thank the members who voted; here they are: ARAGONA, BANNER, BUXTON, CANTERBURY, CLIFFORD, CURTIS, EISLER, GARCADIAGO, GIROD, HARPER, HARTER, D. JACKANICZ, LANSDALL, MCWILLIAMS, MILLER, PAGE, REINHARDT, REY, ROCKFELLOW, ROCKLER, RUJA, RUPPE, SCHERER, SPADONI, SUZARA, TOBIN, VAN DYKE, WEYAND, WILLIAMS, WOODROW, plus 7 ANONYMOUS.

As for the rest of you: our feelings toward you are not kindly.

Incidentally, some ballots — all were marked FIRST CLASS -- took over a month to arrive!

RUSSELL ARCHIVES

- (21) From The McMaster Courier, August 16, 1988, Page 9, -----> with thanks to KEN BLACKWELL:

Support for Russell Editorial Project

Dr. Harry Ruja, centre, chairman of the Bertrand Russell Society, presents the Russell Editorial Project with the Society's cheque for \$1,000 to go toward the Bibliography of Russell. Dr. Louis Greenspan, left, managing editor of the project, is shown receiving the cheque on behalf of the Development Office. Dr. Ken Blackwell, right, co-author of the bibliography also attended the presentation.

DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC. elected for 3-year terms, as shown

- (22) 1987-89: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, STEVE MARAGIDES, FRANK PAGE, MICHAEL ROCKLER, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA
- 1988-90: IRVING ANELLIS, BOB DAVIS, JIM MCWILLIAMS, HUGH MOORHEAD, KATE TAIT
- 1989-91: LOU ACHESON, ADAM PAUL BANNER, KEN BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, TOM STANLEY

The 6 BRS officers are also directors, ex officio

HUMANISM

(23) From Insight (5/4/87, pp. 56,57):

Giving Judaism a Humanist Face

SUMMARY: The incompatibility of Sherwin Wine's agnostic secular humanist views and the theistic elements in Reform Judaism prompted the Michigan rabbi to found the Society for Humanistic Judaism. The movement maintains Jewish rituals, but it replaces religious values with secular content. Wine is confident that secularism will only grow.

Sherwin T. Wine is an agnostic. He is also rabbi of the Birmingham Temple in the Detroit suburb of Farmington Hills.

"The main division ideologically between people today," he says, "is between those who have adapted to the secular age and those who have rejected it." Wine knew pretty much which side he was on — that of agnostic secular humanism — by the time he graduated from the University of Michigan in 1950, having majored in phi-

his own ideas with the theistic elements in Reform Judaism. So in 1963, together with eight families in the Detroit area, he founded the Birmingham Temple, the first congregation to celebrate both secular humanism and the Jewish identity. Within one year, the congregation membership increased to 100 families.

In 1969, as the movement grew, the Society for Humanistic Judaism was formed with headquarters in Farmington Hills. Wine claims some 30,000 followers

Wine, a secular humanist, says he became a rabbi "to serve the Jewish people."

losophy. The following year he obtained a master's degree in the same subject. He realized he wanted to be a rabbi for two reasons: "The only way in our society that you can teach philosophy to the public, outside of an academic setting, is as a clergyman." And, he says, "I have a strong desire to serve the Jewish people." So he went to Hebrew Union College in Cincinnati and was ordained a rabbi in the Reform branch of Judaism in 1956.

But Wine found that he could not square

rived from Poland just before the turn of the century and settled in the Bronx. Though they lived in the United States for more than 60 years, neither learned English, which compelled their seven children to pick up Yiddish. Chuman's grandmother remained "folk-Orthodox" throughout her life. His grandfather conducted the Seder in flawless Hebrew but had become a non-believer who was attracted to unionism and socialism.

With the possible exception of my mother," writes Chuman, "all seven of my grandparents' chil-

worldwide for the movement, 10,000 in the United States.

Last October, representatives from Canada, South America, Europe, Israel and Australia, as well as the United States, met at the Birmingham Temple to found an International Federation of Secular Humanist Judaism.

The society's position is bluntly stated. "There are two kinds of religion. *Theistic* religions assert that the ultimate source of moral authority and of the power for the

dren became atheists. But because of their active family involvement, which was dutiful even if it was rebellious, and because of their antireligion, which was also a form of intimate connectedness with religion, their identity as Jews, as secular Jews, was uncontestable."

But, Chuman notes, "With religious commitment on the ascendance, and with the concomitant ideological attack on modernity, the nonreligious Jew feels betrayed by events and squeezed by two unacceptable alternatives." These, he cites, are either to join a synagogue and so violate his

solution to human problems is to be found outside of people — in a supernatural realm. *Humanistic* religions affirm that moral authority lies within each person and that we have the power, the right and the responsibility to be the masters of our own lives.

"Theistic religions, such as Christianity and conventional Judaism, stress the importance of prayer and faith. Humanistic religions, such as Humanistic Judaism, declare that reason, rather than faith, is the source of truth and that human intelligence and experience are capable of guiding our destiny."

Why, then, retain the particularly Jewish identification? "Humanistic Judaism," the promotional literature explains, "is a religion for Jews who question the traditional view of Jewish history, but who value their Jewish identity. Humanistic Jews understand and appreciate the Jewish past and present in ways consistent with the best insights of modern enlightenment."

Wine's book "Judaism Beyond God: A Radical New Way to Be Jewish," published in 1985, argues that Enlightenment ideas successfully undermined both strong belief in the supernatural and the popularity of worship. The Enlightenment, writes Wine, "turned religious epics into myths and made public acts of reverence, even directed to human rulers, an uncomfortable experience."

Another victim of the Secular Revolution is humility, a virtue that, according to Wine, is tied to authoritarian attitudes. Humility has been replaced by its democratic opposite, dignity, which, Humanistic Judaism asserts, has emerged "as the primary value of the secular age."

"In the contemporary world of individual agendas," Wine says, "the demand for dignity continues to increase. Traditional hierarchical structures are collapsing. Women demand equality with men. Blacks demand equality with whites. The young demand equality with the old. Even children speak of their right to freedom. As for God, he is no longer presented in educated circles as a lord and master. The new egalitarian philosophy prefers him to be a cosmic friend."

In one sense of the word, Humanistic Judaism is a religion: The movement binds its adherents together by virtue of a shared philosophic outlook and participation in the rituals of Judaism. But these have been emptied of their significance as memorials of God's activity in the history of the Jews, his "chosen people," and filled instead with a secular content.

metaphysical commitments or to "transcend his Jewishness and elect to assimilate totally into the mainstream culture . . . the dominant Christian culture."

Wine, too, is aware that his philosophy is far from having swept the field. "There is a large and vocal minority that rejects secular humanism," he says.

"Moreover, among the majority who have accepted secular humanist values, most are ambivalent about having done so, feeling guilt at having left their conventional religion or retaining it in a vestigial form."

For example, a manual on how to celebrate Passover, the spring festival commemorating the Jews' delivery from bondage in Egypt, states that the patriarchs, who are described in the Bible as guiding the people on God's way, did not actually exist. "Neither Abraham, nor Isaac, nor Jacob were real people," writes Wine. "Each of them is a personification, a symbol of a group of Semitic tribes who lived in the Palestine area and who became the ancestors of the Jewish people."

As for the belief that the Hebrew slaves in Egypt were descended from a single man called Jacob (Israel), Wine finds the notion "as probable as the assertion that all Americans are descended from Uncle Sam."

The Passover Seder is, in the Society's "Humanist Haggadah," purged of all references to divine intervention or to the wickedness of the Egyptians. (The traditional intoning of the plagues God inflicted on the Egyptians is also omitted.)

Other holidays are reinterpreted accordingly. For Yom Kippur, the solemn day of atonement and fasting, the Boston Congregation for Humanistic Judaism came up with a family service that ends with a singing of "We Are the World."

Ruth D. Feldman, who edits the journal *Humanistic Judaism*, feels that her beliefs are consistent with the way most Jews live their lives today. Indeed, she says, secular Judaism allows them to do so with honesty and integrity.

Last year, her mother died. At the funeral, a humanist rabbi encouraged every member of the family to voice their feelings about the dead woman, and the service took account of her eclectic religious beliefs.

"Humanistic Judaism allows you to express what you feel in a way that is appropriate to our world," she says.

Her daughter's recent wedding, to a non-Jew, violated traditional Jewish law in that a rabbi presided. Everyone felt comfortable, reports the editor, and all present agreed that the happiness of the couple came first.

How a secular Jewish identity is formed is recounted by Joseph Chuman, leader of the Bergen County Ethical Culture Society in New Jersey. (The Ethical Culture movement was founded in New York City in 1876 by Felix Adler and drew much support from other German Jewish emigrants who abandoned Judaism and embraced a secular humanist outlook.)

Writing in *Humanistic Judaism*, Chuman recounts how his mother's parents ar-

Rabbi David Novak, who teaches Jewish law at the Conservative Jewish Theological Seminary of America in New York, finds Humanistic Judaism to be neither humanistic nor Jewish. Any attempt to constitute a godless Judaism must fail historically or any other way, he believes. And, he adds, true humanism recognizes that the person is related to God.

People such as sociologist Peter Berger and the Lutheran author Richard John Neuhaus make the point that most Americans persist in believing in God and following a religion and consequently are living con-

traditions to the claims made for the secular age, says Novak. Wine's arguments, he contends, are redolent of a puerile optimism that has ignored such historical events as Auschwitz and Hiroshima.

Wine, meanwhile, is confident that "as time goes by, more and more people will

be secular, whether they admit to it or not. This year his followers will hold regional meetings in Brussels in June and Buenos Aires in August, and plans are under way for an Institute of Secular Humanist Judaism in Jerusalem. The institute will offer five-year courses for those intending to be

rabbis and three-year courses for *madric-him*, congregation leaders.

To Rabbi Seymour Seigel, professor of theology and ethics at Jewish Theological Seminary of America, secular humanists are simply wrong in believing that the ethnic and ethical aspects of the Jewish iden-

tity can be furthered without reference to the divine.

"The survival of the Jewish community, despite all the mishaps and persecutions it has undergone," he says, "is an oblique proof of God's concern."

ASSESSMENTS OF BR

- (26) Max Eastman devotes a chapter in his book — "Einstein, Trotsky, Hemingway, Freud and Other Great Companions" (NY: Collier Books, 1962) — to BR. Thank you, TOM STANLEY,

Two Bertrand Russells

BERTRAND RUSSELL is the most readable of living highbrows; he also knows more than any of the rest of them. When Lenin died, his adoring disciples had his brain examined with a microscope to see if it differed in some occult way from the normal. Bertrand Russell's might be better worth examining, for it is a more variously prodigious specimen. George Santayana, in the final volume of his memoirs, described "Bertie" as the most gifted of all the men he had known.

"He had birth, genius, learning, indefatigable zeal and energy, brilliant intelligence, and absolute honesty and courage. His love of justice was as keen as his sense of humor. He was at home in mathematics, in natural science, and in history. He knew well all the more important languages and was well informed about everything going on in the world of politics and literature."

That is high praise indeed, but Santayana added that as a great intellect Russell had somehow "petered out." In discussing the subject with me he said, more harshly: "Along with his genius he has a streak of foolishness."

I was reminded of this when reading a review by Milton Hindus of Russell's recent book, *Portraits From Memory and Other Essays*. Hindus praises the book highly, as any good critic must, but also remarks: "The goddess he worships is Sprightliness, and she can make him do and say silly things at times . . ." I should say *irresponsible or light-minded*, rather than foolish or silly things, but I have long shared this two-fold opinion of Bertrand Russell: unbounded admiration for his mind, and a certain embarrassment about this trait of his character.

He is a funny-looking fellow, rather like some eager-beaked bird, or birdlike gargoyle, and I sometimes wonder what effect this had on him as he grew up. To discover the finest brain of the generation in such a receptacle must have been a surprise. He is not unpleasantly grotesque, however, but pleasantly so when you see his eyes lighted with interest in an idea.

It was thirty-two years ago (November 21, 1927) that he and I entertained a crowded Cooper Union with a debate on *The Road to Freedom*, and I came home and wrote down the title of this essay: "Two Bertrand Russells." I had then read some of Russell's philosophic writings, notably *Our Knowledge of the External World as a Field for Scientific Method in Philosophy*. The title is almost as long as the book, and is not logically constructed, it seems to me. It should read: "The Problem of our Knowledge of the External World, etc. . . ." But the book itself is brief and is logical to a degree rarely to be found in books of philosophy, even the most famous. They are all, with but two or three exceptions, dedicated to proving, or building into a conception of the universe, some notion that is satisfactory to the emotional needs of the philosopher. This, at least, was my firm opinion after emerging from a four-year course in philosophy. I cherished a feeling of admiring kinship with the few so-called skeptics—Hume, Montaigne, Sextus Empiricus, Protagoras perhaps—men who had attempted *without any other motive* to find out what could be known about the plight of man's mind in the universe. I believed, and believe still, that Bertrand Russell belongs among these cool and elevated spirits, and that in a wise history of philosophy his place would be secure. For that reason I approached the meeting in Cooper Union somewhat awed by the honor of being associated in conflict with so great a mind.

Proposed Roads to Freedom was the title of a book that Russell had published, and my opening speech, which as usual I wrote out and delivered from memory, was as thoughtful a criticism of it as I knew how to make. Indeed for those in the audience with a taste for proletarian revolution, it must have seemed quite conclusive. I took a backward glance at all the great advocates of a better social system, and pointed out that none of them, from Plato to Russell, had ever even looked for the road to freedom. They had merely told us what a free society might be like when we got there. Karl Marx, I declaimed—and I was then immature enough to regard this as very wise—did not bother his head about what it would be like when we got there. He concentrated on finding the road: the working-class struggle, namely, for the conquest of political power.

Russell replied, as I would now, that this was all very much more neat than convincing, that it was impossible to treat human history as though it were a process taking place in a

laboratory—words, at least, to that effect. And he remarked how many years had passed since Marx predicted the revolutionary change I was still waiting for, and spoke of the folly of any man's imagining that he could predict the course of history over a long period of time.

"Not one of us can tell right now what is going to happen in the next seven years," he exclaimed.

Toward the end of his speech—which was not a speech, but just brilliant inconsecutive talking—he happened accidentally, as any impromptu speaker might, to get to telling us, rather explicitly, what might be expected of the rest of the twentieth century. It was a bad accident, and I made some good fun in my rebuttal out of the striking contrast between the prophetic genius of Karl Marx and of Bertrand Russell. His answer was magnanimous, and also clever. He acknowledged that with this lucky crack I had probably won the debate, but remarked that this did not prove the validity of the theory of progress through class struggle.

We walked across town together after the debate, and I tried to get him to say something illuminating about my teacher, John Dewey, toward whose instrumental philosophy I was still struggling to orient myself.

"I find him such a dull writah," was all I could get out of him.

I don't know why, but though I have often met Russell since, and ridden in taxis with him, and dined beside him, and made speeches from the same platform, I have never been able to get much farther into a conversation than that. Something rises up between us—whether my too humble admiration for his mind, or an opinion on his part that I haven't any mind, I can't pretend to say. Mathematics, of course, is an alarming thing to a man of my temper and experience. Although I passed examinations in both algebra and trigonometry, not to mention plane and solid geometry, I could not at this moment describe the binomial theorem, or state what a logarithm is, if the sword of Damocles were hanging over me. So perhaps it is just the phantom of Mathematics that rises up between us, putting me in my place with that mystic and impenetrable gesture that has the whole world of unciphering mortals buffaloed.

At any rate, this memoir will contain only one more phrase spoken to me by Bertrand Russell. That, too, was on the way home from our debate, and what he said was—and he said it disdainfully—"Anyone who takes these debates and lectures of our seriously must be an idiot." I had taken my part of it seriously as my manuscript testifies, and whatever may have been my answer, I recoiled inwardly from this remark. As he was then making an enviable income out of these debates and lectures, playing up to the eagerness of a half-baked American intelligentsia to gaze upon, and gather pearls of wisdom from, a great British philosopher, this roused my democratic indignation. I thought he ought to give the best he had for the money and adulation he was getting. I also thought—at that time—that his political opinions were as trivial and superficial as his philosophic speculations were profound. That was the source of my title: "Two Bertrand Russells." I now see that his answer to my neat speech, in spite of that accidental lowering of his guard, was a good one. But I still resent his flippant attitude to that attentive audience. There is a point of view from which nothing that any of us "intellectuals" do or think seems very important. But from that point of view, I am not sure a book in the library on the Principles of Mathematics ranks so much higher than a speech in Cooper Union on the Road to Freedom. I would like to find the same Bertrand Russell in both places.

I will give another example of what I mean. Not so many years ago I attended a lecture by him in the Rand School for Social Science. It was a lecture on Aristotle, and was attended by a throng of young boys and girls, mostly working-class, all hungrily drinking up with burningly attentive eyes whatever gems of wisdom and guidance they could get from this famous and truly great man. And the great man delivered a very fine lecture—a chapter perhaps from his *History of Western Philosophy*. He was particularly illuminating on the subject of the virtue which Aristotle called *megalopsychia*, and which is often but incorrectly translated "magnanimity." It means something more like high-mindedness or dignity of spirit. You might say that it means "what noblesse oblige," for it is essentially an aristocratic virtue. Russell was engaging and wonderfully subtle in describing it. But afterward one of those burning-eyed youngsters, a girl in her teens, breathless with bashfulness and a zeal to understand, asked him a question—not a penetrating question perhaps, but not foolish. He brushed her off and out of the

intellectual world with some frivolous jest about consulting Mrs. Aristotle. As I watched her sink back miserably into her chair, I thought: "Well, he has given a perfect discourse on *megalopsychia* and a perfect example of the lack of it."

It must have been after that lecture, for it was in an anteroom at the Rand School, that Bertrand Russell confided to me the genuinely desperate financial situation he was in. His radical opinions, particularly about military patriotism and marriage, had closed all the innumerable chairs of philosophy that would otherwise have been open to him. To climax this hardship, he had just been summarily ejected from a professorship at the rambunctious art foundation in Philadelphia established by the Argyrol king and ex-prize fighter and cranky connoisseur, Albert C. Barnes. He told me with genuine distress in his voice that he really did not know how he was going to earn his living.

This will surprise the reader now, but hardly more than it surprised me then. I was indeed so appalled that a great mind should be in such a plight—and my admiration for the delving mind was so much stronger than my distaste for the flippant tongue—that I went over the next morning to the New School for Social Research, and pleaded with its founder and director, Alvin Johnson, to give Bertrand Russell a job! Both Johnson and the New School, I thought, were bold enough to stand up to public opinion in such a cause. I realized how little Russell had exaggerated his plight when I received my answer. Johnson listened patiently, with the genial twinkle in his eyes and the genial pipe in his mouth that are both a part of him, and when my plea was finished, removed the pipe with friendly deliberation and said:

"Max, I agree with everything you said . . . But the question will have to come before the trustees. I will put it before them, but I can advise you in advance not to hope for a favorable answer."

The two-fold nature of Bertrand Russell has given rise to some other interesting reactions besides those I quoted. W. B. Yeats, in an imaginary letter to a schoolmaster about his son's education, made this amusing remark: "Teach him mathematics as thoroughly as his capacity permits. I know that Bertrand Russell must, seeing that he is such a featherhead, be wrong about everything but as I have no mathematics I cannot prove it. I do not want my son to be as helpless." Even the *Encyclopaedia Britannica* shares this two-way attitude toward the great philosopher. It describes him in a biographical essay as "temperamentally desperate, loving extremes . . . almost querulously criticising the world's workings," and declares ironically that he "has been peculiarly successful in eliciting from contemporary physics those theorems that are most consonant with his own temper." But when it comes to getting an article on the most subtle and difficult subject in the whole encyclopedia, one requiring acuity and balance as well as learning of the most reliable kind, the article on Knowledge itself—what we can know and how we know it—the editors turn to Bertrand Russell!

I have a feeling, which I cannot verify, that the trivial and irresponsible member of this dual personality is apt to be uppermost when he is dealing with America. Many other distinguished Europeans have come overseas annually to tap the gold mine of our provincial adoration of Old World Culture—it was natural enough—but most of them tried hard, however unsuccessfully, to give a good lecture. Yeats, for instance, according to his biographer, "always gave of his best . . . and this consideration sprang no less from his inborn courtesy than from a sense of his own dignity and what was due to others." But Bertrand Russell was content merely to stand up and chatter about ideas. Perhaps, indeed, he was the only one who could stand up and chatter about ideas without fear of exhausting the reservoir, or losing control of the taps. I cannot help doubting, however, whether in lectures to a British audience he would have been quite so cavalier. "Love of England," he says in this recent book, "is very nearly the strongest emotion I possess"—a statement so surprising in one whose closest companion seems to have been the universe that it adds weight to my feeling that in order to understand him we have to divide him in two.

Russell himself contributes a little to this feeling. "The serious part of my life ever since boyhood," he says, "has been devoted to two different objects. . . . I wanted, on the one hand, to find out whether anything can be known; and, on the other, to do whatever might be possible toward creating a happier world." He adds that he has found his work on social questions "much more difficult and much less successful" than his earlier work on mathematical logic. He thinks it is more difficult "because its utility depends upon persuasion." My feeling is that on social (and political) questions, he is inclined to spend more time in persuasion than in doing the work—the work, I mean, of establishing valid opinions. It is in this sphere, at least, that the light-minded Bertrand Russell seems so often to have sway.

Having said this, I must hasten to add that in 1920, when he paid his visit to Soviet Russia, Bertrand Russell arrived with speed at an opinion that time has verified. He was right when most of us who shared his bold views about World War One were making the mistake of our lives. He is entitled to all the

boasting he so genteelly refrains from doing about that fact. At that early date, his adverse report on the "Great Experiment" said pretty nearly everything that the rest of us wasted so much time in summoning the mental force or humility to say. It was not as though he had gone over there with adverse prejudices, either. On the contrary, a month or so before boarding the train, he had issued a startling announcement of his conversion to Communism. He had to take that announcement back while it was still floating like a flag almost from the mast-head of all pro-Bolshevik publications throughout the western world.

The memory touches me rather deeply because it was in my magazine, the *Liberator*, that he published the original confession of his faith. We printed it in extra-sized type on the first pages of the magazine, rejoicing that we had now a comrade-in-arms who would strike respect at least, if not fear, into the hearts of our enemy, the general public. He did not send his recantation to the *Liberator*, but to our rival the *Nation*, wishing perhaps to save me a rather painful embarrassment, for I believed in free discussion as well as proletarian revolution and should have had to publish it. As it was, I felt compelled to answer the great philosopher, and I did so with all the scholarly heft I could muster, entitling my essay, "Plato, Nietzsche and Bertrand Russell." I am happy to recall that I did not dismiss his recantation as a class-conscious reaction, although that would have been made easy by the fact that his traveling companion, Robert Williams, head of the British Transport Workers' Union, came back with an exactly opposite reaction: "All my previous hopes and expectations were more than borne out by my actual contact with Soviet affairs." I brushed this easy argument aside, and answered according to my own pretty thoroughly un-Marxian type of revolutionism.

"It is possible," I said, "for persons of drastic and pure intellect, or militantly sympathetic emotion, to abstract from their own economic or social situation, conceive the process of revolutionary struggle scientifically, and put their personal force in on the side where lie the ultimate hopes of human life." And I paid a special tribute to Russell's capacity for such disinterested logic, his championship of "scientific method in philosophy." "What is it," I asked, "that prevents him from bringing over that austere and celebrated method into his contemplation of the problems of society? It is the contagious Christian disease of idealizing the soft, and worshipping the ineffectual."

So I disposed of this most devastating intrusion on my state of exalted belief. Bertrand Russell was in China when my editorial essay came out. His wife, Dora Russell, wrote a ponderous answer to it, and he sent her manuscript to me saying that it expressed his views. I am not by any means a touchy person; my inferiority complex takes other forms than that. But I must confess I was not flattered by this left-handed, or no-handed, way of answering my studious and deeply pondered criticism of his changed opinion. Twice since then, once in a letter, once in a personal encounter, Bertrand Russell has reproached me for betraying the principle of free discussion in not publishing his wife's letter. On neither occasion did I say in reply—what I thought should be obvious—that I did not care to advertise the position he put me in by replying to my dissertation through an unknown woman who happened to be his wife. I cannot help wondering, since I am still in the vicinity of that subject, whether he would have sent such a communication to a British editor.

I wish I might feel as happily confident as I did in those days about that "hard-headed idealism" which I regarded as the heart of the Marxian doctrine when purged of Hegelian metaphysics. My present feeling when Bertrand Russell expresses his "firm conviction" that "the only stable improvements in human affairs are those which increase kindly feeling and diminish ferocity," is one of nostalgia. I was brought up to think so, and I would like to go back to my childhood. But I do not believe we can increase kindly feeling and diminish ferocity on a large scale except by selective breeding. And I still think that the political Bertrand Russell fails to confront such facts with that unremitting, diligent and disciplined hardness of mind with which the philosophic Bertrand Russell confronts a proposition in logic or mathematics. One cannot be so sure, it is true, about political as about mathematical matters, but one can require of himself that he be as sure as possible before advising the world. And this, it seems to me, is what the political member of the Bertrand Russell combination fails to do. His recantation after the visit to Soviet Russia was an act of admirable devotion to an ascertained truth; it is beyond praise. But was not his startling proclamation of a conversion to Communism just before he went, by the same token, somewhat cursory and careless?

Bertrand Russell has made a good many such startling shifts of opinion in the course of his work on social questions, more, by a good deal, than the changing conditions have warranted. I remember—it cannot be so long ago—his announcing in the *New Leader* that love, after all, is the only force that can save the world. Yet in 1948, in an address at Westminster School which he took pains to publish, he said:

"There must be in the world only one armed force supra-national and all-powerful . . . It is the only way to prevent Great

Wars. There is singularly little hope of establishing such a force by international agreement. . . . The Western Alliance with the United States and the Commonwealth have the nucleus of such a force. It must impose itself on the whole world, and remain powerful, uniquely so, until the world has been educated into a unified sanity."

A very far call from love as the savior of the world.

Though sprightly enough, none of these rapid changes seems quite so featherweight as his shift of passion and opinion in the last seven years on the subject of the fight against Communism. In 1950, in the *New York Times Magazine*, he issued a battle cry that must have roused thousands who care about real values to join in that fight. He depicted with militant eloquence the horrors of life under the Communist dictatorship: "Soviet man, crawling on his knees to betray his family and friends to slow butchery"; "A world in which human dignity counts for nothing"; a world in which "it is thought right and proper that men should be groveling slaves, bowing down before the semi-divine beings who embody the greatness of the state."

"It is this conception that we have to fight," he cried, "a conception which . . . would, if it prevailed, take everything out of life that gives it value, leaving nothing but a regimented collection of groveling animals. I cannot imagine a greater or more profound cause for which to fight."

During the eight years since that battle call was issued, the "regimented collection of groveling animals," with no change in its nature, has steadily gained ground throughout the world. The fight to which we were so gloriously summoned, though more desperate, is still being fought. And what has become of our intellectual standard bearer now, our great philosopher who came down from the heights of pure reason to summon us into battle for "all human values?" He sits aloft once more and informs us that "anti-Communism" may be classified with Communism as a "dogmatic and fanatical belief in some doctrine for which there is no evidence." "Nationalism, Fascism, Communism, and now anti-Communism," he says, "have all produced their crop of bigoted zealots ready to work untold horror

in the interests of some narrow creed."

And to certify this surrender to the enemy of all human values, he contributes a preface to another book written by one of the most unabashed defenders of that "regimented collection of groveling animals" in the western world, Cortis Lamoot.† In this preface he reaches the climax of a series of slanders against America that would, in a man less famed for the achievements of his mind, seem very nearly insane. I will quote but one example of this wild talk, since it is no pleasure to dwell on these flights of the feather-like partner in the firm of Bertrand Russell.

"Members of the FBI join even mildly liberal organizations as spies and report any unguarded word. Anybody who goes so far as to support equal rights for colored people, or to say a good word for the UN, is liable to visit by officers of the FBI and threatened, if not with persecution, at least with blacklisting and consequent inability to earn a living. When a sufficient state of terror has been produced by these means, the victim is informed that there is a way out: if he will denounce a sufficient number of his friends, he may obtain absolution."

I imagine that Bertrand Russell regards it as an example of unprejudiced logic to liken the extremes of intolerance to that which the passion of the fight against Communism has carried certain individuals in America to the systemized brutalities of the totalitarian police state. To my mind it suggests, rather, a deep-lying and irrational prejudice.

But that is not the point I wished to make in concluding this essay. The error underlying everything Russell now says about the "great fight" to which he summoned us so gloriously was present already in the summons. It is not a "conception" we have to fight, but a conspiracy—a conspiracy by seizing political power to force that conception upon an unwilling world. The problem is indeed complex and subtle how a relatively free society can, without destroying its own freedom, defeat such a conspiracy. There is room here for a wide latitude of opinion.

* *Portraits From Memory*, p. 38.

† *Freedom Is as Freedom Does*. Preface in the English edition only.

BERTRAND RUSSELL'S VIEWS ON RELIGION

- (27) Bertrand Russell's Views on Religion is a pamphlet on Russell with a forward written by Al Seckel (Editor of *Bertrand Russell on God and Religion* and *Bertrand Russell on Ethics, Sex and Marriage*)

Some excerpts from the pamphlet are reprinted below. You may purchase these pamphlets for ten cents per copy from Atheists United, 14542 Ventura Boulevard, Suite 211 Sherman Oaks, Ca. 91403

GOD

"I've observed that the belief in the goodness of God is inversely proportional to the evidence. When there's no evidence for it at all, people believe it, and when things are going well and you might believe it, they don't."

RELIGIONS

"The fact is that religion is no longer sufficiently vital to take hold of anything new, it was formed long ago to suit certain ancient needs, and has subsisted by the force of tradition, but is no longer able to assimilate anything that cannot be viewed traditionally."

FAITH

"What I wish to maintain is that all faiths do harm. We may define 'faith' as the firm belief in something for which there is no evidence. When there is evidence, no one speaks of 'faith'. We do not speak of faith that two and two are four or that the earth is round. We only speak of faith when we wish to substitute emotion for evidence."

PRAYER

"It is not by prayer and humility that you cause things to go as you wish, but by acquiring a knowledge of natural laws. The power you acquire in this way is much greater and more reliable than formerly supposed to be acquired by prayer, because you could never tell if your prayer was answered favourably in heaven."

LINUS PAULING

- (28) The Pauling Prize: A Welcome Honor from Norway from the Bulletin of the Atomic Scientists, Dec. 1963, vol. 19, no. 10, p. 18

"On October 11, Linus Pauling was awarded his second Nobel prize. The first was awarded in 1954 for his achievements in theoretical chemistry; the second for his relentless and dedicated campaign against the testing of nuclear weapons. Pauling's achievement in thus winning two Nobel prizes in two widely separated areas of human endeavor is unique. We extend to Dr. Pauling our sincere congratulations.

"The award of the Nobel Peace Prize to Pauling is a recognition that in our time scientists have become an important influence in mankind struggle. Pauling was among those who spoke out against nuclear weapons testing early and vigorously. He emphasized that the production of radioisotopes in these tests can lead to an increased frequency of congenital malformations in future generations. His estimates, as well as those of others, of the likely extent of this genetic damage, have helped to increase public appreciation of the danger.

His efforts to publicize this hazard included the well known petition to the United States of January 14, 1958, signed by 9,234 scientists from 44 countries, and the suit against the governments of the United States and the Soviet Union seeking a court injunction against nuclear weapons tests. Pauling's condemnation of these tests have been equally vigorous when levelled at either the government of the United States or at the government of the Soviet Union.

"Pauling's scientific work has encompassed a broad spectrum of molecular science. His earliest efforts were directed toward understanding the nature of chemical bond. He made significant contributions to theoretical chemistry and the knowledge of the molecular structure of chemical compounds. He emphasized the view that the behavior of such compounds can be understood in terms of their molecular structure. Beginning in the mid-1930s, he became increasingly interested in the molecular structure of biologically important compounds. This led to his work on the structure of proteins; coupled with this was a growing interest on his part in the broader field of biological phenomena. He made a significant contribution to biology by developing the concept of "molecular disease," such as sickle cell anemia based on a single "error" in the molecular structure of hemoglobin.

"The range of Dr. Pauling's genius has thus made him a key figure in controversy over the scientist in politics. While we have not always seen eye to eye with him on uses of tactics, we have only admiration for the courage, energy, and integrity with which he has pursued his principles. It pleases us as fellow Americans that the Norwegian Parliament has now given this special recognition to his role as scientist-citizen."

BOOK REVIEW

- (29) From the Journal of Pain and Symptom Management (Winter 1987, pp. 53-55), with thanks to MARVIN KOHL:

Voluntary Euthanasia
 Edited by A.B. Downing and Barbara Smoker
 Published by Peter Owen, London and
 Humanities International
 Atlantic Highlands, New Jersey, 1986, 303 pp.
 \$29.95

Reviewed by Marvin Kohl

The past two decades have witnessed both a notable increase of interest in voluntary euthanasia and considerable insurgence against the

practice. Under the influence of what may broadly be called quality-of-life points of view, advocates have urged that sanity and wisdom consist not in the pursuit of life but in the pursuit of a quality life and conversely that, where a life is irreparably blasted by the most loathsome forms of disease and degradation, it may be desirable to exit. Despite great variety in the kinds of justifications offered, quality-of-life advocates basically agree that voluntary euthanasia is sometimes excusable, permissible, virtuous, or obligatory. Indeed, the quality-

of-life group might well be called Promethean, since they are hostile to the idea of just letting nature take its course and insist that man should consciously and intelligently control his own destinies.

The contrary point of view is put forward with considerable vigor by anti-quality-of-life advocates or vitalists who argue that talk about worthwhile or worthless, meaningful or meaningless, quality or non-quality life generates formidable problems. Here too we find a diversity of philosophical and moral positions. But there

is general agreement that life is intrinsically valuable or that a human life can never be cor-

Marvin Kohl, PhD, is Professor and Chair of Philosophy, State University of New York, College at Fredonia, Fredonia, New York.

rectly assessed as being worthless or to be sufficiently lacking in quality as to warrant the active pursuit of death. Against the euthanasianist's position, it is argued that a judgment about the quality of a person's life cannot in principle be a reasonable basis for killing that person.

This volume is an enlarged and updated edition of *Euthanasia and the Right to Life* (1969). The majority of papers—including Anthony Flew, Joseph Fletcher, Granville Williams, and Christian Barnard's—are written from the quality-of-life perspective. Yale Kamisar and Luke Gormally represent the opposition, each making an able case against euthanasia. In addition to Barnard and Gormally's papers, the new material in the volume includes the Vatican's Declaration, Colin Brewer's discussion of the hospice movement, P.V. Admiraal's outline of the way euthanasia is and should be practiced in the Netherlands, and an insightful article about the suicides of Arthur and Cynthia Koestler.

Let us begin with Barnard's story about a patient named Eli Kahn. Aged 78, he was suffering from carcinoma of the prostate, obstruction of the bowel, and very severe emphysema. Mr. Kahn said to his doctor: "You mustn't try to save my life. I am ready to die. The machine is worn out, and the mechanic must now give up." "No," was the reply, "this is not a hospital which just allows patients to die like that. We treat you here, we don't just let you die."

Unfortunately what happened to Mr. Kahn is all too familiar. After pointless surgery he developed problems with his lungs, and was intubated. During the night he somehow managed to disconnect the respirator. And in bed there was a note, written in a shaky hand. The message read: "Doctor, the real enemy is not death—the real enemy is inhumanity."

According to Barnard that also should be our message. We should not allow medicine to become inhumane. And to become unconcerned about the quality of life is to become inhumane. Thus he writes:

It is not true that we become doctors in order to prolong life. We become doctors in order to improve the quality of life, to give the patient a more enjoyable life . . . And the same is true when we are dealing with terminally ill patients: what we should ask ourselves is whether there is still any quality of life left. The doctor who is unconcerned about the quality of life is inhumane; and the real enemy is not death but inhumanity. (p 177)

Barnard's point about quality of life is well taken. We may attempt to dodge the issue and argue, as Gormally does, that quality of life arguments are not sound and that "the only reason for killing a man which is consistent with the true dignity of human beings is that the man deserves death." (p 89) But morality is not limited to a matter of desert. And the heart of Barnard's argument is that it is difficult to see how an inhuman act can be a moral one, even if it be one of omission.

But improving the quality of life is by no means the only function nor perhaps the most important function of medicine. And it is at best hyperbole to say that "the real enemy is not death but inhumanity." It is true that death may be a friend but more often than not it is an enemy. Thus it seems much closer to the truth to say that the general function of medicine is to improve both the quality and quantity of life. And even if we want to add that we are not talking about the prolongation of mere biological existence but the prolongation of life of at least minimal quality, undesirable death is still a very great enemy.

To prevent misunderstanding, let me say emphatically that I do not wish in any way to minimize the importance of the daily routine of most physicians who may not be engaged in combat against death but who decidedly help improve the quality of their patient's life. But I do wish to argue that because this function is important and must not be neglected, it does not follow that the fight against death is of no importance, or that it is a lesser function. What is often lost in the fury that accompanies public debates of this kind is the common sense understanding that being humane, improving the quality of life, and fighting against undesirable death are all necessary parts of modern medicine.

The harder question, the question of whether a patient still has any quality of life left or the more general question of what constitutes the lack of a quality life, stands on a somewhat different footing. All the evidence indicates that what we generally regard as a life of minimal quality is bound up with an individual's ability to satisfy certain kinds of reasonable desires or goals. It is undoubtedly true that men form different conceptions of what constitutes a life of high quality, even a life of sufficient quality, but many would unhesitatingly maintain that when a human being cannot possess or achieve any goals that life is devoid of quality. Quality of life advocates certainly think it reasonable to say that where an individual lacks both cerebral hemispheres (as in the case of the hydranencephalic infant), there is not even minimal quality life. They also think it reasonable to say that where an individual has permanently lost all higher brain function the same holds true.

When, however, we turn to cases where there is no brain damage or where there is less than full impairment, we find another judgment, which I will call the judgment that a life *lacks sufficient quality*. This is often blended indistinguishably with the judgment that there is *no quality*. Space does not permit full elaboration. But I do wish to suggest that, even if we admit that where there is no quality of life, death is not an injury to the decedent, it does not follow that this is true in all cases when a life lacks sufficient quality. To argue, as some libertarians do, that a life that merely tips on the side of a negative balance is sufficient to warrant voluntary death is, I believe, tantamount to saying that it is permissible for people to exit when life merely tips on the side of unhappiness. Such thinkers seem to forget that a life of this quality is not necessarily an empty, or nearly empty, one. It still may possess opportunity for great moments of satisfaction and achievement. So that exiting from a life that has just barely tipped to the negative side of the scale is one thing; exiting from a life devoid of any quality for its possessor still another.

Judgments as to quality of life become even more complicated. We can and should further distinguish between those who have just tipped to the negative side of the scale and those who are close to being devoid of quality. Eli Kahn was ready to die. But he welcomed death not because of cognitive incapacity. Nor did he decide to die because his life had just tipped to the negative side. His decision to die was made on significantly different grounds. Because of advanced prostatic cancer and very severe emphysema the judgment was that his life was *almost devoid of any quality*. This indicates that there is a difference—a vital logical, if not moral difference—between a *life devoid of any quality, one almost devoid of quality, and one that has just tipped on the negative side of the scale*.

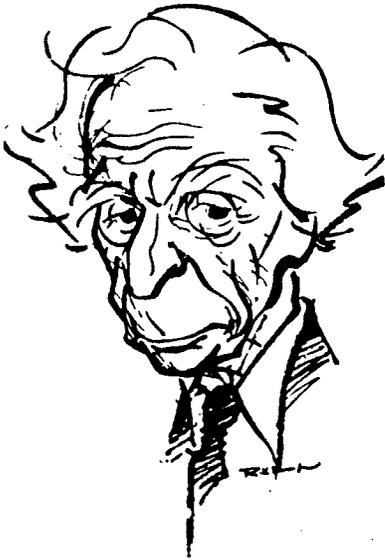

The essence of the quality-of-life position is that we are being inhumane when we do not actively respect the former conditions; that we are being inhuman when a patient correctly judges his own life to be devoid or almost devoid of quality and wants to die, and we do not help. Thus doing good in the sense of being beneficent or helping others is an essential part of being humane. It is the duty of every man, we are told, to be beneficent, ie, to be helpful to men or women in need according to one's means. This duty becomes a stricter one (and a necessary condition for being humane) when there is dire need and it is relatively easy to help. Contrary to Gormally's suggestion that the minimally moral man is one who rewards and punishes only on the basis of desert, Barnard and other quality-of-lifers are urging that it requires the recognition of the duty to help others when their need is dire and it is relatively easy to do so.

RUSSELL OBITUARY

- (31) Bertrand Russell is Dead is from the February 4, 1970 issue of the Times of India (New Delhi). The obit was written by J. D. Singh from the Times of India News Service.

LONDON, Feb. 3

Bertrand Russell died at his home in Wales this morning at the age of 97. He had been ill with influenza.

Philosopher, mathematician, logician and crusader, Lord Russell made a unique contribution to improving the moral and political climate of this century. His passionate advocacy of public causes, generally of an unpopular kind, made him a controversial figure and led to his imprisonment twice--first in 1918 and again in 1961.

During the First World War, he was a pacifist and campaigned for "no conscription". He was fined one hundred pounds (his library was seized to pay the fine) and removed from lectureship at Trinity College. In 1916 he was due to lecture at Harvard but the British Government refused to issue him a passport. In 1918 he was sentenced to six months' imprisonment for making comments on the American army which were intended to prejudice Britain's relations with the United States.

His second imprisonment came in September 1961. Impatient of its law-abiding methods he had left the campaign for nuclear disarmament which he had helped to found in 1958 and launched a civil disobedience movement. He was sentenced to two months' jail. He was 88.

As late as December last he protested to the Soviet Prime Minister, Mr. Kosygin, against the expulsion of the well-known author, Mr. Solzhenitsyn, from the Writers' Union.

Throughout his life he was an ornament and an acquisition to a variety of causes and worked actively for the Fabian Society, the free trade movement and women's suffrage. He stood unsuccessfully as a parliamentary candidate on three occasions--the first time in 1907 on the issue on women's suffrage.

Often called "the Voltaire of our time," he was a stimulating speaker and lecturer and prolific author and wrote more than 50 books, many of them on mathematics and philosophy.

In his "Principles of Mathematics" he explained that this purpose was first to show that all mathematics followed from symbolic logic and, secondly, to discover, as far as possible what were the principles of symbolic logic itself.

Bertrand Arthur William Russell was born on May 18, 1872, in one of England's aristocratic families known for its radical stand in politics. One of his ancestors, Lord William Russell, lost his head on a charge of rebellion against King Charles II while his grandfather, Lord John Russell, was one of Queen Victoria's Prime Ministers and famous for pushing through the Reform Bill of 1832.

Bertrand Russell's mother died when he was two and his father when Bertrand was three years old. His father had directed that his son should be brought up as an agnostic, and had appointed a free thinker as his guardian but the direction was set aside by a court.

As a young man he won an open scholarship to Trinity College where he took a first class in Mathematics and Moral Sciences. He spent some months as honorary attache at the British Embassy in Paris. After the First World War he visited Russia as a member of the British Labour Party delegation. In 1920 he went to China to deliver a series of lectures on behaviourism at Peking University .

On the death of his elder brother in 1931, he succeeded to the title as the third earl. He was awarded the Order of Merit in 1949, the Nobel Prize for literature in 1950, the Kalinga Prize in 1957 and Danish prize for outstanding contributions to European culture in 1960. He founded the Russell Peace Foundation and the Atlantic Peach Foundation.

He married four times and had three children, His obituary, he suggested some years ago, should mention that he had many friends and survived them all.

Bertrand Russell fought to save the world from the horror of nuclear war.

He had done much to change the course of philosophic study, but to most people he was a figure of opposition--his own opposition to many beliefs during his long life and others' opposition to his views.

He was best known as an advocate of civil disobedience who urged people to demonstrate against war, nuclear armaments and racial discrimination.

Advanced years did not diminish his fervour, and just before his 95th birthday in 1967 he organised the Bertrand Russell International War Crimes Tribunal -- unofficially and without legal standing -- in Stockholm. The Tribunal found America guilty of committing war crimes, in Viet Nam, and its Allies guilty of being accomplices.

Only last December he appealed to the U.N. Secretary-General, U Thant, to back an international war crimes commission to investigate the alleged "torture and genocide" by Americans in South Viet Nam.

He was reviled in his early years as a crank because of his views on pacifism and sexual freedom. Even as an octogenarian and nonagenarian he was mocked--and revered--for his views on the Cuban missile crisis, on the threat of the hydrogen bomb, and the Viet Nam war, and was thrown out of academic posts.

At the age of 90, he sat in the roadway to back his opinions, only to be hauled away to jail again, but gently.

In his later years, Bertrand was called "pro-communist" and "anti-American". A series of lectures on the British Broadcasting Corporation in 1945 were described by Moscow Radio as "the howling of a wolf".

THREE PASSIONS

In that year, he was reported as saying if communism could only be swept away by war, he would accept war in spite of all its destruction.

When his views on communism later mellowed, he lobbied the Soviet Government over the fate of an imprisoned student and raised with Premier Nikita Khrushchev the position of Jews in Russia.

He described himself as "never a good Victorian".

In his autobiography published in 1967, he said three passions had governed his life: "the longing for love, the search for knowledge and unbearable pity for the suffering of mankind".

"I have sought love, first, because it brings ecstasy so great that I would often have sacrificed all the rest of life for a few hours of joy", he said.--AP & Reuter.

"The Guardian" said that Russell's death will bring home the fact that his philosophical work has already taken its place alongside such greats as Descartes, Leibnitz and Kant.

"The Times", in a massive four-column obituary, said: "Bertrand Russell had a secure place in history. There exist no disciples of Russell. Instead there exist scores of inquiring philosophers driven by questions which Russell was the first to ask."

BERTRAND RUSSELL: A LIAR?

- (32) The following article appeared on page 2 of the Oct. 29, 1956 edition of the Daily Express (London).

Bertrand Russell is called a liar today by the Federal Bureau of Investigation.

The 84-year-old English philosopher has written a sizzling attack on the F.B.I. in a preface to a book due out tomorrow.

The book, a new edition of "Freedom Is As Freedom Does," is by 54 year old Corliss Lamont, Left-wing New York lecturer who has appeared several times before congressional committees.

Russell accuses the F.B.I. of employing "spies and agents provocateurs" and of creating "a terrorist system" in the U.S.

Informers are safe, he says, "so long as they continue to do the dirty work. But woe betide them if they repent."

What says the F.B.I.? "We decided we should never add dignity to the name of Bertrand Russell by making an official statement." said a Washington spokesman.

"The history of the F.B.I. will be published in two weeks' time. It is accurate and will stand in sharp contrast to what Russell said - a complete falsehood."

BR's foreword to Lamont's book is reproduced in RSN30-9 (May 1981).

BOOK REVIEWS

- (33) Ryan's "Bertrand Russell, A political life," reviewed by John Campbell (London Times Literary Supplement, July 1-7, 1988) ...with thanks to KEN KORBIN.

Bertrand Russell stood for Parliament three times in his long life - once in 1907 as a Liberal and twice in 1922 and 1923 for Labour. In the former case he stood specifically as a Suffragist in the rather special circumstances of a by-election at Wimbledon; while after the war he was careful to select true-blue Chelsea as a safe platform from which to make his gesture of support for Labour with no possibility of winning. When he did make a serious attempt in 1910 to secure the family pocket borough of Bedford, the local committee very wisely rejected him. For Russell was not in any normal sense of the word a politician at all. He could never co-operate happily in any sort of organization. His one experience of trying, in the No Conscription Fellowship in 1916-17, cured him very nearly for life of the ambition to try again; his presidency of the Campaign for Nuclear Disarmament in the late 1950s ended equally acrimoniously.

So Alan Ryan's subtitle is ambiguous. "A political life" normally implies a biography of a politician from which the personal and private life has largely been excluded. Alternatively it may mean a specialized study of one particular aspect of a varied career. Ryan's meaning is closer to the second, except that Russell, though not formally a politician, lived, wrote and thought for most of his life within a framework that was always in the broadest sense political. His format is in fact a clever device for allowing him to write freely about

the public Russell, whom most of us are interested in, leaving out on the one hand the mathematics and most of the philosophy and on the other all Russell's tortuous emotional and marital entanglements. Having thus cleared his ground, he has written an enjoyably lucid, shrewd and critically admiring assessment of the old goat's extraordinary mixture of clear-sighted and cock-eyed ideas.

Russell's political thinking was founded on his philosophical work: the authority with which he spoke and wrote on politics derived partly from his mathematical achievement, partly from his rank and pedigree. He belonged, as Ryan puts it, to two overlapping aristocracies, of birth and of exceptional talent. He was born not merely into the Liberal purple - his grandfather was Lord John Russell, his godfather John Stuart Mill - but into the radical tradition as well: his parents were prominent advocates of birth control and his midwife, debarred by the prejudices of the day from attending him as a doctor, was Elizabeth Garrett Anderson. For most of his life, however, Russell's radicalism was in some tension with his intellect. He lost his position at Trinity College, Cambridge, as a result of his opposition to the First World War, and gave away most of his money. He was thenceforth obliged, in order to support wives and children (and for several years from 1927 his experimental Beacon Hill School), to earn his living by his pen. Though he chafed at not

being able to get on with his serious work, most of his enormous output of political writing, over half a century from 1916 to the late 1960s, was written for money and therefore at least partly with the deliberate intention to shock.

Hence there are two Russells, expressing often contradictory views in quite distinct tones of voice. Russell One is the sober liberal - rational, sceptical and humane. Russell Two is a wild railer against the iniquities of the world - strident, personalized and foolishly exaggerated. Ryan actually distinguishes a third, the utopian preacher; but this is only the positive aspect of the hell-fire prophet. Both equally lack the intellectual rigour of what one would like to call the "true" Russell. The point is, for those who only remember him in extreme old age squatting intransigent in Trafalgar Square and, later still, violently denouncing American "genocide" in Vietnam through the mouth of his sinister disciple Ralph Schoenman, that the second Russell did not emerge only as an aberration at the end of his life but had been present throughout: as early as 1915 he was capable of alleging that the bishops supported the war because they hoped to get large dividends from their armament shares. He was always liable to spoil a good argument by intemperate personal abuse. His religious agnosticism, for instance, was quite rationally founded; yet his loathing of organized religion became so intense as to be at times disturbingly religiose itself.

The rationalist's desire for a faith was one of the springs of Russell's thought. This, Ryan suggests, was what initially drew him to mathematics: he wanted to discover the fundamental structure of things. He very early saw through the political flaws and economic errors of Marxism; but he understood its appeal as a secular religion, even though it was not for him. As an old liberal anti-tsarist he initially welcomed the 1917 revolution; but a visit to Russia in 1920 only confirmed his horror of the infant Soviet Union's inherent tyranny. With equal realism, Russell the sober sceptic similarly recognized the futility of the League of Nations, in which so many of his high-minded liberal friends like Gilbert Murray placed such faith; but characteristically Russell the utopian preacher insisted not that the League was over-ambitious but that the only effective safeguard of peace would be a world government. Once seized of the idea, he did not deign to bother his head about how it could be brought about. In Russell's mind shrewd *Realpolitik* coexisted bewilderingly with blind utopianism.

The dilemma that most exercised Russell all his life was the classic liberal dilemma of late nineteenth-century liberalism threatened by collectivism: how to secure for the many the freedom enjoyed by the few without thereby destroying it; how to preserve the intellectual integrity and cultural inheritance of the educated élite (which Russell prized more than anyone) in the face of advancing democracy (which he also supported); how to reconcile, in the terms of one of his best and most thoughtful political books, *Freedom and Organisation* (1934), the freedom of the autonomous individual with the necessary regulating organization of the State. So far as domestic politics were concerned, this sense of conflicting imperatives led him by the early 1950s to a really very sensible, if unexciting, Lib-Lab compromise: in particular his belief in the fundamental importance of education, and his own experience of running a private school, led him to place great value on pluralism against the monopolistic claims of the all-powerful State. But he had never really been a socialist even when he had joined the Independent Labour Party and stood for Parliament. He had declared himself a guild socialist as a sort of best-of-both-worlds fudge between Marxism and anarchic syndicalism. He really only called himself a socialist because he believed that capitalism caused war; and from 1914 on, the prevention of war was what animated his political passion.

In truth he was not very interested in domestic politics at all: Ryan points out that he never wrote anything between the wars about unemployment. It was the Great War which changed

his life, wrenching him out of his comfortable Bloomsburyish Cambridge niche. He joined first the Union of Democratic Control—writing a superb demolition of the *entente* policy of Sir Edward Grey—then (though he was already too old himself to be called up) the No Conscription Fellowship; he lost his job at Trinity and in 1918 was sent to prison for “insulting an ally”—the United States. (In six months inside, we are told, he read 200 books and wrote two.) For the rest of his life it was war and the increasingly monstrous threat of war that continued to trigger the emotionalism, extravagance, name-calling and, in the end, absurdity of Russell Two.

In 1936 Russell published the silliest of all his books and the only one he himself explicitly disavowed a few years later, *Which Way to Peace?*, an openly defeatist tract in which he argued that war would mean the certain end of European civilization and that therefore conquest by Hitler was the lesser evil. In reaching this conclusion Russell was influenced by the widespread expert consensus that (as Baldwin expressed it) “The bomber will always get through”. Heavy bombing of cities in the first days or hours of a war was expected to produce panic and the rapid disintegration of civil society. It is odd to find the habitually maverick Russell thus tamely accepting the received wisdom; as Ryan points out, he failed to consider either the prohibitive cost in aircraft of delivering such a knock-out assault or the possibility of mutual deterrence as an alternative to surrender. It was not because he was a pacifist. Russell was never a pacifist. He had no absolute objection to the taking of life, if the likely end justified the sacrifice. Back in 1900, he had defended the Boer War on the ground of Britain's civilizing mission: a British victory over the Boers would, he believed, advance the larger interest of the human race; therefore the war was justified. Forty-five years later, notoriously, when the Americans had the atom bomb but the Russians had not, he seriously proposed an American pre-emptive strike against the Soviet Union to prevent them acquiring it. Throughout his life Russell judged the issues of war and peace against the loftiest measurement of the future of humanity—as he reckoned it.

His attitude to both Russia and America changed little over his life: at least the poles between which his attitudes veered remained consistent. Russell Two hated them both equally. His virulent anti-Americanism did not make him in the least pro-Soviet: Russell One was quite clear that CND was no place for fellow-travellers. He was not “soft on Communism”; yet more powerfully than as the headquarters of world Communism, the Soviet Union always remained in his imagination the

cruel, backward imperialist Russia of the tsars. Loathing America, however, Russell One nevertheless simultaneously for a substantial period looked to the United States as the only possible guarantor of peace and the nucleus of his projected world government. In the mellow decade after 1945 when he began to age gracefully into the role of sage (“a new Voltaire?” Ryan asks, before emphasizing the differences), receiving the Order of Merit and a Nobel Prize for Literature, he actually supported the creation of Nato. Then, however, from about 1954 (when he was eighty-two) he began to age disgracefully into the raving old monomaniac of the Bertrand Russell Peace Foundation and the Vietnam Tribunals. Ryan is as kind to this sad coda as he can reasonably be; but he tellingly illustrates how far Russell Two had by the end slipped the last restraints of Russell One by quoting some of the uncritical idealization of the Vietcong that—if he did not actually write it—went out over his name. (Ryan judges that Russell did know broadly what he put his name to.) Hitherto Russell, even when at his most outraged by the iniquity of governments, whether British, Russian or American, had been scrupulously impervious to the sentimental fallacy of imputing special virtue to the victims of invasion or oppression. At the end he fell for it hook, line and sinker.

He thus brought himself down to the level of the very mindless slogan-chanting rabble he had, as one of the greatest living embodiments of Intellect, all his life most furiously despised. He should have died a decade sooner.

Yet for all the follies, contradictions and absurdities he catalogues—and that is largely omitting the distinctly unlovable human frailties of his private life—Ryan cannot suppress his admiration for Russell. Even Russell Two at his most egregious has a magnificent zest for life which is infectious and life-enhancing. What he said was ultimately less important than how he said it and the fact that he bothered to say it, insisted on saying it and went on saying it in the teeth of the condemnation of the righteous. It comes back, of course, to his aristocratic self-confidence in his right to speak out, addressing American Presidents, for instance, from Woodrow Wilson to Lyndon Johnson, with a lordly assurance of equality. Who can pretend to such self-confidence today? And for what values would a modern Russell speak? He was an extraordinary survivor from the high age of Liberalism into the world of nuclear war and mass extermination. Russell's liberal instincts, even when impractical, even when on occasion chillingly lofty, were rooted with absolute certainty in a morality, a faith in human possibility that we have lost. Who, in our cynical age, now speaks to overweening governments with such certainty?

(34) Ryan's "Bertrand Russell, A political life," reviewed by Oliver Conant in the Village Voice's Literary Supplement (November 1988)...with thanks to WARREN SMITH.

This modest, serious book by political historian Alan Ryan is a guide to the remarkably various views of Bertrand Russell. Ryan's prose—sober, dispassionate, donnish—can't hope to compete with the flash and sparkle of Russell's own style. However, anyone who welcomes the chance to be reminded of what Bertrand Russell meant in the world could do no better than to read Ryan's careful examination of his lesser-known but fascinating essays, pamphlets, and books. He has also provided well-researched commentary on Russell's astonishing public life—or was it lives?—as “polemicist, agitator, educator and popularizer.”

Despite Ryan's disclaimer that he has not written a biography, *Bertrand Russell* covers Russell's aristocratic and liberal upbringing; his qualified feminism; his courageous agitation against World War I, for which he served time in jail; his trip to the

USSR, which resulted in one of the earliest and harshest accounts of the course of the Russian revolution, *The Practice and Theory of Bolshevism*, written in 1920; his utopian educational ventures in the 1930s; his stormy visits to the U.S.; and the last two causes with which his name was associated, the Campaign for Nuclear Disarmament and the movement against the war in Vietnam.

Ryan most admires Russell's “refusal to grow old, calm down and become respectable.” Russell's vigor was in evidence throughout his long public life. When, in 1916, he threw in his lot with the group of young English pacifists called the “No-Conscription Fellowship,” he was already 44, with an established reputation. But Ryan's book is no hagiography. Russell's faults—his tendency to demonize his opponents, his polemical excesses and recklessness, his ar-

rogance, what Ryan tellingly calls the “curious thinness” in his argumentative style—are kept in plain view. Ryan deplores Russell's sentimentalized depictions of the Vietnamese (which, he notes, contradicted a long-held scorn for doctrines asserting the superior virtue of the oppressed) and his support for the Vietnamese Communists. To depict them as the leaders of a “purely indigenous movement of national liberation, with scarcely a communist in their ranks,” was, Ryan writes, “either disingenuous or self-deceived, or both.” It was also self-defeating, since it allowed his opponents to claim that he had become senile. Ryan himself is far from believing anything of the sort—in “War and Peace in the Nuclear Age,” he acknowledges fully the presence of Russell's observations on the barbarous American conduct of the war in Vietnam, and asks, movingly, “At the age of ninety-

three or ninety-five, what more could he do than cry out against the horror and lend his prestige and his name to those who seemed most energetic in combating it?”

Bertrand Russell was a man of volatile combinations: a rebel-aristocrat, a passionate rationalist. One of the more disquieting impressions to emerge from Ryan's “political life” is how reckless a man he could be, the extent to which he veered between extremes, capable of advocating “virtual anarchy at one moment and a completely controlled society at the next.” Yet Russell consistently attempted to write and speak as a free intelligence, a task that was passed on to him by the great 19th century liberals and radicals, including his own godfather, John Stuart Mill. In an atmosphere as fouled with aversion to liberalism as ours, a man like Bertrand Russell is in danger of seeming irrecoverably alien.

BR RECOLLECTED

(35) Victor Lowe reminisces, in the Baltimore Sun (6/16/74, p.K3). Our thanks to HARRY RUJA:

Tea with the 'Mad Hatter'

By VICTOR LOWE

When Bertrand Russell was at Harvard University for the fall term of 1940, he looked like the Mad Hatter. We met ~~but had no real talk.~~ But in the summer of 1965 I did want to talk to him very much. I was in England to research the life of Alfred North Whitehead, the philosopher whose work had first drawn me to Harvard where I became his student in 1929. Russell had been his student in the Nineties as an undergraduate at Cambridge University, and later—before Whitehead moved from mathematics to philosophy—his intimate friend and his collaborator on the monumental, three volume "Principia Mathematica." He wrote me from his home in North Wales that he would be happy to see me there; he had a fair number of Whitehead letters that he would let me copy. (A bonanza, for Whitehead was a notorious non-letter-writer—unlike Russell who wrote letters incessantly.)

The house in which he had lived for the last nine years, Plas Penrhyn, stood above and behind the oddly charming, fake-Italian resort town of Portmerion, where I put up at the hotel. The house was smallish, but pleasantly secluded from the road by beech trees and with a magnificent view of mountains, Cardigan Bay, and the Glassyn River valley.

I never saw a servant there—then or at a later visit. Lady Russell opened the door and brought tea into the living-room. She was in her 60's, a small, attractive woman, civilized and utterly devoted to him. A peace-button in her lapel declared: "I like Bertrand Russell." Edith Finch was his fourth wife. As a woman once said to me, "four wives isn't many for a man his age."

As I looked at Russell I thought, "How he has shrunk!" But age had miniaturized rather than changed him. His hazel eyes were as direct, his jaw as firm or firmer above the wrinkled neck. He had lost nothing except that look of the Mad Hatter. His only visible concession to age was in wearing slippers instead of shoes. But why shouldn't an earl wear slippers in his own house?

His wife wore a hearing aid; Russell, she told me later, should have worn his too, but he could not adjust it. (His incompetence with mechanical contraptions was legendary.) My speech is naturally slow, however, and in our talks

Dr. Lowe is professor emeritus of philosophy at the Johns Hopkins University, and the author of "Understanding Whitehead."

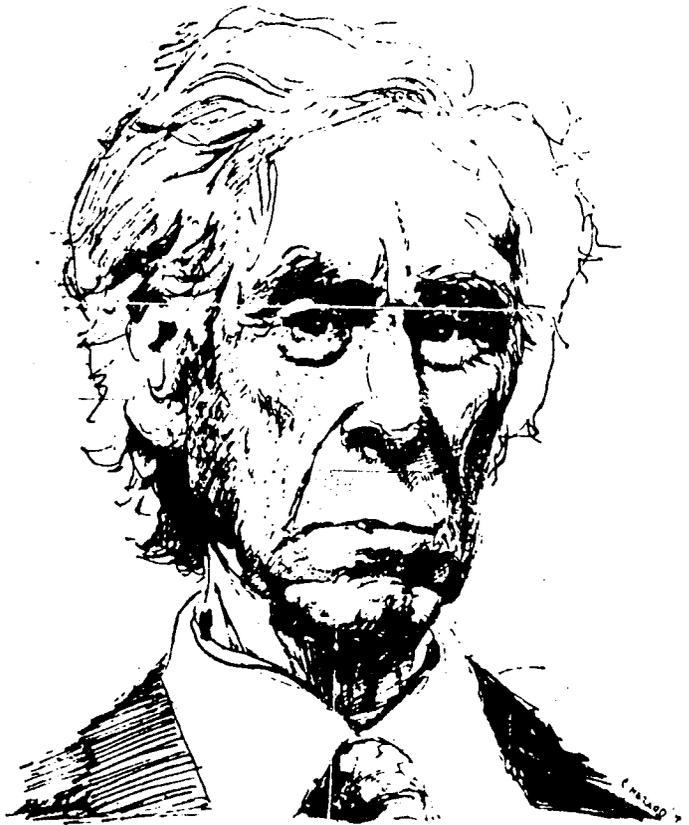

he missed but one word—Xerox. I had rashly assumed that there would be a Xerox machine not far away with which Russell's secretary and I could copy the letters quickly. When I mentioned this dream to explain why I had left my portable typewriter in London, he only said, "You can use mine, in my study," and took me upstairs to a small, plain room. The typewriter was a Remington Noiseless, apparently one of the first of its kind; but it worked, once you learned its tricks and manners, and I was glad to humor it.

Whitehead, Russell said, had been a superb teacher. As I copied the letters of the "Principia" years, I became convinced that the teacher-pupil relationship had not wholly disappeared. At 30 Russell was unhappy, easily discouraged. I was struck by the frequency with which Whitehead praised the work that Russell had sent him. But their work could not have been so good if Whitehead had been soft in his criticisms. He was not. One letter, interestingly, had not been saved in toto: there were only two sentences.—"Everything, even the purpose of the book, has been sacrificed to making the proofs look short and neat. It is essential, especially in the early parts, that the proofs be written out fully."

I could not ask Russell directly what he had destroyed, but I did ask why he had saved those two sentences. "Because they show that the fullness of 'Principia' is due to Whitehead." In his "Autobiography," published two years later, Russell quoted the first sentence for another purpose—to show that as his first marriage began to disintegrate his unreal state of mind made even his mathematical work defective. I think, however, that in his treatment of many subjects Russell was always neat and often too short; considerations that would interfere with a simple, witty conclusion did not get considered.

I came back to Russell's house the next morning to go on copying. A pretty, barefoot teen-ager let me in. When I asked if she was a granddaughter she answered pleasantly, "Oh, there are hundreds of us." Around noon he came into the study to see if I was comfortable and to apologize for not asking me to lunch. Then he took me out through the garden and showed me a short-cut through a cow pasture to my hotel.

In the afternoon we talked for an hour. Russell's speech was deliberate, never hurried. His voice usually rose at the end of a sentence, as if to say: this is the truth, period. No groping for words; Russell, the most highly verbal-

Bertrand Russell

Charles Hayward, Sunpapers/ARTIST

ized man I have known, thought entirely in them.

Naturally, he could not answer half the questions I asked about the Whitehead he knew 60 years earlier. As to when their collaboration started he could only say, "It grew up." When he was quite specific (and, as it turned out, accurate) about the sums that the Royal Society, he, and Whitehead had put up towards publication I thought, "What a memory, at 93!" However, I later found the same figures in his autobiography; they were part of a story with a witty punchline, the sort of story that one finds oneself reeling off by rote—a good conversational set-piece.

At Harvard, some people called Whitehead a saint. I asked Russell, who has often mentioned Whitehead's great kind-

ness to him, whether he thought it was the right word. "No," thoughtfully. "Whitehead was a complicated man." "Saint," he pointed out, "is a religious word." His voice rose. "And I don't like religion!"

At the time of their collaboration Whitehead, like Russell, believed that there were no rational arguments for God's existence, and called himself an agnostic. The agnosticism did not last. Russell said that the death of Whitehead's son in the war "made him want to believe in immortality." As Russell knew that Whitehead when young had almost become a Catholic, I raised the possibility that he had always wanted to be religious. Russell dismissed it: "I suppose that when Whitehead professed to be an agnostic he really was one." It seemed to me, though I did not say so,

that human beings can be more complicated than Russell would allow.

Russell first went to prison for pacifism in World War I. The Whiteheads had two sons in the service. Whitehead himself did some mathematical work for the war effort—from a sense of duty, and with a heavy heart. Russell's only comment was, "It must have given him some happiness, or he wouldn't have done it." Yet Russell told me emphatically that there had never been a break between them. I believed him. Letters I had copied not only showed how strongly the Whiteheads disagreed with his pacifism, but their strong sympathy when he was persecuted for it. The letters were quite moving.

I was surprised, though, when he told me with equal emphasis that Whitehead had never influenced his philosophy. Both publicly and in our correspondence he had fully acknowledged his debt to Whitehead in the early development of his philosophy of science. I silently concluded that Russell's denial simply expressed his rejection of Whitehead's later work.

Russell himself always felt it both a duty and a pleasure to expose and denounce wrongdoing by governments. There was pride in his voice when he said that one of his ancestors had his head cut off by the king.

At the end of the second day, I looked in on Russell and his family to say thank you and good-by, and then let myself out the side door, to the garden and the cow pasture. Just inside the door, a table held a neat stack of outgoing letters. The one on top was addressed to Ho Chi Minh.

I was next in England in 1967 on a leave of absence from Johns Hopkins, and anxious to see Russell again. He invited me and my wife to tea at Plas Penrhyn on a Sunday in early May. Lady Russell brought us in. Before my mind full of Whitehead, I had not noticed in the hall the Epstein bust of Russell before which my wife stopped, delighted. In the same way, I had only seen the living-room as pleasant, liveable and uncluttered. It was also—my wife tells me—full of beautiful things, from the rare old Chinese scroll paintings to the exquisite Eighteenth Century teacups. On a table there were tall tulips with unusual blue markings. "How lovely! What are they?" Neither Russell nor his wife knew. "We must ask the gardener." But it was a courtesy answer. Gardens were not their subject.

Russell's appearance had not changed in two years. His wife, pointing to a round, filled pipe-holder, told us that he had smoked them all since breakfast.

When my wife had last seen him, in 1940, she felt an aura which suggested that he did not suffer fools gladly. In awe, she could say nothing but, "Yes, Lord Russell," and "No, Lord Russell." Now that was gone. Within two weeks of his 95th birthday, he looked civilized, engaging, and not above a bit of gossiping about people they had both known and who could no longer be hurt. They could and did gossip.

She admired the unusually heavy gold watchchain across his vest. "My grandfather had one like it," Russell said. "This one belonged to my grandfather, Lord John Russell." He touched it, and spoke the name proudly and affectionately.

There was an echo of the same feeling when the talk drifted to his first and most distinguished mistress, Lady Octoline Morrell, a duke's daughter who had married a commoner. "We understood each other," he said unselfconsciously. "You see, we were both aristocrats."

We had been asked to stay for an hour, but to our delight were kept an extra 30 minutes. Neither of us saw Bertrand Russell again, but I sent several letters with further questions about Whitehead; at decent intervals, for I respected his preoccupation with peace. He answered them all. Russell was a kind man.

There is much to be said for calling him the English Voltaire, as many did when he died in 1970. His reaction to suffering was pity and great anger, he had exclaimed to me, "Men take their greatest pleasure in killing other men!" He was a man of great courage and goodwill and a brilliant man—but not a meditative one. His incorrigible wit got in the way, and demanded exaggerations of reality.

It is not the meditative mind, but the simplifying, fighting one that gains a big following. I saw the size of Russell's when the centenary of his birth was celebrated two years ago at McMaster University in Hamilton, Ontario, where the Bertrand Russell Archives are kept. It drew an amazing crowd. Since Russell was an important philosopher, the author of about 70 books, and a man who could not open his mouth without scolding against hypocrisy and respectability, professors, bibliographers, journalists, and simple acolytes all celebrated together. Some of the proceedings would have made him laugh, but I think that on the whole he would have found that big show highly gratifying. Unlike Whitehead, he relished publicity. And I think, odd though it seems when one considers his accomplishments, that he never ceased to need praise and encouragement.

RELIGION

(36) From Wisconsin State Journal (5/13/88) and Freethought Today (7/88, p.24):

Tutu right for wrong reason

By Annie Laurie Gaylor

Archbishop Desmond Tutu is a great human being, and one whose personal charm and warmth seem irresistible. But as a feminist and a freethinker, I also feel greatly disappointed in his message.

I am sure many other non-Christians who applaud his cause, but who were forgotten by him during his Madison visit, also felt estrangement.

Tutu asks us to base our commitment to equality and justice not on human values, but on adherence to the dictates of supernatural authority. The elderly black woman walking down the dusty streets of Soweto deserves "not just respect but reverence," he said, because she is "God's child." His views, he said, are not adopted as "a political ideology but on the basis of Scriptures. You and I and all of us for the sake of the survival of our global village home have to oppose apartheid and racism and injustice wherever we find them."

In the historic pattern of the powerless, Tutu has adopted the religion of his oppressors. The oppressed often desperately hope that, if one of their own could be accepted as a mouthpiece for God, the oppressors

Gaylor is editor of Freethought Today, a newspaper published by the Freedom From Religion Foundation, Madison.

Guest column

would finally listen.

Tutu seeks to persuade not on the justice of his cause, but on the authority of a religion whose patriarchal, hierarchical values created the very oppression he seeks to end.

Bertrand Russell once noted: "Cruel men believe in a cruel God and use their belief to excuse their cruelty. Only kindly men believe in a kindly God, and they would be kindly in any case." Clearly, Tutu is a kindly man who could only believe in a kindly god. Because Tutu is kind, he sees only the kind references in the Scriptures he upholds so passionately. But basing a movement of human liberation on the Bible is like building on quicksand.

