

NEWSLETTER #1
March 1974
(Revised 12/74)

This is Newsletter #1. It aims to keep you informed. We don't yet know whether Newsletters will be sent out monthly, bi-monthly, quarterly, or occasionally. That will depend on how much news there is, or on how urgent it is to get the news out quickly.

The asterisks in the left column call your attention to our requests — requests for suggestions or information or clippings, etc.

- * Present plans for the contents of Newsletters are tentative. Please make suggestions and criticisms. If you should disapprove of something or other, please do not hesitate to say so.

The Newsletter will be divided into sections, tentatively set as follows:

REPORTS FROM CHAIRMEN. Committee Chairmen will report bi-monthly (a) on what they have done since their last report, and (b) on what they are planning to do in the months ahead. The reports will serve the following purposes: (1) They will let you know what the committees are doing. (2) They will enable you to make suggestions and criticisms. (3) They will enable you to offer to participate in a planned activity that particularly interests you.

NEWS ABOUT MEMBERS. As members we are all primarily interested in the work the BRS does to further Russell's purposes; but we are also interested in our fellow-members as people. The previous section (Reports from Chairmen) deals with the former; this section deals with the latter.

- * The news that appears in this section will come mostly from the members themselves, and only occasionally from another member. If you change your job, publish a paper, attend a conference, make a speech, run for office, engage in political activity, picket some villain, etc., please let us know about it. (And please be specific: give date; name of organization involved, if any; tell what you did, etc.) Include any event that occurs in your work or in your life as a citizen, whether or not related to the BRS or its aims.

- * QUESTIONS & ANSWERS & REMARKS. If you have a question about BR or about the BRS, that you think another member may be able to answer, send your question to the Newsletter. (Example below.) Or if there is any (reasonably brief) message you would like to communicate to all the members, send it in.

- * SMALL TALK. These will be items of no great significance that for some reason interest or amuse you; send them in.

NEW MEMBERS. We plan to list a new member's name, address, affiliation, interests, etc.

The Augusta address at the top of this page is the Society's permanent address. When you write to the Newsletter, write either to the Augusta address or to Newsletter, c/o Lee Eisler, Box 409, RD #1, Coopersburg, Pa. 18036.

To get things started, here is the Newsletter format, using the only information I now have on hand, which is the information I can supply myself, as a chairman and as a member.

* * * * *

REPORTS FROM CHAIRMEN

Information Committee (Lee Eisler, Chairman):

1. Press releases were sent to 35 home town and home campus publications, of 11 members (founders.) Names of publications were supplied by the members, as were biographical details about themselves.

The purpose of this press release was to get publicity for the BRS, and perhaps to get inquiries about the BRS. Kate's release did in fact produce an inquiry.

This press release did not contain news of any interest to a newspaper editor in a big city like New York, Chicago, Los Angeles, San Francisco, or Washington. The fact that the BRS was founded is not interesting except to a very small percentage of the total population, and except (probably) to a small group of special publications (see list below.) But newspapers outside of big cities sometimes consider a press release newsworthy simply if it contains the name of a local person. The smaller the town and newspaper, the more likely it is to use the release. THE LAKEVILLE (CONN.) JOURNAL used Kate Tait's release without significant change; the QUAKERTOWN (PA.) FREE PRESS used Lee Eisler's release, keeping it practically intact. Jack Pitt got a long, half-page feature story in THE DAILY COLLEGIAN, his home-campus publication. (Copies enclosed.) But the AUGUSTA CHRONICLE used only 2 paragraphs of Peter Cranford's release. And we thought it hopeless to send releases to The New York Times, The Washington Post, etc.

* If your story has appeared locally and you have not yet sent us a clipping or photocopy, please do so.

2. Newsletter. The Information Committee will put out this Newsletter for the time being. Later on, the members may wish to set up a Newsletter Committee.

5. Re publishers: We consider publishers — and our relations with them — to be very important to the BRS. We will not send them anything until we have a more fully developed plan.

7. The special publications. The following periodicals have special audiences, and may be interested in carrying news about the BRS:

PHILOSOPHY & PUBLIC AFFAIRS, Princeton University Press, Princeton, N.J. 08540
 ETHICS, University of Chicago Press, 5801 Ellis Avenue, Chicago 60637
 THE ETHICAL FORUM, Ethical Culture Society, 2 West 64 St., NY NY 10023
 THE HUMANIST, American Humanist Society, (see last page for address)
 JOURNAL OF PHILOSOPHY, 720 Philosophy Hall, Columbia University, NY NY 10027
 AMERICAN RATIONALIST, Rationalist Association, PO Box 1762, St. Louis, Mo. 63199
 AMERICAN SOCIOLOGICAL REVIEW, 1001 Conn. Avenue NW, Washington, D.C. 20036
 THE HUMANIST IN CANADA, Box 157, Victoria, B.C. Canada

* We will send them a short version (called a News Brief) of the Bulletin (March.) If you happen to read any of these publications, please notice whether they carry news about the BRS, and if so, please send us a clipping or photocopy.

* If you know of a publication that might be added to this list of special publications, please send us its name and address. (Address not essential; we can look it up.)

8. A small classified ad will soon be inserted in SATURDAY REVIEW/WORLD and NEW YORK REVIEW OF BOOKS, as follows:

BERTRAND RUSSELL SOCIETY. New. Write for information. Box 000, SR/W.

Cost is less than \$25 per publication. We hope this will produce inquiries about the BRS.

* * * *

QUESTIONS & ANSWERS AND REMARKS

Lee Eisler asks:

In BERTRAND RUSSELL SPEAKS HIS MIND (an Avon paperback, 1960) — and also on Caedmon LP, TC-1149, BERTRAND RUSSELL SPEAKING — BR says: "...taboo moralities tend to perpetuate ancient cruelties. ...the Oracle at Delphi...stood up for human sacrifice long after other Greeks had given it up." However, a Professor of Classics at Harvard, an eminent scholar, has told me he knows of no human sacrifice or anthropophagy (cannibalism) connected with Delphi. Does anyone know what evidence BR had in mind when he made this statement?

* * * *

MISCELLANEOUS

The address of THE HUMANIST (Item 7, above) is as follows:
THE HUMANIST, Prof. Paul Kurtz, Editor, State University of New York at Buffalo, 4244 Ridge Lea Road, Amherst, N.Y. 14266.

Whenever you send us a clipping, please put the publication's name on the clipping, and the date of the issue.

* * * *

REVISED EDITION

This is a revised edition of Newsletter #1. Items in the original edition that are no longer relevant have been eliminated. The original numbering of items has been retained. This issue is one page shorter than the original edition.

B2 THE LAKEVILLE JOURNAL, Thursday, February 28, 1974

Katherine Tait Helps Form Bertrand Russell Society

Katherine Tait, of Falls Village, is one of the founders of the new Bertrand Russell Society, which held its first meeting in New York City earlier this month. The Society's aims are to make Russell's views better known and to promote causes Russell believed in. Mrs. Tait, Russell's daughter, was elected Treasurer. She teaches German at Dutchess Community College in Poughkeepsie.

The Society will develop programs to further Russell's purposes. Areas of interest include: the promotion of Russell's writings; the encouragement of new scholarly and popular writings on Russell's life and

thought; Russell's ideas as alternatives to student mysticism, cynicism, apathy, and alienation; the importance of rational thinking; Russell's thoughts on power, politics, and government; human rights; disarmament and peace; misapplications of science; Russell's views as aids to greater enjoyment of life.

Almost all 12 founders of the Bertrand Russell Society were (and are) subscribers to "Russell," the quarterly publication of the Russell Archives (at McMaster University, Hamilton, Ontario). A majority are associated with colleges and universities. There are, however,

no requirements, academic or otherwise, for membership in the new Society, other than an interest in Russell and a general sympathy with his aims and outlook.

The Bertrand Russell Society has the support and cooperation of the Bertrand Russell Archives, of the Bertrand Russell Peace Foundation, Ltd. (Nottingham, England), and of the Bertrand Russell Society of Tokyo, Japan. Kenneth Blackwell, director of the Archives, is a founder of the Society.

Anyone interested in Bertrand Russell is invited to inquire about membership in the Society. Write Lee Eisler, chairman, Information Committee, Bertrand Russell Society, RD No. 1, Coopersburg, Pa. 18036.

C'burg man Quakertown (Pa.) FREE PRESS helps found 2/28/74 Russell club

A Coopersburg man Lee Eisler, is one of the founders of the new Bertrand Russell Society. Eisler is the author of "Morals Without Mystery," a book based on Russell's views on morality, which won praise from Russell. Russell's daughter is another of the founders.

The society held its first meeting in New York City earlier this month. Its aims are to make Russell's views better known and to promote causes he believed in.

The society is developing programs to further Russell's purposes. Areas of interest, for possible programs, include: Russell's ideas as attractive alternatives to student mysticism, cynicism, apathy and alienation; Russell's thoughts on power, politics, and government; human rights; misapplications of science; the

encouragement of new scholarly and popular writings on Russell's life and thought; the promotion of Russell's writings; disarmament and peace; Russell's views as aids to the greater enjoyment of life; the importance of rational thinking.

Almost all twelve founders of the Bertrand Russell Society were (and are) subscribers to "Russell," the quarterly publication of the Russell Archives, at McMaster University, Hamilton, Ont.

More than half of them are associated with colleges and universities, more than half have Ph.D. degrees, including the society's four officers.

However, there are no requirements, academic or otherwise, for membership in the society, other than an interest in Russell and a general sympathy with his aims and outlook.

The Bertrand Russell Society has the support and cooperation of the Russell Archives, of the Bertrand Russell Peace Foundation, Ltd. Nottingham, England, and of the Bertrand Russell Society of Tokyo, Japan. The director of the Russell Archives is one of the founders of the Society.

Anyone interested in Bertrand Russell is invited to inquire about membership. Write Peter C. Cranford, President, Bertrand Russell Society, 2108 1/2 Walton Way, Augusta, Ga. 30904.

Bertrand Russell's philosophy lives on through followers

By Susan Good
Collegian Staff Writer
Bertrand Russell, the late phi-

losopher and English mathematician, is still living through his works and followers.

DR. JACK PITT

A dozen Russell followers across the nation joined together in early February to expand Russell's "life" to a Bertrand Russell Society.

Dr. Jack Pitt, CSUF philosophy instructor, is one of those followers and is the first secretary for the group.

The brainchild of the society idea is Dr. Peter Cranford, a clinical psychologist in Atlanta, Georgia. Cranford, who frequently applied Russell's insights to his patients, checked written journals and the Russell Archive in Canada to find possible society advocates. After finding a dozen advocates, he called the national planning meeting.

Pitt was called to the meeting after Dr. Cranford read an essay Pitt had written about Russell.

Why be so enthusiastic about Russell? When Pitt first recognized Russell's merits he was the president of the American Federation of Teachers and was in active protest against CSUF faculty firing in the late 60's.

"As a philosopher I had certainly read Russell," Pitt recalls, "but his beliefs really began to apply to what was happening during the firings."

At that time, Pitt recalled, faculty members Bob Mezey, Ren Mabey and Everett Frost were fired because of their free

speech and so-called "radical" views.

"Russell was against the arbitrary use of power prevalent during the firings," Pitt said, "and believed in human freedom and fairness in dealing with people . . . I couldn't agree more."

Russell, Pitt said, could be described as a pacifist . . . but it depended on the war. Russell was against World War I and criticized the perversion of science for political or economic ends. More recently Russell staged a protest against bomb creation and protested against the Vietnam war with an anti-Vietnam war crimes tribunal.

"But Russell also thought philosophy should speak to the people and wrote many essays about marriage, morals, and happiness," Pitt said.

Pitt added that Russell believed in the American tradition, hard work, and in solving the problems of mankind through rational inquiry and trust.

Because Russell lived in accord with all these ideals, Pitt said he feels Russell is "worthy of being honored and continued."

The society, founded on the premise that there are thousands of Russell advocates who would like to "get together," will promote Russell's ideas to "contribute to the quality of life in

today's world."

Its programs will include the promotion of Russell writings and the encouragement of new scholarly and popular writings on Russell's thoughts.

On the local level, Pitt said he hopes the society will have a "public" rather than an academic base.

"If enough people are interested, perhaps we could meet on a regular basis for discussion, talks, etc.," Pitt said, adding that the CSUF philosophy department could take care of the "academic Russell."

Pitt accepts the assumption that there are many Fresno area people disenchanted with "organized religion" and "political parties" and said that Russell's beliefs, not under either heading, could bring such people together.

Members of the international society will receive two Russell publications printed semi-monthly by the Russell Archive, while local discussion branches will also be formed if members are interested. Yearly dues are \$5 for students and \$12 for professionals.

Students and faculty members interested in joining the national society or in forming a local group can contact Pitt at the CSUF philosophy department, 487-2621.

NEWSLETTER #2

May 1974

In this Newsletter, as in the previous one, an asterisk in the left column indicates a request for suggestions or information. The consecutive numbers in parentheses, at extreme left, are for ease of reference, e.g., "Item 4, Newsletter #2." The reports, below, have been edited, except when in quotes. There are several new sections.

* * * * *

REPORTS FROM OFFICERS

President Peter G. Granford reports on...

- (1) Founding members' suggestions. All letters from founding members, that had been written during the nearly two years that preceded the founding meeting, were reviewed, and the suggestions contained in them were condensed into 22 pages, in advance of the meeting. "We have considered almost all of them."
- (2) BRS of Japan. "On the day we organized, Professor Tsutomu Makino of the BRS of Japan sent us a cablegram of congratulations. He has just finished writing a book, 'The Range of Bertrand Russell's Thoughts on Life.' He states, 'I have been faced with the problem as to how the BRS of Japan should proceed from now on.' I will send him our Newsletter."
- (3) New preamble. "All who have replied so far — 6 or 7 — are satisfied with the preamble as is. Several agree with Lee Eisler (who had submitted a new preamble) on the point of logic. Jack Pitt pointed out that we have a formal method of changing the Constitution."
- (4) * BR Foundation is being set up, at a cost of \$300 for attorney fees plus about \$150 for advertising, seals, court costs, etc. "If you have any ideas about this, write me at once." (The Foundation will be eligible to receive tax-deductible contributions.)
- (5) Membership. All BRS members are equal — all votes carry equal weight — but we can think of members as falling into 3 classes:
 First, there are those who join because of an interest in BR, and wish to be kept informed of BRS activities. They are very welcome. The BRS is open to everyone provided he/she has an interest in BR and agrees to abide by the BRS Constitution. (See Item 49, below.)
 Second, "from this level, you can graduate to activity, engaging in spreading BR's ideas."
 Third, there are the "Russellites, the hard core who...will work intensively and presumably for a lifetime for the BRS, are guided by a love for humanity and have an authoritative knowledge of BR himself."
 "If, by next February, we can bring together only 40 Russellites of the same mind as ourselves, we can feel satisfied. In the long run, these people will be more valuable to the BRS than any other category...for they will give the BRS its permanent character."

"However, this does not mean that we should think small. I am not arguing against bigness as such. I would much prefer the 400 that Martin Garstens wants, (Hurst John wants 500 in a year), speakers of the highest calibre, and the getting and spending of money in large amounts...provided we build solidly."

So, giving free rein to imagination, "I am thinking in terms of chapters on every campus, BRS societies 'wherever two or three are gathered in the name of Russell,' Bertrand Russell retreats, The International Bertrand Russell Society, a Bertrand Russell University located next to the UN, the Bertrand Russell Bible in all motels, BR psychotherapy, the BR Monitor, BR Institutes in Applied Philosophy (after Dale Carnegie), a BRS Information Center, a movi~~es~~ of BR, and some amusing ones I will keep to myself."

- (6) Recommended article. "I recently read the 24-page section on BR in 'The Encyclopedia of Philosophy,' edited by Paul Edwards (MacMillan.) It is very good."
- (7) Reading list. "We need a graduated list of readings to interest those who ask. MARRIAGES AND MORALS may be better than THE CONQUEST OF HAPPINESS because it is about sex, and its date of publication (1929) surprises most people. THE CONQUEST OF HAPPINESS grips those who are in trouble and are looking for something they can believe. Gary Slezak recommends NEW HOPES FOR A CHANGING WORLD for popular distribution. (Douglas Lackey would like to see an inexpensive republication of WHAT I BELIEVE (1925) .)
- (8) Taking a stand. "The time may come when one of us may have to take a stand." By one of us, I mean any Russellite. We need to set up some guide-lines for them and for the BRS in this area. I suppose this is in your department, Martin Garstens."
- (9) The Vice-Presidency. "We also need some guide-lines for the office of Vice-president. It should be a meaningful and challenging position. I am trying to be a tabula rasa where the office of president is concerned, and think that basically the presidency should be 'created' by the needs of the Society. Perhaps this should be true of the vice-presidency."
- (10) The peace issue. "Bob Davis asked me to see who among our correspondents were interested in 'peace'. I could find only one. I think the reasons for this are that most feel impotent, that some are turned off by 'peace' ostensibly defined by the Russians, that to some degree the peace movement was self-serving, political, and aroused uneasy feelings in the patriotic. Of course there is a world-wide longing for a more genuine peace movement in the tradition of Russell. Best present bet: spread BR's ideas and hold 'peace' in limbo."
- (11) The Finance Committee. "Hurst John and Lee Eisler, both on the Finance Committee, have strong apparent differences of opinion on how money should be handled. "Since both have their hearts in the right place, I would think that the best solution would be to allow them to thrash things out and later expand the Committee, to include a pair of in-betweeners, such as Martin Garstens and Katherine Tait — or anyone else Hurst would like to have."

- (12) Being reminded. "I am sure I do not have a fool-proof system of tending to BRS business. Please remind me of anything I have failed to do."
- (13) Motivating ourselves. "When I am engaged in work that I should do — for my own long-range benefit — I give myself short-range rewards, knowing that my body cannot understand long-range goals, but does understand coffee and a cruller, a walk around the block, picking up some shrimp to boil later, a short ride on a quiet road, or hitting a bucket of golfballs. With this system of reinforcement, I can generally work indefinitely.
 "Too, we should all get all the fun we can get out of being Russellites — the pleasure of being with like-minded people, excitement of the kind we had while working together, the resolution of differences, eating and drinking together (all this at the February meeting). We should consider all means of bringing people closer together, which have been developed by religious groups, civic clubs, sales organizations, and political organizations."
- (14) Committee on Applied Philosophy. Advises the Committee, "Take all the time you need. The work is too important to hurry."
- (15) Effective operating principles. "The preceding should not, however, negate what should be a permanent objective: 'Seek the blow of a thousand blows' (a basic Zen idea), (i.e., expend time and energy in ways that aim at large-scale rather than small-scale results, a letter to the New York Times as opposed to one to a friend.) And aim at doing all things yesterday.
 "Some other operating favorites, while I am on the subject: apply Occam's Razor; have big margins of safety; seek permanent solutions; have problem-solving attitudes; have faith that there is an answer; eliminate anger except for effect; criticize ideas but not persons; no self-pity; assume that all work can be done within the available time." (Parkinson's Law in reverse.)
- (16) Relationships with each other. "For the time being, chairmen should be given the ball and be allowed to run with it. However we should follow Russell in being sceptical with ourselves, and express ourselves with the greatest freedom when we feel that any idea or activity does not measure up. This means that we must all absorb hostility much as a psychologist does, but we must not hesitate to confront each other with what we think is reality. Needless to say, in the spirit of Russell, our attacks should be directed at ideas rather than persons. In addition, we must balance this with notice, recognition, and accolades for accomplishment."
- (17) BRS stationery. "I feel guilty about asking Joe Neilands to head up our stationery committee. This is like asking Einstein to teach first grade arithmetic. (Later) I have seen the new stationery. It captures the spirit of the Society."
- (18) BRS publicity. "Although Lee Eisler and Ken Blackwell are still feeling their way, the work they have already done is impressive. I should reward such activities by sending labels from Red Hackle."
- (19) Committee on Science. "Joe Neilands presided at a 'Symposium on Chemical Weapons and U.S. Public Policy,' on April 1st. Joe, go ahead and work up your idea 'to do this kind of thing but on a higher intellectual level.'" (See Item 30, below.)

- (20) Protest on communist repression. This news item comes from a recent (April) issue of the London Times: "DISSIDENTS UNITE. A protest against intellectual repression in the Communist countries is being mounted as a result of a meeting in Rome between Ken Coates of the Bertrand Russell (Peace) Foundation and Pavel Litvinov, the Russian dissident author. The initiative has the endorsement in Russia of the scientist Sakharov, providing the first joint East-West protest of this kind. "Three days, all anniversaries of the imprisonment of Russian and Czech dissidents, have been selected: May 7, November 27, and March 29 next year."

Vice-President Robert Davis reports on...

- (21) Reading BR. In his circular letter of 3/13/74, Bob urged members to read more Russell, especially in unfamiliar areas. Bob offers to suggest titles * in any particular area you may wish to explore; write him. He also recommends THE BASIC WRITINGS OF BERTRAND RUSSELL, edited by Lester Denonn, which covers all the major areas.
- (22) "Credibility" issue. We're not quite sure how it got that name. It refers to the question: How do you get rid of someone who joins the BRS and then behaves irresponsibly? (We do not have this problem now; we may never have it; but we'd like to be prepared.)
Bob says that if the member consents to the aims and purposes and structure of the group as outlined in the Constitution, and then behaves irresponsibly, he/she can be expelled in the manner stated in the Constitution. Therefore we will add a NOTICE TO NEW MEMBERS later in this Newsletter (Item 49 .)
- (23) International Civil Liberties Committee. Bob (who is Chairman) and Kate Tait are educating themselves on the subject, and are in contact with other organizations. Kate has been in touch with Chris Farley, of the Bertrand Russell Peace Foundation. Bob, following a suggestion by Hurst John, plans to send BRS members a copy of the International Bill of Rights.
- (24) BR Foundation. On the question -- Is California a good state in which to incorporate the BRS as a non-profit corporation, eligible to receive tax-deductible contributions? -- the advice (from books and lawyers) is against California, and to prefer a state that is not rigorous in its accounting demands.

Secretary Jack Pitt reports on...

- (25) The Constitution and Minutes. Jack edited and produced the Constitution, prepared the minutes of the February 1974 meeting, mailed both of these to the founding members, and to Lady Russell "at Ken Blackwell's excellent suggestion."
- (26) Local chapter. "I believe we might be ready in Fresno to explore the possibility of a 'Fresno local'. I suggest two items for general * consideration: (a) The relation between 'locals' and the national * organization, particularly as concerns money. (b) A coordination between our national advertising and local attempts to form chapters."

- (27) Amendments to minutes. Jack is "aware that the minutes (of the February 1974 meeting) will benefit from certain amendments, and invites all those wishing to propose amendments to see him shortly before the next meeting. Those unable to attend are encouraged to contact him in writing."

Treasurer Katherine Tait reports, as of April 4, 1974:

- (28) Contributions: 882.66
- Expenditures: 5.56 for checkbook
35.34 for stationery
- Balance: 841.82

* * * * *

REPORTS FROM CHAIRMEN

Committee on Applied Philosophy (Martin A. Garstens, Chairman):

- (29) The Committee is exploring its approach to the problem of attaining a more "philosophic" outlook in everyday life. It plans to produce a handbook on "great philosophy", and may hold small study-group meetings to discuss goals and the means of achieving them.

Committee on Science (J.B.Neilands, Chairman):

- (30) Symposium on chemical weapons and U.S. public policy, sponsored by American Chemical Society, held in Los Angeles on April 1st, was presided over by Dr. W. J. Bailey. (ACS President) and Joe Neilands. Joe spoke on "The U.S. chemical war in Indochina and the Geneva Protocol," and claimed that Nixon's rejection of the tear gas/herbicide ban is the sole reason for the U.S. Senate's failure to ratify the Geneva Protocol outlawing chemical weapons. For more details, see the SAN FRANCISCO EXAMINER story (Page 10) and the press release on Joe's talk at the Symposium (Page 11.)
- Congressman Wayne Owens (D., Utah) spoke about "The need for a public examination of U.S. chemical warfare policies: treaties, stockpiles, and the new chemical system." Congressman Owens and others are continuing their efforts to get Congress to consider the problem, as can be seen in THE NEW YORK TIMES story of 4/29/74 (see Page 12) That Joe is working on a hot issue, which he is helping to heat up, is indicated by the prominence given by the TIMES to the herbicide damage story — 5 columns on its Page 2.

- (31) University course. At the University of California, Berkeley, where Joe is Professor of Biochemistry, they seem to think that scientists should not live in an ivory tower, indifferent to the consequences of their researches. We attach the schedule for the course, "Biochemistry and Society" (Page 13). Joe was scheduled to lecture on "Chemical-Biological Weapons" on April 5th.

- (32) The Committee's purpose. " To develop Science as an enterprise which is devoted to the enhancement of the quality of life and which, at the same time, does not jeopardize the long-term stability of the biosphere."

Annual Meeting Committee (Hurst John, Chairman):

- (33) Hurst has been in touch with 12 hotels in NYC, one of which will probably be selected for our February 1975 meeting. Hurst has already seen 4 of the 12, and plans to come to NYC to see the rest.

Information Committee (Lee Eisler, Chairman):

- (34) BRS ads appeared in SATURDAY REVIEW/WORLD, May 4th issue (classified ads, "Personal"), and in THE NEW YORK REVIEW OF BOOKS, May 2nd issue (classified ads, "ETC.")
- (35) Epstein head of BR. Wrote 3 firms and found one that might be willing to make replicas of the head, provided we can get permission to do so. We do not yet know what costs, if any, might be involved. You can see a photo of Epstein, Russell, and the head on Page 116 of Volume 3 of BR's AUTOBIOGRAPHY.
- (36) Letter of Welcome is sent to new members.
- (37) Member's Questionnaire aims to elicit a few facts about each member and about how he/she became interested in BR and in the BRS. A copy is enclosed (except to the most recent members, who have already * received it.) Please answer the Questionnaire, and return it.
- (38) "New member package." The following items are sent to a new member: Letter of Welcome, the Constitution, the Minutes of the first meeting, the Newsletter, the Member's Questionnaire.
- (39) Special publications. 8 publications were listed in Item 7, Newsletter #1. Remove PHILOSOPHY & PUBLIC AFFAIRS; it has no "News & Notes" Section. Add: THE BULLETIN OF THE ATOMIC SCIENTISTS, 1020-24 E. 58th St., Chicago 60637
SCIENTIFIC AMERICAN, 415 Madison Avenue, New York, N.Y. 10017
SCIENCE (A.A.A.S.), 1515 Massachusetts Avenue NW, Washington, D.C. 20005
* Please suggest other publications that might be suitable for our list.
- (40) Original respondents. Sent "Bulletin March 1974" and Letter of Invitation to 44 people who answered Peter Cranford's first letter and said they might be interested in a Russell Society. To date, 6 have joined.
- (41) New member sheet, one sheet per member, is sent to Ken Blackwell (so he can enter or extend the subscription to "Russell"), to Kate Tait (along with dues), and to Peter Cranford (to keep him up-to-date on new members.)
- (42) BRS story in "Russell 12" Submitted story, which was used, with thanks to Ken Blackwell for editing, adding, and removing errors.
- (43) Clipping book. started clipping book of "newspaper stories (based on BRS press releases) that members send me. I will bring it to the Annual Meetings, so that members who wish to can look at it."

(44)

Wrote many letters, mostly to members.

* * * * *

SPECIAL REQUESTS

(45)

1976. The U.S. Bicentennial may provide an opportunity for stimulating interest in BR's writings. BR had a lot to say about America, not all of it uncomplimentary. There was much that he found to admire.

- * We would like to collect BR quotes on America and on its statesmen, both complimentary and uncomplimentary. Please keep an eye out for such quotes, and mail them in when and as you find them. BR scholars, please help! We would like to build up a collection of quotes.

Here are ways in which this material might be used: (1) As a book, to be published by a trade publisher (if we can find one) in 1976, perhaps with a title something like: "WHAT MAKES AMERICA WORTH PRESERVING. An assessment by America's good friend and severe critic, Bertrand Russell." (2) As a book, the cost of publishing to be subsidized by the BRS (if we can find the money.) (3) As a magazine article. (4) In press releases. (5) As an inexpensively produced booklet (mimeographed?) for BRS members.

None of these possible uses is guaranteed. We have to see what material we can gather. The next step would be to work it into a book, and then try publishers.

- * Would someone like to take on the job of receiving the quotes and assembling them into a manuscript for a book?

Here is a sample quote from BR's FREEDOM AND ORGANIZATION (Norton paperback), Pages 229 to 231:

"Jefferson deserves to be regarded as the founder of American democracy for three reasons: first, he wrote the Declaration of Independence; second, he led and largely created the Republican party (not the ancestor of the present Republican Party), by which the Federalists, who were anti-democratic, were overthrown; third, he was the first President who believed in democracy and sought to establish it." (p. 229)

"Although he was a fine gentleman, his contempt for social distinctions was genuine and deep-seated, and enabled him, throughout the French Revolution, to avoid the false sentimentalism inculcated by Burke. In 1794, he hopes the French will 'bring, at length, kings, nobles, and priests, to the scaffolds which they have been so long deluging with human blood.'" (p. 229)

"From this bare outline of his official career, it might have been supposed that he would not have time for many interests outside politics. In fact, however, his love for his home at Monticello, his interest in architecture, his omnivorous scientific curiosity, were all at least as strong as his political ambition, and caused him to be genuinely glad of his periods of leisure and retirement." (p.230)

"Everything that was admirable in eighteenth-century culture was to be found in Jefferson, without the somewhat limited and static quality that made that age unsatisfactory." (p. 231)

- (46) Russellite statement. Consider the following 2 statements:
- (A) The most important thing we have to offer Russellites is the opportunity to serve.
- (B) The most important thing we have to offer Russellites is the opportunity to further Russell's purposes.
- * Which one do you prefer?
- * If you'd like to try your hand at stating what the BRS offers (to present or potential Russellites,) please send us the results.
- (47) * Newsletter suggestions. If you have suggestions, comments or criticisms concerning the Newsletters, please send them in.

* * * * *

NEW MEMBERS

- (48) We welcome these new members:

Irvin Ashkenazy, 1435 Avenue 64, Pasadena, Cal. 91105
 Amy P. Block, Apt. 101, 2515 Benvenue, Berkeley, Cal. 94704
 Richard A. Hyman, 3-C, 157 East 57th Street, New York, N.Y. 10022
 Rebecca Hyman, 3-C, 157 East 57th Street, New York, N.Y. 10022
 Donald W. Jackanicz, 53 Washington Square South, New York, N.Y. 10012
 Gerald Kahan, 9813 Tolworth Circle, Randallstown, Md. 21133
 Darrell Kong, 2825 E. Swift, Fresno, Cal. 93726
 Henry Kraus, 9166 Gerald Avenue, Sepulveda, Cal. 91343
 Dr. Douglas Lackey, 50 Juniper Road, Wayne, N.J. 07470
 Dr. Corliss Lamont, 315 West 106th Street, New York, N.Y. 10025
 James B. Milne, 1126 Agincourt Road, Ottawa, Ontario, Canada K2C 2H7
 Raymond Plant, 13 Kingsview Blvd., Brampton, Ontario, Canada L64 1C5

The BRS started with 12 members. There are now 24.

For the benefit of new members, here are the addresses of the other 12 members (home address, in most cases:)

Lorraine C. Beattie, 4-430 Hazel Street, Waterloo, Ontario, Canada N2L 3P8
 Kenneth Blackwell, Archivist, The Bertrand Russell Archives, Mills
 Memorial Library, McMaster University, Hamilton, Ontario, Canada L8S 4L6
 Dr. Peter G. Cranford, 2108½ Walton Way, Augusta, Georgia. 30904
 Robert Davis, 1737 Silverwood Terrace, Los Angeles, Cal. 90026
 Lee Eisler, Box 409, R.D. 1, Coopersburg, Pa. 18036
 Dr. Martin A. Garstens, 913 Buckingham Drive, Silver Spring, Md. 20901
 Hurst John, 2011 Country Club Drive, Columbia, Mo. 65201
 Dr. J. B. Neilands, Dept. of Biochemistry, University of California,
 Berkeley, Cal. 94720
 Dr. Jack Pitt, Dept. of Philosophy, School of Humanities, California
 State University, Fresno, Cal. 93740
 Dr. Don D. Roberts, Dept. of Philosophy, University of Waterloo,
 Gary M. Slezak, 1768 West 95th Place, Chicago, Ill. 60643
 Dr. Katherine Tait, Box 45, Falls, Village, Conn. 06031

In the next Newsletter, we expect to report on members' special interests, etc., based on answers to the Questionnaire.

NOTICE TO NEW MEMBERS

(49) Each of you has been sent a copy of the BRS Constitution. Please read it through. We expect that you will find it satisfactory. If, however, you do not, let us know what your objections are. In the unlikely event that we cannot resolve our differences to your satisfaction and to ours, we will -- regretfully -- annul your membership and refund your dues.

* Note:if we do not hear from you by July 31, 1974 (or by 3 months after your enrollment, whichever period is longer,) we will assume that you find the Constitution satisfactory and agree to abide by it.

* * * * *

LOOSE ENDS

(50) Re the press releases that were sent to your home-town or home-campus newspapers: if you don't see the publication regularly, and don't know -- but would like to know -- whether the press release was used, visit the publication's office next time you are in its neighborhood, and look at back issues for the week or 10 days following the date of release (Feb. 20 or 27.)

* If you find the story, send us a clipping or copy, please.

* * * * *

SMALL TALK

(51) Bob Davis says he likes the photo of the founding members, at the February meeting, but feels that Jack Pitt and Lee Eisler stole the show. (Lee says he thinks he -- Lee -- stole too much Red Hackle, and it shows.)

* * * * *

MISCELLANEOUS

(52) Note to Chairmen: in future reports on your activities, please -- when possible -- tell something about your intentions as to future activities (immediate future and long-range future), so that members who are interested in that kind of activity or project can write to you about it.

(53) To address all members:if you have a question or request that you'd like to put before the membership, via the next Newsletter, send it to Box 409, R.D. 1, Coopersburg, Pa. 18036

SCIENCE / MEDICINE

Chemical arsenal growth denounced

By Gobind Behari Lal
Science Writer

LOS ANGELES — The American Chemical Society's annual meeting opened

here today with a University of California biochemist's denunciation of America's expanding chemical warfare arsenal

He blamed President Nixon for U.S. failure to ratify a 49 year old international protocol on chemical warfare agents.

The Army's top chemist defended U.S. policy.

Keynote speaker, U.S. Rep. Wayne Owens of Utah, said the public must understand the issues and influence Congress' position.

The Army wants to spend \$200 million on new binary agents in the next few years, with expenditures eventually reaching \$1 billion.

Binary Agents are lethal nerve gases composed of two chemicals, harmless until mixed in a weapons system.

An apparent majority of the society agreed with UC Berkeley biochemistry professor Dr. John Neilands, who laid the blame for proliferation on President Nixon.

"The failure of the U.S. to ratify the 1925 Geneva Protocol on Chemical and Biological Warfare," he said, "has resulted in the continued making and storing of these weapons.

"President Nixon must be held personally accountable for this failure," Neilands said. There had been moves

to implement the pact, but the President had excluded herbicides and teargasses from the weapons to be banned, since both types were heavily used in the war in Vietnam, he explained.

"The important thing now is to induce the U.S. to conform to the general informed opinion on the definition of chemical weapons and the scope of the Geneva Protocol," he concluded.

Army chemist Col. William E. Dismore Jr., chief of the chemical branch of the chemical and nuclear division of the Army chemical Corps defended the planned weapons.

"A small but important part of our deterrent capability is chemical weaponry. The Army's approach to modernization of the deterrent chemical weapons stockpile is compatible with U.S. objectives of negotiations for effective chemical arms restraint."

Dr. Robert Roberts, a social chemist of the Midwest Research Institute in Kansas City, argued that chemical weapons will not prevent or win a war.

SCIENCE COMMITTEE CHAIRMAN CALLS FOR
BAN ON MILITARY USE OF TEAR GAS AND HERBICIDES

J. B. Neilands, Chairman of the Committee on Science of the BRS, spoke in Los Angeles on April 1 in favor of eliminating tear gas and herbicides from military arsenals. The occasion was the 167th national meeting of the American Chemical Society, an association of 110,000 professional chemists. Neilands, who presided over a day-long symposium on "Chemical Weapons and U.S. Policy", claims that President Nixon's rejection of the tear gas/herbicide ban is the sole reason for failure of the Senate to give advice and consent to ratification of the Geneva Protocol, a 1925 accord which outlaws the use in war of all "chemicals, liquids, analogous materials and devices". The U.S. is practically the only nation, major or minor, which has not yet approved the treaty. According to Neilands, Senator Fulbright will move the Protocol to the Senate floor once the tear gas/herbicide impasse has been resolved.

President Nixon called for ratification in 1969 but made it clear that the measure should not extend to tear gas and herbicides, two agents which had been heavily deployed in the Indochina War. The U.N. subsequently voted 80-3 to classify tear gas and herbicides as chemical weapons specifically disallowed by the Protocol; the three negative votes were cast by Australia, Portugal, and the U.S.

Neilands, a biochemistry professor at the University of California at Berkeley, concluded:

Watergate is a mere misdemeanor compared to the war crimes perpetrated by the Johnson-Nixon Administration in Indochina. Obviously, tear gas and herbicides are coveted weapons in the hands of an imperialist power. Nonetheless, chemists must assume the responsibility to stigmatize these agents along with the nuclear weapons. While general and complete disarmament is a necessary ultimate objective if mankind is to survive, we can advance to this goal and save lives by ostracizing particularly odious (and, in terms of international law, illegal) weapons.

U.S. Panel to Study Steps to Heal Herbicide Damage in Vietnam

By JOHN W. FINNEY
Special to The New York Times

WASHINGTON, April 28—The Defense Department next month will convene a committee from eight Government agencies to study what steps the United States can take to help South Vietnam cope with the ecological damage caused by the American use of herbicides during the war.

The formation of this committee is the first direct United States Government response to a report to Congress in February by a committee of the National Academy of Sciences.

The committee said that the extensive use of herbicides by the United States between 1962 and 1971 had caused "extensive and serious" damage to the inland forests of South Vietnam and had destroyed 36 per cent of the mangrove forests in the Mekong Delta region.

At the same time, the committee found no evidence that the herbicides, which were basically the same as those used for agricultural purposes in the United States, had caused long-term damage to the fertility of the South Vietnamese soil.

Before its publication, the report was the subject of considerable controversy in the National Academy of Sciences, with two members of the committee protesting that the damage to the inland forests was being underestimated by the committee.

Since its publication the controversy has continued, with Dr. Anton Lang of Michigan State University, the chairman of the committee, accusing some unidentified members of the National Academy of having leaked an incomplete, slanted and erroneous summary of the report to The New York Times. An article on a summary of the report was published in The Times on Feb. 22.

The report has meanwhile become caught up in the political controversy over whether

the United States should renounce the military use of herbicides.

To some members of Congress, including Senator Gaylord Nelson, Democrat of Wisconsin, and Representative Wayne Owens, Democrat of Utah, supports their contention that the United States should interpret the 1925 Geneva Convention on chemical warfare to ban the use of herbicides. The Administration has thus far refused to accept this in submitting the Geneva Convention, which has never been ratified by the United States, to the Senate for approval.

The Defense Department, which is the principal opponent within the Administration of a herbicide ban, reached the following "general conclusion" on the report:

"Some damage has resulted from the military use of herbicides in Vietnam. However, most of the allegations of mas-

sive, permanent ecological and psychological damage are unfounded. It should also be remembered that herbicides were used to save American and allied lives in a combat situation, not to collect scientific data."

The herbicides were primarily used to clear away foliage in areas believed to be occupied by North Vietnamese or Vietcong forces, exposing them to attack. The herbicides were also used, to a lesser extent, to destroy crops that provided food sources to the Communists.

The academy report contains a number of what Dr. Lang has described as "strong recommendations." To study what action to take on the recommendations, the Defense Department has decided to convene a committee with representatives from the Defense Department, State Department, Department of Health, Education and Welfare, Agriculture Department, Interior Department, National Science Foundation, Agency for International Development and Environmental Protection Agency.

Aid Agency Short of Funds

One of the committee's principal recommendations was that the United States provide "financial and technical support" to a "Vietnamese effort to cope with the consequences of herbicide use." The committee gave no figure for although the report said that reforestation of the mangrove forests would require "a considerable input of labor and capital.

Without such reforestation, the committee estimated, it would take the mangrove forests "well over 100 years" to recover.

Privately officials expect this recommendation to raise an immediate controversy over which Government agency should assume the budgetary responsibility.

Senator John C. Stennis, Democrat of Mississippi, chairman of the Senate Armed Services Committee, made clear nearly a year ago that he believed the Defense Department should turn over responsibility for further action on the herbicide issue to other agencies. The logical choice, officials suggest, would be the Agency for International Development, but it is already short of funds for its economic aid program for South Vietnam.

The academy committee also recommended "further studies in collaboration with the Vietnamese with a view to promoting greater understanding of the properties of these herbicides, of their peaceful uses and their hazards." The report noted that, particularly among urban populations, the American use of herbicides "came to be an emotionally charged symbol standing for many apprehensions and distresses, especially those for which Americans are blamed."

Other Recommendations

On a more technical level, the academy committee concluded the following actions:

¶A systematic sampling program to determine whether dioxin — a highly toxic sub-

stance in Agent Orange, one of the defoliants widely used in South Vietnam—had found its way into the Vietnamese food chain. The reported noted that there had been preliminary findings that dioxin was present in shellfish in South Vietnamese waters draining areas that had been subjected to heavy herbicide spraying.

¶Intensive studies, once peace has been restored in the Vietnamese highlands, into reports that herbicides caused illness and deaths among children of the Montagnard tribesmen. The reports were based on interviews with Montagnard refugees, but the committee found the reports "so consistent that despite the lack of medical and toxicological evidence" they "cannot be dismissed out of hand."

¶Prompt evaluation of hospital data to determine whether there is any relationship between exposure to herbicides and birth defects. The report said the committee could find "no conclusive evidence" of association between herbicides and congenital defects but acknowledged that the "material available is not adequate for definite conclusions."

Controls Held Adequate

¶Epidemiological studies on whether potential disease carriers, such as mosquitoes and rats, had increased in defoliated areas that might be used as refugee resettlement sites.

¶"Serious consideration" of reforestation of at least part of the mangrove forests, which the report noted play an important role as a breeding ground for fish and shellfish as well as providing fuel for South Vietnamese peasants. With "a massive reforestation program," the report estimated, the destroyed mangrove forests, representing about 0.5 per cent of the South Vietnamese land area, can be restored in approximately 20 years.

¶A "systematic inventory"

as soon as possible of damage to the inland forests, which received three-quarters of the 18.8 million gallons of herbicide sprayed on South Vietnam. About 10 per cent of the inland forest area was sprayed, most of it only once but some areas several times. On the basis of study of aerial photographs, the committee concluded that the herbicides had destroyed 500,000 to 2,000,000 cubic meters of merchantable timber and 5 million to 11 million cubic meters of nonmerchantable timber, with the extent of damage depending heavily on the number of times an area had been sprayed.

These damage estimates were considerably lower than those offered earlier by other scientific groups and they prompted two members of the panel, Pham Hoang Ho of the University of Saigon and Paul W. Richards of the University College of North Wales, to submit dissenting views complaining that the committee report underestimated the damage to the inland forests.

One recommendation that the Defense Department feels is necessary is a proposal that Congress require independent scientific studies of the possible ecological or physiological effects of new weapons proposed by the Pentagon. In commenting on the academy report, the Defense Department said that "adequate control now exists" through environmental legislation.

The academy committee urged that work on its recommendations "be initiated promptly, since any delay will make its accomplishment more difficult."

BIOCHEMISTRY AND SOCIETY

BIOCHEMISTRY 150, SPRING 1974

Staff: J. B. Neilands
Rush Wayne

Schedule: MF, 12:10 - 1:00 P.M., Room 101 Biochemistry Building

Prerequisites: Biochemistry 102; Biochemistry 100A, or consent of instructor

Formalities: 2 units, P/NP; term paper or project; no final or other exams

Information: 642-7460 or 642-7452

TENTATIVE SCHEDULE

Mondays

Fridays

	1	Mathematicians and Society John Kelley, UCB	5	Chemical-Biological Weapons J. B. Neilands, UCB

NEWSLETTER #3
September 1974

- (1) As in previous Newsletters, an asterisk in the left column indicates a request that you may wish to respond to. The abbreviation NL2-4 would refer you to Newsletter #2, Item 4. There are a number of new sections, including one, ABOUT INDIVIDUAL MEMBERS, that — as its name suggests — gives some information about individual members and about the nature of their interest in BR. Item 48 gives a brief listing of members' special interests. Edith Russell and Lester E. Denonn have joined BRS as Honorary Members. There is a particularly good statement (we think) by George Williams on why he values BR (Item 84.) Remarks by members have sometimes been edited and condensed.

* * * * *

REPORTS FROM OFFICERS

President Peter G. Cranford reports:

- (2) President's letters. The "President's Monthly Letter, June 1974" and the "President's Interim Letter" (June 14, 1974) were sent to all members. We repeat 2 items:

"We are now in a sort of shakedown cruise. The ship has been launched and we are engaging in the serious business of sailing it on rough and uncharted waters. The crew has not yet become a unit and hence there are all sorts of uncertain roles, disagreements, self-doubt as to whether one should be a member of the crew, and presumably some doubt as to whether Columbus is going to discover the new route to India.

"Sooner or later we are all going to show up with weaknesses. First with ourselves, and then with others. We need to finesse around weaknesses and capitalize on virtues so that the ship will be adequately and efficiently manned. It will be worth a second and third effort, and even major sacrifices, if we believe 'then conquer we must, if our cause it is just.' There will be no survival for us, our children or our grandchildren, unless someone assumes the responsibility of a massive effort to increase the amount of rationality in the world. This was Russell's cause and it is our cause." (Monthly Letter)

"As to the function of the BRS President himself, I think we should follow BR: 'What I suggest is that no one should learn how to obey, and no one should attempt to command... (A leader's) authority is suffered voluntarily... to achieve a common purpose... Purposes should not be forcibly imposed on others... This is what I mean when I say no one should command and no one should obey.' ON EDUCATION, P. 38, Allen & Unwin, 5th Impression, 1966.) (Interim Letter)

- (3) BRS, current status. "The Society is operating very smoothly at the moment. We have a steady flow of mail coming from and going to members, and it takes several hours a day to keep things current.
"I think we have established ourselves as an organization deserving serious consideration, and the time has come to take a stand on issues."
- (4) BR Peace Foundation sent "a letter (Item 32) to The(London)Times, of 6/20/74 — signed by Edith Russell, Ken Coates, and Chris Farley — protesting Solzhenitsyn's charge in 'Gulag Archipelago' (Volume 2, not yet out) that BR 'in some way connived at, or apologized for, injustice in the Soviet Union.'"
- (5) BR discussion groups. Ken Blackwell, Martin Garstens, Jack Pitt, and Gary Slezak are organizing BR groups.(See Items 13, 15, 16.)
- (6) Honorary member procedure."The election of honorary members hit a snag which Jack Pitt straightened out in a hurry. The membership approved the following procedure: 'A person may be nominated for honorary membership if he/she (a) is a member of the Russell family; or (b) has worked closely with BR, giving him substantial support and encouragement in one or more of his larger projects; or (c) has made a distinctive contribution to some area of Russell scholarship. A 2/3 vote of the membership is needed to confirm the nomination.'"
- (7) By-laws."Jack Pitt has accepted the task of working up a set of by-laws. I have also asked Jack to handle all problems of organization."
- (8) Founders photo. If you signed up (some time ago) for one or more of the photos taken at the founding meeting, the correct, agreed-on price is \$2 per photo. Lee Eisler reports he refused a COD for \$15.40. If any of you were charged more than \$2 per picture, please let me know."
- (9) Welcoming letters."I am writing welcoming letters to all new members."
- (10) Husband-and-wife dues are to be \$15 annually. This is a tentative, executive decision,made because a quick answer was desired. The members will be asked to ratify or revise it, at the Annual Meeting.

Vice-President Robert K. Davis reports:

- (11) Integrating new members. Bob is working to "integrate new members into the organization — to get their ideas, and discover what activities might interest them. Many new members wish to do something constructive and we have to provide them with that opportunity. All committee heads should be thinking of ways to do this. For example, I think that on the International Civil Liberties Committee, we might offer new members either a topic, such as torture, or a country, such as Chile, to specialize in. They could then educate the rest of us, and possibly promote some kind of action. I have been writing to new members with this in mind. The topic should be of their own choosing."

For Bob's report on the International Civil Liberties Committee, see Item 20.

Secretary Jack Pitt reports:

(12)

Edith Russell's letter. Jack sent Edith Russell a copy of the BRS Constitution and the Minutes of the First Meeting. She responded as follows: " I am intensely interested in its founding and have read the document several times with great happiness in the serious purpose and determination that they evince. I send my warmest congratulations to you and the other founders." She urges us not to be discouraged by snags we may strike but to carry on her husband's work.

(13)

BRS(Fresno). The first meeting of this local chapter — BRS(Fresno) — was held May 30th, attended by 12 — 5 townspeople, 5 students, Jack and his wife. In response to the group's wishes, another meeting was scheduled for July, to discuss THE CONQUEST OF HAPPINESS; and another in the Fall, to see a BR movie and discuss it. Jack makes these points: 1) Banks and other organizations have meeting rooms that they will let out free to responsible organizations. 2) So will public libraries. 3) Libraries will usually put posters in all branches announcing the meeting. 4) Libraries often have their own programs — films or discussions — and a BRS chapter might integrate into this. For instance, Jack will put a BR film into the Library series of films; he will benefit by the general publicity that the Library gives to this series, and he will invite the audience to stay after the film to discuss BR and the BRS.

Some problems: (a)"Many of the public are interested in a philosophical-literary society. They are happy to discuss BR and to have a BRS. But they do not have the intensity of interest in BR that most present BRS members have. It would be unfortunate to lose these people, who basically have a 'Great Books' approach. Yet we will lose them if the activities * of the BRS were to be construed narrowly. I invite comment." (b) What * part of the \$12 dues should stay in the local chapter (to pay local * expenses)? (c) Should something extra be offered to the general public, * as an extra inducement to pay the \$12 dues, and if so, what?

(14)

Treasurer Katharine Tait reports, as of June 5, 1974:

Balance on hand (April 4,1974).....	\$841.76	
Income: Founders' pledges, and contribution..	549.99	
Membership dues.....	<u>161.00</u>	<u>710.99</u>
		1552.75
Expenditures: McMaster for 15 "Russell"		
subscriptions.....	45.00	
Information Committee.....	<u>178.46</u>	<u>223.46</u>
Balance.....		1329.29

* * * * *

COMMITTEE REPORTS

Committee on Applied Philosophy (Martin A. Garstens, Chairman):

(15)

Discussion group. The first meeting — of 10 persons including Martin — was held at Martin's house June 17th. At the second meeting, July 15th, the 10 participants discussed THE CONQUEST OF HAPPINESS, "which gives rise to many interesting topics. It is a tremendous challenge to see if one can successfully steer a group of philosophy non-professionals toward an ongoing philosophic activity, stressing in the initial stages self-examination." Things went well, says Martin. The plan is to meet monthly, except for summer vacation interruptions. The next meeting is scheduled for September.

(16)

Committee on Applied Philosophy (Gary M. Slezak, Committee Member):

Discussion groups. Gary's first discussion group — of 11 participants, including himself — met July 6th to discuss COH (THE CONQUEST OF HAPPINESS), which all had read. The discussions are taped. Gary's aims were: 1) "to test BR's ideas on today's younger people; 2) to get a sample of youth's thinking about happiness and the future; and 3) to gain experience for future discussion groups which I plan to hold later at U. of Chicago." Ages ranged from 21 to 26. The adverse criticisms are interesting:

. "The book is too simplistic. Real life is never so predictable.

. "The book is dated. Some wished BR had revised COH to make it more relevant to today's world. Many things which today cause great unhappiness are not included, e.g., the population explosion, the Bomb, etc.

. "The book is elitist. Some found BR a bit too detached from the mainstream of existence. One said: 'He talks about the common man but his examples are somewhat clumsy and condescending...you can tell he's an aristocrat who's never had to experience what most people have.' Many felt this way. Several reacted against BR's reference to happy colored people.

. "The book is sexist. All but one of the women — 5 out of 6 — resented what they felt to be generalizations about women, especially in the chapter on envy.

. "The book is 'too rational'. A genuine misunderstanding — and perhaps mistrust — of rationalism was evident throughout the discussion. One person opposed BR's advocacy of an orderly mind, another attacked his advice on making decisions in a rational manner. Some felt that rational methods made one less human, despite the argument that since only man is capable of rationalism, any increase would make him more human, not less."

On the other hand, "most found BR's chapter on 'the sense of sin' very good. All had been reared in a strong religious environment; none felt that religion had given them much satisfaction, and many attributed this to the reasons BR mentions in this chapter."

Gary plans to meet with 3 more discussion groups before our February 1975 meeting, at which time he will report his findings, including selected transcripts of the tapes — "expletives included," he says.

Information Committee (Lee Eisler, Chairman):

- (17) Advertising. The classified ads in SATURDAY REVIEW/WORLD, 5/4 and 7/21, produced good results. A 3rd ad is scheduled for 9/21. The ad in THE NEW YORK REVIEW OF BOOKS, 5/2, did poorly.
- (18) Membership. To date (8/16/74) we have mailed 64 "information packages" (including an invitation to join) to persons who inquire about the BRS or whose names are suggested by other BRS members. Suggest names,
* please.
- (19) Newsletters. "I put together — and mail— the Newsletters. They are sent to members, honorary members, and to the BR SOCIETY IN JAPAN, the BR SOCIETY IN AUSTRALIA, and the BR PEACE FOUNDATION (England.) Back issues are sent to new members."

International Civil Liberties Committee (Robert K. Davis, Co-Chairman):

- (20) Amnesty International. "I have joined this group. It provides a great deal of information. It selects 3 people per month to mount campaigns for — one from the East, one from the West, one from the Third World. They are selected regardless of ideology but they must not have committed nor advocated acts of violence; they are usually in prison for their opinions. The campaign consists of writing letters to officials of the offending country, protesting the situation and asking for redress." Bob may poll BRS members as to whether they wish BRS to take part in some future campaign.
Bob also belongs to ACLU and has recently joined the International League for the Rights of Man.
- (21) United Nations Declaration. Bob has provided the enclosed folder, UNIVERSAL DECLARATION OF HUMAN RIGHTS, containing the text adopted by the General Assembly in 1948.

Committee on Science (J. B. Neilands, Chairman):

- (22) "The argument against chemical weapons is that they are indiscriminate, apt to involve non-combatants, and excessively cruel in the sense that survivors may be debilitated for life. They were outlawed by the 1925 Geneva Protocol, a measure that Nixon wants the Senate to ratify in a compromised form, i.e., one that would sanction the use of tear gas and herbicides. Watergate is just a caper compared to the crimes committed by LBJ and Nixon in Indochina with the use of these agents. Read about it in 'Harvest of Death,' J. B. Neilands et al., Free Press, 1972."
- (23) Letter to BR Peace Foundation. "Dear Ken (Coates), I have your circular regarding an organized campaign to curb suppression of political dissent in the USSR and Eastern Bloc European countries. Do you think it would be useful if a commission of The Bertrand Russell Society were to visit the USSR to interview scientists regarding their freedom to travel, their rights to political dissent and the general quality of their academic and professional lives? The commission

could report first to our members and then to the media and the various professional science societies to which we belong. I look forward to hearing from you soon." (dated 8/1/74)

Activities under consideration:

- (24) Symposium. Joe may try to interest a professional science society in co-sponsoring — with BRS — a major symposium with social significance, at the science society's annual meeting.
- (25) Anniversary. "This October will mark the 10th Anniversary of the student uprising, the Free Speech Movement, at Berkeley, which sparked similar movements elsewhere. The BRS might salute this date with an appropriate symposium. The 1964 Free Speech Movement needs to be analyzed from the perspective of a decade of elapsed time. In the years which followed Nixon's and Reagan's coming to power, a lot of people died in Indochina and we got Watergate. We need to assess what needs to be done to enhance our civilization and preserve the biosphere in a reasonably habitable form for all living things. We could recruit the core of the speakers locally and possibly raise travel expenses for the others via an advance from a publishing house. "There is also a possibility that this Anniversary can be made part of a course I am going to supervise here in the fall Quarter."
- (26) Rider. "I am trying to get a Congressman interested in attaching a rider to all federal grants for basic research which would require a showing of social responsibility on the part of the principal investigator. At the very least, this would generate a lively discussion. I would plan to circulate a draft of the legislation among ourselves, in the Newsletter, etc., before going public with something that might be half-baked and liable to embarrass the Society."

* * * * *

ABOUT BR'S WRITINGS

- (27) Which book(s) got them started on BR? Members were asked, on the QUESTIONNAIRE, "What was the first thing written by BR that you read?"

3 said THE PROBLEMS OF PHILOSOPHY
3 said WHY I AM NOT A CHRISTIAN
2 said MARRIAGE AND MORALS
2 said THE CONQUEST OF HAPPINESS

The following titles were mentioned once: AUTOBIOGRAPHY, A HISTORY OF WESTERN PHILOSOPHY, THE SCIENTIFIC OUTLOOK, WHICH WAY TO PEACE? WISDOM OF THE WEST, UNPOPULAR ESSAYS.

Of the first 3 books read by BRS members, these are the titles and number of mentions:

THE PROBLEMS OF PHILOSOPHY — 5
THE CONQUEST OF HAPPINESS — 4
A HISTORY OF WESTERN PHILOSOPHY — 4
WHY I AM NOT A CHRISTIAN — 4
THE BASIC WRITINGS OF BERTRAND RUSSELL — 3
AUTOBIOGRAPHY — 3
MARRIAGE AND MORALS — 3
UNPOPULAR ESSAYS — 2

These titles are mentioned once: ABC OF ATOMS, ABC OF RELATIVITY, THE AMBERLEY PAPERS, HAS MAN A FUTURE? HUMAN SOCIETY IN ETHICS AND POLITICS, HUMAN KNOWLEDGE, OUR KNOWLEDGE OF THE EXTERNAL WORLD, PROPOSED ROADS TO FREEDOM, RELIGION AND SCIENCE, THE SCIENTIFIC OUTLOOK, SELECTED PAPERS, WAR CRIMES IN VIETNAM, WHICH WAY TO PEACE?

To date (8/6/74) 22 members have returned the MEMBER'S QUESTIONNAIRE. Not every question was answered, which is why the "first thing read" adds up to less than 22.

(28) Over 25. The following members report that they have read more than 25 books by BR: CAMPBELL, DAVIS, EISLER, KAHAN, LACKEY, MILNE, PITT, SLEZAK, WILLIAMS.

(29) COH as a starter. Peter Cranford has given away over 700 copies of COH, to friends, and to people who see him professionally. Gary Slezak has given 50 copies "to family members, to friends, and to friends of friends. It was easy." People whose first taste of BR comes via COH often discover they like BR and want to read more of him. But see Item 16.

* * * * *

ABOUT BERTRAND RUSSELL

This section will deal with everything about BR except his writings, such as his experiences and activities, his influence, his personal qualities.

(30) BR and computers. "...workers in computing machine design are indebted to previous workers in logic and hence obviously to Russell for the monumental 'Principia'," writes Dr. Warren L. Semon, Director of Systems and Information Science, Syracuse University, and Chairman of the Editorial Board of COMPUTER. Dr. Semon's letter is reproduced on Page 24.

The following are quotes from A COMPUTER PERSPECTIVE, by the office of Charles and Ray Eames, Harvard University Press, 1973:

"In 1910 'Principia Mathematica' by Bertrand Russell and Alfred N. Whitehead presented the idea that logic is the foundation of all mathematics. It develops the calculus of propositions, solving equations in terms of statements that are either true or false." (P. 121)

"The methods of symbolic 'true or false' logic described by Russell and Whitehead were, in 1937, shown to have practical application to the design of electrical circuits (in Shannon's thesis, 'Symbolic Analysis of Relay and Switching Circuits.'" (Caption to picture of "Principia Mathematica")

* * * * *

"Bush's differential analyzer (1930) was the first general equation solver. It was very successful. And to many people it began to appear that such big general purpose analog computers would dominate scientific calculation in the future.

"I was trying to solve some of the problems of electric circuitry, such as the one connected with failures and blackouts in power networks," said Bush, "and I was thoroughly stuck because I could not solve the tough equations the investigation led to." (P. 117)

"The Bush differential analyzer originally gave its solution in the form of curves." That is, it was non-digital.

"While a graduate student, Shannon took a part-time job operating a Bush differential analyzer. The analyzer's relay circuits needed frequent attention, and Varnevar Bush suggested to Shannon that the design of such circuits would make a good thesis subject."

"In 1937 Claude E. Shannon, for his Master's Thesis at M.I.T., described a way of using symbolic logic to improve electrical switching circuits. In one example, he showed how to simplify an 'Electric Adder to the Base Two.'...Shannon's paper, as it turned out, proved that programming an electronic digital calculator would be a problem, not in arithmetic, but in logic." (Caption)

"Shannon's thesis, published in the 'Transactions of the American Institute of Electrical Engineers' provided a theoretical basis for the entire set of operations that would be designed into electronic digital computers."

(31) Sierra Club's salute to BR. Their ad in the June issue of SCIENTIFIC AMERICAN is reproduced on Page 25.

(32) Solzhenitsyn's error. The following "Letter to the Editor" appeared in The Times (London) on June 20, 1974:

SOLZHENITSYN AND BERTRAND RUSSELL

From Edith Lady Russell and others

Sir, According to volume one of "Gulag Archipelago", the Soviet security services have, in the past, commonly assumed that they are under no obligation to prove the guilt of those whom they have arrested, preferring to allow these victims to establish their own innocence even if that has been virtually impossible in the circumstances of their detention. Solzhenitsyn writes very powerfully, and with just scorn, of this practice, which he rightly sees to be logically invalid and morally reprehensible.

"Unfortunately, if the report from Agence France-Presse which you carried on June 13 is accurate, then in the second volume of the same work Solzhenitsyn himself seems to be guilty of a not dissimilar attitude in at least one respect. When he brackets the name of Bertrand Russell with that of Dr. Hewlett Johnson, and charges that Russell in some way connived at, or apologized for, injustice in the Soviet Union, he is responsible (no doubt from ignorance, but responsible none the less) for a slander against one who consistently opposed

the terror in Russia from the very earliest days of the Revolution.

"If Mr. Solzhenitsyn will look at 'The Practice and Theory of Bolshevism,' first published in 1920, or at any of Russell's other subsequent voluminous writings on the Soviet Union, socialism and related matters, he will very quickly appreciate the serious injustice of his remarks.

"Russell's outspoken critique of repression in the USSR was earning the strenuous denunciations of numerous Soviet apologists at a time when Mr. Solzhenitsyn was, by his own account, deciding whether or not to join an NKVD training school. When Stalin died the BBC invited Russell to submit an obituary. But when they received it they refused to transmit it, because they felt it to be too unflattering.

"In later years, whilst continuously pressing for detente and avoidance of war, Russell persistently defended Soviet writers, scientists and artists from the attacks of the authorities and passionately denounced their repression. More than once he spoke and wrote on behalf of Solzhenitsyn himself.

"It pains us to have to complain in this way about a writer who has conducted himself with such courage in the face of oppression: but if your report is true, then Solzhenitsyn has done a great wrong to Bertrand Russell, and we earnestly hope and expect he will hasten to correct it.

"Yours sincerely,

EDITH RUSSELL

KEN COATES

CHRIS FARLEY

The Bertrand Russell Peace Foundation, Ltd.

Gamble Street, Nottingham

June 14 "

Ken Blackwell adds the following:

"The falsity of Solzhenitsyn's charge is demonstrated by Russell's preface to Gustav Herling's 'A World Apart', the autobiography of a Siberian prisoner, and by a chapter in Freda Utley's 'Odyssey of a Liberal,' where Russell battled with Shaw to get her husband out of Siberia."

- (33) The obituary of Robert Rounseville — who played the title role in the 1956 Broadway musical production of "Candide" (of which there is a superb Columbia LP) — states: "At the time of his death, he was completing plans to appear this fall in a one-man show, 'Guided Tour of Intellectual Rubbish,' based on the life and writings of Lord Bertrand Russell, the British philosopher." (New York Times 8/8/74)

* * * * *

NEWS ABOUT MEMBERS

- (34) IRVING ASHKENAZY has a story — "The Business of Urchins" — in WESTWAYS (July 1974) that will interest lovers of the sea, says Peter Cranford.

- (35) AMY P. BLOCK graduated with honors in biochemistry from the University of California, Berkeley, in June, and is now a graduate student.
- (36) PETER CRANFORD. "I have been in a long fight against the Army on behalf of two patients. It has proceeded from the lower echelons to the Pentagon and Secretary of Defense Callaway. In substance, I and a chaplain recommended a compassionate re-assignment for a black sergeant whose wife was suicidal. The stress upon both was so acute that I predicted a breakdown for him and probable death for her. The sergeant did break down and is now psychotic, and the wife made an attempt that was aborted by one of the members of my staff. Eight children are involved."
 Two weeks later: "I was able to convince the Secretary of the Army to over-rule the Pentagon, and Anthony is on his way home. Anthony is only the tip of the iceberg. The blow of a thousand blows, which I have mentioned before, is to see how this case can be used to help those who are intimidated by the Army's Catch 22, "If you are having a hardship, take a hardship discharge." Since there was considerable Army sentiment for Anthony, I suspect that it was the absence of a democratic process that was (and is) the real villain."
 Jack Anderson had a fairly long version of the story in his column of June 5th.
- (37) JOE NEILANDS gave a one-month lecture course in Peru this summer, at the University of San Marco, oldest university in the New World, founded in 1551. They gave Joe an Honorary Professorship, a gold medal, and "a visit to the Inca ruins for the whole family."
 Joe has edited — and written an introduction to — MICROBIAL IRON METABOLISM, a volume to be published soon by Academic Press. For the announcement, giving details, see Page 26.
- (38) KATHARINE RUSSELL TAIT has a book about her father scheduled for publication — by Harcourt, Brace, Jovanovich — in February or March 1975. "It is mostly personal reminiscence and reflection on 'Life with Father'. There is quite a lot of domestic detail and stuff like that, but basically it is an answer to the question: what was it like, having BR for a father? There is some discussion of his ideas, of course, but it's not a theoretical book. Nor is it a 100% fan book; Russell buffs may not like it. However, I wanted it to be honest, as my father would have wanted it to be."
 Kate will give an evening course on BR's educational ideas at Dutchess County Community College (where she regularly teaches German) this fall.
- (39) GARY M. SLEZAK is working on an article on BR's stay at the University of Chicago in 1938-39.
- (40) Please do not hesitate to send in news about yourself. You help BRS when you do so. You will not be thought to be seeking the limelight. Such news is interesting to other members. We repeat what we said in the first Newsletter: If you change your job, publish a paper, attend a conference, make a speech, run for office, engage in political activity, picket some villain, etc. please let us know about it. Include any event that occurs in your work or in your life as a citizen, whether or not related to BRS or its aims.

HONORARY MEMBERS

We take special pleasure in welcoming the Honorary Members:

- (41) EDITH RUSSELL is BR's widow, the light of his later years, to whom he tenderly, gratefully, glowingly dedicated his AUTOBIOGRAPHY. For more about her, see the AUTOBIOGRAPHY. For her formal title, see Item 61. Her address: Plas Penrhyn, Penrhyndeudraeth, Merioneth, England
- (42) LESTER E. DENONN has had a distinguished career in law: he recently retired from a leading New York law firm (Simpson, Thacher and Bartlett); has written a number of law review articles; has had 113 book reviews in the American Bar Association Journal, a record number; and his widely-used work, "Secured Transactions under the Uniform Commercial Code," will soon be in its 6th edition.
- Aside from and in addition to all this, he is probably the first Russellite. Not a professional philosopher, not a professional logician, he — like many — is interested in everything BR wrote. His collection of books by and about ER is enormous (he's been at it quite a while); a catalog listing the contents of his BERTRAND RUSSELL LIBRARY runs to some 150 pages. Yet he hasn't merely collected ER, as the following works indicate:

- . THE PHILOSOPHY OF BERTRAND RUSSELL, edited by Paul Schilp. Tudor Publishing, 1944 and 1951. Lester Denonn wrote the 60-page bibliography.
- . THE WIT AND WISDOM OF BERTRAND RUSSELL. Edited and with an introduction by Lester Denonn. Beacon Press, 1951.
- . BERTRAND RUSSELL'S DICTIONARY OF MIND, MATTER, AND MORALS. Edited and with an introduction by Lester Denonn. Philosophical Library, 1952.
- . THE BASIC WRITINGS OF BERTRAND RUSSELL 1903-1959. Edited by Robert Egner and Lester Denonn. Simon & Schuster, 1961.

Consequently, anyone interested in ER is likely (a) to know Lester Denonn's name, and (b) be grateful to him for his contributions to ER scholarship and for helping to make available a good sampling of what ER wrote. His address: 135 Willow Street, Brooklyn, NY 11202.

* * * * *

NEW MEMBERS

- (43) We are very glad to welcome these new members:

Fred W. Allendorf, 2725 Montlake Blvd. E., Seattle, WA 98112
 Noel F. Ambery, Warren Turnpike Road, Falls Village, CT 06031
 Mary Axel, 554 Fifth Avenue, New York, NY 10036
 John A. Butler, Lecturer in English, School of Basic Studies,
 Ahmadu Bello University, Zaria, Nigeria
 Capt. Herb A. Campbell, PO Box 231, Wisconsin Dells, WI 53965

Dr. Elizabeth R. Eames, Department of Philosophy, Southern Illinois University, Carbondale, IL 62901

Bonnie Flanagan, 604 Second Street, Alice, TX 78332
 Dan Freedman, 4 Lakeview Road, Deal, NJ 07723
 Dr. Edwin E. Hopkins, 352 S. Drew Street, Baltimore, MD 21224
 Charlotte H. Kaplowitz, 317 Terhune Avenue, Passaic, NJ 07055

Dr. Marvin Kohl, Department of Philosophy, State University College,
Fredonia, NY 14063
Alfred C. Kwok, Box 7634, University Station, Austin, TX 78712
Dr. Charles R. Magel, Department of Philosophy, Moorhead State College,
Moorhead, MN 56560
Col. Robert L. Perley, Rt. 1, Box 189c, Murphy, NC 28906
Evelyn V. Reader, 8315 Loring Drive, Bethesda, MD 20034

Rebecca Sue Ringer, 702 Gove Street, Quinter, KS 67752
Dr. Harry Ruja, Department of Philosophy, San Deigo State University,
San Deigo, CA 92115
Ronald C. Rybnikar, 29 Chicjon Lane, East Hanover, NJ 07936
Hildburg Scheu, Apt. 12, 15 Amos Avenue, Waterloo, Ontario, Canada
Glerma M. Stone, 3340 Oakridge Drive, Augusta, GA 30904

Rodney L. Thomas, 226 N. Lincoln, Kent, OH 44240
Gene Tuck, Box 435, Exeter, NH 03833
Dr. Atwell R. Turquette, Department of Philosophy, University of
Illinois, Urbana, IL 61801
Dr. George Williams, Burlington County College, Pemberton-Browns Mills
Road, Pemberton, NJ 08068

(44) Membership total: There are now 48 members, plus 2 honorary members.

(45) Trial membership. Since the BRS is an unknown quantity to people who do not belong to it, we are offering trial memberships. Our Letter of Invitation ends this way: "You may join on a trial basis. Dues are refundable on request any time during the first year of membership."

* * * * *

MEMBERSHIP ANALYSIS

(46) Why they join BRS. According to answers on the QUESTIONNAIRE, most members have joined BRS for one or more of the following 5 reasons:

- . to learn more about BR — about the man, about his writings, about his ideas and aims.
- . to be in touch with like-minded people, who share my interest and enthusiasm.
- . to further BR's purposes, to promote his ideas and aims.
- . to do something useful for others by being part of a group that aims to carry on BR's work.
- . to be able to discuss BR's work with others who share my interest and enthusiasm.

Some other reasons mentioned:

- . to have a positive effect on my thoughts and behavior.
- . to help with my teaching and service to the community.
- . to do my part in spreading his ideals and message.
- . to be identified with BR (whom I greatly admire) through the BRS.
- . to spiritually profit by joining.

- . to change BR's U.S. image.
- . to discover the special BR-interests of other Russellites.
- . I joined because I believe in what BR believed.

Implicit in many of the above reasons is the desire to learn — and perhaps to teach others — how to live the Good Life.

(47) Occupations of members. BRS is not a scholarly organization, but 24 of its 48 members are affiliated in one way or another with colleges and universities. Included among the 24 are 11 professors of philosophy, 4 graduate students, and 6 undergraduates. The membership list also includes an architect, an archivist,, a biochemist, a river captain, a retired Army colonel, a master electrician, several engineers, a marketing specialist, a psychologist, a physicist, an English teacher, a German teacher, several writers, and a self-styled laborer.

(48) Members' special interests. Members were asked, in the QUESTIONNAIRE, "What subjects or topics that BR deals with are you particularly interested in?" Here are their responses:

AMBERY:atheistic ethics BEATTIE:philosophy of man/epistemology
 BLOCK:everything/especially mis-use of science CAMPBELL: humanism/
 peace DAVIS: everything/especially BR's non-technical philosophy
 EISLER:ethics-politics-power/science/history GARSTENS: everything
 R.A.HYMAN:BR's general logical,rational approach to life JACKANICZ:
 ethics/religion/philosophy(except logic)/ contemporary society/
 history/BR's life and experiences JOHN: BR's commonsense philosophy
 of living in harmony with all elementsKAHAN: social and political
 ideas KONG: avoidance of nuclear war/ BR's religious ideals LACKEY:
 history of BR's logic MILNE: all NEILANDS: peace/disarmament/anti-
 imperialism PITT:BR's logic and mysticism ROBERTS: philosophy in
 general/logic/theory of knowledge/religion RYBNIKAR: agnosticism/
 Christianity SLEZAK: social philosophy, ie.politics/history/
 education/ religion STONE: man's relations with others, as a
 caring person in society TAIT: education TUCK: epistemology
 WILLIAMS: logic/epistemology/ BR's political and social concerns

* * * * *

QUESTIONS AND ANSWERS, AND REMARKS

(49) Richard A. Hyman, responding to NL2-46, suggests the following Russellite statement:

"The most important thing we have to offer Russellites is the opportunity to serve themselves in a very worthwhile and fulfilling manner, if their interests are in this area."

* * * * *

SPECIAL REQUESTS

- (50) "1976". Gary Slezak has volunteered to take charge of Project "1976" — the proposed collection of BR quotes on America, to tie in with
* America's Bicentennial in 1976. (NL2-45). Please send BR quotes on America, both complimentary and uncomplimentary, to Gary. (Item 58 gives his new address.) Write or type the quotes on 4 x 6 cards, and write your name on the back. Thanks!
- (51) Questionnaire supplement. We plan to send all members a MEMBER'S QUESTIONNAIRE SUPPLEMENT requesting the following additional information: phone, name of colleges and universities where you obtained degrees (if any), name of your present employer, your specialty, your hobby, your recreational interests, your age. We'd like to know your age because it will help in our long-range planning. We'd like to know your specialty and hobby so that when some question comes up that falls within your area of interest or expertise, we can refer it to you. As in the original Questionnaire, answers are optional. If there is any other item
* or question you'd like to see included in the SUPPLEMENT, please send it to the Newsletter (Box 409, R.D. 1, Coopersburg, Pa. 18036.)
- (52) Short BR biography. BRS could make good use of a short, skeleton biography of BR; just the bare bones. Each event should get a paragraph; paragraphs
* should be numbered; titles for further reading should be included. Will someone volunteer to do this?
- (53) * Courses on BR. If you know of any courses on BR being given anywhere this fall, please tell us.
- (54) Greeting card. Bob Davis wants to put together a "Season's Greetings" card, with some appropriate quote from BR and a suitable design. ("I borrowed the idea from 'The Humanist in Canada'," says Bob.) Anyone with ideas, please forward them. "Ken, anything you can suggest for a cover — a design or picture that BR was fond of? How about the recipe for Lord John's pudding?"

* * * * *

FINANCES

- (55) A generous contribution has been made to our not exactly robust bank account by Corliss Lamont. It is much appreciated.
- (56) Money, money, money. If any of you are in position to donate extra money — that is, money in addition to dues — to the Society's treasury, it will be very welcome. Several projects are being explored — the possibility of publishing a book, of making replicas available of Jacob Epstein's head of BR — that we'd like to be in position to go ahead with. For projects like these, we need extra money. If you find you can make a contribution, send it, any time, to Hurst John, Chairman, Finance Committee, 2011 Country Club Road, Columbia, Mo. 65201.

Also, if you can contribute extra money in future on a regular annual basis, write Hurst John and say, "I expect to contribute \$XX to the BRS annually," so that he can have an idea of how much money will be coming in.

Contributions or statements of intentions will not be announced (except in special cases). When BRS becomes a non-profit organization, legally, then contributions will be tax-deductible.

* * * * *

RECOMMENDED READING

(57) By BRS members:

Elizabeth Eames. BERTRAND RUSSELL'S THEORY OF KNOWLEDGE. Allen & Unwin, 1969. Recommended by Peter Cranford.

Douglas Lackey. ESSAYS IN ANALYSIS. George Braziller, 1973. Essays by ER, selected by Dr. Lackey, who also wrote the introduction. Recommended by Peter Cranford.

Corliss Lamont. VOICE IN THE WILDERNESS: COLLECTED ESSAYS OF 50 YEARS. Prometheus Books. Recommended by Bob Davis.

Jack Pitt. WITH RUSSELL AT THE ARCHIVES, an article in "Russell 2" Recommended by Peter Cranford.

By a non-member:

Karl Popper. THE OPEN SOCIETY. "His defense of democracy in Volume 2 is well worth reading in the light of Watergate," says Peter Cranford.

* * * * *

ADDRESS CORRECTIONS & CHANGES

(58) The following 6 new addresses replace the addresses in NL2-4,8:

- Lorraine C. Beattie, Faculty of Arts, Department of Philosophy,
University of Waterloo, Waterloo, Ontario, Canada N2L 3G1
- Amy P. Block, Apt. A, 2328 Roosevelt Street, Berkeley, CA 94703
- Dr. Martin A. Garstens, Senior Fellow, Department of Physics and
Astronomy, University of Maryland, College Park, MD 20742
- Dr. Don D. Roberts, Faculty of Arts, Department of Philosophy,
University of Waterloo, Waterloo, Ontario, Canada N2L 3G1
- Gary M. Slezak, Head, Curriculum Laboratory, Regenstein Library,
Room 471, University of Chicago, Chicago, IL 60637
- Dr. Katharine Tait, 18A Kirchner Avenue, Hyde Park, NY 12538

MISCELLANEOUS

- (59) Let us know if your Newsletter arrives battered. We may have to use a heavier mailing envelope.
- (60) Let us know if your address is incorrect.
- (61) Concerning the mysterious ways (to Americans) of English titles: Ken Blackwell advises that a letter to Edith Russell could be addressed in any 1 of 3 ways: The Countess Russell; Edith, Countess Russell; Edith, Lady Russell. Inside, the letter would start off, "Dear Lady Russell," etc. She signs herself "Edith Russell"

* * * * *

ABOUT INDIVIDUAL MEMBERS

- (62) NOEL F. AMBERY, of Falls Village, Conn., Master Electrician, began his Russell reading with THE ABC OF ATOMS. He is specially interested in BR's atheistic ethics. He joined BRS because he "would like to know more of Bertrand Russell." He'd like BRS (1) "to educate the public on the harmfulness of modern mythology (religion);" and (2) "to educate the public on the harmfulness of future wars." He belongs to "Americans United for Separation of Church and State." and "Society of Separationists."
- (63) LORRAINE C. BEATTIE, of Waterloo, Ontario — a graduate student and teaching assistant in Philosophy at Waterloo University, who attended the Founding Meeting — first read THE PROBLEMS OF PHILOSOPHY, THE THEORY OF DESCRIPTIONS, and THE BASIC WRITINGS (part), in that order. She is specially interested in BR's "philosophy of man" and epistemology. She was taken with BR's "straight-forward rational approach...as well as the penetrating insights..." She values his "reasonableness, his undogmatic attitude that's reflected in a willingness to revise earlier positions..." She joined BRS to "become more familiar with BR's life and ideas and with the interests of other Russellites." She is keenly interested in the Committee on Applied Philosophy's efforts to "promote a philosophic attitude in everyday life." She hopes to have her Ph.D. by December 1974.
- (64) AMY P. BLOCK, of Berkeley — a graduate student in Nutrition at University of California — first read the AUTOBIOGRAPHY (III), then HUMAN SOCIETY IN ETHICS AND POLITICS, then MY PHILOSOPHICAL DEVELOPMENT. She is interested in everything BR has written, and wants to have it all read by the end of 1974. (!) She is specially taken with BR's integrity, and with his insights into human behavior. She joined BRS (after hearing about it from her Professor of Biochemistry, Joe Neilands) because she wants to become a Russellite. She'd like BRS (1) to work to win U.S. adherence to the Geneva Protocol outlawing chemical warfare (discussed in NL2-30): and (2) to promote BR's philosophy.

(65)

HERB A. CAMPBELL, of Wisconsin Dells — a semi-retired River Captain, and retired musician, First Class, USN — has read most of BR. He is specially interested in the BR Peace Foundation and in BR's association with Whitehead. (Whitehead's ADVENTURES OF IDEAS — 1932 — was "the first heavy book in my life.") He was specially taken with BR's "humanism", his peace activities, and his sense of humor. He values BR's rational approach to mysticism; "BR was not an atheist." He joined BRS because of "my interest in BR's approach to the humanities, and because of my personal devotion and admiration for this man and mind of the Century." He'd like BRS to "win more acclaim and recognition for BR and for his motives."

Some years ago he printed at his own expense 10,000 copies of BR's A NEW APPROACH TO PEACE, a 5000-word pamphlet on the then newly formed Bertrand Russell Peace Foundation, for which BR expressed his appreciation in a letter dated 4/29/66. He has distributed these pamphlets to the "many university centers I visit, to my many friends in the American Federation of Musicians, and to my federal and state representatives."

At Wisconsin Dells — "a major scenic attraction of the Mid-West" — he has also been in charge of public relations, and has written a number of attractive pamphlets, one of which (with handsome pictures) has sold more than a million copies. He has kindly offered to send them to any BRS member who writes him requesting them. (PO Box 231, Wisconsin Dells, WI 53965) They will also be available for BRS members to look at, at the February 1975 Meeting.

He recalls with pleasure the time he and BR became partners (sort of) by consummating a gigantic transaction. It seems that BR had written that he collected rivers, but that his collection contained only Eastern rivers (Ganges, Yangtze, etc.) and he offered to trade with someone who had Western rivers. "I, as a River Pilot, offered him a trade — Mississippi, Orinoco, Amazon, etc." BR accepted, suggesting that they both might jointly own all the rivers. — a proposal which Captain Campbell found entirely satisfactory.

Captain Campbell wants to devote himself "to the promotion of ideas promulgated by Russell."

(66)

PETER G. CRANFORD, Ph. D. of Augusta, Georgia — BRS President — left home at age 15, and 50 years later founded The Bertrand Russell Society. In between, he acquired a Ph. D. and became a clinical psychologist; wrote 2 books on popular psychology; originated the \$64 Question (later the \$64,000 Question); and fathered 5 children. He came across BR's writings by accident; in a bookstore, looking for a book to recommend to patients, his eye lit on a book titled, THE CONQUEST OF HAPPINESS. That's how it all began.

(67)

ROBERT K. DAVIS, of Los Angeles — BRS Vice President, salesman, former teacher — has read "roughly 65-70 of BR's books, and many articles and letters at the Archives." He is "interested in everything BR wrote, but especially the non-technical philosophy." He was taken with BR's "forceful, clear style and the scintillating rationality." (He first read MARRIAGE AND MORALS, then WHY I AM NOT A CHRISTIAN, and THE PROBLEMS OF PHILOSOPHY.) He also values BR's "Renaissance mind, and moral passion." He joined BRS "to associate with like-minded people, and to further his (and my own) interests. These are reward enough. I want to participate in something that will achieve good things." He'd like BRS to achieve a solid membership, and link up internationally.

Bob's interest in BR "began in adolescence, when he found BR's social philosophy both liberating and intoxicating." He wrote his Master's Essay on BR's activities during World War I. He attended the 1972 "Spheres of Influence in the Age of Imperialism" Conference, hosted by The BR Peace Foundation, in Linz, Austria, and the 1972 Centenary at McMaster.

He is also Co-Chairman of the Committee on International Civil Liberties.

- (68) LEE EISLER, of Coopersburg, Pa. — Chairman of the Information Committee, former advertising writer — has read about 45 books by BR, starting with THE SCIENTIFIC OUTLOOK, HUMAN SOCIETY IN ETHICS AND POLITICS, and HUMAN KNOWLEDGE. He is specially interested in BR's writings in ethics-politics-power, science, history. He was taken with BR's intellectual honesty and competence, and with his ability to write interestingly and with clarity and precision, especially on the topics just mentioned. He values BR's "liberating views on morality, his intelligent approach to promoting mankind's well-being, his pursuit of enlightenment, happiness, and peace." He joined BRS because BR "has been my chief interest for a number of years, to learn more about BR, and to be in touch with other BR-enthusiasts. Also I like being identified with BR through the BRS." He'd like BRS to (1) develop a brief statement of BR's own aims and purposes, and (2) attract more Russellites. He has written a short book based on BR's views on morality, MORALS WITHOUT MYSTERY, which BR said a few kind words about.
- (69) MARTIN A. GARSTENS, Ph.D., of Silver Spring, Md. — Chairman, Committee on Applied Philosophy; Senior Fellow, Department of Physics and Astronomy, University of Maryland — is interested in everything BR wrote. Philosophically, he considers BR's "big contribution to be the demonstration of the central role logic must play in Philosophy and Life. But not the only role." He joined BRS to associate — and have discussions — with like-minded people, and to participate in furthering BR's ideas. He is conducting a BR discussion group. (Item 15)
- (70) RICHARD HYMAN, of New York City — a sales and marketing specialist — has read MARRIAGE AND MORALS and THE CONQUEST OF HAPPINESS. He is specially interested in BR's "general logical and rational approach." He values BR's "power not only to have thought it all out but his ability to translate it into words so that people like myself can learn and use his ideas to a practical advantage." He joined BRS in the hope that "this association will have positive effects on my thoughts and behavior and that I can have a more positive effect on people I associate with, as a result." He says he has been living an empty life, and that now, BR's philosophy "gives me the chance to grow and change it."
- (71) DONALD W. JACKANICZ, of New York City — a graduate student at New York University, in Modern European History, chiefly interested in Great Britain, Germany and Russia, and the general period 1890-1945 (he also has a B.A. in Philosophy) — has read 15 of BR's books, starting with WHY I AM NOT A CHRISTIAN (a title he found startling), THE PROBLEMS OF PHILOSOPHY, and UNPOPULAR ESSAYS. His special BR interests include ethics, religion, philosophy (except logic), contemporary society, history, BR's life and experiences. He was taken with BR's "fine writing style, including elements of expressive humor, well-directed emotionalism, and simple reasoning, especially in the non-technical books/essays; in philosophy and politics, his distinction between what can be known (through science alone) and what by its nature cannot be known but only desired (these being the things of value in life.)" He specially values BR's "continuing efforts in a variety of social concerns with which I identify; his exciting life; (from a historian's viewpoint, his life may be understood as reflective/representative/indicative of certain contemporary British and world developments;) his excellence in writing. Discovering "Russell" enhanced his BR interests; consequently, he joined BRS because "I thought

in some way I would spiritually benefit by becoming connected with it. I value the sheets I have thus far been mailed." He'd like BRS to (1) "help spread BR's ideas throughout the world (including translation projects), so that individuals may consider BR's approach to life, its troubles, and happiness; and (2) sponsor research on BR's role in philosophy, history, education theory, etc."

"I feel BR was a monumental figure in certain disciplines and a perceptive one in most others; I may do work on his life and contribution for my dissertation, but at present this is uncertain."

(72)

HURST JOHN, of Columbia, Mo. — Chairman of the Finance and Annual Meeting Committees, architect and consultant — was drawn to BR as a result of reading WISDOM OF THE WEST and THE CONQUEST OF HAPPINESS. He is specially interested in BR's "commonsense philosophy of living in harmony with all elements." He was taken with BR's "open-minded expressions, clear thinking, honest explanations, straight-forward challenges, harmonious expressions — ingredients present in all men of integrity." He specially values that fact that BR — "like all other free thinkers — made it clear that every living soul is an important total being worthy of his living." He joined BRS because he felt it would contribute to "awareness and awakening," to "sharing the joy of living," to "feeling worthy," and to "doing what I believe in." He'd like BRS (1) to "share our enthusiasm for reality, so as to inspire a thousand participants;" (2) "to become a stepping stone to BR's kind of freedom;" and (3) to generate an awareness of universal knowledge as reflected in BR's writings."

(73)

GERALD KAHAN, of Randallstown, Md. — a chemical engineer with McCormick & Co. (spice and extract firm), and part-time graduate student (in food science) at University of Maryland — started with THE PROBLEMS OF PHILOSOPHY, THE ABC OF RELATIVITY, and PROPOSED ROADS TO FREEDOM, and by now has read 50 books by BR. He is specially interested in BR's social and political ideas. He was taken with BR's "incisive logic and breadth of knowledge." He specially values BR's "attitude and approach to life." He joined BRS "to meet people with similar interests." He'd like BRS "to solidly establish itself." He has suggested that BRS consider doing these projects: (1) a documentary film on BR; (2) a biography of BR for young readers; (3) a display package illustrating BR's life and work, for museums, libraries and colleges.

(74)

DARRELL KONG, of Fresno — a student at California State College (where Jack Pitt is his Professor of Philosophy) — has read A HISTORY OF WESTERN PHILOSOPHY, THE CONQUEST OF HAPPINESS, and numerous articles on nuclear warfare and on religion. He is specially interested in BR's efforts to avoid nuclear warfare and in BR's views on religion. He was much taken with BR's protest against World War I and the Vietnam War. And BR's "constant attacks" on the dogmas of established religions "inspired me greatly." He specially values BR for his "philosophical thoughts and for THE CONQUEST OF HAPPINESS." He joined BRS to learn more about activities centering around BR, and wishes "to do my part in spreading his ideals and furthering his work, so that peace and joy can be for everyone." He'd like BRS to make speakers available, who talk informally at public meetings about BR in relation to present problems.

- (75) DOUGLAS LACKEY, Ph. D., of Wayne, N.J. — Assistant Professor of Philosophy at Baruch College of the City University of New York — has read about 55 books by BR, starting with WHY I AM NOT A CHRISTIAN, THE BASIC WRITINGS OF BERTRAND RUSSELL, and A HISTORY OF WESTERN PHILOSOPHY. He is specially interested in the history of BR's logic, and recently edited the collection of BR papers titled ESSAYS IN ANALYSIS, published by Braziller (1973) in both hardcover and paperback editions. He was captivated by BR's prose style. What he specially values about BR is "nothing less than the whole corpus of his writing and the spirit all his books convey." He joined BRS feeling that an appropriate function of the Society would be to "act to bring out new editions of BR's works and keep old ones in print." He'd like BRS to arrange for the republication of WHAT I BELIEVE as a separate book.
- (76) JAMES B. MILNE, of Ottawa — an Engineering Procurement Officer (Aerospace) for the Canadian Government — has read with care some 20 of the 65 books by BR that he owns; he has delved into the rest of them, and intends to read them thoroughly too. He began with MARRIAGE AND MORALS. He is interested in all of BR's works, "though I have some difficulty with his mathematical logic and some of his philosophy." (Who doesn't? Ed.) He was taken with BR's "clear thinking, expression, continuity — and I thought he was, for the most part, right." He also values BR's amazing range of knowledge, and the way he writes. "He is, of course, for the most part, still right." He joined BRS because of his interest in BR, and "hopes to discover more on this fascinating man." He also hopes that the U.S. image of BR can be changed. He'd like BRS to (1) make available an inexpensive bibliography of books by and about BR; (2) make available reprints of BR's articles; (3) provide "information on the people carrying on BR's philosophy and ideas where BR left off"; (4) make available transcripts, records and tapes of BR's radio and TV interviews. (1) above should also contain price and where-to-buy information.
- (77) J.B. NEILANDS, Ph.D., of Berkeley — Chairman, Committee on Science; Professor of Biochemistry, University of California; member, 3rd Commission of Inquiry, Bertrand Russell War Crimes Tribunal, North Vietnam (1967); founder, Scientists' Committee on Chemical and Biological Warfare (1968); co-author, "Harvest of Death — Chemical Warfare in Vietnam and Cambodia," Macmillan, 1972; early critic of nuclear power, author of pamphlet, "Industrial Radiation Hazard" (1963); initiator of one of the first citizens' victories against nuclear power plants, at scenic Bodega Bay, California — first read BR's statements and pamphlets on the Vietnam War, then read the AUTOBIOGRAPHY. He is specially interested in BR's views on peace, disarmament, and against imperialism. He was taken with the clarity of BR's analysis of political events, and especially values BR because during the mid-1960s, "at a time when Western intellectuals were equivocal about the Vietnam War, BR came out 4-square against it. He thus displayed admirable qualities of leadership in the intellectual community." He joined BRS because it fits in well with two of his activities, teaching and doing something useful for the community. He would like to see BRS publish a good book, hold a good symposium. He happened to be present at the 1950 Nobel Prize ceremonies, when BR won the award for literature, "but he made zero impression at that time."

- (78) DON D. ROBERTS, Ph.D., of Waterloo, Ontario — Associate Professor of Philosophy at the University of Waterloo, and past President of the C. S. Peirce Society — has read perhaps 10 of BR's books. He is specially interested in BR's views on "logic, theory of knowledge, philosophy in general, and religion." He was (and is) drawn to BR by his "candor, willingness to change his mind; his ability to simplify complicated matters in a way which does not disparage the complications; his power of thought." He joined BRS because he thought he "could help a little at the start."
- (79) RONALD C. RYENIKAR, of East Hanover, N.J. — a senior in Social Studies, Secondary Education, at William Patterson College, and member of the American Anthropological Association, American Ethnological Association, Council on Anthropology and Education, Northeastern States Anthropological Association — read WHY I AM NOT A CHRISTIAN, HUMAN SOCIETY IN ETHICS AND POLITICS, and POWER, in that order, and has thus far read about 10 books by BR. He is specially interested in BR's views on agnosticism and Christianity, and took to BR because "I had finally found someone who felt basically the same way I do about religion in general and Christianity in particular." What he specially values about BR are the 3 passions BR mentions in the prologue to his AUTOBIOGRAPHY as having governed his life: "the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind." He joined BRS in the hope of gaining "a better understanding of the philosophy of BR." He'd like BRS to "try for the best possible communication between members."
- (80) GARY M. SLEZAK, of Chicago — Member, Committee on Applied Philosophy; Head, Curriculum Laboratory, University of Chicago — has read 30 books by BR, starting with THE PROBLEMS OF PHILOSOPHY, AUTOBIOGRAPHY (III), HAS MAN A FUTURE? He is specially interested in BR's social philosophy, meaning BR's views on politics, history, education and religion. He was taken with BR's "moral values, especially his writings on religion and war; and with his concise and witty style of writing." He specially values BR's "search for truth and love; his intellectual honesty and wit; and his moral courage." He joined BRS because "I believe strongly in what he believed, and for the satisfaction of being involved in a very altruistic cause — spreading the 'Good Life'." He would like to see BRS (1) "sponsor a youth conference on rational alternatives," (2) establish campus Russell groups, and (3) "spread BR's ideas and values with the appearance of new books, studies, articles. (A sort of 'neo-Russellism'.) He is conducting group meetings. (Item 16)
- (81) GLENNA F. STONE, of Augusta, Ga. — student at Augusta College, bookkeeper, and Sunday School teacher of adults at 1st Baptist Church — knew BR only by reputation, as an Englishman critical of the U.S., until Peter Cranford gave her a copy of THE CONQUEST OF HAPPINESS. This led her to read SELECTED PAPERS and then THE BASIC WRITINGS OF HERTRAND RUSSELL. She is specially interested in BR's views on "man's relations with others, as a caring person in Society." She was taken with BR's wit and with "his handling of deep subjects in such an easy manner." She specially values BR's (1) "appreciation of the good in man; and his own goodness; (2) his 'gay irreverance'; and (3) his new approach to old problems." She joined BRS because she is eager "to explore philosophy and learn from great minds. BR is tremendously exciting."

(82)

KATHARINE RUSSELL TAIT, Ph.D., of Hyde Park N.Y. — BR's daughter, U.S. citizen, teacher of German, mother of 5 — has read about 20 of BR's books, starting with WHICH WAY TO PEACE? THE AMBERLEY PAPERS, and THE CONQUEST OF HAPPINESS. She likes the clarity and wit of his writings, and is specially interested in his views on education. She particularly values his courage,, integrity, and humor. She joined BRS "out of curiosity, I'm afraid.Hoped to meet people to talk to about his ideas and hopes; perhaps to be able to do something useful." (She says she hasn't regretted her decision to join.) She'd like to see BRS (1) achieve "a larger membership and a reputation for honest, generous help to the oppressed;" (2) set up college study groups; and (3) encourage the publication of articles in various periodicals.This fall she will give a course on BR's ideas on education; and her book about her father will be published early next year.(Item 38)

(83)

GENE TUCK, of Exeter, N.H. — "laborer (wage slave)", who wants no "Mr." in front of his name because he has "an eccentric's distaste for what seems to me to be mere rote convention" — first read UNPOPULAR ESSAYS, then A HISTORY OF WESTERN PHILOSOPHY, then OUR KNOWLEDGE OF THE EXTERNAL WORLD, as he now recalls it. He has read about 10 of BR's works, and is specially interested in epistemology. BR's "understandability" delighted him. He particularly values BR for "his pioneering agitation, his provocativeness, and his fearless enquiry everywhere." He joined BRS because he wants to "get as complete an understanding as I can of everything BR wrote, stood for, hoped for, believed, thought, felt." He'd like BRS to (1) get "all of BR's writings into print, inexpensive print; (2) clarify what BR thought; and (3) work for world-wide application of BR's attitude and practice of free inquiry."

