The University has since built its marine laboratory on Bodega Head and has pledged itself to resist industrial encroachment on the area. However, at one point the power company and University had planned joint development of the site, the latter claiming that heated water from the reactor would attract fish!

Our struggle to preserve the scenic values of the California coast convinced me that the means of communication in our society were defective. I and others spent a great deal of time and effort trying to establish a cooperative, community-owned newspaper. The paper was to be independent of advertising and to be owned entirely by the readers by virtue of holding a \$5 share. We sold a large number of shares of this denomination and managed, after a year or two of intense effort, to raise a modest sum of capital. It was not enough, in my judgement, to sustain the paper through the initial lean years while it sought to establish circulation. The paper, called *The Citizen*, lasted for about a year and went bankrupt. The problem of disseminating information, the latter being the very basis of a democratic society, is one which is still in need of solution.

Although the environment and the promulgation of information are important problems, our primary attention, as I have already intimated, should be the military establishment and its activities.

Following a visit to Hanoi in 1967 as an investigator for the Bertrand Russell War Crimes Tribunal and noting the large-scale use in the war of 'riot control' agents and 'weed killers', I decided that, as a biochemist, I was in a unique position to become an expert on chemical warfare and so to make a contribution to public understanding of this aspect of the war.

At the December 1968 meeting of the American Association for the Advancement of Science (AAAS) in Dallas, Texas, E. W. Pfeiffer and I organized a group called Scientists' Committee on Chemical and Biological Warfare. Others who joined the group and who were listed on the letterhead included Philip Siekevitz, Rockefeller University, David Baltimore, Massachusetts Institute of Technology, John T. Edsall, Harvard University, A. W. Galston, Yale University, E. James Lieberman, National Institutes of Health, Michael McClintock, University of Colorado, Richard Novick, Public Health Research Laboratory of the City of New York, Gordon Orians, University of Washington, Robert Rutman, University of Pennsylvania and Susan Zolla, New York University Medical Center. We announced our first annual meeting by an advertisement in *Science*², the organ of the AAAS; this cost us about \$100 each and said in part:

'As a result of recent accidents and disclosures the American public has become aware of our substantial program of research and development in chemical and biological weapons. In Vietnam a form of chemical warfare—the use of herbicides and antipersonnel gases—has been in progress for many years. These developments are of far-reaching importance and have grave implications for the future of US military and foreign policy. They require the closest scrutiny; those who are aware of the dangers involved should bring the issues to public attention, and press for suitable action.

'The Scientists' Committee on CBW was established at Dallas in December 1968. We propose to gather and disseminate information, and to work for certain specific actions.

'The information program is based on the following principles: (1) every effort will be made to obtain and publish information with traditional scientific objectivity; (2) all information will be made public; (3) the Committee will promote, and assist in, a comprehensive study of the ecological and sociological effects of the military uses of chemical agents in Vietnam; (4) technical information will be assembled on research and development of CB weapons in the United States and other countries; (5) the policies of various countries in the area of CBW will be brought to public attention.

'We ask for action by our Government to ratify the 1925 Geneva Protocol on CBW, without reservations or restrictive amendments. We intend to campaign for ratification.'

The war had radically affected academic life in the USA, and so most of the major professional societies that we approached readily complied with our request for symposia or for the use of facilities at our annual conventions. We organized evening lectures and films on the topic of chemical warfare, the Geneva Protocol and other matters deemed capable of bringing home the full horror of the war. Besides the AAAS, the American Chemical Society, often accused of pro-industry bias, the smaller American Society of Biological Scientists, and many other science organizations sponsored events or adopted resolutions urging ratification of the 1925 Geneva Protocol banning first use of chemical and biological agents in war. In the end, organizations that advocated ratification of this instrument represented not less than 250 000 scientists.

In this connexion I wish to salute the metamorphosis of the American Chemical Society. Back in 1926 it had joined with industry spokesmen, the military and veterans groups to defeat ratification of the Protocol. In the ensuing years most countries ratified this treaty but not, conspicuously, the USA. President Nixon announced in 1969 that he was sending the measure back to the Senate with a request for advice and consent to

ratification. He sought at that time to exempt tear gas and herbicides, a move which stalled action for several years. The Board of Directors, reversing its previous stand, called for ratification. At last the treaty was signed by President Ford in a form which does not completely rule out the deployment of chemicals but restricts their use to very special circumstances. In recent years, at its national meetings in Los Angeles and in San Francisco, the American Chemical Society has arranged forums on chemical warfare and has made available verbatim reprints of the proceedings of these symposia^{10 11}.

The Scientists' Committee on Chemical and Biological Warfare is now more or less defunct. However, in view of renewed interest in chemical agents on the part of the Pentagon, we may need to revitalize the organization. The problem of binary nerve gases is one of perennial concern to all parties interested in disarmament. The military has had considerable difficulty in shipping, decontaminating and decommissioning the nerve gas arsenal. Many of these problems would be solved by adoption of the binary type of agent, in which the two halves, relatively harmless in themselves, are kept separate and only combined after the projectile is in flight to the target. For several years, the Pentagon has requested an appropriation which would be sufficient to enable conversion of the entire nerve gas inventory into the binary type agent. Thus far, Congress has decline to approve this item in the budget.

I conceived the idea of publishing a book comprised of eyewitness reports of American scientists who had actually visited the chemical warfare battlefields in Vietnam. A number of publishers were approached with the idea; none showed any interest, apart from the Free Press Division of Macmillan Company. That publisher, after a long delay, brought out a full report by G. Orians, E. W. Pfeiffer, A. Vennema, A. H. Westing and myself on the use of anti-personnel gas and chemical herbicides. The book, which contains some pertinent remarks in a foreword by Gunnar Myrdal, was entitled *Harvest of Death*¹². While it never became a 'best-seller', it is a historical documentation of the illegal use of chemical agents in modern war.

Disincentives

I was cautioned by my colleagues that my public activities would cause me to lose my grants and that my career as a researcher would come to an end. I did lose my support from the Office of Naval Research, which had underwritten the costs of my work on microbial iron transport since the early 1950s. Since just at that time it became unpopular for the military to support basic research, it is not clear that this was an act of retribution. I do think that the Navy had in mind a public relations effort to contain criticism and to cultivate the goodwill of the scientific community. They were among the first dependable sources of support for basic research and were on the scene before the National Science Foundation was created.

This episode highlights the virtue of the Mansfield Amendment to the military budget, a measure which restricts support only to those projects that have a direct military application. The quality and objectivity of the science bought by military dollars may be tainted by the source of the funds; however, the public service duties of the investigator may well be in conflict when agencies with a controversial mission are a significant source of funding.

Evidence that the academic scientist still has a public image of being objective can be seen in the endorsements to an advertisement promoting nuclear power. Many of the scientists who signed the statement gave their academic but not their industrial affiliations¹³.

I was improperly taken off the payroll of the University of California during my trip to Hanoi; I was on vacation at the time. I also lost the use of my passport for about a year. Eventually my salary was restored, and, following a suit in the federal court for the northern district of California, my passport was revalidated. (Recently, President Carter removed all restrictions on the freedom of travel.) These were very small penalties, but they are apparently enough to deter some members of the scientific community from public activity.

We are living in a technological age, and we need to devise some means of encouraging the participation of scientists in public affairs. In my opinion, the average research scientist is too oriented toward awards and professional esteem.

Proposal for action

Professional societies, at least within the USA, are constitutionally dedicated to public service. This dedication usually nets some kind of privilege, such as a tax concession or a postal subsidy. I suggest that professional science societies around the world form a council, which would publish a newsletter and perhaps eventually operate a short-wave radio network. The information content would be divided between recent advances in the pure research aspect of some branch of science and a discussion of the societal impact of the entire science enterprise. Science organizations in the eastern bloc countries seem to be as enchanted with the 'technological fix' as their counterparts in the west, so we would probably have to go ahead without the participation of those who feel that science is fine if developed under socialist auspices¹⁴. Scientists enjoy frequent contacts across international boundaries, but usually only on a strictly professional basis. The Pugwash group does good work but is essentially élitist in composition. The World Federation of Scientific Workers in the eastern bloc countries and the Federation of American Scientists are both vitally concerned with disarmament, but the two organizations operate independently of each other. Societies for social responsibility in science exist in several countries but suffer from lack of a broad appeal to most scientific workers. What I am proposing is an association of scientists in a world-wide federation with a constitutional dedication to peaceful and ecologically sound uses of scientific knowledge.

BOOK REVIEWS

(26)

"The Tamarisk Tree 2" by Dora Russell, reviewed in *The Times* (London), March 30, 1980:

Progressive lady

DORA RUSSELL is the perfect Progressive Lady of the early 20th century, successor to Ibsen's New Woman, and predecessor of yesterday's bra burners. In 1919, when first living with Bertrand Russell, she was perfectly willing to bear his children but disappointed that they were settling down like a married couple. On being told by Russell that he would get a divorce from his first wife and marry her, she burst into tears.

Naturally she felt that education, like sex, should be free of restriction, and she may well have been the driving force behind the setting up of Beacon Hill School, that school as the popular press called it, where games were not compulsory or competitive, the aesthetic emphasis was on do-it-yourself art, and children were left to decide whether or not they would come into class. There was a School Council run by the children, nakedness in good weather was encouraged, adults were addressed by their first names.

Did it work? Russell, who retired from the enterprise after five years, says no. There were rarely more than twenty children, so that money was always short. Problem children were sent to the school, and had to be under constant supervision to stop bullying. Lack of order and routine made the children bored and destructive. "A school is like the world: only

THE TAMARISK TREE 2
 by Dora Russell/Virago £8.95
 pp 218

Julian Symons

Dora Russell: distinctly authoritarian

government can prevent brutal violence."

So far Bertie. It is not surprising that Dora, who continued the school for another eleven years, thinks otherwise, playing down problems and viewing things through honey-tinted spectacles. The differences between them are neatly encapsulated in what one child said in defence of bullying. "The bigs hit me, so I hit the smalls, that's fair." "Hit" is Bertie's word.

Dora tells the same story, but changes the word to "tease."

Her book is an account of the struggle to continue the school, in different places, and at times with desperately little money. Bertie removed two of their children to Dartington, and then withdrew support from the school. Later he is glimpsed occasionally, behaving badly or ungenerously. Bernard Shaw, appealed to for money, offered "the utmost sympathy and kindness" and a bank guarantee—but no cash. In 1937 there were twenty pupils, three years later the number was down to ten. At times Dora was the only teacher. She went bankrupt, but continued the school.

This second volume is about Beacon Hill almost to the exclusion of the author's personal life. Nearly half the book is taken up by the poems and plays of the children, and no doubt the plays were livelier in performance than they are in reading. Glimpses of a personality do come through, however, glimpses not wholly agreeable. The dedication and persistence shown in running the school are little short of heroic, but the character of this lover of freedom comes through as distinctly authoritarian. Can it be purely accidental that two other schools which merged with Beacon Hill at different times quickly ended the collaboration? And what would have happened to teachers who questioned Russell tenets like: "As soon as books are introduced, you are at one remove from direct reality," or rejected the determination to concentrate on

nature study projects, avoiding "nationalist and chauvinist teaching of history"?

In the hidebound educational Twenties and Thirties one would have been on the side of this Progressive Lady. Today the educational rigidity she shows is apparent. What kind of teacher is it who fails to understand that to ignore "nationalist and chauvinist" reading of history is to take children dangerously far from the real world and its motives? Or who does not know that the ability to read gives immense joy to children and enlarges tenfold their understanding of "outer reality"? In a final chapter called "Was It All Worthwhile?" the author contrasts her conception of education with that of those who at present clamour for emphasis on purely vocational training. But an educational choice isn't an either/or between the Beacon Hill "freedom" to learn about pond life and cavort naked on lawns, or to be trained as a computer operator. It should embrace academic skills, the awareness of competition, the reality of power. Those children who thought that it was natural for the bigs to hit the smalls had a better understanding of reality than Dora Russell shows.

(Thank you, DAVID HART)

BRS LIBRARY

(27) Films available from the BRS Library, as reported by Librarian Don Jackanicz:

The entire collection of films housed in the BRS Library will be presented at the June 20-22, 1980 Annual Meeting in Chicago. These include two new titles recently acquired thanks to contributions from several members. Each of these films is available for rental from the Library. The modest fee collected is earmarked for the future purchase of films. (Two CBS films from the 1950s may be our next purchases, but they must first be viewed to determine their exact content and visual quality.) Our seven films are:

1. Bertrand Russell Discusses Philosophy.
2. Bertrand Russell Discusses Power.
3. Bertrand Russell Discusses Mankind's Future.
4. Bertrand Russell Discusses The Role of the Individual.
5. Bertrand Russell Discusses Happiness.

-----No. 1-5 are black and white, 16 mm., 13½ minutes in length each. A transcript for each can be found in the book Bertrand Russell Speaks his Mind (Cleveland: World Publishing Co., 1960). Rental cost: \$10.00 per film plus a refundable \$50.00 deposit per film.

6. Bertrand Russell.

-----No. 6 is black and white, 16 mm., 30 minutes in length. A transcript is available in "A Life of Disagreement", Atlantic Monthly, v. 190, August 1952, pp. 51-54. This is a general interview dealing with autobiographical, philosophical, and political topics. Rental cost: \$20.00 plus a refundable \$50.00 deposit.

7. The Life and Times of Bertrand Russell.

-----No. 7 is black and white, 16 mm., 40 minutes in length. This film was produced by the BBC as part of the 90th birthday celebration for Russell in 1962. A documentary, it uses a biographical format which, for better or worse, concentrates on the threat of nuclear war and Russell's work to prevent such folly. Included are interviews with Russell and several prominent British intellectuals.

To order a film or films write to Don Jackanicz, BRS Library, 3802 N. Kenneth Ave., Chicago, IL 60641 stating the title or titles desired and about how long it or they will be kept. Full payment must be made after which the film or films will be shipped via U. S. Mail or United Parcel Service. The renter must pay postage (and for U. S. Mail shipment insurance) both ways--the Chicago to renter postage will be recovered by withholding an equal amount from the deposit which will be refunded upon receipt of the returned film or films.

CONTRIBUTIONS

(28) We need contributions from more members! Please remember that dues do not cover our operating costs. Contributions make up the deficit. Contribute what you can when you can. Send a contribution c/o the newsletter, RD 1, Box 409, Coopersburg, PA 18036.

(29) We thank JOHN TOBIN for his contribution, and PETER CRANFORD and KATHY FJERMEDAL for their continuing, regular, monthly contributions.

RECRUITING

(30) Know any potential members? From time to time members send us names of people they know who might be interested

in joining the BRS. If you know any such people, send their names and addresses to P.K. Tucker, Co-Chairman, BRS Membership Committee, PO Box 1537, North Platte, NE 69101. She will see to it that they receive information about the BRS.

ELECTION OF DIRECTORS

- (31) Time to nominate Directors. As you know, the Bylaws now permit a Board of 24 Directors. 8 Directors are to be elected this year (and every year) for 3-year terms.

Any member can nominate another member, to be a candidate for the office of Director.

Also, if you wish to be a candidate yourself, notify the Election Committee. Someone will nominate you.

The duties of a Director are not onerous. Directors are occasionally asked their opinion on something or other, by mail; and they are expected to make a reasonable effort to attend annual meetings.

We would like to have more than 8 names on the ballot, so that members are given a choice.

We need candidates. Don't be reluctant to nominate someone else. Don't be reluctant to volunteer yourself.

The names of the candidates will appear on the ballot, next issue (RSN27). Directors elected will serve for 3 years, starting 1/1/81. Directors whose terms expire on 1/1/81 are ED HOPKINS, DON JACKANICZ, JACK PITT, WARREN SMITH, and KATE TAIT. Directors may succeed themselves; that is, they may be re-elected.

* To nominate someone — or to volunteer yourself — write the Elections Committee, RD 1, Box 409, Coopersburg, Pa 18036.

MEMBERSHIP RENEWALS

- (32) Everyone's renewal dues are due now (except members who joined in 1980).

(This is a repetition of the DUES ARE DUE notice, printed on a separate sheet that accompanied this newsletter.)

If you joined the BRS any time in 1979, you have received all 4 issues of "Russell Society News", and your renewal dues are due now.

If you joined the BRS any time before 1979, your renewal dues are due now.

Strictly, your dues are not due till mid-year — July 1st; but it might slip your mind if you wait till July 1st. The prudent thing to do is to send us your membership-renewal check now — while you have it in mind — and date the check July 1, 1980

Dues are \$20 (regular), \$25 (couple), \$5 (student); plus \$5 if outside the USA and Canada.

By responding promptly, you also avoid possible delays in mailings of "Russell Society News" and "Russell".

Please mail dues to RD 1, Box 409, Coopersburg, PA 18036.

Are you reaching for your checkbook?

BULLETIN BOARD

- (33) Tom Horne needs his music-manuscript returned. He writes:

At the Russell Society meeting a couple of years ago, I brought copies of a musical setting I wrote to the introduction of Russell's autobiography. By accident, I gave out all my copies, and had none left to submit to a publisher. I would be grateful if someone would return a copy to me, so that I can copy it.

It was at the Los Angeles meeting in 1977 that Tom gave out the copies of his 8-part choral work, "Three Passions".

* If you've got a copy, please lend it to him. His address: 2824 East Mission Lane, Phoenix, AZ 85028.

ABOUT OTHER ORGANIZATIONS

(34.)

Amnesty International USA is collecting signatures for a petition to President Carter on the death penalty.

The petition does not ask for the abolition of the death penalty. It asks that a Presidential Commission on Capital Punishment be appointed, to gather data on various aspects of the death penalty. These aspects are mentioned in the petition itself, which is reproduced on the last page (43).

We have included the petition in this newsletter because it provides an opportunity for the IRS to help AIUSA collect signatures.

We urge you to sign this petition, and also to get others to sign. You — and others — can sign the petition whether you are for or against the death penalty, because the petition does not take a stand for or against; it merely asks for fact-finding.

After you have collected as many signatures as you can, put a 15¢ stamp on the petition, fold it, seal it, and mail it. It is already addressed.

Thanks!

(35)

The International League for Human Rights is collecting signatures on behalf of Andrei Sakharov. Here is their letter, and the statement on Sakharov:

National affiliates and correspondents around the world.

In consultative status with the United Nations, UNESCO, ILO and Council of Europe.

Executive Director
Maureen R. Berman

The International League for Human Rights

(formerly The International League for the Rights of Man)

236 East 46th Street, 5th floor
New York, N.Y. 10017
Tel. (212) 972-9554
Cable HUMRIGHTS, N.Y.

Dear Member:

In this period of international tension, it is more urgent than ever that we work to keep human rights an important factor in American foreign policymaking, and that we support those whose rights are threatened in other parts of the world.

As you know, Andrei D. Sakharov, Honorary Vice President and Board Member of the International League, was forced into internal exile by Soviet authorities. Since 1971, when the Moscow Human Rights Committee of which Dr. Sakharov is a founding member became an affiliate of the League, we have worked closely with him. We have undertaken our efforts on his behalf with a special commitment.

We are cooperating with Dr. Sakharov's stepchildren who reside in the United States, Tanya and Efrem Yankelevich. You may have seen reports of the press conference we organized for the Yankeleviches which was covered on five New York television stations and broadcast worldwide.

The League is now coordinating a petition campaign on behalf of Dr. Sakharov and needs your help.

If you are willing to sign the enclosed statement, please indicate so on the enclosed card.

In this first letter as the League's President since Jerome Shestack resigned in order to accept President Carter's appointment as the new United States Representative to the United Nations Human Rights Commission, you will not be surprised to find me asking for your continued financial support. This is a time of increased League activity -- and increased need.

If you support our efforts on behalf of Dr. Sakharov -- and our other efforts to help those who suffer from government repression in every region of the world -- please help us by again making a generous contribution. We will be most grateful.

Sincerely,

Harris L. Wofford, Jr.

STATEMENT ON BEHALF OF ANDREI SAKHAROV

THE FORCED EXILE OF NOBEL LAUREATE DR. ANDREI SAKHAROV, WHOSE COURAGEOUS DEFENSE OF HUMAN RIGHTS IN THE SOVIET UNION HAS BEEN A SOURCE OF HOPE FOR HIS COUNTRY AND FOR ALL THE WORLD, IS AN INTOLERABLE ACT. TO PROTEST THIS GRAVE INJUSTICE, WE WILL WORK TOGETHER IN OUR INDIVIDUAL AND ORGANIZATIONAL CAPACITIES, TO EXERT AS MUCH PRESSURE AS POSSIBLE ON THE SOVIET LEADERS TO RELEASE DR. SAKHAROV AND ALLOW HIM TO EXPRESS HIS VIEWS WITHOUT CONSTRAINT. WE CALL ON OTHERS TO JOIN US IN DEMONSTRATING THAT DR. SAKHAROV'S FRIENDS THROUGHOUT THE WORLD WILL ACTIVELY AND TIRELESSLY OPPOSE THE SILENCING OF THIS GREAT DEFENDER OF HUMAN RIGHTS.

If you wish to work on behalf of Sakharov, write to the League and tell them so. (236 East 46th St., 5th Floor, New York, NY 10017). Mention that you learned about their efforts through The Bertrand Russell Society's newsletter.

(36)

The Bertrand Russell Peace Foundation "profoundly concerned by the acute worsening of international tension, the renewed arms race, and the growing danger of nuclear proliferation"...has..."proposed the creation of a European Nuclear-free Zone as a feasible middle-term goal."

They are canvassing for signatures in Great Britain (in support of their proposal) and would like to see similar efforts launched in the USA. Here is how they state their case:

STATEMENT ON A EUROPEAN NUCLEAR-FREE ZONE

We are entering the most dangerous decade in human history. A third world war is not merely possible, but increasingly likely. Economic and social difficulties in advanced industrial countries, crisis, militarism and war in the third world compound the political tensions that fuel a demented arms race. In Europe, the main geographical stage for the East-West confrontation, new generations of ever more deadly nuclear weapons are appearing.

For at least twenty-five years, the forces of both the North Atlantic and the Warsaw alliances have each had sufficient nuclear weapons to annihilate their opponents, and at the same time to endanger the very basis of civilized life. But with each passing year, competition in nuclear armaments has multiplied their numbers, increasing the probability of some devastating accident or miscalculation.

As each side tries to prove its readiness to use nuclear weapons, in order to prevent their use by the other side, new more "usable" nuclear weapons are designed and the idea of "limited" nuclear war is made to sound more and more plausible. So much so that this paradoxical process can logically lead only to the actual use of nuclear weapons.

Neither of the major powers is now in any moral position to influence smaller countries to forego the acquisition of nuclear armament. The increasing spread of nuclear reactors and the growth of the industry that installs them reinforce the likelihood of world-wide proliferation of nuclear weapons, thereby multiplying the risks of nuclear exchanges.

Over the years, public opinion has pressed for nuclear disarmament and detente between the contending military blocs. This pressure has failed. An increasing proportion of world resources is expended on weapons, even though mutual extermination is already amply guaranteed. This economic burden, in both East and West, contributes to growing social and political strain, setting in motion a vicious circle in which the arms race feeds upon the instability of the world economy and vice versa: a deathly dialectic.

We are now in great danger. Generations have been born beneath the shadow of nuclear war, and have become habituated to the threat. Concern has given way to apathy. Meanwhile, in a world living always under menace, fear extends through both halves of the European continent. The powers of the military and of internal security forces are enlarged, limitations are placed upon free exchanges of ideas and between persons, and civil rights of independent-minded individuals are threatened, in the West as well as the East.

We do not wish to apportion guilt between the political and military leaders of East and West. Guilt lies squarely upon both parties. Both parties have adopted menacing postures and committed aggressive actions in different parts of the world.

The remedy lies in our own hands. We must act together to free the entire territory of Europe, from Poland to Portugal, from nuclear weapons, air and submarine bases, and from all institutions engaged in research into or manufacture of nuclear weapons. We ask the two superpowers to withdraw all nuclear weapons from European territory. In particular, we ask the Soviet Union to halt production of the SS-20 medium range missile and we ask the United States not to implement the decision to develop cruise missiles and Pershing II missiles for deployment in Western Europe. We also urge the ratification of the SALT II agreement, as a necessary step towards the renewal of effective negotiations on general and complete disarmament.

At the same time, we must defend and extend the right of all citizens, East or West, to take part in this common movement and to engage in every kind of exchange.

We appeal to our friends in Europe, of every faith and persuasion, to consider urgently the ways in which we can work together for these common objectives. We envisage a European-wide campaign, in which every kind of exchange

takes place; in which representatives of different nations and opinions confer and co-ordinate their activities; and in which less formal exchanges, between universities, churches, women's organizations, trade unions, youth organizations, professional groups and individuals, take place with the object of promoting a common object: to free all Europe from nuclear weapons.

We must commence to act as if a united, neutral and pacific Europe already exists. We must learn to be loyal, not to "East" or "West", but to each other, and we must disregard the prohibitions and limitations imposed by any national state.

It will be the responsibility of the people of each nation to agitate for the expulsion of nuclear weapons from European soil and territorial waters, and to decide upon its own means and strategy, concerning its own territory. These will differ from one country to another, and we do not suggest that any single strategy should be imposed. But this must be part of a trans-continental movement in which every kind of exchange takes place.

We must resist any attempt by the statesmen of East or West to manipulate this movement to their own advantage. We offer no advantage to either NATO or the Warsaw alliance. Our objectives must be to free Europe from confrontation, to enforce detente between the United States and the Soviet Union, and, ultimately, to dissolve both great power alliances.

In appealing to fellow Europeans, we are not turning our backs on the world. In working for the peace of Europe, we are working for the peace of the world. Twice in this century Europe has disgraced its claims to civilization by engendering world war. This time we must repay our debts to the world by engendering peace.

This appeal will achieve nothing if not supported by determined and inventive action, to win more people to support it. We need to mount an irresistible pressure for a Europe free of nuclear weapons.

We do not wish to impose any uniformity on the movement nor to pre-empt the consultations and decisions of those many organizations already exercising their influence for disarmament and peace. But the situation is urgent. The dangers steadily advance. We invite your support for this common objective, and we shall welcome both your help and advice.

BOB DAVIS finds their statement reasonable and balanced, and would like to work on behalf of it in the USA. If you * would like to join Bob in this effort or if you have any suggestions as to how to further this cause, notify Bob (2501 Lakeview Avenue, Los Angeles, CA 90039.)

(37) Stanford Against Conscription (SAC) says it "is a coalition of individuals who, for a variety of reasons, believe that President Carter's call for registration should be opposed." They sent a packet of literature. Their address: c/o Jon Bower, 667 Marion Avenue, Palo Alto, CA 94301.

PUBLICATIONS RECEIVED

(39) "Islamic Revolution", subtitle: "Dimension of the Movement in Iran". Published by Research and Publication, Inc., PO Box 2556, Falls Church, VA 22042. \$10 per year. Volume 1, Number 7, October 1979 is a 30-page slick paper Time-size publication. Contents include "an eyewitness account of Kurdistan", polygamy in Iran, and "Propaganda Devices used by the Media".

REPORTS FROM COMMITTEES (CONTINUED)

(40) Elementary particles. This is Alex Dely's summary, mentioned in (6):

AN ALTERNATIVE THEORY OF THE CONSTITUTION OF MATTER The Expanding-Contracting Particle Play

By George Blam and Alex Dely

(The following sketchy notes of our continuously evolving theory came out of consideration of the missing neutrinos supposed to be emanated from the sun.)

What if a positron is really a central core constantly attracting quanta of energy to a central point in spacetime, and an electron is a core expelling such quanta from a central point? These expanding and contracting cores, because of their extremely small size, would have little influence on the basic nuclear, subnuclear

and electromagnetic forces, but would render a point in spacetime where gravity is effected. As such they would fulfill the same role as the virtual particles in other now standard theories...

What if such an expanding "particle" meets a contracting one? The result is a particle vastly reduced in size because of mutual annihilation, but where the cores remain to become neutrinos, whereas the contracting and expanding clouds around the cores become scattered and are manifested as gravitational waves or gravitinos. We have not yet found sufficient data to obtain numerical results as to how much contribution this process yields in the case of the sun. The neutrino would be neither contracting nor expanding, the resulting pulse of gravitinos can become redshifted or blueshifted, thus changing in frequency and thus energy, which accounts for the vast output of X-rays, gamma rays and other electromagnetic radiation from the stars, instead of Einstein's gravitational waves. It also accounts for the fact that our laboratories are at a very limited position relative to the rest of the universe, thus explaining why in electron-positron collisions only gamma rays are consistently observed.

Since however a very small particle with small mass remains, it is subjected to gravity, which may explain the neutrino scarcity near earth as due to the strong fields near the sun. The resulting neutrino will inherit some of the characteristics of the electron and positron, to obey conservation laws such as mass-energy, momentum, etc... but the distribution of the latter contributions, besides symmetry, depends in large measure on the model of the electromagnetic interaction used, as well as even more on synthetic models combining all known forces.

In the presently popular Weinberg-Salam model, we are checking their predictions and the available literature to adjust our parameters.

The theory also explains paircreation: a neutrino split up into electrons and positrons.

In the big bang theory of the origin of the universe, an enormous explosion yielded an immeasurable amount of radiation. This radiation should theoretically produce equal amounts of matter and antimatter. Cosmologists have long worried about the missing vast amounts of antimatter. We explain the situation as follows: It is likely that the universe did not expand totally uniformly. In that event the radiation may have pairproduced electrons and positrons which may have bunched together and, because of different energies, the resulting particles occupied different energy levels, thus able to share their clouds of virtual particles without violating any known physical laws. Similarly, the outward pressure of the positron cloud would prevent other positrons in the same energy level, yet would also allow the electron cloud to come so close as to balance the positron pressure and gravitational forces. By combinations of the above mechanisms, positrons and electrons could coalesce to form the heavier-than-electron particles.

At present we are working on the most likely layout of each of the known elementary particles. However, one bonus of our theory is that it neatly incorporates a persistent but fringe concept in elementary particle physics, namely the bootstrap theory, which in summary states that there are no families of privileged elementary particles, but that all particles except maybe one, are formed, and given their full and everchanging characteristics (such as their quantum numbers) by their interaction with the whole of the universe. This somewhat Eastern idea has profound and beautiful philosophical implications.

Anyhow, our theory predicts that the big bang radiation at each energy level can give rise to that energy equivalent of an electron positron pair. Then by their interaction, bunching, coalescing wholly or partly, new and everchanging particles can be created, so that our everexpanding zoo of particles (over 200 have now been observed) may never come to an end; indeed, physicists, by experimentally changing the magnetic field configuration, and especially as a result of the tremendous increase in energies in the world's accelerator facilities, may be insuring the constant manufacture of "artificial" particles, which rarely form in nature ordinarily. But that remains an item for further study and reflection.

However, preliminary results indicate our ability to obtain the experimentally observed masses, charges, and other particle properties within statistical bounds of the accepted values. Presently we are studying the makeup of atomic nuclei in our framework. Presently we are trying to resolve a discrepancy between the constituent particle masses in a nucleus and its observed values. However we hope to arrive at a reasonable explanation, which presently seems to be that some of the missing mass is converted into energy of motion during the nuclear assembly. Thus, varying decay schemes with measurable effects can be forecast which hopefully will coincide with predictions of the traditional beta-decay, the newly predicted proton decay, and many others...

The above is a short summary of our work. Recent experiments (some of them described in a May 1978 "Scientific American" article as well as in recent scientific journals) have found jets emanating during particle interactions. Present day quantum chromo dynamics has not been able to fully explain them. We think our expanding-contracting particle cloud hypothesis may soon become an attractive alternative. In the next few months we hope to apply more sophisticated mathematical modeling to obtain quantitative results which can then be checked against observed data. We hope to present some preliminary findings in an informal session at the Chicago 1980 annual meeting.

RUSSELL SOCIETY NEWS

No. 27

August 1980

- (1) Last call for dues (37). The 1980 meeting (2). The first BRS Award (17). BRS Award candidates wanted (18). New series, "My Favorite Russell" (10). Schilpp's favorite Russell (16). BR on Iran (11). Time to vote for Directors (36,44), for 1981 meeting place (3,44). for Schilpp's honorary membership (26,44). BAS anti-war Essay Competition (19). "Faith and Fanaticism" (42). Index (43). An asterisk in the left column indicates a request.

THE 1980 MEETING

- (2a) The 7th Annual Meeting of the BRS was held on June 20-22, 1980 (from Friday evening to Sunday noon) at the University of Chicago's Center for Continuing Education.

The sessions were absorbing and the facilities (all under one roof) were excellent, credit for all of which belongs to DON JACKANICZ. He selected the site, planned the program, acquired the speakers, arranged the exhibits, provided Red Hackle, taped the sessions, and videotaped the presentation of the BRS Award. He also arranged to get feedback: a questionnaire asked members how they had liked various features of the weekend.

Films of BR were one feature of the sessions, as has been true of all recent BRS meetings. 7 BR films were shown; the BRS now owns all 7 BR films that are commercially available (RSN26-27).

All sessions were taped, and you may borrow the cassettes from the BRS Library (address below).

An attendance record was set. 33 members attended one or more of the 5 sessions: JERRY ALSPAUGH, GEORGE BLAM*, ROBERT CANTERBURY, LEN CLEAVELIN, JACK COWLES, PETER CRANFORD, DENNIS DARLAND, BOB DAVIS, ALEX DELY, LESTER DENONN, RON EDWARDS, LEE EISLER, MARY GIBBONS*, BARRY GOLDMAN, DAVID HART, ALVIN HOFER, DON JACKANICZ, JOHN JACKANICZ, ROBERT LOMBARDI, STEVE MARAGIDES, JIM MCWILLIAMS, JOE NEILANDS, JACK RAGSDALE, STEVE REINHARDT, HARRY RUJA, CHERIE RUPPE, GARY SLEZAK, CRAIG TISON, ELEANOR VALENTINE, ARNOLD VANDERLINDEN, HERB VOGT, CAROLYN WILKINSON, RON YUCCAS. (* became a member at the meeting)

Also present at one or more sessions were 16 non-member guests: Celeste M. Cassidy, Bess Denonn, James P. Gianickos, Richard J. Harris, Allen Jonassen, Gladys Krobil, Jean Nakhnikian, George Nakhnikian, Keith Peterson, Marian Roberts, Madelon Schilpp, Paul A. Schilpp, Amber Stelnicki, Miriam Targ, Lila Weinberg, Arthur Weinberg. (We don't vouch for the spelling; we had to decipher signatures.)

The following officers were elected (or re-elected) for one-year terms starting 1/1/81: Chairman: PETER CRANFORD; President, BOB DAVIS; Vice-President, HARRY RUJA; Treasurer, DENNIS DARLAND; Secretary, DON JACKANICZ.

- (2b) Lester Denonn's talk, "Characterizations of Bertie — Pro and Con", consisted of quotes selected from the 2100 books and articles in his great Russell Library. As the following samples indicate, many people had nice things to say about BR; but it was not unanimous:

- . Santayana: Bertie was small, dark, brisk...according to some people the ugliest man they had ever seen. But I did not find him ugly, because his mask, though grotesque, was expressive and engaging.
- . Laski: Did you ever read B. Russell's rather striking piece of rhetoric, "A Free Man's Worship"? I think that it is the religion of a sensible man.
- . Gellner: If humanism had saints, they would be the first to be canonised. (Said of Hume, J.S. Mill and Russell.)
- . Radhakrishnan: He has been a major force in the growth of liberalism in national and international affairs.
- . Berenson: For many years I have been reading what you published about things human, feeling as if nobody else spoke for me as you did.
- . Jager: His fiction...abounds in lucid intelligence and wit. In 1953 he published the first of two volumes, declaring that after devoting his first eighty years to philosophy, he planned to devote the next eighty to other forms of fiction.

*Russell Society News (Lee Eisler, Editor): RD 1, Box 409, Coopersburg, PA 18036
 BRS Library: (to 8/31/80) Don Jackanicz, BRS Co-Librarian, 3802 N. Kenneth Ave., Chicago, IL 60641
 (starting 9/1/80) Jack Ragsdale, BRS Co-Librarian, P.O. Box 28200, Dallas, TX 75228

- . Willey: It was universally known that Russell despised titles, and insisted on being described and addressed as plain Bertrand Russell. After the lecture he came up to me and asked me to arrange for a taxi with the Trinity porter. "If you tell him it's for LORD RUSSELL it will be all right."
- . Durant: The bad boy of England, scandalizer of all continents, and prospective terror of the House of Lords...
- . Broad: As we all know, Mr. Russell produces a different system of philosophy every few years.

(2c) Peter Cranford spoke about "The Possibilities of Compossibility", summarized as follows:

Scattered in several of Russell's works is his idea of "compossibility" — a condition "when desires can be satisfied by the same state of affairs." He hoped that the idea would be expanded by others. Compossibility advises that we seek our good by providing for another what he feels is to his good.

The use of compossibility to satisfy our desires, to increase the total amount of good, and to exert influence can make tough decisions less difficult. For instance, Nations A and B have differing ideologies. Both A and B wish to satisfy their desires, one of which is to participate in the Olympic Games. The question is, should A punish B for its ideology by boycotting the Games?

Compossibility would say "No" in this and all other similar situations — between all people and all groups. It puts water on the flames instead of gasoline.

Antagonists can still continue to disagree in areas of conflict (generally pertaining to matters of self-preservation)

The advantages of compossibility are constructive action in the face of deadlocks, positive attitudes instead of negative ones, less acrimonious backgrounds, denial of "an eye for an eye" and "the meek shall inherit the earth"; and it does not leave the field to wariness gone mad — the certain prelude to universal destruction.

(2d) Don Jackanicz spoke about BR's stay in Chicago, 1938-39 (when BR taught at University of Chicago for a semester), and illustrated it with slides. His talk was based on a paper he and GARY SLEZAK had written ("The Town is Beastly and the Weather was Vile"), which was published in "Russell 25-28", p.5. Since most members have this issue of "Russell", we will say no more about it. (If you do not have it, you can borrow it from the BRS Library, address on Page 1, bottom.)

(2e) The nuclear panel of 6 speakers — 3 pro and 3 con — discussed nuclear energy. It is a serious subject. Their arguments were presented with considerable care and great conviction, on both sides. (Jim McWilliams said, later: "Next time give them knives.") We will not attempt to summarize; we doubt that we could.

(2f) The BRS Award was presented to Paul Arthur Schilpp. This was the highlight of the weekend. The citation read: "For opening a new path to a better understanding of the work of living philosophers." He was given a standing ovation. He responded with some interesting reminiscences about BR. For more about Professor Schilpp, see (16), (17), (26), (44).

(2g) Bob Davis spoke about BR's pacifism, noting that there are different kinds of war — wars of colonization, wars of principle, wars of self-defense, wars of prestige — and different kinds of pacifism — absolute and relative, individual and political. BR's pacifism was relative (for he favored World War II).

(2h) Some negatives. Excellent as the meeting was — it may have been the best one yet — we cannot say it was perfect. There were, in fact, 2 notable imperfections. Apparently under the mistaken impression that the BRS is a scholarly Society, Professor George Nakhnikian gave a professional philosopher's talk that was too scholarly for non-philosophers. And George Blam, pinchhitting for Alex Dely, with whom he is developing a theory about elementary particles (RSN26-40), talked about those particles and was too specific for non-physicists.

And while we're being negative: some members mentioned — on the feedback questionnaire — that in some of the BR films, it is difficult to understand what the people are saying — due, in part, to the U.K. accents. Perhaps transcripts should be available, in future.

Otherwise, all was lovely. If you missed the 7th Annual Meeting, you missed a good one!

For more about the meeting, see the minutes (40).

THE 1981 MEETING

(3) Where in 1981? Here is where we have met in the past: 1974, 1975, 1976 New York (Hotel Tudor); 1977 Los Angeles (Westwood Holiday Inn); 1978 Hamilton (McMaster University); 1979 New York (Hotel Tudor); 1980 Chicago (University of Chicago's Center for Continuing Education.) We have had the poorest facilities in New York, and the best

facilities when we have met in academic quarters (Hamilton, Chicago).

At the 1980 meeting, a number of cities were mentioned for 1981: Austin, Boston, Baltimore, Hamilton, Los Angeles, Washington. These are listed on the ballot (last page of this newsletter), along with a blank space where you can list some other city, if you wish to. Boston has a lot of academic institutions, and we might be able to locate in one of them. Hamilton has the Russell Archives, and McMaster's superb facilities. Washington has, well, it's Washington.

Bob Davis has some ideas about all this. See the next item (3.5).

A weekend in June seems to be the best time. June has several merits: it does not conflict with the academic year; and it does not have winter storms that gum up air-travel schedules.

Well, take your pick. We're going to vote for Hamilton.

* * * * *

Don's memo. Don Jackanicz has written a short (3-page) memo ("Some Annual Meeting Reminiscences") on the way he planned for the 1980 meeting and the way it turned out. Whoever is in charge of a future meeting might get some useful ideas from it. It is in the BRS Library.

REPORTS FROM OFFICERS

(3.5) President Robert K. Davis reports:

Elsewhere in this issue (44) you are asked to notify us as to your preference for time and place of the 1981 annual meeting. Since the meeting is one of the major responsibilities of the president, I would like to make a few remarks and solicit your suggestions.

Our meetings have gotten better, for the most part, with the passage of time. This year's meeting in Chicago was the best yet, and is due almost entirely to the work and ability of Don Jackanicz. The Chicago experience points out the fact that there are two basic conditions for a successful meeting. First, there must be a fairly large number of BRS members in the area to draw attendance from. Second, there must be a person on hand locally who will take charge — select a meeting-place and reasonable accommodations, solicit speeches, etc.

We have not had a meeting in the South because neither of these conditions have been met. Washington, DC has been suggested for 1981. We do have membership in sufficient numbers in the Boston-Washington corridor to justify this, but we don't seem to have anyone in the area to organize it. If you have any suggestions to solve this problem or wish to volunteer to help, please so indicate on the ballot. My own feeling is, Washington would be the best choice for 1981, if (and only if) the organization problem can be solved.

Hamilton was mentioned quite often. So was California. That would presumably mean Los Angeles, because most of our California members live in this area. San Francisco was mentioned because it is a great place to visit, but unfortunately we have only 4 or 5 members in that area. Claremont was mentioned for its academic and wine facilities; it is in the L.A. area and certainly is a possibility.

Please let us know your preference for the coming meeting, and also for later ones.

There is some interest in a meeting in London. It was suggested for 1981 (perhaps to be coordinated with the Memorial Bust Dedication) but prudence would suggest a later date. I personally like the idea and we could put together a good program, in all likelihood. However I think very few members would go (in '81), so it is probably not a good idea. Please let us know (via the ballot) whether you would attend such a meeting, later on.

Several of us in Southern California are thinking of having a purely social get-together in the immediate future. Interested So. Cal. members who have not received a letter on this should contact me immediately — as well as anyone else who is going to be in the L.A. area. (2501 Lakeview Avenue, Los Angeles, 90039.213-663-7485.)

(4) Treasurer Dennis J. Darland reports:

For the quarter ending 3/13/80:

Balance on hand (12/31/79).....	2716.10	
Income: 24 new members.....	364.22	
6 renewals.....	70.00	
Total dues.....	434.22	
Contributions.....	852.50	
sales of RSN, books, etc.....	130.35	
Total income.....	1417.07	+1417.07
		4133.17
Expenditures: Information & Membership Committees.....	857.17	
Subscriptions to "Russell".....	234.50	
Other.....	91.35	
Total spent.....	1183.02	-1183.02
Balance on hand (3/31/80).....	2950.15

Special purpose funds: 1979 Scholarship Award.....	500.00
1980 Scholarship Award.....	500.00
Bertrand Russell Memorial(London).332.50	
Total restricted funds.....	1332.50
Balance on hand (3/31/80).....	2950.15

(This report was presented at the 1980 meeting.)

REPORTS FROM COMMITTEES

(5) Information Committee (Lee Eisler, Chairman):

The Information Committee's job is to communicate with members — and with non-members to the extent that we are able to. To communicate with members, we issue a newsletter 4 times a year. To communicate with non-members, that is, with the outside world, is difficult (on a small budget). Our efforts in this direction are modest. Mostly we try to reach the academic community. We would of course like to reach the general public as well, and let it know of our existence. Sooner or later we'll plan some event that the media will judge to be of interest to the public; then it will be reported in the newspapers, etc. Unfortunately the doings of philosophers are rarely judged to be of interest to the public.

We reach out to the academic community in 3 ways. (1) We have a BRS session at the annual meeting of the American Philosophical Association (Eastern Division). The announcement of this session — and the call for papers — appear in the scholarly philosophy journals. (2) We offer the BRS Travel Scholarship. It began in 1979, and awards (up to) \$500 to a doctoral candidate, to enable him to travel, say, to the Russell Archives to do research for his dissertation. The announcement of the Travel Scholarship is sent to 5 departments in 15 large universities (Philosophy, Psychology, History, Sociology, and English). The announcement of the winner is sent to the same 75 departments. The winner in '79 was a historian. (3) The announcement of the BRS Award — given this year for the first time — is sent to the Philosophy Departments of 15 major universities, to philosophy journals, to The New York Times, etc.

(This report was presented at the 1980 meeting.)

(6) Membership Committee (Lee Eisler, Chairman; P.K. Tucker, Co-Chairman):

The Membership Committee's chief job is to recruit new members. To do this, we are advertising (this year) in 9 publications: APA MONITOR, THE HUMANIST, MENSA, THE NATION, THE NEW REPUBLIC, THE PROGRESSIVE, SATURDAY REVIEW, and UU WORLD. This produces about 50 inquiries — and about 8 new members — per month, on the average. It's a lot of work to handle these 58 responses each month, and I am very grateful to Co-Chairman Tucker for doing it. I'm also indebted to BEV SMITH, the previous Co-Chairman, who handled this assignment for 3 years.

(This report was presented at the 1980 meeting.)

(7) Philosophers Committee (Ed Hopkins, Chairman):

The papers for the meeting of the BRS with the Eastern Division of the American Philosophical Association in Boston (December 1980) are in process of being chosen. My main problem is a dwindling supply of papers. I need to have more papers submitted. If you know of anyone who has a paper on Russell that he would want to read at our meeting, urge him to submit it to me. I intend to have a meeting, with papers on Russell, every year, but I do need help in getting those papers. I have not yet solicited papers from known Russell scholars, but will do so if necessary.

(This report was presented at the 1980 meeting.)

(8) Science Committee (Alex Dely, Chairman):

(Alex was unable to give his scheduled talk at the 1980 meeting, because of various complications. Here are excerpts from the talk he intended to give:)

The Social Responsibility of Scientists and Laymen

All of us are working and living in the year 1980, when the control over much scientific research and development is in the hands of a few people at large private institutions, corporations and government bureaucracies. These people often use scientific results in such a way as to fulfill their own institution's goals. Most often, such goals do not fit the broad parameters of international concerns for the environment, quality of life, resource scarcity or even the future of life itself. If we are all not soon to be regretful Einsteins, scientists and laymen such as yourselves have the enormous and pressing responsibility to speak out on social issues and scientific ones, as Russell did, so effectively and eloquently, not as a representative of an institution but as an educated human being...

No matter what our leaders pretend, the ugly reality is that massive sums of money and manpower are spent in the preparation for the most effective destruction. The U.S. federal budget creates a Faustian bargain for many activists and researchers — the risk of loss of integrity in return for those all too necessary funds to continue an endeavor, be it in pure science or the fight against pollution.

Government support (and control) at 15 leading American universities accounts for over 85% of monies in the biological sciences, 80% in physics and chemistry. Much too often, safe research is carried out with results either insignificant or a mere confirmation of well-known facts, merely to make sure the money will keep coming.

Let us discuss some areas in which everyone, especially that mythical creature, the "objective scientist", should act with discernment and tenacity:

First is the need to limit the apotheosis of irrationality — the threat of nuclear annihilation. The issue of disarmament and the consequences of even a limited nuclear war have been widely discussed. J. Moreland and I are developing an essay to be entered in the Essay Competition (of "The Bulletin of Atomic Scientists") on "How to Eliminate the Threat of Nuclear War". (Our essay will appear in the next issue of the newsletter. For a description of the Essay Competition, see Item 19.) (The theme of their essay is the technical and financial feasibility of developing the resources of the moon. Ed.) This is an area in which every citizen should participate, the scientist as information dispenser and organizer, everyone else as political and grassroots activist: The moon development program will extend over about 20 years.

A more immediate concern is the pollution of our planet. Are we going to stay at war with Nature? Nearly 20 million people participated in the first Earth Day in 1970. Since then, environmental concerns have become part of the political value system. Strong laws were enacted in the U.S. However, current economic problems tend to reduce effective enforcement of such laws. The web of life is enormously complex, and we still do not know its many synergistic relationships. Only intense citizen pressure can keep the environmental issues in the limelight, and force the development of satisfactory solutions. Again the scientist must do the research, disseminate the information in a coherent, comprehensive picture, and then the layman can spread awareness of problems and solutions.

The 1979 Council on Environmental Quality reports that the U.S. water resources (drinking water reserves, coastal fisheries, and wetlands) are in trouble. Industrial waste and land run-off are found difficult to legislate and control. The U.S. endangered species list grew from 89 in 1969 to 228 in 1980. In that same time span, the U.S. lost 17 million acres to roads, shopping centers and the like. Worldwide there are more than a billion more people to feed. With increased use of foodstuffs for gasahol production, food scarcities in parts of the world will probably worsen. Americans still squander resources as if there were no tomorrow. We rely more on foreign oil today than we did in 1973. Every person who calls himself "educated" must spread the word that Spaceship Earth is a finite resource. Either we go out into space or we cut back on attacks on the environment; I hope we will do both.

Scientists, as government consultants and experts, will need to learn to escape from the secrecy which so often covers inefficiency. If no one knows, it becomes much too easy to deal with troublesome advice, whether it is factual or not. Scientists cannot remain the professional diplomats they are today, building behind-the-scenes relationships based on reciprocal favors. Scientists or their representative groups must offer the public and government free and informed advice, whether the public or government asks for it or not!

Such action is beyond one man's powers, but the efforts of a concerned group can produce remarkable results. No science is a precious sanctuary where one can forget the woes of the world. As a start, each Congressman should be assigned a volunteer individual scientist or group of laymen, to provide advice on the many new problems in technology, which Congress must eventually vote on.

Science is not something beyond ordinary human affairs. Empire builders in science have promulgated that myth. Informed laymen — and only they — can destroy it, and ultimately help science, by enabling the rest of the world to understand its relatively simple findings — not the detailed studies, but the broad concepts and basic ideas.

Many scientists have been intimidated by threats to withhold grants, and by the knowledge that during a long fight, they will be drained emotionally, physically, and intellectually. Scientists cannot do it alone; laymen must help carry the burden.

The science of biology probably poses the gravest threat, yet holds the greatest promise, for human life. Historically, scientist and layman alike have contributed to the perversion of this science through loyalty to parochial patriotism rather than international or ethical tenets of a profession or world law. Chemical and biological warfare have been part of the U.S. weapons arsenal in Maryland since 1946. Gradually the sciences traditionally promoting human life (medicine, biology, and biochemistry) are being perverted for military applications. Part of the Hippocratic Oath reads, "Neither will I administer a poison to anybody, even when asked to do so, nor will I suggest such a course."

Biological warfare is more insidious than nuclear war. Without an overt declaration of war, countries can be ravaged by successive crop failures of unknown origin; epidemics of human disease and fertility can be caused. In Vietnam, the U.S. Army used defoliating and herbicidal chemicals, completely disregarding international law. The U.S. Department of Defense continually surveys major food crops in China and Russia, with emphasis on their susceptibility to known blights. Army training manuals show estimates on the introduction of blights into an unprepared country (80% cropless in a single attack), and one can conclude that anticrop warfare (in a period of food supply strain) will be a question of feasibility rather than morality. The chemical and biological ingredients used or planned for warfare are constructed so as to be non-biodegradable, thus threatening whole nations with disastrous ecological consequences.

In too many situations, scientists feel that to take a moral stance is outside their professional domain. Such a "hear no evil, see no evil" attitude is dangerous. Too often, the harmful effects of, say, insecticides, have not yet been studied. In such a situation — over 50% of all chemicals on the market are still untested! — the scientist must be vigilant as protector of the public health rather than as mere collector/evaluator of existing, incomplete data. Since most scientists are not trained to see and assess the total context, they must

be pressured from the outside, by knowledgeable and persistent laymen.

Small areas of science are often the basis of technology. The influences of such technology on daily life have not yet been widely studied; too often the scientist feels that these influences are beyond the reach of objective verification or other parts of "scientific method". Even in relatively common activities, such as food processing, many a biologist would discover food for a nightmare when reviewing the list of FDA-approved food additives. Consumers today are often the guinea pigs because scientists and technicians provide inadequate, falsified, or no evidence at all, to prove products safe. Scientists and laymen alike should press for legislation making companies liable for ill effects suffered by customers.

Research geneticists and recombinant DNA scientists have spoken out more pointedly about their concerns about hazards, especially those genetic in nature. Today we have the ability to change man's gene pool, and patents are awarded on living organisms. Yet most scientists have compartmentalized their thinking to such a degree as to become unable to grasp complex relations between chemicals and genetic damage.

There are thousands of scientific publications, millions of pages, from which fact one can easily conclude that most scientists cannot possibly be the experts in broad areas they would like or purport to be. Public understanding of what science can and cannot do is of paramount importance. The stakes are too high to permit knowledge without wisdom.

We urgently need a broad, ecological philosophy, a humility toward the complexities of nature and toward man's abilities and limitations. Man does not have the God-given right to extract from Nature every last bit of material, regardless of the cost to other organisms. Man cannot survive the loss of biological diversity. As competition for scarce resources builds, social stresses mount. We must find ways to change the most important aspect of man's world: his view of himself.

Our world is too quickly being reduced to a domesticated garbage heap; scientists have helped this come about. Some of them recognize the problems, fewer are constructing the "big picture" in which solutions can be found. But the world runs not by science alone; laymen must take over some of the load. Grass roots groups have done a great deal in spreading ecological understanding. But short-term economics and ecology don't seem always to go hand in hand; and time may not be on our side. Schools must teach all the facts of life, not just the ones which prevailing ideology allows. Scientists can discover the facts and start their dissemination; but laymen must keep pressuring them, to make them see the whole forest rather than single trees. Scientists should not be seen as experts or gods. They must be made to reject the secrecy which surrounds most work in areas of defense, biology, etc.

Nuclear war, insecticides, solar energy, weapons systems, etc., are not just scientific issues, but social, moral and economic ones as well. The public cannot judge till given the facts; that is the scientist's role. Then the public must assimilate the information, and make a collective judgment.

Many more problems could be mentioned — population growth, world food supply, etc. — but all discussion points to the unique role of the scientist: to inform the public about achievements and failures in science and technology, so that the public conscience can operate. This requires a continual feedback between scientist and layman, to assure reliability of information. We must all help build a composite picture of how the world runs, what it consists of, how the parts interrelate, what causes damage, etc. Education is the key. Scientists and educators must be required to transmit accurate and complete information about our world. No such information or knowledge can be considered "classified". The boundaries separating specialized areas of human affairs, and between science and the public, must be eliminated. Ultimately it is a matter of commitment that will make or break us.

All of us who see this need are obligated to work for its resolution. Each individual, scientist and layman, must choose the area in which his efforts will be most fully felt. Our efforts, whether in science, in education, in business, or in politics may help save mankind from a perilous and unsavory future. Bertrand Russell made that effort. Let us try to follow his example.

(9) Universal Human Rights Committee (David Paul Makinster, Acting Chairman):

(David regrets that he has to step down as Acting Chairman. Other demands on his time make it impossible for him to do the job the way he would like to. He offers these observations:)

The inclusion in RSN26 of the Amnesty International USA petition is exactly the sort of action by which, in my estimation, the Human Rights Committee can be most useful. I have mentioned before the idea of an "information clearinghouse for Human Rights groups." To publicize, assist, and help to coordinate the activities of capable, established Human Rights groups is far more valuable than merely duplicating efforts with limited resources.

Whoever chairs the Committee would do well to subscribe to the HUMAN RIGHTS BULLETIN of the International League for Human Rights, 236 East 46th Street, New York, N.Y. 10017 — a fine source of information and general resources.

We should consider exchanging mailing lists with other organizations interested in promoting human rights. Individuals who object to this should be given time to request by mail that their names be excluded from such an exchange.

The meaning of "human rights" should be made specific, based, as far as possible, on what Russell believed, although I am not aware that he made any outright definition or enumeration of human rights. Here is a start, based on my own understanding of Russell:

Every individual has a right to develop his or her character and talents free from persecution or the threat

of persecution arising from intolerance concerning ideas, private lifestyle, personal conscience, or any other unconventionality that does not actually deprive others of their similar personal liberty. To deprive a person of life, health, property, means of livelihood, or freedom -- of personal association, thought and its expression, or unrestricted movement -- on the basis of that person's failure to conform to prevailing ideologies and social mores, is to treat that person as less than fully human. That is the basic characteristic of a "human rights violation," which, as I see it, makes it impossible for one to live a life "inspired by love and guided by reason." If we are to be concerned with Human Rights the way Russell was (as I understand him), we must not reject concern for issues as diverse as child abuse, the arms race, ERA, the poisoning of the environment with chemicals and nuclear waste, the jailing of Soviet Jews, and the wholesale firing of homosexual teachers, to name just a few items.

Finally, I would like to say that I am more than willing to devote whatever time I can spare to the Committee's activities.

A SPECIAL REQUEST

(10) "My Favorite Russell" -- a new series in the newsletter -- starts in this issue.

The series will consist of responses (by various members) to the questions: Which of Russell's writings is your favorite, and why?

* Members, please send us your answers.

* Honorary members, we'd be specially interested in knowing what your favorite Russell is, and we hope you will wish to tell us.

Please send your response to the newsletter (address on Page 1, bottom.)

The series is off to an excellent start: the first installment is by Paul Arthur Schilpp, who just received the first BRS Award (17). His essay appears as Item 16.

BR ON THE WORLD SCENE

(11) BR on Iran:

I propose to take Iran as a case study of what the West means by the "free world"... I hope citizens of the West will begin to inquire as to why their taxes and armies have been given over to support tyranny and corruption the world over... When the national uprising occurs, will the United States protect Iranian "freedom" as in Viet Nam by seeking at immense human cost to suppress the rebellion? (Bertrand Russell, 1966)

We thank DENNIS DARLAND, who advises that he found this quotation in a piece of literature he acquired at the University of Iowa in 1978. It was put out by the Iranian People's Support Committee.

BR QUOTED

(12) In "Forbes" (again!) Last issue we mentioned that "Forbes" had quoted BR 2 months in a row. Now, in the May 12th issue, they're at it again:

Whenever one finds oneself inclined to bitterness, it is a sign of emotional failure.

Looks like BR has achieved complete respectability.

(Thank you, Whitfield Cobb.)

(13) In "Today", "Florida's Space Age newspaper, a Gannet newspaper published in Brevard County, Florida". The date is some time in February 1980:

Russell, Lincoln Among Atheists

By TOM ATKINSON
Merritt Island

I read the history of the Spanish conquistadores in Mexico, and Central and South America — how these Catholic Christians would take Indian babies to a priest or monk, have them baptized, then bash their heads on the rocks. The

(Thank you, Herb Vogt.)

history of the scandals behind the pope's robes will convert any thinking person to atheism.

To those who have labeled me a Communist, I suggest they read *Why I Am Not a Christian* by Bertrand Russell. Lord Russell was also labeled a Communist, and he was a Nobel Prize winner. Thanks for putting me into his company. I repeat one of his last statements: "There has been a rumor in recent years that I have become less opposed to religious orthodoxy than I formerly was. This rumor is totally without foundation. I think all the great religions of the world — Buddhism, Hinduism, Christianity, Islam and Com-

munism — both untrue and harmful. . ." etc. (This Clarion book is available at most bookstores.)

Last Friday morning on TV 2 news, I heard a young man singing a song praising Abraham Lincoln as a man of God. The truth is, Christians have been claiming America's most respected president as one of their own for decades. Honest Abe said: When I find a church that practices what it preaches, that church I will join. Read *Lincoln the Atheist* by Joseph Lewis, P.O. Box 2117, Austin, Texas 78768.

ABOUT BERTRAND RUSSELL

- (14) Nero Wolfe's creator is scared (for once), as told in Rex Stout, A Biography by John McAleer (Boston: Little Brown, 1977) pp. 192-193:

As soon as she got back from Russia, Ruth resumed her duties as Scott Nearing's secretary. One of the first things she did was to arrange for Scott to debate Bertrand Russell at Carnegie Hall, on 25 May 1924. For moderators, she rounded up Samuel Untermyer and Benjamin A. Javits, brother of Jacob Javits. The topic was "Can the Soviet Idea Take Hold of America, England, and France?" Scott took the affirmative side.

Rex had an aversion to staged debates and avoided them as a matter of principle. Yet he wanted to meet Russell. Ruth handled that too. She brought Russell around to Rex's apartment, on Perry Street, for high tea. In Rex Russell found a lively intellectual sparring partner. Over the next five years, until Rex went to Europe, whenever Russell was in New York, he came by regularly for dinner and conversation. One night when they were having dinner together, their minds ranged over English literature. They talked of the Mediterranean origin of the usual Gothic villain in English novels. Rex asked: "Why is it that whenever there is a character of Latin extraction in a novel by an Englishman, even if the novelist is obviously sympathetic with the character, between the lines there is always a note of condescension?" Russell's brow corrugated. "They gesticulate," he announced, "and we can't bear it." Of Russell, Rex told me: "In 1926 he was fifty-four and world-famous;

I was forty and merely an American businessman who could answer his thousands of questions about my country and fellow citizens, and could (and did) supply vast quantities of fresh caviar, which he loved. And apparently he liked me. There wasn't much we never talked about. Once he spent hours trying to define and describe to his satisfaction, precisely, the difference between the operation of his mind and mine that made me incapable of understanding the general theory of relativity."¹¹

Russell was one of the few men in the world who could hold Rex in awe. Years later, in the spring of 1940, he was Rex's dinner guest at High Meadow. Of that occasion Egmont Arens afterward reported: "I'd known Rex more than twenty years and never saw him at a loss for words. He was informed and intelligent and he showed it. But that night he was like a little mouse at a feast of cats — silent and attentive and bright eyed and quietly pleasant. And all of a sudden I realized, By God, Rex is scared! He really was scared. I was surprised and kind of touched."¹²

During World War II, when Russell sent his children to America, on his instructions they visited Rex.

Though best known as the author of the Nero Wolfe mysteries, Stout was also a founder of "The New Masses" (a Marxist periodical of the 20s), a board member of the American Civil Liberties Union, and president of Vanguard Press. Ruth is Rex Stout's sister. The Russell-Nearing debate was published by Allen & Unwin as Bolshevism and the West and by Haldeman-Julius as Soviet Form of Government: Little Blue Book No. 723.

We are indebted to TOM STANLEY for all of the above.

- (15) Blanshard on Russell Brand Blanshard is "a philosophical rationalist"... "perhaps the most distinguished living proponent of that great tradition," according to Paul Arthur Schilpp. Schilpp edited The Philosophy of Brand Blanshard (La Salle, IL.: Open Court, 1980), which is Volume 15 in "The Library of Living Philosophers". Here is what Blanshard had to say about BR in that just-published volume, pp. 86-90:

During Moore's period at Swarthmore, Russell and his wife were living not many miles away in a fine stone house at Malvern, bought for him by my former employer, A. C. Barnes. One day a note came from Lady Russell inviting the Moores and ourselves to tea. Moore declined, on the ground that he was indisposed, which was true, I think, in more senses than one; the two men, whose names are so often joined, and who owed so much to each other, were not temperamentally congenial. But Dorothy Moore accepted, and Frances and I drove her to the house, which was in the neighborhood of Bryn Mawr. I recall only two things about this visit. Russell was in a jovial mood, and taking me into his study, pointed to an old silhouette on the wall. It was the likeness of a philosopher, he said; could I tell who it was? I have a fair eye for philosophic physiognomies, but this had me baffled. "That," said Russell, "is my godfather, John Stuart Mill." It was the strange and unlikely truth. Russell was born in 1872; Mill died in 1873; Russell's parents, the Amberleys, had been devoted admirers of Mill; and though none of them had any clear religious beliefs, Mill had consented to serve as godfather and had sent the infant an inscribed silver cup. The other fragment of memory from that visit is a remark of Russell's about James. He had evidently been engaged on the

chapter on James for his *History of Western Philosophy*, and had been rereading the essay on "The Will to Believe." "Isn't it immoral!" he exclaimed.

I did not know Russell nearly as well as I did Moore, but I read far more of him, partly because there was so much more of him to read; between forty and fifty of his volumes are on my shelves. He came to Ann Arbor in the early twenties to lecture on the structure of the atom, and kept his audience amused with such comparisons as that between the behavior of electrons in passing from orbit to orbit and the behavior of fleas in hopping unseen from one place to another. With a few other young philosophers, I took him to a basement café in the Michigan Union and plied him with food and questions. I asked what ground he had for believing in Occam's razor. He replied that it was incapable of proof but that we could not help believing it, and that experience appeared to confirm it. I sent him a copy of *The Nature of Thought* in 1942, and though it contained a sharp criticism of his *Analysis of Mind*, he wrote me a pleasant letter about it, reminding me that Joachim, to whom the book was dedicated, was a relative of his who had drawn up for him, when he was eighteen, a list of readings, including the *Logics* of Bradley and Bosanquet;

"they started me on philosophy," he said. In October 1968 I went to McMaster University in Canada to give an address at the opening of the Russell Collection to the public. This collection of Russell's books and manuscripts, which had been acquired earlier that year, will undoubtedly be a Mecca for students of his work. He must have had a larger volume of correspondence than any other philosopher in history, including Voltaire, for the collection contains more than 120,000 letters, with "a few thousand" temporarily reserved; and more than 4,500 correspondents are listed by name. His library also was acquired by McMaster, including Wittgenstein's library, which Russell bought from him in 1919. I was happy that I could add one small item to the collection myself. Moore had written part of his essay on Russell's theory of description in our house in Peacham, Vermont, and had left the manuscript with me. I sent it to the Russell Collection.

Russell was as ready as Moore to change his views with changing evidence. He started with Hegelian idealism; from this he shifted to one of the most extreme realisms on record; and toward the end of his life he shifted back to a Berkeleyan position regarding all that is immediately experienced. It will be recalled that according to Montague the chief difficulty with the New Realism was that it could not deal with error. Russell boldly met this difficulty, not by withdrawing from realism but by defiantly becoming more realistic still; he was prepared to regard all the strange shapes seen as one walks round a table and all the bats' heads seen by the alcoholic as members of an independent physical order. This position was examined by Lovejoy in *The Revolt Against Dualism*, and when he finished, not much was left of it. Russell, alive to the force of such criticism, beat a slow retreat. By 1948, when *Human Knowledge: Its Scope and Limits* appeared, he was writing, "if percepts are 'mental,' as I should contend, then spatial relations which are ingredients of percepts are also mental."¹³ Indeed the space and time of common life with all their contents were now regarded as mind-dependent, and the problem of the theory of knowledge was to find some way of correlating items in the realm of sense with the events in the realm of physics that gave rise to them. Our "real" world, the plain man's world of tables and chairs, of green grass and blue skies, is a panorama in the minds of its beholders. In comparison, the physical world was a ghostly affair that lay at the end of a precarious inference, and matter had resolved itself into "a wave of probability undulating in nothingness."

Moore was the very type of a Cambridge specialist; Russell was a Renaissance universalist. Russell wrote on every branch of philosophy except aesthetics. When I asked him once why he had not written on that too, he replied, "because I don't know anything about it," though he added characteristically, "that is not a very good excuse, for my friends tell me that it has not deterred me from writing on other subjects." He has been charged with turning out potboilers which were loosely and hastily thrown together, and no doubt in the vast volume of his writing one does find a wide variation in quality. His *History of Western Philosophy* is not the place to go for accurate philosophic reportage; his views on religion seem to me too unsympathetic and negative; and his later anti-Americanism, which led him to range an American president alongside Hitler, embarrassed many of his admirers. But even in second-grade Russell there are the trenchancy and force of a remarkable mind. If one does not get Aristotle quite as he was from the *History*, one gets at least the enlightening impression that one great logician formed of another. The defects of Christianity pointed out in *Why I Am Not a Christian* are real defects, even if the virtues are too largely ignored. And though Russell's indictment of American policy was too much like a prosecutor's brief, what he loved above all—rationality—and what he hated above all—cruelty—were surely the right things, whether he found them in

the right places or not.

How many philosophers, one wonders, have succeeded in being readable through thousands of pages? Russell's success is the more striking because he was in one sense not a stylist at all. He did, to be sure, fall under the influence for a time of his literary brother-in-law, Logan Pearsall Smith, whose gods were Flaubert and Walter Pater; and he showed what he could do in the rhetorical vein when he wrote *A Free Man's Worship*. "a work," he said later, "of which I do not now think well." Until he was twenty-one, he wanted to write like John Stuart Mill. But he came to think that, for him at least, imitation involved insincerity, and that the true ideal was one derived from mathematics; "I wished to say everything in the smallest number of words in which it could be said clearly."¹⁴ The result is a style dominated by simple declarative sentences, and so nicely adjusted to his way of thinking that he could write without revision. He had another mode of economizing his energies in writing, namely a strategic use of the subconscious. When he had to write an article, or essay, he would give intense attention long beforehand to defining the issues he wanted to deal with and summoning up such relevant knowledge as he had. He would then commit the matter to his subconscious until two weeks or so before the article was due, when he usually found that he could write it straight off with very little effort. What led him to rely on this method, he said, was his experience in preparing his Lowell Lectures on *Our Knowledge of the External World*. The lectures were to be given in Boston at the beginning of 1914. He struggled with the problem through most of the preceding year, only to reach the end of the year in frustration and despair. Since the time was short, he arranged to dictate to a stenographer what straggling ideas might come. "Next morning, as she came in at the door," he recalled, "I suddenly saw exactly what I had to say, and proceeded to dictate the whole book without a moment's hesitation."¹⁵ When I was writing the chapter on "The Subconscious in Invention" for *The Nature of Thought*, I found many instances of such use of the subliminal mind, but I doubt if there is any philosopher for whom it has proved such a cornucopia as for Russell.

What I admire most about Russell, however, is not his writing but his rationalism. Not rationalism in the technical sense, for he abandoned that when his pupil Wittgenstein convinced him on a walking trip in Norway that mathematics was only a vast tautology. By rationalism here I mean the rational temper, the habitual appeal to reason as the only ultimate arbiter of men's differences of view. Russell was involved almost continuously in political and moral controversy; he lost his Trinity fellowship and went to jail over the First World War; he was refused the right to teach in New York because of his views on marriage and morals; he was bitterly attacked for his opinions on Hiroshima and Vietnam. But he was always ready to present reasons for his beliefs, and to reconsider them if these reasons could be shown unsound. Most persons are much worse in theory than in practice, but Russell's practice was sometimes better than his theory. From middle life on, he was prey to the unfortunate doctrine, which for a while even Moore found seductive, that moral judgments are only expressions of feeling or desire, and, as incapable of truth or falsity, cannot be made out by evidence. But neither in controversy nor in practice did he behave as if he took this seriously. He never ceased to argue on moral issues, to assume that where men differed there was an objective truth to be found, or to believe that the highest human goodness lay in acting rationally. He acted himself like an eighteenth-century rationalist, and the man whom he regarded as "the noblest and most lovable of the great philosophers"¹⁶ was that archrationalist Spinoza. It can hardly be doubted that in the annals of practical rationalism Russell will rank high.

(Thank you, Don Jackanicz.)

"MY FAVORITE RUSSELL"

(16)

By Paul Arthur Schilpp:

The Society has asked me to say in a more or less abbreviated statement which one of Bertrand Russell's writings I would choose as my first preference and why. I am happy to comply with this request although I am all too aware that no scholar should respond to a specific request like that without having read everything that the respective author had written and published. And, with all my regard and respect for Lord Russell, I simply can make no such claim. As over against my good friend, Mr. Lester E. Denonn, I do not even begin to own a small proportion of Russell's writings which are in his possession. Consequently, in undertaking this assignment, I must in advance plead guilty to unprofessional procedure.

On the first half of this assignment, that is, naming a specific Russelian writing, I must admit that among those I do know I have no hesitancy whatsoever in picking his "A Free Man's Worship" of 1902. At that point

in his life Russell was barely thirty, certainly far from famous, whether in philosophy, mathematics, science, or even politics. It may seem strange, therefore, to pick such an early writing in his career. But, in all honesty, I can make no better choice.

Which brings me to my reason for this selection. In a way this may be easily and succinctly stated: "A Free Man's Worship," in my humble judgment, is a literary masterpiece of the first magnitude. No other scholar, certainly no philosopher in the English-speaking world in the twentieth century, can, at least from my point of view, match the stylistic beauty of this literary piece. It isn't a matter of agreeing or disagreeing with its content; with much of which I do in fact agree. But that is, as I have just indicated, quite beside the point. The magnificent phrases, each followed by many others, just come sweeping along until one feels almost breathless by the time one reaches the end. Who, who has ever read it, can forget such paragraphs as the following (I shall only select two):

"That Man is the product of causes which had no prevision of the end they were achieving; that his origin, his growth, his hopes and fears, his loves and his beliefs, are but the outcome of accidental collocations of atoms; that no fire, no heroism, no intensity of thought or feeling, can preserve an individual life beyond the grave; that all the labors of the ages, all the devotion, all the inspiration, all the noonday brightness of human genius, are destined to extinction in the vast death of the solar system, and that the whole temple of Man's achievement must inevitably be buried beneath the debris of a universe in ruins — all these things, if not quite beyond dispute, are yet so nearly certain, that no philosophy which rejects them can hope to stand. Only within the scaffolding of these truths, only on the firm foundation of unyielding despair, can the soul's habitation henceforth be safely built."

* * * * *

"Brief and powerless is Man's life; on him and all his race the slow, sure doom falls pitiless and dark. Blind to good and evil, reckless of destruction, omnipotent matter rolls on its relentless way; for Man, condemned today to lose his dearest, tomorrow himself to pass through the gate of darkness, it remains only to cherish, ere yet the blow falls, the lofty thoughts that ennoble his little day; disdaining the coward terrors of the slave of Fate, to worship at the shrine that his own hands have built; undismayed by the empire of chance, to preserve a mind free from the wanton tyranny that rules his outward life; proudly defiant of the irresistible forces that tolerate, for a moment, his knowledge and his condemnation, to sustain alone, a weary but unyielding Atlas, the world that his own ideals have fashioned despite the trampling march of unconscious power."

It really does not matter how many times one reads or has read such passages. At each renewed time of reading, they grip the reader anew. Is there anything else I can say?

THE BERTRAND RUSSELL SOCIETY AWARD

(17) The first ERS Award, as told in a ERS press release:

FIRST BERTRAND RUSSELL SOCIETY AWARD GOES TO PHILOSOPHER PAUL ARTHUR SCHILPP

Paul Arthur Schilpp, Distinguished Research Professor of Philosophy at Southern Illinois University is the recipient of the first Bertrand Russell Society Award. The Award was presented on June 21st, during the Society's 7th annual weekend meeting, held this year in Chicago, at the University of Chicago's Center for Continuing Education.

This first Award has been given for an important innovation in philosophical scholarship, which benefited not only Russell, but quite a few other contemporary philosophers as well, and will no doubt benefit many more in the future.

The Award's citation reads: "For opening a new path to a better understanding of the work of living philosophers." The new path is The Library of Living

Philosophers, which Professor Schilpp conceived and edited. The Library consists of a series of volumes, each one dealing with a single philosopher, but with a difference.

Most philosophical studies in the past have been about philosophers who are dead. Professor Schilpp asked scholars to write about philosophers who were still living, and who could respond to what the scholars had written about them. Thus, the volume on Russell, for example, contains "critical or descriptive essays" by eminent scholars, each examining some aspect of Russell's work. Then Russell replies to these essays, agreeing with some and disagreeing with others. In the process much light is shed.

In all there are 14 volumes, on 14 philosophers — including Dewey, Whitehead, Santayana, Einstein and Popper — and several more in preparation. The majority were published during Professor Schilpp's 29 years in the Philosophy Department of Northwestern University, where he is Professor Emeritus of Philosophy.

Only a few highlights of Professor Schilpp's long and productive career can be mentioned here. Besides being an editor, he is or has been: an author and philosopher (The Crisis in Science and Education, Human Nature and Progress, Kant's Pre-Critical Ethics, The Quest for Religious Realism); a Methodist clergyman, like his father; a consultant in philosophy to Encyclopedia Britannica; President of the American Philosophical Association (Western Division); Co-Chairman of the recent Einstein Centennial Commemoration Festival in Carbondale, Illinois; a visiting professor at the University of Munich; a lecturer in India and Ceylon; and a representative of the State Department at the Pakistan Philosophical Congress.

Bertrand Russell (1872-1970) wrote for 2 entirely distinct audiences: Philosopher & Mathematician Russell wrote for his fellow philosophers and mathematicians; Citizen Russell wrote for his fellow citizens around the world. The Bertrand Russell Society, Inc., is not a scholarly society, though one of its aims — as its first Award indicates — is to promote Russell scholarship. It also aims to promote ideas and causes that Russell championed. Most of the Society's members live across the USA and Canada; about a dozen foreign countries are also represented on the membership list. For information about the Society, write RD 1, Box 409, Coopersburg, PA 18036.

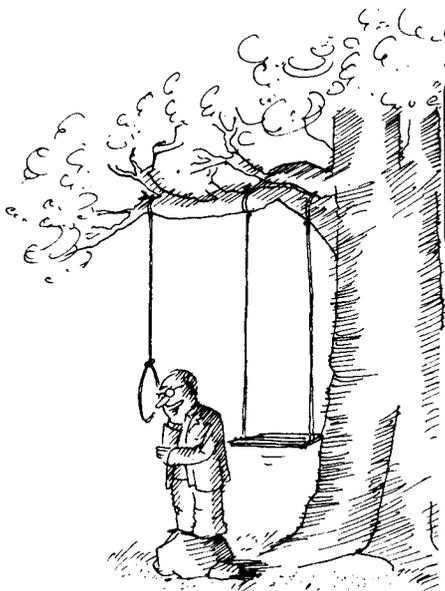

- (18) * The second BRS Award? We are asking for your suggestions, for the next recipient of the BRS Award. Whom would you like to see get it? Send us your nominations.

There should be a genuine connection between the person you nominate and BR. It might be someone who had worked closely with BR, in an important way. Or someone who has made a distinctive contribution to Russell scholarship. Or someone who has acted in support of a cause or idea that BR championed, or whose actions exhibited qualities of character (such as moral courage) reminiscent of BR.

Send your BRS Award nominations c/o the newsletter (address on Page 1, bottom) and tell why you think your nominee deserves the Award. If the winner is a well-known figure — or at least, not unknown — it may earn publicity for the BRS, which would be desirable.

PROMOTING BR'S PURPOSES

- (19) Against the threat of nuclear war, from "The Bulletin of the Atomic Scientists":

THE BULLETIN OF THE ATOMIC SCIENTISTS

ANNOUNCES

An International Essay Competition

In honor of its founding Editor, Eugene Rabinowitch, the Bulletin of the Atomic Scientists and the Albert Einstein Fund offer a \$5000.00 prize for the best essay on

How to Eliminate the Threat of Nuclear War

Thirty-five years after the bombing of Hiroshima and Nagasaki, the danger of nuclear war is greater than at any other time. Five nations have nuclear arsenals and many more are on the threshold.

The Editors and Directors of the Bulletin believe that once these weapons are used the ensuing war will be mankind's last and will mark the disappearance of our civilization. We appeal to those individuals born after Hiroshima to address the issues of peace and survival.

Competition Requirements

The Competition is restricted to individuals born on or after August 6, 1945.

Contestants must submit an original and three copies of an English language essay not to exceed 4000 words.

A self-addressed envelope and return postage must be included with each entry.

The contestant must submit a statement giving the Bulletin of the Atomic Scientists first and exclusive publication rights for one year from date of submission.

Entries must be postmarked by September 15, 1980.

Review Procedures

The Bulletin Editors and Editorial Council will review all essays. The final decision will be made by an international and independent jury whose members will be selected by the board of directors.

The Award

\$5000.00

The Rabinowitch Award Essay will be published in the January 1981 Bulletin of the Atomic Scientists

Mail Your Essay to

The Rabinowitch Essay Competition
The Bulletin of the Atomic Scientists
1020-24 East 58th Street
Chicago, Illinois 60637 USA

Additional copies of this announcement are available at the above address.

(Thank you, Bob Davis.)

RATIONALITY
and its adversaries

- (20) Evolution vs. Creation, continued. Last issue we reported that the Campus Crusade for Christ people were trying to get the Biblical story of creation taught in highschool science (sic!) classes, along with the theory of evolution. (Incidentally we reported it under the heading, RELIGION AND ITS ADVERSARIES, but RATIONALITY AND ITS ADVERSARIES seems more appropriate.)
- Fundamentalism seems to be on the march these days — see Martin Marty's article (42) or the current Republican platform — and the Humanist Association of San Diego is taking the threat (to the teaching of science) seriously. They are publishing a quarterly journal, called "CREATION/EVOLUTION". "Its aim will be to answer, in simple but correct language, all the major 'scientific' arguments creationists usually use in their publications and debates." \$8 for one year (4 issues). \$2.50 for the current issue. Send your check to CREATION/EVOLUTION, 953 Eighth Avenue (208), San Diego, CA 92101.
-

NEWS ABOUT MEMBERS

- (21) Herb Campbell was planning to come to the 1980 meeting, but got taken to the hospital instead. There they gave him a pacemaker, and he reports that he's coming along fine. He has provided all of us with A NEW APPROACH TO PEACE by Bertrand Russell, that accompanies this newsletter. Some of you may recall that he and BR traded rivers some years ago (NL3-65). Herb has been a river pilot at scenic Wisconsin Dells, a tourist attraction. If any BRS member wanders up that way, Herb could be very helpful, and that would please him very much. Write him (P.O. Box 231, Wisconsin Dells, WI 53965) or phone (608-254-8468).
- (22) Lee Eisler had an experience similar to one of BR's. He was due to enter the hospital for a minor operation last year. A hospital employee phoned him at home and asked a few routine questions, one of which was, "What is your religion?" The question is asked for the benefit of local clergymen, who regularly come to the hospital to visit patients of their various faiths. Lee answered, "I'm an agnostic." The next question was, "Do they have a church in Coopersburg?"
- (23) Ed Hedemann is spokesman for the War Resisters League, one of the antidraft groups planning to protest draft registration, according to a story in The New York Times, June 15, 1980, p. 19. Here are 2 excerpts from the Times story:
- | | |
|---|--|
| <p>Some antidraft organizers are toying with what Dan Ebener of the pacifist Fellowship of Reconciliation called "all sorts of creative ideas to disrupt the system."</p> <p>These include legally tying up business at the post offices where registration is expected to take place by forming lines of dozens of people to buy one-cent stamps and registering thousands of noneligible or false names with the Selective Service System. "We'll register Carter and maybe some generals," said Ed Hedemann of the War Resisters League.</p> | <p>Mr. Hedemann said that the war Resisters League might urge those who registered to wait until the last two days before signing up, while Susar Hadley said that the Fellowship of Reconciliation would distribute cards on which those of draft age would be asked to register their opposition to the draft at the same time that they registered with the Government.</p> |
|---|--|
- (24) Conrad Russell made a lightning trip to McMaster, to lecture to the History Department, on March 11th. (Thank you, WARREN SMITH and KEN BLACKWELL.)
-

QUESTIONS & ANSWERS

- (25) $2 + 2 = ?$ "Some time in the middle 30s," writes JACK RAGSDALE, "I came across something of Russell's that read something like 'two and two are about four', and that has always intrigued me. Does anyone know where in BR's writings it occurs...and what it means?" Write Jack c/o the newsletter (address on Page 1, bottom.)
-

HONORARY MEMBERSHIP

- (26) Paul Arthur Schilpp has been proposed for honorary membership. He received the first BRS Award for his contribution to Russell scholarship, as described in (17). Honorary members must be approved by two-thirds of the members voting. Please vote (last page).

NEW MEMBERS

(27) We welcome these new members:

MRS. E. DEWEY BENTON/1324 Palmetto St./Clearwater, FL 33515
 GEORGE BLAM/20 Arlington Ave./St. James, NY 11776
 DECIO A. CALDERON/31-76 51st (5A)/Woodside, NY 11377
 A. J. CARLSON, JR./274 Saxer Ave./Springfield, PA 19064
 RICHARD D. CHESSICK, M.D., Ph.D./2622 Park Place/Evanston, IL 60201

DEWEY DANIELSON/ P.O.Box 2000 FPC/Lompoc, CA 93438
 JACK H. DORWART/1735 Costada Court/Lemon Grove, CA 92045

BOOK REVIEWS

- (29) "The Case of the Philosophers' Ring" by Randall Collins is a new (1978) "Sherlock Holmes" detective story in which a fictional BR plays an important role. We spoke rather highly of it in RSN22-34.

But now along comes a professional philosopher, who takes a sterner view. He is HARRY RUJA (our new Vice-President-Elect, incidentally), Professor Emeritus, Philosophy, at San Diego State University, and this is what he says:

Recently I read this work, which is one of an expanding series of "Sherlock Holmes" tales purporting to be by "Dr. Watson".

We read of Russell's mathematical work, of his association with Wittgenstein, his connection with Trinity, and of his friends, Keynes, Whitehead, Strachey, and Moore. The mystery in the novel is who, or what, caused the death of a brilliant young Hindu mathematician, found lifeless without a mark on him but with a taut abdomen. There is more mystical mumbo-jumbo than ratiocination in the solution, though Holmes is shown "deducing" a stranger's history on first meeting, in typical "Astounding, Holmes," "Elementary, my dear Watson" fashion.

The facts about Russell and his circle of acquaintances are, however, sadly garbled. Collins has Russell participating in demonstrations against the war (World War I) even before England got involved, when in fact Russell's opposition took active form only after the war was well under way. Moreover, BR was not on the streets protesting but in his study writing Why Men Fight and editorials for The Tribunal. Collins has Russell in prison for having urged the munitions workers to strike, whereas the more prosaic reason was that he had expressed scepticism as to the help American troops could offer the Allies.

Collins even retells Russell's jokes wrong: as for instance, the one in which BR is asked by the jailer what his religion is and replying "agnostic," not "atheist" as Collins has it, is reassured with the remark, "Well, there are many religions, but I suppose they all worship the same God."

Even on trivial matters, Collins bungles, as when he refers to Arthur Balfour, who had arranged for Russell to have a somewhat more comfortable cell, as "Lord" Balfour, a title Balfour did not acquire until 1922.

There are some interesting moments in the mystery as it unfolds, but all in all, this book will appeal more to mystery-fiction lovers than to friends of Russell, for whom the distortions will prove painful, if not downright offensive.

BRS LIBRARY

- (30) 2 Co-Librarians. Beginning September 1, 1980, Jack Ragsdale and Don Jackanicz will each assume the title of Co-Librarian of the BRS Library. Jack will take physical possession of the Library's holding, and will answer members' requests to borrow, buy or rent. (Films are for rent.) Contributions to the Library (of books, etc.) should be sent to him. Don will continue to work on a variety of Library projects, including the acquisition of material and bibliographic research.

For some time, Don had been trying to interest another BRS member in taking over part of the Library's work. "A few members expressed interest, and I thank all of them warmly for their ready willingness to help." Don and Jack discussed the Library at the 1980 Meeting, and Don concluded that Jack was the volunteer in best position to do the job. Don is now in process of closing out all outstanding Library accounts. If you have ordered books and have not yet received the complete order, you will hear from Don in due course.

Thus, the Library now has 2 addresses: Jack Ragsdale/P.O. Box 28200/Dallas, TX 75228
Don Jackanicz/3802 N. Kenneth Ave./Chicago, IL 60641

At the 1980 Meeting, the entire Library collection, supplemented by materials from Don's personal library and the Library of the University of Illinois at Chicago Circle, was assembled for display and reference. The BRS Library is indebted to The Open Court Publishing Co., of La Salle, IL, which lent an exhibit set of "The Library of Living Philosophers" (edited by Paul Arthur Schilpp, who was guest of honor at the 1980 Meeting.) There is a special discount price for BRS members on volumes in "The Library of Living Philosophers". See below.

- (31) Open Court discount. Open Court Publishing Company has offered BRS members a 20% discount on the 11 in-print volumes in "The Library of Living Philosophers". Take 20% off of the following list prices: Albert Einstein, 27.50; C. D. Broad, 27.50; C. I. Lewis, 25.00; Ernst Cassirer, 30.00; G. E. Moore, 25; Karl Popper (in 2 vol.) 35.00; George Santayana, 25.00; Karl Jaspers, 30.00; Martin Buber, 27.50; Rudolph Carnap, 35.00; Sarvepalli Radhakrishnan, 27.50. Paperbound: Albert Einstein, 6.95; Ernst Cassirer, 12.00; G. E. Moore, Vol. 1, 6.95, Vol. 2, 5.95; Karl Jaspers, 12.00.

The Russell, Dewey, and Whitehead volumes are out of print, and are available (only) from University Microfilms International, 300 North Zeeb Road, Ann Arbor, MI 48106

PARADOXES

(32) Jerry Alspaugh writes:

My 31 fourth-graders are enjoying the paradoxes in Russell Society News.

I told them about the one I found more than 20 years ago, in my Introduction to Philosophy course. It comes from BR's Human Knowledge (New York: Simon & Schuster, 1948), which I quote (p.180):

I once received a letter from an eminent logician, Mrs. Christine Ladd Franklin, saying she was a solipsist, and was surprised that there were no others. Coming from a logician, this surprise surprised me.

Back then I wrote my own paradox: "I'm going to kill myself, or die trying."

I remember an old cartoon which had one lady telling another: "Let's get several boxes before the hoarders come."

James Fixx offers this poser about a smart explorer captured by savages, who say to him: "Make a statement. If it is true, you will be hanged. If it is false, you will be shot." He says: "I will be shot," and is released.

My last paradox concerns me. Now that I have a free mind, I feel as I did when I was a "sanctified" Nazarene.

EXPENSES/CONTRIBUTIONS

- (33) Deductible expenses. This is a reminder to those members who are entitled to treat the cost of attending the 1980 meeting as a deductible expense on their federal income tax. That includes, as we understand it, members whose presence is essential to the conduct of the meeting — officers, directors, chairmen and committee members. If you are one of those members, and you take the deduction (as you are entitled to), there is one more thing you must do: you must notify the BRS Treasurer, and tell him the total amount you are deducting. The BRS is required to report that amount as a contribution to the BRS, on the BRS's tax return. (The BRS is not required to pay taxes, but it must file a return when its income exceeds \$5000.)
- * So please be sure to do your part in enabling the BRS to conform to the requirements. Notify BRS Treasurer Dennis J. Darland (1406 26th St., Rock Island, IL 61201) of the amount you will claim as a tax-deductible expense. Better not wait till 1981; better do it now.
- (34) Russell Memorial (London). We are pleased to report that 21 more BRS members have aided the plan to place a memorial bust of BR in the gardens of Red Lion Square, London, through their contributions: ROBERT CANTERBURY, WHITFIELD & MARGARET COBB, JACK COWLES, DENNIS DARLAND, LESTER DENONN, WILLIAM EASTMAN, PHILLIPS FREER, BARRY GOLDMAN, CHARLES GREEN, CONNIE JESSEN, FRANK PAGE, JACK RAGSDALE, CHERIE RUPPE, CAROL SMITH, GLENNA STONE, JOHN TOBIN, HERB VOGT, RONALD YUCCAS, TERRY & JUDITH ZACCONE. They, and all other donors, will hear from the Appeal Committee of the Bertrand Russell Memorial (London), thanking them for their contributions, and advising them (in advance) of the date and time the bust is to be unveiled. If you haven't yet sent a contribution, there is still time to do so. Send your (tax-deductible) check, made out to "The Bertrand Russell Society, Inc." to the ER Memorial, c/o the newsletter (address on Page 1, bottom).
- (35) BRS Treasury. We thank the following members for their contributions to the BRS Treasury: DENNIS DARLAND, PHILLIPS FREER, RAY PLANT, HARRY RUJA, DONNA WEIMER, and — for her continuing, regular, monthly contributions — KATHY FJERMEDAL.

BRS BUSINESS

- (36) Time to vote. The last page of this newsletter consists of a ballot for voting on the following:
- (1) Election of 8 Directors, for 3-year terms starting 1/1/81
 - (2) Time and place of 1981 meeting. Discussed in (3, 3.5)
 - (3) Honorary membership for Paul Arthur Schilpp. Discussed in (26).
 - (4) Feasibility of a future meeting in London. Discussed in (3.5)

Here are some facts about the Director-Candidates:

ADAM PAUL BANNER, age 59, was born in Chicago and graduated from the University of Evansville, Indiana in 1949 with a degree in Chemistry and Physics, followed by unfinished graduate studies at George Washington University. He has spent in excess of five years, not counting military service, outside the United States, serving in: Japan, Thailand, Korea, and Turkey as a civilian government employee and as a volunteer executive for the International Executive Service Corps of New York City. Presently semi-retired, he is a carbon and graphite chemist and has been known to write a fair poem.

ED HOPKINS, present Board member, Chairman of the Philosophers Committee. Originated and organizes the annual BRS Symposium at the APA (Eastern Division).

DON JACKANICZ, present Board member, BRS Secretary, BRS Co-Librarian. Planned and brought off the successful 1980 meeting.

S. ALI MOHAMMAD GHAEMI, of McLean, VA. Entering Junior year in highschool Member: Amnesty International, Int'l League for Human Rights, Clergy & Laity Concerned, United Nations Ass'n of the U.S., Palestine Congress of North America, Society for Iranian Studies, Thoreau Society, Thoreau Fellowship, various national and international Islamic groups, many philatelic groups. Interested in politics, history, writing, poetry, Islamic and Socialist philosophies, historical perspectives of philately. The "S" stands for "Sayyed", title of verification of descent from Holy Prophet Mohammad through his cousin and son-in-law, Emam (or Imam --- religious leader) Ali.

CHERIE RUPPE, Associate Member: Pugwash, Federation of American Scientists, Union of Concerned Scientists. Fellow of Endangered Wildlife Trust of So. Africa. and Member of The Whale Protection Fund. Member of Pacific Northwest Ballet Ass'n and PNWB League. Interests: skiing, sailing, hiking, photography & travel.

WARREN ALLEN SMITH, present Board member, BRS Vice-President (until 1/1/81). Member: American Humanist Ass'n, British Humanist Ass'n, Mensa. Former book review editor, "The Humanist" (USA), high school teacher (English), recording studio owner.

KAT TAIT, present Board member, founding member, honorary member, first BRS Treasurer, author of "My Father, Bertrand Russell," (New York: Harcourt Brace 1975).

P.K. TUCKER, Co-Chairman, Membership Committee; Research Psychologist in health care and law enforcement, Youth Services Coordinator of Lincoln County Youth Services.

Please vote. There are 8 candidates for 8 openings. There would have been more candidates if more members had nominated candidates, or had volunteered themselves. Next year, let us have more than 8 candidates, so that we give the member-voters a choice; with your cooperation, we can do it.

Even though all the candidates are going to be elected, we ask you to vote anyway, in order to (a) indicate your interest in BRS affairs, and (b) show your approval of the slate of candidates.
Vote.

MEMBERSHIP RENEWALS

(37) Last call for dues. As we reported last issue (RSN26-32), everybody's dues were due July 1st (except members who enrolled this year). There is a 2-month grace period, which extends the time to September 1st. If your dues have not been received by September 1st, you will be excommunicated and will probably spend the rest of time in Dante's 7th circle of hell.

We suggest you mail your dues check right now, while you have it in mind. You wouldn't want to risk excommunication, would you? Please send dues to BRS Membership Committee, RD 1, Box 409, Coopersburg, PA 18036. Regular member, \$20; couple, \$25; student, \$5. Outside USA and Canada, add \$5.

OBIT.

(38) We regret to report the death of BRS Member Edward B. Cochran, of Tiburon, California, after a short illness.

PERIODICALS RECEIVED

(39) "Flashpoint" is an 8-page publication (page size 11½ x 17) that "defines itself in the broad tradition of 'libertarian socialism', of which anarchism is one variety." "Libertarian socialism holds that the 'means of production', the workplaces, machines, etc., should be democratically controlled by all who work with them. Unlike the Communists or social democrats, we don't want to replace a private boss with a government boss." \$4 for 12 issues. Box 7702, Saskatoon, Saskatchewan, Canada.

1980 MEETING (CONTINUED)

- (40) Minutes of the 1980 Meeting. The Seventh Annual Meeting of The Bertrand Russell Society, Inc., was held Friday, June 20, through Sunday, June 22, 1980, at the University of Chicago Center for Continuing Education, 1307 E. 60th Street, Chicago. Except as noted, the events took place in the Center's Conference Room 2BC.

Friday, June 20. From 6:00 to 8:00 P.M. people registered in the Center's first floor lobby. At 8 P.M. Chairman Peter Cranford called the first session to order. After introductory remarks, he asked all present to stand up, one at a time, and say a few words about themselves. President Bob Davis then took the chair. Two films, Bertrand Russell and Bertrand Russell Discusses Happiness, were shown, after which Professor George Nakhnikian (of Indiana University) read "Reason and Self-Love", an excerpt from his forthcoming book on ethics. Following some discussion of this paper, the meeting was adjourned at 10:30 P.M. The Board of Directors then met in Room 215. All members were welcome to attend the Directors' Meeting, and many did.

Saturday, June 21. The morning session was called to order by Bob Davis at 8:30 A.M. After presentation of the film, Bertrand Russell Discusses Power, Don Jackanicz spoke on "Bertrand Russell in Chicago, 1938-39" (see 2d). Bob Davis turned the chair over to Peter Cranford, who presided over the General Business Meeting which, for convenience, included the 2nd session of the Directors' Meeting. For details see (41). Bob Davis again took the chair. Next, Lester Denonn presented his talk, "Characterizations of Bertie — Pro and Con — from L.E.D.'s Russell Library." (2b). The session was adjourned at noon.

At 1:30 P.M. the afternoon session was called to order by Bob Davis. The film, The Life and Times of Bertrand Russell was presented, after which Peter Cranford delivered his paper, "On Compossibility" (2c). Then came another film, Bertrand Russell Discusses the Future of Mankind. The next event was a panel discussion, "Nuclear Energy and the Responsibility of Scientists." (2e) The panel, chaired by Bob Davis, consisted of 3 pro-nuclear speakers — John R. Honekamp, A. David Rossin, and George S. Stanford — and 3 anti-nuclear speakers — Lawrence R. Knobel, William Martin, and Amber Steynicki. Each panelist presented an introductory statement, after which they discussed the issue as a group. The audience posed questions and expressed individual viewpoints. The session was adjourned at 6 P.M.

Members and guests were then invited to the Red Hackle Hour, in the Center's second floor lobby. Next came the banquet, from 7 to 8:30 P.M., in a private Center dining room.

The evening session began with the film, Bertrand Russell discusses Philosophy. Then Don Jackanicz presented the first Bertrand Russell Society Award to Paul Arthur Schilpp, "for opening a new path to a better understanding of the work of living philosophers" (as the inscription read, on the Award plaque.) It was Professor Schilpp's turn to speak: he discarded his prepared speech on BR's philosophy — because, as he said, we had just heard from the master himself, on film — and ad-libbed a series of recollections, mostly about BR; the results were quite delightful. After a lively discussion period, the sessions was adjourned at 11:30 P.M.

Sunday, June 22. Session called to order by President Bob Davis at 9 A.M. The film, Bertrand Russell Discusses the Role of the Individual, was shown. Chairman Peter Cranford took the chair and presided over the third and final General Business Meeting, which again included a Directors' Meeting. See (41) for details. Again taking the chair, Bob Davis spoke on "Bertrand Russell's Pacifism." (2g). Science Committee Chairman Alex Dely then briefly reported on his Committee's work, and introduced a colleague, George Blam, who reviewed a technical research topic in physics (RSN26-40). The session was adjourned at 12:45 P.M.

Submitted by Donald W. Jackanicz, Secretary.

- (41) Minutes of the 1980 Directors' Meeting. The Board of Directors of The Bertrand Russell Society, Inc. met in 3 sessions — on Friday, June 20, on Saturday, June 21, and on Sunday June 22 — at the University of Chicago Center for Continuing Education, 1307 E. 60th St., Chicago.

Friday, June 20. Chairman Peter G. Cranford called the meeting to order at 10:50 P.M. in Room 215. These Board members were present (as well as many members who were not Directors): Peter Cranford, Robert Davis, Lester Denonn, Lee Eisler, Don Jackanicz, Joe Neilands, Steve Reinhardt, Harry Ruja, and Gary Slezak. Secretary Jackanicz read the minutes of the 1979 Directors Meeting; their acceptance was MSC. Discussion turned to Jack Pitt, now in England, who had submitted a letter of resignation (from the BRS) to Bob Davis. Peter Cranford stated that the resignation was not in effect, since letters of resignation must be sent to the Board Chairman. The Travel Scholarship project, conceived and directed by Jack Pitt, was reviewed and praised. His letter of resignation was related to changes in the Travel Scholarship proposed by others. Harry Ruja advised postponing any action on the Travel Scholarship and on the resignation until Jack Pitt returned to the USA later this year. Peter Cranford will contact Jack Pitt in an effort to determine what problems exist and how to attend to them.

It was moved by Bob Davis, and unanimously carried, that an ad hoc Officer Nominating Committee be formed — consisting of Lester Denonn, Lee Eisler, and Harry Ruja — to submit a slate of officers (for the year 1981) by Sunday, on which the Directors could then vote. Don Jackanicz asked whether "Inc." had to be included on BRS stationery; Lester Denonn and Steve Maragides, both lawyers, advised that the answer is "yes", because "Inc." is legally part of the Society's corporate title. Lee Eisler expressed dissatisfaction with the design of the current BRS stationery; he will attempt to redesign it. Don Jackanicz suggested that the BRS issue membership cards to all members. Peter Cranford suggested establishing the post of Finance Chairman, to analyze the budget and determine whether money is being well spent. The session was adjourned — on Gary Slezak's motion — at 11:58 P.M.

Saturday, June 21. The joint Directors/General Business Meeting began — in Conference Room 2BC — at 10:17 A.M., as Chairman Peter Cranford was handed the gavel by President Bob Davis, who chaired the General Meeting. Board Members present were: Peter Cranford, Bob Davis, Lester Denonn, Lee Eisler, Don Jackanicz, Joe Neilands, Harry Ruja,

and Gary Slezak. Treasurer Dennis Darland submitted a financial report, stating that on March 31, 1980, \$2950.15 was the balance on hand (details in Item 4). The Bertrand Russell Memorial bust, to be permanently displayed in London, was discussed; members were urged to make contributions — and to do it through the BRS, in order to show that the BRS is participating in the fund-raising efforts and also to make the contributions tax-deductible. President Bob Davis reported on his recent activities, including work with Peter Cadogan on the memorial bust, the search for a permanent site for Lester Demom's Russell Library, and correspondence with the owner of a portrait of BR that the owner would like to present to a suitable organization or institution.

Lee Eisler, Chairman of the Information Committee and Membership Committee, reported on his work with "Russell Society News", advertising, and other related topics. (Details in Items 5 & 6.) He made 3 requests of all members: (1) to send in items for inclusion in the newsletter; (2) to make contributions to the BRS Treasury, as membership dues are insufficient to cover expenses; and (3) to make a contribution through the BRS to the Russell Memorial (London). Don Jackanicz spoke about the Awards Committee, commenting that no chairman now exists and that it is highly desirable that there be one. The Chairman handed the gavel back to the President at 11 P.M. and the meeting was adjourned.

Sunday, June 22. The final session began at 9:30 A.M., with Peter Granford presiding. Board members present were Peter Granford, Bob Davis, Lee Eisler, Don Jackanicz, Harry Rujaj, and Steve Reinhardt. Lee Eisler reported on the recommendations of the ad hoc Officer Nominating Committee: Chairman, Peter Granford; President, Bob Davis; Vice-President, Harry Rujaj; Treasurer, Dennis Darland; Secretary, Don Jackanicz. He moved that the entire slate be elected, and it was carried unanimously.

The site of the 1981 meeting was discussed; a number of cities were proposed; a newsletter poll of members will be taken (see Items 3 & 4.) A committee consisting of Bob Davis, Lee Eisler, Don Jackanicz, and Harry Rujaj was formed, to work on a possible 1982 or 1983 BRS trip to Britain, which might be the site of an annual meeting.

Peter Granford told of a \$900 gift from BRS Member Ricky Hyman for the promotion of the concept of "compatibility." Lee Eisler read a letter from Herb Campbell (see Item 21) who had been ill and who would enjoy hearing from members (PO Box 231, Wisconsin Dells, WI 53965.) Dennis Darland moved that he be empowered to open a BRS bank account at the First National Bank of Rock Island, Ill; approved. Peter Granford mentioned Joe Neilands' idea of arranging an orderly succession of officers. The meeting was declared adjourned by the Chairman at 10:25 A.M.

Submitted by Donald W. Jackanicz, Secretary

FUNDAMENTALISM

FAITH AND FANATICISM

by Martin E. Marty

AMERICANS KNOW that in the modern world religion is of no account—and yet there was the television picture, relayed from Teheran, telling a different story altogether. United by fanatic loyalty to fierce Shi'ite Islam, millions of Iranians, led by a scowling Ayatollah, toppled the hated Shah, thereby embarrassing the United States. Ten months later embarrassment turned to terror as Iranian students and militants stormed the American embassy and took more than 50 members of the staff hostage.

Many of the images that reached screens here were, of course, familiar. Burnings in effigy, snipers, and street demonstrations have been nightly news fare for years. But other signs of the revolution evoked only incomprehension. Why would Teheran women leave behind the modish dress they wore in their offices and take to the streets in black garb and the *chador*, the veil from preliberation days? How could people today wage war in the name of the *Qur'an*, an ancient scripture? And why would anyone want to turn war, which is always evil enough, into a *jihad*, a "struggle," or holy war? To get the phenomenon into focus, the media and the nation settled on a term: fundamentalism—Shi'ite Islam was so remote from experience as to seem useless—with the word "militant" often preceding it.

Soon fundamentalism became a buzz-

word, just as a year earlier, after Jonestown, every intense religious group was tagged as a "cult." Everyone from the *hare krishna* chanters to the amiable Amish came to be cults, and none of them liked it. Similarly, American Protestant fundamentalists resent being pushed into the same camp with the Moslems, whom they regard as infidels. For their part, Islamic scholars protest that to borrow a term from the American experience—"fundamentalism" comes from *The Fundamentals*, a group of mild-mannered tracts published in the U.S. after 1910—and apply it to Moslems half a world away is a sign of imperialism, as if America had to provide a model for every movement, even those in other nations.

Now such disclaimers have some justification. Not everyone labeled a fundamentalist is one, nor does only one kind of fundamentalism exist. Nevertheless, there is no denying that in the 1980s religion is back with a vengeance—and not just in Iran. Most of the burgeoning movements around the world are militantly antimodern, fanatical, and hold in contempt the separation of church and state. Every day, it seems, brings forth new evidence of the growing power and determination of the religious recalcitrants. While millions of individuals, thousands of congregations, and hundreds of movements may be moderate in outlook, I know of no place where

wide-scale and aggressive liberalism is holding its own against the spiritual opponents of the modern impulse.

In the Islamic world, besides Iran, there is the example of Saudi Arabia, where around 200 Moslem fanatics (said to call themselves the New Kharajites) invaded the Grand Mosque at Mecca because they considered the Saudi regime unworthy of representing the true faith. According to reports, about 300 people were killed before Saudi troops retook the mosque. Ayatollah Ruholla Khomeini's charge that the incident was backed by the U.S. and "Zionists" incited an attack on the U.S. embassy in Pakistan, where General Zia-ul-Haq is trying to forge an Islamic republic.

In Japan, the most literate and technologically advanced society on earth, people are not behaving as had been predicted. Instead of becoming completely private about religion, the way moderns normally are, or dropping faith entirely, many of them are joining new religions like Soka-gakkai and Rissho-koseikai. Members of these Buddhist sects do not completely fit the Khomeini mold, and would resent being tarred with the same brush. They have been more supple than the Iranians in adapting to urban styles, and the salvation they offer, unlike that of Islam, is this-worldly. But as uprooted moderns they seek authority, discipline, a kind of earnest religious experience. As at home with the media as the Ira-

nians are, the Soka-gakkai people have chosen to go political and work through the highly nationalistic Komeito, or Clean Government party. With its less political but ideologically more conservative partner, this religion has to be reckoned with.

Militancy reappeared on Indian soil, where some once-gentle Hindus have been roused to battle over—and please pardon what sounds like a cliché but is literal—sacred cows. In West Bengal and Kerala, where Western modernism is powerful, thanks to Communist dominance, the Moslem and Christian minorities fear Hindu fanatics who object, sometimes violently, to the eating of beef. The cows are only one of many symbols of tension between religious communities in that nation.

In Israel, the Bloc of the Faithful, or Gush Emunim party, cherishes the reputation but not the name of militant fundamentalism. Operating on the West Bank as an annexationist no-compromise group, its followers take literally the ancient scriptural covenant between God and Abraham, and are ready to go to war for their beliefs.

In the USSR, while moderate religion complies with the state, fundamentalist Baptists and Pentecostals remain belligerent in their dissidence. Even Aleksandr Solzhenitsyn, whose criticisms of the West have cheered many masochists here, is fired by a rigid Eastern Orthodox outlook and Slavophilia. It is his fundamentalist style that gives the novelist such power and eloquence. The last thing he wants to understand is Western pluralism and its tolerance.

Meanwhile, over in the Catholic Church, militants are rallying around leaders like French Archbishop Marcel Lefebvre, who insists on clinging to Latin liturgy and rejecting most of the policies adopted by the Second Vatican Council. Even Pope John Paul II, because he is cracking the whip on progressive theologians like Hans Küng, is sometimes lumped with religious right-wingers. What spares him is his sometimes radical view of world politics, an expansive personal mien, and his embrace of Vatican Council reforms.

Finally, there are those American Protestant militants whose distinguishing characteristic is meanness; they are mean and want to be seen as mean. The scowl is as much a part of their image as it is that of Khomeini or the Pittsburgh Steelers' defensive line. Their view has been propounded by George W. Dollar in his *A History of Fundamentalism in America*. True believers, he writes, must "both expound and expose ... because of new form of middle-of-the-roadism, worldliness, and friendliness to apostate church activities." Translate: Billy Graham and his kind. Doubt never crosses the minds of people like Dollar.

His book breathes the spirit that Finley Peter Dunne put into the mouth of his Mr. Dooley: "A fanatic is a man that does what he thinks th' Lord wud do if he knew th' facts in th' case."

People who do not turn their TV dials to the right channels may still think of fundamentalists as apolitical. With good reason. Only a dozen years or so ago, the rightists attacked moderate and liberal religious leaders in the mainline denominations and in the National Council of the Churches of Christ and the World Council of Churches and the Vatican for "speaking out" on such issues as the war on poverty, civil rights, and peace. Fundamentalists said this violated the law of God in the scriptures.

Young Iranian militant—around the world, 'religion is back with a vengeance.'

But who says fundamentalists cannot change? Today it is hard to picture a candidate for office trembling because the ecumenical councils or the boards of social concern of United Methodist Church or the United Church of Christ or the United anything else have advocated policies contrary to his own. But before 1980 ends not a few candidates will have ducked for cover to escape the fundamentalist barrage.

Militant fundamentalists control a large percentage of the 1,400 radio and 35 television stations that make up the Protestant media network; it currently claims 47 million devoted hearers who turn to religious TV for entertainment, conversion, healing, positive thinking, and political signal calling. Moreover,

fundamentalist leaders like the Reverends Jerry Falwell and Pat Robertson—who take in more money than the Republican and Democratic parties—are mastering the mails. Along with direct-mail wiz Richard Viguerie, they work through fronts with names like Religious Round Table, the Moral Majority, and Christian Voice to spread their views. They have helped unseat former Senators Thomas J. McIntyre and Dick Clark, and they have the power to send other legislators whom they have targeted to political oblivion.

But their larger enemies are humanism, liberalism, and immorality. "Fifteen years ago," says Falwell, "I opposed what I'm doing today, but now I'm convinced this country is morally sick and will not correct itself unless we get involved." Involvement means, for him, "fighting a holy war.... What's happened to America is that the wicked are bearing rule. We have to lead the nation back to the moral stance that made America great." The echoes of the Iranian militants are loud and clear.

Why fundamentalism now? After all, on no calendars but their own were militant fundamentalists supposed to have power in the 1980s. Already in the 1780s people of the Enlightenment foresaw the end of irrational religion in the face of the rise of reason. By the 1880s religious liberals seemed to be adapting to modernity so suavely that the obscurantists seemed to be heading for obscurity. And although militant fundamentalism has a long history in the U.S., America seemed to be on a thoroughly modern course after 1964. The mainline and moderate churches had prospered during the Protestant-Catholic-Jewish suburban boom in the Eisenhower era. John Kennedy, Pope John XXIII, Martin Luther King, Jr., Paul Tillich, and the remembered Pierre Teilhard de Chardin were heroes to the upbeat religionists. In his best-seller of 1965 Harvey Cox wrote that *The Secular City* was no less than a transcription for our times of "the Biblical image of the Kingdom of God." It would be "the commonwealth of maturity and interdependence."

What went wrong? The curious but correct answer is "modernity and modernization." In his *The Ordeal of Civility*, John Murray Cuddihy argues that victims of modernization experience life as being all chopped up, too full of choice. Modernity, they know, separates church from state, ethnicity and region from religion, fact from value. It cruelly sunders and rarely supports. People in its wake experience "hunger for wholeness." On this scene the Ayatollah is almost a pure demodernizer. He would counteract the differentiations and diffusions that make religion so flexible, that cause it to be such a thin spread in the life of dispersed moderns. Fortunately for him,

there was a villain of modernization: the Shah, who imported but hoarded the best features of technology and left the oppressed of Iran with nothing except trampled customs and a disintegrating culture. Like all fundamentalism, then, the Shi'ite version is reactive; it repeats trends and wants to recover what has been lost.

This brings us to the crucial point: fundamentalism and traditionalism are far from the same thing. Tradition comes from *traditio*, "handing over," and refers to what God hands over to the Church in Jesus Christ and the succession of believers. But such tradition, as the great scholar Yves Congar reminded fellow-Catholics, is a flowing stream, not a still and stagnant pond. Motion, development, flow—these are precisely what the fundamentalist world-view cannot tolerate.

So with conservatism. It can be supple, absorptive, and empathic. Western, chiefly biblical, faith is grounded in history. It has to do less with Platonic ideas than with Mosaic realities. This faith celebrates remembered events such as exodus and exile, or for Christians, the words and ways of Jesus. Conservatives do not freeze everything back in biblical times. They conserve or save what they find of value in the inherited intuitive wisdom of subsequent people, whether saints or martyrs or sinners. The fundamentalist codifies everything.

The sociopsychological underpinnings of fundamentalism and other such phenomena were eloquently described by the late Talcott Parsons. In one of his few eloquent passages, the sociologist wrote that moderns, like their ancestors, must still endow their good fortune and their suffering alike with meaning. They cannot let these occur as something that "just happens." But modernity calls forth ever more human initiative in the search for meaning. Greater demands call for greater daring. So the human "takes greater risks. Hence the possibility of failure and of the failure being his fault is at least as great as, if not greater than, it ever was." The firm ground is gone. If the venturer is on the high-wire, he asks for a secure net.

During such tense periods, fundamentalists seek high-intensity religious experiences in order to find meaning. Then, to channel and rein these experiences, they need strong authority. The "kids" found it in "the cults," where a master stated all Truth and a surrogate family provided all support. As long as people are unsure of their identities, mistrustful of strangers, threatened by erosive creeds, and wary of conspiracies, some of them will huddle into fundamentalism. Through such movements around the world they seek to ward off the devils, the shahs abroad, or the humanists at home. They will find com-

pany with other true believers and remake or unsettle their part of the world before the End. As long as there are potential followers for such movements, there will be no lack of leaders to exploit their impulses.

In America, fortunately, pluralist democracy and an affluent society provide counterforces and many benefits to pass around, thus keeping fundamentalists from forming armies. Still, militants will attract people to the notion that if Russia has its atheistic creed and Iran its Moslem ideology, both of which work because they allow for no doubt or ambiguity, then "we" need equally fierce dogmas to match theirs. Religious counterparts to the SALT treaties falter, and

Reverend Jerry Falwell—'The enemies are humanism, liberalism, and immorality.'

interfaith or ecumenical strivings seem to be nothing but foolish memories.

Will the fundamentalists win? Some who answer yes to that question foresee the end of the age of Enlightenment, the decline of liberalism, the demise of dialogue. Certainly the fundamentalist and tribalist outbreaks have checked empathic or responsive instincts in many cultures. Moderate church people are envious of the growth among authoritarian groups. No one today writes about massive outpourings of understanding between people. The new prophets envision an age in which religiosity fuses with weaponry to produce upheavals in Iran, unsettlements in America, and statist creeds and faiths.

Yet prophets have been wrong before.

As surprising as the survivals and reappearances of militant fundamentalisms have been, so also has the presence of people who combine faith with openness. Even if it is not their half of the inning, there are still those who believe that one can combine deep commitment with urgent civility. They refuse to accept the argument that all would be well if only religion would go away. Whatever one wishes, most people are going to continue their search for meaning, whether in benign or malign company and spirit. When they desert religious symbols, they often transfer their fanaticism to nationalist or totalitarian ideologies. The civil, committed believers, meanwhile, urge an end to distinctions between kinds of religious faith.

They need but are not finding alliance with the other intended victim of holy wars, currently named humanist. Mr. Falwell has found his scapegoat: "255,000 secular humanists," he said in January, "have taken 214 million of us out to left field." He wanted to lead the crowd back to right field. The Moral Majority wants "the vast majority of Americans" to ally against what they call, along with Falwell, "humanism."

Previously, academic humanists were of little help. Historically uninformed as some of them were; reacting against their childhood faith as were others; unwilling to recognize the varieties of historic religious experience, writers like Joseph Wood Krutch, Harry Elmer Barnes, and Walter Lippmann decided that all religious certainty had to be murderous, all religious tolerance heretical, and fundamentalist faith alone had integrity. Such twitting of liberals was a luxury in 1925. It helped humanists keep their distance from open-minded theists who stood in developmental traditions of faith.

Today when Ayatollah fundamentalism violates the rules of diplomatic games or adopts the weapons of terror, such luxuries are less attractive. If "the fundamentalists are coming," it is important, this time, to understand both their grievances and their impulses. Some reconnaissance, to determine who is in their camp and who is not, is strategically wise. Most of all, after the appearance in our century of people like Pope John XXIII, Mohandas Gandhi, Abraham Joshua Heschel, and Martin Luther King, Jr., it no longer seems necessary to equate faith with certainty and both of them with murder. There are happier alternatives, even if they are less visible than ever, less favored than fanaticism in today's world of conflict.

Martin E. Marty is Fairfax M. Cone Distinguished Service Professor at the University of Chicago, associate editor of The Christian Century, and author of, among other books, A Nation of Behaviors.

INDEX

- (43) Introductory (1). 1980 meeting (2a); Denoni's talk (2b); Cranford's talk (2c); Jackanizer's talk (2d); nuclear panel (2e); BRS Award (2f); Davis's talk (2g); some negatives (2h). 1981 meeting, where? (3). President Davis reports (3.5). Treasurer Darland reports, 1st quarter (80 (4)). Reports from Committees: Information (5); Membership (6); Philosophers (7); Science (8); Human Rights (9). BALLOT

(4) This ballot is in 4 parts. Please participate in all parts.

Part 1. Election of Directors

8 Directors are to be elected, for 3-year terms starting 1/1/81. Make checkmarks next to those candidates, below, for whom you wish to cast your votes. Remarks about the candidates are provided in (36).

- | | | |
|--|---|--|
| <input type="checkbox"/> Paul Adam Banner | <input type="checkbox"/> S. Ali Mohammad Ghaemi | <input type="checkbox"/> Katharine R. Tait |
| <input type="checkbox"/> Edwin W. Hopkins | <input type="checkbox"/> Cherie Ruppe | <input type="checkbox"/> P. K. Tucker |
| <input type="checkbox"/> Donald W. Jackanicz | <input type="checkbox"/> Warren Allen Smith | |

Part 2. Time and Place of 1981 Meeting

If there is a chance, however slight, that you may attend the 1981 Meeting, please vote your choice of time and place. If, however, you are certain that you will not be able to attend, then do not vote Part 2 and go directly to Part 3.

Write "1" next to your first choice, and "2" next to your second choice, for time and place.

(1.5)

COMING EVENTS

BRS at APA , December 28. The BRS will have a session, as usual, at the annual meeting of the American Philosophical Association (Eastern Division), this year in Boston. This is the 7th consecutive year of these BRS sessions at APA. For the program, and abstracts of 2 papers, see (4) and (5). The exact date of the session is not quite certain, and should be verified; it will probably be December 28.

REPORTS FROM COMMITTEES

- (2) Membership Committee (Lee Eisler, Chairman, P.K. Tuckers, Co-Chairman):

We will try to enlarge BRS membership to 500. At that figure, we expect to be financially independent; that is, we will be able to pay our own way, without depending on members for contributions to make up a deficit.

We now have between 250 and 300 members. (Renewals are still coming in, which is why we do not have an exact figure at this time.) We won't reach 500 overnight, nor even in a year or two. If we continue to grow at the same rate as in the past, we may make it by 1984 or 1985. This is a projection, and rests on several assumptions, some of which may turn out to be mistaken; we hope they won't.

To improve our chances, we are stepping up our advertising, with a view to speeding up the acquisition of new members. Chairman Peter Cranford has approved the idea of increasing the advertising appropriation; and he and Rick Hyman -- who recently made a very generous contribution to the BRS Treasury -- have approved of using some of the Hyman contribution to pay for the increased advertising.

If the BRS becomes economically self-supporting, it will have taken an important step toward the goal of long-term survival -- a goal worth working for.

* * * * *

- * In 1981 we will be advertising in HARPER'S, THE HUMANIST, INQUIRY, MENSA, THE NATION, THE NEW REPUBLIC, NEW YORK REVIEW OF BOOKS, THE PROGRESSIVE, SATURDAY REVIEW. We are interested in finding additional publications for our ads. If you know of one you think might be suitable, send us its name; we will investigate. Our address is at the bottom of this page.

- (3) Science Committee (Alex Dely, Chairman):

I received a very warm letter from Professor Paul A. Schilpp, who said, among other things, "I'm glad to see that this excellent and important paper, 'The Social Responsibility of Scientists and Laymen', is now available -- although it should be made available to tens of thousands more readers..."

(The paper had been scheduled for the 1980 BRS meeting, and was printed in RSN27-8.)

Although the praise was very generous, I do think the ideas are relevant. I would like to write several versions of it, to send out to popular magazines. However, I am pressed for time and I would appreciate it if some member would volunteer to help me rewrite one or more versions of my talk.

- * Any volunteers? Write Alex directly: Physics Dept., University of Arizona, Tucson, AZ 85721

I also invite interested members to write me about becoming members of the Science Committee.

Alex also advises that he and Jerre Moreland are collaborating on an essay, "How to Avert Nuclear War", for entry in the Essay Competition in "The Bulletin of the Atomic Scientists" (RSN27-19). The competition is in honor of the publication's founding editor, Eugene Rabinowitch.

PHILOSOPHERS' CORNER

(4) BRS at APA: the Program:

Time and Place: at the annual meeting of the Eastern Division of the American Philosophical Association, this year in Boston, at the Boston Sheraton, December 27-30, 1980. The BRS session will probably be on December 28, at 10 A.M., but should be verified.

I. RUSSELL AND THE ATTAINABILITY OF HAPPINESS. Marvin Kohl, SUNY/Fredonia
Commentator: Mitchell Staude, University of Maryland

II. REFERENTIAL AND NON-REFERENTIAL USES OF DENOTING EXPRESSIONS. Richard Fumerton, University of Iowa
Commentator: Justin Leiber, University of Houston

Chairman: David Johnson, Naval Academy

This Program is presented by the BRS Philosophers' Committee, Edwin Hopkins, Chairman

(5) BRS at APA: Abstracts of the Papers:

Russell and the Attainability of Happiness, Marvin Kohl

Happiness depends partly upon external circumstances and partly upon oneself. It depends upon having and appreciating reasonably continuous success at satisfying one's basic needs and correlate interests. According to Russell, when understood in this way, happiness is attainable for most ordinary men and women. Two objections are considered: first, the charge that happiness is not attainable largely because of man's unavoidable fear of death and second, the charge that Russell's characterization is too rich, too loose, and that because of this, because the nature of the goal is unclear, happiness is generally less attainable.

Referential and Non-referential Uses of Denoting Expressions, Richard Fumerton

In "Reference and Definite Descriptions" Keith Donnellan attempted to draw distinction between what he called the referential and attributive (non-referential) uses of definite descriptions. While the distinction seems easiest to draw in terms of definite descriptions it may also be possible to extend it to predicate expressions (denoting properties) and proper names. In this paper I shall argue that the most natural way of explicating this distinction at the level of language involves appeal to epistemological concepts and that appeal to such concepts raises old epistemological problems that new philosophers of language ignore at their peril. I shall further argue that if the distinction between referential and non-referential uses of denoting expressions is to avoid becoming so vague as to be of little philosophical importance, it will involve a distinction Russell drew long ago between objects with which we can be acquainted and objects with which we cannot.

THE MEMBERS VOTE

(6) Results of the RSN27 ballot:

Part 1. Election of Directors. 8 candidates were elected for 3-year terms starting 1/1/81: PAUL ADAM BANNER, ALI GHAEMI, EDWIN HOPKINS, DONALD JACKANICZ, CHERIE RUPPE, WARREN ALLEN SMITH, KATHARINE R. TAIT, P.K. TUCKER.

Part 2. Time and Place of 1981 Meeting: Hamilton in June was chosen by a good margin when only "1st choice" was counted, and also when 1st and 2nd choices were combined and counted. We selected June 26-28 (from Friday evening through Sunday noon), as earlier June weekends encountered obstacles.

Part 3. Honorary membership for Paul Arthur Schilpp is approved all but unanimously. (Yes, there was one "disapprove"!)

Part 4. A future meeting in London? Of the 61 members who responded to Part 4, there were 6 yes, 7 probably, 34 possibly, and 14 no.

21% of the members voted, the same percentage as last year. We ought to do better.

ER ON PACIFISM

(7)

4 kinds of pacifists, 4 kinds of war. Last issue we reported briefly on the talk BOB DAVIS gave (at the 1980 meeting) on ER's pacifism (RSN27-2g). That brief report didn't satisfy us; we asked Bob for more. Here it is:

What follows is a shortened resume; I will leave out the part on World Government. I drew from a variety of sources, but my primary sources are "The Future of Pacifism", a 1944 article in "The American Scholar", vol. 13, #1, and Justice in Wartime, 1916 (difficult to obtain as it has not been republished except possibly in the scholar's reprint series.)

I agreed to give this talk at a college before the Soviet invasion of Afghanistan and the hostage affair, but wrote it during the worst parts of these crises last winter. I was struck by ER's prescience in these matters. In 1916 he remarked: "The fact that the Persians -- the intellectual aristocracy of the Moslem world -- had freed themselves from the corrupt government of the Shah (in 1910) and were becoming Liberal and Parliamentary was not regarded as any reason why their northern provinces should not be devastated by Cossacks and their southern regions occupied by the British." (J.W.) ER often said that his first political memory was of the Second Afghan War of 1878; the British and Russians schemed over Afghanistan in the 19th Century much as they do today. ER's views are still in step with today's events.

ER makes several distinctions concerning types of pacifism. First, there is Absolute Pacifism. This means that no wars are justified for any participants. The pacifism of the Quakers and of Ghandi is of this sort, and is closely connected with the philosophy of non-violence. Among Christians this is generally rooted in the Commandment, "Thou Shalt Not Kill" and the Sermon on the Mount. Christians normally make exceptions only when self-defense, communists or fascists are involved. By the tenets of Absolute Pacifism, war against Nazi Germany was wrong.

The other form of pacifism is Relative Pacifism -- the general but not total disbelief in the acceptability of war. According to this, very few wars are worth fighting, and most wars produce worse results than other alternatives would have. By this theory, opposition to Germany in World War II was justified. The problem of "drawing the line" arises. All wars seem to be garbed in the rhetoric of self-defense

Pacifists may be further classified as belonging to one of two types, the individual pacifist and the political pacifist. The individual pacifist's concern is limited to his own activities; he refuses to fight. The political pacifist's concern is to prevent his government from fighting; and he attempts in various ways to influence the actions of his government. Many religious pacifists are of the individual sort. They are concerned with their own conscience or state of grace and not with society as a whole.

ER was a relative, political pacifist. He believed that most, but not all, wars are wrong, and he worked in the political arena for goals he felt would avoid war. Though he suffered imprisonment twice in his lifetime for his anti-war work, he did support World War II and repudiated his 1936 Which Way to Peace? (It is still worth reading.) Being against war sounds very much like conventional wisdom today, but we should remember that through most of history war has been glorified. During the first half of this century such views were still very strong, and supported intellectually by Social Darwinism. That ER's views are commonplace today is due in no small part to ER's own efforts.

It should also be noted that ER approached a position of Absolute Pacifism after the spread of nuclear weapons, on the basis that any war was likely to lead to the use of nuclear weapons and universal destruction. He felt that the imposition of any political system, no matter how horrible, was superior to universal destruction, because man could recover from a "new dark age" but not from annihilation. On the other hand, he supported North Viet Nam, presumably as a war of genuine self-defense, and he broadcast support to the Czechs in 1968. I personally have no doubt that he would do the same today about Afghanistan.

If one accepts Relative Pacifism, one must be able to decide which wars are acceptable. ER developed a way of classifying wars in the chapter, "The Ethics of War," in J.W.

The first type is Wars of Colonization, which ER felt were often justified. By this he meant wars where a people of superior culture occupied and drove out the indigenous people. "They have the merit, often fallaciously claimed for all wars, of leading in the main to the survival of the fittest, and is chiefly through such wars that the civilized portion of the earth has been extended from the neighborhood of the Mediterranean to the greater part of the earth's surface." He stressed that the differences between the peoples must be undeniable, and that "if we are to judge by results, we cannot regret that such wars have taken place." However, he stressed that these wars belong to the past as the world is fully peopled now.

His second category is Wars of Principle; these too are often justified. They are wars in which one side is genuinely supporting a principle of value -- such as religious toleration -- against a force that is attempting to destroy that principle. He felt that the U.S. Civil War, conceived as a war to end slavery, was therefore justified for the North. But he also said, "It is very seldom that a principle of genuine value to mankind can only be propagated by military force; as rule, it is the bad part of men's principles, not the good part, which makes it necessary to fight for their defense."

The third type is Wars of Self-Defense, which he says, surprisingly, are rarely justified. He means that most wars are called self-defensive by the participants, and usually incorrectly. A war that really was self-defensive by the rule of the Wars of Principle he might accept. However, submission by the party attacked might, in some cases, be preferable if judged by the final results. He thought that submission to Germany in World War I could have been preferable to the destruction caused by the war, despite the ultimate victory.

The final classification is Wars of Prestige, which he felt applied to almost all modern wars, and were never justified. "Rather than forego the triumph, rather than endure the humiliation, they are willing to inflict upon the world all those disasters which it is now suffering and all that exhaustion and impoverishment which it must long continue to suffer." This seems to me to sum up the U.S.A. in Viet Nam, Russia in Afghanistan, and the Iraq-Iran War.

At a later date, 1936, BR added revolution to his list. He observed that revolutions "are justified if supported by a majority of the people and do not serve to impose minority rule."

BR does not provide easy answers but to my mind there are no easy answers. Absolute Pacifism attempts to provide a complete answer, but I cannot accept that all wars for all participants have been bad. Resistance to Nazi Germany was certainly justified. On the other hand, almost all wars seem to be thought just by the participants. So we are left to sort it out, to inform ourselves about history, current events, other viewpoints, and logic. From this raw material we must make our judgments. In this process, BR's views, his classifications, can be of distinct help.

MY FAVORITE RUSSELL

(8) By Lester E. Denonn:

My favorite of favorites among all of Bertie's works is The Amberley Papers, which I have just read for the sixth time. Although his parents died when he was very young, they had a marked influence on his beliefs. The Problems of Philosophy is my next choice. It was used as a text in an undergraduate course and again in a graduate course. Since I had already studied the work, I was the star of the graduate course.

I also like the rest!

BR QUOTED

(9) "Forbes" quotes BR quite often, as we have seen (RSN25-20, RSN26-15, RSN27-12). Here's another one, from several years ago (4/17/78):

Men who are unhappy, like men who sleep badly, are proud of the fact.

And a recent one (9/29/80):

It is possible, and authentic wise men have proved that it is possible, to live in so large a world that the vexations of daily life come to feel trivial, and that the purposes that stir our deeper emotions take on something of the immensity of our cosmic contemplations.

(Thank you, Whitfield Cobb)

BRS PROJECTS

(10) Short papers wanted. A long time ago KEN BLACKWELL suggested that we have a series of short papers (as part of BRS literature) giving BR's views on various subjects. They would be titled RUSSELL ON HISTORY, RUSSELL ON RELIGION, RUSSELL ON CENSORSHIP, RUSSELL ON PHILOSOPHY, RUSSELL ON POWER, RUSSELL ON HAPPINESS, RUSSELL ON EDUCATION, RUSSELL ON WOMEN'S RIGHTS, RUSSELL ON COMMUNISM, RUSSELL ON MARX, etc., etc. Each one would be brief; 2 sides of one page, maximum.

* Who will volunteer to write one? Advise the newsletter and mention the topic. Address on Page 1, bottom.

BERTRAND RUSSELL MEMORIAL

(11) The unveiling date is October 23rd. We recently received the following letter:

(See next page, please)

BERTRAND RUSSELL MEMORIAL

An Appeal made by Sir Alfred Ayer, Lord Brockway (Chairman of the Appeal Cttee), Peter Cadogan (Secretary), Lord Ritchie Calder, Frank Dobson MP, John Gilmour, Dora Russell, Lord Willis and Baroness Wootton.

c/o SPES, Conway Hall, 25 Red Lion Square, London WC.1. Tel: 01. 242. 8032/3.

TO ALL THOSE WHO HAVE DONATED TO THE APPEAL

8th October 1980

Dear Lee Gasler,

Many thanks for your donation of (amount deleted)

All has gone well and you are invited to attend the unveiling of the Memorial at:

12.00 mid-day, Thursday 23rd October 1980
in the Gardens of Red Lion Square, London WC.1

Lord Brockway will preside over the ceremony and Dora Russell will unveil the bust. The idea of the Memorial stemmed in the first place from Dora Russell. She took the matter up with Lord Brockway and the Appeal Committee was constituted. Sir Alfred Ayer, who knew the work of the sculptor Marcelle Quinton, introduced her to us and the work began. Marcelle Quinton also advised on the site, designed the plinth and arranged the installation.

Sir Alfred Ayer will also speak during the ceremony as will Peter Cadogan, the Honorary Secretary of the Appeal Committee (ex-Committee of 100 and currently the General Secretary of the South Place Ethical Society).

The Borough of Camden has been most helpful throughout and has contributed generously to the Appeal. We are glad to say that the Mayor of Camden, Councillor Ron Hefferman, will be present on the 23rd and will speak on behalf of the Borough.

After the ceremony all Donors are invited to a Reception in the Library of the adjacent Conway Hall - where Bertrand Russell once gave the Conway Memorial Lecture.

All Donors are cordially invited to the Reception. As this letter also constitutes the invitation will you please be good enough to bring it with you?

On behalf of the Appeal Committee,

Peter Cadogan (Honorary Secretary)

NOTE: We are still a few hundred pounds short of the target of £4000. Money is still coming in. If you would like to bring the Appeal to the notice of a friend who has not so far contributed, we hope you will do so. All new Donors will receive this acknowledgement and invitation by return.

Although it was on very short notice, Bob Davis and Don Jackanicz decided to be present at the unveiling.

The Appeal Committee had advised us (RSN27-34) that it would thank all donors individually, and would advise them (in advance) of the date and time of the unveiling. It didn't work out quite that way. Some donors were notified in advance; some were not; and some still have not been notified. But every donor will (sooner or later) receive the thank-you letter which is reproduced above.

To date the BRS has received a total of 1032.50 for the Bertrand Russell Memorial, from 53 donors, the great majority of whom are BRS members.

A report by BOB DAVIS on the unveiling appears toward the end of this newsletter (48c,d).

BR CELEBRATED

(12) For Doonesbury fans:

(Thank you, RICHARD SHORE)

ASSESSMENTS OF BR

(13) Baumgartner on Howard on BR. Walter Baumgartner thinks that Anthony Howard's reassessment of the life and work of Bertrand Russell ten years after his death (RSN26-10) needs to be reassessed itself.

Many of Howard's statements -- and the fact that some statements were made at all -- need to be scrutinized. Admirers of Russell admit that there were unusual aspects of this unusual man, but a reading of Howard's article does not provide a well-balanced picture. To be specific:

Howard: "It was certainly in the early part of his life that he wrote his most intellectually distinguished books." Howard goes on to name The Foundations of Geometry and 3 others.

This is what BR had to say, years later: "My first philosophical book, An Essay on the Foundations of Geometry, which was an elaboration of my Fellowship dissertation, seems to be now somewhat foolish... Apart from details, I do not think there is anything valid in this early book." (My Philosophical Development. London: Allen & Unwin, 1959. p. 39) Not exactly intellectually distinguished. Alan Wood, in his biography, does not mention The Foundations.

Howard: "The unkind -- or perhaps merely those endowed with his own sharp critical faculty -- were later to say that all of Russell's original work was done before he was 45." Apparently, then, we ought to write off the following:

- The Practice and Theory of Bolshevism (1920). Historian Walter Laqueur calls it the most brilliant essay ever written on the subject, including the way it forecasts future repression in the Soviet Union.
- Marriage & Morals (1929). It placed Russell with G.B. Shaw and H. G. Wells as the main spokesmen for a "new morality" which has had considerable influence. "Russell" No. 33/34, p. 25.
- The Conquest of Happiness (1930), an extremely helpful book. It has, for example, induced Dr. Peter Cranford to distribute several hundred copies to patients and friends. ("Russell" No. 12, p. 31)
- Power, A New Social Analysis (1938) is of enormous political importance, and a fascinating prototype for logical atomism. ("Russell" No. 33/34 p.25)

- A History of Western Philosophy (1945). The best written and most interesting history of philosophy ("Russell" No.35/36. P. 19), which also shows the connection of philosophy with political and social circumstances.
- Human Knowledge, Its Scope and Limits (1948). "...it seems to me that these later views of Russell's on perception and related matters are crucially important and, moreover, that they are the nearest thing to the truth about these issues that have been proposed to date." Grover Maxwell in Bertrand Russell: A Collection of Critical Essays, D.F. Pears, ed. Garden City: Doubleday (1972) pp. 110-111.

Howard, referring to the Beacon Hill School: "Russell himself hardly directed all of his energies to it -- even in September 1927, when the school first opened, he was away on a lecture tour in America."

Howard suggests the image of a man who shuffles out of his responsibilities; but the reason Russell was lecturing in America was to raise money for the school. "My father was off to America in pursuit of money again in 1929 and 1931 and when he was not in America, he was busy writing books to raise the necessary funds." My Father, Bertrand Russell by Katharine Tait. New York: Harcourt Brace Jovanovich (1975) p. 100

Howard: "The by-products tended to be essentially potboiler books, one of which, Marriage & Morals, was to return to haunt him when he finally decided, in 1938, to embark on an academic career in America." This is slanted writing. "...was to return to haunt him ..." suggests that BR might have regretted writing Marriage and Morals, but there is no evidence of that, nor any reason to think he regretted it.

Howard: "The woman who brought the action (to stop BR from teaching at CCNY) succeeded -- the university, in the words of the judge who tried the case, having convicted itself of being interested in 'establishing a chair of indecency'." (Howard calls it a university, but in fact it was a college, City College.) More slanted writing. The uninformed reader might well assume that BR had been unable to persuade the judge to decide the case in his favor. In fact, BR never participated in the case, though he wanted to. It was the City of New York, dominated by Catholic politicians, that defended the case, and did so with a view to losing it; and did lose it. The judge was Catholic. BR was never called to testify.

Howard: "Though he remained in America for the greater part of the war...he was luckier than, say, Isherwood or Auden in never having it held against him that he preferred the safety of exile to the perils of the home front."

A reflection on BR's integrity. He was in America when the war broke out, and was not allowed to travel to England. He was finally able to persuade the British Embassy in 1944 to let him return to England. (Autobiography III, p.342.) We only see the top of the iceberg, and can never be certain of the real motives behind human actions, but to claim, as Howard does, that BR sought nothing but safety does not fit BR's character, and is quite unfair.

Howard takes quite a lot of space to quote a hostile critic, A. J. P. Taylor of the Committee for Nuclear Disarmament: "When we set up the Campaign for Nuclear Disarmament we wanted a distinguished figure, and there was Russell, who'd spoken out very frankly against nuclear weapons, and he was made President. Like any president of a society, he was meant to be a figurehead -- not to come to executive meetings, not to lay down policy, but just to give his benign blessing and there his name would be on top of the letter paper. But instead of that he thought he was much better fitted to run the Campaign for Nuclear Disarmament than we were. I thought he was a frightful nuisance."

This contributes nothing to our understanding of BR. It merely tells us that Taylor didn't like Russell.

Howard: "By now" -- ie., after the Campaign for Nuclear Disarmament had begun -- "there were those ready to say that Russell had become a publicity hunter."

BR sought publicity for the cause of nuclear disarmament, not for himself, which would have been out of character. Only a hostile or uninformed critic would suggest otherwise.

All in all, Howard seems to say that BR, though brilliant, could be irresponsible and lacking in moral fiber. What a pity that he chose to write this article without being better informed. There is enough misinformation about BR floating around -- e.g., many believe BR was a communist -- without adding still more.

BRS TRAVEL GRANT

(14) 1980 Travel Grant is awarded. For the second year in a row, the BRS Travel Grant has been awarded to a historian. He is Steven J. Livesey, doctoral candidate in History at the University of California, Los Angeles. The award pays up to \$500 for travel for purposes of research for a dissertation. Mr. Livesey's dissertation, "Metabasis: The History of a Concept from Greek Antiquity to the Renaissance," will be based in part on his research in libraries in England, France, Germany, and Italy.

(15) 1981 Travel Grant is announced. The announcement (a) of the conditions of the 1981 Travel Grant, and (b) of the winner of the 1980 Travel Grant was sent to 5 departments in some 15 major universities and a few others. The 5 departments are Philosophy, Psychology, History, English, Sociology.

NUCLEAR DISARMAMENT

- (16) A 25th Anniversary. From "The Bulletin of the Atomic Scientists" (October 1980), with thanks to BOB DAVIS:

From Science Council of Japan

Statement from the Council in commemoration of the 25th anniversary of the Russell-Einstein Manifesto.

A quarter of a century ago, on July 9, 1955, a Manifesto signed by the two distinguished scientists, Bertrand Russell, Albert Einstein and nine other Nobel Laureates, including Hideki Yukawa, was released as a call to the whole world.

The Manifesto faced and gave a warning against the actual peril arising as a result of the development of nuclear weapons, which confronts mankind with the possibility of annihilation. It appealed to the scientists of the world, irrespective of differences of political thinking, creed, nationality, socio-economic system, to assemble in conference to deliberate how to overcome this peril. The objectives were to adopt a resolution to urge the governments of the world to realize that their purpose cannot be furthered by a world war, to recommend that all matters of dispute be settled by peaceful means, and simultaneously to initiate a signature campaign subscri-

ing to this resolution among scientists and the general public all over the world.

The Manifesto, from the standpoint of "human-beings, members of the species Man, whose continued existence is in doubt," emphasizes the special responsibility of scientists because they do know most about the formidable dangers of nuclear warfare and consequently they should endeavour more strenuously than anyone else to bring about the complete abolition of nuclear weapons. Indeed, the Manifesto ushered in the meeting of scientists at Pugwash in 1957, where distinguished scientists from various countries of the world, including H. Yukawa and S. Tomonaga, assembled and adopted a statement in line with the spirit of the Russell-Einstein Manifesto.

During the past 25 years, considering the opinions and movements of the peoples of the world, it is fortunate that no nuclear weapon has been used in actual warfare. Nevertheless, the possible danger of their use is growing stronger because of the recent developments of nuclear weapons systems which have

invalidated the theory of nuclear deterrence—the pretext for maintaining nuclear weapons in the past.

The final document unanimously approved at the Special Session for Disarmament of the General Assembly of the United Nations held two years ago clearly stated that "Mankind today is confronted with an unprecedented threat of self-extinction" because of the accumulation of nuclear weapons.

The pressing situation in which we now find ourselves proves that the aim of the Manifesto, which recommended that every government "find peaceful means for the settlement of all matters of dispute between them" has even greater significance than when it was issued.

The Science Council of Japan, at the time of its inauguration in 1949, declared its firm determination both within Japan and overseas that it would exert itself to make science provide the basis for a cultural nation and for world peace, indicating the attitude of self-reflection of Japanese scientists. Since then, particularly since the H-bomb tests at the Bikini Atoll in 1954, the Council has ceaselessly expressed serious con-

cern for the complete abolition of nuclear weapons and time and again has issued many recommendations, statements and appeals against testing, production, stockpiling and use of nuclear weapons.

It was only natural then, that the Council stood firmly behind the aims of the Russell-Einstein Manifesto, and adopted a resolution to give full support to the statement of the scientists meeting at Pugwash.

As this year marks the twenty-fifth anniversary of the Russell-Einstein Manifesto, the Council, recalling its consistent stand in support of nuclear disarmament through all these years, hereby re-confirms the spirit and significance of the Manifesto and simultaneously resolves to make even greater efforts to carry out the special responsibility of scientists to attain the most earnest aspiration of humanity for the still unrealized total abolition of nuclear weapons.

We therefore call upon all scientists and scientific organizations both in Japan and overseas to support this statement of our Council and to collaborate with us in the pursuit of these aims. □

RELIGION

- (17) Fundamentalism. We intend to give considerable space to the resurgence of fundamentalism -- the belief that the Bible is the word of God and therefore infallible -- because it perpetuates beliefs for which there is no evidence, many of which do great harm; because it is anti-democratic, in that it confers enormous power on those who interpret the Bible and claim to know what God wants people to do; because its approach to issues and problems is the antithesis of the scientific approach; because it seems to be achieving political power in the USA; and finally because it is the exact opposite of what Bertrand Russell stood for.

- (18) "Discover" reports on creationism. "Discover" is the new Time-Life "Newsmagazine of Science." This is from the October 1980 issue, pp. 92-93:

CREATIONISM ON THE RISE

In an all-out challenge to Darwin, the Scientific Creationists are more creative than scientific

The division in the ranks of the Darwinists has given comfort and new hope to the fundamentalists, who reject evolution out of hand. Foremost among them are the "scientific creationists," who cite what they claim is scientific evidence that Darwin was wrong; that the earth's plants and animals were created

more or less in their present forms; that people and apes, not to mention pickereel and pigs, never had a common ancestor. In state after state, in all regions of the U.S., the anti-evolutionists are campaigning to have their beliefs included in public school science courses. Late in August they got some big-

league support when Republican presidential candidate Ronald Reagan told reporters, prior to a meeting of Christian fundamentalists in Dallas, that if evolution is taught in the public schools, the "Biblical story of creation" should also be taught.

The famous 1925 Scopes trial in

Tennessee, which pitted the Bible-thumping William Jennings Bryan against defense attorney Clarence Darrow, dealt with a comparatively simple argument. Schoolteacher John Scopes was haled into court on charges that he had violated state law by teaching evolution in the classroom. Bryan ar-

gued that man was created in just the way the Book of Genesis told it. But Darwin so brilliantly demonstrated that it was illogical to take the Bible literally that creationism never quite recovered, and the way was cleared for greater public acceptance of evolution. (Though they won the war, Darrow and Scopes lost the battle; Scopes was fined \$100.)

Today's creationists are considerably more sophisticated than Bryan; they go to painful lengths to emphasize the "scientific" over the "creationist," but in doing so they have become more creative than scientific. Much of their support comes from the Institute for Creation Research, in San Diego, an offshoot of the Baptist-oriented Christian Heritage College (enrollment 200). Richard Bliss, who holds a Ph.D. in education and is director of curriculum development for ICR, sounds the theme with a pithy statement of principle: "I believe that the Creator created man as man, the dog as dog, the different plants as different plants."

Bliss's colleague Gary Parker, a biology professor, elaborates. Design, he says, is a key to creationist thought. "The evolutionists would have us believe that all the living things are due to three factors—time, chance, and continuing process. But the creationists say that there is a level of order to life that couldn't possibly have come from pure chance." Parker says the evidence seems to show that all organisms were created from an inventory of common parts, and that each species is put together in a different arrangement. "It's just like having a big pile of cinder blocks," explains Parker. "You can make an armory from those blocks, or a warehouse, or a mansion. It depends on your design." Using another simile, he says that a pile of aluminum, electrical wire, rubber, and other materials dumped on the end of a runway would never arrange itself into an airplane, let alone fly. "But an intelligence external to that matter can design it and give it a function, can make it into an airplane." David Raup of Chicago's Field Museum, dismisses that argument: "It does not take into account two essentials of evolution—unlike cinder blocks, organisms reproduce themselves, and they are subject to natural selection."

For their evidence, the creationists exploit the quarrel among paleontolo-

ASPCA founder Henry Bergh chides Darwin in Thomas Nast's famous cartoon.

gists over the matter of gradualism in evolution. If Darwin was right, say the creationists, why are there gaps in the fossil record? They point to the sudden appearance of complex life forms in Cambrian rocks as evidence that the Great Flood occurred. Its waters, they say, drowned most existing life and quickly buried it in mud, which explains why so much of it was preserved in fossil form. To help make their point, they even cite some of the theories proffered by the paleontologist Stephen Jay Gould. Says Gould: "It's so utterly infuriating to find oneself quoted, consciously or unconsciously, incorrectly, by creationists. None of this controversy within evolutionary theory should give any comfort, not the slightest iota, to any creationist."

But it does. And partly for that reason, the creationists have ranged

throughout the U.S. to promote their cause. In state after state, legislation has been introduced that would require public schools to add creationist teachings to their biology classes. Wisconsin, Missouri, and South Dakota already provide such instruction. In Washington County, Virginia, teachers this fall will have to take brief note of creationism in biology and earth science courses, quoting from Genesis to give the basis of this viewpoint. School administrators in Tampa, Florida, have been ordered to provide extensive creationist instruction. Says one official: "The recommendation from our office was that scientific creation and other theories be taught in areas other than science, but the board of education chose to have them taught in science as well."

Creationist fervor is influencing the

textbook industry, as well. At least four major publishers now deal with the subject. Says Lois Arnold, senior science editor at Prentice-Hall, "We don't advocate the idea of scientific creation, but we felt we had to represent other points of view." Other publishers may soon do the same. Texas has decided that all texts dealing with evolution should "identify it as only one of several explanations of the origins of humankind." That requirement is the strongest pressure yet on the publishing industry, which is beginning to buckle under. Says one editor whose book presents the creationist position: "Creationism has no place in a biology text, but after all we are in the business of selling textbooks."

Here and there, opponents of creationism have gone to court to fight its inroads. A Tennessee law requiring the teaching of creationism was declared unconstitutional because the wording explicitly mentioned the Bible. The U.S. District Court rejected a suit brought against the Smithsonian Institution that would have required including creationism in a display on evolution. The American Civil Liberties Union successfully fought a decision by two Indiana school districts to adopt a creationist book as a biology text. That book was later rewritten to get around the court's objections. Says Lawrence Reuben, the lawyer who handled the ACLU's case: "Now I'm not sure I could win against the book, although it says essentially the same thing."

Scientists are disturbed by the burgeoning creationist movement. Niles Eldredge calls it "a return to know-nothingism." Wayne Moyer, executive director of the National Association of Biology Teachers, complains that the creationist campaign is "pure propaganda, a very serious delusion of the public." The Iowa Academy of Science has formed a special committee to combat creationist pressures.

Clifford G. McCollum, a committee member and past president of the Iowa Academy, summarizes what many scientists feel about the movement: "It's a contradiction in terms to speak of 'scientific creationism.' The basic premise, the basic dogma, is the existence of a divine creator. What they espouse as academic freedom to teach creationism is their academic freedom to teach the flatness of the earth."

—James Gorman

(19) Reagon favors creationism, according to the following portion of a report in The New York Times (8/24/80, p.28), headlined: "Anderson Attacks Reagan and Carter Foreign Policies." Anderson is being questioned, in the first paragraph:

Questioned by reporters, he also took sharp issue with Mr. Reagan over remarks the Republican nominee made yesterday about evolution and biblical history at a meeting of Christian fundamentalists in Dallas.

Identifying himself as an evangelical Christian, Mr. Anderson said "I put myself outside" any attempts to "politicize evangelical doctrine" or to say "what should be or should not be taught in the classrooms of America."

Mr. Reagan said he favored teaching the biblical theory of creation along with the scientific theory of evolution in public schools.

Mr. Anderson said he favored "the fullest freedom as far as scientific inquiry is concerned," and said he believed "we should not get into anything that smacks of censorship as far as textbooks are concerned."

(19)

"The Dial" reports on creationism. "The Dial" is a new monthly published by the Educational Broadcasting Corporation. The following is from the September 1980 issue, pp.44-51:

THE FOLKS WHO HATE DARWIN

When you saw the TV series *The Voyage of Charles Darwin*, it didn't occur to you that the ideas in it were controversial. You won't despair when the series is repeated, nor wince if you encounter the new British series, *Life on Earth*, nor gnash your teeth at the evolutionary assumptions of the *Cosmos* and *Nova* shows. But there are people who will, people who think evolution is wrong, if not evil. Meet four of them here. Read of the scope of their movement (page 51). Then read, overleaf, the advice of a scientist who tells you how to argue with these earnest and determined people.

Richard E. Bliss,
Institute for Creation Research,
San Diego, California

"I'll make a prediction: The scientific community to its own demise will ignore the creationist model. There is a grassroots strength for this movement that will cause it to spread fast. The explosion will come as soon as teachers know that creationism is good science. We have the data; the scientific data are with us."

Arthur S. Underland,
aerospace engineer,
Houston, New York

"Evolutionists make the assumption that evolution is true. But what does the fossil record tell us? No evidence for evolution. Cambrian rocks five hundred and seventy-five million years old contain fossils of the major phyla of the animal kingdom. Sudden! zap, just like that, every organism is complete. A clam is a clam, a jellyfish is a jellyfish. Not a single intermediate fossil has ever been found between an invertebrate and a fish."

William Ball,
mining developer,
Indianapolis, Indiana

"A lot of Christians accept evolution because it's all they've ever been taught. They believe God brought about life through an evolutionary process. I accepted this, too, until about four years ago, when I became a Christian. Now I see what an impossible situation God's evolutionary process would be. It's like calling black white."

Duane T. Gish,
Institute for Creation Research,
San Diego, California

"We believe those creatures discovered in East Africa called *Australopithecus* are distinctly apes and not related to man. The creationist view is that man has always been man. We say this because we've never seen anything created. No one has ever seen anything come into being - not stars, not plants, not animals. Things were created supernaturally by processes that are not operating in the world today. A dog always remains a dog, a fruit fly always remains a fruit fly, an onion always remains an onion."

(20)

WHAT TO SAY TO THESE PEOPLE

BY GARRETT HARDIN

The seven-part TV series *The Voyage of Charles Darwin* ended in a reenactment of the 1860 Huxley-Wilberforce debate, in which Dr. Samuel Wilberforce, bishop of Oxford, attacked Thomas Henry Huxley for upholding Darwin's views, but was thoroughly trounced. A television viewer might well have concluded that Darwinism had triumphed. How

wrong he would have been!

Among scientists, it is true, the Darwinian theory did pass from triumph to triumph in the years after the debate to become the only view seriously entertained by professional biologists. The idea of natural selection now suffuses every branch of biology. There, Darwin has won.

But in the public arena, things are quite otherwise. Sixty-five years after Huxley-Wilberforce, the trial of John T. Scopes, a high-school teacher, revealed an enormous resistance to Darwin's ideas among Fundamentalist Protestants. To the dismay of both parties in the dispute, this celebrated 1925 "monkey trial," in which Scopes was accused of teaching the theory of

evolution in Dayton, Tennessee, was ultimately decided on purely technical grounds. Scopes was first convicted and fined \$100, but on appeal he was acquitted on the technicality that the fine had been excessive. Within a few years, other trials around the country determined that state laws could not mandate the teaching of the biblical story of creation nor forbid the teaching of evolution in the public schools. Both violated the First Amendment of the Constitution, which established the separation of Church and State.

In the 1860 debate, evolutionists won the battle; in the following century, they nearly lost the war. By the time of the centenary of the *Origin of Species*, in 1959, the vast majority of high school biology texts had resolved the dispute simply by suppressing both special creation and evolution. The word "evolution" was usually omitted, with the flabby word "development" standing in its place. Natural selection was scarcely touched upon. A high school student in 1960 would generally have had no inkling of the importance of Darwin in the intellectual history of humanity.

The public resurrection of Darwinism came, curiously, from space. In October 1957, the Soviet Union launched *Spunik I*, the first artificial earth satellite. By beating us out in the race to space, the Soviets shattered American complacency about our technological superiority. There arose an immediate outcry for greater emphasis on the teaching of science in the high schools. As biologists took up their portion of the educational burden, they became aware of how disastrously school administrators and textbook publishers had sabotaged biology. A feisty geneticist, Nobel Prize winner H. J. Muller, protested in an article entitled "One Hundred Years Without Darwin Is Enough." In response, the Biological Sciences Curriculum Study, the official arm of the biology teaching profession, put out five different high school textbooks, each of them assigning a major role to evolution and natural selection. When the state board of education in Texas asked for a special edition that would mitigate these frightening ideas, BSCS refused to compromise.

In human affairs as in Newtonian physics, action provokes reaction. Within a few years, Fundamentalists had developed a new attack, which ran around the end of the First Amendment. Knowing that they could not insert an explicitly religious view into the school curricula, they called their view scientific, christening it "scientific creationism." Their plea that it be included in the curricula had a surface plausibility. No human being *was* present at the origin of life on earth, nor did anyone actually observe and record the evolution of one species into another millions of years ago. Therefore (said the creationists), it is just as scientific to believe that all existing species were created in an instant in exactly the same forms that they now appear as it is to suppose that they evolved. Scientific creationists do not ask that their theory displace Darwin's in the schools. They ask only for equal time.

Are scientific creationists concerned primarily with science or with religion? In a presentation to the California Board of Education, one of their spokespersons said, "Creation in scientific terms is *not* a religious or philosophical belief." At the same time, an appeal for funds made by the Creation Science Research Center, in San Diego, bragged that it intended "to take advantage of the tremendous opportunity that God has given us . . . to reach the 63 million children in the United States with the scientific teaching of Biblical creationism."

Even at the religious level the creationist view is a biased one. The only creation story they mention is the one in Genesis (in which there are actually two stories—the version in the first chapter being

so different from that in the second chapter that biblical scholars believe they were written hundreds of years apart). Why do they not mention the belief of Hindus that the world began with the creation of the cosmic egg? What about the Babylonians' belief that there was not a single creationist god but two cosmic parents?

Many outsiders see the creationists' call for fair play as little more than a legal ploy. A close reading of Fundamentalist literature by social scientist Dorothy Nelkin, of Cornell University, led her to believe that these earnest people are most deeply disturbed by what they regard as the moral disintegration of our society—rising crime rates, profligate sexuality, breakdown of the family, undermining of authority, and so on. Darwin may be only the scapegoat.

Because many of the views of Fundamentalists are widely shared, creationists have considerable support among those who couldn't care less about the creation-versus-evolution argument. During the past generation, Americans have become ever more concerned about fair play toward minorities. Protecting minorities increases diversity, which is regarded as a positive good. Scientists have long insisted that truth cannot be determined by majority vote; Galileo, after all, was in his day a minority—or "a majority of one," to use Thoreau's inspired phrase. We worship fair play; we are intolerant of dogmatism.

So in town meetings and in public debates, scientific creationists have proved formidable opponents. Scientists have not found it easy to explain to creationist supporters why a view held by a sizable minority should be forcibly excluded from the public schools.

To see what is involved, let us adopt a tactic discovered long ago by the mathematicians: When one question stumps you, ask another. That is, ask a related question whose answer throws light on the first.

Let our other question be this: Why don't we teach astrology in the schools? Astrology holds that the course of each human life is determined to a considerable degree by the position of the stars in the sky at the exact moment of the individual's birth. Belief in it, in one variant or another, has probably been held by most of the people on earth. Even today, some universities in India offer degrees in the subject. Yet American believers do not pressure boards of education to add their subject to the curriculum. If believers in astrology became as well organized as the creationists, it is hard to see how their demands could be withstood. Our emotions concerning this issue have not been aroused; we can objectively examine the issues. On what grounds might scientists object to the inclusion of astrology in the public schools?

The reason for not calling astrology a science is simple: Its assertions cannot be proved false.

There is a widespread belief among the public that the statements of science are *provable*. Scientists and philosophers now agree this is wrong. No scientific statement is ever fully proved. Science is made up of statements that *may* be proved false but that have not, in fact, been proved false by the most rigorous tests. Those that are not falsifiable are *waterproof hypotheses*, and they are beyond the pale.

Let's see why astrology is not science. Over 1,500 years ago, Saint Augustine cited what he regarded as a definitive disproof of astrology. He knew of two babies who were born at the same time, one to a wealthy couple and the other to a slave woman. When these babies grew up—surprise!—the child born to wealth became wealthy, and the slave's child became a slave. Since they had been born at the same instant, it was obvious, said Saint Augustine, that the astrological hypothesis was nonsense.

Did Saint Augustine prevail? He did not. Astrolog-

gers had a very simple response to his "disproof," which they continue to repeat to the present day. It is this: No two babies are ever born at *exactly* the same instant. Therefore, their astrological signs are different, and their futures must differ as well. Insistence on the word "exactly" converts the astrological position into a waterproof hypothesis.

Should astrology be taught in public schools? Not as science. On this scientists must be adamant. The total exclusion of doctrines based on waterproof statements is one of the few dogmas of science. If the public wants to have astrology taught as part of some other course—history? sociology?—that is a matter about which a scientist, *as a scientist*, has nothing to say.

Having shown that astrology is not scientific, we can return to our principal question: Is scientific creationism scientific? Curiously, a complete answer to this question was worked out more than a century ago in a brief dispute that has, by a quirk of history, been almost completely forgotten. The idea of evolution is much older than Darwinism. What Darwin contributed was a believable mechanism to account for evolution. Fifteen years before the *Origin of Species*, an anonymous volume, *Vestiges of the Natural History of Creation*, espoused the evolutionary view. Scientifically, *Vestiges* was, in the opinion of scientists both then and now, a poor thing, but it was very popular; it went through ten editions before the *Origin of Species* was published.

Many religious people saw evolution as a threat to morality and religion. One of the most disturbed of these was Philip Gosse, a minister in the Fundamentalist group called the Plymouth Brethren. Gosse was not only a minister but also a naturalist (a common combination in Victorian England). During the 1850s, Darwin consulted him on many matters, though without ever revealing the heretical trend of his thought.

Gosse, upset by *Vestiges*, set out to demolish completely all theories of evolution. He began with geology. Geologists explain the strata of the rocks by physical principles, deducing that it must have taken millions of years to deposit layer upon layer of sedimentary rocks. There is no way to reconcile this deduction with the religious belief that the world began in the year 4004 B.C., so proclaimed in the seventeenth century by James Ussher, archbishop of Armagh. But Gosse thought he had found a way. His book, published two years before the *Origin*, was entitled *Omphalos*. The name is significant: It is Greek for "belly button."

Consider Adam and Eve, said Gosse. Did they have navels? Since the navel is a vestige of the link between the fetus and the placenta, one could argue that they had no navels, since Adam was created from dust and Eve was created from Adam's rib. But one could also argue that the first human had to have a navel; it is inconceivable that God (a perfect being) would create imperfect creatures. Adam's and Eve's navels were not evidence of a preexisting being (namely a mother) but were merely what one would expect in God-created creatures.

Gosse explained the stratification of the rocks by the same logic. Strata are not evidence of processes occurring over millions of years; they are merely what one would expect to find in a perfect world. The strata and their fossils were all created on day three (see Genesis) as a materialization of God's thought. The fossils are merely artifacts that God was pleased to place among the strata when he created the world. The deductions of the geologist and the biologist fall to ground, and the Bible stands supreme as the revelation of truth. So said Gosse.

Gosse expected *Omphalos* to be attacked by scien-

tists. It was. He was not prepared for the bitter denunciation by the religious community. Asked to write a review of *Omphalos*, his friend Charles Kingsley, a minister and the author of *Westward Ho!*, refused. He wrote a letter to Gosse explaining why.

"You have given," Kingsley said, "the 'vestiges of creation theory' the best shove forward which it has ever had. I have a special dislike for that book; but, honestly, I felt my heart melting towards it as I read *Omphalos*."

"Shall I tell you the truth? It is best. Your book is the first that ever made me doubt [the doctrine of absolute creation], and I fear it will make hundreds do so. Your book tends to prove this—that if we accept the fact of absolute creation, God becomes God-the-Sometime-Deceiver. I do not mean merely in the case of fossils which *pretend* to be the bones of dead animals; but in . . . your newly created Adam's navel, you make God tell a lie. It is not my reason, but my *conscience* which revolts here . . . I cannot . . . believe that God has written on the rocks one enormous and superfluous lie for all mankind."

"To this painful dilemma you have brought me, and will, I fear, bring hundreds. It will not make me throw away my Bible. I trust and hope. I know in whom I have believed, and can trust Him to bring my faith safe through this puzzle, as He has through others; but for the young I do fear. I would not for a thousand pounds put your book into my children's hands."

Gosse, abandoned by churchmen, gave up theorizing and returned to merely observing nature. As a popularizer of nature, his position in science education is an honorable one. His *Evenings at the Microscope* persuaded many an English gentleman to take up the microscope as a hobby.

Returning to the present, we note that there has been no improvement in the arguments for creation since *Omphalos*. Of course we now have the ingenious "radioactive clock" method of dating strata and fossils, but this can be explained away as easily as Adam's belly button. If an Archeozoic crystal has more lead and less uranium than one formed during the Cenozoic Era, it is merely because God set the two clocks at different times when he started both of them ticking in 4004 B.C. So say the creationists.

Neither scientist nor scientific creationist can suggest any deduction from the creation hypothesis that can be proved false, now or in the future. But the hypothesis of evolution is falsifiable by a thousand conceivable observations, for example, finding *Australopithecus* bones in strata from the Mesozoic Era. Evolution, therefore, might be a false hypothesis. But creationism can never be proved false.

The Reverend Charles Kingsley was closer to the truth than perhaps he knew when he said it was not his reason but his conscience that made him reject the waterproof belly button argument. In some abstract sense, science may (as some claim) be value

free, but the practitioners of science often become very emotional when they are confronted with waterproof hypotheses. They exhibit what can only be called moral indignation—or the sort of contemptuousness a professional gambler would express if he were asked to play poker with twos, threes, fours, fives, and one-eyed jacks wild. Grown men don't play such games.

There is a paradox in the present Mexican standoff between scientists and scientific creationists. Bible supporters want Genesis taught because (they say) it is scientific; evolutionists want waterproof hypotheses excluded because (they feel) they are intellectually immoral. Small wonder for confusion.

Actually, all of the arguments given here could be included in public schools and with considerable educational benefit. That such material is not included has many explanations. The principal one is

no doubt this: It is always easier to teach facts than arguments. It is particularly difficult to examine for an understanding of arguments. Teachers—some of them—are lazy. So are some students. Classes—

most of them—are large; this militates against teaching subtle arguments. A pluralistic society like ours makes it easier to run away from a controversy than to deal with it fairly and openly.

One wonders: When the second centenary of the *Origin of Species* rolls around, in the year 2059, will the theory of evolution through natural selection be universally accepted? Evidences of natural selection are everywhere: in the unwanted appearance of DDT-resistant insects and antibiotic-resistant disease germs as well as in the wanted development of domestic plant and animal varieties in response to breeding programs in which man defines the selective criteria. But these evidences are nothing to a person who does not reject waterproof hypotheses.

Our social world is a chaotic one. It is understandable that many sincere people should seek emotional refuge in a waterproof hypothesis like that of instantaneous creation. Broadening the support for Darwin's view depends not so much on accumulating more scientific evidence as it does on getting more people to understand the nature of science itself. □

Garrett Hardin, a former biology and human ecology professor at the University of California, Santa Barbara, now writes and lectures.

THE CREATIONISTS' CLOUT

No one knows how many scientific creationists there are, but since the late Sixties, they have managed to have bills introduced in at least fifteen states that would force public schools to teach, alongside evolution, that a supreme being made us. So far, none of these bills has been passed, although some have met only narrow defeat. The Georgia legislature passed different versions of a bill but could not agree on a final form.

Creationists have done their most persuasive wooing in the twenty-two states where school board committees choose textbooks. Now in California, many high school students use a biology book that does not even mention Darwin. In New York, Luther Sunderland persuaded the state board of education to reassess the biology text used in its public schools.

The movement's best-known organization is the Institute for Creation Research, in San Diego. It is funded by individuals who learn of its work through a monthly newsletter and receives, officials say, an average of 1,000 donations each month, the average amount being \$20. ICR's seven staff scientists all have doctoral degrees and spend most of their time promoting creationism on college campuses. They also write books. Many of these are published by Creation-Life Publishers, near San Diego. One recent children's book has modern man and dinosaurs living side by side.

Christian Heritage College, also in San Diego, offers courses in creationism to 400 students and holds special courses for teachers.

Creation Science Research Center of San Diego is the legal activist among the creationist groups. It recently sued the California Board of Education for not making it clear that creationism may be taught in biology classes. CSRC says it helped force changes in texts at least six times in California during the last decade.

The Bible Science Association, in Minneapolis, sold, until recently, radio spots to many midwestern stations. It publishes weekly readers for schools and a monthly newsletter with a circulation of 18,000. The Creation Research Society, in Ann Arbor, Michigan, with a membership of 700, publishes the *Creation Research Quarterly*, a journal of record containing the latest "scientific" findings to substantiate the cause.

Only recently are school boards and teachers learning how to argue effectively against creationists. An issue of *The American School Board Journal* published an article advising readers of how to mobilize in defense of science. Several counties in Georgia defied decrees by local boards to include creationism in the school curricula.

(21) From The New York Times (10/15/80, p. A18):

Secular Humanists Attack A Rise in Fundamentalism

By KENNETH A. BRIGGS

A group of 61 prominent scholars and writers have attacked the recent rise of Christian fundamentalism by issuing a declaration that denounces absolutist morality and calls for an emphasis on science and reason rather than religion as a means of solving human problems. Called "A Secular Humanist Declara-

tion," the statement warns that "the reappearance of dogmatic authoritarian religions" threatens intellectual freedom, human rights and scientific progress. It expresses skepticism toward "supernatural claims," doubt about "traditional views of God," and rejection of the "divinity of Jesus."

The group assails "fundamentalist, literalist and doctrinaire Christianity; a rapidly growing and uncompromising Moslem clericalism in the Middle East and Asia; the reassertion of orthodox authority by the Roman Catholic papal hierarchy; nationalistic religious Judaism; and the reversion to obscurantist reli-

gions in Asia."

Affirming the need for moral standards that are based on logic and empirical experience, the declaration opposes "absolutist morality" and says that it is immoral to "baptize infants, to confirm adolescents, or to impose a religious creed on young people before they are able to con-

sent."

U.S. and Foreign Signers

Among the American signers are Dr. B. F. Skinner, the retired Harvard psychologist, Isaac Asimov, the author, Dr. Walter Kaufman and Dr. Sidney Hook, both philosophers, and Francis Crick, the Nobel laureate cited for his work in the discovery of DNA. Dr. Paul Kurtz, a member of the faculty at the State University of New York at Buffalo, drafted the basic document and gathered the signatures. The declaration appears in the first issue of a secular humanist magazine, "Free Inquiry," edited by Dr. Kurtz.

The list of foreigners who joined in the statement includes Baroness Barbara Wootton, deputy speaker of the British House of Lords; Kai Nielsen, the Canadian philosopher, and Dora Russell, widow of Bertrand Russell.

Dr. Kurtz said that the "growth of fundamentalism that is a vociferous critic of secular humanism as a scapegoat" had prompted him to issue the counterattack.

Secular humanism, as a philosophy that favors exclusion of religion in making moral and political decisions, has been frequently attacked by many Roman Catholics and Protestants as the chief factor in what they see as a sharp decline in the nation's morals. According to this view, the secular humanists have succeeded in removing God from schools and government deliberations and among the results has been a tendency to regard morals as man-made.

Role in Political Campaign

The attack on humanism has been a key element in the effort by conservative evangelicals to gain political influence in the present American election campaign. Preachers on the stump and on television repeatedly rail against what they see as an atheistic plot to stamp out religion. Most are working for causes and candidates who espouse moral positions that are believed to be grounded in the divine authority of the Bible. These morals, which include opposition to homosexuality, premarital sex, abortion and divorce, are viewed by the evangelicals as immutable and those who do not heed them

are seen as subject to God's judgment.

"The moving force behind humanism is Satan," writes H. Edward Rowe, an evangelical leader, in a new book, "Save America." "Humanism is basically Satan's philosophy and program. Certain features of it may sound reasonable, but it always leads to tragedy, simply because it ignores the guidance of God."

The secular humanists trace their heritage to classical philosophy, the worldly focus of the Enlightenment of the 18th century and the emergence of the scientific method. Among those who are said to stand in this tradition are Lucretius, Spinoza, Darwin and Einstein. Though humanists reject divine authority over morality, most believe sound ethical standards can be derived from human reason.

In the declaration, the group asserts that secular humanists "may be agnostics, atheists or skeptics." The statement contends that "men and women are free and are responsible for their own destinies and that they cannot look toward some transcendent Being for salvation."

Reflecting elements of two earlier humanist manifestos, in 1933 and 1973, the declaration depicts supernatural religion and divine revelation as enemies of the rational process that leads to progress. "We are apprehensive that modern civilization is threatened by forces antithetical to reason, democracy and freedom," the statement says.

Reliance on Scientific Method

"Although not so naive as to believe that reason and science can easily solve all human problems," the declaration continues, "we nonetheless contend that they can make a major contribution to human knowledge and can be of benefit to mankind. We know of no better substitute for the cultivation of human intelligence. We believe the scientific method, though imperfect, is still the most reliable way of understanding the world."

Dr. Kurtz asserted that the scientific method continues to be the "dominant model" for the modern world, despite attacks from some religious groups. "The critics want to turn the clock back to the pre-modern world, to repeal the modern, scientific world," Dr. Kurtz said.

Though empirical, rational methods appear to be the most common means of exploring human problems, the declaration complains that secular humanists do not have sufficient opportunity to explain their views. It says the media are "inordinately dominated by a pro-religious bias" and that the "views of preachers, faith healers, and religious hucksters go largely unchallenged."

"Secular humanism places trust in human intelligence rather than divine guidance," the declaration says. "Skeptical of theories of redemption, damnation, and reincarnation, secular humanists attempt to approach the human situation in realistic terms; human beings are responsible for their own destinies."

The other United States signers were:

George Abell, professor of astronomy, UCLA; John Anton, professor of philosophy, Emory University; Khoren Arisian, minister, First Unitarian Society of Minneapolis; Paul Beattie, minister, All Souls Unitarian Church, president, Fellowship of Religious Humanism; H. James Birx, professor of anthropology and sociology, Canisius College; Brand Blanshard, professor emeritus of philosophy, Yale University; Joseph L. Blau, professor emeritus of religion, Columbia University; Arthur Danto, professor of philosophy, Columbia University; Albert Ellis, executive director, Institute for Rational-Emotive Therapy; Roy Fairfield, former professor of social science, Antioch College; Herbert Feigl, professor emeritus of philosophy, University of Minnesota; Joseph Fletcher, theologian, University of Virginia Medical School; Sidney Hook, professor emeritus of philosophy, New York University, fellow at Hoover Institute; George Hourani, professor of philosophy, State University of New York at Buffalo; Marvin Kohl, professor of philosophy, medical ethics, State University of New York at Fredonia; Richard Kostelanetz, writer, artist, critic; Joseph Margolis, professor of philosophy, Temple University; Floyd Matson, professor of American Studies, University of Hawaii; Ernest Nagel, professor emeritus of philosophy, Columbia University; Lee Nisbet, associate professor of philosophy, Medaille College;

George Olincy, lawyer; Virginia Olincy; V. W. Quine, professor of philosophy, Harvard University; Robert Rimmer, novelist; Herbert Schapiro, Freedom from Religion Foundation; Herbert Schneider, professor emeritus of philosophy, Claremont College; George Tomashovich, professor anthropology, Buffalo State University College; Valentin Turchin, Russian dissident, computer scientist, City College, City University of New York; Sherwin Wine, rabbi, Birmingham Temple, founder, Society for Humanistic Judaism; Marvin Zimmerman, professor of philosophy, State University of New York at Buffalo.

From Canada: Henry Morgenthaler, physician, Montreal.

France: Yves Galifret, executive director, l'Union Rationaliste; Jean-Claude Pecker, professor of astrophysics, College de France, Academie des Sciences;

Britain: Sir A. J. Ayer, professor of philosophy, Oxford University; H. J. Blackham, former chairman, Social Morality Council and British Humanist Association; Bernard Crick, professor of politics, Birkbeck College, London University; Sir Raymond Firth, professor emeritus of anthropology, University of London; James Herrick, editor, The Free Thinker; Zhores A. Medvedev, Russian dissident, Medical Research Council; Lord Ritchie-Calder, president, Rationalist Press Association; Harry Stopes-Roe, senior lecturer in science studies, University of Birmingham, chairman, British Humanist Association; Nicholas Walter, editor, New Humanist.

India: A. B. Shah, president, Indian Secular Society, director, Institute for the Study of Indian Traditions; V. M. Tarakunde, Supreme Court Judge, chairman, Indian Rationalist Humanist Association.

Israel: Shulamit Aloni, lawyer, member of Knesset, head of Citizen's Rights Movement.

Norway: Alastair Hannay, professor of philosophy, University of Trondheim.

Yugoslavia: Milovan Djilas, author, former vice-president of Yugoslavia; M. Markovic, professor of philosophy, Serbian Academy of Sciences & Arts and University of Belgrade; Sveta Stojanovic, professor of philosophy, University of Belgrade.

(Thank you, STEVE REINHARDT and BEV SMITH)

THE NEW YORK TIMES, MONDAY, OCTOBER 6, 1980

Against Creationism

By Ben Bova

We may laugh at the quaintness of the 1925 monkey trial in Tennessee, when teacher John T. Scopes was threatened with fine and imprisonment for teaching Darwinian evolution to his high-school students. Yet it wasn't until 1970 that the last anti-evolution laws in our country were wiped off the books. Even then the battle did not end. It goes on today, more subtle, and in some ways more bitter, than ever before.

Creationists, who believe that the world and the human race were created out of nothing by some divine fiat, no longer insist on banning every mention of evolution from the classroom. Instead, they pressure school boards to give Creationism "equal time" with evolution in science classes. As a result, in many biology texts the origin of the human species is illustrated by Michelangelo's Adam from the Sistine Chapel ceiling. It's fine painting, and Genesis is an inspired bit of writing. But it isn't biology. To insist that Genesis be inserted into biology texts and to

pretend that religious mythology can explain biological phenomena is about equivalent to believing that straw can be woven into gold.

The Creationists claim that scientists still refer to evolution as a "theory"; therefore, the scientists don't accept

Darwin's ideas as proved. In science, the word "theory" indicates "a systematic statement of principles; a formulation of apparent relationships or underlying principles." A hypothesis is an unproved idea. A theory, in science, is a structure of logic that brings

together many diverse observations (and welds them into an understandable whole. Really powerful theories, such as those of Darwin and Einstein, also predict phenomena that haven't been observed before.

The Creationists retort: "But scien-

tists themselves don't agree on Darwin's theory." True. God forbid that they should.

Science is a process of discovery. Darwin's ideas are some five generations old now. Much new information has been uncovered. Biologists argue about the details of evolutionary processes, just as physicists argue about subatomic particles. This does not mean that physicists don't believe atoms exist.

Evolution, as described by Darwin and others, is the cornerstone of the biological sciences. No serious scientists dispute this, even though they will haggle fiercely over minute details.

Recently the concept of "scientific creationism" was raised, with scientists or engineers — usually not biologists — saying that evolution stands at

best on shaky intellectual ground. To prove that Creationism is correct, the Creationists try to find flaws in evolution. This is an intellectual shell game, in which you don't prove your point but instead try to demolish the opposing point of view and then pretend that this proves you're correct.

So far not one shred of evidence has ever been found to support the Creationist point of view. Not a fingerbone, not a leaf, not a shard of evidence exists. We may have been created by some deity or other unfathomable force, but there is no evidence whatsoever that it happened in this way. And if it did happen this way, the creating force went to incredible trouble to litter this planet with the evidence of evolution: from dinosaur fossils to hominid teeth, from the elegant

speciation Darwin found during his voyage on H.M.S. Beagle to the stages of development a human fetus undergoes during its nine-month gestation.

There is a dark element of catechism thinking among the Creationists. They don't need evidence, because they know they're right. Their mode of thought, straight out of medieval times, leads not to understanding but to acceptance of Authority. Make no mistake about it. Those who are convinced of the truth will never stop merely with demands for "equal time." They inevitably move toward taking political control, just as they inevitably gravitate toward the most conservative positions on issues. Already the Creationists are using political clout to tamper with biology teaching. Give them the political power and

they will outlaw any ideas they do not agree with: Evolution is merely one of many ideas that these zealots attack.

The preceding paragraph is hypothesis, an unproved idea. We can test this hypothesis in good scientific fashion. Are the Creationists fair-minded people who want only to present conflicting ideas in an equitable, reasonable manner? Ask the next Creationist you meet whether he or she would be willing to have a chapter explaining Darwinian evolution inserted into the Bible alongside Genesis. Then you'll learn what "equal time" really means to them.

Ben Bova is executive editor of *Omni* magazine, a monthly, from which this is adapted.

(23) From The New York Times (10/15/80, Op Ed page):

WASHINGTON — Columnists, political commentators, and editorialists have been writing a great deal lately about the emergence of religion-oriented political organizations, even suggesting that this is the most important issue in the Presidential election — more important than inflation or foreign policy or unemployment.

Religion is indeed important in the 1980 elections, but it is apt to be more so in future ones.

Many have written of this issue as if it concerned simply the question of church-state relations, and as if the separation between church and state is threatened. In fact, not one of the religion-oriented political organizations wants to lower the barrier between church and state. All of us do want the nation's laws and policies to reflect the values, beliefs, and principles of America's Christian majority. What justification is there for our seeking that?

First of all, there is the point that the majority of Americans are Christian — that is, ours is a Christian nation. Consider just the Catholics. The church in the United States claims 49 million members, but a few years ago the Gallup poll found 11 million more of us — 60 million in all. That is more than a quarter of the population. Add the nation's Protestants and Eastern Orthodox and you get an overwhelming majority. Why should not a nation's laws, policies, and even public ceremonies reflect the values, beliefs, and principles of the majority of its people? Those of such nations as Ireland and Israel do. Ours used to. They should again.

Leaving aside the matter of numbers, they should. That is because laws and policies and the politics that bring them into being are not abstract. They have to do with how men live — men, not simply citizens, but living, breathing, hurting, playing, working, worshipping, dreaming men. It is not sim-

A Christian America

By Gary Potter

ply that these men, including the women among them, need and want homes, jobs, education for their children, social stability and a secure and peaceful future — all matters on which politics touch. They are also creatures created in the image of God, they are His children, and they are entitled to the dignity and freedom befitting their station. Who is more likely to secure their entitlement than Christians, those who recognize they are God's children?

I spoke of freedom. Am I free because I can see a pornographic movie, or sell one, or make one, or recruit my neighbor's daughter to perform in one? Is that freedom?

Christian political activists have another idea. They have the idea that it is the business of politics to ensure for men the freedom to do their duty. Every man's first duty is to win salvation. This is a way of saying that there are things that matter more than mere politics and should precede them in importance. Good politics, like good economics, depend on good morals. Good morals depend on religion.

Every really serious political issue is finally moral. When Humberto Cardinal Medeiros urged voters in Massachusetts to elect pro-life candidates he was not speaking as a politician. He spoke as the quintessential moralist, a man of religion. It is for a man of religion to instruct us morally even as it is for a man of politics to seek a public order annealed to the highest concep-

tion of the public good: a society of free men bent on doing their duty. That would be a Christian society.

What about men, Christian and otherwise, who are unmindful of their duty? What about the non-Christians in a Christian society? Would they be oppressed? It is the rule of the secularist that is oppressive. The secularist has no vision of anything beyond the here and now. He does not believe in eternal life, or at least he acts as if he does not. The here and the now are all he has. So his compulsion is to make an imperfect world perfect. To do it he regulates, controls, manipulates, dictates and, in the end, tyrannizes. Tyranny is a substitute for government. There is nothing that prevents our having a tyranny, except the growing awareness of the nation's Christians that it is dangerous for their values, beliefs, principles, and morals to be disregarded in the political process and in the formulation of public policy. So they are beginning to weigh candidates and issues in the light of their faith.

Commentators disturbed by this development are not consistent. They argue that "private" moral views inspired by religious beliefs should not infuse public actions, but they never argue that persons who believe in nothing beyond themselves and their ability to perfect the world should fail to vote their views.

Men who believe in nothing beyond themselves and their ability to perfect the world are liberals by definition. It was inevitable that Christians should be in conflict with them. That is not because Christians necessarily are conservatives, but because liberalism is a sin.

Gary Potter heads Catholics for Christian Political Action, which he describes as "an independent national laymen's political-education and action organization."

(Thank you, BEV SMITH)

CURRENT PUBLIC ISSUES

(24) Nuclear Power opponents who don't happen to know about the Union of Concerned Scientists would do well to write them and ask about their activities. They are mostly MIT professors who know what is risky (and what is not) about nuclear power. They are the group that Governor Thornberg of Pennsylvania consulted in connection with the venting of radioactive gas at Three Mile Island. Their current concern is that the U.S. is about to embark prematurely on a radioactive waste disposal plan that is inadequate and that will probably have dangerous and irreversible consequences. Their address: 1384 Massachusetts Avenue, Cambridge, MA 02238.

LOCAL CHAPTERS

- (25) L.A. A group of BRS members met, for the fun of it, on September 19th at a Hollywood restaurant, and enjoyed good company, good conversation, and (for all we know) good food. We don't have a complete list of who was there, but we know it included BOB DAVIS, KATHY FJERMEDAL, JOE GORMAN, JIM HAUN, and HARRY RUJA. They decided to meet again, on Sunday, November 16th, at 1 P.M., at Bob's house, where they will look over his Russell collection, discuss a book, and drink tea and/or Red Hackle. (The book: Why I Am Not A Christian, chosen because most of them had read it.) There may also be 2 short BR films.
- If you think you may go, write Bob a note (2501 Lakeview Avenue, Los Angeles, CA 90039) or phone (213-663-7485). His house is very small, and he wants to have enough chairs on hand.