Even conventionally religious Winnie Mandela notes in her book "Part of My Soul Went With Him": "... the white man came with a Bible in one hand and a gun in the other; he gave the black man the Bible while taking his land. He taught the black man that when master hits the one cheek, you turn the other. And while the white man was enjoying his heaven on this earth, he wanted us to believe we would have our share of the fat of the land in the next world."

Historically, Christianity has supported and upheld slavery, segregation

and racism. Abolitionist Theodore Parker once remarked that if the whole American church had "dropped through the continent and disappeared altogether, the anti-slavery cause would have been further on."

Other than the Unitarians and Quakers, mainstream churches were Johnny-come-latelies in opposing slavery. Mid-1800s estimates reported 80,000 slaves owned by Presbyterians, 225,000 by Baptists and 250,000 by Methodists. Tutu might be interested to know that Anglicans probably owned most of the rest of the nearly 4 million blacks held in slavery at the beginning of the Civil War.

Why was this, and why is the church the backbone of apartheid in South Africa? The Bible from which Tutu claims all authority for racial equality is riddled with laws, endorsements and commandments for slavery.

Exodus 21 contains barbaric orders for slavery and punishment of insurrection. Jesus' parables tell of slaves justly whipped and "delivered to the tormentors" (Matthew 18:34). Paul tells slaves to honor their owners (Tim. 6:1); servants are told to obey with "fear and trembling" (Titus 2:9); "Servants, be subject to your masters in all fear" (1 Peter 2:18). Paul even turns in a runaway slave (Epistle of Paul to Philemon).

My sermon to Archbishop Tutu is this. If you look to an authority outside yourself, outside the human mind

Desmond Tutu

and heart, you will never solve any injustice. Injustice is created by human beings (often in the name of religion); justice must likewise be created by human beings. When you argue from authority, you must remember that there will always be an opposite authority. When you say "God" grants us freedom and equality, you are talking like a slave, and, Mr. Tutu, you of all people are not worthy of that.

Social justice is not right because a Big Daddy tells us so — it is right because our human reason and compassion tell us so. The elderly African woman walking down that dusty road does deserve respect and reverence, not because she is "God's child" but because she is a human child.

ABOUT BERTRAND RUSSELL

(38) More on the Mad Hatter, from Martin Gardner's "Annotated Alice". Thank you, TOM STANLEY.

"It is impossible to describe Bertrand Russell," writes Norbert Wiener in Chapter 14 of his autobiography *Ex-Prodigy*, "except by saying that he looks like the Mad Hatter . . . the caricature of Tenniel almost argues an anticipation on the part of the artist." Wiener goes on to point out the likenesses of philosophers J. M. E. McTaggart and G. E. Moore, two of Russell's fellow dons at Cambridge, to the Dormouse and March Hare respectively. The three men were known in the community as the Mad Tea Party of Trinity.

This is Tenniel's caricature

ABOUT RUSSELL'S WRITINGS

(39)

From the Philadelphia Inquirer (8/2/53, p. 19, Society). Our thanks to HARRY RUJA.

Russell, 81, Tells Stories With Twinkle

SATAN IN THE SUBURBS. By Bertrand Russell. (Simon and Schuster. 148 pp. \$3)

MATHEMATICIAN, philosopher and Nobel Prize-winner.

Bertrand Russell, in his 81st year, presents a new facet of his versatile powers in this slender volume of short stories.

While he would hardly merit handsprings from the public for the present achievement alone, many readers will wish to read these tales, not only for their special charm and wit, but because they are, after all, from the pen of one of the world's leading citizens.

There are four short stories here, and a novelette which bears the book's title. All are odd, unclassifiable. There is a marked Victorian or "old-fashioned" flavor to the prose, but with an added element—which might be called the twinkle in an octogenarian's eye.

The tales appear to stem from a familiarity with a host of writers: Beerbohm, Dumas, Bronte, Haggard, Stevenson and others of the pre-20th century school of story-telling. Some readers will

detect the Voltairian touch and, too, the influence of H. G. Wells.

Russell, in his preface, states, "Each of them was written for its own sake, simply as a story, and if it is found either interesting or amusing it has served its purpose."

No one will deny that entertainment is the book's main purpose. The pen-and-ink drawings by Asger Scott, which embellish the tales, are particularly good, and suggest that more publishers might employ the services of illustrators.

1989 MEETING: NYC JUNE 24,25

HAVE YOU MAILED YOUR RENEWAL DUES?

RUSSELL SOCIETY NEWS

No. 61

February 1989

- (1) Highlights: Annual Meeting 89: program (2), arrangements (4). Ayer interview (33). BR reviews Schweitzer book (13). Early renewer Honor Roll (19). Are your dues overdue? (24). 15-Year Index of BRS newsletters (32). High praise (unintended) from *Punch* (3). Lamont's new book (25). Moorhead's *Meaning of Life* (26). Recommended reading: *Opposing Viewpoints* (18). Ryan's *Bertrand Russell: A Political Life*, reviewed by Galbraith (8), Goodman (10, Hampshire (5), Kramer (6). The Index is at the end. An asterisk in the left column = a request.

ANNUAL MEETING (1989)

- (2) June 23-25, 1989, NYC. The theme: *Reality vs. Illusion: Death, War and the Problem of Skepticism.*

Friday, June 23...at Milford Plaza Hotel

4-6pm Registration
 7:30-8:45 Welcome, Presentation of 1989 Book Award, and "Russell's Political Life"
 8:45-9:00 Coffee break
 9:00 Board of Directors Meeting [all members welcome]

Saturday, June 24...at Ethical Culture Society (Social Hall)

8-9am Registration
 9:00-10:00 Russell movies, tour of NYC, or possible panel on "Skepticism and the Positive Rule of Illusion"
 10:30-10:45 Coffee break
 10:45-11:45 General Meeting
 12:00-1:30 Lunch
 1:30-3:00 Paper: Alan Ryan, Princeton University
 "Russell's Pacifism"
 3:00-3:15 Coffee break
 3:15-4:15 Paper: Marvin Kohl, SUNY at Fredonia
 "Understanding the Pragmatics of Pacifism"
 5:00-6:00 Red Hackle Cocktail Hour

Tentative program----->

8:00 Banquet...at Milford Plaza Hotel
 9:00 Presentation of 1989 BRS Award to Paul Edwards
 Talk: Paul Edwards, CUNY at Brooklyn
 "Voltaire and the Role of Skepticism"

Sunday, June 25...at Ethical Culture Society

9:30-10:30 Paper: Tim Madigan, *Free Inquiry*
 "The Rationality of Waging War"
 10:30-10:45 Coffee break
 10:45-11:45 Paper: Michael Rockler, Rutgers at Camden
 "Skepticism and Education"
 12-1:30 Lunch
 1:3--6:00 Open Possible paper:
 "Russell's Optimism about the Future"

ABOUT BERTRAND RUSSELL

- (3) High praise (unintended), from *Punch* (5/17/67, p. 702), with a bow to HARRY RUJA:

According to the founder of the new Havelock Ellis Society, "all of us are members of the Abortion Law Reform Society. My wife and I are also members of the Family Planning Association, The Homosexual Law Reform Society, and I'm an executive of the Vegetarian Movement." Gather ye rosebuds, chum; it can only be a matter of days before Lord Russell makes a takeover bid.

Page 23 -- with Dora Russell's obituary in the London Times -- is missing from this issue, the result of a printing foul-up. The last two paragraphs of the obit. appear on Page 24. We will include the entire item in the next (May) issue.

ANNUAL MEETING (CONTINUED)

ETHICAL CULTURE SOCIETY
2 West 64th Street
New York, NY 10023

MILFORD PLAZA HOTEL
270 West 45th Street
New York, NY 10036

Registration Fee = \$65.00 (Includes Banquet)

Single Day Registration: Saturday = \$15.00

Sunday = \$10.00

Students and Senior Citizens pay no Registration Fee
Banquet = \$40.00

(4) Arrangements----->

To register, use Registration Form on blue top page of this newsletter

Please mail completed Form and Registration Fee (payable to BRS '89)
by May 15th to:

Professor Michael Rockler
Department of Education
SUNJ Rutgers at Camden
Camden, NJ 08102
609-757-6051

To reserve a room at Milford Plaza Hotel:
from any State except New York State: 800-221-2690
from NY State: 800-522-6447
from New York City: 869-3600

Rate = \$80.00 Single, \$90.00 Double. Identify yourself as a Bertrand
Russell Society member to get the reduced rate. Reserve by May 15th

Alternative accommodations: West Side YMCA, 5 West 63rd Street, New
York, NY 10023. One block from Ethical Culture Society. 212-787-4400

BOOK REVIEWS

- (5) Bertrand Russell: A Political Life by Alan Ryan, is receiving a great many reviews. We included three of them in our last issue, and have four in this one. The great number of reviews of this book indicates the great interest in Russell that continues to exist 19 years after his death.

Author Alan Ryan will present a paper, *Russell's Pacifism*, at the BRS Annual Meeting, the afternoon of June 23rd.

Here is Stuart Hampshire's review, in the *New York Review of Books* (2/2/89, pp. 7-9):

Engaged Philosopher

Bertrand Russell: A Political Life
by Alan Ryan.
Hill and Wang, 226 pp., \$19.95

Stuart Hampshire

International politics since about 1938 has had one feature in common with the stock market: the major events have proved to be unpredictable, or at least they have not been predicted by the experts. In guessing the future, one would have done just as well to go to a fortune-teller or to try a crystal ball. Some examples of the major turning points have been, listed in no particular order: the Molotov-Ribbentrop Pact, Erhard's *Wirtschaftswunder* in West Germany, the

erection of the Berlin Wall, the success of Sputnik, the Sino-Soviet split, Khrushchev's introduction of missiles into Cuba and the ensuing crisis, the eclipse of the Communist party in France, the recent Palestinian uprising and its successful prolongation. It is not surprising that the experts and commentators are usually caught off-guard, explaining the change in retrospect in various plausible sounding styles. We have no general theory, even of the roughest kind, that might

point to the mechanisms of political change, or that might pick out salient tendencies and suggest to us what we should expect in international affairs in the next year or two.

In his very pleasantly written and enjoyable book, Alan Ryan often has to say that Bertrand Russell's analyses of international politics at particular moments, and his expectations based on the analysis, were plainly wrong, particularly during the later part of his life, in his seven-

ties, eighties, and nineties, when he was disappointed, embittered, and angry, and when he was unwilling any longer to write in measured tones. But when they are judged by the criterion of successful prediction the wise commentators, calm editorial writers, and careful political analysts in my reading have not done much better than Bertrand Russell or Proust's M. Norpois.

From 1914 onward, Russell immersed

himself in a sea of uncertainties because the horror of the war had implanted in him an intense and unappeasable sense of public responsibility. He could not bear to think of the suffering and the immense and continuing waste of life attributable to political stupidity. Yet his autobiography shows that the search for certainties was the driving force in his intellectual experiences, and the center of some of his strongest emotions. There is therefore a strangeness in the story that Ryan has to tell of the masterful philosopher of logic who turned himself into a political commentator and militant activist.

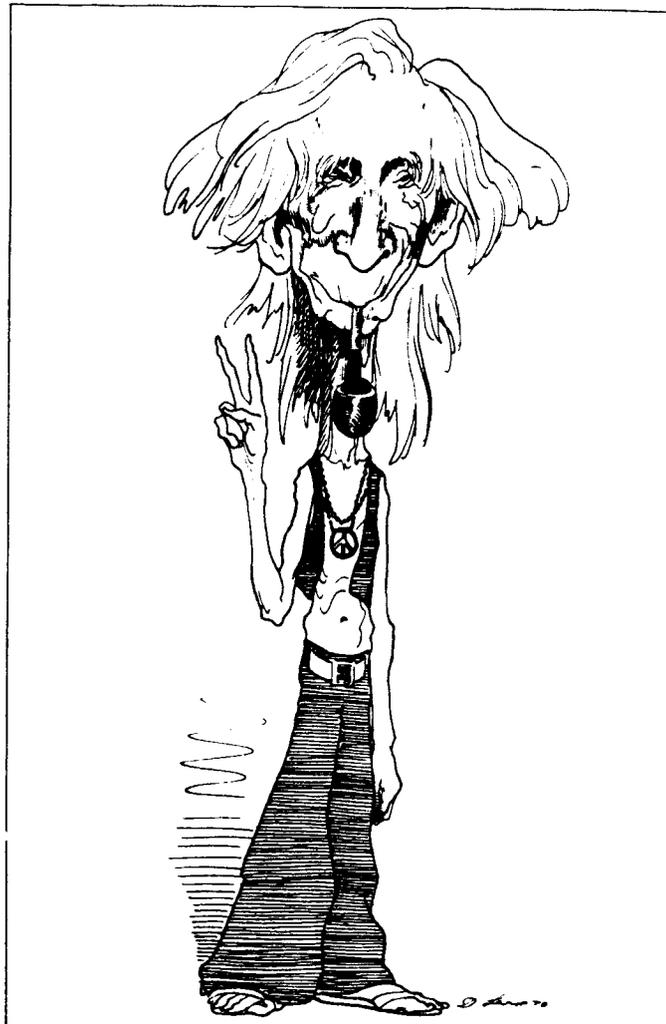

The response of ordinary men and women to the outbreak of war in 1914 provided the dividing line in Russell's life. Their normal response in Britain was one of resolute cheerfulness, optimism, steady loyalty, and a readiness to endure the unanticipated ghastliness of the trenches almost without comment. Even now it is difficult to read about the battles of the Somme or Nivelle's offensive or the battle of Passchendaele without amazement, because in World War II only the battles on the Eastern front could show an equal profligacy in the waste of lives in an ocean of suffering. Privately educated among aristocratic radicals, and self-consciously the heir of a famous tradition of liberal reform, Russell had an outlook upon the world that had been set in a final mold in Cambridge; and this was the Edwardian Cambridge of Sidgwick and of G. E. Moore, which at the time seemed likely to be entirely secure in the propagation of its values far into the tranquil future, and at least as long as the British Navy policed the seas. That the great movement of democratic reform in the preceding century had led up to the catastrophe of hate, destruction, and unthinking nationalism that occurred in 1914, that the mass of the population in Britain, and particularly of the working population, accepted the facts of modern mechanized warfare without protest—both these considerations led Russell to change his way of life, and to become a permanent and active enemy of established moral values. Estranged from his friend and collaborator in the great *Principia Mathematica* of 1910, A. N. Whitehead, and from many of his colleagues at Trinity College, Cambridge, having lost his fellowship there, and imprisoned for his antiwar activities, he became henceforth a prophet of Enlightenment as well as a philosopher, and supported himself by his writing outside the shelter of British universities.

In explaining Russell's public life after 1914, Ryan emphasizes the confidence, and the sense of natural leadership and political responsibility, that Russell derived, perhaps only semiconsciously, from his aristocratic birth. This is no doubt part of the truth, and Ryan cites evidence from the correspondence with Ottoline Morrell, the daughter of a duke, whom Russell had for some years loved and who was always an intimate friend. I believe that his prophetic role had another and more direct source in his intellectual formation at Cambridge. It would be an exaggeration to say that throughout his life he always found it difficult to take any man seriously who was not educated at Cambridge, but not too much of an

exaggeration; Oxford University and the United States, for example, he viewed with a suspicion and distaste which sometimes were half-humorous attitudes, but also half-serious. England was the country to which he was fiercely attached, as he declared in his autobiography, and attached with an undisguised chauvinism. This left foreigners in second place, even while they conveyed their admiration of him as logician and as philosopher from all over the world. Within England Cambridge was his spiritual home, and, after his parents died early in his life, he had had no conventional home that could compete with Cambridge in his memory. He always retained the manner of one who had as a young man belonged to an intellectual elite, a manner that was characteristic of those who had belonged to the secret

plainly felt a contempt for uneducated people which is entirely at odds with the sentimental profession of solidarity with humanity's offerings which opens his *Autobiography*. The assertion that Darwin was worth thirty million ordinary men is not easy to reconcile with the claim that "Echoes of cries of pain reverberate in my heart."

I believe that there are two misunderstandings here. First, there is a confusion between, on the one hand, allegiance to liberal and socialist values and, on the other, a respect for the voice of the people and for the opinions of the majority. There generally is not in fact any correlation between these two attitudes, and I cannot see why such a correlation should

society of the Apostles in its heyday.

Russell's pastoral attitude to the mass of mankind, his sense of superiority and of responsibility and his lack of shame in expressing them, seems to me to have been on the whole reasonable and not to have been at all malign in its effects. Here I am in part disagreeing with Ryan's interpretation of Russell's political philosophy and of some of the reasons and motives behind it. He remarks that Russell

be expected. Secondly, there is, I believe, a misunderstanding of Russell.

Russell early in his life experienced an intense response to the beauty of intellectual order. He found that he was happiest when he could discern hard, rock-like patterns of thought that stand out distinctly and unmistakably in a rarefied air, at a great height of abstraction and away from ordinary objects, and from their

casual associations. The *Autobiography* describes his joy in following Euclid as a child. This joy in intellectual order permeated his whole life and it could be heard in the accents of his speech and in the shape of his sentences. When he gave the first, and easily the best, set of Reith lectures on a public theme on the BBC, under the title *Authority and the Individual* (1949), a very large audience listened with pleasure to the flow of abstract argument. His own love of clarity and order, alive in his sentences and in his voice, made the logical abstractions seem as concrete as chairs and tables. It was a feat of popularizing argument unequalled in my experience, because it was so evidently spontaneous. From childhood to old age, chairs and tables, the actual or apparent furniture of the world, were never as real for him as logical structures, and in these broadcasts he was just opening a corner of his private world to the public.

A passion for intellectual order, and an emotional response to the beauty of abstract ideas, ranked and linked together, is one possible model of a philosopher, the model that Plato promoted as his ideal. Perhaps Plato himself half conformed naturally to this ideal, and half felt contrary temptations, temptations to diversions and digressions, to the play of imagery and to literary experiment and to storytelling. The wholehearted Platonic philosopher, like Russell, is unavoidably aristocratic in his attitudes, because he rejects received opinions and unexamined prejudices, and, above all, he hates demagoguery. Hating demagogues and bad arguments, he is unlikely to show respect for their victims in the populace at large, who perpetually ensure by their credulity that specious arguments are profitable. In oligarchic societies, as in Plato's Greece, or in mid-nineteenth-century England, it was unnecessary to pretend to respect the opinions and judgments of the majority, and Macaulay and Matthew Arnold, for example, were in this respect Russell's companions in making no pretense of admiring ordinary men, as opposed to arguing against the social system that oppressed them. But since 1918 in Britain, and in the age of Lloyd George and of H. G. Wells, liberalism and populism became increasingly associated as naturally marching together. Following the successes of popular conservatism in the US, Britain, Israel, and elsewhere, we now know that *vox populi* only rarely and in exceptional circumstances—after a war, for instance—proclaims the supremacy of liberal values. Russell certainly looked down on the majority of his compatriots as the largely helpless victims of hired opinion makers and Establishment hacks. This did not prevent him from feeling agonized by the waste of lives through wars and through avoidable poverty.

In 1896 six witty and clear lectures delivered at the recently founded London School of Economics were published under the title *German Social Democracy*. This was Russell's first entry into social philosophy. He rejected Marx's labor theory of value and he was shrewd and amusing in his assessment of Ferdinand Lassalle's leadership of the Socialist party in Germany. The years of great philosophical achievement followed: *Principia*

Mathematica, written with Whitehead (1910, 1912, 1913), and *The Problems of Philosophy* (1912), a small masterpiece. His practical radicalism and militancy began with the No-Conscription Fellowship in 1915. He was never to look back and to recapture the comparative calm and philosophical detachment of his late Victorian and Edwardian years. Immediately after the war he published some philosophical work of permanent value, for instance, "The Notion of Cause," a chapter in *Mysticism and Logic* (1918), and *An Introduction to Mathematical Philosophy* (1919), and he returned to thinking about philosophy in the late Thirties. *An Inquiry into Meaning and Truth* (1940), the outcome of this late thought, has passages that are still of great interest to philosophers.

From 1918 until Russell's death in his nineties, there is a continuous flow of books and articles and lectures on every aspect of public policy: on education, peace, and armaments, on marriage and sexual morality, on the future of science and its social effects, and on the nature of happiness. The orderly and elegant sentences, and the even pace of the arguments, never fail and the occasional cackle of wit, so characteristic of the man, at intervals relieves the prose. Written in ink to the accompaniment of many cups of tea, Russell's manuscripts, at least in this later period, have very few erasures. He wrote, as he talked, within an iron frame of rational order. Unexplained uncertainty, muddle, and ambiguity are nowhere to be found. As a matter of taste, they were an offense to him when he observed them in public institutions and he could not tolerate them in his own thought. Precisely this splendid virtue was often in the long run a defect in his political writing, because it seemed that many of the uncertain features of the real world, muddled as it is, had slipped through the silken net of his lucid prose, as he reflected on education or on international relations or on monogamy and sexuality. Even many of his admiring readers felt that they were often presented with an idealized, Platonic equivalent of life in place of life as it is actually and confusingly lived. But this is certainly not true of *The Practice and Theory of Bolshevism* (1920), which is a masterly anticipation of the evils to come in the Soviet Union, based on a visit there; nor is it true of *Freedom and Organisation* (1934), an original survey of ideas and personalities between 1815 and 1914, written with the aid of his third wife, "Peter" Spence.

Russell reviews these popular writings of Russell's middle period, before the Second World War, with a light touch, half admiring, half critically detached, which seems entirely just and in harmony with the material. A free-ranging intellectual certainly had a role to play in those years of Stanley Baldwin's rule in Britain, alongside Bernard Shaw, Aldous Huxley, and, rather earlier, G.K. Chesterton. Russell's strength was that, unlike the other three, he had a fully articulated and coherent philosophy to support his wit and his iconoclasm. He was not merely teasing the bourgeoisie with Irish mockery, as Shaw was, or playing with the para-

doxes of religious conversion and of rationality, as Chesterton genially liked to do. He did not flirt with his public, and he did not try to be genial, which are strategies for concealing the operations of the intellect from a population that will otherwise resent these operations. He had a defined philosophical position, and a largely unchanging one, and everything that he wrote flowed, directly and without concealment, from the central tenets of his philosophy, which was a theory of knowledge developed early in his life while he was working on the foundations of mathematics. A decent human being is a person who discards or suspends all accepted opinions that, when examined, are seen to have no tested and secure foundations, either in logic or in empirical evidence. The search for secure foundations of knowledge is the first duty of man, and it is the only way to approach any serious issue, whether of public policy or of private happiness. Once the limits of human knowledge concerning an issue are fixed and clear, love and loyalty and kindness should then hold sway.

Russell had abandoned the rigorous study of philosophy because Wittgenstein told him in Cambridge after the war and the Armistice that his search for the foundations of knowledge, whether mathematical or empirical, was a mistake, a misconception of the nature of knowledge, which did not have foundations. Wittgenstein was later to show that knowledge grew in a less clearly marked and a more untidy way, and nothing could be done to make it more tidy. Russell was so impressed by the evidence of Wittgenstein's genius that he thought that he was probably right, and he preferred not to start to think about philosophy all over again. This would be painfully to repudiate his own past and to disavow his own most steady commitments. Much later, in *Human Knowledge, its Scope and Limits* (1948), he returned to his old epistemological habits, and there were several occasions when he fiercely denounced the influence of Wittgenstein within philosophy. Wittgenstein by his example had converted many analytical philosophers, particularly in Britain, from the pursuit of logical rigor to the recognition of the value in philosophy of informality, of inconclusiveness, of respect for the idioms of common speech. In Russell's philosophy the idioms of common speech deserved no respect, because they embodied only the people's ancient and prescientific ignorance, "the metaphysics of the Stone Age." Russell was probably as much disappointed by the eclipse of "scientific philosophy," as he had conceived it long ago, as by the survival of national ambitions in politics. He was lonely in his last decades, his visions rejected as unreal and his hopes as unrealizable, both in philosophy and in politics.

Ryan gives a stirring account of Russell's determined reentry into platform politics after World War II. "During the 1940s," Ryan writes, "he was almost isolated... in his insistence that America must use her monopoly of nuclear weapons to create a world government armed with the power to destroy any country which tried to create nuclear weapons of its own,"

even if this meant war with the USSR.

The bombs would fall on Leningrad and Moscow in the cause of perpetual peace. This was the low point of Russell's political thought, the consequence of his habit of abstract calculation without any concrete imagination of people walking on the earth and soon to be burned alive. After the Soviet Union acquired nuclear weapons, he was a leader in the Campaign for Nuclear Disarmament and of the campaign of protest against the Vietnam War.

Ryan does not conceal or defend the injustice and the violence of language of some of Russell's anti-American utterances. Like Freud, Russell often felt an intense antipathy to American civilization and to the forms that the unrestrained pursuit of wealth had taken in the US. When the US embarked on a cruel war that could not be seen as a defense of a vital national interest, he ceased to be just in his calls for justice, and he talked nonsense about the nature and intentions of the Viet Cong.

Finally, Ryan gives an admirably balanced account of the Cuban missile crisis and of the extraordinary historical moment in which Khrushchev and Kennedy, replying to telegrams from Russell urging a compromise, presented their arguments to the world "through the sitting-room of a ninety-year-old philosopher." Ryan remarks that Russell knew that his role in the episode was almost accidental, but that he enjoyed the feeling of being at the heart of events. He then states the moral that the whole book skillfully conveys: the significance today of Russell's sustained efforts to provoke thought on public issues, and particularly on the issues of war and peace; Russell's involvement and participation, in spite of all the hostility and derision that he aroused.

Democracy has its overriding virtues, first of all, the virtue of preventing an oligarchy or dictatorship from monopolizing, or nearly monopolizing, power over a long period of time without the majority of the population endorsing this monopoly; and power here includes the power to make war. This primary virtue brings with it a secondary virtue, that of comparative efficiency in government, because the government has periodically to satisfy the voters in some essential respects, which include at least seeming efficiency; and this is not true of oligarchies and dictatorships. On the other hand, democratic institutions are often praised for virtues that they manifestly do not possess. There is an ideology of democracy that is as deceiving as the ideologies of capitalism and of communism. This ideology suggests that, given democratic institutions, the people as a whole, through their representatives in the Congress, and perhaps also through public opinion polls, are able to make their wishes known on the acceptability of any specific risk of war when it arises.

In a slowly unfolding war, such as the war in Vietnam, this may not be a wholly unrealistic suggestion; even if the publicly available information is deceptive, public opinion can still have a substantial effect, and in fact it did so in that case. But there is at present no certain way in

which the popular will can be brought to bear through a democratic process on a decision between peace and war, if that issue arises unpredictably from a confrontation of armed forces in the field, in the air, or at sea. There has not so far been a debate in the political arena to determine why US administrations have been unwilling to accept a no first-strike policy, and on the dangers of confrontation without such a policy. From the standpoint of the safety of the US population, and with all the risks and probabilities computed, this caution about adopting a policy of no first use may be the right policy. But also it may be wrong, and the risk of wholesale destruction of most of the population and its habitat are at issue.

The recent presidential election could not allow a question of this gravity to come up for debate, if only because the candidates could not afford to seem "soft on defense"; and most voters recognize constraints such as this in a spirit of controlled contempt for such democratic elections. Demogogy rules at that time and will continue to rule. Who then will raise the issue of first strike if not lone and obstinate intellectuals, not ashamed of their obstinacy, such as Russell and Sakharov (who has taken a clear position against first use)?

Conservatives in the US and in Britain and in the Soviet Union will of course continue to call these interventions ignorant and unrealistic, and then will go on to denounce the interference of intellectuals in politics. It is true that dissident intellectuals, doing what Russell did and Sakharov still does, do not have access to the information that the government and the chiefs of staff possess, and that their protests must be to this extent ignorant and unrealistic. But they raise the questions, and without them there would be little or no public questioning of the wisdom of the elected administrations and their chiefs of staff. This is surely an uncomfortable thought when the survival of many nations, and also of future generations, is at stake: not only uncomfortable, but contrary to the intentions embodied in the American Constitution.

The intention of the Founding Fathers was that the decision to declare war should always be part of a democratic process and should be taken by the elected representatives of the people. If the modern technology of war makes this utopian and impractical, as it probably does, at least the delegations of the power to respond to attack should be made matters for public discussion. For example, can the commanders of submarines with nuclear weapons maintain communications with Washington in an accidental confrontation, or must they be given unchecked responsibility? One thinks of the *Vincennes* incident in the Persian Gulf, when an Iranian civil aircraft was shot down by an American cruiser by mistake. It is not only the superpowers who will be at sea and in the air with nuclear weapons.

Ryan ends his book with a retort to those who are inclined to sneer at Russell's protests against the war in Vietnam when he was ninety-three years old. Let them ask themselves, he writes, how well they have lived up to the injunction not to

follow a multitude in assenting to evil. Russell was a philosopher and, like Plato and Spinoza, he never had the slightest inclination to follow the multitude in any direction; this was part of his strength

and contributed to the exemplary value of his life. But the key word in Ryan's retort is "assent." Russell and Sakharov belong to the rare type of intellectual who does not just acquire a scientific or

scholarly reputation, and then, pleading lack of expert knowledge, leave the future of the species to be decided by their rulers without their unscholarly questionings and protests; they did not

passively assent, either in their earlier creative scientific careers or later as responsible human beings. However one judges relevance, Ryan's story is relevant to the political dilemmas facing us now.

Mischief and Bad Judgment

By HILTON KRAMER

Is there something about the vocation of philosophy in our time that debars even superior minds from holding wise or decent or reasonably informed political views? The evidence of the present century suggests some unpleasant answers to this question. Jean-Paul Sartre, for many years the most famous and influential philosopher in Europe, was notoriously profligate in embracing at one time or another virtually every form of leftist totalitarianism that came to power in his lifetime, and his intense hatred of bourgeois democracy remained undiminished to the end. Martin Heidegger, by common consent one of the great philosophical minds of the century, took up the Nazi cause at the very moment when it was beginning to destroy—along with much else—the intellectual life of his native Germany. Even our own much-admired Hannah Arendt, who had so much to teach us in her great work on "The Origins of Totalitarianism," was reported to be so fearful in her last years about fascism coming to power in the U.S. that she spoke of seeking refuge in Switzerland. Clearly, a talent—or even a genius—for philosophical reflection is no guarantee of either political wisdom or, as these cases attest, political common sense.

It is in the life and work of Bertrand Russell, however, that we encounter the most protracted example that this century has to offer of a first-rate philosophical mind repeatedly adopting political views

that so often proved to be utterly capricious and contradictory where they were not simply odious. Given Russell's intellectual eminence and the world-wide attention that his political views were so often accorded over a very long period—he lived from 1872 to 1970—it is surprising that Alan Ryan's new book, "Bertrand Russell: A Political Life" (Hill & Wang, 226 pages, \$19.95), is the first to be devoted to the subject of the philosopher's politics.

Now that such a book exists, it is easy enough to see why better minds than Mr. Ryan's have in the past shied away from a subject that turns out to be, even in this sympathetic account of it, far more bizarre than most of us have suspected.

Consider some of the more spectacular episodes in Russell's political history. In the '30s he urged the British to submit to a Nazi invasion since resistance, in his opinion, was certain to result in the destruction of European civilization. (The assumption was, of course, that Hitler's triumph would not.) In the '40s, when the U.S. still enjoyed a monopoly on atomic weapons, he argued for a pre-emptive strike against the Soviet Union. By the 1960s, however, he had decided that, as Mr. Ryan writes, "The sole cause of evil in the world was American imperialism." And along the way there were many similarly obtuse pronouncements—e.g., that Harold Macmillan, the British prime minister, was "much more wicked than Hitler"; that the CIA had caused President Kennedy's assassination; and that "the American gov-

ernment [in the 1960s] was genocidal."

In his earlier years, to be sure, Russell had occasionally written with keen insight about some of the pivotal political developments of the time. In the most important of the books he wrote on politics, "The Practice and Theory of Bolshevism" (1920), he gave the world a prompt and stunning analysis of the totalitarian character that had marked the Soviet regime from the outset—an analysis that Russell himself afterward ignored, when it suited his political outlook to do so, most appallingly when in his last years he attacked the Soviet Union, as Mr. Ryan duly reports, "for excessive timidity in supporting national liberation movements, and demanded Russian intervention on behalf of the Vietcong, and in support of Cuba, the Angolan independence movement, and the Palestine Liberation Organization into the bargain." In the end, as Mr. Ryan writes, Russell believed that "Russia's chief duty was to send arms and advisers to every anti-American cause wherever it might be found."

How are we to account for this lamentable and often ludicrous record of political

By Alan Ryan

mischief and bad judgment" Russell was

clearly no totalitarian himself, but he wasn't much of a friend of democracy either. His responses to the grave political crises of his time tended to be either utopian or defeatist—to favor some all-embracing solution, such as world government, or to settle for a brutal imposition of power. Reading Mr. Ryan's melancholy chronicle, one has the sense that the real life of politics didn't finally interest Russell very much. He was impatient with its processes, contemptuous of its institutions, and full of snobbery and disdain for the kind of people—so much less cultivated and intelligent than himself—who served in its ranks.

Mr. Ryan, a British academic now teaching politics at Princeton University, is not an ideal guide to this dismal history. For one thing, he is too much in awe of Russell's genius (and genealogy) to be really critical of his subject's almost unbroken record of failed judgment. And for another, Mr. Ryan himself so completely shares the standard left-liberal views that held Russell's mind in thrall in his dotage that he cannot see beyond them. As he acknowledges in his preface, "it would be idle to pretend that I find Dean Rusk, General Westmoreland, the editors of *The New York Times*—or Lloyd George and the War Office of 1916—as sympathetic as Russell." What he has given us is a labored defense of a political record that is largely indefensible.

Mr. Kramer is the editor of *The New Criterion*.

HOW can you not like a book that offers the following characterization of the illustrious Bertrand Russell's notorious inconsistency? "There is nothing like a timely death to lend vigor and consistency to a life's work. Russell had to contend with staying alive; and by the time he was ninety, consistency must have seemed to him less like the hobgoblin of little minds than the hallmark of a short life."

Philosopher At the Barricades

BERTRAND RUSSELL
A Political Life

By Alan Ryan
Hill and Wang, 226 pp. \$19.95

By John Kenneth Galbraith

I AM NOT quite sure whether Ronald Reagan has legitimized resort to personal anecdote or been a warning against it. Risking that it is the first, I begin with one.

I have shared with Bertrand Russell an association with Trinity College, Cambridge, over many years—his as a lecturer, prospective fellow (the fellowship offer was withdrawn

John Kenneth Galbraith is Paul M. Warburg professor of economics, emeritus, at Harvard University.

Bertrand Russell

because of his inconvenient agitation against conscription in World War I, when he also went for six months to Brixton gaol) and later as a much cherished fellow; mine, for some 50 years, first as a frequent visitor to economists

at the college and later as a fellow and honorary fellow.

One of my visits was in 1945 or 1946, when I took a day or two off from public business and came down from London. Reading matter was scarce in those stringent years, and on the way I checked the newspaper stalls in vain. At Trinity I found, to my delight, a large volume inscribed "To The Old Guest Room from Bertrand Russell."

My pleasure did not last. It was a tract somewhat in the spirit of Velikovsky, alleging, to the best of my imperfect recollection, that human tenancy on this planet began in A.D. 200, when voyagers from outer space landed suddenly on what is now, in all probability, Soviet Armenia. All earlier history was the richly imagined construction of those who came after. I tried the book two or three times and gave up.

That evening at High Table I found myself, to my pleasure, seated next to Bertrand Russell. He asked where I was staying, and in telling him, I unwisely mentioned what I had been reading.

"Do tell me what you thought of it," he said in distinctly impressive tones.

I faced the moment of truth. It was a book evidently endorsed by a man large in my vision. It was also *that* book. I struggled and said, "I'm afraid I..."

—Continued on page 13

couldn't make a great deal of sense out of it."

"There is none whatsoever," said Russell, "but you would be delighted at how many, seeing my name, praise it inordinately."

My justification for this story is that this is very much the Bertrand Russell of Professor Ryan's book. (Alan Ryan is professor of politics at Princeton and taught earlier at New College, Oxford.) Russell was a man relentlessly in pursuit of the forgivable foibles, errors, inanities, aberrations and insanities of humankind, with perhaps some special attention to Americans.

Alan Ryan seeks on occasion, if somewhat unsuccessfully, to exclude Russell's more deliberate work in philosophy and mathematical logic. He is concerned with the political essayist and sometime participant in matters of religion and ethics; also the determined and even heroic opponent of British participation in World War I and very specifically the conscription of the young; also the man of diverse and, at the time, very challenging views on education, which were expressed both in writing and in the practical experience of running the perilously impoverished Beacon Hill school. Ryan concludes the book with Russell's opposition to Hitler and Stalin and his last years as a relentless advocate of nuclear disarmament and critic of American participation in the Vietnam war.

IT IS a fascinating and even breathtaking account. One marvels that anyone could write as much as Russell did and do so much in any one year or even in a lifetime that extended a full 98 years to 1970. Russell wrote to advocate, instruct and, over many years, also to make money, of which he was recurrently in need. The sheer volume, especially of the nonacademic writing, is a problem for Professor Ryan. There is simply too much to summarize, but he tries, and the reader is left at times with a feeling of the sketchiness of the comment as well as with a far greater number of textual references than anyone could possibly keep in mind.

Yet there is redemption. In nearly all this account one is struck by Bertrand Russell's prescience. On the inbuilt resistance to thought and accommodation of great organizations, public and private, he was far ahead of his time. And likewise on encouragement and excitement as opposed to discipline and punishment in education; and on sex and sex education; and extensively on religious orthodoxy; and on the supreme futility of the mass murder in World War I, then a treasonous view, now largely accepted; and on the repressive tendencies of comprehensive socialism and of Joseph Stalin; and on the nature and consequences of our intervention in Vietnam; and on the awful threat of the arms race and nuclear devastation. Not only did he

lead on these matters, but he went on repeatedly to education and agitation. In his last years the latter gave way to extreme and even incoherent condemnation, especially of the United States, some, perhaps much, coming from close associates who had appropriated his name. It is a warning to us all of the dangers of living too long.

As I've noted, the volume of Russell's writing is a problem for Ryan. So, in lesser measure, is the frequency with which Russell changed his mind. One reason he was so often right was that he abandoned with no hesitation any view that showed itself to be fragile or at fault. (Sometimes he apologized very decently to those he had earlier persuaded.) The first chapter, in which Ryan summarizes Russell's early and evolving liberalism, and the one following on "Religion, Ethics and Liberal Politics" are especially demanding, as the author covers a wide range of personal history and writing and must deal with changing views.

These problems apart, this is a very good book. One reads it with a certain chauvinist sorrow. An egregious intervention on religious and personal behavioral grounds in 1940 denied Russell a professorship at City University of New York. Had it been otherwise, we might have had him here in the United States for our even more intimate instruction for the next 30 years. ■

BOOK REVIEWS

- (10) Bertrand Russell: A Political Life by Alan Ryan, is reviewed by Walter Goodman in the *NY Times* (12/29/88). Thank you, SHOHIG SHERRY TERZIAN.

The Politics of the Philosopher

By WALTER GOODMAN

Insofar as the name of Bertrand Russell means anything to Americans today, it probably conjures up the gaunt white-haired patriarchal leader of sit-ins against the nuclear bomb and speak-outs against the war in Vietnam. In the closing decades of his long life, the British Nobel Prize-winner turned entirely away from his provocative and innovative work in philosophy, logic and education toward what he saw as life-and-death issues of the time.

In concentrating on the public figure, Alan Ryan makes a pertinent contribution to Russelliana. His analytic new book reminds us that Russell's "political life" began long before his emergence as a radical leader in his 80's and 90's. He came by politics naturally, as a descendant of an aristocratic family of liberal inclination. In Russell's 1896 work, "German Social Democracy," Mr. Ryan notes, the grandson of Britain's first Liberal Prime Minister carved out a position of his own on the political left: "He had no time for inherited power, doubted the legitimacy of landed property and thought universal adult suffrage the only tolerable basis of political authority; but he was no socialist. He felt no sort of solidarity with working people; and he thought that under any regime differential rewards for differential contributions would be required." In 1907, he ran for Parliament on a platform of women's suffrage.

Russell's first wholehearted plunge into politics came in World War I, which he viewed as "a lunatic enterprise" brought about by national envy. His unswerving opposition to the war in general and conscription in particular brought him a brief stay in jail. Mr. Ryan, a former Oxford don now teaching politics at Princeton, observes that here as elsewhere, Russell's views did not fit into established categories. Although he denied that self-defense was a sufficient reason for fighting a war, Russell was no pacifist. Mr. Ryan calls him "a conse-

Picture Parade, 1988

Bertrand Russell

quentialist." To put the case bluntly, the killing of large numbers of people was defensible if the good achieved was sufficient. But whatever his theoretical position, in practice Russell opposed war and favored a vague sort of world government.

In the 1920's, he stood as a Labor Party candidate for an unwinnable seat in Parliament but parted from much of the British left in his critical view of Russia's October Revolution. Although he opposed Allied intervention against the Bolsheviks, Mr. Ryan writes that he discerned in the new Soviet regime "old-fashioned Asiatic brutality, tsarist inefficiency and an attitude to Marxism which blended superstition and hypocrisy." He saw little hope for freedom under any Marxist regime.

Russell's attitude toward the United States was more ambiguous. He was attracted by liberal democracy but put off by a capitalism he saw as exploitive and potentially bloodthirsty. When he lost the offer of a chair at the City College of New York in 1940 under the pressure of the Roman Catholic Church and others who had been affronted by his writ-

ings on religion and sex, it could only confirm a distaste for America that would color his later views.

In Mr. Ryan's fair assessment, the 1930's were not Russell's brightest years as a political prophet. Guided by his belief that a second world war would mean the destruction of civilized life, he preached appeasement of the Nazis, a position he soon came to regret. He put his hopes for post-war peace in some sort of Platonic society — a planned economy that would combine American productivity and Russian authoritarianism.

After the Allied victory in World War II, when the United States had a monopoly on nuclear weapons, Russell, outspoken if not prudent, urged a war to end all war against the Soviet Union. Some years later he would conclude that it was the United States that was the true threat to peace, and he sought Soviet intervention in behalf of the Vietnam, Cuba and the Palestine Liberation Organization.

Mr. Ryan confirms that in his last decade of activism through the Campaign for Nuclear Disarmament and his impassioned opposition to the war in Vietnam and in favor of the Vietnam, Russell was influenced, if not controlled, by some of those around him. But the biographer makes a convincing case that the fierce hostility Russell displayed toward America was not an aberration of "extreme old age or thrust upon him by wild young men." Mr. Ryan finds the roots of his view that "the American government was genocidal, the police efforts pretty much on a par with the camp guards at Auschwitz and black rioting a justified response to a campaign of extermination" in his earlier writings.

What the generally sympathetic biographer considers alarming about his final years is the high proportion of abuse to argument (Russell called British Prime Minister Harold Macmillan more wicked than Hitler, then regretted doing so) and the habit of asserting disputed facts without any suggestion that they were open to doubt. Grievous charges against a philosopher — but then Bertrand Russell had long since moved away from that line of work.

"Cheer up, Gilbey—we're close to civilization!"

BY BERTRAND RUSSELL

- (13) BR reviews Schweitzer's book, *Civilization and Ethics*, in *The Dial*, April 1924. Thank you, TOM STANLEY.

DOES ETHICS INFLUENCE LIFE?

CIVILIZATION AND ETHICS. (*The Philosophy of Civilization, Part II.*) By Albert Schweitzer. Translated by John Naish. (Black. 10s. 6d.)

DR SCHWEITZER'S book is of considerable importance, and deserves to be read with care. The translator tells us that the lectures at Mansfield College, on which the book is based, were delivered in French, while the MS. was in German. The explanation is that Dr Schweitzer is an Alsatian; and this no doubt has given him a certain impartiality in the conflicts of our age.

Dr Schweitzer traces our misfortunes to a curious source: the mistaken belief that our views on ethics must be dependent upon our views as to the nature of the world. He greatly admires the Eighteenth Century, because of its enlightenment and optimism. But machinery and Darwinism and other modern improvements destroyed optimism about the nature of the world, and therefore (because of the above erroneous belief) also destroyed men's ethical optimism, though the outward form of optimism was preserved by degrading ethical valuations to the level of what were thought to be facts about the actual world. Hence our profound immorality, with all its attendant ruin.

Dr Schweitzer's own position is agnostic as to the real world. He is more or less Kantian both in this matter and in the belief that ethics can stand without any support from metaphysics. But

he does not follow the Critique of Practical Reason in using ethics to establish metaphysical conclusions. His ethics consists of a single principle, which he calls "reverence for life." This principle he carries almost as far as the Buddhists. He says that if you work with a lamp on a hot summer night you should keep your windows shut for fear of hurting moths; that if, on a wet day, you find a worm on the pavement you should pick it up and put it on damp earth; and so on. Nevertheless, he does not enjoin vegetarianism or condemn vivisection, though on the latter subject he has qualms. It is not clear whether he is an out-and-out pacifist, though he commends the Quakers as the only religious body which throughout the war remained faithful to the teaching of Christ. He holds, as against the Socialists, that private property and inheritance are sacred rights, which cannot be taken away without infringing his principle of reverence for life; though, of course, he goes on to say that it is our moral duty to use our property for the benefit of the community.

These positive conclusions are contained in the last few chapters; the bulk of the book is concerned in discussing European philosophers from Socrates to Count Kayserling, and affirming their inferiority to the philosophers of India and China, whom he does not discuss. One must suppose that these critical chapters appear to the author, and will appear to many readers, to afford a solid argumentative foundation for his own opinions. This, however, is not and cannot be the case: his criticisms all assume his own point of view, and are only valid if that is granted. For my part, I share

his opinions to a very great extent; but I should not attempt to give a basis for an ethical opinion by criticism of the stock philosophers. The argument that what ought to be cannot be deduced from what is, seems to me valid, and sufficient to condemn almost all European ethics and metaphysics, which have attained their "profundity" by confusing the good with the true. But it follows that when a man tells us "such-and-such is good in itself" he cannot advance any valid argument for his position, nor can we advance any valid argument against it. What passes for argument, on such questions, is really exhortation or rhetoric; and, for my part, I should prefer not to disguise this fact by an apparatus of irrelevant erudition.

There are two matters of importance on which I find myself in disagreement with Dr Schweitzer. One concerns his ethical criterion of reverence for life, and the possibility of using it to decide practical difficulties; the other concerns the causal importance of ethical opinions in relation to public events.

Life, in itself, seems to be neither good nor bad, and it is difficult to see why we should reverence it. We do not know how far the lower forms of life are associated with sentience; and, apart from sentience, living matter is ethically indistinguishable from dead matter. There are passages which suggest that Dr Schweitzer believes in hylozoism; he speaks of destroying an ice crystal in the same way in which he speaks of destroying a flower or a moth. But, if so, he falls into the error which he is chiefly concerned to attack, namely, that of founding his ethic upon a highly disputable metaphysic. He certainly conceives "life" in some more or less mystical way: he defends mysticism, and urges that ethics should be "cosmic." It is difficult to understand what he means by this, since human actions can only affect events on or near the surface of the earth. Physics is "cosmic" because it applies to the whole known universe; but ethics seems as terrestrial as geography, unless we assume some such view of the world as Dr Schweitzer rightly declares to be ethically irrelevant.

Passing by these difficulties, and confining ourselves to the higher forms of life, we find that they contain not only all that is good in the known universe, but also all that is bad. If reverence for life is the good, a tiger must be bad. If we assign to the tiger the same importance as to each of the animals that it kills, we shall kill

it in order to maximize life. We are thus committed to a calculus of causes and effects, just as the utilitarians were. All the usual justifications of war, slavery, and so on, become theoretically admissible, and must be examined on their merits, not dismissed *à priori*. This is not what Dr Schweitzer intends. He wishes us to decide each moral problem in some intuitionist way which is not clearly defined. He says: "Only the reverence of my will-to-live for every other will-to-live is genuinely ethical. Whenever I sacrifice or injure life in any way I am not ethical, but rather am I guilty, whether it be egoistically guilty for the sake of maintaining my own existence or wellbeing, or unegoistically guilty with a view to maintaining those of a majority." It follows that a man who kills a tiger is "guilty"; and yet Dr Schweitzer would not say that we ought to abstain from killing tigers. On this point he seems to have failed to think out his ethic, as also on the different degrees of intrinsic value attaching to different forms of life.

Finally, it is difficult to agree with Dr Schweitzer in the importance which he attaches to ethical opinions as a cause. If all the professors of ethics in all the universities of the world had taught his ethical system throughout the last one hundred years, I doubt whether one line of the Versailles Treaty would have been different from what it is. It is true that the ethical opinions of the average man have altered during the last century, but they have altered as a result of machinery, not of academic theory, and they have altered so as to justify what the average man was going to do in any case. Speaking causally, our ethics are an effect of our actions, not *vice versa*; instead of practising what we preach, we find it more convenient to preach what we practise. When our practice leads us to disaster we tend to alter it, and at the same time to alter our ethics; but the alteration of our ethics is not the cause of the alteration of our practice. Experience of pain affects the behaviour of animals and infants, although they have no morals; it affects the behaviour of adult human beings in the same way, but the change is accompanied by ethical reflections which we falsely imagine to be its cause. Dr Schweitzer's book is an example of such reflections. But neither it nor its academic predecessors seem to the present reviewer to have that importance in moulding events which the author attributes to them.

ABOUT BERTRAND RUSSELL

(14) From the *Detroit Jewish Chronicle*, 18 Nov 1927, with thanks to HARRY RUJA:

Bertrand Russell

It is eminently fitting that Bertrand Russell, coming to Detroit Saturday, should appear under the auspices of the B'nai B'rith. Those who have followed the writings of this greatest of all modern thinkers know that there is almost a family resemblance between the thought of Bertrand Russell and the thought of the best Jewish minds today.

This kinship of attitude and approach is no mere accident. Jewish thought today, wherever it has freed itself from the confining narrowness of ecclesiasticism, is intent upon just the sort of intellectual realism that makes Russell the philosopher of modernity. Accepting nothing that cannot be logically demonstrated, weighing all things that can be weighed by human understanding and viewing all the rest with an open mind—that is the mental attitude of Russell. And that is the mental attitude of the Jew today.

We would caution those who are familiar with Russell and his philosophy only from the chapter in the "Story of Philosophy" by Will Durant, that our English guest is not at all the cold thinking machine that the popular Mr. Durant makes him out to be. The thousands who have received that impression from Durant's book will, if they hear Mr. Russell during his tour of the United States, be very much surprised to find that he is really a high-strung, emotional man—a fact that does not emerge from his writings. He is the inspired mathematician, the poet of numbers. He knows and understands the emotions of man and gives them their due place in the scheme of things as they are.

In this he is again the uncompromising realist. He views science, not as an end in itself, but as a means to an end—an end that we do not, perhaps cannot know.

He is not deceived by the noisy blatanancies of our civilization. Human values transcend all other values in his philosophy. He allows the machine its proper place in society but he does not glorify the machine. Neither does he fall into the alternative error of egocentric pride. To him man is not the center of the universe but he is the center of his own little universe. He knows our human fears but he neither pities nor blames us for them, much less does he deride us, as some have seen fit to do recently. He is the scientist of the human mind. He observes, understands and records.

It will be obvious that in that respect Russell resembles Spinoza. Like the great Jewish thinker, he sees the universe as a vast machine of cause and effect, but, again like Spinoza, he does not jump to the conclusion that the problem of human life and its meaning is solved by that phrase. Spinoza has been called the

"God-Intoxicated man." Russell, too, experiences a sublime intoxication, but it is Science that intoxicates him. Not the methods of science, which change with every new problem, but the aim of science, the intellectual approach of science.

There is still another analogy between Russell and Spinoza. It has been said that "Spinoza's God was an atheist." So also is Russell's Science. It is not quite sure of itself. Which, after all, is the very quintessence of the scientific approach.

We have had occasion in these columns to commend Pisgah Lodge for its enterprising intellectual advancement programs. May we one more congratulate this splendid organization for having arranged to bring Mr. Russell to Detroit. The whole community owes Pisgah Lodge a rising vote of thanks.

BOOK REVIEWS

- (15) Whitewash. From *The Troubled Face of Biography*, Eric Homberger and John Charaley, eds. (NY: St. Martin's Press)...with thanks to PETER CRAMFORD. The following excerpt begins by referring to Tom Moore's *Life of Byron* (1830):

; but his work is

taunted by the un-Byronic timidity of the age in which he wrote, and our sense of what is missing is the more vexing because we know that Moore, and suspect that his executor, Lord John Russell, destroyed many of the documents on which it rests.

Later biographies of the nineteenth century are far worse. I confess that I never realised how far the Victorians were ready to go until I read the life of Lord John Russell's widow by her daughter, Lady Mary Agatha Russell, and Desmond MacCarthy (1910). Seldom can family piety have gone so far. None of the dramas and anguishes which Bertrand Russell makes so fascinating in his various accounts of his family (he was Lady John's grandson) is allowed to emerge. The result, necessarily, is that Lady John, one of the most remarkable women of her time, never for an instant comes to life, even though her biographers conscientiously follow Boswell and Moore by intruding as much primary material as they can lay hands on and fillet. The *Life of Lady John Russell* exemplifies the process by which Boswell's brilliant art was congealed, in pious hands, into the dismal official two-volume biographies which Lytton Strachey made it his business to discredit.

WITHOUT GOD

- (16) SOS has competition. AAARG! -- American Atheists' Addiction Recovery Groups -- "concerns itself with saving lives, not souls (whatever those are)." It calls itself "the only national alternative to the cultish Christian Alcoholics Anonymous." It is the second "substance abuse" organization to come to our attention. The first was SOS -- Secular Organizations for Sobriety -- which we reported on in RSN58-21. AAARG!'s address: P.O. Box 6120, Denver, CO 80206-0120. Thank you, JACK COWLES.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

- (17) Chairman, Harry Ruja; President, Marvin Kohl; Vice-President, Michael J. Rockler; Treasurer, Dennis J. Darland; Secretary, Don Jackanicz; Vice-President/Information, Lee Eisler.

RECOMMENDED READING

- (18) Opposing Viewpoints Series is a truly remarkable series of books on just about every controversial issue you can think of:

Abortion, Aids, American Foreign Policy, American Government, The American Military, American Values, America's Elections, America's Prisons, Constructing a Life Philosophy, Crime & Criminals, Criminal Justice, Death & Dying, The Death Penalty, Drug Abuse, Economics in America, The Environmental Crisis, Latin America & the U.S., Foreign Policy, Male/Female Roles, The Mass Media, The Middle East, Nuclear War, The Political Spectrum, Poverty, The Problems of Africa, Sexual Values, Social Justice, The Soviet Union, Teenage Sexuality, Terrorism, The Vietnam War, War and Human Nature.

Many books on controversial subjects are published in America, but not many get wide distribution, and usually sink without a trace. One of the surprising things about this series is that you will probably find at least some of the volumes in your own local library. We found them in two small branch libraries that we visited.

They seem ideal for use in high schools, for classroom discussions. They are also good reading.

The volumes present opposing viewpoints by competent experts. For instance, the volume, "Constructing a Life Philosophy", now in its 5th edition, includes an essay on Humanism by Corliss Lamont, one on Atheism by Madalyn O'Hair, and one, "Jesus Christ Gives Life Purpose" by Billy Graham. "Religion and Science" includes "The Church Should Not Have Final Authority in Science," by Galileo Galilei [1614], and "The Church Should Have Final Authority in Science" by the Roman Curia. It also presents opposing essays on "Are Science and Religion Compatible?", "How Did The Universe Originate?", "How Did Life Originate?", "Should Ethical Values Limit Scientific Research?"

Each volume has an admirable introduction by the publisher, David L. Bender, who discusses "Developing Basic Reading and Thinking Skills", skills which include "Evaluating Sources of Information", "Separating Fact From Opinion", "Identifying Stereotypes", and "Recognizing Ethnocentrism".

The 2 volumes mentioned above are paperback, priced at \$8.95, \$9.95 delivered; we ordered them by postcard from the publisher, Greenhaven Press, 577 Shoreview Park Road, St. Paul, MN 55126, and charged them to a credit card. Greenhaven's Spring 1988 Catalog shows a price of \$6.95; maybe you can buy them for less than we did. Greenhaven's phone: 1-800-231-5163

RENEWAL HONOR ROLL

- (19) A record number of members -- 149 -- paid their 1989 dues before January 1st. We are delighted by this fine showing, which gives the renewal-process a real head start. Here are the 149 early birds:

LOUIS K. ACHESON JR., CLIFFORD W. ALLAN, AURORA ALMEIDA, J. M. ALTIERI, JEAN ANDERSON, STEFAN ANDERSSON, IRVING H. ANELLIS, JAY ARAGONA, RUBEN ARDILA, J. BY BERTRAND RUSSELL

(20) A Guide For Living In The Atomic Age is the title of this article in United Nations World, November 1949, 3(11), 33-36...with thanks to TOM STANLEY.

WHAT is meant by "loyalty"? When is it a virtue, and when is it a vice? "Loyalty" may be defined as will to make personal sacrifices for the good of a group of which one is a member. Men can and do show loyalty to many different kinds of groups, of which family, nation, class, party, creed, are the most important. The first three are biological, the last three mental. Buddha, and the Stoics taught that we should feel loyalty to all mankind, and far their teaching has had an effect.

Is loyalty always a virtue? I should say emphatically No. It is common to think that all bad conduct springs from selfishness, and to infer that any conduct which has an unselfish motive must be good. But if by "good" we mean "likely to promote human welfare," then much unselfish conduct must count as "bad." Everything depends upon the cause to which sacrifice is made.

Broadly speaking, loyalty is undesirable when the group concerned has harmful purposes. A pirate may risk his life to save that of his captain, when it would be a good thing if his captain were killed. Similarly, a soldier may die for his country in an unjust war. The world would now be better than it is if, in the two world wars, Germans had been destitute of loyalty—at least so most people who are not German think. What can be said generally is that no group is likely to achieve any collective purpose, whether good or bad, unless most of the members of the group are loyal to it. It may also be said that loyalty in a good cause is not likely to exist unless blind unquestioning loyalty has become a habit. On this ground many people value loyalty regardless of its object. But I think that such people have failed to realize how much of what is worst and most dangerous in the existing world situation is due to this very practice of unquestioning loyalty, particularly loyalty to the national State.

Today it has become of the utmost importance to generate, if possible, new loyalties which transcend the boundaries of national states. But can loyalty be extended from the national State to a supra-national group of states? The problem is difficult both

politically and psychologically. Let us consider first what are the most usual or most potent causes of loyalty itself.

It is clear that loyalty has an instinctive basis; it exists in savage tribes. It seems to be natural to human beings to view members of their own herd with feelings that are friendly in the absence of specific causes of hostility, and to view everyone else with feelings that are hostile in the absence of special reasons for friendliness. Among savages the herd is small, and every member of it is known to every other; the basis of friendliness in this case is familiarity. Although, in a large modern nation, this basis is not so directly present, it still supplies a background. Members of the same nation, on the average, have more in common than members of different nations—language, ways of behaving, habits in eating and drinking, and so on. But, above all, they have the same enemies. Foreigners may always be a source of danger, and if this happens compatriots are likely to find themselves on the same side. Connected with the sense of danger is love of home. A hen will risk death by crossing a road in front of a car, because she feels safer at home. Human beings also feel safer at home and emotionally they feel as if all compatriots had the same home. This makes all compatriots lovable in times of danger.

In addition to the instinctive grounds of loyalty, there are others that have a more or less rational basis. The chief of these are common interests and common beliefs. Among groups generated by the former are pirate crews, invading armies, and companies for the development of backward areas; among the latter, political parties and religious sects. But loyalties of this sort are not very secure under stress, unless they have a backing in instinctive loyalty—a very obvious and compelling one to self-interest. It is this that makes the difficulty in generating a supra-national loyalty. The instinctive loyalty tends to remain purely national, and the remainder, so long as it is based upon reason and argument, is likely to break down just when it is most needed.

THE problem of supra-national loyalty differs according to whether the new unit is world-wide or is limited to a group which has, or may have, no external enemies. The Western Union or the countries in the Atlantic Pact may acquire unity and independence, from fear of Russia or Communism. Fear of external enemies has always been the most powerful source of social cohesion. It can be invoked, given adequate propaganda, whenever there is an obvious external common danger. But it is not easy to picture in this way a loyalty to the whole human race or to a world State.

Communists have to a great extent succeeded in creating among the non-Russian adherents a loyalty which is supra-national. They have done this in four ways: by a dramatic common creed; by inspiring hate and fear towards non-Communists; by completely rewriting history; and by a monopoly of all means of propaganda (including education and the press) wherever they have acquired power. These methods cannot produce a world-wide unity except by the complete victory of Communism. The methods are, in the main, such as non-Communists cannot adopt without being untrue to their principles. We must, therefore, look for other ways of producing a supra-national loyalty.

I THINK it should not be very difficult, in the course of fifty years or so, to generate a very reliable loyalty to a group such as the Western Union, or even to the whole of Western Europe and English-speaking North America. There is a considerable degree of cultural unity, produced first by the Catholic Church in the Middle Ages, and strengthened in our own time by science and scientific technique. There is (rightly or wrongly) a common apprehension of danger from the East. These causes have already given rise to a vigorous movement towards political union, and they should, before long, produce a corresponding degree of economic cooperation.

If a group of Western Powers are genuinely anxious to create a supra-national sense of solidarity among the nations composing the group, there are certain things that they must do. First, they must rewrite

the textbooks of history used in schools, which should become the same in all countries concerned. The new textbooks should lay stress on whatever cultural unity exists, and should minimize cultural differences. They should carefully abstain from glorification of any one member nation at the expense of any other. They should make past wars between member nations appear as foolish and senseless. And they should suggest that the nations composing the group should do great things for mankind in the future, provided they remain friends and not enemies.

Next, they should have a common flag and a common supra-national anthem. The Stars and Stripes and the Union Jack must no longer obsess themselves on the consciousness of children, and it must not be for "God Save the King" that we all stand up. But these powerful methods of emotional stimulation must not be discarded; they must merely be transferred to new symbols. I am sure the reader will feel a vehement resistance to this suggestion. I feel it myself. But the strength of our unreflecting resistance is the best proof of the necessity of the change that I am advocating.

THERE is another measure which may be desirable with a view to stimulating a feeling of unity, but which has its dangers. The unity of a nation is symbolized by a King or President, and a supra-national union, if it is to make an equally strong appeal, must also be symbolized by a person. In modern times such a person cannot be a King or Emperor, but must be an elected President. There are, however, two dangers. One is that the President might become a Führer; the other is that there might be jealousies and contests between the nations as to which of them the President should come from. To obviate the first of these dangers, I should give to the President only such functions as belong to our King. To obviate the second, I should decree that he must come from a country with a small population. Given these two conditions, I think the President should be chosen for life, prayed for in church, and saluted with a salute of more than twenty-one guns.

Loyalty to a group of Powers which is not world-wide can be much facilitated by methods which retard the advance to world unity. Fear of hostile groups is the main cause of such supra-national unity as now exists or is within the sphere of practical politics. To emphasize such fear in education and in political propaganda is one of the easiest ways of stimulating the sentiment of unity. Another is to preach the superiority of our own group of nations; for instance, by calling it the Christian group, and dwelling on the merits of Christianity as compared to other religions. Such methods of producing unity in a group, though they may be necessary for practical reasons, are to be deprecated in the long run, except in so far as they are a liberation from the tyranny of a narrow nationalism. Combinations of groups of nations are, I think,

very necessary for a number of urgent reasons, but only a world-wide unity affords any real solution of the appalling problems with which civilization is faced. And for the present the prospect of world-wide unity is very dim.

To GENERATE the kind of sentiment which (one hopes) will ultimately make world unity a real thing, first leaders and then populations must undergo a long process of re-education. We must learn to think and feel about mankind collectively. We must give our attention to the things that have been achieved by the human race: tools, fire, language, agriculture, art, science, industry, etc. We must emphasize both biological evolution and the diffusion of culture. The history that we teach to the young must show how, over and over again, civilizations have climbed to

a certain height, and then decayed by ossification or been destroyed by war. In economics, instead of laying stress on competition, we must show how wealth has resulted from co-operation in larger and larger units. The aim should be to create a new way of thinking for man as man, and a new definition of the ways by which he can more and more develop the world by which he is distinguished from the rest of the known universe. The result should be that, when any new thing is proposed, our first spontaneous reaction is to consider how it will affect mankind, not how it will affect this or that group.

ALTHOUGH our main hope should be on the hope of peace and achievement, there is still a place for the rational realization of danger. Do you wish the human race exterminated by atom bombs?

you content that we should continue to suffer from plagues and pestilence which a concerted effort could wipe out? Are you willing to look on passively while the population increases to a point at which an adequate food supply becomes impossible? Of such world-wide human problems there are many. They cannot be tackled at present, because no government effectively cares for mankind as a whole. If governments so desired, the young could be educated in a way which would make them vividly aware of such problems, and they now are of those affecting the safety of their own nation.

Before this can happen, however, we have a long way to go. It is nineteen hundred years since Christ said "Thou shalt love thy neighbor as thyself." I wonder how many more years it will be before people begin to think that this was sound advice.

CHURCH/STATE SEPARATION

(21) Adam Jacobs states his case:

Adam Jacobs
51 Clifton Ave., Apt. C-508
Newark, New Jersey 07104

December 17, 1988

- 2 -

Mr. Stephen W. Townsend
Clerk, New Jersey Supreme Court
Hughes Justice Complex
CN 970
Trenton, New Jersey 08625

Dear Mr. Townsend:

The three undersigned individuals are recently admitted members of the New Jersey Bar (1987). We are writing to express our objection to the use of the words "in the year of our Lord" on the certificate to practice law issued by the New Jersey Supreme Court. As an agnostic, secular humanist, and atheist respectively, we are personally offended that the certificate indicates the date of conferral by making reference to and exalting (through capitalization of the word "Lord") a deity in which we do not believe.

It is customary in our profession to display one's bar certificate in one's place of business. For us to display these certificates would violate our rights of freedom of speech and of religion, because our names appear and are associated with a named deity in which we, as non-theists, do not believe. We find it particularly objectionable that a direct reference to a deity is made on a document conferred by a judicial body, since the judiciary, among all other legal institutions, should be most sensitive to maintaining religious neutrality on documents issued in its name.

Clearly, the date could be stated in a secular fashion simply as "nineteen hundred and eighty-seven." This date, though derived from the alleged historical birthdate of Jesus, could, if stated plainly, be fairly interpreted to mean "after the common era" (a.c.e.). This alternative differs significantly from the expressly religious character of the wordage currently used and satisfies the test of *Sherbert v. Verner*, 374 U.S. 398 (1963), which requires the state to use the least restrictive means of accomplishing a compelling state objective that burdens religious beliefs.

We propose a solution; namely, that all those attorneys already holding certificates containing the words "in the year of our Lord" be given the option, after personal notice, to exchange their existing certificates for newly issued versions denoting the date in the secular fashion described above. (Please see attached diploma from Rutgers University Law School for example of neutral wording.) Henceforth, however, all certificates would refer to the date only in secular form.

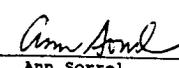

Please contact us if this suggestion is acceptable to you. If it is not, please write us with an explanation so that your position will be concisely stated in the event a legal remedy becomes necessary.

For an example of the United States Supreme Court's posture toward constitutional issues conceptually close to those raised here, please see *Wooley v. Maynard*, 430 U.S. 705 (1976), where the Court held that the state of New Hampshire could not force its citizens to display its motto ("Live free or die") on the state's license plates.

Thank you for your kind and prompt attention to this matter.

Very truly yours,

Adam Jacobs

THE BERTRAND RUSSELL ARCHIVES

- (22) In the beginning...or how it all began, as reported in *The Observer*, London, 31 March 1968, p.3, with thanks to HARRY RUJA;

Russell letters sold to Canada

by DONALD TRELFOED

BERTRAND RUSSELL'S vast collection of letters and papers has been sold for a world record sum to a university in Canada and will be leaving Britain in the next few weeks.

The deal was completed at Lord Russell's home, Penrhyneddraeth, in North Wales, last week by Mr William Ready, librarian and Professor of Bibliography at McMaster University, Hamilton, Ontario.

The price has not been disclosed, but is thought unlikely to have been less than £250,000—higher than the previous record reputedly paid for the papers of Trotsky and Yeats.

The Canadian bid was successful after more than a year's negotiations against powerful competition from universities, museums and foundations in the United States, Europe and the Far East. A number of oil-rich Arab sheikhs also showed some interest.

No firm British bid was included in the 30 finally considered, though a number of bodies, including the British Museum, made inquiries; they finally admitted they couldn't

afford to compete.

Questions are likely to be asked in Parliament as to why this unique collection—which sheds rare light on the intellectual, political and literary life of Britain over the best part of a century—should be allowed to go overseas.

Part of the cost of the collection is being met by a grant from the Canada Council, equivalent to the Arts Council in Britain; the rest is coming from foundations and private donors in Ontario. The money will go to Lord Russell himself and not, it is stressed, to the Bertrand Russell Peace Foundation.

Negotiations have been conducted by Russell's literary agents, Continuum 1, at their third-floor office in Oxford Street, London, where it has taken a research team two years to catalogue the collection—which includes about 150,000 letters, manuscripts, tapes, journals, diaries and awards. Transporting the collection will involve complex cartage and insurance problems; it will probably be flown by Air Canada in sealed and bonded-steel containers in four consignments in the next five weeks.

Frolific

The collection is in four parts. The first includes the *Ambler* papers, the saga of the related Russell and Stanley families. The second has manuscripts of Russell's work in mathematics and philosophy. The third is his private correspondence with friends and writers such as Conrad, Lawrence, Forster, Eliot, Wells and Virginia Woolf. The political section comes last, containing voluminous mementoes of Russell's work for world peace, including personal correspondence with scientists and statesmen from Einstein to Ho Chi Minh.

The archives establish Russell's

claim to be the century's most prolific correspondent: he has written at least one letter for every 30 hours of his life—he is 95—and the causes he has publicly espoused range from Dreyfus to Lee Harvey Oswald.

In the archive centre at McMaster University, his papers will join those of Gabriel Fielding, Anthony Burgess and the Wheat Board of Canada. McMaster is one of 14 State-supported universities in Ontario and has the only nuclear reactor in any Commonwealth seat of learning.

Professor Ready, biographer of Professor J. R. R. Tolkien, creator of the *Hobbits*, is a genial Welshman who joined the 'brain drain' himself 20 years ago after reading English at the University of Wales in Cardiff and Balliol College, Oxford. 'This is a great Commonwealth coup,' he said. 'I was conscious all the time of fierce American competition. I hope this will begin a trend to Canada away from the US. We cannot pursue serious research work in Canada without primary sources. The Russell papers will enrich Canada's resources for graduate work in many fields. Archival control of material of this kind is vital to our civilisation.'

Although the papers will be housed at McMaster, they will be available to scholars from all over the world. This freedom of access is written into the sale. It is a must, and I'd like to emphasise that.'

This is the most important collection ever to enter Canada, but it isn't Professor Ready's first scholastic coup. When he was at Milwaukee he acquired the Tolkien papers and at Stanford University he brought home a collection of the papers of Somerset Maugham.

'It's a great game,' he says. 'I recently got hold of a remarkable collection of Roman studies in Leipzig, East Germany—and between ourselves, I hear there's an eleventh-century Boethius right here in London.'

PHILOSOPHY

- (23) BRS at APA, 1988. The announcement and an abstract:

The Bertrand Russell Society will present a panel on the philosophy of Bertrand Russell in conjunction with the Eastern Division meetings of the American Philosophical Association in Washington, D.C. This session will convene at 5:15 p.m. on Wednesday, December 28, 1988, in the Holmes room of the Sheraton-Washington Hotel. The program will consist of:

PAPER: "The Ontological Foundation of Russell's Theory of Modality". Jan Dejnozka

Commentator: Thomas Magnell, Smith College

Chair: David E. Johnson, United States Naval Academy

Abstract of
"THE ONTOLOGICAL FOUNDATIONS OF RUSSELL'S THEORY OF MODALITY"
by Jan Dejnozka

Prominent thinkers such as Kripke and Rescher hold that Russell has no modal logic, even that Russell was indisposed toward modal logic. In Part I, I show that Russell had a modal logic which he repeatedly described and that Russell repeatedly endorsed Leibniz's multiplicity of possible worlds. In Part II, I describe Russell's theory as having three ontological levels. In Part III, I describe four Parmenidean theories of being Russell held in his life: Literal in 1903; universal in 1912; timeless in 1914; transcendental in 1914-1948. The transcendental theory underlies the primary level of Russell's modal logic. In Part IV, I examine Rescher's view that Russell and modal logic did not mix.