(84)

GEORGE WILLIAMS, Ph. D., of Medford Lakes, N.J. — Professor of Philosophy at Burlington County College — began reading BR essays at age 15, and was impressed by parenthetical remarks about religion at a time when he was "beginning to experience some doubts about religion." After the essays, he read RELIGION AND SCIENCE, then A HISTORY OF WESTERN PHILOSOPHY, and by now has read 30 to 40 of BR's books. He is specially interested in BR's "logical and epistemological theories, and in his political and social concerns." He values BR because BR "exemplifies integrity amidst our valueless cynicism and cynicism amidst our sanctimonious gullibility. When we reach intellectual puberty and discover, consequently, the Pandora box of civilized hypocrisy opening before us, the rare appearance of a Russell encourages that kind of hope which allows us to be cynics, but not valueless cynics. I originally encountered BR during my own intellectual puberty." As to what he most values about BR: "Today I cannot say whether I am attracted more to his innovations in logic and epistemology or to his commitments to social and political responsibility. Both are aspects of the same man." He joined BRS because he wishes "to discuss with others who share my enthusiasm, questions of interpretation of BR's work. Secondly, I would like to help promote the causes and arguments defended by BR." He'd like BRS to (1) publish a collection of currently out-of-print selections by BR and about BR; (2) support internationalism and pacifism regarding new occurrences in politics; and (3) conduct seminars which pursue a better understanding of BR's ideas." He corresponded with BR some years ago and currently "is engaged in writing a comprehensive commentary on his work."

P.S.

(85)

More on COH. Here are excerpts from a letter just in, from Peter Cranford to Gary Slezak, dated 8/15/74. Peter gives his reactions to Gary's discussion group's adverse criticisms of COH (Item 16):

"I was greatly surprised that they were so ambivalent. First, granting that COH has its deficiencies, it is the best there is. They should see what else is available! The most popular and perhaps the best, below Russell, is Dale Carnegie's "How to Win Friends and Influence People." COH is the only book I know of that offers an acceptable starting point for pursuing happiness. It does need an accompanying manual that would give examples of common problems that result in unhappiness and would tell precisely how to go about solving them. I think I could do it but the BRS makes such projects just about out of the question.

"It is true that real life is not too predictable. No two problems are precisely the same, yet there is generally a solution to all of them — except the final one — and BR's method for that one is the best available.

"As to Item Two, the book is limited, I grant; but the problems mentioned (by the group) are dealt with elsewhere by BR — the Bomb, the population explosion, and many others. This is a big problem with BR. " To find out what he thinks about various matters, " you have to read everything he has written. COH should be just a starter...a more or less philosophical one. If your group is working on an applied philosophy, I do not know any starting place other than COH — despite its limitations.

"On Item Four, I agree with your lone woman. The other women may have taken quick umbrage and overlooked the fact that BR directed his remarks to both men and women. BR anticipated the findings of psychology by many years. We now know that there is a pecking order in herd type animals and this holds true for human animals. As a consequence, everyone tries to climb in the pecking order by criticism, etc. and resists the climbing of others. This seems to contribute to a species and individual survival function. The instinct to climb is so strong via "malevolence" (at the sacrifice of others) that it takes the hardest form of self-discipline to overcome it. This is akin to paranoia, which also is a survival mechanism. 'Let the customer beware,' is one form of it.

"As to Item Five, although I admit we must cater to often 'irrational' emotions, this catering is a form of rationality — for we must consider emotions and religious impulses as data and give them scientific consideration. I think that mysticism is vestigial and very powerful, but it is in large degree a defect. We have to accommodate it, harness it, be on guard against it, and enjoy it. But to the degree that it interferes with our assessment of probability, to that degree, I think, one becomes "insane". No computer can afford to have a single bit of false data or unworkable process without become to that extent "irrational".

Asterisked items. Please go back and look at the asterisked items, starting at Page 1. You are making a contribution to BRS whenever you are able to respond. We repeat the Newsletter address: Box 409, R. D. 1, Coopersburg, Pa., 18036.

SYRACUSE UNIVERSITY

SYSTEMS AND INFORMATION SCIENCE | 313 LINK HALL | SYRACUSE, NEW YORK 13210

TELEPHONE 315 | 423-2368

June 25, 1974

Mr. Lee Eisler
Chairman, Information Committee
The Bertrand Russell Society
Box 409
R. D. 1
Coopersburg, Pennsylvania 18036

Dear Mr. Eisler:

It is certainly true that computers, particularly computer designers, are indebted to logicians in general and hence Russell in particular. In 1938 Claude Shannon's masters thesis at M.I.T. described the use of the propositional calculus in the design of relay switching circuits. This work together with subsequent work at Harvard (in which I participated), at Bell Laboratories and M.I.T. laid the foundation for the use of Boolean algebra in the logical design of switching circuits (and hence of computers).

A specific reference to Russell's work and its relevance appears in "Computer Perspectives", a book about the History of Computers recently published by Harvard University Press.

In summary, it is true that workers in computing machine design are indebted to previous workers in logic and hence obviously to Russell for the monumental "Principia".

Very truly yours,

Warren L. Semon
Director

WLS:t

a double corner (say the move is north-west in the illustration on page 107 of the February issue), quads must be placed on the cell two squares west of the king and on the cell immediately above that square, not on two white border cells as the text says.

In March I gave a method of trapping a rook or a bishop with two quads per move and a queen with four quads. Ashok K. Chandra, Robert Holmes, Ned Horvath, Eli Shapiro, Charles Whitmer and Thomas R. Wyant III all supplied proofs that a rook or a bishop can be trapped with one quad per move and a queen with three. Assume a rook is limited to n cells per move. The trapping strategy, on the minimum board of side $5n^2 + 3$, is to use the first $4n$ moves to place (regardless of how the rook moves) n quads at the top of each top corner and at the bottom of each bottom corner. All four corners can be sealed in this way before the rook can attack a corner cell. Since the rook can then attack only one border cell at a time, single quads suffice to complete the entrapment.

A bishop on a sawtooth board is equivalent to a rook on a regular board (as explained in March): as a result the same

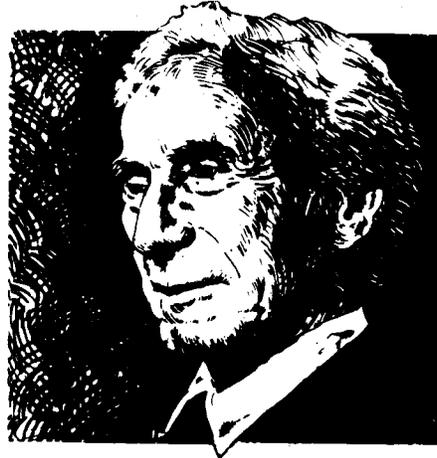

quads
board
trap

 n is

SCIENTIFIC AMERICAN
June 1974

brackets indicate rounding up to the nearest integer. Regardless of how the queen first moves, $2n$ quads are placed on both sides of each corner, leaving the queen unable to attack more than three border cells on all subsequent moves. Chandra also showed that if the queen's maximum move is 2, it can be trapped by two quads per move on a board of side 67 or possibly smaller.

E. N. Adams, Robert Holmes and Thomas R. Wyant III found that the knight could be trapped with three quads per move. Adams proved this could be done on the go board (19 by 19) and possibly on a board as small as 16 by 16. The most surprising letter was from Jerry Butters, who is working for his doctorate in economics at the University of Chicago. Butters found an elegant procedure for trapping a knight with just two quads per move. His 13-page proof requires a board of side 4,500. This board can be reduced considerably, but at present there are only conjectures on the minimum-size board. I have urged Butters to write up his proof for a mathematics journal and shall report here if he does so.

25 years ago, Bertrand Russell said that governments should have a third primary aim after security and justice. It is conservation—conservation of the earth's natural resources.

Welcome to the club, Bertrand Russell

Scientist, mathematician, philosopher, writer—and conservationist. We have an idea that if Bertrand Russell's long life had lasted even longer, today he could well be a member of the Sierra Club. Most certainly he would agree with our principles, which he recognized full well a quarter of a century ago.

Russell understood the limitations of natural resources. He understood this at a time when our resources seemed infinite. In those years, conservation was generally regarded as a dream, but to Russell it was a necessity.

The Sierra Club was formed in 1892 to conserve and protect the wilderness that man had been subduing for centuries. Our focus now is the wholeness of the habitat for mankind and for all living things. That is our purpose today—developing an ethic to make the world fit for living.

The Sierra Club works in a tradition of strong, decisive action to achieve such a world. We work in realistic ways. We lobby effectively for sound legislation. We take legal action to enforce it. We inform and educate. And we ask for expertise from people who understand the

principle of conserving the natural values that sustain life itself, our soils, our oceans and estuaries, our air and water. We want people who share our goal of protecting the biological and physical foundations of living.

As a reader of this publication, you are likely to be one of those people.

We would welcome you to the Club.

Microbial Iron Metabolism

A Comprehensive Treatise

Edited by **J. B. NEILANDS**

*Department of Biochemistry
University of California, Berkeley*

July 1974, 616 pp., \$42.00

ISBN: 0-12-515250-7

If all the iron in the human body were concentrated, it would weigh no more than a small nail. And yet, this seemingly insignificant amount of a most common element is involved in biological reactions which are absolutely crucial to life, e.g., the transfer of electrons at redox potentials below and above the pyridine nucleotides, the transport of oxygen, the reduction of O₂ and N₂, the reduction of ribotides to deoxyribotides for the synthesis of DNA, and the metabolism of inorganic nitrogen compounds.

This volume offers a comprehensive treatment of the subject of microbial iron metabolism — a field that has recorded major advances in recent years. Containing articles by investigators from a wide range of view-points, it gives detailed coverage to topics such as iron transport and storage, the cytochromes, nitrogenase, hydrogenase, iron sulfur proteins, glutamate synthase, hydroperoxidases, oxygenases, and the general role of iron in microbial physiology. It also contains practical information that relates basic knowledge in microbial iron metabolism to problems in clinical medicine and metal corrosion.

MICROBIAL IRON METABOLISM will provide an invaluable source of fact and theory for biochemists, microbiologists, physiologists, hematologists, nutritionists, molecular biologists, biocoordination chemists, and agricultural scientists. It is certainly a volume that points the way to future research.

TENTATIVE CONTENTS:

INTRODUCTION

J. B. NEILANDS, Role of Iron in Microbial Physiology
P. ANN LIGHT, and ROGER A. CLEGG, Metabolism in Iron-Limited Growth

TRANSPORT, BIOSYNTHESSES, AND STORAGE

HARRY ROSENBERG and I. G. YOUNG, Iron Transport in Enteric Bacteria

B. ROWE BYERS, Iron Transport in Bacilli

THOMAS F. EMERY, Biosynthesis and Mechanism of Action of Hydroxamate Type Siderochromes

NICHOLAS J. JACOBS, Biosynthesis of Heme

CHARLES N. DAVID, Microbial Ferritin

IRON ENZYMES AND PROTEINS

WALTER LOVENBERG, Nonheme Proteins: Ferredoxins and Rubredoxins

R. H. BURRIS and W. H. ORME-JOHNSON, Nonheme Proteins: Survey of Nitrogenase and its ESR Properties

STANLEY STREICHER and RAYMOND C. VALENTINE, Nonheme Proteins: The Genetic Basis of Nitrogenase Activity

L. E. MORTENSON and JIANN-SHIN CHEN, Nonheme Proteins: Hydrogenase

RICHARD E. MILLER, Nonheme Proteins: Glutamate Synthase

P. D. BRAGG, Nonheme Proteins: Nonheme Iron in Respiratory Chains

T. YAMANAKA and K. OKUNUKI, Cytochromes

T. YONETANI, Hydroperoxidases

MITSHUHIRO NOZAKI and Y. ISHIMURA, Oxygenases

RICHARD D. SAGERS, Other Iron-Containing or Iron-Activated Enzymes: Enzymes Acting on Certain Amino Acids, Amines, and Acetyl Phosphate

REACTIONS OF INORGANIC SUBSTANCES

DONALD G. LUNDGREN, ROBIE VESTAL, and ROBERT TABITA, The Iron Oxidizing Bacteria

WARREN P. IVERSON, Microbial Corrosion of Iron

MEDICINE AND CHEMOTHERAPY

J. J. BULLEN, H. J. ROGERS, and E. GRIFFITHS, Microbial Iron Metabolism in Infection and Immunity

Index.

NEWSLETTER #4
November 1974

Please note Item 1, about the BRS session at the December meeting of the American Philosophical Association in Washington, which you may wish to attend. The discussion on the merits of COH continues (Items 13 and 16). You are invited to contribute to a new section, SHORT AND SWEET (Item 14). Ottoline's diary is not flattering (Item 17). An asterisk in the left column indicates a request; please respond, if you can. Remarks by members are sometimes edited and condensed.

FORTHCOMING EVENT

(1) BRS Meeting, Washington, D. C., December 27, 1974. Ed Hopkins writes:

" I have made contact with the American Philosophical Association and have secured a meeting room for the BRS at the meeting of the Eastern Division in Washington. The BRS session will be held at the Washington-Hilton in the Hamilton Suite at 10 A.M. on Friday, December 27th. Will BRS members interested in attending please get in touch with me to consider what we might do there. I would like to discuss one of BR's works. If someone has a paper he/she would like some comments on, we could have that. I could look over the various suggestions, get the feel of how the sentiment is going, and then notify everyone who had been in touch with me."

Thanks to Ed's initiative, the Washington meeting provides an opportunity to bring the BRS to the attention of many professional philosophers. We know that BRS holds considerable appeal for philosophers; about 20% of our members are professors of philosophy. We hope that every member who can will attend the meeting and will get in touch with Ed without delay. (The meeting isn't very far off). Ed's address: 352 E. Drew Street, Baltimore, Md. 21224.

REPORTS FROM OFFICERS

President Peter G. Cranford reports:

(2) Tax-exempt status. BRS would like to qualify as a non-profit organization, to which tax-deductible gifts can be made. "All legal work has been completed. This was a thorough piece of work, researched and

coordinated by Mike Annis; guided by a retired lawyer friend, Bill Mobley; and reviewed by Jack Pitt, Lester Denonn, and other founders. If we had had to pay for this work, I estimate that the cost would have run well over \$1500. Mr. Mobley will not accept reimbursement."

(3) Secretary Jack Pitt reports:

BRS (Fresno): "We had a meeting in our home during the summer when we discussed THE CONQUEST OF HAPPINESS. Many of the opinions expressed resembled those reported by Gary."

"At our next meeting, last night (10/6), we showed two films, "BR looks at mankind's future" and "BR discusses Power". They were rented for \$5 each from the U. S. C. Library. Each runs 14 minutes, and both were made in 1961. The meeting was held at a local branch library, and about 25 people turned up. A discussion period followed the films. We had good publicity on this event--TV, radio, newspaper. By now I think if there were any Russellites in the area, they would have contacted us. At our next meeting, we plan to discuss the first volume of the AUTOBIOGRAPHY."

(4) Treasurer Katharine Tait reports, as of September 2, 1974:

Balance on hand (June 5, 1974).....		1329.29

Balance on hand.....		1567.10

COMMITTEE REPORTS

(5) Committee on Applied Philosophy (Martin A. Garstens, Chairman):

Discussion group. "The Washington area group has met 3 times thus far, with approximately the same 10 people. How stable the group will be remains to be seen. I consider these meetings an experiment, whose objectives even are not entirely clear. Some who attend have the 'Great Books' background, others have scientific, literary, law, etc. backgrounds; these are distinctly different. (I have thought of starting a group at the University with much younger people). My own objective is to see if we can develop some routine procedures of self-analysis in a philosophic vein (perhaps something like Socratic dialog).

But I repeat, this is all experimental and may not work out. The objectives may be wrong, the people attending may be wrong, the methods tried may be wrong, the skill required for doing this may be too difficult, etc., etc. (Any ideas are welcome).

"The discussions are draped, so far, around COH and topics arising therefrom, i.e., nature of happiness, practicality of BR's suggestions, is COH dated? implementation, comparison with other approaches.

"The next session (10/6) will continue with the latter topic, A FREE MAN'S WORSHIP, and further chapters of COH.

"We meet at a different house each time. The sessions thus far have been found very stimulating.

"ED HOPKINS dropped in for one session." (9/25/74)

(6) Committee on Education (Katharine Tait, Chairman)

This is a new committee . More in the next Newsletter.

Information Committee (Lee Eisler, Chairman):

(7) Advertising. There will be small ads in BULLETIN OF THE ATOMIC SCIENTISTS, November 1974; THE HUMANIST, November 1974; and APA MONITOR (American Psychological Association), November or January. Also a half-page ad in HUMANIST IN CANADA, next issue, as a gesture of support; it is having financial difficulties.

(8) Publicity. There was a BRS news item in the Ziff-Davis Newsletter, BEHAVIOR TODAY, 9/23/74.

(9) Second Questionnaire. "First, let me say, I have been misspelling questionnaire all my life--till today. I have been giving it only one n. My apologies. And my thanks to Jim McWilliams for pointing it out."

We enclose a SECOND QUESTIONNAIRE (Misspelled again! It had already been printed). Please answer it and return it. As it says, its aim is to provide information that may help our recruiting efforts or our long-range planning, or may add to our knowledge of the specialized skills included in our total membership, or may be of interest to other members.

(10) Recruiting Theory. This Committee's recruiting activities--consisting of small ads and news items -- aim to locate and attract existing BR admirers. It is this group that is most likely to be interested in a BR Society, and from it will come many who will contribute efforts to help BRS prosper. Attracting others -- those who know little or nothing about BR, or who "know what isn't so", e.g., that BR was a communist -- is a task best left till later (in our opinion), after we have acquired a solid core of "Russellites" -- the Russell enthusiasts. Therefore we make no efforts to interest the general public at this time; our ads do not mention BR's virtues or achievements; they merely mention his name, which is all that is needed to catch the attention of existing BR admirers.

- (11) Newsletter schedule and closing dates. We plan, from now on, to issue a Newsletter every 3 months: January, April, July, October. If you want an item included in a Newsletter, please have it arrive by the 10th of the previous month, e.g., closing date for the January 1975 issue is December 10, etc. Chairmen and officers, please note closing dates, for your reports
-

ABOUT BR'S WRITINGS

More on THE CONQUEST OF HAPPINESS.

- (12) ELIZABETH EAMES gives her reaction to the charge that COH is sexist (NL3-16) in Item 16.
- (13) ED HOPKINS wrote Peter Cranford a letter, when he enrolled as a BRS member. Here are excerpts:
- "I would be interested in back issues (of the Newsletter) only if they dealt with BR's COH.
- "I am by no means infatuated with all of BR's work. I studied his epistemological works in graduate school, found them solid and clear but not profound. I always looked at his pupil Wittgenstein as the better philosopher. But about 6 months ago I happened to read COH. I found it at once one of the most sane and most useful books that I have ever read. I see it as one of the best works in the most important kind of philosophy, namely that kind of philosophy which is designed to induce one to become better and to provide practical guidance on how to do so. (I see it as comparable to Plato's Gorgias, Aristotle's Nichomachean Ethics and Thoreau's Walden).
- "I began passing this book on to friends and students as soon as I had read it and have incorporated it in the courses which I teach on the introduction to philosophy. (I feel very strongly that in an introductory course students should get useful rather than academic philosophy. And what can be more useful than Russell?).
- "I was only mildly interested in BRS until I read the story about you and COH. It was a real shock to find that others shared my feelings about this book.
- "I would be very interested in reading anything that anybody has written about COH, be it a present member of BRS or someone writing in some obscure journal. Have you by any chance acquired a bibliography on COH that you could pass on to me? I want to see why other people admire it, and what criticisms have been made of it and what attempts to improve on it."
-

SHORT AND SWEET

(A new section. If you come upon a sentence or two that you like particularly, please send it in.)

- (14) "...every American is a democrat in the sense of 'I am as good as you are,' but very few in the sense of 'You are as good as I am.'"

Barry Feinberg and Ronald Kasrils,
BERTRAND RUSSELL'S AMERICA , Volume I
(George Allen & Unwin, London, 1973),
p. 192. Sent in by Lee Eisler

ABOUT BERTRAND RUSSELL

- (15) The Sierra Club understated it. The Sierra Club's salute to BR -- in its ad in SCIENTIFIC AMERICAN, June 1974 (NL3, p. 25) -- says that BR advocated conservation of natural resources 25 years ago. In fact, Ken Blackwell points out BR, was advocating conservation more than 50 years ago. In 1916, in PRINCIPLES OF SOCIAL RECONSTRUCTION (U. S. title: WHY MEN FIGHT), BR wrote:

"Our present system is wasteful of human material...The same is true of material resources: the minerals, the virgin forests and the newly developed wheatfields of the world are being exhausted with a reckless prodigality which entails almost a certainty of hardship for future generations." (Chapter IV)

- (16) BR was no sexist, says this lady. She is ELIZABETH EAMES, and she disagrees with the nearly unanimous reaction in Gary Slezak's group that discussed COH (NL3-16):

"Like other women in these days of our heightened consciousnesses, I flinch at some remarks BR makes. But then almost all authors, men and women, cause similar reactions, especially if they wrote longer ago than five years.

"But I think as feminists we can excuse some generalizations uncomplimentary to women in the light of the great debt we owe BR. Historically he must be considered in the vanguard of the movement for women's suffrage in the early years of our century, a vanguard which proved unpleasant and dangerous when he was nearly mobbed after a political speech urging votes for women. Intellectually he was one of the first thinkers of our century to point out the weakness and immorality of the way sex and marriage are treated by the state and society; his position seems mild today in the light of our more radical alternatives but it initiated this kind of discussion. His writings on education also reflect a freedom from sex stereotyping which was not and is not common. As a human being it seems, from his autobiography, his letters, and reports of his life, that he tried to treat the women he knew as human beings, encouraging them to write books, run for office, and guide their own lives. In fact, there have been few men in our times who were so aware of the problems of women, or who made as many efforts to help them. Whether it was offering individual tutoring to a woman who was denied the opportunity to study symbolic logic at her Cambridge college, or helping raise funds to build a school for girls in China, or offering havens for

unmarried mothers (as reported in the article by Grattan-Guinness in the current "Russell"), BR was far from being a sexist."

(17)

Ottoline. The following excerpts are from a review of the book, OTTOLINE AT GARSINGTON, edited by Robert Gathorne-Hardy. The review, in the Sunday Times (London), September 1, 1974, is by Raymond Mortimer.

"Lady Ottoline Morrell gave her friendship to a variety of authors and painters. A talent-spotter rather than a lion-hunter, she picked them out before they had become well known. In this second volume of her memoirs, edited by her loyal friend, Robert Gathorne-Hardy, she describes them with notable acumen, and also gives us some of their curious letters. Bertrand Russell, for instance, writes to her about his admiring friendship for D. H. Lawrence, who ended it by sending him crazy insults, here printed.

"This volume covers the years 1915-1918..."

"Her affair with Bertrand Russell, here told for the first time from her point of view, reveals the gulf that separated her romanticism and religiosity from their scepticism."

"Russell's first three marriages went wrong. I met all his wives: the third was the most beautiful and in my view the most tiresome, the fourth far the most delightful. The first, Alys, was a sister of Logan Pearsall Smith, who had doted on Philip Morrell when they were undergraduates and had been attracted also by Lady Ottoline. But he was a manic-depressive; and when she took up with Russell, Pearsall Smith started a crazy vendetta against her, blaming her for the collapse of his sister's marriage which was childless and had broken down some ten years earlier.

"Though Lady Ottoline found Russell physically repulsive, she accepted him as a lover because of what she called 'the beauty of his mind, the pure fire of his soul.' He read Plato and Spinoza aloud to her, yet told her also that books would never do her any good. Though she enjoyed poetry, she was indeed neither well-educated nor an intellectual. Here is an extract from her diary:

'I would give my right hand to be free from Bertie, but how can I now that he depends on me? I cannot write to him what I know would darken his life, perhaps forever...I blame and blame myself overwhelmingly. If I could tell him now how I adore Philip, I should feel happier; and yet I have, often, and he seems to forget it. But now I must go on and bear the burden of him (Russell) upon me -- may God guide me about it.'

"Though one must feel sorry for her, such confusion of thought is of a piece with the soulful outbursts in her diary about her love for all things beautiful....It was not she under God's guidance who ended the affair with Russell, but he. He soon replaced her with an American girl, and later with T. S. Eliot's first wife, on whom he lavished presents he could not afford."

(18) Regrets. Movie Director Roman Polanski ("Knife in the Water", "Rosemary's Baby", "Chinatown") says he can never forgive himself "that I didn't manage to meet Bertrand Russell. He was my hero for years and I always hoped that I would meet him. Somehow I didn't think that man was going to die." Interview in PENTHOUSE, August, 1974. (PENTHOUSE is full of pictures of undressed women. If that bothers you, and if you want to locate the above quote, turn directly to Page 96.)

(19) How we see him. A composite picture of BR begins to emerge, as members tell what drew them to him and what they particularly value about him. Several caveats are in order.

First, what follows is one person's interpretation of the data; someone else might interpret the same data somewhat differently; e.g., for purposes of this portrait, "idealism" has been classified as "commitment", "humor" as "wit", "humanism" as "happiness", etc., which may produce some distortion. To make visible the way statements have been interpreted, the members' original statements are given in Part III.

Second, the brush strokes are highly selective, and neglect important aspects of BR as a person. For instance, BR must have had an enormous capacity for work, yet this would not appear in the data because no one would mention this as something they particularly valued him for.

(20) Part I: The Composite Picture

BR comes through as a man of integrity, who hated hypocrisy; a pioneer of courage, with a passionate sense of commitment to what he believed in, and who was not afraid to stand alone.

He thought it important to make efforts to preserve the human race from self-destruction, to promote its happiness, and to liberate it from the depressing weight of religion; to think clearly and not dogmatically; to search for love; and to seek knowledge, even about mysticism.

Aiding him in these efforts were his remarkable abilities, both natural and cultivated. His gifts, talents, endowments, capacities, skills -- call them what you will -- included an ability to analyze and simplify; a capacity for making sound judgments; an ability to write with clarity, brevity, and wit; a capacity for achieving insights, including insights into morality; plus an enormous range of interests and knowledge, reflected in the vast range of his writings.

In sum, an admirable, fascinating and extraordinarily gifted human being.

(21) Part II: The Separate Parts of the Picture

The analysis below shows how individual members contributed to the composite picture. The parts of the picture -- i.e., the separate aspects of BR -- are listed in order of frequency; the one mentioned most often heads the list; the second most often mentioned one is second, etc.

Summary: The 5 aspects of BR mentioned most often by BRS members, when asked what they particularly value about him, are: the way he writes, the way he thinks, his concern for mankind's happiness, his integrity and his wit.

<u>Number of Mentions</u>	<u>Aspects and members mentioning them</u>
17	<u>Way he writes.</u> BLOCK, BUTLER, CAMPBELL, DAVIS, EISLER, FORNO, HYMAN, JACKANICZ, JOHN, LACKEY, LEFKOWITCH, MILNE, PITT, SCHEU, SLEZAK, STONE, TAIT, TUCK
16	<u>Way he thinks.</u> ALLENDORF, BEATTIE, DAVIS, HYMAN, JACKANICZ, JOHN, KAHAN, KWOK, LEFKOWITCH, MILNE, PITT, ROBERTS, RUJA, STONE, TURQUETTE, WILLIAMS
11	<u>Happiness.</u> ALLENDORF, CAMPBELL, EISLER, HOPKINS, JOHN, LEFKOWITCH, RUJA, RYBNIKAR, STONE, THOMAS, TURQUETTE
11	<u>Integrity.</u> ALLENDORF, BLOCK, EISLER, FORNO, JOHN, PITT, ROBERTS, SLEZAK, TAIT, TUCK, WILLIAMS
8	<u>Wit.</u> CAMPBELL, FORNO, JACKANICZ, PITT, SCHEU, SLEZAK, STONE, TAIT
7	<u>Commitment.</u> BUTLER, DAVIS, LEFKOWITCH, JACKANICZ, KONG, MILNE, WILLIAMS
5	<u>Preserve human race.</u> CAMPBELL, EISLER, KONG, SLEZAK, STONE
5	<u>Moral Insights.</u> EISLER, SLEZAK, STONE, THOMAS, WILLIAMS
5	<u>Not Dogmatic.</u> BEATTIE, JOHN, KONG, ROBERTS, RUJA
4	<u>Courage.</u> FORNO, SLEZAK, TAIT, TUCK
4	<u>Seek Knowledge.</u> EISLER, RUJA, RYBNIKAR, SLEZAK
4	<u>Range of knowledge.</u> DAVIS, KAHAN, MILNE, SCHEU
4	<u>Views on religion.</u> BUTLER, KONG, RYBNIKAR, SLEZAK
3	<u>Pioneer.</u> NEILANDS, STONE, TUCK
3	<u>Insights.</u> BEATTIE, FORNO, JACKANICZ
2	<u>Love.</u> RYBNIKAR, SLEZAK
2	<u>Sound judgment.</u> MILNE, NEILANDS
2	<u>Mysticism.</u> CAMPBELL, PITT
1	<u>Stand alone.</u> NEILANDS
1	<u>Range of Writings.</u> MILNE

(22)

Part III: The Original Data

The following are the members' statements. Each member's statement is followed by capitalized words which show how the statement was interpreted for purposes of the composite portrait.

Allendorf. The clarity of thought and the logic unhindered by "generally accepted" beliefs. His continual inspiration to live an enjoyable life. WAY HE THINKS, INTEGRITY, HAPPINESS.

Beattie. His clear and straightforward rational approach...as well as the penetrating insights. His undogmatic attitude that's reflected in a willingness to revise earlier positions in the light of what he might have since discovered. WAY HE THINKS, INSIGHTS, NOT DOGMATIC.

Block. A man of the highest integrity. He is a magnificent writer. INTEGRITY. WAY HE WRITES.

Butler. He writes "literature"; the clarity and lucidity. I value his idealism. He is living proof that man needs no superstitions or faith in God to be human. WAY HE WRITES, COMMITMENT, VIEWS ON RELIGION.

Campbell. His humanism, peace activities, and sense of humor. His rational approach to mysticism. HAPPINESS, PRESERVE HUMAN RACE, WIT, MYSTICISM.

Davis. The forceful clear style and the scintillating rationality. His Renaissance mind and moral passion. WAY HE WRITES, WAY HE THINKS, RANGE OF KNOWLEDGE, COMMITMENT.

Eisler. His intellectual honesty and his ability to write with clarity and precision...His enlightened views on morality; his intelligent approach to promoting mankind's well-being; his pursuit of enlightenment, happiness, and peace. INTEGRITY, WAY HE WRITES, MORAL INSIGHTS, HAPPINESS, KNOWLEDGE, PRESERVE HUMAN RACE.

Forno. Clarity of expression and wit. His intellectual insights, personal courage and example of integrity in all matters. WAY HE WRITES, WIT, INSIGHTS, COURAGE, INTEGRITY.

Hopkins. The practical usefulness and saneness of COH. HAPPINESS.

Hyman. His reasonable commonsense approach. His power not only to have thought it all out, but also his ability to translate it into words so that people like myself can learn and use his ideas to a practical advantage. WAY HE THINKS, WAY HE WRITES.

Jackanicz. His fine writing style...expressive humor, well-directed emotionalism, and simple reasoning. In philosophy and politics, his distinction between what can be known (through science alone) and what by its nature cannot be known but only desired (these being the things of value in life). His continuing efforts in a variety of social concerns. ..his exciting life. WAY HE WRITES, WIT, COMMITMENT, WAY HE THINKS, INSIGHTS.

John. Open-minded expressions...clear thinking...honest explanations...straightforward challenges...harmonious expressions. He made it clear that every living soul is an important total being worthy of his living. NOT DOGMATIC, WAY HE THINKS, INTEGRITY, WAY HE WRITES, HAPPINESS.

Kahan. His incisive logic and the breadth of his knowledge. WAY HE THINKS, RANGE OF KNOWLEDGE.

Kong. His protest against World War I, and the Vietnam war. His constant attack on established religious institutional dogma. PRESERVE HUMAN RACE, COMMITMENT, VIEWS ON RELIGION, NOT DOGMATIC.

Kwok. Logical reasoning. His personality, his faith in logic. WAY HE THINKS.

Lackey. Prose style. WAY HE WRITES.

Lefkowitz. His clearness of thought. His ability to write with clarity on very difficult topics. His personal crusade for social justice. His logical approach to life and all of its problems. WAY HE THINKS, WAY HE WRITES, COMMITMENT, HAPPINESS.

Milne. Clear thinking, expression, continuity, and I thought he was, for the most part, right. Amazing range of knowledge and writing. WAY HE THINKS, WAY HE WRITES, COMMITMENT, SOUND JUDGMENT, RANGE OF KNOWLEDGE, RANGE OF WRITINGS.

Nielands. Clarity of analysis of political events. At a time when Western intellectuals were equivocal about the Vietnam War, BR come out 4-square against it. He thus displayed admirable qualities of leadership in the intellectual community. SOUND JUDGMENT, PIONEER, STAND ALONE.

Pitt. His freedom. Integrity, intelligence, wit. His logic and his mysticism. INTEGRITY, WAY HE THINKS, WIT, MYSTICISM.

Roberts. His candor, willingness to change his mind; ability to simplify complicated matters in a way which does not disparage the complications; his power of thought. INTEGRITY, NOT DOGMATIC, WAY HE THINKS.

Ruja. Objectivity, rationality, concern for human happiness. Contributions to logic. NOT DOGMATIC, WAY HE THINKS, HAPPINESS, SEEK KNOWLEDGE.

Rybnikar. I finally found someone who basically felt the same way I do about religion in general and Christianity in particular. BR's 3 passions. ..the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind. VIEWS ON RELIGION, LOVE, SEEK KNOWLEDGE, HAPPINESS.

Scheu. His tremendous wit and lucidity, his erudition. Can one ever stop reading Russell? One could be cheerfully marooned with 5 to 10 of his books and keep quite occupied. BR was influential enough for me to take up formal philosophy at age (almost) 39, with a grown family. WIT, WAY HE WRITES, RANGE OF KNOWLEDGE.

Slezak. His concise & witty style of writing. His moral values, esp. his writings on religion and war. His search for "truth" and love. His intellectual honesty and wit. His moral courage. WIT, WAY HE WRITES, MORAL INSIGHTS, VIEWS ON RELIGION, PRESERVE HUMAN RACE, SEEK KNOWLEDGE, LOVE, INTEGRITY, COURAGE.

Stone. His wit. His handling of deep subjects in such an easy manner. His appreciation of the good in man, and his own goodness. His new approach to old problems. WIT, WAY HE THINKS, PRESERVE HUMAN RACE, HAPPINESS, MORAL INSIGHTS, PIONEER.

Tait. The clarity and wit of his writings. His courage, integrity, humor. WIT, WAY HE WRITES, COURAGE, INTEGRITY.

Thomas. I am excited about his ethical writings and humanistic dedication. MORAL INSIGHTS, HAPPINESS.

Tuck. Understandability. His pioneering agitation, his provocativeness, his fearless enquiry everywhere. WAY HE WRITES, PIONEER, INTEGRITY, COURAGE.

Turquette. His clear analysis of ideas. His broad humanity. WAY HE THINKS, HAPPINESS.

Williams. He exemplifies integrity amidst our valueless cynicism, and cynicism amidst our sanctimonious gullibility. When we reach intellectual puberty and discover, consequently, the Pandora box of civilized hypocrisy opening before us, the rare appearance of a Russell encourages that kind of hope which allows us to be cynics, but not valueless cynics. Today I cannot say whether I am attracted more to his innovations in logic and epistemology or to his commitments to social and political responsibility. Both are aspects of the same man. INTEGRITY, MORAL INSIGHTS, WAY HE THINKS, COMMITMENT.

NEWS ABOUT MEMBERS

- (23) LORRAINE C. BEATTIE and DON D. ROBERTS were married in August. This is the first marriage between BRS members, though BRS cannot claim credit as catalyst; both are in Philosophy at U. of Waterloo. We wish them a good life inspired by love and guided by knowledge.
- (24) PETER CRANFORD "has bad news on the Anthony case, that Jack Anderson wrote about (NL3-36). Sgt. Anthony was sent back to Augusta in a drugged state on convalescent leave. He became normal while in Augusta but apparently relapsed when the Army reneged on the re-assignment back with his family. This may become a cause célèbre."
- (25) LESTER DENONN tells about his recent trip to London and Wales:
- "My first visit in London was to meet Mr. Rayner Unwin of George Allen & Unwin to discuss the future of the second edition of 'THE BASIC WRITINGS OF BERTRAND RUSSELL', all the details for which Professor Egner and I have completed. We are hopeful that economic conditions will soon turn for the better to warrant its early appearance.
- "And then our 'Pilgrimage to Mecca' as I termed it when we were warmly greeted by Lady Russell in the abode of Bertie (as we all referred to him) in beautiful Penrhyndeudraeth in North Wales. We met with her on three occasions and reveled in the book-lined walls and the mementos that abounded. It was a thrilling experience to say the least.
- "We also met with two of Bertie's granddaughters, Sarah and Lucy, and Mr. & Mrs. Rupert Crawshay-Williams. We enjoyed the tales the Crawshay-Williams told of their days as neighbors of Bertie. He is the author of 'RUSSELL REMEMBERED.'
- "One of our pleasant memories was cocktails and dinner with the three Russells at the delightfully situated Hotel Portmeirion where we stayed. We cannot help but voice the hope that a full grown BRS might some day hold a convention on this glorious spot and wander to the home on Plas Penrhyn where Bertie lived and where now Lady Russell gracefully maintains this historic, beautiful site."
- (26) MARTIN GARSTENS reports on his visit to Penrhyndeudraeth:
- "I drove through England and Wales, and being near Penrhyndeudraeth, without knowing whether BR's last house was still occupied, I visited the house and met Lady Russell and two of the grandchildren, Sarah and Lucy. I have some interesting pictures of the house, the inhabitants, and myself. If there is any interest, I will circulate them. Lady Russell showed me a copy of the catalog (of Lester Denonn's Bertrand Russell Library), which impressed me as an important document..." Perhaps Martin will bring the pictures to the Annual Meeting, for viewing.
- Incidentally, the catalog of Lester Denonn's huge library of books and articles by and about BR--it runs to some 150 pages--is available at \$3.50, from him.

- (27) CORLISS LAMONT's "article, 'How to be happy--though married', (THE HUMANIST, May/June 1973) is being reprinted in the forthcoming anthology, 'CONTROVERSIAL VIEWS ON SEX ROLES, MARRIAGE AND THE FAMILY', edited by Kenneth C. W. Kammeger (Allyn and Bacon, Boston).
"Dr. Lamont's book, 'VOICE IN THE WILDERNESS', (Prometheus Books) has led to several appearances by him on radio and TV..."THE HUMANIST, September/October, 1974.
- (28) * HARRY RUJA has reviewed 2 books about BR (in PHILOSOPHY AND PHENOMENOLOGICAL RESEARCH). They are BERTRAND RUSSELL'S THEORY OF KNOWLEDGE by Elizabeth R. Eames, and THE DEVELOPMENT OF BERTRAND RUSSELL'S PHILOSOPHY by Ronald Jager. A most interesting review! We have reprints of this 3-page review (date not known), but not enough to supply all members. We will mail them on request, while they last.
- (29) EDITH RUSSELL accepted honorary membership with this letter:

"Dear Dr. Cranford: Thank you for your letter of 27 June. I feel deeply the honour that you and Mr. Blackwell and Mr. Eisler and the other members of the Bertrand Russell Society have done me in electing me to honorary membership, and am very happy to accept. The aims of the society, as I have learned of them from you and Mr. Pitt, are very dear to my heart.

"It is good news, too, that your letter brings in telling me that there are already forty members of the society committed to these aims. Such rapid growth, and among people of such calibre and dedication, speaks for the work already done by the founding members. It augurs wonderfully well for the future of the society.

"I need hardly say, I hope, that I send you and them my best and warmest good wishes for success in achieving our aims."

NEW MEMBERS

- (30) We are delighted to welcome these new members:

Dr. Arthur M. Arkin, 12 East 97th Street, New York, N. Y. 10029
Jan Berkshire, R. R. #1, Schaefer Lake, Hope, In. 47246
Stanley Morton Elam, R. D. #2, Pamplin City, Va. 23958
Dr. Lawrence J. Forno, Dept. of French Language and Literature,
College of Arts and Sciences, U. of Kentucky, Lexington, Ky. 40506
David B. Greenman, Apt. 32A, 600 Fulton Avenue, Hempstead, N. Y. 11660

Herman Lefkowitz, 49 Kingland Street, Nutley, N. J. 07110
James E. (Jim) McWilliams, Box 201, Marvell, Ark. 72366
Andrew C. Ramsay, 274 Sterling Avenue, Pacifica, Ca. 94044

This brings the total number of members to 56, as of 10/15/74

QUESTIONS & ANSWERS, AND REMARKS

- (31) JOHN BUTLER, presently teaching in Nigeria, asks:

"Would anyone know about the connexion between BR and Virginia Woolf? Since I am writing a thesis on Virginia Woolf and also several papers, I would like to do one of BR and Woolf. I wonder if they ever read each others' works and whether there was ever any correspondence between them other than personal. Any information would be welcome, as here we are desperately short of research facilities except in science."

His address: Ahmadu Bello University, School of Basic Studies, Zaria, Nigeria.

CORRECTIONS & SUPPLEMENTARY REMARKS

- (32) The argument against chemical warfare, continued. The argument stated in NL3-22 -- that chemical warfare is indiscriminate, affects non-combatants, and may debilitate survivors for life -- strong as it is, is nevertheless incomplete as it stands. It fails to mention the effects of a still worse kind of chemical warfare, the kind that endangers the long-term stability of the biosphere; it is worse because it affects future generations as well as present. It is the kind practised by the U. S. recently, that may have done permanent damage to the inland forests of Vietnam. (NL2, p. 12)
- (33) Jack Pitt's article, WITH RUSSELL AT THE ARCHIVES, recommended by Peter Cranford, is to be found in "RUSSELL 2", not in "RUSSELL 12" as incorrectly stated in NL3-57.
- (34) Address Change: Gary M. Slezak's new home address is 6229 S. Talman Ave., Chicago, Ill. 60629

FINANCES

- (35) Contributions. We will announce contributions after all, despite what we said in NL3-56, because -- on second thought -- it seems fitting to express appreciation to someone who does more than required, in helping us keep the wolf from the door. We acknowledge, with thanks a contribution from Rick Hyman. We are also aware that officers, chairmen and others make a hidden contribution every time they absorb an expense in the course of carrying on the work of the BRS. We wish to thank them too.
-

RECOMMENDED READING

(36) Paul Kurtz, Ed. THE HUMANIST ALTERNATIVE: SOME DEFINITIONS OF HUMANISM. Prometheus Books, 1973. Recommended by Gary Slezak.

Paul Kurtz, Ed. THE HUMANIST, September-October 1974. This issue deals with various cults of irrationality that have sprung up in recent years. Recommended by Lee Eisler.

ABOUT INDIVIDUAL MEMBERS

(37) FRED W. ALLENDORF, of Seattle -- graduate student in genetics, and pre-doctoral research associate, at U. of Washington -- has read WHY I AM NOT A CHRISTIAN. He was taken with BR's "clarity of thought and the logic unhindered by 'generally accepted' beliefs." He particularly values BR's "continual inspiration to live an enjoyable life." He joined BRS "in hopes of contacting people with similar interests and beliefs." B. S. (Zoology, P. S. U.). M. S. (Fisheries, U. W.). He reads SCIENCE, GENETICS, NATURE, and other special publications.

(38) ARTHUR M. ARKIN, M. D., New York City psychiatrist, read THE PROBLEMS OF PHILOSOPHY when he was 14 (His sister had given it to him). "I was electrified". After that, he read A FREE MAN'S WORSHIP and MARRIAGE AND MORALS (Today he is specially interested in BR's writings on epistemology). He was taken with BR's "tolerant scepticism, combined with brilliant analytic ability, and humor." He finds that his acquaintance with BR has helped "broaden my perspectives in problems of science and life...and in my attempts to formulate criteria for validity of psychological interpretation." He joined BRS for intellectual stimulation. He is a Fellow of the American Psychiatric Association, has affiliations with the Association for the Psychophysiological Study of Sleep, and reads THE JOURNAL OF THE AMERICAN PSYCHOANALYTIC ASSOCIATION.

(39) JAN BERKSHIRE, of Hope, Indiana -- a graphic artist -- is not sure which of BR's writings he read first (by now he has read 20-25), but an early one was A HISTORY OF WESTERN PHILOSOPHY. He is interested in anything BR writes about. He was drawn to BR by "his remarkable attitude in general, his insight and the phenomenal sense of reality with which it was complemented, his seemingly unassailable integrity in the area of interpretation, the almost paradoxical combination of accuracy and humaneness in his manner of expression, and the courage in defending resultant convictions." He also values BR's "emotional and intellectual stamina, the singular degree of clarity with which he expressed himself, and the tremendous staying power of his humor." He joined BRS "out of respect for BR, for the prospect of valid involvement, the potential rewards of association," He'd like BRS to re-write the Questionnaire. (Touché, Ed.) Besides graphics, he is also interested in poetry, music, and the theatre.

- (40) JOHN A BUTLER--British, usually lives in Canada, but currently in Zaria, Nigeria, as Lecturer in English at Ahmadu Bello University -- read WHY I AM NOT A CHRISTIAN, ENQUIRY INTO MEANING AND TRUTH, and UNPOPULAR ESSAYS, in that order. He is interested in "practically anything BR wrote about, "especially history of philosophy. He was drawn to BR because A HISTORY OF WESTERN PHILOSOPHY "made an attempt to place philosophy against a socio-historical background; and also the fact the BR writes 'literature'; as a lecturer in English literature, BR's style is a useful example of lucid prose, stands next to (with) T. H. Huxley in clarity and lucidity". He also values BR's "idealism and the fact that BR is living proof that man needs no superstition or faith in God to be human." He joined BRS for "simply two reasons: academic (BR's impact on 20th Century intellectual life); and his work towards world peace (without which my first reason would be useless!)" He also offers to contribute articles, if needed, and might like to see BRS arrange for another publication dealing with BR's work. He is writing a thesis on Virginia Woolf (see Item 31). He reads TIMES LITERARY SUPPLEMENT, P. M. L. A., CAMBRIDGE QUARTERLY. B. S., B. Ed., Dip. Ed. (all U. of Saskatchewan).
- (41) LAWRENCE J. FORNO, Ph. D., of Lexington, Ky., is Associate Professor of French (literature) at U. Of Kentucky. "As a graduate student in French literature at Columbia, I saw a quotation of BR concerning Rousseau, on an exam. I liked it so much that I read A HISTORY OF WESTERN PHILOSOPHY." Then he read WHY I AM NOT A CHRISTIAN, and RELIGION AND SCIENCE. He has kept right on reading BR, and by now "I've read almost all of his major books in print." He is specially interested in BR's views on philosophy and history of ideas. He was taken with BR's "clarity of expression, and wit." He specially values BR's "intellectual insights, personal courage, and example of integrity in all matters." He joined BRS to learn more about BR. He is researching "relationship of BR to 18th Century French philosophers. I hope to share my findings with BRS." (We look forward to it. Ed.) He'd like BRS to (1) foster the publication of all BR works (a definitive edition?); (2) conduct a world-wide survey of all persons who had contact with BR and never reported publicly, to bring out more biographical data on him." Member: Modern Language Assoc., American Society for 18th Century Studies, etc.
- (42) EDWIN E. HOPKINS, Ph. D., of Baltimore -- teacher of philosophy and of mathematics, his two loves (same as BR's) -- first read AN INQUIRY INTO MEANING AND TRUTH, then OUR KNOWLEDGE OF THE EXTERNAL WORLD, and by now has read 8 or 9 of BR's works. He is specially interested in BR's views on ethics (especially as revealed in COH, with which he was -- and is -- much taken), mathematical logic, and history of philosophy, He joined BRS "to be in contact with kindred souls, with people who would have the same interest in discussing BR's works as I." He would like to see BRS form local chapters. Member: American Association of University Professors, and American Philosophical Association. His Ph. D. is from Duke. For his views on COH, see Item 13.

- (43) ALFRED C. KWOK, of Austin, Texas -- who is studying physics -- first read THE PROBLEMS OF PHILOSOPHY, then the AUTOBIOGRAPHY, and THE PRINCIPLES OF MATHEMATICS. He is specially interested in BR's views on philosophy and logic, and was taken with BR's logical approach and reasoning. He particularly values BR's "personality and faith in logic." He joined BRS because of the importance he attaches to logic: "We human beings tend to be emotionally biased despite our intelligence. Logic is our compass in the sea of variance. It is most profitable intellectually to have it within you to learn by observation and interaction." He'd like BRS to let the public know BR's views on science and technology, psychology, peace, and human behavioral conditioning, for which he greatly respects BR. He reads SPECTRUM (IEEE), and PHYSICS TODAY.
- (44) HERMAN LEFKOWITCH, of Nutley, N. J. -- electrician and "self-educated high school drop-out" -- read WHY I AM NOT A CHRISTIAN, UNPOPULAR ESSAYS, and IN PRAISE OF IDLENESS, in that order, and has read a total of 15 works by BR. He is specially interested in BR's views on religion, science, and social justice. He was taken with BR's "clearness of thought, his ability to write with clarity on very difficult topics, and particularly values BR's "personal crusade for social justice, his logical approach to life and all its problems, and his iconoclastic search for truth." He joined BRS "to join like-minded people in honoring the memory of BR and furthering his views." He'd like BRS to "explore all possibilities of getting more people aware of BRS." He is a member of United Secularists of America.
- (45) JAMES E. (JIM) MCWILLIAMS, of Marvell, Arkansas -- high school teacher of English and German -- first read A FREE MAN'S WORSHIP (included in a textbook he used as a college freshman, in English in 1962). After that, he read BERTRAND RUSSELL'S BEST and WHY I AM NOT A CHRISTIAN. He was drawn to BR by "the strength of spirit evinced in A FREE MAN'S WORSHIP, i.e., his ability to face the darkness unafraid. To me his courage was exhilarating." He also values BR's "rational acumen and his wit, i.e., the sense of humor he kept in dealing with falsehood and wrong thinking." By joining BRS, he "rather hoped to meet or come into contact with others who share my admiration for BR." He'd like BRS to (1) "organize as many college campus chapters as possible; (2) become a recognized spokesman for civil liberties; and (3) arrange for special displays and promotion of BR's writings -- in public and other kinds of libraries." He belongs to the Sierra Club, American Humanist Association and American Civil Liberties Union. B. A. (Latin), M. A. (English), Fulbright Scholar (India 1966-67), and U. of Mississippi Fellow (1971-72).
- (46) HARRY RUJA, Ph. D. of San Diego -- Professor of Philosophy at San Diego State University -- was first exposed to BR's writings in philosophy courses, in the 1930's. By now he has read practically all of BR's books and probably half of BR's shorter pieces. Among the first things he read, as he now recalls it, were WHAT I BELIEVE, A FREE MAN'S WORSHIP, ON SCIENTIFIC METHOD IN PHILOSOPHY, and MYSTICISM AND LOGIC. He is specially interested in BR's views on ethics. He was taken with BR's "objectivity, rationality, and concern for human happiness," and thinks BR "deserves fame because of his contributions to logic." He joined BRS to be in touch with others who share his goals, and because it is "important to keep BR's memory alive." He'd like BRS to (1) encourage philosophers to discuss BR's philosophy, (2) help keep BR's publications in print; and (3) encourage magazines to reprint some of BR's essays.

He has collaborated on a BR bibliography with Ken Blackwell, and gave a talk, "The Problems and Pleasures of a Russell Bibliographer", at the 1972 BR Centenary Celebration at McMaster University. He is a member of the American Philosophical Association, American Civil Liberties Union, Zionist Organization of America, and B'nai B'rith. He reads PHILOSOPHY AND PHENOMENOLOGICAL RESEARCH, MIDSTREAM, and AMERICAN ZIONIST.

- (47) HILDBURG SCHEU, of Waterloo, Ontario -- mother of a grown family, now a philosophy student (as a result of her exposure to BR's writings)--- first read BERTRAND RUSSELL SPEAKS HIS MIND, then THE CONQUEST OF HAPPINESS, and SELECTED PAPERS, and has read a total of about 10. She is specially interested in "everything covered in the first two books I read." (The first one deals with philosophy, religion, war and pacifism, communism and capitalism, taboo morality, power, happiness, nationalism, the role of the individual, fanaticism and tolerance, the H-bomb, and the possible future of mankind. Ed.) She was taken with BR's "way of treating the subject matter, his tremendous wit, and lucidity, his erudition. Can one ever stop reading BR? One could be cheerfully marooned somewhere with 5 to 10 of his books and keep quite occupied." She joined BRS because she likes to talk with other Russellites--but not the ones interested in formal logic or mathematics, which are not her interest in life. "There must be more like me who nevertheless find much to enjoy in BR." She'd like BRS to have closer collaboration with the BR Archives at McMaster, and have annual meetings there instead of in NYC, (We think BRS collaborates very closely with the Archives. Any suggestions as to how to make it still closer will be welcome. Ed.)
- (48) RODNEY L. THOMAS, of Kent, Ohio, has a B. S. in Music Education and is now a graduate student, and graduate assistant, in Philosophy at Kent State U. His undergraduate degree is from an Evangelical Christian Liberal arts college; he is interested in bringing liberal humanistic views to church audiences via theatre. He first read PRINCIPIA MATHEMATICA (in a course on metalogic), then A FREE MAN'S WORSHIP and THE PRINCIPLES OF MATHEMATICS. He is specially interested in BR's views on morality and humanism. He began to read BR out of curiosity; "Now I am excited in hearing about his ethical writings and humanistic dedication." He joined BRS (1) because of his interest in BR's ethical views; (2) he'd like to know about efforts by others in humanistic projects; and (3) "to find others of like mind, with the same project goals in mind and possibly joint efforts with them." He reads THE HUMANIST, is a member of American Humanist Association.
- (49) ATWELL R. TURQUETTE, Ph. D., of Urbana, Illinois -- Professor of Philosophy at U. of Illinois -- first read THE ABC OF RELATIVITY, then COH and PHILOSOPHY OF LEIBNIZ, and has read about 20 books by BR. He is specially interested in BR's views on philosophy and logic. He was (and is) taken with BR's "clear analysis of ideas...and his broad humanity, "which he greatly values". He joined BRS because he "was curious to see what kind of Society would attempt to realize BR's ideals.

I have been interested in BR for many years and thought BRS might be able to add to my knowledge of BR." He'd like BRS to (1)"promote world peace and disarmament at all levels; (2) Promote the purpose of the Committee on Science; and (3) promote the purpose of the Committee on Civil Liberties." He was one of BR's students at U. of Chicago.

A FINAL P. S.

Newsletter address: The BRS Newsletter, Box 409, R. D. #1, Coopersburg, Pa. 18036

(This Newsletter was reprinted 3/75. Corrections were made, including, particularly, in the Section, NEWS ABOUT MEMBERS, Items 37-49; the names here are now listed in correct alphabetical order; the previous printing had some names out of alphabetical order. There is now a double item number, e.g., ~~(40)~~ (37); here 37 is the correct new number, 40 is the former number, in the earlier printing.)

NEWSLETTER #5
January 1975

Item 1 is a reminder about the Annual Meeting, coming in February. The BRS name will be placed before a mass audience for the first time (Item 5). Item 21 discusses the make-up of the BRS membership list. An asterisk in the left column indicates a request; please respond, if you can. Remarks by members are sometimes edited and condensed.

FORTHCOMING EVENT

(1) Annual Meeting, 1975, starts Friday at 7 P.M. (February 7th) and ends Sunday noon (February 9th), at the Hotel Roosevelt, 45th Street and Madison Avenue, New York, N.Y. 10017. If you can attend, please (1) reserve a room, and (2) notify Peter Cranford (at the Augusta address above), very soon. Special nightly rates for BRS: single room, \$20; double, \$26; 3 students in a room, \$30. (No tax; BRS is now tax-exempt.) To reserve, send payment in advance for 1 or 2 nights, to Reservations Desk, Hotel Roosevelt. Mention BRS, to get special rate. We hope to see you there. For those who cannot attend, there will be a report on the Meeting, next Newsletter.

PAST EVENT

(2) BRS/APA Meeting. The BRS session at the American Philosophical Association (Eastern Division) meeting in Washington, on 12/27/74 (NL-1) will be reported in the next Newsletter. (Also see Item 6.)

REPORTS FROM OFFICERS

(3) President Peter G. Cranford's report is replaced this month by his recent President's Letter to all members, that dealt with the upcoming Annual Meeting.

(4) Treasurer Katharine Tait reports, as of December 1, 1974:

Balance on hand (September 2, 1974).....	1567.10	
Income: Pledges and contributions.....	299.99	
Membership dues.....	<u>162.00</u>	<u>461.99</u>
		2029.09
Expenditures: Information Committee.....	562.50	
McMaster, Archives(16 subs).....	48.00	
Family membership refund.....	9.00	<u>619.50</u>
Balance on hand.....		<u>1409.59</u>

COMMITTEE REPORTS

(5) Committee on Science (J. B. Neillands, Chairperson):

Mass audience. An article — on science, technology, and the biosphere — by Joe Neillands will appear in ORGANIC GARDENING, probably in the near future. We are doubly happy about this, first, because it will bring Joe's message about threats to the biosphere to ORGANIC GARDENING's large audience of about 1,000,000, and second, because Joe will sign the article as Chairperson of the BRS Committee on Science, which will place the BRS name before that same large audience. More on this in a later issue.

Information Committee (Lee Eisler, Chairman):

(6) 2 pages mailed to 250. The Program for the BRS session at the American Philosophical Association meeting (Item 2) was mailed to "Chairman, Philosophy Department" of 250 colleges and universities. About 175 of the 250 were the largest, with student bodies of at least 10,000 and, presumably, with large Philosophy Departments. Included in the mailing was a second page (shown on Page 12) giving information about the BRS and inviting membership. (The Program is not included in this Newsletter since it has already been mailed to members by Peter Cranford.)

(7) Advertising. We will run our ad in SATURDAY REVIEW/WORLD for the fourth time, on 1/25/75. We will repeat our ad in THE HUMANIST (2nd insertion) in January or March. HUMANIST IN CANADA appreciated our gesture of support (NL4-7), and gave us a full-page instead of a half-page (Issue No. 31, p.47), adding a picture of BR plus a BR quote at age 97:

My work is near its end. I have lived in pursuit of a vision, both personal and social. Personal: to care for what is beautiful, for what is gentle, to allow moments of insight to give wisdom at more mundane times. Social: to see in imagination the society that is to be created, where individuals grow freely and where hate and greed and envy die because there is nothing to nourish them. These things I believe, and the world, for all its horrors, has left me unshaken.

HUMANIST IN CANADA will also give us a small free ad, every issue in 1975.

- (8) Book-of-the-Month Club offers, as everyone knows, remarkable book bargains, to induce people to sign up and become members. Their current ads offer MacMillan's Encyclopedia of Philosophy in 4 volumes for \$17.50 — hitherto available only in 8 volumes costing more than \$200. Their ad lists a "small sampling" of 20 of the many philosophers who are to be found in these volumes; BR is not one of the 20. We didn't like that for our own reasons; but we also thought they were missing a bet. We wrote them, calling their attention to the fact that BR was possibly the most popular of all philosophers today, that he has more books currently in print than any philosopher since Aristotle — 47 according to BOOKS IN PRINT; 67 if you include paperback duplicates of hard cover editions — all indicating the great, continuing interest in BR and his enormous influence on present-day thinking.
- Book-of-the-Month Club answered our letter within a day, saying: "You are quite correct. Future Encyclopedia of Philosophy ads will include Bertrand Russell."
- (9) Encyclopedia of Associations: BRS will be included in future issues of this big volume. The next revised edition is due in January 1976. Meanwhile BRS will be listed in the second issue of their quarterly supplement, NEW ASSOCIATIONS AND PROJECTS, to be issued during the first quarter of 1975.
- (10) Publicity from a publisher. We thought Harcourt Brace Jovanovich Inc, might be interested in the fact that Katharine Tait was going to give a talk about her father at the BRS/APA meeting (Item 2). They are; they are going to publish her book about her father in the Fall of 1975. We had a meeting in NYC with their Director of Publicity, who seemed quite pleased about it all. The result is that HBJ will issue a press release about Kate's talk. They will also provide a sheet describing the book, that will be available at the meeting. Kate's talk is titled RUSSELL'S DAUGHTER REMINISCES. We don't yet know what the book will be titled.

ABOUT BR'S WRITINGS

- (11) Professor Tsutomu Makino, President, Bertrand Russell Society, Japan, has sent us a copy of his 37-page booklet, READERS' INDEX TO THE SUBJECTS DEALT WITH IN BERTRAND RUSSELL'S BOOKS. (The outer cover is in Japanese, the contents in English.) Part One lists more than 60 books by BR. (It excludes books on mathematics.) Part Two lists approximately 600 topics. Next to each topic are listed the names of chapters that deal with the topic, the name of the work and the page number. For instance, suppose we look up "fear". This is what we find:
- FEAR: Fear (43) 166
 Fear (23) 56
 Life Without Fear (43) 193

All 3 entries are names of chapters. The 1st and 3rd appear in volume 43, which is NEW HOPES FOR A CHANGING WORLD; the 2nd appears in volume 23, which is ON EDUCATION (U.S. title: EDUCATION AND THE GOOD LIFE.) The numbers after the parentheses are page numbers.

Unfortunately, the name of the publisher, and the edition, are not given, for the 60-plus volumes. The page numbers shown here are incorrect for the American editions. However, this is not a serious drawback, since it is easy to look at the table of contents and find the chapter (and page number) you are seeking.

We have asked Professor Makino whether copies of his admirable index is available to BRS members, and will report in a future issue.

Professor Makino is working on his next compilation, which will include the topics in BR's forewords, introductions and prefaces; in BR's books on mathematics; and in books about BR by others.

ABOUT BERTRAND RUSSELL

- (12) The status of women (continued.) Here is more on this subject, previously discussed by Gary Slezak (NL3-16), Peter Cranford (NL3-85) and Elizabeth Eames (NL4-16): RUSSELL 14 contains a 10-page essay, hitherto unpublished, in which BR states his view that women should have the same rights as men. He wrote the essay about 1907. That was the year he stood for Parliament, in behalf of votes for women; he was opposed by a man named Chaplin. Chaplin's election posters read:

NO THANKS MY DEAR
You mind the baby
and leave politics to me
I'm going to vote for
CHAPLIN and the EMPIRE

Chaplin won.

For the Centenary (1972), The Archives reproduced the Chaplin poster and offered it for sale. It may still be available. (Recommended. Ed.)

- (13) BR to Brennan. Letters by BR to his friend, Gerald Brennan — from 1933 to 1957 — were recently listed in the catalog of Sotheby Park-Bernet Galleries, the well-known auctioneers (December 3, 1974, p. 44, Item 190.) They were described as a "charming, intimate series mostly about Russell's daily life, family, and plans, and also containing literary, philosophical references." The following excerpts were given; they obviously were taken from letters written at different times:

...this house is not fit for visitors, however unfastidious...All of the W.C.s are dangerously insanitary; almost all the furniture was taken away; the dirt and stink everywhere are horrible...Peter... is overwhelmed by bugs, fleas, cats, puppies, & baby birds, not to mention sanitary authorities, butlers, electricians, gardeners, babies & other minor fauna of the countryside...

...we have become normal people instead of the nervous wrecks that we had become through my matrimonial complications...

...As for love, the most unwise love of my life was in full swing when I was 63...

...Philosophers & mathematicians in love are exactly like everybody else, except, perhaps, that the holiday from reason makes them passionate in excess...

WRITINGS ABOUT BR

(11.) Brennan on BR. Extracts from Gerald Brennan's autobiography — PERSONAL RECORD 1920-1972 (Cape, London, 1974) — appeared in OBSERVER REVIEW (England) (November 10, 1974, p. 25), in a not-quite-full-page article, illustrated by a photo of Bertie, Peter (Patricia, BR's 3rd wife) and Brennan, at a beach. Here are extracts from the extracts:

All the furniture in the house was ugly. Bertie was aware of this and explained that it had once belonged to Wittgenstein and was on that account sacred to him. I think he was really indifferent to his indoor surroundings, though he loved Nature and was proud of his magnificent estate.

He was a very good host, considerate, hospitable and by turns serious and amusing. In the mornings he worked, but during the rest of the day we were together, going for walks through the beech woods after lunch and in the evenings talking and reading aloud to each other.

He and Peter made an odd contrast. She — tall, very young and willowy, with red hair and a creamy complexion, smooth pussycat face, an insinuating smile, and under the smile a rather too determined chin. He — with his flowing white hair, prominent nose and bright, eagle eyes overhung by dark bushy eyebrows. It was the most alert face I have even seen, and one that became more striking with every year that marked it. His photographs show this, but not that he was rather short, with that shortness that is straining to reach higher. Thus he always held himself upright, never slouching even in an armchair, and one felt a readiness for action in his whole body. This and his way of pulling out his large silver watch when meal-time grew near — one cannot imagine him being ever late for anything — called up the picture of some very correct and methodical person, say, a Victorian banker or statesman.

In the evenings Bertie read the Bible aloud, and when he wished to smoke his pipe, he asked me to read from it. He had a remarkable knowledge of its absurd and scandalous passages, and could quote chapter and verse for them. He would start one of these readings by asking me, 'Do you know that edifying passage where God tries to kill Moses in a hotel?' I did not know it and he read out the verses in Exodus 4 that gave it. Then he said, 'Do you remember the passage that begins, "Remember now thy Creator in the days of thy youth?" Creator is a mistranslation for Penis. Quaint, isn't it?'

I once spoke to Leonard Woolf of this strange familiarity of Bertie's with the less-known parts of the Bible, and he said, 'All the atheists of his time had it. It was part of their equipment, and in their search for damaging texts, they probably read it as often as believers.' But it was not only the absurd passages that Bertie knew; he had a

genuine liking for its stories of human life and for its poetry. Thus when I read him the account of the death of Absalom, which he had forgotten, he was greatly moved.

He got a rather juvenile pleasure from certain sorts of absurdity and found more of these in religious doctrines than anywhere else, taking them always in their most literal sense because then they seemed more absurd. Like Voltaire he did not want to understand religious ideas or see them in their historical context or as having a symbolical interpretation, but merely to discover in them examples of the preposterous. And yet he was not entirely without religious feeling, and did not call himself an atheist. No one as convinced as he was of the fundamental unintelligibility of the universe — he used to say we had not yet discovered a single certain fact about it — could fail to have some sympathy with the mystical attitude.

Since he judged by his reason alone, he saw everything in black and white. Besides, the strength of his feelings when aroused would often prevent him from taking in his adversaries' case, so that, shutting his eyes to all inconvenient facts, sweeping to one side the finer considerations, he would deliberately misinterpret and blacken them. Thus in intellectual matters he was often very unjust indeed.

On the other hand, he was candid in speaking of many of his own failings. He told me that his vanity suffered deeply because he was not as well known as Wells and Einstein and that he often regretted that he had not taken up physics, in which so many great discoveries were being made, rather than symbolic logic, which led nowhere. Yet the men he would most have wished to resemble were not, he said, the men of intellect, but those who had exposed some great barbarity or injustice, such as the conditions of slavery on the Congo or Upper Amazon rubber plantations.

Speaking of his childhood, he said, 'My only pleasure in church used to be calculating the date of Easter. You divide by 19, excluding fractions. It was such a relief to be able to do that. One was never allowed to exclude fractions in arithmetic at other times.'

Bertie's curiosity about the world was limitless, and he especially prized odd bits of what he called useless information. But sometimes he started to talk on mathematics and logic, and then I was out of my depth at once and could not understand a word of what he said. He seemed to find this incomprehensible — why couldn't anyone follow a mathematical or logical argument, seeing that each separate step was so easy to take?

But even then, little though I could grasp of what he said, the force and drive of his intellect used to amaze me. It was precisely that drive always in a straight line, taking no account of the complexity of things, blind to incommensurables, that, when he left logic for life, caused him to make so many miscalculations. Yet when not excited by passion, he did what he could to allow for the irrational element in human nature and was sometimes successful in this.

Bertie regarded himself as being a very vain man. I thought that ambitious was a better word. What he really wanted was that his great superiority of mind should be generally recognized, so that he should be in a position to exert a useful influence on human affairs. He was always modest about his work, and when he spoke badly about other philosophers it was because he disapproved of their tendencies and never out of envy.

To sum up Bertrand Russell: both his mind and his work could be seen as split into two separate compartments. In one he was the logician and philosopher, the man of pure intellect who is completely cut off from all feelings. In the other he was the political writer, educationalist, teacher, prophet, moved by a generous indignation at the follies and cruelties of the world, but also by a hankering for public esteem and applause.

As is so often the case with pacifists, there was a strong streak of aggressiveness in his nature. A sceptic in everything else, in political matters he always felt convinced that he was right and that those who disagreed with him were not merely mistaken but corrupt and evil.

When one talked with Bertrand Russell one could never forget that he was a great man. Not only was his intellect a very powerful one, but his capacity for feeling was on the same scale. If much of this feeling was destructive, even more of it was channelled into a passionate concern for human happiness. Perhaps one might say that in the strength and depth of his nature he resembled Milton, though he lacked that poet's egotism and had less bitterness and rancour. For the same greatness of mind was there, an attribute of his character that could not be invalidated by his failings, and I believe that future generations will recognize it.

* * * * *

We are indebted to Mr. Goodwin G. Weinberg for sending us the clippings on which Items 13 and 14 are based.

(15) Clark biography. Ken Blackwell reports that Ronald W. Clark, author of "Einstein", a recent Book-of-the-Month Club selection, is now completing a huge biography of BR, to be published in a year or so. Clark writes us that "it will be about 300,000 words long and will cover the whole course of Russell's life and activities. There is a great deal of fresh material here in England, as you can well imagine."

NEWS ABOUT MEMBERS

(16) JOHN BUTLER, teaching in Nigeria, would like to get hold of Virginia Woolf's ROGER FRY: A BIOGRAPHY. We've asked a firm that specializes in out-of-print books to try to locate a copy.

(17) PETER CRANFORD wrote the following letter to ARMY. It appeared in the November issue.

I should like to comment on "The Military and the Media: A Proposal for a Cease-Fire" by Maj. Gen. Franklin M. Davis, Jr. (September).

To resolve intergroup conflicts it is first necessary to establish the causal lines. We would also assume that in similar conflicts there are similar causes. Gen Davis states the cause with: "A little sober reflection suggests that central to the issue of the military-media relationship is the basic fact that neither really understands the other."

I would submit that the basic difficulty is more one of philosophy. We expect to find similar difficulties when any two philosophies of

organization differ and no difficulties when they are the same.

In Russia there is no conflict between the military and the media since they are both Marxist. In the U.S., there is perpetual conflict. It originates in the differences between an authoritarian organization and a generally free one.

It is clear then that the conflict must continue until these organizational philosophies become more closely aligned. The solution must answer the question: to what degree can the military become an open society and still be able to fulfill its purposes?

(18)

DONALD JACKANICZ tells about his recent visit to the Archives:

Presently I am involved in a seminar concerning the history of European thought since 1500. I am preparing a paper titled, "The Social and Political Thought of Bertrand Russell from World War I through the 1930's." Having visited the great libraries of New York City, I decided that a trip to the Russell Archives was in order. My visit was an extremely happy one partly because of the helpfulness of the Archives staff, but, moreover, because I was pleased to find the Archives a sort of living museum.

I spent about ten hours there over two days of early November. I cannot say that what I observed was typical, but what I did see was heartening. The Archives are housed in a single room of modest size. There is sufficient work and reading space, and the character of the setting is agreeable. Visitors have immediate access to most books although Russell's letters and papers and other such rare items must be specially requested. Blow-up photographs are present; a few display cases contain objects of interest; a set of bookcases contain Russell's many books (in various editions and translations), works on Russell, and works to which Russell referred; other bookcases hold periodicals and unpublished writings; the card catalogue and bibliographic aids are readily accessible.

While I was attending to my needs, I was curious to see who else was using the Archives. Few people came in. But, of those who did, there was a mixture of "veterans," who had apparently come many times before and who wished to check some new item or speak with the staff, and the "initiates," like myself, who had never before used the Archives or who were in need of help from the staff. I watched a student listening to a tape recording, another scanning a bibliography of Russell's articles, and a pair of young men being shown around by one of the secretaries.

My reaction was thoroughly positive. Of course I was pleased to see how well the collection was being preserved and how free is one's access to materials. But, more importantly I found, the Archives as an institution fosters the reading and study of Russell in all his characteristic multiplicity. Most Archive users are presumably McMaster University students and staff or Hamilton residents. But, skimming through the register, I noted how many visitors had come from out of town and how many from a considerable distance. I remain pleased to think that all of these people experienced something like that which I experienced through my Archives visit. While any great writer, like Russell, can be understood in more than one way, there is some commonality which joins all readers into some spiritual union.

My visit was of "scholarly" use. But I also enjoyed a simple humanistic experience which I encourage all concerned with Russell to seek out.

(19) JIM MC WILLIAMS' book (NL4-39) — that he, as a college freshman, used in an English course — is titled TOWARD LIBERAL EDUCATION, edited by Louis G. Locke, William M. Gibson, and George Arms (Holt, Rinehart & Winston, New York, 1962, 4th Edition.) Besides A FREE MAN'S WORSHIP, it also contains a 4-page article by BR, CO-EXISTENCE OR NO EXISTENCE. This is the book that got Jim started on BR.

* If you know of any other anthologies that include writings by BR, please let us know.

NEW MEMBERS

(20) We are very pleased to welcome these new members:

David (Dave) Glenn Gantt, MacMurray College, Box 273, Jacksonville, Il. 62650
Karen Garrison, Box 394, Henniker, N.H. 03242
Chris Hackemack, 2734 El Tivoli, Dallas, Tx. 75211
Arlyn (Al) Kravig - B58560, C. T. F. - N., Soledad, Ca. 93960
Anita Joyce Levine, 238 Senisa Drive, San Antonio, Tx. 78228

Martin Lipin, 14442 Hamlin Street, Van Nuys, Ca. 91401
Tom Love, Battelle Human Affairs Research Center, PO Box 5395, Seattle, Wa. 98105
R.N. Malatesha, Box 88436, Bates West, U. of South Carolina, Columbia, S.C. 29208
Daniel T. McDonald III, 4C, One Fifth Avenue Hotel, 1 Fifth Avenue, N.Y., N.Y. 10003
Dr. James W. Oliver, Dept. of Philosophy, U. of South Carolina, Columbia, S.C. 29208

Stephen J. Reinhardt, Apt. 202, 2401 Pennsylvania Avenue, Wilmington, De. 19806
Reynolds B. Schultz, 626 Western Avenue, Glen Ellyn, Il. 60137
Werner Segnitz, 1069 Belmont Cr., Kamloops, B.C. Canada V2B 1X4
Patricia (Pat) Spang, PO Box B-129, Morningside College, Sioux City, Ia. 51106
Bruce Thompson, 95 Blair Hall, Princeton University, Princeton, N.J. 08540

Jerry R. Waite, Apt. 201, 1305 Woodfield Avenue, South Bend, In. 46615

MEMBERSHIP ANALYSIS AND STATISTICS

(21) What kind of people join BRS? The short answer is: the kind of people BR wrote for; that is to say, all kinds.

A somewhat expanded answer might go as follows:

BR, during his long and productive life, wrote about almost everything there is (and even — for philosophers — about some things that aren't, like the golden mountain and the present King of France.)

As a consequence of his extraordinarily many interests — and resultant writings — he reached people in many walks of life. This is reflected in BRS membership.

Appropriately, teachers of philosophy form the largest single group; but only one member in six belongs to this group.

A partial list of other members — partial because not all members have returned Questionnaires — includes an architect, an archivist, a biochemist, a chemical engineer, 2 electricians, 6 graduate students, a graphic artist, a highschool freshman, a land surveyor, 3 foreign-language-and-literature teachers, a marketing specialist, a nuclear engineer, an assistant office manager, a physicist, an aerospace procurement officer, a psychiatrist, 2 psychologists, a retired river captain, a salesman, a retired structural engineer, 4 undergraduates, 2 writers, and a self-styled laborer.

BRS is a mix of scholars and non-scholars; but all members seem to have at least two things in common: a great admiration for BR and a sense of indebtedness to him.

- (22) Age range. BR's appeal to people of all ages is demonstrated by 2 BRS members: Rebecca Sue Ringer, of Quinter, Kansas, is 14 years old; and Andrew C. Ramsay, of Pacifica, California, is 80.
- (23) Number of members, as of 12/16/74: 72.
-

QUESTIONS & ANSWERS

- (24) Dr. Arthur M. Arkin provides an answer to the question in N11: What evidence did BR have in mind (or might he have had in mind) when he said: "...taboo moralities tend to perpetuate ancient cruelties. The Oracle at Delphi...stood up for human sacrifice long after other Greeks had given it up." Dr. Arkin offers the following:

Descriptions of Greece, 2 Vol. 1886

Pausanias, IV, 6-14: "The Messenian King, Aristodemus, consulted the Oracle at Delphi for ways to defeat the Spartans; how Apollo bade him offer in sacrifice to the gods a virgin of his own royal race; how he put to death his own daughter, and lost the war." The Life of Greece, W. Durant (Simon & Schuster, New York, 1939), p. 73.

- (25) A COH bibliography was something Ed Hopkins wanted to look at, if one existed. Now one does, thanks to Ms. Darlene Booth, Assistant Archivist of The Bertrand Russell Archives, who provided the one reproduced on Page 13.
- (26) "Are We Any Happier?" Ms. Booth has also sent us an article with the foregoing title — it appeared in Nash's Pall Mall Magazine, 95(506): July 1935, pp. 121-2 — in which BR "updates ideas he dealt with earlier in COH." We have asked the Russell Estate for permission to reprint it in the Newsletter.
-

BULLETIN BOARD

(27) Harry Ruja's book review is still available. We'll send you a copy (while they last), if you ask for one. Harry reviews Elizabeth Eames' "Bertrand Russell's 'Theory of Knowledge'" and Ronald Jager's "The Development of Bertrand Russell's Philosophy." The review originally appeared in PHILOSOPHY AND PHENOMENOLOGICAL RESEARCH. We recommend it. Write The Bertrand Russell Society Newsletter, Box 409, R.D. 1, Coopersburg, Pa. 18036.

(28) Your own project. If you have an idea for a project that you'd like to work on, write Peter Cranford about it. His address: 2108½ Walton Way, Augusta, Ga. 30904.

(29) The Quester. We have been sent 2 issues of THE QUESTER, "Newsletter of University Rationalists," a 5-page weekly from the University of Texas Freethought group. It has been going since 1971. \$5 per year. We think they'll probably send you a sample issue, if you request it. P.O. Box 4913, Austin, Tx. 78765.

(30) Medallion. A notice we got in the mail says that the "portrait medallion" pictured here — 13" in diameter, "cast in durable Hydrocal" (whatever that is), choice of color — is offered for sale for \$20 delivered. We haven't seen the medallion. Our mentioning it in the Newsletter is not an endorsement, nor is it the reverse. For more information, write the sculptor, Warner Williams, Culver, In. 46511.

FINANCES

(31) Non-profit, tax-exempt. The Bertrand Russell Society is now a non-profit corporation, recognized by the Internal Revenue Service as having tax-exempt status. We are checking on how this may benefit members, and will let you know.

A FINAL P.S.

(32) Profiles. We will continue to provide brief profiles of members in later issues. These are based largely on the Questionnaires. Please return your Questionnaires, if you have not already done so.

Thus endeth the first year.

THE BERTRAND RUSSELL SOCIETY
new this year
invites membership

Aims.The Bertrand Russell Society (BRS) aims to promote the study and spread of Russell's ideas and the causes he believed in.

Growing.12 persons attended the founding meeting in February 1974. In 8 months, membership more than quadrupled, and continues to grow.

Why people join.Most members have joined (they tell us) for one or more of 5 reasons: to learn more about BR; to be in touch with other BR admirers; to further BR's purposes; to be able to discuss BR's work with others who share their interest and enthusiasm; to do something useful for others, via BRS.

Academia.Though not a scholarly society, many scholars belong to BRS. About half of the present membership (63, as of 11/22/74) have college or university affiliations; 11 are professors of philosophy.

Some members of BRS:

- . Edith, Lady Russell, BR's widow, an honorary member.
- . Dr. Katharine Russell Tait — BR's daughter, U.S. citizen, mother of 5 — Treasurer of BRS, and a founding member.
- . Lester E. Denonn, eminent Russell scholar and co-editor of THE BASIC WRITINGS OF BERTRAND RUSSELL, an active honorary member.
- . Dr. Douglas Lackey, editor of the recently published ESSAYS IN ANALYSIS BY BERTRAND RUSSELL
- . Dr. Corliss Lamont, educator, author, civil libertarian.
- . Dr. J. B. Neilands, Professor of Biochemistry, U. of California, Berkeley; Member, 3rd Commission of Inquiry, BR War Crimes Tribunal, North Vietnam (1967).

How BRS functions. BRS uses the mails, and holds one meeting per year. (In 1975: February 7-8-9, in New York City.) Committees are formed to promote particular activities. (There are 3 committees thus far: Applied Philosophy, International Civil Liberties, Science.) 4 Newsletters per year go to all members, plus occasional President's Letters. And of course, members write to each other, especially to those on the same committee.

Degree of activity.Members may be as active or as inactive as they wish to be. Some are very active; others wish merely to be kept informed; still others fall somewhere in between. No matter. Everyone who is interested in Bertrand Russell is welcome.

For more information, please write to The Bertrand Russell Society, Box 409, R.D. 1, Coopersburg, Pa., 18036.

(This is the "second page" referred to in Item 6.)

This is THE CONQUEST OF HAPPINESS(COH) bibliography (referred to in Item 25), prepared by Ms. Darlene Booth, Assistant Archivist of The Bertrand Russell Archives, who calls it "a concise bibliography of notable reviews."

"Open Letter to Bertrand Russell" by Max Plowman, The Adelphi, October 1930, pp. 108-13.

Today and Tomorrow, January 1931, pp. 194-5.

NEWSLETTER #6
April 1975

- (1) Two major events have occurred since the last Newsletter: The BRS session at the APA meeting (Items 2-7), and the Annual Meeting (Items 8-24). A new section, PHILOSOPHERS' CORNER (Items 33-35) is intended for members who are professional philosophers. Members will vote on the time and place of the 1976 Annual Meeting (Item 25). BR's own postscript to "The Conquest of Happiness" is reproduced in full (Item 31). The Bertrand Russell Peace Foundation (England) is in trouble (Item 46). As usual, an asterisk in the left column indicates a request; please respond, if possible.
-

DECEMBER 27, 1974

- (2) BRS/APA Meeting. The BRS presented a program on 12/27/74 at the meeting (in Washington, D.C.) of the American Philosophical Association, Eastern Division.

KATHARINE TAIT (nee Katharine Russell) reminisced about her father; DOUGLAS LACKEY discussed BR's first encounters with Wittgenstein; Carl Frank, of Rutgers, commented on the Lackey presentation; and PETER CRANFORD spoke briefly about the BRS. ED HOPKINS, who conceived the project and brought it into being, introduced the speakers. The project had been initiated too late to get into the official program issue of JOURNAL OF PHILOSOPHY, but BRS's own program mailings were apparently not without results: about 30 persons attended, including BRS Members CRANFORD, EAMES, EISLER, GARSTENS, GUY, LAMONT, READER, and SLEZAK.

BRS intends to do this again at next year's APA Meeting (December 1975), in New York City. Ed is issuing a call for papers on BR (Item 33).

- (3) Kate's talk was charming and informative. Here are some of the things she said:

BR began thinking about education during World War I, because "he wondered how people could grow up and be delighted at the prospect of killing each other. So he began to think about how you could educate people not to be like that."

After John and Kate were born, BR began to study psychology "to find out what you do in the home, as well as in school, to bring up citizens of the right kind. So he read Freud, and the latest psychology he could get hold of, which, bad luck for us, turned out to be John Watson, who wrote: 'Moral education begins at birth.' The child doesn't develop virtues, but good habits." But, says Kate, there's more to it than conditioning. John and Kate — who were "conditioned" to have good habits — didn't find it any easier to be good than BR had found it,

having been brought up on his grandmother's moral principles.

BR and his second wife, Dora (Kate's parents), decided to found a school (the Beacon Hill School), where they could educate their children the way they wanted to.

"My father thought that learning should be interesting and exciting, but that not all of it could be, and that children should be able to accept some dull routine as a necessary prelude to the more interesting things that would follow. The education method and theory really worked. We learned an enormous lot, and we learned it with great interest and enthusiasm, much of it on our own."

Thus Kate considers the school a success; but her father thought it a failure.

"He was rather an all-or-nothing person. He thought that if you set children free, they would be intelligent, liberal and cooperative, and what turned out was that when you set them free, they bullied one another brutally, and he found that you had to supervise them. You couldn't simply enlighten their minds, you also had to be a policeman. That was a big disappointment. He hadn't really expected that at all, because he thought that all their problems came from their benighted upbringing, and if you liberated them, all would be fine. It wasn't."

BR loved to tell jokes. "Some were not so great:

"Hungary used to be called Yum-Yum, but people didn't like that, so they changed the name to Hungary, thought it was more dignified.

"One of the worst stories of my childhood: the Duke of Wellington had a tail, small, you didn't see it under his coat, and he had a special hole in his saddle where it fit." When Kate went away to school, she told the teacher about the Duke of Wellington's tail, and the teacher said, "I never heard that, are you sure?" Kate answered, "Well, my father told me so, and his grandmother knew the Duke of Wellington." When Kate went home, she asked her father about the tail, and when the truth came out, she felt humiliated.

"He kept us hopping with puzzles. How do you know the table is here when you're not in the room? How do you know the sun will rise tomorrow? And he told us about the Cretan who said, 'All Cretans are liars,' and how were you supposed to know whether they were or they weren't? We used to rack our brains over these things, and I grew up saying I would never be a philosopher. I rather enjoyed them at the time but they seemed so unanswerable.

"He knew so much — history, geography — he would always answer your questions. And he knew yards of poetry by heart."

When BR had finished his daily writing stint, "he was the most entertaining, the most affectionate, the most charming person I've ever met. But when he had to work he just tuned you right out.

"Every day of his life he read what he called 'a silly book', usually a detective story. Whenever we moved, we had to find a lending library, so he could have his supply of silly books. If no detective stories were available, any kind of sloppy romance was better than nothing. This was his relaxation. It was quite a long time before I realized that 'silly' was one word and 'books' another."

If you'd like more of this delicious stuff, Kate's book of reminiscences about her father is scheduled for publication this Fall, by Harcourt Brace Jovanovich.

(4)

Douglas Lackey's paper was titled, "Russell's First Encounter With Wittgenstein, As Documented In Unpublished Materials." What follows is a sampling of the paper, to show its aims and its flavor; but it is only a minor portion of the whole.

I wish in this paper to fill in some gaps in the biography of Russell and Wittgenstein. I hope the incidents I relate will be of interest to the history of philosophy and, derivatively, to philosophy itself.

My presentation has 3 parts. First, I describe this first encounter between R and W in much greater detail than has ever been done before. Second, I describe the state of R's philosophy when W was R's student. My aim is to show that many of the key notions of logical atomism associated with W in fact first appeared in unpublished writings of R to which W had access. Third, by providing a new documentary account of W's thought and personality from 1911 to 1913, I give a basis for a negative evaluation of the thesis...that W's ideas cannot be understood apart from the cultural mix of Hapsburg Vienna.

R and W had encounters in 5 different periods...

The most important meeting was the first. R actually succeeded in giving W some ideas, and W succeeded in changing some of R's own. R wrote about this in 5 different places. R's descriptions of the encounters were all written decades after the event and cannot be considered historical documents...The Notes on Logic by W are equally suspect...

Of the 1400 letters R wrote to Ottoline (Morrell) during these years, 84 record information about W. (The letters are now in the Library of the University of Texas.) And the main book on which R was working when W was his student has been preserved in manuscript.

"My German is argumentative and very tiresome. He wouldn't admit that there was not a rhinoceros in the classroom." (R's first comment.)

"My German engineer is a fool. He thinks that nothing empirical is knowable." (Early comment.)

"W brought me something he had written. It's very good, much better than my English pupils write. I shall encourage him, Perhaps he will do great things."

"After my lecture, W came to my room with me to compose a definition of logical form as opposed to logical matter, to which I suggested various objections, which made him miserable."

"This morning I had my lecture, then W, bringing me some lovely roses. He is a dear man, in spite of being a bore. He also brought me a very original suggestion, which I think is right, on an important point in logic."

"I like W more and more. He has the theoretical passion, which is rare, and one is glad to find it. He doesn't want to prove this or that, just to find out what things really are. He is very excitable

and rather mad, and he has excellent manners, though in an argument, he forgets about manners and simply says what he thinks. In spite of it all, something about him makes him a hero."

"W is a rather severe critic of my lectures. He says I make things too simple and too easy, and encourage the dogmatic discipleship which I deplore. He's very excitable, and has more passion about philosophy than I have. His avalanches make mine seem like mere snowballs. He has the pure intellectual passion in the highest degree, and it makes me love him. His disposition is that of an artist, intuitive and moody. He says, every morning he begins his work with hope, and every evening he ends in despair. He has just the sort of rage when he can't understand things that I have."

"He says, in his judgment, 'A Free Man's Worship' needs something solid in back of it. He dislikes the last chapter of my shilling shocker" — The Problems of Philosophy. In the last chapter, R says philosophy is good because it expands your mind. "W disagrees with that. It vexes him that philosophy should have any use outside of itself."

"I think W has genius. In discussion with him, I put out all my force just to equal his. With all my other pupils, I should squash them flat if I did so. He suggested several new ideas which I think valuable. He is an ideal pupil; he gives passionate admiration, with vehement and intelligent dissent. He spoke with intense feeling about the beauty of the big book" — Principia Mathematica — "and said that he found it like music. That's how I feel about it, but few others seem to... He said that the happiest hours of his life had been passed in my room. He is not a flatterer, but a man of transparent and absolute sincerity. I have the most perfect intellectual sympathy with him, the same passion and vehemence, the same feeling that one must understand or die, the same sudden jokes breaking down the frightful tension of thought."

"I shan't feel the subject" — logic — "neglected by my abandoning it so long as he takes it up. I thought he would smash all the furniture in my room today, he got so excited."

R wrote his paper on the ultimate constituents of matter. "He doesn't like the rest of my paper on matter, but only because of disagreement and not because it was badly done."

"I told him he ought not to simply state what he thinks but to give arguments for it. He says arguments spoil the beauty. He'd feel hurt, as if he were dirtying a flower... He does appeal to me. He's an artist in intellect, and this is very rare. I told him I hadn't the heart to say anything against him, but that he better acquire a slave to state his arguments."

"I gave W some sage advice, not to put off writing until he had solved all the problems, because that time would never come. This produced a wild outburst. He has the artist's feelings; he will produce the perfect thing or nothing. I explained how he wouldn't get a degree or be able to teach unless he learned to write imperfect things. This made him all the more furious. At last he begged me not to give him up even though he disappointed me. With all his intransigence, he makes me feel like a puny compromiser. I have such a strong protective feeling for him that I find it hard to be as reckless for him as he is for himself, though I think he is quite right about this."

"W just arrived, frankly pained by my article on religion." (The Essence of Religion.) "He felt I had been a traitor to the gospel of exactness, wantonly used words vaguely, and said things that are far too intimate for print. I minded this very much. Of course, I agreed with him."

"I feel very much inclined to leave this" — a proposed paper, What is Logic? — "to W."

"W is on the verge of a nervous breakdown, not far removed from suicide, feeling himself a miserable creature, full of sin. Whatever he says, he apologizes for having said it." W's 3 brothers committed suicide; W did not.

"I am pleased to find that W thinks just as well about this idea about matter as I do."

"Ten years ago I could have written a book on the store of ideas I have already, but now I have a higher standard of exactness. W has persuaded me that the early proofs of Principia Mathematica are very inexact."

"I find I can no longer talk to him about my work, only about his. I have become completely reserved."

R began to write a book on the theory of knowledge without telling W.

This is the end of the sampling of a fascinating presentation. There are no present plans to publish the Lackey paper.

- (5) Carl Frank disagreed with the Lackey contention that some ideas usually attributed to W were actually originated by R, because they can be found in R's unpublished manuscript. Frank maintained that, even though these ideas do appear in the unpublished manuscript, that does not prove that R originated them, for R and W had been discussing logic and philosophy quite intensely for a considerable time, and anything R wrote at that time would necessarily have reflected his discussions with W.
 - (6) Peter Cranford told how his almost accidental discovery of COH — he was attracted to it, in a bookstore, by its title; he was looking for a book to give to troubled patients in his private practice — was an event that ultimately led to the founding of The Bertrand Russell Society.
 - (7) Tapes. We have a tape (cassette) of the Tait, Lackey and Frank talks. It is not of professional quality, but the speakers are quite audible. We will lend it on request. Write the Newsletter.
-

ANNUAL MEETING, 1975

- (8) The 1975 Annual Meeting — held in New York City, at the Hotel Tudor, February 7-8-9 — marked the start of the BRS's second year of existence.

President Peter G. Cranford presided at the first 2 sessions, Vice-President Bob Davis at the second 2. These members were present for one

or more of the 4 sessions: ARKIN, BLACKWELL, CRANFORD, DAVIS, EISLER, GARSTENS, GREENMAN, JACKANICZ, LACKEY, MANESSE, MCDONALD, REINHARDT, SLEZAK, TAIT, THOMPSON, WILLIAMS. Also present, Dan Manesse's guests: Margaret Tauss, Dr. Herbert Lauring.

The Meeting started Friday evening with a movie of BR — an NBC interview on BR's 80th birthday (excellent) — brought to the Meeting from Chicago by Gary Slezak. Afterwards, Peter Cranford gave a review of the first year, Lee Eisler presented highlights of Information and Membership Committee activities (Item 30), and Kate Tait, as Treasurer, spoke about money matters (Item 28.)

On Saturday, the sessions continued, morning, afternoon, and evening. All business was completed by the end of Saturday; no formal meeting was scheduled for Sunday.

Here is what happened on Saturday:

- (9) Bob Davis, in his introductory remarks, said that, basically, the BRS does 2 things: BRS makes it possible for Russellites to be in touch with one another; and it works to spread BR's ideas and further his purposes by means of projects — projects which members take part in, those who have the time and inclination. He said we had succeeded in our first year goal of acquiring members, and that the next goal, as he sees it, is to make sure that all members who might wish to, are in fact participating in a BRS program that appeals to them — or starting one of their own, as Dan Manesse has done (Item 16).
- (10) 1975 Contributions. \$1600 has been contributed or pledged for the coming year by the original BRS members.
- (11) Joe Neilands was prevented by flu, at the last minute, from attending the Meeting. (We missed him. Ed.)
 Martin Garstens read us excerpts from Joe's article for "Organic Gardening", SCIENCE AND THE BIOSPHERE. It is very, very good; we will send reprints to all members, when available.
 Joe proposed that the Committee on Science (which he heads) work to achieve 6 goals, provided the BRS approved. These were: phasing out research grants sponsored by the Dept. of Defense; requiring recycling programs where appropriate; mandatory disclosure of all sources of income by recipients of federal grants; requiring interdisciplinary and science policy studies on campuses with substantial federal grants; requiring performance records showing social responsibility of all principal investigators getting public funds; and focusing attention on the biological hazards of continuing to generate radioactive materials.
 There was some opposition to some of the proposals, at the Meeting, and unfortunately, Joe was not there to explain or defend them. We decided therefor to have the proposals written up more fully, and submitted by mail to the members, so that they could vote for or against each of the proposals. You can expect to receive something in the mail on this, when it has been completed.
- (12) "What I Believe." The following was proposed by Douglas Lackey, and approved:
 In order to induce a publisher to re-publish BR's 1925 essay, What I

Believe, as a separate paperback, BRS agrees to purchase 1000 copies (if it is published.) The book would probably sell for \$1 or \$1.30 retail. BRS's maximum commitment would be \$1300. Douglas Lackey undertakes to sell 250 copies per year, to his students; BRS would recover its money in 4 years.

The reason for the special interest in What I Believe is that it states BR's social views concisely, and is a good, short introduction to BR for beginners.

* This is the first time the BRS has undertaken to spend a not inconsiderable amount of money, and for a purpose other than growth or internal communication. Any member who has feelings about this, one way or another, is invited to express them in the Newsletter.

(13) \$300. Officers were authorized to spend up to \$300 on a single project, if money is available, without getting permission from the members. The reason for this is, we elect officers to carry on our business, and we have to give them the means to do it (within limits), without making it burdensome.

(14) Arthur Arkin spoke informally about the value of BR's ideas to psychiatry.

(15) A New York City chapter will soon start. Potential members include GREENMAN, JACKANICZ, MANESSE, McDONALD, THOMPSON.

(16) Daniel Manesse read 2 brief chapters from his novel, GOTHAM COLLEGE, (meaning CCNY), on how Mayor Fiorello LaGuardia (an otherwise admirable Mayor, Ed.) caved in before the pressure of NYC's Catholic politicians, who didn't want BR to teach at CCNY, and who succeeded in seeing that he didn't. Dan had been a student at CCNY at the time of the original episode (1940).

Dan will undertake to publish, at his own expense, a Russell magazine. "It might be a good place for students to get first things published," says Bob Davis; or for anyone else who wishes to write. The whole idea — like any new idea — is necessarily experimental. If things go well, BRS might eventually sponsor the magazine.

(17) "Philosophy". Martin Garstens, a philosopher by avocation (he earns his living as a physicist), and George Williams, a philosopher by vocation or profession (he teaches philosophy for pay), discussed the 2 kinds of BR writings: (1) the "philosophical" writings (on epistemology, language, logic, metaphysics, etc.); and (2) the "popular" writings (on religion, morality, marriage, sexual conduct, happiness, education, politics, power, rationality, nuclear weaponry, etc.)

George, as devil's advocate, said that some philosophers consider the popular writings as "mere journalism", not philosophy at all, and ignore everything BR wrote except the "philosophic" writings. (At the Meeting, many of the "non-philosophers" seemed to feel just the opposite: they largely ignore BR's books on "philosophic" subjects and value BR for his "popular" writings.)

Martin, who heads the Committee on Applied Philosophy, thinks that the academics whom George was referring to, have too narrow a view of philosophy, and ought to include under "philosophy" the things that touch people's everyday lives.

* Comments are invited.