NEWS ABOUT MEMBERS

- (26) Dong-In Bae writes from Germany: "Although I cannot attend the annual meeting, my heart and mind will be with you in Chicago. I have only one wish: I think it would be desirable to print the scholarly addresses in the next newsletter, on the following grounds: (1) as a documentation of a feature of BRS activities; and especially (2) for the benefit of the members who did not attend the meeting. I wish you great success in your meeting. With warm regards."
- (27) Whitfield & Margaret Cobb have an oil portrait of BR hanging over the fireplace in their living room. It is "imaginatively colored -- cool blue head of reason, hot orange flames of irrationality -- from a black and white photograph of BR on one of his ban-the-bomb protest marches (published in Life), and was painted by Sylvia Wilkinson, then an art major at the University of North Carolina at Greensboro, where I used to teach math."
- (28) Peter Cranford is, as we know, interested in promoting the concept of "compossibility". It was the subject of his talk at the 1980 meeting (RSN27-2c). His new book, just completed, may help, at least indirectly. "I had planned to use the title, 'Compossibility: The Art and Skill of Influencing People (Including Yourself)' but this ran into resistance. The book owes a debt to Russell, and should help the cause. The new title will probably be, 'How To Be Your Own Psychologist', self-published in four to five months."
- (29) Dora Russell, as reported in "World Press Review" (August 1980), and originally reported in The Times, London: Pessimistic Educator. As an early champion of such causes as progressive education, Socialism, and global peace, Dora Russell finds today's world less hopeful than that of the 1920s, when she and her husband, Philosopher Bertrand Russell, founded Britain's "discipline-free" Beacon Hill School. Bemoaning the advance of technology in modern schools, she says, "I don't believe it would be possible to educate children now as I once believed they could be educated. Who cares about the human race anymore?"
- Mrs. Russell, now eighty-five, lives in Cornwall, in the house she and Lord Russell bought sixty years ago. She recently published the second volume of her autobiography and is continuing work on a book about the technological age. "Either we turn our planet into a machine," she says, "or we return to some form of civilization. It is a savage, difficult choice." (Thank you, BOB DAVIS)
- (30) Paul Arthur Schilpp was planning to retire (again!) and move to the gentler climate of California this year. This summer, he and his wife, Madelon, made a house-hunting trip to California. He writes: "We did not find what we were looking for -- and I do not feel confident that we ever will (they want \$210,000 for just a chicken coop -- or outhouse). We may be forced to stick where we are. In any case, after officially retiring emeritus status on July 1, I was reappointed on September 1: no rest for the wicked; which, I suppose, shows just how terribly wicked I must be."
-

QUESTIONS & ANSWERS

- (31) 2 + 2 = ? JACK RAGSDALE had wondered what BR meant when he said something like, "Two and two are about four." Jack also wondered where the remark occurred (RSN27-25).
- KEN KORBIN offers this: "Wittgenstein said something like this: 'If there are two apples on a table and two more apples are put on the table, then there are probably four apples on the table.' This may be the source of BR's remark, although I do not know what Wittgenstein means."
-

HONORARY MEMBERS

(32) We welcome a new honorary member:

PAUL ARTHUR SCHILPP/Emeritus, Philosophy/Southern Illinois University/Carbondale, IL 62901

NEW MEMBERS

(33) We welcome these new members:

KEVIN BOGGS/1111 S.W. 16th Ave.(101)/Gainesville, FL 32601

ANNE L. BUTCHER/1203 6th Ave.(1)/Tacoma, WA 98405

COLLECTORS' CORNER

(35) This new section is for members and non-members who wish to buy, sell, or trade books, letters, photographs,

etc. that have some connection with BR. We will also list the names and addresses of collectors.

- (36) Book Collector DAVIS. Bob Davis/ 2501 Lakeview Avenue/ Los Angeles, CA 90039
- (37) Book Collector LENZ. John R. Lenz/305 Riverside Drive (2B)/New York, NY 10025
- (38) Book Collector LESSING. Dr. H. W. Lessing/50 F, Cornwall Gardens/London S.W.7/England. He would like to be in touch with other collectors and with people interested in selling books by BR.

CONTRIBUTIONS

- (39) Russell Memorial (London). The following have each made a contribution to help pay the cost of the memorial bust of BR that was unveiled in the gardens of Red Lion Square last month: JACQUELINE BERTHON-PAYON, GRAHAM ENTWISTLE, DOUGLAS F. FRASER, DAVID S. HART, ALVIN HOFER, RICHARD HYMAN, GLADYS LEITHAUSER, WILLIAM MCKENZIE-GOODRICH, ERNEST L. SNODGRASS, WILLIAM VALENTINE. Our thanks go to all of them.
- (40) BRS Treasury. We thank these members for their contributions, which help pay our annual operating deficit: JACK COWLES, DENNIS DARLAND, KATHY FJERMEDAL, RICHARD HYMAN, CORLISS LAMONT, GLADYS LEITHAUSER.

BRS BUSINESS

- (41) Expulsion of member proposed. The BRS has never expelled a member; there has never been reason to. But now, alas, there is good reason, at least in our opinion. The members will be the final judges; they will vote on it. Here are some facts:
- John Sutcliffe, who lives in England, has been a member since September 1975. He has taken a lively interest in BRS affairs, and his writings have often appeared in the newsletter.
- * * * * *
- NL11-8 (8/76) reports that he is "in process of setting up a BRS in Britain." That is, he intended to form a BRS-BRITAIN COMMITTEE of the BRS, and recruit new members in Britain. For this purpose, he ran ads at his own expense in "The New Humanist" (Britain).
- NL13-8 (2/77): Bob Davis reports, after a lengthy visit with Sutcliffe in England, that "England does not lend itself to our style of organization, but John is a valuable member to have in England." That is, the plan to have a BRS-Britain Committee was dropped, and Sutcliffe continued as a regular member.
- * * * * *
- Sutcliffe had a letter published in "The Listener". He sent a copy to us for possible inclusion in the newsletter. The letter said highly derogatory things about an unnamed organization that -- obviously and unmistakably -- was The Bertrand Russell Peace Foundation. The letter was signed this way:
- John Sutcliffe
The Bertrand Russell Society
- Sutcliffe had every right to write this letter in his own name but no right whatever to say it was coming from the BRS or represented the BRS view, which it does not. We wrote him as follows on July 19, 1980:
- I am distressed to see that your published letter, which you identify as having appeared in "The Listener" of 7/2/80, is signed with your name and "The Bertrand Russell Society".
- That is a misappropriation of the BRS name. You are not authorized to speak for the BRS.
- Nor are you the "England Representative" of the BRS, although your stationery claims that you are. The BRS does not have an England Representative or any representatives other than elected ones. Calling yourself an England Representative is a misrepresentation, and should stop.
- I don't wish to be entirely negative. You have made a number of useful contributions to the BRS. That is why I am not going to recommend that you be expelled as a member.
- I don't expect you to like what I have said here, but I hope that when you think it over, you will decide that you can live with it, and this will enable you to continue to make useful contributions to the Society.

On July 26th he responded to our letter this way:

Dear Lee,

How could I ever be annoyed with so petty and patronising an individual as you? Does my tolerance level of feels appear so low to you?

May I apologise -not for my action- but for the silly man you obviously are. Loyal to the letter of Bertie Russell you are totally ignorant of the spirit of the man and his work.

Your bureaucratic mentality so eager to cross every "t" and dot every "i" is alien to any organisation that represents Bertie and his work. The discussion of compossibility at the BRS meeting was most interesting, why dont you try it sometime. But it makes me wonder how much of Davis "compossibility" with the Peace Foundation prompted your letter and its rather amusing attempt to impose its pathetic authority.

Note that he does not say he will stop calling himself "England Representative", nor does he say he will stop writing letters to publications as if coming from the BRS. To say nothing of the abusive tone.

* * * * *

Bob Davis had had similar problems with Sutcliffe earlier. Here are relevant excerpts from Bob's letter to Sutcliffe of January 5, 1978:

I am writing you about a matter of procedure. Lee Eisler sent me a copy of the entry in the English Association handbook for this year with an attached letter. In the letter he pointed out that having a British Representative, as you are listed, implies a British chapter and that violates the express intention of the Board not to have foreign chapters. That was decided last February, and I notified you of that in my letter of February 16th. I feel that Lee is correct in this matter and that when it is time for the 1978 book to be compiled, you should tell them to drop mention of us completely as we are not a British group.

Here is how Sutcliffe answered on January 15th:

As ever you match the charm of the well oiled machine with the tact of an air-raid. As one who is supposed to inspire an organisation they lead your indelicacy is inspirational only to every narrow minded bureaucrat. Your letter was insensitive timed as it was, and this reply may seem to you over sensitive, but you demonstrate a serious deficiency in your ability to administer anything but the most slavish machine or a dedicated bunch of acolytes. I think and I hope I have proved my worth to the BRS and its collective effort of many diverse individuals contributing to a common commitment in Bertie's work and its aims. But I deplore the efforts you and Lee Eisler seem to be making to institutionalise our freely united work. You are, I feel, making the same error of judgement as the Foundation, and you may (as I think you desire to do) overcome your difficulties with them, so that you can gain access to his work, only to fall into their trap of reducing it to a single authoritative interpretation. Consequently in order to show you mean business you have keep the rank and file under control so as not to rock the boat and thus threaten future relations with the Foundation. Dissent from corporate decision has thus to be sat on. Is my crime so terrible in and by itself? It just may regardless of so major an error as to transgress so mighty a policy bring in new members who wont know that in you and your committee lies the true authority of all our effort and the only True word of Bertie Russell, and I suppose that would be unforgivable.

I hope Peter Cranford's creation has not fallen into the hands of so many petty minded bureaucrats. We do not need celestial time servers dotting every 'I' and crossing every 'T'. We are a group of individuals acting together with initiative, not a stereotyped commercial organisation looking for profitable success. Such a view is alien to Russell and his work.

* * * * *

HARRY RUJA --BRS Vice-President elect, Emeritus Professor of Philosophy at San Diego State University -- offered these comments, in a letter to Bob dated September 30, 1980:

I have worked through the correspondence on the Sutcliffe matter. On the basis of this correspondence alone, I would have to agree to expulsion, if only for the tone of contempt he has adopted in his letter to you and Lee. I know nothing of the source of his dislike of the two of you, but certainly the perfectly reasonable request you made of him, in a completely non-accusatory manner, should not have provoked the abuse and hostility in his replies. I assume that the decision not to have foreign chapters, or, more specifically, an English representative, was made with due deliberation by the Board, not "rammed through" for some sinister motive. If so, Sutcliffe's resentment of the decision seems utterly uncalled for.

You acted properly in asking the English Association to delete their listing of us in their Handbook of Societies after Sutcliffe made it clear he had no intention to do so. Since apparently S. intends to

continue to do what we have asked him repeatedly not to, I suggest you send a letter to The Times of London and to The Observer, and perhaps also to The Manchester Guardian to the effect that the BRS is an American society, incorporated under the laws of Georgia, with no foreign chapters or foreign representatives, though open to all persons everywhere who accept the goals of the society. If Lee did not write to The Listener as soon as he received a copy of Sutcliffe's letter published in the Feb 7 issue of The Listener in which the signature implied that S. was representing the BRS, you (or Lee) should do so now, even at this late date, informing The Listener that that was a fraudulent identification.

* * * * *

That is the case against John Sutcliffe.

According to the Bylaws (Article II, Section 3), "Any member...may be expelled...by a two-thirds majority of those members voting by mail in a referendum occasioned by the issue."

* Please vote, using the ballot at the end of this newsletter.

CORRECTIONS

- (42) He WAS there. When we listed the members who attended the 1980 meeting (RSN27-2a), we inadvertently omitted HUGH MOORHEAD's name. When we mentioned it to him, he replied, "Leaving my name out is of no matter — so never mind" — which reminded him of the joke that BR got sick of hearing, at home, in his youth: What is mind? No matter. What is matter? Never mind.
- (43) How to order LOLP. Last issue, we reported the discount, for BRS members, on books in the series, "The Library of Living Philosophers" (RSN27-31). We meant to include the following paragraph, which tells how to order:
- To order, write Ms. Mary McNelis, Open Court Publishing Co., La Salle, IL 61301, and state that this is a "BRS Order". Enclose exact discounted price plus \$1 handling charge. If any questions, phone (toll free) 800-892-6831.
- (44) It was Bob Davis's idea. And we should have mentioned that fact when we introduced the new series, "My Favorite Russell". The series began last issue with Paul Schilpp's favorite Russell (RSN27-16), and continues in this issue with Lester Denonn's favorite Russell. We expect this idea to produce a lot of interesting reading.

PERIODICALS RECEIVED

- (45) Die Fackel/The Torch/Le Flambeau is published by the Korean Bertrand Russell Society. As some of you know, it was founded in 1977 by BRS Member Dong-In Bae. It is located in Koeln, West Germany. Dong-In, a Korean, has been given political asylum there.
- We have just received Issue No. 12, August 15, 1980; 44 pages, page size 6 x 8½. It is mostly in Korean; 5 pages are in German. Page 38 is Dong-In's letter, in English, to President Carter, expressing concern over the fate of Kim Dae Jung and over many other human rights violations in South Korea, whose government the USA supports.
- Earlier we had received Issue No. 1 (NL13-55) and Issue No. 2 (NL15-42). All 3 issues are available from the BRS Library (Jack Ragsdale, BRS Co-Librarian, PO Box 28200, Dallas, TX 75228.)
- (46) "Islamic Revolution" We reported receiving this periodical in RSN26-39. ALI GHAEMI has some views on it. If interested, write him directly: PO Box 427, McLean, VA 22101

COLLECTORS' CORNER (CONTINUED)

- (47) Walter Craig Davidson (805 Marinel Lane, Mission, TX 78572) writes:
- I own a copy of The Autobiography of Bertrand Russell, 1872-1914, McClelland and Stewart Limited, Toronto, Montreal, First Canadian Edition, that was autographed for me by Bertrand Russell. It is in perfect condition. I also have a typewritten, short letter to

me, signed by Bertrand Russell in ink. The letter is on Bertrand Russell's Plas Penryn, Penryn, Merioneth letterhead and dated 14 January, 1957.

The letter is in response to one I wrote Bertrand Russell concerning my understanding of his views on determinism and free will. The letter is in perfect condition. I also have a copy of Bertrand Russell's Wisdom of the West, editor Paul Foulkes, Rathbone Books, Ltd., London, 1959, printed in Great Britain by L.T.A. Robinson Ltd., London, with Doubleday & Company, Inc., Garden City, N.Y. on the title page. This was personalized to me as follows: "With good wishes to Craig Davidson/Bertrand Russell July, 1960." This book is in perfect condition.

Inasmuch as I am retiring shortly and would not like to see these items lost eventually, I will accept the highest bid for either or both of these items. I had thought to contact Sotheby's but will not do so until your members have had an opportunity to acquire these items.

THE UNVEILING

(48a)

The Times, October 24, 1980

Photograph by Jonathan Player

Mrs Dora Russell with Marcelle Quinton's bust of her husband after yesterday's unveiling.

Bertrand Russell commemorated

By Michael Horsnell

About 100 Humanists gathered to pay homage to the late Bertrand Russell in London yesterday when a bronze bust of the philosopher was unveiled.

Lord Russell, who died in 1970 aged 97, will gaze in effigy through the plane trees of Red Lion Square, by Conway Hall, the cultural cathedral of the humanist movement in Bloomsbury where he lectured.

In an emotional appeal to her former husband as she unveiled the bust, Mrs Dora Russell, aged 85, asked: "Bertie, do we live and labour in vain? You

wrote that the good life is inspired by love and guided by knowledge. Well, there is far too much knowledge in the world at the present time and far too little love."

It was Dora Russell who conceived the idea of the memorial. She took it up with Lord Russell's lifelong friend, Lord Brockway, and an appeal committee raised most of the £4,000 needed. Sir Alfred Ayer, a member of the committee, introduced the sculptor, Marcelle Quinton, who took six weeks to produce the bust at what she calls an "idealized 60 years of age".

Lord Brockway, who presided at the ceremony, said: "He began his active life in opposition to war. He ended his active life in opposition to war and the danger of nuclear bombs. I very much hope if this country suffers a nuclear attack that the bust of Bertrand Russell will be left standing as a warning to us."

He added: "Bertrand Russell was a complete man, a great philosopher and great mathematician, a great sociologist. In each of those spheres he will be remembered."

(48b) Dora Russell, October 23, 1980:

First of all I want to thank all those who have helped in any way to make the placing of this memorial and our presence here today possible. If I do not enter into details it is simply to save making a long speech. Thank you all very much, very much. We are most grateful.

Bertie used to enjoy saying that he came of a family whose members were expected so to live as to have equestrian statues erected to them after their deaths. He felt he could not aspire to that honour, but must therefore try to live in some way to deserve being remembered. Of course those of us who knew and loved him will always remember him; those, too, who enjoy reading will enjoy reading his books. His wit and wisdom stay in the mind.

None the less, I felt that those of us who were with him in his first campaign for peace in 1916 should, before we also disappear, make some actual and visual sign and place of remembrance, to which those who will follow him in the age-long struggle for peace and liberty may come and think about him, as about the still suffering world. Many of us have known martyrs in that struggle — these too we will remember here today and hereafter.

Peace-makers are comrades of danger, poverty, and scorn. Did Bertie, do we, live and labour in vain? The world of nuclear weapons seems to be in a worse state than ever. Bertie wrote that the good life is one inspired by love and guided by knowledge. There is far too much knowledge in the world today and precious little love. I have never been able to see other peoples as my enemies, even as competitors. Surely now we realize that we have only this world and must learn to love one another. Peace on earth is not spelt in ideologies...**

And to young people I say, why are you running to other countries and other gurus, when you have this marvelous one here of your very own. From Bertie's book, which I hold as almost his finest, the History of Western Philosophy, you can learn to understand our past and present and so how to think clearly about the future.

And may everyone of you who can walk march this very Sunday with that CND* for which he did so much.

Bertie, thou shouldst be living at this hour, we still have need of thee. But while we live, the cause you espoused will not be abandoned, nor will you be forgotten by generations to come.

*CND: Committee for Nuclear Disarmament

**Several words are undecipherable on our copy

(48c) Bob Davis's report:

Don Jackanicz and I managed to attend the October 23rd dedication of Bertrand Russell's memorial bust by the skin of our teeth. The invitations were mailed on October 8th to all donors from London but seem to have been lost in the mails. Don received his on the 20th and immediately phoned me. We decided to go. We both flew out on the 21st and arrived on the 22nd for the following day's dedication. One more day of delay in the mail and we would not have been able to make it.

The dedication was at noon in Red Lion Square, which is very close to the British Museum. I urge you all to visit the bust if ever you get to London. It is very well done. I refer you to the reprint of the London Times story and picture. (We will try to have a better picture in the next issue. Ed.) Though not mentioned in the Times story, Sir Alfred Ayer, Peter Cadogan, and I also spoke briefly.

After the ceremony, there was a reception in Conway Hall, which adjoins the Square. Among those present were BR's son, the Earl Russell, a granddaughter, Sarah Russell, and a number of British humanists, artists, and intellectuals. Of special interest to me were Sir John and Lady Russell; he was formerly British Ambassador to Argentina and is a son of the famous "Russell Pasha" — the Cairo police commissioner of some 70 years ago. I also met Georgiana Blakiston, a Russell, who has recently published Woburn and the Russells, which I promptly procured and read. It is a history of the Russell family, centered around the Dukes of Bedford and the family home of Woburn Abbey. Incidentally, it is appropriate to have BR's bust in this section of London as it was developed by the Russell family over several hundred years. There are many reminders of this; the British Museum fronts on "Great Russell Street", for example.

I also discussed the sculpture with the sculptress, Marcelle Quinton. She is prepared to have 7 more editions made at a minimum of \$7000 each, so perhaps one in North America is not an impossibility. I may contact the Getty Museum people here, via Sir John and Lady Russell, on the matter. I suggested to Mrs. Quinton that small reproductions, with a price within reach of average people, might be desirable, and she promised to explore the possibility.

I called a new member. Dr. H. W. Lessing, on my arrival and told him about the dedication, so that he was able to attend. I had supper with him and Mrs. Lessing on Friday, and we discussed collecting BR items -- an activity we hope to expand through the newsletter. He is interested also in a British BRS group. I met two other people similarly interested -- Jack Black, once a lawyer for BR, and G. N. Deodheker, Secretary of the National Secular Society, and we will pursue this idea with them. They are also very interested in an eventual London (or Oxford) BRS meeting.

David Hart, a BRS member who teaches mathematics in Rochester, NY, is on leave in Cambridge. His wife called him on the trans-Atlantic phone the day of the dedication and he managed to arrive for the event. Don and I spent the following Monday with him in Cambridge seeing the sights and talking Russell. He is doing well there, and has promised to send a report to the newsletter..

Don and I also spent Saturday in Oxford where I acquired many old books, including a number of Russell items and a 1724 biography of Cardinal Woolsey.

Sunday we attended the 11 A.M. Lecture at Conway Hall, on logic. Conway Hall usually has a humanist service -- ie, a lecture -- at this hour on Sundays, and I recommend it, if you find yourself in London. In the afternoon we attended the CND anti-nuclear rally in Trafalgar Square -- a rally similar to the ones the CND and BR had put on in the 1960s. Both Peter Cadogan and I feel that the official estimates of 50-60,000 were conservative, and that it looked more like 100,000. It was much like our demonstrations here on the same subject.

On Tuesday I spent the afternoon with Peter Cadogan exploring the possibilities of a British BRS chapter, a London BRS meeting, and an approach to Sakharov by an American equivalent to work for peace and disarmament. The question is: who should make the approach? We have several ideas but nothing definite at the moment.

The rest of our trip was personal. We attended several good concerts and plays, and Don was dashing around Britain and France on a rail pass when I flew home on the 29th.

(48d) Bob Davis says a few words.

Here is a rough recollection of my remarks at the dedication, after I was introduced by Lord Brockway:

I am very glad to be here to lend an international touch to the dedication of Bertrand Russell's bust. I have come 6,000 miles on very short notice precisely because I feel the importance of this occasion.

The Bertrand Russell Society is a small organization, but international. Most of our members are in North America, but there are members on all continents -- in England and the Continent, Latin America, Africa, Asia, and Australia.

This is testimony to the fact that Russell was not only a great Englishman but also a great international figure, a great human. Indeed, I would say that in the last 25 years of his career he was primarily an international figure. He was quite aware that his outlook had become international, as evidenced in his great 1954 BBC speech when he concluded with his famous appeal -- "Remember your humanity and forget the rest."

So it is appropriate that we have some international representation at this dedication of the bust of a great Earthian.

Thank you.

INDEX

- (49) Introductory (1). Coming event: BRS at APA 12/28/80 (1.5). Reports from Committees: Membership (2); Science (3). BRS at APA: the Program (4); 2 abstracts (5). Results of the vote (6). Davis on BR's pacifism (7). Denonn's favorite Russell (8). Forbes quotes BR (9). BRS project: short papers wanted (10). BR Memorial: date is set (11); reports on the event (48). Doonesbury cartoon (12). Baumgartner on Howard on BR (13). BRS Travel Grant: 1980 Grant awarded (14); 1981 Grant announced (15). Science Council (Japan) on nuclear disarmament (16). Religion: Fundamentalism (17); "Discover" on creationism (18); Reagan favors creationism (19); "The Dial" on Darwin-haters (20a) and what to say to them (20b); secular humanists to the defense (21); Bova against creationism (22); "A Christian America" (23). UCS vs. nuclear power (24). L.A. meetings on 9/19 and 11/16 (25). News about members: Bae (26); Cobb (27); Cranford (28); Dora (29); Schilpp (30). A response to "2 + 2 + ?" (31). New honorary member Schilpp (32). New members (33). Address changes (34). Collectors' Corner (35): Davis (36); Lenz (37); Lessing (38); Davidson (47). Contributions: BR Memorial (London) (39); BRS Treasury (40). Expulsion of member proposed (41). Corrections: Moorhead was there (42); how to order LOLP (43); Bob Davis's idea (44). "The Torch" (periodical) received (45). More on "Islamic Revolution" (periodical) (46). Collector Davidson (47). BR Memorial unveiled (48). Index (49). Ballot (50).

(50)

BALLOT

This ballot is in 2 parts. Part 1 is for all members. Part 2 is for Directors only.

Part 1. Expulsion of a member

The case against this member -- that is, the case in favor of expelling him -- is provided in (41).

Please check one: () I vote for expulsion.

() I vote against expulsion.

Part 2. Proposed changes in BRS Travel Grant

If you are a Director, you have been sent a memo giving reasons for the proposal to change the "1982 Travel Scholarship" (so-called) to the "1982 Doctoral Grant" (That memo was not included in this newsletter to save newsletter space.)

Please check one of the 3 options below:

() I approve of the proposed changes.

() I disapprove of the proposed changes.

() I wish to postpone a decision now, and discuss the proposed changes at the 1981 annual meeting.

RUSSELL SOCIETY NEWS

No. 29

February 1981

- (1) 1981 annual meeting (2,47). AHA's 2 anti-fundamentalist conferences (3d). Science Committee: plans (5a), Pugwash 1980 (5b). Results of vote: both proposals carry (6). Essay by ER: "What Is Happiness?" (7). Karl Popper's "Favorite Russell" (8). Vatican may OK Galileo (22). Photos: ERS Award (Chicago), ER Memorial (London) (29). "Nuclear Nightmares" reviewed (34). Index (48). An asterisk in the left column indicates a request.

ANNUAL MEETING

- (2) The 1981 Annual Meeting will take place at the Russell Archives, McMaster University, Hamilton, Ontario, June 26-28, from Friday evening till Sunday noon. For details — such as costs, how to reserve a room, how to get there, etc. — see (47).

REPORTS FROM OFFICERS

President Bob Davis reports:

- (3a) * Work on the Annual Meeting at McMaster continues. It will be organized primarily by Ken Blackwell, a BRS founding member and Director of the Russell Archives. Speakers are needed and suggestions are welcome. Questions or suggestions may be sent either to Ken (Russell Archives/ McMaster University/ Hamilton, Ontario/Canada L3S 4L6) or to me (2501 Lakeview Avenue, Los Angeles, CA 90039).
- (3b) In November we had a local ERS meeting at my house. Present were LOUIS ACHESON JR., JACQUELINE BERTHON-PAYON & guest Gary Aurouze, PHIL FREER, JOE GORMAN, CHARLES GREEN, ARLYN KRAVIG & guest Berry Hall, MARTY LIPIN, and ELLEN YOUNG. We discussed "Why I Am Not A Christian" and "What Is An Agnostic?"
- (3c) We decided to have another meeting, and our poster tells the story:
- BERTRAND RUSSELL SOCIETY will hold a public meeting Sunday, February 15 at 12:30 P.M. at the Claremont College Faculty House. There will be 2 Bertrand Russell filmed interviews, and a discussion of his views on religion, based mainly on "A Free Man's Worship", "Why I Am Not A Christian", "What I Believe", "What Is An Agnostic?" More information from Jacqueline Berthon-Payon, Joe Gorman, and Robert Davis (we listed addresses and phone numbers.) Also lunch (optional).
- We felt that, in this age of increasing religious obscurantism, ER's works have peculiar merit, in that they address the questions directly and honestly and provide a rational alternative.
- I urge members in other cities — who are concerned about the growing power of the fundamentalists — to get together and do something similar, as part of the good fight.
- (3d) On the following page is a letter from the American Humanist Association. I plan to attend their San Diego conference in April, as does Joe Gorman. Note that they are having another conference in late October at the University of Maryland. This provides an opportunity for Maryland-area members who feel strongly about the resurgence of religious fundamentalism, to do something about it! Let AHA know, probably at the Amherst address, that you plan to attend.
- (3e) I am taking a one-week course on how to raise funds from foundations, in early February, here in L.A. The ERS has many projects it could pursue, if it had money. Perhaps, with the aid of this course, I can raise some.

Treasurer Dennis J. Darland reports:

- (4a) Deductible expenses. As previously reported, the cost of attending a BRS meeting is a deductible expense, for US income tax purposes, for some ERS members — those whose presence is essential to the conduct of the meeting, such as directors, officers, committee chairmen who report to the meeting (and probably committee members who supplement a chairman's report.) The ERS does not reimburse these expenses.

REPORTS FROM COMMITTEES

(5) Science Committee (Alex Dely, Chairman):

(5a) Future plans. Alex wrote the following letter to a member who had expressed interest in getting on the Science Committee. We print it because others may also wish to know what this Committee is going to be doing.

You have already discovered that the ERS is a loosely knit organization devoted to critically evaluating the relevance of Russell's ideas to today's world problems. Russell, during the last 25 years of his life, was first and foremost concerned with the spread of nuclear weapons. In the light of the continued proliferation of such weapons, I consider this issue to be of towering importance.

Secondly, implicit in Russell's (and Einstein's) thought was the concept that man, in order to prosper as a species, must learn to live in harmony with nature. For that goal to be achieved, the public must be made aware of the intricate ecological balance of nature.

Thirdly, Russell delighted in the phenomenal explosion of radical concepts throughout the physical and biological sciences. However he would have been pained by the lack of comparable breakthroughs in their philosophical consequences, i.e., our outlook on the Universe, our "World View". Indeed, our sciences at present live in the spirit of analysis, whereas what we desperately need (in order to have the public understand, value, and adopt our conclusion) is an attempt at synthesis, an integration of the emerging concepts and their meaning. In short, we must construct a comprehensive philosophy that is relevant to today's world problems and which incorporates findings of all the sciences.

The above are the three main interests I would like to develop through the Committee. However, you are probably more interested in specific tasks. Here they come!

It will not help a bit if we restrict our ideas to the ERS itself. I have expressed these concerns through some newsletter reports, e.g., "The Social Responsibility of Scientists" (RSN27-8). I think we should approach the print media. Although my time is limited and my interests vary widely, from physics to politics, one series of projects I have in mind is to compose a series of short essays on environmental matters, to be sent to newspapers for inclusion in their editorial pages. Those essays could be expanded for magazines such as "Saturday Review" and many similar publications. As we are in a depressed economy, the environment will take a back seat politically, which I greatly deplore. Some topics are: DNA dangers and possibilities, pesticide dangers, untested chemicals' effects on the foodchain, quality of food we consume, sources of pollution...and the list goes on, as you well know.

A similar series of essays could be written on nuclear weapons or biological & chemical warfare, which was the approach that interested my predecessor, Joe Neilands. Finally, most of today's problems are global: the world food situation, energy, population, technology transfer, etc., etc. They can only be solved at an international level. That would be an excellent topic for essays, especially in the light of the prevalent attitude that government intervention is necessarily harmful. Is it? When does it become so? How can we make an international effort that's effective? Are ideologies, parties, etc., harmful to the cause? There is literally no end to the topics that need to be brought to the public's attention, lest it remain uninformed. That is the first leg of my specific actions. I'm in the process of writing a series of such short essays and will soon start sending them off. I also hope to do something similar in the semi-technical scientific journals, such as "Bulletin of the Atomic Scientists" and "Physics Today", in my area of specialization.

Finally, at the local and state level in Arizona, I'm hoping to get politically involved in environmental matters, and at the federal level, in energy policy.

I try to spend 4 hours a week on the aforementioned essays and other committee work, primarily gathering information and taking notes. Every couple of months, I summarize these, and compose a few essays. I have built up a modest collection over the past 4 years. Soon, after expanding some of them, I expect to start sending them out. The main purpose is to spread concern over issues that concerned Russell, and to spread awareness of the Society and ourselves.

Perhaps you are thinking, "My God, all that sounds great, but it is so frustratingly complex! Where do I start? Will it make a difference?" I understand the feeling of inadequacy at times. I have had it many a time! However, Russell, in his 80s took to the streets of London to protest nuclear weapons and was thrown into jail. With this in mind, I say, let us all do what we humanly can and feel we should according to our values.

I'm sure your interests differ widely from mine. The projects above are strictly my plans for myself. They are not fixed Committee plans. Since I receive only on-and-off help from other members, I am pretty much on my own; that's why I mention my interests. However, I'd be delighted if you could join me on the Committee. Choose your own title and pick your topics, if mine don't suit you. Spend as little or as much time at it as you wish. We're dealing with a world full of problems crying out for thought. Every bit of help would be appreciated.

(By the way, the State Department has authorized construction of a nuclear plant at Bataan in the Philippines, after geologists found active quake faults only 10 miles away. Disconcerting!)

(5b)

Pugwash 1980. Alex's report, which follows, is based in part on the November 1980 issue of "The Bulletin of the Atomic Scientists" and in part on correspondence with some of the Belgian and Netherlands organizers of the 1980 Pugwash Conference (which was held at Nijenrode, Breukelen, Netherlands): Dr. Smith, Netherlands Pugwash Director; R. Gastmans, of Louvain, Belgium; Unesco's Dr. Apostel, of Ghent, Belgium; and a Russian emigré in Belgium who prefers not to be named.

In "A New Approach To Peace," Russell states "...Not only would such a (nuclear) war be a total disaster to human hopes, but...a nuclear war may break out at any minute... We have first to persuade governments and populations of the disastrousness of nuclear war... Of these tasks, the first has been largely accomplished... They have succeeded in making very widely known, even to governments, the dangers of nuclear war..."

However, today, neither governments nor a majority of the populations seem to take this view. The Russians, we are indoctrinated, are using sophisticated technology and are ahead of us, so nothing but the best, latest, and most modern nuclear weapons are necessary to protect the free world. (Nobody seems to worry about the continued abysmal performance of the 54 25-year-old Titan missiles, rotting in the Southwest.) The public is swallowing that scenario whole.

Instead, limited nuclear war has become respectable, whereas mutual assured destruction (MAD) is considered outmoded (primarily because scientists in many laboratories have developed new generations of nuclear weaponry.) Professional patriots, including our President, have opted for a first-strike capability.

That nuclear war will probably occur before this century ends was an unspoken fear at the 1980 Pugwash Conferences, a formal conference of scientists and scholars from all parts of the world. This past August's 30th Conference — on Science and World Affairs — was the 25th Anniversary of the first Pugwash Conference, that resulted from the "Russell-Einstein Manifesto", which advised men to "remember your humanity and forget the rest." Here are some of this Conference's conclusions:

- 1) "A major nuclear war would mean the end of civilization. And yet — nuclear arms are proliferating to many additional states,...while attempts are made in various countries to lend respectability to the insidious notion of a winnable nuclear war."
- 2) "Military expenditures (\$500 billion worldwide, and growing at \$20 billion a year) consume resources needed for improvement of human life, especially in poor nations."
- 3) "Resulting economic, social, and political inequities...create dangerous foci for the outbreak of local wars, which could easily escalate."
- 4) "We must more than ever make this appeal: 'Shall we put an end to the human race; or shall mankind renounce war?'"

Alfred Nobel thought that once armies were able to annihilate each other in minutes, civilized nations would then recoil with horror. Well, we have reached the point where not only armies but entire populations can be wiped out. Yet no public outcry is forthcoming. Science and technology are continuing to play devastating roles. Immediately after SALT I was signed, both superpowers started to develop new kinds of weapons (such as the cruise missile) that were not covered in the treaty.

What can be done constructively?

I. International agreements must remain a priority. First-strike capabilities must be outlawed.

II. Disarmament has been a failure, in the main, because the negotiators have been the superpowers themselves, who want to preserve their power-superiority over the rest of the world. The smaller states must get deeply involved in the negotiations, and end their sin of silence; those nations are the ones where a limited nuclear war would be fought!

III. Pugwash has tended not to take sides. They must throw away their respectful attitudes toward ineffective agreements. Pugwash must organize the scientists and leaders of small nations to use their superiority in numbers to influence the superpowers.

IV. Scientists in the nuclear nations must speak up. Many, as individuals, speak out against nuclear war.

Many, however, remain silent on the public front, for fear of losing jobs and prestige. As long as the public does not show them appreciation for whistleblowing, their first loyalty will be to those by whom they are fed, paid, and nurtured. In short, the public, and only the public, can make the position of nuclear-war-protester a prestigious and rewarding one.

V. Opposition to renewing a nuclear arms race has, traditionally, been confined to individuals and small groups outside the policy-making establishment. In all countries, large coalitions are needed, consisting of schools, universities, churches, labor unions, the private sector and those agencies of government that would have to deal with the remains of society after a nuclear war. Such coalitions, to be effective, would need an enormous grassroots network of dedicated and informed individuals in all communities. Organizing such a network involves small sacrifices from lots of people, and most jobs could be handled by ordinary citizens.

VI. The Bertrand Russell Peace Foundation has, over the past 12 months, effectively staged a Campaign for European Nuclear Disarmament (END), for a nuclear-weapons-free Europe. Due to its persistence — and the work of others — the British Parliament held its first debate on nuclear weapons in 15 years, in January 1980! Even though Britain is notorious as a country where public debate on defense issues is severely hampered by lack of information and resources, the END Campaign shows that accomplishment is possible.

VII. Finally, what must every BRS member do? They must get involved in at least one of the above activities, more than one if possible. They must inform themselves, join local groups of discussion and public education, they must speak in schools and before school boards. They must use radio, TV and newspapers to get their activities and messages across. If religious zealots can do so, so can we! We must run for local government positions, so we can have meaningful input into community decisions and can influence public policy. Ultimately, in a nation, everything ties together. If things go wrong, aggression comes alive. All of us can take a few hours a month and compose a short article, or paraphrase a Russell idea on nuclear war. If we do so, and send them to local, state and national mass magazines, we will spread Russell's word and our own concern for mankind's fate. Those among us who do not contribute in their own way do a grave disservice to the memory and image of Russell, a man who fought for his beliefs. There is a world out there that needs our message. It may not be there for long!

Alex is insistent about what ought to be done. "If the BRS is not to be seen as a farce in studying and spreading Russell's activism, all our members should be as informed and involved as possible... Any human endeavor consists of two main phases: one is analysis and information gathering, the second is action. Either one without the other is doomed to failure..."

If Alex sounds too insistent, it is well to remember what ER said when accused of being fanatical about the need to get rid of nuclear armaments: "It's hard not to be fanatical about it, because the issue is so important and we have no Ark." (Can someone supply the source of this quote?)

(5c) Alex gets a grant, a \$2500 grant from the Arizona Research Labs, to use as he sees fit.

(5d) "How To Avoid Nuclear War" — a 12-page essay that Alex and Jerre Moreland (Psychology Department, Bradley University) submitted in the Essay Competition of "The Bulletin of the Atomic Scientists" (RSN27-19, RSN28-3) — is available from the BRS Library, address on Page 1, bottom.

(Thanks to CHERIE RUPPE for sending the pages of the November 1980 "Bulletin" referred to above.)

RESULTS OF THE VOTE

(6a) Expulsion. The members voted to expel John Sutcliffe. The vote was not close.

(6b) Travel Grant change. The directors voted in favor of changing the "Travel Grant" (formerly the "Travel Scholarship") to a Doctoral Grant, starting in 1982. The Grant will be \$500, to be spent as the doctoral candidate wishes.

BY BERTRAND RUSSELL

(7) Bob Davis is a book collector, as we know (RSN28-36). When in England for the unveiling of ER's bust (RSN28-48), he located 2 volumes, to each of which ER had contributed a chapter. Here is one of them (the other will appear in RSN30):

What Is Happiness? by 10 authors. London: John Lane/The Bodley Head, 1938. ER's contribution follows.

HAPPINESS depends upon a combination of internal and external causes. Writers on happiness, most of whom have been in comfortable circumstances, have unduly emphasized the internal causes.

What Marcus Aurelius would have thought if he had been put on a raft in the Arctic Ocean with nothing to eat or drink, would not have been quite what he said in his writings. Any man who maintains that happiness comes wholly from within should be compelled to spend thirty-six hours in rags in a blizzard, without food.

There have, no doubt, been men who could have remained happy in such circumstances, but they have been few and not far removed from lunacy. For the overwhelming majority of mankind certain elementary necessities and comforts are an indispensable condition of happiness. I do not much admire those rich men and women who tell the poor that happiness is spiritual and just as easy on a small income as on a large one.

Omitting saints, lunatics, and men of genius, ordinary people need, for their happiness, certain fairly simple conditions, which with a little wisdom in economics and politics, could be fulfilled for almost everyone. I put first the purely physical conditions—food and shelter and health. Only when these have been secured is it worth while to consider psychological requisites.

Having said this, however, I do not want to deny the importance of mental causes. We all know many people who have good health and enough to eat, who are nevertheless miserable. They may suffer through external circumstances: unpopularity, lack of success, unhappiness in marriage, or unsatisfactory children.

Or they may suffer through internal maladjustment, through conflicts in their own psychology. Not infrequently, external misfortunes have their source in the character of the sufferer; but conversely, the character of the sufferer may be warped by external misfortunes.

Happiness, if it is to have any depth and solidity, demands a life built round some central purpose of a kind demanding continuous activity and permitting of progressively increasing success. The purpose must be one which has its root in instinct, such as love of power or love of honour, or parental affection.

Some people, it is true, are like cats, and can be contented so long as they can lie in the sun; but this is exceptional, at least in northern countries. As the mental life develops, men become less and less able to

find happiness in mere passive enjoyment.

Nor is activity for its own sake satisfactory; what is needed is activity directed to a desired end. For the great majority of mankind there is too much of this: the time and energy spent in earning a living condemn the hours of leisure to fatigue and futility. But I doubt whether those who win sudden wealth in a sweepstake or a lottery are able, after the first, to enjoy their new leisure, unless they can become sufficiently interested in something to take again to work—though not such severe or uninteresting work as most people find necessary in order to avoid starvation.

Economic insecurity is, at present, one of the great sources of unhappiness. I am thinking not only of that extreme form which consists in fear of utter destitution, but of the dread of a descent in the social scale. This is not only painful in itself, but is a cause of terrible political consequences—Fascism, imperialism, and militarism are all reinforced by it.

It is entirely preventable: with a better economic system there need be no destitution and no social classes. But meanwhile the evil perpetuates itself by filling men's minds with envy and fear. So long as our economic system remains competitive, these emotions, with all their evil progeny, will continue to govern large parts of the lives of individuals and nations, making happiness precarious and embittered unhappiness very common.

The psychological sources of unhappiness, which are studied by psychiatrists in their extreme forms, mostly have their source in unwise treatment during childhood. A child may be unloved, or may feel that another child is unjustly favoured at his expense; the result is almost sure to be a proneness to discontent and envy and hostility.

Or he may be thwarted in his legitimate impulses of adventure and exploration, with the result that he becomes either timid or blindly rebellious.

This form of mistake is especially common with uneducated parents, who are perpetually saying 'don't' when there is no occasion for prohibition. It must be admitted that this attitude is not surprising in harassed and over-worked mothers, since a child's adventurousness is dangerous to himself and inconvenient to others.

This is one of the arguments in favour of nursery schools, where the environment can be free from dangers and fragile objects, and the child can learn muscular dexterity without fear of disaster.

There is an opposite danger, which is that of 'spoiling' by too much emotional affection and too little training in self-discipline. This produces an adult who is too much attached to a parent to be able to form new ties, or so accustomed to indulgence as to make impossible demands upon contemporaries.

These are only a few of the ways in which bad handling during the first years may produce a character incapable of happiness or success in later life.

The happiest body of men in the modern world are, I should say, the men of science. Their work is interesting, and difficult without being too difficult; they feel it to be important, and the world agrees with them; their sense of power is gratified, since science is transforming human life; and in spite of the new horrors that science has added to war, most of them are convinced that the effects of scientific knowledge are pretty sure to be beneficial in the long run.

They have the pleasure of exercising skill, the pleasure of winning public respect, the pleasure of seeing the practical benefits of their discoveries, and their work has a large impersonal interest which is a protection against self-absorption.

The conditions of a happy life, it seems to me, are: first, health and a fair degree of economic security; second, work which is satisfying both because it is felt to be worth doing and because it utilizes whatever skill a man possesses without making impossible demands; third, personal relations that are satisfying, and especially a happy family life; fourth, a width of interests which makes many things enjoyable.

Our age is not a happy one, because it is oppressed by vast organized hostilities, of nation against nation, class against class, and creed against creed. These evils have their root in political and economic evils, but they are perpetuated also, in part, owing to defects in individual psychology, which make mass appeals to hatred and fear more successful than appeals for sanity and co-operation.

If the majority of men were individually sane they would soon make an end of the collective insanities which threaten our civilization. But it is difficult to see how individual sanity is to be brought about in the countries whose Governments depend for their existence upon its absence.

Perhaps there is in human nature an impulse towards sanity which will reassert itself before long. It has been so in the past after epochs of temporary madness; we may therefore hope that it will be so again.

"MY FAVORITE RUSSELL"

- (8) Karl Popper writes that his favorite Russells are The Problems of Philosophy and Mysticism & Logic. He regrets that he cannot say more at present because he is "totally snowed under by urgent unfinished work and I simply cannot spare the time to write. I am sure you will understand." We do, and we were pleased to hear from him.

ER POPULARIZED

BRUNO WALTER AUDITORIUM

111 Amsterdam Avenue Telephone 799-2200

THE OPEN BOOK
presents
**BERTRAND RUSSELL'S
GUIDED TOUR OF INTELLECTUAL RUBBISH**

dramatized by **Marvin Kaye**

TUESDAY, NOVEMBER 13, 1979
WEDNESDAY, NOVEMBER 14, 1979
4:00 P.M. ADMISSION FREE

The use of cameras in this theatre is not allowed.

Free tickets may be obtained at the Amsterdam Avenue entrance on the day of the event. For evening programs apply in person after 4:00 p.m.; after 12 noon on Saturdays. For 4:00 o'clock programs, apply after 3:00 p.m.

We've been in touch with Marvin Kaye since 1973 (yes, '73, before we were born, so to speak. The BRS was not founded till '74.) (For more, see NL3-33 and NL6-32.) His group, THE OPEN BOOK, is now a federally-approved non-profit organization, and is now seeking funding, in order to put "Guided Tour" on in NYC and also to make it available for touring. We've asked him to let us know next time "Guided Tour" is staged, so that members in the NY area who wish to can attend.

PROGRAM SEQUENCE:

Introduction	Full Ensemble
Autobiographical Interlude	Bill Bonham
Remembrance of Friends Past	Bill Bonham, George DeLucenay Leon
On Education	Beverly Fite, Saralee Kaye, George DeLucenay Leon, Toby Sanders, Nancy Temple (wearing mortarboard)
On Sex and Marriage	June Miller, Saralee Kaye (seated at beginning of section), Toby Sanders
Mr. Bowdler's Nightmare	Beverly Fite (Mrs. Bowdler), George DeLucenay Leon (Mr. Spiffkins), June Miller (Narrator), Toby Sanders (Mr. Bowdler)
On Old Age	Bill Bonham
On Comets	Full Ensemble
On the Future of Mankind	Full Ensemble

BERTRAND RUSSELL'S GUIDED TOUR OF INTELLECTUAL RUBBISH was originally commissioned and performed by the late Robert Raunseville as a one-man show. Portions of it were staged by him at Deerfield Academy and Western Washington State University.

The complete script is a two-act drama. The present version, arranged for reading ensemble, represents roughly half of the full play, revised and slightly condensed to meet the strict staging limitations of THE OPEN BOOK productions.

Incidental Music: *Two Studies for Flute, Coroner, & Cello* by Burt Levy; used by permission of the composer.

BERTRAND RUSSELL'S GUIDED TOUR OF INTELLECTUAL RUBBISH is the only authorized dramatization of the writings of the late Lord Russell. It is performed with the permission of the joint copyright owners, Marvin Kaye and The Bertrand Russell Estate, and is expressly authorized by those parties, as well as Edith, Countess Russell; George Allen & Unwin Ltd., the publishers of Bertrand Russell's works; and The Bertrand Russell Peace Foundation.

THE OPEN BOOK is a professional readers theatre company sponsored by Jay Broad and Jose Ferrer and registered with the New York State Charities Commission.

BR QUOTED

- (10) "Forbes" loves BR. Hardly a month goes by, it seems, without finding BR quoted in "Forbes". The issue of 11/24/80 offers this:

It is the preoccupation with possession, more than anything, that prevents men from living freely and nobly. How odd of "Forbes" to pick this particular quotation for its readers, mostly businessmen.

(Thank you, WHITFIELD COBB)

BR MEMORIAL

- (11) The announcement of the unveiling, issued by the Appeal Committee, is reproduced here, for the record:

BERTRAND RUSSELL MEMORIAL

An Appeal made by Sir Alfred Ayer, Lord Brockway (Chairman of the Appeal Cttee), Peter Cadogan (Secretary), Lord Ritchie Calder, Frank Dobson MP, John Gilmour, Dora Russell, Lord Willis and Baroness Wootton.

c/o SPES, Conway Hall, 25 Red Lion Square, London WC.1. Tel: 01. 242. 8032/3.

The Unveiling Ceremony

of the bust of Bertrand Russell - sculptor, Marcelle Quinton

12.00 mid-day, Thursday 23rd October 1980
in the Gardens of Red Lion Square, London WC.1

LORD FENNER BROCKWAY

DORA RUSSELL (who will unveil the bust)

SIR ALFRED AYER

PETER CADOGAN (ex-Committee of 100)

and

THE MAYOR OF CAMDEN
CLLR RON HEFFERMAN

All who would like to pay tribute to the life and work of the great philosopher will be welcome.

For photos taken at the unveiling by DON JACKANICZ, see (29).

ABOUT BERTRAND RUSSELL

(12)

Asimov's minibiography, in *Asimov's Biographical Encyclopedia of Science and Technology*. "The Lives and Achievements of 1195 Great Scientists from Ancient Times to the Present." Garden City: Doubleday, 1964, 1972.

[821] **RUSSELL**, Bertrand Arthur William Russell, 3d Earl
English mathematician and philosopher
Born: Trelleck, Monmouthshire, May 18, 1872
Died: Penrhynedeudraeth, Merionethshire, February 2, 1970

Russell's parents died while he was very young and his grandfather John Russell took charge. This grandfather had been Prime Minister of Great Britain from 1846 to 1852 and from 1865 to 1866, and was created 1st Earl Russell in 1861.

Young Bertrand led a lonely, unhappy childhood in the puritanical home of his grandparents. He entered Cambridge in 1890, where George Darwin [642] was one of his teachers and where Whitehead [748] grew interested in the young man.

Bertrand Russell inherited the earldom from his elder brother in 1931 but preferred not to use the title. This was all of a piece with his strong and unconventional liberal views. Through much of his life he had been a militant pacifist (which is not the contradiction in terms it seems) and for this lost his college post during World War I and spent some months in jail in 1918. He ran for Parliament (unsuccessfully) on the Labour ticket in 1922.

His views on social problems were equally unconventional. From 1927 to 1932 he ran a school for children in which advanced notions of discipline (or, rather, lack of it) were used. In 1940, when, during a temporary stay in the United States, he was appointed to the staff of the City College of New York, his published views on sex were

used by the clergy and the Hearst press to arouse a storm of disapproval against him. His appointment was pusillanimously withdrawn as a result by a State Supreme Court order.

During the stressful times before World War II, Russell retreated from pacifism, but with the coming of the nuclear race and the cold war of the 1950s, he returned to his earlier views with greater force than ever. In his nineties this militant patriarch led the forces of neutralism in England and constantly defied the government, confident that it would not choose to jail him (although it did for a short while in 1961).

Russell heard Peano [731] lecture in mathematics in 1900 and grew interested in the basic logic of mathematics. In 1902 he made his first mark in this direction when he wrote to Frege [657], pointing out what has since become a famous logical paradox and asking how Frege's new system of mathematical logic would handle it. Frege was forced to admit that his system fell short and so added a footnote to his two-volume work that nullified all that had gone before.

Russell then went on to try to answer his own question by setting up a still better system of logic on which to base mathematics. This effort reached its climax in the publication from 1910 to 1913 in collaboration with Whitehead of *Principia Mathematica*, a name reminiscent of Newton's [201] great work. This was the most ambitious and nearly successful effort to make all of mathematics completely rigorous, but as Gödel [1069] was to show twenty years later, all such efforts were doomed to failure.

Russell wrote numerous books and in 1950 he received the Nobel Prize in literature.

ASSESSMENTS OF BR

(13)

Gilbert Ryle on BR the Philosopher. Ryle read the following at a meeting of the Aristotelian Society at 5-7 Tavistock Place, London, WC 1, on Monday, December 7, 1970, at 7:30 P.M.

We members of the Aristotelian Society are here tonight to say 'Goodbye and thank you' to that grand philosophical thinker, Bertrand Russell, who gave his first paper to this Society in 1896.¹ This is not an occasion for an exegetic commentary on the almost infinite variety of his thought, but rather one for concentrating our gratefulness on those three or four determining impulses by which his thinking has given to the philosophical thinking of all of us, quite irrespective of our particular opinions and specialities, much of its whole trajectory.

For what concerns us today and, I maintain, for what should chiefly concern the future historians of twentieth-century thought, it matters comparatively little whether a few or many of us accept, or whether a few or many of us reject, this or that Russellian doctrine. The fact that he did not found a school or capture disciples was due partly to the accidents of his career, but especially to certain admirable features of his thinking. Among these was his immunity from reverence in general and especially from reverence for himself. He would have found Russell-acolytes comical and Russell-echoes tedious. On the other hand, what matters immensely is that, not what we think but, so to speak, the very style of our philosophical thinking perpetuates, where we are ordinarily least conscious of it, a style of thinking that had not existed in philosophy before, say, 1900.

(1) In speaking, metaphorically, of the Russellian style of thinking, though I am not alluding primarily, I am alluding secondarily to one particular intellectual temper for which the credit – the great credit as I think – needs to be divided between William James and Russell. For in one respect James and Russell were quite unlike Mill, Sidgwick and Bradley, quite unlike Brentano, Meinong and Husserl, and quite unlike even Moore, namely in their combination of seriousness with humour. Hume and Bradley had wit, and Hume could play. But James and Russell found out for themselves and so taught us at our best how to pop doctrinal bubbles without drawing blood; how to be illuminatingly and unmaliciously naughty; and how, without being frivolous, to laugh off grave conceptual bosh. Stuffiness in diction and stuffiness in thought were not, of course, annihilated, but they were put on the defensive from the moment when James and Russell discovered that a joke can be the beginning, though only the beginning, of a blessed release from a strangling theoretical millstone.

(2) Much more important was a new style of philosophical work that Russell, I think virtually single-handed, brought into the very tactics of philosophical thinking. Anticipated, I suggest, only by the unre-membered Aristotle, Russell occasionally prescribed and often delib-

erately practised what can be called 'aporetic experimentation'. In his *Mind* article of 1905 'On Denoting', he says:

A logical theory may be tested by its capacity for dealing with puzzles, and it is a wholesome plan, in thinking about logic, to stock the mind with as many puzzles as possible, since these serve much the same purpose as is served by experiments in physical science. I shall therefore state three puzzles which a theory as to denoting ought to be able to solve; and I shall show later that my theory solves them.

In 1904, near the beginning of his first *Mind* article on 'Meinong's Theory of Complexes and Assumptions', he had praised Meinong for the excellence of his quasi-empirical method of psychological research. His 1908 article 'Mathematical Logic as based on the Theory of Types' opens with a list of seven selected contradictions demanding some common solution. Now of course other philosophers, indeed all other philosophers worthy of the name, always had resolutely and conscientiously tried to overcome theoretical difficulties. They knew that their theories were in jeopardy so long as hurdles remained uncleared or uncircumvented. Nearly all of them, too, had from time to time opposed error by putting up obstacles in the way of the erroneous views or the bad arguments of others. It is not criticism or self-criticism that Russell invented. What was, I think, new was Russell's heuristic policy of deliberately mobilising, stiffening and constructing his own hurdles against which to pit his own nascent speculations. Difficulties in the way of a theory are no longer obstacles to thought; they can be and should be constructed or collected as aids to thought. They can be the self-applied tests by which philosophical thinking may become a self-correcting undertaking. As in the laboratory a well-designed crucial experiment tests a physical or chemical hypothesis, so in logic and philosophy a well-designed conceptual puzzle may be the *experimentum crucis* of a speculation.

To us, in 1970, this heuristic policy is obviously right. The most modest discussion note in one of our philosophical journals presupposes that philosophical progress requires positive and planned operations of sifting the tares from the wheat of doctrines and of arguments. Criticism is now not hostility; self-criticism is now not surrender. But we should, I suggest, search eighteenth- and nineteenth-century philosophy in vain, cases of a philosopher actively hunting for and designing conceptual hurdles to advance his own future progress.

In his *Principles of Mathematics*, chapter X, entitled 'The Contradiction', and in its second Appendix, Russell had launched himself on what was to prove to be that most arduous of his theoretical undertakings which culminated many years later in his history-making Theory of Types. Already, in 1903, he was marshalling a battery of heterogeneous paradoxes against which he would test the desiderated solution of the special paradox of self-membered classes. Each of these auxiliary paradoxes, whether superficial or fundamental, was to serve as a testing device, with its own special edges, of the theory-to-be of self-reference.

Two precautionary words. By 'aporetic experimentation' I do not mean tentativeness, diffidence or even undogmatism. Russell meant some of his conceptual experiments to yield not 'perhapses' but definite results. Next, in using the notion of *experimentation*, I am not, of course, referring to physical tests; and I am not supposing that it is the mission of conceptual experiments – if anything has this mission – to engender inductive generalisations.

Unlike Wittgenstein, Russell was not focally, but only peripherally concerned to fix the places in human knowledge of logic and philosophy. When, as in *Our Knowledge of the External World as a Field for Scientific Method in Philosophy*, he did try to do this, he adopted too easily the idea that philosophy could and should be disciplined into a science among sciences. It was not, however, by this sort of promised assimilation of philosophy to science that he taught us a new kind of dialectical craftsmanship, but by the examples that he set of planned puzzle-utilisation. Like Moore, Russell constantly preached Analysis; but what, when pioneering, he practised included this far more penetrating, because self-testing, method of inquiry.

(3) At the end of the ninth chapter of *The Problems of Philosophy* (1912) Russell wrote:

The world of universals, therefore, may also be described as the world of being. The world of being is unchangeable, rigid, exact, delightful to the mathematician, the logician, the builder of metaphysical systems, and all who love perfection more than life. The world of existence is fleeting, vague, without sharp boundaries, without any clear plan of arrangement, but it contains all thoughts and feelings, all the data of sense, and all physical objects, everything that can do either good or harm, everything that makes any difference to the value of life and the world. According to our temperaments, we shall prefer the contemplation of the one or the other. The one we do not prefer will probably seem to us a pale shadow of the one we prefer, and hardly worthy to be regarded as in any sense real. But the truth is that both

have the same claim on our impartial attention, both are real, and both are important to the metaphysician. Indeed no sooner have we distinguished the two worlds than it becomes necessary to consider their relations.

Here Russell declares, what his writings show, that he himself knew and loved the views from the Alpine heights where there dwelled Plato, Leibniz and Frege, but also knew and loved the valleys that were tilled by Hume, Mill and James. Russell was that rare being, a philosopher whose heart was divided between transcendentalism and naturalism. His mind had been formed in his youth both by John Stuart Mill and by pure mathematics.

Indeed Russell got much of the impetus and nearly all of the turbulence of his thinking from his being homesick for the peaks while he was in the plains, and homesick for the plains when he was on the heights. However drastic, his reductionisms had some reluctances in them; however uncompromising, his Platonisms were a little undevout. Neither transcendent being nor mundane occurring felt to him either quite real, or gravely unreal. When in the mood he could think flippantly of either.

His ice-breaking and Ockhamising article 'On Denoting' came out only two years later than his ice-breaking, Platonising *Principles of Mathematics*; and in his *Our Knowledge of the External World* (1914) the second chapter 'Logic as the Essence of Philosophy', which is Fregean in inspiration, is immediately succeeded by two chapters entirely in the vein of the phenomenalism of John Stuart Mill. His paper of 1919 'On Propositions', which is very largely in the idioms of Watson, James and Hume, succeeds by only a year his lectures on Logical Atomism, where he is talking as if in the hearing of Meinong, Whitehead and the youthful Wittgenstein.

In his very early Platonising days he submitted in the *Principles of Mathematics*, section 427, a list of terms or objects that possess being, though they lack existence, namely, 'Numbers, the Homeric gods, relations, chimeras and four-dimensional spaces . . . if they were not entities of a kind, we could make no propositions about them'. Though he wrote this with complete seriousness, yet we can surely detect in his list an accent of sly shockingness, as if he could already guess what it would be like to season this overhospitable platter of being with a pinch of salt; and even what it would be like one day, though not yet, to investigate the credentials of the argument 'if they were not entities of a kind, we could make no propositions about them'.

Conversely, however far he moved away from the Platonism of his youth, he never conceded to Mill's reductionism about the truths of mathematics anything more than the recognition that it really is one business of pure mathematics to be capable of being applied to what there is in the everyday world. In the Introduction to the 2nd edition (1937) of his *Principles of Mathematics* he rejects the formalism of Hilbert for, apparently, excluding applications of mathematics to the real world: he allows, with regrets, that mathematical truths, with those of formal logic, being 'formal' truths, cannot, as he had once thought, be construed as describing transcendent entities. He allows too, again with regrets, that there is something in some way 'linguistic' about these formal truths. But not for a moment does he concede to Mill that these truths are merely high-grade inductive generalisations about things that exist and happen down here. None the less he would quite soon be developing a theory of perception and, therewith, a theory of physical objects which does not do very much more than bring up to date the phenomenalism of Mill's *System of Logic*.

It is sometimes said that Russell merely oscillated, pendulum-like, between transcendentalism and naturalism, or between Platonism and empiricism. The truth, I suggest, is that, anyhow in his formative and creative years, we find him neither at rest in the valley nor at rest among the peaks, but mountaineering – trying to find a way from the valley back to the peaks, or a way from the peaks back to the valley. He had two homes. But where he toiled, and where he was alone, and where he was happy was on the mountainside.

(4) The last of the four determining impulses by which Russell directed the course of subsequent philosophy is this. Russell was not only a pioneer formal logician, but, like Aristotle and Frege, he was a logician-philosopher. He saw every advance in formal logic as, among other things, a potential source of new rigours in philosophy; and he saw every philosophical puzzle or tangle as a lock for which formal logic might already or might some day provide the key. It was due to him, as well as, in lesser degree, to Frege and Whitehead that some training in post-Aristotelian formal logic came fairly soon to be regarded as a *sine qua non* for the philosopher-to-be; and debates between philosophers on philosophical matters quickly began often merely to ape but sometimes to apply or employ the blackboard operations of the formal logician.

Naturally it was, at the start, the more dramatic innovations in Russellian logic that were adopted by philosophers. The new term-relation-term pattern of simple propositions was for a time expected to accomplish nearly all the philosophical tasks at which the sub-

ject-predicate pattern baulked. But even if not into this new pattern, still formalisation into some newly sponsored pattern or other was for a time expected to make short work of any surviving philosophical problems. But to say this is only to say that Russell, Whitehead and Frege made many philosophers enthusiasts for their new so-called Symbolic Logic – and enthusiasts are always impetuous. The remarkable thing is that these three – and Russell more than the other two – did fire this enthusiasm. Even outside the English-speaking world they fired it, partly through the mediation of Wittgenstein, as far away as Vienna; and without this mediation as far away as Poland.

Doubtless some of these zeals were ephemeral or factitious; doubtless, too, some of the Frege–Russell hopes for a monolithic Euclideanisation of mathematics were doomed to disappointment; and certainly we have long since forgotten the promise, if it was ever made, that philosophical problems would now receive their solutions by instant formalisation. None the less, philosophy in the English-speaking world has inherited from the *Principles of Mathematics* and *Principia Mathematica*, as well as from Frege's logical writings, not only a respect for rigour, but a discipline in rigour, the absence of which from what, with reservations, I label 'continental' philosophy still makes cross-Channel discussion unrewarding.

However, I do not wish merely to acknowledge the huge effects of, especially, Russell's logicising of philosophy. There was another massive legacy left by Russell, the logician-philosopher, which we can call the Theory of Types.

By 1903 Russell had found, and imparted to Frege, a contradiction in that notion of *class* which had been a central concept in the work of Cantor, as well as in Frege's and Russell's own definitions of *number*. With this contradiction the young Russell had associated a whole battery of partly similar antinomies, for all of which, it seemed, some general diagnosis and, hopefully, some general cure could be found. Either answer, 'Yes' or 'No', to the question 'Is "I am now lying," true?' seems to establish the other: 'Yes, if no; but no, if yes'. To the question 'Is the class of classes that are not members of themselves a member of itself?'

the only answer again seems to be 'Yes, if no; but no, if yes'. Russell came, in the long-postponed end, to the conclusion that for a specifiable reason these questions are unanswerable by 'Yes' or by 'No': they are improper questions. Epimenides's assertion was a pseudo-assertion: an assertion cannot be a comment upon itself; and a given class C can only be nonsensically spoken of as one of the items that belongs, or even does not belong as a member to C.

Besides the sentences that convey standard propositions that are true or else false, there are grammatically passable sentences which are neither true nor false, but nonsense. It was some, but only a very few, nonsense-excluding rules that Russell, in his Theory of Types, tried to formulate and justify.

It is of some historical interest that the Vienna Circle misappropriated Russell's notion of nonsense for its own special Auegan purposes. But it is of huge historical importance that the whole *Tractatus Logico-Philosophicus* can be construed as a Procrustean essay in the theory of sense/nonsense. The *Philosophical Investigations* also is, in large measure, an inquiry into the rules of 'grammar' or 'logical syntax' of which patent or latent absurdities are in breach. In his lectures on Logical Atomism Russell showed how he had already been glad and proud to learn from the young Wittgenstein of 1912–3 some of the expansions, extensions and new applications of which his former Theory of Types had now become capable.

In these different, though doubtless internally connected ways, Russell taught us not to think his thoughts but how to move in our own philosophical thinking. In one way no one is now or will ever again be a Russellian; but in another way every one of us is now something of a Russellian. Perhaps we do not even read Russell very much; but in at least four radical ways what we say to philosophers and write for philosophers differs in intellectual method and intellectual temper from what we would have said and written in pre-Russell days and from what we would say and write today if we were – shall I say? – Ruritanians.

(14)

W. I. Matson on BR's Ethics:

Spinoza is the noblest and most lovable of the great philosophers. Intellectually, some others have surpassed him, but ethically he is supreme. As a natural consequence, he was considered, during his lifetime and for a century after his death, a man of appalling wickedness. (A History of Western Philosophy, New York, Simon & Schuster, 1945: 569; a passage written with the fervour of fellow feeling, soon after the CCNY affair)

The first I heard of Bertrand Russell was in the 1930s when half a page, with portrait, was devoted to vituperating him in the Hearst Sunday paper. I can't remember the particular occasion; I think he was just being denounced on general principles as an enemy of the people, an atheist and immoralist. He was quoted as having described his outlook as like that of Lucretius – an opening which the author exploited in this way: 'All we know of Lucretius comes from Bishop Eusebius, who in his *Chronology* notes for the year 55 BC: "T. Lucretius Caro died. Having been driven mad by a love potion, in intervals of sanity he wrote some poems which were edited by Quintus Cicero." That's the kind of man Russell is (the furious scholar continued): an admirer of sexual psychopaths.'

With youthful perversity I was led to find out more about Russell, and Lucretius too, whose poems, I discovered, were still extant in our public library. So I took up philosophy because William Randolph Hearst hated Bertrand Russell. There must be many of my generation who, whether or not as a result of these proteptic discourses, got their first enthusiasm for philosophy from some encounter with Russell's work. Not mathematics, philosophy; and not epistemology, ethics; for what first aroused our interests and passions were the same books and essays that shocked Hearst, those coolly sensible, humorous, and humane disquisitions on what kind of life is worth living for a human being.

Man has been called a rational animal, yet to look at the human condition rationally is often thought an inhuman thing to do. Most people cannot examine life: some, like Dr Johnson, can but do not want to; of the few who are willing and able, most, like Plato, Marx and Freud, throw away received opinions only to set up new orthodoxies often more constricting than the old, thus justifying Dr Johnson. It was the rare merit of Russell, as of Voltaire, to have looked at the way of the world with a gaze childlike in its directness yet deeply penetrating and to have asked of what he saw: Does this help or hinder a man in his effort to live a

life worth living by a rational animal? If not, why do we have it, and could we not have something better?

Life does not get examined even by its appointed examiners unless some shock sets them off. With Russell it was the First World War. No wonder. He was not a pacifist, but he saw that there was not enough at stake on either side to justify the slaughter, and that a negotiated settlement, on almost any terms, would be better than its continuance. This empirical approach, whereby what it would be best to do is decided not in accordance with rigid and mechanical deduction from abstract principles, but by attention to the particular circumstances of the case at hand, is the rule from which he never deviated. In the seventeenth century he would have been called a trimmer; in the twentieth he was an act utilitarian.¹

Like Aristotle's, Spinoza's and John Stuart Mill's, Russell's idea of the happiness that ought to be the aim of conduct is not titillation but the untrammelled development and exercise of innate powers: vitality. Vital activity manifests itself more as what we do on impulse than in accordance with plans and schemes, Russell believed. In his early ethico-political treatise *Principles of Social Reconstruction*, impulse, hymned as the very 'expression of life', generated some curiously sophisticated varieties, such as an impulse towards art and science, and even one 'to avoid the hostility of public opinion'. He recognised that not all impulses are splendid, nor all premeditated actions mean, and the tone of *HSEP* is more cautious. Nevertheless Russell always saw happiness as roughly measurable by the scope afforded to spontaneity, and the occupational malady of civilised life as the subordination of impulse to purpose that it necessarily imposed.

The means-end distinction has great importance in Russell's ethical thinking, defining the place of reason in conduct and clarifying the difference between purpose and impulse. Reason, we are told, is concerned only with 'the choice of the right means to an end that you wish to achieve. It has nothing whatever to do with the choice of ends' (*HSEP*: 8), which are the bailiwick of the emotions. The picture is familiar. There are the things you want – the objects of your impulses and feelings, and there are the means you may adopt to get them, your planned actions. The latter are the domain of reason, the finding out of how things are and of the logical relations that may hold between statements. Whether such and such a course of action is likely to obtain what you want, is something on which reason may deliver a verdict. But whether you want it or not is simply a matter for feeling – you just *do*, or don't, have this emotional attitude towards the thing. It is not reasonable, nor unreasonable, to like or dislike anything for its own sake. There is no such thing as

an irrational aim except in the sense of one that is impossible of realization' (HSEP: 11). When we call something good or bad, we are not making a statement that is true or false, we are making an exclamation, expressing a wish, or commanding or suggesting.

Some philosophers in this century have been content with this emotive ethical theory descended from Hutcheson through Hume. Russell, however, was dissatisfied, at least part of the time, and strove through his life to work out a version that would not lead to the consequence, which he confessed to *feeling* was profoundly wrong, that reason has nothing to choose between the ends pursued by Adolf Hitler, on the one hand, and Dag Hammarskjöld, on the other. Much of his last and most important ethical work, HSEP, is concerned with the problem of avoiding having to say that no ethical judgment is liable to criticism on grounds of truth – that condemnation of Nero boils down to 'Nero? Oh fie!' (HSEP: 26).

His way out was to hold that although ethical judgments are based on feelings, still the feelings of mankind are sufficiently in agreement to allow for the possibility of ethical generalisations valid for all animals like us. He summed up his efforts in four 'propositions and definitions' which, he claimed, 'provide a coherent body of ethical propositions, which are true (or false) in the same sense as if they were propositions of science':

- (1) Surveying the acts which arouse emotions of approval or disapproval, we find that, as a general rule, the acts which are approved of are those believed likely to have, on the balance, effects of certain kinds, while opposite effects are expected from acts that are disapproved of.
- (2) Effects that lead to approval are defined as 'good', and those leading to disapproval as 'bad'.
- (3) An act of which, on the available evidence, the effects are likely to be better than those of any other act that is possible in the circumstances, is defined as 'right'; any other act is 'wrong'. What we 'ought' to do is, by definition, the act which is right.
- (4) It is right to feel approval of a right act and disapproval of a wrong act. (HSEP: 115 ff.)

If ethics is to be founded on 'the fundamental data of feelings and emotions' (HSEP: 25), this is a more plausible version than some others. It does not base goodness and badness directly on the feelings that we allegedly report when we assign the words 'good' and 'bad' to things. Rather Russell says that we have 'emotions of approval' (whatever those might be) for reasons that boil down to beliefs about the likely consequences of the acts approved. If the Aztec approves of human sacrifice and cannibalism, that is because he believes them important for securing a bumper crop of maize. We may disagree with his belief, but we do not disagree with his contention that a bumper maize crop is a good thing – or at any rate that feeding the surviving people is good. The relevant agreement would still exist even if we happen not to desire the continued supply of maize to Aztecs. For what the Aztec thinks is a good thing is enough maize for his group; we likewise value food for *our* herd. This is not a logical truth – the Aztec, or we, could desire the starvation of our respective groups without violating any logical laws – but Russell thinks it unlikely, in fact, that we would. He is saying that, as a general rule, human beings disagree only about means, not about ends. And disagreement about means is not really moral disagreement, for the question whether a certain act is likely to have a certain effect is a factual one, resolvable in principle by scientific methods. We could grow maize with and without the assistance of human sacrifice, and by statistical analysis of the yields conclude whether the means proposed was, in fact, efficacious.

Again the means-ends distinction is made to bear the whole philosophical load. This is a heavy burden. Except for the acts of God, everything we have to contend with is the effect of a human action, and anything at all may be approved or disapproved. So you may approve, and I disapprove, the same act, just because we both believe (correctly, let us assume) that it is likely to have the effect of diminishing the population of X's. As this kind of disagreement is frequent, this kind of effect cannot be what Russell has in mind as falling within the scope of the generalisation (1), which affirms general agreement of the 'emotional' reactions to agreed facts. And the reason is easy to see. Disagreement at this level doesn't count, for we have not yet reached the realm of ends. Why do you approve of diminishing the population of X's, while I disapprove? Because you think that something ultimately desirable, let us say the ecological balance, will thereby be furthered. But perhaps I agree with this estimation of the facts, and still disapprove: perhaps because I think it's better to upset the ecology, which within broad limits can take care of itself, rather than cause widespread and acute suffering

here and now. So we have to go on to a still higher plateau, where you want the ecology let alone in order to produce a better world (or at any rate not a worse one), and I likewise want a better, or non-worse, world. Here we agree, but it is a sterile kind of agreement. What, indeed, would it be like to wish for a worse world – worse for everyone and everything, and for oneself as well? We have reached the end, to find there only a tautology. Thus, it was not quite right of Russell to claim that the ethical propositions advocated were 'true (or false) in the same sense as if they were propositions of science', at least not if one holds, as Russell did, that the most general propositions of science are non-tautological.

One should not make too much of objections like these to the four-proposition ethics, however. For that was not really the ethical system that Russell advocated, even though he sincerely believed he did.

Russell thought along these lines: Ethics ought to be objective. Objectivity means being scientific. Being scientific means generalising by induction from particular data. Now, the data of ethics are not the sense-data out of which science is constructed; but they are another species of the genus consciousness, namely, feelings or emotions. Ethical propositions, therefore, are generalisations from those feelings in which mankind agree, as science is generalisations from the percepts that command agreement.

We need not here consider whether this is a satisfactory conception of the structure of science, for the analogy with ethics does not hold. An 'objective' system based on feelings as data would be, as we have seen, either false or trivial. And even if it were neither, it would still not be ethics, but rather a compendious statement of what people feel – sociology or psychology, without normative import, despite the 'definitions' in the second and third propositions. This is not to say that you can't derive 'ought' from 'is' – but you can't do it this way. You might just as well come right out and say something like

What ought to be approved is what enhances vitality.

If you are an optimist, you may also say

What is approved = What ought to be approved.

Russell certainly believed the first of these. Equally certainly he did not believe the second. But there is also the Kantian element: Russell wrote of 'that respect for the human being as such, out of which all true morality must spring' (*Marriage and Morals*, New York, 1929: 153), and however little formal attention this non-utilitarian principle got, it is never far beneath the surface in all his particular disquisitions.

Thus, Russell's real ethics was at least in part Aristotelian-cum-Kantian – somewhat ironically in view of the rough treatment he gave those philosophers in his *History* and elsewhere. That this was his real 'system' can be seen, for example, in his consistent and emphatic opposition to Marxism, an opposition for which the four-proposition ethic provides no grounds; on the contrary, the two almost conflate themselves. Russell detested Marxism because it is a philosophy stemming from and perpetuating hatred,¹ manipulating human beings and suppressing their spontaneity and individuality more thoroughly than any other.

No one in his century had a mind freer of cant than Russell's. Such freedom had its price, as he often found to his rue. He could not solace himself among the intellectual herd when buffeted by Hearst & Co. If Russell had lived only to the age recommended by the Psalmist, he would have died in poverty, far from home and virtually friendless. Happily, he survived to attain high honours and moderate wealth. But he would not have been pleased to see, as I did, his portrait stuck on the wall in the place of honour between Mao Tse-Tung and Che Guevara in a den of student revolutionaries. It is a nice question whether it is better to be praised for the wrong reasons than not to be praised at all. But an undoctinaire apostle of common sense seldom has another choice.

NOTES

- 1 An act of which, on the available evidence, the effects are likely to be better than those of any other act that is possible in the circumstances, is defined as 'right' (*Human Society in Ethics and Politics* (HSEP), London, George Allen & Unwin, 1954: 116). This is vastly different from rule utilitarianism, *alias* the domino theory, which got us into the Vietnam War.
- 2 Even more perhaps from envy, an emotion whose importance in human affairs Russell aristocratically underestimated.

ER'S INFLUENCE

(15) Abbie Hoffman, in an interview in the Tucson Weekly News (12/10/80):

Q: Do you see people returning to an organization like SANE?

A: Yes, I would think an organization like SANE, Ban the Bomb, Campaign for Nuclear Disarmament, I think that's going to happen. Nuclear weapons are going to become big issues.

The Sixties began for me really with those movements, triggered by Bertrand Russell in Trafalgar Square — Campaign for Nuclear Disarmament — CND. We saw the image of fifty to a hundred thousand people and him with his lion mane up there on a platform, and people would sit down and they wouldn't let traffic come through. They blocked off Trafalgar Square with 100,000 people. And those images filtered across this country. And that was very early. Against the testing of nuclear weapons.

(Thank you, ALEX DELY)

ERS PROJECTS

(16) "Russell on Ethics" is the title of a short paper by PHIL STANDER, written in response to our request (RSN28-10). It's the first of a series of short papers that present ER's views on a variety of subjects. How about offering to write one? See RSN28-10 for suggested topics. Here is "Russell on Ethics":

"All human activity is prompted by desire or impulse." On this point Russell is emphatic. "If you wish to know what men will do, you must know not only, or principally, their material circumstances but rather the whole system of their desires with their relative strengths."⁽¹⁾

Russell states his own desires: "...three passions, simple and overwhelmingly strong, have governed my life: the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind."⁽²⁾ In all that Russell writes, there is the implicit or explicit view that, although both love and knowledge are the two main requisites for right action, love is more fundamental. This is so, Russell tells us, because it will lead men to seek knowledge in order to find out how to benefit those they love.⁽³⁾

Russell considers the general happiness of man a legitimate ethical end or aim. Contempt for happiness is easier when the happiness is other people's. History demonstrates that the men who did most to promote happiness were those who thought happiness important, not those who despised it in favor of something more "sublime."⁽⁴⁾ Only a philosophy based on love, empathy and compassion can serve man, can produce stable improvements in human affairs, and can avoid the nightmare of war.

The fundamental data of ethics, for Russell, are feelings and emotions. Ethics differs from science, for an ethical judgment does not state a fact. "It states, though often in a disguised form, some hope or fear, some desire or aversion, some love or hate. The Bible says, 'Thou shalt love thy neighbor as thyself,' and a modern man, oppressed with the spectacle of international discord, may say, 'Would that all men loved one another'; these are pure ethical sentences which clearly cannot be proved or disproved merely by amassing facts."⁽⁵⁾

Since, in Russell's view, actions are determined by subjective desires, how is it possible to say that some actions are ethically superior to others? Russell finds it possible by examining desires.

Russell calls a number of desires "compossible" (a term borrowed from Leibniz) when all can be satisfied by the same state of affairs. When desires are not compossible, they are "incompatible". When a nation is at war, the desires of all its citizens for victory are mutually compossible, but incompatible with the opposite desires of the enemy. Obviously there can be a greater total satisfaction of desire when desires are compossible than when they are incompatible. Therefore, according to Russell's definition of the good:

...compossible desires are preferable as means. It follows that love is preferable to hate, cooperation to competition, peace to war, and so on. (Of course there are exceptions: I am only stating what is likely to be true in most cases.) This leads to an ethic by which desires may be distinguished as right or wrong, or, speaking loosely, as good or bad. Right desires will be those that are capable of being compossible with as many other desires as possible; wrong desires will be those that can only be satisfied by thwarting other desires.⁽⁶⁾

From this ethic of general happiness, or the common good, one can infer an indefinite number of ethical maxims. In addition to the test of compossibility, there is a simple rule by which all ethical maxims are to be tested: "No ethical maxim must contain a proper name," meaning "any designation of a particular part of spacetime" — not only the names of individuals but also of regions, countries, and historical periods. Russell is suggesting something more active than a cold intellectual assent, something in the nature of real desire, "something which has its roots in sympathetic imagination. It is from feelings of this generalized sort that most social progress has sprung and must still spring."⁽⁷⁾

"If your hopes, wishes, desires and plans are confined to yourself, or your family, or your nation, or the adherents of your creed, you will find that all your affections are paralled by dislikes and hostile sentiments. From such a duality in men's feelings spring almost all the major evils in human life — cruelties, oppressions, persecutions, and wars. If our world is to escape the disasters which threaten it, men must learn to be less circumscribed in their sympathies."(8)

Given this emotive basis of programs of action, i.e., the principle of universal love or reverence for life, and its manifestation in the generalized sort of sympathetic imagination he calls "abstract sympathy", Russell proceeded to design programs of reform which would insure the future of man. World government and world-wide democracy as the organizational panaceas and a tolerant population characterized by a sense of the unity of the world and the family of man constitute the general aims of Russell's programs of reform.

PHILOSOPHY

(17) 'ANALYSTS' WIN BATTLE IN WAR OF PHILOSOPHY, says the heading on this story in The New York Times (1/6/81), p.C1:

By EDWARD B. FISKE

AS in Athens, so in America: Philosophers disagree, sometimes with passion. Last week, in a battle fought with virtually every traditional academic weapon short of hemlock, proponents of "analytic" philosophy reasserted their control of the Eastern Division of the American Philosophical Association.

At the division's annual meeting here, the analysts soundly defeated candidates of a coalition of "pluralists" who charge that they have been unfairly excluded from positions of leadership.

The debate, marked by personal acrimony as well as philosophical differences, dramatized the political nature of the world's oldest academic profession. "All academic fields have factions and personality conflicts," said John J. McDermott, a pluralist from Texas A and M. "In philosophy the issue seems to be whether some of us are actually in the profession."

Since World War II, the "analytic" approach to philosophy has been dominant in American universities. Primarily a product of such 20th-century thinkers as Ludwig Wittgenstein and Bertrand Russell, it seeks to clarify traditional problems of philosophy through logic and by careful analysis of language and concepts. "Philosophy is a continuation at a more abstract or inclusive level of the natural sciences," said Willard Quine of Harvard University, one of the greatest of contemporary American analytic philosophers.

The opposing term, "pluralist," describes not a single approach but a variety of nonanalytical schools, including phenomenology, existentialism, metaphysics and the American "pragmatism" that grew from the thought of John Dewey and William James. Unlike the analysts, they see philosophy as a way of describing the world rather than analyzing thoughts, and they see themselves as heirs to the philosophers and issues of the past.

In discussing the ethics of abortion, for example, an analytical philosopher might begin by analyzing terms such as "non-voluntary," while a representative of one of the pluralist schools might start by describing a situation in which an abortion took place.

Pluralists charge that analysts' fascination with logic and highly technical arguments —

Continued From Page C1

pled with their acknowledged indifference to the history of philosophy — is driving undergraduate students away from philosophy courses. "In schools like Vanderbilt and Stony Brook, where pluralists are represented on the faculties, you get as much as 15 percent of students enrolled in philosophy courses at any given time," said Donald Lohs, a professor at the State University of New York at Stony Brook. "At places like Maryland or Pittsburgh, where the analysts are dominant, you get only about five percent."

The struggle between the two factions broke out at last year's convention of the Eastern Division, when the "Committee on Pluralism" successfully challenged the "official" slate of officers. The dissidents managed to elect John E. Smith of Yale as vice president and captured the other two available elective seats on the 10-member executive committee. Professor Smith now moves up to the presidency of the 3000-member division.

At last week's convention, the analysts fought back. A letter was circulated over the signatures of nine past presidents charging that the Committee on Pluralism "seeks to obtain through political means a position of influence which its members have not been able to obtain through their philosophical work."

The counterstrike succeeded. When the votes were counted, Adolf Grunbaum of the University of Pittsburgh, an analytic philosopher who had lost the election last year, won the vice-presidency over William Barrett, the New York University professor who was the pluralist entry. The pluralist candidates for the executive committee, John Lachs of Vanderbilt University and Sandra Rosenthal of Loyola in New Orleans, were also defeated.

The rhetoric of the political debate left little doubt that the participants were professional philosophers. At a

rally organized by pluralists on the eve of the election Bruce Wilshire of Rutgers University said that he looked forward to a day when "the various groups and parts of it will define themselves as parts of the whole, not parts which are the whole."

Privately, the two sides frequently engaged in personal attacks. A Yale analyst described one pluralist colleague as "a joke" and another as "not a serious contributor to philosophical literature." Professor Lachs riposted for the pluralists: "How about those who have the political power without philosophical distinction?"

Underlying the conflict are some fundamental nonintellectual tensions within philosophy. As in other fields, there has been a dispersion of talent beyond such traditional bastions of influence as Harvard, Princeton, Michigan and, more recently, Pittsburgh; and departments at universities such as Vanderbilt, Kansas and Arizona have become increasingly visible.

The pluralists, most of whom come from such newer institutions, claim that the structure of the A.P.A. does not reflect this "democratization." "It's a revolt of the provinces against the Northeast," said Mr. Lachs.

The pluralists also claim that analysts conspire to keep nonanalytic philosophy out of the influential journals and that they do not regard the pluralist approaches as serious philosophy. It would be most unusual, for example, for a student at Harvard to do a dissertation on Dewey or James.

Analysts readily concede that they are not particularly familiar with the opposition. Professor Quine, asked whether individual pluralists might be exceptions to the generalizations in the letter he signed, replied, "I suppose so, but I don't know their work."

A variously attributed saying in higher education is that academic politics are so bitter because "so little is at stake." At the convention this became a serious issue.

Pluralists argued that, by controlling

The New York Times/Edward B. Fiske
Ruth Marcus and William Barrett

the association, the analysts are in a position to advise foundations and the National Endowment for the Humanities where to distribute their grants, suggest experts to evaluate departments, determine who presents and publishes scholarly papers and influence who gets jobs and who does not.

The analysts, however, deny that such power flows from the organization. "Philosophers do philosophy, not associations," said Ruth Marcus of Yale. "I can't think of a single occasion where the A.P.A. was called upon to compose a council or make a grant for someone."

The Eastern division voted last week to elect future officers by mail ballot. Pluralists said this procedure would give a voice to philosophers from smaller institutions who cannot afford to come to the meetings. One analyst disputed this conclusion, however, saying "they will still vote for the people they read."

Professor McDermott, formerly a professor at Queens College in New York City, noted that there is not a single major philosophy department in this country devoted to American pragmatism. He called it "rather ironic" that he travels from Austin to Cambridge to complete a new edition of the works of William James, shunned by the analysts at Harvard.

Asked whether he agreed that this was indeed ironic, Professor Quine looked somewhat quizzical and said, "I don't believe I know McDermott."

Continued on Page C4

- (18) "Russell's Cryptic Reply to Strawson" — an article by James W. Austin in "Philosophy and Phenomenological Research" (June 1979) — concludes with a paragraph that "ought to ignite the interest of Russell scholars," says DAVID PAUL MAKINSTER.

The paragraph refers to Russell's article, "Mr. Strawson on Referring," in "Mind" (July 1957). Here is the paragraph:

Most read his article as the incomprehensible ramblings of an old warrior no longer able to rationally defend his theory from its detractors. While his thoughts are admittedly skeletal and recondite, they are neither ultimately incomprehensible nor the ravings of senility. Moreover, they are right.

David continues: "This article, together with a companion piece by the same author (DENOTING PHRASES AND DEFINITE DESCRIPTIONS, "Southern Journal of Philosophy", VI. XIV,#4), constitutes an original and sympathetic illumination of Russell's contributions to the theory of reference — contributions too often given short shrift by contemporary linguistic philosophers."

NUCLEAR AFFAIRS

- (19) Medvedev's nuclear disaster on "60 Minutes!" Nuclear Disaster in the Urals — a 1979 book, which is an expansion of a 1976 magazine article, by Zhores A. Medvedev — is a piece of scientific detective work that points to a nuclear disaster in Russia in 1956 (RSN23-14). This was at first disputed (RSN24-6) and later accepted as probably correct (RSN26-18).

Medvedev's nuclear disaster finally got the national attention it deserves when it was discussed on CBS's "60 Minutes", on November 9, 1980. The point — especially for the USA, where we may or may not go ahead with nuclear power plants — is that nuclear accidents can contaminate large areas, and have.

- (20) END — the European Nuclear Disarmament Campaign launched by the Bertrand Russell Peace Foundation — has been endorsed by "The Bulletin of the Atomic Scientists." The Bulletin carried the Foundation's "Statement on a Nuclear Free Zone" in its December '80 issue. To refresh yourself on the text of the Statement, see RSN26-36.

(Thank you, BOB DAVIS.)

For book reviews of Nuclear Nightmares, see (34).

RELIGION

- (21) Creationism, continued. From "People"(12/8/80):

THE SCOPES TRIAL SETTLED THE ISSUE OF EVOLUTION, RIGHT? WRONG: DARWIN IS ON THE RUN AGAIN, CLAIMS AN EXPERT

Stephen Jay Gould admits that if nature had endowed him somewhat differently, "I would have been happy playing center field for the Yankees or singing Wotan in Wagner's Ring cycle at the Met." As it turned out, he's done all right. Raised in Manhattan, a court stenographer's son, Gould graduated from Antioch College and received his Ph.D. in paleontology from Columbia in 1967. That same year he joined the Harvard faculty and is now a tenured professor of geology. A gifted writer, Gould produces a monthly column on evolution for Natural History magazine. Called "This View of Life," it won the 1980 National Magazine Award for Es-

says and Criticism. Thanks to "a lucky bit of physiology," the 39-year-old professor can work past midnight seven days a week, sleep for only six hours and awake totally refreshed. Under this regimen, he has written Ontogeny and Phylogeny, a 1977 scholarly study of the theory of evolutionary stages, and two volumes of collected essays. Ever Since Darwin (1977) and his recently published The Panda's Thumb (W.W. Norton, \$12.95). Gould lives in Cambridge, Mass. with his wife, Deborah Ann, and sons Ethan, 7, and Jesse, 11. There he discussed the facts and fantasies of man's origins with Eric Lev-
in of PEOPLE.

Is evolution really a controversial idea anymore?

In the last five years there's been a tremendous resurgence by creationists, or fundamentalist Christians, who deny evolution and hold to the Bible as literal truth. Instead of hoping to discredit evolution entirely, as they did with the Scopes Trial in the '20s, they're willing to settle for a so-called dual model, the teaching of evolution and creation side by side. During the campaign President-elect Reagan made a statement supporting the dual model. This is becoming one of the most pressing political issues today.

Is the dual model catching on?

The creationists are getting even more than they asked for from local school boards. Instead of adopting the dual model, the boards sometimes just kick evolution out. Cowardly textbook publishers have been quietly excising evolution too.

Are religion and science reconcilable?

Certainly. Science can't answer the ultimate questions of where it all came from. Either matter was here all the time, or something that created matter was here all the time. Either way, some notion of eternity is inescapable.

"Calling an Edsel a dinosaur is unfair to dinosaurs," says Gould. Diplodocus (left), like his brethren, was really an efficient creature.

Mickey Mouse's evolution toward a more youthful appearance, Gould argues, resembles a process in humans called neoteny.

I don't think the facts of nature necessarily prove the existence of an ordering agent—which is what a lot of people mean by God—but that's an issue science doesn't get into. Science does not threaten anyone's faith. What galls me is that the creationists selectively distort the work of scientists and prey on the public's misconception about what the word "theory" means.

How?

In the American vernacular, a fact is something well established, while a theory is more dubious and a hypothesis is just a guess. The creationists say ignore evolution because it's only a theory. That isn't the way scientists use the word at all. Facts are the data of the world; theories are ideas that help us interpret and explain facts. The fact of evolution is as certain as the fact of gravity. You can debate endlessly, as physicists still do, whether Newton's or Einstein's theory of gravitation is better, but apples still fall. Likewise, scientists debate whether Darwin's theory of evolution or somebody else's is better; but people still evolved from ape-like ancestors. The debate indicates not that evolution is in trouble, as the creationists would have you believe, but that biology is alive and well. In fact, it's a marvelously joyous and fruitful debate.

What has the debate focused on?

Mainly, the Darwinian hard line of the last 40 years. It states that small genetic variations occur at random in local populations of a given species. Gradually, over vast spans of time, natural selection preserves those variations that help the organism better adapt to its environment and eliminates other variations that do not. The hard line says, although Darwin himself never took this hard a line, that any major change must be seen as an adaptation produced by natural selection, or survival of the fittest.

For example?

One classic case of natural selection is the peppered moth. The species around Manchester, England became black over 50 years or so after the Industrial Revolution. It was an adaptive

response to trees darkened by soot from local factories. Camouflaged against the sooty bark, they survived. The light-colored moths, easily spotted by hungry birds, were eaten and died out.

How is the Darwinian hard line being challenged?

We've seen that a lot more genetic variation occurs than we thought. It's been found that individual genes may exist in as many as 20 different chemical states, each state being a kind of mutation. Some mutations don't change the behavior or form of the organism, so they don't affect the organism's ability to survive. Thus evolution may be less survival-oriented and more random than we thought.

What other myths about evolution are being exploded?

Darwin argued that change is always slow and gradual, but we now see otherwise. Today, for instance, 5,000 to 10,000 years is often cited as the average time required for the production of a new species—for example, for polar bears to arise from their immediate ancestors, the brown bears. Darwin would not have denied that species could develop that quickly, but he would have said that in general a lot more time is necessary.

Ten thousand years is "quick"?

Absolutely. You have to consider that most species survive an average of five to 10 million years. If they arise in 5,000 to 10,000 years, that is about one-tenth of a percent of their entire existence. On a geological time scale, that is instantaneous.

How could Darwin have missed this?

Today we know a lot more about the actual mechanics of how species arise than Darwin did. Also, Darwin was very much a 19th-century man who shared the cultural bias of his day that slow, steady progress was the way of the world. The historical cataclysms of the 20th century have discredited that notion. Perhaps the most subtle point is that we are no longer making excuses for the fossil record, as Darwin and his immediate successors did.

What do you mean?

The fossil record—the record of the past as documented by fossils—has never indicated slow, gradual change between species. It has shown species arising suddenly. For years scientists explained that away by claiming the record was spotty. We can't say that anymore. Millions more fossils have been found since Darwin's time.

Doesn't the fossil record show any intermediate evolutionary forms?

Very rarely for lower-level species. But for enormous transformations like the rise of mammals from reptiles—which took tens of millions of years—there are numerous steps. For instance, two small bones of our middle ear called the hammer and anvil were originally components of the reptilian lower jaw. We can very distinctly trace their slow-movement to the back of the jaw and then into the head, decreasing in size and increasing in sensitivity to sound as they went.

So evolution builds new parts with materials already on hand?

Exactly. As the French biologist François Jacob once said, nature is an excellent tinkerer. A wonderful example is found in pandas, which is where I got the title of my book. They spend their days eating bamboo, stripping off the leaves by running the stalk between the pad of their paw and what seems to be an opposable thumb. Actually it is not a thumb but a greatly enlarged wrist bone. It's a somewhat clumsy solution, but just such odd arrangements prove that evolution is a real process, full of imperfections.

Did such imperfections cause the dinosaurs' extinction?

No, extinction is a natural part of life. Dinosaurs, in fact, were one of the most successful animal groups ever. They ruled the world for 100 million years. Humans beings have only been around 200,000 years as a species and five million years as a lineage distinct from apes. Dinosaurs have really gotten a bum rap. The old view was that they were slow, clumsy brutes, inefficient and very dumb. Recent anatomical reconstructions show that dinosaurs

were perfectly efficient, adequate creatures whose brains were the right size for reptiles of their dimensions. They were finished off eventually by climatic change, biological competition and possibly the impact of an immense asteroid 65 million years ago.

If extinction is a natural part of life, then how long do we human beings have?

That's not answerable because we've altered the earth so much it just isn't a biological question anymore. Our destiny is in our own hands. I seriously doubt, however, that we or any species now existing will still be here in five billion years, when the sun blows up and the earth comes to an end.

Why do you cite Mickey Mouse as an example of evolution?

A long time ago I noticed that Mickey Mouse's appearance had changed considerably since his invention in 1928. He started as a nasty, rambunctious creature, but as he became a national symbol Disney made him more lovable. Mickey's nose got thicker and shorter, his eyes bigger, his limbs softer and puffier and his ears moved back. All this made him appear more cuddly and juvenile. The Disney artists intuitively understood what changes would make Mickey cuter; I don't think they realized the biology behind it.

What is the biological significance?

Human evolution follows a process called neoteny—the retention of youthful features. We, meaning mankind, grow more slowly and mature sexually much later than other primates. We retain certain features in adulthood—lack of body hair, small nose, small teeth, large eyes—that are part of the juvenile stages of other primates. This has been extremely important to us in at least two ways. One is that our large brain is partially the result of brain growth continuing into early life. In most animals, the body keeps growing but the brain stops. Perhaps more important, we remain flexible in our behavior. As adults we can play and learn the way other primates can do only in infancy. We are, in a literal sense, grown-up children. So Mickey's evolution mirrors our own. □

(22) Vatican Opens Study on Clearing Galileo says a headline in the Los Angeles Times (10/24/80). Here are excerpts:

On instructions of Pope John Paul II, the Vatican has undertaken a new study of Galileo Galilei with the apparent objective of reversing the 347-year-old finding of heresy brought against him by the Holy Office.

...In 1611 he was convicted of heresy for arguing that the sun is at the center of the universe, and he was found "at least erroneous" for arguing that the Earth was not at the center of the universe but in fact was in motion.

No formal action was taken against Galileo at that time because he agreed to abandon the censured views and not to communicate them to others.

In 1633 at the age of 69, he was again brought to trial on grounds of his new findings again supporting the theories of Nicolaus Copernicus, the 16th Century Polish astronomer who said the planets revolve around the sun.

The court concluded that he was "vehemently suspected of heresy" and he was forced to kneel and forswear the scientific findings and then face life imprisonment. House arrest in Florence was substituted for the prison term.

J. Bronowski tells the story of Galileo's trials and triumphs in The Ascent of Man, Boston: Little Brown, 1971, pp. 198-218.

(Thank you, JOHN HARPER, JR.)

BR devotes 8 pages of The Scientific Outlook (New York: Norton, 1931) pp. 24-32, to excerpts from the sentence passed on Galileo in 1633. Here is how it starts:

Whereas you, Galileo, son of the late Vicenzio Galileo, of Florence, aged 70, were denounced in 1615 for holding as true a false doctrine taught by many, namely, that the sun is immovable in the center of the world...

NEWS ABOUT MEMBERS

(23) Adam Paul Banner has good reason, we think, to feel pleased. Here's why, as reported in the Midland Daily News:

Banner's petition answered

By DONNA SANKS
Daily News staff writer

If you buy a wood stove next winter and are surprised at the amount of information in the accompanying literature about how to install and maintain it, you can thank Adam Paul Banner.

Banner, ~~3802 N. Kenneth~~ decided in 1977 that consumers needed to know more about the coal and wood burning appliances that, when improperly used, were burning their houses down.

He petitioned the Consumers Product Safety Commission to require manufacturers to put safety information on coal and wood-fired appliances and in literature about them.

Starting in May, manufacturers will be required to do just that.

The commission's new rules, issued almost four years after Banner initiated the action, requires product makers to provide information on the appropriate clearances between the

stove and chimney connector and combustibles to avoid fire, type of chimney and floor protection to be used, how to prevent over-firing, inspection and cleaning information and the name and address of the manufacturer.

Banner said he decided to petition the product safety commission while working for a local building supply company which sold coal and wood burning stoves.

"I detected a tremendous lack of education on the part of consumers about how to use and maintain them," he said. Much of the information required by the commission will have to be permanently attached to the burners so when they change hands, the new owner will be aware of safety precautions.

Banner's petition contained fire data from New York, Illinois, Wisconsin, Minnesota and Michigan about the number of fires and deaths caused as a result of improper use of coal and wood-fired heaters.

According to the product safety commission about 14,000 fires and 115 deaths are estimated to have occurred in 1978 from the use of wood or coal stoves. The major causes of fires was improper installation, placing the devices too close to combustibles which are ignited from the heat of the stove, the commission report said.

Banner said he doesn't expect the new regulations to cut down dramatically on the number of house fires or deaths resulting from improper use of the stoves. "There is the possibility that people will tend to become more aware of what the problems are," he said.

"You don't change people. You contribute in small quiet ways. Maybe you may save one or two lives. What does it matter. Even if you save one, it's worth it," Banner said.

The Midland resident said he is interested in energy and the environment and regularly reads the federal register, where new regulations must be printed before going into effect.

Adam Paul Banner

"This is just another step in consumer education," he said.

(24) Len Cleavelin writes: "I'm still in Chicago, contending with the winter (mildly unpleasant), with the law (ditto), and with lawyers (dreadful). If that weren't bad enough, there's the small matter of the presidential election. As Clarence Darrow said, 'I was told, as a child, that anyone could become President. I'm beginning to believe it.'"

(25) Peter Cranford, author, has a publication date for his new book: April 15. We don't yet know its title or cost.

(26) Don Jackanicz is working on a paper on BR and the House of Lords, which he intends to present at our '81 meeting. * He would appreciate hearing from anyone who has relevant information. (3802 N. Kenneth Avenue, Chicago, IL 60641)

(27) Joe Neilands, first Chairman of the Science Committee and Professor of Biochemistry at UC Berkeley reports:

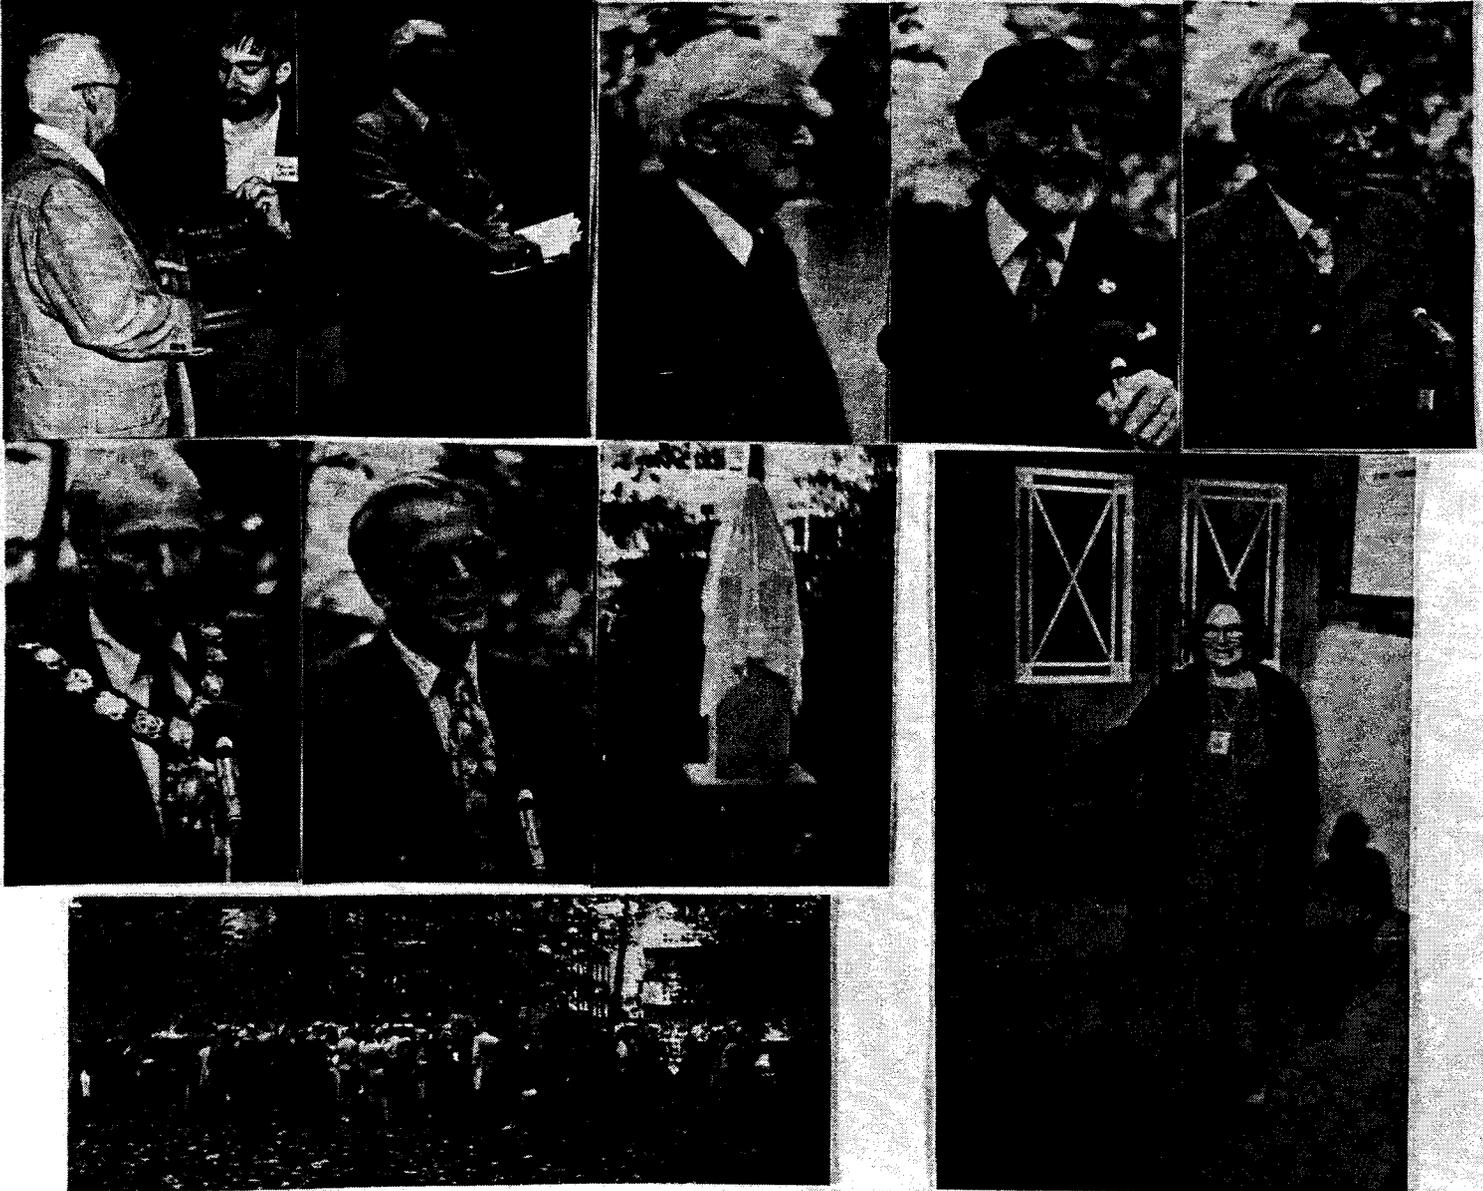

The film, "The Life and Times of Bertrand Russell", was shown to an audience about about 30 here in the Biochemistry Department on December 19. It was my Xmas present to the Department. For a fee of \$50 to the copyright holder, we obtained permission to make a video tape of this very fine film. It is now available in our library, where students may view it at their leisure.

(28a) Conrad Russell's book, Parliaments and English Politics 1621-1629 (Oxford University Press, 453 pp.), was reviewed in "The New York Review of Books" (12/18/80, pp. 58-61). The reviewer, J. H. Hexter, Director of the Yale Center for Parliamentary History, says: "Russell's main views diverge sharply from those of every specialist for the past century, and if he is right, then the interpretations of other historians of the years between 1560 and 1660 are surely askew." (Thank you, BOB DAVIS.)

(28b) The program of the 1980 Annual Meeting of the American Historical Association lists Conrad Russell, Yale University, as presenting a paper, "Causes of the English Civil War." (Thank you, DON JACKANICZ)

RECOMMENDED READING

(32) "Gödel, Escher, Bach" by Douglas R. Hofstadter (New York: Vintage Books, 1979). "This is a book about mathematics and logic that you don't have to be a mathematician or logician to understand," says Lee Eisler. The book has been on the NYTimes best-seller list, to everyone's surprise. Here's part of what Gerald Jonas says, in "Behind The Best-Sellers" (New York Times Book Review, 12/28/80, p.18): "The germ of the book was Mr. Hofstadter's conviction that something should be done about the average person's ignorance of one of the epochal discoveries of 20th Century mathematics, Gödel's Theorem. In a rough paraphrase, this theorem states that no formal system capable of rigorous distinctions between truth and falsehood can ever be both consistent and complete. Gödel is one of the spoilsports of modern science; along with Heisenberg's Uncertainty Principle and the Second Law of Thermodynamics, Gödel's Theorem sets unpassable bounds to man's ability to know and control everything."

(33) "Cyril Burt, Psychologist" by L. S. Hearnshaw, Cornell University Press, 1979. "A study of a charlatan," says ADAM PAUL BANNER. By chance, we happened to see what "Discover" (February 1981) said about it. It will curl your hair.

Errant Knight
 No question about it: Sir Cyril Burt was a cad. For several years, the British Psychological Society had hoped desperately that the reputation of its late president could be salvaged. Alas, the evidence was too persuasive.
 Burt spent the major part of his career trying to prove that intelligence is genetically, not environmentally, determined, and that upper-class people have inherently higher I.Q.s. In his most famous study, Burt published what appeared to be convincing data on 68 pairs of identical twins who had been brought up separately from birth under starkly different social conditions, yet had precisely the same I.Q.s. His work was a key influence leading to Britain's 1944 Education Act, which set up a school system that effectively segregated children on the basis of their I.Q. scores. So respected was Burt that in 1946 he became the first psychologist in Britain to be knighted.
 Five years after his death in 1971, he was branded a fraud by several American and British scientists and a London *Sunday Times* reporter. They claimed that Burt had fabricated both his statistics and the research assistants he cited in his papers. Other scientists rushed to verify those findings, and soon Sir Cyril was in posthumous disgrace.
 For four years the British Psychological Society ignored the accusations. Meanwhile one of its most respected and cautious members, Professor Leslie Hearnshaw, embarked on his own study of the Burt affair. The society hoped that Hearnshaw would return with good news, but in the end he reported that Burt had indeed been "handed, devious, and corrupt."
 Still, the debate rages. Just how devious was the inventive psychologist? His supporters insist that he began to fabricate data only in the latter half of his life, when disease, depression, and retirement nearly drove him mad. Detractors claim that Burt was "lent from his early years." They are trying to gather more damning evidence, but will probably have little luck; nearly all Burt's earliest research material was destroyed during a German air raid in the early 1940s.

BOOK REVIEWS

(34) "Nuclear Nightmares" is a book that thinks about the unthinkable and shows how it could happen. 2 reviews follow:

(34a) From The New York Times Book Review (11/3/80, p. 18):

NUCLEAR NIGHTMARES

An Investigation Into Possible Wars.
By Nigel Calder.
168 pp. New York:
The Viking Press. \$10.95.

"If you listen carefully you can hear the cackle of chickens coming home to roost," writes Nigel Calder in this grim, ironic look at the ultimate evil of our time. We citizens of the nation that introduced nuclear warfare to the world now find the prospect of sudden nuclear death a steadfast if uninvited house-guest; his ghostly form attends every supper table in America, and he will not go away.

The danger that nuclear arms will again be used in anger has not diminished in the 35 years since Hiroshima. Meanwhile the consequences of nuclear war

have mounted to a Moloch's stature with the growth of the weapons stockpiles, up now to something approaching 10,000 warheads each for the United States and the Soviet Union — "deliverable," as they say, into our laps and theirs upon a moment's notice.

So ghastly would be the consequences of even a "limited" nuclear war that optimists count upon its very horror to keep it forever at bay. (If you listen carefully, you can hear whistling in the dark.) The aim of "Nuclear Nightmares" is to dispel unwarranted optimism of this sort by outlining four plausible ways a nuclear war might start.

Mr. Calder's first scenario envisions nuclear conflict arising out of "conventional" war between NATO and Warsaw Pact forces in Europe. For 25 years

NATO had made it clear that this would be the likely result of any Soviet aggression in the area, though Western Europe is a poor nuclear theater, for as one NATO officer complained to Mr. Calder, "German towns are only two kilotons apart."

Nuclear assault by one of the less powerful nations now acquiring the bomb makes for Mr. Calder's second "nightmare." Here the very paucity of warheads can invite their use, as Mr. Calder notes: "If you have a thousand, and can hide some in submarines at sea and scramble others into the air at a moment's notice, then it is technically difficult to destroy all of your nuclear weapons in a surprise nuclear attack. . . . If, on the other hand, you have only two bombs, one of them parked in a grove near the airport and the other in the stables of the

summer palace, it is possible for a well-informed aggressor who has three bombs to use two of them to annihilate your nuclear weapons and the third to destroy your capital city."

Mr. Calder's third and fourth scenarios rear their frightening heads from the very complexity of the modern nuclear war machines. Accident remains a risk — a communications anomaly during a world crisis might prompt the commander of a single submarine to deal death to millions — but still worse risks wear the mask of sanity, as when the increased accuracy of multiple nuclear warheads invites a cold-blooded decision to strike against an opponent's missile silos before he can hit yours.

Mr. Calder is a science writer of the first order, the author of "Violent Universe," "Ein-

stein's Universe" and the estimable BBC documentaries associated with them, but he is not superhuman and he has no grand solution to offer to our nuclear dilemma. "My feelings," he writes, "are those of a busybody who has shouted 'Fire!' in the theater and now cannot point to the safe way out." He urges signing a comprehensive test-ban treaty, which at least would slow the alarming technological acceleration of the nuclear arms race, but his view of our future even with this improvement is dark. Writing this sane, informative and depressing book does not appear to have given him much pleasure or satisfaction. The nuclear house-guest sits at his table as at ours, threatening to remain until the end of the world, as evil a legacy as ever a generation bequeathed its children. ■

4b) From The Progressive (December 1980, pp.55-57):

NUCLEAR NIGHTMARES: AN INVESTIGATION INTO POSSIBLE WARS

by Nigel Calder
Viking Press. 168 pp. \$10.95.

Scott Sanders

Within half an hour from the moment you read these words, an all-out nuclear exchange between the United States and the Soviet Union could murder some 300 million people outright and sentence incalculable millions more around the globe to lingering death by hunger and disease. The long-term effects of radiation and ecological disruption would exterminate many species, perhaps including, within a generation or two, our own.

The mind recoils from such a prospect. We either stop thinking about the menace of nuclear war or we tacitly assume, as readers of Victorian novels once assumed, that all will turn out right in the end. Meanwhile, we go on paying our life insurance premiums, planting orchards, taking care that our children eat healthy foods, debating the merits of space colonies, trusting there will be a future. Surely the doomsday weapons will never be launched. Surely the holocaust is impossible.

On the contrary, nuclear war is quite possible, and is rendered more likely with each new bomb constructed, each new weapon devised, each new country joining the holocaust club. That is the chilling and convincing point of Nigel Calder's *Nuclear Nightmares*. Among the myriad possible routes to nuclear war, Calder ex-

amines the four likeliest ones: the escalation of conventional war in Europe; the proliferation of nuclear weapons; the breakdown in military command or electronic control of weapons; and the quest by both superpowers for first-strike capability.

The European war scenario, centered in Germany, will be familiar to readers. But many may not realize, as I did not, that official NATO policy promises first use of nuclear weapons should conventional defenses fail. Deployment of "tactical" nuclear weapons, ranging in size from artillery shells to guided missiles, makes firing the first salvo easier. Once the swapping of missiles begins, combatants are not likely to exercise gentlemanly restraint. If war flares in Europe, with thousands of nuclear weapons aimed across the ideological border, the continent will almost surely be reduced to ashes.

According to Calder's second scenario, acquisition of the bomb by one government after another, including racist regimes such as South Africa's and dictatorships such as Brazil's, will eventually lead to the local use of nuclear weapons. Since the two superpowers claim the whole planet as their province, any local outbreak might well become global. The members of the nuclear club caution other nations to leave the atom alone, while daily they add to their own arsenals. Both SALT treaties permit—indeed, virtually mandate—large increases in atomic stockpiles. France, Germany, America, and the Soviet Union export nuclear reactors, fuels, and reprocessing equipment to client nations. They persevere in this commerce even though critics have shown—see, for ex-

ample, "Nuclear Power and Nuclear Bombs" in the summer issue of *Foreign Affairs*—that any state possessing reactors can readily build the bomb.

The third possible route to apocalypse leads through the electronic and bureaucratic thickets surrounding the weapons. As military decisions become increasingly dependent on satellites, radar, and computers, faults in that system may precipitate the very disaster it is built to prevent. Twice in the past year, for instance, our computers announced that the Soviets had launched a nuclear strike. The mistake was discovered in time to avert our promised retaliation. But on some future midnight, when political tension is higher or human judgment slower, mistaken warnings might provoke one side or the other into firing away at these electronic ghosts. Furthermore, as the chain-of-command stretches from the President down to officers in the missile silos, the opportunities for error and for malevolence multiply.

According to Calder's fourth scenario, the superpowers might lurch into war as a consequence of perfecting counterforce weapons. Such instruments are aimed at destroying missiles and submarines and bombers instead of cities. All of that sounds humane enough until you reflect that counterforce weapons only make sense if used first. There is no profit in firing a super-accurate missile, such as the proposed MX, at empty Soviet silos. Every major weapons development of the past decade, most of them pioneered by the United States, has strengthened the incentive for striking first. If each U.S. missile carries ten independently targeted warheads, by firing first we would theoretically be able to destroy

ten Soviet missiles for every one we expend. The Soviets, of course, would enjoy the same ugly advantage by striking first.

"When both superpowers are armed to the teeth with 'counterforce' nuclear weapons," Calder notes, "the danger is not that either side is tempted in cold blood to make his strike, but that both are driven toward it by mutual fear. There may come a moment when, without any malice in your heart, you have frightened your opponent so badly you must hit him before he hits you. Nuclear deterrence becomes nuclear impulsion." Thus the Carter Administration describes the B-1 bomber, cruise missile, MX, and Trident as defensive measures; but they can be viewed only as aggressive by the Soviets. The Soviet arms buildup, justified in the name of defense, appears belligerent to us.

As in his several previous volumes on modern science where he dealt with subjects ranging from meteorology to relativity, here Calder analyzes complex technical issues lucidly, and demonstrates, through his elegant turns of mind, the virtues of reason. There are many complexities in the nuclear arms debate: How can military parity between the United States and the Soviet Union be measured? How can test bans be policed? How can proliferation be halted?

The central issue, however, is elementary: The nuclear arms race is suicidal. It must be halted. The spawning of new weapons must be stopped. Existing arsenals must be dismantled. Means must be found for settling disputes between nations without war. And all these wonders must be brought to pass quickly, perhaps before the

turn of the century, if humankind is to survive. I say "wonders," because no one familiar with the nuclear morass,

least of all Calder, imagines the political and technical problems can be easily solved. Most of the political issues with which we deal are trivial by comparison, as if a homeowner were busily oiling a squeaky door while a fire smolders in the cellar. The penalty for

failing to quench that fire, as *Nuclear Nightmares* makes painfully clear, will very likely be planetary annihilation.

As a start, Calder urges the United States to renounce all nuclear testing for a period of, say, three months. If the Soviets reciprocate, we can progress to a comprehensive test ban treaty. By the same means we could establish a missile-test quota. Both re-

strictions, on nuclear explosions and missile firings, could be readily monitored by existing satellite systems. Both proposals are featured in the "Call to Halt the Nuclear Arms Race," a citizens' initiative aimed at forcing the superpowers to disarm, available from the American Friends Service Committee, 15 Rutherford Place, New York, New York 10003. Another use-

ful guide to citizen action is "Nuclear War Prevention Kit," available for \$1 from the Center for Defense Information, 122 Maryland Avenue NE, Washington, D.C. 20002.

Scott Sanders is a novelist, essayist, and professor of English at Indiana University.

BRS LIBRARY

- (35) See RSN30. Unfortunately, we have had to postpone this item — which gives all the holdings of the BRS Library — till our next issue (RSN30), because of the last-minute inclusion of details about the 1981 meeting (47).

FINANCES/CONTRIBUTIONS

Deductible expenses. See (4a).

- (36) Russell Memorial (London) contributions. Our thanks to FRANK PAGE for his additional contribution.

- (37) BRS Treasury contributors: KEVIN BOGGS, LEN CLEAVELIN, JACK COWLES, DENNIS DARLAND, DOUGLAS IRONSIDE, JIM O'CONNOR, JACK RAGSDALE...and PETER CRANFORD and KATHY FJERMEDAL on a continuing, regular monthly basis. We thank them all for helping to keep us solvent.

BRS BUSINESS

- (38) Bylaw amendments proposed. The bylaws say (Article X, Section 1): "These bylaws may be amended by a majority vote of the Society, voting at a meeting called at least in part for this purpose, and after prior notification of at least thirty days."

This, then, is notice — and it is at least 30 days in advance of the annual meeting scheduled for June 26-28, 1981 — that that meeting is being called at least in part for the purpose of amending the bylaws.

These amendments (and perhaps others) will be proposed at the June meeting:

- (38a) Term of office. At present officers are appointed by the directors for one-year terms. The bylaws do not specify when that one-year shall start and end. Up till now we have assumed that it coincides with the calendar year, that is, that the term runs from January 1st to December 31st. This change is proposed: that the term of office — for officers appointed by the directors at an annual meeting — shall start as soon as they have been appointed, and shall end at the following year's annual meeting, when the directors again appoint the officers.

Strictly, this may not require an amendment; but we propose that it be written into the bylaws as an amendment.

- (38b) Vice-Presidents. At present, the bylaws call for one Vice-President. We propose that it be permissible to have more than one Vice-President when the directors so wish.

Suppose a BRS member wishes to become active in a fund-raising campaign aimed at outsiders. Now, it is generally known that outsiders like to know that they are dealing with someone in a position of authority. Therefore the fund-raiser will be more effective, and his job will be made easier, if he is a Vice-President. That's why we propose that the BRS not be limited to one Vice-President. Incidentally, banks usually have more than one Vice-President for the same reason.

- (38c) Article VII, Section 4. We propose that this section be dropped. It is not relevant. It reads:

Contract with Officers. The Board of Directors may contract with officers for their services, but in no case shall the term of the contract exceed one year. Compensation for services of officers shall be set by the Board of Directors.

- (38d) Agenda. The bylaws (Article IX, Section 1) say, "The agenda for Society meetings shall be prepared by the Board of Directors. Items for the agenda may be proposed by any member, and must be submitted to the Chairman

of the Board of Directors in writing."

We propose that the agenda for the Directors' annual meeting be prepared by the Chairman of the Board; and that the agenda for the General Meeting (also called the "Members' Meeting" or "Business Meeting") be prepared by the President; and that items for the agendas may be proposed by any member, to the Chairman or the President, in writing.

This is a way of dividing the work (of preparing agendas) between the 2 chief officers, and is what in fact we have been doing for the past several years.

- (38e) Expulsion. At present it takes a two-thirds vote of the members voting to expel a member (Article II, Section 3). We have just seen how cumbersome that is. It required nearly 2 pages of RSN28 to state the case against Sutcliffe, plus 2 more pages for the ballot; that is, about one-sixth of the entire newsletter was taken up by the matter. 4 pages of other items of interest had to be dropped or postponed.

We propose that the voting on expulsion be done by directors instead of by the entire membership, by a two-thirds vote of the directors voting.

The directors are the more interested and more active members of the ERS. Their vote can be counted on to be at least as well-considered, at least as fair, as a vote by the entire membership. It would be handled by a memo to the directors, and would free a lot of space in the newsletter; it would also save money. For these reasons, we recommend the change.

- (39) Student dues raised, from \$5 to \$10 a year. We maintained the old \$5 rate for a long time, even though it did not cover costs, because we were (and are) glad to have younger people as members. But recently the number (and proportion) of student members has increased (which is good) and increased our losses (which is bad). Also our costs are higher. Hence the higher dues.

FOR SALE

- (40) BRS members' stationery. 80 sheets, 8 1/2 x 11, \$3.50 postpaid, while it lasts. It will cost more next time we print. Order from the newsletter, address on Page 1, bottom.
- (41) 118-page Denonn catalog, listing the items in Lester's great Russell Library, is available from JOE GORMAN, 1333 Mountain, Claremont, CA 91711. \$4.50. \$5 for the printed-only-on-one-side, for the "annotatively bibliomantic". While they last. Postpaid.

ABOUT OTHER ORGANIZATIONS

- (42a) 4th Russell Tribunal. The following report appeared in the newspaper "24 Heures" of Lausanne, Switzerland on October 27, 1980:

Un Tribunal Russell sur les Indiens d'Amérique siègera à Rotterdam

A session of the Russell Tribunal — the 4th of that name — will take place in Rotterdam, the Netherlands, from November 24th to the 30th, on the rights of American Indians.

The first Russell Tribunal (named for the British mathematician and Nobel Prize winner, Bertrand Russell) met in 1967 to investigate the Vietnam war.

The idea of setting up an international tribunal surfaced in 1977 after the UN Conference on the plight of the Indians. The jury of 15 prominent international persons will examine charges — made by Indians from all parts of America — of genocide, confiscation of territory and natural resources, repression, and violation of treaties.

Incomindios, an international committee for the defense of American Indians, announced the formation of the Tribunal at a press conference in Zurich on Wednesday. According to Incomindios, the entire international community should feel responsible for violations of the rights of Indians.

...

* * * * *

Although The Bertrand Russell Peace Foundation is not named in the above report, the 4th Russell Tribunal was set in motion by them, as were the first 3. RSNL8-49 reported on the setting up of the previous Tribunal, the 3rd — in West Germany, in March 1978.

(Thank you, WALTER BAUMGARTNER. Our translation.)

(42b) 4th Russell Tribunal, continued. The following is from the "Washington Peace Center Newsletter" (January '81):

The Fourth international "Russell Tribunal" held a week long hearing about Indian treaties and human rights violations, in Rotterdam. The jury, consisting of members of European parliaments, labor union representatives, and church leaders, is funded by the "Bertrand Russell Peace Foundation" (Bertrand Russell was a famous philosopher and Nobel laureate in mathematics). The Tribunal came to the conclusion that the rights of Indians all over South, Central, and North America are denied. The uranium mining on Indian land by multinational corporations in the United States was one of the main issues discussed. On the Navajo and Hopi reservations, hundreds are suffering from cancer and leukemia because of the radioactive pollution in air and water. The Indians accuse the US government of planning genocide of their people.

(Thank you WHITFIELD COBB. Thank you also for advising the WPCN that BR's Nobel Prize was in literature, not mathematics.)

Bertrand Russell Peace Foundation's END Campaign: see (20).

(43) Center for War/Peace Studies seeks members and asks for support in its work, "Applied Research Toward a World of Peace With Justice". It is particularly involved in 4 issues: the Law of the Sea, arms control and disarmament, the Middle East, and United Nations reform. Its sponsors include Elizabeth Mann Borgese, Lord Caradon, Stuart Chase, Norman Cousins, Alva & Gunnar Myrdal. Tax-deductible membership is \$20. 218 E. 18th St., New York, NY 10005.

PERIODICALS RECEIVED

(44) "The Churchman", "A Humanistic Approach to Religion, Ethics, and Education." "An independent journal of religious humanism...edited in the conviction that religious journalism must provide a platform for the free exchange of ideas and opinions; that religion is consonant with the most advanced revelations in every department of knowledge; that we are in a fraternal world community; and that the moral and spiritual evolution of man is only at the beginning." Henry Steele Commager and Linus Pauling are among its Associate Trustees, most of whom are ministers. The contents of the November 1980 issue are about as liberal as a liberal could wish. \$6.50 per year. 1074 23rd Avenue North, St. Petersburg, FL 33704.

(45) "Exploring the Bible" Newsletter, a 5-page mimeographed monthly, explores the Bible unsympathetically. \$6 a year, from DISCOVERY, Box 20331, West Valley, UT 84120

(46) "Adelante" (August 1980) is a 16-page Spanish language publication of the anti-Castro Cuban Democratic Socialist Party (PO Box 350, 805, Miami, FL 33135). Its editorial (in English as well as Spanish) urges a vote, not for Carter or Reagan, but for McReynolds. "He represents the end of Imperialism and Capitalism in America."

LAST MINUTE ITEMS

(47) To attend the Annual Meeting, 1981:

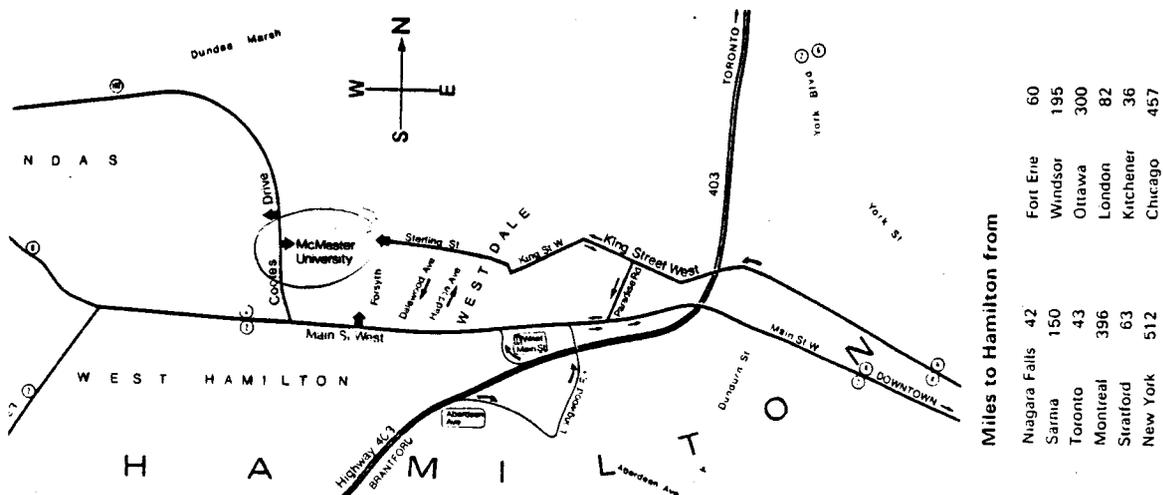

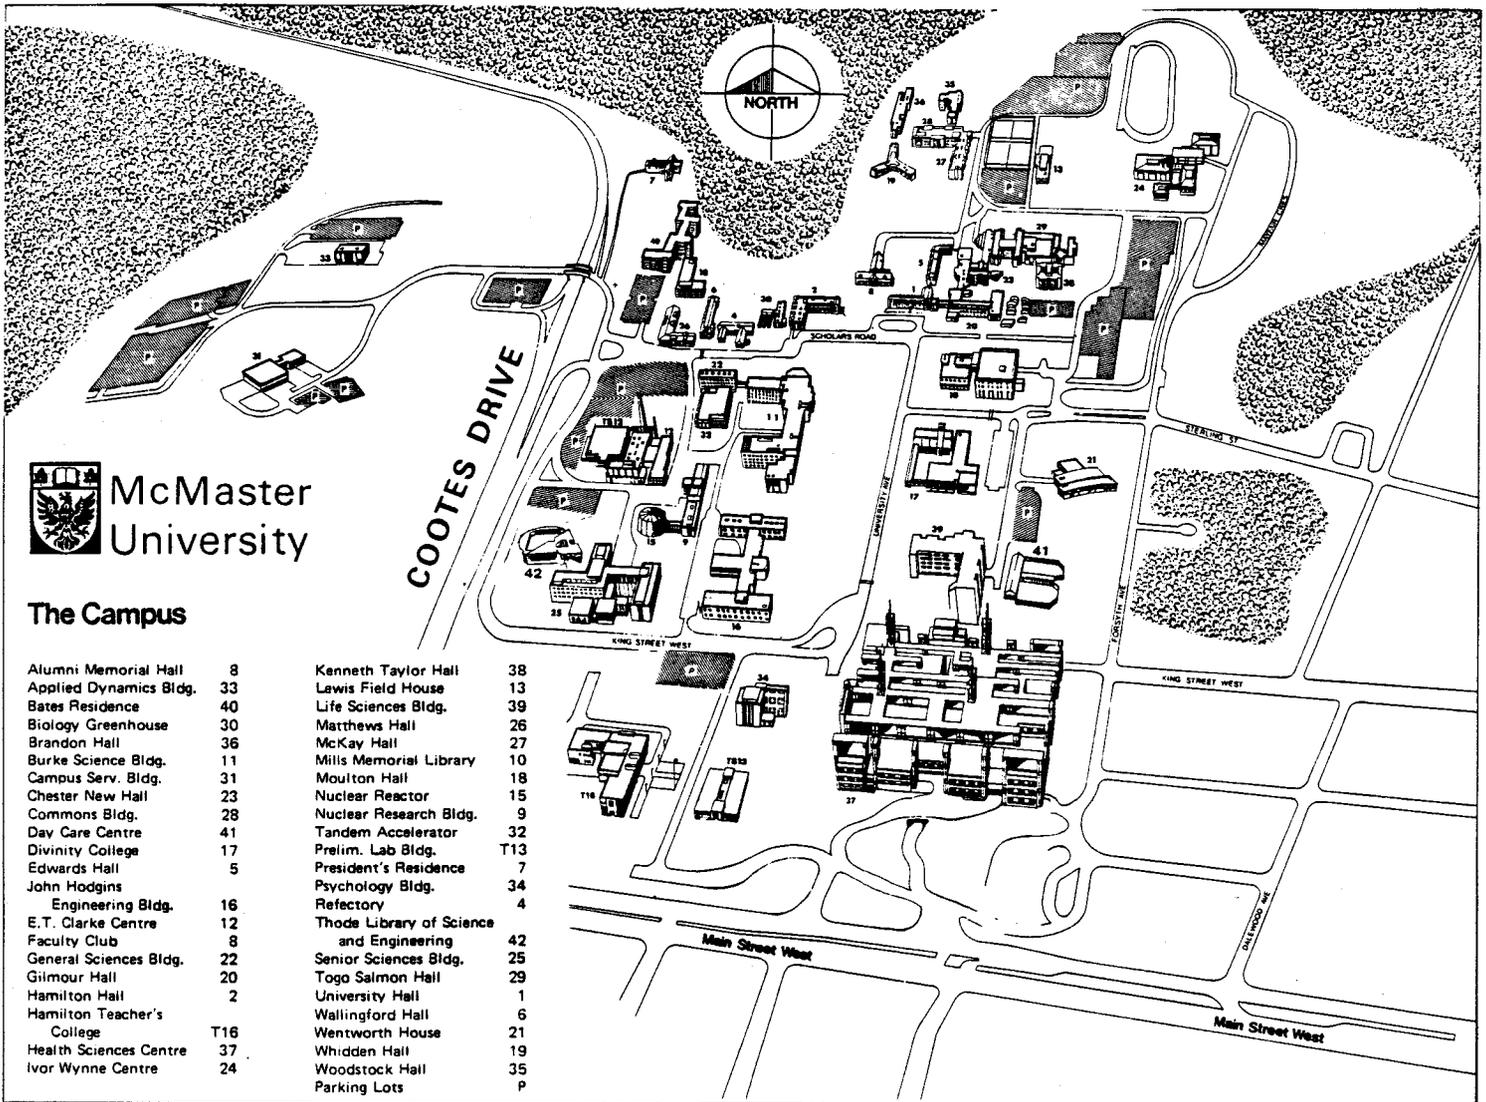

Transportation: The easiest way to get to Hamilton is to travel to Toronto, either by train or plane. Buses go regularly and frequently from the Airport and from the Toronto Bus Depot, about an hour's ride.

Programme: this will consist of films, papers, a Red Hackle Hour, business meeting, and banquet. The papers will be on a diversity of topics associated with Russell's life and work: Russell and Spinoza (or at least Russell's practical ethic); Russell's intellectual development before going to Cambridge; etc. Those wishing to give papers are requested to write to The Bertrand Russell Archives, Mills Memorial Library, McMaster University, Hamilton, Ont., Canada L8S 4L6; please provide an abstract and tentative title. The banquet promises to be a true gala affair at the Russell Archivist's home.

Costs: total cost of the banquet (including wine) and registration for the meeting is \$25. Cost of lodging and other meals is \$39, double, or \$49, single. Payment of the \$25 is to be sent in advance to the Russell Archives. Payment of the \$39 or \$49 should be sent to Conference Services, McMaster University, Hamilton, Ont., Canada L8S 4K1 by June 12th at the latest (see next page for 2 mailing coupons.)

On arrival at McMaster June 26th, go to the Main Lobby Registration Desk in the Commons Building, to register and pick up room key. You can then settle into your room, and then go to the Russell Archives for programme details.

(Thank you, CARL SPADONI. Carl is Assistant Archivist.)

Hamilton, Ontario, Canada L8S 4K1
(416) 525-9140 ext. 4781

McMaster University Conference Services

THE BERTRAND RUSSELL SOCIETY
1981 ANNUAL MEETING
JUNE 26-28, 1981

RESIDENCE ACCOMMODATION
McMaster University
Hamilton, Ontario

Registration Deadline: June 12
Cancellation Deadline: June 23

On campus accommodation in one of McMaster's modern residences is available to all members attending the Annual Meeting of The Bertrand Russell Society, June 26 to 28, 1981. The residences feature single and twin bedded rooms with centralized washroom facilities.

Interested delegates are asked to complete and return the attached form with full payment to McMaster University no later than Friday June 12, 1981.

The following rates will apply:

\$39.00 per person based on double occupancy
\$49.00 per person based on single occupancy

These rates include:

2 nights in residence	(June 26,27)
2 breakfasts	(June 27,28)
1 lunch	(June 27)
1 dinner	(June 26)
Parking	(June 26 - 28)

The University regrets that application for accommodation received after the deadline of June 12, 1981 cannot be guaranteed. Cancellations with a full refund will be granted if notice of cancellation is received by Conference Services no later June 23, 1981.

Check in time : 4:00 p.m. | Check out time : 12:00 noon

ANNUAL MEETING '81

- (2) June 26-28. That's when the 1981 meeting will be held, at McMaster University, Hamilton, Ontario (where the Russell Archives are). Details about transportation to Hamilton, reservations, and costs were reported in the last issue (RSN29-2,47).

It looks like it's going to be an excellent meeting. Here is the tentative schedule of events:

Friday, June 26th. 1:00-6:00 Registration, Commons Building, Main Lobby. Pick up room information and parking sticker. Go to Russell Archives, Mills Memorial Library, for a Programme.
5:00-6:30 Supper, Vallenge Memorial Dining Hall, Commons Building
7:30 Welcome and Introduction, CNH (Chester New Hall) 106
7:45 Film. CNH 106
8:30 15 minute coffee break, in CNH Foyer
8:45 Nick Griffin, "First Efforts", CNH 106
10:00 BRS Board of Directors Meeting, CNH 207. All members welcome.

Saturday, June 27th. 7:30-8:45 Breakfast, Vallenge Memorial Dining Hall, Commons Building
9:00 Film. CNH 106
9:30 General BRS Business Meeting & BRS Award
10:00-10:15 Coffee break. CNH Foyer
10:15 Don Jackanicz, "Russell and The House of Lords". CNH 106
11:10 Bob Davis, "Russell and Clio", CNH 106
12:00-1:30 Lunch, Vallenge Memorial Dining Hall, Commons Building

2:00 David Harley, "Russell and Wells", CNH 106
2:45-3:00 Coffee break, CNH foyer
3:00 Panel on editing Russell's papers, CNH 106
4:00-5:00 Red Hackle Hour, Reading Room outside of Russell Archives, Mills Memorial Library

7:00 Banquet, Ken Blackwell's house in Greenville

Sunday, June 28th. 7:30-8:45 Breakfast, Vallenge Memorial Dining Hall, Commons Building
8:45-10:00 Free time to pack and check out
10:00 David S. Hart's talk
11:00 Ken Blackwell, "Russell's Ethical Debt to Spinoza."
12:00 Cash lunch in Vallenge Memorial Dining Hall, Commons Building (optional).

We hope a lot of you can get there. And for those who cannot, we expect to tape the whole thing (audio cassettes), and make the tapes available through the BRS Library.

All who have attended past meetings are glad they did. Try to make it, if you possibly can.

REPORTS FROM OFFICERS

- (3) Chairman Peter G. Cranford reports:

I'm delighted at the way things have been going (and growing) during the past year. I am thinking not only

*Russell Society News, a quarterly (Lee Eisler, editor): RD 1, Box 409, Coopersburg, PA 18036
BRS Library: Jack Ragsdale, BRS Co-Librarian, PO Box 28200, Dallas, TX 75228

of the steady increase in membership, but also of the BRS Award, that now seems on its way to becoming an annual event. In 1980 the Award went to Paul Arthur Schilpp, in recognition of his contribution to philosophical scholarship, through The Library of Living Philosophers, which he originated and edited. Bertrand Russell was one of many who benefitted from it. In 1981 the Award will go to Steve Allen for his entertaining and enlightening presentation of ideas -- including some of Russell's -- in the PBS series, "Meeting of Minds".

As I have mentioned on other occasions, I am interested in promoting "compossibility", a word that Leibniz originated and that appealed greatly to Russell. It should not take too much luck to put "compossibility" into the language. It is important that this be done since the idea of compossibility is the only one I know of that has a chance of bringing about a needed change in foreign policy. For instance, in the Polish-Russian confrontation, compossibility would advocate that our diplomatic efforts be directed at assisting both sides in finding a compossible solution. If the United States had made such a gesture, we would immediately have regained a large measure of the moral leadership we have lost since Vietnam. As it is, Russia and the United States keep circling each other like two insane sumo wrestlers.

The compossible idea is not entirely new. Others have advocated the substitution of love for paranoia. Russell's contribution was to provide a practical method for doing this. I can think of no greater project for us than to carry the torch of compossibility.

I hope I may have furthered the cause of compossibility, in a modest way, through a feature story on my new book, in the "Atlanta Constitution" (March 30, 1981). See (51)

(4) President Robert K. Davis reports:

This winter and spring has been a busy one for me as President. In February I attended a week-long seminar on fund-raising, which helped me develop techniques that I hope will benefit the BRS. In February, we also had another meeting of the Southern California members, ably organized by Joe Gorman, and held at the Claremont Colleges. We had brunch, saw 2 ER films, and discussed his religious views. About a dozen people attended. Topics for future meetings will include ER on war and disarmament, on communism, and on the future. Steve Allen has donated videotapes of the 2 "Meeting of Minds" episodes that have Russell as one of the characters. I hope to show these tapes at a local meeting some time this fall.

On April 18th I represented the BRS at the American Humanists' annual conference, in San Diego. I was on a panel discussing varieties of free thought in America, and what we can do together to combat moral majorityism. My remarks were well received. The rest of the conference was delightful. It dealt mostly with the MM, and it provided me with a lot of ammunition for dealing with them. Carl Sagan accepted their award ("Humanist of the Year") and gave an excellent talk.

We have been working steadily on the agenda for the annual meeting this June. There's a good chance that we may have the 1982 meeting at a college at Oxford. When we polled members last summer, about 12-15 said they might attend a meeting in England. I hope a meeting at Oxford will entice even more of you. I am communicating with people in England about human rights and/or dissidents as possible themes for the meeting. I invite members to drop me a line with suggestions or observations.

We have accepted an offer from the San Diego Unitarians to co-sponsor their dramatic presentation, "Bertrand Russell Meets the Moral Majority." The time has been shifted from May 30th to some time in the fall.

(5) Treasurer Dennis J. Darland reports:

For the quarter ending 3/31/81:

BY BERTRAND RUSSELL

(7) Second thoughts. This is a preface ER wrote for a privately printed edition of "A Free Man's Worship". In it ER tells in what ways he would write it differently if he were writing it "today" (i.e., in 1923), 21 years after he wrote it originally. It is the edition that Tom Stanley writes about in (36).

PREFACE

A Free Man's Worship was written twenty-one years ago, and in that period of time most men undergo very considerable changes. These changes, in my own case, would lead me to use somewhat different words if I were writing on the same theme now, but I see no reason to think that they would be better words. At the same time, a Preface gives an opportunity for mentioning such modifications as may have a more than personal importance.

Fundamentally, my view of man's place in the cosmos remains unchanged. I still believe that the major processes of the universe proceed according to the laws of physics; that they have no reference to our wishes, and are likely to involve the extinction of life on this planet; that there is no good reason for expecting a life after death; and that good and evil are ideas which throw no light upon the non-human world. I still believe that, in times of moral difficulty and emotional stress, the attitude expressed in this essay is, at any rate for temperaments like my own, the one which gives most help in avoiding moral shipwreck. Indeed I believe this, if possible, more firmly than when I wrote. The outbreak of the war, apart from the general disaster, was to each one of us a personal crisis; to me it afforded an invitation to cynicism and despair. Experience showed that no good purpose was served by yielding to this temptation. But the fundamental attitude recommended in A Free Man's Worship, which was the one that I strove to maintain, appears to me in retrospect the one which I should still wish to preserve in a world cataclysm, in spite of the isolation which it entails.

There are, however, two points in

regard to which, if I were writing now, I should wish to introduce some modification. The first of these concerns materialism; the second concerns the scope of the notions of good and evil.

As regards materialism, the views expressed in the essay would, presumably, be generally classed as materialistic. But speaking metaphysically, I do not by any means believe in the reality of matter, which I regard as a mere logical construction convenient for every-day purposes and for the approximate statement of physical laws. Matter, as commonly conceived, is supposed to persist and exercise force. But according to the physics of relativity, all that ultimately exists is a world of fleeting events, which coexist and succeed each other according to certain laws. There are no permanent substances and there are no such entities as "forces." For this reason it is an imaginative error to regard matter as persisting any more than an individual spirit persists, and it is an undue survival of an outworn point of view to speak of matter as possessing power. "Power," like "force," is a concept for which a true metaphysic (so at least I believe) will find no place. The imaginative outlook demanded by such a metaphysic is difficult and novel. Certainly it would be in some points different from that expressed in A Free Man's Worship. But I doubt whether it is possible, as yet, to express it in literary form, without philosophic subtleties.

This question, however, is less important, in our present connection, than it might naturally be thought to be. The reason is, that it makes no appreciable difference to human destiny. It does not alter the nature of death, or of its antecedents and consequents. It does not in any way humanize the universe of physical science, or diminish our grounds for believing the course of that universe to be quite alien to our desires. Those aspects of materialism which were inimical to religious orthodoxy remain unaffected; all that is affected is its habit

of treating matter as a "substance," capable of being imaginatively personified, and even hated, as in the doctrine of the Manichaeans. The "events" which remain as the ultimate constituents of the physical world cannot rationally be regarded with love or hate, or with any emotional attitude except that of intellectual curiosity. But from the point of view of human life, and the place of good and evil in the world, the change from matter to "events" makes no difference whatever.

It remains to consider the scope of good and evil. At the time when I wrote this Essay, I believed good and evil to be what is called "objective," that is to say, I believed that if one man judged a certain thing to be good, not merely in its effects, but in itself, while another judged it to be in itself bad, one of them must be mistaken. I did not believe that, in judging a thing to be good, we are merely expressing our own emotional attitude to it, so that another man, whose emotional attitude is different, may equally legitimately judge it to be bad. Now I do believe this, for a variety of reasons which cannot be set forth in this place. I believe, that is to say, that good and evil are what is called "subjective." The practical effect of this is less than might be thought. In the first place, if two men do in fact differ as to what they think good, little is gained by insisting that one of them is in error, so long as no method is known of deciding which of them it is. In adding up accounts, if two men obtain different results, a little care in repeating the calculation will show which (if either) is right; but in ethical disputes no method has ever been found of compelling agreement. That being so, it is as well to recognize that we have to deal with an emotional difference, not an intellectual one, and that argument is as fruitless as in the case of two people of whom one likes oysters while the other does not. But in the second place, ultimate ethical differences, when irrelevancies have been

cleared away, are very rare. It must be admitted that they do exist; those who believed in eternal damnation regarded the punishment of sin as good in itself, quite apart from any reformatory or deterrent effect, while most moderns regard punishment as in itself a regrettable necessity, to be justified (if at all) by its good effects. In spite of such instances, however, it will usually be found, if an ethical question is stated in a manner sufficiently abstract to avoid party passion, that people do not differ much as to what is ultimately desirable on its own account, but only as to the means of obtaining it. Everybody is agreed that happiness is better than unhappiness, love than hate, and knowledge than ignorance. Practical disagreements arise, not through divergent opinions as to what is worth having, but through the fact that we all want it for ourselves or our class or our nation, rather than for all mankind impartially. Practical disagreements also arise as to the means of obtaining what all desire, but these are, in theory, capable of being settled by purely scientific arguments. Moreover they are very often a cloak (usually unconscious) for individual or collective selfishness, which is not defended in theory, though it is always obtruding itself in the stress of life. These causes of ethical dispute are amenable to ethical or scientific argument, even though we admit that, in the last analysis, good and evil are "subjective." On this matter therefore, as in regard to materialism, the points we have been considering affect only the manner of expression, not the fundamental attitude and outlook. In a happier world, an easier attitude might be possible; but in a world so full of horror as the one in which we find ourselves, it is difficult to see how anything less unbending can withstand the assaults of despair.

BERTRAND RUSSELL

(8)

"What Life Has Taught Me" by Twenty-Five Distinguished Men & Women", selected and arranged by Sir James Marchant, was published by Oldhams Press Limited, London, in 1948. BR, one of the 25, contributed this:

incite to war. I have had to admit that gains are never secure, and that benefits to which men have grown accustomed are liable to be carelessly tossed aside in moments of excitement. I have had to face the possibility that perhaps knowledge is a misfortune, and only ignorance can preserve human beings from mutual extermination.

These facts, and others like them, are to be assimilated, but afford no argument against the desirability of what they prove to be difficult. We know that democracy is possible, since there are countries where it exists; we know that tolerance is possible, for the same reason. If there are populations incapable of the compromise and mutual forbearance upon which tolerance and the success of democracy depend, that is no reason for not valuing these things, but only for not attempting to approach them by short cuts, and for studying the conditions which, hitherto, have made them possible where they were possible. There is a type of person, all too common in the world of practical affairs, who is determined to be effective at all costs, and who, if he cannot do good, is content to do harm. If he knows how to make dynamite but not how to build houses, he will blow up existing buildings, causing a greater racket and a quicker change than any architect could hope to cause. And so, when democracy proves difficult, dictators arise, and take pride in the multiplicity of the hopes that they have brought to ruin. If I had to make up moral maxims for the young, my first would be: "It is better to do a little good than much harm."

Respect for the individual—a very essential part of the Liberal creed—is a less definite matter than democracy or legal toleration, and more hedged about with limitations and provisos. What I mean by it is rather a state of feeling than a definite precept. It is not always possible, in practice, to treat an individual with respect, for example, if he is a homicidal maniac. But I will try first to indicate what I mean, and only then consider what life has taught me as to its practicability.

Human beings impinge upon each other in many ways. Where there is food for one, and ten people to eat it, there will be conflict. Where two rivals each desire to be supreme in one community, at least one of them must be disappointed. Where there are many religions, each claiming to be the unique repository of absolute truth and the sole means of eternal salvation, it is difficult for them to live in peace with one another. In the present day, those who believe in State trading and those who believe in private capitalism are finding it very hard to adjust their differences. It is certainly not always possible for conscientious men to avoid violent conflict, since two creeds, both impersonal and both held with perfect sincerity, may be mutually incompatible.

But much the greater part of the violence in human relations would be prevented if men could feel and practise the virtue which I am calling "respect for the individual." Primarily, this consists in a great reluctance to inflict humiliation. In former times hardly anyone (except King Lear when he was mad) saw any harm in this. The stocks and the pillory were opportunities for the jeers of hostile crowds; criminals were branded so that their disgrace became indelible; children were not only flogged, but unmercifully mocked. This sort of thing was dying out during the nineteenth century, but has been revived in recent times. The Nazis, in their milder moods, dressed Jews in ridiculous costumes, and drove them through the streets wearing placards saying "I am a Jew." After the liberation of France, female collaborators, shorn of their hair, were exhibited to the execration of their neighbours. In all totalitarian countries, punishment has

Tsarist government, which shocked enlightened opinion throughout the world, was provoking a revolutionary opposition from which something infinitely better was to be expected before long.

There was always the possibility of war, but Hague Conferences and the Concert of the Powers gave grounds for hope that an explosion could be deferred until the probably not distant date when the Social Democrats acquired control in Germany. And surely, in an epoch of sane progress, men could not be so mad as to jeopardize everything in the gamble of a world conflict. So I, in common with most others of liberal outlook, thought and felt in the years before 1914.

The experience of subsequent years, while it has not changed my views as to what would be desirable, has shown that the road to the realization of nineteenth-century hopes is much longer and more arduous than it had seemed. The forces of obscurantism, irrationality, cruelty, and ruthless strife have shown themselves (temporarily, we may hope) capable of defeating the movement towards ordered progress. A war in defence of freedom, even when victorious, inevitably involves the sacrifice of some part of what is being fought for. The world in which we find ourselves is nearer to the world of Hitler's dreams than it was before 1933; in this impersonal sense, some part of the victory was his. To take only one instance: there is far more anti-Semitism, both in England and in America, than there was before Hitler's persecution of the Jews began. The First World War, we were told, was a war to end war, and for a moment it seemed as if it might achieve this object; but no one dares to maintain that the Second World War can have any such outcome. Instead, the menace of the atomic bomb suggests the futility of all hopes for the immediate future of mankind.

This gloomy situation may be met in various ways. The easiest, and perhaps the most natural, is "let us eat and drink, for tomorrow we die." If this attitude is widely adopted, there is no doubt that tomorrow we shall die, and not only we, but the whole civilized way of life gradually built up by the Greeks and Romans, Christianity and science. Perhaps it is now too late; perhaps the seeds of death, nourished in the soil of the unbridled lust for power which moralists have never succeeded in curbing, cannot now be prevented from bearing their dreadful fruit; perhaps the discipline of a dark age is necessary before a saner civilization can arise. If so, those who say "let us eat and drink" are in the right: forethought is folly, and intoxication—alcoholic or spiritual—the only possible alleviation of despair.

But while there remains any chance that this utter pessimism is excessive, I shall refuse to adopt it. There is still a chance of averting disaster, and to increasing that chance all the efforts of those who feel a responsibility towards the world should be directed.

The lessons that life has taught me during the present century are not cheerful ones. I have had to admit that sheer cruelty plays a much larger part than I thought in the make-up of a large proportion of mankind. I have had to admit that, when the present is painful, men, for the most part, will seek alleviation, not in rational measures which might produce gradual amelioration, but in myths inspired by hatred and phantasies of power, leading to outbursts of violence which intensify the evils by which they are caused. I have had to admit that when suffering is intense and widespread it generates callousness: large-scale atrocities and cruelties which, fifty years ago, would have caused a universal outcry, now pass almost unnoticed unless they can be used to

WHEN I UNDERTOOK to write on this subject, I did not realize how difficult I should find it. Of the things which I now believe, some spring from my own temperament, some from reading and reasoning, and some from experience; it is only these last that can be said to have been taught me by life. But to separate them from the others is a matter of hazardous psychological conjecture.

When I was young, if I had heard of an elderly man writing on this subject, I should have had very definite expectations. I should have looked for a collection of moralistic platitudes explaining his success, such as: "Good habits cannot be acquired too early in life. Such modest achievements as may have been mine I attribute to early rising, cold baths, abstinence from tobacco, moderation in alcohol, but above all regular work, day in, day out, with occasional holidays devoted to healthful exercise in the Alps or on Highland grouse moors." But the splendid certainties of those days are gone, and I cannot speak to the young of this time with the same hope of imposing on their credulity.

For my part, a large proportion of my activities has been devoted to logic and mathematics, and to the more abstract aspects of the empirical world, such as space and time. On such matters life has nothing to teach; on the contrary, it has always seemed to me that the spirit of impartiality and detachment which they demand has an important part to play in teaching how life should be lived. Perhaps as a result of these pre-occupations I have learnt less from life than most old men have; I have sought rather, in a platonic spirit, to mould life to a pattern than to mould the pattern to what life would have suggested as the line of least resistance.

But in saying this I am thinking of my adult life. The pattern that has influenced me was, of course, formed by early influences, and might have been very different if I had grown up in a different environment. The Jesuits used to say that the first seven years are decisive; psycho-analysts sometimes speak as though character were determined by what happens to a child during its first three years. However that may be, I recognize that, in my own case, my character, tastes, and ideals were, in the main, fixed by the time I reached the age of sixteen. Of course many things then were only in embryo, but the seed had been sown, and could only produce a growth of a certain species.

In practical matters I was brought up in the creed of nineteenth-century aristocratic liberalism, involving toleration, democracy, freedom of opinion, and respect for the individual. I have never seen any reason to abandon any part of this creed, though I have been more conscious at some times than at others of its apparent or temporary limitations. Until 1914 I shared the optimism which then seemed reasonable. Parliamentary institutions were firmly established in America and Western Europe, the German Reichstag was a vigorous body which had every prospect of increasing its power; Japan had a Diet, Russia acquired its Duma in 1905, and China attempted to adopt democracy in 1912. No reason appeared for doubting that all the world, before long, would be governed by democratic representative institutions.

Toleration, equally, seemed assured of victory. The days when Bradlaugh had been prevented from taking his seat were in the past; the vindication of Dreyfus led to a Liberal era in France. In Germany, it is true, men who made fun of the Kaiser suffered a few months' imprisonment, but I doubt if there is now any country outside Great Britain and the Dominions where the penalties for political heresy are as slight as they were in Germany between 1900 and 1914. The intolerance and cruelty of the

consisted partly of making its victims, under the influence of torture, behave in ways that destroyed their self-respect; confession, begging for mercy, and betraying comrades were the commonest of these ways.

To anyone possessed of sympathy and psychological imagination, this sort of thing is infinitely painful. When a human being has been humiliated beyond a point, something of value in him has been irreparably destroyed. The Stoics maintained that a man could always avoid this damage by the exercise of his own willpower, but we now know that this is false. There is no one whose will cannot be broken by torture which is sufficiently severe and sufficiently prolonged, but apparently the ancients were less ingenious in these ways than the governmental fiends of our day. The knowledge of these dark facts saps most men's resistance at an early point, since they are aware that it will give way sooner or later. Consider a German who was a Communist till 1933, then a Nazi till 1945, and now (in the Russian Zone) is again a Communist. What self-respect can such a man have retained? What crimes will he refuse to perform, and in what atrocities will he be unwilling to bear a part? And almost the whole of the Continent of Europe is full of such men, many of them in positions of some authority.

Aristocratic pride was formerly regarded as a virtue, in part with justice, and in part not; it was a virtue in so far as it consisted in self-respect, but a vice when it involved contempt for inferior mortals. In Spanish peasants I have found the good element of pride without the bad; so I have in all classes in China. But in Western urban communities, and among those who have submitted to dictatorships, whether of the German or the Russian variety, not only is the good kind of pride usually absent, but there is no willingness to admit that it is a virtue. This is due, I think, to the diminution of economic, social, and political independence. It has been revived, to some degree, among Western wage-earners, by the growth of trade unionism. But it is hardly to be expected where success depends upon carrying favour with official superiors, or where unguarded candour may lead to execution or the concentration camp. To preserve it should be one of the aims of a good social system. In economic and political relations, and above all in education, self-respect should be carefully guarded, and humiliation avoided to the utmost extent that practical necessities permit.

The problem of combining the greatest practicable degree of respect for the individual with the indispensable controls required for public order, economic justice, and technical efficiency, is one of immense difficulty and complexity, requiring hazardous conjectures as to social consequences and a doubtful balancing of one set of ethical values against another.

In the province of education, respect for the child demands that instruction shall, as far as possible, be a matter of co-operation between teacher and pupil, not of a discipline imposed by force without the child's inward assent. It demands also that the beliefs and precepts instilled into the child's mind shall be such as are genuinely believed to be for his good, and not merely such as are convenient to the powers that be and calculated to make him die quietly whenever a predatory government can further its ends by having him killed. These considerations led me to believe in "progressive" education. At the same time, I am compelled to acknowledge that many "progressive" educators, in their zeal for individualism, neglect things that are of great importance. We are not only individuals, but also members one of another; education should make a man not only an upstanding individual,

but a useful member of society. This requires, on the one hand, adequate instruction, and on the other hand a social ethic. Everything possible should be done to make children enjoy learning, but learn they must, if they are to play their part in a civilized community. And in a world where organization has created great forces—churches, political parties, industrial corporations, and above all, armed States—a man who never thinks of himself as a unit in a group is impotent unless he is a great creative artist. It is necessary to find a cohesive force as powerful as patriotism, but without the limitations that make patriotism inadequate. Education must take account of the need for collective sentiments, with the correlative concept of social duty.

We need, and should teach in schools, loyalty to something greater than our own nation. It is nationalism that has brought the world to its present terrifying condition, and that is making an acceptable solution of international problems so hard to find. The loyalty that is needed is loyalty to Man, and not to Man merely as a biological species, but as the sole embodiment, so far as our knowledge extends, of certain values. Man is capable of creating and appreciating beautiful things, he is capable (within limits) of knowledge, he can experience love and admiration and ecstasy. It is true that he exemplifies also the opposites of these goods: the creation of hideous squalor, wilful ignorance, hatred and envy and anguish. But in spite of all that is horrible and all the insistent incitements to despair, I retain the belief that Man is capable of developing his better potentialities and gradually lessening the intensity of his evil passions. It is this belief, not a narrow nationalism, that should be taught in schools and made the basis of social obligation. It is this belief—so at least it seems to me—that alone supplies an antidote to despair that is rational, and not based upon some comforting myth that invites men to abrogate the primary duty of a sober search for what is true.

For the man who values individual liberty, perhaps the most perplexing of all problems is that of economic organization. The case for Socialism, broadly speaking, is derived from the concept of justice, not from that of liberty. But its opponents argue that justice may be too dearly bought if it involves the sacrifice of freedom. This is one of the matters as to which life has taught me most, but unfortunately, its lessons have been mutually contradictory, and have left me somewhat bewildered. Until 1914 I was a Liberal, and felt hesitations about Socialism because I feared that it would diminish freedom. The First World War made me a Socialist, because I thought that Socialist States would be less warlike than States inspired by predatory capitalism. But the Soviet régime, which I have always abominated as ruthless and dictatorial, showed how easy it is for a nominal Socialism to develop an oligarchical tyranny more thoroughgoing and disastrous than any that is possible under capitalism. In the substitution of bureaucracy for big business I see no cause for rejoicing.

If Socialism is to be a boon and not a disaster, it must fulfil certain conditions. It must be democratic, in the Western sense, not in the perverted sense that the Soviet Government is endeavouring to popularize. And it is not enough that it should be democratic as a whole; there must be democracy in the various parts, as was suggested by guild socialism. Take, say, the iron and steel industry. If this industry is in the hands of the State, and its governing officials are appointed by the Government, they will have at least as much power as now belongs to the great capitalists who control the industry. Indeed, they are pretty certain to have more, since strikes against a democratically elected government will win less

sympathy than strikes do at present. Clearly the solution lies in extending, rather than in curtailing, the functions of trade unions. Every great industry should be controlled, so far as its internal affairs are concerned, by a trade union co-extensive with the industry. The general public, which is represented by the State, is interested in the amount and price of the product, but the mode of production and the appointment of managers concerns the industry itself, and should be in its hands—subject to an ultimate control by the State in the event of gross evils being established by a public inquiry.

Not only the industry as a whole, but each factory, should have a measure of self-government. If Socialism is not to stifle individual energy and initiative, it must be accompanied by an immense extension of federalism. The general principle that should govern all federal institutions is clear: whatever mainly concerns a subordinate group should be managed by that group, while what concerns its external relations should be managed by a federal authority. Thus there are matters concerning a single factory, matters concerning the national iron and steel industry as a whole, matters concerning its relations to the rest of the nation, and matters concerning its relations to the industry in foreign countries. Each of these should have its own democratically elected authority, with suitably limited powers. Short of some such system, Socialism will merely introduce a new tyranny, the tyranny of officials. And this will not long remain merely a matter of inequality of power; it will soon become—as the development of the U.S.S.R. has shown—a matter of inequality of income also. All the old privileges will reappear, without the exceptions and loopholes and irregularities that, in the old system, enabled men like Shelley and Darwin to do valuable work of which the community did not see the value.

All the questions that I have considered hitherto are overshadowed—and have been overshadowed ever since 1914—by the supreme problem of the abolition of war. If this can be solved, it is reasonable to hope that others will be solved in due course; but if it cannot be solved within the next few years, the outlook is one of utter and unmitigated disaster, at any rate for Western Europe, including Great Britain. And even if our complex social organization could survive one more great war, it could not survive a series, each worse than the last, combining continually more destructive forms of atomic energy with bacteriological warfare. Somehow the habit of war must be ended, and ended soon.

The atomic bomb, while it has made the problem more urgent, has also made its solution much less difficult. The American Government has proffered what would probably develop into an adequate system, but Russia has refused to accept the offer. The atomic bomb is such a terrible weapon that, if it were controlled by an international authority, that authority would be able to make aggressive war hopeless. This requires that all nations should submit to inspection by officials representing the international authority, and that any attempt to resist or obstruct their work should be treated as a *casus belli*. The United States, in spite of its initial advantage, is willing to submit to these conditions, but the Soviet Government has rejected the necessary limitation of the veto on the ground that it involves infringement of sovereignty. Without infringement of sovereignty human life, as we have known it, cannot long continue, unless some one nation succeeds in conquering the world.

What the world needs is the elimination of wars between nations by the creation of an international authority, possessed of irresistible force, and using that force in accordance with an agreed body of

international law. The first and most urgent step towards this end is the international control of atomic energy. To this step the Soviet Government is now the only serious obstacle.

Ever since the dawn of history, communists have oscillated between the opposite poles of dictatorship and anarchy, involving the opposite dangers of ossification and dissolution or foreign conquest. Through science the world has become one community, which has to choose between common prosperity and common ruin. But it is as yet an anarchic community, destitute of government, filled with hatred and suspicion, profoundly obsessed with the archaic belief that one man's gain must be another man's loss. Under the stress of misfortune passions have grown more violent, and fear has increased mutual suspicion. Jews and Arabs, Hindus and Muslims, Chinese Communists and Chinese nationalists, carry on their little wrangles, while the dispute between Washington and Moscow threatens to reconcile them all in a common grave. The new danger is so vast and so terrible that men shrink from allowing themselves to realize it; they shrink still more from

admitting that ancient enmities, burning controversies, and passions are shibboleths have all become absurd, pathetic and trivial, like sailors quarrelling over a sixpence while their ship is sinking.

What mankind needs is not law alone, or liberty alone, but each in its own province: law to control impulses of aggression and tyranny, freedom for impulses that are creative or for the common benefit. Various obstacles stand in the way, partly institutional, partly psychological. Of the institutional obstacles the most serious and the most dangerous is national armaments. If this were overcome, the resulting prosperity and relief from fear would gradually promote sanity, and lead to the discovery of methods of diminishing the psychological obstacles of cruelty, envy, greed, and lust for power—methods which would be partly psychological, partly educational, and partly economic. The problem of creating a happy world is not insoluble, provided the will to solve it existed. Will men prefer disaster, or will they acquiesce, however reluctantly, in their own salvation?

This is the second of the two volumes that BOB DAVIS brought from England last year. For the first one, see RSN29-7.

(9) A foreword. BR wrote the foreword to the English edition of Corliss Lamont's Freedom Is As Freedom Does. This is from JACK RAGSDALE's copy, a second edition, dated 1956:

number of his friends as Communists, he may obtain absolution.

As in ancient Rome and modern Russia, this system has produced its crop of professional informers, mostly men who once were Communists and who now denounce others at so much a head. These are generally men over whom the Government holds the threat of prosecution for perjury for having at some time denied they were ever Communists. They are safe so long as they continue to do the dirty work demanded of them, but woe betide them if they repent. One of them, Matusow, after securing the conviction of a number of innocent people, went before a Federal judge and recanted. For this the judge said he would give him three years in prison. Although Matusow won this case on appeal, the Government currently is prosecuting him on another charge, that of perjury, for statements he made in his general recantation.

The police have, for many years, shown a complete disregard for the law and, so far as I can discover, no Federal policeman has ever been punished for breaking the law. The whole terrorist system would break down if one simple reform were adopted: namely, that criminals should be punished even if they are policemen.

The evils of the system have not failed to be condemned by some who cannot be accused of subversive opinions. This is true especially of the Federal judiciary. For example, as Mr. Lamont relates, the Federal Court of Appeals in San Francisco objected to the Government's "system of secret informers, whisperers and tale-bearers" and went on to say: "It is not amiss to bear in mind whether or not we must look forward to a day when substantially everyone will have to contemplate the possibility that his neighbours are being encouraged to make reports to the FBI about what he says, what he reads and what meetings he attends." On the whole, however, such protests from "respectable" citizens are distressingly rare. The persecution of minority opinion, even when not obviously connected with Communism, is a thing which has not been imposed from above, but suits the temper of most men and receives enthusiastic support from Juries.

At first sight, it seems curious that a great and powerful country like the United States, which contains only a handful of Communists, should allow itself to get into such a state of fright. One might have expected that national pride would prevent anything so abject, but such a view would be one which could only be suggested by a false psychology. We are all of us a mixture of good and bad impulses, and it is almost always the bad impulses that prevail in an excited crowd. There is in most men an impulse to persecute whatever is felt to be "different." There is also a hatred of any claim to superiority, which makes the stupid many hostile to the intelligent few. A motive such as fear of Communism affords what seems a decent moral excuse for a combination of the herd against everything in any way exceptional. This is a recurrent phenomenon in human history. Whenever it occurs, its results are horrible. There is some reason to hope that Russia is past the worst in this respect. When McCarthy fell into disfavour, it seemed as if persecution in the United States might diminish. So far, the improvement has been less than one might have hoped. But improvement has begun, and it would be no excess of optimism to think that it will continue, and reach a point where men of intelligence and humane minds can once more breathe an atmosphere of freedom. If this comes about, books such as Mr. Lamont's will have served an immensely important purpose.

It is a pleasure to have the opportunity of introducing to the British public Mr. Corliss Lamont's book *Freedom Is as Freedom Does*. The book is an admirable epitome of the various forms of attack on personal liberty that have been taking place in America in recent years. So far as I am able to judge, Mr. Lamont is wholly reliable as to facts, and he has shown good judgement in selecting from an enormous mass of material. Every friend of freedom ought to lay to heart what he has to say. This applies not only to Americans, since there is no country where liberty may not be endangered.

All countries (except perhaps Holland and Scandinavia) are liable to waves of hysteria, though the extent of the damage caused by such waves differs greatly in different places. France had such a wave in 1793 and, in a lesser degree, during the Dreyfus case. Germany had it in the worst possible form during the time of Hitler. Russia had it under Stalin. And America has had it three times, in 1798, in 1919-20, and since the outbreak of the Korean War. Let us not flatter ourselves that Britain is exempt. From the accession of Charles I until the Revolution of 1688, hysteria of all kinds—left wing, right wing, religious, and economic—was rife. In reading what has happened in America since 1950, I constantly feel as if I were reading about England under the Stuarts. Congressional Committees are the counterpart of the Star Chamber, and Senator McCarthy seems like a re-incarnation of Titus Oates who invented the Popish Plot. Nor is it necessary to go so far back. In the days of the French Revolution, when the mob sacked Dr. Priestley's house and the Government employed spies and *agents provocateurs* to ferret out sympathizers with the Jacobins, England was not unlike what America has been lately. The younger Pitt, if he found himself now in Washington, would feel quite at home. I think it important that English readers should remember such facts and should not react to what is amiss in America by smug national complacency. I think it also important to remember, in protesting against loss of liberty in America, that the loss in Russia was very much greater and that the defects of the American system afford no argument in favour of the Soviet dictatorship.

In spite of these provisos, I cannot deny that some of the facts about the anti-Communist hysteria in America are utterly amazing. Who would have guessed that the *Girl Scout Handbook*, a work intended to instruct what we should call Girl Guides in their duties, was savagely criticized because it praised the United States Public Health Service and spoke favourably of the United Nations, "the handiwork of that arch-traitor Alger Hiss"? So severe was the censure that a correction had to be immediately issued omitting the offending matter.

Perhaps the most valuable chapter in Mr. Lamont's book is the one called "Police State in the Making." The Federal Bureau of Investigation (FBI) has been steadily building up its power and spreading terror far and wide. It has 130 million fingerprint cards and a system of indexing them of which it is enormously proud. Only a minority of the population do not appear in a police dossier. Members of the FBI join even mildly liberal organizations as spies and report any unguarded word. Anybody who goes so far as to support equal rights for coloured people, or to say a good word for UN, is liable to be visited by officers of the FBI and threatened, if not with prosecution, at least with blacklisting and consequent inability to earn a living. When a sufficient state of terror has been produced by these means, the victim is informed that there is a way out: if he will denounce a sufficient

RUSSELL'S ONLY PUBLIC APPEARANCE

(Thank you, DON JACKANICZ)

ER MEMORIAL

- (11)
- Memorial bust of ER
- now stands in the gardens of Red Lion Square, London. The following photo of Dora and the bust, taken when the bust was unveiled, October 23, 1980, is the one that was used in The Times. We reproduced it (poorly) from a copy of The Times (RSN28-48a). Now we reproduce it directly from a print supplied by The Times, for which we thank The Times and Peter Cadogan, who procured it.

- (12) * Contributions needed. The Memorial Appeal Committee still needs another 600 pounds, to finish paying for the bust, so contributions are still very welcome. Send tax-deductible contributions to the newsletter (address on Page 1, bottom), with checks made out to "Bertrand Russell Society, Inc."
-

BR QUOTED

- (13) BR, MCP. The following appears in the course of a long article by John Russell in The New York Times (February 1, 1981, p. D12) about the way men and women have been depicted in the arts during the past 100 years:

The human images that have a large popular constituency in recent art have been of women: doughty and all-enduring in the case of Henry Moore, ample and placidly observant in the case of Auguste Maillol, bouncy and Sousa-esque in the case of Gaston Lachaise. Men shrank, meanwhile, until we came to hear Hamlet's "What a piece of work is a man" as ironical.

No matter how you look at it, there's no doubt which way is up. Men blew it. They blew it as statesmen, as thinkers, as managers and coordinators, and they blew it as lovers. The philosopher Bertrand Russell was a very clever man indeed, by any standards, but as far as posterity is concerned he blew it when he told his first wife not to bother educating herself on his account. ("You really need not trouble yourself about your degree of intellect," he wrote to her. "No woman's intellect is really good enough to give me pleasure.")

We wrote Mr. Russell as follows: "Your Bertrand Russell quotation was a surprise, because I have been under the impression that Russell championed women's rights all his life, in print and also in action (as when he stood for Parliament, campaigning for votes for women in 1907, and lost.)"

He responded:

Alys Russell told me of BR's attitude when I saw her (often) in the late 1940s. The exact words I used come from Barbara Strachey's recent book on her family -- published 1980 by Gollancz in London -- I'm afraid I forgot the title.

Championing women's rights and prizing them as pure intellectuals are not the same thing? Or were not to BR when he was young?

(Thank you, KATHY FJERMEDAL)

ERS PROJECTS/RUSSELL ON X

Here are 4 short papers in our series, "Russell on X", written in response to the request in RSN28-10.

- (14) "Russell on Marx" by DAVID S.HART:

Russell considered Marxism false in theory and disastrous in practice. His published criticisms of Marx began in 1896 in his first book, German Social Democracy. The research for this book was done during a period in which Russell lived in Berlin with his first wife, Alys. Though at the time Russell was a Liberal, his views on Marxism remained largely unchanged, even after he became a socialist. It was because Russell was a non-Marxian socialist that he received the scorn of both the Right and the orthodox Left, especially in the years that followed the Russian revolution.

While Russell often expressed an admiration for the style and sincerity of the Communist Manifesto, he had little respect for Das Kapital. As a contribution to pure economic theory he considered it seriously flawed and of little importance. Marx draws from his Theory of Value the conclusion that wages represent the value of what is required for a worker's "production", i.e. his subsistence. Russell did not think that the level of wages was due to abstract necessity; and he felt that Marx had ignored the possibility of raising wages by means

such as trade unions. In addition, Russell argued that wages are affected by other factors; for example, skill. As he puts it: "a successful Queen's Counsel costs no more to produce than any briefless barrister." Russell noted also that Marx's theory assumed Malthusian conclusions on population: conclusions that, even in Marx's time, experience had shown to be false.

Marx's Theory of Surplus Value was examined, and rejected, by Russell. According to this theory, the capitalist's profit is the value of what the laborer produces in the time beyond that required to meet his wages. Marx based value on labor-time and wages on labor-power. Russell thought this was inconsistent. He held that the conclusion that value is based on labor-time depends on the proposition that wages are based on labor-time, which Marx rejected. Moreover, Russell claimed that the view that value is based on labor-time is false. He saw demand as an independent factor that contributes to value; a factor not wholly an outgrowth of material conditions. That Marx ignored demand, Russell pointed out, was the result to be expected from the materialist theory of history, which can view demand as an effect, but not a cause. Russell found also that Marx did not distinguish between the idle rich and the small capitalist. This led Marx, according to Russell, to disregard what the small capitalist contributes to the value of his product. The error in theory becomes a calamity in practice when, for example, no distinction is made between the small land-owning farmer and the giant landlord.

As for Marx's Law of Concentration of Capital, Russell thought that it was true to a large degree in industry, but false in agriculture. Moreover, he pointed out that the concentration of capital does not imply its concentration in a few hands. Russell gave the example of a stock-holding company to illustrate his view that the number of persons with an interest in capital may actually increase. This is connected with an important difference between Russell and Marx. Marx thought that industrial development would divide society into two hostile camps. Russell believed quite the opposite: that industry in advanced countries tended to blur class differences. He saw that new jobs were being made for scientific and skilled workers, as well as for managers; and that these workers were likely to have divided class loyalties.

Though Russell rejected Marx's laws of economic and historical development, he was in sympathy with much of Marx's indictment of capitalist society. However, Russell's views on how change was to be brought about were in complete contrast to the Marxian doctrine of class war. Russell thought it a great defect of orthodox Marxism that it had no program for approaching its goals by degrees. The all or nothing, death or glory attitude of the class war participants leads to a hot conflict in which the value of both liberty and democracy is forgotten. Russell spent a large part of his life fighting evils quite as great as any Marx had foreseen; but the tool he valued most was argument, not force. In Roads to Freedom, Russell says²:

"Persuasion is a slow process, and may sometimes be accelerated by violent methods; to this extent, such methods may be justified. But the ultimate goal of any reformer who aims at liberty can only be reached through persuasion. The attempt to thrust liberty by force upon those who do not desire what we consider liberty must always prove a failure."

Russell and Marx each pictured an international movement that would put an end to war. Marx's vision was connected with his doctrine of class war. He thought that a person's chief loyalty was to his class; and that wars would cease when the proletariat of all countries had united to overthrow bourgeois society. Russell felt that Marx overestimated class loyalty and underestimated nationalism. That most of Marx's followers supported their national governments at the time of the first world war must surely add weight to Russell's view. However, Russell's most serious objection to Marx's internationalism was that Russell believed that no stable international union could be brought about as the result of a class war fueled by hate. Again, from Roads to Freedom³:

"There is no alchemy by which a universal harmony can be produced out of hatred. Those who have been inspired to action by the doctrine of the class war will have acquired the habit of hatred, and will instinctively seek new enemies when the old ones have been vanquished."

In looking at Marx's philosophy, Russell was careful to distinguish between traditional materialism and the dialectical materialism of Marx. The older materialism is silent on economics and politics; indeed it is compatible with any social and economic system. In Marx's materialism, however, it is not matter alone, but matter and its relation to percipients that is important. Perception is not a passive relation, but an activity in which subject and object are altered. Russell took a very different view; he held that our knowledge makes no difference to the thing known. In addition, he believed that there is no reason why something cannot exist apart from being perceived by any mind. According to Russell, a result of Marx's materialism was a pragmatic theory of truth; something Russell rejected throughout his life, whether the proponent was Marx, James, or Dewey.

Russell disagreed with Marx's view that there is a logical ordering to human events. He felt that this view, as well as Marx's belief that revolution would lead inevitably to progress, reflected 19th century optimism. Russell thought that the practical result of these views was **disastrous**. He believed

that they gave to Marxism a dogmatic certainty that allowed its followers to dispense with ethical considerations. From Freedom and Organization 1814-1914⁴:

"Communists always assume that conflicts between Communism and capitalism, while they may for a time result in partial victories for capitalism, must in the end lead to the establishment of Communism. They do not envisage another possibility, quite as probable, namely, a return to barbarism."

It appeared to Russell that in applying a dialectical method to historical development, Marx considered only one series of thesis, antithesis, synthesis: the series that ends with the establishment of communism. Since class conflicts provided the spur to progress, one wonders whether Marx felt that any progress within communism was possible. Perhaps Russell's most humorous expression of this sentiment is to be found in German Social Democracy⁵:

"The communistic state ought, according to the development-conception of the dialectic method, to form the starting point of a new triad, the thesis for a new antithesis; but if this idea ever occurred to Marx, he must have thought that 'sufficient unto the day is the evil thereof,' for he nowhere gives a hint of anything better than the socialistic community."

Criticisms of Marx can be found in almost every one of Russell's many books. One might perhaps be tempted to wonder why Russell would return so often to theories he thought false. Russell saw that because Marx's work contained an important kernel of truth, it had a natural appeal; but he saw also that if it was taken as the whole truth by passionate adherents, its mistakes in theory were likely to lead to disasters in practice. As in many areas, Russell's vision proved remarkably clear. But beyond any theoretical objections was Russell's conviction that Marxism was a movement driven by hate. This, more than anything, went against Russell's belief that a kinder world could be built only upon a foundation of love and intelligence.

(15) "Russell on Education" by BRUCE A. ROMANISH provides representative quotations that highlight BR's views:

On teachers:

The teacher should love his children better than his state and his church; otherwise he is not an ideal teacher. (1)

It is necessary that teachers have some knowledge of psychology, considerable training in the art of teaching, and a certain freedom to relax the curriculum where necessary. (2)

...the teacher is far the best of the forces concerned in education, and it is primarily to him or her that we must look for progress. (3)

On teaching patriotism:

If you wish a man to commit some abominable crime, from which he would naturally recoil in horror, you first teach him loyalty to a gang of arch criminals, and then make his crime appear to him as exemplifying the virtue of loyalty. Of this process, patriotism is the most perfect example.

...those who consider that children should not be taught to regard wholesale slaughter as the noblest work of man are denounced as renegades, and friends of every country but their own. (4)

Patriotism of the nationalistic type...ought to be mentioned as a form of mass hysteria to which men are unfortunately liable, and against which they need to be fortified both intellectually and morally. (5)

On the press:

The press is such as the public demands, and the public demands bad newspapers because it has been badly educated. (5)

On freedom of opinion:

The fundamental argument for freedom of opinion is the doubtfulness of all our beliefs. If we certainly knew the truth, there would be something to be said for teaching it. But in that case, it could be taught without invoking authority, by means of its inherent reasonableness. (6)

On orthodoxy:

Orthodoxy is the grave of intelligence, not matter what orthodoxy it may be. And in this respect, the orthodoxy of the radical is no better than that of the reactionary. (7)

On punishment:

I believe that punishment has a certain very minor place in education; but I doubt whether it need ever be severe. I include speaking sharply or reprovingly among punishments. The most severe punishment that ought ever be necessary is the natural spontaneous expression of indignation. (8)

On competition in education:

In education, the ideal of competition has had two kinds of bad effects. On the one hand it has led to the teaching of respect for competition as opposed to co-operation, especially in international affairs; and on the other hand, it has led to a vast system of competitiveness in the classroom, and in the endeavor to secure scholarships, and subsequently in the search for jobs. (9)

...the first thing the average educator sets to work to kill in the very young is imagination. Imagination is lawless, undisciplined, individual, and neither correct nor incorrect; in all these respects it is inconvenient to the teacher, especially when competition requires a rigid order of merit. (9)

On truthfulness:

I would have my children truthful in their thoughts and words, even if it should entail worldly misfortune, for something of more importance than riches or honors is at stake. (10)

On freedom and discipline ("permissiveness"):

Very rigid discipline, such as that of soldiers in wartime, makes a man incapable of acting without the goad of external command. On the other hand, complete freedom throughout childhood does not teach him to resist the solicitations of momentary impulse; he does not acquire the capacity of concentrating upon one matter when he is interested in another, or of resisting pleasures because they will cause fatigue that will interfere with subsequent work. The strengthening of the will demands, therefore, a somewhat subtle mixture of freedom and discipline, and is destroyed by an excess of either. (11)

Many things which must be thought about are uninteresting, and even those that are interesting at first often become very wearisome before they have been considered as long as is necessary. The power of giving prolonged attention is very important, and it is hardly to be widely acquired except as a habit induced originally by outside pressure. (12)

On dogmatism and scepticism:

Knowledge, like other good things, is difficult, but not impossible. The dogmatist forgets the difficulty, the sceptic denies the possibility. Both are mistaken, and their errors, when widespread, produce social disaster. (13)

(16) "Russell on Morality" by LEE EISLER is drawn from his book, Morals Without Mystery:

Russell makes a simple distinction between ethics and morals. Ethics has to do with ends, with values, with what is "good". Morality has to do with means, with ways of achieving the values or "goods" that ethics has chosen.

In considering values, Russell takes the view that human happiness is the most important "good".

Consequently, of all the actions that are possible in a particular set of circumstances, the one that seems likely to produce the most happiness is the morally right action, and any other action is morally wrong, immoral.

In considering happiness, Russell is interested only in quantity, regardless of who the people are who will experience the happiness. This kind of impartiality, which does not favor one person or group over another, is capable of winning the allegiance of all, for all will be treated fairly. It also deals with

the problem of "egoism" -- should my desires count more than other people's? Here's what Russell says on this:

Suppose I am a small boy who has been secretly given twelve chocolates, and I have eleven companions who have been given none. I may have such limited desires that I surreptitiously eat all the twelve myself, in which case each gives me less satisfaction than the one before, and the last perhaps hardly any. Or I may be so filled with benevolence that I give one to each of my companions, and eat only one myself. In that case, each chocolate gives as much satisfaction as the first one gave in the other case, and the total of satisfaction is greater than in the other case. Therefore the benevolent boy causes more of the good to exist than is caused by the selfish boy. This illustrates how some desires minister more to the general good than other desires do.

Now we run into a problem. Suppose I invite some friends to see a certain movie because I think they will enjoy it. We go to the movie, and it turns out that some of the group didn't like it. I learn that the ones who had not liked it had wanted to see a different movie. This shows the trouble we get into when we give other people what we think will make them happy. It is better to give people what they think they want; we should try to satisfy their desires.

Although giving people what they want does not guarantee that they will be happy, it will surely produce more happiness than giving them what they don't want, or what we think they want or ought to want.

So instead of aiming to produce maximum happiness directly, we try to achieve it indirectly, by aiming to produce maximum satisfaction of desire (no matter whose.)

But how can we tell whether an act seems likely to produce maximum satisfaction of desire? We can examine the kinds of desire that are to be satisfied.

Russell classifies desires into "compossible" (compatible) and incompatible desires. Compossible desires can be satisfied by the same state of affairs; incompatible desires cannot be. As Russell puts it:

If two men are both candidates for the Presidency of the United States, one of them must be disappointed. But if two men both wish to become rich, the one by growing cotton, the other by manufacturing cotton cloth, there is no reason why both should not succeed. It is obvious that a world in which the aims of different individuals or groups are compossible is likely to be happier than one in which they are conflicting.

Again, if two persons wish to own the same painting, the desire of at least one of them cannot be satisfied. But if two persons want to hear the same public concert in the park, the desires of both can probably be satisfied.

To sum up: pairs or groups of desires are either compossible or incompatible; more desire can be satisfied when desires are compossible than when incompatible.