DUES

(24) Your dues are overdue if you haven't yet renewed for 1989.

As you know, all dues were due on January 1st (except for new members who joined in December.)

The penalty for non-payment of renewal dues is drastic. It is, in fact, the ultimate penalty: extinction. We overheard this conversation: "What ever happened to WINKLER?" "He vanished. He has never been seen again." Obviously, Winkler became a non-person. Ugh!

Don't let it happen to you!

Use the MEMBERSHIP RENEWAL COUPON on the blue front page of this newsletter. Do it now...don't put it off!

Do it for yourself...and do it for us...we like having you as a member!

Do it!

A Lifetime of Dissent

by Corliss Lamont

This collection of essays presents the views of a world-famous Humanist, philosopher and civil libertarian on the major issues of our time. Dr. Lamont has been a dissenter on most of the chief economic, political, philosophic and social issues that confront us. He also champions human rights, freedom of choice and the use of scientific method and reason, with an inspiring commitment to personal and political freedom, and to the happiness and survival of humanity. His suggestions for solutions to some of today's most pressing problems are eminently rational and sensible, and are set forth in no-nonsense prose.

- In "The Crime Against Cuba (1961) he condemns the CIA-sponsored invasion of that island under the Kennedy Administration.
- In "Vietnam: Corliss Lamont vs. Ambassador Lodge" (1967) he debates with Lodge the legality and morality of the war.
- "Adventures in Civil Liberties" (1967) describes Lamont's two most successful victories in the federal courts.
 - In one he defeated Senator Joe McCarthy;
 - In another he proved a federal censorship statute unconstitutional.

His decades-long effort to achieve better U.S.-Soviet understanding is of particular historical interest in view of the recently improved relations between the two countries.

Available from Prometheus Books, 700 E. Amherst St., Buffalo, NY 14215, or call toll free 800-421-0351. In N.Y. State call 716-837-2475. Price: \$21.95 plus \$2.25 for postage and handling. 414 pages. Hardcover.

- (26) Hugh Moorhead has put together a fascinating book, *The Meaning of Life*. Here is how the publisher describes it:

Great writers and thinkers of the 20th Century respond to the question, *What is the meaning or purpose of life?* 250 of them give their answers, including T. S. Elliot, Martin Gardner, Stephen Jay Gould, Joseph Heller, Margaret Mead, Ashley Montague, G. E. Moore, Reinhold Neibuhr, Karl Popper, Eleanor Roosevelt, Bertrand Russell, Dora Russell, Adlai Stevenson, Arnold Toynbee.

Almost none of the responses has appeared in print before. Some handwritten inscriptions that are specially interesting are reproduced alongside the printed version.

Hugh Moorhead is Professor of Philosophy at Northeastern Illinois University. Some time ago, he sent his copy of *Modern Man In Search Of A Soul* to its author, C. G. Jung, asking him to inscribe the book, and to comment on the core question. Jung honored his request. That was the beginning of a *thirty-five* year quest for more answers. And here they are, in this remarkable book.

20% discount to BRS members, says Hugh. List price 14.95. If you wish, he'll autograph it. Possible autographs: "To [your name]"; or "Best wishes to [your name]"; or some suitable phrase that you suggest. To order, send 11.96 + 2.00, total 13.96, to Prof. Hugh Moorhead, 1350 N. Lake Shore Drive, Chicago, IL 60610

NEWS ABOUT MEMBERS

- (27) Ramon Suzara in the (Manilla) Sunday Times Magazine, 12/4/88, p. 13:

What I want for Christmas

FOR THIS CHRISTMAS, I want those thousands of men, women and children outside in the streets of Manila seeking to survive under the most inhuman of conditions to be inside the churches, cathedrals, temples and chapels. If we refuse to love our neighbors, then we should let God love them instead! In the meantime, I want those streets swept and properly maintained and no longer to be used as garbage dumps for display as emblems of the kind of life we now have in the Philippines.

FOR this Christmas, I want school teachers and college professors to bring students in touch with the finest achievements of the human mind. To teach them HOW to think, and not WHAT to think. To make them appreciate that there is not only beauty, but also power in the mind that thinks. That there is more to freedom than just the freedom to enjoy stupidity. That the individual is not the end and the aim of his own being: outside the individual is his family, his country and the future of the nation under civilization.

FOR this Christmas, I want the Philippines to compete with other smaller nations in the business of producing experts at raising not only pigs, chickens and cows, but also experts at raising children into becoming useful adults and upright citizens of the country. And then I want the Philippines to compete not with Korea the the manufacture of cars and trucks, but just to compete with Borneo in the construction of better roads and highways that could induce commuters to obey traffic rules and regulations in the Philippines.

FOR this Christmas, I want Congress to make more substantial changes for the Philippines than just changing the names of some national highways or of some municipalities. The entire nation has a lot of catching up to do, not only for a higher standard of thinking. Congress must real-

ize that all of us were born ignorant but not stupid; we were made stupid by education in the Philippines. Indeed, the majority of us continue to live with stupid answers to questions we have not even asked!

FOR this Christmas, I want editors and writers of papers and magazines to publish more facts and information and not lies and misinformation. Without violence, sex is beautiful. But if we must write about killings worthy in the front page of our papers and magazines, we should not ignore the worst kind of killing that is happening every day in the schools, colleges, and universities: - the murder of the curious minds of the students.

FOR this Christmas, I want the Cardinal, the ministers and the evangelists to admit that they know nothing about God; that they know nothing about heaven or hell or the future of mankind; that they know nothing about the virtues of adding to human welfare and happiness. Indeed, they only know that there is order and harmony in the universe; but they know nothing about the disorder and disharmony created by so many kinds of religions. Why is it that everybody wants to go to heaven, but nobody wants to die?

FOR this Christmas, I want the Philippine Navy to fish for the civilians; I want the Philippine Air Force to fly civilians; and I want the Philippine Army to plant rice for the civilians. Do something nice for a change!

FOR this Christmas, I want the church to encourage the multitude in the practice of birth control and family planning. To preach the morality of contraception and not the morality of impregnation. What the Philippines desperately needs is not more in quantity, but more quality of life. Then perhaps, like many other culturally advanced smaller nations, we too can cele-

brate once a year the birth of social justice and the growth of common decency throughout the land. It is no longer sane to bless the poor, for theirs is the kingdom of poverty, misery and squalor.

FOR this Christmas, I want the born-again Christians to realize completely that wisdom is functional, not revelational. Everyone when they are born, fresh out of the uterus, is an atheist. No baby has any religion. No baby is born as a Moslem, or a Jew, or a Baptist, or a Catholic, or a Hindu. They were born free and then indoctrinated. When they attain an age of intellectual maturity and they repudiate that indoctrination, they become "Born-Again Atheists." They are back to the purity of their beginning before any of this dreadful theistic beliefs was put into their receptive, but indiscriminating, young and malleable minds.

FOR this Christmas, I want the Philippines to be free - free from injustice, free from fear and ignorance, free from superstition, and free from poverty. I want every single Filipino man, woman and child - the citizens of the Philippines - to live under common decency and enjoy the good life inspired by love and guided by knowledge. I want the Filipinos to have faith - faith in themselves, faith in the country, faith in human intelligence, and faith in human progress.

THESE will do for this Christmas. For next Christmas, I want more, much more
MERRY CHRISTMAS! ♦ - Poch Suzara

Mr. Suzara is a member of the Bertrand Russell Society (USA), an organization established to carry on the ideas and beliefs of the world renowned mathematician and philosopher.

- (28) Vincent Dufaux Williams "just returned from Brazil [12/88] where I attended an anarcho-syndicalist congress. So you have an anarchist among you!"

HUMANISM

Diversity in beliefs sets Unitarian church apart

Denver Post Wire Services

NEW YORK — An old gag has it that Unitarian Universalists believe in "one God, at most."

"There's truth in that," says the Rev. William F. Schultz, the affable president of the distinctively open-minded denomination.

"Some say God is everything, in the bushes and stars, and some say he's not at all."

In fact, he adds, it's basically impossible to say just what beliefs the historically influential church holds, and that is one of the big challenges it faces.

"We've always been creedless," he said in an inter-

view. "We've always tried to be open to all sources of inspiration and not limited to any forms of it."

"While we've been global in our loyalties, we have not been effective in articulating a clear message that all Unitarian Universalists could affirm. That's one of our central tasks."

While relatively small, but with a recently growing membership of 179,000, the denomination has been at the forefront of such social causes as racial justice, women's rights, sheltering refugees and peace. In the United States, it has been the faith of Ralph Waldo Emerson, Henry David Thoreau and Frank Lloyd Wright.

But with its wide-open religious perspective, the church has had a hard time specifying just what it believes.

Mixed responses

For example, Schultz offered mixed answers when asked if members hold such traditional religious beliefs as these:

Q: Do they believe in a God who cares about each person?

A: A few would. The majority would not believe in that kind of personal God.

Q: Life hereafter?

A: Most would not believe in a traditional hereafter. Perhaps a third would say they simply don't know. Some would say the scientific studies of death and dying point to some kind of on-going existence.

Q: Did God create the universe?

A: Some would say the universe had no discreet beginning, that it always existed, that it was not God-created. Few call God an individual, and most would say forces of evolution brought it into being.

Schultz, 38, a relaxed, genial Pennsylvanian with neatly trimmed beard and merry eyes, was elected to his post in 1985, one of the youngest heads of an American denomination.

The Unitarian Universalist Association, headquartered in Boston, draws on all major religions in its teachings — Buddhism, Hinduism, Islam, Judaism, Christianity and others, along with their different Scriptures.

While the denomination encompasses all that diversity of beliefs, along with humanism, Schultz said its membership generally affirms several broad concepts that are characteristic, namely:

■ That history and the future are in human hands, an entirely human responsibility. "We do not believe in a God or fate that controls it."

■ That there is no "supernatural" separate from nature, that "the natural world is interconnected and everything in the universe is dependent on everything else."

■ "We do not believe that blessings come from the miraculous, but that they are hidden in the everyday, in the ordinary. To find the face of God, the emergence of the holy, look to the ordinary, the everyday."

Yet even using those words such as "God" and "holy" is not altogether acceptable to members, he said. "To some, those terms are great. But they're anathema to others."

He uses them, he said, "because they have some residual meaning."

Push for ties to Jesus

A minority wing, called the Unitarian Universalist Christian Fellowship, works to get the denomination to identify clearly with Jesus as its central figure of guidance, publishing such needling questions as:

"So you want to be a Christian, but your church isn't?"

Schultz estimates that wing of the church makes up about 10 percent of members. He says the denomination as a whole honors Jesus as a "model for living" but not as divine. Other churches consider him both human and divine.

Under Schultz' leadership, the church has had a growth rate of 1 to 2 percent a year, the membership climbing from a low of 166,000 at the end of the 1970s to its present 179,000.

Schultz was born into the church, but he said few members are, only about 10 percent. About 90 percent were raised in other faiths.

NEWSLETTER MATTERS

- (32) A 15 Year Index of Bertrand Russell Society newsletters has been prepared. It covers the first 15 years of the Society's existence, 1974 through 1988, Issues 1 through 60. It has over 2100 entries, on 40 pages. The first word of the first and last entries on each page appear at the top of the page. \$7 postpaid (within the USA) from the newsletter. Or borrow it from our Library, \$2 postage (within the USA). Postage outside the USA is higher. Newsletter and Library addresses are on Page 1, bottom.

HONORARY MEMBERS

- (33) A. J. Ayer interviewed by Edward St. Aubyn for *The Tatler* (1/89), presumably in 1988.

Hot Ayer

Talking language, truth and logic: A.J. Ayer at home in the South of France, by EDWARD ST AUBYN

Oh God, this can't really be happening, I thought, as the glass slid further open. I had just told the taxi driver who was taking me to Heathrow that I was on my way to the South of France to interview England's most famous living philosopher. He leant back complacently, 'I'm a bit of a philosopher myself: I used to be a Buddhist. Mind you, most of these philosophers are ego-maniacs, aren't they? They put themselves above humanity and yet what are they writing about, eh? *Humanity*. I've met some of the *intelligenria*, and it's all an act, isn't it?'

The assumption that philosophy is about humanity is not one that could be made by someone who shared Freddie Ayer's view of its function. Common usage is not a reliable guide in this matter since 'being philosophical' about something denotes the ability not to think about it too much.

Ayer's first book *Language, Truth and Logic*, as Professor Ted Honderich has put it, 'rescued philosophy in the English language from a kind of maundering.' Another, *The Problem of Knowledge*, is the most elegantly enlightening of inquiries into its subject. A third, *The Central Questions of Philosophy*, establishes him as the evident successor to

Bertrand Russell. He has recently given a new edge and panache to intellectual biography, most recently with his admirable *Thomas Paine*.

In Ayer's view philosophy is an activity devoted to solving problems of sense and of making sense, 'what we can know, how we can know it and what justification we have for our beliefs.' He still stands by Locke's account of the philosopher quoted in his first book, written when he was 24, 'To be an under-labourer in clearing the ground a little, and removing some of the rubbish that lies in the way of knowledge.' The apparent modesty of this ambition is made up for by the vehemence and clarity

with which Ayer has set about the task of 'clearing', and also by the conviction that 'the ground' is what everything else must rest on. As Ayer said to me during our discussion, 'Clearly I can't hold that I am the only conscious creature in the universe... This problem has worried me appallingly.'

Professor Sir Alfred Ayer, Chevalier de la Légion d'Honneur and a member of the Order of Cyril and Methodius, first class (Bulgaria), was born in London in 1910. His father's family was Swiss and his grandfather was rector of the Academy of Neuchâtel. He is called Alfred after Alfred Rothschild for whom his father worked until the latter went bankrupt from speculation. Ayer's father was rescued by his father-in-law Mr Citroën, a Dutch Jew who had made a fortune in the manufacture of Minerva cars, and bought his son-in-law a partnership in a timber firm. Ayer went to prep school at Aston St Vincent, 'where they beat enough Greek and Latin into me to get a scholarship to Eton.' He went on to Christ Church where he became a lecturer in 1932. Gilbert Ryle, his old tutor, was responsible for sending him to attend the meetings of the Vienna Circle, as well as introducing him to Russell and Wittgenstein. During the war Ayer joined the Welsh Guards and worked for the S.O.E. - the 'cloak and dagger outfit'. He considers that the most dangerous point of the war for him came when he was taught poker by some goldminers in West Africa. Having studied the laws of probability, he won an enormous sum of money from them and thought they might kill him. In 1946 he was made Grote Professor of the Philosophy of Mind and Logic at University College London and in 1959 he returned to Oxford to become the Wykeham Professor of Logic at New College. He has been married three times and has had three children: Valerie, who died in 1981, and Julian by his first wife Renée Lees; and Nicholas by his second wife, the American novelist and journalist Dee Wells (whom he intends to remarry). His third wife, Vanessa Lawson (Nigel Lawson's first wife), died in 1985.

Wittgenstein is reported to have remarked, 'The trouble with Freddie Ayer is that he's clever all the time.' The most obvious penalty of being clever all the time, apart from the constant need to ward off boredom with chess games, bridge problems, books, crossword puzzles and newspapers, has been his indifference to nature. He tells the story of Robert Kee driving him around to admire the 'lovely, lush, green scenery of Ireland'. When Ayer fell into a reverie, Robert asked him what he was thinking about. 'I admitted that I was wondering whether sheep think. He was absolutely furious and drove me back to the house.' Ayer thinks rapidly, reads rapidly, speaks rapidly and recently died rapidly, in hospital, only allotting four minutes to the experience before he revived. Since then there 'has been a kind of resurrection' and he has started to notice scenery for the first time. Driving from Avignon to his house at La Migoua he stopped on the mountain above La Ciotat 'And I suddenly looked out at the sea and thought "My God how beautiful this is" and for all these years, for 26 years, I had never really looked at it before.' These experiences have made him feel that life is richer, but not more mysterious. He is a born-again atheist who still feels that moral courage and the

pursuit of pleasure do more justice to experience than optimistic and unverifiable statements about Reality.

Ayer has always worked well under the lime tree at La Migoua, the hamlet where he and Dee bought a farmhouse in 1962. The Ayers made a great impact on the local population when they confronted the mayor on his way down hill with a cortège of cars. Dee refused to back up saying that the road was full of holes. 'Madame,' said the mayor, 'as mayor of this commune I am responsible for the roads and I can assure you that they contain no holes.' While making this speech he stepped backwards into a hole and fell over. Ayer shouted, 'Espèce de collaborateur!' out of the window. As an expert on the Resistance it was an insult that might well spring to his lips. During the war Ayer single-handedly liberated St Tropez and then swept westward with a small army of his own, eventually reaching Bordeaux where the local Resistance asked his permission to kidnap de Gaulle. Ayer said he would be delighted to have him kidnapped, 'But what the hell are you going to do with him? Are you going to kill him? I can't authorise that... And so I saved de Gaulle's bacon. He never knew.'

On the evening that I arrived at La Migoua, Ayer was sitting under the lime tree playing chess. I was very hungry and Dee offered me something to eat. As I was about to bite into half a baguette, Ayer came through the beaded curtain, looked at me piercingly, and said, 'Have you got your homework?' I put down the bread and eagerly accepted a pink booklet called *The Meaning of Life*. Who wants to eat when they are holding the truth in their hands?

His most recent work, published this year, *The Meaning of Life* touches on many of the characteristic themes of Ayer's work and makes them more accessible. Its central argument is that morality cannot be based on authority, whether human or divine. Morality has to be based on personal choice. The rejection of authority as a ground for moral action has not prevented Ayer from having strong moral views and acting on them vigorously. One outstanding example is his chairmanship of the Homosexual Law Reform Committee: he found the persecution of homosexuals unjust and the way in which they were driven underground sordid. One advantage he had for the job is that 'As a notorious heterosexual I could not be accused of feathering my own nest.' Ayer has had about 150 affairs in his life. He loves the company of women, except those who mug up on philosophy. He once thought he heard a woman say, 'I love you so,' when it turned out she had said, 'I love Rousseau.' He was not pleased.

Ayer was also roused to action by finding that the Provost and Fellows of Eton had passed a statute in 1960 stipulating that candidates for a scholarship must have British-born fathers. Had this statute existed in his day it would have excluded Ayer from College since his father was Swiss-born, but he realised that it had been introduced not to exclude the Swiss but to keep out Jews. Threatening to write to *The Times* he was asked by the Provost Sir Claude Elliot to meet him instead. The Provost admitted that it was an anti-semitic measure, complaining that Jews were 'clever in the wrong

way'. When Ayer asked what this meant he said, 'Well, they wouldn't play the Wall Game.' I said 'I feel some responsibility in this matter, I'm not going to have my Jews discriminated against'. He made a bargain with the Provost that he would not do anything publicly for a year, but insisted that the matter be raised again after a year, and reserved the right to lobby the Fellows. The Fellows proved useless, 'I have enormous contempt for people who have no public courage.' He was in despair when he met Sir Edward Boyle, who was minister of education at the time. Boyle was incredulous until he saw the correspondence with the Fellows, at which point he promised to take action. Ayer waited for a month and received a letter saying, 'I'm sorry for the long delay but Macmillan has been very busy. I could not get hold of him, but now I think you'll see something happen.' Three days later there was a headline in the *Evening Standard* saying that the Eton Provost had unwittingly passed an anti-semitic statute, but realising its effect, had repealed it.

Ayer's moral courage can overcome physical fear, as he demonstrated recently in New York where he was told at a party that Mike Tyson was upstairs raping a model. 'We can't have that,' he said, and forged upstairs only to find that Tyson was talking quietly to the model and that she was clearly delighted. Not having any grounds to intervene, but feeling that it would be ignominious to retreat, he said, 'Mr Tyson, you're the physical champion of the world and I am one of the intellectual champions. I think it's high time that we met.'

In *The Meaning of Life* Ayer's atheism is as buoyant as ever. He rejects belief in God because he regards it as nonsensical and undesirable: 'Whatever happens, the believer in the creator is going to say that that was what was intended. And just for this reason his hypothesis is vacuous.' Setting aside its vacuity he wonders what advantage there is for those who espouse it, 'Why should it matter to them that they followed a course which was not of their own choosing as a means to an end of which they are ignorant?' In our conversations he admitted that his rejection of metaphysics in *Language, Truth and Logic* was 'too brutal': metaphysicians have often used respectable arguments to reach their ridiculous conclusions. The vision he had while he was dead in hospital has also made him a little more 'wobbly' about the afterlife. In this vision he crossed a river and encountered a red light which controlled the universe. The red light had two principal assistants who, 'put space together like a jigsaw puzzle'. They had been doing their job poorly and Ayer realised that 'space was out of joint, the universe had gone awry and the laws of nature were not functioning properly.' He felt a great sense of responsibility to put this right, but could not communicate with the Lords of Space. Fortunately, there were also Ministers of Time in the vicinity and, 'Since we're in the days of Einstein, and Space and Time have become Space-Time, one four-dimensional continuum,' he knew that by adjusting Time he would be able to correct the flaw in Space. Before he could fulfil his task he was revived and woke feeling a great sense of frustration.

The extension of consciousness after death raises doubts about Hume's definition of personal identity as a 'bundle of perceptions'. In trying to perfect this theory Ayer found that he had to fall back on physical continuity. This would clearly mean that his vision was only evidence of mental activity continuing for a few minutes without its customary support from the body.

It would be evidence of a crisis in the brain and this is what Ayer takes it to be. Nevertheless the experience does complicate the relationship between the mind and the body and makes the remark of Wittgenstein's quoted in *The Meaning Of Life* seem less triumphantly logical, 'Death is not an event in life: we do not live to experience death.' Unless death is defined as the absence of experience, then it would seem that Ayer has lived to experience death, since he talks of having been 'dead for four minutes'. Ayer still regards 'the soul' as a meaningless word which we have in the language along with other meaningless words like 'God'.

Can it be good for a man to have so much truck with meaningfulness, to have written so much about things that do not exist, and to have as a refrain running through his work the phrase 'literally nonsensical'? But then pointing out meaningless state-

ments is a meaningful activity, just as recognising one's irrational feelings is a rational activity. For Ayer the recognition of these irrational forces is 'a first step towards dismissing them; people may have an 'emotional need' to believe in a transcendent reality, or a soul or a deity, but for him that emotional need is 'Never *never* more important than reason. I find it very unlikely that if I found out more about my unconscious motives it would bring me any closer to a solution of the problems I am interested in.' In fact, he thinks this knowledge would hamper him since in times of misfortune he experiences a suspension of self by working, leaving his intellect free to be as efficient as possible. 'A lot of my friends have said that I am almost schizophrenic, there are two people: A.J. Ayer who writes these books and Freddie Ayer, "The London Freddie Ayer" as Cyril Connolly called me.'

His lack of curiosity about himself does not altogether prevent Ayer from making connections of a psychological type. For instance, he attributes the feelings of invulnerability that he experienced when he disarmed a man in a café in Paris to something more primitive than the conviction that it was the right action to take, 'I felt carried away, just as when I play games I play with enor-

mous intensity. I always play to win, that's part of my grandfather in me.' If he doesn't work he feels his grandfather 'looking over his shoulder' and he recognises that his grandfather's desire to form a 'prominent English family' devolved on to his grandchildren of whom he is the eldest. These sorts of insights do not of course stand in the way of calling personal identity a 'bundle of perceptions' since they are perceptions about the bundle - it is only a question of whether the bundle would be better tied if they were given priority.

There is a strain of argument in *The Meaning of Life* which reminds one that Ayer has long stood on the left in politics. It is his awareness of the fact that most people in the world are engaging in 'a losing struggle to achieve a tolerable standard of living'. He described himself to me as 'an English radical in the tradition of Tom Paine'. He thinks that 'Kinnock is a Welsh windbag' and despairs of seeing Mrs Thatcher unseated although he hates the 'ethos of the devil take the hindmost, and the purely commercial philistine attitude'. One of the aspects of this philistine attitude is that higher education has been under attack, especially departments like philosophy. The good philosophers who

should be replacing Ayer's generation have gone to America.

In his autobiography Ayer says that he would be content to go down in history as Horatio to Bertrand Russell's Hamlet. This is an interesting choice since the most famous remark made to Horatio is, 'There are more things in heaven and earth, Horatio, than are dreamt of in your philosophy.' I do not want to attribute an unconscious frustration with the limits he has set himself to a man who does not think the premises of psychoanalysis are verifiable. In any case within those limits Ayer operates brilliantly.

Notwithstanding Wittgenstein's remark that Ayer is clever all the time, he has not yet mastered the philosophy of housekeeping. When he moved into a new house with his second wife Dee, she asked him to make a drink while she was unpacking. A few minutes later she heard him call forlornly from downstairs, 'Where do we keep the ice?' For some reason (if that is the word), we expect great thinkers to be absent-minded. Having tackled the problems of language, truth, logic, knowledge, and personal identity, it may not be too late for Ayer to find out where we keep the ice. □

OBITUARY

- (35) Herb Vogt, we sadly report, died on December 5, 1988. A BRS member since 1975, he and Bette hardly ever missed an Annual Meeting. They attended the 1988 meeting at Fredonia, but, writes Bette, "he was in a great deal of discomfort most of the time. As you know, he was an avid reader of Bertrand Russell from the time he entered college and was looking for a living philosopher. Much of his own philosophy was influenced by what he had read. I know he would be pleased to have me give this check in his memory." He will indeed be remembered...with great pleasure. Some of us also remember his great jazz-piano-playing, at our Washington meeting (1985). Our thoughts are with Bette, whom we love.
-

NEWS ABOUT MEMBERS

- (36) Bob Davis imbibed some Greek and Roman culture in December. In his own words (excerpts):

Spent 5 days in Rome...most of the time in the Vatican. St. Peter's is amazing. Nothing prepared me for it. For the first time I appreciated the concept of the sublime; it really works at times. We went from the tombs below to the cupola on top. (We managed even to urinate on the roof. Not to worry; they have toilets up there.) We also went to an audience with the Pope. In the Sistine Chapel, we could see both the clean frescoes and the dirty ones; I am convinced cleaning is the right thing. Went to to the Colosseum, the Pantheon, the Circus Maximus, and other old ruins and early churches. I still have lots more to see there.

Spent a week in Greece. John [Lenz] was wonderful. He met us at the Airport, and got us a nice reasonable hotel near him. We went to a number of ruins in Athens, including, of course, the Acropolis. The ruins are great but you can keep modern Greece. I rented a car and we drove to Delphi, across the bay to the Peloponnesus, where we saw Tirens -- I fell off the battlements and bounced instead of broke. Mycenae and Epidaurus; all wonderful. Few tourists and no crowds; we saw Julius II's rooms painted by Raphael -- with no one else in the rooms.

The flight(s) home were tense, with \$103 of course -- real security in Europe. Soldiers in the airports with automatic guns, fingers on the triggers. I hope it doesn't come to that here.

CONTRIBUTIONS

- (37) We thank these early renewers who included a 1989 contribution in their dues payments. Greatly appreciated!

LOUIS K. ACHESON JR., AURORA ALMEIDA, JEAN ANDERSON, IRVING H. ANELLIS, JAY ARAGONA, DONG-IN BAE, DEBORAH BOHNERT, MICHAEL EMMET BRADY, POLLY COBB, WHITFIELD COBB, GLENNA STONE CRANFORD, PETER G. CRANFORD, ALICE L. DARLINGTON, ROBERT K. DAVIS, LEE EISLER, SEYMOUR GENSER, SUSAN J. GIROD, JEROLD J. HARTER, CHARLES W. HILL, DONALD W. JACKANICZ, ALLAN KRAMER, PAUL KURTZ, FRANCES MASON, HUGH MCVEIGH, ROBERT MERRIGAN, HUGH S. MOORHEAD, GLENN R. MOYER, SANDI A. MOYER, FRANK V. PAGE, HELEN PAGE, STEPHEN J. REINHARDT, BENITO REY, WILLIAM M. RIPLEY, MICHAEL J. ROCKLER, HARRY RUJA, WARREN ALLEN SMITH, RAMON CARTER SUZARA, JOHN R. TOBIN, CLIFFORD VALENTINE, ELEANOR VALENTINE, THOM WEIDLICH, CHARLES L. WEYAND, VINCENT DUFAUX WILLIAMS, RONALD H. YUCCAS.

Even in her late eighties, visitors to her remote Cornish home were astonished by her intellectual vigour. Her enthusiasm for her causes remained, and departing guests would leave with the words, "On with the women's revolution!" ringing in their ears.

She continued to speak at meetings of the peace movement. In 1983, at the age of 89, she led the London CND rally in a wheelchair, and earlier this year she took part in a demonstration outside the RAF base at St Mawgon in Cornwall.

ABOUT BERTRAND RUSSELL

(39) From the NY Herald-Tribune (9/22/61, p.24):

What Lord Russell Thinks

To the N. Y. Herald Tribune:

It is regrettable that you chose to print an editorial castigating Bertrand Russell, this profound thinker who has for a very long time been more concerned with the cause of freedom and justice than most of his detractors, and whose unswerving passion for truth and reason has presented itself as an example to many who aspire to become truly civilized.

If you have not read Lord Russell's essay, "The Future of Mankind", may I suggest that you do so.

In it you will find the following statement: "True, I have heard men say that they would prefer the end of man to submission to the Soviet government, and doubtless in Russia there are those who would say the same about submission to Western Capitalism. But this is rhetoric with a bogus air of heroism. Although it must be regarded as unimaginative humbug, it is dangerous, because it makes men less energetic in seeking ways of avoiding the catastrophe that they pretend not to dread."

H. W. Clifford
East Orange, N.J.

Harry Clifford has been a BRS member since 1975.

(40) The following appeared in the November 1974 issue of The Writer (pp. 137-8). Sent to us by Harry Ruja. The article was written by Lesley Conger.

WORDS FOR THEIR OWN SAKES

Somebody once wrote to Bertrand Russell and asked for the twenty words he liked most. Lord Russell replied with a list that he hoped the inquirer would not take very seriously, since it would "at another time . . . probably be quite different." Nevertheless, it is interesting to contemplate:

- | | |
|----------------|----------------------------|
| 1. wind | 11. apocalyptic [sic. ed.] |
| 2. health | 12. ineluctable |
| 3. golden | 13. terraqueous |
| 4. begrime | 14. inspissated |
| 5. pilgrim | 15. incarnadine |
| 6. quagmire | 16. sublinary |
| 7. diapason | 17. chorasmian |
| 8. alabaster | 18. alembic |
| 9. chrysoprase | 19. fulminate |
| 10. astrolabe | 20. ecstasy |

It was good of Russell not to dismiss the question as absurd and unworthy of an answer. And it was also typical of him, as you will see if you care to consult the delightful book from which I got the list, *Dear Bertrand Russell*, edited by Barry Feinberg and Ronald Kasrils (Houghton Mifflin, 1969). Russell was a usually engaging, sometimes crusty, but always tireless correspondent; he even obliged another inquirer with his "favorite recipe," Lord John Russell's Pudding, which he admitted he had never tasted nor indeed laid eyes upon, but which he chose "from nepotal piety."

I like to think, however, that in sending on his list of favorite words Russell was not simply being obliging and pulling them out of the air at random, so to speak. Of course it doesn't make much sense to claim as a favorite word one you can hardly ever have had the opportunity of using (chrysopraxe?), no more than to claim as a favorite recipe a pudding that's never passed your lips; nepotal piety may do for the pudding, but for the words - ? Ah, but who needs sensible reasons? If you are, to your bones marrow, a writer (and Russell was, as much as he was a mathematician and a philosopher), you love words that have beautiful auras of meaning (*wind, heath, golden*), you love words that are absolutely perfect for what they denote (*quagmire!*), you love words that roll around in your mouth like a lovely lemon sour ball (*ineluctable, apocalyptic*) - in short, you love words for their own sakes, and that's that.

My own list follows:

- | | |
|--------------------|----------------|
| 1. legerdemain | 11. theodolite |
| 2. mist | 12. burnished |
| 3. abyss | 13. ephemeral |
| 4. pomegranate | 14. pebbles |
| 5. columbine | 15. lantern |
| 6. grey (not gray) | 16. filigree |
| 7. poultice | 17. mendicant |
| 8. splendid | 18. eucalyptus |
| 9. luminous | 19. lamplight |
| 10. cacophonous | 20. shadow |

(A note on grey: Why grey and not gray? I'm not sure, but to me grey is a kitten, gray is a battleship.)

As you can see, my list is several intellectual cuts and about ten syllables below Russell's and contains, it seems to me, far more words of rather obviously pleasant connotations - as well as words that are simply the names of favorite things (*columbine, pomegranate, eucalyptus*). There are an inordinate number of words having to do with light and color: *grey, luminous, burnished, lamplight, lantern, shadow*; perhaps, by extension, even *splendid* and *mist* and *filigree*. But I don't know why *mendicant* is there, or *poultice*, and as for *theodolite*, I wouldn't recognize one if it came up and bit me. I just like the way the word sounds.

I can't defend *cacophonous*. It sounds awful. But then, it's supposed to.

No doubt an amateur psychologist could have a great time with Lord Russell's list - or with mine. or anyone's. Only two monosyllables - *hm-m*. And what kind of man would go for a word like *inspissated*? What trauma from childhood makes a man fond of a word like *begrime*? And why, indeed, would the notoriously nonreligious Russell have among his favorites the word *pilgrim*?

I had to look up several of Russell's words. I thought *chrysopraxe* might have something to do with *chrysalis*, but it didn't - it's a kind of chalcedony (that's a nice word too). *Terraqueous* and *sublunary* I could figure out, and *diapason* is a stop on our pump-organ, but I hadn't the foggiest notion of *inspissated*, and as for *astrolabe* and *alembic*, I knew them only in the general way that I know my own *theodolite*. But I haven't even been able to find *chorasmean*. The closest I've gotten to it is Chorasmia, a province of ancient Persia, and I'm not sure that's close enough.

After much thought (and despite *inspissated*) I have concluded that there is a definite romantic element underlying Lord Russell's list. *Wind, heath, golden, pilgrim, alabaster, chrysopraxe*, and - here's the clincher - *incarnadine*. When I saw that word on his list, I remembered instantly where I saw it for the first time in my life, some forty years ago (and, except for Lady Macbeth's "multitudinous seas incarnadine," never elsewhere until now), and I would be willing to bet that it was there that Bertrand Russell (in his moony adolescence) saw it, too, in the sixth verse of the *Rubáiyát of Omar Khaydám*: "And David's lips are lockt but in divine/ High-piping Pehlevi, with 'Wine! Wine! Wine! Red Wine! - the Nightingale cries to the Rose/ That sallow cheek of hers to incaradine." My evidence may seem flimsy, but I think my conclusion is, in a word, *ineluctable*.

My own list is of course a shameless wallowing in the romantic, exotic with pomegranates, delicate with columbines, all bathed in misty lamplight filtering through a filigree of eucalyptus leaves. *Cacophonous* and *poultice* may be inexplicable, but even mendicant is romantic if you compare it to panhandler, and obviously legerdemain is there because it makes me think of magic. For that's what they are - *splendid*, *luminous*, *magical* words - and I know no better final word on the subject than the final word on Russell's list: *ecstasy!*

(41)

PANEL DISCUSSIONS

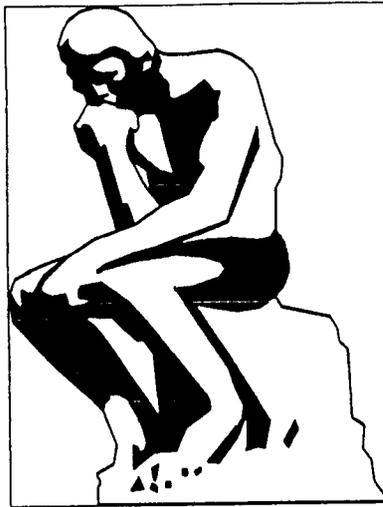

THE BERTRAND RUSSELL SOCIETY

PANEL ON RYAN'S BOOK ON
POLITICAL LIFE OF RUSSELL

The second panel discussion of the McMaster chapter of the Bertrand Russell Society will concern the recent book by Alan Ryan titled *Bertrand Russell: a Political Life*. The work was published in London by Allen Lane The Penguin Press (£16.95) and in New York by Hill and Wang (us\$19.95).

Copies are available in Mills Library (B1649.R94R93) and in private hands.

The book has been the subject of a number of reviews that, above all, showed that the topic interested the reviewer. The Russell Archives have collected copies of reviews by John Campbell in the *T.L.S.* and by the 5th Earl Russell in *The London Review of Books*. Royden Harrison has written a review for a 1989 issue of *Russell*, which may be previewed in the Archives.

One needn't read far in the book before finding contentious statements. Consider the second sentence on p. 1: "His philosophical allegiances were no more stable than his emotional allegiances, and his political allegiances no more stable than either."

The panel is comprised of Kenneth Blackwell, Russell Archivist, and Louis Greenspan, Managing Editor of The Bertrand Russell Editorial Project. Richard Rempel will moderate the discussion. The audience is invited to participate.

Thurs., Oct. 27, at 1:30. UH-317.

THE BERTRAND RUSSELL SOCIETY

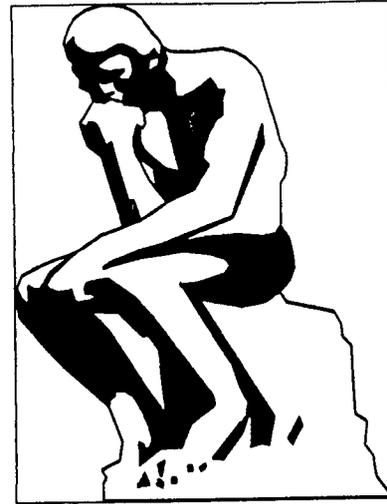

RUSSELL ON
CONTRADICTION

The latest panel discussion of the McMaster chapter of the Bertrand Russell Society will concern the seeming predilection of the early Russell for seeking contradictions.

It might (and probably will, on the panel) be argued that exposing contradictions is a standard philosophical activity, part of the process of evaluating hypotheses, and that he did this all his life, within and without philosophy. But the youthful Russell didn't rest content with finding contradictions. He used them, apparently, to ascend the scaffolding of his current metaphysical edifice. At the top he might decide to call them "antinomies" or even "paradoxes".

It has even been argued (and no doubt will be again, on the 24th), that Russell was only able to discover the Russell Paradox because of his habit of searching for, perhaps manufacturing, contradictions. But there's a snag. As a neo-Hegelian, he could do something creative with contradictions. (Or some of them--and what makes the distinction?) By the time of the discovery of The Contradiction, he was no longer an idealist. It seems that this antinomy functioned like any normal contradiction exposed in any philosophical hypothesis: it threw grave doubt upon the propositions under consideration--in this case, mathematics itself. The panelists will consider whether Russell dealt adequately with the paradox, and whether he could have succeeded as an idealist.

The panel is comprised of Nicholas Griffin (Philosophy, McMaster), Albert C. Lewis (late of the Russell Editorial Project), and Gregory H. Moore (Mathematics, McMaster). Kenneth Blackwell (Russell Archives) will moderate the discussion. The audience is invited to participate.

Thurs., Nov. 24 at 12:30. UH-317.

ABOUT BERTRAND RUSSELL

- (43) This is how the Academic American Encyclopedia tells it. (Dambury, CT: Grolier, Inc. 1980)
From Harry Ruja.

Russell, Bertrand

Bertrand Russell, a seminal figure in the development of 20th-century philosophical thought, made major contributions in the areas of mathematics, logic, education, and social reform. Russell, who received the 1950 Nobel Prize for literature, endorsed the application of rationality to all aspects of thought and language. His early pacifism, which led to his imprisonment in 1918, evolved into a dedicated activism against nuclear armament, for which he was again briefly incarcerated in 1961.

One of the most influential philosophical thinkers of the 20th century, Bertrand Arthur William Russell, 3d Earl Russell, b. Trelleck, Wales, May 18, 1872, d. Feb. 2, 1970, was a grandson of the 1st Earl Russell, who had twice been prime minister of Great Britain.

Life. Orphaned at three, Bertrand was reared by his puritanically religious but politically liberal paternal grandmother. He rebelled early against her rigid moral views, but her otherwise progressive beliefs influenced his later social thinking.

Russell was educated (1890-94) at Trinity College, Cambridge University, and remained there as a fellow (1895-1901) and lecturer (1910-16) until he was dismissed because of his active defense of unpopular causes such as socialism and his opposition to World War I. In 1918 he was imprisoned for his radical pacifism. Russell traveled, wrote, and lectured widely in Great Britain and the United States in the interwar period. On the death (1931) of his older brother he succeeded to the earldom. During the 1930s he modified his commitment to pacifism to acknowledge the necessity to oppose Nazi Germany. Reelected a fellow at Trinity in 1944, he resumed his pacifist stance in the postwar years and was especially vigorous in his denunciation of nuclear weapons. Russell founded the Campaign for Nuclear Disarmament (1958) and the Committee of 100 (1960) as his advocacy of civil disobedience became progressively stronger in the antinuclear movement. As a further outlet for his political views he participated (1964) in the organization of the Who Killed Kennedy Committee, questioning the findings of the Warren Commission concerning the assassination of U.S. president John F. Kennedy. Together with Jean Paul Sartre, he organized (1967) the Vietnam War Crimes Tribunal in Stockholm, which was directed against the U.S. military effort in Vietnam.

In addition to his political involvements, Russell took an active interest in moral, educational, and religious issues. His religious views, as set forth in his book *Why I Am Not a Christian* (1927), were considered controversial by many. In 1931, Russell and his second wife (he married four times) founded the experimental Beacon Hill School, which influenced the founding of similarly progressive schools in England and the United States.

Throughout his life Russell was a prolific and highly regarded writer in many fields, ranging from logic and mathematics to politics to short works of fiction. In 1950 he was awarded the Nobel Prize for literature. His private life was characterized by many disappointments and unsuccessful

personal relationships, however. He scorned easy popularity with either right or left and exhibited an unbreakable faith in the power of human reason. Russell remained active and wrote extensively until his death at the age of 97. The most interesting account of his life is contained in his autobiography (3 vols., 1967-69).

Philosophical Views. Although he had many preoccupations, Russell's primary contribution lay in philosophy, most particularly in logic and the theory of knowledge. His early philosophical views grew out of a concern to establish a vigorous logical foundation for mathematics, a concern that produced *Principles of Mathematics* (1903). Building on the work of Gottlob FREGE, Giuseppe PEANO, and others, Russell argued that arithmetic could be constructed from purely logical notions and the concepts of "class" and "successor." In *Principia Mathematica* (3 vols., 1910-13), written with Alfred North WHITEHEAD, this program was carried out in detail. Even when disagreeing with Russell, contemporary logicians and philosophers of mathematics acknowledge *Principia* to be the most important treatise on logic of the 20th century.

Russell used the rigorous methods of formal logic for a wide variety of problems. His "theory of descriptions" in particular has been called a model of philosophical reasoning. The argument concerns the meaning of referring to nonexistent objects, such as "the present king of France." Russell's solution is to say that the logical form of the statement is obscured by its grammatical form, and that analysis displays a description coupled with a false assertion of existence.

Russell was seriously concerned with the application of logical analysis to epistemological questions and attacked this problem by trying to break down human knowledge into minimum statements that were verifiable by empirical observation, reason, and logic. He was deeply convinced that all facts, objects, and relations were logically independent, both of one another and of our ability to know them, and that all knowledge is dependent on sense experience. With G. E. MOORE, his former pupil Ludwig WITTGENSTEIN, and others, Russell helped guide postwar British philosophy in a more positivist direction, focusing on the logical analysis of philosophical propositions and on the language of everyday life. Russell's basic position, which he first formulated in *Our Knowledge of the External World* (1914), is referred to as logical atomism, by which he meant that all propositions (statements about experienced reality) can be broken down into the logically irreducible subpropositions and terms that constitute them. By combining and recombining these logically independent and discrete terms, we can describe reality as something that occurs at the point of such combinations, called the point event. Another aspect of this argument showed that the logical and grammatical meaning of sentences do not always coincide; Russell insisted that the logical meaning should take precedence.

Difficulties of analysis led Russell to give up many of the characteristic theses of logical atomism, and with his *Analysis of Matter* (1921) and *Analysis of Matter* (1926) he shifted to what has been called neutral monism. In this phase Russell combines a stringent empiricism with an optimistic view of the progress of science that leads to the conception of philosophy as a piecemeal analysis of the findings of science. His examination of the bases of scientific method culminated in *Human Knowledge, Its Scope and Limits* (1948).

Throughout his life Russell acknowledged difficulties in his positions and was ready to admit criticisms and modify his views. While ranging over an immense field, Russell demonstrated an openness to ideas, an aversion to dogma, and a rigor in analysis that more than justify his position, with Moore and Wittgenstein, as a fountainhead of 20th-century English and American philosophy. A PUB FOR THINKERS

(44) | The following was sent to us by Steve Reinhardt (who suggested that we have our next annual meeting at the Beehive Pub!). The article appeared in the Nov. 7, 1988 issue of the New York Times.

Swindon Journal*The Thinker's Pub, With a Resident Philosopher*

By SHEILA RULE

Special to The New York Times

SWINDON, England, Nov. 1 — In this former railway town, where coal smoke spirals from chimneys and mingles with autumn's chill, the convivial regulars at the Beehive Pub sometimes order another round over discussions of Plato, the nature of the universe and, well, just what it all means.

Their thoughts turned to such matters after Dr. Julius Tomin was hired as the pub's philosopher. Dr. Tomin, an exiled Czechoslovak dissident and scholar in classical Greek philosophy, gained international attention in the 1970's after philosophy seminars in his home in Prague were broken up by the police. The road that led him to the Beehive included back streets of virtual poverty in Oxford, a dead end at British welfare offices, collisions with British academics and freeways with unswerving commitment.

"We all ask the big why occasionally," said Noel Reilly, the owner of the Beehive. A mirthful man from Limerick in Ireland, Mr. Reilly created the philosophy position for Dr. Tomin after reading of his plight.

"I wanted to know why our society was willing to pauperize a man of such integrity," he said. "I thought I would do something about it."

500 at First Lecture

More than 500 people squeezed sardine-like onto the pub's old wooden floors, bar stools and plain benches last month — others reportedly tried to climb through windows — to hear Dr. Tomin's first lecture, titled "Time for Philosophy." A bit nervously at first, he used the talk to tell the audience about his life, in which knowledge, languages and philosophy provided paths to spiritual freedom. He described through jokes some hardships, including his years as a factory worker in Czechoslovakia.

"A trade unionist from France went to Czechoslovakia to observe the socialist system," he told the audience. "He returned and reported that people in Czechoslovakia officially are to work eight hours a day but they only work four. There is only one problem, he said. They are only paid for two hours."

The lecture was interrupted repeatedly by applause and laughter as round after round of beer and other beverages were consumed by the crowd. Under his contract, Dr. Tomin, 49 years old, is to give three lectures annually for three years at a salary of about \$8,800 a year.

Stripped of Citizenship

At the pub in Swindon, 90 miles west of London, the philosopher said he was invited by Oxford and Cambridge universities in 1980 to give a series of lectures. He traveled to Oxford but said he soon "realized that I was not welcomed." He decided to re-

Network Photographers/Mike Abrahams

Dr. Julius Tomin, left, the paid resident philosopher at the Beehive Pub in Swindon, England, with Noel Reilly, the owner of the establishment, who hired him.

The contract calls for three lectures a year. Salary: \$8,800.

turn to Czechoslovakia, where he had been imprisoned for a total of 15 months as a youth for refusing to serve in the military and trying to leave the country illegally after being refused permission to emigrate. He had also clashed with the authorities as a signer of the 1977 Czech human rights charter.

As he prepared to go home, the Czechoslovak authorities stripped him of his citizenship. He has been in Oxford ever since.

Dr. Tomin said Oxford had turned down his application for a teaching job. He says he believes he has been excluded from British academia largely because of differences in his view of Greek philosophers. His most controversial theory, that Plato's "Phaedrus" was the philosopher's first dialogue rather than a later one, has been rebuffed by other scholars.

Dr. Tomin accuses the academics of being unable to properly read and

understand Greek.

"That's not an exaggeration but a total falsehood," said Dr. David Sedley, director of studies in classics at Christ's College, Cambridge. He is also editor of *Classical Quarterly*, a century-old journal on classical studies, which has published one paper by Dr. Tomin but turned down several others. "Every serious scholar working on Plato has a knowledge of Greek and reads Plato in original forms."

"In a way, he's trying to put the clock back to the traditional view taken by Plato's followers in later centuries in antiquity," he said. "They didn't have any of the historical perspectives on his development that we have nowadays."

Some scholars doubt that Dr. Tomin will be offered an academic post in Britain in his field, especially since, in recent years, at least six university philosophy departments have been closed. Nonetheless, the pub philosopher, who also reads in French, Latin, English, German and Slovak, continues to study, spending his days at the Bodleian Library in Oxford. His nights are spent alone in a tiny, cluttered room in the basement of an old house, where he keeps the milk for his tea cool on a window ledge.

After Dr. Tomin spent his savings, he lived for several months on wel-

fare. But the authorities cut off the payments, saying that his research made him unavailable for work and that he had placed "unreasonable restrictions" on the type of job he would take.

Mr. Reilly, 42 years old, thought Mr. Tomin might just fit in at the Beehive, a 100-year-old pub that is the neighborhood living room for a diverse group of people.

When Mr. Reilly — a former officer in the Irish Army who has worked as a bartender in Manhattan, Yonkers and the Bronx — offered the philosopher a salaried job, it was not the first time that he had taken a chance. He said he once got drunk at a party in New York City in 1968 and decided to head for London. He had no money, but a man at the party offered "a lift" to London. The man was a steward on a trans-Atlantic liner, and Mr. Reilly became a stowaway. He was caught but a friend wired him fare money and he became, in his words, "a celebrity who was more entertained than entertaining all the way across the Atlantic."

Dr. Tomin said, "Noel has given me the essential help I need to progress to such a degree where I will be able to put Plato on an even higher academic level but also be able to talk about it in plain language to the non-specialist."

(45) BR'S obituary in the *Manchester Guardian*, reprinted in the *San Francisco Sunday Examiner & Chronicle*, (2/8/70, p. 43)...thanks to AL SECKEL:

The Last Late-Renaissance Humanist

Manchester Guardian

THE DEATH of Bertrand Russell last week at age 97 brings home a fact which has long been obscurely known—namely, that Russell's philosophical work, recent though it is, is already included in the philosophical canon. Descartes, Leibnitz, Locke, Berkeley, Hume, Kant, Mill, Russell—that is how the canon now runs. In other words there were not three British empiricists but five. From the point of view of the historian of ideas he represents the end of a tradition, not the beginning of one. In spite of the massive formal logical techniques which he developed, his work has ideologically no real part in strictly contemporary controversy. But Russell's place in intellectual history is also due, in large measure, to the inclusive and "classic" quality of his mind—a quality which is mirrored in the style of the best of the texts.

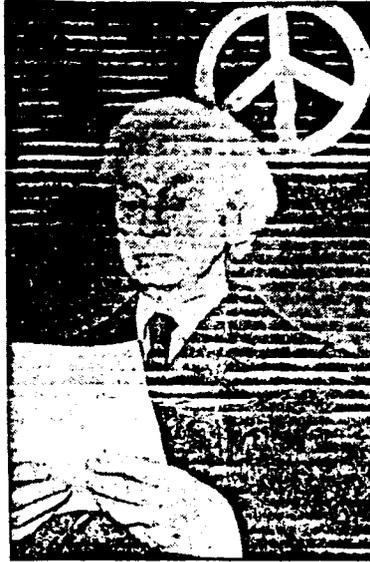

Russell, who had been ill with influenza, died at his home in Merionethshire, in North Wales. Russell's life, like his work, ran on classic or renaissance lines. He was a philosophic amateur, a delicate child, the third earl. He had four marriages; he took part in politics; he suffered fortunes as diverse as dismissal, imprisonment, the award of the Order of Merit, and world-wide acclaim.

The "scandalous" element in his social influence, as in that of Mill, stemmed not only from his inborn and Whig love of liberty, but also from his thirst for social justice. At every point in his career he desired to defend some category of people who, through being denied justice and liberty, were being oppressed.

His socialism, feminism, pacifism; his crusade against nuclear weapons and for Britain's renunciation of them, his marital and educational unorthodoxy, anticlericalism, and, finally anti-Communism—which were in some ways inconsistent with one another—all sprang alike from this generosity of mind. They were pursued sometimes with a lack of balance which suggested a curious immaturity of political and social judgment. His final reputation will be enhanced when the memory of various culs-de-sac into which these causes led him has been obliterated. Bertrand Russell will then stand out more clearly than any other figure as the last late-renaissance scientific humanist of our time.

From the start of his undergraduate life at Cambridge he became an outstanding member of a brilliant company, the friendship of most of whom he retained throughout life. Thenceforward his biography, apart from his emotional development, is the history of the books he published and the enemies he made. After obtaining first-class honors at Cambridge both in mathematics and moral sciences—and, in 1894 serving for a few months as an honorary attache of the British Embassy in Paris—he became a prize fellow of Trinity in 1895. He published an "Essay on the Foundations of Geometry" in 1897, his book on "The Philosophy of Leibnitz" in 1900, and "The Principles of Mathematics" in 1903.

He was made a fellow of the Royal Society in 1906 and published his magnum opus "Principia Mathematica," in collaboration with A. N. Whitehead, in 1910. Two other books, now famous, quickly followed: "Problems of Philosophy" in 1918 and "Our Knowledge of the External World" in 1918. These, together with "Mysticism and Logic" (1918), "The Analysis of Matter" (1927), constitute the corpus of his best work. But much earlier, with the publication of "Principia Mathematica," his international reputation had become secure.

BERTRAND RUSSELL

In May, 1910, he had been appointed to a lectureship at Trinity and on its expiration, by a decision of the Council of Trinity of February, 1915, was to have become a Fellow. But early in 1916 he had written a pamphlet for the no conscription fellowship protesting against the severity of the sentence passed upon a conscientious objector, E. F. Everett: he was prosecuted and fined 100 pounds sterling, and a few weeks afterwards the Council of Trinity dismissed him from his lectureship.

In 1918 he was again prosecuted — this time more legally if not more justly, and sentenced to six months imprisonment, which he spent writing "an introduction to mathematical philosophy." In 1919, when the younger fellows who had been absent on war service returned to the college, a successful memorial was immediately presented for his reinstatement.

From that time public opinion turned increasingly in his favor.

He became a visiting professor at the University of Peking in 1920 and Turner Lecturer (a Trinity College award) in 1926. He received the Sylvester Medal of the Royal Society in 1932, and the DeMorgan medal of the London Mathematical Society in 1933. After that there was a slight pause in his honors until — just before he received the Nobel Prize for literature in 1950 — he was awarded the Order of Merit.

Intellectual Achievements

During the latter part of his life he wrote a large number of books (including his first novel at 80), but it is not upon that his logical and philosophical reputation mainly rests. It rests upon two exceptional intellectual achievements. The first was his large measure of success in deriving the whole of mathematics by rigorous methods from a few very simple logical principles: in proving as he said, that "logic was the youth of mathematics." The second was the substitution, in philosophy, of "logical constructions" for "inferred entities," such as that of substance. In both of these endeavors his object was the same: to bring exact and agreed techniques of thinking to bear upon intellectual fields in which all previous thinking had been emotionally tinged

or philosophically vague. Thus he started an intellectual movement which was far larger than that with which, from the historian's point of view, he will be identified.

When we consider the new light which his methods brought to bear upon general notions, such as that of infinity, which had been traditionally considered ineffable, it is clear that there is no sphere of which we can say, a priori, that exact techniques of thinking cannot be applied to it. Even in spheres where he himself failed his giant shadow looms over us, urging us to further exploration.

Co-Existence

In November, 1957, he published in the "New Statesman" his "open letter to Eisenhower and Khrushchev," in which he declared that our supreme concern should be the continued existence of the human race, that the unrestricted diffusion of nuclear weapons should cease, that East and West should recognize their respective rights, and that their leaders should meet in a frank discussion of the conditions of co-existence.

At the beginning of 1958 the campaign for nuclear disarmament (superseding a previous organization, the National Council for the Abolition of Nuclear Weapons Tests) came into public view with Russell as its president. From this time onwards he became increasingly impelled by a sense of urgency.

More fundamentally, he rejected the whole theory of deterrence and the balance of terror by the moral argument that the risks involved in abandoning the nuclear race were not worth considering against the iniquity for possible mass extermination.

Committee of 100

In February, 1961, Russell led the Committee of 100's first sit-down on the pavements outside the Ministry of Defense; this was tolerated by the police, but when a bigger demonstration was planned for September in Parliament Square its leaders were summoned to be bound over to keep the peace. On refusal, Russell, with his wife and others, was given a week's imprisonment.

Russell's activities in the Committee of 100 later declined, and in the following year he resigned the presidency because he felt himself to be insufficiently in touch with the movement. Throughout his campaign to awaken the country to the nuclear danger, Russell recognized that relaxation of tension was a prerequisite of disarmament. He consistently advocated that research should be undertaken and remedies sought by bodies unconcerned with changing the balance of power, composed of representatives of both sides in the Cold War, along with neutrals. This line of thought led to the initiation of the long series of international scientific conferences, first held at Pugwash.

Role of Mediator

During the autumn of 1962, in the Cuban crisis and in the Sino-Indian frontier dispute, Russell himself took on the role of mediator.

In the long run, Russell looked to world government as the only guarantee of peace. In "Which Way to Peace?" (1936) he taught that the political condition for permanent peace is the existence of a single supreme world authority, possessed of irresistible force. Internationalism must first be established in the military sphere. This theme he returned to in "Has Man a Future?" (1961), and in "Unarmed Victory" (1963) which tells the story of the 1962 crises.

No. 62

May 1989

- (1) Highlights: Annual Meeting 1989 (2,3). BR on Pascal's argument (5). Conrad reminisces about his father (29). BR's *Population Pressure and War* (30). Nominations for Directors wanted (22). How the Army views peace activists (15). Adam Jacobs wins his case (7). 500 letters to Wittgenstein discovered in Vienna (19). The Index is at the end.

ANNUAL MEETING (1989)

- (2) Time and place: June 23-25, 1989, NYC. The theme: *Reality vs. Illusion: Death, War and the Problem of Skepticism.*

The arrangements and program are substantially the same as described in the last issue (RSN61-2,4).

PROGRAM

ARRANGEMENTS

Friday, June 23... <u>at Milford Plaza Hotel</u>	ETHICAL CULTURE SOCIETY	MILFORD PLAZA HOTEL
4-6pm Registration	2 West 64th Street	70 West 45th Street
7:30-8:45 Welcome, Presentation of 1989 Book and Service Awards, and talk by Alan Ryan, "Russell's Political Life"	New York, NY 10023	New York, NY 10036
8:45-9:00 Tea and Coffee	Registration Fee = \$65.00 (Includes Banquet)	
9:00 Board of Directors Meeting [all members welcome]	Single Day Registration: Saturday = \$15.00	
Saturday, June 24... <u>at Ethical Culture Society (Social Hall)</u>	Sunday = \$10.00	
8-9am Registration	Students & Senior Citizens pay no Registration Fee	
9:00-10:30 Panel: "Skepticism vs. Benefits of Illusion". Panelists include David Goldman, Marvin Kohl, David Sidorsky	Banquet = \$40.00	
10:30-10:45 Tea and Coffee	<u>To register: use Registration Form, next page</u>	
10:45-11:45 General Meeting or Russell Videos	Please mail completed Form and Registration Fee (payable to BRS '89) to:	
12:00-1:30 Lunch	Professor Michael Rockler	
1:30-3:00 Paper: Alan Ryan, Princeton University, "Russell's Pacifism"	Department of Education	
3:00-3:15 Tea and Coffee	SUNJ Rutgers at Camden	
3:15-4:15 Paper: Marvin Kohl, SUNY, Fredonia "Understanding the Pragmatics of Pacifism"	Camden, NJ 08102	
5:00-6:00 Red Hackle Cocktail Hour	609-757-6051	
8:00 Banquet... <u>at Milford Plaza Hotel</u>	To reserve a room at Milford Plaza Hotel:	
9:00 Presentation of 1989 BRS Award to Paul Edwards	from any State except New York State: 800-221-2690	
Talk: Paul Edwards, CUNY at Brooklyn "Voltaire and the Role of Skepticism"	from NY State: 800-522-6447	
Sunday, June 25... <u>at Ethical Culture Society</u>	from New York City: 869-3600	
9:30-10:30 Paper: Tim Madigan, <i>Free Inquiry</i> "The Rationality of Waging War"	Rate = \$80.00 Single, \$90.00 Double. Identify yourself as a Bertrand Russell Society member to get the reduced rate. Reserve by <u>May 15th</u>	
10:30-10:45 Tea and Coffee	Alternative accommodations: West Side YMCA, 5 West 63rd Street, New York, NY 10023. One block from Ethical Culture Society. 212-787-4400	
10:45-11:45 Paper: Michael Rockler, Rutgers at Camden "Skepticism and Education"		
Noon End of Conference		

*Russell Society News, a quarterly. Lee Eisler, Editor, RD 1, Box 409, Coopersburg, PA 18036
 Marvin Kohl, Co-Editor, 715 Maytum Hall, SUNY at Fredonia, Fredonia, NY 14063

 Russell Society Library: Tom Stanley, Librarian, Box 434, Wilder, VT 05088

ANNUAL MEETING (CONTINUED)

The Saturday 9am panel -- *Skepticism vs. the Benefits of Illusion* -- will consider whether it is better to be a skeptic and hold, as Russell does, that --

Well-being demands that we only believe something to be true when the claim is supported by reliable evidence, and that we should doubt what is doubtful and disbelieve what is false --

or should we follow Taylor and Brown [Shelley Taylor and Jonathon Brown, *Illusion and Well-Being*, *Psychological Bulletin*, 1988, Vol. 103, No. 2, 193-210] and say that some illusions promote mental health, including the ability to be happy or contented, and the ability to engage in productive and creative work.

BY BERTRAND RUSSELL

(4) From the *San Francisco Review* (September 1960):

THE RISK OF DISARMAMENT

Bertrand Russell

At the disastrous Paris summit, man's future was at stake. In this exclusive article Britain's most eminent philosopher asks whether Khrushchev's disarmament plan is just a trap — or our chance to end the race to global suicide.

Ever since the invention of the H-bomb, the human race has been exposed to a peril which is entirely new. It is the peril of universal death. A mistake by one man, at one moment, may bring about this disaster even when no one is expecting anything of the sort.

This is the consequence of the destructive power of nuclear weapons combined with the doctrine of instant retaliation, which holds that, in view of the advantages of delivering the first blow, H-bombs should be launched against the "enemy"

when there is reason to suspect a hostile attack, without waiting to verify whether such an attack is, in fact, taking place.

The official policy of the British Government is based explicitly upon the belief that there is no possibility of protecting ordinary civilians from an H-bomb attack, but that that small portion of the population which is in charge of launching sites and H-bombs can be kept alive just long enough to exterminate a good many millions of Russians. It is apparently thought that every Briton, in his last gasps, will die happy in the thought of the imminent equal agonies in Russia.

This sort of policy must strike every ordinary person as criminal madness. There is better hope now than at any time during the last 12 years for the prevalence of a saner attitude on the part of the leading powers of the world. Whether reason and humanity will prevail against ancient habits of thought and feeling is still doubtful. If there is to be a happy issue, the decisive actions will have to be taken by Governments. But by public opinion, and for this reason it is very necessary that public opinion should be aware of the dangers and alert in seeking ways of avoiding them.

Mr. Khrushchev's proposal of general disarmament has taken the West by surprise and has faced Western statesmen with some very awkward questions. On the one hand, they dare not definitely oppose his plan, since, if they did so, Russia would achieve a very great propaganda advantage in the eyes of un-

committed nations; on the other hand, the instinct of Western statesmen is to suspect a trap and to think that, as in the past, armaments may be a source of safety.

It is not yet clear which of these two sets of considerations will govern Western policy. For my part, I am entirely convinced that the West ought to assume Khrushchev's sincerity in spite of his Paris walkout and, on this assumption, suggest such safeguards in the way of inspection as may be genuinely needed.

But if his point of view is to prevail, it will be necessary that statesmen should assess the risks of this or that policy more realistically than they have hitherto done.

I think it should be possible to bring about such a reappraisal among Western statesmen, since the arguments to be adduced are completely unanswerable, both from the point of view of national self-interest and from that of the future of man. I will endeavour to set forth what seems to me to be the arguments in favor of this point of view. The questions involved are so difficult and so unfamiliar that it is easy for Governments to be themselves misguided and to generate a completely mistaken public opinion to which, in turn, they say they must bow.

The first thing to be considered is the question of Mr. Khrushchev's sincerity. Does he mean to carry out the ostensible purpose of his suggestions? Or is he trying to impose a trick by which the East will achieve a new superiority?

I think Mr. Khrushchev is an intelligent man who is aware that general disarmament would further Russian well-being and that nuclear war would be a disaster to Russia as well as to all other countries. I am confirmed in this opinion by his neutral attitude on the Sino-Indian dispute.

People doubt his sincerity because of Russia's brutal suppression of insurrection in Eastern Germany and Hungary and his Hitler-like temper shown in Paris.

The moral to be drawn is not that Communist Governments will not keep their word, but that agreements with them should be very precise. This applies to Khrushchev's disarmament proposals. If they are to be accepted, there must be very explicit agreement on the question of inspection.

Assuming Khrushchev's sincerity, what positive arguments are there for believing that acceptance of his suggestion is in accordance with Western interests? There are many, and I will begin with the least important.

The fiscal burden of armaments is, at present, already very severe and is certain, if no agreement is reached, to increase to astronomical proportions. Science is bound to invent more and more expensive ways of threatening the "enemy." We may expect both Russian and American stations on the moon, armed with missiles capable of exterminating Washington or Moscow at a signal from the Government of either country. When people have got used to this state of affairs, there will have to be stations on Mars and Venus.

I do not pretend to foresee exactly what science will be able to do in the way of threatened destruction, but experience since 1945 is sufficient to show that neither side will shrink from any expenditure that may be thought necessary until the populations of East and West are reduced to bare subsistence level. There will then, almost inevitably, on one side or the other, if not on both, be an outburst of impatient fury promoted by men who find the nervous strain unendurable.

If, on the other hand, a disarmament agreement is reached, the resources of science can be used to raise the standard of life in every part of the world, and to prevent an angry determination on the part of undeveloped countries to share in the "blessings" enjoyed now by those who possess a superiority in the arts of scientific homicide.

Much of the most serious argument in favor of a ban on nuclear weapons is that, so long as they exist, a nuclear war is at any moment possible, and, in the long run, probable. Politicians and the public have not yet rightly estimated the risks of various possible policies. A policy of general disarmament is apparently thought, by Western statesmen, to involve a risk of surreptitious gains by the Communist bloc, whether by propaganda or by "knaveish tricks."

But let us now consider the risks involved in the continued production and use of nuclear weapons. There is a cheerful assumption that of course these weapons will never be used. They exist only, we are told, as a deterrent.

This is an incredibly rash and unrealistic point of view. Mr. Dulles taught us to live with the doctrine of "brinkmanship," and, although at the moment a less madly dangerous policy is prevailing, we can have no assurance that good sense will continue to dominate. As things stand, there is little hope of preventing the spread of nuclear weapons to many nations which do not at present possess them. History shows that politicians are not invariably wise, and, when many are in a position to use H-bombs, the likelihood that at least one may be insanely desirous of power becomes great. In addition, there is the possibility of a misinterpreted incident leading to instant retaliation.

It would seem, therefore, that in the absence of a disarmament agreement, the likelihood of a large-scale nuclear war, sooner or later, approaches very near to certainty; and such a war, if it occurs, would be an immeasurably greater disaster than the victory of whichever bloc we happen to dislike. A large-scale nuclear war might destroy the whole population of Europe and at least three-quarters of that of the United States.

This risk is vastly greater than any of those that statesmen are taking care to avoid. The only reason for not allowing it to govern policy is that it is new and that it demands a realization of the interests which East and West have in common, rather than those very much smaller interests in which they compete. I think Khrushchev has grasped this fact and, as it is quite obvious and quite indisputable, I do not despair of its being grasped by Western statesmen.

Why are the obvious arguments for disarmament not universally admitted both in the East and in the West? The reasons, I think, are partly rational and partly mere instinctive obstacles to rationality. It is not wholly irrational for one side to regard as a trick any disarmament proposals proceeding from the other side, and the possibility of a trick is heightened by Russia's extreme reluctance, at various times, to permit adequate inspection.

If Mr. Khrushchev's present disarmament proposal is to be accepted, adequate safeguards in the way of inspection must, clearly, form part of the agreement. But it would be a terrible mistake if suspicion were to cause the West to reject a disarmament treaty without first ascertaining whether adequate inspection would be permitted. And I think the East, also, has had grounds for suspecting Western tricks—for example, when the West has proposed, for propaganda purposes, measures only suggested because it knows the East will reject them.

A second more or less rational argument is that the economy of the West, and especially of the United States, is geared to the production of armaments and that a great depression would be unavoidable if this suddenly ceased.

This view is often proclaimed as if it were an indisputable truth, but those who are in the best position to judge take a different view. There is an American monthly called "Nation's Business," which is the organ of the U.S. Chamber of Commerce. In October, 1959, it published an article entitled "What Peace Could Do To You." This article says, among other things, "Any abrupt softening of cold-war pressures—if it come—can bring this country a boom, not the recession suggested by such phrases as 'peace scare'."

The article points out that the remission of taxation which would be rendered possible would lead to a large increase of consumer spending, and it supports this view by figures as to what has happened after previous reductions of military spending in 1919 and 1945.

It should be emphasized that "Nation's Business" is not a propaganda organ and is not primarily concerned with questions of international politics.

But I think the real strength of the opposition to disarmament comes not from quasi-rational grounds, but from the purely instinctive mechanism which has been built up in human beings

by six millennia of organized war. When a country feels itself threatened by another country or group of countries, the first instinct of everyone who thinks about the matter is to say: "We must make ourselves strong enough for defense if war should come, or, better still, strong enough to deter our enemies from attacking us."

It is this way of thinking which makes it so difficult to end the cold war by conciliation. The method of conciliation does not satisfy national pride and does not afford the sense of dominant power which unthinking patriots desire. There are even people who, in other respects, are not below the average of rationality, who yet think, where the present conflict of ideologies is concerned, that any degree of damage to the West, even to the extent of obliterating the whole population, would be worthwhile if it were accompanied by equal damage to the East.

It is, to my mind, amazing that anybody can think that the defeat of Communism is more important than the continued existence of our species. But perhaps the study of history should have prepared one for this kind of fanaticism. In the last days of the Byzantine Empire, the Government of Constantinople preferred defeat by the Mohammedans to becoming "Azymites" like Western Christians. One could multiply such examples, but they have not, in the past, had the tragic importance which modern fanaticism derives from nuclear power.

The danger from nuclear weapons is one which threatens the whole human race and not only this or that party or nation. It is a danger which makes no distinction between rich and poor, white and colored, Christian and pagan, Communist and capitalist. Nevertheless, those in the West who point out the dangers inherent in nuclear warfare are regarded as traitorous friends of Russia, but are, in fact, mainly of the non-Communist Left in politics.

The only explanation that I can see for this curious fact is that most of those who are on the Right in politics are incapable of admitting the facts of the modern world because these facts make their creed absurd. I think we must hope that the reasons in favor of nuclear disarmament, which are entirely non-party,

will come to be accepted by the Governments of all important countries. Some people will say that the obstacle to a rational treatment of the problem lies, not with Governments, but with public opinion. Public opinion, however, in such a difficult and technical problem is necessarily guided by what it is told.

At present the Governments of East and West try to create a public opinion in which populations will die quietly without realizing, in advance, that this fate was being prepared for them. The Governments, in this respect, are supported by those whose instinct it is to be always on the side of authority. They are supported, also, by the greater part of the press and by the pronouncements of scientists in government employ. And, among the elderly, there are many who think that the cataclysm will not come in their lifetime.

But more important than any of these forces is the natural disinclination to think about unpleasant subjects which, it is felt, may well be left to those whom they professionally concern.