- (18) Bertrand Russell Peace Foundation in trouble. Lee Eisler read a letter from Ken Coates, a Director of the Foundation. The letter also appeared in THE NEW YORK REVIEW OF BOOKS 2/20/75, sent in by Noam Chomsky. (See Item 46.)
- (19) BR writings for beginners. Which of BR's writings would you recommend to a young beginner, say, a highschool or college student?
 Not everything is suitable. One of Gary Slezak's groups, you may recall, was turned off by The Conquest of Happiness, calling it sexist, elitist, etc. We are looking for writings that do not contain outdated passages or require explanations in order to be acceptable to young people.
 Some possible topics: ecology, women's rights, marriage, sex, child rearing.
 The selected writings could be used in 2 ways: they might end up in a book, possibly titled THE MODERN BERTRAND RUSSELL READER; or they might end up on a reading list, perhaps titled INTRODUCING BERTRAND RUSSELL, A List of Selected Readings.
 * Please send suggested titles (of books or essays) to Bob Davis, 1737 Silverwood Terrace, Los Angeles, Ca. 90026. He will work with George Williams and Ken Blackwell on this project.
- (20) Pamphlets. Ken Blackwell suggested a series of brief pamphlets, with titles like RUSSELL ON WOMEN'S RIGHTS, RUSSELL ON EDUCATION, RUSSELL ON RELIGION, RUSSELL ON HAPPINESS...you get the idea. Will members please send suggestions for possible pamphlets to the Newsletter, with sources for quotes.
- (21) Documentary film. The idea of having a film on BR, made from existing film and stills, has occurred to several members. The requirements for bringing off such a project successfully are not inconsiderable. You have to know how to make a film, or else, how to get hold of quite a bit of money so you can hire someone else to make it. The film footage and stills have to be acquired, along with permission to use them. Not a small project. Members with ideas on this — or on an "entertainment" type of film, based on dramatic events in BR's life — should write Bob Davis (1737 Silverwood Terrace, Los Angeles, Ca. 90026), who will work with George Williams on this.
- (22) 2-year terms for officers. There was no election of officers or committee chairpersons at the Meeting, as they had been elected in 1974 for 2-year terms.
- (23) Next year's meeting. Several members have suggested that Annual Meetings be held at some place other than NYC, and perhaps in some month other than February. It was decided, at the Meeting, to let the members decide when and where to hold the 1976 Meeting. See Item 25.
- (24) Some minuses. Because of a foul-up in making arrangements, we had to make a last minute switch from the Hotel Roosevelt. (It turned out, they wanted a guaranteed number of guests, a cocktail party, and a banquet. We couldn't afford it. The Hotel Tudor made no such demands, and provided a large meeting hall at no charge.) We apologize to members who were left waiting in the lobby for a while, early Friday evening. Lee Eisler was asked to make arrangements next year.
-

NEXT YEAR'S MEETING

(25)

Vote. We are going to vote — by mail — to decide when and where to hold the 1976 Annual Meeting.

Use the ballot on the last page of this Newsletter to state your preference as to time and place.

Here are some considerations:

Time of Meeting

Perhaps February is not as convenient for you as some other month. Some have suggested June because the school term is over by then. Another suggested time is December, just before or just after the American Philosophical Association meeting; this would make it easier for our philosopher-members (and others) who attend the APA meeting to also attend the BRS Annual Meeting; it comes at Christmas vacation time, when there are no classes. The December suggestion assumes that the Meeting will be in NYC, because that's where the APA meeting will be.

Please suggest the 1976 weekend (Friday, Saturday, Sunday) that you prefer. Give exact dates, e.g., June 11-12-13, 1976.

Place of Meeting

The U.S. and Canadian members are spread out as follows:

ARKANSAS	McWilliams
BRITISH COLUMBIA	Segnitz
CALIFORNIA	Ashkenazy, Block, Davis, Kong, Kraus, Kravig, Lipin, Neilands, Pitt, Ramsay, Ruja, Sessions, Tobin, Weinbren
CONNECTICUT	Ambery
DELAWARE	Reinhardt
GEORGIA	Annis, Cranford, Stone
ILLINOIS	Eames, Gannt, Schultz, Slezak, Turquette
INDIANA	Berkshire, Waite
IOWA	Spang
KANSAS	Ringer
KENTUCKY	Forno
MARYLAND	Garstens, Guy, Hopkins, Kahan, Reader
MINNESOTA	Magel
MISSOURI	Claiborn, Marie John
NEW HAMPSHIRE	Garrison, Otto, Tuck
NEW JERSEY	Freedman, Kaplowitz, Lefkowitz, Rybnikar, Thompson, Weiner, Williams
NEW YORK	Arkin, Axel, Denonn, Greenman, Becky Hyman, Dick Hyman, Jackanicz, Kohl, Lackey, Lamont, Manesse, McDonald, Tait
NORTH CAROLINA	Perley
NORTHWEST TERRITORIES	Vera Roberts
OHIO	Saal, Thomas

ONTARIO	Blackwell, Milne, Plant, Don Roberts, Lorraine Roberts, Scheu
PENNSYLVANIA	Eisler, Quevedo
SOUTH CAROLINA	Malatesha, Oliver
SOUTH DAKOTA	Anderson
TEXAS	Flanagan, Hackemack, Kwok, Levine
VIRGINIA	Buxton, Elam
WASHINGTON	Allendorf, Richard German, Nancy German, Love
WISCONSIN	Campbell, McKeown

Here is a numerical comparison of members East and West:

East: (New York State + contiguous States and Provinces + New England States + other Eastern Seaboard States): Connecticut 1, Delaware 1, Georgia 3, Maryland 5, New Hampshire 3, New Jersey 7, New York 13, North Carolina 1, Ontario 6, Pennsylvania 2, South Carolina 2, Virginia 1. Total, 45.

West: California, 14, Washington 4. Total, 18.

If all members were to attend the 1976 Meeting, the total mileage traveled would be considerably less for a NYC location than for any other.

There is no doubt that NYC works a hardship on West Coast members. A Westerner has to spend \$500, more or less, to attend, which is a lot, even though it is tax-deductible (we think.) Only 1 out of 18 Westerners attended in 1975.

* The final choice rests with the members. Please send in your ballot (Item 52, last page of Newsletter.)

REPORTS FROM OFFICERS

President Peter G. Cranford reports:

The first year. Although the year's activities have been well documented in our Newsletter, it may be of value to the new members if I recapitulate briefly what we have accomplished and then indicate towards what direction the Society seems to be moving.

In February 1974 eleven interested persons met at the Hotel Tudor in New York City. This had been preceded by a great deal of correspondence in which the purpose of a possible Bertrand Russell Society was debated over a period of many months. The chief aim finally arrived at was, to spread Russell's ideas.

This was done throughout 1974. Pilot chapters in Fresno, Los Angeles, Hamilton, Baltimore, and Chicago were started, under the guidance of Dr. Jack Pitt, Dr. Joe Neillands, Ken Blackwell, Dr. Martin Garstens, and Gary Slezak. Lee Eisler stimulated interest in the Society on a national and local level by news items and advertisements in various national publications, and kept the membership thoroughly informed through his excellent Newsletters. Perhaps five or six members distributed copies

of The Conquest of Happiness in appropriate places. Spreading of ideas also occurred through personal contact. Several members of the original group published articles on or in the spirit of Russell, and others are forthcoming. Dr. Ed Hopkins had a very successful program on Russell's ideas at the December meeting of the American Philosophical Association, and similar exposure is slated in other national associations, in sociology, psychology, political science, and psychiatry. In addition, our activities have been reported in Russell, the official organ of The Bertrand Russell Archives.

All during this time, the Society was steadily growing. By the end of the year it was approaching the hundred mark. This was due in large part to Lee Eisler's advertising done at very little cost, by members bringing in other members, and by our exposure in Russell.

The ages of our members range from early teens to early eighties. The intellectual, educational, and motivational level is very high. Many of the members have read Russell extensively and some knew him personally or had contact with him. Most are drawn to him by his great mind, his great character, and his liberal activism. The calibre of the members has changed the direction of the Society. Some of us thought there should be some alternative to the mysticism and drug culture that was being widely promoted, and that a young group could be interested in Russell's rationalism. But it turned out that the Society was drawing almost entirely from a pool of people who were already familiar with Russell's ideas and who wanted to know others who also were. We then decided that we would first concentrate on building up an organization of "Russellites" and have this group serve as a core for planning further. This has worked out very well, and it is entirely probable that we shall have several hundred of such members by the end of 1975.

The psychological strength of the organization at this point stems from the intellectual and moral stimulation that Russell provides. Additional strength comes from the desire of the members to know other members who have been taught by Russell (directly or indirectly) and who have his attitude toward life. How many such people exist in the world we do not know. It is possible that when these are all brought into the Society, growth will slow down. It is more probable that the so-called Russellites, who are clearly highly intelligent, capable, socially oriented, and motivated, will so stimulate the Society that it will continue to grow and act more or less indefinitely — as have the religions.

This brings me to the point that I have tried to make in various ways. Without some degree of Russellian mysticism, I do not think the Society will ever be a strong force in the world society. I know that my argument for the need for mysticism may not be palatable to some. Some are intimidated by Russell's Why I Am Not A Christian, some have been concerned in the past about the development of a "cult of personality", and some tend to turn their back on any form of mysticism. The truth of the matter is that in two important ways, we are no different from the major religions. We believe in love as the chief ingredient of the good life and we have faith that life can have meaning. We differ in that we are committed to implementing this with knowledge acquired in a scientific manner.

(Peter is going to have to tell us, in the next Newsletter, what he means by "Russellian mysticism." Ed.)

A decided weakness in the organization is the poor representation at the Annual Meeting. We had eleven members at our first Meeting, and sixteen at our second, in 1975. We must try to make a better showing next year.

The attendance of key officers and chairmen and members of our committees should be encouraged even if we must subsidize a portion of the expense. Some could not come because of the allied problems of distance and time. Part of this general problem may be solved by a small separate but representative business meeting preceding the Annual Meeting. Part can be solved by getting up a western Society. (Bob, could you do this?)

The time has come, too, to have a rather formal agenda, through a program committee that would have things completely structured months in advance of the Annual Meeting. (Bob, could you do this, or select a committee that would? I will serve on it, though I am poor at this sort of thing.)

As to finances, I will serve as coordinator of a committee this year. I need ideas as to how to proceed. My first one was to appoint every member as a member of the Finance Committee, and to have a small Steering Committee in which responsibility could be concentrated. Another feeling I have is that I would never want us to be a money-grubbing group, and to think instead that we do not solicit money but rather provide an opportunity for a member to invest charitable funds wisely.

I think finally that in all our activities in 1975, we should constantly orient ourselves with the thought, "What would Russell advise in such a situation?"

(27) Vice-President Robert K. Davis' report is merged into Items 8-24, on the 1975 Annual Meeting.

(28) Treasurer Katharine Tait reports:

For the quarter ending 2/7/75:

Balance on hand (December 1, 1974).....1409.59

Income: Pledges and contributions.....366.66

Membership dues.....176.00

542.66

1952.25

Expenditures: Information Committee....419.73

McMaster(16 subs).....48.00

William Mobley.....150.00

Katharine Tait(expenses) 60.00

707.73

Balance on hand (February 7, 1975).....1244.52

For the year ending 2/7/75:

Balance on hand (February 7, 1974).....0000.00

Income: Pledges and contributions.....2315.00

Membership dues.....685.00

3000.00

Expenditures: Information Committee...	1227.04	
McMaster (subs).....	159.00	
Fresno meeting.....	54.40	
Stationery.....	66.24	
W. Mobley.....	180.00	
K. Tait, expenses to D.C....	60.00	
	<u>1746.68</u>	
Misc.....	<u>8.80</u>	<u>1755.48</u>
Balance on hand (February 7, 1975).....		1244.52

REPORTS FROM COMMITTEES

(29) International Civil Liberties Committee (Bob Davis, Chairman):

"I am looking for an interested member to take over the chair of this Committee. The V.P. duties preclude my giving adequate attention to it; this pains me, but that's how it is. Approval was given, at the Meeting, for the Chairperson to affiliate with Amnesty International. As mentioned earlier (NL3-20), Amnesty selects 3 political prisoners each month — one each, from the East, the West, and the Third World — held in violation of their civil rights, and writes letters to officials of the offending countries. The prisoners, to be selected by Amnesty, must not have used or advocated violence. Amnesty is well respected, and their selections should preclude questionable or dishonest figures.

"Also, if there is no objection, I will change the name of this Committee to the Committee on International Human Rights."

(30) Information and Membership Committees (Lee Eisler, Chairman):

To give an idea of activities -- and costs, in round numbers -- of these committees:

- . A printed page, such as the one you are now reading, costs 4¢ to 5¢.
 - . A 15-page issue of the Newsletter costs, with 30¢ postage, slightly over a dollar.
 - . 4 Newsletters per year will cost about \$4 to \$6.
 - . A new member receives 11 pages (Letter of Welcome, Questionnaire, Constitution, Founding Meeting Minutes) plus all back issues of the Newsletter. A member joining today gets a total of 87 pages (through Newsletter #5), costing about \$4.50, plus \$1 postage, if first class,
 - . An inquirer is sent 7 pages costing 35¢ plus 20¢ postage.
 - . Our clasified ads cost from \$4 (THE HUMANIST) to \$25 (BULLETIN OF THE ATOMIC SCIENTISTS) each. SATURDAY REVIEW costs \$20.
 - . During the first year, information about the BRS was sent to some 200 persons, about one-third of whom joined.
-

BY BERTRAND RUSSELL

(31)

A P.S. to "The Conquest of Happiness." The following article by BR first appeared in the July 1935 issue of NASH'S PALL MALL MAGAZINE (England), and is printed here with the permission of The Bertrand Russell Estate.

Are We Any Happier?

Happiness and unhappiness, as everyone recognizes, are due partly to causes lying within the individual, partly to his external circumstances. When we say that a person is melancholic, we imply that his unhappiness comes from within; if we adhered to etymology, we should mean that he suffered from black bile. On the other hand, in the days before so many monarchs had lost their thrones, it was customary to say of a man that he was as happy as a king, and in our times most people envy the very rich. In some ways, a man can increase his happiness by his individual good sense, even without augmenting his outward prosperity; in other ways he is dependent upon matters outside his own control, such as the success or failure of his country in war. It is important to discover the proportion between these two kinds of causes of happiness, since, broadly speaking, the latter are far more dependent than the former upon political and economic conditions.

There are those who maintain that any sane man can make himself happy by a sound philosophy, however poor he may be; there are others who regard external circumstances as decisive except in a few rare instances. I do not hold with either extreme, but I think the second much more nearly true than the first.

In the ancient world, when the Greeks had lost political freedom, many of their wisest men adopted the Stoic philosophy, which taught that true happiness comes wholly from within, and will be enjoyed by the virtuous man, however hardy fate may deal with him. The doctrine was taken over by the Romans, among whom its most eminent advocate was the Emperor Marcus Aurelius. He was perhaps hardly in position to judge how much happiness would have remained to him if he had been transformed into a starving proletarian, but the early Christians, whose morality largely resembled that of the Stoics, showed that, to some men, happiness is possible in spite of poverty and persecution.

No one can deny that by self-discipline, self-knowledge, and a wise philosophy, much can be done to increase contentment. But when it is argued that, for the community in general, such things can take the place of social and political improvement, many important factors are overlooked.

In my book, The Conquest of Happiness, which was published five years ago, I dealt with the private and individual means of acquiring happiness, and as I confined myself to these, I may have seemed to be assigning undue importance to them. What I said in that book still seems to me just, but it was stated to be only one side of the whole truth, In what follows, I shall consider mainly the other side.

There are a few saints and sages, and also a certain number of lunatics, to whom very little in the way of good fortune is necessary. Men who have a firm faith, whether true or false, which enables them to feel sure that the causes they care for will ultimately triumph, may merge their ego so completely in the success of their creed, that what happens to themselves as individuals ceases to seem important to them. If everybody were of this sort, the world would be divided into inquisitors and martyrs, each deriving felicity from the flames of the auto da fe.

But most men have not this inflexibility; their beliefs are held with a certain measure of doubt, and are apt to be abandoned if they lead to misfortune. History shows that it is commoner to recant under persecution

than to persist, and even among those who persist, a very small modicum of doubt will rob martyrdom of its ecstasy and deprive the inquisitor of insensibility to the tortures of his victims. It is not therefore through increase of bigotry that universal happiness will be achieved.

Leaving such extreme cases on one side, it may be said that ordinary men can achieve happiness, with only a small amount of external prosperity, if they have good health, a cheerful disposition and a sound philosophy of life, and these, it may be said, are purely personal matters. But as soon as we consider their causes we find ourselves plunged into the world of politics and economics.

Take first good health. The diminution of illness and the lowering of the death-rate are among the most cheerful features of the modern world. In England, the improvement began at the beginning of the nineteenth century, and has continued steadily, apart from occasional epidemics such as that of influenza at the end of the War. The causes are by no means obscure. The chief causes, between 1801 and 1811, were, according to Clapham's Economic History of Modern Britain, "the conquest of small-pox, the curtailment of aguish disorders through drainage, the disappearance of scurvy as a disease of the land, improvements in obstetrics, the spreading of hospitals and medical schools." All these are what may be called public causes.

Later improvements have been brought about in similar ways: by sanitation, by advances in medical science, by public health services, by the better diet and housing, which, throughout the period from 1850 to the Great War, accompanied the diminution of poverty. The increase of happiness thus brought about obviously greatly exceeded anything that could have been achieved by merely operating directly on individuals.

Take next, as a source of happiness, the possession of a cheerful disposition. Mark Tapley always kept up his spirits, even when he was suffering from malaria in a dismal swamp. It used to be thought that anybody could acquire this sort of talent by moral effort. No doubt, a man can, by moral effort, abstain from overt complaining, and utter encouraging platitudes even amid the direst misfortunes. But when this is merely an expression of will-power, not genuine gaiety, it is apt to be more irritating than the most lugubrious lamentations.

A spontaneously cheerful disposition, which alone is a source of happiness to its possessor and his companions, depends upon a variety of causes, partly physical, partly mental. The two chief essentials are right functioning glands and wise psychological treatment in early childhood, which depends upon diet, sunshine, and good sense in parents and teachers. In cold countries, and especially in towns, diet and sunshine will be deficient wherever there is great poverty, while parents and teachers will not, as a rule, deal wisely with children unless they have been instructed in the bad effects of unregulated severity. In southern countries, among families living on their own produce, where there are no schools and parents are too busy to notice their children, the conditions for a cheerful disposition may exist naturally; but in northern, industrialized countries they can only be brought about, on a wide scale, by deliberate public effort.

It remains to consider a sound philosophy of life, as one of the apparently private sources of happiness. We must, however, confine ourselves to such philosophies as genuinely influence action, for those which remain purely theoretical may only increase unhappiness. Mr Micawber had the most correct principles as to income and expenditure,

and yet was always in debt, because his belief in his own principles did not go deep enough to restrain his extravagant impulses.

A philosophy which determines conduct is not so easily produced as one which is only a matter of words. Take, for instance, a man's estimate of his own importance. A frequent cause of unhappiness is the difference between the value a man sets upon himself and that which the world sets upon him. Poets, painters, composers and inventors, are often convinced that their work is of immense importance, although others refuse to notice it. Sometimes they are right, but usually they are wrong.

In a less noteworthy form, the same sort of delusion is common among unsuccessful men, and is a considerable source of unhappiness. If, from the first, their expectations had been lower, they would not have been disappointed and might have lived contentedly. On the other hand, this same kind of humility would be fatal to the work of really great men, who need self-confidence in order to persevere against opposition.

We can only say, therefore, that a man should esteem himself at his true worth, but whether he does so may not be apparent until he has been dead for a hundred years. This only amounts to saying that it is a good thing if people are intelligent as to their own capacities, and neither unduly humble nor unduly conceited. In the great majority of cases, this is a matter which is determined by the environment.

There have been ages of self-confidence and ages of humility; there have similarly been nations and classes where every man thought himself capable of remarkable achievements, and others where such a belief would have been thought presumptuous. The self-confident ages contain great achievements, but end in political chaos or enslavement; the modest ages may be politically stable, and in a slow way constructive, but are hostile to individual genius. Athens from Pericles to Plato, Renaissance Italy, Elizabethan England, France in the late eighteenth century, were convinced of their own greatness, individually and collectively. Plato, Columbus and Shakespeare were more convinced of their capacity to do great things than they could have been if they had been born in the late Roman Empire or during the Dark Ages; and what applied in a supreme degree to them applied in a proportionately lesser measure to their contemporary compatriots. As these instances illustrate, self-confidence, on the average, depends upon social conditions rather than upon the individual.

Those who interpret all history in economic terms might argue, with a very considerable degree of truth, that happy ages are those in which the average income is increasing, and unhappy ages are those in which it is diminishing. Some people, mostly well-to-do, preach contempt of filthy lucre, and maintain that it is easy to be happy though poor. The important question, in regard to happiness, however, is not the absolute amount of one's income, but its augmentation or diminution.

Perhaps a very rapid increase, by altering one's habits and one's social milieu, may not be altogether a source of contentment, but a continual rise of (say) ten per cent. every year is likely to bring the nearest possible approach to perfect bliss. The boy or girl whose parents are rising in the world gets, every year, rather better holidays and education than he or she had been expecting. When the boy becomes a young man, if he does well, he can marry the girl of his choice, whereas if he does badly he may have to wait a long time. When he in turn has children, if he prospers he can always give them rather more than his previous standard of life had led him to expect. Above all, he has the feeling of being a successful man; since circumstances adapt themselves to his wishes, he acquires an illusion of omnipotence, than which nothing is more delightful.

The optimism of the nineteenth century, which now seems a pathetic delusion, was caused by the rapid and general increase of material prosperity, and conversely the impoverishment of the present day is producing a number of forms of pessimism, most of which are disguised as optimistic beliefs in nonsense. The world is full of highly-educated young men who cannot find any exercise for their laboriously acquired capacities. When we suffer, we find relief in the belief that our misfortunes are due to human enemies; therefore times of increasing poverty are times of hatred.

In our day, it is common to attribute the world's misfortunes to the Jews or the capitalists, the socialists or the wickedness of foreign nations. Hence arise a number of violently persecuting creeds, nationalism, anti-semitism or fascism and communism. As our economic misfortunes are due to failure to organize and co-operate as much as modern industrial technique demands, all these dividing fanaticisms only increase the general chaos and breakdown, but this in turn, by a natural psychological mechanism, increases hatred, which further intensifies poverty, and so on endlessly in a vicious circle.

The man who sees hope in individual reformation might, nevertheless, make an effective retort to our argument that average happiness depends upon changes of average income. The prosperity of the nineteenth century was brought about by the intelligence of a rather small number of men, who made scientific discoveries and invented machines. What is needed in our day is the general acceptance of similar discoveries in economics and social psychology, but this is difficult, because men find it hard to think about their fellow-men without passion.

When Galileo studied falling bodies and Newton discovered the laws of planetary motion, when James Watt contemplated the kettle and Faraday investigated the phenomena of electromagnetism, they did not love or hate the objects that they were considering. Galileo did not waste his breath in telling bodies that they ought not to fall, nor did James Watt exhort the steam to be content with the space allotted to it. But when we study human beings and their behaviour, we are continually labelling it "misbehaviour;" and ceasing, in so doing, to consider it with that scientific detachment which is necessary for intellectual understanding.

In the Middle Ages, epidemics were attributed to the wrath of Heaven, and combatted by collective prayer in churches, which of course spread the infection. Nowadays, however ardently the sanitary authorities may wish to check the disease, they do not attribute it to an enemy or regard the microbes as wicked. When any considerable section of the population is able to view our present misfortunes in the same dispassionate manner, the cure will not be difficult to find.

At present, education and the press combine to make this difficult, by inculcating nationalism and emotionalism. But when we consider that the scientific attitude towards the physical world is scarcely more than three hundred years old, and that astronomers promise the human race another billion years or so of existence, it is perhaps not an excessive optimism to hope that sooner or later, the scientific attitude will spread to human affairs. When that happens, poverty will be abolished in a generation, and its abolition will bring a decay of hatred that may make the gain lasting.

If social science is to dominate politics and economics, as physical science has come to dominate our dealings with the inanimate world, the change, in the one case as in the other, must proceed from a beginning among a few exceptional individuals to a gradual conquest of the thoughts and imaginations of ordinary men and women. In spite, therefore, of the immediate importance of social causes in producing happiness, a sound individual philosophy remains important, since it is the source from which

must spring the transformation of social forces from causes of misery to causes of happiness.

The individual is moulded by society, but it is equally true that society is moulded by individuals. Social reform and individual enlightenment are two sides of one process, and neither can be considered apart from the other.

ABOUT BERTRAND RUSSELL

(32)

"Guided Tour of Intellectual Rubbish", the one-man show — "based on the life and writings of Lord Bertrand Russell" — that didn't get produced last Fall because of Robert Rounseville's death (NL3-33), was written by Marvin Kaye, of NYC, Mr. Kaye writes that he owns the script, that copy-right is jointly held by the BR Estate and himself, and that he has gotten the Estate's permission to look for a new actor.

He is "just beginning to work on a new production. Your Society might very well be instrumental in our pursuits, though at this point, it is a bit early to offer any concrete suggestions. However I certainly appreciate your good wishes and would be most interested in staying in touch.

"At present, the script is aimed at the college lecture circuit, though I am negotiating now with London for permission to take it off-Broadway later, if the demand warrants. Also, I hope it may eventually be made into a filmed TV broadcast, perhaps for the educational network. But this is early to be talking about it!

"The script itself is on file at McMaster University, which I hope to visit prior to production. It is a two-act one-man show, but it is not a podium show. There are several settings and the actor communicates with the audience as if he were speaking spontaneously to them. (There are "plants" in the audience.) In the second act, there is the equivalent of a one-act play for one actor in a dramatization of Russell's amusing "Mr. Bowdler's Nightmare."

PHILOSOPHERS' CORNER

(33)

A call for papers on BR. The BRS program for the December 1975 meeting (in NYC) of the Eastern Division of the American Philosophical Association will consist of the reading and discussion of two papers on BR. ED HOPKINS — who is in charge of the program — requests that papers be submitted by July 1, 1975. (This deadline will enable us to get the program into the Program Issue of the JOURNAL OF PHILOSOPHY.) A committee of 3 — ELIZABETH EAMES, DOUGLAS LACKEY and Carl Frank — will select the two papers. Papers may be on any aspect of BR's philosophy, should have a reading time of about half an hour, should be typed double-space, submitted in duplicate, with an abstract of 150 word maximum. Mail it to Dr. Edwin E. Hopkins, 352 S. Drew Street, Baltimore, Md. 21224.

(34) A call for stand-by judges. We are late in calling for papers on BR (preceding item.) (We'll start considerably earlier for the 1976 program.) But since time is short (with a July 1, 1975 deadline), the committee of judges may be swamped, if many papers are submitted. Perhaps some of our philosophers would be willing to volunteer as stand-by judges, in case of need. If so, please send your name to Dr. Edwin E. Hopkins, address above.

(35) Courses on BR. We have the following available, which we will lend on request (sent to the Newsletter):

from CHARLES R. MAGEL, Chairman, Phil. Dept., Moorhead State College
 . Syllabus, Fall 1974 Course on BR. 2 pages.
 . 5-page form, STUDENT EVALUATION OF COURSE

from GEORGE SESSIONS, Phil. Dept., Sierra College
 . Final exam, requiring an analysis of arguments in a 1948 6-page article in Atlantic Monthly by W. T. Stace (included.)

SPECIAL REQUESTS

(36) BRS-APA Session, 12/27/74. We may not have an accurate record of members attending this session. If you attended and were not named in Item 2,
 * please notify the Newsletter. In any case, if you attended and wish to make any comments about the session, we'd be pleased to have them; write
 * the Newsletter.

(37) Project "1976". This, you may recall (NL2-45, NL3-50), is to be a collection of BR quotes on America, both favorable and unfavorable, that we might be able to publish, to tie in with the American Bicentennial and gain some publicity for the BRS. Members were asked to send in suitable quotes; the response has been underwhelming. It's time to change this miserable record of non-performance. We suggest the following: when you come upon something BR has written that you consider suitable, please put it on a 4 x 6 card, with your name on the back, and mail it to Gary Slezak, 6229 S. Talman Avenue, Chicago, IL. 60629. It may earn you a bit of immortality, who knows?

NEWS ABOUT MEMBERS

(38) PETER CRANFORD is quoted, in an article by Elinor Ashkenazy, REFLECTIONS: ON ACCEPTING DEATH (The Progressive, February 1975, p. 20):

Dr. Peter Cranford, a clinical psychologist in Augusta, Georgia, says the fear of dying is a necessary fear: "Without this fear, the species would have almost nil survival value." In his opinion, attitudes toward death are not likely to change. "except for less belief in a hereafter. My own feeling is that an adjustment to foreknowledge of death is the price we have to pay for having the power — unlike other life — to

look into the future."

- (39) MARVIN KOHL was Special Editor of the Benificent Euthanasia issue of THE HUMANIST, July/August 1974.
- (40) HERMAN LEFKOWITZ reports that on December 18th he heard a short radio interview with JOE NEILANDS on the U.S. Government's attitude (regrettable) toward chemical weapons. He heard it on New York City's Pacifica (non-commercial) station, WBAI.
- (41) GARY SLEZAK visited the Russell Archives in December, doing research for an article on BR's stay at the University of Chicago. He is also working on a comparison of the predictions of Nostradamus, Jean Dixon, and BR.

LOCAL CHAPTERS

- (42) Chicago area. GARY SLEZAK writes (11/20/74): "The Chicago area group is not a campus group. I hope membership will eventually include several area universities. As of now, members represent U. of Chicago, the Chicago Circle Campus of the U. of Illinois, and the U. of Wisconsin. We might evolve into a 'Midwest Chapter'."
- Here is Gary's report of 11/27/74: "The Chicago area chapter of BRS is now in existence. The first meeting, held in early November, was primarily an organizing meeting.
- "The second meeting took place in my apartment on November 25th. It went extremely well. A film was shown: an NBC interview with BR in 1951. (Much of what BR said during the interview is outlined in New Hopes for a Chaning World, published the same year, 1951.)
- "After the film discussion, a sociologist from the University of Wisconsin, Dr. James E. McKeown, spoke to the group on BR's contributions to sociology, which — in his opinion — were many. He stressed BR's ability to foresee major societal change, and noted that ultimately BR was an optimist. Dr. McKeown, a very distinguished sociologist (see Who's Who in the World, 1974-75), plans to be an active member of our chapter." (He has since joined BRS. Ed.)
- "Later we put together a tentative reading list for future discussion purposes. Our first book discussion is planned for early January on COH. We will explore the book in detail and discuss the criticisms leveled against it by those (non-Russellites) who comprised my first COH group. (NL3-16) Books to be discussed at subsequent meetings are: Human Society in Ethics and Politics, Marriage and Morals, Why I Am Not A Christian, Education and the Social Order, Mysticism and Logic, Power, Freedom and Organization, and selections from A History of Western Philosophy.
- "We're advertising at other area universities and hope to increase our membership. We number 6. Some, but not all, plan to join the national Society soon. Others are mainly interested in discussing certain works. A few of the graduate students seem interested in doing some writing, but nothing definite is being planned at this stage."

NEW MEMBERS

(43)

We are very pleased to welcome these new members:

Dan Anderson/2015 E. 34 R./Sioux City, S.D. 57104
 Truman E. Anderson, Jr./825 Petroleum Club Bldg./Denver, Co. 80202
 Mike Annis/1309 Glenn Avenue/Augusta, Ga. 30904
 Dong-In Bae/5 Koeln 41/ Luxemburger Str./ West Germany
 Dawn D. Bishop/ 1016 Beech Lane/ Anchorage, Alaska 99501

James Haley Buxton/ 720 Pennsylvania Avenue/ Norfolk, Va. 23508
 Dan Claiborn/ 2314 Braemore/ Columbia, Mo. 65201
 Paul Courtright-Whyte, O.D./ 317 Waugoo Avenue/Oshkosh, Wi. 54901
 Dr. and Mrs. Richard H.L. (Nancy A.) German/4107 North 36th/Tacoma, Wa. 98407
 Dr. Alfred H. Guy, Jr./Chairman, Philosophy Dept./U. of Baltimore/
 1420 North Charles St./ Baltimore, Md. 21201

Marie P. John/ Apt. 16D/230 Brentwood/St. Louis, Mo. 63105
 Dr. Herbert C. Landsell/8412 Harker Drive/Potomac, Md. 20854
 Daniel Manesse/P.O.Box 41/Woodlawn Station/ Bronx, N.Y. 10470
 Dr. James E. McKeown/ 1469 N. Sheridan Road/ Kenosha, Wi. 53140

BULLETIN BOARD

(45)

Membership list. We have extra copies, listing 83 members (and their addresses) as of 2/1/75. It was prepared for the Annual Meeting. If you'd like one, ask.

(46)

BR Peace Foundation in trouble. We received the following communication, postmarked January 20th, from THE BERTRAND RUSSELL PEACE FOUNDATION, LTD., Bertrand Russell House, Gamble Street, Nottingham NG7 4ET, England:

Dear Friend:

We are writing to ask your advice and help concerning a grave crisis which confronts this Foundation. Our work has increased considerably in the years since the death of Bertrand Russell, partly because we have established a first-class modern printing press (which services a large number of trade union, community civil liberties, socialist, radical, anti-war and womens' organisations, besides the needs of the Foundation itself); together with an extensive publishing house which has produced approximately 100 pamphlets and some 3 dozen books in the recent past. But the traditional work of the Foundation in defence of peace, in opposition to imperialism, and in support of political prisoners in every continent of the world, has not in the least declined since Russell's death.

We are profoundly moved by the large number of letters which come from every part of the world, requesting assistance, and expecting our intervention to be effective. Of course, the fact that Russell is now silent means that the role of the Foundation has changed, and that very often it has become a switchboard, either connecting victims of repression with appropriate lobbies which can help them, or sometimes directly organising petitions and press coverage on their behalf. This has increased the difficulties of the work. Where, in the past, a simple letter from Russell could often have a dramatic effect on a dictatorial government which was ill-treating its political prisoners, now it is necessary to organise quite extensive collections of signatures in order to achieve a somewhat smaller impact. None the less, we have abundant evidence that the work we have been doing is useful, and that very many people have need of it.

However, we now face a double crisis, which poses a risk that we may be put out of action for an uncomfortably long time. Firstly, the Inland Revenue are insisting on pressing a very high tax claim against us relating, as we feel, unjustly, to money given by Bertrand Russell and expended in connection with the Tribunal on War Crimes in Vietnam. We had made careful allowance to meet all due tax payments, and this case is being pressed even though the special commissioner whose function is to adjudicate such claims has already decisively found in our favour. The Revenue admit that they have chosen to move against us as a test case, in order to reverse the precedents of judge-made law which govern the matter in question. They have told us that they intend to appeal, if necessary, through all the relevant courts, to the bitter end.

They have also refused to underwrite any of the legal costs which this decision imposes on us, even though there is no suggestion that we were culpable, and even though it is admitted that the case is brought entirely in order to establish new norms to assist the Revenue in future cases which have no connection with ours. The legal costs involved in this enormous litigation could be prodigious. As if this were not enough, the local council has simultaneously decided to issue a compulsory purchase order to enable it to demolish our printing factory and all our extensive associated offices. The sum of these two initiatives means that the Foundation urgently needs to raise a very large amount of money in order to maintain its capacity to continue Russell's work. The absolute minimum amount involved is 20,000 pounds. Large as this sum is, our survival cannot be assured on less.

We feel that you may well be able to help us in elaborating a strategy for the organisation of an appeal for so large an amount. We wonder, could you send us your ideas on this matter, and any suggestions you may have concerning persons who may be able to donate substantial amounts, or organisations which may be willing to publicise our difficulties and help us to overcome them?

We cannot say how sorry we are to be compelled to write to you in this vein, but we know that there are very many good friends who will help us to frustrate these attempts to put us out of action and we feel confident that you will help us in reaching them.

Yours sincerely,

Ken Coates (signed)

(Ken Coates and Chris Farley are listed on the stationery as Directors- Ed.)

(47)

Medal. We are indebted to LESTER DENONN and to his friend, Mr. Joseph Sternberg, for leading us to the following:

A medal, or coin, about 3 inches in diameter (72 mm.) — with a head of BR on the front; on the back, a dove escaping through a broken bar of a cage, with the motto, "Je suis libre et le monde sera lui aussi!" (I am free and the world will be too!) — is offered for sale by the French government agency, MONNAIES ET MEDAILLES.

The page describing the medal identifies BR (correctly) as a philosopher and mathematician, and (incorrectly) as winner of the Nobel Peace Prize. (BR's Nobel Award is for literature.) But that is merely an incorrect detail, not important, and not on the medal itself. The medal was put on sale in 1966, at a time when BR was working vigorously for peace, protesting against the Vietnam war, and apparently the French were honoring him for it.

The price in bronze is 41 francs + 7% export tax, in silver 440 francs + 18% export tax, packing and shipping included. Shipment by air costs extra. Pay by bank check or postal money order, payable to l'Agent Comptable des Monnaies et Medailles. Order from: Monnaies et Medailles/ 11, Quai de Conti/ 75270 Paris/ France.

For a glimpse of the logical French mind at work, consider the categories under which this medal is cross-referenced in the French filing system: philosophers, mathematicians, Great Britain, allegories and symbols of Right and Liberty, Nobel Prize, philosophic thoughts, doves and pigeons.

* Does anyone know the source of the quotation?

CORRECTION

- (48) Brenan, not Brennan. We misspelled the name of BR's friend, in NL5-13,14. Sorry.
-

FINANCES

- (49) Necessary lubricant. "I would like to say a little about money," (Peter Cranford talking.) "It is a necessary lubricant for any organizational machine. Hurst John started a tradition of voluntary pledges over and above dues (which barely cover the cost of the Newsletter.) This worked very well for us our first year, and we wound up with a surplus. I wrote the original founders to see if they could make a pledge this year and about \$1600 was pledged by the eleven members.
- "I should like to make the same appeal to the nearly 90 other members who have come to us this year. In the event that a member is financing his own project, and cannot afford any more, whatever he spends on his project is considered a contribution and should be reported to the Treasurer... and is deductible.
- "Those who do finance their own projects and still have spare funds can help by subsidizing those, such as students, who cannot afford to make a pledge. I would suggest to those in this category that they consider a monthly pledge and thus escape the financial intimidation of a large pledge in the face of uncertain economic conditions.
- "There may be a few individuals who may be in very good financial shape, and I would like to say to these that we need the money to build up our resources and would greatly appreciate any assistance they can give to help insure this."
- (50) Tax-deductible contributions. Contributions of money to BRS are tax-deductible. Dues and the cost of attending the Annual Meeting are deductible for professional philosophers; these items may also be tax deductible for the rest of us, we think. (We believe we are classed by the IRS as a philosophical society, but we are trying to rectify that, so that we are classed as a cultural/educational/charitable society.) Probably the best course is to take deductions, on your tax returns due 4/15/75, for out-of-pocket expenses connected with BRS, while we await final clarification from the IRS.
- (51) Contribution received. We acknowledge with thanks a generous contribution from Marie P. John.
-

BALLOT

When and where
would you like to have
the next Annual Meeting?

Note: In selecting dates, choose a weekend (Friday, Saturday, Sunday), with this exception: if you choose December just before or just after the APA meeting (December 28-29-30), then the only options are December 26-27-28 — the overlap will permit BRS members to attend the BRS session at APA — or December 31, January 1-2.

1(a). My first choice for date of meeting is _____

1(b). My second choice is _____

2(a) My first choice for its location is _____

2(b) My second choice is _____

3. I probably will attend the next Annual Meeting...

(a) if it is held at the location I have indicated in 2(a) or 2(b).
Check here if true. ()

(b) if it is held in New York City.
Check here if true. ()

(c) no matter where it is held.
Check here if true.

Your name _____ Date _____

Your address _____

Please remove this page from the Newsletter and mail it to The Bertrand Russell Society, Inc., R.D. 1, Box 409, Coopersburg, Pa. 18036.

NEWSLETTER #7
July 1975

(1) Members are asked to reconsider and vote on BRS financing of "What I Believe"(Item 45). Members have voted on the time and place of the 1976 Annual Meeting (Item 2). Peter Cranford appoints a new Finance Committee Chairman(Item 4),and expands on his stand on mysticism (Item 9). Members will vote on Joe Neilands revised Science Committee Statement (Item 15). BRS issues "A Report on Courses on Bertrand Russell" (Item 12). BRS Awards are proposed (Item 25). An asterisk indicates a request or offer.

ANNUAL MEETING (1976)

(2) Results of the vote. 20 members returned their ballots, not a very good showing.

18 ballots stated preferences as to location: 14 mentioned NYC as their 1st or 2nd choice; 3 mentioned Hamilton, Ontario; 2 mentioned Washington, D.C. No other location was mentioned more than once.

19 ballots stated preferences as to time (including several that said "any time":) 10 mentioned December as their 1st or 2nd choice; 7 mentioned June. Including 2 "any times", December is preferred by 12 out of 19 ballots. Of these, 6 mention December 26,27,28: 3 mention December 31-January 1,2.

December 26,27,28 has the further merit of permitting BRS members to attend the BRS session at the APA Meeting. (The APA Meeting is December 28,29,30. The BRS session will take place December 28.)

Accordingly, the next Annual Meeting will be in NYC, December 26,27,28,1975. We hesitate to call it the 1976 Meeting; we'd better call it the "1976" Meeting.

(3) Rotation plan. Joe Neilands made this excellent suggestion: hold the Annual Meeting every 4th or 5th year on the West Coast, every 10th year in the mid-West, and the rest of the time in NYC.

One way to do something like that is to have 2 years in a row in NY, then the 3rd year somewhere else; then another 2 in a row in NY, and again the 3rd year somewhere else; and so on. The "somewhere else" could be West Coast the 1st time, mid-West the 2nd time, West Coast the 3rd time; repeat this for a 9-year cycle.

It would work out this way for the next 18 years: West Coast the 3rd, 9th, 12th and 18th years; mid-West the 6th and 15th years; NY the rest of the time. West Coast has the Meeting every 3rd or 6th year; mid-West has it every 9th year.

At the "1976" Meeting, let us discuss the "every 3rd year" plan and alternatives.

REPORTS FROM OFFICERS

(4) President Peter G. Cranford reports:

Finance Committee. The most important development since the last report is that TRUMAN ANDERSON, JR. has offered his services in connection with our money-raising problems. Truman is 31, and is President of Petro Search, Inc., at 825 Petroleum Club Bldg., Denver, Co. 80202. In his letter of enrollment, he writes, "His books have had a very important impact on my life and personal philosophy." He wants to form a Denver chapter and to see the Applied Philosophy Committee succeed. He has had experience in raising funds for non-profit organizations. I have appointed him Finance Committee Chairman — with BOB DAVIS, LEE EISLER, KATE TAIT and myself as members.

(5) Newsletter #6. I have heard universal praise of LEE EISLER's last Newsletter. I have awarded him the honor of raising his rank in the Order of Red Hackle to "2nd degree."

(6) New publication. I admire the courage of DAN MANESSE in putting out "Bertrand Russell Today" on his own. Dan has good promotional ability, and this is a rare quality. He thinks in large terms. Dan is open to suggestions and thinks in large terms.

(7) Bob Davis continues to help with the Presidential load, and always does a willing and thorough job. He is politically sophisticated and has the ability to penetrate to the heart of problems. He is hard to fool and has the courage to speak out.

(8) Jobs to do. This summer I need to work on the bylaws, set up a working Board of Directors, get correspondence out faster, and set up the BRS in the American Psychological Association as ED HOPKINS did with the philosophers.

(9) Russellian mysticism. Although I am in close agreement with Russell on matters of religion, I also recognize religion as a widespread current answer to deep psychological needs. Russell, who had tremendous intellectual courage, was able to satisfy his needs in a generally rational manner, but the path he blazed may not be one that can be comfortably followed by the great masses of mankind. Like him, I consider the attraction of mysticism fraught with dangers, but I also believe it has the capacity for great good. My conclusion, from which I see no escape: if it is a psychological impossibility to eliminate all mysticism, then the only alternative is to harness at least some of it. To me the Russellian mysticism is an attempt to put meaning into life. I would extend this to include all emotional means that will help make the attempt successful. Hence we would harness ethical or neutral emotional means to promote his causes.

But there are various forms of mysticism, many derived from basically biological sources, which, properly used, can provide motive power to rationalism. These forms are psychological in nature and find expression in the desire to be a leader, to follow, admire, and love a leader, to

contribute to the welfare of the herd, to be physically and emotionally close to others, to exercise the functions which contribute to survival, to like oneself, to set up defenses against death, to find meaning in a life unlimited by one's ego, and various other motivating feelings that are not necessarily rational.

I believe that mysticism gone rampant is insanity, but that turning one's back upon it is unscientific, and attacking it is bootless. Attacks against mysticism arouse the most violent passions, and they are no different and no more useful than the attacks of the mystics against the agnostics.

Mysticism should not be attacked. It should be understood. This produces a certain sympathetic understanding as to why it appeals to so many, and what can be done to make it serve rational ends.

Did Russell overlook the good potential of mysticism because he was preoccupied with its evils? The answer would give us a starting point in bringing the mystics and agnostics closer together. As things stand, the Christians and some other religions fear and abhor the agnostics, and the agnostics are unsympathetic to the needs of the "tender-minded."

The tender-minded mystics have a body of thought that helps maintain the stability of their personality. The tough-minded agnostics have a body of thought that maintains theirs. Thus the mystic is "shook up" by a statement that "Jesus will punish you for riding your motor-bike recklessly, for He is the God of Probability." The agnostic will be "shook up" by a statement that Russell (the super-agnostic) was fundamentally a mystic and a "Christian" in attitude. Both reactions are cut from the same psychological cloth.

The brain generally does what the emotions dictate, and I don't think the emotional and the cerebral can be separated. The pragmatic and ethical use of the emotions for good ends is what I mean by Russellian mysticism.

(10)

Treasurer Katharine Tait reports, as of May 1, 1975:

Balance on hand (February 7, 1975).....	1244.52

Balance on hand.....		1149.37

REPORTS FROM COMMITTEES

(11)

Committee on Applied Philosophy. See Items 33,34 (LOCAL CHAPTERS).

(12)

Information Committee (Lee Eisler, Chairperson):

Courses on BR. We wrote up a 2-page Questionnaire, to be sent to "Chairperson, Philosophy Dept." at 275 colleges and universities. We first sent it to our own BRS philosophers, asking for suggestions, and got many good ones. We then mailed the revised Questionnaire, a great improvement over the original, and got back 54. We suspect that a 20% response from heads of departments, who are very busy people, is probably pretty good; and if so, the credit should go to our BRS philosophers, whose suggestions converted the original Questionnaire into something a department head would be willing to take the time to read.

We then wrote up the results of the Questionnaire in a 4-page Report, and mailed it to the 275 institutions. (We enclose a copy of the Report.) We also mailed it to all publishers whose books are used in the courses, and to these publications read by philosophers: JOURNAL OF PHILOSOPHY, REVIEW OF METAPHYSICS, PHILOSOPHY AND PHENOMENOLOGICAL RESEARCH, APA BULLETIN, and RUSSELL. Also to THE HUMANIST, HUMANIST IN CANADA, THE AMERICAN RATIONALIST.

One outstanding fact emerges from the Questionnaires: of the institutions responding, 83% give at least one course that is partly or exclusively on Russell. This suggests that interest in Russell, among professional philosophers, is very high.

We must not assume that our 20% sample is completely representative. Institutions that do give courses on Russell are probably more likely to answer the Questionnaire than institutions that do not; so the figure for all 275 institutions would probably be something less than 83%. Nevertheless, 20% is a respectably large sample, and we can take considerable satisfaction in the 83% figure.

We hope to achieve several things with the Questionnaire and Report: (1) to acquire information that would be useful (or at least, interesting) to teachers of philosophy; (2) to discover the state of current interest in Russell, among professional philosophers; (3) to stimulate additional interest in Russell, in philosophy departments, which could lead to an increase in the number of courses on Russell; (4) to bring the BRS to the favorable attention of philosophy departments; (5) to have a good reason for bringing the BRS to the attention of the publishers of Russell's books. (Re (4), several philosophers have joined the BRS as a result of the Questionnaire.)

We messed up one thing, somewhat, on the Report. In Item 19 (Page 3 of the Report), we failed to mention the name of the Bard paperback — it's HERTRAND RUSSELL SPEAKS HIS MIND — and we implied that it is still in print. It isn't. It is available today in a hardbound library edition at \$9.75, published by Greenwood.

(13)

Advertising. We will run our small classified ad in MENSA, THE PROGRESSIVE (August), ATLANTIC MONTHLY (August), HARPER'S (August), THE HUMANIST (July/August).

(14)

Philosophers Committee. See Item 23 (PHILOSOPHERS' CORNER)

(15)

Committee on Science (J.B. Neilands, Chairperson):

At the Annual Meeting there had been a proposal from JOE NEILANDS, that the Committee work to achieve 6 goals, if the BRS approved. There was opposition to some of the proposals (NL6-11). In view of the opposition, Joe reconsidered: "I think it may be easier for us to reach a consensus on something concrete, like nuclear power, as opposed to more esoteric items like accountability or funding in science. Accordingly, I have prepared a statement on nuclear power for submission to the Science Committee, and eventually to the membership."

Here is the statement, which has been approved by a majority of the Committee:

Nuclear Power and the Energy Crisis

The Committee on Science of The Bertrand Russell Society, Inc. has considered the question of nuclear power in relation to the persistent energy crisis and wishes to make the following recommendations:

1. Large scale fission reactors for generation of electricity should be phased out and no more units of this type should be constructed, pending solution of certain outstanding problems. Of the latter the safe disposal of the radioactive fission products is the most urgent. Fission reactors are inefficient and waste excessive amounts of heat into the environment. Nuclear plants are liable to sabotage and to theft of plutonium for purposes of blackmail, terrorism or military operations. Finally, the amount of insurance available for public and private sources is insufficient to requite all possible claims in the event of a large scale accident.
2. As a rational alternative to nuclear power we advocate an integrated program based on the immediate, stringent conservation of energy coupled to a longer range development of solar power as the single solution guaranteed to be compatible with maximum stabilization of the biosphere.

Committee on Science

Amy Block
J. B. Neilands

We are going to vote by mail, on whether the BRS should approve this statement. The last page of this Newsletter is a ballot, on which you can indicate your approval or disapproval.

We thank MARTIN GARSTENS, DAVE GREENMAN, ANITA LEVINE and BRUCE THOMPSON for sending their comments on the original proposals -- some with clippings and articles, including the following:

."Public Interest Report" on Nuclear Terrorism..."drafted by Dr. L. Douglas DeNike, a contributor to 'Bulletin of the Atomic Scientists' and author of a forthcoming book on radioactive crime and banditry."
(Sent in by ANITA LEVINE.)

. "Manifesto on Energy signed by 32 Scientists" — including 10 Nobel Prize winners — which says, "We can see no reasonable alternative to an increased use of nuclear power to satisfy our energy needs." (Sent in by DAVE GREENMAN, who is a power plant engineer, and thinks nuclear power is the best of the currently available alternatives.)

. Reprint of the "Congressional Record," Senate, 4/1/74, in which Sen. Abourezk says solar energy is entirely feasible and that the "AEC is trying to deceive the public into thinking that solar energy is 'way down the road' and 'decades away', and that Exxon, Gulf and Shell have bought up solar energy companies and are doing whatever is necessary to make that prophecy come true." (Sent in by AMY BLOCK.)

. Many newspaper stories on the dangers of plutonium as fuel. (Sent in by ANITA LEVINE.)

* We will lend any of this material on request.

* * * * *

(16)

JOE NEILANDS also sent us the following Letter to the Editor, "Chemical and Engineering News," April 7, 1975, Page 47:

Sir: I was greatly surprised in reading the report entitled, "Scientists debate pollutant thresholds," (C&EN, Feb. 17, Page 22) to find that the general consensus at the recent American Association for the Advancement of Science meeting is that pollutant thresholds exist below which human health is not adversely affected. For the last several years, all I have been reading and hearing is that there are no safe levels of carcinogens nor of radiation.

The higher the level, supposedly, the greater the number of cancer cases or of teratogenic effects. In addition, amply demonstrated synergistic effects of multiple chemical exposures and known wide variations in individual susceptibility must lower these threshold limits (if they exist) to vanishingly small quantities.

Before everybody climbs on the bandwagon in accepting this new consensus of experts, I suggest appropriate reflection be given to the following quote from Bertrand Russell. This brilliant mathematician and philosopher once stated that, "Even when the experts all agree, they may well be mistaken."

Werner A. Mukatis
Associate Professor of Chemistry
Bradley University

SHORT AND SWEET

(17)

"When I was young, I liked mathematics. When this became too difficult for me, I took to philosophy, and when philosophy became too difficult, I took to politics."

Reported by Steve Harvey, in BR's obituary, in the Los Angeles Times, 2/8/70; mentioned in "Thomas Jefferson: An Intimate Portrait" by Fawn M Brodie. Our thanks to Gary Slezak.

ABOUT BR'S WRITINGS

(18) BR's 2 audiences. BR wrote for 2 entirely different audiences. Philosopher Russell wrote for his fellow-philosophers. Citizen Russell wrote for the ordinary citizen.

Philosopher Russell wrote about such things as theory of knowledge, philosophy of mind, language, logic, mathematics, metaphysics.

Citizen Russell wrote about almost everything else (except esthetics): about happiness, marriage, morals, sex, politics, religion, science, nuclear disarmament, psychology, history, education, international relations, civil liberties, censorship, democracy, power, political systems, tyranny, cruelty, and unnecessary wars.

Many philosophers read Citizen Russell, but few citizens read Philosopher Russell. That is to be expected, because philosophers are also citizens, but relatively few citizens are philosophers.

Each audience takes considerable interest in what Russell has to say (to it):

Professional philosophers pay quite a lot of attention to Russell, to judge by the results of the recent BRS Questionnaire, sent to 275 colleges and universities, inquiring about courses on Russell. 83% of the institutions responding are currently — Spring 1975 — giving at least one course that is partly or wholly on Russell.

Ordinary citizens — quite a few of them — apparently want to read everything Russell ever wrote. Practically all of Russell's books — and there are many — are still in print. "Books In Print 1974" lists 74 entries under "Bertrand Russell, Author," which is a kind of record: Russell has the most books in print today of all the philosophers since Aristotle.

The BRS is open to — and welcomes — members of both audiences. About 1 BRS member in 5 is a professional philosopher; the others are ordinary citizens. Well, sort of.

(19) Booklist. We have a 3-page list of BR's books, compiled by Bob Davis. It is not for professional philosophers, not for Russellites, not for anyone who has read a fair amount of BR. But if you have read only a few Russells — or only in one field — then you might find this list helpful in letting you know what else is available. The list consists of titles (plus an occasional comment) grouped under these headings: biography, history, religion, science, education, fiction and anecdotes, social * philosophy, and miscellaneous essays. We will send it, on request.

ABOUT BERTRAND RUSSELL

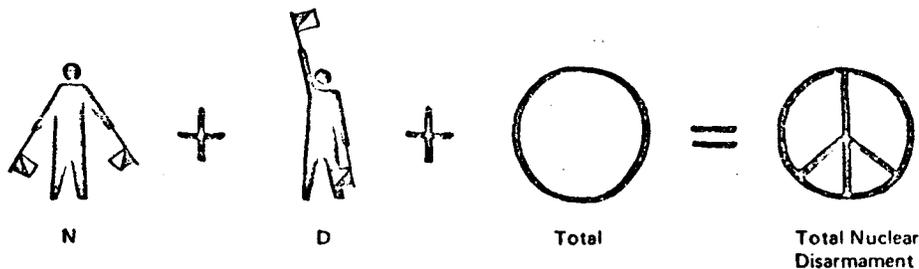

- (20) Peace symbol. AMY BLOCK sent us the following, from "Symbol Sourcebook," Page 53, by Henry Dreyfus, the American industrial designer:

PEACE

Controversy surrounds the origin of the ubiquitous peace symbol. It was introduced by pacifist Lord Bertrand Russell during Easter of 1958, when he marched at Aldermaston, England, campaigning for nuclear disarmament.

The most acceptable explanation of the design relates it to the international semaphore alphabet: N (for nuclear), D (for disarmament). These superimposed signals are surrounded by a circle indicating complete, world-wide, or total. Thus, total nuclear disarmament.

So today, this distinctive mark is universally a symbol for peace.

- (21) Dora Russell. The following, by Jill Turner, originally appeared in The Times (London), 10/2/74, under the caption:

The woman who refused to live in the shadow of Bertrand Russell

"Men do not yet realize how women's outlook is changing, nor attempted very seriously to adapt to that change." So wrote Dora Russell in a little book, "Hypatia: The Future of Women," published not 5 but 50 years ago.

Now, aged 80, Mrs. Russell could be taken for a woman 30 years younger. And as it became clear at the recent conference of the Rationalist Press Association, she had women's rights worked out long before most of the audience was born.

Dora Russell had seen "young mothers sobbing outside the polling stations because they had no vote." Characteristically, she acted on what she saw. As soon as she became eligible at 30, she stood as Labour parliamentary candidate for Chelsea. She lost, though with the highest vote won there for Labour in many years, and her talent for raising popular support has been hard-used ever since.

With Margaret Sanger and Marie Stopes, she was in at the beginning of the fight for birth control. The aim — then as now — was that every child should be wanted, but the strain of pregnancy on the mother's health was also considered. She found it was "four times as dangerous to bear a child

as to work in a mine, and mining was men's most dangerous trade."

Armed with this statistic, she led a deputation (including a rather bewildered H.G. Wells) to the Minister of Health demanding free advice on birth control. Fifty years ago, too, she campaigned for six weeks' paid maternity leave before and after childbirth — a claim still not acknowledged as a right.

Dora Russell would approve of the fact that I have not yet mentioned that she was Bertrand Russell's second wife. "No one," she claims, "knows the importance of being a person in one's own right better than I do." She wanted "Hypatia" to be published under the name Dora Russell rather than Mrs. Bertrand Russell and is still "infuriated" that it is sometimes misclassified among her husband's works. She admits to having lived "in the shadow of his reputation" and will tell how people would call on the pretence of wanting to meet her and then talk only to her husband, treating her as "the dispenser of tea."

She was in no great hurry to get married, and was certainly not one to take a back seat. When Bertrand visited Russia soon after the Revolution, she insisted on going, too. Posing as a tourist going to see the midnight sun, she made the journey via the North Cape.

She liked Russia as much as Bertrand hated it. He wrote: "Cruelty, poverty, suspicion, persecution formed the very air we breathed," while she felt "the spirit of the Revolution abroad in the land, the birth of a new culture." The Russian army, unlike the British, were "always dancing," she told me, "but Bertie reacted to them like an old liberal."

When Bertrand Russell was invited to lecture at Peking University — at a time when Mao Tse-tung was a junior librarian there — he said he would go only if Dora went, too. Telegrams located her in Moscow, and five days after her return, she left with him for China. Their views on China coincided rather more than on the Bolsheviks, but Bertrand caught bronchitis and was soon seriously ill with double pneumonia. Without the help of penicillin, she nursed him back from the brink of death — his death was actually reported in the Japanese and later the British and American press. Soon afterwards she found herself pregnant, and only then did she agree to marriage.

Dora Russell takes seriously the responsibilities of motherhood. She claims that children's rights are even more neglected than those of women. With her astounding knack of writing what it takes the public half a century to accept, she produced "In Defense of Children," in 1932. When I met her, she was reading similar ideas in a new paperback.

For 16 years, at first with Bertrand and later alone, she ran a progressive and much-maligned school. At the time, A.S. Neill considered her "the only other educator." Together at educational conferences between the wars, they found that sex, religion, and politics were taboo and not discussed. Her reaction was simple: "What else is there to talk about?"

The school at Beacon Hill drew most of its support from Americans. "Our friends in Bloomsbury dined out on made-up stories about us," Dora says sadly. "The British don't like children" Her school council was rather like the United Nations. Children had the same voting rights as adults and decided their own timetables, rules, and punishments. She says that it worked well — the children gained a sense of community and cooperation from a very young age. But she adds that her own children became, if anything, a bit too cooperative: "They don't fight for themselves in our competitive, savage society."

Dora refers to the school as a painful time in her life. Bertrand was anxious to have a third child but apparently unable to give her one. Their unconventional marriage, which permitted affairs, broke down when those

affairs led to children and ended in a battle of blame and fabrication. But her enthusiasm carried her through, first at the school and later as science editor of "British Ally," a magazine sent to Russia during the war. She was "disgusted" when it was stopped as a result of the Cold War.

But in reality her preoccupations range much wider. She was a founder member of the National Council for Civil Liberties in 1932, and more recently was on the Hampstead committee behind the Aldermaston marches. She completed the march five times and was arrested with the Committee of One Hundred. But as long as Bertrand Russell enjoyed the CND limelight, Dora was kept away from her natural place as a leader.

Dora Russell shares with her late husband the courage to fight for what she believes right, however unpopular. She also enjoys that unquestionable advantage when it comes to having faith in one's convictions: a powerful intellect. Her first-class degree and subsequent fellowship from Girton owed nothing to her famous husband. She delights in making a good intellectual point. "Well, I don't know about all this," she starts in a cheerful, no-nonsense manner. "It has always seemed to me that..." and says what everybody has been fumbling for.

Living a few miles from Land's End still cannot cut her off from public life. Her letters often appear in the press. Cyprus and private armies are her present worries. Closer to home, she is campaigning against the closure of village schools. "They're carting children away from their homes. How can they have any roots? Why can't the teachers travel?"

Her autobiography, "The Tamarisk Tree," is to be published by Elek/Pemberton in the spring.

We are indebted to KEN BLACKWELL for letting us know about this article.

FURTHERING BR'S PURPOSES

(22) Public Interest Science. BOB DAVIS has sent us the following book review from "Bulletin of the Atomic Scientists", February 1975, and written by its Editor:

"Advice and Dissent: Scientists in the Political Arena," by Joel Primack and Frank von Hippel. Basic Books, Inc., New York. 1974 299 pages. \$12.95.

FROM CARSON TO NADER: THE GROWTH OF PUBLIC INTEREST SCIENCE

What ought to be known widely throughout the general public will not be known, Bertrand Russell once wrote, unless great efforts are made by disinterested persons to see that the information reaches the minds and hearts of vast numbers of people.

"I do not think this work can be successfully accomplished except by the help of men of science... I think men of science should realize that unless something rather drastic is done under the leadership or through the inspiration of some part of the scientific world, the human race, like the Gadarene swine, will rush down a steep place to destruction in blind ignorance of the fate that scientific skill has prepared for it."

It is rather late in their book that Joel Primack and Frank von Hippel

come to those words of the great English philosopher, who embodied the principle of science in the public interest. But his spirit was there in the beginning. Sparks from the fires he lit burn brightly in the pages of "Advice and Dissent," which is a book about the second- and third-generation Lord Russells of the United States and some of the drastic things they have been doing.

Rachel Carson, a woman of science who heard the message more clearly than her male colleagues, launched the environmental revolution in the United States with her publication of "Silent Spring," which led ultimately (if tardily) to the banning of mass-application of DDT, despite the entrenched opposition of the chemical industry and the government's agricultural advisers.

Matthew Meselson, a biochemistry professor at Harvard, helped galvanize concern in the scientific community over the U.S. Air Force's chemical warfare in Vietnam, triggering an independent investigation by the American Association for the Advancement of Science which embarrassed the Nixon administration into abandoning its massive jungle spraying operation (long after the damage had been done.)

William A. Shurcliff, an administrator at the Harvard-MIT Electronic Accelerator, organized the objectors to sonic booms into a potent force which marshaled the technological arguments which shot down the supersonic transport despite its entrenched backing in industry, Congress and the federal government. Physicists in Seattle, Chicago and Cambridge likewise mobilized public sentiment against the anti-ballistic missile system.

And, on the basis of a crash course in nuclear reactor engineering, Dan Ford (an economist) and Henry Kendall (a physicist) forced the U.S. Atomic Energy Committee into a wrenching (and still incomplete) re-appraisal of the safety standards in its regulation of the burgeoning commercial nuclear power program.

Those are some of the heroes of "Advice and Dissent." Their successes and their setbacks help weave together a perceptive, useful and highly readable account of the major political battles of the last decade involving the applications of science and technology. But the real message of the book, as its title suggests, is the relationship between advice and dissent in the political arena.

The role of scientific adviser to the government can be a corrupting one even for the most eminent of scientists, say Primack and von Hippel. Even when good advice is ignored or patently misused, there are strong social and psychological pressures against the adviser "going public":

The high-level government adviser has typically undergone a long process of "socialization" in Washington during his slow climb up through the hierarchy of advisory committees. His self-esteem, not to mention his position in his organization and in the eyes of his colleagues, may not be unrelated to his advisory activities and his association with men in power.

It is becoming more and more clear, however, that to the extent that the administration can succeed in keeping unfavorable information quiet and the public confused, the public welfare can be sacrificed with impunity to bureaucratic convenience and private gain. Thus advisers who keep their information and analyses confidential in the interests of preserving their "effectiveness" may find that very effectiveness decreasing as a poorly informed and uncertain Congress and public become less and less able to call the administration to account for irresponsible actions.

The authors argue against continuation of the confidential client relationship between adviser and the executive branch of the federal government, contending that the obligation of the adviser is not to the agency which pays him but to the larger public. They say secrecy should be limited to matters of genuine national security and to proprietary trade information, and that government decisions would be sounder if the technical advice on which they were based were fully disclosed. It would help, too, to make technical advice more readily available to the other branches of government.

As for the dissenters, Primack and von Hippel urge a continued strengthening, within the scientific community and the public, of the public interest science tradition, to which they themselves as young scientists have made significant contributions. (Primack is assistant professor of physics at the University of California at Santa Cruz; von Hippel is a research scientist at the Center for Environmental Studies at Princeton University; both are increasingly being heard from as advisers and dissenters.) The movement will flourish, they suggest, so long as the activists continue to do their homework, force science and technology policy debates out into the open, and utilize the political processes which remain open in our democratic society.

Currently it takes an unusually adventurous and astute individual to be an effective public interest scientist. Such exceptional personalities are no more common in science than in other fields, and society has become too complex to depend for salvation on the activities of a few individuals. The challenge to citizens and scientists alike, therefore, is to civilize the environment of public interest science so that more scientists can contribute (through such methods as greater professional recognition for the work of public interest scientists)...

There seems to be an infinite variety of forms which public interest science can take. The public support exists, scientists want to become involved, and there are plenty of dragons.

Lord Russell would have agreed.

PHILOSOPHERS' CORNER

- (23) Philosophers Committee report, EDWIN E. HOPKINS, Chairman, Eastern Division: Plans for the BRS session at the next APA meeting (December 28, 1975) in NYC are moving ahead well. Quite a number of papers have been received to date, and the difficult job of selecting the 2 to be read and commented on at the session is now going on, with the help of DOUGLAS LACKEY and Carl Frank. The BRS program will be in the Program Issue of the JOURNAL OF PHILOSOPHY.
- (24) Not enough jobs. The "Review of the Week" in the (Sunday) "New York Times," April 13, 1975, had the following item:

PHILOSOPHERS OUT OF WORK

Professional philosophers have traditionally been absorbed into teaching, but about 500 of the 8,000 academic philosophers in the United States have lost their teaching jobs this year, and 2000 recent doctoral graduates in philosophy are unable to find places. Some have turned to such jobs as cab-driving.

The American Philosophical Association thinks this is a waste to society, and it has started a campaign to "sell" the value of the "thinking man." With their problem-solving ability and a little supplemental training in a specific field, philosophers should be qualified for a variety of jobs in government and business, says Professor Norman Bowie of Hamilton College, the Association's executive secretary. He says purists in the field don't like the idea.

"A philosopher's training in logic makes him a natural for computer programming, and some of our members have landed government jobs dealing with social trends," said Mr. Bowie. "Experience with decision theory can be applied to urban planning. Situations involving business and medical ethics and problems such as reverse discrimination are possibilities. An ombudsman's job is ideal."

While philosophers with doctoral degrees have almost always turned to teaching, philosophy majors who do not go on to graduate work generally have entered fields such as law, business, civil service and theology.

The Association is planning institutes and conferences for businessmen and government officials to see what can be done, and for university philosophy department chairmen to discuss possible changes in curriculum.

SPECIAL REQUESTS

(25) BRS Awards proposal. We submit the following proposal for the consideration of the members. Please send your comments and suggestions.

* We propose that the BRS make awards to outstanding individuals, on a regular or occasional basis.

An award should represent some cause or idea which BR championed. For instance, BR was very much against any kind of censorship. The reporter who, a year or so ago, preferred to go to jail rather than reveal the source of his information, could have been the recipient of, say, The Bertrand Russell Society 1974 Free Press Award. A few years ago, we might have given the Bertrand Russell Society Award for Moral Courage to Daniel Ellsberg.

We don't have much money now, so the award, at this point, could be simply a citation, a scroll, stating why we had chosen this particular recipient. If we come into money, we might add a cash prize — \$100?, \$500? \$1000? Also, if we succeed in having replicas made of the Epstein bust of BR, that could be an appropriate award.

The award recipient would be invited to attend a dinner at the Annual Meeting, where the award would be presented. The recipient might say a few words.

There ought to be an Awards Committee, to select nominees for the BRS Awards, and to write the citation that stated the nominee's meritorious acts. The Committee would submit its choice, and the citation, to all the members, by mail; the members would approve (or disapprove) the selection.

Any BRS member could nominate a candidate for the Awards Committee to consider, stating the nominee's qualifications.

Awards might be (a) for exposing and/or opposing hypocrisy, censorship, tyranny, cruelty, abuse of civil liberties, abuse of power, injustice, oppression, superstition, etc. — or (b) for promoting or furthering free press, population control, conservation, civil liberties, nuclear disarmament, world government, rationality in morality and elsewhere, democratic procedures, equality for women, happiness, and education.

As we see it, there are 3 benefits to making such awards: (1) An award highlights some aspect of BR's life or work, and therefore fits the BRS aim of spreading BR's ideas and furthering his purposes. (2) It may earn some publicity for the BRS. (3) The recipient will be pleased to receive recognition.

We've had the idea of BRS Awards for some time, but we must credit the Humanist Association of Canada for (indirectly) getting us to do something about it. We read the following in "The New York Times", March 29, 1975, under the heading "Notes on People":

The Humanist Association of Canada announced that its 1975 American Humanist award will be shared by Betty Friedan, the feminist writer, and Dr. Henry Morgentaler, whose conviction for performing abortions in a clinic rather than a licensed hospital was upheld by the Canadian Supreme Court. Dr. Morgentaler surrendered to the Montreal police Thursday to begin serving an 18-month sentence.

The Humanist Association of Canada has been making awards since 1967. Recipients have included Margaret Sanger, Brock Chisholm, Linus Pauling, Julian Huxley, Erich Fromm, Abraham Maslow, Benjamin Spock, Buckminster Fuller. Note that these are rather well-known names; that is one reason why newspapers print the story.

* Anyone interested in working on the Awards Committee should write PETER CRANFORD. (Dr. Peter G. Cranford, President, BRS, 2108½ Walton Way, Augusta, Ga. 30904.)

* And we repeat, please send any comments or suggestions on the awards idea to the Newsletter.

NEWS ABOUT MEMBERS

- (26) PETER CRANFORD, who originated the radio and TV quiz show, "The \$64 Question" -- later "The \$64,000 QUESTION" -- says it may soon return to the air.
- (27) ELIZABETH EAMES and KATHARINE TAIT spoke before the Philosophy Circle and local BRS chapter at McMaster University not long ago. The 2 talks were titled, "The Interaction of Russell and Wittgenstein," and "The Guinea Pig Speaks."
- (28) CORLISS LAMONT placed a large, 3/4-page ad in the "Review of the Week" section of the (Sunday) "New York Times" of June 1, 1975, that began:

TO OUR FELLOW AMERICANS!
DON'T LET PRESIDENT FORD
AND HENRY KISSINGER
DELUDE YOU ABOUT CAMBODIA!

Once again in the fracas over the Mayaguez the United States Government is trying to deceive the American people.

Most of the rest of the ad consisted of excerpts from an article by Wilfred Burchett in the "Guardian" of May 28, analyzing the Mayaguez affair, and advancing the view that "this latest episode in the U.S. tradition of gunboat diplomacy was a deliberately provoked pretext for showing the

tattered U.S. flag in Southeast Asia." "The evidence pointing to the sham character of the whole affair is overwhelming," says Burchett, who then cites evidence. (Unabridged copies of Burchett's article can be obtained * free of charge from the GUARDIAN, 33 West 17th Street, New York, N.Y. 10010.) The ad was signed by Corliss and Helen Lamont.

(29) CORLISS LAMONT had another ad in that same (Sunday) "New York Times" of June 1, 1975. This one was in the Book Review section. Here it is:

YES! There is a Solution!
HOW TO BE HAPPY
—THOUGH MARRIED

by Dr. Corliss Lamont, Author, Educator, Philosopher

Some common sense suggestions for improving marriage:
A brief guide for frustrated or perplexed married couples.
Topics covered are The Joy and Beauty of Sex, The Need
For Variety, Revised Wedding Services, Divorce as the
Worst Solution.

*"More useful than any ten of the current sex
manuals." DR. JOHN K. SHELBY*

Read the pamphlet, enjoy it, recommend it! Send 50c in coin
or check to:
BASIC PAMPHLETS, Dept. T61, Box 42, New York, N.Y. 10025

(30) HERBERT C. LANSDELL has kindly given us a copy — which we will lend on * request — of each of the following 2 papers:

"INS opinion about psychosurgery," a 3-page paper published in the "Bulletin of the International Neuropsychology Society," 11/74, signed by: H. Lansdell, Potomac Chapter, Society for Neuroscience.

"PSYCHOSURGERY: SOME ETHICAL CONSIDERATIONS," a 12-page paper published under the heading

"PROTECTION OF HUMAN RIGHTS
IN THE LIGHT OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS
IN BIOLOGY AND MEDICINE"

in "Proceedings of a round table conference organized by CIOMS with the assistance of UNESCO and WHO" at "WHO Headquarters, Geneva, 14, 15 and 16 November, 1973" and "distributed by the World Health Organization on behalf of the Council for International Organizations of Medical Science, Geneva 1974." The paper is by Dr. Herbert Lansdell, Psychologist, Laboratory of Neural Control, National Institute of Neurological Diseases and Stroke, Bethesda, Maryland, U.S.A.

(31) ANITA JOYCE LEVINE writes:

I was a candidate this March, 1975 for City Council here in San Antonio. My platform was to deal with our energy problems by bringing solar energy to San Antonio — we already have a working demonstration set of solar collectors on the roof of the workshop at my house — and to compel our City Public Service Utility to withdraw funding of the South Texas Nuclear Project, in which they are wasting a million dollars a month and will continue to do so for the next 8 to 10 years.... I lost the election because not enough money to spend on ads, but was able to influence another candidate on my place to go solar. He won!

- (32) HARRY RUJA did the 31-page bibliography that appears in "Bertrand Russell. A collection of Critical Essays," edited by D. F. Pears (Anchor Books, Garden City, N.Y. 1972), paperback. For the most part, it lists "only those of Russell's writings which are primarily philosophical."
-

LOCAL CHAPTERS

- (33) Chicago area. GARY SLEZAK reports:

The Chicago-area chapter of BRS has met 3 times since I last reported (NL6-42). We have discussed "COH", "A Free Man's Worship", and the first half of "Human Society in Ethics and Politics."

Many of the comments about "COH" resembled those made by the first group (of non-Russellites) which discussed the book last July (NL3-16). Yet the criticism were fewer this time, due mainly, I think, to the fact that most of the members of the first group were not familiar with Russell's other works, unlike the members of the present group.

At our February meeting, we compared "A Free Man's Worship" with "COH". One person thought BR was more like Prometheus in "COH", while in "A Free Man's Worship" he was Atlas — supporting the heavens on his shoulders!

At our last meeting we discussed the first half of "Human Society in Ethics and Politics." I think it's one of BR's best popular books, but not everyone agreed. One member, a philosophy student, thought BR raised more questions than he answered, that he treated the subject simplistically. We had a good discussion of the ethical importance of free will (BR thought its importance exaggerated) and also of superstitious ethics.

We will discuss "Freedom and Organization: 1814 to 1914" at the next meeting, probably in July.

- (34) New York City area. This is a new chapter, or rather, it will be a new chapter, for it can hardly be said to exist yet. Meetings were postponed till Fall, for various reasons.

The chief movers, DON JACKANICZ and DAN MCDONALD, both at NYU, sent a letter to 18 NYC-area members, got favorable responses from 5, so the group should be able to start this Fall with a nucleus of 7.

They came up with an ingenious way of recruiting members for BRS: they made up small posters, each consisting of an interesting picture of BR with a short paragraph underneath that says in effect, if you are interested in BR, his work or ideals, write BRS for more information. One picture they used was the cartoon from "The Evening Standard", 9/21/61, that appears opposite Page 212 of Volume 3 of the "Autobiography." ("All right, for the last time who's the brains behind all this?") They posted their posters "here and there in the NYU area." We have had an inquiry as a result of the posters. Don and Dan suggest that other members might wish to do the same kind of thing.

NEW MEMBERS

(35) We extend a warm welcome to these new members:

Louise S. Biyal/Netherwood Road/Hyde Park,N.Y. 12538
C. Grant Brooks/PO Box 268/111C E. Crooked Hill Road/Pearl River,N.Y. 10965

BULLETIN BOARD

(37) Little Blue Books, the first mass-marketed paperbacks, that were advertised in the old Saturday Evening Post in the days when it was the most influential medium in America (the 1920s), and -- like the Post -- sold for a nickel, are available. Order directly from Little Blue Books, Box 10, Girard, Ks. 66743. Here are the ones by BR:

Little Blue Books, 20¢ each: 1582 A LIBERAL VIEW OF DIVORCE. 1463 HAS RELIGION MADE USEFUL CONTRIBUTIONS TO CIVILIZATION? 677 WHAT CAN A FREE MAN WORSHIP? 1372 WHY I AM NOT A CHRISTIAN.

Big Blue Books, 50¢ each: 5839 AM I AN ATHEIST OR AN AGNOSTIC?(1949)
5864 AM I AN ATHEIST OR AN AGNOSTIC?(1950) 5544 CAN MEN BE RATIONAL?
5638 THE FAITH OF A RATIONALIST. 5332 HOW TO READ AND UNDERSTAND HISTORY.
5380 IDEAS THAT HAVE HARMED MANKIND. 5381 IDEAS THAT HAVE HELPED MANKIND.
5376 IS MATERIALISM BANKRUPT? 5543 IS SCIENCE SUPERSTITIOUS?5542 ON THE VALUE OF SCEPTICISM. 5345 AN OUTLINE OF INTELLECTUAL RUBBISH. 5545 STOICISM AND MENTAL HEALTH. 5289 THE VALUE OF FREE THOUGHT. 5546 WHAT IS THE SOUL?

QUESTIONS AND ANSWERS

- (38) Quotation tracked down. KEN BLACKWELL has supplied the source of the quotation, "Je suis libre, et le monde lui sera aussi," on the Russell medal offered for sale by the French government agency, Monnaies et Medailles (NL6-47):
"It comes from a letter BR wrote to Lady Ottoline Morrell on August 31, 1918, a date on which he was not free, as he was then enduring a prison sentence of up to 6 months for anti-war work. The exact English is, 'I am free, and the world shall be.' It appears at the end of the appendix to Chapter 1 of the second volume of BR's Autobiography."
- (39) Philosophy and literature. THOMAS W. SIMON asks whether any member "knows of any attempt to relate BR's philosophy with his literary works. I am working on this project and would greatly appreciate such information."
If you have information on this, please send it to the Newsletter and we will forward it.
- (40) BR on Kant. Can anyone help with the following? It "concerns Kant's famous statement in the 'Critique of Practical Reason' to the effect that two things fill his mind with awe: the starry heavens above and the moral law within. Somewhere Russell comments on it and expresses surprise or astonishment that Kant should have made such a statement." Where is BR's comment located?

(We are asking that answers to Items 39 and 40 be sent to the Newsletter for forwarding, rather than directly to the inquirers, as the simplest way for us to know when questions are answered; also, some answers may be suitable for the Newsletter.
- (41) "Human Society in Ethics and Politics." LEE EISLER asks whether anyone can explain this title, which has puzzled him for years.
-

SUPPLEMENTARY REMARKS

- (42) "Philosophy". TRUMAN E. ANDERSON, JR. has this to say, on what ought to come under the heading of "philosophy" (discussed in NL6-17):

If the sole purpose of philosophy is to provide academicians with obscure language and abstruse concepts with which to dazzle one another in technical journals, then the "popular" writings may be only "mere journalism". To suggest that an essay on happiness is less philosophic than an essay on neutral monism is an insult to philosophy.

The study of philosophy is deeply endangered by those who feel that it is a technical matter comprehensible only by experts. The more speculative aspects of philosophy are intellectually challenging and exciting, but the more practical elements are of far greater value to the human race.
- (43) And here is part of what GENE TUCK had to say:

Philosophy renders logical certainty, an intellectual feeling. Common sense

renders psychological certainty, an emotional-instinctual feeling. As I would not call intellect emotion, so I would not call philosophy common sense. This latter is what I believe the "narrow" interpretation of "philosophy" would avoid-prevent.

Philosophers should philosophize about philosophy, if the word is to maintain its meaning. Otherwise meaninglessness is invited in, and the sky's the limit.

Ordinary people almost never talk about philosophy, so why call what they do talk about by that name? In the world of psychological man, logical man is scarce -- although his day is coming.

I would turn Russell's wit* completely around. Science is what we believe (psychological conviction) and philosophy is what we know (logical conviction.)

(*BR was asked, "What is the difference between science and philosophy?" BR replied: "Science is what you know, and philosophy is what you don't know, roughly speaking." Ed.)

GOOD QUOTES

(44) Against irrational behavior. DAN MCDONALD sends the following quote from "Cows, Pigs, Wars, and Witches," by Marvin Harris, a Columbia University anthropologist:

"I see no reason why the further indulgence of involuted, ethnocentric, irrational, and subjective modes of consciousness should result in anything markedly different from what we have always had: witches and messiahs. We don't need more weird vibrations, bigger psychotropic cults, and zanier head trips. I make no claim for the millenarian splendors that will come from a better understanding of the causes of lifestyle phenomena. Yet there is a sound basis for assuming that by struggling to demystify our ordinary consciousness, we shall improve the prospects for peace and economic and political justice. If this potential change of odds in our favor be ever so slight, I think we must regard the expansion of scientific objectivity into the domain of lifestyle riddles as a moral imperative. It's the only thing that's never been tried."

Dan adds: "The Harris book is concerned with the anthropological interpretation of so-called irrational behavior. Dr. Cranford originally formed the BRS to act as a grassroots campus movement. The Harris book can serve as a useful handbook for explaining why science and scepticism are better than blind acceptance of the contemporary world urban social order."

FUN & GAMES

- (45) Coal. Our thanks to AMY BLOCK for lending us "A Random Walk in Science," an anthology compiled by R. L. Weber. Page 107 -- the first page of a 2½-page article titled, "On the feasibility of coal-driven power stations" -- is reproduced on Page 25.
-

FINANCES

- (46) "What I Believe" financing reconsidered. We are going to reconsider whether or not the BRS should put up the money for 1000 copies of "What I Believe," in the manner described in NL6-12. We will vote yes or no, by mail. The last page of this Newsletter is the ballot. The cut-off date for votes to count is September 1, 1975. Please vote!

Here is the situation, as described in Newsletter #6, Item 12:

"What I Believe." The following was proposed by Douglas Lackey, and approved:

In order to induce a publisher to re-publish BR's 1925 essay, "What I Believe," as a separate paperback, BRS agrees to purchase 1000 copies (if it is published.) The book would probably sell for \$1 or \$1.30 retail. BRS's maximum commitment would be \$1300. Douglas Lackey undertakes to sell 250 copies per year, to his students; BRS would recover its money in 4 years.

The reason for the special interest in "What I believe" is that it states BR's social views concisely, and is a good, short introduction to BR for beginners.

This is the first time the BRS has undertaken to spend a not inconsiderable amount of money, and for a purpose other than growth or internal communication. Any member who has feelings about this, one way or another, is invited to express them in the Newsletter.

We now recommend a "no" vote for the following reasons:

. If the book is published, and BRS puts up the \$1300, that is slightly more than there is in the treasury, as of 5/1/75. It would leave the treasury empty, or slightly overdrawn.

. Money is needed for operating expenses -- for Newsletters, for recruiting new members, etc. -- and none would be available without borrowing.

. BRS, Inc. does not have assets, does not have a credit standing, and could not borrow money on its own. This means that some member(s) would have to guarantee a loan personally -- which no member ought to be asked to do.

. \$1300 is nearly twice as much as the BRS collected in dues during its whole first year of existence. It is a disproportionate commitment for BRS's slim resources.

. The proposal was approved by the members present at the Annual Meeting February 8, 1975. A maximum of 16 were present at the time of the vote. We think this is too serious a financial commitment to be decided by so few members. That is why we are asking everyone to vote on the issue.

We suggest that you vote right now. Please fill in the ballot (on the last page of this Newsletter) and mail it. Thanks!

(47)

Financing future projects. We can learn from our experience with undertaking to finance "What I Believe." If some project comes along that seems highly desirable but also calls for more money than is available, we can then put it to a vote; a "yes" vote by an individual would also indicate his/her willingness to be assessed a pro rata share of the cost, up to some stated limit. For instance, if you were to vote in favor of Project X, your "yes" vote would also indicate your willingness to be assessed up to, say, \$25, * to help cover the project's cost. We invite comments on this.

(48)

Contributions. So far this year — meaning since February 1975, the start of our second year — we have received cash contributions from PETER CRANFORD, LEE EISLER, MARTIN GARSTENS, ALFRED KWOK, CORLISS LAMONT, JOE NEILANDS, and GENE TUCK. Much appreciated...and much needed.
* If you like what we're doing, help pay for it with a contribution (if and when you can spare the money.) Send it to the Newsletter.

(49)

2nd year dues. When you receive a "Membership Renewal Request" — ie, a request for dues for your 2nd year of membership — please respond without delay. When your renewal time comes, you will receive only one renewal request.

ABOUT OTHER ORGANIZATIONS

(50)

BRS, Japan. Our thanks to KEN BLACKWELL for sending us the following article by Kazuteru Hitaka, a Director of The Bertrand Russell Society in Japan. It appeared in The Times (London) on May 7, 1975.

IMPACT ON INTELLECTUALS OF BERTRAND RUSSELL

Lord Bertrand Russell is foremost among the British philosophers who have influenced Japan. His impact on intellectuals there lay in his concept of freedom and equality and his theory of justice and reform.

Bertrand Russell introduced his ideas through "Kaizo", a leading magazine in Japan at the beginning of the century, in an article entitled "Theory of Social Reform". Until then Japan had been governed by feudalistic ideas and controlled by the police and the military. At a time when the curtain was about to rise on a new epoch it was fortunate for Japan that students, men of culture and intellectuals in Japan had already been enlightened by Russell's ideas.

His works were translated and published in Japan, one after another, and extracts from his writings appear in many school textbooks. They include "Practice and Theory of Bolshavism," "History of Western Philosophy," "On Religion," "On Power," "ABC of Relativity," "Marriage and Morals," "On Happiness." To this day Russell's works are esteemed by scholars working in philosophy, logic, mathematics, natural science, social philosophy, political thought and so on.

Russell is known to the Japanese as an active promoter of world peace as well as a leader in this cause. We were impressed by the fact that he was a leading worker for world peace until his death at the age of 97; had never

been daunted by the imprisonment inflicted on him, nor defeated by unjust powers.

The world scientists' conference (Pugwash conference) was proposed in a statement by Russell and Einstein. Other efforts of his for peace included a movement for the establishment of a federal world government, the Campaign for Nuclear Disarmament, the Committee of 100, The Vietnam Solidarity Campaign, as well as protests against the invasion by the Soviet Union of Hungary and Czechoslovakia.

These activities are held in Japan as those of a pacifist and a moderate. His book, "Has Man A Future?" has been praised unstintedly as a warning to mankind.

Russell is respected especially by young Japanese. They have been touched by his sincere attitude towards life in which he tried hard to seek truth without recourse to social conventions, and took a firm stand against unjust powers, supported by his ideology and convictions. He was neither biased nor swayed by dogma. Although he came from the British aristocracy, he devoted himself to the minority races and to the oppressed and loved people sincerely, even though it entailed risks to his life.

Russell taught young Japanese the way to humane living by his own example and his three-volume autobiography is very popular with them. His spirit will be kept alive forever among the Japanese.

(51)

BRS, Japan. Professor Tsutomu Makino has sent us "THE 10TH ANNIVERSARY ISSUE, BULLETIN NO. 23, THE BERTRAND RUSSELL SOCIETY, JAPAN MAY 1975". 22 pages * entirely in Japanese. We will lend it, on request.

Regarding Professor Makino's "READERS' INDEX TO THE SUBJECTS DEALT WITH IN BERTRAND RUSSELL'S BOOKS" (NL5-11), we had asked him if a BRS member could write him and obtain a copy, and at what cost. He answers that "your BRS can make and distribute copies for public use, without any royalty obligation," mentioning his name as compiler. Unfortunately we do not have money to do this, but we will lend our one copy on request. It is in English.

ADDENDA

(52)

Nobel Award. We came upon the following too late to include it where it properly belongs — in the section, ABOUT BERTRAND RUSSELL:

BR was awarded the Nobel Prize in Literature for 1950. This was the Presentation, as made by Anders Osterling, Permanent Secretary of the Swedish Academy:

"The great work on Western philosophy which Bertrand Russell brought out in 1946, that is, at the age of seventy-four, contains numerous characteristic reflections giving us an idea of how he himself might like us to regard his long and arduous life. In one place, speaking of the pre-Socratic philosophers, he says, "In studying a philosopher, the right attitude is neither reverence nor contempt, but first a kind of hypothetical sympathy, until it is possible to know what it feels like to believe in his theories, and only then a revival of

the critical attitude, which should resemble, as far as possible, the state of mind of a person abandoning opinions which he has hitherto held."

And in another place in the same work, he writes, "It is not good either to forget the questions that philosophy asks, or to persuade ourselves that we have found indubitable answers to them. To teach how to live without certainty, and yet without being paralyzed by hesitation, is perhaps the chief thing that philosophy, in our age, can still do for those who study it."

With his superior intellect, Russell has, throughout half a century, been at the centre of public debate, watchful and always ready for battle, as active as ever to this very day, having behind him a life of writing of most imposing scope. His works in the sciences concerned with human knowledge and mathematical logic are epoch-making and have been compared to Newton's fundamental results in mechanics. Yet it is not these achievements in special branches of science that the Nobel Prize is primarily meant to recognize. What is important, from our point of view, is that Russell has so extensively addressed his books to a public of laymen, and, in doing so, has been so eminently successful in keeping alive the interest in general philosophy.

His whole life's work is a stimulating defence of the reality of common sense. As a philosopher he pursues the line from the classical English empiricism, from Locke to Hume. His attitude toward the idealistic dogmas is a most independent one and quite frequently one of opposition. The great philosophical systems evolved on the Continent he regards, so to speak, from the chilly, windswept, and distinctive perspective of the English Channel. With his keen and sound good sense, his clear style, and his wit in the midst of seriousness, he has in his work evinced those characteristics which are found among only the elite of authors. Time does not permit even the briefest survey of his works in this area, which are fascinating also from a purely literary point of view. It may suffice to mention such books as the "History of Western Philosophy" (1946), "Human Knowledge" (1948), "Sceptical Essays" (1948) (?) and the sketch, "My Mental Development" (in "The Philosophy of Bertrand Russell," 1951); but to these should be added a great number of equally important books on practically all the problems which the present development of society involves.

Russell's views and opinion have been influenced by varied factors and cannot easily be summarized. His famous family typifies the Whig tradition in English politics. His grandfather was the Victorian statesman, John Russell. Familiar from an early age with the ideas of Liberalism, he was soon confronted by the problems of rising socialism and since then he has, as an independent critic, weighed the advantages and disadvantages of this form of society. He has consistently and earnestly warned us of the dangers of the new bureaucracy. He has defended the right of the individual against collectivism, and he views industrial civilization as a growing threat to humanity's chances of simple happiness and joy in living. After his visit to the Soviet Union in 1920 he strongly and resolutely opposed himself to Communism. On the other hand, during a subsequent journey to China, he was very much attracted by the calm and peaceable frame of mind of China's cultivated classes and recommended it as an example to a West ravaged by wild aggression.

Much in Russell's writings excites protest. Unlike many other philosophers, he regards this as one of the natural and urgent tasks of an author. Of course, his rationalism does not solve all troublesome problems and cannot be used as a panacea, even if the philosopher willingly writes out the prescription. Unfortunately there are — and obviously always will be — obscure forces which evade intellectual analysis and refuse to submit to control. Thus

even if Russell's work has, from a purely practical point of view, met with but little success in an age which has seen two world wars — even if it may look as if, in the main, his ideas have been bitterly repudiated — we must nevertheless admire the unwavering valour of this rebellious teller of the truth and the sort of dry, fiery strength and gay buoyancy with which he presents his convictions, which are never dictated by opportunism but are often directly unpopular. To read the philosopher Russell often gives very much the same pleasure as to listen to the outspoken hero in a Shaw comedy, when in loud and cheerful tones he throws out his bold retorts and keen arguments.

In conclusion, Russell's philosophy may be said in the best sense to fulfil just those desires and intentions that Alfred Nobel had in mind when he instituted his Prizes. There are quite striking similarities in their outlooks on life. Both of them are at the same time sceptics and utopians, both take a gloomy view of the contemporary world, yet both hold fast to a belief in the possibility of achieving logical standards for human behaviour. The Swedish Academy believes that it acts in the spirit of Nobel's intentions when, on the occasion of the fiftieth anniversary of the Foundation, it wishes to honour Bertrand Russell as one of our time's brilliant spokesmen of rationality and humanity, as a fearless champion of free speech and free thought in the West.

My lord — Exactly two hundred years ago Jean Jacques Rousseau was awarded the prize offered by the Academy of Dijon for his famous answer to the question of "whether the arts and sciences have contributed to improve morals". Rousseau answered "No", and this answer — which may not have been a very serious one — in any case had the most serious consequences. The Academy of Dijon had no revolutionary aims. This is true also of the Swedish Academy, which has now chosen to reward you for your philosophical works just because they are undoubtedly of service to moral civilization and, in addition, most eminently answer to the spirit of Nobel's intentions. We honour you as a brilliant champion of humanity and free thought, and it is a pleasure for us to see you here on the occasion of the fiftieth anniversary of the Nobel Foundation. With these words I request you to receive from the hands of His Majesty the King the Nobel Prize in Literature for 1950."

At the banquet, Robin Fahraeus, Member of the Royal Academy of Sciences, made the following comment: "Dear Professor Bertrand Russell — We salute you as one of the greatest and most influential thinkers of our age, endowed with just those four characteristics which on another occasion you have regarded to be the criteria of prominent fellow men; namely, vitality, courage, receptivity, and intelligence."

BR's Nobel Lecture later became Chapter II of Part II of "Human Society in Ethics and Politics" (1955). The Chapter's title is "Politically Important Desires." The Lecture can be heard on Heritage LP A-1202, "Bertrand Russell Speaks," which is out of print. We will, on request, make a tape(cassette) * copy of the LP and send it to you, for the cost of the blank cassette(\$1).

This is Item 53 — Page 107 of "A Random Walk in Science," referred to in Item 45:

On the feasibility of coal-driven power stations

O R FRISCH

From *The Journal of Nuclear Physics* 3, pp 27-30 in commemoration of the 70th birthday of Professor Niels Bohr (October 7, 1955) at the Institutet for Teoretick Fysick, Copenhagen.

The following article is reprinted from the Yearbook of the Royal Institute for the Utilization of Energy Sources for the Year MMMCMLV, p1001.

In view of the acute crisis caused by the threat of exhaustion of uranium and thorium from the Earth and Moon Mining System, the Editors thought it advisable to give the new information contained in the article the widest possible distribution.

Introduction. The recent discovery of coal (black fossilized plant remains) in a number of places offers an interesting alternative to the production of power from fission. Some of the places where coal has been found show indeed signs of previous exploitation by prehistoric men who, however, probably used it for jewels and to blacken their faces at tribal ceremonies.

The power potentialities depend on the fact that coal can be readily oxidized, with the production of a high temperature and an energy of about 0.0000001 megawattday per gramme. This is, of course, very little, but large amounts of coal (perhaps millions of tons) appear to be available.

The chief advantage is that the critical amount is very much smaller for coal than for any fissile material. Fission plants become, as is well known, uneconomical below 50 megawatts, and a coal-driven plant may be competitive for isolated communities with small power requirements.

Design of a coal reactor. The main problem is to achieve free, yet controlled, access of oxygen to the fuel elements. The kinetics of the coal-oxygen reaction are much more complicated than fission kinetics, and not yet completely understood. A differential equation which approximates the behaviour of the reaction has been set up, but its solution is possible only in the simplest cases.

It is therefore proposed to make the reaction vessel in the form of a cylinder, with perforated walls to allow the combustion gases to escape. A concentric inner cylinder, also perforated, serves to introduce the oxygen, while the fuel elements are placed between the two cylinders. The necessary presence of end plates poses a difficult but not insoluble mathematical problem.

Fuel elements. It is likely that these will be easier to manufacture than in the case of fission reactors. Canning is unnecessary and indeed undesirable since it would make it impossible for the oxygen to gain access to the fuel. Various lattices have been calculated, and it appears that the simplest of all—a close packing of

BALLOT

(54) Issue #1: Should the BRS finance the publication of "What I Believe," as described in Item 46?

We recommend "no".

Please vote "yes" or "no": Yes() No() (Check one.)

(55) Issue #2: Should the BRS give its approval to the Science Committee's statement on nuclear power, set forth in Item 15?

Please vote "yes" or "no": Yes() No() (Check one.)

Remarks (optional) _____

Please remove this page from the Newsletter and mail it to The Bertrand Russell Society, Inc., R.D. 1, Box 409, Coopersburg, Pa. 18036.

Note: To have your vote count, your ballot must be postmarked no later than September 1, 1975.

NEWSLETTER #8
October 1975

- (1) Arrangements for the forthcoming Annual Meeting are discussed (3-10). Travel expense will be deductible for some (8). The Science Committee statement on nuclear energy is adopted (27). BRS will not finance "What I Believe" (25). Ken Blackwell provides a book-list (29). "75 Years of Rationalism" (56). This issue has an index, in 2 parts (2)(64.5). Numbers in parentheses are item numbers, not page numbers. An asterisk in the left column indicates a request or an offer to lend.
-

- (2) Index. Annual Meeting: time and place (3), schedule (4), room reservations (5), comments (6), Sunday morning meeting (7), tax-deductible travel (8), electing directors (9), by-laws (10). President's Report (11). Vice-President's Report: Annual Meeting suggestions (12), Los Angeles next?(13) Universal Human Rights Committee (14), (Item omitted) (15). Treasurer's Report (16). ANNUAL MEETING, DECEMBER 26-27-28, 1975

- (3) The place: Hotel Tudor, 304 East 42nd Street, New York, N.Y. 10017. Phone: (212)986-8800.

- (4) The schedule:

Friday (Dec. 26) 8 P.M. to midnight. Film and business meeting #1

Saturday (Dec. 27) 9 A.M. to noon. Business meeting #2

Noon to 2 P.M. Lunch (unscheduled)

2 to 6 P.M. Business meeting #3

6 to 7 P.M. Red Hackle Hour

7:30 to 9 P.M. Banquet

9 P.M. to midnight. Business meeting #4

Sunday (Dec. 28) 10 A.M. to 1 P.M. BRS session at APA
(Statler-Hilton Hotel, 7th Avenue at 33rd Street)
1 to 2:30 P.M. Lunch (unscheduled)
2:30 to 5 P.M. Business meeting #5, if needed

(5) Reserving a room: you will need lodging for 2 nights, Friday and Saturday, December 26 and 27. A single room costs \$14, a double-bed or twin-bed room costs \$20. No deposit is required, unless you expect to arrive after 6 P.M. We have applied for certification, to eliminate the local 8% tax. To get these rates, mention BRS, when writing to reserve. Write Mr. Thomas D. Damberg, Hotel Tudor.