It is also true that desires can be modified by social institutions (such as the criminal law or the economic system) and by the moral code (which determines praise and blame), or formed by early education. A wise society will use these means to modify desires, discouraging incompatible desires and encouraging compossible desires and their satisfaction, so as to produce maximum satisfaction of desire, and consequently of happiness.

* * * * *

This brief outline gives only the bare bones of some of what Russell had to say about morality. For more of his insights on morality and ethics -- in the superbly expressive language for which he is renowned (and which must surely have been a factor in the decision to award him the Nobel Prize in literature) -- see his Human Society in Ethics and Politics (New York:Simon & Schuster, 1955). The two indented quotations above are from HSEP, p. 37 and p. xix.

* * * * *

An interviewer once asked Russell whether his ideas on ethics and morals satisfied him. "No," said Russell, "but other people's satisfy me still less."

(17) 2 formats are now available for papers in the "Russell on X" series, as you may have noticed. Format #1 is a sort of essay with quotations, as in "Russell on Marx" (14). Format #2 is a collections of quotations, as in "Russell on Education" (15).

David Hart is writing "Russell on Power" and "Russell on Non-Economic Factors in Politics". ⁴here are still plenty of subjects left, such as RUSSELL ON RELIGION, RUSSELL ON CENSORSHIP, RUSSELL ON PHILOSOPHY, RUSSELL ON HAPPINESS, RUSSELL ON WOMEN'S RIGHTS, RUSSELL ON COMMUNISM, RUSSELL ON SEX, RUSSELL ON MARRIAGE, RUSSELL ON SCIENCE, RUSSELL ON PSYCHOLOGY, RUSSELL ON CIVIL LIBERTIES, RUSSELL ON DEMOCRACY, RUSSELL ON WARS, RUSSELL ON NUCLEAR ARMAMENTS, ETC., ETC.

* How about trying your hand at one?

BRS AWARD

(18)

Steve Allen will receive the 1981 Bertrand Russell Society Award. He is an unusual fellow. Though widely known as a comedian and durable TV performer, it is not generally known that he is interested in ideas. He has written many earnest non-fiction books ("Explaining China", "How To Think", "Ripoff" are a few) and serious fiction, such as "The Wake". What endeared him to the Award Committee was the PBS series, "Meeting of Minds", which brings together, in animated conversation, great figures and thinkers of the past. Mr. Allen wrote it and appears in it as moderator. The BRS Award plaque will say:

For using unique talents
in the service of public enlightenment
by inviting ordinary citizens
to meetings of many great minds

The New York Times recently had a feature story on the front page of its Business Section (2/16/81 p.D1) headlined STEVE ALLEN, THE CONGLOMERATE. The Times story is mostly about Mr. Allen's remarkably diversified activities as a public entertainer (including the writing of 4000 songs), but also includes the following:

Besides his penchant for entertaining America, Mr. Allen is also committed to enlightenment. "I have a philosophical concern that the American public is getting dumber," he says. "As we sit here engaged in idle banter, the American public is getting dumber. So I've done three things. One is 'Meeting of Minds.' A second was a record album called 'How to Think.' The third was an educational game called 'Strange Bedfellows.'"

Here's what Robert Lewis Shayon said about Steve Allen, in the "Saturday Review", about 25 years ago:

Mr. Allen is a thinking man's comic. His thoughtfulness has become more apparent to observers since his highly successful career as a TV entertainer began recently to proliferate, in a twentieth-century version of the Renaissance man, with buds of literary talent, musical composition, movie-acting, orchestra-conducting, even sermonizing as a lay preacher in a New York church, and, more recently, arguing in Hollywood for the ending of nuclear weapons testing.

Mr. Allen will not be able to attend the June meeting. The Award will be presented by Bob Davis at a private meeting. Mr. Allen will make a special tape, to be played at the June meeting at McMaster.

(Thank you, DON JACKANICZ, for much material on S.A.)

PROMOTING BR'S PURPOSES/NUCLEAR DISARMAMENT

(19)

From "The Bulletin of the Atomic Scientists" (January 1981, pp. 33-36):

The threat today**The Russell-Einstein Manifesto 25 years later.**

Joseph Rotblat is emeritus professor of physics at the University of London. For many years he was the editor-in-chief of *Physics in Medicine and Biology*; and for 28 years the chief physicist to St. Bartholomew's Hospital in London. He is a former secretary-general of Pugwash. This article is based on a paper he presented to the 30th Pugwash Conference in Breukelen, the Netherlands. Rotblat was a signer of the 1955 Russell-Einstein Manifesto.

(Thank you,
BOB DAVIS)

The development of the hydrogen bomb in the United States and the Soviet Union in 1953 marked the start of a deadly race, the nuclear arms race, with both sides manufacturing and testing bombs of ever-increasing destructive power. Even at that time, before the advent of ballistic missiles, these bombs delivered by manned aircraft could annihilate the largest centers of population. In the climate of intense mistrust, fear and hostile propaganda which prevailed at that time, it seemed highly probable that the Cold War would change into a hot war in which civilization would be

destroyed.

It was in those circumstances that the Russell-Einstein Manifesto was born 25 years ago. It was a time when the world situation appeared highly dangerous and the outlook for mankind was very gloomy. The idea that the scientific community should be actively concerned about the dangers to humanity, which arose largely through the work of scientists, was conceived by Bertrand Russell; it was immediately endorsed by Albert Einstein, whose signature to the Manifesto was one of the last acts of his life. Together with the signatures of nine other sci-

entists from six countries, the Manifesto was issued to the public in London on July 9, 1955.

While specifically calling upon scientists to assemble in a conference to discuss the means of averting the danger, it urged governments to realize that mankind had entered a new phase in which disputes must be settled by peaceful means, because there would be no victors in a nuclear war. The Manifesto also contained a powerful and moving appeal to the general public:

"We are speaking on this occa-

sion, not as members of this or that nation, continent, or creed, but as human beings, members of the species Man, whose continued existence is in doubt. . . . We shall try to say no single word which should appeal to one group rather than to another. All, equally, are in peril, and, if the peril is understood, there is hope that they may collectively avert it."

Looking back at the Manifesto from the perspective of a quarter of a century, it might appear that the hope expressed in it—that the peril may be averted—has been fulfilled.

The best evidence, of course, is that we are still here, that a nuclear war has been avoided, even though we came dangerously close to it on several occasions. Many factors have contributed to the restraint shown by the nuclear powers. Among these factors one must include the weight of evidence provided by scientists about the immediate and long-term disastrous consequences of a nuclear war.

But if, after congratulating ourselves on surviving so far, we take a sombre look at the world today, we must come to the conclusion that the peril has not been averted. Indeed, the world situation today is far more perilous than it was 25 years ago: the probability of a nuclear war during this century is very high.

For a time, during the past 25 years, the danger of a nuclear war appeared to have abated. Much trust was put into the deterrent value of nuclear weapons, and most people believed that we had reached a nuclear stalemate—that no side would risk an attack with nuclear weapons because the other side would retaliate and inflict unacceptable damage. However, it was not generally realized that this balance of terror was not a stable equilibrium, that it was in fact a dynamic balance, a spiralling arms race, in which technological advances and improvements compelled both sides to keep raising the level of armaments all the time in order not to fall behind. As a result of this, the nuclear arsenals have increased several hundred-fold, and we now have the equivalent of five tons of high explosives for every man, woman and child on this globe.

But more dangerous than this quantitative expansion was the qualitative advance, the sophistication of the new types of weapons and the fantastic precision with which they can reach and destroy a target many thousands of miles away. Each side is getting nearer to a situation where it may perceive that it has acquired the ability to knock out, in a first strike, a sufficiently high proportion of the enemy's missiles to reduce the retaliatory potential to an acceptable level. At present, a first strike capability is still remote, due to the invulnerability of submarine-launched missiles; but intense research on antisubmarine warfare may lead to greater detectability of the location of submarines, and thus give a first strike posture more credibility. Even those who believed in the deterrent now have to admit that the continuous qualitative progress in nuclear weaponry, far from giving greater security, has in fact made both sides much more vulnerable.

In addition to this vertical proliferation, we also have the increased danger of horizontal proliferation. Twenty-five years ago there were three nuclear powers; now we have officially five nuclear weapon states. But a sixth has demonstrated its nuclear capability by testing, and at

least two others are believed to possess nuclear weapons. A number of other countries are on the threshold of becoming nuclear weapon states, and the membership of the nuclear club is likely to increase. This trend can be attributed to the changed attitude of the nuclear powers towards nuclear war, which arose from the change of emphasis from deterrence to an offensive posture. If the great powers now consider the use of nuclear weapons as a means of winning a conflict, then why should not other nations aspire to possession of nuclear weapons, and in this way increase their security as well as prestige.

The change of attitude of the nuclear powers towards nuclear war has made the present situation extremely dangerous. For many years, and to most people even now, a nuclear war was unthinkable. Its consequences would be unacceptable; it would mean the end of civilization; and therefore it could never happen. But now we are told that a nuclear war is not only possible but that it could be won at a relatively low cost in casualties. The military strategists have for some years advocated the doctrine of flexible response, and this has now become the official policy of the U.S. government.

Technological advances in the arms race—especially the greatly improved accuracy—are mainly responsible for this new policy. Deterrence is by definition a defensive posture; a big bomb presents a real menace to a city even if it cannot be accurately targeted. On the other hand, in an offensive posture high accuracy is essential. With a small error in targeting, even nuclear weapons of low yield could ensure the destruction of a specific military object; this in turn makes possible the full utilization of MIRV (multiple independently-targetable re-entry vehicles), a device which enables one launcher to carry ten or more warheads, each programmed to hit a different target. Thus, the new technology has brought about a change in strategic doctrine, from deterring a nuclear war to fighting a nuclear war.

A fighting posture was, of course, postulated even earlier, in the decision to respond to a conventional attack in Europe with short-range nuclear weapons. The NATO countries have been basing their strategy on the concept of a limited nuclear war, fought with tactical nuclear weapons, "mininukes" and neutron bombs, designed to minimize damage to property if not to people.

The notion that one side can choose to wage a limited nuclear war is absolute nonsense. One side can start a war, but it takes two sides to keep it limited. The assumption that both sides will conduct the war like a chess game, each in turn making a move in accordance with agreed rules, is quite groundless.

In any situation involving the security or interest of the big powers,

the probability of isolating the conflict is very small. In particular, a clash in the European theater, initially intended to be limited to the use of tactical nuclear weapons on military targets, is likely to escalate: first by nuclear attacks on vital targets in the cities in the theater zone, still with purely military aims in mind, but then increasing in scale to attacks on targets in the home lands of the adversaries, and eventually to a massive exchange, with the employment of all the stockpiles of nuclear weapons. Indeed, once nuclear weapons are used—which means that deterrence has failed—each side will be anxious to be the first to reduce the retaliatory potential of the enemy. An all-out strategic nuclear war is therefore most likely to occur.

Yet the public is being systematically conditioned to the acceptance of a limited nuclear war. In an attempt to persuade the public that escalation can be avoided, the deterrent is again invoked. We are told that if the deterrent is to be credible, we must take measures to minimize the casualties of a nuclear war, and thus show the enemy that we are not afraid of such a war. Civil defense measures are, therefore, being urged on the public. "Protect and Survive" is the slogan in the United Kingdom, and similar campaigns are being mounted in other countries. The suggested civil defense measures would be laughable if they did not carry such tragic consequences. They will not convince any enemy, but they may lull the population into a false sense of security. If the public is made to believe that the casualty toll can be greatly reduced by civil defense measures, then a nuclear war becomes more acceptable, and this in itself makes the outbreak of such a war more likely. While some people accept the official line that civil defense measures are going to protect them, and they acquire expensive shelters even though these would be ineffective in an all-out nuclear war, others take the fatalistic attitude that a nuclear war with total destruction is inevitable. Some find comfort in the thought that at least there would not be much suffering; we shall all be dead in an instant. But this is not what is likely to happen in a nuclear war.

Very few people know that in Hiroshima three times as many people died in the five-year period after the bomb than on the day of the explosion. They died from the combined effects of burns, mechanical injury and radiation. In a full-scale war, in which many cities would be the targets, even the pitiful medical care available in Hiroshima would be absent, and the suffering and agony would be multiplied a thousand-fold.

When the magnitude of destruction is too large, our senses become dulled. We can no longer comprehend it. It is, therefore, essential to go back to the actual experience of nuclear bombing, to the two

Japanese cities, even though anything that happened there would be dwarfed by the scale of a future holocaust. We have to move away from the notion that the death of hundreds of millions is a matter for statistics, and begin to think again in terms of human beings, in terms of the tragedy of hundreds of millions of individual lives that would be lost, and the immense misery this would bring to the survivors. Listening to the voices of the survivors of the Japanese bombing would help to orient our thinking. The book, *Children of Hiroshima*, recently published in English, contains accounts written by children six years after the event about their experience of the bomb. It should be read by everybody. Here are two such accounts written by boys who were five years old at the time the bomb exploded over Hiroshima.

"I was playing outdoors when I saw a sudden flash. Fire broke out everywhere. Our house and gate burned down before I knew it. I felt very sad. Then we went under a bridge. There were many people there dying from burns. Then we went to the other side of the river and stayed there overnight.

The next morning, we were hungry. My sister went to the school near Misasa Bridge where there was an emergency relief squad and she brought back some boiled rice balls for us to eat. While we were wandering around with our sister, we met Daddy and Mummy. Mummy had burns on her hands and feet. Daddy looked as if he would die any moment. I was so unhappy I started to cry. I was very, very sad. We did our best to take care of him. He was on the verge of dying. When I brought a glass of water for him to drink, he seemed to get better.

Then we went to our relatives' and stayed there for some time. In a few days, they built a shack for us to live in.

One day, I went to the hill to play. When I came back, Daddy was dead. We put him into a coffin and carried it to a crematory. The next day, we brought back some of his bones and buried them in the cemetery.

A few days later, Mummy died too. We put her into a coffin and carried it to the cemetery the same as Daddy. My sister and I buried the bones of my Mummy beside my Daddy's. We prayed kneeling in front of their grave and cried to ourselves.

I went to the hill to gather chestnuts. I boiled them and made an offering of them to my Mummy and Daddy. Some days later, I went to the river to dig shellfish. I came back with them and my sister boiled them. We ate them. Then we took some of them to our parents' grave. Then we went into town to buy some incense-sticks. As soon as we returned home, my sister went to the cemetery to offer them to our parents." □

- (20)
- From a letter to the Editor, Los Angeles Times, March 29, 1981, Part II, p. 6:

In this period of renewed casual discussion of the use of the atomic bomb, there was one page that hit home most strongly. There are nine photos of assorted subjects, by sex, age, and nationality. The facing page features the following quotation of Bertrand Russell:

"The best authorities are unanimous in saying that a war with hydrogen bombs is quite likely to put an end to the human race . . . there will be universal death—sudden only for a fortunate minority, but for the majority a slow torture of disease and disintegration . . ."

Perhaps the trigger happy should paste this quote to their shaving mirrors to be read at least once a day.

(Thank you, JOHN TOBIN)

HUMANISM

- (21)
- BR, Humanist, is featured on the May page of the American Humanist Association's 1981 Desk Calendar . (\$3 from AHA, 7 Harwood Drive, Amherst, NY 14226.) This quotation appears:

The conviction that it is important to believe this or that, even if a free inquiry would not support the belief, is one which is common to almost all religions and which inspires all systems of state education. The consequence is that the minds of the young are stunted and are filled with fanatical hostility both to those who have other fanaticisms and, even more virulently, to those who object to all fanaticisms . . . The world needs open hearts and open minds, and it is not through rigid systems, whether old or new, that they can be derived.

Others featured on other pages include Dana Andrews, Edwin H. Wilson, Corliss Lamont, Margaret Sanger, Julian Huxley, Brock Chisholm, Albert Ellis, John Boyd Orr, Vashti McCullum, Steve Allen. (Thank you, JOHN TOBIN.)

RELIGION/CREATIONISM

- (22)
- Fred Hechinger, The New York Times' education reporter, discusses the California case in the issue of March 10, 1981, p. C4:

Creationism, Politics And Public Schools

By FRED M. HECHINGER

LAST week's widely publicized case before a California judge in Sacramento began with a demand that pupils in California's public schools be informed by their science teachers that evolution is not the only theory that explains the creation of humankind. The trial concluded with a ruling by Judge Irving Perluss that existing state education policies did not violate the religious rights of people who object to the teaching of evolution.

But to placate the plaintiff, the judge directed the education authorities to circulate a policy statement to schools and textbook publishers that Darwin's theory of evolution should not be treated as a dogma of the "ultimate cause of origins."

The issue before the court seemed to be Act Two of the Scopes Trial of 1925, in which a biology teacher was found guilty of violating the Tennessee law against the teaching of evolution. Kelly

Segraves, a California parent, brought suit to argue that his children were denied their right to be taught the biblical story of creation as another "model" of the way man arrived on this planet. To avoid any collision with the constitutional prohibition of teaching religion in public schools, the challengers insisted that they were advocating not religion, but a rival scientific version—scientific creationism.

In the end, they compromised by agreeing to a policy that requires science teachers merely to acknowledge the existence of other theories. Although the case thus ended in something of a draw, the reappearance of the issue in the courts was a revealing reminder of how politics and pressure groups influence public education.

The rising respect given by politicians to the numbers and influence of creationists was shown when Ronald Reagan, several months before he entered the White House, responded to a question about evolution: "Well, it is a theory, it is a scientific theory only, and it has in recent years been challenged in the world of science and it is not yet believed in the scientific community to be as infallible as it once was believed."

Many scientists and science teachers

were appalled. "Nonsense," said Niles Eldredge of the American Museum of Natural History. "No active geneticist, embryologist, systematist, anatomist or paleontologist doubts that life has evolved. What such biologists do argue about is how life has evolved."

The Science Council of New York City, with a membership of more than 1,000 science teachers, met at Rockefeller University in December for a symposium on creationism. A representative of New York City's Board of Education emphasized that in its jurisdiction only science and scientific theory, and not scientific creationism, would be taught in science classes, whatever else might be studied in literature or other classes.

There are plentiful indications, however, that school boards in many communities have already made accommodations or can be expected to do so if pressure mounts. In Florida, a Tampa school administrator said: "The recommendation from our office was that scientific creation and other theories be taught in areas other than science, but the Board of Education chose to have them taught in science as well."

Political inroads into the curriculum are not new, and even flagship institu-

tions above the public schools have not been immune. In 1796, a course in French language and literature, which had been instituted 10 years earlier when the French were allies, was eliminated from the curriculum at Harvard to assuage anti-French feelings. It was not revived until 1806 when students petitioned for its return.

In World War II, Nicholas Murray Butler, president of Columbia University, purged anything and anyone suspected of being pro-German. Many public schools followed a similar course.

For many years, textbook publishers, fearful of losing sales in the South, avoided criticism of slavery and referred to the Civil War as the War Between the States.

This is the background that makes science teachers nervous about the creationist drive. Some of them remember that in 1926, one year after the Scopes trial, George W. Hunter, former science chairman of DeWitt Clinton High School in the Bronx, deleted all mention of evolution from "Civil Biology," the textbook he wrote that had been used by John T. Scopes.

Stanley L. Weinberg, a science teacher in Iowa, who is involved in ef-

forts to combat creationism, said that it was not until the early 1960's, when some prominent university scientists took the lead in a nationwide high school science reform movement, that evolution reappeared in science textbooks.

What worries science teachers now is that the supporters of creationism may be able to confuse the public by complaining that they are denied their democratic right to equal time for an allegedly rival scientific theory. Their strategy is to attack evolution as an "unproven" theory that is either invalid or, at most, of dubious value.

Dr. Wayne A. Moyer, executive director of the National Association of Biology Teachers, replied in a speech: "A theory often represents a brilliant flash of insight.... A theory is never proved

but it is continuously scrutinized as new observations are added.... A scientific theory can never be proved—only disproved." The creationists, he says, in effect turn the argument around and say that evolution, because it cannot be proved in a laboratory, is not a science.

These science teachers fear that the activities of the creationists could result in the religious doctrine replacing scientific theory in some public school science classes. Experience suggests that textbook publishers might soon be affected. Texas, a major textbook buyer, has already determined that science texts covering evolution should "identify it as only one of several explanations of the origins of humankind."

In an effort to resist the influence of creationists, Mr. Weinberg has helped

to organize Committees of Correspondence. Already in operation in 12 states, they enlist scientists, teachers and lay citizens to provide information and protective action at the local level. "I urge scientists especially to become involved because you are next," said David Kraus, a spokesman for New York's group, who is chairman of the Science Council's committee for scientific freedom.

Dr. Moyer translates the issue to the classroom level. Asked by a student whether he believes in evolution, he would, in turn, ask the student what he meant by "evolution" and by "believe." Suppose a student were to ask, "You know, humans coming from monkeys and stuff like that — are you really convinced?"

Dr. Moyer said he would reply: "I have faith or belief in the methods of

science. That is, I trust them to tell me about the real world. This gives me confidence in the theory of evolution. As for humans coming from monkeys, I am confident that more than 5 million years ago there was a population of apelike animals which separated into two or more subpopulations. They continued to evolve during the intervening years to produce modern man and modern apes."

Mr. Moyer added that giving students the mental tools to make sense of facts "may not always win you plaudits from the community for you will be helping students to challenge authority." The creationists, he says, are aware of this and want to prevent their beliefs from being challenged. He concludes that, as professional critical educators, "there is no doubt that we stand in their way."

(23) "Galileo", in The New York Times, 4/12/81, p.E23:

Galileo's Latest Memo

By Theodore K. Rabb

TO: Charles Darwin
FROM: Galileo Galilei
SUBJECT: Your current troubles

Since I once had to deal with the science vs. Bible problem, maybe I can cheer you up by reminding you of what I had to go through to establish the sun as the center of the solar system.

Actually, the trouble started with Copernicus. He was a perfectly respectable churchman, but the theologian who published his book, one Osiander, thought it safest to add a preface saying that the heliocentric theory was only a hypothesis. The sun was put at the center, and the earth made to move around it, just for the sake of some calculations; the theory was not necessarily a true description of the heavens. Osiander wanted to be extra careful not to offend those who believed the older, geocentric theory, based on the Bible.

These traditionalists, however, did

not want anyone teaching Copernicus's ideas. Martin Luther himself rebutted Copernicus by citing the biblical passage in which Joshua makes the sun stand still. Others quoted Ecclesiastes: "The earth abideth for ever. The sun also ariseth, and the sun goeth down, and hasteth to his place where he arose." Another favorite was the 93d Psalm, which can be translated as "The earth also is stable, that it cannot be moved."

Some critics preferred arguments from common sense. (I can't bore you with everything they said, so I'll cut out their excess verbiage, and mine, too.) One famous scholar, Jean Bodin, said that "no one in his senses will ever think that the earth, heavy and unwieldy from its own weight and mass, staggers up and down around its own center and that of the sun." But the main objections related to the Bible, and these finally led the Roman Church to declare the Copernican view contrary to Holy Scripture. It would be arrogant, Pope Urban VIII said, to teach Copernican notions: "To speak about the subject as if it were anything but a hypothesis would be tantamount to constraining God within the limits of your ideas."

The critics of Copernicus took heart because scientists could not agree among themselves. Some thought Copernicus right; others thought him wrong; and yet others tried to find a compromise in between. But their disputes did not make the biblical argu-

ment any more relevant, as I pointed out:

"These men have resolved to fabricate a shield for their fallacies out of the mantle of pretended religion and the authority of the Bible. These they apply, with little judgment, to the refutation of arguments that they do not understand and have not even listened to. Contrary to the sense of the Bible, they would extend its authority until even in purely physical matters they would have us altogether abandon reason and the evidence of our senses in favor of some biblical passage.

"I think that in discussions of physical problems we ought to begin not from the authority of scriptural passages, but from sense-experiences and necessary demonstrations. Nothing physical which sense-experience sets before our eyes, or which necessary demonstrations prove to us, ought to be called in question upon the testimony of biblical passages. I do not believe that that same God who has endowed us with senses, reason, and intellect has intended us to forgo their use. He would not require us to deny sense and reason in physical matters which are set before our eyes.

"It would perhaps fit in better with the decorum and majesty of the sacred writings to prevent every shallow and vulgar writer from giving to his compositions an air of authority by inserting in them passages from the Bible. Such authors would impose upon

others an obligation to subscribe to conclusions that are repugnant to manifest reason. God forbid that this sort of abuse should gain countenance and authority, for then in a short time it would be necessary to proscribe all the contemplative sciences. Truly demonstrated physical conclusions need not be subordinated to biblical passages, but the latter must rather be shown not to interfere with the former. If in order to banish the opinion in question it were sufficient to stop the mouth of a single man then that would be very easily done. But it would be necessary to forbid men to look at the heavens."

As you know, they did stop my mouth. When I proved Copernicanism beyond a doubt, I was condemned by the Inquisition. My punishment was to repeat the seven penitential psalms once a week for three years, under house arrest. The decision frightened many scientists, including Descartes, and crippled Catholics' work in astronomy. And yet, in the long run we astronomers won out, because, to quote my friend Kepler, "so great is the power of truth." Eventually the Church actually apologized to me — ironically, though, it did so at this very time, the late 20th century, when anti-Copernicanism has appeared in a new guise: anti-Darwinianism.

Theodore K. Rabb, professor of history at Princeton University, has written on the history of science.

(24) Letter to the Editor, Washington Post, from a lady in Virginia:

According to the doctrine of my church, the universe was created when Uncle Duke dropped a tab of Owsley into a volcano and Vulcan spewed out six virgins, who then shackled up with him and begat my second cousin, twice removed. It is profoundly repugnant to me that the science classes in Virginia public schools do not accord respect to the convictions that I have instilled in my children. Fortunately, the creationists have found the courage to speak out in support of our beliefs. May their tribe increase.

BARBARA BASSETT

Alexandria

OPINION

- (25) Gore Vidal. Three excerpts from "Views from a Window: Conversations with Gore Vidal", Robert Stanton, editor. Secaucus, NJ:Lyle Stuart, 1980.

Reagan:

AMERICAN FILM: How do you feel about movie actors?

VIDAL: Oh, I love actors. Movie actors are a very special breed. Gregory Peck and I were once talking about Ronald Reagan, and I said, "I wouldn't want a professional screen actor to be President of the United States, no matter how nice or bright he is because he's spent his entire life being moved about like a piece of furniture. He's used to being used."

p.157

BR's sex life:

THE EARL OF LONGFORD, 1974: Yes, indeed. I have read *Burr*, and one or two of Gore Vidal's other books, and of course he is an absolutely brilliant writer of fiction. But Jefferson, who used to be one of my heroes, is my hero no longer after reading Gore Vidal's account of him. I don't think he would deny that Jefferson appears as a very dishonest figure in the book. And I think a man who behaves badly in the world of sex will behave badly in other worlds as well. You can find exceptions—perhaps Wellington was an exception—but, by and large, if a man is very self-indulgent and betrays his wife, he will betray his friends and everybody.

DEAN: How high on your own list of sins would you place sexual promiscuity: Higher than average?

LORD LONGFORD: Let me put it this way: the older you get, the higher it comes. Bertrand Russell was a genius in his way, but he behaved abominably to a whole series of women by any ordinary standards—the standards of John Stuart Mill, or any liberal.

DEAN: But isn't sin a departure from a standard which the sinner himself accepts?

LORD LONGFORD: Bertrand Russell was such an egotist that I don't know what standards he could accept which could possibly put him in a bad light. But the fact is that he not only left a whole string of women in a very unhappy condition but

gloried in it. He was a tremendously idealistic man, but in that field he was utterly selfish, and I think if you behave very badly in the world of sex you can reveal yourself as totally selfish. And, in the last resort, leaving out religion altogether, just taking any sort of morals, selfishness is the supreme sin.

VIDAL: Well, I don't really accept any of that. I too have read Russell's autobiography. I've also read him on mathematics, I've certainly read him on philosophy. He was a master of the English language and I don't think adultery made him split infinitives. I don't think his life with women in any way affects his findings in mathematics, nor the nobility of many of the political causes which he espoused in later life, and which I'm sure Lord Longford also espoused. He was a virtuous figure. Putting the two things together is a kind of madness. One has nothing to do with the other. As a matter of fact, I have often found that people who are not particularly well fulfilled with their wives or their women or their boyfriends are sometimes infinitely more virtuous in their public lives or in their art. Also, I don't find Russell in the least self-ish sexually: he was a great romantic. If anything, he was rather silly, the way he was falling in love with people.

LORD LONGFORD: He kept leaving these women, and in that autobiography he describes how he ruined some woman whom he didn't marry in the end. I should think, in that field, he was totally selfish.

pp.228-230

Vidal's atheism:

STANTON, 1979: I doubt that you care much for the opinion of others, especially when they attempt to challenge your unpopular beliefs. Do people still try to convince you to change your ways?

VIDAL: Those who love Jesus spend a lot of time writing me hate letters. In fact, the most mail that I ever got was the result of a Phil Donahue television program. I said that I was an atheist. A spasm of hatred went through the Bible belt ...

p.82

The BRS Library has a videotape of that TV program. (donated by Phil Donahue in response to our request for a transcript. Transcripts were not available in those days.)

NEWS ABOUT MEMBERS

- (26) Peter Cranford is the author of How To Be Your Own Psychologist (Augusta:Great Pyramid Press, 1980). It is a large, handsome hardbound book of some 220 pages, containing observations and advice based on the author's "30 years of full-time private practice as a clinical psychologist." "Compossibility" is featured prominently on the dust jacket and cover, and there are 21 direct references to BR in the index plus a number of indirect ones. For the Atlanta Constitution's story on the book, see (51). List price \$14.95, \$16.00 postpaid. Special BRS price, \$12 postpaid, from Pyramid Press, Box 2745, August, GA 30904.

(27) David Hart at Cambridge:

I spent the months of September through January in Cambridge. For some time I had wanted to pursue things not connected with my work in mathematics. I wanted to read, write, and think, about whatever moved me. When I first arrived in Cambridge, my feeling was one of jubilation mixed with awe. Cambridge is a strikingly beautiful medieval city. The streets go off in every different direction and are very seldom straight for more than a 100 yard stretch. The map of Cambridge reminds one of what one would see if a box of stick matches were dropped onto a piece of paper: a thoroughly skew pattern! Cambridge is dominated by the university, which is a loose union of 22 independent colleges. The architecture is of a grand scale: most of the colleges were founded and built between the 13th and 16th centuries. In the colleges live the students, fellows, and various resident scholars.

It is not unusual to meet persons who have a 40 year continuous association with their college. I met several times with a philosopher who, inspired by Russell, Wittgenstein, and Moore, came to Cambridge from Poland in 1936 and has never left. The former president of my Cambridge college studied under Wittgenstein from 1929-1931; he showed me his notebooks from Wittgenstein's lectures: they were fascinating. I learned from him that Wittgenstein hated Russell's book The Conquest of Happiness; Wittgenstein called it a "vomitive".

I did not at first have any connection with the university: I had come over merely to pursue my research without any fuss. Initially, I found the university to be a very closed and private world: inaccessible to all but a few. Later, however, I was invited to become a member of a college; this made it easier for me to move within university circles. I wrote letters to many persons and talked about my interests in Russell's philosophy. A succession of invitations to tea followed, and I was able to meet many philosophers with whom I could discuss my ideas. I became part of several philosophical discussion groups and from that time on Cambridge opened up to reveal a society of the greatest friendliness and warmth.

However, it was not only in the university that I met interesting and intelligent persons. More of my friends came from outside the university than from inside it. In fact, it was by taking part in public events that I was able to make some of my more rewarding friendships. I was constantly surprised by how many people I met who had deep interests in many subjects. When I would tell people that Bertrand Russell, Edith Sitwell, and Henry W. Fowler were three of the persons whose work I admire greatly, a lively discussion would follow. Here, at home, the same comment brings a blank stare and a quick change of subject.

I was eager to observe the English Left and to learn whether Russell's brand of socialism was anywhere to be found. To my surprise, I found that England is not the place to look for Russell's political influence. Many of the warnings that Russell gave in the 1920's and 1930's are ignored by the most powerful elements of the Left. The result is that many of the hazards seen by Russell have not been avoided. I was lucky to be in England during a period of great political activity: a Social Democratic party was formed by dissidents from the oligarchic, undemocratic Labor party. The Campaign for Nuclear Disarmament, of which Russell was the first president, doubled its membership and added 200 new chapters in the past year. In addition, Russell's call for unilateral disarmament by Britain is gaining an ever increasing following.

I found Wittgenstein's influence on the current Cambridge philosophers to be enormously more powerful than Russell's. This does not seem to be due to a lack of interest in Russell's work; for many of those I met had read almost all of Russell's philosophical writings. One might say that though they know Russell, they quote Wittgenstein. I brought up Russell at every opportunity: at the Moral Sciences club, in discussion groups, and in private conversations. In this way I learned a great deal and I changed many of my previous views. I went to Cambridge with a specific research project in mind; I came home with the seeds of many projects.

It is always fascinating to hear anecdotes from persons who had met or heard Russell. A 90 year old woman I met had heard Russell speak at the time of the first world war. Her opinion of him was not high: "I never liked him; you could never pin him down." A person who was at Trinity when Russell returned in 1944 told me of the necessity of securing a seat in Hall on the side of Russell's good ear if dinner-time conversation was desired. I became friendly with a retired professor of mathematics at the University of Sydney; we often talked about Russell. He had heard Russell speak on several occasions and had read most of Russell's books. He admired Russell greatly: "Russell had the finest and quickest mind I've ever known, and his altruism was sincere." I find many such expressions of profound respect as I look back over the bulky journal that I kept during my time in Cambridge. I should be happy to talk to anyone about my experiences. However, I might give this warning: when once I have started talking about Cambridge, it is very difficult to get me to stop.

- (28) Don & John Jackanicz. The two brothers took a trip to Texas in April. Don gives his impressions of the University of Texas at Austin:

It enjoys a wonderfully fine campus setting, and I spent 2 days wandering through it. I do hope that one year the BRS can hold its Annual Meeting at the University, with its attractive atmosphere, suitable accommodations, and the Russell-Morrell letter collection.

My brief visit to the University's Humanities Research Center afforded the opportunity to examine, however briefly and superficially, the more than 1700 letters written by Russell to Lady Ottoline Morrell from 1910 to 1938. Also available there are a number of other important Russell materials. Ellen S. Dunlap of the Center most graciously helped me get acquainted with the collection's format and order. I am sure she and the other librarians would welcome inquiries and visitors. She can be contacted as follows: E.S.D., Humanities Research Center, University of Texas, Box 7219, Austin, TX 78712. Of course, the Russell Archives has photographs of most if not all of these materials, but to examine the originals is quite an experience.

The Center has approximately 1600 letters on 5 microfilm reels, of the 1910-1938 correspondence from Lady Ottoline to Russell as well as photocopies. (The Russell Archives has a converse set of copies.) Also in the collection are letters from Russell to others, an 1898-1905 notebook of 85 pages in which he recorded impressions of McTaggart's lectures on Lotze and of his life with Alys Russell, manuscripts of articles, and such curiosities as first editions of The Analysis of Matter and Human Knowledge: Its Scope and Limits with marginalia by George Santayana.

Worth the trip!

QUESTIONS & ANSWERS

- (29) 2 + 2, continued. Originally JACK RAGSDALE wondered what BR meant when he said, "Two and two are about four." (RSN27-25) KEN KORBIN offered a Wittgenstein quote, adding that he, Ken, did not know what Wittgenstein meant by it (RSN28-31). Now comes ALBERT ENGLEMAN with this:

Primal man -- he who lives within us in the instinctual realm of the mind -- performs his mathematics by counting or not-counting. The instinct to count is activated at the mere mention of a number -- and a number, after all, is simply the conventional symbol of the counting that has been done by another to a certain point. Therefore, to perceive a number absolutely we must limit the counting impulse urged by the appearance of its symbol, and we must stay the urge to count more, up or down.

There would be no confusion whatever if the proposition had been put this way (the unconscious engrams are in parentheses): "There are two, and only two apples on a table (do not count beyond two), and two more apples, and only two, are put on the table (count two more only); then there are probably four apples on the table."

You see, the probability is a conditional assurance and says: "You may well believe there are four apples on the table (as you have counted), and if there are not, it has nothing to do with the arithmetic of the thing, but is rather a matter of an insinuating obfuscation by which the apples may be redefined or unidentified."

Everybody got it straight now?

- (30) No Ark. KEN KORBIN has supplied the source of the quotation used in RSN29-5b: John Chandos interview of BR in 1961, preserved on Riverside LP 7014/15 (out of print). Here is the corrected quotation:

BR: "I find it difficult not to get a little fanatical about it because the issue is so large." (The danger posed by the existence of nuclear weapons.) "It's the largest it's been since Noah."

Chandos: "And we have no Ark."

BR: "No, we have no Ark."

NEW BOOKS

(33) "The Evolution of Conscience" is by Ralph A. Newman, Professor Emeritus, Hastings College of the Law, University of California (San Francisco). He writes:

It is my hope that the scientific discovery of the source of virtue will replace the explanation of divine inspiration, which is losing its hold on millions -- though there are still many intelligent people who find it difficult to throw off the lure of the supernatural.

Here is how Professor Newman presents his book:

The Evolution of Conscience is the first study of the significance of recent discoveries in the field of animal behavior in connection with the problem of the source of the impulse of benevolence toward our fellow humans. This impulse is a biological inheritance, from our ancestors of the animal kingdom, of the instinct of concern for the weaker members of the herd or community. Without this instinct no species could have survived. There is no longer need to resort to supernatural explanations of altruism. Men are made of the same elements that are found in the rocks, the plants, the animals and the distant stars, and man's social impulses are as much the product of the evolutionary process as are his need for food and shelter.

The decisive controls of life, we are told by a discoverer of the secret of the origin of life, are reduced to a matter of the precise order in which the microscopic molecules are arranged in a giant molecule. These tiny organisms are the result of a fortuitous combination of twenty amino acids and four nucleic acids, and the giant molecule is the origin of all forms of life. The universe and all living things are the result of chance.

If the rate of expansion of the universe in the first second of cosmic time had been reduced by only one part in a thousand billion, the universe would have collapsed after a few million years, long before any biological evolution could have taken place. Our planet, Earth, was torn from the sun by the tidal pull created by a wandering star. The process of evolution produced, through countless millions of random mutations, millions of branches of life, one of which resulted in the phenomenon of man.

It is intolerable that men and women who honestly regard belief in God as superstition must hesitate to express their unbelief for fear of social reprisal. Belief in God is itself a subtle form of atheism; men cannot create, out of their fears, hopes and imagination, a God who really exists.

The dogmas of the western religions, centered about the story of Jesus, have been revealed to parallel in nearly every detail the mythology of earlier civilizations. Recent archeological discoveries have established the existence of a sect which flourished at the time of Jesus not many miles from Bethlehem, where Jesus was born and where he received his religious education. The teachings of this sect are identical, except for the doctrine of the immaculate conception, to the basic doctrines announced by Jesus. These discoveries raise serious doubts that the doctrines he preached were divinely inspired. Christology was fully established before Jesus was born. For millions of people who are no longer satisfied with the theological explanation of the meaning of their lives, the implications to be drawn from many branches of modern science will enable them to tear themselves free from the shackles of the supernatural and to find a natural explanation of life's meaning in the sentiment of human brotherhood that is innate in their own nature.

The weaving of the rich tapestry of social solidarity is a quest of purest religious quality; a thrilling adventure, as each of us can find out for himself. The mists of the supernatural have begun to lift. We can gaze at the open sea.

Some opinions about the book:

Edward L. Barrett, Jr., Professor and former Dean, School of Law, UC Davis: "You have put into words ideas which have helped me to rationalize and understand attitudes of my own which I had resisted thinking about and putting into words. Hence I find your project enormously useful."

Dr. M. E. Marty, Lutheran Pastor, and on the University of Chicago School of Divinity: "Your idea is dazzling."

Algernon D. Black, Leader Emeritus, New York Society for Ethical Culture: "What you have done is a magnificent piece of work and one which should be of great use to a great many people. It is informative, challenging and clarifying and I, for one, shall treasure it and use it."

The book can be ordered from Alchemy Books, 681 Market St.(755), San Francisco, CA 94105, for \$8.60 postpaid.

* * * * *

Peter Cranford's new book is discussed in (26) and (51).

"MY FAVORITE RUSSELL"

(34)

By Bob Davis:

My favorite Russell is his 1934 Freedom Versus Organization:1814-1914. As he states in the preface: "This book is an attempt to trace the main causes of change during the hundred years from 1814 to 1914." It is essentially an intellectual history of the period but has elements of both social and political history. It includes a section on American history which, as an American, I find particularly interesting.

I like it best for a number of reasons. First, it is history, perhaps my chief love since childhood. ER wrote several kinds of history. His History of Western Philosophy is the best known. But in Freedom, his discussion of how the thinkers of the 19th Century, especially the Philosophic Radicals, actually influenced events is clearer than that of any professional historian I know of.

Another reason I like this book best is that it was written when ER seems to have been at the peak of his stylistic power. The first volume of his autobiography, also stylistically brilliant, was written at this time, though not published until 1967. I consider it the best-written book of history I have ever read, including Gibbon. Its 451 pages (Norton paperback edition) provide a continuous seamless narrative, with nothing lost, nothing jumbled -- on a topic so complex that most other writers bog down and get lost in the material. In my opinion, it even tops the classic work in this area, by Elie Halevy.

Russell's sense of humor and his ability to make light comments that instruct are abundantly present. In his chapter on Jeremy Bentham, Russell adds the footnote: "He (Bentham) made an unvarying practice of walking around his garden before breakfast and after dinner. These walks he described as his 'ante-jentacular and post-prandial circumambulations'." That note explains a great deal about Bentham's impenetrable prose -- a curse to all who study him. ER also manages to work in the old doggerel:

Stuart Mill both mind and matter
Ruthlessly would beat and batter...

One of the best uses of humor is in one of the four chapters on Marx and Marxism. These, incidentally, are very good expositions of the subject, and I recommend them highly -- unless you are a Marxist and wish to remain one. At the end of a long and serious discussion of dialectical materialism, ER wrote the paragraph indented below. I first read it in a restaurant and broke into such laughter that everyone began to stare at me and the former Lt. Governor of the State of Iowa came over to find out what was so funny; after I showed it to him, he decided to read the book! Marxism, like any other religion, doesn't bear being laughed at very well. Here it is:

History can be viewed in many ways, and many general formulae can be invented which cover enough of the ground to seem adequate if the facts are carefully selected. I suggest, without undue solemnity, the following alternative theory of the causation of the Industrial Revolution: industrialism is due to modern science, modern science is due to Galileo, Galileo is due to Copernicus, Copernicus is due to the Renaissance, the Renaissance is due to the fall of Constantinople, the fall of Constantinople is due to the migration of the Turks, the migration of the Turks is due to the desiccation of Central Asia. Therefore the fundamental study in searching for historical causes is hydrography.

When I discussed the idea of this series with Paul Arthur Schilpp last summer, I told him of my choice. He responded that he had asked Russell which of his (Russell's) books Russell liked best. BR answered: Freedom Versus Organization. Read it!

BRS LIBRARY

(35) Send all inquiries, requests or orders to Jack Ragsdale, Co-Librarian, PO Box 28200, Dallas, TX 75229.

(35a) Films. The 7 Russell films listed below, each acquired through member contributions, may be borrowed by BRS members and by responsible non-members. Each is 16mm. black and white. Rental prices are given below. A \$75 deposit is also required, per film, which is refunded when the film is returned, less the cost of shipping and insurance. Film rentals have a one week limit, except in unusual instances. Contact the Library as soon as a definite use-date is known. The Library would appreciate hearing about any other Russell films in private collections, other libraries, or broadcasters' files.

1. Bertrand Russell Discusses Philosophy.
2. Bertrand Russell Discusses Power.
3. Bertrand Russell Discusses Mankind's Future.
4. Bertrand Russell Discusses the Role of the Individual.
5. Bertrand Russell Discusses Happiness.

-----No. 1-5 are 13½ minutes each. In these films Russell is interviewed by Woodrow Wyatt on a variety of specifics within the general topics. A transcript for each can be found in the book Bertrand Russell Speaks His Mind (Cleveland: World Publishing Co., 1960). The audio portion of No. 1 is also available on the record Bertrand Russell Speaking (Caedmon TC-1149).
Rental cost: \$25.00 per film plus a \$75.00 deposit per film.

6. Bertrand Russell.

-----No. 6 is 30 minutes in length. Interviewed by Romney Wheeler, Russell deals in this film with autobiographical, philosophical and political topics. A transcript is available in "A Life of Disagreement", Atlantic Monthly, v. 190, August 1952, pp. 51-54.
Rental cost: \$40.00 plus a \$75.00 deposit.

7. The Life and Times of Bertrand Russell.

-----No. 7 is 40 minutes in length. This film was produced by the BBC as part of the 90th birthday celebration for Russell in 1962. A documentary, it uses a biographical format which, along with interviews with Russell and several prominent British figures, concentrates on the threat of nuclear war and his work to prevent such folly.
Rental cost: \$40.00 plus a \$75.00 deposit.

(35b) Tape recordings may be borrowed for \$1 per tape, plus shipping and insurance both ways. The audio cassettes were produced by amateurs, are fairly good, though not up to professional standards. We intend to have all available Russell discs and audio tapes transferred to top quality cassettes by a professional studio. We would appreciate getting information on any other Russell discs or tapes held in private collections, other libraries, or broadcasters' files.

I. Video Cassettes.

1. Phil Donahue interviews Gore Vidal for nearly an hour in 1970. The views expressed jibe well with BR's, and are not often heard on a popular TV show.
2. Presentation of the BRS Award to Paul Arthur Schilpp on June 21, 1980 followed by his acceptance speech and reminiscences of Russell. Approximately 45 minutes.

II. Reel to Reel Audio

1. Sinfonia Contra Timore, a symphony by Graham Whettam dedicated to Russell and completed in 1962; Leipzig Radio Symphony Orchestra, Gunther Blumhagen, conductor.

III. Audio Cassettes.

1. Excerpts from the Proceedings of the June 20-22, 1980 BRS Annual Meeting held at the University of Chicago, Chicago, IL, including the presentation of the BRS Award to Paul Arthur Schilpp followed by his acceptance speech; George Nakhnikian's paper "Reason and Self-Love"; Donald W. Jackanicz's paper "Bertrand Russell in Chicago, 1938-1939"; Robert K. Davis's talk on "Russell's Pacifism"; Lester E. Denonn's paper "Characterizations of Bertie--Pro and Con--from L. E. D.'s Russell Library"; Peter G. Cranford's paper "On Compossibility"; Alex Dely and George Blam's discussion of the BRS Science Committee and contemporary physics; and the panel discussion on "Nuclear Energy and the Responsibility of Scientists" with participants John R. Honekamp, A. David Rossin, George S. Stanford, Lawrence R. Knobel, William Martin, and Amber Stelnicki and moderator Robert K. Davis.
2. Excerpts from the Proceedings of the June 1-3, 1979 BRS Annual Meeting held at the Hotel Tudor, New York, NY, including Harry Ruja's paper "Bertrand Russell on Israel"; Jack Pitt's paper "Bertrand Russell's Response to Marx"; Lester E. Denonn's paper "Bertie and Litigation from Birth Until Death: A Lawyer's Commentary"; and Albert Ellis's talk on "Psychotherapy and Bertrand Russell".
3. David Susskind speaking with Bertrand Russell. From a June 17, 1962 television broadcast. Approximately 100 minutes.
4. Bertrand Russell Speaking, a phonograph record (Caedmon TC-1149). Four interviews of Russell by Woodrow Wyatt in 1960. Approximately 45 minutes.
5. Bertrand Russell Speaks: Human Nature and Politics, a phonograph record (Audio Archives/Heritage LPA-1202). Russell presenting his 1950 Nobel Prize Lecture "Politically Important Desires". Approximately 45 minutes.
6. Notice to the World--Renounce War or Perish!--World Peace or Universal Death, a phonograph record of the proceedings of BR's July 9, 1955 Claxton Hall press conference regarding nuclear weapons. (Audio Masterworks LPA-1225) Approximately 30 minutes.
7. Speaking Personally: Bertrand Russell, a phonograph record of BR interviewed by John Chandos. Approximately 90 minutes. (Riverside 7014-5)
8. Bertrand Russell, a phonograph record being an abridgement of No. 7 above. (Pye Golden Guinea GGL-0110). Approximately 40 minutes.
9. Wisdom: Conversations with the Elder Wise Men of Our Day, Volume 2, a phonograph record (Decca DL-9084) featuring interviews by Romney Wheeler of BR, David Ben-Gurion, Frank Lloyd Wright, and Sean O'Casey. Appr. 40 min.

(25c)

Print. Most of the books, booklets, articles and papers listed below have been contributed by BRS members. Contributions are welcome, especially those by or about Russell. There is no charge for borrowing. Borrowers pay postage (and insurance when needed) both ways.

1. PRINCIPLES OF SOCIAL RECONSTRUCTION; BR; 174 pp.
2. PROBLEMS OF KNOWLEDGE AND FREEDOM; Noam Chomsky; 111 pp.
3. THE RIGHT TO BE HAPPY; Dora Russell Black; 295 pp.

4. "The Political and Cultural Influence" from THE IMPACT OF AMERICA ON EUROPEAN CULTURE; BR; 17 pp.
5. Untitled contribution to LIVING PHILOSOPHIES; BR; 11 pp.
6. "Introduction" to THE NEW GENERATION: THE INTIMATE PROBLEMS OF MODERN PARENTS AND CHILDREN; Victor Francis Calverton and Samuel D. Schmalhausen, editors; BR; 8 pp.
7. BERTRAND RUSSELL CENTENNIAL CELEBRATIONS: CATALOGUE OF THE EXHIBITION; 40 pp.
8. ROADS TO FREEDOM: SOCIALISM, ANARCHISM, AND SYNDICALISM; BR; 143 pp.
9. A HISTORY OF WESTERN PHILOSOPHY AND ITS CONNECTION WITH POLITICAL AND SOCIAL CIRCUMSTANCES FROM THE EARLIEST TIMES TO THE PRESENT; BR; 895 pp.
10. THE CONQUEST OF HAPPINESS; BR; 180 pp.
11. NEW HOPES FOR A CHANGING WORLD; BR; 218 pp.
12. FREEDOM VERSUS ORGANIZATION, 1814-1914; BR 471 pp.
13. DEAR BERTRAND RUSSELL. . . : A SELECTION OF HIS CORRESPONDENCE WITH THE GENERAL PUBLIC, 1950-1968; Barry Feinberg and Ronald Kasrils, editors; 169 pp.
14. "Russell on Religion"; INTERNATIONAL JOURNAL FOR PHILOSOPHY OF RELIGION, Spring 1975; Jack Pitt; 14 pp.
15. Review of Elizabeth R. Eames, BERTRAND RUSSELL'S THEORY OF KNOWLEDGE and Ronald Jager, THE DEVELOPMENT OF BERTRAND RUSSELL'S PHILOSOPHY; PHILOSOPHY AND PHENOMENOLOGICAL RESEARCH, March 1974; Harry Ruja; 3 pp.
16. THE COMPANIONATE MARRIAGE; Ben B. Lindsay and Wainwright Evans; 396 pp.
17. NECESSARY RUSSELL: AN INTRODUCTION TO THE LIFE AND TIMES OF BERTRAND RUSSELL; William Ready; 118 pp.
18. Reviews of Ronald W. Clark, THE LIFE OF BERTRAND RUSSELL; Dora Russell, THE TAKARISK TREE: MY QUEST FOR LIBERTY AND LOVE; and Katharine Tait, MY FATHER BERTRAND RUSSELL; a collection of book reviews taken from newspapers, magazines and journals.
19. THE BITCHES' BREW OR THE PLOT AGAINST BERTRAND RUSSELL; Myra Buttle, pseudonym of Victor William Williams Saunders; a play; 87 pp.
20. RUSSELL IN REVIEW; J. E. Thomas and Kenneth Blackwell, editors; 268 pp.
21. MY OWN PHILOSOPHY: A NEW ESSAY; BR; 30 pp.
22. THE LIFE OF BERTRAND RUSSELL IN PICTURES AND HIS OWN WORDS; compiled by Christopher Farley and David Hodgson; 95 pp.
23. THE FUTURE OF SCIENCE; BR; 86 pp.
24. BERTRAND RUSSELL'S PHILOSOPHY; George Nakhnikian, editor; 278 pp.
25. MYSTICISM AND LOGIC; BR; 226 pp.
26. THE AUTOBIOGRAPHY OF BERTRAND RUSSELL, Volume I; 308 pp.
27. HUMAN SOCIETY IN ETHICS AND POLITICS; BR; 200 pp.
28. THE PROBLEMS OF PHILOSOPHY; BR; 167 pp.
29. THE GOOD CITIZEN'S ALPHABET; BR; about 50 pp.
30. RUSSELL'S PHILOSOPHY AND THE MODERN AGE; Tsutomu Nakino; in Japanese; 281 pp.
31. THE PROCEEDINGS OF THE BERTRAND RUSSELL MEMORIAL LOGIC CONFERENCE, DENMARK, 1971; John Bell, Julian Cole, Graham Priest, and Alan Slomson, editors; 404 pp.
32. "Recollections of Three Hours with Bertrand Russell"; Lester E. Denonn; 6 pp.
33. INTRODUCTION TO MATHEMATICAL PHILOSOPHY; BR; 208 pp.
34. PRINCIPIA MATHEMATICA, Volumes I, II, and III; Alfred North Whitehead and BR; 1,907 pp.
35. "The Labour Party's Foreign Policy"; BR; pamphlet of Oct. 14, 1965 speech; 5 pp.
36. DICTIONARY OF MIND, MATTER AND MORALS; BR; Lester E. Denonn, editor; 190 pp.

37. "Panpsychism versus Modern Materialism: Some Implications for an Ecological Ethics"; George S. Sessions.
38. THE PRINCIPLES OF MATHEMATICS; BR; 524 pp.
39. "Psychosurgery: Some Ethical Considerations" and "INS Opinion about Psychosurgery"; Herbert Lansdell; 13 and 3 pp. resp.
40. NORMS WITHOUT MYSTERY; Lee Eisler; 118 pp.
41. BERTRAND RUSSELL SPEAKS HIS MIND; BR interviewed by Woodrow Wyatt; 173 pp.
42. DIE FAKEL/DIE TORCH/LE FLAMBEAU: ZEITSCHRIFT DER KOREANISCHEN BERTRAND RUSSELL GESELLSCHAFT (JOURNAL OF THE KOREAN BRS); No. 1, March 1977 and succeeding numbers; chiefly in Korean and German.
43. FACING UP TO NUCLEAR POWER: RISKS AND POTENTIALITIES OF THE LARGE-SCALE USE OF NUCLEAR ENERGY; John Francis and Paul Abrecht, editors; 244 pp.
44. "Bertrand Russell's Conception of the Meaning of Life"; Peter G. Cranford; 8 pp.
45. "Russell and his Detractors"; Peter G. Cranford; 5 pp.
46. ADVENTURES IN CIVIL LIBERTIES; Corliss Lamont; 25 pp.
47. "The Case for British Nuclear Disarmament"; BULLETIN OF THE ATOMIC SCIENTISTS, March 1962; BR; 5 pp.
48. LIVING PHILOSOPHIES; book having a BR contribution; 334 pp.
49. THE TAMARISK TREE: MY QUEST FOR LIBERTY AND LOVE; Dora Russell; 304 pp.
50. READER'S INDEX TO THE SUBJECTS DEALT WITH IN BERTRAND RUSSELL'S BOOKS; Tsutomu Makino; English and Japanese; 37 pp.
51. "Naturalistic Humanism", chapter from VOICE IN THE WILDERNESS; Corliss Lamont.
52. "Anthropocentrism and the Environmental Crisis"; George Sessions; 12 pp.
53. "Principles and Perplexities: Studies of Dualism in Selected Essays and Fiction of Bertrand Russell"; Gladys Garner Leithauser; Ph. D. dissertation; 294 pp.
54. "Education for Democracy"; BR; 16 pp.
55. "The Extinction of the Gadfly--A Plea for Philosophical Commitment"; Leonard Cleavelin and Don Evans; 9 pp.
56. HAZARDS OF NUCLEAR POWER; Alan Roberts and Zhores Nedvedev; 73 pp.
57. OTHER MINDS: MONTHLY LETTER OF THE RATIONAL HUMANIST ASSOCIATION; beginning 1978.
58. POLITICAL IDEALS; BR; 172 pp.
59. SATAN IN THE SUBURBS; BR; 143 pp.
60. ODYSSEY OF A LIBERAL; Freda Utley; 319 pp.
61. LADY OTTOLINE'S ALBUM; SNAPSHOTS AND PORTRAITS OF HER FAMOUS CONTEMPORARIES AND OF HERSELF; Carolyn G. Heilbrun, editor; 117 pp.
62. "The Possibilities of Compossibility"; Peter G. Cranford; 2 pp.

(35d) Books for sale. Prices include postage, but may be raised if costs increase. "HB" indicates hardbound; otherwise softbound. Most titles can be shipped immediately. These discounted books -- often difficult to find locally -- can add to your collection at a saving, while helping the BRS, which makes a modest profit.

COLLECTORS' CORNER

(36) Tom Stanley writes:

Although Russell was one of the finest essayists of the Twentieth Century, few of his essays have been reprinted as attractive, well designed books.

In 1923 Thomas Mosher, publisher and bibliophile, reprinted "A Free Man's Worship" in a boxed edition of 950, with an additional 50 numbered copies in vellum. Russell contributed an interesting preface on how his views had changed in the twenty years since it had been written. This preface is usually omitted when the essay is anthologized but can be found in the Haldeman-Julius reprint: What Can A Free Man Worship? (Girard, (1925)).

In 1959 Herb West, bookseller and publisher, reprinted the essay together with Burrough's "The Faith of a Naturalist" as Two Modern Essays On Religion (Hanover: Westholm Publications). Most of the 500 copies were signed by West.

PARADOXES

(37) Chemistry. The following sign is in the Chemistry Lab of l'Ecole d'Humanité of Galdein, Switzerland:

He who understands nothing but chemistry
does not understand chemistry properly.

(Thank you, H. L. Cooke, Jr.)

CONTRIBUTIONS

- (38) BRS Treasury contributors. We thank BOB DAVIS and JOHN SCHWENK...and PETER CRANFORD and KATHY FJERMEDAL, who never fail to make monthly contributions.
* Members, please notice: the list of contributors used to be much longer. Wouldn't you like to help lengthen the list?
- (39) Russell Memorial (London) contribution:our thanks to Baylor L. Johnson (non-member).
-

ELECTION OF DIRECTORS

- (40) Time to nominate Directors. Directors are normally elected for 3-year terms. The bylaws permit a Board of 24 Directors, and we would like to fill all 24 seats. (Only 22 are filled at present.) We will elect 8 Directors for 3-year terms. We will also elect 2 Directors for 1-year terms, because we elected only 6 Directors 2 years ago. This will bring the total to 24.
- Any member can nominate any other member to be a Director-candidate.
- If you wish to be a candidate yourself, notify the Elections Committee, and someone will probably nominate you.
- The duties of a Director are not onerous. Directors are occasionally asked their opinion about something or other by mail; and they are expected to make a reasonable effort to attend annual meetings (the cost of which, incidentally, is tax-deductible.)
- We would like to have more than 10 names on the ballot, so as to give members a choice.
- A brief statement about a potential candidate should accompany a nomination.
- The next newsletter, RSN31 (August), will contain a ballot with names of candidates and information about them.
- Directors whose terms expire at the end of this year are PETER CRANFORD, BOB DAVIS, LEE EISLER, MARTIN GARSTENS, HARRY RUJA, GARY SLEZAK, and BEV SMITH. Directors may succeed themselves; that is, they may be re-elected.
- To nominate someone -- or to volunteer yourself -- write the Elections Committee, RD 1, Box 409, Coopersburg, PA 18036.
-

MEMBERSHIP RENEWALS

- (41) Everyone's renewal dues are due now (except those who have joined since the first of this year.)
- If you joined the BRS any time in 1980, you have received all 4 1980 issues of "Russell Society News", and your renewal dues are due now.
- If you joined the BRS any time before 1980, your renewal dues are due now.
- Strictly, dues are not due till July 1st; but the prudent thing to do is to send us your check now -- while you have it in mind -- and date it July 1st. This way it won't slip your mind.
- Dues are \$20 (regular), \$25 (couple), \$10 (student); plus \$5 if outside the USA and Canada.
- Please respond promptly, to avoid possible delays in mailings of "Russell Society News" and "Russell".
Mail dues to RD 1, Box 409, Coopersburg, PA 18036.
-

VOLUNTEER NEEDED

- (42) The Membership Committee needs a volunteer, to be Co-Chairman, handling inquiries and enrollments.
- The procedures and record-keeping have been worked out, and seem satisfactory. The work is not difficult but it does take some time -- perhaps 3 to 5 hours a week -- and it is absolutely essential to the BRS's well-being.

It can be quite interesting to get inquiries -- requests for information about the BRS, some with personal statements or observations -- from all parts of the USA and from foreign countries (often with unusual stamps.)

This job is for someone who has worked in an office and enjoys doing paperwork.

You will need some space to store the printed material that is sent to inquirers and new members.

The work is now being done by "PK" Tucker, the present Co-Chairman, who has been doing it for more than a year, and we are greatly indebted to her; but now there are other demands on her time. She will continue as Co-Chairman, until someone else takes over.

No one should volunteer who is not prepared to stay for at least a year.

Anyone who might be interested should write Lee Eisler, Chairman, Membership Committee, RD 1, Box 409, Coopersburg, PA 18036. If you happen to be coming to the June meeting at McMaster, we can discuss it there.

* Who will volunteer?

FOR SALE

(43) Members' stationery, 8½ x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On bottom: "Motto of The Bertrand Russell Society, Inc." Printing costs are up 76%, envelope up 50%, postage up 53%. Our price is up 48%: \$6.25 for 95 sheets (which weigh just under a pound.) Order from the newsletter, address on Page 1, bottom.

(44) BR postcard. Philippe Halsman's handsome 1958 photo of BR with pipe. Actual size 4¼ x 6. 75¢ for the first one, 50¢ each after the first one. Order from the Newsletter, address on Page 1, bottom.

(Thank you, TOM STANLEY)

ABOUT OTHER ORGANIZATIONS

- (45) "END" Campaign criticized. The Bertrand Russell Peace Foundation is campaigning for European Nuclear Disarmament (RSN26-36). The campaign has been endorsed by "The Bulletin of the Atomic Scientists" (RSN29-20). But not everyone favors the campaign; this letter appeared in the "Bulletin" (April '81, p.57):

The "Appeal" being circulated for signature by the Bertrand Russell Peace Foundation concerning END—European Nuclear Disarmament—does not deserve the support you give it by publishing it on the first page of your December 1980 issue. There are far better proposals for arms control and disarmament in Europe being put forward, for instance by the French government at the 1980 European Security Conference meeting in Madrid.

END is based on three fallacies. The Appeal states: "Over the years

public opinion has pressed for nuclear disarmament and detente between the contending military blocs. This pressure has failed." This statement is quite untrue. There has been public hope that detente might come about, but there has been virtually no public pressure for disarmament.

The Appeal states: "We must act together to free the entire territory of Europe, from Poland to Portugal, from nuclear weapons..." The "entire territory of Europe" goes as far as the Urals.

The Appeal states: "We offer no

advantage to either NATO or the Warsaw alliance." By excluding European Russia from "Europe," the Soviet Union would have a monopoly of nuclear weapons in Europe. They would also retain their conventional superiority.

The French government at Madrid has been arguing that nuclear is only likely to break out in Europe as a result of *conventional* war in Europe; which seems reasonable. They therefore argue for *conventional* disarmament within the region stretching from the Atlantic to the Urals.

Nuclear disarmament, they argue, cannot be regional, but must be universal; which again makes sense.

Carl Friedrich von Weizsacker's article in the same issue, *European Armaments in the 1980s*, alive as it is to many of the realities of Europe, will, I hope, have dissuaded your readers from accepting the not quite innocent naivetes of END.

ELIZABETH YOUNG
London W2 3HS

(Thank you, BOB DAVIS)

PERIODICALS RECEIVED

- (46) "Freedom From Religion Foundation Newsletter" (March 1981). Issued (free) by the New Jersey Chapter (Box 40, Asbury, NJ 08802) of the national organization (30 West Mifflin St., Suite 312, Madison, WI 53703), this 8-page monthly provides reprints of newspaper stories on activities of religious groups. This issue contains stories on Moral Majority, creationism, school prayer, the Pope, Islamic sect, Baptist preacher, Penthouse, book burning and abortion. It also contains an editorial; notice of a meeting in NYC on April 13; another meeting in Morristown, NJ on April 5; and lists of books, buttons, bumper stickers and labels for sale. Tax-deductible membership, \$15.
- (47) "Tranet" "Transnational network of appropriate/alternative technologies." "A newsletter of, by and for those individuals and groups around the world who are actively developing appropriate/alternative technologies." A remarkable information source for those to whom the ideas -- small-is-beautiful, self-sufficiency, self-reliance -- appeal. The 18-page Spring '81 issue (No.18) includes a directory of African A.T. (Alternate Technology) Centers. The Fall issue will include a directory of intercultural exchange programs, etc. "Tranet" (quarterly) goes to members only. Membership \$15 a year, to PO Box 567, Rangeley, ME 04970
- (48) "New Muslim Outlook" (not yet a publication; now in planning stage). It plans to be "a new monthly newsletter directed by a group of students, concentrating on the socio-political situations in the Third World in general and the Muslim World in particular. Emphasized shall be analyses of currents in political repression and dissidence, human rights violations and clarification of some misconceptions produced by several information vehicles in the West. The writing shall not include religious revolutionary rhetoric, and shall be presented in an analytical manner deviating from the typical radical journalism found in other Islamic religious-political journals. We ask for your moral and financial support, since our means of production are extremely limited. Sample copy (1st issue): 75¢. Year subscription: \$7.00. Donations welcome. When replying, please mention where you saw this notice. PO Box 3152, Falls Church, VA 22043."

REPORTS FROM COMMITTEES

- (49) Philosophy Committee (Ed Hopkins, Chairman):

I am now in process of choosing papers for the BRS meeting with APA (Eastern Division) this December. I still need papers. Papers must reach me before the end of May. Also I would still like to get more names of people interested in commenting on a particular aspect of Russell's philosophy. Include a phone number where you can be reached, if you are responding to either the call for papers or the call for commentators, at this late date.

(50) Science Committee (Alex Dely, Chairman):

I have been working in 2 areas: (1) "peace" efforts, and (2) hazardous waste management in Arizona. As I have received little input from BRS members, I have decided to describe my own activities, with the idea that some members may wish to do similar things in their own communities.

- On the "peace" front, I have been active in 4 main projects. First, I have been in written contact, personally and through the American Physical Society, with the exiled Russian physicist, Andrei Sakharov. We are gearing up a major effort to send him letters of moral support for his courageous anti-nuclear proliferation stands, as well as journals so he can keep up-to-date with developments in physics.
- Second, I have become an abstractor/editorial consultant to the Canadian Journal of Peace Research Abstracts, which digests all relevant books, articles, etc....dealing with any aspect of the arms race and disarmament. (They need more such abstractors. They'll send you the reading materials to keep in return for your summary of them. If interested, contact me: Physics Department, University of Arizona, Tucson, AZ 85721.)
- Third, I have become a member of the American Physical Society's Committee on International Scientific Affairs, which, along with other major scientific organizations, will recommend personal and institutional ways to transfer scientific/technological information to Third World nations efficiently. Fourth, I'm trying to galvanize Tucson area public interest groups, schools, etc., into opposing the MX missile system. I talk to any group that will listen. I am also preparing a 30-page critique of the MX Environmental Impact Statement, which is technically inadequate. BRS members can help oppose the MX by writing a comment -- even if only a general opinion -- to President Reagan or Defense Secretary Weinberger before July 1st (the final decision date). For more information, contact me, or SANE, 514 C Street, N.E., Washington, DC 20002, or National Campaign to Stop the MX, 201 Massachusetts Avenue, N.E., Suite 116, Washington, DC 20002.

Arizona's hazardous waste management program has been rated #39 out of 50 states, in overall effectiveness. (Alex supplies some specifics, which we omit. Ed.) In cooperation with various environmental groups (Sierra Club, Friends of the Earth, etc.) and other citizen organizations, I have set up a comprehensive clearing-house of toxic waste information, for these groups as well as the press and public. I have prepared testimony for hearings and I am lobbying for an adequate package. I need other states' versions of hazardous waste legislation/regulations. If some of you can send me a copy of such from your local governments, as a possible model for us, I would be very grateful. I hope you all will get involved in similar projects in your own communities, for this issue will surely become THE environmental issue, if not THE political one, of this decade.

NEW BOOKS (CONTINUED)

(51) "How To Be Your Own Psychologist" by Peter G. Cranford, is described in a feature story in the "Atlanta Constitution" (March 30, 1981), only a small part of which is reproduced here, and in regrettably small type:

How To Fire Your Analyst

Dr. Peter Cranford, maverick psychologist, comes out with a book to help troubled people cure themselves, sans psychoanalyst, sans expense.

By Robert Lamb
Contribution for News

IF DR. PETER Cranford isn't careful, he'll not only lose the hand that he holds, he'll lose it off clean up to the elbow.

The Augusta psychologist has written a book titled "How to Be Your Own Psychologist." One who has bought and used the book, Cranford and his colleague might find themselves in a bit of a predicament.

But Cranford could not care less. In fact, a portion of his book sings the praises of altruism. "Altruism is the highest form of respect," he writes. "The appeal to another's altruism is the strongest -- the only -- influence we can exert on others. When we have little to offer in exchange,"

But hold on. Cranford didn't spend much time talking about altruism. He is, but simple and sappy he isn't. Right up front he tells you: "The purpose of this book is to help you to increase your ability to influence yourself and others."

Ah, spoken like a true pragmatist. "I have been reading this book for a long time," says William Barrard Russell, who came along with James as his idea. But listen up: "Everything you desire you must get out of yourself. You must get everything you have or will get from yourself." Cranford writes, "Almost everything you have or will get comes from yourself. It is your own influence is 'never based on assets' and is important to self-preservation, he says. In short, persuasion is the name of the game. OK. Fine. But how do you do it?"

"Compassion," Cranford says, adding that he filed the idea from Russell. "I have been reading this book for a long time," says William Barrard Russell. Simply put, it means this: "If you can prove that you can satisfy your own needs, he will do what you want him to do."

Cranford explains. Russell took the concept that certain ideas co-exist in the mind. He says that the golden rule and reciprocal altruism. You scratch my back and I'll scratch yours.

INDEX

RUSSELL SOCIETY NEWS

No. 31

August 1981

- (1) '81 Annual Meeting reported (6,53,54). Playboy interview (12). BR on Evolution (16), on History (17). '82 BRS Award nominations wanted (19). On Sakharov (20). On Nuclear Disarmament (21-23). About Humanism (24-28). Time to vote (43). Membership list (51). An asterisk in the left column indicates a request.

(2) MEMBERSHIP RENEWALS

Last call for dues. Everyone's dues were due on July 1st (except new members who enrolled this year.) If your dues have not been received by September 1st, you become — horrible thought — a non-person. Please mail your dues, if you haven't yet done so, to the Membership Committee, RD 1, Box 409, Coopersburg PA 18036. Dues: regular \$20, couple \$25, student \$10. Plus \$7.50 if outside the USA and Canada.

COMING EVENTS

(3) Tenth Interamerican Congress of Philosophy (October 18-23, 1981):

THE INTERAMERICAN SOCIETY OF PHILOSOPHY
AND
THE AMERICAN PHILOSOPHICAL ASSOCIATION
THE
TENTH INTERAMERICAN CONGRESS OF PHILOSOPHY

5. SOCIETY AND RIGHTS: PHILOSOPHICAL PROBLEMS
A. Economic issues
B. Political representation
C. Civil rights
D. Social change
E. Political institutions

Theme: HUMAN RIGHTS
Host Institution: FLORIDA STATE UNIVERSITY
Place: TALLAHASSEE, Capital of Florida
Dates: 18 - 23 OCTOBER 1981
Languages: ENGLISH, PORTUGUESE, SPANISH, FRENCH

6. PRACTICE: Discussion of concrete problems of the limitation, defense, and extension of human rights from the perspective of one or more participating countries.

The organizing committee welcomes contributions on any philosophical topic, and will arrange sessions as appropriate for what is submitted.

The committee is inviting work on the topic of human rights, the theme of the congress, both in the form of individual papers and organized symposia. It especially welcomes contributions on this topic, either in the form of single papers or ideas for symposia, and suggests the following categories.

THEME: HUMAN RIGHTS

1. PHILOSOPHIC FOUNDATIONS
 - A. Alternative points of view on rights
 - B. Origins and development of rights
 - C. Changing conceptions of rights
2. HUMAN NATURE OR THE HUMAN CONDITION
 - A. Needs and rights
 - B. Rights and human differences (race, gender, sex, age, etc.)
 - C. Health care, research, and rights
 - D. What are the human rights?
3. RIGHTS OF INQUIRY AND EXPRESSION: PHILOSOPHICAL PROBLEMS
 - A. Speech, publication, and broadcast
 - B. The arts
 - C. Religion
 - D. Science
 - E. Philosophy
4. ETHICS AND RIGHTS
 - A. Moral and legal problems of human rights
 - B. UN Declaration of Human Rights (especially the study led by Klibansky for the International Institute of Philosophy)
 - C. The work of the Interamerican Commission on Human Rights
 - D. Moral Education

Funds are available for a limited number of participants. In view of the limitations, we appeal to those wishing to attend to seek local funding where possible. In order to make the necessary arrangements, the committee requests that brief abstracts or summaries of proposed work be received in the congress office by April 30, 1981. While we will consider proposals received after that date, those received later will have a diminishing prospect for financial assistance or optimum placement in the program.

Individual contributed papers should be planned for a delivery time of about twenty minutes, so that ample discussion time will be available. Similar considerations prevail for symposia. Where desirable, fuller written versions may be distributed in advance. We are now developing publication plans, and anticipate that the invited papers and a portion of the contributed papers will be published in the original language and in what translations may be possible and appropriate, with abstracts in all four languages.

Papers will be accepted without regard to the philosophical point of view they express, and wherever possible the committee intends to put works with differing points of view close to each other on the program in order to maximize the opportunity for fruitful exchanges. In addition, cognizant of the relevance that fundamental and applied work have for each other in the area of human rights, the committee will attempt to arrange for constructive dialog.

A number of other organizations, for example the Society for Iberian and Latin American Thought, are planning meetings of their own in conjunction with the Tenth Congress. Further information on this will be available later.

The Tenth Congress has been designated a regional international meeting by UNESCO. Prospective participants from outside Canada and the United States will need a passport and a United States visa. Please advise us if any unusual difficulties arise.

The 16-page pamphlet announcing the Congress, from which the above is taken is in Portuguese, Spanish and French as well as English. There are enrollment forms in the 4 languages. For more information, write Tenth Interamerican Congress of Philosophy, American Philosophical Association, University of Delaware, Newark, DE 19711. Thank you, DAVID MAKINSTER.

(See Page 32 for addresses of newsletter and BRS Library)

- (4) Humanist Summit Conference (October 29-30, 1981), at College Park Maryland. BOB DAVIS and DON JACKANICZ will represent the BRS at the Conference. All BRS members are invited. For information, write Bob (2501 Lakeview Avenue, Los Angeles, CA 90039).
- (5) BRS at APA (December 28, 1981). For the 8th consecutive year, the BRS will have a session at the annual meeting — this year in Philadelphia, December 26-30 — of the American Philosophical Association, Eastern Division. For the program see (11). The date of the BRS session is probably December 28th, but it should be verified.

ANNUAL MEETING '81

- (6a) The 8th Annual Meeting of the BRS was held on the agreeable green campus of McMaster University, Hamilton, Ontario, home of The Bertrand Russell Archives, the weekend of June 26-28, 1981.

Facilities were excellent, thanks to the good work of KEN BLACKWELL, CARL SPADONI, and CHERYL WALKER, of the Russell Archives. Ken is Archivist, Carl is Assistant Archivist, and Cheryl is Secretary.

28 BRS members attended: KEN BLACKWELL, ANDREW BRINK, BOB CANTERBURY, PETER CRANFORD, DENNIS DARLAND, BOB DAVIS, RON EDWARDS, LEE EISLER, PAUL GARWIG, NICK GRIFFIN, ALVIN HOFER, DON JACKANICZ, MARVIN KOHL*, HERB LANSDELL, JOHN LENZ, BOB LOMBARDI, STEVE MARAGIDES, CALVIN MCCAULAY, MICHAEL PARAYESKI, RAY PLANT, STEVE REINHARDT, CHERIE RUPPE, CARL SPADONI, KATE TAIT, ELEANOR VALENTINE, WILLIM VALENTINE, HERB & BETTY VOGT. (*rejoined the BRS at the meeting)

11 non-members attended: Joseph Capuana, Catherine Funnell, Paul Gallina, David Harley, Elaine Heller, Joan Link, Marilyn Mason, Margaret Moran, Richard Rempel, Roland Stromberg, Elizabeth Valentine.

The following officers were reelected for 1-year terms, starting immediately: Peter G. Cranford, Chairman; Robert K. Davis, President; Harry Ruja, Vice-President; Dennis J. Darland, Treasurer; Donald W. Jackanicz, Secretary.

(A Bylaw amendment, passed at the meeting, provides that officers elected at an Annual Meeting shall take office immediately upon election, and shall remain in office until the next election, at the following year's Annual Meeting. Formerly the term of office coincided with the calendar year.)

There were talks by Ken Blackwell, Bob Davis, Nick Griffin, David Harley, Don Jackanicz, and Bob Lombardi; a panel discussion, with Ken Blackwell, Andrew Brink, Nick Griffin, and Richard Rempel participating, and Carl Spadoni moderating; and a showing of 2 "Meeting of Minds" programs in which BR was one of the characters.

All talks were taped and you may borrow the tapes from the BRS Library (address on Page 1, bottom). It is not true that the tapes are completely unintelligible; you can often make out what people are saying.

The gastronomical and social highlight of the weekend was the Saturday night banquet at Ken and Kandriin Blackwell's splendid, spacious house in the country (about 4 miles from Mc^Master). We will not attempt to describe the many superb platters that were set out before us, all made by K. B. (plus excellent brown bread baked by the other — or archiving — K.B.) that set a standard for future banquets that we don't expect to see equalled. Banquetwise, it will be all downhill from now on.

* * * * *

Here are summaries of 2 of the talks:

- (6b) Ken Blackwell's "How Russell Planned to Achieve Compossibility":

Bertrand Russell had certain difficulties in his personal life: the familial loneliness into which he was plunged as an orphan, the consequent lack of union with others (be they groups or individuals), and the lack of peace caused by the restless torment of his particular set of passions. Russell sought love because through love he felt the hard shell of his ego dissolve and experienced the mingling of personalities. He sought even sexual love for this reason, as is evidenced by the coinciding of his early asceticism of both the emotions and the body and later expansiveness of the emotions and welcoming of sexual love. In the realm of thought, Russell is well known for his insistence on certain standards of belief. Allowing yourself to believe without good evidence is to yield to paltry personal desires to which a largeness of vision would never succumb. And just as he wished to escape from the prison of purely personal desires, he wished man to escape from the anthropocentric viewpoint, the perspective that judges all in terms of man's desires. When, however, it became a question of man's existence being threatened by man himself, Russell's ability to think of the human race without distinctions, supported by an expansive generosity, led him into strife in his old age, to do battle not with other men but with age-old hostile forces in man himself. In private life he was a generous man whose impersonal intellect was tempered by caring for the persons involved in the issue at hand. The record of his life shows him (as he puts it in his advice on growing old) making his "interests gradually wider and more impersonal, until bit by bit the walls of the ego recede and [his] life becomes increasingly merged in the universal life."

The foregoing description uses language associated with what I identify as the Spinozistic ethic by which Russell lived and which underlies his normative writings.

[Following this opening paragraph, I examined some of Russell's writings — especially The Conquest of Happiness — for the concept of self Spinoza bequeathed him and which is at the foundation of his ethic to promote generosity and rationality.]

(6c) Nick Griffin's "First Efforts":

The title of this talk is taken from the third chapter of My Philosophical Development and concerns Russell's intellectual development before he went to Cambridge in 1890. Given Russell's puritanical upbringing from his grandmother, his early thinking on religious subjects is traced through his secret journal, "The Greek Exercises". Russell's fascination with mathematics and his failed attempts to understand it are also analyzed. The talk concludes with the loss of Russell's religious beliefs upon reading Mill's Autobiography. The talk to the ERS was an abbreviated presentation of the first chapter of a book that I'm writing with Carl Spadoni entitled Russell's Idealist Apprenticeship.

* * * * *

For much more on the '81 Meeting, skip to Don Jackanics's reports, Pages 31-33. Other talks in later issues.

REPORTS FROM OFFICERS

(7) Chairman Peter G. Cranford reports:

A chief action of the Board of Directors was to initiate a revision of one of the Bylaws. The need for this was presented by Alvin Hofer because of differences of opinion as to how ethical violations were to be handled. He presented detailed procedures, and will present the results of further study. Others serving on the revision committee are Cherie Ruppe, Ray Plant, and the Board Chairman.

It was also decided that payment to the Russell Archives for "Russell" would be made at the time of publication rather than in advance.

It was suggested that we have a symposium on compossibility. This could serve as a pilot for an international discussion at a later date. Steve Allen and Dick Cavett have been approached, to include an examination of compossibility on their respective TV shows.

I have been in communication with Dr. Paul G. Kuntz, Professor of Philosophy, at Emory University, who has been in touch with Kenneth Blackwell concerning a philosophical workshop to be held on the Atlanta campus. Emory now rivals Harvard in the amount of endowments.

The Meeting held at McMaster this year was well organized, stimulating and socially enjoyable. It lived up fully to the high standard that has been set by recent Meetings. The intellectual calibre of those who participate is impressive.

(8) President Robert K. Davis reports:

I have been working on a number of projects in addition to the McMaster Meeting and doing research. In May Dan Wray, Jacqueline Berthon-Payon and I, with my sister as photographer, presented the ERS Award to Steve Allen at his offices in Los Angeles. We had an interesting half-hour with Allen, who seems to be well versed in Russell's religious ideas. I sent Andrei Sakharov a brief telegram, at the request of the Sakharov Defense Committee, on the occasion of his 60th birthday (see 20c).

As noted earlier, I have been working on having the 1982 Annual Meeting in England. I received some encouragement last fall; some members said they would try to attend. Recently several more have made it clear that they intend to go, and several European members have responded enthusiastically. I have been working with Peter Cadogan, of the South Place Ethical Society — he ran the BR Memorial campaign — and he put me in touch with the Wilberforce Council for Human Rights. We are discussing a joint meeting at Oxford, with the theme "Persecution Without Prison" — an area of human rights. It has to do with people punished administratively — exile is an example — rather than by imprisonment. Much has to be decided and nothing is certain yet, but I do have high hopes that this Meeting can be arranged. Members with suggestions or observations should please forward them to me (2501 Lakeview Avenue, Los Angeles, CA 90039.)

A statement by Andrei Sakharov, not widely distributed in North America, put out by the Wilberforce Council, is being distributed with this newsletter. We can feel pleased that they are interested in working with us.

The ERS has been invited, by the American Humanist Association, to attend a "Humanist Summit Conference" in College Park, MD, October 30-31. (Cf. 4. The AHA letter of 5/28/81 says the dates are Oct. 29-30. If you plan to attend, better check with Bob as to the correct dates.) I have indicated that I plan to attend, if personal finances permit; Don Jackanics has also indicated interest in attending. The Summit Conference will serve as a coordinating committee and idea generator among the groups attending, especially important in these days of Moral Majority nonsense.

Finally, I have been working on finding a home for Lester Denonn's Russell Library. I attended a seminar on fund-raising last winter, which helped clarify the problem. I have found a potential home for the collection. The prestigious private Huntington Library in San Marino, California (in the L.A. region) has indicated that it is "enthusiastic over the prospect" of getting the Denonn collection, and that "there is a large and interesting body of material in the collection which should be most useful to scholars studying Russell and other

philosophers of his time." Of course, the money is still to be raised; but having (1) learned the proper way to handle this project, and (2) found a very good potential home, I can at last report some real progress in this matter.

(9) Treasurer Dennis J. Darland reports:

For the quarter ending 6/30/81:

Balance on hand (3/31/81).....1134.75

Income: 5 new members.....60.00

50 renewals.....960.00

Total dues.....1020.00

REPORTS FROM COMMITTEES

(10) Science Committee (Alex Dely, Chairman):

(1) Dissident scientist report: as a member of the American Physical Society's Committee on International Scientific Affairs, I helped write a "Human Rights Kit: Suggestions for Activities in Support of Oppressed Physicists" (available free from American Institute of Physics, 335 E. 45th St., New York, NY 10017). It gives case reports of scientists illegally imprisoned in Eastern Europe and South America for unpopular political beliefs, and sample letters to U.S. and foreign officials. Though most BRS members are not physicists or scientists, these actions can be taken by any citizen. I encourage BRS members to write letters of support for these courageous people; the investment in time is small, the emotional satisfaction large. Contact me if interested. (Physics Dept., University of Arizona, Tucson 85721.)

(2) Thanks to Kate Tait, who volunteered her services as an abstractor to the Canadian Journal of Peace Research Abstracts. I enjoy this work very much, and find many ingenious ideas on how to stop nuclear proliferation and start educating for a political system in which conflicts can be resolved through reason rather than military might.

(3) The landbased MX missile system is getting increased criticism from many who have studied the social, political, environmental and economic costs of "man's largest project". The decision on the basing mode (land or sea) will probably be made in July or August. I'm helping organize several workshops and a large conference-debate in Phoenix. We are hoping the land-based system can be defeated, as it is militarily inferior to sea-based missile systems.

(4) I have become the State Toxic Substances Coordinator for the coalition of several environmental and consumer groups. In June and July, severe ground water pollution was found in Tucson, due to TCE (trichloroethylene). This carcinogen is estimated (at the levels detected) to cause 1 excess cancer per 10,000 people. As Tucson gets all its drinking water from ground water, and the population is 500,000, the health hazard is obvious. Equally disturbing, the EPA's Enforcement Division is being eliminated, and OSHA is being weakened. The states will now have to take over the task, and Arizona lacks trained personnel, money and other support. I am holding workshops, outlining alternatives and possibilities of political action. Several thousand wells have been closed across the country due to TCE alone. I suggest that BRS members look into the situation in their own communities. You may be unpleasantly surprised, but may still have time to correct the problem. I have plenty of information on how to start a toxic substances campaign. If interested, please contact me.

Anyone interested in working with me, or getting more information, on any of the above, please write to me.

PHILOSOPHERS' CORNER

(11)

THE PROGRAM OF THE BERTRAND RUSSELL SOCIETY

with

THE EASTERN DIVISION OF THE AMERICAN PHILOSOPHICAL ASSOCIATION

Place: Sheraton-Philadelphia and Franklin Plaza Hotels, Philadelphia

Time: December 27, 1981 to December 30, 1981
(Probably the morning of the 28th at 10 a.m. Consult the program issue of the APA Proceedings for confirmation.)Do Relations make any Particular difference?
Chris Swoyer, University of Oklahoma

Commentator: Roger Simonds, American University

Russell on the Relations of Universals and Particulars
Larry Blackman, SUNY, Geneseo

Commentator: David Rodier, American University

Chairman: Justin Leiber, University of Houston

Abstracts of the papers to be presented may be gotten in advance of the meeting by writing Edwin Hopkins, 6165 64th Ave. #3, Riverdale, Md. 20840.

This Program is presented by the BRS Philosophers' Committee
Edwin Hopkins, Chairman

BR INTERVIEWED

(12)

The Playboy Interview. G. B. Gelson, ed. (New York:Playboy Press, 1981). Interviewer: Norman MacKenzie. March 1963:

In mid-Camelot, even Kennedy "liberals" did not question the need for a strong military. The New Left had not yet formed, Catch-22 was still a cult book, and pacifism was something odd and just a bit unsavory. Which seemed to be good enough reasons for Fisher to assign journalist Norman MacKenzie to interview Lord Bertrand Russell, the renowned mathematician, philosopher, and pacifist.

It was supposed to be a "theme" interview: Lord Russell's passionate call for disarmament and his castigation of both superpowers would certainly provide enough substance for an extended conversation, Fisher thought. But as it turned out, Lord Russell had some unconventional views on other matters, too, calling for a new outlook on sexuality, for a revamping of sexual education, for a new and open morality—topics congenial to PLAYBOY, but not often articulated by such a respectable spokesman. It was Fisher's—and PLAYBOY'S—first real coup.

If the long and stormy life of Bertrand Arthur Russell can be said to possess any unifying thread, it is an enduring attitude of passionate skepticism, a lifelong refusal to accept any truth as immutable, any law as infallible or

any faith as sacred. During the nine decades of his dedication to dissent, the erudite Earl Russell, a member of the House of Lords, has been awarded the Nobel Prize for literature in recognition of his pioneering research in mathematical philosophy and symbolic logic, and honored with Britain's distinguished Order of Merit for service to his country. But he has also been reviled as an enemy of religion and the flag; jailed for his ringleadership of passively nonviolent demonstrations against nuclear armament; and variously extolled and execrated for his contentious convictions on free love, women's suffrage, sex education, pacifism and preventive war.

As the London Times wrote last May on the occasion of Lord Russell's 90th birthday, "for every one who grasps even the outline of his contribution to mathematical logic, 10,000 wear the little button that he wears." The button is the badge of the Campaign for Nuclear Disarmament, a militantly antimilitary movement of which he is the combative champion. As spiritual leader of the famed Committee of 100, a ban-the-bomb group that commands widespread popular support in Britain, he has also earned international eminence—and a brief prison term for civil disobedience—as the most articulate agitator for the controversial cause of unilateral disarma-

ment.

In October 1961—after a decade of mounting personal outcry against the unabating arms race—Russell warned his uneasy listeners at a ban-the-bomb rally in London's Trafalgar Square that they would be lucky if any of them were alive in a year's time. That year has passed, and nuclear holocaust has not yet overtaken us. We began our interview by reminding Lord Russell of this prophetic miscalculation.

PLAYBOY: Inasmuch as the world has successfully survived the year since your Trafalgar Square address, Lord Russell, would you care to revise your estimate of the likelihood of an atomic war?

RUSSELL: I said at Trafalgar Square that we would need luck as things were, and we have been extremely lucky so far. But I don't see any reason to be optimistic. I still feel that the human race may well become extinct before the end of the present century. Speaking as a mathematician, I should say that the odds are about three to one against survival. The risk of war by accident—an unintended war triggered by an explosive situation such as that in Cuba—remains and indeed grows greater all the time. For every day we continue to live, remain able to act, we must be profoundly grateful.

PLAYBOY: In a scathing reference to President Kennedy, Premier Khrushchev and Prime Minister Macmillan, you said in 1961 that "they are the wickedest people who have ever lived in the history of man, and it is our duty to do what we can against them." Did you actually mean to say that Kennedy, Khrushchev and Macmillan are the worst of a gallery of villains which includes Hitler and Attila?

RUSSELL: That was an arithmetical statement. Just as it is a wicked thing for one man to murder another, it is 10 times as wicked to murder 10 others, and 1,000,000 times more wicked to be responsible for the death of 1,000,000 men. No man in history has ever had the chance to murder on such a scale. In the past there have been long and bitter wars that caused appalling destruction, but at the end there were still people who could build again. Today we face the prospect of total obliteration in a single day. If mankind is to survive at all, intelligent people must learn to think and act in a less provocative manner than in former times.

PLAYBOY: Did not the avoidance of nuclear war over Cuba last October reassure you about the prudence and restraint of both Kennedy and Khrushchev?

RUSSELL: There *are* signs that the politicians are beginning to realize the implications of the power they wield. But they have not fully assimilated them. So much seems to depend on very personal factors with politicians—even on what they have had for breakfast and whether they have indigestion when they have to make some important decision. What I am saying is this: When two great powers disagree about anything—it doesn't matter what—they must find a way to settle it somehow by arbitration or by negotiation, not by war or threat of war. We know only too well that if you threaten someone with war and he doesn't give way, then you may find yourself committed either to war or to backing down—and *that* choice has almost always been resolved by war. The Berlin crisis is a case in point. Here the Russians have been somewhat aggressive; they are trying to secure a change in the status of West Berlin by what amounts to threats of war. In the case of the Cuban crisis, on the other hand, Khrushchev has shown himself to be less belligerent than Kennedy, and in effect, at a crucial moment last October, was responsible for avoiding a war of nuclear devastation. Full credit must be given to him for this. He acted with great restraint in a crisis of the first magnitude. I hope it may presage similar responses should the Berlin question reach a comparable peak of crisis. The essential thing to understand is that no conceivable solution to any problem is worse than a nuclear war. It is necessary to realize before it is too late that any act—whatever its motive or rationale—is to be considered wicked if the consequence is an atomic holocaust.

PLAYBOY: What do you believe was the effect of your own personal intervention with Khrushchev—via your much publicized cable appealing for Russian prudence in responding to the American blockade of Cuba?

RUSSELL: He carried out the promise he made in the letter replying to my cable—the promise to do nothing rash that would risk conflict. Within hours of my communication, 12 Soviet ships had turned back from their Cuban destination and Khrushchev had stopped further shipment. This left Cuba illegally blockaded in violation of international law. I believe that if a blockade is defensible when applied to Cuba, then the precedent can be applied also to Berlin and even to Britain, which is an advanced American nuclear base. America should remember the War of 1812 when the United States would not tolerate a British blockade. This is the very heart of what I have been saying for years: If nuclear bases are intolerable in Cuba, then they are intolerable anywhere in the world. Nuclear bases threaten the survival of mankind and the Cuban crisis has shown us how very close we are to annihilation.

PLAYBOY: Do you think the Russian position on Berlin may bring us closer still?

RUSSELL: I can't tell. There are all these different possibilities. There is *intended* war, resorted to when one side really thinks it can win. That is the least likely cause in this case. Then there is escalation—a little war growing into a big one. There is also threat and counter-threat, where each side hopes the other will give way—a course inevitably bringing such dangerous factors as prestige and national pride into play. But what is most likely in Berlin or elsewhere is simply war by misinterpretation. You may get a meteor or something like that showing up on a radar screen, and someone will press the button. There is no time to consider. It could so easily happen, in a day, in a moment . . .

PLAYBOY: Can you make any estimate of the destructive consequences of such a disastrous "misinterpretation"?

RUSSELL: This is a question for experts, though all experts are biased. For an uninformed person such as me, it is very difficult to make any precise forecast. But I could give you a *minimum* estimate. I believe you must generally estimate that, at the very least, the price of nuclear war would be that half the population of both America and Russia, plus the whole of the population of Western Europe and Britain, would be wiped out.

Fear is very much a part of the incentive for armaments. If the fear were removed, each side would be more reasonable. I think that if the West were to voluntarily divest itself of nuclear weapons as a token of its peaceful intentions—this would greatly impress the Russians. They would then feel that they had nothing to fear and that they could enormously reduce their own expenditure on armaments. They would spend their money on consumer goods instead.

PLAYBOY: Does your disarmament plan involve also the abandonment of conventional weapons?

RUSSELL: We should not interfere with conventional weapons unless there is general nuclear disarmament. We would then discard all but a very small number of conventional weapons.

PLAYBOY: It has been said by some political observers that this eventuality will remain entirely academic as long as the U.S. continues to insist on inspection without disarmament, and the U.S.S.R. on disarmament without inspection. Would you agree or disagree with this appraisal?

RUSSELL: It does rather look that way. One side says that America is to blame for the stalemate and the other says Russia is responsible. You get the same sort of explanation in both countries. That, roughly speaking, has been the excuse for not reaching agreement. But I think the true explanation lies deeper than that. Neither side *wants* agreement, and they have to have something plausible to disagree about. You must realize that in both countries there are political and military factions—lobbies, if you like—which exert powerful pressure for extremist policies. On both sides they consist of people with interests in armaments and all the apparatus of preparation for war. There are military commanders in power on both sides, and their vested interest is in exercising that power. In fact, military people carry much more weight in the making of policy than does public opinion.

PLAYBOY: Would you say, then, considering this climate of opinion within as well as between Russia and America, that there is any realistic hope of drafting a global disarmament plan which would be acceptable to both sides?

RUSSELL: No, not at present. There is no possibility of attaining or sustaining general disarmament until East-West tension has lessened.

PLAYBOY: In 1957 you wrote in *The New Statesman*, the liberal British journal, an appeal to Premier Khrushchev and then-President Eisenhower for just such a lessening of world tension, to which both the Russian leader and John Foster Dulles responded with public reassurances. Six years have elapsed since then without a noticeable decline in global strife and division. At this critical moment in the cold war, would you care to make another such appeal—perhaps suggesting specific ways in which relations can be improved—to Khrushchev and President Kennedy?

RUSSELL: If I were to make another such appeal, I would have to begin by repeating what I said in 1957. I should say simply to both men: "You seem anxious to destroy the world, to create vast misery and total destruction. All this preparation for war is childish—and suicidal. If you could only begin to tolerate each other, you would be perfectly happy." I would go on to suggest that the overridingly urgent necessity is to come to an agreement; this is far more important than the precise form the agreement takes. Last summer I sent a message to Moscow in which I expressed the wish that in all negotiations between East and West, the negotiator for the Communists should begin by saying that the universal victory of capitalism would be less disastrous than nuclear war. At the same time, the Western spokesman should start by admitting that the universal victory of communism would be preferable to the destruction of mankind. In a speech last July,

Khrushchev singled out this suggestion and said that he entirely agreed. I was rather pleased. I would suggest further that the likelihood of war could be lessened immeasurably if both sides would place a great deal more emphasis on the ghastly destructiveness of war. At present the major organs of publicity in both East and West are inclined to make the public believe that nuclear war wouldn't really be so terrible after all. That is why I am opposed to Civil Defense preparations. They are diabolical inventions calculated to tell lies and to deceive. Everyone who knows anything knows that. People may think themselves safe in their deep shelters—but they will roast. Governments must be made to give up the habit of lying in order to persuade people to die quietly. Thirdly, I would strongly recommend an agreement on both sides not to teach that the other side is wicked. For Americans, communism is the Devil; for the Russians, capitalism is the Devil. The truth is that neither is wicked than the other. They are both wicked.

PLAYBOY: Do you see no difference between the moral positions of America and Russia?

RUSSELL: No. They *both* have abominable systems. I am inclined to prefer the American system, but only because it is more allied with what I am used to. If I had been born a Russian, probably I should prefer the Russian system.

PLAYBOY: Have your views changed since you returned from a trip to Russia in 1920 to write one of the earliest and sharpest criticisms of the Soviet regime?

RUSSELL: I still take exactly the same view. Up to the time of Stalin's death, it was really quite horrible. Since then, I think, things have not been quite so bad—though I still don't care for the Soviet system at all. I just don't happen to like the American system either. The Americans tell you they stand for freedom: What they mean is that you must be quite willing to perish in order to be free in hell. In Russia they punish you if you espouse capitalism; in America they punish you if you espouse communism. What is the difference? But it is not worthwhile for us to go into the question of whether Russia or America has the better system. There are merits and demerits on both sides. The only important matter is to find some way of compromise between them which will avoid war. At present each has an entirely melodramatic conception of the other, and I think that the Russian Government in particular encourages this view by not allowing Russian tourists to visit other countries except in small organized groups. The same applies to Western visitors in Russia. This is a great pity. But there also seems to be some kind of fear in the West that if you get to know Communists, you will begin to admire them and finally be won over by them. Not a bit of it. There is simply no other way to achieve on each side an understanding of the real nature of the other.

PLAYBOY: Do you consider it possible to strive for these same aims *without* waiting a century—by relying on the UN?

RUSSELL: It can't be done through the UN as it is now, because the UN does not embrace China. Its exclusion is a colossal stupidity. The veto also is an absurdity. Some nations, moreover, are very much more powerful and populous than others, and you cannot invest a little nation with the same weight as a big nation. What you will have to do is divide the world into regions. You might, for example, have North America as one group, Europe as another, Russia as a third, China as a fourth, and so on. You would have to work it out with a view to making it more or less equally balanced in population. And the various regions ought to be so constituted that their internal relations would be foremost in importance and their relations to the outer world secondary in importance. I would leave each region complete autonomy for its own affairs. The world government would become involved only when there were contests or disputes with other regions. We shall not long survive without some such system.

PLAYBOY: On a personal level, why have you chosen to adopt a policy of civil disobedience as a means of promoting the cause of peace?

RUSSELL: Purely to get attention. All the major organs of publicity are against us. It was extremely difficult to get any attention at all until we resorted to it. I have no views in principle either for or against civil disobedience. It has always been practiced at different times and places. With me it is purely a practical question of whether to do it or not, a method of propaganda.

PLAYBOY: Do you feel that the authorities have the moral right to prosecute and imprison those involved in such nonviolent demonstrations for peace—as they have done to you?

RUSSELL: I have no right to complain about being punished for breaking the law. I complain only if I am not permitted to break it. I recognize that if you go outside the law you cannot complain if it is made a little awkward for you, but it ought to be possible to do so. If I suddenly took it into my head that I wanted to assassinate the Queen, then I should expect to be punished. You do that sort of thing with full foreknowledge of the consequences.

PLAYBOY: You were recently threatened with expulsion from the Labor Party for urging Western representatives to attend a Moscow "peace" conference and state their views. Aren't such occasions always turned to their own advantage by the Communists?

RUSSELL: On the contrary. Members of the Committee of 100 went to Moscow last summer and presented their point of view very effectively indeed. They got publicity both inside and outside of Russia. Many Americans have asked me why I don't preach my ideas to the Russians as well as to the West, and the answer is that I *do*. Certainly the Russians disagree with much of what I say, but I have found it just as easy—or as difficult—to get publicity for my views in the Soviet press as in the English press. The question I wondered about was whether they had bowdlerized what I said. I have taken the trouble to get translations of what they printed and found that they have been completely faithful. They have not altered a scrap.

PLAYBOY: In addition to disseminating your views personally on both sides of the Iron Curtain, you were the initiator of a series of peace conferences, of which the first was held in Pugwash, Nova Scotia, between groups of scientists from East and West. What positive results do you feel have emerged from these symposia?

RUSSELL: They have made a contribution toward informed opinion. For one thing, as a result, the test-ban negotiations came very much closer to success than they would otherwise have done. But the Pugwash meetings have not accomplished as much as one might have hoped. There was a lack of effective publicity. The public won't listen to informed opinion. They want uninformed opinion.

PLAYBOY: In 1916, you were fined £100 by the Lord Mayor of London for circulating a pacifist leaflet which the law deemed "likely to prejudice the recruiting and discipline of His Majesty's Forces." Your intention, you said then, "was to procure, if possible, a change in the law, or failing that, to secure a change in administration." Does the same intention motivate your current antiwar activities?

RUSSELL: Yes. Then, of course, I was defending the rights of conscientious objectors in World War I. I do not wholly share their views, but I felt, and still feel, that one should respect their convictions. They believe what I do not believe: that it is wicked to take part in *any* war, however righteous the cause. I supported the war against Hitler, and have become a pacifist today largely because of the destructiveness of nuclear warfare.

PLAYBOY: Even if a nuclear conflict is avoided, either through disarmament or a continuing balance of power, Khrushchev has made it clear that future "peaceful co-existence" will entail a continuing nonviolent struggle on the ideological front and an intensified campaign of economic competition which he predicts will eventually "bury" us. What posture do you feel the West should adopt in combating this threat?

RUSSELL: Neither of these conflicting interests will be arbitrated equitably and amicably until we have a truly representative and authoritative world government. In the absence of one, it will be a tug-of-war, a question of who is stronger. A continued program of economic and educational aid to underdeveloped countries, meanwhile, would be a significant means of strengthening the Western position. It would be better, of course, if such aid were given cooperatively by both sides, but I don't think that this is practical politics at the moment. In either case, it should be given not on cold war grounds, but simply because these people need help.

PLAYBOY: Do you share the apprehension of leading sociologists and economists concerning the implications of unchecked population growth in such overcrowded and underproductive areas as Africa, China, India and parts of Latin America?

RUSSELL: The population problem has, in my opinion, been rather exaggerated. It can be solved by adequate birth control, and I don't think that Catholic objections will prevent the increasingly widespread use and acceptance of contraceptives. After all, Roman Catholics represent only a small segment of the world's population. India and China are the really big problem areas, and both are inclined to favor birth control.

PLAYBOY: Do you agree with many historians and social scientists who foresee that the next century will witness "an inexorable economic and social evolution," as one commentator has expressed it, "from the tradition of individual enterprise to the psychology of mass man"?

RUSSELL: Societies comprised of small farmers, merchants and artisans will soon be anachronistic. Almost everybody is already part of something big. If we are to preserve individual liberty in this new world of huge firms and institutions, we must begin thinking in different terms from the tenets of classical liberalism. We will be able to deal with the "curse of bigness," as Justice Brandeis called it, only by democratizing industry. I would like, for example, to see rules providing for the popular election of directors and managers in each industry. The important thing is to ensure the limitation

and equitable division of power. At present economic power is too much concentrated in the hands of a few big men who control the lives of others to an undesirable degree. The Russians—in fact, socialists of all countries—make the cardinal error of believing that if you have a democratic state running industry, then it automatically follows that the industries themselves will be democratic. But to put state officials in place of capitalist officials changes nothing; they are still men, still wielding the same power. Unless state officials are made responsible to all us underlings, nothing will ever be achieved by nationalization.

PLAYBOY: So far we have been talking mainly of the issues which have preoccupied you during the last half-dozen years. But your life's work has encompassed a multitude of causes. Which of them has mattered most to you?

RUSSELL: Though they have mattered differently at different times, the question of international peace certainly transcends any I have ever been concerned with or any issue that previously excited me. But I have derived great satisfaction from many of my interests—matters of the mind more than anything else. Mathematical logic has been the source of perhaps my deepest intellectual gratification. It has given me very great pleasure to feel, in an important field of human knowledge, that I may have made some lasting contribution to man's understanding of things which were once beyond his grasp, but which can now be comprehended and manipulated. I am also pleased with the aftermath of my campaign for women's suffrage and my efforts to secure a more enlightened sexual morality and behavior. They have gone almost as well as I would have liked them to go. When I was young, one talked to a woman in a different language than when talking to a man. There was a cultivated unreality in intercourse between men and women which I thought was very bad indeed. Today things are utterly different. Young people don't realize how much change there has been. But we still need much more freedom and frankness in sexual instruction. Another matter to which I have always attached great importance in education is that schools ought not to teach nationalism. Every school, with hardly any exception, has as one of its objects the deception of children. They teach them patriotism, to salute the flag. But the flag is a murder symbol, and the state is a pirate ship, a gang of murderers come together. When they salute the flag, they salute the symbol of bloody murder. All this is perfectly clear, valid psychology.

PLAYBOY: On the occasion of your 90th birthday, Lord Russell, you said, "In old age, one becomes aware of what has, and of what has *not* been achieved." Did you mean this observation to apply to the fruits of your own efforts in behalf of the various causes you've espoused?

This bears repeating:

"...in all negotiations between East and West, the negotiator for the Communists should begin by saying that the universal victory of capitalism would be less disastrous than nuclear war. At the same time, the Western spokesman should start by admitting that the universal victory of Communism would be preferable to the destruction of mankind."

BR QUOTED

(13) St. Louis Post-Dispatch, Letter to the Editor:

Bertrand Russell once sardonically remarked that he could find very little evidence that man is a rational animal. The latest spate of correspondence from the anti-gun control people certainly justifies Lord Russell's pessimism. As nearly as I can decipher their arguments, they are saying that after a victim is dead or wounded, law enforcement and justice should be vigorous and swift. My grandmother would have called it "locking the barn door after the horse was stolen."

Richard Ash

Mexico, Mo.

(Thank you, STEVE MARAGIDES)

(14) Forbes (5/11/81, p. 348):

"A sense of duty is useful in work but offensive in personal relations." Bertrand Russell

(Thank you, WHITFIELD COBB)

BR MEMORIAL

- (15) Russell Memorial (London) -- not quite paid for. This from London, from Peter Cadogan, who handled the fund-raising:

The present position is that we owe the sculptor her last 200 pounds and have about 50 pounds in the bank. It would be nice if we were to raise a little more. Dora and John Russell gave very generously to the fund (they were the biggest donors) and then finally put up an extra 400 pounds to make sure we paid our way -- so that, since this was in theory a loan, any surplus we have will be paid back to Dora. The help we have received from The Bertrand Russell Society in the US has been most rewarding both financially and psychologically.

RUSSELL ON X

- (16) "Russell on Evolution", quotations selected by FRED ALLENDORF, who last month attended a special workshop in teaching evolution at the college level -- he teaches evolution to biology majors at the University of Montana -- at the Annual Meeting of the Society for the Study of Evolution, in Iowa City.

On the origin of life:

It may seem odd that life should evolve by accident, but in such a large universe accidents will happen. (1)
It is probable that all forms of life have evolved from unicellular organisms. How these were first formed we do not know, but their origin is no more mysterious than that of helium atoms. (2)

On Darwin:

The doctrine that all men are born equal, and that the differences between adults are due wholly to education, was incompatible with his emphasis on congenital differences between members of the same species. (3)

On a design:

Is there not something a trifle absurd in the spectacle of human beings holding a mirror before themselves, and thinking what they behold so excellent as to prove that a Cosmic Purpose must have been aiming at it all along? (4)

If I were granted omnipotence, and millions of years to experiment in, I should not think Man much to boast of as the final result of all my efforts. (5)

Man, as a curious accident in a backwater, is intelligible: his mixture of virtues and vices is such as might be expected to result from a fortuitous origin. (6)

On evolution as progress:

The same laws which produce growth also produce decay. (7)

And if the changes on the earth's surface during the last million years appear to our present ethical notions to be in the nature of progress, that gives no ground for believing that progress is a general law of the universe. (8)

A process which led from the amoeba to man appeared to the philosophers to be obviously a progress -- though whether the amoeba would agree with this opinion is not known. (9)

On Man's relationship to other animals:

Things and species lost their boundaries, and none could say where they began or where they ended. (10)

The difference between man and the lower animals, which to our human conceit appears enormous, was shown to be a gradual achievement, involving intermediate beings who could not with any certainty be placed within or without the human family. (11)

An adherent of evolution may maintain that not only the doctrine of equality of all men, but also that the rights of man, must be condemned as unbiological, since it makes too emphatic a distinction between man and other animals. (12)

Would not a world of nightingales and larks and deer be better than our human world of cruelty and injustice and war? (13)

On the environment:

Man is a part of nature, not something contrasted with nature. (14)

To formulate any satisfactory modern ethic of human relationships it will be essential to recognize limitations of man's power over the non-human environment. (15)

On philosophy:

That man is the product of causes which had no prevision of the end they were achieving; that his origin, his growth, his hopes and fears, his loves and his beliefs, are but the accidental collision of atoms; that no fire, no heroism, no intensity of thought and feeling, can preserve an individual life beyond the grave; that all the labors of the ages, all the devotion, all the inspiration, all the noonday brightness of the human genius, are destined to extinction in the vast death of a solar system, and that the whole temple of Man's achievement must inevitably be buried beneath the debris of a universe in ruins -- all these things, if not quite beyond dispute, are yet so nearly certain that no philosophy which rejects them can hope to stand. (16)

From evolution, so far as our present knowledge shows, no ultimately optimistic philosophy can be validly inferred. (17)

(17) "Russell on History" by PHILIP STANDER:

As a science, history conveys two very different meanings. First, science, as the verifier of historical facts, is especially important where evidence is both scarce and obscure and where there is a conflict of testimony. "History, however much it may be pursued as an art, has to be controlled by the attempt to be true to fact." (1) Science, in the sense that the historian does his utmost to preserve fidelity to the facts, is absolutely essential to the study of history.

There another sense in which history attempts to be scientific. This is when historians seek out causal laws connecting different facts. The attempt to discover such causal laws in history resembles attempts by which the physical scientists have succeeded in discovering interconnections among facts. "If there were a science of history, its facts would be deduced from general laws, which would come first in the general order." (2)

At present, Russell is quick to admit, history is far from this state. While some aspects of history can be made more or less scientific, and Russell believes that it is important to do this whenever possible, the material is much too complex to be reduced to scientific laws at present. In fact, Russell adds, such reduction to law is probably centuries away. Due to our present ignorance there is too much that appears as chance, and too great a likelihood that we overlook, in the search for causal laws connecting events, an incalculable number of variables and forces. (3) "I think the course of history is subject to laws and is probably for a sufficiently wise person deterministic; but nobody is wise enough. It is far too complicated and nobody can work it out; the person who says he has done so is a charlatan." (4)

Another difficulty in searching for such laws is that there is not so much recurrence in history as there is, for example, in astronomy. For even when historical causal sequences are established, there is not much reason to expect that they will hold in the future. The relevant facts are so complex, and we are so ill-equipped to deal with them, that unforeseeable changes falsify our predictions. "No historian, however scientific, could have predicted in the fourteenth century the changes brought about by Columbus and Vasco da Gama. For these reasons I think that scientific laws in history are neither so important nor so discoverable as is sometimes maintained." (5)

Russell applies these arguments especially to those who think that they have discovered some formula according to which human events develop, to those large schemes of historical development which many have found so fascinating. Men such as Hegel, Marx, and Spengler have created general formulae which, Russell believes, can only be made plausible by omitting half the facts. Such men who attempt to make up philosophies of history are dismissed by Russell as merely inventors of mythologies. (6)

Russell's sceptical appraisal of "descriptive theories", of projections into the future on the basis of described patterns, derives from his views concerning our knowledge of the past. Since the past is known through given effects, a wide variety of causes of the same effect is conceivable, thereby rendering questionable an historian's explanatory theory. For this reason, it is highly probable that the future might be very different from projections based on some descriptive patterns which, in turn, were based upon the "discovery" of causal relations. The assessment of evidence and records, Russell concludes, will always be restricted to context, temperament, occupation, and so on. That is, historians come to the past with attitudes and biases, and their temporal location and local interests determine their individual assessments of the past.

In coming to grips with the fact of considerable disagreement among observers of the same event, Russell contends that an historian's narrative, most certainly, is an imposed structure upon events where historians exclude and include according to their various senses of significance. The result of this process of selection is the demonstration of relations between the facts. And it is precisely because the historian shows relations, i.e., makes connections by jumping over spaces of time, that the historian is an artist, his selectivity being a reflection of his motives, temperament and assumptions.

It is grossly incorrect, however, to conclude that Russell believes historical records to be an iron curtain to the past. Among philosophers, Pragmatists have been similarly misinterpreted. Rather, like the Pragmatists, Russell's view is that, since everything said about the past is reduceable to record, then one must be sceptical of those attempts to form closed, absolute, and final descriptions about events derived from records. This form of scepticism assumes that some records yield more plausible accounts than others. It is this issue of "plausibility" that renders understandable much of Russell's activities in the realm of historical research.

First, in this connection, some observations yield evidence more plausible than others. Essentially, Hume asserted this when he wrote, "All probability...supposes an opposition of experiments and observations, where the one side is found to overbalance the other, and to produce a degree of evidence, proportioned to the superiority." (7) In much the same way, Russell asserts, some discoveries of cause and effect relationships appear more plausible than others. Thus, it becomes possible for Russell to study "general trends" in history and to talk of "cause and effect". One must keep in mind, however, that the use of such terms is to be understood in light of the issue of "plausibility".

When, finally, A History of Western Philosophy was completed, Russell openly admitted to being eclectic, for, in order to cover such a vast stretch of time, "it is necessary to have very drastic principles of selection. ...In the case of the men whom I have discussed, I have mentioned what seemed relevant as regards their lives and their social surroundings; I have even sometimes recorded intrinsically unimportant details when I considered them illustrative of a man or his time." (8) Of course, such selectivity influences the causal relations which one infers. In the case of Russell, philosophy was perceived as an integral part of social and

political life: "not as the isolated speculations of remarkable individuals, but as both an effect and cause of the character of various communities in which different systems flourished." (9) This, essentially, is Russell's theory of "reciprocal causation", i.e., the theory that history is determined by the interaction of men and their environments, the theory that the circumstances of men's lives do much to determine their philosophy and that, conversely, their philosophy does much to determine their circumstances. THE BRS AWARD (1981)

(18) The 1981 BRS Award, to Steve Allen was reported in RSN10-17. Here is how it was reported in a BRS press release:

STEVE ALLEN RECEIVES THE 1981 BERTRAND RUSSELL SOCIETY AWARD

The 1981 Bertrand Russell Society Award has gone to Steve Allen, a man who does not fit anyone's stereotype. Though widely known as a comedian and versatile TV performer, it is not generally known that he is also given to serious thought, as will appear below.

The Award, in the form of a Plaque, was presented to Mr. Allen by BRS President Bob Davis, at a private meeting in Van Nuys on May 28th.

The Plaque citation reads: "For using unique talents in the service of public enlightenment, by inviting ordinary citizens to meetings of many great minds."

This refers to the PBS TV series, "Meeting of Minds," which brings together great figures and thinkers of the past, in animated conversation. The series was conceived, written, and moderated by Mr. Allen.

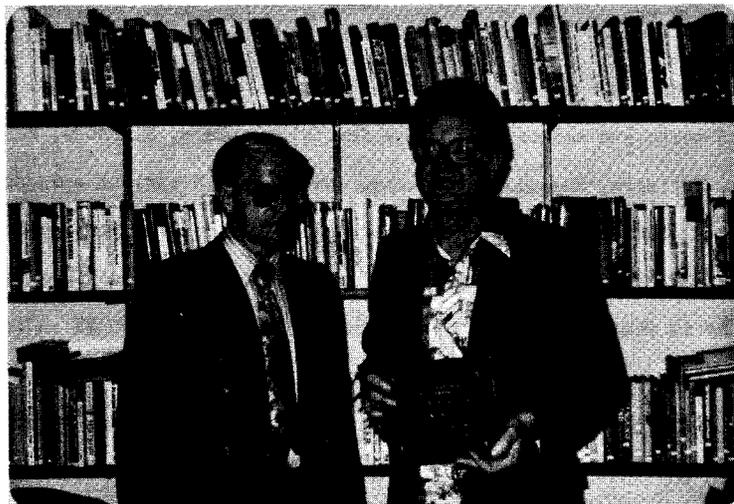

"Meeting of Minds" deals with important figures of many kinds — from rulers and generals to poets and saints, and not a few philosophers. Socrates, Plato, Aristotle ... Aquinas, Voltaire, Russell...all appear on-stage, in various episodes. In fact, "Meeting of Minds" might almost have been called "Philosophy For People Who Don't Like Philosophy." It is not a dry-as-dust presentation of ideas to a captive audience, as is sometimes the case in a college classroom. (No TV audience is captive.) There are flashes of wit, clashes of ideas, and the excitement of good argument. And, importantly, the ideas presented are true to the historical record. All this may help explain why "Meeting of Minds" is now in its 4th season, with more to come in prospect.

That a popular TV performer, in position to reach a very large audience, should wish to use his time and talents to enlighten his fellow citizens — clearly a labor of love — should not go unnoticed. Nor has it. "Meeting of Minds" has won the Peabody Award, a TV Critics Circle Award, the Encyclopedia Britannica Award, the Film Advisory Board Award, and 3 national "Emmy" nominations. The Bertrand Russell Society is delighted to add its Award to this list. It is clear that Mr. Allen knows what's important, in the opinion of lots of people.

Bertrand Russell was also someone who invested a good deal of his time in enlightening his fellow citizens, as titles of many of his books indicate: "The ABC of Atoms", "The ABC of Relativity", "The Conquest of Happiness", "What I Believe", "Marriage & Morals", "A History of Western Philosophy". This last was one of the few books that President Carter took with him to the White House from Plains.

Only the bare bones of Steve Allen's remarkable versatility and energy can be indicated here. He is a comedian-actor-jazz pianist-clarinetist-lyricist-post-novelist-master of ceremonies-orchestra leader-singer. And that's not all: He has composed 4000 songs, and written 22 books. Some of the books are decidedly serious, such as "Ripoff" (on white collar crime), "The Ground Is Our Table" (about migratory farm labor), and "Explaining China". His novel, "The Wake", first written as a play, about a poor Irish Catholic family in Chicago, is semi-autobiographical. He has also written 2 volumes of poetry.

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970). It is not a scholarly society — though quite a few scholars are members — and is open to anyone interested in Russell. For information, write RD 1, Box 409, Coopersburg, PA 18036.

Bob Davis has just given the BRS Award plaque to Steve Allen

THE ERS AWARD (1982)

(19) The 1982 ERS Award — whom would you like to see get it? Send us your nomination, your candidate.

A candidate should have done one of the following:

- made an important contribution to Russell scholarship (as ERS Award Winner Paul Schilpp did);
- popularized important ideas, thus enlightening the public (as ERS Award Winner Steve Allen does in "Meeting of Minds");
- worked closely with ER in an important way;
- acted in support of a cause that ER believed in. M.I.T. Professor Henry W. Kendall, of the Union of Concerned Scientists, who works against nuclear armaments (and nuclear power), would qualify;
- acted in ways that exhibited qualities of character (such as moral courage) reminiscent of ER.

Send your nomination to the ERS Award Committee, care of the newsletter (address on Page 1, bottom), and tell why you believe your candidate deserves the Award. If you name a well-known figure, it may earn publicity for the ERS, which is a plus. If you are not sure whether your candidate qualifies, don't let that stop you: it's up to the Award Committee to pass on qualifications.

HUMAN RIGHTS (SAKHAROV)

(20a) Peter Cadogan on Sakharov, in "New Scientist" (May 26, 1981):

Andrei Sakharov

There has been too much silence about Andrei Sakharov and it is good to see *New Scientist* make an end of it ("Sakharov: science of a dissident", 30 April, p 274). May I draw readers attention to the remarkable statement he made last October in the form of an open letter to the president of the Soviet Academy of Sciences? Part of it reads as follows:

"My life has been such that for two decades I found myself among those engaged in scientific-military and military construction projects in which I myself took an active part and then, for more than 12 years, I have been among those people who have set themselves the task of a non-violent struggle

for the observation of human rights and the rule of law. My fate has thus forced me to perceive with especial acuity the questions of war and peace, international security, international trust and disarmament, and the questions of human rights and open societies, and to give intense thought to these problems in all their interdependencies. That was how my position evolved. In many respects it proved unorthodox, at odds with the official line and with my own assessments of many years previous. In the final analysis all this has completely changed my life, my goals and my ideals."

The open letter runs to six pages, is a truly remarkable document, and is available from me for an SAE, or from

its publishers in this country: The Wilberforce Council for Human Rights, Salisbury Hall, Park Road, Hull HU3 1TD.

Sakharov would like to hear from scientific colleagues and friends. The November 1980 *Bulletin of the Atomic Scientists* published an appeal from F. Janouch of the Research Institute for Physics, Stockholm, part of which reads: "I am convinced that it is time now for the scientific world community to escalate the efforts to help our distinguished Soviet colleague. From Andrei Sakharov's last communication it is obvious that he is mainly missing the information about what is going on in physics. It should be easy for physicists to break down this information barrier. Let the theoretical institutes,

laboratories and groups from all over the world begin sending to Sakharov their preprints, lecture notes, and reports."

They should be sent by registered mail with the pink "advice of delivery" card (P68G)CS to: Professor Andrei Sakharov, Prospekt Gagarina 214, kv3, Scherbinka 2, Gorki, USSR. If the pink delivery card is not returned within a month with Sakharov's signature on it, please ask the local post office to investigate the matter. The Post Office is obliged, according to international convention, to make an investigation and, if unable to provide proof of delivery, to pay compensation.

Peter Cadogan
East West Peace People
1 Hampstead Hill Gardens
London NW3

(20b) Sakharov's 6-page open letter to the President of the Soviet Academy of Sciences is enclosed with this newsletter. BOB DAVIS obtained copies for ERS members from The Wilberforce Council for Human Rights, Hull, England, which published it. Our thanks to the Wilberforce Council and to Bob.

Note: the Wilberforce pamphlet suggests 2 actions: (1) Write a polite letter to Brezhnev expressing your concern about the denial of Sakharov's human rights, with a carbon copy not to Popov, the Soviet Ambassador to England, but to the Soviet Ambassador to the U.S. (His Excellency, Dr. Anatoly F. Dobrynin, Soviet Ambassador, Soviet Embassy, 300 Massachusetts Avenue N.W., Washington, DC 20036.) (2) Write a letter of support to Sakharov, address on back page of the Wilberforce pamphlet.

(20c) Andrei Sakharov Defense Committee (NYC) urged people and organizations to telegraph greetings to Sakharov on his 60th birthday, May 21, 1981. Bob Davis did so, on behalf of the ERS.

NUCLEAR DISARMAMENT

(21) From The New York Times Review of the Week (5/24/81, p.E19):

A Day To Remember

By James Reston

WASHINGTON — It used to be celebrated as Decoration Day, then as Memorial Day, sometimes even by the simpler English name of Remembrance Day — but lately we have forgotten to

remember why it was set apart: On May 3, 1868, Gen. John A. Logan, Commander in Chief of the Grand Army of the Republic, issued an order that on May 30 of that year there should be a pause to decorate the graves of the soldiers killed in the Civil War, and to pray for reconciliation and peace.

Since then we have had five wars, with so many more graves to decorate that we are running out of space here in Arlington Cemetery. Yet one of the most significant aspects of politics here now is that very little is said about how to avoid another war. There is no discussion, as there was in the years after

the Second World War, of organizing the nations for peace, no debates about Baruch plans or Acheson plans or Lillenthal plans for the control of nuclear weapons, no Eisenhower plan for transferring tens of billions of dollars from military to civilian purposes.

It almost seems to be accepted that

safety lies in more and more military weapons, now costing the world over \$800 billion a year. The United States military budget — significantly called the "defense" budget — is now larger than the entire Federal budget of 20 years ago and the main opposition to it comes from those who want to make it even larger.

Occasionally somebody does speak out against the prevailing indifference to the mounting cost and danger of the arms race, but their warnings are certainly not part of any serious debate between the parties or even much thoughtful discussion in the press.

Prof. Henry Kendall, a physicist at the Massachusetts Institute of Technology and chairman of the Union of Concerned Scientists, recently made a speech at the State University of Groningen in the Netherlands, deploring the mounting tension between the major nuclear nations and the lack of debate about that perilous predicament.

"The danger of nuclear war remains one of the grim features of modern life," he said. "... a few U.S. nuclear strategists, some of them with close as-

sociations with the present Reagan Administration, even believe that 'limited' nuclear wars can be fought — and in terms of American political objectives — 'won.' Europeans no doubt, living as they do on one of the primary potential battlefields, must find this opinion rather unsettling...."

The explosion of a one-megaton weapon in the lower atmosphere," he reports, "will create a fireball some 7,000 feet in diameter: a million tons of air will be heated above 2,000 degrees centigrade. Detonated at or near the ground the weapon will dig a crater nearly one-fifth of a mile in diameter and 300 feet deep. If such an explosion occurs in an urban area, some 50 square miles will be totally destroyed by the blast effects and much of the wreckage burned out from fires started by the heat...."

We will spare you the gruesome details of his estimates of death and destruction in any nuclear war, but Senator Edward Kennedy did manage to get the entire speech printed, without debate, in the appendix to the Congressional Record of May 12, 1981.

George Kennan, probably our most

distinguished and certainly our most articulate living diplomat, was in Washington last week to receive the Albert Einstein Peace Prize.

He asserted that the United States and the Soviet Union were now on a "collision course politically" and that the "process of rational communications between the two governments seems to have broken down completely."

"Every President of this country from Dwight Eisenhower to Jimmy Carter," he said, "has tried to remind us that there could be no such thing as victory in a war fought with such weapons... [yet] when one looks back over the history of these warnings, one has the impression that something has now been lost of the sense of urgency, the hopes, and the excitement that initially inspired them so many years ago."

"One senses, even on the part of those who today most acutely perceive the problem and are inwardly most exercised about it, a certain discouragement, resignation, perhaps even despair, when it comes to the question of raising the subject again...."

Kennan has little faith that the present crisis can be averted by merely

renewing the strategic arms talks with the Soviet Union and agreeing to small reductions in nuclear arms.

"I can see no way out of this dilemma," he observes, "other than by a bold and sweeping departure.... I would like to see the President, after appropriate consultation with the Congress... propose to the Soviet Government an immediate across-the-board reduction by 50 percent of the nuclear arsenals now being maintained by the two superpowers...."

Though this dramatic proposal came from the man who has the longest experience of any American on Soviet affairs and who originally proposed the policy for "containing" the expansion of Soviet power, his remarks were not widely discussed or even circulated.

It is this silence — or indifference — or forgetfulness — that is so ominous on this Remembrance Day. George Kennan may be right or wrong, but with his record, he is certainly not irrelevant, and might even be as worth listening to as, say, Senator Jesse Helms, North Carolina's gift to peace and good will.

What seems to be a transcript of the Kennan speech that Reston refers to appeared as an article in "The New York Review of Books" (7/16/81, pp. 14-15). Titled "A Modest Proposal", it ends with this paragraph:

In the final week of his life, Albert Einstein signed the last of the collective appeals against the development of nuclear weapons that he was ever to sign. He was dead before it could see publication. It was an appeal drafted, I gather, by Bertrand Russell. I had my differences with Russell at the time, as I do now in retrospect. But I would like to quote one sentence from the final paragraph of that statement, not just because it was the last one Einstein ever signed, but because it sums up, I think, all that I have been trying to say on the subject. It reads as follows:

We appeal, as human beings to human beings: Remember your humanity, and forget the rest.

(22) From "The Dial" (February 1981) pp. 46-49:

Why Aren't We More Afraid Of The Bomb?

We are very afraid. But we don't show it.
There's the rub.

BY ROBERT JAY LIFTON

Robert Jay Lifton is a professor of psychiatry at Yale University. His most recent book is *The Broken Connection: On Death and the Continuity of Life*.

The atom bomb that struck Hiroshima shortly after 8:00 A.M. on August 6, 1945, was a trifle. Strategic war-

heads today can create a nuclear explosion over a thousand times more powerful. These devices are infinitely more lethal in the amount of radiation they can spread. We know, nevertheless, what that trifling bomb did to Hiroshima. We know that people by the thousands were incinerated in the streets, many of them as they hurried to work. A white flash, and they were

gone. Ninety percent of the people who were outdoors and within six tenths of a mile from where the bomb hit died instantly. All the buildings within two miles crumbled. The blast melted stone.

Surviving the explosion was no guarantee of remaining alive. Within days, radiation began its work. People became weak, ran high fevers, developed diarrhea, bled from all their orifices, lost

their hair, and died. Death by radiation is in many ways worse than the explosion itself. Radiation is invisible. It was the survivors' second encounter with death after the bomb dropped.

Years later, they had their third encounter. Because of radiation, cases of leukemia, most of them fatal, increased. This was only one kind of cancer that the bomb produced; the incidence of

cancer of the thyroid, the lungs, the ovaries, and the cervix also rose. But psychologically, leukemia, particularly in children, was the ultimate horror, the eventual outcome of the first moments after the bomb struck. The fears have not ended. The rate of cancer among survivors continues to increase. They wonder what genetic scars will appear in their children or their children's children.

We can be reminded of the Hiroshima bomb, and we know that many more powerful bombs are aimed right now at cities around the world. So why aren't we frightened by the knowledge that if a one-megaton bomb (the bomb dropped on Hiroshima was only thirteen kilotons) struck a city as densely populated as New York, over two million people would probably die instantly? Cockroaches would survive well. They would be blinded by the flash but still able to resist radiation far better than humans.

I think we are afraid, but we hide our fear. We have done precious little talking about the consequences of Hiroshima and Nagasaki. Yet, my study of Hiroshima survivors and my observations in this country today lead me to believe that those events *have* had an important psychological impact on us. The Hiroshima explosion cannot really represent what would occur today if nuclear weapons were used. Still, Hiroshima has things to tell us, particularly if we look at it not as an obscure event in the past but as a truth dominating our existence today. Ironically, we ourselves experience in muted form much of what happened psychologically to the survivors even though we have never experienced such a holocaust.

Right after the bomb exploded, the survivors ceased to feel, though they were surrounded by destruction and mutilation—people whose flesh fell from their bodies, charred corpses in fantastic positions, screams and moans. "Somehow, I became a pitiless person," one survivor told me, "because if I had had pity, I would not have been able to walk through the city, to walk over those dead bodies, badly injured bodies that had turned black, their eyes looking for someone to come and help them."

The survivors were psychically numb. It was a defense mechanism to close themselves off from death. Their unconscious message: If I feel nothing, then death is not taking place. But such cessation of feeling is itself a symbolic form of death.

There was also another emotion: The survivors felt the need to justify their own survival when so many others had died. An impossible task. The alternative was to feel guilty for being alive, and this turned to shame. Survivors spoke of "the shame of living." They

could never simply conclude that by happy chance they had survived. Now, thirty-five years later, some have remained so identified with those who died that they themselves feel as if dead. In daily life, they have become distrustful and suspicious yet have craved human relationships. These have been difficult to find; just as the survivors felt ashamed for themselves, others in Hiroshima have felt them to be tainted by death. Survival became a stigma, and some of that attitude still lingers.

Hiroshima initiated us into the possibility of global destruction. In the United States, that awareness has a special impact on children, according to unpublished studies conducted several years ago by Michael Carey, a historian trained in psychoanalytic methods. He interviewed people who had been schoolchildren in the early 1950s. It was the time when schools across the country held bomb drills, in which pupils were told to crouch under their desks. The Hiroshima and Nagasaki bombs and the fear of a menacing Russia inspired those quaint exercises. Nightmares and fantasies of death and destruction resulted.

The repercussions went far beyond bad dreams. A child must struggle to understand death and come to terms with its inevitability and finality. We all have difficulty doing this, but under ordinary circumstances, we come to accept death as part of life's rhythm. Bomb drills, bomb scares, and images of grotesque, massive death interfere with the capacity of children to think of death as natural. They equate it with annihilation.

The world is insane. This attitude also emerged from Carey's interviews—the bomb is irrational, governments are irrational, and those in authority have no real authority. In such a world, nothing can endure. Awareness of the bomb's potential has thus created an ephemerality; we remain alive at the whim of a craziness that can make us disappear in an instant.

We deal with this by leading double lives. All those whom Carey interviewed spoke of both the possibility of destruction as well as the need to go about their lives as if nothing would happen. Most of us probably lead the same double lives and, in fact, share the themes that appear in Carey's work. We cannot afford to incorporate our knowledge of the destructiveness of nuclear weapons into our emotions. If we allow ourselves to feel what we know, we probably could not go on; hence the extraordinary gap we experience between knowledge and feeling.

Becoming numb to the threat of nuclear destruction is perhaps one way to get through daily life, but it is not a so-

lution. Indeed, it may lead us right into extinction. The existence of nuclear weapons and the threat of their use interfere with the human desire for continuity. We need to feel connected, I believe, to those who have existed before and will exist beyond our brief individual life spans. We normally experience this sense of immortality in the idea of living on in our children, our creations, our influences on others, and in something all cultures describe as an individual's relationship to the natural world. We also feel this larger continuity in spiritual, or religious, terms and, finally, in psychic states that we view as transcendent, states so intense that time and death disappear—religious ecstasy, song and dance, sex, or merely the contemplation of beauty.

But in the face of extermination by a nuclear holocaust, who can believe in living on in one's children and their children or by means of spiritual or creative achievement or even in nature, which we now know to be vulnerable to our destructive weapons? Though we may be numb to the danger of destruction, we are aware of the bomb's presence, its weight on us. This, I believe, is why we are hungrier than ever for states of transcendence. We seek highs from drugs, meditation, jogging, and skydiving, and we join extremist religious cults that offer a kind of cosmology that sometimes includes or even welcomes a nuclear event.

Much worse, a religion based solely upon the nuclear threat exists today. It is industrial society's ultimate disease, a condition I call nuclearism. Worshipers passionately embrace nuclear weapons both as a solution to anxiety over possible nuclear holocaust and as a way of restoring a lost sense of immortality. They seek grace and even salvation—the mastery of death and evil—through the power of the new technological deity.

Adherents see the deity as capable not only of apocalyptic destruction but also of unlimited creation. The bomb, they think, can solve diplomatic impasses, force a way to peace, and atomic energy's potential can create a world of milk and honey. Believers come to depend on weapons to keep the world going. Edward Teller, a leader in the development of the hydrogen bomb, has associated unlimited bomb making with the adventurous intellectual experience of Western civilization, derided what he calls "the fallout scare," assured us that we can survive a nuclear attack, and insists above all that we cannot and must not try to limit the use of nuclear weapons.

A dangerous expression of nucle-

arism in our present weapons policy is the advocacy of "limited nuclear war." Proponents continue to seek from weapons magical solutions to political and military dilemmas while closing their eyes to the unlimited destruction that would result.

We must be able to imagine the consequences of nuclear weapons if we are to stop their use. Coming to terms with massive death, collective death, is asking a great deal of the human imagination. Yet, I do not see how we can ask for less.

That is why we need to remember Hiroshima. Its images give substance to our own intellectual sense of horror. However inadequately that city represents what would happen now if thermonuclear weapons were dropped on a population center, it helps us imagine. Keeping alive Hiroshima's death may help us keep alive.

The proximity of a nuclear holocaust is beginning to break through our numbness, at least for many of us. The accident at Three Mile Island, the near explosion of a Titan II warhead in Damascus, Arkansas, bring the ease of massive death in the nuclear age to the surface of our consciousness. The Iraq-Iran conflict deepens the shadow of possible global destruction. We are beginning to see through the sterility of the nuclear language—"exchanges," "scenarios," "stockpiles"—used by our political and military planners. As we sense the danger increasing, our defenses weaken and our fears increase. This is the beginning of awareness. We now need to go further and place nuclear dangers in the contexts of our lives, our values, and our personal and political advocacies. Unless each one of us knows where he or she stands ethically and politically—what one feels about the future of nations and mankind—a stand on nuclear holocaust may be impossible.

But to gain that perception, one must open oneself to discomfort and anxiety. That poses a formidable historical, even evolutionary, problem. Ordinarily, we are selective in what we experience, feeling just enough and closing ourselves off just enough to function and survive. Technology has upset that equation. What is now required is an unprecedented level of tension and psychic balancing, one that permits us to imagine a nuclear holocaust but does not paralyze us with fear.

Can we speak of a shift in consciousness taking place? We may do better to speak of a struggle against numbing. As reluctant as a turn toward awareness may be, it is an important step along a path to a human future. □

HUMANISM

(24) From The New York Times (5/27/81)p. A26:

Secular Humanists Confront the Moral Majority

To the Editor:

The informative news article by Dena Kleiman on the increase in book censorship and on the general assault on "secular humanism" (May 17) should alarm supporters of civil liberties and all fair-minded Americans.

As Miss Kleiman shows, rightist religious groups, such as the Moral Majority, are everywhere attacking the philosophy or religion of humanism, which has become, they contend, "the unofficial state religion." "Its omnipresence . . . particularly within the nation's schools," they say, "is responsible for crime, drug abuse, sexual promiscuity and the decline of American power." The religious fundamentalists claim that humanists control education, the press, radio and TV and the Government itself.

As an active humanist for almost 30 years, I am astonished at these wild charges, since humanists have unfortunately remained a small minority. The American Humanist Association has never had more than 6,000 members, and that number is at present reduced to approximately 3,000. We would indeed rejoice if humanism had the power and influence widely ascribed to it today.

While constantly accused of being "amoral," secular humanism advocates the highest ethical standards. Its supreme ethical aim is the this-earthly

welfare, progress and happiness of all humanity, with reliance on the methods of science and reason, democracy and love. It embodies the sound principles of the philosophies or religions and thus incorporates much of the Judeo-Christian ethic as set forth in the Bible, especially in the Ten Commandments and the Sermon on the Mount.

Like demagogic politicians, demagogic organizations need a demonic scapegoat, and they have chosen humanism. They extend their malicious propaganda to the liberals and even the American Civil Liberties Union, which a Moral Majority leader has absurdly denounced as "a Communist front."

In the face of all this pernicious nonsense, we humanists are standing firm and fighting back as best we can.

CORLISS LAMONT
Honorary President
American Humanist Association
New York, May 18, 1981

'An Incorrect View'

To the Editor:

Though some state Moral Majority chapters, which are autonomous, may be involved in limited efforts to influence the quality of reading material in some public schools, the national Moral Majority office is not involved in any such problems at this time.

Those state chapters that are so in-

involved are doing nothing different from what feminist organizations and minority groups have been doing for years. Those groups have succeeded in rewriting books so that they reflect the way they view themselves and the way they perceive the world. What is good for the liberal goose ought to be good for the conservative gander.

I do not believe in a "conspiracy theory" among secular humanists. Their philosophy, however, is a world view that is shared by many who have influence in such substantive areas as textbooks, television, movies and advertising. As major influencers of what we see, read and, therefore, think, secular humanists are having a major impact on America.

Secular humanism is an incorrect view of mankind, placing the created at the center of all things, rather than the Creator. From such a presupposition flow inevitable moral and ethical consequences that I believe have proved to be detrimental to the best interests of the human race.

Under the Constitution, secular humanists are perfectly free to assert their philosophy, but they must be tolerant of those who disagree with them and do the same.

CAL THOMAS
Vice President for Communications
The Moral Majority
Lynchburg, Va., May 20, 1981

(Thank you
DON JACKANICZ)

(25) From Newsweek (July 6, 1981) pp.48-49:

The Right's New Bogyman

During last year's political wars, the preacher-politicians of the Moral Majority transformed the terms "liberal" and "liberalism" into synonyms for godlessness and immorality. Now, in the wake of last November's conservative landslide, the fundamentalist New Right has shifted its terminology and tactics to confront a new bogyman. The target is what Christian fundamentalists label "humanism"—and their campaign against anyone they regard as a humanist threatens to become as virulent as the anti-communist crusade of the 1950s.

In the Western tradition, humanism is not really a philosophy. Rather, it is an attitude that recognizes the dignity of man and the importance of culture to his full development; it therefore emphasizes, as the poet T. S. Eliot put it, the superiority of "breadth, tolerance . . . and sanity" over "narrowness, bigotry and fanaticism." In the fundamentalist view, however, humanism becomes very nearly its own opposite: a narrowly anti-Christian creed that denies God, glorifies self-indulgence and preaches everything from Darwin's theory of evolution to socialism and pornography. With the influence of humanists in government, the media and public education, says the Moral Majority's Rev. Jerry Falwell, "secular humanism has become the religion of America." It has, he declares, "taken the place of the Bible."

That apocalyptic message has become the rallying cry of a diverse field of right-wing political and religious groups, and it is being repeated with increasing frequency throughout the nation. The Christian Broadcasting Network, for example, has

sold 1,813 prints of "Let Their Eyes Be Opened," a half-hour film that warns about the pervasive influence of humanism in the public schools while regaling audiences—most of them Bible-study and prayer groups—with peephole views of scantily clad teen-age prostitutes.

The crusade's most vigorous apostle is San Diego preacher Tim LaHaye, a self-styled Biblical family counselor who has used his anti-humanist zeal to achieve considerable political clout. Earlier this year LaHaye organized the Council for National Policy, an informal coalition of New Right activists that for the first time puts well-heeled conservatives like oil billionaire Bunker Hunt and fundamentalist preachers in regular touch with right-wing political tacticians, U.S. senators—and the White House. As council president, LaHaye figured prominently at a lavish dinner party recently given in Washington, D.C., by conservative fund-raiser Richard Viguerie and attended by a number of Cabinet and White House officials. "We share a basic commitment to moral values," LaHaye says of his new political-religious coalition. As he noted in "The Battle for the Mind," a book he wrote about the humanist threat, "We must remove all humanists from public office and replace them with pro-moral political leaders."

So far, the anti-humanist campaign's main battleground has been in the public schools. Armed with fundamentalist tracts with titles like "Secular Humanism: The Most Dangerous Religion in America," activists criticize textbooks, intimidate teach-

ers and block sex-education programs. In Alabama, businessman Leo Yambrek enlisted the support of Gov. Forrest (Fob) James's wife in an anti-humanist crusade that succeeded in eliminating five history and social-studies textbooks from the state's education curriculum. In New Hampshire, former Congressional candidate Bob Sweet has taken to the lecture circuit warning parents and teachers against the dangers of godless humanism in the classroom. And in the wealthy Dallas suburb of Plano, Texas, a group called Concerned Parents for Quality Education has written congressmen—and the White House—demanding that all traces of humanism be removed from the Plano schools. "It's a pervasive campaign, an epidemic and a real attack on public education," says Dorothy Massie of the National Education Association's teacher rights department. "It's really a witch hunt, only now the witches are humanists."

'Paranoid': Who are the humanists whom the fundamentalists are hunting? There is no clear answer. In the classic mode of what American historian Richard Hofstadter has called "the paranoid style in American politics," the fundamentalists seem to have created a conspiracy where none actually exists. LaHaye, for instance, warns darkly that America is being victimized by "275,000 humanists" who control everything from the Supreme Court and the Federal government to the nation's universities, labor unions and media. But in "The Battle for the Mind" (350,000 copies of which are currently in print), he manages to identify only a handful of card-carrying sec-

ular humanists—chiefly the hundred-odd signers of a windy 1973 tract called the "Humanist Manifesto II." This group of prominent, self-described nontheists—among them, science-fiction writer Isaac Asimov, behavioral psychologist B. F. Skinner and philosopher Sidney Hook—denounced religion in the name of the "scientific method." In doing so, they set themselves off from the mainstream of humanist tradition—a tradition in which man's relationship to God is as important a subject as any other human activity.

Despite its obscurity, the "Humanist Manifesto" has been used by fundamentalists to back up their charge that secular humanism is a religion—and as such should not be taught in public schools. The basis of that argument was set out in a 1978 article in the Texas Tech Law Review by attorneys John W. Whitehead and John Conlan. According to Whitehead and Conlan, secular humanism received what amounted to official recognition as a religion when the Supreme Court decided to allow principled nontheists to register as conscientious objectors to military service. As a result, they wrote, "Traditional theism, particularly Christianity, [was] disestablished as the State's presuppositional base in exchange for the religion of Secular Humanism." What were the humanist religion's tenets? To define them, Whitehead and Conlan turned to the "Humanist Manifesto"—which asserts the supremacy of human reason and science over religious faith and the authority of the Bible.

Narrow Test: Like many conspiracy

theories, the anti-humanist argument contains elements of truth. Until the establishment of universal public education in the late nineteenth century, most American higher education—and much secondary schooling as well—took place in Christian schools. Not all of them, however, would have passed the modern fundamentalist's narrow test for Biblical inerrancy. In any case, the appearance of totally secular universities did have a profound influence on the thinkers and activists who eventually shaped public education in America. "John Dewey and most of the other progressive architects of the public-education system grew up in small-town, Protestant America," says church historian Martin Marty. "But after they went to university, they dismissed all religion as the dull, small-town Protestantism they had known." Today, however, apart from an occasional celebrity skeptic like Skinner, there are few dyed-in-the-wool secular humanists left on campus who do much more than serenely ignore religion.

The fundamentalist attack on humanism is aimed at far more than just contemporary secularism. It represents a challenge to the root values of Western culture and the tradition of Christian humanism that lies at its core. As evangelical educator David Hicks notes, "The dialectic between pagan humanism and Christianity . . . undergirds all Western thought, culture and education."

Just as Saint Augustine used the scaffolding of Platonism to create the first system of Christian theology, so did Saint Thomas Aquinas draw on Aristotle to fashion his magnificent medieval synthesis of reason and revelation. Even the great Protestant reformers, Calvin and Luther, were trained as humanists; indeed, it was their humanistic studies that led them to their rediscovery of the Bible. And in Erasmus and Saint Thomas More, Renaissance humanism merged with Christian learning and sanctity.

"The Christian humanist does not feel skittish about using the word *humanism*," evangelical scholar Mark Noll has written, "since at the heart of his faith stands the confession that God—the originator of everything right and good—himself became man." The fundamentalists seem oblivious to this notion. "They know a lot about Jesus," Noll says, "but they would know a lot more about him if they also knew Aquinas and Pascal."

But the fundamentalist mind is essentially bellicose; it demands an enemy to fight, not books to read. Modern fundamentalism, after all, got off the ground in the 1920s when Biblical literalists abandoned the secular university and all it represented in favor of their own Bible colleges—sanctuaries that scorned humanistic learning as satanic. In their view, seminal thinkers like Plato and Aristotle were worth discussing only as

examples of pagan error. Both Falwell and LaHaye were educated at such schools, and today both head fundamentalist colleges that continue this essentially anti-intellectual tradition.

The fundamentalist critique of humanism is breath-takingly simple. "All books are based either on man's thoughts or God's thoughts," LaHaye argues in "The Battle for the Mind." The notion that Christianity could be enriched or informed by outside sources is thus considered completely invalid. Indeed, LaHaye criticizes Aquinas for reintroducing Aristotelian thought in the Christian West, remarking: "It is an irony of history that a man who was sainted by his church as a scholar was responsible for reviving an almost dead philosophy, which has become the most dangerous religion in the world today—humanism." This notion that anything not inspired directly by Biblical truth is inevitably anti-Christian applies to more than just philosophy. Among others, LaHaye excoriates Michelangelo for sculpting a nude David—when the Bible makes it clear in Genesis that, having fallen from grace, man should cover his nakedness. "The Renaissance obsession with nude 'art forms,'" LaHaye declares, "was the forerunner of the modern humanist's demand for pornography in the name of freedom."

Alienation: Such bizarre indictments

may say less about humanism than about the fundamentalists' profound alienation from the life of the mind. As the Roman Catholic philosopher Jacques Maritain observed, "Humanism is inseparable from civilization or culture." In rejecting it, the fundamentalists are, in a sense, rejecting the entire Western tradition.

They may also be rejecting some potential allies—chiefly those orthodox Christians, both Catholic and Protestant, who are equally upset by sexual promiscuity, drugs and moral indifference. The fact is, fundamentalists share a common enemy with orthodox Christians and devout Jews: secularists in every walk of life who deny that man has a transcendent dignity and destiny. Together, they might well find a way to bring teaching about religion back into the nation's schools and check the zealotry of those social planners who would manipulate the young at the expense of parental authority.

Fundamentalists have only recently awakened to these problems, and to the fact that the United States is no longer—if it ever was—the Christian nation they yearn for. America is a complex, pluralistic nation whose problems demand of its citizens all the breadth, tolerance and sanity that Eliot said humanism has to offer. And if that takes the form of a religious faith, it must feed on more than resentment and fear.

(26) Humanist books purged, a front page story in The New York Times(5/17/81):

Parents' Groups Purging Schools Of 'Humanist' Books and Classes

By DENA KLEIMAN

In Onida, S.D., birth control information has been removed from the high school guidance office, and the word "evolution" is no longer uttered in advanced biology. "Brave New World" and "Catcher in the Rye" have been dropped from classes in literature. The award-winning children's book "Run, Shelley, Run" has been banned from the library.

In Plano, Tex., teachers no longer ask students their opinions because to do so, they have been told, is to deny absolute right and wrong. In Des Moines, Iowa, a high school student production of "Grease," the hit Broadway musical, was banned. In Mount Diablo, Calif., Ms. Magazine is off the school library shelves; it is available only with permission from both a parent and a teacher.

Lobbying Methods Sophisticated

Emboldened by what they see as a conservative mood in the country, parents' groups across the nation are demanding that teachers and administrators cleanse their local schools of materials and teaching methods they consider antifamily, anti-American and anti-God.

Armed with sophisticated lobbying techniques and backed by such national organizations as Moral Majority, the Eagle Forum and the Christian Broadcasting Network, these parents are banding together to remove books from libraries, replace textbooks, eliminate sex education courses and balance lessons of evolution with those of Biblical creation, at least. They also seek to revise such things as the open classroom, new math and creative writing, asserting that these relatively unstructured academic approaches break down standards of right and wrong and thus promote rebellion, sexual promiscuity and crime.

'Secular Humanism' Opposed

There have always been disgruntled parents of one political persuasion or another. But visits to several cities and interviews with educators and leaders of the movement in cities around the nation show that today's groups are far more numerous, well organized and vocal. Their focus is no longer a specific book or course of study but rather the very nature of public education itself. The philosophy of "secular humanism," they say, permeates every facet of school life, from learning the alphabet to high school lessons in American history.

"Secular humanism is the underlying philosophy of all schools," said Terry Todd, national chairman of Stop Textbook Censorship, a group based in South St. Paul, Minn., which argues that "decent" books such as "The House of Seven Gables," "A Midsummer Night's Dream," "Huckleberry Finn" and "Robinson Crusoe" have been censored in favor of "humanist" literature. "Those of us who understand know how it is infiltrated, know how it is inculcated in the children."

Lottie Beth Hobbs, president of the Pro-Family Forum in Fort Worth, Tex., which distributes a leaflet entitled "Is Humanism Molesting Your Child?" said, "Humanism is everywhere. It is destructive to our nation, destructive to the family, destructive to the individual."

According to these groups, "humanism" has become the unofficial state religion. Its omnipresence, they contend, particularly within the nation's schools, is responsible for crime, drug abuse, sexual promiscuity and the decline of American power.

The Philosophy Called Humanism

There is a philosophy called humanism, which places man at the center of the universe, encourages free thought

and scientific inquiry without deference to a supreme being and offers no absolute standard of ethics.

But critics of the antihumanist movement, including teachers, parents and administrators, charge that the campaign is based more on hysteria than fact. They see "secular humanism" as a meaningless catch-all term used by these groups to describe all the nation's ills. While they acknowledge that humanism is the underlying philosophy of modern society, they dispute the belief that its acceptance is a result of conspiracy. Nor do they believe that it has been destructive to mankind.

"I think secular humanism is a straw man," said Paul Kurtz, a professor of philosophy at the State University at Buffalo, a leading humanist. "They are looking for someone to blame."

"Substitute the word humanist for Communist of the fifties or Bolshevik of the twenties," said Dorothy Maasie of the National Education Association. "This time the target is public school education."

Based primarily in predominantly white suburbs and small towns, the protesting parents' groups, which number in the hundreds, have names such as Young Parents Alert, People Concerned With Education, Parents of Minnesota and Guardians of Education. They include many parents who have never been involved in organized activity before but have decided to join with others now because they fear that the problems of urban school systems are slowly encroaching on those of their own home towns. Direct mail, toll-free telephone numbers and cable television provide easy access to others who share their concerns.

Brainwashing Is Alleged

Through brochures, films and pamphlets distributed at parents meetings, these parents are being told that humanism "brainwashes" students to accept

suicide, abortion and euthanasia and that it encourages them to lie, alienates them from their parents, fosters such "socialistic" anticompetitive practices as the open classroom and conditions them to think that there is no such thing as right or wrong.

"Some of you may have elementary or secondary children who experience stomach aches, headaches, nightmares or other similar complaints and/or disorders that cannot be accounted for," warns a pamphlet entitled "Parental Guide to Combat the Religion of Humanism in Schools," distributed by Parents of Minnesota. "Look in your schools! Modern educational materials and the techniques used may be what is causing those problems."

"I worry about my sons," said Lore Finley, whose two sons attend grade school in Blunt, S.D., and who only recently has become aware of the movement against secular humanism. "We do not have any rules in school; no right, no wrong. I don't like secular humanism. It teaches anything goes: if you feel it's O.K., do it."

What these parent groups are asking for, they say, is a return to many of the teaching practices and textbooks of 30 years ago, as well as the Christian values and principles upon which, they argue, the country was founded. They are asking specifically for history texts that emphasize the positive side of America's past, economics courses that stress the strengths of capitalism and literature that avoids divorce, suicide, drug addiction and other harsh realities of life.

Rating Textbooks for Parents

On another level, they advocate a return to academic "basics," contending that the abandonment of such disciplines as penmanship has led to slackening of standards and declining achievement. They want reading programs that focus on phonics rather than whole word recognition, writing programs that stress good

spelling over creativity. They also want, they say, a curriculum and an approach to teaching that clearly delineates between right and wrong.

"There is just too much negativism," said Mel Gabler, who with his wife, Norma, operates the largest "textbook clearinghouse" in the country, advising parents' groups on the moral acceptability of textbooks from their home in Longview, Tex. The Gablers say inquiries have increased 90 percent since President Reagan was elected in November.

"There is an uneasy feeling that maybe we've bent over backwards with being broadminded," said Dr. Scott Thompson, president of the National Association of Secondary School Principals.

According to Judith Krug of the American Library Association, since last November there have been attempts to remove, restrict or deny access to 148 different books in 34 states.

In Buhler, Kan., for example, "The Kinsman," a science fiction novel by Ben Bova, was removed from the library of the Prairie Hills Middle School because parents complained that it was sexually suggestive. In Gretna, Va., a parent-teacher committee at the high school voted to cut out or ink over "Howl" by Allen Ginsberg and "Getting Down to Get Over" by June Gordon, which involves the trauma of a woman who was raped, both of which are in "The Treasury of American Poetry."

In Muskego, Wis., students must now have written permission to check out the feminist health manual "Our Bodies, Ourselves." In Branson, Mo., an issue of Sports Illustrated was returned to the publisher in a brown paper bag because it emphasized bikini swim suits. In French Lick, Ind., "Death of a Salesman" has been banned from a high school English class because it contains obscenities.

Curbing Various Textbooks

Because of successful challenges by such groups as the Gablers, numerous health, social studies, English and science textbooks have already been removed or revised to comply with parental

complaints. Most recently, the Alabama Board of Education voted to remove "Justice in America" and "Unfinished Journey," both published by Houghton Mifflin and widely used in social studies classes across the country, from the state's approved textbook list in response to parental complaints that they were filled with secular humanism.

"We feel we brought the best of scholarship and accumulated as accurate and objective a book as we can possibly publish," Gary Smith, corporate counsel for Houghton Mifflin, said of "Unfinished Journey." "We found it difficult to find substance to support the charges made."

Many attempts to ban books have met failure. Others are still tied up in litigation, such as *Pico v. Island Trees*, a case involving a ban on Long Island in 1978 of nine books, including "Slaughterhouse Five" by Kurt Vonnegut Jr., "The Fixer" by Bernard Malamud, and "Down These Mean Streets" by Piri Thomas. The Long Island case is currently on appeal to the Supreme Court and could become an important test case of a school board's right to decide the contents of a school library.

Even in areas where censorship efforts have failed, teachers and others say that the battles themselves have had a chilling impact in certain cases on what goes on in the classroom.

Avoiding Controversial Subjects

"I think about what I'm doing twice," said Betty Duke, who teaches ninth grade history at Vines High School in Plano, a suburb of Dallas, where no specific book has been eliminated. "Is there anything controversial in this lesson plan? If there is, I won't use it. I won't use things where a kid has to make a judgment."

In South St. Paul, a suburb of St. Paul, Minn., all books that could possibly be considered controversial must be so labeled. They must then be reviewed by committee and either rejected or accepted by the school board. Rather than be subjected to that procedure, teachers in the school system simply have not changed the curriculum in more than six years and continue to use books that may

in fact no longer be relevant.

"We want and need to update contemporary literature," said Joyce Johnson, who teaches language arts at South St. Paul Senior High School. "But we won't make suggestions because they would only be labeled out of context."

Learning About Humanism

Peter Carparelli, the principal of Helena Senior High School in Montana, said that many of his teachers had become anxious since a meeting last month when a discussion of the sex education curriculum turned into a forum on the ills of secular humanism. "There is this feeling that you're being questioned," he said.

"Anything that I think possibly controversial I tape," said George H. Tanner, one of several teachers at Montello High School in Wisconsin who began taking cassette tape recorders to class after parents accused them of "anti-God" statements they deny making.

Parents become aware of "secular humanism" and the campaign to cleanse the schools in different ways. Some first heard about it by means of religious television, newspapers or at religious services. Many others have been invited to community meetings and have been shown films and given pamphlets from such national organizations as the Gablers, the Pro-Family Forum, the Eagle Forum, Moral Majority, the Heritage Foundation and America's Future.

Some of the pamphlets currently in circulation include "Weep for Your Children," "The Hate Factory" and "Anti-God Humanists are 'Conditioning' Our Children."

Quick Network Reaction

A 29-minute film produced by the Christian Broadcasting Network and entitled "Let Their Eyes Be Opened" has already sold over 1,800 copies at \$125 each to individuals and groups across the nation. The film shows, among other things, aborted fetuses and teen-agers who have taken an overdose of drugs. It attempts to show that teen-age prostitution, pornog-

raphy and murder are all a result of secular humanism in the schools.

"Two years ago I didn't even know what secular humanism was," said Joy Cook of Blunt, S.D., president of the local parents group attempting to purge it from the schools. "Now I realize you can be a humanist without knowing it and that there are humanists doing everything."

Mrs. Cook, who has a son at Sully Buttes high school in Onida and another child in grade school in Blunt, first heard about secular humanism when she was working to oppose the proposed equal rights amendment. She was told to call a lobbyist in North Dakota, who in turn said that she would put Mrs. Cook in touch with someone who could tell her more about humanism. Fifteen minutes later, Mrs. Cook said, she received a phone call from Mel Gabler of Texas, who sent her a package of materials.

Mrs. Cook now subscribes to at least a dozen national organizations sympathetic to her cause and keeps their literature in cardboard boxes and files in her living room. She plays host to sessions around her kitchen table to inform her neighbors of humanism's dangers and is always an outspoken participant at school board meetings. She, among others in the community, was in favor of banning "Run Shelley Run" by Gertrude Samuels, which was chosen by the American Library Association as Best Book For Young Adults in 1974 and which deals, in sometimes stark language, with the problems of a teen-age runaway.

"We have to get rid of secular humanism," said Donald J. Rykhus, superintendent of schools in Onida and Blunt, S.D. The only way that can be done, he said, was by getting rid of "liberal, real liberal, personnel."

"I worry for my son," said Vicky Brooks, who teaches English at Sully Buttes high school and opposed the ban. "I don't want him to be in a community where if you disagree you are wrong. I want him to be able to evaluate opinions and be able to think. People who can't think are ripe for dictatorship."

(27) From *The New York Times* (7/22/81) p.A13:

We're No Holier for Our 'Holy War'

By Martin E. Marty

Martin E. Marty is professor of the history of modern Christianity, at The University of Chicago, associate editor of The Christian Century, and author, most recently, of "The Public Church: Mainline-Evangelical-Catholic."

CHICAGO — One year into its holy war, the United States, is not, and stands small chance of becoming, a holier, happier, more civil, or more moral nation.

Last summer, during the election campaign, citizens began to see what in the black movement used to be called the "religiocification" of politics. Now, the unpromising language of the crusade or jihad corrupts the news media and disrupts society. It is time for a cease-fire.

Religiocification has old, long roots. Grant the New Christian Right a point: Now and then its foil, "Secular Humanists," have used religious terms. In 1934, the philosopher John Dewey wanted democratic humanism to become "explicit and militant" as a faith. Humanist manifestos in 1933 and 1973 — overlooked, and overlookable, documents — included some holy-war terms. But if they were calling for some kind of "church," almost no one ever joined.

The United States Supreme Court unwittingly handed the Protestant Right some weapons. In *Torcaso v. Watkins*

(1961), the Justices named some religions that did not focus on faith in God: Buddhism, Taoism, Ethical Culture, and, yes, Secular Humanism. In United States v. Seeger (1965), the Court quite properly granted conscientious-objector status to a citizen whose "religious" conscience was formed without reference to a "Supreme Being." The Court cited the theologian Paul Tillich's broadening definition of religion as "ultimate concern."

With aid from a hated philosopher, the Court, and a theologian, the new religious Right started calling every mental outlook, world view, philosophy of life, or even warm tingle, a religion.

In 1978, John W. Whitehead, a lawyer, and John Conlan, a former Congressman, put the arsenal together in a garbled article in the Texas Tech Law Review. Fundamentalist best-sellers since then have billboarded their argument. The two authors claimed that in a string of cases, climaxed in the "school prayer" decisions of 1962 and 1963, the Justices had "virtually eliminated... traditional theism" from schools. In the authors' reasoning, since some "ultimate concern" has to ground all talk of values and morals, some religion has to be privileged and established in American public institutions. Even though the Justices had explicitly rejected this notion and carefully ruled out

Secular Humanism as a candidate for such establishment, Mr. Whitehead and Mr. Conlan claimed that at least by default they had ruled it in.

During the last three years, we have heard the claim that the faith of the majority, traditional theism, should be so established. Whose theism — that of Jews and Christians, or Christians alone, or Protestants, or Mormons? The Right wants Genesis-based "Scientific Creationism" given equal time to counter evolution, which they claim can be taught only as a sort of religion. While there are plausible grounds for tuition tax credits, the Protestant militants implausibly argue that public schools are established churches of Secular Humanism and that they have the right to be protected from them. Library and school-board members may be devout Presbyterians or Roman Catholics, but if they do not surrender to the Right, they are chased as godless Secular Humanists.

The Rightist case is based on distortions of language and history. The Supreme Court school-prayer decisions did not take God out of the schools. Two years before the first decision, a survey shows, only about 6 percent of the school districts in the pious Midwest and only 2 percent of those on the West Coast had "devotional home room exercises," and only 18 percent and 11 percent had Bible reading at all.

Some religious leaders have called

for de-escalation of the holy war. The evangelist Billy Graham, the conservative Baptist theologian Carl Henry, responsible evangelicals, many Catholic bishops, half the Southern Baptist Convention — all have warned against confusions that result when leaders mobilize religious instincts for political causes.

America may have a (sometimes creative) civil religion, but it has also gotten by as a civil society. Alongside its public religion, its schools have been productive on the basis of a public philosophy. The writer G. K. Chesterton did call this "the nation with the soul of a church," but, like the other nations of the free West, it is also a nation with the soul of a nation. Arthur Mann, a University of Chicago historian, recently reminded discussants in a debate that through most of America's history, citizens did well with simpler concepts like "American Ideals," and asked, whatever happened to them?

Not every aspect of every world view, science class, notion, or philosophy has to be a matter of "ultimate concern" and thus religion. Citizens can pursue religion through churches, synagogues, and, yes, tiny clubs of Secular Humanism. The religions have a right to seek influence in the free realm. What the United States needs now is civil argument, which can resume only when the holy war scales down.

(28) From the Los Angeles Times (5/28/81):

Art Buchwald**Hunting Down the Secular Humanists**

The new threat to this country, if you believe the Moral Majority and the television preachers, is not Communists or fellow travelers but "secular humanists."

The "secular humanists" are the ones who are brain-washing our children with books about evolution, sex, race relations, ERA and naughty words.

This means we have to get the books out of the schools and libraries. The book censors are starting to organize, the moral crusade has begun and the hunt for secular humanists is on.

I am always intimidated by book-burners, so I want to get on the bandwagon as soon as possible.

My problem is, unlike the Red-baiting witch hunts of the McCarthy days, I find it impossible to know who a secular humanist is.

★

It was easy to tell a Commie or fellow traveler in the '50s because he always carried a Daily Worker under his arm and didn't bother to shine his shoes. He never had a nice thing to say about Roy Cohn or Sen. Joe McCarthy and he kept taking the Fifth Amendment when he was called in front of the House Un-American Activities Committee. Also, you could check up on him by finding out if he once belonged to one of the hundreds of subversive organizations listed by the government as being for the violent overthrow of the government.

But a secular humanist is a different breed of cat. From what I can gather, he is much harder to identify unless he openly admits he thinks Darwin's theory of creation makes sense.

Secular humanists are not joiners. They don't have cells where they plot anti-American and anti-God propaganda. Most of them work alone, doing historical research, writing textbooks and novels, and explaining

how babies are born. They pollute children's minds with how the world is, rather than how the anti-humanists would like it to be.

What makes them so dangerous is that secular humanists look just like you and me. Some of them could be your best friends without you knowing they are humanists. They could come into your house, play with your children, eat your food and even watch football with you on television, and you'd never know that they have read "Catcher in the Rye," "Brave New World" and "Huckleberry Finn."

★

Of course, there are some who flaunt their humanism and will brag they're for abortion and against prayers in public schools. You can throw them out of the house.

But for every secular humanist who will tell where he or she stands on a fundamentalist issue, there are 10 who keep their thoughts to themselves and are working to destroy the American family.

No one is safe until Congress sets up an Anti-Secular Humanism Committee to get at the rot. Witnesses have to be called, and they have to name names of other secular humanists they know.

Librarians and teachers must be made to answer for the books they have on their shelves. Publishers have to be held accountable for what they print. Writers must be punished for what they write.

The secular humanists should be put on notice that they can no longer hide behind the First Amendment.

If we're going to go back to the old moral values that made this country great, we're going to have to do it with search-and-destroy methods. First, we must burn the books—and if that isn't enough, then we must burn the people.

(Thank you
JOHN TOBIN)

RELIGION

(29) Instructions from Mt. Sinai, from the New York Times Review of the Week (5/24/81)p.E19:**By Anthony Lewis**

One of the important elements in Ronald Reagan's election was right-wing fervor on social and religious issues. The Moral Majority and other groups roused a lot of voters with their calls to end abortion, put prayer back in the schools and resist the women's movement as a threat to the family.

Since Jan. 20 the Reagan Administration has done its best to keep those questions on the back burner in Congress. It did not want its economic program obstructed by an emotional fight over social issues.

But now the fight is on. And we can already see that it represents a danger to the President — not to his economic package, which is on its way, but more deeply to the political climate in the country.

Abortion, that most divisive of issues, has led the way. Senator Jesse Helms and others have been pressing for action on a bill to get around the Supreme Court's decision that it is unconstitutional to make early abortions a crime, by a "simple" declaration that human life begins at conception.

Then last week the Senate, by a vote of 52 to 43, attached to an appropriation bill the strictest anti-abortion rider it has ever approved. The lan-

guage forbids the use of Federal funds to pay for a poor woman's abortion unless the pregnancy threatens her life. It rules out abortions under Medicaid even in cases of rape or incest.

In the debate on the rider, the issues were ones not of party but of faith — really of religious belief. The chief debaters were all Republicans: on one side Senator Helms, on the other Senators Bob Packwood and Lowell Weicker.

Senator Helms specifically rejected appeals for the approximately 15,000 women who become pregnant as the result of rape each year. Under existing law they are eligible for Medicaid abortions if they are poor and have reported the rape within 72 hours. But Senator Helms spoke of "a d herring whereby people come up four months later and say, 'Oh, by the way, I was raped four months ago.'"

Senator Packwood said: "There is growing in this country a Cotton Mather mentality . . . narrow, unforgiving." He spoke of "a feeling that 'God speaks to me. I will tell you what He says. Tough luck if you're not on the same wavelength.'"

Senator Helms answered: "We're talking about the deliberate termination of human life. If that's a Cotton Mather mentality, so be it. There is a set of instructions that came down

from Mount Sinai about that."

That drew from Senator Weicker: "We're not running this country from divine commandments or instructions from Mount Sinai."

My guess is that most Americans do not want this country run by divine commandments — or, rather, by politicians who claim exclusive knowledge of those commandments, the intolerance that motivated Cotton Mather in the Salem witch trials is not the basis of the American political system.

Fundamentalist religion is gaining strength in the United States. But I do not believe it follows that religious Americans want a theocracy as their form of government. Many, even of the strongest personal beliefs, would hold to the country's tradition of diversity in faith and separation of religion from government.

It happens also that a guarantee of diversity — a prohibition on the mixing of church and state — is written into the Constitution. And most Americans, when they think about it, are not likely to favor radical change in that aspect of our fundamental law.

Then there is the place of the Supreme Court in our system. Americans rallied in 1837 to protect a Court whose decisions they did not like against the court-packing plan of a highly popular President. I think the

feeling for the Court as an institution, as a safeguard, is just as strong today. Most Americans will feel uneasy about changing the Court's reading of the Constitution by "simple" legislation.

The public, then, may come to see those who raise the social issues not as "conservatives" but as radical zealots. And the mood of friendly tolerance for conservative experiment in Washington could turn sour.

In the same week that the anti-abortionists were pushing to the extreme in Washington, Italians by a 2-to-1 margin rejected a tightening of their moderate abortion law — and did so despite the emotional circumstance of the attack on the Pope. It would be ironic if a country with a First Amendment were to let religion command politics more than it does in Rome.

Another irony is that some of the same men who talk about translating the word of God into American legislation show little concern for the godless cruelties of other governments. Senator Helms indicates no desire to have the United States speak out against torture in Uruguay or official anti-Semitism in Argentina.

There again I doubt that the right-wing zealots speak for America. The more the extreme right sets the pace, the more danger there is that Ronald Reagan's Washington will lose its rapport with the country.

(30) Creationism, James Gorman in "Discover" (May 1981)

"Isn't it difficult to realize that a trial of this kind is possible in the 20th century in the United States of America?"

That question was asked more than half a century ago by defense attorney Clarence Darrow about the famous "monkey trial" of 1925, in which a Tennessee public school teacher named John Scopes was found guilty of violating state law by teaching evolution in his classroom. Incredible as it may seem, the same question could have been asked in March 1981, as evolution went on trial in a California courtroom, and was seriously challenged by a bill passed overwhelmingly by the Arkansas state legislature. Although the much heralded California trial ended inconclusively, the Arkansas vote may have set the stage for another, more dramatic battle.

The California case was brought by Kelly Segraves, 38, and several others, including Segraves's 13-year-old son Kasey. Segraves is director of the Creation-Science Research Center, based in San Diego. He is one of a growing number of fundamentalist Christians who consider themselves "scientific creationists"—a description that many scientists believe was invented solely as a device to slip creationism into public school curricula in the guise of science. Segraves's grievance was that the state of California was teaching evolution as fact in public school science classes. Thus, he said in his complaint, infringing on the free exercise of religion by those whose beliefs run contrary to the Darwinist theory of evolution. His demand: science courses must take a position of "neutrality" on the origins of life. About the only way that could be done—though Segraves did not specifically request it—would be for the schools to teach also the scientific creationist view,

essentially the same as the biblical version of the beginning of life as described in Genesis.

Interest in the trial had been building, and when it began early in March in Sacramento, Superior Court was packed with spectators hoping for a rerun of the Tennessee case. Local newspapers headlined the event "The Monkey Trial," and the presiding judge, Irving Perluss, acceded to pleas from the press for full coverage. A television crew was in place in the jury box, a photographer sat in the front row of spectators, and the opposing attorneys were equipped with clip-on, battery-operated microphones.

In his opening statement, Richard Turner, Segraves's attorney, said that his client wanted teachers to "stop teaching the theory of evolution as fact in public schools." To dramatize his point, on the second day of the trial he called as a witness young Kasey Segraves, who testified that his public school teacher had told him that man evolved from apes. This conflicted with what he was taught at home. Said Kasey, "I believe that God created man as man and put him on the earth."

It soon became apparent that Kelly Segraves had backed away from the language of his original complaint. He was careful not to advocate the teaching of creationism in the schools, and said he objected most to the state's making the theory of evolution "unquestioned dogma." All he really wanted, it turned out, was qualification of one sentence in the state's science guidelines for teachers and textbook publishers, which read: "The process [of evolution] has been going on so long that it has produced all the groups and kinds of plants and animals now living as well as others that have become extinct." The addition of such phrases as "most scientists believe" or "scientists hypothe-

size" would satisfy him.

Judge Perluss was incredulous. "I thought you wanted scientific creationism taught in the schools. I wonder if this case of great and important constitutional issues has evolved, if you pardon the pun, and come down to a question of semantics. If this is what this case is now all about, then it seems to me we're wasting an awful lot of time."

After five days of argument, Perluss handed down his ruling. He held that the evolution statement did not infringe the free exercise of religion and could thus stand unamended. But he ordered wide dissemination to educators and textbook publishers of a 1973 state board of education policy directive that specified that evolution should be presented as theory, not dogma.

On the surface, the ruling seemed a defeat for opponents of the teaching of evolution in public schools. But Segraves seemed pleased. Said he, "We've done what we came here to do—that is, establish the rights of the Christian child. We've made sure dogmatic assertions can't be made in the science classroom any more." Deputy Attorney General Robert Tyler was not happy with the ruling. "The science framework and the state of science in California is intact," he said. "But to throw the creationists a bone, the judge mandated a meaningless act. The very fact that the creationists won anything has given them great momentum."

In fact, the momentum was already there. Pressed by fundamentalists, legislators in 14 states have introduced bills requiring that creationist views be presented in science classes. One Florida school district requires that creationist ideas be taught in biology classrooms, and in California, Minnesota, South Dakota, Kansas, Illinois, and

Iowa, individual biology teachers have voluntarily included these ideas in their courses. The Texas school board insists that biology textbooks used in public schools include a statement that evolution is a theory and not a fact. Bowing to such pressures, several publishers have sharply reduced the amount of space in biology textbooks devoted to Darwinian theory, or have added sections on creationism.

In mid-March the creationists won their greatest victory to date, when Arkansas passed a bill requiring that, beginning in 1982, if either evolution or scientific creationism is taught in public schools, balanced treatment must be given to the other viewpoint. In an apparent effort to convince the courts that the legislation does not violate the constitutional separation of church and state, the bill prohibits the teaching of religion or reference to religious writings in the classroom. Said Arkansas State Representative Michael Wilson, who sided with the minority in the 68-to-19 vote, "As a lawyer, I will tell you the courts will hold this bill unconstitutional as quickly as it gets to court."

Indeed, the Arkansas legislation seems to define the battle line sharply and set up a confrontation that could provide what Sacramento failed to: a 1980s version of the Scopes trial.

Many scientists believe that the creationists are attacking not only evolutionary theory but the nature of scientific inquiry itself. In the following Essay, written for DISCOVER this month, Harvard professor Stephen Jay Gould, a leading paleontologist (and one of creationism's chief antagonists), accuses scientific creationists of distorting legitimate scientific discourse with falsehoods and innuendo. His arguments may well state the case of the scientific community in the trial that seems destined to come.

(31) "The Churchman" ran this ad in the New York Times Review of the Week (5/24/81) p.E7. We admire it.

PARDON ME, MR. LINCOLN

THREE SCORE, and three years ago
Our grandfathers helped bring forth upon
this planet

The First World War,
Conceived in nationalistic fervor
And dedicated to the proposition
That some people are more equal than others.
Now we are engaged in a vast Cold War.
Testing whether our nation or any other nation
So deceived and so frustrated can long endure.
For many years international leaders
Have been conducting conferences and meetings,
presumably in efforts
To halt the insane, irrational, immoral and
suicidal condition
That threatens with extinction all living
organisms. But in a larger sense, they cannot
obliterate, they cannot eradicate.
They cannot save us from the ultimate folly of
nuclear war.
The courageous, selfless and consecrated persons,
living and dead,
Who over the years struggled, bled, and died
In pursuit of peaceful solutions to international
misunderstandings
Are the only ones who can show us the way to
save ourselves from the extinction.
The world's people seldom note nor long
remember the unspeakable horrors of past wars,
But they will not survive an atomic holocaust.
It is for those of us now living to dedicate
ourselves completely
To the unfinished task which peacemakers, living
and dead, thus far nobly advanced.
It is for those of us who for so long have buried our
heads in the sands
To be here dedicated to the great unfinished task
remaining before us

That this nation and the entire world, under God,
Shall at last emerge from the scourge of war;
And that government of the military, by the
military and for the military,
Shall vanish from the Earth.

MAHLON R. HAGERTY

The above poem reflects the sentiments found
in each fearless issue of *The Churchman*, a
Humanist-oriented journal, the oldest religious
(and youngest in spirit) magazine in the country. A
copy of the poem, plus a free issue of *The Church-
man*, will be sent for a \$5.00 trial subscription of
one year. Among its authors are Professor John
Somerville, Hazel Henderson, George Seldes, Brig.
Gen. Hugh B. Hester, Edward Larrab, Dr. Corliss
Lamont, Rabbi Morrison D. Bial, the Rev. Stephen
H. Fritchman, Robert St. John — all speak-
ing forthrightly and with enlightenment on the
pressing issues of our troubled time with a focus
on world peace.

YES, I accept your offer to try THE CHURCHMAN.

- Send me a one-year subscription to THE
CHURCHMAN.
Include my FREE issue.
- My check for \$5.00 is enclosed.

RATIONALITY

- (32) Cognitive dissonance. From The New York Times Review of the Week (5/17/81) p.E22:

The Triumph of Cognitive Dissonance

To the Editor:

Cognitive dissonance, which is the belief in two or more mutually exclusive ideas, is not unusual. What is less

common is a political philosophy based on such logical contradictions. Today, American conservatives seem to believe that:

- In technology, America is falling behind the rest of the world; funding

for education and scientific research should be cut.

- Government should stay out of peoples' private lives; what is needed is a constitutional amendment prohibiting abortion.

- Federal spending causes inflation because it is wasteful and inefficient; military spending should be increased.

- The military cannot keep enough trained, dedicated people in service; resume the draft (see also private lives, above).

- The free market should determine the worthiness of any product or service; curtail Japanese imports.

- America needs efficient transportation; subsidize Lockheed and Chrysler. Cancel Conrail.

Most serious is the belief that the way to reduce the likelihood of nuclear war is to build more nuclear weapons. I realize that the republic in which logic rules has yet to be founded. I hope that the republic in which illogic rules is not upon us. One concern I have is whether, like the village in Vietnam, America will be destroyed in order to be saved.

JOSEPH WALKER
Philadelphia, May 11, 1981

NEWS ABOUT MEMBERS

- (33) Andre Bacard recently became a member and would like to hear from members who live in, or plan to visit, the Bay Area. Write him at Box 4121, Stanford, CA 94306
- (34) Adam Paul Banner is going to Haiti for 3 months (or more) under the auspices of the International Executive Service Corps, as a Volunteer Executive. He designs plants, and is a technical specialist in the manufacture of carbon and graphite. He will assist in the start-up and development of a flashlight battery plant. For his address in Haiti, add (39).
- (35) Leonard Cleavelin, who is studying law, has accepted a commission in the U.S. Navy Judge Advocate General's Corps. He is spending the summer as an Ensign on temporary active duty, and was therefore unable to be at the McMaster Meeting.
- (36) Daniel Tito expects to matriculate at Goddard College, Vermont, this fall.
-

QUESTIONS & ANSWERS

- (37) More on 2 + 2 = ? Originally, JACK RAGSDALE wondered what ER meant when he said something like "Two and two are about four" (RSN27-25). KEN KORBIN offered a statement approximately from Wittgenstein (RSN28-31). Now BOB LOMBARDI comes across some paragraphs that seem relevant, in ER's The Art of Philosophizing (NY: Philosophical Library 1968) pp.114-115:

"But," you may say, "none of this shakes my belief that 2 and 2 are 4." You are quite right, except in marginal cases—and it is only in marginal cases that you are doubtful whether a certain animal is a dog or a certain length is less than a meter. Two must be two of something, and the proposition "2 and 2 are 4" is useless unless it can be ap-

plied. Two dogs and two dogs are certainly four dogs, but cases may arise in which you are doubtful whether two of them are dogs. "Well, at any rate there are four animals," you may say. But there are microorganisms concerning which it is doubtful whether they are animals or plants. "Well then, living organisms," you say. But there are things of

which it is doubtful whether they are living organisms or not. You will be driven into saying: "Two entities and two entities are four entities." When you have told me what you mean by "entity," we will resume the argument.

Thus concepts, in general, have a certain region to which they are certainly applicable, and another to which they are certainly inapplicable, but concepts which aim at exactness, like "meter" and "second," though they have a large region (within the approximate field) to which they are certainly

inapplicable, have no region at all to which they are certainly applicable. If they are to be made certainly applicable, it must be by sacrificing the claim to exactness.

The outcome of this discussion is that mathematics does not have that exactness to which it apparently lays claim, but is approximate like everything else. This, however, is of no *practical* importance, since in any case all our knowledge of the sensible world is only approximate.

Bob continues:

Though Russell doesn't use the quote " $2 + 2$ sometimes = 5", it is clear how leeway can be found to make a case for it. For example, two women plus two women equal four women, you might say. But what if one woman were pregnant? What if one were pregnant with twins? So much for the certainty of mathematics, since mathematics is subservient to the arbitrary judgment of the person doing the adding.

COLLECTORS' CORNER

(40) Preservation. TOM STANLEY writes:

The physical care of books and pamphlets is a very important but often neglected aspect of collecting. I'd like to recommend two sources of concise introductions to this topic: Preservation Office, Library of Congress, Washington,DC 20540. (They offer 5 leaflets on environmental protection of paper materials.). Michael Turner, Preservation Office, Bodleian Library, Oxford, England. (Two leaflets.) These items are free.

If you'd like to complete your collection of Haldeman-Julius pamphlets by Russell, you can contact the company at its new address: Norris Peters, Little Blue Book Company, Box 19911, Columbus, OH 43219. Mr. Peters must own the copyright as he wrote that he could print any of the titles for distribution. For the story of BR and H-J, see "Russell" (29-32:1978).

CONTRIBUTIONS

(41) BRS Treasury contributors:we thank PETER CRANFORD, LEE EISLER, KATHY FJERMEDAL, PHILLIPS FREER, DON JACKANICZ, RAY PLANT, JOHN SCHWENK, and JOHN TOBIN.

(42) Russell Memorial (London) contributors: our thanks to JACQUELINE HERTHON-PAYON, PETER CRANFORD, LEE EISLER, DON JACKANICZ, JIM MCWILLIAMS, FRANK PAGE, and WILLIAM VALENTINE. Contributions to the Russell Memorial are still needed; please see (15).

ELECTION OF DIRECTORS

(43) We are voting to elect 8 Directors, for 3-year terms starting 1/1/82. This year, for the first time, we have more candidates (13) than openings (8). That is how it should be (when possible), to give members a choice. We like all 13...but can vote only for 8. You need not sign your ballot; it can be a secret ballot, if you so choose.

Here is data on the Director-Candidates:

JACQUELINE HERTHON-PAYON (Claremont, CA) is the new Co-Chairman of the Membership Committee. For more about her, see (44).

PETER CRANFORD (Augusta, GA) is founder (and chief financial angel) of the BRS; BRS Chairman of the Board; formerly President; currently a Director; author, and clinical psychologist in private practice.

BOB (Robert K.) DAVIS (Los Angeles) is a founding member; BRS President; former Vice-President; currently a Director; salesman; small business proprietor; former highschool teacher.

ALEX DELY (Tucson, AZ). Chairman, Science Committee. Born & educated in Belgium (philosophy & physics). U.S. resident since '76. Physics research at U. Chicago. Teaching physics at U. of Arizona, formerly at Illinois State U. Active in "progressive issues" (disarmament, equal access to justice, etc.). State Toxic Substances Coordinator for Sierra Club, BRS member since '75.

LEE EISLER (Coopersburg, PA) is a founding member; Chairman, Membership and Information Committees; editor,RSN; currently a Director; retired; formerly advertising writer and executive.

DAVID HART (Rochester, NY) attended BRS Annual Meetings in '79,'80, and '81. Gave talk at '81 meeting on ER's disregarded advice to the English Left. "My interest in ER led me to spend a recent leave of absence" -- from teaching mathematics -- "in Cambridge"(England) (written up in RSN30-27). Wrote "Russell on Marx"(RSN30-14).

ALVIN HOFER(Miami,FL) is Chairman of a BRS committee to revise expulsion procedures. Would like to see "more of the Society's decisions determined by the general membership, by RSN balloting." Ph.D. in physics; has done basic and applied research. Member:Common Cause, National Organization for Women.

MARVIN KOHL (Fredonia, NY) is Professor of Philosophy at the State University of New York, and author of Benificent Euthanasia, Infanticide and the Value of Life, and other books.

HUGH S. MOORHEAD (Chicago) is Professor and Chairman, Philosophy Department, Northeastern Illinois University, Chicago;Master's Thesis on Russell; Doctorate on the Great Books movement. "Have nearly all of ER's books, purposely omitting Principia Mathematica,which isn't readable!" Has 3 notes from ER.

JACK RAGSDALE (Dallas,TX) is Co-Chairman of the BRS Library Committee.Born in Atlanta, fortunately received "a good inheritance of tolerance and doubt, and questioned religious and social values even before I discovered ER's Why I Am Not A Christian in my teens. I started as a seaman and finished as an importer/wholesaler. I have traveled extensively, which has sharpened my awareness.Speak Spanish;lived in NYC 40 years."