All this would be different if all Governments could be induced to face the dangers, and to realize the new approach to international relations which these dangers necessitate. If the Governments did not devote themselves to keeping their populations ignorant and developing palpably dishonest schemes of civil defence, public opinion would soon become quite different from what it is. There is much reason to hope that the Governments of both East and West are learning wisdom, and that something like Mr. Khrushchev's proposal will be agreed to.

It would be a mistake, however, to think that the problems raised by nuclear weapons can be solved by disarmament alone. There must also be an agreed method of settling international disputes by means of an agreed international authority. Until this is done, wars will still be possible and, if prolonged, they will lead to the renewed manufacture of nuclear weapons.

So long as war remains possible, the nuclear danger will remain, and the future of our species will be at the mercy of powerful fanatics. If the grandchildren of the present generation are to live to maturity, the difficult problem of the permanent prevention of war will have to be solved. Its solution requires new ways of thinking.

RELIGION

- (5) Russell's response to Pascal's argument. Here is Pascal's argument, as summarized by A. J. Ayer:

Not to bet on the existence of God is to bet against it. But you should bet on it. For in so doing, you have everything to gain, and nothing to lose. Suppose that the chances are even, you are still betting on having two lives against one.

Ayer then says:

Bertrand Russell's reaction to Pascal's wager is worth recording. He argued that if there were a just God, he would expect men to make proper use of the reason with which he had endowed them. Since he had not supplied them with sufficient evidence for believing in his existence, he would be displeased with those who did so and pleased with those who did not. Russell made this not wholly serious point to me in conversation. I do not know if he ever put it into print.

From *Voltaire* (NY:Random House, 1986, p. 66-7). Thank you. TOM STANLEY.

RELIGION

- (7) Adam Jacobs wins his case. Last issue you saw Adam's letter to the NJ Supreme Court objecting to the use of the words "in the year of our Lord" on his certificate to practise law. Here is the outcome, as reported in the *New Jersey Law Journal* (4/13/89, pp 1,20):

Adam Jacobs, (left), Ann Sorrel, and Charles Novins were offended by the phrase 'in the year of our Lord' on their law licenses, and they let the state Supreme Court know so.

Court Says Finis To Anno Domini

By Suzanne Riss

Any reference to the Lord offends Adam Jacobs, an agnostic.

So when he unpacked his attorney's license after three years at Rutgers Law School-Newark, he was morally affronted to notice the language in the lower right-hand corner. Next to his name, the date of conferral was indicated with the words "in the year of our Lord."

"I was shocked to see my name associated with a deity I do not believe in," says Jacobs, an associate with the Short Hills office of the New York firm of Fragomen, Del Rey & Bernsen.

Not one to let such disturbances go unchallenged, Jacobs and two law school classmates, Ann Sorrell and Charles Novins, wrote to the New Jersey Supreme Court last December ask-

ing that the religious reference be removed from the licenses. The trio has long been bothered by what it sees as a gradual encroachment of religious language into secular society — especially in the courts.

Last month, the state Supreme Court revised the license, removing the reference to "the year of our Lord." Stephen Townsend, clerk of the state Supreme Court, says the justices also took the opportunity to change the gender references on the licenses, replacing "his" and "her" with the attorney's name. The justices also replaced the license's white paper with cream parchment paper.

Lawyers admitted to the New Jersey bar as of December 1988 will receive the newly fashioned licenses. The changes have delayed the issuance of

CONTINUED ON PAGE 20

The three friends, who were admitted to the New Jersey bar in 1987, say they viewed the religious language on their licenses to practice law as a violation of the separation of church and state. And as activists since their days at law school, they wanted to do something to change it.

the licenses to the 1,800 lawyers who were admitted last December; they will receive their licenses during the next four months.

Townsend says the justices began to review the licenses a year ago after they received a letter of complaint about the religious reference from an attorney, whom he declined to name. The objections raised by Jacobs, Novins and Sorrel were considered during the justices' review, although Townsend would not say how much weight their comments were given. No other complaints about use of the phrase "in the year of our Lord" were received by the Court, according to Townsend.

Exchange Policy

While Jacobs, Novins and Sorrel say they are pleased with the Court's decision, they still have the old licenses which bear the language they find offensive. Townsend says that the Court is considering allowing attorneys who already have licenses containing "in the year of our Lord" to exchange them for the newly issued versions.

Until such an exchange is possible, the trio say they will not display their licenses in their offices. To do so, they say, would violate their right to free speech and religion because their names would be next to a deity in which they do not believe.

In their letter to the Court, Jacobs, Novins and Sorrel wrote: "We find it particularly objectionable that a direct reference to a deity is made on a document conferred by a judicial body, since the judiciary, among all other legal institutions, should be the most sensitive to maintaining religious neutrality on documents issued in its name."

The three friends, who were admitted to the New Jersey bar in 1987, say they viewed the theistic language on their licenses to practice law as a violation of the separation of church and state. And as activists since their days at law school, they wanted to do something to change it.

Sorrel, an associate with the Newark firm of Helling, Lindeman, Goldstein, Siegal, Stern & Greenberg, says that she had not looked at her license until she settled into her first job and unwrapped her certificate before getting it framed.

'Unreasoned Approach'

"When I opened it, I said, 'Wait a second. I don't like this language. I don't believe in the lord referenced in it.' ... I believe we can live moral and just lives without relying on religious tenets or on faith. I'm a rationalist. I reject the unreasoned approach to life," says Sorrel.

Novins, a part-time associate with Richard B. Livingston in Livingston, identifies himself as an atheist. He says that he, Jacobs, and Sorrel joined forces on this issue as they had many times at law school when they ran the school's newspaper. Among their causes at that time were keeping U.S. Army recruiters

off the campus and preventing the closing of a shelter for the homeless.

Says Jacobs: "We are always trying to encourage awareness of the deference, both subtle and open, that is given to religion by society at large and the legal community in particular."

The fight Jacobs, Sorrel and Novins waged, however, was not simply a philosophic one but also a legal one. The basis for their legal dispute was three-fold: the separation of church and state, the Establishment Clause of the First Amendment, and principally, the right not to speak, as enunciated by the Supreme Court in *Wooley v. Maynard*, 430 U.S. 705 (1976).

In *Wooley*, the U.S. Supreme Court held that New Hampshire could not force its citizens to display the state motto, "Live free or die," on the state's license plates. Jacobs, Sorrel, and Novins also cite the case of *Sherbert v. Verner*, 374 U.S. 398 (1963), which requires the state to use the least restrictive means of accomplishing a compelling state objective that burdens religious beliefs.

Looking to the Federal Court

The trio's next project? Corresponding with the U.S. District Court in New Jersey and the Third U.S. Circuit Court of Appeals in Philadelphia to have "in the year of our Lord" removed from licenses issued by those courts.

Says Sorrel, "I would razor out, white out, or tape over the reference to 'our Lord' on my Third Circuit license before I would hang it on my wall."

The U.S. Supreme Court certificates show the date of conferral with the phrase "in the year of our Lord." The policy used by various states appears to be somewhat haphazard. The Pennsylvania state attorney license simply states the year of conferral, while the license in Massachusetts uses "in the year of our Lord."

In New York state, the larger version of the attorney license — the one that is suitable for framing — includes a reference to "the year of our Lord." However, the smaller version does not include that reference.

By way of explanation for the inconsistency, Daniel Brennan, staff attorney with the New York state Appellate Division, says, "I think it's a matter of no one bothering to change the language on the large license. Most people don't notice these things. They don't go to the trouble."

But Jacobs, Sorrel and Novins did go to the trouble. And they are not finished yet. In addition to being offended by the language on attorney licenses, they also object to the use of the Bible in the courtroom for witnesses to swear by even though non-believers are permitted to "affirm by" the Bible. They also object to Congress beginning every session with the Pledge of Allegiance which contains the words "under God."

The list goes on. Yet even they acknowledge that one of their pet peeves probably will not see a change for some time. They object to the words "In God We Trust" on U.S. currency.

Adam is annoyed because this story in the *New Jersey Law Journal* fails to mention his many references to Bertrand Russell, whose writings he says inspired these activities.

NAME CHANGE

- (8) Allen & Unwin began to publish BR's books in 1916 -- at a time when BR was in jail for his actions opposing the war (World War I), and when no large publishing house would touch his books (RSN55-36). Here -- with thanks to DON JACKANICZ -- is the announcement of the firm's new name.

150 Years of Publishing Tradition...

Allen & Unwin, Inc. is now UNWIN HYMAN, INC.

In 1986 the venerable British publishing houses of George Allen & Unwin and Bell & Hyman merged to form Unwin Hyman, one of the largest independent British publishers. The U.S. division of Unwin Hyman, formerly Allen & Unwin, Inc., will now be called Unwin Hyman, Inc., and will continue its tradition of, and commitment to, publishing the finest in scholarly and general interest titles.

Landmarks

- 1838** George Bell, Publisher, established in London.
- 1871** John Ruskin sets up George Allen as a publisher.
- 1914** Stanley Unwin buys George Allen and forms George Allen & Unwin.
- 1976** Allen & Unwin, Inc., and Allen & Unwin Australia, Pty. Ltd., formed in Boston and Sydney.
- 1977** Robin Hyman buys George Bell and Bell & Hyman is formed.
- 1986** Allen & Unwin and Bell & Hyman merge interests to form Unwin Hyman.
- 1988** Allen & Unwin, Inc., Boston, becomes Unwin Hyman, Inc.

Our authors have included such distinguished scholars and writers as:

Max Weber, Bertrand Russell, Friedrich Nietzsche, James M. Meade, Sir W. Arthur Lewis, Charles Kindleberger, Alec Nove, Paul Kennedy, James Rosenau, K.J. Holsti, Agnes Heller, Ferenc Feher, Tom Bottomore, J.M. Synge, Niko Tinbergen, Genaro Arriagada

Our expanding U.S. editorial program now includes: gender studies, Soviet studies, international relations, Latin American studies, and media studies and popular culture.

BR RECOLLECTED

- (9) Shohiq Sherry Terzian: "I heard that BR was to appear at some event at CCNY downtown Manhattan, and immediately made plans to meet him. BR was actually there, and not only did I meet him, but shook his hand, mentioning that I had had the honor of hearing Alfred North Whitehead at Harvard several times, while an undergraduate at Radcliffe. Compared to Whitehead, BR seemed subdued. Whitehead had mesmerized students with his veddy British appearance, his accent, his attire. BR was virtually solemn but affable, and listened intently while I raved on about my admiration for Santayana. To my great surprise, BR quietly said, "Yes, he's a great man, a great and wise philosopher. To which I mumbled, "Thank you, thank you..." becoming virtually speechless. Here was the great BR actually talking to me! This was wartime, Manhattan. BR had been in the headlines [the CCNY affair, 1939-40? RSN32-11], and I felt honored to have caught him before his lecture and appointments. I recall thinking: So this is greatness; Bertrand Russell was so simple, so kind, so for real..."

BRS CHAPTER (MCMMASTER)

THE BERTRAND RUSSELL SOCIETY

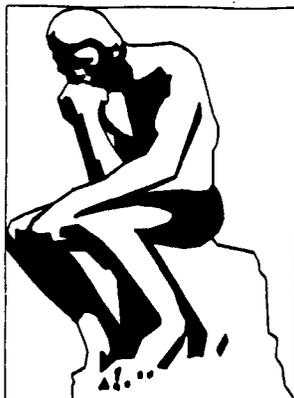

RUSSELL'S FRIENDSHIPS WITH
LUCY MARTIN DONNELLY
AND HELEN FLEXNER

By Maria Forte

At the turn of the century Bertrand Russell struck up friendships with two American women. One, Lucy Martin Donnelly, was on the faculty of Bryn Mawr teaching English Literature. The other, Helen Thomas, in whom Russell confessed later to be romantically interested, was a struggling writer. She married a prominent medical researcher, Simon Flexner. The women were close friends. Both kept Russell's letters, and he kept theirs.

For her doctoral dissertation at McMaster, Maria Forte edited and introduced this double correspondence. It ranges widely over personal, literary, political, religious and philosophical matters. Russell often confided thoughts and feelings in his letters to them that he did to no one else at the time. He even graded some student papers for Donnelly, telling her what he thought of the new academic study of English Literature.

Russell rarely saw Donnelly and Flexner during the years of the correspondence, which lasted nearly a half-century. When he did so it was during flying visits to America or the Americans' less frequent visits to Britain. Maria Forte has uncovered the personal story and laid bare the multiple levels of allusion (and possibly illusion) in the relationships, connecting Russell's side of it with his life as a whole during the period.

MCMMASTER UNIVERSITY

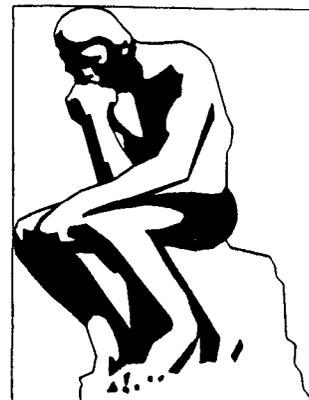

THE BERTRAND RUSSELL SOCIETY

THE DIALECTIC OF
THE SCIENCESTHE NEW REALISM,
1898

Nicholas Griffin

Professor Griffin will be reading the Introduction, in two parts, to Volume 2 of *The Collected Papers of Bertrand Russell*, of which he is co-editor. Volume 2 collects Russell's published and unpublished philosophical and mathematical papers for his formative period, 1895-99. During this time he was an idealist, or neo-Hegelian. In this guise he struggled to build a philosophy of science and then of mathematics that would satisfy the synthesizing goal of what Griffin has called "the Tiergarten programme". The unpublished manuscripts for the period are profuse, and yet, as Griffin and his co-editor, Dr. Albert C. Lewis, point out, may be well be vastly incomplete. The programme was brought to an abrupt end for was it so abrupt? by Russell's conversion to realism by G.E. Moore in or about the year 1898.

The Society is fortunate in being able to hear an Introduction to a *Collected Papers* volume before it has been committed to print. The volume in question is expected to be published this year as *Philosophical Papers, 1895-99*.

Thurs., Mar. 16 at 12:30. UH-317.

Thurs., Mar. 23 at 12:30. UH-317.

REPORTS FROM COMMITTEES

(11) Philosophers Committee (David E. Johnson, Chairman):

Call for papers. The Bertrand Russell Society announces a call for papers to be presented at its meeting with the Eastern Division of the American Philosophical Association in December 1990. Papers may be on any aspect of Russell's philosophy. They should have a reading time of about one-half hour and should be submitted in triplicate, typed, and double-spaced, with an abstract of not more than 150 words. The name and address of the author should be submitted on a separate page. The submission deadline is April 1, 1990. The papers should be sent to David E. Johnson, Chairman, Philosopher's Committee, The Bertrand Russell Society, Sampson Hall, U. S. Naval Academy, Annapolis, MD 21402-5044. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

CONTRIBUTIONS

- (12) We thank SUSANA IDA MAGGI & ROBERT SASS for their recent contributions to the BRS Treasury. Much appreciated.
- (13) We remind all of you that a good way to, as they say, feel good about yourself is to bolster the BRS Treasury with a contribution. Any amount, large or small, is welcome. Send it c/o the newsletter, address on Page 1, bottom.

BY BERTRAND RUSSELL

(14) From *United Nations World* (September 1948) 2(8) 14-16:*Famous British Scientist and Philosopher***Bertrand Russell***Foresees Boredom or Doom in a Scientific World*

THESE ARE THE HAZARDS—

*Death in atomic or bacterial warfare**Robot slavery under a cruel dictatorship**Or a dull, safe, antiprogenitive existence . . .*

DR. RUSSELL HOPES BLEAKLY FOR THE BEST

EVER since men were civilized to combine in communities, the chief aims of collective action have been to keep one's own society and to exterminate or subjugate those of neighboring nations. Most wars have been accompanied and exacerbated by a contest of "ideologies," in which victory decided what was to be considered "truth."

Should the Sabbath be observed Saturday or Sunday? Is it pork beef that is unclean? Should we worship the sun or the Christian God? These questions were decided by the armies of Titus, the prowess of the Great Mogul, and the warlike enterprise of the Conquistadores.

Is communism or capitalism a better economic system? This question remains to be decided, not (all likelihood) by the economists, but by war. Human passions and human ambitions remain what they were when the ancient Egyptians invented "civilized" war. Always science has supplied new means for the satisfaction of old lusts.

In general, however, science does not increase the destructiveness of war, since, as a rule, it strengthens the defense as much as the attack.

What makes the gravity of the present situation is that recent inventions have done much more for the attack than for the defense. The happy periods in human history are those in which defense is stronger than attack: we, unfortunately, seem to be entering upon a period of the opposite kind. It must be admitted that bacteriological and atomic weapons offer, for the future, opportunities of destruction against which, at present, no adequate defense can be foreseen.

THE FATE THE SCIENTISTS BROUGHT ON THEMSELVES

In old days, men of science did whatever research was important in their own judgment: Newton, Cavendish, Faraday, and Darwin chose their own subjects, and were, intellectually, their own masters. Now, since the usefulness of science in warfare has been recognized by governments, this freedom is rapidly disappearing. In some countries the disappearance is already complete, in others it is only a process of taking place. Most men engaged in science, especially physicists, need enormously expensive apparatus, which can only be provided by governments of American billions. The part played by governments in directing scientific activity is rapidly increasing in importance; it is a matter of international concern when some government kidnaps an eminent physicist. There is no hope of stopping this movement towards the enslavement of scientists, as long as the world continues to be oppressed by the fear of scientific war.

Science itself has brought about this situation, though the men of science had not the faintest intention of leading to any such result. As a consequence of their subjection to governments, men of science are increasingly compelled to pursue the ends of governments rather than those proper to science. The purposes of governments are partly in harmony with the good of mankind, but contrary to it: they wish their own country (and to a lesser degree their allies) to be prosperous and powerful, but they wish the countries of their enemies or potential enemies to be poor and weak.

The scientist who discovers how to benefit others is therefore at least as honored as the one who shows how to benefit ourselves. The pursuit of knowledge for its own sake, which was once the purpose of science, is lost sight of; there are even philosophers who tell us that there is no such thing. A physicist who wishes to study uranium can have access to any amount of public money, but if he wished to devote equal skill and equal labor to the study of (say) carbon, he would have to persuade his government that he was on the track of a method of inventing robots.

This state of affairs is profoundly distasteful to most men of science, but it is not in their power to do anything except acquiesce or utter protests which are doomed to inevitable futility.

Of course, subjection to the State is not necessarily an evil, except insofar as the purposes of the State are evil. But so long as there are many states, and so long as the danger of war exists, the purposes of states must be partly evil when viewed from the standpoint of mankind as a whole.

Short of a relapse into a pre-scientific society—which could only take place by a process involving widespread starvation and appalling misery—the only cure for this diversion of science to methods of destruction is the creation of a single superstate strong enough to make serious wars impossible. But this is a problem for the politicians, not for the men of science.

Assuming this problem solved—as it must be if a scientific society is to survive—scientific technique could

become almost wholly beneficent. The increased productivity of labor, which we owe to it, has been hitherto a doubtful boon, since it has been used less to diminish the burden of work than to increase the proportion of the population that can be set apart for the business of war. But if the fear of war were removed, the human race by the help of science could both work less and produce more. There need, in fact, no longer be any abject poverty anywhere in the world.

Science has already achieved immense triumphs in the prolongation of life and the diminution of disease. Given the better economic conditions that might come with the abolition of war, a great deal more could be done in this direction even without any improvement in medicine: and there is of course every reason to expect that improvement in medicine will continue. If, however, a lower death rate is not to lead to overpopulation, it will be necessary that the birth rate should be low, not only in those Western countries where this is already the case, but everywhere.

At present, for nationalistic reasons, government desire for a high birth rate is a cause and incentive of war; but if the danger of war were removed we might hope that a less insane policy would prevail. It is obvious that if war is eliminated and the death rate from diseases much diminished, only a very general low birth rate can prevent a worldwide shortage of food. For a time, this might be prevented by the application of more science to agriculture, but in the long run, if the population of the globe continues to increase, it must become impossible to feed it. A scientific society, therefore, can only be stable if the birth rate is so low as not to lead to any appreciable increase of population.

A SCIENTIFIC SOCIETY CAN BE DULL—OR VICIOUS

Given a low birth rate and a system making large scale wars impossible, a scientific society may be stable, which it is not at present. But, though stable, it might contain little or nothing that, according to existing standards of value, would deserve to be admired.

Ever since the invention of gunpowder, every advance in scientific technique has increased the power of the State. Up to a point, this is an unquestionable gain: almost any government is better than anarchy. But until recently governments which were very bad could be removed by revolution, and this put a limit to what was practicable in the way of tyranny. Now, as a result of scientific technique there appears to be no such limit.

Given control of the police and the armed forces, an oligarchy, however small, can exterminate political op-

ponents, and by means of a monopoly of education and the press can, within a generation, persuade almost all its subjects that it is enlightened and benevolent, and has no aims except the national welfare.

It can, meanwhile, devote its energies to stabilizing its own power and to increasing its own wealth at the expense of the powerless. And with every increase of injustice and despotism it can enhance its popularity, since no means exist of telling truths or refuting falsehoods except when the government so desires.

This is not a fancy picture. It has been achieved in Russia where the Bolsheviks, at first, were hardly 1 per cent of the population. If it is not to happen everywhere, democracy must be preserved and strengthened:

■ There must be publicity for facts that the government wishes to conceal and for opinions that it wishes to silence.

■ There must be constitutional means of bringing about a change of government.

■ The authorities must not have power to deprive people of liberty or of food except by due process of law, and the judges must be independent of the executive.

■ Accusations brought by the authorities against political opponents—for example, that they are plotting the forcible overthrow of the government—must be investigated carefully, impartially and critically, and during the investigation the accused must not be exposed to torture by the police.

■ A man's wife and children must not be punished for his sins.

All these are old-fashioned Liberal demands, which to many people appear out of date. Belief in benevolent despotism, which died out in the 18th Century, has been revived in our time, partly by those who hope to be the despots, and partly from ignorant impatience with existing evils. The result is a real possibility: that the scientific society may be of the despotic sort. It is therefore worth while to remind ourselves of the inevitable evils of such a society.

First there are economic evils. The oligarchs are sure to allot to themselves much larger incomes than they permit to the vulgar herd. In Russia at the present day, the percentage difference between the incomes of the rich and the poor is certainly greater than in Britain, and it is estimated by competent authorities to be greater than in the United States. An oligarchic system makes such inequality nearly certain, for in the long run wealth is the result of power. Only equality in the distribution of power can secure economic justice.

Next come cultural evils. In order that those who are deprived of power should not have a sense of injustice, they must be uneducated or miseducated. In a scientific society, the lat-

ter has been found the better method. The poor are made to attend school, and have access to reading matter, but what they are taught and what they are allowed to read is what the government thinks good for them, and bears no relation to fact. The average inhabitant of Moscow stares with pitying incredulity at travelers who tell him that there are underground railways in Western cities.

MEN CANNOT BE TRUSTED WITH TOO GREAT POWER

In order to keep up a large scale deception of this kind, there is need of very elaborate precautions against any infiltration of knowledge. This inevitably produces, sooner or later, a dull and stereotyped orthodoxy, which makes all serious intellectual innovation impossible. After some generations of such a regime, the capacity for original thought will have atrophied, and men will merely repeat authoritarian phrases from the books that established the orthodoxy.

Not least of the objections to an oligarchic regime is the probable prevalence of sheer cruelty toward underlings. As regards slavery, this is a commonplace, but it applies to many systems which do not nominally involve slavery. British industrialism was unbelievably inhuman where wage earners had no political power. King Leopold's treatment of the natives of the Congo provoked a scandal, but was only worse in degree than such that Negroes have suffered elsewhere.

In Russia inhumanities not unlike those of the Congo and of early British industrialism are inflicted by the forced labor camps which have become an integral part of the Soviet economy. Human nature is not to be trusted with irresponsible power, and where irresponsible power exists, appalling cruelties are to be expected.

On such grounds, a scientific society, if it is to be such as most people in Western nations can admire, must preserve a vigorous democracy and a considerable measure of cultural freedom. I think that perhaps, even at best, it is likely to contain less than we could wish of some good things, particularly art.

Human beings are a mixture of social and anarchic impulses, but as society grows more organic the freedom that can be allowed to the anarchic part of human nature grows less. Artistic impulses tend to be connected with anarchic elements, and to die out when life is tame and well regulated.

AGGRESSION: AN EXPRESSION OF SPONTANEITY

If a scientific society is to survive, the self-assertiveness which leads to

wars will have to be curbed by authority, and spontaneity will have to be restrained in many directions. It may prove impossible to restrain it in harmful directions without diminishing it in directions that are desirable. If so, safety will have been purchased at the expense of dullness. But this is a doubtful speculation, and we may hope that it is a mistaken one.

Science may be a boon if war can be abolished and democracy and cultural liberty preserved. If this cannot be done, science will precipitate evils greater than any that mankind has ever experienced.

Thank you, TOM STANLEY.

DISSENTING OPINION

(15) From *Nuclear Times* (March/April 1989):

HOW 'THEY' SEE 'US'

THE MILITARY VIEWS PEACE ACTIVISTS AS A BUNCH OF CRUSADERS, CRIMINALS AND CRAZIES

On September 1, 1987, a U.S. Navy locomotive ran over Brian Willson, leader of a group of protesters who were blocking the railroad tracks outside the Concord Naval Weapons Station in California. The train, operated by civilian Navy employees, hit Willson when he failed to move off the tracks, fracturing his skull and severing his legs.

The House Armed Services Committee concluded after an investigation that the accident had resulted "from an overabundance of trust on the part of all concerned": the protesters standing on the tracks believed the oncoming train would stop; the train crew believed that the protesters would move. But this game of chicken seems more indicative of a mutual lack of understanding—the wide gulf between the military establishment and its civilian critics that has both sides thinking in terms of "us" versus "them, with little idea of what makes the other side tick.

For its part, however, the military has made some effort to understand its critics. This has been seen as necessary in recent years, whether to deal with growing local opposition to nuclear weapons in the early 1980s, or more recently, to mobilize public support for military spending at a time of budget crunches and improving U.S.-Soviet relations.

The results of these efforts, as revealed in writings and through recent interviews, show attitudes that are biased by the nature of the military itself: its purpose in "understanding" the peace movement has been to learn how better to fight it.

"Crusaders, Criminals and Crazyes." Every activist in the country is familiar with the litany of derogatory adjectives used to describe them: naive, misguided, emotional, irresponsible, anti-American—just for

starters. Typical of military literature on the subject is the Army's 1983 training manual, *Countering Terrorism on U.S. Army Installations*, which specifies three types of radical activists: "crusaders, criminals and crazyes."

Elsewhere, peace movement activists are frequently characterized as floundering fools—crazies in the weird, disjointed sense. A 1983 study by the conservative Hudson Institute for the Department of Defense (DOD) categorizes anti-nuclear activists as either "protected"—"those who actually believe that unilateral sweetheart actions will bring like responses"—or "naifs"—"those who believe simple-minded 'peace' slogans." The study's author, B. Bruce Briggs, refers to these activists as "silly riffraff." Dale Smith, a retired Air Force major and author of *The Eagle's Talons: A Military View of Civil Control of the Military*, prefers the term "starry-eyed idealists." In a March 1983 editorial, the *Santa Maria Times*, which serves California's Vandenberg Air Force Base, calls anti-nuclear activists simply "anti-whatevers."

While these analysts are largely dismissive, others stress that it is a serious mistake to underestimate the "excessively or persistently optimistic" viewpoint. "Peacekeeping by wishful thinking" can be subversive, or at best, "dangerously counterproductive," explains James H. Toner, in the September 1987 issue of *Parameters*, the official military journal published by the U.S. Army War College. "Confronted by a popular mythology which often suggests that peace is available virtually for the asking, leaders, sycophantic and saccharine, truckle to Pollyannas in endorsing schemes which sometimes, in their simplicity, may undermine rather than support the struc-

tures of peace."

Soviet Tools. At the opposite extreme from irrelevant crazies is, according to the Hudson Institute, a more sinister group: the outright "leftists," "deviants" and "nihilists." These supposedly disaffected activists are seen as the genuine subversives in the peace cause—not least because they are believed to serve as intentional or unwitting agents of Soviet propaganda.

Alleged Soviet manipulation and disinformation of peace groups seems a given for military and right-wing civilian political analysts. In the September 1988 issue of *Army* magazine, Gen. John R. Galvin, commander of U.S. forces in Europe, attributes opposition from the European and U.S. peace movements to "the Soviet effort to prevent deployment of the Pershing II and ground-launched cruise missiles." In an October 1982 column for *The Washington Times*, Patrick Buchanan, former Reagan White House communications director, wrote, "Anyone who cannot see the hand of Moscow and the ugly faces of its odious little affiliates inside the 'peace movement' in Europe and the 'freeze movement' in the United States is simply not looking." There seems to be some disagreement, however, over whether the peace movement is subordinate to, or merely manipulated by, the Soviet Union: when asked in off-the-record interviews about the alleged Soviet link, several Pentagon officers took great care to assure that they don't believe the Soviets actually "run the show," but that they understandably take an interest in it.

Activism and Terrorism. Military analysts reserve a special category for peace activists who engage in civil disobedience and direct action. These "anti-nuclear extremists," in the words of a February 1982 RAND Cor-

poration report, *The Appeal of Nuclear Crimes to the Spectrum of Potential Adversaries*, represent a special threat. The report describes such activists as "individuals or groups so committed in their opposition to nuclear programs that they would be willing to undertake criminal actions to further their cause." A 1980 RAND memorandum lists "possible" crimes that could be committed by these "extremists" as including "low-level standoff attack," "theft or purchase of information," and taking and holding hostages.

The absence of such crimes in any instances of direct action has not stopped military observers from perfunctorily equating the criminality of civil disobedience with terrorism. Analyzing Nuclear Regulatory Commission data, the Army's counterterrorism manual lists "extremist protest groups" in the category of terrorists motivated by politics and ideology.

Similarly, Lt. Col. David Linn of the Office of Security Police, writing in the August 1985 *USAF Security Police Digest*, describes what he calls the "soft-core terrorism" practiced by Western European activists targeting NATO. "Militant protesters vandalizing road signs which direct forces on military maneuvers or cementing demolition shafts can easily springboard to acts of hard-core terrorism such as fire-bombing vehicles and bombing pipelines or communication sites."

Crusaders. While crazies can be dismissed, and "countermeasures" can be taken against criminals, the military is less sure of what to do with a third type of activist, the "rank and file" of the movement: students, professionals, housewives, retirees and environmentalists. As described in the Hudson Institute study, these are "the concerned," those who "recognize the great problem of nuclear war and have been sold programs that appear to deal with it" (emphasis added).

These "crusaders" are generally viewed as well-intentioned, reasonable and law-abiding. Several Washington-based Pentagon officers we spoke with went so far as to acknowledge a positive role of what they call the "public-interest" community—a group most peace activists would consider themselves to be part of.

Yet for others in the military, it is precisely this group's success that is most alarming. Citing anti-nuclear activists' ability to draw media attention and embarrass the armed services, and the way they "negatively shape U.S. defense policies," the

Hudson Institute concluded that "the concerned are those at whom a counter-disarmament campaign can be directed."

Dealing with Activists. Not everyone in the military holds extremist views of anti-nuclear activists, and the military's negativism about peace activists has to some extent ebbed and flowed with the movement's own growth and decline. In the heyday of the Freeze, for example, some—particularly high-level officers—voiced positive and respectful views of the movement and its participants. In a January 1983 interview with *National Guard* magazine, Gen. John W. Vessey, Jr., chairman of the Joint Chiefs of Staff, said, "Those people arguing for a freeze now have their hearts in the right place. But their logic is flawed." General David C. Jones, Vessey's predecessor, asserted in the official DOD publication, *Defense 82*, that "this movement cannot be dismissed as the emanations of a fringe element—it is drawing increasing numbers of very serious-minded concerned citizens."

But in spite of such respectful attitudes on the part of high-level officers, the rank and file of the military—particularly those responsible for physical security and public relations—generally have held more negative attitudes. And because it is precisely these functionaries who have been assigned the task of "interfacing" with anti-nuclear activists, the military has in a way codified their more extremist views.

In turn, such attitudes are reinforced by the mandate the military has assigned its public affairs and security programs. Rather than emphasize direct debate with critics, the military defines these programs' mission as "confrontation management"—containing the visibility and effectiveness of protesters. The approach means that the military deliberately limits its interaction with questioning citizens. Officers who have contact with an unfriendly public are directed to forego discussions about policy. During the deployment of MX missiles, for instance, Maj. Michael C. McMullin, the official Air Force public liaison for Nebraska and Wyoming, flatly ruled that "blue-suiters [Air Force officers] would not enter into a debate, nor share the same platform with someone representing the opposition, i.e., an 'anti-MX' group." Further, the major noted in his 1987 thesis for the Air Command and Staff College that "we did not recognize these types of groups [the MX opposition] as civic groups; therefore, we would not accept speaking requests from them."

In an article entitled "Participatory Democracy: Challenge to Readiness" in the June 1986 issue of *Army*, Milton H. Mater, a retired Army colonel, and Dr. Jean Mater discuss "organized civilian efforts to halt, delay or change military projects." The authors write that, today, peace activists' "battle arenas are the public hearing or public meeting and the courtroom. Their weapons are grassroots groups, coalitions, media-bait slogans, letters to the editor While adversaries play the game of power politics, the Army plays a different game, based on rationality, attempting to resolve the conflict by carefully explaining technology and military requirements."

The Mater's article, although extremist in tone, reveals a subtler, but more fundamental bias that widens the gap between the military and the peace movement. Hiding behind claims of impartiality and rationality—and the declared political neutrality of the armed forces—the military not only excuses itself from real contact with citizens, it intimates that politics is an illegitimate way to make decisions about defense. Here the military itself seems naive. Decisions on competing programs are made on the basis of politics, whether those political struggles be inter-service or intra-bureaucratic within the Pentagon, or in the public domain.

Gen. Galvin, writing in *Army*, appears to acknowledge this at least in part: "Development of the ability to present the military viewpoint will be more critical in the years ahead. . . . To maintain support for adequate national and alliance security, leaders at all levels are going to have to become more articulate and more accessible to the press and the public than we frequently have been in the past."

But as battles are fought in the coming years over defense spending and program priorities—and over the very definition of "national security"—the military will have to do more than articulately express its views. It will have to recognize that its opposition is more than a bunch of crazies—it is a manifestation of a nation weary of nuclear weapons. It will have to join the political debate as an equal partner—and work *with* the peace movement and the public—rather than merely sharpen its sword for a tougher battle ahead. □

Julie A. Morrissey is a research associate with the Institute for Policy Studies' Arms Race and Nuclear Weapons Research Project. William M. Arkin is director of the institute's National Security Program.

RUSSELL ARCHIVES

(17) From the *Hamilton Spectator* (4/27/68):Russell Papers

McMaster purchase will make city a Mecca of scholarship

By WILLIAM READY

THE Russell Papers are a gift of great bounty, the greatest bounty of its kind ever to come to Canada, and it cost McMaster not a penny. The money came from purses public and private, from foundations and from individuals, alumni and friends.

The sums ranged from \$255,000, the gift of the Atkinson Charitable Foundation, through the generous and imaginative pump-priming grant of the Canada Council of \$150,000, down to the dollars and cents that have begun to come in to the University.

Along with the cash have come letters of congratulation, inquiry and pride in the project that has allowed Canadians to bring this great research collection to Canada, where it will do more good than any library collection in the social sciences and the humanities ever before assembled in this land.

Generosity

McMaster is still bewildered by the enormous content of this gift. Throughout the world learned journals and newspapers alike have realized ever since the Russell Papers came on the market that it was the most significant archive of its kind that has ever existed.

It needed a man like Bertrand Russell to assemble it, and indeed Earl Russell's generosity in this gift must not be neglected, nor the perspicacity and vision that persuaded him to decide upon McMaster as the proper place for his Papers.

Had this collection been broken up and sold in parts, the Russell estate would probably have realized far more money from the sale, because there are tens of thousands of letters alone that are so fascinating in nature and from people so eminent in the world of learning, literature and political events that they would have brought often scores of pounds singly from their purely holographic nature.

Such a letter, for example, as one of Aldous Huxley's recommending yoga to the Earl — a missive three pages

long; or Bernard Shaw's postcard advising Russell that if he took legal action on a pacifist cause he would wind up doing six months in jail (as Lord Russell did, fulfilling Shaw's prophecy).

The manuscript preparations for the great *Principia Mathematica*, Russell's greatest scientific achievement, with comments and annotations, theorems and equations by A. N. Whitehead, the foremost mathematician of his time, Russell's teacher, and later, colleague.

All these are here and so many more unique items essential for any real appreciation of the life and times of Russell.

Scholarly institutions all over the world would have welcomed the chance to possess them, and money was not the prime obstacle that they had to overcome.

But Bertrand Russell decided that a university like McMaster, with a Fellow of the Royal Society as its president, a scientist eminent and respected throughout the world guiding a university that is eminent also in the classics, in Shakespearean scholarship, in physics, art, and with a burgeoning new division of biomedicine, was the most deserving place to house his archives.

McMaster has an archival centre as well that promises to become one of the very best. If it does, it will be because of the generosity of Canadians who have given so freely towards its establishment and its strengthening, because of men like Lord Russell who have seen the virtue of it, and because of leaders like President H. G. Thode and those other faculty members who have encouraged in every way possible this research development within the University.

Moreover, and this is important, McMaster holds all this unique and scholarly material only in trust, as it were, for the rest of the

world of learning, here, and in Ontario, in Canada and throughout the world.

There are scholarly examples, here of Russell's great mind at work in enterprises so multifarious and so current that the young and those not dedicated to scholarly pursuits will find them exciting as an exhibition, more than they can well imagine.

Visitors

Beginning in the fall of '68, by which time the Russell Papers will be in order and in their proper place, there will be exhibitions of them available for loan (in copy form) and for show (in the original) both at the university and through the public libraries and all kinds of schools and institutions in Hamilton and beyond.

The *Times Literary Supplement*, that most eminent journal of the world of letters, forecasts in an article on the Russell Papers at McMaster — there have been scores of these articles, ranging from *Time* and *Newsweek* magazines through to the *Paris edition of the New York Herald Tribune* — that Hamilton will see many visitors who will come here seeking a view or study of the Russell Papers. This is as it should be, for the future of Hamilton town and McMaster gown are wedded.

Who knows? The Holiday Inn and the Sheraton Connaught may have copy exhibitions from the Russell Papers, and along with signs pointing to Dundurn Castle there may be arrows directing tourists and scholars to the Russell Papers which, again, is as it should be.

Come September there will be a symposium on the Russell Papers at the university to which all the town will be invited, as well as a scholarly round table on them to acquaint the other universities with this great wealth of research that has come to Canada as a gift.

assesses the importance of
Mac's newly acquired collection
of Bertrand Russell's papers.

leaves coming to light.

Freedom

The years have demonstrated the rectitude of many of his public protests that were so unpopular when he had the courage to make them. Even now he shows some of the impudence of the infant terrible that has been a sort of dented halo around him all his life.

There may be many of us who may oppose many of his actions and statements, but unless we defend to the end his right to say and do these things, we shall be but a sham, a fake university.

The cause of women's rights, for instance, as he espoused them in the day when brickbats were the only bouquet for such a championship, the confessions and execrations flowing at him in print and manuscript through the years along with the many compliments and the blessings; all are here.

There is not a single facet of human activity during his near-century of living that he did not participate wholly in.

Russell is such a full man in the flight and swooping freedom of his mind and action that he makes Da Vinci appear rooted to the earth, and Thomas More a time-server.

The Dreyfus case received his warm and active attention, and he was on the right side in it, although it seemed to be leftist and masonic to those who wanted Dreyfus condemned if only to encourage others like him.

There are more than a hundred articles that he wrote for the Hearst press, his correspondence concerning nuclear disarmament, the war in Vietnam, the manuscripts of his novels and short stories.

Go-between

This list can go on and on, but a great catalogue has already been compiled of all the material and a copy of it can be consulted at the National Library of Canada and at the Hamilton Public Library, as well as at McMaster.

A number of commentators have remarked upon McMaster's "shrewd investment" in obtaining these papers in the teeth of such determined and more affluent ri-

It is not too much to say that these papers may change and exhilarate the very nature of the growth of graduate studies in Ontario; certainly they will accelerate the already existing impetus that has been afforded them by the department of university affairs.

The growing co-operation between the universities and their libraries throughout the province will take a long step forward sooner than they expected in sharing in the use of the wealth of this collection.

Defender

What is it that makes the Russell Papers so important?

The popular image of Lord Russell is of one who is against the government, who would hang Lyndon Johnson from a sour apple tree, who was expelled from King's College, Cambridge, to that College's everlasting shame, and was expelled from an American university professorship because of his views that were out of step with the prevailing squint.

Wherever there has been injustice in the world, or rather wherever Russell has seen injustice, he has been there in defence of the weak and the oppressed, often in a way that has covered him temporarily with obloquy and worse.

Being human, people tend to see the dark side of his face and imagine the worst. Even if their worst often their imaginings have been accompanied with a purient snigger or a hypocritical gasp of dismay that a man can be so free of convention, this belted earl who in reality has been, compared to most men, a clear and shining kind of secular saint, a man who has done such good by stealth to help penurious colleagues, artists, as these letters show.

But such is the case of prophets everywhere. Only now, as he accepts his old age with grace and dignity, are his many private benevo-

vals; that is also a feather in the cap of all who made it possible.

As for myself, I was merely the go-between in this affair, and all the reward that I can even bear to think of I have received already from the warmth and the generosity of those people who made it possible, and from the requests that are already piling up by dedicated scholars from over the world who want to get a crack at the papers.

We shall publish a guide to them before the summer is through and until that time they will be under guard and in process of being organized for use.

As soon as possible, however, and certainly before the fall term begins, all the people will be invited to share in McMaster's pride at having received this great donation that will make McMaster more of a Mecca of scholarship than ever before.

Thank you, HARRY RUJA.

NEWS ABOUT MEMBERS

EVENING OBSERVER, Dunkirk-Fredonia, N.Y.

Marvin Kohl New Associate Dean

Marvin Kohl of Fredonia has been appointed associate dean of arts and humanities at Fredonia State University College.

Dr. Kohl's scholarly background is in the area of ethics, focusing on matters of life and death and the nature of happiness and well-being. He has been chairman of the philosophy department since 1983 and a professor in the department since 1966.

A graduate of New York University and the City College of New York, where he received his doctorate and bachelor's degree, Dr. Kohl began his teaching career at Long Island University.

He is the author of the book "The Morality of Killing" and the editor of "Beneficent Euthanasia" and "Infanticide and the Value of Life." He has received National Institute of Mental Health and National Endowment for the Humanities fellowships and was recently a Visiting Scholar at Harvard University. He also presently serves as a contributing editor of "Free Inquiry," a consultant to the "Russell" journal and he is president of the International Bertrand Russell

DR. MARVIN KOHL

Society.

Dr. Kohl and his wife, Phyllis, live at 168 Temple St., Fredonia. They have four children: Richard, Rhiana, Matt and Maura. His hobbies include Chinese cooking, friendly running and rock gardening.

NEWS ABOUT MEMBERS

- (19) Ting-fu Hung, who lives in Munich, has kindly sent us a newspaper article on Wittgenstein, from *Die Zeit*-Nr. 18-28, April 1989, pp.14-17. It is headlined (in German), YOU WILL EVENTUALLY UNDERSTAND. Subhead: 500 letters to Wittgenstein, previously unknown, have been discovered in Vienna...including some from Bertrand Russell, Gottlob Frege, John Maynard Keynes, as well as others.

One letter in German in Russell's handwriting is displayed. It is dated 25 Nov 1915, and says:

Dear Wittgenstein:

It gave me great pleasure to receive your letter a few days ago. I am extraordinarily pleased to learn that you are writing a treatise for publication. I hardly think it necessary to wait for the end of the war. [W. was in the German army.] Can't you have a duplicate MS. sent to America? [America had not yet entered the war.] Professor Ralph Barton Perry, Harvard University, Cambridge, Mass, USA, would send me the MS. and I would have it published.

I think of you constantly, and want to have news of you. Be happy, and may Fate take good care of you! [Möge das Schicksal Dich shonen!]

Yours,

Bertrand Russell

We have sent the article to the Russell Archives, to be available to scholars.

- (20) Ramon Suzara writes from his native Philippines (3/16/89):

I live and work in one of the most backward countries in the world. It is backward culturally, socially, economically, politically, and backward in science and technology. It's quite doubtful whether the Philippines will ever catch up with civilization. What's indubitable, however, is that this country is ahead religiously. It's the only Christian nation in all of Asia. Here, the task of nation building is just passed on everyday to God's mercy; and, when nothing happens, everybody begs for God's forgiveness. In the meantime, Filipinos in general have the fatal habit of wasting time fighting over the problems by completely ignoring the possible solutions.

Lee, nine (9) months, I inadvertently shocked a whole lot of my Christian friends and relatives including ex-girlfriends. I adopted from the streets of Manila a three (3) month old baby boy starving to death. He was so emaciated, sickly looking - just a poor miserable piece of humanity. He weighed then only 8 lbs. Well, the boy is a year old now, so fat and healthy, weighing 30 lbs - always smiling, a very good child who has captured the minds and hearts of my people. In fact, my ex-girlfriends want him and love him and so the boy has not only a home here with me, but also in different places. I named the child Bertrand and everybody now calls him "Bertie."

I love Bertie very much as if he were my own flesh and blood. I still feel dissatisfied, however, as there are still thousands of such kids abandoned in the streets of Manila. It is frustrating not to be able to find them decent homes.

Best wishes,

Ramon

LABORATORY ANIMALS NEED ONLY HUMANE TREATMENT: ANIMAL "RIGHTS" MAY DEBASE HUMAN RIGHTS

HERBERT LANSDELL

Yerkes Regional Primate Research Center, Emory University

(Received February 29, 1988)

Arguments for animal "rights" confuse the issue of what rights are about and, in the context of the care of laboratory animals, are misleading. Only human beings have rights and they should be cherished and extended. Consideration of the welfare of animals is important, but the context is that it is for the benefit of human beings and the animals serving humanity. Scientists need to explain the worth of animal research, particularly in regard to psychological studies. They also need to expose the fallacies in the animal rightists' arguments as one of the means to help diminish the threat to science.

Keywords: humane treatment, animal welfare, rights, laboratory animals, animal rights, antivivisection

The activities of antivivisectionists have become a threat to biological research in the U.S.A. and with their statements about animal "rights" they are confusing people with a false claim of similarity to the issues of human freedom and welfare. Although no reasonable case can be made for being inconsiderate to dogs, cows, cats, horses and other animals that have played significant roles in human societies for thousands of years, the reasons for not being cruel to them have little or nothing to do with the notion that animals can have rights. Without doubt most people tend to develop an attachment to an animal that serves them, and it may often be similar to the affection that a person can have for another human being. But the view that these and other animals have rights is leading to circumstances that can preclude them from being of service to humanity, including their use in scientific studies. The argument needs to be dealt with so that this hindrance to research may be contained (Frank, 1987), and in doing so the main issue of rights for human beings may benefit a little from the clarification.

Laboratory scientists who use animals need to debate the antivivisectionist leaders, consider their arguments, and explain to the public the nature of animal research and the basis for being kind to laboratory animals (Johnson & Morris, 1987). Organizers of crimes against laboratories may be unreasonable and unlikely to participate in a fair discussion of the issues. But this type of difficulty is not sufficient reason to ignore the arguments their sympathizers offer about animal "rights". Scientists have an obligation to deal with the arguments made by the sympathizers and other antivivisectionists (Caplan, 1986); countering the arguments could in fact contribute to the advancement of science and human welfare. The nature of rights and their origin first needs some examination in answering the arguments.

THE ORIGIN OF RIGHTS AND THEIR NATURE

Human rights start as arguments for privileges that people proclaim on the basis of historical and moral considerations. For a concept of a right there has to be a

ELECTION OF DIRECTORS

- (22) Nominations for Directors, please. We wish to elect 10 Directors this year, for 3-year terms starting 1/1/90. This will give us a total of 24 elected Directors. The August newsletter will provide a ballot for voting.

We are asking you to nominate candidates (whose names will appear on the August ballot.) Any member may nominate any other member to be a Director-Candidate.

If you wish to be a Candidate yourself, notify the Elections Committee and someone will probably nominate you. The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something or other by mail, and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. The cost of attending meetings is (federal) tax-deductible for Directors.

We would like to have more than 10 names on the ballot, so as to give members a choice.

A brief statement about the candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.

Directors whose terms expire in 1989 are JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, STEVE MARAGIDES, FRANK PAGE, MICHAEL ROCKLER, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA. They are eligible for re-election.

BRS Officers are Directors ex officio.

We urge last year's candidates who were not elected to try again this year.

TO NOMINATE SOMEONE — or to volunteer yourself — write the Election Committee, c/o the newsletter, address on Page 1, bottom.

OBITUARY

(25)

Dora Russell. This is the obituary from The (London) Times (6/2/86) that we were unable to print last issue. Sent us by HARRY RUJA, who comments: "Dora's book, *Hypatia*, was the first book she had written alone, but two years earlier, she and BR had jointly written *The Prospects of Industrial Civilization*. The statement, that she had 4 children during her marriage to BR, is strictly true, but two of those were not BR's."

Mrs. Dora Russell, who died at her home in Cornwall on May 31, was a central figure for much of this century in feminist and peace movements. In the 1920s she put forward views which were considered ahead of their time, but have since been echoed by many feminists.

She campaigned for family planning, women's rights and progressive education. She worked consistently for the peace movement, helping in the organization of the Campaign for Nuclear Disarmament and of the Women's Peace Caravan that toured the Soviet Union in the 1950s.

During her 12-year marriage to Bertrand Russell - she was his second wife - she was involved with him in numerous causes.

Born in 1894, the daughter of Sir Frederick Black, KCB, a senior civil servant, she met Russell when she was a fellow at Girton, having already been inspired, as were many progressive young students, by his opposition to the First World War.

With Russell she went on an extensive tour of China and, on their return in 1921, was married to him. Together they set up a progressive school, Beacon Hill School, which she continued to run after their divorce in 1935.

Her first book, *Hypatia, or Women and Knowledge*, published in 1925, drew thundering attacks from newspapers for its argument in favour of sexual freedom for women. Her second book, *The Right to be Happy* (1927), expressed her strongly held view that human problems could not be solved by the invention of bigger and better machines and that the source of human happiness lay in human beings themselves.

A work published in 1932, *In Defense of Children*, called for children's rights to be respected, and suggested that the history of the treatment of children was more often than not the history of brutality and cruelty.

In 1983 she finally published a book that she had begun, but abandoned due to lack of encouragement, in 1923, *The Religion of the Machine Age*. Inspired by her visits as a young woman to the United States and the Soviet Union, its thesis was that communism and capitalism were reverse sides of the same coin, both involving worship of technological progress.

In all her books, Dora Russell emphasized the importance of the resources of nurturing, affection and creativity, too often neglected, she felt, in a male dominated world.

A warm and enthusiastic fighter for causes she believed in, her own life was blighted by misfortune. In her autobiography, *The Tamarisk Tree*, published in 1975, she described how, during her prolonged and bitter divorce from Russell, she fell deeply in love with a man younger than herself, Paul Gillard, an active communist.

He was killed by persons unknown as he walked home in Plymouth one night. His death meant the end, she said, of her "quest for liberty and love. From now on I lived for impersonal ends."

She later married a friend of Gillard's, Pat Grace, who helped her in the running of her school.

During her marriage with Russell, she had four children, two sons and two daughters. Her eldest, John, suffered a severe nervous breakdown in the 1950s and her younger, Roddy, was crippled in a mining accident and was an invalid until his death in 1983.

Despite personal misfortune, Dora Russell's zest for life remained undimmed. During and after the war, she worked for the Ministry of Information, writing many reports, particularly those related to science, for publication in Russia at a time when the two powers were allies.

Her visit to Bolshevik Russia in 1920, when she smuggled herself across the border, had left her with a strong sympathy towards the Soviet Union and she always decried the destructiveness of the "cold war" relationship.

She lived for much of her life, particularly the latter half, in Porthcurno, Cornwall. The publication of her two-part autobiography, *The Tamarisk Tree*, by Virago in 1975 and 1980, led to a new generation of feminists and peace campaigners discovering her.

Even in her late eighties, visitors to her remote Cornish home were astonished by her intellectual vigour. Her enthusiasm for her causes remained, and departing guests would leave with the words, "On with the women's revolution!" ringing in their ears.

She continued to speak at meetings of the peace movement. In 1983, at the age of 89, she led the London CND rally in a wheelchair, and earlier this year she took part in a demonstration outside the RAF base at St Mawgon in Cornwall.

OBITUARY

- (26) Harry Clifford -- a valued BRS member since 1975 -- died on October 12, 1988, at age 87. His son, Walter, writes:

My father's death was very sudden; up until the last moment he had been both mentally and physically very active, writing letters to newspapers about his various concerns in the world... [For instances of Harry's letters to newspapers, see RSN41-18 and RSN61-39.]

All in all, he was quite a remarkable man, who held Bertrand Russell in the highest esteem. If my dad had a hero, B.R. was the man. He left a considerable collection of Russell books, as well as a letter from Russell written to him a number of years ago and relating to the subject of nuclear proliferation.

Our thanks to Walter Clifford for his letter conveying the unhappy news.

BR RECOLLECTED

- (29) Conrad Russell reminisces about his father. In *The Times* (London), May 14, 1972 (pp32 ff). Conrad is BR's 2nd son, by his 3rd wife, Patricia ("Peter"). We regret the poor quality of the text and the occasional missing words. Thank you, HARRY RUJA.

Perhaps any son feels some sense of oddity at being asked to pay tribute to his father as one of the greatest men of his century. It is characteristic of Bertrand Russell that he should have brought up a son for whom this sense of oddity shades off into a warm amusement at the solemnity of the human race. The tributes which have been paid, both to the quality of his mind and to his achievements in changing the ideas of his many generations, are deserved. Yet it is also important, and vastly to his credit, that the impression left in the mind of a child growing up in his house is not one of awe and reverence, but of affection and laughter.

The pictures which linger in the memory are not of a great mind scything down opposition, but of a gentle, innocent, fun-loving and amusing man. The pictures of him which linger are mostly of simple enjoyment of simple things. One remembers his pleasure in the first good puff of a newly-lit pipe, or in the appearance of his mid-morning cup of tea. I remember him initiating me into the mysterious ceremony of winding his gold watch, and his delight in having tea on the terrace and looking at the mountains in the afternoon sun.

One would not guess, from reading the public tributes, that one of the things which gave him greatest pleasure was watching the sun set behind the mountains, or that one of the things which made him most indignant was watching someone else incompetently making up his fire.

The greatest tribute I can pay to him in his capacity as a parent is to say that the times when I am most vividly reminded of him are not when I consider some great cause to which he has made a vital contribution, but when as a parent myself I am explaining something interesting or exciting to my three-year-old son. When I point out something to him from the window of a train, and watch the expression of wide-eyed delight grow on his face, I often sud-

Memories of my father

By Conrad Russell

Bertrand Russell was born 100 years ago, on May 18, 1872. A Nobel Prize-winning philosopher, scientist and author, he was known to the world as a brilliant intellectual and prophet of nuclear doom. But what was he like as a man and a father? Here Conrad Russell, who is a lecturer in history at London University, reveals this unknown side of his father's character

denly realise that I have been mimicking the explanations and demonstrations which used to create the same reaction in myself many years ago. My first memory of my father is of him pointing out the humps of salt floating on the surface of the Great Salt Lake. My second memory is of him supervising, with total calm and apparently infinite leisure, the process of disembarkation at the end of a three-day train journey.

Two dominant themes run through all these memories of his enjoyment of simple things. One is of the intense vitality of his interest and of his desire to know: the identification of a distant mountain seen from Snowdon could exercise his mind with the same intensity as a problem in mathematical logic. The other is of his constant wit and capacity to create amusement. When I was four he used to console me during the uncomfortable piteous of dressing boils by devoting endless inventiveness to describing the exploits of a character called Captain Niminy-Piminy - a cross between Nansen and Baron Munchausen.

Above all, I remember him not as an 'intellectual' but as a man who was at his happiest out of doors. His favourite proverb used to be to the effect that "men of wisdom love the sea: men of virtue love the mountains", since he hoped that this proved that he was endowed with both qualities. Certainly, growing up as his son provided an unrivalled education in the skills needed to handle both the sea and the moun-

tain. Such maxims as "If there's a current, always begin by trying to swim against it, to make sure you can" stick firmly in my mind and, I hope, will stick equally firmly in my sons' minds.

On the mountains, I never remember him getting lost, since he had an unrivalled sense of direction, but he was always ready with such pieces of advice as that one should note the direction of the wind if one saw that the clouds were coming down unexpectedly. He knew the North Welsh mountains so well, that such advice was superfluous, but I have often been glad of it in more difficult conditions in other places. In outdoor situations he was endowed with an authoritative calm which was most delightful to a son. I remember, for example, shouting to him for help when I got out of my depth in the sea: he stood calmly at the edge of the water, and simply said "Swim", which I did.

Again, the two dominant themes in my memories are of fascination in detailed information, and of sheer simple joy. I remember him reaching the top of Knicht, when he was 77 and I was eight and our climbing powers were approximately equal. I remember him, at 95, swinging over the steps to the balcony at Plas Penrhyn for the sheer delight of the view of Snowdon in the afternoon sun. Above all, I remember him spending hours watching the movement of water in waterfalls. One of my earliest memories of him is of watching him standing under a waterfall in California, and one of my latest is of him gazing rapt at the fall of the water through the rapids of Aberglaslyn in North Wales.

In the midst of his enjoyment he was able to indulge his love for information and understanding. It was characteristic of him that he should know the exact height of almost every mountain in North Wales. It was equally typical that he

could expound the working of the laws in such a way as to make them not merely intelligible to a child, but intellectually fascinating. He had the same understanding of the sky, and could give the most brilliantly lucid demonstration of the working of an eclipse.

It should already be clear that, for him, the conventional distinction between work and leisure had much less meaning that it had for most people. Except when he was driven on by the urgent pressure of public events, or by the need for money, he would normally work because he found it fun. Similarly he would absorb the experience of his leisure into his work. For example, in his book on *Human Knowledge* he discussed the question whether it is possible, when sitting on a beach, to know that there are more grains of sand on the beach than one can see at that moment.

This question had occurred to him during a holiday in Wales, while he was sitting on Black Rock Sands looking along the beach, and he had immediately consulted me about it. At the moment this was an exercise in conversational amusement, but subsequently, like so much else, it was absorbed into his work and became part of a serious philosophical discussion. He did not acquire the ideas used in his work simply by working: he acquired them by living. I still remember the moment when this suddenly became clear to me. I was listening to a broadcast talk of his, and we had recently been reading *Oskar Tevst* aloud and, lo and behold (as he would have said), there was Mr Bumble among the examples used in his talk.

Growing up with him, and indeed with both my parents, was an education in itself, and I could perhaps claim, with greater justice than Osbert Sitwell, to have been "educated during holidays from Eton" and from other schools. The lack of distinction between work and leisure was one of the most important elements in this education.

Another thing he taught me very early was that words, just as much as any other toys, could be used with a precision which was great fun. As so often, the point was best made with one of his enormous collection of stories—in this case one of his numerous stories about the dissemi-

ture of Herbert Spencer by his juniors.

A schoolboy remarked to Herbert Spencer: "What an awful lot of rooks." Herbert Spencer (and here my father's voice would grow portentously solemn) replied: "I see nothing awful about those rooks."

"I didn't say they were a lot of awful rooks," said the schoolboy. "I said they were an awful lot of rooks." After a number of these stories, precision in the use of words became second nature.

The fact that he worked at home meant that it was possible to learn an understanding of 'work' far earlier than most children can. The privilege of having their fathers work at home is one many children used to have during their most imitative years. Now, in the days of commuting, it is one very few children enjoy, and it has been an incalculable advantage to me to be one of the few who did enjoy it. One of the first things impressed upon me was that, during working hours, my father's study was out of bounds. This rule was so sacred that I did not venture to break it until I was eight. When I went in, with my heart in my mouth, my father was covering pages with an endless series of mathematical symbols. When the door opened, he simply continued working and, after what seemed an age, I withdrew crestfallen, wondering whether he had ever known I had been in the room.

Perhaps the most valuable of all the lessons he taught was that ideas had to be considered on their merits: any idea, however extraordinary it sounded, might be true, and one could only reject it once one had seriously considered the evidence for and against it. He was well aware that most ideas which are now considered conventional had, at some other time, and often at some other time during his own life, been considered too eccentric to be worth a hearing. He knew, in the words of his godfather J. S. Mill, that the conventional man ought to reflect that "the causes which make him a churchman in London would make him a Buddhist or a Confucian in Peking"—a remark whose truth is only highlighted by

For this reason, it was impossible for him to be a conventional member

of 'the Left'. He could not, without doing violence to his own mind, have become one of those people who know their position as soon as they know what is the 'Left-wing' stance on the question. The classic example of this fact is his visit to Russia in 1920. Being the man he was, he could not help considering the evidence, and, considering it, could not help coming down against the main trends of the Russian Revolution and, even more strongly, against many of the Marxist theories behind it. The result, *The Practice and Theory of Bolshevism*, is one of his best and most important works. It is so good precisely because it is not the work he wanted to write when he went, but the work he was forced to write by the evidence he observed, even though in the process he had to part company with many of his closest friends. This book shows his mind working in some of the ways I remember with most affection.

It is commonly known that he was no respecter of persons, but it is not so commonly known as it should be that he was not a disrespector of

he could have a withering contempt for the argument of a Prime Minister or of a great philosopher if he did not find it intellectually convincing, but it is not equally well known that he could have a profound respect for the opinion of his masseur or of his gardener if he thought it was cogently presented.

The readiness to consider a case on its merits extended to the person presenting the case, as well as to the type of case presented. My father thought he had a right to demand that governments should listen to what he had to say, but it is not as well understood as it should be that he did not think this was some peculiar right of his own: he thought it was a right inherent in being a human being, and belonged to anyone willing and able to present a cogent case. For his son, of course, such an attitude was a joy. It meant that, as soon as I could form coherent sentences, I could argue with him, and always take it for granted that I would be treated as an equal: my arguments would be treated with any respect they might deserve and, if I won an argument, my victory would be conceded without fuss.

the man brought up in the tradition of J. S. Mill, that every man is entitled to his individuality and that part of his individuality is that his opinions matter. When teaching people who think that they have no right to an opinion on a controverted question because they have not researched on it, I wish passionately that everyone had had such an upbringing. Again, this respect for good arguments, from whatever quarter they might come, sprang from the same root as so much else in him that gave pleasure: the passionate interest in anything from which there was something new to be learnt.

At the same time as he adjusted to a century which saw more change than those he grew up with could ever have imagined, he preserved a strong sense of the past, and of his own family past. Many of the causes for which he fought were the same for which his parents had fought against the ridicule of their contemporaries. But his sense of family extended much further back than this: he had been brought up by his grandfather, Lord John Russell, and his wife. They were the source of many of his best stories, and

his sense of present extended as far back as Lord John's active political memories: as he used to say, it was history up to Waterloo, and after that it was gossip.

Indeed it was sometimes gossip rather earlier than that. I remember one occasion when when he switched from a tirade against Mr. Wilson to a tirade against the Younger Pitt, and suddenly the uncanny sense was borne in upon me that he was speaking as if the two Prime Ministers were contemporaries. So, in a way, he was recalling the youthful memories on which Lord John Russell and his wife had brought him up, and Mr. Pitt had been the political villain of Lord John's youth, to whom the 14-year-old Lord John had dedicated some satirical verses, ironically expressing "the hope that you may live long enough to bestow a pension upon your humble servant." Among Lord John's anecdotes, one which made a particular impression on

my father, was the story of Lord John's visit to Napoleon on Elba, when Napoleon had urinated on the floor in public. As Talleyrand said, it was a pity so great a man should be so *mal élevé*.

But my father's sense of family stretched further than this. To him,

a family did not only mean the people who lived under the same roof: that was what he meant by the Victorian phrase "my people". "My family" meant something it can mean only to those who have grown up with family portraits: a line stretching back to the 16th century, and which he hoped would stretch for many generations after he was dead. A family was a line in which the generations he knew, long as they were, were only a very small part in which his achievement was one among a long succession.

His concern for the posterity of the human race should be seen in the context of this sense of family posterity: of generations stretching out far beyond his knowledge. This sense of continuity combined with an intense enjoyment of the present. One cannot say anything about his sense of family without saying what intense pleasure he derived from his last wife, Edith: the sight of her coming into a room could bring a light to his face which is not often seen in men beyond the stage of engagement. He took pleasure in many things, but perhaps more in her company than in anything else.

It would be distorting to conclude without touching on his public career. Of his work in mathematics and philosophy I am incompetent to judge, though I saw it give much pleasure to the ablest among my undergraduate contemporaries. The immense effect of his comment on social questions may be partly illustrated by the fact that almost every view for which he has been in trouble has subsequently become conventional. One of his greatest achievements was in combating the whole

complex of values expressed in the statement that "we are a Christian country". This statement was last made by Sir Alec Douglas Home to the Scottish Christian Conference, I think in 1965. It has not, I believe, been made by any prominent figure since.

That I have lived through my career without experiencing (except at Eton) any embarrassment for not being a Christian is not the least of the things I owe to my father. One story in which he took much pleasure was the story of the clergy who gathered round the sick-bed of Thomas Hobbes, hoping to receive his deathbed repentance. Hobbes got up, and said to them: "Be off, or else I will detect all your cheats from Aaron to yourselves." The clergymen all turned and ran. There is no doubt that my father could have achieved a similar feat.

In his greatest attempt, the abolition of nuclear weapons, he has so far failed. The best commemoration he could be given would be to grant him this last, and greatest, success. However, though he did not achieve this, he achieved something less. Up to about 1959, Ministers regularly used to defend the dropping, as well as the possession, of nuclear bombs, and used to get away with doing so. In a very short time and largely because of my father's efforts, this view changed.

The last Minister to make a serious attempt to defend the use of nuclear bombs in war was the then Mr Henry Brooke, during the 1964 General Election, and he was howled down by his audience. For this rapid swing of opinion, my father deserves a very large share of the credit. Whether this achievement is enough to preserve the human race remains to be discovered. My father believed it was not.

It is, of all others, the point on which he would have been happiest to be proved wrong ●

POPULATION

- (30) The following is a chapter from BR's *Fact and Fiction* (NY: Simon & Schuster, 1962, pp. 267-276). It originally appeared in *The Human Sum*, ed. C. H. Rolph (London: Heinemann, 1957), and was included in *The Population Crisis and the Use of World Resources*, ed. Stuart Mudd (The Hague: Dr. W. Junk, 1964). (Thank you. TOM STANLEY)

Population Pressure and War

THE WORLD is faced at the present day with two antithetical dangers. There is the risk, which has begun to sink into popular consciousness, that the human race may put an end to itself by a too lavish use of H-bombs. There is an opposite risk, not nearly so widely appreciated, that the human population of our planet may increase to the point where only a starved and miserable existence is possible except for a small minority of powerful people. These risks, though diametrically opposed to each other, are nevertheless connected. Nothing is more likely to lead to an H-bomb war than the threat of universal destitution through over-population. It is with the nature of this threat and with the means for averting it that I shall be concerned in what follows.

Wars caused by pressure of population are no novelty. Four times—so the historians of antiquity assure us—the population of Arabia was led to overrun neighbouring countries by drought at home. The results were many and of many kinds. They included Babylon and Nineveh, the Code of Hammurabi, the art of predicting eclipses, the Old Testament, and finally Islam. The barbarians who destroyed the Roman Empire did not keep accurate vital statistics, but there can be little doubt that population outgrew the resources of their northern forests and that this pressure precipitated them against the rich Mediterranean lands. During the last few centuries population pressure in Europe has been relieved by emigration to the Western hemisphere and, as Red Indians do not write history, we have thought of this process as peaceable. The East, however, has enjoyed no such outlet. It was mainly population pressure that precipitated Japan's disastrous excursion into imperialism. In China, the Taiping Rebellion, civil war, and Japanese aggression, for a time kept the population in check. In India, the population grew and grows unchecked, producing a downward plunge towards misery and starvation.

But, although population pressure has been a vital element in human affairs from time immemorial, there are several new factors which make the present situation different from anything that has preceded it. The first of these is the utter disastrousness of scientific warfare which means that war makes the survival of anything doubtful and the survival of any good thing almost certainly impossible. The second is the absence of empty or nearly empty land such as those into which the white man overflowed from the time of Columbus to the present day. The third, which has an immense importance but has hardly begun to be recognized, is the success of medicine in diminishing the death rate. These three factors taken together have produced a situation which is new in human history. It must be coped with if utter disaster is to be avoided. The East has been awakening to this necessity; the West, largely for ideological reasons, has been more backward.

A few facts are necessary to make the situation clear, but I shall deal with them briefly as Professor Huxley's previous article* has dealt with most of them. The population of the world, which at most periods has been very stationary, began to grow with unprecedented rapidity about the year 1650. Since then the rate of growth has been not merely maintained

but continually increased and is now much more rapid than it was even twenty years ago. The present rate of increase in the population of the world is, roughly, one a second or eighty thousand a day or thirty million a year, and there is every reason to think that during the next decade the rate of population growth will become even greater. As a consequence of the growth in numbers during the last twenty years, human beings, on the average, are less well nourished than they were before the Second World War. It is considered that 2,200 calories is the least upon which health and vigour can be maintained and that those who have less than this are under-nourished. Adopting this standard, half the world was under-nourished during the 'thirties and two-thirds of it is under-nourished now. To this process of deterioration no limit can be set except by a slowing-up of the increase in numbers. A careful survey of the world's resources in the matter of food leads to the conclusion that technical advances in agriculture cannot keep pace with the great army of new mouths to be fed. Moreover, technical advances can barely hold their own against the deterioration of the soil which results from a desire for quick returns. There is yet another matter of policy which has played a great part in the USSR and is destined to play a great part in China as well as in various other countries. This is the determination, for reasons of national power and prestige, to industrialize very quickly and even at the expense of agriculture. In the existing state of the world, one can hardly blame countries for this policy. Before the First World War, Russia had little industry but was an exporter of grain. Before the Second World War, Russia had much industry and had ceased to export grain. Russia was defeated in the First World War and was victorious in the Second. In view of such facts, we cannot wonder at the race towards rapid industrializing on which many under-developed countries have embarked.

All these reasons make it nearly certain that poverty and under-nourishment will increase in many of the most important parts of the world during at least the next twenty years, even if everything possible is done to prevent this result. The downward trend will continue until the growth of population has been slowed up. The deterioration in living conditions must be expected to produce increasing discontent and increasing envy of the more prosperous parts of the world. Such feelings tend to produce war even if, on a sane survey, no good can come of war to anybody.

In regard to the population problem there is an enormous difference between the white and non-white parts of the world. In most white countries there has been a continual decline in the birth rate during the last eighty years and, at the same time, such a rapid advance in technique that the growth in population has not been incompatible with a rise in the standard of life. But in the East, in Africa, and in tropical America the situation is very different. While the death rate has declined enormously, the birth rate has remained nearly stationary and the nations concerned have not enjoyed those outlets which enabled Western Europe to prosper during the nineteenth century. Let us consider the three most important

countries of the East: India, China, and Japan. These three countries, between them, contain two-fifths of the population of the world. China, where the vital statistics are somewhat uncertain, is estimated to have a population of 583 million and an annual increase of 11.6 million. India has a population of 372 million and an annual increase of 4.8 million. Japan has a population of 86.7 million and an annual increase of 1.2 million. All these three countries, as well as the USSR, have recently undergone a change of policy in regard to population. In India and Japan, this change has been very notable. Nehru inaugurated the change by a pronouncement which had no precedent among the leading statesmen of the world: "We should," he said, "be a far more advanced nation if our population were about half what it is." In pursuance of this policy, his government inaugurated a birth control campaign. Unfortunately, so far, economic and ideological reasons combined have led to the adoption of ineffective methods, but there is every reason to hope that better methods will be adopted before long. The Japanese government in an official bulletin published in December, 1940, just one year before Pearl Harbor, said: "If we think of the distant future of mutual prosperity in Asia, and if we give heed to the glorious mission of the Japanese race, the one thing of which we can never have enough is the number of superior people belonging to the Imperial nation." Defeat in war has changed the attitude of the Japanese government, which is now doing everything in its power to lower the rate of population growth. In the absence of birth control information, abortions in Japan have become extremely prevalent. According to Dr. Yasuaki Koguchi there were between one million eight hundred thousand and two million three hundred thousand induced abortions in the one year 1953. So desperate is the economic situation that large numbers of women have resorted to sterilization. The Japanese government, although it does not forbid abortion, is aware that contraception would be preferable and does what it can to encourage it.