(6) Comments:

- (a) We are at the Hotel Tudor again because we found it satisfactory the past 2 years and because its prices are modest for New York.
- (b) If you arrive Friday afternoon, phone Peter Cranford on the house phone, and let him know you have arrived. We will gather in Peter's room.
- (c) At about 6:30 P.M. we will move to the Hotel Tudor dining room for an informal meal, and be there until we move to the Carriage Room for the 8 P.M. meeting.
- (d) The Saturday night banquet will be in the Hotel Tudor dining room ("Three Lions Pub") and we will have it exclusively as a private dining room. Choice of sliced steak, broiled chicken, broiled fish. Cost, including a drink and tip, is \$10.50. Pay then.
- (e) We will try to have information on restaurants in the area, if you wish to go elsewhere for lunch Saturday and Sunday.
- (f) Note that the Sunday morning session is at a different location. It's where the American Philosophical Association meets (Statler-Hilton Hotel.)
- (g) If there should be last minute changes in schedule, we will leave the revised schedule at the Hotel Tudor front desk.
- (h) Bob Davis suggests making travel reservations early, because of the Christmas crunch. For more of his suggestions, see (12).
- (i) Please use the last page of this Newsletter to let us know that you plan to attend (if you do.) It will help our planning, if we can learn in advance how many members expect to attend.

(7) The Sunday morning meeting is being held under the auspices of the American Philosophical Association, at their hotel (Statler-Hilton). Papers on BR will be read, and discussed, by professional philosophers. For the program, see (65); for abstracts (66). This is the 2nd year in a row that the BRS has a session at APA, and we expect it to be an annual event, chaired by ED HOPKINS, who conceived it and administers it.

A word to non-professional philosophers: This is going to be pretty heady stuff, and non-professionals may not be able to follow it. As we know, BR wrote for 2 entirely different audiences; this is the other audience. Nevertheless we think you will want to attend this session, to get an idea of the kinds of things BR dealt with in this area -- and that professional philosophers continue to work on. Courage!

(8) Tax-deductible travel to meetings. Some, but not all, BRS members are entitled to deduct the cost of travel, lodging and meals, to attend the Annual Meeting, the IRS has informed us. These members fall into 2 groups:

- (1) Professional members -- including philosophers, educators, sociologists, historians, economists, psychiatrists, psychologists, etc. -- who benefit in the field of their professional competence through their membership in the BRS.

(2) Essential members. This refers to members whose presence is essential to the proper conduct of the Meeting. This includes directors, who elect the officers at the Meeting; officers, who conduct the meeting; committee chairpersons, who report to the Meeting; and committee members who amplify the chairperson's report.

Note: If you take a tax deduction, you must also report it to the BRS Treasurer, Kate Tait. (Dr. Katharine Tait, c/o Reischer, 1300 N. Barton, Arlington, Va. 22201.) The BRS is required to report it as income — even though it pays no tax on income — when income exceeds \$5000.

(9) Electing directors. At the Annual Meeting, members present will be asked to vote for directors.

We think the person best qualified, at this point, to recommend a slate of directors is Peter Cranford, who has been in communication with more members than anyone else, and more often, and who has — we think it has been demonstrated — a sound intuition in these matters.

We will therefore list the 12 members whom Peter recommends as directors.

However, this is not a closed affair. Any member may nominate members as candidates. If you wish to nominate someone, send us the member's name (use the last page of this Newsletter), along with a few brief remarks saying why you are nominating him/her.

At the Meeting, members will elect 12 of the candidates.

Here is Peter's list of 12: ANDERSON JR., ARKIN, BLACKWELL, CRANFORD, DAVIS, DENONN, EISLER, GARSTENS, NEILANDS, PITT, SLEZAK, TAIT.

The lines of authority — within the BRS — go as follows: members elect directors; directors elect officers; the President appoints committee chairpersons; committee chairpersons appoint committee members.

(10) By-Laws. The Bertrand Russell Society, a non-incorporated entity formed in February 1974, has been replaced by The Bertrand Russell Society, Inc. The BRS Constitution must be replaced by the corporation's by-laws. These are now being drawn up and will follow the lines laid down in the Constitution. They will be submitted to the members for approval or modification, probably at the Annual Meeting.

REPORTS FROM OFFICERS

(11) President Peter G. Cranford reports:

The Society was born early in 1974 and the immediate problem was the danger of a still-birth. This danger we survived. During the next twelve months we carefully felt our way as to what we were going to do, but held firm to the idea of "spreading his ideas" and trying anything that gave hope of establishing beachheads of activity.

The main accomplishments of 1975 are these: The organization is running smoothly and promises to continue to do so. We are a legally tax-exempt foundation in excellent standing with the Internal Revenue Service. Our finances, though limited, are in good condition. We are fulfilling our purpose of "spreading his ideas" through a magnificent Newsletter and through our promising relationship with the American Philosophical Association. These two "beachheads" are open-ended and give us unlimited opportunities for the expenditure of money and energy.

We have other beachheads in the making. The most promising at this time is that of the Science Committee, which is concerning itself with problems of some magnitude. Our first national recognition may well come from this source.

It is now clear that we have the means of permanently funding the Society. We place small ads in national journals announcing the existence of the Society. This draws members. With their fees we are able to finance the Newsletter. The Finance Committee then raises additional funds from those desirous of making further contributions on an annual basis, and from other sources. (Some members contribute by Christopher-type activities that they finance themselves.)

Our December 1975 Annual Meeting should be by far our best. The first two were very informal affairs, but this one will be much better organized. Bob Davis and Lee Eisler have already begun work on it and I appreciate their relieving me of this responsibility.

Our most important task in 1976 will be to capitalize on the great pool of intelligence, liberal thinking and Russellian motivation of our members.

(12) Vice-President Robert K. Davis reports:

My summer business crush is drawing to a close and I can again attend to more BRS business. I shall be in contact with more members. I intend to visit new members in Southern California.

Regarding the Annual Meeting: In view of the travel problem at Christmas, we view the 27th (Saturday) as being the major day for serious business. Officers and Chairpersons plus anyone else with business for the Meeting should arrive as early as possible Friday, to attend to last minute details and prepare for a smooth presentation at the Meeting. Members who wish to propose something or conduct business at the Meeting should write to me, with copies to Peter and Lee (or use the last page of this Newsletter) — as soon as possible, please, since the agenda has to be organized well before the Meeting.

(13) Concerning Joe Neiland's suggestion for alternate meeting places (NL7-3): I would be happy to organize a meeting here in Los Angeles, if the members wish it. We are gaining members here, and such a meeting might spur us on. Maybe I can get Disneyland to add a Philosophers' Ride to Fantasyland — perhaps a myriad of logical symbols carrying people on abstruse journies!

(14) When the BRS was founded 2 years ago, Katharine Tait and I were responsible for the Universal Human Rights Committee (then called the International Civil Liberties Committee.) We felt that the mistreatment of human beings had been a matter of great concern to ER, and continues to be to many of his followers. Both Kate and I are officers, and have not had time to do much on this committee. I have written a few letters; that is about the extent of it. Lately, however, I have received some letters of interest from new members; I intend to write them, and ask that other interested members write me. Perhaps we can come up with some ideas and action plans by the time of the Meeting.

(16) Treasurer Katharine Tait reports, as of August 1, 1975:

Balance on hand (May 1, 1975).....	1149.37	
Income: Pledges and contributions.....	542.99	
Dues (new & renewals).....	<u>166.00</u>	708.99
		<u>1858.36</u>
Expenditures: Information Committee.....	139.47

Balance on hand.....	1573.89	

REPORTS FROM COMMITTEES

(17) Applied Philosophy Committee (Martin A. Garstens, Chairperson:)

While attending a music festival at Skidmore College (Saratoga Springs), I heard an amazingly well-presented series of lectures on ethics by a Professor Rucker of this college. Just the sort of thing (with modifications) for applied philosophy. It was a sort of Socratic dialogue, done with immense skill. I think discussions of ethics may constitute the heart of what we can do in applied philosophy. I am looking into this very thoroughly, and when Russell discussions begin here again, I plan to center it around Russell's (and other's) views on ethics. I think we need to clearly define the new ethic for our time and learn to live according to it. There is much confusion in this area.

(18) Finance Committee: the new Chairperson, Truman E. Anderson, Jr., has been out of the country since his appointment, and has nothing to report at this time.

Information Committee (Lee Eisler, Chairperson:)

(19) Advertising and inquiries: We have begun to keep track of the number of inquiries (about the BRS) that we receive, as a result of advertising. Our August advertising was particularly heavy; our ad appeared for the first time in HARPER'S MAGAZINE, HARPER'S WEEKLY, BOOKLETTER, ATLANTIC MONTHLY, THE PROGRESSIVE, THE NATION, THE NEW REPUBLIC, in addition to our old stand-by, SATURDAY REVIEW. Such a large amount of advertising is not normal for us (too expensive), but we were mostly trying out new publications to see what results they produce.

During August, we received 41 inquiries, during September 44, a total for the 2 months of 85, which is quite a lot. 8 persons enrolled in August, 14 in September, a 2-month total of 22. Thus about 1 inquirer out of 4 enrolls — from this particular mix of publications.

- (20) "The American Rationalist" gave a brief digest of BRS's "Report on Courses on Bertrand Russell" in its July-August 1975 issue.

Committee on Science (J. B. Neilands, Chairperson):

- (21) The Committee's statement, "Nuclear Power and the Energy Crisis," has been adopted as the official BRS position, as indicated in (27).
- (22) Hiroshima Day address was given by JOE NEILANDS at the Glide Memorial Church in San Francisco; "Nuclear Power Means Atomic Bombs and Radioactive Garbage." (69) provides the full text.
- (23) (Item withdrawn, pending confirmation.)

- (24) HERMAN LEFKOWITZ informs us that Public Service Gas & Electric Co. (N.J.) has distributed, with its July customer service bills, a reprint of "Manifesto on Energy Signed by 32 Scientists." It favors nuclear energy (NL7-15).

THE MEMBERS VOTE

- (25) "What I Believe:" should the BRS finance its publication, as described in NL7-46? 31 "no" votes, 2 "yes" votes. Consequently, the BRS is not committed to financing the publication of this short essay at this time. We think this makes good sense, since we don't have the funds. However, we would very much like to see WIB published as a separate short book, a view which members expressed even while voting "no".

DOUG LACKEY writes (8/1/75): "Thus far, E. P Dutton have expressed no interest in republishing WIB, even with a guaranteed pre-sale of 2000 copies paid for from my own funds." Accordingly, even if the BRS vote had gone the other way, it would not have made any difference: it would not have induced Dutton to publish.

- (26) Did we stack the cards against financing, by saying "We recommend 'no'" on the ballot? GARY SLEZAK and HERNARD WHEELER think we did. Presumably their objections are based on the idea of "No electioneering near the polls." We don't think the analogy is valid, but that's only our opinion.
* What's yours?

- (27) Nuclear statement: should the BRS approve the Science Committee's statement, as set forth in NL7-15? 25 "yes" votes, 7 "no" votes, 1 abstention. The statement is now the official BRS position on energy.

Two members who favor the statement are not fully satisfied with it. Neither ANITA JOYCE LEVINE nor JIM McWILLIAMS want solar power to be the sole alternative, excluding wind, geothermal, ocean thermal.

- (28) Not out front. JOE NEILANDS writes (8/14/75): "The Union of Concerned Scientists has hustled 2300 signatures from scientists denouncing nuclear power — which makes us not exactly out in front in the BR tradition!" Senator Mike Gravel's Energy Newsletter reports it this way:

Some 2,300 scientist, engineers and technologists have called for a cut-back in America's nuclear power program. In a statement prepared by the Union of Concerned Scientists, they say the U.S. should develop a national policy of conservation and non-nuclear energy.

This statement was released in Washington August 6, the 30th anniversary of the atomic bombing of Hiroshima. The scientists said their "early enthusiasm" for nuclear power has been "eroded" by concern about radioactive wastes and the link between nuclear power and nuclear weapons technologies.

Our thanks to DAN McDONALD for sending the Gravel Newsletter.

ABOUT BR'S WRITINGS

- (29) Blackwell's book-list. We enclose, with this Newsletter, a 4-page Russell book-list, prepared by KEN BLACKWELL. It sorts BR's books into 17 categories and can be used as an aid in studying BR's thought. It speaks for itself, so we will say no more about it here other than that we are delighted to have it.
- (30) Not for philosophers only. Some of the papers presented at the Russell Symposium at Indiana University in 1972 — they are listed in (36) — are of general interest: those by Wollheim, Nakhnikian, Schoenman, and Sherman. They are the last 4 on the list.
-

ABOUT BR

- (31) Alley cat. Complimentary remarks about BR can be found by the carload. Uncomplimentary remarks are not in short supply either. The following excerpt from "En Route to 'The Waste Land'" by T. S. Matthews ("The Atlantic", January 1974) contains both kinds:

For some months the Eliots lived with Vivienne's parents in Hampstead. Then Bertrand Russell, who at Harvard had wished Eliot would speak up more, and was grinned at, with an admiring grin, as "Mr. Apollinax," encountered his well-remembered pupil one day in Oxford Street. Renewed acquaintance warmed to cordiality, and led to introductions: to Lady Ottoline (Russell's mistress at the time) and all the Comus crew that battered on her at Garsington Manor for well-fed weekends — Leonard and Virginia Woolf, Katherine Mansfield, Middleton Murray, Aldous and Maria Huxley, Vanessa and Clive Bell, Duncan Grant, Lytton Strachey, and lesser lights. It led also to a ménage à trois.

Bertrand Russell had a first-rate mind, humane aspirations, and the sexual morals of an alley cat. Although he strongly resembled Tenniel's illustration of the Mad Hatter, he was apparently attractive to some women; and many women helplessly attracted him. He now invited the impoverished Tom Eliots to come live with him in his small London flat. Only a very innocent or a very sophisticated couple would have accepted the offer. The Eliots were not sophisticated.

...

In January, 1916, Eliot wrote him an effusively grateful letter:

Dear Bertie: This is wonderfully kind of you; really the last straw, so to speak, of generosity. I am very sorry you have to come back, and Vivienne says you have been an angel to her...I am sure you have done everything possible, and handled her in the very best way; better than I. I often wonder how things would have turned out but for you. I believe we shall owe her life to you, even.

Russell explains this letter, or partly explains it, in a deadpan footnote that may or may not reveal more than he intends: "Mrs. Eliot was ill and needed a holiday. Eliot, at first, could not leave London, so I went first with her to Torquay, and Eliot replaced me after a few days." Did Russell seduce Vivienne; and was Eliot, for at least a time, unaware of the fact? The probable answer to both questions, in the light of the circumstantial evidence and of the characters concerned, is yes.

...

Bertie's angelic handling of Vivienne was not the only reason for Eliot's gratitude. Russell's conscience, which was sleepy only in sexual affairs, troubled him about some debentures he held, with a face value of 3000 pounds, in an engineering firm that was making munitions: "Russell was a pacifist at the time, so he handed over the debentures to Eliot. The small but steady income from them was a great help. (Eliot kept the debentures for some years and finally returned them.)"

Thanks to BERNARD WHEELER for sending us this article.

(32)

Philanderer. From "Walter Scott's Personality Parade" — "Want the facts? Want to learn the truth about prominent personalities? Want informed opinion? Write Walter Scott" — a page in "Parade, The Sunday Newspaper Magazine" of August 31, 1975, in "The Pittsburgh Press":

Q: Can you tell me if Bertrand Russell, the great British philosopher, was also a great philanderer? B. Dreher, Cambridge, Mass.

A: Yes. He slept with pretty nearly every female he could get his hands on. An excellent book by one of his wives, Dora Black Russell, provides the details. It is an autobiography, "The Tamarisk Tree: My Quest for Liberty and Love," published in London by Elek.

This looks remarkably like a question dreamed up by a publisher's publicity department in an effort to sell more copies of a book. Thanks to JAMES WILLIAMS for sending us this item.

(33)

2 new books on BR, that we mentioned earlier — "My Father, Bertrand Russell," by KATHARINE TAIT (NL3-38) and "Bertrand Russell: A Life and Times," by Ronald W. Clark (NL5-15) —are about to appear, in October or November. Our thanks to MARTIN GARSTENS, who saw the announcement in "The Washington Post" of 8/31/75. For later information on Kate's book, see (57).

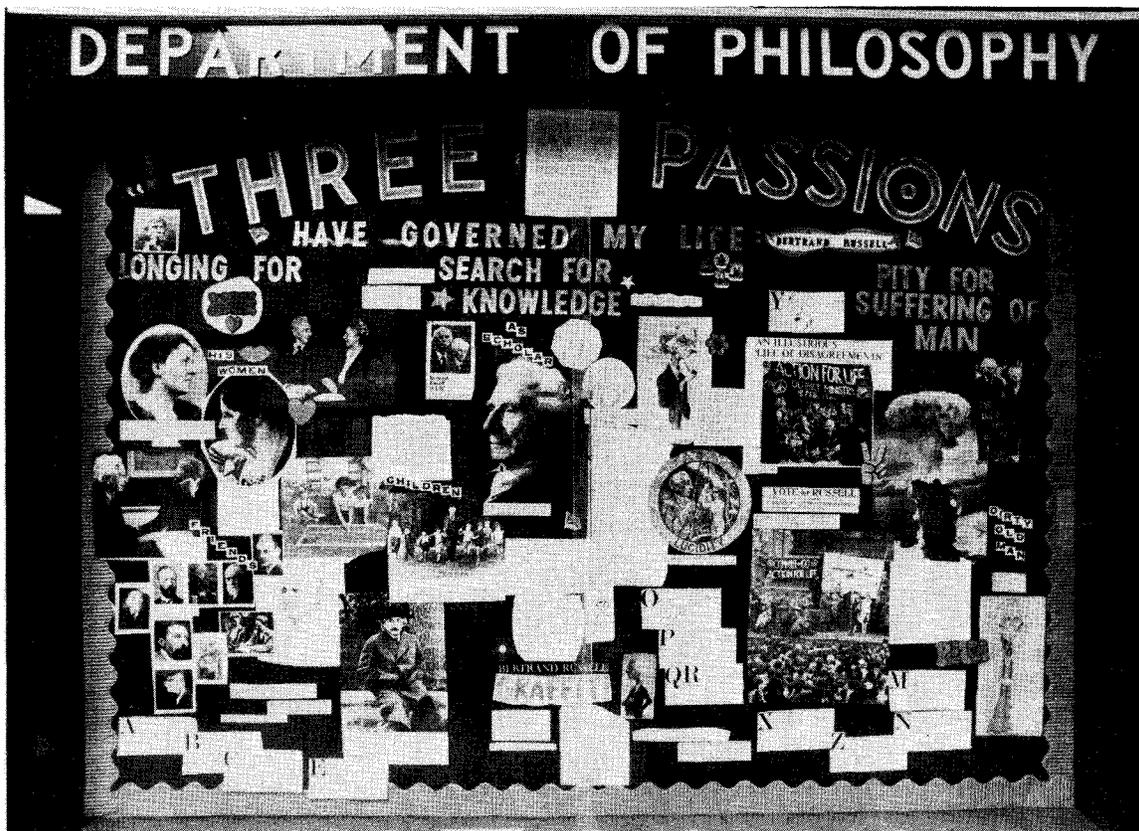

(34)

BR display. Promoting the study and spread of BR's ideas is a major aim of the BRS, and there are many ways of going about it. One of the most innovative and appropriate, we think, is the splendid Russell Bulletin Board Display pictured below. It was created by Susan Hunt, one of Professor CHARLES R. MAGEL's students at Moorhead (Minnesota) State College.

We like it because it looks attractive and interesting, and seems likely to stimulate interest in BR; and it does so where it can do the most good: on a college campus. (We think that the most effective way of spreading BR's ideas is by exposing college students to them.)

Ms. Hunt thought this up all on her own. "I cannot share any of the credit," says Professor Magel, and adds: "In color it is rather spectacular."

Our congratulations to Ms. Hunt.

PHILOSOPHERS' CORNER

(35)

BR and the environment. The present environmental crisis has produced a flurry of academic activity in the search for an appropriate philosophical and ethical stance towards the environment. Bertrand Russell's philosophical ideas play a prominent role in several papers recently written by GEORGE SESSIONS, which trace the historical development of Western man's anthropocentric indifference to the non-human environment. On several occasions, BR shied away from being labeled a "humanist", claiming that this philosophical orientation placed too much importance on the centrality of man in the scheme of things. BR professed an affinity for Spinoza's more cosmic orientation, and throughout his long career, stressed the compatibility of a mystical sense of the unity, and respect for the totality, of Nature with the rationalistic scientific approach. The papers argue that it is this philosophical attitude of BR's which is needed as the basis for a contemporary ecological world-view.

These are the papers:

- . "Anthropocentrism and the Environmental Crisis," Humboldt Journal of Social Relations. Vol. II, No. 1, Fall, 1974
- . "Panpsychism vs. Modern Materialism: Some Implications for an Ecological Ethic."

* We will lend them on request.

For a similar attitude toward the environment by another author, see (63).

(36)

Indiana symposium essays published. We have received a complimentary copy of BERTRAND RUSSELL'S PHILOSOPHY, edited by George Nakhnikian, from its publisher, Barnes & Noble. It consists of 14 essays written for the symposium on BR held at Indiana University, March 9-11, 1972. Most of the essays are arranged in pairs; the second member of each pair is written in response to the first. These are the essays:

- . Frederic B. Fitch, "Toward Proving the Consistency of 'Principia Mathematica'"
- . John Myhill. "The Undefinability of the Set of Natural Numbers in the Ramified 'Principia'"
- . Nino B. Cocchiarella, "Formal Ontology and the Foundations of Mathematics"
- . Roderick M. Chisholm, "On the Nature of Acquaintance: A Discussion of Russell's Theory of Knowledge"
- . Wilfred Sellars, "Ontology and the Philosophy of Mind in Russell"
- . Romane Clark, "Ontology and the Philosophy of Mind in Sellars' Critique of Russell"
- . David Pears, "Russell's Theories of Memory 1912-1921"
- . W. C. Salmon, "Memory and Perception in 'Human Knowledge'"
- . Grover Maxwell, "The Later Bertrand Russell: Philosophical Revolutionary"
- . W. C. Salmon, "Russell on Scientific Inference or Will the Real Deductivist Please Stand Up?"
- . Richard Wollheim, "Bertrand Russell and the Liberal Tradition"
- . George Nakhnikian, "Some Questions about Bertrand Russell's Liberalism"
- . Ralph Schoenman, "Bertrand Russell and the Peace Movement"
- . Edward Sherman, "Bertrand Russell and the Peace Movement: Liberal Consistency or Radical Change?"

- (37) BRS at APA (Pacific Division.) JACK PITT and HARRY RUJA held a BRS session at the March 27th meeting — in San Deigo — of the American Philosophical Association, Pacific Division. The meeting's time and place got fouled up, and "only a few people managed to discover us," says Jack. Happily, one who did was BILL EASTMAN. "But we did have a productive discussion of the aims and activities of the BRS," says Harry, who adds, "Jack and I need to consider whether we will arrange something for the next meeting of the Pacific Division, in Berkeley in spring."

* * * * *

For more PHILOSOPHERS' CORNER items, see (59-68).

SPECIAL REQUEST

- (38) BR on women's rights: quotations wanted. When someone inquires about the BRS with a view to joining, we send what we call our "information package", consisting of a handful of pages that give various bits of information about the BRS and BR.

We have become aware of a conspicuous gap in the present package: nothing in it indicates that BR was one of the earliest champions of women's rights.

- * If you know of any quotations from BR's writings — or any incidents in his life — that show this, please send it to the Newsletter (address on Page 1.)
-

LOCAL CHAPTERS

- (39) Fresno. JACK PITT reports: "The local BRS has merged with The Philosophical Society here at the University (California State). The hope is that it will represent the community wing of the Society."
-

NEWS ABOUT MEMBERS

- (40) DONG-IN BAE has been granted political asylum in West Germany, where he is studying for his doctorate. "I regard it as a shame that I have had to win the right of political asylum in a foreign country. It is painful that there are so many human beings 'living' under both tyrannies in Korea and that I have to remain here." Ideally, he says, he would like to be a free-world citizen, "though I am of course grateful to West Germany."

(41)

KOUJI TOMIMORI writes that he attended the Pugwash Symposium held in Kyoto, August 28-September 1. Speakers included Dr. S. Tomonaga, Prof. J. Rotblatt, Prof. W. Epstein, and Prof. T. Toyota. The speakers stressed the need of heeding Russell's and Einstein's advice, by getting rid of nuclear weapons. Kouji would be pleased to hear from other BRS members. (195 Dan, Akame-Chō/Nabari City, Mie-Ken/518-04 Japan.)

NEW MEMBERS

(42)

We are happy to welcome the following new members:

Elinor Ashkenazy/ 1435 Avenue 64/Pasadena, Ca. 91105
 Dennis H. Auger/ St. Stephen Priory/Dover, Ma. 02030
 Harry W. Clifford/275 Prospect St./ East Orange, N.J. 07017
 Felix & Elixabeth De Cola/736 N. Martel Avenue/Hollywood, Ca. 90046
 Lee & Freya De Cola/119 Park St./Newton, Ma. 02158

Samuel E. Dibble, Jr./1102 Gazin St./Houston, Tx. 77020
 Joseph A. Franks/41 Smith St./ Irvington, N.J. 07111
 Gregory & Susan Gargarian/807 Somerville #3/Somerville, Ma. 02143
 Anthony W.(Andy) Hawks/97 Curtis St./ Somerville, Ma. 02144
 Samuel Hopkins/2278 East 26th St./Brooklyn, N.Y. 11229

Alvin Hunter/Santa Rosa Junior College/Santa Rosa, Ca. 95401
 Dr. Frank E. Johnson/1516 Lake St./ San Francisco, Ca. 94118
 Richard J. Lorenz/2119 Cherry Bend Drive/ Houston, Tx. 77077
 Mary A. McCallum/321 East 83rd St./New York, N.Y. 10028
 Carol S. Mull/ 240 S. Chester Avenue/Indianapolis, In. 46201

Robert Nelson/ P.O.Box 1160/ Chula Vista, Ca. 92012
 Richard R. Noriega, Jr./ 232 West 32nd St./Tucson, Az. 85713
 Jerry A. Richards/ 628 N. 27th St./Allentown, Pa. 18104
 Steve Simons/ 5902 W. Main/ Dothan, Al. 36301
 John Sutcliffe/9, Naseby Avenue/Higher Blackley/Manchester M9 2JJ/ England

Kouji Tomimori/195 Dan, Akame-Chō/Nabari City, Mie-Ken/518-04 Japan
 Herbert G. Vogt/29 Woodvale Road/Branford, Ct. 06405
 James Williams/1310 Woodlawn Avenue/Pittsburgh, Pa. 15221

NEW ADDRESSES

Fred W. Allendorf/ Genetisk Institut/Aarhus Universitet/8000 Aarhus C/Denmark
Dong-In Bae/ 5 Koeln 41/Nassestr. 26/ West Germany
Daniel T. McDonald III/317 Judson Hall/53 Washington Square South, New York, N.Y. 10012
James E. McWilliams/ Box 34/ Holly Ridge, Ms. 38749
Dario Quevedo/Math. Dept./U. of Los Andes/AP. Aero 4976/Bogota, Columbia

Glenna M. Stone/2199 Fort Dr./ Smyrna, Ga. 30080
Katharine Tait/c/o Reischer/1300 N. Barton/Arlington, Va. 22201

(44)

MEMBERSHIP ANALYSIS

Male/female ratio. 100 men and 22 women currently belong to the BRS (as of 9/8/75). That is, women constitute 18% of the membership. We expect the 18% figure to increase, especially if we can increase awareness of BR as an early champion of women's rights.

BULLETIN BOARD

(45)

Autographed photo. Mr. Robert Y. Johnson, of Mexico, writes: "Back in 1931, when I was writing my thesis on Russell, I wrote to him asking for an autographed photo, which he kindly sent and which I still have in perfect condition. What value, if any, does this picture have? It is the size of a post card." Please send any suggestions to the Newsletter, for forwarding.

QUESTIONS & ANSWERS

(46)

Hodge-podge. HERBERT A. STAHL writes: "BR was very critical about politicians and politics. In one of his books he concluded a paragraph or chapter with a harsh remark describing politics as a hopeless mess, an un-understandable and unfathomable hodge-podge of opinion, drives and goals, so that nobody is capable of predicting what the final outcome will be." He asks whether anyone can give the exact wording of this passage and/or tell where it appears.

* Please reply to the Newsletter.

CORRECTIONS

- (47) BRS Awards proposal. This is a minor correction to NL7-25, to set the record straight. It was the American Humanist Association — not The Humanist Association of Canada — that made the 1975 Humanist of the Year award to Betty Friedan and Dr. Henry Mergentaler, and that in previous years had made awards to Margaret Sanger, Brock Chisholm, Linus Pauling, Julian Huxley, Erich Fromm, Abraham Maslow, Benjamin Spock, and Buckminster Fuller. The New York Times had it wrong, and that's where we got it.
- (48) Andrew Ramsay's name was misspelled, when we gave his new address (NL7-36). Sorry.
- (49) Sample, not response. In NL7-12, speaking about the response to the questionnaire we had sent out (inquiring about courses on ER), we said, "...20% is a respectably large sample..." It was a mistake to have called it a sample; it was a response. The sample consisted mostly of institutions with more than 10,000 students. We polled all of them; the sample was 100% of these larger institutions. 20% of them responded.
The corrected statement would read: "20% is a respectably large response, and we can take considerable satisfaction in the 83% figure."
-

SUPPLEMENTARY REMARKS

- (50) "Philosophy"(continued). On the question — Should "philosophy" be defined narrowly or broadly? (NL6-17, NL7-42, 43) — we notice that the Nobel committee favored the broad interpretation. It gave ER the prize in 1950 because he wrote about things that interested the ordinary citizen. As the Nobel Presentation says:
- His works in the sciences concerned with human knowledge and mathematical logic are epoch-making and have been compared to Newton's fundamental results in mechanics. Yet it is not these achievements in special branches of science that the Nobel Prize is primarily meant to recognize. What is important, from our point of view, is that Russell has so extensively addressed his books to a public of laymen, and, in doing so, has been so eminently successful in keeping alive the interest in general philosophy.
- (51) "The Guardian". The Mayaguez item (NL7-28) said that the entire original article could be obtained from "The Guardian." We have since seen an ad for "The Guardian" which says that it "gives the Marxist viewpoint." The Marxist viewpoint is not necessarily wrong or mistaken in a particular instance; but Marxists have their own axe to grind. In future, when we pass along information that comes from a Marxist source, we will mention that fact (when we are aware of it.)

RECOMMENDED READING

- (52) BOB DAVIS recommends: "for the more 'philosophical' of our members, 'Wittgenstein's Vienna' by Janik and Toulmin. It traces the intellectual/cultural climate of W's early years. I don't agree with much of the authors' opinions on Hapsburg Vienna or on BR, but it is an excellent exposition of the forces moulding W."
Also: "Symbolic Logic" by Lewis & Langford. "It will attempt to teach me notation for pursuing BR." Available from Dept. of Science, Dover Publications, 180 Varick Street, New York, N.Y. 10014. They have a catalog of books on science and mathematics, including Rudolph Carnap's "Introduction to Symbolic Logic and its Applications," and Susanne K. Langer's "An Introduction to Symbolic Logic."
- (53) GARY SLEZAK recommends "Jumpers," a play by Tom Stoppard. Grove Press, Inc., 1972. Available in paperback, Evergreen Edition, \$1.95. "The play has several very amusing references to BR."
-

FINANCES

- (54) Foreign members, add \$5. We have begun to ask members and inquirers outside the USA and Canada to pay an extra \$5 when they pay dues. That's about what it costs to send Newsletters and other material by air (as printed matter.) Surface mail to foreign countries, including Mexico but not Canada, may take a month or more. We recently had a letter from England that came by ship and took a month. We have to use airmail to foreign countries.
- (55) Contributions. We thank the following members for their contributions: ASHKENAZY, BAE, BLACKWELL, DAVIS, LACKEY, McDONALD, READER, RUJA. It helps.
-

ABOUT OTHER ORGANIZATIONS

- (56) "75 Years of Rationalism," by Hector Hawton, originally appeared in "The New Humanist," published by the Rationalist Press Association (England), of which BR was at one time President. It was later reprinted in "The American Rationalist," which is where we saw it. We reprint it with RPA's kind permission. Mr. Hawton was Managing Director of RPA, 1953-71.

What is meant by Rationalism? If you consult a textbook of philosophy you will find that Rationalism is the name given to those metaphysical systems which claim to provide information about the nature of reality without recourse to the tiresome method of observation and experiment. I suppose Hegel is the supreme example of this type of Rationalist.

He argued on purely logical grounds that there could be no planet between Mars and Jupiter. Unfortunately for Hegel, astronomers discovered one the same year (1801) that he made his pronouncements. One recalls also those professors of Padua on whom Galileo poured such ridicule. He had seen the satellites of Jupiter and the mountains of the moon through his telescope, but the professors refused to look lest their beautiful theories should be killed by an ugly fact. They tried to conjure the stars out of the sky by logic as though by incantations, Galileo protested.

It is strange that the same word, Rationalism, should have come to be used in an opposite sense in the nineteenth century — namely as the antithesis of speculative metaphysics and reasoning a priori about nature. The founders of the Rationalist Press Association were not opposed to Reason, very much the contrary; what they were opposed to was doing science in an armchair. In short, they were representatives of the new age which was just dawning. Scientific enquiry was, of course, already some three centuries old, but the secularization of life and thought as a result of the new knowledge was only beginning. I am speaking now of the year 1899 when twelve men came together in a room of the Ethical Union at Surrey House on the Embankment and founded a publishing house. The almost Quixotic nature of the project may be judged from the fact that the new organisation was dedicated to the publication of unpopular books, and started without capital apart from the result of an appeal for 1000 pounds.

First non-fiction paperbacks

Evidently it is not only Christians who have a faith that can move mountains. Charles Albert Watts believed that the time was ripe for such an enterprise. The fruits of the 1870 Education Act could now be seen in a new, literate public, hungry for reading matter. By supplying them with a blend of sensationalism and entertainment Northcliffe started a veritable gold rush to Fleet Street. He would have found the idea of giving the masses unpopular books incomprehensible. But it was not the first time when books which seemed to have only a limited appeal, despite their excellence, hit the jackpot. This happened to three of the early productions of the RPA — Joseph McCabe's "Twelve Years in a Monastery," Ernst Haeckel's "The Riddle of the Universe," and T. H. Huxley's "Essays and Lectures." The extraordinary prescience of Charles Albert Watts is shown by more than one innovation far in advance of his time. The famous series of sixpenny reprints was a forerunner of the paperback revolution in publishing. Again, by returning to members of the RPA in the shape of publications the value of their annual subscriptions, Watts was the first to experiment with the idea of a book club. The subscription was fixed at the modest sum of five shillings. The RPA was thus able to bring scientific and freethought classics within the reach of the smallest purse — and they were often very small indeed at the turn of the century. But the RPA was never intended to be an elitist organisation. It was started to satisfy the hunger for knowledge of a largely self-educated public. The guide-lines were laid down in a document published in February 1899. Politics were to be avoided and every effort was to be made to meet the need for publications that would stimulate freedom of thought, popularize science, support a humanistic philosophy of life, separate morality from all theological conceptions, and encourage secular education.

The first agnostics

Many people think that the RPA is primarily engaged in anti-religious propaganda. That is not strictly true, though it is not difficult to see how such an impression arose. Prominent in the early booklists were authors like T. H. Huxley, who coined the word, "Agnosticism", J. M. Robertson, who argued that Jesus never existed, and Joseph McCabe, an ex-monk whose attacks on the churches pulled no punches. Before even the RPA was founded, C.S. Watts had published "The Agnostic Annual", which became "The Rationalist Annual" and is now called "Question". The Religious Establishment was convinced that Rationalism was out to destroy religion. It was seen as a greater danger than Secularism because of its more moderate tone and the intellectual eminence of so many of its active supporters. Watts was well aware of the importance of the tone of voice adopted in the publications. He realised that for Rationalism to be influential it must eschew the brashness of the sort of street-corner atheist whom the church could safely ignore unless he had laid himself open to prosecution for blasphemy. One task of Rationalism was to make unbelief respectable. To do so it had to identify with science.

There was no doubt where the RPA was to stand. For although it had no official party line, it clearly stood for morals without religion. The concern to preserve moral standards of a fairly conventional kind was implied in the objects (objectives?) of the RPA. It was evident, too, from the preoccupation of Rationalists with secular education. Among the earliest publications were books for children on moral behaviour by F. J. Gould. No one, if we discount the rather decadent literary group who caused this really very earnest period to be called "the naughty nineties", imagined anything so bizarre as the "Permissive Society".

The fears of the religious apologists were well-founded. In the long run the decline of religion was bound to put in question certain traditional moral standards. With the advantage of hindsight we know that this has happened. Seventy years ago the smear was used to create prejudice against the RPA in very insidious yet practical ways. Clerical pressure continued to be applied to booksellers, discouraging them from displaying Rationalist books. To quote the Annual Report for 1912:

...the renters of certain bookstalls have been warned that the continued exposure of RPA publications would endanger the renewal of their tenancy; managers of large wholesale houses have declined to circulate our books except where ordered, on the ground that it would be inconsistent with their religious convictions; and numerous retail firms which have hitherto included RPA books in their lists have now withdrawn them. Pressure from clerical and other orthodox clients has been brought to bear on booksellers and in every direction, sometimes ineffectually but in most cases successfully.

To some extent this was off-set by supplying books direct to members. And when these underhand tactics were repeated thirty years later against "The Thinkers Library", the series was already so successful that the effect on sales was negligible. "The Thinkers Library" sold over three millions copies before its career was brought to an end by the aftermath of the Second World War.

Castle Reith

You may feel that I have not yet given a plain answer to the question with which I began: What is Rationalism? A publishing house is not the same

as an "ism". Some distinction must be drawn between Rationalism as an ideology, and Rationalism as an organised movement. And although the RPA is mainly concerned with publishing, it is more like the SPCA or the Catholic Truth Society than an ordinary commercial publishing firm. Such firms do not publish unpopular books, nor do they live mainly on legacies and donations.

Although the main emphasis of the RPA has always been on the written word, it sponsored highly successful lectures on evolution. When broadcasting superseded lectures, and made it possible to reach an enormously bigger audience, several deputations from the RPA got as far as the corridors of the Kafka-like institutions, but not much further. It was not until the Reith regime came to an end that the BBC was more hospitable to Rationalists, though it preferred to call them Humanists.

(Lord Reith was Director-General of the BBC until 1938. In 1947, the BBC started an annual series of broadcast lectures, called the Reith Lectures. ER gave the first one, which was published in 1949 as "Authority and the Individual". Ed.)

Against arbitrary authority

Another activity which engaged the RPA was the campaign to give only secular instruction in State schools. Its first Declaration forwarded to the Board of Education was signed by George Meredith, Sir Frederick Harrison, Havelock Ellis, Israel Zangwell and J. Ramsey McDonald. Many years later, in 1941, when a coalition government was preparing a new education Bill, it was sadly evident that it would be useless to revive the campaign for secular education. It was decided instead to urge the more modest and constructive policy of treating the subject of religion in classrooms on non-partisan lines.

A full-time Education Officer was appointed to publicize the new approach. It certainly met the criticism that Rationalism is purely negative and only invested in denying the "truths" of religion. It is worth noting that the word religion does not appear in the legal objects of the RPA. Rationalism is defined as

the mental attitude which unreservedly accepts the supremacy of reason and aims at establishing a system of philosophy and ethics verifiable by experience and independent of all arbitrary assumptions or authority.

I do not think there was any doubt in 1899 about where to look for the most glaring instances of arbitrary authority. The Pope had recently announced that he was infallible, and the Anglican Church, although shaken by defections, had not yet lost its arrogant self-confidence. Today the phraseology of the definition admittedly looks dated, but no one has propounded an acceptable alternative. "The supremacy of reason" has been derided by some critics, for whom it conjures up the extravagant gestures of the French Revolutionaries who enthroned the goddess of Reason in the Cathedral of Notre Dame.

This was not what the Founding Fathers had in mind, we may be sure, but their concept of Rationalism derived nevertheless from the eighteenth century Enlightenment, when the dogmas of the Church were subjected to the acids of criticism. Voltaire, Condorcet, Bayle, Diderot were Rationalists in the modern sense.

The strand of Rationalism can be traced through the Philosophical Radicals, and Utilitarians. Bentham, Godwin and Mill were heirs of the

French philosophes. They believed that only by the application of rational methods to human problems was it possible to build a better society.

Now although science is not explicitly mentioned in the formal definition of Rationalism I have quoted, it is obvious that the RPA arose from the upsurge of scientific discovery in many different fields. It was a spin-off of the Scientific Revolution which continued at accelerating pace deep into the present century. Indeed the attitude of mind which Rationalism promotes is what made science possible. For what is really meant by "Reason" in this context is scientific method.

Literature and science

Rationalists are sometimes accused of "scientism", a pejorative term meaning a belief that science can solve all problems and that human progress is inevitable. I don't know of any scientists who take this naive view. We don't have to believe in Original Sin to recognize that civilisation is a thin and precarious crust built over latent savagery. Reason is a late development of evolution, as Darwin and Freud have shown. But can anyone deny that the world would be a better place if people behaved more reasonably? I am afraid that the answer is that some people can and do deny just that. Since the last war there has been a cult of irrationalism both in religion and in some schools of philosophy. Rationalism is thought to be cold, untouched by emotion, insensitive to poetry and music. Yeats drew this caricature of a Rationalist when he wrote scornfully of:

A levelling, rancorous, rational sort of mind
That never looked out of the eye of a saint
or out of a drunkard's eye.

And before Yeats, the stereotype was vividly fixed by Wordsworth in the image of a scientist "peeping and botanizing on his mother's grave", or "We murder to dissect." I suppose Darwin's lament that his appreciation of poetry and music had become atrophied gave a certain plausibility to the charge. But it is a travesty. We must not confuse the irrational with the non-rational. It would certainly be irrational to try to stifle these vital and necessary elements in our nature. As Whitehead puts it, "If man cannot live on bread alone, still less can he live on disinfectants."

The founders of the RPA would have agreed. A glance at an early list of supporters shows that literature and the arts were represented from the beginning: Emile Zola, Eden Philpotts, Arnold Bennett, George Meredith, H. G. Wells, Somerset Maugham, among the writers, Bjornson, the Norwegian dramatist, William Archer, the translator of Ibsen, Ernest Newman, the musical critic and biographer of Wagner. As for our late President, Bertrand Russell, his emotional life was not exactly inhibited by his devotion to mathematical logic. It was Russell who called a completely rational man "that inhuman monster". He must have been thinking of James Mill.

When I say that Rationalism is synonymous with a scientific outlook, I am not making the absurd suggestion that there is a single philosophical system to which all scientists and therefore all Rationalists must subscribe. Again, if you glance at the list of Honorary Associates of the RPA, you will see that some are agnostics, some atheists, others pragmatists or dialectical materialists or logical positivists. There are also representatives of different political parties — Liberal, Conservative, Socialist and Communist. What they have in common is a commitment to rational enquiry in matters of belief and an opposition to irrationalism in all its forms — to thinking with the blood, like

Hitler, through the solarplexus with D. H. Lawrence, through blind faith with Kierkegaard.

So Rationalists find their bond of unity in the search rather than in the answers. They are always ready to judge in accordance with the evidence and to follow an argument through, no matter how unpalatable the conclusions. This is the attitude of mind, the rational temper, which distinguishes Rationalism from those ideologies which require adherence to a set of unsupported dogmas. It was not invented by the RPA. Although it gave rise to scientific knowledge, a similar approach existed in the minds of a few gifted individuals long before the Scientific Age dawned. In the sixth century BC something which I can only call a mutation in human thought occurred in a few communities as far apart as Greece and China. Men (Confucius was one of them) began to ask questions about the world and the meaning of life, and instead of accepting what the priests had told them, they used their reason. They began to think for themselves.

Let me quote Max Weber:

In the sense of the absence of all metaphysics, and almost all residues of religious anchorage, Confucianism is Rationalist to such a far-going extent that it stands at the extreme boundary of what one might possibly call a religious ethic. At the same time Confucianism is more rationalist and sober, in the sense of the absence and the rejection of all non-utilitarian yardsticks, than any other ethical system, with the possible exception of Jeremy Bentham's.

And to quote an authority on ancient China, Professor H. G. Creel:

A great many men have been willing that people should govern themselves, but relatively few philosophers have been willing to trust men in general to think for themselves — unless, that is, they think along the line that the philosopher graciously points out for their own good. Confucius was not only willing that men should think for themselves; he insisted upon it. He was willing to teach them how to think, but the answers they must find for themselves. He frankly admitted that he himself did not know the truth, but only the way to look for it.

I can think of no better description of Rationalism, but if it seems far fetched to trace it an ancient China, there is no doubt that Confucianism influenced the philosophers of the Enlightenment and so indirectly fertilized the free-thought movement in the nineteenth century.

Since World War II the intellectual climate has undergone a complete change. As the process of secularisation gathered strength, the needs which organised Rationalism once satisfied were less pressing. Loss of interest in religion meant that there was no longer the same interest in irreligion. Rationalism seemed to be the victim of its success. It was at this stage that I joined the RPA as editor. I must confess that I felt at times that like little Britain we had lost an empire and not yet found a role.

Another problem was the virtual disappearance of the self-educated man — the public on which the RPA mainly relied in its beginning. Facilities for higher education are available today which did not exist until long after the RPA was formed. A number of publishers have now followed Penguin into the serious paperback market. Many paperbacks cost a pound or more — very different from the RPA sixpenny reprints, and indicative of the tremendous social change that has taken place.

No movement can hope to succeed that is not allied to the social forces of the time. When these change, you must either adjust to the new situation or perish. The RPA has shown considerable powers of adaptation.

When for some reason that is not clear to me, Rationalists and Free-thinkers were almost invariably referred to by their opponents and on the BBC as "Humanists", the RPA decided to change the title of its monthly journal from "The Literary Guide" — which was no longer an accurate description of the contents — to "The Humanist". When I retired, it was changed again to "The New Humanist". An even more significant move was to sponsor jointly with the Ethical Union a new organisation called the British Humanist Association. The partnership had to come to an end when the Ethical Union lost its charitable status — a fate which has now overtaken the RPA.

In my own view the problems created by the decline of religion are still with us, but they should now fall into second place in the RPA's area of concern. The first place should be occupied by the concrete problems created by the advance of science. The population explosion is the outcome of medicine's success in death control. The depletion of the world's resources and the pollution of the environment are consequences of the abuse of technology. Automation and computerization are responsible for a second Industrial Revolution. These are some of the urgent issues that face us in the second half of the twentieth century and which did not exist when the RPA was founded. By concentrating attention on the anxieties which trouble people today, young and old, I believe the RPA would display once more that power to adapt in a changing world which is necessary for survival.

ADDENDA

- (57) "My Father, Bertrand Russell," by Katharine Tait, is due to come out November 10th. "They have put a horrid picture of me on the back," says Kate, "but otherwise it looks all right." Harcourt Brace Jovanovich has sent out 800 review copies (which to our untutored ears sounds like a lot), and we can expect to be seeing reviews — and perhaps Kate herself on TV interviews — in the near future.
- (58) Publicity. The ERS name will get a free ride on Kate's book (57). It is mentioned on the back flap of the dust cover. This will place the ERS name before its largest audience to date.
- (59) Abstracts of program papers, the 3 that are to be read at the ERS session at APA on 12/28/75, are to be found in (66,67,68).
- (60) Interchange is a new feature of the Newsletter. We will print abstracts of papers (on ER) that are available on request, from their authors.
* Philosophers are invited to send abstracts, for possible future insertion in the Newsletter, to Dr. Edwin E. Hopkins, Chairman, Philosophers Committee, The Bertrand Russell Society, Inc., 352 S. Drew Street, Baltimore, Md. 21224. Here are 2 Interchange abstracts:
- (61) "Russellian Fiction and Russellian Philosophy." Russell's fiction has received little attention, particularly from philosophers. William Gass provides a philosophical means of viewing fiction, viz., the novel as a philosophical construction. Russell's fiction is found to be a curious blend of Russellian and non-Russellian philosophy. Russell's character development

and almost complete disregard for metaphor are criticized. Russell is shown failing to keep the reader imprisoned in the novel and wanting to say something about the "real-world." His fictional output is seen to mark a transitional period in his ethical philosophy. This is particularly evident in his later fictional works. In these works Russell is shown to be constructing a world in which ethical feeling and moral reasoning can be reconciled. It is claimed that it is in fiction that Russell fantasizes a rational foundation for ethics.

Thomas W. Simon, Dept. of Philosophy, U. of Florida, Gainesville, Fl. 32611

- (62) "Russell, McTaggart, and 'I!'" McTaggart borrowed one of his most crucial arguments — the argument through which he tries to show that there is immediate acquaintance with selfhood — from Russell. Russell, meanwhile, had abandoned the "borrowed" position but he returned to the questions involved a number of times and reviewed them at length in Human Knowledge, Its Scope and Limits. I argue that the original argument can be reconstructed so that it remains interesting, that Russell's later discussions introduce new issues whose implications are not fully explored, and that, when they have been restored, something remains which may serve McTaggart's position while not conflicting in important ways with Russell's basic aims in Human Knowledge.

Leslie Armour, Dept. of Philosophy, Cleveland State U., Cleveland, Oh. 44115

- (63) "Small is Beautiful: Economics As If People Mattered," by E. F. Schumacher (Harper & Row, paperback) — a new book that seems to be having considerable impact — is entirely in harmony with George Sessions' position on the environment (35), as the following quote indicates:

The arising of this error (the error of thinking that "the problem of production" has been solved), so egregious and so firmly rooted, is closely connected with the philosophical, not to say religious, changes during the last three or four centuries in man's attitude to nature. I should perhaps say: western man's attitude to nature, but since the whole world is now in a process of westernisation, the more generalised statement appears to be justified. Modern man does not experience himself as a part of nature but as an outside force destined to dominate and conquer it. He even talks of the battle with nature, forgetting that, if he won the battle, he would find himself on the losing side.

- (64) Russell-Trotsky dialog. We noticed this classified ad in "The New York Review of Books" of October 16, 1975:

WOULD WELCOME COLLABORATOR for projected Russell-Trotsky Dialogue on Revolution. Must know Russell or Trotsky or Russian or mathematical logic. Young, independent scholar from Pacific Northwest preferred (not essential) for personal get-together. Box 11202, Classified Dept., New York Review of Books, 250 West 57th Street, New York, N.Y. 10019

- (64.5) Index, Part 2: "My Father, Bertrand Russell" (57). Publicity (58). Abstracts (59). Interchange (60): Simon (61), Armour (62). "Small Is Beautiful" (63). Russell-Trotsky, ad (64). BRS/APA Program (65). Abstracts: Loux (66), Ulrich (67), Johnsen (68). Hiroshima Day Address (69). Annual Meeting Mailing Page (70).

(65)

Program
of
THE BERTRAND RUSSELL SOCIETY, INC.

at the December 1975 meeting
of the Eastern Division of
THE AMERICAN PHILOSOPHICAL ASSOCIATION

Time: December 28, 1975, 10 A.M. to 1 P.M. (Sunday)

Place: The Statler Hilton Hotel, New York City
(7th Avenue at 33rd Street)

I. THE IDENTITY OF INDISCERNIBLES AND RUSSELL'S LATER THEORY OF
SUBSTANCE. Michael J. Loux, University of Notre Dame

Commentator: Douglas Lackey, Baruch College, CUNY

II. WHAT IS RUSSELL'S THEORY OF DENOTING? William Ulrich, University
of California, Irvine

Commentator: Justin Lieber, Lehman College, CUNY

III. RUSSELL AND LATTER DAY INDUCTIVE THEORY. Bredo C. Johnsen
University of Houston

Commentator: Howard Kahane, Baruch College, CUNY

Chairman: Edwin E. Hopkins*

* * * * *

A fourth paper -- THE TRANSFORMATION OF INTENSIONAL FUNCTIONS TO EXTENSIONAL
FUNCTIONS AS IN *20 OF THE PRINCIPIA MATHEMATICA -- will not be read or
commented on at today's meeting. However, its author, Joseph Bevando,
Graduate Center, CUNY, is present and is available, in case those who wrote
and obtained a copy of it wish to discuss it with him.

*Not presently employed in philosophy; teaching mathematics

Abstracts of papers to be read at the BRS/APA meeting of 12/28/75:

- (66) Michael J. Loux, The Identity of Indiscernibles and Russell's Later Theory of Substance.
 In "On the Relations of Universals and Particulars," Russell contends that the "bundle" theory of substance is false. The argument presented there is that while the Identity of Indiscernibles is false, the "bundle" theory presupposes its truth. In Inquiry into Meaning and Truth, where Russell himself develops a "bundle" theory of substance, he attempts to answer the objection posed in the earlier work. After examining the reply of the later Russell, I argue that it is unsuccessful in meeting the early Russell's criticism of the "bundle" theory.
- (67) William Ulrich, What is Russell's Theory of Denoting?
 It is argued here that the usual understanding of the Theory of Descriptions, exemplified by David Kaplan's paper "What is Russell's Theory of Descriptions?" mistakenly takes the theory to imply that definite descriptions are not singular terms. The author defends the view that, according to Russell's formulation of the theory in "On Denoting," definite descriptions are singular terms, given the normal understanding of that concept, even though they are also held by Russell to be "incomplete" symbols." Further, it is argued that Russell was not interested solely in the semantical question of giving an account of the truth conditions of sentences containing definite descriptions, but was also interested in such epistemological questions as what are the "objects of belief" and what are beliefs "about." Russell's account of denoting was, in part, intended to answer such questions. The notion of denoting plays no part in Russell's later views, eg., in the Logical Atomism period, so the thesis defended here applies only to his early formulations of the theory, but it is argued that Russell's early concerns are of more contemporary interest than the purer version of the theory he later held. Some of the implications of the early view for issues of contemporary interest, such as the problem of "quantifying in," are sketched.
- (68) Bredo C. Johnsen, Russell and Latter Day Inductive Theory.
 It is the received view of Russell's Human Knowledge that it advances a postulational theory of the justification of induction. But there is far more afoot than this; in particular, Russell also held that the problem of induction is not to justify inductive inferences, but rather to define the notion of validity for induction. However, in spite of having clearly stated this problem, Russell never offers his (promised) solution. I formulate a solution in terms of concepts central to Russell's view of knowledge, and show how closely related this proposal is to certain views of Quine. The paper closes with an attempt to state sharply the real issue between Russell/Quine and Goodman on the theory of induction.

NUCLEAR POWER MEANS ATOMIC BOMBS AND RADIOACTIVE GARBAGE

J. B. Neilands, Professor of Biochemistry
University of California, Berkeley, CA 94720
and Chairperson, Committee on Science
Bertrand Russell Society

The proliferation of nuclear weapons is inextricably associated with the development and worldwide dissemination of nuclear electric generators. In addition, the latter will burden the earth with an inventory of radioactive wastes which will contaminate the planet in perpetuity.

The US should take the lead in renouncing and phasing out nuclear power. Instead, we should turn to the sun, a fusion reactor safely installed 93,000,000 miles away in space. Life originated in the presence of the sun and is dependent on this source of energy. Solar energy is thus the only way out of the energy crisis that can be guaranteed to be non-polluting. At the same time, the solar economy will promote peace by displacing the stuff of which nuclear bombs are made.

The six nuclear equipment exporting nations, US, Canada, Britain, France, USSR and West Germany, will soon be joined by Japan and Italy. France has been negotiating with South Korea, Pakistan and Argentina for the sale of nuclear fuel reprocessing plants. Discussions have been underway between West Germany and Brazil for the establishment of a complete nuclear facility in the latter country. We now have about 220 nuclear plants operational or on order in the US and there are approximately 275 power reactors planned in 26 countries. It has been estimated that in 20 years the fissionable material in foreign transit will suffice to make 20,000 bombs. In only five years the world will have accumulated 770,000 lbs. of plutonium and the annual production of this element will be running at 40,000 lbs.

We recall that India derived her bomb from a nuclear reactor acquired from Canada.

Plutonium is the preferred raw material for fabrication of nuclear weapons. It is also the most toxic inorganic substance known to man. The lethal dose of Pu-239 is of the order of a microgram, which is to say that there are potentially 5,000,000 mortal doses in a quantity equal to the weight of a 5¢ piece. It dissipates its radioactivity slowly and is only half decayed after 24,000 years. Even if containment is 99.99% effective, hundreds of thousands of additional cases of radiation induced diseases, such as cancer and leukemia, will result from the nuclear power industry.

The US government is aware of the problems of sabotage, terrorism, blackmail, and clandestine development of weapons associated with nuclear fission power plants and hopes to rely on inspection, accounting, monitoring, special seals, and so forth. These methods are doomed to failure. Virtually no attention has been paid to the chronic hazard presented by the ashes of the nuclear process.

In conclusion, nuclear power is seen as an unacceptable risk. It is an inherently intractable technology that cannot be made palatable by treaties and so-called safeguards. The only long range solution to the energy problem is to get on with the business of harnessing solar energy while coupling this to a program of stringent conservation of energy.

ANNUAL MEETING MAILING PAGE

Please mail this page if you plan to attend the Meeting in December 1975.

* * * * *

1) When do you expect to arrive at the Hotel Tudor?

(a) date _____
(b) hour _____

2) Have you any suggestions for the agenda?

3) If you wish to nominate candidates for director, please name them here:

Your name _____ date _____

Your address _____

Please return this to The Bertrand Russell Society, Inc., R.D. 1, Box 409, Coopersburg, Pa. 18036 — as soon as convenient.

NEWSLETTER #9
January 1976

- (1) The BRS will have a session at the psychologists' meeting (2). The Philosophers' Committee calls for papers, for December 1976 (15). The Neilands article, "Science and the Biosphere," is published (12,47). The index is at the end (50). An asterisk in the left column indicates a request or an offer to lend.
-

COMING EVENTS

- (2) BRS at the American Psychological Association. MARY ENGEL plans to set up a BRS session at this APA meeting in Washington, D.C., September 3-7, 1976. BRS psychologists who would like to be kept informed or who might possibly participate in the session should write Dr. Mary Engel, Apt. 12G, 4455 Douglas Avenue, Riverdale, N.Y. 10471.
-

REPORTS FROM OFFICERS

- (3) President Peter G. Cranford reports:

"During the second year of our existence we have roughly doubled our membership.

"A moment of truth, for the BRS, comes when a member's first year is up. Will he or she renew, or not? Has the BRS given him what he wanted, so that he now wants to renew membership? People join the BRS with all kinds of expectations -- for which we are not responsible. Some are bound to be disappointed; they do not renew. But the great majority do renew, and that is a source of intense satisfaction.

"We continue to attract highly intelligent liberals with a high degree of common sense. Many have considerable academic training. We are beginning, too, to become an international society in fact, and within the next two years the time will come about when we will feel ready to begin taking stands consonant with our purposes. We are now represented in Canada (our mecca), Denmark, West Germany, Nigeria, Colombia, Japan, and England. John Sutcliffe is actively working to found a BRS in Britain and his progress, spirit, and dedication give us reason to believe that his effort will not be a weak one.

"Although we continue to operate with limited funds and without a finance chairman (we are seeking one), our finances are adequate for our present needs and purposes. The existence of the Newsletter is assured. I am happy about this, since correspondence from the membership about this activity is almost completely laudatory and appreciative.

"I am no longer anxious about the survival and growth of the Society. It is a strong baby. But I am anxious about the fact that we do not have an even stronger degree of compossibility between the Society and its individual members. I may be premature in my anxiety since I strongly believe in large margins of safety, and our present compossibility via the Newsletter, friendly communications between members, and opportunities to serve, may be enough -- as it is for many organizations. But my subconscious tells me that this is not enough when the principles (to which we all seem to be committed) are of the highest magnitude. I solicit the membership for ideas in this connection. Without a higher degree of compossibility, fast growth is unlikely.

"I am not particularly concerned about fast growth at this time. What is needed is a very "hard-core" group of committed Russellites (perhaps Red Hackle-ites) who will give the Society the direction that Russell would approve of if he were alive. Perhaps this can best be done by expanding the Board of Directors to 24, with requirements of permanent commitment, attendance at Directors' meetings, heading a productive committee, and such other requirements as might be suggested by the members."

(4) Secretary Jack Pitt reports:

"I am preparing a revision of the by-laws, taking into account the many helpful comments and suggestions I have received, for presentation for action at the meeting in December(1975)."

(5) Treasurer Katharine Tait reports, as of November 15, 1975:

Balance on hand (August 1, 1975).....	1573.89	
Income: Pledges and contributions.....	386.99	
Dues (new and renewals).....	<u>549.00</u>	935.99
		<u>2509.88</u>
Expenditures: Information Committee.....	1024.04	
McMaster (42 subs).....	126.00	
Georgia corporation fee, 1976.....	<u>5.00</u>	1155.04
		<u>1155.04</u>
Balance on hand.....		1354.84

REPORTS FROM COMMITTEES

(6) Applied Philosophy Committee (Martin A. Garstens, Chairperson):

"I have become very interested in BR's views on ethics, and we will probably go through his book, "Human Society in Ethics and Politics," and his earlier essay on ethics. I have been reading widely in ethics and have been in touch with other groups deeply concerned with ethical problems, i.e., the Humanists and the Ethical Culture Society. We have a lot to

learn from them in practical matters, but the strength gained from presenting a central philosophy of the caliber of Russell's is considerable, I think. It provides a coherence which these groups perhaps lack."

Information Committee (Lee Eisler, Chairperson):

- (7) New Co-Chairperson, Membership Committee. "I am very glad to report that, in response to the memo of 11/10/75, CAROL MULL has offered to handle inquiries and enrollments, as Co-Chairperson of the Membership Committee. (The Membership Committee is a subdivision of the Information Committee.) Carol was formerly supervisor of trust accounting at a bank; inquiries and enrollments are now clearly in very competent (and willing) hands.
- (8) Advertising. "Our small classified ad will appear in the following publications, at about 2-month intervals throughout the year: APA MONITOR, ATLANTIC MONTHLY, BULLETIN OF THE ATOMIC SCIENTISTS, HARPER'S MAGAZINE, THE HUMANIST, MENSA, THE NEW REPUBLIC, THE PROGRESSIVE, with a view to achieving and maintaining, in 1976, a membership of 150.
"We will probably continue to operate at a deficit — a deficit made up by contributions from members — but the deficit should be considerably smaller than the 1974 deficit of \$1100 (excluding contributions.) I mention this financial item here, since it is the Information Committee that spends most of the BRS's money.
- (9) Back issues curtailed. "Until recently we had been supplying new members with all back issues of the Newsletter. This was desirable because it told new members everything that had happened to date.
"But as back issues multiplied, the cost of supplying them became excessive. The first 8 Newsletters — which total 154 pages, at about 5¢ per page — cost us about \$7.70; to mail them costs an additional \$1 (or more) postage. Furthermore, the number of back issues keeps increasing, and so does the cost of postage. We could not afford to continue to supply all back issues.
"This is what we are now doing: we supply back issues of the current (calendar) year. We offer a previous year's issues for \$5 (per year.) If a new member wishes merely to read — but not buy — previous years' issues, we will lend them, for \$1 (to defray postage.)
- (10) The next Newsletter, #10, would "ordinarily come out in April, but I am going to be out of the country from sometime in February to sometime in May, and there is just no way that I can get a Newsletter out in April or May. I'm not happy about postponing NL 10, because it will report on the "Annual Meeting and on the 2nd BRS session at APA, which, at this point in BRS history, are our 2 most important annual events. I will try to get NL 10 out before I leave; otherwise there will probably be a double issue in July."

(11) Philosophers' Committee (Edwin E. Hopkins, Chairperson):

BRS at APA. " I have virtually finished work on this year's meeting (December 28, 1975), and am beginning work on next year's. I have sent the announcement, calling for papers (for 1976) to Russell, Journal of Philosophy, Philosophy and Phenomenological Research, The Review of Metaphysics, the APA Bulletin, and the BRS Newsletter (see Item 15). All of these journals published our announcement last year.

"Our 1975 Program has been published in the APA Special Eastern Division Program and The Journal of Philosophy. It is first in the listing and can't be missed."

Also see Items 16 and 17, under the heading, PHILOSOPHERS' CORNER.

(12) Committee on Science (J.B. Neilands, Chairperson):

Joe Neiland's article "Science and the Biosphere," originally intended for "Organic Gardening" (NL5-5), has appeared instead in the same publisher's "Environment Action Bulletin," of November 29, 1975. "Rodale decided that this fitted better in their Bulletin, as I was not able to relate it to the culture of giant sunflowers. The Bulletin audience, although smaller, is more action-oriented than is that of 'Organic Gardening'."

The article is reproduced, Item 47.

ABOUT BERTRAND RUSSELL

(13) Re BR's mysticism: "The emphasis on BR's mysticism," writes GEORGE SESSION, "and its compatibility with rational scientific approaches will assume increasing importance, I should think. After writing my material (NL8-35), I stumbled across the closing chapters of Jager's 'The Development of Russell's Philosophy,' and he gives much the same analysis of Russell's religious views as I did, stressing Russell's paper, 'The Essence of Religion.' This section in Jager should be required reading for any Russellite who conceives BR as the arch-atheist and supreme no-nonsense rationalist."

(14) "Alley-cat" tossed back. T.S. Matthew's statement -- "Bertrand Russell had a first-rate mind, humane aspirations, and the sexual morals of an alley-cat," (NL8-31) -- does not sit well with KEN BLACKWELL, whose caustic response is: "T.S. Matthews has the scholarship of an alley-cat."

Ken goes on to say:

"If he had really wanted to get at the truth, he would have extended his researches to The Russell Archives to see if there was anything definite on the 'seduction of Vivienne Eliot' problem. He might also have read BR's letters to Lady Ottoline Morrell. (They're at Texas, but McMaster has copies.) Ronald W. Clark's Life of Bertrand Russell has the fullest discussion, but let me quote from a letter BR wrote to another writer on Eliot in 1968. He said: 'I never had any intimate sexual relations with Vivienne.' From all that I have seen, this seems to be true, though the key phrase of the statement invites philosophical analysis."

PHILOSOPHERS' CORNER

- (15) A call for papers, deadline June 1, 1976, to be presented before The Bertrand Russell Society, Inc., at the December 1976 meeting in Boston of the Eastern Division of the American Philosophical Association: papers may be on any aspect of Russell's philosophy. They should have a reading time of about half an hour, should be submitted in triplicate, typed, double-spaced; with an abstract of 150 words maximum. The author's name and address and the paper's title should be on a separate page. Please send papers to Edwin Hopkins, Chairman, Philosophers' Committee, The Bertrand Russell Society, Inc., 352 S. Drew Street, Baltimore, Md. 21224.
- (16) Russell Interchange, begun last issue as a continuing feature of the Newsletter, offers a service to authors who desire critical reactions to their papers on BR. We print abstracts of papers that are available on request from their authors. Abstracts should be sent to Edwin Hopkins, Chairman, Philosophers' Committee, The Bertrand Russell Society, Inc., 352 S. Drew Street, Baltimore, Md. 21224. One such abstract follows:
- (17) "A Name By Any Other Name Is Still A Name." Abstract:
 Recently, Saul Kripke has made use of the notion of possible worlds to try to handle the philosophical problem of naming. Kripke argues that his notion of rigid designator is preferable to Russell's logically proper name. I argue that Kripke is beset with the same major difficulties which faced Russell, and that Kripke, like Russell, is methodologically committed to a doctrine of acquaintance and ostension. I also argue that Kripke is committed to acquaintance with bare particulars and species, thus extending (unacceptably) Russell's doctrine of acquaintance. Rigid designators are simply names by another name.
- * Paper available from Dr. James F. Harris, Jr., Department of Philosophy, College of William and Mary, Williamsburg, Va. 23185.

SPECIAL REQUESTS

- (18) BR on women's rights. Our recent request for quotations that show BR as an early champion of women's rights (NL8-38) brought a quick response from KEN BLACKWELL. Ken reminded us of BR's essay, "The Status of Women," written about 1907 and published for the first time 66 years later, in the Summer 1973 issue of "Russell."
 As a result, we now have a double-page, BERTRAND RUSSELL ON THE SUBJECTION OF WOMEN — most of it stemming from Ken's suggestion — as part of our information package that is sent to people who inquire about the BRS. It is reproduced in Item 48. Also see Item 46.
- (19) BR on Marx: quotations wanted. We'd like to collect BR quotes on Marx.
 * If you know of any or come across any, please send them to the Newsletter (address on bottom of Page 1).

Can anyone supply the source of the following quote:

"Marx pretended that he wanted the happiness of the proletariat. What he really wanted was the unhappiness of the bourgeoisie — and it was because of the negative element, because of that hate element, that his philosophy produced disaster."

CURRENT PUBLIC ISSUES

(20)

Nuclear power. ANITA JOYCE LEVINE has sent us a short pamphlet, "Why 138 Communities Are Fighting Nuclear Power," issued by the Citizens Energy Council, National Committee To Stop Environmental Pollution, Allendale, N.J. 07401 and by Solar Energy Coalition of Texas, P.O. Box 28228, San Antonio, Tx. 78228. It states the case against nuclear power. Some quotes:

"I hope the safety of this country will never be made dependent upon almost superhuman engineering and operational qualities." Sir Alan Cottrell, Science Advisor to the British Cabinet.

"The reason we don't have solar power is that the oil companies don't own the sun." Ralph Nader.

"It's a hard way to boil water." Mike Gravel, U.S. Senator, (Alaska).

(21)

Senate Bill S.1, and House Bill H.R.3907, known as the "Criminal Justice Reform Act of 1975," seem to be based, as someone has said, on the proposition that Watergate never happened and never could. Under S.1, an otherwise illegal act by a government official could be immune to prosecution "if covered by an official grant of express permission or based on a written interpretation issued by the head of a government agency." On the other hand, public access to defense information is prohibited with penalties for violation ranging up to death. Even reporting cost overruns on a new weapon or racial trouble at an army base could be considered a felony unless a reporter learned about it from a government handout. Had S.1 been the law when the Pentagon Papers were published, Ellsberg and Russo — and executives of The New York Times, The Washington Post and Beacon Press — would have been jailed, according to the Unitarian-Universalist World News, of 11/1/75. S.1 contains many other infringements on civil liberties, and its sponsors include Senators McClelland, Hruska, Eastland, Fong, Griffin, Mansfield, Moss, Scott (Pa.), Taft and Tower. ANITA JOYCE LEVINE, who provided all this information, suggests you write your Senators and Representative to protest against this bill. She protested to Senator Birch Bayh, an early sponsor (who, incidentally, is not her senator), and was pleased to see that he dropped sponsorship because of public reaction. In case you're still hesitating: S.1 was drafted, in large part, under Nixon, by John Mitchell and Richard Kleindienst.

(22)

Nader. We reproduce a page from Ralph Nader's Public Citizen literature, telling where to write for materials in 7 areas of citizen-action: Item 49.

- (23) Warning. We have received a pamphlet, "Warning to you! From God Almighty!" sent by the Christian Mission Society (non-sectarian) of Phoenix.
-

OPINIONS

- (24) More on mysticism. JOHN SUTCLIFFE disagrees with PETER CRANFORD'S views on mysticism (NL7-9):

"To accept Dr. Cranford's mystical view of Russell would be an act of self-deception, for it would be to admit premisses which give way to consequences other than those of Russell's 'ideal.' His ambition is an admirable one, which may, if adopted, admit more who would otherwise abhor the Russellian point of view; but by doing so, would we be true to the legacy of Russell? I think not."

- * On request, we will lend John's 3-page paper that contains the above quote. It also states his views on criticisms of COH (Conquest of Happiness) that have appeared in the Newsletter (NL3-16).
-

LOCAL CHAPTERS

- (25) Fresno. JACK PITT reports, from California State University, that "the BRS-Philosophy Club is alive and well, yet we need to improve ways of reaching non-academics."
- (26) NYC. DON JACKANICZ and DAN MC DONALD, both at NYU, made serious efforts to start a NYC chapter. They sent several letters to BRS members living in the area, they put up notices on NYU bulletin boards, etc. But they underestimated the amount of time it takes to get a chapter going, time that — as graduate students working for advanced degrees — they could not spare for activities outside their studies. Consequently, a NYC chapter is out for the present. We thank them very much for their efforts in behalf of the BRS. (Don, incidentally, may write his doctoral thesis on BR. His field is modern European history.)
Does anyone else want to get things going in NYC?
-

BRS AUTHORS

- (27) "My Father, Bertrand Russell," by KATHARINE TAIT (Harcourt Brace Jovanovich, 1975, \$9.95). MARTIN GARSTENS considers it "a very important contribution towards understanding BR, that should be read by everyone. It is a poignant description of the problems which arise in attempting to attain BR's main goal: 'reason in society and in our lives'."

- (28) "Russell on Religion," by JACK PITT, in "International Journal for Philosophy of Religion" (Vol.VI, No.1, Spring 1975, Martinus Nijhoff, The Hague), 40. A highly interesting 14-page essay, examining the complexity of BR's attitude toward religion.

* We will lend it on request.

NEW MEMBERS

- (29) We are happy to welcome these new members:

Dr. Jean Anderson/93600 West Fork Indian Creek Road/Swisshome, Or. 97480
Frank Arceneaux, Jr./ Rt. 1 Box 75-R/Carencro, La. 70520
Anne Ayers/326 Lafayette Road/Yorktown, Va. 23690
Rebert Cranfill/4619 S.Willow Street/ Seattle, Wa. 98118
Alberto Donadio/Ap. Aereo 16914/Bogota, Colombia

Dominguez Hills, Ca. 90747

MEMBERSHIP RENEWALS

- (31) Renewal procedure works this way: suppose John Doe first became a member of the BRS on April 14, 1975. Early in the month preceding his anniversary month (ie, early in March 1976), we will mail a renewal request. We will like it very much if John responds by sending his next year's dues almost immediately. Many members do; but not all. There is a 2-month grace period. If dues are not paid by the end of June(that is, before July 1st),we classify John Doe as an ex-member.

The 2-month grace period is experimental. We may modify or eliminate it in future. If most members who renew do so without using the grace period, we will probably eliminate it.

MEMBERSHIP ANALYSIS AND STATISTICS

- (32) Student membership:30%. We place a high value on the 30% of our members who are students, for several reasons: students are usually more open to new ideas than the rest of us; every new student member is a potential spreader of BR's views for many years to come; and student members represent the future -- the BRS will someday be in their hands.

Student memberships, at \$5 per year, do not half cover the cost of the mailings we send to members. Nevertheless, we think it's good policy to get as many student members as we can. It's an investment in the future.

- (33) Current membership total: as of 12/1/75, we had 140 members (135 paid-up + 5 in grace-period limbo) and 19 ex-members.
-

BULLETIN BOARD

- (34) Job wanted.RON RYBNIKAR has received his B.A., and asks whether "anyone knows of a Social Studies(secondary level) teaching position. Anywhere." His address: 48 Sunny Valley Road,Apt. S, New Milford, Ct. 06776.

- (35) Going to Europe? Any BRS member going to Europe should give consideration to paying a visit to JOHN SUTCLIFFE. John is in process of setting up an English BRS (or an English chapter of the BRS, we're not sure which). Our only contacts with him to date have been by mail, and face-to-face meetings would no doubt be enjoyable and fruitful. His address: 9,Naseby Avenue, Higher Blackley,Manchester M9 2JJ, England. If you think you may visit John, please let Peter Cranford know. (Dr. Peter G. Cranford, 2108½ Walton Way, Augusta, Ga. 30904.)
-

SPECIAL INTERESTS

- (36) Freethought catalog. "The American Rationalist, A Bi-Monthly Freethought Magazine" -- in which we originally saw the article, "75 Years of Rationalism" (NL8-56) -- offers to send an 8-page catalog of freethought literature on request. Write P.O. Box 994, St. Louis, Mo. 63144.
*
-

QUESTIONS & ANSWERS

- (37) Mystery. JIM WILLIAMS asks: "What detective/mystery authors/books did BR like best?" Please send answers to the Newsletter.
- (38) Intellectual history. RON RYBNIKAR writes: "The PBS Programs, "Explorations in Shaw" and "Shoulder to Shoulder", coupled with BR's autobiographical writings, give the impression that there was a strong intellectual community whose members were personally as well as professionally very close. I'd appreciate any recommendations of books or articles dealing with the intellectual history of England, 1880-1930. In particular, I am interested in BR's relationship, if any, with the Fabian Society (or other socialist movements), the anti-war movement, and the women's suffrage movement." Please send replies to the Newsletter.
-

RECOMMENDED READING

- (39) "Bertrand Russell, An Introduction," by Brian Carr (George Allen & Unwin, London. 1975. 1.95 English pounds) JOHN SUTCLIFFE writes as follows: "It contains a selection of essays covering a broad range of BR's work. It has a well-written introduction, and each section has a useful set of remarks outlining BR's ideas on a given subject. At the end of each section, there is a list of recommended further reading. It is a worthy book, and deserves to be read. My only criticism is that the price is a little much for a paperback of less than 200 pages."
On the strength of John's recommendation, we ordered it from Parker & Son, 27 Broad Street, Oxford OX2 6AQ, England. The price had risen to 3.65 pounds + postage, which comes to \$8.11 total. It is a hardcover book, covered in paper (not cloth).
- (40) "What Is An Agnostic?", an essay by BR, is recommended by BILL YOUNG. It is included in "Religions in America." (Simon & Schuster, New York. 1963)
- (41) "The Tamarisk Tree," by Dora Black Russell. (Putnam, New York. 1975. \$9.95). She is BR's second wife, and Kate Tait's mother. (See NL8-21). Two BRS members comment on it:
DON JCAKANICZ: "Delightful!"
PETER CRANFORD: "If BR can survive this book, he can survive anything."

It does one good thing: it gets the worst out into the open, and under circumstances that may make of BR a posthumous martyr — attacked when he cannot defend himself. Dora does make the record more complete, and she thereby exposes her own weaknesses rather clearly."

Query: Did these two read the same book?

(42)

"Modern English Philosophy," by Brian Magee. (St. Martin's Press, New York. 1971) It is an edited transcript of Magee's BBC interviews with British philosophers. RON RYBNIKAR: "There are many varied and interesting references to BR's work. This is my amateur opinion; my own field is educational anthropology." LEE EISLER: "This book is easy reading for non-philosophers, since it consists of spoken language rather than written language. It puts a lot of things into perspective. It is being remaindered at the Barnes & Noble Annex, NYC, for \$1. I don't know if they'll sell it by mail for \$1 plus handling. Here's the address, if you want to try: Barnes & Noble Annex, 5th Avenue at 18th Street, New York, N.Y. 10011.

FINANCES

(43)

Tax deduction reminder. Certain expenditures made by a member may be deductible items for federal income tax purposes. These are of 2 kinds:

- (1) If you spend money on BRS business, it is deductible. Examples: a long distance phone call on BRS business, buying BRS stationery, stamps.
- (2) If you attend a BRS meeting, your travel, food, and lodging are deductible, provided you are in one of the 2 groups mentioned in NL8-8.

Note: If you take any tax deductions, you must also report it to the BRS Treasurer. The BRS is required to report it as income — even though the BRS pays no income tax — when income exceeds \$5000 per year.

(44)

Contributions reminder. Our dues do not cover our operating costs. We depend on contributions for our survival. Please make a contribution when you find you can spare some money — a lot or a little; it all helps.

(45)

Contributions. We thank the following members for their contributions, received since the last Newsletter: ALLENDORF, NEILANDS, REINHARDT.

ADDENDA

(46)

DONG-IN BAE supplied 6 excellent BR quotes on the subjection of women, from "Why I Am Not A Christian", "Principles of Social Reconstruction", "Fact and Fiction", "Unpopular Essays", "The Philosophy of BR", "Portraits from Memory". We were not able to use them in our Information Package, for lack of space, but we are glad to have them and will use them when the opportunity arises.

(47) Science and the Biosphere: Coexistence or Catastrophe?

A biochemist calls for the scientific community to assess its portion of the blame for the environmental mess we've made of things and suggests ways it can begin to make amends.

*J.B. Neilands, Professor of Biochemistry
University of California, Berkeley,
and Chairperson, Committee on Science,
Bertrand Russell Society*

Twenty-three years ago, when I first began teaching biochemistry on the Berkeley campus of the University of California, there was no thought but that science was an unalloyed blessing to humankind. We all believed, with Francis Bacon, that scientific research would work for the "merit and emolument of man," and we were unabashed fans of the technological fix. But in less than a quarter of a century the research scientist has come face to face with this stark reality: Unless technology can be tamed, the time left for the human species on this planet may be measured in decades.

First, we should acknowledge the genuine triumphs of science. Medical research has done much to alleviate human suffering and has practically eliminated the major infectious diseases in our society, save for the common cold. Science has enabled rapid communication and travel over vast distances. It has allowed us to discover basic facts about the physical and natural worlds we live in. Yet all of this seems now to have been a Faustian bargain when measured against the potentially destructive power inherent in a runaway technology. And much of what we call progress has been achieved at enormous cost in resources. It has also been specist in that it afforded short term benefits to the human race at the expense of other life forms.

The behavior of all substances, animate or inanimate, is governed by the immutable laws of thermodynamics. These laws are more durable than anything cast in concrete or written in stone. They are permanent and inviolate. They tell us that energy can be neither created nor destroyed and that a system, plus its surroundings, proceeds inexorably to a condition of increasing disorder. The failure of the human race—the so-called intelligent species—to heed these basic laws of thermodynamics lies at the crux of the environmental and survival crisis.

What are the major factors tending to destabilize

the biosphere and thus possibly terminate life on this planet? Forecasts in this field are not apt to be highly accurate since we often simply cannot predict the direction and source of trouble.

Granted that our technological way of life tends to undermine the stability of the biosphere, what alternatives can be suggested?

Since science is the mother of technology, it has sometimes been suggested that all scientific research should stop. However, this would be both counter-productive and undesirable.

Research scientists are motivated by curiosity and their labor corresponds to the intellectual and creative endeavor of the artists and writers. So, despite whatever obstacles might be thrown in the way, some level of scientific research will remain and will continue to offer its *potential* enhancement of the quality of life.

Indeed, the knowledge already gleaned by scientific research indicates the road that *must* be traveled to reach the steady-state biosphere. In short, we must "go lean," "live lightly," recycle, study nature, turn to the sun as the only truly "organic" source of energy, and terminate the unconscionable waste of both material and intellectual resources on militarism. Individuals should endeavor to become self-sufficient in regard to energy and food. The continued dependence on agribusiness means the plunder of soil, water, fossil fuels, and the exploitation of farm workers. The individual can live more ecologically by using solar heaters, by installing insulation, by recycling, by generating methane for cooking, and by replacing the private auto by the foot, the bicycle, or the public transport system. Fission power reactors should be abandoned as an inherently intractable technology and as for fusion power we already have it—safely installed 93,000,000 miles away in the sun. Industry must be induced to use enzymes and an organic technology in general. For example, the iron-containing nitrogenase enzyme in soil bacteria fixes N₂ efficiently at 50° F and

(Our thanks to our friends at the Bucks County Free Library, James A. Michener Branch, who obtained this copy of the Environment Action Bulletin for us. The Bulletin has a circulation of about 15,000, according to the N. W. Ayer Directory.)

at atmospheric pressure while the commercial process for the synthesis of ammonia, using an inorganic iron catalyst, runs at 800° F and several hundred atmospheres of pressure!

“All institutions receiving federal funds for basic research must be required to set up a unit committed to science policy studies and offer courses in the social responsibility of the scientist.”

All growth-oriented economies can be discarded as viable means for political organization of societies. In my travels in the Third World, from North Vietnam to Peru, I have not yet found a government sufficiently attuned to the environmental imperative.

Society has the power, through the manipulation of the purse, to regulate the scientific enterprise. Basic research in the typical major American university is underwritten by grants from the National Science Foundation or from some other division of the federal government, such as the Departments of Health, Education and Welfare or Defense. We should phase out all campus Defense contracts and divert these presently tainted dollars to the hard-pressed budgets of agencies sponsoring research into basic human needs, the environment and the various new technologies which will have a low impact on the life support system. At \$10.6 billion, the proposed expenditure by the Pentagon for research and development is exactly half of the total federal budget in this category for fiscal 1976!

Recipients of grants, the principal investigators, should be required to make a showing, and to have compiled a demonstrated record of performance, in the broad area of social responsibility in science. Principal investigators using public funds for the support of projects in basic scientific research should be required to make a full disclosure of all personal sources of income. Thus, the federal income tax statements of

“Soil bacteria fix nitrogen efficiently at 50° F and at atmospheric pressure while the commercial process for the synthesis of ammonia . . . runs at 800° F and several hundred atmospheres of pressure.”

principal investigators might be kept on public file at a central location on campus. No direct theft of money under the present system is implied—indeed, the accounting procedures of the government make this virtually impossible. I am thinking of more subtle forms of fraud. For example, how many academics have had their public service functions undermined by lucrative consultantships with industry and the Pentagon?

All institutions receiving federal funds for basic research must be required to set up a unit committed to science policy studies and, where appropriate, to maintain a recycling program. Academic institutions with substantial research activities would be obliged to offer courses of instruction in interdisciplinary studies and in the social responsibility of the scientist.

The basic thrust of these ideas is to make the research scientist aware of the environmental crisis and its origin. Ultimately, it will be the duty of Congress, responding to popular demand, to work out the mechanical details of this or some other affirmative action program on behalf of the biosphere.

Meanwhile, as the research scientists put their own houses in order, what can the average citizen do to negate the most destructive features of the technological society?

Clearly, we must develop a healthy skepticism for the maxim that “*science = progress.*” We can go on from there to inquire how we can best make our own talents and resources available in the contest for the biosphere. It is my contention that we are all in a position to make significant contributions at home, at the workplace, or at both. In my own case I have incorporated a large element of environmentalism in the teaching of biochemistry, including the initiation of a special course titled, “Biochemistry and Society.” Based on fundamental knowledge gleaned from years of study of microbial iron metabolism, I have organized a research project designed for the treatment of certain types of anemia. During the years of the Vietnam war our small committee of scientists sponsored lectures and films on defoliation at dozens of meetings of professional scientific societies.

Finally, we should cultivate a spirit of optimism. Some fifteen years ago the giant Pacific Gas & Electric Company decided to build a nuclear power plant at Bodega Bay on the California coast 50 miles north of San Francisco. A handful of ordinary citizens defeated the combined might of the PG&E, the AEC and the various agencies of the state government. The struggle to preserve the biosphere is merely a replay, on a grand scale, of the battle of Bodega Bay and of countless similar engagements for the protection of ourselves and those who will inherit the earth.

I am indebted to the many colleagues who reviewed and commented upon a preprint of this article.

“The failure of the human race—the so-called intelligent species—to heed the basic laws of thermodynamics lies at the crux of the environmental and survival crisis.”

(48)

BERTRAND RUSSELL ON THE SUBJECTION OF WOMEN

Russell was an early champion of women's rights. So was his mother, who made speeches for votes for women in the 1860s. Russell himself stood for Parliament in 1907 on a women's suffrage platform. His opponent ridiculed the idea with a campaign poster that read, "No Thanks, My Dear, you mind the baby and leave POLITICS to me," and won. BR was passionate in his conviction that women must have complete equality in all areas, believing it essential to good relationships between men and women that bring out the best in both sexes.

"John Stuart Mills' 'Subjection of Women' is a very persuasive and well-reasoned book... My father and mother were disciples of his, and my mother used to make speeches in favor of votes for women in the sixties. So ardent was her feminism that she caused me to be brought into the world by the first woman doctor, Dr. Garrett Anderson, who was at that time not allowed to be a qualified medical practitioner but was only a certified midwife." Marriage and Morals (New York: Bantam Books, 1959), 53. (First published in 1929.)

"It was generally held by respectable women when I was young that sexual intercourse was displeasing to the great majority of women, and was only endured within marriage from a sense of duty; holding this view, they were not unwilling to risk a greater degree of freedom for their daughters than had seemed wise in more realistic ages. The results have perhaps been somewhat different from what was anticipated..." ibid. 56.

"If the old morality is to be reestablished, certain things are essential: some of them are already done, but experience shows that these alone are not effective. The first essential is that the education of girls should be such as to make them stupid and superstitious and ignorant; this requisite is already fulfilled in schools over which the churches have any control. The next requisite is a very severe censorship upon all books giving information on sex subjects; this condition is also coming to be fulfilled in England and America, since the censorship, without change in the law, is being tightened up by the increasing zeal of the police. These conditions, since they already exist, are clearly insufficient. The only thing that will suffice is to remove from young women all opportunity of being alone with men: girls must be forbidden to earn their living by work outside the home; they must never be allowed an outing unless accompanied by their mother or an aunt...It must be illegal for an unmarried woman under fifty to possess a motor-car, and perhaps it would be wise to subject all unmarried women once a month to medical examination by police doctors, and to send to a penitentiary all such as were found to be not virgins. The use of contraceptives must, of course, be eradicated, and it must be illegal in conversation with an unmarried woman to throw doubt upon the dogma of eternal damnation. These measures, if carried out for a hundred years or more, may perhaps do something to stem the rising tide of immorality. I think, however, to avoid the risk of certain abuses, it would be necessary that all policemen and all medical men should be castrated." ibid. 61.

"Most people's sex-life, at present, is more or less unsatisfactory. This is partly due to bad education, partly to persecution by the authorities and Mrs. Grundy. A generation of women brought up without irrational sex fears would soon make an end of this. Fear has been thought the only way to make women 'virtuous', and they have been deliberately taught to be cowards, both physically and mentally. Women in whom love is cramped encourage brutality and hypocrisy in their husbands, and distort the instincts of their children. One generation of fearless women could transform the world, by bringing into it a generation of fearless children, not contorted into unnatural shapes, but straight and candid, generous, affectionate and free." Education and The Good Life (New York: Boni & Liveright, 1926), 82.

"The most obvious example of power-morality is the inculcation of obedience. It is (or rather was) the duty of children to submit to parents, wives to husbands, servants to masters, subjects to princes, and (in religious matters) laymen to priests..." Power (London: Allen & Unwin, 1938), 239. (Available as a Norton paperback.)

"...the subjection of women is much more complete at a certain level of civilization than it is among savages. And the subjection is always reinforced by morality. A man, says St. Paul, 'is the image and glory of God: but the woman is the glory of man. For the man is not of the woman; but the woman of the man. Neither was the man created for the woman; but the woman for the man.' (I Corinthians xi.7-9). It follows that wives ought to obey their husbands, and that unfaithfulness is a worse sin in a wife than in a husband. Christianity, it is true, holds, in theory, that adultery is equally sinful in either sex, since it is a sin against God. But this view has not prevailed in practice... Adultery with a married woman was wicked, because it was an offense against her husband; but female slaves and war-captives were the legitimate property of their master, and no blame attached to intercourse with them. This view was held by pious Christian slave-owners, though not by their wives, even in nineteenth century America.

"The basis of the difference between morality for men and morality for women was obviously the superior power of men. Originally the superiority was only physical, but from this basis it gradually extended to economics, politics, and religion. The great advantage of morality over the police appears very clearly in this case, for women, until quite recently, genuinely believed the moral precepts which embodied male domination, and therefore required much less compulsion than would otherwise have been necessary." ibid. 240.

"The argument in favor of equality between men and women is merely an application of the general argument in favor of liberty." The Status of Women, c. 1907 (published in Russell: The Journal of The Bertrand Russell Archives, 14: Summer 1974,)3.

"...liberty becomes increasingly important as the relation concerned is more intimate;...therefore it is more important in the family than in the state, and most important of all in the relations of men and women. The more two people have to do with each other, the more desirable it becomes that they should not prey upon each other's spontaneity, nor impair each other's self-respect and self-reliance... Very few have the self-control required in order to leave liberty to those whose possible mistakes are greatly feared." ibid. 5.

"...the straightforward self-reliant woman...I imagine is to retain the sympathy and kindness which belong with the maternal instinct, while everything else is to be done by education and way of life, to cure the indirectness which comes of the instinct for being loved rather than for loving. And when the world contains women of this type, the companionship of men and women will become something which at present exists only in very rare cases, where on both sides good ends are desired, and reason takes the place of the desire to have one's own way. At present, men and women seldom have any real companionship or any real understanding of each other's best: brought together by a temporary attraction, they remain strangers, and as a rule, hamper each other's development. In all this there is no necessity; it is due mainly to the fact that subordination rather than liberty is expected, and that women's follies and men's vices are pleasing to the sense of superiority of husbands or wives, as the case may be. To teach men and women to love equality and liberty is the real beginning of all reform in personal relations; and until this is done, people will continue to degrade and depress those with whom their lives are passed." ibid. 12.

(49)

CITIZEN ACTION MATERIALS AVAILABLE FREE ON REQUEST

1. Public Citizen's Tax Reform Research Group will send a sample copy of their monthly newspaper, "People and Taxes." Write to Public Citizen's Tax Reform Research Group, P.O. Box 19404, Washington, D.C. 20036.
2. For materials on nuclear power plant hazards, write to Professor Henry Kendall, Department of Physics, Massachusetts Institute of Technology, Cambridge, MA 02139.
3. For information to assist you in compiling a directory of physicians in your area, and a manual to help you decrease harmful occupational noise in the workplace, write to Dr. Sidney Wolfe, Public Citizen's Health Research Group, P.O. Box 19404, Washington, D.C. 20036.
4. How does a daily newspaper inform its readers about nuclear power? Write to S. R. Cook, P.O. Box 3003, Springfield, MA 01108, for a compilation of the Springfield Union's nuclear power series (up to three copies).
5. For materials on how to study your electric utility company, write to the Georgia Power Project, P.O. Box 1856, Atlanta, GA 30301. Please enclose a self-addressed, stamped envelope.
6. Action for Children's TV, a fast-growing citizens' and parents' group, will send you information on the present state of children's TV programming and advertising, and what can be done to improve the situation. Write to ACTV, 45 Austin Street, Newtonville, MA 02160.
7. Most citizens get the majority of the news about their members of Congress from their members of Congress. Only 27% of the 1,806 U.S. daily newspapers have their own Washington news bureau. The other 73% rely primarily on the national legislators' often self-serving press releases for "news" about them. To find out what can be done to improve press coverage of your representatives in Washington, write to Capitol Hill News Service, National Press Building, Washington, D.C. 20004.

from Ralph Nader, Public Citizen, 1346 Connecticut Avenue, N.W., Washington, D.C. 20036

NEWSLETTER #10

April 1976

- (1) The 2nd Annual Meeting(2-15). Peter Cranford is now Chairman of the Board (8), and head of the Finance Committee(37). Bob Davis is President(9). The BRS now has 15 Directors(6), a Library(10), an Awards Committee(13) and higher dues(12). The next Annual Meeting will be in California(11). The BRS draws a big crowd at APA(25). This is a big year for books on BR(35). An asterisk in the left column indicates a request or an offer to lend.
-

THE 2ND ANNUAL MEETING

- (2) The 2nd Annual BRS Meeting, at the Hotel Tudor, NYC, December 26-28, 1975, marked the end (symbolically if not literally) of the BRS's 2nd year, and the start of its 3rd.

The Meeting began (Friday evening) with a movie of an interview with BR titled, "What is Philosophy?" Delightful. A transcript of this interview appears as Chapter 1 of "Bertrand Russell Speaks His Mind" (NL7-12). The sound portion is on Caedmon LP, TC 1149 (listed in the "Schwann 2" catalog, Fall-Winter 1975-76.)

(We're indebted to KEN BLACKWELL — we're always being indebted to him for something or other — for supplying the film. We hadn't been able to borrow or rent one for the Meeting; Ken came to the rescue.)

We then heard reports from officers and committee chairpersons. More on this below: Items 14, 15.

We spent all morning (Saturday) hammering out details of the bylaws, building on the solid foundation JACK PITT had provided in what he called a "rough draft." Discussing and deciding on bylaws is not terribly interesting (except to specialists) — some members were understandably bored by it — but bylaws are absolutely essential to running a corporation in an orderly (and legal) way, and we can now take satisfaction in the fact that the job is behind us and will not have to be done again. Jack is now writing up the final version, incorporating what was decided on at the Meeting. All members will receive a copy.

Much other business was transacted during the afternoon, including the election of directors and the appointment of officers. (Items 6-13)

We then moved to Peter Cranford's suite for the Red Hackle Hour. The term, "Red Hackle", in this instance, we learned (with some disappointment), has nothing to do with strutting roosters nor with raising anybody's hackles. A red hackle is a red feather. You can see one on the guardsman's hat pictured on the Red Hackle label. PETER CRANFORD supplied the Red Hackle; we forget who supplied the explanation. People enjoyed themselves.

We then ate dinner (officially called a "banquet"), and stayed on and on and on, talking.

Sunday morning the BRS put on its session at the APA Meeting. It drew a great crowd, but few BRS members. See ED HOPKINS' report (Item 25).

3) Attendance.We had expected at least twice as many people as last year's 16, for we now have twice as many members, and this year the cost of attending the Meeting is tax-deductible. We were disappointed. A total of 22 attended one or more of the sessions during the 3 days.

And 22 is an inflated figure. 2 of the 22 attended only the Sunday morning APA session, which is not normally part of a BRS Annual Meeting. One member attended only the banquet. Few members were there Friday evening.

4) Saturday, best day.We have now learned that more members attend on Saturday than on Friday or Sunday. Therefore at the next Annual Meeting, most of the important business will be scheduled for Saturday, including -- especially -- reports of officers and committee chairpersons on what has happened during the past year and what is contemplated for the coming year. The Friday evening session will be a directors' meeting, at which, among other things, the officers for the next year will be appointed.

5) Members present. Here are the 22 who attended:ARKIN, CLIFFORD, CRANFORD, DAVIS,EISLER, ENGEL,FRANKS, GARSTENS, HOPKINS, JACKANICZ, LACKEY, LEFKOWITCH, MANESSE, MCDONALD, MCKEOWN, NOBLE, PITT, REINHARDT, RICHARDS, SLEZAK, TAIT, WEINER.

* * * * *

The following business was conducted at the Saturday session:

6) New Directors. The members present elected Directors, for 3-, 2-, and 1-year terms: PETER CRANFORD, BOB DAVIS, LEE EISLER, MARTIN GARSTENS, and GARY SLEZAK, for 3 years;ED HOPKINS, DON JACKANICZ, JIM MCKEOWN, JACK PITT, and KATE TAIT, for 2 years; KEN BLACKWELL, LESTER DENONN, DAN MCDONALD, JOE NEILANDS, and STEVE REINHARDT for 1 year.

Note the influx of new, young blood, including several people in their 20s.

7) Method of electing future directors.It would be possible to have directors elected by the members who are present at Annual Meetings. But since relatively few members attend Meetings -- currently about 1 out of 7 -- it will be more democratic if all members have a voice in the election of directors, through the use of mail ballots.

There will be 15 Directors in all. 5 will be elected by mail each year, for 3-year terms.

Each year the Elections Committee will draw up a list of at least 5 candidates, to fill the 5 yearly openings. The list will include names chosen by the Elections Committee; it will also include names submitted by other BRS members.Any member may submit (to the Elections Committee) any other member's name as a candidate, stating qualifications.