HARRY RUJA (San Diego, CA) is BRS Vice-President. Professor Emeritus, Philosophy, San Diego State University. Russell scholar and bibliographer;currently a Director. BRS member since its first year (1974).

WILLIAM VALENTINE (Eaton Rapids, MI). Telecommunications specialist, Michigan Supreme Court. B.S.,M.A., Communications. Formerly directed funded research at U. Notre Dame and Michigan State U., experience that could be useful to BRS projects. Recent articles:"Human Rights and World Telecommunications", Pacific Telecommunications Conference, Honolulu,1980; "A Conversation with Dora "ussell" in "Russell" (1981)

DAN WRAY (Hollywood). BRS member since 1975. Playwright and screen writer. Attends local (Los Angeles area) BRS meetings and presentations. Especially interested in ER as an intellectual historian, as in A History of Western Philosophy. Hopes to suggest future BRS projects and to help make arrangements for the '82 meeting in Oxford (England).

Please vote! Use the ballot on the last page of this newsletter.

BRS BUSINESS

- (44) Membership Committee's new Co-Chairman is Jacqueline Berthon-Payon. Laureate du Conservatoire de Musique, Nancy, France; BRS member since early '78. An "instant convert" to BR when a friend lent her The Will To Doubt some years ago. She has since given away, to friends and acquaintances, 115 copies of Bertrand Russell's Best (Egner,ed.) She will deal with requests for information about the BRS, and enroll new members. We welcome her warmly to her new office. Her address: 463 W. 10th St.,Claremont, CA 91711.

FOR SALE

- (45) Members' stationery price reduced 20%.We ordered a larger quantity and got a better price from the printer. New price: \$5 postpaid for 95 sheets. 8½ x 11, white. "A cross the top;"The good life is one inspired by love and guided by knowledge*" Bertrand Russell.On bottom:"Motto of The Bertrand Russell Society, Inc." Order from the newsletter, address on Page 1, bottom.
- (46) BR postcard. Philippe Halsman's handsome 1958 photo of ER with pipe. 4¼ x 6. 75¢ for the first one, 50¢ each after the first one. RSN30-44 shows it. Order from the newsletter, address on Page 1, Bottom
- (47) New book price list replaces the list of RSN30-35d. Till further notice, order these books from Don in Chicago, not from Jack in Dallas.

---The following titles can be ordered from the BRS Library at the discounted prices shown.

---This list and prices are current as of August 1, 1981 and supersede previous lists and prices. From time to time market changes require title deletions, allow for title additions, and force price increases. But the discounts given provide considerable savings, especially for certain titles which are often difficult to locate.

---Prices include postage and other shipping costs.

---"H" indicates a hardbound edition. No notation indicates a paperbound edition.

- Prices shown are in U.S. funds. Please remit by check or money order, payable to The Bertrand Russell Society, in U.S. funds or the equivalent.
 ---Your order will be promptly filled, although occasionally an out of stock item may cause a brief shipment delay.
 ---Send orders to Donald W. Jackanicz; 3802 N. Kenneth Ave.; Chicago, IL 60641; U.S.A.

ABOUT OTHER ORGANIZATIONS

(48)

BR Peace Foundation objects to objections. The Foundation has been campaigning for European Nuclear Disarmament. (RSN26-36). Elizabeth Young does not favor the campaign (RSN30-45). Now Ken Coates, a Director of the Foundation, responds to Ms. Young, in this May 12, 1981 Letter to the Editor, "Bulletin of the Atomic Scientists":

Elizabeth Young writes to say that your readers should not accept "the not quite innocent naivetes of END" (the European Nuclear Disarmament Campaign). Why are we "not quite" innocent? Does she mean we are not as stupid as she would like us to be thought? Or does she mean that we are not "innocent" because we are in some way "guilty"? If so, of what are we to be convicted? All those public figures who came together last year to propose that a nuclear-weapons-free zone be established in Europe are absolutely politically transparent. Our different and evolving views on a whole range of matters have been quite widely published and discussed, and concealment of our purposes is the very last thing which informed critics have ever charged against any of us. No: we may be wrong, but if so our argument can easily be met without unworthy innuendo. If we are right, such innuendo is even more unworthy. Ms. Young really ought to stick to the issues, and bite her tongue when these aspersions cross her mind. She will find that she may become more persuasive when she does.

Up to now, however, her arguments are not very strong. We propound three fallacies, she thinks. The first of these is that "public opinion has pressed for nuclear disarmament and detente." No, she thinks, on the contrary:

"there has been virtually no public pressure for disarmament." But the United Nations Special Session on Disarmament did not fall out of the sky. How was it brought into being? Were there not constant pressures from the non-aligned states, from European neutrals, and from voluntary peace organizations, churches, and other bodies? When, since 1978, spokesmen as different as the Pope, Lord Mountbatten, President Tito and the Socialist International have warned against the arms race, does all this have no effect on public opinion? But elsewhere Ms. Young has expressed her disapproval of the final document of the UN Special Session, because it gives explicit support to the idea of nuclear weapons-free zones. Pressure for disarmament, in her view, is not properly so-called unless it fits her so-far unstated criteria of what is acceptable disarmament.

Our second fallacy is, she thinks, geographical: we have called for an ultimate, de-nuclearization of military forces in Europe "from Poland to Portugal", but Europe reaches into the Urals. This point would weigh more heavily if it had not several times been answered in a variety of exchanges initiated by Elizabeth Young in other newspapers. The call for a nuclear-free zone is directed against the threat of "limited" nuclear war. It seeks to arouse a common movement between all the European countries which are sandwiched between the nuclear superpowers. Superpower disarmament must be negotiated separately, not because we wish it so, but because this fact is an evident and regrettable part of the same logic which has evolved superpowers. In appealing to the political territory of Europe, we are, as Elizabeth Young knows, adapting to the proposals for general ground-rules on nuclear-free zones which were drawn up in the UN Special Session. Within the meaning of those rules, not only do member-states of such zones pledge themselves to forswear nuclear weaponry, but also a number of explicit undertakings are reciprocally required from the nuclear powers. If half of the USSR were to be included in such a zone, then the USA would be asked to allow that it might be strafed from Vladivostok but must withhold a response against Moscow or Leningrad. This is, we may believe, a nonsensical suggestion, and it reinforces the appreciation that the two superpowers necessarily constitute a special case. We do not suggest that the UN Special Session offers the only possible basis for denuclearized zones, but we do believe that it proposes a starting point. If Ms. Young is asked how she would proceed differently, she refuses, because she disagrees with the UN recommendations in their entirety so far as this issue is concerned.

Lastly, we are accused of fallacy because she believes our proposals would advantage Russia, while our intention is to offer no advantage to either Alliance. But our proposals would have the same effect in the Warsaw Pact as in NATO, in the sense that they would concentrate the nuclear forces into superpower territories, and thus reorient their priority targeting upon each other. The basic advantage here would be for Europe, East and West, which would have defused the most pressing danger of limited war preparations, and bought time, if not much, for joint superpower nuclear disarmament. Obviously Ms. Young disagrees with us, but she has not pinpointed a "fallacy". There is more than one opinion, a situation which is quite compatible with an absence of fallacies on both sides, unless fallacies are defined by some political authority.

In weighing the military balance, Elizabeth Young enters a complex field, as she well knows, but her description greatly simplifies it. It is a debate worth pursuing further, and for this reason I will not accuse her of "not quite innocent" naivete, but instead would prefer to invite her to develop her argument, in which others might then join with some prospect of enlightenment.

(49) You can count on the Quakers! We are pleased to reproduce this flyer, sent us by ALEX DELLY:

support a
nuclear moratorium

wear a button!

1½" diameter, 2 colors as shown, safety
backpins, available from AFSC

1-25 25¢ each
26-100 15¢ each
100-more 10¢ each

please add 15% for handling and postage

Enclosed is \$_____ for _____ nuclear
moratorium buttons. (Please make checks
payable to AFSC and add 15% for
postage.)

(50) "Humanistic Judaism"— an attractive quarterly published by the Society for Humanistic Judaism — "is the voice of the fourth Jewish alternative. This alternative embraces all Jews who value their Jewish identity, but who find no place in the three traditions of conventional Judaism." They are committed "to reason and humanpower." Books they offer for sale include Humanist Manifestos I and II, 3 books by Corliss Lamont, 2 by Lester Mondale. The Winter 1981 issue deals largely with feminist efforts to eliminate the male-is-superior aspects of traditional Jewish religion. Information: Society for Humanistic Judaism, 28611 West Twelve Mile Road, Farmington, MI 48018.

ABOUT "RUSSELL"

(52) Latest issue? A number of members have inquired about this. The latest issue of "Russell" is "35-36 autumn-winter 1979-80". Another issue, a quadruple one, is nearly ready for distribution.

The eighth Annual Meeting of The Bertrand Russell Society, Inc. was held Friday, June 26 through Sunday, June 28, 1981 at McMaster University, Hamilton, Ontario, Canada. Except as noted, all events took place in Room 106 of Chester New Hall on the McMaster University campus.

Friday, June 26, 1981

Following afternoon registration in the Commons Building and in the Russell Archives in Mills Memorial Library, an informal dinner was held in the Vallance Memorial Dining Hall of the Commons Building.

At 7:08 p.m. Kenneth Blackwell, Russell Archivist, called the first session to order by welcoming all assembled and introducing Robert K. Davis, BRS President, who thereafter presided over the proceedings.

A general business meeting began as President Davis reported on a number of recent BRS business items and his own undertakings:

1. With the help of Peter Cadogan of London, plans for a 1982 BRS Annual Meeting in Oxford are progressing.
2. The President sent greetings from the BRS to Andrei Sakharov on his 60th birthday.
3. BRS members have been invited to attend the October 1981 American Humanist Association conference to be held in College Park, Maryland.
4. The President recommends Los Angeles as site of the 1983 BRS Annual Meeting.
5. The Huntington Library of San Marino, California has offered to house Lester E. Denonn's Russell Library, but \$100,000 for its purchase would have to be raised by 1983.
6. The President intends to work toward the creation of a sculpture of Will and Ariel Durant to be placed in a Los Angeles park near their home. Steve Allen has expressed interest in helping with this effort.
7. The 1981 BRS Award was presented to Steve Allen on May 28, 1981 by Jacqueline Berthon-Payon, Dan Wray, and the President "for using unique talents in the service of public enlightenment, by inviting ordinary citizens to meetings of many great minds." (Although Mr. Allen was unable to attend the Annual Meeting, a set of photographs of the Award presentation ceremony was on display.)
8. The absence of Vice President Harry Ruja was noted; he is devoting a year to scholarly work in Israel.

All members present unanimously agreed to dispense with the reading of the 1980 Annual Meeting Minutes. Treasurer Dennis J. Darland then reported the BRS's cash balance was approximately \$1,400.00. His detailed Treasury records are available for inspection. Next, the Co-Chairman of the Information and Membership Committees, Lee Eisler, briefly spoke on developments regarding Russell Society News and membership growth. Lee then distributed to all present a sheet of five proposed Bylaw amendments (see attached). The membership present unanimously adopted the first; discussion on the second was postponed; the third was defeated; and the fourth was unanimously adopted. Discussion followed on Lee's fifth proposed Bylaw amendment and one advanced by Alvin Hofer (see attached), both of which concerning member expulsions. Agreement was reached to discuss the expulsion question more fully at a later time, however, Steve Maragides requested the Minutes to include an official reference to the recent expulsion of John Sutcliffe.

With the conclusion of the general business meeting, Nicholas Griffin read "First Efforts", a part of the first chapter of a forthcoming book, Russell's Idealist Apprenticeship, authored by Carl Spadoni and himself. This presentation dealt with Russell's mathematical and philosophical thought during his pre-Cam-

bridge years. After discussion and a brief refreshment interval, the first of two "Meeting of Minds" video tapes were shown, having been donated by Steve Allen. Engaged in this television conversation, moderated by Mr. Allen, were St. Augustine, Thomas Jefferson, the Empress Theodora, and Russell.

The first session was adjourned at 10:05 p.m. Shortly thereafter, the BRS Board of Directors met in Room 207 of Chester New Hall.

Saturday, June 27, 1981

Breakfast was taken in the Vallance Memorial Dining Hall. At 9:05 a.m. President Davis called the second session to order. After a few general announcements, the second "Meeting of Minds" video tape was presented. In this tape the four previously mentioned figures concluded their conversation. A brief refreshment interval followed. Don Jackanicz then spoke on "Russell and the House of Lords", outlining Russell's few House of Lords speeches and providing background on that institution and Russell's apparent contempt for it. The final morning session event was the presentation by Robert K. Davis of "Russell and Clio" in which he examined Russell's philosophy of history, particularly as stated in Power: A New Social Analysis. The session was adjourned at 12:20 p.m. The Vallance Memorial Dining Hall was the site for lunch. About one hour before the afternoon session began, the BRS Board of Directors held a second meeting outdoors on the plaza near Kenneth Taylor Hall.

The afternoon session was called to order by President Davis at 2:10 p.m. "H. G. Wells and Bertrand Russell: World Educators" was presented by David Harley who explored the intellectual relations between these two figures. After a refreshment interval, a panel discussion was held in which the McMaster University Russell papers editorial project was reviewed. Participants were Carl Spadoni, who chaired the discussion, Kenneth Blackwell, Andrew Brink, Nicholas Griffin, and Richard Rempel. The complexity and extent of the project, which will result in up to thirty printed volumes, were described, and questions from the audience served to clarify a number of points. At 3:48 p.m. the session was adjourned.

A Red Hackle Hour was held from 4:00 to 5:00 p.m. in the Reading Room adjoining the Russell Archives. The permanent collection and temporary exhibits of the Archives and the friendly atmosphere in the Reading Room were quite sufficient to insure a pleasant hour for all. Shortly before 7:00 p.m., members met in front of the Commons Building to arrange for rides to the Greensville, Ontario home of Mr. and Mrs. Kenneth Blackwell at which a delightful garden banquet was held. The evening concluded as members returned to Hamilton somewhat after 11:00 p.m.

Sunday, June 28, 1981

Breakfast was again taken in the Vallance Memorial Dining Hall. The final session was called to order at 9:35 a.m. by President Davis. Robert Lombardi then presented "Nuclear Disarmament: A Plan for Peace" in which he expounded his own proposals for reducing American and Soviet armaments. This was followed by "Detours on the Road to Freedom: Russell and Today's English Left" given by David S. Hart who recently returned from an extended stay in Cambridge. Due to time limitations, a refreshment break was combined with discussions of these two papers. Lastly, Kenneth Blackwell spoke on "How Russell Planned to Achieve Compossibility" which replaced his previously announced paper, "Russell's Ethics-- A New Look", and which included considerable material on Russell's admiration of Spinoza. Following a concluding discussion period, at 12:08 p.m. the session was adjourned. An informal lunch was then held in the cafeteria of the Health Sciences Center.

Board of Directors of The Bertrand Russell Society, Inc. met in two sessions on Friday, June 26 and Saturday, June 27, 1981 at McMaster University, Hamilton, Ontario, Canada.

Friday, June 26, 1981

The Chairman of the Board of Directors, Peter G. Cranford, called the first session to order at 10:08 p.m. in Room 207 of Chester New Hall. The following ten Board members were present: Peter G. Cranford, Kenneth Blackwell, Dennis J. Darland, Robert K. Davis, Lee Eisler, Don Jackanicz, Raymond Plant, Stephen J. Reinhardt, Cherie Ruppe, and Katharine Tait. The following twelve Board members were not present: Adam Paul Banner, Jack R. Cowles, Lester E. Denonn, Martin A. Garstens, Ali Ghaemi, Edwin E. Hopkins, J. B. Neilands, Harry Ruja, Gary M. Slezak, Beverly Smith, Warren Allen Smith, and P. K. Tucker.

Non-Board member Robert Lombardi raised the problem of John Sutcliffe by questioning whether an official BRS endorsement process exists for ideas and opinions put forth by individual members. The Board responded that each BRS member is free to speak for himself or herself and may bring up any issue at BRS meetings; however, the statements of individual members must not be represented as being endorsed by the BRS unless specific Board or general membership consent is given. Non-Board member Alvin Hofer, who had been recognized to speak by Chairman Cranford, then turned the Board's attention to his proposed Bylaw amendment regarding the expulsion of members. His "working document" (see attached) and his statement in its support stressed the need for absolute fairness for one whose expulsion is being considered. Chairman Cranford, Robert K. Davis, and Lee Eisler recounted the history leading to the expulsion of Mr. Sutcliffe with the latter two Board members agreeing that his expulsion had been scrupulously based on Bylaw procedures and was conducted with fairness. The Chairman, however, raised doubts as to the propriety of the procedures used. Raymond Plant then moved that Alvin Hofer's "working document" be officially received by the Chairman for Board study. This motion was unanimously accepted. Chairman Cranford named a committee consisting of himself as Chairman, Alvin Hofer as Corresponding Secretary, and Raymond Plant and Cherie Ruppe as members to review the expulsion provisions in the Bylaws. He also expressed his intention to write to Mr. Sutcliffe on the Board's discussion of the expulsion topic; his letter, the Chairman stated, would be circulated to all Board members before being mailed to Mr. Sutcliffe.

Turning to the subject of BRS funds, Treasurer Dennis J. Darland briefly reviewed his accounts and began a discussion on the possibility of investing Treasury money which is presently restricted in full to a checking account. Some Board members voiced their concern of possible legal problems which could result from such investments, while it was mentioned that the small amount now in the Treasury could not command particularly high returns in any investment. However, all agreed that it would be preferable to realize some small fund increase through placing some amount of Treasury funds in interest-bearing accounts in banks or other relatively secure financial institutions. Robert K. Davis finally moved that the Treasurer, with the cooperation of officers and knowledgeable BRS members, be allowed to invest BRS funds in a responsible manner. This motion was accepted by an eight to two yes vote; Kenneth Blackwell and Raymond Plant voted no.

Next discussed was the best procedure for Board members, officers, and members performing official BRS business to qualify for income tax deductions for their legitimate, non-reimbursed expenses. (The discussion was based on the United States income tax model and may or may not be applicable to those individuals liable for income tax payments in other countries.) Treasurer Dennis J. Darland and Don Jackanicz recounted the latter's late 1980 request that the Treasurer 1. accept his personal check, whose total represented his non-reim-

bursed 1980 BRS expenses plus a contribution to the BRS, and 2. send in return a BRS check in the amount of his non-reimbursed expenses total. Don had expended a considerable amount of his own funds in 1980 for BRS activities and wanted to make his income tax computations and forms as simple as possible; he therefore hoped to use the cancelled personal check as evidence of a contribution to the BRS for income tax purposes rather than to itemize all of his individual expenses as deductions. Dennis explained that he did not honor Don's request as he did not consider the arrangement proper. Don explained that he was following the example of Robert K. Davis who had sent a check under similar circumstances to a previous Treasurer. Discussion brought the Board to the conclusion that it would be preferable for each BRS member acting in an official capacity to be responsible on his own or her own for any income tax deduction and that, though used in the past, the contribution-reimbursement method outlined above should be avoided. Contributions are of course encouraged, and members are to be reimbursed upon request for authorized expenses. But the BRS's best interests require individuals to handle their tax deductions independently.

Board members Kenneth Blackwell and Katharine Tait left the meeting at 11:10 p.m.

The session's last order of business concerned Russell: The Journal of the Bertrand Russell Archives and its infrequency of publication which has disturbed many BRS members. Robert K. Davis stated that the BRS should take some position since a large number of Russell subscriptions are paid for through BRS membership dues. He suggested two possibilities: 1. discontinue subscriptions through the BRS, allowing each individual to subscribe on his or her own as desired; 2. the BRS should pay for Russell only when an issue is published. Discussion continued for a few minutes on this problem. But, owing to the late hour, the meeting was adjourned at 11:18 p.m. by Chairman Cranford with the understanding that a second Board meeting would be held the next day at a location to be announced.

Saturday, June 27, 1981

Chairman Peter G. Cranford called the second session to order at 1:18 p.m. outside in the plaza of Kenneth Taylor Hall. The following seven Board members were present: Peter G. Cranford, Dennis J. Darland, Robert K. Davis, Lee Eisler, Don Jackanicz, Cherie Ruppe, and Raymond Plant. The other fifteen Board members were absent.

Don Jackanicz suggested that, to save limited time and to streamline proceedings, only Board members should be allowed to speak during Board of Directors meetings unless a non-Board member is specifically authorized to speak by the Chairman. His suggestion was briefly discussed, but no formal motion was made.

Two points were then made by Chairman Cranford: 1. in his opinion the "informal" procedures which have been followed to good ends by officers should be replaced by formal ones; 2. regarding the possibility discussed from time to time of organizing a BRS publishing venture, he recommends refocusing on the audio tape medium, especially considering the chaotic structure of the publishing industry and the contemporary appeal of audio-visual materials.

Robert K. Davis reintroduced the question of Russell and what, if any, action the BRS should take regarding its infrequency of publication. He moved that effective January 1, 1982, the BRS is to make payment to McMaster University for the Russell journal at the time of publication. This motion was unanimously accepted. The Secretary was requested to inform McMaster University of the Board's decision via a formal letter.

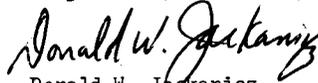

Discussion turned to the election of officers. Chairman Cranford expressed his view that a change in officers would be beneficial for the BRS. Cherie Ruppe

then put forth a blanket resolution for the complete reelection of all incumbent officers. Her motion was unanimously accepted.

The final matter discussed was the proposed 1982 Annual Meeting in Britain. Chairman Cranford voiced the opinion that such a meeting might not be successful because of the great distance involved, considering the majority of the BRS's membership resides in North America; he suggested planning would be difficult and probably few members would be able to make such a major trip. However, Robert K. Davis, who has been the principal advocate and organizer of a Britain meeting, optimistically outlined the successful liaison formed between the BRS and Peter Cadogan of the London South Place Ethical Society, who has offered to work with us in planning a 1982 Annual Meeting at Oxford. Bob also cited the possibility of working with the London-based William Wilberforce Society from which he has recently received encouraging communications. In any event, Bob stated, he will keep all Directors fully informed of his continuing work which, he feels assured, will result in a worthwhile 1982 Britain Annual Meeting.

As the afternoon session of the general BRS meeting was due to begin and as no further business remained to be discussed, Chairman Cranford adjourned the session at 2:01 p.m.

Respectfully submitted,

Donald W. Jackanicz
Secretary of the Board of Directors
The Bertrand Russell Society, Inc.

July 1, 1981

P.S. to the above: Alvin Hofer's "working document" is not included at this time, as it is a preliminary proposal. When the committee produces the final version (on expulsion procedures), it will appear in the newsletter.

COMING EVENTS

- (2) **The World Congress of Philosophy, August 21-27, 1983, will meet in Montreal. The theme will be culture. RAY PLANT suggests that it might offer an opportunity for presenting a paper on some relevant aspect of Russell. A circular gives details of events, fees, lodging, and deadlines. Here is a statement from the circular:**

The World Congresses of the Fédération internationale des sociétés de philosophie (FISP) are held every five years. Some previous congresses have dealt with a variety of questions while more recent ones have tended to seek unity in a common theme. Many participants, though recognizing the advantages of greater unity and coherence, realized that much good philosophical work had been excluded because it was unrelated to the theme. The

Montréal World Congress will, for these reasons, combine both approaches.

One part of the program will bear on a central theme which will be elaborated in four plenary sessions, and four special sections. In addition, general sections devoted to the major areas of philosophy, colloquia, symposia and so on, will be scheduled.

We mean by culture that which human intelligence and feeling have accomplished

through the ages: values, symbols, myths, language, religion, arts, sciences, technology, laws, philosophy, social and political structures... Culture, however, amounts to more than an accumulation of material and spiritual accomplishments; it is a complex and dynamic reality, in and through which the individual gives substance to his aspirations, and transforms himself and his environment. The Congress will attempt to ask, in a strictly philosophical perspective,

radical questions about the nature of culture, the diversity of its aspects, the adequacy of its responses to the most profound expectations of individuals and groups, and its capacity to provide a better future for humanity.

This theme will be elaborated in four plenary sessions, each comprising three invited papers, and in sessions of four special sections, under the same titles as the plenary sessions, consisting of contributed papers.

If interested, write for information to: **Secrétariat du XVII^e Congrès mondial de philosophie, Université de Montréal, C.P.6128, succursale A, Montréal, Québec, Canada H3C 3J7**

BY BERTRAND RUSSELL

- (3) **Russell on marriage, in "The Outlook", March 7, 1928. Marriage & Morals was published the following year, 1929.**

My Own View of Marriage

THE subject of marriage is a much more complicated one than seems to be generally thought by those who write about it. There are, broadly speaking, two views, both of which are widely held but neither of which appears to me to have any validity. There is the romantic view, embodied in fairy tales, according to which the prince and princess marry and live happy ever after; this is the view which has led to the frequency of divorce, for as soon as the couple are not living happy ever after he comes to the conclusion that it was not the princess and she that it was not really the prince; then each makes another experiment, probably equally unsuccessful. And the reason of the repeated failures is that both have had an entirely impossible conception of what the relation between two people can be.

Then there is the view, expressed with brutal frankness by St. Paul, that "it is

better to marry than to burn;" in this view, sexual pleasure is wholly regrettable, but human nature is so weak that few will forego it wholly; marriage, however, can be relied upon to reduce the pleasure to a minimum and to turn husband and wife into mutual policemen. This view describes itself as the belief that marriage is a sacrament.

Each of these opposing views is too extreme, the one in that it regards pleasure as the end of life, the other since it thinks the same of the prevention of pleasure. Pleasure in itself is a good, but not a very important good, and it cannot satisfactorily be made the end of life because it does not entail progressive activity. To achieve happiness it is necessary to have some end never completely realized, but always in process of realization. Ambition, parental affection, scientific curiosity, artistic creativeness, supply such activities; a man or woman who is absorbed in one of these

and is not wholly unsuccessful can achieve a measure of happiness, but a man or woman who lives for pleasurable moments is certain, ultimately, to be the prey of unendurable boredom.

It is in this respect that marriage is distinguished from temporary extramatrimonial relations. Marriage is complicated, owing to the fact that it involves two very diverse elements—the relation of the man and woman to each other, and the relation to their children. (Where there are no children the essence of marriage is absent.) In a happy marriage the husband and wife love each other and their children, and their love for each other is fulfilled, not merely in sex, but in co-operation for their children; this is a motive which in decent people survives at moments when mere pleasure has lost its vividness, or when perhaps some psychological strain has introduced difficulties into the merely personal aspects of the relation. But

when marriage is wholly successful, the satisfaction which it affords is extraordinarily complete, since the sexual and parental instincts co-operate to reinforce each other.

It is at the production of such marriages that laws and morals ought to aim. This end is certainly not achieved by the conventional ethics which maintain that two wholly inexperienced people should enter upon an indissoluble relation; to find a person with whom one can live harmoniously through life is not easy, and is all but impossible to the totally inexperienced, who cannot distinguish sex hunger from the deeper affection which will survive satisfaction and be intensified by it. There should, therefore, be experience before marriage, both for men and women; there must also be the possibility of dissolving marriage for grave cause. The conventional view, however, as to what constitutes grave cause is, to my mind, wholly mis-

taken. Occasional adultery on either side is quite compatible with deep and lasting affection, and if this were generally realized jealousy would not nearly so often wreck the happiness of married people, as it does at present. Jealousy is, of course, rooted in instinct, but the occasions which bring it into play depend very largely upon beliefs and social conventions. What is expected does not cause the same jealousy as what is unexpected, and jealousy becomes far more terrible when it is reinforced by the belief that a sin has been committed. I do not say that the control of jealousy is altogether easy, but it is certainly not more difficult than lifelong faithfulness to one person. It would be absurd to pretend that a happy or decent life is possible without self-control, but I maintain that a large part of the necessary self-control should go into the curbing of jealousy, whereas conventional morality regards jealousy as wholly admirable. I am not, however, advocating unfaithfulness; I am merely advocating a tolerant attitude to it when it occurs.

There are, however, other causes sufficiently grave to call for the dissolution of a marriage in spite of the harm that may be done to children; among the more obvious of these I should mention insanity, crime, and habitual drunkenness. Where such things exist in one partner to a marriage, it is better for the children that that partner should not have access to them. There are other situations in which divorce might be desirable, but they are very difficult to define with legal precision. When the parents hate each other, they are apt to institute a competition for the children's affections; this produces an atmosphere which is almost bound to create grave nervous disorders in the children, for whom, therefore, divorce is as desirable as it is for their parents. I do not quite know how such cases can be brought within the purview of the law except through the vague idea of incompatibility, which amounts, in effect, to divorce by mutual consent. Probably in fact divorce by mutual consent, given a right public opinion, would do less harm than the continuance of a marriage which has become nothing but a legal bondage. It should, however, be recognized that wherever there are children it shows a failure of self-control and a lack of parental responsibility in one, if not both partners, when they cannot so adjust their differences as to co-operate in regard to the welfare of their children.

What is of real importance in a suc-

cessful marriage is the merging of the ego in a wider unit. That man and wife are one flesh should be something more than a mere phrase; there should be an instinctive physical sympathy as the structure upon which mental companionship is built. Modern men and women are much too much inclined to a certain hardness and completeness of the ego. In a great many marriages, even when they are not unhappy, there is no profound interpenetration, no merging of the individual life into a wider, more satisfying common existence. This in this merging that the real excellence of marriage consists, and where it is absent no profound happiness can exist. Although many people resist this breaking down of the walls of self, it is nevertheless a profound human need, and where it is not corrected there will be a sense of dissatisfaction, of which the causes will very likely remain unknown. But where this complete union has been achieved it extends also to the children, towards whom parental love will be free and spontaneous and not tainted with jealousy. This result is not to be achieved without generosity, fearlessness, and passion, three things at which the traditional moralist looks askance. There must be no attempt to fetter one's partner, no fear of the possible pain to which one exposes one's self by a complete abandonment to love, no inhibition of passion as the result of a niggardly morality.

One of the difficulties in all modern civilization is the association of well-regulated and orderly conduct with personal prudence. Personal prudence carried beyond a point is death to all the finer qualities and all the spiritual joys that life has to offer. It is for this reason that all the great mystics have inveighed against it; "cast thy bread upon the waters;" "take no thought for the morrow;" "he that loseth his life shall find it"—all these are condemnations of prudence. Yet it would be impossible to carry through marriage and the care of young children without prudence. I think there is, however, a distinction to be made between the prudence which is personal and concerned with avoiding hurt to one's self, and that other prudence which springs from love and is concerned with avoiding hurt to the object of affection. Personal prudence in marriage means the certainty of missing all that gives importance to marriage as an enrichment of the individual life; but prudence in regard to the welfare of one's children is clearly one of the most imperative duties, though even this may

be overridden by some great public need.

The psychological difference between the two kinds of prudence is clear, since one has its root in fear, the other in love; unfortunately, the prudence which is rooted in fear has been much reinforced by conventional morality. We think better of a man who grows rich than of a man who grows poor, of a woman incapable of love than of a woman seduced. In all this our outlook is lacking in courage and magnanimity, and this is at the basis of a very large number of matrimonial troubles. Not infrequently husband and wife begin their married life with a determination on each side to preserve as much privacy as possible, the wife aiming at privacy chiefly in physical matters, the husband in matters concerned with his business; in this way an attitude of mutual antagonism grows up and there is never that complete surrender to a common life out of which alone a true marriage can grow. People have some strange notion that there is something sacred about their individuality, and so they tend to make the sex relation trivial and purely physical instead of being a profound and fructifying union of two whole persons. This may be connected with the individualism that has grown up from the Christian doctrine of personal salvation as opposed to the more primitive belief in the family.

MAN is a complex creature, but his life should be built upon a basis of instinct, using this word not in its technical sense, but in the broader sense common in popular usage. Sex, parenthood, and power are the chief instinctive passions, and much harm has come through confused mixtures of the three as well as from an intellectual simplification of each. Each has its penumbra in the emotional life, and, as a source of profound satisfaction, none brings its full possible contribution to human happiness unless it comes with the right surroundings. The impulse to power is obviously the source of political activity, also of the business activities of men who are already rich. It is the source also of the intellectual life; the impulse to knowledge comes primarily from the feeling that knowledge is power.

Parenthood is an impulse quite distinct from sex, as any one may see who will take the trouble to read the Old Testament. It is mainly a desire to escape from death, to leave some portion of one's ego functioning in the world after the death of the rest of the body;

but in order for it to be developed to its full extent in women it requires the physical care of the child, and in order to exist in men in any satisfying form it requires certainly as to paternity. This is, of course, the crux in all theories which would relax the rigidity of the marriage bond on the side of women; this also is the justification for male jealousy; but in the practical working out of this problem men have found in their marriage relations an outlet for their impulses to power rather than for their feelings of affection. The psychological problem to be faced, and I do not pretend that it is an easy one, is this: can a man retain any certainty of paternity if marriage is an equal partnership instead of a slavery involving in fact if not in form a more or less Oriental seclusion; or, if this is impossible, will women's demands for freedom lead to a return to the matriarchal system?

I do not think the psychology of modern marriage has as yet been at all worked out, and I foresee a considerable period of difficulty before civilized mankind arrives again at an institution as solid and lasting as the old patriarchal family. Perhaps this stage will never be reached until the state assumes the economic rôle of the father and the family, as we know it, ceases to exist. I sincerely hope not, for marriage and the family supply elements in life which are very valuable and which nothing else in the modern world can give. Life in its biological aspect is a continuous stream in which the division into different individuals is incidental and unimportant; to realize this aspect of life is to leave the prison of self by one of the many gates into a larger world, and for ninety-nine men and women out of one hundred it is the easiest of these gates.

Sex alone does not have this merit, but only sex in connection with parenthood, for then it becomes something transcending the emotion of the moment and forming part of the stream of life from the beginning to the unknown end! The true education in sexual morality would consist of giving to young people a sense of the importance and dignity of marriage so conceived. The old-fashioned morality had a basis which was not rational, while the newer absence of morality tends to sweep away all that has real value in the relations of men and women; to preserve this we need a new morality, not less serious than the old, but based upon a truer psychology and a just appreciation of human needs.

- (4) "Reflections on Pacifism in Wartime (1914-1918)", reprinted in The Past Speaks, Walter L. Arnstein, editor, (Lexington, Mass.: D.C. Heath, 1981) pp. 322-324:

BERTRAND RUSSELL, *Reflections on Pacifism in Wartime (1914-1918)*

Just as the declaration of war on Germany in August, 1914, won the support of most but not all British leaders so did the prosecution of the war that followed win the support of most Britons but rouse the objections of a small but distinguished group of conscientious objectors. Of these, the philosopher Bertrand Russell was one of the most eminent.

The most difficult period in which to keep one's head was the very beginning, before the battle of the Marne. The rapid advance of the Germans was terrifying, the newspapers, and still more private conversations, were full of apparently well-authenticated atrocity stories; the stream of Belgian refugees seemed to strengthen the case for defending Belgium. One by one, the people with whom one had been in the habit of agreeing politically went over to the side of the war, and as yet the exceptional people, who stood out, had not found each other. But the greatest difficulty was the purely psychological one of resisting mass suggestion, of which the force becomes terrific when the whole nation is in a state of violent collective excitement. As much effort was required to avoid sharing this excitement as would have been needed to stand out against the extreme of hunger or sexual passion, and there was the same feeling of going against instinct.

It must be remembered that we had not then the experience which we gradually acquired during the war. We did not know the wiles of herd-instinct, from which, in quiet times, we had been fairly free. We did not realise that it is stimulated by the cognate emotions of fear and rage and blood-lust, and we were not on the look-out for the whole system of irrational beliefs which war-fever, like every other strong passion, brings in its train. In the case of passions which our neighbours do not share, their arguments may make us see reason; but in war-time our neighbours encourage irrationality, and shrink in horror from the slightest attempt to throw doubt upon prevailing myths.

The great stimulant to herd-instinct is fear; in patriots, the instinct was stimulated by fear of the Germans, but in pacifists fear of the patriots produced a similar result. I can remember sitting in a bus and thinking: "These people would tear me to pieces if they knew what I think about the war." The feeling was uncomfortable, and led one to prefer the company of pacifists. Gradually a pacifist herd was formed. When we were all together we felt warm and cosy, and forgot what an insignificant minority we were. We thought of other minorities that had become majorities. We did not know that one of us was to become Prime Minister, but if we had known we should have supposed that it would be a good thing when he did.

The pacifist herd was a curious one, composed of very diverse elements. There were those who, on religious grounds, considered all warfare wicked; there were many in the I.L.P.¹² who came to the same conclusion without invoking the authority of the Bible; there were men who subsequently became Communists, who were cynical about capitalist wars but were quite willing to join in a proletarian revolution; and there were

men in the Union of Democratic Control,¹³ who, without having definite opinions about wars in general, thought that our pre-war diplomacy had been at fault, and that the belief in the sole guilt of Germany was a dangerous falsehood. These different elements did not easily work together. The

cynicism of communists-to-be was painful to Quakers, and Quaker gentleness towards the war-mongers was exasperating to those who attributed everything evil to the wickedness of capitalists. The Socialism of the I.L.P. repelled many Liberal pacifists, and those who condemned all war were impatient with those who confined their arguments to the particular war then in progress. And so the pacifist herd split into minor herds. In some men, the habit of standing out against the herd became so ingrained that they could not co-operate with anybody about anything.

The atmosphere was very inimical to intelligence. At first, I tried not to "lose, though full of pain, this intellectual being." I observed — or thought I observed — that, in the early months, most people were happier than in peace-time, because they enjoyed the excitement. This observation produced indignation among my pacifist friends, who believed that virtuous democracies had been tricked into war by wicked governments. Arguments as to the origins of the war were thought unimportant by those who were opposed to all war, and were brushed aside as irrelevant by the great bulk of the population, to whom victory was the only thing that mattered. For the sake of unanimity among pacifists, it became necessary for the different sections to suppress all but the broadest issues. We all had to avoid all subtlety, and practice a kind of artificial stupidity.

And gradually the hysteria of the outer world invaded the pacifist herd. I remember hearing a woman at a meeting state, with passion, that if her son were wounded in the war she would not lift a finger to nurse him. The logic was clear, since nursing was war-work; but her position was not calculated to recommend pacifism to waverers. Some pacifists, out of opposition to the patriots, made out such a good case for the German Government that they embarrassed German pacifists, who were trying to persuade their public that the faults were not all on our side. At intervals, the German Government made peace offers which were, as the Allies said, illusory, but which all pacifists (myself included) took more seriously than they deserved. Having, with great difficulty, disbelieved what was false in war propaganda, it was impossible to believe what happened to be true.

I remember one evening when I came away from a pacifist meeting with Ramsay MacDonald. He was depressed, and as we walked up Kingsway he said he was afraid of acquiring what he called the "minority mind." Some may think that he has since been only too successful in avoiding this danger, but it cannot be denied that it is a danger. It does not do to think that majorities must be wrong and minorities must be right.

In times of excitement, simple views find a hearing more readily than those that are sufficiently complex to have a chance of being true. Nine people out of ten, in England during the war, never got beyond the view that the Germans were wicked and the Allies were virtuous. (Crude moral categories, such as "virtuous" and "wicked,"

revived in people who, at most times, would have been ashamed to think in such terms). The easiest theory to maintain in opposition to the usual one was the Quaker view, that all men are good at heart, and that the way to bring out the good in them is to love them. Christ had taught that we ought to love our enemies, and few people cared to say straight out that He was mistaken. Those who genuinely held the Quaker view were respected, and the Government disliked having to send them to prison.

The class-war opinion, that capitalist wars are wicked but proletarian wars are laudable, could be preached with success to working-class audiences; it had the advantage of giving an outlet for hatred, of which many persecuted pacifists felt the need. Frequently, in meetings nominally opposed to all war, the threat of violent revolution was applauded to the echo. This view was, of course, the one of all others most hated by the authorities, but it was psychologically capable of being held by a majority.

The view which I took, and still take, was that, while some wars have been justified (for instance the American Civil War), the Great War was not justified, because it was about nothing impersonal and raised no important issue. This view required too much argument to be effective in such a violent time; it could be put forward in books, but not at meetings. It was also impossible to get a hearing for the view that a war cannot be justified by its causes, but only, if at all, by its effects. A "righteous" war was supposed to be one which had the correct diplomatic preliminaries, not one in which victory would bring some benefit to mankind. One of the most surprising things about the war, to me, was its power of producing intellectual degradation in previously intelligent people, and the way in which intellectual degradation always clothed itself in the language of a lofty but primitive morality.

To stand out against a war, when it comes, a man must have within himself some passion so strong and so indestructible that mass hysteria cannot touch it. The Christian war resister loves his enemies; the Communist war resister hates his government. Neither of these causes of resistance was available for me; what kept me from war fever was a desire for intellectual sobriety, for viewing matters involving passionate emotion as if they were elements in a formula of symbolic logic. I found it useful to think of nation *x*, nation *y*, and nation *z*, instead of England, France and Germany. But the effort was considerable, and hardly left me the mental energy to apply the same process when *x* was the British Government and *y* was the imprisoned pacifists. I still think, however, that intellectual sobriety is very desirable in war time, and I should wish all who, in anticipation, expect to stand out against the next war, to practise the habit of translating concretes into abstracts, so as to see whether their reasonings still seem convincing when the emotion has been taken out of them. In theory, we all know that this is essential to scientific thinking, but the war showed that it is more difficult than many people suppose.

By Bertrand Russell

The active presence of freedom in American life is vanishingly small. Words and slogans are used for long periods after they have been emptied of content by events. Those who know within themselves that to challenge their society fundamentally is a dangerous thing to do deceive themselves by clinging to such hollow slogans until they have been sufficiently corrupted to have lost interest in them. The next step for the absence of vital life is for the conceptions to be acknowledged as something desirable anyway. "National interest" is the replacement term most preferred.

I consider that there are three large developments in American society which have made talk of freedom and individual liberty empty talk which satisfies the diminished consciences of those who want to believe that they are motivated by these values at the same time that they embrace a society which despises freedom and individual liberty.

These three developments are: 1) Overt and unabashed police-state techniques; 2) the evolution of institutional life incompatible with freedom and liberty; and 3) the power-struggle between two authoritarian giants, America and Russia, which has introduced the concomitant threat of annihilation for mankind. These three developments act upon and reinforce one another.

Since the end of World War II, the way to political power in the United States has been characterized by the crudest persecution of dissident opinion. The object of this persecution has been to impose upon the United States an acceptance of capitalism and of the power of large industry. To further this end, any potential critics of such a power arrangement have been hunted down and declared subversive. One of the tragic aspects of this development has been

the willingness on the part of liberals to swallow the dishonest assumptions, seek to dissociate themselves from those under attack, and to allow the perpetrators to establish their power and their values as beyond question. Questions have been decided to be incompatible with patriotism.

"Subversives" are those who pose such questions. They are called Communists because it was also a purpose of men who hold American power to discredit alternatives to Capitalism by equating support of a foreign power with domestic dissidence.

Communists were a convenience and all who retained an independent mind were obligated to denounce Communism if they were to remain free and employed. Communism, however, was an issue created as a conscious hoax. The power of the Soviet Union was real and the power-conflict with the Soviet Union was real. Espionage, as old as nation-states, was also real. None of these facts had any bearing on the use to which they were put by cynical addicts of power. Communists had no political significance within American life. It is not clear why it is illicit for Communists to play a role in the political life of a free country.

It was soon clear, however, that Communists would be hunted, for that enabled the hunters to accuse all with whom they had political differences of being this new form of devil, carefully cultivated as a domestic "menace".

The Federal Bureau of Investigation is a secret political police. It has frequently fabricated evidence to frame innocent people and any who dared suggest that this had been done were themselves subjected to the same treatment. The Justice Department undertook to pay for a posse of terrified perjurers who, upon losing their terror, found official lying a lucrative way to live. American political life centered in the late forties and fifties upon the intimidation of all men of integrity prepared to criticize their country.

Investigating committees have also used the paid informer and instructed liar. Many individuals have been jailed and many thousands more deprived of livelihood. The effect of this systematic and pervasive program of intimidation has been to eliminate political alternatives from the public discourse in the United States.

Opportunist politicians such as Joseph McCarthy and Richard Nixon patterned their careers on the national pastime of inquisiting men with independent minds. The press has entirely cooperated in this. The press, like all media of communication, is controlled by large economic interests. These very economic interests have nurtured the attack upon civil liberty and the "concentration camp for the mind" which characterizes the United States of America.

The Justice Department assisted with loyalty boards, subversive lists, and prosecutions of individuals for their political views. The F.B.I. persisted in fabricating evidence and even the existence of Communists to be hunted in order to continue to drain public funds.

The case of Alger Hiss illustrated the proposed fate of all foolish enough to defy; and the F.B.I. constructed a typewriter to secure a false conviction.

The atmosphere of hysteria so sedulously cultivated by the press and the Government of the United States was sufficient to murder the Rosenbergs who were accused of espionage on the evidence of a perjurer. Even the law under which they were tried was substituted for the one under which they were accused because the former carried the death penalty. The Rosenbergs were incapable of having copied the documents they were said to have copied because, as Einstein pointed out, they lacked the essential training necessary to have done that of which they were accused. The peacetime death penalty showed how far the persecutors would go in the United States and

helped to diminish the danger of intellectual independence.

Espionage, however, was only the guise, for political views of a radical kind would hardly be cultivated by an intended spy. The continued object was the man who disagreed. After a time, however, the persecution of dissidents (called ferreting out Communists) became a career in itself and more and more victims were necessary to feed the inquisition and its victim-hungry administrators.

The case of Morton Sobell, illegally kidnapped, convicted on non-existent evidence, sentenced to thirty years, is one of the more obvious examples of "freedom" in the United States.

The Attorney-General's list includes today many hundreds of organizations which are declared subversive. The Feinberg Law of New York requires teachers to report on the political beliefs of their colleagues. Those who are friends or associates of political dissidents are themselves subject to and in danger of overt persecution.

The system of terror which I am describing and which, I am certain, is familiar to Americans, has worked in an informal way as devastating as its more exhibitionist aspect. Private industry does not employ the politically suspect. The right to travel is a consequence of holding dependable views. A great blackmailing industry emerged with journals such as "Red Channels," destroying careers by smearing men as Communists. The important fact is that a free society would not be one in which a political view could constitute a danger to the holder. Nor could someone be "smeared". Smears betray the absence of freedom.

The result of this pervasive and systematic terror has been that Americans first respond to political discussion by seeking to attach labels to ideas, the better to dismiss them without having to consider them.

It is not possible to have such an environment for fifteen years without profound effect. Americans prefer to say that the witch-hunt was a passing phase of hysteria created by nasty men such as McCarthy. On the contrary, the persecution which America has witnessed and largely embraced was created by men of power to destroy political opposition. McCarthy was an excrescence upon this fact.

The second development to which I have referred earlier is an institutional one. The nature of a large industrial society is bureaucratic and impersonal. The individual is submerged in vast collective units. Individuals who are created for such institutions are without features marking independence of mind. Adlai Stevenson said:

"Technology, while adding daily to our physical ease, throws daily another loop of fine wire around our souls".

This statement is one full of insight. It reveals that the United States is as collectivized as the Soviet Union in the sense that both societies are characteristically large and are dominated by bureaucracies. The private or public character of these institutions does not determine the extent to which people are cogs. It is technology and size which do that. Ideology is largely irrelevant.

For this important reason, the persecution of men of independent mind is not the only source of tyranny in America. The daily lives of people are incompatible with freedom. They no longer have real control over decisions which affect them and this is a fundamental fact.

Part of this second development is the nature of power itself within American political life. The corporate community constitutes a private Government. Industries are interlocked and the economic and political life of the United States can not seriously be separated. So it is with economic and political power. The corporate community finances both political parties, provides the

millions necessary for both candidates in Senatorial elections, owns and controls the media of communication and, in effect, exercises the power of decision-making. For this reason formal political democracy in the United States is largely a sham and "freedom" is a convenient myth at the disposal of faceless bureaucrats. The overwhelming political power of the corporate community is private in character only insofar as there is no public awareness of its role, let alone knowledge of its decisions or control over them. The two political parties operate within this system and the formal political institutions—the Congress and the Executive—merely serve to administrate for the corporate community. After fifteen years of persecution, systematic conditioning and the eradication of political opposition, the American public accepts national interest as defined by corporate capitalism. For these elementary reasons, the political democracy of which Americans speak is, for me, largely without serious meaning.

Intimately related to these two developments which I have sought to describe has been the power struggle between the Soviet Union and the United States—the Cold War. The elimination of dissent was achieved by identifying dissent in the popular mind with support of the "enemy", the "devil" the inconceivably wicked Russians. The nice thing about this was that it also became impossible to question the power-struggle itself. Russia was the means of ending American radicalism and the means itself was sacred. I am utterly convinced that if the conflict with the Soviet Union had never existed a different menace would have been adopted for the purposes of political persecution.

Nonetheless, the struggle for power with Soviet Russia has enabled American politicians to sanctify every oppressive act in the name of national security and to label every appeal for freedom as sympathy for the Russians.

In the course of the struggle it has become apparent that neither side is concerned about anything except dominating the other. The Russians may proclaim hostility to Capitalism and the Americans to Communism. Yet the two systems, under the very pressure of their own conflict, have become remarkably alike. The bureaucratic and impersonal character of these two countries has taken them in very similar directions. Stalin, it was true, was exceptionally cruel. Since Stalin the cruelty has diminished apace with the growth of intolerance in America.

The United States has created and supported tyrannical regimes around the world. The sole criterion for support has been subservience to American military needs and willingness to allow the resources and peoples of the respective countries to be exploited by American industry.

This pattern in America has made the question of freedom directly relevant to the unlikely hope of human survival. Unless it becomes possible not only to question in isolation the holders of American power, but to mobilize effective political opposition to their power and their policy, survival is in doubt.

If friendship with the Soviet Union is treasonable, if the power of the military-industrial complex is unchallengeable, if the insane struggle between the Soviet Union and the United States is not halted, then the absence of freedom will lead to the end of life on our planet.

I believe that until a radical analysis of this kind is made by Americans and acted upon, regardless of the consequences, we must all live through the sufferance of semi-literate paranoids with their fingers on buttons.

(Thank you, JOHN TOBIN)

REPORTS FROM OFFICERS

(6) Chairman Peter Cranford reports:

(6a) (Editor's note: Chairman Peter Cranford and President Bob Davis disagree as to whether expelled BRS Member John Sutcliffe should be allowed to appeal his expulsion.)

Peter says that, at the '81 Board meeting in June, he appointed a committee to consider that question.

Bob maintains (and says the minutes will confirm) that no such committee was appointed; that the Chairman does not have the power to appoint any committee (for it is the Board, not the Chairman, that has that power, according to the Board's Bylaws); that, in any case, it is the Society (the members) and not the Board (the Directors) that has the responsibility of dealing with expulsion, according to the BRS Bylaws, and that the Board has no power to overrule a Society vote; that Peter's belief that Sutcliffe should be allowed to appeal was supported by advice Peter got from BRS Director Ray Plant, an attorney, but that Ray's advice was mistakenly based on the obsolete BRS Constitution instead of the current BRS Bylaws. (The obsolete Constitution does not provide for expulsion by mail ballot; the Bylaws do so provide. Sutcliffe was expelled as the result of a mail ballot.)

There are many aspects of the Sutcliffe matter. To provide all details might fill much of this newsletter; briefly this is what has happened:

Peter polled the Directors and asked for their "reactions" to Sutcliffe's request for an appeal, and later said that a majority (9 to 7) had "voted" in favor of appeal. In response to that, several Directors who had given favorable "reactions" said they had not meant to have them counted as "votes" -- and changed their position.

Bob now questions whether a majority of the Board does in fact favor allowing an appeal.

To answer this question, BRS Secretary Don Jackanicz (who is also Board Secretary) has mailed ballots to all Directors, asking them to vote on whether to allow Sutcliffe to appeal, and we should know the answer by the end of this month. That should settle the matter one way or the other.

Bob -- though he believes there is no way under the Bylaws that the Sutcliffe case can be reopened -- has nevertheless said he would abide by the result of Don's poll, as a contribution to bringing this matter to a conclusion. Now here is Peter's Chairman's Report:)

(6b)

The society is in the process of re-assessing its methods and goals as the aftermath of the Sutcliffe case. At the last board meeting Dr. Alvin Hofer argued that the by-laws, particularly as they pertain to expulsion, needed revision. Dr. Hofer was then appointed chairman of the committee to do so. He will be assisted by Cherie Rupee, Steve Reinhardt, Ray Plant and myself.

Robert Lombardi then challenged the method used in the Sutcliffe case. As a result I appointed Cherie Rupee and Ray Plant to assist me in an investigation of the procedure. The chief points at issue were that Mr. Sutcliffe had written that no charges had been transmitted to him and that he had had no opportunity to formally argue in his defense. I wrote him in January of 1981 to the effect that he could present his case to the board. I did not hear from him again. It then occurred to me that he might not have received my letter written some eight months previously, and decided I should write to him to see if he had. A very short letter was written making this inquiry, and since it had no other substance I did not send copies to the board.

In the meantime, Ray Plant sent me the enclosed letter (dated August 28, 1981) indicating that there were several weaknesses in the procedure and John Sutcliffe should be informed that he could appeal either by written statement or in person. Sutcliffe then sent a letter requesting the right to appeal. I sent his letter to all board members asking for their reaction. A majority of the seventeen responding wrote letters giving various reasons why an appeal should be allowed. The minority, led by the BRS president and the editor of the BRS newsletter, argued that since Sutcliffe was expelled in accordance with the by-laws (see attached opinion by Ray Plant dated September 22, 1981), no appeal should be granted. Both have also argued that the board has no power to re-open the matter.

The president seems self-contradictory at this point since he is working in behalf of Amnesty International which seeks to have people released who were convicted in accordance with the laws of their country. Bertrand Russell was similarly punished on several occasions.

Since the sub-committee and the board were in agreement, I communicated our decision to Sutcliffe granting his request to appeal. I expect a formal appeal within the next few weeks.

August 28th, 1981.

Mr. Peter G. Cranford, Ph. D.,
Chairman,
Board of Directors,
The Bertrand Russell Society,
1500 Johns Road,
Augusta, Ga., 30904,
U. S. A.

Dear Peter:

Re: John Sutcliffe.

Thank you for your letter of August 10th re John Sutcliffe's appeal against expulsion. Your letter just arrived owing to the recent Canadian mail strike.

My advice would be for you to notify Mr. Sutcliffe that his appeal will be considered and to inquire whether he wishes to conduct his appeal by way of correspondence to the Board then if upheld, by mail to the members at large, or whether he wishes to conduct his appeal in person or by agent at our next Annual Meeting.

As you know, there is no explicit procedure for appeal in the Society's By-laws. These are being reviewed and I will be recommending that the affected member may have a choice of conducting his appeal by correspondence or by appearing in person or by agent at the next Annual Meeting of the Board and membership.

I hope to have my comments to you on a proposed expulsion procedure by letter in the near future.

Kind regards.

Yours sincerely,

Ray Plant
R. M. Plant,
Regional Solicitor.

RMP:mb

September 22nd, 1981.

Dr. Peter G. Cranford,
1500 Johns Road,
Augusta, Georgia,
30904, U.S.A.

Dear Peter:

Further to the efforts of the Sub-committee, I have reviewed the Society's Constitution which I have available. Section 3 of Article II of the Constitution covers the subject of expulsion in a cursory way. The aims of the Society as set out in Section 1 of Article II are sufficiently general that I doubt very much whether Mr. Sutcliffe could be expelled for violation of them.

His conduct was personally abusive but did not contravene the stated aims of the Society. It is for this reason that I suggest that the Constitution of the Society be amended to reflect that expulsion may occur for any reason deemed sufficient by the Board of Directors and membership of the Society where such reason is related to the conduct of the member in public or private life which would bring the Society or its office holders into disrepute. In this connection, is there further word on Mr. Sutcliffe's Appeal from the other members?

To assist in the Sub-committee's evaluation of the By-laws, it would be of value if a set of By-laws were distributed to the members of the Sub-committee for perusal and recommendations.

Yours sincerely,

Ray Plant
R. M. Plant,
Regional Solicitor.

RMP:mb

C.C. Mr. Alvin D. Hofer, Ph. D.
Mr. Stephen J. Reinhardt
Ms. Cherie Ruppe

(7) President Bob Davis reports:

(7a) First, I would like to offer these observations on the Sutcliffe matter:

1. The letter from Ray Plant is based on the old Constitution which is not in force rather than on the Bylaws that we now operate under, and which -- unlike the Constitution -- provide for expulsion by mail ballot.
2. There is no committee to investigate the Sutcliffe expulsion. The Board Bylaws state that committees are appointed by the Board, not by the Chairman, and the Board appointed no such committee.
3. I received Peter's original letter, that he sent to the Board, 6 weeks later than the other Directors. (It did not call for a "vote", but merely for a "reaction".) I immediately wrote to the Directors, opposing appeal on constitutional grounds and also because Mr. Sutcliffe is not good for the Society. But by this time, many Directors had already responded to Peter's letter, and Peter announced the result as a "vote" in favor of appeal. Since then 3 Board members have notified me that they object to having their "reaction" treated as a "vote" (which they did not intend) and have changed their minds, which I believe nullifies Peter's majority.
4. Ray Plant, in his letter of September 22nd fails to mention that the principal charge against Mr. Sutcliffe was his refusal to stop acting as our official representative; such behavior is grounds for expulsion. The abusive behavior he exhibited toward others -- including non-members, apparently as our representative -- is secondary.
5. Finally, Mr. Sutcliffe's recent letter of appeal shows no regret and no promise to stop the activities for which he was expelled.

(7b)

Don Jackanicz and I attended the Humanist Summit Conference in College Park, Maryland (in University of Maryland facilities) on October 30-31. The purpose of the meeting was to draw together "humanistically oriented groups" to organize for combatting Moral Majorityism. Whether or not the BRS is such a group (I think it is) depends on definitions, and I will rely on BR's statement that though he did not use the label ("humanist") himself, he would not be inclined to "bring an action for libel" if someone applied it to him.

There were interesting talks by Paul Kurtz, Jerry Larue, N.F.I.Schwarz of Utrecht, Holland -- Co-Chairman of the International Humanist and Ethical Union -- and others. There were also group planning sessions. It was a successful conference. We passed a group affirmation-resolution, and will start "networking" among groups -- humanist, religious, and establishment -- who are threatened by or dislike the Moral Majority and its allies. Don and I both signed the affirmation (and contributed to it.) I am presenting it to the BRS Board to consider for official BRS endorsement. Here is the statement:

Affirmation of American Freedom by the Humanist Summit Conference

We, representatives of humanistically oriented groups, deplore the attack upon us by intolerant religious forces. We believe that this simplistic attack is not only upon humanism but is an all-out assault upon the open and pluralistic character of American society and upon the Constitution and traditional American freedoms. By their repeated assaults upon the separation of church and state, these zealots undermine the very foundation of our democratic society and religious freedom. We hold that no one group, religious or secular, has an exclusive claim to patriotism in America nor an inherent right to force its values and ideology upon the rest of us. Rather, we believe that it is through open discussion and debate that we as Americans can arrive at intelligent decisions on the ethical, social and political issues facing us. As humanists we accept both our right and obligation to participate in determining the future of our society without threats of intimidation or censure. This, we believe, is the essence of being an American and is of central importance to humanism.

To follow this up, the Ethical Union is sponsoring another conference in March '82 which I shall try to attend. Also the International Humanist and Ethical Union is having a World Conference in Hanover, Germany, August 1-5, '82, which I have been invited to attend and hope to be able to. It dovetails with our proposed '82 meeting at Oxford.

REPORTS FROM COMMITTEES

(9)

Science Committee (Alex Dely, Chairman) reports:

(9a)

(1) The following, on the '81 Pugwash Conference, supplements the New York Times article of 9/4/81 reproduced below (16).

The 31st Pugwash Conference (August 28-September 2, 1981 at Banff, Alberta, Canada) had as its theme, "Avoiding Nuclear War". The group concluded that an ominous spread of concepts making nuclear war thinkable is coupled to strivings to get rid of all arms control agreements (SALT, NPT...)

The group agreed that nuclear weapons' only real use is as deterrents, not as weapons, and reaffirmed that it is impossible to limit a nuclear war in quantity and/or quality. The Pugwash group, consisting of U.S., U.S.S.R. and other scientists, unanimously rejected any doctrine legalizing limited nuclear war.

They deplored the defeat of SALT II in the U.S. Senate, and want the U.S. and U.S.S.R. to refrain from any

action that could jeopardize important provisions of SALT II (which were agreed upon) so that future negotiations would not start in a vacuum.

They agreed that the most useful step in stopping the U.S.-U.S.S.R arms race would be to prevent the spread of nuclear weapons to more countries, as well as a mutual freeze on nuclear forces to current numbers and characteristics. Most importantly, destabilizing systems (such as the MX, which can be perceived as having first-strike capabilities) must be avoided; in this case, when both sides have similar systems, the situation is much worse than if only one nation does. Trying to match such systems adds to the instability; rather first strike targets should be dismantled, leaving first strike weapons nothing to attack.

They also endorsed a nation's withholding its supplies of fissile material for weapons purposes. The situation in Europe was thought to be deteriorating rapidly. A "zero proposal" was suggested, in which non-deployment of NATO weapons (such as the neutron bomb) would be coupled to a reduction in U.S.S.R. SS-20 missiles. It was suggested that, in each power bloc, political action be taken to ban training in the use of these new weapons at military maneuvers. To gather such public support, it was agreed to contact all scientific organizations, and scientists of high prestige, to undertake massive public outreach projects.

- (9b) (2) A letter was sent to Congressman John Rhodes and others, opposing efforts (such as H.R. 4400) to weaken the Clean Air Act, and indicating the harm to Arizona that would result from the proposed weakening of the Act. The Clean Air and Clean Water Acts are up for renewal, and letters of support to your Congressman and Senators would be useful.
- * (9c) (3) A 7-page package of material was sent to 40 ERS members who in some way are connected with a university, as part of the Science Committee's dissident scientists effort. It describes the treatment given Soviet physicist Vladimir Kislak, a Jewish refusenik (who was refused a visa to join his family in Israel), jailed on a charge of having attacked a woman; and includes a petition for his release. A free 16-page kit, "Suggestions for activities in support of oppressed physicists" is available from Kurt Gottfried (Chairman, American Physical Society Committee on the International Freedom of Scientists), Newman Laboratory, Cornell University, Ithaca, NY 14853.

PHILOSOPHERS' CORNER

- (10) A call for papers for December 1982 was sent to scholarly journals by the ERS Philosophy Committee Chairman Ed Hopkins:

The Bertrand Russell Society announces a call for papers to be presented at its meeting at the Eastern Division of the American Philosophical Association in December 1982. Papers may be on any aspect of Russell's Philosophy. They should have a reading time of about one half an hour and should be submitted in triplicate, typed and double spaced with an abstract of not more than 150 words. The name of the author, with his address and the title of his paper, should be submitted on a separate page. The submission deadline is May 15, 1982 and the papers should be sent to Edwin Hopkins, Chairman, Philosopher's Committee, The Bertrand Russell Society, 6165 64th Ave., #3, Riverdale, Md. 20737. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

ABOUT BERTRAND RUSSELL

- (11) The CCNY Affair, as reported in *When LaGuardia Was Mayor* by August Heckscher with Phyllis Robinson (New York: Norton, 1978) pp.269-275:

The Case of the Noble Earl

On October 1, 1939, the Board of Higher Education of New York City named as professor at City College an erudite, disconcertingly witty Englishman who was to teach the philosophy of mathematics. Nobody took much notice of it at the time, and those who did saw nothing inappropriate in the choice. The *Sun*, bellwether of the conservatives and guardian of conventional standards, commented editorially on the new appointment. "He thinks so clearly, and writes with so much sparkle and gusto, that business should boom in the philosophy department." It did indeed, but in

a quite different way from what the editorialist had anticipated.

The Englishman in question was Bertrand Russell, world renowned mathematician, but also expounder of views upon social and political questions that often astounded and shocked his contemporaries. In particular, he held views on the relations between men and women which even today, though they are widely followed, are rarely expressed so lucidly and frankly. In a book, *Marriage and Morals*, published ten years before his New York appointment, he had written: "I am sure that university life would be better, both intellectually and morally, if most university students had temporary childless marriages that would afford a solution to

the sexual urge neither restless nor surreptitious, neither mercenary nor casual, and of such nature that it need not take up time that should be given to work." All sex relations that do not involve children should be regarded as a purely private matter, he urged; adultery was permissible and even desirable, and as for Christianity: "Through its whole history it has been a force tending toward mental disorders and unwholesome views of life."

That was strong language. The book was attacked at the time but in due course was forgotten; at the start of the war Russell accepted a teaching appointment at the University of California. But there was one man, Bishop William T. Manning of New York, who did not forget and carried on in the press and elsewhere a continuing crusade against the English earl. The issue as it was posed by the bishop, and as it was seen by most others who took up the fight, was not quite the one we would expect today: not civil liberties and the right to teach, but the right to speak unpopular views. It was, in short, the old issue of toleration, and Bishop Manning was one of those who could not bear to put up with views so different from his own and so personally offensive.

In the volatile community of New York the Russell appointment was not likely to be passed over in silence. When the mathematical operation of adding one to one was performed—when the opinions of Bertrand Russell were set in conjunction with the post of City College professor—the ensuing controversy reached through all levels of public opinion, shook up the Board of Education, the courts, and the City Council, and posed a crisis for the LaGuardia administration. The mayor himself was in an acutely embarrassing position. He did not, it must be said, emerge with honors from this trial. His battles for the rights of minorities and the oppressed, his stand against the suppression of free thought in the European dictatorships, seemed to be ignored when highly unpopular opinions were expressed in his own backyard.

LaGuardia at this time and later was much influenced by the religious hierarchies, both Catholic and Episcopalian. Bishop Manning, who referred to Russell as "an ape of genius," had enlisted the mayor's aid in various church matters and was in regular communication with City Hall. In fairness it must be added that the mayor, as a sensitive politician, was aware of the repercussions throughout his New York constituency likely to be aroused by Russell's views on sex and religion. When the chips were down, the liberals and the defenders of toleration were but a small group within the city complex, and by no means the most powerful. Finally, the mayor's own views on sexual morality, orthodox and conventional as they were, made him susceptible to being genuinely shocked by the writings of the noble earl.

"I am not a prude," the mayor stated, with the kind of innocence which made people think he very probably was. He added, to prove his point, that he had been an aviator in the war and had traveled "all over Europe." His attitude toward women was certainly old-fashioned. When his secretary, Anna Clark, visited Washington on official business, he insisted she stay at a hotel which demanded of its residents that they check in by midnight. When, at the end of a day's work, he suggested to Mitzi Somach that she ride home with him in his city car, he made sure that a third person in addition to the driver accompany them. All this might have been set down as one more of the mayor's amiable eccentricities. But when the Bertrand Russell appointment divided true believers from the bigots and the nervous nannies, it placed LaGuardia on the wrong side of the line.

Between October and March the Bertrand Russell affair boiled along below the surface of public opinion, but enough discontent was aroused to cause the council on March 14 to adopt a resolution ordering the Board of Higher Education to rescind the appointment. The St. Patrick's Day Parade that year was held under a driving snow; one can imagine that among the notables on the platform (several of whom stayed like the mayor until the end) the case was fully discussed. Here were leading representatives of the religious and political establishment, and the Russell appoint-

ment had grown as heated as the weather was cold. "Why is it we always select someone with a boil on his neck or a blister on his fanny?" LaGuardia had grumbled a few days before, and his sentiments at the grand Irish tribal rite must have been expressed in similar vein. Two days after the parade, the Board of Education was to meet to reconsider the appointment.

On the eve of the meeting the mayor received from Charles H. Tuttle, a respected member of the board, a somber letter warning that the appointment, if carried through, would do harm to City College and would be an affront to the religious people of the city. "I lay the facts before you so that you may take such action as your judgment dictates." With the letter was a memorandum setting forth lengthy quotations, most of them from Russell's controversial *Marriage and Morals* of a decade earlier. At the same time the mayor was receiving advice from Burlingham. "I hope you will keep out of the Bertrand Russell mess," wrote that wise mentor. "If Bishop Manning had kept his fourteenth-century trap shut, the noble earl would have come and gone without notice." At about the same time, in a letter addressed to "My dear and good bishop," LaGuardia was extending to Manning profuse apologies for the appointment and promising to act "within the limits of such powers as I have."

These powers included pressure on the Board of Higher Education. One member, having resisted such pressure, appealed later for LaGuardia's "forgiveness," saying that his vote could only be laid to "conscience or human fallibility." Others, though less penitent, were suffering from the same debilities. The board at its March 19 meeting voted eleven to seven against reconsideration of the appointment. A taxpayer's suit started court action, while in Albany an inquiry was voted into the activities of reds and other subversives in the New York City schools.

The decision of the court came rapidly, on March 31, in the form of an opinion delivered by Justice John E. McGeehan. McGeehan was a Catholic who had once tried to have the portrait of Martin Luther expunged from a city mural depicting the history of religion. Not surprisingly he now found Russell unfit for the post of professor. Russell's attitudes toward sex were "immoral and salacious"; besides, he was not a United States citizen. The next move was the mayor's. On April 6, when the LaGuardia budget was presented, it was noted that funds for the Bertrand Russell post had been dropped. This was in keeping, it was blandly explained, "with the policy to eliminate vacant positions." On the same day two thousand students at City College left their classes at noon in protest. At Carnegie Hall a rally urged restoration of the \$8,800 budget item and called for an appeal of the McGeehan decision.

At this point LaGuardia's course becomes least comprehensible. He set himself rigidly against appeal, and Chanler, the corporation counsel, announced under evident pressure that his office would not take the Russell case to a higher court. Chanler's face-saving defense of this position was that it was a poor case on which to base an appeal; there was "the gravest danger" that it might be affirmed. He refused also to permit other counsel to take over. The Board of Higher Education thereupon flouted the mayor by naming special counsel of its own, top lawyers from the conservative law firm of Root, Clark, Bushby, and Ballantine. At the University of California, meanwhile, Russell found his post barred to him when he sought to continue there rather than to subvert New Yorkers.

The strains resulting from the mayor's stand were intense, both within and outside his official family. John Dewey, the noted educator, wrote LaGuardia a letter which must have hurt. After expressing shock at the mayor's refusal to allow an appeal, he stated, "I have regarded you as a person who could be counted on to do the straightforward thing independent of political pressure." Burlingham was deeply dismayed. His letter of April 18 is worth quoting at length:

I strongly urge you to direct Chanler to consent to appeal. I seriously

doubt his right to tell the Board of Education they cannot appeal and I regard this refusal . . . as high-handed. . . .

You know how foolish I think the Department of Philosophy and the Board of Higher Education were in nominating and appointing Russell, and how abhorrent Russell's doctrines are to me. But why should a man with your record in a free country do to the CCNY what the Nazis have done to Heidelberg and Bonn? . . .

Your attempts to dispose of the case while it was in the courts was bad enough; but to prevent the Board appealing to higher courts is far worse. . . .

It is not like *you*.

To this cry from the heart LaGuardia's reply was a disingenuous brush-off. "The pressure groups are certainly bearing down on you," the mayor wrote. "A lawyer has advised his client (the mayor) not to appeal, and the client has accepted. . . . That is all there is to that."

The actual relations between "the lawyer" and "the client" are suggested by a letter of April 27 to Chanler. Referring to a "memo re the Russell case," evidently suggesting some means to placate the liberal groups, LaGuardia thus addressed his corporation counsel:

In reference to your memo re the Russell case, it might be becoming to a scrivener in the office of a barrister in the 18th century, but utterly unworthy of a law officer in the greatest city in the world. . . . The city's law department is pettifogging on technical procedural matters. The city provides third-grade clerks for that purpose. . . . I fear you are under a misapprehension as to the duties of your office and the responsibilities which go with these duties. Further correspondence will not be helpful; nor is it desirable.

Avoidance of an open break with the corporation counsel was fortunate for the LaGuardia administration. Chanler evidently was

(Thank you, JOHN JACKANICZ)

(12) Another by Ronald Clark, as reported in...

PUBLISHERS' WEEKLY

VILLAGE VOICE Literary Supplement October 1981

BERTRAND RUSSELL AND HIS WORLD

Ronald Clark. Thames & Hudson (Norton, dist.), \$14.95 ISBN 0-500-13070-1

Clark wrote an earlier extended biography of Russell (1975, "The Life of Bertrand Russell"), but this present compact life story is an excellent rendering of the 98 years of his subject's very active life and packs much information into less than 100 pages of text. Russell's childhood in Richmond Park was a tranquil one, his years at Cambridge were active and his work as a mathematician resulted in "Principia Mathematica." It was in 1918, as a war protester, that he served his first prison term and his career as a gadfly of the Establishment began. He lectured widely in the U.S., married four times and won a Nobel prize for literature. The 105 black-and-white illustrations have been carefully selected, and they illuminate the text perfectly. They include rare photos of T. S. Eliot, D. H. Lawrence and Wittgenstein—as well as of Russell's wives and children. A model of popular biography.

[September 28]

(Thank you, PETER CRANFORD)

BERTRAND RUSSELL AND HIS WORLD
By Ronald Clark

Thames and Hudson, \$14.95

To accomplish great things and create an individual style, it is probably no hindrance to issue from a ruling class line and spend 98 years sentient upon the earth. Godfathered by John Stuart Mill, Bertrand Russell arrived in 1872, was orphaned early, and was subsequently brisk-walked into manhood by his austere and formidable grandparents. Next there was Cambridge, and soon after that lasting fame from his collaboration with Alfred North Whitehead on the monumental *Principia Mathematica*, published between 1910 and 1913.

Russell proved that certain ancient logical paradoxes were fundamental to mathematics, generating roughly the same seismographic shock wave in mathematical logic as Einstein's Relativity Theory was to produce in physics. "It is passion that has made my intellect clear," Russell wrote, "absolute unbridled Titanic passion . . . that has made me never stop to ask myself if the work was worth doing . . . [or] care if no human being ever read a word of it." It was also a passion for avoiding first wife Alice.

There would be four marriages and many affairs—those with Ottoline Morrell and Colette Maleson were the most important and

able to adjust his conscience to the mayor's interpretation of "the duties of his office." No doubt he did believe that in the hysterical atmosphere of the moment an appeal would risk confirmation. He must have understood, too, the physical strain under which the mayor was laboring. Dr. George Baehr, the mayor's personal physician, was forbidding him to make any appointments at night. Mitzi Somach found the mayor's conduct of office affairs too burdensome to endure further; she left quietly at this time, realizing only afterward that he had been an ill man. Unchanged in his affection, Burlingham wrote LaGuardia in May, "I am so worried that you are not taking proper care of yourself. Here you are, when you should be resting, in so many activities and giving so much of yourself to each of them."

The Russell affair came to its conclusion in the fall. Russell had by then accepted a teaching post with the Barnes Foundation in Merion, Pennsylvania, and the Board of Higher Education at its October meeting voted fifteen to two to drop the case. A final word in this inglorious episode may be left to Russell himself, who broke a dignified silence to answer a letter in the *Times* charging that he ought to have withdrawn voluntarily from the City College appointment:

If I had considered only my own interests and inclinations, I should have retired at once. But it would have been cowardly and selfish. . . . I'd have tacitly assented to the proposition that substantial groups shall be allowed to drive out of public office an individual whose opinions, race, or nationality they find repugnant. . . . In a democracy it is necessary that people should learn to endure having their sentiments outraged. Minority groups already endure this. . . . If it is once admitted that there are opinions toward which tolerance need not extend, the whole basis of toleration is destroyed.

enduring couplings. There would be late-in-life children, a school for tots, treatises on sexual freedom, and, in 1940, a disgraceful ruling by the N.Y. State Supreme Court outlawing Russell's City University appointment on the grounds of immorality and atheism. That sexual desire was both ecstatic and evanescent was a paradox with which Russell never fully made peace. To explain his appetites, he theorized that he could not remain physically attracted to a woman for more than seven or eight years and then spent his life proving it—a bit of casuistry he would never have permitted himself in logic.

Russell stood (and lost) in the Wimbledon by-election of 1907 as a candidate supporting the Women's Suffrage Society. He was a pacifist during World War I and went to jail for his views. And although a Socialist (sometimes), by the 1950s Russell had become an ardent Russiaphobe, at one stage even advocating "preventive war" with the Soviets. But as the cold war continued, Russell returned to his pacifist stand, his white mane becoming a symbol of the British movements to ban the bomb and end intervention in Vietnam. Explaining why he devoted the later part of his life entirely to politics, Russell said, "What is the truth on logic does not matter two pins if there is no one alive to know it."

Russell's enormous productivity—he wrote and wrote and wrote, usually 3000 words a day,

earning the majority of his income as a journalist and freelancer—and the grand sweep of events in which he participated are always thrilling to read about in Ronald Clark's vigorous narratives. The present volume distills his consistently juicy 700-page biog of 1975 (Knopf, \$15), into a 100-page aperitif with generous side order of illustration. Pheromone-chocked Russell looks, of all things, like Jiminy Cricket. And in an Augustus John portrait, Ottoline Morrell is positively predatory, her menacing tongue peeking out beneath long incisors. Ottoline was the original of D. H. Lawrence's venomously penned *Hermione* in *Women In Love*, and one sort of gets a feel for what he saw.

Clark's new book alters two aspects of his earlier story: Ralph Schoenman, Russell's enigmatic (maybe sinister) secretary, now appears to have had less influence over Russell, and the discord between Russell and Colette Maleson is presented as arising from her infidelity rather than his insatiableness. But clear-headed and engaging as this volume is, it's much too meager for such an expansive life as Russell's. "I do so hate to leave this world," he said a few days before his death. One is loathe to leave this vital and various life too. I recommend the '75 book for better and more.

—Laurie Stone

(Thank you, WARREN SMITH)

(12a) ...and as recommended by DON JACKANICZ:

At perhaps the height of Russell's fame and public acceptance, a picture biography, Bertrand Russell, O.M. by H. W. Leggett appeared in 1950. Although difficult to locate today, this book served as the only biography of Russell until Bertrand Russell, The Passionate Sceptic by Alan Wood was published in 1957. Now, Bertrand Russell And His World by Ronald Clark, author of the immense The Life of Bertrand Russell (1976), has arrived, owing much to both the Leggett volume in terms of format and the earlier Clark volume in terms of content. Format: Bertrand Russell And His World consists of about two-thirds text and one-third photographs; the illustrations, many of them never before published, complement the text excellently. Content: obviously based on research which yielded the first, longer Clark volume, this book distills the author's earlier, perhaps overly detailed, narrative to provide an engaging sketch of Russell's public and private lives. This is not a "coffee table book", which might well apply to The Life of Bertrand Russell in Pictures and his own Words (compiled by Christopher Farley and David Hodgson). It offers a reader new to Russell a pleasing way of gaining introductory biographical knowledge. And it offers more knowledgeable Russell readers a reinforcing review of facts already known, plus perhaps overlooked incidents and details and wonderful photographs.

BRS DOCTORAL GRANT

(13) The following announcement was sent to some 25 American, Canadian and U.K. universities in September and October:

Announcing
The Bertrand Russell Society's
1982 DOCTORAL GRANT

The Bertrand Russell Society will award a doctoral grant of \$500 to help defray expenses of a currently enrolled doctoral candidate in any field whose proposed dissertation best gives promise of dealing in a significant way with the thought, life, or times of Bertrand Russell.

The candidate is required to send to the Society:

- (1) an abstract of the theme of the dissertation and of the plan of study;
- (2) a letter from the chairman of the candidate's department which states that all work for the doctorate has been completed except the dissertation, and that the topic of the dissertation has received academic approval;
- (3) a letter from the dissertation advisor evaluating the applicant and the plan of study;
- (4) a signed statement saying that if the candidate is awarded the grant, he/she will provide the Society, at its expense, with a copy of the complete dissertation as approved by the candidate's department.

Applications and supporting documents should reach Professor Hugh S. Moorhead, Chairman, Philosophy Dept., Northeastern Illinois University, Chicago, IL 60625, by May 15, 1982. The results of the competition will be announced in June 1982.

HUMAN RIGHTS

(14) Dyson on involvement. He is Professor of Physics, School of Natural Sciences, at the Institute for Advanced Study in Princeton. He is the author of Disturbing the Universe. From The New York Review of Books (4/30/81) p. 43:

Winner

The following essay will appear as an introduction to Mark Ya. Azbel's book Refusenik: Trapped in the Soviet Union, to be published at the end of April by Houghton Mifflin.

Freeman J. Dyson

Mark Azbel is one of the genuine heroes of our time, worthy to stand on the stage of history with Andrei Sakharov and Alexander Solzhenitsyn. I met him first in Moscow in 1956 when he was shy and thin, a brilliant young physicist

rising rapidly through the ranks of the Soviet scientific establishment. He and I had worked independently on the same problem in solid-state physics. His solution was more general and more powerful than mine. I knew then that he would become an important scientist. I had no inkling that he would become a

famous dissident. His book describes the human background of his life: the hardships of childhood in wartime Siberia, the joys and sorrows of becoming a full member of the privileged Soviet intelligentsia, the gradual growth of awareness of his Jewish roots, the transfer of his loyalties from Russia to

Israel, the decision to emigrate, the drama of his five-year leadership of the group of Jewish dissidents in Moscow, and the final safe arrival in the promised land with wife and daughter and cat.

Two aspects of the book make it unique as a historical document. In Book I, Azbel gives us an authoritative record of the vicissitudes of Soviet science during the post-Stalin era. The record is based primarily on his firsthand knowledge of the leading physicists and of the Party hacks with whom they had to struggle. But his interests and his knowledge extend far beyond physics, into all areas of Soviet intellectual life. And his understanding of the hidden sources of power and influence give his record a depth that is lacking in accounts written by outsiders.

In Book II we have a record of the duel that was fought, in the secret chambers of the KGB, between Azbel and the various KGB interrogators who tried to break down his resistance. This duel is similar in many ways to the duel described in Arthur Koestler's novel *Darkness at Noon*, forty years earlier. Koestler's hero, Rubashov, is one of the old Bolshevik leaders of the 1917 revolution. Stalin's policemen succeed in breaking his spirit and persuade him to incriminate himself and his friends before they execute him. Azbel was given the same treatment. He tells me that he has never read *Darkness at Noon*, and I therefore accept as accurate his memory of the many details of his interroga-

tions, which faithfully echo the interrogations of Rubashov. There is only one essential difference between Rubashov's duel and Azbel's. Rubashov lost and Azbel won.

How could it have happened that Azbel won? There are two main reasons. In the first place, Azbel is gifted with superhuman courage and presence of mind. When, in the course of his interrogations, he is brought before a group including a full general of the KGB and the Prosecutor-General of Moscow, his immediate reaction is to think: "I suppose it was not until this confrontation with such a formidable array of top-ranking authorities that I fully realized what a threat we posed to them." Which of us ordinary mortals would entertain such a thought at such a time?

The final turning point of his duel comes when he is interrogated by an official of even higher rank, Sergei Ivanovitch Gavrilov, the liaison man between the KGB and the Central Committee. Here Azbel takes the offensive. "You'll encounter some new troubles, which, I assure you, you don't anticipate. Either you'll have to let me go, or you'll have to imprison me for a long term; you won't have any other choice. You seem to know a lot about me, Sergei Ivanovitch. You probably realize that I'm not lying.... So there are the alternatives for you. Which do you prefer: simply to let me go, or to create another martyr to arouse the sympathies of the scientific community? It seems to me that in this case our interests coin-

cide."

The second reason Azbel won is that the Soviet establishment has in some sense lost its nerve. Forty years ago, the interrogators of Rubashov would not have been intimidated by Azbel's defiance. They would not have hesitated to add one more martyr to the millions they had already made. They would have replied to his recalcitrance by sending him down to be shot in the cellar or sending him away to rot in a labor camp. Now, forty years later, things have changed. The Soviet regime, even in the innermost recesses of the KGB, is unsure of itself. Azbel prevailed over his enemies because he was prepared to die and they were unprepared to kill. This is a historical development of profound importance, not only for the future of Soviet society but for the future of all mankind.

We in the West have a double responsibility, which we cannot evade. In the first place, as Azbel's story makes clear, we have a responsibility to give practical and moral support to individuals who are fighting for their lives and their freedom within the Soviet system and who call to us for help. In the second place, we have an even greater responsibility to avoid doing harm to the millions of loyal Soviet citizens who do not ask for our help and can only be endangered by it. In particular, we must think of the plight of the multitude of Jews who are striving to build a future for themselves and their children in the Soviet Union and for whom any action tending to identify Jews in general as

Western protégés represents a deadly threat. Above all, we must avoid repeating the mistakes of 1918-1920, when the well-meaning but blundering attempts of the United States and other Western countries to help the opponents of the Soviet regime ended in the strengthening of our enemies and the massacre of our friends.

Confronted with this double responsibility, what should we do? Whether we decide to involve ourselves or not to involve ourselves in the struggle for human rights in the Soviet Union, we are gambling with other people's lives. I have generally believed that it is wise for us to avoid involvement, remembering the words of Solzhenitsyn: "I put no hopes in the West—indeed, no Russian ever should. If we ever become free it will only be by our own efforts." But now Mark Azbel has convinced me that there are occasions when Western involvement is practically effective and morally justifiable. I regret now that I gave no help to Azbel during his years of struggle. I still am afraid that our impatient attempts to force the Soviet regime to adopt our alien standards may result in halting the slow internal evolution of the regime toward more humane patterns of behavior. We must weigh the consequences of intervention in each case as best we can, never acting in a spirit of self-righteous ignorance, giving help only when we can clearly see that the people we help are like Mark Azbel, people who have the strength and the courage to become free by their own efforts. □

(15) The Prime Minister supports the Wilberforce Council's campaign.

(Thank you, BOB DAVIS)

Mr. Jack Lennard, co-ordinator of The Wilberforce Council, presents the Prime Minister, Mrs. Margaret Thatcher, with a copy of "Freedom Call" during his visit to No. 10 Downing Street.

Mrs. Margaret Thatcher, the Prime Minister, has expressed her support for the worldwide campaign launched by The Wilberforce Council, to reunite Soviet Jews with their families who have settled in Israel. She was briefed on the plight of some of the 500 split families by Mr. Jack Lennard, when he was invited to Number 10 to discuss the reunification campaign. The Prime Minister said "This campaign is one which deserves the support and encouragement of all who attach importance to the humanitarian principles underlying the Final Act of the Conference on Security and Co-operation in Europe. It is important that the efforts of government in this field are paralleled by those of voluntary organisations and individual men and women. Only in this way can the depth of feeling in the United Kingdom about abuses of human rights be brought home to those responsible."

Please help The Wilberforce Council for Human Rights, Salisbury Hall, Park Road, Hull HU3 1TD, England.

NUCLEAR DISARMAMENT

(16) Pugwash 1981, as reported by The New York Times(9/4/81) p. A3:

Scientists From 40 Nations Urge Freeze on Nuclear Arsenals

By HENRY GINIGER

Special to The New York Times

BANFF, Alberta, Sept. 3 — Alarmed over the intensification of the arms race, scientists from the United States, the Soviet Union and 38 other countries appealed here today for a freeze on the present levels of nuclear arsenals by the two major powers.

The scientists urged "an immediate moratorium on new weapons deployment," followed quickly by agreements on weapons production and testing, a ban on all nuclear tests and a cutoff in production of fissile material. This so-called strategy of suffocation was first proposed by Prime Minister Pierre Elliott Trudeau of Canada three years ago.

Members of the Pugwash movement, a 24-year-old meeting ground for scientists seeking to find ways to limit the arms race and reduce international tensions, talked here in private for close to a week in one of the most pessimistic moods since the movement began in the little Nova Scotia town of Pugwash in 1957.

The Nuclear War Fallacy

The 133 experts in the natural and social sciences who gathered here on Friday for the 31st conference of its kind declared that in 12 months since last year's meeting in Amsterdam "the nuclear arms race has become still more sav-

age."

The group noted that strategic arms limitation talks had been interrupted and other disarmament negotiations "have stopped completely or are at an impasse." Alarm was also expressed over what the group saw as the growing notion that limited nuclear wars can be fought and won.

"It is a fallacy to believe that nuclear war can be won," the scientists said, adding that there was a wide feeling among them that "the leaders of the nuclear powers should explicitly deny military doctrines which legitimize limited nuclear warfare."

The group continued, "The Soviet and American Governments should reaffirm their intention to maintain equal security at more stable and lower force levels."

Much of the anxiety appeared to stem from moves by the Reagan Administration toward an arms buildup at home and in Europe, and the nine Soviet scholars who attended did nothing to discourage this view. At a public forum in Calgary on Sunday, Georgi A. Arbatov, head of the Soviet Institute for United States and Canadian Studies, declared that "the only obstacle on the way to arms control is the position of the United States."

Senator Charles Percy, chairman of the Senate Foreign Relations Commit-

tee, pointed out that the atmosphere created by the Soviet intervention in Afghanistan had made Senate approval of the most recent arms accord with the Soviet Union impossible. He stressed, however, the Administration's commitment to arms control and reduction.

Prof. Herbert York of the University of California at San Diego, who was the American negotiator for a comprehensive test ban treaty until the talks were suspended last November, said in an interview that the toughening of American policy "did not take place in a vacuum," and he pointed to events in Iran and Afghanistan. Nonetheless, he said there was a perception in the Pugwash group that the Reagan Administration was "not sufficiently informed about or interested in" disarmament questions and had placed a relatively low priority on them.

The group expressed particular concern over the threatened arms buildup in Europe and said "it is essential that serious negotiations on limiting nuclear weapons in Europe begin soon before it is too late to set low limits." But when proposals were made to dismantle the Soviet SS-20 missile system in exchange for an American pledge not to deploy American Pershing-2 and cruise missiles in Europe, the Soviet participants resisted this as unbalanced. They were

understood to have insisted that the West's present forward-based systems had to be involved in any accord on mutual reductions in Europe.

'Rough Parity' With Soviet

The scientists agreed that at present there was "rough parity" in the deterrent capacities of the United States and the Soviet Union and warned against efforts to "destabilize" this balance. They were particularly concerned about the introduction by both sides of missile systems that threaten each side's deterrent ability and provided "incentives for starting a nuclear war."

The group said that the highly accurate counterstrike missile systems "are particularly dangerous since they create mutual fears of a first strike."

There was general resistance by the Soviet scientists to any direct or implied criticism of actions by the Soviet Union or of countries allied to it. Participants in the Pugwash movement nominally represent only themselves, but some Western scientists acknowledged that the Soviet contingent is answerable to officials at home. In particular, there is a Soviet commitment to publish Pugwash statements without change and the Soviet representatives were therefore sensitive to any Pugwash statement that could run counter to official policy.

(17) From Pugwash 1980, a talk by Hideki Yukawa, as it appeared in The Bulletin of the Atomic Scientists, January '81:

The absolute evil

Hideki Yukawa, Nobel laureate, is emeritus professor of physics at Kyoto University, Japan (606). He presented this address to the 30th Pugwash Conference.

A quarter of a century has passed since I signed the Russell-Einstein Manifesto. I am now deeply worried about the present world situation which has not improved in the intervening years, but has rather entered a more tragic phase.

For a short period tension between the East and the West seemed to be relaxed and dialogues on peace between the United States and the Soviet Union became more active. Recently, however, there has been a retrogressive move to Cold War times. This is obviously against the spirit of the Manifesto. It is not only short-sighted but also dangerous for scientists to try to close the way to international dialogue. Clearly, free exchange of opinion internationally

and domestically is vitally important for peace as well as for the progress of science itself. If we give up our efforts for mutual understanding, there remains only confrontation through military power.

It is now quite evident what will come of military confrontation between the major powers, or mutual deterrence based on nuclear weapons. A balance of terror with huge and highly sophisticated nuclear weapon systems, far beyond comparison with the state of the world 25 years ago, seems to have reached an almost intolerable stage. Recently, horrible accidents surrounding nuclear strategic systems have repeatedly been reported. I believe this to be the sternest warning that the danger of the nuclear annihilation of human beings by an unintended major war has now become a reality.

Why are we human beings still treading such a foolish and pernicious path? What can we gain from the spiralling arms race? With much regret I have to state that even sci-

entists gathering at Pugwash Conferences in pursuit of world peace cannot avoid some responsibility for this matter. One of the fundamental causes for the present awful situation of the arms race, I think, is that we have rejected as unrealistic the original idea of Bertrand Russell that nuclear weapons are an absolute evil and must be eliminated. In the process, we have accepted the illusion of keeping peace with nuclear weapons. This is in principle wrong and is unintentionally or intentionally affected by vested interests with respect to possession of nuclear weapons. I am afraid that any peace design based on vested interests of nuclear weapon states cannot be persuasive to many of the non-nuclear weapon states.

Another fatal cause may be that we have been so indolent, if not rather timid, in pursuit of a new world order where one can live without armaments, while we have been supporting complete and general disarmament. Designing such a new world order is indeed a difficult

task, because it will be associated with some change of the present political status. I believe, however, short-sighted technical manipulation without a future prospect will not be able to resolve the present tragic situation.

A future scenario is not explicitly depicted in the Manifesto. Insofar as I know, however, Russell and Einstein were considering this problem. In fact, in order to control the sovereignty of states both were thinking of a world federation, an idea with which I am also sympathetic in principle. This idea may still be premature, but it should be elaborated upon in collaboration with experts from different fields. At the Pugwash Conferences in the past decades, even discussing such a problem has been put aside in favor of detailed arguments regarding the technical aspects of arms control.

I therefore appeal to all of you to make a fresh start based on the original idea of the Russell-Einstein Manifesto and cooperate to implement it however difficult it may be. □

(Thank you, BOB DAVIS)

(18) The CND is alive and well -- and living in London and on the Continent.

Here's what BR said about the CND -- the Campaign for Nuclear Disarmament -- in 1969:

The CND was publicly launched at a large meeting at the Central Hall, Westminster, on February 17, 1958. So many people attended this meeting that there had to be overflow meet-

ings. It seems now to many people as if the CND has been part of the national scene from the beginning of time, and it has lost its lustre and energy through familiarity.

But if the CND had "lost its lustre and energy" 11 years after its founding, it certainly snapped back in 1981 ...and into the headlines. This is from the New York Times (10/25/81) p.3:

150,000 in London Rally Against Bomb

By WILLIAM BORDERS
Special to The New York Times

LONDON, Oct. 24 — About 150,000 people marched through the heart of London today in a peaceful demonstration demanding nuclear disarmament.

Carrying placards depicting the horrors of nuclear war and chanting "Ban the bomb!" the marchers wound their way from the north bank of the Thames, near Trafalgar Square, to Hyde Park for a three-hour rally, blocking automobile traffic all along the route.

The rally, like a similar one in Bonn two weeks ago, reflected rising antinuclear feeling that is spreading across Europe, especially among the young.

The Campaign for Nuclear Disarmament, which sponsored the protest here, says that its membership in Britain has increased tenfold — from 3,000 to 30,000 — since early 1980.

Michael Foot, the leader of the Labor Party and a longtime campaigner for nuclear disarmament, said at the Hyde Park rally that the goal was to recapture in the 1980's the fervor of the huge peace rallies in Britain 20 years ago.

"This time we must carry it through to the end and get rid of all nuclear weapons everywhere," he said, speaking from a platform decorated with a sign that read, "Together We Shall Stop the Bomb."

Although the rally was not specif-

cally anti-American, there was an anti-American tone in many of the signs and speeches, including that of Mr. Foot, who said:

"Ronald Reagan says there can be a limited nuclear war. But any idea of limited nuclear war in Europe is an insanity and an outrage. We will take this message from one corner of Britain to the other, from one corner of Europe to the other, from one corner of the world to the other until we rid the world of nuclear weapons."

At its annual convention last month, the Labor Party formally committed itself to nuclear disarmament, although that policy is opposed by a substantial faction within the party.

Several of the speakers today, expressing a fear that is basic to the recent resurgence of antinuclear feeling in Europe, said that when Americans speak of a limited nuclear war they mean a nuclear war that is "limited to us, the Europeans," excluding the two superpowers.

The protesters, most of them apparently middle class and under the age of 40, came from all over Britain on special trains and buses. Many brought babies or young children, their carriages bearing such slogans as "Let Me Be Allowed to Grow Up" and "I Want to Live."

The crowd estimate was made by Scotland Yard, which had a helicopter hovering overhead all afternoon.

There were reports of similar anti-nuclear demonstrations from Rome, Bonn and Paris.

HUMANISM & ITS ADVERSARIES

(19) From the New York Times Review of the Week (9/6/81) p. 18E:

Humanists Begin to Rally In Ancient Battle of Creeds

By WRAT HERBERT

Several volunteers at the Natchitoches Parish Hospital in Louisiana surprised the hospital administration last year by resigning in protest against the hiring of a philosopher from nearby Northwestern State University as "humanist-in-residence." At the same time in Maine, the federally funded State Humanities Council was fending off attacks on its activities by *The Maine Paper*, a conservative weekly tabloid. Somewhat earlier, in Virginia, Prof. Robert S. Alley abdicated the chairmanship of the Religion Department of the University of Richmond at the urging of the administration; Mr. Alley had come under fire from the local Baptist community, which condemned his biblical scholarship as heretical.

Such incidents are part of an increasingly visible campaign, conducted by the new Christian right and spearheaded by Moral Majority, against a force they label "secular humanism." Last week, Yale University's president, A. Bartlett Giamatti, formerly professor of a humanistic discipline — literature — counterattacked with a speech to incoming freshmen, in which he excoriated the activities of the religious right as a threat to traditions of free intellectual inquiry.

Just who are these humanists who have become the target of such displeasure? There is, in fact, an organized group of secular humanists, the American Humanist Association, which traces its origins to the 1933 Humanist Manifesto. The humanist credo has evolved since then, but the basic tenets of the organization, which includes notable academics and intellectuals, remain intact: a belief in

rational man as the source of his own salvation and a rejection of the supernatural. According to Sidney Hook, professor emeritus of philosophy at New York University and a long-time humanist, "In rejecting the supernatural, humanism maintains that moral judgments are valid independent of revelation. That is what Moral Majority is attacking." The latest statement, the Secular Humanist Declaration, issued by the kindred Council for Democratic and Secular Humanism in Buffalo last October, is explicitly critical of fundamentalist religions.

Aside from such associations, "humanist" is a gelatinous word. It could identify organized agnostics in New York, one of the liberal Christian world views, or a humanities professor who might or might not be a religious believer. Indeed, Moral Majority spokesmen concede that the quarrel extends far beyond card-carrying humanists.

In his book, "The Battle for the Mind," Tim LaHaye, a San Diego Baptist Minister and Moral Majority board member, argues that 275,000 secular humanists now control public debate by controlling the media, government, schools, colleges and universities. Moral Majority further contends that humanism constitutes a civil religion in the United States. Paul Kurtz, professor of philosophy at the State University of New York in Buffalo and author of *Humanist Manifesto II* (1973) and the Secular Humanist Declaration, agrees that humanist attitudes dominate American life, but only in the sense, he says, that humanism is committed to intellectual tolerance. "The fundamentalist attack is directed toward the idea and values of the university, which they view as a secular institution,"

he said. "What they object to is modernity."

Roots in the Renaissance

To the extent that humanism stands for skepticism and open inquiry, Professor Kurtz and others argue, today's cultural skirmish is the latest in an ancient battle of creeds. Humanism traces its roots to the Renaissance and the rediscovery of the secular Greek and Roman texts that ultimately led to the enlightenment and scientific revolution. But Jaroslav Pelikan, Yale University professor of Christian history, argues that humanism and religious faith are not incompatible.

Professor Pelikan also observes that the position of the Christian right has many historical antecedents and can itself be traced to the Renaissance. "We call it the Reformation," he said. Suspicion about rational discourse must always be troubling to a university, he added, because the university depends on rational discourse and the possibility of examining and re-examining the fundamentals. "The unexamined life is not worth living," Socrates said. He, by the way, also ran into this."

Such sentiments are widely shared in the academic community, but there's no consensus on whether fundamentalist attitudes undermine intellectual inquiry. Martin Marty, professor of Christian history at the University of Chicago, notes that the brunt of the attack from the Christian right "will be felt in the elementary schools and local libraries." In 1980, he said, 1,200 communities reported citizen pressure for censorship, in contrast to 300 communities in 1979.

More to the point, Professor Marty said, is that the Christian right is fostering a general anti-intel-

lectual climate. "Giamatti sees liberals in the academy as unwilling to defend pluralism and the free marketing of ideas — and he's right," he said. "Why is America so willing to forgo the diversity out of which so much good has come?"

Henry G. Yost, president of the American Association of University Professors, also said that the university cannot be divorced from the rest of society and that the A.A.U.P. has for this reason

taken a stand against state legislation requiring the teaching of "creationism" alongside evolution in the schools. "Students don't arrive at college out of the womb," he said. "They come out of the public school system, and if they come with the idea that science is something which it is not, they're going to have trouble with higher education."

But the acid test, Mr. Yost and others argue, will

come in the humanities themselves — the disciplines traditionally concerned with values. "We teach our students to be critical, and if we succeed, they will be critical of all values and will ultimately develop their own set of values," Mr. Yost said. "If one begins with the fundamentalist assumption that there is one demonstrable set of values, one is not free to question."

LOCAL MEETINGS

- (20) A picnic in the park -- planned by BOB DAVIS for Southern California members and guests, in Brand Park, Glendale, on August 30th -- was well-attended and well-liked, reports KATHY FJERMEDAL. Members present -- besides Kathy and Bob -- included LOU ACHESON, NORM & LYN BAKER, JACQUELINE BERTHON-PAYON, PHIL FREER, JOE GORMAN, MARK HARRYMAN, DON HYLTON, HARRY RUJA, and DAN WRAY.

NEWS ABOUT MEMBERS

- (21) Joseph Nechvatal exhibited 8 drawings on "The Occult Power of Technology" at The Drawing Center, 137 Green St., NYC, Sept. 16 - Oct. 28. Another exhibit, "The Occult Power of Technology, Part II" will be held at P.S.1, 46-01 21st St., Long Island City, NY, Oct. 18 - Dec. 13. He is fabricating a large mural on the horrors of nuclear war to be permanently installed in Baltimore, with sound track and theatrical lighting, when fully funded. About half the funding has been raised; he'd like help in funding the rest. If you help, you will receive, * in appreciation, an original drawing, etc. His address: 18 No. Moore St., New York, NY 10013

QUESTIONS & ANSWERS

- (22) BR and Husserl? Did BR have any contact with, or opinion about, the phenomenology of Edmund Husserl? A Polish student, Bogdan Tadzik, working on his thesis, would like to know. Please respond c/o the newsletter, address * on Page 1, bottom. We will forward your response to Poland.

DORA

- (23) From The Outlook, March 7, 1928:

Mrs. Bertrand Russell vs. the University of Wisconsin

MRS. BERTRAND RUSSELL, wife of Bertrand Russell, whose article appears in this issue of The Outlook, has found the open sesame to the front page. She has been denied, she says, the right to appear on a public platform by those who are in disagreement with her views. President Glenn Frank, of the University of Wisconsin, whom she holds responsible for this denial, presents a different version of the incident from that of her own. In a despatch to the New York "World" he says:

Neither the present existence nor the future guaranty of free speech for students and teachers at the University of Wisconsin is in any way involved in the Dora Russell episode.

My advice in the matter, which I declined to give until after members of the student committee had expressed their own doubt and reluctance respecting the lecture, rested

upon one consideration and one only—that the discussion and advocacy of free sexual relations both before and after marriage is an enterprise that good taste and a sense of propriety suggest should be staged elsewhere than before a mixed audience in a co-educational institution.

President Frank goes on to draw a not very happy comparison between taking a bath in a glass bath-tub and lecturing on sex before a mixed audience.

This is the way in which Mrs. Russell views the situation:

This insult to my personal integrity is unpardonable, especially as Frank's references to taking his bath in public show that his own mind is tortured by a sense of impropriety where the human body is concerned.

The younger generation do not feel this, but are besmirched by the attitude of their elders and forced to poisonous secrecy by prohibitions.

The younger generation was never so much in need of honest and sincere discussion of these problems. It is absolutely necessary to give them new values, as I am trying to do in speech and writing.

It may be debatable whether the hindsight of the student

council and of President Frank was justified by the character of the lecture which Mrs. Russell proposed to deliver. Certainly it is not debatable that the University would have avoided a great deal of unpleasant notoriety and Mrs. Russell's ideas would have been deprived of a great deal of publicity if it had permitted her, when once invited, to appear as scheduled. The decision to invite her would have been a question of good taste or a question of whether or not she had anything really valuable to offer. The invitation, once withdrawn, immediately made her a martyr in the cause of free speech—a distinction to which she is not entitled.

It is rather amusing to find that while the controversy over Mrs. Russell rages in the press and while President Glenn Frank is defending his exclusion of Mrs. Russell from the University halls, Columnist Glenn Frank, who writes a syndicated daily feature for the press, takes occasion to quote with

(Thank you, TOM STANLEY)

approval the following phrases of Thoreau:

The wisest man preaches no doctrines; he has no scheme; he sees no rafter, not even a cobweb, against the heavens. It is clear sky.

No way of thinking or doing, however ancient, can be trusted without proof.

How vain to try to teach youth or anybody truths. They can only learn them after their own fashion, and when they are ready.

If I were consciously to join any party, it would be that which is the most free to entertain thought.

Fresh air is the surest poison that has yet been discovered for half-baked ideas. In fact, it is more than a poison, for it exercises a selective power between half-baked and well-baked ideas which the wisest of any generation cannot individually possess.

POPPER

(24) From World Press Review, August 1981, pp.33-34:

The Statesmen's Philosopher

Karl Popper's formula for minimizing political error

—PAUL-HEINZ KOESTER—

Paul-Heinz Koester is Editor of the weekly "Stern" of Hamburg, from which this is excerpted.

British Prime Minister Margaret Thatcher is refreshed by the teachings of economist Adam Smith, and France's Giscard d'Estaing gets spiritual nourishment from the writings of Voltaire. When Germany's Helmut Schmidt goes on vacation he carries books by Vienna-born philosopher Karl Popper.

Karl Raimond Popper, once a construction worker and carpenter's apprentice, is the West's most important living political thinker. Some of his works have been published in twenty-two languages. He is revered almost as a political philosopher, and some assert that the influence of this scholar, who lives in England, extends "even into contemporary German political issues and party policies."

Popper considers himself a theoretician of science rather than a political thinker, and he is far more interested in natural sciences than in the social sciences. He is the founder of critical rationalism, a theory of knowledge that is also a "critical method for eliminating error"—a method that, through the attempt to refute theses and theories, discovers their errors. He destroyed the century-old notion that scientific knowledge is unassailable.

Induction, which is used by scientists for arriving at knowledge, means the observation of separate, recurring facts and events to derive universally valid laws of Nature and theories. A universal statement gains validity by the number of observations on which it is based. Popper

showed that inductive reasoning from the particular to the universal does not work. An observation that ten swans are white tells us only that ten swans are white, not that all swans are.

Popper's critical rationalism teaches that however much an endeavor fails to prove the truth of an assertion, we nonetheless come closer to the truth by seeking our errors and attempting to eliminate them. In doing so it is even possible to discover the truth. We simply can never be entirely certain of it.

Popper's teaching applies equally to political theories. In contrast to the natural scientists, who abandon a theory once it has failed, politicians tend to adhere dogmatically — uncritically, according to Popper—to a theory known to be unusable. The consequences are repression, suffering, and war. Popper therefore demands, "We should let our erroneous theories, instead of people, die."

Sir Karl, who was knighted by the Queen of England, supports the concept of a democracy in which political ideas compete with one another. In this "open society" only "reasonable" reforms should be possible—only those that can be tested for their success or failure. We can never predict all the consequences of our actions, Popper says, but we can correct many errors if we proceed in small, comprehensible steps.

He formulated a series of principles that should be heeded by every political reformer. For example, he believes in eliminating specifically deplorable conditions such as housing shortages and unemployment, rather than making decisions in the name of an abstract goal such as that of

"general well-being."

His vision of an ideal politician is a "social technician" who attacks problems like an engineer. The engineer's task is to construct a machine that functions and then to keep it going. The social technician has a similar task: "to design social institutions and to reshape or preserve already existing social institutions."

The social engineer may have a conception of the ideal society, but he guards against "the new planning of society as a whole." His critical reason tells him that such a complex undertaking would unavoidably lead to a situation in which causes could no longer be distinguished by effects and in which the consequences of actions could no longer be known.

The main cause of deplorable social conditions and political injustice in democratic States, in Popper's view, is lack of insight into the piecemeal nature of political action. "Avoidable evils often are not avoided," he says, "because most politicians do not realize that to err is human and that it is only possible to learn from self-criticism and the correction of one's mistakes."

Popper's message has been received in Bonn. Years ago German Foreign Minister Ralf Dahrendorf, a former Popper student, introduced some of his teacher's philosophy into party politics. And Helmut Schmidt, always endeavoring to cast ideological ballast overboard, advised politicians in the foreword to his book *Critical Rationalism and Social Democracy* to read not only Marx but also Popper.

The Chancellor and the thinker met last December. They discussed how critical rationalism might be applied to international policy, especially in areas of tension. Their meeting took place in the village of Penn, in Buckinghamshire, England. Popper has lived there for thirty years with his wife Hennie, rarely venturing from his modestly furnished home.

Popper's interest in contemporary politics is astonishingly slight. He neither owns a television set nor subscribes to a newspaper. He pays as little attention to the many articles and books preoccupied with his thinking. Otherwise, he explains,

he would get excited about them and "spend the whole day writing letters."

Popper's father, who was a lawyer, heightened his social conscience at an early age. Popper inherited a love of music from his mother. While still in public school, he browsed in his parents' library through works that would soon become decisive for him—the writings of John Locke, David Hume, Charles Darwin, Immanuel Kant, and Schopenhauer.

Popper endured "hours of hopeless boredom" in secondary school, which he left at seventeen without graduating. He enrolled at the University of Vienna, becoming a Marxist until he witnessed the shooting of several young, unarmed workers who were goaded by Communists into a clash with police. "It became clear to me that as a Marxist I bore some responsibility for the tragedy, at least in principle," he says in his autobiography.

"It was terrible to presume to knowledge which, on the basis of an uncritically accepted dogma, made it a duty to endanger the life of another person for a dream that possibly could never be realized. One may surely risk one's own life for such a thing but never another's."

The young philosopher, who worked in construction and carpentry before graduating from Vienna's Pedagogical Institute in 1928, had been preoccupied with questions of science theory following his rejection of Marxism. He found his way to critical rationalism mainly through involvement with the works of Isaac Newton and of Albert Einstein, who contradicted part of Newton's theory of gravitation.

The partial incompatibility of the two scientists' theories was confirmation of what the young thinker had long suspected: that no theories can be certain to be true; that inductive conclusions based on separate observations are not applicable to general laws of nature; and that the gathering of supportive data does not suffice to document the truth of a theory.

However, Vienna's school of logical positivists proposed verifiability of statements by experience as the distinction between sense and nonsense. A heated dispute evolved, for Popper declared re-

futability by observable facts to be the criterion for truth. In his view a theory that is claimed to be scientific must be testable. The more clearly it is restricted, the better it can be tested—indeed, there is no other way.

In 1934 Popper's book *Logic of Scientific Discovery* brought invitations to lecture in England, where he met the influential liberal economist August von Hayek and the renowned Bertrand Russell, whom Popper calls "the greatest philosopher since Kant." He later took a teaching position in New Zealand.

In London in 1945 he published *The Open Society and Its Enemies*, whose argu-

ments for democracy have a logical and polemical sharpness rare in philosophical literature. His shorter but equally important work, *The Poverty of Historicism*, which attacked "historicists" such as Hegel and Marx, appeared a year earlier.

Popper considers predictions about the future course of history "pure superstition." His most important counterargument: "The course of human history is strongly influenced by the growth of human knowledge." A prediction would have to take into consideration the growth of knowledge—for example, in atomic and energy research—but that is not possible, because no scientist can state

today what he will know only tomorrow.

In *The Open Society and Its Enemies*, Popper tested Marx's explanation of the development toward a classless society. Marx asserted that tensions develop between the wealthy and the working class that lead to revolution, to the triumph of the proletariat, and eventually to a classless society. Popper counters that the last point above all cannot necessarily be concluded: After post-revolution disintegration of working-class solidarity, new classes can form—such as the party elite of the Soviet Union and the suffering class of the Gulag Archipelago.

With publication of *The Open Society*

Popper was invited to join the faculty of the famous London School of Economics and Political Science, where he taught logic and scientific methods for more than twenty years. Among his most important recent writings is *Objective Knowledge: An Evolutionary Approach*.

In this book he describes three worlds: the objective world of matter, the subjective world of consciousness, and the similarly objective world produced by the human spirit—ideas, theories, problems, and arguments. "The task of our consciousness," he says, "is to create a connection between the first and the third worlds." ■

As some recent BRS members may not know, Sir Karl is an Honorary Member of this Society.

(Thank you, BOB DAVIS)

RECOMMENDED READING

(27) Ludwig Wittgenstein: Personal Recollections, Rush Rhees, ed. (Totowa, NJ: Rowman & Littlefield, 1981), is recommended by DON JACKANICZ. He says this:

The philosophical and personal relationships of Russell and Wittgenstein are discussed in considerable detail in Russell's own writings and in biographical studies of Russell. L. W.: P. R., although not including much on Russell, does broaden greatly our knowledge of Wittgenstein the man, that is, the man whom Russell claims to have prevented killing himself on a number of occasions, the man whose work made Russell wonder for a while whether he, Russell, had anything more to contribute to philosophy, the man who said to Russell and Moore -- referring to his work, on the day they examined him for a Ph. D. -- "Don't worry, I know you'll never understand it." Wittgenstein the writer is often perplexing, and his character and actions were sometimes even more so. The reminiscences given by the six contributors to this volume -- one of Wittgenstein's sisters, the woman who taught him Russian just before his Soviet Union trip, and four of his students and friends -- overflow with detail and anecdotes. Some of the material is comic, some deeply moving, all of it worth reading for anyone wanting to understand more fully one of the great philosophers who took from and gave to Russell.

BOOK REVIEW

(28) Davis reviews Cranford. Bob Davis has read Peter Cranford's new book (RSN30-51) and likes it. His review:

Peter Cranford's new book, How To Be Your Own Psychologist, is one that many of you may wish to own and perhaps give to a friend. Non-technical, "it can easily be read by an intelligent highschool student", and is geared to help people without an academic background in psychology. It is one of the better of the "How To" genre. It avoids the crackpotism of much popular psychology -- he doesn't once recommend that you lie down on the floor and scream!

The book aims to help the reader help himself, to make his life more fulfilling and help others do the same.

As one might expect, Russell appears in the text a great deal. Much of the book advocates Russell's "compossibility" — the entire first section is devoted to it. Compossibility uses mutual interests or agreements — "what a person feels is to his good" — to achieve cooperation in life. Russell quotations pepper the book, and his "The good life is one inspired by love and guided by knowledge" — the motto of the ERS — is part of the preface.

Other sections describe "Direct Influence", "Self-Influence" and "Altruistic Influences". Some chapters are devoted to handling problems such as nervous breakdowns, anxiety, depression, suicide, influencing children, teen-agers, and the elderly, and achieving happiness.

I found some of the later chapters most interesting. I particularly liked Chapter 8 — "Great Maxims of Self-Interest". Here Cranford lists 30 maxims — from an original list of 150 — that he feels are a guide to successful living. Some of my favorites are: "the guide to life is probability", "Act on what is probable", and "Assume that you are responsible for everything that goes wrong in your life (even if you are not)." This is followed by advice on how to program the maxims into your life.

Programming or influencing yourself — your subconscious — is an important feature of the book. I have used such techniques in dealing with smoking and dieting. There is also advice on self-hypnosis. Meanings are made clear by examples from real life.

A lot of books on psychology are not accessible to the non-expert. A lot that are accessible are irresponsible. Cranford's book is neither. Many will find it useful.

"MY FAVORITE RUSSELL"

(29) Hugh Moorhead's favorites come from Sceptical Essays (New York: Norton, 1928), pp. 11, 113-114.

Introduction: On the Value of Scepticism

I wish to propose for the reader's favourable consideration a doctrine which may, I fear, appear wildly paradoxical and subversive. The doctrine in question is this: that it is undesirable to believe a proposition when there is no ground whatever for supposing it true. I must, of course, admit that if such an opinion became common it would completely transform our social life and our political system; since both are at present faultless, this must weigh against it. I am also aware (what is more serious) that it would tend to diminish the incomes of clairvoyants, bookmakers, bishops and others who live on the irrational hopes of those who have done nothing to deserve good fortune here or hereafter.

The Harm that Good Men Do

We all know what we mean by a "good" man. The ideally good man does not drink or smoke, avoids bad language, converses in the presence of men only exactly as he would if there were ladies present, attends church regularly, and holds the correct opinions on all subjects. He has a wholesome horror of wrongdoing, and realizes that it is our painful duty to castigate Sin. He has a still greater horror of wrong thinking, and considers it the business of the authorities to safeguard the young against those who question the wisdom of the views generally accepted by middle-aged successful citizens. Apart from his professional duties, at which he is assiduous, he spends much time in good works: he may encourage patriotism and military training; he may promote industry, sobriety, and virtue among wage-earners and their children by seeing to it that failures in these respects receive due punishment; he may be a trustee of a university and prevent an ill-judged respect for learning from allowing the employment of professors with subversive ideas. Above all, of course, his "morals," in the narrow sense, must be irreproachable.

It may be doubted whether a "good" man, in the above sense, does, on the average, any more good than a "bad" man. I mean by a "bad" man the contrary of what we have been describing. A "bad" man is one who is known to smoke and to drink occasionally, and even to say a bad word when someone treads on his toe. His conversation is not always such as could be printed, and he sometimes spends fine Sundays out-of-doors instead of at church. Some of his opinions are subversive; for instance, he may think that if you desire peace you should prepare for peace, not for war. Towards wrongdoing he takes a scientific attitude, such as he would take towards his motor-car if it misbehaved; he argues that sermons and prison will no more cure vice than mend a broken tire. In the matter of wrong thinking he is even more perverse. He maintains that what is called "wrong thinking" is simply thinking, and what is called "right thinking" is repeating words like a parrot; this gives him a sympathy with all sorts of undesirable cranks. His activities outside his working hours may consist merely in enjoyment, or,

worse still, in stirring up discontent with preventable evils which do not interfere with the comfort of the men in power. And it is even possible that in the matter of "morals" he may not conceal his lapses as carefully as a truly virtuous man would do, defending himself by the perverse contention that it is better to be honest than to pretend to set a good example. A man who fails in any or several of these respects will be thought ill of by the average respectable citizen, and will not be allowed to hold any position conferring authority, such as that of a judge, a magistrate, or a schoolmaster. Such positions are open only to "good" men.

Hugh is not alone in admiring the first excerpt. James Reston used it in a column in 1977. See NL16-17.

CONTRIBUTIONS

- (30) We thank these members for their contributions to the BRS Treasury: KEVIN BOGGS, ALEX DELY, HARRY RUJA, OLIVE WILLIAMS...and KATHY FJERMEDAL, who never misses a month!
- (31) Non-contributors, please consider making a contribution. Any amount. If we can double our membership -- which we are trying to do -- we may no longer need contributions to cover our operating deficit; but till then, we will need whatever help you can give. Please send what you can spare c/o the newsletter, address on Page 1, bottom.
-

ELECTION OF DIRECTORS

- (32) Elected:JACQUELINE BERTHON-PAYON, PETER CRANFORD, BOB DAVIS, ALEX DELY, LEE EISLER, HUGH MOORHEAD, JACK RAGSDALE, and HARRY RUJA.
- What was new and different about this election was that, for the first time, there were more candidates than openings, which gave members a choice. All 13 candidates were well qualified. We hope that those who were not elected will agree to be candidates again next year.
- The votes were tallied by Lee Eisler. The count was verified by BRS Secretary Don Jackanicz.
-

NEWSLETTER MATTERS

- (33) Changing your address?Please notify us promptly when you move. That will save us the nearly \$2 it costs when your newsletter is returned to us and we then re-mail it to your new address.
-

FOR SALE

- (34) Members' stationery, 8½ x 11 white. Across the top:"The good life is one inspired by love and guided by knowledge.* Bertrand Russell" On the bottom:"*Motto of The Bertrand Russell Society". \$5 postpaid for 90 sheets (weighs just under a pound, travels Third Class). Order from the newsletter, address on Page 1, bottom.
- (35) BR postcard, 4¼ x 6. Philippe Halsman's handsome 1958 photo of BR with pipe. 50¢ each plus 25¢. RSN30-44 shows it reduced in size. Order from the newsletter, address on Page 1, bottom.
- (36) Haldeman-Julius Blue Books, from Bob Black, Box 23, Pittsburgh, Kansas 66762. A 10-page list of approximately 200 paperback books "for atheists, anarchists and other friends" includes these by BR: AM I AN ATHEIST OR AN AGNOSTIC? CAN MEN BE RATIONAL? THE FAITH OF A RATIONALIST. IDEAS THAT HAVE HARMED MANKIND. IS SCIENCE SUPERSTITIOUS? ON THE VALUE OF SCEPTICISM. STOICISM AND MENTAL HEALTH. HAS RELIGION MADE USEFUL CONTRIBUTIONS TO CIVILIZATION? WHAT CAN A FREE MAN WORSHIP? The last 2 are Little Blue Books (3½ x 5), 50¢ each. The others are Big Blue Books (5½ x 8½), \$1 each. Add \$1 handling charge for orders under \$10.

(37) Books from the BRS Library, at the discounted prices shown:

- This list and prices are current as of August 1, 1981 and supersede previous lists and prices. From time to time market changes require title deletions, allow for title additions, and force price increases. But the discounts given provide considerable savings, especially for certain titles which are often difficult to locate.
- Prices include postage and other shipping costs.
- "H" indicates a hardbound edition. No notation indicates a paperbound edition.
- Prices shown are in U.S. funds. Please remit by check or money order, payable to The Bertrand Russell Society, in U.S. funds or the equivalent.
- Your order will be promptly filled, although occasionally an out of stock item may cause a brief shipment delay.
- Send orders to Donald W. Jackanicz; 3802 N. Kenneth Ave.; Chicago, IL 60641; U.S.A.

ABOUT OTHER ORGANIZATIONS

(38)

"The Moral Minority" is an 8-page newsletter put out by Moral Minority/The Real Majority, Inc., a non-profit organization dedicated to preserving the separation of church and state, defending human and civil rights, and eliminating prejudice based on sex, race, religion or national origin." The Moral Minority doesn't like the proposed Human Life Amendment or the Family Protection Act, and does like Senator Goldwater (who doesn't like the Moral Majority or its fund-raiser, Richard Viguerie.) Membership and subscription, \$10. They will probably send a sample copy on request: Moral Minority, Inc, #1068, PO Box 22557, Denver, CO 80220.

CORRECTIONS

- (39) David Hart WAS there, at the June meeting, at McMaster. What's more, he was one of the speakers (see RSN30-2), and -- in his quiet, understated way -- gave one of the more enjoyable talks of the weekend (on how British Labor failed to follow BR's advice.) Omitting all mention of David from our report on the '81 meeting was undoubtedly the worst error we've made in 31 newsletters, and we regret it very much.
- (40) André Bacard's correct address is Box 5121, Stanford, CA 94305. He would like to hear from members who live in, or plan to visit, the Bay Area.

NUCLEAR DISARMAMENT
continued

- (41) END. A lot of Europeans want nuclear weapons kept out of Europe, and have been demonstrating in large numbers to say so (18). The founder of the movement for European Nuclear Disarmament (END) is E. P. Thompson, says The Bulletin of the Atomic Scientists.

In the Bulletin's words (January 1981) p. 6 →

The Bulletin invited Professor Thompson to comment on a few of the many books on nuclear holocaust. In this article the author does so, and then moves on to a comprehensive and challenging assessment of the nuclear menace in Europe.

This is how the Bulletin identifies Thompson, p. 8 →

E. P. Thompson, historian and writer, founder of the Center for the Study of Social History at the University of Warwick (U.K.), is currently a visiting professor, Brown University, Providence, R.I. 02192. He is the author of *The Making of the English Working Class* (1963) and *Writing by Candlelight* (1980). He is the founder of the movement for European Nuclear Disarmament (END), and co-editor of *Protest and Survive* (1980).

And here is the Thompson article, pp. 6-13:

The END of the line

Nigel Calder is a most able practitioner in the "high popularization" of science and technology, and his work demands respectful attention.¹ *Nuclear Nightmares* is an instant party-stopper, and a book to press into the hands of your flippant nephew or giddy niece. More seriously, it deserves a general readership, as a brisk and informed run-through of the technological and strategic infrastructure of World War III. We are provided with several chilling scenarios as to its probable occasion, and if the book is not supplemented with further (and very different) reading, it will lead readers only into the immobility of despair.

The Military Balance, published annually by the International Institute of Strategic Studies, acquires in Calder's pages a biblical authority. Europeans in the past year have come to look skeptically (even sourly) upon the reputed objectivity of that "International" Institute. They have noted that the public interventions of some of its staff and council in the debate surrounding the decision to "modernize" NATO's nuclear forces have been indistinguishable from those of NATO apologists, and that a large advance

in weaponry in favor of the Warsaw powers was registered in the 1980 *Balance* by the expedient of changing the rules and counting in new ways.² This alarmist evidence was eagerly blown up in the U.S. press on the eve of the election. Many of us in Europe these days tend to turn for evidence to institutes in Stockholm (SIPRI), West Berlin, the Sussex Arment and Disarmament Information Unit and, in the United States, to such sources as this *Bulletin*.

What Calder does is to show the massing of weaponry, its sophistication, the logic of interlocking strategies, and the several points where "deterrence" may pass swiftly into war in a compulsive process in which peoples and governments have become "the servants rather than the masters of that which they have created." Those words are George Kennan's, and Calder's book might be taken as a densely-observed extended illustration of Kennan's more general summary:

"... that immensely disturbing and tragic situation in which we find ourselves today: this anxious competition in the development of new armaments; this blind dehumanization

of the prospective adversary; this systematic distortion of the adversary's motivation and intentions; this steady displacement of political considerations by military ones in the calculations of statesmanship; in short, this dreadful militarization of the entire East-West relationship in concept, in rhetoric, and in assumption, which is the commanding feature—endlessly dangerous, endlessly discouraging—of this present unhappy day."³

Yet I cannot disguise my view that Calder's book, as well as others in this growing genre, are also symptoms of this unhappy day. They neither challenge nor, in any fundamental way, do they diagnose. Rather, they exhibit precisely "the steady displacement of political considerations by military ones." The sophistication of the technological reportage masks an inadequacy in the treatment of political process. The brisk bravura of Calder's style presses always toward the exotic and exclamatory mode of science fiction: it has no terms for graver meditation on our predicament, and no space for the measured analysis of the actions of states. Louis René Beres's *Apocalypse* prompts the same reflections: carrying some useful information, and also more

positive proposals than Calder does, its analysis of political process is nevertheless sadly defective.⁴

What happens in these cases is that analysis is forced, unwittingly, into the parameters of a self-fulfilling argument. Founded upon the evidence of weapons and strategies, whose rationale is always that of "deterrence," there is no space in which the validity of any alternative rationale can be allowed or examined. We are inside the rationale which has led us to this unhappy day, and which will shortly lead us to worse, and we can never get out. Whether the balance of evidence or perception is tilted towards the West or East (how many systems?, what worst case expectations?), the analysis is confined *within the same parameters*: that is, within the leap-frog logic of deterrence. Within this logic the hawks of each side feed to each other arms and provocations. They strive for "parity," envisage "gaps" and "windows of opportunity." Through never-ending negotiations at the highest level they adumbrate elaborate devices of "control" and trade-off, which their clever games-players then seek to evade or to turn to new advantage, and thus generate more thrust in the course toward collision.

Operating within such parameters,

Calder, at the end simply gives up. Disarmament conferences are dismissed as the background croaking of frogs beside the silos at Grand Forks; any reversal of the collision-course could be more dangerous than going on as we are. Beres, willing himself to be more positive, offers new proposals for arms control negotiators at the very topmost level, some of which are neat and deserve attention. Yet none of these proposals will be worth a dime unless there are profound, worldwide modifications in public consciousness, which bring their thrust to bear in the realm of active, operative *politics*—modifications for which the paradigm of deterrence offers no terms.

I find that many North Americans these days are profoundly pessimistic about any such utopian expectations: the well-informed are despairing, and they hope, at the best, only to slow down the leapfrog logic. Europeans have become in the past year a shade more desperate, and they are in increasing numbers despairing of the logic of deterrence. They are looking outside the old parameters of "balance" to the long-neglected processes of political discourse and cultural expression. Across the widening Atlantic we send you greetings, but also our storm signals of despair.

Arguments founded upon weaponry and strategy are enclosed within a determinism whose outcome must be war. All that doves can do within these parameters is check or decelerate a thrust which (next month, next year, next crisis, next election) accelerates once more. If there is anywhere any hope, we must search for it outside this determinism. I will proceed by defining certain areas of concern which Calder's book, and others of this genre, do *not* discuss. Those I select (for there are many others) are:

- the ultimate location of the upward "creep" of weaponry;
- ideological problems relating to the control and manipulation of information; and
- a particular case of the politics of weaponry, illustrated by NATO "modernization."

Weapons do not, as yet, invent and make themselves. There is a human decision to make them. Who takes such decisions? How?

This is a question more important than those of throw-weight or circular error probable, yet it is assumed unanalyzed in deterrence theory. From the time of Eisenhower and Khrushchev, the leaders of the superpowers have shrugged off personal responsibility.⁵ But so also have some of the highest scientific and even military advisors to these leaders. I need not mention the distinguished line of arms control, sci-

entific and defense advisors to U. S. administrations who have candidly signalled their profound disagreements with the decisions of government. In the Soviet Union, blanket official secrecy makes the record less clear; we must go back as far as Khrushchev's memoirs for a similar account of the rejection of prime scientific advice, in the encounters between Khrushchev and Andrei Sakharov.

In Britain the Official Secrets Acts are so heavy that we learn a little of the process only some years after the event, and then only from advisors so eminent that they are immune from prosecution. Three notable cases can be cited from 1979 to 1980: Lord Louis Mountbatten, Lord Zuckerman, and Field Marshal Lord Carver. Mountbatten, in a concise and humane speech delivered at Strasbourg two months before his murder, signalled his extreme anxiety at the nuclear arms race and indicated the specific advice he had given, when Commander-in-Chief of the British General Staff, against any strategy which entertained the possibility of limited or theater nuclear war.⁶ Carver, another outgoing Commander-in-Chief, and a conventional proponent of NATO deterrence theory, has signalled in a succession of interviews and letters to the Times his long-standing opposition to an independent British nuclear weapons system. Zuckerman, who was Chief Scientific Adviser to the British Government from 1964 to 1971, has surveyed, in a lecture of outstanding importance, the record of two decades in which "the views of the Killians, the Wiesners, the Kistiakowskys, the Yorks"—and (by implication) the Zuckermans—were consistently overruled.⁷

We are faced here with an extraordinary situation, although not a situation for which a historian is altogether unprepared. Not only the nominal leaders of states but also their chief scientific advisors and chiefs of general staff disclaim responsibility for the most central decisions of state policy. All gesture toward an ulterior process to which they themselves became captive. It was Eisenhower who warned of the "danger that public policy could itself become the captive of a scientific-technological elite." Zuckerman, the scientist, passes the buck down the line to technology. The "military chiefs, who by convention are the official advisors on national security, merely serve as a channel through which the men in the laboratories transmit their views," and "chief scientific advisors have proved to be no match for the laboratory technicians":

"The men in the nuclear weapons laboratories of both sides have suc-

ceeded in creating a world with an irrational foundation, on which a new set of political realities has in turn had to be built. They have become the alchemists of our times, working in secret ways which cannot be divulged, casting spells which embrace us all."

We have at last identified the human agent of our doom, concealed within a secret laboratory, casting malevolent spells. And this brings us close to the findings of experts on arms control who have identified the ulterior thrust towards weapons innovation in such terms as "technology creep."⁸ Undoubtedly this directs us to a significant moment of process, which appears to its own actors in this way. Yet there is still something unexplained. For this traces the most significant tendency of our times to a source, either in a laboratory conspiracy, or in an inexorable technological determinism of a kind for which historians (or, I should say, historians whom I consider to be reputable) do not find any historical precedent. That is, some vulgar practitioners of determinism apart, historians do not find that technology (or inventors), unaided, created industrialization or capitalism or imperialism. Nor can technology creep, unaided, bring us to extermination. Historians find, rather, a collocation of mutually-supportive forces—political, ideological, institutional, economic—which give rise to process, or to the event. And each of these forces exists only within the medium of human agency.

I see no reason why this historical finding must now, in 1980, undergo drastic revision. But this need not lead us toward any optimistic conclusions. We may be led to an even more pessimistic finding: that technology creep is indeed supplemented by a host of collateral and mutually supportive forces which, taken as a set, constitute the process which has led us to Kennan's "this present unhappy day." And if we read Zuckerman with care, we find that the men in the laboratories did not do all this alone. They also "knew how to respond to the mood of the country, how to capture the attention of the media, how to stir the hearts of generals. They have been adept . . . in creating the climate within which political chiefs have to operate."⁹

The cast has now become larger: it takes in public opinion, the media, the military, the politicians. In sum:

- the weapons systems—and their "laboratory" technicians, lobbyists and public relations operators—
- attract a large concentration of the resources and scientific skills of the host society and are then transformed into huge inertial forces within that society, whether bureau-

cratic or private in expression:

- they are interlocked with the government bureaucracy (exchange of personnel with Defense ministries and with Party bureaucracy, and so forth), and become adept at lobbying in the media and in the organs of the state;

- there is generated around them a large supportive and protective security and policing apparatus, which, in its turn, enhances the control of information and the inhibition of opposition, and which actively furthers the crystallization of a supportive ideology.

Politicians then rise in influence from the weapons system and security apparatus themselves (Brezhnev, Bush). As in all long-term historical processes—and imperialisms provide clear examples—now one and now another of the collateral forces may attain dominance: now the "alchemists in the laboratories," now the generals, now the media, now the politicians, may appear to be calling the tune. But this is only as it seems to the actors at a particular moment within the process, for in truth alchemists, politicians, generals and ideologists are all part of one set. Technology can creep only because ideology is creeping alongside it and because politicians are creeping away from any decisive control. And behind the politicians is the pressure of those hundreds of thousands of electors who "are making their livings doing things which were promoted years before by their political predecessors. It is the past which imbues the arms race with its inner momentum."¹⁰

That is a pessimistic conclusion indeed.¹¹ It leads reflective persons within the system to suppose that there may be only one remote possibility of staving off the end. By some wizardry at the highest level of diplomatic engineering between the superpowers—SALT XIII?—the plug will at the last moment be pulled, and the waters of nuclear menace will drain out of the rival baths just before they overflow onto the floors of the world. This most momentous political action will be taken, by the leaders of states and their advisors, without any of the normal preliminaries of general political agitation and discourse. It is supposed that the very same political forces which have made these insane structures will suddenly unmake them: the weapon systems and their political and security support systems will de-weaponize themselves.

This will not happen. And what this analysis should indicate is that it is precisely at the top of both opposed societies that agreement to de-escalate is *most* impossible. It is here that inertia and "creep" have their uncontested reign. It is here that the advice of scientists and even

of rational military minds is jammed by a concatenation of competing interests and bureaucracies. It is here that the maintenance of cold war becomes an actual *interest*, and an instrument of policy in the subjection and control of client states, the legitimation of other kinds of adventure, and the suppression of dissent. It is here that the futile exercises of "balance," of contests for "face," of "posture," of endlessly protracted negotiations about minutiae, and of worst case hypotheses, govern every encounter.

The conclusion is evident. If we are to develop a counterthrust to the inertia of the weapons systems, then we must do this first of all, not at the top, but at the bottom, in the middle, and on the margins of both opposed state structures. Only here is there space for the insertion of any rationality. We can destabilize the weapons systems only from below. The means must include those of political discourse and agitation; of lateral exchanges of many kinds between the middle ranges of society in the opposed blocs; of detaching client states from their dependency on either bloc and adding to the sum of influence of non-aligned powers; of pressing measures of conversion to peaceful production within the weapons system itself;¹² and of contesting, with every surviving resource of our culture, the enforcement of security and of information control.

I have written: "with every *surviving* resource of our culture." But survival can no longer be assumed. Calder, Beres and other writers in this genre carry warnings about the dangers of nuclear terrorism.¹³ The point should be taken, although it is low on the list of the most probable occasions of disaster. What they say very much less about is the danger that the weapons states will themselves become terrorist, and turn their terror against their own peoples.

The evidence is disquieting. The essential information about weapons and strategy (without which no democratic counterforce can possibly be mounted) already comes through to us from only a few channels. The Soviet Union and its client states are governed by the strictest rules of military secrecy. Persons employed at any level in the weapons system must renounce travel (for holiday or other purposes) to the West, unless under exceptional and authorized conditions. Similar controls are enforced in several Western states. While public opinion in the Soviet Union and in Eastern Europe is anxious about weaponry and war (and, in the most general sense, is "peace loving"), the level of information available to citizens on

weaponry and strategy is very low. There is almost no public controversy about what options are available to their own statesmen; even the names of weapons (SS-6, SS-20, the Backfire bomber) are unknown.¹⁴

In Britain the Official Secrets Acts operate with a rigor which surprises many Americans. Even members of successive British cabinets were not informed of the Chevaline program for the sophistication of the Polaris warhead—a program which was pressed forward over a period of nearly ten years, at a cost of £1,000 million, without budget sanction and without any mention in the House of Commons.

What is even less widely known in the United States is that the last British government, under the Labor Party, mounted a full state prosecution, based on the Official Secrets Acts, of an ex-corporal who had divulged some low level and very stale information about signals interception to two radical investigative journalists. (They were also prosecuted—not for publishing but simply for *listening* to "secrets.") This prosecution, the "ABC trial" of 1978, was pressed forward by the Security Services, and was accompanied by devices to fiddle or "vet" the ancient and much-lauded safeguard of British liberties, the jury system.¹⁵

Margaret Thatcher's Conservative government, shortly after entering into power in 1979, rushed forward a new Official Information Bill. This measure, designed by Security, was heralded by a public relations lobby, presenting it as a rationalizing and lenient revision of the law. On inspection—and only after the Bill had been steered by Lord Hailsham through the House of Lords—it was found to be the most draconian measure of thought control presented to the British legislature since 1820. New clauses were aimed directly at journalists and at peace researchers, enabling Security to break open their offices and files; and if researchers had accumulated materials, from *legitimate open public sources*, which, when pieced together like a jigsaw, revealed an "official secret," then they were liable to prosecution. An official secret in Britain has been defined as any information on the operation of the state which the state has not officially released.

Thatcher's Bill was aborted, in the face of opposition. We can expect a "reformed" Bill to be re-introduced at any time, although the existing Acts are heavy enough. In the past year some very effective investigative journalism has been going on, notably by Duncan Campbell (one of the defendants in the ABC trial) in the *New Statesman*, which has revealed, among other things, the large

extent of telephone tapping and surveillance of British citizens, and the fact that the United States has some four or five times more military bases and installations in Britain than has ever been admitted to the British Parliament. There has also been a "leakage" of regional Civil Defense contingency plans, which include measures for the internment or execution in the event of war of suspected seditionists. British Security is now itching for a spectacular and successful State trial.

I know less about the immediate situation in other Western states, although the outstanding independent European newspaper, *Le Monde*, has come under state prosecution, in part (it is said) in consequence of its severe criticisms of the new French Security Law. And in Australia a book and two national newspapers are now under prosecution, in the first exercise of Official Secrets Acts since World War II, for revealing details of secret ANZUS (Australia, New Zealand, and the United States) agreements.

The object of these operations is, of course, not to conceal information from an enemy, but to conceal it from their citizens. Sometimes, as Zuckerman has noted, "the rules of official secrecy are exploited, not because of the need for security, but to promote partisan policies" as between competing interests within the state bureaucracies. More generally it is part of the overall exercise in manipulating domestic public opinion. I find these political developments to be greatly more threatening than are scenarios of nuclear terrorism or of war by accident through a snarled computer. The essential precondition to any counterthrust to the inertia of the weapons systems must be the ever-wider communication of fuller and more objective information about these systems.

In the European Nuclear Disarmament (END) movement we are laying increasing stress on *lateral* communication, on transcontinental (as well as transatlantic) exchanges between specialist groups: universities, scientists, doctors, religious bodies or trade unions. We owe, and the entire world owes, a debt of gratitude to those members of the U.S. scientific, intellectual and arms control community who have steadily held open the channels of information and communication for so many years. They have been the prime providers of whatever information the world now has. The significance of this work is too great to be measured.

Among so many scenarios of the occasions of nuclear war, there is a failure to discuss an actual, immediate and possible occasion of war going on beneath our noses. I

refer to the NATO decision to "modernize" its nuclear armory.

What so many overlook is that these assumptions preempt examination of the most far-reaching political issues, now coming to occupy the center of European discourse. There have emerged, not two but *three* opposed perceptions of the situation:

- the United States plus NATO perception;
- the Soviet perception; and
- growing European perception, hostile to both.

I need not rehearse the official NATO view here, since it was summarized in the October 1980 *Bulletin*.¹⁶ In this view, which emerged not in common West European perception but from within the defense bureaucracies of NATO powers, a menacing unbalance or gap was discovered in the European theater. Its agents were identified as the Soviet SS-20 missiles and Backfire bombers. It was necessary to match these with Pershing IIs in West Germany and with cruise missiles across the Western board.

The other side to the coin of Official Secrecy is that all information on defense matters is Official Information: that is, it is served up to the public ready-cooked, with ideological dressing, on an official plate. The defense correspondents of the media duly attended Official Briefings and handed these on. Public opinion was manufactured in these ways: the American public was informed that Europeans were crying out for cruise missiles, the European public was informed that the United States insisted upon sending them, and both were informed that NATO was working in the best interests of all.

In an obliterating and highly orchestrated propaganda campaign (funded out of our own taxes) the NATO redefinitions were imposed.¹⁷ It suddenly appeared that, in this European theater only ground-launched missiles might be counted; sea-launched missiles might not. The British government issued an official White Paper of astounding mendacity, in which Poseidon, Polaris and countless lesser delivery systems simply disappeared.¹⁸ Pentagon charts, fed into the Western media immediately prior to the NATO decision (at Brussels, December 12, 1979), did much the same.¹⁹

The television obligingly supplied rushes of monstrous carrier-mounted SS-20s crashing through bushes in their advance upon the Free West. Expert SLOBs (Silver-Lipped Operators of Bullshit) perfected new means of moral lobotomy upon the public: normative and moralistic attributions entered into the very vocabulary of weapons technology, so that menacing missiles of similar destructive power be-

came "monsters" (if Soviet) and "deterrents" (if NATO).²⁰ Thus the pre-packaged NATO perception.

In Soviet perception the notion of this European theater is a NATO invention, and probably a Pentagon trick. Since cruise and Pershing II missiles are to be owned and operated by U. S. personnel, these are seen as forward-based U.S. strategic missiles which reach some 500 miles deeper into Russia than do the F-111 and the Vulcan—and, indeed, take Moscow and Kiev within their arc. Both missiles are highly accurate, but the Pershing II is speedy also, and can hit targets in Western Russia in anything between four and ten minutes from launch.

Taken together with U.S. Presidential Directive # 59, it is now possible to see the Soviet nightmare. Pershing IIs will make a preemptive strike, in five minutes flat, taking out Western Russian ICBM silos and, at the same time, an Alaskan-based strike will take out ICBMs in Asiatic Russia. The cruise missiles will saunter along behind, smelling their way over the terrain, and take out control, communications and political centers, as well as half the Russian population. Apart from the few surviving ICBMs, "the only response open to the Russians would be the launching of their own medium-range missiles against the NATO European allies."²¹ No doubt the opportunity would be taken.

My quotation is from the distinguished East German scientist, Robert Havemann. And it may be necessary to assure Western readers that, so far from being anyone's stooge or apologist, Professor Havemann is an outstanding defender of civil liberties (what Westerners call "a dissident"), who has been pushed around and held under house arrest by the oafish East German security police for several years.

That Havemann should issue this grave warning is a matter to take into grave account. For what he makes clear is that NATO weapons modernization is nothing less than a slow-playing Cuban missile crisis in reverse. Putting Pershing IIs in West Germany is an exact analogy with Khrushchev's freighter steaming toward Cuba. Seen in this light, the response of the Soviet political leaders has been rather cooler than that of President Kennedy. Brezhnev's finger has not yet moved toward the button. There are still two years of Western second thoughts, and perhaps for Soviet concessions on the SS-20. But Havemann warns us that these will be very dangerous years: "How long can the Soviet Union simply observe this process of preparation for a sudden attack which threatens its very existence? Can they afford . . . simply to watch

passively?"

I am not quite sure how the third, European, perception so suddenly emerged, although we did something about it ourselves. It is this. We are pig-in-the-middle while an interminable and threatening argument between born-again Christians and still-born Marxists goes on above our heads. Today there are supposed to be superpower negotiations (or preliminaries to preliminaries to negotiations) going on about European theater weapons—a matter which could scarcely concern us more—and there is no European seat at the table.

U.S. scenarios for a limited war in the European theater do not amuse us: this is where we happen to live. And where we will very certainly die in any nuclear exchange (however "limited"), since, whichever superpower claims itself as the scorched and radiation-stricken "winner," all of Europe will certainly be devastated. We are clear also that the first consequence of the importation of cruise missiles will be even denser Soviet targeting plans on the recipient nations.²² Already England's still green but not-so-pleasant land may carry a greater density of nuclear weapons launching bases (airfields, submarine depots) and ancillary military installations than any part of the world. We are not amused by parliamentary assurances that missiles, owned and operated by foreign personnel, will only be launched after "consultation" and in our national interests.

Other matters also have become clear. One is the tendency for both military alliances—NATO and the Warsaw Pact—to become instruments of superpower political control, reducing the lesser states to abject clientcy. This is as true in the West as in the East of Europe. Another is the fact that Eastern and Western Europeans live in the same theater, are subject to the same menace, and are rediscovering common interests. It has occurred to us that if the West leaned a little less heavily upon the East with missiles, then self-activating democratic processes (as in Poland) might have greater room to move; and that the Western peace movement and the Eastern movement for democratization might make common cause.

The new movement for European Nuclear Disarmament has grown with astonishing rapidity. It commenced, long before December 1979, with the refusal of Norway and Denmark even to entertain cruise missiles. In Norway the movement was initiated by a few concerned citizens who organized a telephone-bombardment of the Norwegian Assembly. It moved on to Holland, where in a remarkably successful

alliance which stretched from the Dutch churches through the Radical and Labor parties to the far left, a campaign was initiated—of petitioning, of discussion, and of torchlight processions. This culminated in the defeat of the Dutch government in the Assembly on December 11, 1979—the day before the NATO meeting. Under these pressures both Holland and Belgium have delayed their decision on the missiles.

The British hibernated all through that winter, while the falling leaves of "official information" choked up all entries to their burrows. But, coming out into the daylight last spring, they looked around at the changing scene and did not like it. There has been a swift change in perception. Anti-missile groups have sprung up across the country, thickest in East Anglia and Berkshire (around the nominated missile harbors). The long-standing Campaign for Nuclear Disarmament has been rejuvenated. Trade unions and the Labor Party have adopted uncompromising policies rejecting both the cruise and Trident missiles. On October 26 there assembled in Trafalgar Square some 80,000, representing Liberals, Labourists and ecologists, Welsh Nationalists and far leftists, church men and women and academics. It is becoming increasingly unlikely that the introduction of cruise missiles into Britain is politically viable. And if Thatcher introduces them, Michael Foot—the newly-elected Leader of the Labor Party—has promised that he will send them back.

The contribution of European Nuclear Disarmament to this has been one of putting together movements and individuals, in East as well as West Europe, behind a common platform and a common strategy.²³ Our Appeal was issued at the end of April over a transcontinental list of signatories. It calls upon NATO and the United States to halt plans for cruise missiles and Pershing IIs and upon the Soviet Union to halt the SS-20. It calls for an expanding nuclear-weapons-free zone in Europe, and envisages the gradual loosening of allegiances to either bloc. It calls on individuals, East or West, to act for common survival without regard for the interests or prohibitions of national states. It sets forth a strategy of lateral exchanges across the continent, from Poland to Portugal, and it demands freedom of communication and exchange of information, East and West.

There are now strong END committees in France, West Germany, Greece, Finland, and Portugal, and active supporting movements or groups in most other European countries. In Eastern Europe much quiet, off-the-record, discussion is taking place, but we find it hard still

to get through to Soviet citizens. In Britain END groups have been set up in most universities, and the movement is far from cresting yet.

The thrust to final war continues. But we have, at least, generated a small counterthrust. And what we have discovered is that, even in "this unhappy day," the process is not finally determined by technology or strategy: there is still a space in which people and opinion can move. Even the British media which, a year ago, seemed impermeable to rationality, have opened new spaces here and there, revealing in their midst not only STOBs but also concerned citizens, themselves anxious that democratic discourse should be resumed.

We could have done none of this without the channels of objective information which the *Bulletin* among others has helped to hold open. We have now been able to hand on this information to a growing European public. Our strategy is neither against the United States nor against the Soviet Union. If successful, we hope that a nuclear weapons-free zone in Europe might take some of the sting out of the Cold War's venom, and provide a shield or space between the superpowers in which tensions would lessen. It might help to save both giants from themselves. □

Defence Estimates, Commd. 7826-1, (London: HMSO, April 1980).

19. See Christopher Paine's admirable study, "Pershing II: the Army's Strategic Weapon," *Bulletin*, 36, No. 8 (Oct. 1980), esp. p. 30.

20. Such exercises appear to be not unknown on this side of the Atlantic also. See the letter in the *New York Times* purporting to come from a professor of "political science" at M.I.T. (although this must surely be a hoax?), Oct. 8, 1980. The author refers to Bernard Feld's "allegorical request" (meaning?) to readers to consider U.S. missile planning (including the MX system) as they appear in Soviet perceptions. He continues:

"With respect to building potential silo-killers, those familiar with the approach and style of Soviet military research and development can point to the SS-18 and SS-19. By 1990, these two systems will at least equal MX's alleged counter-silo capabilities. The

difference is that MX is still a paper missile while the SS-18s and SS-19s are already deployed and undergoing steady improvement. Moreover, possible fifth-generation follow-ons to these Soviet missiles might well eclipse MX's ability to destroy hardened military targets."

Thus a Soviet missile is a "potential silo-killer" whereas a U.S. missile system has only "alleged counter-silo capabilities"; a projected U.S. system is only "a paper missile" whereas projected and even wholly hypothetical ("possible fifth-generation follow-ons") Soviet missiles are perceived as hideous and immediate threats. The author caps his argument by placing "the arms race" in inverted commas, as if it was only a suspect concept of long-haired liberals (but what *else* is going on now?). See Stephen M. Meyer, "The Folly of Unilateral Arms Restraint," *New York Times* correspondence, Oct. 8, 1980. It is possible that the human species is

more gravely threatened by the STOBs of both sides than by the SLBMs.

21. Robert Havemann, "After the Thirty Minutes War," in *END Bulletin* No. 3 (Oct. 1980).

22. This perception is shared by Paul C. Warnke: "If I were a European, the last thing in the world I would want would be to have more theater nuclear forces, because I would think that would make me all the more certain to be the first target at the beginning of a war"; interview in the *Guardian* (London), Sept. 28, 1980.

23. The European co-ordinating center for END is at the Bertrand Russell Peace Foundation, Gamble Street, Nottingham NG7 4ET, U.K. The British END office (which handles subscriptions for *END Bulletin*) is at 6 Endsleigh Street, London WC1, U.K. Universities END can be reached through Jolyon Howorth, University of Aston, Birmingham, U.K.

To sum up:

U.S. scenarios for a limited war in the European theater do not amuse us; this is where we happen to live.

There are supposed to be superpower negotiations going on about European theater weapons, but there is not a European seat at the table.

While an interminable and threatening argument between born-again Christians and still-born Marxists goes on above our heads, we are the pig-in-the-middle.

A nuclear weapons-free zone in Europe might take some of the sting out of the Cold War's venom, . . .

. . . and provide a shield or space between the superpowers in which tensions would lessen. It might even help to save the giants from themselves.

(Thank you, BOB DAVIS)

(42) A 1962 foreword.

The Warfare State

Fred J. Cook

FOREWORD BY BERTRAND RUSSELL

MR. FRED J. COOK'S *The Warfare State* is one of the most important and also one of the most terrifying documents that I have ever read. His thesis is that the "military industrial complex" has become so powerful in the United States that it dominates the Government and is, at the same time, so insane that it is quite ready to advocate what is called a "pre-emptive" war against the Soviet State. The evidence which he adduces is massive and unanswerable except by plain abuse.

There was a time when American authorities assured us that they would not initiate a nuclear war. This time is past. It may be that the President and the State Department still cling desperately to the hope that they can prevent a pre-emptive war, but fresh evidence to the contrary continues to pile up. Much new evidence has appeared since Mr. Cook's first publication of *Juggernaut: the Warfare State in The Na-*

tion's supplement of October 28, 1961. The force of this evidence has been recognized, not only by nuclear disarmers, but by such orthodox physicists as P. M. S. Blackett in an article in the *New Statesman* of March 2, 1960. He points out that during the campaign preceding the presidential election there was supposed to be a "missile gap" which, for the moment, was thought to give superiority to the Soviet military power. As soon as the presidential campaign was ended, it turned out that there had never been any missile gap.

More shameful than this has been the campaign to persuade the American public that almost all Americans could survive a nuclear war by means of shelters. At first individual shelters were advocated. Of these, *Life* said: "You could be among the 97 per cent to survive if you follow the advice on these pages." This was such a stupid lie that the American public refused to believe it. The campaign for individual shelters having failed (as it was probably intended to fail), the policy of deep communal shelters is now advocated. These, if constructed, would constitute an even more ghastly death trap than individual shelters. With the very large bombs introduced by the Russians in their recent series of tests, the greatest danger is no longer fall-out, but fire-storms. In a fire-storm, the misinformed refugees in deep shelters would either be incinerated or die for lack of oxygen. All this has been set forth, clearly and scientifically, by Gerard Piel, editor of the *Scientific American*. But so blinded by its own ferocious prejudices is the military industrial complex, that it is successfully preventing the great majority of Americans from becoming aware of the death that supposed patriots are preparing for them.

It is obvious that the determined men who control the armed forces of the United States can, at any moment, create an incident which will appear to be proof of Russian aggression and will be met by full-scale nuclear "retaliation." I am old enough to "Remember the Maine" in 1898. Macmillan, in dogmatic language, has assured the world that there will be no war by accident. U Thant, who, unlike our Prime Minister, has no axe to grind, has told the world that the danger of accidental war is great and increasing.

There is only one way of reversing the trend towards preemptive war. It is to make the truth known to the American

public. This is a difficult task, since the military-industrial fanatics have a large measure of control over the major means of publicity. Mr. Cook's work is an immensely important contribution to this gigantic task. If there are human beings in the world at the end of the present century, Mr. Cook will be one of the men whom they will have to thank for their existence. I earnestly hope that his extraordinarily valuable work will be widely read and pondered, and that in many minds it will penetrate the barriers of intolerant hatred which is being built up by powerful but irresponsible interests.

Paperback from Collier Books, New York, 1964, hardcover from Macmillan, New York.

(Thank you, JACK RAGSDALE)

LAST MINUTE ITEM

- (43) Disclaimer. Two of Ray Plant's letters appear in this newsletter (6c). Ray would like it known that (1) these letters were based on the obsolete Constitution, and that he intends to write a new letter to replace them; and (2) his advice to Peter in these letters -- supplemented by phone calls and apparently clearly understood by Peter -- was that nothing should be communicated to Sutcliffe until and unless (a) the new expulsion procedure had been worked out, and had been approved by the Society, and (b) the Society had then decided that it wished to allow Sutcliffe to appeal. None of this has yet occurred. Thus Peter, in telling Sutcliffe that he was allowed to appeal, was not following Ray's advice.

MEMBERSHIP RENEWAL

- (2) New due-date for dues: January 1st. We are not raising dues; we are changing the time they come due. For the past several years, dues have come due on July 1st, with a 2-month grace period. Now we are making a change for this reason:

Consider the case of someone who joined in 1980 and did not renew in 1981. Under the present (pre-1982) procedure, that person did not become an ex-member until September 1, 1981. He received the 4 newsletters of 1980, plus the February, May and August newsletters of 1981, a total of 7 newsletters -- nearly 2 year's newsletters for 1 year's dues. That is an expense to the BRS that we need to avoid. By moving the due-date up to January 1st, we will be able to identify our non-renewing members by March 1st (when the grace period ends), and achieve a saving.

If the 1982 procedure had been in effect in the above case, the non-renewing 1980 member would have received the 4 newsletters of 1980, plus the February 1981 issue, a total of 5 newsletters -- which is considerably better than the 7 that a number of non-renewing 1980 members actually did receive.

In future, we will give notice in the November issue that dues are due on January 1st. We are late in giving notice this year; to compensate, we will extend the grace period an extra 2 months for 1982.

Accordingly, your dues are due now, and we'd like to have them as soon as you can send them; but in any case, they should be received before May 1st if we are to send you the May newsletter.

This also applies to new members, who joined in 1981. No matter in which month you joined, you have all received the same BRS material: the 4 1981 newsletters and "Russell". The member who joined in December '81 has received just as much BRS material as the member who enrolled 11 months earlier, in January '81; the December member received it all at once, the January member received it over the course of a year.

We hope you will understand our need for this change. We also hope that that the shift to January 1st does not cause a money-problem for anyone; if it does, let us know.

Here is the dues schedule, in U.S. dollars: regular \$20, couple \$25, student \$10. Add \$7.50 outside the USA, Canada, and Mexico. Send dues to BRS, RD 1, Box 409, Coopersburg, PA 18036.

Thanks!

ANNUAL MEETING (1982)

- (3) June 25-27, Claremont, California is the time and place. For more, see (8b, 41).
-

REPORTS FROM OFFICERS

- (4) President Bob Davis reports: see (8).

*Russell Society News, a quarterly (Lee Eisler, Editor): RD 1, Box 409, Coopersburg, PA 18036
BRS Library: Jack Ragsdale, BRS Co-Librarian, 4461 23rd St., San Francisco, CA 94114

(5) Vice-President Harry Ruja reports:

The Vice-President of the BRS enjoys an Olympian detachment. The Bylaws assign him/her no functions as such whatever. That detachment was reinforced for me in 1981 by my stay in Israel from January through June. Moreover, I missed the Annual Meeting which this past year was again in Hamilton.

However, I was not so detached that I did not notice the turbulence around me. As a member of the Board of Directors, I was obliged to concern myself with the "Sutcliffe affair", which has been simmering since January 1977 and came to a boil in the fall of 1980 with Sutcliffe's expulsion. There have been aftershocks (to switch metaphors) all through 1981.

One good thing has come out of the controversy: a closer look at our Bylaws. A committee is giving thought to revising them, to enable the Society to deal more effectively with certain tasks whose procedures the present Bylaws do not explicitly or fully describe.

The work of the Society continues. The advertisements for members continue to appear and attract inquiries, the membership status is healthy, the newsletters continue to be informative and interesting, and planning for this year's Annual Meeting is already under way.

Here in Southern California, a number of us have met in informal and most congenial settings and have had opportunity to become better acquainted with one another and to discuss matters of common interest.

In a more academic vein, once again Ed Hopkins arranged a professional session on Russell's philosophy at the annual meeting of the Eastern Division of the American Philosophical Association. Announcements of our Doctoral Grant have gone out to many universities and colleges, and we look forward to receiving inquiries from promising doctoral candidates.

Incidentally, things at McMaster are buzzing, and I have high hopes that the Blackwell-Ruja bibliography will appear before long. But no one says anything anymore about the lamented still-born Volume II of Mortals and Others, though I haven't given up hope on it.

All in all, despite some abrasiveness, the year has been a good one, and the Society is healthy.

Treasurer Dennis J. Darland reports:(6) For the quarter ending 12/31/81:

Balance on hand(9/30/81).....	965.16
Income: 43 new members.....	737.50
36 renewals.....	585.00
total dues.....	1322.50
Contributions.....	137.50
Sales of RSN, books,etc.....	149.01
total income.....	1609.01
	<u>2574.17</u>

total spent.....	7795.80
	<u>7795.80</u>
Balance on hand (12/31/81).....	<u>1136.77</u>

(8a) President Bob Davis reports:

The tentative plan to hold the 1982 Annual Meeting at Oxford did not work out. Our contact there, Jack Lennard of the Wilberforce Council on Human Rights, was organizing primarily for us, and asked a commitment of at least 40 members. I of course could not make that commitment. However, he is now working on a more general meeting on the same theme of human rights, for the summer of 1983. I hope we will participate; let us discuss it at our June meeting. I hope those of you with views on the matter will communicate them to me. I will provide details on the 1983 gathering as I receive them.

(8b)

I am pleased that the '82 Annual Meeting will be held at Scripps College, part of the Claremont Colleges, in Claremont, California, the last weekend in June (June 25-27). It has been five years since the last West Coast meeting. Los Angeles was discussed as the alternate spot for 1982 or 1983; Claremont is a suburb of Los Angeles. We have held a local meeting there, and I have also visited the campus on my own; it is beautiful and peaceful and should serve very well. See (41).

Details on how to get there, and other information, will be found in the May RSN. We will have meetings, room and board on campus. Room and board will cost about \$35 per day, pro-rated for the half-days of Friday and Sunday, which seems quite reasonable. I have appointed an Executive Committee for the meeting and for the BRS Award, consisting of Louis Acheson Jr., Jacqueline Berthon-Payon, Lee Eisler, Donald Hylton, Don Jackanicz, Harry Ruja, Dan Wray and myself. Anyone wishing to give a talk, or having a program suggestion or request, or a nominee for the BRS Award, please let me know about it soon as possible.

Some of the program is already lined up. Al Seckel will give a talk on Russell and the Cuban Missile Crisis, drawing on both published and unpublished sources. Dr. Gerald Larue, who spoke so well on the Moral Majority at the Humanist annual meeting in San Diego last spring, has agreed to talk to us on the subject. The program may also include these possibilities: a film dealing with BR's position on nuclear war; a talk or panel on disarmament; the celebrated Norman Lear film on the Moral Majority; a talk or panel on BR and the 1980s ("New Hopes for a Changing World" revisited). Dan Wray is planning to film parts of the meeting as well as interviews with members; a documentary film may result.

(8c)

I plan to attend another Humanist meeting, in New York March 27-28. Not much has happened since the October ARA meeting; I hope to have some say on what should be done in a more concrete, activist way about the current climate of religious and moral intolerance. Anyone with ideas on this, please write me immediately.

My address and phone: 2501 Lake View Av., Los Angeles, CA 90039. (213)663-7485.

REPORTS FROM COMMITTEES

(9) Membership Committee (Lee Eisler, Chairman; Jacqueline Berthon-Payon, Co-Chairman):

1982 ads for the BRS will appear about once a month in these publications: ATLANTIC MONTHLY, BOSTON MAGAZINE, FREE INQUIRY, HARPER'S, HUMANIST, MENSA, NATION, NEW REPUBLIC, NEW YORK REVIEW OF BOOKS, NOT MAN APART, PROGRESSIVE, SATURDAY REVIEW. FREE INQUIRY is a quarterly; THE HUMANIST appears 6 times a year; we are in all issues of both. We are in THE NATION (a weekly) about twice a month because of a special bargain rate. We are trying BOSTON MAGAZINE for 6 issues (Oct. 81 through Mar. 82). As you perhaps know, advertising is not an exact science. When advertising in a new publication, we cannot know in advance whether it will produce a sufficient number of inquiries to justify its cost. If the results are poor, we drop the publication, as we have done with INQUIRY (not to be confused with FREE INQUIRY). If you know of any publication that you think might be suitable for BRS ads, tell us, and we'll look into it.

(10) Science Committee (Alex Dely, Chairman):

"Almost exactly 2 years have passed since the statement was issued, signed by the late Albert Einstein, some other colleagues and myself, drawing attention to the dangers that would face humanity if another world war were to break out with the almost certainty of the widespread use of nuclear weapons.

"In fact, the stock piles of nuclear weapons have increased, new nations have joined the ranks of those producing those weapons...

"If this meeting could make clear the scientific facts with regard to such questions, and the place where certain knowledge ends, and hypothesis begins, it would perform a useful service... It follows that methods other than war, or the threat of war, must be devised for deciding questions as to which different nations disagree. The first step towards such methods must be the lessening of mutual suspicion."

In this way, Bertrand Russell opened the July 1957 Pugwash meeting of eminent scientists to discuss the elimination of the threat of nuclear war. After 25 years, the message retains its urgent validity.

The last 2 sentences deserve special emphasis regardless of whether you believe that the West is adequately or inadequately armed. Two projects gathering steam nationwide to establish alternative means of conflict resolution deserve the support of BRS members:

- 1) The movement to establish a National Peace Academy.
- 2) Establishment on many university campuses of "Committees for the Study of Peace and Conflict Resolution."

At the University of Arizona, a group of faculty as well as student organizations have met with the University President to obtain status as an academic program for a Master's degree. The prospects look excellent, and across the country, groups like this may finally bring facts and knowledge gathered from many branches of science into the defense debate. The goal is to achieve general conflict-resolution methods applicable at all levels of society. Many individual ideas have floated around for decades, but have not been integrated.

* I hope that the possibilities of these 2 projects will excite you as they do me, and that you may wish to promote similar community-based efforts. I can send you an extensive kit of materials, for doing so. Write me: Physics Dept., University of Arizona, Tucson, AZ 85721. This way we may actually help implement Bertrand Russell's dream! How about it?

* Finally, a suggestion: at present most BRS committees are one-man committees, the one man being the Chairman. I suggest that every BRS member join some committee, and make suggestions to the Chairman as to what issues are of interest, and how they might be able to help. This could make committees more productive and effective in dealing with persons and organizations outside the BRS. If you agree with this, please send me a postcard saying so.

BY BERTRAND RUSSELL

(11) "On The Evils Due To Fear", from If I Could Preach Just Once (New York: Harper, 1929) pp. 219-230:

On the Evils Due to Fear

By Hon. Bertrand Russell

IF I were about to be executed and were allowed twenty minutes in which to make a farewell address, what should I say? It would be necessary to be brief and simple, and I think I should concentrate upon one issue, namely the importance of eliminating fear. I do not imagine that mankind can be made perfect; whatever may be done, some defects will survive, but a great many of the defects from which adults suffer are due to preventable mistakes in their education, and the most important of these mistakes is the inculcation of fear. Parents, priests, and governments have despaired of maintaining their authority by an appeal to reason, and have preferred to produce abject, cowering slaves. I do not believe that any good thing is to be obtained through fear, and I hold that obedience not otherwise obtainable had better not be obtained. The objections to fear as a social force are of two kinds. There are the bad effects upon those who cause terror, and the bad effects upon those who suffer it. Both are grave, though the latter more so.

To begin with those who inspire terror. They inevitably become cruel and fond of thwarting others; they grow impatient of opposition and argument, and of every kind of reasoning tending to show that they have misused their authority. They come to prefer persons without self-respect and without principle. They are themselves inevitably filled with fears. They fear to lose their unjust authority; they fear to rouse merited resentment in their underlings; they fear that the world may be-

come more reasonable. These fears lead them to increase their cruelty, and every increase of cruelty increases their fear of reprisals. Thus there is a vicious circle tending to a perpetual intensification of the connected evils of tyranny and apprehension.

The effects of fear upon those who feel it are, however, very much worse. There are various kinds of fear; of these, physical fear, which alone is traditionally despised, is by far the least harmful. Moral and intellectual fears are far worse. All fear inspires a greater or less degree of rage, which, since it dare not vent itself upon the dreaded object, finds an outlet in tyranny over whatever is weaker. Just as in the holders of power cruelty begets fear, so in their slaves fear begets cruelty. Fear of social disapproval is probably one of the chief causes of meanness and unkindness in the modern world. People enjoy expressing social disapproval because they themselves have been thwarted by the fear of incurring it. When a man has sacrificed something of importance in order to retain the good opinion of his neighbors, he is naturally furious when some one else refuses to make the sacrifice, and he therefore becomes a fierce moralist, determined to punish the bold sinner. The sinners punished by social disapproval include almost all who are not hypocrites, all who have new ideas of a not purely scientific kind, and all who practice any morality more generous or less vindictive than that of their own herd. Fear of social disapproval is, therefore, a very dangerous quality to inculcate. Social coöperation should be voluntary and reasonable, not a craven submission of each to all.

One of the worst effects of fear is that it produces

stupidity. Intelligence requires a certain kind of intellectual fearlessness; it requires, at any rate, a capacity for intellectual independence, and intellectual independence will hardly be found where there is no degree of social independence. For this reason, societies which prize social cohesion unduly are almost sure to be composed of stupid individuals. They will, therefore, become incapable of progress, either scientifically or socially. Not even the most ardent feminist can deny that women have shown much less intellectual independence than men. I believe this to be mainly due to the fact that they have been more rigidly subjugated than men to a morality of fear. The recognized method of producing virtue in women has been the fear of social ostracism on earth, and hell fire hereafter. In order that these fears may acquire a firm hold, girls have been taught, from their earliest years, to be timid in their thoughts and to avoid following any argument to its logical conclusion, on the ground that all logical conclusions are unladylike. They have thus been left to practice the vices of the coward—envy, backbiting, and petty-mindedness. What the traditional moralist apparently fails to recognize is that the mental attitude leading to such vice causes infinitely more misery than a more fearless attitude which might sometimes lead to generous sins, but would never lead to ungenerous vices.

I regard with horror all those whose business is to keep the human spirit and the human intellect in fetters. I include among these almost all ministers of religion, a large proportion of school teachers, 90 per cent. of magistrates and judges, and a large proportion of those who have earned the respect of the community by their insistence on what is called a rigid moral standard. These different classes of men are all engaged in their several ways in endeavoring by means of social disapproval, or the criminal law, to produce belief in propositions which every candid inquirer can see to be at best doubtful, and which every student of statistics knows to be socially harmful. Take for example, the following facts from an American official publication: out of every thousand children born in America the number who die during the first year is: among the Portuguese 200.3, among the French-Canadians 171.3, among the Poles 157.2, among the native white population 93.8, and among the Jews 53.5. These figures show clearly that the infant mortality is proportional to the intensity of belief in the Christian religion. Herod caused nothing like such a massacre of innocents as is caused by Catholic dogma, and one of my reasons for publicly combating what I regard as superstition is to prevent this needless suffering of helpless children. And the

harm done by Christianity is very largely due to the fact that it has its psychological roots in fear.

When I say that fear is an evil, I do not mean that it can be adequately combated by conscious courage. Conscious courage does not eliminate fear, it merely prevents people from acting upon it; it thus involves a state of nervous tension which is almost sure to produce disastrous results. The right methods for avoiding fear depend upon the kind of fear involved. There are in the first place purely imaginary fears; such, for example, is the fear that eating ham or practicing birth control will be punished by an angry Deity. Such fears are instilled in youth with a view to producing certain kinds of conduct; they can be combated very simply by merely omitting to teach belief in false propositions to the young. I know it will be said that the young will not be virtuous unless they believe false propositions. This is a most curious attitude resting upon a twofold fallacy. There is first the belief that virtuous behavior is something in favor of which no rational argument can be given, and second the further belief that irrational and untrue arguments are going to be sufficient to lead to painful self-denials, which admittedly cannot be defended on any reasonable ground. To teach rational behavior is undoubtedly difficult, but it is certainly easier by rational than by irrational means. Accustom a child to suppose that there are good reasons for what you say; let him verify for himself that this is the case wherever such verification is possible to him. Tell him nothing whatsoever that you do not seriously believe to be true. Cultivate his scientific spirit, so that he will for himself test your assertions when he can, and you will produce in the end a human being capable of a degree of rationality entirely impossible to those who have been brought up upon a conception of sin derived from arbitrary theological prohibitions. If it be said that rational human beings will not conform to the whole of the ethical code that has been inculcated by the Church, so much the worse for that code.

There is another class of fears where danger is real but can be eliminated by sufficient skill. The simplest examples of this are physical dangers such as are incurred in mountain-climbing. But there are a large number of others. Take, for example, the danger of social disapproval. It is quite true that one man may steal a horse while another man may not look over the hedge; this difference depends mainly upon a certain kind of difference in instinctive attitude toward other people. The man who expects to be ill-treated will be, while the man who approaches his fellows in fearless friendliness will find this attitude justified by results. Boys who are

afraid of dogs run away from them, which causes the dogs to come yapping at their heels, while boys who like dogs find that the dogs like them. Exactly the same thing applies to our behavior in regard to other people, but the right result cannot be produced by screwing up one's courage to face what one believes to be hostility; it can be produced only by a certain genuine friendliness and expectation of friendliness.

There is yet a third class of dangers which cannot altogether be avoided, but which may be felt to be more or less terrible according to a man's outlook. Such, for example, is the danger of financial loss. A great part of many people's lives is overshadowed by the fear of poverty. Great poverty such as that of a wage-earner out of work is undoubtedly a very terrible evil, but the comparative poverty which well-to-do business men dread is only rendered a serious evil by misdirection of interests and tastes. The reasons for desiring wealth are luxury and ostentation. Luxury is the pleasure of lazy men who do not enjoy any form of activity, and ostentation is the pleasure of those whose principal desire is to be envied by fools. Neither of these pleasures will be strong in those whose active impulses have been allowed free play in youth, but a discipline based upon fear too often curbs these impulses, since virtuous parents fear that they will lead to sin, and fussy parents fear that they will lead to danger. Almost all sound education consists in providing opportunities for activities. An undesirable form of activity should not be directly checked, but should be replaced by creating an environment in which some more useful form becomes more attractive. The result will be the production of human beings who do not desire great wealth, and do not greatly fear its loss if they happen to acquire it. Fear of social disapproval should be met in the same way, not by teaching people to resist heroically the impulses to conformity, but by teaching them a certain kind of self-respect which will make them comparatively indifferent to the approval of the herd, so long as they have the approval of their own judgment and of those whose opinion is worthy of respect.

I do not wish to suggest that absence of fear is alone enough to produce a good human being; undoubtedly other things are necessary. But I do suggest that freedom from fear is *one* of the most important things to aim at, and is perhaps more easily achieved by a wise education than any other equally desirable quality. Freedom from fear confers physical, moral, and intellectual benefits. Miss Margaret McMillan points out that children who are

frequently scolded do not breathe rightly, and are thus more apt than other children to suffer from adenoids. Many other examples could be given of the way in which fear damages health, more especially through its interference with digestion. The moral damage that it does is even more important. This damage is partly a result of the injury to health, for, as is now well known, many of the gravest moral defects are connected with bad functioning of the digestive processes. Of this, avarice is a notable example. But the most important evil due to fear is the attitude of rage against the world. Dr. John B. Watson has demonstrated that the instinctive stimulus to rage in new-born infants is constriction of the limbs, or anything that interferes with freedom of movement. From this origin, through the process of conditioned reflexes studied by Pavlov, the rage reaction grows out gradually, so that it comes to be elicited by a number of other stimuli. When a man fears his fellows, he reacts in defense as he would react if they were actually interfering with his liberty of movement. At least he reacts in this way so far as his emotions are concerned, but the overt expression of rage is partly inhibited by his fears, and therefore he looks about unconsciously for some safe outlet. He may find this in religious or moral persecution, in love of war, in opposition to humanitarian innovations, in oppression of his children, or in all of these combined. All these vices are in nine cases out of ten a result of hidden fears.

Intellectually, also, fear has disastrous results. There is the fear of any unusual opinion which prevents men from thinking straight on any subject on which their neighbors have foolish opinions. Then there is the fear of death, which prevents men from thinking straight on theological subjects; and then there is the fear of self-direction, which leads men to seek some authority to which they can submit their judgment. These various forms of fear are responsible for quite half the stupidity in the world. Most of the stock of fear with which men and women go through life is implanted in them during the first six years of childhood, either with a view to making them "good" or by contagion from the fears of parents. For my part, I care nothing for the virtue which is rooted in fear, and I should seek everywhere, but more especially in early education, to produce human beings capable of social coöperation to the necessary extent for reasons with which fear should have nothing whatever to do. This is in my opinion the essential problem of moral education—a problem by no means insoluble, and only thought to be difficult owing to the weight of prejudice and cruel tradition.

BR'S INFLUENCE

- (12) JOHN VAN WISSEN recently became a member. We sent him the usual Questionnaire, and got back some unusual answers.

What first made you aware of BR's existence or of his writings?

Bertrand Russell was one of those "no good" authors, translated into the Dutch language, my father used to read when I was very young. Emile Zola and a fellow named Diderot or something were others, like BR, whose black-listed books were put out of sight by my saintly mother whenever rumour had it that a Parish Priest was about to visit. Especially after Easter, when such a visit was predictable, father's books, together with the non-Catholic daily, the "Delftse Courant", were rounded up and hidden as soon as he left for work. Father read libraries. He was different. Very few aunts and uncles liked him. He did not go to church any more, which grieved my mother, and I sensed that those no-good books had something to do with it all. On many a Saturday, father made me do the rounds among the libraries, with a note: "Any NEW book by the following authors:..." Bertrand Russell was one of them, and I prayed a lot along the way that they wouldn't have any more books by those guys. So I knew that BR existed when I was perhaps ten, and I remember it well now that I'm fifty-five and a member of The Bertrand Russell Society.

What do you now value most about BR?

Well, now, let me see. BR was there when I needed a BR. I value BR because he helped me off the path of Righteousness. BR can still drag people out of the Cave causing them to get hit by lightning. BR helped me put my mixed-up head in order! BR was the event in the scheme of things that disturbed my mental frame of reference, thereby causing me to interpret experience differently. Unlike the True Believers (of the CCNY affair), I turned out to accept and admire BR, and that's because I'm smart. BR was one of my lucky stars. I like BR.

- (13) John Lennon. We are indebted to WILLIAM JARRELL for the following:

The magazine, "Beatlefan" (October/November 1981) prints a transcript of an RKO Radio interview with John Lennon on December 8, 1980, the day he was murdered. An excerpt:

"My whole generation was brought up with the bomb. I remember Bertrand Russell and the H-bomb, and the reason that we were rock-and-rollers in the 50s is because the bomb might go off any minute."

THE BRS AWARD (1982)

- (14) * Name your candidate for the 1982 BRS Award. A candidate should have done one of the following:
- . made an important contribution to Russell scholarship (as BRS Award Winner Paul A. Schilpp did);
 - . popularized important ideas, thus enlightening the public (as BRS Award Winner Steve Allen does in his TV program, "Meeting of Minds");
 - . worked closely with BR in an important way;
 - . acted to further a cause that BR believed in. M.I.T. Professor Henry W. Kendall, who heads the Union of Concerned Scientists, and who works against nuclear armaments (and nuclear power), would qualify;
 - . acted in ways that exhibit qualities of character (such as moral courage) reminiscent of BR.

Send your candidate's name to the BRS Award Committee, care of the newsletter (address on Page 1, bottom), and say why you think your candidate deserves the Award. If you name a well-known figure, it may earn publicity for the BRS, which is a plus. If you are not sure whether your candidate qualifies, don't let that stop you; let the Award Committee make that decision.

OK, start thinking!

ON NUCLEAR WAR

- (15) The danger of nuclear war preoccupied BR during the last portion of his life. This recent paper by BRS Science Committee Chairman ALEX DELY describes some current misperceptions.

NUCLEAR WEAPONS: PERCEPTIONS VS. REALITIES

Introduction. Andrei Sakharov, the father of the Soviet thermonuclear bomb, who is presently exiled in Russia, has recently called for Soviet and Western scientists alike to be faithful to their "special professional and social responsibilities" and take a public stand when nuclear warfare is the issue. No matter how painful it is to speak out for the truth when one out of every two physicists in this country is employed through Department of Defense grants, it is crucial that questions of peace and disarmament be given absolute priority

even in the most difficult circumstances.

The following observations are drawn from a talk at the Colloquium on Science Disarmament by Wolfgang Panofsky, Director of the Stanford Linear Accelerator Center. Dr. Panofsky has for many years carefully mapped the many aspects of the nuclear war problem. He has arrived at the conclusion that defense policy makers simultaneously:

- 1) overestimate what technology can predict in certain areas, and
- 2) ignore scientific realities in other areas.

Recent statements by Reagan Administration officials indicate a belief in a winnable limited nuclear conflict. Yet Edward Anderson, a former missile guidance consultant at Honeywell, now at the University of Minnesota, publicly maintained that because of inherent aiming problems, no missile can be trusted to hit enough targets on a first firing to avoid massive retaliation. When a missile is fired along an untested trajectory, one cannot predict how large this "bias error" will be. In fact, the uncertainties, and the consequences of missing, are enormous. This example illustrates Panofsky's thesis, and its derivative, namely, that once nuclear war is initiated by any power, under any doctrine, in any theatre, for any tactical purpose, the outcome will be continued escalation of the conflict.

Physical vs. Political Reality. During the past two decades, a dangerous divorce has taken place between the physical realities of nuclear weapons and the perceptions of such weapons as a source of power, perceptions which have become a political reality. This role reversal, from physical carrier of destruction to political tool, has made impossible a rational assessment of a nation's "adequate nuclear weapon supply". This role reversal thus leads to an amplification of the arms race; and arms control agreements that focus on reduction in numbers (symbols of power) are doomed to failure, unless we consistently and insistently are mindful of the medical-technical realities of the use of these weapons. A distorted perception lies at the heart of the arms race. Unless this changes, arms control will fail. The message of groups such as Physicians for Social Responsibility, the Fellowship of Reconciliation, and the American Friends Service Committee will continue to stress this fact.

However, the history of the arms race suggests that non-scientific (political) factors overshadow technical or military factors as reasons for the arms build-up. Indeed, forces internal to each nation fuel arms acquisitions and exports (not related to the international situation) in these ways:

- 1) In capitalist and socialist countries alike, there are strong institutional pressures to increase the arms build-up (which takes 25% of the national budget), by the military sector. This is not a matter of ideology, but of pure institutional economics; any producer can give dozens of reasons why more of his product is needed.
- 2) The "we want it too" syndrome (childish!) is a powerful internal political factor. New technology such as the MX, particle beam and laser weapons (among many others) is especially sensitive to this. A perceived breakthrough is potentially too great an item of prestige for politicians to forgo, even if military significance is non-existent. And of course, the other side wants the same item, fueling another round of arms build-up (and resultant decrease in budgets for social services.)
- 3) The asymmetry of perception which causes fear is possibly the most serious driving force. Both the U.S. and the U.S.S.R. claim that the other side has achieved superiority. Obviously, they cannot both be right. The problem here is that politicians engage in simplistic number manipulation, while publicly ignoring hard-to-quantify factors such as the reliability of allies, differences in geography, length of boundaries shared with potential adversaries, etc...etc...Especially at defense budget appropriations time, the simplistic political perception far outweighs objective reality.
- 4) The secrecy of military planning in itself causes fear and thus fuels the arms race, besides diminishing the feasibility of verifying any arms control agreement.
- 5) New technology generates its own momentum.
- 6) The "we must have more than they have" attitude. No defense analyst would claim that the outcome of a nuclear conflict depends on the number of weapons available, i.e., that the side with the most weapons will prevail. To claim that would be to ignore the history of military strategy. The linkage of arms control to national politics (as in the SALT II Senate ratification hearings), where numerology is king, actually impedes arms control.
- 7) Inherent political momentum can impede arms control. When a military system proves a useful bargaining chip, it becomes politically impossible to drop it after negotiations are completed. Salt I eliminated the Anti-Ballistic Missile (ABM) system, yet neither the U.S. nor the U.S.S.R. have actually abandoned it.

In sum, nuclear weapons today serve primarily a political purpose, regardless of physical utility; and if ever used, the effects will be largely incalculable. One firm conclusion (as published in "Physics Today", June 1981) is that a nuclear conflict will be "offense-dominated", because a nuclear warhead does such extreme damage, the costs of "ensured" interception, missile silo defense, and limitation of casualties, render the total "defensive" costs astronomical compared to the costs of a first strike.

What can be done? Conventional non-nuclear military strategy maintains that one needs more bullets than targets, because many bullets may miss their target. Nuclear weapons, however, inflict enormous damage

whether the original target was hit or missed!

Until the political basis of the nuclear arms race diminishes in importance, there are still some options for the near future:

- 1) Unilateral action. A first step would be to eliminate clearly redundant weapons systems and those susceptible to first strike attack.
- 2) Sufficiency. Nuclear stockpiles should be solely evaluated in terms of a nation's need to counteract only those military and/or economic targets of importance, and not necessarily in kind. Such a strategy will lower the number of warheads required for a "sufficient" national defense.
- 3) Arms Control Negotiations. Linkage between arms control and other domestic or international issues of contention should be minimized, and negotiations must guarantee security for both sides.
- 4) Technical advice. Top policy makers should assign to their staff at least one scientist who has contact with military developments, and who can make known all the uncertainties in weapons technology.
- 5) Public education. An all-out effort is needed to stress the technical realities and minimize the political ones.

Let us hope that the reality of what would happen in a nuclear war is not so painful to most citizens that they will choose psychological denial, which is the route we are traveling today. That is the worst possible approach. It is time to speak out, in the best interest of all nations.

(Members who wish to become involved in ERS Science Committee activities related to defense policy are urged to contact me. Physics Dept., U. of Arizona, Tucson, AZ 85721)

(For a thoroughgoing and detailed examination of the calamity of nuclear war — along with the phenomenon of psychological denial that Alex refers to — see the 3-part article by Jonathan Schell in The New Yorker Magazine — February 1, 8, 15, 1982 — also mentioned in Item 47. Ed.)

PHILOSOPHY

- (16) Philosophy for all. Pace University is bringing Philosophy out of the ivory tower and into the open. They have opened a Museum of Philosophy. They have scheduled a Congress — and a Contest — for students; and not just for college students, but also for those in high school and junior high school.

"The Museum's aim is to bring philosophical questions and concepts before the public, and especially children, in an enjoyable and understandable manner. There are programs designed for people of all ages and educational backgrounds, with a particular emphasis on programs for children. There should be something for everyone with a sense of wonder." (from their folder)

This is some of what The New York Times (10/31/81) said about the opening of "what the creators call the world's first Museum of Philosophy":

What are Locke's Socks? Some visiting students really did want to know. On one wall hung six socks. The first was a white cotton sweat sock. The next had a colorful patch on it, the third a couple of patches, and so on until the sixth sock was nothing but patches.

"Assume," said a guide, "the six socks represent a person's socks over time. This is the image John Locke used. Can we say that a sock which is finally all patches, with none of the original material, is the same sock?" In short, the principle of identity.

This is the announcement of the Congress and the Contest:

FIRST NATIONAL CONGRESS ON PHILOSOPHY FOR JUNIOR HIGH SCHOOL, HIGH SCHOOL AND COLLEGE STUDENTS: 1982

NATIONAL ESSAY CONTEST IN PHILOSOPHY FOR JUNIOR HIGH SCHOOL, HIGH SCHOOL AND COLLEGE STUDENTS: 1982

The Museum of Philosophy at Pace University has organized two major philosophy events for Junior High School, High School and College Students.

The first is a National Essay Contest in Philosophy for which scholarship awards will be given at each school level. Teachers in Junior High Schools, High Schools and Colleges around the country will be invited to submit essays by their students for the Contest. Students may also submit their entries directly.

The Museum of Philosophy has also organized the First National Congress on Philosophy for Junior High School, High School and College Students in which, for the first time, students will have the opportunity to present formal papers, some of which later will be published in book form. They will also have the opportunity to construct and present exhibits, dioramas, experiments and demonstrations on a wide range of topics in philosophy including: ethics, aesthetics, theory of knowledge, history of philosophy and the relation between philosophy and science.

Students are also invited to submit papers outlining original philosophical theories or theoretical viewpoints which they have developed. The principal aim of these events is to stimulate students' interest in philosophy and provide a forum for the top students in the United States to present their ideas and proposals, analyses and exhibits on human knowledge and the human condition.