Both China and Russia have been compelled by hard facts to take up an attitude not consistent with what Communists have hitherto regarded as Marxist orthodoxy. They have been in the habit hitherto of proclaiming that only under capitalism does a population problem exist and that under Communism over-population cannot occur in any foreseeable future. In Russia abortion, which Stalin had made illegal, was made again legal by a decree of November 23, 1955. China, during the past two years, has permitted and even encouraged propaganda for scientific methods of contraception avowedly "at the general request of the masses" and in the hope of bringing about a steady fall in the Chinese birth rate.

In all these four countries—Russia, India, China, and Japan—the main difficulty is not now the opposition of government or of public opinion to birth control, but the lack of the necessary appliances and the extreme poverty which would prevent their purchase even if they were obtainable. It is for this reason that abortion is common in spite of the danger to health that it involves. But, however great the difficulties may be, there is good reason to hope that in all four countries the birth rate will be much reduced within a generation.

In under-developed countries that are still under Western domination, a less enlightened policy prevails. In Africa, the West Indies and the tropical part of Central and South America nothing is done to check the increase of population, and the standard of life is, in consequence, continually falling. Western nations, and especially the United States, spend great sums of money in the hope of benefiting under-developed nations, but the hoped-for benefit does not result because it is not accompanied by control of population. On the balance, what the West spends philanthropically on under-developed regions

merely increases the number of sufferers and augments the terrible sum of human misery. It is a humiliating reflection for those who are inclined to feel complacent about what are called "Western values" that on this supremely important question, upon which the whole future of mankind depends, the West is less enlightened than the East and less capable of rational adjustment to circumstances. This is due, no doubt, in large part to the fact that the most powerful Western countries, owing to their low birth rates, do not have a serious domestic population problem. Western practice at home is at variance with Western theory. What people do is right, but what they think they ought to do is wrong. What they think they ought to do has disastrous consequences, not at home, but wherever Western nations dominate less developed regions either directly or through financial and medical assistance. By their superstitious and benighted policy, they are breeding great areas of discontent and hostility.

There are in the world at present sharply marked divisions between areas of prosperity and areas of poverty. In Western Europe and North America and Australia, the immense majority of the population are adequately nourished. In Africa, India, and China, a large majority have less food than is necessary for health and vigour. This situation is not getting better. On the contrary, it is getting worse. The poorer countries are growing poorer, while the richer ones grow richer. It is mainly the increase of population that causes the poverty of the poorer countries. The resulting situation is explosive. It is hardly to be expected that the less prosperous parts of the world will tamely acquiesce in the continually widening inequality. The situation is of just that kind that in the past has always led to war and conquest. However irrational a resort to war in modern circumstances may be, hunger and sullen anger may, in desperation, produce an outbreak that can end only in utter disaster. There cannot be secure peace in the world while the present economic inequalities persist. If peace is to become secure, it can only be through an improvement in the standard of life in undeveloped regions, and this improvement will have to be so great and so long-continued as to give a prospect of ultimate economic equality. As things are at present, if the world's supply of food were divided equally among all the populations of the world, there would have to be a catastrophic decline in the Western standard of life, and it is obvious that Western nations would not submit to such a decline except as a result of defeat in war. Hopes of peace, therefore, must rest on measures designed to benefit the East without injuring the West, and such measures are impossible unless they involve a very great fall in the birth rate of the more prolific countries.

It is difficult not to be filled with despair when one contemplates the blindness of statesmanship and of everyday popular thought on the issues with which modern man is faced. The leading powers of the world spend enormous sums and devote their best brains to the production of methods of killing each other. Eminent moral leaders give their blessing to such efforts, and at the same time tell us that it is wicked to prevent the births which, by their excessive number, drive the nations on to the invention of H-bombs. I could wish to see it generally recognized in the West, as it is coming to be recognized in the East, that the problem of over-population could probably be painlessly solved by the devotion to birth control of one-hundredth or even one-thousandth of the sum at present devoted to armament. The most urgent practical need is research into some method of birth control which could be easily and cheaply adopted by even very poor populations. There is, at present, only an infinitesimal research on this all-important matter, although it is in the highest degree probable that rather more research and rather more public encouragement could produce incalculably beneficial results.

Given a successful outcome to such research, there should be in every town and village of the more prolific countries centres of birth control information and public assistance as regards the supply of birth control apparatus. The Western nations have a special responsibility in this matter, for it is the discoveries of Western medicine that have so lowered the death rate as to produce a lack of balance that, on a global scale, is a wholly new phenomenon. I will give two illustrations out of many. In Ceylon, when DDT was introduced to combat malaria, the death rate fell within two or three years to the level of Western death rates, while the birth rate remained constant, with the result that there is at present an increase of population at the rate of 2.7 per cent per year. The figures of the death rate in Japan are even more remarkable. In the five years before the Second World War, the average death rate in Japan was 17.4. In 1946, it had risen to 17.6. In the following years it fell with extraordinary suddenness: in 1951 it was 10.0 and, in 1954, 7.9. A large part of this fall is attributable to American methods of public health. In spite of the very highest motives, those Western medical missions and medical scientists who have with extraordinary suddenness brought about the great decline in the death rate have incidentally done very much more harm than good. The desirable remedy does not lie in restoring the death rate to its former level. It does not lie in the promotion of new pestilences. Least of all does it lie in the vast destruction that a new war may bring. It lies in adapting births to deaths. The stern limits of the earth's fertility will

see to it before long that the balance between births and deaths is restored. It will see to it with an arithmetical inevitability which is independent of human wisdom or folly. But if the balance is restored by human folly, immense suffering throughout the world will be involved; while, if it is restored in accordance with the dictates of good sense and humanity, there can be an end to poverty and an end to the vast hopelessness of female lives devoted to the production of children who ought not to exist and whose existence must almost inevitably be filled with misery.

During what remains of the present century, the world has to choose between two possible destinies. It can continue the reckless increase of population until war, more savage and more dreadful than any yet known, sweeps away not only the excess but probably all except a miserable remnant. Or, if the other course is chosen, there can be progress, rapid progress, towards the extinction of poverty, the end of war, and the establishment of a harmonious family of nations. It seems that the East is becoming alive to the problem, but the West, in its theories and in its external dealings, lags behind. Of all the long-run problems that face the world, this problem of population is the most important and fundamental for, until it is solved, other measures of amelioration are futile. It is too late to escape from great hardship in the near future, but there is good reason to believe that, if war can be averted meanwhile, the pressing needs of the world will bring amelioration before it is too late.

(34) Book news:

Among the sixteen essays to be published in the forthcoming Rereading Russell are "Portrait of a Philosopher of Science" by Ken Blackwell and "Russell's 1913 Theory of Knowledge Manuscript" by David Pears. The collection is scheduled to be published sometime in May. The publication date for Andrew Brink's Bertrand Russell: The Psychobiography of a Moralist is June 1, 1989. Production difficulties have delayed the release of the new paperback edition of Paul Schilpp's The Philosophy of Bertrand Russell. Open Court Publishing has, however, sent the Society an advance issue.

The Society needs a reviewer for the Schilpp volume, and for these recently published volumes from Allen & Unwin:

Essays on Language, Mind, and Matter 1919-1926, edited by John Slater. Volume IX in "The Collected Papers of Bertrand Russell".

Logic and Knowledge, Essays 1901-1950, edited by Charles Marsh. This paperback edition of Russell's essays in the fields of logic and the theory of knowledge is available for \$19.95.

Prophecy and Dissent 1914-16, edited by Richard Rempel with Margaret Moran. Volume XIII in "The Collected Papers of Bertrand Russell".

Any member who is willing to write a review of one of these titles for the News is urged to contact me as soon as possible. There are no deadlines on the reviews.

The W.W. Norton paperback printings of Power and The Scientific Outlook are out of print. The Library has only two copies of each in stock.

DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
elected for 3-year terms, as shown

1987-89: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, STEVE MARAGIDES, FRANK PAGE, MICHAEL ROCKLER, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA

1988-90: IRVING ANELLIS, BOB DAVIS, JIM MCWILLIAMS, HUGH MOORHEAD, KATE TAIT

1989-91: LOU ACHESON, ADAM PAUL BANNER, KEN BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, TOM STANLEY

The 6 BRS officers are also directors, ex officio

ABOUT OTHER ORGANIZATIONS

- (36) **AA.** We sent postcards to California BRS Members, alerting them to the American Atheist Meeting, March 24-25, in Mission Valley, CA. If you attended, please send us a brief report on it, for the Newsletter. Thanks.
- (37) **CCP,** Concerned Philosophers for Peace, now in its 8th year, was formed in 1981 at the Pacific Division meeting of the APA. In 1987 it held a joint meeting with IPPNO, International Philosophers for the Prevention of Nuclear Omnicide. (IPPNO IS BRS Laureate John Somerville's organization.) It issues a newsletter twice a year. For information: Concerned Philosophers for Peace, Department of Philosophy, The University of Dayton, 300 College Park, Dayton, OH 45469-0001.
- (38) **FREETHOUGHT TODAY** — published 10 times a year by the Freedom From Religion Foundation (FFRF) — fights the good fight for atheists and agnostics. To sample it, send \$1 to *Freethought Today*, PO Box 750, Madison, WI 53701
- (39) **SOS** (Secular Organizations for Sobriety) is the freethought alternative to the religiously oriented AA (Alcoholics Anonymous). Its good-looking 8-page newsletter (Dec/Jan 88-89) tells how to conduct an SOS meeting, and, among other things, lists its National Board Members, which include Steve Allen, Paul Kurtz, Vern Bullough, Gerald Larue, and others. For the quarterly newsletter, send \$12 to SOS Subscriptions, FREE INQUIRY, Box 5, Buffalo, NY 14215-0005.

BOOK REVIEW

- (40) *Intellectuals*, by Paul Johnson, is reviewed by John D. Judis in *The Washington Post's Book World* (2/26/89). Thank you, DON JACKANICZ.

How the book is advertised
(NY Review of Books, 5/18/89, p.27)

"Johnson's intellectuals are egotistical, male chauvinist, avaricious, deceitful and perverse. They are responsible for everything he detests."

The Men Who Knew Too Much

INTELLECTUALS

By Paul Johnson
Harper & Row, 385 pp. \$22.50

By John B. Judis

THE NOUN "intellectual" appeared in the early 19th century and was used in the same pejorative sense as the more recent term "egg-head," but, in the intervening years, it has come to refer more neutrally to someone who dwells upon the larger questions of life and society. In this book profiling major liberal intellectuals from Rousseau through Mailer, however, British conservative Paul Johnson wants to restore the original, negative sense of the term. Johnson's intellectuals are egotistical, male chauvinist, avaricious, deceitful and sexually perverse. They are responsible for everything Johnson detests, from Stalin's Russia to the "childish" decade of the '60s.

Johnson argues that the ideas of these "secular intellectuals" are "rooted in" their depraved personalities. "Sartre's inability to maintain a friendship with any man of his own intellectual stature helps to explain the inconsistency, incoherence and at times sheer frivolity of his political views," Johnson writes. There is even a causal chain from the man to his works to the acts performed in his name. Johnson writes of Marx's capacity for political quarreling, "There is nothing in the Stalinist era which is not distantly prefigured in Marx's behavior."

Johnson writes a good sentence and parts of this book are fun to read, but his central argument is thoroughly tendentious and even contemptible. The book masquerades as a study of a defined historical type, the intellectual, and of the relationship between the intellectual's personality and his work, but the argument boils down to an attempt to discredit certain intellectuals' ideas by linking them to their unsavory personal lives. Johnson's method is not that of the historian but that of the ad hominem debater and the supermarket tabloid.

The problem lies with how Johnson defines, or fails to define, the term intellectual. He claims that the "secular intellectual" has historically displaced the priest and witch doctor as the guardian of culture. He then confines these "secular" intellectuals to anti-religious and left-liberal thinkers like Marx or Bertrand Russell. But the point is misleading. What occurred historically was the detachment of church from state and of

Benevolent geniuses or monsters of deception?

This penetrating examination of the moral and judgmental credentials of leading intellectuals contains incisive portraits of Rousseau, Shelley, Marx, Ibsen, Tolstoy, Hemingway, Russell, Brecht, Sartre, Wilson, Victor Gollancz, Lillian Hellman, Cyril Connolly, Norman Mailer, James Baldwin, Kenneth Tynan, Noam Chomsky and others who are revealed as both brilliant and contradictory, magnetic and dangerous.

Paul Johnson

Author of *A HISTORY OF THE JEWS* and
MODERN TIMES: The World from the Twenties to the Eighties.

"Fascinating....Instructive....Johnson is a superb writer.... His book is a celebration of plain truth and common sense by a very sensible Englishman."—*USA Today*

-

BR CELEBRATED

- (2) BR's Birthday. A nice idea from The Humanist Fellowship of San Diego: a Bertrand Russell Birthday Celebration, on May 17th. Here is what they said in their newsletter of April 21, 1989:

We celebrate the birth of an eminent thinker, writer, debunker, skeptic, rationalist and Humanist. Dennis Wills will show his collection of Russell memorabilia. Read aloud those Russell passages which move you to tears, make you laugh, or impress you as incredibly wise -- or foolish. Wonder at the paradoxes in this man who could teach so eloquently and movingly about love, compassion and mercy -- and yet bring so much pain and bitterness into the lives of those who gave him love and trust. Bring your Russell books to share and compare. Meet Dr. Harry Ruja of the *Bertrand Russell Society*.

LOCAL CHAPTERS

- (3) Foreign Aid, BRS style: The Benares Plan. There are people in foreign countries -- third world countries, developing countries, where living standards are low and money is scarce -- who might like to join the BRS but who cannot afford the dues.

That's a pity, because they are being deprived of the benefit of Russell's thinking, and we are being deprived of new foreign members.

We needed to find a way to let people who cannot afford the dues join the BRS anyway...and we have found it! Credit for this goes chiefly to Chandrakala Padia, of Benares, India, who knew there was a need, and who devised a way to fill it.

Here's the plan, *the Benares Plan*, subject to approval by the Directors:

1. There will be a Benares Chapter of the Bertrand Russell Society, Inc. in Benares, India. This will be the first of what we hope will be many chapters in foreign countries and cities.
2. Dues will be \$40 per year for the Chapter, regardless of the number of members. Plus \$7.50 for airmail, which is essential. For example, if the Benares Chapter acquires 10 members, the cost to each member will be \$4.75.
3. The Chapter will receive only one copy of the BRS newsletter, which can be passed around, member to member, or photocopied.
4. The Chapter will be headed by a Director. The Director of the Benares Chapter is Chandrakala Padia.
5. The members will have all rights (and responsibilities), including the right (and responsibility) of voting. Their names will of course appear on our Membership List.
6. The Chapter will submit a report to the BRS on its activities once a year, in time to have it presented at the BRS Annual Meeting. During its first year, a Chapter will also report at the end of the first 6 months.
7. The Chapter's goal will be the same as the BRS's: to learn more about Russell, and to spread his views to scholars and the general public.

Members in other foreign cities, take note! Can you take advantage of the Benares Plan? Let us know.

NUCLEAR STRATEGY

- (4) *What goes on in the minds of our nuclear strategists? Why — since we already have 50,000 nuclear weapons — do we keep on building more?* Steven Kull, psychotherapist, decided to look for answers to these questions. He presents his findings in *Minds at War: Nuclear Reality and the Inner Conflicts of Defense Policymakers* (NY: Basic Books, 1988).

The book is reviewed by McGeorge Bundy in *The New York Review of Books* (July 20, 1989, pp. 3-5), where Bundy is identified as Special Assistant on National Affairs to President Kennedy. That means he was with President Kennedy during the Cuban Missile Crisis. He is now Professor of History at New York University and the author, most recently, of *Danger and Survival: Choices About the Bomb in the First Fifty Years*.

We are printing the review in full, despite its considerable length, because of the importance of the nuclear weapons issue to Russell. Russell thought they had to be abolished, if man is to survive, and he devoted the last 25 years of his life campaigning against them.

Here is the review:

The Emperor's Clothes

Minds at War: Nuclear Reality and the Inner Conflicts of Defense Policymakers by Steven Kull.

Basic Books, 341 pp., \$19.95

McGeorge Bundy

The summer of 1989 finds us in a time of new hopes for the strengthening of a stable peace between the Soviet Union and the West. After a slow and overcautious beginning, George Bush has decided that he did not like that beginning, and has set a new course just in time to win the strong support of his colleagues in the NATO Summit at the end of May. He has also plainly impressed the government of Mikhail Gorbachev, whose contribution to our new hopes remains the larger, if only because the need for basic change has always been larger in Moscow. Most of all, Bush has succeeded in explaining his new course in language that was most persuasive where it was most obviously his own. His most convincing demonstration was in a long interview with *The Washington Post*, published on June 2; I will return to it.

Steven Kull's remarkable book concerns the same overcautious cast of mind from which George Bush has just had a narrow escape. I begin with that escape not only because it reflects great credit on Bush, on his senior colleagues, and on the public pressure that led them to reconsider their views, but also because it is helpful that we consider the findings of Steven Kull in a mood of hope. Kull himself is not a pessimist, believing that there are strong forces on the side of nuclear common sense, but many of his findings on what experts have been thinking are so depressing that it is well to begin with a reminder that we can do—indeed are doing—better.

After more than ten years of practice as a psychotherapist, Kull was drawn to the study of nuclear danger, and after initial academic work he decided to examine the problem through an exercise of his professional skills as an interviewer. It seemed to him that there was a radical disjunction between nuclear reality and the policies advocated by many defense experts. Could he find out by careful and searching interviews whether they had

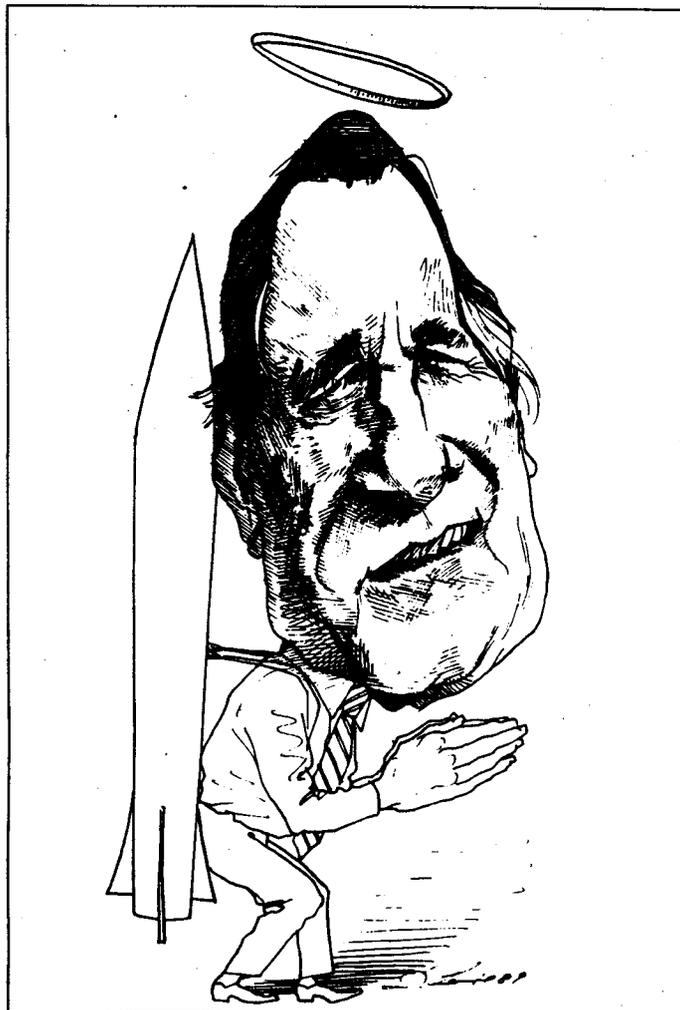

arguments he had not understood, or how far they might be moved by convictions unrelated to their formal argument? The core of his book is an account of what he learned from these interviews. Having traversed much of this terrain myself over more than forty years of participation in the American nuclear de-

bate, I am able to report that the states of mind encountered by Kull are familiar, while his conclusions about them are both fresh and convincing.

Kull set out to interview experts who had made reputations as being "pro-defense" and as being sophisticated in

their understanding of questions of nuclear policy. He found eighty-one men and three women who were willing to talk with him, and among them were former secretaries of defense, former members of the Joint Chiefs of Staff, senators, congressmen (two in each category so far), and larger numbers of middle-level officials of the Pentagon, the Arms Control Agency, and congressional staffs. He talked to still larger numbers of analysts from think tanks, as well as to six members of a group that he defines as "original key nuclear strategists from the fifties and sixties." (He also talked, less intensively and less systematically, to a number of Soviet experts.) All in all, though he names no one, he makes a wholly believable claim to have talked to people who usually argue in favor of new weapons systems, who are generally persuaded that it makes an important difference whether the US is "ahead" or "behind" in numbers and capacities of nuclear weapons, and who also are ready to defend the need for an ability to "prevail" in a nuclear war.

Kull sought out people with these views precisely because of his own deep conviction that in critically important ways their thinking was deeply inconsistent with the realities of nuclear weapons. He believes, as I do, that there will be only losers in any conflict that engages even a small proportion of the nuclear weapons of each superpower. He believes further that once you have forces that are clearly able to survive attack and strike back with a formidable number of warheads—the condition in which both sides have been living for decades—neither side can gain or lose from variations in the relative capacities of elements of their forces. For him as for me—and for Dwight Eisenhower thirty years ago—the imperative of nuclear weaponry is not to keep ahead, not even to keep up, but simply to have enough to deter a nuclear war from breaking out. But *Minds at War* is not about Kull's reasons for his own beliefs, although the reader may well find himself drawn by Kull's account to the conclusions with which Kull himself began. The book is about what happens when serious defense experts are pressed to defend

convictions about nuclear policy that seem to their interviewer to be in conflict with reality.

Four opinions prevalent among his eighty-four respondents became the targets of Kull's questions. Two are related to specific weapons systems: those that would be part of strategic defense—not only Reagan's SDI but less ambitious defenses against ballistic missiles—and those weapons that would have a combination of accuracy and power sufficient to destroy "hard targets"—heavily protected military assets such as weapons in hard silos or command centers far underground. Kull challenged the experts he talked with to defend these systems. He gives summaries of their arguments and of his own replies, and on balance he wins his case. There is indeed great intellectual confusion surrounding the strategic defense program and also great doubt about the utility of attempts to destroy hard targets when so many of the weapons that would be the most important targets, especially missiles in silos, could be fired before the hard-target killers arrived.

It is not surprising that a number of the analysts Kull talked to turn out to have found these programs so obviously attractive that they did not take the trouble to frame a rational argument for them. Yet judgment on these two programs really depends on technical analysis. Can a system of defense against missiles outmatch a system of deterrent offensive weapons in cost effectiveness and capacity to survive in wartime? How much is accuracy capable of replacing explosive power as a destroyer of genuinely military targets? Because of this dependence on technological assessment, these two subjects are less useful for illuminating the basic psychological questions that Kull is addressing than two more general questions he posed to the military experts. First, what is the importance of maintaining "nuclear balance" with the Soviet Union? Second, what is meant by the commitment to win or to "prevail" in a nuclear war?

Kull himself accepts that each of the superpowers should have adequate deterrent nuclear strength, which he describes as a capacity for a flexible and secure second strike. What he finds unconvincing is the argument that it is necessary for the US to match particular Soviet capacities, for example the throw weight of land-based missiles or the power of mid-range missiles in Europe. He reports that his respondents produced no persuasive evidence for their arguments. That is, they could not show the real consequences for either side, in a real nuclear war, of not matching the throw weight of the other side's land-based missiles or the precise power of its mid-range missiles. Indeed most of his witnesses were willing to recognize, at least some of the time, that the American capacity for destructive action of all sorts, including missiles launched from the sea or air, was such that the Soviet leaders were amply deterred from undertaking a nuclear attack, in spite of whatever particular advantages they might have in particular weapons.

Nevertheless most nuclear experts insisted on matching specific Soviet systems. For some it was simply a matter of what they took to be elementary good sense—in any conflict the side that has more strength has the advantage. Big kids beat up little kids; big navies beat little navies. And, in the words of one congressman, "strategic ain't a damned bit different."

Yet thinking of this kind, as straightforward as it is mistaken, is less important than a quite different argument based not on what the defense analyst himself believes, but on what he thinks other people think. Maintaining this or that aspect of the nuclear balance with the USSR is important, the experts told Kull, because third-world countries, the allies in Europe, or nervous American voters think it is. If any of them conclude that the balance favors the Russians, they may become more fearful of the Soviet

quite simple and basic reality: that above the levels of nuclear overkill long since overtaken by both superpowers, mere numbers tell us very little about the quality of nuclear deterrence on either side, so that perceptions based on such numbers are quite simply nonsensical. But Kull's many respondents generally resisted this elementary notion. Many—perhaps most—accept for themselves the nuclear reality that numbers are not decisive; but they take the different perceptions of others as essentially unalterable, and they argue that to satisfy them there must be a visible and sustained American insistence on new nuclear procurement.

In the end, of course, the Reagan administration in which many of these experts served decided to let words take the place of action. The "window of vulnerability" that troubled so many of the defense analysts in the early 1980s was

perceptions that these people found threatening were in part the product of their own proclamations of present danger. Kull trenchantly demonstrates that the advocates of new procurement of nuclear weapons systems regularly feel the need to proclaim a perilous imbalance to get their appropriations. These proclamations can be heard abroad, particularly among NATO leaders who worry that Europe will seem weak if the imbalance proclaimed in Washington is not rectified.

At a still deeper level, Kull discovered, the very act of competing for a balance with the USSR, or even for getting ahead, was often found justified for its own sweet sake. It is, some of the experts told him, good for morale to keep up with the Soviets; it is a way of holding up our own side without having to pay the costs of war itself. The arms race, in a sense, becomes the defense analyst's moral equivalent of war, meeting a requirement for competition that is in the very nature of human beings and states.

The most searching of the questions Kull asked was what the United States should do if deterrence failed and the Soviet Union made war on the West. He got varied answers, but the ones he found most interesting are those that asserted that the US should pursue the traditional goals of military victory—whether by taking territory, imposing military defeat, or otherwise gaining an advantage. Many respondents recognized that nuclear war could impose such death and destruction that there could be no victory for either side in any traditional meaning of the term. But the same people often remained powerfully attached to traditional logic: wars have winners and losers, and military leaders must aim to win. Fighting a nuclear war for this purpose was repeatedly contrasted with what respondents understood to be the only alternative—the so-called MAD doctrine of mutual assured destruction. They did not assert that this destruction could be avoided, and they did not appear to understand that when Robert McNamara first talked of assured destruction, he was describing what could surely happen, not what should be planned. MAD, for these analysts, was an unacceptable alternative to the proper and legitimate objective of coming out ahead. There were many respondents, even in this group, who were interested primarily in stopping the war "at the earliest possible moment," not in winning it. I agree with Kull that this objective makes good sense, given the reality of nuclear destructiveness. But it was clearly not easy for many others to think about anything except some recognizable form of victory.

Like the belief in keeping a balance, planning to win a nuclear war was often defended as necessary for its effect on the perceptions of others than the speaker. Americans, some of the experts said, will not back a president who is not determined on victory; allies must believe that the United States means to fight if necessary, and declarations of determination to win are helpful. Most of all, the Soviets, who were themselves often seen by

Union and more accommodating to it; Soviet power will grow, and American power will shrink. Kull notes that an analyst as experienced as James Schlesinger has argued that if we wish to influence the perceptions of others "we must take appropriate steps (by their lights) in the design of the strategic forces." A former member of the Joint Chiefs of Staff told Kull that he himself was "not really concerned about the military aspect of nuclear balance, because the effect of exchanges would be so catastrophic to the Soviets, whoever fired first." Still he believed that for political reasons, especially to impress the third-world nations that estimate relevant strength by numbers of missiles or submarines, we must keep up our end of the balance, because those people "just count."

For Kull, as for me, the immediate question is whether there are not ways of persuading even the nonspecialist of a

ended not by building new missiles, but simply by the declaration of Reagan's Scowcroft Commission that no such window had opened. US "parity" with Soviet nuclear weapons itself was restored not by matching particular numbers that were thought to have produced dangerous perceptions, but by repeated presidential declarations that the job was done. Some of the true believers in the Soviet threat are still muttering today about it, much as some of them muttered about it to Steven Kull a few years ago; but for most people the troubling perceptions of Soviet predominance were dealt with by words from the American government, not by clear-cut changes in the nuclear balance. That solution was available all the time.

In reality, the journey through nuclear fear of the last fifteen years, so largely inspired by the people Kull has sought out, was never necessary. Indeed the false

ine experts as determined believers in war fighting, must understand that the US leaders are determined to win, even if it makes Americans seem a "little bit crazy," as one respondent put it. That way the Soviets are deterred.

The intensity of this kind of belief, the power of Kull's interviewing, and the absurdity of the result are all illustrated in the following exchange. "I" is Kull, and "R" is his respondent:

I: Do you feel we need to have a war-fighting strategy or war-fighting capability?

R: Yeah, deterrence is creating that uncertainty and doubt in the adversary. We are going to be a mirror image, our goal is to be a mirror image of what we perceive to be their doctrine and their force posture. I think we are taking steps to be that mirror image.

I: Why?

R: It comes back to deterrence... I think they have to perceive that we are prepared just as they are. That our goal is to prevail... Their [nuclear weapons] whole purpose is to create this perception that, hey, we've got to stay away from that stuff, 'cause we can't lick 'em.

I: Do you think we can lick 'em?

R: No; and I don't think they can lick us. I agree it's a self-defeating goddamn thing... [But] I think that this is one of their illusions that they believe.

I: So what you're saying is that we've got to act like we've got that illusion too?

R: Or we've got to act to create that perception in their minds.

I: And we do that by acting as if we do?

R: Right. [laughter]

I: But you don't really believe we can prevail in a war?

R: I agree with you, it is senseless. I mean, what is there that's going to be left that really has any value or that is recognizable to us or to them? I mean, I'm not sure there is anything of value in what will remain.

I: But we should do what we can to develop the hardware that makes it look like we are getting ready to fight a war in which we think we could prevail. Because that's going to have the right psychological effect on them. Is that right?

R: As crazy as it sounds, I think so. I think so...

I: How do you know that the Soviets are not doing the same thing?

R: I don't [surprised laughter]... I don't!... But if that's all it is, it sure is a waste of GNP on both sides!

This kind of thinking is even worse than wasteful. While many defense ex-

perts believe that the US should seem a little bit crazy, at least some of them know that at the same time there are plenty of people who want to be assured that the United States will not do anything crazy, and so the highest officials, especially presidents, must try to show that they fully understand the danger of nuclear war. They may allow others to sound crazy, but they do not willingly sound that way themselves.

Indeed presidents take considerable care to sound sane, and no occupant of the White House paid more attention to this requirement than Ronald Reagan. Early in his first term he found a phrase that he repeated steadily ever after, first alone and then in joint statements with Mikhail Gorbachev: "A nuclear war cannot be won and must never be fought." Whatever else he said, about the evil empire and the uses of strategic defense, for example, he recurred to this declaration. It is true that it imposed some verbal acrobatics on Caspar Weinberger, who accepted Reagan's new maxim but insisted that it was wholly consistent with his own announced conviction that any secretary of defense who was not planning to prevail in a nuclear war should be impeached. But discomfiture among subordinates is seldom troubling to self-confident presidents, and Mr. Reagan steadily increased his emphasis on his basic finding. I am not aware that his position was directly criticized by the experts who believe in nuclear victory, but it may be that he was protected by a disposition on the part of defense experts to attribute his statement to politics and not conviction. My own belief is that he meant every word of what he said, that Gorbachev agrees with him, and that each man accepted the sincerity of the other on this basic point.

Returning to Bush and the leadership of NATO, we can see that what almost trapped him was exactly the kind of thinking, deeply set in the minds of NATO experts, that Kull has examined and exposed. Before Bush himself took charge, his administration had accepted as imperative for NATO a "modernization" program for the Lance missile in Germany called "Follow-on-to-Lance"—a deceptive title, because the range of the follow-on would be some four times that of Lance. The new missile was needed, it was asserted, not to attain balance with the Soviet Union's forces, and still less for victory, but for "coupling," a NATO notion that gives to nuclear weapons based in Europe the role of making it believable, for both friends and adversaries, that the American president will initiate nuclear war if it is needed to stop Soviet aggression in Europe.

According to the argument, the US will

be seen as unlikely to come to Europe's help if it must fire its strategic weapons from North America, thereby risking retaliation within the US; the willingness of the US to sponsor a nuclear response becomes plausible, so the argument runs, only when NATO has short-range missiles such as the Lance at its disposal in the "European theater." The belief that short-range missiles have this value has no basis in historical evidence. American missiles based in Europe did not prevent protracted crises like the one over Berlin in 1961 and 1962, and no such missiles were in place during the relatively calm years between 1964 and 1972. But in Brussels, Washington, and perhaps especially London there are analysts that make it an article of faith that without such weapons the alliance will become uncoupled. Their passion is intensified when such systems are opposed by citizens and statesmen whom they perceive as soft, and the modernization of Lance is opposed by such people in Germany. The impasse that hardened on this subject in May threatened to make a shambles of the NATO Summit until George Bush took charge.

What Bush did, fundamentally, was to change the subject from the modernization of Lance to the prospect for a new kind of peace in Europe. He did not directly overrule the nuclear zealots, and indeed the NATO communiqué contains a number of ritual pieties about the need for maintaining land-, sea-, and air-based nuclear systems in Europe. Moreover Bush backed the pronuclear side in rejecting any prospect of removing all short-range missiles on both sides. But he explicitly accepted both future negotiations on this subject and a timetable under which negotiations will begin before Lance is modernized. His central decision was to put conventional arms reductions at the top of the agenda, and he made his point decisively clear by proposing specific American troop reductions and the inclusion of combat aircraft in the bargain. The allies accepted his proposal, and the first paragraph of their joint communiqué, which would have been impossible two weeks earlier, puts the priority of NATO where it belongs—on the achievement of a new and stable balance in reduced conventional forces, East and West.

The achievement of a low-level conventional balance will not be easy, but it is possible now as never before, and if it can be achieved, the nuclear problems of NATO will fade into the background. What has led to complex and unpersuasive notions like the one that coupling with the US depends on particular pieces of hardware is the genuine requirement to find some persuasive counter to Soviet conventional superiority. It was entirely

natural that nuclear weapons should be given this role in the days of clear-cut American strategic superiority, but in later decades the concept of "extended deterrence"—deterrence of conventional attack by the threat of nuclear response—has been much more difficult. What we can now reasonably call the Bush solution is much the best: remove the problem by removing its cause. There will be nuclear weapons on both sides for a long time to come, and in many different systems, but in a world of stable conventional balance the amount of frustrated nonsense in the responses of sober defense analysts to questions like Steven Kull's will be greatly reduced.

The new direction set in Brussels will not be maintained without continuous attention from the Bush administration. Traditional attitudes are stubborn, and they can be reinforced by the interests of particular military services as well as by tendencies in Brussels to argue for weapons controlled by NATO headquarters. But what the President revealed in this episode is more than a quick-fix response to criticism and to the risk of failure—though it is not wrong for presidents to respond to such immediate stimuli. Talking to *The Washington Post* after his success, Bush showed a breadth of view and a reflective confidence that seemed new to me. He would still be careful, but also eager to bring about a new consensus; and the prospect he put forth is one that goes "beyond containment" to a new kind of Europe, especially through change in Eastern Europe. It will take time, but it is a genuine vision of genuine possibility. The President himself remains wary of what he calls "the vision thing," but he joked about that in *The Washington Post* interview, and he can be comforted by the thought that, especially when prospects are bright, vision and prudence are not enemies but friends.

Steven Kull is also hopeful, in the end. He does not stop with demonstrating the internal contradictions that come from making a balance with the USSR the justification for weapons procurement and victory the object of nuclear war. From his own arguments with his respondents, he became aware that many of them, even though selected from the hawkish end of the spectrum, have a sober understanding of nuclear reality and know, whatever they may say in public, that these weapons do not fit the rules of inherited conventional military thinking. His overall conclusion is that "a greater adaptation to nuclear reality not only is possible but to some extent is already occurring," and among Soviets as well as Americans. It is just this adaptation that can be both cause and effect of the progress now in sight between the governments of Gorbachev and Bush. □

VOLUNTEERS WANTED

(5) Call for Research Assistance to help HARRY RUJA:

Russell visited the United States repeatedly over a 55-year period, starting in 1896 with his first wife -- who, like the last, was American-born -- and ending in 1951. During those years, he lectured extensively throughout the country and in Canada. Ken Blackwell and I have documented some of those lectures in *Russell* No. 6 (Summer 1972) and No. 10 (Summer 1973). Feinberg and Kasrils provided a full account of Russell's relationships with the U.S. in their *Bertrand Russell's America* (2 vols., 1973, 1983). In our comprehensive bibliography, now in process, Blackwell and I seek to cite every published report of his lectures in the United States and Canada.

Members of the BRS can help us in this task. If you would approach your main city library and request a list of all the articles by or about BR which appeared in the local newspaper(s) and send me a copy of that list, our task would be considerably advanced, and we could be more confident that we have come as close to completeness as is reasonably possible.

Many newspapers are now turning to computerized indexes of their contents, and others have files of clippings, some of which may be BR files.

I have been querying a number of newspapers seeking a particular item; some of them are very responsive, but many invite me to use the indexes in their local public libraries or hire someone to do research. (One cited \$75 per hour!)

As you can infer, I am adopting the latter alternative, with a modification: I'm not hiring you. I'm enlisting you in a volunteer Research Corps. Will you join?

Note to residents of New York, Chicago, and Los Angeles: Don't bother with the 1938-1940 period. I have already thoroughly canvassed those years in your cities.

ABOUT OTHER ORGANIZATIONS

(6) American Atheists. We reported in May (RSN62-36) that we had sent postcards to BRS members in California, alerting them to an AA meeting on March 24-25. We asked members who attended to let us know how things went. LARRY JUDKINS has responded to our request with the following splendid report:

In late March of this year, I attended the Nineteenth Annual National Convention of American Atheists. The meeting took place in San Diego, California, over Easter weekend, beginning on Good Friday and ending in the afternoon of Easter Sunday. Unfortunately, I arrived too late in the evening to participate in any of Friday's events.

Saturday, however, was the principal day of the assembly. Jon G. Murray, President of American Atheists, opened the festivities with, among other comments, an expression of appreciation to the Bertrand Russell Society for sending out advance notices of the convention to the Society's California members. He added that if Bertrand Russell were still alive, he most certainly would be welcome there.

Convention events consisted of everything from speeches and discussion groups to the presentation of awards to "Outstanding American Atheists". There were also plenty of opportunities for Atheists to socialize, including a Members' Banquet and Conventioneer's Party. A book and product display room was on hand where one could purchase a Bertrand Russell tee shirt or any of hundreds of other items which might be of interest to Atheists.

Besides speeches by the members of the Murray-O'Hair family (Madalyn O'Hair, Jon Murray, and Robin Murray-o'hair), many other interesting and informative lectures were given. Psychologist John F. Higden spoke about "What Makes Religionists Tick," and Anton Neureiter of Austria and Gottfried Niemiets of West Germany each gave fascinating talks concerning their respective governments' recent prosecutions (or persecutions) of Atheists for "blasphemy".

Several panels and discussion groups were held. Topics discussed included "Atheism and Children," "The Birth of Modern Atheism," and "Grass Roots Atheist Activism". But for me, by far the most interesting panel was that which concerned "Creationism." It featured the well-known anti-creationists Frank Awbray and William M. Thwaites, both of whom are biologists at San Diego State University.

I have not yet received the final reports on the convention from American Atheists. However, the preliminary word is that this was one of the best-attended American Atheist Conventions ever, with well over 400 registered conventioneers.

Personally, I found the whole experience thoroughly enjoyable, and I highly recommend that all BRS members are are Atheists try to attend the next American Atheist Convention.

BOOK REVIEWS

(7) Volume III, in *The Observer Review* (5/18/69), with thanks to TOM STANLEY:

Russell right or wrong

by PHILIP TOYNBEE

THE AUTOBIOGRAPHY OF BERTRAND RUSSELL Vol. III
(Allen and Unwin 42s)

IN THE preface to this third volume of Lord Russell's splendid work he warns us that 'I have found that it is not possible to relate in the same manner private and public events, or happenings long since finished and those that are still continuing and in the midst of which I live.' He goes on to write of 'the unavoidable reticences necessitated by the law of libel'—and to these we have the right to add the reticences imposed on Lord Russell simply by his own strong sense of human decency.

We should not complain about these restrictions, but it is true that they make for a book which is different in kind from the earlier volumes. Lord Russell tells us that during this latest period the private part of his life became increasingly important; but we cannot gather this from anything we find inside the present book. And since one of the great things about its predecessors was the subtle but powerful blending of his private and public emotions it is no use denying that the third volume is an altogether thinner and less impressive work than they were.

Letters are included here, as they were before, but there are fewer of them and many more manifestos, lectures, statements to the Press, etc. And the text itself is largely a description of Lord Russell's many moral and political campaigns. To anyone who shares his strong and unremitting concern for the sufferings and afflictions of the human race these descriptions make dramatic, though often depressing, reading. But the absence of a private life running through these pages as an accompaniment to the campaigns will leave even the most public-spirited of readers with a sense of deprivation.

One example of the loss will have to serve as an illustration of what is constantly felt:—

At Christmas, 1953, I was waiting to go into hospital again for a serious operation and my wife and household were all down with flu. My son and his wife decided that, as she said, they were 'tired of

children.' After Christmas dinner with the children and me, they left, taking the remainder of the food, but leaving the children, and did not return. We were fond of the children, but were appalled by this fresh responsibility which posed so many harassing questions in the midst of our happy and already very full life. For some time we hoped that their parents would return to take up their rôle, but when my son became ill we had to abandon that hope and make long-term arrangements for the children's education and holidays. Moreover, the financial burden was heavy and rather disturbing. . . .

There is an understandable dryness in Lord Russell's tone as he tells this extraordinary story, but his self-imposed reticence has forbidden him to tell us more. Yet the reader, while admiring the writer's refusal to indulge either in moral indignation or in self-righteousness, is bound to feel a strong sense of frustration at this point. After all, by this time we have long been admitted to the privacies of the author's heart and mind. To have the door more or less slammed in our faces here is almost like a snub. For the causes of this strange behaviour by Russell's son and daughter-in-law are clearly of very great importance to us in our attempt to understand Russell himself.

As for the main bulk of the book—its account of his campaigns against nuclear weapons and against the American intervention in Vietnam—everyone who refused to follow exactly where Russell led is bound to find something here to complain about. It must be said that he is no better than the rest of us at eating crow, and there are very few moments in this book where he admits to having been wrong or even mistaken. I write

agrees, both with Russell's plea that Britain should get rid of her nuclear weapons and with his condemnation of the American aggression in Vietnam. I write, too, as one who believed, and believes, that the Direct Action Campaign may have done more harm than good to the anti-nuclear cause, and who cannot wholly excuse North Vietnam and the Vietcong either for their conduct during the war or for their determination to continue fighting it at any price.

Blinkered as I must be by this particular complex of attitudes I cannot help regretting the extreme violence and, to my mind, one-sidedness of some of Lord Russell's judgments. He does not retract his morally outrageous remark that '[Kennedy and Macmillan] are much more wicked than Hitler . . . they are the wickedest people that ever lived in the history of man . . . I find this judgment understandable, but deplorable. Russell is surely right in thinking that the policies of Kennedy and Macmillan might have led to a greater human disaster than any that Hitler achieved. But I think he is wrong to think that wickedness should be measured by effects rather than by motives.

Lord Russell insists over and over again that he is not anti-American, yet I don't believe any comparatively unbiased reader could doubt that this is exactly what he constantly shows himself to be. I share his indignation with the Americans for their bestial war; but I do not believe, as he evidently does, that in the general power struggle between the Great Powers America has behaved worse than Russia.

And when Lord Russell feels the need to explain why, in 1956, he strongly condemned the Tories'

Suez adventure but had nothing to say against the repression of the Hungarian Revolution I find his explanation weak indeed:—

I did not [speak out against Russia] because there was no need. Most of the so-called Western world was fulminating. Some people spoke out strongly against the Suez exploit, but most people were acquiescent.

On the contrary, there was a sizeable minority of English public figures who strongly condemned both monstrosities. And surely Lord Russell must have recognised that his silence on a major issue speaks every bit as loud as most other people's shrillest utterances.

So I don't feel that Russell can be acquitted of some unwisdom at certain points of his recent campaigns. But nor have I ever felt that his campaigns were anything but passionately sincere in motive and gallantly energetic in execution. And I am sure that this high moral passion of our grandest old man has done a great deal to prevent us all from subsiding into that accidie and social despair which so often overwhelms the citizen of a country which is moving downwards on the power-scale. When all has been said against him that can be said, Lord Russell remains a marvel—a marvel of intelligence, lucidity and wit; a marvel of undeviating concern for his fellow-humans.

REPORTS FROM COMMITTEES

(8) Philosophers Committee (David E. Johnson, Chairman):

The Bertrand Russell Society will sponsor a session on the philosophy of Bertrand Russell in conjunction with the Eastern Division meetings of the American Philosophical Association. The session will begin at 7:30 p.m. on Thursday, December 28, 1989, in the YORK room of the Hyatt Regency Hotel, Atlanta, Georgia. The program will consist of a paper entitled *Russellian Objects: Unity, Complexity and Empiricism* by Trip McCrossin of the Center for the Study of Language and Information, Stanford University. Commentary will be by Stephen Neale, Princeton University, followed by a general discussion. The chair of this session will be David Johnson, U. S. Naval Academy.

BOOK REVIEWS

- (9) *Intellectuals*, by Paul Johnson. Last issue we printed an unfavorable review from The Washington Post (RSN62-40).

Here are 2 more unfavorable reviews:

Review by Bernard Williams in *The New York Review of Books* (July 20, 1989, pp.11-13).

Bad Behavior

Intellectuals

by Paul Johnson.

Harper and Row, 385 pp., \$22.50

Bernard Williams

Paul Johnson is a prolific British writer who has produced histories of the Jews, Christianity, the modern world, and the English people. He is, I believe, a Catholic (if so, it commendably did not discourage him, in his substantial and very readable history of Christianity, from admitting that the religion, to all intents and purposes, was founded by Saint Paul). Between 1955 and 1970 he worked on the left-wing journal *The New Statesman*, and for six years was its editor, with more success than anyone has achieved since. He is now firmly entrenched on the right, and is a fierce critic of left intellectuals.

The background to his new book is the rise and influence of secular intellectuals as moral and political guides, a development which he interprets as an unsuccessful replacement for clerical authority. This general theme is only the background to the book—indeed, it might be called the excuse for it—and not its subject, since Johnson does not discuss the role of the intellectual in general terms, nor does he consider the difference between secular and religious intellectuals or ask whether they have a more significant part in some societies than in others. In fact, he does not pretend that the book is anything more than it is, a series of unflattering short biographies of people identified as secular intellectuals. They are an odd assortment, ranging from Rousseau and Shelley to Kenneth Tynan and Lillian Hellman, by way of Marx, Tolstoy, and Hemingway, among others. He describes them all so as to bring out their bad behavior. According to Johnson, they all—this seems to be their defining characteristic—"preferred ideas to people." Ruthless or exploitative personal relations are particularly emphasized: the well-known histories of Rousseau's treatment of his children, for instance, and Tolstoy's relations to his wife are rehearsed.

The chosen intellectuals are also represented as characteristically, if not universally, very unscrupulous about the truth, though this charge takes different forms, not always very carefully distinguished. Sometimes, as in the case of Russell and Sartre, it means that they made reckless and irresponsible political statements. With others, particularly Marx, it means that they would not admit it when proved wrong. With many, it means that they lied to their wives or their creditors. In

the case of the left-wing British publisher Victor Gollancz, who is particularly picked on for sins against veracity, it paradoxically means, in several instances, that he stated with extreme frankness to authors that he would not publish material with which he did not agree.

One or two intellectuals are rather

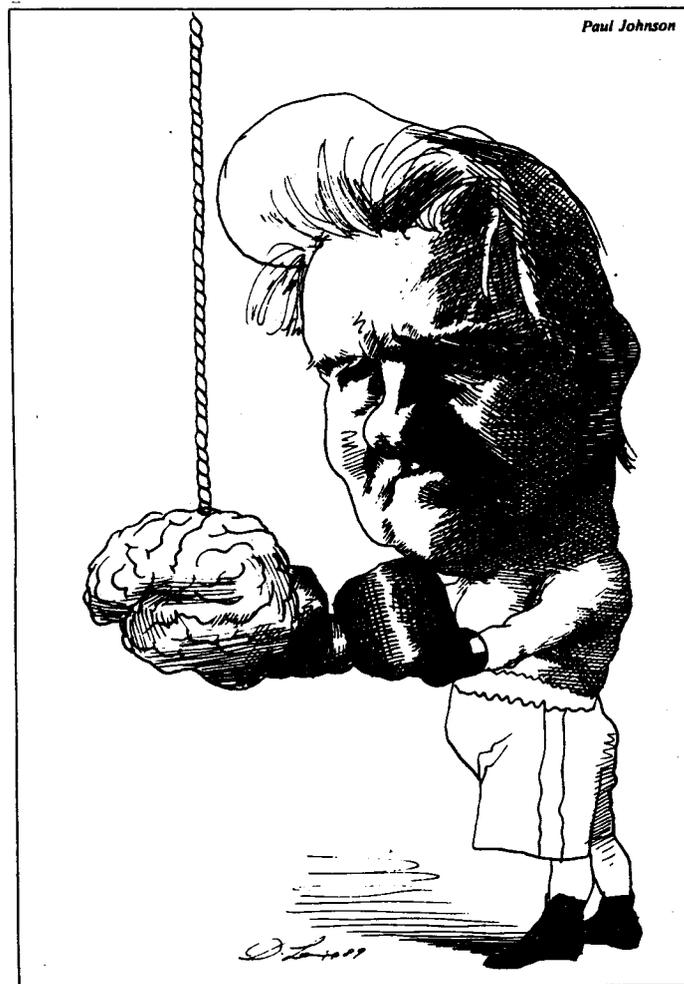

are shown as sexually unscrupulous and in many cases insatiable—and in almost every chapter (Ibsen is resistant to the treatment) there is a detailed rehearsal of the subject's adulteries, infidelities, and general sexual disorder. All the subjects but one are men; in the case of the exception, Lillian Hellman, Johnson is not

theories would not pass a first-year exam. The little that is said about the technical work of Russell, Sartre, and Chomsky would have been better left out. The creative writers Johnson discusses he in fact admires, but he has nothing interesting to say about them. All the unlovely chatter about writers leaves in the end some sense of respect for only two of them: Ibsen and—interestingly—Brecht, who is represented as so unrelievedly and chillingly horrible that even an author who is prepared to patronize Marx and sneer at Tolstoy seems rather awed by him.

So the whole enterprise is quite useless. But it does raise two questions, at least. One is why an intelligent and hardworking writer with a sense of the past should have thought it worth doing. I have no idea. The other is the question of whether there was a subject to be written about, if Johnson had chosen to pursue it seriously. Is there anything interesting to be said about "intellectuals" as such? Who are they? What authority, if any, do their pronouncements have? It is these questions, particularly the last, that Johnson's book might have addressed, and perhaps was originally intended to address.

If there is a question worth addressing, certainly one would have to start with a less eccentric selection of intellectuals. One elementary improvement would be that they should not be selected just for being badly behaved. Johnson himself, as a matter of fact, undermines any general lesson to be drawn from his selection by several times mentioning other people who were nicer than his subjects, were exploited by them or at least were there to pick up the pieces, and yet had as good a claim to be secular intellectuals as the subjects had. In the tale of Tolstoy, there is Turgenev. Near Sartre at one time, there is Camus—though Johnson says he is not an intellectual, on the simplistic ground that he did not hold ideas to be more important than people. Above all, as friend and victim of the wretched Rousseau, there is Diderot. Diderot was an extremely sympathetic human being who was interested in a vast range of ideas and experience and as an organizer, an editor, and a writer of the great Encyclopedia did as much as any other single person, perhaps more, to form modern consciousness. If Diderot was not a secular intellectual, then there is no such person.

Johnson's principles of selection are partly formed by the notion, explicitly applied to Camus, that exploitation of other people is a defining mark of an intellectual, or at least of a secular one. This is an uninteresting conception and begs all the questions. But in addition to

heartlessly mocked for practical incompetence: the aged Sartre became confused at a meeting; Bertrand Russell was unable to bring a kettle to the boil or adjust his hearing aid. A long paragraph devoted to the accidents in which Ernest Hemingway was involved makes a blackly comical catalog, but hardly a surprising one, granted the feats he was always attempting and the fact, firmly emphasized by Johnson, that much of the time he was drunk.

Above all, the writers in *Intellectuals*

content with the material he has about her sexual adventures and throws in a good deal more about those of Dashiell Hammett. The censorious and distinctly prurient tone of all this suggests that the Church's revenge on the secular intellectual has been shaped by the more dubious aspects of the confessional.

Much, then, is said about the less intellectual activities of the intellectuals. Not much is said about their ideas. The account of Marx is a standard caricature; the remarks about Rousseau's political

this, and indeed contrary to it, Johnson may have another idea. It may be that he is not claiming to produce a generalization about all secular intellectuals (the language of "typically," "characteristically," and so forth makes it hard to tell), but is rather saying that these examples serve in themselves as a demonstration of the truth he wants to bring home: that possession of the sorts of characteristics by which intellectuals are distinguished—an interest in ideas, perhaps, and a disposition to see the world, particularly the world of politics, in abstract and general terms—carries no guarantee at all of moral reliability or good judgment. So why should the intellectuals have any authority? Why should anyone take any notice of them?

If this is Johnson's question, as I think it is, his principles of selection still are inadequate. For one thing, there are still questions to be answered about non-secular intellectuals. Why should anyone have listened to them, either—to T.S. Eliot, for instance, or to Claudel? He says nothing at all about this, but it is possible to imagine what his answer might be. From two very brief passages about the replacement of clerical authority by that of the secular intellectual, one might infer the opinion that if Christian intellectuals (in particular) are to be listened to, it is because they are Christian, not just because they are intellectuals. Or, rather differently: it may be they should be listened to because they are intellectuals, and their abstract and general formulations are what attract intellectual interest, but any authority they have is the authority of their Christian beliefs and derived from their religious tradition, and does not simply come from their status as intellectuals. With secular intellectuals, on the other hand, there is nothing to commend their views to people's attention beyond the fact that they are intellectuals.

This is some sort of an answer, but a very incomplete one. Many secular intellectuals do attach themselves to a tradition, as many among those reviewed in *Intellectuals* have attached themselves to Marxist traditions. Johnson thinks those traditions false and pernicious, and indeed sometimes proceeds in a peremptorily right-wing way (he counts the judgments of *Commentary* magazine as authoritative without further argument, and a statement about Sartre by the extreme right paper *L'Aurore* is unquestioningly accepted, although it is at the same time described as a sneer). But that should not be the point. Even if Johnson does not like the tradition in question, it will still be true that the authority that is claimed for these intellectuals' judgments does not derive from a pure act of personality, but is attached to traditions of discourse that stand behind the thoughts of particular people, as the works of Hegel, Saint-Simon, Ricardo, and Feuerbach, to name only a few, stand behind the ideas of Marx.

Equally, it would be a great mistake to suppose that the authority of Christian intellectuals is just the authority of the Church. Their role as such intellectuals is

not that of a priest; moreover they have in fact often been heretics. Nor are their characteristics as intellectuals at all simply related to their Christian belief, or to the Church, and there is much to be said about the questions of how much help or harm may be done to the Christian life by its expression in abstract terms and in connection with a wider range of ideas. "What is the authority of an intellectual?" is as good a question about a Christian intellectual as about a secular one, and has been recognized to be so by Christians: by Newman, for instance, to take one notable example about whom Johnson certainly knows a good deal.

There is another, quite different, respect in which Johnson's list of examples needs to be reconsidered if the right question is to be isolated. It is necessary to separate from the supposed authority of the intellectual something else, the authority of the artist. By including Shelley, Tolstoy, and others who were creative writers Johnson confuses the issue in several ways. One is that the self-centeredness, the exploitation of others, what he calls the "monumental egotism" of these people, tells us nothing special about intellectuals. It simply reflects the well-known fact that some creative people make ruthless demands on those around them. It is another, and in fact totally useless, question whether those people's achievements "excuse" their behavior. Their neglected children, abused wives, abandoned mistresses, unpaid creditors, and other victims needed an answer to that question, perhaps, and they can hardly be blamed if their answer was negative. But we scarcely need an answer to it. Moreover, this entire theme has very little to do with the authority of intellectuals. The authority of these artists lies in their works, not in the characteristics typical of intellectuals.

Johnson strangely neglects this point. He admires most of the artists he discusses—in the case of Shelley, perhaps too indiscriminately. (Is it because he does not admire his work that he did not take up Wagner, an artist who, one would think, was from all points of view ideally suited to his style of treatment?) But he does not try to understand, or relate to his theme, the hardly unfamiliar fact that work displaying great insight can go with a heartless life and ridiculous pronouncements. In one case he runs into critical trouble, since he both regards Tolstoy as "perhaps the greatest of all novelists" and yet claims to find in the novels what he finds in Tolstoy's life, an inability to sympathize with other human beings.

It is true that the respect awarded to artists because of their works may get extended, in the case of some of them, into a regard for, or at least an interest in, their pronouncements on political and other subjects. This may not be entirely rational, any more than it is when the same thing happens with scientists or entertainers. But it is hardly surprising: such people may well be remarkable, singular, interesting, with a talent for powerfully expressing feelings. In any

case, this is not an issue of the authority of the intellectual. The intellectual, in Johnson's sense of a distinguished or well-known person, is someone who has a disposition and capacity to discuss and think in an informed way about ideas, and is thought to have some authority to speak about questions of immediate public concern, particularly about politics, in virtue of that capacity.

In some cases, the distinction between the authority of the intellectual and that of the artist is of course blurred. This is particularly so with the theater and with film, and there has been the tiresome phenomenon, for instance, of writers such as John Osborne or Arnold Wesker, whose awkward plays were thought better than they were because they expressed political ideas, which in their turn were better regarded than they should have been because they were expressed on the stage. But in the end, the authority of the intellectual, if there is such a thing, should be a purely intellectual authority. It is more than an expertise or scholarship, because it is applied outside the sphere of experts and scholars. It is the authority of a person to speak about the particular issues, above all political issues, derived from that person's capacity to handle ideas. Can there be such a thing?

The first requirement is that ideas should have something to do with politics. It is of course possible to pretend that they do not, and the present British government is a sustained exercise in pretending they do not. Its well-known anti-intellectual position of course includes its being against intellectuals, but that is only a small part of what it includes, since there are not many intellectuals to be against: intellectuals, as opposed to men of letters or academics, have never been a very common phenomenon in Britain. Moreover, a good number of those that there are find themselves somewhere on the left, and the government has good reason to be against them anyway.

But it is not much more encouraging to right-wing intellectuals. An example is to be found in a recent article in the *London Times* by Roger Scruton, certainly a right-wing intellectual, written to mark Isaiah Berlin's eightieth birthday and mostly devoted to an attack on him. The attack itself has no substance—it merely applies to one of the least appropriate targets conceivable the old line about liberals committed to free speech being soft on communism—but it does offer a glimpse of Scruton's own location on the right, when he says that he senses in Berlin "a dearth of those experiences in which the suspicion of the liberal idea is rooted: experiences of the sacred and the erotic, of mourning and holy dread." What this might have to do with any politics now accessible to anyone is a question for Scruton, but, as he is well aware, it certainly has nothing at all to do with the politics of Mrs. Thatcher.

In one way, that is undeniably reassuring. On the other hand, the fact that Scruton's rhetoric, vapid as it is, has no conceivable relation to current political

speech is an illustration of something more general and less welcome, that current speech has no room for any exercise of the imagination. In fact, although they are anti-intellectual, Thatcherian politics are deeply involved in ideas. They are, with their fixation on the competitive market and contempt for public assistance to the noncompetitive, more intensely ideological, as has often been noticed, than is usual in Britain. It is not that they have no ideas, but that they lack imagination, and those who develop the ideas are public accountants, publicists, and blinkered theorists of the market, rather than anyone who reflects more imaginatively on anything else. Certainly they are not intellectuals.

It is the intellectual imagination that gives intellectuals whatever authority they have. Of course it is true that the particular judgments of intellectuals may be impractical or poorly related to a given situation. But they are not meant to govern: that is the business of government, and to say that no one should comment on government except those in government is to say that there should be no comment. Of course, some intellectuals may be vain, self-important, and mendacious: that merely suggests that there should be more intellectuals who do not have such characteristics. Of course, the interest attached to the pronouncements of intellectuals may, in some cultures, be exaggerated. It is hard to deny that that used to be true in France, or at least in Paris; it is remarkable what intense scrutiny used to be applied to every shift of position, every analysis and rationalization, of certain Parisian thinkers who had never demonstrably shown good sense about anything.

But even such distortions raise questions that need answers. At the end of his chapter on Sartre, Johnson reports, in a bewildered tone, his funeral:

Over 50,000 people, most of them young, followed his body into Montparnasse Cemetery. To get a better view, some climbed into the trees... To what cause had they come to do honour? What faith, what luminous truth about humanity, were they asserting by their mass presence? We may well ask.

If we may well ask, we should do well to answer. We need not suppose that the reputation of Sartre was entirely well-founded to acknowledge the truths to which it spoke: that politics necessarily involves ideas, and particularly so when it denies this; that political ideas need the surroundings, the criticism, and the life provided by other ideas; and that some people are able to bring those ideas imaginatively into the thoughts of those who are going to live under that politics. There is such a thing as the authority of the intellectual, and it is to be found in that capacity—an authority which, like that of the artist and unlike that of the clergy, depends on the uncommanded response of those it affects. □

The Great Unwashed

INTELLECTUALS

By Paul Johnson.

385 pp. New York: Harper & Row. \$22.50.

By Wendy Doniger O'Flaherty

THIS is a book by an intellectual who tells us not to listen to intellectuals. Aldous Huxley once defined an intellectual as someone who had found something more interesting than sex. Paul Johnson's definition is equally idiosyncratic: an intellectual is someone who wants to refashion the world, politically, in accordance with principles of his own devising. Moreover, a "disregard for truth and [a] preference for ideas over people . . . marks the true secular intellectual." Of the people whom Mr. Johnson forces to lie on this Procrustean bed, a dozen are given a chapter apiece: Rousseau, Shelley, Marx, Ibsen, Tolstoy, Hemingway, Brecht, Bertrand Russell, Sartre, Edmund Wilson, Victor Gollancz and Lillian Hellman. A final chapter lumps together George Orwell, Evelyn Waugh, Cyril Connolly, Norman Mailer, Kenneth Tynan, Rainer Werner Fassbinder, James Baldwin and Noam Chomsky. Mr. Johnson, the author of "A History of the Jews" and "Modern Times: The World From the Twenties to the Eighties," hurries through a superficial summary of each literary corpus, the ideas, to get to his real concern, the lives of these men — and woman. He is interested not in what they wrote, but in what they did — more precisely, in what others say they did, since the book is based almost entirely on secondary sources.

The obvious thesis is that intellectuals lead bad lives. The not so obvious, implicit corollary is that, therefore, the ideas of intellectuals are bad. The various accusations are quickly generalized through recurrent comparisons that give the general impression that these flaws are held in common by all intellectuals (implying that there are no intellectuals who are not thus flawed) but not by other people (implying that there are no nonintellectuals who are thus flawed). Mr. Johnson revels in all the wicked things these great thinkers have done, and the reveling parts of the book are great fun to read. Special attention is paid to a trinity of sins that characterize this group: lying, fornicating and dishonesty about money.

Lying is of particular relevance to Mr. Johnson's argument, since it implies that we should not believe what intellectuals say: "One thing which emerges strongly from any case-by-case study of intellectuals is their scant regard for veracity." The lies range from self-serving deceptions and conscious revisions of history to idle mythologizing, sexual boasting, self-deception and mere difference of opinion. Thus, when we are told that Hemingway's story about his inspection of F. Scott Fitzgerald's penis in a men's room "seems to be a piece of fiction," we may wonder how Mr. Johnson knows the true case. He acknowledges that it might be unfair to accuse writers of "lying," that Hemingway regarded lying as "part of his training as a writer" and admitted that writers "often lie unconsciously and then remember their lies with deep remorse." Yet Mr. Johnson asks: "To what extent do intellectuals as a class expect and require truth from those they admire?"

Intellectuals (particularly Rousseau, Tolstoy, Hellman, Sartre, Simone de Beauvoir, Russell, Hemingway, Gollancz and Baldwin) write apparently "frank" confessions whose "selective honesty is in some ways the most dishonest aspect." They "disarm the reader by what appears to be shocking frankness and admission of guilt [but] . . . in fact hide far more than they reveal."

Wendy Doniger O'Flaherty is a member of the Committee on Social Thought and the Mircea Eliade Professor of the History of Religions at the University of Chicago. Her latest book is "Other Peoples' Myths."

This false glasnost infuriates Mr. Johnson because it works, because other people do not think, like him, that these people are liars. The false confessions are also condemned for the trouble they cause, particularly when they lift the lid of the Pandora's box of sexual secrets and expose the contents to the intellectual's partner as well as to the general public. Mr. Johnson skillfully documents the misery that such "open diaries" produced in the lives of Rousseau (who confessed that one woman with whom he was impotent said, "Leave women alone and study mathematics"), Tolstoy and his wife, Sonia (whose "nightmarish battle of the diaries" eventually drove Tolstoy to keep "a 'secret' diary, which he hid in one of his riding boots" and which his wife, of course, found), and Simone de Beauvoir (who so infuriated Nelson Algren when she published his love letters to her that he said, "I've been in warehouses all over the world and the women there always close the door").

These male intellectuals exploit women, Mr. Johnson says. Shelley toyed with the idea of incestuously involving his sisters in his harem, Tolstoy "failed to tell women with whom he had sex that he had contracted venereal disease and might still have it" and Hemingway "wrote an obscene poem, 'To Martha Gellhorn's Vagina,' which he compared to the wrinkled neck of an

thing wrong with it — or did he think there was?" Victor Gollancz believed that he would lose the use of his penis, imagined that it kept disappearing into his body and "would constantly take it out to inspect it, to discover whether it showed signs of VD or indeed whether it was still there at all."

Now, these are delightful dirty stories, but what do they tell us about intellectuals? We learn that, as they get older, many of them (Ibsen, Hemingway, Sartre, Russell) preferred younger and younger women — a taste hardly confined to great thinkers. Indeed, it needs no feminist come from the grave to tell us that men have generally mistreated women. Another character flaw to which Mr. Johnson devotes what seems a disproportionate amount of attention is the lamentable personal hygiene of most intellectuals, which he grumbles about like the mother of a teen-age boy. Marx "rarely took baths or washed much at all," and his room was a pigsty. Hemingway (according to his third wife) "was extremely dirty" and allowed his unneutered tomcats to march all over the dining table. Brecht "was always dirty," and aggressively, dishonestly so: "[Theodor] Adorno said that Brecht spent hours every day putting dirt under his fingernails so he looked like a worker." Russell had such bad breath that Lady Ottoline Morrell refused to sleep with him for a while.

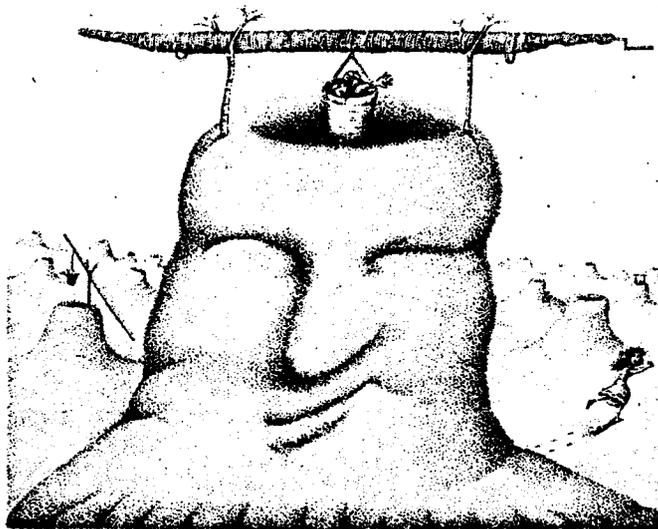

Sartre was "disgustingly dirty," and Connolly left "bathroom detritus" in the bottom of his host's grandfather clock and bacon rashers marking his place in his host's books. Why does Mr. Johnson bother to tell us? Did the physical filth of these men make their thoughts unclean?

This line of argument, from life to art, is explicitly applied to Marx, whose "grotesque incompetence in handling money . . . explains why he devoted so much time and space to the subject." The argument runs like this: Marx, unable to pay the interest on his debts, came to view "the charging of interest, essential as it is to any system based on capital, as a crime against humanity." He himself, however, immediately began "exploiting anyone within reach." Rousseau, Shelley, Brecht and Russell are all described as exploitative, but Marx in particular is accused of having a "tendency to exploit those around him," and this is said to have led to his theory that the masses are exploited. An unconscious satire on this simplistic correlation of life and theory is provided by Marx's mother, who wished aloud that "Karl would accumulate capital instead of just writing about it."

Marx brings us to the true serpent in the intellectual garden — not sex but politics. It becomes gradually apparent that "intellectual" is a euphemism for what Mr. Johnson occasionally calls "a radical" or "a radical intellectual." If radicals are liars, we might expect conservatives to tell the truth, and lo, this is the case: Waugh "had an unusual regard for truth. . . . He was, he said, a conservative. . . . Waugh described society as it was and must be." Most of Mr. Johnson's intellectuals are leftists of one sort or another, and "intellectual" is ultimately revealed to be a synonym for "socialist" or even "Communist": "Social engineering is the creation of millenarian intellectuals who believe they can refashion the universe by the light of their unaided reason. . . . It was pioneered by Rousseau, systematized by Marx and institutionalized by Lenin."

It is certainly noteworthy that Mr. Johnson does not discuss any of the intellectuals on the far right, such as Heidegger, Pound and Paul de Man, whose lives are currently the subject of much heated debate. Orwell and Edmund Wilson, the only liberals for whom Mr. Johnson expresses any approval or sympathy, are the exceptions that prove the rule, men who, "unlike most intellectuals," cared about real people and cared about the truth. They acted out the old saying that a man is a fool not to be a Communist until he is 30 years old, and a fool to remain one after that. Both Orwell and Wilson recoiled from the far left and moved toward the

Continued on page 36

old hot-water bottle, and which he read to any woman he could get into bed with him." Sartre "dedicated his 'Critique de la Raison Dialectique' (1960) publicly to de Beauvoir, but got his publisher Gallimard to print privately two copies with the words 'To Wanda.'" Mr. Mailer stabbed his second wife in the abdomen and back. When Fassbinder got married, "the bride found her bedroom door locked, and the groom and the best man in her bed." Connolly, in bed with a married woman of quality during a V-bomb raid over London in 1944, ungallantly jumped out, saying, "Perfect fear casteth out love."

Intellectuals (or Mr. Johnson's selection of them) are obsessed with the male sexual organ. Rousseau "always had trouble with his penis"; Marx had boils on his; Ibsen "would not expose his sexual organ even for the purpose of medical examination. Was there some-

Marx rarely took baths or washed, his room was a pigsty; while Brecht was always dirty.

The Great Unwashed

Continued from page 3

right, a move Mr. Johnson, not surprisingly, finds compatible.

In the final reckoning, it becomes apparent that Mr. Johnson dwells on the dirty habits and unpaid debts because he believes that moral flaws are political flaws. In writing of "the strain ... in carrying the Left Man's Burden," he cites with approval Connolly's statement that many had joined the left "because 'they hated their father or ... worried about sex.'" It is because intellectual politics is the work of drunkards and adulterers that it is irrational and characterized above all by violence. And this violence rages unchecked because the intellectuals are godless. Radical intellectual is sometimes replaced here by "secular intellectual," for the intellectuals have scorned religion and set themselves up in place of priests; indeed, they have committed the supreme act of hubris by presenting themselves not merely as false priests but as false gods: "The secular intellectual might be deist, septic or atheist. ... Unlike their sacerdotal predecessors, they were not servants and interpreters of the gods but substitutes."