The list of names will be sent to all members, on a mail ballot. Each member will check 5 names. The 5 candidates receiving the most votes will become Directors, for 3-year terms. In case of a tie, the Elections Committee will cast the deciding vote.

The complete yearly cycle of electing Directors consists of 3 parts, in 3 successive issues of the Newsletter, one part per issue:

. Part 1 is a notice in the Newsletter, asking members who wish to,

to submit names of candidates for director, stating qualifications.
. Part 2 is the mail ballot, listing the candidates.
. Part 3 is the result of the vote, as tabulated by the Elections Committee.

We are inaugurating the cycle with this issue. Part 1 is Item 39. Part 2 will be in N111, Part 3 in N112.

- (8) Chairman of the Board, a new office, was created. Appropriately, PETER CRANFORD, the person who started the BRS, was appointed to be the first Chairman.
- (9) New Officers. The Directors appointed the following to one-year terms of office: President, BOB DAVIS; Vice-President, GARY SLEZAK; Secretary, JACK PITT; Treasurer, STEVE REINHARDT.
- (10) The BRS Library was established. It will accumulate LPs, tapes and films — also books, articles, magazines, photos, etc. — by or about BR, to lend to members, to local chapters, and to responsible non-member organizations.
Some of these materials are out-of-print or expensive or both, and the BRS Library will help make them available where they otherwise might not be.
When appropriate, the Library will offer materials to the Archives.
DON JACKANICZ is Library Committee Chairperson, GARY SLEZAK Co-Chairperson.
The Library's first acquisition is the Coronet Film, "What is Philosophy?" the same as the film that was shown at the Meeting. It was donated by PETER CRANFORD. The film is available from Dan Jackanicz, 53 Washington Square South, New York, N.Y. 10012, for the cost of postage and insurance, plus a \$3 charge which will go towards the purchase of other materials for the Library.
- * Please send spare or duplicate books or other materials on BR to the Library (c/o Don). If you have LPs or tapes that you would be willing to lend to the Library for a short time, so that tape copies can be made, please let Don know.
- (11) Next Annual Meeting, in California: JACK PITT will confer with JOE NEILANDS to see whether it might be held at UC Berkeley. BOB DAVIS will also check on the possibility of meeting in San Francisco or L.A.
- (12) Higher dues. A new dues schedule was approved, which will move the BRS slightly closer to being self-supporting (very slightly): regular member, \$15; husband-and-wife, \$20; student, \$5 (unchanged). Foreign, except Canada, add \$5.
- (13) The Awards Committee was established, to make an annual award to an outstanding individual whose actions have furthered some BR purpose or exemplify some quality of character that distinguished BR. For details on how this Committee will function, see Item 41. It has no chairperson, and needs one. Anyone interested should get in touch with Peter Cranford (Dr. P.G. Cranford, 2108½ Walton Way, Augusta, Ga. 30904. Phone: (404) 736-3514.)
- *

- (14) Officers report. Outgoing President PETER CRANFORD, outgoing Treasurer KATE TAIT, and Secretary JACK PITT reported on their recent activities, which were substantially those reported in the last Newsletter (NL9-3,4,5).
Outgoing Vice-President BOB DAVIS didn't make the usual kind of report. He had made up the Meeting's agenda. He chaired all the sessions. And, in effect, he gave a whole series of reports, as he put various items of BRS business into context, for the benefit of the members present. (Furthermore, he kept things moving and on schedule, and did it all with ease and grace. We salute him!)
- (15) Committee reports:
. Applied Philosophy Chairperson MARTIN GARSTENS reported on his current interest in ethics, in line with what he had previously reported in NL9-6.
. Applied Philosophy Committee, Chicago Chapter Chairperson GARY SLEZAK reported on his viable local BRS chapter. It meets once a month, to discuss ER's writings. Books are assigned, to be read and reported on. And, we gather, everyone does the work that's assigned.
. Information and Membership Committee Chairperson LEE EISLER described the aims and functions of this Committee (for details, see Items 42,43), reported that we had 145 active members (as of 12/27/75), and that more than 70% of the members renew membership after their initial year. He asked members to be on the lookout for opportunities to send out appropriate press releases. "If you learn of some event that might deserve a press release, please let me know."
. Science Committee Chairperson JOE NEILANDS, who could not attend the Meeting, sent a letter reviewing events of the past year. These have been reported in previous Newsletters (NL5-2; NL7-15; NL8-21,22; NL9-12).
. Philosophers' Committee Chairperson ED HOPKINS reported on his 1976 plans (NL9-11,15).
-

REPORTS FROM OFFICERS

President BOB DAVIS reports on a number of things not related to the recent Annual Meeting:

- (16) Rewarding job. "I have been contacting members, mostly by letter but a few in person. One of the rewards of my job is that I am in contact with many interesting people. Because of ER's diverse appeal, we have a diverse group, but we have a unity in that everyone seems to have a mind and interests in things outside themselves."
- (17) Felix. "I have just visited Felix De Cola. I attended one of his Sunday evening musicales. (He's been having them for 30 years.) When I entered, he and a young woman were playing a Brahms duet, from a score he'd just gotten from the British Museum. He has made recordings (including a piano comedy album), and played for radio and TV. He has a superb collection of chamber music. I told him I was thinking of having a 'reception' for Southern California members, and he offered to make his attractive dwelling available for it. He also provided us with 100 copies of a photo of ER." (This photo is available on request from the Newsletter. It is an excellent photo of a scowling ER, probably taken during one of ER's anti-nuclear demonstrations.)

(18)

Kouji." Here are portions of a letter I enjoyed from Kouji Tomimori, our first Japanese member."

I thank you for your warm welcome to me, on my becoming a member of the Society. I am astonished to know that I am the first member not only from Japan but from all of Asia. I feel it is a great honor for me.

I think it is fortunate that your Society (now our Society), organized by members in the U.S.A. and Canada, is gradually adding members from around the world — a horizontal development — and not only intellectuals, but all kinds of people — a vertical development.

From BR's prologue to his Autobiography ("Three passions..."), I found another aim in life. Till then my aims had all been inside myself, none outside. BR taught me that my aims also had to include what was outside of me. We must aim to improve society and the conditions under which all people live.

I intend to report on the influence of BR in Japan.

(19)

Please speak up!"If some of you have suggested things to me and gotten no response, please write me again. We depend on members to help carry the ball on these; we expect individual initiative and responsibility; we really can't operate any other way. Here are several projects I have been discussing with members:

(20)

Zahatopolk. "RICHARD LORENZ wants to put out a 'classic comic' of this BR short story. I suggested he write a member who is an illustrator. I consider this a very interesting project."

(21)

Russell-Trotsky Dialog on Revolution (NLS-64)."ROBERT PARKER (6819 37th Avenue N.E., Seattle, Wa. 98115) wants to collaborate on this with someone who knows BR. I considered taking it, but later had to decline for want of time. Anyone interested, especially with a history background, should write him. This is a very appropriate project for the BRS to help with. What follows is Parker's own description of his project."

I envision a dialog on the theoretical justification for revolution. BR, I find, offers the most humane and intellectually honest views in opposition to revolution that I have encountered; Trotsky, I find, offers the most consistent views in support of revolution. Actually the project grew out of prior interest in these two men, both of whom, in their individual ways, have stirred my soul by their love of truth and their sincerity in wishing to advance the interests of humanity. Trotsky and Russell met only once, and then, briefly, so the Dialog itself will have to be in some sense fictional, but based of course on the real views and personalities of the participants.

My ultimate interest is in writing something of intellectual interest on this subject for the average American reader. My purpose will be educative, not literary, not academic. American opinion on this matter, as on others, is formed to an amazing extent, by false propaganda and off-the-cuff feelings. Regard for sincere men who hold truth in high esteem is low, even in schools, and I should like, in my work, to do what I can to reverse this. By presenting the issue of revolution (which for about a year has been uppermost in my mind) in the way I

propose, I shall, as I imagine, be presenting the best possible intellectual content on the subject and, at the same time, be introducing the reader (the imagined general reader) to two of his century's most sincere and profound men.

22) Geographical list/interest list. "I expect to prepare a list of members who live near each other, and another list of members with similar interests, to facilitate communication."

23) Universal Human Rights. "The BRS committee on Universal Human Rights is still largely inactive. I have written to new members who expressed interest, but have received no replies.

"I write Amnesty International prisoners, and circulate information among members.

"One of the main groups in the world for human rights is the International League for the Rights of Man, located near the United Nations. The following excerpts are from their own statement."

The International League for the Rights of Man has been successful in focusing the attention of the world community on gross violations of human rights, in bringing complaints of such abuses before the United Nations, Organization of American States and other international bodies, in securing the release of political prisoners, in getting sentences reduced and death penalties rescinded, in helping individuals leave countries, in reuniting families, in improving procedures at the UN for dealing with complaints, in ameliorating racial and religious persecution.

For 33 years, the League has worked on behalf of human rights — seeking to establish human rights standards, investigating violations, intervening with governments, making representations before international bodies, conducting research and educational programs, publishing special reports on human rights conditions in various countries, assisting victims, sending observers to political trials, dispatching special investigative missions to inquire into specific violations and effect redress, supporting and helping to establish civil liberties groups in countries throughout the world, coordinating the activities of affiliates and representatives, advising on the use of international machinery for the protection of human rights.

If interested in more information, write the League at Suite 6F, 777 United Nations Plaza, New York, N.Y. 10017

REPORTS FROM COMMITTEES

(24) Committee on Science (Joe Neilands, Chairperson):

"I have been in contact with the American Chemical Society, urging them to co-sponsor a session on Chemical-Biological Weapons at the annual meeting of the Society in San Francisco in September 1976. The proposal

has gone through some of the lower level committees of the ACS and awaits action by the executive officers of that Society.

"PETER CALAGNA has suggested that we consider the impact of science on the 'sociosphere'.

"A colleague in Japan has asked for information on the Committee's activities.

"Other members of the Committee are FRED ALLENDORF, AMY BLOCK, MARTIN GARSTENS and ANITA JOYCE LEVINE."

PHILOSOPHERS' CORNER

(25) Report on the BRS at APA. ED HOPKINS, who runs the BRS sessions at the American Philosophical Association (Eastern Division) meetings, reports that the 2nd one -- in New York, December 28, 1975 -- "was very well attended. At least a hundred people were there at one time or another during the lengthy session. At times there wasn't a vacant seat to be had. The only flaw was that we had scheduled too many papers; things went on too long. And we were rushed, and ran out of time. That won't happen again, because next time we'll have 2 papers instead of 3.

"At the session, we announced that we were trying to get money to publish the papers, and we invited people to sign up if they wanted copies, in case we succeeded in raising money. 18 persons signed. The postscript to this, I regret to say, is that we have just been turned down by the foundation to which we had applied for a grant."

(26) Judges wanted. Anyone interested in helping to judge the papers that are to be presented at the next BRS session at APA, Eastern Division -- in Boston, December 1976 -- should write Ed Hopkins. (Dr. Edwin E. Hopkins, 352 S. Drew Street, Baltimore, Md. 21224.)

*

NEWS ABOUT MEMBERS

(27) Gary Slezak won 1st Place in the Annual Twelfth Night Contest of the Chicago Playwrights' Center. Gary's play, "The Writer's Wife," was performed on January 4th.

(28) Al Kravig, an inmate in Soledad Prison, is Librarian of the Inmate Committee for Higher Education. He writes:

ICHE is run by all inmates...My assistant is a real revolutionary (well educated) and he is constantly preaching about Mac, Castro, and such. Interesting, but I'm glad to say BR appeals to me.

ICHE also started a college for veterans, with real college instructors. This semester we have History, Economics, Philosophy, and an Introduction to College. We have 85 students and the general tenor of the place has

really changed.

I am ready to go to work on some BRS work NOW. I've gotten out of my apolitical stage and now feel I must expand my horizons, become politically conscious, so to speak.

Our library has 2 books by ER — "Autobiography III" and "Common Sense and Nuclear Warfare" — and I'd like to build it up. Several people are interested in ER and would get into him if we had the books.

* Maybe some of the BRS members would donate some old copies. Oddly enough, we have reams of stuff by Wittgenstein — I like him. But he really blows Freud out of the window. And what was the reason for his break with ER?

BRS AUTHORS

(29) Peter Cranford has written, and KATE TAIT has edited, the scripts for 5 tapes on discipline in the classroom. The tapes, intended for teachers and principals in grade schools, will be recorded by the National School PR Association, an affiliate of the National Education Alliance, and offered for sale to schools.

(30) * Ed Hopkins advises that he has written a paper arguing against compulsory education, which he offers to lend on request. Write Dr. E. E. Hopkins, 352 S. Drew Street, Baltimore, Md. 21224.

NEW MEMBERS

(31) We are happy to welcome these new members:

Maurice Belanger/Box 501, Stn.B/Ottawa, Ontario K1P 5P6/Canada
Frank C. Bertrand/ Apt. 304/6 Olde English Village Road/ Dover, N.H. 03820

ADDRESS CHANGES

- (32) Fred W. Allendorf/ Dept. of Zoology/University of Montana/Missoula, Mt. 59801
Howard K. Jones/39 Whitcomb Road/Riverside, R.I. 02915
Bruce Thompson/230 Witherspoon Hall/Princeton University/Princeton, N.J. 08540
-

- (33) MEMBERSHIP ANALYSIS & STATISTICS

- (33) Renewal rate: 71%. As Peter Cranford mentioned in the last Newsletter (NL9-3), people join the BRS with all kinds of expectations. Some are bound to be disappointed, and do not renew membership. But far more renew than do not. Renewals outnumber dropouts by more than 2 to 1. As of 1/31/76, 56 members had renewed, 23 had dropped out, which translates into a renewal rate of 71%.
-

BULLETIN BOARD

- (34) Books by mail, at a saving. We have been dealing for several years, with complete satisfaction, with BOOKQUICK, Box B, Roseland, N.J. 07068. They advertise in the classified columns of the (Sunday) New York Times Book Review section. They offer 33 1/3% discount on "current bestseller list titles" (in the NYT Book Review section); 30% discount on books listing for \$10 or more; 25% discount on \$3 to \$10 books. Plus 40¢ per book postage/handling. "These discounts apply to virtually all general interest (non-text/technical) books." They will refund any overpayment. Their order form has a discount table, so you don't have to do the arithmetic yourself.
- For instance, "The Life of Bertrand Russell," by Ronald W. Clark, lists for \$17.50. Their price is $12.25 + 40¢ = 12.65$ total.
-

BOOK REVIEWS

- (35) 3 books on BR. This is a big year for books about BR. There's KATE TAIT's book, "My Father, Bertrand Russell"; "The Tamarisk Tree" by Dora Russell, nee Dora Black, BR's 2nd wife, Kate's mother; and "The Life of Bertrand Russell" by Ronald W. Clark.

The reviews have been arriving (thanks to AMY BLOCK, HARRY CLIFFORD, ALVIN HUNTER, and CAROL MULL.) So far, we've seen all 3 books reviewed together in SATURDAY REVIEW (1/10/76), TIME (1/12/76), and WALL STREET JOURNAL (1/15/76). And we've seen reviews of the Clark book(alone) in THE NEW YORK TIMES (1/15/76) and in NEWSWEEK (1/19/76).

- * If you come upon other reviews of the 3 books, or any of them, please send us a clipping or photocopy.
- * We'd be interested in getting your comments on any or all of the 3. We hope a lot of you will respond to this invitation to comment.

We (in the BRS) are a company of BR-admirers. But not everyone admires. Collectors of ~~I-don't-like-Russell~~ reviews will not want to miss the one in the WALL STREET JOURNAL.

- * We'll lend any of the reviews we have, on request.
-

CORRECTION

- (36) Re "Bertrand Russell, An Introduction," which JOHN SUTCLIFFE recommended (NL9-39): we were mistaken in saying the price had risen from 1.95 to 3.65 (English pounds). The paperback is 1.95, the hardcover 3.65. (Our thanks to KEN BLACKWELL. Again!)
-

FINANCES

- (37) New Finance Committee Chairperson: PETER CRANFORD. Now that Peter is no longer President — he's been kicked upstairs (as he likes to put it) to the new post of Chairman of the Board — he'll have more time to give to trying to raise money for the BRS. Kicked upstairs (at his own request)? Yes. To an easy job? No!

- (38) Contributions. We thank the following members for their contributions, received since the last Newsletter: EISLER, GARSTENS, VERA ROBERTS.

BRS BUSINESS

(39) It's time to nominate Directors. As explained in Item 7, the members will elect 5 Directors each year.

The Elections Committee will place the names of at least 5 candidates on the ballot, which will appear in the next Newsletter. If there are more than 5 candidates, the 5 who receive the most votes will be the new Directors whose 3-year term starts in 1977. (Each member votes for 5 Directors.)

A Director may succeed himself, that is, he or she may be re-elected. The Directors whose terms expire at the next (1977) Annual Meeting are BLACKWELL, DENONN, NEILANDS, REINHARDT, and MC DONALD. Some or all of these names may appear on the ballot, and some or all may be re-elected.

Any member may nominate candidates for Director. If you wish to do so, send your candidate's name, and a brief statement as to qualifications, to Elections Committee, c/o BOB DAVIS, 7025 W. Franklin #86, Hollywood, Ca. 90068

Please note the May 1 deadline Nominations postmarked later than May 1 will not be considered.

(40) Committee functions. Chairpersons were asked to describe the work of their committees, in more or less detail. Not all responses are in yet; the following 5 items are what we have received so far.

(41) Awards Committee

The BRS will make an annual award to an outstanding individual who represents some cause or idea that BR championed or exemplifies some quality of character that distinguished BR (such as moral courage.)

The Committee does the following:

- (1) Selects the candidate for the award.
- (2) Writes a statement telling why it has chosen this candidate, and submits it to the membership for approval, by mail.
- (3) Notifies the approved candidate, inviting him/her to the Annual Meeting Banquet.
- (4) Prepares a scroll, to be given to the candidate at the Banquet, and a brief presentation speech (which could include reading the scroll.)
- (5) Delivers the scroll and speech to the President, who makes the Presentation Speech.

Remarks:

- (a) Any BRS member can suggest a candidate to the Committee, stating the nominee's qualifications.
- (b) The award-winner will have performed an action that echoes some aspect of BR's life or work, such as (A) exposing or opposing: hypocrisy, censorship, tyranny, cruelty, abuse of civil liberties, abuse of power, injustice, oppression, superstition, etc. or (B) promoting or furthering: civil liberties, population control, conservation, a free press, nuclear disarmament, world government, rationality in morality and elsewhere, democracy, human rights, equality for women, happiness, education, and Russell scholarship.

- (c) Three benefits of making awards: (1) The award, by highlighting some aspect of BR's life or work, fits the BRS aim of furthering BR's purposes. (2) It may earn some publicity for the BRS. (3) It can be expected to please the recipient.
- (d) The award is unlikely to gain publicity, unless the recipient is well-known. Note, for instance, the well-known names of the recipients of Humanist Association awards: Betty Friedan, Margaret Sanger, Linus Pauling, Julian Huxley, Erich Fromm, Abraham Maslow, Benjamin Spock, Buckminster Fuller.

(42)

Information Committee

General aims: (a) to present information about the BRS to BRS members and to the outside world; (the outside world has subdivisions, such as the academic community, book publishers, the general public, etc.); (b) to make the outside world aware of the existence of the BRS.

Specific functions: . Issue a Newsletter quarterly.

- . Issue a Press Release on a new member (with permission.)
- . Publicize (with Press Releases, etc.) the annual BRS Awards.

Publicity efforts: The above specific functions are (or will be) regularly recurring activities. Some publicity efforts can recur regularly, and be scheduled in advance; some cannot be. Here are examples of both kinds, that occurred in 1975:

- . The mention of the BRS on the dust cover of Katharine Tait's book, "My Father, Bertrand Russell." (Non-recurring)
- . Questionnaire (to colleges and universities) on courses on BR. (Could recur.)
- . Survey of courses on BR given in colleges and universities. (Could recur.)

(43)

Membership Committee

General aims: to recruit new members, to obtain renewals of membership, and to keep membership records and statistics.

Specific functions:

Inquiries: . Place advertisements, soliciting inquiries about the BRS.
. Answer the inquiries

Enrollments: . Process the enrollment of new members, in this way:
.. Send a NEW MEMBER page, giving data on the new member, to the President, Vice-President, Treasurer, and Russell Archives
.. Send the new member a Letter of Welcome, Member's Questionnaire, and BRS printed material (Newsletters, BR book-list, etc.)

Renewals: . Send a renewal request to each member as the membership year expires.
 . Include, with it, a request for a contribution.

Record-keeping: . MEMBERSHIP LIST. List the members in the order they enroll.
 Give each member a number. Identify the ad which they answered.
 . RENEWAL LIST. List the members who renew, in the order they renew.
 . EX-MEMBER LIST. List the members who did not renew.
 . MONTHLY MEMBERSHIP STATUS REPORT, to President, Vice-President, Treasurer, Russell Archives:
 ..List members who have renewed during the month.
 ..List members who became ex-members at the end of the month.
 ..Give changes of address of members.
 ..Give number of current members (= total of membership list less ex-members)
 .. Give number of inquiries and enrollments during the month.
 . CONTRIBUTIONS LIST. List contributions received from members, for future mention in the Newsletter

(44)

Philosophers' Committee

At the present time, the chief function of the Philosophers' Committee is the organization of the meeting of our Society that is held with the Eastern Division of the American Philosophical Association.

More generally, this Committee is devoted to improving communications among those working on Russell's philosophy. The Russell Interchange, recently started, is one attempt in this direction.

(45)

Universal Human Rights Committee

This Committee is a reflection of Russell's lifelong interest and work in the area of human rights and civil liberties, and the realization that for many members this aspect of Russell's life is a primary concern. More concretely, its purpose is to connect the Society to the growing international approach to human rights as being international instead of nationalistic. The Committee will inform the members and also engage in practical work in line with this aim.

(46)

Chairpersons of the above committees are: Awards Committee, none. (Description by Lee Eisler.). Information Committee, Lee Eisler. Membership Committee, Carol Mull & Lee Eisler, Co-Chairpersons. Philosophers' Committee, Ed Hopkins. Universal Human Rights Committee, Bob Davis.

Lee Eisler adds: "Although the Information and Membership Committee can be viewed as a single committee, I view it as 2 committees, with the Membership Committee being a subdivision of the Information Committee."

(47)

No conformity-requirement. We have said elsewhere that the only requirement for membership in the BRS is an interest in BR.

That does not mean agreeing with everything BR ever wrote.

BR himself did not always agree with everything he had written.

He changed his mind whenever he felt he had good reason to.

And he disliked it when he was treated as an object of reverence.

We think that's the proper attitude to have toward BR and his ideas. They are not sacred.

Accordingly, we have members who presumably do not accept all of BR's ideas and positions. They belong to organizations professing beliefs that BR did not share. Some belong to churches. One is a member of a Roman Catholic religious order (Dominicans.) Another is a Rosicrucian.

We don't think the BRS will be harmed by accepting non-conformity. On the contrary, we think it's a source of strength. We like having members who think for themselves.

NEWSLETTER MATTERS

(48) This issue is early. This issue of the Newsletter, dated April 1976, is actually being issued in February, for the reason given in NL9-10.

(49) Newsletter date shift. Future Newsletters will be dated February, May, August, November. This shift — to one month later than last year's issues — will permit each issue to carry the Treasurer's Report of the preceding calendar quarter. This will provide a more up-to-date picture of our financial situation than we have been having.

MISCELLANEOUS

(50) Advertising by members. BOB DAVIS suggests that some members might want to run the little BRS ad on their own, in their own campus newspapers or in other local publications. This is the ad:

BERTRAND RUSSELL SOCIETY. New. Information: (your address, or your name and address, goes here.)

If someone responds to the ad, forward the response to CAROL MULL, P.O. Box 11133, Indianapolis, In. 46201. Include this information: name and date of the publication in which you ran your ad, and your name. Carol will send an Information Packet to the Inquirer.

ABOUT OTHER ORGANIZATIONS

- (51) Bertrand Russell Peace Foundation. In N16-46, we printed a letter from the Foundation stating their need for money, and asking for contributions and ideas. We have since learned more about the Foundation, with the result that our present attitude toward them is, tentatively, one of coolness. We are continuing to gether additional information about them, and have accumulated a considerable amount of correspondence. Any member who wishes to may examine our files on the Foundation.
-

INDEX

- (52) 2nd Annual Meeting (2-15): attendance (3); Saturday best day (4); members present (5); new Directors (6); method of electing Directors (7); Chairman of the Board (8); new Officers (9); BRS Library (10); California next (11); higher dues (12); Awards Committee (13); Officers report (14); Committee reports (15). Bob Davis: rewarding job (16); Felix (17); Kouji (18); please speak up (19); Zahatopolk (20); Russell-Trotsky Dialog (21); geographical- and interest-lists (22); Universal Human Rights (23). Committee on Science (24). BRS at APA (25). Judges wanted (26). Gary wins (27). Letter from Soledad (28). Peter Cranford's scripts (29). Ed Hopkins paper (30). New members (31). Address changes (32). Renewal rate (33). Books by mail (34). 3 books on ER (35). Price correction (36). Finance Committee (37). Contributions (38). Time to nominate Directors (39). Committee functions (40): Awards Committee (41); Information Committee (42); Membership Committee (43); Philosophers' Committee (44); Universal Human Rights Committee (45); Chairpersons (46). No conformity-requirement (47). This issue is early (48). Newsletter date shift (49). Advertising by members (50). ER Peace Foundation (51). Index (52).

NEWSLETTER #11
August 1976

- (1) The BRS will have a session when the psychologists meet (2). BRS Science Committee Chairperson, Joe Neillands, will chair the American Chemical Society's symposium on chemical weapons (10). The BRS will define its goals (19). Harry Ruja reviews McMaster's Russell Centenary volume (37). The BRS Library has 14 items (39). We vote for Directors (42,47). BR had strong views on the movies (13). Bob Davis writes Solzhenitsyn (17). Red Hackle for Ontarians (29). The index is at the end (46). An asterisk in the left column indicates a request or an offer to lend. Some may call this the Sutcliffe Issue; his name appears in 5 items and on a 5-page supplement.
-

COMING EVENTS

- (2) BRS Psychology Symposium, September 5th. In a previous Newsletter, we reported that the BRS was going to have a session at the September 1976 meeting of the American Psychological Association, in Washington, D.C. (NL9-2) At that time, the APA seemed to have accepted the BRS proposal for a session. That is no longer so; the APA does not want the BRS session, because -- we suspect -- of hostility, somewhere within the APA, to some of ER's views.
- We've decided to have our symposium in Washington anyway, without the APA's blessing. We have reserved the Chinese Room in the Mayflower Hotel from 8:30 to 10:30 P.M., on September 5th.
- This is the program:
- PETER G. CRANFORD, Chairperson: "ER and his relevance to psychology."
KATHARINE RUSSELL TAIT: "My father's psychology of educating children -- did it work?"
JACK PITT: "ER and the logic of the double-bind."
THOMAS W. SIMON: "Psychological influences on BR's theory of mind."
ALBERT ELLIS: (title not known)
- We will not be listed in the official APA program, but we will have announced the BRS Symposium in the APA MONITOR and in BEHAVIOR TODAY, and on posters in hotels in Washington where APA members are staying.
- We invite all BRS members -- especially those living in the Washington area -- to attend.

REPORTS FROM OFFICERS

(3) Peter G. Cranford reports...

as Chairman of the Board:

"Although we have a Board of Directors, its duties are nominal at this time — restricted primarily to what the Bureau of Internal Revenue demands of us for tax-exempt purposes.

"A study of the duties of boards of directors in this country reveals a wide variance. JACK PITT is now working on what these duties should be, and will present them at our next meeting, in California. In the main, I think the Board will be setting policy, establishing guide lines, and function as a check and balance on officers, committees, and membership. I think the Board should be made up of highly motivated members, knowledgeable about BR, able to attend meetings, and dedicated to the BRS's aims.

"JOHN SUTCLIFFE has prepared a statement of his views as to what these aims should be." (See Item 19.)

as Finance Coordinator:

"Over-all, we are solvent. If we continue to operate as we have been doing — with free labor, free office space, memberships, and contributions — we can see a couple of years ahead. We have about 175 members, with an estimated 30 who can be depended on to engage heartily in the process of building the Society (based on responses to correspondence.)

"I think we are in position, both financially and in other ways, to move into Phase Two of the Society's growth. We must tap the abilities of members, to grow. To do this effectively, we must make it possible for more members to become involved. This requires more elaboration of who and what we are or ought to be. We are beginning the process of finding that out in this issue of the Newsletter. (See Item 19)

"As to finance, I propose that we learn how to make money, as is appropriate in a capitalistic society. I think this is the only way we can grow and influence others rationally. It is generally agreed by the rationalist and humanist groups that, power-wise, they have not gotten far. The Rationalist Press Association, in England, is having financial troubles. The (U.S.) Humanist publications operate with a modest number of subscribers, and (like ourselves, at present) must beg for funds. Their writings are of high calibre, but their influence seems limited. Unless the BRS can develop new methods of promotion, we too will be of slight influence. We must learn from BR himself. He was an excellent promoter. By building on his shoulders, we can go far.

"The polling of members for ideas on raising money produced a gratifying 30 responses, for which I wish to thank these members: T. ANDERSON, CAMPBELL, CRANFIEL, F. DE COLA, DONADIO, ELLIS, FRANKS, GANTT, GOMEZ, KINDELL, KWOK, LANSDELL, LAWTON, LIPIN, D. LOVE, MARAGIDES, MC DONALD, MULL, NEILANDS, PARKER, PITT, PLANT, REID, RODRIGUEZ, SILVA, SPANG, STAHL, WAITE, COURT-RIGHT-WHYTE, AND SUTCLIFFE.

"Their suggestions can be summarized as follows:

"1. Set up a system of solicitation of our own members. Specific approaches might be: (a) raise dues; (b) solicit the assignment of 15% of royalties of BRS-sponsored talks, tapes, books, articles, etc.; (c) solicit the assignment of 15% of royalties from the sale of BRS material (also, incidentally, solicit corporations, such as Simon & Schuster, IBM, etc.); (d) garage sales conducted by individual members for the BRS; (e) contribute books, etc. to the library, for use or sale; (f) annual 'free-will offering' on BR's birthday; (g) solicit the assignment of gifts in wills.

"2. Have the BRS go into business, to make money: (a) develop BR books, pamphlets, talks, workshops, tapes, films, etc., and charge for them; (b) charge fees for Russell Information Service; (c) develop a BR exhibition to spread the word, and charge admission.

"I am not recommending that we act on all these suggestions. I have reservations about some of them. Nevertheless I have reported them here because one thing often leads to another. I would welcome your reactions or comments."

*

(4) President Robert K. (Bob) Davis reports:

BRS's 3rd Annual Meeting will "probably take place the first week-end in February 1977 -- February 4-5-6. This has not been confirmed but appears to be the best date."

United World Federalists of Japan to visit U.S.A. "I have received a letter from Sumi Yukawa, President of UWF-Japan. They have a large group of members arriving in Los Angeles August 15th. Then in 2 separate groups, they will visit U.S. cities on their way to the U.N. in New York. They would like to meet BRS members, and discuss world government and peace. I have written them, and intend to meet them, after details have been worked out. All Southern California members interested in meeting this group should write me for details -- 7025 W. Franklin #86, Hollywood, Ca. 90068. Or phone (213) 874-5568. I hope we can have a healthy turnout. Both world government and peace were among BR's most important concerns and we should reflect a similar set of values.

"Leaving L.A., one group will go to San Francisco, Chicago, Philadelphia and New York, the other going to Las Vegas, Salt Lake City, Cheyenne, Denver, Kansas City, St. Louis, Chicago, Buffalo, Niagara Falls, and New York. All members interested in meeting them in one of those cities should also write me for information."

Bob's report is brief, since he has already reported on many of his activities in his President's Letters of April 1 and June 1.

(5) Vice-President Gary Slezak reports:

"I have looked at each member's Questionnaire and drawn up a list of those interested in committee work. It breaks down this way: Universal Human Rights 13, Applied Philosophy 13, Science 11, Education 5, Information & Membership 2, Philosophers 2, Awards 1. Though that totals 47, it represents only 27 members, because some expressed interest in more than one committee. 27 is about 15% of BRS membership -- not exactly a superb showing. I am writing to each of the 27.

* "If you might want to serve on, or know more about, a committee, please write me (Apt. 206, 215 E. Chestnut St., Chicago 60611).

* "Or if you have an idea for a project related to BR, write, and I will attempt to promote it within the BRS.

"Our goal is the involvement of as many members as possible in meaningful work."

Treasurer Stephen J. Reinhardt reports...

(6) For the quarter ending 3/31/76:

Balance on hand(12/31/75).....	1173.14	
Income: 38 New Members.....	351.00	
20 Renewals.....	259.00	
Total Dues.....	610.00	
Contributions.....	534.81	<u>1144.81</u>
		2317.95
Expenditures: Information & Membership		
Committees.....	1022.11	
Bank Charge.....	6.51	<u>1028.62</u>
		1289.33
Misc. Adjustments.....		<u>14.00</u>
Balance on hand (3/31/76).....	1303.33	
* * * * *		

(7) For the quarter ending 6/30/76:

Balance on hand (3/31/76).....	1303.33	
Income: 11 New Members.....	135.00	
7 Renewals.....	95.00	
Total Dues.....	230.00	
Contributions.....	250.99	
Sale of Newsletters	10.00	<u>490.99</u>
		1794.32
Expenditures: Information & Membership		
Committees.....	134.78	
Subscriptions to "Russell"....	108.50	<u>243.28</u>
Balance on hand (6/30/76).....	1551.04	

Note: Expenditures of 215.86 during the first quarter of 1976 (chiefly for "Russell" subscriptions) are not yet reflected in the Treasurer's Report, and will appear in the 3rd Quarter Report. Consequently, balance on hand, at the end of the 1st and 2nd Quarters, is actually 215.86 less than appears.

REPORTS FROM COMMITTEES

- (8) BRS-Britain. JOHN SUTCLIFFE is in process of setting up a BRS in Britain. (Of course there ought to be a BRS in Britain!) He has begun to advertise, with best results so far from NEW HUMANIST, published by the Rationalist Press Association. He hopes the BRS and the BR Peace Foundation can co-exist — since both apparently are here to stay — avoiding conflict "through simple tolerance and avoidance." He likes to think that things may improve between the 2 groups. He has visited Countess Russell.
- (9) Library Committee. See Item 39.
- (10) Committee on Science JOE NEILANDS, Chairperson, will chair a symposium on chemical weapons, on August 31, at the American Chemical Society meeting in San Francisco. He wanted the symposium to be co-sponsored by BRS (NL 10-24), a proposal which the ACS considered for a long time. ACS finally decided it wanted to be the sole sponsor.
- On June 5, the Northern California members — Amy Block, Howard Sherman, and Joe — met for lunch, to discuss the BRS.
- "My research has been going well and has taken me on several trips around the country."
- (We reproduce — Page 22 — the front cover of AMINCO LABORATORY NEWS, Winter 75-76. It starts a 3-page story on a discovery made by Joe and his graduate students. We will lend the issue on request.)
- * "In September I plan to go to Peru, and in December to England. Thereafter I expect we'll have our Annual Meeting."
- (11) Universal Human Rights Committee. DAN MC DONALD and BOB DAVIS are now Co-Chairpersons. No report at this time. Dan's address: 53 Washington Square South, New York, N.Y. 10012. Bob's address: 7025 W. Franklin #86, Hollywood, Ca. 90068.
-

PHILOSOPHERS' CORNER

- (12) BRS at APA, December 1976. Philosophers' Committee Chairperson ED HOPKINS is in process of selecting the best papers, for presentation at the BRS session at the December 1976 meeting of the American Philosophical Ass'n (Eastern Division), in Boston — helped by JUSTIN LEIBER who will chair the BRS session.
-

BY HERTRAND RUSSELL

(13)

BR on movies. DAN MC DONALD has collected a few BR quotes -- things BR had to say about the movies.

The first -- from the "Autobiography," published in 1969 -- deals with the topic that constantly preoccupied BR in his last years, the threat of nuclear war.

The next 3 were all written around 1930, when Hollywood movies were in their heyday, their worldwide influence enormous. Some of what BR says here about the movies might well be applied to today's TV -- though the worldwide impact of American TV of the 1970s is no doubt considerably less than that of Hollywood movies of the 1930s.

"The attitude of most of humanity towards its own destruction surprised me. In December 1959 I had read Nevil Shute's ON THE BEACH and I attended a private showing of its film. I was cast down by the deliberate turning away it displayed from the horrible, harsh facts entailed by nuclear war -- the disease and suffering caused by poisoned air and water and soil, the looting and murder likely among a population in anarchy with no means of communication, and all the probable evils and pain. It was like the prettified stories that were sometimes told about trench warfare during the First World War. Yet the film was put out and praised by people who meant to make the situation clear, not to belittle the horror. I was particularly distressed by the fact that I myself had praised the film directly after seeing it in what I came to think the mistaken opinion that a little was better than nothing. All that sort of thing does, I came to think, is to make familiar and rob of its true value what should carry a shock of revulsion. Irony such as that in DR. STRANGELOVE or in OH, WHAT A LOVELY WAR is a different matter. That does cause people to think, at least for a short time." The Autobiography of Bertrand Russell, 1944-1969, pp. 147-148. Simon & Schuster, 1969

"The great majority of young people in almost all civilized countries derive their ideas of love, of honor, of the way to make money, and of the importance of good clothes, in the evenings spent in seeing what Hollywood thinks is good for them. I doubt whether all the schools and churches combined have as much influence as the cinema upon the opinions of the young in regard to such intimate matters as love and marriage and money-making. The producers of Hollywood are the high priests of a new religion. Let us be thankful for the lofty purity of their sentiments. We learn from them that sin is always punished, and virtue is always rewarded. True, the reward is rather gross, and such as a more old-fashioned virtue might not wholly appreciate. But what of that? We know from the cinema that wealth comes to the virtuous, and from real life that old So-and-so has wealth. It follows that old So-and-so is virtuous, and that the people who say he exploits his employees are slanderers and trouble-makers. The cinema therefore plays a useful part in safeguarding the rich from the envy of the poor." The Scientific Outlook, pp. 194-195, W.W. Norton, 1962(1931).

"For my part, I am a person of simple tastes: I like to see a race between a motor car and an express train; I enjoy the spectacle of the villain gnashing his teeth because he has just failed to pick off the engine driver; I delight in men tumbling off skyscrapers and saving themselves by telegraph wires; I am thrilled by a sheriff's posse galloping through a sandstorm in the alkali desert. And the enjoyment of these unsophisticated

delights is enhanced by the feeling that in that matter at least one is in harmony with the great world democracy." "The Cinema as a Moral Influence" (1929), reprinted in Bertrand Russell's America, 1896-1945, B. Feinberg and R. Kasrils, eds., p. 254. Viking 1974

"Perhaps the greatest of all forces for uniformity in the modern world is the cinema, since its influence is not confined to America but penetrates to all parts of the world, except the Soviet Union, which, however, has its own different uniformity. The cinema embodies, broadly speaking, Hollywood's opinion of what it is like in the Middle-West. Our emotions in regard to love and marriage, birth and death are becoming standardized according to this recipe. To the young of all lands, Hollywood represents the last word in modernity, displaying both the pleasures of the rich and the methods to be adopted for acquiring riches. I suppose the talkies will lead before long to the adoption of a universal language, which will be that of Hollywood." "Homogeneous America" (1930), reprinted in Bertrand Russell's America, 1896-1945, pp. 258-259.

- (14) Project 1976.R.N.(MALT) MALATESHA has been working on this project (NL2-45, NL3-50, NL6-37), collecting BR quotes on America, and has

* gathered quite a few. We will lend them on request.

- (15) God Debate. BERNARD WHEELER reports that he was able to buy the English edition of "Why I Am Not A Christian" — which contains a transcript of BR's 1948 BBC debate with Father Coplestone on the existence of God — from George Allen & Unwin, Ltd., Park Lane, Hemel Hempstead, Herts, HP2 4TE, England, for \$2 plus postage.

ABOUT BERTRAND RUSSELL

- (16) Catalyst. DON JACKANICZ bought an LP recently of 2 choral works by Ralph Vaughan Williams, "Toward the Unknown Region" and "Dona Nobis Pacem" (Angel S-36972), which uses words of Walt Whitman. The jacket notes say that it was BR who introduced Vaughan Williams to Whitman's poetry. BR and Williams were fellow undergraduates at Cambridge.

SPREADING BR'S VIEWS

- (17) Letter to Solzhenitsyn, from BOB DAVIS:

Aleksandr Solzhenitsyn
Zurich, Switzerland

Dear Mr. Solzhenitsyn:

I am writing you in regard to your BBC conversation with Mr. Charleton.

I found the interview to be a very invigorating discussion of important issues.

However, I am concerned with your comments on not understanding Bertrand Russell and his alleged position on the slogan, "Better red than dead." Knowing your opinion, I do not hope to convince you that he was right in the general matter, but I do believe that one can understand his position.

There are two separate points to consider. First, the phrase itself. The phrase was originally, "Better dead than red." This became a code phrase during the early 50s that the warrior mentality used to heighten intolerance and increase the probability of war. By tackling that phrase, and saying that if that were the only choice (which it was, and is, not), one would rather be red than dead, one combatted a whole attitude. So it must not be understood as a simple phrase.

The heart of the matter is more complex. It hinges on the nature of modern war. The plain facts of the matter are that a nuclear war between the West and the East would result in an initial slaughter of hundreds of millions and a worse death for many more afterward. Those who adopt policies or attitudes that promote the possibility of war must take responsibility for risking those casualties. The brute fact of nuclear warfare is that it would at the least end civilization and very possibly the human race. People who do not understand this are ignorant of the nature of nuclear warfare.

This being the basic fact of modern warfare, Russell adopted the position that, if matters came to that point, he would prefer tyranny to the end of mankind. He compared it to the Dark Ages, believing that no matter how horrible the conditions, it would still be superior to the extinction of man. I do not believe that such a position is either extreme or difficult to understand.

Russell's fullest expression of this may be found in a small book, Common Sense and Nuclear Warfare, and again in Volume III of his Autobiography. I believe that you would find both books stimulating reading, as they are lucid discussions of points you disagree with Russell on. I enclose a copy of Chapter X, and Appendix I, from Common Sense, and a short letter from Dear Bertrand Russell (p. 29) that elucidate the points I have made.

In this country, your interview was followed by a discussion with W. F. Buckley, Jr. and Malcolm Muggeridge on the subject matter of the talk. I am always amazed that individuals who proclaim Christian belief can then turn to advocating intolerance and policies that may very well result in mass death. Apparently they read the story of Christ differently from the way I do.

On an entirely separate note, I wish to say that as a citizen of California, I look forward to your being in residence at the Hoover Library at Stanford. I would hope that your presence will be intellectually stimulating to the entire state. As a history graduate student, I worked for a year as an archivist at the Hoover Presidential Library in our Midwest. I came to hold a deep respect for Hoover as one of the greatest men America has ever produced.

Yours,
Robert K. Davis
President/Bertrand Russell Society

(18)

Mail scheme. JOHN SUTCLIFFE has thought up an ambitious scheme for disseminating ER's views -- to BRS members and possibly to outsiders -- consisting essentially of readings of ER's books, using suggested reading

lists, followed by discussion (by mail) with members who are either professional philosophers or very competent amateurs.

ED HOPKINS says he has some reservations about it: "The idea of encouraging intellectual discussion — via the mails — between members is a good one. However I am not sure that the Teacher-Student set-up will work. I suspect that very few professional philosophers would be willing to take on the burden involved. A more workable idea might be to have a column in the Newsletter listing people and books on which they wish to correspond with someone. (Perhaps an expanded Interchange?) Speaking as a professional philosopher who might be involved in such a program, I would be unwilling to take on the work involved in preparing to teach by mail, but would not mind corresponding with someone concerning something in which I then had an interest. My reservations about the Sutcliffe plan are just that, and are not to be construed as opposition."

* We'd be pleased to hear your comments on all this.

* We will send, on request, John's 2-page memo on his scheme, one page of which is his suggested reading list.

SPECIAL REQUESTS

(19)

A VERY special request. We are going to set down on paper, in a more or less formal way, the objectives of the BRS.

We expect to provide an answer to the question: What ought the BRS try to be or do, what should be its goals?

This is a large question, and we don't expect to find an answer quickly — at any rate, one that most members can agree on.

We think we know in a general way the direction the members would like to move in. We know, for instance, that most members joined the BRS for one or more of 5 reasons: to learn more about BR; to be in touch with other BR-admirers; to discuss BR's work with others who share their interest; to further BR's purposes; and to do something useful for others via the BRS.

Now it's time to be more specific.

* * * * *

This is how we plan to go about getting the answer:

(1) We invite each of you to send us your suggestions. We not only invite, we urge. What do you think the BRS's aims ought to be?

(2) We will print your suggestions and mail them to the entire membership for comments.

(3) When you receive someone else's Suggested Aims, tell us what you think of them. Do you approve or disapprove, like some parts of it but not others, etc. Please speak up.

(4) When we receive a Member's Reaction (to another Member's Suggestions), we will print it and distribute it to all members.

(5) Some members may react to another Member's Reaction. If so, we will print that too, and distribute it.

(6) And so on.

This process will take time. Mailings (of Suggested Aims, and Reactions) will probably be distributed to the members quarterly, along with a Newsletter.

We will toss things back and forth until a number of specific notions emerge. We may then submit a list of possible aims to the members for a vote. Conceivably, we might submit, say, 20 aims and ask the members to select the 3 (or 10) they favor. We're not at all sure about this part; we'll wait and see how things develop.

* * * * *

We are able to start things off immediately. We enclose "Prospects for Future BRS Policy" by JOHN SUTCLIFFE. John was kind enough to provide us with the first of the members' Suggested Aims. We enclose it without comment, because we want your comments.

* * * * *

Remarks:

. Ends and means. Suggested Aims can be about means as well as ends. For instance, one aim might be: to oppose the ill-treatment of human beings by governments (human rights, civil liberties); that would be an end. One means toward that end might be: to cooperate with other organizations with similar aims, such as Amnesty International or the American Civil Liberties Union.

. Length. Suggested Aims can be as short as one sentence or as long as necessary. The shorter the better, as long as it says what you want it to say. John Sutcliffe's enclosed 5-page paper — though probably longer than most we expect to receive — was originally 12 pages long; he cut it by more than half. We will lend the original 12-page version on request.

* * * * *

We repeat our special requests:

- (1) Please send us your Suggested Aims.
- (2) Please send us your reactions to John Sutcliffe's Suggested Aims.

Thanks.

CURRENT EVENTS

Bookpurge. The Island Trees School Board has removed 11 books from school libraries and classrooms, according to a dispatch from Levittown (Long Island, N.Y.) in the March 19, 1976 issue of Newsday.

The School Board's President said the Board has a right to remove "any books we don't want. The taxpayers don't have to subsidize garbage."

Board members had not read any of the books. They had read excerpted passages (i.e., out of context.) The 11 purged books include BR's "Why I Am Not A Christian," Vonnegut's "Slaughterhouse Five," and an anthology edited by Langston Hughes, "The Best Short Stories by Negro Writers."

The teachers' union will file a grievance under the teachers' contract with the school district on the grounds that the action is a violation of academic freedom.

Our thanks to BRUCE THOMPSON for sending us this story.

(20)

OPINION

- (21) Rationalism-emotionalism. The following letter by JOHN SUTCLIFFE appeared in a recent issue of NEW HUMANIST (London):

I was most impressed by J. Walsh's article, "Is rationalism out of date?" (March). Mr. Walsh seems to identify an important problem involved in the distinction he draws between rationality and emotive or prejudiced behavior in the meaning we give to the term "human". The problem is made more apparent than real by his implicit assumption that rationality is for him a moral value. Thus he bases his rationalism — unconsciously perhaps — on the irrationalism of a moral belief. This seems to me to tend to diminish the strength of his concluding arguments.

Human nature is a very complex structure of both rational and irrational elements, and as Mr. Walsh points out, we cannot from any sense of self-deception ignore either one or the other. Emotion is as much a fact of our human nature as reason. Neither the one nor the other by itself reveals any greater or dominant truth of that nature; they are the facts of what is the case. One is not "better" than another, but simply different. To understand ourselves we need to understand these facts, to come to terms with them as they occur. Irrationality is not to be blamed, it is to be understood. Rationalism of necessity involves tolerating irrationality, and not turning rationalism into a moral critique for this is to make the same mistake as the irrationalist.

Humanism seems to me in its denial of religion to assert ethics as an alternative metaphysic. Rational thought does not deny our emotional nature, but if carried to its conclusion it does deny the conceptual aberrations that emotional nature gives rise to — both religion and ethics. To know that what is hateful is destructive of human nature, or that what is a consequence of love is beneficial to it, does not oblige us to express these notions in moral terms or to assert normative value to them. To do so would be irrational, and to me, a "rational ethic" is a definite contradiction in terms.

COMMENT/REMARKS

- (22) Religion.DONG-IN BAE offers these comments: "I am inclined to agree with JOHN SUTCLIFFE's principal points, in his 'The Reconquest of Happiness' (NL9-24) — though I do not understand everything he says. JACK PITT's 'Russell on Religion' is a very fine contribution to understanding the complex and inconclusive position of BR on religion, and may offer a way to reconcile the diverging viewpoints of John and PETER CRANFORD."

NEWS ABOUT MEMBERS

- (23) Lester Denonn has penned a bit of verse (2 pages) titled "A History of Philosophy". Sample: "To me Dewey was phooey, Pierce was worse." We will lend it on request.
- * (24) Carol Mull is giving 6 lectures on symbolism next Spring, for Indiana University's Adult Continuing Education Program. Topics: Carl Jung and his theories; line symbolism, speech and math; ancient and religious symbolism; symbols in art; symbols in literature; Great Seal, peace symbols, national, political and commercial (trade marks) symbols.
- (25) Don Roberts, a founding member, who teaches philosophy at U. of Waterloo (Ontario), read a paper to the Peirce Society at the December 1975 meeting of the American Philosophical Association. Unfortunately he did not arrive in NYC in time to attend the BRS Annual Meeting. "I remember the founding meeting with nostalgia," he writes.
- "We are quite happy, and excited still over Lori's Ph.D" — Lorraine Beattie Roberts, Don's wife. "Lori is doing some part-time liason work for U. of Waterloo, and is teaching at a local community college, Conestoga College, a course on assertiveness training for women.
- "I'm busy with teaching, as usual — too much teaching each winter term. The heavy load comes with the hard winter. Near record snows and cold up here, and if it were not so peaceful and palatial at Wildwood Place" — where they live — "it would be very discouraging to have to wake up to winter in Waterloo this year

MEMBERSHIP STATISTICS

Current membership total, as of 7/1/76, is 176 members.

BULLETIN BOARD

- (29) Red Hackle in Ontario. Hepburn & Ross, Ltd., of Glasgow, have advised BOB DAVIS that Red Hackle is now listed with the Liquor Control Board of Ontario. This means that BRS members (and anyone else) in Ontario can now obtain BR's favorite whiskey through local liquor stores.
- In order to stay listed with the Liquor Control Board, Red Hackle has to achieve a certain minimum sales volume, and (we are told) rather quickly. So if you're thinking of buying Red Hackle, buying it sooner rather than later may help keep it available in Ontario.
- Hepburn & Ross also have a special agent in Vancouver who can place specific orders through the Liquor Control Board in B.C. We will try to get the agent's name.
- (30) Freethought Directory. A 4-page publication, THE DIRECTORY OF U.S. FREETHOUGHT GROUPS AND PUBLICATIONS, 1975-76 is offered free by the Denver Freethinkers Society, P.O.Box 1621 Englewood, Co. 80110.
-

QUESTIONS & ANSWERS

- (31) Augustine Age. LEE EISLER submits the following, and ends it with a question:
- BR talks — on the LP "Speaking Personally" (Riverside 7014/15, out of print) — about the way original thinkers, for the most part, have been persecuted, mentioning Buffon, Galileo, Einstein.
- "I think that liberty in many of its forms is almost bound to be less than it was in the 19th Century...You cannot do your work as an individual unless you happen to be something like a poet. It's no good being a composer, for then you'd have to get people to perform your music. A poet can be an individual still; but most people can't. I think the effect of the growth of authority will be extremely unfortunate...And I think the arts, and especially literature, will suffer very much. But there will always be some rebels, some who manage to produce immortal work before they're put to death, and that's what we've got to hope for....
- "I think of the ancient world. After Augustus, when the evils of turmoil and civil war had been put an end to, genius also was put an end too. Perhaps we shall get an Augustine, or a post-Augustine, Age, an Antonine Age; that's the best we can hope for. But I don't think that Europe, at any rate, will produce great men. I think perhaps the negroes will, because I think they'd be very recalcitrant to discipline. You might quite easily get geniuses among the negroes, but I don't think you'll get it in the white countries, because we've proved ourselves too anarchic. Our anarchism is destructive. You see, a certain amount of anarchism is necessary to genius, but not so much that the genius can't live."

The question: What did BR probably have in mind when he used the words, "Augustine Age" or "Antonine Age"?

- (32) BR's favorite detective stories. HENRY KRAUS supplies an answer to JIM WILLIAM's question (NL9-37), that he found in Ved Mehta's book, "Fly and the Fly-Bottle," (Little, Brown & Co., Boston. Undated; probably 1962):
- "I have to read at least one detective book a day,' said Russell, 'to drug myself against the nuclear threat.' His favorite crime writers were Michael Innes and Agatha Christy. He preferred detective stories to novels because he found that whodunits were more real than howtodoits. The characters in detective stories just did things, but the heroes and heroines in novels thought about things...If you compared sex scenes in the two media, in his sort of pastime they got into and out of bed with alacrity, but in the higher craft the characters were circumspect; they took pages, even to sit on the bed. Detective stories were much more lifelike. The paradox was that authors of thrillers did not try to be real, and therefore they were real, while the novelists tried to be real, and therefore were unreal. The things we most believed to be unreal — nuclear war — might turn out to be real, and the things we took to be most real — philosophy — unreal." (pp.40-41)
- (33) BR-LW split. AL KRAVIG had asked what the reason was for BR's break with Wittgenstein. DONG-IN BAE suggests Chapters 10 and 18 of BR's "My Philosophical Development" as a good place to look for some answers.

CORRECTIONS

- (34) Member misquoted. In NL9-41, we (mis-)quoted DON JACKANICZ's reaction to Dora Black Russell's book "The Tamarisk Tree." We quoted him as saying, "Delightful!" What he actually said was:
- "I've read Dora Russell's book, which I found a fine autobiography. Her treatment of BR, while loving and understanding, apparently held nothing back. It was difficult and somewhat disenchanting to learn the details, at least from the author's point of view, concerning the break-up of their marriage and their divorce proceedings. To be frank — but with no intention of preaching, etc. — BR's 4 marriages have continued to disturb me."

We cannot explain the misquote. Pure error. Very sorry.

SUPPLEMENTARY REMARKS

- (35) Advertising by members (continued.) In NL 10-30 we told how BRS members could run the BRS ad on their own, if they wished to, "in their own campus newspapers or in other local publications."
- A word of advice may be appropriate, since some ads, even free ones, may not be productive. A case history will show what we mean:

Last year HARPER'S MAGAZINE offered to provide free ads in HARPER'S WEEKLY if we took ads in HARPER'S MAGAZINE. We accepted. The free ads in HARPER'S WEEKLY proved to be expensive, because we had to answer 19 inquiries, at about \$1 each, and the 19 inquiries produced only one new member. We cannot afford \$19 for one new member. We are no longer interested in free ads in HARPER'S WEEKLY.

If you run an ad in a regular newspaper -- even THE NEW YORK TIMES -- you may get some inquiries, because some people are curious and will answer an ad. But they are not likely to join the BRS because the fact is, most people in the general population -- the ordinary run-of-the-mill readers of newspapers -- would not be interested in joining the BRS.

The publications that have been productive for us -- a list which includes ATLANTIC MONTHLY, BULLETIN OF THE ATOMIC SCIENTISTS, HARPER'S MAGAZINE, THE HUMANIST, MENSA, THE NEW REPUBLIC, THE PROGRESSIVE, SATURDAY REVIEW -- are selective. They perform a screening process for us. There is a somewhat higher concentration of potential BRS members among their readers than among the general population. About 1 out of 6 inquirers produced by these publications joins the BRS, which is considerably better than HARPER'S WEEKLY's 1 out of 19.

The common denominator of the productive publications seems to be this: their readers are people who are interested in ideas, and read books. This is probably a pretty good rule of thumb for deciding whether or not to run an ad in a particular publication. Campus newspapers, for example, would clearly be OK, according to this rule. The ARMY TIMES, which has been suggested, would probably not be.

RECOMMENDED READING

(36) "Naturalistic Humanism", CORLISS LAMONT's essay, was recommended by BOB DAVIS, in his President's Letter of April 1. We will lend this essay on request.

*

BOOK REVIEWS

(37) "Russell in Review" Edited by J. E. Thomas and KENNETH BLACKWELL. Toronto: Stevens & Hakkert, 1976, xx + 268p., \$18 (\$12.50 to Russell subscribers, which includes all BRS members).

Reviewed by HARRY RUJA.

Those who attended the Russell Centenary Celebration at McMaster University in Canada in October 1972 will be pleased to have this volume to remind them of the stimulation and enlightenment they received. Those who did not attend and have a serious interest in Bertrand Russell will have in this collection of papers on various aspects of Russell's life and thought

a significant source of insights into his special qualities. This collection well deserves to take its place on one's bookshelf alongside the distinguished collection edited by Schilpp and published in 1944, as well as the more recent ones edited by Pears, Schoenman, and Nakhnikian.

It is difficult for me to pick a single favorite from among these well-written and informative papers, but I can pick a favorite two: S. P. Rosenbaum's "The Logic of a Literary Symbol" and Ronald Jager's "Russell and Religion." (The Rosenbaum appears also in the University of Toronto Quarterly, summer 1973, volume 42.) In an area which I have never seen explored before, Rosenbaum identifies a number of novels and poems — generally satirical — which portray Russell, or a reasonable facsimile thereto, in an ironic role — as iconoclast, lecher, sceptic, disembodied intellect, an idea or cause personified, or propounder or butt of various jokes. T.S.Eliot, D.H. Lawrence, and Aldous Huxley are among the better known of the authors who found Russell good "copy."

In a cryptic conclusion, Rosenbaum seems to promise a sequel to his charming essay. "For the literary symbolic logician," he writes, "a history of Bertrand Russell in song and story needs to be complemented by a study of Bertrand Russell through the looking glass"(p.87). I hope that Rosenbaum follows through on this intriguing promise.

That Russell was, after his adolescent years, a life-long enemy of theological obscurantism and ecclesiastical obstructionism is so well known that it may seem to border on the ludicrous to claim, as Jager does, that there was an enduring strain of platonism, i.e., transcendent-alism, in Russell's thinking (or, perhaps better, feeling) which was largely though never completely submerged in his later years. But Jager makes a good case, or at least says enough to suggest that there is a good case, for a contrary view. He makes good use of Russell's unpublished (but it is now available in Feinberg's Collected Stories of Bertrand Russell, 1972) early short novel (or quasi-novel since I see it more as a dialogue with names of protagonists casually attached to the ideas than a confrontation between flesh-and-blood creatures), The Perplexities of John Forstice. He finds there a "mystical intuition that this familiar material order...testifies to another order; an order of eternity certainly, of perfection possibly, and of divinity surely"(p.103). If this sounds incredible to those who know the Russell of "Why I Am Not A Christian," it would be well to look again at his own account in the Autobiography, volume 1 (Allen & Unwin, 1967, p.146; Little-Brown, pp. 220-22) of the feelings and thoughts which filled him as he observed Evelyn Whitehead writhing in pain from an angina attack, or to ponder these words of his (ibid., Allen & Unwin, p.13; Little-Brown, p.3) published in 1967: "I have sought love...because in the union of love I have seen, in a mystic miniature, the prefiguring vision of the heaven that saints and poets have imagined."

Jager dealt with this issue in chapter 10 of his book, The Development of Bertrand Russell's Philosophy (Allen & Unwin, Humanities Press, 1972), and he will no doubt write more on it. We look forward to reading what further he has to say on the subject.

I characterize briefly the other papers in this collection, many of which deserve fuller comment.

J.E.Thomas describes the celebrations in their manifold manifestations.

Cyrus Eaton briefly and Christopher Farley at greater length recount reminiscences of their associations with Russell. (The two essays are also in Humanist of Canada, November 1972, number 23.)

Kenneth Blackwell describes the resources of The Bertrand Russell Archives at McMaster University and projects their future.

Jo Newberry reports some of the results of her extensive research on Russell's work with pacifists in World War I.

Robert C. Marsh seeks to assess the impact of Russell's educational views on the contemporary world and concludes with a qualified optimism: "We have grounds for hope and reasons to work" (p.133).

John G. Slater asks, "Did Russell contribute to the philosophical study of politics? and, Did he defend a particular political philosophy? He answers No to the first question and Yes to the second, and then identifies the elements of that political philosophy.

In one of the more technical papers in the volume, I. Grattan-Guinness examines the mathematical and philosophical background of The Principles of Mathematics and concludes that though its appearance was of "national significance in awakening British mathematics and philosophy from its dogmatic slumbers" and of international and enduring significance in its exposure of basic paradoxes, it suffers from certain "philosophical unclarity" and inaccuracies (p.173).

A. J. Ayer writes on Bertrand Russell as a philosopher, clearly identifying the major themes of that philosophy.

C. E. Cassin, D. F. Pears, and N. L. Wilson deal with specific elements of Russell's philosophy, the first with "meaning," the second with "desire," and the third with "logical atomism." (The Pears paper appears also in his Questions in the Philosophy of Mind, London, Duckworth, 1975.) They all deserve close study.

The volume has a biographical index and an index of names and titles, and is supplied with five full-page illustrations.

Many who attended the celebrations will, as they work through the volume, keep thinking, as I did, of a paper that was read that is not here, I. F. Stone's provocative paper on Russell's advocacy of "preventive war." The Preface informs us that Stone preferred for it not to be published. An "unauthorized" copy is in The Bertrand Russell Archives, and a brief paraphrase is in Humanist in Canada, November 1972, number 23, p. 28. (See also my critical letter in the May 1973 issue of this magazine, number 25, pp.4-5.) Ronald Clark treats the issue fully in Chapter 19 of his Life of Bertrand Russell (Jonathan Cape, Knopf, McGraw-Hill-Ryerson, 1975), though I find his treatment not as sympathetic as it might have been. Best statement of the basic issues that I know of is Russell's "The Future of Mankind" in his Unpopular Essays (1950). The problem that Russell confronted then, viz., the survival of civilization in the nuclear age, is still with us. I for one am convinced that he analyzed it correctly and identified the solution, viz., world government. Whether that solution will be implemented in time to forestall Armageddon remains to be seen.

Department of Philosophy

The Big 3 reviewed. As all BRS members no doubt know by now, there have been 3 important books on BR (for the general public), published in the past 12 months: (1) KATHARINE TAIT's My Father, Bertrand Russell (Harcourt Brace Jovanovich, New York, \$8.95); (2) Dora Black Russell's The Tamarisk Tree: My Quest for Liberty and Love (Putnam's, New York, \$9.95); (3) Ronald W. Clark's The Life of Bertrand Russell (Knopf, New York, \$17.50).

We have accumulated some book reviews, which the BRS Library will lend on request. Numbers in parenthesis indicate which of the 3 books is reviewed:

INDIANAPOLIS STAR 1/4/76 (1,3). Thanks to CAROL MULL.
NATIONAL OBSERVER 1/31/76 (1,3) Thanks to HARRY CLIFFORD.
NEWSWEEK 1/19/76 (3)
NEW YORK POST 2/6/76 (3)
NEW YORK REVIEW OF BOOKS 3/4/76 (1,2,3)

NEW YORK TIMES 1/15/76 (3)
NEW YORK TIMES BOOK REVIEW 2/15/76 (1,2,3)
NEW YORKER 2/2/76 (1)
SATURDAY REVIEW 1/10/76 (1,2,3)
TIME 1/12/76 (1,2,3) Thanks to AMY BLOCK and CAROL MULL.

WALL STREET JOURNAL 1/15/76 (1,2,3) Thanks to ALVIN HUNTER

* To borrow the reviews, write to Don Jackanicz (BRS Library), 3802 N. Kenneth Avenue, Chicago, IL 60641.

BRS LIBRARY

(39)

The Library Committee, established at the December 1975 Annual Meeting (NL 10-10), is chaired by DON JACKANICZ. GARY SLEZAK is Co-chairperson. Here are highlights of Don's report:

. The Library plans to accumulate all kinds of items related to BR — books primarily, but also films, tapes, phonograph records, photographs, newspaper clippings, articles from periodicals — for the purpose of making them available to members and to responsible non-member organizations.

. The Library now contains 14 items, as follows:

1. Coronet Film: BERTRAND RUSSELL DISCUSSES PHILOSOPHY. 14 minutes, b&w.
2. PRINCIPLES OF SOCIAL RECONSTRUCTION.
3. PROBLEMS OF KNOWLEDGE AND FREEDOM, by Noam Chomsky.
4. THE RIGHT TO BE HAPPY by Dora Black Russell.
5. THE POLITICAL AND CULTURAL INFLUENCE (of America on Europe).
6. BR's paper in LIVING PHILOSOPHIES
7. BR's Introduction to THE NEW GENERATION, Calverton & Schmalhausen, eds.
8. CATALOGUE OF THE EXHIBITION (at McMaster U. 1972).
9. ROADS TO FREEDOM: SOCIALISM, ANARCHISM AND SYNDICALISM.
10. A HISTORY OF WESTERN PHILOSOPHY.
11. THE CONQUEST OF HAPPINESS.
12. NEW HOPES FOR A CHANGING WORLD
13. FREEDOM VERSUS ORGANIZATION
14. DEAR BERTRAND RUSSELL

Our thanks to these members, who have made the initial contributions: Peter Cranford (1), Bob Davis (5,6,7,13), Lee Eisler (10), Don Jackanicz (2,3), Dan McDonald (4,8,9,14), Gary Slezak (11,12).

- * . Members may borrow any item by writing to: Don Jackanicz (BRS Library), 3802 N. Kenneth Avenue, Chicago, Il. 60641. There is no fee for borrowing. (Exception: a \$3 fee for the film, which goes toward the purchase of other materials.) The borrower pays postage, not in advance, but when the item is returned. Books and other printed matter may be borrowed for 3 weeks, records and tapes for 2 weeks, films for 1 week. If a longer loan period is needed, for a special reason, please discuss it in advance with Don.
- * . If you would like more information about Library items, ask Don to lend you the Item-Sheets, which give brief descriptions.
 - . Members are invited to contribute items they would like to share with other members. (Incidentally, paperbacks have the merit of costing less to mail.) Contributions will be acknowledged.
 - . Don will welcome all suggestions connected with the operation of the Library.

(40) Time-Life's BR film — 40 minutes long, black & white — is no longer available for rental or preview. It is for sale at \$275. Is there an angel out there who wants to buy it for the BRS Library? (Thanks to JIM WILLIAMS for bringing this film to our attention.)

FINANCES

(41) Contributions. We thank the following members for contributions, received since the last Newsletter: HARRY CLIFFORD, JOHN COCHRANE, PETER CRANFORD, JIM MC KEOWN, JIM MARTINSON, JOE NEILANDS, AND BRUCE THOMPSON.

BRS BUSINESS

(42) Time to vote for Directors. At the end of this Newsletter is a ballot. Please use it to vote for 5 candidates to fill the upcoming 5 vacancies on the Board of Directors.

The 5 candidates — proposed by the Elections Committee — are Directors at present. Their current term expires January 1, 1977. They are candidates for re-election, for 3-year terms starting 1/1/77.

In other words, there are 5 names on the ballot, and we ask you to vote for all 5. If that sounds something like an election, communist style — with no opposing candidates — the reason for it is that no other names were submitted by members. Any member may submit names (NL 10-7); none were submitted this year. We hope some of you will submit names next year.

Why bother to vote this year, when there are no opposing candidates? When you vote, you indicate your support of the idea that directors should be elected by the entire membership rather than only by those who attend the Annual Meetings. We ask your support for this idea.

Here are the 5 candidates:

- . KENNETH BLACKWELL. Founding member. Archivist of the Russell Archives.
- . LESTER DENONN. 1 of our 2 honorary members. Distinguished lawyer. An early Russellite, collector of BR's works, editor of The Wit and Wisdom of Bertrand Russell(1951), Bertrand Russell's Dictionary of Mind, Matter and Morals(1952), The Basic Writings of Bertrand Russell(1961, co-editor.)
- . DANIEL T. MC DONALD. Doctoral candidate (anthropology, NYU).
- . J. B. NEILANDS. Founding member. Chairperson, Committee on Science. Professor of Biochemistry, UC Berkeley.
- . STEPHEN J. REINHARDT. BRS Treasurer. DuPont executive

Please vote.

SUGGESTIONS

(43)

Walking. "In reading Clark's Life of Bertrand Russell," writes DAN BOND, "I noticed on Page 212 the breakthrough that BR achieved with Joseph Conrad. 'Then we went for a little walk, and somehow grew very intimate.' The Peripatetics knew the value of walking for increasing the understanding, the flow of ideas, along with the flow of blood. BR was a great walker. Does BRS sponsor any walks for its members?"

LOCAL CHAPTERS

(44)

Chicago. GARY SLEZAK reports:

The Chicago Chapter has met 5 times since the beginning of 1976. The following books have been discussed at our meetings: Freedom and Organization, An Inquiry Into Meaning and Truth, Marriage and Morals, Why I Am Not A Christian, and Unpopular Essays. We have also had lively discussions of Clark's biography and Kate's My Father, Bertrand Russell.

Our meetings are held monthly — usually on a Wednesday night — and last approximately 3 hours. We usually number about 6, though we will gain 2 or 3 new members this summer. The meetings are getting better each time. The chapter has been active for almost 2 years now, and we've gotten to know each other fairly well, which is an additional asset. Each of us has ordered a Bertrand Russell T-shirt from Warren Street Screen Press in Cambridge, Mass. It is still undecided whether they will be required dress at future meetings!

For our July meeting, we're driving up to Dr. McKeown's, in Kenosha, Wisconsin, for a Sunday afternoon discussion of Authority and the Individual. We'll hold a special meeting later in July, when Kate comes to Chicago to lecture at U of C. We hope she'll have time to spend an evening with us.

Prof. J. B. Neilands with models of ferrichrome and enterobactin.

“PARASITISM” AT THE MOLECULAR LEVEL: Phage, Colicin M, Antibiotic, and Vital Iron Transport Compound Compete For Same Receptor Site In *E. Coli*.

Professor J. B. Neilands and three of his graduate students in the Department of Biochemistry, University of California, Berkeley, have discovered an intriguing phenomenon: A bacteriophage, an antibiotic, a protein (colicin M), and a critically important transport molecule for ferric iron all compete for the latter's receptor site on the outer cell membrane of *E. coli*.

Since this receptor site was originally evolved to aid the microbes in the capture of highly insoluble ferric iron, the competition of phage for the same site may represent a remarkable case of a “parasite” (phage) exploiting some aspect of the molecular configuration of that complex, to effectively vie with the iron-bearing compound for attachment to the cell surface.

Similarly, colicin M, a protein antibiotic secreted by certain bacteria, apparently has a configuration that

fits it to the same receptor site.

As Neilands expressed it in an interview with Lab News, this apparent convergence of molecular evolution makes the iron receptor site an “Achilles' pore” for *E. coli*. Iron is absolutely essential for cell respiration and as a cofactor of ribotide reductase, an enzyme on the DNA synthesis pathway which cannot be bypassed. Thus, competition for this site by a phage and by a killer substance from other bacteria represents a kind of “chemical warfare” that exploits one of *E. coli*'s most vulnerable points.

The new discovery is an outgrowth of research Neilands began two decades ago on the isolation and characterization of “high affinity” ferric iron transport compounds, collectively called “siderophores.” These

LAST MINUTE ITEMS

(46A)

BR-LW seminar, titled "Russell & Wittgenstein", will be offered this fall at University of Wisconsin - Parkside (Kenosha), Thursday evenings, 6:30 -9:15 P.M., starting September 9. Registration the previous week. Prerequisite: 9 credits in philosophy. We thank THOMAS CHARLES TASKONIS for this information.

(46B)

United World Federalists of Japan, continued. As a supplement to Item 4, we reproduce the (August) schedule of the UWF-J in the USA, on the next 2 pages.

(46B) SCHEDULE (A-course for middle-aged group)

Sunday, 15 August

Leaving Tokyo 18:15 by PA-008
Arriving Los Angeles 12:05
Reception and send-off party at Mankind Center;
Meeting with world federalists and other

Monday, 16 August

Leaving Los Angeles 17:00 by air
Arriving San Francisco 18:04

Tuesday, 17 August

Morning; Visiting the Mayor, Round-table talk at the Center of World
Citizens Assembly
Afternoon: Sight-seeing

Wednesday, 18 August

Leaving San Francisco 10:00 by air
Arriving Chicago 15:54

Thursday, 19 August

Morning: Meeting with world federalists at the Chicago branch of WAWF;
Visiting the Chicago University
Afternoon: Sight-seeing

Friday, 20 August

Leaving Chicago 10:30 by air
Arriving Philadelphia 13:20
Meeting with Quakers at the World Friends Center

Saturday, 21 August

Leaving Philadelphia by bus
Arriving New York

Sunday, 22 August

New York
Meeting with world federalists and world pacifists as well at the
office of NGO and others

Monday, 23 August

New York
Visiting U.N. Headquarter; Meeting with the Secretary General Kurt
Waldheim and members of 47 nations special committee

Tuesday, 24 August

New York
Visiting U.N. Headquarter and others

Wednesday, 25 August

Leaving New York 12:00 by PA-801

Thursday, 26 August

Arriving Tokyo 14:40

(46B)

SCHEDULE (B-course for youth group)

Sunday, 15 August

Leaving Tokyo 18:15
 Arriving Los Angeles 12:05
 Reception and send-off party at the Mankind Center
 Meeting with world federalists and others

Monday, 16 August

Leaving Los Angeles 17:15 by bus

Tuesday, 17 August

Arriving Las Vegas 00:35
 Leaving Las Vegas 03:20 by bus
 Arriving Salt Lake City 15:10
 Meeting with world pacifists and others

Wednesday, 18 August

Leaving Salt Lake City 09:15 by bus
 Arriving Cheyenne 19:35
 Leaving Cheyenne 20:30 by bus
 Arriving Denver 22:55

Thursday, 19 August

Morning: Meeting with world pacifists and others
 Leaving Denver 12:15 by bus

Friday, 20 August

Arriving Kansas City 05:15
 Leaving Kansas City 08:15 by bus
 Arriving St. Louis 13:15
 Leaving St. Louis 13:45 by bus
 Arriving Chicago 20:15

Saturday, 21 August

Meeting with world federalists at the Chicago branch of WAWF

Sunday, 22 August

Leaving Chicago 13:30 by bus
 Arriving Buffalo 05:15
 Leaving Buffalo 05:30 by bus
 Arriving Niagara Falls 06:35
 Leaving Niagara Falls 10:05 by bus
 Arriving Buffalo 11:10
 Leaving Buffalo 12:01 by bus
 Arriving New York 20:00

Monday, 23 August

New York
 Visiting U.N. Headquarter; Meeting with the Secretary General
 Kurt Waldheim and members of 47 nations special committee

Tuesday, 24 August

New York
 Visiting U.N. Headquarter and others

Wednesday, 25 August

Leaving New York 12:00 by PA-801

Thursday, 26 August

Arriving Tokyo 14:40

BALLOT

5 persons are to be elected to the Board of Directors, for 3-year terms, starting January 1, 1977.

Please make a checkmark after the names of 5 candidates, below, for a total of 5 checkmarks. (Brief remarks about each candidate are given in Item 42.)

Kenneth Blackwell ()

Lester E. Denonn ()

Daniel T. McDonald ()

J. B. Neilands ()

Stephen J. Reinhardt ()

Remarks (optional) _____

Your name _____ Date _____

Your address _____

Please remove this page from the Newsletter and mail it to The Bertrand Russell Society, Inc., R. D. 1, Box 409, Coopersburg, Pa. 18036.

Note: to have your vote count, ballot must be postmarked no later than October 1, 1976.

NEWSLETTER #12
November 1976

- (1) The BRS Psychology Symposium drew a full house (3). The program for the BRS at APA (philosophy) is set (61). 5 Directors are re-elected (no surprise)(12). 7 BR films are listed (15). Hook's article is making waves (23-26). A visit to P------(29). The BRS Library is growing (52). The Army failed to appear at the chemical weapons symposium (60). More about BRS aims (70). The index is at the end (69). An asterisk in the left column indicates a request or an offer to lend.
-

COMING EVENTS

- (2) Next Annual Meeting will be in Los Angeles, February 4-5-6, 1977. Details will come in a letter from President BOB DAVIS.
-

RECENT EVENTS

- (3) "The psychologist nobody knows." That was the slogan of the BRS Symposium, held in Washington on September 5th, during the Annual Convention of the American Psychological Association.
- The Symposium came into existence because PETER CRANFORD, himself a clinical psychologist, believes that most psychologists are unaware of BR's very considerable contributions to psychology. Peter wanted to spread the word.
- His was the program, as presented:
- . PETER G. CRANFORD, Chair: "The Relevance of Bertrand Russell to Psychology."
 - . JACK PITT, California State University: "Bertrand Russell and the Logic of the Double-Bind."
 - . THOMAS W. SIMON, University of Florida: "Russell, Practical Philosophy, and Philosophical Therapy."
 - . ALBERT ELLIS, Institute for Advanced Study in Rational Psychotherapy: "Bertrand Russell and Rational Emotive Therapy."
- Peter describes the evening this way:
- After initial difficulties of which you have been informed (NL11-2), the BRS scored a gratifying success at the Washington meeting. Over 90 people crowded the Chinese Room of the Mayflower Hotel, and heard an excellent and well-balanced panel discuss many facets of Russell's association with psychology. KEN BLACKWELL's 4-page Russell Book-List (with asterisks added to indicate books of particular relevance to psychology) and the BRS Fact Sheet were distributed to those attending, a number of whom were obliged to sit on the floor when available seats

were exhausted.

At the end of the verbal presentation, the film was shown to an audience which had strongly protested the suggestion that it might be too late in the evening to put it on.

Some members continued the discussion far into the night, and it is rumored that daylight was rapidly approaching before everyone was bedded down.

BRS members present included MARTIN GARSTENS and wife, ED HOPKINS, and HERB LANSDELL, as well as all members of the panel. Was any other BRS member present?

There'll be another BRS session next year, when the APA meets again. HERB LANSDELL will be in charge. His address: 8412 Harker Drive, Potomac, Md. 20854.

If you'd like to read the Symposium papers, borrow them from the BRS Library (c/o Don Jackanicz, 3802 N. Kenneth Avenue, Chicago, Il. 60641.) 2 of the 4 papers are already in the Library, and the other 2 are expected.

We have some posters left over, announcing the Symposium. Excellent picture of BR smoking his pipe. 8½ x 11 on light cardboard. When requesting one, send about 20¢ in stamps, to cover postage, etc.

REPORTS FROM OFFICERS

(4)

President Bob Davis reports:

My attempts to have the Annual Meeting at UCLA have come to naught; if it is not an academic conference sponsored by a department, UCLA wants none of it. I am in contact with city officials, with a view to finding a site. I will look for a hotel in the UCLA area or perhaps at the beach. I will send all members a letter giving details, when arrangements have been completed. It will tell how to make reservations, etc.

I would appreciate your suggestions for the Annual Meeting's program or agenda. Please write me, at 7025 W. Franklin #86, Hollywood, Ca. 90068.

I have gotten more information on Red Hackle. See (41).

As reported elsewhere, our Psychology Symposium went very well. We are now organizing something for members who wish to work on problems that interest them, in psychology and philosophy. More about that later, in my letter.

I have read, and recommend, still another CORLISS LAMONT book. See (43).

As President, I am planning to visit Britain in December. I hope to see JOHN SUTCLIFFE, Rev. Michael Scott, The BR Peace Foundation, Cambridge, and possibly LADY RUSSELL. If anyone needs an errand done there, please send me details so I can decide whether I'll be able to handle it. Naturally I look forward to this trip. I think I'll re-read Pickwick Papers to get into the proper spirit.

I will attend the Amnesty International west coast regional meeting later (in October), and will discuss the possibility of having the BRS Human Rights group adopt prisoners in collaboration with AI. If I get positive results, I shall write all BRS members who have expressed interest in the Universal Human Rights Committee.

Treasurer Steve Reinhardt reports:

(5)

For the quarter ending 9/30/76:

Balance on hand (6/30/76).....	1551.04		
Income: 18 new members.....	187.00

	2890.05		<u>2890.05</u>
Balance on hand(12/31/75).....			<u>1173.14</u>

*The period is not quite one full year; about 11 months. We decided to end the BRS's 2nd fiscal year on 12/31/75 (instead of letting it continue to 2/7/76), so that future BRS fiscal years would coincide with the calendar year.

REPORTS FROM COMMITTEES

(7) BRS-Britain(John Sutcliffe, Chairperson):

John has been in touch with the following organizations, to explore the possibility of cooperation: Rationalist Press Association, H.G. Wells Society, Anti-Apartheid Movement, Friends of the Earth, Amnesty International, United Nations Association, Committee on Nuclear Disarmament, and Child Action Poverty Group.

(8) Library Committee (Don Jackanicz, Chairperson):

See (51).

Science Committee (J. B. Neilands, Chairperson):

(9) A report by Joe Neilands on the American Chemical Society Symposium on chemical weapons, held August 31st in San Francisco, and chaired by him, appears on Page 25.

(10) "The local chapter of the Science Committee of the BRS will co-sponsor a discussion, 'Disarmament and Justice,' on Thursday, October 21, here on the Berkeley Campus. We are doing this with the War Resisters League and with a pacifist group here called Pacific Life Community."

PHILOSOPHERS' CORNER

(11) The BRS/APA program, December 28, 1976 — for the meeting in Boston of the American Philosophical Association (Eastern Division) — is reproduced (61). Abstracts of papers: (67)(68).

THE MEMBERS VOTE

(12) Directors re-elected. BRS members BLACKWELL, DENONN, MC DONALD, NEILANDS, and REINHARDT have been re-elected, by mail ballot, for 3-year terms starting 1/1/77, as BRS Directors.

The reason for electing directors by mail is that it permits the entire membership to participate rather than just the relatively few members who attend Annual Meetings. But the "entire membership" (of about 175) did not vote; only 29 voted, about 1 in 6, not many more than the number who attend Annual Meetings. We like to think that this was because, in this particular election, the outcome was not in doubt. (There were 5 candidates for 5 openings; all were going to be re-elected no matter how small the vote.)

There is room for improvement.

BY BERTRAND RUSSELL

- (13) Freedom. The New Haven Journal-Courier has a short quotation, headed "Good Morning," daily on its front page. On August 13, 1976, it read:

"Freedom in general may be defined as the absence of obstacles to the realization of desires."

Bertrand Russell

Our thanks to HERB VOGT.

- (14) BR in anthologies. Some people first become aware of BR through an anthology that contains something by or about BR. Such anthologies are often used in freshman college English courses. Here are some anthologies:

FROM THOUGHT TO THEME: A RHETORIC AND READER FOR COLLEGE ENGLISH, 2ND EDITION. Ed. William F. Smith and Raymond D. Leidlich (New York, Harcourt, 1968). Contains:
 ."The Social Responsibility of Scientists," from BR's Fact & Fiction.

THE NORTON READER: AN ANTHOLOGY OF EXPOSITORY PROSE, REVISED. Ed. Arthur M. Eastman (New York, Norton 1969). Contains:
 ."On the Nature of Truth and Falsehood," from BR's Philosophical Essays.

CLASSIC AND CONTEMPORARY READINGS IN THE PHILOSOPHY OF RELIGION, 2ND EDITION. Ed. John Hick (Englewood Cliffs, N.J., Prentice-Hall, 1970). Contains:
 ."The Existence of God," the debate (N111-15) originally broadcast in 1948 on the Third Programme of the BBC, between BR and Fr. Copleston, S.J. of Heythrop College (England) and the Gregorian University (Rome).
 ."On Death and the Mystical," by Wittgenstein, from the Tractatus.
 ."Gods," by John Wisdom, a student of Wittgenstein's.

PHILOSOPHY AND POLITICAL ACTION: ESSAYS EDITED FOR THE NEW YORK GROUP OF THE SOCIETY FOR PHILOSOPHY AND PUBLIC AFFAIRS. Ed. Virginia Held, Kai Nielsen and Charles Parsons. (New York, Oxford, 1972). Contains:
 ."Russell, Radicalism, and Reason," by Stuart Hampshire.

* Know of any others?

Our thanks to TOM TASKONIS for all the above.

- (15) BR films. The following survey of BR films was made by DON JACKANICZ.

From the information I have been able to gather, there now exist at least seven commercially distributed films concerning Bertrand Russell. The Bertrand Russell Society presently possesses one of them in its Library. Certainly it is desirable that the Society acquire the other six.

Individual members or groups within the Society would find these films of great value; it appears to be a tradition that at the annual meeting a Russell film is shown. Prices for both rental and purchase are increasing over time, and some or all of these films may soon be withdrawn from order catalogues. Although the cost of purchasing films is rather high, in the long run purchase is preferable to repeated rental of the same titles. The three firms have each expressed a genuine interest to be of help even though none can offer a discount to the Society or to any individual member.

I recommend that the Society act to acquire each of the films. Perhaps Society funds could be appropriated. Perhaps a member or members would be willing to contribute toward their purchase. The following describes the seven available films. I trust all members will consider their worth and will make their opinions known as to whether the acquisition of these films should be a major Society goal and, if so, how this should be done.

1. Bertrand Russell Discusses Philosophy; the one film now owned by the Society; this and the following four films are approximately 13½ minutes long, are in black and white, and are 16 mm.; each of these five are interviews of Russell by Woodrow Wyatt and are available in printed form with eight others in Bertrand Russell Speaks His Mind (Cleveland: The World Publishing Co., 1960); on the copyright page of this book the following appears which may give reason to suspect all thirteen interviews may be available: "This is a transcript of a Television Series filmed and produced in England by VanCon Productions and distributed by Telemat Sales Limited."; each of the five are available for what was said to be "a short time longer" from Coronet Films/65 E. South Water St./Chicago, Ill./60601//312-332-7676 at the price of \$31.25 per film; no rental or previewing.
2. Bertrand Russell Discusses Happiness.
3. Bertrand Russell Discusses Mankind's Future.
4. Bertrand Russell Discusses Power.
5. Bertrand Russell Discusses the Role of the Individual.
6. Bertrand Russell; 30 minutes, black and white, 16 mm.; produced by the National Broadcasting Company in 1958 for its "Wisdom Series"; the following is descriptive information supplied by Films Inc.: "The noted philosopher, mathematician, and Nobel prize winner talks about his 'eighty years of changing beliefs and unchanging hopes.' He tells what he feels he has learned and what he feels he has not learned in his long, distinguished career, discusses the present needs of the world and his hopes for the future."; available from Films Inc./733 Green Bay Road/ Wilmette, Ill./ 60091// 312-256-4730 at the price of \$175.00 for purchase or \$21.00 for rental; no previewing.

7. Bertrand Russell; 40 minutes, black and white, 16 mm.; produced by the British Broadcasting Corporation; no available printed description; available from Time-Life Films / 401 N. Michigan Avenue / Chicago, Il. / 60611 // 312-467-9700, at the price of \$275.00; no rental or preview.

SHORT & SWEET

- (16) "Near Harvard Yard I used to eat in a cafeteria where the food was cheap but not very good," says William Jovanovich. "I would sit at a long public table where on many occasions there also sat the philosopher, Bertrand Russell. One day I did not contain my curiosity. 'Mr. Russell,' I said, 'I know why I eat here. It is because I am poor. But why do you eat here?'" 'Because,' he said, 'I am never interrupted.'

From a Commencement Address given at Colorado College, May 30, 1966. Reprinted in The American Scholar, Vol.36, No. 1, p.40. Winter 1966-67.
Our thanks to STEVE REINHARDT.

BR'S INFLUENCE

- (17) Jimmy Carter. The Hugh Sidey article in TIME, 9/6/76, titled "The Presidency/ A Man Among Old Friends," contains this paragraph:

A few days ago, Carter plucked out Bertrand Russell's "A History of Western Philosophy." He handled it gently, like an old friend, opening the worn pages carefully and glancing at familiar lines. "I've read it three or four times," he said.

- (18) B. F. Skinner. "Through articles in 'The Dial' in 1927 he was led to Bertrand Russell's book, "Philosophy," and then, on the basis of Russell's qualified enthusiasm, to John B. Watson's doctrine of behaviorism."

From Allan Lacy's book review in "The Chronicle of Higher Education" (9/7/76) of the first volume of Skinner's autobiography "Particulars of My Life" (New York, Knopf, 1976).

Our thanks to DON JACKANICZ for both of the above.

PUBLICIZING BR

- (19) Libraries. "After it has been approved by the Indianapolis Public Library, literature may be placed on a public table, for distribution. I imagine other city libraries have a similar arrangement," writes CAROL MULL.
Some libraries have bulletin boards where approved notices may be posted, instead of a public table.
Members who would like to help spread the word about BR (and the BRS) through their public library should post the BRS Fact Sheet ("Some facts about The Bertrand Russell Society, Inc.") on their library's bulletin board, or make a few photocopies of it and place them on the library's public table.
The BRS Fact Sheet is part of the Information Packet that was sent you when you originally inquired about the BRS. If you can't locate yours, ask Carol for one. (Mrs. Carol Mull, 240 S. Chester Avenue, Indianapolis, In. 46201.)
- (20) Information Packet. For the benefit of older members, and also for the record, here is what today's Information Packet contains: (1) Letter of Invitation (to join), revised 8/76; (2) Fact Sheet, revised 8/76; (3) Russell's 2 Audiences, revised 8/76; (4) The BRS has no Conformity Requirement; (5) What Kind of People Join The BRS? (6) BR on the subjection of women; (7) Presentation of the Nobel Prize; (8) Members Reply to a Questionnaire; (9) BRS's Program at APA (philosophy), 12/76.
- (20.5) "Serials Review", a new publication destined for library reference shelves, useful to scholars and other researchers, has written up the BRS in its Inaugural Issue (Jan.- June 1975) p. 23. It is published by Pierian Press, which seems to be affiliated with Ohio State University Libraries. For those unfamiliar with the term, "serial", The BRS Newsletter is a serial; there is a series of BRS Newsletters.
- (21) Epstein head. Back in May 1974 we reported on our efforts to have replicas of Jacob Epstein's head of BR become available. (For a photo of Epstein, BR, and the head, see the Autobiography, Vol. III, p. 116. New York, Simon & Schuster, 1969.)
We regret that our efforts have been stymied by Lady Epstein, the sculptor's widow, whose permission to reproduce the head seems to be essential. Lady Epstein said no on the grounds that replicas would "infringe the interests of the owners of the original bronze" and that Epstein had been "very much opposed to commercialization of his work."
The owner of the original bronze -- BR's widow, EDITH RUSSELL -- does in fact want the replicas made, and has informed Lady Epstein of this.
If colleges, universities and libraries -- and individual admirers of Russell and Epstein -- were to purchase replicas of the head, that would hardly fit the usual notion of commercialism.
We have brought this to Lady Epstein's attention, but have had no further response from her.
-

ASSESSMENTS OF BR

(22)

PC on BR. PETER CRANFORD writes:

I have re-read Marriage and Morals, and I think the answer to Don Jackanicz's perturbation (NL11-34) may be found in its pages.

One question to be answered is: What should society's relationship to Russell be, even assuming his sexual activities to have been deplorable? Here I think we would all agree that even if he had been a rapist or a molester of children, we would still need to balance what in his life was socially beneficial against what was socially destructive. Certainly we would want such a standard to be applied to ourselves, just as the world has applied it to the many sexually aberrant who have made major contributions.

On the implied question raised by Don -- Did Russell lead a life that was consistent with what he seemed to represent? -- BR's "reply" can be found in Marriage and Morals. This was published in 1929 and probably written in 1927-28, some 5 or 6 years before his divorce from Dora.

BR's sexual ethics were derived from basically scientific premises. He thought the fundamental purpose of marriage was to perpetuate the species, and that the greatest duty and pleasure was in the raising of children. His first wife could not have children, and this with other factors of less significance brought about the dissolution of the marriage. Because of Victorian pressures from which he was intellectually but not emotionally emancipated, he delayed divorce for a number of years.

Russell deduced that a marriage should be open, that jealousy should be controlled, that adultery was not a world-shaking event that should affect a solidly-based marriage, that there were instinctive, legal, psychological and moral reasons why extra-marital sex should not lead to pregnancy, and that "there must be a certain similarity in regard to standards of value." His consistency of belief in the latter area led to another divorce.

When he sought happiness in another marriage to a much younger woman, love was not strong enough to overcome the problems related to sex discrepancy. He acknowledged that his marriage was a bad mistake. Divorce was the logical remedy.

His 4th marriage was a long and happy one.

I conclude that his personal sexual life is basically irrelevant to the assessment of his genius, but that it was nevertheless fundamentally consistent with his views, which are now being rapidly absorbed into Western ethics.

* * * * *

From time to time, attempts are made, in print, to diminish BR's stature. I therefore ask this question: To what extent, if any, should the BRS undertake to refute charges against BR, when these appear to be false or misleading?

*

(23)

Garstens on Hook. MARTIN GARSTENS writes:

There is a very serious problem about the image BR presents, arising from the recent 3 books (Clark, Tait, Dora).

A particularly devastating attack has appeared in "Commentary" (July 1976) by Sidney Hook. He makes several serious charges which I believe

are valid, and raise doubt as to whether BR's "good life" was one "inspired by love": (1) There is good evidence that BR had the virus of anti-Semitism (See "Commentary" and Clark). (2) There was a large element of hypocrisy in his "conscientious objection" to World War I. (3) His treatment of his daughter was thoughtless and cruel. There are many other similar items. I am afraid our picture of BR is going to have to be drawn "more accurately" than it has been in the past.

(24) Sidney Hook's "Bertrand Russell the Man", in "Commentary" July 1976 (62).

(25) Jackanicz Hook-ed and (possibly) un-Hook-ed. DON JACKANICZ writes:

I find Prof. Hook's article-review extremely disturbing. I must agree with parts of it even though I feel Hook has misjudged much. (Incidentally, I strongly disagree with his analysis of Dora Russell's autobiography, which I continue to hold a worthy book even though not written by a master of style.) Nevertheless I feel we must all examine what Hook has said. It is a well-executed statement of one view of BR. It is a strong challenge. This is the point of view from which I would begin a discussion of BRS aims.

Nowhere does Hook dispute BR's greatness as a philosopher. Rather, his arguments center on BR's life and personality as revealed in the 3 books. Hook offers specific examples of questionable incidents and questionable attitudes to mankind and life: anti-Semitism, aristocratic privilege, outbursts of extreme condemnation of individuals, etc. A claim is made that "the discovery that the moralist has failed to live up to his own precepts destroys faith in his sincerity, creates doubts about the principles he offers as guides, and deprives him of the authenticity -- and the moral authority -- that accrues to any person who seems willing to stake his life or reputation on his beliefs."

"Those who are concerned about Russell's image might well hope we will be spared further revelations about the events and intimacies of his life," says Hook.

What is to be made of this?

As I have expressed earlier, there is much of BR's life that continues to present difficulties to me. One example would be his 4 marriages. I would not criticize his enjoyment of sexual relations with so many women, but I cannot understand why BR continued to commit himself to marriage. The full details of the marriages have not yet been produced, but Dora Russell has provided considerable material. Perhaps some day issues such as this one of marriage will become more clear to me. But a man of such general wisdom is not one I would readily expect to suffer from so many personal problems of judgment. From certain sources I find BR was so extremely kindly and friendly and humane. From others this is contradicted strongly, as in the Hook article. I can only conclude, as have others, that BR was a strongly troubled man, subject like every person to so many problems of life. His powerful sense of reason continually conflicted with his equally -- or perhaps stronger -- emotional nature. He had a profound utopian vision, like so many wonderful men, but he also seems to have realized, as most of them did not, that it could not be fully or even substantially realized. Perhaps, in addition to the study of history and the events of his own time, BR came to see this through critical self-observation.

Yet I continue to think of BR as the foremost representative of the rational ideal I would have men follow. Learning more about his life tells me more about everyone and so much about myself. Every biographical revelation will only more strongly confirm for me that his psychological

and social ideas have great importance as they can even be applied to the person who had formulated them.

I very much would like to hear from other members. My feeling is that anyone admiring BR who can transcend the Hook article will know much about the proper aims of the Society.

(26) The above was written September 18th. What follows was written October 8th:

Our meeting at Gary Slezak's house on September 27th was memorable. Besides Gary and his wife, 7 people were there. We arrived around 7:30 and some of us stayed until after 12. We were to have discussed Authority and the Individual, but the group's concern turned to the Hook article, which was read aloud and discussed in sections. While Gary shared some of my thoughts, the others seemed not too concerned, and saw some of Hook's statements and views loaded, trivial, unprovable, false, misleading, subject to qualification, and in other ways of doubtful importance. I must say, speaking with these people was refreshing, after having been so taken by the Hook article. I still consider it a powerful anti-Russell (ie, anti-Russell the man, not the philosopher) position. I hope others will comment on it through the Newsletter or in other ways.

SPREADING BR'S VIEWS

(27) The Great Unbelievers -- from Voltaire to Bertrand Russell is a course being given by Paul Edwards at The New School for Social Research (65 Fifth Avenue, New York, N.Y. 10003.) (It began September 23rd.) Edwards is Editor-in-Chief of Macmillan's superb 4 (and 8) volume Encyclopedia of Philosophy, and the author of "How Bertrand Russell was prevented from teaching at the College of the City of New York," which is included in Why I Am Not A Christian (London, Allen & Unwin, 1957), which Edwards also edited.

Excerpts from the course description: "Bertrand Russell's objections to Christianity and other religions; critique of traditional sexual morality; educational theories; persecution and imprisonments; Russell on life without religious illusions."

Our thanks to DON JACKANICZ.

LEARNING MORE ABOUT BR

(28) Mail study scheme (continued). "I have to agree with ED HOPKINS (NL11-18)," says JOHN SUTCLIFFE. "My ideas on this subject, as it stands, would tie people up." John suggests an alternative: have a list of recommended books, and let the Newsletter also list members and the subjects they would like to discuss (by mail) with other members. Any further comments?

PENRHYNDEUDRAETH

(29)

John Sutcliffe visits Edith Russell. Excerpts from his letter:

Our short visit to Wales began with a journey that took my mother and myself across the flat Cheshire plain, by the old Roman walls of Chester and into the beautiful Welsh countryside. Eventually by way of such places as Roman Bridge, Betws-y-Coed, and Blaenau Ffestiniog, we arrived at our destination, Portmeirion.