Leading philosophers from around the nation, including specialists in philosophy for children, will be present to give lectures and run seminars and workshops.

For more information about any of this, write Museum of Philosophy, Pace University, NY NY 10038. Please mention that you read about them in Russell Society News.

HUMANISM

- (17) WARREN ALLEN SMITH was surprised (and pleased) to see his article that appeared in "The Humanist" 30 years ago reappear in the March/April 1981 issue. Here are parts of it:

A. J. AYER: I do not know what distinction you wish to draw between atheistic humanism and naturalistic humanism. Is it that the atheistic humanists dramatize the fact that there is no God, whereas the naturalistic humanists assume it without being emotionally impressed by it? Or would you include theists and agnostics among your naturalistic humanists so long as their main interest was in the fortunes and activities of human beings independently of any matters of religious belief or disbelief? If this is the criterion of naturalistic humanism then I should classify myself as a naturalistic humanist, although I am in fact an atheist.

Naturalistic humanism seems to me, as I understand you to define it, essentially not a dramatic creed and I therefore doubt if it can properly be said to "spur literary imagination." On the other hand, I think that great works of literature may very well be written by naturalistic humanists. I should judge this to be especially true of novels. Dickens, Trollope, Balzac, Stendhal, and Turgenev are obvious examples, and I have no doubt that you can find many more. I cannot see any reason, either in logic or in fact, why the serious interest in his subject which is required by the imaginative writer should depend upon his holding any religious or metaphysical beliefs.

BERTRAND RUSSELL: You ask me whether I call myself a scientific humanist or a naturalistic humanist. I am not in the habit of giving myself labels, which I leave to others. I should not have any inclination to call myself a humanist, as I think, on the whole, that the nonhuman part of the cosmos is much more interesting and satisfactory than the human part. But if anybody feels inclined to call me a humanist, I shall not bring an action for libel.

ALBERT SCHWEITZER: I find the articles [in *The Humanist*] very interesting and my full sympathy is given to the movement which you represent: humanism. The world thinks it must raise itself above humanism; that it must look for a more profound spirituality. It has taken a false road. Humanism in all its simplicity is the only genuine spirituality. Only ethics and religion which include in themselves the humanitarian ideal have true value. And humanism is the most precious result of rational meditation upon our existence and that of the world.

ARTHUR SCHLESINGER, JR.: My own views on the problem are rudimentary. It seems to me that the most important thing for the preservation of civilization is a belief in moral standards. That belief is really most solid when it is founded upon a fervent belief in a supernatural order. For those of us who lack a belief in supernatural religion, we must base our standards as securely as possible on our own conception of man. For my own part, I find the Christian interpretation—as in Reinhold Niebuhr—of the incompleteness of merely human experience and the inadequacy of merely human resources entirely convincing, but I cannot go along with the belief that this incompleteness and this inadequacy are to be perfected by an infusion of the supernatural. I do not know where this puts me in your categories, but I do think that any great literature must be based on an understanding of the weakness and fallibility, the misery as well as the grandeur, of man.

RELIGION

(18) Scientific creationism, an oxymoron. First the good news, then the bad, all from The New York Times, on the dates shown:

(18a) The judge's decision (1/6/83, p. 1):

Judge Overturns Arkansas Law On Creationism

He Says It Violates Rule on Church and State

By REGINALD STUART
Special to The New York Times

LITTLE ROCK, Ark., Jan. 5 - A Federal district judge today overturned the Arkansas law requiring "balanced" classroom treatment of the theories of evolution and "creation science."

In stopping the state from carrying out the law, Arkansas Act 590, Judge William Ray Overton of the United

Excerpts from opinion, page B8.

States Court for the Eastern District of Arkansas declared in a sharply worded 38-page opinion that "creation science" "has no scientific merit or educational value."

He ruled: "Since creation science is

not science, the conclusion is inescapable that the only real effect of Act 590 is the advancement of religion."

"It was simply and purely an effort to introduce the biblical version of creation into the public school curricula," he said. Since this would violate the Constitution's guarantees of separation of church and state, he said, the act therefore must be barred from execution. The law was to go into effect in the fall.

Bill Advances in Mississippi

Judge Overton's opinion, accompanying a permanent injunction, was issued in the case of McLean v. Arkansas Board of Education. Arkansas having enacted the law only in March, it was the first judicial test in the country of a state "creationism" law.

In Louisiana, the next state to adopt such a law, a court challenge has been filed by the American Civil Liberties Union, which fought the law in Arkansas. There were more than 20 plaintiffs in the case, including the Rev. Bill McLean, a Presbyterian minister in Little Rock, whose name is on the case.

Other state legislatures are weighing similar measures. The Mississippi State Senate, minutes after convening today, approved a creation science bill. It must still pass the state House and Gov. William Winter has not taken a position on

the issue.

At a news conference here in Little Rock after Judge Overton's order was filed, the Arkansas Attorney General, Steve Clark, said that it was "probable" that he would appeal. He said it would take several weeks for him to decide. An appeal would go to the United States Court of Appeals for the Eighth Circuit.

Creation science is an account of the origin of life that closely parallels the first 11 chapters of the Book of Genesis in the Bible. The close resemblance prompted the opposition to the law and a court challenge on the ground that it was only a smokescreen for teaching religion in public schools. In his opinion, the judge concurred.

Date of Origin Is an Issue

The tenets of creation science include the creation of all things by a supernatural force, separate origins of human beings and animals, the recent origin of the world, thousands of years ago, and an origin that included a catastrophic flood. Evolution science, in contrast, holds that human beings evolved from lower forms of life millions of years ago.

These contrasting distinctions are set forth in Section 4 of the Arkansas law, with six definitions applied to each school of thought.

Opponents of the law, a group of clerics, teachers and scientists, argued that creation science was religion, not

science, and that its teaching would violate the First Amendment requirement of separation of church and state and the equal protection clause of the 14th Amendment.

In the trial last month, the plaintiffs sought to prove that creation science had no scientific merit, that it could not be taught without involving the state in religious matters and would impede academic freedom. The state hinged its defense hopes on the contention that creation science was a science.

In a review of the history of the legislation, Judge Overton said that "creationism" was an offshoot of fundamentalism, which began in the 19th century in response to social change, new religious thought and Darwinism, the theory of evolutionary biology outlined by Charles Darwin 120 years ago.

"Creationists have adopted the view of fundamentalists generally," the judge wrote, "that there are only two positions with respect to the origins of the earth and life: belief in the inerrancy of the Genesis story of creation and of a worldwide flood as fact, or belief in what they call evolution."

"The creationist organizations consider the introduction of creation science into the public schools part of their ministry."

On the legislative history of the Arkansas act, he wrote that the proponents of the law were motivated solely by their religious beliefs and that the legis-

lature had conducted no "meaningful" fact-finding before it enacted the law.

But even if the court considered only the language of the law, Judge Overton wrote: "The evidence is overwhelming that both the purpose and effect of Act 590 is the advancement of religion in the public schools."

'Inescapable Religiosity'

"Both the concepts and wording of Section 4 (a) convey an inescapable religiosity."

As to the state's requirement that instruction on the origin of life follow a "two model" approach, evolution and creation, Judge Overton said:

"The two-model approach of the creationists is simply a contrived dualism which has no scientific factual basis or legitimate educational purpose. It assumes only two explanations for the origin of life and existence of man, planets and animals: it was either the work of a creator or it was not.

"Application of these two models, according to creationists, dictates that all scientific evidence which fails to support the theory of evolution is necessarily scientific evidence in support of creationism and is therefore creation science 'evidence' in support of Section 4 (a)," the judge said.

He assailed the law's definition of the theory of evolution as "simply a hodgepodge of limited assertions, many of which are factually inaccurate."

(18b) Excerpts from the ruling (1/6/82, p. B8):

LITTLE ROCK, Ark., Jan. 5 (AP) — Following is the text of the definitions given in Section 4 of Arkansas' Act 590, the creation science law, and excerpts from today's ruling in the case by Federal District Judge William Overton:

Section of Law

Definitions, As used in this act:

(a) "Creation-science" means the scientific evidences for creation and inferences from those scientific evidences. Creation-science includes the scientific evidences and related inferences that indicate: (1) Sudden creation of the universe, energy, and life from nothing; (2) The insufficiency of mutation and natural selection in bringing about development of all living kinds from a single organism; (3) Changes only within fixed limits of originally created kinds of plants and animals; (4) Separate ancestry for man and apes; (5) Explanation of the earth's geology by catastrophism, including the occurrence of a worldwide flood; and (6) A relatively recent inception of the earth and living kinds.

(b) "Evolution-science" means the scientific evidences for evolution and inferences from those scientific evidences. Evolution-science includes the scientific evidences and related inferences that indicate: (1) Emergence by naturalistic processes of the universe from disordered matter and emergence of life from nonlife; (2) The sufficiency of mutation and natural selection in bringing about development of present living kinds from simple earlier kinds; (3) Emergence by mutation and natural selection of present living kinds from simple earlier kinds; (4) Emergence of man from a common ancestor with apes; (5) Explanation of the earth's geology and the evolutionary sequence by uniformitarianism; and (6) An inception several billion years ago of the earth and somewhat later of life.

Excerpts From Decision

The evidence establishes that the definition of "creation-science" has as its unmentioned reference the first 11 chapters of the Book of Genesis. Among the many creation epics in human history, the account of sudden creation from nothing, or creatio ex nihilo, and subsequent destruction of the world by flood is unique to Genesis. The concepts are the literal fundamentalists' view of Genesis.

The ideas are not merely similar to the literal interpretation of Genesis; they are identical and parallel to no other story of creation.

The argument that creation from nothing does not involve a supernatural deity has no evidentiary or rational support. To the contrary, "creation out of nothing" is a concept unique to Western religions. In traditional Western religious thought, the conception of a creator of the world is a conception of God.

Indeed, creation of the world "out of nothing" is the ultimate religious statement because God is the only actor. As Dr. Langdon Gilkey noted, the Act refers to one who has the power to bring all the universe into existence from nothing. The only "one" who has this power is God.

The argument advanced by defendants' witness, Dr. Norman Geisler, that teaching the existence of God is not religious unless the teaching seeks a commitment, is contrary to common understanding and contradicts settled case law.

The approach to teaching "creation-science" and "evolution-science" is identical to the two-model approach espoused by the Institute for Creation Research and is taken almost verbatim from I.C.R. writings. It is an extension of fundamentalists' view that one must either accept the literal interpretation of Genesis or else believe

in the godless system of evolution.

"No Scientific Factual Basis"

The two-model approach of the creationists is simply a contrived dualism which has no scientific factual basis or legitimate educational purpose. The emphasis on origins as an aspect of the theory of evolution is peculiar to creationist literature. Although the subject of origins of life is within the province of biology, the scientific community does not consider origins of life a part of evolutionary theory.

The theory of evolution assumes the existence of life and is directed to an explanation of how life evolved. Evolution does not presuppose the absence of a creator or God and the plain inference conveyed by Section 4 is erroneous.

The essential characteristics of science are: (1) It is guided by natural law; (2) It has to be explanatory by reference to natural law; (3) It is testable against the empirical world; (4) Its conclusions are tentative, i.e., are not necessarily the final word; and (5) It is falsifiable.

Creation science as described in Section 4 (a) fails to meet these essential characteristics. First, the section revolves around 4 (a) (1) which asserts a sudden creation "from nothing." Such a concept is not science because it depends upon supernatural intervention which is not guided by natural law. It is not explanatory by reference to natural law, is not testable and is not falsifiable.

If the unifying idea of supernatural creation by God is removed from Section 4, the remaining parts of the section explain nothing and are meaningless assertions.

Section 4 (a) (2), relating to the "insufficiency of mutation and natural selection in bringing about development of all living kinds from a single organism," is an incomplete negative generalization directed at the theory of

evolution.

Section 4 (a) (3) which describes "changes only within fixed limits of originally created kinds of plants and animals" fails to conform to the essential characteristics of science for several reasons.

First, there is no scientific definition of "kinds" and none of the witnesses was able to point to any scientific authority which recognized the term or knew how many "kinds" existed.

Second, the assertion appears to be an effort to establish outer limits of changes within species. There is no scientific explanation for these limits which is guided by natural law and the limitations, whatever they are, cannot be explained by natural law.

The statement in 4 (a) (4) of "separate ancestry of man and apes" is a bald assertion. It explains nothing and refers to no scientific fact or theory.

Section 4 (a) (5) refers to "explanation of the earth's geology by catastrophism, including the occurrence of a worldwide flood." This assertion completely fails as science. The Act is referring to the Noachian flood described in the Book of Genesis.

A Supernatural Force

The creationist writers concede that any kind of Genesis flood depends upon supernatural intervention. A worldwide flood as an explanation of the world's geology is not the product of natural law, nor can its occurrence be explained by natural law.

Section 4 (a) (6) equally fails to meet the standards of science. "Relatively recent inception" has no scientific meaning. It can only be given meaning by reference to creationist writings which place the age at between 6,000 and 20,000 years because of the genealogy of the Old Testament. Such a reasoning process is not the product of natural law; nor is it explainable by natural law; nor is it tentative. Individuals and groups who work inde-

pendently in such varied fields as geology, paleontology, geology and astronomy. Their work is published and subject to review and testing by their peers.

The journals for publication are both numerous and varied. There is, however, not one recognized scientific journal which has published an article espousing the creation-science theory described in Section 4.

Some of the state's witnesses suggested that the scientific community was "close-minded" on the subject of creationism and that explained the lack of acceptance of the creation science arguments. Yet no witness produced a scientific article for which publication had been refused.

Cannot Accept Argument

Perhaps some members of the scientific community are resistant to new ideas. It is, however, inconceivable that such a loose knit group of independent thinkers in all the varied fields of science could, or would, so effectively censor new scientific thought.

The methodology employed by creationists is another factor which is indicative that their work is not science. A scientific theory must be tentative and always subject to revision or abandonment in light of facts that are inconsistent with, or falsify, a theory. A theory that is by its own terms dogmatic, absolutist and never subject to revision is not a scientific theory.

The creationists' methods do not take data, weigh it against the opposing scientific data, and thereafter reach the conclusions stated in Section 4 (a). Instead, they take the literal wording of the Book of Genesis and attempt to find scientific support for it.

An 'Unscientific Approach'

The Creation Research Society employs the same unscientific approach to the issue of creationism. Its applicants for membership must subscribe

to the belief that the Book of Genesis is "historically and scientifically true in all of the original autographs."

The court would never criticize or discredit any person's testimony based on his or her religious beliefs. While anybody is free to approach a scientific inquiry in any fashion they choose, they cannot properly describe the methodology used as scientific, if

they start with a conclusion and refused to change it regardless of the evidence developed during the course of the investigation.

It is easy to understand why educators find the creationists' textbook material and teaching guides unacceptable. The materials misstate the theory of evolution in the same fashion as Section 4 (b) of the Act, with empha-

sis on the alternative mutually exclusive nature of creationism and evolution. Students are constantly encouraged to compare and make a choice between the two models, and the material is not presented in an accurate manner.

The "public school edition" texts written by creationists simply omit Biblical references but the content and

message remain the same.

Since creation science is not science, the conclusion is inescapable that the only real effect of Act 590 is the advancement of religion.

References to the pervasive nature of religious concepts in creation science texts amply demonstrate why state entanglement with religion is

inevitable under Act 590. Involvement of the state in screening texts for impermissible religious references will require state officials to make delicate religious judgments. The need to monitor classroom discussion in order to uphold the Act's prohibition against religious instruction will necessarily involve administrators in questions concerning religion.

(18c) Stephen Jay Gould comments (1/12/82, p.A15):

CAMBRIDGE, Mass. — Biblical literalists, this time masquerading under the nonsense phrase "scientific creationism," have just lost the first skirmish of round three.

In Little Rock, Ark., Federal District Judge William R. Overton has declared the Arkansas "balanced treatment" act unconstitutional because it forces biology teachers to purvey religion (and a narrow, sectarian concept of religion at that) in science classrooms.

Round one was lost in 1988 (also in Arkansas), when the United States Supreme Court, in *Epperson v. Arkansas*, threw out an anti-evolution statute much like the Tennessee law used to convict John T. Scopes in the famous "monkey trial" of 1925. These laws specifically enjoined the teaching of evolution.

So creationists tried again (round two), asking not that evolution be excised from curricula but that their religious view be given equal time. These laws, passed in several states, were also invalidated as violating the First Amendment and its insistence on separation of church and state.

In round three, creationists have banished God from their legal language, and advocated equal time for the same antediluvian views, now renamed "scientific creationism" and supposedly free of religious content or motivation. Judge Overton saw through the ruse, and acted accordingly.

Arkansas Act 890 of 1981, now invalidated, patently displays the firm

mooring of "creation science" in the book of Genesis read literally. "'Creation science' means," the act declared, in part, "[s]udden creation of the universe, energy and life from nothing. . . ; separate ancestry for man and apes; explanation of the earth's geology by catastrophism, including the occurrence of a worldwide flood; and . . . a relatively recent inception of the earth and living kinds."

One might wonder why creationists expose their biblical literalism so openly: Why do they not opt for more general language, thus obfuscating the sectarian source of their doctrine? They cannot, for they are boxed in by their own extremism. General language might permit such allegorical interpretations of creation as an equation of biblical "days" with millions of years — and a rough correspondence of Genesis with geology. Yet, to creationists, this "liberal theology" is as evil as evolution itself, and equally worthy of dogged attack. The issue is not religion vs. science, for no such opposition exists, but a particular, narrow sectarianism opposed to knowledge and learning in general. Thus, 12 of the 17 individual plaintiffs who sued successfully to invalidate Act 890 are ministers and bishops.

I testified for the plaintiffs. I only wish that the entire nation could have taken two weeks off and sat in Judge Overton's courtroom to witness the utter intellectual bankruptcy of "scientific creationism." It takes hour after hour to cut through clever rhetoric, and to discover, invariably, nothing underneath.

Creationist "geology," the subject of my own testimony, may serve as an example of their general approach. Creationists face an acute dilemma because they believe that all creatures once lived together (as products of God's busy six days of precisely 24 hours), yet they must admit that fossils occur in an orderly stratigraphic sequence throughout the world — trilobites in lower strata, dinosaurs in the middle, and large mammals at the top.

To separate a single creation into this invariable order, they call upon Noah's cataclysmic flood and its consequences. They invoke three mechanisms, all invalid: hydrodynamic sorting, with densest fossils in the lowest strata; ecological separation, with inhabitants of mountaintops in upper strata; or differential intelligence permitting the most resourceful reptiles to postpone their inevitable demise until the latest possible moment.

At its core, "flood geology" is not science because it calls explicitly upon divine and miraculous suspension of natural laws to gather the waters together, bring animals to the ark, and care for them during a year in extremis. When flood geology does make testable predictions in scientific form, they have been conclusively falsified. The lower strata are filled with delicate creatures that would not settle first from a universal flood; advanced fishes and whales are in upper strata that record their time of evolution, not their oceanic environment.

We professional evolutionists are ob-

viously concerned and angry about the creationist resurgence, but why should anyone else view it with more than mild amusement?

First, although the etymology of the argument pits creation against evolution, the attack is directed against all science; if the earth is but 10,000 years old, then most of physics falls with the invalidation of radioactive decay as a method of dating, and nearly all of astronomy goes in rebutting the claim that light from distant galaxies takes millions of years to reach us. Creationism can only flourish in an ambience of unquestioning authoritarianism. Second, the growth of creationism reflects no increased force of argument but the successes of a larger political program (identified with the Moral Majority and other rightist groups) that include defeat of the Equal Rights Amendment and a total ban on abortion. Jesters often prepare the way for heavy roles.

This political setting also guarantees that creationism will not quietly recede after this recent, rousing defeat. I wish that the sports metaphor of my first sentence could have been baseball and strike three, but I chose boxing and round three for a reason, and the fight will continue for many more rounds.

Eternal vigilance, to quote the old cliché, is indeed the price of liberty.

Stephen Jay Gould, a paleontologist and professor of geology at Harvard University, is author, most recently, of "The Mismeasure of Man."

(18d) Clarence Darrow at the 1925 Scopes trial (1/12/82, p.A15):

Evolution, A 'Crime'

In March 1925, the Tennessee Legislature outlawed the teaching of "any theory that denies the story of the Divine Creation of man as taught in the Bible, and to teach instead that man has descended from the lower order of animals." That July, in a case that became known as the "monkey trial," John T. Scopes was tried in Dayton for teaching the theory of evolution and fined \$100 for the misdemeanor. Clarence Darrow was chief defense counsel. The prosecuting attorney was William Jennings Bryan. Following are excerpts from Mr. Darrow's remarks during the second day of the trial, in the circuit court of Rhea County. (In 1927, the Tennessee Supreme Court reversed the circuit court's decision.)

Here is the State of Tennessee, living peacefully, surrounded by its beautiful mountains, each one of which contains evidence that the earth is millions of

years old. Here is a state going along in its own business, teaching evolution for years: state boards handing out books on evolution, professors in colleges, teachers in schools, lawyers at the bar, physicians, ministers — a great percentage of the intelligent citizens of the State of Tennessee, evolutionists, had not even thought it was necessary to leave their Church.

They believed that they could appreciate and understand and make their own simple and human doctrine of the Nazarene, to love their neighbors, be kindly with them, not to place a fine on and not to try to send to jail some man who did not believe as they believed. And they got along all right with it, too, until something happened.

They have not thought it necessary to give up their Church because they believed that all that was here was not made on the first six days of creation, or that it had come by a slow process of developments extending over the ages, or that one thing grew out of another.

They are people who believed that organic life and the plants and animals and man, and the mind of man, and the religion of man are the subjects of evolution, and they have not

got through, and that the God in which they believed did not finish creation on the first day, but that he is still working to make something better and higher still out of human beings, who are next to God, and that evolution has been working forever and will work forever — they believe it.

And along comes somebody who says we have got "to believe it as I believe it; it is a crime to know more than I know." And they publish a law to inhibit learning.

Now, your Honor, there is an old saying that nits are made of lice. I don't know whether you know what it makes possible down here in Tennessee. I know; I was raised in Ohio. It is a good idea to clear the nits — safer and easier.

To strangle puppies is good, when they grow up into mad dogs, maybe. I will tell you what is going to happen, and I do not pretend to be a prophet, but I do not need to be a prophet to know.

Your Honor knows that fires have been lighted in America to kindle religious bigotry and hate. You can take judicial notice of them, if you cannot of anything else.

If today you can take a thing like evolution and make it a crime to teach it in the public schools, tomorrow you can make it a crime to teach it in the private schools, and next year you can make it a crime to teach it to the husbands or in the church. At the next session you may ban books and the newspapers. Soon you may set Catholic against Protestant, and Protestant against Protestant, and try to foist your own religion upon the minds of men.

If you can do one, you can do the other. Ignorance and fanaticism are ever busy and need feeding. Always they are feeding and gloating for more. Today it is the public school teachers, tomorrow the private, the next day the preachers and the lecturers, the magazines, the books, the newspapers.

After a while, your Honor, it is the setting of man against man and creed against creed, until with flying banners and beating drums we are marching backward to the glorious ages of the sixteenth century when bigots lighted fagots to burn the man who dared to bring any intelligence and enlightenment and culture to the human mind.

(18e) H. L. Mencken on the Scopes trial (1/12/82, p. A15):

Scopes: Infidel

The Baltimore Evening Sun sent H. L. Mencken to Dayton to cover the case of The State of Tennessee v. John Thomas Scopes, in 1925. Following are excerpts from various dispatches.

The town, I confess, greatly surprised me. I expected to find a squalid Southern village, with darkies snoozing on the horseblocks, pigs rooting under the houses and the inhabitants full of bookworm and malaria. What I found was a country town full of charm and even beauty. . . .

Nor is there any evidence in the town of that poisonous spirit which usually shows itself when Christian men gather to defend the great doctrine of their faith. I have heard absolutely no whisper that Scopes is in the pay of the Jesuits, or that the whisky trust is backing him, or that he is egged on by the Jews who manufacture lascivious

moving pictures. On the contrary, the Evolutionists and the Anti-Evolutionists seem to be on the best of terms and it is hard in a group to distinguish one from the other.

There is an almost complete absence in these pious hills of the ordinary and familiar malignancy of Christian men. If the Rev. Dr. Crabbe ever spoke of bootleggers as humanely and affectionately as the town theologians speak of Scopes, and even Darrow. . . . his employers would pelt him with their spyglasses and sit on him until the ambulance came. . . . There is absolutely no bitterness on tap. But neither is there any doubt. It has been decided by acclamation, with only a few infidels dissenting, that the hypothesis of evolution is profane, inhumane and against God, and all that remains is to translate that almost unanimous decision into the jargon of law and so have done.

To call a man a doubter in these parts is equal to accusing him of cannibalism. Even the infidel Scopes himself is not charged with any such infamy. What they say of him, at worst, is

that he permitted himself to be used as a cat's-paw by scoundrels eager to destroy the anti-evolution law for their own dark and hellish ends. There is, it appears, a conspiracy of scientists afoot. Their purpose is to break down religion, propagate immorality, and so reduce mankind to the level of the brute. They are sworn and sinister agents of Beelzebub, who yearns to conquer the world, and has his eye especially upon Tennessee. Scopes is thus an agent of Beelzebub once removed, but that is as far as any fair man goes in condemning him. He is young and yet full of folly. When the secular arm has done execution upon him, the pastors will tackle him and he will be saved.

In brief this is a strictly Christian community, and such is its notion of fairness, justice and due process of law. . . . Its people are simply unable to imagine a man who rejects the literal authority of the Bible. The most they can conjure up, straining until they are red in the face, is a man who is in error about the meaning of this or that text. Thus one accused of heresy among them is like one accused of boiling his grandmother to make soap in

Maryland. He must resign himself to being tried by a jury wholly innocent of any suspicion of the crime he is charged with and unanimously convinced that it is infamous. Such a jury, in the legal sense, may be fair. That is, it may be willing to hear the evidence against him before bumping him off. But it would certainly be spitting into the eye of reason to call it impartial.

The trial, indeed, takes on, for all its legal forms, something of the air of a religious orgy. . . . The courthouse is surrounded by a large lawn, and it is peppered day and night with evangelists.

The Scopes trial. . . has been carried on in a manner exactly fitted to the anti-evolution law and the simian imbecility under it. There hasn't been the slightest pretense to decorum. The rustic judge, a candidate for re-election, has postured before the yokels like a clown in a ten-cent sideshow, and almost every word he has uttered has been an undisguised appeal to their prejudices and superstitions. The chief prosecuting attorney, beginning like a competent lawyer and a man of

self-respect, ended like a convert at a Billy Sunday revival. It fell to him, finally, to make a clear and astounding statement of the theory of justice prevailing under fundamentalism. What he said, in brief, was that a man accused of infidelity had no rights whatever under Tennessee law.

Darrow has lost this case. It was lost long before he came to Dayton. But it seems to me that he has nevertheless performed a great public service by fighting it to a finish and in a perfectly serious way. Let no one mistake it for comedy, farcical though it may be in all its details. It served notice on the country that Neanderthal man is organizing in these forlorn backwaters of the land, led by a fanatic, rid of sense and devoid of conscience. Tennessee, challenging him too timorously and too late, now sees its courts converted into camp meetings and its Bill of Rights made a mock of by its sworn officers of the law. There are other States that had better look to their arsenals before the Hun is at their gates.

Reprinted by permission of The Baltimore Sun

(18f) The bad news is that textbook publishers are watering down or eliminating references to evolution, in order to make their textbooks acceptable to states like Arkansas and Tennessee (1/5/82, p. C1):

By FRED M. HECHINGER

THE court challenge of an Arkansas law that defines creationism as a science has done more than focus on what most scientists consider a silly issue. It has exposed the vulnerability of the public schools to noneducational, political pressures. However judges may rule in Little Rock and in the many states that are considering similar laws, the impact of "scientific creationism" on science teaching in many American classrooms will be felt for years. Textbook publishers are already revising science books to insure that the controversy will not reduce sales and profits.

"Creationism" is a theory based largely on the first 11 chapters of Genesis. It maintains that the universe and the earth are 6,000 to 10,000 years old and that all current and extinct forms of life were created in six days, as stated in the Bible.

But, by denying that their theory is based on religion, the creationists try to circumvent the prohibition of religious instruction in public schools. They ask that their theory, which they call "creation science" — as opposed to "evolution science" — be given equal time with the teaching of evolution.

Scientists point out that acceptance of the creationist "theory" would not just contradict everything the schools know and teach about biology but would scrap many other scientific theories, in geology, astronomy, archeology, anthropology, physics and so on. In the December issue of *Science* '81, for example, Allen Hammond, a geophysicist and mathematician, and Lynn Margulis, a microbiologist, wrote that most stars in our galaxy and in all other observable galaxies are more than 10,000 light-years away. Therefore, they say, "Either those objects are more than 10,000 years old, or totally new astronomical hypotheses are needed." All the accepted and tested methods of measuring time, they add, give an age for the universe of 10 billion to 20 billion years.

Why, against so much expert testimony, are the schools nevertheless subjected to such strong pressure to give creationism equal time?

Creationist pressures are taken seriously for reasons that tell much about schools and society. In a conservative era, theories that appeal to some vocal conservative groups cannot

readily be ignored by elected representatives, even if they fly in the face of scientific and pedagogical knowledge. It is worth noting that the Arkansas law was enacted last year and signed by Governor Frank White, who said later that he had not read all of it.

The concept of "equal time," moreover, has great popular appeal. It has the ring of democratic fairness. It suggests the absence of compulsion, giving pupils a chance to examine both sides of a question and then make up their minds. Of course, this approach presupposes that there are two sides to such issues, just as it would have presupposed two sides to the question whether the earth is flat or round.

An additional factor is the popular view of the term "theory." When creationists say that evolution is "only a theory," they play on the popular interpretation of the word as an educated guess rather than the scientist's understanding of the word as a formulation of basic principles in a particular area, supported by empirical evidence and open to confirmation — or refutation — by evidence yet to be discovered. Taking the semantic byplay a step further, the creationists try to put their "science" on an equal footing with evolution by citing specific, often legitimate, examples of incomplete and yet to be explored aspects of evolution.

Since all but the best teachers lean

heavily on textbooks, the effect of the controversy on textbooks regardless of any court rulings, becomes vital and for a long time ahead irreversible. In the last 10 years, according to Henry P. Zuidema, a paleontologist and science writer, many textbooks have already been revised, reducing space given to evolution and presenting the subject in more tentative terms. The index of a 1979 text, "Biology: Living Systems," by Charles Merrill, contains only three lines of page references under "evolution," compared to 17 lines in a 1973 edition.

Two editions of a text published by Allyn & Bacon in 1974 and 1977 included materials on the Genesis account of creation. Two Harcourt Brace Jovanovich texts, "Biology: Patterns in Environment" and "Biology: Patterns in Living Things," omit Charles Darwin entirely.

Some publishers, says Mr. Zuidema, have added creationism to their science texts but in private conversation try to rationalize their actions by saying that they put it in the last chapter, which most teachers rarely reach.

He quotes Lois Arnold, senior science editor at Prentice-Hall: "We don't advocate the idea of scientific creationism but we felt we had to represent other points of view."

A case can, of course, be made for teaching creationism as part of the history of science — the evolution of

biological thought itself. The problem arises when political pressures on teachers and textbook publishers make it appear to be part of, or in some sense equal to, modern science.

How does the specific legislative intrusion into the school curriculum differ from a host of previous mandates — driver education, teaching about alcohol and drugs or about local or state history? A crucial difference is that those other mandates, undesirable as they, too, may be, at least merely diminished the time available for the teaching of what school administrators may consider more appropriate subjects. Creationism, if given equal time with science and presented as science, distorts the substance of education. It tries to compel the majority of science teachers to give the imprint of scholarship to something they know is not so.

Frank Press, president of the National Academy of Sciences, in a letter to the January/February issue of *Science* '82, writes: "We simply cannot afford to teach pseudo-science in the guise of science. And creationism, which, arguably, may have a place elsewhere in teaching and comparative religion, is not science. . . . I can only hope that in once again confronting this issue, seemingly resolved years ago, we gain by improving both science education and the public's understanding of science."

- (18g) We'd like to end this with a quote from a column by Ellen Goodman in the Washington Post (12/2/81):

As Anthropologist Ashley Montague wrote, the difference between science and creationism is that "science has proofs without any certainty; creationists have certainty without any proofs."

DEMOCRACY

- (19) The people's choice, according to "The Best Man" by Gore Vidal, Act One, Scene One:

Reporter: Do you think people mistrust intellectuals in politics?

Observer: Bertrand Russell seems to think so. He once wrote that the people in a democracy tend to think they have less to fear from a stupid man than from an intelligent one.

Reporter: Wasn't Bertrand Russell fired from City College of New York?

Observer: Yes, he was fired. But only for moral turpitude...not for incompetence as a philosopher.

(Thank you, BEV SMITH)

NEWS ABOUT MEMBERS

- (20) Justin Leiber is one of the authors included in The Mind's I, "composed and arranged by" Douglas R. Hofstadter and Daniel C. Dennett (New York:Basic Books, 1981), both of whom are here trying to discover the meaning of "self", the meaning of "I". (It is an aspect of their interest in artificial intelligence.) The excerpt from Justin's science fiction novel, Beyond Rejection, (New York:Random House, Ballantine Books, 1980) deals with mind tapes (where everything in your mind is put on tape, and then into a blank brain, which is then implanted in another body -- and possibly rejected, whence the title -- so that one day "you" may find yourself in another body.) Dennett has nice things to say about this excerpt.

- (21) Dora Russell writes a Letter to the Editor of The Guardian (British) (11/8/81):

Your Leader-writer (October 25) appears to have discovered at long last that Americans are not our "dear cousins" -- a fact which was already apparent to me in 1917 when, at the age of 23, I accompanied my father, Sir Frederick Black, on a war-time mission to the United States which had just come into the war. We were, in consequence, seeking some help about oil supplies.

I found there a foreign, even alien, nation, shaping its own values, which spelled pride in its machines and advanced technology with a sense of its own growing power and what this might achieve.

Unknown to me then, some courageous young American women had been striving might and main to keep their country from involvement in Europe. My own experience also made me dubious about this, but more so about the future effects of industrialism, because I found in America no moral purpose to control it.

Three years later, in Bolshivik Russia, I found -- as did the then Guardian correspondent Arthur Ransome -- as sense of a good moral purpose that might have been helpful. I dreamed of an understanding between what I perceived to be two potential great powers. Still unpublished, I have the script of that dream: The Soul of Russia and the Body of America.

Since 1920 I have never ceased to campaign like many others, fruitlessly, against the cold war, and to believe that because America's Monroe Doctrine excludes Europe from the Western Hemisphere, we should have one for Europe to safeguard our own affairs.

But as you suggest, why don't the Americans and Russians get together to learn something about each other's characters and ways. After all, we tolerate Bob Hope on our golf courses.

- (22) Bill Young did some traveling last fall. Here are excerpts from the way his trip was reported in the Des Moines Register of 11/3/81, p. C1:

"We evangelists travel light on clothing," noted William Henry Young as he paused during a bus terminal interview to fish out papers from his suitcase filled mostly with literature.

One supposed that Jerry Falwell might have a few more clothing changes aboard his Learjet than Young displayed, as he waited in Des Moines for the Greyhound bus. It was to take him to Chicago, the next leg on his cross-country "evangelical pilgrimage".

But then, Young doesn't quite fit the mold of the high-powered evangelistic stars.

...
The bus-riding soft-spoken Young doesn't have a gimmick that tugs at the heartstrings and the pocketbooks. He continues "to preach the gospel of agnosticism" as founder, chief and sole staff of the Society of Evangelical Agnostics (SEA).

The very word "evangelical" conveys the idea of zealous efforts to convert others. Hardly a word to use in connection with agnosticism.

In common parlance, an atheist is one who believes there is no God, a theist believes there is, and an agnostic

doesn't know and cautiously avoids taking sides. Historically, that hasn't been seen as a cause to promote evangelistically.

As Young, 53, tells it, he grew up as a fundamentalist and did a bit of teen-age revival preaching. Then came a conversion to Mormonism, followed by two years of formal theological training.

He taught mathematics, switched to library work and is now head of library services for the Fresno, California, public school system.

He said his "conversion experience" came as he was driving through the Colorado mountains. "The realization struck me as a gentle theistic lightning bolt that if God had wanted his creatures to have answers to the big questions about 'Ultimate Reality', the purpose of the universe, the meaning of life and death for man, He would have provided more definite and convincing information.

"This brought a deep realization of, and resignation to, the reality of not knowing. From that moment on, I was an agnostic."

He got so enthused about it that a friend said he was evangelical about his agnosticism. He rolled that idea around for a while and, in 1974, formed SEA.

He explains evangelical agnosticism as being based on these principals:

- . "That one should study and investigate with an open mind all sides of the issues that claim one's interest and concern.
- . "That is is morally wrong to come to final conclusions based on inadequate evidence.
- . "That one should accept living with the realization that one does not have, and probably never will have, the final solutions to the problems of existence."

Waiting for his bus, Young insisted that agnosticism isn't "a halfway house between atheism and theism." He sees it as a positive acceptance of uncertainty in ultimate matters.

Thus he sees militantly atheistic Madalyn Murry O'Hair and militantly Christian Falwell as equally "immoral" for accepting as absolutes concepts that Young believes have inadequate evidence.

During SEA's first 6 years, Young says he gained more than 600 members. They get his quarterly publication of free-thought writings, membership cards and the SEA logo of a circle divided by a wavy line.

Recently he came on the idea of a cross-country tour to visit SEA members and give talks where invited. He calls the bus trip "Overland -- By Sea". The destination before the return trip to California was the "Humanist Summit Conference" in College Park, MD.

His Des Moines-area stop included an overnight stay with John Patterson of Ames, an Iowa State University faculty member noted for his outspoken and unorthodox religious views.

Young wanted to make clear that his organization was not one of those tax dodge outfits with phony "ordinations" that have sprung up around the country. He said he hasn't applied for tax exemption as a religious organization, doesn't ordain anyone as an agnostic minister, and no one can expect to deduct his meager membership fees -- \$1 the first year and not much more thereafter -- from his income taxes.

Young comes across as a gentle, compassionate man who enjoys gentle gibes at all "true believers" but is seriously devoted to agnosticism as a way of life, not just an absence of belief.

He puts it this way in an article:

"I continue to feel that the agnostic insight is both valid and viable in pointing to the directions that mankind's thinking should take. The more I read and reflect on the matter, and the more life experiences that take place, the more I realize that the principles of agnosticism are important in all aspects of life, not just the initial acceptance of agnosticism about religious matters."

QUESTIONS & ANSWERS

- (23) Husserl. A Polish doctoral candidate asked whether BR had any contact with, or opinion about, the Phenomenology of Edmund Husserl (RSN32-22). HERB LANSDELL came across the following footnote on Page 93 of "The Phenomenological Movement" by Herbert Spielberg (The Hague: Martinus Nijhoff, 1960):

¹ Much to Husserl's disappointment, the *Logische Untersuchungen* were never reviewed in the Anglo-American magazines of the time. However, Bertrand Russell, in his survey of "Philosophy in the Twentieth Century," published first in *The Dial* in 1924, referred to it as "a monumental work"; also, in a spontaneous letter to Husserl of April 19, 1920, now in the Husserl Archives at Louvain, he mentioned the fact that he had the second edition with him in prison during his term for pacifist activities in 1917.

RECOMMENDED READING

(26) "Yes to Life" by CORLISS LAMONT (New York: Horizon Press, 1981), reviewed by BOB DAVIS:

This is an enjoyable, informative book that I heartily recommend to all BRS members, by a distinguished American Humanist philosopher and BRS member, who has led a life of involvement and controversy that lends itself well to autobiography. Lamont's skill as a writer creates a book that is difficult to put down. I read it in two sittings over over a weekend.

The book contains personal information, of course, but is organized around themes such as humanism, the myth of immortality, democratic socialism, civil liberties, and other topics of importance in his life. Accordingly,

there is much in the book that is instructive on these topics; that is part of the reason the book is so good. I found the recapitulation of humanist philosophy, for example, to be very valuable.

He is a scion of a leading American capitalist family; his father was Chairman of the Board of J. P. Morgan; yet Lamont is a convinced democratic socialist. I was always rather curious about this and wondered what problems it had created for him and his family. Was there a great deal of conflict about this at the time? Did his family disown him? O, to have been a fly on the ceiling during conversations in the Lamont household 60 years ago! But it appears to have been a much more civilized and tolerant affair than I had supposed; perhaps my prejudices formed in the 1960s were showing.

I liked the chapter on "The Philosophy of Humanism" best, perhaps because of the Moral Majority attacks. It provides the non-theistic basis of humanist belief. In it, Lamont also discusses his contacts with Russell, Santayana and Dewey, all of whom he thought well of. Lamont devotes several pages to BR, and includes 3 short letters from BR. See the excerpts (45).

There are 3 chapters on civil liberties in which Lamont discusses his beliefs and his fights. He ran afoul of Senator Joseph McCarthy and others like him, and the State Department too. He sued the government for infringements on his civil liberties, and won his lawsuits, enlarging freedom for all of us.

There are chapters on recreation (including sports), travel, and his two marriages. Those interested in poetry will enjoy the full chapter on John Masefield, the British Poet Laureate, a long-time friend of the Lamont family. I particularly enjoyed his interests that I happen to share, such as the theatre. I was glad to learn about the Lamont Conservancy, a wilderness area near Manhattan that his family donated to the public and that he maintains, and uses for nature hikes.

There are also items that some BRS members may disagree with: his positive attitude towards the Soviet Union, and Communist China; and perhaps his views on Viet Nam. I suggest that you get the book and see for yourself.

RECOMMENDED

(27a) "Reds" is a film -- with Warren Beatty and Diane Keaton -- about John Reed's adventures, chiefly with the Russian Revolution, which Reed described in his book, "Ten Days That Shook The World". DORA RUSSELL appears briefly several times as one of the many elderly "witnesses" who give their recollections of the events or personalities of the time. The New York film critics called it the best picture of 1981.

* * * * *

(27b) Here is a letter from Dora Russell to DON JACKANICZ, dated 1/9/82:

Thank you for writing about my appearance in the film Reds. I am glad to know that it has really been made, and seems to be a success. When I was in London helping with publicity for my second Tamarisk Tree book, the film people got in touch with me, having realized, from my first book, that I had met John Reed. I spent a whole day at Pinewood Studios with Warren Beatty and camera team, talking much of the time into camera. He was anxious to get the spirit of the period, and I was much impressed with the amount of time and trouble they were taking and must have gone on taking, to judge by the list of people contacted. And only just in time; some are now dead.

What grieves me is that so much of the truth comes out too late as history. And even more when the climate changes so that one sees moves being made to destroy even what little pioneers in my generation achieved. From its very start I was against the war, hot then cold, against Soviet Russia, not because I was, or ever have been, a communist, but I saw it as a great blunder of history. It sowed the wind of which the nuclear generation reaps the whirlwind, and Jack Reed was right indeed when he called his book, "Ten Days That Shook The World". I saw at that time and tried vainly to make people, including Russell, understand, that the industrial system must either be socialist and cooperative or it will be run by a dictator or oligarchy. This was, in effect, what the Bolsheviks were saying. It was then, and remains true now, at a period when competitive overproduction still prevails both nationally and internationally. It is not a matter of communism versus capitalism, but simply of how to deal with the growth of the industrial way of life. I did persuade Russell to write, with many of my ideas, and with me, "The Prospects of Industrial Civilisation". Men of that generation, like our first socialists, and Mao, Chou en Lai, Ho Chi Min, Lenin saw the problems. I was astounded to hear Alistair Cooke the other day call Mao a "monster".

PARADOXES

(28) Well, hardly ever. To avoid a dogmatic approach in any of his work, a philosopher tacked the following memo on his office wall:

- 1. Never use the word, "always".
 - 2. Always avoid the word, "never".
- (Thank you, KEN MYLOTT)

FUN

(29) THE PHILOSOPHY CIRCLE

SINCE early this morning I have been taking propositions from various treatises by Wittgenstein, typing them onto neat white squares of paper, and then gluing the squares in a column on a large sheet of cardboard. I have also glued an "anti-square" adjacent to each square, in which I have typed the same proposition with all the verbs negated. Here is a sample:

The world is everything that is the case.
The world is not everything that is not the case.

If there were no connection between the act of expectation and reality, you could expect a nonsense.

If there were a connection between the act of expectation and reality, you could not expect a nonsense.

Language must speak for itself.
Language must not speak for itself.

And so on.

Tonight the Philosophy Circle meeting at my house. Last week we met at Alice Dodd's apartment. The subject was "Alternatives to the Law of Excluded Middle." Alice Dodd's middle has been excluded, at least to me, ever since she started sleeping with Herbert Feist, the department chairman. Before she took up with Feist she was a logical positivist. Feist is a Kantian idealist—*Ding-an-sichlich*, and all that. I am a logical positivist, and during the meeting I insisted that the law of excluded middle was either true or it was not true. Tonight's subject is "Does the Philosophy of Wittgenstein Have a Content?" This is why I have been gluing my little squares. My idea is that if Wittgenstein's statements and their negations both seem equally true or equally untrue, then they have no content and we can go on to something else—anything else. I have also prepared the cheese and wine.

The doorbell rings. It is old Professor Lash. His main claim to fame is that he studied for a term in Cambridge when Wittgenstein was still alive. Once, when old Lash was drunk, he confided to me that while he was there Wittgenstein refused to talk with him. For some reason, Wittgenstein couldn't stand him. I tried to console him by telling him that if Wittgenstein were still alive he would be appearing constantly on the Johnny Carson show. "Here's Ludwig," I said.

Old Lash was scandalized. "Wittgenstein hated interviews," he muttered.

"But that was before television," I pointed out.

I helped him home, and before he got out of my car he recited a limerick that he said he had heard from G. E. Moore. I have always liked Moore's comment after reading Wittgenstein's thesis: "It is my personal opinion that Mr. Wittgenstein's thesis is a work of

genius; but, be that as it may, it is certainly well up to the standard required for the Cambridge degree of Doctor of Philosophy." The limerick, though, was not much good.

Pith! That's what it takes to get ahead in this world. There's no such thing as too much pith. Take the last maxim in Wittgenstein's "Tractatus": "Whereof one cannot speak, thereof one must be silent." Have you ever read such pith? Tonight that will be the password. No more disruptive remarks like the one I made at the last meeting, when I said that our meetings reminded me of the partial inverse of Lord Acton's maxim.

"What ever do you mean?" old Lash was good enough to inquire.

"It's that absolute lack of power corrupts absolutely—if you take my point," I explained.

Feist, who was presiding, looked a little liverish but didn't say anything. Alice Dodd's eyes began to flash the way they do when she gets angry. There will be none of that tonight. Let bygones be bygones. Water over the dam. Tonight I am going to be as pithy as the grave.

"White or red, John?" I say after I have taken Lash's coat. Once he has decided on a color for his evening's wine, he likes to stick with it.

"Red, if you don't mind," Lash replies.

The doorbell rings again. It is Alice Dodd. Her

cheeks are a healthy rose, and her long blond hair is neatly tied in a ribbon. She is wearing a tartan wool skirt in deep reds and greens. I think it is new. She looks around my living room. "George, you seem to be doing interesting things with your furniture," she comments.

"Yes," I reply. "I have sold most of it."

Before she can say anything, old Lash, who has already begun working on the wine, asks, "How is the book coming?" She and Feist are "bringing out"—or perhaps "bringing up"—a monograph on Kant's last major essay, "The Conflict of the Fac-

ulties." When Feist mentioned this to me I told him that I had never read that essay, because I had always assumed that it was a discussion of academic politics.

"While I have always admired Kant's sense of humor," I added, "I have never been entirely certain that it would lend itself to a pastiche on academic life. Did he ever write any light verse? You can tell so much about a philosopher from his light verse. Hegel had a wonderful touch." Feist did his thesis on Hegel.

The doorbell rings again. It is Albert Backen. Poor Albert is not tenured. Alice Dodd and I, in the days when she was still a logical positivist, once made up a plainsong that began with the verse

Poor Albert hath no tenure.

No ten-y-ure hath he.

No ten nor ure no ten nor ure hath he.

I am fond of Albert, but I worry about him. He wears his lack of tenure on his sleeve like a black band of mourning. "Come in, Albert," I say. "I am pleased you could come. We need young minds like yours." (Actually, Albert has never missed a meeting.) He looks up at me brightly. Perhaps I have heard something from the promotion committee. Old Lash interrupts, "Once, when I was visiting with Wittgenstein in his rooms in Trinity, he confided to me that—"

"John," I say before he can get any further, "I read recently that the only films Wittgenstein would see were Westerns. He felt a special affinity with Tom Mix. Did he ever mention that to you?"

The doorbell rings again. This must be Feist. Warren Drake, the only other member of the department to come to our meetings, has gone to Nevada for a divorce. I open the door. Bless my soul—it is Feist, and what a nice new sports jacket he is wearing. "A present from your wife?" I inquire loudly, so that Alice Dodd will hear. "We were just discussing Wittgenstein's obsession with Tom Mix. I think John was about to point out that this may have had something to do with Wittgenstein's sexual preference." (I have always liked the phrase "sexual preference." It conjures up in my mind an image of one of those Korean greengrocer's where the dear legumes are all tarted up in colors so bright that they look as if they have just come fresh from the embalmer. "What is your preference in lettuce?" asks the kindly grocery person.)

"Wittgenstein had no sexual preference," Lash remarks.

Before anyone has a chance to inquire further, Feist says, "Sorry I'm late. I've just come from the Dean's. Burning the midnight oil, you know."

"Well put, Herbert," I remark, noting out of the corner of my eye that at the mention of the Dean poor Albert

has turned white. "Is there anyone here that you haven't met?"

Feist arches his eyebrows slightly but does not say anything. He greets Alice a little formally and poor Albert hardly at all.

Feist takes a chair across the room from Alice. I am about to bring out my sheet of cardboard with its squares and anti-squares, but before I have a chance to do so Albert begins to talk. "There is a passage in Wittgenstein's 'Philosophical Remarks,'" he says, smiling winningly at Feist, "which has been giving me a good deal of trouble. Professor Feist, perhaps you could elucidate it for me?"

Oh, Albert, you poor bastard, I think. Feist couldn't elucidate the meaning of a telephone bill.

"I would be pleased to," Feist says condescendingly.

Albert reads, after pointing out that the passage is on page 110 of the little blue paperback edition we all have in front of us, "'I haven't got stomach-ache' may be compared to the proposition 'These apples cost nothing.'" He hesitates, expecting that Feist will have something to say. Nothing is forthcoming.

Albert continues, "The point is that they don't cost any money, not that they don't cost any snow or any trouble." He hesitates again. In fact, he has come to a dead stop and is peering intently at Feist. I can see that Feist has been taken completely off guard and is stalling for time, in the hope, perhaps, that old Lash will say something and rescue him. But Lash has now drunk nearly a full bottle and is not to be counted on.

"I should have thought—" Feist begins.

"Quite so," I interject.

"I should have thought," he goes on, "that within the general Hegelian warp and woof—"

Suddenly old Lash sits up and says, "I believe that the expression is 'Warp and Woof,'" after which he subsides seraphically back into his corner.

Alice tries to come to the rescue. "I think there is a misprint in the text. It should read, 'They don't cause any snow or any trouble.'"

"I am not sure that will wash," I say, "unless you are prepared to change the second proposition so that it reads 'These apples cause nothing.'" By now I can see that I have tossed pith to the winds.

Albert, who appears to be entirely oblivious of what is going on, and who, poor sod, really wants to understand Wittgenstein, adds, "I have gone through the 'Philosophical Remarks' with some care, and I have underlined all of Wittgenstein's references to apples. Here is one on page 132."

We all turn to page 132 and Albert reads, "'If I have 11 apples and want to share them among some people in such a way that each is given 3 apples, how many people can there be?'" Once again he looks to Feist and

draws a blank. He reads on: "The calculation supplies me with the answer 3."

I can see that Lash is collecting his thoughts and is about to say something. "I think that John wants to make a point," I interrupt.

"Wittgenstein was very partial to fresh vegetables," Lash explains. "But only in season."

There is a dead silence.

Albert, who somehow has the idea that it is his responsibility to say something, begins again. "When I was at Harvard . . ."

Oh, Christ, I think, the doomed son of a bitch really has a death wish. Doesn't he realize that Feist hates Harvard? The graduate school turned him down, and he had to do his graduate work in the Midwest.

Feist's right fist is clenched white. As dense as Albert is, he does appear to notice that something has gone terribly wrong.

"When I was in graduate school," he continues hesitantly, "Quine once told us—"

Before he can bury himself, old Lash comes unexpectedly to the rescue. "Young man," he says, gesturing with a half-filled wineglass, "it's very much like comparing apples and oranges."

God knows what old Lash has in mind, but Albert interprets this sibylline comment as a request for more passages dealing with fruit. He seems to have made a horticultural reading of Wittgenstein's entire opus. "Professor Lash," he says respectfully, "here is something about oranges in Wittgenstein's 'Philosophical Remarks' that you might find interesting. On page 276, toward the bottom of the page . . ." We all turn our blue books to page 276. "Wittgenstein writes, 'Admittedly it's true that we can say of an orange that it's almost yellow, and so that it is "closer to yellow than to red" and analogously for an almost red orange. But it doesn't follow from this that there must also be a midpoint between red and yellow—'"

"Exactly the sort of thing I had in mind," Lash comments.

I sneak a glance at Alice Dodd. In the days when she was still a logical positivist we would come back after a

session like this to my house, collapse on what was then my sofa, and laugh until we were in tears. "This, too, shall pass," I would say, echoing a comment I once made about a group of sophomores who were taking my survey course in modern philosophers. Now she is sitting upright in her chair. Her face is a mask. God knows what she is thinking. Feist is staring intently at the ceiling.

Albert goes on, "Here is something I came across last night in the 'Philosophical Grammar.'" He takes a fat red paperback volume out of his briefcase and opens it to a page he has marked with a thin sliver of paper. "What does the process or state of wanting an apple consist in," he begins.

What does the state of wanting Alice Dodd consist in, I think.

"Perhaps I experience hunger or thirst or both, and meanwhile imagine an apple, or remember that I enjoyed one yesterday . . . perhaps I go and look in a cupboard where apples are normally kept. Perhaps all these states and activities are combined among themselves and with others."

Feist has shifted his stare from the ceiling to his carefully polished left shoe. I am sure it has been polished by his wife.

Albert continues inexorably, "On page 140 of the 'Philosophical Remarks,' just above the diagram, Wittgenstein asks, 'Can I know there are as many apples as pears on this plate, without knowing how many? And what is meant by not knowing how many? And how can I find out how many? Surely by counting . . .'"

We all stare uncomprehendingly at the diagram. It resembles the skeletal structure of an especially rigid fish, and seems to have wandered onto the page by accident.

"Do you happen to have any apples?" Albert asks.

"Yes," I reply. "I think there are a few in the kitchen, but they are a bit past their prime." I was planning to give them to the department secretary.

"I need them to illustrate the next example, which is rather abstract," Albert explains.

I go into the kitchen and am rummaging about in a heap of uncertain

fruit, attempting to locate the remaining apples, when the kitchen door opens and then closes. It is Alice Dodd.

"Look at this curious hole," I say, pointing to a perforation in one of the apples I have managed to unearth. "Do you think that whatever made it was going from the inside out or the outside in?"

"Why did you sell your sofa?" Alice Dodd asks.

"I found it distracting," I reply. "The pattern on the slipcover was much too busy."

"I rather liked it," Alice Dodd remarks.

My, my, I think. What have we here? Perhaps Alice Dodd is finding that Kantian idealism is wearing a bit thin. But before I can explore the matter in more detail the kitchen door opens again. It is Feist. When he catches sight of the two of us his face turns the color of those extraordinary *asperges* that the French manage to grow entirely underground. When they dig them up they look like little shrouds.

"Herbert," I say affably, "Professor Dodd and I were just ducking for apples. Perhaps you would like to join us."

"I . . ." Feist begins. "No need to apologize, Herbert," I say. "Take a handful."

We return to the living room, apples in hand. Old Lash is now dozing lightly. That is the last we will hear from him. I will have to ask Albert to take him home. The four of us divide the apples into little piles, and Albert begins to read: "If I say: If there are 4 apples on the table, then there are 2 + 2 on it, that only means that the 4 apples already contain the possibility of being grouped into two and two, and I needn't wait for them actually to be grouped by a concept . . ."

At this point we each take four apples and group them into two and two. Feist is staring intently at his apples, although from time to time he sneaks an anxious look at Alice Dodd.

Albert continues, "This '*possibility*' refers to the sense, not the truth of a proposition. $2 + 2 = 4$ may mean 'whenever I have four objects, there is the possibility of grouping them into 2 and 2.'"

"Albert," I ask, "do you think the logic would work equally well with six apples? Are four apples absolutely essential to the argument?"

"I haven't tried it with six," Albert acknowledges.

I glance at Feist. He looks as if he is about to explode. The thought crosses my mind that perhaps he is going crazy. It would do wonders for the department.

He suddenly gets up to leave and, with a desperate look in the direction of Alice Dodd, announces that he has an early-morning appointment with the Dean.

"Before you go, Herbert," Alice Dodd says evenly, "we should settle on our next meeting. I propose that we have it at my place again and that the subject should be 'Do We Exist?'"

"Of course, of course," Feist says, and he leaves without saying goodbye.

WELL, they are all gone now. Alice Dodd and I helped Albert pack old Lash into Albert's car. Alice gave me an affectionate wink when she got into hers. Now, alone among the shards of decaying apples, I can take stock of the evening. On the minus side, I was never able to display my little tableau of Wittgenstein and anti-Wittgenstein propositions. No matter—I will use it in my course next spring. On the plus side, there is clearly a marked softening in Alice Dodd's Kantian idealism. Perhaps I can repurchase my sofa from the Japanese mathematician to whom I sold it.

The slipcover can always be changed to a somewhat less aggressive pattern.

As I am collecting the last of the apples, I notice that Albert has forgotten to take with him his annotated copy of Wittgenstein's "Philosophical Remarks." In fact, he has left it opened to page 64. Sure enough, near the top of the page there is another reference to apples. Wittgenstein writes, "If I wanted to eat an apple, and someone punched me in the stomach, taking away my appetite, then it was this punch that I originally wanted."

What an odd thought. What could Wittgenstein possibly have had in mind? I must ask Albert in the morning.

—JEREMY BERNSTEIN

FINANCES/CONTRIBUTIONS

- (30) Fat cats! And not-so-fat-cats: we welcome your contributions to the BRS Treasury. We are receiving fewer contributions than a year ago, and we have use for the money. Perhaps we have been negligent in not reminding you that the BRS does not (yet) pay its way on dues alone. In '81 dues covered only 2/3 of our expenses; we depend on contributions to make up the deficit. So, when you have some spare money, please consider sending some to the BRS. Any amount is welcome, in one, two, or three digits. Send it care of the newsletter, address on Page 1, bottom. Thanks!
- * (31) We thank these members for their contributions to the needy BRS Treasury: FREDERICK CLARK, STEVE DAHLBY, CAROLYN WILKINSON...and KATHY FJERMEDAL, who never forgets.
-

BRS BUSINESS

- (32) The Board votes on Sutcliffe's appeal. We mentioned last issue that the Directors were being polled on whether Sutcliffe should be allowed to appeal his expulsion (RSN32-6a). The Board voted "no".
-

FOR SALE

- (33) Members' stationery. 8½ x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell". On the bottom: "*Motto of The Bertrand Russell Society, Inc." \$5 postpaid for 90 sheets (weighs just under a pound, travels 3rd Class). Order from the newsletter, address on Page 1, bottom.
- (34) BR postcard. 4¼ x 6. Philippe Halsman's handsome 1958 photo of BR with pipe, 50¢ each plus 25¢. RSN30-44 shows it slightly reduced in size. Order from the newsletter, address on Page 1, bottom.
-

BRS LIBRARY

- (35) Films. The 7 Russell films listed below, each acquired through member contributions, may be borrowed by BRS members and responsible non-members. Each is 16mm. black and white. Rental prices are given below. A \$75 deposit is also required, per film, which is refunded when the film is returned, less the cost of shipping and insurance. Film rentals have a one week limit, except in unusual instances. Contact the Library as soon as a definite use-date is known. The Library would appreciate hearing about any other Russell films in private collections, other libraries, or broadcasters' files.
1. Bertrand Russell Discusses Philosophy.
 2. Bertrand Russell Discusses Power.
 3. Bertrand Russell Discusses Mankind's Future.
 4. Bertrand Russell Discusses the Role of the Individual.
 5. Bertrand Russell Discusses Happiness.
- Nos. 1-5 are 13½ minutes each. Russell is interviewed by Woodrow Wyatt. A transcript for each can be found in Bertrand Russell Speaks His Mind (Cleveland:World Publishing Co., 1960). The audio portion of No. 1 is also available on the LP "Bertrand Russell Speaking" (Caedmon TC-1149). Rental: \$25 per film plus \$75 deposit per film.
6. Bertrand Russell.
- No. 6 is 39 minutes long. Interviewed by Romney Wheeler, BR deals with autobiographical, philosophical, and political topics. A transcript is available in "A Life of Disagreement" in "Atlantic Monthly", v. 190, August 1952, pp. 51-54. Rental: \$40 plus a \$75 deposit.

7. The Life and Times of Bertrand Russell.

-----No. 7 runs 40 minutes. Produced by the BBC, for Russell's 90th Birthday Celebration, in 1962, this documentary uses a biographical format. It interviews several prominent British figures as well as Russell, and concentrates on the threat of nuclear war and BR's work to prevent such folly. Rental: \$40 plus \$75 deposit.

Please send orders or inquiries to Jack Ragsdale, address on Page 1, bottom.

OBITUARIES

(36) Will and Ariel Durant. "I am sure that all our North American members know that this distinguished couple died this past fall," writes BOB DAVIS. He continues:

She was 83, but died first. He died 2 weeks later, shortly after his 96th birthday. This is a brief memoir of my experiences with them.

I made my first contact with their minds as a teen-ager when I read The Renaissance, part of their series, The Story of Civilization. Over the years I read all 11 volumes of that series, as well as their earlier and later books not part of the series, some 19 volumes in all. In 1976 I wrote them, saying how enjoyable and valuable I found their books. I mailed the letter to their publisher and scarcely expected a reply. Ten days later I received a reply, which said that my "kind comments were a precious boost to our egos", and I discovered that they lived only a few minutes away. We exchanged a number of brief letters, mostly about history and Russell. Durant advised, when reading The Decline and Fall, to "enjoy your Gibbon slowly. What a lordly style! I will forgive you if you skip some of the pages about the theological disputes of the early Christian centuries." He also gave some advice on Welsh history, and told about his visit to BR at his Welsh hideout" in 1949.

I invited the Durants to the 1977 BRS banquet -- we were not, alas, giving our annual BRS Award at that time -- and they accepted. Some of you recall that banquet and their recollections of BR. I drove them to the banquet, and in the car I got some extra (mischievous) details. Later that evening, I wrote this memo to myself:

On Saturday, February 5, 1977, the Durants attended the BRS banquet. I called for them. In the car, and later at the banquet, they told stories from the 1920s about BR. He visited them several evenings, during his lecture-tours in this country, and he debated Will on several occasions. The following stories are an amalgamation of what was told in the car and at the banquet. There were more details at the banquet, but more risqué ones in the car.

The first story was Will's, about the time BR visited them in New York for the evening. BR asked Ariel to take him to his hotel. BR did not know that the driver of the car was her brother. In the car, he took her hand and tried to persuade her to go for a ride in Central Park, as he worked his way up her arm. He told the driver to go through the park; the driver turned around and told him firmly that he was taking him to his hotel. BR never did figure out why the driver was so impertinent. In the car, Will told this with great zest and humor -- sort of teasing Ariel. She teased back, saying, "If I had gone, where would that leave you?" He replied: "I would have lost my front row seat."

Ariel obviously liked BR. At one point Will said no woman was safe with BR. Ariel protested that that cheapened her, that BR liked women but had taste.

Later I got the famous Ariel Durant "quick shuffle" when I called at their house to discuss a business proposition. I had what I thought was a good idea; noting how effectively BR had used film and TV to further his ideas and influence, I felt that Durant should do the same. Their "The Lessons of History" (1968) contains discussion of 12 questions of importance in historiography, such as "Race and History", "Morals and History", "Economics and History", etc. I was going to propose a TV series for PBS based on the 12 questions.

Here is how the quick shuffle worked. (It was a method she had perfected over 60 years, to minimize interruptions of his time. The details are in their autobiography.) She meets you at the door in what appears to be a very bad mood, and with evident distaste, and grudgingly takes you in to Will, who is all warmth and smiles. While I explained the idea to him, she repeatedly interrupted with comments like, "Why don't they just read the books?" Unfortunately they were both insensitive to film as an educational medium. I realized he had last been a full-time teacher in 1911, well before the advent educational film. There was a bit more conversation, and then I was escorted out by Ariel, who then turned on the charm (as per her method) which was considerable. And so I found myself on the doorstep in a bit of a haze at the speed of it all: total elapsed time 10 minutes!

Their house is old Spanish style in the California manner. I would love to own and remodel it, as it has great potential for elegance and ease of living. Will's room, at that time, was off of the front door and was extraordinarily stark. I felt I knew what a monk in a cloister felt like and was chilled by its effect. The room was bare except for an army cot, and a desk at which he sat. This is basically the way he had lived in order to put out all those books. It's what Ariel meant when she said he was "Catholic from the neck down." His eating habits (he had told me on another occasion) were of the same sort: simple food, and very little. He didn't eat much meat but was not a vegetarian. I mentioned Schopenhauer's remark that he had tried

vegetarianism and had lost vigor and had had to re-write everything he had written while on the diet. Durant said the same thing had happened to him.

At the banquet I was embarrassed by a student who discussed their impending deaths with them, saying what a waste it would be. Durant must have experienced a lot of this because, in his infrequent appearances around town, he raised the subject himself — saying how he did not fear death, and that death was a part of life. Death makes life complete, he said, and offers a necessary discipline to get on with our work. It makes way for the fresh and new, and renews our world.

A remarkable man, and a remarkable couple.

ABOUT OTHER ORGANIZATIONS

(37) END Campaign criticism continues. To review the situation: The Bertrand Russell Peace Foundation campaigns for European Nuclear Disarmament (END) (RSN26-36); the Campaign is endorsed by "The Bulletin of the Atomic Scientists" (RSN29-20); Elizabeth Young objects to the campaign and to the endorsement (RSN30-45); the Peace Foundation responds to Young's arguments (RSN31-48). Now Young responds to the Foundation, in the "Bulletin" (Nov. '81, pp.58-60):

Young's response: Ken Coates dislikes and disputes my mild suggestion that the naivetes of END are "not quite innocent." He also disputes three statements of fact I made in that brief letter. Let me deal with these first.

• The END appeal states "over the years public opinion has pressed for nuclear disarmament . . . this pressure has failed." I commented that this statement is quite untrue; there has been public hope that detente will come about but there has been virtually no public pressure for disarmament.

Between the partial test ban of 1963 and the United Nations Special Session on Disarmament in 1978 there was indeed pressure from some parties other than "public opinion"—the words used in the END appeal; from public opinion there was no pressure at all and it is, I think, quite invidious for END to claim there was and that it failed. In the last two years public pressure has emerged in Western Europe and it is the nature and purpose of this recent pressure that we are discussing, *not* the desirability or necessity of general and comprehensive disarmament, which I take to be self evident.

• The appeal states "We must act together to free the entire territory of Europe from Poland to Portugal from nuclear weapons." I commented: "the entire territory of Europe" goes as far as the Urals. Coates suggests END/CND has "answered" this point elsewhere. It isn't really a point you can answer; it's just a fact which you either know or don't. Even Leonid Brezhnev recognized this, by agreeing in his February Report to the Sixteenth Congress of the Communist Party of the Soviet Union that Europe-wide confidence building measures should now reach to the eastern frontiers of Russia, that is, to the Urals. (The Minister for Defense and others are now trying to withdraw this "concession"!)

Certainly Europe's best hopes lie in the negotiated extension of confidence building measures, binding, verifiable, militarily significant, throughout our continent, as has been proposed by the West with neutral support at the Madrid Conference on Security and Cooperation in Europe, followed by a European disarmament conference that their successful operation would allow.

END's belief in a nuclear free zone in Europe "from Portugal to Poland" is nonsense, not because of the U.N. Special Session on Disarmament Final Document's welcome to nuclear free zones, but despite it. "Nuclear free" is not "nuclear safe," and Soviet pledges and signatures on documents are not particularly binding: consider Soviet military activity in the internationally demilitarized Svalbard archipelago, its passing of aircraft carriers through the straits from the Black Sea in defiance of the Montreux Convention, its military invasions of East European countries and of Afghanistan despite the U.N. Charter. And, of course, its apparent contempt for "Basket Three" undertakings at Helsinki—those on Human Rights.

Europe is not some distant peninsula, insignificant and militarily unimportant. Europe is where a match lit in the wrong place can blow up the world. The superpowers as military entities are not and cannot be indifferent to Europe. In any war between them, a neutral Western Europe would be fought for and conquered in the earliest stages. It is a fact of geography that the desirable aircraft carrier consisting of Western Europe—and particularly Britain—would be boarded or shot out of the water at the earliest moment possible in any war, nuclear or conventional. Were we neutral and unarmed, the process would be all the quicker and all the bloodier, as each side sought to prevent the other from setting up its missiles on our land.

Coates says "the call for a nuclear free zone is directed against the threat of limited" nuclear war. END/CND seems to be alone, with a few crazy theorists, East and West, in believing that nuclear war can be limited. Certainly, neither the United States nor the Soviet governments do, nor does anyone who has any idea of the effects of nuclear weapons. Indeed, the mind boggles at the idea that declaring Europe or Western Europe "nuclear free" could somehow make us all safe in a war between the United States and the Soviet Union. Non-Soviet Europe will be safe only when the process of general and comprehensive disarmament is well on its way: perhaps quite long after other parts of the world will be able to feel safe.

• The appeal states: "We offer no advantage to either NATO or the Warsaw Alliance." I commented that "by excluding European Russia from 'Europe' the Soviet Union would have a monopoly of nuclear weapons in Europe. They would also retain their conventional superiority."

Of course if END *could* operate equally in Eastern and Western Europe, it no doubt *would*. The deduction is impeccable but the premises are faulty because it cannot operate in Eastern Europe. The idea of END operating in Eastern Europe can be entertained only by those who haven't noticed or don't care that the Soviet presence in Eastern Europe is different in kind and purpose from the American presence in Western Europe. Not only have I already "pinpointed" this "fallacy"; so have East Europeans in commenting on END, both exiles and pseudonymous dissidents from inside Eastern Europe.

E.P. Thompson, guru of the campaign, has said a CND badge was recently seen in Warsaw; hardly, one would suppose on a *bona fide* member of Solidarity. The evolution of Poland's new-found freedoms depends entirely and utterly on keeping stable

the precarious balance between the risks the Soviet government perceives: on the one hand, the risk of intervening and being opposed by the Polish armed forces, thereby perhaps starting World War III; and on the other, the risk of not intervening, and seeing the collapse of "proletarian internationalism" as well as of "irreversible socialist achievements" and all sorts of other Leninist claims and doctrines. Solidarity knows only too well on what a knife edge it is performing its revolution; it seeks to curtail all possible signs of anti-Sovietism. The least we can do for them now is to refrain from inviting them to leave the Warsaw Pact. Massive Soviet deployments all around them, on land and sea, show clearly enough that it would be war if they tried it.

As long as it is confined to Western Europe, END's neutralism is very welcome to the Soviet government and it is no "innocent naivete" on the part of END's leadership tacitly to imply that it does not enjoy wholehearted Soviet approval and the unqualified support of Soviet-supported bodies. It is not the support that is culpable but the implication that it does not exist, and the pretense that all the riders on the END/CND bandwagon are straightforward, evenhanded believers in multilateral disarmament, in democratic process, in the freedom of the press, freedom of information, and so on. Some are; others, and they appear to be the more effective, are not.

"Objectively," to use an appropriate Marxist term, END's aims are not even-handed as between East and West. The disarmed and neutral Europe they seek would not be a haven of liberal achievement and enterprise, but a westward extension of the Soviet glacis, enjoying certain licensed liberties in the shadow of overwhelming military power and "proletarian internationalism." It is small wonder that END's leadership

tends to avert its eyes from the Soviet Union's totalitarian doctrines and practices. It is infinitely more critical of the United States, forgetting that the American people were able to force their government to withdraw from Vietnam and to get rid of a corrupt President.

END/CND has had its considerable popular success in Western Europe in

the last two years, because there has been no other leadership available for the thousands who are deeply — and rightly — offended and frightened by the arms race.

This period may now be ending. In France, the undeniably Socialist President Francois Mitterand is no appeaser or unilateral disarmament to the Soviet government's alarm, he is em-

phasizing that verifiability is the cornerstone of arms control and disarmament in Europe. Helmut Schmidt's determination that there shall be East-West negotiations on Euro-strategic missiles is at last beginning to pay off. In Britain, the Left has split, in part on the issue of "unilateral" — one-sided — disarmament, which the old Labour Party appears to be adopting. The newly-founded Social Democrat

Party is multilateralist; in alliance with the Liberal Party, it is now running away with the opinion polls and by-election votes.

Their doctrine is likely to be, "Neither red nor dead; on with disarmament!"

The Fellowship of Reconciliation and the American Friends Service Committee remind us of "man's peril", and urge us to support the steps they propose in the following open letter:

OPEN LETTER TO THE AMERICAN PEOPLE

For the past thirty years, a major proportion of our country's resources, technical skills and scientific expertise have been devoted to weapons of mass destruction. The nuclear arsenals of the United States and the Soviet Union have grown and the sophistication of the weapons on both sides has increased dramatically.

Prominent scientists now warn that the "balance of terror" is unstable. Nuclear war, until now considered unthinkable, could occur within this decade.

The arms policies of Ronald Reagan threaten to bring our nation to the brink of economic ruin and nuclear war. A total of \$1.5 trillion will be spent over the next five years on a buildup of strategic and conventional forces unprecedented in peacetime. This radical pursuit of the goal of military superiority is committing us to build hundreds of new bombers, missiles and submarines with a first-strike capability.

The Reagan plan pushes us headlong through a window of real vulnerability, as a nation and a planet. The administration claims it has a "mandate" for this risky and expensive arms buildup in the face of an ominous Soviet threat. Yet it was the United States which failed to ratify the Strategic Arms Limitation Treaty. At this point, the two superpowers have achieved a rough parity in their nuclear forces. The Reagan politics of fear and parallel Soviet attitudes are driving the arms race forward in ways that divert attention from growing economic problems in both countries.

There is no mandate for nuclear war. The opposite is true: polls show that Americans overwhelmingly favor nuclear disarmament. Half of those polled favor a total ban on the building of new weapons and destruction of all nuclear weapons already built. (Gallup Poll, June 21, 1981.)

To fund the Reagan arms budget, severe cuts have been made in social programs providing basic necessities such as food, health care, and education. Growing unemployment — especially among minorities and the young — and ever-higher inflation and interest rates pose more of a threat to the average citizen than any foreign power. Proposed increases in military spending will only deepen the economic trap into which we are moving.

The Reagan government tells us that people in other nations look toward the United States to maintain a "margin of safety" over the Soviet Union. Yet our allies in Europe are reluctant to serve as the surrogate battlefield for the next war, and instead urge arms negotiations and a maintenance of detente. In West Germany over 1½ million people have signed petitions against the stationing of American Pershing II and cruise missiles on their soil. There have been serious concerns raised about U.S. plans to build the neutron bomb, and the heightened risks of a so-called "limited" nuclear war.

It is time for Americans from all walks of life to unite in opposition to the mean-spirited and dangerous domestic and military policies of the Reagan administration. It is time for us to join together in favor of genuine security, built on a healthy economy and global framework of peace and disarmament.

We urge all those who refuse to be swept along by the tide of fear and militarism that has become the mark of U.S. policy in the 1980s to join this movement. We urge our fellow citizens actively to support vigorous and visible efforts to reverse this trend and support the following:

- **Substantial cuts in the proposed U.S. military budgets** for fiscal years 1982 and 1983 and a commitment to economic conversion, redirecting resources and technology towards solving urgent social and urban problems, and re-funding essential human needs programs now being cut or eliminated.
- **A declaration** by the United States that it would never initiate a nuclear war nor be the first to use nuclear weapons in a future conflict, abandoning the building and deployment of first-strike weapons systems.
- **Confidence-building measures**, such as an immediate ban on all flight-testing of new strategic delivery systems like the MX missile and cruise missile and B-1 bomber.
- **An immediate cut-off** on the production of fissionable materials for bombs and a pledge not to use civilian reactors to produce materials for nuclear weapons.
- **A freeze on underground nuclear explosions** and a renewal of negotiations with the Soviet Union and other nations for a comprehensive test ban treaty.
- **Suspend all plans to deploy** ground-launched cruise and Pershing II missiles in Western Europe while negotiations for reductions in theatre forces on both sides are underway.

Finally, we urge our fellow citizens to mount a **public appeal** to President Reagan and Soviet Premier Breshnev to announce at the **United Nations Second Special Session on Disarmament** in June 1982 a **moratorium** of 2-3 years on the production and deployment of any new weapons systems or additional warheads as a first step toward significant reductions in current strategic systems. Only such creative action on the part of the superpowers can offer a way out of the nuclear trap.

The arms race poses a challenge to which we must respond with foresight, courage and hope. Together we can work to halt and reverse the arms race and, in the best tradition of American democracy, take back control of our nation, its economy and foreign policy.

PERIODICALS RECEIVED

- (39) "Adelante" (Ano II,#3), all in Spanish, 16 pages, 25¢, is published by the Partido Cubano Democratica Socialista. The address of this anti-Castro group is PO Box 350805, Miami, FL 33135.

PUBLICATIONS RECEIVED

- (40) A Socialist Calendar is quite beautiful. It is large, 23 x 15 inches; one month per page; top half of each page reproduces a painting in handsome color. Most of the paintings show workers working; one shows them striking. Days of the calendar commemorate events in socialist history. (January 14,"Independent Labour Party formed in Bradford, England, under Keir Hardie." September 21, "10,000 Filipinos defy government order and hold 'freedom march'. Eight people killed.") Published by the Boag Foundation, Ltd., 576 Keith Road, West Vancouver, BC, Canada V7T 1L7. Price not known.

An amusing sidelight: some very prominent American capitalists not known for their socialist leanings have apparently lent a hand to this socialist undertaking. The acquisition of one of the paintings— The Cotton Pickers, by Winslow Homer — "was made possible through the Los Angeles County Museum Trustees." The Trustees are listed and include Robert O. Anderson (head of Arco), Justin Dart (Pres. Reagan's friend and head of Dart & Kraft), and Dr. Armand Hammer (head of Occidental Petroleum).

LAST MINUTE ITEMS

- (41) Room reservations, '82. To reserve your room for the June 25-27 BRS Annual Meeting, at Scripps College, Claremont, California, send \$70 to Jacqueline Berthon-Payon, 463 W. 10th St., Claremont, CA 91711. That covers room and board for 2 days (½ day Friday, full day Saturday, ½ day Sunday). There may be an extra charge for a single room (if available) and for air-conditioning (if available), and for the Saturday night banquet.

Notice that we, as individual members, are not making our reservations directly with the College. We make them through one of our own members, Jacqueline, who will tell the College how many rooms (and meals) will be needed.

In the May issue, we expect to provide additional information: *Deadline for making reservations. *Deadline for cancelling reservations, for full refund. *Costs of single room, air-conditioning, and banquet. *Cost of meals only (for those who don't need rooms). * How to get there from airports, bus terminals and railroad stations. *Where to register, when you first arrive. *Where to go for Friday night dinner.

* If you plan to attend, it will be helpful if you make your reservation soon.

BRS Annual Meetings are enjoyable events, and rewarding in many ways. Try to make this one, if you can.

Dora Russell on Humanism today, in "The Freethinker" (U.K.) (January 1982) pp.8,9,15:

(42)

The dangers facing humanity in the nuclear age cannot be underestimated. Is it surprising that a generation that has grown up in the age of "the balance of terror" is highly critical of science, an attitude that is encouraged, for the wrong reasons, by religious fundamentalists. Dora Russell, a veteran campaigner for peace, women's rights and social reform, examines these questions.

As *The Freethinker* enters its second century, it and the National Secular Society meet challenges by antagonists who are likely to prove as daunting as the enemies faced by 19th-century pioneers like Charles Bradlaugh, Annie Besant and G. W. Foote.

The human race is confronted not only by the old struggle for freedom of thought but, under nuclear threat, for sheer physical survival. Humanity is now locked in a grim conflict that is being waged at all levels; in politics, economics, ideologies, religion, philosophy, science, ecology. Yet so departmentalised are our minds and our social structure, that contenders involved in one field are too often unaware that the same struggle, on precisely the same issues, is going on in all the others. Are humanists fully awake to what threatens us all, and how important it may be to give a lead, seek allies and sound the alarm to arouse the sleepers?

In the issue of *The Freethinker* for November 1981, some articles indicate the directions from which the attack is coming. There is the usual entrenched faith of the established Christian churches, observing, in the customary Armistice Day ceremonial, their adherence to the doctrine of just wars. Today there are many sincere Christians, already pacifists, who are joining CND. But despite their creed of brotherly love they would still not subscribe to the sentiments of John Lennon's song: "Imagine there is no heaven, no separate countries, no religions to die for."

On the contrary, President Reagan's "twice born" evangelical Protestants are out to crush the humanists and sweep the country in a vast conversion to faith in America as god's favoured nation, destined to rule the world. For these "creationists" the scientists' theory of man's evolution is so much nonsense, but science is splendid when devoted to preparations for war.

The non-Christian religions of the Middle East are newly athirst for killing and dying and persecuting; direct opposition to all that America stands for. Then there are the Marxist-Leninist believers with their varying sects in Russia and China.

In Britain, politicians, economists and trade unionists are split on the dilemmas of disarmament; querying whether to spend money on nuclear weapons or welfare, war or peace, death or life. The clash between these two claimants on the national wealth is not new. It has merely reached its present critical stage because of the immense growth of the contending claimants. On the one side the hungry millions of the world (as well as our own now more demanding citizens); on the other, a vast number of ever more diabolical, scientifically ingenious and horribly expensive weapons with which wars may now be waged.

No country or people can now escape that ultimate war, to which persistence in our way of life and belief has brought the pursuit of rivalry, prosperity and power, supported by the expansion of scientific discovery and the resultant industrial technology.

Revolt by the younger generation against science is the natural outcome of the bomb on Hiroshima, followed by the mounting tension of the so-called "balance of terror". In addition, the young now realise that the boosted technology, with automation, is rendering human labour redundant; consequently not only they, but even their fathers and mothers, are out of work. In such times people tend to turn to the comforts of religion. And the holders of power are well satisfied that the populace should

be distracted from the subversion that might otherwise result from their frustration and discontent.

Some believers return to the neglected churches. The religious teaching in the schools (to which agnostics and atheists justly object) may still indoctrinate, but it no longer has an emotional appeal that inspires the young.

The Failure of Religion

Strenuous efforts are being made on television and radio to reclaim their parents. The BBC is very active. Three pages a week in the *Listener* offer to teach us about the remission of our sins, salvation and the mysteries of theology. Television provides us with the unedifying spectacle of masses of grown men and women bawling about Jesus while prancing and stamping like pop groups.

We are also shown the orgiastic antics (significantly blindfold) of those who follow a new religious practice taught by a guru, which for younger people appears to be a more popular outlet for the emotions and a means of saving your own soul.

It is with these young men and women, above all, that we should be concerned. What do their elders offer them but religions in which they can no longer believe, or faith in that rationalism and science which, in their view, have brought them to the edge of destruction and do not even offer the minimum security of employment?

It is no use talking to young people about the wonders of electronics, or the splendid technology that is going on, to make some people, but probably not them, exceedingly prosperous. What they see is a society in which the best scientific brains—and the most money—are devoted to research and industry for war purposes, and an education increasingly concentrated on the limited amount of manpower that will be needed to serve the scientific elite. They may well ask the one vital question: "Since the statesmen and scientists are so clever, why do they not put an end to war?"

The young, and to some extent also their parents, are starved of expression of feeling, of creative outlets, colour, adventure, variety, change. With nothing but small subsidies from the State, how are they to fill their days of enforced leisure? Sex (for the most part perforce without parenthood), and the new style religions are all that they have left. Some, in desperation, take to violence in the streets, some take their own lives.

Fanny Cockerell, of the Progressive League, in her article (*A Dormitory of Bishops*, November 1981), touches on this problem of the need to have something to believe in and for the comfort of fellowship with other human beings. As one who supported the foundation of the League, who were welcomed for their conferences at my school, I am glad to know that *Plan* still lives and the League is still active. They, among those of us who are humanists, know well enough that we had to fight for our causes; free speech, birth control, divorce and abortion law reform—against brutal opposition from organised religion. We know too of the great benefits brought by science, however much overshadowed by the prostitution of science to war. We have consistently campaigned against armaments, and longed to see science in alliance with peace. All that we strove for is now clearly under attack by the organised religious hierarchies who will use every device of propaganda and repression to reimpose their authority, attributing all the world's evils to man's sinfulness and disobedience to god.

Ignoring Reality

The new religions—while perhaps some avoid postulating god, and discard sin—offer instead an almost sexual adoration of their human leader. They retreat into personal isolation, expressed in the quietism of meditation, or else in the deliberate discarding of all inhibitions and the fulfilment of the personality with a degree of self-indulgence which resembles—is perhaps attributable to—the

intensely selfish individualism that is characteristic of the Western so-called free world. In that free world, even now, moves against democracy endeavour to repress and outlaw strikes, whilst in that so-called unfree world, the democratic right to strike is being asserted and defended.

With such social issues, with poverty, with the threat of nuclear war, the followers of the new religions are not at all concerned. Their argument that the self must first be fulfilled before feeling or showing concern for others is no more than pretence. In actual fact, relatives and friends soon find that absorption in the new religions is destructive of all other sympathy and ties.

What seems to me important is that we are, after all, social animals, and it is only by knowing and helping and being helped by others, that we ourselves realise what, in modern jargon, is called our potential. Religious communities, like convents and monasteries, have always existed for those who prefer to retire from the tumult of the secular world. But the soul-seekers of today should realise that the nuclear world is not like that of the dying Roman Empire. If, by chance, some survive the nuclear holocaust, on a tiny islet, the destroyed and poisoned land will be unproductive and uninhabitable. There is no escape.

God alone, the religious might say, can and will resolve the intolerable confusion which human beings have brought upon themselves. We might reply that the very notion of a god was evoked by men and women in order to evade their own responsibilities. It is time for humanity to reach maturity and at long last assume responsibility—as far as it in us lies—for creating a tolerable existence for everything that lives on our planet.

Humanity's Opportunities

In humanism I have always felt the warmth of association with all organic life, with our roots in the productive soil of our earth. My dissent from god and religion arose from its denial of this very life which animates plants, birds, animals and humans. If god created all this, then why are his worshippers commanded to reject it all, as savage, bestial, lust and sin?

Human beings have developed remarkable gifts of imagination and rational thought. These come from the living organisms that are ourselves and the energy that moves us, as it moves everything else, to grow, create, reach old age and die. With all our faculties we shape our image of the external world. Imagination serves our dreams and aspirations; it may also serve our fears, reason, our curiosity as to what is really real, which may also act as a bridle on our imagination. If we, and our statesmen, were to apply to international politics the long-suffering patience, imagination and honesty of purpose of the artist or scientist in their work, we could save our world from disaster and bring about some tolerance, harmony and peace. At this time this is more important than detailed argument about our origins, or from where the force of creative life comes.

It seems to me as if, at present, fear is driving many to evade the issue. Radio and television provide another escape. The people seen and heard on the interminable television serials have become more real to those who watch them than their fellow citizens, or fellow travellers on this planet. We live in a real world, which is in great danger from our ignorance and foolish mistakes.

Humanism should be active. It has much to contribute. Above all it is not a new religion with doctrines, merely the plea that customs and beliefs are personal and never justify persecution or indifference to others. If we examine ourselves and reflect on what power-seeking, killing and fear have done to a world of plenty and great beauty and its peoples, we may learn how it is possible to live as human beings, and take courage to do so.

(Thank you, BOB DAVIS)

"Free Inquiry" will examine the Bible, April 16-17. Here are excerpts from the news release:

"Science, the Bible, and Darwin" a symposium to be held at the Amherst Campus of the State University of New York at Buffalo on April 16-17, will mark the centennial of the death of Charles Darwin. . . . distinguished scientists and scholars will discuss the relationship between science and religion. . . . The conference is sponsored by Free Inquiry magazine in cooperation with the University's departments of Philosophy, Anthropology, Sociology, and Biology. Among questions to be explored at the conference are:

1. What is the relationship between science and biblical revelations?
2. To what extent can the Bible be used as an authority for knowledge about nature, ethics, and politics?
3. What do modern Biblical scholars and scientists have to say about the origins of the Bible?
4. In what ways is the Bible contradicted by scientific evidence?
5. What is valid and what is invalid in Darwin's work in the light of modern science?
6. How do Biblical accounts of creation stand up when compared with the scientific evidence for evolution — as drawn from geology, anthropology, biology, and other disciplines?

Let Free Inquiry know if you plan to attend, or if you want more information. 716-834-2921; 1203 Kensington Av., Buffalo, NY 14215. Reserve rooms at the Marriott Hotel, 1340 Millersport Highway, Amherst, NY 14221; 716-689-6900.

Humanist Essay Contest is announced:

NORTH AMERICAN ESSAY CONTEST

For Young Men and Women of Good Will *TELL A FRIEND*

IF YOU ARE AGE 29 OR UNDER AND HAVE SUBSTANTIAL CONCERN FOR HUMANS AND THE FUTURE, YOU ARE INVITED TO SHARE YOUR THOUGHTS AND VISION.

SUGGESTED TOPICS

Insights on:

- Steps Toward Humanizing the World
- Using Science for Human Goals
- Ways to Surmount the Divisiveness of World Religions
- Bringing Inspirational Aspects of Evolution, Biology, Astronomy, or Other Sciences into Classroom Courses
- Methods I Have Used in My Teaching Which Encouraged Consideration of Others and Thinking About Ethical Problems
- Developing a Scientific and Humane Personal Philosophy
- Self-Fulfillment Through Service to Others
- or other related topics will be welcomed.

The purpose of this contest is to encourage thinking which can help bridge the gap between the practices of established institutions and the practical creative insights of the oncoming generation. The future will be shaped by what is in process. Here is an opportunity to provide your input.

Winning essays of not more than 2,500 words will be published in THE HUMANIST and other media.

PRIZES

FIRST PRIZE — \$1,000

SECOND PRIZE — \$500

THIRD PRIZE — \$100

If with your submission you mention a teacher, librarian, dean, or adviser (with address) as instrumental to your having entered your essay, and if you are one of the winners, we will recognize that individual with a special award including \$100.

PROCEDURE

Contest Procedure:

- Manuscripts must be typed and double-spaced
- Entries must be postmarked before July 15, 1982
- Send to: THE HUMANIST, 7 Harwood Drive, Amherst, NY 14226
- A panel of distinguished judges, to be announced later, will review the entries
- Winners will be notified by November 15, 1982
- THE HUMANIST reserves the first right of publication
- Entries will not be returned.

Each entrant will receive a complimentary one-year subscription to
 THE HUMANIST 

(45) Lamont on BR. Some excerpts from Corliss Lamont's recent autobiography, Yes To Life (NY:Horizon Press,1981), mostly about BR:

Neuroses and radicalism (p. 43)

When I asked myself how the happiness of humanity could be achieved and evils such as war and poverty overcome, I used my intellect as best I could and came to certain conclusions, such as the necessity of democratic Socialism, for the actualization of those ends. I thought it absurd to attribute Oedipus hatred of my father and guilt feelings about his wealth as the main causes of my loving humanity and supporting Socialism.

I dearly loved and greatly admired my father. We argued about the important issues of the day, but I argued just as much with my mother; our family dinner table, as I have said, was a free-for-all in which everyone participated in a friendly and tolerant spirit. In any case, it is a social good that children should to some extent disagree with their parents. This is the key to progress in any community or country; and it stimulates constructive criticism by each new generation.

In the 1930's, in the middle of the Great Depression, Socialism as the way out was widely discussed and proposed by thousands of middle-class intellectuals and proletarian workers with nobody claiming that they had Oedipus motives and other psychoanalytic rigamarole, frequently used by the Establishment to try to show that radical proposals are irrational and merely emotional outpourings of suffering and discontented people.

Regrettably two eminent British radicals contributed to the psychoanalytic attack on radicals. Philosopher Bertrand Russell stated that while he himself believed that the rational arguments for radicalism are overwhelming, the fundamental incentives that lead persons, especially "educated men," toward the Left are non-rational and emotional. "Rubbish!" say I, to use a favorite British expression. Author John Strachey recounts that at his first meeting with Russell, the latter greeted him with the words: "What's the matter with you? I had a neglected childhood." And Strachey goes on to say, "Many and deep, I am sure, are the personal neuroses which have made me into a Communist."

I have never accepted the Freudian idea of an Oedipus complex that affects all children. I grant that some children develop antagonism or hatred toward one or both parents: others may suffer from different sorts of neuroses, resulting from social unpopularity or sexual maladjustment. Such troubles are important stimuli in thought and action, but do not in themselves determine the direction in which a person may turn in order to solve personal dilemmas. Individuals subject to such pressures do not necessarily land in the Socialist camp; they may enter the Catholic Church, become storm-troopers of Fascism, commit suicide, join encounter groups, develop into alcoholics, support the labor movement and Socialism, or become conservatives or radicals or apolitical.

The 3 greatest (p.80)

Three men whom I consider the greatest philosophers of the twentieth century were all essentially Humanist, although they did not choose that word to describe their position. John Dewey preferred to call himself a humanistic Naturalist; Bertrand Russell termed himself a Rationalist; and George Santayana wished to be known as a Materialist. While these thinkers differed on technicalities, their comprehensive philosophy was definitely that of naturalistic Humanism.

Civil liberties & Vietnam (pp.83-84)

Like Dewey, Bertrand Russell took a Humanist stand on the main issues in philosophy and was active in public affairs, especially in the struggle for peace and the eventual abolition of nuclear weapons. His literary style was eminently readable and often caustic in criticism of some philosopher or other. He was one of the few philosophers who ventured into the precarious realm of sex relations. His notable book on the subject, *Marriage and Morals* (1929),¹⁴ advocated a liberal and rational approach.

During his last decade I had the privilege of visiting Russell twice at his home in Wales. In his eighties, though somewhat spare physically, his mind seemed as acute as ever as he discoursed on the burning issues of the day. I was much gratified when he wrote a foreword to my book on civil liberties, *Freedom Is As Freedom Does* (1956).¹⁵

In December, 1962, the Emergency Civil Liberties Committee presented its annual Tom Paine Award to Earl Russell in absentia at its yearly

dinner to celebrate the ratification of the Bill of Rights by Congress. I made a brief presentation speech of appreciation on behalf of the Committee, and Russell sent me a gracious acknowledgment:

Civil liberties & Vietnam
(continued)

Dear Dr. Lamont,

It was a great pleasure to receive your kind letter of December 13 and to read your presentation speech for the Tom Paine Award.

My disappointment at not being present at your dinner was more than matched by my delight in noting both the generosity and the wisdom of your remarks.

I once wrote of Paine that "... he set an example of courage, humanity and single-mindedness." I am indebted to the Emergency Civil Liberties Committee for the honour it has conferred by associating me with the memory of Tom Paine.

With warm good wishes for the New Year,

Yours sincerely,
Bertrand Russell

Active in public affairs to the end, Bertrand Russell died in February, 1970, at the extraordinary age of ninety-seven. Some years earlier he had written: "Three passions, simple but overwhelmingly strong, have governed my life: the longing for love, the search for knowledge and unbearable pity for the suffering of mankind." In June, 1970, I flew to London to represent the American Humanist Association, of which Russell had been an honorary member, and the National Emergency Civil Liberties Committee at a Memorial Meeting for Russell. I spoke briefly, saying that "American Humanists long have regarded Bertrand Russell as the world's outstanding representative of the Humanist philosophy. He was a modern Socrates continually challenging the Establishment and outworn traditional beliefs. . . . He was one of the few philosophers of the twentieth century who stepped out of the study to put ethical ideals into action."

During the last decade of his life I had a voluminous correspondence with Lord Russell covering his support of civil liberties, his unceasing campaign for international peace and the abolition of nuclear weapons, and his opposition to the American aggression in Vietnam. Here is a short note from him in answer to my letter of November 14, 1967, in which I mentioned my contribution of \$2,000 toward his activities in opposing U.S. atrocities and other war crimes in the Vietnam war:

Dear Dr. Lamont,

I was very pleased to receive your good letter of November 14th and to learn of your further generous gift to our work. This is not only a great encouragement to me personally, but is also, of course, of great practical importance.

The final public session of the International War Crimes Tribunal is now being held in Copenhagen and I am hopeful that it will help in a small way to make more widely known the full horror of the war in Vietnam.

With all good wishes,

Yours sincerely,
Bertrand Russell

Free will (pp. 84-85)

Turning to the realm of philosophy, I had a very important exchange of letters with him on the issue of freedom of choice or free will. I had set him down as a determinist until I read in Erich Fromm's essay, "Prophets and Priests" (1968),¹⁶ that Russell "is not a determinist who claims that the historical future is already determined; he is an 'alternativist' who sees that what is determined are certain limited and ascertainable alternatives." Now this fits in precisely with my own viewpoint on freedom of choice. Opposing the extremes to which Sartre goes on this question, I claim that free choice is *always* limited by one's heredity, environment, economic circumstances—all deterministic elements in the picture. But beyond them, though established by them, are real alternatives between which a man can choose. That is where free choice comes in.

Russell answered me on August 16 with a noteworthy letter:

Dear Dr. Lamont,

Many thanks for your letter of August 3, I am in broad agreement with what you say about the free will question. Anything that one says on this is sure to be wrong! It is difficult to find a form of words, and the difficulty is due to linguistic problems. There are no laws of nature which make the future certain. Any scientific investigator would always have to assume determinism as a working hypothesis, without complete belief or complete denial. I cannot be described as a determinist, and my views are closer to yours than to Sartre's.

With kind regards,

Yours sincerely,
Bertrand Russell

I have called Russell's letter "noteworthy" because for the first time in his long career he subscribed to the idea of limited freedom of choice. This question is of such great significance in philosophy, religion and our day-to-day life that an outstanding philosopher's opinion on it is most persuasive.

(Thank you, WARREN SMITH and JOHN TOBIN)

VERY LAST MINUTE ITEM

(46) / "Guided Tour" performance, NYC, April 5-6. Marvin Kaye writes:

Unless the Estate indicates otherwise, THE OPEN BOOK will be presenting the second act of my script, "Bertrand Russell's Guided Tour of Intellectual Rubbish" on April 5 and 6 at the Bruno Walter Auditorium in the Lincoln Center Library & Museum of Performing Arts, 111 Amsterdam Avenue, NYC. Admission will be free.

This is a five-person adaptation from the original one-man show I did for Bob Rounseville (NL3-33, NL6-32, RSN29-9). The material is essentially the same, and consists of sections (in order) entitled: "On Education", "On Sex and Marriage", "Mr. Bowdler's Nightmare", "On Old Age", "On Religion", "On Comets", and "On the Future of Mankind." We hope to stage the first act in the late fall, after which we hope we'll be able to begin touring the show.

(47)

LETTER FROM THE EDITOR

February 18, 1982

Dear BRS Members:

You probably know about BR's speech to the House of Lords in 1945 in which he pointed out the danger to the survival of all mankind in the recently developed atom bomb.

As I was preparing this issue of the newsletter, I received the February 15th issue of The New Yorker magazine, which contains the third of Jonathan Schell's 3 pieces on The Fate of the Earth.

These are factual, well-documented articles (which I imagine will become a book.) They set forth convincingly why nuclear war is suicidal. It is suicidal not because millions and millions will be blasted to bits, burned alive, or irradiated dead or dying. It is suicidal because it will destroy the earth's capacity to support life. This is explained very clearly and explicitly.

And it could happen any second, because of the existence of nuclear weapons. The danger is immediate. It is essential that every one of us take immediate

steps to understand the danger, and to make others aware, in order to stop the production of nuclear weapons that will inevitably lead to the destruction of the entire earth. Does this sound melodramatic? It isn't. It's real.

I hope you will all read the Jonathan Schell articles. I hope you will begin today to start putting your efforts to saving this planet.

Since this Society carries Bertrand Russell's name, it behooves us more than others to carry on his work. It is particularly appropriate for us to do so. We hardly have the right to continue using his name if we do less.

Before you go to sleep tonight, talk to a few people about the danger of nuclear war. Write a letter to your Congressman, your Senator. Try to set up some discussion group. Write a letter to your local newspaper. Do not put it off. Be absolutely determined. As BR said, when reproached for being fanatical about the subject: it is hard not to be fanatical about it, the issue is so great.

The danger is real. It is immediate. Let us begin today to do everything we can. Nuclear weapons have got to go!

Sincerely,

Lee Eisler

(The 1945 House of Lords speech was the first of BR's many efforts to alert the world to the danger. Other efforts include: his BBC broadcast ("Man's Peril", 1954), the statement on the peril signed by eminent scientists from both sides of the Iron Curtain (1955), and the many Pugwash Conferences, which BR was responsible for starting in 1957, and which were the ancestors of the Salt talks .)

ANNUAL MEETING 1982

- (2) Los Angeles replaces Claremont. We have changed the place but not the date: June 25-27. The place is the Sheraton Townhouse (also called Sheraton West), 2961 Wilshire Boulevard, Los Angeles, CA 90010. When writing "Reservations" there, to reserve your room, mention BRS to get the discount. Single room \$59, double \$69 (before discount). If you want to share a double room, let Bob Davis know; he will team you up with another member. In that case, if yours is a name that does not indicate your sex -- like Pat or Lee -- indicate it. If you want lodging that costs less than the Sheraton, write Bob, and he will tell you what's available. The Saturday evening banquet costs \$17.50 and includes table wine. Please send Bob your check for \$17.50. We have to tell the Sheraton several days in advance how many will attend the banquet; it will be helpful if you send Bob your \$17.50 check sooner rather than later. To get there take the Mid-Wilshire Hotel Bus from Los Angeles Airport, which lets you off at the Sheraton door. The meeting starts Friday June 25th at 8 P.M. and ends Sunday about noon. Bob's address: 2501 Lake View Avenue, Los Angeles, CA 90039. We hope to see many of you there! For more, see (43).

RECENT EVENTS

- (3) National Summit Conference on Religious Freedom and the Secular State was held in NYC on March 27th. BOB DAVIS and LEE EISLER attended as delegates from the BRS.

There were sessions on religion in the public schools (school prayer), book banning (library censorship), creationism, morality in a secular society, and infringements on sexual privacy.

Two organizations sponsored the Conference. The two had decided to combine when they discovered that their aims were virtually identical. One of them, The Center for Moral Democracy, was organized by the New York Society for Ethical Culture -- which is associated with the American Humanist Association -- "for freedom, tolerance and diversity in moral, religious and intellectual life." The other, The Voice of Reason, was formed by The Society for Humanistic Judaism, to defend the Secular State, Personal Freedom, and Free Inquiry. Moral Democracy and Voice of Reason, now combined, will be known as Voice of Reason.

We asked Rabbi Sherwin Wine -- founder of the Society for Humanistic Judaism -- how a rabbi could be part of a movement that shunned the supernatural. He replied that he loved the Jewish traditions in which he has grown up -- he viewed them as cultural -- and he also loved the ideals of humanism, and he found no difficulty in combining them.

For more about the Society for Humanistic Judaism, see (36). For more about the Voice of Reason, see (37).

Next day (March 28th) the meeting was open to the public. Speakers included polymath Isaac Asimov, Dorothy Samuels (Executive Director of the ACLU), and a representative of Planned Parenthood.

It was all well worth attending.

For another report on the National Summit Conference, see (4).

REPORTS FROM OFFICERS

(4) President Robert K. Davis reports:

My major activity during the past quarter was attending the second Humanist Summit Conference, with Lee Eisler, in NYC, March 27th and 28th. The meeting was sponsored by the Ethical Culture Society and we met in their building on Central Park West. 29 organizations with over 60 delegates attended. These groups are humanistically oriented, and share the distinction of being targets of the so-called Moral Majority. We were there to hear reports on the religious right, and to share ideas on programs of action. On Sunday, the 28th, the meeting was public, with Isaac ASimov among the guest speakers. He gave a witty speech.

I was asked to sit in on the founding of the new Voice of Reason, on Monday (the 29th). This is envisaged as a nation-wide grass roots organization, to monitor and oppose the religious right. It will monitor local political issues and races, and keep an eye on efforts to ban books in schools or libraries, or to insert "scientific creationism" into science courses. We had a productive meeting, and worked out rules of organization, a proposed budget, preliminary financing, and hired a National Director, Ed Doer. (formerly with "Americans United for Separation of Church and State.") We adopted a "Declaration of Religious, Intellectual and Personal Freedom." Eight of us attended this meeting: Philosopher Paul Kurtz (who has been called, "Mr. Secular Humanism"), and representatives of the American Humanist Association, the Ethical Culture Society, and the Society for Humanistic Judaism. Sherwin Wirs — founder of the Society for Humanistic Judaism — is an atheist rabbi, dynamic, charismatic. He started the Voice of Reason in Michigan. Meanwhile, the Ethical Culture people had started a similar group in New York, which they called "Moral Democracy". Our meeting merged the 2 groups, under the name, "Voice of Reason". A network already exists in several states. A public meeting is to be held in Washington, DC in May. Los Angeles Ethical Culture Leader Gerald Larue and I are to organize a West Coast conference for this fall, probably in October.

Membership in the Voice of Reason costs \$20 per year. To join or for information, write Voice of Reason, Box 16, Franklin, MI 48025.

Next day I attended Humanist Philosopher (and ERS member) Corliss Lamont's 80th birthday party at O'Neal's Restaurant, hosted by the Emergency Committee on Civil Liberties. It was most enjoyable, and I was able to talk informally with people from the previous weekend — Paul Kurtz, Steven Fenichell (AHA Treasurer), Ed Wilson (a founder and Director Emeritus of the AHA) — as well as with Dr. Lamont. People from many groups that Lamont has been involved with over the years attended, all kinds of people, from poets to lawyers. There were speeches, a birthday cake, and the presentation of a handsome red vest. Then Lamont sang songs while the M.C. — the lawyer who represented Ellsberg in the Pentagon Papers case — also wearing a red vest, did a soft shoe routine.

Later in the week I dined with ERS Director Jack Cowles, and also attended Warren Smith's Saturday cocktail hour at his Variety Studios. We discussed business in both cases, but as always seems to be the case when ERS members meet, there were a lot of common interests to talk about besides ER and the ERS.

On a more serious note, I have been thinking all winter that the humanists ought to make contact with the Soviet block in the spirit of detente to organize a non-governmental exchange. I had hoped to discuss this at the weekend Conference but was able to do so only informally. I have been corresponding with Dora Russell, Karl Popper, Paul Kurtz and Corliss Lamont about it. The best place to launch such a proposal would be at this summer's International Humanist Conference in Germany. Unfortunately the bad U.S. economy will probably prevent me from going as it has crippled my business; this is not a good time for me to undertake a rather expensive trip. I have some other avenues to explore, and hope to report more positive developments in the future.

I discussed several publishing projects with Paul Kurtz — one of whose hats is as head of Prometheus Press. Dora Russell had written that her recently completed magnum opus on the machine age — gestating for 60 years — was not being published, as it was too controversial. I suggested it to Prometheus, and they are interested. Also Dora's second volume of autobiography "Tamarisk Tree II" has not been published in the USA. This too is being considered. It is especially important as an educational and feminist document. I also proposed that Prometheus publish, in a very inexpensive format, 3 essays by ER: "Why I Am Not A Christian", "What Is An Agnostic?" and "What I believe". The first two are extremely effective discussions of religion, and the last is a positive statement of what a free-thinker can believe. This might involve our guaranteeing a minimum purchase; if so, I would ask members to consider buying 10 or 20 copies each, to distribute as gifts, etc. But first, details, including price, must be worked out.

Plans for the annual meeting are coming along, and I expect it to be an interesting one. I have programs lined up on the Moral Majority and nuclear war.

(5) Secretary Don Jackaniz reports:

As amended in June 1981, the ERS Bylaws state that the agenda for the Annual Membership Meeting is to be prepared by the President, and the agenda for the Annual Board of Directors Meeting is to be prepared by the Chairman of the Board of Directors. The amended Bylaws further state that items for these agenda may be proposed in writing by any ERS member to the President and the Chairman respectively.

In accordance with these provisions, as ERS Secretary and Board of Directors Secretary, I would like to remind all members about the June 25-27 Annual Membership Meeting and the Annual Board of Directors Meeting. Any agenda proposals should be forwarded as specified above as soon as possible

The BRS Bylaws also state that at least 30 days notice must be given should Bylaw amendments be proposed at a BRS meeting. The same 30-day notice is also required for amendments to the Board of Directors Bylaws. This then is notice that Bylaw amendments will be considered at both Meetings.

REPORTS FROM COMMITTEES

(6) Membership Committee (Lee Eisler, Chairman, Jacqueline Berthon-Payon, Co-Chairman):

Last issue we listed the publications in which BRS ads will appear during 1982 (RSN33-9). Please note several changes. Eliminate SATURDAY REVIEW; it was our 2nd most expensive publication last year, and rates have just gone up 30%. Eliminate ATLANTIC MONTHLY after June; they have just nearly doubled their rates. Add COLUMBIA JOURNALISM REVIEW, a bi-monthly.

(7a) Science Committee (Alex Dely, Chairman):

The Futility and Dangers of Nerve Gas Weapons

Possibly the most dangerous and unnecessary feature of President Reagan's record defense budget is a request of \$30 million to resume biochemical nerve gas production. The Pentagon plans to produce 20,000 binary nerve gas artillery shells a month. Further plans call for production of chemical warheads for the ground-launched cruise missile. The total cost of the biochemical weapons program will be between \$3 and \$6 billion by 1985.

In May 1980 the U.S. Senate approved \$20 million for the Pine Bluff Arsenal (Arkansas) chemical weapons plant. The proposed binary weapons contain two separated non-toxic agents; in flight, they mix to form deadly nerve gas. Binary weapons are designed to kill by disrupting the nervous system and paralyzing the respiratory system. Death comes within minutes.

World condemnation of the senseless killing caused by poison gases during World War I led to the 1925 Geneva protocol, which prevents first use of poisonous gases in war. In 1969 Nixon ordered a moratorium on U.S. chemical weapons production, which became the basis for the 1972 Biological Weapons Convention outlawing development, possession and production of "germ weapons". By February 1981 U.S. negotiations with the U.S.S.R. had proceeded to a draft agreement prohibiting possession of chemical weapons, destructions of existing stocks within 10 years, and international on-site inspections.

Since then, prompted by alleged chemical weapon use by the U.S.S.R. in Afghanistan, the Reagan Administration has let the talks lapse.

Arguments against new chemical weapons production:

- 1) The U.S. stockpile still consists of almost 7,000 tons of lethal agents. The U.S. General Accounting Office found, in a 1977 audit, that deterioration is occurring (due to Army neglect) only in the nerve gas rockets, not in the artillery shells. No new production is needed, as we can now blanket over 9,000 square miles with lethal agents.
- 2) True deterrence requires that the U.S. and NATO augment their defensive capabilities. (Adequate protective equipment is decisive in a biochemical conflict.) Since biochemical warfare is so insidious -- concealed vials can be carried to enemy country and let loose in water supplies or dispersed over crops! -- new production will lead to a new mutual weapons build-up and further insecurity.
- 3) Binary chemical weapons have little military value: they have never been field-tested. More importantly, Warsaw Pact forces are already well equipped to function in a chemically contaminated environment. Civilians would be the main victims. The chemical weapons program diverts attention from strategically more useful NATO capabilities, such as conventional weapons, training and protective gear.
- 4) The utility of these weapons, in any conflict with Russia, depends on their deployment in Europe. To blunt European protest (for various reasons), these weapons would require 2 full weeks of airlift time from U.S. storage sites to European battlefields. By then however the main advantage of chemical warfare would be lost.
- 5) Chemical weapons cause indiscriminate destruction of people and food/water supplies. New production will undermine the stability of NATO even more.
- 6) By producing nerve gas weapons, the U.S. will lose the moral leverage over Russia in our ideological battle to win over Africa, South America and Asia.

Action urgently needed:

Chemical weapons votes in the U.S. Senate have only been narrowly lost: 46-47 in 1980, 48-50 in 1981.

Once again, Senator Hart of Colorado has introduced Senate Bill 2078, an amendment to the Defense Department Authorization Bill, to eliminate the the \$30 million for chemical weapons production.

It has bipartisan support, and critical votes will occur between April 12 and May 15

As of now, Sen. Goldwater favors renewed biochemical weapons production. Sen. De Concini is undecided and swayable with pressure from Arizonians. This happens to be the situation in Arizona.

Please write your two Senators requesting support for S.B. 2078. Write Sen Gary Hart, expressing your support for his S.B. 2078. The address for all Senators is: (name of Senator), U.S. Senate, Washington, DC 20510. Write the editor of your newspaper, and request editorials against chemical weapons production. Ask groups you belong to to pass resolutions condemning new nerve gas production.

For more information, please contact me at the UA Physics Dept., Tucson, AZ 85721.

(7b)

More about nerve gas, from The Russell Committee Against Chemical Weapons, Nottingham, England, which presumably is an offshoot of The Bertrand Russell Peace Foundation, also of Nottingham, England. This appeared in World Press Review, April 1982, p. 54:

Military Affairs

Russell Committee

The Nerve Gas Renaissance

The controversial return of the 'death cloud'

STEVEN ROSE

JULIAN PERRY-ROBINSON

ALASTAIR HAY

SEAN MURPHY

Steven Rose is professor and Sean Murphy a lecturer in biochemistry at Britain's Open University; Alastair Hay teaches chemical pathology at Leeds University; Julian Perry-Robinson does research at the University of Sussex. This article is excerpted from "The Threat of Chemical Weapons," published by the Russell Committee Against Chemical Weapons, Nottingham, England.

Last year the U.S. Congress authorized \$20 million toward a new binary nerve gas plant at Pine Bluff, Ark., and work began in October. This is the first part of a program estimated to cost an extraordinary \$8 billion within the next five years.

The binaries are nerve gases so toxic that a milligram or so absorbed through the lungs or skin can kill within minutes or less, but are developed as two separate chemicals which, until mixed, are relatively harmless. These agents are to be packed in shells or bombs or as tips on missiles for use in the European theater. This means they must be stockpiled in Europe, and the U.S. assumes that a host country—probably Britain—will be found.

Hundreds of such compounds have been produced and considered for use as weapons. Today three are stockpiled: the German inventions Sarin and Soman (the so-called G agents) and, among the British and American agents, five times as toxic as the G agents, one in particular—VX. It is the principal nerve gas stockpiled in the U.S., although this may change with the new U.S. binary program.

The toxicity of these agents has led to novel ways of making and handling them. Instead of being placed as liquid in bombs or shells, the principal ingredients are stored in the shell, separated by a thin disc. Upon firing, this separating disc collapses and the reaction, yielding the toxic agent, takes place in the air.

The so-called binary weapons, which deposit their load when they reach the

Nerve gas gear—'pressure on NATO.'

target, have been developed over the past decade, particularly in response to fears of accidents during manufacture, stockpiling, or transportation of the nerve gases—and as a response to environmentalists' concerns. However, any military use of binaries would be identical to that of the other nerve gases.

Nerve gases have general effects on the nervous system. If the compounds block or mimic key nerve pathways in the brain or spinal cord they will incapacitate the victim. They can be absorbed into the body through the skin, airways, or mouth; symptoms include intense sweating, constriction of the airways to the lungs, filling of the lungs with mucus, vomiting, defecation, paralysis, and respiratory failure.

About a thousandth of a gram is enough to kill—fifty times more deadly than phosgene or cyanide. Acute nerve-gas poisoning produces death within minutes, but small doses from short exposures can accumulate in the body because the gas is broken down by the liver only slowly; death can be a prolonged process.

One U.S. Army agent known as BZ, dispersed in aerosol form, interferes with

heart contraction and with nerve pathways in the brain. Its symptoms are increased heart rate, dry skin, blurred vision, disorientation, loss of coordination, stupor, and amnesia. Generally the result is random and undisciplined behavior that lasts for two to four days.

The argument for stockpiling nerve gas in Europe goes that, although law and custom may prevent our using the weapons, we know that our enemies are less scrupulous, so we need the weapons to deter their use. Over 1958-69 declared American policy on chemical weapons was of "no first-use" but no restriction was in the policy guidance issued by the Joint Chiefs of Staff to U.S. military commands. In 1959-63 the U.S. Congress quadrupled its chemical warfare appropriations. The still-continuing Soviet build-up of chemical warfare capabilities dates to this period.

The American joint chiefs believe that if chemical weapons were introduced into a European war nerve gas would soon be used by both sides at a rate approaching 2,000 tons a day. Computer simulation of such a war shows chemical casualties conservatively estimated in the millions because of the secondary effects of nerve gas blown downwind of battle zones to highly populated areas. Because civilians will have little protection, the ratio of non-combatant casualties will likely average 20 to 1.

NATO now has no retaliatory chemical warfare capability, although in West Germany the Americans maintain stocks of their own nerve gas. Indeed, there are sufficient differences among the chemical warfare policies of member states to inhibit the creation of a unified NATO policy. Now that the U.S. is proceeding on chemical rearmament, pressure on NATO is intensifying.

The Americans evidently expect the safety features of their binary munitions to undercut domestic political opposition. The reports of chemical warfare from Afghanistan, Southeast Asia, and elsewhere, albeit unverified, have also encouraged support.

A great quantity of American armament is already in Britain, so it is conceivable that nerve gas is included. This has been denied by Washington, but rumors persist—most recently the allegations concerning U.S. facilities at Caerwent. It is unclear whether legal safeguards exist to prevent the Americans from shipping or flying in stocks without prior British approval.

(Thank you,
BOB DAVIS)

- (2) DEPT. OF DEFENSE INFLUENCE IN UNIVERSITY RESEARCH. 16 pages. This was presented on April 10th as part of Ground Zero Week observances at the University of Arizona.

PHILOSOPHERS' CORNER

(8) BRS Philosophy Committee Chairman Ed Hopkins reports:

Papers have started to come in for the December 1982 BRS session at the annual meeting of the American Philosophical Association (Eastern Division). People who wish to be considered as commentators should get in touch with Ed. Note his new address: 5713 Chinquapin Parkway (C), Baltimore, MD 21239.

BY BERTRAND RUSSELL

(9a) Two talks over BBC radio, given by BR in 1949, were later published by the Beacon Press (Boston), in 1951, in the volume The Western Tradition.

TOM STANLEY --- to whom we are indebted for this item --- found the following in Clark on BR's radio work:

"Of all the many speakers I handled I would put Bertie among the most professional," says Ronald Lewin of the B.B.C. "His scripts were always immaculately composed to exactly the right length and written in a style which absolutely fitted his way of speaking. He was completely docile in rehearsal and never struck attitudes or made difficulties as many lesser individuals used to do. But then, his scripts were always so perfect that very little rehearsal was necessary." The Life of Bertrand Russell by Ronald W. Clark (NY:Knopf, 1976) p.496.

(9b) Talk #1:

SCEPTICISM AND TOLERANCE

by

Bertrand Russell

THERE is at the present time a wide-spread belief that those nations and individuals that remain rational and cool and (within common-sense limits) sceptical, cannot hope for success when they are brought into contact with systems of widely held and fanatically believed dogma. This view is especially common among the sceptics themselves, who are apt to suffer from a kind of fascinated immobility when confronted with the glare of powerful but intellectually limited sectarians. I do not think that history bears out this view of the powerlessness of moderate and limited scientific belief when engaged in conflict with fanaticism; in fact, the exact contrary is nearer to the moral to be drawn from the past. Let us glance at a few illustrations of this theme.

The Generals who commanded Roman armies in the days when the Roman Empire was most rapidly expanding were for the most part Epicurean sceptics. Their motives were the crudest possible: to plunder the gold reserve of temples, keeping half and distributing the other half among their soldiers; to destroy cities which were commercial rivals of Rome; and so on. The later Romans, pagan and Christian alike, were sunk in superstition; they became increasingly fanatical down to the fall of Constantinople in 1453, and every increase of fanaticism brought fresh defeat.

The same sort of thing is true of the Mohammedans. In the great days of their early conquests, their leaders were sceptics, who had at first opposed the Prophet's new sect,

and only joined it when they saw that there was money in it. This sceptical attitude lasted all through the great days of the Caliphate; when fanaticism began to prevail, loss of military power came with it.

In the sixteenth century, the most fanatical of the Great Powers was Spain. In spite of every advantage—a brave and warlike population, a superb geographical position, and all the resources of the Indies—Spanish power collapsed. The Jews and Moors, the most industrious and civilized inhabitants of the Peninsula, were expelled, to the great detriment of the State. Holland was lost through unwillingness to practise toleration. After the long fruitless devastation of the wars of religion, when the Peace of Westphalia and the collapse of the English Puritans had shown that no extremists could win, the greatest share of wealth and power came to Dutch and English Latitudinarians. The Revocation of the Edict of Nantes, by transferring useful industries from France to England, prepared the way for French defeat in the Seven Years' War.

At no stage in this long history was victory correlated with fanaticism.

The most recent history shows that in this respect there is no change. The British entered the second world war as a heavy duty, by no means in the spirit of a crusade. The Russians and Americans were goaded into self-defence by unprovoked attacks. Only the Nazis were inspired by fanaticism, and their fanaticism contributed not a little to their downfall. After victory, the Allies were surprised to find how little progress the Germans had made towards the construction of atomic bombs. This was largely because they would not employ physicists who were Jews or Anti-Nazis. Their fanaticism also greatly stimulated the resistance movement in conquered territories. I think there can

be no doubt that if their rulers had been more rational, they would have won the war, since they would not have attacked Russia or encouraged the Japanese to attack America.

Those who hold that fanaticism can only be defeated by a rival fanaticism cannot appeal to facts in support of their opinion. Victory in modern war depends primarily upon natural resources, industrial and scientific skill, and shrewdness in those who determine policy. Of these requisites, skill and shrewdness are not so likely to be found among fanatics as among men whose outlook is more nearly scientific. Fanatics are unwilling to accept scientific discoveries made by their enemies, and therefore soon fall behind those whose outlook is more cosmopolitan.

Some of those who fear that fanaticism is irresistible do so because they regard complete scepticism as the only alternative. The desirable alternative is not to be sceptical but to be scientific. The sceptic says "nothing can be known"; he is a dogmatist, though a negative one. His creed, we must admit, is paralysing, and a nation which accepts it is doomed to defeat, since it cannot adduce adequate motives for self-defence. But the scientific attitude is quite different. It does not say "knowledge is impossible", but "knowledge is difficult". As against the dogmatist, it holds that nothing can count as knowledge until it has been submitted to the tests that science has shown to be useful, and even then it may require correction in the light of fresh evidence. As against the sceptic, it holds that what has emerged from a scientific scrutiny is more likely to be true than what has not, and that in many cases this likelihood is almost certainty; in any event, it is the best hypothesis to accept in practice. The dogmatist accepts one hypothesis regardless of the evidence; the sceptic rejects all hypotheses regardless of the evidence. Both are irrational. The rational man accepts the most probable hypothesis for the time being, while continuing to look for new evidence to confirm or confute it. It is by acting in this way that man has acquired his power over nature, and that the scientific nations have acquired their power over the rest of mankind.

The difference between a rational man and a dogmatist is not that the latter has beliefs while the former has none. The difference is as to the grounds of the beliefs and the way in which they are held. The rational man is prepared to give reasons for his beliefs, and these reasons, except as regards values, are ultimately derived from observation of facts. He will admit that his reasons are not absolutely conclusive, and that new facts may necessitate new beliefs. But he will be prepared to act upon a high degree of probability as vigorously as the dogmatist acts upon what he holds to be certainty. He has, moreover, one great advantage over the dogmatist. When the dogmatist is shown to be wrong—for example, by defeat in war—he suffers a total defeat which can never befall the rational man, who

has always admitted that he may be mistaken. Nothing can be more hopeless than a population of disillusioned bigots, who have lost the capacity to be rational, and have no longer any outlet but despair for their irrationality. Such a population has no power of self-direction, and little willingness to accept again the kind of direction from without which has been found to lead astray. The springs of action are dried up, and nothing remains but listless drifting. This is part of the price that has to be paid for indulgence in collective hysteria.

I do not wish to suggest that a man who is scientific to the right extent will be devoid of emotion. Science can deal only with means, not with ends; the ends must be supplied by feeling. For my part, there are certain things that I value; I should mention especially intelligence, kindness, and self-respect. Science cannot prove that these things are good; it can only show how, assuming them to be good, they are to be obtained. To believe in these or any other ultimate values without giving a reason for doing so is not irrational, since the matter is not one for rational argument. All rational argument requires premises, without which it cannot start. In matters of fact, the premises come from perception; in matters of value, from feeling. Much of the wide-spread prejudice against the rational comes from failure to realize that rationality is only concerned with what can be proved, not with what proofs have to assume. A man is not unscientific because of his ultimate ends, but because of mistakes as to how to achieve them. Hitler was unscientific because the destruction of Germany, which was what he achieved, was no part of his purpose. To be rational or scientific is only one among virtues; no sane man would pretend that it is the whole of virtue.

Tolerance, as a practical maxim, has two sources: on the one hand, the realization that we may be mistaken; on the other hand, a belief that free discussion will promote the view we favour. This latter opinion must be held by anyone whose opinions are formed on rational grounds. Dogmatists, on the contrary, fear that free discussion would show their beliefs to be groundless, and that is why they always favour censorship. The Western world has learnt tolerance with difficulty, partly by realizing the usefulness of science, which bigots tried to crush. Experience has shown that tolerance and free discussion promote intellectual progress, social cohesion, prosperity, and success in war. I see no reason to suppose that this is going to be any less true in the future than it has been up to the present day. Fanaticisms come and go, and those of our time, like earlier ones, will perish through practical refutation. Tolerance and the scientific spirit are among the greatest of human achievements, and I see no reason to think that we are in process of losing them, or that those who retain them are thereby in any degree weakened in whatever struggle may lie ahead.

Talk #2:

NATURE AND ORIGIN OF SCIENTIFIC METHOD

by

Bertrand Russell

SCIENCE, like most things, was gradual in its beginnings, and it was not until the seventeenth century that it began to acquire a decisive position. It has since grown to be the most distinctive characteristic of our age; for good or evil, it is what makes our age different from antiquity and the medieval centuries.

Science may be defined as the discovery of causal laws by means of observation and experiment—laws which are more valued when they are quantitative than when they are merely qualitative. Mathematics, which does not require observation, owes its first considerable development to the Greeks, but the only observational study in which the Greeks were proficient was astronomy, where there are very obvious uniformities and much can be done by pure geometry. It was not until Galileo that a way was found of dealing with motions that are not uniform and not periodic. Before his time men sought laws

of stability; but in modern times laws of change have been what science has mainly wished to find. And ever since Bacon science has been valued, not only, or even chiefly, as pure knowledge, but as a source of power—power over inanimate nature, power over plants and animals, and now, at last, power over human communities.

Science is a product of Europe. The only exception of importance that I can think of is the Babylonian discovery that eclipses could be predicted. A very few nations—Italy, France, the Low Countries, Britain, and Germany—contributed quite 90 per cent. of the great discoverers. Poland contributed Copernicus, Russia contributed Mendeleeff and Pavlov, but on the whole the share of Eastern Europe has not been a large one. Within Western Europe, as may be seen from a map showing the birth-places of eminent men of science, there has been a correlation with commerce and industry. But commerce does not necessarily lead to science. It did not do so among the Phoenicians and Carthaginians, and the Arabs, though they studied science of a sort, made no discoveries in any way comparable to those of Western Europe since 1600. I do not think that seventeenth-century science can be regarded as an inevitable outcome of social and economic conditions; the existence of individuals possessed of very rare abilities was also necessary. Why they should have been born there and then cannot be explained in scientific terms by means of our present knowledge. It certainly does not have a racial explanation, as may be seen from the fact that many of the best men of science have been Jews, who though living in Western Europe are not of course of West European stock.

The importance of the economic conditions which attended the beginnings of modern science has been so much emphasized that the intellectual conditions have tended to be overlooked. Let us spend a few moments in considering scientific method in itself, apart from the social environment that promoted it.

The essential matter is an intimate association of hypothesis and observation. The Greeks were fruitful in hypotheses, but deficient in observation. Aristotle, for example, thought that women have fewer teeth than men, which he could not have thought if he had had a proper respect for observation. Francis Bacon, on the other hand, overestimated the mere collecting of facts, supposing that this, if carried far enough, would of itself give rise to fruitful hypotheses. But there are so many facts, and so many ways of arranging facts, that no one can collect facts usefully except under the stimulus of some hypothesis to which they are relevant. Throughout any scientific investigation, even from the very beginning, generalizing hypotheses must exist in the mind of the investigator to determine the direction of his observations. The hypotheses must, however, continually change and develop as new facts prove the old hypotheses to be inadequate.

It is commonly said that the framing of hypotheses is the most difficult step in scientific investigation, and perhaps this is true of men who have undergone a thorough education in science. But viewed historically it would seem that respect for fact is more difficult for the human mind than the invention of remarkable theories. It is still believed by a large percentage of the inhabitants of this country that people born in May are specially liable to corns, that the moon affects the weather, and that it is dangerous to see the new moon through glass. None of those who hold these theories think it necessary to verify them. Aristotle's physics, as interpreted by medieval commentators, supplied a number of admirable theories, which covered the

ground much more adequately than Galileo could do. There was nothing against the theories except that they were not in accordance with the facts, but this objection struck Galileo's Aristotelian adversaries as frivolous. And when he discovered Jupiter's moons their existence was denied, on the ground that the number of the heavenly bodies must be seven. I think, therefore, that in the beginning the respect for fact demanded by science is more difficult even than the framing of what may prove good hypotheses. And the hypotheses that prove good are very seldom such as commend themselves to our initial prejudices.

As against Bacon, the history of science seems to show that even the worst hypothesis is better than none. The beginnings of chemistry were dominated by the search for the philosopher's stone and for means of turning base metals into gold. This search supplied an essential element in scientific method which was absent in astronomy—I mean *experiment* as opposed to passive observation. If the medieval alchemists had not had extravagant hopes, they would not have had the patience to accumulate gradually a great mass of facts which could only become known by the artificial creation of conditions not spontaneously produced by nature. This work, which the Arabs took over from Alexandria and the Christians from the Arabs, supplied much detailed knowledge, but did not yield anything scientifically systematic until the time of Lavoisier and Priestley at the end of the eighteenth century. And it was not until our own day that the diversity of chemical elements was fitted into an unitary theory, and that the transmutation of elements became a practical possibility—with consequences that, if not controlled, threaten disaster to mankind.

The prejudices against scientific investigation of facts has been strongest where human beings are concerned. Throughout the middle ages anatomy was hampered by a rooted objection to dissection of corpses. Vesalius, who was Court physician to Charles V and Philip II, ventured, under the protection of royal favour, to defy this prejudice. But his enemies accused him of having dissected a body while still alive, and he was sentenced, as a penance, to a pilgrimage to the Holy Land. During his return he was shipwrecked and died of exposure. In China, not many years ago, a French surgeon, who had been invited to found a medical school, demanded corpses for dissection. He was told that to cut up corpses would be an impiety, but that he could operate instead upon living criminals. These two opposite stories both illustrate the obstacles to a scientific outlook.

Western Europeans, and men in the New World whose ancestors, whatever their racial origin, had lived in Western Europe, had for about three centuries a virtual monopoly of science, and acquired thereby a supremacy throughout the world such as neither they nor anyone else had possessed at any earlier time. This monopoly, of course, could not last for ever. Although the Japanese challenge proved unsuccessful, European dominion in Asia is disappearing, and we may expect a growth of Asiatic science as a result of political independence. Now that scientific method has been developed, a great deal can be achieved without the genius that was necessary in the pioneers. Any man possessed of patience and fair abilities and the necessary equipment can, nowadays, be pretty sure to find out *something*, and it may happen to be something of great importance. I do not think that Mendel's work required any very extraordinary gifts, and yet the Mendelian theory of heredity is transforming scientific agriculture and stock-breeding, and probably will in time considerably alter the congenital character of human beings. The more

science advances, the easier it becomes to make new discoveries; that is why the rapidity of scientific progress has been continually increasing since the seventeenth century.

Science has been victorious over the prejudices that opposed its progress, because it has conferred power, and especially power in war. Archimedes, almost the only *experimental* scientist among the Greeks, was useful in the defence of Syracuse. Leonardo da Vinci was employed by the Duke of Milan because he understood the science of fortification. Galileo, similarly, was supported by the Grand Duke of Tuscany because his researches on projectiles showed how to make artillery more effective. In

the French Revolution French men of science played a vital part in the defence of their country against its many enemies. In the recent war it was scientific superiority that secured the final defeat of Japan. For such reasons, there is now little active opposition to scientific technique and scientific methods of investigation.

But power without wisdom is dangerous, and what our age needs is wisdom even more than knowledge. Given wisdom, the power conferred by science can bring a new degree of well-being to all mankind; without wisdom, it can bring only destruction.

BR ON ISRAEL

- (10) A 1943 article by BR, as reported in the "Jewish Post" (Winnipeg, Canada), December 1981:

Bertrand Russell Supported Zionism

Noted British philosopher Bertrand Russell (1872-1970) was a strong supporter of the creation of a Jewish State following World War II, even though he generally opposed nationalism strongly and viewed states as being the embodiment of nationalistic aspirations, according to Dina Porat, a lecturer at Tel Aviv University's Chaim Rosenberg School of Jewish Studies.

In an article entitled "The Role of the Jewish State in Helping to Create a Better World," in the publication *The New Palestine* in 1943, Russell wrote: "In a dangerous and largely hostile world, it is essential to Jews to have some country which is theirs, some region where they are not suspected aliens, some State which embodies what is distinctive in their culture."

Regarding control of immigration to the Jewish State, a subject which posed great problems for Great Britain, Russell suggested that "the Jewish authorities ought to have a free hand as regards immigration of Jews . . . What I have in mind is an international agreement that any Jew, anywhere, if he wishes to settle in Palestine, shall be granted permission to do so if the recognized Jewish authorities approve . . . This amounts to saying that every Jew should be eligible for citizenship of the Zionist State, and that only Jews should be the judge of his fitness."

Russell envisioned a Zionist State that would be "autonomous as regards its internal affairs," but foresaw the political and military struggles with Israel's Arab neighbors that would result from the creation of a Jewish State.

Russell wrote: "There may be no way of reconciling the actual

Palestinian Arabs to the influx of an alien population into what is, after all, their country, but the important thing is that any grievances they may feel should not be taken up by the Mohammedan world, and made the basis of a general hostility to Europeans, including European Jews . . . As for the future, we live in an age when every kind of national, racial, and religious bigotry is on the increase, and it must, I fear, be thought likely that the Muslim world will share the general revival of fanaticism. This will mean that the Jews of Palestine will need constant military protection, over and above what they can themselves supply in the way of self-defense."

Russell also saw the Jewish State as a watch dog against antisemitism bringing information pertaining to antisemitic acts before an international tribunal. He saw the Jewish State as a champion of world peace, since, Russell wrote, "for now, as in the time of the Crusades, they are made the scapegoat when war breaks out." He believed the creation of the Jewish State would, chiefly, be a means of putting an end to antisemitism, and to that end, the Zionist State, if it were "enlightened and liberal" could "make contributions which will be of inestimable value and will command the respect of the world."

The article was discovered by Dina Porat in the files of Yitzhak Greenbaum, chairman of the United Rescue Committee of the Jewish Agency in Jerusalem during World War II. The TAU lecturer is doing doctoral research on the Jewish Agency's role in rescue operations of Jews during the Holocaust.

"Here was a world-famous authority, understanding and sympathetic, raising a clear voice for a brighter future for the Jews in their own state," Dina Porat comments in her introduction of the article, which appeared in *Zionism*, a quarterly magazine published by the Chaim Weizmann Institute for Zionist Research of

The Chaim Rosenberg School of Jewish Studies at TAU.

(Thank you, RICK SHORE)

ABOUT BERTRAND RUSSELL

- (11) BR's favorite hymn, as a boy:

Weary of Earth and Laden with my Sin

Weary of earth and laden with my sin,
I look at heaven and long to enter in;
But there no evil thing may find a home,
And yet I hear a voice that bids me "Come".

So vile I am, how dare I hope to stand
In the pure glory of that holy land?
Before the whiteness of that throne appear?
Yet there are hands stretched out to draw me near.

The while I fain would tread the heavenly way,
 Evil is evil with me day by day;
 Yet on mine ears the gracious tidings fall,
 "Repent, confess, thou shall be loosed from all."

It is the voice of Jesus that I hear,
 His are the hands stretched out to draw me near;
 And his the Blood that can for all atone,
 And set me faultless there before the throne.

O great Absolver, grant my soul may wear
 The lowliest garb of penitence and prayer,
 That in the Father's court my gracious dress
 May be the garment of Thy righteousness.

Yea, Thou wilt answer for me, righteous Lord;
 Thine all the merits, mine the great reward;
 Thine the sharp thorns, and mine the golden crown;
 Mine the life won, and Thine the life laid down.

Naught can I bring, dear Lord, for all I owe,
 Yet let my full heart what it can bestow;
 Like Mary's gift, let my devotion prove,
 Forgiven greatly, how I greatly love.

(Thank you, DAVID HART)

BR BROADCAST

- (12) "Science and Values", BR's essay, was read over Pacifica Foundation's FM Station KPFK (North Hollywood, CA) on March 3rd, on "Science Connection", a program conducted by Steve and Vera Kilston. Steve did the reading, and called the 1951 essay remarkably relevant to 1982. "Then the phones were open for listener response, and there was much spin-off from Russell's essay," reports JOHN TOBIN. (Thank you, John.)

The essay, originally included in The Impact of Science on Society (New York: Columbia University Press, 1951), is included in The Basic Writings of Bertrand Russell, edited by Robert E. Egner and Lester E. Denonn. (New York: Simon & Schuster, 1961, pp.635-646).

BR QUOTED

- (13) In stone. We met someone at the March 27th National Summit Conference (3) in NYC whose face lit up when we mentioned that we were from the Bertrand Russell Society. The reason: there is a BR quotation on her husband's tombstone:

The great use of a life is to spend it for something that outlasts it.

* Does anyone know the source of this quotation?

BR CELEBRATED

- (14) "Guided Tour", Act II, was presented in NYC on April 5-6. We were there. You can see Act I (we recommend it) on November 8-9 — dates you may wish to note on your calendar. The following is from their program:

THE OPEN BOOK is a non-profit performing ensemble recognized by the IRS and New York State Charities Commission as an organization dedicated to presenting new and little-known literature to the public in an intimate style that focuses primarily on the word rather than the setting. Its sponsors include producer-playwright Jay Broad; novelist Mary Higgins Clark; actor-director José Ferrer; actor-producer Beverly Penberthy, and educator-librarian Dr. O. B. Hardison, Jr., Director of the Folger Shakespeare Library, Washington, DC

BERTRAND RUSSELL'S GUIDED TOUR OF INTELLECTUAL RUBBISH was originally commissioned as a one-man show by the late actor-singer Robert Rounseville. Portions of it were staged by him at Western Washington State University and Deerfield Academy. The complete script is a two-act program. Act I will be presented by THE OPEN BOOK as part of the Library and Museum of the Performing Arts 4 P.M. concert series in this theatre on Monday and Tuesday, November 8-9, 1982.

BERTRAND RUSSELL'S GUIDED TOUR OF INTELLECTUAL RUBBISH is the only authorized dramatization of the writings of the late Lord Russell. It is performed with the permission of the joint copyright owners, Marvin Kaye and The Bertrand Russell Estate, being expressly authorized by Edith, Countess Russell; George Allen & Unwin, Ltd., publishers, and The Bertrand Russell Peace Foundation.

The New York Public Library at Lincoln Center

BRUNO WALTER AUDITORIUM

111 Amsterdam Avenue Telephone 799-2200

THE OPEN BOOK

presents

BERTRAND RUSSELL'S
GUIDED TOUR OF INTELLECTUAL RUBBISH

(ACT II ONLY)

by Marvin Kaye

Monday, April 5, 1982
Tuesday, April 6, 1982

4:00 P.M.

Admission Free

The use of cameras in this theatre is not allowed.

Free tickets may be obtained at the Amsterdam Avenue entrance on the day of the event. For evening programs apply in person after 4:00 p.m.; after 12 noon on Saturdays. For 4:00 o'clock programs, apply after 3:00 p.m.

BERTRAND RUSSELL'S GUIDED TOUR OF
INTELLECTUAL RUBBISH (ACT II only)

Derived from the works of Bertrand Russell
Dramatized and directed by Marvin Kaye

THE ENSEMBLE (in alphabetical order)
BILL BONHAM, BEVERLY FITE, SARALEE KAYE,
JUNE MILLER, TOBY SANDERS

Understudy for men's roles: Marvin Kaye
Understudy for women's roles: Nancy Temple

(THE OPEN BOOK's style is an amalgam of traditional staging and reader's theatre. No attempt is made to fully characterize, costume or "make-up" any role; the emphasis, rather, is on the author's words and ideas. Thus, below, the identifications do not reflect the total range of any ensemble member, but are merely for convenience in identifying who is who).

PROGRAM SEQUENCE

On Education	Bill Bonham (at blackboard) and full ensemble
On Sex and Marriage	Saralee Kaye, June Miller, Toby Sanders
Mr. Bowdler's Nightmare	Bill Bonham (Spiffkins) Beverly Fite (Mrs. Bowdler) June Miller (Narrator) Toby Sanders (Mr. Bowdler)
On Old Age	Bill Bonham
On Religion	Bill Bonham, Toby Sanders and full ensemble
On Comets	Full ensemble
On the Future of Mankind	Full ensemble

BILL BONHAM, co-founder, is on the faculty of Manhattan Community College. Specialist in communications skills, he has taught and directed at NYU, Pace, Murray State University and the College of the Virgin Islands.

*BEVERLY FITE recently played Aunt Eller in an acclaimed production of *Oklahoma!*, seen in various Midwestern cities. She has sung, acted and danced on Broadway, on all major TV networks, and in city clubs. She is featured on the Columbia cast album, *Pai Joey*.

*MARVIN KAYE, co-founder, is a novelist, playwright and director. His eleven novels include *Bullets for Macbeth* (Dutton), *The Incredible Umbrella* and (with Parke Godwin) *The Masters of Solitude* (Doubleday). He teaches an advanced writing workshop at NYU.

SARALEE KAYE is co-editor (with Marvin Kaye) of a Nelson Doubleday anthology of ghost stories. A former teacher, she is an actor and sometime magician's assistant (AGVA). She has special training in voice-overs for TV.

*JUNE MILLER appears regularly in TV commercial, daytime dramas, in print advertising and theatrical films. She has played leading roles in regional theatres throughout America.

*TOBY SANDERS is a mime, clown and magician, and has written a definitive text on the clowning art. A student of Katherine Sergava at HB Studio, he has taught physical comedy in New York and elsewhere.

*NANCY TEMPLE is a leading soprano with Light Opera of Manhattan and the Manhattan Savoyards, and is a member of the New York City Opera. Her singing career has included solo appearances with the Denver Symphony and other orchestras, and she has acted extensively in summer stock and dinner theatre.

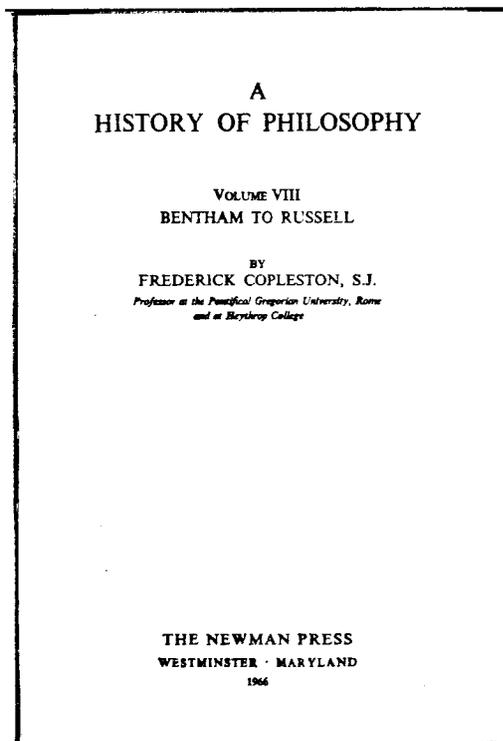

*Appearing through the courtesy of Actors' Equity Association.

ASSESSMENTS OF BR

(15)

A Jesuit on BR. We don't normally come across writings by professors at the Pontifical Gregorian University in Rome, and we can't say we seek them out -- it's a bias we have -- so we are especially indebted to JOSEPH WILKINSON for suggesting that we see what Frederick Copleston, S.J. had to say about BR.

The title page (size reduced)

Here is a large sampling, from the 3rd of 3 chapters on BR, dealing with BR's ethical views (pp. 471-477):

CHAPTER XXI
BERTRAND RUSSELL (3)

Introductory remarks—Russell's earlier moral philosophy and the influence of Moore—Instinct, mind and spirit—The relation of the judgment of value to desire—Social science and power—Russell's attitude towards religion—The nature of philosophy as conceived by Russell—Some brief critical comments.

1. We have been concerned so far with the more abstract aspects of Russell's philosophy. But we noted that his first book was on *German Social Democracy* (1896). And concomitantly with or in the intervals between his publications on mathematics, logic, the theory of knowledge, the philosophy of science and so on he has produced a spate of books and articles on ethical, social and political topics. At the 1948 International Philosophical Congress at Amsterdam a Communist professor from Prague took it upon himself to refer to Russell as an example of an ivory-tower philosopher. But whatever one's estimate may be of Russell's ideas in this or that field of inquiry and reflection, this particular judgment was patently absurd. For Russell has not only written on matters of practical concern but also actively campaigned in favour of his ideas. His imprisonment towards the close of the First World War has already been mentioned. During the Second World War he found himself in sympathy with the struggle against the Nazis, and after the war, when the Communists were staging take-overs in a number of countries, he vehemently criticized some of the more unpleasant aspects of Communist policy and conduct. In other words, his utterances were for once in tune with the official attitude in his own country. And in 1949 he received the Order of Merit from King George VI.¹ In more recent years he has not only campaigned for the introduction of a system of world-government

but also sponsored the movement for nuclear disarmament. In fact he carried his sponsorship to the extent of taking a personal part in the movement of civil disobedience. And as he refused to pay the imposed fine, this activity earned him a week or so in gaol.² Thus

¹ I do not mean to imply, of course, that this high honour was not a tribute to Russell's eminence as a philosopher.

² The short period was passed in the prison infirmary, it is only fair to add, not in the usual conditions of prison life.

even at a very advanced age Russell has continued to battle on behalf of the welfare of humanity, as he sees it. And the charge of 'ivory-tower philosopher' is obviously singularly inappropriate.

In the following section, however, we shall be concerned with the more theoretical aspects of Russell's ethical and political thought. To the general public he is, of course, best known for his writing on concrete issues. But it would be out of place in a history of philosophy to discuss Russell's opinions about, say, sex¹ or nuclear disarmament, especially as he himself does not regard discussion of such concrete issues as pertaining to philosophy in a strict sense.

2. The first chapter in *Philosophical Essays* (1910) is entitled 'The Elements of Ethics' and represents a conflation of an article on determinism and morals which appeared in the *Hibbert Journal* in 1908 and of two articles on ethics which appeared in 1910 in the February and May issues of the *New Quarterly*. At this period Russell maintained that ethics aims at discovering true propositions about virtuous and vicious conduct, and that it is a science. If we ask why we ought to perform certain actions, we eventually arrive at basic propositions which cannot themselves be proved. But this is not a feature peculiar to ethics, and it does not weaken its claim to be a science.

Now, if we ask for reasons why we ought to perform certain actions and not to perform others, the answer generally refers to

consequences. And if we assume that an action is right because it produces good consequences or leads to the attainment of a good, it is clear that some things at any rate must be good in themselves. Not all things can be good. If they were, we could not distinguish between right and wrong actions. And some things may be considered good as means to something else. But we cannot do without the concept of things which are intrinsically good, possessing the property of goodness 'quite independently of our opinion on the subject, or of our wishes or other people's'.² True, people often have different opinions about what is good. And it may be difficult to decide between these opinions. But it does not follow from this that there is nothing which is good. Indeed, 'good and bad are

¹ We may remark in passing that in 1940 Russell's appointment to the College of the City of New York was cancelled because of his views on marriage and sexual conduct. True, he was given a chair at the Barnes Foundation, Philadelphia, but this appointment lasted only until 1943. The New York episode led to a good deal of acrid controversy, on which the present writer does not feel called upon to pass any comment.

² *Philosophical Essays*, p. 10.

qualities which belong to objects independently of our opinions, just as much as round and square do'.¹

Though goodness is an objective property of certain things, it is indefinable. It cannot therefore be identified with, say, the pleasant. That which gives pleasure may be good. But, if it is, this is because it possesses, over and above pleasantness, the indefinable quality of goodness. 'Good' no more means 'pleasant' than it means 'existent'.

Now if we assume that goodness is an intrinsic, indefinable property of certain things, it can be perceived only immediately. And the judgment in which this perception is expressed will be insusceptible of proof. The question arises, therefore, whether differences between such judgments do not weaken or even entirely undermine the thesis that there can be knowledge of what is good. Russell obviously does not deny that there have been and are different judgments about what things are good and bad. At the same time such differences, in his opinion, are neither so great nor so widespread as to compel us to relinquish the idea of moral knowledge. In fact, genuine differences between the judgments of different people in regard to intrinsic goodness and badness 'are, I believe, very rare indeed'.³ Where they exist, the only remedy is to take a closer look.

In Russell's view genuine differences of opinion arise not so much in regard to intrinsic goodness and badness as in regard to the rightness and wrongness of actions. For an action is objectively right 'when, of all that are possible, it is the one which will probably have the best results'.⁴ And it is obvious that people may come to different conclusions about means, even when they are in agreement about ends. In these circumstances the moral agent will act in accordance with the judgment at which he arrives after the amount of reflection which is appropriate in the given case.

The thesis that goodness is an intrinsic, indefinable property of certain things, together with the subordination of the concepts of right and obligation to the concept of the good, obviously show the influence of Russell's friend, G. E. Moore. And this influence persists, to some extent at least, in *Principles of Social Reconstruction* (1916). Russell is here mainly concerned with social and political themes; and he tells us that he did not write the book in his capacity as a philosopher. But when he says that 'I consider

¹ *Ibid.*, p. 11. ² *Ibid.*, p. 53. ³ *Ibid.*, p. 30.

the best life that which is most built on creative impulses'¹ and explains that what he means by creative impulses are those which aim at bringing into existence good or valuable things such as knowledge, art and goodwill, his point of view is certainly in harmony with that of Moore.

3. At the same time, though there is certainly no explicit recantation in *Principles of Social Reconstruction* of the views which Russell took over from Moore, we can perhaps see in certain aspects of what he says the manifestation of a tendency to make good and bad relative to desire. In any case there is a marked tendency to interpret morality in the light of anthropology, of a certain doctrine about human nature. I do not mean to imply that this is necessarily a bad thing. I mean rather that Russell is moving away from a purely Moorean point of view in ethics.

'All human activity', Russell agrees, 'springs from two sources: impulse and desire.'² As he goes on to say that the suppression of impulse by purposes, desires and will means the suppression of vitality, one's natural tendency is to think that he is talking about

conscious desire. But the desire which lies at the basis of human activity is presumably in the first instance unconscious desire. And in *The Analysis of Mind* Russell insists, under the influence of psycho-analytic theory, that 'all primitive desire is unconscious'.³

The expression of natural impulse is in itself a good thing because men possess 'a central principle of growth, an instinctive urgency leading them in a certain direction, as trees seek the light'.⁴ But this approval of natural impulse, which sometimes puts us in mind of Rousseau, stands in need of qualification. If we follow natural impulse alone, we remain in bondage to it, and we cannot control our environment in a constructive manner. It is mind, impersonal objective thought, which exercises a critical function in regard to impulse and instinct and enables us to decide what impulses need to be suppressed or diverted because they conflict with other impulses or because the environment makes it impossible or undesirable to satisfy them. It is also mind which enables us to control our environment to a certain extent in a constructive manner. So while he insists on the principles of 'vitality', Russell does not give a blanket approval to impulse.

We have seen that Russell attributes human activities to two sources, impulse and desire. Later on he attributes it to 'instinct,

¹ *Principles of Social Reconstruction*, p. 5.
² *Ibid.*, p. 12. ³ P. 76.
⁴ *Principles of Social Reconstruction*, p. 24.

mind and spirit'.¹ Instinct is the source of vitality, while mind exercises a critical function in regard to instinct. Spirit is the principle of impersonal feelings and enables us to transcend the search for purely personal satisfaction by feeling the same interest in other people's joys and sorrows as in our own, by caring about the happiness of the human race as a whole and by serving ends which are in some sense supra-human, such as truth or beauty or, in the case of religious people, God.

Perhaps we can adopt the suggestion of Professor J. Buchler² that for Russell impulse and desire are the basic modes of initial stimulus, while instinct, mind and spirit are the categories under which human activities as we know them can be classified. In any case Russell obviously has in mind a progressive integration of desires and impulses under the control of mind, both in the individual and in society. At the same time he insists on the function of spirit, considered as the capacity for impersonal feeling. For 'if life is to be fully human it must serve some end which seems, in some sense, outside human life'.³

4. Even if in *Principles of Social Reconstruction* Russell retained, though with some misgiving, the Moorean idea that we can have intuitive knowledge of intrinsic goodness and badness, he did not retain the idea very long. For example, after having remarked in a popular essay, *What I Believe* (1925), that the good life is one inspired by love and guided by knowledge, he explains that he is not referring to ethical knowledge. For 'I do not think there is, strictly speaking, such a thing as ethical knowledge'.⁴ Ethics is distinguished from science by desire rather than by any special form of knowledge. 'Certain ends are desired, and right conduct is what conduces to them.'⁵ Similarly, in *An Outline of Philosophy* (1927) Russell explicitly says that he has abandoned Moore's theory of goodness as an indefinable intrinsic quality, and he refers to the influence on his mind in this respect of Santayana's *Winds of Doctrine* (1926). He now holds that good and bad are 'derivative from desire'.⁶ Language is, of course, a social phenomenon, and, generally speaking, we learn to apply the word 'good' to the things desired by the social group to which we belong. But 'primarily, we call something "good" when we desire it, and "bad" when we have an aversion from it'.⁷

¹ *Ibid.*, p. 205.

² In *The Philosophy of Bertrand Russell*, edited by P. A. Schilpp, p. 524.

³ *Principles of Social Reconstruction*, p. 245. ⁴ P. 37. ⁵ P. 40.

⁶ *An Outline of Philosophy*, p. 238. ⁷ *Ibid.*, p. 242.

To say nothing more than this, however, would be to give an over-simplified account of Russell's ethical position. In the first place the utilitarian element in his earlier ethical ideas, an element common to him and to Moore, has remained unchanged. That is to say, he has continued to regard as right those actions which produce good consequences and as wrong those actions which produce bad consequences. And in this restricted field knowledge is possible. For example, if two men agree that a certain end X is desirable and so good, they can perfectly well argue about which possible action or series of actions is most likely to attain this end. And in principle they can come to an agreed conclusion representing probable knowledge.¹ But though the

context would be ethical, the knowledge attained would not be in any way specifically different from knowledge of the appropriate means for attaining a certain end in a non-ethical context. In other words it would not be a case of a peculiar kind of knowledge called 'ethical' or 'moral'.

When we turn, however, from an examination of the appropriate means for attaining a certain end to value-judgments about ends themselves, the situation is different. We have seen that Russell once maintained that differences of opinion about values are not so great as to make it unreasonable to hold that we can and do have immediate knowledge of intrinsic goodness and badness, ethical intuition in other words. But he abandoned this view and came to the conclusion that a difference of opinion about values is basically 'one of tastes, not one as to any objective truth'.² If, for instance, a man tells me that cruelty is a good thing,³ I can, of course, agree with him in the sense of pointing out the practical consequences of such a judgment. But if he still stands by his judgment, even when he realizes what it 'means', I can give him no theoretical proof that cruelty is wrong. Any 'argument' that I may employ is really a persuasive device designed to change the man's desires. And if it is unsuccessful there is no more to be said. Obviously, if someone professes to deduce a certain value-judgment from other value-judgments and one thinks that the alleged deduction is logically erroneous, one can point this out. And if a man meant by 'X is good' no more than

² It would not be certain or demonstrative knowledge. But neither is scientific knowledge certain knowledge.

³ *Religion and Science* (1935), p. 238.

⁴ The statement 'I think that cruelty is good' or 'I approve of cruelty' would be an ordinary empirical statement, relating to a psychological fact. 'Cruelty is good', however, is a value-judgment.

that X has certain empirical consequences, we could argue about whether X does or does not tend in practice to produce these effects. For this would be a purely empirical matter. But the man would not be likely to say, even in this case, 'X is good' unless he approved of the consequences; and his approval would express a desire or taste. In the long run, therefore, we ultimately reach a

point where theoretical proof and disproof no longer have a role to play.

The matter can be clarified in this way. Russell may have sometimes expressed himself in such a way as to imply that in his opinion judgments of value are a matter of purely personal taste, without involving other people in any way. But this is certainly not his considered opinion. In his view judgments of value are really in the optative mood. To say 'X is good' is to say 'would that everyone desired X', and to say 'y is bad' is to say 'would that everyone felt an aversion from y'.¹ And if this analysis is accepted, it is obvious that 'cruelty is bad', when taken as meaning 'would that everyone had an aversion from cruelty', is no more describable as true or false than 'would that everyone appreciated good claret'. Hence there can be no question of proving that the judgment 'cruelty is bad' is true or false.

Obviously, Russell is perfectly aware that there is a sense in which it is true to say that it does not matter much if a man appreciates good wine or not, whereas it may matter very much whether people approve of cruelty or not. But he would regard these practical considerations as irrelevant to the purely philosophical question of the correct analysis of the value-judgment. If I say 'cruelty is bad', I shall obviously do anything which lies in my power to see that education, for example, is not so conducted as to encourage the belief that cruelty is admirable. But if I accept Russell's analysis of the value-judgment, I must admit that my own evaluation of cruelty is not theoretically provable.

Now, Russell has sometimes been criticized for giving vehement expression to his own moral convictions, as though this were inconsistent with his analysis of the value-judgment. But he can make, and has made, the obvious retort that as in his opinion judgments of value express desires, and as he himself has strong desires, there is no inconsistency in giving them vehement expression. And this reply seems to be quite valid, as far as it goes.

¹ In his *Replies to Criticism* Russell says: 'I do not think that an ethical judgment merely expresses a desire: I agree with Kant that it must have an element of universality'. *The Philosophy of Bertrand Russell*, edited by P. A. Schilpp, p. 722.

This is the final paragraph (p.494). Note how, in the last 2 sentences, Copleston's feelings as a Catholic collide -- if that's the word -- with his feelings as an Englishman.

It is thus difficult to classify Russell in an unambiguous manner, for example as an 'empiricist' or as a 'scientific humanist'. But why should we wish to do so? After all, he is Bertrand Russell, a distinct individual and not simply a member of a class. And if in his old age he has become, as it were, a national institution, this is due not simply to his philosophical writing but also to his complex and forceful personality, aristocrat, philosopher, democrat and campaigner for causes in one. It is indeed natural that those of us who hold firm beliefs which are very different from his and which he has attacked, should deplore certain aspects of his influence. But this should not blind one to the fact that Russell is one of the most remarkable Englishmen of the century.

Clark mentions "...the mutual respect felt by the two men, exemplified by Copleston's summary of Russell in his *History of Philosophy* and by Russell's observation that 'one can criticize Copleston for having become a Jesuit, but not for the detailed consequences of being one.'" *The Life of Bertrand Russell* by Ronald W. Clark (New York: Knopf, 1976, p. 497)

Here are the first 2 paragraphs of the Epilogue (p. 497):

We have seen that though Bertrand Russell has often expressed very sceptical views about the philosopher's ability to provide us with definite knowledge about the world and though he has certainly little sympathy with any philosopher who claims that his particular system represents final and definitive truth, he has always looked on philosophy as motivated by the desire to understand the world and man's relation to it. Even if in practice philosophy can provide only 'a way of looking at the results of empirical inquiry, a frame-work, as it were, to gather the findings of science into some sort of order',¹ this idea, as put forward by Russell, presupposes that science has given us new ways of seeing the world, new concepts which the philosopher has to take as a point of departure. The scope of his achievement may be limited, but it is the world with which he is ultimately concerned.

¹ *Wisdom of the West*, p. 311.

In an important sense G. E. Moore was much closer to being a revolutionary. He did not indeed lay down any restrictive dogmas about the nature and scope of philosophy. But, as we have seen, he devoted himself in practice exclusively to analysis as he understood it. And the effect of his example was to encourage the belief that philosophy is primarily concerned with analysis of meaning, that is, with language. True, Russell developed logical analysis and was often concerned with language; but he was concerned with much else besides. Both men, of course, directed attention, in their different ways, to analysis. But it was Moore rather than Russell who seems to us, on looking back, to be the herald, by force of example rather than by explicit theory, of the view that the primary task of the philosopher is the analysis of ordinary language.

RELIGION

(16) Creationists certified as biology teachers. From The Washington Post (4/9/82, p. B1):

Virginia Approves Biology Program At Falwell College

By Michael Isikoff
Washington Post Staff Writer

RICHMOND, April 7—A Christian college headed by the Rev. Jerry Falwell won approval today from a state education committee to have graduates of its biology program, who are taught "the scientific basis for biblical creationism," certified as teachers in Virginia public schools.

If the state Board of Education upholds the decision this summer, it apparently would be the first time Virginia has granted teaching accreditation to a fundamentalist school that includes creationist theory in its curriculum, according to several state educators.

Spokesmen for the Falwell school, Liberty Baptist College in Lynchburg, which has been seeking accreditation for the last three years, immediately hailed the advisory panel's 8-to-1 vote as a major victory for the "academic freedom" of like-minded Christian colleges to teach alternatives to the standard Darwinian theory of man's evolution.

But a biology professor who served on the panel and opposed the recommendation termed it an endorsement of "intellectual garbage."

"This is exactly what I expected given the political climate of the state and the power and prestige of the television gospel," said Dr. William Jones, professor of biology at James Madison University in Harrisonburg, the panel's lone dissenter. "It's giving them

[Liberty Baptist] legitimacy to do a lot of things. Their students now have access to the classrooms where they can use the pulpit of the biology lecturn to preach creationist theory."

Other state educators, however, said the ramifications of the approval would not be extensive, because it is not teachers but local school boards that determine what is taught in public schools.

"This is not going to allow their teachers to go into the classrooms with a Bible under their belt," said Roger S. Schrock, state coordinator of the teacher certification program.

The dispute over Liberty Baptist's biology program turned a normally routine procedure for teacher certification into an emotionally charged debate that touched on the fundamental question about the origin of life. Sitting at a conference table cluttered with biology, zoology and other science textbooks, Jones argued there was no scientific basis to the "biblical theology" that man was created through divine intervention.

"Who knows how long these [biblical] stories went around the campfires of the nomadic?" he asked. If Liberty Baptist students are to be certified to teach in the public schools, he said, then the public "has a right to expect that we do not deal in voodoo."

Jones was repeatedly challenged by Terry Weaver, 36, a self-described "divine creationist" and chairman of the Liberty Baptist biology department. Weaver said he holds a doctorate in microbiology from Ohio State University. "In science we deal with that which is observable and testable," he said. "But nobody has ever demonstrated that something nonliving became living. That's not science, that's dogma."

The immediate issue was whether Liberty Baptist, a school of about 3,000 students founded by

Falwell in 1971, would have its curriculum approved under a state program that would make its graduates automatically eligible for certification in Virginia secondary schools. Approval also would qualify Liberty Baptist graduates to teach in about 35 other states.

To win certification, a school's program must be evaluated by an advisory "visiting committee" of teachers and college professors to determine whether it meets state educational standards.

After the committee inspected Liberty Baptist last fall, it voted to endorse the school's curriculum in seven subjects. It held up approval of its biology program, in part because of statements in the school's catalogue by Falwell, the school's chancellor.

"Liberty Baptist College is a miracle school," Falwell wrote. "Our prayer is that God will help us equip young people who with strength of character and commitment to the absolute truths of the Word of God will go out to shake this world for God."

The catalogue lists five objectives for its natural science and mathematics programs. One is "to give the student a greater appreciation of the omnipotence and omniscience of God through a study of His creation." Another is "to show the scientific basis for biblical creationism."

Critics questioned how such objectives could be reconciled with state instruction requirements in biology, earth science and general science. Weaver said that while instructing its students in creationism, Liberty Baptist also taught standard evolutionary biology. "We are going to give both sides of this important question on the origin of life an equal hearing," he said.

Because Liberty Baptist teaches evolutionary biology, the committee decided to approve the program. Weaver called the decision "a victory for everyone who wants to keep universities as an open forum for debate. . . . It protects the right of everyone to present an opinion that may or may not agree with that of the state."

NEWS ABOUT MEMBERS

(17) Len Cleavelin, who has been studying law at the University of Chicago, will be married on July 31st — a few days after he takes his bar exams. The lady is Judith Anne Gividen, also from the University of Chicago, with a B.A. in Human Behavior and Institutions. Len has a commission in the U. S. Navy Judge Advocate General's Corps. In December the couple will move to California; Len will report to the Naval Legal Service Branch Office in Long Beach. The wedding takes place at 7 P.M. in the Joseph Bond Chapel on the University of Chicago campus. Judith is not only joining Len in holy wedlock; she is also joining the ERS, we are very pleased to report.

(18) Francisco Giron B. is a Salvadorean, currently in Germany, enrolled at Hamburg University. 30 years of age, he is a person of considerable culture and many interests. He writes:

* I am quite concerned about the war in my country. I am interested in corresponding with other members of the Society to get opinions on the situation in El Salvador (Nicaragua)...and in particular, to get answers to the following questions: a) What do you think is happening in El Salvador? b) What causes the war? c) What are possible solutions to the conflict? d) What should a Salvadorean do to help solve the problem?

I ask this in the spirit of Bertrand Russell, of avoiding unnecessary human suffering.

His address: Preystr. 20/2000 Hamburg 60/West Germany.

(19) Joseph Nechvatal's 8' x 10' Mural With Sound Track, "The End of the World", was presented at Empire Salon/2nd Story Books (527 N. Charles St., Baltimore) by Desire Productions/Balti Media, March 5th through March 19th.

- (20) Herb & Betty Vogt: "Off to Near East (Holy Land), Cairo and Athens in May. 84th Infantry Division in Hot Springs in August. (Herb is a U.S. Army Major, retired.) Vogt family reunion in New London, Connecticut; Arno is the oldest of 50 of us. We may just make it to Scripps." We hope they do.

BOOK REVIEWS

(23) The Self and Its Brain: An Argument for Interaction by Karl R. Popper and John C. Eccles (Springer International, 597 pp) as reviewed in The New York Review of Books (11/8/79):

Does Mind Matter?

The Self and Its Brain:

An Argument for Interactionism

by Karl R. Popper and John C. Eccles.
Springer International, 597 pp., \$17.90

P. B. Medawar

"What is mind?"—no matter
"What is matter?"—never mind

(from *Punch* magazine, 1885)

That thinking is something which goes on in the brain is a proposition to which we all assent unless we are being deliberately "difficult" about so commonplace a belief. Yet the evidence that it does so is very circumstantial and indirect, and some philosophers have expressed doubts about the matter. Mind, they have argued, is not a "thing" for which a place can be allocated. But from a commonsensical point of view the evidence that makes us think of the brain as the seat of thinking and as the fountain of voluntary action is too persuasive to be dismissed.

The book that prompts these reflections gives us an opportunity to eavesdrop upon an extended dialogue between Karl Popper, whom many regard as the world's foremost living philosopher, and John Eccles, the Nobel Prize-winning neurophysiologist. Between them they try to clarify a problem that neither thinks is likely to be wholly solved: the problem of the relationship between mind and the various physical performances of the nervous system.

It is a problem upon which two extreme views have been held: at one extreme, that Mind is a thing apart which cannot be said to be in any way embodied—for mind belongs to a quite different "semantic category" from nerve impulses and the like. At the other extreme is the uncompromising materialism that is embodied in Charles Darwin's question: "Why is thought being a secretion of brain more wonderful than gravity a property of matter?" Without going to the other extreme, as Darwin did, I feel confident that the dismissive "category" argument is principally a defense by orthodox philosophers against what they have interpreted as another attempted usurpation of their subject matter by those pesky scientists. It is a poor argument anyway: heredity and high molecular weight polymers also belong to different semantic categories; nevertheless genetic memory is physically embodied in the order of the nucleotides which, strung together, form the giant polymer deoxyribonucleic acid (DNA). I shall try now to explain the

Quotation from Stephen J. Gould's admirable essays *Ever Since Darwin: Reflections in Natural History* (Norton, 1977).

notion of a semantic category.

Consider a sentence such as "the cat sat on the mat" and imagine a blank, to be filled in arbitrarily, in place of the word "cat." Clearly we could substitute

the word "dog," "mouse," or—meaningfully, though implausibly and perhaps mistakenly—"elephant." On the other hand we could not substitute "foreign exchange deficit," which would not be just erroneous or unlikely, but downright meaningless because it belongs to a different semantic category.

Some philosophers, led by Gilbert Ryle, take the view that thinking, willing, and other such acts of mind belong to a different semantic category from nerve impulses and other traffic of the brain. To attribute an act of mind to something that goes on in the brain—or to say that a state of mind has no physical effects on the brain—is thus a category blunder as elementary as to say that "the case for proportional representation sat on the mat."

After the publication of Gilbert Ryle's *Concept of Mind* mention of categories and "category mistakes" became painfully common. I don't think, though, that many who used the term really understood what a "semantic category mistake" was or that they would have been able to give tongue to whatever vague conception of it they may have had. Probably they took Ryle on trust, though to be sure the "category mistakes" to which Ryle refers are in reality simply mistakes—quite straightforward and easily understandable mistakes, too, such as anyone might make.

One example of what Ryle calls a category mistake comes to mind: he envisages a foreigner in Oxford who is shown a number of colleges, libraries, playing fields, museums, and administrative offices, and then asks where the university is—thus making the elementary category blunder of confusing an abstract pedagogic entity, the university, with a piece of ground occupied by bricks and mortar. But this is not a semantic category mistake—it is simply a mistake—one that might easily be made by Americans used to the idea that universities are real material objects situated on a campus—as many American universities at least as good as Oxford are. Popper has criticized Ryle's argument in detail elsewhere than in this volume: and I agree that there is nothing in the concept of semantic category mistakes which prohibits our

²See *Conjectures and Refutations* (Basic Books, 1963), Chapter 13.

thinking that states or acts of mind can exercise physical effects.

Although Popper's and Eccles's opinions differ in several important ways—Eccles believes in God and the supernatural but Popper does not—they share much common ground. Both feel that the materialist "debunking" of man has gone far enough, and neither goes along with "the current intellectual fashions that belittle science and the other great human achievements."

It is characteristic of Popper's style of

thinking that in repudiating materialism he should acknowledge the great inspiration it has been to science and point out that the leading materialist philosophers "from Democritus and Lucretius to Herbert Feigl and Anthony Quinton" were often great humanists and fighters for freedom and enlightenment. He points out, however, that even at a physical level the "essentialist" theory of matter—that matter is neither capable of further explanation nor in need of it—has been superseded in recent years by explanatory theories of matter. Modern physics, Popper declares, undermines the essentialist theory of matter: "there is no essence which is the persisting carrier or possessor of the properties or qualities of a thing." Now that the universe has come to be thought of as a theater of interacting events or processes, "the physical theory of matter may be said to be no longer materialist." La Mettrie's notion of man as a machine has in recent years undergone a similar transformation: biological materialism transcended itself with the recognition that evolutionary changes of matter have taken such a turn as to lead to self-awareness and purposive behavior.

The notions of emergence and of creativity play an important part in Popper's thinking. A clue to understanding Popper's use of these ideas is that he regards man as part of the universe. Man is creative, ergo the universe is creative. Popper reasons:

With the emergence of man, the creativity of the universe has, I think, become obvious. For man has created a new objective world, the world of the products of the human mind, a world of myths, of fairy tales and scientific theories, of poetry and art and music.

Popper, who argued the case for the objective existence of this world in his *Objective Knowledge* (1972), calls this "World 3," in contradistinction to the physical World 1 and the subjective or psychological World 2 (see below).

The existence of the great and unquestionably creative works of art and of science shows the creativity of man, and with it of the universe that has created man.

Popper's principal argument—in my opinion completely convincing—turns upon his acceptance of the notion of "emergence." Let us follow Popper in schematizing the hierarchy of what the natural world is made of in the form of a table starting at the top with, say, political and ecosystems and ending at the bottom with subatomic particles, or whatever the lowest analytical level may be.

- (12) Level of ecosystems
- (11) Level of populations of many-celled animals
- (10) Level of metazoa and multicellular plants

- (9) Level of tissues and organs (and of sponges?)
- (8) Level of populations of unicellular organisms
- (7) Level of cells and of unicellular organisms
- (6) Level of organelles (and perhaps of viruses)
- (5) Liquids and solids (crystals)
- (4) Molecules
- (3) Atoms
- (2) Elementary particles
- (1) Sub-elementary particles
- (0) Unknown: sub-sub-elementary particles?

We can see by inspection that there is a progressive enrichment of empirical content at each level as we go from bottom to top; we can see also that new properties and characteristics "emerge" as we ascend: sexuality and fear for example emerge at a biological level. Moreover every statement that is true and meaningful at one level is also true at every level above it: it is a truth of politics no less than of chemistry that $\text{NaOH} + \text{HCl} = \text{NaCl} + \text{H}_2\text{O}$.

"Reductionism" is the ambition, valid as a research program, to interpret higher levels in terms of lower levels—to interpret sociology in the language and with the concepts that apply to the behavior of individuals, to interpret biology according to the laws of chemistry, and chemistry according to the laws of physics. Reductionism has been a highly successful research stratagem: it is the way of interpreting the world that makes it easiest to see how, if need be, the world might be changed. On the other hand, the ambition it embodies may be impossible to fulfill: thus it is merely silly to say that political concepts such as proportional representation or the "foreign exchange deficit" can be "interpreted in terms of" physics and chemistry. But it should be possible to say this if the axiom of reducibility were unconditionally true, because the phrase "interpretable in terms of..." indicates a transitive relationship—i.e., if A can be interpreted in terms of B and B in terms of C then A can be interpreted in terms of C.

In the light of these concepts Popper thinks the most reasonable view of consciousness is that it is an emergent property which has arisen under selective pressures and is not therefore the result of an intervention by any psychic force or other supernatural agency.

In his discussion of objections to this theory of emergence it seems to me that Popper (though he mentions it) might have elaborated upon F. A. von Hayek's point that our knowledge of the working of the brain must always be incomplete because brain function is both the subject of the investigation and the means by which it is investigated. In much the same way and for somewhat similar reasons a painter can never com-

plete a painting which includes the painter himself painting the picture and the canvas upon which he is working. Popper uses this example to illustrate the cognitive limitation that is embodied in Goedel's Theorem, which applies for example to the attempt to demonstrate by deduction that a vast deductive system such as that of *Principia Mathematica* (which Joergen Joergensen described as a "deductive theory of deduction") is free from self-contradictions. To describe a system fully we must be able to stand outside it: it is hopeless if we are part of it ourselves.

Popper is well known to believe in the "real" existence of a world—which he calls World 2—of states of mind such as awareness, consciousness, anxiety, embarrassment, etc. Popper is an interactionist moreover: he believes that World 2 interacts with the ordinary world of physical objects and events, called World 1. My own favorite illustration of the truth that World 2 and World 1 interact is blushing, a state of affairs in which a mental state—embarrassment—brings about the closure of arteriovenous anastomoses of the skin of the face, thus flooding the capillaries with blood: the existence of this interaction is not a solution of the brain/mind problem so much as a challenge to seek and appraise relevant evidence, discuss alternative views, and look for causal connections.

As I have said, there is another real world too, Popper believes: the world of the products of the human mind—the world of theories, hypotheses, stories, myths, arguments, and so on. The interactionist position is clearly supported by the self-evidence of the interaction between Worlds 2 and 1; but in spite of these interactions World 1 is a closed world: physical processes can be and must be explained and understood by physical theories, whether or not these self-sufficient physical processes are in some way linked to World 2. A simple solution of the body/mind problem is that which Popper describes as "radical physicalism," according to which men-

tal processes and states of mind do not exist: only physical states of the brain can be said to do so. The other extreme—panpsychism—contends that nothing else exists: "the stuff of the world is mind-stuff" (it was once said), of which matter is some kind of exterior manifestation. Popper finds grave objections to this view.

Eccles's section of the joint work begins by recounting the greatest triumph of the cell theory: the notion that—unlikely though it seemed at first—the nervous system has a cellular structure; and by means of clear descriptions and diagrams Eccles describes the localizations of sensory and motor functions and faculties in the brain.

Although Eccles's account of the matter has the authoritative tone and expertness to be expected in a scientist of his distinction, it is not philosophically sophisticated (there is no consideration, for example, of the Kantian coloration of much modern sensory physiology). At the same time, his opinions have a bluff, ~~unpleasant~~ ~~too~~ often shunned by the philosophers of mind:

When thought leads to action, I am constrained, as a neuroscientist, to conjecture that in some way my thinking changes the operative patterns of neuronal activities in my brain. Thinking thus eventually comes to control the discharges of impulses from the pyramidal cells of my motor cortex... and so eventually the contractions of my muscles, and the behavioral patterns stemming therefrom.

Eccles takes the view that a certain part of the brain—e.g., the cerebellum—is responsible for the normal execution of a physiological performance which can be shown to go wrong when that part is damaged or otherwise interfered with. Geneticists take much the same view about genes: if a mutant gene is responsible for the failure to synthesize a particular enzyme—such as phenylalanine hydroxylase then the nor-

mal (i.e., non-mutant) counterpart of that gene is automatically taken to be the one that is responsible for the normal synthesis of the enzyme. These habits of thought are so deeply ingrained that any attempt to criticize their logic will probably be ignored; besides, they may be right.

The most original and illuminating part of this book is without doubt the long section occupied by the dialogue between the two authors. It is a very special pleasure to read this grave and measured discussion, each man learning from the other and both above all else anxious to get at the truth of the difficult matters they discuss. There is nothing quite like it in any other philosophic work of comparable stature.

My only criticism of the dialogue as dialogue is that the natural friendliness and good manners of the participants may have inclined both of them to declare that they are more closely in agreement with each other than they really are—particularly over the role of sensory information in our knowledge: Popper attaches more importance than Eccles does to the role of expectation, predisposition, and the interpretative element generally in the way in which we turn sensation into sense.

Both authors believe in the reality of the existence of the state of consciousness and both believe it to be an emergent property; as to whether lower animals enjoy conscious states, both agree that the existence of degrees of consciousness even in human beings is very relevant. At the same time, I was surprised by Eccles's skepticism of the tool-making capabilities of chimpanzees, the evidence for which I think convincing. Popper for his part regards tool-making as an advanced manifestation of a faculty to be found in all living organisms: "that living organisms in a sense select and fashion their own environment."

In the outcome the authors agree on the interactionist position: that acts and states of mind can exercise physical effects and that the physiological activities

of the brain can affect the mind. Both believe that physiological research will progressively deepen our knowledge of this interaction, even if the problem is not likely to be completely solved.

Among the most attractive features of this book are the authors' lack of dogmatism and their determination from the beginning not to dismiss the brain/mind problem as a nonproblem or as a pseudo problem—by declaring for example that "brain" and "mind" are different categories and that never the twain shall meet. "Semantic categories" have been something of a nuisance in philosophy, because their existence—and they do exist—has more often been used to evade problems than to solve them.

The very substantial merits I have called attention to will probably be judged to outweigh the occurrence of a misprint on p. 562.

In evaluating the interactionist position we may legitimately retreat into a pragmatic stronghold: the concept works and leads to fruitful ideas and actions. Here is the part of the brain that has to do with speech; there, with sound. Stimulate the hypothalamus here there or elsewhere and the subject will feel enraged, elated, or ravenously hungry, as the case may be. There is nothing more offensive in the idea that these faculties or states of mind have a material basis than in the idea that the optic nerve has to do with sight and the auditory with sound. Such notions as these make sense of the behavioral consequences of damage to the central nervous system, and put us in the way of finding out what we can do about them.

Even if we never know exactly how brain and mind interact the interactionist position is methodologically a most fruitful one: as time goes on natural and contrived experiments will progressively enrich our understanding of the physical basis of mind—very likely in ways that will be medically useful, so that in spite of the disillusioned dialogue with which this article began it will one day certainly become true to say that what mind is *does* matter.

(24) Ludwig Wittgenstein: Personal Recollections, ed. Rush Rhees (Totowa, NJ: Rowman and Littlefield, 235 pp.), as reviewed in the Boston Globe (9/9/81) p. 60, by Robert Taylor of the Globe Staff:

"I believe he considered it more important to be free of all trace of vanity than to achieve a great reputation in philosophy," a pupil of Ludwig Wittgenstein recollects. Yet this same pupil also recalls Wittgenstein citing Kierkegaard's bitter parable about the effect of his writings: "He said he felt like the theater manager who runs on the stage to warn the audience of a fire. But they take his appearance as all part of the farce they are enjoying, and the louder he shouts the more they applaud."

This tantalizing, fragmentary, uneven yet hypnotic book collects some basic reminiscences about the most significant philosopher of our century: Hermine Wittgenstein's reminiscence written in June 1944 not intended for publication but as an attempt to preserve a family record at a time when it appeared all such records would be obliterated; the memoir of Fania Pascal, close friend and Wittgenstein's Russian teacher; of the late F.R. Leavis, his colleague at Cambridge; of John King, who took lecture notes in 1931-32; above all the conversations with Wittgenstein recorded in Boswell and Johnson vein by M. O.C. Drury, a remarkable

man who came up to Cambridge intending to study theology and assume holy orders, and who spent the bulk of his career as the senior psychiatrist at St. Patrick's Hospital, Dublin.

Despite the fact that he founded (inadvertently) two schools of philosophic thought, Wittgenstein eschewed the history of philosophy—he never felt obliged to read Aristotle, for instance. Instead, he grappled intractable Truth with a tenacity that recalls Socrates. Like Socrates, the man was frequently absurd, but even his ties inspired respect, for in the tradition of the stage manager of Kierkegaard's anecdote, Wittgenstein sought to wake people up, to make them aware of the implications of language, of consciousness and (as he does in the lucid "Tractatus-Logico-Philosophicus," completed in a prisoner of war camp in World War I), of using the mind to transcend its own limitations.

Intriguing in this volume is the multiplicity of its viewpoints. Wittgenstein's sister is practical and down to earth, but no more so than Ludwig, whose passion for precise measurements was such that he decided to have a ceiling of a room raised three centimeters in order to con-

form to the plans of a house he designed, and which still stands in Vienna. Leavis views Wittgenstein as a colleague and continually apologizes for his own philosophic background; Drury's relations are those of a disciple until a sudden, unexpected shift reverses roles.

Are so many different views astonishing? Before becoming a philosopher, Wittgenstein was a mathematician, a musician (he carried a clarinet wrapped in an old sock), a mechanical engineer, a soldier, a grade school teacher, an architect, a sculptor, an aeronautical designer. Though he never graduated from college, he received a professorship at Cambridge, and he gave up that post in order to become a hospital porter. At Cambridge with its reverence for sartorial forms, Wittgenstein usually went tieless, wore a zippered suede jacket and scuffed brown shoes. Yet Leavis saw him as "a center of life, sentience and human responsibility," immensely superior to the blandly supercilious Bertrand Russell.

In these memories one finds startling trivia about Wittgenstein such as his addiction to the

American catchphrase. "let's case the joint," his admiration for Astaire and Rogers, his preference for Tristram Shandy as a comic novel over the vastly unfunny Don Quixote. But, more incisively, there are relevant insights, too. "Hegel seems to me to be always wanting to say that things which look different are really the same. Whereas my interest is in showing that things which look the same are really different." Wittgenstein throughout exerts the magnetic spell of personality as engrossing as Samuel Johnson's.

(Thank you, GRAHAM ENTWISTLE)

BRS LIBRARY

(25)

Books for sale.

- The following titles can be ordered from the BRS Library at the discounted prices shown.
 ---This list and prices are current as of May 1, 1982 and supersede previous lists and prices. From time to time market changes require title deletions, allow for title additions, and force price increases. But the discounts given provide considerable savings, especially for certain titles which are often difficult to locate.
 ---Prices include postage and other shipping costs.
 ---"H" indicates a hardbound edition. No notation indicates a paperbound edition.
 ---Prices shown are in U.S. funds. Please remit by check or money order, payable to The Bertrand Russell Society, in U.S. funds or the equivalent.
 ---Your order will be promptly filled, although occasionally an out of stock item may cause a brief shipment delay.
 ---Send orders to Jack Ragsdale; 4461 23rd St.; San Francisco, CA 94114; USA

- (26) "Let Me Die Before I Wake" by Derek Humphry has been donated by HUGH MC VEIGH. It is a 102-page book published by Hemlock, "a society supporting active voluntary euthanasia for the terminally ill." For more about Hemlock, see (35).
-

FINANCES/CONTRIBUTIONS

- (27) Hat in hand. We have to remind you about a very boring subject: money. Not that we enjoy boring you, but the fact is, the money we collect in dues is not (yet) sufficient to pay our expenses. In 1981 dues covered only 2/3 of our operating costs; we depend on contributions to make up the deficit. We think that when we get about 200 more members, we'll be able to stand on our own feet, economically. And that will be great! For one thing, we won't have to bore you any more with appeals for money, like this one. So please bear with us...and share with us any money you can spare. Any amount from \$1 up is welcome. Send it care of the newsletter, address on Page 1, bottom. Thanks!
- (28) We thank these members for their contributions during the past quarter: PETER CRANFORD, BOB DAVIS, LEE EISLER, CHARLES HILL, LLOYD & OPHELIA HOOPES, DON JACKANICZ, HARRY LARSON, JOHN LENZ, STEVE REINHARDT, GREG SCAMMEL ...and (of course!) KATHY FJERMEDAL.
-

ELECTION OF DIRECTORS

- (29) Time to nominate Directors. Directors are elected for 3-year terms. The Bylaws call for a minimum of 6 and a maximum of 24 Directors. We currently have 21. If we elect 8 this year, that will bring the total up to 24, which is desirable.
- Any member may nominate any other member to be a Director-Candidate.
- If you wish to be a Candidate yourself, notify the Elections Committee, and someone will probably nominate you.
- The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something, by mail; and they are expected to make a reasonable effort to attend annual meetings. The cost of attending meetings is tax-deductible, for Directors.
- We would like to have more than 8 names on the ballot, so as to give members a choice.
- A brief statement about a Candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.
- The next newsletter (RSN35, August) will contain a ballot with brief statements about the candidates.
- Directors whose terms expire this year are KEN BLACKWELL, JACK COWLES, LESTER DENONN, JOE NEILANDS, STEVE REINHARDT.
- * To nominate someone -- or volunteer yourself -- write the Elections Committee, care of the newsletter (address on Page 1, bottom.)
-

MEMBERSHIP RENEWALS

- (30) Last call for '82 dues. Renewals have been sluggish -- possibly because of the new January 1st due-date, possibly because we didn't enclose a colorful reminder, possibly because money is tight.
- We said that if you hadn't sent your renewal by May 1st, we would have to consider you an ex-member and not send you this issue of the newsletter.
- But we've had to change our mind because of the following predicament:
- A large proportion of you who have not yet renewed will renew later on, when you get around to it. But if we wait till you renew before sending you the newsletter, we have to send it first class for 54¢ or 71¢ (depending on weight), instead of at the non-profit rate of about 6¢. Since there are a lot of you who haven't yet renewed, that adds up to a lot of postage.
- We had to decide whether to send you the newsletter now and save on postage, and risk the loss if you do not renew. Sending it is a gamble. We win if you renew. We lose if you don't.