So we see how evil intellectuals are, and we also see why. "It is all very baffling," Mr. Johnson writes, "and suggests that intellectuals are as unreasonable, illogical and superstitious as anyone else." The banality of this belabored point is mind-boggling. Unlike Captain Renault in "Casablanca," we are not "Shocked! Shocked!" to find that Shelley was a schnorrer, Tolstoy a compulsive gambler, Hemingway an alcoholic. What is shocking is Mr. Johnson's moral indignation and his expectation that we, too, will click our tongues in disapproval.

Why should intellectuals behave better than nonintellectuals? Mr. Johnson argues that people who tell us how to behave should behave better than people who don't tell us how to behave. He cites numerous instances of the glaring disparity between words and deeds in the treatment of women by men like Ibsen, Shelley, Russell and Sartre, who were pioneering champions of the women's movement, and in the treatment of their own children by men like Rousseau and Tolstoy, who wrote so much about the importance of education. He admits that "very few of us lead lives which will bear close scrutiny, and there is something mean in subjecting Rousseau's, laid horribly bare by the activities of thousands of scholars, to moral judgment. But granted his claims, and still more his influence on ethics and behavior, there is no alternative." He approves of Orwell's judgment of Pound: "One has the right to expect ordinary decency even of a poet."

But one could easily argue the contrary case, and expect poets to behave worse than other people; many great thinkers have been highly neurotic, some downright mad. Indeed, it may well be that

Fassbinder Unbound

[Rainer Werner] Fassbinder pursued with relentless ferocity one of the three great themes of the new sixties' culture: the uninhibited exploitation of sex. ... He drew men from the working class and turned them into actors as well as lovers. One, whom he called "my Bavarian negro," seems to have specialized in wrecking expensive cars. Another, a former North African male prostitute, was homicidal. ... A third, a butcher-turned-actor, committed suicide. ... Fassbinder also reflected, in his films and lifestyle, the second great theme of the new culture: violence. As a very young man, he seems to have been close to Andreas Baader, who helped to create one of West Germany's most notorious terrorist gangs. [He] embraced ... a third theme of the new culture: drugs. ... He does not seem to have taken up hard drugs until ... 1976. ... But then, having tried cocaine, he became convinced of its creative power and used it regularly. ... On the morning of 10 June [1982, his companion] Juliane Lorenz found him dead in bed. ... A funeral of sorts took place but the coffin was empty as the police were still examining his body for drugs. *From "Intellectuals."*

their high-minded ideals, far from rendering them vulnerable to accusations of hypocrisy, keep sinful intellectuals from being even worse human beings than they would otherwise be. Evelyn Waugh, when asked how he could behave so badly after he had become a Roman Catholic, replied, "Think how much worse I would be if I were not Catholic." The rarity is not intellectuals who sin but those who don't, those few double geniuses who are good both at life and at art. A book about them would be worth reading.

Mr. Johnson might have kept in mind the fine book by his hero Edmund Wilson, "The Wound and the Bow," which argues for a necessary correlation between artistic gifts (the bow) and serious personality flaws (the wound). Or one might take another tack and argue in defense of sublimation: people who cannot love real people channel their blocked human feelings into the public forum and express them in ways that benefit far more people than their (neglected) immediate family. Tolstoy's well-earned guilt drove him to produce the great art that he left in payment of his human debts. Many a Nobel laureate, like the man who established that

honor (a manufacturer of ammunition), has needed his unusual talents to atone for his unusual sins. We should therefore "pardon them for writing well" (as W. H. Auden remarked of Paul Claudel, in his poem on the death of Yeats).

BUT even if we grant — and the case is certainly far from airtight — that the people Mr. Johnson has chosen to write about are nasty pieces of work, are their ideas nasty? Should men's words be judged in the light of their deeds? Mr. Johnson thinks they should. He agrees with Waugh's judgment on Connolly, asking: "How could someone like Connolly give advice to humanity on how to conduct its affairs?" Mr. Johnson focuses on "the moral and judgmental credentials of intellectuals to tell mankind how to conduct itself. How did they run their own lives? ... Were they just in their sexual and financial dealings? Did they tell, and write, the truth?" He concludes that, for intellectuals, "ideas came before people, Mankind with a capital 'M' before men and women, wives, sons or daughters."

Mr. Johnson thinks this should not be so. He argues that "massive works of the intellect do not spring from the abstract workings of the brain and the imagination; they are deeply rooted in the personality." This is certainly true; but it does not necessarily follow that, if the personality is flawed, the works of the intellect are flawed in direct correlation. We have learned from Freud that motives are overdetermined in far more complex ways than such an assumption implies. Moreover, the ultimate effect, for good or ill, of a work of the imagination that endures for centuries cannot be bounded by the brief life of the personality that created it. "Intellectuals" is symptomatic of the philistinism of our culture, which incites the press to pillory mature public figures for the sins of their high-spirited youth. But the relationship between the life lived and the art left behind is not a simple matter of politics.

D. H. Lawrence (who knew well whereof he spoke) was right to advise us: Trust the tale, not the teller. And many a sadder but wiser sage has rightly warned his disciples: Do as I say, not as I do. Sartre best stated the true and sad irony of the matter: "For many years I treated my pen as my sword: now I realize how helpless we are. No matter: I am writing, I shall continue to write books." The books of great thinkers are often salvaged from the debris of lives tragically flawed. And our time is better spent in reading their own great books than in reading trivializing books about their shabby lives.

DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.

BOOK REVIEWS

- (12) Two reviews by Russell detractors. We think you'd like to — and ought to — know what they are saying.

Bertrand Russell: A Political Life, by Alan Ryan. This is the eighth review of Ryan's book to appear in the newsletter. The reviewer, Kenneth Minogue, is identified as a "Professor of Political Science at the London School of Economics." As might be expected of a review in the *National Review* (Publisher, William Buckley), it aims to diminish Russell. (Thank you, TOM STANLEY.)

THE THIRD EARL v. THE THIRTY MILLION

Kenneth Minogue

Bertrand Russell: A Political Life, by Alan Ryan (Farrar, Straus, 240 pp., \$19.95)

ANYONE WHO doubts William Buckley's judgment that it would be better to be ruled by the first two hundred names in the Boston telephone directory than by the faculty of Harvard had better read Alan Ryan's *Bertrand Russell: A Political Life*. It shows what can happen when an analytical genius turns his hand to the human condition.

Russell's youthful energies were devoted to philosophical logic. The *Principia Mathematica* was written (in collaboration with A. N. Whitehead) in the first decade of the century. The remainder of a very long life—Russell died in 1970 at the age of 97—was taken up largely by moral, political, and social issues. His powerful intelligence penetrated the confusions of this foggy terrain to reveal the one right answer, and his

jaw set firm. Like Don Quixote, he charged. His career is reminiscent of nothing so much as the *New Yorker* cartoon in which a pair of personified windmills discern in the distance a thin knight on horseback, and one says to the other: "En garde! A nut." The grandmother who brought him up drilled him in a precept that Professor Ryan appropriately uses as a leitmotif of this remarkable career: "Thou shalt not follow a multitude to do evil." Whenever he detected an established opinion, Russell would go haring off in the opposite direction.

He acquired in early life the full repertoire of free-thinking beliefs then current, though he often gave them an unusual turn. His pacifism in the First World War led to a restful six months in prison, where he was able to finish two books. In 1936 he was to be found arguing that Britain ought to capitulate to Hitler, because any attempt to resist would put Western civilization back several centuries. It was one of the few opinions he later repudiated, though it was based on a principle that seemed at the time virtually self-evident: "A government which began by fighting for democracy would have to take such a firm grip on its population to fight the war successfully that it would end up as a military dictatorship."

Russell's reputation as an all-purpose pundit was at its height in the years after the Second World War. The advanced opinions that had so often shocked the bourgeoisie were becoming the commonplaces of a more liberated age. He was awarded the Order of Merit in 1949, and won the Nobel Prize in Literature in 1950. He was gaddily by appointment to Britain and the world. It looked as if the multitude had finally come to him, and the thought plunged him into deep gloom: "I began to feel slightly uneasy, fearing that this might be the onset of blind orthodoxy. I have always held

that one can be respectable without being wicked, but so blunted was my moral sense that I could not see in what way I had sinned."

He need not have worried. His genius for finding one-shot solutions to the problems of the world had not deserted him. Responding to the dangers of nuclear destruction, he argued that the American monopoly of the bomb should be used against the Russians to establish a world hegemony. When Russia acquired the bomb, he moved in the opposite direction. From 1954 onward, Russell's noble brow and silvery locks were the prow adorning the anti-nuclear movement. He became "ombudsman to the world"—though an ombudsman whose attention was largely focused upon the derelictions of the United States. Unlike most philosophers, he got angrier as he got older, and his last sad fate was to fall into the hands of an American radical called Ralph Schoenman, who began issuing, in the name of the nonagenarian Russell, strings of radical clichés sentimentalizing the Vietcong—a form of simplicity, as Ryan observes, entirely foreign to Russell, who, whatever his eccentricities, never lost a strain of realism.

Genius toppling into absurdity is a tragedy less uncommon than one might suppose. Part of the cause in this case was that the circumstances of Russell's later life led him to become an opinion machine. He worked the American lecture circuit, and his pen was never still. The articles were often trivial ("Who May Use Lipstick?" "On the Fierceness of Vegetarians," etc.), but like his many books, they were always lucid, witty, and provocative. No one makes a living in journalism merely by being sensible. But in Russell's case, deeper reasons may be discovered for this classic descent into political folly.

The secret of politics lies in the appropriate deployment of certain middle-level ideas such as tradition, prudence, authority, ritual, and so on. Such ideas mediate between the grand universals like rights and justice on the one hand, and brute facts on the other. The reductionist in Russell was not only largely blind to the place of this dimension of politics, but actually mistook his blindness for a special kind of insight. Once analysis had revealed the obvious truth about the current condition of the world, Russell was happy to share it with everyone. The dangerous point came when others failed to agree with him. Was it stupidity? Prejudice? The dead weight of uncritical orthodoxy? The temptation was to slide into melodrama: to find that a sinister interest lay behind such irrationality. This slide from abstraction to melodrama—the characteristic vice of the intellectual in politics—was especially tempting for Russell when he found himself at odds with one "multitude" or another. His democratic beliefs constantly collided with his elitist instincts.

The conflict is recurrent in his work. In education, the issue was simply between those who were guided by love and those who were guided by hate. The history of science was a struggle against the obscurantism of religion. Philosophy was a journey from mystification toward the light of modern empiricism. On the issue of peace with Nazi Germany, Russell displayed, as Ryan puts it, something of the "logic of the paranoiac." His intellectual fanaticism deepened with time. So did his anti-Americanism.

The United States appears to have represented for Russell all the anarchic irrationalism likely to bring down civilization. His basic idea about the problem of the modern world was how to reconcile (and we may quote the title of one of his books that Ryan most admires) *Freedom and Organization*. Freedom threatens irrationalism and war, while organization may lead to despotism. Yet both are necessary. Russell had already anticipated the dystopian nightmares of Huxley's *Brave New World*. America, from which he so often drew his sustenance, seems to have represented for him both these threats. In 1918 he had argued that one of the dangers of continuing the war would be the use of American

troops to keep the British working class intimidated. The only beneficiaries of such a victory would be J. P. Morgan and Standard Oil. Nor did he find American mores more attractive than American power. His intolerance cannot have been mitigated by the New York court judgment invalidating his appointment in 1940 to a professorship in philosophy at the College of the City of New York. The judge agreed with "an anxious Catholic mother convinced that a course in formal logic from the notorious lecher would entirely subvert her daughter's morals." Here is his account of how Americans pass the time: "It is held that drink and petting are the gateways to happiness, so people get drunk quickly and try not to notice how much their partners disgust them. After a sufficient amount of drink, men begin to weep and to lament how unworthy they are, morally, of the devotion of their mothers."

Should one take such remarks as the snobbish response of the third Earl Russell to the anxieties of a middle-class civilization? They seem rather to be a recycling of familiar European clichés about American life. And the

irony of his anti-Americanism is that Russell's political judgment exhibits just the kind of instability that is often taken to be typical of American foreign policy.

This instability is the oscillation between morality and a ruthless realism. Russell is reported by Ryan to have shocked Max Eastman by remarking that a Charles Darwin was worth thirty million ordinary men. Some of his solutions to the problems of the world would have cost the lives of millions. What mattered to Russell was civilization, understood as the concrete embodiment of reason; the happiness of ordinary mortals was of less concern. On the other hand, he was in his last years horrified by what he took to be the American policy of putting the world to rights by the use of napalm. Perhaps the real problem is that Russell was one of those people who are only capable of entertaining one idea at a time. Each idea was often brilliant, a vehicle of luminous prose resting upon an array of good abstract reasons. But no such idea ever collided with its like.

Ryan has written a judicious account of the public career of the philosopher as entertainer and crusader.

He manfully discards some of the encrustation of legend, as when he writes that "There never was a visiting vicar who exclaimed, 'Good God!' on meeting a naked child on the doorstep, only to be told, 'There is no God,' though it seems a pity that it never happened." His remarks on the fact that most of the views that made the elderly Herbert Marcuse a famous figure with the young of the Sixties had been anticipated by Russell raise a wider issue about the place of the intellectual in Anglo-Saxon countries. The fame of Marcuse, Habermas, Lukacs, Althusser, and their like results in large part from the fact that their Germanic obscurities provide the opportunity for an army of academic expositors to explain the simple propositions underlying the metaphysical jargon. Poor Russell had lots of ideas, but, doomed to the lucidities of the English tongue and the empirical tradition in philosophy, he remained a fish out of water to the end of his life. What a guru this man would have been had his native tongue only been French or German! □

OCTOBER 14, 1988 / NATIONAL REVIEW

- (13) *Bertrand Russell: A Political Life*, by Alan Ryan. Reviewed by Sidney Hook, who had love-hate feelings toward Russell. Russell was Hook's idol at one time; later Hook called Russell anti-Semitic (RSN12-24,62). This review appeared in *Insight* (10/1/88) (Publisher: Rev. Sun Moon). (Thank you, JACK COWLES and SHOHIG SHERRY TERZIAN)

Politics Tests Philosophy's Meaning

SUMMARY: When it comes to philosophers of logic and mathematics, the position of Bertrand Russell is secure. But his place is less secure in the area of political thought. In providing details from the philosopher's life, Alan Ryan, in "Bertrand Russell: A Political Life" (Farrar, Straus & Giroux, \$19.95, 240 pages), provides unique insights into Russell's philosophy as he applied it to political issues, particularly over his last 18 years, says philosopher Sidney Hook.

Bertrand Russell's achievements in the foundations of logic and mathematics have won for him a philosophical immortality that cannot be affected by the vagaries of his political positions, which range from the occasionally profound to the downright silly.

Had Russell died at the age of 80, rather than at 98, it is not likely that anyone would have composed an intellectual biography of his political life. But the mischievous political role he played during the last 18 years of his life, culminating in his apotheosis of one of the most ruthless communist dictatorships of the world, warrants this approach to his life, especially by someone who was initially sympathetic to Russell's stand during the Cuban missile crisis and who still admires his position, if not his extremism, on Vietnam. But Alan Ryan has not attempted a full-scale biography of the philosopher, who died in 1970, reasoning that Ronald Clark's "The Life of Bertrand Russell," despite some shortcomings, makes it unnecessary.

Normally the details of the lives of the great figures in the arts and sciences can be regarded as irrelevant to the nature and appreciation of their work. It is questionable whether, if we knew more about Wil-

liam Shakespeare's life, it would have a greater bearing on our understanding of "Hamlet" than knowing the details of Sir Isaac Newton's life would have on our understanding of his "Principia."

Pablo Picasso was a great painter but a contemptible human being who would not protest the Stalinist persecution of those who followed his style. Bertolt Brecht was a great dramatist who betrayed those who sacrificed their lives for him, became intensely disliked by those, such as W. H. Auden, who had befriended him, and remained lovable only to Eric Bentley.

George Bernard Shaw was a great dramatist whose paeans of praise for Mussolini, Hitler and Stalin, despite what he knew of their victims, sicken any decent human being. The quality of Richard Wagner's music has nothing to do with his views on the Jews, and the quality of Chilean poet Pablo Neruda's imagery is unaffected by his complicity in the attempt of David Alfaro Siqueiros, the Mexican thug and painter, to assassinate Leon Trotsky.

Why, then, should the details of Bertrand Russell's political thought and behavior be any more relevant to our understanding of his philosophy? Mainly because, although Russell occasionally professed to

an off-the-cuff attitude toward his writings on social, political and ethical questions — and these writings constitute a large bulk of his publications — he did regard himself as a philosopher in the classical tradition, as a lover of wisdom. He did set himself up as a teacher of mankind, an educator concerned with the nature of good and evil and the quest for a better society than the one in which we find ourselves. The way such a person lives, his behavior and advice to others, has a definite bearing on the real sense of his words.

To be sure, Russell had too much of a sense of humor to set himself up as a prophet. His deadly wit shredded the raiment of a long line of religious and secular prophets before his time and left them naked with their followers shivering in the cold light of his analysis. Nonetheless it is legitimate to test the consistency, adequacy — even the sincerity — of his ideas about man and society by his public and private behavior. Whatever the result, it would not affect his status as a logician and mathematician, but it bears on much else.

Were Russell's contributions assessed by his theoretical writings alone, his legacy would be unimpressive. There were radical and incompatible shifts on basic issues, from an initial Platonic realism to a Human skepticism. He ended up with the view that no moral ends are irrational except those that are literally impossible to execute. He himself was uncomfortable with the resultant view that there are no differences in rationality between the ends of Hitler and those of his Holocaust victims.

Ryan fails to offer a plausible explanation of what transformed Russell from a gratuitous advocate of a Pax Americana into a raving anti-American.

He dismissed without serious study John Dewey's "problematic approach" to moral issues, which stressed the fact that means and ends cannot ever be sharply differentiated, that multiple ends or values are involved in every genuine ethical problem, that all ends involved in a specific problem are "penultimate," not ultimate, and that the possibility of discovering a shared interest as a basis for a judgment, short of war, is an empirical question, not one of logic. It is no difficult task to show that Hitler's professed ends were irrational because of the consequences of the means used to achieve some of them. If Hitler were sane, he would himself have had to acknowledge it.

Russell's topical writings on political and social philosophy readily commanded a hearing because he was a Russell — the grandson of a famous liberal prime minister, an aristocrat to the manner born in a country that "dearly loves a lord." One of the many merits of Alan Ryan's "Bertrand Russell: A Political Life" is the insightful way in which Russell's aristocratic prejudices get reflected in his thought and behavior.

Even Russell's absolute fearlessness in defying public opinion seems as much to exhibit the aristocrat's attitude that he has a right to override ordinary middle-class conventions as it does matchless moral courage. The assumption sometimes shows itself in less than worthy ways. I recall him complaining bitterly that his wife, Lady Russell, was reduced to doing her own housework because the local women, "culturally inferior persons better fit for such things," could not be induced to work for the paltry wages he was offering. They could do better as riveters in the shipyards!

It also showed itself in the absence of any sense of gratitude for anything one did for him. Not that anyone has a right to gratitude, but it was noticeable that Russell took it for granted that those around him should want to do things for him that he would have regarded as sheer presumption if they were expected of him. The Americans he knew spoiled him, as they tend to do to distinguished Englishmen.

Russell's extraordinary cleverness made it easy for him to rationalize his failings in ordinary human relationships. When I once wondered whether his third wife resented his infidelities (she did) he remarked:

"Any woman worth loving would sooner have one-tenth of a first-rate man than all of a tenth-rate one" — a sentiment he had no difficulty in squaring with his firm conviction in the equality of women and the democratic way of life. To his credit, Ryan, no hero-worshiper, is quite aware of this.

"For most of his life Russell plainly felt a contempt for uneducated people which is entirely at odds with the sentimental profession of solidarity with humanity's sufferings which opens his 'Autobiography,'" Ryan writes.

Russell once said Charles Darwin was worth 30 million ordinary men. Why only 30? Darwin himself would never have said such a thing. Nor would Abraham Lincoln or John Dewey, for whom democracy was more than a purely political concept.

Russell's aristocratic bias had its virtues, too. He was no trimmer, always spoke out boldly and never evaded a difficult or embarrassing question. He would no more

tell a lie — regardless of the consequences to himself — than commit a logical fallacy.

But although disdaining lies in personal relationships (except, of course, in his love letters), he had absolutely no compunction in lying about whole nations. He actually delighted in his outrageous statements about entire nations, even after they were exposed as untruths. Thus he seriously charged that the United States in the late 1950s had become a police state every whit as oppressive as the Soviet Union. This is among the minor violations of the truth:

"Anybody who goes so far as to support equal rights for colored people, or to say a good word for the U.N. is liable to be paid a visit by officers of the F.B.I. and be threatened, if not by persecution, at least with blacklisting and consequent inability to earn a living."

Not even a public protest by Norman Thomas, the veteran socialist leader and a more consistent opponent of war than Russell himself, against Russell's outrageous lies had any effect on him. His fantasies about the United States and insults of its leaders intensified. When Washington published pictures of Soviet nuclear missiles in Cuba, he dismissed them as faked and called President Kennedy a liar. He denounced the American heads of state as "worse than Hitler," and Harold Macmillan, the modest British prime minister, as "more wicked than Hitler" for being a dupe of the Americans.

Ryan deplores the extremism of Russell's language and his glorification of the victims of alleged American oppression. Even when Ryan describes the distressing and semicomical spectacle of Russell's endorsement of revolutionary direct action against Britain's nuclear establishment, he insists that the philosopher was neither suffering from senility nor had he become a convert to the ideology of communism.

I concur with his judgment. Russell remained in the possession of his senses even when he began to talk about American "cops," in the slang provided to him by Ralph Schoenman, a fanatical American Trotskyist who, as Russell's amanuensis in the later years, rewrote his words without improving them.

Ryan fails, however, to offer a plausible explanation of what transformed Russell from a gratuitous advocate — certainly unsolicited by anyone in Washington — of a Pax Americana into a raving anti-American who sounded like an understudy for the future Ayatollah Ruhollah Khomeini. Ryan suggests that Russell's paranoia can be traced to his fear of atomic war.

"It was Russia's success in detonating its own bomb in 1949," Ryan writes, "which changed Russell's views on nuclear policy" and presumably on U.S. responsibility for the brinkmanship that might push the world into war.

In this belief Ryan is demonstrably mistaken. As late as Sept. 27, 1953, more than a month after the Soviet Union had exploded its own hydrogen bomb, Russell published an article in *The New York Times Sunday Magazine* in which he wrote:

"Terrible as a new world war would be, I still for my part should prefer it to a universal Communist empire."

Six years before that, after the Soviet Union had refused to accept the generous proposal of the United States, which then had a monopoly on the atom bomb, to internationalize all sources of atomic en-

ergy, Russell had urged that the bomb be used to force the Kremlin into compliance — even though the resulting war would have meant, by his own account, a half-billion deaths and an uninhabitable Europe.

Who was Dr. Strangelove, then? Russell's paranoiac anti-Americanism a decade later may have been the consequence of a deep, stinging self-mortification with himself for ever having made this barbarous proposal, exacerbated by a wounded vanity at his failure as a world statesman.

Regarding U.S. involvement in Vietnam, Ryan offers some mitigation for his subject's frenetic anti-Americanism on the grounds that Russell was, after all, opposing an immoral involvement in an immoral war. Here, unfortunately, Ryan seems to have become infected by Russell's hysteria.

It is very curious. Ryan, as did Russell himself, makes much of the fact that John Stuart Mill was Russell's godfather and that, with some modification, Russell proudly carried on the same secular, rational tradition of opposition to tyranny. Yet neither Russell nor his critical admirer, Ryan, seems aware that it was Mill who spelled out a justification of American intervention in Vietnam.

In his famous essay on "Non-Intervention," Mill wrote:

"To go to war for an idea, if the war is aggressive not defensive, is as criminal as to go to war for territory or revenue, for it is as little justifiable to force our ideas on other people, as to compel them to submit to our will in any other respect."

I am confident that both Russell and the young English philosopher Ryan would agree with this. Mill adds, however, that:

"The doctrine of non-intervention, to be a legitimate principle of morality, must be accepted by all governments. The despot must consent to be bound by it as well as the free states. Unless they do, the profession of it by free countries comes but to this miserable issue, that the wrong side may help the wrong side but the right may not help the right. Intervention to enforce non-intervention is always right, always moral, if not always prudent."

The people of South Vietnam desired their freedom from domination by the communist country on their northern border. The United States intervened in Vietnam as it did in Korea to establish the principle that changes in Asia were not to be precipitated by outside force.

Even from a consequentialist ethical standpoint, to which Russell sometimes subscribed, the same conclusion follows. Compare the fate of the tens of thousands of boat people, the equal or greater number of those slaughtered or herded into concentration camps — from which came messages only for poison "to end our suffering" — with the fate of the South Vietnamese people under Diem or Ky or Thieu. Which is the lesser evil?

More could be said for Russell's social and educational philosophy than for his practical political philosophy — but not much more. How thin, abstract and dated his social writings are becomes apparent when contrasted with John Dewey's "Democracy and Education" and "Human Nature and Conduct."

— Sidney Hook

ANNUAL MEETING (1989)

- (14A) June 23-25, New York: that's when and where the BRS held its 1989 Annual Meeting...at the Milford Plaza Hotel Friday evening, and at the Ethical Culture Society Saturday and Sunday.

Present at the Meeting:

Members: DENNIS DARLAND, BOB DAVIS, LINDA EGENDORF, LEE EISLER, VIC FERNANDEZ, DAVID GOLDMAN, CLARE HALLORAN, DON JACKANICZ, JOHN JACKANICZ, TED JACKANICZ, DAVID JOHNSON, MARVIN KOHL, KEN KORBIN, GLADYS LEITHAUSER, CARL MILLER, CHANDRAKALA PADIA, STEVE REINHARDT, MICHAEL ROCKLER, WALTER VANNINI, THOM WEIDLICH. 20 members.

Guest speaker/participants: Louis Greenspan (Manager, Bertrand Russell Editorial Project, McMaster University), Alan Ryan (Professor, Politics, Princeton University), David Sidorsky (Professor, Philosophy, Columbia University).

Other guests: Miriam Hecht, Dorothy Klein, Jonathan Lobl.

These BRS Officers were elected or re-elected, effective immediately: Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Treasurer, Dennis Darland; Secretary, Don Jackanicz.

Other actions taken during the Meeting:

- . Agreed to McMaster's request for a price increase for *Russell*.
- . Adopted a new fee schedule, effective 1990. See (17)
- . Waived dues for the following year for new members who enroll during the final quarter of the year.
- . Chose the site and date of the 1990 Annual Meeting: McMaster University, Hamilton, Ontario, June 22-24, 1990
- . Adopted a new grant program for candidates for Master's and Doctoral degrees. See (18)

For amplification, see the Minutes of the 1989 Annual Meeting and Minutes of the Board of Directors 1989 Annual Meeting (15). Please correct the Minutes of the Board: replace "senior citizen" with "limited income" in the 4th paragraph.

There was a Red Hackle Hour, enjoyable as always, and a superb Chinese dinner at Shun Lee's, both on Saturday.

Events of the weekend included these:

- . Announcement of the BRS Award to Paul Edwards.
- . Announcement of the BRS Book Award to Alan Ryan.
- . Announcement of the BRS Service Award to Harry Ruja, retiring BRS Chairman.
- . Talk by Alan Ryan, *Russell's Political Life*.
- . Panel: *Skepticism vs. the Benefits of Illusion*. Participants: David Goldman, Marvin Kohl, David Sidorsky.
- . Talk by Alan Ryan, *Russell's Pacifism*.
- . Talk by Marvin Kohl, *Understanding the Pragmatics of Pacifism*.
- . Tim Madigan's paper, read by Vic Fernandez, *The Rationality of Waging War*
- . Talk by Michael Rockler, *Skepticism and Education*.
- . Talk by Louis Greenspan on the present status of *The Russell Editorial Project*

The Awards

- (14B) The 1989 BRS Award to Paul Edwards. Remarks by Marvin Kohl:

Paul Edwards is Professor of Philosophy at Brooklyn College and The New School for Social Research. As a teacher, editor-in-chief of *The Encyclopedia of Philosophy*, and general editor of Macmillan's *Great Philosophers* series, he has contributed significantly to the growing renaissance in philosophy. He was an early pioneer in Russell scholarship, and kept the faith when it was unpopular and often costly to do so.

Edwards met Russell in 1950, and corresponded with him about *The Logic of Moral Discourse* and *Why I Am Not A Christian*. It was not easy to have *Why I Am Not A Christian* published. It took political skill, patience, and a great deal of courage. Russell was very much impressed by Edwards' courage, and said so in a 1956 letter. In 1957 Russell writes, "I am glad that Simon & Schuster have recovered their nerve about the book and that it will be published within a couple of months. Please, again, accept my thanks and congratulations for your share in the work."

I remember my first meeting with Paul Edwards. I was a student in his graduate class on logical positivism. He opened the course by claiming that scientific method was the only source of knowledge, and that metaphysical statements were meaningless, or at least, deeply problematic. With a Russellian gleam in his eye, he quickly added that "much of what parades for knowledge is metaphysics or some other form of intellectual rubbish." I know of few men who naturally and more passionately abhor the cognitive abuses which typify

classical as well as some of the more vulgar forms of theism, idealism, and existentialism than Paul Edwards. Like Russell, he advocates the practice of going by the evidence and forgoing belief, especially certain belief, where evidence is lacking. His books -- including *The Logic of Moral Discourse*, *Buber and Buberism*, *Heidegger and Death*, and his edition of Russell's *Why I Am Not A Christian* -- reflect this vigorous outlook, the outlook of agnostic skepticism.

It is perhaps fitting to close with the same story that Edwards closes his recent study of Voltaire with. Anatol France once visited Lourdes where he was shown a room full of crutches, canes, wheelchairs, eyeglasses, and other implements left behind by people who had been miraculously cured of their ailments. "What," asked France, "no wooden legs?" This was one of Bertrand Russell's favorite stories, and we may be sure that Paul Edwards greatly enjoys it because it so neatly captures the essence of his case.

It is a privilege to present this plaque to him on behalf of the Bertrand Russell Society.

The Award has this inscription:

The Bertrand Russell Society Award
to
Paul Edwards

in recognition of his distinguished contributions to Russell Scholarship and courageous devotion to agnostic skepticism.

The BRS 1989 Book Award to Alan Ryan's *Bertrand Russell: A Political Life*

Introduction by Marvin Kohl: Alan Ryan is Professor of Politics at Princeton University, and previously taught at New College, Oxford. His other books include *Property and Political Theory* and *The Philosophy of John Stuart Mill*.

His new book, *Bertrand Russell: A Political Life*, is a fascinating account of a fascinating life. According to Ryan, what gave Russell such an astonishing intellectual ascendancy was the combination of imagination in inventing and resolving problems, and an incisiveness in pressing home difficulties in his own analyses which verged on a talent for intellectual infanticide. Part of what makes Ryan's book so immensely attractive is that he has similar abilities, and successfully avoids the latter border. It is clear, I think, that he shares Russell's deep moral revulsion at any philosophy or study which could play fast and loose with truth. He therefore attempts to preserve the rich and at times mindbending complexity of Russell's thought.

Professor Ryan is critical yet gallantly fairminded. The quest is one of earnest understanding. He genuinely wants to understand Russell's political thought and, perhaps in a deeper way, to understand what constitutes an ideal liberal.

Unlike other recent writers, he does not confuse greatness with perfection. Like Russell, he understands that if it is a duty, it is not incumbent to be perfect or to make the world a perfect place; it is only incumbent to make ourselves better human beings, and the world a better place to live.

The Award, which it is our great pleasure to present, reads:

The Bertrand Russell Society
1989 Book Award to Alan Ryan

For his distinguished study of Bertrand Russell's political life, Ryan reminds us that Russell sought to achieve a balance among a utilitarianism which tends to view happiness as an ultimate composite good, a liberalism which typically viewed freedom as the greatest of all social goods, a theory of benevolence which held that love is the most important guiding emotion, and the belief that no moral ideal was worth the destruction of civilization. He also reminds us that there is a distinction between greatness and perfection, and that even one of the greatest of men was not perfect.

The BRS Service Award to Harry Ruja.

[Marvin Kohl's introductory remarks, not available at this time, will be in the next issue.]

The Award:

The Bertrand Russell Service Award
to
Harry Ruja

For a career in Russell studies and a decade for the BRS

Summaries of Talks

(14C) Thanks to their splendid cooperation, we are able to present summaries of talks written by the speakers themselves.

Here is how Alan Ryan summarizes his two talks:

Alan Ryan recalled the reasons which had impelled him to write his *Russell: A Political Life*. He had three main reasons for an interest in Russell's politics: first, he had been sustained in his doubts about the religious, ethical and political views of his school teachers back in the 1950s by reading *A History of Western Philosophy* and had joined the Campaign for Nuclear Disarmament almost as soon as it was founded; second, he had never quite believed Russell's insistence that his politics had nothing to do with his philosophy, and had always wanted to see what the connection was; and third, he wanted to see how Russell's ideas had stood up to the passage of time. As expected, Russell's politics and philosophy have at least a strong psychological and conceptual affinity — Russell's hatred of Hegelianism and of political collectivism, for instance, spring from the same individualist basis; many of his ideas have become old hat — which is a sign of their essential correctness; but some of Russell's impatience, carelessness, and ill-temper looks no better with the passage of time than it did in the first place. Still, one ends with one's admiration undented.

Russell's relationship to pacifism is complicated. He insisted he was not a pacifist, because the taking of human life *could* on occasion be justified, while a true pacifist was always and absolutely opposed to it. As a consequentialist, Russell was logically committed to the view that sufficiently good consequences justified violence, though it is disturbing that the application he had in mind was colonialism — the spread of Western civilisation was a good of such value that it justified the extermination of the Red Indian and the Australian aborigine. Still, the consequences to which Russell generally appealed yielded conclusions close to those of absolute pacifism: love, and the dispassionate search for truth are the glories of civilisation, and will certainly be casualties of modern warfare, with its stirring up of mass hatred, its propaganda and with the authoritarianism needed to keep men in the field. The interesting cases to contemplate are Russell's short-lived defeatism of the mid-1930s, when he wrote *Which Way to Peace?*, and his much longer lived defence of risking nuclear war to impose disarmament on Stalin's Russia. In the first case, he thought European civilisation would be destroyed by war — then decided it would be even more thoroughly destroyed by Hitler; in the second case, he thought a pre-emptive war sooner better than a worse one later. But nobody who holds the second view can plausibly be called a pacifist, and Russell was quite right to insist that he was not one.

Michael Rockler summarizes his talk this way:

Bertrand Russell had a lifelong interest in education. He wrote two books on teaching and learning, founded a school which survived for more than a generation, and addressed schooling in many of his writings.

Russell's views on education were influenced by his philosophical skepticism. A curriculum based on skepticism requires that teaching and learning be based on reason. This excludes the teaching of patriotism, and leads to schools that are secular institutions with no religious content. The program of studies would support free inquiry and the scientific temper; it would be fallibilistic and have an international focus.

Schooling in the twenty-first century would be improved if it adopted the ideas of this remarkable thinker who was born in the nineteenth century.

Marvin Kohl's summary goes like this:

An analysis of one aspect of Gandhian pacifism: specifically, the claim that nonviolence not only works against opponents who are sufficiently moral but that it also works, in some important sense, against resolute and brutal aggressors. Russell's argument — the argument that when one's opponent is resolute and brutal, the method of nonviolence has no success [Bertrand Russell, *The Future of Pacifism*, in *The American Scholar* 13:1 (Winter 1943-44)7-8 — is developed. Differences between the effectiveness of a particular method, ideal, and impossible dream are explored.

In conclusion I suggest that perhaps we can, and often must, "dream the impossible dream." Perhaps heroic achievement takes place only when the apparently impossible is expected. But even the most beautiful of all dreams, the messianic dream of perpetual peace, must be limited by practical reason if evidence overwhelmingly indicates that the penalty of being too ardent, in this case of insisting that nonviolent methods are always preferable, results in the nightmare of encouraging unnecessary death or rank injustice.

We regret to report that the delicate state of Paul Edwards health prevented his attending the Meeting and giving his talk on Voltaire. We would have loved seeing and hearing him, and offer our best wishes for his early return to good health.

This is Tim Madigan's summary:

Throughout his long life, Bertrand Russell was deeply concerned over how to eliminate the threat (and the reality) of warfare. He frequently advocated an all-powerful World Government which could enforce peaceful cooperation amongst nations. The question arises: Who will watch the watchman? Russell seemed attracted to the Platonic notion of a benign dictatorship of philosopher-kings, but recognized the unlikelihood of this ideal ever being achieved. While one can fault Russell for the sketchiness of his views on World Government, one can admire him for his constant reiteration that war must be abolished, and that rational human beings must prove their rationality by pooling their resources to end this form of madness.

MINUTES OF THE 1989 MEETING

(15)

MINUTES OF THE 1989 ANNUAL MEETING

The 1989 Annual Meeting of The Bertrand Russell Society, Inc. was held from June 23 to June 25 in New York City. The events of June 23 took place in the Palace Room of the Milford Plaza Hotel, 270 W. 45th St., New York, New York 10036. Except as noted, the events of June 24-25 took place in the Elliott Library (Room 507) of the Ethical Culture Society, 2 W. 64th St., New York, New York 10023.

Friday, June 23, 1989

The meeting was called to order at 7:42 p.m. by Vice President Michael J. Rockler in the absence of President Marvin Kohl. After welcoming remarks, Vice President Rockler introduced Robert K. Davis, who presented a Bertrand Russell Society Service Award to Board of Directors Chairman Harry Ruja in absentia. Leonard Ruge (sic) accepted the Award for his cousin. Vice President Rockler then presented the 1989 Bertrand Russell Society Award to Paul Edwards in absentia. A final award, the 1989 Bertrand Russell Society Book Award, was presented by Vice President Rockler to Alan Ryan for Bertrand Russell: A Political Life. After accepting the Award, Mr. Ryan addressed those gathered on "Russell's Political Life." The meeting was recessed at 9:31 p.m.

Saturday, June 24, 1989

At 9:03 a.m. the meeting was reconvened by President Kohl. A panel consisting of Marvin Kohl, David Goldman, and David Sidorak considered the topic "Skepticism vs. Benefits of Illusion." After this two hour discussion, President Kohl, in the absence of Chairman Ruja, presided over a combined Society Business Meeting and first session of the Annual Meeting of the Board of Directors. See the accompanying "Minutes of the Board of Directors Annual Meeting" for details. Following the combined Society Business Meeting and Board session, Louis Greenspan spoke on the recent work of the Russell Editorial Project at McMaster University. The meeting was recessed at 12:09 p.m.

The meeting was reconvened by President Kohl at 1:40 p.m. Alan Ryan presented a paper titled "Russell's Pacifism." Following a refreshment period, Marvin Kohl presented a paper titled "Understanding the Pragmatics of Pacifism." Group discussion ensued after each paper. The meeting was recessed at 5:00 p.m., at which time the Red Hackle Hour began in the hall adjoining the Elliott Library. Thereafter, interested persons proceeded to the Shun Lee restaurant, 43 W. 65th St., New York City for a group supper.

Sunday, June 25, 1989

The second session of the Annual Meeting of the Board of Directors was held preceding the reconvening of the Society meeting at 9:40 a.m. by President Kohl. Victor Fernandez read Tim Madigan's paper, "The Rationality of Waging War," after which a refreshment period occurred. Michael Rockler then presented his paper titled "Skepticism and Education." Group discussion ensued after each paper. The meeting was adjourned at 11:40 a.m.

MINUTES OF THE 1989 BOARD OF DIRECTORS ANNUAL MEETING

The 1989 Annual Meeting of The Bertrand Russell Society, Inc. Board of Directors was held in two sessions on June 24 and 25 in the Elliott Library (Room 507) of the Ethical Culture Society, 2 W. 64th St., New York, New York 10023. The first session was a combined Board Meeting and Society Business Meeting. The second session was exclusively a Board Meeting.

Saturday, June 24, 1989

In the absence of Board Chairman Harry Ruja, the Meeting was called to order at 11:03 a.m. by President Marvin Kohl. The following Board members were present: Jack Cowles, Dennis J. Darland, Robert K. Davis, Lee Eisler, David Goldman, Donald W. Jackanicz, John A. Jackanicz, David E. Johnson, Marvin Kohl, Gladys Leitner, Stephen J. Reinhardt, Michael J. Rockler, Warren Allen Smith.

Robert K. Davis moved and it was unanimously agreed that the reading of the

minutes not take place and that the minutes be made available for individual examination throughout the meeting. Mr. Davis then nominated the following persons for BRS officer positions: Marvin Kohl--Board Chairman, Donald W. Jackanicz--Board Secretary, Michael J. Rockler--President, John R. Lenz--Vice President, Lee Eisler--Vice President/Information, Donald W. Jackanicz--Society Secretary, Dennis J. Darland--Treasurer. The nominated persons were unanimously elected to these positions.

Excerpts were read from a letter from Kenneth Blackwell, stating that the subscription price of Russell: The Journal of the Bertrand Russell Archives would be subject to a \$1.00 price increase for 1989 and a \$2.00 price increase for 1990, as compared with the 1988 base year price. Lee Eisler moved that the BRS should authorize payment of \$1.00 more per BRS-related Russell subscription for 1989 and \$2.00 more per BRS-related Russell subscription for 1990, as compared with the 1988 base year price. This motion was unanimously accepted. Mr. Eisler then moved that effective in 1990 regular membership dues be increased to \$33.00 and couple membership dues be increased to \$38.00 with no change in the student or senior citizen membership dues. This motion was carried with a vote of Yes--11, No--1, Abstain--1.

Chandrakala Padia brought up the problem of membership affordability by some interested individuals in countries such as India. In discussion the possibility was explored of encouraging Indians to reproduce issues of Russell Society News for wider distribution within India. President Kohl suggested that Ms. Padia prepare a formal letter to incoming President Rockler on this subject.

There followed a further discussion of membership dues. Mr. Davis suggested that Russell Society News appeal to student and senior citizen members to pay regular membership dues if this can be afforded. Jack Cowles moved that membership dues be prorated for the first year of new memberships. This motion was withdrawn. Mr. Eisler moved that members joining in the last quarter of a year be charged no membership dues for the following year. This motion was unanimously accepted.

President Kohl then announced that the next BRS Annual Meeting would be held at McMaster University, Hamilton, Ontario, Canada from June 23 to June 25, 1990. The point was raised that these dates, which are for a Saturday, a Sunday, and a Monday, may be slightly incorrect since BRS Annual Meetings are traditionally held on a Friday through Sunday schedule. President Kohl continued that the 1990 Annual Meeting theme will be "Illusion vs. Reality: Education and Religion" and proposed that the program be comprised of paper presentations and workshops.

The meeting was recessed at 11:40 p.m.

Sunday, June 25, 1989

The meeting was reconvened by President Kohl at 8:05 a.m. The same Board members were present as those who had been in attendance the preceding day.

Discussion began on Hugh S. Moorhead's proposal to alter the doctoral grant program. Michael J. Rockler moved that as much as \$1,500.00 be spent per year on an academic grant program, which would provide for up to three master's degree grants of \$500.00 each or one master's degree grant of \$500.00 and one doctor's degree grant of \$1,000.00. This motion was unanimously accepted.

Following general consideration of Book Award procedures, discussion returned to the previous session's topic of encouraging BRS involvement for persons in countries in which paying regular membership dues can often be an economic hardship. Warren Allen Smith suggested that, in addition to India, Caribbean countries might be areas in which the formation of BRS chapters might be encouraged to provide another means by which less affluent individuals might participate in the BRS. It was informally agreed that Mr. Smith, Mr. Davis, and Mr. Eisler will work together on a further examination of this suggestion.

Attention was lastly turned to further consideration of the format and events of the 1990 BRS Annual Meeting. Among suggestions offered were the following: (1) Well in advance of the Meeting, announce a Russell book, chapter, or essay to be discussed in a seminar or workshop; (2) Announce in advance a social topic to be discussed in a seminar or workshop with reference to how it relates to Russell's writings; (3) Include a reading of a Russell literary work, such as a short story, or a dramatic reading of a Russell debate, perhaps as part of the banquet proceedings.

The meeting was adjourned at 9:24 a.m.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

(16) Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Treasurer, Dennis J. Darland; Secretary, Don Jackanicz; Vice President/Information, Lee Eisler.

DUES

- (17) New dues schedule, 1990. We have had to raise dues because Russell Archives needs more money for subscriptions to "Russell". The cost to the BRS is \$2 more in 1990, \$1 more in 1989. We were going to raise everybody's dues by \$2, to cover the increased cost. Instead, we decided not to raise students and limited income — we are leaving them at \$12.50 — and raising regular dues by \$3. Here, then, is the dues schedule, starting in 1990: Regular, \$33; couple, \$38; student and limited income, \$12.50.
-

GRANTS

- (18) New Grant Program increases the amount of Grants to \$1500 yearly. There can be 3 Master's Degree Grants of \$500 each, or 1 Master's Degree Grant of \$500 and 1 Doctor's Degree Grant of \$1000. HUGH MOORHEAD, Chairman of the Doctoral Grant Committee, is in charge of the Program, which was his idea. It may induce some graduate students — who hadn't yet made up their minds — to study Russell.
-

NEW MEMBERS

- (19) We welcome these new members:

BR HONORED

- (21) OM. In earlier issues, we described the nature of Britain's Order of Merit, which BR received in 1949 (RSN54-5 and RSN55-18.) Here is the document that confers the honor, as it appears in the *Catalog of the Exhibition of Documents from the Bertrand Russell Archives in the Mills Memorial Library* October 12-14, 1972

George R.

George the Sixth, by the Grace of God of Great Britain, Ireland and the British Dominions beyond the Seas, King, Defender of the Faith and Sovereign of the Order of Merit to Our Right, trusty and Right well-beloved Cousin Bertrand Arthur William Earl Russell Fellow of the Royal Society

Greeting

Whereas We have thought fit to nominate and appoint you to be a Member of Our Order of Merit We do by these Presents grant unto you the Dignity of Membership of Our said Order and We do hereby authorise you to have, hold and enjoy the said Dignity.

Given at Our Court at Saint James's under Our Sign Manual and the Seal of Our said Order this Ninth day of June 1949 in the Thirteenth year of Our Reign.

By The Sovereign's Command

Arthur Siskine

Secretary and Registrar

Grant of the Dignity of a Member
of the Order of Merit
to The Right Honourable Bertrand Arthur
William, Earl Russell, M.A., F.R.S.

BRS AUTHORS

(22A) *The Meaning of Life*. Hugh Moorhead's new book was described in RSN61-26, including how to buy it at a 20% saving directly from Hugh. Here are some book reviews:

From *The Washington Post* (2/11/89):

What's life all about?

The question is hard to answer, but the attempts are enlightening

By John Blades

When Hugh S. Moorhead wrote to Jessica Mitford, asking her please to explain the meaning of life, she responded promptly and politely but not very helpfully. "Sad to say," Mitford informed him, "I don't really know. . . . do you? If so, please advise. It would come in most handy to have the answer. . . ."

That was 10 years ago, and, sadder to say, Moorhead, chairman of the philosophy department at Northeastern Illinois University, reports he is no closer to having a definitive answer for either Mitford or himself. But he does maintain, somewhat more cheerfully, "I've gained a greater appreciation for the question."

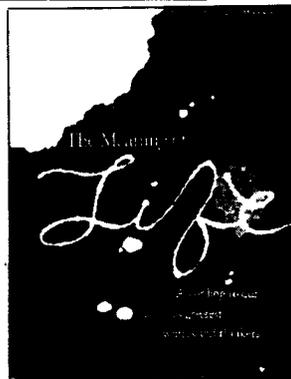

Besides Mitford, Moorhead directed the "question" to many of "our century's greatest writers and thinkers," among them T.S. Eliot, John Dos Passos, Katherine Anne Porter, Henry Miller, Walker Percy and Margaret Mead. He received more than 350 replies, a majority of which appear in Moorhead's newly published, and appositely titled, anthology, *"The Meaning of Life"* (Chicago Review Press, \$14.95).

The book is perhaps the inevitable byproduct of an obsessive philosophical quest that Moorhead

Hugh Moorhead and his book of answers to the Big Question.

Book world

began almost 40 years ago, while he was a graduate student at the University of Chicago. As Moorhead explains, he was surveying the books in his small but rapidly growing library when "it just occurred to me that I would like to know what the authors thought was the meaning or purpose of life."

Not content to simply ruminate and noodle over the matter, Moorhead picked out books by Arnold Toynbee, Albert Einstein, Albert Schweitzer, George Santayana and C.G. Jung. These he bundled

up and sent off to the authors, along with requests for their autographs and comments on life's meaning.

The first book came back from Toynbee, Moorhead says. He opened the package eagerly, only to find that Toynbee had quoted a line of scripture on the flyleaf of "A Study of History": "What is the true end of Man?—To glorify God and enjoy Him for ever." Moorhead was vaguely disappointed, explaining, "I guess I expected something more historical."

Moorhead was not exactly elated by the responses from the other authors, only one of whom, Jung, even so much as acknowledged that he had asked the question. And like Mitford many years later, Jung merely said, "I don't know. . . ."

Undeterred, Moorhead sent out hundreds of other books over the next decades, eliciting commentary that was earnest, whimsical, inspirational, thoughtful, lyrical, facetious, obtuse, evasive, skeptical and, in a case or two, indignant because he'd been so rude as to ask. The most intemperate of these, Moorhead says, came from Christopher Morley, the essayist and novelist ("Kitty Foyle").

"He wrote a page and a half, asking how I could presume to interrupt his writing and didn't I know he had arthritis in his right hand? I was more sensitive then, and it took me about two weeks to recover."

If he was wounded by Morley's note, Moorhead was pleased with the flyleaf philosophy from humorist Fred Allen, offered this morbid thought: "Life is a slow walk down a long hall that gets darker as you approach the end."

Perhaps the most noteworthy omission from Moorhead's book is his own answer to what he calls the "ultimate question." He suggested that the meaning of his life is to ask the question, "What is the meaning of life?"

(22B) From *Eleven Magazine* (July 1989), the magazine of the PBS station in Chicago:

The reviewer, John Callaway, offers a pageful of summer reading suggestions and concludes with this —————>

And, finally, is summer the time when you relax enough to wonder what it's all about? If so, the book for you is, yes, *The Meaning of Life*, a collection of thoughts about life's purposes collected by Chicagoan Hugh S. Moorhead over a thirty-five year period. Moorhead asked such thinkers as Aldous Huxley, Archibald MacLeish, Arthur Miller, e.e. cummings, Bertrand Russell and Paul Tillich to write a brief statement about the meaning of life on the flyleaf of books they had written. This little volume is a delight and a treasure.

(22C) From *The Chicago Tribune* (2/8/89, Section 5 3):

Even brightest haven't slightest

The Meaning of Life

By Hugh S. Moorhead
Chicago Review Press, 232 pages, \$14.95

Reviewed by Peter Gomer
A Tribune writer

Thirty-five years ago when he was a graduate student in philosophy at the University of Chicago, Hugh Moorhead sent his copy of "Modern Man In Search of a Soul" to the famous psychiatrist and author Carl Jung and asked him to autograph the book, and perhaps to respond to the following: "Please comment on the question, What is the meaning or purpose of life?"

"Really, I don't know what the meaning or purpose of life is," wrote Jung. "But it looks exactly as if something were meant by it."

Heartened to draw a reply, Moorhead embarked on a game that over the years has become an impressive collection of more than 700 books similarly inscribed by savants, writers and wits.

Moorhead, who serves as chairman of the philosophy department at Northeastern Illinois University, cheerfully admits to having no particular plan for his book-buying; merely things he wanted to read.

His collection includes such diverse talents as Isaac Asimov, Kingsley Amis, Michael Anania, Erma Bombeck, Erskine Caldwell, Stephen Jay Gould, Emily Kimbrough, Ira Levin, Archibald MacLeish—"who knows, with Buckminster Fuller, that life is a verb"—Margaret Mead, Eleanor Roosevelt, Wallace Stegner, Adlai E. Stevenson, Dr. Seuss, Arnold Toynbee and Robert Penn Warren.

None of Moorhead's correspondents, this grinch feels compelled to point out, could really tell him what the meaning of life is, although his buying their books probably was contributory. E.E. Cummings referred Moorhead to the line of a poem: "not for philosophy does this rose give a damn."

Others referred him to philosophers. "Nietzsche said: Life is an unprofitable episode that disturbs an otherwise blessed state of non-existence," replied comedian Fred Allen. "I say: 'Life is a slow walk down a long hall that gets darker as you approach the end.'" Not bad.

Nobelist Francis Crick—who, with James Watson, defined the molecular structure of life, if not its meaning—wrote that, "If there wasn't anything at all, we wouldn't be here."

Joseph Heller, not surprisingly, said he had no answers to the meaning of life, "and no longer want to search for any."

Paul Tillich helpfully ventured that "The 'Courage to Be' takes the anxiety of non-being into itself," if you've got the time. James Thurber admitted, sadly, that "I have never found the meaning of life."

Some writers quoted philosophers or other writers, like Samuel Butler, who said that "Life is like playing a difficult violin solo in public, and learning the instrument as you go along."

T.S. Eliot autographed his selected essays, but ordered his secretary to scold the cheeky correspondent: "Mr. Eliot says your question is one which one spends one's whole life in finding the answer for, and he is sorry he has not yet got to the point where he can sum it all up on a flyleaf."

Charming though this all is, one longs for deeper lessons from such celebrated minds, and so I turned with anticipation to the distinguished historian Barbara Tuchman, who died Monday. Surely a lifetime spent studying the epic sweep should have imparted something important. "The meaning of life," she suggested, "is what you make of it."

Hey, Harry Golden Sr. did better. "The purpose of life," he wrote Moorhead, "is to live as long as you can."

1990 BRS AWARD AND BRS BOOK AWARD

(23) Suggestions sought. Members are invited to submit candidates for the 1990 BRS Award and 1990 BRS Book Award.

The BRS Award goes to someone who meets one or more of the following requirements: (1) had worked closely with BR in an important way (like Joseph Rotblat); (2) has made an important contribution to Russell scholarship (like Paul Schilpp); (3) has acted in support of a cause or idea that BR championed (like Henry Kendall); (4) whose actions have exhibited qualities of character (such as moral courage) reminiscent of BR; or (5) has promoted awareness of BR or BR's work (like Steve Allen.)

The BRS Book Award goes to the author whose recent book throws new light on BR's life or work in an important way.

Let's have your suggestions, please! Send them c/o the newsletter, address on the bottom of Page 1.

VOLUNTEER WANTED

(24) Editor sought. We are looking for someone to become Editor of this newsletter. Our two current Co-Editors have demands on their time which do not permit them to take on Editorship at this time; they will continue as Co-Editors.

If you'd like to find out what's involved in being Editor, if you'd like to explore the possibility, write to the newsletter. Or phone Lee Eisler at 215-346-7687.

ABOUT OTHER ORGANIZATIONS

(25) SOS. Secular Organizations for Sobriety, the freethought alternative to the religiously oriented Alcoholics Anonymous, has issued another splendid newsletter (Spring 1989). A letter from SOS founder, Jim Christopher, mentions the remarkable fact that in less than 3 years, more than 85 groups have been established in the U.S., Canada, Australia and Europe. For their quarterly newsletters, send \$12 to SOS Subscriptions, c/o Free Inquiry, P.O. Box 5, Buffalo, NY 14215-0005.

CHURCH/STATE SEPARATION

- (27) Wins the case and loses her job. Last issue (RSN62-7) we reported (with some satisfaction) that Adam Jacobs and two colleagues -- Ann Sorrel and Charles Novins -- had won their case in the New Jersey Supreme Court. They had objected to the words "in the year of our Lord" on their certificate to practice law, as a violation of the doctrine of separation of church and state. This was reported in the *New Jersey Law Journal* (4/13/89).

Later issues of the *Journal* contained a great number of letters to the editor disagreeing with the Court's decision and faulting the 3 colleagues, some in a mocking or abusive way.

Ms. Sorrel had asked the *Law Journal* to identify her as a "recent law graduate". But the *Law Journal* -- which also didn't like the Court's decision, and had run an editorial denouncing it -- named the firm for which she worked.

As a result, the firm fired her.

The firm -- Hellring, Lindeman, Goldstein, Siegal, Stern and Greenberg -- told Ms. Sorrel, "the article has caused you to be the victim of hate and that reflects on this firm."

Ms. Sorrel now seeks support for a lawsuit "to challenge the illegal termination".

The law firm of Smith, Mullin, and Kiernan -- described by Ann Sorrel as "a law firm with a reputation for its advocacy of civil liberties and specializing in employment discrimination law" -- is willing to handle the case...but, as she says, a lawsuit costs money.

The BRS is not in position to give money to this worthwhile cause. But BRS members who wish to help should send contributions -- any amount is welcome -- to Nancy E. Smith, Smith, Mullin & Kiernan, 100 Executive Drive, Suite 340, West Orange, NJ 07052.

X Modern Logic @

An International Journal of the History of Mathematical Logic, Set Theory,
and Foundations of Mathematics

June 22, 1989

(28) Peirce----->

Lee Eisler
Bertrand Russell Society
R D 1, Box 409
Coopersburg, PA 18036

Dear Lee,

As BRS members will know, Russell wrote the "Foreword" for James K. Feibelman's book *An Introduction to Peirce's Philosophy* (New York, Harper, 1946). Therefore, BRS members who are interested may wish to attend the upcoming Peirce conference at Harvard later this year.

The Charles S. Peirce Sesquicentennial International Congress will be held at Harvard University (Cambridge, Massachusetts) from 6 to 9 September 1989. The program will cover all aspects of Peirce's thought - philosophy, science, religion, language (semantics), logic, and mathematics. Registration for the entire program is \$150; those wishing to attend for less than the entire program may register at \$50/day. For information about registration and housing, contact:

Charles S. Peirce Sesquicentennial Congress
Harvard Graduate School of Education
339 Gutman Library
Cambridge, MA 02138.

Sincerely yours,

Dr. Irving H. Anellis, Editor

**MCMASTER UNIVERSITY
THE BERTRAND RUSSELL SOCIETY**

**BERTRAND RUSSELL'S PHILOSOPHY
OF LIFE AND CRITIQUE
OF RELIGION TO 1914:
A PSYCHOPHILOSOPHICAL APPROACH**

Stefan Andersson

Mr. Andersson, a doctoral student at Lund University, Sweden, has done extensive research into Russell's philosophy of religion, in both its impersonal and personal aspects. He recently published in *Russell* a bibliography of all known research on the subject.

His presentation to the Russell Society will include the outline of the dissertation he will be submitting.

**THE NATURE OF RUSSELL'S
SOCIALISM**

Chandrakala Padia

Dr. Padia teaches political science at Banaras Hindu University, India. She is researching in the Bertrand Russell Archives on a three-month fellowship from the Indian Philosophy Council, her topic being the same as her paper for the Russell Society. In 1982 she completed a doctoral dissertation for Banaras on "The Concept of Liberty in Bertrand Russell" and has since published several articles on his political philosophy. Dr. Padia has also published on the nature of terrorism and other topics.

OBITUARIES

- (34) From *The Los Angeles Times* (6/29/89), with thanks to JOHN TOBIN and BOB DAVIS:

Alfred J. Ayer; Noted British Philosopher

From Staff and Wire Reports

LONDON—Alfred J. Ayer, the most celebrated and representative British philosopher of his generation, who believed that philosophical problems are rooted in a vague and muddled use of language, has died. He was 78.

Sir Alfred, regarded as the philosophical heir of the late Nobel laureate Bertrand Russell, died Tuesday night in University College Hospital here after a lengthy respiratory illness.

Although he became widely known outside academic circles for his anti-religious views, his lasting reputation will rest upon his philosophical publications.

His first book, "Language, Truth and Logic," published in 1936 when he was only 25, was considered the first exposition of logical positivism in the English language.

Ayer said that for any statement to mean anything it must be verifiable by experience or analysis, and if that is not possible, the statement is merely an expression of opinion.

This led him to atheism.

Ranging widely between the ideas of linguistic philosophers Russell and Ludwig Wittgenstein, the movement Ayer helped develop accepts that language must be strictly analyzed and redefined if there is to be any possibility of using it as an intelligible means of logical argument.

The philosophical school of linguistic analysts now dominates many British and American universities.

"Language, Truth and Logic," which jolted metaphysicians by its assault on "much of what has passed for philosophy," owed a debt to empiricists such as Russell and Rudolf Carnap.

"I maintain that there is nothing in the nature of philosophy to warrant the existence of conflicting philosophical 'schools,'" Ayer wrote. "And I attempt to substantiate this by providing a definitive solution of the problems which have been the chief sources of

controversy between philosophers in the past."

"The principles of logic and metaphysics are true simply because we never allow them to be anything else," he added.

Ayer wrote "The Foundations of Empirical Knowledge" in 1940 and "The Problem of Knowledge" in 1956, as well as volumes of philosophical essays and histories of modern philosophy in which he extended the traditions of British empiricism.

Throughout his career Ayer remained firmly in the empiricist tradition of Locke, Berkeley, Hume and Russell. The last two of these Ayer acknowledged as his masters, and his most recent works included two brief studies of Russell (1972) and of Hume (1980). Ayer concluded his autobiographical "A Part of My Life" (1977) with the modest remark that he would consider it "glory enough . . . to be thought even to have played Horatio to Russell's Hamlet."

Sir Alfred, who was knighted in 1970, was born Alfred Jules Ayer, the only child of a well-to-do French-Swiss father and a Dutch Jewish mother.

Educated at Eton and at Oxford University, he was a philosophy lecturer and research student at Oxford's Christ Church College from 1932 to 1944, and dean of Wadham College, Oxford, from 1945 to 1946. He served as an intelligence officer in France during World War II.

Ayer, known to colleagues and students as Freddie, was professor of mind and logic at University College, London, from 1946 to 1950, then professor of logic at the University of Oxford and fellow of New College, Oxford, until 1978.

He was a visiting professor at New York University from 1948 to 1949; at City College, New York, from 1961 to 1962, and at Baruch College in New York State beginning in 1987.

OBITUARIES

A. J. Ayer Dead in Britain at 78; Philosopher of Logical Positivism

By ERIC PACE
Special to *The New York Times*

Sir Alfred Jules Ayer, the British philosopher who did much to introduce the school of philosophy known as logical positivism to his English-speaking colleagues, died Tuesday at University College Hospital in London after long suffering from a respiratory ailment. He was 78 years old and lived in London.

Sir Alfred, who was known professionally as A. J. Ayer, was knighted in 1970 during his two decades as Wykeham Professor of Logic at Oxford University.

After doing brilliantly as an Oxford undergraduate, he was exposed to logical positivism in 1932 in Vienna, where he sat in on meetings of the Vienna School of philosophers, mathematicians and other scholars. He wrote the influential book "Language, Truth and Logic," published in 1936, which came to be regarded as the basic English-language work on logical positivism.

Experiential Test Required

The philosophy, which was also known as scientific empiricism, held that statements in principle that could not be verified by experience were meaningless, and sought to apply the exactness and the methods of the natural sciences and mathematics to the work of philosophers. It spurred a widespread emphasis on linguistic analysis in philosophy.

A 1957 article in *The Observer* of London said that the movement that Sir Alfred pioneered in Britain "ranges

widely between the ideas of Bertrand Russell and those of Wittgenstein," the German philosopher of language.

"Ayer is chiefly responsible for bringing the philosophy of logical positivism, then prominent on the Continent, to the English-speaking world," said Prof. Hilary Kornblith, interim chairman of the philosophy department at the University of Vermont, in commenting yesterday on Sir Alfred's death.

Professor Kornblith, a specialist in the theory of knowledge, a field in which Sir Alfred was prominent, said: "At the age of 26, he published 'Language, Truth and Logic,' which for many served as their introduction to this philosophical view. Ayer and logical positivism continued to have a significant effect on the English-speaking world for decades to come."

As Thelma Zeno Lavine, then Elton Professor of Philosophy at George Washington University, wrote in 1983: "The members of the Vienna Circle had little knowledge of traditional philosophy and less use for it; but they loathed and feared the German idealistic philosophies which appeared to be legitimating the rise of irrationalism in continental politics. Their goal was to replace the dangerous philosophic mystifications of Europe with a tough, empirical 'scientific mentality.'"

"Enfant Terrible"

In writing "Language, Truth and Logic," Professor Lavine observed,

Camera Press, 1977

Sir Alfred Jules Ayer

Mr. Ayer was "an enfant terrible who cleverly placed a lighted stick of dynamite under all traditional philosophies. The old philosophic landscape has never been fully rebuilt since then."

That book, she continued, "is generally conceded to be one of the most influential books of 20th-century philosophy."

Over the years, Sir Alfred wrote other important works, wielded influence as a teacher, and became known for his quickness in philosophical argument.

It was after a varied academic career at the University of London and elsewhere that he held the professorship at Oxford — and was also a Fellow of New College, Oxford — from 1959 to 1978. He was a Fellow of Wolfson College, Oxford, from 1978 to 1983.

Prescient, Not Voguish

Even after his views were no longer fashionable, advocates of more contemporary views would come to his lectures, debate with him and find themselves out-argued, his admirers like to recall.

Sir Alfred, an atheist, was so persuasive in argument, the story goes, that when the English writer Somerset Maugham lay dying, he got Sir Alfred to visit him and reassure him that there was no life after death.

In 1968, Sir Alfred's heart stopped for four minutes at a hospital in London, and he wrote later that he had seen a red light and become "aware that this light was responsible for the government of the universe."

The experience left his atheism unquenched, he wrote, but "slightly weakened my conviction that my genuine death — which is due fairly soon — will be the end of me, though I continue to hope it will be."

Education and War Service

Alfred Jules Ayer was born on Oct. 29, 1910, in London, the son of Jules Louis Cyprien Ayer and the former Reine Christen. He studied at Eton and at Christ Church, an Oxford college, earning a bachelor's degree in 1932 and a master's in 1936.

In World War II, he served in the British Army, rising to captain.

Over the years he was variously a visiting professor at New York University, the City College of New York and at Bard College in Annandale-on-Hudson, N.Y. He also lectured at Harvard and Columbia and was a Montgomery Fellow at Dartmouth.

Sir Alfred's first and second marriages ended in divorce; his third wife died, and earlier this year he remarried his second wife, Alberta Constance Chapman, a writer known as Dee Wells. He had a son and a daughter from his first marriage and a son from his second.

Sir Alfred was an Honorary Member of The Bertrand Russell Society.

(36) From *The Washington Post* (7/15/89, p. B6):

Author, Philosopher Sidney Hook, 86, Dies

Associated Press

STANFORD, Calif.—Sidney Hook, 86, a philosopher, author, educator and leading figure in American intellectual circles since the late 1920s, died of congestive heart failure July 12 at Stanford University Hospital.

Since 1973, Dr. Hook had been a senior research fellow at the Hoover Institution on War, Revolution and Peace on the Stanford University campus. He took the position after retiring from New York University, where he had taught since 1927, and had been chairman of the philosophy department until 1968.

Dr. Hook became a leading proponent of philosopher John Dewey's ideas, known as pragmatism, a peculiarly American philosophy that

an idea must be judged by how it works rather than by how it looks. Under the philosophy, an idea may be true under certain circumstances but false under others.

He first became known as a secular humanist. His first book, "The Metaphysics of Pragmatism," published in 1927, was an exposition of Dewey's thought.

He became an international figure in 1933 upon publication of "Towards the Understanding of Karl Marx," which was viewed as a sympathetic interpretation of ideas of the philosophical founder of Marxist communism.

He tried to integrate Marxism with the pragmatist philosophy expounded by C.S. Peirce, William

SIDNEY HOOK

James and Dewey. His second book, "From Hegel to Marx: Studies in the Intellectual Development of Karl Marx," published in 1936, is a scholastic classic, considered one of the best critical expositions of Marxism ever by an American philosopher.

Dr. Hook never joined the Communist Party and rejected the idea that the attainment of socialism or a planned economy could or should be accomplished by sacrificing democratic ideals and institutions.

His best-known work, "The Hero in History," published in 1943, is still widely used in college classrooms.

In 1951, Dr. Hook founded the American Committee for Cultural Freedom. He was an early critic of Sen. Joseph R. McCarthy, a controversial Republican who charged that communists had infiltrated the U.S. government.

Dr. Hook expounded his views on issues of that era in two books, one titled, "Heresy, Yes—Conspiracy, No!"

He was born in New York City on Dec. 20, 1902. He graduated from City College of New York in 1923, earned a master's degree at Columbia University in 1926 and received a doctorate from Columbia in 1927.

He is survived by his wife, Ann, two sons and a daughter.

(37) From *The New York Times* (7/14/89, p. D15):

Sidney Hook, Political Philosopher, Is Dead at 86

By RICHARD BERNSTEIN

Sidney Hook, a major American philosopher who wrote many books on Marxism, public policy and education, died of congestive heart failure Wednesday at Stanford University Hospital in Stanford, Calif. He was 86 years old and lived on the university campus.

Professor Hook had been a senior research fellow at the Hoover Institution on War, Revolution and Peace at Stanford since 1973. Through most of his academic career he was associated with New York University, where he began teaching in 1927 and was chairman of the philosophy department for 35 years until he retired in 1969.

Dr. Hook was for six decades a vigorous participant in many of the principal intellectual and political debates of this century. He was a thinker and a teacher of philosophy who did not hesitate to enter into the fray of political debate and conflict.

He was best known for his consistent anti-Communist stance and his vigorous defense of political and academic freedom. His critique of Stalinism in the 1930's was one of the first against the Soviet Union by a major figure in leftist intellectual circles.

Advocate of Strong Defense

Dr. Hook was a guiding spirit in organizations of intellectuals whose purpose was to combat what they saw as the threat of totalitarianism. He helped to organize the Congress for Cultural Freedom in 1950 to counter what the group considered to be Communist-led intellectual fronts.

An advocate of a strong military, he debated Albert Einstein and Bertrand Russell on the question of disarmament. While fervently anti-Communist, he opposed Senator Joseph R. McCarthy's activities in the 1950's, terming the Senator "a heavy liability to the friends of American democracy and international freedom."

Through dozens of books and hundreds of articles, and in the course on the philosophy of democracy that he taught at New York University for decades, Dr. Hook had a profound influence on the thinking of several generations of American teachers, philosophers and political figures.

In his autobiography, "Out of Step: An Unquiet Life in the 20th Century," published in 1987 by Harper and Row, he provided an illuminating account of his friends and foes as well as his many philosophical battles.

Appraising the book, John Gross wrote in *The New York Times* that "even those who accept his general view of the world are likely to quarrel with some of his specific conclusions." But Mr. Gross concluded, "It is a fearless book, which gets its priorities

right, and one that nobody interested in the ideological battlegrounds of the 20th century should disregard."

In later years, Professor Hook's passionate anti-Communism led many political commentators to label him a neoconservative. He angrily rejected the label, variously terming himself "a social democrat" and "a Cold War liberal."

Dr. Hook was a rigorous thinker and writer whose characteristic style was to state a point of view and then support it with an array of tightly woven arguments. His major books were "Toward the Understanding of Karl Marx" (1933), "From Hegel to Marx" (1936), "The Hero in History" (1943) and "Pragmatism and the Tragic Sense of Life" (1974).

An Outspoken Secularist

Dr. Hook's philosophy was based on the three pillars of pragmatism, secularism and rationalism. A student of the pragmatist philosopher John Dewey at Columbia University, Dr. Hook never tired of saying that there were no absolutes. He believed that all ideas had to be tested against the reality of experience.

He was an outspoken secularist who maintained that people must find

Intelligence 'in behalf of human freedom.'

meaning in a world without a divine presence to impose meaning on it. And he was a supreme rationalist; he believed fervently that proper behavior and correct opinions could emerge only by an examination of problems guided entirely by reason, not by emotion or religious beliefs.

He called himself a secular humanist, defining the term in a 1982 interview as "the view that morals are autonomous of religious belief, that they are relevant to truths about nature and human nature, truths that rest on scientific evidence."