Altogether we spent about 5 or 6 hours in Lady Russell's company.

We were cordially welcomed and taken into the main living room of Plas Penrhyn. It is an ideal room for study, for relaxation and for conversation. Its window looks out on the garden and on the view toward Portmadoc and the hills beyond. Above the fireplace was a small alcove window, in which rested a number of gifts Bertie had received, including a beautiful pair of ornaments sent by Ho Chi Minh at the height of the Vietnam war, for his birthday. Behind where I sat one bookcase contains all of Bertie's books; another contains the books that had come from Pembroke Lodge. There were also shelves containing books on philosophy and history. I saw a complete set of the Cambridge Ancient History, that they had both found very dry going, the complete works of Hegel and Schopenhauer in the original German, Cornford's work on Plato, Crossman's "Plato Today", a multi-volume set of Aristotle's works, Erdman's "History of Philosophy", and much more. Along the wall is Bertie's desk with its well-known chair...and the 90th birthday medallion made by Christopher Ironside. The rest of the desk is as it appears in countless pictures, with its silver ink stand, scissors, and letter-opener, and the tobacco bowl that had once been Wittgenstein's.

On both our visits we spoke of the problems between the BRS and the Foundation. I said it was unfortunate that they saw fit to antagonize those who could be their friends. Lady Russell agreed, but pointed out that the circumstances (of the Inland Revenues' claim for back taxes and the action of the Nottingham local authority to impose a compulsory demolition order on the building) had meant that they were working very long hours without much rest, and this had led to short tempers and a suspension of the usual rational processes and whatever manners accompany them. I felt we both knew that neither of us actually believed this explanation. On the 2nd visit, I said I hoped the differences between ourselves and the Foundation had not seriously distressed her. She said that they had, that they were silly and unnecessary. I am confident that Lady Russell will support us and do her best to ease the situation.

Lady R. was most concerned with how we saw our purpose. I said we were not a memorial society, but that we believed BR's ideas worthy of greater application in a world so divided against itself and so close to destruction; that in a personal sense we all felt a tremendous loyalty to him; that it was not possible to give a precise answer to that question; that it was BR's very human quality that had made life all the more valuable.

Lady R. then asked what we hoped to achieve. I outlined what I hoped the BRS could achieve, now that more than ever there was a need to express the hope for a rational alternative to the present state of things. Lady R. agreed, but asked, how — with so few and so scattered a membership — could we achieve anything. I said our diffuseness throughout the world was one of our advantages; it meant we could cover a larger area, that our members came from diverse backgrounds and cultures, with

wide interests and varied outlooks. Also that we hoped in future to cooperate with other organizations who are "compossible" with our aims. The use of this word interested her; she said, "Bertie had hoped it would be generally adopted."

On the way up to the first floor, we passed Epstein's sculpture of BR. Lady R. had once liked it, she said but did so no longer.

She commented on Dr. Cranford's enthusiasm for obtaining Red Hackle, and ordering it by the case. When I mentioned how good it was, she said I was to be careful to get only the "de luxe", not the ordinary.

I mentioned Clark's biography. Evidently he had insisted on writing it, and faced with this situation, Lady R. decided to cooperate with him. Although he saw her often, he made many errors in areas she has personal knowledge of, such as, that she came from Mormon parentage, that Freda Utley was "right wing", politically, that the post was delivered to Plas Penrhyn by bicycle, that the house stands at the end of a tree-lined lane (it is mostly lined with hedges and local farmers' barbed wire). Lady R. said these were only the errors she knew of, but how many more were there in that big book? We both agreed the book could not claim to be the definitive work on BR.

LOCAL CHAPTERS

- (30) Chicago. The Hook article was discussed. See (26).

NEWS ABOUT MEMBERS

- (31) Peter Cranford once invented a quiz show called "The \$64 Question". It became widely known on radio, and grew to be "The \$64,000 Question" before it disappeared from TV. Now it's back again, on syndicated TV, bigger than ever, as "The \$128,000 Question." (If you answer the \$64,000 question correctly, you get a chance at another \$64,000 question.) A man of many parts, Cranford.
- (32) Bill Eastman has recently "returned from six months in Japan. Interest in Russell (or British/American philosophy generally) is less than lively around Kyoto."
- (33) Corliss Lamont. The following appeared in The New York Times, in the "Notes on People" column, on July 17th: "Asking the full release of security files kept on him, Corliss Lamont has filed suits under the Freedom of Information Act against the Central Intelligence Agency, the Federal Bureau of Investigation and the Department of Justice. The 74-year-old Socialist author and teacher, a longtime proponent of Soviet-American friendship, has also filed a \$150,000 damage claim for violation of his rights by the C.I.A.
"In his suits in New York Federal District Court, Dr. Lamont said that the C.I.A. had withheld 'in their entirety, 76 separate records identified by the agency' and had deleted parts of 11 other records released to him at his request. The F.B. I., he said, withheld 'an unspecified number of records' in their entirety and deleted parts of 274 pages of records it released to him."

"A spokesman for Dr. Lamont's lawyers, Leonard B. Boudin and Michael Krinsky, said yesterday that the \$150,000 preliminary administrative claim is based on indications in the released C.I.A. documents that the agency had 'opened a lot of' his first class mail." Our thanks to DAN MC DONALD.

- (34) R.N.(Malt) Malatesha has taken a position as Assistant Professor of Special Education in the College of Education, Idaho State University, Pocatello, Id. 83209.
- (35) Kate Tait "came to Chicago," writes DON JACKANICZ," in late July to deliver a talk to a U. of Chicago philosophy class taught by Prof. Stephen Toulmin and Dr. Robert C. Marsh. Kate invited the class to be imaginary visitors to her childhood home, spoke of Beacon Hill School, and answered all questions. About 35 were present. The day before, GARY (SLEZAK) and his wife had invited me to their home for dinner with Kate. Afterwards we walked to DR. CAROLYN WILKINSON's, who hosted a small local Society meeting in her home. All this was thoroughly pleasant and memorable."
- (36) Herb Vogt and wife, Betty, attended the Olympic Games in Montreal. "Thrilling. My first Olympics were in Berlin, 1936. Later in Rome, 1960. The Opening Ceremonies in Munich, 1972. I am an Olympic fan as well as a BR fan. In Canada, we visited the museum of R. Tait McKenzie, surgeon, sculptor, etc., and purchased a miniature of 'The Joy of Effort' plaque, a large one of which I had seen as a student at Springfield College (Mass.) in the early 30s. Tell KATE TAIT I enjoyed her book as well as any of Anne Morrow Lindbergh's, whom I also admire."
- (37) * Request. When you take a trip and it's particularly enjoyable, tell us about it. It will probably be of interest to other members.

NEW MEMBERS

- (38) We are glad to welcome these new members:

BULLETIN BOARD

(40) Choral work. TOM HORNE has written "an 8-part choral work on an excerpt from the introduction to BR's 'Autobiography'". It is unpublished. If anyone has a choir that would like to sing it, or wants to help get it published, I can make a Xerox for him/her." Tom's address: 2824 E. Mission Lane, Phoenix, Az. 85024.

(41) Red Hackle. The BRS is not in the liquor business (more's the pity...it might help our treasury), but we think it might amuse some members to be able to sip the spirits that soothed the sage of Penrhyndeudraeth. That's why we keep providing data (thanks to the efforts of BOB DAVIS) on the availability of Red Hackle on this side of the Atlantic.

Here's what BR had to say about Red Hackle, in letters to Hepburn & Ross, Ltd.:

"You kindly offer to take back part of our supply of Red Hackle if we find ourselves over-stocked. But that is a state of affairs that we cannot believe to be possible. We shall get through the extra supply all too soon." 8 July 1960

"My house in London was recently entered by a burglar. He found 2 bottles of Red Hackle, consumed them on the spot, and thereupon considered further depredations unnecessary. I consider this a tribute to Red Hackle and accordingly I owe you a debt of gratitude. Will you

kindly send me two dozen bottles of Red Hackle to the above address in North Wales." 2 August 1963

From "Dear Bertrand Russell" (Boston, Houghton Mifflin, 1969), p.141-2.

In the USA, the following liquor wholesalers can provide names of retailers in their areas who can supply Red Hackle:

- .D.C.: Central Liquor Store, Inc., T/A Central Imports Ltd., 516 9th St. N.W., Washington, D.C. 20004
- .Florida: Hartley & Parket, Inc., 15800 N.W. 15th Avenue, Miami, Fl. 33169
National Wine & Liquor, 16601 N.W. 8th Avenue, Miami, Fl. 33164
Consolidated Seaboard Distributors, 9423 N. Main St., Jacksonville, Fl. 32203
Leon J. Gulden Associates, 2500 Hollywood Blvd., Suite 312, Hollywood, Fl. 33020
- .Georgia: State Wholesalers, Inc., P.O. Box 20238 - Stan, Atlanta, Ga. 30325
- .Maryland: Beverage Dist. Co. of Maryland, 3001 Cowan Avenue, Baltimore, Md. 21223
- .Nevada: Las Vegas Dist. Co., 4326 Aldebaron Avenue, Las Vegas, Nv. 89103
- .South Carolina: Ben Arnold Co., 700 Gervais St., Columbia, S.C. 29201
- .Texas: American Wines Importing Co., 1907 Edwards St., Houston, Tx. 77007

In Canada, Red Hackle may be bought or ordered in:

- .Ontario: as reported in N111-29.
- .Vancouver: through A.L. Duncan, Esq., Finnex Agencies, Ltd., 1525 Robson St., Vancouver 5. Phone: 684-2351

Here are some retailers who handle Red Hackle in Texas: Richards Store (Houston), Don & Ben's (San Antonio), Centennial Liquor Stores (Austin & Dallas); and in Florida: Jax Liquor Stores (Jacksonville), Big Daddy Stores (Miami & Fort Lauderdale.)

QUESTIONS & ANSWERS

- (42) Sartre, Camus. TOM TASKONIS would like to know "if anyone knows anything of BR's thoughts on Sartre, or perhaps Camus." Please send responses to the Newsletter, for forwarding.

RECOMMENDED READING

- (43) "The Trial of Elizabeth Gurley Flynn by The American Civil Liberties Union" by CORLISS LAMONT, recommended by BOB DAVIS in these words: "Anyone concerned with civil liberties will find this a very interesting book. It carries an enthusiastic endorsement by BR."
- (44) "The Pursuit of Power" by Barry Commoner (New York, Random House, 1976), recommended by LEE EISLER. "It tells specifically what we are doing wrong, and what we ought to be doing, about the energy problem, the

villain being the pursuit of profits. However, not everyone (including myself) will agree with Commoner's prescription (socialism) for dealing with the villain. I prefer Nader's prescription, that would retain privately-owned corporations, but make them behave, through federal charters, etc. If and when the state takes over the private corporations, there will be no recourse against arbitrary authority."

- (45) "Bertrand Russell's Best", ed. Robert E. Egner (London, Allen & Unwin, 1958), recommended by TOM TASKONIS. "For those looking for a whole passel of good quotations on subjects like psychology, religion, sex and marriage, education, politics, and ethics."
-

BOOK REVIEWS

- (46) "My Father, Bertrand Russell" by KATHARINE TAIT (New York, Harcourt Brace Jovanovich, 1975) and The Life of Bertrand Russell by Ronald W. Clark (New York, Knopf, 1976), reviewed by S.P. ROSENBAUM in the Toronto Globe Mail:

(We were going to postpone this review till next Newsletter, because this one is getting too fat, but since the review is, in effect, another assessment of BR, we decided not to delay it.)

The mind and personality of Bertrand Russell struck his contemporaries as so remarkable that the first accounts we have of the philosopher -- as distinct from his philosophy -- are in song and story rather than history. His extraordinary mixture of Apollinian genius and Dionysian drives led to his appearance in the poetry of T.S. Eliot and the fiction of D.H. Lawrence and Aldous Huxley some time before he began to be described in memoirs. To a number of Russell's acquaintances his advent seems to have been foreshadowed by that other witty mathematical logician Lewis Carroll and his illutator Tenniel in the character of the Mad Hatter. But Russell finally became too famous for the disguises of fiction: the literary symbol became a legend told by the memoirists, the most interesting of whom is, of course, Russell himself.

Russell's autobiographies are still the best place to begin reading about his life, yet the simplistic candor with which Russell narrates his life results in some curious distortions. Through his own looking-glass, Russell appears like the knife that Margot Asquith once compared him to: you cannot see him edge on -- he is visible only when turned flat.

The autobiographies beginning to accumulate from what might be thought of as Russell's extended family are adding dimensions to the many roles that Russell played during the 97 years of his life. Lady Ottoline Morrell's give a fuller picture of Russell the Edwardian philosopher and First World War pacifist. Dora Russell, his second wife, has recently published The Tamarisk Tree, an autobiography that includes the 12 years she was married to him, and illuminates Russell as feminist and educator. In both realms his practice diverged notably from his theory.

Most recently, Dora and Bertrand Russell's daughter has written her recollections. Katharine Tait's book is not another contribution to the genre of Bringing Up Father. It documents, instead, Russell's flat statement in his autobiography that despite his intense longing for children he failed as a parent. "He never gave his whole heart to anyone though he tried," she writes. "We were not loved for ourselves,

but as bridges out of loneliness. We were part of a charade of togetherness acted by a fundamentally solitary person. He played at being a father in the same way, and he acted the part to perfection, but his heart was elsewhere and his combination of inner detachment and outer affection caused me much muddled suffering." Her suffering began at the famous Beacon Hill school run by the Russells, and culminated in her conversion. "The doctrine of original sin," she explains, "gave to me...the same sense of intoxicating liberation my father had received from sexual emancipation. It was normal for me to be bad, and I need not feel ashamed." Earlier, however, Katharine Tait explained how she had once tried to find help in her father's book, The Conquest of Happiness, but discovered that his attributing unhappiness to the inculcation of puritan morals did not apply to Bertrand Russell's daughter.

"My Father, Bertrand Russell" is a rather sad, confessional autobiography, whose importance is to be found in the contrast it offers to Ronald W. Clark's attempt at a definitive life of Russell. The difficulties of writing an extended and detailed account of Russell's life -- one needs really to say lives -- are formidable. There are three stories to be told at more or less the same time and all are important. Russell's public career, his philosophical achievement, and his private life were significantly interconnected. It is not always the case that the private affairs of a great man impinge on his public accomplishments, as they did with Russell; and when the hero is celebrated as a man of thought as well as a man of action, the biographical demands are daunting indeed. How Russell's three lives interrelate is illustrated by the scandalous proceedings by which he was judicially deprived of a professorship at the City College of New York. Russell's three marriages (there were eventually to be four, with two mistresses and uncountable affairs along the way), his works such as Marriage and Morals, and his public advocacy of such unpalatable doctrines as pacifism and atheism led to the prosecuting attorney's claim that Russell's works (including presumably those on mathematical logic) were "lecherous, libidinous, lustful, venereal, erotomaniac, aphrodisiac, irreverent, narrow minded, untruthful, and bereft of moral fibre."

Of the three lives to be dealt with, Clark is best on Russell's public roles. He has made excellent use not only of the vast Russell archives at McMaster University but also of the documents in the Public Record Office that reveal in intriguing detail the exasperated and at times almost sinister ways that the Foreign Office tried to cope with Russell's pacifist activities during the First World War. Clark's account of Russell's advocacy, after the Second World War, of a Western preventive war against Russia is superb in its detail and in the objectivity of Clark's conclusion that "The real point is simply that Russell denied making certain statements he had certainly made, and accused his accusers of lies and distortions." The story of Russell's involvement with the Campaign for Nuclear Disarmament and later with the Committee of 100 should remain the standard account. "The Life of Bertrand Russell" is, in short, an important contribution to the history of Russell's times.

The biography of Bertrand Russell as a philosopher is given much less attention by Clark. Russell's works are mentioned as they are written and published, sometimes rather perfunctorily, and there is a general lack of analysis of Russell's intellectual nature. It is here and in his account of Russell's personal life that Clark's writing can be criticized. At its best there is a lack of crispness, of exactness, and at its worst, it is banal and clichéd. Consider the unintended humor of the following prose: "And as background, and never very far from his thoughts, there were high grand schemes of philosophical investigation, powered by a head of steam..." In his biographies of Einstein, Haldane, and

the Huxleys, Clark has shown himself capable of dealing with abstruse ideas in biography, but here there is a disproportionate absence of concern with the life of Russell's mind. One could not possibly tell from Clark's account, for example, what T.S. Eliot was getting at when he wrote that "it is a public misfortune that Mr. Bertrand Russell did not have a classical education." The ideas that molded Russell and that were modified by him require fuller treatment than they have been given in what will remain for some time the standard life of the English-speaking world's most famous modern philosopher. The intellectual biography of Russell is still to be written; for those who do not want to wait, there is again an autobiography at hand -- "Russell's excellent "My Philosophical Development."

In its treatment of Russell's private life, Clark's biography is both deeply interesting and very disappointing. It is here that the contrast with Katharine Tait's autobiography appears. With the partial exceptions of his relationships with Lady Ottoline Morrell and Lady Constance Malleon, Russell's personal relations are never convincingly portrayed in Clark's book. Katharine Tait's descriptions of Dora Russell, of Russell's son and heir and of Katharine herself have no counterparts in Clark. Russell's first wife is sketched in faintly, but there is practically no attempt to convey the personalities of Russell's other three wives. These failures may be partly the result of restricted documents -- there is no correspondence used between Russell and any of the last three, all of whom are still living. By contrast Clark's original use of Russell's fascinating correspondence with Ottoline is quite possibly the most interesting part of the private biography of Bertrand Russell. But the lack of documents does not explain why we are told so little about Russell's relations with his older brother. Again there is a lack of analysis in the biography. Somewhere in Clark's seven-hundred pages there ought to have been a discussion of the influence on the orphaned Bertrand of his only sibling, the notorious "wicked earl" who was convicted of bigamy in the House of Lords. Clark does suggest, implicitly at any rate, that Bertrand Russell was not a philosopher who happened to be an aristocrat, but an aristocrat who was also a philosopher. The two women he loved longest were both aristocrats, and he once confessed that he would like to have been a French aristocrat in the age of reason, just before the French Revolution. At times Clark's silence on Russell's personal relations is almost mysterious, as in the full account of Russell's relations with Ralph Schoenman, the secretary who many felt had made Russell a dupe for his own political aims and whom Russell finally disowned; the role played by Russell's fourth wife Edith in these and other matters concerning Russell's final political activities is mentioned in Clark's biography only in Schoenman's denunciation of her.

Russell's personal relations are finally so important to his biography because he failed so often in them. With his wives, with Lady Ottoline and Lady Constance, with Whitehead and Wittgenstein, with Lawrence and Eliot, with his own children, with Schoenman, something always went radically wrong. Constance Malleon's summary of it to Russell after loving and trying to love him for thirty years may be the most perceptive explanation, and it echoes Katharine Tait. "I see everything quite clear now, and it seems a dreary end to all our years. I see now that your inability to care for anybody, with the whole of you, for longer than a rather short time, must be more painful to you than it is to those who are able to continue caring in spite of everything." From Wonderland to Wasteland Bertrand Russell suffered from a fundamental

lack of integrity in the original sense of the word — of wholeness. The Russell family motto is not Know Thyself but Che Sara Sara. Russell seems never to have understood very deeply his role-playing fragmentariness that may have been a necessary condition of his genius. However it was, his biography as we have it is, to borrow the words from a book on Gertrude Stein, a study of Bertrand Russell in pieces.

(47)

"My Father, Bertrand Russell" by KATHARINE TAIT, reviewed by Brian Glanville in The Times (London), July 29, 1976:

We have had in recent months almost a plethora of what one might call Russelliana; and now this fine and moving memoir. Katharine Tait is an admirable writer, with a gift for simple, limpid, evocative prose. She is much clearer headed than Dora, her mother, that confused and passionate bluestocking, Wellsian figure, her ideas so much the simplistic product of her time. She is probably more mature and emotionally objective than her formidable, much loved, much resented father. Yet she knows that she possesses neither her father's matchless intellect nor her mother's phenomenal energy and competence.

As parents, Dora and Bertrand Russell Meant Well, that is the best you can say about them, the best, I suppose, that you can say about most modern parents, with this rider: that the Russells believed in their hubristic innocence that they had found the definitive method of educating children. Alas, this meant stifling common sense and instinct in favour of abstract theory, of letting babies cry themselves into exhaustion, of "curing" fears and phobias by subjecting the children to them in calibrated doses.

"He was such a kind man, my father, yet his method of education seems full of brutal assaults on the childish mind. Had he quite forgotten how a child feels?"

Mrs. Tait, though exasperated, never allows herself to forget the horrors of Russell's own childhood. If family life with Bertrand and Dora was hard enough, however, it was Paradise by comparison with life at Beacon Hill, the "progressive" school they founded, where Kate and her brother John found themselves having the worst of both worlds: the school was full of disturbed, aggressive children, their parents were at once tantalizingly near and, by intention, cruelly inaccessible.

When that marriage broke up, there was the beautiful Peter, Russell's third wife, in some ways a better and kinder companion to poor, plain, plump Katharine, but increasingly alienated by Bertrand's coldness, degenerating finally into a monster of guilt-inducing domesticity.

Shuttling between England and America, ill-equipped for the mundane difficulties of life, Katharine found solace at Radcliffe, and greater solace still in the Church; perhaps the ultimate rebellion against her father's rationalism. Her marriage, after joint missionary work with her husband, foundered; largely, she admits, through her own intransigence. But her father's last years brought her to a genuinely Christian love and forgiveness of which her book is the poignant manifestation.

BOOK REVIEWS REVIEWED

- (48) A. J. Ayer, to the Editor of The Times Literary Supplement (London), November 7, 1975:

Sir -- I think it a pity that Rosemary Dinnage, in her well-written review (October 31) of Ronald W. Clark's biography of Bertrand Russell, should have arrived at the silly conclusion that Russell "may yet be remembered for his love-letters rather than his works of logic." This is, indeed, an impression that one might gain from Mr. Clark's book, but Mr. Clark has strangely contrived to write a very long life of a great philosopher, without displaying the faintest understanding of his philosophy.

Our thanks to DON JACKANICZ.

- (49) Michael Burn, to The Times (London), November 14, 1976:

More from the Knocking Bertand Russell workshops. This time it is by Dr. A. L. Rowse. Your diarist (July 1) quotes him as having written recently: "The truth of the matter is that Bertrand Russell was a bloody humbug."

Would Rowse be thinking of the private humbug who paid all Professor Whitehead's household bills for many years, while allowing the professor to think that the money was coming from Mrs. Whitehead? Or the national humbug who wrote a letter to The Times (May 17, 1916) taking responsibility for an anonymous leaflet thought seditious, for which he was fined a hundred pounds and deprived of his lectureship at Cambridge? Or the colossal international humbug who kidded Einstein into calling him "wise, honourable, bold, and humorous...in a brutal and arid generation"?

Dr. Rowse is also quoted as unable to think "why Russell had such a success with Americans, except that their charity is inexhaustible". Training in historical research, as well as a little courtesy and kindness, could have led him to ask the reason from Russell's widow, who is American and was married to Russell for the last 18 years of his life.

"Superb stuff" is your diarist's comment on these comments of Rowse's; -- presumably -- for -- the -- compost heap on his allotment.

Our thanks to KEN BLACKWELL.

THE BRS LIBRARY

- (50) BRS Library address: c/o Don Jackanicz, 3802 N. Kenneth Avenue, Chicago, Il. 60641
- (51) Library Committee Report, Don Jackanicz, Chairperson:

From the first contribution to the latest, the Library has owed its character to those who have donated a variety of materials. An examination of the thirty items currently constituting the

collection will show that there is much more which might be contributed, but we should be pleased to have several rather unusual, rare, or expensive items which many members might not otherwise be able to examine. All members are encouraged to consider making a donation. And, equally so, all members are encouraged to consider using the resources of the Library. Donations are made not so that ever more materials are gathered together in one rarely visited location, but so that everyone concerned can benefit from a common collection. Every person making a contribution receives a letter of appreciation and is given recognition in the Newsletter. All interested in borrowing an item receive what I trust is a prompt reply.

As of September 27, 1976 twelve members or organizations have made contributions of films, books, pamphlets, or articles. In addition, several members have individually contributed copies of book reviews of the Clark, Dora Russell, and Tait volumes. Four members have borrowed the following materials: the film, Bertrand Russell Discusses Philosophy (borrowed one time each by two individuals); Freedom vs. Organization; and the Pitt article, "Russell on Religion". From the fee for films the Library has accumulated \$6.00 to be used for future purchases; suggestions are indeed welcome here.

Obviously the volume of contributing is greater than that of borrowing. Perhaps certain members are a bit shy or may feel their requests would be troubling to the Librarian. Please do not allow reasons such as these to be inhibiting. Perhaps certain members simply do not find the presently small collection to hold anything they would want to borrow. Presumably many members personally own or can more readily obtain some or all of what we now have to offer from other sources. For these people all that can be recommended is to wait until a need arises or some desire develops or until the collection has grown sufficiently to include materials of interest to them.

In the last Newsletter members were asked to formulate aims for the Society.. I would suggest that one of principle aims should be to further the study and appreciation of Russell's life, thought, and aspirations for humanity. With the Library the Society possesses one means of enriching every member's knowledge of Russell and all things with which we identify him. Members who support the Library through contributions help to realize the Society's aims through sharing while members who borrow enrich themselves through personal study or introduce others to the reasons why we consider Russell a worthy individual. The Library is becoming a vital resource of the Society. But for this to continue the membership must participate more fully. I believe it will do so.

(52) Recent additions to the Library (where no author is mentioned, the work is by BR):

15. Gotham College by Daniel Manesse. Fiction
16. Russell on Religion by JACK PITT. 14-page essay
17. Book review by HARRY RUJA of Bertrand Russell's Theory of Knowledge by Elizabeth Eames, and The Development of Bertrand Russell's Philosophy by Ronald Jager.
18. The Companionate Marriage by Ben B. Lindsey and Wainwright Evans.
19. Necessary Russell by William Ready.
20. 27 book reviews (at last count) from various publications, of My Father, Bertrand Russell by KATHARINE TAIT, The Tamarisk Tree by Dora Black Russell, and The Life of Bertrand Russell by Ronald W. Clark.
21. The Bitches' Brew, or The Plot Against Bertrand Russell by Myra Buttle, pseud., Victor William Williams Saunders. A play.
22. Russell in Review, ed. by J.E.Thomas and KENNETH BLACKWELL. 13 papers or talks given at the Russell Centenary at McMaster, 1972.
23. My Own Philosophy: A New Essay.
24. The Life of Bertrand Russell In Pictures and His Own Words Compiled by Christopher Farley and David Hodgson.
25. The Future of Science.
26. Bertrand Russell's Philosophy, ed. by George Nakhnikian. 14 papers presented at the Indiana Russell Symposium, 1972.
27. Mysticism and Logic.
28. The Autobiography of Bertrand Russell, Vol. I
29. Human Society in Ethics and Politics.
30. The Problems of Philosophy.

(53) * Book review request. If you come across a book review of the Tait, Clark or Dora Russell books, please send it (or a photocopy) to the BRS Library.

(54) * Logic Conference. The BRS Library has obtained a printed page (loaned on request), listing the contents of The Proceedings of the Bertrand Russell Memorial Logic Conference, Denmark 1971. Excerpts:

- ."The particular stimulus for the conference was opposition among some logicians to NATO finance for logic conferences."
- ."The conference was dedicated to the memory of Bertrand Russell because it was thought that he would have approved the guiding spirit of the conference, namely, that mathematics cannot be cut off from other human activities. This volume begins with a short tribute to Russell which includes (by kind permission of the publishers) a reprinting of the moving postscript to his Autobiography."
- ."These proceedings will be about 350 pages long and will be published in the Spring of 1973."
- ."For further details, write to: Bertrand Russell Memorial Logic Conference, c/o Dr. A. Slomson, School of Mathematics, The University, Leeds LS2 9JT, England."

GOOD QUOTES

- (55) From the liver. Although TOM TASKONIS thinks the following quote "came more from the liver than from the heart," it is one of his favorites:

"In 1997, if we still exist, we must expect rival parties of Russian Commissars and American Marines to travel at enormous expense to the surface of Mars and to keep themselves alive there for a few days while they search for each other. When they find each other, they will exterminate each other. Each side will hear of the extermination of the other side and will proclaim a public holiday to celebrate the glorious victory." From Has Man A Future? (New York, Simon & Schuster, 1962.)

FINANCES/CONTRIBUTIONS

- (56) Contributions have been made by the following members, for which we say: "Thank you very much!":...: COCHRANE, DAVIS, REINHARDT, RUJA, WRAY.
-

BRS BUSINESS

- (57) Bylaws. The Corporation's bylaws (the BRS is a non-profit corporation), which were discussed and agreed on at the last Annual Meeting, have been written up by BRS Secretary JACK PITT, and are enclosed with this Newsletter. Also enclosed are tentative ("draft") bylaws for the BRS Board of Directors.

* Anyone who wishes to suggest changes in either set of bylaws, for future consideration, should send them to the Newsletter, for forwarding.

- (58) Minutes of the 3rd Annual Meeting, held in NYC on December 26-28, 1975, are enclosed with this Newsletter. They were prepared by BRS Secretary JACK PITT. Terminology note: In NL10-2 we called the December 1975 meeting "the 2nd Annual Meeting." Jack's minutes call it the 3rd. We'll go along with Jack, and hereafter will call it the 3rd. Our idea had been that the Feb. '74 meeting was the "Founding Meeting"; the Feb. '75 meeting was the "1st Annual Meeting"; the Dec. '75 meeting was the "2nd Annual Meeting." Jack's way is simpler, and therefore better.

- (59) Secret ballot. HERB LANSDELL thinks that members should have the option of casting a secret ballot, when voting. Agreed. In future, you may use your ballot and not sign it; anonymous ballots will count as if signed. However, we do prefer ballots that are signed, because a ballot is also an indicator: members who vote indicate more interest in BRS affairs than members who do not, and we like to know who they are.
-

BINARY CHEMICAL WEAPONS - THE ARMY IS A "NO-SHOW"

The U. S. Army cannot defend its plan to launch a major escalation in the technology of chemical weaponry. That has to be the conclusion from a BRS initiated symposium at the August 31 meeting of the American Chemical Society in San Francisco. The Pentagon had promised to send a representative, whose name appears in the program, but as the date drew nigh he withdrew and the Army went without an official spokesman.

About a year and a half ago the Science Committee of the BRS proposed that the American Chemical Society co-sponsor a full discussion of chemical weapons at the San Francisco meeting. The Chemical Society agreed but asked that the topic be narrowed to just binary chemical weapons. Later the chemists asked to go it alone without co-sponsorship by the BRS. However, the chairman of the Science Committee* was asked to preside over the afternoon session.

Binary chemical weapons, a major advance in the technology of nerve gases, are fabricated in such a way that the two components of the gas, each of which is relatively innocuous in itself, are mixed while the missile is in flight. Thus binary weapons are simple to manufacture, transport, store and decommission.

At the San Francisco gathering speakers from academia, the United Nations, Congress and the U. S. Arms Control and Disarmament Agency were in general agreement that a switch to the binaries would have a negative impact on the progress of multilateral talks now in progress aimed at ridding the world of these odious devices. For several years in a row the Pentagon has been unsuccessful in convincing Congress to supply funds for development of the new nerve agents.

* of the BRS

(61)

PROGRAM
of
THE BERTRAND RUSSELL SOCIETY, INC.

at the December 1976 meeting
of the Eastern Division of
THE AMERICAN PHILOSOPHICAL ASSOCIATION

Time: December 28, 1976, 10 A.M. to 1 P.M. (Tuesday)

Place: The Sheraton-Boston Hotel, Boston, Mass.

I. RUSSELL ON GENERAL FACTS, Ausonio Marras, University of Western Ontario

Commentator: David Johnson, United States Naval Academy

II. RUSSELL, FREGE AND THE "MEANING" OF THE THEORY OF DESCRIPTIONS,
OR: DID RUSSELL KNOW HIS FREGE? Raymond Perkins, University of
New Hampshire at Manchester

Commentator: Alfred Guy, University of Baltimore

Chairman: Justin Lieber, Lehman College, CUNY

(Papers presented here may be borrowed, by writing The Bertrand Russell Society Library, c/o Don Jackanicz, 3802 N. Kenneth Avenue, Chicago, IL. 60641.)

Observations

Bertrand Russell the Man

(62)

Sidney Hook

THE publication of three books on Bertrand Russell*—one by his second wife, one by their daughter, and one by an admiring but honest biographer—hard on the appearance of Russell's three-volume *Autobiography* gives us more details about Russell's life and loves than about any philosopher who has ever lived. And it is still not the whole story. What Russell's own account has lacked in candor, Ronald Clark has made up in large part. Those who are concerned about Russell's image might well hope we will be spared further revelations about the events and intimacies of his life.

This profusion of biographical detail is rather puzzling if we think of Russell's achievement as a professional philosopher. Neither the validity of his ideas nor even their significance depends in any way upon the startling details of his domestic and public life, and the bizarre record, both comic and cruel, of his multiple extramarital adventures. Russell's place in the history of philosophy is secure just as much as is Wagner's in the history of music. But anyone who expects to learn why, or to deepen his insight into Russell's contributions by reading these biographies, will be disappointed. Only Clark's book makes passing references to Russell's work in philosophy but hardly attempts to do it justice. A dozen other volumes are available for its critical assessment, and happily they ignore biographical details.

Why, then, should these volumes,

SIDNEY HOOK, *the distinguished philosopher, is the author of numerous works, the most recent of which is Revolution, Reform, and Social Justice. His other books include The Hero in History, Pragmatism and the Tragic Sense of Life, Education for Modern Man, and From Hegel to Marx.*

each in its own way, have such a disillusioning effect upon those who, for all their philosophical and political differences with Russell, have admired his intellectual brilliance, his expository clarity, and his critical gifts? These gifts were in evidence not only in the assessment of the doctrines of other thinkers but in his readiness to abandon one philosophical position after another in his own quest for a set of basic ideas that would make sense of human experience, the place of scientific knowledge in it, and the nature of the good life in the good society. No matter what the character of Russell's life, why should it make a difference to our evaluation of any of the views he professed?

The reason, it seems to me, is this: Russell set himself up in the public eye as more than a professional philosopher concerned with the solution of technical problems, some of which had come down from antiquity. For the greater part of his adult life, he played and enjoyed the role of a moral teacher, of a sage passionately concerned with the fate and sufferings of his fellow man, of an enlightened dispenser of wisdom about human freedom, peace, love, education, and the upbringing of children. The discovery that the moralist has failed to live up to his own precepts destroys faith in his sincerity, creates doubt about the principles he offers as guides, and deprives him of the authenticity—and the moral authority—that accrues to any person who seems willing to stake his life or reputation on his beliefs.

Who would have imagined, for example, that Bertrand Russell could have been touched by anti-Semitism? Writing to Lady Ottoline Morrell, one of his mistresses, about the social hardships he endured be-

ing lionized during one of his very profitable lecture tours in the United States, he confides: "I can't imagine how I survived. In New York I stayed with a philosopher, Kallen, a Jew, whose friends are all Jews. All were kind, but I began to long for the uncircumcised. New York is mainly Jewish."

When he makes derogatory references to millionaires, it is always to "Jewish millionaires"—never to English or American or Indian millionaires who are much more numerous. Earlier, in writing to Lady Ottoline about his disillusionment with Bolshevism, he refers to its tyrannical bureaucracy, "with a spy system more elaborate and terrible than the Czar's, and an aristocracy as insolent and unfeeling, composed of Americanized Jews [*sic!*] . . . Imagine yourself governed in every detail by a mixture of Sidney Webb and Rufus Isaacs." (The mention of "Americanized Jews" is characteristically inaccurate. By stretching, it could only fit one man in Russia at the time—Boris Reinstein, whom Russell did not meet.)

Clark is obviously embarrassed by passages of this kind. After citing Leonard Woolf's caustic remark that in such sentences Russell enjoyed "the best of all his worlds—dislike and hatred of Americans, Jews, and even his personal friends," Clark adds: "The accusation is less unfair than it sounds. In no sense an anti-Semite . . . Russell nevertheless sometimes exhibited a personal allergy to Jews which is betrayed in his private correspondence from time to time, lasted until the 1930's, and should not be brushed under the carpet"—which he promptly proceeds to do by calling attention to the fact that after Hitler, Russell's personal allergy to Jews was kept in check and that he approved the creation of a Jewish state. Three hundred pages,

* *The Life of Bertrand Russell*, by Ronald W. Clark, Knopf, 766 pp., \$15.00; *The Tamarisk Tree*, by Dora Russell, Putnam, 304 pp., \$9.95; *My Father Bertrand Russell*, by Katherine Tait, Harcourt Brace Jovanovich, 211 pp., \$8.95.

and twenty-two years later (1970), in the last political statement of his life, Russell delivered himself of a blistering attack against Israel for its "aggression" against Egypt. Clark refers to it with characteristic distress and understatement as "in some ways the most remarkable of his many statements"—remarkable for faulty judgment and irresponsibility.

BUT this streak of anti-Semitism in Russell is far from the most surprising blemish revealed in Clark's biography. To me his most shattering pages are the account of Russell's jail sentence during World War I. It was the news of his imprisonment and the reading of his *Justice in War Times*, while I was a high-school student, that inspired in me the beginning of a lifelong interest in Russell's thought. His behavior seemed a matchless act of intellectual and moral courage. Although not a principled pacifist, Russell staunchly defended the rights of conscientious objectors. The British government, recognizing their scruples, had offered them alternative service in a peaceful non-military pursuit of national importance. Those who refused to compromise in any way, and rejected all forms of alternative service, were called Absolutists and were jailed. Russell was a strong supporter of the Absolutist position.

In 1918 Russell was convicted by a foolish English court for making some foolish remarks about the possible use of American expeditionary forces to break strikes and "shoot down strikers." He was sentenced to six months in the Second Division—where ordinary prisoners were sent. In an effort to escape his prison sentence, he proposed that Gilbert Murray and other friends approach the Tribunal and in his behalf plead that his work in philosophy be regarded as alternative service in the national interest, thus giving him exemption from a jail sentence.

Such a proposal, coming from one who had urged the Absolutists to refuse any alternative service of national importance and insist upon serving jail terms—in those days under conditions extremely prejudicial to their health—was an extraordi-

nary piece of hypocrisy. Nothing came of it. Russell then proceeded to pull strings—which every truly conscientious objector would have scorned to do—to arrange that he should serve his sentence, not in the Second Division, which was organized on a very harsh regimen, but in the First. The aid of Lord Haldane, Lord Balfour, and Herbert Samuel, the Home Secretary—all of whom he personally despised—was invoked, together with that of his blustering brother, Frank, the then Lord Russell. The consequence was that, as Clark puts it, Russell "served his sentence as an aristocrat of the prison world." It was more like living in a hotel than a jail—he was allowed his own food, the opportunity to do his own work, special visits, the services of another prisoner as servant to relieve him "from the performance of unaccustomed tasks or offices." There were hardships, to be sure. "He was worried by the ban on smoking, but agreed to settle for chocolate as compensation."

The simple truth is that Russell enjoyed the appearance of martyrdom but suffered hardly more than he did fifty years later when he again defied the law under the glare of a stage-managed publicity that cost him nothing. In the 1960's he was treated by the authorities as a national treasure. His defiance was much more a form of theater for ego satisfaction than a rational and effective means of furthering a cause. In 1918 he took a taxi to Brixton prison, annoyed that the authorities had not arranged for a Black Maria which would have been a grand occasion for massive press coverage. Under the circumstances, many persons with a cause would have been happy to pay the authorities considerable money for this kind of martyrdom. Thought of his own comfort was rarely absent from his plans. "When Russell protest sat," Clark tells us, "he insured that there was an ingenious air-cushion in his trousers."

IN THE complex entanglement of social and political affairs, to hold to a particular policy regardless of consequences and the unexpected development of events is a mark of fanaticism. It betokens a religious

rather than a rational or scientific approach to politics. And like other thinkers who refused to make a religion out of their politics, Russell changed his views on important matters of public policy often.

But in contradistinction to his change of mind on philosophical questions, he had a tendency to personalize the political positions he abandoned and to heap unmeasured abuse upon those who advocated views not far removed from those he himself had once advanced. They were not honestly mistaken but evil, cruel, corrupt men. Russell himself had gone from imperialism to pacifism to a defense of just war but was mordant about those who did not share his views when he held them. The earliest and most ruthless advocate of a preventive war against the Soviet Union, he was prepared to sacrifice all of Western Europe and almost a half-billion lives for Communist defeat. But at the time of the Cuban missile crisis, because they stood up to Khrushchev, he denounced Kennedy and Macmillan as "wicked and abominable . . . much more wicked than Hitler . . . the wickedest people that ever lived on earth."

When this absurd comparison backfired and the noise of indignation it provoked made him appear ridiculous even to some of his own supporters, he claimed he had been quoted out of context. This, as Clark painfully documents, was not the only untruth of which he was guilty. For a period of a decade, whenever it served his purpose, he denied that he had ever supported a preventive war against Russia—"The story . . . is a Communist invention"; then, confronted by the evidence, compelled to admit it, he blurted, "It's entirely true and I don't repent of it"; yet some years after, he pleaded with a correspondent to give "the lie to the fiction that I advocated war against the Soviet Union." As sympathetic as Clark is to Russell, he is aghast at Russell's tergiversations for the good of the cause: "If the suggestion that he deliberately tried to conceal his earlier version is repugnant, the record does not really allow any other conclusion to be drawn."

"A man's inconsistencies," Russell

54/COMMENTARY JULY 1976

was fond of saying, "are the clues to his passions." What passions are here at work? Here the good Clark for all his remarkable industry fails us. It is not love of power in the ordinary sense. Although in one of his letters Russell writes that "the love of power is terribly strong in me," the context shows that it was a power to influence people and to make them notice him. But he could have exercised this power without becoming a spokesman for appeasement and surrender to Communism. It cannot be his pacifism, which was never principled with him, as is indicated by his support of the war against Hitler and his willingness to sacrifice a half-billion lives to insure Stalin's downfall. Nor was it his anti-Americanism, a passion which, indeed, ran very deep within him.

The passion that underlay Russell's political inconsistencies and led him not only to hail the ruthless Leninist, Ho Chi Minh, as a fighter for human freedom, but to a stoical resignation to the triumph of Communism on a world scale, was stronger than anti-Americanism. Surprising as it may sound in the light of his fervent expression of love of humanity, it was his hatred of mankind, of its stupidity and viciousness, of its persistent refusal to listen and follow the counsels of wisdom he had offered it throughout his life. This mood is not far below the surface of his emotions when he comments on the ordinary run of political events, and it sometimes bursts forth in letters to his intimates: "I hate the world and above all the people in it . . . I hate the planet and the human race. . . ." More than once he confessed himself ashamed to belong to the human race. No one who felt so keenly about intellectual freedom, human dignity, and the glory of untrammelled inquiry and the right to dissent could have been so calmly resigned to the victory of Communism except as a punishment for a world whose policies had contributed to that victory.

DESPITE its limitations, it will be a long time before Clark's biography will be superseded. There probably will be many more discoveries of

episodes in Russell's transatlantic love life—upstairs and downstairs. But they will add little to our understanding either of his philosophy or politics.

Something must be said of the biographies of Russell by his second wife and their daughter. Dora Black Russell seems to have been the least attractive in every way of Russell's wives and of the other women in his life. Her book is really an apology, a reply to Russell's own disparaging comments in later life about her mind, character, and political morals. It throws some light on why he was originally drawn to her. She seems to have been his first encounter with the radical chic that put free sex at the center of the life of freedom—including intellectual and cultural freedom. The book also confirms in some measure the account Russell gives of why she became progressively distasteful to him. It is full of boring inconsequential details about her own activities as a feminist and Communist fellow-traveler in order to create the impression that she led an independent life of her own. She is the ideal type of what in the 30's used to be called a "totalitarian liberal." Speaking of her propaganda for feminism, which was more Bohemian than proletarian, she writes with the typical condescension of the middle-class socialist dependent on servants: "As a socialist, I felt that we were a bit too middle class and ought to be doing something to help those proletarians about their sex."

A REFRESHINGLY different book from that of her mother is Katharine Tait's *My Father Bertrand Russell*. It is painstakingly honest, very well written, and full of psychological insight born of suffering and a sense of being unloved. The author was burdened at an early age by the agonizing feeling that she could not live up to the abstract moralistic pieties of her father, whom she adored. At the same time she had an unerring sense for the hollowness of his words and his complete obliviousness to her needs, her fears, and her hopes. She probably expected too much of her parents, but if only a fraction of her story is true, it makes one wonder about their

psychological fitness as enlightened school reformers. What they could not give their own children, they probably could not give other children.

Katharine Tait intuitively sensed the fact that for all his generous help to her and her family, Russell was emotionally detached from them. He could not live up to his own ideals of human relationship because he lacked the capacity for empathetic identification. She was spared the hurt of knowing that, according to one of Patricia Russell's letters to Freda Utley, her father found her "repulsive," but it was his insensitiveness to her ordinary feelings that disillusioned her in his grand words about reforming man and society. She claims to have been cured in consequence, even as a child, of belief in utopian projects and abstract visions of progress. Having lost her faith in her father, she became convinced that there was a Heavenly Father and accepted the vocation of a Christian missionary to spread the glad news of His existence. There is a certain irony, not lost on Russell, in the fact that the author of *Why I Am Not a Christian* should have indirectly contributed to his daughter's conversion to Christianity. That she could not bring herself to explain to Russell the need or the grounds for her belief in something so central to her life, or even to discuss it with him, indicates how great was the failure of communication between them.

Russell once remarked that Socrates was even more lucky than wise in picking the right time and the right way to die. The world cheated Russell out of his martyrdom. In his eightieth year he had become a pillar of the establishment and was rather unhappy about it. Although he did his best soon after to collapse it on its foundations, he escaped the fate of either Socrates or Samson. During the last ten years of his life he appeared in the public eye as a vain and crotchety figure, often manipulated by others. No one knows how posterity will regard him as a social and political thinker. My guess is that whatever the judgment will be, had he not lived so long, it would have been kinder.

ABOUT OTHER ORGANIZATIONS

- (63) The United World Federalists of Japan meeting in Los Angeles on August 15th was dismal, apparently because the Americans organizing it were incompetent, reports BOB DAVIS. Bob did not stay long.
- (64) H.G.Wells Society. JOHN SUTCLIFFE has arranged for an exchange of newsletters between the BRS and the H.G. Wells Society, headquartered in England.
* We will lend their newsletter on request.
- (65) Committee for Nuclear Responsibility, Inc. has a distinguished Board of Directors that includes Ramsey Clark, Lewis Mumford, Linus Pauling, Harold Urey, George Wald, and James B. Watson. Excerpts from its literature:
 . "Nuclear power will introduce the age of private atom-bombs."
 . "Radioactive poisons are a million to a billion times more hazardous than chemical poisons."
 . "Solar energy is amply adequate for all the conceivable energy needs of the world. It is harmless and certain to work."
 They ask for money (tax-deductible). Their address: P.O.Box 332, Yachats, Or. 97498
- (66) Union of Concerned Scientists points out that, among other things, "it takes plutonium half a million years to lose its killing power." It has asked the government to go slow on the construction and exportation of nuclear power plants, until present controversies are resolved concerning safety, waste disposal, and plutonium safeguards. They too need money. Their address: 1208 Massachusetts Avenue, Cambridge, Ma. 02138.
-

PHILOSOPHERS' CORNER, CONTINUED

Abstracts of papers to be presented at BRS/APA on 12/28/76:

- (67) Ausonio Marras. "Russell on General Facts." Abstract:
 In his 1918 lectures on Logical Atomism Russell argued that in addition to particular facts corresponding to particular propositions such as 'This is white' there are also general facts corresponding to general propositions such as 'All men are mortal'. Since facts are essentially conceived by Russell as constituting the truth-conditions for propositions ("they are the kind of thing that makes a proposition true or false"), and since for Russell a necessary and sufficient condition for admitting a given type of fact is to account for the truth-conditions of a given type of proposition, I contend that Russell's argument for the existence of general facts fails to support its conclusion: particular facts are sufficient (and hence general facts are unnecessary) to provide an ontological grounding for general propositions. I also argue that Russell's commitment to general facts rests on the adoption of an (inappropriate) epistemic criterion: he postulates general facts to account not merely for the truth-conditions of general propositions, but for our knowledge of (the truth-value of) general propositions.

(68)

Raymond Perkins. "Russell, Frege and the 'Meaning' of the Theory of Descriptions (or): Did Russell Know His Frege?" Abstract:

The widespread belief that Russell confused meaning in the sense of 'sense' with meaning in the sense of 'reference' is mistaken. The main sources of this belief are : (1) Russell's apparent rejection of Frege's sense/reference distinction in his paper "On Denoting"; and (2) his curious argument in Principia Mathematica which seems to involve an equivocation between sense and reference.

I argue (A) that if Russell's apparent attack on Frege is viewed in the light of his earlier theory of denoting in The Principles of Mathematics, it becomes clear that he is not rejecting the sense/reference distinction per se, but only a particular version of it; and (B) that if one grasps the full purport of Russell's theory of incomplete symbols so that naming is seen as a separate semantic dimension from both sense and reference, the grounds for holding the Principia argument as an equivocation on 'meaning' as between sense and reference collapse.

BRS aims. Enclosed with this Newsletter is the next installment (dated 11/1/76) of Members' Suggestions and Members' Reactions, concerning

* BRS aims. Please send us your Suggestions and Reactions.

NEWSLETTER #13

February 1976

1976

- (1) Coming up, a debate about BR and religion (2). Report on the 4th Annual Meeting(4). Bob Davis visits England (8). The 3rd annual BRS session at APA (philosophy) (19). The BRS will award Travel Grants (20). Recollections of Beacon Hill (23). A decision on BRS aims (51). The index is at the end (56). An asterisk in the left column indicates a request or an offer to lend.
-

COMING EVENTS

- (2) Debate: BR and religion. The debate will be between KATE TAIT and Madalyn Murray O'Hair, and will be the highlight of the 2nd BRS Psychology Symposium, for the benefit of psychologists attending the American Psychological Association meeting in San Francisco, in late August.

We're not sure that "debate" is precisely the right word. In any case, the two ladies will present opposing points of view about BR's attitude towards religion. Kate takes the position that her father was essentially a religions man, with personal reasons for rejecting organized religion. Dr. O'Hair, on the other hand, believes that BR's outlook was scientific and that he was therefor unable to accept the "illusions dished up by our primitive anthropomorphic tendencies", not to mention the fact that all religions claim to be true and that therefor not more than one can be.

It was Dr. O'Hair who brought the lawsuit that stopped prayers in U.S. public schools.

HERB LANSDELL is making all arrangements. BRS members will be welcome. We'll let you know the date, time and place

We don't think you'll want to miss this event, if it's at all possible for you to get there.

- (3) 2 BR movies. BOB DAVIS will be showing the movies, "BR discusses philosophy" and "BR discussess Happiness" sometime during the weekend of April 29-30. This is the weekend that the American Humanist Association meets, in Los Angeles. Bob will show the films either at the AHA meeting or at his home. He will notify members in the Southern California area about arrangements. Members from outside the area who may attend should notify Bob. (7025 W. Franklin #86, Hollywood, Ca. 90068. 213-874-5568)
-

4TH ANNUAL MEETING

- (4) The 4th Annual Meeting of the BRS was held the weekend of February 4-5-6, 1977, at the Westwood Holiday Inn (Los Angeles).

The February 4th (Friday evening) session was a Directors Meeting (but open to all members). Present were AMY BLOCK, PETER CRANFORD, BOB DAVIS, LEE EISLER, JOE NEILANDS, JACK PITT, and STEVE REINHARDT. The meeting lasted long into the night, and produced a number of decisions:

- . The statement as to BRS aims will be kept simple (51).
- . Next year's meeting will be at the Russell Archives, in Canada, and probably not in winter -- perhaps during spring recess or in summer.
- . Jack Pitt's proposal for BRS Fellowship Travel Grants was approved (20).
- . \$300 was appropriated from BRS funds for the purchase of BR films, as a result of Don Jackanicz's proposal (47).
- . Kate Tait, the BRS's first Treasurer -- and as most of you of course know, BR's daughter by his 2nd marriage, to Dora Black -- was made an honorary member.

February 5th (Saturday) was the big day. There was a morning session, an afternoon session, and a banquet in the evening. Present some or all of the time were IRVIN ASHKENAZY, AMY BLOCK, PETER CRANFORD, BOB DAVIS, LEE EISLER, MARTIN GARSTENS, CHARLES GREEN, TOM HORNE, JIM & RITA HAUN, HENRY (& Rosemary) KARUS, AL KRAVIG, ELGIN MADEO, STEVE MARAGIDES, JOE NEILANDS, JACK PITT, STEVE REINHARDT, HARRY RUJA, JOHN TOBIN and BILL YOUNG, as well as a number of guests.

The meeting-room contained posters of BR, and on tables were many books by or about BR, most of them from Bob Davis's own library.

The meeting opened with the film, "BR discusses philosophy." (The newly acquired film, "BR discusses happiness," did not arrive in time. No doubt we will see it at next year's meeting, at the Russell Archives.)

Then came words of welcome from BRS Founder, PETER CRANFORD, followed by BOB DAVIS's report on his trip to England (8). JACK PITT told about the new BRS Fellowship Travel Grants (20), LEE EISLER spoke about the cost of acquiring a new member (12) and read DON JACKANICZ's report on the BRS Library. MARTIN GARSTENS found that trying to arrive at an Applied Philosophy was not easy (11). HARRY RUJA told about the trials and satisfactions of collecting BR's columns written for the Hearst newspapers (published under the title Mortals and Others).

However, nothing's perfect, and neither were we. We recklessly promised what we could not deliver. We had a Red Hackle Hour without Red Hackle. Anyone who was lured to the meeting by the promise of Red Hackle has a genuine grievance. We will try to make up for it next year.

Highlight of the entire weekend was the presence of Will and Ariel Durant at the banquet Saturday evening. Though we would have been entirely content merely with their presence, they spontaneously and voluntarily told charming anecdotes about some of their experiences with BR. She told about the time she and BR went to a Greenwich Village nightclub, where BR was so charmed by the attention paid him by the professional ladies of the establishment that they stayed until closing time. He told a delightful story of how BR had it in mind to try to interest Ariel in amorous activities, but was thwarted by the unusual fact that the car's driver was Ariel's brother, who refused to drive where BR wanted to be driven but drove Ariel home instead. Our only regret is that there were no tape recorders at the banquet, to preserve the Durant stories.

All BRS business was completed on Saturday, and therefore there was no formal BRS meeting on Sunday (February 6th).

Our meetings get better and better. This was the best one yet. We salute Bob Davis, for keeping it moving, keeping it organized, and keeping it interesting all the way.

REPORTS FROM OFFICERS

Chairman Peter G. Cranford reports...

(5)

as Finance Coordinator:

"We continue to be financially sound and no doubt will continue to be so for the coming year. Two major expenses are looming that need to be provided for by contributions. Jack has offered to do the work required to set up an annual scholarship of \$500 to assist someone with research expenses at the Russell Archives. Don Jackanicz needs about the same amount to purchase 5 BR films that have become available.

"One member's will provides a bequest that should amount to about \$10,000. A number of members are making contributions of expenses connected with BR offices they hold. Another member who is writing a book will give 15% of royalties to the BRS. Our President, who is making a much needed trip to England on our behalf is financing it himself. Various members have made cash contributions. Steve Reinhardt is doing a masterful job as Treasurer...as his reports show.

(6)

as Psychology Coordinator:

"We have now established an intellectual beach-head with the members of the American Psychological Association. This is being consolidated by Herbert C. Lansdell, and no doubt we will be hearing from him as his plans materialize. He will be working primarily with the Society for Philosophy and Psychology (54) within APA. Other psychological groups that would profit from a more extensive knowledge of Russell should be worked with next year -- particularly the clinical psychologists. Perhaps the Psychology Corner can do this. Also the "blow of a thousand blows" would be the wide distribution of the papers read at the symposium, including Blackwell's marked list of BR books. Bateson, for instance, has been inspired by Russell in his theorizing about schizophrenia, as Jack Pitt pointed out in his recent paper.

(7)

As Chairman of the Board:

"I would recommend that all members be highly motivated and have a good knowledge of Russell. To bring as many of these people together as possible, I favor expanding the number of directors.

"At this time I do not think we should be concerned with building a large membership. We have close to 175 very intelligent people. This number is more than adequate to determine where we are going and how to get there. The problem is how to harness our brain power. If we do not do this, we will lose members as fast as we get them -- particularly if they come to us with expectations of finding an intellectual or activist home.

"This brings the matter of what key, if any, is there to future growth after goals have been identified. Russell gives us the answer in his principle of compossibility. "Compossibility" seems to be broadening its meaning "ostensively", as ER would say. Letters between members show an increasing use of the word. I understand that BR told Lady Russell that it was his hope that compossibility would have a growing influence. In such writing as I have done lately, formally and informally, I have used the term with expanded meaning, as have others. This is not necessarily bad. BR did it himself when he borrowed the term from Leibniz. I think the idea of compossibility has a very wide applicability, and indeed,

I should like the U.S. President, who is a student of Russell, to examine it as a guide to foreign policy. I think compossibility is the key to the expanding influence of the Society. I used the principle in promoting the recent psychology meeting. In effect, the psychologists left the meeting with information psychologically useful to them (in easily understood ways.) The principle was also applied in less obvious ways to organize the meeting. We will not lose any member when belonging to the Society is compossible — i.e., to the member's good and to our good. We already have some degree of compossibility: some want to serve society, some want intellectual friends, some are inspired by Russell, and some want what our Newsletter gives them. I do not think that this is enough to nurture a world-wide movement. There is no present reason to believe that we will be much more effective than the Humanist groups.

"Although the Society is not yet ready to think about a large membership, it can begin to think about a strong one. To become so, it would have to learn how to make money. If the members shared in the profit, we would have a compossible arrangement. The money could be used to make more money, which could then be used to recruit members or promote Russell's ideas. When enough interest is generated in Russell, members who were knowledgeable about him and had a message to deliver could get lecture fees. Money could also be made in writing about Russell in such a way as to be popularly attractive. This is a potential gold mine. I expect that there are scores of books that could be written by taking Russell's ideas and making them more understandable. Lee Eisler's idea in Morals Without Mystery was a move in this direction.

"Our best work is being done by essentially "one-man committees". To find and utilize every member who is willing and able to work in such a fashion would greatly strengthen us. The considerable influence that Christianity has had on the Western world is derived from the work of early disciples. If we consider ourselves the custodians of Russell's spirit, it is theoretically possible for another small group such as ours also to achieve notable influence. Grandiose as the idea may appear, the attempt must be made, since there is nothing on the horizon that gives the world much reason to hope. I am most hopeful about ourselves. With our present membership and one million dollars, we could realistically do 200 times what we are now doing with five thousand dollars."

(8) President Robert K. Davis reports on his visit to England:

"I can't do full justice to my recent trip to England (From December 15 to January 5), but a number of members have asked me to write a brief report, so here it is:

"I went primarily on BRS business, but I also attended to personal business and enjoyment. I arrived in London on the 16th, going from 80° sunny California to cold, rainy Chelsea. In fact I was cold and wet most of the time, but everyone was solicitous and had me sit near the heaters. I spent the first 4 days in London, attending to business during the day and to the arts in the evening. I went to several superb Christmas concert plus some plays.

"I visited with the Rev. Michael Scott for several hours. He had gone to South Africa as a boy and had lived there until 1948, at which time he was expelled by the present government (which had taken over from General Smuts) because it did not like Scott's anti-apartheid work. He has worked for many causes in England and Africa since then. He worked with BR in the CND (Committee for Nuclear Disarmament) and the Committee of 100 in the 50s and 60s and was present at the Trafalgar Square

demonstration that resulted in BR's imprisonment. Our discussion ranged over a wide variety of topics, but dealt mostly with BR's work in Africa. I have promised to help him with one item. He has been an observer at the UN for almost 30 years for the International League for the Rights of Man. Because of South African pressure, the U.S. government had been giving him a restricted visa. He can only stay in New York for the UN session and may not go more than one mile from the UN. This year, apparently to mollify South Africa, because of Kissinger's activities in Rhodesia, the State Department refused him entrance to this country. After protest, they relented (they have to let people like Scott go to the UN), but listed requirements they knew Scott could not meet. Therefore he missed the first session in almost 30 years. I am seeing what can be done to prevent that, next time.

"From London I traveled to Nottingham. There I visited the Russell Peace Foundation at Bertrand Russell House. Mr. Ken Fleet gave me a tour of the building and the presses, and talked with me about the Foundation. I bought a large number of their books. I am getting enough copies of their 'Aims and Work' brochure to distribute with the Newsletter. I also want to make arrangements so that members can purchase books from the Russell Press.

"From Nottingham I went to Manchester, to see BRS member John Sutcliffe. John and I spent about 7 hours together, talking. I found John to be a man of wide interests, with a desire to promote the BRS. Unfortunately, the situation in England does not lend itself to our style of organization. But John is a valuable member to have in England.

"A friend, Peter Houchin, picked me up in Manchester and we drove to Edinburgh for Christmas. We went through the lake district of Wordsworth fame. As a result of this trip, Peter and I are to be business partners. He hunts for 18th Century books of research value and exports them to the U.S. and elsewhere. I am helping him, and hope to expand it to prints, maps, brass rubbings, etc. and we hope to start a small shop in L.A.

"Peter, his German wife, her mother from Bavaria and I had Christmas Dinner at Mrs. Dark's, his former landlady. She is a peppery woman in her 70s. Her son was there. Also her 2nd husband, a Polish expatriate. He had fought the Red Army in 1920 and the Nazis as a partisan, had been at Dunkirk, and had had his land confiscated by the Communists in 1945. His daughter was also present, on her first trip out of Poland. It was a very ecumenical evening; we did not discuss politics.

"While in Edinburgh, I visited David Hume's tomb. Unfortunately, the tomb of one of the great atheists of modern times came under the control of a hyperreligious female descendent, who covered it with noxious, sentimental religious quotes. Shocking!

"I rented a car and the four of us drove to Plas Penrhyn, Penrhyndeudraeth (I can pronounce it now). I stayed at the Portmeirion Hotel. It is a 'fantastic' resort. I stayed in the main hotel, which is 19th Century, with large lounging rooms and personal service. There are also 36 guest cottages built in an Italian style. It is all somewhat familiar because it has been seen often in movies and on TV.

"The next day I visited Lady Russell. Her house is small and comfortable. From it you can see the bay, Shelley's house, and a Roman campground. A local farmer gave me a personal tour of the neighborhood. Lady Russell is quite vigorous and interested in her husband's work. We spoke for 2½ hours. We discussed the BRS, the Foundation and other things. She showed me the library, which included BR's copy of Principia and mementos and gifts from people, including Ho Chi Minh. I left and returned at four with my friends, for tea and more talk. The visit with Lady Russell was the high point of my trip.

"That evening I attended a Welsh banquet at the hotel. Lady Russell asked me what a Welsh banquet was. I found it to be a good meal based on medieval recipes and accompanied by intolerably dull speeches in Welsh.

"From Wales we drove to Peter's house in Bridgewater, Somerset. Michael Scott thought I should visit Dora Russell at Porthcurno, so we drove down. The house and Dora as just as Kate Tait described them in her book. I spent about 4 fascinating hours with Mrs. Russell. We discussed many things, but mostly the school and her children. She let me read the draft of a book she is writing on the school. (The Beacon Hill School. See 23.) It is excellent. I also browsed in her (and BR's) library that dated from the school years. I drove back to Penzance and took a train to London.

"I spent New Years in London. New Year's Eve I saw Gilbert & Sullivan's Patience, performed by the D'Oyly- Carte Company at Sadler-Well's Theatre. I then went to Trafalgar Square for midnight. There were about 100,000 people there and I think I was the only sober one. Since it was raining, that was not wise. (To have been there, or to have been sober? Ed.)

"At the start of the week, I met Chris Farley for tea. We had a long fruitful talk about the Foundation and the BRS. We cleared up some misunderstandings, and he gave some valuable advice based on his long years of experience with the Foundation.

"That evening I splurged and dined at the Savoy, feeling very regal.

"My last day I attended to personal business and also visited the headquarters of Amnesty International. There I discussed my proposal for a BRS Rights group working through them. I will have more to say about this later. If it goes through, it will be the first of its kind.

"The next day I flew home. I arrived (ugh) in rain. The plane I arrived in took off for New Zealand, and was later struck by lightning.

"For 3 weeks I had burned the candle at both ends, and now I slept 12-15 hours a night for a week. I then pulled together the final details for the Annual Meeting."

Treasurer Stephen J. Reinhardt reports:

REPORTS FROM COMMITTEES

(11)

Applied Philosophy Committee (Martin A. Garstens, Chairperson):

"This Committee really has as many chairmen as there are local ERS groups or chapters around the country.

"My efforts have mostly consisted of trying to delineate some scheme whereby philosophy (which, according to philosophical tradition 'bakes no bread', thus implying that it is impractical and therefore inapplicable) might be made applicable.

"In my estimation we in the ERS do not have a clear idea as to how to transform philosophy into applied philosophy, and ER never supplied us with a ground plan.

"I think the general feeling in our Society has been that if we can just get more people to read many of BR's books, there would be a great gain in reason in the world. In that sense, philosophy would have become applied. To a degree this is true.

"Unfortunately those who already have a taste for reason are the ones attracted to BR, and it is very hard to reach those who do not. Reaching the latter is the problem for the ERS.

"I am very much struck by the reaction in this country to Alex Haley's book, 'Roots,' and to its recent portrayal on TV. I was deeply moved by it, as were some 100 million people (it is estimated) who watched it. There was literally an emotional ground swell to what was a rational description (partially fictionalized for concreteness) of an important portion of our country's history.

"Of course whatever good comes of it all will be frittered away due to lack of an overall philosophy (amongst the 100 million viewers) in which to fit it.

"The overall philosophy is theoretically being supplied by the ERS through the works of BR.

"Unfortunately, BR himself never got down to the nitty-gritty of developing methods of getting philosophy to the masses.

"John Dewey, I believe, contributed more to this aspect of the problem than any philosopher I know of. But even he did not complete the job.

"I have come to believe that Ethics is a key element in trying to reach the masses rationally

"For about 2 years I organized a group studying BR directly. During the last year I joined the local Washington Ethical Society (a Humanist group) to see how Ethical teachings are used in a practical group meeting weekly or more often.

"I have tried to introduce Russell and related philosophies in the Ethical meetings (there are several hundred members), and we are in the midst of several interim seminars along these lines.

"The problem in the Ethical group, as in the ERS, is that people join with many diverse interests. One thing I have accomplished is to make many in the group aware of the need for a common overall philosophic outlook, if ethical tasks are to be sensibly carried out. I hope to report further on this in the future.

"I now think that Ethics can be studied to a large degree as a science, and that consequently a far higher degree of agreement can be attained than many people realize. The high degree of agreement does occur in the sciences. I must say, however, that Russell, while a great believer in science, did not hold this point of view. I think he was mistaken. People like Dewey and M.R. Cohen believed that a scientific approach is possible.

"Part of the BRS's task is to clarify how this can be done."

Information Committee (Lee Eisler, Chairperson):

- (12) Advertising. During 1976 we advertised in 8 publications. When the results came in — in the form of inquiries and enrollments — we found that 4 of the 8 did much better than the rest. So in 1977 we are concentrating on the 4 "better" publications. There'll be 12 ads — one per month — in each of the 4, as compared with 6 ads in 1976.

The 4 better publications — better from the standpoint of recruiting new members economically — are MENSA, THE HUMANIST, HARPER'S MAGAZINE, and THE NEW REPUBLIC. The other 4 are APA MONITOR (read by psychologists), ATLANTIC MONTHLY, BULLETIN OF THE ATOMIC SCIENTISTS, and THE PROGRESSIVE.

ATLANTIC MONTHLY produced the greatest number of inquiries, but very few enrollments. That made the cost of a new member acquired through ATLANTIC MONTHLY very high — \$32 (because it costs us about \$1 to answer an inquiry.) This compares with the average cost of a new member produced by the better group — \$4. That's why we dropped out of ATLANTIC MONTHLY.

- We are now testing a few ads in UU WORLD (Journal of the Unitarian Universalist Association.) Our thanks to BILL YOUNG and JOHN HARWICK for * suggesting UU WORLD. We welcome such suggestions.

- (13) Press release discontinued. In the past, when a new member joined, we would send a Press Release (with the member's permission) to his/her local or hometown or campus newspaper. The Release identified the member, said he/she had joined the BRS, and then said some nice things about BR, and of course mentioned the BRS. We have done this for several years, but it has produced no results whatever; no member has ever sent us a clipping based on the Release. We are therefore discontinuing this kind of Release.

- (14) Library Committee (Donald W. Jackanicz, Chairperson): see Item 47.

(15) Membership Committee (Lee Eisler & Carol Mull, Co-Chairpersons):

A membership list, giving members' names and addresses, as of 1/1/77, is enclosed with this Newsletter. It was also distributed at the Annual Meeting.

Science Committee (J.B. Neilands, Chairperson):(16) Nyet. The Neilands article, "Science and the Biosphere: Coexistence or Catastrophe?" (NL9-47) has been reprinted — along with comments by others — in Scientific World (Vol. XX, 1976, No. 4, p. 20), the "journal of the World Federation of Scientific Workers, published quarterly (in London) in English, French, German and Russian."

Several of the comments were favorable, but that of Academician N.P. Federenko (USSR) was not.

Joe had said, among other things: "We all believed, with Francis Bacon, that scientific research would work for the 'merit and emolument of man', and we were unabashed fans of the technological fix.... Yet all of this seems now to have been a Faustian bargain when measured against the potentially destructive power inherent in a runaway technology.... In short, we must 'go lean', 'live lightly', recycle, study nature, turn to the sun as the only truly 'organic' source of energy, and terminate the unconscionable waste of both material and intellectual resources on militarism."

Federenko says: "It is more than naive to think, as is currently fashionable in the West (e.g., "Small is Beautiful," by E. F. Schumacher, NL8-63) that the slowing down of the process of turning the world into a wasteland can be based on elementary self-support of a feudal type. There is no road back. We can only go forward..."

Then Federenko makes his political pitch, telling us that socialism will solve the problem: "However, for the time being, people as a global entity are, indeed, incapable of taking account of the principal natural laws, as has been pointed out by J.B. Neilands, who is right when he says that this is where the essence of the present day ecological crisis lies. But 'for the time being' is determined by social conditions. A socialist organization of the world will remove this limitation and will provide mankind with the key to environmental management."

What problem hasn't socialism promised to solve?

(17) Underwater monster. The panel discussion (preceded by a campus march) at UC Berkeley on 10/21/76, sponsored by the BRS Science Committee and others (NL12-10), produced some horrendous facts about the Trident submarine, according to a story in The Daily Californian, Berkeley (10/25/76).

The Trident is being built by Lockheed. Former Lockheed engineer Robert Aldridge, who helped design the Trident's MARV (part of the Trident's missile), provided these facts:

. The Trident is almost twice the length of a football field, and more than 4 stories high.

. It will carry 24 Trident II missiles, each of which contains 17 maneuvering warheads (MARVs) that can be sent to different targets. It can thus destroy $24 \times 17 = 408$ cities with nuclear blasts each 5 times more powerful than those that hit Hiroshima.

. A Saturday Review article by Norman Cousins said that, next to Pres. Ford and Secretary Brezhnev, a Trident commander is the 3rd most powerful man in the world. He will control more destructive force than that of Great Britain, Italy, Spain, Brazil, West Germany, Japan, etc.

. The Navy plans to have a fleet of 30 Tridents by 1990 at a total cost of at least 90 billion
 . "The public is being deceived by the government," said Aldridge. "They try to force us to believe that if we don't continue to pour in billions of dollars towards national defense, we'll fall behind the Russians and make ourselves vulnerable. We can kill each other so many times over it doesn't matter anymore."

- (18) Facing up to Nuclear Power, a recent book, is reviewed and recommended by Joe Neilands. See Item 46.

PHILOSOPHERS' CORNER

- (19) Report of the Philosophers' Committee (Edwin E. Hopkins, Chairperson):

The BRS session at the annual meeting (in Boston) of the American Philosophical Association (Eastern Division), on December 28, 1976, went extremely well, with unusually lively interplay between panelists and audience, according to JUSTIN LEIBER, who chaired the session. (For the program, see NL12-61.) Attendance was sparse, however, apparently because the APA failed to distribute its Bulletin (containing the program) in time.

This is the 3rd year in a row that the BRS has held a session at APA meetings. A call for papers, for next year's session (in Washington, D.C.) has already gone out.

- (20) BRS Fellowship Travel Grants. The BRS will award a \$500 Travel Grant each year, to enable a scholar -- selected by a BRS Grant Committee -- to travel to the Russell Archives at McMaster University, Hamilton, Ontario, to do research. (This was Jack Pitt's fine idea.)
 As to funding, Peter Cranford has offered \$250, to match another \$250 from BRS funds. The BRS will earmark \$1.50 of each member's dues, for this purpose. The first grant will be awarded in 1978. For more information, ask Jack. (Dr. Jack Pitt, Dept. of Philosophy, California State University, Fresno, Ca. 93740.)

PSYCHOLOGISTS' CORNER

- (21) APA. These BRS members are also members of the American Psychological Association:

BY BERTRAND RUSSELL

(22)

"Bertrand Russell Speaks His Mind" is a transcript, in book form, of 13 TV interviews which BR gave in 1959 (NL7-12). Originally published in the USA by Avon in 1960 at 50¢, "Books In Print" lists it, hardbound from Greenwood, for \$9.75, but it has in fact been unavailable. We have just received a paperback version published in West Germany, in English. * You can now borrow it from the BRS Library, or buy it from Verlag Darmstädter Blätter, Schwarz & Co., Haubachweg 5, 61 Darmstadt, West Germany, for DM 9.80.

We recommend it because it's a good Russell sampler; it deals with 13 interesting topics, is brief, and easy to understand. 2 of its chapters are transcripts of the 2 films the BRS now owns, "BR discusses philosophy" and "BR discusses happiness."

We thank the publisher for sending us a copy.

ABOUT BERTRAND RUSSELL

(23)

Recollections of Beacon Hill. UNA CORBETT's daughter, Joy, was a student at the Beacon Hill School, entering in 1928, the year after Russell and his wife Dora founded it. Una has kindly sent us a clipping from The Record, Antioch College, dated 6/6/47, in which Joy talks about Beacon Hill:

After Russell's School, Antioch is Conservative

"I hear you consider Antioch a terribly conservative institution," many a person has remarked to Joy Corbett -- and after having studied 11 years under Bertrand Russell, she can only reply, "Well, it is."

After having been chairman, at 11, of the school council at Russell's Beacon Hill school near Chichester, England -- a council with all the powers of our administrative and community councils put together, hiring and firing the teachers -- Joy came into a much more old-line atmosphere at Antioch. Among other things, Antioch is the first school where she has received grades.

Unconventionalities

Russell's school, originally intended to run from the age of two or three to college age, actually only had a student body of 30-40 students of 12 years old or less when Joy was there. Besides the more obvious unconventionalities such as mixing dorms for boys and girls, and no clothes at all worn in the summer months, Joy remembers the strong political conscience the children were given. "Even in plays we wrote and produced, we were very much absorbed in the miners' problem, the Ethiopian war and other social subjects."

The education at Beacon Hill was ultra progressive, with the chief aim to develop the child's personality by pottery work, painting, carpentry and the like. There was little of the three Rs, Joy noted, as these could be picked up at a regular academic school within a year of transferring, whenever the students did, into grade school or high school.

History, geography and some languages were worked in to certain of the students' projects, and a few books were introduced into some of them, but only as they served the students' interests and never as ends in themselves.

Reading Trouble

Joy, now a third year English major on a co-op job in New York City, remembers that she had trouble reading while at Russell's school. "Progressive educational philosophy says not to make children do what they do not like to do," she smiled, "but it turned out I just had poor eyesight." Though chairman of the school council at 11, Joy was never secretary, she recalled, "-- I couldn't write that well."

Joy's memory of Russell dates from when she was about eight. "He was tall, thin, and white-haired, and we all called him Bertie. Dora, his wife, is also a creative teacher, and continued the school after their divorce." Their philosophy of education is set forth in Russell's Education and the Good Life and Dora's The Right to Be Happy.

Of her life in their school Joy is enthusiastic. "If there is one thing I learned there, it was the meaning of freedom. I learned what freedom is by first hand experience. We had freedom in everything, from self-government to self-expansion. The School gave us free reign and we had to learn moderation by trial and error. We both originated and enforced the rules. Once we did away with all rules, but it did not work out, so we made new ones."

Ended in 1939

Life at Beacon Hill was always varied and stimulating, with visitors from foreign countries to study the methods, refugees from the Hitler-occupied countries and Franco Spain, and hunger-marchers stopping by on the way to London to demand larger unemployment benefits. There were always some American students but the outbreak of the war in 1939 sent them all, including Joy, scurrying home.

(24)

Will visits Bertie. Excerpt from a letter from Will Durant to Bob Davis, dated 12/2/76:

When we visited John Cowper Powys near Corwen, Wales, in 1948, we made a side trip to see Bertrand Russell in his Wales hideout. He was in good health and good cheer, and ambled with us over his grounds.

We shall have a few friendly pages about Lord Russell in A DUAL AUTOBIOGRAPHY, scheduled for publication in 1977.

(25)

WARREN ALLEN SMITH received the following letter from BR, dated 2/24/51:

Dear Mr. Smith:

You ask me whether I call myself a Scientific Humanist or a Naturalistic Humanist. I am not in the habit of giving myself labels. I should not have any inclination to call myself a humanist, as I think, on the whole, that the non-human part of the cosmos is much more interesting and satisfactory than the human part.

But if anybody feels inclined to call me a Humanist, I shall not bring an action for libel.

(26) An English bookseller's catalog contains this item:

RUSSELL (Bertrand) A highly important typescript letter, signed, to the novelist, Pamela Frankau, approximately 100 words on one page, (Wales), 22 Sep. 1960, concerning the Campaign for Nuclear Disarmament of which he was President, declaring that the time has come to incite the nation to riot (or 'civil disobedience' to use his phrase) and informing her of the formation of 'the Committee of 100' for that purpose: a document proving to our mind that the boring old mathematician should have stuck to his sums. Together with Miss Frankau's reply (copy) declining to join. 50 pounds.

Our thanks to BOB DAVIS for this item.

BR'S INFLUENCE

(27) Paddy Chayevsky -- who wrote the screenplay for "Network", a movie satirizing TV that we recommend highly -- "quoted Bertrand Russell" in an interview in The New York Times (11/14/76). The Times story did not say what Mr. Chayevsky had quoted, so we wrote him and asked. Here is part of his answer:

"The sentence of Bertrand Russell's which I paraphrased -- rather than quoted -- was a definition of the purpose of philosophy, which, as I recall, was to learn how to live with uncertainty."

One place where BR says this is in the chapter, "What is philosophy?" of the book, "Bertrand Russell Speaks His Mind" (22):

I think that the sort of philosophy I believe in is useful in this way: that it enables people to act with vigour when they are not absolutely certain that it is the right action. I think nobody should be certain of anything. If you're certain, you're certainly wrong, because nothing deserves certainty, and so one ought always to hold all one's beliefs with a certain element of doubt, and one ought to be able to act vigorously in spite of the doubt. After all, this is what a general does when he is planning a battle. He doesn't quite know what the enemy will do, but if he's a good general, he guesses right. If he's a bad general, he guesses wrong. But in practical life, one has to act upon probabilities, and what I should look to philosophy to do is to encourage people to act with vigour without complete certainty.

BR QUOTED

(28) A gentleman. Cecil Porter's article from London, in "The San Francisco Examiner & Chronicle, Sunday Punch" (2/13/77) discusses the British aristocracy's traditional low opinion of "trade".

"For generations the only respectable ways to acquire wealth were to make war, to own land, or administer the law. As Philosopher Bertrand Russell said: 'A gentleman may use a sword but never a typewriter.'" Thank you, AMY BLOCK.

(29) Item deleted.

ASSESSMENTS OF BR

(30) Off the Hook. In response to the Sidney Hook article, "Bertrand Russell the Man," in Commentary July 1976 (NL12-62), which describes BR as anti-semitic, BOB DAVIS has this to say:

I feel that Hook's charges were a tissue of distortions that could not have been accidental.

I wish to reply to the anti-semitism charge since a number of members appear to have accepted it. The charge is based on some rather poor underpinnings. Hook refers to a letter in which BR tells of staying in New York with Jewish friends, but that he "longed to be with the uncircumcized." To interpret this as anti-semitic is absurd -- the whole letter conveys a tone of respect and gratitude to the people involved. BR's "uncircumcized" statement was an off-hand way of saying he longed to be home with his own friends.

Hook also states that when BR made derogatory references to millionaires it was "always Jewish millionaires and never American or Indian millionaires." In point of fact, this is wrong. Anyone familiar with his letters and writings knows that "American millionaires" is a phrase Russell usually used.

Finally, Hook referred to BR's last public statement, which concerned Israel:

The aggression committed by Israel must be condemned, not only because no State has the right to annex foreign territory, but because every expansion is also an experiment to discover how much more aggression the world will tolerate... We are frequently told that we must sympathize with Israel because of the suffering of the Jews in Europe at the hands of the Nazis. I see in this suggestion no reason to perpetuate any suffering. What Israel is doing today cannot be condoned, and to invoke the horrors of the past to justify those of the present is gross hypocrisy.

This is not calculated to please Israeli supporters but is hardly anti-semitic.

At our Annual Meeting, several Jewish members who are familiar with BR's record in this area expressed their outrage at Hook's assertion.

To further repudiate Hook's charge, we are trying to get permission to run an article BR wrote in 1933. (See Item 32).

Hook went on to make similar distortions concerning women and the family. They are equally off the mark, but I won't go into that here. The recent issue of "Russell" (20: winter 75-76) has balanced that out a bit better.

A few words must be said about Mr. Hook. He and BR were old philosophical antagonists. I have in my library a book, The Meaning of Marx, 1934. It is the symposium in which BR first published his essay-speech, "Why I Am Not A Communist," at a time when Communism was very chic intellectually. Defending Communism was Sidney Hook. By the fifties, however, Hook had become a somewhat militant anti-communist. Throughout the 50s and 60s he was in conflict with the sort of positions BR adopted in international relations. I think quite frankly that this is the source of Mr. Hook's distortions of Russell on the matters that he chose to mention in his review. It was, in other words, a cheap shot.

Incidentally, Hook published an essay on Morris Cohen last summer at about the same time he attacked BR. In the Cohen article he managed to get around to labeling George Santayana as "an ill-concealed anti-semitic." This has been admirably refuted in American Scholar (December 1976). I wonder if Mr. Hook has a passion for this particular charge.

- (31) Revenge. DONG-IN BAE has this reaction to Sidney Hook's article in "Commentary"(NL12-62): "It is understandable that such an opportunistic and pseudo-humanistic technocrat as Sidney Hook must hate such a man as Bertrand Russell. In his article he is taking revenge for the passages about him in the Autobiography."

This is what is in the Autobiography (Vol.III,p 147):

Several years later Hook again attacked me publicly, but this time in such a manner that no comment from me was necessary. It amused me, however, that for his defense of "freedom" and his attack on my views on Vietnam, he chose as his vehicle a journal later admitted to be financed by the Central Intelligence Agency.

- (32) "Why Are Alien Groups Hated?" is the title of a BR essay in Everyman (10/6/33) that we are awaiting permission (from the BR Estate) to reproduce. It is impossible to believe that the man who wrote this essay was anti-semitic, Sidney Hook notwithstanding. Our thanks to HARRY RUJA, who sent us this essay.

THE BRS AWARD

- (33) O'Hair. TOM TASKONIS writes: "In support of my nomination for our first annual award -- Madalyn Murry O'Hair -- I submit the following quote from BR, indicating that he would have agreed":

"Bertrand Russell was in correspondence with Dr. Madalyn O'Hair during the early 1960s, and was the single person of note in the world to come to her assistance during the times when she was being arrested and imprisoned. On December 4, 1965, he issued the following statement:

"The arbitrary arrest of Mrs. Madalyn Murray is outrageous. Her views as an Atheist are shared by the intellectual community of all countries, and her persecution cannot be tolerated.

"I urgently request the immediate release of this brave and entirely admirable woman.(Signed) Bertrand Russell.' The American Atheist, June 1976, p.3

CURRENT ATTITUDES

(34)

Religious USA. "Gallup Poll Finds New Evidence of Pervasive Religious Character of U.S., With Only India More Committed," says the heading on a New York Times story on 9/11/76.

During a Presidential campaign in which Jimmy Carter's "born again" faith has helped raise curiosity about the nation's overall religious character, some new evidence from the Gallup poll indicates that the United States is as pervasively religious as it was a quarter century ago.

A survey of 60 non-Communist nations suggests that the United States professes a greater level of religious commitment than any other major industrialized society and ranks only behind India among all countries studied.

Compared to Europe, which spawned most of this nation's denominations, the gap is particularly striking. While 56 percent of Americans surveyed said that their religious beliefs were "very important", for example, only 27 percent of Western Europeans said the same.

Likewise, while 94 percent of Americans said that they believed in "God or a universal spirit," 78 percent of Western Europeans made that affirmation.

Asked if they believed in life after death, 69% of the American respondents said they did, a percentage point higher than a similar Gallup survey of Americans in 1948. Among Europeans, the same answer was provided by a high of 48 percent among Italians to a low of 33 percent among West Germans.

The figures attest both to the continuing central role of religion in America and to the decline of faith in Europe.

...

An apparent disparity has developed in the last few years between private profession of faith and participation in organized religion. Most major denominations have suffered membership losses in recent years, particularly among the young. Although the sharp decline appears to have ended among most of these churches, the losses have been significant.

But there appears to be little support for those who, a decade ago, were predicting the demise of American spirituality under the weight of secularism. Since the "God is dead" movement and the radical turning away from religion by students of the 1960s, the nation has experienced a wave of evangelistic activity which has included succeeding generations of youth.

Our thanks to HERB LANSDELL.

OPINION

(35)

Tom. We have received a 4-page letter from TOM TASKONIS expressing a number of opinions, with some of which we disagree.

. The BRS should undertake to refute charges made against ER (such as Hook's charge of anti-semitism). We agree.

. Tom faults Hook for writing that ER hailed "the ruthless Leninist,

Ho Chi Minh, as a fighter for human freedom," and then, among other things, Tom denies that Lenin was ruthless. ("Hook does not actually call Lenin ruthless, but to combine the terms does" imply it.) "Lenin may have been, some say, opportunistic, perhaps even elitist, but certainly not ruthless." We disagree. ER met Lenin, and found him to be ruthless.

. Tom criticizes DONG-IN BAE for saying communism is undemocratic. "By definition, communism is democratic." "In the Soviet Union people vote just as they do here." We disagree.

. Tom enclosed a pamphlet, "Everything you always wanted to know about the Middle East conflict...but were afraid to ask", from the Middle East Coordinating Committee. It includes a paragraph by ER containing the sentence, "What Israel is doing today cannot be condoned." We agree (though you don't have to.)

* These are merely excerpts, some perhaps out of context. We will lend Tom's whole letter on request.

NEWS ABOUT MEMBERS

- (36) Dong-In Bae. See Item 56.
- (37) Don Jackanicz, who is working for his doctorate, has passed his orals. He is now working on his dissertation, tentatively titled, "The Place of Bertrand Russell in Intellectual History."
- (38) Corliss Lamont. The (Sunday) New York Times Review of the Week on 1/10/77 contained a large ad headed:

To the American People
The Carter Administration
and The Congress

Vietnam
A Time for Healing and Compassion

The ad advocated, among other things, direct negotiations between Washington and Hanoi, admission of Vietnam to the UN, lifting the embargo on American trade and travel to Vietnam, extending diplomatic recognition to Vietnam, economic aid for reconstruction of Vietnam, pardon for military deserters and those with less-than-honorable discharges, improvement of programs for Vietnam veterans.

Many of these steps seem likely to be taken, which must give considerable satisfaction to the ad's 19 signers. The bottom-line name was "Corliss Lamont, Author, Coordinator."

- (39) John Sutcliffe took some excellent pictures of Penrhyndeudraeth during his visit there (NL12-29). They can be borrowed from the ERS Library.

BULLETIN BOARD

(42)

Book distributor wanted. BOB DAVIS would like to find a North American distributor for the Spokesman Press, the publishing arm of the BR Peace Foundation (England). If anyone is interested, or knows of someone who might be, please notify Bob. (7025 W. Franklin #86, Hollywood, CA 90068.)

QUESTIONS & ANSWERS

- (43) Sartre. TOM TASKONIS had asked (NL12-42) about BR's opinion of Sartre. Here it is: "I think the Existentialist philosophy is pure nonsense, based intellectually on errors of syntax and emotionally upon exasperation." (Dear Bertrand Russell, Houghton Mifflin, Boston, 1969, p. 109.) Our thanks to BOB DAVIS.
-

CORRECTIONS

- (44) Poverty, not Pursuit. In NL12-44, when we recommended a recent book by Barry Commoner, we gave an incorrect title, "The Pursuit of Power." The correct title -- and a much better one -- is "The Poverty of Power."
-

BOOK REVIEWS

- (45) "The Life of Bertrand Russell" by Ronald W. Clark is reviewed by KATE TAIT in the latest issue of "Russell" (No.21-22). Not to be missed!
- (46) "Facing up to Nuclear Power", by John Francis and Paul Abrecht (editors). The Westminster Press, Philadelphia, 1976. \$3.95. Reviewed by J. B. NEILANDS:

This 244-page paperback is copyrighted by the World Council of Churches (WCC). The majority of the text is taken directly from the May, 1975 issue of Anticipation and represents a selection of the background papers presented at a Hearing on Nuclear Energy held at Sigtuna, Sweden, June 24-29, under the auspices of a sub-unit on Church and Society of the WCC.

The individual papers in this volume are relegated to six sections, namely, an introduction, the nuclear option, alternative energy sources, social ethics of nuclear power, a report to the churches and, finally, a summing up. There is an appendix consisting of a glossary of technical terms.

The WCC has attempted to assemble within this volume all points of view about nuclear power, both favorable and unfavorable. Alvin Weinberg, a well-known proponent, thinks the benefits are worth the price, which is eternal vigilance. Hannes Alfvén feels otherwise. A unique feature of this book is the section on global energy perspective wherein options for Latin America and Africa are considered. There is a fairly extensive discussion of radiological hazards and the relation of nuclear power to atomic weapons is explored in extenso.

Although the book is a balanced and self-contained review of nuclear power, two aspects of the process might have received further attention. Thus it would have enhanced the quality of the book to have included a section dealing with the abiologic nature of fission and fusion and the theory of its incompatibility with the life support system of the planet. Secondly, the book seems a little weak in politics and economics, at least within the American context. Full disclosures of the role of the AEC (now ERDA) as a huckster of nuclear power and the monopolization of uranium supplies by the energy industry would have been in order.

In spite of these limitations, *FACING UP TO NUCLEAR POWER* is an honest attempt to lay bare what is in store for a society about to go nuclear on a large scale. We owe it to ourselves, and especially to future generations, to become familiar with the arguments presented in this book. It is available on loan from the BRS Library, 3802 N. Kenneth Ave., Chicago, Illinois 60641.

THE BRS LIBRARY

(47) Report of the Library Committee (Don Jackanicz, Chairperson):

Since the printing of the last Newsletter, the BRS Library has received an additional fifteen contributions from eleven individuals. This brings the collection to a total of forty-five items. During the same period, two items (Nos. 31 and 38) were borrowed. Again, it is quickly concluded that interest in contributing exceeds interest in borrowing. In my last report I suggested explanations of why so few members have borrowed. But I can now only repeat that the Library has been organized for convenient use by all interested members. As the Library continues to grow--and we should all be most grateful for this--an increasingly diverse collection is being made available. Now, for example, we can offer Russell's five most important works in mathematical philosophy, a field hitherto unrepresented. It can be reasonably supposed that in 1977 new subject areas, other rare or unusual books and articles, and more non-printed materials will find their place in the collection so that members will come to find the Library a vital part of the BRS.

It will be remembered that the first contribution to the Library was a film. In Newsletter 12 commercially available Russell films were described and a proposal was made that the BRS acquire the remaining six. Our one film has been used four times and will again be presented at the February Los Angeles meeting. But, as was mentioned last time, the other six films may soon be removed from active sales

catalogues. I strongly feel the BRS should obtain these films before the opportunity is lost. A complete or partial appropriation may be advisable. This will probably be discussed in Los Angeles. But members in a position to consider making a special donation toward their purchase might consider the value of acquiring these films. \$775.00 would be needed to buy all six films. Presently the Library has \$6.43 reserved for the purchase of materials. However, with this quite modest sum it can readily be seen how an appropriation or direct contributions are necessary. I trust that those agreeing that films of Russell would greatly enhance the BRS's resources will be willing to help.

As mentioned earlier (4), \$300 has been appropriated for the purchase of films. Don will choose the films to be bought.

(48)

The 45. Here is a listing of the items in the BRS Library. When no author is mentioned, the work is by BR. The donor's name appears at the end.

1. Bertrand Russell Discusses Philosophy (film). Peter Cranford
2. Principles of Social Reconstruction. Don Jackanicz
3. Problems of Knowledge and Freedom, by Noam Chomsky. Don Jackanicz
4. The Right To Be Happy, by Dora Black Russell. Dan McDonald
5. The Political and Cultural Influence, an article in The Impact of America on European Culture. Bob Davis
6. Untitled contribution to Living Philosophies.
7. "Introduction" to The New Generation: The Intimate Problems of Modern Parents and Children. 1930. Bob Davis
8. Bertrand Russell Centennial Celebrations: Catalogue of the Exhibition (at McMaster). Dan McDonald
9. Roads to Freedom: Socialism, Anarchism and Syndicalism. Dan McDonald
10. A History of Western Philosophy. Lee Eisler
11. The Conquest of Happiness. Gary Slezak
12. New Hopes for a Changing World. Gary Slezak
13. Freedom versus Organization. Bob Davis
14. Dear Bertrand Russell. Dan McDonald
15. (item being checked)
16. "Russell on Religion" (essay) by Jack Pitt. Author.
17. Book review by Harry Ruja, of Bertrand Russell's Theory of Knowledge by Elizabeth R. Eames, and The Development of Bertrand Russell's Philosophy by Ronald Jager. Author
18. The Companionate Marriage by Ben B. Lindsey. Dan McDonald
19. Necessary Russell: An Introduction to the Life and Times of Bertrand Russell, by William Ready. Lee Eisler
20. 27 book reviews of Clark's The Life of Bertrand Russell, Dora Black Russell's The Tamarisk Tree: My Quest for Liberty, and Katharine Tait's My Father, Bertrand Russell — that appeared in various publications. Many donors
21. The Bitches' Brew or The Plot Against Bertrand Russell by Myra Buttle. Don Jackanicz
22. Russell in Review, J.E. Thomas and Kenneth Blackwell, editors. Papers from the McMaster Centenary Celebrations. The Bertrand Russell Archives

23. My Own Philosophy: A New Essay. 1946. The Bertrand Russell Archives
 24. The Life of Bertrand Russell in Pictures and His Own Words, compiled by Christopher Farley and David Hodgson. The Bertrand Russell Archives
 25. The Future of Science, with a "Self-Portrait" of the Author. Bob Davis
 26. Bertrand Russell's Philosophy, George Nakhnikian, editor. Papers from the Indiana University Russell Symposium, 1972. Publisher
 27. Mysticism and Logic. Dan McDonald
 28. The Autobiography of Bertrand Russell, Volume I. Dan McDonald
 29. Human Society in Ethics and Politics. Jim Martinson
 30. The Problems of Philosophy. Jim Martinson
 31. 4 papers from the BRS Psychology Symposium, 1976 The authors
 32. The Good Citizen's Alphabet. Lee Eisler
 33. Russell's Philosophy and the Modern Age by Tsutomu Makino. In Japanese. Author
 34. The Proceedings of the Bertrand Russell Memorial Logic Conference, Denmark 1971. Alan Slomson
 35. "Recollections of Three Hours with Bertrand Russell" by Lester E. Denonn. Author
 36. Introduction to Mathematical Philosophy. John Sutcliffe
 37. Principia Mathematica, Volume I. John Sutcliffe
 38. 15 color photographs from a visit to Penrhyndeudraeth, taken by John Sutcliffe.
 39. "The Labour Party's Foreign Policy", pamphlet, 1965. Peter Cranford
 40. Dictionary of Mind, Matter and Morals, Lester E. Denonn, editor. Peter Cranford
 41. "Pansychism versus Modern Materialism: Some Implications for an Ecological Ethics", unpublished paper by George Sessions. Author
 42. Principia Mathematica, Volume II. John Sutcliffe
 43. Principia Mathematica, Volume III. John Sutcliffe
 44. The Principles of Mathematics. John Sutcliffe
 45. "Psychosurgery: Some Ethical Considerations" and "INS Opinion about Psychosurgery", 2 papers by Herbert C. Lansdell. Author
- Plus 3.
46. Bertrand Russell Discusses Happiness (film). Peter Cranford, Lee Eisler, Don Jackanicz, The BRS Library, and The BRS Treasury
 47. Morals Without Mystery, by Lee Eisler. Author
 48. Bertrand Russell Speaks His Mind. 13 interviews. Publisher

(49)

Do borrow! The BRS Library is there to be used. BRS Library, c/o Don Jackanicz, 3802 N. Kenneth Avenue, Chicago, IL 60641

(50)

CONTRIBUTIONS

We are grateful to the following members for their contributions to the BRS Treasury: CAMPBELL, COWLES, CRANFIL, DONADIO, EISLER, FRANKS, HAILU, HARWICK, KINDELL, KWOK, LAWTON, LEVINE, LIPIN, MARAGIDES, MC DONALD, O'CONNOR, PLANT, READER, REID, RODRIGUEZ, SPANG, STOUCK and THOMPSON.

BRS BUSINESS

(51)

BRS aims. First, we would like to express our thanks to those who sent us their suggestions and comments: BAE, CRANFORD, DAVIS, EASTMAN, EISLER, JACKANICZ, MULL, NEILANDS, PARKER, SUTCLIFFE and TAIT.

The Directors have agreed that the statement as to aims should be brief. This is the statement:

The BRS aim is to promote BR's purposes.

This short statement has a very long reach, and can encompass many things. It covers: spreading BR's views; working for things he worked for; learning more about him; promoting appreciation of his life and actions; promoting Russell scholarship; promoting communication among Russell admirers, etc.

Here are some current BRS activities that help promote Russell's purposes:

- . The BRS Library -- promotes knowledge about, and understanding of, BR and his views.
- . The APA (philosophy) annual session -- promotes Russell scholarship.
- . The APA (psychology) session, which will probably be annual -- spreads BR's views on human behavior among psychologists.
- . The BRS Fellowship Travel Grant (new) -- encourages BR scholarship.
- . the soon-to-start Amnesty International tie-in -- to relieve oppression of political prisoners, a cause to which BR devoted much effort.