As is obvious, we chose to send you the newsletter now. Which means we're betting on you to renew. Don't let us down.

Dues (in U.S. dollars): regular \$20, couple \$25, student \$10. Plus \$7.50 outside the USA, Canada and Mexico.

Please mail dues to: 1982, RD 1, Box 409, Coopersburg, PA 18036

Thanks!

FOR SALE

- (31) Members' Stationery. 8½ x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell." On the bottom: "*Motto of The Bertrand Russell Society, Inc." \$5 postpaid for 90 sheets (weighs just under a pound, travels 3rd class.) Order from the newsletter, address on Page 1, bottom.
- (32) ER postcard. 4½ x 6. Philippe Halsman's handsome 1958 photo of ER with pipe, 50¢ each + 25¢. RSN30-44 shows it slightly reduced in size. Order from the newsletter, address on Page 1, bottom.

For ERS Library books for sale, see (25).

ABOUT OTHER ORGANIZATIONS

- (33) American Atheists hold their annual convention " each year on the weekend closest to April 13th, to commemorate the birthdays of Thomas Jefferson, founder of our Nation, and Madalyn Murray O'Hair, founder of American Atheists." This year they held it in Washington, DC, on April 9-11. Scheduled speakers included Isaac Azimov, Ralph Ginsberg, and Albert Ellis. They publish "American Atheist" magazine, subscription \$25. Membership costs \$40 and includes the magazine. PO Box 2117, Austin, TX 78768.
- (34) Croatian National Congress has sent us 7 pages alleging Yugoslav oppression of its Croatian minority, and listing 6 documents for sale, on that subject. We will lend the 7 pages on request to the newsletter, address on Page 1, bottom.
- (35) Hemlock states its aims this way:

GENERAL PRINCIPLES

1. HEMLOCK will seek to promote a climate of public opinion which is tolerant of the right of people who are terminally ill to end their own lives in a planned manner.
2. HEMLOCK does not encourage suicide for any primary emotional, traumatic, or financial reasons in the absence of terminal illness. It approves of the work of those involved in suicide prevention.
3. The final decision to terminate life is ultimately one's own. HEMLOCK believes this action, and most of all its timing, to be an extremely personal decision, wherever possible taken in concert with family and friends.
4. HEMLOCK speaks only to those people who have mutual sympathy with its goals. Views contrary to its own which are held by other religions and philosophies are respected.

OBJECTIVES

- Continuing a dialogue to raise public consciousness of active voluntary euthanasia through the news media, public meetings, and with the medical and legal professions, and others.
- Clarifying existing laws on suicide and assisted suicide.
- Publishing informational material to help members decide the manner and means of their death. (Members of three months' standing may order **Let Me Die Before I Wake**, the only guide to self-deliverance for the dying in the USA.)
- Issuing a quarterly newsletter to members providing up-to-date information on issues of dying and death.
- Participating in the international debate through membership of the World Federation of Right To Die Societies.

Hemlock's address: PO Box 66218, Los Angeles, CA 90066

(36) Society for Humanistic Judaism was founded in Detroit in 1969 "to promote the ideas and practices of Humanistic Judaism through the publication of educational materials, the organization of new congregations, and the training of leaders." Its leader and founder is Rabbi Sherwin Wine of The Birmingham Temple, Detroit. It is holding its 12th annual meeting in Washington, DC April 30, May 1-2, on the theme, "Jewish Roots of Jewish Humanism", about which it says: "There is a long-standing secular and humanistic tradition in Jewish history which stood in opposition to the established religious hierarchy and its supernaturalist doctrines. The values of human reason, human dignity, and human power are old Jewish values. It is important for us to understand the real Jewish roots." Membership in the Society includes a subscription to its excellent quarterly journal, Humanistic Judaism, 28611 West Twelve Mile Road, Farmington Hills, MI 48018.

(37) The Voice of Reason will attempt to counter the work of the Religious Right, and seeks members. Sherwin Wine is its National Spokesman. Here is how they put their case:

Who Speaks For The Real America?

Groups such as the Moral Majority and Christian Voice claim they do. But do they?

Advocates of the new Religious Right aim to impose their beliefs on everyone. They want their version of religion to limit your personal freedom.

They have:

- forced books off the shelves.
- substituted Bible teaching for science.
- smeared Congressional opponents.

Their agenda runs from blocking abortion and ERA to restoring prayer in the schools.

Their goal: to "alter" our constitution. Their interpretation of scriptures would determine what you can read, see and do.

Preserve the American Way

Our Founding Fathers knew from experience the dangers of enforced religious morality. They built into our Bill of Rights a wall between church and state... a wall now under siege by self-styled fundamentalists who insist they know how God wants the rest of us to act.

Our nation has spread the benefits of science and technology and opened doors of opportunity through untrammelled creative intelligence. Medicine... the arts... consumer conveniences — all are the products of free minds.

Progress, not regression to Puritanism, is the American Way.

The America you and your children will live in depends on the outcome of the struggle to preserve our traditions.

The Voice of Reason
P.O. Box 16
Franklin, MI 48025

Where Do You Stand?

Do you believe that:

- You have the right and responsibility to make your own decisions?
- Your conscience, not someone else's beliefs, should be your guide?
- Women and men should have equal rights?
- What you do with your body is your business, not the government's or the church's?

If you agree, then yours is a voice of reason—the real voice of America.

What Can We Do?

The Voice of Reason, a nonprofit organization, is committed to keeping America progressive, free and rational. By uniting, our voices gain strength.

We can:

- Monitor school boards and legislatures.
- Alert each other through a newsletter.
- Work and lobby with like-minded groups.
- Spread the word among friends and neighbors.
- Train discussion leaders.
- Provide information on issues.

We can do all this and more—with your support.

We must get our message on radio and TV and in the print media. The evangelical right is heavily financed and has tremendous exposure. (Moral Majority's Jerry Falwell operates on a \$75 million budget, appears on 324 stations with 50 million viewers, and even has his own zip code.)

A little of your time and/or money will go a long way.

Join The Voice of Reason. It may be the most reasonable investment you ever made. Let's show them who is the real majority.

Yes! I Want to be a Voice of Reason.

Send me your newsletter. Here's my dues.

\$5.00 for student, \$8.00 individual, \$16.00 family, \$25 supporting, \$50 sustaining, \$100 patron. \$..... benefactor

..... I want to help. Tell me what I can do.

..... I will organize a chapter in my area. Please send literature and instructions

BOOK REVIEW (CONTINUED)

- (39)
- Reviewer Medawar.
- In the review of the Popper-Eccles book (23), we neglected to include the brief descriptive paragraph about the reviewer, which The New York Review of Books always provides. Here it is:

P. B. Medawar won the Nobel Prize for Medicine in 1960. He was formerly director of the National Institute for Medical Research and is working on cancer research for the Medical Research Council in England. He is the author of Induction and Intuition in Scientific Thought, The Hope of Progress, The Life Science (with J. S. Medawar), and Advice for a Young Scientist, just published. (1979)

THINKING OUT LOUD

- (40a)
- 3 letters to The Guardian (England)
- , one of which is by DORA RUSSELL. She sent the 3 to Bob Davis, who sent them to us. All 3 appeared under the heading, "When Philosophers should march Left, Right into the Market Place".

- (40b) Letter of January 16th 1982 from Judith Scott:

I agree with Ian Flintoff (Letters 13 January) that most people want peace, harmony, and the extermination of poverty, hunger, and violence. I also agree with his observations that our economic and political system has failed to meet these desirable goals for most people.

As the answer to this problem, Mr Flintoff prescribes radical socialism. In theory he must be right because socialist ideology is premised on such values as peace, harmony and the eradication of poverty, hunger and violence. But in practice, any political system has to be operated by human beings with some sort of administrative machinery and both these factors make the leap from theory to practice very difficult.

Of course it is unfair to judge socialism in practice by evidence of its failures but unfortunately, that is the only empirical evidence we have.

If, therefore, we wish to see a socialist Britain, it is important to analyse why attempts to implement socialism elsewhere have failed to produce democratic societies in which the desirable side of human nature and its material well-being can flourish. In this respect the question of power, both political and economic, is absolutely fundamental. The problem lies in designing a system which ensures that the power is distributed equitably.

Mr. Flintoff says that in a socialist Britain "power will be given to the population," but he fails to explain how this is to be done. (Who, for example, feels that nationalized industries give power either to those who work in them or to the population which finances them?) Mr Flintoff also argues that "the institutions

of decision and administration must obey the common will." What is the common will? Doubtless the elites of Poland or El Salvador could provide a common answer.

To raise these questions is not to deny the attractions of socialist ideology nor, remotely, to defend the iniquities of capitalism. It is merely to point out, as Bryan Magee did, that good intentions are an insufficient guarantee of arriving at the desired destination.

If Britain is to become a democratic socialist state, it can do so only if those who believe in that ideology can convince the people of this country that they will not be exchanging one form of repression for another. Given the lack of empirical evidence to support the arguments for socialism, it is vital that those who wish to see it implemented here can explain precisely how such a system would operate politically, economically, and administratively. Until that happens, most people, I suspect, will opt, albeit passively, for the devil they know.

(40c)

Letter of January 16th 1982 from James Lund:

Ian Flintoff's letter (January 13) may be seen as exemplifying the political disposition described by Bryan Magee in his account of "good intentions" which may lead the extreme Left perhaps nowhere, perhaps to tyranny in the name of democracy. It shows no awareness that the evils created by injustice may enter into and override a political attempt to redress such injustice: insecurity, fear, resentment, envy, and the simple desire for revenge may prove stronger than wishes for the equality of freedom, justice and compassion.

Yet there is more to the exchange than this. Mr. Flintoff is surely right when he points out that Bryan Magee (Guardian Agenda, January 11) goes much too far in emphasizing the "unfathomable mystery" of human being. Even if Mr Magee is moved to do so by the unforeseen consequences of good-wishers in politics, uninformed by the knowledge required to transform them into the actuality of good intentions.

Bryan Magee is a philosopher as well as a politician; among other activities in philosophy he was the organiser and presenter on television of Men of Ideas. This series of introductory discussions of the work of a number of recent and contemporary philosophers provoked surprisingly widespread, valuable discussion of the influence of philosophy in the world at large. Yet, significantly in the present context, it failed to provide any focus on what the late John MacMurray described as the emergent problem in the development of philosophy in this century.

This is the question of the logical form in which we think of ourselves in philosophy. MacMurray was concerned by the inadequacy and incoherence of the ideas of man in contemporary philosophy as conceptual frameworks within which to act and reflect in the context of contemporary experience and difficulties. These are ideas of man as either a relation of two disturbances, matter and mind, which is still predominant in much Anglo-American philosophy; or as an organism, integral to the order of nature.

In his Gifford Lectures, MacMurray began the task of working out a scheme of man as primarily an agent, a beginner and knower both in action and reflection, who is also a person who appears to be and is necessarily related to other agents.

Whatever judgment comes to be agreed as to the significance of this work, there is no doubt of the contemporary importance, both in philosophy and in the world at large, of the question of individual and communal identity, which gave rise to it. Arthur Koestler once observed that man is the only form of living being whose members slaughter on another in huge numbers in consequence of their differences of belief as to what they are and the way in which they should live.

It is some years now since Men of Ideas was first shown. Is there a possibility, either in television, or perhaps in the pages of The Guardian, for some extended popular discussion of the question of human identity and the related question of the influence of natural science on philosophy?

Mr Magee touches on this issue when he maintains that there is a relation between the political philosophy of the extreme Left and "old-fashioned 19th Century scientism". Yet Men of Ideas did not touch on the dominance of philosophy by natural science throughout the modern age, which is evident in the matter, mind and organic concepts of man, fundamental to philosophy in this era.

The practical importance of such discussion in the deepening political divisions of the day appears self-evident. On the right, there is an increasing emphasis upon the importance of human agency: the possibility of beginning and knowing in action, reaction, inherent in the uniqueness of the human agent. On the Left, there is increasing emphasis on the social being of man: the sharing of a like condition grounded both in a common form of organic being or nature, and in the sharing of common pursuits, not only in economic life but in all forms of action and reflection.

This is not an either/or but an and/and issue. Both understandings are valid Each is complementary to the other. They are and always will be in tension with each other. The tension is inherently creative, but it is being transformed into a destructive opposition, symptomatic of the underlying intellectual crisis of identity which it is the task of philosophy to try to resolve through a coherent synthesis.

What is wanted is public philosophical discussion of the issues and the possibilities of such a synthesis at a popular level — in the market place, so to speak.

(40d) Letter of February 1st 1982 from Dora Russell:

You ask for "Philosophers to march Left, Right into the market place" (Letters January 16). We already had one in Bertrand Russell, who delivered the first Reith lectures in 1948 on the very topic under discussion, the relation of the individual to society. His opening sentence reads: "The fundamental problem I propose to consider in these lectures is this: how can we combine that degree of individual initiative which is necessary to progress with the degree of social cohesion that is necessary for survival?"

Influenced by the immense advances of science, he had come to believe that the main purpose of modern philosophy was to interpret the findings of science and their consequences. But, as his History of Western Philosophy shows, he was well aware that traditional philosophy was the offshoot of religion and theology, plus Plato and Aristotle.

Russell's thought, however, lies within the Cartesian dualism of mind and matter, which glorified the objective, impartial intellect and has made mathematics and mechanism central to our social and economic system. Science is revered like a religion but science cannot teach us the values by which to live. Neither can the traditional religions, which deliberately placed man and his faculties outside the world of organic life, regarding everything animal as sinful and obscene.

It is significant that, in the series of modern thinkers directed by Mr Magee, there was only one woman, Iris Murdoch. The fact is that, while they may study philosophy because it is an academic subject, for a great many women, technical philosophy is no more than a masculine intellectual parlour game.

Mary Midgley's innovations in her book Beast and Man are a breath of fresh air. Mr. Koestler is to be congratulated on being perhaps the first male to admit that man the animal has been consistently destroying his own species, a practice known and deplored by women for many centuries, without power to end it. Religions and ideologies are the motive power of this destruction.

Raymond Aron, in his course of lectures on industrial civilization, remarks that having lost all former criteria of how to live, industrialism has not yet evolved a consensus of belief. In this the glib politicians will not help us. A really fundamental study of life in all its forms is called for, to seek reason why and how it is worth while and possible for mankind to live in harmony on this planet.

In common no doubt with many others, I have been trying to wrestle with this problem of the machine-age.

* * * * *

Brian Magee's 15 TV interviews with philosophers have been transcribed and appear in book form, in Men of Ideas (New York: The Viking Press, 1979).

BOOK REVIEWS (CONTINUED)

(41) The Philosophy of Humanism by Corliss Lamont (New York: Frederick Ungar, 1982), reviewed by Bob Davis:

We have all gotten used to hearing attacks by the Religious Radical Right on various aspects of what is essentially modernism. They really seem to reject modern life in general in favor of their own fundamental and "Biblical" values. Their code word for modernism is "humanism" or "secular humanism", and it is used as broadly and sloppily by them as "communist" was used 30 years ago. In this usage the Right has been quite fortunate, by dumb luck I suspect. "Humanism" is really quite a vague term. In lower case, humanism stands for modernism. Those who do not understand the modern world and are frustrated by it can blame women's rights, abortion, unruly children, nasty Russians, gay rights, etc., on humanism. In addition, there is a small philosophic (some say religious) Humanist movement (with a capital H) that can be pointed to and used as a whipping boy.

Humanists have made things unnecessarily easy for the Right. Many Humanists don't seem to have a clear idea of what Humanism is. Consequently they are not prepared to defend Humanism against attacks and turn things around, carrying the battle to the Right -- which is what ought to be done. I am often surprised, at Humanist meetings, by how little feel for Humanism many in attendance have.

Fortunately this conditions can be corrected. Humanism has some very effective exponents -- Russell not least, and a number of strong figures operating today. Two of the foremost, or perhaps I should say, the two foremost, are 2 BRS members: Corliss Lamont and Paul Kurtz. Lamont has written a classic book, The Philosophy of Humanism. It was written over 30 years ago, and has had several revisions.

That this book provides a clear and effective explanation of Humanism is indicated by the fact that Rev. Tim LaHaye, co-founder of the "Moral Majority", quotes it 36 times in his 1980 The Battle for the Mind, as evidence of how wicked Humanism is. In consequence, Dr. Lamont has just had published the new 6th edition, with a new introduction, "Exposing the Moral Majority."

The Philosophy of Humanism is both history and philosophy. The text was developed over a 13-year period, during which Lamont gave a course on naturalistic humanism at Columbia University. As a result, it is very thorough; points are worked out in detail, alternatives and objections are discussed. Not a paragraph

is obscure. I consider this the best of Lamont's many books. I rank it with Russell's popular works for style, clarity and discussion of complex questions.

The opening chapters provide a definition of Humanism, and describe types of humanism and the wide variety of people and beliefs that the term "humanist" can refer to. A considerable amount of history is provided. Lamont traces the roots of humanism to the ancient Greeks, Hebrews and others...to the Renaissance humanists...to Spinoza...and continues into the 20th Century.

The principal part of the book deals with philosophic aspects and issues of humanism. Lamont discusses Humanism's Theory of the Universe, including such topics as the role of science, existence, nature, knowledge, ethics, happiness. For the layman, the presentation of these subjects is refreshingly clear, devoid of technical terms and inflated writing that obscures so much in philosophy.

For many, however, the intellectual aspects of Humanism are secondary, the feel for life and human happiness being more important. Much of the latter half of the book addresses these aspects. Lamont has always had strong feelings for nature and poetry, and the two are both well represented. I particularly recommend the poem on death on page 180.

I cannot find, in The Philosophy of Humanism, anything with which I disagree. Some Russell scholars may wish to reject his hopelessly American discussion of "Truth"; others may adopt a more Popperian view of science. But that would not affect the substance of the book.

In sum, this is a valuable book. I was glad to re-read it after some years, especially in the light of today's political climate. If you can't find it at a local bookstore, you may order it from the publisher, Frederick Ungar Publishing Co., 250 Park Avenue South, New York, NY 10003. \$15.95 cloth, \$9.95 paper.

Introductory (1). Annual Meeting June 25-27 (2). National Summit Conference, March 27, NYC (3). President Davis reports (4). Treasurer Darland reports (38). Secretary Jackanicz reports (5). Membership Committee report (6). Science Committee report on nerve gas (7a); BR Peace Foundation on nerve gas (7b); 2 papers offered, on Civils Defense, and Defense Dept. Influence (7c). Philosophy Committee report (8). 2 BBC talks by BR (9a); "Scepticism and Tolerance" (9b); "Nature and Origin of Scientific Method" (9c). BR on Israel, 1943 (10). BR's favorite hymn (11). BR's "Science and Values" broadcast (12). BR quote on tombstone (13). "Guided Tour" (Act II) performed (14). A Jesuit on BR (15). Creationist biology teachers (16). News about members: Cleavelin (17), Giron (18), Nechvatal (19), Herb & Betty Vogt (20). New members (21). Address changes (22). Book reviews: Popper-Eccles (23,39), on Wittgenstein (24), Lamont (41). BRS Library: books for sale (25), "Let Me Die Before I Wake" (26). Contributions solicited (27). Contributors thanked (28). Time to nominate Directors (29). "82 dues, last call (30). For sale: members' stationery (31), BR postcard (32). Other organizations: American Atheists (33), Croatian National Congress (34), Hemlock (35), Society for Humanistic Judaism (36), Voice of Reason (37). Treasurer's Report (38). Reviewer Medawar (39). 3 letters to The Guardian (40a): Scott (40b), Lund (40c), Dora (40d). Lamont's book reviewed (41). Index (42). Annual Meeting tentative program (43).

ANNUAL MEETING (CONTINUED)

(43)

Tentative program. As we said in the last issue (RSN33-8b), Al Seckel will give a talk on Russell and the Cuban Missile Crisis, drawing on published and unpublished sources. Dr. Gerald Larue will discuss the "Moral Majority". There may also be some or all of the following: a film dealing with BR's position on nuclear war, a talk or panel on disarmament, the celebrated Norman Lear film on the "Moral Majority", a talk or panel on BR and the 1980s ("New Hopes for a Changing World" revisited). Dan Wray plans to film parts of the meeting and interviews with members; a documentary film may result. The '82 BRS Award will be announced.

RUSSELL SOCIETY NEWS

No. 35

August 1982

- (1) Annual Meeting 1982, including new BRS officers (2). Annual Meeting 1983 at McMaster (3). New BRS President reports (4). BR in Russia, 1920 (10). 1982 BRS Award to Kendall (12a). 1982 Doctoral Grant to Garciadiego (13). BR vs. the Bomb:1945 (14); 1959 (15). Pugwash (16a,b,c,d). Celebrating Popper (26). Schilpp speaks out (27). Vote, please (30-32): in asterisk in the left column indicates a request.

- (2) ANNUAL MEETING '82

The 9th Annual Meeting was held in the Sheraton Town House, Los Angeles, the weekend of June 25-27. A luxury hotel is probably not the most appropriate setting for a BRS meeting, but it must be said that the facilities were remarkably agreeable — probably because the Town House was built 50 years ago, before the age of chrome and big glass and before the cost-accountants had set limits on the number of square inches of floorspace allowed per patron.

25 BRS members attended one or more sessions: LOUIS ACHESON, JACQUELINE BERTHON-PAYON, ANDRE BACARD, JACK COWLES, DENNIS DARLAND, BOB DAVIS, ARTHUR DE MUNITIZ, LEE EISLER, ALBERT ENGLEMAN, KATHY FJERMEDAL, MARY GIBBONS, JOE GORMAN, CHARLES GREEN, DONALD HYLTON, DON JACKANICZ, MARTY LIPIN, BOB LOMBARDI, STEVE MARAGIDES, JIM MCWILLIAMS, JACK RAGSDALE, STEVE REINHARDT, HARRY RUJA, CHARMAINE SOLDAT, MARK WEBER, DAN WRAY.

29 non-members attended one or more sessions: Jo Bacon, Bob Burkett, E. Cheslow, Robert Chisholm, Marilyn Donova, John R. Edwards, Joe Engelsman, Fredericka Frank, Paul Frank, Annette Green, Tim Hayes, Bruce W. Johnson, Ralph Keyes, Gerald Larue, Harry Levinson, Pauline Lipin, Alice Lipton, Saul Matlin, Mo Newkirk, Maritze Pick, Esther Robinowitz, Mr/Mrs P. Rose, Al Seckel, Laura Seckel, Adolph Sertshin, Patricia Turner*, Gerald Weber, Kathleen Winsor.
*joined the BRS after the meeting.

The following officers were elected for one-year terms, starting immediately: Harry Ruja, Chairman; Don Jackanicz, President; Jacqueline Berthon-Payon, Vice-President; Dennis Darland, Treasurer; Cherie Ruppe, Secretary. Two new offices were created and filled: Bob Davis, Vice-President/Special Projects; Lee Eisler, Vice-President/Information.

The program included a panel of 4 — Lou Acheson, Jr., Don Hylton, Don Jackanicz, Dan Wray — moderated by Bob Davis, discussing "New Hopes for a Changing World, 1982"; Bob Davis on "BR and World Government"; Al Seckel on "BR and the Cuban Missile Crisis"; Gerald Larue on the misnamed "Moral Majority". Two Russell films were shown, "Bertrand Russell" and "The Life and Times of Bertrand Russell". There were 2 films followed by talks: Helen Caldicott's "The Last Epidemic", after which Dr. Timothy J. Hayes, of the Physicians for Social Responsibility, discussed medical aspects of nuclear war; Norman Lear's "The Radical Right" was followed by a talk by Robert Burkett, of People for the American Way. After the Saturday evening banquet, "Oh, What A Lovely War" was screened.

During the weekend, there was a Society meeting and a Board of Directors meeting. For details — including a discussion of ex-Chairman Peter Cranford's resignation, and the reasons therefor — see the minutes (34,35) and Bob Davis's report (5,37).

* * * * *

We are indebted to JIM MCWILLIAMS for the photos on the next page. Jim took the group photo Sunday morning (June 27). If you want a print of it, Jim will send you one. He asks that you send a \$5 contribution to the BRS, c/o the newsletter, address below. (He wants to help fatten the lean BRS Treasury. Thank you, Jim!) If you want a print, please order before September 30th.

It was a good meeting!

(Photos on Pages 2 & 3)

- (3) The 1983 Annual Meeting will take place at McMaster University, Hamilton, Ontario, Canada. There are good reasons for meeting at McMaster in any year: the Russell Archives are there; the campus is handsome; the facilities are excellent, not exorbitantly priced, and well managed; and we are made to feel quite welcome there. But there is a special reason for going there in '83; that's when a Conference will be held on BR's non-technical writings up to 1918. Since most of us are not mathematicians or professional philosophers — we are BR's non-technical (or "popular") audience — those are the writings that most interest most of us.

The Conference — and the BRS Annual Meeting — are scheduled for the last weekend in June '83 — June 24-26 — Friday-Sunday. Both at McMaster. Note it on your calendar. Details on costs and reservations in a future issue.

(2b)

Sunday morning, June 27

Seated, left to right: Annette Green, Pauline Lipin, Harry Ruja, Don Jackanicz, Laura Seckel, Arthur de Munitiz, Robert Davis, Gerald Larue, and Steve Maragides.

Standing, left to right: Jim McWilliams, Kathleen Fjermedal, Lee Eisler, Charles Green, Mary W. Gibbons, Esther Robinowitz, Jack Ragsdale, Marty Lipin, Jack R. Cowles, Albert Engleman, Donald Hylton, Kathleen Winsor, Robert Lombardi, Dennis Darland, Shirley Weaver, Jacqueline Berthon-Payon, Lou Acheson, and Al Seckel.

REPORTS FROM OFFICERS

(4) President Donald K. Jackanicz reports:

I would like to salute my predecessor, Bob Davis, for his many years of excellent work as BRS President. Using his imagination and organizing skills, he contributed much to our Society and set an example of thoughtful leadership that will not be easily matched. Through his new role as Vice-President/Special Projects, the BRS will continue to benefit from his abilities.

As is evident elsewhere in this issue, the Los Angeles 1982 Annual Meeting was successful for the BRS and enjoyable for everyone there. Once again it was Bob who organized the meeting, and I thank him for all his efforts.

Now is the time for all members to mark calendars and begin planning to attend the 1983 Annual Meeting. It is not true that one hasn't truly been a BRS member until one has attended an Annual Meeting; but it is certainly true that to participate in one is rewarding and memorable. The '83 Meeting will provide an excellent opportunity for members to visit the Archives, meet fellow members again or for the first time, and become involved in discussions about BR. The dates: June 24-26, 1983.

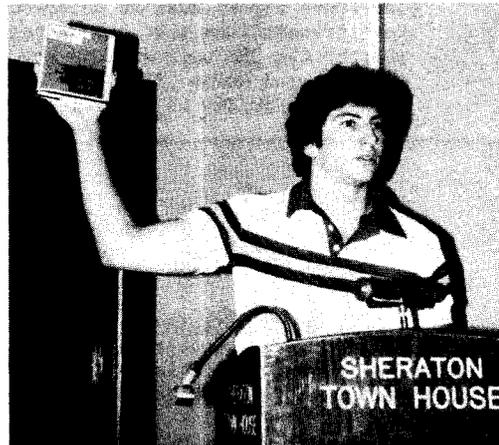

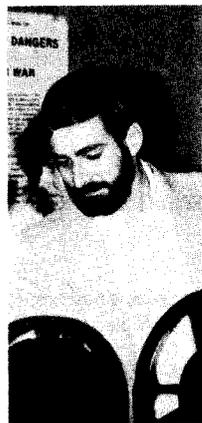

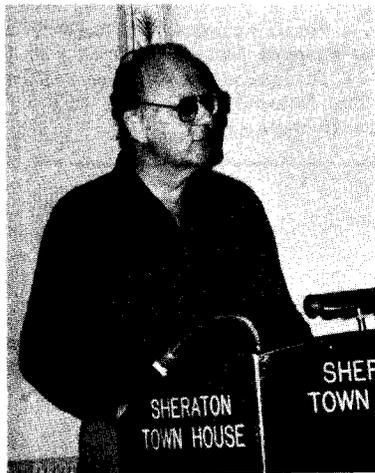

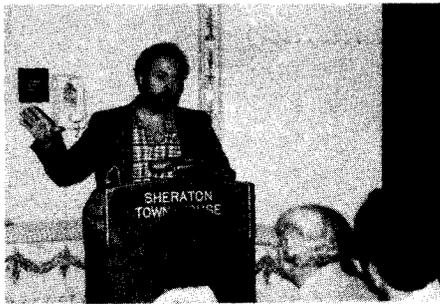

During the coming months, I will welcome members' comments and proposals for strengthening the BRS and its programs. During our brief history, we have accomplished a number of things: the BRS Award, the Doctoral Grant, the BRS Library, Annual Meetings, symposia for professional philosophers, a fine newsletter. We should now consider how the BRS can broaden its activities to embrace more aspects of BR and Russell Studies.

* Reflect on the possibilities. I look forward to hearing from you. 3802 N. Kenneth Av., Chicago, IL 60641

(5) Outgoing President Davis (now Vice-President/Special Projects) reports:

I was very pleased to nominate Don Jackanicz of Chicago to succeed me as President, at the Annual Meeting. He has shown both the ability and the willingness to give it the time that the job requires.

My new position — Vice-President/Special projects — will allow me to pursue projects that I have been reporting to you on over the last few years. One area has been in publishing. I regret that one publishing project has come to naught. I wanted to republish 3 ER essays -- "Why I Am Not A Christian", "What Is An Agnostic?", and "What I Believe" — in inexpensive paperback form, for wide distribution. Prometheus Press seemed interested; but it turned out that it was going to cost \$9.95, with the BRS

Photos, layout and captions by Jim McWilliams

Some photographs from the 1982 BRS Annual Meeting: Clockwise, from upper left: (1) Dan Wray helped with registration of members and guests. (2) Dr. Timothy Hayes spoke on the medical aspects of nuclear war. (3) Jacqueline Berthon-Payon looks on as Jack Ragsdale handles sales of BRS books and materials. (4) During a break in proceedings, Bob Davis converses with Dr. Gerald Larue. (5) Al Seckel discussed Russell's efforts in the resolution of the Cuban missile crisis. (6) Don Jackanicz operated the film projector. (7) Dr. Larue talked about the Moral Majority. (8) Robert Burkett of People for the American Way led a discussion centering on the film "The Radical Right." (9) Lee Eisler holds the plaque given 1982 BRS Award winner, Dr. Henry W. Kendall, as Bob Davis reads the citation.

(5,cont.) guaranteeing 1000 copies at about \$6 each. We are not, of course, in position to do that. I could not understand why a paperback of about 60 pages could cost that much. I am still working with them, on Dora Russell's two books.

On another project some progress has been made. I am co-organizing — with Gerald Larue, of AHA and Ethical Culture Society — an educational meeting for the Voice of Reason (which we founded in March, you may recall RSN34-4), on the Moral Majority, to be held October 17th in Los Angeles. I hope many local members can attend when further details are worked out and supplied.

(The rest of Bob's report deals with the Cranford letter of June 10th in which he (Peter) resigned from the Board, but not from the Society. It is located with the Minutes, which deal with the same subject. See Item 37.)

(6) Outgoing Secretary (now President) Don Jackanicz reports:

The Secretary's Report consists of the Minutes of the '82 Meeting. See Items

(7) Treasurer Dennis Darland reports:

For the quarter ending 6/30/82:

Balance on hand (3/31/82).....	1930.02
Income: 21 new members.....	318.00
110 renewals.....	1920.00
Total dues.....	2238.00
Contributions.....	160.00
Sale of books, RSN, deposits, etc.....	760.51
Total cash rec'd.....	3158.51
	<u>5088.53</u>
Expenditures: Membership & Information	
Committees.....	1641.10
ERS Library.....	191.91
Annual Meeting.....	1010.97
Bank charges.....	10.18
Bertrand Russell Memorial (London)....	50.00
Other.....	59.24
Total spent.....	<u>2963.40</u>
Balance on hand (6/30/82).....	2125.13

(The above report must be understood for what it is. It is a "cash balance statement"; it shows cash transactions that have actually occurred — money has changed hands. It does not indicate whether the BRS owes anybody any money. In fact, the BRS is obligated to pay the following: the Doctoral Grant (\$500), a BRS member (\$500), McMaster for "Russell" (approx. \$500). The balance on hand (6/30/82) is \$2125.13, but the major portion of it is owed. Ed.)

PHILOSOPHERS' CORNER

(8) The BRS at APA, 12/82, Baltimore. The BRS presents a session every year at the annual convention of the American Philosophical Association (Eastern Division), under the direction of ED HOPKINS, Chairman of the BRS Philosophers' Committee. This year it is being held in Baltimore, in December. The exact date, location, and time will appear in the next newsletter. This is the program:

I. "The Social Contract in Bertrand Russell's Theory of Statehood and War"
 Robert Ginsberg, Pennsylvania State University (Delaware County)
 Commentator: Thomas L. Benson, University of Maryland (Baltimore County)

II. "Mysticism and Motivation in Russell's Philosophy"
 Stephen Nathanson, Northeastern University
 Commentator: A. H. Guy, University of Baltimore

Chair: David Johnson, Naval Academy

Abstracts of the papers to be presented may be obtained in advance by writing Edwin Hopkins, 5713 Chinquapin Parkway, Apt.C, Baltimore, MD 21239 (Chairman of the BRS Philosophers' Committee).

REPORTS FROM COMMITTEES

Science Committee (Alex Dely, Chairman):

This report consists of a paper by Dr. Dean V. Babst, "Assessing Overall Consequences of Nuclear War", that specially emphasizes earthquakes and tidal waves, and environmental contamination.

Problem

As the nations of the World strive for security, each nation strives to be stronger or strongest. As a result, the number of nuclear weapons and ability to deliver them is rapidly growing. At what point-in-time does the arms race become self-destructive? Since the arms race is consuming much of the World's resources and may result in our total destruction, this is an urgent question.

There is deep concern among many, even now, that mankind may not survive a nuclear war (1,2,3). The present concern, however, is still not enough to move the people of the World to secure themselves from nuclear destruction. It is for this needed concern that this article raises additional possible dangers about the arms race. It is hoped the new uncertainties raised here will help in the growing World efforts at arms control. It may take tremendous anxiety in the World to overcome enough of the distrust between nations to produce adequate arms control agreements.

The assumption that the World can survive a nuclear war becomes increasingly doubtful the longer the arms race continues. Consider the combined effects of the following.

Earthquakes and tidal waves.

A nuclear war could detonate explosive forces equivalent to 2,000 Mount St. Helens' volcanic explosions. Mount St. Helens' main explosion (10 megatons*) in 1980 devastated 120 square miles of land (4). In 1980, the World's nations had upward of 20,000 megatons of force in 50,000 nuclear weapons (5). The World's nuclear arsenals are rapidly growing.

A nuclear bombardment could detonate within minutes an unprecedented release of power that defies the imagination. Could such explosions set off a chain-reaction in the Earth, triggering world-wide earthquakes, and tsunamis (seismic tidal waves).

In 1971 there was international concern that a 5 megaton nuclear test explosion, called Cannikin, in the Aleutian Islands off Alaska might trigger great earthquakes and tsunamis (6,p.214). Since the earthquakes that the test produced created no significant damage (6,p.216), world-wide concern died down.

While the damage from Cannikin was not as great as some feared possible, still the test caused more extensive landslides than officially expected. Two days after the Alaskan test the collapse of the underground cavity resulting from the Cannikin explosion produced a magnitude 4.0 earthquake recorded at the Seismographic Station of the University of California at Berkeley, several thousand miles away (6,p.217).

Nuclear explosions (about 1 megaton each) at the Nevada Test Site have been shaking the Earth for years. For example, in 1966 a nuclear test, called Crowley, shook perceptibly (but did not damage) multi-story buildings in Las Vegas sixty miles away (6,p.203). In April 1968 a test, coded Boxcar, produced thousands of aftershocks (up to 4.5 magnitude) for six weeks (6,p.204). Later in the same year (Dec. 1968) an explosion, called Benham, initiated a sequence of earthquakes (up to 5.7

magnitude) which lasted several months (7). In order to trigger the rupture of a fault in the Earth by a nuclear explosion, it is necessary to concentrate the explosion beneath the Earth's surface near a fault. The test explosions described above were of this type.

Nuclear weapons are designed to explode on or above the ground. A nuclear explosion above ground has much of its energy dissipated. However, even a single above ground test explosion still has considerable force. For example in 1956 at Maralinga, Australia, a small test nuclear bomb (Hiroshima size) was ignited more than 300 feet above the ground. The explosion created a crater more than 1,500 feet across and its sound waves shook homes 250 miles away and it was recorded on a seismograph 600 miles away (6,p.16).

While a single nuclear explosion above ground is unlikely to cause damaging earthquakes, "What could a bombardment of a hundred, a thousand or tens of thousands of nuclear explosions do, especially if some of the explosions are concentrated in the same area or close to the Earth's surface?" The Federal Emergency Management Agency discussed a 6,500-megaton attack on the United States in planning one of its civil defense models. Such an attack would yield an explosive force equal to 500,000 Hiroshima bombs (8). The Hiroshima bomb killed 70,000 people and destroyed two-thirds of the 90,000 buildings within the city limits (1). Is it possible to imagine a force equal to half of a million Hiroshima bombs relentlessly hammering the United States and some of its tectonically unstable regions without triggering earthquakes, perhaps some of them catastrophic in size?

Besides the pounding of the United States, there would be a similar hammering of Russia and Europe and perhaps other land areas. In addition to the power being released over the continents, there would be awesome naval engagements. How many nuclear explosions does it take in the seas to start vast rolling motions in the oceans? If many areas are shaking and oceans are rolling, could there be a compound effect across the Planet?

The Earth's crust has many cracks (faults) and its land and oceanic masses are slowly moving in different directions building tremendous tensions. Scientists are continually concerned about major earthquakes even under normal conditions.

In addition to all of the above, there is the unknown internal forces of the World to be considered. For example, what effect would the unprecedented hammering have on the Earth's rotational wobble? The polar wander is believed to be due to a fluid motion of the Earth's molten core (9). Could the pattern of explosions and rolling oceans, in combination with Earth's rotation and tides, further amplify internal stresses?

If the Planet starts to quaking when and where does it stop? For example, what would happen in the chain of 300 active volcanoes (Ring of Fire) that ring the Pacific from Chile to Alaska to Japan to New Zealand (10)? Some earthquakes can cause movement in other faults (11). If an earthquake over magnitude 7.5 were triggered in Amchitka in Alaska,

the odds based on past experience, would favor generation of a tsunami, or great sea wave, which could well damage coastal regions around the Pacific (6,p.214). "In this century more than 200 tsunamis have been recorded in the Pacific. One of these resulted in coastal waves more than 100 feet high that smashed into land with tremendous destructive power (12)."

Do defense strategies and civil defense plans take into consideration what might happen if nuclear bombardments set off a series of world-wide earthquakes or tsunamis? For example, what would happen to the release timing and accuracy of missiles in swaying or crumbling missile guidance centers? Under such circumstances, can a nation be hit by its own missiles? Can a country planning a limited nuclear engagement ever be sure it will remain limited?

The United States is considering an expensive plan for clustering 100 MX missiles in super-hardened silos within an area of about 10 square miles. The theory behind the "dense pack" is the first Russian missile to explode would destroy many of those that followed just behind. What is the earthquake possibilities created by continuous hammering of many nuclear explosions within a very limited area even if the area has no known faults? What would happen to missiles even in super hardened silos if the earth is violently shaking?

In submarine warfare, it is probable that there would be many underwater nuclear explosions. In the oceans, there are faulted areas. For example, the center of the Atlantic Ocean is one of the Earth's more active earthquake areas (6,p.78). The Earth's crust below the oceans is thinner than below the continents. Could a nuclear war in the oceans trigger earthquakes and tsunamis that could flood coastal cities? Could a big tsunami destroy birth navies?

In 1883, a volcano, Krakatoa, exploded producing a tidal wave which was 120 feet high in some bays of Java and Sumatra. It wholly or partially destroyed 295 towns, and killed 36,000 people. A Dutch warship was washed ashore (13).

Environmental contamination

The Final Epidemic (1) and in Reflections - The Fate of the Earth (2) discuss carefully and in detail how a nuclear war could contaminate the Earth with radioactivity as well as rendering its biosphere unfit for human survival. These works explain how the World's ozone layer might be destroyed by the rapid production of nitrous oxide. This could result in increased exposure to cosmic and ultraviolet radiation, which would kill most plants and animal life.

In order to further illustrate how a nuclear bombardment could contaminate every part of the World's air, land and sea, consider the following. In 1954 the U.S. exploded one nuclear bomb over the Bikini Atoll in the Pacific Ocean. The radioactive fallout contaminated more than 7,000 miles of surrounding ocean (14). Mount St. Helens' main volcanic explosion covered 12,000 square miles from Washington State to Maine and Georgia with dust. Nuclear explosions equivalent to 2,000 Mount St. Helens' volcanic eruption might cover the planet with radioactive materials many times over. Because of mixing by high winds across the equator, there would be no safe havens in either the southern or northern hemispheres (6,p.91).

March 28 and April 4, 1982 Mexico's volcano, El Chichon, erupted sending a cloud of volcanic ash and sulfuric acid into the stratosphere. Satellite pictures originally captured the slowly drifting cloud as a grayish-white haze extending from

Mexico to Saudi Arabia. According to the National Oceanographic and Atmospheric Administration at Hilo, Hawaii, the cloud is about 15 miles thick and from 9 to 19 miles high (15). At that altitude, it may hover for several years. According to the National Aeronautics and Space Administration, by blocking the sun, it has potential for climatic change. It may cause portions of the globe to sizzle or shiver. The events would occur if the cloud prevented release of the Earth's heat (16).

What type of weather could a bombardment of thousands of nuclear explosions produce? And what would be the consequences of long-term changes in the weather? Could continuous hot or cold weather cause polar ice caps to melt or expand? Such changes could effect sea levels, flooding coastal cities or leaving them stranded. What would be the effects of sustained hot or cold weather on crops, since some areas could become deserts or flooded? How do these possibilities enter into the Defense Department's 1982 five-year defense plan for a protracted nuclear war?

Urgency

We need to be assessing the overall consequences of what we are doing while there is still time. The risk of a nuclear war starting by accident is increasing as the following grow:

1. Number of nations with nuclear weapons.
2. Chance of computer error with growing computerization.
3. Number of people handling weapons.
4. Continuous refinement of "hair-trigger" counter-response.

Decisions about whether to launch nuclear weapons soon may be made by computers, if the United States and Soviet Union deploy the next round of weapons, e.g. Pershing II. The new weapons will be able to reach their targets with such speed, accuracy and power that they will be able to destroy nuclear command, control and communication systems within minutes. Nations will be on hair-trigger alert. The Planet survived past false alarms because there was time to ascertain the errors before a command to launch was given. In the future there will not be time. Under such conditions, a limited war can quickly become a nuclear holocaust.

"During an eighteen-month period, the North American Air Defense Command had 151 false alarms. Four resulted in orders that increased the state of alert of B-52 bomber crews and intercontinental-ballistic-missile units" (17). Our survival also depends on the proper conduct of other nations' personnel and computers. There is no chance to call back a missile once it is fired.

Conclusion

The World is spending billions of times more money for perfecting arms than for ideas on how to live together. Between 1960 and 1977, an estimated \$336 billion went into research and development of new weapons (18). We are going to have to invest vastly more money into learning how to build a peaceful World. Congress is considering legislation to establish a United States Academy of Peace (19). We need to support this legislation and peace research institutes.

To buy time, we need to work vigorously for a multilateral nuclear freeze. The complexity of monitoring arms control agreements along with the distrust between nations make the problems of achieving effective arms control extremely difficult and time is short. The more convincingly that it can be shown how destructive a nuclear war could be, the greater should be all nations' incentive for solving the extremely

difficult tasks necessary to achieving world-wide arms control. We need to be doing much more research about the impact of simultaneous nuclear explosions in terms of earthquakes and environmental destruction. We need to be using our imagination to communicate the direction the World is headed with the utmost speed, force and clarity if mankind is to survive.

ABOUT BERTRAND RUSSELL

- (10) ER in Russia, 1920. HARRY RUJA came across the following in Emma Goldman's "Living My Life" (NY: Garden City, 1934, republished by AME 1970). He writes, "It provides eye witness testimony that ER, unlike the members of the British Labour Delegation, resisted Russian propaganda."

There were certain members of the British Mission, however, not entirely inclined to look in open-mouthed wonder at the things about them, with their mental eyes shut. These were not of the labouring element. One of them was Mr. Bertrand Russell. Very politely but decisively he had from the very first refused to be officially chaperoned. He preferred to go about himself. He also showed no elation over the honour of being quartered in a palace and fed on special morsels. Suspicious person, that Russell, the Bolsheviks whispered. But then, what can you expect of a *bourgeois*?

ER, LIBERATOR

- (11) ER, teacher. Sometimes, when people write for information about the BRS, they mention why ER has a special place in their affections. To wit:

I have in part ER's writings to thank for making my exit from the Mormon Church possible. As a young high school student, I came across his name in my American History class (back in 1960), and I began to read some of his philosophical and "moral" essays. Needless to say, I was disturbed and totally shaken. Now "A Free Man's Worship" beautifully states my approach to religious feeling.

And another:

I would be interested in your activities concerning my intellectual father.

Still another:

I did not discover ER until I was in my early twenties. (It surely would have been much better to have discovered him when I was three!) But, for the past fourteen years, I have gone into agnosticism, Principia Mathematica, and from Plato and Aristotle to Wittgenstein, A.J. Ayer, Tarski and many others. Bertrand Russell has been both my guiding light and source of continuous inspiration through all those years and hundreds of volumes.

THE BERTRAND RUSSELL SOCIETY AWARD

(12a) The 1982 Award, as told in a ERS news release:

THE 1982 BERTRAND RUSSELL SOCIETY AWARD GOES TO HENRY W. KENDALL

Henry W. Kendall, Chairman of the Board of the Union of Concerned Scientists, has received the Bertrand Russell Society Award for 1982. He is a Professor of Physics at Massachusetts Institute of Technology, specializing in elementary particle physics, and was a consultant to the Defense Department on classified matters for over 10 years.

The Award citation reads: "For promoting a more accurate understanding of the dangers of nuclear war, as Chairman of the Union of Concerned Scientists."

Dr. Kendall helped found the non-profit Union of Concerned Scientists (UCS) in 1969, to assess the impact of advanced technologies on society. The UCS keeps an eye on nuclear reactor safety, radioactive waste disposal, energy policy alternatives, liquified natural gas transport and storage, air and water pollution, and the threat of nuclear war.

UCS reports are highly esteemed. For instance, when the Governor of Pennsylvania wanted an assessment of the possible hazard of venting radioactive gases at the damaged and dangerous Three Mile Island nuclear power plant, he asked the UCS to do the assessing. Dr. Kendall was Study Director of that UCS report.

Dr. Kendall has authored or coauthored UCS reports and studies in a number of the areas mentioned above; but it is his work in opposing nuclear weapons that particularly appealed to the Bertrand Russell Society Award Committee, because Russell himself had devoted much effort to that cause during the last 25 years of his life. Russell kept trying to alert the world to the dangers of nuclear war and the need to prevent it, as in his speech to the House of Lords (1945); his BBC radio talk, "Man's Peril" (1954); his assembling of eminent scientists from both sides of the Iron Curtain to sign a statement (now known as the "Einstein-Russell Manifesto") on the dangers of nuclear warfare (1955), and to attend the first of the Pugwash Conferences (1957), which are the ancestors of the Salt talks; and his books, "Common Sense and Nuclear Warfare" (1959) and "Has Man A Future?" (1961).

Dr. Kendall's work is furthering the cause that Russell thought the most important in the world. To cite an instance: Dr. Kendall's paper, NUCLEAR WAR IN EUROPE -- presented

before the Conference on Nuclear War in Europe, at Groningen, The Netherlands, April 24, 1981 — described in chilling detail the kinds of horror that nuclear war would inflict on Europe: a fireball over a mile in diameter, heating a million tons of air hotter than 2000° C., lethally irradiating 600 square miles, contaminating an additional 2000 square miles, etc., etc. All that (and much more) from a single one-megaton nuclear bomb; and there are thousands of nuclear weapons, with yields many times one megaton (averaging perhaps 20 megatons each) on both sides of the Iron Curtain. The consequences of an all-out nuclear war are beyond comprehension.

The Bertrand Russell Society, Inc. is a company of admirers of Bertrand Russell (1872-1970). It is not a scholarly society, though a number of scholars belong to it, and is open to anyone interested in Russell. For information, write BRS Information, RD 1, Box 409, Coopersburg, PA 18036. The UCS is located at 1384 Massachusetts Avenue, Cambridge, MA 02238. It has over 100,000 members, and welcomes new ones.

* We sent this news release to many publications (as well as to certain departments in universities). If you come across a mention of the BRS Award to Dr. Kendall in any publication, please tell us about it and, if possible, send a clipping or photocopy.

(12b) We thank those who sent us the names of their nominees for the '82 Award: OPHELIA HOOPES, JOHN LENZ, NATHAN SALMON, ELEANOR VALENTINE. We appreciate the cooperation.

(12c) The 1983 BRS Award? We ask you to suggest the next recipient of the BRS Award. Whom would you like to see get it, and why? Send us your nominations.

There should be a genuine connection between the person you nominate and ER. It might be someone who had worked closely with ER in an important way. Or someone who has made a distinctive contribution to Russell scholarship. Or someone who has acted in support of a cause or idea that ER championed, or whose actions exhibited qualities of character (such as moral courage) reminiscent of ER, or who in some way had promoted awareness of ER or BR's work.

Send your BRS Award nominations c/o the newsletter (address on Page 1, bottom) and tell why you think your nominee deserves the Award. If the winner is a well-known figure — or at least, not unknown — it may earn publicity for the BRS, which is desirable, though not essential.

THE BRS DOCTORAL GRANT

(13) 1982 winner is Alejandro Garciadiego of the Institute for the History and Philosophy of Science and Technology at the University of Toronto, and — we're pleased to say — a member of the BRS.

Every year since 1979 the BRS has offered a \$500 award to a graduate student who has completed all requirements for the doctorate except the dissertation.

According to the current wording, the money is "to help defray expenses of a currently enrolled doctoral candidate in any field whose proposed dissertation best gives promise of dealing in a significant way with the thought, life, or times of Bertrand Russell."

The main goal of the current dissertation is to study the role played by ER in the origin and development of the paradoxes of set theory. It also aims to show that "the emphasis on the study of the foundations of mathematics is the result of a complex and interdisciplinary net of events and ideas, and not the simple product of the logical contradictions."

(14)

ON NUCLEAR WAR

BR vs. The Bomb, 1945. The history of the anti-nuclear-weapons movement starts in 1945 — the year of Hiroshima. As far as we know, BR was the first private individual of some eminence to speak out publicly against the atom bomb, in a speech to the House of Lords, in December 1945, a mere 4 months after Hiroshima.

BR provides the background:

The political background of the atomic scientists' work was the determination to defeat the Nazis. It was held—I think rightly—that a Nazi victory would be an appalling disaster. It was also held, in Western countries, that German scientists must be well advanced towards making an A-bomb, and that if they succeeded before the West did they would probably win the war. When the war was over, it was discovered, to the complete astonishment of both American and British scientists, that the Germans were nowhere near success, and, as everybody knows, the Germans were defeated before any nuclear weapons had been made. But I do not think that nuclear scientists of the West can be blamed for thinking the work urgent and necessary. Even Einstein favoured it. When, however, the German war was finished, the great majority of those scientists who had collaborated towards making the A-bomb considered that it should not be used against the Japanese, who were already on the verge of defeat and, in any case, did not constitute such a menace to the world as Hitler. Many of them made urgent representations to the American Government advocating that, instead of using the bomb as a weapon of war, they should, after a public announcement, explode it in a desert, and that future control of nuclear energy should be placed in the hands of an international authority. Seven of the most eminent of nuclear scientists drew up what is known as 'The Franck Report' which they presented to the Secretary of War in June 1945. This is a very admirable and far-seeing document, and if it had won the assent of politicians none of our subsequent terrors would have arisen. It points out that 'the success which we have achieved in the development of nuclear power is fraught with infinitely greater dangers than were all the inventions of the past'. It goes on to point out that there is no secret which can be kept for any length of time, and that Russia will certainly be able to make an A-bomb within a few years. It took Russia, in fact, almost exactly four years after Hiroshima. The danger of an arms

race is stated in terms which subsequent years have horrifyingly verified. 'If no efficient international agreement is achieved,' it states, 'the race for nuclear armaments will be on in earnest not later than the morning after our first demonstration of the existence of nuclear weapons. After this, it might take other nations three or four years to overcome our present head start.' It proceeds to suggest methods of international control and concludes: 'If the United States were to be the first to release this new means of indiscriminate destruction upon mankind, she would sacrifice public support throughout the world, precipitate the race for armaments, and prejudice the possibility of reaching an international agreement on the future control of such weapons.' This was not an isolated expression of opinion. It was a majority opinion among those who had worked to create the bomb. Niels Bohr—after Einstein, the most eminent of physicists at that time—approached both Churchill and Roosevelt with earnest appeals in the same sense, but neither paid any attention. When Roosevelt died, Bohr's appeal lay unopened on his desk. The scientists were hampered by the fact that they were supposed to be unworldly men, out of touch with reality, and incapable of realistic judgments as to policy.

Subsequent experience, however, has confirmed all that they said and has shown that it was they, and not the generals and politicians, who had insight into what was needed.

Indignant atomic scientists, after Hiroshima, inaugurated a monthly review, *The Bulletin of the Atomic Scientists*, which has continued ever since to present the sane view on atomic weapons and atomic warfare.

I expressed a view which was substantially the same as that of The Franck Report, which I had not then seen, in a speech in the House of Lords on November 28, 1945. I said, and I quote the speech in full since it has appeared only in the proceedings of the House of Lords:¹

¹ Hansard, Official Report, House of Lords, Vol. 138, No. 30. Wednesday, November 28, 1945.

BR's speech to the House of Lords:

'My Lords, it is with very great diffidence that I rise to address you, both because I have only once before addressed your Lordships' House and because, after listening to the debate yesterday and today, I feel that other speakers have ten times the political knowledge and twenty times the experience that has fallen to my lot, and that it is an impertinence for me to say anything at all. At the same time, the subject to which I wish to confine my remarks—namely, the atomic bomb and its bearing on policy—is so important and weighs so heavily upon my mind that I feel almost bound to say something about what it means for the future of mankind.

I should like to begin with just a few technical points which I think are familiar to everybody. The first is that the atomic bomb is, of course, in its infancy, and is quite certain very quickly to become both much more destructive and very much cheaper to produce. Both those points I think we may take as certain. Then there is another point which was raised by Professor Oliphant, and that is that it will be not very difficult to spray a countryside with radio-active products which will kill every living thing throughout a wide area, not only human beings but every insect, every sort of thing that lives. And there is a further point which perhaps relates to the somewhat more distant future. As your Lordships know, there are in theory two ways of tapping nuclear energy. One is the way which has now been made practicable, by breaking up a heavy

nucleus into nuclei of medium weight. The other is the way which has not yet been made practicable, but which, I think, will be in time, namely, the synthesizing of hydrogen atoms to make heavier atoms, helium atoms or perhaps, in the first instance, nitrogen atoms. In the course of that synthesis, if it can be effected, there will be a very much greater release of energy than there is in the disintegration of uranium atoms. At present this process has never been observed but it is held that it occurs in the sun and in the interior of other stars. It only occurs in nature at temperatures comparable to those you get in the inside of the sun. The present atomic bomb in exploding produces temperatures which are thought to be about those in the inside of the sun. It is therefore possible that some mechanism analogous to the present atomic bomb, could be used to set off this much more violent explosion which would be obtained if one could synthesize heavier elements out of hydrogen.

'All that must take place if our scientific civilization goes on, if it does not bring itself to destruction; all that is bound to happen. We do not want to look at this thing simply from the point of view of the next few years; we want to look at it from the point of view of the future of mankind. The question is a simple one: Is it possible for a scientific society to continue to exist, or must such a society inevitably bring itself to destruction? It is a simple question but a very vital one. I do not think it is possible

to exaggerate the gravity of the possibilities of evil that lie in the utilization of atomic energy. As I go about the streets and see St Paul's, the British Museum, the Houses of Parliament and the other monuments of our civilization, in my mind's eye I see a nightmare vision of those buildings as heaps of rubble with corpses all round them. That is a thing we have got to face, not only in our own country and cities, but throughout the civilized world as a real probability unless the world will agree to find a way of abolishing war. It is not enough to make war rare; great and serious war has got to be abolished, because otherwise these things will happen.

'To abolish war is, of course, a very difficult problem. I have no desire to find fault with those who are trying to tackle that problem; I am quite sure I could not do any better. I simply feel that this is a problem that man has got to solve; otherwise man will drop out and the planet will perhaps be happier without us, although we cannot be expected to share that view. I think we have got to find a way of dealing with this. As everybody is aware, the immediate difficulty is to find a way of co-operating with Russia in dealing with it. I think that what the Prime Minister achieved in Washington was probably as much as could, at that time, be achieved. I do not suppose he could have done any better at that time. I am not one of those who favour the unconditional and immediate revelation to Russia of the exact processes by which the bomb is manufactured. I think it is right that conditions should be attached to that revelation, but I make the proviso that the conditions must be solely those which will facilitate international co-operation; they must have no national object of any sort or kind. Neither we nor America must seek any advantage for ourselves, but if we are to give the secret to the Russians, it must be on the basis that they are willing to co-operate.

'On that basis, I think, it would be right to let them know all about it as soon as possible, partly, of course, on the grounds that the secret is a short term one. Within a few years the Russians will no doubt have bombs every bit as good as those which are at present being made in the United States; so it is only a question of a very short time during which we have this bargaining point, if it is one. The men of science, as your Lordships know, who have been concerned with the work are all extremely anxious to have the process revealed at once. I do not altogether agree with that, for the reasons I have stated, but I think it can be used as a means of getting a more sincere and a more thoroughgoing co-operation between ourselves and Russia. I find myself a whole-hearted supporter of the Foreign Secretary in the speeches he has made. I do not believe that the way to secure Russian co-operation is merely to express a desire for it. I think it is absolutely necessary to be firm on what we consider to be vital interests. I think it is more likely that you will get genuine co-operation from a certain firmness rather than merely going to them and begging them to co-operate. I agree entirely with the tone the Foreign Secretary has adopted on those matters.

'We must, I think, hope—and I do not think this is a chimerical hope—that the Russian Government can be made to see that the utilization of this means of warfare would mean destruction to themselves as well as to everybody else. We must hope that they can be made to see that this is a universal human interest and not one on which countries are divided. I cannot really doubt that if that were put to them in a convincing manner they would see it. It is not a very difficult thing to see, and I cannot help thinking that they have enough intelligence to see it, provided it is separated from politics and from competition. There is, as everybody repeats, an attitude of suspicion. That attitude of suspicion can only be got over by complete and utter frankness, by stating "There are these things which we consider vital, but on other points we are quite willing that you should stand up for the things you consider vital. If there is any point which we both consider vital, let us try to find a compromise rather

than that each side should annihilate the other, which would not be for the good of anybody." I cannot help thinking that if that were put in a perfectly frank and unpolitical manner to the Russians they would be as capable of seeing it as we are—at least I hope so.

'I think one could make some use of the scientists in this matter. They themselves are extremely uneasy, with a very bad conscience about what they have done. They know they had to do it but they do not like it. They would be very thankful if some task could be assigned to them which would somewhat mitigate the disaster that threatens mankind. I think they might be perhaps better able to persuade the Russians than those of us who are more in the game; they could, at any rate, confer with Russian scientists and perhaps get an entry that way towards genuine co-operation. We have, I think, some time ahead of us. The world at the moment is in a war-weary mood, and I do not think it is unduly optimistic to suppose there will not be a great war within the next ten years. Therefore we have some time during which we can generate the necessary genuine mutual understanding.

'There is one difficulty that I think is not always sufficiently understood on our side, and that is that the Russians always feel—and feel, as it appears, rightly—that in any conflict of interests there will be Russians on one side and everybody else on the other. They felt that over the Big Three *versus* the Big Five question; it was Russia on one side and either two or four on the other. When people have that feeling, you have, I suppose, to be somewhat tender in bargaining with them and certainly not expect them to submit to a majority. You cannot expect that, when they feel that it is themselves against the field. There will no doubt have to be a good deal of tact employed during the coming years to bring about continuing international co-operation.

'I do not see any alternative to the proposal which is before the world of making the United Nations the repository. I do not think that there is very much hope in that, because the United Nations, at any rate at present, are not a strong military body, capable of waging war against a great Power; and whoever is ultimately to be the possessor of the atomic bomb will have to be strong enough to fight a great Power. Until you can create an international organization of that sort, you will not be secure. I do not think that there is any use whatever in paper prohibitions, either of the use or of the manufacture of bombs, because you cannot enforce them, and the penalty for obeying such a prohibition is greater than the penalty for infringing it, if you are really thinking of war. I do not think, therefore, that these paper arrangements have any force in them at all.

'You have first to create the will to have international control over this weapon, and, when that exists, it will be easy to manufacture the machinery. Moreover, once that machinery exists, once you have an international body which is strong and which is the sole repository of the use of atomic energy, that will be a self-perpetuating system. It will really prevent great wars. Habits of political action will grow up about it, and we may seriously hope that war will disappear from the world. That is, of course, a very large order; but this is what we all have to face: either war stops or else the whole of civilized mankind stops and you are left with mere remnants, a few people in outlying districts, too unscientific to manufacture these instruments of destruction. The only people who will be too unscientific to do that will be people who have lost all the traditions of civilization; and that is a disaster so grave that I think that all the civilized nations of the world ought to realize it. I think they probably can be brought to realize it before it is too late. At any rate I most profoundly hope so.'

At that time, when opinion had not hardened, the House of Lords listened to me with approval and, so far as I could judge, this approval was equal in all Parties. Unfortunately, subsequent events put an end to this unanimity. But, for my part, I see nothing to withdraw in what I then said.

Both previous excerpts are from BR's "Has Man A Future?" (London: Allen & Unwin, 1961) pp.20-28. Out of print, the book is still available — at \$8, postpaid, hardcover — from the BRS Library, address on Page 1, bottom.

- (15) BR vs. The Bomb, 1959. BR's "Common Sense and Nuclear Warfare" (New York: Simon & Schuster, 1959) "is perhaps the best thing ever written on the subject," says PHILIP LE COMPTE. "Now out of print, it will be reprinted in fall by another publisher, and is available in many libraries."
"BR made a similar proposal in a chapter in a multiauthored book edited by Quincy Wright and others, called 'Preventing World War III' (1962)."

PUGWASH

- (16) Pugwash '82 — 25th Anniversary — as reported by...
(16a) Flora Lewis, in her column in the New York Times (7/18/82) p. E 19:

FOREIGN AFFAIRS.

More Spies in the Sky

By Flora Lewis

PUGWASH, Nova Scotia, July 17 — There has been a strange cycle of public indifference and militant activity against the danger of nuclear arms since the first two were dropped. Distressed at failure to understand, Bertrand Russell and Albert Einstein issued a dramatic manifesto in 1965.

That led to a meeting of top scientists from East and West at the boyhood home of Cyrus Eaton, the late U.S. industrialist, in 1957. So was founded the Pugwash Conference.

For its 25th anniversary, the conference is here again. The two signatories of the Russell-Einstein document still alive, Linus Pauling and Joseph Rotblat, noted that all those years, marches and U.N. conferences later, the threat is greater than ever.

And people are stirring again. The peace movement has never had broader support. Once again, East-West relations are cold and angry. The U.S. and the Soviets are talking in Geneva about braking the arms race, and sustaining it at home.

Time is running out on even the chance of arms control, the scientists say, because science itself has made possible new weapons so much more

accurate, so much faster, so much harder to detect that agreements may become meaningless.

There isn't much point in calling for trust. If there were trust, there would be no need for verifiable agreements, no excuse for having atomic weapons at all.

Nor has public pressure yet brought tangible response. The words are there, but who knows what they mean. Soviet Chairman Leonid Brezhnev announced a unilateral freeze on deployment of SS-20's (after the program was virtually complete). A few months later, the United States said a number of additional Soviet missiles had been deployed facing Western Europe. Moscow said that this was a lie.

There has been no explanation. The same problem weakens the call for an American pledge of "no first use" of any atomic weapon, which Mr. Brezhnev has proclaimed. How can you tell, until it's too late?

Mr. Pauling, a twinkly-eyed veteran of declarations for disarmament supported by fellow Nobel laureates, urged a unilateral freeze on all nuclear arms by both the United States

and the Soviets until they get around to a binding treaty. But nobody has defined the proposal. The United States would presumably abandon not only MX, all cruise missiles and Pershings in Europe, but planned Trident submarines and Minuteman improvements. What would the Russians do?

It is the underlying fear of discarding the nuclear shield that makes it so hard to blunt the nuclear sword. The numbers game of balancing off missile for missile to set a level of security is clearly nonsense in a world that stocks 50,000 warheads with more than a million times the power of the Hiroshima bomb.

And yet, the awesomeness of the bomb has maintained nuclear ceasefire in a world that hasn't stopped fighting since 1945. This morning's news reported on three full-scale wars (in Lebanon, Iraq and Somalia), two long, bloody guerrilla campaigns (in Northern Ireland and the Basque country) and a shattering new spy scandal in Britain. Peace is not at hand. Declarations aren't settlements.

The dilemma of fear remains. In an early attempt to confront it, President Eisenhower proposed an "open skies" program so the United States and Soviets could see for themselves what the other was doing. Moscow refused. It happened anyway, with satellites and electronic intelligence. But nobody is reassured.

So the issue comes back to information, a way to know and judge what is

being prepared, in order to weigh the self-serving official counter-declarations.

One of the most hopeful ideas engaging some of the Pugwash scientists is what Australia's Sir Mark Oliphant calls "technological spying" by the middle powers. A lot of countries are now advanced enough to compete with the United States and Russia in monitoring preparations for war if they pool scientific and economic resources, though none could do it alone.

A group including delegates from Canada, Australia, France, Britain, Germany, Japan, Austria, Sweden, among others, is to meet in October to work on further details, already set out in an experts' report to the U.N. The European satellite launcher Ariane would put their own spies in the sky.

The U.S. has opposed the idea on the grounds that ambiguous intelligence could be politically abused to confound the world even more. Given experience, Washington has a point if it's to be a U.N. operation. But the countries capable of participating could set up their own structure. An objective (which doesn't mean neutral) verification of superpower agreements and menacing moves would go a long way toward easing the question of what to believe. Then, unilateral restraints could be monitored and the argument of balance better judged. It's something concrete to do quickly, worth more than talk.

- (16b) Fox Butterworth, in the New York Times (7/19/82) p.2:

Antinuclear Movement Turns 25 in Nova Scotia

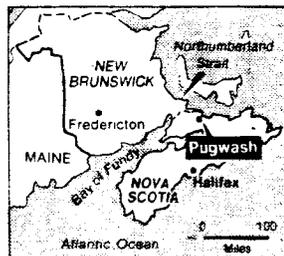

By FOX BUTTERFIELD

Special to The New York Times

PUGWASH, Nova Scotia, July 18 — The morning of Aug. 6, 1945, was clear and sunny, Prof. Iwao Ogawa remembers. At the time, he was helping his students at the Imperial Japanese Naval Academy, 10 miles south of Hiroshima, build a bomb shelter.

Suddenly there was a brilliant flash of light, then a terrible rush of wind that shattered the windows in his house. A huge cloud rose over the city, singed red by the firestorm burning below.

Professor Ogawa was in a unique position. He is the only nuclear physicist known to have observed the explosion of that first atomic bomb over Hiroshima. Within hours he began making calculations that led him to suspect what had happened, for Professor Ogawa knew that two teams of Japanese scientists were themselves secretly trying to build a nuclear weapon.

Pugwash was the birthplace of the conference sponsor, Cyrus Eaton.

The Pugwash Meetings

Professor Ogawa also has a more pleasant recollection. Twenty-five years ago, he was one of a group of 22

distinguished scientists from 10 countries, including the Soviet Union and China, who met at this tiny fishing village of Pugwash to discuss ways of averting a nuclear holocaust.

That conference, sponsored by the Cleveland industrialist Cyrus Eaton in response to an appeal by Bertrand Russell and Albert Einstein at the height of the cold war, was the first such meeting between American and Soviet scientists. It and a series of so-called Pugwash meetings that followed helped lay the groundwork for the Nuclear Test Ban Treaty of 1963, the United Nations-sponsored treaty to ban the spread of nuclear weapons and the 1980 convention outlawing biological weapons.

In 1960 the scientists split with their patron, Mr. Eaton, fearing that his close personal ties to the Soviet leadership imperiled their neutrality in the East-West conflict.

But this weekend a group of 35 arms control specialists, disarmament activists and scientists, including Professor Ogawa, returned to Pugwash to celebrate the 25th anniversary of the meetings and pay tribute to Mr. Eaton, who died in 1979.

Pugwash, across the Northumberland Strait from Prince Edward Island,

was Mr. Eaton's birthplace. The conferences were held on the waterfront in the converted storehouse of a lobster fisherman, and the guests were housed in a 170-year-old white frame inn.

Group Backs Weapons Freeze

Although this weekend's meeting was an informal one — a full gathering of the 2,000 scientists from 75 countries who now make up the Pugwash movement is to be held in Warsaw in August — the group adopted a resolution supporting a nuclear weapons freeze, a reduction in nuclear arsenals and pledges of no first use of nuclear weapons like the one made by the Soviet Union last month.

The major question before the group, which included Linus Pauling, twice a Nobel laureate, was that of how scientists could take advantage of the sudden popularity of the antinuclear arms movement, particularly the freeze campaign. For years scientists like Professor Pauling warned about the dangers of nuclear war without much popular response.

Herbert Scoville Jr., president of the Arms Control Association and a former Deputy Director of the Central Intelligence Agency, recalled that President

Johnson proposed a freeze on nuclear weapons in 1967 and that in 1970 the Senate approved a freeze resolution by a vote of 72 to 6.

Most of the participants agreed with Sergei P. Kapitsa, a member of the Soviet Academy of Sciences and the host of a popular science program on Moscow television, that neither superpower can gain nuclear superiority. "There is an essential parity of strategic weapons, overkill parity," Professor Kapitsa said, differing with the Reagan Administration's view that the Soviet Union enjoys an advantage because of its lead in large land-based intercontinental ballistic missiles.

But the participants did not all agree on how to put a freeze into effect. Paul M. Doty, director of the Center for Science and International Affairs at Harvard University, said that in most freeze resolutions, which call for a moratorium on the testing, deployment and production of nuclear weapons, it would be difficult to verify whether a nation had stopped arms production.

Professor Doty, a leading arms-control expert, said it would be simpler to monitor deployment and testing of nuclear weapons. "I myself wish production wasn't part of the freeze," he said. "We have too little experience with it."

Professor Doty said he hoped to begin work soon on drawing up a more carefully defined freeze proposal.

He also said the next 18 months to two years would be a crucial period for arms control. If the talks in Geneva between the United States and the Soviet Union on strategic and medium-range nuclear missiles do not make progress within that time, he said, the United States may have deployed its cruise missiles in Europe.

Cruise missiles could upset the strategic balance, he said, and would be almost impossible to verify as part of an arms-control agreement. The Soviet Union trails the United States in developing a sophisticated cruise missile, Professor Doty said, but it will eventually have them and the arms race will have escalated to a new level.

But Professor Doty was skeptical of Moscow's recent pledge not to use nuclear arms first and of similar proposals by disarmament groups in the United States. Such pledges would be too easy to circumvent, he argued. All a nation would have to do, he said, is explode a nuclear device inside its own territory and assert that it had been attacked, absolving itself of responsibility for sticking to the promise.

Hesburgh Trying to Form Meeting

Another participant in the conference, the Rev. Theodore M. Hesburgh, president of the University of Notre Dame, said he had been working for the last 18 months to try to bring the world's top scientists together with the leaders of the Roman Catholic Church "for the first time since Galileo."

Father Hesburgh said that he had worked out a draft program on the dangers and possible solutions to nuclear war and that the presidents of 15 national academies of science, including that of the Soviet Union, would present

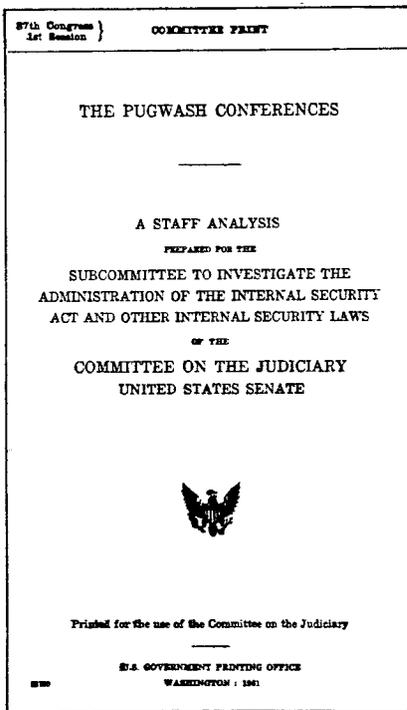

the program to Pope John Paul II in Rome in September. The draft does not single out any particular plan, Father Hesburgh said, but by joining scientific and religious authority it could increase pressure on the world's leaders to act.

Professor Ogawa said he remembered how, after the atomic bomb had been dropped on Hiroshima, he helped organize teams of scientists to determine what had caused the disaster.

"Our first clue was that X-ray film in the hospitals had all been blackened, exposed," he said. "That could only have happened by radiation. We also had seismologists who measured the distance from Hiroshima at which gravestones had been toppled. Their estimate of the bomb's size proved very accurate."

"The bomb was a terrible thing, Professor Ogawa went on. "But until it was dropped, the navy officers were very confident they could fight on. After it, they came to me and asked for books about physics. It may have shortened the war."

INTRODUCTION

By Thomas J. Dodd, vice chairman, Subcommittee on Internal Security of the Senate Committee on the Judiciary

For better or for worse, the coming period is likely to see increasing contact between scientists of the free world and scientists of the Communist world.

Some of these contacts will take place in connection with international conferences convened by the specialized scientific societies. Others will take place as part of the cultural exchange program between East and West. Still other contacts will be fostered by cooperative scientific programs like the International Geophysical Year. Finally, there have been and will probably continue to be privately sponsored conferences at which Communists and non-Communist scientists are brought together.

In most of the contacts that have thus far taken place, the free world scientists, although they have sometimes argued strongly, have not been able to compete with their Communist counterparts. The extensive use which the Communist propaganda apparatus has made of the Pugwash conferences is proof enough of this.

The free world scientists have no central guiding political ideology. The Communist scientists have such an ideology.

The free world scientists are under no discipline. The scientists from the Communist bloc countries, when they attend international conferences, do so under the discipline of the Communist Party.

The free world scientist, brought up in the tradition of freedom of criticism, is frequently critical, and sometimes overcritical of his own government. The Soviet scientist—especially the Soviet scientist who represents his government abroad in any capacity—has been conditioned to blind obedience to government policy.

The free world scientist has been accustomed to an exchange of views with fellow scientists based on a common regard for the truth and scientific objectivity. The Soviet scientist knows from his own sad experience, that, whenever there is a conflict between scientific objectivity and Communist dogma, it is scientific objectivity that must yield.

The free world scientist comes to his meeting with Soviet scientists with an open mind, full of trust and a desire to communicate and cooperate. The Communist scientist comes to these conferences with carefully defined political directives. It is his duty to attempt to shape and exploit the conference in a manner which will best serve the ends of Soviet imperialism.

SOME OF THOSE BEHIND THE LONDON APPEAL

LORD BERTRAND RUSSELL

As the philosophical initiator of the London appeal and the subsequent Pugwash Conferences, Lord Bertrand Russell has, in a way, set the background and tone of these Conferences. It is true that since 1920, Russell has carried on an energetic and continuous theoretical struggle against the forces of communism. He admits that, "For a little while after the death of Stalin, I, like others, had hopes that the Soviet regime was improving. These hopes have been shattered by events in Hungary."¹ Simultaneously, however, and for some unexplained psychological reason, the British philosopher has entered upon a frenetic crusade against our Federal Bureau of Investigation and the American courts. In this crusade he demonstrates close ideological kinship with Cyrus S. Eaton, fellow initiator of the Pugwash Conferences. For some curious reason, Russell's strictures against the American juridical system are primarily directed in behalf of Communist cases and Communist atomic spies. For evidence he does not turn to the proceedings of the American courts but to writers notorious for their pro-Communist bias. Norman Thomas, the veteran Socialist leader, has accused Russell of a desire "to use the blackest possible paint in depicting the American scene."²

Russell admits, for example, that he has "been at times critical of some things American, more particularly as regards Communist China and police action against American alleged Communists."³ Note the skeptical reference to "police action" and "alleged Communists." With regard to Julius and Ethel Rosenberg and Morton Sobell, Communist atomic spies, convicted by the American courts on the basis of exhaustive testimony, Russell has not examined the court record but has been convinced by a book by Prof. Malcolm Sharp entitled "Was Justice Done?" Sharp, it should be noted, was a defense counsel in this case and has repeatedly signed appeals in behalf of Communist cases.⁴ In his New Leader article Mr. Thomas denied that Professor Sharp was "better able than the jury to judge the facts, or than the courts to judge the law."⁵

He adds: "Lord Russell damns the FBI by reference to Max Lowenthal's book, 'The Federal Bureau of Investigation.' I read the book when it came out and found it, in important points, unconvincing. * * * The force of Mr. Lowenthal's book, I must inform Lord Russell, was weakened because he had a personal grievance

CONCLUSIONS

Our evaluation of the Sixth Pugwash Conference at Moscow in December 1960 is not complete because we are still receiving information about it and expect to learn much more about it. From what we now know, our conclusions, in general, apply to the Sixth Conference as validly as they do to the preceding ones. There are, however, some important variations.

For example, it appears thus far that no strong efforts were made by the Soviet scientists to enforce unanimity of opinion upon the representatives of the United States and other free nations. Thus it may

be that Conclusion No. 6 does not apply to the Sixth Conference.

1. The Pugwash Conferences were initiated, in part, by individuals with significant records of support of Communist causes, including one leading member of the Communist Party of France.

2. Among the sponsors and initiators of the Pugwash Conferences were individuals who have displayed a sharp, unreasonable, and sustained hostility to the United States, its representatives, institutions, and policies.

3. The Pugwash Conferences were approved by the Soviet Government and the Soviet delegates were chosen by the Soviet Academy of Sciences, which operates under the discipline of the Communist Party of the Soviet Union.

4. The Pugwash Conferences were made possible through the financial support of Cyrus S. Eaton, who has shown strong and un concealed sympathy for Soviet policies and hostility to American policies and activities of our Government to insure national security.

5. Among the Soviet scientists who attended the Pugwash Conferences were high ranking, disciplined representatives of the Communist Party of the Soviet Union and of the Soviet military establishment, who were far superior in political, diplomatic, and military experience to the American delegates, who attended merely as individual scientists.

6. Exploiting the natural desire of scientists for international cooperation and exchange of information, the Soviet delegation to the Pugwash Conferences sought to impose upon American scientist-delegates a form of international discipline superior to the obligations of American scientists to their own Government. Strong efforts were made at the Conferences to enforce unanimity of opinion.

7. The Soviet delegation sought to exercise ideological leadership at the Pugwash Conferences.

8. From the viewpoint of Soviet interests, the Pugwash Conferences served as an organic part of their cold war design to discredit American nuclear policy and accredit Soviet nuclear policy within the United States and throughout the world.

9. The Soviet Government has extended flattering honors and recognition to some American scientists who attended the Pugwash Conferences and to Cyrus S. Eaton, who made the conferences possible.

10. The general tenor of the Pugwash Conferences, as set by Lord Bertrand Russell and the Soviet delegation, was to weaken the will of American scientists to resist Soviet aggression.

11. The Soviet delegation and others prominently associated with the Pugwash Conferences sought to utilize the meetings for purposes of pressure upon American Government policy in the nuclear field.

12. A veil of secrecy surrounded the proceedings of the Pugwash Conferences. The full proceedings have never been made public in the United States although they have been sent to Soviet Premier Nikita S. Khrushchev.

13. The Pugwash Conferences were utilized politically to open the doors to delegations from Communist countries which have not been recognized by the United States.

14. The Soviet press and the Communist press in the United States were uniformly sympathetic to the proceedings of the Pugwash Conferences.

15. In general the American scientists who participated in the Pugwash Conferences had no clear understanding of the nature of the international Communist conspiracy as it operates in the field of science, or of the relationship between the Soviet Academy of Science and its individual members to the Communist Party of the Soviet Union and to the Soviet government.

The excerpts above come from the 143-page 1961 pamphlet — it resembles an unbound book — for sale by the Superintendent of Documents, Government Printing Office, Washington, DC. Priced at 40¢ in 1961

(16d) How BR viewed the Senate Internal Security Committee (1961):

The Pugwash Movement has recently been honoured by the Senate Internal Security Committee (a sub-committee of the Judiciary Committee of the United States Senate). The report of this Committee is a truly astonishing document. It regards it as self-evident that any person in the West who wishes to diminish East-West tension must be actuated by pro-Communist bias: that in any more or less friendly contact between any Communist and any non-Communist, the Communist must be capable of outwitting the non-Communist, however great may be the ability of the latter; that any Communist participant in Pugwash Conferences must only express the policy of his Government; but that, nevertheless, in spite of Pugwash pronouncements in favour of peace, which Communists have signed, the Russian Government is bent on war. The report allows itself a resort to tricks which is really surprising. In

an account of me, it quotes my statement: 'We have to learn to ask ourselves not what steps can be taken to give military victory to whatever group we prefer, for there no longer are such steps'—but this last phrase it omits. It points out that my views on policy were not the same in 1948 as in 1959, and benevolently suggests, 'that, in 1948, Russell was only 76 years old, while in 1959 he was 87'. It omits to mention that, during the intervening years, another change had taken place, possibly even more important than my further descent towards senility—namely, that, at the earlier date, America alone had the A-bomb, whereas, at the later date, both America and Russia had the H-bomb. It proceeds to point out that there were Communists at the Pugwash conferences, as though that fact alone discredited them. The aim of diminishing East-West tension, which could not well be

pursued in the absence of Communists, was evidently regarded as, in itself, reprehensible. Moscow's approval of Pauling's book *No More War* is quoted as showing Pauling's wickedness, on the ground, apparently, that no right-minded person could oppose nuclear war.

All these, however, are minor criticisms which might amount to no more than evidence that Western scientists, as the Report says, are simple-minded folk, 'who blissfully believe that Soviet participation was motivated purely by a scholarly desire to further the cause of international science or by an idealistic urge to advance the movement towards disarmament and international peace'. The eagle eyes of the Senate Internal Security Committee have pierced deeper into the hidden motives of Pugwash scientists. There is a section of the report entitled 'Incitement to Treasonable Action'. This gives an account of the

activities of Alan Nunn May, Julius Rosenberg, and Klaus Fuchs, intended to give the reader the impression that these 'traitors' were somehow connected with Pugwash. I have seldom come across a piece of propaganda more dishonest than this.

The whole tone of the report is to the effect that the wicked Russians praise peace, while all patriotic Americans praise war. Any unprejudiced person, reading the Report and believing it, would inevitably be driven to the support of Russia. Fortunately the West is not quite so black as it is represented to be in this Report. But it would be very unwise to overlook the fact that Senate Committees have immense powers of persecution, and use these powers, in the main, to discourage and discredit every approach towards sanity.

from "Has Man A Future?", pp.71-73.

OPINION

- (17) Phyllis Shlafly on the atomic bomb. It "is a marvelous gift given to our country by a wise God." (New York Times about 7/1/82)

COMMENT

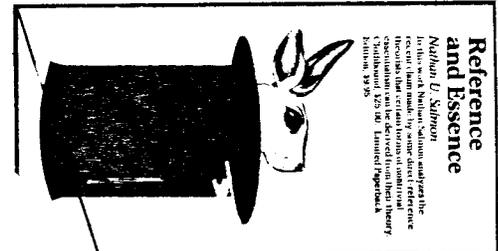

- (18) Harry Ruja would like us to know that the 2 radio talks in the last issue (RSN34-9) were broadcast in 1948, and were first printed in the BBC's publication, "The Listener", on May 27 and September 3 of the same year. Harry adds, "It's good to have a reminder from the Jewish Post (RSN34-10) that BR supported the idea of a Jewish state 5 years before its establishment."

NEWS ABOUT MEMBERS

- (19) Kevin Boggs got his B.A. in Microbiology from the University of Florida in May. He will now do graduate work there on biological nitrogen fixation. "If just a few of the important food crops could be genetically manipulated to host a species of bacteria that can fix atmospheric nitrogen" -- replacing expensive commercial nitrogen fertilizer -- "it would be a great achievement in the fight to end world hunger."
- (20) Alfred J. Carlson, Jr., M.D. -- father of 3, Board-certified Pediatrician, in private practice for many years -- is working toward his Master's in Philosophy, at Villanova, and has nearly got it.
- (21) Alex Dely is Chairman of the HRS Science Committee and teaches physics at the University of Arizona. He is about to go to Law School. Unusual? Yes. "Public interest and politics (water law and national security as well as immigration) are my main present motives. A science-law combination is rare and will be useful. For financial reasons, I will keep teaching at U. of A."
- (22) Sarah ("Sally") Primm conducts a 2-hour talk show on religion, on Sunday evenings, over KVOR Radio, Colorado Springs. She is a Humanist Counselor, AHA.
- (23) Nathan U. Salmon. Formerly Assistant Professor of Philosophy at Princeton, he is now Associate Professor of Philosophy at the University of California at Riverside. We saw this ad for his book in the Princeton University Press ad in The New York Review of Books (7/15/82)p.29

The small type says:

In this work Nathan Salmon analyzes the recent claim made by some direct-reference theorists that certain forms of nontrivial essentialism can be derived from their theory. Clothbound, \$25.00. Limited Paperback Edition, \$9.95.

HONORARY MEMBERS

(24) Celebrating Popper:a book**IN PURSUIT OF TRUTH**

*Essays on the Philosophy of Karl Popper
on the Occasion of His 80th Birthday*

Edited by

Atlantic Highlands, NJ 07716
about Aug. 15, 1982 at \$25.00

a convocation

ANNOUNCING:

THE FIRST INTERNATIONAL CONVOCATION OF THE OPEN SOCIETY AND ITS FRIENDS
at THE PRINCE GEORGE HOTEL in New York City
NOVEMBER 22-24, 1982

featuring addresses by F A HAYEK

DONALD T. CAMPBELL

ANTONY FLEW

and 25 other speakers and discussants

The Conference will explore the philosophy of Sir KARL POPPER from three interrelated perspectives: the destruction of the old epistemology; the erection of a new epistemology: evolutionary epistemology; and the presuppositions of the open society.

Conference registration fee: \$25.00
(U.S. funds)

(Special early registration fee
received before September 15, 1982:
\$20 in U.S. funds)

Accommodations at the Prince George:

\$48 (U.S.) single occupancy per night

\$27 (U.S.) double occupancy per
person per night

Please make checks payable to Paul Levinson/The Open Society,
and send to Prof. Paul Levinson, Fairleigh Dickinson University,
Teaneck, NJ 07666, U.S.A.

Reservations must be received by October 15, 1982 to assure accommodations.

For further information write to Paul Levinson at the above address,
or phone: (212) 548-0435.

TURN OVER PLEASE for
CONFERENCE PROGRAM as of 7/82

(25) Schilpp tells it like it is. Professor Paul Arthur Schilpp, winner of the first Bertrand Russell Society Award (1980), gave the Commencement Address at Southern Illinois University on May 15, 1982, titled "Whither?". This is it:

Mr. Chancellor, Mr. President, members of the Board of Trustees, members of S I U's faculties, Distinguished Guests, parents and other relatives of our graduates, and last, though far from least — for this is, after all, YOUR day — today's graduates, my fellow students:

Customarily commencement-speakers begin their remarks with congratulations to the graduates. I find this difficult, to say the least. For, after 60 years of university-teaching, I know that your education, so far from being completed, has only just "commenced"! And, with the unemployment situation being what it is today, it certainly would not be kind to congratulate you on the job which for many of you does not seem to be awaiting you next week. And, worst of all, how could I possibly, with any degree of honesty, congratulate you on the kind of a world into which you are graduating? I could perhaps congratulate you on having completed some particular course of study; and this I am glad to do. But in doing so, I am reminded of another commencement-occasion a few years ago.

It took place at Johns Hopkins University in Baltimore. on the occasion of a graduating class of M.D.'s. As commencement-speaker the graduates had chosen a world-famous physician-surgeon, who, in his address, told the graduates that, since they were just fresh out of medical school, they obviously had been taught all the latest that medicine had discovered, invented and achieved. That, consequently, they came out of medical school knowing much, much more than the actually practicing physicians. Hearing him thus go on and on, the graduates' heads began to swell until the speaker came to his peroration, saying: "Perhaps half of the things you have learned are true; unfortunately, I cannot tell you which half."

As a mere philosopher, I would not even dare to be that sanguine. If one-tenth of what you have learned in college is so, I would say that you are very fortunate, indeed. But, again, I cannot tell you which tenth!

It used to be said that "Where there is no vision the people perish" (Proverbs). But, what vision can anyone recommend to you today? The vision that looms up before anyone who has the nerve to look at the existing facts and then dares to project tomorrow from what he is able to see today is that of a no-longer-existing humanity on a despoiled planet wiped out by nuclear war: obviously no vision to be enjoyed!

One thing which does seem to be the case — in the light of the ever-escalating armaments race between the world's two super-powers — is that, whether we like to face up to it or not — we do have to think the unthinkable (as even TIME Magazine in its recent cover story, 6 weeks ago, found it necessary to remind us). And the unthinkable is the possibility of annihilating every living thing from this planet!

Perhaps you opine that a day of celebration like today is not the time to be reminded of such possibilities. But, as a philosopher, I consider it my duty to try to induce you to think even on a day of supposed celebration. If TIME Magazine finds it necessary to do so, how much more a supposed philosopher! And this all the more so when I find that most of my fellow-citizens have been turning a deaf ear to such voices of warning for over 30 years now, even when the voice was that of a President of the United States (himself a General) or that of the Chairman of the Joint Chiefs of Staff of all America's armed forces. Since TIME's issue of March 20th, almost every magazine, and even newspapers such as the "Southern Illinoian" and the "Daily Egyptian", have been trying to call us to our senses on this issue. Yet, as you know from your own viewing of TV and reading of papers, neither the administration in Moscow nor the one in Washington, DC seems to be paying the slightest attention to these warnings. Both seem to be ignorantly going on not only with the nuclear race, but increasing it and asking our people to support such increases. Each super-power tells the world that the nuclear weapons NOW in their possession can annihilate the human race not once but 25 times over. What neither seems ever to ask — let alone tell us — is: Who is going to do it the second time when the annihilation is complete on the first time around? Yet each administration is bent on increasing its destructive arsenal ever more. This insanity must be stopped! World-wide catastrophe cannot be avoided by heaping insanity upon insanity.

But if you yourselves are inclined to turn a deaf ear to both TIME Magazine and to a mere philosopher, then, please, listen, first to President Eisenhower: On the evening of January 18th, 1961, in his farewell address to the American people (i.e., the night before he left office), Eisenhower tried to warn us as follows. I quote:

The conjunction of an immense military establishment and a large arms industry is new in American experience. The total influence — economic, political, even spiritual — is felt in every city, every statehouse, every office of the Federal Government... We must not fail to comprehend its grave implications. Our toil, resources, and livelihood are all involved. So is the very structure of our society.

"In the councils of government," Eisenhower went on,

we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist.

...Disarmament, with mutual honor and confidence, is a continuing imperative. Together we must learn how to compose our differences, not with arms, but with intellect and decent purpose.

More than 21 years have passed since that presidential warning. Today it is all too obvious that, while most of our fellow-citizens may have heard those words, they certainly did not listen. Neither did the State Department or the White House.

I shall never forget the time when the 20th Century's greatest scientist personally retold me the story of what happened when, a year after World War II, a reporter from the New York Times came to see him in Princeton to ask the question: "What will be the weapons in World War III?" to which Einstein replied: "I am sorry that I can not answer this question because I do not know. But I can tell you for a certainty what will be the weapons in World War IV, namely: sticks and stones!"

Let us not forget that the great Beatle singer, John Lennon, for whom you students marched in a candlelight parade on this campus when he was murdered, tried to fight against war. As a peace activist, he spoke up courageously in many ways and no one will ever forget his song, "Give Peace A Chance." Others of you will remember seeing the dramatization of Nevil Shute's "On The Beach", which finds only 2 human beings alive after a nuclear war.

On the other hand I cannot agree with Bob Dylan's famous two lines, "If God is on our side, He will stop the next war." God did not stop the first two world wars. And because He endowed man with freedom of choice, it is up to us to stop it.

But if you think that President Eisenhower's warning was fairly drastic, I invite you, finally, to listen to the words spoken even 13½ years before Eisenhower's Farewell Address. At an Armistice Day (now called Veterans Day) address before the Boston Chamber of Commerce (scarcely a radical organization) on November 10th, 1948, this speaker tried to rouse his audience with this searing blast:

With the monstrous weapons man already has (remember, this was 1948!), humanity is in danger of being trapped in this world by its moral adolescents. Our knowledge of science has clearly outstripped our capacity to control it. We have too many men of science, too few men of God. We have grasped the mystery of the atom and rejected the Sermon on the Mount. Man is stumbling blindly through a spiritual darkness while toying with the precarious secrets of life and death. The world has achieved brilliance without wisdom, power without conscience. Ours is a world of nuclear giants and ethical infants. We know more about war than we know about peace, more about killing than we know about living. This is our Twentieth Century's claim to distinction and to progress.

Those were not the words of a pacifist, clergyman, philosopher, educator, poet, or bleary-eyed visionary, dreamer, commencement-speaker, or do-gooder; they were uttered by General Omar Nelson Bradley, a five-star general and, at the time he spoke, Chairman of the Joint Chiefs of Staff. Let his words sear into our consciousness! They are far more powerful than anything I could possibly say. It must be clear to anyone hearing those words that America paid no more attention to General Bradley than it paid to President Eisenhower.

"Ethical infants" General Bradley calls us — and so we are. In fact, one comes to wonder whether anyone in the White House or State Department has any idea of ethics (remember "Watergate" or the "Bay of Pigs"). We certainly seem to know how to kill. Do we know how to live?

Yet this is the kind of world into which you are graduating — a world which was not of your making, but which we, your elders, are bequeathing to you. There can no longer be any question that we, your elders, have miserably failed. If you cannot do any better than we have done, humanity is doomed.

Many of you have, rightfully, opposed our presence in such places as El Salvador. But that, after all, is a relatively minor matter when compared with the annihilation of what we have come to know as "civilization" or the very existence of the human race. To stop the insanity of even contemplating annihilation must now be our first priority. At my age, what have I to lose? But you?!

Of what value is a so-called university education, if it cannot help prepare us to take on the enemies of humankind, wherever they may be found?! Even if in our own house. And surely, those who are so persistently at work preparing for the possible demise of the human race — surely, if anyone — those are the real enemies of mankind.

I'll dare you to go forth from these exercises and take on any and all governments which persist in continuing the present insanity. If you fail at this point, no one will be left to tell the tale.

America's dream is not dead it is only hidden under the bushel of selfish nationalism, rampant militarism, and would-be imperialism, which are eating at the very fabric of our society.

I'll challenge you to proceed to recover America's great dream of world-brotherhood, so that this beloved country of ours, already hallowed by the sacrificial deaths of millions of our fellow-citizens, may — instead of disappearing from the earth — rise to a new rebirth of freedom, justice and democracy, the hope not only of America but of all mankind!

CONTRIBUTIONS

- (28) Your attention, please! The BRS Treasury is just about flat. Membership renewals this year are down, probably due to tight money. But expenses are up: advertising rates are up, printing costs are up, postage is up. You could say we are in a predicament.

One casualty might well be the \$500 BRS Doctoral Grant that we have been offering annually(since 1979) to the graduate student who qualifies. See (13). We may have to suspend it for '83, which would be unfortunate.

We know that many of you do not have money to spare. All the more reason why contributions from those of you who are able to send them would be particularly helpful to us now.

Please do what you can. We need your help. Any amount is welcome. Send it c/o the newsletter, address on Page 1, bottom. Thanks!

- (29) We thank these members for their contributions to the BRS Treasury: JOHN FOTI, CHARLES HILL, DON JACKANICZ, JACK RAGSDALE, HARRY RUJA, WAYNE SANGSTER, WILLIAM VALENTINE and (as always!) KATHY FJERMEDAL... and DON ROBERTS for his contribution to the BR Memorial (London).

MONEY MATTERS

- (30) "Russell". As you know, all BRS members receive "Russell: The Journal of The Bertrand Russell Archives", published by the McMaster University Library Press. We think very highly of it and no doubt so do our members.

A problem has arisen as a result of the increased cost of publishing "Russell". McMaster finds it necessary to ask the BRS to pay \$2.50 more per member (per year).

The BRS Treasury has no extra money. We have been able to pay our bills, but we have no surplus.

If we are to pay an additional \$2.50, we will have to raise our dues by that amount.

We are reluctant to raise dues; and in any case we would not want to raise dues in these circumstances without the members' permission. The decision to consult the members was made at the recent annual meeting. We are going to put it to a vote. The ballot (last page of this newsletter) has a section asking you to vote "yes" or "no" to a \$2.50 increase in dues, starting in '83.

We think there are compelling reasons for voting "yes": (1) "Russell" is an excellent publication and, in our opinion,

no one interested in ER should be without it. (2) The \$2.50 raise is a bargain compared with the cost of an individual subscription (\$7.50). (3) The consequences of voting "no" are all undesirable: (a) you would not receive "Russell" starting in '83; (b) it would weaken our ties to the Russell Archives, for our present arrangement — that provides "Russell" to every ERS member — is a gesture of support for the work being done at the Archives, and we think it most appropriate that the ERS should show this kind of support; (c) it would penalize the Archives financially, because it seems unlikely that a substantial number of ERS members would subscribe to "Russell" at the new individual rate of \$7.50 per year.

If the majority votes "yes" you will continue to receive "Russell" as before, and your dues will increase by \$2.50 a year, starting in '83.

If the majority votes "no", it will save the ERS the cost of the present group subscription, but we will not lower dues, because the ERS Treasury can use the money!

We urge you to vote "yes".

ELECTION OF DIRECTORS

(31) We elect Directors, 8 of them, for 3-year terms starting 1/1/83. Please use the ballot at the end of this newsletter. There are 11 candidates. We like 'em all, but there are only 8 openings. Take your pick. Here they are, in reverse alphabetical order. You need not sign your ballot; it can be a secret ballot, if you prefer it that way.

DAN WRAY (Hollywood). ERS member since 1975. Playwright and screen writer. Attends local (Los Angeles area) ERS meetings and presentations. Especially interested in ER as an intellectual historian, as in "A History of Western Philosophy".

CAROL R. SMITH (Seattle) is a 5-year member with 28 years of business and professional experience. Her B.A. is in Sociology, from the University of Washington. Belongs to AI, ADA, Greenpeace, Audubon. Is strong on organization and creativity.

— STEPHEN J. REINHARDT (Wilmington) has been a member since the ERS's first year, 1974, and has attended every meeting. He was ERS Treasurer for many years, and has been a Director since 1976.

— JIM MCWILLIAMS (Eagle Pass, Texas), ERS member since the Year One (1974). AHA, ACLU, Sierra Club. Fulbright Scholar (India). Describes self as "occasional teacher (German, English), farmer and storekeeper." Currently teaching English as a second language to Spanish-speaking students at Eagle Pass. "I invite members to visit me in the garden spot." Attended several annual meetings; took photos of the '82 meeting (pp 2 & 3).

MARVIN KOHL (Fredonia, NY) is a Professor of Philosophy at SUNY, Fredonia. Has had a life-long interest in ER's writings. Has written books and articles on Abortion and Euthanasia. With Paul Kurtz, he drafted "A Plea for Benificent Euthanasia", has been an active Humanist, helped draft Humanist Manifesto II.

— DONALD HYLTON (Pico Rivera, CA) teaches math in secondary schools, and is working for his doctorate in Educational Psychology. His primary academic interests are math and philosophy. "I consider myself a citizen of the universe. I despair for the future of mankind."

— DAVID HART (Rochester) is a 4-year member, has attended 3 of the last 4 annual meetings. At the '81 meeting, he gave a talk on ER's advice to the English left (ignored). His interest in ER led him to spend a leave of absence in Cambridge (England), which he wrote up for the newsletter (RSN30-27). He also wrote "Russell on Marx" (RSN30-14).

— LESTER DENONN (Brooklyn) is a distinguished lawyer, a ERS Honorary Member and Director, and editor or co-editor of "The Basic Writings of Bertrand Russell", "The Wit and Wisdom of Bertrand Russell", and "Bertrand Russell's Dictionary of Mind, Manners and Morals". Also "Recollections of 3 Hours with Bertrand Russell" (RSN14-16).

— JACK COWLES (NYC) is a retired naval officer (Commander/Aviator/Intelligence) and has been interested in ER since taking ER's course in Philosophy at UCLA in 1940. A member since '76, a ERS Director since '79.

— KENNETH BLACKWELL (Hamilton, Ontario) is Archivist of the Russell Archives, Editor of "Russell", a Founding Member of the ERS, and a ERS Director since its founding.

— LOUIS ACHESON JR. (Encino, CA) 4-year member. 30 years with Hughes Aircraft; now Senior Scientist (aerospace engineer and systems analyst); on NASA space projects for past 10 years. World Federalists, Worldview Exploration Seminars, International Cooperation Council (now Unity-in-Diversity Council). As a teen-ager, read "Selected Papers of Bertrand Russell" and has been hooked on ER ever since.

Please vote! Why not right now? Turn to the ballot on the last page.

(32) Board vacancies. Bob Davis nominates 2 members — PAUL ARTHUR SCHILPP and STEVE MARAGIDES — to fill the unexpired terms of former members, Adam Paul Banner and P. K. Tucker, who were originally elected for the 3-year period 1981-1983. ERS Bylaws (Article VI, Section 6) provide that vacancies on the Board may be filled by a majority

vote of the remaining Directors. Professor Schilpp needs no introduction. He is an Honorary Member, and won the first BRS Award (1980)(RSN27-17,26). Steve Maragides is an attorney employed by the State of Illinois Department of Revenue. A member since 1975, he has attended 5 of the last 6 annual meetings. His degrees are in Journalism (from Northwestern) and Law (from U. Illinois).

These 2 nominees, if approved, will serve as Directors for the unexpired terms, which run until 1/1/84

* Directors (only), please vote on this. Use Part 3 of the ballot on the last page.

NEWSLETTER MATTERS

- (33) How to help the newsletter. When you come across a reference to BR — or a reference to something he was interested in — in your reading, please let us know about it, for possible use in the newsletter. If you are in doubt as to its suitability, send it anyway and let us see it. Send a clear, clean photocopy, if possible. Please remember that the newsletter depends, in large part, on material that members send. Thanks!

MINUTES

(34) Minutes of the Members' Annual Meeting, 1982:

The Ninth Annual Meeting of The Bertrand Russell Society, Inc. was held Friday, June 25 through Sunday, June 27, 1982 at the Sheraton Townhouse Hotel, 2961 Wilshire Boulevard, Los Angeles, California.

Friday, June 25, 1982

At 8:00 p.m. President Robert K. Davis called the first session to order in the hotel's Viscount Room. Following his greeting and introductory remarks, Bertrand Russell, a thirty minute film, was presented. The session concluded with a panel discussion entitled "New Hopes for a Changing World Revisited--Russell and the 1980's" which examined the applicability of Russell's 1951 book to contemporary world problems. Robert K. Davis was panel chairman. Panelists were Louis K. Acheson Jr., Donald Hylton, Donald W. Jackanicz, and Dan Wray, each of whom were provided ten minutes for an opening statement after which group and audience discussion followed. The session was adjourned at 10:00 p.m. at which time the first session of the Board of Directors Annual Meeting was called to order in the Viscount Room.

Saturday, June 26, 1982

The second session was called to order in the hotel's Wedgewood Room at 9:25 a.m. by Robert K. Davis. Projector mechanical problems prevented the scheduled film, Bertrand Russell Discusses Power, from being shown. Robert K. Davis then presented a talk entitled "Russell and World Government." Following a brief refreshment period, the first of two Society Business Meeting sessions was held.

Announcement was made of the previous evening's Board of Directors election of Society officers whose terms run for one year beginning upon their election-- Donald W. Jackanicz, President; Jacqueline Berthon-Payon, Vice President; Cherie Ruppe, Secretary; Dennis J. Darland, Treasurer. Also announced were the election of Harry Ruja as Board of Directors Chairman and Cherie Ruppe as Board of Directors Secretary. At the new President's request, former President Davis continued to chair the Society Meeting. Former Secretary Donald W. Jackanicz read the Minutes of the 1981 Annual Meeting; these were approved as read. Treasurer Dennis J. Darland then gave a summary of Society income and expenses, referring members to his regular Russell Society News reports for details.

Former President Davis outlined the following about his activities and views:

1. In 1981-1982 he attended humanist meetings in College Park, Maryland and New York City.
2. He is working with Gerald Larue to plan a Fall 1982 West Coast "Voice of Reason" conference to oppose Moral Majority influence.
3. Paul Kurtz of Prometheus Press has corresponded with him on the possible publication of Dora Russell's The Tamarisk Tree, II (not yet available through a North American company) and her (unpublished) book on the machine age. A Prometheus Press offer to publish three popular Russell essays with Society cooperation will probably not work out as the publisher would require the Society to purchase a large number of the rather expensively priced volumes for financing.
4. He suggests the Society work to keep Russell books in print and to bring back into print such contemporary titles as Common Sense and Nuclear Warfare and Has Man a Future?
5. No progress has been made on securing a permanent home for the Lester E. Dennon Russell Library or attempting to raise funds for a sculpture of Will and Ariel Durant for a Los Angeles park; however, he will continue working toward these ends.

Attention then turned to the resignation of Peter G. Cranford from the Board of Directors and the series of related events occurring over the year following the 1981 Annual Meeting. Robert K. Davis read former Chairman of the Board Cranford's June 10, 1982 resignation letter and provided an account of Peter G. Cranford's efforts during the past year to reverse the expulsion of John Sutcliffe. These efforts, he maintained, took considerable liberties with the BRS Bylaws and alienated a majority of the Board of Directors; they would not have reelected him Chairman this year. He concluded by stating he has a large set of supporting documents in his possession, which are available for individual examination. Lee Eisler and Donald W. Jackanicz agreed with the Davis account of events, and also have supporting documents. Other members giving their opinions were Robert Lombardi, Steve

Maragides, Harry Ruja, Jack Ragsdale, and Dan Wray. A motion was then made by Joe Gorman and seconded by Jack Ragsdale that Peter G. Cranford be given an opportunity to examine these Minutes prior to publication in Russell Society News and to make any comments about them as an appendix to the Minutes. This motion was carried. Acting Secretary Donald W. Jackanicz stated he would contact Peter G. Cranford accordingly.

A Society Bylaws amendment concerning Article I, Section 1, "Bylaw amendments" was proposed by Robert K. Davis and seconded by Lee Eisler to alter the Section's wording to the following:

These Bylaws may be amended by a majority vote of the Society voting at a meeting called at least in part for this purpose, and after prior notification of at least thirty days, or by mail through the Newsletter. In the case of mail ballots, the proposed change is to be specified with supporting arguments in a Newsletter issue; in the following issue other views are to be presented and a ballot provided.

Discussion centered on the proponent's claim that this amendment would democratically broaden member participation in the amendment process which until this time has been restricted to those members present at Annual Meetings. This amendment was accepted with a vote of Yes--15, No--0, Abstain--4.

At 12:15 p.m. the first Society Business Meeting session concluded and the Meeting itself was recessed for lunch.

The Meeting was reconvened at 1:25 p.m. as The Life and Times of Bertrand Russell, a forty minute film, was screened. Al Seckel then presented his paper entitled "Russell and the Cuban Missile Crisis" which was followed by discussion. Robert K. Davis announced the recipient of the 1982 BRS Award, Dr. Henry W. Kendall, who, among other noteworthy accomplishments, has distinguished himself by his opposition to nuclear weapons. Robert K. Davis also read a letter from Peter Cadogan on the European peace movement and mentioned the October 1982 Vienna peace movement gathering in which members may wish to participate.

After a brief refreshment break, Dr. Timothy J. Hayes of Physicians for Social Responsibility and the Council for Liberal Education introduced a film, "The Last Epidemic," in which a group of physicians, scientists, and former military officials described what would happen to the exemplary city of San Francisco were a single major atomic bomb detonated over it. Dr. Hayes next presented a talk on the ecological and medical consequences of large scale nuclear warfare.

The session was adjourned at 4:45 p.m. At 6:30 p.m. the second session of the Board of Directors Annual Meeting was called to order in Room 902 of the hotel. Due to an unexpected scarcity of the scotch for which it was named, the traditional Red Hackle Hour was not held; instead, members rested or informally gathered before coming together again at 7:30 p.m. for the Banquet held in the hotel's Inner Terrace. After the fine meal, a film, "Oh, What a Lovely War," to which Russell referred in his Autobiography, was presented in an adjoining room. The evening's events concluded at 11:50 p.m.

Sunday, June 27, 1982

At 8:40 a.m. the third and final session of the Board of Directors Annual Meeting was held in Room 902.

The third and final session of the Society Annual Meeting was called to order at 9:27 a.m. in the Viscount Room by Donald W. Jackanicz. The second of two Society Business Meeting sessions began with Harry Ruja acting and Lee Eisler seconding that the first sentence of the Society Bylaws, Article VII, Section 1, "Officers" be amended to read as follows: "The officers of the Society shall consist of a president, a vice president, a secretary, a treasurer, and other vice presidents for special areas as deemed desirable by the Board of Directors." It was stated that the Board of Directors, pending acceptance of the Society Bylaws amendment, had elected Robert K. Davis Vice President/Special Projects and Lee Eisler Vice President/Information. (For details of the special area vice president proposal, see the accompanying Board of Directors Minutes.) Steve Reinhardt then voiced reservations to this change, particularly regarding the Vice President/Special Projects position whose incumbent might without authorization involve the Society in the controversial affairs of individuals and other

organizations. Similar criticism was offered by other members. After this discussion, the amendment was carried with a vote of Yes--7, No--0, Abstain--3. Robert K. Davis and Lee Eisler spoke about their new positions in which they would essentially be performing the same duties they had previously undertaken.

Lee Eisler also urged all members to submit materials to Russell Society News for possible publication; he explained if one were unsure of the suitability of an item, it should nevertheless be submitted and would be included if found to be appropriate editorially. He then announced the Board's decision for a Russell Society News ballot concerning the possibility of increasing membership dues to cover the subscription increase for Russell: The Journal of the Bertrand Russell Archives.

President Jackanicz announced the Board of Directors' decision to form an ad hoc committee staffed by Steve Reinhardt, Lee Eisler, and himself to review the Society and Board Bylaws and recommend reforms. He also announced the Board's decision that the next Society Annual Meeting be held in Hamilton, Ontario in connection with the June 1983 Bertrand Russell Archives symposium on Russell's non-technical writings. With no further business at hand, the Society Business Meeting was adjourned and the gavel was presented to Robert K. Davis who presided over the remainder of the program.

Submitted July 26, 1982

Donald W. Jackanicz
Donald W. Jackanicz, Acting Secretary
For Charie Ruppe, Secretary

(35) Minutes of the Directors' Annual Meeting, 1982:

The Board of Directors of The Bertrand Russell Society, Inc. met in three sessions on Friday, June 25, Saturday, June 26, and Sunday, June 27, 1982 at the Sheraton Townhouse Hotel, 2961 Wilshire Boulevard, Los Angeles, California.

Friday, June 25, 1982

Because of the resignation of Peter G. Cranford as Chairman of the Board of Directors, Board Secretary Donald W. Jackanicz called the first session to order at 10:24 p.m. in the hotel's Viscount Room. The following nine Board members were present: Jacqueline Berthon-Payon, Jack R. Cowles, Dennis J. Darland, Robert K. Davis, Lee Eisler, Donald W. Jackanicz, Jack Ragsdale, Stephen J. Reinhardt, and Harry Ruja. The following nine Board members were not present: Kenneth Blackwell, Alex Daly, Lester E. Denonn, Ali Ghazmi, Edwin E. Hopkins, Hugh S. Moorhead, Charie Ruppe, Warren Allen Smith, and Katharine Tait.

Secretary Jackanicz read the former Chairman's letter of resignation, which also stated Board member J. B. Neillands had resigned, as well as a letter the Secretary had received from J. B. Neillands affirming his resignation. The Secretary then called for nominations for Board Chairman. Only one was made--Lee Eisler nominated Harry Ruja with Stephen J. Reinhardt seconding the nomination. With a vote of Yes--8, No--0, Abstain--1, Harry Ruja was elected Board Chairman. Secretary Jackanicz then handed the gavel to Chairman Ruja who made a brief acceptance speech. The Secretary read the Minutes of the 1981 Board Annual Meeting; these were approved as read.

To fill one of the unexpired Director terms, Robert K. Davis nominated Paul Arthur Schilpp; this nomination was seconded by Lee Eisler. However, citing Article VI, Section 6 of the Society Bylaws, Chairman Ruja ruled that no Board vacancies could be filled unless a majority of the Board was present.

Dennis J. Darland gave the Treasurer's report which stated the Society's cash balance was \$2,395.14 as of March 31, 1982. He explained that a more current balance figure could not be immediately provided because of recently written checks, mostly in connection with the 1982 Annual Meeting. The Treasurer's report was accepted as read.

Discussion turned to the election of officers. Robert K. Davis nominated Donald W. Jackanicz for President; this nomination was seconded by Harry Ruja. Jacqueline Berthon-Payon nominated Robert K. Davis for President; this nomination was seconded by Dennis J. Darland. Chairman Ruja determined a secret ballot was required. In response, Jack R. Cowles stated he was pleased the new Chairman had chosen to follow formal parliamentary procedures in this and other Board matters. Jack R. Cowles and Jack Ragsdale were requested to count the ballots whose votes were Donald W. Jackanicz--8, Robert K. Davis--1. For the office of Vice President, Donald W. Jackanicz first nominated Stephen J. Reinhardt and then Jack R. Cowles; however, both declined their nominations. Stephen J. Reinhardt nominated Jacqueline Berthon-Payon; this nomination was seconded by Robert K. Davis. She was unanimously elected. For both Society and Board Secretary, Lee Eisler nominated Robert K. Davis; however, he declined this nomination. Donald W. Jackanicz then nominated Charie Ruppe, with Robert K. Davis seconding the nomination. She was elected by the vote of Yes--8, No--0, Abstain--1. For Treasurer, Robert K. Davis nominated Dennis J. Darland, with Jacqueline Berthon-Payon seconding the nomination. He was unanimously elected. His work as Treasurer was then praised by Robert K. Davis, particularly because of his excellent quarterly reports.

Several Bylaws amendments were next introduced, however it was decided these would be discussed at a later time. The last order of business concerned the date and site of the 1983 Annual Meeting. Lee Eisler reported on the possibility of holding a June 1983 Meeting at Hamilton, Ontario in conjunction with the Bertrand Russell Archives' symposium on Russell's non-technical writings. The Board discussed the merits of such an arrangement, and Lee offered to contact Kenneth Blackwell for further information. With the late hour, it was agreed that the Board would again meet the next day at a time and place to be announced. The Meeting was recessed at 11:37 p.m.

Saturday, June 26, 1982

The second session of the Board Meeting was called to order by Chairman Ruja at 6:38 p.m. in the hotel's Room 902. Except for Robert K. Davis who was not present, the same list of present and absent members applied for this session.

Stephen J. Reinhardt introduced a resolution, seconded by Jack Ragsdale, as follows:

Peter Cranford took a leading part in the affairs of the Bertrand Russell Society from its inception, first as its President and then as its Chairman. On the occasion of his resignation from the Board, the Board expresses its gratitude to Peter for helping to establish the Society and for giving freely of his time and energy to further its prospects. The Board urges Peter to continue to present his views on Society matters and assures him of their respectful reception.

The Board approved the resolution with a vote of Yes--6, No--0, Abstain--2.

Lee Eisler then proposed that Article X of the Society Bylaws be amended to allow for mail ballots for Society Bylaws amendments. His motion was seconded by

Two talks on the Moral Majority and the attack on ideological pluralism followed. Dr. Gerald Larue spoke first about his experiences confronting reactionary religious spokesmen and attempted to analyze the foundations of the Moral Majority movement. Then Robert Burkett of People for the American Way introduced his organization's film, "The Religious Right," which captured Moral Majority leaders uttering extreme statements. A lively discussion period followed.

The Meeting was adjourned at 12:00 p.m. after which members informally talked in the garden outside the Viscount Room. Jim McWilliams invited all present to be photographed by him. After a series of farewells and departures, some members enjoyed brunch together in a hotel dining room.

Jack R. Cowles and accepted by the Board by a vote of Yes--8, No--0. However, it was subsequently agreed by the Board that its vote was merely advisory, as only the Society--not the Board--can amend the Society Bylaws. Lee Eisler then proposed another Society Bylaws amendment: regarding Article 7, Section 1, he moved its first sentence should read, "The officers of the Society shall consist of a president, a vice president, a secretary, a treasurer, and other vice presidents for special areas as deemed desirable by the Board of Directors, with each such vice president serving at the pleasure of the Board." This motion was seconded by Jack Ragsdale. In discussion, this amendment's purpose was established as being a means of enhancing the Society status of certain active Society members who were already engaged in extensive projects authorized by the Board or through Society tradition. With the title "Vice President for X," such a member could more effectively communicate with non-members and other organizations. In no way would this amendment alter the role of the Vice President who is next in line to succeed the President. And it would be unlikely for any "Vice President for X" to engage in any activities not previously engaged in by other officers and committee chairman. However, Stephen J. Reinhardt objected, explaining he feared the possibility of such a Vice President acting in unauthorized ways to commit the Society to controversial positions or to align the Society with controversial organizations. This motion was accepted by the Board by a vote of Yes--5, No--1, Abstain--2. Again, however, it was subsequently agreed by the Board that its vote was merely advisory to the Society.

A motion to form an ad hoc Bylaws Reform Committee was made by Donald W. Jackanicz and seconded by Lee Eisler. This motion was accepted by a vote of Yes--8, No--0. Chairman Ruja named Lee Eisler, Stephen J. Reinhardt, and Donald W. Jackanicz to serve on the Committee which is to report to the Board on both the Society and Board Bylaws no later than the 1983 Annual Meeting.

Treasurer Dennis J. Darland next moved that both the Treasurer and the President be authorized to sign Society checks. This motion was seconded by Jack Ragsdale. Previously only the Treasurer's name appeared on the Society checking account, creating the possibility of difficulties were the Treasurer to die in office. With two officers capable of signing, risks would be diminished, although it would remain the Treasurer's responsibility to manage and safeguard Society funds. This motion was accepted with a vote of Yes--8, No--0. Treasurer Darland stated he would submit the necessary bank paperwork.

A firmer commitment to a Hamilton, Ontario 1983 Annual Meeting was made as Lee Eisler formally moved the Meeting be held in conjunction with the Archives' symposium, subject to successful planning with Kenneth Blackwell and McMaster University. Jack Ragsdale seconded this motion which was approved by a vote of Yes--8, No--0.

Lee Eisler next moved that the question be submitted to the membership through a Russell Society News ballot whether to continue to include a subscription to Russell: The Journal of the Bertrand Russell Archives with membership dues, increasing the dues by the increased subscription price. This motion was seconded by Jack Ragsdale. The need for this action is based on the Archives' intention to increase Russell's subscription price, which in turn will either require higher dues or Society subsidizing of member subscriptions. The exact increase has not been announced, but Lee is inquiring with Kenneth Blackwell. This motion was accepted unanimously.

Chairman Ruja then recognized non-Board member Robert Lombardi to speak. His three points were: he questions the desirability of the "Vice President for X" amendment; Russell Society News production costs could be cut by using a smaller size print and sophisticated typewriters; he believes the Society should become involved in environmental issues such as pollution control.

With the Banquet to begin in a short time, at 7:35 p.m. it was decided to recess the Meeting until the next day at a time and place to be announced.

Sunday, June 27, 1982

The third and final session of the Board Meeting was called to order by Chairman Ruja at 8:40 a.m. in the hotel's Room 902. Except for Jack Ragsdale who was not present, the list of Board members present and absent on Friday, June 25, 1982 applied for this session.

Jacqueline Berthon-Payon moved that, in accordance with the Board's actions the previous day, the position of Vice President/Information be created with duties consisting of transmitting information about the Society to members, non-members, and external agencies, under the supervision of the President. Her motion was seconded by Robert K. Davis and accepted by a vote of Yes--8, No--0. Jack R. Cowles then moved that the position of Vice President/Special Projects be created with duties to be assigned by and direction to be provided by the President. His motion was seconded by Jacqueline Berthon-Payon and accepted by a vote of Yes--7, No--0, Abstain--1.

To fill these newly created positions, Robert K. Davis nominated Lee Eisler for Vice President/Information, with Jacqueline Berthon-Payon seconding the nomination, and Jack R. Cowles nominated Robert K. Davis for Vice President/Special Projects, with Jacqueline Berthon-Payon seconding the nomination. Lee was elected unanimously, while Robert was elected by a vote of Yes--7, No--0, Abstain--1.

It was subsequently agreed by the Board that the actions described in the two paragraphs above were valid pending Society approval of an amendment to Article 7.

Section 1 of the Society Bylaws allowing for additional vice presidents. This amendment was approved by the Society on June 27, 1982.

With no further business at hand, at 8:52 a.m. it was unanimously agreed to adjourn the Meeting.

MEDICAL VILLAGE 1500 JOHNS ROAD	August 5, 1982	TELEPHONE 736-3514 733-8612
For RSN Publication:		
<p>I would like to thank the Directors for the majority vote of the board members present in passing a resolution of gratitude to me for my help in establishing the Society and in furthering its prospects.</p> <p>It had been our original intent that the Society would be a vehicle through which we could promote Russell principles for the rest of our lives. However I note with sadness that only two of the original founding members were present at the 1982 meeting.</p> <p>I further thank the Society for giving me the opportunity to respond to a matter discussed at the meeting. I must state that there are no points of agreement between me and Messrs. Davis, Eisler and Jackanicz concerning the expulsion of John Sutcliffe. I see a parallel between this matter and the persecution of Bertrand Russell in New York City, when he was not allowed to participate in his own defense. It is a matter of principle.</p> <p>To those members who responded to my letter of June 10, I regret to write that I have as yet been unable to reply, due to a lengthy hospital stay and a convalescence which continues to limit my activities.</p> <p style="text-align: right;">With best wishes, <i>Peter G. Cranford</i> Peter G. Cranford</p>		

- (37) Bob Davis on the Cranford letter of June 10th --- a continuation of Bob's report as Outgoing President (5):

I feel I must comment on Peter Cranford's letter of June 10th, which must have come as a shock to BRS members, who did not know -- could not know -- about his improper behavior as Chairman. His resignation was clearly an attempt to beat the Board to the punch -- that is, he said, in effect, "I quit," before the Board could say, "You're fired!" -- and to do so in a harmful way. We would surely not have elected him Chairman again after his behavior during the past year, in his attempts to overrule the Society's vote expelling John Sutcliffe. His letter is vague and duplicitous. To begin with -- it is not true that problems he vaguely refers to -- the Sutcliffe expulsion -- have "failed to surface in the newsletter". His own November Chairman's Report (RSN32-6) was wholly devoted to this topic. See also my remarks in that newsletter (RSN32-7). It was also mentioned in the February issue (RSN33-32). To claim that the problem failed to surface after he had made a report on it is duplicitous.

Jack Pitt resigned more than 2 years ago because he did not like the fact that changes in the BRS Travel Grant, which he had devised, were proposed. To put this fact in with the others as though they were all related is misleading, to say the least.

But Peter is correct in saying that something has been withheld, namely, the details of his own irregular behavior. Lee Eisler has been protecting him, in effect. Since he has forced the issue, I will relate a

sample of his behavior. When Lee was originally thinking of moving to expel Sutcliffe (for repeatedly misrepresenting himself as our agent, and for passively abusing people with whom he disagreed), Lee notified Peter about this at two different times, to learn whether Peter objected. Peter did not reply to these queries. Six months after the expulsion, at the '81 Meeting, Peter tried to reinstate Sutcliffe. I objected because (a) the Board cannot overrule a vote of the Society, and (b) Sutcliffe was not a desirable member. The Board did not give Peter what he wanted.

Peter then said he would write Sutcliffe (about the Board's disapproval of the expulsion procedure) but would show the letter to the Directors for approval before sending it. He did not do this. He wrote to Sutcliffe, bypassing the Directors, soliciting an appeal. He then sent copies of Sutcliffe's response to the members of the Board, asking for their reactions to Sutcliffe's request to appeal his expulsion. When he got the reactions, he called them "votes" and said the majority had voted in favor of appeal, 9 to 7. Several Directors objected, saying they had not intended their "reactions" to be counted as "votes, and switched their position, which cancelled Peter's majority. I asked that the reaction-letters be turned over to the Secretary for verification — standard procedure — but Peter refused. When Don Jackanics repeated the request, Peter attacked him.

I then had the board polled on 2 questions: (a) Can the Board overrule a vote of the Society? (b) Should Sutcliffe be given the right to appeal? The Board voted "no" to both questions. Despite this, Peter wrote Sutcliffe that he was declaring the Society and Board votes null and void, and that he — Sutcliffe — was reinstated. That was sheer fantasy (or bluff); it is also an example of the way Peter makes up the rules as he goes along, not paying much attention to RRS Bylaws, which do not empower him to overrule decisions of the Society or the Board. The expelled member has not been reinstated.

Re Ray Plant's resignation: Ray originally favored an appeal. In August '81 he wrote 2 letters, mistakenly based on our obsolete Constitution, supporting appeal, and sent them to Peter with the request that they not be used without his permission. When his error was pointed out, Ray checked the current Bylaws (which had replaced the Constitution), and changed his mind. However, Peter ran the letters, against Ray's intentions, in his November Chairman's Report (RSN32-6c). Later, Peter had his secretary, Brenda Goolsby, write Ray that he had not intended to run the letters and that Lee had done it on his own and that Lee had edited Peter's report. Unfortunately for Peter, the facts were against him. He had sent a copy of his Chairman's Report, which included the 2 letters, to all Directors; it was easy to see that both statements were false. At that point, Ray resigned.

Peter's letter of June 10th said Ray Plant was "a member of the committee investigating the Sutcliffe case." There was no such committee. The Board Bylaws are clear: only the Board may create committees. It created one, to investigate the expulsion procedure. All during the past year, Peter kept coming up with new committees of his own, so that I had to write the people he appointed and point out that he did not have the power to create a committee.

I hope this matter is behind us, but if Peter pursues it with future letters, it will be well to keep in mind the history of his behavior in the Sutcliffe case.

RR, PANELIST

(38) **"The Future of Man" was a televised symposium sponsored by Joseph E. Seagram & Sons, Inc., in 1959. Here are excerpts from the printed record, for which we are indebted to TOM STANLEY:**

The spectacular advances in the sciences are bringing about the greatest revolution in man's history, transcending the goals of even the greatest visionaries.

If, as is now expected, man, in the next century, gains control over his physical environment, what will happen to him as an individual? When science gives him greater leisure than ever before, will he use it to develop his great reservoir of potentials? Will he use this new time to bring about a renaissance in the arts, sciences and the humanities? Or, is there a danger that he will fall into a state of decadence?

It is our hope that these outstanding men of our generation who have graciously given of their time to this Symposium, may provide us with guidance and insight to effective means for coping with the great challenges that will face mankind in the foreseeable future.

DR. MILTON S. EISENHOWER, Chairman
President, The Johns Hopkins University

Interviewing Panel

DOUGLAS EDWARDS WILLIAM L. LAURENCE INEZ ROBB
CBS The New York Times United Features

* * * * *

DR. EISENHOWER: *Now, finally, before we begin the informal discussion, I am going to present Lord Bertrand Russell. His initial statement will be presented on a three-minute film, but Lord Russell has been listening to our comments in London via two-way radio hookup, and so will be able to participate in the discussions which follow. Ladies and gentlemen, the eminent philosopher and mathematician, Lord Russell.*

LORD RUSSELL: What the effect of science will be on human life during the next hundred years I do not think anybody can foresee. What men can foresee is that there are two possibilities: human life may immensely improve, or it may become vastly worse than it ever has been before. It cannot stay where it is. Science is a very dynamic force, and it compels change, a change which may be either for better or for worse. And I don't think anybody can tell at present which it will be. It rests with human volitions. There is no fate about it, there is nothing predetermined. It's not a matter of natural forces, it's a matter of human choice, whether we shall choose to prefer disaster to everybody

or good fortune even to those whom we don't like. That is the thing that we have to choose, and I don't know which we shall choose.

The only way that I can see in which a scientific society can become stable and survive for long periods is the establishment of one single World Authority possessing all the serious weapons of war. If that were done, science could then devote itself to making people happier, which it could do quite easily. At present, more than half the human race are undernourished. There's no reason why there should be any poverty at all in the world if science were allowed to devote itself to making people less poor. At present, we devote most of our energies, most of our thought and most of our money, to the business of trying to kill each other, and that is generally considered the most important.

But when you put it like that, anybody can see that it's mad and quite absurd, but still very few satisfied people are doing more.

I think that the trouble is not so much the conflict between communism and capitalism—this is what is generally thought to be the trouble. I think the trouble is more "nationalism," and it so happens that communism is associated with one great state and capitalism with another. But I think that if you had no ideological conflict there would still be nationalism as a conflict, and I think that is the greatest danger, and that you've got to get international feeling into the world if the human race is to survive.

Well now, at present there are three things that may happen—and I don't know which of them will—the first is a great war in which all civilized nations are wiped out and only savages remain. I suppose that if that happened the savages might in the course of several millenia climb up to the present peak of enormous wisdom that we've arrived at.

The second possibility, which is not too improbable, would be the extermination of man altogether.

And the third possibility is what I mentioned before, the establishment of a world government. We must, in the world that we're in now, have either disaster or a new world far better than any world that has ever existed before.

It rests with us to choose, and I really don't know which we shall choose, because we have to alter our habits of thinking; we have to cease to think of people as enemies and think of them just as human beings—and that is a difficult job, it's not a thing we've been in the habit of doing. We have to choose between utter and absolute disaster on the one hand, and on the other hand a better world than any that has ever existed before. The choice is ours. The choice is one to which each separate one of us can contribute.

I hope—but not quite confidently—that we shall choose wisely.

* * * * *

MRS. ROBB: The problem of over-population has haunted this symposium. I would like to address this first question to Lord Russell. Can Lord Russell suggest any practical solution to this pressing world problem?

LORD RUSSELL: Yes. Yes, the problem of over-population is one which can be very easily settled. One can provide, quite cheaply, methods by which population will not increase at its present rate. And such methods are, in fact, advocated in Eastern Asia. It is only in the United States and parts of Europe that superstition interferes with the solution of this problem. It is not a difficult problem.

SIR JULIAN: Well, I'm afraid I can't agree with Lord Russell. Population control isn't an easy problem; it's an extremely diffi-

cult problem. I've just been in India and I realize what a terrible problem it is. So do the Indians; they have now realized, thanks to the careful studies made by various economists, that if they don't get their rate of population increase down by about 50% within about 35 years they will never be able to industrialize, never reach a stable state of society which can develop along industrialized lines. Far from that, they will get to a point of no return, after which the standard of living will go down.

Furthermore, it is not true to say that there is any simple and cheap method which is available for use by poverty-stricken people living in places like rural India, in villages with no sanitary conveniences. On the other hand, the problem is soluble; we've got to plug hard at research, and we shall get a cheap and simple method.

The Indian government is taking the problem very seriously, it is starting to train people to go out into the villages and will eventually make population control part of the Public Health Service. But it won't be easy, though it is exceedingly urgent.

LORD RUSSELL: May I reply to that?

DR. EISENHOWER: Go ahead, Lord Russell.

LORD RUSSELL: I wanted to make a comment to the criticism of my saying that it was easy. Now, I agree that it is not quantitatively easy, as compared to some other things, but if one hundredth part of the money that we spend on learning how to kill each other were spent on birth control, it is pretty certain that we should very soon arrive at some method which would be cheap and easy, and which could be applied in countries such as India to solve the problem. But at the present, we think it more important that infants should be born and exterminated very cleverly, rather than that we should prevent their being born.

* * * * *

MR. EDWARDS: We were talking about values. Is there anything wrong with our value system? I take it there is something wrong now; it's been changing. I'd like to ask Dr. Montagu about that.

DR. MONTAGU: I think there's a great deal wrong with our value system. One of the most frequent criticisms made of us is that we subscribe to too many unsound values. The supreme American value is success. Success in terms of what has been called the principle of conspicuous consumption, or "keeping up with the Joneses." I think this is the principal value which has led to a large number of personal and social disasters in this country. America is not the only country that suffers from the worship of this value, it merely happens to be in a position to realize it more effectively than others.

DR. EISENHOWER: Lord Russell, I believe you wanted to say something about this.

LORD RUSSELL: This thing I want to say, which is that I find a certain optimistic assumption running through almost everything that has been said. Now, of course, I hope—I hope with all my heart that the optimistic assumption will be right, but if you feel too sure about it you will get lazy and you will let yourself acquiesce in the continuation of dangers which, in the end, may make the optimistic assumption wrong. Now, take for example this question of what you can do with education to make people better. You can do just as much to make them worse, and there is always a danger that an authoritarian government, equipped with more scientific knowledge than we have at present, will breed people to be submissive and to endure evils which they ought not to endure. And I feel it very important, not only in that respect but in a great many others, to realize that a happy outcome is

not a certainty; it is a thing which we have to work for and which may perhaps not be realized.

DR. EISENHOWER: Mrs. Robb?

MRS. ROBB: I would like to ask Lord Russell about a subject on which he touched in his preliminary speech. He deplored the rampant nationalism abroad today as one of the threats to our world. Does Lord Russell see anything that can abate or control that nationalism which threatens us?

LORD RUSSELL: Yes. Yes, it can be controlled by education and by the establishment of a world government which makes anarchic actions by single nations ineffective, but I think it requires education, and I don't think you'll get education of that sort until you've moved a long way towards world government. I see in the world today new liberated nations. Each liberated nation brings in a new nationalism, and I think that's a very great danger.

* * * * *

LORD RUSSELL: Yes, I do want to. I want to say what I was thinking about in the matter of education. I wasn't thinking of conveying knowledge, I was thinking of conveying ways of feeling. Now, in almost all civilized countries at present the school child salutes the national flag. He ought instead to salute the flag of the United Nations. He ought to salute some international symbol and not a national symbol, and I feel that in all our education—I'm not saying this about one country or another but about all of them—they go on glorifying their own country, which is no longer the right thing to do.

DR. EISENHOWER: I hope some member of the panel is going to disagree with what's just been said.

* * * * *

LORD RUSSELL: May I speak for a moment?

DR. EISENHOWER: Please do, Lord Russell.

LORD RUSSELL: I just wanted to say that it seems to me that some of the discussion has brought in big words and difficult things to achieve. And the problem before us is really a rather simple

one. The problem is: Would we rather that the human race continue to exist even though that may involve some happiness to people that we don't quite like, or would we rather have the whole thing exterminated. That is the whole question.

* * * * *

DR. EISENHOWER:

I would like to break over on the prerogatives of a chairman and pose one concluding question myself, which may involve Lord Russell and several members of the panel. It seemed to me, when the question of nationalism came up, that it was left with the assumption that nationalism is evil in itself, and I just don't think this is so. It seems to me that true love of country, like love of family, can be one of the greatest forces for progress in the world. Historically, when we developed allegiance to the tribe and then the nation, we didn't give up any allegiance to the family. Although we exist as a national to which we show allegiance, we still recognize loyalties to our families, to our churches, and to our local and regional communities. And today, now that we have to build a peaceful world in cooperation with other nations, this doesn't imply that we must give up nationalism or love of country. Indeed, nationalism or taking national pride, in this sense, can be a highly constructive motivating force. It seems to me that this was left in a rather bad way, and I wonder if Lord Russell wants to quarrel with the Chairman before we conclude?

LORD RUSSELL: Yes, I certainly do. I should like to say about nationalism that it has two entirely distinct aspects. On the one hand, there is cultural nationalism, and there is love of your native soil. And against that I have not a word to say. On the other hand, there is the view that your nation is so much better than any other that it has a right to fight and kill people of other nations whenever it happens to suit its interests. And that is the sort of nationalism that I don't like.

DR. EISENHOWER: I'll call the kind you are talking about "blind nationalism."

REPORTS FROM OFFICERS

(1.5) President Don Jackanicz reports:

As we approach the mid-point in the BRS year -- between annual June meetings -- I would like to remind all of you of the June '83 Meeting, to be held in conjunction with the Russell Archives-sponsored symposium on Russell's non-technical philosophy. The BRS has met at the Archives before, and these meetings have been specially rewarding. If you have never attended an Annual Meeting or visited the Archives, here is an opportunity that deserves careful consideration. The symposium program will occupy much of the time. There will also be Society and Directors's meetings, the traditional Red Hackle Hour, the Banquet, and some specifically BRS-related activities. Any agenda proposals members may have should be addressed to me. I welcome suggestions. (3802 N. Kenneth Av., Chicago, IL 60641). The next BSN will contain details on the meeting.

From time to time, members ask what they can do to become more involved in BRS affairs. Here are some suggestions:

- .Nominate someone for the BRS Award. See RSN35-12c for the requirements. The Award honors a worthy individual and also provides publicity for the BRS.
- .Submit materials for the newsletter. The newsletter needs your help in acquiring Russell-related items of interest, both historical and contemporary: book reviews, articles, news about members (including yourself), opinions on public issues and BRS affairs, etc. If in doubt as to whether an item is suitable, send it anyway; if suitable, it will be used.
- .Vote in elections. Although more members voted than ever before -- in the recent balloting (by mail) for Directors -- fewer than 1 out of 3 voted, so there is plenty of room for improvement here. Your voice should be heard!
- .Make use of the BRS Library. It has much to offer -- books, films, tapes -- to borrow, rent or buy. Address on Page 1, bottom
- .Encourage local libraries and bookstores to stock Russell books. Introduce others to Russell's writings possibly with a short essay or your favorite among his writings.
- .Inform schools and students about the BRS Doctoral Grant, which aids a worthy doctoral student in his or her work on a Russell-related topic. Like the BRS Award, this recognizes excellence while creating publicity for the BRS.
- .Finally -- if you can -- make a contribution to the BRS Treasury. Membership dues do not cover expenditures; the deficit must be made up by contributions. Your contribution will help make possible the continued proper functioning of the Society. Send a contribution c/o the newsletter (address on Page 1, bottom).

(2) Bob Davis, Vice-President/Special Projects, reports:

My activity this fall is centered primarily on two groups: Voice of Reason (VOR) and a November meeting of "The Open Society and its Friends".

I was co-organizer, with Gerald Larue (of the Ethical Culture movement and AHA), of an October 17th public rally to start a California VOR chapter. You may recall my report on the organizing meeting of VOR in New York last April (RSN34-4,37). The aim is to set up a grass-roots group to monitor and oppose the new right's political/social agenda. In Los Angeles, this seems to be taking the form of coordinating different existing humanist-oriented groups. The main speaker for the rally was Dr. Sherwin Wine, co-founder of VOR, who came from Michigan for this occasion.

*Russell Society News, a quarterly (Lee Eisler, Editor): RD 1, Box 409, Coopersburg PA 18036
ERS Library: Jack Ragsdale, ERS Co-Librarian, 4461 23rd St., San Francisco, CA 94114

"The Open Society and its Friends" is the title of a conference to be held November 22-24 in New York, to explore aspects of Karl Popper's philosophy (RSN35-24). Sir Karl is an honorary BRS member. The name is taken from his two-volume "The Open Society and its Enemies", which I feel every educated person should read at least twice. Speakers are people of eminence, including a Nobel Laureate (Frederick Hayek). At the final session, a new society based on Popper's philosophy will be organized. Since what they are doing parallels in many ways what the BRS has done, I have offered to make available to them what the BRS has learned from experience. I look forward to the existence of an interesting and vital new society.

I will also probably attend a late December "National Humanist Leadership Council" meeting in New York, but I have no details on this at the present time.

(3) Treasurer Dennis J. Darland reports:

For the quarter ending 9/30/82:

REPORTS FROM COMMITTEES

(4) Science Committee (Alex Dely, Chairman):

(Alex and Dean Babst, also of the BRS Science Committee, have written a briefing paper, "Growing Probability of an Accidental Nuclear War", which they have sent to certain members of Congress and to organizations working to stop the nuclear arms race. The paper will be available from the BRS Library. The following press release is based on a portion of their paper.)

RISK OF NUCLEAR WAR BY ACCIDENT IS ONE MORE REASON TO SUPPORT THE FREEZE

"There's a definite chance that the two superpowers will exterminate each other, even though neither side wants that result nor initiates it," says Alex Dely, Chairman of the Science Committee of the Bertrand Russell Society and a member of the University of Arizona Physics Department and the staff of Puma Community College.

"It can happen by accident. That's why my Committee is supporting freeze Proposition 201 on the Arizona ballot this election," Dely continued. "The logic is simple. The greater the number of nuclear weapons, the greater the chance of accident. President Reagan has ordered 17,000 more nuclear weapons; that's 17,000 more chances of accidents."

An unwanted nuclear holocaust can be triggered by any of the following:

- . Human or computer error fires the first missile. (There were 32 nuclear-weapons-related accidents between 1950 and 1980.)
 - . Decreased time for error-correction. The Pershing II allows only 5-6 minutes.
 - . A 3rd country, or a terrorist, explodes a nuclear bomb, and the 2 superpowers suspect each other; a nuclear exchange results. To make this more likely, inaccurate plutonium-accounting by the U.S. and by the International Atomic Energy Agency permits the spread of nuclear weapons to other countries or groups.
 - . Existence of first-strike ("counterforce") weapons -- like the MX -- creates fear, interferes with rational decision-making, and may cause a strike...because of "use or lose".
 - . Increasing complexity of weapons increases possibility of misfiring.
-

ABOUT BR'S WRITINGS

- (5) "Principia Mathematica" and computers. From "The Making of the Micro" by Christopher Evans (New York: Van Nostrand Reinhold, 1981) pp.60-61:

Boole, you may recall, was an English philosopher living around the time of Babbage who showed that the rules and principles of logic were sufficiently well formalized for them to be expressed in mathematical terms. Thus you could use mathematical notation to state logical propositions and, by following the rules of mathematics, follow the various propositions to their ultimate, inescapable conclusions. The link between logic and mathematics had been made, but it had had curiously little impact and sat around in the way that these things sometimes do until somebody turned up who could see how to develop it. The "somebody" - or "somebodies" in this case - who pounced on Boole's great concept were a pair of awesome intellects: Alfred North Whitehead and Bertrand Russell, whose three-volume work *Principia Mathematica* (1910-13) is thought by some people to be one of the most influential scientific texts of all time. In it Whitehead and Russell argued that logic was not only inseparable from mathematics but was also the foundation of it, and they went on to develop a propositional calculus in which problems could be solved in terms of a series of statements that are either true or false. This means that problems other than those of a purely mathematical nature and concerned with matters in the "real world" - "Should I do this or that?" "What happens if?" etc. - can be converted into mathematical form and, in principle at any rate, could be put to a specially programmed computer for solution.

For a short sketch of BR by the same author, see (8)

BR SMEARED

- (6) BR quoted?

Socrates is greater than Christ because he did not have the cruel and sanguinary instincts of that hallucinating Jew.

An article in *La Patria* by Jose Velez Saenz says that a professor has written a book attributing the above statement to BR.

All of the above appears in a column in *El Espectador* (Bogota, 13 Septembet '82), written by Antonio Panesso.

Mr. Panesso goes on to say that BR could not have made that statement -- it is not BR's style nor way of

thinking.

* Does someone at the Archives — or anyone else — want to comment on this kind of item?

(Thank you, ALBERTO DONADIO, of Bogota)

* * * * *

For those whose Spanish is better than ours, we reproduce the relevant part of the Panesso column.

En un artículo de José Vélez Sáenz en La Patria se afirma que un profesor estadounidense ha escrito un libro con frases célebres entre las cuales figura ésta, atribuida a Bertrand Russell: "Sócrates es mucho más grande que Cristo porque no tuvo los instintos crueles y sanguinarios de ese judío alucinado."
Habría que advertirle al profesor autor del libro, cuyo título no se menciona, que lo han informado mal, que ha leído pesimamente, o que ha

inventado la frase. Russell no escribió ni dijo nunca esa tontería. No es ni su estilo ni su modo de pensar y expresarse.

El caso no tiene mucha importancia, sin duda. Pero corresponde a un hábito muy extendido de citar frases y atribuirlos a cualquiera, sin ton ni son. Se hace una afirmación ligera en un periódico y se repite en otro. lo vuelve a citar alguien y se constituye en una especie de depósito de frases, una verdadera casa de citas abierta a

todo el mundo y en la cual se saquea a todo el mundo. Las citas descuidadas corresponden a la irresponsabilidad intelectual. A los oradores les encantan las frases entre comillas, que dan ocasión de mencionar a gente ilustre como amiga de bolsillo. Es la tendencia que los ingleses llaman "dropping names", que se registra también en la vida social: dejar caer por ahí nombres propios ilustres como si fueran de casa, para cobijarse un poco con su gloria.

THE BRS DOCTORAL GRANT

(7) This 1983 announcement was sent to some 25 American, Canadian and U.K. universities, and to scholarly journals, in September and October:

Announcing
The Bertrand Russell Society's
1983 DOCTORAL GRANT
and the
1982 DOCTORAL GRANT RECIPIENT

1983: The Bertrand Russell Society will award a doctoral grant of \$500 to help defray expenses of a currently enrolled doctoral candidate in any field whose proposed dissertation best gives promise of dealing in a significant way with the thought, life, or times of Bertrand Russell.

The candidate is required to send to the Society:

- (1) an abstract of the theme of the dissertation and of the plan of study;
- (2) a letter from the chairman of the candidate's department which states that all work for the doctorate has been completed except the dissertation, and that the topic of the dissertation has received academic approval;
- (3) a letter from the dissertation advisor evaluating the applicant and the plan of study;
- (4) a statement, in the candidate's covering letter, indicating that if the candidate is awarded the grant, he/she will provide the Society, at its expense, with a copy of the complete dissertation as approved by the candidate's department.

Applications and supporting documents should reach Professor Hugh S. Moorhead, Chairman, Philosophy Department, Northeastern Illinois University, 5500 N. St. Louis Avenue, Chicago, IL 60625, by May 1, 1983. The recipient will be announced in June 1983.

* * * * *

1982: the recipient is Alejandro Garcíadiego, a doctoral candidate at the Institute for the History and Philosophy of Science and Technology at the University of Toronto.

The main goal of Mr. Garciadiego's dissertation is to study the role played by Bertrand Russell in the origin and development of the paradoxes of set theory. It also aims to show that "the emphasis on the study of the foundations of mathematics is the result of a complex and interdisciplinary net of events and ideas, and not the simple product of the logical contradictions."

BR BIOGRAPHIES

(8) Short sketch of BR from Page 66 of "The Making of the Micro" (5):

Bertrand Russell, 3rd Earl (1872-1970), English philosopher and mathematician, was one of the greatest logicians of all time. Truly a Renaissance man, his was one of the most widely varied and persistently influential intellects of the twentieth century. For nearly all of his life he had 40 books in print ranging over philosophy,

mathematics, science, ethics, sociology, education, history, religion, politics and polemic, and in 1950 he was awarded the Nobel Prize for Literature. His work with his friend and former tutor, Alfred North Whitehead (1862-1947), *Principia Mathematica* (1910-13), demonstrated the indivisible link between logic and mathe-

matics -- to the benefit of the development of computers and data processing. Russell was a controversial public figure, married four times, and ardent social reformer; he was an anarchistic left-wing atheist, and was actively opposed in the last three years of his life to the manufacture of H-bombs and the war in Vietnam.

Did you notice any errors of fact? There were 3, all in the last sentence. See (37).

PROMOTING BR'S PURPOSES: NUCLEAR DISARMAMENT

(9) From the New York Times (9/4/82), p. A3:*Nobel Scientists Ask Atom Freeze*

GENEVA, Sept. 3 (AP) — Ninety-seven scientists who have won Nobel Prizes called today for a freeze on the deployment and development of nuclear weapons, warning that "time is fast running out" to prevent a nuclear holocaust.

The call was made through the council of the Pugwash Conferences on Science and World Affairs and was distributed by the organization here.

Today's declaration said that "monstrously high levels of deployed nuclear arms must be reduced as soon as possible" and endorsed a freeze of nuclear arsenals at prevailing levels.

More than half the signers were from the United States, according to the list provided by Pugwash, a disarmament

movement during the height of the cold war that was inspired by Albert Einstein and Bertrand Russell and sponsored by the industrialist Cyrus S. Eaton. They include Linus C. Pauling, Hans A. Bethe, Konrad E. Bloch, Richard P. Feynman, Edward M. Purcell, Emilio Segre, William N. Lipscomb Jr., George Wald and Steven Weinberg.

The declaration was also signed by scientists from Australia, Canada, France, West Germany, Ireland, the Netherlands, Pakistan, the Soviet Union, Switzerland and Britain.

The Soviet winners who signed were identified as Nikolai G. Basov, Pavel A. Cherenkov, Ilya M. Frank, Piotr L. Kapitsa, Aleksandr M. Prochorov and Nikolai N. Semenov.

(10) Buchwald in the Washington Post, sometime in September or October 1982:*'Cap's' Last Laugh: Winnable Nuclear War*

By Art Buchwald

People are constantly asking me, "Who is the man with the most humor in the Reagan administration?" They are surprised when my response is "Cap" Weinberger, our secretary of defense. "Cap" says things with a straight face that make you want to roll on the floor.

Just the other day he told newspapermen he is for a "protracted nuclear war." He doesn't want one of these hair-trigger wars which last 30 or 40 minutes. "Cap" said he has or-

dered everyone at the Pentagon to figure out not only how to keep a nuclear war going, but how to make sure the United States wins one when the missiles start flying.

Half the people in the Pentagon took "Cap" seriously. But those who knew what a deadpan comic "Cap" is just laughed and went back to doing the crossword puzzle.

The material for "Cap's" "protracted nuclear war" came out of a routine he did when he first took charge of the Defense Department and came up with a comic routine on

"limited nuclear war."

He tried this one out in front of an armed services committee last year and had everyone in stitches. "Cap," without cracking a smile, said he thought a "limited nuclear war" with the Soviets was not only feasible, but essential so the United States would have time to fight a conventional war.

"Cap" said if we let the Russians know that we were only going to fight a "limited nuclear war" then they would agree not to use their big stuff to attack us.

The only ones who didn't laugh were our NATO allies who figured out that if a "limited nuclear war" was going to be waged it would be on their turf, and even after Al Haig tried to explain to the Europeans that "Cap" was only joking, they still didn't find the secretary of defense's war routine very funny.

So "Cap" got his writers together and said, "I think my jokes are losing something in the translation. We're going to have to come up with a new monologue, and throw the 'limited nuclear war' stuff out."

One of the writers said, "I got it! What if you just stand up at the microphone and say you're no longer for a 'limited nuclear war,' but you've opted for a 'protracted' one instead? Say we're going to build offensive weapons that will make the U.S. prevail no matter what the Russians throw at us."

"That's pretty funny," "Cap" said. "Let's work on it. But keep it quiet or Johnny Carson will hear about it, and use it on his 'Tonight' show first."

The writers all went to work and came up with some memorable lines. One was "you show me a secretary of defense who is not preparing to

win a nuclear war, and I'll show you a secretary of defense who should be impeached."

Another one which was a real crowd-pleaser: When he was asked if a nuclear war was winnable, "Cap" replied, again with a straight face, "I just don't have any idea; I don't know that anybody has any idea.

But we're certainly going to give the armed forces everything they need to win one."

These are just a few samples of "Cap" Weinberger's humor. They may not sound as funny on paper, but when you see him standing up in front of the mike, looking like Woody Allen, delivering them, you could die laughing.

PHILOSOPHY

(11)

The Museum of Philosophy, which started out at Pace University (RSN33-16), has moved to Hunter College. "The Museum's aim is to bring philosophical concepts and questions before the public, and especially children, in an enjoyable and understandable manner. There are programs designed for people of all ages and education and backgrounds, with a particular emphasis on programs for children. There should be something for everyone with a sense of wonder."

"Tours for groups and individuals of all ages introduce you to the world of ideas."

The Museum of Philosophy, Hunter College Teacher Center, 695 Park Av., at 69th Street, NY NY 10021. (212) 795-3737.

CREATIONISM

(12)

From the New York Times (8/29/82) p.22:

Poll Finds Americans Split on Creation Idea

By RICHARD SEVERO

The American public is almost evenly divided between those who believe that God created man in his present form at one time in the last 10,000 years and those who believe in evolution or an evolutionary process involving God, according to the Gallup Poll.

George H. Gallup Jr. said his organization had not previously polled Americans on the same questions regarding creation and so no comparisons could be made with beliefs in years past.

The findings dismayed some prominent religious leaders, who said, among other things, that human existence on earth is much older than 10,000 years, but the results came as no surprise to a leading anthropologist.

Of the participants in the the poll, 44 percent, nearly a quarter of whom were college graduates, said they accepted the statement that "God created man pretty much in his present form at one time within the last 10,000 years."

Four statements were offered to respondents on a card and they were

asked to select the one that came closest to describing their views "about the origin and development of man."

Nine percent agreed with the statement: "Man has developed over millions of years from less advanced forms of life. God had no part in this process." Thirty-eight percent said they agreed with the suggestion that "man has developed over millions of years from less advanced forms of life, but God guided this process, including man's creation." Nine percent of those interviewed simply said they did not know.

The views of Roman Catholics and Protestants were divergent, with Protestants more likely to believe in the biblical account of creation and Catholics more likely to believe in evolution guided by God.

Fundamentalist beliefs were not confined to the South and Middle West. The Gallup organization reported that Southerners and Middle Westerners "are slightly more likely to accept creationism" than those living elsewhere.

The results, according to the poll, were based on personal interviews con-

ducted last month with 1,518 adults, 18 years of age and older, in more than 300 areas of the nation. The Gallup organization said that in a sample of that size, the margin of error could be three percentage points in either direction.

Bishop John S. Spong, the Episcopal Bishop of Newark, said he did not know of a single reputable biblical scholar who would say that God created man in the last 10,000 years, "since there is an enormous amount of evidence to the contrary." He called the poll's findings a "sorry reflection" on academic achievement in this country.

However, he said that quite possibly, the numbers of Americans holding this view suggested that modern people could not cope with the enormous amount of change that had occurred in their lifetimes. As a result, they "tend to retreat into yesterday's security systems," he said. He said that such fears about the future had thus strengthened the simple answers offered by what he called "the right-wing reactionary people" in organized religion.

Dr. Ashley Montagu, an anthropolo-

gist at Princeton University, said he was not surprised at the high number of Americans espousing the creationist view, including those with college training. He said Henry Noble McCracken, the late president of Vassar College, "once observed that college has ruined many a good truck driver."

Bishop Kenneth Hicks of the United Methodist Church in Arkansas said it seemed "almost incredible" to him that 44 percent of those questioned believed that creation occurred in the last 10,000 years. Bishop Hicks, who opposed recent efforts to introduce the teaching of creationism in Arkansas public schools, said the Gallup findings suggested that some religious organizations had done a poor job in teaching the meaning of Scripture.

Another Methodist official, the Rev. Jeanne Audrey Powers, who is on the staff of the Commission on Christian Unity and Interreligious Concerns, called the phrasing of the questions offensive because they referred not to the creation of humankind or of men and women, but to the "creation of man" only.

(13)

NYC says yes to evolution, as reported in the New York Times (6/24/82), p.1:

New York Schools Bar 3 Textbooks As Poor on Evolution Explanation

By GENE I. MAEROFF

Three high school biology textbooks have been rejected for use in the New York City public schools because of what Board of Education officials say is an inadequate treatment of the Darwinian theory of evolution.

The publishers of two of the three books have been told that their books are additionally unacceptable because of what school officials termed an uncritical endorsement of the creationism theory, which is based on the Bible.

Darwin's theory states that organisms developed from earlier forms by hereditary transmission of slight variations over successive generations. The creationists, on the other hand, hold that species were created as they now appear.

In taking such action at a time when school systems throughout the country are under pressure to acknowledge the creationist viewpoint, New York City has become one of the first large districts to put publishers on notice that it will not accept such teachings in biology classes.

"This is a very important stand, and every community concerned about the honest teaching of science ought to take a similar stand," said Wayne A. Moyer, executive director of the National Association of Biology Teachers in Res-

ton, Va.

Issue in 11 Legislatures

National efforts to promote the creationist view in teaching about human origins have led legislators in 11 states to introduce bills in the last 12 months that would require the inclusion of the creationist approach. None of those bills have yet been approved.

Two other states, Arkansas and Louisiana, previously passed such laws. The Arkansas law, however, was declared unconstitutional last January by a Federal District Court, and the Louisiana law is being challenged in a case that is to begin next month.

As the controversy has spread, some publishers have de-emphasized the treatment of evolution in their textbooks to try to blunt possible criticism by proponents of creationism. In 17 states, not including New York, a textbook must be cleared by state authorities before a local district can buy it.

One of the books that the New York board rejected was "Life Science," published by Prentice-Hall of Englewood Cliffs, N.J. In a letter to the publisher explaining the rejection of the book, a school system official said, "This book does not state that evolution is accepted by most scientists today, and presents special creation without characterizing it as a supernatural explanation that is outside the domain of science."

The official, Charlotte Frank, executive director of the system's division of curriculum and instruction, sent the letters to the publishers of the three books in recent days.

The other rejected books were "Experiences in Biology," published by Laidlaw Brothers of River Forest, Ill., and "Natural Science: Bridging the Gap," published by Burgess Publishing Company of Minneapolis.

In one of the passages deemed objectionable by school officials, the Burgess book stated:

"Another hypothesis about the creation of the universe with all its life forms is special creation, which gives God the critical role in creation. In some school systems, it is mandated that the evolution and special-creation theories be taught side by side. That seems a healthy attitude in view of the tenuous nature of hypothesis."

The third book won approval more than a year ago, but was rejected upon re-examination. It completely omits the word evolution and makes no mention of Darwin, according to the Board of Education reviewers.

"We deleted the term evolution from the textbook because we wanted teachers to be permitted to teach biology without being forced to face controversy from pressure groups," said Eugene Frank, director of publications at Laidlaw Brothers. He added that concepts about evolution were contained in the book even though the word evolution

was not used.

"We are developing a supplementary chapter on evolution for this book, and it will be available in the fall for those school districts that want it," Mr. Frank said.

Spokesmen for the two other publishers declined to comment.

Automatic Re-examination

All new books and revised editions of older books must be approved by a three-member committee to be eligible for use in the city's public schools. State curriculum requirements and city guidelines enter into the consideration. Publishers request the reviews in order to sell their books in the district.

The committee is made up of the subject area director for the school system and teachers or supervisors who work in the particular subject area. Each book that is rejected is automatically re-examined by a second committee.

Among the passages in the Prentice-Hall book that the reviewers said accounted for its rejection were these:

"Some people believe that evolution explains the diversity of organisms on earth. Some people do not believe in evolution.

"These people believe that the various types of organisms were created as they appear. No one knows for sure how the many different kinds of living things came to be. But many people have developed theories to explain how this diversity may have come about."

ADVERTISEMENT

Where We Stand

by Albert Shanker President, American Federation of Teachers

Schools Should Reject Texts That Distort Science

Are Creationists Aping the U.S.S.R.?

The Soviet Union once had many of the world's leading geneticists. But within a short period of time during Stalin's regime, genetics was killed in the U.S.S.R. How and why did this happen? The political leaders of the Soviet Union wanted genetic theories to conform to the official state "religion," Marxism. They thought that the prevailing genetic theory that many biological characteristics were inherited contradicted their egalitarian Communist philosophy. With the power of Stalin, they had no trouble changing the theory to fit their ideology.

World-renowned geneticists were removed from the leadership of scientific societies and from their jobs if they did not accept as science the theories of Trofim Lysenko that traits acquired through environmental changes could be inherited. . . a theory more in conformity with the state "religion." *The Death of a Science in Russia*, published in 1949 by the University of Pennsylvania, presented transcripts of speeches delivered at the Lenin Academy of Agriculture barely a year earlier which revealed "the quackery which was to replace genetics." Said Conway Zirkle, the book's editor: "The winning clique acted with totalitarian thoroughness. Five geneticists found it expedient to recant, to discard their scientific knowledge, and to adopt the Communist orthodoxy. Nothing remotely like this has happened in the last three centuries. . ."

The result of using political pressure and power to determine scientific conclusions was devastating. A generation of students was brought up on this new state-imposed theory. But what the students really learned was that scientific theories are not the products of research, experimentation and critical thinking within the scientific community, but the result of who controls the tools of power and terror. Soviet agriculture was ordered to operate on the basis of "Lysenkoism," with disastrous results in crop and animal production. Ultimately Lysenko was removed and the Soviet powers admitted that their effort to impose scientific views through political power had been a failure.

Now in the United States there is pressure to teach creationism, or at least to give it equal treatment as a "theory" alongside Darwinism. Of course, the United States is not the Soviet Union. There is no Stalin to arrest and jail our Darwinists or to install a creationist as the head of the National Institute of Science. But the pressures are there. Textbook companies have been told by some school boards that unless there is

something in the science texts on creationism, they won't buy the books. So, many textbook publishers have capitulated, presenting evolution and creation as if they had equal scientific weight and were accepted as scientific fact by equal numbers of informed people.

Textbook publishers will argue that they *only* give a little space to creationism and that they *only* say that some people reject the theory of evolution and accept instead the Biblical narrative of creation. But that just won't wash. What if a textbook in medicine were to describe the standard cure for a given disease and then go on to say that some people believe it is more effective to cure this disease by using leeches or reciting a specific prayer three times a day?

Those who are pushing creationism will not like the comparison, but if they succeed, they will have the same impact on American science that Stalin and Lysenko had on Russia's.

Because textbook companies are yielding to pressure, the action taken recently by the New York City Board of Education is very important. It should serve as a model to school boards across the country. The Board's Division of Curriculum has disapproved several texts in biology and general life sciences because they do not adequately cover evolution or because they give equal treatment to creationism. One book says: "Some people believe that evolution explains the diversity of organisms on earth. Some people do not believe in evolution." On another page the same text says: "Each species may have been created separately. . . ." A second book declares: "Another hypothesis about the creation of the universe with all its life forms is special creation, which gives God the critical role in creation. In some school systems, it is mandated that the evolution and special creation theories be taught side by side. That seems a healthy attitude in view of the tenuous nature of hypothesis."

The Board of Education told the publisher of the latter book that it was "unacceptable" because "the theory of evolution is not a 'tenuous hypothesis.'" And to the publisher of the first book, the Board wrote the following:

"This book does not state that evolution is accepted by most scientists today, and presents special creation without characterizing it as a supernatural explanation that is outside the domain of science. In addition, the concepts of evolution are temporized to the extent that what is already known and scientifically substantiated is treated merely as 'possible,' and not as an accurate appraisal of the results of scientific investigation. . . . Since one of the objectives of a sound science education is the accurate interpretation of observable data, we cannot approve a book that distorts, negates, or minimizes the import of those concepts and principles which are accepted by most of today's scientists as the cornerstones of modern biological theory."

Wise words. Creationism has no place in a science curriculum, and school boards across the country ought to take the lead of the nation's largest school system . . . exert the necessary counter-pressure . . . and put some backbone into those publishers who have abandoned science under religious and political pressure.

Mr. Shanker's comments appear in this section every Sunday. Reader Correspondence is invited. Address your letters to Mr. Shanker at United Federation of Teachers, 250 Park Avenue South, New York, N.Y. 10010. ©1982 by Albert Shanker.

(15) Book derides creationism. See book review (20).

DORA

(16a) "The Soul of Russia and the Body of America" was written by Dora Black (soon to become Dora Black Russell) in 1921, when she was 26. It is now printed for the first time, as a pamphlet, by the Open Head Press (2 Blenheim Crescent, London, W11), with a 1982 introduction by Dora.

Here is the 1982 introduction:

I am not and never have been a communist but, like John Reed, I wanted to know what the Soviet Revolution was about. As one of the witnesses to the very early days of the revolution I offer some of my comments which unaccountably do not appear in the film.

In the summer of 1920, at the age of twenty-five, I managed to get in to Russia when such journeys were still being forbidden by the British Government. Travelling by pleasure steamer round the North Cape to see the midnight sun, by getting off at a small fishing village, Vardo, in Norway, from there with others I put across to Murmansk in a fishing boat.

There seemed to be not only coming and going between the two ports, but fraternisation. The customs men were amiable. Our Soviet passports were small squares of linen stamped with the red hammer and sickle. The captain was taking his children to spend some of the summer in Murmansk.

There we were greeted warmly by Russian comrades who took us to some quite spacious huts which had been erected and left by the recently withdrawn British Expeditionary Force against Russia. Midsummer Eve was being celebrated; there were also gatherings of the local comrades at which, after every speech, sounding brass would strike up the Internationale, a practice which I found wherever I went. I had a bathe in the Arctic, which was made very disagreeable by hordes of mosquitoes.

In a train with an engine whose boiler had holes stuffed with sticks and rags we proceeded to Petrograd. On the way, at a large junction, some Red Army men got into the train. With Madge Newbold, my travelling companion, I spent the whole night talking to them, using German, translated back and forth.

For the first time, I learned all the theory as to how international revolution was to take place. They knew all about the class war and 'dictatorship of the proletariat'. They offered us Russian tea and jam out of tins which, as they said with glee, had been left behind by the British troops. One very handsome blond young officer with a page-boy haircut pinned his Red Army badge onto my dress.

When I walked into the Astoria Hotel in Petrograd the first person I met was John Reed. 'Where did you get that?' he asked, pointing to the badge. 'A Red Army officer gave it to me.' I said. At

that time it was alleged that the Red soldiers raped all women and that Soviet women were nationalised. 'How brutal of him!' laughed Reed.

He talked with enthusiasm of his Russian comrades and with some doubt about the British Labour Party and trade unions. As I recalled in my autobiography: 'He was tall and broad and typical of the intransigent and generous American who supports an unpopular cause; they seem to act with greater commitment and less reserve than their English counterparts.'

Whatever we may think of the climate of opinion or purpose in the Russia of today, it might help to recall the mood of the early days of the Soviet Revolution, when it inspired great ideals in the Russian people and greatly stirred up the hearts and minds of the peoples of the West.

In 1917 I had had occasion to be in the British War Mission to New York just as America came into the war. American women, who came to Europe on the Ford 'Peace Ship', were actually trying to stop the war: they became the founders of the Women's International League for Peace and Freedom.

It was my first contact with the American way of life. Through our negotiation on oil supplies, I became aware of the immense power of great industrial corporations and impressed by the extension of technological invention. We regarded the Americans as our cousins, we spoke the same language. Yet, coming from European culture and habits, I felt this to be a foreign civilisation. Though so far totally unpolitical and not even a convinced pacifist, I knew what was said about capitalism and socialism. Yet it was the industrial machine and the way of life it engendered that troubled me, not either of the ideologies. I already began to perceive that it would lend itself to dictatorship and even make an end to democracy as we understood it. Was it also destined to carry continually at its heart the bitter class conflict between workers and owners?

The failure to recognise and promote friendly relations with Soviet Russia after the 1917 Revolution was one of the greatest blunders of history. It was perhaps the last chance of taming and controlling the industrial machine in the interests of life and human well-being.

Still worse was the immediate war waged against Russia on all fronts, sowing the wind whose whirlwind the entire world now reaps. As Phillip

Knightley remarks in his book *The First Casualty*, it was perhaps the greatest act of folly the Allies committed in the First World War, an act that poisons relations with Russia to this day: 'Historically, this is a period of immense importance, yet little is generally known about it.'

'No full understanding of the Cold War is possible without taking it into account; yet when Khrushchev said, in Los Angeles in September 1959, "Never have any of our soldiers been on American soil, but your soldiers were on Russian soil," most of his listeners did not know what he was talking about. Their ignorance can be forgiven. In 1943,

E.M. Halliday, a reporter for *Yank*, the American army magazine, tried to write a story about the fighting between American and Russian troops during the Allied intervention in 1918-19. He found little about it in the *Encyclopaedia Britannica*, and the *Columbia Encyclopaedia* stated flatly: "American forces did not participate in the fighting between the Allies and the Bolsheviks."

Do the brute facts of today differ very greatly from the brute facts of more than sixty years ago? Only that they have become more brutal. We came through another war, which happened precisely because we did not learn the lesson of how a dictator, almost a maniac, could take hold of and enslave a people to the industrial machine, thereby inventing that 'Total War' the machine now imposes on all advanced industrial nations. Statesmen, both West and East, have followed the example of Hitler. Conflict is still the core of their being.

It may still not be too late to save ourselves from final disaster. Today even military leaders, such as the late General Eisenhower and Lord Mountbatten, admit the mistakes and issue a warning to us. The eminent scientist Lord Zuckerman, former adviser to the Government, recently on television blamed the scientists themselves more than the politicians as responsible for our predicament, in that they insist on continuing to devise ever more deadly and subtle means of killing people. They then frighten the statesmen on both sides into ordering the adoption and production of these new horrors.

I use the word 'soul' to express the aspiration of one person or a whole people towards an ideal goal. It is now vital for us to recognise that the soul of peoples for peace is active both sides of that barrier called the Cold War. We must break through the censorship that is

imposed by the great powers. So much emphasis is laid on secrecy and spying that each side fears the emissaries of peace as if they were a Trojan horse.

Especially is this true of the many and constant efforts and appeals of women. A recent congress in Prague of women from 132 countries, and hundreds of national and international organisations, opposing the arms race and nuclear war, went unreported. An appeal from fourteen of the most eminent Soviet women scientists addressed on these issues to their colleagues and university women of the West was virtually ignored. Nor do similar efforts in the West find place in the Soviet press. Thus each side, wanting

peace, believe that the other is planning war.

Yet the creative genius of man and woman is as always still there within us. Men and women in Russia, indeed in all countries, still exist who are inspired by great ideals of peace and harmony, of a creative life full of fresh flights of the imagination, of fresh insights into those mysteries of what is called the domain of science.

In that year of 1920 I felt that the one hope of the machine serving rather than dominating mankind was that it must be administered cooperatively for human needs. Many workers and thinkers in the West were already striving for such an

ideal. Here in Russia was an entire people forming a nation who were prepared to stake all on this ideal purpose. On my return I planned to write a book outlining the prospects for the future as I saw it. What followed was to have been the first chapter. I have now completed the book, titled *The Religion of the Machine Age*.

Those days of revolution were truly, in ways that John Reed never lived to see, Ten Days That Shook the World.

Dora Russell
Porthcurno
Cornwall
February 1982

(16b) This is what Dora wrote in 1921:

It is not difficult to define what is meant by the body of America. As one writes the words, the imagination conjures up visions of skyscrapers with swift elevators; vast factories where materials can be seen travelling fantastically on moving platforms to emerge at the exit as finished products; huge freight cars thundering their way from one busy town to another; immense liners ploughing the Atlantic; wide fields of cotton, followed by great expanses of ripening corn. America stands, in fact, for the most complete example of the mechanism of industrial production on which the whole economic life of the West is based. It is an impressive mechanism, so impressive that quite three-quarters of those involved in, or in contact with it, forget that it is but a mechanism and nothing more. They come to imagine that this organisation of economic life, this speed, this comfort, are in themselves civilisation and the goal of human endeavour, that all the best creative energy of man should be turned to developing resources producing goods, inventing processes to speed up production.

They endow this machine with a soul and a message which is to be carried to the uttermost parts of the earth, to be taught if need be, by bullying, or at the point of the sword. To those who, despite

every effort to the contrary, cannot bring themselves to accept such a primitive notion of civilisation, this machine worship is as horrible and superstitious as the adoration of the savage for his painted block of wood or stone. There have been, in the past, many of these ^{DISSENTERS}. And one sees them now, in America, enquiring distressfully what is the matter with their country, feeling dimly that the trouble lies in her barrenness of ideals and emptiness of soul, and, looking round from one party to another, and one class to another, seeking a possible source of regeneration.

In Europe, too, idealists are trying to find some motive for building prosperity anew, and the disgust and despair in which the war has left them, are but

heightened when they look across and see in America the image of what they may become, of what America is capable of making of the whole world. They see this excellent body, this shell of a State, and the soul of man walking mournfully through it, as though a wilderness, seeking an oasis where it may perchance rest for a moment, not hoping to find a home.

It is not from America that regeneration can come. There is every sign that her people, like the industrial peoples of Europe, will first seek relief from the intolerable mechanical burden of their lives in the worn-out pastime of imperial conquest. Yet all that America could give to a subservient world would be her body, her industrial efficiency, a valuable gift in days gone by, and still needed in the present and the future, but not enough. America can give us no new ideals, and it is for new ideals that the whole world, from the East Atlantic to the West Pacific, is hungry. Thinking Europe has become conscious at last that it cannot live with the industrial machine unless new ideals can be found to control and govern it. In China, also, the question on the lips of all intelligent people is: "Since it seems we must follow in the path of the industrial nations, how shall we do so without becoming as horrible and degraded as they?"

One nation in the world has set out to answer that question in practice, and that is Russia. For this reason the most cynical have turned to her in joyful surprise; even her bitterest and blindest opponents are conscious that she has found something new which she is trying to expound to the world and, while they do their utmost to destroy her in the act of realisation of her ideals, they yet have a sneaking hope that they may not succeed. So desperate has the need for hope become in our blackened and ruined world.

It is not easy to give a clear picture of the soul of present day Russia. Not only has it been so much misrepresented by friends and enemies alike, but those who

should express it, the Bolshevik leaders themselves, do not convey their meaning to us, because they speak through old Western formulae, which no longer fit Russia's thought. Then too, many of the leaders are not alive to the miracle that is happening, they are still thinking in old categories; such are those who have returned from America and are dominated by admiration for the industrial machine in itself and out of touch with the peculiar genius of their people.

The prestige of that America, which was to Russia the Land of Liberty, plays a great part in influencing their outlook. To these men — as perhaps to Americans in general — the epithet of Wellsian Martians recently hurled at the Bolsheviks in general — may justly be applied. If they become dominant, Russia may develop on American lines. But their point of view is neutralised by that of the Russian people, the rank and file, still confused and stammering and unable to express clearly the ideals by which they are moved. And Lenin, in his policy for Russia, though not in his polemics, seems to me the most coherent expression of Russia's beliefs. When the Russians, through Lenin and their propagandists, profess themselves orthodox disciples of Marx and denounce the West as heretical, one cannot but smile at their perversity.

To me every fibre of the Russian's being is opposed to the Marxian determinist outlook. If only they would recognise this, they would make it their glory and their pride that they are splendid heretics to Marx, and thereby do the whole world a magnificent service. Not only are they heretics to Marx, but to the entire Western outlook. Western visitors to Russia (such orthodox Marxians) exclaim at the "breakdown of civilisation" by which they mean the terrible material suffering and disorder that prevail. Yet Russia to-day is perhaps the most civilised country in the world. Where does civilisation lie if not in the designs and purposes, the ideals of men?

And where, except in Russia, is an ideal

that fits modern life to be found? Russia's communism is not "the guardian of Western civilisation", it is a new ideal of civilisation, which, if we could but be induced to listen to it, could re-civilise our own barbarous and hateful lives.

This is to me the supreme fact about Russia, that she is a country just emerging from the medieval ages of faith into the valorous adolescence of the Renaissance. Her thought is burning and her courage high. Honour and glory, faith, are for her words still charged with meaning, scepticism has not yet dimmed her ardour, nor materialism blurred her soul. Russia's instinctive belief is in a heroic figure of man, demi-god, Promethean, grappling with and subjugating a hostile universe, or triumphing over it, even in material defeat, by the indomitable courage of his spirit. She still breathes the air of Shakespeare and has not known the caustic age of Voltaire.

A nation that approaches the latest developments of sophisticated political science in this mood is apt to be puzzling. Scientific thinkers denounce her as romantic, romantic thinkers hail her short-cuts to communism as the quintessence of science. Both agree that the term "scientific" is the highest that could be bestowed. But to me the very merit of Russian communists is that, with some exceptions, they are quite *unscientific*, if we take scientific in its popular sense, that of dispassionate materialism, indifference to human values. Russia, by dint of having escaped a process of complete capitalist development of industry, which has taken place in England, Germany and America, has escaped the background of thought associated with it — and which Marx claims to arise directly out of it.

But she has not escaped all contact. She has skimmed the cream of advanced thought and, blending with this her own heroic and artistic outlook, has produced communism, the ideal which could animate our Western industrial system, that is still enslaved to a worn out philosophy. Just because she had not a tradition of developed industry, her thoughts and hopes have been free to soar. Now she maintains that she will develop her industry, ideally, in the service of man, giving him not only comfort, but leisure, art and science. The West points to her disorganised railways, her ignorant, unskilled people, her mere handful of intelligent workers, and urges that the spirit of communism is useless without the industrial body, that first the body must be created, then the soul. Russia assents — she wants the body, but her counterthrust is unanswerable: "You have the body, but where is the soul?"

This question comes as a challenge to the determinism of the West. For two centuries we have first tacitly assumed, then openly declared, that we are, down

to the minutest action of our lives, the

creatures of habit, moulded by economic circumstances, or scientific laws over which we have no control. We have visualised our development, not only as physical, but as a moral evolution. We have therefore been content to wait and allow economics to mould us. We have risked no "rough hewing" of our ends, confident of their shaping by some methodical deity — or force of science. The only result is that we are to-day bankrupt of living thought puerile in action, the puppets of the huge material forces that we have allowed to grow at random, and that now, so far from contributing to our moral and intellectual advancement, threaten to engulf us in hideous destruction. It seems as though this cannot continue; we must stop short and re-awaken the slumbering human spirit to assume control and reassert the dignity of man and his sovereignty over the earth.

The Russians believe themselves to be against capitalism only, but the study of Russian writers before the Revolution shows that it is the whole fabric of our life that they despise. I think they are right to condemn it, but in error when they imagine, as their present leaders do, that the fabric of our life is the creation of capitalism only. Life in any period of history appears to me as a fabric of economic forces and ideas inseparably woven together, of ideas engendered by economic forces and economic forces that

owe their origin to, or are directed by, ideas and scientific thought of the past. The journey from cause to effect in political life is not so easy as the economic interpretation of history would have us believe. The fabric of life changes, but I doubt if it changes more because of the movement of matter than because of the movement of ideas.

All that can be safely said is that new ideas are present beside new economic factors, without risking the establishment of a causal relation either way between the two factors. The whole texture of and shape of a human body and face can change under the influence of a change of character or outlook; it can change also by material habits or occupations. What we see is neither the expression of the thought and emotion produced by some material circumstances, nor the effect of thought and emotion on the body. The two things are the same, the matter in movement is the idea, the idea is the matter in movement. Both are aspects of a change or event.

Often while in Russia and since returning, I have wondered whether we are right or they. We, who have conceived of communism as budding and blossoming like a flower on the sturdy plant of competent and organised indus-

try, or they, who see it as a whirling heart of fire that must consume ancient evils and then cooling transmute itself into the crust of material expression, creating industrialism anew, a thing, it may be, of undreamed of power and beauty. To us, tutored in determinism, economic circumstances is the decisive factor in politics. We think of the industrial machine as having an irresistible momentum, we imagine Russia in its grip, changing ideals and character, assimilating rapidly to the industrial nations of the West. But when we do so, we forget how far the industrial system, as we conceive it, is the product of the thought of our past, how it perpetuates old prejudices, how it bears like every thought or institution in the world, the unmistakable stamp of its origin and date.

Two visions came repeatedly before my eyes. In the one the machine in America grew increasingly rapacious and cruel, while in Russia it triumphed over human forces and Europe and Asia were sucked into its maw. There were long hours of mechanical slavery, black and ugly factories, fatuous towns and futile luxuries. Thought and art were dead; the populations petulant and trivial.

In the other the spirit of communism in Russia had leapt like a great wave to meet the West, and Western science and skill — its twin brother — had reared its head and sprung to the meeting with an exultant roar. So they met at last, soul and body, and went springing skywards in a clear, green pyramid of joy. The filth of factories and the grime of poverty were washed away and everywhere there emerged a new and smiling world. Human life was restored to harmony; men were no longer cramped and twisted to serve as wheels and cogs; they found that leisure to savour the whole life of man is better than empty luxury that cogs cannot enjoy. The power of the machine was broken forever; it served instead of commanding, and everywhere the bright roofs of lovely hamlets, the spacious factories, the grassy tree-girt spaces where children and students met to chatter and play, and workers to dance and sing after their easy labours; the quiet arbours where the artist would seek loneliness to brood, or the men of science peace for arduous discussion or complicated thought — all these testified to what life might be, not for the few, but for all, if the spirit of man in justice and humanity would but conquer and yoke the mechanical monster to his will.

Our Western industrial body can give birth to this vision, but can it unfold the spirit that could achieve its realisation? But I am confident that communism, cutting out from the industrial system the motives of profit and exploitation, and administering it in terms of humanity and justice, could so transform industrialism as to make of it a thing of beauty, not of terror.

NEWS ABOUT MEMBERS

- (17a) Leonard Cleavelin -- more formally ENS Leonard Cleavelin, JAGC, USNR -- is stationed at the Naval Legal Services Office, Great Lakes, Illinois, in the claims department. He will take the Missouri Bar Exams in February, attend Naval Justice School, Newport, RI next summer, and hopes to get to our June '82 meeting at McMaster.
- (17b) Judith Anne Gividen married Leonard Cleavelin a few months ago and is retaining her maiden name. She is in the personnel department of a chemical company, and will accompany Leonard to Newport next summer, and (we hope) to McMaster.
-

NEW MEMBERS

- (18) We're very pleased to welcome these new members:

BOOK REVIEWS

- (20)
- On creationism, from the New York Times (9/7/82) p.C3:

Abusing Science: The Case Against Creationism

By Philip Kitcher 213 pages. The M.I.T. Press. \$15.00.

Remember when Clarence Darrow, or perhaps Spencer Tracy playing Clarence Darrow, walked out of that hot Tennessee courtroom after winning the big one for John T. Scopes, scientific reason, and the theory that man evolved from lower life forms?

If you do, remember again, because Clarence Darrow failed. Mr. Scopes was convicted of breaking Tennessee's law forbidding the teaching of evolution. The conviction was overturned on a legal technicality, not on the facts and not on the Constitution.

Decades later, such outfits as the

Moral Majority and the Institute for Creation Research seem to have inherited the hot air waves, if not the wind. And this has alarmed Philip Kitcher, a philosopher of science at the University of Vermont, enough to give us this thoughtful and witty attack on "scientific creationism," which, he says, exploits intellectual tolerance while charging that evolution is intolerable "because it is inimical to religion and morality" and to the literal reading of Genesis.

The resurgent anti-evolutionary uproar of late would be great fun were it not that a good case can be made for the proposition that the creationists exert enormous influence in the society at large, to the harm of all scientific inquiry and in the face of overwhelming evidence for evolution. So

Dr. Kitcher has mixed a great deal of cold logic and history into his case, thereby creating a book that is as valuable as it is fun to read for scientists and nonscientists alike.

In his introduction, he tweaks creationists' noses with a bit of organic history, from photosynthesis "inventing" blue-green algae, which dominated life on earth for half the planet's history, to us.

"My aim is to mention a few important incidents that can provide a context for later discussions," he writes. "I am also out to set a new record: 4 billion years of history in under three pages." This indeed he accomplishes, then goes on to show, in the following chapters, that scientific reasoning does not have to be immoral, or even anti-Bible, to be fun.

JAMES P. STERBA

- (21)
- "American Freedom and the Radical Right"
- by Edward Erickson (NY:Ungar 1982), reviewed by BOB DAVIS:

With the rise of the new radical right and the so-called Moral Majority, many individuals have found themselves in a predicament; they don't like what's happening, but they are short on facts and arguments for dealing with it. Now books are beginning to appear, to remedy that situation. One such book, "American Freedom and the Radical Right" by Edward Erickson, just published, should be of great help. It is brief -- 117 pages -- but comprehensive and very readable. Erickson is Chairman of the Board of Leaders of the New York Ethical Culture group and was Director of the Center for Moral Democracy, which has now merged with the Voice of Reason. He has been active in this area for about 30 years.

The book is organized into 9 chapters and an "Afterword". Essentially it performs 3 functions. First, it provides a history and current description of the radical right, its leaders, and their use of religion to further their political ends. Second, it describes the attack on "secular humanism" as a device for attacking pluralistic democracy and modernism in general. Third, it discusses new right behavior and positions on various current controversial issues.

The third function takes up most of the book. There are chapters on "The Politics of Intolerance," "Sex as a Political Weapon: Abortion, Homosexuality and Theocratic Law", educational issues, the arms race, anti-communism -- in short, the whole new right program.

I have both praise and blame for the book. The praise is for Erickson's clear distinction between traditional, individualistic conservatism and the new right's authoritarian brand. He points out that traditional conservatives are allies in the fight against the radical right. My criticism is that Erickson is uncritical about contemporary liberalism. He seems unaware that liberalism's fund of ideas seems exhausted, and that it has failed to analyze correctly society's current problems, or propose viable solutions to them. This creates a vacuum which the new right aims to fill. What we need now are new perceptions and new ideas with which to approach our problems.

But if Erickson does not offer anything in the way of new politics or a new synthesis with which to guide America, he does offer a good critique of the dark forces of reaction, and I highly recommend the book for that purpose.

At bookstores, or direct from the publisher: Frederick Ungar Publishing Co., 250 Park Avenue South, NY NY 10003. \$9.95 cloth, \$4.95 paper.

BOOKS WANTED, TO BORROW

- (22)
- Want to borrow
- a book that you can't find in a library or bookstore? (Many BR books are out of print, alas.) Maybe a BRS member owns it and will lend. Tell us which book, and we will list it here next newsletter. Write the newsletter, address on Page 1, bottom.

CONTRIBUTIONS

(23) We thank these members for their contributions to the BRS Treasury (most welcome!): TIMOTHY CISSNER, DENNIS DARLAND, KATHY FJERMEDAL, FRANCISCO GIRON, CHARLES HILL, DON JACKANICZ, JIM MCWILLIAMS, JAN CORBURG, FRANK PAGE, JACK RAGSDALE, STEVE REINHARDT, CAROL SMITH, RAMON SUZARA, JOHN WILHELM

(24) We solicit contributions from members who have some money to spare.

The closing balance shown on the Treasurer's Report (3) would be a lot smaller if we had not received an unusually large (and wholly unexpected) contribution from one member. But we cannot rely on the unusual to provide a comfortable margin of financial safety. We'd like to see a number of you help to provide that margin. Won't you consider it?

You could do it -- you could help provide a margin of financial safety for the BRS -- by making a contribution when you can. Probably you can't do it every month -- as one member does -- but perhaps you can do it occasionally...from time to time...as you find you have a bit of money to spare.

Please do what you can. Any amount is welcome. No amount is too small to be useful.

* Send it c/o the newsletter (address on Page 1, bottom). Thanks!