'The Greatest Enemy'

For Dr. Hook, even freedom had to be subjected to reason and experience, and not taken as an absolute. He maintained that for one person to insist on his absolute freedom meant depriving someone else of some of his freedom.

"It is the spirit of absolutism that is the greatest enemy of a liberal civiliza-

tion," Dr. Hook wrote in 1964. "It can be curbed only by the pragmatic temper that tests all principles by their consequences for the quality of human experience."

Dr. Hook was born in Brooklyn on Dec. 20, 1902, and was reared in a slum in the Williamsburg section. After graduating in 1919 from Boys High School in Brooklyn, he went to City College, graduating in 1923, and then to Columbia University, where he became a disciple of Dewey and earned a master's degree in 1926 and a Ph.D. a year later.

Like many other young intellectuals of his generation, Dr. Hook was attracted by the Bolshevik Revolution in the Soviet Union and by Marxist writings. These interests reached a culmination with his publication in 1933 of "Toward the Understanding of Karl Marx: A Revolutionary Interpretation."

Dr. Hook shocked orthodox Marxists, with whom he had earlier been close, by contending in the book that there was a crucial difference between what he called "Marx and Marxism." He maintained that there was a moral and intellectual gulf between what he saw as the humanistic ideals of Marx himself and the Communist orthodoxy that had developed in the Soviet Union.

Retired in 1969

"Orthodoxy," Dr. Hook wrote, "is not only fatal to honest thinking; it invited the abandonment of the revolutionary standpoint which was central to Marx's life and thought."

Dr. Hook joined the philosophy department at New York University as an instructor in 1927, became chairman seven years later and remained in that post until his retirement in 1969. While teaching at the university, Dr. Hook wrote hundreds of books and articles. He became an academic philosopher fully engaged in the political debates of his era.

Professor Hook's most passionate interest was what he viewed as the evils of totalitarianism. After supporting the Communist Party candidate for President in the election of 1932, he broke entirely with the party and with Stalin by the mid-1930's.

In 1950, Dr. Hook joined forces with the American writer James T. Farrell and prominent European intellectuals like Raymond Aron in France to create the Congress for Cultural Freedom with the goal of countering what its founders saw as cultural groups financed and controlled by Communist Parties.

It was later disclosed that the group had been partly financed by the Central Intelligence Agency, though there

Dr. Sidney Hook

was never any suggestion that its policies were not entirely independent.

In the 1960's, Dr. Hook was criticized by the New Left for his positions on the Vietnam War, racial quotas and academic freedom.

He maintained during the American war effort in Indochina that, while a withdrawal of American forces was desirable, it should come only in conjunction with a similar action by the North Vietnamese.

Professor Hook criticized quotas in university admissions designed to redress racial imbalances, calling them perversions of the concept of equality of opportunity. And, while he debated publicly with Bertrand Russell, Dr. Hook criticized American universities for refusing to allow Russell to teach in this country because of his political views.

He received many honorary degrees and other awards, including the Presidential Medal of Freedom in 1985.

Professor Hook, in concluding his entry in the 1988-89 "Who's Who in America," offered this l'envoi:

"Survival is not the be-all and end-all of a life worthy of man. Those who say that life is worth living at any cost have already written for themselves an epitaph of infamy, for there is no cause and no person they will not betray to stay alive. Man's vocation should be the use of the arts of intelligence in behalf of human freedom."

Surviving are his wife, the former Ann Zinkin; a son by a previous marriage, John Bertrand Hook of San Francisco; a second son, Ernest Benjamin Hook, of Berkeley, Calif.; a daughter, Susan Ann Goulian of La Jolla, Calif., and three grandchildren.

(38) From *The Los Angeles Times* (7/14/89), with thanks to BOB DAVIS:

Proponent of Pragmatism

Sidney Hook; Noted U.S. Philosopher

From Staff and Wire Reports

Sidney Hook, considered by many to be America's leading philosopher of pragmatism and at the least one of the most influential thinkers of the 20th Century, has died of congestive heart failure at the age of 86.

The philosopher, author and educator, who had been a controversial figure in American intellectual circles since the late 1920s, died at Stanford University Hospital on Wednesday.

Since 1973, he had been a senior research fellow at the Hoover Institution on War, Revolution and

Peace at Stanford. He took the position after his retirement from New York University where he had taught since 1927 and served as chairman of the philosophy department until 1968.

Hook almost always challenged accepted ideas and refused to substitute passion for logic in arguing a

case.

Key Belief

He wrote in his autobiography that his key belief was that "the central problem of our time is the defense and enrichment of a free and open society against totalitarianism."

In a 1987 review of his autobiography, "Out Of Step: An Unquiet Life in the 20th Century," Time magazine wrote: "To '30s conservatives, he seemed a Marxist apologist; to '60s New Leftists, he was a cold warrior . . . [but] the only group to whom Hook paid strict allegiance was the party of one."

Hook became a leading proponent of philosopher John Dewey's ideals, known as pragmatism, a peculiarly American philosophy that an idea must be judged by how it works rather than by how it looks. Under the philosophy, an idea may be true under certain circumstances but false under others.

Hook first became known as a secular humanist, and his first

book, "The Metaphysics of Pragmatism," published in 1927, was an exposition of Dewey's thought.

Hook became an international figure in 1933 upon publication of "Towards the Understanding of Karl Marx," which was viewed as a sympathetic interpretation of ideas of the philosophical founder of Marxist-Communism.

Hook tried to integrate Marxism with the pragmatist philosophy expounded by William James and Dewey. His book, "From Hegel to Marx: Studies in the Intellectual Development of Karl Marx," published in 1936, is a scholastic classic, considered one of the best critical expositions of Marxism ever made by an American philosopher. But Hook never joined the Com-

munist Party and rejected the idea that the attainment of socialism or a planned economy could or should be accomplished by sacrificing democratic ideals and institutions. He was one of the first outspoken opponents of Soviet communism under Joseph Stalin.

He founded the Committee for Cultural Freedom in 1939, an organization of more than 200 intellectuals opposed to Stalinist repression. The same year, he became a full professor in the philosophy department of NYU, despite demands for his ouster by some of the nation's press.

Came Under Fire

The Hearst newspaper organization particularly regarded him as a

communist although the Communist Party itself called him a renegade and even a "fascist."

Hook's best-known work, "The Hero in History," published in 1943, is still widely used in college classrooms.

Hook also founded in 1951 the American Committee for Cultural Freedom and was an early critic of Sen. Joseph R. McCarthy (R-Wis.)

Hook expounded his views on issues of that era in two books, one titled, "Heresy Yes—Conspiracy, No!"

Despite the furor his Marxist views had generated over the years, in 1985 he was awarded the Presidential Medal of Freedom, one of this country's highest honors.

THE DIRECTORS VOTE

(40) The ballot at the end of this newsletter is in 2 parts. Part II is for Directors only. Directors will vote on 2 proposals:

Proposal #1: to create an Executive Committee, to consist of the Chairman, the President, and the Vice President, with the authority to act and make decisions, subject to later approval by the Board.

An Executive Committee will permit important decisions to be made quickly — in cases where speed seems desirable.

Proposal #2 is about the Benares [Chapter] Plan. The Plan is described in (3). It would be good to have a decision quickly — on whether or not to approve the Plan; the Executive Committee, if it existed, could make that decision quickly.

If there were no ballot in this August issue, then — without an Executive Committee — we would have to canvass all Directors, now dispersed around the continent, for their approval (or disapproval) of the Benares Plan. That would be time-consuming, as well as inconvenient and an expense. And that's why it would be useful to have an Executive Committee, which could act quickly.

We ask you to vote on 2 things, Proposal #1, the Executive Committee, and Proposal #2, the Benares Plan.

Directors, please turn to the ballot, and vote on these Proposals now.

ELECTION OF DIRECTORS

(41) Here is the list of Candidates. As you will notice, we have 10 Candidates for 10 openings. That means that all 10 Candidates will be elected. Then why go through the motions of having an election?

We should have had -- and expected to have -- more than 10 Candidates. We tried to get more of them, but evidently didn't try hard enough. The fault is ours.

Next year, things will be different! We have already lined up 20 potential Candidates for next year. We think many of them will accept an invitation to be a Candidate.

But please vote anyway. Your vote is a gesture of support, even though in this particular instance, we can't say we have earned it.

We are to elect 10 Directors, to bring the total to 24. Use the ballot at the end of this newsletter. Here are the candidates, in reverse alphabetical order:

THOM WEIDLICH, 26, 5-year member, currently pursuing a Ph.D. in American History at Columbia University. Now writing his Master's Essay on the 1940 City College case in which BR lost his post at CCNY as a result of conservative religious/political pressure. It will also be the subject of his dissertation.

RAMON SUZARA (San Francisco, CA). Dropped out of highschool, expelled from De La Salle College (Philippines). "Then I hit my stride at the greatest university: a collection of books, especially Russell's, which made me realize the depths of my shameful ignorance. My mind was twisted with religious indoctrination; Russell untangled the mess for me. In '64 I helped set up the BR Peace Foundation, Philippine branch."

WARREN ALLEN SMITH (Stamford, CT), member since 1977, BRS Director 1978-1986, former BRS Vice-President. Member American Humanist Association, British Humanist Association, Mensa. Former book review editor, "The Humanist" (USA). High school teacher (retired). Recording studio owner. Winner of the Leavey Award from the Freedom Foundation of Valley Forge (RSN50-23).

PAUL ARTHUR SCHILPP (Carbondale, IL). Distinguished Research Professor of Philosophy (Emeritus) at Southern Illinois University, BRS Director 1983-86, BRS Honorary Member, recipient of the first BRS Award (1980). creator and editor of "The Library of Living Philosophers". And much more.

CHERIE RUPPE (Bellevue, WA), member since 1980, BRS Director 1981-86, BRS Secretary 1982-3, Member Pugwash, Federation of American Scientists, Union of Concerned Scientists, Fellow of Endangered Wildlife Trust of S. Africa, Member, Whale Protection Fund, Northwest Ballet Ass'n. Orangutang hugger (see picture RSN49-21).

FRANK PAGE (Fairview Park, OH). BRS Director 1984-86, member since 1977. CPA. A dedicated Russellite since the 1920s. "Since Russell has been a great influence on my intellectual and social outlook, I would consider it a duty as well as a privilege, if re-elected, to serve on the BRS Board."

STEVE MARAGIDES (Granite City, IL), member since 1976, BRS Director. Attended 9 of the last 10 annual meetings. Attorney. Moved the BRS from Georgia to Illinois, donating his legal services. Degrees: Journalism (Northwestern) and Law (University of Illinois).

DAVID GOLDMAN, M.D. (New York, NY), member since 1979, BRS Director 1984-86. Clinical Assistant Professor of Psychiatry at NYU Medical School, Lecturer in Psychiatry at Columbia University Psychoanalytic Center. Notes false psychologizing in current nuclear strategies...and, influenced by BR, served on Executive Board of NY Chapter of Physicians for Social Responsibility.

WILLIAM K. FIELDING (Ware, MA). Chmn, Science Committee; CoChmn, Membership Committee. Retired from wage-slavery, liberated for study and writing. Lifelong autodidact. From draftsman, land surveyor, and electronic technician to proprietorship (electronic). Atheist, humanist, Mensan. Studying math, logic, philosophy, languages; and enjoys writing music and verse.

JACK COWLES (New York, NY), member since 1976, BRS Director 1980-82 and 1984-86. Retired naval officer; served in the Pentagon, with co-finger on the button. Anti-war informant to Senator Fulbright, after Tonkin Gulf incident, which caused Navy to blacklist him. Took BR's lecture course at UCLA, 1940.

Why not use the ballot (on the last page) right now?

Crusader of the Mind

THE LIFE OF BERTRAND RUSSELL. By Ronald W. Clark. Knopf, 786 pp. \$17.50

By GODFREY HODGSON

WHAT A LIFE! What a task and what an opportunity for a biographer!

Bertrand Russell lived to be 87. When he died, more than 60 of his books were still in print. His output of articles, ranging from master exercises in mathematical logic for learned journals to "Should Socialists Smoke Good Cigars?" for the Hearst papers, poured from his pen with the steady profusion of a man whose mind was so efficient that he rarely needed to change a word of what he had written. To one of his mistresses, Lady Ottoline Morrell, he wrote more than 1700 letters.

A short list of his human valencies suggests the protean scope of the man. His life reached back into the mainstream of English history, and spread into the farthest.

He was a descendant of the promontory of the Glorious Revolution. When the Whigs of 18th-century England toasted the good old cause, they drank to the faith for which "Sidney died in the field, and Russell on the scaffold." His grandfather was one of Victoria's subprime ministers. He was the brother-in-law of Bernard Berenson, the pupil of G.E. Moore, the collaborator of A.N. Whitehead, the tutor of Ludwig Wittgenstein. He argued with Trotsky, and lived to correspond with Khrushchev. He was a friend of John Dewey, Lynton Strachey, G.M. Trevelyan, Sidney and Beatrice Webb, Aldous Huxley, John Maynard Keynes.

In his work, he was the great all-rounder. He wrote books on *Marriage and Morals* and on *War and Social Democracy*. In his fifties, he set himself to reform the theory and practice of education, and in his eighties and nineties, to save the world from the danger of nuclear war.

As a technical philosopher, he tried his hand at logic, at the theory of knowledge, and on the problem of matter: his greatest gift was for translating the technicalities of academic philosophy into books and articles that could be read with enlightenment by the general reader. He was one of the half-dozen greatest mathematicians of his time, yet his Nobel Prize was for literature.

If the word "philosophical" carries con-

Illustrated by Richard Wilson for *The Washington Post*

notations of stoicism, detachment and self-abnegation, Russell was a most unphilosophical philosopher. It would be truer to say that his life demonstrates the shallowness of the popular assumption that logic and passion are antithetical.

He was a man of passions. For mathematics; for landscapes—from the ordered Cambridge of his youth to the wild North Wales of his old age; for children; for women. He was married four times, but two women he never married, Lady Ottoline Morrell and Lady Constance Malletson.

Yet, apart from these six major attachments, up into his seventies he was forever falling in love. Through he once wrote in *Ulysses* that truth was the divinity

he had mainly served, the sad fact seems to be that in his dealings with women he was almost compulsively deceitful. He was capable of writing to a mistress to describe his life in the greatest detail, passionately insisting how much he missed her—and unctuously omitting to mention that another woman was with him as he wrote.

His greatest passion, after all, was perhaps for work. There were times when even his supremely fluent intellect was blocked for months, either by the sheer difficulty of the task, as happened when he was writing *Principles of Mathematics*, or—as happened when Wittgenstein had solved needs of thought about his theory of knowledge—by the fact that an elaborate structure had been erected on faulty foundations; yet work was

almost always easy for him, and almost always a pleasure.

It was also a consolation. Nothing could be more mistaken, now that—thanks to Ronald Clark's labors—we have access to Russell's private correspondence and, for part of his life, to his journal, than to go on thinking of him as he has so often been pictured, as a sort of 20th-century Voltaire, a cheerfully unromantic, rationalist wit who had somehow survived from the century of lights.

There was a dark background to his intellectual brightness. Much of his long life was lived, and much of his vast output of work accomplished, in despair. More than once, he said himself, only the feeling that his work was worth doing deterred him from suicide.

There was darkness in another sense, too. Generosity of character, lucidity of intellect, courage about everything he did were marred by pride, conceit, snobbery, cruelty in personal relations, and a certain persistent habit of untruthfulness in matters both personal and political.

Men and women never recover, they say, from an absence of love in early childhood. Russell's childhood, in the puritanical splendors of his grandmother's home after the death of both his parents, did lack love.

Ronald Clark is inclined to attribute to the chilling legacy of that childhood that lasting inability to reconcile his intellect and his emotions which made Russell's life, for all its triumphs, a tragedy. Certainly the tragic recurrence of the irrational in his story reminds one of Horace's line about how you can drive out nature with a pitchfork, but she keeps coming back.

Just on 40, he gave up serious philosophy, essentially for life, because he sensed—not because it was proved to him—that Wittgenstein would destroy his work and perhaps his reputation. Just on 56, it seemed that his sexual life was about to come safely into harbor, and that he would marry "Colette" Malletson. Instead he abruptly left for China with Dora Black, who became his second wife. With her he embarked on a generous but absurd venture in school teaching.

It ruined him financially and condemned him to years of the most desperate hack journalism. Through sheer courage, and talent, and work, he survived. Yet it is impossible not to feel that his true vocation was as a mathematician and philosopher, rather than as the pamphleteer and publicist he became.

Ronald Clark has dealt honorably and courageously with this gigantic task. His greatest weakness is that he does not sufficiently explain the exact nature of Russell's achievement as a mathematician and logician; he should have been willing to risk boring us more in order to make sure we understood the most important achievements of his subject. The surface of his prose is marred by a tin ear for false notes, and by occasionally clumsy syntax.

In his modest, conscientious way, he has enabled us to feel the force of the thing that drove this passionate logician, the thing which, in a love letter to Colette he called "not love or hate or pity or scorn, but the very breath of life, fierce and coming from far away, bringing into human life the fearful, passionless force of non-human things."

It was that which made Bertrand Russell something more than the sum of the great philosopher he was in his youth and the great crusader he became in his old age: which made his life, for all its flaws and contradictions, one to which after his death attention should be paid, just as when he was alive it never occurred anyone's mind to deny that he was a great man. □

BY BERTRAND RUSSELL

- (2) *Why I Am Not A Communist*. This is not the essay with the same title included in *Portraits From Memory* (London: Allen & Unwin, 1956). This is from *The Meaning of Marx*, Sidney Hook, editor (NY: Farrar & Rinehart, 1934). (Thank you, TOM STANLEY.)

WHY I AM NOT A COMMUNIST¹

by BERTRAND RUSSELL

WHEN I speak of a "Communist," I mean a person who accepts the doctrines of the Third International. In a sense, the early Christians were Communists, and so were many medieval sects; but this sense is now obsolete.

I will set forth my reasons for not being a Communist *seriatim*.

1. I cannot assent to Marx's philosophy, still less to that of Lenin's *Materialism and Empirio-Criticism*. I am not a materialist, though I am even further removed from idealism. I do not believe that there is any dialectical necessity in historical change; this belief was taken over by Marx from Hegel, without its only logical basis, namely the primacy of the Idea. Marx believed that the next stage in human development *must be* in some sense a progress; I see no reason for this belief.

2. I cannot accept Marx's theory of value, not yet, in his form, the theory of surplus-value. The theory that the exchange-value of a commodity is proportional to the labor involved in its production, which Marx took over from Ricardo, is shown to be false by Ricardo's theory of rent, and has long been abandoned by all non-Marxian economists. The theory of surplus-value rests upon Malthus' theory of population, which Marx elsewhere rejects. Marx's economics do not form a logically coherent whole, but are built up by the alternate acceptance and rejection of older doctrines, as may suit his convenience in making out a case against the capitalists.

3. It is dangerous to regard any one man as infallible; the consequence is necessarily an oversimplification. The tradition

¹ Printed by permission of the *Modern Monthly*, issue of April, 1934.

of the verbal inspiration of the Bible has made men too ready to look for a Sacred Book. But this worship of authority is contrary to the scientific spirit.

4. Communism is not democratic. What it calls the "dictatorship of the proletariat" is in fact the dictatorship of a small minority, who become an oligarchic governing class. All history shows that government is always conducted in the interests of the governing class, except in so far as it is influenced by fear of losing its power. This is the teaching, not only of history, but of Marx. The governing class in a communist state has even more power than the capitalist class in a "democratic" state. So long as it retains the loyalty of the armed forces, it can use its power to obtain for itself advantages quite as harmful as those of capitalists. To suppose that it will always act for the general good is mere foolish idealism, and is contrary to Marxian political psychology.

5. Communism restricts liberty, particularly intellectual liberty,

more than any other system except fascism. The complete unification of both economic and political power produces a terrifying engine of oppression, in which there are no loopholes for exceptions. Under such a system, progress would soon become impossible, since it is the nature of bureaucrats to object to all change except increase in their own power. All serious innovation is rendered possible only by some accident enabling unpopular persons to survive. Kepler lived by astrology, Darwin by inherited wealth, Marx by Engels' "exploitation" of the proletariat of Manchester. Such opportunities of surviving in spite of unpopularity would be impossible under Communism.

6. There is in Marx, and in current economic thought, an undue glorification of manual as against brain workers. The result has been to antagonize many brain workers who might otherwise have seen the necessity of socialism, and without whose help the organization of a socialist state is scarcely possible. The division of classes is put by Marxians in practice even more than in theory, too low in the social scale.

7. The preaching of the class war is likely to cause it to break out at a moment when the opposing forces are more or less evenly balanced, or even when the preponderance is on the side of the capitalists. If the capitalist forces preponderate, the result is an era of reaction. If the forces on both sides are roughly equal, the result, given modern methods of warfare, is likely to be the destruction of civilization, involving the disappearance of both capitalism and communism. I think that, where democracy exists, socialists should rely upon persuasion, and should use force only to repel an illegal use of force by their opponents. By this method it will be possible for socialists to acquire so great a preponderance that the final war may be brief, and not sufficiently serious to destroy civilization.

8. There is so much of hate in Marx and communism that communists can hardly be expected, when victorious, to establish a régime affording no outlet for malevolence. The arguments in favor of oppression are therefore likely to seem to the victors stronger than they are, especially if the victory has resulted from a fierce and doubtful war. After such a war, the victorious party is not likely to be in the mood for sane reconstruction. Marxists are too apt to forget the war has its own psychology which is the result of fear, and is independent of the original cause of contention.

9. It is said that, in the modern world, the only practically possible choice is between communism and fascism. I do not believe this. It seems to me definitely untrue in America, England and France. The future of Italy and Germany is uncertain. England had a period of fascism under Cromwell, France under Napoleon, but in neither case was this a bar to subsequent democracy. Politically immature nations are not the best guide as to the political future.

BR'S BIRTHDAY

- (3) A date to remember: May 17...BR's birthday. We've never taken notice of it, and that's been our loss. It's an occasion for celebration. We're glad he was born. He left us a legacy of great thoughts...and gave an example, by his own actions, of moral courage that inspired and influenced many.

We can hardly be expected to have celebrated BR's 100th Birthday in 1972; we didn't exist then. But ever since 1974, when we were founded, we could have done something about it...and didn't.

We are indebted to the Humanist Fellowship of San Diego, for celebrating BR's Birthday this year (RSN63-2), which set a good example.

May 17, 1990 is BR's 118th Birthday. 118 is not a notable number to build a great celebration around. Nevertheless, let's not ignore it. Let's take note of it in some appropriate way:

Please send your suggestions for 5/17/90 to the newsletter.

RECOMMENDED READING

- (4) Toynbee demolished, by H. R. Trevor-Roper, who reviews *Arnold J. Toynbee: A Life* by William H. McNeill, in *The New York Review of Books* (10/12/89). The review starts off this way:

Thirty-five years ago, Arnold Toynbee's *Study of History* was a world best seller. It was described as "the greatest work of history ever written." It conquered first America, then the Muslim East, then Japan. Its author, hailed as "the most renowned scholar in the world", "a universal sage," circled the globe in triumph, receiving homage wherever he went. At the height of his fame, I rashly wrote a dissentient essay. It was denounced by a Roman Catholic priest (who refused to read it) as "blasphemy" and by a Muslim writer as "a symptom of intellectual chaos." Today the cult has subsided. The ten thick volumes of the *Study* sit undisturbed on the library shelves. Who will ever read them? A few Ph.D. students perhaps, desperate for a subject. Did anyone ever read them in toto? I doubt it.

Still, the fact of that phenomenal success story remains and deserves study, so we must be grateful to Professor McNeill who, at the request of Toynbee's surviving son, has written this biography. It is a work of thorough research, and it is written with skill, sympathy, and discretion. But however sympathetic, however discreet, it makes — casually, obliquely, or in footnotes — some damaging admissions. It will not, I think, restore the credibility, or the credit, of its hero.

As an undergraduate at Balliol, Toynbee had written in a letter: "As for Ambition, with a great screaming A, I have got it pretty strong. I want to be a great gigantic historian."

Here are some of the views that Historian Toynbee expressed at various times during his life: Hitler was essentially a man of peace; it was OK if Hitler won the war; civilization has no value except as a means to religion; Roman Catholicism was to be the religion of the new world empire; America replaced the Nazis as the new "universal state"; the fatal decline of Western civilization began with the Renaissance, when "pagan" Greek culture and freedom of thought fatally weakened the medieval unity of Christendom.

The review ends, many pages later, this way:

His vanity and complacency cut him off from corrective friendship -- he seems to have had few friends -- and left him an easy prey to the flattery of the press and publishers. I do not regret having exposed the pretentious obscurantism of his work when it was being cried up throughout the world as the ultimate wisdom of centuries; but perhaps I would have been a little gentler if I had known that his father, for his last thirty years, had been mad.

Read the whole thing. You'll be well rewarded.

BR'S WRITINGS ASSESSED

(6) Brink, Russell, and Rational Love, by MARVIN KOHL.

To attempt to briefly say anything about the nature of rational love seems presumptuous, and requires a degree of wisdom I do not possess. But in light of Brink's recent assault¹, it would seem timid, even cowardly, not to say something. The use of the genetic fallacy may have its use in the halls of deception, but, to my mind, has no place in the academe, especially in the halls of responsible psychobiography.

Brink seems disposed — not merely to explain Russell's behavior and beliefs about love in terms of their origin but — to depreciate them because of their problematic origins. "Russell was a flawed moralist," he writes, "torn by love and hate from which he sought deliverance by impersonal service to humanity. Like many obsessional personalities, he was hyper-moral — forced by the war in his ego to be always vigilant lest he destroy more than he could create.² "Russell," Brink concludes, "wanted to teach the world to live at peace. The reasons for our inability to do so may be judged from his own hidden, unprocessed, retributive emotions about being imprisoned by women."³

Brink forgets that the quality and truth of Russell's writings have nothing to do with his early loss of his parents, his having too many nannies, or his general beliefs about women. Perhaps Russell did have a troubled childhood. Perhaps he did have an unappeasable hunger, a need to be mothered and, therefore, an obsession with finding perfect love. Perhaps his quest for perfect love was unrealistic and often did have a devastating influence upon his relationships. But how does this affect the accuracy of his definition of love or help us understand the importance of being able to distinguish between loving non-rationally and loving only that which is worthy of our affection? Or does Brink believe that all who urge that we ought to love humanity — or hold that if A loves B rationally, then A must love B for what A takes to be worthwhile qualities or features — have simply suffered trauma in childhood?

Russell appears to claim:

- (1) There are various kinds of love;
- (2) Consummate love⁴ or "love at its fullest is an indissoluble combination of two elements, delight and well-wishing."⁵
- (3) To love someone, in this sense, is to delight in the contemplation of that person and want that person's good. Accordingly, if A loves B, A must cherish and desire the welfare of B.
- (4) There is a distinction between loving consummately without good reason and loving consummately with good reason;
- (5) Important things should not be loved unless they are worthy of being loved;
- (6) The only love that need never be checked is the love of goodness itself⁶; and
- (7) Only active and rational consummate love can save the world.

Critics may disagree. They may wish to remind us that Russell failed to adequately explicate some of these statements. They may want to argue that his theory has no, or little, psychological value. Or that, given relevant evidence, some of the statements are false. Here I only insist: first, that the truth or warrant of the above statements stand or fall independently of Russell's life or personality; second, that to flaw a moralist and his theory simply and only because of his infirmities of childhood is, at best, psychological sleaze.

BY BERTRAND RUSSELL

- (7) *The Future of Mankind*, from *Unpopular Essays* (NY: Simon & Schuster, 1950), with thanks to HARRY RUJA. Notice, incidentally, the highly favorable opinions about life in America expressed by BR, who is sometimes accused of being anti-American.

The Future of Mankind

BEFORE the end of the present century, unless something quite unforeseeable occurs, one of three possibilities will have been realized. These three are:

- I. The end of human life, perhaps of all life on our planet.
- II. A reversion to barbarism after a catastrophic diminution of the population of the globe.
- III. A unification of the world under a single government, possessing a monopoly of all the major weapons of war.

I do not pretend to know which of these will happen, or even which is the most likely. What I do contend, without any hesitation, is that the kind of system to which we have been accustomed cannot possibly continue.

The first possibility, the extinction of the human race, is not to be expected in the next world war, unless that war is postponed for a longer time than now seems probable. But if the next world war is indecisive, or if the victors are unwise, and if organized states survive it, a period of feverish technical development may be expected to follow its conclusion. With vastly more powerful means of utilizing atomic energy than those now available, it is thought by many sober men of science that radio-active clouds, drifting round the world, may disintegrate living tissue everywhere. Although the last survivor may proclaim himself universal Emperor, his reign will be brief and his subjects will all be corpses. With his death the uneasy episode of life will end, and the peaceful rocks will revolve unchanged until the sun explodes.

Perhaps a disinterested spectator would consider this the most desirable consummation, in view of man's long record of folly and cruelty. But we, who are actors in the drama, who are entangled in the net of private affections and public hopes, can hardly take this attitude with any sincerity. True, I have heard men say that they would prefer the end of man to submission to the Soviet government, and doubtless in Russia there are those who would say the same about submission to Western capitalism. But this is rhetoric with a bogus air of heroism. Although it must be regarded as unimaginative humbug, it is dangerous, because it makes men less energetic in seeking ways of avoiding the catastrophe that they pretend not to dread.

The second possibility, that of a reversion to barbarism, would leave open the likelihood of a gradual return to civilization, as after the fall of Rome. The sudden transition will, if it occurs, be infinitely painful to those who experience it, and for some centuries afterwards life will be hard and drab. But at any rate there will still be a future for mankind, and the possibility of rational hope.

I think such an outcome of a really scientific world war is by no means improbable. Imagine each side in a position to destroy the chief cities and centers of industry of the enemy; imagine an almost complete obliteration of laboratories and libraries, accompanied by a heavy casualty rate among men of science; imagine famine due to radio-active spray, and pestilence caused by bacteriological warfare: would social cohesion survive such strains? Would not prophets tell the maddened

populations that their ills were wholly due to science, and that the extermination of all educated men would bring the millennium? Extreme hopes are born of extreme misery, and in such a world hopes could only be irrational. I think the great states to which we are accustomed would break up, and the sparse survivors would revert to a primitive village economy.

The third possibility, that of the establishment of a single government for the whole world, might be realized in various ways: by the victory of the United States in the next world war, or by the victory of the U.S.S.R., or, theoretically, by agreement. Or—and I think this is the most hopeful of the issues that are in any degree probable—by an alliance of the nations that desire an international government, becoming, in the end, so strong that Russia would no longer dare to stand out. This might conceivably be achieved without another world war, but it would require courageous and imaginative statesmanship in a number of countries.

There are various arguments that are used against the project of a single government of the whole world. The commonest is that the project is utopian and impossible. Those who use this argument, like most of those who advocate a world government, are thinking of a world government brought about by agreement. I think it is plain that the mutual suspicions between Russia and the West make it futile to hope, in any near future, for any genuine agreement. Any pretended universal authority to which both sides can agree, as things stand, is bound to be a sham, like U.N.O. Consider the difficulties that have been encountered in the much more modest project of an international control over atomic energy, to which Russia will only consent if inspection is subject to the veto, and therefore a farce. I think we should admit that a world government will have to be imposed by force.

But—many people will say—why all this talk about a world government? Wars have occurred ever since men were organized into units larger than the family, but the human race has survived. Why should it not continue to survive even if wars go on occurring from time to time? Moreover, people like war, and will feel frustrated without it. And without war there will be no adequate opportunity for heroism or self-sacrifice.

This point of view—which is that of innumerable elderly gentlemen, including the rulers of Soviet Russia—fails to take account of modern technical possibilities. I think civilization could probably survive one more world war, provided it occurs fairly soon and does not last long. But if there is no slowing up in the rate of discovery and invention, and if great wars continue to recur, the destruction to be expected, even if it fails to exterminate the human race, is pretty certain to produce the kind of reversion to a primitive social system that I spoke of a moment ago. And this will entail such an enormous diminution of population, not only by war, but by subsequent starvation and disease, that the survivors are bound to be fierce and, at least for a considerable time, destitute of the qualities required for rebuilding civilization.

Nor is it reasonable to hope that, if nothing drastic is done, wars will nevertheless not occur. They always have occurred from time to time, and obviously will break out again sooner or later unless mankind adopt some system that makes them impossible. But the only such system is a single government

with a monopoly of armed force.

If things are allowed to drift, it is obvious that the bickering between Russia and the Western democracies will continue until Russia has a considerable store of atomic bombs, and that when that time comes there will be an atomic war. In such a war, even if the worst consequences are avoided, Western Europe, including Great Britain, will be virtually exterminated. If America and the U.S.S.R. survive as organized states, they will presently fight again. If one side is victorious, it will rule the world, and a unitary government of mankind will have come into existence; if not, either mankind, or at least civilization, will perish. This is what must happen if nations and their rulers are lacking in constructive vision.

When I speak of "constructive vision," I do not mean merely the theoretical realization that a world government is desirable. More than half the American nation, according to the Gallup poll, hold this opinion. But most of its advocates think of it as something to be established by friendly negotiation, and shrink from any suggestion of the use of force. In this I think they are mistaken. I am sure that force, or the threat of force, will be necessary. I hope the threat of force may suffice, but, if not, actual force should be employed.

Assuming a monopoly of armed force established by the victory of one side in a war between the U.S. and the U.S.S.R., what sort of world will result?

In either case, it will be a world in which successful rebellion will be impossible. Although, of course, sporadic assassination will still be liable to occur, the concentration of all important weapons in the hands of the victors will make them irresistible, and there will therefore be secure peace. Even if the dominant nation is completely devoid of altruism, its leading inhabitants, at least, will achieve a very high level of material comfort, and will be freed from the tyranny of fear. They are likely, therefore, to become gradually more good-natured and less inclined to persecute. Like the Romans, they will, in the course of time, extend citizenship to the vanquished. There will then be a true world state, and it will be possible to forget that it will have owed its origin to conquest. Which of us, during the reign of Lloyd George, felt humiliated by the contrast with the days of Edward I?

A world empire of either the U.S. or the U.S.S.R. is therefore preferable to the results of a continuation of the present international anarchy.

There are, however, important reasons for preferring a victory of America. I am not contending that capitalism is better than Communism; I think it not impossible that, if America were Communist and Russia were capitalist, I should still be on the side of America. My reason for siding with America is that there is in that country more respect than in Russia for the things that I value in a civilized way of life. The things I have in mind are such as: freedom of thought, freedom of inquiry, freedom of discussion, and humane feeling. What a victory of Russia would mean is easily to be seen in Poland. There were flourishing universities in Poland, containing men of great intellectual eminence. Some of these men, fortunately, escaped; the rest disappeared. Education is now reduced to learning the formula of Stalinist orthodoxy; it is only open (beyond the elementary stage) to young people whose parents are politically irreproachable, and it does not aim at producing any mental faculty except that of glib repetition of correct shibboleths and quick apprehension of the side that is winning official favor. From such an educational system nothing of intellectual value can result.

Meanwhile the middle class was annihilated by mass deportations, first in 1940, and again after the expulsion of the Germans. Politicians of majority parties were liquidated, imprisoned, or compelled to fly. Betraying friends to the police, or

perjury when they were brought to trial, are often the only means of survival for those who have incurred governmental suspicions.

I do not doubt that, if this régime continues for a generation, it will succeed in its objects. Polish hostility to Russia will die out, and be replaced by Communist orthodoxy. Science and philosophy, art and literature, will become sycophantic adjuncts of government, jejune, narrow, and stupid. No individual will think, or even feel, for himself, but each will be contentedly a mere unit in the mass. A victory of Russia would, in time, make such a mentality world-wide. No doubt the complacency induced by success would ultimately lead to a relaxation of control, but the process would be slow, and the revival of respect for the individual would be doubtful. For such reasons I should view a Russian victory as an appalling disaster.

A victory by the United States would have far less drastic consequences. In the first place, it would not be a victory of the United States in isolation, but of an Alliance in which the other members would be able to insist upon retaining a large part of their traditional independence. One can hardly imagine the American army seizing the dons at Oxford and Cambridge and sending them to hard labor in Alaska. Nor do I think that they would accuse Mr. Attlee of plotting and compel him to fly to Moscow. Yet these are strict analogues to the things the Russians have done in Poland. After a victory of an Alliance led by the United States there would still be British culture, French culture, Italian culture, and (I hope) German culture; there would not, therefore, be the same dead uniformity as would result from Soviet domination.

There is another important difference, and that is that Moscow orthodoxy is much more all-pervasive than that of Washington. In America, if you are a geneticist, you may hold whatever view of Mendelism the evidence makes you regard as the most probable; in Russia, if you are a geneticist who disagrees with Lysenko, you are liable to disappear mysteriously. In America, you may write a book debunking Lincoln if you feel so disposed; in Russia, if you write a book debunking Lenin, it would not be published and you would be liquidated. If you are an American economist, you may hold, or not hold, that America is heading for a slump; in Russia, no economist dare question that an American slump is imminent. In America, if you are a professor of philosophy, you may be an idealist, a materialist, a pragmatist, a logical positivist, or whatever else may take your fancy; at congresses you can argue with men whose opinions differ from yours, and listeners can form a judgment as to who has the best of it. In Russia you must be a dialectical materialist, but at one time the element of materialism outweighs the element of dialectic, and at other times it is the other way round. If you fail to follow the developments of official metaphysics with sufficient nimbleness, it will be the worse for you. Stalin at all times knows the truth about metaphysics, but you must not suppose that the truth this year is the same as it was last year.

In such a world intellect must stagnate, and even technological progress must soon come to an end.

Liberty, of the sort that Communists despise, is important not only to intellectuals or to the more fortunate sections of society. Owing to its absence in Russia, the Soviet government has been able to establish a greater degree of economic inequality than exists in Great Britain, or even in America. An oligarchy which controls all the means of publicity can perpetrate injustices and cruelties which would be scarcely possible if they were widely known. Only democracy and free publicity can prevent the holders of power from establishing a servile state, with luxury for the few and overworked poverty for the many. This is what is being done by the Soviet

government wherever it is in secure control. There are, of course, economic inequalities everywhere, but in a democratic régime they tend to diminish, whereas under an oligarchy they tend to increase. And wherever an oligarchy has power, economic inequalities threaten to become permanent owing to the modern impossibility of successful rebellion.

I come now to the question: what should be our policy, in view of the various dangers to which mankind is exposed? To summarize the above arguments: We have to guard against three dangers: (1) the extinction of the human race; (2) a reversion to barbarism; (3) the establishment of a universal slave state, involving misery for the vast majority, and the disappearance of all progress in knowledge and thought. Either the first or second of these disasters is almost certain unless great wars can soon be brought to an end. Great wars can only be brought to an end by the concentration of armed force under a single authority. Such a concentration cannot be brought about by agreement, because of the opposition of Soviet Russia, but it must be brought about somehow.

The first step—and it is one which is now not very difficult—is to persuade the United States and the British Commonwealth of the absolute necessity for a military unification of the world. The governments of the English-speaking nations should then offer to all other nations the option of entering into a firm Alliance, involving a pooling of military resources and mutual defense against aggression. In the case of hesitant nations, such as Italy, great inducements, economic and military, should be held out to produce their co-operation.

At a certain stage, when the Alliance had acquired sufficient strength, any Great Power still refusing to join should be threatened with outlawry, and, if recalcitrant, should be regarded as a public enemy. The resulting war, if it occurred fairly soon, would probably leave the economic and political structure of the United States intact, and would enable the victorious Alliance to establish a monopoly of armed force, and therefore to make peace secure. But perhaps, if the Alliance were sufficiently powerful, war would not be necessary, and the reluctant Powers would prefer to enter it as equals rather than, after a terrible war, submit to it as vanquished enemies. If this were to happen, the world might emerge from its present dangers without another great war. I do not see any hope of such a happy issue by any other method. But whether Russia would yield when threatened with war is a question as to which I do not venture an opinion.

I have been dealing mainly with the gloomy aspects of the present situation of mankind. It is necessary to do so, in order to persuade the world to adopt measures running counter to traditional habits of thought and ingrained prejudices. But beyond the difficulties and probable tragedies of the near future there is the possibility of immeasurable good, and of greater well-being than has ever before fallen to the lot of man. This is

not merely a possibility, but, if the Western democracies are firm and prompt, a probability. From the break-up of the Roman Empire to the present day, states have almost continuously increased in size. There are now only two fully independent states, America and Russia. The next step in this long historical process should reduce the two to one, and thus put an end to the period of organized wars, which began in Egypt some 6,000 years ago. If war can be prevented without the establishment of a grinding tyranny, a weight will be lifted from the human spirit, deep collective fears will be exorcised, and as fear diminishes we may hope that cruelty also will grow less.

The uses to which men have put their increased control over natural forces are curious. In the nineteenth century they devoted themselves chiefly to increasing the numbers of *homo sapiens*, particularly of the white variety. In the twentieth century they have, so far, pursued the exactly opposite aim. Owing to the increased productivity of labor, it has become possible to devote a larger percentage of the population to war. If atomic energy were to make production easier, the only effect, as things are, would be to make wars worse, since fewer people would be needed for producing necessities. Unless we can cope with the problem of abolishing war, there is no reason whatever to rejoice in labor-saving technique, but quite the reverse. On the other hand, if the danger of war were removed, scientific technique could at last be used to promote human happiness. There is no longer any technical reason for the persistence of poverty, even in such densely populated countries as India and China. If war no longer occupied men's thoughts and energies, we could, within a generation, put an end to all serious poverty throughout the world.

I have spoken of liberty as a good, but it is not an absolute good. We all recognize the need to restrain murderers, and it is even more important to restrain murderous states. Liberty must be limited by law, and its most valuable forms can only exist within a framework of law. What the world most needs is effective laws to control international relations. The first and most difficult step in the creation of such law is the establishment of adequate sanctions, and this is only possible through the creation of a single armed force in control of the whole world. But such an armed force, like a municipal police force, is not an end in itself; it is a means to the growth of a social system governed by law, where force is not the prerogative of private individuals or nations, but is exercised only by a neutral authority in accordance with rules laid down in advance. There is hope that law, rather than private force, may come to govern the relations of nations within the present century. If this hope is not realized we face utter disaster; if it is realized, the world will be far better than at any previous period in the history of man.

If BR's position seems extreme — that nuclear weapons threaten human existence — as some have said, it is well to recall his exchange with John Chandos, in his 1961 interview (RSN30-30):

BR: I find it difficult not to get a little fanatical about it because the issue is so large. It's the largest it's been since Noah.

Chandos: And we have no Ark.

BR: No, we have no Ark.

THE NUCLEAR PREDICAMENT

- (8) Will this change minds about nuclear power plants? (Thank you, BOB DAVIS.)

THE WALL STREET JOURNAL THURSDAY, AUGUST 17, 1989

Nuclear Reactors Everyone Will Love

By PAUL E. GRAY

The American nuclear industry is its own worst enemy. By trying to push ahead with vast, costly projects that have been stalled by political opposition, it exacerbates the irrational public fears that have blocked the development of nuclear power in the U.S. Instead, utilities should be exploring a new type of nuclear reactor that recent technological innovation has put within reach: a reactor type that is environmentally sound and economically competitive.

This reactor type uses new fuels, new design methods to dissipate heat, and smaller units that can be built and tested off-site. It has excited scientists and engineers world-wide, but industry and government leaders in this country—pessimistic about the public's willingness to accept nuclear power under any circumstances—are reluctant to adopt it here. That reluctance is wrong. It is time for all of us to take a hard look at modular reactors.

It has become a commonplace to say that the nuclear industry in the U.S., is dead, and that its death looks like a suicide. The problems of Seabrook and Shoreham nuclear plants are persuasive demonstrations of that commonplace.

Oil Spills and Garbage

But oil spills, undisposable garbage, polluted beaches, and—above all—steadily increasing atmospheric pollution from fossil fuel are persuading many political leaders to review their prejudices about nuclear energy. Americans who want a clean, safe and domestically produced energy source should follow—especially because all the practical alternatives to nuclear power present grave hazards to public safety and health. The perceived risks of nuclear power are grossly overestimated and usually stated without reference to the hazards of other energy sources.

There are, however, two major problems with the present generation of water-cooled reactors. The light-water reactors, or LWRs as they are known to engineers, used in nearly all the plants in operation or under construction in the United States, place heavy demands on their builders and

operators. The risk they pose to public safety is an accident involving loss of coolant that could lead to the melting of fuel elements and the subsequent release of radioactivity. The safety systems for these light-water reactors are extremely complicated. These safety systems require explicit anticipation of all possible forms of failure and they must necessarily rely on probability analysis. In a world in which probability is not widely understood, such analysis is not reassuring to most of the

It is possible to design and build reactors that could survive the failure of components without fuel damage and without releasing radioactivity.

public. While these methods lead to margins of safety that are quite acceptable, Americans remain, for the most part, skeptics.

The second problem is that light-water reactors, which are custom-made at the site, cannot be tested in advance to ascertain what would happen in a true disaster.

It is possible, however, to design and build a series of small reactors that could produce the power of a large plant. These reactors could survive the failure of components without fuel damage and without releasing radioactivity because their fuels can withstand the maximum temperatures possible under the worst of circumstances. Their design limits the power density of the reactor core as well as the actual size of the core, and exploits natural processes to remove heat and avert fuel damage in the event of a loss of coolant.

Such "passively safe" reactors can be designed to suffer the simultaneous failure of all control and cooling systems without danger to the public. And their safety can be demonstrated by an actual test: a West German modular reactor has passed such tests three times.

One of the most advanced of these modular reactors is under study at the Massachusetts Institute of Technology. It is based on the West German reactor that has demonstrated its safety, but adds several technologies in which the U.S. still has a com-

petitive industrial edge. The hot gas that leaves the reactor is used directly to spin a turbine (based on aerospace designs), which, in turn, drives a small, very high speed generator (based on power electronics). This combination results in a power generating system that is substantially smaller and more efficient than current LWR systems, which are based on steam turbines and low-speed generators.

By virtue of its inherent or passive safety features, this small, gas-cooled re-

actor eliminates the complex, active safety systems needed by current LWRs. The gas turbine eliminates the complex, hard-to-maintain, steam generators common both to nuclear plants and ordinary fossil-fired power plants. The result is a power plant that produces electricity not only at lower cost than nuclear reactors (an easy target), but that is competitive with the projected cost of next-generation "clean" coal-fired plants. Power from such coal generators, the Department of Energy calculated in 1986, would cost an average of 5.5 cents per kilowatt hour. Power from modular reactors can be brought to market for 4.5 cents per kilowatt hour.

These savings can be realized because the new plants will be made to a single, prelicensed design in central factories. Construction costs are estimated to be less than \$1,000 per kilowatt of electricity. Costs per kwe for the Seabrook reactor in New Hampshire and the Shoreham project in Long Island were more like \$5,000 to \$6,000, primarily because of long delays and extensive redesign during construction. Operating costs of traditional nuclear plants are also much higher than those of modular plants would be, because the older type require very large staffs—700 people per plant—to oversee their involuted safety systems. Modular reactors could offer much more safety with staffs only half as big.

Nil Operating Risk

Smaller, modular reactors will produce less energy than present reactors do: 100 to 150 megawatts of electrical power output compared with 1,000 to 1,500 megawatts, but this difficulty can be overcome, if necessary, by linking together a number of small, individual power-producing modules. Since each module would be identical and centrally built, licensing could be standardized and based on full-scale testing of an actual plant. This is an enormous advantage. It would allow actual demonstration of the reactors' response to severe and demanding hazards.

With an operating risk that is virtually nil and the production of significantly less radioactivity in the environment than coal-fired electric power plants, second-generation nuclear power could be a major source of environmentally sound energy if we would only take advantage of it. The failure of the government and the nuclear industry to provide leadership in developing a second generation of power plants based on these developments has already cost us dearly.

Mr. Gray is president of the Massachusetts Institute of Technology

(9)

DIRECTORS OF THE BERTRAND RUSSELL SOCIETY, INC.
elected for 3-year terms, as shown

1987-89: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, STEVE MARAGIDES, FRANK PAGE, MICHAEL ROCKLER, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA

1988-90: IRVING ANELLIS, BOB DAVIS, JIM MCWILLIAMS, HUGH MOORHEAD, KATE TAIT

1989-91: LOU ACHESON, ADAM PAUL BANNER, KEN BLACKWELL, JOHN JACKANICZ, DAVID JOHNSON, JUSTIN LEIBER, GLADYS LEITHAUSER, STEVE REINHARDT, TOM STANLEY

The 6 BRS Officers are also Directors, ex officio

(10)

1990 DUES ARE DUE

TO ALL MEMBERS: Everybody's renewal dues are due January 1, 1990. The January 1st due-date applies to all members, including first-year members (except those who joined in the final quarter (October/November/December 1989)).

Here is the 1990 dues schedule: Regular, \$33; couple, \$38; Student and Limited Income, \$12.50. Plus \$7.50 outside U.S., Canada, and Mexico. Plus \$2.50 for Canada and Mexico. In US dollars.

Please mail dues to 1990, RD 1, Box 409, Coopersburg, PA 18036.

If you want to make our life a little easier, send your dues soon. And if we receive them before January 1st, you'll find your name on the Renewal Honor Roll.

Thanks!

TO FIRST YEAR MEMBERS — members who joined any time during 1989; the rest of this item is for you.

We know from experience that new members sometimes feel put upon when asked to pay dues after less than a year of membership. We understand that. We'll tell you why we do it this way.

In the previous system, a new member's dues covered 12 months of membership. That required us to notify each member individually — on the anniversary date of enrollment — that the next year's dues were due. And after that, we had to follow up on all members, to see whether dues were in fact paid. This went on throughout the whole year. It was cumbersome, provided many chances for error, and took a lot of time. In fact, it took more time than we had. We had to make a change.

The present system is easier to administer, produces fewer errors, and takes less time. Everyone's dues come due on the same day, January 1st. Simple!

We don't think that the new member whose first year of membership is less (sometimes considerably less) than 12 months has been short-changed in any important way. He/she has received just as many newsletters (and knows as much about the BRS) as the member who joined in January.

All first-year members (except those who enrolled in January) have a first-year membership period that is shorter than a year. Thereafter, the yearly membership period is always a full 12-months.

The one exception to all the above are those who joined in October/November/December 1989. Their renewal dues are not due till January 1, 1991.

(11)

THE MEMBERS VOTE

10 candidates for Director were elected or re-elected: JACK COWLES, WILLIAM FIELDING, DAVID GOLDMAN, STEVE MARAGIDES, FRANK PAGE, CHERIE RUPPE, PAUL SCHILPP, WARREN SMITH, RAMON SUZARA, and THOM WEIDLICH.

We thank the members who voted: LOU ACHESON, IRVING ANELLIS, JAY ARAGONA, RUBEN ARDILA, DENIS ARNOLD, WALTER BAUMGARTNER, JACQUELINE BERTHON-PAYON, GLENNA CRANFORD, PETER CRANFORD, JIM CURTIS, BOB DAVIS, LINDA EGENDORF, WILLIAM FIELDING, STEPHEN FREY, DAVID GLOVER, BARRY GOLDMAN, GERRY GRAITON, TING-FU HUNG, NOBORU INOUE, DON JACKANICZ, KEN KORBIN, HERB LANSDELL, JOHN LENZ, TIM MADIGAN, CARL MILLER, STEVE MOLENAAR, WILLIAM NEWHALL, FRANKLIN NICKERSON, BENITO REY, MICHAEL ROCKLER, HARRY RUJA, CHERIE RUPPE, WARREN SMITH, TOM STANLEY, SHOHIG TERZIAN, DEWEY WALLACE, RICHARD WILK, VINCENT WILLIAMS, ELEANOR WOLFF, JAMES WOODROW, CHARLES YODER...AND 3 UNSIGNED BALLOIS. (Signing is optional.)

Only 14% of the members voted. Pretty bad! Not much of a show of support. What do we have to do to light a fire under the rest of you who did not vote?

(12)

NEWSLETTER MATTERS

We regret the very small print in RSN63-42, the book review of Clark's *The Life of Bertrand Russell*. In our eagerness to get it all on one page, we failed to notice how small the print had become. We'll try not to let that happen again.

(13) From *The New York Times* (5/18/52), with thanks to STEVE REINHARDT.

Advice to Those Who Want to Attain 80

Don't be afraid of having a good time, says one octogenarian, and by all means be active.

By **BERTRAND RUSSELL**

N.Y.T. 5-18-52

IF I were to treat this subject scientifically, I should send a questionnaire to some large list of persons over 80, containing a whole set of queries such as: are you a teetotaler, are you a vegetarian, have you ever lived in the tropics, do you wear wool next the skin, at what age did you cease consulting medical men, and so forth? I should leave a large space at the bottom of the page for "remarks" in which the selected octogenarians should be invited to list their fads. But, unfortunately, I had not sufficiently long notice to be able to adopt this thorough-going method, and I am reduced to the prosy and disjointed reflections of a garrulous elderly gentleman.

The first step which must be taken at the very beginning is a careful choice of ancestors. If your parents, grandparents, and great-grandparents have all lived to be 80 your chances are much improved. I was prudent as regards grandparents and great-grandparents, but not as regards my parents, both of whom died when I was an infant.

But beyond this point, when I think over the old people I have known, I find it very difficult to discover any common quality to which to attribute their longevity. I lived once in a village whose inhabitants, with one single exception, were very earnest Methodists and fanatical teetotalers. The one exception, to the scandal of all the rest, was the oldest inhabitant and an habitual drunkard. I have no wish whatever to draw a moral (or immoral) from this case; as the books would say, the statistical material is inadequate.

Bernard Shaw would tell all and sundry that he owed his long life to abstinence from meat and alcohol. I, however, was never persuaded on this point. I thought that he owed it to pugnacity. There was always "that asinine scoundrel, So and So," to be shown up as the ass he was. And there was always the feeling that if Shaw were dead the job would not be adequately done. Such sentiments (believe me) do much to prolong life. If you really wish to live to be 80, I think you will find a habit of hilarious olympian controversy very helpful.

THERE is one class of very long-lived persons—but unfortunately no mere male can belong to this class. It is the class of those who are born to be widows. I have known a number of eminent ladies who belonged to this type. Many of them had eminent husbands, but the poor fellows had to die in order that their wives might achieve their destiny.

One of the finest examples of this type was an old lady, whom I knew some twenty years ago, who was the widow of a Cambridge mathematician. When I was a boy old-fashioned teachers still used the mathematical textbooks of a man called Todhunter who

BERTRAND RUSSELL, world-famous philosopher, has a birthday today. He's 80.

had been dead for some time, and whose books were being discarded by up-to-date schoolmasters. I asked the old lady whether she had known Todhunter, and, after some reminiscent effort, she replied, "Oh, yes, he was one of the younger Fellows."

One day when I called I was told that she was rather tired and not seeing visitors. I asked solicitously what it was that had tired her, and was told that her car had stuck on an up-hill, and she had got out and pushed it up

to the top. She died at last, and I hope that she is now patronizing Todhunter in the Elysian fields.

If you wish to live long, it is a mistake to have a finite and realizable ambition. It used to be illegal in England to marry one's deceased wife's sister. There was a society devoted to getting the law changed in this respect. The society had an energetic and skillful secretary who was appointed when he was quite young, and invariably gave satisfaction. He knew all the

arguments, and all the answers to arguments on the other side. Youth passed in the pursuit of his task and middle age likewise. At last, when he had reached the age of 70, the reform to which he had devoted his life was carried, and he was left drifting aimlessly in a world which he no longer wished to change. Life had lost its savor, and he died.

THEN there was the eminent Cambridge mathematician who, at the age of 22, discovered a famous theorem which to this day is called by his name. After this he felt that he had done enough in the way of original work, and he devoted the remainder of his life to accumulating mathematical books and papers in his study. He covered the walls with shelves from floor to ceiling, but the shelves became full. He then stacked books and pamphlets on the floor. The whole of the floor became covered except a narrow passage to his desk. At last that, too, was covered. He locked the door and, shortly afterward, expired.

When I was young I knew a man who had retired from business in 1821. I do not, however, recommend this as a means of achieving old age. Most of the men I have known who have retired from work have died of boredom shortly afterward. A man who has been active, even if he has thought throughout his life that a leisurely existence would be delightful, is apt to find life unbearable without some activity upon which to employ his faculties. I am convinced that survival is easier for those who can enjoy life, and that a man who has sufficient vitality to reach old age cannot be happy unless he is active.

From my own practice I have little to say that is either instructive or edifying. I have, I suppose, lived a wholesome life, avoiding every kind of excess and taking abundant exercise. Until the age of 42 I was a teetotaler. But for the last sixty years I have smoked incessantly, stopping only to eat and sleep.

IHATE fresh air indoors, and have found a way of justifying this feeling to fresh air fiends. I say to them, "Have you noticed that old people never like fresh air?" They always agree. I then say, "And do you realize that this is because those who love fresh air never live to be old?"

Although, on the whole, my natural tastes are wholesome, I have never, except when I was ill, done anything on the ground that it was good for health. I eat what I like and don't eat what I don't like, even when I am told that dire consequences will follow. They never do. I am convinced that so long as you are healthy, it is unnecessary to think about health.

I enjoy life at least as much as when I was younger, and I should like to live another ten years provided there is not another world war meanwhile. If there is, there will be something to be said for being dead.

Lord Russell—"I enjoy life at least as much as when I was younger."

BOOK REVIEWS

The Philosophy of Bertrand Russell, Volume V, The Library of Living Philosophers, Paul Arthur Schilpp, Ed., (Open Court Publishing Co.), reviewed by WILLIAM K. FIELDING.

Reissuance of the 1944 The Philosophy of Bertrand Russell — Volume V of The Library of Living Philosophers, edited by Paul Arthur Schilpp -- reminds us that intense minds outlive their mortal brains. In Russell's ninety-eight-year life, he managed to explore and clarify so many areas of human concern that contemporary Thought has yet to exhaust all possible discussion of his assertions, hypotheses and questions. As critiqued by the twenty-one contributors to this still-seminal work, Russell survives most of the specialized viewpoints current in his heyday.

When inviting prominent advocates of various, often contentious, branches of philosophy to support or differ from Bertrand Russell's prodigious outflow of reasonable Doubt (and, frequently, debatable Reason), Dr. Schilpp may have failed to anticipate the parochialism and short-sighted political biases that could infiltrate ostensibly "philosophical" converse. For here we find embedded a great many trivial and evanescent issues of the mid-1940s academic/cultural ferment, now only of interest as history -- echoes of Lost Causes and savants flatly discredited by subsequent trends.

Yet, in the book's final section (also in an Addendum to the 1971 edition), Russell is himself permitted the last word: "Reply to Criticisms." A subtle blend of exegesis and characteristic wit tends to highlight permanently-cogent matters, ignoring or dismissing glaring provincialism. And, it must be said, there are all too many examples of the latter.

Residual traces of traditional logic color the Common Sense obfuscations and tortuous word-games of G. E. Moore, whose perplexities had stimulated Russell near the beginning of his epistemological conditioning. And blatant, wrongly-indoctrinated Marxism masks anything of value hidden in V. J. McGill's apology for totalitarian Power; our later perceptions of Stalin's excesses (and McCarthyism!) vindicate Russell's seemingly-ambivalent avoidance of such political certitude. Defense of Dewey-eyed pragmatic education, seen as directly opposed to BR's alleged permissive theories of tutelage and child-guidance, makes Boyd H. Bode's huff-and-puff attack sound unwarranted and foolish. But these are exceptions to the highly-perceptive and just analyses conducted by most of the other contributors to this on-the-whole invaluable and admirable symposium.

Perhaps more for the general-public reader than for presently-functioning exponents of "technical" (university-endorsed) Philosophy, attention given to Our Knowledge of the External World, The Analysis of Mind and Why I Am Not a Christian demonstrates importance of Bertrand Russell as the spokesman for Common Humanity. Excellent treatment of logical and mathematical and psychological brilliance will remain little diminished by time (by Reichenbach, Gödel, Feibleman, Nagel, Laird, Chisholm and other permanently-respectable commentators writing here); but of even greater future worth is the enlightenment offered to a thoughtprovoked citizenry of tomorrow's Global Civilization. For, beyond any incidental quibbling over minor imponderables, Bertrand Russell will persist in the thinking of all people in all futures as the Grand Unifying Theory of Philosophy. He brought reasonableness to Reason; taught Love to cold ideologues; and showed mankind the dangers of badly-aimed Science. Careful reading of — and constant reference to — this Philosophy of Bertrand Russell will re-orient any human mind toward our common obligation to understand our own natures and to preserve Earth.

Mention must be made of the late Lester E. Denonn's exhaustive bibliography. Denonn, starting from intense personal interest in Russell's ideas, performed what used to be called "yeoman service" — the often under-appreciated useful labor of collection, correspondence and legwork required of the thorough bibliographer. (All discoverable Russell writings, 1895-1962, are accounted-for.) As in similar listings, intention of the editor is to direct readers to benefits of reading-in-depth original texts of the author presented. Thus, it appears a venal sin-of-omission that this 1989 edition failed to make proper use of updated biblio-data known to be available from Prof. Harry Ruja and Russell Archivist Kenneth Blackwell.

Inevitably, the 21st Century will see this volume in successive reprints, for Bertrand Russell extrapolates beyond our time as the truest observer/critic of a troubled (penultimate?) Age.

REPORTS FROM OFFICERS

(15) President Michael Rockler reports:

The 1990 Annual Meeting will be held at the Russell Archives in Canada. I hope a great many members will attend. It is a sad fact, however, that most members have never attended even one of these Annual Meetings. That's a pity because attending a Meeting and meeting fellow members is a very satisfying experience, quite aside from the fact that you see an interesting program and learn more about Russell.

I know that -- alas! -- it can be expensive to attend a Meeting. No doubt that's the reason why most of you have not done so. But if you cannot afford to go every year, perhaps you can afford it once in a while; and if so, 1990 is a good year to do it...because the Archives is (are?) a special place. There you can see not only books, but also manuscripts, letters, pictures and posters... and meet Archivist Ken Blackwell and his Archives colleagues. BR's own personal desk (and chair), the one on which he did much of his writing, is there. You can hear him talk, on tape; there's a large library of tapes to choose from.

If you have never attended a BRS Meeting, please know this: the 1990 Meeting -- June 22-24 -- has much to offer!

(16) Vice President John Lenz reports, in a letter dated 10/1/89:

Hello! I am back in business, very glad to be home.

Last summer (1988), I participated in an American excavation at a "dark age" site called Kavousi, in eastern Crete. The purpose of the dig was to find out about this obscure period of Greek history, between the last vestiges of Minoan culture and the rebirth of Greek civilization in the 8th Century B.C. We had architecture from both of these periods. The first day I found human skull bones from a cremation burial with iron weapons, and, in the last week, a late Minoan shrine was discovered with several cult statues in place. After the dig (a long one), I helped out at my old site on Paros (from the same period), then visited several islands off the coast of Turkey. When I returned to Athens, I found *Russell* with my first article awaiting me!

The American School of Classical Studies, where I spent the year, had a full program which entailed visiting almost all the sites in every part of Greece. (This sounds impressively large, but actually isn't. An Embassy fact book compares the size of Greece to Alabama's.) At each site, a student gave a full report on the scholarship. We quickly learned the best places to get souvlaki and the *Herald-Tribune*. In March, our trip to Turkey had some wondering aloud why we had wasted so much time in Greece! The Turkish monuments are often better preserved, and unspoiled because largely still unexcavated. For example, one of the most memorable ancient cities, Heracleia under Mt. Latmos, exists today under and around a small village, where donkeys graze in an ancient senate-house.

My Fulbright grant was generous to me, so I was able to do a little traveling on my own. I continued plugging away at my forthcoming Columbia dissertation, and gave 3 talks on it in Greece. We also dug at ancient Corinth with the American School. In December, Bob Davis, and his friend, Steve Pudenz, visited, so I had the pleasure of showing them some of the best sites in Greece, such as Delphi, Naflion, Mycenae, Tiryns, and the theatre at Epidaurus.

The purpose of my Fulbright was to encourage international understanding, a life-long commitment of Russell's. I was therefore a little dismayed to find myself not relishing life in Greece. Constantly I was reminded of all the things we take for granted; and not "we" meaning Western Civilization, but we in the United States. After 15 months, I found New York absolutely calm and peaceful. (I will never again say New York is fast and busy, at least not in a bad way.) They don't drive on the sidewalk here, smoke non-stop, and you don't have the constant roar of motorcycles, the incessant squabbling between people over most transactions of everyday life. They still have political terrorism there, as you may have noticed in recent news. My experience abroad made me even more glad to be an American.

However, in fairness, Athens was an absolute Mecca when I returned there 3 weeks ago from a trip to Egypt. The monuments in Egypt were spectacular, and I don't see how Greece could not have acquired aspects of its civilization from the Egyptians (for example, temple architecture). (But not as much as is claimed in the sensational new book everyone is talking about, *Black Athena* by Martin Bernal. However an Athenian cabdriver will demand 10 pounds, say, then will be perfectly happy with 2. (In Athens, they go where they want and don't pick you up unless you're going the right way.) Then Egypt Air cancelled my flight on no notice when I arrived at the airport, causing me to miss my long-awaited connection home. (I gave a paper on the history of the 4th Century A.D at a papyrology conference.) So perhaps I'm not made to be a world traveller; not for extended periods, anyway. And perhaps I concur with what may have been Russell's outlook, that desiring international peace and understanding does not mean that all cultures have to be valued equally.

Oh, I also managed to run over to London's Red Lion Square during a 2-week trip to England in July. Russell sits quietly, largely unnoticed by all but pigeons, in this park. A life-size statue of Fenner Brockway was erected at its other end.

I am back at Columbia, teaching first-year Latin, and writing on "Kingship in Early Greece (1100-700 B.C.)" I returned September 12th.

FINANCES

(17) Treasurer Dennis Darland reports on the quarter ending 9/30/89

Bank balance on hand (6/30/89).....	6708.35

NEWS ABOUT MEMBERS

(18) Abercrombie (Neil) is off and running for Honolulu City Council. We wish him luck!

(19) McVeigh (Hugh) sent us his good-looking, lively 10-page newsletter, *The Humanist Monthly*, (Vol. 1, Issue 11, August 1989). "The Voice of Secular Humanism for the Capital District and the Hudson Valley. Capital District Humanist Society Established 1986." [And founded by Hugh.] In one item, he quotes Edd Doerr: [the Williamsburg Poll found that 10% of the U.S. population considers itself "secularist"; therefore, if secularists were an organized denomination, they would form the second largest in the country, after Catholics (about 22%) but ahead of the Southern Baptists (about 6%).

Hugh includes a few words of his own, titled *Some Thoughts of an Activist*: "The past 100 years have shown that a small group of thinkers and activists, without benefit of TV, computers, radio or typewriters can greatly affect the WORLD VIEW....The recent social upheavals seem to imply that SECULAR HUMANISM offers one logical way to approach our current dilemmas."

(20) Rey (Benito) invents a portable test instrument, which pleases his boss ----->

Response Technologies' employee improves Midax

A portable test instrument for checking the ion modulator and ion generator boards in the MIDAX 300 print engine was recently developed by Benito Rey of Moore Response Technologies in Mississauga, Ontario. The advantage of this new development is that it reduces down time due to the capability of testing malfunctioning ion boards using the portable ion board tester as opposed to stopping production and testing the boards while they are in the MIDAX system.

Moore extends its appreciation to Benito for his extra effort to do a quality job.

- (21) Paul Arthur Schilpp. The following message was received by DON JACKANICZ, in response to his inquiry:

Professor Schilpp has been in poor health for many months. He is not able to keep up with correspondence. He sends best wishes to those in the BR Society. (signed) M.S.

Creator of the innovative *Library of Living Philosophers*, and its first Editor, Professor Schilpp received the 1980 BRS Award, and is a BRS Honorary Member. For his remarks — "My Favorite Russell" — at the BRS 1980 Annual Meeting in Chicago, see RSN27-16.

CONTRIBUTIONS

We thank JEROLD HARTER for his recent contribution to the BRS Library.

* Contributions are welcome at any time, in any amount, large or small. Send them c/o the newsletter or the BRS Library, addresses on Page 1, bottom.

(25)

BRS GRANTS

The BRS 1990 Grants have been expanded in scope to include Master's as well as Doctoral candidates. The details are in the announcement shown below. It was mailed on 10/16/89 to 4 departments in each of 28 U.S. and Canadian colleges and universities. Included in the mailing were a press release ("3 SCHOLARS ARE HONORED ...") and an updated BRS Fact Sheet, shown on the following pages.

Please post

"The good life is one inspired by love and guided by knowledge"

THE BERTRAND RUSSELL SOCIETY, INC.

Announcements: 1990: A NEW PROGRAM of DOCTORAL and MASTER'S GRANTS
1989: THE DOCTORAL GRANT RECIPIENT

1990. The Bertrand Russell Society will award funds to help defray expenses of currently enrolled Doctoral and Master's candidates for graduate level degrees, whose proposed dissertation (Ph.D.) or thesis (M.A.) best gives promise of dealing in a significant way with the thought, life or times of Bertrand Russell.

Depending on the number and quality of applications, the award money will fall into one of two patterns: (a) \$1000 for a doctoral candidate and \$500 for a master's, or (b) \$500 to each of three candidates for the master's.

Candidates are required to send to the Society:

- (1) An abstract of his/her dissertation or thesis, and plan of study.
(2) A letter from the Chairman of the candidate's department which states the following: (a) for the Ph.D. candidate: that all work for the doctorate has been completed except the dissertation, and that its topic has received academic approval; (b) that the candidate for the master's is actively involved in graduate study, and is studying Russell via course work, personal reading, and/or research.
(3) (a) A letter from the dissertation adviser evaluating the applicant and plan of study. (b) A letter from the Chairman or potential thesis advisor evaluating the applicant and probable plan of study.
(4) A statement in the candidate's covering letter saying that if a grant is awarded, he/she will provide the Society, at its expense, with a copy of the completed work as approved by the department.

Applications and supporting documents should reach Professor Hugh S. Moorhead, Chairman, Philosophy Department, Northeastern Illinois University, 5500 North St. Louis Avenue, Chicago, IL 60625 by May 1, 1990. The recipients will be announced on or around July 1, 1990.

Please note: Candidates may be enrolled in any field. Past grants have gone to persons in the fields of History, Mathematics, and Philosophy. English, Education, Sociology and Psychology are other likely fields.

1989 Doctoral Grant recipient is Jose N. Pecina-Cruz, a doctoral candidate in the Physics Department of the University of Texas, Austin.

According to Mr. Pecina-Cruz, Russell devoted much work to the General Theory of Relativity (Theory of Gravitation), which he (P-C) intends to reconcile with Quantum Mechanics. Russell welcomed physics into new aspects of knowledge. In The Analysis of Matter, Russell suggested an approach — now known as the Lattice Gauge Theory — to quantifying gravity.

Honorary Members: Sir Alfred Ayer Paul Edwards Linus Pauling D.F. Pears Sir Karl Popper Conrad Russell The Earl Russell Paul A. Schupp Katherine Russell Tai

3 SCHOLARS ARE HONORED BY THE BERTRAND RUSSELL SOCIETY

At its 1989 Annual Meeting -- in New York City, June 23-25 -- the Bertrand Russell Society awarded honors to these 3 Russell scholars:

The 1989 Bertrand Russell Society Award to Paul Edwards.
 Professor of Philosophy at Brooklyn College and the New School for Social Research, "in recognition of his distinguished contributions to Russell Scholarship and courageous devotion to agnostic skepticism." As teacher, as Editor-in-Chief of the Macmillan's 8-volume *Encyclopedia of Philosophy*, and as General Editor of Macmillan's *Great Philosophers* series, he has contributed significantly to the growing renaissance in philosophy.

The 1989 Bertrand Russell Society Book Award to Alan Ryan,
 Professor of Politics at Princeton University, previously at New College, Oxford, for the originality and perceptiveness of his *Bertrand Russell: A Political Life*, in which he showed, among other things, the compatibility of Russell's philosophical and political views, both stemming from his devotion to the idea of individual freedom.

The Bertrand Russell Society Service Award to Harry Ruja.
 Professor Emeritus of Philosophy at San Diego State University, a member of the BRS since the year of its founding (1974); a Director since 1978; Vice-President 1981; Chairman 1982; resigned Chairmanship 1989. A Russell scholar and bibliographer, editor of the Russell essay collection *Mortals and Others*, he and Russell Archives Archivist, Kenneth Blackwell, are compiling a comprehensive 2-volume Russell bibliography for Unwin Hyman, London.