* * * * *

Having said this, we cannot resist quoting Kate Tait's statement on aims:

The BRS serves a useful function in putting Russell-admirers in touch with other admirers, helping them learn more about Russell, and encouraging them to do some of the things he used to do.

NEWSLETTER MATTERS

(52)

This issue is late. Though dated February 1977, it will actually be mailed in April. We regret the delay, and intend to get back (gradually) to our regular quarterly schedule. The 4 annual issues bear the dates February, May, August, and November.

ABOUT OTHER ORGANIZATIONS

- (53) The Society for Philosophy and Psychology had its 3rd annual conference scheduled for March 18-20, 1977 at the University of Pittsburgh, with a program in these areas: (1) mental representation; (2) problems of psychoanalysis; (3) moral psychology. For further information about this Society, ask HERB LANSDELL (Dr. Herbert C. Lansdell, 8412 Harker Drive, Potomac, MD 20854.
- (54) AHA. A news release from the American Humanist Association (9/24/76) advises that they have received \$136,000 in grants (from the Rockefeller Foundation and the Veatch Program), toward the production of a "new educational public affairs series of 26 color TV programs, titled 'Ethics in American Society'." It will explore "the ethical condition of the major institutions of American life, i.e., government, business, industry, the professions (education, law, medicine, journalism), the sciences, international relations and the personal and family ethic." The new series was spurred by the success of an earlier series, "The Humanist Alternative", consisting of 39 half-hour programs (in one of which, incidentally, ALBERT ELLIS participated), which was aired by approximately 225 public and commercial TV stations. Tentative release date of the new series is Spring 1977.
- (55) KBRS. DONG-IN BAE has formed the Korean Bertrand Russell Society. (The KBRS is located in West Germany and hopes one day to be located in a democratic Korea.) He formed it with "a very few Korean families also living in West Germany, and one German student of law." The KBRS has devised a constitution (called a "Statute"), and has issued a Manifesto, "For the Building Up of Social Democracy in Korea," setting forth its aims and ideals. It contains many references to BR, and includes the following sentence: "In South Korea there must be immediately abolished above all the antidemocratic-totalitarian-fascistic dictatorship of Yushin-terror-regime, and a true democratic society, in which freedom, justice and love will prevail, must be built up." Dong-In is the KBRS's President. Its address is Nassestr. 26, 5000 Koeln 41, West Germany. The KBRS has sent us copies of its new publication, "The Torch" (No. 1, March 1977. 78 pages.) It is written mostly in Korean and German, but some parts are in English, including the following:
- . BR's "A Liberal Decalog" (p. 5)
 - . A BR quote from Ideas That Have Harmed Mankind: "The general aim of the democrat is to substitute government by general assent for government by force, but this requires a population that has undergone a certain kind of training." (p. 20)
 - . A letter to Vice-President Mondale, on the occasion of Mondale's recent visit to Bonn, regretting previous American administrations' support of Korean President Park Chung Hee, and expressing satisfaction in the Carter Administration's statements on human rights. (p.44)
 - . The Society's Constitution and Manifesto. (pp.72 and 74)

* "The Torch" can be borrowed from the BRS Library.

INDEX

Introductory (1). Tait-O'Hair "debate"(2). 2nd BRS Psychology Symposium (2). Two BR movies (3). 4th Annual Meeting (4). Peter Cranford reports (5,6,7). Bob Davis on England (8). Steve Reinhardt's reports: last quarter '76(9), full year '76(10). Martin Garstens on Applied Philosophy (11). Lee Eisler on advertising (12), a discontinued press release (13), membership list as of 1/1/77 (15). Ed Hopkin's report on philosophers (15.5,19). Joe Neilands on Russia's nyet (16), undersea monster (17), a recommended nuclear book (18,46). New BRS Travel Grants (20). BRS-APA members (21). "BR Speaks His Mind" from Germany (22). Recollections of Beacon Hill(23). Will visits Bertie(24). Warren Smith's BR letter (25). Bookseller's catalog item(26). Chayevsky(27). BR on a gentleman(28). Davis vs. Hook(30). Dong-In Bae vs. Hook(31). BR essay awaited(32). BRS Award nomination (33). Religious USA (34). Taskonis letter (35). News about members: Dong-In Bae(36), Don Jackanicz(37), Corliss Lamont(38), John Sutcliffe(39). New members(40). Address changes (41). Book distributor wanted(42). BR on Sartre(43). Correction(44). Book reviews: Tait on Clark(45), Neilands on nuclear book(46). Library Committee report(47). BRS Library inventory(48). BRS Library's address (49). BRS contributors thanked(50). BRS aims (51). NLI3 late(52). Society for Philosophy and Psychology(53). AHA's new TV series(54). KBRS(55). Index(56).

P.S.

Three items are being mailed along with this Newsletter:

- . The BRS Membership List, as of 1/1/77. (Item 15)
- . "The Bertrand Russell Peace Foundation, Its Aims and its Work"(16-page pamphlet)
- . A memo from Lee Eisler, seeking a Co-Chairperson for the Membership Committee

Newsletter #14
May 1977

- (1) Debate cancelled (2). A large contribution (4). A pat on the back (5). One way to get involved (6). A proposal to the BRS (8). A new Co-Chairperson (10). BR on Lenin (15). Denonn recollects (16). Dora reviews Clark (33). An asterisk in the left column indicates a request or an offer to lend.
-

COMING EVENTS

- (2) Debate cancelled. The Tait-O'Hair debate on BR and religion (NL13-2) is cancelled for the present. Neither lady wanted to participate unless APA sponsored the event.
We say "cancelled for the present" because efforts are being made to hold the event at some other time, under some other sponsorship, perhaps at a university.
As of now there is no plan to have a BRS Psychology Symposium in San Francisco in late August. If such a plan should develop, we will notify members in time to attend.
-

(3)

REPORTS FROM OFFICERS

- (4) Chairman Peter G. Cranford reports:

I should like to add my congratulations to President Bob Davis for the magnificent annual meeting, in L.A. It was unusually well run and Bob's promotional ability in obtaining Will and Ariel Durant as speakers provided a treasured experience for Russellites.

The Society is coming of age as a living extension of the life of Bertrand Russell. The Durants brought him to life with their reminiscences of their relationship to him — all off the record, unfortunately. Tom Horne continued the process with his choral work — "Three Passions" — the prologue to the first volume of Russell's autobiography set to music. Thanks to the promotional efforts of Mrs. Betty De Loach Milham, a concert musician and friend of the late President Eisenhower, there is some reason to hope that the Westminster Choir may produce the work at Princeton University. Mrs. Milham, who attended Russell's lectures at Princeton, has provided the funds for the annual ERS Travel Grant, which will enable a scholar to travel to the Russell Archives at McMaster University. I would like to suggest that it now be called the Betty De Loach Award. The setting up of such an award was promoted by Jack Pitt and is our first real move into charitable activity.

We have had a minor setback in our plans to make Russell better known as a psychologist. Again we have been turned down by the American Psychological Association.

A present problem is the finance committee which I head. We can take some consolation in that we continue to be in solid financial shape though our budget is small. We have been able to support Lee in providing us with our jewel, the Newsletter, that binds us all together. The ERS Library is giving greater emphasis to films. Don Jackanicz's films will slowly but surely rival the Newsletter in keeping Russell's ideas alive.

To go back to finances, after a year of being finance chairman, I have made very modest progress. Part of this has been due to my schedule, which is filled from 5 A.M. to 9 P.M. with both personal and professional responsibilities. Too, as pointed out previously, humanistic organizations such as ours are having to retract, both here and abroad. I think that the only ultimately successful method is for the ERS to make money and to use a portion of what is made to have a professional fund-raiser — or at a minimum, to pay one of our members to work at it part-time. However we have no present cause to worry. I think for the time being we should simply be satisfied to function a year at a time, augmenting our contributions when possible and living within our means.

I would like to suggest to all members who feel "left out" that the best first step is to spread Russell's ideas in any way they can, and to contribute perhaps a widow's mite. With two hundred of us engaged in such activity, we can do a great deal of ultimate good.

(5)

President Bob Davis reports:

I received a letter from Edith Russell, and it says some nice things about the way things are going, here at the ERS. These are some highlights:

"The things that the ERS are doing and planning to do seem to me impressive and extremely encouraging, especially the scholarship program. I congratulate you most heartily. It seems as if things are coming rapidly and astonishingly well under your guidance. It is all so heartening and I much look forward to hearing more..."

She mentions Graham Whetlow's Symphony, dedicated to ER.

She mentions an Italian disc of ER's poem to her. (Set to music?)

She is interested in Tom Horne's choral work, "Three Passions" (NL12-40).

If anyone knows about the Whetlow Symphony or the Italian disc, please notify the Newsletter.

(6) Vice-President Gary Slezak reports:

I am now chairing the Awards Committee. The Committee's function has been outlined in N110-13,41. If you are interested in becoming more involved in the BRS, this is a good opportunity. The Committee will compile, over the next six months, a list of nominees and their credentials. The list will be submitted to the Board of Directors, which will narrow the list to 5 nominees. Afterwards, the general membership will vote and select the recipient of the 1978 BRS Award.

The Committee will consist of as many BRS members as wish to join it. In order to select the persons who most reflect BR's work and actions, we need the involvement of as many members as possible. Please write me for more information. (215 E. Chestnut St., #206, Chicago, IL 60611.)

(7) Treasurer Steve Reinhardt reports:

Balance on hand (12/31/76).....	1561.23	
Income: 8 new members.....	105.00

Expenditures: Information & Membership Com.....	-24.58*	
"Russell" subscriptions	172.50	
Toward film purchases	313.00	
Annual meeting.....	97.72	
	<u>558.64</u>	
		<u>558.64</u>
Balance on hand (3/31/77).....	1850.82	

*A negative amount, due to a refund of 97.60 from Harper's for ads paid for previously but not run, and unusually low expenses this quarter.

REPORTS FROM COMMITTEES

(8) Applied Philosophy Committee (Martin Garstens, Chairperson):

Martin's report is in the form of a proposal to the BRS, titled:

RUSSELL AND THE SECOND DISCOVERY OF FIRE

Somewhere Teilhard De Chardin said: "Some day after we have mastered the winds, the waves, the tides, and gravity, we will harness for God

the energies of love: and then for the second time in the history of the world man will have discovered fire."

Bertrand Russell could have made this second discovery. He had all the tools: the brains and reasoning power, the background, the education, the health, the longevity (97 years), the occasion, the position in society and in government, the following among intellectuals, the ideals, the love and the desire to attain this goal.

The second discovery of fire, may I suggest, is the extension of man's capacity to reason in his social relations and morality, as the first was the successful use of reason in man's relation to nature. But Russell did not bring this about, and it behooves the Russell Society, in carrying on Russell's work, to understand why.

Russell lacked the common touch. In spite of all his talents and auspicious background, he remained an aristocrat with a distinct distaste for the common man and for those he thought less intelligent than himself. (See Kate Tait's review of Clark's "Life of Bertrand Russell" in RUSSELL 21-22, Spring-Summer 1976.) In my estimation, this was the primary weakness in Russell's approach to the social problem. He never thought out the necessary educational techniques to reach the common man and thus attain a mass following.

his cannot be an ordinary following. It is one in which the use of reasoning and scientific method a la Russell is central. It also consequently can only be slow in growth, but at least it could be a beginning.

The Russell Society, if it is to be more than a book reading association, must attempt to explore and correct this basic weakness of Russell's. Whatever additional flaws one finds in Russell's character (and there are many) ultimately reside in this weakness.

One area in which Russell has important things to say and which is particularly important for our time is that of ethics. If we can bring reason and scientific method into ethics, as has thus far not been done, ethics and rational morality would have more extensive influence. This, I believe, could be T. D. Chardin's second discovery of fire.

At the University of Maryland I am trying to interest some of the faculty in the question as to whether a verifiable scientific ethics can be formed from current philosophies of ethics (which are very numerous), which might attain some degree of consensus, in the same way as the natural sciences developed out of natural philology historically. If this can be done, it would be very important in making reason and scientific understanding more widespread than the natural sciences have done.

(9) Information Committee (Lee Eisler, Chairperson):

Editorial "we". In discussing TOM TASKONIS' letter (NL13-35), we said "We agree" or "We disagree" with various statements in the letter. When we said that, we were using the editorial "we"; that is, we were expressing the Newsletter Editor's opinion. We were not speaking officially on behalf of the BRS. When that is the case, we will say, "The BRS agrees (or disagrees)".

We (and the BRS) would like to make that perfectly clear.

(10) Membership Committee (Lee Eisler, Chairperson):

New Co-Chairperson. We are very pleased to report that Beverly C. Smith has become the Co-Chairperson of the Membership Committee. She succeeds Carol Mull in handling the inquiries and enrollments that result from our efforts to recruit new members. Officers, Chairpersons, Directors and others who may need printed material for recruiting purposes (e.g. the BRS Information Packet) should request it directly from Beverly (74 Montaine Park, Rochester, NY, 14617.) Our great thanks go to Carol, who handled this BRS responsibility impeccably, even when there were many other demands on her time.

(11) Philosophers' Committee (Ed Hopkins, Chairperson):

See (12), under PHILOSOPHERS' CORNER

PHILOSOPHERS' CORNER

(12) Report of the Philosophers' Committee, by Ed Hopkins:

All flows smoothly towards the meeting of the BRS with the American Philosophical Association (Eastern Division) in Washington, D.C. this December. A call for papers has appeared in Journal of Philosophy, Review of Metaphysics, Russell, and Proceedings of the American Philosophical Association. So far (April 5th) only one paper has been received, but that is more than we had last year at this time. I expect to get 15 to 20 papers if the future succeeds in resembling the past.

I am getting together four copies of papers and comments, and the tape, of the last meeting. They will be turned over to the BRS Library.

I have been teaching a course titled, "Self-help through Philosophy," for a local learning network called The Baltimore School. The main text for the course was The Conquest of Happiness, with one essay by Seneca on "Tranquillity of Mind" thrown in. The discussions were interesting, I learned as much as my "students", and I rate the experience a success. I will be doing another five week, one-night a week, course during May.

(13) New periodical. The publisher of "Information Philosophie" has sent us the 28-page December 1976 issue. This Swiss periodical aims to inform its readers (in German) about "the newest trends, activities, and happenings in the philosophical world." Its address: Redaktion, Schlimpergstrasse 31, CH-8307 Effretikon, Switzerland. We couldn't find any subscription price; maybe our German wasn't good enough. You can
* borrow this issue from the BRS Library (3802 N. Kenneth Avenue, Chicago, IL 60641.)

BY BERTRAND RUSSELL

(14)

The Faith of a Humanist is the title of a little pamphlet by BR, published by the "American Humanist Association, Humanist House, Yellow Springs, OH 45387." BOB DAVIS, who sent it to us, thinks it is about 20 years old, and has not been published in any book he knows of. Here is the complete text:

When I try to discover what are the original sources of my opinions, both practical and theoretical, I find that most of them spring ultimately from admiration for two qualities -- kindly feeling and veracity. To begin with kindly feeling: most of the social and political evils of the world arise through absence of sympathy and presence of hatred, envy, or fear. Hostile feelings of this sort are common between nations; at many times they have existed between different classes or different creeds within one nation; in many professions envy is an obstacle to the recognition of superior merit; hatred of Jews, oppression of Negroes, contempt for all who are not white, have brought and are bringing great suffering to would-be oppressors as well as to those whom they have sought to oppress. Every kind of hostile action or feeling provokes a reaction by which it is increased and so generates a progeny of violence and injustice which has a terrible vitality. This can only be met by cultivating in ourselves and attempting to generate in the young feelings of friendliness rather than hostility, of well-wishing rather than malevolence, and of co-operation rather than competition.

Veracity and Kindly Feeling

If I am asked "Why do you believe this?" I should not appeal to any supernatural authority, but only to the general wish for happiness. A world full of hate is a world full of sorrow. Each party, where there is mutual hatred, hopes that the other party will suffer, but this is seldom the case. And even the most successful oppressors are filled with fear -- slave owners, for example, have been obsessed with dread of a servile insurrection. From the point of view of worldly wisdom, hostile feeling and limitation of sympathy are folly. Their fruits are war, death, oppression, and torture, not only for their original victims but, in the long run, also for their perpetrators or their descendants. Whereas if we could all learn to love our neighbors the world would quickly become a paradise for us all.

Veracity, which I regard as second only to kindly feeling, consists broadly in believing according to evidence and not because a belief is comfortable or a source of pleasure. In the absence of veracity, kindly feeling will often be defeated by self-deception. It used to be common for the rich to maintain either that it is pleasant to be poor or that poverty is the result of shiftlessness. Some healthy people maintain that all illness is self-indulgence. I have heard fox-hunters argue that the fox likes being hunted. It is very easy for those who have exceptional power to persuade themselves that the system by which they profit gives more happiness to the underdog than he would enjoy under a more just system. And, even where no obvious bias is involved, it is

only by means of veracity that we can acquire the scientific knowledge required to bring about our common purposes. Consider how many cherished prejudices had to be abandoned in the development of modern medicine and hygiene. To take a different kind of illustration: how many wars would have been prevented if the side which was ultimately defeated had formed a just estimate of its prospects instead of one based on conceit and wish fulfillment!

Believing Without Proof

Veracity, or love of truth, is defined by Locke as "not entertaining any proposition with greater assurance than the proofs it is built upon will warrant." This definition is admirable in regard to all those matters as to which proof may reasonably be demanded. But since proofs need premises, it is impossible to prove anything unless some things are accepted without proof. We must therefore ask ourselves: what sort of thing is it reasonable to believe without proof? I should reply: the facts of sense-experience and the principle of mathematics and logic — including the inductive logic employed in science. These are things which we can hardly bring ourselves to doubt, and as to which there is a large measure of agreement among mankind. But in matters as to which men disagree, or as to which our own convictions are wavering, we should look for proofs, or if proofs cannot be found, we should be content to confess ignorance.

There are some who hold that veracity should have limitations. Some beliefs, they say, are both comforting and morally beneficial, although it cannot be said that there are valid scientific grounds for supposing them to be true; these beliefs, they say, should not be critically examined. I cannot myself admit any such doctrine. I cannot believe that mankind can be the better for shrinking from the examination of this or that question. No sound morality can need to be based upon evasion, and a happiness derived from beliefs not justified on any ground except their pleasantness is not the kind of happiness that can be unreservedly admired.

Religious Beliefs and the Universe

These considerations apply especially to religious beliefs. Most of us have been brought up to believe that the universe owes its existence to an all-wise and all-powerful Creator, whose purposes are beneficent even in what to us may seem evil. I do not think it is right to refuse to apply to this belief the kind of tests that we should apply to one that touches our emotions less intimately and profoundly. Is there any evidence of the existence of such a Being? Undoubtedly belief in Him is comforting and sometimes has good moral effects on character and behavior. But there is no evidence that the belief is true. For my part, I think the belief lost whatever rationality it once possessed when it was discovered that the earth is not the center of the universe. So long as it was thought that the sun and the planets and the stars revolved about the earth, it was natural to suppose that the universe had a purpose connected with the earth, and, since man was what man most admired on the earth, this purpose was supposed to be embodied in man.

But astronomy and geology have changed all this. The earth is a minor planet of a minor star which is one of many millions of stars in a galaxy which is one of many millions of galaxies. Even within the life of our own planet man is only a brief interlude. Non-human life existed for countless ages before man was evolved. Man, even if he does not commit scientific suicide, will perish ultimately through failure of water or air or warmth. It is difficult to believe that omnipotence needed so vast a setting for so small and transitory a result.

Apart from the minuteness and brevity of the human species, I cannot feel that it is a worthy climax to such an enormous prelude. There is a rather repulsive smugness and self-complacency in the argument that man is so splendid as to be evidence of infinite wisdom and infinite power in his Creator. Those who use this kind of reasoning always try to concentrate our attention on the few saints and sages; they try to make us forget the Neros and Attilas and Hitlers and the millions of mean poltroons to whom such men owed their power. And even what is best in us is apt to lead to disaster. Religions that teach brotherly love have been used as an excuse for persecution, and our profoundest scientific insight is made into a means of mass destruction. I can imagine a sardonic demon producing us for his amusement, but I cannot attribute to a Being who is wise, beneficent, and omnipotent the terrible weight of cruelty, suffering, and ironic degradation of what is best that has marred the history of man in increasing measure as he has become master of his fate.

A Plausible Conjecture

There is a different and vaguer conception of cosmic Purpose as not omnipotent but slowly working its way through recalcitrant material. This is a more plausible conception than that of a God who, though omnipotent and loving, has deliberately produced beings so subject to suffering and cruelty as the majority of mankind. I do not pretend to know that there is no such Purpose; my knowledge of the universe is too limited. But I do say, and I say with confidence, that the knowledge of other human beings is also limited, and that no one can adduce any good evidence that cosmic processes have any purpose whatever. Our very inadequate evidence, so far as it goes, tends in the opposite direction. It seems to show that energy is being more and more evenly distributed, while everything to which it is possible to attribute value depends upon uneven distribution. In the end, therefore, we should expect a dull uniformity, in which the universe would continue forever and ever without the occurrence of anything in the slightest degree interesting. I do not say this will happen; I say only that, on the basis of our present knowledge, it is the most plausible conjecture.

Immortality, if we could believe in it, would enable us to shake off this gloom about the physical world. We should say that although our souls, during their sojourn here on earth, are in bondage to matter and physical laws, they pass at death into an eternal world beyond the empire of decay which science seems to reveal in the sensible world. But it is impossible to believe this unless we think that a human being consists of two parts — soul and body — which are separable and can continue independently of each other. Unfortunately all the evidence is against this. The mind grows like the body; like the body it inherits characteristics

from both parents; it is affected by diseases of the body and by drugs; it is intimately connected with the brain. There is no scientific reason to suppose that after death the mind or soul acquires an independence of the brain which it never had in life. I do not pretend that this argument is conclusive, but it is all that we have to go on except the slender evidence supplied by psychical research.

Happiness Through Kindness

Many people fear that, without the theoretical beliefs that I find myself compelled to reject, the ethical beliefs which I accept could not survive. They point to the growth of cruel systems opposed to Christianity. But these systems, which grew up in a Christian atmosphere, could never have grown up if either kindly feeling or veracity had been practiced; they are evil myths, inspired by hate and without scientific support. Men tend to have the beliefs that suit their passions. Cruel men believe in a cruel God and use their belief to excuse their cruelty. Only kindly men believe in a kindly God, and they would be kindly in any case. The reasons for the ethic that, in common with many whose beliefs are more orthodox, I wish to see prevail are reasons derived from the course of events in this world. We have seen a great system of cruel falsehood, the Nazi system, lead a nation to disaster at immense cost to its opponents. It is not by such systems that happiness is to be achieved; even without the help of revelation it is not difficult to see that human welfare requires a less ferocious ethic. More and more people are becoming unable to accept traditional beliefs. If they think that, apart from these beliefs, there is no reason for kindly behavior the results may be needlessly unfortunate. That is why it is important to show that no supernatural reasons are needed to make men kind and to prove that only through kindness can the human race achieve happiness.

ER ON PEOPLE

(15)

ER on Lenin. We said -- in NL13-35 -- that ER found Lenin to be ruthless. Here is some of what ER said to John Chandos in 1961, taken from the LP, "Speaking Personally," (Riverside 7014/7015). We based our conclusion, that ER found Lenin ruthless, on the last paragraph below.

I met Lenin in 1920 when I was in Russia. I had an hour's talk with him tete a tete. The conversation was in English, and his English was quite good.

I was less impressed with Lenin than I expected to be. He was of course a great man. He seemed to be a reincarnation of Cromwell, with exactly the same limitations that Cromwell had. Absolute orthodoxy. He thought a proposition could be proved by quoting a text in Marx. And he was quite incapable of supposing that there could be anything in Marx that wasn't right. That struck me as rather limited.

I disliked his great readiness to stir up hatred. I put certain questions to him. One of them was: you profess to be establishing

socialism, but as far as the countryside is concerned, you seem to me to be establishing peasant proprietorship, which is a very different thing from agricultural socialism. He said, "O dear me, no. We're not establishing peasant proprietorship. You see, there are poor peasants and rich peasants, and we stirred up the poor peasants against the rich peasants, and they soon hanged them to the nearest tree, ha!ha!ha!" I didn't much like that.

ABOUT BERTRAND RUSSELL

(16)

Lester Denonn recalls 3 hours he spent with ER in 1943:

At the suggestion of Professor Schilpp of Northwestern University, for whose Library of Living Philosophers I am preparing a bibliography of the works of Bertrand Russell, I have been in communication with Russell from time to time about the project. His recent series of lectures on Monday evenings in New York City gave me the opportunity of suggesting a meeting. His response was characteristically crisp: "Your letter reached me after some delay. I am afraid I probably couldn't manage dinner, but I could come to your office next Monday (Feb. 16, 1942) between 3 and 3:30, and give as much time as might be necessary. If however your work makes that impossible, I will try to manage a later hour on a later Monday. Yours sincerely (signed) Bertrand Russell."

The eventful Monday arrived but no Russell and finally at about quarter to four Mr. Russell was announced and in a few seconds was before me — all to myself. I had seen him but twice before, on the lecture platform at Cornell in 1924 and in Brooklyn in 1938. It was the same Russell I had seen, but an older man, frailer looking than his height on the dais led one to believe, but vigorous and hearty nonetheless, with unforgettably roguish, piercing blue eyes, that punctuated every remark, and the distinguished shock of white hair that crowns the familiar angular photographs.

He apologized for being late, stating that he had miscalculated the time it would take to reach my office. He strode to the window to enjoy the view and pass a few pleasantries about the shipping — or lack of it — and then indicated that he was ready to get down to business. He wanted to see how far I had progressed with the bibliography.

Before handing him my notebook, I remarked how thoroughly ashamed I was to sit down with him, since my Mother's maid had told me it was no honor to meet him. "Why that fellow ran a nudist camp in England, and what's more, they called him Barney, that's what they did." He shrugged his shoulders, realizing that the Barney was a lot of "Blarney," and merely commented that the newspapers — or some of them — had seen fit to print wholly unmitigated lies about him.

He opened the looseleaf and turned to 1895, to a note on his article, "The Logic of Geometry," appearing in "Mind." "I remember that well," he said. "Except for an earlier review, that was the first time that my name appeared in print as an author, and you know how an aspiring author is impressed by his first appearance in print."

He then read carefully line after line, year after year, commenting not infrequently on entries he had forgotten and recalling other possible sources for items. He was throughout extremely helpful in making suggestions.

Many of the books and articles struck forgotten chords that played first upon his eyes with merry twinkles and then tripped with droll laconic phrases into anecdotes sounded in rich English accent.

"Haldane on Infinity.' I remember that well. It was the custom for members of the Aristotelian Society to tear each other's papers apart unmercifully. Not knowing that the members had decided that it would be unbecoming to follow this practice with their president, a distinguished cabinet minister, I sat intently writing notes for refutation. When Haldane had finished, old Shadworth arose to move the vote of thanks but was too weak to continue. Imagine my consternation when they turned to me to make the motion. I did so, but rushed home with my notes to get the criticism off my chest. Hence the article."

"Proposed Roads to Freedom.' You know, that was called 'Roads to Freedom' in England, but my publishers thought it was safer to call it 'Proposed Roads,' in America."

"Cambridge articles? Oh, yes, I remember the controversy about one in which I tried to show that it was necessary to lie to become ordained in the Church of England. I caught one of the Professors of Church History in a glaring inconsistency on a point of church history"

"Articles in the Britannica? Why, of course. The Britannica came out with an edition during the last war in which the article about me painted me as a horrible fellow. When after the war, they invited me to write on mathematical philosophy, I answered that I learned from their prior edition that I was scarcely a fit person to become a contributor. A long letter of apology followed promptly."

"Weekly syndicated articles in the Hearst newspapers? You know, a writer has to make his living by his bad writing so that he can continue at what he thinks is his good writing."

"On Denoting' -- I think that was my best work. I have expressed the ideas better subsequently, but that represents the field -- on description -- in which I believe most will say is my most significant contribution."

"You will notice that I always spell Leibniz without the 't'. If there had been German birth certificates in his day, they would have shown the 't', but since he wrote mainly in French, he himself indicated the name most frequently without it."

"Jourdain's 'The Philosophy of Mr. B*rrr*and R*ss*l.' That was a curious work containing many direct statements of mine. Jourdain, poor fellow, suffered from paralysis. I would go to see him frequently and bring him all sorts of mental gymnastics, such as, 'first, the idea slipped my mind and then it went clean out of my head. Where was the idea between the two events?' It seems that Jourdain took them all down and got them out in book form, adding some others that he picked up elsewhere."

"Articles on China? A missionary once told me that one of my articles criticizing the English government's treatment of the Chinese had saved the lives of many Englishmen in the days when the anti-foreign difficulties were rife. The Chinese figured that if one Englishman could write that way, maybe all the English weren't so bad. But the English government didn't like the article very much anyway."

We had arranged a very interesting program early in our meeting. He wanted a little time out for an Englishman's regular afternoon tea while I signed my mail; then he would like about three quarters of an hour to review his lecture notes for the evening and then, in answer to a repeated invitation, "he probably could manage dinner," so long as he could get to his lecture a few minutes before the scheduled hour.

At five he left and returned shortly after half past. One of the boys chanced to be in the reception room when he returned. I introduced him to Russell and commented that he had heard him some years ago in a debate with John Cowper Powys. "Oh, I remember that debate. It was on marriage. I agreed with Powys on one point — that marriage has something to do with the difference between men and women."

I then took him on a short tour of the office, explaining what he had gathered from some of the telephone calls that had interrupted us, that the firm represented one of the large commercial banks of the city. "You know, no doubt, that I don't particularly like bankers," he said. He seemed a little perplexed at the fact that I should have shown such devotion to his works as evidenced by the large library of over sixty volumes that I have acquired and all the time I have spent on the bibliography, when my surroundings seemed so foreign to his social and political views. I acknowledged that I differed with him and added that, perhaps, my views were less remote from his than those of some of my colleagues. He seemed amused at this response and satisfied to let the point drop — for the time being.

Before returning to my room, I offered him a separate room for his lecture review but he said that that would be unnecessary. His notes were in longhand. He read them silently and carefully, with his ever faithful pipe aglow. "I can't think without it." Now and again he made a few changes. In order not to make him conscious of my presence, I sat preparing my contracts lecture for the next evening. He later explained that he always reviews his thoughts this way before a lecture and then is able to talk without reading from his notes, except now and then. Frequently he talks from a bare outline.

When he had finished, we repaired to Ye Olde Chop House on Cedar Street. He commented very favorably about the place. "It reminds me of an inn in London. I was the only Englishman who ever went there. They made it for Americans."

His running rapid-fire comment delighted me as it must have some of the guests at the intimately close tables, as his rich English voice was unmistakably arresting.

"Will Durant? Charming fellow. Writes beautifully, but never has a fact correct — not even my father's name."

"Whitehead? I am sure that we differ from each other on many points, but we have refrained from printing our disagreements. Yet I remember one occasion when I lectured on solipsism at a meeting at which he was chairman. I said I could not subscribe to the doctrine as I could not believe that I had created all that existed in the world, especially not the many pages of Mr. Whitehead that I could not understand."

He said that he had been in all of the United States on lecture tours except Florida, Georgia and South Carolina. This remark was prompted by my explanation of the reason why my family was presently in Florida. "I am very sorry to hear about the mastoid trouble your children have had. My two older children were also operated on for mastoids. I remember the night when one was taken to the hospital. I had to debate with a bishop. I don't like bishops, but I particularly didn't like this one. He argued that all human suffering was caused by sin. I

could scarcely understand how my little five-year-old boy could have sinned so much."

"Talking about bishops — you know my disinterested view of the so-called Bertrand Russell case is that it was an outrage. Even if I had not been concerned in it, I would still think it was an outrage. They used to say a lot about Tennessee." His eyes twinkled.

He asked me whether I differed from his philosophic position — again intimating that my surroundings bespoke wide divergence from his political ideas. I said that I had just finished a book still in typescript in which I developed an epistemological idealism along with a metaphysical realism, which I presumed was opposed to his realism. "On the contrary," he said, "if you are influenced by critics who mistake my views and place me with the realists, then you will think so, but if you will attend closely to my arguments, you will see that I haven't been an epistemological realist since 1905. My latest book should convince you of that."

He explained that he was lecturing once a week at the Barnes Foundation on the history of thought from Thales to today. He is carefully planning these lectures in preparation for a lengthy work on the history of human thought in its social and cultural background.

On the way to the lecture hall, he harked back to his perplexity at my choosing him for my philosophic labors in my philosophic hobby. I explained that insofar as hero worship was concerned, that I had a hero in the late Justice Oliver Wendell Holmes who, although not a systematic philosopher, stirred me deeply by the trend of his thinking. He stated that he could readily understand why an American lawyer interested in philosophy could feel that way about Holmes but that he was still curious about himself. I said I could not better express my views about him than I had done on previous occasions when I had said that I felt his to be the most catholic mind ("small 'c'," he interjected) that I knew through which I could view the currents of contemporary problems.

By this time we had reached his destination. He made sure not to mix up the books we had alongside of us. I had Laird's "Theism and Cosmology", and the philosopher had — a detective story. He got agilely out of the taxi, and as he swung around to enter the lecture hall, he turned back and said, "Be sure to tell your Mother's maid that I am neither so wicked, nor for that matter, so red as I am painted." ("Recollections of Three Hours with Bertrand Russell" originally appeared in "Correct English", Vol.44, No.1 — December 1943.)

Our thanks to DON JACKANICZ.

BR MENTIONED

(17) Studs Terkel. A review of Studs Terkel's newest book, "Talking to Myself," (Time Magazine, 4/18/77) mentions the wide variety of events and personalities that Terkel has written about.

"He was in Chicago when Dillinger was shot and in Selma in 1965. He has also elicited conversation from just about every notable from Bertrand Russell to Mahalia Jackson."

We will try to have the conversation he elicited from BR in our next issue. Our thanks to ALBERTO DONADIO.

BR QUOTED

(18)

Two kinds of work. George F. Will's article, "The Hell of Affluence" (Newsweek, 3/21/77) discusses Fred Hirsch's new book, "Social Limits To Growth". Its thesis is that when an affluent society has satisfied basic material needs, then people begin to want "positional" or prestige things such as a "choice" suburban home, an "exclusive" vacation spot, an "elite" education, a "superior" job — which are necessarily in limited supply — and this is bound to produce discontent. The number of persons educationally equipped for "superior" jobs increases faster than the number of such jobs. Will's final paragraph goes as follows:

Today even more than in 1935, there is much truth in what Bertrand Russell then said facetiously: "Work is of two kinds: first, altering the position of matter at or near the earth's surface relatively to other such matters; second, telling other people to do so. The first is unpleasant and ill-paid; the second is pleasant and highly paid. The second kind is capable of indefinite extension: there are not only those who give orders, but those who give advice as to what order should be given."

ASSESSMENTS OF BR

(19)

Will Durant, on the contemporary scene in philosophy:

Professional philosophy still hides itself from the world, lost and secure in the labyrinths of logic, the mysteries of mathematics, or the meticulous, anesthetizing analysis of words.

Bertrand Russell is the lusty exception to this norm; he soon broke out of the cave to face bravely what seem to me the real problems of philosophy: nature and mind, morals and character, liberty and order, violence and law, youth and age, love and marriage, beauty and ugliness, Communism and democracy, war and peace, religion and secularism, progress and decay, the lessons of history, the meaning of life and death.

Thanks, again, to DON JACKANICZ.

LOCAL CHAPTERS

- (20) Chicago area. Gary Slezak writes: "At our last meeting, we discussed ER's 'The Problems of Philosophy' and continued our discussion from the previous meeting of Sidney Hook's article attacking Russell (NL12-62). The next meeting is scheduled for late May. We plan to show new films recently purchased for the Library."
-

NEWS ABOUT MEMBERS

- (21) Peter Cranford has been writing papers: "Russell and his Detractors" (5 pages); "Bertrand Russell's Conception of the Meaning of Life" (8 pages), which will be a chapter in Dr. Erika Wick's book (title unknown). Both papers are available from the ERS Library (3802 N. Kenneth Avenue, Chicago, IL 60641)
- * (22) Albert Ellis's article, "Religious Beliefs in the United States Today," in "The Humanist" (March-April 1977) suggests reasons why "so many intelligent and well-educated people today fall back on devout dependency on supernatural forces, which their own parents and teachers had largely abandoned in the 1920s and 1930s."
According to an item in the Indianapolis Star (4/20/77), Albert Ellis, "psychotherapist and author, will speak at the 28th Annual Meeting of the Mental Health Association in Marion County at 8 P.M., May 12th." (Thank you, CAROL MULL.)
- (22.5) Ed Hopkins has been teaching a course, "Self-help through Philosophy." See (12).
- (23) Corliss Lamont was named Humanist of the Year by the American Humanist Association. He gave the keynote address at the AHA's recent meeting in L.A., telling what he believed characterized a Humanist, and citing ER an example of someone who remained vital to the end because he never retired but kept himself involved. ERS members present were BOB DAVIS, CHARLES GREEN and BILL YOUNG.
- (24) Justin Leiber has been appointed a visiting scientist at M.I.T. His book, "Noam Chomsky: A Philosophical Overview" (St. Martins Press, New York) will soon be followed by "Structuralism: Scepticism and Mind in the Psychological Sciences." He chaired last year's ERS session at the annual meeting of the American Philosophical Association (Eastern Division) and expects to chair it again this year (in Washington, late December.) He is looking for a job teaching philosophy.
- (25) Betty De Loach Milham has 3 organ concerts scheduled for July: at Hartwick College, Oneonta, N.Y. July 3rd; at the Cathedral of St. John the Divine, NYC, July 23rd; and one in Passaic, N.J., date and place not known. (If interested in attending the Passaic concert, write Betty, 1474 Lyon Avenue S.E., Aiken, SC 29801.) In addition to giving concerts, she teaches piano,

organ and harpsichord, and has organized and been director of the Aiken Choral Society.

- (26) Jack Pitt, ERS Secretary, is one of twelve participants attending a 2-month seminar this summer at The Johns Hopkins University. The seminar, "Philosophy and the Social Sciences," will focus upon theories concerning the psychological basis of culture, and upon alternative explanations of institutions and institutional change. It is funded by the National Endowment for the Humanities with the intent of enabling scholars from different parts of the country to come together to engage in advanced study and research. The amount of the award is \$2400.

- (27) Warren Allen Smith writes "Manhattan Scene", a 2-page sheet "for excerpting by West Indian newspapers." It consists of items from various publications and organizations, plus a generous helping of jokes. Here are samples from the issue of March 31, 1977:

The truth behind the food crisis, claims the Environmental Fund, is that the 1974 UN meetings in Bucharest and Rome mistakenly assumed, first, that the hungry nations have the right to produce as many children as they please; and, second, others have the responsibility to feed them. Thus, the Fund (1302 18th St., NW, Washington, D.C. 20036) states that although countries have every right to increase their populations, they also have the accompanying responsibility to care for those people. It's not up to the U.S. or Australia or some other nation to care for the rest of the world, particularly when they do not realize that the real problem behind world hunger is "too many people." At some point, concludes the group, "we in the U.S. are going to find that we cannot provide for the world any more than we can police it."

Groucho Marx, when asked what he thought of computer dating, said, "I'm in favor of it. But only if the two computers love each other."

NEW HONORARY MEMBERS

- (28) We are delighted to report that we have two new honorary members:

Katharine Russell Tait, daughter of Bertrand Russell and Dora Black Russell, is a founding member of the ERS and was its first Treasurer.

John Russell, son of Bertrand Russell and Dora Black Russell, is now the Earl Russell, having inherited the title from his father. John writes, "here are still many causes which could activate the mind of Bertrand Russell. The battle is not over. And so it is with particular delight that I welcome your invitation to me to join the Bertrand Russell Society as an Honorary Member."

NEW MEMBERS

(29) We are very pleased to welcome these new members:

George Carter/EPP/Carnegie-Mellon University/Pittsburgh, PA 15213
 David Bruce Harley/98 Bertram Dr./ Dondas, Ont., L9H 4T7/Canada
 Vance G. Ingalls, Jr./2237 Mason/ San Francisco, CA 94133
 James Kuzmak/24 Collingswood Road/ New City, NY 10956
 (Mr.) B.J. Lucas/4316 Dallas/ Houston, TX 77023

Carl C. Neel/541 McBee Street/Malvern, AR 72104
 Jay Seckels/5234 S.E. Ogden/Portland, OR 97206

BULLETIN BOARD

(31) Good book, good buy. We have bought a limited number of copies, at a bargain price, of Dora Black Russell's The Tamarisk Tree, list price 9.95. We offer it at \$4 plus 50¢ for postage. Dora — ER's 2nd wife, and mother of our two new honorary members — tells what it was like being married to ER and running the Beacon Hill School with (and without) him. Order The Tamarisk Tree from DON JACKANICZ, 3802 N. Kenneth Avenue, Chicago, IL 60641.

RECOMMENDED READING

(32)

"From Under The Rubble", Alexander Solzhenitsyn, editor (Little Brown 1974) is a collection of essays, 2 of which are recommended by BOB DAVIS: "Socialism in our Past and Future" by Igor Shafarevich, and "Contemporary Socioeconomic Systems and their Future Prospects" by Mikhail Agursky. "Both dissidents, both hostile to socialism, both thought-provoking. Several other essays are, unfortunately, religious hogwash," says Bob.

BOOK REVIEWS

(33)

Dora reviews Clark. The following review, by Dora Black Russell, of Ronald W. Clark's "The Life of Bertrand Russell" originally appeared in "Freethinker" (December 1975, Vol. 95, #12):

In two respects at least Ronald W. Clark has undertaken an immense task — to deal with the extent and complexity of Russell's life, as well as the vast amount of material, published and unpublished. He has the possibly unenviable advantage of being the first person allowed by the Russell Estate and McMaster University to make use for publication of the Russell Archives; he has also the correspondence between Russell and Lady Ottoline Morrell and Lady Constance Malleon, both now no longer living. One must give him considerable credit for exhaustive work, which no one who has ever undertaken research should undervalue.

But several considerations arise in dealing with archives. The volume of the material is overwhelming and indigestible in a short space of time; how much should be verbatim, how much paraphrased; most important of all, what should be selected for publication and what left out. As I indicated in my autobiography, Russell left his papers to two Trustees, Countess Edith Russell and Anton Felton, of the Russell Estate. They had the power to destroy or otherwise dispose of these papers. None of Russell's children have been told what has or has not been preserved of family correspondence. I do not know if any letters of mine to Russell exist; if so, I have been informed that, on Russell's orders, they are not to be published till five years after my death. All this is relevant only in the sense that a biographer is inevitably highly selective in the use of material and will be guided by his own opinions, values and tastes, as well as by the availability and sheer superabundance of documents with which he has to deal.

Perhaps I should say at once that I am one of those who dislike the modern passion for prying into every detail of people's private, more especially their sex, lives and the hoarding up of letters and papers for the purpose of sale and future "revelations". Many letters survive, of course, for sentimental reasons and may later be discovered. But others are both written and preserved by those concerned out of a sense of their own importance; these, to the disadvantage of humbler persons, survive to make and possibly distort history. I do not know to what extent learning more about a writer or statesman may damage the image one may have formed

of him. I do know that, when I read how the wife of John Donne gave birth to twelve children and died in childbirth, it tarnished somewhat for me the glory of his love poetry.

But I want first to comment on Clark's handling of Russell the mathematician, philosopher, rationalist, political reformer and agitator. Clark gives chronologically the relevant information and extracts from letters, and as regards the achievement with Whitehead of "Principia Mathematica", there is little that anyone not expert can say, except to note the agony and exhaustion the work entailed. But when it comes to other activities, Clark fails to get inside the spirit of Russell and the times through which he was living. Clark is either lacking in the necessary imagination and empathy, or else he is too right-wing in politics to do justice to Russell's campaigns. He is certainly, like one aspect of Russell himself, a class and cultural snob. We are frequently reminded that Bertie was "a Russell", so inspired by great traditions that his aristocratic bearing at the Nobel Prize ceremony in Stockholm was such as to "put the Royal Family at ease"!

Exploration of religion with Ottoline has space, but the great battle for reason against authority, intolerance and superstition is scarcely mentioned. But this mattered greatly at the period when a mere handful of "Heretics" in Cambridge, with C. K. Ogden were upholding the young in their unbelief amid an environment of compulsory chapel-going in the Colleges. Nor is credit given to Ogden, the rightful inventor of the impudent "Today and Tomorrow" series to which both Bertie and I contributed. I have been credited with "influencing" Bertie towards anti-religion. The truth is that both of us had to struggle free from a religious upbringing. And, in fact, one of Bertie's first suggestions to me on our return from China was that I should join the Rationalist Press Association and the Independent Labour Party. We both attended dinners of the RPA, Bertie worked and wrote for them for half a century, and was their President from 1955 till the day of his death. He was on the Panel of Distinguished Members of the National Secular Society, to whom he gave a lecture in 1927 on "Why I Am Not a Christian", which was later published by the NSS and the RPA.

To the National Secular Society on the occasion of their Centenary as late as 1966 he wrote: "It is good news that the National Secular Society is publishing a centenary brochure, and I am glad to take this opportunity of congratulating the Society on a hundred years of successful work for liberal causes. Ninety-eight years ago my father was defeated in a Parliamentary election because he advocated birth control. Throughout the disgracefully scurrilous campaign his opponents alluded to him as Vice-Count Amberley. A Bishop accused him of infanticide and his usual political friends fought shy of supporting him. Not only in this matter of birth control, but in all questions where sex plays a part, there has been, during the last hundred years, and especially during the last fifty, a profound change in which the National Secular Society has taken a valiant part. The Blasphemy Laws, though still on the Statute Book, have become a dead letter. There still remains much to be done to secure a rational ethic, and we may look forward confidently to the continuation of the valuable work of the National Secular Society in this field. I wish all success to the Society."

In 1964 this was his contribution to the NSS campaign for Secular Education: "The attempt to impose religious belief on children should be resisted. Religious doctrine is arbitrary and entirely the province of those who wish to maintain such views as they find adequate to their needs. It is entirely unacceptable, however, that doctrine should be

foisted upon the young as a matter of duty in the course of their education. I welcome the campaign against compulsory chapel and religious coercion in our schools."

As we all know, from present controversy, none of these causes can be called a dead letter. And Bertie Russell stands out in his time, as great as Voltaire in his, as a tireless fighter of great integrity who was a support and inspiration to multitudes among the confused and troubled, to whom he brought relief and clarity of thought.

On philosophy Clark rightly gives space to the harrying of Russell by Wittgenstein. As I have never been a Wittgenstein fan I can only feel sympathy with Russell, when, in the midst of writing the results of very hard-won thought, he was assailed by attacks on his personal character and by theories that seemed to destroy the very foundation of his work. As to this now I cannot judge, but at that date, since I was studying philosophy and eighteenth-century thought myself, I enjoyed Bertie's application of the atomic and analytic method to matter and mind, and I recall sharing his puckish delight that Einstein had "upset MY Newtonian cosmology."

The story of Russell's pacifism from 1915 onwards is usefully told in detail from Russell's angle. This was the time in Russell's life when he was most emotionally alive, and was able, in great meetings, to reach out and feel himself at one with the mass of ordinary people. But it does not convey just what Russell meant to us young men and women, a man who stood up alone for the sake of life, conscience, the hope of a better world. We would have followed him anywhere.

By the same token, Clark's estimate of the Campaign for Nuclear Disarmament (CND) and the Committee of 100 is totally inadequate. Those of us who had been young beside Russell in 1916 now found again the champion we needed. At its outset, CND was an uprising of intellectuals, who were among the few who really understood the meaning of nuclear weapons. It did not come from the mass of the people. But, as information spread, it became a great movement of morality, humanity and compassion. It was pre-eminently a movement for which the combination of qualities that Russell possessed were required. That work, the manifesto with Einstein, and forming the Pugwash group of scientists, had an effect on world opinion which will never be forgotten if our history survives.

Searching my own beliefs I find that there is no cause which Russell led or supported — apart from several aspects of his hostility to Russia — with which I have not been in whole-hearted agreement. Strange as it may seem to this more cynical age, there were some things which Russell and my generation really believed and knew we had to fight for. Nor should it be forgotten that many benefit today from some, at least, of our victories. There have been great changes in the marriage laws, in the relations of men and women, and in the theory and practice of education. Some of us innovators and pioneers indeed have lived to see our ideals distorted and misused; "free love", for instance, is not the same thing as "having sex", nor is much of the education today styled "progressive" in accord with what Russell and I intended.

About our school Clark has pieced together information from various sources. His use of hearsay, innuendo and anonymous malicious gossip is, in a serious book on such a subject, inexcusable and near libel. Seducing members of the staff was not, as implied, Bertie's habit. Remarks to the staff about women alleged to have been made by Bertie, are quoted from sources not given and an anonymous teacher claims to have been sexually approached. Such statements, which may even be deliberate falsehoods by those who made them, should not have been reported by a

scrupulous biographer. The one case, to which the quotation from my divorce refers, is fully told in my book and arose in our own home before the school started, as did any subsequent incidents of the kind. We kept our private lives apart from the school. It is also untrue that Griffin Barry ever came to stay at the school until after Bertie had left it and me for good. As regards the staff, they did have reasonable liberty for their own lives; a bungalow classroom some distance from the main school house could be used now and then to give a party to their friends. Two marriages took place among the staff, who were, in the main, loyal and excellent teachers. My daughter Kate has written that she learned more at our school than at any other time of her life.

Clark gives the impression that we taught the children about intercourse and sex fully in biological terms. In fact we did not; our sex teaching by present standards was old-fashioned. We were not dealing with adolescents; we answered questions, did not discourage or discuss masturbation; our aim was to let the children feel that there was nothing unclean or improper about their bodies. (I am, in fact, dubious about the way sex teaching is done nowadays.)

Even where he quotes from published statements by Bertie or me, Clark gives a false impression. We were not in entire agreement; I did not teach socialism in the school; its basis was democracy instead of authoritarianism, and co-operation instead of competition. At that time it seemed as if our social system were moving in such a direction, which, regrettably, cannot be said now.

Clark quotes from an article which I wrote about the school fairly recently in the journal, "Anarchy," as if the views it contained were from Bertie and me. In fact I stated clearly at the beginning of the article that this account related only to the time after Bertie had left. The fully democratic Council, with domestic staff and gardeners, was my innovation, as was the teaching of history from the beginning of the world, associated with biological and archaeological objects found by the children. But Clark rightly assesses that Bertie found the financial drain of the school unbearable and that, while he took pleasure in elaborating theories of education, he lacked the patience and community spirit to put them into practice.

Where his sources are other writings by me, Clark, either by carelessness or selective omission, again gives false impressions. I was attacked in America in 1928 for my book, "Hypatia," which contained views about sex, not for the "Right to be Happy," which did not. My autobiography, recently published, and which he has obviously read, contains incidents in which I participated. He states that the idea for the book, "Prospects of Industrial Civilisation," came to Bertie on the ship for China, but not that it arose entirely from theories about the nature and effect of industrialism which, as I explained, I put to Bertie in the midst of the Red Sea, theories which he called highly original and are elaborated in my own book.

I also tell the full story of the onset of Bertie's illness in China and how two Chinese chauffeurs and I played our part in helping to save his life, by getting him back from the Western hills, and demanding the opening of the gates of Peking. Clark dismisses this as a car with a puncture on the way back from Bauding, the place where previously he had caught the chill which later developed. The photo of Bertie facing pp. 320-321 is one I took of him on the wall of Peking not the Great Wall; the other showing him on a veranda, taken by Mr. Chao, is of our own Chinese house, not the University, and there is a shot of me, back

view, also photographing him. When it comes to my marriage to Bertie, Clark gets the registry office wrong; it was Battersea, not Chelsea. Nor was there any celebration or speech by Frank Russell, other than his characteristic remark that the Registrar had tried to marry him to Eileen Power, the other witness, before we arrived. My son John was born at 31 Sydney Street, Chelsea, and not in hospital. These things are all related accurately in my autobiography.

Clark seems deliberately to play down the wives in this story, possibly because three of them are still alive. But I think there are other reasons. The temptation to make use of the rich harvest of the Ottoline and Colette letters was very great; one or two that are included contain important information, but it might have been preferable to keep most of them for the two books of correspondence which will undoubtedly be published. Ferreting out every detail of the sex life of eminent persons is the passport to a large sale and evokes the greatest attention from reviewers. Why does not Women's Lib protest against the spate of male chauvinist sex which has, for weeks, been flooding our Sunday press? First, we had Augustus John, now we have to have Russell and Shaw. Unavoidably I have to deal with Bertie's attitude to women.

In the tradition of Englishmen he was brought up to know nothing about them, except to place them in two categories; wives for child-bearing and domestic chores, the rest for romantic liaisons, or the purely physical satisfaction of the sexual appetite. To Alys, the very young Bertie was an insufferable little prig and snob, correcting her grammar and manners, informing her that she was "fat" and unintelligent. For years, depriving her of "conjugal rights," he did not seek a divorce. It must be remembered that, at that date, divorce broke professional careers and husbands assumed that wives could do without sex. (James Barrie never consummated his marriage and was hurt and astonished after many years of pretence, when his wife wanted to leave him.) I note that at one point, Alys, possibly in desperation, asked Bertie if he could "acknowledge" a child if she had one. In her Quaker way she believed in free love and also in women's rights.

Fortunately Ottoline took him in hand, arousing in him aesthetic values which he lacked, bringing also the warmth of a real companionship with a woman. His letters to her reveal a part estimate of himself: "I have a perfectly cold intellect which insists upon its rights and rejects nothing. It will sometimes hurt you, sometimes seem cynical, sometimes heartless ...you won't much like it. But it belongs with my work -- I have deliberately cultivated it and it is really the main thing that I have put discipline into...the sudden absolute cessation of feeling when I think I must be trying at first. And nothing is sacred to it -- it looks at everything quite impartially..."(p.139)

Ottoline responded: "It was exhausting but delightful for me to have my mind kept in strict order...I often... wanted to hide under shady sentimental willow trees but this was never allowed." Indeed Bertie's gift to her, and to me, as to any intelligent woman or man whom he valued, was to inspire that poise and self-confidence which spring from discovering one's inherent talent. Thus he evoked in Ottoline the capacity to queen it later among her Garsington intellectual coterie.

Ottoline notes in her diary that concern for the nation, due to their aristocratic lineage, was a further bond between them. One entry goes to the heart of Bertie's tragedy: "He is so lonely and tortured by his brain incessantly working, and he cannot be sympathetic to the things that so much affect me. His body and mind seem to have a huge gap between them ... his intellect is so immense but en l'air, not en rapport with the

things of this sensual life. No visionary power or imagination in that direction or what there is is very arctic and bare."

The pursuit of intellectual excellence at no matter what cost, and the dominance of the scientific mind, sharpened for the uncompromising pursuit of truth, had, at times, brought both Russell and Whitehead to the verge of madness. Men were intoxicated by their exciting discoveries in physics, and, so exacting was the work in this field and in mathematics, that even at an early age men's brains became too old to cope with it. I have also written of this remoteness of Bertie's intellect, seeing in it not only the danger of individual isolation, but the peril of an entire society dominated by the schizophrenia of a scientific elite.

When he comes to Bertie's dilemma about Colette and myself, Clark sets the scene like a Barbara Cartland novel that I recently read. A nobleman of ancient lineage, deciding that the time has come to beget an heir, begins to extricate himself from his aristocratic mistresses and seek a likely candidate among young debutantes. The eligibility of the selected young woman, said to be gentle — and even intelligent — is discussed by the titled ladies. She may be taken on trial, but should she, after journeying to China, presently fail to deliver the goods, she may be discarded in favor of previous loves, irrespective of her sacrifice of her own promising career. Reading this, I can only say (like Bergson when Bernard Shaw insisted on expounding his philosophy for him) "O no, it was not quite zat." Clark is well aware that the pursuit of truth did not apply in Bertie's pursuit of ladies, hence he might have guessed that the impression given by the letters he cites, is not the whole story.

I was, of course, ignorant of the depth of his relations with Colette. Their love began when, through the war, Bertie was most alive emotionally and nearest to the way ordinary human beings feel. Clearly there is reason to see in this the love of his life, and that they should have married then. But the question to ask is why did Colette, professing eternal love, not wish to go with Bertie to Russia and China? Why did he hide the fact that I was to be with him? Colette faced the same choice as I — to live day by day beside a man of austere intellect and have children; or the glamour and color of the theatre, and the dramatic expression of her own personality. Bertie once wrote that he liked to live like the great characters in Shakespeare or Grand Opera; so perhaps, did she. Both were a bit theatrical; and passionate meetings and partings did not involve any lasting commitment.

The reticence of Bertie's letters about my lone disappearance into Russia covers, not so much indifference, as our bitter quarrel before he went. Faced with my anger because he broke his promise to "start our life" by going there together, he had — always admiring an adventurous spirit — more or less dared me to go alone. Alarmed at the result, he was not as Clark says, inactive. But there was little he could do. He wrote desperate letters to the British Consul in Reval and urged Arthur Watts to find me and get me out. In the event, I presently returned from China, having helped to save the life of the father and delivered the goods in the shape of his son — possibly to the misfortune of all four of us.

I did not aspire, as Colette suggested, to become the Empress of all the Russells. Experiencing three generations of them, I found, as she did, that the relation is quite otherwise. Bertie often mentions his own lustfulness. I doubt if he ever experienced the full sexual thrust of the male. It was inhibited in him by his cold loveless aristocratic upbringing, and by his own intense devotion to his intellect. He was a frightened small boy, a will-o'-the-wisp, a lonely man out in the cold

without the constant physical and emotional warmth of a woman beside him.

Since Clark stresses sex issues, women cannot easily evade them. Should romantic love prevail over a trail of mental breakdowns, broken marriages and careers? What do we mean by love, anyway? We seem obsessed by sex; our sex codes are in confusion. Do we now — so it seems — evaluate men as sex objects in the way that men have traditionally evaluated women?

Do women propose to emulate and themselves live by the masculine sex code? Have they not something better to contribute from the inspiration of their own psyche both to human life and human society? Are not the lack of love, the growth of self-seeking in our society traceable to the very same causes that bedevilled Bertie's own ideals in his personal life and beyond? These were the sort of problems with which those of us struggling for sexual liberty and understanding were dealing and which are smirched by Clark's prurience.

Ronald W. Clark no doubt thinks that he has told the complete story without fear or favour. In fact the whole tone of this book denigrates Bertie vis-a-vis the Establishment. Amid all the detail about ancient lineage and the rest, one element is missing — the spark of genius. Bertie had insight and vision which I am glad that my life allowed me to come in contact with and to share. Was he ever really wrong about human choices and human destiny? What choice is the world making even now?

THE BRS LIBRARY

(34)

Report of the Library Committee (Don Jackanicz, Chairperson):

Not having attended the 1977 annual meeting, I am indebted to Lee Eisler for having presented the Library Committee report in Los Angeles. According to the minutes of that meeting, "in discussion it was remarked that most of Russell's books are available without too much effort either from Libraries or book-stores. It was voiced that the Library might best concentrate on films, tapes, and records." I fully agree with the former observation but only partially with the latter suggestion.

The Books in Print catalogue provides a lengthy list of Russell's works while most community and academic libraries do offer some variety of printed material by and about Russell. For this we can be grateful, but it should be remembered that some members may not be in a position to purchase personal copies or can not readily consult well-stocked collections of Russelliana. It is in the interest of these members that many of the Library's items should be considered. In addition, a number of the Library's books and articles, because of their uncommonness or rarity, are such as to attract potentially every

members. We have seen that few members have made use of the Library. Yet it is encouraging to know that a growing assortment of printed material is available upon request by any member. I am confident that those members in need will contact the Library.

That the Library should obtain films and recordings of Russell is a proposal I have supported from the beginning. I do not believe making such non-printed materials available should be the Library's sole or even principal activity. But it has been established that Russell films and recordings are useful and popular at B. R. S. functions. The Library now possesses two films and a third is being ordered. At the Los Angeles meeting a Treasury appropriation of \$250.00 was made for the purchase of a BBC/Time-Life film titled Bertrand Russell. I am pleased to report the possibility of obtaining this film at a discount. If this can be done, the remainder of the Treasury appropriation might be applied toward acquiring another film. While none are presently in the Library, tapes and records would likely become as popular as films, and their contribution, like all gifts from members, is to be welcomed.

By the distribution time of Newsletter 15 we should have received our third film. As of April 1, 1977, however, the Library has accumulated fifty items through the contributions of B. R. S. members and others. All of these contributors are to be applauded, and the membership is reminded that their requests will be gladly received and promptly filled.

ODDITIES

(35)

Bedford anecdote. The following comes from Interesting Anecdotes, Memoirs, Allegories, Essays, and Poetical Fragments: tending to amuse the Fancy, and inculcate Morality. By Mr. Addison, 1797:

The late Duke's great-grandmother, wife to the fifth Earl of Bedford, and mother of the excellent Lord Russel, died before her husband was advanced to the Dukedom. The manner of her death was remarkable: - She was very accomplished in mind as well as person, though she was the daughter of Robert Carr, Earl of Somerset, by the dissolute Countess of Essex. But the guilt of her parents, and the murder of Sir Thomas Overbury, had been industriously concealed from her; so that all she knew was their conjugal infelicity, and their living latterly in the same house without ever meeting. Coming one day into her Lord's study, her mind oppressed and weakened by the death of Lord Russel, the Earl being suddenly called away, her eye, it is supposed, was suddenly caught by a thin folio, which was lettered, Trial of the Earl and Countess of Somerset. She took it down, and, turning over the leaves, was struck to the heart by the guilt and conviction of her parents. She fell back, and was found by her husband dead in that posture, with the book lying open before her.

(Thanks, Bob Davis and Peter Houchin.)

CONTRIBUTIONS

(36) Money contributed by members (in addition to dues) during the first 3 years of BRS existence (1974-1976) has provided 64% of BRS income, and is essential if the BRS is to prosper and develop its possibilities.

We thank the following members for their recent contributions to the BRS Treasury: TRUMAN ANDERSON, JR., JUSTIN COLEMAN, PETER CRANFORD, FRANCES DIMITT, DON JACKANICZ, TERRY & JUDITH ZACCONE.

BRS BUSINESS

(37) Time to nominate Directors. As you recall, the BRS has 15 Directors; 5 are elected each year, for a 3-year term (NL10-7,39).

Any member may nominate a candidate for Director. The names of the candidates will appear on a ballot in the next issue (NL15).

* If you wish to nominate someone, send your candidate's name and a brief statement of qualifications, to the Elections Committee, c/o Bob Davis (7025 W. Franklin #86, Hollywood, CA 90068.)

The 5 Directors whose terms expire on 1/1/78 are ED HOPKINS, DON JACKANICZ, JIM MC KEOWN, JACK PITT and KATE TAIT. Directors are not limited to a single term; they may be re-elected.

(38) Classified information. The membership list, that we distributed to members with NL13, is for members' personal use only. Its purpose is to facilitate communication among members. It is not to be sold or given to other publications or organizations without the written permission of the BRS President.

ABOUT OTHER ORGANIZATIONS

(39) Denver Freethinkers' Society has issued another 4-page "Directory of U.S. Freethought Groups and Publications — 1977". Their address: PO Box 1621, Englewood, CO 80150. The BRS's name and address is listed, with the letter "U" alongside, meaning "unknown". This means they don't know anything about us. The Directory states, "The information here presented was obtained from the groups themselves." This is misleading, since it implies that the BRS supplied the information in response to a request, and knew it was going to be listed in the Directory, none of which is so. On the other hand, one could say that the information presented did come from the BRS, since it probably came from our classified ads. The Directory also states: "No implication is intended that the groups and publications herein assembled are in mutual accord with any philosophies, viewpoints or policies, except as specifically stated."

P.S.

- (40) Carol Mull is teaching, at Clark Junior College of Business, a class in Business Law, and a class and lab in Electronic Accounting Machines and Mini-Computers. Next quarter she will also have a class in Art Appreciation. Many students are veterans, handicapped or underprivileged, and Carol's aim is to help make them more employable. Next Fall, she will do her usual 6 lectures on Symbolism, at Indiana Central College. Busy gal!
- (41) Maiden speech. Next issue we expect to run John Russell's maiden speech, of July 21, 1976, in the House of Lords. It deals with the industrial nations' obligation, as he sees it, to help feed the 3rd World.
-

NEWSLETTER #15
August 1977

- (1) Medvedev to speak(5). Mortimer Adler includes ER (10). Brother Frank on Bertie (11). The Terkel interview (12,44). Graham Whettam on his symphony (14, 46). 62 dissertations (16). Spokesman books for sale (27). More BR films acquired (33). Time to vote (40,49). Volunteer needed (41). The index is at the end (48). An asterisk in the left column indicates a request or an offer to lend.
-

REPORTS FROM OFFICERS

- (2) Chairman Peter G. Cranford reports:

The position of Board Chairman remains a nominal one. It is likely best to let it define itself ostensibly over a period of time. Its eventual position will no doubt be to note the overview and guide policy.

As things have developed with us since the founding, the best work of the society is done by individuals with the following characteristics:

1. Russell has had a big impact on their lives and they are knowledgeable about him.
2. They have a high degree of altruism.
3. Their work demonstrates a high degree of competency.
4. They all think and write well.
5. They work effectively as "one-man committees".
6. They are all volunteers.

To strengthen the society, I think that the governing board should be composed primarily of members who have the above qualities. Board members who are not able to actively work in spreading ideas but have unique contributions to make should be in special categories -- honorary, sponsors, etc. Potentially strong board members are difficult to spot in advance. I expect they will surface on their own -- first by volunteering and second by performance. The number of working board members probably should be increased.

Since our purpose is to spread Russell's ideas, they should be spread at first to our own members -- who often are looking to the working members for leadership. For this, we need three pamphlets: "What We Believe", "What Russell Can Do For You", and "What You Can Do For The Bertrand Russell Society". We need to educate our own members if the only thing we do is to provide them with various reading lists. It occurred to me that the simplest thing an individual or group could do is to purchase a Russell film of their own and show it widely in their commu-

nity. I did a similar thing during the war in educating groups as to certain threats posed by yellow fever. I reached very large numbers of people with minimum effort on their part and mine. A Russell film followed by a question and answer period would be just as effective.

I am planning to do some rather direct spreading of ideas this year by purchasing the Russell film on happiness and showing it on request to those interested. A contribution might be solicited.

Although we attract some by our slogan, "The good life is inspired by love and guided by knowledge", another motivator is more effective. Russell was ultimately concerned with the survival of humanity. There is no greater motivator than survival. This incidentally is what makes the churches tick. They offer survival after death. This is an offer difficult to refuse but we can match it with survival before death plus "survival" after death of the kind advocated by Russell.

Another thing that members can do when they write or give talks is to use the ideas of Russell where they seem appropriate. I have done this both with small groups and on a national scale. Persistent legitimate name and idea dropping will in time grow in an exponential manner providing the ideas are sound. There is no one to do this but us. Incidentally, wherever I have mentioned "compossibility" to the very intelligent it has created a great deal of interest. This sort of propagandizing is done very well by the Seventh Day Adventists. I think that we will find that many church methods have utility for us.

I think we need a "one-man committee" to get us started in a small way in the publishing business. The Rationalist Press, Albert Ellis, church groups, etc. do this with profit. I think that Bob Davis suggested sometime ago that small books a la Haldeman-Julius might be the way to begin.

A serious weakness in the organization is that we have not yet begun to establish an applied philosophy. Everything considered, I cannot think of a greater applied philosopher than Bertrand Russell. A rather lengthy manifesto for this non-existent discipline could easily be put together from his writings and his activity.

The society can become very influential if it is able to do the following:

The society must develop a strong compossible situation with its own members. It must be profitable for each member to belong to the society and it must be profitable for us to have them as members. I do not think that the organization should be faulted so far for not having done this better. We have been too weak to do anything but grow. All that we have been able to offer members is some satisfaction of their herd instincts -- i.e., to belong to a group that is interested in an altruism of the sort demonstrated by Russell. We also have been sought out by those lost in the philosophical jungle who are looking for a rational meaning in life.

The society will grow in a limitless fashion if it learns how to make money. This is an absolute necessity. I think therefore that as soon as possible the newsletter must be made

to pay for itself and that all funds given away should be given on an indefinite loan/contribution basis. All that this would mean is that all applying for a travel grant would make a commitment to repay the money when they can comfortably do so. They could have the choice of repaying it as a minimal interest loan or as a tax deductible contribution to the society. This would not be a legal obligation. It would simply be an unenforceable moral obligation. This should work two ways. Members, particularly students, who are having extreme hardship (and we have some) should be assisted with dues, etc. out of a fund set up for this purpose.

In making money, we should capitalize on methods that have proven successful. Albert Ellis has generously spelled this out for us. He is a splendid promoter -- the best I know in psychology. If he lives to be 97, his total literary and financial output will rival Russell's -- if it doesn't already. If he ever retires we should draft him as finance chairman.

Since so much depends on finances, the time has come to get a good money raiser. The job can be made compossible simply by paying someone to do it. But we don't have the money! In the early days of television there was a similar problem. There were no programs because there were no television sets to receive them. There were no TV sets because there were no programs. However, as with TV, we can do it if we simply make a start...as we have done with the film library.

We have concerned ourselves with awards for others. I think that it would be wiser to give awards to each other. The only payment the society can make for meritorious work is by recognition. As a starter, I propose that the board give annual rewards for various forms of achievement. This increases compossibility.

(3) President Bob Davis reports:

Instead of presenting a formal President's Report in this issue, we note that the following items were initiated by Bob: Whettam's Symphony (14,46), new honorary member (24), Spokesman Books (27), Lamont speech (22,43), Earl Russell's maiden speech (23,45).

(4) Treasurer Steve Reinhardt reports:

Balance on hand (3/31/77).....	1850.82	
Income: 18 new members.....	164.73	
30 renewals.....	367.93	
Total dues	532.66

REPORTS FROM COMMITTEES

Science Committee (Joe Neilands, Chairperson):

- (5) The Committee has invited Dr. Zhores A. Medvedev to lecture at Berkeley, and he has accepted. Tentative date: November 22. Subject: Environmental problems in the USSR. In his letter of acceptance, Dr. Medvedev writes: "I have studied very seriously the aspects of radioactive contaminations of environment in the USSR."
- (6) "I'm interested in having the BRS Science Committee approach professional science societies on the matter of setting up a world-wide short-wave transmission network for communication of both research results and social concerns among scientists. I have floated the idea around a little and it's not entirely crazy," says Joe.

Information Committee (Lee Eisler, Chairperson):

- (7) The BRS is testing ads in ATLAS and in HUMAN BEHAVIOR. We'll report the results in a future Newsletter.
-

BY BERTRAND RUSSELL

- (8) "The Faith of a Humanist"(continued). Last issue we printed this essay (NL14-14), with BOB DAVIS's comment that it had not been printed in any book he knew of. Well, KEN BLACKWELL and HARRY RUJA are preparing a complete bibliography of BR's writings, and Ken sent us the record telling how this essay originated and where it has been published. It is interesting not only in itself, but as a foretaste of what the Blackwell & Ruja complete bibliography will be like. Here it is:

The faith of a rationalist. Listener, Lon., 37 (29 May 1947), 826, 828. Broadcast 20 May 1947 in a series of talks on "What I believe". Reprinted without title in A.D. ^tRichie et al., What I Believe (London: Porcupine Press, 1948); as The Faith of a Rationalist / No Supernatural Reasons Are Needed to Make Men Kind (Girard, Kan.: Haldeman-Julius, B-638, 1947), pp.3-5; The Faith of a Rationalist (London: Watts, n.d., 12pp. [idem., London: Published for the Rationalist Press Association Ltd by Barrie & Rockcliff, n.d., 12pp.]); with Russell approving the change, as The Faith of a Humanist (Toronto: The Humanist Guild of the University of Toronto, [1960], 8pp.); The Faith of a Humanist (Yellow Springs, Ohio: American Humanist Association, n.d., AHA Publication No. 205 [Leaflet Series], 12pp.); as "The faith of a humanist", Humanist Anthology, ed. Margaret Knight (London: Barrie & Rockcliff, 1961); Atheism (A). MS is titled "What I Believe"; TS. BBC script.

* * * * *

(9)

It is JOHN TOBIN who brought "The Faith of a Humanist" to our attention originally. He had sent it to BOB DAVIS, who sent it to us. John tells why he thinks the ERS should publish it in pamphlet form:

I consider it an explicit, simple and succinct statement describing a humanistic orientation towards life, without being "philosophical".

I have given copies of it to many people.

Kai Neilson in his article, "The Resurgence of Fundamentalism" (The Humanist, May/June 1977), says, "There is a gap — indeed a widening gap — between intellectuals and plain folks, and it is perhaps nowhere more evident than in their reaction to religion."

I agree, and consider "The Faith of a Humanist" to be just the kind of thing that is needed. It is something that "plain folks" can understand.

ABOUT ER'S WRITINGS

(10)

Mortimer Adler, a man known to be very choosy about books — he chose the books in the collection, "Great Books of the Western World" — has been doing some more choosing. This time he concentrates on books of the

20th Century, and has chosen 95 of "lasting significance." 3 of them are by ER: "Introduction to ^Mathematical Philosophy", "The Problems of Philosophy", and "Proposed Roads to Freedom".

* For the full story, including the list of the 95 "best books", as it appeared in the Chicago Tribune, May 22, 1977, write the BRS Library, c/o Jackanicz, 3802 N. Kenneth Avenue, Chicago, IL 60641. (Thanks, DON.)

ABOUT BERTRAND RUSSELL

(11) A brotherly view, as reported by DON JACKANICZ:

During my trip to the Russell Archives in June, 1977 I had a rare chance to skim through (not enough time to have read) My Life and Adventures, the autobiography of Bertrand's brother, Frank. This book of over 300 pages, surprisingly at least to me, mentions Bertrand Russell only a few time and chiefly so concerning his very early years. Frank Russell's life was a full one in its own way, yet the lack of more substantial material concerning his brother raises a few questions. Should anyone know more about the relations between the two brothers which might help to explain this minimal treatment, would he or she please let me know?

The following excerpts from MLAA give an impression of Frank Russell's style while confirming information we have received from other sources:

My brother on the other hand is a Russell in appearance, physique, artistic qualities, but certainly not ineffective, although perhaps with a touch of the Russell instability. [p. 9.]

We always had German nurses and governesses, and in those days I knew German as well as English. My brother knew German before he knew English. [p. 17.]

[At Pembroke Lodge] Bertie, whom they caught younger [than I] and who was more amenable, did enjoy the full benefits of a home education in the atmosphere of love, with the result that till he went to Cambridge he was an unendurable little prig. [p. 38.]

Aug 9 [1883] I gave Bertie his first lesson in Euclid this afternoon--he is sure to prove a credit to his teacher. He did very well indeed, and we got half through the Definitions.

Sept 7 [1883] Bertie successfully mastered the Pons Asinorum this evening, and in fact did it very well. [This and the preceding paragraph are from F. R.'s journal; p. 101.]

(12) Studs Terkel talked with BR in a 1972 radio interview. We reproduce it on Page 27 from Terkel's latest book, "Talking to Myself" (Pantheon Books, 1977), pp. 64-68.

(13) Burke's Peerage, London, 1967, contains the following:

RUSSELL.

The 3rd Earl Russell (Bertrand Arthur William Russell, O.M.), of Kingston Russell, Dorset, and Viscount Amberley, of Amberley, co. Gloucester, and of Arisalla, Meath, F.R.S., *educ.* Trin. Coll. Camb. (B.A., 7th Wrangler 1893, 1st. cl. Moral Science 1894, Foll. 1895, M.A. 1897), Dr. *honoris causa*, Univ. of Aix-Marseilles, 1949; hon. Assoc. Nat. Inst. of Arts and Letters (U.S.A.) 1953; apptd. Foll. and Lect. Trin. Coll. Camb. 1944, author of *German Social Democracy, Philosophy of Leibniz, Philosophical Essays*, etc., Nobel Prize for Literature 1950; received O.M. 1949; b. 18 May, 1872; s. his brother as 3rd Earl 1931; m. 1stly, 13 Dec. 1894 (m. diss. by div. 1921), Alys Whittall Pearsall (d. 21 Jan. 1951), dau. of Robert Pearsall Smith, of Friday's Hill, Haslemere, Surrey. He m. 2ndly, 27 Sept. 1921 (m. diss. by div. 1935), Dora Winifred, M.B.E., dau. of late Sir Frederick Black, K.C.B., and has issue,

1. JOHN CONRAD, Viscount Amberley, served as Sub-Lieut. R.N. on British Admiralty Delegation in Washington (*Corn Veol, Fortchurno, nr. Penzance, Cornwall*), b. 16 Nov. 1921, *educ.* Dartington Hall Sch., and California and Harvard Univs., m. 28 Aug. 1946 (m. diss. by div. 1955), Susan Doniphan, dau. of late Nicholas Vachel Lindsay, American poet, and has issue,
 1. Sarah Elizabeth, b. 1946.
 2. Lucy Catherine, b. 1948.
1. Katharine Jane, b. 29 Dec. 1923, m. 1948, Rev. Charles William Stuart Tait (*St. Andrews, Wellesley, Mass., U.S.A.*), son of Charles Herman Avis Tait, of Boston, Mass., and has issue,
 1. David Alexander, b. 1951.
 2. Jonathan Francis, b. 1955.
 3. Andrew Michael Philip, b. 1961.
 1. Anne Elizabeth, b. 1953.
2. Harriet Ruth, b. 8 July, 1930; m.

He m. 3rdly, 18 Jan. 1936 (m. diss. by div. 1952), Patricia Helen, dau. of Harry Evelyn Spence, and by her has issue,

2. Conrad Sebastian Robert (110, *Goldhurst Terrace, N.W.0*), b. 15 April, 1937, *educ.* Eton, and Merton Coll. Oxford, m. 1962, Elizabeth Franklin, eldest dau. of H. Sanders, of 9, Victoria Road, Harborne, Birmingham.

He m. 4thly, 15 Dec. 1952, Edith, dau. of Edward Bronson Finch, of New York.

Lineage—THE RT. HON. LORD JOHN RUSSELL, 1st Earl Russell, P.C., K.G., G.C.M.G., *educ.* Westminster and Edin. Univ., b. 18 Aug. 1792, 3rd son of 6th Duke of Bedford (by his wife Georgiana Elizabeth, dau. of 4th Viscount Torrington); m. 1stly, 11 April, 1835, Adelaide

(d. 1 Nov. 1838), widow of 2nd Baron Ribblesdale, and dau. of Thomas Lister, of Armitage Park, and had issue,

1. Georgiana Adelaide, m. 15 Aug. 1867, Archibald Peel, D.L., of Westlea, Broxbourne, Herts, 3rd son of Rt. Hon. Jonathan Peel, M.P., and d. 25 Sept. 1922, leaving issue (see PEEL, E.). He d. 9 Aug. 1910.

2. Victoria, m. 16 April, 1861, Rev. Henry Montagu Villiers, Preb. of St. Paul's, elder son of Rt. Rev. Hon. Henry Montagu Villiers, Bishop of Durham, and d. 9 May, 1880, leaving issue (see CLARENDON, E.). He d. 9 Sept. 1908.

His Lordship m. 2ndly, 20 July, 1841, Lady Frances Anna Maria Elliot (d. 17 Jan. 1898), dau. of 2nd Earl of Minto, and by her had issue,

1. JOHN, Viscount Amberley, M.P. for Nottingham, b. 10 Dec. 1842; m. 8 Nov. 1864, Katharine Louisa (d. 28 June, 1874), dau. of 2nd Baron Stanley of Alderley, and d. 9 Jan. 1876, having had issue,
 1. JOHN FRANCIS STANLEY, 2nd Earl.
 2. BERTRAND ARTHUR WILLIAM, 3rd and present Earl.
1. Rachel Lucretia, b. 2 March, 1868; d. 3 July, 1874.

2. George Gilbert William, B.A. Camb, Lieut. 9th Lancers, b. 14 April, 1843; d. 27 Jan. 1933.
3. Francis Albert Rolfe, M.A. Oxford, F.R. Met. Soc., b. 11 July, 1849; m. 1stly, 21 April, 1885, Alice Sophia (d. 12 May, 1886), dau. of Thomas Spragging Godfrey, of Balderton Hall, Notts, and had issue,

1. Arthur John Godfrey, B.A. Balliol Coll. Oxford, b. 11 March, 1886; m. 3 Sept. 1914, Hilida (*Tree Top, Farnham Lane, Haslemere, Surrey*), dau. of late William Foster, and d.s.p. 9 March, 1943.

He m. 2ndly, 28 April, 1891, Gertrude Ellen Cornelia (d. 28 Oct. 1942), eldest dau. of Henry Joachim, of Highlands, Haslemere, and d. 30 March, 1914, having by her had issue,

2. John Albert, M.C., Capt. 2nd S. Staffs Regt., served in World War I 1914-18 (wounded), b. 8 Oct. 1895; m. 1929, Alice Ives, and d.s.p. 12 April, 1931.
1. Margaret Frances, b. 16 May, 1894; m. 18 Dec. 1918, Edward Mayow Hastings Lloyd, C.B., C.M.G. (*Tidborough Reg. Royal Newport, Herts, Reform Club*), 3rd son of late Edward Wynell Mayow Lloyd, of Hartford House, Winchfield, Hants, and has issue,
 3. (Mary) Agatha, b. 1853; d. unm. 23 April, 1933.

This distinguished statesman, orator, and writer entered Parliament as M.P. for Tavistock 1813, represented successively various other places, viz., Hunts, Banbury, Devon, Stroud, and the City of London, and sat in the House of Commons for forty-seven years, during which period his name was prominently connected with most of the political events of his country. He was Sec. of State for the Home, Foreign, and Colonial Deptts., Lord Pres. of the Council, Commr. to the Congress at Vienna, etc., and was first Lord of the Treasury (Premier) from 1846-52. He was afterwards apptd. Foreign Sec. 18 June, 1859, and held that office till his resignation became First Lord of the Treasury 1865 (ret. 1866). He was raised to the peerage as EARL RUSSELL and Viscount Amberley, by patent, dated 30 July, 1861, and d. 28 May, 1878, being s. by his grandson.

JOHN FRANCIS STANLEY, 2nd Earl Russell, baronet at law, Lieut. Army Motor Reg., J.P. Norfolk, Alderman L.C.C., Parl. Sec. Min. of Transport 1929, and Parl. Under-Sec. of State for India Dec. 1929-31, b. 12 Aug. 1865; m. 1stly, 6 Feb. 1890 (m. diss. by div. 1901), Mabel Edith (d. 22 Sept. 1908), 3rd dau. of Sir Claude Scott, 4th Bt. He m. 2ndly, 31 Oct. 1901 (m. diss. by div. 1915), Marion, dau. of George Cooke, of Cumberland, and 3rdly, 1916, Mary Annette, authoress (d. 9 Feb. 1941), widow of Count (Hendrik August) von Arnim, and dau. of H. Herron Beauchamp, and d.s.p. 3 March, 1931, being s. by his brother.

Creation—30 July, 1861.

Arms—Arg. a lion rampant, gu. on a chief, sa., three escallops of the field, over the centre escallop a mullet. **Crest**—A goat, statant, arg., armed and unguled, or. **Supporters**—Dexter, a lion, gu., sinister, an heraldic antelope, gu., armed, unguled, and tuffed, ducally gorged, and chained, the chain reflexed over the back, or. each supporter charged on the shoulder with a mullet, arg. **Motto**—Che sara sara.

Residence—Plus Porthyn, Porthyendreaeth, Merionethshire. **Club**—Athenaeum.

BR CELEBRATED

(14)

Graham Whettam's symphony — "Sinfonia Contra Timore", symphony against fear — bears this dedication:

"Dedicated to Bertrand Russell, and all other people who suffer imprisonment and other injustice for the expression of their beliefs, or the convenience of politicians and bureaucracies."

The composer's own story, telling — among other things — how the scheduled first performance in 1964 was cancelled because of the dedication, appears in a 10-page supplement to this Newsletter.

(We incorrectly named the composer "Graham Whetlow" in NL14-5.)

Mr. Whettam writes to BOB DAVIS (7/3/77): "There is a very good recorded performance which was made in Leipzig, and is available to radio stations internationally. I do not know whether American radio stations have arrangements for obtaining tapes from East German Radio; certainly European radio stations have facilities for exchanging tapes, and I know that the BBC is at present awaiting the arrival of that particular tape."

ASSESSMENTS OF BR

(15)

Hoopes vs. Hook. OPHELIA HOOPEES takes exception to Sidney Hook's article in "Commentary", July 1976 (NL12-62), which describes BR as anti-semitic. She disagrees with Hook, and cites the following from a 1959 TV interview, "Fanaticism and Tolerance", transcribed in "Bertrand Russell Speaks His Mind" (NL7-12, NL13-22):

Woodrow Wyatt: "Do you think that this has happened a great deal in human history — that large groups of people have been seized with fanaticism?"

BR: "Yes, it's happened at most periods in most parts of the world. It's one of the diseases of the mind to which communities are subject."

Wyatt: "Which would you say are some of the worst occasions?"

BR: "Well, I think there have been various occasions one could mention. Take anti-Semitism. That is one of the most dreadful because that is the worst manifestation that is recent, and so dreadful one can hardly bear to think of it. Well, though I know it is not considered the right thing to say, anti-Semitism came in with Christianity; before that there was very, very much less. The moment the Roman government became Christian it began to be anti-Semitic."

PHILOSOPHERS' CORNER

Frank writes:

The above listing of dissertations has been culled from Dissertation Abstracts International. When given, I have added the order number and the number of pages for each dissertation. Individual copies can be ordered from: University Microfilms International, Dissertation Copies, P.O. Box 1764, Ann Arbor, MI 48106. \$15 apiece for softbound, \$18 for hardcover.

* As this is believed to be a first bibliography, please bring any corrections or additions to my attention.

Frank's address: 6 Olde English Village Rd., Apt. 304, Dover, NH 03820.

RUSSELL ARCHIVES

(17)

DON JACKANICZ, who heads the BRS Library Committee, and is currently working on his dissertation (which will one day be added to Frank

Bertrand's list), spent 5 days at the Russell Archives at McMaster University. Here are a few paragraphs from his report:

My one suggestion to anyone considering an Archives visit is to examine A Detailed Catalogue of the Archives of Bertrand Russell before arriving at McMaster. Although too few of these books were published, many large public and college libraries have a copy. It would be worth a special trip of 100 miles to be able to consult the Catalogue in advance. Now I had examined a copy twice before, but I had not taken notes. Thus I had to use valuable time reviewing the Catalogue at the Archives. Learn from my mistake!

I spent the remainder of Tuesday, Wednesday, Thursday and Friday morning examining a rich variety of correspondence, books, and other materials. Here is a partial list: Russell's correspondence from and to Attlee, Einstein, Elliot, EMMA GOLDMAN, KARL Popper, Santayana, Whitehead, and Wittgenstein; correspondence concerning the British Liberal Party, Fabian Society, Independent Labour Party, and Labour Party; the Archives' card catalogue; two plays concerning Russell; Frank Russell's My Life and Adventures; volume 1 of the projected 25 volume set of Russell's essays; a bibliography of Russell's contributions to periodical publications (very lengthy); and a collection of reviews of the recent Ronald W. Clark, Kate Tait, and Dora Russell books. To my surprise Mr. Blackwell informed me that I may have been the first Archives patron to request the file of correspondence labelled "Frank Russell's death"!

I especially enjoyed discovering, listening to, and taping a number of phonograph recordings of Russell all but one of which are no longer commercially available. The director of the Music Library, Mr. Jambor, kindly allowed me to use the Library's facilities.

Don's complete 4-page report — which also describes his wanderings in and about Toronto and Hamilton — is available from the BRS Library (c/o Jackanicz, * 3802 N. Kenneth Avenue, Chicago, IL 60641). We recommend it, especially to anyone contemplating a visit to the Archives.

RATIONALITY

(18)

"...nothing could be further from instinct than rationality and therefore, according to Ferenczi, rationality was also the height of madness." Humboldt's Gift, by Saul Bellow, p. 31 (Viking 1975).

This is probably not Bellow's own view. He is quoting his half-drunk, half-mad poet-genius, Humboldt, who is fictional. Is Ferenczi fictional * too?

NEWS ABOUT MEMBERS

- (19) Amy Block has been appointed to the Faculty Academic Senate Committee on Academic Freedom, at UC Berkeley.
- (20) Alex Dely has founded the Philosophy Club at Illinois Central College, which he hopes to form into a BRS chapter. He reports on this, and on his graduate study semester at Ghent State University (Belgium) and on a seminar he attended at CERN (Europe's largest nuclear research facility, at Geneva) in a supplement which accompanies this Newsletter. Alex will welcome inquiries or comments about anything in his report. His address: 2419 N. Prospect Rd., #B, Peoria, IL 61603.
- (21) Ed Hopkins took a week's hiking trip in the Smokies and is spending most of the rest of the summer in the library, reading and writing. He and JACK PITT meet almost daily. Jack, you recall, is attending a 2-month seminar at The Johns Hopkins University (NLL4-26).
- (22) Corliss Lamont has written "Adventures in Civil Liberties", recounting his "personal involvement in civil liberties battles, court cases, and crises," published by Basic Pamphlets, Box 42, New York, NY 10025. Price 50¢. It can also be borrowed from the BRS Library.
We mentioned earlier (NLL4-23) that Corliss Lamont had been named Humanist of the Year by the American Humanist Association, and that he had given the keynote address at AHA's recent meeting. We reproduce the text of that address as it appeared in "The Humanist", July/August 1977, pp.34-35 (43).
- (23) John Russell, the 4th Earl Russell, who inherited the title from BR, made his maiden speech in the House of Lords on July 21, 1976. We reproduce it below (45).
BOB DAVIS offers this sidelight on the occasion of the speech: "It was made in the middle of a discussion on the industrial world's responsibility to the third world. This discussion was initiated by Lord Brockway, whom those familiar with Russell's life will remember as the young anti-war activist who worked with BR during the first world war (and who has been a fighter in liberal/left causes ever since.) We first met Brockway working with BR; now we find him working with BR's son."

NEW HONORARY MEMBERS

- (24) We are delighted to welcome a new honorary member:
- Conrad Russell, son of Bertrand Russell and Patricia ("Peter") Spence Russell. He is a historian.

All 3 of BR's children are now honorary members of the BRS.

Their addresses:

The Earl Russell/Carn Voel/Porthcurno/ Nr. Penzance/Cornwall/England

Dr. Katharine Tait/46 Dunster Street/Cambridge, MA 02138

Mr. Conrad Russell/Dept. of History/Bedford College/Regent's Park/London NW1 4NS/England

NEW MEMBERS

(25) We are very pleased to welcome these new members:

BULLETIN BOARD

(27) Spokesman books sold here. ERS members may now purchase Spokesman books from the ERS Library.

Spokesman Books is the publishing arm of The Bertrand Russell Peace Foundation (Nottingham, England).

A 2-page list of books by and about BR, taken from the Spokesman Books catalog, is reproduced on the next page.

DON JACKANICZ says: "All of these books are fine. I recommend each of them to anyone interested in Russell."

Books by and about Bertrand Russell

JUSTICE IN WARTIME

by Bertrand Russell

It was for holding the views on war and peace expressed in this book, which has been out of print for half a century, and for acting on them, that Russell was deprived of his university lectureship and finally sent to prison.

232pp Demy 8vo

SBN 85124 089 5
Cloth £4.00

ICARUS, OR THE FUTURE OF SCIENCE

by Bertrand Russell

A facsimile reprint of the first edition of Russell's book of 1924, long out of print, in which he answered J.B.S. Haldane's *Daedalus*, an optimistic lecture on the future of science.

64pp. 6½" x 4½"

SBN 85124 055 0
Cloth £1.00

THE LIFE OF BERTRAND RUSSELL, IN PICTURES AND IN HIS OWN WORDS

ed. Christopher Farley and David Hodgson

This beautifully produced book, with over 100 photographs; contains extensive quotations from several of Russell's writings which piece together his long life. There is also a useful bibliography of his published books.

96pp A4

SBN 85124 046 1
Laminated Paper £2.00

HISTORY OF THE WORLD IN EPITOME

by Bertrand Russell

A beautifully printed and illustrated example of Russell's wit and insight. Makes a rare present.

Donated by Gaberbocchus Press
16 pp. illus. FS. 16mo

SBN 85124 012 7
Paper £0.25

INTO THE TENTH DECADE: A TRIBUTE TO BERTRAND RUSSELL

A handsome brochure, profusely illustrated, prepared in honour of Russell's 90th birthday. An essential addition to all Russell libraries.

40pp. illus. Demy 4to. OUT OF PRINT

SBN 85124 016 X
Paper £1.00

BERTRAND RUSSELL, 1872-1970

Contributors to this memorial booklet include: Raymond Williams, Arnold Toynbee, David Horowitz, Ken Coates, Lawrence Daly, Gunther Anders, Mehmet Ali Aybar, Vladimir Dedijer, and Laurent Schwartz. There are also extracts from Russell's writings.

A selection of the thousands of tributes paid to Russell after his death at the age of 97, this booklet brings out his passionate devotion to the cause of social justice and international brotherhood. It is well illustrated.

35pp. illus. 4to.

Paper £0.25

PROBLEMS OF KNOWLEDGE AND FREEDOM

by Noam Chomsky

The Bertrand Russell Memorial Lectures delivered by Professor Chomsky at Cambridge University in 1971, discussing Russell's attempts to discover the conditions of human knowledge and the conditions of human freedom. These lectures remain among the most important examinations of Russell's life and work.

Forthcoming

ROY MEDVEDEV: POLITICAL ESSAYS

A new volume from the leading spokesman of socialist democracy in the USSR.

N. S. KHRUSHCHEV: THE SECRET SPEECH TO THE 20th CONGRESS

With a Foreword by Roy Medvedev

This vital document has long been out of print: yet without it, it is impossible to understand modern communism.

THE SOCIALIST ENVIRONMENT:

edited by Colin Stoneman, Tony Emerson and Michael Barratt Brown

Through an arrangement with Spokesman Books, we are able to offer their books at 20% off of list price, plus a mailing charge.

Prices in the Catalog are in English Pounds. Here is a conversion table, at an assumed \$1.75 per Pound:

<u>price in Pounds</u>	<u>price in \$</u>	<u>less 20%</u>	<u>plus mailing</u>	<u>total cost</u>
4.00	\$7.00	\$5.60	\$0.35	\$5.95
2.00	3.50	2.80	.35	3.15
1.00	1.75	1.40	.35	1.75
.30	.53	.42	.35	.77
.25	.44	.35	.35	.70

The BRS makes a modest profit on any Spokesman books you may order, which goes into the Library's coffers.

In future, we expect to be able to ship books promptly; but during the next few months, please expect delays, as we await shipments from England by slow surface mail.

BRS Library address: c/o Jackanicz, 3802 N. Kenneth Avenue, Chicago, IL 60641. Please send payment when you order.

- (28) Russell T-Shirt. \$6, 4 for \$20. State size: small(34-36), medium(38-40), large(42-44). Postpaid. Historical T-Shirts, Box 55, Somerville, MA 02144. JOE NEILANDS was given one for Father's Day, and thinks well enough of it to have sent us this information.

CORRECTIONS

- (29) \$250 for films was appropriated from BRS funds, at the Directors Meeting. It had been incorrectly reported as \$300 (NL13-4,47).
- (30) NL13 was incorrectly dated "February 1976", on Page 1. It should have been "February 1977".

BRS LIBRARY

- (31) Don Jackanicz, Chairperson of the BRS Library Committee, reports:

The activities of the B. R. S. Library continue to grow. Perhaps the most noteworthy success concerns films. Not only are we close to having acquired the seven films of Russell commercially available in the United States, but member interest in these films is increasing. With a Treasury appropriation it was possible to purchase another excellent film, The Life and Times of Bertrand Russell, which differs from the interview format of the other six. The Life is a fine doc-

umentary and, as the title suggests, an introduction both to Russell and the history of the contemporary world. I predict this will become our most popular film. A generous donation has now allowed the purchase of two other films, Bertrand Russell Discusses the Role of the Individual (from the series of interviews comprising the book Bertrand Russell Speaks his Mind) and Bertrand Russell (from the NBC television series Wisdom). The two remaining films, Bertrand Russell Discusses the Future of Mankind and Bertrand Russell Discusses Power, I would propose, should be acquired before the 1978 annual meeting.

Since January 1977 the Library's films have been borrowed seven times; one borrower can of course use a film for more than one showing. At my home three films were presented before a group of non-B. R. S. friends. While no one was immediately "converted" to become a member, all found these films informative, stimulating, and at times, as was intended, amusing. I have also attended showings before B. R. S. groups. Through the medium of film Russell can be appreciated anew. Thus I invite all members to consider borrowing films for showing before local B. R. S. groups or, as did I, as an introduction to Russell for one's friends. I remind all members that each borrowing of a film brings \$3.00 into the Treasury.

Member interest in books and articles has maintained its modest level. Writings by B. R. S. authors are one type of Library offering repeatedly requested by borrowers. The acquisition of these works should be strongly supported. However, I would also encourage the growth of our collection of printed materials by and concerning Russell. Any member in need of a particular volume or essay now has another source in addition to public and academic libraries or his or her own pocketbook. It is assuring to know that through the Library an uncommon and expensive work such as Principia Mathematica can be on any member's table within one week. We owe a great debt to all individuals and organizations making contributions to the Library.

Presently I am investigating phonograph records made by Russell. Several are known to me, and at least one of these is yet commercially available. For the next Newsletter I hope to offer an extended report on Russell records, but for now I will merely suggest the desirability of having this material available in the Library on cassette tape.

The sale of Dora Russell's autobiography, The Tamarisk Tree, has gone well. The B. R. S. has begun negotiating with Spokesman Books, the Bertrand Russell Peace Foundation's publisher, for rights to distribute its publications at a discount to B. R. S. members. Other Library sales programs

are possible. As these plans mature, all members will be informed through the Newsletter.

Having member opinion on the Library's performance would be most appropriate and informative. All letters of inquiry, proposal, and criticism are welcome.

Editor's note: The "generous donation" referred to above came from Peter Cranford, the BRS's founder. Thank you, Peter.

(32)

Don Jackanicz's film review of 3 of the BRS films, which he and some friends recently viewed, follows:

The first two films, each about 14 minutes in running time, were Bertrand Russell Discusses Philosophy and Bertrand Russell Discusses Happiness, both being interviews of Russell by Woodrow Wyatt. Perhaps the most striking thing about these films, other than Russell himself, is the backdrop before which the interlocutors were seated, i. e. a wall of shelves and books so obviously made of flat cardboard. We found this evidence of a low budget production highly comical. Perhaps Russell too considered these imitation books amusing. Of course Russell's comments are delivered in his characteristic manner of pleasing grace and wit, but the seriousness of the interviews should not be doubted. Some viewers may consider certain of Mr. Wyatt's statements and questions to be naive (possibly so with a purpose) or poorly phrased. I do. Here an interviewer finds himself next to an eminent philosopher and social activist, and he gives the appearance of having prepared himself solely by skimming one or two encyclopedia articles. But Russell's responses are so well considered and memorable that the interviewer's questionable participation tends to be overlooked.