ELECTION OF DIRECTORS

(25a) Elected (or re-elected) for 3-year terms starting 1/1/83: LOUIS ACHESON JR., KENNETH BLACKWELL, LESTER DENONN, DAVID HART, MARVIN KOHL, JIM MCWILLIAMS, STEVE REINHARDT, CAROL R. SMITH.

Elected to fill unexpired terms of former members, starting immediately and ending 1/1/84: PAUL ARTHUR SCHILPP and STEVE MARAGIDES.

We liked all of the candidates, and we hope that those who were not elected this time will consider standing again next year.

The votes were tallied by Lee Eisler. The count was verified by Bob Davis.

* * * * *

(25b) The proposal to increase dues by \$2.50 was approved by a wide margin. See (26).

MEMBERSHIP RENEWALS

(26) Dues are due January 1st. Please pay without delay; it saves work and expense.

Please note that all dues have been raised \$2.50, by vote of the members on the August ballot, to cover the increased cost of the McMaster publication, "Russell".

The January 1st date also applies to new members who joined in 1982, no matter in which month they joined. The member who joins in December '82 will have received as much BRS material -- the 4 '82 newsletters, and "Russell" -- as the member who joined 11 months earlier. The December member receives it all at once, the January member over the course of the year.

This is the '83 dues schedule, in U.S. dollars: regular \$22.50, couple \$27.50, student \$12.50. Outside the USA, Canada, and Mexico, add \$7.50. Please send dues to: 1983, RD 1, Box 409, Coopersburg, PA 18036.

If you want to make our life a bit easier, send your dues soon. Thanks!

VOLUNTEER WANTED

(27) Can you volunteer to be the new Co-Chairman of the Membership Committee?

We need someone who can spare several hours a week to handle inquiries and enrollments.

The present Co-Chairman, Jacqueline Berthon-Payon, does a superb job. But her regular full-time job at the Claremont Colleges — the one that pays for her groceries — has become more demanding. As a result, she has reluctantly decided to give up the post of Co-Chairman, as soon as we find a successor.

The record-keeping routines have been worked out and seem satisfactory (but if you find a way to improve them — fine!)

The work is not difficult but it does take time. It is essential work without which the BRS could not thrive. Even though it has become routine, it has always been found interesting. Inquiries come in from all over the country, and from foreign countries (with foreign stamps, of course), often with comments or anecdotes. We send our current "information packet" to the inquirer.

Our classified ads produce inquiries, which would be forwarded to you.

This is a job for someone who has worked in an office and has enjoyed doing paper-work.

You would need some space for storing the printed material that you would send to inquirers and to new members.

We won't go into details here, but if you might be interested, let us know.

Do not volunteer unless you are prepared to stay with it for at least a year.

Does it appeal to you? Volunteer! Write: Volunteer, RD 1, Box 409, Coopersburg, PA 18036.

"RUSSELL SOCIETY NEWS" MATTERS

(28) Pages missing? Several members reported that Pages 3&4 were missing from their August newsletters (RSN35). If something like this ever happens to you, let us know (address on Page 1, bottom), and we'll send you what's missing.

FOR SALE

- (29) Members' stationery. 8½ x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell". On the bottom: "Motto of The Bertrand Russell Society, Inc." \$5 postpaid for 90 sheets (weighs just under a pound, travels 3rd class). Order from the newsletter, address on Page 1, bottom.
- (30) BR postcard. 4½ x 6. Philippe Halsman's handsome 1958 photo of BR with pipe. 50¢ each + 25¢. RSN30-44 shows it slightly reduced in size. Order from the newsletter, address on Page 1, bottom.
- (31) From Spokesman Books, two titles listed as out-of-print and not available from the BRS Library:

"Into the Tenth Decade: Tribute to Bertrand Russell", 1962. 40 pps, ills. £1.50

"Appeal to the American Conscience" by Bertrand Russell, 1966. 8-page fold-out, ills. 50p

Order from Spokesman Books, Bertrand Russell House, Gamble Street, Nottingham, England NG7 4ET. Spokesman Books is the publishing arm of the Bertrand Russell Peace Foundation, same address.

(Thank you, TOM STANLEY)

(32) From the BRS Library:

BOOKS FOR SALE FROM THE BERTRAND RUSSELL SOCIETY LIBRARY

Prices include postage. "H" indicates hardbound. No notation: softbound. Prices shown are in U. S. funds. Please remit by check or money order, payable to THE BERTRAND RUSSELL SOCIETY, in U. S. funds or the equivalent. Orders are filled promptly. Send orders to Jack Ragsdale, BERTRAND RUSSELL LIBRARY, 4461 23rd St., San Francisco, Ca. 94114.

ABOUT OTHER ORGANIZATIONS

(33) HASD.What do you believe in? What principles guide you in life (and in politics)?

We like the statement of principles adopted by the Humanist Association of San Diego:

We, the members of the Humanist Association of San Diego, a Chapter of the American Humanist Association, affirm the following Principles:

1. We support the use of reason and the scientific method in the pursuit of knowledge and understanding, and reject blind faith in dogmatic doctrines as being without value for these purposes.
2. We are not aware of any evidence for the existence of anything supernatural, and we are therefore

skeptical of such claims as those for a deity or an afterlife.

3. We believe that human beings are the source, the definers, and arbiters of values and ethics. We recognize that values change and develop in response to the continuing experience of the human community.

4. Human welfare is our highest concern, and every person's welfare is of equal value. We are convinced that the human community must be responsible for humane and cooperative interaction among all members of the species, and with the biosphere in which we have evolved.

- (34) Humanist Fellowship of San Diego -- which apparently is the same as the Humanist Association of San Diego -- held a rally on ER's birthday (May 18). Notice of the noon rally (at Third and B, Downtown) had appeared in Frank Mortyn's Humanist Calendar. Here's how he describes the event:

Our Bertrand Russell birthday rally consisted of an open-air meeting downtown in front of City Hall. We handed out 100 copies of a specially-prepared flyer. Your officer, Professor Harry Ruja, was present and was introduced. We read the moving introduction to Russell's autobiography. To gain attention, we opened and closed the event with a few minutes of a recorded Beethoven symphony. We were pleased to get spontaneous applause at the conclusion of the presentation.

- (35) Hemlock, "A Society Supporting Active Voluntary Euthanasia for the Terminally Ill" -- whose principles and objectives were described RSN34-35 -- has issued a pamphlet, "Assisted Suicide: The Compassionate Crime". Also "Hemlock Quarterly". Hemlock seeks members (\$15 per year) and tax-deductible contributions. PO Box 66218, Los Angeles, CA 90066.

BR CELEBRATED

- (36) "Guided Tour of Intellectual Rubbish" (Act I), based on ER's writings, was presented at the Bruno Walter Auditorium of the New York Public Library at Lincoln Center, on November 8 & 9, 1982. It was directed by Marvin Kaye, who also dramatized it...and performed by members of The Open Book (of which Marvin Kaye is a co-founder) -- a non-profit organization "dedicated to presenting new and little-known literature to the public..."

We saw it with JACK COWLES, and enjoyed it thoroughly. Afterwards we spoke with Marvin Kaye. If "Guided Tour" is repeated, we will report it, and recommend it highly to BRS members.

See RSN34-14 for our report on the presentation of Act II last April -- the 2 Acts are independent of each other -- and for more about The Open Book and the cast.

MISINFORMATION

- (37) The 3 errors in the brief sketch of ER (8) are these: ER was not an anarchist, he was a socialist. He was not an atheist, he was an agnostic (though he did say, that in practice, there was little difference.) He opposed the H-bomb not merely during the last 3 years of his life, but during the last 25, starting with his 1945 speech in the House of Lords (RSN35-14).

BR INTERVIEWED

- (38) 1965, Merv Griffin. From "Merv" an autobiography by Merv Griffin with Peter Barsocchini (New York: Simon & Schuster, 1980), pp. 114-119:

The opportunity for my first big political interview came while we were in England doing a location show with Bob Hope. Hope was there shooting a movie and I did an interview with him on the set. But I felt, since we were over there, we should try to get an English perspective on current events. Someone suggested Bertrand Russell, the

Nobel Laureate and world-renowned philosopher. We found him simply by looking in the phone book. Russell's personal assistant, a young American named Ralph Schoenman, informed us Lord Russell would consent to the interview on condition that I would not ask questions about his personal life; Russell was wary of American inter-

views, because he was often asked more about his four marriages (two to American women) than about his political opinions. Lord Russell's political opinions were what I was after. He had indicated to the press a dislike of American foreign policy, so when he greeted me at his modest home in Chelsea I asked him if he could possibly be as anti-American as the press painted him to be. The ninety-three-year-old philosopher smiled and said, "How could I be? Fifty percent of my wives have been American."

I began the interview by asking him if the cold war between America and the Communist bloc countries would ever be settled.

"Yes, it will be settled, one way or another. Probably the most likely way will be by the extermination of all combatants on both sides. Then somehow it will be settled."

Then I asked the question which caused Lord Russell's eyes to start flashing: "What *would* be the necessary steps toward world peace?"

"Of course, the first thing would be for Americans to give up aggressive war, give up the habit of invading peaceful countries and torturing them. I think that is a first step."

He caught me off guard. Nineteen sixty-five was a time when most Americans felt there was a right side to the war in Vietnam and a wrong side, and clearly we were on the side of right; this was before the weekly death toll underscored color films of bloody battles on the six o'clock news.

"Is that what you believe, Lord Russell, that we are conducting aggressive wars?"

"Yes, you are. It's not that I believe it; it's plain fact. You're conducting an aggressive war in Vietnam. And you're on your way to conducting a similar war in the Congo."

I was stunned, on America's behalf, at the charge.

"Aren't they protective skirmishes?"

He slapped his fist on his chair's armrest.

"*No!* Now, look, ordinary Americans believe that they are conducting a protective war, protecting non-Communists against these wicked Communists. And that is not the case. They're conducting a war against people who were, until they were attacked, entirely in favor of neutrality. And now they've learned what American troops are. . . ."

Russell's eyes were fiery, his voice increasingly sharp.

". . . The Geneva Congress decided, I think very sensibly . . . that Vietnam, north and south, as one, should have a general election and should have whatever government the general election showed the country wanted. The Americans were not part of the Geneva Conference but did announce when it arrived at its decisions that they would support it on the whole. They sent, first, advisers to South Vietnam, and the advisers sent back word to America that the country was not in a state where a general election was possible. . . . They [Americans] then sent troops to advise the advisers, and they made friends with the tiniest minority of people in Vietnam. They set them up as a puppet government, and about nine-tenths of the population disliked this puppet government. So they put the peasants into strategic villages where they were prisoners, where they were exposed to forced labor, where they had *no* freedom, where they had to do as they were told, and where they were from time to time murdered whenever a soldier felt like it. Now, Sir Robert Menzies, in sending off troops to support this regime, said they were going to defend one of the 'frontiers of human freedom.' Well, now what do you think happens in South Vietnam? What sort of human freedom do you think there is? Who gets the freedom? *Well*, I'll tell you. This is a quotation from a paper in Dallas. Dallas is generally not considered

in the forefront of revolution. . . .

"It says: 'Supposedly the purpose of the fortified villages is to keep the Viet Cong out. Barbed wire denies entrance and exit. Vietnamese farmers are forced at gunpoint into these virtual concentration camps. Their homes, possessions and crops are burned. In the province of Cantong some villagers were led into the town square, their stomachs were slashed, their livers extracted and put on display. These victims were women and children. In another village expectant mothers were invited to the square by government forces to be "honored." Their stomachs were ripped open and their unborn babies removed.'

"I could read you any number of extracts from any number of newspapers, saying *this* (he slaps the newspaper article) is what America is doing. *This* is the action of America. *This* is its war for liberty. And I think it's the most disgraceful thing I've ever heard of. Horrible! That they should take these innocent people who don't care a damn what government there is, as long as they're left alone, and torture women and children. . . . Apart from these sorts of things, they drop Napalm and other defoliants on people. They issue notices at the villages saying, 'Don't let your children run out, because if you do our helicopters will kill them.' That sort of thing. Most Americans don't *know* that's the sort of war that's going on. If they knew, I think well enough of America to think at least some of them would think it was perhaps rather regrettable. . . ."

"They drop Napalm on a *child*. Napalm eats into you. You can't stop it. The children die of it in great agony, terrible agony. That sort of thing is going on all the time."

I sat stunned and sickened by the extract he'd read from the Dallas newspaper; I couldn't believe such an article hadn't caused a national scandal.

"I'm amazed that there was an investigation and this was printed in the Dallas paper . . . Americans have great conscience about that, sir."

"I don't remember that anybody was punished."

"They should have been."

"They should have been, yes, but I don't think they were."

I asked Lord Russell if he didn't admire America for our freedoms of speech and religion. He bristled once again.

"Those things were commonplace until America took to infringing them. When I was young everyone took them for granted. But since America has come in, it's quite different. Freedom of religion? Well, Communism is a religion. You don't allow freedom to Communism. You made it a criminal act to be a Communist in America [in reference to Senator McCarthy's investigation].

"Communism is a religion?"

"Certainly."

"It's a godless religion, though."

"Yes. So is Buddhism. Everybody admits Buddhism is a religion."

My mind kept flashing back to the atrocities he talked about in Vietnam; I turned the conversation again to the subject of world peace. "The peoples of every country, I am sure, desire nothing but peace."

"That's a slogan," he said, "and I think you should get rid of that slogan. They desire peace, but they desire peace on *their* terms. You see, this recent offer the Prime Minister is making . . . he won't meet the Viet Cong. He wants peace, no doubt. But he wants peace on his terms. That is, he wants the enemy, if you call him the enemy, to give up all his own demands and simply accept the demands of America. That is the sense in which he wants peace."

"On what terms *can* we have peace? Peace at any price?"

"Peace at any price only encourages the other folks who don't want peace. So that is not peace at any price. You've got to have a government, *one* government, for the world. That's the only way you can secure peace. One government for international affairs. The national affairs would have a national government. You shouldn't insist on all national governments being of the same sort. If some people want a monarch, let them have it. If some people want a dictatorship, let them have it. You must let them have whatever they like."

I decided to ask about the CIA. It wasn't a subject many Americans were aware of in 1965, but I asked Russell his feelings about it.

"It's a band of organized assassins. That's what I think about it."

Again he caught me short. I had sought the interview to get a unique perspective on America, but by this time I realized the tape I was bringing back would be shocking to my audience.

"Do we, as mankind," I asked Lord Russell, "deserve to survive?"

"If you use God as judge, *that* God [of the Old Testament] judged at the time of Noah. He thought only eight people deserved to survive. A definite exaggeration." [Laughter.]

"... But I don't think anybody *deserves* to survive, or hardly anybody. . . . We don't want to be dealt with according to our sins. We should have a very bad time, if so. I'd like to say just a little about how glorious the world might be if only the people would forget that they hate each other."

"That's what we want to hear."

"I think this is a matter where science comes in. Science has made it possible for everybody to be happy, unless they have some incurable disease. It only requires that people should stop hating each other. They should aim at their own happiness and not at the unhappiness of others. You see, all of us spend the bulk of our income and the bulk of our energies on making other people miserable."

Bertrand Russell's allegations about atrocities in Vietnam and the use of assassination by the CIA as a political tool, which sounded so inflammatory and unsubstantiated to us in 1965, proved in later years to be sadly close to the truth.

Page 146

(Thank you, DON JACKANICZ)

"Lord Russell, let me leave you with one quote—of Thornton Wilder's. He was the one who said, 'Governments should be small and funny.' Do you agree?"

"Yes. And I should point out that the whole armed might of Monaco is on my side."

Immediately upon our return to the States we checked out the article in the Dallas newspaper Russell had quoted from. It turned out to be a "letter to the editor" written by a Vietnamese businessman, and not a piece by an investigative journalist. Still, the effect of Lord Russell's reading it on the air was devastating.

We played the interview into our show, and the studio audience was grumbling when it was over; some boomed. I read a prepared statement: "Many of you, I'm certain, disagree with what Lord Russell had to say. I know I did. You are perhaps shocked and angry, not only at him but at me for providing him the platform of this show on which to make his remarks. But nothing would be easier for me than to book this show with people who have ideas that are carbon copies of my own, or no ideas at all. But I don't think it's an easy world or that my primary responsibility on this program is to take it easy. You'll continue on this show to see people of every persuasion who have hard things to say, and I don't think you can get at any truth without hammering out on the anvil of everyone's right to disagree. I believe the vast majority of Americans are committed to that principle."

As soon as the show aired I heard from hundreds of Americans who *weren't* committed to the principle of free speech. I received letters and telegrams labeling me a Communist, traitor and antireligious crusader. Even members of the national press lashed out at me, including my old friend Bob Considine, who contended I shouldn't provide a platform for such outrageously anti-American statements at a time when our country faced an internal struggle because of the war. It was as if I had attacked America. (The funny part about Bob Considine's article was that Bob's son, who worked as a cameraman on my show, caught hell from his dad, too.)

Page 122

Because everyone, from Shakespearean actors to rock stars, was frothing with issues during the sixties, one of the toughest parts of our job was presenting a balance of opinion. When too many guests spoke out against the war, we heard about it, as I said earlier. Network lawyers sent me memos: "In the past six weeks 34 antiwar statements have been made and only one pro-war statement, by John Wayne. . . ." I shot a memo right back. "Find me someone as famous as Mr. Wayne to speak in favor of the war and we'll book him." The irony of the situation wasn't wasted on me; in 1965 I'm called a traitor by the press for presenting Bertrand Russell, and four years later we are hard-pressed to find *anybody* to speak in favor of the Vietnam war.

It would be required that every sentence should belong to some precise level of the hierarchy. Therefore, if one could find no level in which a given utterance fit, then the utterance would be deemed meaningless, and forgotten.

An analysis can be attempted on the two-step Epimenides loop given above. The first sentence, since it speaks of the second, must be on a higher level than the second. But by the same token, the second sentence must be on a higher level than the first. Since this is impossible, the two sentences are "meaningless". More precisely, such sentences simply cannot be formulated at all in a system based on a strict hierarchy of languages. This prevents all versions of the Epimenides paradox as well as Grelling's paradox. (To what language level could "heterological" belong?)

Now in set theory, which deals with abstractions that we don't use all the time, a stratification like the theory of types seems acceptable, even if a little strange—but when it comes to language, an all-pervading part of life, such stratification appears absurd. We don't think of ourselves as jumping up and down a hierarchy of languages when we speak about various things. A rather matter-of-fact sentence such as, "In this book, I criticize the theory of types" would be doubly forbidden in the system we are discussing. Firstly, it mentions "this book", which should only be mentionable in a "metabook"—and secondly, it mentions *me*—a person whom I should not be allowed to speak of at all! This example points out how silly the theory of types seems, when you import it into a familiar context. The remedy it adopts for paradoxes—total banishment of self-reference in any form—is a real case of overkill, branding many perfectly good constructions as meaningless. The adjective "meaningless", by the way, would have to apply to all discussions of the theory of linguistic types (such as that of this very paragraph) for they clearly could not occur on any of the levels—neither object language, nor metalanguage, nor metametalanguage, etc. So the very act of discussing the theory would be the most blatant possible violation of it!

Now one could defend such theories by saying that they were only intended to deal with formal languages—not with ordinary, informal language. This may be so, but then it shows that such theories are extremely academic and have little to say about paradoxes except when they crop up in special tailor-made systems. Besides, the drive to eliminate paradoxes at any cost, especially when it requires the creation of highly artificial formalisms, puts too much stress on bland consistency, and too little on the quirky and bizarre, which make life and mathematics interesting. It is of course important to try to maintain consistency, but when this effort forces you into a stupendously ugly theory, you know something is wrong.

These types of issues in the foundations of mathematics were responsible for the high interest in codifying human reasoning methods which was present in the early part of this century. Mathematicians and philosophers had begun to have serious doubts about whether even the most concrete of theories, such as the study of whole numbers (number theory), were built on solid foundations. If paradoxes could pop up so easily in set theory—a theory whose basic concept, that of a set, is surely very intuitively appealing—then might they not also exist in other branches of mathematics? Another related worry was that the paradoxes of logic, such as the Epimenides paradox, might turn out to be internal to mathematics, and thereby cast in doubt all of mathematics. This was especially worrisome to those—and there were a good number—who firmly believed that mathematics is simply a branch of logic (or conversely, that logic is simply a branch of mathematics). In fact, this very question—"Are mathematics and logic distinct, or separate?"—was the source of much controversy.

This study of mathematics itself became known as *metamathematics*—or occasionally, *metalogue*, since mathematics and logic are so intertwined. The most urgent priority of metamathematicians was to determine the true

nature of mathematical reasoning. What is a legal method of procedure, and what is an illegal one? Since mathematical reasoning had always been done in "natural language" (e.g., French or Latin or some language for normal communication), there was always a lot of possible ambiguity. Words had different meanings to different people, conjured up different images, and so forth. It seemed reasonable and even important to establish a single uniform notation in which all mathematical work could be done, and with the aid of which any two mathematicians could resolve disputes over whether a suggested proof was valid or not. This would require a complete codification of the universally acceptable modes of human reasoning, at least as far as they applied to mathematics.

Consistency, Completeness, Hilbert's Program

This was the goal of *Principia Mathematica*, which purported to derive all of mathematics from logic, and, to be sure, without contradictions! It was widely admired, but no one was sure if (1) all of mathematics really was contained in the methods delineated by Russell and Whitehead, or (2) the methods given were even self-consistent. Was it absolutely clear that contradictory results could *never* be derived, by any mathematicians whatsoever, following the methods of Russell and Whitehead?

This question particularly bothered the distinguished German mathematician (and metamathematician) David Hilbert, who set before the world community of mathematicians (and metamathematicians) this challenge: to demonstrate rigorously—perhaps following the very methods outlined by Russell and Whitehead—that the system defined in *Principia Mathematica* was both *consistent* (contradiction-free), and *complete* (i.e., that every true statement of number theory could be derived within the framework drawn up in *P.M.*). This was a tall order, and one could criticize it on the grounds that it was somewhat circular: how can you justify your methods of reasoning on the basis of those same methods of reasoning? It is like lifting yourself up by your own bootstraps. (We just don't seem to be able to get away from these Strange Loops!)

Hilbert was fully aware of this dilemma, of course, and therefore expressed the hope that a demonstration of consistency or completeness could be found which depended only on "finitistic" modes of reasoning. These were a small set of reasoning methods usually accepted by mathematicians. In this way, Hilbert hoped that mathematicians could partially lift themselves by their own bootstraps: the sum total of mathematical methods might be proved sound, by invoking only a smaller set of methods. This goal may sound rather esoteric, but it occupied the minds of many of the greatest mathematicians in the world during the first thirty years of this century.

In the thirty-first year, however, Gödel published his paper, which in some ways utterly demolished Hilbert's program. This paper revealed not only that there were irreparable "holes" in the axiomatic system proposed by Russell and Whitehead, but more generally, that no axiomatic system whatsoever could produce all number-theoretical truths, unless it were an inconsistent system! And finally, the hope of proving the consistency of a system such as that presented in *P.M.* was shown to be vain: if such a proof could be found using only methods inside *P.M.*, then—and this is one of the most mystifying consequences of Gödel's work—*P.M.* itself would be inconsistent!

The final irony of it all is that the proof of Gödel's Incompleteness Theorem involved importing the Epimenides paradox right into the heart of *Principia Mathematica*, a bastion supposedly invulnerable to the attacks of Strange Loops! Although Gödel's Strange Loop did not destroy *Principia Mathematica*, it made it far less interesting to mathematicians, for it showed that Russell and Whitehead's original aims were illusory.

But if *Principia Mathematica* was the first victim of this stroke, it was certainly not the last! The phrase "and Related Systems" in the title of Gödel's article is a telling one; for if Gödel's result had merely pointed out a defect in the work of Russell and Whitehead, then others could have been inspired to improve upon *P.M.* and to outwit Gödel's Theorem. But this was not possible: Gödel's proof pertained to *any* axiomatic system which purported to achieve the aims which Whitehead and Russell had set for themselves. And for each different system, one basic method did the trick. In short, Gödel showed that provability is a weaker notion than truth, no matter what axiomatic system is involved.

Therefore Gödel's Theorem had an electrifying effect upon logicians, mathematicians, and philosophers interested in the foundations of mathematics, for it showed that no fixed system, no matter how complicated, could represent the complexity of the whole numbers: 0, 1, 2, 3, ... Modern readers may not be as nonplussed by this as readers of 1931 were, since in the interim our culture has absorbed Gödel's Theorem, along with the conceptual revolutions of relativity and quantum mechanics, and their philosophically disorienting messages have reached the public, even if cushioned by several layers of translation (and usually obfuscation). There is a general mood of expectation, these days, of "limitative" results—but back in 1931, this came as a bolt from the blue.

Mathematical Logic: A Synopsis

A proper appreciation of Gödel's Theorem requires a setting of context. Therefore, I will now attempt to summarize in a short space the history of mathematical logic prior to 1931—an impossible task. (See DeLong, Kneebone, or Nagel and Newman, for good presentations of history.) It all began with the attempts to mechanize the thought processes of reasoning. Now our ability to reason has often been claimed to be what distinguishes us from other species; so it seems somewhat paradoxical, on first thought, to mechanize that which is most human. Yet even the ancient Greeks knew that reasoning is a patterned process, and is at least partially governed by stable laws. Aristotle codified syllogisms, and Euclid codified geometry; but thereafter, many centuries had to pass before progress in the study of axiomatic reasoning would take place again.

One of the significant discoveries of nineteenth-century mathematics was that there are different, and equally valid, geometries—where by "a geometry" is meant a theory of properties of abstract points and lines. It had long been assumed that geometry was what Euclid had codified, and that, although there might be small flaws in Euclid's presentation, they were unimportant and any real progress in geometry would be achieved by extending Euclid. This idea was shattered by the roughly simultaneous discovery of non-Euclidean geometry by several people—a discovery that shocked the mathematics community, because it deeply challenged the idea that mathematics studies the real world. How could there be many different kinds of "points" and "lines" in one single reality? Today, the solution to the dilemma may be apparent, even to some nonmathematicians—but at the time, the dilemma created havoc in mathematical circles.

Later in the nineteenth century, the English logicians George Boole and Augustus De Morgan went considerably further than Aristotle in codifying strictly deductive reasoning patterns. Boole even called his book *The Laws of Thought*—surely an exaggeration, but it was an important contribution. Lewis Carroll was fascinated by these mechanized reasoning methods, and invented many puzzles which could be solved with them. Gottlob Frege in Jena and Giuseppe Peano in Turin worked on combining formal reasoning with the study of sets and numbers. David Hilbert in Göttingen worked on stricter formalizations of geometry than Euclid's. All of these efforts were directed towards clarifying what one means by "proof".

In the meantime, interesting developments were taking place in classical mathematics. A theory of different types of infinities, known as the *theory of sets*, was developed by Georg Cantor in the 1880's. The theory was powerful and beautiful, but intuition-defying. Before long, a variety of set-theoretical paradoxes had been unearthed. The situation was very disturbing, because just as mathematics seemed to be recovering from one set of paradoxes—those related to the theory of limits, in the calculus—along came a whole new set, which looked worse!

The most famous is Russell's paradox. Most sets, it would seem, are not members of themselves—for example, the set of walruses is not a walrus, the set containing only Joan of Arc is not Joan of Arc (a set is not a person)—and so on. In this respect, most sets are rather "run-of-the-mill". However, some "self-swallowing" sets *do* contain themselves as members, such as the set of all sets, or the set of all things except Joan of Arc, and so

on. Clearly, every set is either run-of-the-mill or self-swallowing, and no set can be both. Now nothing prevents us from inventing R: *the set of all run-of-the-mill sets*. At first, R might seem a rather run-of-the-mill invention—but that opinion must be revised when you ask yourself, "Is R itself a run-of-the-mill set or a self-swallowing set?" You will find that the answer is: "R is neither run-of-the-mill nor self-swallowing, for either choice leads to paradox." Try it!

But if R is neither run-of-the-mill nor self-swallowing, then what is it? At the very least, pathological. But no one was satisfied with evasive answers of that sort. And so people began to dig more deeply into the foundations of set theory. The crucial questions seemed to be: "What is wrong with our intuitive concept of 'set'? Can we make a rigorous theory of sets which corresponds closely with our intuitions, but which skirts the paradoxes?" Here, as in number theory and geometry, the problem is in trying to line up intuition with formalized, or axiomatized, reasoning systems.

A startling variant of Russell's paradox, called "Grelling's paradox", can be made using adjectives instead of sets. Divide the adjectives in English into two categories: those which are self-descriptive, such as "pentasyllabic", "awkwardnessful", and "recherché", and those which are not, such as "edible", "incomplete", and "bisyllabic". Now if we admit "non-self-descriptive" as an adjective, to which class does it belong? If it seems questionable to include hyphenated words, we can use two terms invented specially for this paradox: *autological* (= "self-descriptive"), and *heterological* (= "non-self-descriptive"). The question then becomes: "Is 'heterological' heterological?" Try it!

There seems to be one common culprit in these paradoxes, namely self-reference, or "Strange Loopiness". So if the goal is to ban all paradoxes, why not try banning self-reference and anything that allows it to arise? This is not so easy as it might seem, because it can be hard to figure out just where self-reference is occurring. It may be spread out over a whole Strange Loop with several steps, as in this "expanded" version of Epimenides, reminiscent of *Drawing Hands*:

The following sentence is false.
The preceding sentence is true.

Taken together, these sentences have the same effect as the original Epimenides paradox; yet separately, they are harmless and even potentially useful sentences. The "blame" for this Strange Loop can't be pinned on either sentence—only on the way they "point" at each other. In the same way, each local region of *Ascending and Descending* is quite legitimate: it is only the way they are globally put together that creates an impossibility. Since there are indirect as well as direct ways of achieving self-reference, one must figure out how to ban both types at once—if one sees self-reference as the root of all evil.

Banishing Strange Loops

Russell and Whitehead did subscribe to this view, and accordingly, *Principia Mathematica* was a mammoth exercise in exorcising Strange Loops from logic, set theory, and number theory. The idea of their system was basically this. A set of the lowest "type" could contain only "objects" as members—not sets. A set of the next type up could only contain objects, or sets of the lowest type. In general, a set of a given type could only contain sets of lower type, or objects. Every set would belong to a specific type. Clearly, no set could contain itself because it would have to belong to a type higher than its own type. Only "run-of-the-mill" sets exist in such a system; furthermore, old R—the set of all run-of-the-mill sets—no longer is considered a set at all, because it does not belong to any finite type. To all appearances, then, this *theory of types*, which we might also call the "theory of the abolition of Strange Loops", successfully rids set theory of its paradoxes, but only at the cost of introducing an artificial-seeming hierarchy, and of disallowing the formation of certain kinds of sets—such as the set of all run-of-the-mill sets. Intuitively, this is not the way we imagine sets.

The theory of types handled Russell's paradox, but it did nothing about the Epimenides paradox or Grelling's paradox. For people whose interest went no further than set theory, this was quite adequate—but for people interested in the elimination of paradoxes generally, some similar "hierarchization" seemed necessary, to forbid looping back inside language. At the bottom of such a hierarchy would be an *object language*. Here, reference could be made only to a specific domain—not to aspects of the object language itself (such as its grammatical rules, or specific sentences in it). For that purpose there would be a *metalinguage*. This experience of two linguistic levels is familiar to all learners of foreign languages. Then there would be a *metametalinguage* for discussing the metalinguage, and so on.

BY BERTRAND RUSSELL

(39) On Gilbert Murray, from "An Unfinished Autobiography" by Gilbert Murray (London, Allen & Unwin, 1960) pp. 205-211:

A FIFTY-SIX YEAR FRIENDSHIP

by Bertrand Russell

MY FRIENDSHIP with Gilbert Murray began rather suddenly in February 1901. I had known him slightly for many years as the husband of my cousin Mary, but it was only when he came to Newnham to read part of his translation of the Hippolytus that my admiration led to a rapidly growing intimacy. I wrote him a letter (February 26, 1901) in the course of which I said:

'Those of us who love poetry read the great masterpieces of modern literature before we have any experience of the passions they deal with. To come across a new masterpiece with a more mature mind is a wonderful experience, and one which I have found almost overwhelming. It had not happened to me before, and I could not have believed how much it would affect me. Your tragedy fulfils perfectly—so it seems to me—the purpose of bringing out whatever is noble and beautiful in sorrow; and to those of us who are without a religion, this is the only consolation of which the spectacle of the world cannot deprive us.'

My praise gave him pleasure, and he wrote:

'I will not say that I feel pleased or delighted by your great enjoyment of my Hippolytus, because my feelings are quite different from that. It is rather that your strong praise makes a sort of epoch in my life and in my way of regarding my work. Of course I have felt great emotion in working at the Hippolytus; I have been entranced by it. And then the thought has always come to me, that there were dozens of translations of the Greek Tragedians in all the second-hand shops; and that I could not read any of them with the least interest; and that probably the authors of nearly all of them had felt exactly as I was feeling about the extraordinary beauty and power of the matter they were writing down. A translator, if he takes pains, naturally gets nearer to understanding his author than an ordinary reader does; and every now and again the poem means to him something approaching that which it meant to the poet.

'Of course all authors—in different degrees, but all enormously—fail to convey their meaning. And translators, being less good writers and having a harder task, fail even more deplorably. That is the normal state of the case. But what seems to have happened in our case is that you have somehow or other understood and felt the whole of what I meant to convey.

'I do not mean that I had anything mysterious or extraordinary to say; but merely that, even in the case of a bad poet or the man-in-the-street when in certain moods, if you could really understand what was in his mind it would be something astonishingly beautiful compared with what one ordinarily gets from reading a very good poem. When I am bored with poetry, I constantly have the feeling that I am simply not understanding the man or he is not expressing himself, and that probably something very fine indeed is going on inside him; and in some moment of special insight one might see inside him and get the fine thing.'

This inaugurated a correspondence which continued for fifty-six

years and ended only with his death.

We met most frequently during the years 1901 to 1905. At this time we were neighbours during a large part of the year: he at Churt; and I, first at Fernhurst, then at Churt and then at Tilford. He was a delightful companion and a very amusing talker. Alys, my first wife, and I intended to build a house at Churt in order to be near the Murrays, and the plans for this project were well advanced when the Murrays decided to leave Churt because it was thought not to suit Mary's health. In consequence of this move I saw rather less of him than I had been doing.¹

Most of the letters that passed between us are rather solemn, but our conversation did not by any means usually have this serious character. He was full of amusing fancies which were apt to puzzle his wife and his younger daughter Agnes. One day when I came to see them, he greeted me with the remark: 'I have found a school for Denis. The Headmaster is the Rev V. Ermin, of the Creepers, Crawley Down.' At this point Mary exclaimed indignantly, 'Oh, Gilbert! He's not Reverend.' The only substratum of fact in the story was that the school was at Crawley. He told Agnes, then aged about six, a long fantastic story of something that had happened to a train at a junction. 'Is it true?' she asked, with wide eyes. 'Quite true,' he replied very solemnly. 'Honour bright?' she asked again. 'Yes. On a bright railway track.' The poor girl retired completely bewildered. One day when the parlour maid answered my ring at the front door, and I inquired whether Professor Murray and Lady Mary were at home, she replied, 'Well, Sir, I think they're *probably* in—unless they're out.' It turned out that they were in; and I said, 'Mary, your parlour maid is of opinion that the laws of thought should not be applied to empirical material except with great caution.' Mary remarked, 'Oh, what an unkind thing to say!' And Gilbert said, 'I am glad to know that she has such just views.'

Many of his most amusing fantasies probably live now only in my memory. I would find, when I reminded him of them forty or fifty years later, that he had entirely forgotten them. He assured me once that there was an Oxford Don who had reduced all jokes to thirty-seven proto-Aryan originals and, when any-

¹ The Murrays moved to Oxford in 1905 when G.M. was elected to a teaching Fellowship at New College.

body made a joke in his presence, he would say, 'Yes. There is that joke.' Many years later, I asked Gilbert if he remembered this story. He hesitated for a moment, and then said, 'I think he was a *Cambridge Don*'.

A great deal of our conversation, however, was on a more serious plane. We were both liberal, humanitarian pacifists. We were both profoundly impressed by the cruelty and wickedness to be found in the world, but with a confident hope that these things would gradually diminish. A caricaturist might have compared us to the two curates in the *Bab Ballads*, each determined to be 'the mildest curate going'. But in this rôle, Gilbert was much more successful than I was. I would have outbreaks of savage indignation in which I wished to give pain to those whom I hated. When Massingham said in print that I would not hurt a fly, I was indignant. But Gilbert's kindly feelings were less liable to lapse into savagery. He remained reasonable and gentle even under great provocation. I admired this quality though I knew that I could not emulate it. I could not sympathize when he spoke in a kindly fashion even about Rudyard Kipling¹ after a walk round Beachy Head with that, to me, detestable man. I felt as the orthodox did when Origen declared that even Satan would be saved at the last.

It was not only in politics, but also in philosophy that he and I

were broadly in agreement. He had steadfastly adhered to British Empiricism in the style of Mill. I reverted to it after a brief excursion into German Idealism. This agreement led him to invite me to write on Philosophy for the Home University Library of which he was one of the editors. One of the most amusing of all his letters to me is one purporting to come from the publishers, Williams and Norgate, justifying themselves against my supposed complaints: for instance, I had remarked in my book that I was not acquainted with the Emperor of China, and he makes the publishers say that, if I desired an introduction to that Potentate, I should have mentioned it before signing the contract.

When the First World War broke out in 1914, he and I took different sides. He supported Sir Edward Grey, whose policy I passionately repudiated. I thought, and still think, that Britain ought to have remained neutral. He published a pamphlet in defence of the Government, and I published a polemical attack on his pamphlet. Subsequent events raised doubts in his mind. On August 20, 1955, he wrote to me: 'It is quite possible that the effects would have been less disastrous if we had stayed out and allowed Germany to become complete master of western Europe, on more or less equal terms with USA and Russia.' But, at the time, as we both felt very strongly, our differences of opinion caused a certain estrangement. However, I wrote to him: 'I feel our friendship still lives in the eternal world, whatever may happen to it here and now.' And he replied in a similar tone.

At the time when I was imprisoned in 1918 he took the liberal view that the expression of opinion ought to be free. He worked hard on my behalf and was largely instrumental in my being put in the First Division. For his help at this time I owe him a deep debt of gratitude.

In later years, our opinions no longer diverged acutely, though he remained a Liberal and I had joined the Labour Party. We both, like many men of our generation, felt lost and bewildered by the outbreaks of barbarism which were making nineteenth century optimism look shallow. We had ventured forth in a frail skiff on calm and sunny seas, but wild tempests were threatening to sink our little bark, and hopes grew gradually more difficult and more remote. In these later years, a more dignified comparison than that of the Two Curates would be appropriate. Our mood was like that of St Jerome and St Augustine watching the fall of the Roman Empire and the crumbling of a civilization which had seemed as indestructible as granite. A letter from him of July 27, 1953, expresses part of his feeling about this development:

'I think I started from an Irish Rebel background, and gradually learned to believe in the English Liberals, partly through Mr G's championing Home Rule, partly because of the enthusiastic Radicalism of Castle Howard.

(Thank you, BOB DAVIS)

'You started from an atmosphere of Whig Prime Ministers, and distinguished Radicals, and found in 1914 that their gospel wasn't enough. Of course this is only one element, but it explains some things.'

It has been a difficult time for those who grew up amid Victorian solidities. To the very end, Gilbert did everything that lay in his power to salvage civilization, and for this he deserves to be honoured by all who care for the things that he valued.

After the dinner in his honour of the Philosophical Society of England in September 1951, he wrote to me (September 12, 1951):

'I was greatly touched by that letter you wrote to the Philosophical Society Dinner about our fifty years of close friendship. It is, I think, quite true about the fundamental agreement; I always feel it—and am proud of it.

'I had explained that I preferred you to other philosophers because, while they mostly tried to prove some horrible conclusion—like Hobbes, Hegel, Marx &c, you were, I believed, content if you could really prove that $2+2=4$, and that conclusion, though sad, was at least bearable. ("To think that two and two are four, and never five or three the heart of man has long been sore and long is like to be.")¹ . . .

'Yours ever, and with real thanks for your letter, which made me for a moment feel that I was not completely a failure.'

In my Message (September 11, 1951) to the Society, I had summed up the reasons for my admiration of Gilbert Murray:

¹ From A. E. Housman's *Last Poems*, No. xxxv, which Gilbert Murray here slightly misquotes.

'I greatly regret my inability to be present at this dinner in honour of Gilbert Murray, who has been my close friend for over half a century. Throughout that period, I have hardly known whether to admire most his wit or his wisdom. Of his erudition it is not for me to speak, since it is in a field of which I am exceptionally ignorant.

'He and I have not always agreed on public issues, but we have, I think, throughout whatever divergences on this or that question been conscious of a deep underlying agreement on fundamentals.

'Gilbert Murray is a great and steadfast humanist, who adheres to liberal beliefs, now, alas, not so common as they were when he and I were young. As growing darkness descends upon the world, stars shine more brightly, and of these stars Gilbert Murray is among those of the first magnitude.

'If the international world could listen to him, many of our troubles would quickly end, and the sombre fears that rob our age of hopefulness would be dissipated.'

ABOUT BR'S WRITINGS

(40) More on Gödel. Several years ago we ran part of a review (by Brian Hayes) of "Gödel, Escher and Bach" by Douglas Hofstadter (New York: Basic Books, 1979) (RSN23-17.) Hayes said that Russell and Whitehead, in "Principia Mathematica": "invented a formal language... simple and powerful"... that until 1931 "appeared to have the satisfying quality of completeness." They believed that "any true property of the whole numbers could be demonstrated in their language and that no false proposition could be proved."

In 1931 Gödel demonstrated that this was not so, that "any system of formal logic powerful enough to describe the natural numbers is intrinsically incomplete," as Hayes puts it.

We think the story of how all this came about is an exciting one, the way Hofstadter tells it... so we are going to let him tell it:

RR VIEWED BY CONTEMPORARIES

(42) Norman Cousin's not-exactly-favorable assessment, in his book "Human Options" (New York: Norton, 1981) pp.124-5:

BERTRAND RUSSELL: spare, crusty, pipe-smoking. He climbed the heights of mathematical and philosophical abstractions as did few other intellectual figures of his time. He leaned heavily on the work of Alfred North Whitehead and Ludwig Wittgenstein, or at least that portion of their work that broke with traditional thought. He became deeply involved in political and moral issues and had even more influence outside England than in his own homeland. Personally, he could be playful and even impish. Those of his friends who expected him to be quixotic and inconsistent were seldom disappointed. In the company of other eminent intellects he could be uncommunicative at times to the point of inarticulateness. When he met Albert Schweitzer for the first time at the home of a mutual friend in London, what was expected to be an historic intellectual encounter turned out to be an epic non-event. Russell commented on the weather, which in London has seldom made for

exciting conversation. Schweitzer nodded affably. Absolute silence and small talk alternated for the next few minutes, then Russell looked at his watch and said it was time to leave for the country. If Schweitzer felt deprived because the discussion did not turn on Russell's favorite themes—agnosticism, equality of the sexes, non-totalitarian socialism, and free love—he carefully concealed his loss. Russell's antipathy to orthodoxy and his talent for intricate grammar were perhaps never better demonstrated than in his *Our Knowledge of the External World*, when he wrote: "The one and only condition, I believe, which is necessary in order to secure for philosophy in the near future an achievement that surpasses all that has hitherto been accomplished by philosophers, is the creation of a school of men with scientific training and philosophical interests, unhampered by the traditions of the past, and not misled by the literary methods of those who copy the ancients in all except their merits."

(Thank you, WARREN SMITH)

LAST MINUTE ITEMS

- (43) Volunteer NOT wanted, in spite of what we said in (27). The new Co-Chairman of the Membership Committee will be Carol R. Smith, of Seattle.

Carol had volunteered for the job in 1981 shortly after it had gone to Jacqueline Berthon-Fayon. So, while we were preparing the "volunteer wanted" item (27) for this newsletter, we also wrote to Carol asking if she still wanted the post. She did (and does), we are happy to say.

We are most grateful to Jacqueline, who handled the responsibilities with speed and sensitivity. We doff our hat! We are greatly indebted.

PHILOSOPHERS' CORNER

- (45) BRS at APA, December 28, Baltimore. The BRS session at the annual convention of the American Philosophical Association (Eastern Division) is scheduled for 10 A.M. The convention is spread over 3 hotels, all near each other in downtown Baltimore: Hyatt Regency, Baltimore Hilton, and Lord Baltimore. We don't know which one will house the BRS session. It will be listed in the lobbies. (It will also be listed in the November issue of "Proceedings of the American Philosophical Association", not available at this writing.) BRS Philosophy Committee Chairman ED HOPKINS suggests getting there at about 9 A.M. to pick up literature and find out where to be at 10 A.M. Our previous issue provided the BRS program (RSN35-8).

REPORTS FROM OFFICERS

(2) President Don Jackanicz reports:

Four months remain before our 1983 annual meeting, perhaps a bit early to make travel plans; but especially for members who've not been to Hamilton before, it might be a good idea to get out maps or timetables and do some planning. Recent airlines price wars have driven fares quite low on many routes; these could help, if you have to travel far and low fares remain available. For us Chicagoans there is a new option, a US\$96 round trip, Chicago to Toronto, Amtrak. (Hamilton is an hour's bus trip from Toronto.) This will be an unusual BRS annual meeting, as the Archives is preparing a major program, described elsewhere in this issue (33). Two other annual meetings have been held at the Archives, and were highly satisfactory. If you've never attended a meeting or visited the Archives, I suggest you give it careful consideration! See you there, I hope.

(3) Vice-President/Special Projects Bob Davis reports:

My activities for the last quarter have been mostly in connection with meetings. In November I attended the Popper conference, "The Open Society and its Friends" (RSN35-24). My role was principally a passive one. Most people in attendance were students or close followers of Popper. I did, however, take part in the discussions aimed at establishing a Popper Society. My experience in the BRS shed light on some of their problems. I have joined the organization -- assuming it comes into existence.

I was to attend the North American Humanist Leadership Conference, but did not, due to the time of year and my just-completed trip to New York. However, I did submit a "Humanist Blue Book" proposal for a cheap pamphlet series based on the famous Blue Books of years ago. Sherwin Wine and I came up with the idea in October at the Voice of Reason conference in Los Angeles (30).

Please note the information about the Wilberforce meetings and events in England this year. I expect to attend the August conference at Cambridge. In '81 I had tried to arrange a joint BRS-Wilberforce meeting in England for '82; it did not materialize, partly because the BRS did not support the idea very well. But perhaps our efforts were not wholly wasted; they may have resulted in Jack Lennard's coming up with the '83 conference. I hope some of you will make the trip with me. See (31).

I have been providing Dora Russell with some material for her new book on the years 1945-50 and the origins of the Cold War. It seems to be going well. She will discuss BR in it, but writes that "it is time that someone did a thorough bit of research about what Bertie said at that time, starting from the Lord's speech. He did about 70 broadcasts for home or over-seas, and it may be said that he did much to influence opinion. He is accused of favoring the idea of atom-bombing Russia before she got the secret. No one has taken the trouble to find out the exact position. It is clear from the Soviet reaction to his hostility to totalitarian regimes and his passion for the individual that this was enough to make them think of him as a 'howling wolf of capitalism'."

(4a) Treasurer Dennis J. Darland reports:For the quarter ending 12/31/82:

Balance on hand (9/30/82).....	1750.58
Income: 10 new members.....	155.00
9 renewals.....	142.50
total dues.....	297.50

*received from members for the Russell Memorial in London

REPORTS FROM COMMITTEES

(5) Library Committee (Jack Ragsdale, Co-Librarian):

This month I received 65 new books for the BRS Library, as a gift from Don Jackanicz. Much appreciated!

I want to appeal to members to make donations of books of possible interest to BRS members. Ramon Suzera has kindly given us several volumes, as have Bob Davis, Lee Eisler, and Harry Ruja. The Library's address is on Page 1, bottom.

Next issue I expect to provide details on a portion of the Library's holdings.

(6a) Science Committee (Alex Dely, Chairman):

In the near future we hope to have a first draft of our "Accidental Nuclear War" book, commissioned by Canadian Peace Research Institute and Stockholm International Peace Research Institute (U.N. affiliated).

We have sent 6 briefing papers on National Security to the House and Senate Armed Services Committees, House Foreign Affairs and Senate Foreign Relations Committees. The response has been very encouraging.

We have another Congressional briefing paper ready: "Accidental Nuclear War Assessment Center."

We have 2 more briefings coming out soon: one on Latin America, the other on a model providing scenarios of potential conflicts at 3 different sites: Warsaw Pact vs. Nato Europe; Warsaw Pact vs. India/Pakistan; and Nicaragua/El Salvador vs. Honduras.

Our BRS Science Committee Report on Nuclear Testing/Earthquakes (RSN35-9) was partially reprinted by the MX Information Center (Salt Lake City) in their publication, "Nuclear Issues" (1/83).

The following 2 "call for help" papers outline what this Committee will be doing in the next 6 months:

"The good life is one inspired by love and guided by knowledge"

January 3, 1983

THE BERTRAND RUSSELL SOCIETY, INC.

TO: All Nuclear Weapons Researchers
RE: Call for information and coauthors for a book evaluating the probability of an accidental nuclear war.

Need Most national security experts today discuss nuclear war in terms of strategy. To our knowledge, no book length analysis has been written to identify the numerical probabilities technical and social/psychological factors contribute to the possibility of an accidental nuclear conflict. We have been commissioned to produce such a study by two U.S. Congressmen. Part of this assessment will be published as a book by Peace Research Institute, Dundas, Ontario, Canada.

Content

- It is planned to discuss, among others, the following factors:
1. **Accidental misfiring of one's own weapons.** As computerization grows, the chance of computer program errors, electronic chip failures, etc. increase.
 2. **Decreasing time allowed for error corrections.** In the next generation of weapons (e.g. Pershing II), there will only be a few minutes for error corrections by party launching and party being attacked.
 3. **Increasing number of nuclear weapons.** The U.S. alone is building 17,000 more nuclear weapons in the next few years.
 4. **Growing number of nations with nuclear weapons.** At least 17 nations, on all continents, are building weapons, many in trouble spots such as the Middle-East.
 5. **Dependability of people handling nuclear weapons.** The greater the degree of mental problems, alcoholism and drug abuse among those handling nuclear weapons the greater the chance of an accident.
 6. **Inaccurate plutonium accounting.** The U.S. monitoring system for keeping track of weapons-grade uranium is incomplete and inaccurate according to the General Accounting Office. The GAO also says the International Atomic Energy Agency has only carried out 50 percent of its inspections.
 7. **Technology is spreading.** Technical knowledge for converting civilian nuclear power plant waste into weapons-grade materials is spreading rapidly.
 8. **Expanding arms sales.** Greatly expanded arms sales by the U.S., U.S.S.R., France and Britain is increasing the spread of weapons technology.
 9. **Terrorist possession of nuclear warheads.** As the knowledge and materials for nuclear weapons spread, the opportunity for terrorist groups to acquire them is growing. If a terrorist group explodes a nuclear bomb, it could trigger a holocaust since the direction of the attack is unknown. Some nations have "little to lose" in threatening nuclear blackmail.
 10. **Secrecy.** Each nation's secret testing of new nuclear weapons increases uncertainties.
 11. **Technological advances.** The growing advantage of some offense weapons over defense capabilities makes nations increasingly edgy. For example, verification technology (NAVSTAR Satellite) is being outstripped by new weapons development (Cruise Missiles)
 12. **Age of conventional weapons stock.**
 13. **Length of civilian/military command chain.**
 14. **Vulnerability to blackmail via dependence on foreign sources of strategic minerals.**
 15. **Sabotage of key energy network systems (power plants, pipelines, etc.**
 16. **Communication mechanisms between nations.**
 17. **Financial market instabilities.**
 18. **Type of government (democratic/military).**
 19. **Conflict resolution mechanisms.**
- etc.

The book will consist of 4 parts.

- Part I: An overview will be made of available data on each of above mentioned factors.
- Part II: An estimate will be made for when an accidental nuclear war can be expected if no corrections are made in present trends. The estimate will include the analytical model used for combining factors studied. A mathematical estimate for each factor's contribution to chance of an accidental war will be presented. The probability estimates will need to be periodically updated in a rapidly changing world. The estimates will need to be continually refined as better data becomes available.
- Part III: An analysis of proposals made in the past 10 years by scientists, statesmen and informed laymen to alleviate the above mentioned factors will be described. Based on our probability analyses, recommendations to Congress on the most effective methods to deter an accidental nuclear war will be made.
- Part IV: An annotated bibliography of nuclear weapon accident materials for the last 10 years will be developed.

We intend to report the study's progress in Briefing Papers for purposes of immediate impact and feedback.

Sharing

We are writing the book because there is a great need considering our present world conditions. Yet, though many relevant publications exist, to our knowledge, no comprehensive and specific mathematical risk study has been made of these factors and their prevention.

We therefore invite your suggestions as to additional factors to be considered, data analysis techniques, relevant literature, sharing of mailing lists, etc....If you are interested in writing on a specific topic, we shall appreciate your help as a coauthor. A more detailed initial overview paper is available upon request. Thank you beforehand for your help! Please contact any of the following:

"The good life is one inspired by love and guided by knowledge"

January 3, 1983

THE BERTRAND RUSSELL SOCIETY, INC.

TO: All Nuclear Weapons Researchers

RE: Call for information and coauthors for a "Nuclear Weapons Treaty Verification Methods" Book.

Need

Much of the arms race is based on distrust and growing technical complexity. The lack of understanding of verification procedures provides one of the main difficulties in controlling the nuclear arms race. This lack leaves the public unsure if agreements can be verified. Technical arguments between specialists, at times, further confuse the issue. The purpose of this paper will be to describe in a concise and understandable manner verification procedures so that citizens, legislators and researchers can better assess arms reduction proposals for themselves.

Content

It is planned to write a section for each of the following verification procedures:

- Acoustic signal detection
- Electromagnetic signal detection
- Seismic signal detection
- Satellite X-ray signal detection
- Country's resource allocations
- Country's buying patterns for radioactive materials
- Conventional spying techniques
- Other procedures

For each procedure, there will be a section describing technique, equipment needed, what type of verification data can be collected, over what distance, in how much time, at what relative cost, and with what comparative strengths and weaknesses.

The book will be written in two parts:

1. A short popularized part that can be used alone.
2. A large parallel appendix for those who want greater detail on any one procedure.

Sharing

We shall be writing the book because we know of no such book and there is a great need. If you are planning a book of this type please let us know so that we will not duplicate but rather complement each other's efforts. If you are interested in writing on a specific procedure, we shall appreciate your help as a coauthor. If you have any materials you would like to call to our attention, we shall appreciate them. Thank you in advance for your help!

Physics Department, University of Arizona, Tucson, Arizona 85721

- (6b) Accidental War Assessment Center is the title of the Science Committee's latest paper (dated 1/14/83), by Dean V. Babst and Alex Dely. Here is its "highlight" page:

One way to estimate when an accidental war is likely to happen, unless corrections are made, is to determine when false alarms will take longer to clear than time allowed for stopping launch sequence. False alerts may be more frequent than is generally realized. Senators Gary Hart and Barry Goldwater in 1980 conducted an investigation. It was discovered that during one 18-month period the computers of the North American Air Defense Command experienced 151 false alarms, one lasting 6 minutes. If Pershing IIs are placed in operation in early 1984 as planned, the first false alarm after that taking longer than 5 or 6 minutes to clear may be too much. The false alarms of other nations are not known but if they are similar to ours it doubles the risk.

We urge Congress to speed up its current efforts to develop a multinational crises center for preventing an accidental war.

We urge Congress to create an Accidental War Assessment Center to help it assess planned major changes in weapons systems and policies as soon as possible. The Center could help Congress assess whether each major change adds more to our security than it detracts by increasing the chance of an accidental war. Cost for the Assessment Center will be minuscule compared with defense costs. Does it make sense to spend hundreds of billions of dollars for defense and nearly overlook the greatest growing threat, accidental war?

Factors found by the Center to be contributing most to the chance of an accidental war could be widely published so that other nations can join in prevention efforts.

Alex is taking a leave of absence from the University of Arizona Physics Dept. and Law School to work full time on the above. For more on accidental nuclear war, see (34).

BY BERTRAND RUSSELL

- (7) BR's BBC Interviews (1959) were published in the USA as a 50¢ paperback by Avon in 1960, under the title "Bertrand Russell Speaks His Mind", long out of print. Later it became available in a hardbound library edition published by Greenwood, originally at \$9.75, now at \$17.50. In February 1977 we reported that a paperback version printed in Germany, in English, was available from Germany at DM9.80 (NL13-22). But this doesn't exactly make it readily available.

We are fond of it because it presents BR's views on a dozen topics (a baker's dozen, actually) interestingly and succinctly.

Now fortunately "The Humanist" has printed the interviews in its November/December 1982 issue. They have shortened each interview and omitted two, which is just as well: the Avon paperback is 144 pages long.

We are going to reproduce the shortened Humanist version here. It's a good refresher, a good sampler of BR's views, and a good indicator of the range of BR's interests.

Two of the interviews are transcripts of films the BRS owns: "BR Discusses Philosophy" and "BR Discusses Happiness".

If you want to see the unshortened original version, it's in the BRS Library.

WHAT IS PHILOSOPHY?

WOODROW WYATT: Lord Russell, what is philosophy?

BERTRAND RUSSELL: Well, that's a very controversial question. I think no two philosophers will give you the same answer. My

own view would be that philosophy consists of speculations about matters where exact knowledge is not yet possible. That would only be my answer—not anybody else's.

W.W.: What's the difference between philosophy and science?

B.R.: Well, roughly, you'd say

science is what we know and philosophy is what we don't know. That's a simple definition and for that reason questions are perpetually passing over from philosophy into science as knowledge advances.

W.W.: What good is philosophy?

B.R.: I think philosophy has two uses really. One of them is to keep alive speculation about things that are not yet amenable to scientific knowledge; after all, scientific knowledge covers a very small part of the things that interest humankind and ought to interest them. There are a great many things of immense interest about which sci-

ence, at present at any rate, knows little, and I don't want people's imaginations to be limited and enclosed within what can be now known. I think that to enlarge your imaginative view of the world in the hypothetical realm is one of the uses of philosophy. But there's another use that I think is equally important, which is to show that there are things which we thought we knew and don't know. On the one hand, philosophy is to keep us thinking about things that we may come to know, and on the other hand to keep us modestly aware of how much what seems like knowledge isn't knowledge.

W.W.: Now in this way philosophy, in a sense, becomes a kind of servant of science.

B.R.: Well, that's part of it, but of course it isn't only a servant of science—because there are a number of things that science can't deal with. All questions of values, for example. Science won't tell you what is good and what is bad—what is good or bad as an end, not just as a means.

W.W.: But what change has there been over the years in the attitude of philosophers and the public to philosophy?

B.R.: That depends upon the school of philosophy that you're thinking of. In both Plato and Aristotle the main thing was an attempt to understand the world, and that, I should say personally, is what philosophy ought to be doing. Then you come on to the Stoics and their emphasis was mainly on morality—that you ought to be stoical, you ought to endure misfortunes patiently—and that came to be a popular use of "philosopher."

W.W.: Would you say that Marx was a philosopher?

B.R.: Well, he was certainly in a sense a philosopher, but now there you have an important division amongst philosophers. There are some philosophers who exist to uphold the status quo, and others who exist to upset it—Marx of course belongs to the second lot. For my part I should reject both those as not being the true business of a philosopher, and I should say the business of a philosopher is not to change the world but to understand it, which is the exact opposite to what Marx said.

W.W.: What is the main trend of philosophy today?

B.R.: Well, one would have to distinguish there between English-speaking countries and continental European countries. The trends are much more separate than they used to be. Very much more. In English-speaking countries and especially in England, there is a new philosophy which has arisen, I think, through the desire to find a separate field for philosophy. In what I was saying a moment ago, it would appear that philosophy is merely incomplete science, and there are people who don't like that view. They want philosophy to have a sphere to itself. That has led into what you may call linguistic philosophy, in which the important thing for the philosopher is not to answer questions but to get the meaning of the questions quite clear. I myself can't agree to that view, but I can give you an illustration. I was once bicycling to Winchester, and I lost my way, and I went to a village shop and said, "Can you tell me the shortest way to Winchester?" and the man I asked called to a man in a back room whom I couldn't see—"Gentleman wants to know the shortest way to Winchester." And a voice came back, "Winchester?"—"Aye"—"Way to Winchester?"—"Aye"—"Shortest way?"—"Aye"—"Don't know." And so I had to go on without getting any answer. Well, that is what Oxford philosophy thinks one should do.

W.W.: What practical use is your sort of philosophy to a man who wants to know how to conduct himself?

B.R.: A great many people write to me saying they are now completely puzzled as to how they ought to conduct themselves, because they have ceased to accept the traditional signposts to right action and don't know what others to adopt. I think that the sort of philosophy I believe in is useful in this way: that it enables people to act with vigor when they are not absolutely certain that that is the right action. I think nobody should be certain of anything. If you're certain, you're certainly wrong, because nothing deserves certainty, and so one ought always to hold all one's beliefs with a certain element of doubt and one ought to be able to act vigorously in spite of the doubt. After all, this is what a

general does when he is planning a battle. He doesn't quite know what the enemy will do, but if he's a good general he guesses right. If he's a bad general he guesses wrong. But in practical life one has to act upon probabilities, and what I should look to philosophy to do is to encourage people to act with vigor without complete certainty.

W.W.: What do you think is the future of philosophy?

B.R.: I don't think philosophy can, in future, have anything like the importance that it had either to the Greeks or in the Middle Ages. I think the rise of science inevitably diminishes the importance of philosophy.

W.W.: How would you summarize the value of philosophy in the present world and in the years to come?

B.R.: I think it's very important in the present world. First, because, as I say, it keeps you realizing that there are very big and very important questions that science, at any rate at present, can't deal with and that a scientific attitude by itself is not adequate. And the second thing it does is to make people a little more modest intellectually and aware that a great many things which have been thought certain turned out to be untrue, and that there's no short cut to knowledge. And that the understanding of the world, which to my mind is the underlying purpose that every philosopher should have, is a very long and difficult business about which we ought not to be dogmatic.

RELIGION

W.W.: Have you ever had religious impulses, Lord Russell?

B.R.: Oh, yes. When I was adolescent I was deeply religious. I was more interested in religion than in anything else, except perhaps mathematics. And being interested in religion led me—which it doesn't seem often to do—to look into the question of whether there was reason to believe it. I took up three questions. It seemed to me that God and immortality and free will were the three most essential questions, and I examined these one by one in the reverse order, beginning with free will, and gradually I came to the conclusion that there was no

reason to believe in any of these. I thought I was going to be very disappointed, but oddly enough I wasn't.

W.W.: Do you think it is certain that there's no such thing as God, or simply that it is just not proved?

B.R.: I don't think it's certain that there is no such thing—no—I think that it is on exactly the same level as the Olympic gods, or Norwegian gods; they also may exist, the gods of Olympus and Valhalla. I can't prove they don't, but I think the Christian God has no more likelihood than they had. I think they are a bare possibility.

W.W.: Do you think that religion is good or harmful in its effects?

B.R.: I think most of its effects in history have been harmful. Religion caused the Egyptian priests to fix the calendar, and to note the occurrence of eclipses so well that in time they were able to predict them. I think those were beneficial effects of religion; but I think a great majority have been bad. I think they have been bad because it was held important that people should believe something for which there did not exist good evidence and that falsified everybody's thinking, falsified systems of education, and set up also, I think, complete moral heresy; namely, that it is right to believe certain things, and wrong to believe certain others, apart from the question of whether the things in question are true or false. In the main, I think religion has done a great deal of harm. Largely by sanctifying conservatism and adherence to ancient habits, and still more by sanctifying intolerance and hatred. The amount of intolerance that has gone into religion, especially in Europe, is quite terrible.

W.W.: But then, if a religion is harmful, and yet humans have always insisted on having one, what is the answer?

B.R.: Oh, humans haven't. Some have, and those are the persons who are used to it. In some countries, for instance, people walk on stilts, and they don't like walking without stilts. Religion is just the same thing. Some countries have got accustomed to it. I spent a year in China, and I found that the ordinary average Chinese had no religion whatsoever, and they were

just as happy—I think, given their bad circumstances, happier than most Christians would have been.

W.W.: But I think a Christian would say that if he could convert them into being Christians they'd be much happier.

B.R.: Well, I don't think that's borne out by the evidence at all.

W.W.: Yes, but now doesn't humankind rather search for some cause of faith outside itself, which appears to be bigger than humankind, not merely as a question of cowardice or leaning on it, but also wanting to do something for it?

B.R.: Well, but there are plenty of things bigger than oneself. I mean, first of all there's your family, then there's your nation, then there's humankind in general. Those are all bigger than oneself and are quite sufficient to occupy any genuine feelings of benevolence that a person may have.

W.W.: Do you think that organized religion is always going to go on having the same sort of grip on humankind?

B.R.: I think it depends upon whether people solve their social problems or not. I think that if there go on being great wars and great oppressions and many people leading very unhappy lives, probably religion will go on, because I've observed that the belief in the goodness of God is inversely proportional to the evidence. When there's no evidence for it at all, people believe it, and, when things are going well and you might believe it, they don't. So I think that, if people solve their social problems, religion will die out. But on the other hand, if they don't, I don't think it will.

W.W.: Do you think that you and I are going to be completely snuffed out when we die?

B.R.: Certainly, yes. I don't see why not. I know that the body disintegrates, and I think that there's no reason whatever to suppose that the mind goes on when the body has disintegrated.

WAR AND PACIFISM

W.W.: Lord Russell, do you think it reasonable to say there have been just wars.

B.R.: Yes, I think it's quite reasonable, though, of course, you have to define what you mean by just. You could mean, on the one hand, wars which have a good legal justification, and certainly there have been quite a number of wars where one side had a very good legal justification. Or you could mean wars which are likely to do good rather than harm, and that isn't at all the same classification. Not at all.

W.W.: You were a pacifist in the First World War. Don't you think you were a bit inconsistent in not being a pacifist in the Second World War?

B.R.: Well, I can't think so at all. I'd never have taken the view that all wars were just or that all wars were unjust. Never. I felt some were justified and some were not, and I thought the Second World War was justified, but the First I thought was not.

W.W.: Do you think that people enjoy wars?

B.R.: Well, a great many do. It was one of the things that struck me in 1914 when the First War began. All my pacifist friends, with whom I was in time to work, thought that wars are imposed upon populations by the wicked machinations of governments, but I walked about the streets of London and looked in people's faces, and I saw that they were really all happier than they were before the war had started. I said so in print and I caused great heart-searchings among pacifist friends, who didn't like my saying this. I still think that a great many people enjoy a war provided it's not in their neighborhood and not too bad; when the war comes onto your own territory it's not so pleasant.

W.W.: But isn't it part of human nature to have wars?

B.R.: Well, I don't know what human nature is supposed to be. But your nature is infinitely malleable, and that is what people don't realize. Now if you compare a domestic dog with a wild wolf, you will see what training can do. The domestic dog is a nice comfortable creature, barks occasionally, and he may bite the postman, but on the whole he's all right; whereas the wolf is quite a different thing. Now you can do exactly the same thing with human beings. Human

beings according to how they're treated will turn out totally different, and I think the idea that you can't change human nature is so silly.

W.W.: But surely we've been a long time at the job of trying to persuade people not to have wars, and yet we haven't got very far.

B.R.: Well, we haven't tried to persuade them. A few, a very few, have tried to, but the great majority have not.

COMMUNISM AND CAPITALISM

W.W.: What do you think are the similarities between communism and capitalism, Lord Russell?

B.R.: There are quite a lot of similarities which can result almost inevitably, I think, from modern technique. Modern technique requires very large organizations, centrally directed, and produces a certain executive type to run them. And that is equally true in communist and in capitalist countries, if they are industrially developed.

W.W.: Do you think that they produce a similar attitude of mind, these large organizations in, say, Russia and America?

B.R. I think so, though not completely. I mean, there are differences in degree, but not in kind. . . . I think there is a very great similarity between a really powerful American executive and a Soviet administrator. There are more limitations upon what the American executive can do, but in kind they are the same sort of thing.

W.W.: After the First World War you went to Russia, and, at a time when most people of the Left were giving three cheers for Russia, you struck rather a discordant note. Do you still think that what was going on in Russia then was undesirable?

B.R.: Oh, I do, and I think the Russian regime that has resulted is not particularly desirable from my point of view, because it doesn't allow for liberty, it doesn't allow for free discussion, it doesn't allow for the unfettered pursuit of knowledge. It encourages dogmatism, it encourages the use of force to spread opinion, it does a number of things which as an old liberal I find

very, very distasteful indeed.

W.W.: Do you mean that the communists in Russia, having got hold of this apparatus of government, now no longer believe in the dictatorship of the proletariat?

B.R.: Yes, I do. The proletariat is a Pickwickian word, as it's used in Russia. When I was there I found that Lenin counted as a proletarian, but the absolutely miserable beggars in the street who couldn't get enough to eat were counted lackeys of the bourgeoisie.

W.W.: I see what you mean. But to move on to another area where communism is practiced on a very large scale—China—do you think that China is as great a threat to what I won't now call the free world, but the parliamentary, as Russia is?

B.R.: Yes, I should think, in the long run, perhaps a greater threat. China is newer to it than the Russians are and is still at an earlier and more fanatical stage than the Russians have reached. And China has a much larger population than Russia. It has a population which is naturally industrious—they have always been industrious; and it is capable of being a more powerful state than Russia, and I think has at least as great men.

W.W.: Do you think it is possible for communism and capitalism to learn to live side by side in the world together?

B.R.: Yes, it certainly is possible. It's only a question of getting used to each other. Now take the Christians and the Mohammedans. They fought each other for about six centuries, during which neither side got any advantage over the other, and at the end of that time some man of genius said: "Look, why shouldn't we stop fighting each other and make friends?" And they did, and that's all right, and just the same thing can happen with capitalism and communism as soon as each side realizes that it can't gain the world.

TABOO MORALITY

W.W.: Lord Russell, what do you mean by taboo morality?

B.R.: Taboo morality is characteristic of the primitive mind. It is the only kind, I think, in primitive

tribes where, for example, it would be a rule you must not eat out of one of the chief's dishes.

Of course a great deal of taboo morality is entirely compatible with what one might call rational morality. For instance, that you shouldn't steal or that you should not murder. Those are precepts which are entirely in accord with reason, but they are set forth as taboos; they have consequences that they ought not to have. For instance, in the case of murder, it is considered that it forbids euthanasia, which I think a rational person would be in favor of.

W.W.: Well, if you don't believe in religion, and you don't, and if you don't think much of the unthinking rules of taboo morality, do you believe in any general system of ethics?

B.R.: Yes, but it's very difficult to separate ethics altogether from politics. Ethics, it seems to me, arise in this way. A man is inclined to do something which benefits him and harms his neighbors. Well, if it harms a good many of his neighbors, they will combine together and say, "Look, we don't like this sort of thing, we will see to it that it doesn't benefit the man," and that leads to the criminal law, which is perfectly rational. It's a method of harmonizing the general and private interest.

W.W.: Is there such a thing as sin?

B.R.: No. I think sin is difficult to define. If you mean merely undesirable actions, of course there are undesirable actions. When I say *undesirable*, I mean that they are actions which I suppose do more harm than good, and of course there are. But I don't think sin is a useful conception. I think sin is something that it is positively good to punish, such as murder, not only because you want to prevent murder but because the murderer deserves to suffer.

W.W.: A large part of taboo morality affects sexual relations. And a very large part of your output in writing has been about sexual relations. What advice would you give now to people who want to conduct themselves sensibly so far as sex is concerned?

B.R.: Well, I should like to say, by way of preface, that only about 1 percent of my writings are concerned with sex, but the conven-

tional public is so obsessed with sex that it hasn't noticed the other 99 percent of my writings. I should like to say that, to begin with, I think 1 percent is a reasonable proportion of human interest to assign to that subject. But I should deal with sexual morality exactly as I should with everything else. I should say that, if what you're doing does no harm to anybody, there's no reason to condemn it. And you shouldn't condemn it merely because some ancient taboo has said that this is wrong. You should look into whether it does any harm or not, and that's the basis of sexual morality as of all other.

W.W.: To come back to the basis of what we've just been talking about—the unthinking rules of taboo morality. What damage do you think they are doing now?

B.R.: Taboo morality certainly is doing harm today. Take, for example, the question of birth control. There is a very powerful taboo by certain sections of the community which is calculated to do very enormous harm. Very enormous harm. It is calculated to promote poverty and war and to make the solution of many social problems impossible. That is, I think, perhaps the most important, and I think there are a number of others. Indissolubility of marriage is definitely harmful; it is based solely upon ancient tradition and not upon examination of present circumstances.

POWER

W.W.: Lord Russell, what are the impulses that make men want power?

B.R.: I should suppose that the original impulses, out of which subsequent power-loving people got their drive, came in times that were liable to occasional famine, and when you wanted to be sure that if the food supply ran short it wouldn't be you who would suffer. It required that you have power.

W.W.: What are the kinds of power that have developed since then?

B.R.: Well, there are different ways of classifying powers. One of the most obvious, I think, is that of

direct power over the body. This is the power of armies and police forces. Then there is the power of reward and punishment, which is called the economic power. And then, finally, there is propaganda power, a power to persuade.

W.W.: Can we turn a moment to another form of power—economic. Do you think that Marx put too much emphasis on the importance of economic power?

B.R.: Marx, in the first place, put too much emphasis on economic as opposed to other forms of power. Second, misled by the state of business in the 1840s in England, he thought that it was ownership which gives power and not executive control. Both those interpretations led him to propose a panacea for all the ills of the world which proved entirely fallacious.

W.W.: Do you think economic power needs curbing?

B.R.: Yes, I think every kind of power needs curbing because certainly the power to starve large regions is very undesirable. I think the economic power of certain regions in the Middle East to withhold oil if they like is not at all a desirable kind of thing.

W.W.: Now how important is this whole problem of use and abuse of power in a person's life.

B.R.: I think it's of quite enormous importance, and in fact I think it's almost the main difference between a good government and a bad one. In a good government, power is used with limitations and with checks and balances and in a bad government it's used indiscriminately.

W.W.: Do you think that, broadly speaking, the democratic systems of the West produce a roughly reasonable balance between the need of government to take action in a firm and decisive way and the need of the government to satisfy people that the action they're taking is in conformity with what people want?

B.R.: Well, certainly we are very much better than totalitarian governments. Very much better. For the reason that we have certain ultimate curbs on power. But I think there ought to be some rather more immediate curb than very oc-

casional general elections. In the modern world, where things are so closely integrated, that is hardly enough, and we ought to have more in the way of referendums.

W.W.: Don't you think that referendums would be a rather clumsy way of doing this?

B.R.: Oh, they'd be clumsy and slow. But I think they might be better than a system in which it's possible at any moment for a government to plunge its country into utter and total disaster without consulting anybody.

WHAT IS HAPPINESS?

W.W.: Lord Russell, you seem to be a very happy person. Have you always been so?

B.R.: No, certainly not. I've had periods of happiness and periods of unhappiness. Luckily for me the periods of happiness seem to lengthen as I grow older.

W.W.: What do you think are the ingredients that make for happiness?

B.R.: Well, I think four are the most important. Perhaps the first of them is health; the second, sufficient means to keep you from want; third, happy personal relations; and fourth, successful work.

W.W.: What are the factors that militate against happiness?

B.R.: Well, there are quite a number, apart from the opposites of the things we're talking about. Now one of the things that militates against happiness is worry, and that's one respect in which I've become much happier as I've grown older. I worry much less and I found a very useful plan in regard to worry, which is to think, "Now what is the very worst thing that could happen?" . . . And then think, "Well, after all it wouldn't be so very bad a hundred years hence; it probably won't matter." After you've really made yourself think that, you won't worry so much. Worry comes from not facing unpleasant possibilities.

W.W.: How important do you think boredom is?

B.R.: I think it's immensely important, and I think it's—I won't say

it's distinctly human, because I've looked at apes in the zoo and they seemed to me to be experiencing boredom—but I don't think other animals are bored. I think it's a mark of higher intelligence, but I think the importance of it is quite enormous. You can see it from the way that savages, when they first come in contact with civilized people, want above all things alcohol. They want it far more than they want the Bible or the Gospel or even blue beads, and they want it because for a moment it takes away boredom.

W.W.: But how is one to overcome boredom in people, say, girls

who are quite well educated? They marry and then have nothing else to do but look after the house.

B.R.: Well, it's a bad social system. I don't think that you can always alter it by individual action, but that example you give is nowadays very important. It shows that we haven't got a proper social system because everybody ought to be able to exercise whatever useful skill he or she possesses. Modern highly educated women after they marry are not so very well able to, but that's an effect of our social system.

W.W.: Do you think that it helps

people to be happy to have some cause to live for and with?

B.R.: Yes, provided they can succeed more or less. I think if it's a cause in which there is no success they don't get happy. But if they can get a measure of success from time to time, then I think it does help. And I think I should go on from that to another thing, which is that side interests, especially as one gets older, are a very important element in happiness. The more your interests are impersonal and extend beyond your own life, the less you will mind the prospect that your own life may be going to come to an end before very long. I think that's a very important ele-

ment of happiness in old age.

W.W.: What do you think of all these formulae that people are constantly issuing about how to live a long life and be happy?

B.R.: Well, as to how to live a longer life, that's a medical question and not one on which I should like to express an opinion. I get a great deal of literature from the advocates of these systems. They tell me that if only I took their drugs my hair would turn black again. I'm not sure that I should like that because I find that the whiter my hair becomes the more ready people are to believe what I say.

We are going to hold the 4 remaining BBC Interviews till later. If we have room, they will appear toward the end of this issue. They do. See (37).

On the obligations of scientists. We are indebted to OPHELIA HOOPES for the following article from "The Minority of One" (February 1964):

SCIENTISTS AND WORLD PEACE

Tests of nuclear weapons claim a higher toll in human lives and health than ever predicted. Government scientists obscure these facts. Men like Linus Pauling alert us to the universal hazards.

By Bertrand Russe!!

The struggle for peace has been very much dependent upon the willingness of those who know the truth to speak it. Scientists who have not been in the pay of governments have known and spoken the truth about the terrible danger with regard to radioactive fallout resulting from nuclear testing in the atmosphere. Governmental scientists, on the other hand, have been evasive and often openly dishonest in their remarks about these phenomena. It has been painful for those scientists who have experienced the use to which their work has been put by governments. It has been particularly exasperating to find that those remarks which have been made by governmental scientists and which ignored or suppressed the danger to mankind have received the widest attention and publicity from the mass media, whereas the painstaking efforts of non-governmental scientists to speak the truth and to alert the public have gone virtually unattended by those whose duty it is to inform the public of the truth.

In 1954, in response to a manifesto drafted by me and joined in by Albert Einstein, a very large group of Nobel scientists from East and West were brought together in a series of conferences which came to be known as the "Pugwash Conference." The purpose of these meetings was to enable scientists of East and West to discuss outstanding problems concerning the danger of war and to emphasize the social responsibility of scientists for their work and the consequences of the use to which it has been put by people who hold power. For eight years the Pugwash scientists have prepared reports, in which cooperation has occurred between scientists of East and West, of the

highest value and importance. It has been interesting to observe the extent to which these reports and the new information they revealed have been ignored by the press of the world.

One of the scientists who has made a major contribution in the struggle against nuclear war is Dr. Linus Pauling, who has been justly honored recently. In a recent article, "Would Civilization Survive a Nuclear War," published in the November, 1963 issue of *The Minority of One*, Dr. Pauling pointed out that the Soviet Union and the United States together possess a stockpile of nuclear weapons which is equivalent to the explosive power of 320,000 million tons of T.N.T. This arsenal of death is capable of destroying our planet a great number of times. To illustrate this, Dr. Pauling pointed out that in order to exhaust this stockpile it would be necessary to use all of the explosive power employed during the entirety of the Second World War each day for 146 years. Recently it has been revealed that the United States has, at the moment, a stockpile of 130,000 aerosol nerve gas bombs. This non-nuclear stockpile is as deadly as its nuclear counterpart. Each nerve gas bomb is capable of extinguishing life in an area of 3,500 square miles. The total stockpile is capable of eliminating life in an area of 455 million square miles. This is eight times the total land area of the globe and 151 times that of the United States of America.

These statistics give an indication of the gross immorality involved in the usage of the talent and the inventions of scientists by governments. The scientist has a peculiar responsibility to tell the truth about his work and to insist that his creative endeavor is not profaned in this way. Those scientists who have worked for governments have said that nuclear testing did not provide a

very grave danger to mankind. It has just been revealed, however, that the first cause of child mortality in the United States is now leukaemia, which only a short while ago was a comparatively rare illness. The second cause is congenital deformity which, only a short time ago, was virtually unheard of as an important cause of death. The radiation found in children of the State of Utah aged two to fourteen was 28 times the safe level for one year, and it was acquired within one month. Sir John Cockcroft of the Atomic Energy Commission in Great Britain has recently stated that, during the past two years, the level of radiation has reached such a height in Great Britain that at one point it was thought necessary to halt all supplies of fresh milk to children. Sir John further stated that, if testing in the atmosphere were to be resumed, it would be necessary to halt such supplies of fresh milk. These are truly shocking revelations and indicate the lonely courage of those scientists who have spoken out and the moral failure of those who have not.

It is only now being said that the recent increase in leukaemia in the State of Utah may be owing to radiation escaping from underground tests and that the spate of deformed children attributed to the thalidomide drug may, in fact, have resulted from the incredible increase of radioactive fallout during the large series of Russian and American tests which occurred in 1961 and 1962. No doubt we shall learn years from now, assuming that we are alive, more terrifying information concerning the negligence of governments and the silence of people who should have had the moral determination to speak. It is because of the efforts of a few honorable scientists who have worked incessantly for peace that the danger to mankind has become better known and the hope for human survival remains.

This article will also appear in the *Nobel Prize Magazine*, published in Sweden.

For more good work by Linus Pauling, see (40).

(Thank you BOB DAVIS, DON JACKANICZ)

PROMOTING BR'S PURPOSES

(10)

Let us all praise the Catholic bishops. It's not often that we are able to agree with the Catholic hierarchy. Its views on abortion and divorce cause unnecessary suffering. Its views on birth control cause overpopulation, which causes poverty and, in the long run, war. But let us not fail to notice that the bishops are on the same side as Bertrand Russell on that most important of issues: nuclear weapons. This is how it was written up in *The New York Times* (11/21/82, p. 4E):

White House Failed to Soften Bishops' Policy Criticism Last Week

Theology Gets Down to Cases on Nuclear Arms

By KENNETH A. BRIGGS

WASHINGTON — The nuclear age has ushered in what many of the nation's Roman Catholic bishops call a "new moment" in moral theology that demands a fresh way of thinking about the ethics of war and peace. Last week, at its annual meeting in Washington, the National Conference of Catholic Bishops took decisive steps to draft a pastoral letter that solidifies the church's opposition to nuclear arms, tentatively stakes out some new ground on deterrence and, in general, reflects a striking change in attitude.

The bishops' stance, as contained in the second draft of the letter that unofficially received a two-thirds backing, calls nuclear war "immoral." It condemns the use of nuclear arms as well as the threat to use them, and allows for their possession only if linked to earnest efforts to achieve negotiated disarmament. It also raises doubts about the possibility of fighting "limited" nuclear war and calls for a bilateral, verifiable nuclear freeze.

Criticism of the document came swiftly from the White House in a letter from William P. Clark, President Reagan's national security adviser. Mr. Clark tried with little apparent success to convince the bishops that American nuclear policy is compatible with the church's moral standards. Complaints from small groups of conservative Catholics also seem to have had little impact.

Despite the sudden attention given the draft document, much of it reflects stands taken in the past by Popes, church councils and the bishops. But where earlier statements tended to refer to the general state of the world, the American bishops this time spoke, too, to their homeland and to its military policies.

That trend has been evident for several years on other issues. The bishops are heeding the direction of the Second Vatican Council by applying the broad principles of the universe's church to specific issues and in so doing have become bolder critics of their own government. By 1971 they were opposing the Vietnam war and within another two years speaking out against the Supreme Court's decision to allow abortion. More recently, they have decried American military aid to El Salvador, fought cuts in aid to the poor and, most dramatically, rallied against the arms race.

The common theme is that all life is sacred. As Archbishop John F. Roach of Minneapolis confid-

ence president, noted in his opening address, "Where the value in question is human life, the linkages go far beyond the surface and deeply influence the whole cast of our moral lives. Selective reverence for human life is a kind of contradiction in terms, not only as a matter of logic but also as a matter of existential reality."

Over the past decade, the relevance of that conviction to the arms race has engaged the attention of a growing number of bishops. At various points

few bishops still balked, but the vast majority were clearly on a course that surprised many in and out of the church. Their resolve was echoed in an apparent rebuff of the Administration's criticism by Bishop Sullivan, who called on the conference to "stay the course for peace."

On most every major point, the bishops stood together. The one area where they were challenged to go beyond previous church statements on nuclear arms concerned the justification for nuclear deterrence. At issue was what Pope John Paul II meant when he said that possessing nuclear weapons could be "morally acceptable" if tied to sincere efforts to bring about disarmament. The problems were twofold. One was that a questionable means, a nuclear stockpile, was being justified in the service of a patently good end, maintaining peace. To some that was a moral contradiction: Archbishop Rembert Weakland of Mil-

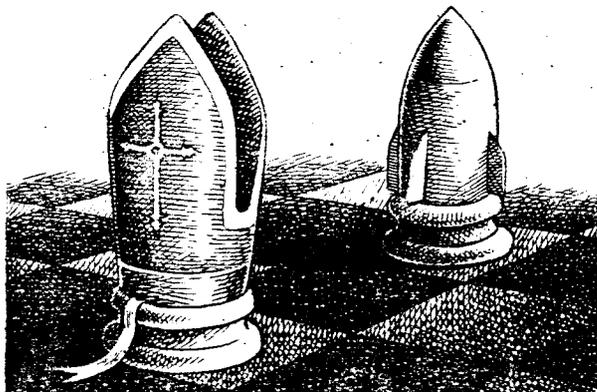

waukee asked the Vatican to provide clear definitions. The other problem was the feeling among many bishops that the Reagan Administration has not sincerely pursued negotiated arms reductions with the Russians. Thus present United States nuclear deterrence cannot be justified. Bishop Raymond Lucker of Wisconsin expressed that conviction on the floor.

The view is still considered radical among the bishops, but it raises the question and, in the opinion of some, has placed pressure on the Administration to demonstrate good faith efforts. Far from the bishops' being influenced by the Administration, some bishops believe the White House could increasingly respond to the moral arguments set forth by the church's hierarchy.

At the risk of being called naive or accused of meddling in matters beyond their competence, the bishops spoke boldly of being peacemakers. Warned that their actions could divide the church, they showed no inclination to back down. Bishop Kenneth Untener of Saginaw, Mich., said he had mailed copies of the draft letter to 18,000 members of his diocese and was convinced from the response that it was "an instrument of peace."

A Gallup survey, released today, indicates that the bishops have solid backing from the nation's 50 million Catholics on their proposal for a nuclear freeze. It shows Catholics favoring a bilateral freeze 82 percent to 13 percent, with 5 percent undecided. At the same time, they narrowly reject a universal freeze by 53 percent to 47 percent.

The bishops left Washington committed to voting on a final version in May. There was little likelihood that differences over the morality of deterrence could be ironed out to everyone's satisfaction, but the bishops seemed content to live with the disagreements. Declaring "our top priority must be the disarmament of the human spirit," Archbishop John R. Quinn of San Francisco called on the conference to endeavor to bring about "the creation of a psychology of peace."

along the way, certain bishops have led the movement in an evolutionary direction, through timely encouragement or example. Among the landmarks was the testimony favoring SALT II by John Cardinal Krol before a Senate subcommittee in 1978. Many believe the intervention by Cardinal Krol, a respected conservative from Philadelphia, helped foster a change in direction among many who had been reluctant to move away from the church's "just war" tradition.

Other bishops have set the tone and moved the issue along in their own dioceses. Among them were Humberto Cardinal Medeiros of Boston, who conducted talks with scholars from Massachusetts Institute of Technology and Harvard before writing his own pointed assault on nuclear weapons, and Bishop Walter Sullivan of Richmond, Va., who became an outspoken critic of United States policy. Then there was the leadership of Archbishop Joseph L. Bernardin of Chicago as head of the special committee entrusted with drafting the pastoral letter.

The bishops called for such a letter at their 1980 meeting, and many at this year's session showed signs of having undergone a recent conversion. A

QUESTIONS & ANSWERS

- (11) Horrible, horrible, horrible. Dick Cavett was interviewing Jonathan Miller on PBS, and remarked, "Someone said, 'Once it is understood that life is horrible, horrible, horrible, one can get on with living and be happy with it.'"

"Oh," said Miller, "that was Bertrand Russell."

CREATIONISM

- (12) From The New York Times (11/23/83, p.A23):

Judge Voids Creation Law In Louisiana

NEW ORLEANS, Nov. 22 (AP) — A Federal district judge today struck down a Louisiana law requiring the public schools to teach "creation science" with the theory of evolution.

State officials said an appeal will be filed. A similar statute had been thrown

out in Arkansas, leaving Louisiana's the only such law in the nation.

The law here was challenged on the basis that creation science was religion in disguise and that the provision violated the First Amendment guarantee against establishment of religion.

Judge Adrian Duplantier today granted a summary judgment sought by the state Board of Elementary and Secondary Education.

Board's Authority Cited

The board said the law violated Louisiana's Constitution, because only the board is empowered to mandate the teaching of a particular course. It also argued that the Legislature overstepped its authority in imposing the study of creationism.

Judge Duplantier agreed, saying the Legislature exceeded its limits by "dictating to public schools not only that a subject must be taught, but also how it must be taught."

The measure, passed in 1981, was sponsored by State Senator Bill Keith of Shreveport, with the backing of fundamentalist religious groups.

"I think the judge is wrong," Senator Keith said today. "I think the judge's decision was a perfunctory one."

Decision to Be Appealed

Senator Keith and the state Attorney General, William Guste, promised an appeal of Judge Duplantier's decision.

The case had been filed by the American Civil Liberties Union on behalf of 45 plaintiffs, with the state board a defend-

ant. Later, the board switched sides.

The decision, coupled with one by Federal District Judge William Overton in Little Rock, Ark., "establishes a consistent pattern that creationism cannot be imposed on public schools," said Martha Eigel, the director of the Louisiana civil liberties union.

The creationism law required a school to teach "creation science" along with evolution. Creation science parallels Biblical accounts of the creation of the earth and everything on it instantaneously no more than 10,000 years ago. Evolution, as outlined by Charles Darwin and accepted by most scientists, holds that life on earth developed over millions of years.

NEWS ABOUT MEMBERS

- (13) Marvin Kohl wrote a letter to "The Humanist" (Jan/Feb '83):

Bertrand Russell Speaks

Bertrand Russell is clearly one of the great secular humanists of the twentieth century. Few philosophers have placed greater emphasis upon, and

been more personally devoted to, the ideals of love and knowledge. We should remember our great heroes and, therefore, I most welcome the "Bertrand Russell Speaks" interview.

I only wish to take exception to a statement made in the opening paragraph of the introduction. Strictly speaking, Russell devoted his life to

the pursuit of truth and not "the pursuit of scientific, philosophic, and moral truth." He did not believe that there were different kinds of truth. He certainly did not hold, as the interview itself reveals, that philosophic truth differs from scientific truth. What makes philosophy different is not that it has a different way of truth

but that it addresses the larger and more important questions and believes that, even where exact knowledge is not yet possible, greater understanding is...

Fredonia, NY

- (14) Corliss Lamont is the subject of this article in "The Columbia Law Alumni Observer" (Oct/Nov '82):

Corliss Lamont Endows Civil Liberties Chair

Humanist philosopher and civil libertarian Corliss Lamont has given the Law School \$1 million to establish a professorship of civil liberties. The gift, announced in October by Columbia President Michael I. Sovern, was presented to Law School Dean Albert J. Rosenthal on September 13.

The endowed chair, established by the University Trustees at their October meeting, has been named the Corliss Lamont Professorship of Civil Liberties.

Lamont, an alumnus and longtime benefactor of the University and a former faculty member, is widely

known as a humanist philosopher and civil libertarian. An active supporter of civil liberties groups, he is the chairman of the National Emergency Civil Liberties Committee. For more than twenty years he was a director of the American Civil Liberties Union.

"Columbia is once again the beneficiary of Mr. Lamont's exceptional generosity," President Sovern said in his announcement. "Too few of us recognize how critical civil liberties law is to the well-being of our entire society. I have long admired Mr. Lamont's abiding faith in the importance of these liberties and cannot conceive of a more fitting expression of that faith than this professorship."

"It is really a great privilege for me to establish such a

professorship at Columbia," Lamont said. "It solidifies the warm ties I have had with the University since I started teaching there more than fifty years ago in 1928. I believe that the professorship of civil liberties can be important for the study and advancement of these rights in the United States. The Columbia Law School has taken a significant step forward in accepting this endowment."

Law School Dean Albert J. Rosenthal said that the chair will serve as a focus and catalyst for the further enlargement of the school's activities in support of civil liberties. "Its occupant will be a leading scholar with a strong record of creative research and writing relating to civil liberties and civil rights as defined in the U.S. Constitution and the Bill of Rights and elsewhere in federal and

state laws," said Dean Rosenthal.

"The Corliss Lamont Professorship will be a wonderful symbol of this dedicated humanitarian's lifelong commitment to the defense of freedom," said Dean Rosenthal, adding, "we are deeply grateful."

Lamont has long been a proponent of civil liberties causes. In 1965, in the U.S. Supreme Court, he won a First Amendment case against censorship of incoming foreign mail by the U.S. Postmaster General. In 1953, in the U.S. Court of Appeals, he won on constitutional grounds the dismissal of an indictment for contempt of Congress brought by Senator Joseph McCarthy's investi-

gating committee. Lamont has received numerous awards and honors, including the John Dewey Humanist Award, the Humanist of the Year Award and the Gandhi Peace Award.

Corliss Lamont graduated from Harvard *magna cum laude* in 1924 and did graduate work at Oxford University and at Columbia, where he received the Ph.D. in 1932. He taught philosophy at Columbia from 1928 to 1932 and from 1947 to 1959. He is the editor or author of some thirty works. Recent books include *Voice in the Wilderness*, a collection of essays written over a period of fifty years, and his autobiography, *Yes to Life*.

Lamont's family ties with Columbia began before his birth eighty years ago. His mother, Florence Corliss Lamont, earned the M.A. degree in philosophy from Columbia in 1898. She gave Columbia the estate that houses the University's Lamont-Doherty Geological Observatory in Palisades, N.Y. Mr. Lamont has given to the University Libraries important collections of major literary and philosophical figures, many of whom were his friends, such as Rockwell Kent, George Santayana and John Masefield. In 1979 he gave the libraries letters from his Columbia professor and friend, philosopher John Dewey. ■

- (15) **Joseph Nechvatal will be one of the "young emerging visual artists whose works will be on view and available for purchase on February 12th" at the Kitchen Center for Video, Music and Dance, 484 Broome Street (Second Floor), NYC. The occasion is a fund-raising inaugural concert celebrating a new Steinway B grand piano. It aims to raise money to match an NEA Challenge Grant. Tickets \$100.**

- (16) **Jack Ragsdale wrote this letter to "Free Mind", newsletter of the American Humanist Association (Jan/Feb '83):**

Deathbed Conversions

The letter of W. F. Harris to the *Johannesburg Star*, concerning the "conversion" of Darwin to Christianity (republished in *Free Mind*, November/December 1982), is an exposé of what is apparently a commonplace occurrence. I know of two other cases where famous men were said to have changed their beliefs of a lifetime on their deathbeds: George Bernard Shaw and Bertrand Russell.

Shaw was unconscious and did not recover, so he could not deny the story; but Russell did. Let me quote

him:

... I am interested in the recrudescence of an entirely fictitious story which began in 1921 and which I had supposed had died down by this time.

In that year, I had double pneumonia in Peking and only one English nurse was obtainable. She was a lady of great piety who told me when I was convalescent that she had had great struggles with her conscience on the ground that she thought it her duty to let me die although professional instinct proved too strong for this virtuous impulse. I was delirious for a fortnight, and, as soon as the delirium ended, I had

no recollection whatever of the two weeks that had passed. During these two weeks the aforesaid nurse looked after me at night and my wife looked after me by day. It appears that when I coughed I was in the habit of lapsing into profanity in ways which the nurse mistook for serious appeals to the deity. This, at least, was what my wife told me. . . .

Stories of this sort are always spread about unbelievers. . . .

All this is found in *Dear Bertrand Russell* (Houghton and Mifflin, 1969)
Jack Ragsdale
Co-Librarian

Bertrand Russell Society
San Francisco, CA

Editor's note: Several years before his death, a prominent Christian publication opined that Russell, now approaching his hundredth year, was rumored to be "turning to religion." I wrote to him at his home in Wales to advise him of this news. He shot back a very angry letter, the substance of which stated, "It seems there is a lie factory at work on behalf of the afterlife. My views on religion remain the same as they were when I was sixteen. I consider all forms of religion not only false but harmful."

- (17) **Warren Smith sent us his usual, pleasant, chatty, year-end letter telling what he's been up to lately. Here are a few highlights of his activities as...**

Investment counsellor: "As chairman of Mensa's stock selection committee, I've had great fun supervising the portfolio of what I believe is the largest investment club -- we even number an oil worker in Saudi Arabia and a rabbi in Australia. Although there's no correlation between IQ and making money, we can certainly thank the Reagan Market for having covered up our worst mistakes.

High school teacher: "Not only did we bring the school philosophy up-to-date and upgrade sophomore English, but also so many of my ex-students are reporting exciting successes -- two from Harvard and Princeton taught my classes recently. The first essay I ever saw was written with a steel pen-point dipped into a bottle of ink. The most recent essay was completed by one of my 10th graders on his own Apple II. He'd stored drafts in his computer, made all the necessary corrections (I'm a severe taskmaster), then instructed the machine to print the final copy. If word processors replace typewriters by the time I retire, I'll not be at all surprised. Although in my 34th year of teaching, I still look forward to getting to school by 7:30 a.m., not being absent, getting student papers back before the next class, and loving every moment.

Owner of recording studio in the Big Apple: "What a time we've had with our new 24-track MCI and accompanying console! We completed soundtracks for 2 nightclubs often in the news (Indigo and Club Versailles) as well as for Robert Whitehead's production of "Medea" -- David Amram's music highlighted performances by Zoe Caldwell and Dame Judith Anderson. Irving Burgie (who wrote Barbados's national anthem) just completed an album. During the year I must have done layouts for a hundred labels and LP jackets, many in French and Spanish, and one in Russian, for a Jewish dissident group that had left the USSR only a few months ago and had already mastered jazz. Try to see "Charlotte", the one-woman telecast shot in Ireland by Julie Harris about the Brontës, and for which David Amram recorded the sound track with us. By all means, if you're in Times Square on a Friday night, Saturday or school vacation, visit me at Variety Recording, 130 West 42nd Street."

MEMBERSHIP RENEWALS

(20)

Renewal heroes and sluggards. About 100 BRS members paid their membership renewal dues before they came due on January 1st. That was most helpful of them -- heroes! -- and is appreciated.

A number of other members have paid their renewal dues since the first of the year, which is fine.

* As for the rest of you -- sluggards! -- the grace period ends the last day of February. On March 1st, non-payers become non-persons. To escape this fate, send your renewal dues to the newsletter (address on Page 1, bottom), and sleep well tonight. Dues, in US dollars: regular 22.50, couple, 27.50, student 12.50. Outside the USA, Canada and Mexico, add 7.50. Thanks!

FINANCES/CONTRIBUTIONS

- (21) We thank these members for their recent contributions — needed and most welcome — to the BRS Treasury: WHITFIELD & MARGARET COBB, ALICE DARLINGTON, BOB DAVIS, ALEX DELY, LEE EISLER, MARY GIBBONS, CHARLES HILL, CONNIE JESSEN, SUSANA MAGGI, KARIN PETERSON, HARRY RUJA, ANTHONY ST. JOHN, BOB SASS, JOHN SCHWENK, CAROL SMITH, CARL SPADONI, RAMON SUZERA, JOHN VAN WISSEN.
- (22) Money reserves are down. The Treasurer's Report for the year (4) shows that we have \$600 less in the Treasury than a year ago. And if one member had not made an unusually large contribution, we'd have no money at all in the Treasury. We are cutting it pretty close!
- In '82, dues covered only 58% of expenses.
- * Please contribute what you can spare whenever you can spare it.
- No amount is too small to be useful.
- Send it c/o the newsletter, address on Page 1, bottom.
-

FOR SALE

- (23) Members' stationery. 8½ x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell". On the bottom: "**Motto of The Bertrand Russell Society, Inc." \$5 postpaid for 90 sheets (weighs just under a pound, travels 3rd class). Order from the newsletter, address on Page 1, bottom.
- (24) BR postcard. 4½ x 6. Philippe Halsman's handsome 1958 photo of BR with pipe. 50¢ each + 25¢. RSN30-44 shows it slightly reduced in size. Order from the newsletter, address on Page 1, bottom.
-

OBITUARY

- (25) Dietrich R. Moeller, of Waterloo, Ontario. The Canadian Post Office returned RSN36 with the notation, "Deceased". We have no further information.
-

CORRECTION

- (26) TWO Humanist chapters in San Diego. JOHN WILHELM advises that the Humanist Fellowship of San Diego is not the same as the Humanist Association of San Diego, despite what we said in RSN36-34. He is a member of both.
-

ABOUT OTHER ORGANIZATIONS

- (27) American Atheists announces Volume II of "All the Questions You Ever Wanted To Ask American Atheists, with All the Answers", by Jon Murray and Madalyn Murray O'Hair. Volume I and Volume II, \$5 each, from American Atheists, PO Box 2117, Austin, TX 78768. Check, money order, Visa or Master Card.
- (28) The John Dewey Foundation and The Center for Dewey Studies (Southern Illinois University) announce the John Dewey Essay Project, open to undergraduates only, on the '83 theme, "Aspects of John Dewey's Philosophy". Length, under 10,000 words. Deadline 6/1/83. Decision by 9/15/83. Awards \$1000 and \$500.
- Perhaps the BRS should do something similar; but first we'd have to get hold of some prize money.

- (29) North American Committee for Humanism (NACH) — Sherwin T. Wine, President — "was established in Chicago in August 1982 at a special meeting of forty humanist leaders. This meeting was called to provide a unified course of action to promote humanism as a philosophy of life and to deal effectively with the assaults of its enemies."

Membership is by invitation of the Board of Directors, which invites acknowledged leaders in the humanist world of North America. BOB DAVIS is one of the Directors.

Plans include the following:

- . an annual summer conference
- . a quarterly newsletter (for members)
- . a humanist anthology (the best in humanist literature)
- . new Blue Books (inexpensive editions of humanist classics)
- . a Humanist Institute (see paragraph below)
- . a Summer Institute, sponsored by the Humanist Institute, accompanying the annual summer conference

The Directors of the Institute are the same as the Directors of NACH. Whereas members of NACH are present leaders of humanism, the Humanist Institute will train future leaders of humanism. The Leadership School program will take 3 years, if pursued full-time.

NACH's address is 28611 W. 12 Mile Road, Farmington Hills, MI 48018.

(Thank you, Bob Davis)

- (30) Voice of Reason — which we reported on previously (RSN34-37) — held a rally in Los Angeles on October 17th. Here's how the event was written up in the AHA newsletter, "Free Mind" (Jan/Feb '83):

A public rally introducing and publicizing the work and purpose of the Voice of Reason in its fight against the Moral Majority and the New Right was held at the New Bridge School in Los Angeles on October 17, 1982. The rally, hosted by the Los Angeles Ethical Culture Society and its leader, Dr. Gerald Larue, with input from other Humanist and free-thought organizations from the greater Los Angeles area and surrounding vicinities, marked the first step in extending the Voice of Reason's national network to the West Coast.

Formed in 1981 for the purpose of protecting and preserving "the historic American Principles of personal privacy, free inquiry, and good citizenship in a secular state," VOR has chapters currently operating in Michigan, Illinois, Massachusetts, Pennsylvania, New York, Florida, Arkansas, Ohio, and Alaska.

The keynote speaker of the rally, Dr. Sherwin T. Wine, founder of the Voice of Reason, electrified his audi-

ence with the urgency at hand of alerting and awakening all Americans to the dangers that will confront us should the fundamentalist aims of the Moral Majority, led in Congress by such persons as Senator Jesse Helms of North Carolina, become the laws of the land.

Dr. Wine stressed vigorously the nation's need to reinforce by action and by vote the Jeffersonian ideal of a free and secular democratic America, guaranteeing separation of church and state, equal freedom for the religious and the nonreligious, and a free and religiously neutral system of public education.

Joining with the Ethical Culture Society of Los Angeles in support of the October 17 rally were representatives and members of the American Humanist Association, the Humanist Association of Los Angeles, the Bertrand Russell Society, the First Unitarian Church of Los Angeles, the Humanist Society of Friends, Atheists United, and the Society of Humanistic Judaism. Representatives of

these groups, having honored Dr. Wine at a luncheon preceding the rally, concluded the day's activities by forming a steering committee to plan and inaugurate new VOR chapters, a speakers bureau, and a training program for speakers and chapter leaders.

Members of this initial steering committee include: Dr. Gerald Larue, chairperson; Dr. Maxine Negri, organizer of the speakers bureau; Bob Davis (who, with Gerald Larue, co-planned the October 17 rally); Russell McKnight; Helen Colton; Larry Taylor; Ken Bonnell; Queen Silver; Edwin Peters; Norman Boehner; Jacqueline Page; Elsie Stenson; and Brenda Jeffreys.

It should be noted that a recent merger between the Center for Moral Democracy (originally working out of the New York Society for Ethical Culture) and the Voice of Reason (headed by Dr. Wine and VOR's chairperson, Lynne Silverberg, and by executive director Edd Doerr) occurred on March 29, 1982. The present board of directors of the newly en-

larged Voice of Reason includes AHA board members Stephen Fenichel and Dr. Gerald Larue and former board member Dr. Paul Kurtz.

It is fervently hoped that the concerted efforts of all the aforementioned Humanist and freethought organizations, as well as those now operating elsewhere and those yet to be formed on the West Coast, will more quickly enable the aims of the Voice of Reason to be brought to greater fruition, success, and prominence.

In conclusion, it must also be mentioned that, as part of the VOR rally, People for the American Way generously provided their own thought-provoking film documentary showing a forbidding and alarming array of fundamentalist leaders and organizers, vehemently promoting on television their aims, prophecies, and hatreds. This film, *Life and Liberty for All Who Believe*, having been revised and polished, is narrated by Burt Lancaster and will be aired over prime-time television throughout the country.

(Thank you, Bob Davis)

- (31) Wilberforce Council for Human Rights(England) will this year honor the memory of William Wilberforce, who worked successfully for the abolition of slavery. Slavery was abolished in the Commonwealth on July 26, 1833 (29 years before Lincoln's Emancipation Proclamation). This is the 150th Anniversary Year of the abolition of slavery and of Wilberforce's death.

The Council will produce a book and video tape, "William Wilberforce and 3 Centuries", present a Freedom Concert at Royal Albert Hall by the London Philharmonic Orchestra on November 6th, and hold another special event in Westminster Abbey or the House of Commons, probably in November.

There will also be a weekend seminar, August 5-7 — "Cambridge Freedom and Peace Seminars in the Context of Human Rights" — at St. John's College, Cambridge (where Wilberforce had entered as a student in 1776.) This is the seminar or conference that Bob Davis refers to in (3), and hopes that a number of BRS members will attend.

On the next page are details and application forms. Jack Lennard thinks there will be more applications than can be accepted, so if you want to attend the seminar, better not postpone applying.

THE WILBERFORCE COUNCIL
for
HUMAN RIGHTS

Memo from
JACK LENNARD
Co-ordinator & Executive Director.

Salisbury Hall, Park Road,
Hull, North Humberside,
England, HU3 1TD.

WILLIAM WILBERFORCE - 150th ANNIVERSARY YEAR
CAMBRIDGE WEEKEND SEMINAR

Friday 5th August to Sunday 7th August 1983.

The Wilberforce Council is holding a Weekend Seminar at St. John's College, Cambridge, where in 1776, at the age of 17, William Wilberforce entered as a Student and where he first met William Pitt who became a close friend.

William Wilberforce, although his name is identified with the cause of the slave more than with any other public question, it must not be supposed that he was a man of one idea, or that it could be said of him in the words of Grotius, that he "spent his life in strenuously doing nothing." Everything which bore upon social and moral improvement could count upon his hearty support; every outrage upon toleration or freedom found in him an eloquent enemy. His superiority to party, while it exposed him to the charge of inconsistency, made his advocacy the more valuable, because it was known to be independent; and when he was fairly prepared, and the object was one that stirred him, his eloquence was of a high order. The purifying of elections, the relief of oppressed consciences, whether Nonconformist, Quaker, Jew or Catholic.

It is, therefore, fitting that the title of the Seminar should be 'Freedom and Peace' in the context of Human Rights.

There has already been worldwide a favourable response which will ensure a memorable occasion - from the USA, Europe and from many parts of Great Britain.

OUTLINE PROGRAMME

- Friday, 5th August. Afternoon arrival and register.
7 p.m. Banquet - Guest Speakers and discussion.
- Saturday, 6th August. 10 a.m. Seminar - possible 2 groups.
12.30 p.m. Lunch and discussion.
2.30 p.m. Seminar - possible 2 groups.
7 p.m. Banquet with guest speaker and discussion.
- Sunday, 7th August. 10 a.m. Seminar.
12.30 p.m. Lunch and guest speaker, summing up.

THE COST, including VAT

- Full board and conference meals (2 nights). £52.08 (11 double rooms and the rest single)
- Bed and Breakfast only. per night £11.67
- Standard lunch: £5.75. Standard dinner: £8.62.
- Registration fee, including coffee/tea and biscuits. £ 5.00
- Lunch and Banquet meetings are open to non-diners.

To make the event financially viable will those who can add to the registration fee.

St. John's College accommodation could also be made available for additional nights before and after the seminar.

APPLICATION FORM

To: The Wilberforce Council for Human Rights,
Salisbury Hall, Park Road,
HULL, HU3 1TD, England.

Name _____ Date _____
 Address _____ Tel. No. _____
 Organisation _____
 Special interests _____

Please book as follows for which I enclose
The appropriate deposits per person, Registration £5
College Board £5

- Double/single rooms (full board) at per person. . . . £52.08 (2 nights)
- Double/single rooms (Bed & breakfast) at per person. £23.34 (2 nights)
- Dinner Friday/Saturday. £17.24
- Registration fee, incl. coffee/tea Friday/Sunday. £ 5.00 (add contribution where possible to make event financially viable)

Please state if you are interested in the following:
Tee/Sweat Shirts with neat printed emblem, price £2/£3, £5/£6.
Ties with printed/woven emblem.

We are looking into the possibilities.
The Wilberforce Council is producing a Collectors' Item. Wilberforce 150th Anniversary Commemorative Cover (envelope). 9th March 1983, first day issue, Commonwealth Day Stamps. Set of 4 (90p) on Commemorative Cover with Commemorative Postmark. Limited Edition, advance orders £2.50. Later purchases, subject to availability, prices to be quoted on request.

ORDER:
Commemorative Covers @ £2.50

Wilberforce Council Freedom Concert, Sunday, 6th November 1983, Royal Albert Hall, Kensington Gore, London.

It is by coincidence that William Wilberforce lived at what was then Kensington Gore House and now the Royal Albert Hall. We expect to achieve distinguished Patronage. We have engaged The London Philharmonic Orchestra, a distinguished Russian Conductor, Rudolf Barshai, and a distinguished Russian Violinist, Boris Belkin. "Boris Belkin's playing projects unpredictable technical wizardry." Sunday Times, London.
"Rare poetic feeling." New York Times.

PROGRAMME:
Prokofiev Classical Symphony (No. 1)
Prokofiev Violin Concerto No. 2
Beethoven Symphony No. 7

Tickets from the Royal Albert Hall or agents up to £7.50
From The Wilberforce Council £10-£25.

Please reserve _____ tickets @ _____

* * * * *

We noticed that PBS is having a 6-part series on the abolition of slavery. This is what they say about it in the February program guide of WHYY, the PBS TV station in Philadelphia:

THE FIGHT AGAINST SLAVERY

Slavery has been called the greatest crime in the history of the world, but all whites were not guilty and all blacks were not innocent. It was a crime of humanity against itself and that is the premise of this six-part series which traces the monumental struggle to end slavery in the British Empire from 1750 to 1834. Beginning Wednesday the 2nd at 10:00 p.m.

(32) World Peace Movement has a small brochure stating its principles and purposes, and a nice slogan, "Think globally, and act locally". They will probably send their brochure on request. POBox 2, Ojai, CA 93023.

ANNUAL MEETING (1983)

(33a) The time, June 24-26. The BRS Annual Meeting '83 is timed to coincide with a Conference at McMaster. The Conference -- jointly sponsored by the Bertrand Russell Editorial Project (at McMaster University) and The Institute for the History and Philosophy of Science and Technology (at University of Toronto) -- is in 2 parts.

- Part 1 -- June 24-26, 1983 -- is on BR's non-technical ("humanistic") writings.
- Part 2 -- June 1984 -- will deal with BR's technical writings.

The program consists of 10 talks, starting Friday at 1 PM and ending at noon, Sunday. (Actually, the program starts at 12:50 PM with a brief speech of welcome by Richard A. Rempel, Coordinator of the Russell Editorial Project.) It's not solid talk, talk, talk. It's talk alternating with coffee breaks and ending with a Barbecue at the Faculty Club 6 PM on Friday, and a Buffet Banquet with Red Hackle (BR's brand of whiskey) 7 PM Saturday.

These are some of the speakers and their topics:

- . S. P. Rosenbaum (University of Toronto), "Russell and Bloomsbury".
- . Kirk Willis (University of Georgia and winner of the ERS 1979 Doctoral Grant, "Russell's early views on religion".
- . Peter Clarke (St. John's College, Cambridge University), "Russell and liberalism".
- . Brian Harrison (Corpus Christi College, Oxford University), "Russell and suffrage".
- . Thomas C. Kennedy (University of Arkansas), "Russell and pacifism".

A ERS business meeting will be held Friday evening, when no Conference talks are scheduled.

Costs: A Conference fee of \$30 (students \$15) covers talks, coffee breaks, Barbecue, Banquet. Cost of lodging and other meals is \$43.84 per person double, \$54.34 single. This covers 2 nights lodging (June 24,25), 2 breakfasts (June 25,26), 1 lunch (June 25). Extra lodging before and after the Conference is available at the daily rate of \$15.75 double, \$21 single. Rates include bedding, towels, soap, daily maid service, parking and Ontario's 5% sales tax.

To make a reservation: you need 2 checks, payable to McMaster University in Canadian funds. (1) Send the Conference fee "well in advance" to Secretary, The Bertrand Russell Editorial Project, TSH 719, McMaster University, Hamilton, Canada L8S 4M2. (2) Send payment for lodging, etc., to Conference Services, Commons 101B, McMaster University, Hamilton, Canada L8S 4K1, and mention dates of arrival and departure.

On arrival at McMaster, go to the Main Lobby Registration Desk in the Commons Bldg. (Bldg. #28 on map, circled), to pick up your room key and settle into your room. Then go to the Russell Archives in Mills Memorial Library (Bldg. #10 on map, circled) between 9 and 5 PM Friday, to register for the Conference and get a program. The Conference talks will all be given in Room 111, Gilmour Hall (Bldg. #20 on map, circled). Map is on next page.

Transportation to McMaster. Go to Toronto by train or plane. Then it's an hour's bus-ride to Hamilton/McMaster, from Toronto Airport or Bus Terminal. The Toronto-Hamilton bus may stop at McMaster on request; we're not sure of this. In any case, "McMaster is in the west end of the City of Hamilton, just a few minutes from downtown by car, taxi or public bus," according to McMaster literature.

If you can't get there before Friday evening, you will have missed 3 talks Friday afternoon. There are 7 talks scheduled after Friday.

Look for more details in the next issue of "Russell", due out soon (Vol 2, No.2, Winter 1982-83).

* Come if you can!

ON NUCLEAR WAR

(34) From The New York Times (11/21/82 p. E19):

War by Accident

By Tom Wicker

More than 100,000 American military personnel have some form of access to or responsibility for nuclear weapons. A House subcommittee has reported that in 1977 — a typical year — 1,219 of them had to be removed from such duty because of mental disorders, 256 for alcoholism and 1,365 for drug abuse.

There's every reason to suppose that the Soviet Union, with more or less equal nuclear forces, has at least as severe a problem. Because their technology is not as advanced as that of the U.S., the Soviets may have a worse record of malfunctioning by the computers that control missile firings.

That's a scary thought, since on our side the North American Defense Command reported 151 computer false alarms in an 18-month period. One had American forces on alert for

a full six minutes before the error was discovered.

Such human and electronic fallibility is one good reason why the International Physicians for the Prevention of Nuclear War, after intensive study, concluded that "the risk of accidental nuclear war is not only unacceptably high but is rapidly increasing."

President Reagan, too, has expressed concern at the possibility of an unintended spark setting off nuclear conflagration. Several published reports have suggested that his Administration has been reviewing the problem and he's expected to address it in his forthcoming arms control speech.

But it's unlikely that he'll speak to the primary threat, which is not personnel or computer failures, frightening as they are. The real problem is the proliferation of numbers and kinds of nuclear weapons and delivery vehi-

cles, and of the nations that possess these weapons, or soon might.

Both superpowers have literally thousands of nuclear weapons. Missiles, now the main reliance for delivery, can't be recalled if mistakenly launched. Communication with submarines is still far from perfect. Limited warning time after a real or falsely reported launch makes an erroneous command calculation, perhaps aided by computer malfunction, all too likely.

Thus, a weapons buildup on either side, matched as it always is on the other, increases the chances of a fatal error, whether of judgment or performance. And a paper by the International Physicians group points out the obvious — that "the single most powerful force increasing the risk of accidental nuclear war" is the trend on both sides toward first-strike weapons.

Bigger, more powerful and more accurate missiles targeted on the other side's missiles mean that whoever shoots first may well destroy the other's nuclear forces. So either may be led by suspicion and fear to miscalculate the other's intentions and fire its own missiles in a pre-emptive strike.

If Mr. Reagan should decide to pro-

tect the MX missile with a ballistic missile defense, the Soviets would certainly respond with their own missile defense system. Both sides then would have a new reason, in a crisis that could lead to war, to shoot first — and perhaps mistakenly.

Fearing being beaten to the punch, either side might calculate that firing first would force the other to activate his defense missiles; then, while the defender was preoccupied with the first attack, a second could be launched, and the attacker would still have his own missile defense system ready to fend off counter-attack.

The NATO policy of responding with nuclear weapons if a conventional attack on Western Europe could not be halted by conventional means also risks accidental war. The Soviets could misinterpret NATO intentions and fire nuclear weapons of their own. And while NATO battlefield commanders are not supposed to have authority to use nuclear weapons, who knows what might happen in the turmoil of battle?

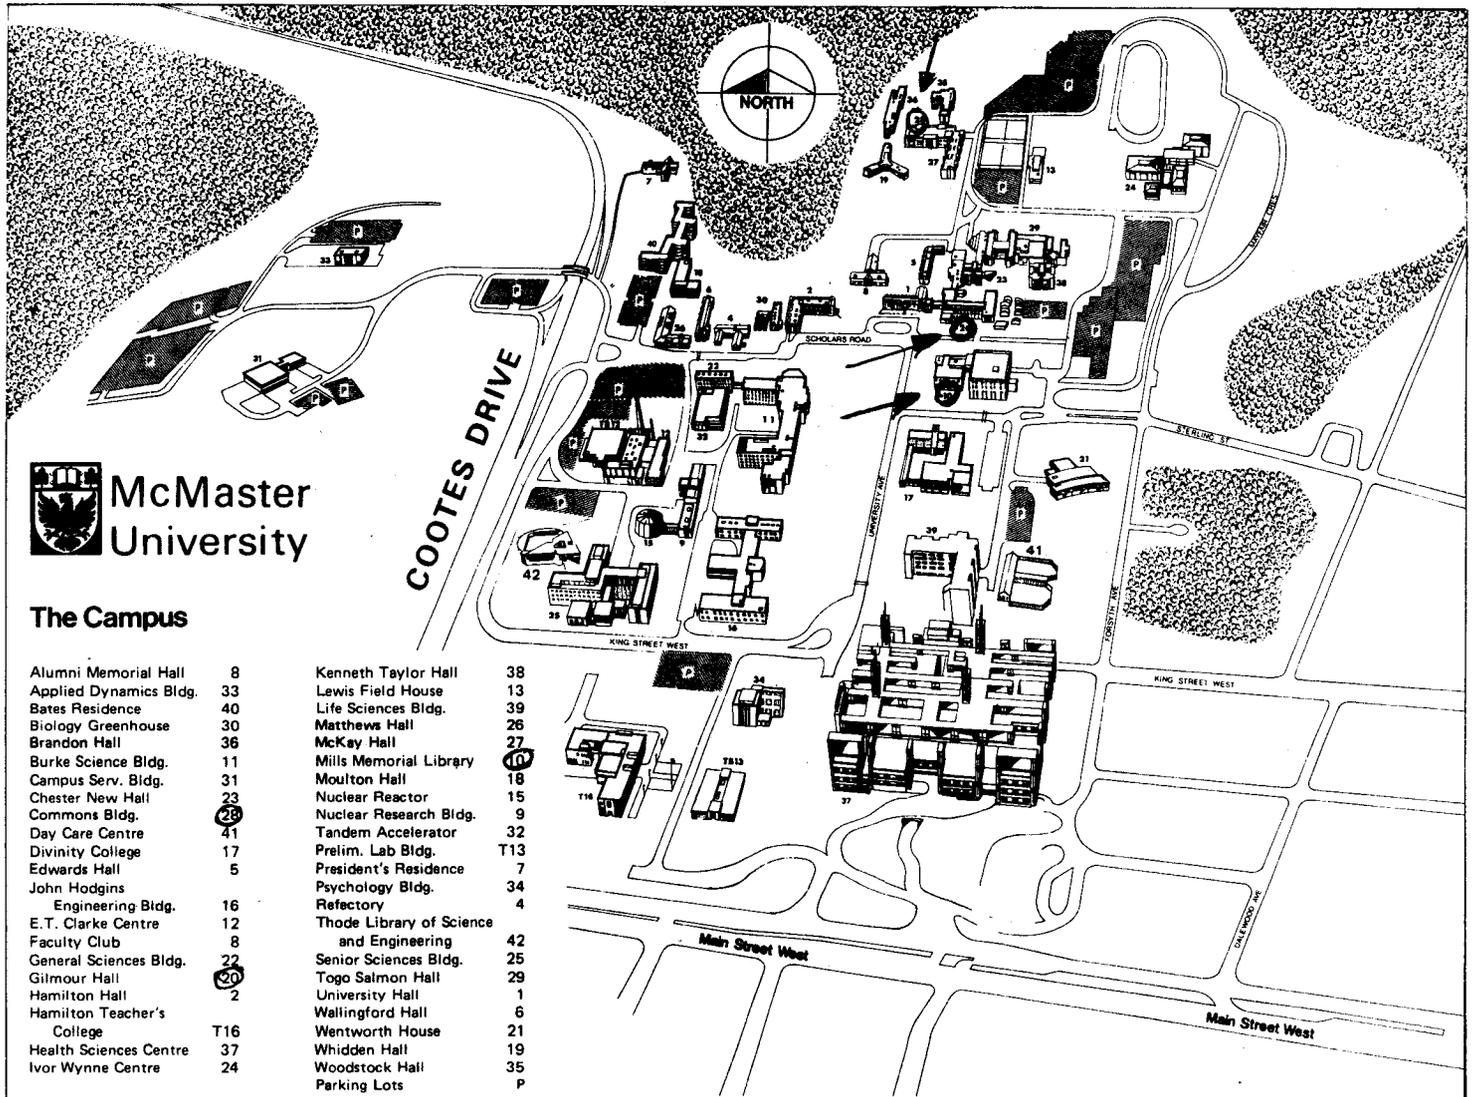

The spread of nuclear weapons to nations beyond the five that already have them poses other obvious threats of accidental war, since that would

mean more such weapons in more hands, perhaps with less sophisticated human and technological controls.

The Reagan Administration, unfortunately, has shown a distinct lack of interest in the problems of proliferation to other nations. And while Mr. Reagan has recognized the necessity to improve American command and control facilities, and his Administration has been studying some sort of joint operations with the Soviets to guard against mishap and misunderstanding, his planned nuclear buildup, including the huge new MX missile, actually increases the risk of accidental war.

The best immediate safeguards against such a disaster would be the ratification of SALT II, which Mr. Reagan says he's observing anyway; completion of the Comprehensive Test Ban Treaty that's been largely worked out with the Soviet Union; and, if obtainable, a verifiable Soviet-American freeze on the production and deployment of more nuclear weapons on either side. And all these would be long steps toward the surest safeguard of all — the reductions in nuclear forces that are Mr. Reagan's stated goals.

ON NUCLEAR WEAPONS

(35)

We are being nuked right now! Two books — reviewed in *The New York Times Book Review* (1/16/83, p. 18) — indicate the extent to which nuclear weapons are doing great harm to the human psyche without even being fired. The review, by John Woodcock, of Indiana University, tells the story:

INDEFENSIBLE WEAPONS

The Political and Psychological Case Against Nuclearism.
By Robert Jay Lifton and Richard Falk.
301 pp. New York: Basic Books. Cloth, \$15.50. Paper, \$6.95.

NUKESPEAK

Nuclear Language, Visions, and Mindset.
By Stephen Hilgartner, Richard C. Bell and Rory O'Connor.
Illustrated. 282 pp.
San Francisco: Sierra Club Books. \$14.95.

their importance to our welfare and survival. have not yet been revealed or absorbed — and that there are powerful institutional and psychic barriers to changing this situation.

“Indefensible Weapons” is a collaboration, in the form of parallel essays, by the psychiatrist Robert Jay Lifton and the political scientist Richard Falk. (They collaborated in 1971 on “Crimes of War,” an anthology

of pieces and documents on war crimes.) In his essay, “Imagining the Real,” Dr. Lifton first distills what he has learned from his studies of Hiroshima survivors about the psychological effects of the “imagery of extinction” and then applies those insights to us today — giving, in effect, a detailed anatomy of the mind in the time between nuclear holocausts. It is a condensed, readable and telling

document.

He finds that images of massive annihilation wrought by technology now provide a major context for our lives and profoundly disturb our psyches and social relations. These images, Dr. Lifton says, have destroyed our sense of biological and cultural connection, leaving us without traditional sources of meaning for our lives. We are

UNDERLYING the divergent approaches of these two books is a common emphasis on what their authors

see as our “nuclear illusions.” Both books argue that many truths about nuclear warfare and nuclear energy, despite

Published by the Council for Democratic and Radical Humanism

January 28, 1983

Dear Friend:

You are cordially invited to attend "Religion in American Politics," a special symposium sponsored by FREE INQUIRY Magazine to be held at the National Press Club in Washington on March 16, 1983, the birthday of James Madison.

This conference will raise the question of whether the Fundamentalist Right and other ultraconservatives are correct when they argue that the American republic and the Constitution are based on Judeo-Christian foundations and that those who argue for separation of church and state have betrayed the American heritage. History tells us that in drafting the Constitution the Founding Fathers focused on religious liberty and the idea that the state should be neutral concerning religion. Many today unfortunately wish to revise that history.

The conference will commemorate the birthday (March 16) of James Madison, the Father of the Constitution, who led the fight for the Bill of Rights and religious freedom. There will be a group of distinguished speakers, including Henry Steele Commager, Senator Lowell Weicker, former-Senator Sam Ervin, Daniel Boorstin (Librarian of Congress), Michael Novak, and Richard Morris. The morning session will focus on James Madison and the Founding Fathers. The theme of the afternoon session will be "The Bible and Politics."

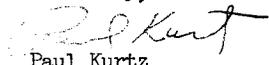

Religious figures surely have every right to express their point of view in a free society; however, when individuals and groups seek to give a "sacred" justification for their political beliefs, there is a real danger that this will engender sectarian factions. Our conference will explore the role of religion in politics in a secular state.

There will be limited admittance to this conference due to the capacity of the Ballroom of the National Press Club. Pre-registration is necessary. Please fill in the registration form attached to the enclosed program and return it to us as soon as possible.

If you would like hotel accommodations, special rates for the Madison Conference are available at the Hotel Washington (800-424-9540), which is near the National Press Club and the White House.

We look forward to hearing from you and to meeting you at the conference.

Sincerely,

Paul Kurtz
Editor

enclosure

(36) "Religion in American Politics" is the title of a special symposium sponsored by "Free Inquiry" magazine that looks like the best thing to come down the pike in a long time. That's why we are giving it a lot of space. First, here is Paul Kurtz's introductory letter, followed by the printed announcement:

RELIGION

cut off from immortality itself, in a condition of "radical futurelessness" that no belief system can assuage. The extremity of this situation makes understandable the reaction, which Dr. Lifton says is not uncommon, of people who see bombs as detentes or their detonation as a spiritual experience.

Among the unhappy paradoxes he notes is that the psychic numbing by which we as individuals shut out the reality of the bomb in order to stay sane works against the collective awareness and action that might avert an Armageddon of our own making.

Dr. Lifton sees hope, however, in a kind of reality principle. Eventually, he asserts, the mind rebels against "distorting processes," and he supports his belief by pointing to the "world-wide hunger for nuclear truth." He ends with a description of the salutary effects of "crossing the line" to antinuclear activism.

In his essay, "Political Anatomy of Nuclearism," Mr. Falk addresses the causes and effects of the beliefs that have brought us to our current state. He argues that the basic political legitimacy of American democracy has been seriously compromised by its reliance on nuclear weapons. "This condition of tarnished legitimacy," he believes, "is linked to the passion for secrecy, the official control and management of news, and the easy readiness to identify morally concerned citizens as fools, at best, or if they persist so as to obtain a hearing, as enemies of the state."

Political uneasiness thus leads to the exclusion of citizens from the development and implementation of policies of the greatest importance. And, Mr. Falk says, our leaders, caught in a web of militarism, technological imperatives, bureaucratic privilege and international gamesmanship, remain

remote from — and fatalistic about — the nuclear situation.

Mr. Falk's most interesting contribution is his discussion of American and Soviet rivalry in the nuclear arms race. He is broadly critical of the United States — of its proprietary zeal, for instance, in pushing to stay far ahead in the early years and of its later pursuit of the phantom of nuclear superiority, which he calls "political fanaticism of the worst kind." All along, he convincingly suggests, the Soviets have been much less aggressive and menacing than portrayed by our Government.

Given the pervasiveness of nuclearism, Mr. Falk feels that nuclear holocaust is inevitable unless some drastic changes are made. He never develops the particulars of the "politics of antinuclearism," but he seems to rest his hopes for a possible future on a broad, global change from "Machiavellian" self-interest to a more communal and

"holistic" world view that he associates with ecological consciousness and spiritual evolution.

Perhaps because of space limitations and the authors' activist impulses, exhortation occasionally takes over from exposition in these essays. Toward the end Mr. Falk seems rushed his argument rhetorical. Each writer's concluding optimism, welcome as it is, seems detached from what has gone before. But finally it seems better to demand the miracle of the world rather than of the book. Dr. Lifton's and Mr. Falk's essays are valuable reflections on the most urgent dilemma of our time. They make an excellent briefing for life in a world under the cloud of nuclearism.

"Nukespeak," a cultural history of the selling of nuclear technology for both peaceful and military purposes, is dedicated to George Orwell, whose

literary creation of "newspeak" dramatized the power of governments to control reality through the manipulation of language. The authors, three Boston journalists, argue that "In the thirty-six years since the atomic bombings of Hiroshima and Nagasaki, a new language has evolved. . . . Nukespeak is the language of nuclear development. . . . In Nukespeak, atrocities are rendered invisible by sterile words like megadeaths; nuclear war is called a nuclear exchange."

We have included only the first paragraph of the review of the second book.

Religion in American Politics

Schedule of Events

9:30 A.M. - 12:00 P.M.

James Madison, the Founding Fathers, and the Constitution The Secular Roots of the American Political System

Chair

Paul Kurtz, Professor of Philosophy,
State University of New York at Buffalo;
Editor, FREE INQUIRY Magazine

Speakers

Robert Rutland, Professor of History,
University of Virginia, and editor of
The Madison Papers

Henry Steele Commager, Professor of History,
Amherst College

Daniel J. Boorstin, Historian

Richard Morris, Professor of History,
Columbia University

Discussant: Michael Novak, American
Enterprise Institute

12:15 P.M. - 1:30 P.M.

Luncheon

Speaker: Sen. Lowell P. Weicker, Jr.

1:30 P.M. - 4:00 P.M.

The Bible and Politics

Chair

Gerald Larue, Professor Emeritus of Biblical
Archaeology, University of Southern California
at Los Angeles

Speakers

Sam Ervin, Former U.S. Senator from North
Carolina

Leo Pfeffer, Professor of Constitutional Law,
Long Island University; Special Counsel of the
American Jewish Congress

Robert Alley, Professor of Humanities,
University of Richmond

James M. Robinson, Professor of Religion and
Director, Institute of Antiquities and Religion,
Claremont Graduate School, Claremont,
California

Discussant: A. E. Dick Howard, Professor of
Law, University of Virginia

Commemoration Ceremony

5:30 P.M.

James Madison Memorial Annex
Library of Congress

... For 205 years this nation, based on [constititutional] principles, has endured ... One of the great strengths of our political system always has been our tendency to keep religious issues in the background. By maintaining the separation of church and state, the United States has avoided the intolerance which has so divided the rest of the world with religious wars ...

Madison saw this as the great paradox of our system: How do you control the factions without violating the people's basic freedoms?

Can any of us refute the wisdom of Madison and the other framers? Can anyone look at the carnage in Iran, the bloodshed in Northern Ireland, or the bombs bursting in Lebanon and yet question the dangers of injecting religious issues into the affairs of state?

The religious factions that are growing in our land are not using their religious clout with wisdom. They are trying to force government leaders into following their positions 100 percent ...

The uncompromising position of these groups is a divisive element that could tear apart the very spirit of our representative system, if they gain sufficient strength. ...

No, I will not be able to attend the Symposium, but please accept my contribution (tax deductible) for \$_____ to help cover the costs of this and future special events.

(37) Here are the 4 remaining BBC Interviews:**NATIONALISM**

W.W.: Do you think that nationalism is a good or a bad thing, Lord Russell?

B.R.: If you want to see foreign countries you have to travel poor, and in that respect I think there's a great deal to be said for nationalism. For keeping diversity—in literature, in art, in language, and all kinds of cultural things. But when it comes to politics, I think nationalism is unmitigatedly evil. I don't think there is a single thing to be said in its favor.

W.W.: Why is nationalism harmful?

B.R.: What I mean by it being harmful is that it's a part of its teaching to inculcate the view that your own country is glorious and has always been right in everything, whereas other countries—well, as Mr. Podsnap says in Dickens, "Foreign nations, I am sorry to say, do as they do." I don't think that it's right to view foreign nations in that way. One sees curious examples of it. I wrote a book in which I was talking about nationalism, and I said, "There is, of course, one nation which has all the supreme virtues that every nation arrogates to itself. That one is the one to which my reader belongs." And I got a letter from a Pole saying, "I'm so glad you recognize the superiority of Poland."

W.W.: Why do people want to be divided up into national states?

B.R.: Well, it is part of our emotional apparatus that we are liable to both love and hate, and we like to exercise them. We love our compatriots and we hate foreigners. Of course we love our compatriots only when we're thinking of foreigners. When we've forgotten foreigners we don't love them so much.

W.W.: We all know that Americans and Europeans suffer from racial prejudice. Do you think that Asians and Africans suffer from racial prejudice any less?

B.R.: Not a bit less. And in fact because it's rather new with them they probably suffer more at the present moment. I should think that both African and Asian na-

tionalism are, at the moment, more fierce than any that exist among Europeans, because they've just awakened to it. I think it is a very, very great danger. I think nationalism is, apart from the tension and the danger of an East-West war, I think nationalism is the greatest danger that humankind is faced with at the present time.

W.W.: Why do you think nationalism seems to be so much more virulent today than it ever has been before?

B.R.: Oh, it's due to education. Education has done an awful lot of harm. I sometimes think it would have been better if people were still unable to read and write. Because the great majority, when they learn to read and write, become open to propaganda, and in each country the propaganda is controlled by the state and is what the state likes. And what the state likes is to have you quite ready to commit murder when you're told to.

W.W.: Is there any solution to this problem of nationalism other than having, say, an imminent invasion from Mars?

B.R.: Well, that of course would stop it at once. We should then have planetary nationalism for our planet against all other planets. We should teach in schools how much more noble our planet has always been than these wretched Martians, of whom we shouldn't know anything and therefore we could imagine any number of vices, so that would be a very simple solution. But I'm afraid we may not be able to do it that way. I think we've got to hope that people will get positive aims—aims of promoting the welfare of their own and other countries, rather than these negative aims of strife.

THE ROLE OF THE INDIVIDUAL

W.W.: What do you mean by the role of the individual?

B.R.: I'm thinking primarily of activities which an individual can carry out otherwise than as a member of an organization. I think there are a great many very important and very useful, desirable activities

which have hitherto been carried out by individuals without the help of an organization, and which are coming more and more to depend upon organizations. The great men of science of the past didn't depend upon very expensive apparatus—great men like Copernicus, Galileo, Newton, and Darwin. They did their work as individuals, and they were able to.

W.W.: But may one go a little further into cultural and scientific freedom and what precisely it means in its importance to the community?

B.R.: Well, I came to the conclusion that broadly speaking the important impulses that promote behavior can be divided into creative and possessive. I call an impulse creative when its aim is to produce something which wouldn't otherwise be there and is not taken away from anybody else. I call it possessive when it consists in acquiring for yourself something which is already there, such as a loaf of bread. Now of course both have their function, and man has to be sufficiently possessive to keep himself alive, but the real important impulses, when you're talking about the sphere of liberty, are creative ones. If you write a poem you don't prevent another person from writing a poem. If you paint a picture, you don't prevent another from painting a picture. Those things are creative and are not done at the expense of somebody else, and I think those things ought to have absolute liberty.

W.W.: Why is it, do you think, so many discoveries have shocked people?

B.R.: Because they make people feel unsafe. Every human being, like every animal, wants to live in what is felt to be a safe environment—an environment where you won't be exposed to unexpected perils. Now when a man tells you that something you've always believed was in fact not true, it gives you a frightful shock and you think, "Oh! I don't know where I am. When I think I'm planting my foot upon the ground, perhaps I'm not." And you get into a terror.

W.W.: Well, this really affects discoveries in the realm of thought rather than in practical science. I

mean, nobody minds if somebody invents a machine that will go to the moon.

B.R.: Well, no. But they do mind—at least some people mind, though not as many as I should have expected—a machine that would destroy the human race, which is also part of science.

W.W.: You attach enormous importance to this question of the role of the individual. Why have you attached so much importance to it?

B.R.: Because all the important human advances that we know of since historical times began have been due to individuals of whom the majority faced virulent public opposition.

W.W.: Do you think that fear of public opinion has stopped many people from doing good and sensible things?

B.R.: Yes, it has a very profound effect, especially in times of excitement when there's a great deal of mass hysteria about. A great many people are terrified of going against mass hysteria with the result that bad things triumph where they shouldn't.

W.W.: Do you think that applies to scientists and artists?

B.R.: Yes, I think so. I think scientists have the prerogative that they are sometimes able to prove that they're right; but artists can't prove that they are right. An artist can only hope that other people will think so; so I think the artist is in a greater difficulty than the scientist. But the scientist in the modern world undoubtedly is in difficulty, because he may make discoveries that are inconvenient to the government and in that case he'll get in trouble.

W.W.: Well, what about people who are in a sense thinkers and not strictly either artists or scientists devising practical things?

B.R.: Well, of course, that depends. A great many thinkers do take care not to express in any public way opinions which will bring them obloquy.

W.W.: Do you think any new

limitations on liberty are needed?

B.R.: Yes, certainly. Limitations on national liberty are needed, and there are some things that are absurd. The arguments that socialists used in favor of nationalizing natural resources have now become arguments in favor of internationalizing natural resources. The most obvious example is oil. It's a little absurd that a very small territory which happens to have a great deal of oil on its territory should be the sole possessor of that oil.

W.W.: Do you think liberties need expanding?

B.R.: Well, liberties need enlarging in a mental sphere, and, if anything, diminishing in what I call the possessive sphere.

FANATICISM AND TOLERANCE

W.W.: What is your definition of fanaticism, Lord Russell?

B.R.: I should be inclined to say that a man is a fanatic if he thinks some one matter so overwhelmingly important that it outweighs anything else at all. To give an example, I suppose all decent people dislike cruelty to dogs, but if you thought that cruelty to dogs was so atrocious that no other cruelty should be objected to in comparison, then you would be a fanatic.

W.W.: Why do you think people do get seized in large numbers with fanaticism?

B.R.: Well, it's partly that it gives you a cosy feeling of cooperation. A fanatical group all together have a comfortable feeling that they're all friends with one another. They are all very much excited about the same thing. You can see it in any political party. There's always a

fringe of fanatics in any political party, and they feel very cosy with one another; and when that is spread about and is combined with a propensity to hate some other group, you get fanaticism well developed.

W.W.: But might fanaticism at times provide a kind of mainspring for good actions?

B.R.: It provides a mainspring for actions all right, but I can't think of any instance in history where it's provided the mainspring for good actions. Always I think it has been for bad ones because it is partial, because it almost inevitably involves some kind of hatred. You hate the people who don't share your fanaticism. It's almost inevitable.

W.W.: What is your definition of toleration?

B.R.: Well, it varies according to the direction of your thinking. Toleration of opinion, if it's really full-blown, consists in not punishing any kind of opinion as long as it doesn't issue in some kind of criminal action.

W.W.: What are the limits of toleration, and when does toleration turn into license and chaos?

B.R.: I think the ordinary liberal answer would be that there should be complete toleration as regards the advocacy of opinions as to what the law ought to be; but there should not be complete toleration for advocacy of acts which remain criminal until the law is changed. To take an illustration, you might, for instance, be in favor of reintroducing capital punishment in a country where it doesn't exist, but you shouldn't be free yourself to assassinate somebody that you thought deserved it.

W.W.: Are you optimistic that

people and governments will do the right thing about the H-bomb?

B.R.: Well, there are times when I'm optimistic and times when I'm not. I don't think anybody can tell how much sense governments will have. One hopes, of course, that in time they will begin to understand the problems they deal with.

THE FUTURE OF HUMANKIND

W.W.: Can we turn now to more cheerful things?

B.R.: Well, I should say that the first thing that is needed is a realization that the evils of the world, including the evils which formerly could not possibly have been prevented, can now be prevented. They continue to exist only because people have passions in their souls which are evil and which make them unwilling to take the steps to make other people happy. I think the whole trouble in the modern world, given the powers of modern technique, lies in the individual psychology, in the individual person's bad passions. If that were realized, and if it were realized further that to be happy in a modern, closely integrated world, you have to put up with your neighbor also being happy, however much you may hate him. I think if those things were realized, you could get a world far happier than any that has ever existed before.

W.W.: What sort of things do you think you could push away if your people direct their passions in the sort of way you're suggesting?

B.R.: Well, first of all, war. Second, poverty. In the old days, poverty was unavoidable for the majority of the population. Nowadays it isn't. If the world chose, it could, within forty years, abolish poverty. Illness, of course, has been enormously diminished and could be diminished still further. There is no reason why people should be unable to have periods of sheer enjoyment frequently.

W.W.: Well, we're now talking really about the creation of positive good. What other positive good can be produced by man, do you think, in the future?

B.R.: I think a great deal depends on education. I think in education you will have to stress that humankind is one family with common interests. That therefore cooperation is more important than competition, and that to love your neighbor is not only a moral duty nominally inculcated by the churches, but is also much the wisest policy from the point of view of your own happiness.

W.W.: What final message would you like to give to future humankind?

B.R.: I should like to say that you have, through your knowledge, powers which humans have never had before. You can use these powers well or you can use them ill. You will use them well if you realize that humankind is all one family and that we can all be happy or we can all be miserable. The time is passed when you could have a happy minority living upon the misery of the great mass. That time is passed. People won't acquiesce in it, and you will have to learn to put up with the knowledge that your neighbor is also happy, if you want to be happy yourself. I think, if people are wisely educated, they will have a more expansive nature and will find no difficulty in allowing the happiness of others as a necessary condition of their own. Sometimes in a vision, I see a world of happy human beings, all vigorous, all intelligent, none of them oppressing, none of them oppressed. A world of human beings aware that their common interests outweigh those in which they compete, striving toward those really splendid possibilities that the human intellect and the human imagination make possible. Such a world as I was speaking of can exist if everyone chooses that it should. And if it does exist—if it does come to exist—we shall have a world very much more glorious, very much more splendid, more happy, more full of imagination and happy emotions, than any world that the world has ever known before.

BR INTERVIEWED

- (38) 14 & 92. (From "Redbook Magazine, September 1964, verbatim). Recently Jhan Robbins, a frequent contributor to Redbook, took his son Tom with him to Europe. While there he arranged a meeting between Tom and 92-year-old, Nobel Prize-winning mathematician, philosopher and essayist Bertrand Lord Russell. The interview took place at Lord Russell's ancient limestone house in Penrhyndeudraeth, Wales. Lady Russell was present. Tea was served, and when Lady Russell learned that the date coincided with Tom's 14th birthday, she had a large mocha cake brought in to help celebrate the occasion.

Many Americans are aware of Lord Russell's position on nuclear disarmament but are unfamiliar with his thoughts in other areas. In the three hours of conversation between the 14-year-old boy and the 92-year-old philosopher, everything from school marks, grandparents and profanity to patriotism, happiness and the Bible was discussed.

Lord Russell: Well, young Tom, congratulations on your birthday.

Tom: Thank you, sir -- you're making it a very unusual birthday. Do you remember what you did on your fourteenth birthday?

Lord Russell: No. I recall my tenth, however. A dreadful day. I was given one gift, a plain blue sweater. I was told that I wasn't properly grateful. I was scolded severely and reminded that when I was born I was almost named Galahad.

Tom (laughing): That's terrible! It sounds like you must have had a very unhappy time when you were young.

Not really, but I think many young people believe they're unhappy at the time. When I was your age I was contemplating suicide, or thought I was. Then one night I had a dream in which I was dying. A family friend was standing at my bedside and in my dream I said, "Well, at any rate, there's one comfort I shall soon be done with all this." He replied, "When you're a little older you won't talk that sort of nonsense!" And I didn't. That was the end of my suicide fantasy. I think it is quite common to young people who feel sorry for themselves, particularly if they are having difficulties at home or at school.

Well, back home, the grownups are always talking about how school isn't difficult enough. I guess you think so too. Since you're a mathematician, I guess you think we should study more math at school.

No, I rather think that although mathematics and the so-called hard sciences are very important, they are too much in vogue these days. What I'd like to see is a more objective and more thorough study of political and economic systems, and history that's not quite so hysterical. Students are taught the most absurd versions of their country's history!

I know! We studied our Mexican war two different times. But once we were taught that it was a good war and once that it was a bad war! To this day I don't know if Davy Crockett was a hero or a border bandit. I'm a Quaker, though, and our church teaches that all wars are wrong.

I think some wars have been justified. Your War of Independence, for example, and our resistance to the Spanish Armada.

My father said that you were also in favor of fighting the Second World War.

Yes, The two world wars were very different. The first one was a raw power struggle. The atrocity stories were largely trumped up and there was no moral issue that could not have been settled by negotiation. Hitler, and the Nazis, on the other hand, were intolerable. If they had won, life would have been hell.

Sometimes I say "hell" too. When I'm talking about something and get excited. But my teachers don't like it.

It's surprising, isn't it? So many things that seem to be a good outlet for grownups aren't considered permissible for children. I wish the schools would pay less attention to profanity and more to acts of unkindness -- those are the real sins. Still, one can't have an entire classroom full of youngsters all swearing and arguing.

You sure can't in a Wilton, Connecticut, school! I like to argue and I get excited and I get mad and then they lower the boom. But I bet you gave your teachers a hard time too.

I didn't have the opportunity because I didn't go to school.

I was taught at home by a private tutor until I went to college. I lived in almost complete solitude.

You must have been awfully lonely. But at least you didn't get report cards.

You're talking about marks, are you? Yes, I suppose bringing one's marks home for Father to see can be rather painful. It is my observation that most parents tend to delude themselves into thinking that they were better and more serious students than their children. The truth is -- and it's merciful -- that in memory, humiliations and failures tend to vanish and successes are magnified.

I spent my first eight years in a kind of strict public school. But when I go to ninth grade I'm going to a school called Putney in Vermont that is sort of progressive.

I think the encouragement of originality without technical skill, which is practised in many progressive schools, is a mistake. You can't play a proper part in a technically complex civilization unless you've had a considerable dose of sneer instruction. I also think that if a person is to be able to fit into adult society he must learn while still young that he is not the entire center of the universe and his wishes are often not the most important part of a situation.

You don't like progressive schools?

There are some things I admire about progressive schools. I admire the freedom of speech and the freedom to challenge ideas. The fact is, however, that teachers are more important than any kind of method or discipline. Children learn the genuine beliefs of their parents and teachers, not their professed precepts. My own parents believed that intellect, energy, creativity and progress are more important than manners.

Were your parents always protesting about things, like you do?

My parents, Lord and Lady Amberley, shocked their families and public sentiment. They declared themselves in favor of women's suffrage and birth control. They both died when I was young. They left a will naming two of their dear friends as guardians. But these people -- like my parents -- were free thinkers. Not religious. My grandparents went to court and had the will set aside. They even dug up my parents' grave where they were buried in our family grounds and had them reburied in a churchyard.

How could they do that? That doesn't sound right.

My grandfather was a former Prime Minister of England.

Oh.

Although we had many household servants, we lived in Spartan simplicity. I remember rising early on bitter-cold winter mornings to practice the piano and I was not allowed to light a fire in the music room.

I hate to practice even if it isn't cold -- I play the violin. I like music but I really hate to practice. The only way I can make myself do it is to make myself a huge sandwich with all the best things in the refrigerator. Then I pick up the violin and promise myself I can have the sandwich when I finish.

A sort of self-bribe, eh, Tom? I never thought of that -- but it would not have worked for me. My grandparents did not believe that sweets or treats were good for children. Indeed,

if there were two desserts at dinner -- say, apple tart or rice pudding -- I was expected to have the pudding.

It doesn't sound like you had much fun, Lord Russell.

There was no intent to provide fun. No one even considered it. My grandparents did what they thought right and I learned a great deal from them. The house was often filled with important people, and I suppose my early exposure to political discussions helped to shape my life.

You must have learned a lot.

I discovered very early that the most distinguished men cannot always be counted on for profound remarks.

Who were some of the men?

I well remember the time that Prime Minister Gladstone came to dinner. I was told that if I was very quiet and listened carefully, I might stay with the gentlemen, who in those days remained at the table for an hour or so after dinner to drink port while the ladies retired to the drawing room. Dinner was finished at last. The table was cleared. The wine was poured. Gladstone, as the guest of honor, was expected to start the conversation. When he opened his mouth I nearly fell off of my chair with excitement.

What did he say?

He cleared his throat and said, "This is very good port they've given me, but why have they given me it in a claret glass?" I was stunned with horror and embarrassment. Nothing much was said that evening.

What a bunch of stuffed shirts!

Ah, but they were very high-principled. My grandmother gave me a Bible with two inscriptions on the flyleaf: "Thou shalt not follow a multitude to do evil." That's from Exodus. And the other was, "Be strong, and of good courage, be not afraid, neither be thou dismayed: for the Lord thy God is with thee wheresoever thou goest." I've always remembered those texts, and I believe they have profoundly influenced my life.

I thought you didn't believe in God and the Bible.

The Bible is a rather poorly written history book but it does contain some useful guidance -- and a lot of nonsense. I stopped believing in religious dogma when I was almost your age. I haven't missed it.

I'd hate to give up Christmas. I don't just mean the presents -- I mean the feeling of Christmas.

No reason why you can't enjoy a holiday celebrating man's capacity for ethical and moral development.

Well...but it's not the same.

Since you seem to enjoy abstract thinking, perhaps you'd like to study higher mathematics.

I don't think so. I'm not even good at lower mathematics. I can't seem to really understand it. Last year I had a good math teacher but even he couldn't do much with me. He tried -- and I tried. But it was no use.

Try again. If more people -- particularly politicians and social philosophers -- knew more about mathematics, there wouldn't be so much trouble in the world. In mathematics there are no absolutes; everything is relative. But the politicians won't have it. Take patriotism, for example. Your country, right or wrong. Salute the flag, regardless of what it stands for. Silly rot. Lot of dangerous emotionalism. The plain fact is that most nations of this world should in all honesty fly the Jolly Roger.

A person like you, Lord Russell, can get away with saying that.

I don't get away with much. You forget the times I've been carted off to jail.

I've seen the pictures. You didn't seem to be too upset about it, though. Not the way most people look when arrested.

You must remember, Tom, I intended to get arrested. I wanted the publicity. If I'd merely called a meeting and stood up on a box to explain my views on world peace, the story would have rated a few paragraphs on an inside page and nothing at all on television. But when an elderly member of the House of Lords, who is also a reasonably distinguished scientist, is arrested, it is front page news. People begin to ask, "What's it all about?" It's not very pleasant to make an exhibition of oneself, but it's the only way to reach many people. The only way in which we can make the facts known is to find a form of protest which even the hostile press will notice.

(Toms sits back in his chair, looking disturbed.)

What's the matter there, Tom?

I don't want to get into an argument, sir...

Never be afraid of an argument. Go right ahead.

I mean, if you go so far as to break the law, it should have something to do with what you're protesting against. Shouldn't it? Like the American abolitionists who hid runaway slaves. We talked a lot about them in our Sunday school. They broke the law because they thought it was wrong. It went against their conscience. That's pretty different from breaking the law just to get yourself on television. I mean, otherwise you might just as well throw a rock through a Buckingham Palace window -- that would get attention. And you would get arrested.

I dare say. You seem to be mixed up. You mustn't exaggerate, young man. That's always a sign that your argument is weak. Americans tend to false exaggeration. Such as saying that everyone who disagrees is a Communist.

Some people say you're a Communist, Lord Russell. I wanted to ask you.

You see? What did I tell you? No, I'm not a Communist. I was one of the first writers to publish a book pointing out the flaws in communism, both as an economic system and as a way of life. Marx was a muddled thinker and inspired by hatred. Communism is possible only where there is poverty, strife and hatred. The best way to combat it is not war. Its spread can only be stopped by reducing poverty. Certainly communism will never be attractive to the prosperous Western countries whose people have tasted the luxury of individual freedom. I say tasted, mind you. We have a long way to go before we have real freedom. Including the United States.

Have you ever done any traveling in the United States? You don't seem to like it very much.

Oh, yes. I spent many years in your country. I saw in America a sign at a beach club that said, "Gentiles Preferred." I wanted to write "Christ keep out" underneath it, but in the end I decided not to. There may no longer be signs like that one around, but I am sure that minority groups -- Negroes and Jews -- know it exists.

However I think there are many nice things about your country. You Americans are very kindly in personal relations -- much more so than we British. Strangers are made to feel welcome. Also I find American speech very pleasant to listen to -- much of your slang is refreshingly expressive. But I wish they would call it American and not English. I don't mind being told I don't speak American well. I don't.

What I do object to about America is the herd thinking. There is no room for individuals in your country — and yet you are dedicated to saving the world for individualism.

I think there are individuals in America. At least the people my parents know. Whenever my parents have a party, the guests sit around arguing for a couple of hours about civil rights and politics and so forth. You can hear them all over the house. At least you don't get put in jail for criticizing the government.

No, but if you are extreme enough in your criticism, you can lose your job or go bankrupt. The fact is, there is precious little freedom anywhere.

Well...I guess I don't see it the way you do. Back home the big thing now is the civil rights movement. Even a lot of kids my age are involved in it. But I read somewhere that you don't think Negroes are as smart as white people.

The remark I believe you're referring to was made decades ago. I have long since changed my mind because I have learned more. Never be ashamed to change your mind — change is the hope of the world. You hear people say today, "There will always be war; you can't change human nature." But two hundred years ago people were saying, "There will always be dueling."

My father and most of my friends' fathers were in World War Two. They keep saying that war is terrible and we have to end it. But when I hear them talk about things like Pearl Harbor and Churchill and the Battle of Britain, I can't help but think that even though there were terrible things, the people who lived through it had some great times.

I agree that to have a full life you have to have adventure, with companionship and a sense of dedication. Conflict — the wish to struggle righteously against odds — is natural for youth. But the nuclear age has changed all that. If war between East and West should break out tomorrow, it is quite likely to mean the end of the human race. Some leaders are prepared to see the human race destroy itself rather than forego the pleasures of fanaticism.

Is that why you say, "Better Red than dead?"

I didn't coin that phrase. It originated in Germany. I don't know how it became credited to me. All my efforts are aimed at nuclear disarmament, so that neither one of these decisions shall be thrust upon us.

In American a lot of people say, "Better dead than Red."

Equally absurd. Remember that the French lived under Nazi occupation for years. They hated it and they suffered, but they didn't go out and commit mass suicide. Everyone wants to live to a ripe old age. Everyone hopes tomorrow will be better.

I'd like to live to a ripe old age too if I could have as exciting a life as you do.

It's all a matter of choosing your ancestors. Except for my parents, Most of my ancestors lived to be at least eighty. Although long ago, one died in his thirties of a disease which is rather rare today — he had his head cut off.

It's hard to think that when you were my age the world was all still horse and buggy. I guess you've seen a lot of inventions since you were young.

Oh, yes — telephone and electricity and all that. But the most important have been new inventions in human relations. Men and Women, for example. Today they treat one another very much the same. Fifty years ago the sexes lived in two different worlds and there was almost no communication. Modern drugs have changed things too. Today poor people can look forward to living almost as long as rich people. At least in your country

and mine.

But too often discoveries and inventions make people feel unsafe. When you are told that something you've always believed is in fact not true, it gives you a frightful shock and you want to disbelieve.

Lord Russell, you seem to be pretty happy. Are you?

I believe I am. I'm rather fortunate. As you grow older, the periods of happiness seem to lengthen.

What do you think makes a person happy?

I believe four ingredients are necessary for happiness. Health, warm personal relations, sufficient means to keep you from want, and successful work.

I guess you've known a lot of famous people in your life. Which one do you remember best.

Einstein, for one. He was a beautiful person. Joseph Conrad, the novelist, I greatly admired. I named my son after him and he sent him a silver christening cup, despite the fact that the boy was never baptized. I knew both Alfred Lord Tennyson and Robert Browning and didn't care for either of them. Browning was a dull sort — a great hand at old ladies' tea parties. Tennyson fancied himself — always walking along in a cloak with his hair flying, playing the poet. I met Lenin and he made a very poor impression on me. Extremely narrow-minded and said some very cruel things.

My father told me you also knew George Bernard Shaw —

Yes.

—and that he ran into you with his bicycle.

He came flying down a hill, quite out of control. The smash threw him twenty feet through the air and he landed head-first on the road. My own bicycle was smashed and I thought we were both done in. But Shaw picked himself up and rode away, laughing. I had to go home by a very slow train. At every stop Shaw, on his bicycle, rode along the platform, put his head in the carriage window and jeered. At one stop he said, "You ought to be a vegetarian; you wouldn't bruise so easily." (They laugh.)

Well, he died before you did.

Yes. Well, he was ninety-four. I hope to live another ten years.

I thought you said two or three years ago that the whole world probably wouldn't last that long.

I feel slightly more optimistic now, but not much.

I'd hate not to be able to finish out my life. I've got a lot of plans.

Keep right on making them. I still believe in the possibility of a free and happy world, but you have to work for it. No one is sure how much sense governments have. Let us hope that they will begin to understand the problems they deal with before it is too late. I know I'm getting close to the end and I don't believe in any kind of afterlife — still I don't fear death. I hope to die while still at work, knowing others will carry on.

Americans say, to die with your boots on.

Exactly. I've enjoyed our talk.

I have too, Lord Russell. I'll always remember it. (Thank you, OPHELIA HOGPES, for this delightful interview)

ABOUT OTHER ORGANIZATIONS (continued)

- (39) **The Bertrand Russell Peace Foundation's Ken Coates writes to say: "We at the Foundation are very closely preoccupied by the forthcoming Berlin European Nuclear Disarmament Convention, which is the second in a series of major conferences of European peace movements." It starts on Monday, May 9th and continues through the rest of the week. Ken sent this "working paper", which provides some background, and the thinking behind the May meeting.**

From Brussels to Berlin: Towards a Nuclear-Free Europe

This working paper offers a general framework for the Berlin convention. It leaves open specific topics and questions as they might develop towards the Convention. This paper is an invitation for further discussion.

I. Points of Departure

The first European Peace Conference, based on the Russell Peace Appeal for a nuclear-weapons-free Europe, took place in Brussels 2-4 July, 1982. The Appeal expresses the following guiding principles for a politics of peace:

- "We must act together to free the entire territory of Europe, from Poland to Portugal, from nuclear weapons, air and submarine bases, and from all institutions engaged in research into or manufacture of nuclear weapons. We ask the two superpowers to withdraw all nuclear weapons from European territory."
- "It will be the responsibility of the people of each nation to agitate for the expulsion of nuclear weapons and bases from European soil and territorial waters, and to decide upon its own means and strategy, concerning its own territory."
- "We must learn to be loyal not to 'East' or 'West', but to each other."
- "At the same time, we must defend and extend the right of all citizens, East or West, to take part in this common movement and to engage in every kind of exchange."
- "We must resist any attempt by the statesmen of East or West to manipulate this movement to their own advantage. We offer no advantage to either NATO or the Warsaw Alliance. Our objectives must be to free Europe from confrontation, to enforce detente between the United States and the Soviet Union, and, ultimately, to dissolve both great power alliances."

Proceeding from these principles, a second European Peace Conference is to be held in Berlin (West) in May, 1983. The Berlin Conference is to be carried through, as was the Brussels Conference, by a European liaison-committee. Berlin suggests itself as conference site for a number of reasons:

- 1983 marks the 50th 'anniversary' of German fascism's seizure of power. The consequences of this seizure of power are, to this day, more manifest in the divided city of Berlin than in any other European city.
- One of these consequences is Europe's partition into two blocs. Berlin lies on the very sector-boundary of the confrontation between the blocs. Therefore the European peace movement should develop from this city initiatives towards overcoming this bloc confrontation.

- The planned Peace Conference in Berlin can decisively influence public opinion in the Federal Republic of Germany - as that country which would be most affected by the planned NATO arms-build-up - as well as in other West European countries and the USA. In this sense, the Conference can contribute significantly to the movement against the stationing of new nuclear weapons in Western Europe.

II. Main Themes of the Berlin Convention

Whereas the Brussels Conference above all enabled the various West-European peace movements to become acquainted with each other and to directly share experiences and opinions, the Berlin Conference is intended to go several steps further: on the one hand towards discussing and working out concrete forms of direct political action at the national and at the European level; on the other hand, towards the further development and linkage of already existing strategies for peace-politics. This double goal corresponds to the Berlin Conference's two central themes:

1. Possibilities for European co-ordinated initiatives against the stationing of new nuclear weapons in Western Europe

- a. Military and political consequences of the planned NATO arms build-up;
- b. Stocktaking of the European peace commitment against deployment of new nuclear weapons in Western Europe: further steps; experience with specific forms of action; relation of extra-parliamentary movements to governmental decisions; national viewpoints and relationships of forces; possibilities of co-ordinated European initiatives.

2. Perspectives for a nuclear-weapons-free Europe in connection with alternative conceptions for European defence politics

Discussion of: unilateral disarmament; proposals for nuclear-weapons-free zones as proposed e.g.

in the Rapacki/Kekkonen Plan or by the Palme Commission report; pacifist alternatives and social civil-defence; conscientious objection to military service; defensive weapons-systems and strategies; neutrality and bloc-independence; 'Europeisation' and collective security systems; perspectives for detente politics; the relation between disarming in nuclear weaponry and arming in conventional weaponry.

Relating to these two main themes, the following issues are to be discussed at the Berlin Conference:

1. Bloc confrontation and ideas toward overcoming such confrontations

- a. What are the consequences of bloc confrontation for the domestic political situation in countries in West and East? (Clichés about the 'enemy' in the prevailing ideology, in the public sphere and in the school; the militarisation of society; the curtailment of fundamental rights; the repression of movements for social emancipation.)
- b. What consequences does bloc confrontation have for the relationship of the European states among themselves? (The role of neutral states; the relationship of nuclear-powers to their NATO or Warsaw-Pact partners - partners who do not have nuclear weapons on their soil.)
- c. What special responsibility have the two German states for overcoming bloc confrontation? (Proposals for the removal from German territory of all weapons of mass-destruction; possibilities for common initiatives, on the part of both German states, for a nuclear-weapons-free zone in central Europe; the prospects of a peace treaty towards settling the 'German question'; the 'German question' as viewed by our neighbours.)

2. The social, economic and ecological costs of armaments

- a. *Taking stock of the present situation.* (The destruction of jobs; critique of large-scale technologies; the relation between civil and military uses of nuclear energy.)
- b. *Alternatives.* (Conversion of armaments industries; soft technologies.)

3. The interconnection of the East-West conflict and the North-South conflict

- a. Militarisation of international politics. The export of weapons, military intervention and presence; the striving for global hegemony and the creation of dependent military dictatorships; wars fought by proxy; concepts for nuclear-weapons-free zones in the Third World and perspectives for world-wide nuclear disarmament; Extension of NATO strategy (for example in the Middle East) in respect of the deployment of new missiles in Southern Europe (Comiso).

- b. The economic dependency of the Third World and perspectives for new world economic order.
- c. The relationship of the peace movement to liberation struggles and wars in the Third World. How can the European peace movement contribute to a non-aligned course of the Third World countries struggling for self-determination.

III. Character and Form of the Berlin Peace Conference

The Berlin Conference is intended to serve the practical politics of peace in general, and specifically to serve as well an open and vigorous discussion of strategy. In this context, there will be room for a broad and intense exchange of opinions and experiences on the part of the various grass-root movements, as well as for expert debates and for public-oriented discussions. The opportunity presented by the Berlin Convention for a comprehensive East-West dialogue should be explored.

Furthermore, the Conference should allow for the development and expression of an authentic culture of the peace movement.

The current plans for the Conference call for two stages:

1st stage (Monday, 9 May - Wednesday, 11 May)

Discussions by experts in the form of hearings, with a limited number of participants, to deal with the main themes listed above.

2nd stage (Thursday, 12 May - Sunday, 15 May)

Open plenary sessions and fora dealing with the main themes, in addition to various workshops organised, for example, according to the particular professions of the participants, according to their country or region, according to their particular form of practical peace-politics.

The Berlin Conference is to be planned and realised by autonomous peace groups, as well as by representatives from political parties, labour unions and church initiatives. The condition for participating in organising the Conference, hence also for sharing the responsibilities connected with it, is the recognition of the principles of the Russell Peace Appeal listed above, and the recognition of the specific goals and themes of the Conference as outlined in this paper.

The Berlin Conference will provide peace initiatives with the opportunity to present their organisation and activities to the Conference participants; and that it will provide independent workshops the opportunity to meet and work.

This proposal was accepted in principle by the European Nuclear Disarmament Liaison Committee in Brussels, September 1982.

"We are also trying to arrange Hearings about the situation in Lebanon and the occupied territories, since we have great fears that the conflict in the Middle East could bubble over into something much bigger." "The aim would be to establish as definitely as possible, on the one hand, the precise circumstances and the motivations of the invasion of Lebanon, the nature of the war, the way it was conducted, the causes, the circumstances and the scope of the various massacres, during the war and after; and on the other hand, the repression and annexation policy as conducted in the occupied territories of the West Bank, Gaza, and Golan, the conditions and scope of colonization, of the takeover of land and other resources, especially hydraulic resources, of the elimination of leading political and cultural elites, of over-exploitation of workers, and of police and military repression, from violations of human and democratic rights up to shootings and tortures."

PROMOTING BR'S PURPOSES

(40) Linus Pauling talks to science teachers. The following is a portion of an article in "The Science Teacher" (May 1966), which is based on an address given at the annual Convention of the National Science Teachers Association in NYC in April of that year.

Scientists also have the duty to help educate those of their fellow citizens who represent what C. P. Snow called "the other culture." If I remember correctly, Lord Snow divided the two cultures in this way: The scientists, the people who understand the world, including our scientific knowledge of it, constitute one culture, and the non-scientists, who understand only those parts of the world that we describe as non-scientific, constitute the other culture. Not long ago Professor Denis Gabor of the Imperial College in London participated in a symposium in the Center for the Study of Democratic Institutions. After this experience with a large group of social scientists, he suggested that the division is not really between the scientist and the non-scientist, but between those people interested in facts and ideas on the one hand, and those interested in words on the other. This seems harsh, but I think that there is something to it. I recall a series of discussions at the Center about the presidency, in which presidents of the United States were categorized as Washingtonian, or Jeffersonian, or Hamiltonian. Finally I asked, "Have you laid down some attributes of the actions or decisions of the presidents and assigned to them their percentage weights of Washingtonianism, Jeffersonianism, and Hamiltonianism, and then analyzed the actions and decisions of the various presidents to find out what the quantitative conclusions are? Have you done this, or have you done anything such as to lead you to think that two different people who classified the presidents among your three categories would reach the same conclusions about them?" The answer was that this sounded interesting but had not been done. Yet, this is what they must do—not just use words that they don't define and carry on vague discussions, but try to make their concepts more precise, to have ideas that can be closely related to fact.

In the class of people who are interested in facts and ideas, we have, of course, most scientists, and also a good number of non-scientists who think along the same lines even though they don't have scientific training. In the other class—those interested in words—we have some scientists and some philosophers, and many non-scientists. I remember reading a book on philosophy in which the author went on, page after page, on the question: If there is a leaf on a tree and you see that it is green in the spring-time and red in fall, is that the same leaf or is it a different leaf? Is the essence of leafness still in it? Words, words, words, but "chlorophyll" and "xanthophyll"—which are sensible in this connection of what has happened to that leaf—just don't appear at all. Admittedly, we have some people who are called scientists who are in the category of those who talk about words rather than facts and ideas.

What is the solution going to be? I believe that the ultimate solution will be that everyone will have a knowledge of science, but it will take a generation, two generations, for us to reach this goal, even in the United States. I believe that we shall reach this goal if the world is not destroyed. I believe that reason will win out and that the world will continue to improve.

What can the scientist do? What are the problems to be attacked, what are the actions that constitute his social obligations? We know that we have

changed the world. We introduced into the world a tremendous change in the ways of waging war when the bombs became millions of times more powerful, more energetic, on the basis of the amount of material exploded. At the time of Hiroshima and Nagasaki a couple of pounds of nuclear material undergoing fission released energy equal to 20,000 one-ton blockbusters. The second great discontinuity came in 1954. There were preliminary tests in 1952 and 1953, but the great one was the United States Bikini test in 1954. The bomb, with about 1300 pounds of explosive material—three-stage, fission, fusion, fission—exploded and released energy equivalent to that of 20 million tons of TNT. What does that mean to the non-scientist? I recall reading an advertisement of an insurance company about an explosion, in New Jersey, of a ship in which 457 tons of high explosives exploded with "megaton might"—only off by a factor of 2,000 from a megaton, a million tons of TNT. This is the sort of understanding that the world has about these explosives. How many people are there who know that the Bikini bomb, having 1300 pounds of explosive material, had explosive energy greater than that of all explosives used in all of the wars of history, including the first and second world wars and all earlier wars?

One 20 megaton bomb can smash a city such as New York flat and kill 10,000,000 people with the blast, fire, and radioactive fallout. The plane that crashed over Spain in January was carrying four H-bombs. I've seen newspaper reports that the bomb that was lost in the Mediterranean was a 20 megaton bomb, total weight 2800 pounds. That means that it is efficiently made—1300 pounds of nuclear explosives and about 1500 pounds of gadgetry, the conventional explosive RDX or PETN that produces the implosion—the inwardly directed explosion that compresses the ball containing a mixture of uranium-235 and plutonium-239, which then undergoes a process of nuclear fission and sets off the second stage of nuclear fusion in a couple of hundred pounds of lithium deuteride, and the third stage of nuclear fission in a thousand pounds of ordinary uranium metal. These bombs exist by the thousands in the world today.

Scientists recognized immediately in 1945 that it was their duty to help educate their fellow citizens, so that we all can take part in the democratic process, in making decisions, informed decisions. I began very early, by myself, in 1945, and within a few months was associated with eight other scientists: Professor Albert Einstein; Harold Urey; Frederick Seitz, who is president of the National Academy now; Harrison Brown, foreign secretary of the National Academy; Victor Weisskopf; and a few others, in the Emergency Committee of Atomic Scientists, called the Einstein Committee, which functioned quite effectively for four years. Other groups also operated. In particular I recall the work of Bertrand Russell in getting out the Russell-Einstein Manifesto on July 9, 1955. During the year after the explosion of the Bikini bomb on the first of March 1954, Lord Russell had given a number of BBC and other talks on the crisis that faced the world when the bombs became a thousand times more powerful than those that destroyed Hiroshima and Nagasaki. On the ninth of July 1955, he issued a statement that had been signed by Professor Einstein a few days before

his death and by nine other scientists, along with Lord Russell. I'll read from this, just to remind you of what the situation was 11 years ago.

In the tragic situation that confronts humanity we feel that scientists should assemble in conference to appraise the perils that have arisen as a result of the development of weapons of mass destruction, and to discuss a resolution in the spirit of the appended draft.

We are speaking on this occasion not as members of this or that nation, continent, or creed, but as human beings, members of the species man, whose continued existence is in doubt. The world is full of conflict, and, overshadowing all minor conflicts, the titanic struggle between communism and anti-communism. Almost everybody who is politically conscious has strong feelings about one or more of these issues, but we want you, if you can, to set aside such feelings and consider yourselves only as members of a biological species which has had a remarkable history and whose disappearance none of us can desire.

We shall try to say no single word which should appeal to one group rather than another. All, equally, are now in peril, and, if the peril is understood, there is hope that they may collectively avert it.

We have to learn to think in a new way. We can be taken to give military victory to whatever group we prefer, for there no longer are such steps. The question we have to ask ourselves is: What steps can be taken to prevent a military contest of which the issue must be disastrous to all parties?

The general public and even many men in positions of authority have not realized what would be involved in a war with nuclear bombs. The general public still thinks in terms of the obliteration of cities. It is understood that the new bombs are more powerful than the old, and that, while one A bomb could obliterate Hiroshima, one H bomb could obliterate the largest cities, such as London, New York, and Moscow. No doubt in an H bomb war great cities would be obliterated. But this would be one of the minor disasters that would have to be faced. If everybody in London, New York, and Moscow were exterminated, the world might, in the course of a few centuries, recover from the blow. But we know, especially since the Bikini test, that nuclear bombs can gradually spread destruction over a very much wider area than had been supposed.

It is stated on very good authority that a bomb can now be manufactured which will be 25 hundred times as powerful as that which destroyed Hiroshima. Such a bomb, if exploded near the ground or under water, sends radioactive particles into the air or air. They sink gradually over a very much wider area of the earth in the form of a deadly dust or rain. It was this dust which infected the Japanese fishermen and their catch of fish. No one knows how widely such lethal radioactive particles might be diffused, but the best authorities are unanimous in saying that a war with H bombs might quite possibly put an end to the human race. It is feared that if many H bombs are used there will be universal death, sudden only for a minority, but for the majority a slow torture of disease and disintegration.

Many warnings have been uttered by eminent men of science and by authorities in military strategy. None of them will say that the worst results are certain. What they do say is that these results are possible, and no one can be sure that they will not be realized. We have not yet found that the views of experts on this question depend in any degree upon their politics or prejudices. They depend only, so far as our researches have revealed, upon the extent of the particular expert's knowledge. We have found that the men who know the most are the most gloomy.

Here, then, is the problem which we present to you, stark and dreadful and inescapable. Shall we put an end to the human race? Or, shall mankind renounce war?

People will not face this alternative, because it is so difficult to renounce war. The abolition of war will demand drastic limitations of national sovereignty. But perhaps impedes understanding of the situation more than anything else is that the term "mankind" feels vague and abstract. People scarcely realize in imagination that the danger is to themselves and their children and to their grandchildren, and not only to a dimly apprehended humanity. They can scarcely bring themselves to grasp that they, individually, and those whom they love, are in imminent danger of perishing agonizingly, and so they hope that perhaps war may be allowed to continue, provided that modern weapons are prohibited.

This hope is illusory. Whatever agreements not to use H bombs had been reached in time of peace, they would no longer be considered binding in time of war, and both

sides would set to work to manufacture H bombs as soon as war broke out, for, if one side manufactured the bombs and the other did not, the side that manufactured them would inevitably be victorious.

Although an agreement to renounce nuclear weapons as part of a general reduction of armaments would not afford an ultimate solution, it would serve certain important purposes. First, any agreement between East and West is to the good, insofar as it tends to diminish tension. Second, the abolition of thermonuclear weapons, if each side believed that the other had carried it out sincerely, would lessen the fear of a sudden attack in the style of Pearl Harbor, which at present keeps both sides in a state of nervous apprehension. We should, therefore, welcome such an agreement, though only as a first step.

Most of us are not neutral in feeling, but, as human beings, we have to remember that if the issues between East and West are to be decided in any manner that can give any possible satisfaction to anybody, whether communist or anti-communist, whether Asian or European or American, whether white or black, then these issues must not be decided by war. We should wish this to be understood, both in the East and in the West.

There lies before us, if we choose, continual progress in happiness, knowledge, and wisdom. Shall we, instead, choose death, because we cannot forget our quarrels? We appeal, as human beings, to human beings: Remember your humanity and forget the rest. If you can do so, the way lies open to a new Paradise. If you cannot, there lies before you the risk of universal death.

RESOLUTION: We invite this Congress, and through it the scientists of the world and the general public, to subscribe to the following resolution:

In view of the fact that in any future world war nuclear weapons will certainly be employed, and that such weapons threaten the continued existence of mankind, we urge the Governments of the world to realize, and to acknowledge publicly, that their purpose cannot be furthered by a world war, and we urge them consequently to find peaceful means for the settlement of all matters of dispute between them.

This Manifesto was signed by Professor Max Born, Professor P. W. J. M. Dirac, Professor Albert Einstein, Professor Leopold Infeld, Professor Frédéric Joliot-Curie, Professor Hermann Joseph Muller, Linus Pauling, Professor C. F. Powell, Joseph Rotblat, Lord Russell, and Hideki Yukawa. Nine of them are recipients of the Nobel Prize.

The Russell-Einstein Manifesto attracted great interest at the time, and it led to setting up the Pugwash Conferences, fourteen of which have been held. These conferences are on the social responsibilities of scientists. They began in 1957 and have been attended by over 300 scientists from about 30 countries. The topics taken up in the Pugwash Conferences are dangers of nuclear war, arms control, disarmament and world security, biological and chemical warfare, and international cooperation in pure and applied sciences. Dr. Rotblat, in *The History of the Pugwash Conferences*, says that in the second Pugwash Conference most of the issues, about arms control, disarmament, world security, and bomb test fallout, were highly complex, and that in many instances the scientists in the West received for the first time reasoned objections to their views from scientists from the East, and vice versa.

I have little doubt that the Pugwash Conferences contributed greatly to the achievement of the 1960 treaty on Antarctica as a nuclear free zone and the 1963 partial bomb test-ban treaty and to the announcement made by nearly all the nations of the world that their goal is the abolition of war. I believe that these treaties would not have been made had it not been for the acceptance of their social responsibilities by scientists in many countries in the world. But this is a slow process, as you recognize from the problems as outlined in the Russell-Einstein Manifesto. These problems are in large part

still with us. We have, I believe, gone through the period of greatest danger. We now have achieved a state of accepted coexistence of the United States and the Soviet Union. No longer does there exist the antagonism that there was eleven years ago or even five years ago. The understanding of the situation exists now. It has been accepted—accepted in government circles. But still there is much need for education of the public and also of those responsible for national policy.

The abolition of war is not the only problem related to the social responsibilities of scientists. In discussing some others I shall quote from an address I gave on February 18, 1965, at the *Pacem In Terris* Convocation.

First, there is the matter of ethical principles, ethical principles in relation to science. Can there be formulated a rational and scientific basis of a system of morality? I believe that there can be.

I accept, as one of the basic ethical principles, the principle of the minimization of the amount of suffering in the world.

I do not accept the contention that we cannot measure the suffering of other human beings, that we do not know what is good and what is evil.

Even though my relationship to myself is subjective and that to other human beings is objective, I accept the evidence of my senses that I am a man, like other men; I am "fed with the same food, hurt with the same weapons, subject to the same diseases, healed by the same means, warmed and cooled by the same winter and summer"; when I am pricked, I bleed, as do other men; when I am tickled, I laugh; when I am poisoned, I die. I cannot contend that it is anything but the result of chance that I am I, that this consciousness of mine is present in this body; I cannot in good faith argue that I deserve a better fate than other men; and I am forced by this logic to accept as the fundamental ethical principle the Golden Rule: As ye would that men should do to you, do ye also to them likewise."

I know what causes me to suffer. I hope that other human beings will take such actions as to keep my suffering to a minimum, and it is my duty to my fellow men to take such actions as to keep their suffering to a minimum.

We suffer from accidents, from natural catastrophes, from disease, from the ill accompanying the deterioration of age, and also, in a sense the most viciously, from man's inhumanity to man, as expressed in economic exploitation, the maldistribution of the world's wealth, and especially the evil institution of war.

Man has reached his present state through the process of evolution. The last great step in evolution was the mutational process that doubled the size of the brain about a million years ago; this led to the origin of man. It is this change in the brain that permits the inheritance of acquired characteristics of a certain sort—the inheritance of knowledge, of learning, through communication from one human being to another. Thus, abilities that have not yet been incorporated into the molecules of deoxyribonucleic acid that constitute the pool of human germ plasma are not lost until their rediscovery by members of following generations, but instead are handed on from person to person, from generation to generation. Man's great powers of thinking, remembering, and communicating are responsible for the evolution of civilization.

During year after year, decade after decade, century after century, the world has been changed by the discoveries made by scientists and by their precursors, by those brilliant, original, imaginative men and women of prehistoric times and of more recent times who learned how to control fire, to cook food, to grow crops, to domesticate animals, to build wheeled vehicles, steam engines, electric generators and motors, and nuclear fission power plants. And, of course, in the early days the scientists were the theologians, the religious leaders, too. Sometimes the thought occurs to me that the world will not be saved unless we return to this condition.

I remember those Pugwash Conferences on science and world affairs and how the scientists of the East and

West seemed, so far as I could see, to be very much like one another. They resemble one another not only in their knowledge of science, but also in their acceptance of moral principles. It seems to me when I compare scientists with diplomats, with other people, that the scientists of the whole world are more closely related to one another than scientists are to other people in their own country. There is a better understanding among them than with other people. This understanding must spread. The discoveries that scientists have made provide the possibility of abolishing starvation and malnutrition and improving the well-being and enriching the lives of all of the world's people. The effect of the discoveries of scientists in decreasing the amount of human suffering is illustrated by the control that has been achieved over the infectious diseases. In many parts of the world it is now rare for women to die of puerperal infection, for infants to die of diphtheria or scarlet fever, for people to die of diseases such as smallpox or bubonic plague. Cancer remains a cause of great human suffering, not yet brought under control. But we may hope that this terrible disease will also succumb in a few decades to the attack being made on it by scientists.

The results of medical discoveries and technological developments have not yet been made available to all of the world's people. Modern methods

of waging war seem to be more easily available to the underdeveloped countries than drugs, food, and machines for increasing the production of goods.

Our system of morality as expressed in the operating legal, social, and economic structures is full of imperfections, and these imperfections have been accentuated during recent decades. There is great misery caused by the abject poverty of about half of the world's people, yet most scientists and technologists in the world today are working to make the rich richer and the poor poorer, or are working on the development and fabrication of terrible engines of mass destruction and death whose use might end our civilization and exterminate the human race. The already enormous disparity in the standards of living of different peoples has been increasing rather than decreasing in recent years. The use of a large part of the world's wealth—120 billion dollars per year—for the support of militarism and the failure to stop the increase in the amount of human suffering due to poverty are causing a deterioration in morality, especially among young people. I believe that it is a violation of natural law for half of the people in the world to live in misery, in abject poverty, without hope for the future, while the affluent nations spend on militarism a sum of money equal to the entire income of this miserable half of the world's

people.

Pope John the 23rd, in his great Encyclical Letter of April 11, 1963, addressed to all men of good will, said that every man is a person; that every man has the right to life, to bodily integrity, to food, clothing, shelter, rest, medical care, and social services; to security in cases of sickness, inability to work, widowhood, old age, unemployment, or deprivation otherwise of the means of subsistence through no fault of his own; the right to respect for his own person, to his good reputation; the right to freedom in searching for truth and in expressing and communicating his opinions; the right to be informed truthfully about public events; the right to share in the benefits of culture; the right to a basic education and to suitable technical and professional training; the right to free initiative in the economic field and the right to work under good working conditions, with a proper, just, and sufficient wage; the right to private property, with its accompanying social duties; the rights of residence and of freedom of movement, of membership in the human family, and membership in the world community.

Most human beings are now denied these rights. It is our duty to work to achieve them for everyone, and not just the duty of scientists. In the words of Pope John also: "It is not enough, for example, to acknowledge and respect every man's right to the means of subsistence if we do not strive to the

best of our ability for a sufficient supply of what is necessary for his sustenance."

We, as scientists, have the general social responsibilities resulting from our knowledge and understanding of science and its relation to the problems of society. It is not our duty to make the decisions, to run the world, rather, our duty to help educate our fellow citizens, to give the benefit of our special knowledge and understanding and then to join with them in the exercise of the democratic process.

Among the problems with which we may be concerned are the pollution of the atmosphere, the pollution of water supplies, fluoridation of water and use of other public health measures, contamination of the earth with pesticides, with lead from leaded gasolines, misuse of chemicals as food additives, the location of nuclear power plants in thickly populated centers, the best use of scientific and medical knowledge to decrease the amount of human suffering caused by poverty and disease, and especially the prevention of the destruction of civilization by nuclear war.

I believe that we shall succeed in abolishing war, in replacing it by a system of world law to settle disputes between nations, that we shall in the course of time construct a world characterized by economic, political, and social justice for all human beings and a culture worthy of man's intelligence.

(42) A Humanist Manifesto

By CURT SYTSMAN
A poetic defense of Humanism against the attacks of the Moral Majority.

Reprinted from *The Rhyme & Reason of Curt Sytman* by permission of the publisher. Copyright 1982. Curt L. Sytman and CSS Publications, P.O. Box 23-C.L., Iowa Falls, Iowa 50126.

Published as a public service by Lyle L. Simpson, President
American Humanist Association, 7 Harwood Drive, Amherst, N.Y. 14226;
Corliss Lamont, Honorary President; and Stephen S. Fenichell, Treasurer.

In every age, the bigot's rage
Requires another focus,
Another devil forced on stage
By hatred's focus-pocus:
The devil used to be the Jew
And then it was the witches;
And then it was the Negroes who
Were digging in the ditches.
The devil once was colored pink
And labeled communistic;
Now, all at once, in just a blink,
The devil's humanistic.

From Bangor, Maine, to Arkansas
To Medflies by the Sea,
The tongues are sharp and hearts are raw
From what has come to be;
A moral chorus sings a song
And strikes an age-old chime:
The humanist is now the wrong
That festers ever ill.

It's hard to prick a bigot's flaws
And that, my friends, is just because
He makes a devil of a group
And then proceeds to wail and whoop
Against the Satan he has made
Until our land is so afraid
Of what he calls the foe
That no one stops to wonder if
The tattler in the sudden tiff
Is not, in point of fact, the taint
Instead of self-associated aint.
The method is as old as sin,
And yet when sins like this begin,
It's hard to stop the flow.