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970), philosopher, social reformer, Nobel Laureate, and possessor of one of the seminal minds of this century. A number of Society members are professional philosophers; most are members of the general public. Membership is open to anyone interested in Russell. For information about the Society, write "3", RD 1, Box 409, Coopersburg, PA 18036.

FOR SALE

- (28) 15-Year Index of BRS Newsletters, 1974-1988, Issues 1-60, 40 pages, over 2100 entries. Buy it from the newsletter, \$7 postpaid (within the USA). Or borrow it from the BRS Library, \$2 postage (within the USA). Addresses on Page 1.
- (29) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom: "Motto of The Bertrand Russell Society, Inc." New reduced USA price, \$5 for 90 sheets, postpaid. Canada & Mexico still \$6. Order from the newsletter, address on Page 1.

first spoke them.
 Woodrow Wyatt, the inter-

WOODROW WYATT: Lord

little, and I don't want people's im-
 aginations to be limited and en-

closed within what can be now known. I think that to enlarge your imaginative view of the world in the hypothetical realm is one of the uses of philosophy. But there's another use that I think is equally important, which is to show that there are things which we thought we knew and don't know. On the one hand, philosophy is to keep us thinking about things that we may come to know, and on the other hand to keep us modestly aware of how much what seems like knowledge isn't knowledge.

W.W.: Now in this way philosophy, in a sense, becomes a kind of servant of science.

B.R.: Well, that's part of it, but of course it isn't only a servant of science—because there are a number of things that science can't deal with. All questions of values, for example. Science won't tell you what is good and what is bad—what is good or bad as an end, not just as a means.

W.W.: But what change has there been over the years in the attitude of philosophers and the public to philosophy?

B.R.: That depends upon the school of philosophy that you're thinking of. In both Plato and Aristotle the main thing was an attempt to understand the world, and that, I should say personally, is what philosophy ought to be doing. Then you come on to the Stoics and their emphasis was mainly on morality—that you ought to be stoical, you ought to endure misfortunes patiently—and that came to be a popular use of "philosopher."

W.W.: Would you say that Marx was a philosopher?

B.R.: Well, he was certainly in a sense a philosopher, but now there you have an important division amongst philosophers. There are some philosophers who exist to uphold the status quo, and others who exist to upset it—Marx of course belongs to the second lot. For my part I should reject both those as not being the true business of a philosopher, and I should say the business of a philosopher is not to change the world but to understand it, which is the exact oppo-

site to what Marx said.

W.W.: What is the main trend of philosophy today?

B.R.: Well, one would have to distinguish there between English-speaking countries and continental European countries. The trends are much more separate than they used to be. Very much more. In English-speaking countries and especially in England, there is a new philosophy which has arisen, I think, through the desire to find a separate field for philosophy. In what I was saying a moment ago, it would appear that philosophy is merely incomplete science, and there are people who don't like that view. They want philosophy to have a sphere to itself. That has led into what you may call linguistic philosophy, in which the important thing for the philosopher is not to answer questions but to get the meaning of the questions quite clear. I myself can't agree to that view, but I can give you an illustration. I was once bicycling to Winchester, and I lost my way, and I went to a village shop and said, "Can you tell me the shortest way to Winchester?" and the man I asked called to a man in a back room whom I couldn't see—"Gentleman wants to know the shortest way to Winchester." And a voice came back, "Winchester?"—"Aye"—"Way to Winchester?"—"Aye"—"Shortest way?"—"Aye"—"Don't know." And so I had to go on without getting any answer. Well, that is what Oxford philosophy thinks one should do.

W.W.: What practical use is your sort of philosophy to a man who wants to know how to conduct himself?

B.R.: A great many people write to me saying they are now completely puzzled as to how they ought to conduct themselves, because they have ceased to accept the traditional signposts to right action and don't know what others to adopt. I think that the sort of philosophy I believe in is useful in this way: that it enables people to act with vigor when they are not absolutely certain that that is the right action. I think nobody should be certain of anything. If you're certain, you're certainly wrong, because nothing deserves certainty,

and so one ought always to hold all one's beliefs with a certain element of doubt and one ought to be able to act vigorously in spite of the doubt. After all, this is what a general does when he is planning a battle. He doesn't quite know what the enemy will do, but if he's a good general he guesses right. If he's a bad general he guesses wrong. But in practical life one has to act upon probabilities, and what I should look to philosophy to do is to encourage people to act with vigor without complete certainty.

W.W.: What do you think is the future of philosophy?

B.R.: I don't think philosophy can, in future, have anything like the importance that it had either to the Greeks or in the Middle Ages. I think the rise of science inevitably diminishes the importance of philosophy.

W.W.: How would you summarize the value of philosophy in the present world and in the years to come?

B.R.: I think it's very important in the present world. First, because, as I say, it keeps you realizing that there are very big and very important questions that science, at any rate at present, can't deal with and that a scientific attitude by itself is not adequate. And the second thing it does is to make people a little more modest intellectually and aware that a great many things which have been thought certain turned out to be untrue, and that there's no short cut to knowledge. And that the understanding of the world, which to my mind is the underlying purpose that every philosopher should have, is a very long and difficult business about which we ought not to be dogmatic.

RELIGION

W.W.: Have you ever had religious impulses, Lord Russell?

B.R.: Oh, yes. When I was adolescent I was deeply religious. I was more interested in religion than in anything else, except perhaps mathematics. And being interested in religion led me—which it doesn't seem often to do—to look into the question of whether there was

reason to believe it. I took up three questions. It seemed to me that God and immortality and free will were the three most essential questions, and I examined these one by one in the reverse order, beginning with free will, and gradually I came to the conclusion that there was no reason to believe in any of these. I thought I was going to be very disappointed, but oddly enough I wasn't.

W.W.: Do you think it is certain that there's no such thing as God, or simply that it is just not proved?

B.R.: I don't think it's certain that there is no such thing—no—I think that it is on exactly the same level as the Olympic gods, or Norwegian gods; they also may exist, the gods of Olympus and Valhalla. I can't prove they don't, but I think the Christian God has no more likelihood than they had. I think they are a bare possibility.

W.W.: Do you think that religion is good or harmful in its effects?

B.R.: I think most of its effects in history have been harmful. Religion caused the Egyptian priests to fix the calendar, and to note the occurrence of eclipses so well that in time they were able to predict them. I think those were beneficial effects of religion; but I think a great majority have been bad. I think they have been bad because it was held important that people should believe something for which there did not exist good evidence and that falsified everybody's thinking, falsified systems of education, and set up also, I think, complete moral heresy; namely, that it is right to believe certain things, and wrong to believe certain others, apart from the question of whether the things in question are true or false. In the main, I think religion has done a great deal of harm. Largely by sanctifying conservatism and adhesion to ancient habits, and still more by sanctifying intolerance and hatred. The amount of intolerance that has gone into religion, especially in Europe, is quite terrible.

W.W.: But then, if a religion is harmful, and yet humans have always insisted on having one, what is the answer?

B.R.: Oh, humans haven't. Some have, and those are the persons who are used to it. In some countries, for instance, people walk on stilts, and they don't like walking without stilts. Religion is just the same thing. Some countries have got accustomed to it. I spent a year in China, and I found that the ordinary average Chinese had no religion whatsoever, and they were just as happy—I think, given their bad circumstances, happier than most Christians would have been.

W.W.: But I think a Christian would say that if he could convert them into being Christians they'd be much happier.

B.R.: Well, I don't think that's borne out by the evidence at all.

W.W.: Yes, but now doesn't humankind rather search for some cause of faith outside itself, which appears to be bigger than humankind, not merely as a question of cowardice or leaning on it, but also wanting to do something for it?

B.R.: Well, but there are plenty of things bigger than oneself. I mean, first of all there's your family, then there's your nation, then there's humankind in general. Those are all bigger than oneself and are quite sufficient to occupy any genuine feelings of benevolence that a person may have.

W.W.: Do you think that organized religion is always going to go on having the same sort of grip on humankind?

B.R.: I think it depends upon whether people solve their social problems or not. I think that if there go on being great wars and great oppressions and many people leading very unhappy lives, probably religion will go on, because I've observed that the belief in the goodness of God is inversely proportional to the evidence. When there's no evidence for it at all, people believe it, and, when things are going well and you might believe it, they don't. So I think that, if people solve their social problems, religion will die out. But on the other hand, if they don't, I don't think it will.

W.W.: Do you think that you and I are going to be completely snuffed out when we die?

B.R.: Certainly, yes. I don't see why not. I know that the body disintegrates, and I think that there's no reason whatever to suppose that the mind goes on when the body has disintegrated.

WAR AND PACIFISM

W.W.: Lord Russell, do you think it reasonable to say there have been just wars.

B.R.: Yes, I think it's quite reasonable, though, of course, you have to define what you mean by just. You could mean, on the one hand, wars which have a good legal justification, and certainly there have been quite a number of wars where one side had a very good legal justification. Or you could mean wars which are likely to do good rather than harm, and that isn't at all the same classification. Not at all.

W.W.: You were a pacifist in the First World War. Don't you think you were a bit inconsistent in not being a pacifist in the Second World War?

B.R.: Well, I can't think so at all. I'd never have taken the view that all wars were just or that all wars were unjust. Never. I felt some were justified and some were not, and I thought the Second World War was justified, but the First I thought was not.

W.W.: Do you think that people enjoy wars?

B.R.: Well, a great many do. It was one of the things that struck me in 1914 when the First War began. All my pacifist friends, with whom I was in time to work, thought that wars are imposed upon populations by the wicked machinations of governments, but I walked about the streets of London and looked in people's faces, and I saw that they were really all happier than they were before the war had started. I said so in print and I caused great heart-searchings among pacifist friends, who didn't like my saying this. I still think that

a great many people enjoy a war provided it's not in their neighborhood and not too bad; when the war comes onto your own territory it's not so pleasant.

W.W.: But isn't it part of human nature to have wars?

B.R.: Well, I don't know what human nature is supposed to be. But your nature is infinitely malleable, and that is what people don't realize. Now if you compare a domestic dog with a wild wolf, you will see what training can do. The domestic dog is a nice comfortable creature, barks occasionally, and he may bite the postman, but on the whole he's all right; whereas the wolf is quite a different thing. Now you can do exactly the same thing with human beings. Human beings according to how they're treated will turn out totally different, and I think the idea that you can't change human nature is so silly.

W.W.: But surely we've been a long time at the job of trying to persuade people not to have wars, and yet we haven't got very far.

B.R.: Well, we haven't tried to persuade them. A few, a very few, have tried to, but the great majority have not.

COMMUNISM AND CAPITALISM

W.W.: What do you think are the similarities between communism and capitalism, Lord Russell?

B.R.: There are quite a lot of similarities which can result almost inevitably, I think, from modern technique. Modern technique requires very large organizations, centrally directed, and produces a certain executive type to run them. And that is equally true in communist and in capitalist countries, if they are industrially developed.

W.W.: Do you think that they produce a similar attitude of mind, these large organizations in, say, Russia and America?

B.R.: I think so, though not completely. I mean, there are differences in degree, but not in kind.

... I think there is a very great similarity between a really powerful American executive and a Soviet administrator. There are more limitations upon what the American executive can do, but in kind they are the same sort of thing.

W.W.: After the First World War you went to Russia, and, at a time when most people of the Left were giving three cheers for Russia, you struck rather a discordant note. Do you still think that what was going on in Russia then was undesirable?

B.R.: Oh, I do, and I think the Russian regime that has resulted is not particularly desirable from my point of view, because it doesn't allow for liberty, it doesn't allow for free discussion, it doesn't allow for the unfettered pursuit of knowledge. It encourages dogmatism, it encourages the use of force to spread opinion, it does a number of things which as an old liberal I find very, very distasteful indeed.

W.W.: Do you mean that the communists in Russia, having got hold of this apparatus of government, now no longer believe in the dictatorship of the proletariat?

B.R.: Yes, I do. The proletariat is a Pickwickian word, as it's used in Russia. When I was there I found that Lenin counted as a proletarian, but the absolutely miserable beggars in the street who couldn't get enough to eat were counted lackeys of the bourgeoisie.

W.W.: I see what you mean. But to move on to another area where communism is practiced on a very large scale—China—do you think that China is as great a threat to what I won't now call the free world, but the parliamentary, as Russia is?

B.R.: Yes, I should think, in the long run, perhaps a greater threat. China is newer to it than the Russians are and is still at an earlier and more fanatical stage than the Russians have reached. And China has a much larger population than Russia. It has a population which is naturally industrious—they have always been industrious; and it is capable of being a more powerful state than Russia, and I think has

at least as great men.

W.W.: Do you think it is possible for communism and capitalism to learn to live side by side in the world together?

B.R.: Yes, it certainly is possible. It's only a question of getting used to each other. Now take the Christians and the Mohammedans. They fought each other for about six centuries, during which neither side got any advantage over the other, and at the end of that time some man of genius said: "Look, why shouldn't we stop fighting each other and make friends?" And they did, and that's all right, and just the same thing can happen with capitalism and communism as soon as each side realizes that it can't gain the world.

TABOO MORALITY

W.W.: Lord Russell, what do you mean by taboo morality?

B.R.: Taboo morality is characteristic of the primitive mind. It is the only kind, I think, in primitive tribes where, for example, it would be a rule you must not eat out of one of the chief's dishes.

Of course a great deal of taboo morality is entirely compatible with what one might call rational morality. For instance, that you shouldn't steal or that you should not murder. Those are precepts which are entirely in accord with reason, but they are set forth as taboos; they have consequences that they ought not to have. For instance, in the case of murder, it is considered that it forbids euthanasia, which I think a rational person would be in favor of.

W.W.: Well, if you don't believe in religion, and you don't, and if you don't think much of the unthinking rules of taboo morality, do you believe in any general system of ethics?

B.R.: Yes, but it's very difficult to separate ethics altogether from politics. Ethics, it seems to me, arise in this way. A man is inclined to do something which benefits him and harms his neighbors. Well, if it harms a good many of his neighbors, they will combine together and say, "Look, we don't like this

sort of thing, we will see to it that it doesn't benefit the man," and that leads to the criminal law, which is perfectly rational. It's a method of harmonizing the general and private interest.

W.W.: Is there such a thing as sin?

B.R.: No. I think sin is difficult to define. If you mean merely undesirable actions, of course there are undesirable actions. When I say *undesirable*, I mean that they are actions which I suppose do more harm than good, and of course there are. But I don't think sin is a useful conception. I think sin is something that it is positively good to punish, such as murder, not only because you want to prevent murder but because the murderer deserves to suffer.

W.W.: A large part of taboo morality affects sexual relations. And a very large part of your output in writing has been about sexual relations. What advice would you give now to people who want to conduct themselves sensibly so far as sex is concerned?

B.R.: Well, I should like to say, by way of preface, that only about 1 percent of my writings are concerned with sex, but the conventional public is so obsessed with sex that it hasn't noticed the other 99 percent of my writings. I should like to say that, to begin with, I think 1 percent is a reasonable proportion of human interest to assign to that subject. But I should deal with sexual morality exactly as I should with everything else. I should say that, if what you're doing does no harm to anybody, there's no reason to condemn it. And you shouldn't condemn it merely because some ancient taboo has said that this is wrong. You should look into whether it does any harm or not, and that's the basis of sexual morality as of all other.

W.W.: To come back to the basis of what we've just been talking about—the unthinking rules of taboo morality. What damage do you think they are doing now?

B.R.: Taboo morality certainly is doing harm today. Take, for example, the question of birth control.

There is a very powerful taboo by certain sections of the community which is calculated to do very enormous harm. Very enormous harm. It is calculated to promote poverty and war and to make the solution of many social problems impossible. That is, I think, perhaps the most important, and I think there are a number of others. Indissolubility of marriage is definitely harmful; it is based solely upon ancient tradition and not upon examination of present circumstances.

POWER

W.W.: Lord Russell, what are the impulses that make men want power?

B.R.: I should suppose that the original impulses, out of which subsequent power-loving people got their drive, came in times that were liable to occasional famine, and when you wanted to be sure that if the food supply ran short it wouldn't be you who would suffer. It required that you have power.

W.W.: What are the kinds of power that have developed since then?

B.R.: Well, there are different ways of classifying powers. One of the most obvious, I think, is that of direct power over the body. This is the power of armies and police forces. Then there is the power of reward and punishment, which is called the economic power. And then, finally, there is propaganda power, a power to persuade.

W.W.: Can we turn a moment to another form of power—economic. Do you think that Marx put too much emphasis on the importance of economic power?

B.R.: Marx, in the first place, put too much emphasis on economic as opposed to other forms of power. Second, misled by the state of business in the 1840s in England, he thought that it was ownership which gives power and not executive control. Both those interpretations led him to propose a panacea for all the ills of the world which proved entirely fallacious.

W.W.: Do you think economic power needs curbing?

B.R.: Yes, I think every kind of power needs curbing because certainly the power to starve large regions is very undesirable. I think the economic power of certain regions in the Middle East to withhold oil if they like is not at all a desirable kind of thing.

W.W.: Now how important is this whole problem of use and abuse of power in a person's life.

B.R.: I think it's of quite enormous importance, and in fact I think it's almost the main difference between a good government and a bad one. In a good government, power is used with limitations and with checks and balances and in a bad government it's used indiscriminately.

W.W.: Do you think that, broadly speaking, the democratic systems of the West produce a roughly reasonable balance between the need of government to take action in a firm and decisive way and the need of the government to satisfy people that the action they're taking is in conformity with what people want?

B.R.: Well, certainly we are very much better than totalitarian governments. Very much better. For the reason that we have certain ultimate curbs on power. But I think there ought to be some rather more immediate curb than very occasional general elections. In the modern world, where things are so closely integrated, that is hardly enough, and we ought to have more in the way of referendums.

W.W.: Don't you think that referendums would be a rather clumsy way of doing this?

B.R.: Oh, they'd be clumsy and slow. But I think they might be better than a system in which it's possible at any moment for a government to plunge its country into utter and total disaster without consulting anybody.

WHAT IS HAPPINESS?

W.W.: Lord Russell, you seem to

be a very happy person. Have you always been so?

B.R.: No, certainly not. I've had periods of happiness and periods of unhappiness. Luckily for me the periods of happiness seem to lengthen as I grow older.

W.W.: What do you think are the ingredients that make for happiness?

B.R.: Well, I think four are the most important. Perhaps the first of them is health; the second, sufficient means to keep you from want; third, happy personal relations; and fourth, successful work.

W.W.: What are the factors that militate against happiness?

B.R.: Well, there are quite a number, apart from the opposites of the things we're talking about. Now one of the things that militates against happiness is worry, and that's one respect in which I've become much happier as I've grown older. I worry much less and I found a very useful plan in regard to worry, which is to think, "Now what is the very worst thing that could happen?" . . . And then think, "Well, after all it wouldn't be so very bad a hundred years hence; it probably won't matter." After you've really made yourself think that, you won't worry so much. Worry comes from not facing unpleasant possibilities.

W.W.: How important do you think boredom is?

B.R.: I think it's immensely important, and I think it's—I won't say it's distinctly human, because I've looked at apes in the zoo and they seemed to me to be experiencing boredom—but I don't think other animals are bored. I think it's a mark of higher intelligence, but I think the importance of it is quite enormous. You can see it from the way that savages, when they first come in contact with civilized people, want above all things alcohol. They want it far more than they want the Bible or the Gospel or even blue beads, and they want it because for a moment it takes away boredom.

W.W.: But how is one to overcome boredom in people, say, girls

who are quite well educated? They marry and then have nothing else to do but look after the house.

B.R.: Well, it's a bad social system. I don't think that you can always alter it by individual action, but that example you give is nowadays very important. It shows that we haven't got a proper social system because everybody ought to be able to exercise whatever useful skill he or she possesses. Modern highly educated women after they marry are not so very well able to, but that's an effect of our social system.

W.W.: Do you think that it helps people to be happy to have some cause to live for and with?

B.R.: Yes, provided they can succeed more or less. I think if it's a cause in which there is no success they don't get happy. But if they can get a measure of success from time to time, then I think it does help. And I think I should go on from that to another thing, which is that side interests, especially as one gets older, are a very important element in happiness. The more your interests are impersonal and extend beyond your own life, the less you will mind the prospect that your own life may be going to come to an end before very long. I think that's a very important element of happiness in old age.

W.W.: What do you think of all these formulae that people are constantly issuing about how to live a long life and be happy?

B.R.: Well, as to how to live a longer life, that's a medical question and not one on which I should like to express an opinion. I get a great deal of literature from the advocates of these systems. They tell me that if only I took their drugs my hair would turn black again. I'm not sure that I should like that because I find that the whiter my hair becomes the more ready people are to believe what I say.

NATIONALISM

W.W.: Do you think that nationalism is a good or a bad thing, Lord Russell?

B.R.: If you want to see foreign

countries you have to travel poor, and in that respect I think there's a great deal to be said for nationalism. For keeping diversity—in literature, in art, in language, and all kinds of cultural things. But when it comes to politics, I think nationalism is unmitigatedly evil. I don't think there is a single thing to be said in its favor.

W.W.: Why is nationalism harmful?

B.R.: What I mean by it being harmful is that it's a part of its teaching to inculcate the view that your own country is glorious and has always been right in everything, whereas other countries—well, as Mr. Podsnap says in Dickens, "Foreign nations, I am sorry to say, do as they do." I don't think that it's right to view foreign nations in that way. One sees curious examples of it. I wrote a book in which I was talking about nationalism, and I said, "There is, of course, one nation which has all the supreme virtues that every nation arrogates to itself. That one is the one to which my reader belongs." And I got a letter from a Pole saying, "I'm so glad you recognize the superiority of Poland."

W.W.: Why do people want to be divided up into national states?

B.R.: Well, it is part of our emotional apparatus that we are liable to both love and hate, and we like to exercise them. We love our compatriots and we hate foreigners. Of course we love our compatriots only when we're thinking of foreigners. When we've forgotten foreigners we don't love them so much.

W.W.: We all know that Americans and Europeans suffer from racial prejudice. Do you think that Asians and Africans suffer from racial prejudice any less?

B.R.: Not a bit less. And in fact because it's rather new with them they probably suffer more at the present moment. I should think that both African and Asian nationalism are, at the moment, more fierce than any that exist among Europeans, because they've just awakened to it. I think it is a very, very great danger. I think nationalism is, apart from the tension and the danger of an East-West war, I

think nationalism is the greatest danger that humankind is faced with at the present time.

W.W.: Why do you think nationalism seems to be so much more virulent today than it ever has been before?

B.R.: Oh, it's due to education. Education has done an awful lot of harm. I sometimes think it would have been better if people were still unable to read and write. Because the great majority, when they learn to read and write, become open to propaganda, and in each country the propaganda is controlled by the state and is what the state likes. And what the state likes is to have you quite ready to commit murder when you're told to.

W.W.: Is there any solution to this problem of nationalism other than having, say, an imminent invasion from Mars?

B.R.: Well, that of course would stop it at once. We should then have planetary nationalism for our planet against all other planets. We should teach in schools how much more noble our planet has always been than these wretched Martians, of whom we shouldn't know anything and therefore we could imagine any number of vices, so that would be a very simple solution. But I'm afraid we may not be able to do it that way. I think we've got to hope that people will get positive aims—aims of promoting the welfare of their own and other countries, rather than these negative aims of strife.

THE ROLE OF THE INDIVIDUAL

W.W.: What do you mean by the role of the individual?

B.R.: I'm thinking primarily of activities which an individual can carry out otherwise than as a member of an organization. I think there are a great many very important and very useful, desirable activities which have hitherto been carried out by individuals without the help of an organization, and which are coming more and more to depend upon organizations. The great men of science of the past didn't depend

upon very expensive apparatus—great men like Copernicus, Galileo, Newton, and Darwin. They did their work as individuals, and they were able to.

W.W.: But may one go a little further into cultural and scientific freedom and what precisely it means in its importance to the community?

B.R.: Well, I came to the conclusion that broadly speaking the important impulses that promote behavior can be divided into creative and possessive. I call an impulse creative when its aim is to produce something which wouldn't otherwise be there and is not taken away from anybody else. I call it possessive when it consists in acquiring for yourself something which is already there, such as a loaf of bread. Now of course both have their function, and man has to be sufficiently possessive to keep himself alive, but the real important impulses, when you're talking about the sphere of liberty, are creative ones. If you write a poem you don't prevent another person from writing a poem. If you paint a picture, you don't prevent another from painting a picture. Those things are creative and are not done at the expense of somebody else, and I think those things ought to have absolute liberty.

W.W.: Why is it, do you think, so many discoveries have shocked people?

B.R.: Because they make people feel unsafe. Every human being, like every animal, wants to live in what is felt to be a safe environment—an environment where you won't be exposed to unexpected perils. Now when a man tells you that something you've always believed was in fact not true, it gives you a frightful shock and you think, "Oh! I don't know where I am. When I think I'm planting my foot upon the ground, perhaps I'm not." And you get into a terror.

W.W.: Well, this really affects discoveries in the realm of thought rather than in practical science. I mean, nobody minds if somebody invents a machine that will go to the moon.

B.R.: Well, no. But they do mind

—at least some people mind, though not as many as I should have expected—a machine that would destroy the human race, which is also part of science.

W.W.: You attach enormous importance to this question of the role of the individual. Why have you attached so much importance to it?

B.R.: Because all the important human advances that we know of since historical times began have been due to individuals of whom the majority faced virulent public opposition.

W.W.: Do you think that fear of public opinion has stopped many people from doing good and sensible things?

B.R.: Yes, it has a very profound effect, especially in times of excitement when there's a great deal of mass hysteria about. A great many people are terrified of going against mass hysteria with the result that bad things triumph where they shouldn't.

W.W.: Do you think that applies to scientists and artists?

B.R.: Yes, I think so. I think scientists have the prerogative that they are sometimes able to prove that they're right; but artists can't prove that they are right. An artist can only hope that other people will think so; so I think the artist is in a greater difficulty than the scientist. But the scientist in the modern world undoubtedly is in difficulty, because he may make discoveries that are inconvenient to the government and in that case he'll get in trouble.

W.W.: Well, what about people who are in a sense thinkers and not strictly either artists or scientists devising practical things?

B.R.: Well, of course, that depends. A great many thinkers do take care not to express in any public way opinions which will bring them obloquy.

W.W.: Do you think any new limitations on liberty are needed?

B.R.: Yes, certainly. Limitations on national liberty are needed, and

there are some things that are absurd. The arguments that socialists used in favor of nationalizing natural resources have now become arguments in favor of internationalizing natural resources. The most obvious example is oil. It's a little absurd that a very small territory which happens to have a great deal of oil on its territory should be the sole possessor of that oil.

W.W.: Do you think liberties need expanding?

B.R.: Well, liberties need enlarging in a mental sphere, and, if anything, diminishing in what I call the possessive sphere.

FANATICISM AND TOLERANCE

W.W.: What is your definition of fanaticism, Lord Russell?

B.R.: I should be inclined to say that a man is a fanatic if he thinks some one matter so overwhelmingly important that it outweighs anything else at all. To give an example, I suppose all decent people dislike cruelty to dogs, but if you thought that cruelty to dogs was so atrocious that no other cruelty should be objected to in comparison, then you would be a fanatic.

W.W.: Why do you think people do get seized in large numbers with fanaticism?

B.R.: Well, it's partly that it gives you a cosy feeling of cooperation. A fanatical group all together have a comfortable feeling that they're all friends with one another. They are all very much excited about the same thing. You can see it in any political party. There's always a fringe of fanatics in any political party, and they feel very cosy with one another; and when that is spread about and is combined with a propensity to hate some other group, you get fanaticism well developed.

W.W.: But might fanaticism at times provide a kind of mainspring for good actions?

B.R.: It provides a mainspring for actions all right, but I can't think of any instance in history where it's

provided the mainspring for good actions. Always I think it has been for bad ones because it is partial, because it almost inevitably involves some kind of hatred. You hate the people who don't share your fanaticism. It's almost inevitable.

W.W.: What is your definition of toleration?

B.R.: Well, it varies according to the direction of your thinking. Toleration of opinion, if it's really full-blown, consists in not punishing any kind of opinion as long as it doesn't issue in some kind of criminal action.

W.W.: What are the limits of toleration, and when does toleration turn into license and chaos?

B.R.: I think the ordinary liberal answer would be that there should be complete toleration as regards the advocacy of opinions as to what the law ought to be; but there should not be complete toleration for advocacy of acts which remain criminal until the law is changed. To take an illustration, you might, for instance, be in favor of reintroducing capital punishment in a country where it doesn't exist, but you shouldn't be free yourself to assassinate somebody that you thought deserved it.

W.W.: Are you optimistic that people and governments will do the right thing about the H-bomb?

B.R.: Well, there are times when I'm optimistic and times when I'm not. I don't think anybody can tell how much sense governments will have. One hopes, of course, that in time they will begin to understand the problems they deal with.

THE FUTURE OF HUMANKIND

W.W.: Can we turn now to more cheerful things?

B.R.: Well, I should say that the first thing that is needed is a realization that the evils of the world, including the evils which formerly could not possibly have been prevented, can now be prevented. They continue to exist only because people have passions in their souls which are evil and which make them unwilling to take the steps to make other people

happy. I think the whole trouble in the modern world, given the powers of modern technique, lies in the individual psychology, in the individual person's bad passions. If that were realized, and if it were realized further that to be happy in a modern, closely integrated world, you have to put up with your neighbor also being happy, however much you may hate him. I think if those things were realized, you could get a world far happier than any that has ever existed before.

W.W.: What sort of things do you think you could push away if your people direct their passions in the sort of way you're suggesting?

B.R.: Well, first of all, war. Second, poverty. In the old days, poverty was unavoidable for the majority of the population. Nowadays it isn't. If the

world chose, it could, within forty years, abolish poverty. Illness, of course, has been enormously diminished and could be diminished still further. There is no reason why people should be unable to have periods of sheer enjoyment frequently.

W.W.: Well, we're now talking really about the creation of positive good. What other positive good can be produced by man, do you think, in the future?

B.R.: I think a great deal depends on education. I think in education you will have to stress that humankind is one family with common interests. That therefore cooperation is more important than competition, and that to love your neighbor is not only a moral duty nominally inculcated by the churches, but is also much the wisest

policy from the point of view of your own happiness.

W.W.: What final message would you like to give to future humankind?

B.R.: I should like to say that you have, through your knowledge, powers which humans have never had before. You can use these powers well or you can use them ill. You will use them well if you realize that humankind is all one family and that we can all be happy or we can all be miserable. The time is passed when you could have a happy minority living upon the misery of the great mass. That time is passed. People won't acquiesce in it, and you will have to learn to put up with the knowledge that your neighbor is also happy, if you want to be happy yourself. I think, if people are

wisely educated, they will have a more expansive nature and will find no difficulty in allowing the happiness of others as a necessary condition of their own. Sometimes in a vision, I see a world of happy human beings, all vigorous, all intelligent, none of them oppressing, none of them oppressed. A world of human beings aware that their common interests outweigh those in which they compete, striving toward those really splendid possibilities that the human intellect and the human imagination make possible. Such a world as I was speaking of can exist if everyone chooses that it should. And if it does exist—if it does come to exist—we shall have a world very much more glorious, very much more splendid, more happy, more full of imagination and happy emotions, than any world that the world has ever known before. ✽

Bertrand Russell is clearly one of the great secular humanists of the twentieth century. Few philosophers have placed greater emphasis upon, and been more personally devoted to, the ideals of love and knowledge. We should remember our great heroes and, therefore, I most welcome the "Bertrand Russell Speaks" interview.

I only wish to take exception to a statement made in the opening paragraph of the introduction. Strictly speaking, Russell devoted his life to the pursuit of truth and not "the pursuit of scientific, philosophic, and moral truth." He did not believe that there were different kinds of truth. He certainly did not hold, as the interview itself reveals, that philosophic truth differs from scientific truth. What makes philosophy different is not that it has a different way of truth but that it addresses the larger and more important questions and believes that, even where exact knowledge is not yet possible, greater understanding is. . . .

- 251 "Bertrand Russell as a Philosopher" by A.J. Ayer. BBC 1980
- 252 "Bertrand Russell" by Prof. Giovanni Costigan. 1986
- 253 "Portrait of the Father as Philosopher" by Katherine Tait. (In German)

Documentaries

- 275 "The Life and Times of Bertrand Russell". Soundtrack of BBC film. 1962
- 276 "Sound Portrait of Bertrand Russell" NPR dramatization. 1980
- 277 "Bertie and the Bomb" Soundtrack of BBC television broadcast. 1984

Annual meeting papers

- 300 "Bertrand Russell on Israel" by Harry Ruja. 1979
- 301 "Bertie and Litigation" by Lester Denonn. 1979
- 302 "Psychotherapy and Bertrand Russell" by Albert Ellis. 1979
- 303 "Bertrand Russell's Response to Marx" by Jack Pitt. 1979
- 304 Katharine Tait Reminiscences about her father. 1979
- 305 Presentation of Russell Society Award to Paul Arthur Schilpp. 1980
- 306 "The Primary Good" by Marvin Kohl. (incomplete) 1987
- 307 "Bertrand Russell on Education" by Michael Rockler. 1987
- 308 "Bertrand Russell on Ethics, Sex, and Marriage". (incomplete) 1987
- 309 "Bertrand Russell's World View" by Paolo Dao. 1987
- 310 "Bertrand Russell on Impulse: Critique of John Lewis" by Chandrakala Padia. 1987
- 311 "Bertrand Russell and the Greeks" by John Lenz. 1987
- 312 "Bertrand Russell and the Scientific Spirit" by Sam Labson. 1987

Cassettes may be borrowed for \$1.00 per tape.

Recent acquisitions:

- "Is Security Increasing?" Audiocassette of radio discussion with Russell, Walter Laves and Albert Hart. The University of Chicago Roundtable, Jan. 15, 1939. 30 min. Purchased with a donation from Jerold Harter.
- "Terms and Propositions in Russell's Principles of Mathematics" by Leonard Linsky. Offprint. Donated by the author.
- "An Annotated Bibliography of Some of the Principal Writings of Bertrand Russell on Education" by Joe Park. Offprint. Donated by the author.
- The Spinozistic Ethics of Bertrand Russell by Kenneth Blackwell. Donated by the author.
- "The Russell-Hook Debates of 1958: Arguments from the Extremes on Nuclear War and the Soviet Union" by William Gay. Paper read at the 2nd National Conference of Concerned Philosophers for Peace. Donated by the author.

Misc:

The Society needs a reviewer for Savage and Wade's Rereading Russell: Essays in Bertrand Russell's Metaphysics and Epistemology. There is no deadline. Review copies remain the property of the Society, and are only available for loan after a review has been published in the NEWS. Watch for Justin Leiber's review of Language, Mind and Matter, 1919-1926 in a forthcoming issue.

* Can anyone cite the source of this quotation, attributed to Russell?

"It is impossible to be an optimist if you were born around 1914."

Please send your response to Shari Haber, Metropolitan Cooperative Library, System Headquarters, 2235 N. Lake Ave., Suite 106, Altadena, CA 91001.

New book:

A reviewer is needed for the recently published Bertrand Russell's Dialogue with His Contemporaries by Elizabeth Eames. The work is an exploration of the development of Russell's philosophy with ten of his contemporaries: Bradley, Joachim, Moore, Frege, Meinong, Whitehead, Wittgenstein, Schiller, James, and Dewey. Southern Illinois University Press, 288 pages, \$34.95.

BRS LOCAL CHAPTERS

The BRS Chapter at McMaster met on 9/15/89, and heard a talk by Bansrajh Mattai, titled *Education And The Emotions, The relevance of the Russellian perspective.*

Dr. Mattai did his early work in Bertrand Russell's philosophy of education and completed a Ph.D. at the University of Southampton with a dissertation on *Bertrand Russell's Educational Thought: A Critique.*

He is now teaching in the Sociology Department of Joliet Junior College, Illinois.

The meeting also discussed plans for organizing the annual meeting of the Bertrand Russell Society, Inc., to be held at McMaster on June 23-25, 1990. The theme for submission of papers is *Illusion vs. Reality: Education and Religion.*

OTHER ORGANIZATIONS

- (37) Freethinkers' Society, Inc. has sent us its 4-page newsletter, *International Freethinker*, Vol 1, No. 2. The Society is "allied with other societies with compatible goals. Foremost among these is THE TRUTH SEEKER...first published in 1873." It quotes President John Adams saying: "This would be the best of all possible worlds if there were no religion in it." For more information: P.O.Box 2832, San Diego, CA 92112.
- (38) NACH, *The North American Committee for Humanism*, holds its Fourth Annual Humanist Weekend...in conjunction with the *Bragg Symposium* ...in Kansas City, MO, November 17-19, 1989. The principle speakers: Paul Kurtz, Donald Kaul, and William Jones. The theme: *Humanist Ethics, what makes them different?* The site: All Souls Unitarian Church, 4500 Warwick, Kansas City, MO 64111. For information: 816-444-2283.
- (39) NECLC, the *National Emergency Civil Liberties Committee*, announces its Bill of Rights Dinner, on Friday, December 1, 1989, 7 pm, at the Sheraton Centre Hotel, NYC. Its Tom Paine Award will go to Congressman Barney Frank (in 1962 it went to BR), and the Clark Foreman Memorial Award goes to The Chaney-Goodman-Schwerner Coalition. Reservations \$75 per person. NECLC, 175 Fifth Avenue, NY NY 10010.
- (40) FFRF, *Freedom From Religion Foundation*, as written up in *The Atlanta Constitution*, October 6, 1989, p. C1:

Atheists Gather to Keep Faith With Each Other

By Gayle White
Staff Writer

Their T-shirts proclaim, "Blasphemy Is a Victimless Crime," their songs ring out with the words, "I don't need Jesus," and in tones reminiscent of camp-meeting testimonials, they describe their "deconversion" experiences.

Atheists and agnostics from across the country are gathering in Atlanta this weekend for the annual convention of the Freedom From Religion Foundation.

The organization, founded in Madison, Wis., in 1978, has two purposes: to further the cause of separation of church and state and to educate the

public about non-theistic thought.

The convention gives members a chance for fellowship and exchange of information. It also gives them a chance to buy "Reason's Greetings" cards to mail out in December, "Freethinker" bumper stickers, and coffee mugs bearing pictures and quotations of famous atheists and agnostics.

Foundation members are not hostile to God, said Tom Malone, Southeast region vice president and head of the local chapter. "How can you be hostile to something that doesn't exist?"

The foundation does not attempt to pull people away from the church.

ATHEISTS Continued on C4

Doug Jager

We'll print the rest of this fine story in our next issue. It needs a full page, and we've run out of space.

RUSSELL SOCIETY NEWS

No. 65

February 1990

ANNUAL MEETING (1990)

- (1) June 22-24 at The Russell Archives. The Bertrand Russell Archives at McMaster University, Hamilton, Ontario, Canada is the handsome site of the BRS's 1990 Annual Meeting. We repeat what BRS President Michael Rockler said in the previous newsletter:

It is a sad fact that most members have never attended an Annual Meeting. That's a pity because attending a meeting and meeting fellow members is a very satisfying experience, quite aside from the fact that you see an interesting program and learn more about BR.

I know that -- alas! -- it can be expensive to attend a meeting. But if you cannot afford to attend a meeting every year, perhaps you can afford it once in a while, and if so, 1990 is a good year to do it...because the Archives are a special place. There you can see not only books, including BR's own personal collection of books, but also manuscripts, letters, pictures and posters...and meet Archivist Ken Blackwell and his Archives colleagues. BR's own personal desk (and chair), the one on which he did much of his writing, is there. You can also hear BR talk, on tape; there's a large library of tapes to choose from.

The program for the weekend includes a tour of the Archives; a talk by Michael Rockler, *Bertrand Russell and Education: Katharine Tait's Critique*; a Marvin Kohl workshop, *Russell's Theory of Rational Love*; a Don Jackanicz discussion, *Religion and Science*; Tim Madigan on *Russell and Dewey on Education: Similarities and Differences*; Thom Weidlich on *The Bertrand Russell/City College Case: 1940*; a talk by Louis Greenspan at the Saturday Night Banquet; *A History of the Bertrand Russell Society* by Lee Eisler; and a Red Hackle Hour before the Banquet.

There is a single, all-inclusive charge for all of this. It includes the registration fee; lodging Friday and Saturday nights in Wallingford Hall, an excellent McMaster Residence; all meals, from the Friday evening meal through Sunday morning breakfast, including the Saturday Night Banquet. The per person charge for double occupancy is \$110 Canadian; for single occupancy, \$125 Canadian. A U.S. Post Office money order for \$125 Canadian was \$108.76 US (on 1/29/90). A Pennsylvania bank wanted \$128.96 US for the equivalent.

We urge you to register immediately. This will help the McMaster planners. Please send \$110 or \$125 Canadian to THE BERTRAND RUSSELL ARCHIVES, Mills Memorial Library, McMaster University, Hamilton, Ontario, Canada L8S 4L6. Remember, the cheapest way to send money to Canada is by US Post Office Money Order.

Use the Registration Form on the blue top sheet of this newsletter. Thanks!

The May newsletter will provide certain specifics, such as how to head for McMaster (from anywhere), and where to check in on arrival, etc.

See you there!

- (2) Marvin Kohl's Workshop on *Russell's Theory of Rational Love* will meet Saturday, June 23rd, at 3:30 pm. Participants and suggestions are welcome. The topic: What is love, and can we (collectively or individually) determine what is worthy or most worthy of being loved?

Basic reading: *What I Believe* (1925), Section II, *The Good Life*. in *The Basic Writings of Bertrand Russell*, Egner and Denonn, eds. NY: Simon & Schuster, 1967. 371-375. You are strongly urged to read this in advance.

Other suggested readings:

- . Robert Brown, *Analyzing Love*. Cambridge: Cambridge University Press, 1987.
- . Marvin Kohl, *Brink, Russell and Rational Love*. RSN64-6.
- . Robert J. Sternberg, *Liking vs. Loving*. *Psychological Bulletin* 102:3 (1987), 331-345.

OFFICERS OF THE BERTRAND RUSSELL SOCIETY, INC.

- (3) Chairman, Marvin Kohl; President, Michael Rockler; Vice President, John Lenz; Treasurer, Dennis J. Dariand; Secretary, Don Jackanicz; Vice President/Information, Lee Eisler.

*Russell Society News, a quarterly. Lee Eisler, Editor, 1664 Pleasant View Road, Coopersburg, PA 18036

BY BERTRAND RUSSELL

(4) From *I Believe*, Clifton Fadiman, ed., NY:Simon & Schuster, 1939, pp. 409-412, with thanks to TOH STANLEY:

Bertrand Russell

NOTHING that has happened in the world since the first appearance of *Living Philosophies* has caused me to alter any of my beliefs, but some events have led to a change of emphasis. In ordinary life we do not have to proclaim vigorously that two and two are four, because we do not find it questioned; but if important governments put people to death for asserting it, we might have to devote time to the multiplication table which otherwise might be better employed. So it is at the present time. It had seemed, to my generation, that certain principles were definitely accepted in politics, e.g., that Jews and Christians should have the same social and political rights; that a man should not be deprived of life or liberty except by due process of law; and that there should be freedom of opinion except in so far as some interference might be necessary in time of actual war.

These principles, in whole or part, are now rejected by the governments of Germany, Italy, Russia, India, and Japan, not to mention many smaller countries. Those who disapprove of their rejection in one case very often approve of it in another. Communists are shocked by the tyranny in Fascist countries, but think it quite right that Stalin should be able to execute his colleagues whenever the humor seizes him. Fascists are horrified by the sufferings of Russian kulaks, but think that Jews deserve no mercy. The world grows more and more fierce, and fewer and fewer people object to atrocities committed by their own party.

In these circumstances, those of us who still believe in tolerance and democracy are told that we are condemning ourselves to futility, since victory must go either to the Fascists or to the Communists. I think this point of view quite unhistorical, but in any case I could not accept it.

To begin with the historical argument. For a time, the Western world was divided between the followers of Luther and the followers of Loyola; all governments were on one side or the other, fierce wars were fought, and the few who, like Erasmus, remained neutral might have been thought negligible. But after about a hundred years of slaughter without victory to either side, people got tired of the whole business and just stopped. To us, in retrospect, there seems very little to choose between persecuting Protestants and persecuting Catholics: we should divide the world of the seventeenth century into fanatics and sensible people, putting the opposing fanaticisms together as analogous follies. So, in retrospect, will Communism and Fascism appear. The ultimate victory is never to the fanatic, because he tries to keep men's emotions in a state of tension which the great majority, in the long run, find unbearable. The eighteenth century—the age of reason—was a period of relaxation after

the excitements of the wars of religion. So, I doubt not, the modern wars of ideologies will be succeeded by another age of reason, in which, once more, people will not be willing to persecute in the name of beliefs for which there is no evidence.

Fascism and Communism, when analyzed psychologically, are seen to be extraordinarily similar. They are both creeds by which ambitious politicians seek to concentrate in their own persons the power that has hitherto been divided between politicians and capitalists. Of course they have their differing ideologies. But an ideology is merely the politician's weapon; it is to him what the rifle is to the soldier. This is still true, psychologically, even if the politician is taken in by his own eloquence. The technique of both parties is the same: first, to persuade a minority by an ideology which appeals to hate; then, by some trick, to confine military power to this minority; and finally, to establish a tyranny. The method, so far as the modern world is concerned, was invented by Cromwell.

The defects of the method are obvious. Since it appeals to hate, it involves, internally, cruelty and suppression of every kind of freedom, and externally, a vehement reaction of fear and preparation for war. Owing to its revivalist technique, its success, like that of analogous religious movements in the past, cannot be more than temporary; before long, enthusiasm gives place to corruption, and zeal degenerates into the activities of spies and informers. The ruler, terrified of assassination and palace revolutions, is the prisoner of his own secret service; everyone else comes to know that the road to success is to denounce relations and friends for imaginary conspiracies. There is nothing new about all this; it may be studied in the pages of Tacitus as well as in recent accounts of Russia.

It is a great misfortune that so many radicals should have persuaded themselves that the millennium is to be reached along such a road, and should have closed their eyes to the similarity of different brands of totalitarian states. The mentality produced by the Great War has encouraged an excessive belief in what can be achieved by violence, without the concurrence of the populations concerned; and at the same time impoverishment has stimulated the desire to find an enemy to whom misfortunes may be attributed. The cure for the crisis due to the Great War is thought to be a still greater war; all the disillusionments of idealists at Versailles and after are forgotten. In this there is no wisdom. It is not by violence and cruelty and despotism that the happiness of mankind is to be secured. In 1914 the world started along a wrong road, which it is still traversing, faster and faster the longer the end of the journey remains out of sight. Perhaps the blind alley will have to be followed to the very end, as in the wars of religion, before men discover that it leads nowhere. But in the meantime those who retain the use of reason should not encourage the frantic stampede toward disaster.

BR ON WORLD GOVERNMENT

(5) *Why should we bother thinking about world government?*

It may be thought needlessly Utopian to consider world government, since it remains totally impossible so long as the East-West tension continues. It is, however, an urgent problem, since, unless it is solved within the next generation, it is unlikely that the human race will survive. A statement of this sort is found annoying, because people do not like changing their mental habits, and hating certain foreign nations is one of the most deeply ingrained of these habits.

It does not, of course, present itself in this way to their minds. What presents itself consciously is a quick conviction that any unusual thought is absurd. The conviction is so quick and firm that they never look to see whether it has a rational basis. I think, however, that anybody who can resist this unreasoning impulse must perceive that the survival of the human race depends upon the abolition of war, and that war can only be abolished by the establishment of a world government. (*Fact and Fiction* 1961 Simon & Schuster pp. 99-100)

What powers would a world government need?

Primarily those involving peace and war. It would need a monopoly of all the more important weapons of war. It would need the right to revise treaties between nations, and to refuse to recognize any treaty to which it would not give assent. It would need a firm determination to make war upon any nation which rebelled against its authority or committed a hostile aggression against any other nation.

But it would not need to control nations as regards their internal economic development, as regards their education or their religious institutions, or any of the matters that could rightly be regarded as internal. (Italics added.)

What, in fact, it should take away from a nation is what has long ago been taken away from an individual -- namely, the right to kill. Individual citizens, unless they are gangsters, do not feel their liberty unduly hampered by the fact that they cannot shoot their neighbor whenever he plays the piano too loudly.

Individual nations ought to learn that a similar limitation upon their liberty is equally unobjectionable. They ought to be content with liberty to control their own affairs, and not demand the opportunity to shoot foreigners whenever the whim takes them. It is this opportunity of which a world government would have to deprive them. But it need not deprive them of any liberty that a decent person could desire. (*Fact and Fiction* 1961 Simon & Schuster pp.100-101)

What are the prospects for world government in the near future?

Attempts to form new groups by purely voluntary co-operation usually fail, because whatever government is constituted for such groups does not command traditional respect, and is not likely to be allowed enough power to enforce respect.

The most important application of this principle in the present day is to world government.

For the prevention of war, the existence of a single Government for the whole planet is indispensable. But a federal Government formed by mutual agreement, as the League of Nations and the United Nations were formed, is sure to be weak, because the constituent nations will feel as the barons felt in the Middle Ages, that anarchy is better than loss of independence.

And just as the substitution of orderly government for anarchy in the Middle Ages depended upon the victory of the royal power, so the substitution of order for anarchy in international relations, if it comes about, will come about through the superior power of some one nation or group of nations. And only after such a single Government has been constituted will it be possible for the evolution towards a democratic form of international government to begin.

This view, which I have held for the last thirty years, encounters vehement opposition from all people of liberal outlook, and also from all nationalists of whatever nation. I agree, of course, that it would be far better to have an international Government constituted by agreement, but I am quite convinced that the love of national independence is too strong for such a Government to have effective power.

When a single Government for the world, embodying the military supremacy of some nation or group of nations, has been in power for a century or so, it will begin to command that degree of respect that will make it possible to base its power upon law and sentiment rather than on force, and when that happens, the international Government can become democratic.

I do not say that this is a pleasant prospect; what I do say is that men's anarchic impulses are so strong as to be incapable of yielding in the first place to anything but superior force. This would not be the case if men were more rational, or less filled with hatred and fear.

But so long as the present type of national sentiment persists, any attempt to establish a really vigorous international Government would be countered by an irresistible propaganda: "Would you rather live as slaves than die as free men?" the champions of national independence would ask. In every nation in which there was a good hope of not dying, but living, as free men, this rhetorical question would be answered by a general shout in favor of dying for freedom.

I do not say that there is no hope of a better method of ending the international anarchy; what I do say is that there is no hope of this unless and until individuals are much changed from what they are now. It will be necessary that individuals shall have less feeling of hostility and fear towards other individuals, more hope of security as regards their own lives, and a far more vivid realization that, in the world which modern technique has created, the need of world-wide co-operation is absolute, if mankind is to survive. Can a leopard change his spots? I believe that he can, but if not, terrible calamities must befall him.

(*New Hopes for a Changing World* 1951 Simon & Schuster pp.72-73)

...

BR's views on nuclear war -- which assume that nuclear war would destroy all life on earth -- are being called "extreme" by some. William C. Gay's paper *The Russell Hook Debates of 1958: Arguments from the Extremes on Nuclear War and the Soviet Union* was presented at the October 1989 meeting of *Concerned Philosophers for Peace*. In it Gay says:

I will focus on Russell's tendency to argue from the extreme premise that nuclear war could destroy all life and on Hook's tendency to argue from the other extreme premise that communism could destroy all freedom.

Is BR's view "extreme"? No one can know for certain whether a nuclear war would extinguish all life on earth. Maybe it would, maybe it wouldn't. If you assume that life would survive a nuclear war -- then if nuclear war occurs, and it turns out you were mistaken, nothing alive would be left. But if you make the other assumption, that life would not survive a nuclear war, then you become aware of the crucial importance of preventing war...and if you succeed, life can continue.

It is therefore prudent to assume the worst. BR, in assuming the worst, is in fact acting prudently.

Add to this BR's feeling that nuclear war was inevitable. As a student of history, BR believed that any horrible act that could occur, sooner or later would occur. No atrocity has ever failed to occur when the means of performing it were available. Man's inhumanity to man has always been limited by his means. Hitler killed millions of Jews and others; he had the means of doing so. He would surely have killed all the inhabitants of Churchill's England -- the only country that stood up to Hitler at the time, and fought him -- if he had had the means...if he had had A-Bombs.

At present, thousands of nuclear missiles are aimed at the adversary from both sides of the Iron Curtain. The means of fighting a nuclear war clearly existed in BR's day (and still exist today).

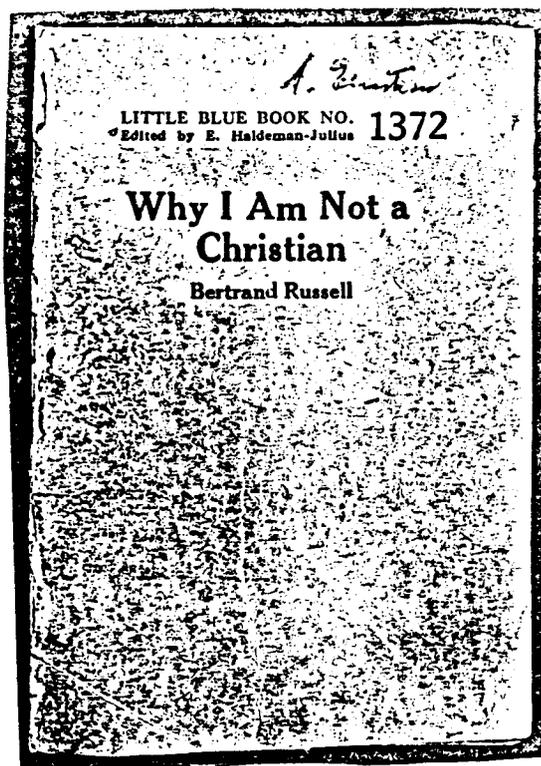

An interviewer told BR that some thought he was being "fanatical" in his views about the likelihood of nuclear war. BR's response was: "It is hard not to be fanatical. The issue is so large."

[Can someone supply the quotation (and source) in which BR says that any folly that could occur would occur? Ditto, BR's response to the interviewer. The Gay paper is in the RS Library.]

BR APPRECIATED

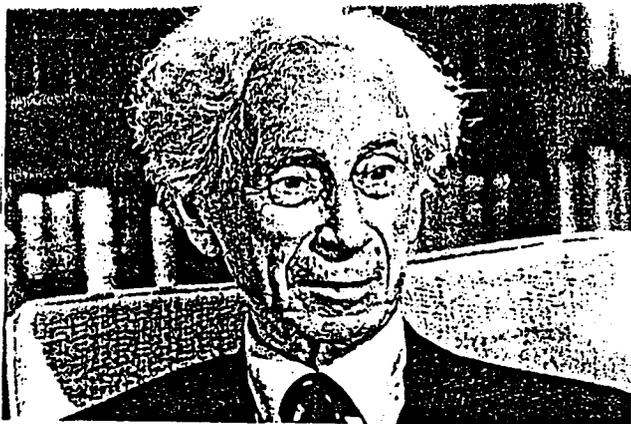

(6)

This is Albert Einstein's personal copy of *Why I Am Not A Christian*. Note -----> his signature in the upper right corner. Thank you, AL SECKEL.

BR INTERVIEWED

- (7) CBS Interview, See It Now (3/22/55). From *See It Now*, Murrow and Friendly, eds. NY: Simon & Schuster, 1955. Thank you, TOM STANLEY.

MURROW: Lord Bertrand Russell is a scientist, a philosopher, and an author. He won the Nobel prize for literature at the age of seventy-nine. He is now eighty-three. He lives at 41 Queens Road, Richmond, Surrey, and it was here that Howard Smith interviewed him.

SMITH: Well, Lord Russell, we've been talking a great deal about America's faults. Are there any British faults that make—that make relations difficult?

LORD RUSSELL: I think the British have very grave faults. I don't think they're political. I think they are more social. I am constantly really shocked by the impolite things that English people, in talk, will say about and to Americans—things that really make me blush, because they are so unjust. And I think they ought to learn the ordinary courtesies of life in dealing with Americans, which they don't seem to have at present, and I think that's been a very great source of trouble—very great.

SMITH: Well, Lord Russell, there seems to have been an unusual amount of friction between America and Great Britain just in the past year. What do you feel is wrong?

LORD RUSSELL: Well, the fundamental cause of the friction between England and America is a difference of view as to policy, especially, I think, in the East. The English have a more cautious approach to Eastern questions, we think, than you seem to have. We're more afraid of war and less persuaded of the justice of certain causes which appear just to America. I notice that Attlee said quite emphatically and without reservation that the Chinese Communist government ought to have Formosa. I think that is a view which is very general in England and hardly anybody holds it in America. It's a very great difference, and of course, there goes with that another difference which is: most English people who know anything about China consider that Chiang Kai-shek is a ruffian, a totalitarian, a bad man altogether, and not the sort of man that one wants to support. And also they think that Americans are quite mistaken in supposing that if Chiang Kai-shek, with the help of America, were to invade China, large parts of the Chinese population would come over to support him. Because they remember that Chiang Kai-shek was beaten because his troops deserted to the Communists. That was before the Communists had power to make them do so.

SMITH: Well, what about America's general attitude toward world affairs? Could you make any suggestion as to how we might develop our attitude?

LORD RUSSELL: Well, in Europe, I don't think I have much criticism of the American attitude. I think, as far as European affairs go, I am pretty much in agreement with it. It's—it's almost entirely as regards Asia that I don't agree. Not that I like the Communist regimes. I don't. I don't like them at all. But I don't think it's the duty of the West to go crusading against any regime it doesn't happen to like. That's altogether too serious. I think, of course, in your internal, national affairs, the will of the country is supreme, and if the country wants something, that happens, and you get the habit of thinking the will of the country is supreme. Now, in international affairs, that is not so. You meet the will of other countries and there has to be give and take, and you haven't the habit of give and take in politics in the same way, I think, that you would have after long experience. You don't—you feel as though you are giving away a principle when you concede things to the other party; whereas it's in the very essence of negotiation.

SMITH: Can you suggest any practical steps we might take to improve relations and to strengthen the Western Alliance morally?

LORD RUSSELL: I think that one of the things I should most wish to see is that there should be no more of this purging of libraries and purging of professors, and no longer the attempt to impose upon the public, by authority and misinformation, a false view about a great many important world problems; and that it should no longer be thought that a man who brings forward some fact that the authorities would like to have kept dark is necessarily disloyal. I think that is one of the main sources of trouble. Undoubtedly, the harshness in America toward people who are thought to be Communist sympathizers is a thing which has shocked English opinion—and, I expect, continental opinion too. The kind of thing that has been associated with McCarthy—but it isn't by any means confined to him. I think what has defeated McCarthy is the fact that other people have taken up his policy, and so I don't see that, from a public point of view, there's very much gained.

SMITH: Yes.

LORD RUSSELL: I don't think it's very much better. Now, this habit of investigating anybody who works for government—so minutely—makes scientists shy off from government work, and is almost certain to be a very great impediment to atomic research in America, and actually to make the whole business of atomic weapons not nearly so effective as it would be if there was less.

SMITH: Do you draw any hope from such things as the Supreme Court decision against segregation in American schools?

LORD RUSSELL: Yes. I think that's a very good thing indeed. And I should like to say here, generally, that I find no criticism whatever of the federal judiciary in America, which I think is very good indeed. Its decisions seem to be sound and liberal and wise.

SMITH: Well, which do you think is the greater menace in the world today, Lord Russell: Communism, or the problems that arise due to the awakening of what are called the backward peoples in Asia and Africa?

LORD RUSSELL: Well, they are virtually the same problem because—the—certainly the awakening of Asia's a thing going like a prairie fire. The Communists have made themselves the protagonists of the—the people of Asia, and they will be the protagonists of the people in Africa as soon as there is much doing there, and that is a very grave danger. But at the same time, I think that we, the Western nations, are very much to blame for not having done the things which ought to have been done—such as land reform, for instance, which ought to have been done long ago, and which we've left for the Communists to do.

SMITH: Well, do you feel then that we have a good chance of leading the Western Alliance along constructive paths?

LORD RUSSELL: Well, nobody else has—that's quite certain. I mean—

[LORD RUSSELL LAUGHS] it's got to be you or nobody.

SMITH: I think a great many Americans doubt the validity of a policy of peaceful coexistence with the Russians. Do you feel that it is possible?

LORD RUSSELL: I think there are only two possibilities: coexistence and coextinction. If you're not going to find a way of coexisting, the human race will cease to exist. That's in view of modern armaments. And I think we've got to coexist. I think the Russians have got to realize that, and we have got to realize it. I am perfectly aware that we shan't get the Russians to realize it unless we have very powerful armaments. We must have sufficiently powerful armaments to make the Russians think a war is not worth while. That, I think, is obvious. I am not at all inclined to urge disarmament at the present time—not at all. But I do think we have got to realize, ourselves, and we have got to get the Russians to realize, that if there is a war, neither side will get any single thing that it wants. Nothing. The Russians won't get world empire. We shan't get security. What you would get is masses of corpses and an extinction of the human race. And that's not what anybody wants—so that we've got to learn to coexist somehow.

BR'S BIRTHDAY

Wrong date. BR's birthday is May 18th, not May 17th as we wrongly reported (RSN64-3). Our knowledgeable colleagues, Archivist KEN BLACKWELL and Librarian TOM STANLEY, noted the error. Ken sent this confirming evidence:

B 10401

CERTIFIED COPY of an Entry in a REGISTER of BIRTHS,
(6 & 7 Wm. IV., cap. 86.)

Given at the GENERAL REGISTER OFFICE,
SOMERSET HOUSE, LONDON.

SUPERINTENDENT REGISTRAR'S DISTRICT <u>Monmouth</u>										
18 <u>72</u> BIRTHS in the District of <u>Trelleck</u> in the County of <u>Monmouth</u>										
No.	When and where Born.	Name, if any.	Sex.	Name and Surname of Father.	Name and Maiden Surname of Mother.	Rank or Profession of Father.	Signature, Description, and Residence of Informant.	When Registered.	Signature of Registrar.	Baptismal Name, if added after Registration of Birth.
178	<u>Eighteenth May 1872</u> <u>Trelleck</u>	<u>Bertrand Boy</u>		<u>John Russell</u>	<u>Katharine Louisa Russell formerly Stanley</u>	<u>Viscount</u>	<u>Amberley Father Trelleck</u>	<u>Third June 1872</u>	<u>William Farmer Registrar</u>	

CERTIFIED to be a true Copy of an Entry in the Certified Copy of a Register of Births in the District above mentioned.

Given at the GENERAL REGISTER OFFICE, SOMERSET HOUSE, LONDON, under the Seal of the said Office, the 8th day of October 1889

By the Act of 6 & 7 William IV., c. 86, sec. 36, it is enacted, "That the Registrar-General shall cause to be made a Seal of the said Register Office and the Registrar-General shall cause to be sealed or stamped therewith all Certified Copies of Entries given in the said Office; and all Certified Copies of Entries, purporting to be Sealed or Stamped with the Seal of the said Register Office, shall be received as evidence of the Birth, Death, or Marriage, to which the same relate, without any further or other proof of such Entry; and no Certified Copy purporting to be given in the said Office shall be of any force or effect which is not Sealed or Stamped as aforesaid."

By sec. 37 of the same Act it is enacted that, "for every general search of the Indexes shall be paid the sum of ten shillings, and for every particular search the sum of one shilling, and for every Certified Copy the sum of six shillings and sixpence;" exclusive of Inland Revenue Stamp (32 & 33 Vict., c. 37) of one penny.

The Act 24 & 25 Vict., c. 26, sec. 36, enacts that whoever shall unlawfully destroy, deface, or injure, or cause or permit to be destroyed, defaced, or injured, any Register of Births, Baptisms, Marriages, Deaths, or Burials, or any part thereof, or shall forge or fraudulently alter, in any such Register, any Entry relating to any Birth, Baptism, Marriage, Death, or Burial, or any Certified Copy of such Register or of any part thereof, or shall forge or counterfeit the Seal of or belonging to any Register Office, or shall offer, utter, dispose of, or put off any such Register, Entry, Certified Copy, Certificate, or Seal, knowing the same to be false, forged, or altered, shall be guilty of Felony, and be liable to Penal Servitude, or to Imprisonment with Hard Labour.

How should we take notice of BR's Birthday? With firecrackers? Roman candles? Dancing in the streets? LINDA EGGENDORF offers this suggestion:

On BR's birthday, members in areas where there are more than just a couple of members should arrange to meet for dinner at an agreed-on restaurant. They can arrange ahead of time to have a cake with candles come from the kitchen at dessert-time. All can raise their glasses in a toast to the memory of the man who said, "The good life is one inspired by love and guided by knowledge." Someone may be given the honor of blowing out the candles...or all can join together in one great super-puff. How many candles on the cake? Many small ones forming the letters B R? As you wish.

Thanks, Linda!

Those of you who attend May 18th BR Birthday Dinners, please let us know about it. (Newsletter address on Page 1, bottom.)

BR QUOTED

(9) From *The Physician and Sports Medicine* (January 88).

George Sheehan, MD

Pursuing Happiness

Man is an animal," wrote Bertrand Russell, "and his happiness depends on his physiology more than he likes to think." Health comes first. Of course, we look to a fundamental state free of disease—or, at the least, free of disease that limits our daily activities.

Happiness, however, connotes more than this neutral status. Russell thought that the trained body was important. "Unhappy businessmen," he stated, "would increase their happiness more by walking 6 miles every day than by any conceivable change in philosophy."

Walking 6 miles a day is quite likely to change one's philosophy as well. Thousands of walkers—and runners, swimmers, and cyclists—will attest to a new sense of life's meaning arrived at during their physical activity. The mind, as well as the body, is in motion.

Russell thought it was impossible to be happy without physical activity, as well as mental. But such activity, he suggested, should be agreeable. It also should be directed to a desired end, and not be contrary to our impulses. "A dog will pursue rabbits to the point of complete exhaustion and be happy the whole time. But if you put a dog on a treadmill, it would not be happy because it is not engaged in a natural activity."

Columnist Sheehan is a cardiologist in Red Bank, New Jersey.

I am an observer of happy dogs. Daily, I see numbers of them walking with their owners on the boardwalk and grass in front of our beach house. They are a curious lot, constantly in motion and exploring the world around them. At times they engage in play, chasing thrown sticks or pursuing frisbees. One characteristic is immediately evident: Dogs are very serious when having fun. They may wag their tails, but they are totally concentrated on what is about to happen.

Play is just as important to us as it is to dogs. Some things we do with our bodies should be done merely because they are fun—not because they serve some serious purpose. If we are not performing some activity that is enjoyable on its own account, we should look for something that is. We may not find an activity as natural to us as hunting is to a dog, but we can come quite close.

"When things are bad," observed Russell, "what a person needs is not a new philosophy, but a new regimen—a different diet, or more exercise, or what not." That advice seems simplistic, but it worked for me. I took to the roads in my 45th year and shored up a life that was coming apart.

Regimen was also the key to the Greeks' pursuit of happiness. They believed that self-mastery included mastery of the body. Their education treated the body as equal to the mind and spirit. The ancient Greeks spent time every day in the gymnasium and palaestra engaged in athletic activity.

The key is movement that is play. What we do with our bodies and minds must be an end in itself as well as a means to an end. Man is an animal, as Russell states. Man is a child, too, whose happiness depends more on that psychology than we think.

Our needs are complex. Our goals come from our highest yearnings, but we must recognize our animal instincts and our childhood impulses. Integrating animal, child, and adult is a formidable task. Yet our happiness depends upon it.

What marks happy people, according to Russell, are two qualities: a stable framework built around a central purpose, and play. Our leisure should include physical play of some sort. This need not be sport, although that is the best way to guarantee play. The game, the contest, the race, the competition, are not essential. What is required is the spontaneous expression of the self as body.

Achieving happiness is a large project, but Russell's suggestion makes for a good start. Like Emerson, and Spencer before him, he is saying that if you wish to be a success in this life, you must first be a good animal.

We can be good animals through exercise that is tedious and repetitious. The better way is through play, which is exercise done without realizing it. The secret of the successful 6-mile walk is leaving work, family, cares, and responsibilities behind, and entering a world that is strangely, yet satisfyingly, all your own. **PSM**

QUESTION

(10)

David Meltz asks whether anyone recognizes the following quotation...and if so, is it correct:

The question is not whether you believe God exists, but whether, if He does, He is anyone you would want to be associated with.

David adds: "I thought H. L. Menken said it, but I cannot find a reference. Any help would be appreciated. Thanks"

Please send responses to the newsletter, address on Page 1, bottom.

THE SCEPTICAL CRUSADER

Russell's Achievement

By G. L. MEHTA

"I BELIEVE," said Bertrand Russell in his *What I Believe* written when he was fifty-two, "that I shall rot, and nothing of my ego will survive. I am not young and I love life. But I should scorn to shiver with terror at the thought of annihilation."

He thought in the same way when he was seventy-eight. "In an old man who has known human joys and sorrows and has achieved whatever work it was in him to do," he wrote, "the fear of death is somewhat abject and ignoble." The best way to grow old, he felt, is neither to have undue absorption in the past nor cling to youth in the hope of sucking vigour from its vitality, to make your interests gradually wider and more impersonal "until bit by bit the walls of the ego recede and your life becomes increasingly merged in the universal life."

Russell endeavoured all his life to put this precept into practice. When most philosophers—not to speak ordinary men—would have resigned themselves to the evils and ills of the world, murmuring, "after me the deluge," he continued to stand fearlessly for his innermost convictions and protest against man's inhumanity to man.

Russell was the greatest among the philosophers of his day. He was also a social theorist, an ardent reformer and an incomparable literary stylist writing with profundity, clarity and wit. Hardly anyone could equal him in his capacity to elucidate the essence of a question and to answer it with complete intellectual honesty. Einstein once said that Russell was the wisest man he ever met.

Amazing

What was the secret of this man whose originality of thinking equalled his amazing versatility? Herbert Gottschalk, a German biographer, saw two very different facets of Russell's character in constant conflict in his personality. There was on one side, the cool, objective, scientific mind interested in nothing but the pursuit of truth and prepared to let it lead him where it might; and, on the other, the ardent philanthropist deeply conscious of his share of responsibility for social welfare.

Russell himself has revealed in his three volumes of *Autobiography* what actuated and impelled him. On his eightieth birthday, he wrote that his life had been devoted to two different objects, which had all along remained separate and had only been lately united in a single whole. He had wanted, on the one hand, to find out whether anything could be known; and, on the other, to do whatever was possible towards creating a happier world. It was the former which led him to mathematics which he thought would give him "a certainty in the kind of way in which people want religious faith."

From his childhood, Russell was an intellectual rebel refusing to accept axioms and secretly doubting religious precepts. He was bitterly disappointed when he found that geometry started with axioms which had to be taken on trust and could not be proved. When he questioned Euclid's axioms—he started by asking whether two things which are equal to the same thing are equal to one another—his elder brother, Frank, who was teaching him, said in despair, "If we don't accept the axioms, we can't go on."

Most Vital

This is the most vital element in Bertrand Russell's thought—philosophical and social. He refused to accept anything *a priori* and was careful not to allow (as most of us do) his ideas to be influenced by his desires. At Cambridge, which provided a milieu for rational thinking, he challenged mathematical symbolism and logical concepts and blazed a new trail in philosophy. His seminal work in mathematical logic was perhaps the most significant since Aristotle.

Russell cherished reason as the most valuable possession of civilised man. "In all things," he said, "I have made a vow, to follow reason not the instincts, inherited partly from my ancestors and gained gradually by selection, and partly due to my education." Not that he did not recognise the limits of attainable knowledge. But for that reason he was not prepared to accept "deep-rooted prejudices as heaven-sent intuitions."

A sceptical attitude in philosophy as in science was in his case a

source of new ideas. As the poet said:

*There lives more truth in an honest doubt
Believe me, than in half the creeds.*

In his eloquent essay, *A Free Man's Worship* (1903), Russell vowed that a new and enduring faith could be created "only on the firm foundation of despair." An honest scepticism towards traditional values and conventional wisdom need not mean a paralysis of will nor a surrender to pessimism. For Russell it was a stimulus to creative thought and optimism.

Distressed

He was a philosopher of action as well as a theorist. He did not live on Olympian heights. Pity for the suffering of mankind was one of his three governing passions. "Nietzsche despises universal love," he wrote in his *History of Western Philosophy*, "I feel it is the motive power to all that I desire as regards the world." He was deeply distressed by the first world war not because of some abstract principles but because he could not bear to see the maiming and slaughter of young men.