The humanist must be a fiend
To gall our Falwell so,
But when the dastards are gleamed
For facts, we still don't know
Just who this "humanist" might be—
A man, a beast or elf.
Indeed, as best as I can see,
I might be one myself.

Since some poor someone always bleeds
When bigots holler treason,
A humanist opposes creeds
And puts his stock in reason;
He holds his faith within his heart,
Where churches ought to be,
And has the strength to know the chart
That maps this complex sea
Cannot be made a simple plan;
Despite the bigot's ravage,
There's gospel in the lowest man
And scripture in the savage.

As best as I can tell, my friends,
The humanistic "sin"
Is nothing but a heart that bends
To let its neighbors in;
It's nothing but a mind that grows
Beyond the cry of treason
To sanctify its sacred chose,
The hallowed gift of reason.

If bending ears to human cries
Or wiping tears from human eyes—
If finding hell in human rot
Or seeking hope in human thought—
If learning grace from human forms
Or spurning hate in human swarms—
Is what is now abhorred,
I'll wear that humanistic creed
Upon my chest where all can read
My dedication to the plan
That man was born to care for man;
I'll wear it proud beneath the sun
And say, when my poor life is done,
That I have served the Lord.

When life becomes a bitter brew
And hatred haunts the air,
There isn't much that we can do
But try to think and care;
It isn't much— it's not enough—
But that, my friends, is why
I'm proud to be a humanist
And will be till I die.

RUSSELL SOCIETY NEWS

No. 38

May 1983

- 1) Annual Meeting, June 24-26 (2,41). BRS Award to Rotblat (32). Rotblat on Pugwash (7). The Cambridge Apostles (5). Mershon Report (8). Nuclear war survivor's manual (9). Reason: better dead than red (10). Bay Area religious beliefs (11). Marx, non-prophet (12). Contributions needed (25). Zuckerman's "Nuclear Sense & Nonsense" (43). BRS Library Campaign (21). BRS's new address (27). We nominate Directors (40). An asterisk in left column indicates a request. Index is at end.
-

ANNUAL MEETING (1983)

- (2) June 24-26 at McMaster. For the information provided in the previous newsletter, see (41). We have no additional information, except that we think we've found the cheapest way (by far) to send payment in Canadian funds: by U.S. Postal Money Order.
- (3) Deductible expense reminder. Members whose presence is essential to the conduct of the meeting are entitled to treat the cost of attending it as a deductible expense on tax returns. That would include officers, directors, committee chairmen, and anyone else who might be giving a report at the meeting.
-

REPORTS FROM COMMITTEES

- (4) Science Committee (Alex Dely, Chairman):
- Alex's chief activity recently has been on the subject of accidental nuclear war. See (8).
- Alex is University of Arizona correspondent for the Federation of American Scientists. He sent us the FAS Public Interest Report (February 1983) on the topic, "Reciprocal Visits by US and USSR political leaders." The basic reason for the arms race is fear of the other side. Yet what do we know about the other side? The Report tells us that "...a majority of the ruling political bodies of the two sides have never visited the country of the other." The 12-page Report aims to encourage Congressional travel to the Soviet Union with a view to achieving a better understanding -- and a lessening of fear -- of the adversary.
-

BR AT CAMBRIDGE

- (5) The Apostles were the source of BR's greatest delight while at Cambridge. As he says in his Autobiography (Boston: Little, Brown. Volume I, 1957. pp.91-92):

The greatest happiness of my time at Cambridge was connected with a body whom its members knew as "The Society," but which outsiders, if they knew of it, called "The Apostles." This was a small discussion society, containing one or two people from each year on the average, which met every Saturday night. It has existed since 1820, and has had as members most of the people of any intellectual eminence who have been at Cambridge since then. It is by way of being secret, in order that those who are being considered for election may be unaware of the fact. It was owing to the existence of The Society that I so soon got to know the people best worth knowing, for Whitehead was a member, and told the younger members to investi-

gate Sanger and me on account of our scholarship papers. With rare exceptions, all the members at any one time were close personal friends. It was a principle in discussion that there were to be no taboos, no limitations, nothing considered shocking, no barriers to absolute freedom of speculation. We discussed all manner of things, no doubt with a certain immaturity, but with a detachment and interest scarcely possible in later life. The meetings would generally end about one o'clock at night, and after that I would pace up and down the cloisters of Neville's Court for hours with one or two other members. We took ourselves perhaps rather seriously, for we considered that the virtue of intellectual honesty was in our keeping. Undoubtedly, we achieved more of this than is common in the world, and I am inclined to think that the best intelligence of Cambridge has been notable in this respect. I was elected in the middle of my second year, not having previously known that such a society existed, though the members were all intimately known to me already.

Things change. We do not recognize the Apostles of Russell's day as they are described in a current book review. The book reviewed is "After Long Silence" by Michael Straight (NY: Norton). The review is by H. Trevor-Roper, identified by The New York Review of Books — in which the review appeared (3/31/83, pp3-7) — as "Master of Peterhouse, Cambridge. Author of 'Hermit of Pekin', 'The Last Days of Hitler', 'The Rise of Christian Europe', and 'Princes and Artists'."

The following excerpts do not give the gist of the review, but are the passages that relate to the Apostles.

As is well known, the most prolific breeding ground for such moles was at Cambridge University. Why was this? On the face of it, Oxford would have seemed more promising. Oxford was the scene of the famous Union debate. Just before that, the Oxford University Communist Society—the "October Club"—had been dissolved by authority: an invitation to its members to go underground. Oxford is traditionally more political than Cambridge. But Oxford, as far as we know, produced no Russian spies, whereas Cambridge can glory in the names of Burgess, Maclean, Philby, Blunt, not to speak of smaller fry. How are we to account for this? Was it a mere accident: the presence of a particularly expert angler at that well-stocked pool? Or was it the consequence of some particular quality of the place?

The two ancient universities of England, as Macaulay wrote, have always had distinct characters. Oxford, in this century, has been gayer, more sophisticated, more cosmopolitan: ideas there overflow, collide and mingle with other ideas, and are diluted or complicated in the process. Cambridge is more esoteric and intense, even solipsistic: its ideas (where they exist) gather steam and build up pressure in the sealed test tubes of introverted coheres. It is difficult to imagine the philosophy of G.E. Moore, with its complacent cult of "good states

of mind," or the sanctimonious teaching of E.M. Forster, with its subordination of public virtue to private relations, being received in Oxford. And what is one to say of the "Apostles," the egregious secret society of self-perpetuating, self-admiring narcissi to which Moore and Forster, Burgess and Blunt, belonged? Could it have existed at Oxford? Would it not there have been blown up from within, or laughed out of existence?

* * * * *

Mr. Straight had already met Blunt on a visit to Russia, sponsored by a communist student, earlier in that year, and soon he was friendly with both him and Burgess. Next year, he found himself co-opted into the secret society of the Apostles and could be scrutinized closely by them. Burgess had by then publicly broken with the Communist Party and, as a blind, was moving in reactionary, not to say Nazi, circles. Philby and Maclean, we may note, were not Apostles. Consequently they did not come his way. Apostles were hardly expected to know anyone outside the society. As one of them once said, when asked a question about other undergraduates, "There are no other undergraduates."

Mr. Straight has a delicate sense of

irony and I particularly enjoyed his account of this absurd secret society. Like most university societies, it had originally been founded (in the early nineteenth century) with a serious purpose (the laicization of the university), and had not been secret at all. But—again like most university societies—it had quickly become purely social. It had also become secret and complacently exclusive. One of the silliest members in Mr. Straight's time was the then provost of Kings, J.T. Sheppard, a third-rate classical scholar. According to Sheppard, in order to be an Apostle, one had to be "very brilliant and extremely nice." There was an initiation ceremony and a fearful oath: the initiate prayed that his soul might writhe in unendurable pain for the rest of eternity if he so much as breathed a word about the society to anyone who was not a member. When Mr. Straight remarked that this seemed a bit harsh, Provost

"See Hugh Sykes Davies, "Apostolic Letter," in *Cambridge Review*, May 7, 1982, and June 4, 1982.

Sheppard reassured him: "You see," he explained, "our oath was written at a time when it was thought to be most unlikely that a member of the society would speak to anyone who was not Apostolic." Such was the self-constituted elite which, by now, had become

the envelope for an even more secret cell: the crypto-communist recruiters of Russian spies.

* * * * *

In 1949, at an Apostles dinner in London, Straight again met Burgess and Blunt, and next day a crucial conversation took place. Burgess was eager to ensure that Straight would not betray them, and Straight, having been assured that both were now inactive—that Blunt had returned to art history and Burgess was about to leave the Foreign Service—gave or implied such an assurance. In fact Burgess did not leave the Foreign Service and Blunt did not cease to act as his accomplice. But Straight did not betray them—at least not yet.

* * * * *

For this reason, although I can forgive their error and even, at a pinch, their treachery, I cannot forgive their arrogance. The picture of the priestly Blunt, with his thin precise voice, ordering the lives of others at the behest of "our friends" in the Kremlin and laying a paternal hand on their shoulders as they leave his presence, will remain with me as the perfect icon of a Cambridge Apostle in 1937. So might St. Paul have sent Timothy to the Christian cells of Greece, or the Jesuit general sped a doomed missionary to the secret priest holes of Elizabethan England. □

The decline of the Apostles began soon after BR's time. Actually, he was aware of it, for he writes (pp.94-95):

Some things became considerably different in the Society shortly after my time.

The tone of the generation some ten years junior to my own was set mainly by Lytton Strachey and Keynes. It is surprising how great a change in mental climate those ten years had

brought. We were still Victorian; they were Edwardian. We believed in ordered progress by means of politics and free discussion. The more self-confident among us may have hoped to be leaders of the multitude, but none of us wished to be divorced from it. The generation of Keynes and Lytton did not seek to preserve any kinship with the Philistine. They aimed rather at a life of retirement among fine shades and nice feelings, and conceived of the good as consisting in the passionate mutual admirations of a clique of the élite.

BR ADMIRER

- (6) Kisty. "George Kistiakowsky succumbed to cancer December 7, 1982 after a long, productive, inspiring career," writes George W. Rathjens in the "Bulletin of the Atomic Scientists" (April 1983, pp 2-3). Rathjens -- a chemist and Professor of Political Science at MIT, and a former Director of the Defense Department's Weapons Systems Evaluation Group -- continues:

He had a distinguished career in chemistry, as is attested by the honors he received: medals, including the Medal of Science from President Johnson and the Priestly medal; honorary degrees and membership in the distinguished scientific societies. But I am ill-qualified to comment on the purely scientific aspect of Kistiakowsky's life or, for that matter, on his contribution to the Manhattan Project and other government service during World War II, for which he received the Medal of Merit from President Truman.

Although I first became acquainted with him in 1958 when I was working in chemistry at Harvard, it was during the ensuing 24 years that I came to know him well, both as a friend and as a comrade-in-arms in what was the consuming passion of his later years: his effort to prevent nuclear war. It is to this period of his life that I turn.

Kistiakowsky went to Washington in mid-1959 as President Eisenhower's science advisor and as chairman of the President's Science Advisory Committee. He brought with him incisive knowledge of military technology, gained through his wartime experience and, later, service on a number of advisory groups, including Science Advisory Committee panels, concerned with missile and other military programs. But he brought something else that was probably even more important to his relationship with the President. Eisenhower is reported to have said that the scientists were the only group that had come to Washington to serve the country rather than their own interests. It was the President's appreciation of this quality, coupled with hard work and healthy skepticism, that made Kistiakowsky and his predecessor, Jim Killian, so influential with Eisenhower, and that gave

them such weight in dealing with the hard sell of the military and aerospace contractors during that period of almost unrestrained interest in missiles, space and other exotic technologies. Would that there were such scientists in Washington today -- and political leadership that valued those qualities.

Kistiakowsky left Washington at the end of the Eisenhower Administration with the Medal of Freedom, with a broader view of the world, and with a very considerable amount of political savvy which he was puckishly wont to downplay when it served his purposes -- for example, in testifying before Congressional Committees. He also left with a concern, much increased since I had first met him, about the danger of nuclear war and the futility -- indeed insanity -- of the arms race. In testifying on the Nuclear Test Ban Treaty of 1963 he said:

"I do not believe that we or any other nation can find real security in a continuing arms race. . . . To speak of winning such a conflict is to misuse the language: only a Pyrrhic victory could be achieved in a nuclear war."

He continued so to believe for the rest of his life.

After his return to Harvard, Kisty continued to serve as a government advisor until 1967 when, thoroughly disillusioned by events in Vietnam, he made a clean break with the Administration.

He then turned to working for a change in policy relating to both Vietnam and the nuclear arms race by speaking out in public, by efforts to secure the election of like-minded people to the Congress and by trying to influence those already in office.

He found a channel for his endeavors in the Council for a Livable World, of which he was chairman from 1977 until his death, and to which he was devoted.

Kistiakowsky's friends were legion, but there were also people and institutions about which he had strong negative feelings; and he was not reticent about making those feelings known. Among American institutions, there were probably none that so infuriated him as the Atomic Energy Commission and its successor agencies. He was appalled by the Oppenheimer affair; by the Commission's coverup of the fallout problem in the 1950s; and finally by its persistent and often devious efforts to prevent the cessation of testing of nuclear weapons. And I do not remember his having said many kind words -- none, after Cambodia -- about President Nixon or Henry Kissinger.

Although he was feisty and on occasion irascible, Kisty was also a man of great charm, warmth and humor. And, I should add, a man with some vanity. On visiting my home once, he said to me that he was pleased to see that my copy of his book, *A Scientist at the White House*, was next to Bertrand Russell's memoirs, and that that was an appropriate place for it. Just this week I learned that he had placed the book there while I had been out of the room. But he was right. He belonged in the company of Russell. Like Russell, he was one of that small group of scientists with good taste not only in research problems -- all great scientists have that, almost by definition -- but with good taste in how to spend their lives, in deciding what to be for and against; and in the courage to act, based on their convictions.

(Thank you, BOB DAVIS)

NUCLEAR DISARMAMENT

(7) Pugwash. It was at the first of the Pugwash Conferences (1957) that scientists from both sides of the Iron Curtain met for the first time. They came to discuss the danger of nuclear war and to seek ways to avoid it.

The Pugwash Conferences were BR's idea. In organizing them, BR was greatly assisted by Professor Joseph Rotblat, about whom BR says, in his Autobiography (NY:Simon & Schuster, 1969, Volume III, p. 98):

He was, and still is, an eminent physicist at the Medical College of St. Bartholomew's Hospital and Executive Vice-President of the Atomic Scientists' Association. ... I have often worked closely with Professor Rotblat and I have come to admire him greatly. He can have few rivals in the courage and integrity and complete self-abnegation with which he has given up his own career (in which, however, he still remains eminent) to devote himself to combatting the nuclear peril as well as other allied evils. If ever these evils are eradicated and international affairs are straightened out, his name should stand very high indeed among the heroes.

The Conferences were not official meetings of government representatives or agencies, and had to be financed privately. The costs of the first Conference were paid by Cyrus Eaton, a wealthy industrialist. The Conference took place in the town where he was born, Pugwash, Nova Scotia.

Professor Rotblat has written "A History of the Pugwash Conferences". Actually, that is not the title of a book; it is the sub-title. The title is "Scientists in the Quest for Peace" (MIT Press, Cambridge, Mass. and London, England, 1972). Here are the first paragraphs of the Preface, followed by the Summing Up:

Preface

Pugwash is an international movement, started in 1957, involving some of the most famous men of learning and aiming to ensure that mankind will not destroy itself. Yet few people, other than its participants, are aware of its existence. The cause of this obscurity lies within the Pugwash Movement itself. Anonymity is the price paid for bringing eminent scientists together and getting them to talk freely and without inhibition on matters which are of deep concern to them but on which they are not necessarily experts. Such talks can be effective, and generate original ideas, only if the participants do not have to worry that what they say may be taken down and published, more likely than not in a distorted fashion. For this reason the meetings are private and the Press not admitted. But if the Press is excluded, its members do not write about them, and hence the ignorance of the public about Pugwash.

There are other organizations which debate the same issues in public, in front of a wide audience and in full glare of the mass media. But usually the discussions turn into speeches for the benefit of the audience, and little original thinking takes place; on the whole such gatherings are less conducive to the emergence of new concepts than a true confrontation of minds, with cross-fertilization of ideas, in a small meeting round a table.

SUMMING UP

In the course of 15 years, the Pugwash Conferences on Science and World Affairs have become established as an important and effective channel of communication between scientists for the study and discussion of many of the complex issues which confront mankind at the present time. The participation in these conferences of eminent scientists from East and West, and the constructive proposals which have emerged from the discussions, particularly in relation to disarmament, have secured for the Pugwash Conferences the respect of the scientific community, of governments, and of many sectors of society. The name "Pugwash" has become a symbol of successful international debate on controversial issues, and the conferences are cited as a model for similar efforts in other fields of human relations.

The success of the Pugwash Conferences is the result of resolute efforts of a group of scientists, determined to retain an independent and unbiased outlook, and anxious to build and consolidate international understanding and co-operation. The Pugwash Conferences have shown that it is possible to apply the scientific approach, which has proved so successful in science and technology, to problems which are only indirectly related to science. They have shown that even when dealing with highly controversial matters, it is possible to tell the truth, without being abusive, to be candid, without trying to embarrass, provided that there is a common approach based on scientific objectivity and mutual respect.

Another aspect of the Pugwash Movement is that it represents an excursion into a new type of activity by scientists, the fulfilment of their social responsibilities. The important role played by science in modern society, and the special opportunities and competence of scientists, put on them the duty to help mankind to avert the dangers which are arising from the progress of science and technology, and to assist in the development of a new world, in which the beneficial applications of science can be fully developed.

Since 1955, when the Russell-Einstein Manifesto was issued, the world situation, as far as it affects the aims of Pugwash, has changed considerably. All nations now accept the view that a nuclear war would be an unmitigated catastrophe, and that no side would emerge as a real victor from such a war. Much has also been achieved in bringing nations together to talk about various aspects of world security. Whereas at the beginning, Pugwash was the only channel of communication between East and West for debate on these issues, nowadays many channels are open, and with the inclusion of China in the United Nations, there are great hopes of extending the lines of communication.

Above all, there has been a dramatic change in the attitude and the involvement of scientists in issues facing mankind. Stimulated by Pugwash in some measure, many scientists have made the study of the problems of disarmament and arms control their main occupation. The increasing awareness in society of the importance of research on peace and conflict, has resulted in the setting up of a number of national, and a few international, institutes, where scholars from both the social and the natural sciences carry out full-time research on these problems. The usefulness of closer international collaboration in science and technology is often linked with the need to establish a better climate for East-West understanding and good will, and this has brought forth projects for new institutions, from an international university to regional institutes, and many scientists are involved in their planning. Other scientists, responding to the realization by society of the importance of a proper organization of science, have made science policy their chief interest and became professionally involved in science planning and administration. The special problems of developing countries have been taken up as a subject of study by social scientists in universities and academies of science. In the affluent countries, society is becoming increasingly concerned with some negative aspects of the peaceful applications of science, e.g., pollution of the environment, or the possible interference with the natural evolution of mankind by "genetic engineering"; many scientists are worried about the possible misuses for war purposes of their academic research and often find that their pursuits pose before them many new moral and ethical problems. This has given rise to the setting up of societies specifically concerned with the social responsibilities and moral obligations of scientists.

All these developments mean that one of the aims of Pugwash, to get scientists to think and work on the various aspects of the impact of science or society, has been largely achieved, and it may be argued that Pugwash should now retire and hand over the remaining tasks to these professional or specialized bodies. On the other hand, it may be argued that the uniqueness of Pugwash as an "amateur" body, in bringing together individuals without commitments and allegiances, and the very fact that over the years it managed to maintain its independence and yet retain the confidence of governments in both East and West, are sufficiently compelling reasons to continue its existence. In any case, the main aims of Pugwash are still to be fulfilled. Although the foreboding of imminent catastrophe expressed in the Russell-Einstein Manifesto has not come true, and we have managed to avoid a world-wide conflagration so far--in a small part perhaps thanks to the existence of Pugwash--the dangers facing mankind have not disappeared. The arms race continues unabated, and is indeed accelerating; the sophistication of weapons of mass destruction and of their means of delivery is increasing, making an accidental outbreak of war ever more probable. The discrepancy in the standard of living between nations is increasing rather than decreasing. The world is in a turmoil, with the ideological differences as pronounced as ever, and with many local conflicts threatening to engulf the whole globe. Clearly, the initial aims of Pugwash, as expressed in the Russell-Einstein Manifesto and in the Vienna Declaration, are still to be achieved, and this alone calls for further and more intense efforts by scientists from all countries and various disciplines to fulfill these objectives. Pugwash remains one of the most effective vehicles for such efforts.

By increasing the scope of its activities, and by bringing in more scientists, young and dynamic as well as senior and respectable, Pugwash, with its unique structure, world-wide links, and established reputation for objectivity and independence, could serve as the rallying point for the diverse activities of scientists. It could be the central forum for critique

of efforts by other groups of scientists, assessment of their results, and generation of new ideas. Thus, Pugwash could become the source of inspiration and hope for the strivings of scientists to create a stable and happy future for mankind.

Professor Rotblat will receive the 1983 Bertrand Russell Society Award. See (32).

ON NUCLEAR WAR

- (8) Accidental nuclear war is a possibility that BRS Science Committee Chairman, Alex Dely -- and his colleagues, Dean Babst and David Krieger -- have been investigating. Last issue we reprinted his 2 "call for help" papers -- addressed to Nuclear Weapons Researchers, on accidental war and "Nuclear Weapons Treaty Verification Methods" (RSN37-6a) -- and highlights of his proposal for an Accidental War Assessment Center (RSN37-6b).

Alex points out that concern about the possibility of accidental nuclear war is not new. He sent us the 1960 Mershon Report, produced by the Mershon Program at Ohio State University. The Program, funded by the late Colonel Ralph Mershon, conducts research into areas vital to U.S. national security.

The Report was republished in England, in 1960, jointly by The Campaign in Oxford University for Nuclear Disarmament, and Housmans, Publishers and Booksellers. It has an introduction by BR:

INTRODUCTION

by

BERTRAND RUSSELL

I am very glad that the Mershon Report entitled Accidental War: Some Dangers in the 1960's is being printed in England by the Campaign in Oxford University for Nuclear Disarmament and Housmans. In spite of the extreme sobriety of this Report, and its obvious desire for objectivity, the document is one which no candid reader can study without the utmost alarm. It takes, one by one, the various ways in which an unintended general war may break out. Among these are the spread of a limited war and diplomatic miscalculation. These causes alone, according to a senior military analyst who is quoted, give an even chance of a general nuclear war during the next ten years. Sheer accidents are another sort of danger. Anti-aircraft missiles have been accidentally launched at least twice. False radar warnings have occurred frequently and are likely to occur even more frequently as radar becomes more sensitive. These false warnings have hitherto sent manned bombers on their murderous mission. These were recalled when the mistake was discovered, but they are being replaced by missiles which cannot be recalled.

All these dangers, to my mind, are far less threatening than what the Report heads as "Human Aberrations". We are told that in the United States 43 per cent of medical discharges from the armed forces are for psychiatric causes and that, nevertheless, there is no psychological screening for men who are going to occupy the most delicate and responsible posts. It is pointed out that such men, if in any degree unbalanced, are likely in a time of tension to act with fatal rashness. What is even worse is that men whom American authorities consider sane would not be so considered in any less hysterical atmosphere. The United States Government is inaugurating a campaign of civil defence and, in order to further it, is sending instructors to all parts of the country to persuade people, falsely, that shelters may keep them alive. What instruction these

instructors are to give is determined by a supreme instructor, Dr. Hurt, the Oak Ridge National Laboratory psychologist. Some of the remarks which those whom he instructs are to spread throughout the country are worth quoting:

"The good-goodies and the fancy pants -- the brains minus the brawn -- are most apt to fall by the wayside when war comes. Not if war comes -- just when. There will be war . . . it is just a question of when, and the main thing we have to fear is people out of control -- even more than the atom out of control . . . I recommend that everyone with a fall-out shelter include a gun in the equipment . . . I recommend shooting anyone who tries to invade a fall-out shelter."

(The Oak Ridger, November 8, 1961)

I am afraid that Dr. Hurt is considered sane. With such men engaged in manufacturing fanatics, it is almost inevitable that in a time of tension some excitable people in responsible posts will feel that individual initiative is called for to force the Government to take action.

Anyone who requires new material for nightmares should bear in mind the following statements which have been made by men in positions of critical responsibility, and which reflect the views of their colleagues around the world:

Admiral Radford:

"I demand . . . total victory over the Communist system - not stalemate."

In other words, war.

General Nathan Twining:

"If it were not for the politicians I would settle the war in one afternoon by bombing Soviet Russia."

General Orvil Anderson, Commander of the Air War College:

"I would be happy to bomb Russia, just give me the order to do it."

These statements are the ravings of men in power. See New York "Nation", October 28, 1961. "Juggernaut: The Warfare State".

The sombre conclusion is that, unless the policies of the Great Powers are radically changed within the next few years, the chances of human survival are very slight.

This is the first paragraph of the Publishers' Note:

Human optimism dies hard: to give but one example, on 1st January 1939 Lloyd's were giving 32-1 odds against war in 1939. It is dangerously easy in such a spirit of optimism to convince oneself that nuclear war is so terrible that it could not happen. With the development of new and speedier weapons systems and of more and more nuclear weapons the danger of war is closer than ever.

These are the titles of some of the sections of the 25-page Mershon Report: ACCIDENTAL WAR IN HISTORY, SPECIFIC DANGERS IN THE 1960s: DEFENSE SYSTEM ACCIDENTS, ACCIDENTAL NUCLEAR EXPLOSIONS, HUMAN ABERRATIONS, UNINTENDED SPREAD OF LIMITED WARS, CATALYTIC WARS (caused by spread of nuclear weapons), DIPLOMATIC AND MILITARY MISCALCULATIONS, INTERNATIONAL TENSION AND READINESS FOR WAR.

Alex writes:

Our many accidental war papers are generating many replies, including about 6 from the Pentagon, NATO, and various generals. They disagree with us but can't state any contrary facts.

We are amassing much critical data, and our book for Canadian Peace Research Association will certainly only be a start on a much more detailed book in a few years.

Senator Hart had indicated he would hold hearings in Accidental War in September. Last week I received a call from his staff that Pentagon officials are worried about a scare, so he's holding off indefinitely till we have more concrete information, and he can ask Defense research agencies to look into our "allegations".

Eventually, Alex may testify at a Congressional hearing.

(9) From the New York Times (12/20/83): *'Survivors' Manual*

One of the most talked-about new books in Washington as the holiday season moves into high gear is bound in red and gold, is distributed by Farrar Straus & Giroux and costs only \$4.95. Its arresting title: "The Official Government Nuclear Survivors Manual -- Everything that is Known about Effective Procedures in Case of Nuclear Attack". The publisher, Bill Adler, said: "We thought the American public should be brought up to date on everything the Government is doing in its behalf. In our opinion, that knowledge may well be America's only hope for survival." Not counting endpapers, the book has 192 pages, every one of them absolutely blank.

(Thank you, DON JACKANICZ)

RELIGION

(10) Reagan: Better dead than red. From the New York Times (3/20/83, p. 18E):

Reagan's Unsettling Life-or-Death Preference

To the Editor:

In addressing the National Association of Evangelicals in Orlando on March 8, President Reagan praised "as a profound truth" the sentiment that it is better that children "die now, still believing in God, than have them grow up under Communism and one day die no longer believing in God" (news story March 9). These words are cause for dismay.

If they are essentially opportunistic rhetoric, calculatingly expressed to an audience that the President had reason to expect would respond enthusiastically to them, they raise embarrassing questions both about Mr. Reagan's judgment and about his good sense. The decency of people and their right to continued life, as a read-

ing of Bernard Shaw's "The Devil's Disciple" might have taught him, does not, after all, depend on their religious beliefs.

We have even more reason for concern if, as many think, Mr. Reagan is a true believer in the kind of sentiment he uttered. For, as the most powerful political leader in the world, Mr. Reagan can, by a touch on a button, determine whether hundreds of millions of people shall live or die.

It is profoundly disquieting that the individual who has life-and-death power over the future of humanity, young and old alike, may believe that we are better off dead but devout than alive and atheistic.

EDWARD PESSEN
Brooklyn, March 11, 1983

- (11) Religious beliefs surveyed. The San Francisco Examiner (of 4/3/83) polled close to 700 people in the Bay Area, asking, "which category best defines your religious beliefs?"

<u>These are the categories:</u>	<u>These are the results:</u>
Atheist — You do not believe in God.	Christian 41%
Agnostic — You do not know whether there is a God or a future life or anything beyond the material world.	Mystic/Spiritualist 22%
Mystic or spiritualist — You don't necessarily believe in a God that created the world, but do believe there is some force beyond the material world.	Humanist 19%
Christian — You believe that Jesus Christ is the Messiah and is the son of God.	Agnostic 11%
Jewish — You regard yourself as descended from the ancient Hebrews and follow the Jewish Scriptures.	Jewish 3%
Humanist — You believe in a moral system based on human interests, not religious beliefs.	Atheist 1%
	Other 3%

(Thank you, JACK RAGSDALE)

More than 30% do not believe in the supernatural — more than we had realized.

- (12) Non-prophet. Karl Marx had some brilliant insights, but he wasn't so hot as a prophet. A lot of things have happened that he didn't figure on. As Sidney Hook puts it:

What was distinctive about his theories concerning how socialism — which *au fond* was an extension of democracy to a way of life — was to be achieved has largely been disproved by historical events. History, alas!, has been guilty of *lesè-Marxism*. Marx underestimated the capacity of capitalist societies to raise the standard of living of its population, including even the longevity of the working class; he underestimated the growth and intensity of nationalism; he was mistaken in interpreting all forms of coercion and exploitation as flowing from private ownership of the social means of production; he ignored the prospect of bureaucratic forms of collectivism; and the very possibility of war between collectivist economies, illustrated in the nuclear threat of Communist Russia against Communist China, was inconceivable to him by definition. As we have seen, he shared the naïveté of anarchist thinkers in believing that the state would disappear with universal collectivism and that "the administration of things" could ever completely replace administration by men and women and the possibility of its abuse. He underestimated the role of personality in history; and, although he contributed profoundly to our understanding of the determining influence, direct and indirect, of the mode of economic production on many aspects of culture, he exaggerated the degree of its determination and its "inevitability" and "necessity." That is why those who have learned most from Marx, if faithful to his own commitment to the scientific, rational method, should no more consider themselves "Marxists" today than modern biologists should consider themselves "Darwinians" or modern physicists "Newtonians." "Marxism" today signifies an ideology in Marx's original sense of that term, suggestive more of a religious than of a strictly scientific or rational outlook on society.

The above quotation comes from Sidney Hook's article in "Free Inquiry" (April 1983, p. 27). Hook maintains that the Marxists have perverted Marx. The article is titled, "Karl Marx versus the Communist Movement".

NEWS ABOUT MEMBERS

- (13) Dong-In Bae. (First, for the benefit of recent BRS members, a few words about Dong-In: a BRS member since early 1975, he is a native of Korea, with political asylum in West Germany. He founded the Korean Bertrand Russell Society, headquartered in West Germany. He set a record for long-distance travel to attend a BRS meeting, traveling all the way from West Germany to Canada for the 1978 meeting at McMaster.)

He writes: I am glad to inform you that on 18th February 1983, it was officially proclaimed that I passed all the doctoral examinations - there were "born" other 19 new Doctors in our Faculty of Economics and Social Sciences at the University of Cologne.

In the meantime, my dissertation with the theme "Arbeitsdesign ('Job Design'): Entwicklungskontext, Praxis, Perspektive" has been printed and delivered to the University Library and to the Dean Office of the Faculty, and I received today the Certificate of the Degree of "Dr. rer. pol." (Doctor rerum politicarum). My major is Sociology, and the secondary subjects are National Economics and Political Science.

In writing my above dissertation, I was happy to quote the following passages from ER and Dora Russell, *The Prospects of Industrial Civilization*, London: George Allen & Unwin, 1970 (1959), P.76f., indicating their foresight into the problems of technological development and industrialization:

"Oil is a good example of a commodity of which there is a shortage. ... Competition between nations will increasingly tend to be not for markets, but for raw materials; that is to say, they will compete as producers, not as traders. ... Industrialism in its heyday is being extraordinarily wasteful of the natural resources of the world, taking no thought whatever for future generations. It is probable that, within the lifetime of those who are now young, scarcity of raw materials will radically transform industry, and compel nations to adopt less frantic and excessive methods of production. Some authorities assert that oil, coal, iron and many other hitherto necessary materials of industrialism, will have grown very scarce fifty years hence; in any case, it is nearly certain that they will have grown sufficiently scarce for those nations which possess them to be anxious to avoid waste." (quoted on P.21 of my diss.).

Now, I must find out a job, above all, in the fields of scientific researches. It will be, however, very difficult to find any job which is adequate for me. As we know, the economically hard, present situations are all over the world more or less the same. On political reasons, as you know, I cannot return to Korea in the near future; I should still stay here (or in any free society).

- (14) Alejandro Garciadiego -- recipient of the 1982 BRS Doctoral Grant -- has completed all the requirements for his Ph.D., and has sent a copy of his dissertation to the BRS Library.

- (15) Marvin Kohl tells why he views abortion as a mixed good, in "Free Inquiry" (Winter 1982-83, p.42):

There are good reasons for supporting a liberal abortion policy. Many anti-abortion arguments we hear today are inadequate. If born human progeny have greater moral standing, if fundamental respect for women demands the recognition of their right to choose responsibly, and if an anti-abortion public policy is deeply harmful, then we have a plausible case for abortion as a mixed good. It is a mixed good because it typically harms by killing another closely akin being—even when an abortion is performed to prevent injury to the life or health of the mother. Moreover, to take away a life leaves many of us with a sense of moral uneasiness, often anguish—even if it be less sentient or only a potential human being, even if it be the best we can morally do in a particular situation. This sentiment is not the result of a Ghandi-like sense of purity. Rather it is due

to the understanding that, in many cases, sex education or birth-control might have been workable and, if so, clearly seems to be preferable. A large part of this anguish is that, as with many human problems, we have allowed the situation to develop to the point where the best moral alternative (though not the only one) is to kill another being.

In light of this, I wish to suggest that Richard Taylor and Jeanne Caputo's "Abortion and Morality" (FI, Fall 1982, p. 32) is an unfair portrayal of the problem. First of all, suppose it is true (which I think it is not) that "the question of when a fertilized ovum becomes a 'human being' is clearly unanswerable." Surely it is then at least plausible to maintain that, since a line cannot be successfully drawn, we should assume that we indeed do have a human

being from the moment of conception. Taylor and Caputo attempt to parry this criticism by suggesting that, since most fertilized ova are never implanted in the womb, God is the supreme abortionist. Now this slapdash move may be amusing to some, but it is clearly fallacious: for the issue in abortion is not the death of the fetus (as in an honest miscarriage or its like), but deliberate killing.

Taylor and Caputo rightfully marshal evidence about the human suffering and the capacity for evil that lies in the proposals to curtail the legal right to abortion. Again, I am sympathetic with their conclusion. But to arrive at it by suggesting that all, or even most, anti-abortionists are blind to morality because they are indifferent to suffering is, at best, simplistic.

First of all, it is one thing to disagree

with a moral position and another to deny that it is a moral position. Second, not all harm is suffering: killing someone whose life has, or could have, genuine meaning is plausibly conceived of as an act of harm. Third, dogmatic fundamentalists are not the only ones who oppose abortion. Many reflective people oppose abortion, as utilitarians, because they believe killing is contagious. They believe that a slide is inevitable and therefore that a liberal or moderate abortion policy has net negative utility. Many other opponents of abortion seem to be act intuitionists. They maintain that one can "see" the rightness or wrong-

ness of an act. They maintain that all abortion is wrong because, if one would witness an abortion, one would "see" or intuit the wrongness of that act.

Now both of these positions may be mistaken. Nonetheless they are moral points of view. And the humanist can dismiss them out of hand only if he is willing to embrace the same kind of simple-minded dogmatism he hopes to conquer. Perhaps in the great battle with the Moral Majority it is understandable that some should become almost like their enemies. But an open society, a political democracy, if it is to work well, requires that we have full relevant informa-

tion as to choices. To the extent either side falsifies or oversimplifies the issues, the process of democracy is made more difficult. To the extent that we humanists lose our reverence for certain ideals or choose immediate political gain at the price of sacrificing truth and fairness, we violate our birthright. •

Marvin Kohl is professor of philosophy at the State University of New York College at Fredonia and author of The Morality of Killing.

(16)

Corliss Lamont. The following ad — in *The New York Review of Books* (3/17/83,p.54) — tells the story:

Lover's Credo
POEMS OF ROMANTIC LOVE
By *Corliss Lamont*

A book of eloquent and exuberant verse by a Humanist philosopher that provides an antidote to today's pervasive vulgarization and debasement of sex relations.

"The bliss of sexual and spiritual love, the beauty of the loved one and of nature, the loneliness and ironies of lost romance are gracefully conveyed in these meticulously structured poems."

— *The Booklist*
American Library Association

"Corliss Lamont, bored with pornography and four-letter words, has shown that one can speak candidly of the delight of tenderness, passion, exaltation and lasting comradeship of two people in love without resorting to coarseness. The title poem, 'Lover's Credo' is especially appealing. . . . This little volume should please lovers of all ages."

— *The Atlanta Journal*

Second revised edition issued in paperback. 72 Pages.

QUESTION ANSWERED

(17)

"Horrible, horrible, horrible." The question Jack Ragsdale asked last issue (RSN37-11) has been answered by JOHN FOTI. He referred us to "Bertrand Russell: The Passionate Sceptic" by Alan Wood (NY: Simon & Schuster, 1958). The following is from Pages 236-7:

My wife then spoke of young men who had been killed in the war; and said that it seemed monstrously unjust that they should not, somehow or somewhere, have a second chance of happiness and achievement. 'But the universe is unjust,' said Russell.

In this, I think, lay the essence of Russell's practical wisdom: to the end he remained true to the faith—preached long before in *A Free Man's Worship*, and intensified by the horrors the world had known since—that the beginning of any worthwhile creed of living must be a recognition of harsh and unpleasant truths. He said that 'the secret of happiness is to face the fact that the world is horrible, horrible, horrible. . . . You must feel it

deeply, and not brush it aside. . . . You must feel it right here'—hitting his breast—'and then you can start being happy again.' Russell went beyond Christian morality in not only stressing man's insignificance compared with the universe, but in saying that the universe has no principle of justice at work in it. I call this practical wisdom because, if you can give up believing in cosmic justice, then nothing can make you have a grievance against the world; and there is nothing so sterile and profitless as having a grievance. Russell, unlike many philosophers seemed to find in the fundamental point of his philosophy of life a practical help in his own living. I do not think he could possibly have kept up his courage and cheerfulness, in the face of sc

much recurring sorrow and anxiety, if he had not come to learn by experience the knack of not feeling sorry for himself. Energy which he might have wasted on feeling sorry for himself was diverted into feeling angry with other people: which I think is much more healthy. He once said 'I don't believe in meekness'.

This, perhaps, was one of his sharpest departures in practice from Christian precepts. But only in practice, because, of course, his theories did not allow him to be angry with anybody. An evil man was not to be hated, but studied and cured by scientific

(Thanks, also, to Ramon Carter and Bob Davis.)

methods: 'It is a waste of energy to be angry with a man who behaves badly, just as it is to be angry with a car that won't go.' But the truth is that a life based strictly on Russell's principles, without occasional deviations, is as difficult as one based strictly on Christian teachings, except for a few exceptional saints. And even Christ himself (as Russell pointed out) was capable at times of unloving remarks to his enemies.

'Hatred of some sort,' Russell once wrote, 'is quite necessary—it needn't be towards people. But without some admixture of hatred one becomes soft and loses energy.'

NEW MEMBERS

(18) We warmly welcome these new members:

BRS LIBRARY

(20) Books to lend. On the next page is a list of 38 books available from the BRS Library. You may borrow any that interest you.

To borrow, order from Jack Ragsdale, BRS Assistant Librarian, 4461 23rd St., San Francisco, CA 94114. There is no fee for borrowing, but please enclose postage when you order, 86¢ for HB, 63¢ for PB; stamps accepted. Return books in 3 weeks, unless you request an extension. On the list of books, the names of donors appear in parenthesis.

1. HISTORY OF WESTERN PHILOSOPHY * HB (Jack Ragsdale)
2. MYSTICISM AND LOGIC PB (Jack Ragsdale)
3. BERTRAND RUSSELL'S BEST Robert E. Egner, Ed. (Ramon Carter) HB
4. AN OUTLINE OF PHILOSOPHY PB (Ramon Carter) HB
5. AUTOBIOGRAPHY OF BERTRAND RUSSELL (1872-1914) HB Vol. 1 (Ramon Carter)
6. LET ME DIE BEFORE I WAKE PB by Derek Humphry (Author)
7. ESSAYS ON BERTRAND RUSSELL edited by E. D. Klemke HB (Bob Davis)
8. MORALS WITHOUT MYSTERY by Lee Eisler (author) HB
9. AUTHORITY AND THE INDIVIDUAL PB (Don Jackanicz)
10. AUTOBIOGRAPHY OF BERTRAND RUSSELL (in one volume) HB (Don Jackanicz)
11. BERTRAND RUSSELL* 1872-1970 cartoons pix, articles etc PB (Don Jackanicz)
12. BERTRAND RUSSELL, A LIFE by Herbert Gottschalk (Don Jackanicz)
13. EDUCATION AND THE SOCIAL ORDER PB (Don Jackanicz)
14. EFFECTS AND DANGERS OF NUCLEAR WAR (15 pp An educational exhibit)
15. ESSAYS ON SOCIALIST HUMANISM PB (Don Jackanicz)
16. GERMAN SOCIAL DEMOCRACY PB (Don Jackanicz)
17. ICARUS or THE FUTURE OF SCIENCE PB (Don Jackanicz)
18. THE IMPACT OF SCIENCE ON SOCIETY PB (Don Jackanicz)
19. AN INQUIRY INTO MEANING AND TRUTH PB (Don Jackanicz)
20. IN PRAISE OF IDLENESS PB (Don Jackanicz)
21. HAS MAN A FUTURE PB (Don Jackanicz)
22. JUSTICE IN WARTIME HB (Don Jackanicz)
23. NATIONAL FRONTIERS AND INTERNATIONAL COOPERATION PB by Roy Medvedev
24. MY PHILOSOPHICAL DEVELOPMENT PB (Don Jackanicz)
25. POLITICAL IDEALS PB (Don Jackanicz)
26. PRINCIPLES OF SOCIAL RECONSTRUCTION PB (Don Jackanicz)
27. THE PRACTICE AND THEORY OF BOLSHEVISM PB
28. ROADS TO FREEDOM PB
29. SCEPTICAL ESSAYS PB
30. SECRECY OF CORRESPONDENCE IS GUARANTEED BY LAW PB by Roy Medvedev
31. THE TAMARISK TREE by Dora Russell, an autobiography
32. MR. WILSON SPEAKS "frankly and fearlessly" ON VIETNAM TO BERTRAND RUSSELL PB
33. MARRIAGE AND MORALS PB (Jack Ragsdale)
34. DEAR BERTRAND RUSSELL - a selection of Russell's correspondence with the public HB (Jack Ragsdale)
35. EDUCATION AND THE GOOD LIFE PB (Jack Ragsdale)
36. HUMAN KNOWLEDGE-ITS SCOPE AND LIMITS PB (Jack Ragsdale)
37. WHY I AM NOT A CHRISTIAN plus 14 other essays on religion and related subjects and a 50-page appendix on the history of Russell's being prevented from teaching at New York's City College. (Jack Ragsdale)
38. THE EVOLUTION OF CONSCIENCE by Ralph Newman PB (Jack Ragsdale)

(21) BRS Library Campaign. We are not satisfied with the BRS Library as it exists today. It's much too small!

We think the BRS Library ought to own a copy of every book BR ever wrote and every book written about him or his work.

That's a big order.

Perhaps you can help us work our way toward achieving it.

If you have a book by or about BR that you've read but are not likely to read again soon, if ever -- or if you have several copies of the same book, perhaps in different editions -- please donate it to the BRS Library, which will make it available to many. If the book you donate is out of print -- many books by BR are -- it will be specially welcome.

If there's some book by BR that's a particular favorite of yours, and that you'd like to see reach more people, buy it -- if you see it for sale -- and donate it to the Library.

In a future issue we expect to list the books by BR that the Library does not own, along with their current prices...in case you wish to contribute money to the Library for the purchase of a particular book.

Help us fill the gaps -- there are many! -- in the BRS Library. Send books to Jack Ragsdale, BRS Assistant Librarian, 4461 23rd St., San Francisco, CA 94114. Book postage: 1st lb. 63¢, thereafter 23¢ per lb.

FUN

- (22) Puzzle. JACK RAGSDALE asks you to guess who is being referred to in the following:

Professor of Paganism; philosophical anarchist; moral nihilist of Great Britain; dessicated, divorced and decadent advocate of sexual promiscuity; corrupting individual; Professor of Immorality and Irreligion; ostracized by decent Englishmen; dog; conducted a nudist colony; ape of genius; devil's minister to men; pro-communist.

Jack says all these quotes come from "How Bertrand Russell Was Prevented from Teaching at City College, New York," by Paul Edwards. It is included, as an appendix, in "Why I Am Not A Christian" (London: Allen & Unwin, 1957, pp 181-220).

ONE-LINER

- (23) A fundamentalist is someone who worships a dead radical.

From "The Founding Fathers and Religious Liberty"
by Robert S. Alley, in "Free Inquiry" (Spring 1983, p.5)
Alley calls it a paraphrase of a comment by John Holt.

CONTRIBUTIONS

- (24) We thank these recent donors: BOB DAVIS, PAUL FIGUEREDO, DAVID GOLDMAN, DON JACKANICZ, MICHAEL TAINT.

- (25) We invite contributions. Invite, did we say? Nay, beg were more like it. We beg contributions.

there is an unusual need for money in the BRS Treasury.
Look! we are standing on our head, which is unusual, because these are unusual times, and

So please send what money you can spare. No amount is too small*to be useful.

Send it c/o the newsletter, address on Page 1, bottom.

*or too large, for that matter

BRS BUSINESS

- (26) Use of the BRS name by members. Some BRS members, when writing a Letter to the Editor (of a newspaper or magazine)-- or to a prominent person -- wish to bring in the BRS name. We like that idea, and encourage it, provided it is done in the following way: write your letter on BRS members' stationery (29).

We ask you not to write BERTRAND RUSSELL SOCIETY after your name, when you sign your letter -- no matter what kind of stationery you use. That would make it appear that you are writing on behalf of the BRS, and that would be an unauthorized use of the BRS name.

- (27) A new address for the BRS. You may have noticed a new BRS address at the top of Page 1. It replaces the former Georgia address.

We have, in effect, moved the corporation from Georgia to Illinois. We did it this way: we dissolved The Bertrand Russell Society, Inc. (a Georgia corporation) and formed The Bertrand Russell Society, Inc. (an Illinois corporation).

From the standpoint of BRS members, nothing has changed, nothing is different.

How did we happen to be incorporated in Georgia? Why did we make the change?

We were incorporated in Georgia because that's where Peter Cranford lives. Peter, our former Chairman, founded the BRS and made all the arrangements in the early years (and paid for them), for all of which we are permanently in his debt. He incorporated the corporation in Georgia because that's where he lives. That was reasonable and proper.

A corporation is required to have a "registered agent" (of the corporation) who is a resident of the state. Peter, a Georgia resident, was the registered agent of the BRS, a Georgia corporation.

But circumstances changed.

Peter is getting on in years, and has had a "lengthy hospital stay and a convalescence which continues to limit my activities," he told us in his letter of August 5th (RSN35-36).

Do we have another BRS member who lives in Georgia and who might become the registered agent if that should become necessary or seem desirable? We have no member in Georgia, except Peter, who has been active in BRS affairs.

So it seemed prudent to move out of Georgia. We moved to Illinois, where we have quite a few members, including 5 Directors, two of whom are BRS Officers, any of whom could satisfactorily fill the post of registered agent.

And that's how it has come about that the BRS is now an Illinois corporation, and that Don Jackanicz, BRS President, is its registered agent. It is Don's Illinois address that is now the official address of the BRS, and appears at the top of Page 1.

We are greatly indebted to BRS Director STEVE MARAGIDES, who is an attorney (and who happens to live in Illinois) for donating his legal services -- which were not inconsiderable -- and which enabled us to make the move from Georgia to Illinois.

* * * * *

Here are the minutes of the two Board of Directors meetings held in connection with the move from Georgia to Illinois:

THE BERTRAND RUSSELL SOCIETY
Special Meeting of the Board of Directors, Claremont, California, 19 Dec. 1982

Present: Harry Ruja (presiding), Jacqueline Berthon-Payon, Robert K. Davis.

Harry Ruja (henceforth HR) called the meeting to order, announced that according to the Bylaws, a quorum was present, and presented the agenda consisting of two items: (1) approving the Society's Bylaws in connection with the application for tax-exempt status, and (2) approving the cancellation of the incorporation of the Society in Georgia and its reincorporation in Illinois.

Robert Davis (henceforth RKD) moved approval of item 1; Jacqueline Berthon-Payon (henceforth JB-P) seconded the motion. There being no discussion, HR called for a vote. The motion passed unanimously.

JB-P moved approval of item 2; RKD seconded the motion. HR raised the issue of the method to be used to notify the membership of this change. Consensus was reached that the BRS News was the appropriate vehicle for that purpose. There being no further discussion, HR called for a vote. The motion passed unanimously.

There being no further business to conduct, the meeting was adjourned.

Harry Ruja

* * * * *

We are not reproducing the "Resolution to Dissolve", which is referred to in the April Minutes, because the Minutes give the substance of the Resolution.

MINUTES OF THE BOARD OF DIRECTORS MEETING OF THE BERTRAND RUSSELL SOCIETY, INC., APRIL 11, 1983

The Special Meeting of the Board of Directors was called to order at 4:00 p.m. on Monday, April 11, 1983 in Room S-204 of the Science Building of Northeastern Illinois University, 5500 N. St. Louis Ave., Chicago, IL. A quorum was established by the presence of three Board members--Donald W. Jackanicz, Steve Maragides, and Hugh S. Moorhead. In the absence of Board Chairman Harry Ruja, those present chose Steve Maragides to serve as Acting Chairman. In the absence of Board Secretary Cherie Ruppe, those present chose Donald W. Jackanicz to serve as Acting Secretary.

The sole agenda item was to authorize dissolution of the Georgia corporation known as The Bertrand Russell Society, Inc. and to establish the corporate identity of our organization as that of The Bertrand Russell Society, Inc., an Illinois corporation, by specifying that, upon dissolution of the Georgia corporation, all Society attributes other than state of incorporation are to be transferred to the Illinois corporation. Steve Maragides moved, with Hugh S. Moorhead seconding the motion, that the "Resolution to Dissolve" (see accompanying sheet) be approved by the Board and submitted to the Secretary of State of the State of Georgia in accordance with that State's corporation dissolution procedure. This motion was carried by a vote of Yes--15 (the three Board members attending in person plus 12 Board members casting affirmative votes by proxy through Donald W. Jackanicz) and No--1 (one Board member casting his negative vote by proxy through Donald W. Jackanicz). Seven Board members did not vote. See the accompanying sheet for a complete vote tally.

With no other business at hand, Acting Chairman Steve Maragides moved that the meeting be adjourned. Hugh S. Moorhead seconded the motion which was unanimously accepted. The meeting adjourned at 4:15 p.m.

Donald W. Jackanicz, Acting Secretary
April 12, 1983

FOR SALE

(28) BR button, b&w, 2 1/4" diameter, \$1.50 postpaid. Same button with a magnet instead of a pin, \$2 postpaid. Order from Buttonworks, 55 Bow St., Portsmouth, NH 03801. Allow 4 weeks.

(29) Members' stationery. 8 1/2 x 11, white. Across the top: "The good life is one inspired by love and guided by knowledge.* Bertrand Russell". On the bottom: "*Motto of the Bertrand Russell Society, Inc." New price: \$6 postpaid, for 90 sheets (weighs just under a pound, travels 3rd class). Order from the newsletter, address on Page 1, bottom.

- (30) BR postcard, Philippe Halsman's handsome 1958 photo of BR with pipe, is presently out of stock at the source. We will let you know when it becomes available again.
-

REPORTS FROM OFFICERS

- (31) President Don Jackanicz reports:

On April 16 I attended the second of three national conferences on No First Use of Nuclear Weapons sponsored by the Council for a Livable World. In October 1982 this organization sponsored a similar meeting in New York; on December 3, 1983 a San Francisco meeting will be held. Five hundred people were present to hear seven hours of talks and to participate in discussion. The program centered on the article "Nuclear Weapons and the Atlantic Alliance" by McGeorge Bundy, George F. Kennan, Robert McNamara, and Gerald Smith appearing in Foreign Affairs, Spring 1982. This article advanced the argument that a firm American commitment to the no first use of nuclear weapons would be a great advance in reducing East-West tension and could be the starting point of more meaningful nuclear arms reduction talks. Both the Soviet Union and China have made such commitments. In discussion, arguments favoring and discrediting this thesis were made so that the proposal was subjected to a substantial critique. Of the four authors, only Bundy was present, but other diplomatic, military, and scholarly authorities were on hand to add their expertise. If you are interested in more information on the Council or would like some of its free publications, including an offprint of this article, write to Council for a Livable World/11 Beacon St./Boston, MA 02108. Attending public interest meetings like this one, studying the issues, and voicing one's opinion to elected and appointed government officials are among the ways each of us can contribute in some small way toward ending the nuclear weapons folly. If you have something of this nature to share with members, please submit a report to the RSN. Your thoughtful contribution might just have some worthwhile affect.

As the June Hamilton Annual Meeting is approaching, I trust as many of you as possible have made travel plans and reservations with our host, McMaster University. Our Annual Meetings have always been the highlight of the BRS year, and in 1983 this tradition will continue. A fine program has been prepared by the Archives, and we will have the pleasure of enjoying it within the beautiful setting of the University. Accommodations, as always, will be very good. The BRS will have several business matters to attend to, and I hope each of you will consider attending for this reason as well as to participate in the other Meeting activities. A final note: After a long search, it seems I have located an adequate Red Hackle supply. This traditional Annual Meeting beverage, I do expect, will be available to us in adequate quantity.

BRS AWARD

- (32) Professor Joseph Rotblat will receive the 1983 Bertrand Russell Society Award. He worked closely with BR on that most important of all possible projects, the elimination of nuclear weapons -- a project which began to take on substance at Pugwash.

Pugwash was a breakthrough. It brought scientists from the East and West together for the first time (to discuss the danger of nuclear war.) Professor Rotblat helped BR bring Pugwash into existence and keep it going. We have already mentioned BR's very high opinion of him (7).

In accepting the invitation to receive the Award, Professor Rotblat writes:

With regard to my relations with Bertrand Russell, I was in close touch with him until his death and, later, with his wife, Edith. The Movement originated by Bertrand Russell, the Pugwash Conferences, has occupied most of my time and still does. Although I am no longer Secretary-General, I am very active in the Pugwash Council and its Executive Committee and I am Chairman of the British Pugwash Group. I am proud of the fact that I am the only person alive who attended all the Pugwash Conferences so far.

There is a possibility that we may be able to present the Award to Professor Rotblat in person at our June meeting. He writes:

I note that the presentation would be made at your banquet at McMaster University on June 25. I shall be in the United States (in Wisconsin) at that time, attending a conference. Should my commitments at the conference enable me to be free on that date, I would be glad to make the trip to Hamilton, but I will not know whether this will be possible until late in May.

This is one more reason for BRS members to come to the June meeting at McMaster! To make reservations, see (41).

OBITUARY

- (33) Herbert A. Stahl has died, we regret to report. He has been a BRS member since early 1975. The many difficulties which he successfully surmounted were described in the Congressional Record of March 1, 1976 and reproduced in RSN19-45 (August 1978). We offer our sympathy to his widow, Dorothy.

ABOUT OTHER ORGANIZATIONS

- (34) Wilberforce seminar cancelled. The seminar was to have taken place at St. John's College, Cambridge, on August 5-7 (RSN37-31), but August, Jack Lennard advises, "is a holiday month, especially the first half, when possible speakers, and others, are on vacation." Hence the cancellation. "I thank you for your kind interest," he adds. "Perhaps we will try again another year."
- (35) Earthday Society Foundation sponsored "Earth Day (a global holiday)" on March 20-21. This is their announcement →

E A R T H D A Y ' 8 3 - M A R C H 2 0 t h - 2 1 s t

PEACE BELL CEREMONY - UNITED NATIONS

SUNDAY, MARCH 20th : 11PM TO 12 MIDNIGHT

THE EQUINOX WILL OCCUR AT 11:39 PM (EST)*

The Peace Bell will be rung at the moment of the equinox, followed by two minutes of silent prayer or meditation; a time for worldwide dedication to the care of Earth. Radio and TV in all countries are urged to give live coverage to this event, to commemorate World Communications Year with a breathtaking global commitment to the care of Earth.

Individuals and groups who wish to celebrate Earth Day may come to the United Nations, or plan their own local celebration.

Earth Day projects can begin one or two weeks before Earth Day. Reports during this time on the state of Earth in local communities are requested. They can be given to local media and by Mailgram to the Earth Society for a State of Earth global round-up on Earth Day. This will include reports from Space and from the North and South Poles.

COMMUNICATE EARTH CARE IN 1983 : WORLD COMMUNICATIONS YEAR

*EQUINOX: 0439 Universal Time (GMT) March 21st (March 20th in New York)

World Policy Institute, Publications 1983. This is an impressive 24-page catalog of books and papers that deal with the really big problems. This is how the Institute describes itself and its areas of interest:

WORLD POLICY INSTITUTE

The purpose of the World Policy Institute is to develop and implement practical proposals for preventing and eventually eliminating war, achieving economic well-being, advancing human rights, and establishing a healthy global ecology.

The World Policy Institute, formerly the Institute for World Order, changed its name in 1982 to reflect a new emphasis on scholarly research aimed at producing pragmatic policy recommendations—in the form of books, World Policy Papers, and briefings—for achieving a more peaceful and just structure of international relations.

The Institute's communications program conveys these recommendations to legislators and public officials, to the general public through the media, to professional and service groups, to universities and schools, and to religious and other membership groups.

CONTENTS

WORLD POLICY INSTITUTE

777 United Nations Plaza
New York, N.Y. 10017
(212) 490-0010

Most of the material is published by the Institute itself, but the Catalog also lists books from other publishers, including Basic Books, W. H. Freeman, UChicago Press, Monthly Review Press, Harcourt Brace Jovanovich, Princeton U. Press, Praeger, etc.

Here are samples, from Pages 12-13

The National Interest and the Human Interest: An Analysis of U.S. Foreign Policy

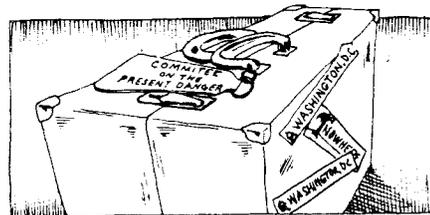

Robert C. Johansen. Princeton: Princeton University Press, 1980. 517 pp. Paper, \$7.95

Johansen develops a new global humanistic framework for analyzing U.S. foreign policy, and assesses the impact of U.S. foreign policy on strategic arms limitation, human rights in Chile, economic well-being in India, and environmental protection of the oceans.

"Indispensable for anyone wishing to teach international relations courses from a perspective that takes into account the ethical issues suppressed by 'realpolitik' thinking."—*Bulletin of Atomic Scientists*

Peddlers of Crisis: The Committee on the Present Danger and the Politics of Containment

New! Jerry W. Sanders. Boston: South End Press, 1983. 335 pp. Paper, \$7.95

Traces the remarkable odyssey of the Committee on the Present Danger from political power, to political exile, and back to the present where a number of the Committee's members hold top positions in the Reagan Administration. Sanders uncovers the conflicts and critical interaction that takes place among policy elites, public opinion, and examines the opportunities for popular movements at home and abroad to challenge elite domination of policy and break the grip of Cold War militarism.

Presents important new material on the foreign policy debate in the U.S. at two critical junctures... the scholarship is superior and the historical reporting is meticulous."—Richard Barnett, Institute for Policy Studies

(37)

Friends of Robert G. Ingersoll, Newsletters 4 & 5 (February and March 1983) report that there will be an Ingersoll Sesquicentennial Festival in Peoria, IL for several days in August, with scholars giving talks at Bradley University. To coincide with the Festival, the Friends are putting on a Freethought Fair. "Representatives of various freethought publishers and organizations will have displays featuring their wares and literature. The Fair will not be limited to Ingersoll and will include the entire spectrum of American freethought: atheism, agnosticism, deism, rationalism, etc." For information about the Festival, Fair, travel and lodging, and exact dates, write the Friends at PO Box 5082, Peoria, IL 61601

- (38) FFRF. The Freedom From Religion Foundation devotes its March 1983 newsletter to a 12-page article, "Creationism: The Fossil Record and the Flood". We reproduce a portion of the conclusion:

...they have given unwary "evolutionists" quite a scare and at times waylaid scientific evolutionists by thrusting a fresh, unexpected attack upon them in debates for which the scientists were totally unprepared. Science had thought that this low-level foolishness had long since been disposed of, and it was caught flat-footed by the novelty of finding a coterie of well-prepared debaters with rather good credentials in science now standing behind the bible itself! Until then, it was easy to dismiss the superstitions of the bible as superstitions. Suddenly, the new breed of fundamentalist burst forth from the covert, quiet halls of fundamentalist colleges where they had been perfecting the attack upon evolution for some time!

The forces of science found themselves in disarray as creation scientists fired volley after volley of challenging, scientific-sounding, and apparently credible arguments in every direction: at school boards, at science itself, at political targets, at textbook publishers: at the blindly faithful—a virtual MIRV barrage designed to bring down the constitutional barrier between religion and the state.

FFRF's address is PO Box 750, Madison, WI 53701. They seek members. Annual dues \$15.

- (39) The Hemlock Society — "supporting active voluntary euthanasia for the terminally ill." The Society is sponsoring a National Voluntary Euthanasia Conference on April 29 and 30, at the Unitarian Center, San Francisco, according to Hemlock Quarterly (No. 11, April 1983). The Quarterly lists the very considerable publicity the Society has been receiving in the media, including NBC-TV's "Today Show" (March 9), ABC-TV's "The Last Word", with Phil Donahue (taped March 29, release date not known), Time Magazine, Behavior Section (March 21). The Quarterly reproduces the Time article.

And we've just come across this sizeable article in The New York Times (4/25/83, p. B8):

The 'Right To Die': Is It Right?

SINCE the apparent suicide in March of Arthur Koestler and his wife in London, something of an old subject — euthanasia — has been debated anew. Only last week, the Koestler deaths were the focus of intense discussion in Dallas at the annual meeting of the American Association of Suicidology, the group of suicide-prevention professionals.

And this Friday, the first National Voluntary Euthanasia Conference is expected to attract several hundred people to the Unitarian Center in San Francisco. The event's sponsor is Hemlock, a two-year-old, Los-Angeles-based organization with 7,500 members that has published a controversial book, "Let Me Die Before I Wake," written by the group's founder, Derek Humphry.

The book's subtitle describes it as a volume "of self-deliverance for the dying." Critics charge the book is a suicide manual that may cause unne-

cessary death among the young and the depressed, people who might not kill themselves if it weren't possible to buy a guide to self-destruction.

The word euthanasia, derived from the Greek roots "good death," has been loosely applied to everything from an individual's right to die with dignity to the extermination of those in nursing homes by the Nazis. Hemlock, however, is primarily interested in those who wish to end the life of the terminally or incurably ill.

An introductory disclaimer in "Let Me Die Before I Wake" suggests that those contemplating suicide should convey their intentions to family, friends, a physician, counselor, minister or suicide-prevention center. The book then presents case histories of dying patients who were assisted in killing themselves by family or friends, and describes dosages of drugs that were used by people to die.

"We are all going to die, and a few of us are going to die badly," said Mr. Humphry. "We regret suicide in the young, and we hope that people will not misuse this book. But are we to deprive intelligent, thinking, terminally ill people of this resource?" What he called "rational suicide" was the ultimate civil liberty, he said.

Hemlock's stance has not gone uncriticized. "Our organization believes that under no circumstances can one

justify the violent taking of life," said Dr. Jack Wilke, president of the National Right to Life Committee. "We don't say that you have to use medication or mechanical equipment if the patient is in the process of dying. But one never directly kills. Doctors who prescribe drugs to such people are helping a patient die, and the doctor is an accomplice to the killing."

A physician for 35 years, Dr. Wilke believes that there is no such thing as pain that cannot be controlled. "No matter what the illness," he said, "one can be kept reasonably comfortable. If you can't control the pain, get another doctor."

Others oppose the Hemlock book on religious grounds. "Certainly one has the physical ability to do away with oneself," said the Rev. William B. Smith, professor of moral theology at St. Joseph's Seminary in Yonkers. "But the moral right? I'd say no. If you believe life comes from God, and you have it in trust for a while, then you believe that you cannot take it. But if you believe you're not only the tenant but also the landlord of your existence — then I suppose you can believe that you can take your life."

Dr. John D. Arras, philosopher-in-residence at Montefiore Medical Center in the Bronx, frequently advises doctors on these issues. "I don't know why believers can't have the view of God as a compassionate innkeeper, who gives his residents the right to check out whenever they want to," he said about religious objections.

Some, like Father Smith, believe that the term "rational suicide" is a contradiction in terms. Dr. Arras thinks that suicide under certain circumstances can be an ethical option. "I believe that the classical philosophical argument for suicide or assisted suicide is very strong," he said. "But these are decisions that should be made in fear and trembling. I'm wary of the popularization of suicide. It's one thing to stake out the abstract right to die, another thing to parade this before depressed people who may take advantage of it."

There is also implied criticism of Hemlock in the policy of older "right-to-die" groups. "We decided not to make available methods that would enable people to take their own life," said Alice V. Mehling, executive director of the Society for the Right to Die, a group in Manhattan founded in 1938. "Suicide can be botched with rather unfortunate results. No one knows really what their tolerance is to an overdose of any drug."

Another Manhattan-based organization, Concern for Dying, has decided against distributing suicide manuals. "We completely support the principle of bodily self-determination," said A. J. Levinson, the group's executive director. "But the vast majority of people who want to commit suicide are depressed people who need counseling — and not instructions."

The Hemlock Society's address is PO Box 66218, Los Angeles, CA 90066.

ELECTION OF DIRECTORS

- (40) We are to nominate Directors. Directors are elected to 3-year terms. The Bylaws call for a minimum of 6 and a maximum of 24. We currently have 22. If we elect 7 this year, it will bring the total up to 24, which is desirable.

Any member may nominate any other member to be a Director-Candidate.

If you wish to be a Candidate yourself, notify the Elections Committee, and someone will probably nominate you.

The duties of a Director are not burdensome. Directors are occasionally asked their opinion about something, by mail; and they are expected to make a reasonable effort to attend annual meetings, though not at great expense. The cost of attending meetings is tax-deductible, for Directors.

We would like to have more than 7 names on the ballot, so as to give members a choice.

A brief statement about a Candidate should accompany a nomination. If you are volunteering, include a brief statement about yourself.

The next newsletter (RSN39, August) will contain a ballot, with the brief statements about the candidates.

Directors whose terms expire this year are ALI GHAEMI, DON JACKANICZ, CHERIE RUPPE, WARREN SMITH, KATE TAIT. They are all eligible for re-election.

* To nominate someone -- or to volunteer yourself -- write the Elections Committee, c/o the newsletter, address on Page 1, bottom.

ANNUAL MEETING (1983)

(41) June 24-26. The following information was provided in the last issue (RSN37-33):

The meeting is timed to coincide with a Conference at McMaster. The Conference -- jointly sponsored by the Bertrand Russell Editorial Project (at McMaster University) and the Institute for the History and Philosophy of Science and Technology (at University of Toronto) -- is in 2 parts.

Part 1 -- June 24-26, 1983 -- is on BR's non-technical ("humanistic") writings.

Part 2 -- June 1984 -- will deal with BR's technical writings.

The program consists of 10 talks, starting Friday at 1 PM and ending at noon, Sunday. (Actually the program starts at 12:50 PM with a brief speech of welcome by Richard A. Rempel, Coordinator of the Russell Editorial Project.) It's not solid talk, talk, talk. It's talk alternating with coffee breaks and ending with a Barbecue at the Faculty Club, 6 PM on Friday, and a Buffet Banquet with Red Hackle (BR's brand of whiskey), 7 PM Saturday.

These are some of the speakers and their topics:

- . S. P. Rosenbaum (University of Toronto), "Russell and Bloomsbury".
- . Kirk Willis (University of Georgia and recipient of the 1979 BRS Doctoral Grant), "Russell's early views on religion".
- . Peter Clarke (St. John's College, Cambridge University), "Russell and Liberalism".
- . Brian Harrison (Corpus Christi College, Oxford University), "Russell and suffrage".
- . Thomas C. Kennedy (University of Arkansas), "Russell and Pacifism".

A BRS business meeting will be held Friday evening. No Conference talks are scheduled.

Costs: A Conference fee of \$30 (students \$15) covers talks, coffee breaks, Barbecue, Banquet. Cost of lodging and meals is \$43.84 per person double, \$54.34 single. This covers 2 nights lodging (June 24, 25), 2 breakfasts (June 25, 26), 1 lunch (June 25). Extra lodging before and after the Conference is available at the daily rate of \$15.75 double, \$21 single. Rates include bedding, towels, soap, daily maid service, parking and Ontario's 5% sales tax.

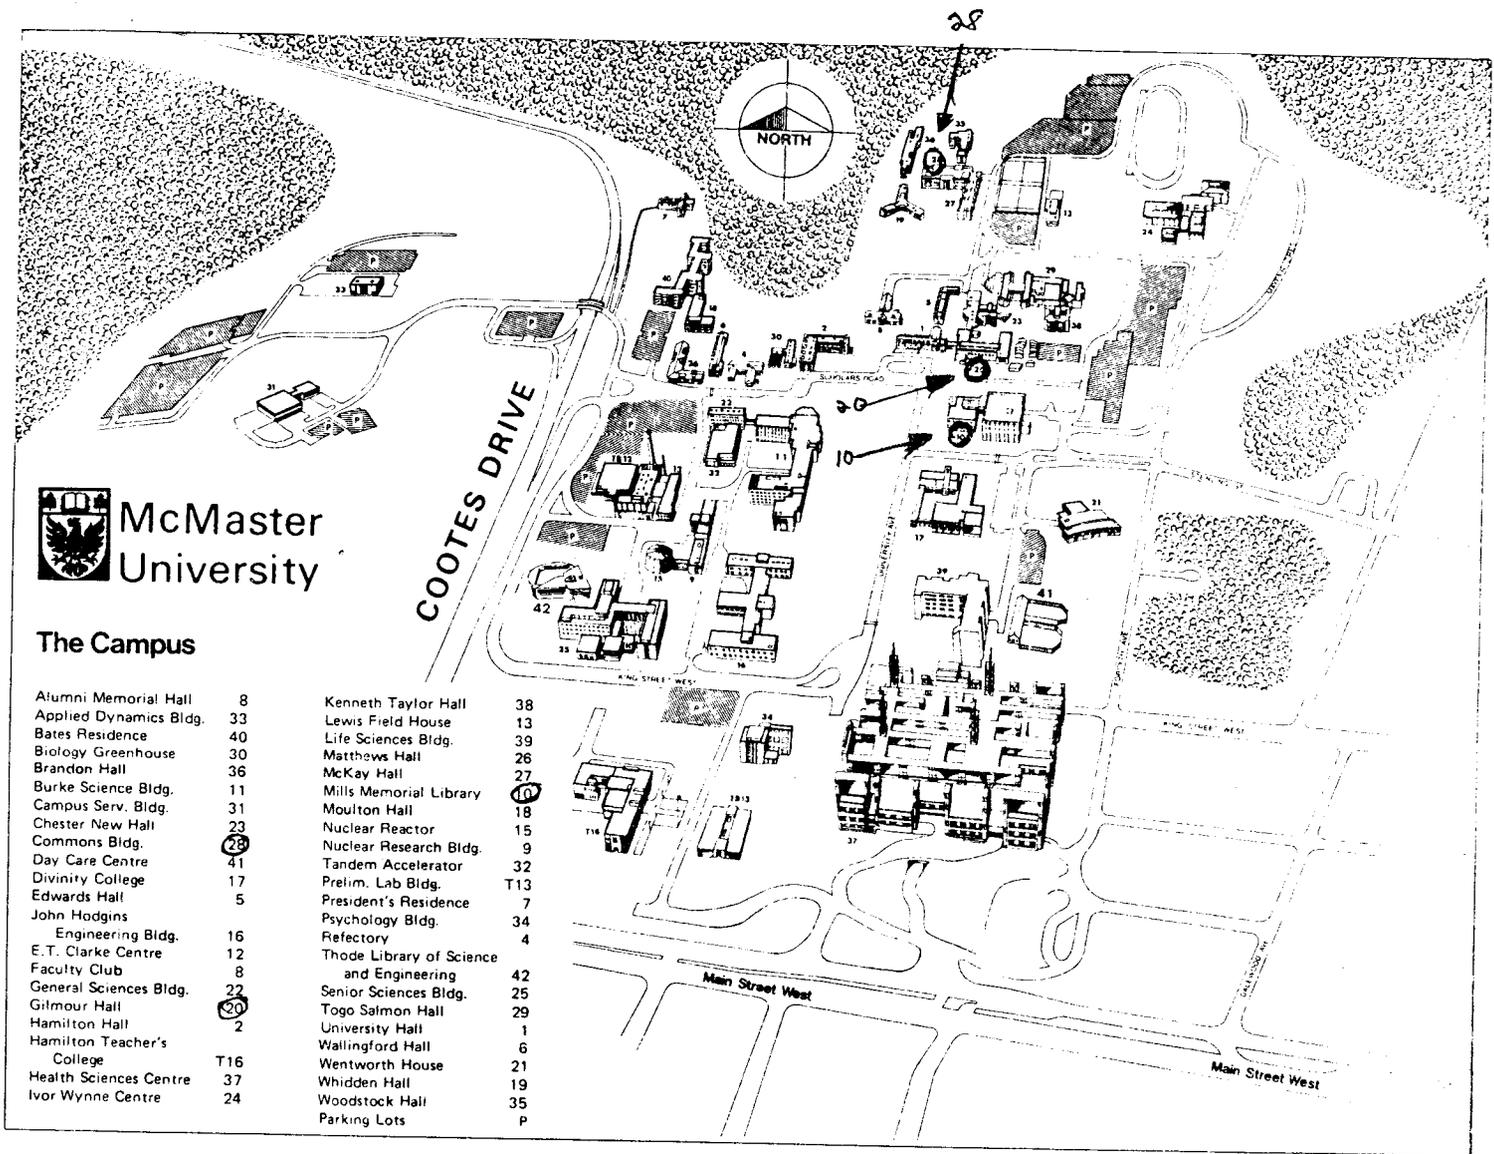

To make a reservation you need 2 money-orders, payable to McMaster University in Canadian funds. (1) Send the Conference fee to Secretary, The Bertrand Russell Editorial Project, TSH 719, McMaster University, Hamilton, Canada L8S 4M2. (2) Send payment for lodging to Conference Services, Commons 1018, McMaster University, Hamilton, Canada L8S 4K1, and mention dates of arrival and departure.

On arrival at McMaster, go to the Main Lobby Registration Desk in the Commons Bldg. (Bldg 28 on map, circled), and pick up your room key and settle into your room. Then go to the Russell Archives in Mills Memorial Library (Bldg. 10 on map, circled) between 9 and 5 PM Friday, to register for the Conference and get a program. The Conference talks will all be given in Room 111, Gilmour Hall (Bldg 20 on map, circled). Map is on next page.

Transportation to McMaster. Go to Toronto by train or plane. Then it's an hour's bus-ride to Hamilton/McMaster, from Toronto Airport or Bus Terminal. The Toronto-Hamilton bus may stop at McMaster on request; we're not sure of this. In any case, "McMaster is in the west end of the City of Hamilton, just a few minutes from downtown by car, taxi or public bus," according to McMaster literature.

If you can't get there before Friday evening, you will have missed 3 talks Friday afternoon. There are 7 talks scheduled after Friday.

* Come if you can!

ANOTHER VIEW

(42) Socrates is greater. You recall the nasty statement attributed to BR which appeared in El Espectador (Bogota) (RSN36-6), and which translates from the Spanish as follows:

Socrates is greater than Christ because he did not have the cruel and sanguinary instincts of that hallucinating Jew.

We thought it was pure smear. But HARRY RUJA has this to say:

Though I cannot affirm or deny that BR said exactly what is ascribed to him by the unnamed professor, according to Jose Velez Saenz, he has expressed somewhat similar sentiments in "Why I Am Not A Christian". On Page 17 of the Simon & Schuster edition, we find: "There is one very serious defect...in Christ's moral character, and that is that He believed in Hell." He was furious with those who would not listen to his preaching, an attitude absent from Socrates and one which detracted from his superlative excellence. On Page 19, BR says further: "I cannot myself feel that...in the matter of virtue Christ stands quite as high as some other people known to history. I think I should put Buddha and Socrates above Him in those respects."

ON NUCLEAR WAR

(43)

"Nuclear Sense and Nonsense" by Solly Zuckerman is nominally a book review in *The New York Review of Books* (12/16/82, pp. 19-26). Actually it is much more; it is an excellent history of the nuclear arms race by someone who ought to know. He was Science Adviser to the British Government.

The books reviewed are "The Nuclear Delusion: Soviet-American Relations in the Atomic Age" by George F. Kennan (Pantheon) and "With Enough Shovels" by Robert Scheer (Random House).

Any European citizen who picks up the two books under review hoping to inform himself about the nuclear dangers that bedevil East-West relations could well be excused were he to gain the impression that George Kennan was brought up within a culture wholly different from the one out of which the characters in Robert Scheer's pages emerged. How, one might well ask, could a politically sophisticated analysis of American-Soviet relations, of the kind which George Kennan provides, appear in the same country and at the same time as the proclamations of a band of military camp followers who pretend to provide intellectual backing for the controversial defense policies of Ronald Reagan and Caspar Weinberger? How is it that senior and experienced American military leaders who have spoken out have so far failed to refute the martial vaporings of a handful of civilians who offer guidelines for all-out nuclear war, as though its consequences would be little worse than a succession of severe droughts? Can it be that the enormous momentum of the arms race, and the pervasive power of the military machine, have in recent years so conditioned the environment of American opinion that, for all that may be said in favor of free speech, public expressions of dissent have so far had as little impact on the formulation of government policy in the US as the whimpers of dissent have in the USSR?

Whatever the answer, the belligerent noises now coming out of Washington are certainly sharpening the anxieties of ordinary citizens in parts of Western Europe where public expressions of concern can still have an impact on government policies. People are scared by talk of protracted nuclear war; by the fact that there is no let-up in the nuclear arms race; by the lack of progress in the START and "theater weapon" talks. And, however regrettable, and quite apart from differences of view about steel imports into the US, or trade relations with the USSR, strains in the Atlantic Alliance will increase the more it becomes clear that European governments are unable to influence the East-West military confrontation.

The recent admissions that the Pentagon, with presidential blessing, is embarking on preparations that would ostensibly provide the US with the means to fight a "protracted" nuclear war against the USSR have generated a new wave of alarm, and more than a little astonishment, in those European quarters where questions were already being asked about other aspects of nuclear strategy. Caspar Weinberger's efforts at retraction, culminating in his "open letter" to some seventy newspapers, have done nothing to allay anx-

ety or to reduce bewilderment. Theodore Draper's "open reply"¹ indicated that the Weinberger letter will more likely than not intensify fear among

¹*The New York Review*, November 4, 1982.

those of America's European allies on whose territory such a war, were it ever to occur, would be fought.

But the whole concept of a nuclear war is nonsense, and the purpose of Mr. Scheer's book is to reveal the degree of nonsense it is. If the subject were not as serious as it is, parts of the book could be read as a skit on the Reagan administration's foreign and defense policies. Unfortunately, however, it is not a skit. What Scheer writes is backed by tapes of conversations he has had with Mr. Reagan; with Vice-President Bush; with Eugene Rostow, now the head of the State Department's Arms Control and Disarmament Agency; with members of the group called the Committee on the Present Danger, of whom Rostow, Richard Pipes, Richard Perle, and several other members are now officials in the Reagan administration. Half of the book is devoted to notes and appendices, which include transcripts of tapes and of other records. It's real enough. Europe and North America have every reason to be fearful. So have the Russians.

No one in his senses should dispute the basic assumption that the rulers of the Soviet Union will do anything in their power to prevent the political disruption of their own state, or that of the satellite countries on whose stability they have in part based their own security. The USSR must be expected to do anything that could further its own interests. To that end it will also take risks, such as, for example, its intervention in Afghanistan. On this there is considerable agreement between George Kennan and Reagan's advisers. But from that point on, their paths diverge sharply.

What is highly questionable in the Reagan doctrine, and certainly to much informed European opinion, is the assumption that the Politburo would deliberately risk intruding into NATO territory, in the near certainty that such aggression would be likely to entail nuclear war. But this is what Reagan's people seem to believe. They also now say that America has to plan for a "protracted" war because the Russians believe that they could fight and win such a war. The Reaganites point to the development of new Russian nuclear launchers and warheads as proof. But if this is proof, then what is not explained is why the Soviet leaders, while deploying nuclear arms with their forces, publicly declare that a nuclear exchange could never be contained and that, once

started, the result would be scores of millions of deaths on both sides. This is not simply propaganda—any more than were the predictions of the nuclear physicists about the amount of energy locked up within the atom.

Nonetheless, as the nuclear arms race now pursues its course, the USSR continues to develop more and more accurate ballistic missiles, in order, as the Pentagon claims, to eliminate America's equally accurate land-based ballistic missiles, with the object of decreasing the intensity of a retaliatory nuclear onslaught. As further "proof" of the USSR's aggressive intentions, the Reagan strategists point to an evacuation program which the USSR is said to have ready for its bigger cities, and to a belief that some significant part of its industry has been built underground. It is also said that the USSR has invested in a vast shelter policy. To those who wish to interpret such developments that way, this means that the USSR is bent on a "first strike." What such interpretations ignore is that regardless of the number of American land-based missiles that might be destroyed, the USSR could still be utterly destroyed by the warheads launched by the airborne and submarine limbs of the nuclear triad of the US.

As seen by the men whom Scheer interviewed, and whom he quotes, the "scenario" of a Soviet first strike necessarily has to be the basis for American policy. Therefore the nuclear arms race must continue, both in quality and quantity. The US must also embark on a shelter policy. It is, of course, admitted that absolute invulnerability of land-based launchers cannot be guaranteed, not even for an MX system. Nor, if there were a nuclear exchange, can there be any guarantee that there won't be casualties, even when the primary targets are so-called "military" targets. But given a civil-defense policy like that of the Russians, fatal Soviet casualties might be kept down to the level of, say, twenty million, which, Professor Richard Pipes thinks, is a tolerable figure. He also believes that if all Soviet cities with a population of a million or so "could be destroyed without trace or survivors, and, provided that its essential cadres had been saved, [i.e., the USSR] would emerge less hurt in terms of casualties than it was in 1945."

Professor Jack Ruina, a professor of electrical engineering at MIT, tells us in Scheer's book that Pipes is a nice man, but that he "knows little about technology and about nuclear weapons." Jack Ruina certainly does know about both. But he is being overgenerous when he limits Professor Pipes's ignorance just to technology and nuclear weapons. Scheer describes Pipes as a "notorious

anti-Soviet hard-liner" who came to America from Poland. To someone like myself who has seen it happen, it is clear that Pipes has little or no idea of what it's like when a city is devastated even with conventional bombs; when it is bombed even at the intensity which London suffered at the height of the Blitz. Hamburg, Dresden, Tokyo were worse. If the Soviet Union were being hit in a nuclear exchange, the US would also be hit. I shudder to think how America, or for that matter the United Kingdom or the USSR, would react were, say, six of their largest cities to be struck simultaneously by a one-megaton nuclear warhead. Each strike would result in something like a quarter of a million immediate deaths. A one-megaton warhead on Detroit would, in theory, exhaust the medical facilities of the whole United States.² I say "in theory," because such facilities couldn't be mobilized. Have none of the members, past or present, of the Committee on the Present Danger the imagination to translate numbers of warheads, launchers, or megatons into human realities?

Official American forecasts indicate that without the kind of shelter policy that Professor Pipes has in mind the number of deaths that would be caused by an all-out nuclear exchange would be scores of millions on each side. But what shelter policy does he have in mind?

Here we turn to T.K. Jones, now the administration's deputy undersecretary of defense for research and engineering, strategic theater nuclear forces. To survive a nuclear onslaught, Soviet citizens evacuated to the outskirts of their cities are advised, so he tells us, to dig a hole and to cover it with small saplings, over which is spread three feet of earth. That would be enough to deal with radioactive fallout. Americans should be taught to do the same. "If there are enough shovels to go around"—this is how Scheer got the title for his book—"everybody's going to make it." And speaking in what he calls general terms, T.K. Jones is quoted as saying that without protection against an all-out nuclear exchange, recovery time

²*The Effects of Nuclear War*, Office of Technology Assessment, Washington, DC: US Government Printing Office, 1979.

would take a couple of generations, probably more. You'd lose half the people in the country. With protection of people only, your recovery time to prewar GNP levels probably would be six or eight years. If we used the Russian methods for protecting both the people and the industrial means of production, re-

covery times could be two to four years.

As I read this passage, I kept thinking that Jones must have been pulling Scheer's leg. But we are assured this was not the case. That being so, is it necessary to comment further on the thinking behind the Reagan administration's notions of a "strategic nuclear exchange"?

I am equally hard put to understand what lies behind the concept of a protracted nuclear war. How would it start? How measured a pace does "protracted" mean?

It is a basic tenet of the policy of the Western Alliance that war in Europe could start only if the Russians moved westward from their present positions. Every effort would then be made to halt them with conventional weapons, and resort to nuclear arms would be made only if our defense failed. The next act in this script is "limited nuclear war," a concept to which no experienced senior European military commander can attach any reality. On the other hand, Scheer reminds us that it is now fashionable in American military circles to talk about "command, control, communications and intelligence" (reduced in jargon to C²I, or C cubed I) as a system whereby a nuclear war could be kept both limited and protracted through measures that would allow the US military establishment to launch and control a war in which nuclear weapons were used and would survive whatever level of destruction took place.

This is nonsense. Whatever form war takes, what's missing from the term is "J"—judgment. Only political judgment could stop a nuclear war from erupting, and only the facts of immediate destruction could stop it. Battlefield nuclear weapons would destroy whole villages and small towns; so-called "theater weapons" big towns and cities. How does a protracted nuclear war proceed? Tit for tat? And how is it contained? We now know that there wasn't enough C²I in the Pentagon, at the time the plan for protracted nuclear war was leaked, to prevent General David Jones, as he stepped down in June from the chairmanship of the Joint Chiefs, from denouncing the whole idea as military rubbish. By so doing, he did far more than Caspar Weinberger could ever do to reassure America's allies that Washington is not deviously plotting their destruction.

But how on earth could the school of thought to which T.K. Jones, Professor Pipes, and Mr. Perle belong prosper, while that to which men such as George Kennan belong has failed to influence policy? Is it that Reagan's amateur strategists are really representative of Americans? Are typical Americans so consumed by their hatred of Russians, and so ignorant of the nature of destruction, that they are prepared to hazard the continuity of Western civilization in order to further their personal prejudices in a fantasy about nuclear war? If that is the case, so much must have been forgotten about the significance of nuclear weapons in East-

West relations that it's worth going back to the beginning.

A month after Hiroshima and Nagasaki had been devastated, Henry Stimson, then secretary of war, advised President Truman that America's possession of the nuclear secret could not be used as a weapon to change the communist system.¹ Instead he urged that the American government—having consulted the British—should tell it all to the Russians, and so avert a "secret armaments race of a rather desperate character." "I consider," he wrote,

the problem of our satisfactory relations with Russia as not merely connected with but as virtually dominated by the problem of the atomic bomb.... If we fail to approach [the Russians] now and merely continue to negotiate with them, having this weapon rather ostentatiously on our hip, their suspicions and their distrust of our purpose and motives will increase.

That was written on September 11, 1945. Four months later, in January of 1946, Secretary of State Byrnes appointed Dean Acheson chairman of a small committee to produce a plan for the international control of atomic energy. The result was a report which, as Acheson tells us in his memoirs,² was largely the work of Robert Oppenheimer, who himself kept closely in touch with some of his physicist colleagues—C.C. Lauritsen, I.I. Rabi, and George Zaccharias.

Contrary to Stimson's advice, the Russians were not brought into the exercise. Nor were the British. In June of 1946, Truman's appointee, Bernard Baruch, presented the Acheson-Lilienthal Report to a newly constituted UN Atomic Energy Commission. The choice of Baruch was greeted with dismay by both Acheson and Oppenheimer, neither of whom seems to have trusted him.³ In December the report was agreed to by ten members of the commission, with the Soviet Union and Poland abstaining, and then in due course it was vetoed in the Security Council. According to some cynical commentators, this result was not unwelcome either to Mr. Truman or to Mr. Baruch.

In retrospect, one cannot regard the Soviet veto as surprising; the USSR was close to completing the development of

¹*International Herald Tribune*, September 11-12, 1982.

²*Present at the Creation* (Norton, 1969).

³Nuel Pharr Davis, *Lawrence and Oppenheimer* (Simon and Schuster, 1968).

its own bomb. The United Kingdom's position was also ambiguous. The UK had been one of the ten that voted in favor of the American plan to "internationalize" the military and civil applications of atomic energy, but it has now been disclosed that two months before the vote was taken, the inner group of Prime Minister Attlee's cabinet had decided to go ahead with the manufacture of a British bomb. The decisive voice in this move was that of Ernest Bevin, the foreign secretary. "We've got to have this," he is reported as having

said to his colleagues. "I don't mind for myself, but I don't want any other Foreign Secretary of this country to be talked at or to by the Secretary of State of the United States as I have just been in my discussions with Mr. Byrnes. We've got to have the thing over here, whatever it costs."⁴ Clearly the Russians were not the only ones who were worried by the possibility of American nuclear domination.

A few of the more sophisticated of the senior scientists who had been involved with Oppenheimer in the Manhattan Project realized from the start that since no theoretical limit existed to the destructive power of nuclear warheads, the latter could not be regarded as just a new form of armament. Among the nonscientists who had come to the same conclusion was George Kennan. Stimson had spoken in 1945. In 1946 Henry Wallace, vice-president to Franklin Delano Roosevelt, had sent an open letter to President Truman advising against the views of "a school of military thinking" which was ad-

⁴Sir Michael Perrin, *The Listener*, October 7, 1982.

vocating "a preventative war" against the USSR before it acquired the weapons.⁵

There were others. In 1947 a book, *The Absolute Weapon*, had been published under the editorship of Bernard Brodie.⁶ It spelled out the message that "the bomb" implied a watershed in international politics. Kennan's initial reaction against the use of the bomb was, as he puts it, instinctive and moral—much the same as that of the Chicago physicists, led by Leo Szilard, whose work had been crucial to the development of the bomb, but who, unlike Oppenheimer, were urging President Truman, before the weapons were used against Japan, that they should never be used. If the Russians too came into possession of the weapon, so Kennan felt,

then it had to be viewed as a suicidal weapon, devoid of rational application in warfare; in which case we ought to seek its earliest possible elimination from all national arsenals. If we were successful in achieving its elimination, fine. If not, then we might, I thought, have to hold a few of

⁵P.M.S. Blackett, *Military and Political Consequences of Atomic Energy* (London: Turnstile Press, 1948).

⁶Harcourt Brace, 1947.

these devices for the unlikely event that others should one day be tempted to use them against us.

The latter consideration of deterrence remains to this day the basic and logical rationale against the concept of unilateral nuclear disarmament.

In 1949 the Russians exploded their first atomic bomb. President Truman then decided to proceed to the development of the hydrogen warhead. Like

Oppenheimer, Kennan opposed the decision. He spelled out his views in a paper which in January 1950 he addressed to Dean Acheson, by then secretary of state. How, he asked, were these new weapons to be regarded?

Were they to be seen as "an integral and vitally important component of our military strength, which we would expect to employ deliberately, immediately, and unhesitatingly in the event that we became involved in a military conflict with the Soviet Union"? Or were we holding them solely as a deterrent? In this last case, we must take care "not to build up a reliance upon them in our military planning." Our public position should then be that "we deplore the existence and abhor the use of these weapons; that we have no intention of initiating their use against anyone; that we would use them only with the greatest of reluctance and only if this were forced upon us by methods of warfare used against us or our allies...." We would, in other words, eschew the first use of such weapons ourselves; and we would try to inculcate into others the assumption that they would never again be used.

I left no doubt in Mr. Acheson's mind as to which of these alternatives I favored. If we were to adopt the first alternative—if, that is, we were to base our military strategy upon the use of nuclear weapons—then, I wrote, it would be hard "to keep them in their proper place as an instrument of national policy." Their peculiar psychological overtones would render them "top-heavy" for the purpose in question. They would impart "a certain eccentricity" to our military planning. They would eventually confuse our people, and would carry us "towards the misuse and dissipation of our national strength." Before launching ourselves on this path we should, in any case, make another effort to see whether some sort of international control could not be devised and agreed upon by the international community.

Kennan's doubts were brushed aside. Since then, all that he and others feared has come to pass. East and West now face each other with tens of thousands more intercontinental nuclear warheads than would be needed to assure a state of mutual deterrence. Warheads have been elaborated for use as battlefield and so-called "theater" weapons. On paper at least, their deployment has become part of tactical doctrine, regardless of the fact that no responsible army commander has the slightest idea of how, given political authority, their use could ever be controlled. Only desk-warriors who have never seen action, only computer specialists who can trade the deaths of millions in war games between the NATO and Warsaw Pact powers, can devise the world of fantasy where nuclear weapons have a role in active warfare, as opposed to being

weapons which, because of their limited and suicidal destructive power, deter states with nuclear weapons from taking military action against each other. Nuclear weapons deter; they cannot defend.

Here, to European eyes, lies the irony of present American policies. In 1947, at a time when Europe was tottering as it tried to overcome the grievous economic, political, and social problems by which it was then confronted, the US generously came to Europe's aid with the Marshall Plan. In 1948 Soviet hostility to the West reached a peak with the coup in Czechoslovakia and with the blockade of Berlin. A fragile European defense organization was set up under the Brussels Treaty, to be underpinned a year later by the formation of NATO, with the US as its main military partner.

Then, alas, the distortion of military planning began, the "certain eccentricity" which George Kennan foresaw the bomb would bring in its train. The European members of NATO were still far too exhausted even to try to implement the 1952 Lisbon Conference goals for conventional forces. The Federal Republic of Germany, whose contribution in manpower is today bigger than that of any other member of NATO, was not even a member. And in any event, the idea had already taken root that disparities in numbers of troops could be compensated for by the provision of battlefield nuclear weapons—an idea which Robert Oppenheimer misguidedly supported, and which Kennan opposed on political grounds.

Twenty years ago, long before President Reagan assumed power, this notion was openly challenged in NATO circles on direct military grounds,⁹ but to no avail. Because it suited Western economic and political circumstances, the European members of NATO have, over

⁹Solly Zuckerman, "Judgment and Control in Modern Warfare," *Foreign Affairs*, 40 (2), 1962, pp. 196-212.

the years, preferred to stick their heads into a mass of nuclear verbiage rather than face the truth that the more they do so—and the more they ignore NATO's weakness in conventional forces—the more defenseless we become in fact, should war ever break out with the Warsaw Pact powers. Of course, we could make the ridiculous assumption that the Russians are so irrational as to risk an uncontrollable nuclear exchange, which could only end in the total destruction of Western Europe, of Warsaw Pact territory west of the Urals, as

well as of the United States and, presumably, Canada. But what would be the point of that?

Up to the mid-Seventies, not a single one of the military leaders who had been involved in NATO planning had spoken out in public to declare his doubts. Since then several have.¹⁰ Admiral of the Fleet Lord Mountbatten, chief of the British Defence Staff for six years, said that the belief that nuclear weapons could be used in field warfare without triggering an all-out nuclear exchange, leading to the final holocaust, is more and more incredible. One of his successors, Admiral Hill-Norton, said that he knew no informed observer who believed that war with nuclear weapons is credible. His successor, Field Marshal Lord Carver, observed that "no sensible, responsible military person" believes that a war could be fought in Europe in which nuclear weapons were used without avoiding a strategic nuclear exchange.

In the latter half of the Fifties and in the early Sixties public alarm about nuclear weapons was essentially due to fears about the health hazards of radioactive fallout from atmospheric nuclear tests; it died down after such tests were banned by the treaty of 1963. Political and military NATO circles continued to base strategy and tactics on the nuclear weapon. All the phrases used over the years to imply to the public that NATO is always updating its policies in the end add up to the same thing—if the Russians launch an attack which cannot be held back by means of conventional weapons, NATO would resort to nuclear arms. What is more, in such circumstances, NATO forces would initiate the nuclear exchange. What *per contra* would the Russians then do? Obviously, if NATO forces move against them, and if NATO starts to use nuclear weapons, the USSR would most likely respond in kind, even if the risk were that the ensuing exchange could end in hundreds of millions of deaths. There could be no victors in such an exchange. The end would be mutual suicide.

George Kennan perceived all this from the moment he realized that the Russians, come what may, would devise their own nuclear weapon. By 1949, when they exploded their first bomb, and the debate about the "super," or hydrogen, bomb started, Kennan was certain. A year later his heterodox views led to his resignation from the State Department and to his first attempts to circulate those views in public, culminat-

ing in the six BBC Reith Lectures which he delivered in 1957.¹¹ In one of these lectures he argued forcibly for the withdrawal of American and Soviet forces from Western Europe and for the unification of the two Germanies as a

¹⁰Solly Zuckerman, *Nuclear Illusion and Reality* (Viking, 1982).

¹¹*Russia, the Atom and the West* (Harper Brothers, 1958).

demilitarized state. In another he pointed to the dangers of introducing tactical nuclear weapons into the armory of NATO's military forces.

Both ideas, as he tells us, "encountered a violently adverse official reaction, particularly in Germany and the United States." His idea of a demilitarized Germany serving as a buffer between East and West was unacceptable to the Western allies and, by the time he made the proposal, to the Russians. His objection to battlefield nuclear weapons was anathema to military technologists and amateur tacticians. But in retrospect, how right Kennan was when he concluded that if nuclear weapons were treated as battlefield weapons rather than as instruments of deterrence they would intensify military tension in Europe, and

would be bound to raise a grave problem for the Russians in respect of their own military dispositions and their relations with the other Warsaw Pact countries. It would inevitably bring about a further complication of the German and satellite problems. Moscow is not going to be inclined to trust its satellites with full control over such weapons. If, therefore, the Western continental countries are to be armed with them, any Russian withdrawal from Central and Eastern Europe may become unthinkable once and for all, for reasons of sheer military prudence regardless of what the major Western powers might be prepared to do.¹²

It did not help Kennan that when he

made this pronouncement the Russians were propounding the same message. Nor did it help that the consequences of his counsel would be a demand for more resources for conventional arms and forces.

In the introductory section to his new book, Kennan pessimistically observes about the nuclear assumptions and strategies of the kind exposed by Scheer

that

they are now so deeply and widely implanted in the public mind that in all probability nothing I could say, and nothing any other private person could say, could eradicate them. Only a senior statesman and political leader, speaking from the prominence and authority of high governmental position (in our country, a president, presumably) could have a chance of re-educating the public successfully on these various points, and this is something for which one sees, at this present juncture, not the slightest prospect.

This is obviously true if the present American administration continues to follow the path it has chosen over the past two years. But I think that Kennan forgets that there are other countries in the world besides the US and the USSR. I feel that there may be more force than he or any of us now realizes to the anti-nuclear movement in Europe—which he discusses in his penultimate chapter.

Sure enough, as his title implies, there is a nuclear delusion—or illusion. But there is also a nuclear reality which is undoubtedly better understood in Europe (including, I would say, the Warsaw Pact countries) than it is in the United States—a land mass that has never been ravaged by modern war. There are West European leaders as well as American

¹²*Ibid.*

residents. I do not despair of the possibility that at some moment one of them could start the process that will remove from today the threat that there will be no tomorrow.

So long as political differences between East and West remain as they are, there is clearly no logic to the concept of unilateral disarmament on either side for either side. But, equally, there is no logic to the nuclear arms race between the US and the USSR, a race which continues because of a built-in technological momentum, and a race which inevitably increases the danger that, by inadvertence or through mad decision, the weapons could one day be used. The explosive release of the enormous forces which hold together the invisible particles that constitute an atom provides a way of erasing in a flash centuries of human achievement. It is not a means whereby political differences can be resolved. □

(44) Mr. Pipes objects, in *The New York Review of Books* (March 31, 1983):

To the Editors:

Lord Zuckerman's essay, "Nuclear Sense and Nonsense" [*NJR*, December 16] contains a few critical remarks about me to which I would like to respond.

Contrary to Lord Zuckerman's assertion, Mr. Robert Scheer, the author of *With Enough Shovels*, cannot have "tapes of conversations" with me because I have never talked to him. To the best of my knowledge, I have never met him. In fact, I do not even know who he is apart from being the author of what (judging by Lord Zuckerman's

review) is an ill-informed and nasty book.

"Given a civil-defense policy like that of the Russians," Lord Zuckerman writes, "fatal Soviet casualties might be kept down to the level of, say, twenty million which, Professor Pipes thinks, is a tolerable figure." Twenty million casualties is the number suffered by the Soviet Union in World War II: since among these victims were members of my own family, I can hardly regard such figures with equanimity. I may further add that estimates by Soviet Civil Defence authorities suggest that they (not I) believe a

well-developed and executed civil defence program will keep casualties in a nuclear conflict down to that level. If Lord Zuckerman regards such expectations as nonsense then he may wish to communicate his views to General Altunin who heads the Soviet Civil Defence effort rather than criticize American rapporteurs of Altunin's estimates.

Quoting Mr. Scheer, Lord Zuckerman describes me as a "notorious anti-Soviet hard liner" who came to America from Poland." If Lord Zuckerman will define for me a "notorious pro-Soviet soft liner" I will

be able to tell whether I am indeed his opposite. My coming to America from Poland, however, has no more bearing on my intellectual qualifications than Lord Zuckerman's migration from South Africa to England has on his.

Lord Zuckerman admits to knowing little about me but he is "clear that Pipes has little or no idea what it's like when a city is devastated even with conventional bombs." Whence the certainty? It so happens that I resided in Warsaw in September 1939 when the city was devastated in Nazi terror raids.

The experience has etched itself deeply in my memory, though I fail to see why it should make me more competent to discuss Soviet nuclear strategy. Most knowledge which civilized man has at his disposal he acquires vicariously, learning from the experience of others. Were this not so, were we required to undergo personally all that we profess to know, on what authority would Lord Zuckerman himself [have] dared to publish fifty years ago his pioneering *Social Life of Monkeys and Apes* since he clearly is neither

a monkey nor an ape?

Lord Zuckerman expresses dismay that the school of thought with which I am associated "prosper" while that which he regards as having a monopoly on political wisdom "has failed to influence policy." To the extent that his essay is representative of his favored school, the reason is not far to seek. Carelessness with facts, frequent resort to *ad hominem* arguments and to ridicule are symptomatic of contempt for the opinions of others. Such a method of argumentation gets

one so far but no further. It may sway some readers, but it certainly does not impress those who must make fundamental decisions affecting national security.

Richard Pipes

Harvard University
Cambridge, Massachusetts

Lord Zuckerman replies:

I fear that Dr. Pipes protests too much. My reference to "transcripts of tapes and of

other records" related generally to those which Mr. Scheer reproduced in his book.

The references to Dr. Pipes's beliefs are in the form of excerpts from his writings. If they are false, I suggest that he take the matter up with Mr. Scheer. If they are not, those who like myself regard the views which they expressed as nonsensical will learn with relief that Dr. Pipes now wishes either to qualify or to disown them.

- (45) "To Preserve A World Graced By Life", a 12-page pamphlet by Carl Sagan, is being mailed to all BRS members with this issue of the newsletter. It is a plea to save our world from nuclear devastation. It has been supplied — at DON JACKANICZ's suggestion — by the Council for a Livable World, whose objectives and distinguished members are listed in the pamphlet. We are grateful to the Council for providing the pamphlet at no charge.

WE APPLAUD

- (46) Felix De Cola's Letter to the Editor of the Los Angeles Times (April 27, 1983):

This is my very last letter to The Times.

I know that I am dying and I am unafraid. I am still a happy atheist, and with Bertrand Russell, I say:

"I think our own hearts can teach us no longer to look around for imaginary supports, no longer to invent allies in the sky, but rather to look to our own efforts to make this world a fit place to live in instead of the sort of place that the churches, in all these centuries, have made it.

Adieu.

FELIX De COLA
Hollywood

This letter was dictated to De Cola's wife; it was mailed on Monday, the day he died.

Felix had been a member of the BRS. (Thank you, Jacqueline Berthon-Payon and Bob Davis.)

BOOK REVIEW

- (47) "Marriage & Morals" by Bertrand Russell (NY: Liveright, 1929). This is one of the books that offended Judge McGeehan in the trial that prevented BR from teaching at City College of New York (1940). This is what reviewers thought of the book at the time it was published, as revealed in "Book Review Digest, 1929" (NY:H.W. Willson Co.):

RUSSELL, BERTRAND ARTHUR WILLIAM. Marriage and morals. 320p \$3 Liveright. 176 Sexual ethics. Marriage 29-21656
Beginning with an historical and ethical survey of sexual morality, Mr Russell discusses the moral standard as it existed among savage tribes and during the Christian era as a background to a consideration of the modern problem, with emphasis upon sexual ethics in relation to modern marriage. Suggestions for certain modifications of the conventional code, making for greater happiness in the whole realm of sex and marriage, are given.

"Bertrand Russell has certainly produced the most humane and persuasive volume in the recent flood of books on marriage. None of it is unfamiliar—which is quite as it should be—and the book will reach a great many people who would have shrunk at the outset that they were hostile to his conclusions. He is convinced of two facts: that marriage is for the sake of the children born in it, and that love is one of the first values of existence." Ruth Benedict
+ Books (N Y Herald Tribune) p5 O 29 '29 160w

Reviewed by Francis Snow
Current Hist 31:639 Ja '30 250w

"In the last analysis Mr. Russell, like Judge Lindsey, is proposing nothing new; he is only suggesting a candid facing of a new fact. An old morality is bankrupt; a new morality will have to be created. In fact, a new morality is

already in the process of being created blindly by the very people who have never heard of Mr. Russell or of the new theories of morality that many of this generation have proposed. The economic and psychological forces in our civilization are at work achieving this change. Mr. Russell's book attempts only to give clarity to this change, but in trying to do this he is attempting in a fine courageous manner an extremely grave task. Too much praise can scarcely be given to those who, like Mr. Russell, see this change as part of a greater revolution in the very structure of social life." V. F. Calverton
+ Nation 129:677 D 4 '29 850w

"If Mr. Russell had more charity towards the world in which he lives he would write a less entertaining book, but he might make a more effective contribution to the discussion of his subject." Ray Strachey
+ Nation and Ath 46:255 N 16 '29 750w
New Statesman 34:162 N 9 '29 850w

"Mr. Russell's trumpet blast is not going to bring down the walls of Jericho, but 'Marriage and Morals' is a civilizing book by one of the two great civilizers of the current age—the other is Havelock Ellis—and even the person whose blood pressure mounts rapidly while turning its pages will be better off for having read it." P. F. Van de Water
+ N Y Evening Post 11m O 12 '29 280w

"Permeating the book is his delicious dry wit, his tentative, half-humorous way of saying things which he means in deadly earnest. There is a good deal in the book with which traditional moralists would take issue. His whole

position on individual freedom, the legal aspect of marriage, and family life is very advanced. . . . Whether or not one agrees with [his] conclusions—and he makes them very easy to accept in argument—the importance of such a book and such a writer as Russell is immense. This importance lies in giving us perspective, more of a birdseye view of problems that lie all too close to everyday life and experience." Isabel Proudfit
+ N Y Times p2 N 17 '29 1300w

"Pity the unsuspecting reader who artlessly opens Bertrand Russell's new book without any premonition of where this astute philosopher will lead him. In that easy, informal manner which discounts all the airs of scholarship Russell puts himself on a footing with the average man, and presto—he is discussing the fundamentals of his beliefs and practices, his faith, his family, his national loyalty, and the very essence of his stock on this earth. Moreover, Russell stirs up these subjects, each of which is fraught with controversy, in the most amiable manner, discussing them as common sense dictates, giving both sides, forcing no conclusions on the reader." Harry Hansen
+ N Y World p17 O 15 '29 1100w

"Liberal minded readers will find much to interest and nothing to shock them in Bertrand Russell's new book. He writes with perfect frankness and transparent purity of motive, and the charge of sentimentality often made against such high-minded idealists can scarcely be advanced against this volume." F. L. Robbins
+ Outlook 153:310 O 23 '29 1600w

"Mr. Russell's book sets the problem in its historical perspective, and states it as fairly as is possible for one who is a natural partisan. Whatever we may think of his proposals it is evident that such a book, written by a man whose good faith is above question, was long overdue."

— Spec 148:sup773 N 9 '22 806w

Spring'd Republican p7e N 3 '29 490w

Marriage and Morals is interesting insofar as it: (1) traces the history of conventional ethics back to their source conditions, and (2) shows that those conditions no longer exist. Mr. Russell fails to prove that assurance of paternity is the only factor that stands in the way of extra-marital relationships." E. M. Allen

AGAIN, THE BIG ISSUE

(48) From The New York Times (4/24/83, p. E21):

'Frightened for the Future of Humanity'

The following statement was signed by 70 scientists who contributed to the development of the first atomic bomb, in 1943. Among the signatories are five Nobel Prize winners — Hans Bethe, Owen Chamberlain, Richard Feynman, Ed McMillan and Emilio Segre. Others include Robert Marshak, Victor Weisskopf and Frank Oppenheimer.

The signers of this statement are scientists who came to the Manhattan Project at Los Alamos in its earliest days and who are now gathered to observe the 40th anniversary of the opening of the laboratory. We write this because we worked on the creation of the first nuclear bomb and therefore, even though the consequences and the concern must be the same for all people equally, we feel a special sense of responsibility. We are appalled at the present level of the nuclear armaments of the nations of the world and we are profoundly frightened for the future of humanity.

The single crucial fact is that the two major world powers now possess a sufficiency of nuclear warheads and delivery systems to destroy each other and a significant part of the rest of the world many times over. Furthermore, in view of the massive overkill potential already achieved, the mobility of many launching systems, and the absence, after many years of research, of any credible defense, we see no conceivable probability of preventing, by any military action that could be taken, such total or near-total destruction. This being so, considerations of possible comparative advantage to one side or the other in numbers of warheads or in megatonnage become irrelevant.

Our one hope is that both the United States and the Soviet Union will recognize the futility of trying to outbuild the other in nuclear strength and also the cataclysmic danger inherent in the effort to do so. We urge upon the leaders of both countries that this recognition be made a cornerstone of national policy and that it lead to the beginning of a mutually agreed upon reduction of nuclear armaments and, for all nations, to the ultimate goal of the total elimination of such weapons.

BR QUOTED

(49) "Forbes" loves BR, and continues to dig up nuggets for its "Thoughts on the Business of Life" section:

To be able to fill liesure intelligently is the last product of a civilization. (April 11, 1983, p. 220)

Change is one thing, progress another. "Change" is scientific, "progress" is ethical; change is indubitable, whereas progress is a matter of controversy. (May 9, 1983, p. 352).

(¹thank you, WHITFIELD COBB)

1983 MEETING, AT MCMASTER

- (2) This report on McMaster 1983 is in 3 parts. Part 1: the Conference. Part 2: the BRS Annual Meeting. Part 3: the BRS Board Meeting. It all occurred June 24-26.

- (2a) Part 1, the Conference. In all previous BRS meetings the programs — speakers, topics, films — have been arranged by the BRS itself; but in the '83 meeting, the program was arranged by the sponsors of the Conference. The Conference was on BR's early "humanist" writings (1888-1918). Here is the program:

Programme

The first of two conferences sponsored by the Bertrand Russell Editorial Project (McMaster University) and the Institute for the History and Philosophy of Science and Technology (University of Toronto). Part II will be a conference on Russell's technical writings up to 1922 held in Toronto late in June 1984.		Saturday 9:00-10:00 Department of English and Russell Editorial Project McMaster University	Sunday 9:30-10:00 Coffee
Friday 12:50	Richard A. Rempel, Coordinator Bertrand Russell Editorial Project	Bertrand Russell's Conversion of 1901	10:00-11:00 Peter Clarke St. John's College Cambridge University
Welcome		10:00-10:20 Coffee	Bertrand Russell and the Dimensions of Edwardian Liberalism
1:00-2:00	S.P. Rosenbaum Department of English University of Toronto	10:30-11:20 Kirk Willis Department of History University of Georgia	11:00-12:00 Thomas C. Kennedy Department of History University of Arkansas
Bertrand Russell and the Bloomsbury Group		The Evolution of Bertrand Russell's Early Religious Beliefs, 1888-1914	To Nourish Life or Minister to Death: Bertrand Russell and the Twentieth-Century Peace Movement
2:00-2:30	Coffee	11:30-1:00 Free time for lunch	12:00 Closing remarks and farewell
2:30-3:30	Gladys G. Leithauser Department of English University of Michigan—Dearborn	1:00-2:00 Nicholas Griffin Department of Philosophy and Russell Editorial Project McMaster University	
The Romantic Russell and the Legacy of Shelley		Bertrand Russell's Crisis of Faith	
3:30-4:00	Coffee	2:00-2:30 Coffee	
4:00-5:00	Carl Spadoni Bertrand Russell Archives McMaster University	2:30-3:30 Harry Ruja Department of Philosophy San Diego State University	
Russell and Aesthetics		Russell on the Meaning of "Good"	
6:00	Barbecue at the Faculty Club	3:30-4:30 Brian Harrison Corpus Christi College Oxford University	
Free evening; general meeting of the Bertrand Russell Society		Bertrand Russell: The False Consciousness of a Feminist	
		7:00 Buffet banquet at Richard Rempel's home	

The large audience, that filled the auditorium in Gilmour Hall, seemed to like what it heard. The applause that followed each talk confirmed that impression.

32 BRS members were there: KEN BLACKWELL, ANDREW BRINK, WHITFIELD & POLLY COBB, JACK COWLES, DENNIS DARLAND, BOB DAVIS, LEE EISLER, PAUL GARWIG, MARY GIBBONS, DAVID GOLDMAN, DAVID HART, DON JACKANICZ, JOHN JACKANICZ, MARVIN KOHL, GLADYS LEITHAUSER, JOHN LENZ, BOB LOMBARDI, STEVE MARAGIDES, JIM MCWILLIAMS, FRANK PAGE, PAUL PFALZNER, STEVE REINHARDT, HARRY RUJA, CARL SPADONI, TOM STANLEY, KATE TAIT, JOHN VAN WISSEN, HERB & BETTY VOGT, ROB WALLACE, CAROLYN WILKINSON.

If that looks like a record number (which it is), let us not puff up with pride too much; that number is not as good as it looks. Some of those BRS members are affiliated with McMaster, or participated in the Conference, and would have been there in any case.

We never have as many members at Annual Meetings as we would like. Attending meetings is never inexpensive, and can be quite expensive for members who have to travel far. All in all we can say that we had a pretty good turnout for the '83 meeting, a little better than average, including some long-time members who came to an Annual Meeting for the first time, and later told us they were very glad they had come.

(2b) Part 2, the BRS Annual Meeting. Here are highlights. More details are provided in the Minutes (38).

- . President Jackanicz voiced the BRS's feelings of great gratitude toward BOB DAVIS for 8 years of notable service as BRS President, 1975-1982. This was followed by great applause.
- . President Jackanicz reported that the BRS had moved from Georgia to Illinois.
- . Treasurer Dennis Darland reported that the present bank balance is \$3364.69.
- . VP/Information Lee Eisler asked members to remember to send him relevant items they come across in their reading, for possible inclusion in the newsletter.
- . President Jackanicz read Jack Ragsdale's letter asking the BRS to endorse a nuclear freeze. (The Board later took action on this. See (23,39))
- . VP/Information Lee Eisler asked that the BRS undertake to gather incidents in BR's life that would lend themselves to a movie on BR. This was approved.

(2c) Part 3, the Board of Directors' Meeting. Here are highlights. More details are in the Minutes (39).

- . The Board appointed (or re-appointed) the following officers: Donald W. Jackanicz, President; Marvin Kohl, Vice-President; Dennis J. Darland, Treasurer; Cherie Ruppe, Secretary; Robert K. Davis, Vice-President/Special Projects; Lee Eisler, Vice-President/Information.
- . The 1984 Annual Meeting will coincide with the 2nd year of the Conference, in June, at the University of Toronto. This Conference will be on BR's technical writings. The BRS will offer a program to provide BRS members with an alternative to the Conference's technical talks.
- . Jack Ragsdale, BRS Assistant Librarian, was named Librarian.
- . Bob Davis, VP/Special Projects, will investigate the possibility of an Annual Meeting in England in 1985.
- . Regarding use of the BRS name by members: BRS members' stationery may be used by members for any purpose, except that they are not to speak on behalf of the BRS unless authorized by the President or Board; members may say, when writing letters, that they are members of the BRS; official BRS stationery is to be used only for official BRS business.
- . A freeze resolution was adopted, to be sent to Presidents Reagan and Andropov (23).

REPORTS FROM OFFICERS

(3) President Don Jackanicz reports:

Those of you who attended the Annual Meeting at McMaster University need not be reminded by me of how successful and pleasant it was. The planning done by the Conference's sponsors at McMaster University and the University of Toronto resulted in a very rewarding weekend. I offer congratulations to all those responsible for this memorable occasion.

This would turn into a much longer account, were I to report fully on the actions taken at McMaster; but since they are covered elsewhere in this newsletter, especially in the Minutes (38,39), I will say no more — except to urge all members to try to come to next year's meeting, June 1984 in Toronto.

(3.5) Acting Secretary Steve Maragides' report consists of the Minutes of the Annual Meeting (38) and the Minutes of the Board of Directors' Meeting (39).

REPORTS FROM COMMITTEES

(4) Human Rights Committee (Alex Dely, Chairman):

(Don Jackanicz recently appointed Alex Chairman of this Committee, which has been inactive for some time. Ed.)

I was shocked recently to get an American Association for the Advancement of Science report detailing how several thousand professionals were illegally detained last year alone in over 30 countries. This is not generally known; Sakharov's plight is one of the few well-known cases.

Early in June I wrote to about 25 human rights organizations. I also wrote to those who had contacted me last year in connection with a human rights packet offer. I suggested we might network, exchange newsletters, and possibly get more BRS members directly involved in heavy duty international politics. The returns are coming in. One kind aims to help individuals, as Amnesty International does. The other kind is more general and aims at influencing Congressional policies towards nations. I hope we can combine them. I'll be glad to compile a packet of information about 40 U.S. groups, from which BRS members can select a group they would like to work with in particular geographical areas.

I would like to call our Committee the "BRS Human Rights and International Development Committee". For about 3 years I have been associated with Volunteers in Technical Assistance (VITA), in Virginia, as well as

with similar efforts in the American Physical Society. The purpose is to act as consultant to Third World projects free of charge in areas of our expertise. VITA has 10,000 members but is still swamped. Most Third World projects are simple, and based on renewable energy technologies familiar to most hobbyists and Popular Mechanics readers. I thought the BRS could carve out a niche for itself by compiling a skills bank, and advertising its existence to trade/scientific groups, embassies, etc.

I took the liberty of writing to 40 embassies of the poorest nations of Africa, Asia and Central/South America, and announced the BRS International Development Group's (i.e., my) availability in areas of hazardous waste disposal, solar/wind/biomass energy, and similar alternative technologies in agriculture. I have University of Arizona friends who will help. I wrote late in June and already received responses from the Guatemalan Embassy and a detailed package from the World Bank. Any BRS hobbyist, educator, etc., who can write or translate manuals or instructional aids, who can design or find something already in the literature, who can serve as US representative to education/trade groups of Third World nations, or can help process paperwork necessary for many grants/services available from the U.S., the U.N., etc., can be of help.

Ultimately we can be part of a network of technical help to these countries, which will earn us good will and give us leverage when we demand human rights compliance.

- * Please let Alex know about your skills, for listing in the skills bank. Write Alex Dely, 6150 E. 31st St., Tucson, AZ 85711

(5) Science Committee (Alex Dely, Chairman):

We have written 6 Congressional Briefing Papers in the past 6 months, four of them on Arms/Accidental War. We have targeted about 50 key members of Congress (on the House Foreign Affairs, Senate Foreign Relations, House and Senate Armed Services Committees), the Pentagon, and scientific public interest organizations.

- * We hope to persuade Congress to create a Congressional Assessment Center for Accidental War. Although we (Dean Babst and I) have received close to 100 replies, we would achieve a much greater result if BRS members would write their Senators and Congressmen. Here's how to do it:

On the next page is reproduced (in reduced size) our 4-page statement, CONGRESSIONAL ASSESSMENT CENTER FOR ACCIDENTAL WAR. It was prepared by the BRS Science Committee at Congressional request. We urge members to make 3 photocopies of it, to send to their 2 Senators and their Congressman, with a covering letter asking them to sponsor/support a motion to create an Assessment Center, and saying that the attached statement tells why it deserves their support.

When we read the 4-page statement, it shook us up. When you read it, we think you'll know why you won't want to put off writing your 3 people in Congress one day longer than necessary! It's scary.

- * Alex would appreciate it if, after you send your letters off to Congress, you send him a postcard giving the names of the people you wrote to.

PHILOSOPHERS' CORNER

(6) BRS at APA, 1982. Philosophers' Committee Chairman, David E. Johnson, reports:

The winter meeting of The Bertrand Russell Society in conjunction with the American Philosophical Association (Eastern Division) was held in Baltimore, Maryland, on December 28, 1982 at 10:00 A.M. in the new convention center. The session, consisting of 2 papers on the philosophy of Russell, with commentary and discussion, was chaired by David Johnson, the newly selected Chairman of the BRS Philosophers' Committee. Audience size fluctuated from 10 to 30. There was lively participation by those in the audience in the times allotted to discussion, and the overall reaction to the session was distinctly favorable.

Robert Ginsberg of the Delaware County campus of Pennsylvania State University delivered the first paper, entitled "The Social Contract in Bertrand Russell's Theory of Statehood and War." Ginsberg argued that although Russell criticized the contract theory of statehood in Hobbes, Locke and Rousseau as a rationalist distortion and myth, he adopts contract terms in his own analyses of anarchy and international relations. When Russell discusses the problem of eliminating war from the world, he projects a worldwide Social Contract. The commentator, Thomas Benson of the University of Maryland, Baltimore County, pointed out that Russell was not a thorough-going pacifist and that what Russell had to say about world government was hardly philosophically dramatic or profound.

Stephen Nathanson of Northeastern University focused his paper — "Mysticism and Motivation in Russell's Philosophy" — on Ronald Jager's argument (in The Development of Bertrand Russell's Philosophy) that religious ideas and motivations were central to Russell's thought. Jager specifically claims that Russell's move toward a logical constructionist analysis of the physical world was motivated by a desire to overcome the hostile, overpowering image of nature put forward by Russell in "A Free Man's Worship". Nathanson argued that Russell found no religious consolation in the reduction of "omnipotent matter" and the "empire of chance" to logical constructions out of sense data. Rather, his motive was to render empirical

THE BERTRAND RUSSELL SOCIETY, INC.

CONGRESSIONAL ASSESSMENT CENTER FOR ACCIDENTAL WAR*

The greatest danger to the security of the United States and the World is a nuclear war starting accidentally or unintentionally. Despite the increasing vast sums being spent on defense, the probability of our accidental destruction is growing. As weapons become more powerful, complex, numerous, accurate, widespread and time for error correction decreases, the probability of an accidental war increases. An intentional war is unlikely since in all probability it would be to commit suicide.

Since accidental destruction is our greatest peril, Congress needs an Accidental War Assessment Center to assess planned major weapons systems or policy changes. Congress needs to determine whether each planned change detracts more from our security than it adds.

There are many weapons policy questions that need answers. We raise only one issue to illustrate the type of assessment needed. If Pershing II missiles are placed in Europe at the end of 1983, as planned, the possibility of an accidental war will be greatly increased for the following reasons.

- The time allowed the Soviets for correcting for false alarms in their strategic warning system will be reduced to about 6 minutes, according to some sources.
- If the Soviet Union has false alerts that take longer than 6 minutes to clear, then we could be forcing them to destroy us and themselves by accident.

While no one doubts there is danger of a false alarm war, the extent of the danger is what needs to be carefully assessed. For example, if it develops that there is a very high probability of an accidental war in 1984, then much of our long-term \$1.5 trillion defense build-up may be not only irrelevant but counterproductive. This could be so, because we are misdirecting our prevention efforts in what little time we have left.

There is no reason why we should proceed in ignorance as to how high the probability of a false alarm war is because the issue can be broken down into answerable questions. The following questions and responses illustrate the type of service the assessment center could provide.

*This statement was prepared for the record at the invitation of the Subcommittee on Department of Defense Appropriations, Committee on Appropriations, U.S. House of Representatives, Wash., D.C., June 1983.

-3-

Joint Chiefs of Staff. Continued inability to correct these failings by the highest levels within the Department of Defense will continue to perpetuate past mistakes and will undermine any chance that an effective attack warning or command and communication system can be installed by 1990."

Other nations do not provide any information on their false alarms. This secrecy could be greatly contributing to a false sense of security.

5. Question: If Pershing II missiles are deployed in Europe, would U.S.S.R. go to launch-on-warning?
Response: Does it make any difference, if the Soviets allow themselves only 6 minutes for error correction and one of their false alerts last longer?
6. Question: Why should Soviets become alarmed with our deployment of Pershing II in Europe since it does not represent a first-strike threat?
Response: If their warning system indicates they are being attacked, they could be expected to respond. Why would we expect them to only respond to a first-strike? How would they know it is not the beginning of a first-strike?
7. Question: Would not Europe expect the U.S. to meet its commitments to deploy as planned?
Response: If a thorough analysis shows that deployment of Pershing IIs means a high probability of a false alarm war, who would insist on deployment?
8. Question: What about false alarms in other nations' warning systems?
Response: Considering the problems in the U.S. warning system, it is urgent we ask other nations to share with all nations their false alarm experience for their own safety. The security of all nations may be dependent upon the nation with the least accurate warning system. If a nuclear missile exchange occurs between any two nations it will be difficult to limit the number of nations involved, given the uncertainty in knowing from where the missiles come. This danger is increasing as the number of nations with nuclear weapons grows. How long can our luck last?

We are urging in our books on accidental war that the Soviets, for their own safety, irrespective of arms control talks, pull back their missiles allowing western Europe more time for error correction. Since the French are only a few minutes away from the Soviets, they have little time for error correction. How error free is the French warning system?

-2-

1. Question: What is the actual time allowed Soviets for error correction if Pershing II missiles are deployed?
Response: The Soviets say they would only be allowed five to seven minutes and some western analysts say 11 to 14 minutes (Newsweek 5-30-83). Other western analysts say 6 minutes, such as Arthur Cox in *Russian Roulette*. Robert Aldridge, a missile expert and author of *Pershing*, in a letter to us said, "Pershing -2s will reduce ~~total~~ resolution of their false alarms to 6 minutes." He also provided excellent supporting evidence.
Since the time for error correction is a key question, Alex Dely has asked the American Physical Society to help assess the issue further. He is a member of their study on the Vulnerability of Landbased Missiles Systems, which is considering the issue. Accurate information is essential to the security of all nations.
2. Question: What is the U.S.S.R.'s false alarm experience?
Response: According to Senator Gary Hart, "No one in the United States knows with any degree of confidence how reliable Soviet personnel and computers are."
3. Question: Can we estimate what the Soviet's false alarm experience is?
Response: If the Soviet's experience is similar to ours, there is a high possibility within one or two years that they will not have enough time to correct one of their false alarms if we only allow them 6 minutes. The most complete and systematic investigation of U.S. false alarms was made by Senators Gary Hart and Barry Goldwater in 1980. They discovered during an 18-month period that our strategic warning system had 147 false alarms, one of which lasted 6 minutes. It is generally agreed that the Soviet's system is not as accurate as ours.
4. Question: What is a reliable source of information on U.S. false alarm problems?
Response: According to the Department of Defense replies to our inquiry, they assure us that the U.S. false alarm problems are under control. Copies of these 1983 letters are available upon request. However, Jack Brooks chaired a Congressional investigation of this problem in 1981 which shows a different situation. Their 1982 report *NOBAD Command Systems Are Dangerously Obsolete* says, "The severe and potentially catastrophic deficiencies found in the Nation's missile attack warning system are a result of significant and long-term management failings within the Air Force and the

-4-

There are many more accidental war questions that need to be assessed. Since there is a need to move quickly, Congress could set up a temporary Accidental War Assessment Center. As the Center proves its ability to provide meaningful help to Congress, eventually part of it could be placed in some agency such as the National Peace Academy.

Since the problem of an accidental war is far larger than any one agency, the Center should be a Congressional agency to provide an overview for the following reasons.

- In view of the large disparity between how the Department of Defense and Congressional Investigation assess the NOBAD false alarm problems, it is essential that Congress be assessing accidental war dangers independently.
 - Pentagon officials asked Senator Gary Hart to hold off indefinitely having his proposed hearing (September 1983) on Accidental War as they are worried about a scare. The public needs to know accurately the dangers they face so that they can respond appropriately.
- Senator Sam Nunn, in a letter (Feb. 15, 1983) to us, said the Secretary of Defense is expected to submit a study on initiatives to contain and control the use of nuclear weapons. The Senator said he "hopes that this will provide Congress and the Administration with a sound analytical framework to focus on ways to reduce the possibility of accidental war and thereby enhance stability." We are greatly pleased to learn of such a development and hope it proceeds rapidly. Congress still needs its own Assessment Center for reasons cited above.

It seems to us that the Assessment Center should be a small, sensitive, coordinating group. It could never hope to answer the many complex problems alone. The Center needs to work closely with other agencies as well as trying to obtain help from other nations in assessing common danger, e.g. what are other nations' false alarm and accident experiences. The assessment procedure should be operational in nature and must not stray from its focus on accidental war prevention.

The Assessment Center needs to provide quick answers with the best data available. It should share its reports widely and seek constructive criticism from all who are interested in order to achieve the utmost accuracy quickly. The reports need to be clear, concise and state limitations. The cost of the Assessment Center would be minuscule compared with defense costs. Does it make sense for Congress to be appropriating hundreds of thousands of dollars annually for defense and not have its own continuous overall assessment of the greatest threat to our existence, Accidental War?

This position paper was prepared by The Bertrand Russell Society's Science Committee. Dean Babst, Research Scientist, N.Y. State (Ret.), 7915 Alma Mesa Way, Citrus Heights, CA 95610. Alex Dely, Physics Dept., Univ. of Ariz., Tucson, AZ 85724. June 8, 1983.

knowledge as certain as possible. However, Russell did find two facets of mysticism which applied to him: first, an emphasis on viewing things impersonally, and second, a tranquility which arose out of achieving the impersonal view of reality.

Alfred Guy of the University of Baltimore, in commenting on Nathanson's presentation, noted that mysticism was a motivating factor in Russell's philosophy in that, prior to seeking certainty about the empirical world, he must first come to wonder about the world as a whole. "To assume that the pursuit of empirical certainty is itself a worthwhile quest is not in itself an empirical certainty," Guy argued. He concluded by suggesting that Russell's talk about mysticism and logic may simply be another way of talking about love and reason. According to Russell, if you feel love, you have "a motive for existence, a guide in action, a reason for courage, an imperative necessity for intellectual honesty." (from The Impact of Science on Society, 1951)

(7) Call for papers. The following is inserted here merely for the record, since its deadline is long past.

The Bertrand Russell Society announces a call for papers to be presented at its meeting at the Eastern Division of the American Philosophical Association in December 1983. Papers may be on any aspect of Russell's philosophy. They should have a reading time of about one-half hour and should be submitted in triplicate, typed and double-spaced, with an abstract of not more than 150 words. The name of the author, with his address and the title of his paper, should be submitted on a separate page. The submission deadline is May 15, 1983 and the papers should be sent to David E. Johnson, Chairman, Philosophers' Committee, The Bertrand Russell Society, Sampson Hall, U.S. Naval Academy, Annapolis, MD 21402. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

ON EINSTEIN

(8) ER & Popper on Einstein. "Einstein, the Man and his Achievement", G. J. Whitrow, ed., (New York: Dover, 1973) is a transcript of 3 BBC programs (uh, programmes) (1967). They grew out of the idea that there ought to be "a program about Einstein and his work while there were people [still] available who had known him personally and would no doubt be glad to record their impressions both of the man and his achievement."

Here is what ER and Karl Popper had to say (pp. 22-28):

Whitrow: We have seen that, as a young man in Berne, Einstein often discussed famous philosophical works with his friends. Few philosophers, however, have made any serious attempt to study Einstein's work. One who has is Bertrand Russell. Recently we asked him if he thought that Einstein was a scientist whom philosophers should study.

Russell: Einstein's stature as a scientist was, and remains, very high. He removed the mystery from gravitation which everybody since Newton had accepted with a reluctant feeling that it was unintelligible. If Einstein's reputation has appeared to diminish, that is only because recent work in physics has been mainly concerned with quantum theory. I do not think that the work of our century in either relativity or quantum theory has had any very good influence upon philosophy, but I regard this as the fault of the philosophers, who, for the most part, have not thought it necessary to master modern physics. I hope that an increasing proportion of philosophers will, as time goes on, become aware that ignorance of physics condemns any philosophy to futility.

Whitrow: I am afraid that Bertrand Russell's criticism is still true of all too many philosophers. There are, however, some exceptions; one of them is Sir Karl Popper. I asked him to tell us something about the influence that Einstein has had on his own philosophy.

Popper: Einstein's influence on my thinking has been immense. I might even say that what I have done is mainly to make explicit certain points which are implicit in the work of Einstein. I will try to sum up in four points what I have learned from Einstein directly and indirectly:

(1) Even the best-established scientific theory, such as Newton's theory of gravitation or Fresnel's theory of light,

may be overthrown, or corrected, as Einstein has shown. Consequently, even the best-established scientific theory always remains a hypothesis, a conjecture.

(2) The recognition of this fact can be and should be of outstanding importance for one's own scientific work. It certainly was so for Einstein's work. He was never satisfied with any of the theories he proposed. He always tried to probe into the weak spots in order to find their limitations. And he did find them: again and again did he criticize his own work in his papers. For example, he began his famous paper of 1915 in which he first proposed the field equations for gravitation with the statement that some of his previous papers were utterly mistaken; and similarly he wrote in 1918, while replying to some criticism, that he had so far failed to distinguish between two different principles, and that his failure had led to confusion.

(3) This attitude, which may be called the critical attitude, is characteristic of the best scientific activity.

(4) With Einstein's work it became very clear that this attitude of criticism was in science something fundamentally different from what philosophers consider and describe as the 'critical attitude', or the 'sceptical attitude', or the 'attitude of doubt'.

Whitrow: Could you elaborate the difference between the critical attitude of scientists and of philosophers?

Popper: Yes. When philosophers speak of criticism they have in mind something like this. A philosopher, say Mr Adam, proposes a philosophical theory and tries to give arguments which would prove it or justify the claim that it is a true theory. Thereupon another philosopher, Mr Baker, analyses Mr Adam's proof and shows that it is invalid. Mr

Baker's destructive analysis of the claims of Mr Adam to have established his theory is what philosophers usually have in mind when they speak of criticism. Or to put it another way: philosophers usually mean by criticism an analysis that aims at showing the invalidity of some arguments which have been offered in justification of the claim that a certain theory is true.

Now, it seems to have been rarely recognized that criticism in science has a very different aim and character. It is not an attack upon the proof or the justification of a scientific theory, but an attack upon the theory itself; not an attack on the claim that the theory can be *shown* to be true, but an attack on what the theory itself tells us – on its content or its *consequences*. This is so because, especially since Einstein, scientists do not seriously hold that their theories can be true or 'verified'. Nowadays they will hardly claim more than that one theory can explain more facts than other known theories, or the same facts better; that it can be tested at least as well as these other theories or even better; and that it stands up to these tests at least as well as these other theories.

This attitude became particularly clear in the case of Einstein's criticism of Newton. Newton, in fact, had claimed that his laws of motion were not conjectural but true descriptions (if not explanations) of the facts, and that they were established by induction. But Einstein, who was a great admirer of Newton, did not criticize this mistaken claim. He did something more important; he revolutionized physics by producing an alternative to Newton's theory which not only passed all the tests which Newton's theory had passed, but also certain tests which it had failed to pass, and a few further tests which altogether went beyond the range of application of Newton's theory of gravitation. Nevertheless, Einstein regarded his own theory of gravitation merely as a step towards a better theory. Thus he wrote about his own field equations of gravitation that, as a matter of course, he never thought for a moment that his formulation of the field equations was more than a makeshift, designed to present provisionally the general principle of relativity in a concise form. And at the end of his last work, published in 1955, when discussing the pros and cons of the final results of his 35 years' search for a generalized relativity theory of a unified continuous field, he wrote that one could give good reasons showing that, and why, reality cannot be at all be represented by a continuous field.

Whitrow: Could you now tell us how this critical attitude of Einstein's which you have described has influenced your own work?

Popper: The Einsteinian revolution has influenced my own views deeply: I feel that I would never have arrived at them without him. In my view it is fundamental to science that it consists of theories which are tentative, or hypothetical, or conjectural. This means that any theory may be overthrown, however successful it may have been, and however well it may have been tested. There can be no theory more spectacularly successful than Newton's; but Einstein showed that even Newton's theory was only a conjecture. Thus, what Einstein's example may teach the philosopher is that science consists of bold speculative guesses controlled by merciless criticism which includes experimental tests.

One point about Einstein which impressed me perhaps more than any other was this: Einstein was highly critical of his own theories, not only in the sense that he was trying to discover and point out their limitations, but also in the sense that he tried, with respect to every theory he proposed, to find under what conditions he would regard it as refuted by experiment. That is, he tried to derive from each theory predictions, testable by future experiments, which he regarded as

crucial for his theory, so that if his predictions were refuted he would give up the proposed theory. Thus while he regarded all physical theories – not only Newton's but also his own – as tentative guesses which might always be superseded by better ones, and which therefore could never be verified, he made it clear that he found it most important to specify the conditions which would make him look at his own theories as refuted or as falsified. This attitude became the basis of my own thesis of the logical asymmetry between verification and falsification or refutation: of the thesis that theories cannot be verified, but that they can be falsified.

Following Einstein's example, I tried at once to find out the limitations of this doctrine, and I was able to show how it was always possible to evade a refutation. But I also showed that the possibility of such an evasion did not destroy the thesis of the logical asymmetry between verification and falsification. And I pointed out that the readiness to eschew such evasions and to accept falsification was one of the basic characteristics of the critical or scientific attitude.

Whitrow: Could you give us an illustration?

Popper: Yes. I may perhaps illustrate this point by an example from Einstein's own career. When D. C. Miller, who had always been an opponent of Einstein, announced that he had overwhelming experimental evidence against special relativity, Einstein at once declared that if these results should be substantiated he would give up his theory. At the time some tests, regarded by Einstein as potential refutations, had yielded favourable results, and for this and other reasons many physicists were doubtful about Miller's alleged refutations. Moreover, Miller's results were regarded as quantitatively implausible. They were, one might say, neither here nor there. Yet Einstein did not try to hedge. He made it quite clear that, if Miller's results were confirmed, he would give up special relativity and, with it, general relativity also.

This readiness to give up one's theory in accordance with the verdict of experiments is most characteristic of Einstein. It characterizes not only his critical or scientific attitude, but what may be described as his scientific realism. Although he knew that it was always possible to uphold one's theoretical constructions against unfavourable experimental evidence, he was not interested in doing so. He believed in some objectively existing reality which he tried 'to catch in a wildly speculative way', to use his own words: he was not content to find some equations fitting the observations, but he tried to grasp, to understand, this reality behind the phenomena. Yet he would have found this wild attempt uninteresting unless he could submit it to the discipline of rigorous experimental tests.

This attitude of Einstein is even today far from being generally accepted. Physicists and philosophers still speak of the verification of predictions, and even of the experimental verification of theories. But experiments have always to be interpreted in the light of theories, and theories can never be verified but remain always conjectures, wild attempts to grasp, or to understand, the hidden reality behind the phenomenal world.

Einstein's own views on the philosophy of science changed considerably during the course of his life. In his earlier writings there are many traces of positivist and conventionalist ideas. Especially noticeable is the influence of Ernst Mach, and also that of the great mathematician Henri Poincaré, who was, indeed, one of the fathers of the special theory of relativity. Einstein said things which contributed much to the positivist doctrines of 'operational definitions' and 'meaning analysis' – doctrines that were largely based on his own famous analysis

of simultaneity. In his later years, however, Einstein turned away from positivism and he told me that he regretted having given encouragement to an attitude that he now regarded not only as mistaken but as dangerous for the future development of both physical science and its philosophy. He saw more and more clearly that the growth of knowledge consisted in the formulation of theories which were far removed from observa-

tional experience. I admit, of course, that we attempt to control the purely speculative elements of our theories by ingenious experiments. Nevertheless, all our experiments are guided by theory and they cannot be interpreted except by theory. It is our inventiveness, our imagination, our intellect, and especially the use of our critical faculties in discussing and comparing our theories that make it possible for our knowledge to grow.

Here is ER again (pp. 89-91):

Whitrow: On the occasion of Einstein's seventieth birthday one of the most moving tributes that was paid to him was in a broadcast on the Third Programme by Bertrand Russell. He concluded by referring to Einstein's attempts after the war to work politically with American nuclear scientists to seek international agreement for the control of atomic energy. But this problem, as Russell wryly remarked, is more difficult than that of relativity. Bertrand Russell has specially recorded for our programme on Einstein this further tribute to his memory.

Russell: Of all the public figures that I have known, Einstein was the one who commanded my most whole-hearted admiration. I got to know him fairly well at a time when we were both at Princeton in the early forties. He arranged to have a little meeting at his house once a week at which there would be some one or two eminent physicists and myself. We used to argue about moot points in the philosophy of physics in an attempt, sometimes vain, to reach fundamental agreement. We did not, in those days, talk much about international politics, chiefly because in such matters we all thought alike. There was, however, one exceptional occasion. I remarked at a meeting that, when Germany had been defeated, the victors would lend money to the German Government and would forget the German crimes. Einstein indignantly repudiated the suggestion, but subsequent experience proved that on this occasion he was mistaken.

When, in the early fifties, the danger of nuclear war began to seem likely to cause universal ruin, I began to feel that this was a risk far greater and far more terrible than any of those with which governments were concerning themselves. I expressed my fears in a BBC broadcast on 23 December 1954. I sent the text of this to Einstein asking him whether he thought it possible that we could get scientists on both sides of the Iron Curtain to sign such a statement. He replied that he was too ill to work himself, but would gladly join me in signing any appeal on the subject that I might draw up and would suggest names of scientists to whom it might be sent.

I adapted the broadcast into a form of an appeal from scientists which I sent to certain eminent physicists including Einstein. After I had obtained a number of signatures from men of the highest scientific eminence, but not from Einstein, I learnt of his death during a flight from Rome to Paris. When I reached Paris, I found his letter agreeing to sign, dated two days before his death and the last public act of his life. This manifesto, known as the Russell-Einstein Manifesto because of the dramatic circumstances of Einstein's signing it, was the origin of the Pugwash Scientific Conferences.

Einstein was not only a great scientist, he was a great man. He stood for peace in a world drifting towards war. He remained sane in a mad world, and liberal in a world of fanatics.

(Thank you, BOB DAVIS)

ABOUT ER'S WRITINGS

- (9) The Bertrand Russell Editorial Project, we've known for some time, is a gargantuan publishing undertaking — they are going to publish everything that ER ever wrote (except his books) — but we've known it only in a vague way. Vague no longer! What brings home the enormity of the project are some details on the sheet below: 28 volumes; one every 9 months (the standard gestation period); anticipated completion date of the final volume, the year 2000.

Publication Details	
McMaster University is custodian of the Bertrand Russell Archives and is directing this vast editorial project.	
Each of the twenty-eight volumes listed below will be bound in an attractive navy-blue cloth, with a gold-embossed profile of Russell on the front. Each volume will be supplied with a protective dust jacket. The first volume, <i>Cambridge Essays 1888-99</i> , will be published in Fall 1983 and, due to methods of working adopted by the editorial team, this will be followed by Volume 7, Russell's <i>Theory of Knowledge: the 1918 Manuscript</i> , scheduled for publication early 1984. The <i>Collected Papers</i> (which will not appear in chronological order) will be published at the rate of approximately one volume every nine months. The anticipated completion date of the project is 2000.	
Volume I special pre-publication price is \$70.00. After December 31, 1983 the price will be \$90.00. The ISBN number for the complete edition of 28 volumes is 0 04 920095 X.	
Volume I	Cambridge Essays: 1888-99
Volume II	Philosophical Papers: 1896-1903
Volume III	Towards The Principles of Mathematics
Volume IV	Philosophical Papers: 1903-1905
Volume V	Philosophical Papers: 1906-1908
Volume VI	Philosophical Papers: 1909-1913

Volume VII	Theory of Knowledge: The 1913 Manuscript
Volume VIII	Philosophical Papers: 1914-1919
Volume IX	Philosophical Papers: 1919-1926
Volume X	Philosophical Papers: 1927-1946
Volume XI	Philosophical Papers: 1947-1965
Volume XII	Contemplation and Action: 1902-1914
Volume XIII	The Rights of the War: 1914-1917
Volume XIV	Revolution and Reconstruction: 1917-1920
Volume XV	China and Labour: 1920-1924
Volume XVI	Behaviourism and Education: 1925-1928
Volume XVII	Science, Sex and Society: 1929-1932
Volume XVIII	Fascism and Other Depression Legacies: 1933-1936
Volume XIX	The Man Who Stuck Pins in His Wife, and Other Essays: 1936-1939
Volume XX	The Problems of Democracy: 1940-1944
Volume XXI	Civilization and the Bomb: 1944-1949
Volume XXII	Respectability - At Last: 1950-1953
Volume XXIII	Man's Peril: 1954-1958
Volume XXIV	The Campaign for Nuclear Disarmament: 1958-1960
Volume XXV	A New Plan for Peace, and Other Essays: 1960-1964
Volume XXVI	The Vietnam Campaign: 1965-70
Volume XXVII	Newly discovered papers
Volume XXVIII	Index

Special Pre-publication offer on the first volume of
THE COLLECTED PAPERS OF BERTRAND RUSSELL.

\$70.00

Offer closes December 31, 1983

For information concerning standing orders and/or single volume purchases, please contact your regular library supplier or

Allen & Unwin Inc.

Merely dividing it all up into 28 categories must itself have been an enormous job.

As the flyer mentions, you can get Volume I for \$70, if you don't wait too long.

BR MISREPRESENTED

(10)

Example #1: Runes. In Dagobert Runes's "Pictorial History of Philosophy" (12) there is a photo of Joseph Stalin with the following caption:

Joseph Stalin, the chief architect of Russian imperialism, who by admission of his own lieutenants executed three and a half million Russian peasants and thousands of his personal coworkers.

On frequent occasion Bertrand Russell deviated from his philosophical work into the realm of social idiosyncrasy and anti-American platitudes. He delighted in attacking the United States as a monger of atomic warfare, advocating a general acceptance of Soviet Russian world dominance

(Thank you, BOB DAVIS)

It is a foolish misrepresentation to say that BR advocated "a general acceptance of Soviet Russian world dominance." That is a variation — a stepped-up variation — on the theme, "Better Red than dead."

Runes, a man of some learning, author of a number of books, and chief of the publishing house, Philosophical Library, should have known better.

Something needs to be said about "Better Red than dead."

"Better Red than dead" was a reaction to — a repudiation of — its opposite, "Better dead than Red", a slogan invented by U.S. hawks in the 1950s, the McCarthy period (NLI1-17). "Better dead than Red" is by no means obsolete today. It was voiced in 1983 by superhawk Ronald Reagan, the man with his finger on the button (RSN38-10).

"Better dead than Red" appears to be the equivalent of Patrick Henry's "Give me liberty or give me death." Here's what BR has to say on that:

PATRICK HENRY, an American patriot who rose to eminence during the War of Independence, is now chiefly remembered for his exclamation: "Give me Liberty, or give me Death." In the mouths of fanatical anti-Communists, this has become a slogan purporting to mean that a world without human beings would be preferable to a Communist world. As Patrick Henry meant it, however, it had a quite different significance. He was advocating a just cause, and, owing to British hostility, the cause could not triumph without the loss of American lives. Consequently, his death might promote liberty. In such circumstances, it is right and proper that his slogan should be approved.

When, however, this same slogan is used to justify a nuclear war, the situation is very different. We do not know what would be the outcome of a nuclear war. It might be the end of the human species. It might be the survival of a few scattered bands of anarchic plunderers in a world that had lost all social cohesion. It might, in the most favorable circumstances imaginable, result in very tight governmental despotisms with rigid rationing of all the necessities of life. Her-

man Kahn, who is concerned to justify nuclear war in certain circumstances, admits that, at the best, it would result in what he call "disaster socialism" (p. 438). The one thing in which it could not possibly result is ordered liberty such as Patrick Henry wanted and his modern admirers pretend to want.*

To die for a cause is noble if the cause is good and your death promotes it. If it is practically certain that your death will not promote it, your action shows merely fanaticism. It is particularly obvious in the case of those who say explicitly that they would prefer the extinction of our species to a Communist victory, or, alternatively, to an anti-Communist victory. Assuming Communism to be as bad as its worst enemies assert, it would nevertheless be possible for improvement to occur in subsequent generations. Assuming anti-Communism to be as bad as the most excessive Stalinists think it, the same argument applies. There have been many dreadful tyrannies in past history, but, in time, they have been reformed or swept away. While men continue to exist, improvement is possible; but neither Communism nor anti-Communism can be built upon a world of corpses.

"Has Man A Future?" (NY:Simon & Schuster, 1962 pp.38-39)

BR mentions the origin of the slogan, "Better Red than dead:

There is a considerable amount of rhetoric, both on the warlike and on the peaceful side, which, whatever its intention, is not likely to lead to the desired result. We have formerly considered the rhetorical war propaganda embodied in the slogan "Liberty or Death," but there is an opposite slogan invented by West German friends of peace: "Better Red than dead." One may guess that in some sections of Russian public opinion there is an opposite slogan: "Better capitalists than corpses." I do not think it is necessary to inquire into the theoretical validity of either slogan since I think it

out of the question that the one should be adopted by Western governments or the other by the governments of the East. Neither slogan presents justly the problem which East and West alike have to face. Given that military victory by either side is impossible, it follows logically that a negotiated *détente* cannot be based on the complete subjection of either side to the other, but must preserve the existing balance while transforming it from a balance of terror to a balance of hope. That is to say, coexistence must be accepted genuinely and not superficially as a necessary condition of human survival.

(same source, p. 89)

Unfortunately, it does not seem to be out of the question that the slogan should be adopted by a Western government: the current U.S. President is reported to have said, "...it is better that children 'die now still believing in God, than have them grow up under Communism and one day no longer believing in God.'"(RSN38-10)

(10b) Example #2: Solzhenitsyn. From The Wall St. Journal (5/12/83, p.32):

Covering the Spectrum

Alexander Solzhenitsyn appeared in London yesterday to accept \$170,000 as the Templeton Prize for Progress in Religion, and quickly loosed critical blasts in all directions. At Bertrand Russell, for suggesting it's better to be Red than dead; "to be Red means

to become dead gradually." At last year's Templeton Prize Winner the Rev. Billy Graham, for making silly remarks about freedom of religion in the Soviet Union after a trip there. Anyone who can hit those two targets in one day has pretty well covered the philosophical and ideological spectrum.

Same story. Beating BR over the head with "Better Red than dead" has apparently become stock in trade with this unusual man. He did it in a BEC interview in 1976 (NLLL-17). And, as above, again in 1983 — and who knows how many times in between?

(Thank you, PAUL GARWIG)

(10c) Example #3: Hook (+ Solzhenitsyn). In a long article in the Los Angeles Times, Sidney Hook quotes Solzhenitsyn with approval:

In his famous 1978 address at Harvard, Solzhenitsyn said, "To defend oneself, one must also be ready to die"—and the context shows that he meant the defense of our free institutions as our ultimate concern.

There is a profound historical and psychological truth here. The lean and hungry

hordes ready to die have always triumphed over those who have sought primarily to save their goods or their necks. (Not infrequently, they lost both, and their honor as well.)

Deny Solzhenitsyn's proposition, and what conclusion must one draw? That

survival is the be-all and end-all of life, the ultimate value.

However, if we are prepared to sacrifice all of our basic values for mere survival, there is no infamy that we will not commit. The result would be a life morally unworthy of man's survival.

Later, Hook goes on to say:

So long as we keep our guard up and do not capitulate, as Kennan or Russell would have us do, perhaps someday totalitarian communist countries will (through internal development) democratize themselves without war.

Differing as profoundly as I do with Solzhenitsyn about so much, I am nonetheless confident that he would agree with a short answer that I have made to the

Kennans and the Russells of this world in the form of a thumbnail credo:

"It is better to be a live jackal than a dead lion—for jackals, not me. Men who have the moral courage to fight intelligently for freedom, and are prepared to die for it, have the best prospects of avoiding the fate both of live jackals and of dead lions. Survival is not the be-all and the end-all of a life worthy of man. Sometimes the worst thing

that we can know about a man is that he has survived.

"Those who say that life is worth living at any cost have already written for themselves an epitaph of infamy, for there is no cause and no person that they will not betray to stay alive. Man's vocation should be the use of the arts of intelligence in behalf of human freedom."

We can't avoid the thought that Hook is pleased at his own courage, his own bravery, in saying, "Survival is not the be-all and end-all of a life worthy of man." We, however, are less enthusiastic about his readiness to die; for, if he goes, we all go; and it is his kind of attitude that makes it more likely.

(Thank you, JOHN TOBIN)

BR ON NUCLEAR WARMONGERS

(11) What makes 'em tick — the nuclear warmongers? Here's how BR sized them up (and if it sounds like a description of the Reagan Administration, remember when it was written, 1961):

But it is not immorality which is the really novel feature of modern weapons. The really novel feature is the absolute certainty that, in a war, *both* sides will be defeated. It is this that makes all thought of modern war silly as well as wicked. The people, whether in East or West, who tolerate policies leading toward war are victims of delusion. Some, who advocate brinkmanship, persuade themselves that in a war of nerves the other side is sure to yield first. This is what Hitler thought after Munich, and his miscalculation led to his downfall. In the same situation at the present day it would have led also to the downfall of his enemies.

There is another group of even more dangerous warmongers. These are the people so filled with national or ideological pride that, in the face of all evidence,

they still believe that their side would "win." I think that this unfounded belief is widely prevalent in both Russia and America, and is encouraged by the governments of both countries as an asset in negotiation.

There is a third group, the group of sacrificial fanatics. This group holds that it is noble to fight and die in a good cause even if the result of your sacrifice is going to be a much worse world than that which would exist if you were less prepared for martyrdom.

Unfortunately, ever since Hiroshima, these three groups have acted together and have succeeded, hitherto, in preventing anything that might diminish the risk of nuclear war. There have been moments, it is true, when one side or the other showed some glimmerings of common sense, but never have both sides felt these glimmerings at the same moment.

"Has Man A Future?" pp. 96-97

BR, PHILOSOPHER

(12) Dagobert Runes, in "A Pictorial History of Philosophy" (NY: Bramhall House, 1959, pp. 268-9), offers this brief account of BR and his philosophical views:

RUSSELL, BERTRAND (1872-). As late as 1940, the appointment of Bertrand Russell as professor of philosophy at the College of the City of New York has roused the fury of bigots of all denominations. It was denounced as "the establishment of a chair of indecency" and withdrawn by the Board of Education after a trial had ended with Russell's condemnation as "immoral" and a danger to the youth of the city.

The victim of this persecution has been accustomed to making sacrifices for his convictions. During World War I he had been imprisoned because of his radical pacifism. He had also been accustomed to having his opinions explained by radical leftists as being determined by his connection with the British aristocracy. His grandfather, Lord John Russell, who had been Prime Minister and Foreign Secretary, had tried to defend European solidarity against Bismarck's national egoism, and had brought about the repeal of the Test and Corporation Act which

barred from public office anyone not belonging to the established Church of England.

Russell is regarded as the most controversial figure of modern Anglo-Saxon philosophy, even by those who recognize him as one of the greatest thinkers of the twentieth century and who agree with Albert Einstein who has confessed that he owes "innumerable happiness to the reading of Russell's works." Russell's mind is uncompromising, not afraid of running risks, yet always ready to change and to admit errors. He always has maintained the independence of his thought and judgment although he underwent many influences. Russell is a prolific writer who attributes the clarity and fluency of his style to his absence from the influence of public school education. Conspicuous qualities of his books are the firm direction of the course of ideas, his ability to continue or check a discussion according to his principal intention, and particularly his easy humor and his devastating irony.

Russell has taken an outstanding part in the foundation of modern mathematical logic. Together with Alfred North Whitehead he has written *Principia Mathematica* (1910-13), one of the most comprehensive systems of mathematics. At first, Russell regarded mathematics as the ideal of philosophy. Then, abandoning Platonism, he thought of mathematics as an instrument of science, and finally declared that logic is not a part of philosophy but of a general theory of science.

To Russell, philosophy is a conception of life and the world which is the product of two factors. The one consists of inherited religious and ethical concepts, the other of investigations which may be called scientific. Philosophy is regarded as something intermediate between theology and science. Like theology it is concerned with speculations on matters concerning which knowledge has been unascertainable. Like science it appeals to human reason rather than to authority. Russell holds that all human knowledge remains uncertain, inexact and partial, and that scepticism, while logically faultless, is psychologically impossible. To obtain some results which may be useful for humanity, philosophy should take its problems from natural sciences, not from theology or ethics.

At least in its broad outline, scientific knowledge is to be accepted. But, against traditional concepts, Russell maintains that knowledge is an intimate, almost mystical

contact between subject and object by perception. Although perception is far more complicated than is generally supposed, common-sense realism comes closer to truth than idealism. Subjectivism is justified to ask how knowledge of the world is obtained but not to say what sort of world exists in which we live. Kant's claim to have effected a "Copernican revolution" is refuted by Russell who declares that Kant rather achieved a "Ptolemaic counter-revolution." Knowledge is characterized as a subclass of true belief, but not every true belief is to be recognized as knowledge. In *Human Knowledge* (1948) Russell deals with the problem of the relation between individual experience and the general body of scientific knowledge, and arrives at the result that science cannot be wholly interpreted in terms of experience. He demands that the description of the world be kept free from influences derived from the nature of human knowledge, and declares that "cosmically and causally, knowledge is an unimportant feature of the universe." Like Whitehead, he holds that the distinction between mind and body is a dubious one. It will be better to speak of organism, leaving the division of its activities between the mind and the body undetermined. What is true or false is a state of organism. But it is true or false in general, in virtue of occurrences outside the organism.

(Thank you, BOB DAVIS)

ER BUST

(13)

ER at the Hirshhorn. The Jacob Epstein bust of ER is currently being exhibited at the Hirshhorn Museum and Sculpture Garden, Washington, DC. The Museum says it is 16½ x 10 x 10 inches, and is one of 6 cast. A photo of ER sitting as Epstein works on the bust (1953) is opposite page 116 of ER's Autobiography, Volume III (NY: Simon & Schuster, 1969).

BRS PROJECTS

(14)

Toward a film about ER. A motion to adopt a Film Project proposal was made, at the 1983 Annual Meeting, by Lee Eisler. The proposal was adopted. Here it is →

This is a proposal that the BRS undertake to work up a presentation that might interest a movie-maker in making a movie on ER.

I am not suggesting that we write a movie script. Let us leave that to the professionals.

Rather, let us provide some of the raw material that a screen writer could make use of. For example:

There are incidents in ER's life that are dramatic or that lend themselves to dramatic presentation. We should make up a list of these, giving a brief description of each incident (and cite the source).

There are many quips, witticisms or verbal exchanges that are amusing or profound or both. We should make up a list of these, stating the essence (and citing the source).

Some incidents come to mind: the CCNY affair, ER's thoughts on Marx and communism, the first jailing, the 2nd jailing, Ban the Bomb episodes, various debates, the 1907 election campaign, etc.

As to procedure, I suggest that as many members as possible contribute to this presentation. Give us your ideas, in writing. The more, the merrier. The more suggestions we get, the better our final result will be.

Finally, I'd like to make a bow to Jack Ragsdale. The idea of trying to interest someone in making a movie about ER originated with Jack.

Mail your ideas to Film Project, RD 1, Box 409, Coopersburg, PA 18036.

At the 1983 Meeting, the names of several movie-makers were suggested: Roman Polanski (BR was his hero -- N114-18), Attenboro (maker of Ghandi), Ken Russell.

THE BRS AWARD

- (15) 1983. Joseph Rotblat was the recipient, as mentioned last issue (RSN38-32). The press release, below, was sent to anti-nuclear organizations, large weeklies, scientific and technical publications, scholarly journals, and publications we advertise in. If you come across a mention of the BRS Award to Professor Rotblat in any publication, please tell us about it and, if possible, send a clipping or a photocopy.

Lee Eisler, VP/Information
Bertrand Russell Society, Inc.

For immediate release
July 18, 1983

JOSEPH ROTBLAT RECEIVES THE 1983 BERTRAND RUSSELL SOCIETY AWARD

The 1983 Bertrand Russell Society Award has gone to Joseph Rotblat, nuclear physicist, anti-nuclear advocate, Secretary General of the Pugwash Conferences for the first 17 years (1957-1973)...and currently active on the Executive Committee, also Chairman of the British Pugwash Group.

The Pugwash Conferences were a breakthrough in East-West relations. They brought scientists from both sides of the Iron Curtain together for the first time to discuss the nuclear peril. The Conferences led to the Salt Talks and to the partial Test Ban Treaty, that banned tests above ground (1963). As Bertrand Russell said: "...it showed that real cooperation could be achieved among scientists of extremely divergent 'ideologies' and apparently opposing scientific as well as other views."

The Conferences were Russell's idea. But Russell was 85, and in poor health, unable to attend the first Conference (in Pugwash, Nova Scotia). As a result, it was Joseph Rotblat who organized it, as well as the following 22 Pugwash Conferences.

The Award citation reads: "For presiding at the birth of the Pugwash Conferences, and nurturing their growth, to develop areas of agreement between East and West so as to diminish the nuclear peril."

It seems odd that anything as important as the Pugwash Conferences should be virtually unknown to the public. Professor Rotblat provides the explanation: "Anonymity is the price paid for bringing eminent scientists together and getting them to talk freely and without inhibition on matters which are of deep concern to them but on which they

are not necessarily expert. Such talks can be effective, and generate original ideas, only if the participants do not have to worry that what they say may be taken down and published...." Therefore the Press is excluded, and thus cannot write about Pugwash... and the public remains uninformed.

Only a few highlights of Professor Rotblat's long and productive career can be given here. He is, or has been, Professor of Physics (now Emeritus) in the University of London at St. Bartholomew's Hospital Medical College; Director of Research in nuclear physics at Liverpool University; atomic energy researcher at Los Alamos; member, Advisory Committee on Medical Research of the World Health Organization; President, British Institute of Radiology; member, Governing Body of Stockholm International Peace Research Institute; Honorary Foreign Member, American Academy of Arts and Sciences. Title of some of his books indicate his major interests: Progress in Nuclear Physics; Radioactivity and Radioactive Substances; Atomic Energy, A Survey; Science and World Affairs; Aspects of Medical Physics; Pugwash, The First Ten Years; Scientists in the Quest for Peace; Nuclear Reactors, To Breed or Not To Breed; Nuclear Energy and Nuclear Weapons Proliferation; Nuclear Radiation in Warfare; Scientists, the Arms Race and Disarmament.

In Bertrand Russell's eyes, Professor Rotblat "...can have few rivals in courage and integrity... If ever the nuclear peril and allied evils are eradicated and international affairs are straightened out, his name should stand very high among its heroes."

The Bertrand Russell Society is a company of admirers of Bertrand Russell (1872-1970). It is not a scholarly society, though a number of scholars belong to it, and is open to anyone interested in Russell. For information, write BRS Information, RD 1, Box 409, Coopersburg, PA 18036.

In the Fall, the press release will go to universities, along with (to save postage) the announcement of the 1983 Doctoral Grant recipient (17) and the 1984 Doctoral Grant offer (18).

- (16) 1984. We encourage members to nominate candidates for the 1984 BRS Award. When you nominate, tell why you think your candidate deserves the Award. There should be a genuine connection between your candidate and BR. It can be someone who had worked closely with BR in an important way (like Joseph Rotblat); or who has made a distinctive contribution to Russell scholarship (like Paul Arthur Schilpp); or who has acted in support of a cause or idea that BR championed (like Henry Kendall); or whose actions exhibited qualities of character (such as moral courage) reminiscent of BR; or who in some way has promoted awareness of BR or BR's work (like Steve Allen).

* Send your nomination to the BRS Award Committee, c/o the newsletter, address on Page 1, bottom. Deadline: December 1st.

THE BRS DOCTORAL GRANT

- (17) The 1983 recipient is Lois Pineau of the University of Toronto. (Last year's recipient, Alejandro Garciadiego, was also from the University of Toronto.)

Every year since 1979 the BRS has offered a \$500 award to a graduate student who has completed all requirements for a Ph.D. except the dissertation. The 1983 award is "to help defray expenses of a currently enrolled doctoral candidate in any field whose proposed dissertation best gives promise of dealing in a significant way with the thought, life or times of Bertrand Russell."

Ms. Pineau, in her dissertation, will argue that Russell's theory of reference "goes further toward solving some of the traditional problems of reference than has generally been appreciated...because they have not been properly understood,"...by Kripke, for instance.

- (18) The 1984 offer, as it will appear in a half-page ad in The Journal of Philosophy (September 1983):

THE BERTRAND RUSSELL SOCIETY'S 1984 DOCTORAL GRANT

The Bertrand Russell Society will award a doctoral grant of \$500 to help defray expenses of a currently enrolled doctoral candidate in any field whose proposed dissertation best gives promise of dealing in a significant way with the thought, life or times of Bertrand Russell.

The candidate is required to send to the Society: (1) an abstract of the theme of the dissertation and of the plan of study; (2) a letter from the chairman of the candidate's department which states that all work for the doctorate has been completed except the dissertation, and that the topic of the dissertation has received academic approval; (3) a letter from the dissertation advisor evaluating the applicant and the plan of study; (4) a statement, in the candidate's covering letter, indicating that if the candidate is awarded the grant, he/she will provide the Society, at its expense, with a copy of the complete dissertation as approved by the candidate's department.

Applications and supporting documents should reach Prof. Hugh S. Moorhead, Chairman, Philosophy Dept., Northeastern Illinois University, Chicago, IL 60625, by May 1, 1984. The recipient will be announced in June 1984.

The announcement of the 1983 Doctoral Grant recipient and 1984 Doctoral Grant offer will be mailed directly to chairmen of 5 departments of (mostly) large universities, as in past years (along with the Rotblat press release.)

CREATIONISM

- (19) From Harvard Magazine (May-June, 1983, pp. 28-32):

Only a theory

Today's primitivists join a long line of political and religious dogmatists who have rejected the empirical observations of science. In the nuclear age, such a stance becomes inexcusably dangerous.

by Philip Dunne

Earlier in this century, a Soviet geneticist named Trofim Lysenko earned the ridicule of the scientific world, and incidentally set back the study of genetics in the Soviet Union for decades, by forcing on his colleagues a pseudoscientific theory of heredity that was politically pleasing to Joseph Stalin and the rest of the Communist Party hierarchy in the Soviet Union.

In the fall of 1980, an American presidential candidate, Ronald Reagan, drew cheers from a partisan crowd by proclaiming that Charles Darwin's theory of evolution was "only a theory."

It would be easy to make too much of the similarity. Geneticist Lysenko's pseudoscience had a direct and

damaging effect on Soviet agriculture, while candidate Reagan's remark, however shocking to the scientific community, was clearly only a case of a politician telling his listeners what they wanted to hear.

What is disturbing is that as canny a politician as Ronald Reagan should have judged it politically profitable to cater to primitivist sentiment. His speech is perhaps an indication of the extent to which strident anti-intellectualism has gained support in America over the past few years.

It is also possible that candidate Reagan did President Reagan a disservice, for a president, as commander in chief of the armed forces, must depend on science for all the military power at his command: the atomic weaponry, the satellites, the carriers and submarines, the tanks and

artillery, the oil that fuels them, and the computers that direct them. All are the products of scientific inquiry, of physical, chemical, electronic, and geological discoveries that a few years ago could be dismissed as "only theories." Indeed, this particular president probably owes his election to the scientists whose theories led to the invention and development of television.

Modern industry and agriculture depend on science, on the freedom to inquire, to test, to prove and disprove, to venture, like Newton, Hutton, Darwin, and Einstein, on to new continents of scientific thought. When Reagan took his stand on the side of militant ignorance, he did more than encourage the primitivists who cheered him. Though many candidates for office may talk primitivist nonsense, the expression of such views by as important

a politician as Reagan at best could not possibly strengthen the nation's civilian economy or its military capability, and at worst might conceivably weaken both. In this nuclear age, Lysenkoism, the encroachment of politics or religion on scientific inquiry, is something no nation can afford.

It is strange that this most militaristic of presidents—who recently has adorned his coat of mail with an ephod, and transcends his elective office to the extent of claiming that his escalation of the arms race is ordained by Scripture—should show such contempt for the sensibilities of the scientists on whom he must depend.

And it is strange that it is the Reagan Administration, with its plans for astronomical expansion of the military component, that simultaneously makes drastic cuts in funds for research, grants, and student loans, thereby severely limiting the number of trained scientists and technologists schools and universities can produce. Someone has failed to make an obvious connection.

Perhaps strangest of all is the fact that it is this same administration, usually so belligerently responsive to every Soviet move, that has cut the budget of our space program well into the bone, and thereby not only deprived us of the fruits of much invaluable scientific research, but virtually abandoned the peaceful exploration of space to other nations, including its great antagonist. The Soviet government may persecute individual scientists who are dissenters, but it clearly, in space and elsewhere, puts a high priority on pure scientific research, and has refrained, since Lysenko and Stalin, from forcing its scientists to accept political baby talk as valid theory.

But possibly we can make some sense of these anomalies when we consider that, in this country, it is often the rabid anti-intellectuals, the enemies of science and scientists, who are the most strident advocates of an expanded military and a proliferation of nuclear power plants, while they cheer the candidate who tells them that Darwin's theory is only a theory.

There is some irony in the probability that Ronald Reagan is the most uncompromising "Social Darwinist"

Technically, of course, Reagan was quite correct. Evolution is only a theory, and so are special and general relativity, the Big Bang, quantum theory, plate tectonics, and all the other giant ideas conceived by our pygmy minds since the Renaissance first divorced science from religious dogma.

ever to sit in the White House, if we accept definition of Social Darwinism as the economic equivalent of the doctrine of "the survival of the fittest." (That phrase, incidentally, was coined not by Darwin himself, but by Herbert Spencer, the great Victorian proponent of *laissez faire*, the Reaganomics of his time. But Spencer, no primitivist, was also an early and dedicated champion of the theory of evolution.)

Technically, of course, Reagan was quite correct. Evolution is only a theory, and so are special and general relativity, the Big Bang, quantum theory, plate tectonics, and all the other giant ideas conceived by our pygmy minds since the Renaissance first divorced science from religious dogma.

No modern anthropologist was present when the first half-brained protohuman decided that he or she preferred two feet to four; still those mute but eloquent historians, the fossils, suggest an approximate date, give or take a few million years—a mere blink of the eye in geological time—for this significant event.

Similarly, nobody has ever seen crustal plates rush apart to create an Atlantic Ocean, because such plates creep at a few centimeters a year, but we have seen the result of their movements, and matched to perfection not only the contours of continents, but geological structures from one side of an ocean to those from another.

Scientific theory is, after all, merely the most logical interpretation by the best-trained minds of the most per-

suasive data. Unlike political dogmatists in the Soviet Union and politico-religious fanatics in the United States, scientists love to question, test, and improve longstanding theories, including their own branchchildren.

Even Albert Einstein's dazzling theories of relativity have been challenged, but have stood fast against all assaults. Rather, quantum physicists have proved that relativity by itself gives an incomplete picture of reality, much as Einstein himself proved that Isaac Newton's purely mechanical physics inadequately described a relativistic cosmos.

Astronomer Edwin Hubble's exploding universe, once thought to be almost perfectly homogeneous, is now showing great gaps in its structure, and possibly is not as pleasingly uniform as we once believed.

Darwin's theory of evolution itself is undergoing the same scrutiny, not to disprove it, as the primitivists claim, but to refine it in light of recent research, which indicates that mutations may occur in quanta rather than slow increments. Rather than crawl like a tortoise, evolution may bound like an antelope.

Nor does any scientist claim to be infallible. The greatest of them can guess wrong. Majestic Lord Kelvin, doyen of nineteenth-century physicists, rejected Darwin's theory because he estimated the age of the earth at not more than a hundred million years, hardly long enough for species to evolve. His reasoning was spotlessly empirical: if the sun burned hydrogen chemically, which he believed, a body of its diameter would soon exhaust its fuel supply. He didn't live to learn the secret of the stars: that they don't burn their hydrogen; they fuse it, and enjoy long lives in an almost perfect balance of gravity and radiation.

Even Einstein, the nonpareil, wasted years of research because, in his love of order, he refused to accept the radical implications of the quantum theory to which he contributed so much. "God," he said in a famous dictum, "is subtle, but not malicious." He "does not play dice." Quantum research proves beyond doubt that God does.

Some intuitive theories, most notably Einstein's own, also have been proved beyond question. The hydrogen bomb bears terrible witness to the power of his thought. By observing the behavior of subatomic particles at relativistic speeds, we know that time itself, as he deduced, is not an absolute. We have even proved that a clock in the penthouse of a skyscraper ticks at a tiny but measurably faster rate than one in the basement. And (though in this particular case the proof is not quite so concrete) the discovery of primordial background radiation is accepted by most cosmologists as a strong indication that our universe originated in a single dimensionless point of infinite density and temperature: The Big Bang.

Recently I read an article in a small local newspaper in which the writer, reflecting a common primitivist view, denounced the Big Bang theory as somehow anti-religious, inimical to the God who created the beauty of birds and flowers, not to mention that lord of all he surveys on earth: Man. I wondered why the writer could not bring himself to credit his God with the even more miraculous feat of creating an entire cosmos from a single point of light. St. Thomas Aquinas, for one, believed that God created the universe out of nothingness—a vacuum—and many modern physicists think so too.

And it's all completely beside the point. A little thought should uncover a strange and usually overlooked truth: There is no fundamental conflict between science and religion.

Science is not concerned with the "why" of natural phenomena, nor even the "how." As Niels Bohr said: "It is wrong to think that the task of physics is to find out how nature is. Physics concerns what we can say about nature." The enemies of science—which after all is only another word for knowledge—make the mistake of believing that scientists infringe on God's patents by inventing the laws of nature, when in fact they hope only to discover what those laws are.

Unfortunately, every religion, including Soviet Marxist-Leninism in Stalin's day, has created its own cos-

mology, based on metaphysical speculation rather than empirical observation. Conflict arises when religious or political dogma masquerades as science, as in the case of today's "scientific creationists." They offer nothing new under the sun. For century after century, their kind have bound reason with the shackles of dogma.

Worse, the dogmatists have often used lethal methods. Throughout the Dark and Middle Ages, overindulgence in scientific inquiry could be dangerous to life and limb. In A.D. 415 Hypatia, philosopher and teacher at the Alexandrian library, was murdered by a mob incited by Archbishop Cyril, who was duly canonized for such service to his church.

For fear of religious dogmatists, Copernicus delayed publication of his theory of earth's heliocentric orbit for many years. His fears proved justified when his champion, Giordano Bruno, was burned at the stake for heresy. The great Galileo escaped a similar fate by recanting that which he knew to be true.

Is this the record of a running battle between science and religion? On the contrary, many of the persecuted scientists were themselves men of the cloth. Copernicus was canon of the cathedral at Frauenburg. Bruno was originally a Dominican friar. One of the fathers of modern cosmology and the Big Bang theory so deplored by the primitivists was a Belgian cleric, the Abbé Georges Lemaître.

Nevertheless, the conflict is usually described as one between the godly and the ungodly, and American primitivists have identified their enemies with some historical accuracy: they call them "secular humanists." In a sense, they are right.

It was, after all, the humanists of the Italian Renaissance who, in the fifteenth century, first questioned the authority of religious dogma in the realms of science, and thereby paved the way for the triumph of skepticism, materialism, industrialism, and capitalism in the modern world.

In the beginning, to be sure, "humanist" meant little more than "classical scholar," but it was the rediscovery of Greek and Roman "pagan" knowledge, married to the growing interest in physical phenomena, that inspired the scientific and industrial revolutions, which eventually swept the world.

Since most educated men of the time took clerical orders, the majority of the early humanists were themselves clergymen. Two of them, Poggio Bracciolini and Lorenzo Valla, were papal secretaries.

And some were as religious as they were scholarly. The deeply devout Erasmus did not scorn the name of "humanist," nor did the saintly Sir Thomas More, a humanist who celebrated another in his *Life of John Picus, Earl of Mirandola*. "Picus," of course, was that extraordinary Renaissance man, Giovanni Pico della Mirandola, who tried to reconcile Greek and Arabic science with Hebrew and Christian theology, and was so in

When a secular humanist looks at a human skeleton, he (or she) doesn't see a clone of God, but only a highly specialized primate, and wonders why anyone would believe that an omnipotent God would choose for himself the male form of a mammal that may soon become extinct.

love with learning that he hoped to assimilate all human knowledge in his own prodigious brain.

From its early humanistic roots, the great tree of science grew and flowered, developing so many branches in such exquisite detail that any claim by a modern Pico della Mirandola to universal knowledge would be patently ridiculous. There is truth as well as wit in the old saw that a scientific specialist is one who learns more and more about less and less.

There is no school of philosophy or science calling itself "secular humanism." Fundamentally, the so-called secular humanist is merely an empiricist who rejects

divine revelation as a source of knowledge. Secular humanists come from Missouri: they need to be shown. When a secular humanist looks at a human skeleton, he (or she) doesn't see a clone of God, but only a highly specialized primate, and wonders why anyone would believe that an omnipotent God would choose for himself the male form of a mammal that may soon become extinct.

Secular humanists (another strike against them) are seldom nationalists. Jefferson and Franklin, Priestley and Condorcet, Bacon and Voltaire, though all held strong political views, and some held offices, were at bottom citizens of the world.

And so, to some extent, were their antagonists. Archbishop James Ussher, whose application of what he thought was scientific method to the chronology of the Old Testament produced 4004 B.C. as the date of the creation, was an Irishman, while John Lightfoot, vice-chancellor of Cambridge University, who refined Ussher's date by specifying the day and hour (October 16, at 9 a.m.), was an Englishman. Even today, there are some who accept their dates as fact. The ludicrous Bishop Samuel Wilberforce, who earned his place in history by demanding to know if Darwin's champion, Thomas Huxley, traced his descent from a monkey in the paternal or maternal line, spoke for the entire obfuscatory wing of mankind.

Primitivism is not only international, but also nonpartisan. William Jennings Bryan was a Democrat, Ronald Reagan is a Republican.

Somehow, the notion has taken root among the primitivists that science per se is evil. Actually, it is not

subject to any moralistic definition: it is neither "good" nor "bad"; it simply is. The good and evil lie in the uses we make of it. The fire of Prometheus was destroyer as well as boon. The Wright brothers probably never dreamed that their invention would bring the horrors of war directly home to Mom and Pop and the kid sister. The hydrogen bomb was, *ab initio*, the creation of that most gentle and pacifistic of men, Albert Einstein.

It is possible that such lethal inventions have subtly encouraged the anti-intellectualist mood in this country. The beneficent science of the Victorians has proved that it can be a wholesale killer. Or it may be that modern primitivism is a natural reaction to the dethronement by science of humankind as the direct creation in his own image of a personalized God. Some people dislike being told that they are cousins to a chimpanzee and descendants of a fish, or that their personal atoms were forged billions of years ago in the centers of exploding stars.

If science is a killer, so the history of religion has been written in blood, and not only that of martyrs. The Aztec and the Inca were murdered on their own blood-stained altars by a Spaniard invoking the merciful name of Jesus Christ. Catholic and Protestant happily slaughtered each other in the Thirty Years' War. Religion has been so much of a comfort to so many that sometimes we ignore its darker side. Even today we have only to look to Tehran and Belfast or the borders of Israel to see that our so-called modern civilization has not quelled sectarian passions, nor wiped the mark of Cain from our brows.

If science can be a passive tool of evil, it is religious man, nationalist man, patriotic man who wields it. The evil is not in what we can learn of nature, but in the

political and religious excesses to which our own contentious natures prompt us.

As to what we can learn of God, perhaps Charles Darwin said it best, in a letter to the American naturalist Asa Gray: "I feel most deeply that the whole subject is too profound for human intellect. A dog might as well speculate on the mind of Newton."

And so a great scientist teaches us a lesson in humility. It is a text that some preachers and politicians would do well to study. I can't help wondering what would have happened if candidate Ronald Reagan, rather than call the theory of evolution "only a theory," had chosen to shed light instead of murk, and asked his partisans to consider what awesome power had created the continuing miracle of the evolutionary process. It might not even have cost him any votes.

As for the secular humanists, let Pico della Mirandola make the case for all. In his celebrated "Oration on the Dignity of Man" he thought that he discerned his God's design for our species: "Nor have we made thee either heavenly or earthly, mortal or immortal, to the end that thou, being, as it were, thine own free maker and moulder, shouldst fashion thyself in what form may please thee best. Thou shalt have power to decline unto the lower or brute creatures. Thou shalt have power to be reborn unto the higher, or divine, according to the sentence of thine intellect." □

Philip Dunne '29 is a writer-director of motion pictures who lives in Malibu. His memoir, *Take Two: A Life in Movies and Politics*, was published in 1980.

From The New York Times Book Review (5/15/83, pp.16-18):

SCIENTISTS CONFRONT CREATIONISM

Edited by Laurie R. Godfrey.
Illustrated. 324 pp. New York:
W. W. Norton & Co. \$19.50.

Since 1968, when the Supreme Court struck down an Arkansas law forbidding the teaching of evolution in public schools, conservative Christians who oppose the idea of evolution have altered their strategy. In school districts and state legislatures across the nation, they are now calling for a "two-model" approach: Schools would emphasize that evolution is only a theory, neither more nor less

valid than the fundamentalists' own theory, known as scientific creationism.

They add that their version of creationism is fully supported by the data used to support evolutionism and is therefore a science. It is this claim, more than constitutional or social positions, that is criticized in this informative, if uneven, collection of essays.

The editor, Laurie R. Godfrey, is a physical anthropologist whose own essay deals with gaps in fossil records. Because such gaps have led evolutionists to disagree among themselves about the rate and pattern of evolutionary change, the crea-

tionists feel justified in drawing their own drastically different conclusions. But as Mrs. Godfrey makes clear, they do this through falsification and distortion, not scientific reasoning.

Mrs. Godfrey's is one of several essays that analyze the creationist argument while presenting sufficient background for the nonscientist reader. Unfortunately, some of the other essays become too technical, as contributors shift from the errors of the creationists to those of scientific rivals. And too many contributors make sweeping pronouncements about religion versus science, construed in the 19th-cen-

tury sense of dogmatic belief versus positivistic skepticism.

The reader who seeks an understanding of the motives and circumstances of fundamentalist parents who dislike the way their children are being educated will not find it here. The book contains little about the recent social history of antievolutionism, focusing instead on the ways in which its ideas are a throwback to earlier attacks on science, such as the flat-earth movement. As a reasoned response to the scientific pretensions of the antievolutionists, "Scientists Confront Creationism" lives up to its title.

NEWS ABOUT MEMBERS

(21) Dan McDonald has been reading "Maugham: A Biography" by Ted Morgan, and was amused to notice points of similarity between Maugham and Russell, 2 very dissimilar people: both born in the 1870s, orphaned as children, became professional writers, had large numbers of readers, disliked D. H. Lawrence, had unconventional views about sex and religion.

(22) Ramon Carter Suzara had the following in the Philippine News (San Francisco, June 22-28, 1983):

Capitalism or Godless Communism

By RAMON SUZARA
Member, Bertrand Russell Society

Bertrand Russell asked: "Is our race so destitute of wisdom, so incapable of impartial love, so blind even to the simplest dictates of self-preservation, that the last proof of its silly cleverness is to be the extermination of all life on this planet? — for it will be not only men who will perish, but also the animals, whom no one can accuse of Communism or anti-Communism."

President Reagan in addressing the National Association of Evangelicals in Orlando last March 8, revealed the truth of his religious sentiments. He said that it is

better "our children die now, still believing in God, than have them grow up under Communism and one day die no longer believing in God."

One wonders, in reply to equal fanaticism, whether the Russian leaders are also saying that it is better Russian children, too, should die now, disbelieving in God, than have them grow up under Capitalism and one day die believing in God?

As the nuclear arms race insanity continues, as its allocated budget now entails \$1.2 billion dollars a day, everyday, as we shall all die in a nuclear war tomorrow, let us also ask: what does it really matter whether Capitalist countries believe in God, but it turns out that

God no longer believes in them? After all, Capitalist countries of which the USA is its greatest power have never stopped bothering God asking Him for His forgiveness!

But then also, what does it really matter whether Communist countries disbelieve in God, but it turns out that God is beginning to believe in them? After all, Communist countries of which the USSR is its greatest power, have stopped molesting God asking Him for anything.

And yet, who is to say and what is the difference? The Revealed Truths of God are still un-revealed, for, if they are, then God's Mystery will cease to be mysterious.

Perhaps, a better alternative will be found to replace both the ends of Communism and the evils of anti-Communism. As to what exactly that better alternative

is — only God knows. In the meantime, obviously, the ways of Communism and the ways of anti-Communism are both ways not of God, but in fact — ways of the devil. After all, God has yet to decide, in His Kingdom and Glory, whether to bless or to curse — Man's destructive powers which will eventually destroy all life on this earth including the devil himself finally, — at last!

But as Bertrand Russell suggested: "There lies before us, if we choose, continuous progress in happiness, knowledge, and wisdom. Shall we, instead, choose death, because we cannot forget our quarrels? I appeal as a human being to human beings: remember your humanity and forget the rest! If you can do so, the way lies open to a new paradise; if you cannot, nothing lies before you but universal death."

THE BERTRAND RUSSELL SOCIETY, INC.

Donald W. Jackanicz, President
3802 N. Kenneth Ave.
Chicago, IL 60641 U.S.A.

11 July 1983

President Yuri Andropov
Central Committee of the
Communist Party
4 Staraya Ploshchad
Moscow, USSR

Dear Mr. President,

The Board of Directors of the Bertrand Russell Society has adopted the following resolution which I am now respectfully submitting to you. An identical letter has been sent to President Reagan.

The Bertrand Russell Society, believing that any use of nuclear weapons will lead to unlimited use of nuclear weapons and probable end of the human race, is in favor of a mutual, verifiable nuclear freeze, leading to a gradual reduction and eventual elimination of nuclear weapons, and urges the leaders of the major nuclear powers to pursue this path.

Sincerely yours,

Donald W. Jackanicz