Bertrand Russell Discusses Philosophy first considers philosophy's traditional place and then passes to twentieth century developments. Russell introduces his well known distinction between philosophy, religion, and science. What is most stressed is the value of reasoned skepticism and tolerance. Bertrand Russell Discusses Happiness attempts to be encouraged. Introduced in the discussion are problems related to the family, friendship, work, income, boredom, envy, and love.

The five films in the Bertrand Russell Discusses ----- series (consult the book Bertrand Russell Speaks His Mind for complete transcripts of these and a number of other interviews) will be highly enjoyable for anyone admiring Russell and sharing many of his opinions. They are invaluable supplements to the great body of Russell's written work. I

am very happy the B. R. S. Library has two (and soon three) of them for any member to borrow. But I feel, as did my brother and friends, that the other film shown that evening, The Life and Times of Bertrand Russell, was far more captivating. Unlike the Bertrand Russell Discusses ----- films which are limited to a brief examination of a particular topic, The Life is a 40 minute documentary of wide scope and content. Russell's life is reviewed from its Victorian beginning to its twilight years in the nuclear age. Two kinds of non-continuous interviews are incorporated: one with Russell punctuating the film with biographical details and anecdotes; and those with friends such as A. J. Ayer and Leonard Woolf who discuss Russell's personality and achievement. His work in mathematics, philosophy, social thought and criticism, and politics are considered. The narrator handles his role admirably. The use of photographs and original film footage is well conceived. And powerful excerpts from Stravinsky's The Rite of Spring perfectly accompany scenes concerning the threat of world disaster through nuclear weapons. The film begins and ends with this question of whether humanity will survive. Despite these introductory and concluding warnings which are presented most soberly, I must use the term wonderful to describe this film.

(33)

* 10 acquisitions. In N113-48 we listed 48 items that were available from the BRS Library. Since then, the 10 items listed below have been acquired. Where no author is mentioned, the work is by BR. The donor's name appears at the end.

49. Die Fackel/The Torch/Le Flambeau. No. 1, March 1977. Periodical of the Korean Bertrand Russell Society. Mostly in Korean. Publisher.
50. Facing Up To Nuclear Power. John Francis and Paul Abrecht, editors. Publisher.
51. The Life and Times of Bertrand Russell. (film)
52. "Bertrand Russell's Conception of the Meaning of Life" by Peter Cranford. (short paper) Author.
53. "Russell and his Detractors" by Peter Cranford. (short paper) Author.
54. Information Philosophie. November/December 1976. Swiss periodical. In German. Publisher.
55. Adventures in Civil Liberties by Corliss Lamont. Author
56. "The Case for British Nuclear Disarmament". (article) Steve Reinhardt.
57. Living Philosophies. 1931 symposium includes BR. Don Jackanicz.
58. Bertrand Russell. (film) Peter Cranford.

(34)

* Information about the BRS Library. The Library's list of all of its holdings (58 items to date) is available on request. (It is virtually the same as what has appeared in N113-48 and N115-33.) The Library also has a detailed Information Sheet for each item in the Library. Any of these Sheets is also available on request. (BRS Library, c/o Jackanicz, 3802 N. Kenneth Avenue, Chicago, IL 60641.)

HM!

- (35) HERB VOGT sent us this business card, for which we thank him:

FINANCES/CONTRIBUTIONS

- (36) Richard Harris, thank you for saving the BRS money on the purchase of the film, "The Life and Times of Bertrand Russell."

- (37) Contributions keep the BRS from going into the hole. Last year, without contributions, the BRS would have had a deficit of \$2405.54. Contributions more than covered the deficit.

We thank the following members for their contributions to the BRS Treasury:
CAMPELL, CRANFORD, GREEN, HILL, LAMONT, MILHAM.

- (38) If you wish to leave money to the BRS, here is a codicil you can add to your will. It must be signed by 2 witnesses.

I wish to give the sum of \$ _____ (or: ___% of my estate) to The Bertrand Russell Society, Inc., 2108½ Walton Way, Augusta, GA 30904, for its general purposes.

Witnesses:

Signed _____

Date _____

(39)

Tax-exempt status continues. When tax-exempt status is first granted, it is granted provisionally for a 3-year period. After 3 years, the organization reports to the IRS on its activities and finances during the period. The IRS then decides whether or not to continue the tax-exempt status. STEVE REINHARDT, BRS Treasurer, has just been advised by the IRS that the BRS continues to be tax-exempt.

ERS BUSINESS

(40)

Time to vote for Directors. The ballot at the end of this Newsletter will enable you to vote for 5 Directors. They will be elected for 3-year terms starting 1/1/78.

The results of the request to the members for nominations (NLL4-27) were disappointing as to quantity (one), but outstanding as to quality (Warren Allen Smith; he is on the ballot.)

Next year, an innovation: you will be encouraged to volunteer to be a candidate for Director, provided you can answer yes to these 3 questions: (1) Do you feel personally indebted to BR? (2) Can you make a personal commitment to organize or to engage actively in some project that aims to spread some of BR's ideas — those that particularly appeal to you? (3) Can you attend Annual Meetings?

The ballot contains the names of 6 candidates, all of whom we believe would work effectively to promote BRS aims.

Vote for 5 of the 6. We would like to have all 6 as Directors but our present Bylaws limit us to a total of 15 Directors. We suggest changing the Bylaws, to enlarge the number of Directors.

* * * * *

Here are a few facts about each of the 6 candidates:

ED HOPKINS, Chairperson, Philosophers' Committee. He originated, and is in charge of, the annual BRS Symposium given before the American Philosophical Association (Eastern Division). Present Board Member.

DON JACKANICZ, Chairperson, BRS Library Committee, doctoral candidate writing a dissertation on BR. He originated, and is in charge of, the BRS Library, and has been the moving force behind the acquisition of BR films. Present Board Member.

JIM MC KEOWN, of the Department of Sociology, University of Wisconsin. Active in the BRS Chicago area chapter. Present Board Member.

JACK PITT. BRS Secretary and a founding member. He drafted the BRS Bylaws (and their predecessor, the BRS Constitution), and originated the idea of the new BRS Travel Grants. Present Board Member.

WARREN ALLEN SMITH. Member (and former Board Member), American Humanist Association, American Unitarian Association, British Humanist Association, Mensa; former book review editor, The Humanist (USA); teacher of English; columnist (NLL4-27), owner of recording studio.

KATE TAIT, BR's daughter, founding member, honorary member, first BRS Treasurer, American citizen, mother of 5. Present Board Member.

* * * * *

* Please vote.

(41) Volunteer needed. We would like to provide BRS members with an index to the first 3 years of the Newsletter (1974-1976, Issues 1 through 12).

Will someone volunteer to make the index?

It will require time and care.

A good way to proceed might be to index first only the first 4 Newsletters, which were issued in 1974. Then the 1974 index would be examined and discussed. Thereafter the remaining 8 Newsletters would be added to the 1974 index.

Whoever volunteers will get a good view (or review) of what's happened during the BRS's first 3 years*, while performing a very useful service for the BRS.

* If interested, write the Newsletter (address on Page 1).

*to say nothing of the delight of discovering (or rediscovering) certain items, such as BR's witticism about why he took to politics (NL7-17) or his remark about the way Americans are democratic (NLL4-14).

ABOUT OTHER ORGANIZATIONS

(42) KERS. We have received the 2nd issue of "The Torch" (No. 2, July 1977), published by the Korean Bertrand Russell Society, which we reported on in NLL3-55. As before, it is written in Korean, German and English, mostly Korean. There is a 2-page story in English, picked up from the "International Herald Tribune", with the heading:

Deceit, Torture Alleged

'Confession' in Seoul: A Tale of Terror

The KERS says this about the story:

We have no doubt that the above report about a concrete case of torture, deceit and terror of the Park regime does not exaggerate the true situation in South Korea...etc.

* "The Torch" (No. 2) is available from the BRS Library. (34) gives the Library address.

(43) CONGRATULATIONS CORLISS!

Dr. Lamont was given the Humanist of the Year Award for 1977 by the American Humanist Association. The Humanist is pleased to publish his acceptance speech, delivered in Los Angeles, April 29, 1977.

How I Became a Humanist

Corliss Lamont

It is a high privilege to receive this award; and I thank profoundly the American Humanist Association for bestowing on me such a great honor.

I am happy to be in the company of those who have received the Humanist of the Year Award since 1953, persons such as: Margaret Sanger, Linus Pauling, Julian Huxley, Erich Fromm, Benjamin Spock, Buckminster Fuller, Henry Morgenthaler, and Betty Friedan.

If you look at that list of the twenty-seven Humanists of the Year, you will agree that the AHA has gathered under its banner a notable group of scientists, teachers, doctors, editors, writers, social workers, and others.

I thought that instead of giving this distinguished audience a message about humanism as such, it would be more interesting for me to become somewhat autobiographical about how I became a humanist and about the chief causes, all stemming from humanism, that I have fought for during my lifetime.

Those main causes have been: (1) the philosophy of naturalistic humanism; (2) the defense and extension of civil liberties; (3) international peace; (4) the conservation and appreciation of nature; (5) economic planning.

I became a humanist some forty-five years ago, in 1932. What first led me in the direction of this philosophy was my study of the age-old question of personal immortality, life after death. I was stimulated in my research by my aunt and uncle, who were spiritualists and kept bringing me messages from the dead. My aunt was a sort of medium and presented me with a poem on my twenty-first birthday, supposedly dictated by my deceased cousin Joe. It was titled, "Thou Art a Man Today." On another occasion my aunt announced she had an important message from "the other side" for my father, Thomas W. Lamont, a banking partner in J. P. Morgan & Company, from J. Pierpont Morgan, the elder. The message was, "Tom, you are doing a fine job," a remark so general that it

could apply to almost any employed person alive. The Lamont family reacted with scorn and skepticism, and I began to have serious doubts about the existence of a hereafter.

In 1932, I took a Ph.D. at Columbia with a thesis entitled *Issues of Immortality*. It took no stand for or against the idea of a future life. But my analysis had gone far in convincing me that there was no hereafter. A few years later, in 1935, I took a reasoned position against that belief with my book *The Illusion of Immortality*.

New efforts are taking place today to prove possible immortality. Raymond Moody's best-selling *Life After Life* concentrates on reports by those declared dead who are then revived. They say that beyond death it is beautiful and serene, with deceased relatives and friends greeting you with loving kindness. The trouble is that these reports come from people who didn't really die and who probably dreamed it all while unconscious.

In 1947, I started to give a course at Columbia on the philosophy of humanism, and from it developed my book *Humanism as a Philosophy*, later retitled *The Philosophy of Humanism*. This gave a general systematic summary of our philosophy. You can count on the fingers of one hand the number of courses on the philosophy of naturalistic humanism given in American educational institutions. In fact, I don't know of a single such course at present.

In the twenty-eight years since my book appeared, it is regrettable that hardly any books have been written by American authors giving an overall treatment of humanism or naturalism. Paul Kurtz's excellent book *The Fullness of Life* is the nearest approach I know. And of course the volume he edited, *The Humanist Alternative*, a symposium, is very useful.

There are plenty of humanist professors in American colleges and universities. Many American philosophers are preoccupied with language philosophy and analytic philosophy. But I suggest that the primary reason for the lack of American books on humanism is that teachers are timid about taking a negative position publicly on

controversial issues, such as the existence of God and immortality. They are afraid their academic careers might be adversely affected. Professor Walter Kaufmann of Princeton states in his article "Criticizing Religious Beliefs" (*The Humanist*, March/April 1977): "There are many faults greater than a thoughtless belief in immortality or god—for example, disbelief coupled with the lack of the courage to defend it publicly." Religious supernaturalism and various occult groups have lately been making much progress in the United States. Now is the time for humanists to make a greater counterattack, in which books would be the heavy artillery. It is time for all humanists to become militant in expressing their views.

As you may know, I believe that the actuality of freedom of choice should be a fundamental tenet of humanism. I am opposed to all forms of determinism, whether religious, philosophical, Marxist, or behaviorist, as with our friend B. F. Skinner.

Certainly free choice has been operating all along in my own life, since I have continually followed paths that were not at all indicated by my family background. Those choices were motivated primarily by love of humanity and the use of intelligence, but they became operative through free will.

My second great cause has been civil liberties. I believe that the support of civil liberties and democracy is an essential part of the humanist philosophy and program. We rely primarily on intelligence and scientific method for the solution of problems, whether individual or social. Scientific method applied to economics, politics, and international relations requires full freedom of expression and inquiry. The new hypothesis, the dissenting opinion, the crackpot idea, must be allowed free expression.

I have been quite active in this field for more than fifty years. I have fought unconstitutional laws, have been sent to jail for picketing on behalf of a trade union, refused to answer questions put by the Un-American Activities Committee and the McCarthy Committee, sued the U.S. Postmaster General for censorship of the mails, and demanded my files from the FBI and the CIA, both of which had some two thousand pages on me.

I particularly relished defying Joe McCarthy, one of the most dastardly scoundrels in American history, putting him to rout in the courts when they dismissed an indictment against me for contempt of Congress, brought on by my refusal to answer McCarthy's unconstitutional questions. It was also a great victory when the U.S. Supreme Court unanimously declared an absurd Congressional censorship law unconstitutional in the case of *Lamont vs. Postmaster General*.

I was also active as a Director for many

years of the American Civil Liberties Union, and during the last decade, chairperson of the National Emergency Civil Liberties Committee.

Of course, the battle against the Federal Bureau of Investigation and the Central Intelligence agency still goes on. And we still need federal legislation to control them properly. I am currently suing the CIA for \$150,000 damages for opening and photostating more than three hundred first-class letters of my correspondence of over fifteen years with a learned economist in the Soviet Union who formerly taught at Columbia University.

Every good Humanist has an obligation to work for world peace, my third cause. Our supreme ethical goal is the happiness, freedom, and progress of all mankind. But that goal can never be attained so long as international wars continue or remain a threat. Today the supreme danger is, of course, war with nuclear bombs, which could destroy the entire human race and all forms of life upon this earth. I opposed American military intervention in Vietnam from the start, as far back as 1962, when President Kennedy was sending the first U.S. troops and military advisers to South Vietnam. In fact, I organized the first public advertisement, printed in the *New York Times*, telling Kennedy to stop the intervention. And I believe he would have stopped it had he not been assassinated through a right-wing conspiracy that wanted the intervention to continue. I never believed the Warren Commission's report that Oswald alone shot Kennedy. It is highly suspicious that a few weeks ago George de Rohen-Schildt, a man who was about to testify before the House of Representatives committee investigating the assassination—was shot to death in Florida. The police said it was suicide, but I think it was murder.

The central need in international peace in this era is good relations between the two superpowers, the United States and the Soviet Union. And so I have spent considerable time in working for American-Soviet cooperation and disarmament agreements. I am still hopeful that the Carter Administration will work out fruitful terms for nuclear disarmament with the Soviet Union.

The enemies of detente with the Soviet Union are the enemies of peace. And the Committee on the Present Danger is itself a great danger to the American people.

My fourth cause is the conservation and appreciation of nature. The American Humanists were in there fighting decades before the drive against pollution and for ecological values became popular causes for the American people and the American government.

Hand in hand with the conservation crusade goes the appreciation of the beauty and magnificence of nature. For the humanist

this is a central value, to be celebrated every season of the year and indeed every day of the year. Poets and prose writers, both in England and America, have been preeminent in expressing the aesthetic grandeur of external nature. I have myself been active in the conservation movement all my adult life, and for many years I was manager of the Lamont Nature Sanctuary established by my mother on the Palisades of the Hudson River. This sanctuary is at present under the supervision of Columbia University.

What is more beautiful, glorious, and exciting than America's national parks, especially in the west? As most of you know, it is a wonderful experience to go through the Grand Canyon National Park, Yosemite

Glacier National Park, Zion, Grand Teton, and others. In its system of national and state parks, America clearly leads the world.

Along with the appreciation of nature usually goes the outdoor life, with much exercise in the open air. And this has been my practice since early youth. People keep asking me why I am so healthy and vigorous at seventy-five. A major reason is certainly that I take a lot of exercise, especially in skiing and tennis, hiking and dancing. Skiing I consider the queen of sports, because it is splendid exercise, because it gives you the chance to breathe pure air, and because it provides beautiful winter scenery: snowscapes and snow-clad mountains to refresh the soul. This last winter I had two grand visits to Aspen, Colorado, where I found plenty of snow. Now, since April 1, I have gone over to tennis. I must admit, however, that for some years I have played only doubles.

One's state of mind and psychological attitude are also important for health. I have never been seriously ill, except for an appendicitis operation in my youth. I like Hotspur's remark in Shakespeare's *Henry IV*, "Zounds, how has he the leisure to be sick?" It's true. I haven't had the time to be sick!

Social economic planning is my fifth main cause. In my book *The Philosophy of Humanism*, I stated: "Humanism brings to

the fore the concept of planning as a key to the establishment of a sound economic order."

Now I would say, "the key." As we view the current situation in the United States and other capitalist countries, we find them all beset with economic problems, such as inflation, that seem impossible of solution. But there is a solution; and that is far-reaching planning—city, state, and national. *Wage and price controls* are necessary for effective planning.

Planning comes naturally to human beings. Effective thinking, as John Dewey pointed out, is usually concerned with solving a problem through drawing up a plan of action. There are seven main levels of planning: (1) problem-solving thought; (2) an individual planning for self and future; (3) family planning, with planned parenthood; (4) private businesses planning, but often planning against each other; (5) government planning, federal, state or municipal; (6) planning for the benefit of all the people by coordinating the entire industrial and agricultural life of the country with transportation, finance, and retail distribution (this is much needed today); (7) international planning through the United Nations, with its specialized agencies, such as the Economic and Social Council and the World Health Organization.

In all these types of planning, except mere thinking, the drawing up of a financial budget is central. The preparation of a budget, whether by individuals, families, businesses, universities, humanist associations or any other organizations, is always an example of planning. All insurance policies involve a financial plan.

Under the capitalist system in the United States, there can be a great deal more effective planning than at present. Planning as such does not imply a socialist society, though I myself favor that sort of society.

The planning idea has been discussed in humanist circles for a long time. As far back as 1949, *The Humanist* published an excellent article in favor of planning, by Professor Joseph Blau of Columbia.

There are other important interests that I have had and shall have, such as the pursuit of poetry and the joy of music. But they are not particularly bound up with the humanist philosophy, as are the five main activities I have outlined.

As I look back on my life, I find that a great deal of it has been involved in controversy, and battles against evil men and evil institutions. I did not plan it that way, but that's the way it has been—and will be.

I never intend to retire. I will keep on going as long as I can write or typewrite or dictate a letter. My ideal here is Bertrand Russell, who kept on fighting till his dying day at ninety-seven. However, I want to hit ninety-eight to see the twenty-first century in!

The subject has been agreed upon beforehand: survival in a nuclear age. He will speak of nothing else. Some sixty-five books written and God knows how many essays and it all comes down to this. You're prepared for the nimbleness of his wit but not for the depth of his feeling. "I am ninety. In the course of nature, I will soon die. My young friends, however, have the right to many fruitful years. Let them call me fanatic."

As I press down the ON lever, the clock chimes eleven times. We have a half-hour. Does it bother me? he asks. I make a stab at humor: It tolls not for us, I hope. He chuckles. He's a gracious host. Wait. There's something on his mind. I push the STOP lever.

The Cuban missile crisis is fresh on his mind. At the most tense moment, before Khrushchev had turned back, Russell had sent cablegrams to the leaders of all the major powers. A plea for sanity. He had received replies from Mao Tse-tung, Pandit Nehru, Charles de Gaulle, Harold Macmillan, Nikita Khrushchev—he pauses. "I, of course, sent one to your President. He is the only one who did not reply." Bertrand Russell may know a lot about philosophy, *Principia Mathematica*, and all that, but he obviously doesn't know much about Big Bad By God John, who ain't blinkin' for nobody.

"I am not on either side. This contest is folly. What I'd like to see is for it to die down, like the waves at sea after a great storm. The US and the USSR have so much in common, this contest is absurd. Ideology plays no part. It is simply dragged in to reinforce armaments. The differences between East and West are as to power, not as to ideology.

"Now, with these new weapons, neither side can win. War is now beyond morality. It is just plain silly. These are not evil men at work, merely silly ones. They don't seem to realize that dividends are not paid to corpses."

I try out the fat man's theory on him, just for size. "There are some who believe, though millions may go, much of the world will survive."

He shakes his head sadly. "Survivors will be ill, hungry, miserable, and savage. A very large percentage will be idiots or monsters. During all that time, there will be horror and ghastliness. It would take ages and ages for the wretched descendents of these survivors to build up anything at all again."

I drop the fat man and go elsewhere. "In your writings, you spoke of Gibbon describing man's lot as a stately historical procession, and how cultural values survived even barbarism."

"Gibbon knew nothing of the nuclear bomb."

"Yet men of science have made it. We think of science and enlightenment. Aren't there some who say, I must discover. How it is used is not my concern."

"Many have played an honorable role in trying to prevent nuclear war. Einstein, for one. But I regret to say there are a fair number of scientists who have been willing to sell their services to governments preparing for wars. None of their concern? If you see a homicidal maniac and you give him a revolver, are you not responsible for the people he kills with it? Of course you are. Similarly, these men of science who've given the world something much bigger than a revolver wash their hands of responsibility and say, 'Oh no, it is not my concern.' It's just a form of cowardice."

I mumble something to Lord Russell about Faraday and the Crimean War. I had read somewhere that he had refused to work on poison gas. That he had told the British government to go to hell or something like that. Russell can't quite make out what I'm saying. I half shout, *Faraday and the Crimean War!*

"Oh yes. That was very creditable of Faraday. He said, 'It's feasible but I won't do it.' It may be a difficult thing to do, but a scientist shouldn't shrink from it because it's difficult."

"You have been called an old fanatic leading fanatical young people . . ."

"I wait for time to persuade them. Everybody who has ever stood for anything that was any good has been accused of being a fanatic. It's an occupational hazard, you might say. You just have to live it down. Certainly, a great many of the young do not regard me as a fanatic, because oddly enough they'd rather be alive than dead.

"I know that many people disagree with me. But one man can be right and most can be wrong. All advances that have been made of any importance have been started initially by a very small minority, often only one. This man has always been ridiculed and persecuted by humanity. It's a law of history."

I steal a glance at the clock against the wall. I'm trying to beat it. So, obviously, is Bertrand Russell. I say something about it's being a long shot. Are the great many being reached?

He laughs. "Aren't we reaching them at this moment?"

Oh Christ! I'll bet he thinks it's a network program. Shall I tell him he'll be heard over an FM radio station in Chicago? I think I'll let it pass. Still, his words will reach some people. Is that a slight

twinge of guilt I feel? Yeah, but I suppress it rather quickly.

The idea of reaching out has caught his fancy. "I think you have to behave in a manner that excites people's interest. However the mass media are against you, the barrier can be overcome. That's why we took to civil disobedience. We get more or less known. We *have* reached a great many. It's a race against destruction. If we aren't wiped out, we'll somehow manage."

"Lord Russell, suppose someone says, I don't want to break the law. Civil disobedience is not for me."

I know this question will keep his motor running. "I should say, Now look here, my dear fellow, have you read any history? Have you heard of the early Christians? Didn't they disobey the law? They were told to worship the Emperor and they didn't. So they suffered. Galileo violated the law. He said the earth moved. The law said it didn't. So he was punished. Have you ever heard of anything of value brought into the world without somebody violating the law?"

"The law represents what people thought right some time ago, because it takes time to enact a law. When circumstances change, what was right ceases to be."

There is something I want to ask him. Damn it, I forgot what it was. His secretary may appear any moment, giving me the high sign. What the hell was it I had in mind? Oh yeah. "Lord Russell, you had once offered a hypothetical case. Assume mad dogs were running around in Berlin today—rabies—wouldn't both sides be working together to eliminate the epidemic?"

"Of course. They certainly wouldn't stop to argue about politics. They wouldn't say, Oh, I hope the mad dogs will bite more people on the other side than on our side. Only politicians bite that way."

I let it ride. The old boy's juices are flowing. No need for a question here. My hunch is right. "You and I are talking here, still alive, thanks to Khrushchev. It would have been wiser had he withdrawn earlier. Nonetheless, we ought to give him credit. It has nothing to do with communism. It's a personal thing."

Time is really running out, and so is the spool of tape. This calls for the home run question. "Lord Russell, what is the world you envision?"

"I should like to live in a world where children were brought up as free as possible, freely, so they shouldn't be filled with rebellious impulses. I should like to live in a world where those of men's impulses that are not possessive should have free scope.

"I divide impulses into possessive and creative. If you write a poem, you don't prevent another man from writing a poem. If you eat food, you don't prevent him from eating food. If there is a shortage, you get conflict. Naturally, material comfort must be sufficiently supplied.

"What has happened in all societies that have ever existed, creative impulses are cramped by politicians or churches. The man who has a new idea or a new way of feeling is punished, although it would be a solution for a great many of our troubles.

"I should like to see our power impulses go into creativity—poetry, music, in lesser ways, gardening. There is always something creative a person can do . . ." He pauses.

Okay, I'll ask it. It won't matter too much to him personally, he said. He's ninety. "Is it possible in our time?"

"Hardly, I think. In our time, we can move toward it. It's a matter of degree. In some ways, things are better than they used to be. People used to be burned alive. Today they're only slowly starved. I suppose that's slightly better, but I don't know. You take steps. You can't get very far in our world. There is such a lot to do."

There is such a lot to do and he won't be around to do it. A touch of rue. A touch of weariness. And what a singular life. Shall I try a parting shot? "You liked Shelley when you were young, in your formative years. Do you still feel the same way?"

His eyes, light up, ever so slightly. "'Tis rather an exciting time. I liked Shelley because he had a vision of what the world might be. I still like him for that, but it's a much more difficult matter getting there than he thought. He thought kings and the Holy Alliance were the obstacles. If they were got out of the way, the world would be happy. They're all dead now, but we're not happy."

Earl Russell's maiden speech in the House of Lords, July 21, 1976.

Earl RUSSELL: My Lords, I ask for the indulgence of the House as this is the first time that I have spoken to your Lordships. I rise to protect the Third World from the usurpations of it which the First and Second Worlds have produced. The Third World is the world; the First and Second Worlds are the cold war and our first duty is to the Third World. Our duty is to keep it fed and thriving. Once you get this idea into your head and your policy treads nimble-toed back to a solid stance, you are on your feet again. Really, in conscience, we shall not have fulfilled our duty to the Third World until we have spent as much annually on feeding it as we at present spend annually on defence. Helping it with investment, so far as development goes—where this is desired by the Third World—is likewise our duty.

You are not telling me that Britain, the United States and the Soviet Union cannot together feed India and Pakistan, because they can. Why, then, are they not doing so? Give the Ministry of Overseas Development a world buyer of food surpluses who can travel round wherever there is a food surplus with funds to purchase it and give the food surplus concerned either to the Third World Government concerned or to Oxfam and World Aid to remove famine. It is in the power of the First and Second World Governments to remove famine and to end hunger as a menace to man. Let them do so, let them not hesitate and let funds be supplied for this purpose. You need a food buyer for the United Kingdom, a food buyer for the European Economic Community and a food buyer for the dollar area and the fate that you do not want is the fate you have visited on the Argentine. A few years ago the Argentine had a beef surplus. You left it unbought. The Argentine, as a result, suffered inflation and economic stagnation and, as a result of those, it suffered its present near-Fascism. You should not have abandoned the Argentine or its beef surplus. You should have bought it for the underdeveloped nations.

I have said enough to indicate what ought to be the defence of the Third World so far as economic policy is concerned. It is for you to walk in the way of truth and righteousness and support that policy. Remember, you will not have done so until you spend as much on feeding the Third World annually as you at present spend on defence—as much on feeding people as on killing them. Defeat the usurpations of the First and Second Worlds against the Third World, feed the human race and end the cold war and then your feet will be treading the path of the right policy; your policy will have virtue and will prevail. Neglect the Third

World and continue with your present policy of nonsensical cold war competitiveness and you will never get anywhere—nor will the human race. End these nonsensical competitions and spend on food rather than on killing people.

There is enough food in the United States and Russia to feed India and Pakistan. Let them do so. Let them give up their hostilities and feed people, and all the parts of Africa where there is endemic famine could be fed as well. Concentrate on food and not on war and you will win; show that Lord Boyd Orr did not live in vain. Use world food surpluses to feed starving nations and do not stop until you have done so. Let your food buyer roam the world with funds at his disposal and you will win. Now heed the Third World's requests economically. Do not brush them aside. Let us hope that the attitude of Her Majesty's Government towards the Third World proposals for a new economic order is friendly and that attention is paid to the Third World. Let the First and Second Worlds be brushed aside, end the cold war, concentrate on food and not on killing, and you will win.

A great prize stands to be gained; the abolition of hunger. Make for it and do not stop until you win the prize. Then, when you have won it and when more is spent annually on feeding people than on defence, you will be able to congratulate yourselves and shout "Huzzah!" at the edifice of the international welfare state which you will then have constructed. After all, these proposals amount to no more than the construction of an international welfare state—the extension of the Welfare State to the international sphere.

I have said enough to indicate where the right path is. Let us hope that Her Majesty's Government have the strength to walk it. All that we can do is urge them to do so; urge them to spend money on a food buyer who carries with him funds equal to the funds at present spent on defence, funds which he spends on food, food which he gives to the Third World nations, thus ending famine everywhere. He should not leave out Latin America, where there is much famine, just because people ordinarily think of the Third World as India and Africa. He should spend as much on ending famine in Latin America as he spends on ending it elsewhere. He should not stop until his task is done.

As I have said, give the Ministry of Overseas Development a world buyer of food surpluses who can travel around the world buying them. Open the grain stocks of Chicago and its meat supplies

to India and Pakistan. Do not stop until everyone is fed. Cause Britain, the United States and the Soviet Union to cease to be the First and Second Worlds and cause them to side with the Third World first. Then the cold war will go and the world will return to itself. The Third World will no longer be so styled but will be called "The World", which it is. The First and Second Worlds will then have disappeared and there will remain the Third World, which is The World. Let us hope that Her Majesty's Government will heed it and not stop heeding it. Let us hope that they will give themselves no peace until they have heeded the Third World. Let us hear no more of neglect but only of fulfilment. Let us see famine and hunger banished from the world; we have the power to see that happen. Do not stop short but go on until the food buyer appears everywhere and until the national estimates annually on defence are totally eclipsed by the estimates for what is spent on food, food for the Third World countries.

If Italy and Greece should be called Third World countries, then listen to them. Let your policy be strong, useful and consistent. Let it be a continuing policy of feeding the Third World and let us see it done in practice with enough publicity to allow the public to know that something is being done, and properly. Then people will have confidence in your Third World policies, because at present they have very little. By continuing diligence and effort, Her Majesty's Government could recover our confidence and could show, by appointing a food buyer, that they intend to get something done. Then we will know that there will be prompt famine relief wherever famine occurs and that Her Majesty's Government have the situation well in hand. Then we will have confidence that the Government have indeed heeded the Third World. It remains for me only to move that the food buyer be appointed. I do so move.

Lord RITCHIE-CALDER: My Lords, it falls to me to congratulate the noble Earl, Lord Russell, on his maiden speech, the sentiments of which I fully endorse, and I hope that we shall hear him speak on many occasions in the future. I wish to follow, as invariably I do, the line taken by my noble friend Lord Brockway in the powerful arguments which he put forward.

NEWSLETTER MATTERS

- (46) NL supplements. These supplements are being mailed with this Newsletter:
- . "On Bertrand Russell -- and a Symphony" by Graham Whettam
 - . Alex Dely reports(7/1/77)
 - . Minutes of the 4th Annual Meeting, February 4-5, 1977
 - . Minutes of the 4th Annual Directors' Meeting, February 4-5, 1977
-

LAST MINUTE ITEM

- (47) Free offer to psychologists. "Bertrand Russell's Relevance to Psychology," a 5-page paper by Peter Cranford, will be offered free (along with a Russell reading-list for psychologists) to readers of APA MONITOR, which is published by the American Psychological Association. The paper states the view that BR is one of the great psychologists, yet is virtually unknown to professional psychologists. The offer will be made through an ad, signed by the BRS Library. The ad will run for a year.
-

INDEX

- (48) Introductory (1). Chairman Peter Cranford reports (2). President's Report (3). Treasurer Steve Reinhardt reports (4). Joe Neilands, Science Committee (5,6). BALLOT

5 persons are to be elected to the Board of Directors, for 3-year terms starting January 1, 1978.

6 candidates are listed below. Please make a checkmark after the names of 5 candidates, for a total of 5 checkmarks. Brief remarks about each candidate are given in (40).

Ed Hopkins ()

Don Jackanicz ()

Jim McKeown ()

Jack Pitt ()

Warren Allen Smith ()

Kate Tait ()

Remarks (optional) _____

Your name _____ Date _____

Your address _____
(You may omit your name and address, if you wish, although we prefer to have it.)

Please remove this page from the Newsletter, and mail it to The Bertrand Russell Society, Inc., RD 1, Box 409, Coopersburg, PA 18036.

Note: to have your vote count, ballot must be postmarked no later than October 1, 1977.

ON BERTRAND RUSSELL - AND A SYMPHONY

Some Personal Reflections by

GRAHAM WHETTAM

The score of Graham Whettam's SINFONIA CONTRA TIMORE - Symphony Against Fear - is prefaced by the following note:

"The first performance of this symphony was given in the Town Hall, Birmingham, on February 25th, 1965, in the presence of Bertrand Russell, by the City of Birmingham Symphony Orchestra, conductor Hugo Rignold.

A previous performance, to have been given on March 7th 1964, had been cancelled by the Committee of the Royal Liverpool Philharmonic Society in exception to the dedication.

SINFONIA CONTRA TIMORE was first known as the composer's 4th Symphony, but is now the earliest acknowledged by him for public performance."

ON BERTRAND RUSSELL - AND A SYMPHONY

Some Personal Reflections by

Graham Whettam

I cannot exactly recall when I became aware of Bertrand Russell, although I do remember that I was reading some of his writings in the latter years of the second World War. I was about 17 years old, and the books included Sceptical Essays, In Praise of Idleness, and, I believe, The Conquest of Happiness. But nearly thirty years afterwards, it is difficult to say which of his books were the first to come into my hands.

It was at about this same time that Russell returned from the United States, as it happened bringing with him the manuscript of the History of Western Philosophy, and then his voice became very familiar through his many BBC broadcasts. It was not only his ideas which compelled attention, but his marvellous use of the English language, and the lucidity which this brought to his exposition of those ideas. My native language is an instrument which can be used with great subtlety; it has a very large vocabulary, and can be used in the expression of thoughts and arguments of an involved and complex kind without losing its natural flexibility. Russell possessed to an astonishing degree the ability to express his ideas in the simplest way: the logical beauty of what he said was enhanced by the beauty of his language. Years later, when he invited me to meet him, I was much impressed with the essential wholeness of the man; his thought and mode of expression were so much a reflection of the complete person that I could understand why he had been one of the great masters of the spoken word, and in broadcasting, where the voice alone must communicate everything.

In 1948 the BBC inaugurated the Reith Lectures, and which are intended to give an opportunity to an eminent person to develop and express his thinking on a matter of public importance. The first of these annual Reith Lecturers was Bertrand Russell, and his theme Authority And The Individual. Russell was concerned with how we could combine that degree of initiative which is individually necessary for progress with the degree of social cohesion that is necessary for survival. In Russell's view, " the problem comes down to the fact that society should strive to obtain security and justice for human beings, and, also, progress. To obtain these it is necessary to separate cultural matters from the Establishment. " Whilst I wholeheartedly accepted the force and logic of this argument, I was only aged 20 at the time of Russell's Reith Lectures. Many years were to pass before I would find this so exemplified in my own experience, and, ironically, linked closely with the name of Russell. Listening to these broadcast lectures was a profound and formative experience, and has at various times caused me to have expectations of Russell's annual Reithian successors which have not been always realized.

Early in 1948 I bought the History of Western Philosophy; I had read some philosophical books, of course, but found that this book, relating, as it does, the thinking of different philosophers to their times and social conditions, and to each other also, was of uniquely positive value for me. I remember reading and re-reading it for three months.

If, as an obvious philosophical layman, I have seemed to dwell too lengthily on Russell's writing and broadcasting, my purpose has been to show, through the benefit to my own non-musical thinking, the positive influence which he exerted, and which must have been of great benefit to men and women in many countries throughout the world.

Timore

The first music to be written of what became my ~~Fourth~~ Sinfonia Contra ~~Timore~~ was intended as the opening of a music-drama. The subject matter is not really relevant, for the project was soon abandoned (and the associations attaching to this music also). This was in about 1952. During the winter of 1956-57, when I was living in the German Black Forest, I took this introductory music, altering only some details of scoring, and made it the introduction to a two-movement symphony; in that form, and to no lasting satisfaction, the work was completed on the last day of September 1957. But this had been a period of considerable personal turmoil and difficulties for me, and this may have contributed to my later decision to start the entire work afresh. The second movement was abandoned completely, and the first part was re-written and re-thought from the end of the initial and somewhat forceful opening lento. In its present and final form, the work comprises three continuous and developing movements.

Early in 1961, two or three months after I had written my first Oboe Quartet for the Netherlands Oboe Quartet of Victor Swillens, this first movement was re-cast, partly due to the promptings of Sir Eugene Goossens, who had said that he would like some new orchestral work from me. A year previously I had dedicated my String Quartet to Goossens, who had himself been a violinist until injury to a finger obliged him to abandon string playing. In late August 1961 he told me that he had a definite outlet for a new work, and urged me to complete the symphony. The central slow movement was thereupon written in the space of a fortnight at Ingatestone in Essex.

There had been much excitement that summer caused by the the public response to demonstrations arranged in London on ' Hiroshima Day ', and organised by the

Committee of 100, foremost amongst whom had been Bertrand Russell. As is well known, the demonstrations were against the use of nuclear weapons. It would appear that the British Government of the time had visions of the benefit which a nuclear war would bring to mankind: very ably demonstrating its own foolishness, 'Authority' caused certain individuals from among the organisers of these demonstrations to appear in court. These people were each sentenced to two months in gaol, but in the cases of Bertrand and Lady Russell, the sentence was reduced to one week for medical reasons. By this time Russell had been for over ten years the holder of the Order of Merit, the highest honour which Great Britain can bestow upon its citizens, as well as a Nobel prizewinner.

There was, of course, an enormous public outcry against the imprisonment of these peaceful people, including a great demonstration in Trafalgar Square. My own response was to write to Lord Russell at Brixton gaol offering him the dedication of the symphony I was writing in the following terms:

" Dedicated to Bertrand Russell, and all other people who suffer imprisonment or other injustice for the expression of their beliefs, or the convenience of politicians and bureaucracies."

Although this dedication subsequently caused people who apparently thought of themselves as bureaucrats to act in ways which were not intended for my benefit, I have always been very glad that it stands at the head of my score, and have indeed at various times been much heartened by it.

Sinfonia Contra Timore

~~The Fourth Symphony~~ was not completed for several months more, the closing pages being finished to my great relief on May 7th 1962. In less than two weeks the symphony's dedicatee became ninety years old: in a little over a month the friend who had encouraged me to complete this score, and who had hoped to conduct the première - Eugene Goossens - was dead. He had been ill for over half a year, but had

latterly seemed to be recovering, and I believe that he did not know how near to death he was.

I remember vividly the celebration party for Russell's Ninetieth Birthday at London's Royal Festival Hall. There was music played by the London Symphony Orchestra conducted by Colin Davis, and including symphonies by Mozart and Stravinsky: messages were read from many parts of the world. Besides men and women eminent in various branches of the Sciences and the Arts, leading statesmen or governments from many countries had sent telegrams, with the notable exception of the Government of Great Britain. I think that Russell's acknowledgement of this celebration said admirably in words what those present could see vibrating through his person. After expressing his deeply-felt thanks he continued:

"I have a very simple creed; that life and joy and beauty are better than dusty death, and I think that when we listen to such music as we heard today, we must all of us feel that the capacity to produce such music, and the capacity to hear such music, is a thing worth preserving and should not be thrown away in foolish squabbles. You may say it's a simple creed, but I think everything important is simple indeed. I've found that creed sufficient, and I should think that a great many of you would also find it sufficient, or else you would hardly be here."

I remember leaving the hall suffused with the mixed feelings of joy that I had dedicated my new work to this man, and of inadequacy before the greatness of such simplicity.

Among the conductors whom I greatly admire is ^{Sir} Charles Groves, ~~until recently~~ conductor of the Royal Liverpool Philharmonic. This is among the oldest of the extant concert-giving bodies and orchestras in England, having been active since 1840. On receiving a copy of the score of my new symphony, Groves promptly reserved the premiere for Liverpool, and the date was fixed for March 7th 1964. Unfortunately, however, I was denied the pleasure of hearing my work in

the acoustically excellent Philharmonic Hall. The Committee of the Liverpool Philharmonic eventually decided that the dedication made the symphony 'unsuitable' for inclusion in its programmes, and so a symphony by a composer who was safely sailing down the River Styx was substituted. This had no dedication, and was therefore found to be appropriate for Liverpool.

Curiously, in the following season the Liverpool Philharmonic included a work of mine which is dedicated " to those who, like Benvenuto Cellini, have great love and zest for life ". I have yet to meet a man who exuded more love and zest for life than Bertrand Russell: and so, even if unintentionally, I feel that Liverpool honoured him in the end.

The symphony's première was delayed for one season, for the following year an opportunity arose with the City of Birmingham Symphony Orchestra, whose conductor was then Hugo Rignold. There was a generous allowance of rehearsal time, and the performance was indeed admirable, one of the best performed orchestral premières which fortune has given me. The symphony is by no means an easy piece to perform, and particularly on account of the rhythmic writing which demands extreme precision and confidence on the part of the conductor, and extremely disciplined playing from the orchestra, who at times must perform with great flexibility and expressiveness. There is a great contrast between the regular triple and strongly marked rhythms of the scherzo-like first movement, and the irregular and even more strongly accentuated rhythms of the central part of the slow movement and also of the finale, particularly the closing pages which surge forward with much energy. These things also contrast greatly with the quality of playing required for the long violin melody of the slow movement, or the quiet slow flute solo in the finale.

The première at Birmingham on February 25th 1965 is also memorable for me on account of the pleasure which I shared with my wife in having Bertrand and Edith Russell as our guests at the performance, and on account of the warmth of the reception which I received from the public. Most vividly I recall Russell, then aged 92, holding my arm as I took him up the stairs and along the corridor to the part of the hall where we were sitting. The love and respect in which people held him I had seen on previous occasions; but to see the people in the corridor move back and stand waiting for my companion to pass moved me deeply. It was a unanimous gesture. Earlier that day I had been asked to meet the press with Russell at his hotel. One of these gentlemen, and whom I had met on previous occasions, reminded Russell of having interviewed him at his home in North Wales, and seven years earlier, of the questions which had been put, the answers given, and asked whether Earl Russell still subscribed to those views. The ninety-two year old philosopher pointed out that his answers had in certain respects been distinctly different from what had just been alleged. Afterwards the journalist produced his shorthand notes of seven years before: Russell's memory had been impeccable.

After the première I particularly recall Earl Russell's wishing that he could have written music, and could have had such an array of musicians and instruments to make the sounds which he had written. I think that he derived much pleasure from the concerted activity and high accomplishment of the orchestra. Later, whilst we were waiting for a car to collect him, he told some delightfully witty tales, though I found his tendency to ask such things as whether I remembered some curious action of King George V in 1914 a trifle

disconcerting, for I was not brought into this world until 1927. I remember asking whether he had met many composers and Russell replied "Only Vaughan Williams: and that was in 1909."

The première of my symphony was a concert occasion, and contrary to what often happens, was not broadcast or apparently even mentioned in the appropriate BBC programmes. After the Liverpool incident, the work had been found to lack sufficient merit for broadcasting, and the BBC would not allow the work's inclusion in its programmes. My wife, quite by chance, heard a BBC radio programme in which the Birmingham concert was previewed, and called me to listen. 'Concert Calendar' dealt with the Brahms Second Piano Concerto, in which Vladimir Ashkenazy was to be the soloist, and with Richard Strauss's Don Juan, a recorded excerpt from which filled in the last two or three minutes of the programme. The preview refrained from mentioning that the concert also included a symphony which would be receiving its world-première. Curiously a gentleman called Frank Gillard, and enjoying the title of Director of Sound Broadcasting, subsequently wrote to me from the BBC explaining that those responsible for the programme had not known about the symphony. Apparently they had not noticed those sections of the press releases referring to the symphony, nor the ample coverage which had already been given to the work by both the national and regional newspapers, as well as the musical magazines. Mr Gillard's position did not seem to be as sound as his title might have implied: the Establishment, at least in the shape of our BBC, did not view the work of one individual kindly.

There was some controversy in the English newspapers, for I had claimed that my symphony had been effectively banned from broadcasting in my own country. Various distinguished people made known their concern, including two former British Ministers, Mr Edward Heath and Sir Edward Boyle, both of whom were then sitting on the Opposition front bench at Westminster. Prime Minister Wilson informed me that whilst of course no

British Government may interfere in a matter of BBC programme content - a fact sometimes not sufficiently appreciated in other countries who themselves have government-controlled radio services - one of his Ministers had written to the BBC acquainting them with the strength of my views. A year or more later, some time for face-saving having passed, it appeared that a degree of merit in the symphony had at last been perceived, for I was advised that a BBC-sponsored performance was contemplated. This period of contemplation proved to be of considerable duration, but this may have been to allow for the discovery of even more merit than had been at first suspected. After some three years the music was recorded by the New Philharmonia Orchestra conducted by the Cuban-born Alberto Bolet: the broadcast was scheduled for a date in February 1970, only two days short of the fifth anniversary of the concert première.

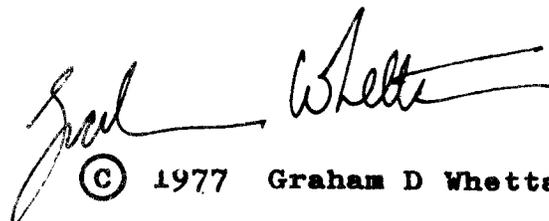

One morning, about two weeks before this broadcast, I was asked to take a telephone call from one of our leading national newspapers, THE GUARDIAN. It appeared that the BBC had sent out publicity about my symphony, and I was asked for some comments about Russell, and for some reminiscence of him at the concert première. After this call I resumed my work until lunchtime when I turned on the radio for the news. Bertrand Russell was dead.

A postscript must be added, for the forgoing is essentially the content of an article written in 1972 as the basis for an interview with me to be heard on Netherlands Radio, and preceding an eloquent performance of Sinfonia Contra Timore conducted by Hubert Soudant. His recording was subsequently transmitted in West Germany, when Soudant was a prize-winner in the Herbert von Karajan conductors' competition in Berlin, and was also heard in Britain in a BBC 'Composer's Portrait'. This had happy consequences, for the BBC then commissioned

the Royal Liverpool Philharmonic Orchestra under its conductor Sir Charles Groves to make another radio recording. The wheel had almost turned full circle: 'almost', for the circle was closed in January 1977 when my most recent symphony, Sinfonia Intrepida, was given its world première by that same orchestra and conductor in the Liverpool Philharmonic Hall.

Sinfonia Contra Timore, my 'Russell' Symphony, has not yet been performed outside of Europe, although it has been heard in that continent's Eastern half. Some time ago I was a guest in East Germany, when GDR Radio mounted a 'Produktion' by the Leipzig Radio Symphony Orchestra under the admirable Jena conductor, Günther Blumhagen. We were given this first-class orchestra for five daily sessions of four hours each - twenty hours in all to rehearse and record a twenty-seven minute work! A very high standard was intended, and was achieved, and no composer could have been happier than I was at the end of those recording sessions. It transpired that a Produktion is GDR Radio's most distinguished treatment for a musical work. The resultant tape is available to radio stations internationally, should they wish to transmit it, and if the producers are happy enough with the quality of the recording, it could be available on disc, assuming that a record company wished to issue it.

Unless its composer is at the height of a world-wide reputation, a symphony written for an orchestra of almost a hundred players may expect ^{comparatively} ~~infrequent~~ infrequent performance in its early years. There was even a time when circumstances seemed to conspire against Sinfonia Contra Timore being performed at all. But there has never been a time for me when its dedication has been less than a source of joy, and also ^{a sense} of privilege. Among my particular treasured possessions is a photograph taken an hour or so before the symphony's first performance: Bertrand Russell, my score upon his knee, was humbly asking what it all meant, and how it worked - asking with the simplicity of the creed which I have quoted.

© 1977 Graham D Whettam

Alex Dely reports

7/1/77

on his participation in the interdisciplinary research group at Ghent State University, on a nuclear research seminar at CERN, and on the philosophy club he has started at Illinois Central College.

* * * * *

At the end of '75, after receiving my bachelor in philosophy at Ghent State University -- I am a native of Belgium -- I decided to visit the United States, which turned out to be so fantastic, I decided to immigrate to America.

However, in the meantime, I realized philosophy ought to become much more aware of science, and since Einstein proved $E=mc^2$, I decided to devote future efforts to the exploration of a philosophical system of "Cosmic-Humanism", the energy philosophy to which I devoted a book. This new system, based on new forms of mathematical calculus and Buckminster Fuller's general systems theory, will try to integrate all sciences and religions, and create a continuum of an evolving man. Thus far my background.

In June '76 I was invited to participate in a 6-month interdisciplinary research group effort of specialists from 9 fields: education, psychology, religion, logic, nuclear engineering, general philosophy, biology, and the physical sciences.

We worked a 6-day week of 14-hour days. In short, here are some of the results of the GSU seminar: the establishment of two new philosophy periodicals, "Philosophica Gandensia" and "Communication and Cognition," of which 12 issues have already been published: "Dimensions of Rationality", "Justification Problems concerning Science", "Metaphilosophy" 1 and 2, "Inductive Logic", and a "Theory of Legal Concepts".

We constantly progressed from abstract theoretical views to concrete applications. Analyses were worked out within our 10 committees, each chaired by an eminent scholar. Thus we started with logic, where Russell and Whitehead's "Principia Mathematica" was heavily employed, together with conflicting views by Carnap and Popper, conflict which we resolved as published in "Philosophica 6", pp.5-27, with the following conclusions:

- a) Popper's deductivism must be rejected;
- b) Carnap's C-function is a good PC function, valuable in assessing the the probability/viability of a hypothesis, but not a TC-function (Truth Function);
- c) a new function, used to determine the degree of confirmation of a hypothesis, ought to replace TC_a and TC_b . Such a new K-function we have developed.

It's obvious Russell's contributions on basics were very necessary in understanding these technicalities.

We developed a new form of Calculus (same issue, pp.75-101), a theory of legal concepts (using the "framework" concept, aiming at the legal unification of the world under law, only viable through axiomatization, however hard to understand.) Further, we analyzed the concept of structure (pp.101-137), working with horizontal and vertical dynamics and variabilities, drawing upon Chomsky.

Shifting towards scientific contributions (work on latest field developments, and interdisciplinary coordination), we then tackled more socially-oriented problems, such as the theories of Karl Marx re-evaluated (pp.137-175), ecology (contributions by Barry Commoner), science and values, science and political power, Marcusean sociology and artificial intelligence related to current U.S. DNA research. Other subjects, yet in manuscript form, will cover Marx, medical ethics, collective action, concepts of meaning, and violence as a means to social change.

Specifically related to Russell, we discussed his views on socialism as outlined in Proposed Roads to Freedom, criticized the mysticism of Russell's logic, and built upon his "religion of thought" and his concept of infinity, followed by symbolism in his analysis of matter, in physical terms (on which I concentrated later, at CERN).

Of course, this report makes our activities look like horrid scholasticism which in reality they were not.

All articles mentioned are available through me upon request.

* * * * *

In the Philosophy Club I founded at Illinois Central College, which we want to form into a Russell Chapter, we'd like to expand discussion, analysis, and synthesis of any of the problems touched upon above or others of concern, and I cordially invite all ERS members to participate by writing. Articles or comments will be published, if possible, in our monthly journal, "Essence".

The purpose of our club is to function as a "systems group", treating concepts which are internally linked or are linkable to each other and are in linkage with the "environment of life". Thus we want to develop a synthesis of terminology, method, action and thought.

Our activities will be as follows:

- 1.1 Formation of committees
- 1.2 Committee consultations
- 1.3 Publication
- 1.4 Organization of courses, conferences, etc., made available to institutions or individuals
- 1.5 Contacts with national and international organizations and invite guest speakers

Committees:

- 2.1 System terminology: compile information + publication of the most used concepts
- 2.2 Abstract models: compile information on current theories and models of mathematics and physico-chemical sciences
- 2.3 Empirical models:
 - a) The industrial system: management principles
 - b) Education: goals and methods
 - c) Health, environment, etc.
 - d) Social systems
 - e) Biological systems

Communication and Cognition:

- 3.1 Study of learning processes, such as developed in psychology and cybernetics

Executive branch

- 4.1 Establishment of a library and compilation of "systems" literature and catalogue
- 4.2 Organize courses and coordination of the other committees.

Momentarily, we have 15 full-time co-workers and 80 part-time, both at Illinois Central College and at Bradley University. These institutions offer both faculty and monetary support. I cordially invite and even urge you to participate in these programs.

* * * * *

The last few months, I've been increasingly interested in the "energy-world-situation", and have taken up the study of nuclear engineering and physics, both for their theoretical value on the origin and composition of the universe, and their practical applications. I had the occasion to remain at CERN, Europe's largest nuclear research facility, to talk to numerous physicists and participate in research on elementary particles, where I got to meet several MIT professors currently working there.

This was all summed up in a one-week symposium, where the ideas of all the greats in the field were discussed, and attempts were made to integrate them. "Quantal formalism" was one of our topics, as it was in 1926 between Heisenberg and Bohr. Bohr's distinction between object and subject has enormous philosophical implications.

The study of Schrödinger's wave mechanics theory explained his fundamental assumption that nature is comprehensible. Einstein's paradox exhorted the view that the concept of objective reality is an "a posteriori" one. Ernst Cassirer, a major influence in Europe, argued that quantum physics conforms to the principles of Dialectical Materialism and can be expressed within a neo-Kantian framework. Oppenheimer was treated, as of course was Russell with his theories on Atomism and his relation to the empiricist, Hume.

The most hotly debated subject however was, surprisingly, the issue of freedom or determinism, the former being defended by A. O. Heisenberg's supporters, the latter by Nobel Prize-winner Louis de Broglie, who has developed a new thermodynamics theory based on an earlier version of his wave dynamics of particles.

To summarize the issue at the '27 Solvay Conference, Bohr, Heisenberg, Dirac and Pauli proposed to base quantum physics on probability, opposed by de Broglie, Schrödinger and Einstein. In today's schools, the former idea is taught, the latter isn't, though both groups have compiled new data and correct mathematical theories. Thus the issue needed, and needs, to be re-evaluated, which is being done at CERN, Stanford, Chicago (Fermi Lab), and N.Y. (Brookhaven).

* * * * *

From these projects, I returned with hundreds of books, magazines, articles, and tens of note pads, enough for years of further study. Obviously this account is very random and confusing, since hundreds of ideas keep popping into my head as I write, enough to fill a column for "Russell" for years. I strongly encourage anyone interested in any of the subjects mentioned to contact me.

I have finished another book on logic (covering the triangle dispute, Russell-Carnap-Popper), one on religion and one on physics, plus numerous essays and articles. As I said, enough material to keep me busy for years.

My best greetings and wishes to all members of the Society. It's Russell's spirit, his quest for truth and justice through courage, that we must promote!

NEWSLETTER #16
November 1977

- (1) Medvedev at Berkeley November 22nd(2). BRS at APA (philosophy) December 28th (3). Next Annual Meeting (4). Directors elected (12). "BR and God" (13). Reston column (17). New name wanted for Newsletter (47). 4-Year Index (56). An asterisk in the left column indicates a request.
-

COMING EVENTS

- (2) Medvedev. As mentioned previously (N115-5), Dr. Zhores A. Medvedev has accepted the BRS Science Committee's invitation to give a talk at Berkeley, on November 22nd, at 4 P.M., on radioactive contamination of the environment in the USSR. For background on Dr. Medvedev, see (58).
An informal evening meeting with Dr. Medvedev, for members and friends of the BRS, is contemplated.
Bob Davis will probably send a brief note to California members, giving further details.
Members who think they may attend should so notify Bob or Joe Neilands -- especially members outside the California area. (Bob Davis, 7025 W. Franklin #86, Hollywood, CA 90068. Professor J. B. Neilands, Dept. of Biochemistry, U. of California, Berkeley, CA 94720.)
- (3) BRS at APA. The BRS Philosophy Committee's Symposium at the meeting of The American Philosophical Association (Eastern Division) takes place the morning of December 28, 1977, at the Park-Sheraton Hotel, Washington, D.C. The Symposium is an annual event.
- (4) Next Annual Meeting will be at the Russell Archives, McMaster University, Hamilton, Ontario, May 19-20, 1978. More on this in President Bob Davis' report (6a).
-

REPORTS FROM OFFICERS

- (5) Chairman Peter G. Cranford reports:

One of the hard facts of life is that the humanist movement is staggering at the moment...both here and in England. Some of this is due to a lack of money, but the primary problem has been that humanism has not been able to supply the philosophical needs heralded by the revolt of youth in the 1960's. The latest issue of "The New Humanist" documents the situation rather well in an article by Colin Campbell in Towards a Humanist Vision (May/August 77).

What this means for the rational movement is that the promotion of rationality may have to become more rational. I think the BRS is on a track which has more promise than the traditional humanistic one. Attacks on mysticism do not seem to attract adherents. There is some accumulating evidence that mysticism has a psychobiological basis and its habitat is in the right hemisphere of the brain. Before we can deal with it, we will certainly have to understand it. However we may not be able to wait on this kind of research. We may have to operate with faith that our use of Russell as a tentative model is as good as we can do at the moment. Certainly he is an inspiration to many of our members - as they have so indicated on the questionnaire we send them when they become members.

The task we originally set for ourselves: to wit "to spread his ideas" remains the same. I am convinced it is the rock upon which an applied philosophy can be built. On a personal basis I am continuing to do this in the local area. I have purchased one of Russell's films, "Russell Speaks on Happiness", and by the time this newsletter is printed I will have shown it to audiences at Fort Gordon, Georgia and at the Augusta Public Library. Don Jackanicz purchased the film for me at a price of \$130.00. I sent a contribution for the same amount to our treasurer with the provision that it be applied to the purchase. I also stipulated that the film was the property of BRS on indefinite loan to me. The film is followed by a questions and answer period. This is something others might wish to do.

. . .

Jack Pitt and I have concurred on a joint plan to establish a science of applied philosophy. In its present stage we are seeking an audience with Dr. Peter Bourne and Mrs. Carter to ask for funds for a feasibility study. The chief levers will be the philosophical vacuum in the schools and the use of some 2500 unemployed philosophers to promote the study and practice of ethical values. We envisage the use of other professions in developing the science.

As soon as we have the money, I strongly recommend that we call for volunteers to work on the matter of financing BRS. I have been accumulating sources and basic literature as to the ways in which non-profit organizations can successfully raise money. I don't think that volunteers alone can do the job. There should be some pay, plus a fair percentage of the money that is raised.

As Lee will no doubt mention, three members have already made some provision in their wills for BRS.

President Bob Davis reports:

(6a) The 1978 Annual Meeting will be held at the Russell Archives, McMaster University, Hamilton, Ontario, Canada, the 3rd weekend in May (May 19-20). I selected this date, after consulting with the Board and other members, because May is a good month for using McMaster facilities, especially the dormitory rooms for those who may wish to. This particular weekend avoids the Memorial Day weekend, and being late in May, seems to avoid some academic dating problems. Also, the 18th will be BR's 106th birthday

I hope this will be our best meeting yet. We will have all the resources of the Archives to draw on. The bulk of the membership -- from Chicago to New England -- is within reasonable driving distance. I have an offer from Lester Denonn -- editor of several of BR's books, including "The Basic Writings of Bertrand Russell" -- to give a talk, "Roaming in my Russell Library". Lester Denonn has one of the finest private collections of Russell literature in the world. I hope to have several

* speakers of this caliber at the Meeting. Any suggestions about other speakers would be welcome.

The next Newsletter will give more details about the Meeting, including available facilities. Scholars should be able to do research at this time, at the Archives, which may make them eligible for grants; at the very least, their expenses would be tax-deductible.

(6b) I would like, from time to time, to relay information on ER's views on questions of current interest that might not be generally known.

The first such issue is that of the Panama Canal, which promises to develop into a rather heated and possibly violent international controversy. ER had the following to say in the chapter, "Pros and Cons of Nationalism" (p. 130-1) in "Fact and Fiction" (1962):

Political theory at the present time has no clear principles by which to decide the delimitation between the sphere of nationalism and the sphere of internationalism. The need of hitherto unrecognized principles has been made particularly evident by the dispute about the Suez Canal. Taking the matter first in the abstract and without regard to current disputes, it is evident that mankind as a whole have an interest in keeping open the routes of commerce and that, where a general interest is involved, it is not right or just that any one nation, or even any two or three, should have exclusive control. But this is never evident to those who, at any moment, have such control. The British had control of Suez and in some degree of Gibraltar; the Americans have control of Panama. It did not occur to us that there was anything unjust in this. On the contrary, we felt ourselves so wise and good that everybody ought to rejoice in having anything so important in our hands. The view which Colonel Nasser has proclaimed is, from the standpoint of principle, the same as that which Britain formerly proclaimed: namely, that there is no injustice in having the canal managed by one power. It should be generally admitted that anything so internationally important as the Suez Canal or the Panama Canal should be under an international authority. The claim that those who happen to live on its bank should have the right to inflict enormous damage upon those who live elsewhere is one in which there is no justice. One might as well claim that two people who live opposite each other on Fifth Avenue should have the right to put a wall across the street. But there is another over-riding principle more important than the rights and wrongs of any particular dispute. It is that in a world of nuclear weapons no dispute must be settled by war except when a decision has been reached by an international authority and resistance to its decision is easily quelled. These conditions do not exist in the Suez dispute and therefore whoever threatens war as a means of deciding it is an enemy of mankind.

I find this a convincing and sane argument, and believe it unfortunate that we did not move in this direction. "Fact and Fiction" is an interesting though obscure book of essays that provides much of ER's thoughts on political questions of the 50s.

(6c)

The 2nd question is that of homosexual or "gay" rights, which is proving to be a question of interest and conflict. BR did not discuss this, to my knowledge, in any great depth. There are some unfavorable comments about BR's views on the subject vis-a-vis such people as Lytton Strachey, John Maynard Keynes, and Ludwig Wittgenstein. However, these views indicate disapproval of such things as Strachey and Keynes using their positions in the Apostles discussion club at Cambridge to woo freshmen. BR also called it "sterile" from a reproductive point of view; which scarcely seems a controversial opinion. The direct comments by BR that I can find are as follows:

Dear Bertrand Russell (p. 120): "My attitude toward homosexuality is that it should be regarded no differently from heterosexual relations — it is a matter only for the people immediately concerned..."

A June 1954 Letter to the Editor of The Twentieth Century: "Sir, I wish to express my very complete agreement with the letter from Mr. Bernard Wall published by you in May 1954. I do not think that making homosexuality a crime serves any purpose except to relieve the vindictive feelings of people who have failed to understand the right principles of the criminal law. Homosexuality of adults with mutual consent is a private matter in which society has no legitimate interest. There is no better reason for punishing it than for punishing extra-marital heterosexual intercourse. Most continental countries recognize this, and I earnestly hope that the English law may before long become equally humane"

The pamphlet, A Meeting in Honour of Bertrand Russell 1872-1970, which relates the events of a memorial for BR, contains the information that the minister heading the Homosexual Law Reform Society was on the dais, and that BR had been "a member of the Honorary Committee of the HLRS and a consistent supporter in his writings and in many other ways." I have written this minister for information on this aspect of BR's work, but have not yet received a reply.

(6d)

On a different subject, I would like to refer you to Carl Sagan's new book, The Dragons of Eden, concerning the evolution of intelligence. He quotes BR as stating, with regard to the development of polymaths, that "the development of such gifted individuals required a childhood period in which there was little or no pressure for conformity, a time in which the child could develop and pursue his or her own interests no matter how unusual or bizarre. Because of the strong pressures for social conformity both by the government and by peer groups in the United States — and even more so in the Soviet Union, Japan, and the People's Republic of China — I think that such countries are producing proportionately fewer polymaths."

(6e)

As acting head of the Universal Human Rights Committee, I am including a copy of the Helsinki accords. These accords are the focal point of much of the rights struggle in the Eastern European nations. The accords call for their wide dissemination by the signatories. Russia, interestingly enough has a better record in this matter than most of the West, since they ran them in full in Pravda. The U.S. in particular has been remiss in this. At any rate, this is a partial correction, and I hope you find the pamphlet of some interest and importance.

REPORTS FROM COMMITTEES

- (7) Library Committee (Don Jackanicz, Chairperson):
See (39,40).
- Membership Committee (Lee Eisler Chairperson, Beverly Smith, Co-Chairperson)
- (8a) Advertising. The recent ads in "Atlas" have produced inquiries and members; we expect to use "Atlas" in 1978. We will probably drop "Human Behavior". We are testing ads in "The Nation".
- (8b) Welcome Packet. For the benefit of members who joined long ago, and for the record, here is what today's Welcome Packet -- which is sent to new members when they enroll -- contains: (1) Letter of Welcome (R5 9/77), (2) the Russell book-list by Blackwell, (3) the 1975 Report on Courses on ER, (4) the BRS Bylaws, (5) the BRS Directors' Bylaws, (6) the BRS Questionnaire, and (7) BRS Newsletters of the current year (if none yet issued this year, then last year's.)
- (8c) Membership analysis and statistics: see (27,28).
- (9) Philosophers' Committee (Edwin E. Hopkins, Chairperson):
Everything is set for the BRS/APA meeting in Washington, D.C. on 12/28/77. We reproduce the Program (55) and abstracts of the papers (53,54).
Next year's meeting (December 1978) will be in Philadelphia. I have already sent a call for papers to The Journal of Philosophy, Philosophy and Phenomenological Research, The Review of Metaphysics, Russell, The Southern Journal of Philosophy, and The American Philosophical Association.
- (10) Universal Human Rights Committee (Bob Davis, Acting Chairperson):
We are distributing, with this Newsletter, a 28-page "Bulletin Reprint" from The Department of State, titled, "Conference on Security in Europe: Final Act, Helsinki, 1975," referred to in (6e) as the "Helsinki accords". Section VII on Page 3 is headed: "Respect for human rights and fundamental freedoms, including the freedoms of thought, conscience, religion or belief."
-
- PROMOTING BR AND THE BRS
- (11) Library movie. PETER CRANFORD arranged to show the film, "Bertrand Russell Discusses Happiness," at the Augusta Library. "About 80 people attended. There was much discussion of the film, of BR himself and of the happiness problem. A successful event," says Peter.

THE MEMBERS VOTE

- (12) Directors elected. The ERS was caught in a bind in this election. We wanted all 6 Candidates to be Directors, but our Bylaws permitted only 5. (The Bylaws limit us to a maximum of 15 Directors, and we already had 10.) The Bylaws can be amended; that requires a vote of the membership. We will propose amending the Bylaws, to increase the maximum from 15 to perhaps 30, at the next Annual Meeting (May 1978). If the amendment carries, then by the time of the next election (August 1978), it will no longer be necessary for the ERS to deprive itself of the services of good people because of Bylaw restrictions.
- The following were elected by mail ballot, for 3-year terms starting 1/1/78: ED HOPKINS, DON JACKANICZ, JACK PITT, WARREN SMITH, KATE TAIT.
- As for "voter turnout", it was — in a word — miserable. 89% of the members did not vote. That's even worse than last year's poor showing of 83%. What can we do to get more members to vote? We'd welcome your
- * ideas on this.
-

ABOUT BERTRAND RUSSELL

- (13) "Bertrand Russell and God: A Memoir" is the title of a short article by Leo Rosten, for Saturday Review/World several years ago (2/23/74). We reproduce it (52).
- (Thank you, Rosemarie Lev.)
- (14) "Six Men" by Alistair Cooke (Knopf, New York, 1977) devotes one of its six sections — 26 pages — to BR. Cooke, though not without admiration for BR, seems not to really like him, and writes about him in a belittling way. It is a well-written piece, interesting all the way, and an antidote for Russell-idolatry.
- (15) Favorite song.
- "...I am 14 years old...One of my hobbies is collecting the names of the favorite songs of famous people..."
- "Thank you very much for your letter. My favorite song is 'Sweet Molly Malone', who sings of the streets of London."

Dear Bertrand Russell, ed. Feinberg & Kasrils,
Houghton Mifflin, Boston, 1969, p. 140

Here are the words:

In Dublin's fair city, where the girls are so pretty,
'Twas there that I first met sweet Molly Malone.
She wheeled her wheel barrow through the streets broad and narrow
Cryin' "Cockles and Mussels alive, alive-o!"

She was a fishmonger, but sure 'twas no wonder,
 For so were her mother and father before,
 And they each pushed their wheel barrow
 through the streets broad and narrow
 Cryin' "Cockles and Mussels alive, alive-o!"

She died of a "faver", and no one could save her,
 And there was the end of sweet Molly Malone;
 Her ghost wheels her barrow through streets broad and narrow
 Cryin' "Cockles and Mussels alive, alive-o!"

Folksinger's Wordbook

Oak Publications, New York, 1973

(Thank you, Bob Davis.)

ER'S INFLUENCE

(16)

Testimonial. Occasionally when new members enroll, they tell us about their feelings of indebtedness to ER. Here is a recent instance, one we find particularly interesting:

I well remember May 18, 1972 — Russell's one hundredth birthday. He was no longer around to receive a card, so I ordered a chocolate cake bearing the inscription, "Happy 100th Russell". My family and friends and I ate it, drank some wine, swapped some stories, and had a jolly good time.

Bertrand Russell was the first thinker of any weight I encountered. I was about 13, if memory serves me, when I learned of him through his autobiography. I was led, of course, on to his other writings. Thanks to their moral force, clarity, energy and breadth, Russell's books awakened me to the big wide world, and now I too am interested in just about everything. I don't suppose I've thought about him for more than 10 minutes in the last couple of years, apart from reading Clark's biography, because my mind has been on a million other things; but it is to Russell that I owe my enthusiasm for learning and for using knowledge toward a worthwhile end. I am now a student of microbiology. If the human race some day allows me to serve it, that will be the climax of a journey stretching back to when I discovered Bertrand Russell.

I was very pleased, then, to learn of your Society. For Russell — for his brilliance and courage, for his force and clarity, for his breadth and curiosity; above all, for his ability to think and act — I have nothing but blissful affection.

Sincerely yours,
 Greg Beaulieu

ER QUOTED

(17) This is James Reston's column in The New York Times of 8/12/77:

Silly Season Samples

WASHINGTON, Aug. 11—"I venture to propose for the reader's favorable consideration," Bertrand Russell once wrote, "a doctrine which may, I fear, appear wildly paradoxical and subversive. The doctrine in question is this: That it is undesirable to believe a proposition when there is no ground whatsoever for supposing it true."

We fished this out of an old Silly Season file the other day when Chicago began talking about a World Series between the Cubs and the White Sox, and finally decided to reprint it after reading some recent hot-weather stunners.

- Beame insists New York Will Balance Budget.
- Carter Says Welfare Plan Will End Corruption.
- Brezhnev Backs Human Rights.
- Lance Says Everything Okay.
- Republicans Seek Liberal Candidates.

Now, there is no evidence whatever for supposing that all these things are true. You might as well announce that "Boys Don't Like Pretty Girls,"

but for some quirky human reason, the Russell Doctrine and others like it never seem to gain much ground.

Take the case of the Chief Justice of the United States, Warren Burger. He is, presumably, no admirer of Lord Russell, whose views on sex were somewhat advanced and on pacifism somewhat retarded, but Mr. Justice Burger came up a while ago with an equally radical proposal. This was: That it is undesirable for the President or the Congress to propose new laws without providing enough judges to administer those laws.

His judicial judgment, put forward with the utmost courtesy, was that if the White House and the Congress insisted that industry submit to "impact statements" (a fancy phrase for considering what you were doing), maybe the Executive and Legislative branches should do the same. This produced quite a hiccup here and was regarded as the silliest suggestion since Barry Goldwater proposed that the country get up enough scratch to pay its bills.

For example, the President has just proposed to legalize the millions of illegal aliens in this country, with full social benefits including welfare payments for those who have been here since 1970. But he made no provision for the cost or "impact" of these people and their families on the budgets of New York or Los Angeles.

Or consider Secretary of State Vance's recent trip to the Middle East. He knew before he left that the Israelis would say "No to the P.L.O."—they have been saying it in italic Caps for months—but he's now saying before flying off to China that the problems of territory and representation in the Middle East should be left to the foreign ministers, whose power is even less visible than their names.

The defiance of the Russell Doctrine of rational skepticism is not to be explained by the excessive summer heat or by any other kind of monopoly of national pride. As Russell says, nationalism is an extreme example of passionate belief in narrow and doubtful political beliefs and illusions.

For example, there is "no ground whatever" for supposing that Mexico can go on doubling its population and

unemployment every generation and exporting its talented but workless people to the United States without provoking a really serious crisis in United States-Mexican relations within the new few years.

Or that René Lévesque can separate Quebec from Canada without risking the dismemberment of that great country and disrupting the friendly and essential economic and military relations of North America. But these things are happening without regard to Russell's Doctrine that "it is undesirable to believe a proposition when there is no ground whatever for supposing it true."

"The skepticism I advocate," Russell said, "amounts only to this: (1) that when the experts are agreed, the opposite opinion cannot be held to be certain; (2) that when they are not agreed, no opinion can be regarded as certain by non-experts; and (3) that when they all hold that no sufficient grounds for a positive opinion exist, the ordinary man would do well to suspend his judgment."

Russell suggested that while these propositions may seem mild, yet, if accepted, they would absolutely revolutionize human life. "I am also aware," he said, "that [they] would diminish the incomes of clairvoyants, bookmakers, bishops [he should have added columnists] and others who live on the irrational hopes of those who have done nothing to deserve good fortune here or hereafter."

Even so, he stuck to the moral of his fable:

"IT IS UNDESIRABLE TO BELIEVE A PROPOSITION WHEN THERE IS NO GROUND FOR SUPPOSING IT TRUE."

* What is the source of Reston's quotation?

- (18) "Monogamous mammals are hard to find" is the opening sentence of an article by M. G. Riegel, in Science News (Vol. 112, 7/30/77, p. 76), titled "Monogamous Mammals". The 3-page article closes with a BR quote from Marriage and Morals: "Uninhibited civilized people, whether men or women, are generally polygamous in their instincts."

(Thank you, HERB VOGT.)

- (19) BR quoted and rebuked.

"This [Chinese] faculty of organizing small islands of happiness, even in seas of the direst hardship, has always roused the wondering admiration of foreign observers. Bertrand Russell, who visited China in 1920, noted this feature and earned a stinging retort from Lu Hsün. About an excursion near the Western Lake, in Hangchow, Russell has written: 'I remember one hot day when a party of us were crossing the hills in chairs — the way was rough and very steep, and work for the coolies very severe. At the highest point of our journey, we stopped for ten minutes to let the men rest. Instantly they all sat in a row, brought out their pipes, and began to laugh among themselves as if they had not a care in the world.'

"To this Lu Hsün replied tartly, and his answer, like everything he wrote, is singularly apt today: 'As for Russell, who praises the Chinese after seeing smiling porters at the Western Lake, I do not know exactly what he is driving at. I do know one thing: if the porters had been able not to smile at those whom they carried, China would have long since been out of its present rut.'"

All the above comes from "Chinese Shadows: Bureaucracy, Happiness, History," by Simon Leys, in "The New York Review of Books" (6/9/77), p. 23. The Russell quote is from "The Problem of China" (London, 1926). The Lu Hsün quote is from "Lu Hsün ch'üan-chi" (Peking, 1963) p. 316.

ASSESSMENTS OF BR

- (20) Alden Whitman, chief obituary writer for "The New York Times," 1964-1976 writes:

Of those now safely dead, I can pick out a dozen for whom it was a pleasure to say a final word:... Bertrand Russell, because he dared to envision a better, more rational humanity..."

For the rest of Whitman's dozen, see "11 Years on the Death Watch" by Alden Whitman, in "More, The Media Magazine" (September 1977).

(Thank you, DON JACKANICZ.)

NEWS ABOUT MEMBERS

- (21) Peter Cranford wrote this Letter to the Editor, which "The Atlanta Constitution" published on 8/25/77:

I should like to comment on Billy Carter's statement ascribed to his mother that he is smarter than his brother, Jimmy.

It may well be that he is right in the sense that he might perform better on an I.Q. test or that he would be superior in an exchange of repartee, or that he would be shrewder in a business deal. Regardless of such activities, he would not necessarily be smarter in the real sense.

One of the "smartest" people I knew was an alcoholic, gradually destroying his brain jigger by jigger and then did it completely by killing both his wife and himself.

When I was chief clinical psychologist at Georgia State Hospital some 25 years ago, I got together about 15 people to assist me on a research project. Most of them had I.Q.'s of 120 to 154. They were all patients.

The truth of the matter is that intelligence measured by "smartness" is of very little value. Real intelligence is judgment embodied in useful knowledge, a good set of emotions, habits of diligence, a reasonable dedication to altruism, and a minimum of self-destructiveness.

It's clearly apparent that if we accept this latter concept of intelligence, which most psychologists agree upon, there is no way that Billy can compare himself with Jimmy. Perhaps he can some day if he can manage to repeat the birth process.

- (22) Albert Ellis. See (35).

- (23) Peter Houchin, our member in Edinburgh, a specialist in 18th Century English literature, locates and sells 18th Century books of scholarly interest. Bob Davis has asked Peter to find items related to the Russell family. Two of these have appeared in the Newsletter: the cause of death of the Earl of Bedford's wife (N114-35), and the strange case of Elizabeth Russell, in this issue (41). Bob writes:

He has just sent me a first edition of "The Life of William Lord Russell" (the Russell beheaded by Charles II in 1683) by Lord John Russell (BR's grandfather). He has also sent "Letters of Lady Rachel Russell" — the widow of William. He has another edition of Lady Rachel, the 6th, in 8 volumes, 3 engravings, in calf leather, published in 1801. Cost £ 16 (\$28). There is a first edition (1784) of plays by William Hayley, calf and marbled board, that includes a play about William Russell, "Lord Russell: A Tragedy", Price £38 (\$66.50). Anyone interested should mail me a check made out to Octodecimo Books. (Bob Davis, 7025 W. Franklin #86, Hollywood, CA 90068.)

- (24) Corliss Lamont wrote this Letter to the Editor, which The New York Times published on 8/7/77:

The Times has rendered an important service by exposing the close and improper ties between the American Civil Liberties Union and the Federal Bureau of Investigation. As a member of the board of directors of the A.C.L.U. I myself was caught in this web of intrigue because officers of the organization were worried about the absurd rumor that I was

a member of the Communist Party.

So it was that in the early 1950's Patrick Malin, then executive director of the A.C. L. U., reported to a full meeting of the board: "I was down in Washington a few days ago and dropped in on J. Edgar Hoover at the F.B.I. I asked him whether Corliss Lamont was a member of the Communist Party, and he said, 'No'." I protested Mr. Malin's little interview as clearly violating the A.C.L.U.'s principle of functioning on an entirely independent political basis. But no other member of the board present raised the slightest objection.

(25) NEW MEMBERS

We are very pleased to welcome these new members:

Raymond C. Bailey/931 Thermal Drive/Coquitlan, B.C./Canada V3J 6R7
 Greg Beaulieu/14-16 Street, N.W./Calgary, Alberta/Canada T2N 2B8
 Frank Bisk/2940 Mott Avenue/Far Rockaway, NY 11691
 Jim Borachef/Box 83/Geraldton, Ontario/Canada

MEMBERSHIP ANALYSIS AND STATISTICS

- (27) 2 out of 3 return Questionnaires. Of the 44 new members who enrolled during the first 9 months of 1977, 29 — 2 out of 3 — have returned the BRS Questionnaire. We would like to improve this statistic, since we find the Questionnaire quite useful. If you have never sent us your * Questionnaire, please consider doing so. If you can't locate your Questionnaire, Bev Smith will send you another. Her address: 74 Montaine Park, Rochester, NY 14617.
- (28) Some membership statistics. There were 172 members of the BRS on 10/15/77 (not including honorary members). 143 (83%) were male, 29 (17%) were female. 56 (33%) were students. 24 (14%) were on the staffs of colleges and university.

Here it is, in another form:

	<u>non-academic</u>	<u>academic</u>	<u>students</u>	<u>totals</u>
Male	75	21	47	143 (83%)
Female	17	3	9	29 (17%)
	92 (53%)	24 (14%)	56 (33%)	172 (100%)

There are, incidentally, 4 husband-and-wife couples.

BULLETIN BOARD

- (29) First editions to swap. "I have been an avid reader of Russell's works for the past 15 years and have recently begun collecting his books in first editions," writes THOMAS STANLEY. "I wonder if any members would be interested in swapping duplicates." His address: Box 336, Hartford, VT 05047.
-

FOR SALE

- (30) BRS stationery for members? Across the top of "official" BRS stationery, used by officers and chairmen, is a BR quotation. One member liked it so much that he wanted it on the stationery he uses.
 If a sufficient number of members are interested, we will print stationery for members' use. This is what it would say:

Across the top of the page, the quotation:

"The good life is one inspired by love and guided by knowledge."*
Bertrand Russell

At the bottom of the page:

*Motto of The Bertrand Russell Society, Inc.

The rest of the page — white, 8½ x 11 — would be blank. Paper quality: average.

If interested, send your check for \$3 for 100 sheets to the Newsletter. If enough members are interested, we will print; otherwise we will return your check. The price includes postage (about \$1).

(31) Spokesman Books. For titles and prices, see NL15-27.

(32) "The Tamarisk Tree" by Dora Russell. Good book, good buy. See NL14-31.

(33) 18th Century books from Peter Houchin. See (23).

CORRECTIONS

(34) The Terkel interview (NL15-12,44): the corrected year is 1962.

RECOMMENDED READING

(35) "Exuberance: A Philosophy of Happiness" by Paul Kurtz (Editor-in-Chief of "The Humanist") is reviewed by ALBERT ELLIS in "The Humanist" (September/October 1977). He ends his review with these words: "Most philosophers have had surprisingly little to say about the philosophy of happiness. But Kurtz, like John Dewey and Bertrand Russell, has a great deal to say in this connection — practically all of it well worth reading."

(36a) Encyclopedia Britannica, 14th Edition (1930) has a good write-up of BR, according to Lee Eisler

(36b) "Bertrand Russell Speaks His Mind". Lee Eisler recommends it as a good introduction to BR for beginners

BOOKS IN WORK

(37) Dora Russell has finished writing her latest book "and already I feel I must revise it!

"I was grateful to Joy Corbett for her remarks about the school (NL13-23), and to the ERS for printing them. I am quoting the part about freedom, in the last chapter of my book, duly acknowledged to the ERS Newsletter. ...she said just what was important to say about freedom and what I said happened in the school."

OBITUARY

(38) Rupert Crawshay-Williams, author of "Russell Remembered", as reported in "The Daily Mail" (England), 6/16/77:

Author Rupert Crawshay-Williams carried a solemn secret with him on his last routine journey to the village shops.

To the neighbors and friends he stopped to chat to, everything about the tall distinguished philosopher appeared normal.

But in his mind, he was turning over the final details of his death and that of his beloved wife, Elizabeth, desperately ill with an incurable paralyzing disease.

That night the devoted couple swallowed sleeping pills and lay in each other's arms reading a shared book and waiting for death.

...
Last night, the author's sister, Lady Greenwood, revealed that the couple who couldn't face life without each other had long planned to die together.

Lady Greenwood, wife of Anthony Greenwood, the former Labour Cabinet Minister, made a life peer in 1970, said: "I think it was a beautiful thing to do.

"They had been married 45 years and adored each other. Only three weeks ago my brother told friends he could not live without her."

She added: "We often talked about death and going together. I used to ask Rupert if he would have the courage when the time came. Elizabeth used to join in the conversations..."

...
He was a close personal friend of the late philosopher and nuclear disarmament campaigner, Bertrand Russell.

Lord Russell had a mansion only 100 yards away from Mr. Crawshay-Williams' cottage, and in 1970 the author published a book on his reminiscences of his friend, titled "Russell Remembered."

...
Mr. Crawshay-Williams was closely linked to the rationalist wing of the Humanist Movement.

Followers believe in voluntary euthanasia and in the right of individuals to decide when and where to end their own lives, as long as others are not hurt.

...
(Thank you, JOHN SUTCLIFFE.)

THE BRS LIBRARY

(39) Don Jackanicz, Chairperson of the Library Committee, reports:

As the second anniversary of its creation approaches, it can be said that the BRS Library is fulfilling its promise. Of course much more can be done and, hopefully, will be done. But, over this short time, the Library's development does appear to have been sound.

The resource of a growing collection of diverse materials is available to members. A book sales program has been begun. With the Library's films (recently circulating in Colombia, Georgia, and California) numerous viewers have been introduced to Russell. Inquiries of non-members have been answered. All of this makes membership in the BRS more worthwhile and helps to broaden public awareness of Russell and the BRS. For members, though, there is another benefit being realized: not only can one borrow, one can contribute to the Library. While some are more active than others in BRS activities, every member can consider making a book or some other item available to others or donating an amount of money, large or small, for the purchase of rather expensive materials, especially films. If you are uncertain how to become involved in the BRS, one suggestion is to remember the Library.

Individuals contributing materials and money to the Library during this last quarter are heartily thanked. Again, all members are encouraged to use the collection whenever desired. And, as some members have done, all are invited to order publications at a discount. By buying these materials, one both obtains a quality item at substantial savings and aids the BRS Treasury.

In the last Newsletter I promised to prepare an article to accompany this report on the phonograph records of Russell. My research has progressed slowly, and I regret that the article is not yet completed.

Lastly, I would like to thank the many members who have corresponded with me about Library business. Such letters are always welcome and a source of great interest.

(40)

Recent Library acquisitions:

(Previous acquisitions have been listed in NL13-48 and NL15-33. Here are the latest. Donor's name appears at the end.)

59. Bertrand Russell Discusses the Role of the Individual (film).
Peter Cranford.
 60. The Tamarisk Tree: My Quest for Liberty and Love by Dora Russell.
Ken Korbin.
 61. Reader's Index to the Subjects Dealt with in Bertrand Russell's Books, by Tsutomu Makino. In English. Author.
 62. "Naturalistic Humanism", chapter from Voice in the Wilderness by Corliss Lamont. Bob Davis.
-

ODDITIES

(41)

Elizabeth Russell anecdote. The following comes from "The Eccentric Mirror" by G. H. Wilson (London, 1813), Volume I:

ELIZABETH RUSSEL

Under this name the reader will undoubtedly expect to find recorded the adventures of a female, but in this he will find himself totally mistaken. The extraordinary person, some particulars of whom are here collected, passed during a long life for a woman, and was not discovered before his decease to belong to the other sex. In the following account it will be necessary, in order to avoid confusion among the relative pronouns, to make constant use of the masculine gender, however oddly it may be sometimes combined.

The various adventures of Russel's life, had they been collected by a contemporary, would have formed a volume as entertaining as those of the celebrated Bampfylde Moore Carew, whom he accompanied in many of his rambles, and from whom probably he first took the hint of disguising his sex to answer some temporary purpose.

It appears from the register of the parish of Streatham, that John Russel (a younger branch of the Bedford family) had three daughters and two sons: William born in 1668, and Thomas born in 1672. There is little doubt therefore that the person here recorded is one of the two, and that when he assumed the female dress, he assumed also the name of his sister Elizabeth, who died in her infancy; under this name in the year 1770, he applied for a certificate of his baptism. He attached himself at an early period of life to the gypsies, and being of a rambling disposition, visited most parts of the continent as a stroller or vagabond; when advanced in years he settled at Chipsted in Kent, where he kept a large shop. Sometimes he travelled the country with goods in the character of a married woman, having changed his maiden name for that of his husband, who carried the pack, and to his death he was his reputed widow, being known by the familiar appellation of Bet Page. In the course of his travels he attached himself much to itinerant physicians, learned their nostrums, and practiced their arts. His long experience gained him the character of a doctress, to which profession he added that of astrologer, and practiced both with great profit; yet such was his extravagance that he died worth six shillings only. It was a common custom with him to spend whatever he had in his pocket at an alehouse, where he usually treated his companions. About twelve months before his death he came to reside at his native place, Streatham. His extraordinary age procured him the notice of the most respectable families in the neighborhood, particularly that of Mr. Thrale, in whose kitchen he was frequently entertained. Dr. Johnson, who found him a shrewd sensible

person with a good memory, was very fond of conversing with him. His faculties indeed were so little impaired by age, that a few day's before he died he had planned another ramble, in which his landlord's son was to have accompanied him. His death was very sudden: the surprise of the neighbours may well be imagined, upon finding that the person who, as long as the memory of any person then living could reach, had been always esteemed and reputed to be a woman, was discovered to be a man; and the wonder was the greater, as he had lived much among women, and had frequently been his landlady's bedfellow when an unexpected visitor came to the house.

Among other precautions to prevent the discovery of his sex, he constantly wore a cloth tied under his chin. As his neighbors not having the penetration of Sir Hugh Evans, who spied Falstaff's beard through his muffler, the motive was unsuspected. After his death a large pair of nippers was found in his pocket, with which, it is supposed, he endeavoured to remove by degrees all tokens of manhood from his face. It may be observed, that supposing him to be the younger son of John Russel, he would have been 100 years of age: if we suppose him to have been the elder, his age would have been 104. He himself used to aver that he was 108. He had a mixture of the habits and employments of both sexes; for though he would drink hard with men, whose company indeed he chiefly affected, yet he was an excellent sempstress, and celebrated for making a good shirt. There was a wildness and eccentricity in his general conduct, which frequently bordered on insanity; and at least we may fairly conclude, to use a favourite expression of Anthony Wood, the Oxford Biographer, that he had a 'rambling head, and a crazy pate'.

The following is an extract from the parish register at Streatham, relative to this singular character:

'——— Russell, buried April 14, 1772. N.B. This person was always known under the guise and habit of a woman, and answered to the name of Elizabeth, as registered in this parish, Nov. 21, 1669, but at death proved to be a man.'

(Thank you, PETER HOUGHIN and BOB DAVIS)

FINANCES/CONTRIBUTIONS

(42) **Contributors.** We thank the following members for their recent contributions: **UNA CORBETT, HARRY RUJA, BEVERLY SMITH, CYNDE STOLL.**

(43) **2 films to go.** The ERS Library now owns 5 of the 7 available ER films. The 2 remaining films cost \$135 each plus delivery charges. **DON JACKANICZ**, Chairperson of the ERS Library, would be happy to receive contributions from members, to enable the Library to make its film collection complete. Send any amount — large or small — to Dan Jackanicz, 3802 N. Kenneth Avenue, Chicago, IL 60641.

(44) If you are leaving money to the ERS in your will, by means of a codicil (NLL5-38) or otherwise, please write a letter to the ERS Secretary saying you have done so. (Dr. Jack Pitt, ERS Secretary, Dept. of Philosophy, California State University, Fresno, CA 93740.) This does not commit you and leaves you free to eliminate the ERS from your will, should you wish to at some future time. It merely informs the ERS, and may encourage other members to do the same thing. Your name will be kept confidential; we will merely put the following kind of item in the Newsletter:

To date, 3 ERS members have included the ERS in their wills.

That statement is not hypothetical; it states a fact.

INVITATIONS TO CORRESPOND

(45) Alex Dely invites letters from ERS members, on any of the topics mentioned in "Alex Dely reports", the 3-page supplement that was distributed with NLL5.

(46) James Kuzmak has an ambitious project in work, in which he would like to interest ERS members. Here are excerpts from his prospectus:

...the systems and habits that have served man up to this point are now obsolete and drastically out of phase with the current world situation brought about by Western science and technology.

Worldwide authoritarianism would be an unthinkable step backward; however that seems to be the current trend.

...the production of arms brings about conditions for their use, via economic and political instability. Bertrand Russell seems to have intuited the connection when he wrote...(A quote follows from "Common Sense and Nuclear Warfare.")

Our political and social problems are very complex, but the lack of thoughtful communication and the ignorance of its importance is our problem in its most basic and unadulterated form.

CORTEX is the acronym for Common Organ for Rational Thought Export, a global project.

CORTEX has been founded on 6 premises, 2 of which are:

Never in the history of the world have there been so many intelligent human beings capable of rational thought and aware of the planet as a whole — problem-solvers on a large scale.

There is little outlet for this problem-solving capacity.

* * * * *

By mid 1980 CORTEX will publish a report resulting from a dialog between editors and participants from around the world.

We believe that the most accurate information and successful ideas concerning social progress must come not from governments and "expert" consultants but from people, wherever they are, whatever their occupations (our underlining).

The final report will grow out of a series of questionnaires... the long-range methodology of the project being based on the Delphi Technique, a method developed by the Rand Corporation as a forecasting technique.

CORTEX requests a \$25 contribution to cover the costs of the 2-year participation.

He would like suggestions for the questionnaire. What questions should be asked?

We suggest you write for the 7-page prospectus (with diagrams), to get a more complete picture of the project. Write James Kuzmak, 24 Collingswood Road, New City 10956.

NEWSLETTER MATTERS

(47)

New name wanted for the Newsletter. Most newsletters consist of just a few pages. The BRS Newsletter is heftier than most, and a name other than "Newsletter" might be preferable. Here are 2 possible new names:

THE RUSSELL SOCIETY QUARTERLY
RUSSELL SOCIETY NEWS

Do you like either of them?

Can you suggest any others? Avoid using the word, "journal", which is used by "Russell: the Journal of The Bertrand Russell Archives."

* We'd appreciate your comments and suggestions.

(48)

Dates of Newsletters during the past 4 years. During 1974, the schedule was random. Starting in 1975 (NL5), and ever since, the Newsletter has been issued at 3-month intervals. Starting in mid-1976 (NLI1), the issue dates were moved back one month (the July issue was moved to August), in order to include the Treasurer's Report for the latest quarter with a minimum of delay. Here are the dates of all Newsletters up to now:

<u>1974</u>	<u>1975</u>	<u>1976</u>	<u>1977</u>
NL1 Mar	NL5 Jan	NL9 Jan	NLI3 Feb
NL2 May	NL6 Apr	NLI0 Apr	NLI4 May
NL3 Sep	NL7 Jul	NLI1 Aug	NLI5 Aug
NL4 Nov	NL8 Oct	NLI2 Nov	NLI6 Nov

(49)

Trivia. We believe the Newsletter provides a fair amount of worthwhile material. Occasionally it also contains trivia -- something not (or barely) relevant to the BRS or its aims; but possibly amusing. We like to think our members can tolerate bits of trivia from time to time. We're sure they spotted the two bits in the last issue.

MISC.

(50)

Oops! One of those things that publishers hope will never happen happened. In some copies of the first edition of "The Life of Bertrand Russell" by Ronald W. Clark, Page 107 is all wrong; it duplicates the text of Page 166; the text intended for Page 107 is missing. When we wrote Knopf, the publisher, about this, they replied: "The error was discovered when the first printing was released, and was corrected at that time (the right page was tipped into the book). Unfortunately there were books that had already left the warehouse..."

At our request, Knopf has supplied copies of Page 107 (the right one), which are distributed with this Newsletter, in case you need it for your copy of Clark.

ABOUT OTHER ORGANIZATIONS

(51)

La Biennale di Venezia. President Bob Davis has sent this letter to their President, Dot. Carlo Ripa di Meana:

Dear Sir:

I have read your article in The New York Review of Books for September 15th and wish to commend you and your compatriots for the upcoming Venice Biennale. The plan to explore both the positive aspects of Eastern European culture and the political control and suppression of that same culture promises to be of great value to all. The Bertrand Russell Society applauds all such efforts at increasing human understanding and battling bureaucratic oppression.

I look forward to seeing reports on the Biennale in the Review and other periodicals.

Yours,

Robert K. Davis
President/ERS

Bertrand Russell and God: A Memoir

Confronted with the Almighty, he would ask,
"Sir, why did you not give me better evidence?"

by Leo Rosten

Whenever I run across Bertrand Russell's name, I remember several afternoons I spent with him in London, many years ago, in his home on Queen's Road.

He was very thin, frail, and skincreased, shorter than I had assumed, with a head much too large for his body, a bright-eyed elf with an aureole of white hair and a thread of a mouth that twisted—sardonic or amused, petulant or defiant—with every turn of his mood.

A pipe was never out of his hands. Whenever I asked him a question, he would fuss and fiddle with that pipe, tamping it down or reaming it, blowing into its stem to clean the passage, filling it, lighting it slowly, tapping it out, or refilling it—and then his answer would emerge, pellucid in phrasing and breathtaking in precision. Never before had I heard such a flow of epigrams or such tantalizing fugues of intelligence and irony. He used his pipe as a prop—to give him time to think, formulating his response, editing it, polishing it, rehearsing it, I suspect, before he presented it to me. The result was intoxicating.

He was rather cool in manner, I should say—perhaps because he was suspicious of my purpose: I had written to say I hoped to persuade him to write an article on agnosticism (for *Look* magazine). Almost his first words were: "I doubt that your editor will publish—in America—what I should want to say."

(One must remember how shabbily Russell had been treated by the city of New York, judged "unfit" to teach at City College and fired, despite his contract, because of his "lecherous, lustful, erotomaniac, aphrodisiac . . . writings," the complaint read.)

He asked, "What sort of article have you in mind?"

"A question-answer format. . ."

"And who," he murmured, "will put the questions?"

"I."

Pause. Puff. Smoke. "Do give me some examples."

"Are you an agnostic or an atheist?" I began.

"Agnostic, of course. . . . Atheists are like Christians: That is, both dogmatically maintain that we can know whether or not there is a God. The Christian holds that God does exist; the atheist holds that God does not. But the agnostic knows that we simply do not possess sufficient grounds either to affirm or deny the existence of a supreme being. . . . So I believe that although the existence of God is not impossible, it is improbable. Quite improbable."

"Then how do you explain the beauty and harmony of nature?" I ventured.

He cocked his head to one side like a mischievous sparrow: "I fail to see much beauty or harmony in a tapeworm. . . . Animals throughout the kingdom of 'beautiful' nature kill and prey upon each other quite without mercy. The stars in the 'harmonious' heavens explode from time to time and destroy everything in their vicinity. Beauty is entirely subjective. It can exist only in the eye—and the mind—of an observer. . . . Try another question."

"Well, do you ever—however vaguely or infrequently—fear God or God's judgment?"

Russell shrugged. "If there is, in fact, a Supreme Deity, which I doubt, I think it most unlikely that he—" a pause, an ironic grimace—"would possess so uneasy a vanity as to be offended by my views about his existence." He fixed me with a skeptical stare. "Now then, will your magazine print such scandalous comments for the God-fearing American public?" His lips corkscrewed both dubiety and disdain.

"I can assure you that we will."

"Perhaps you had better ask more questions."

"Do you deny that man has a soul?"

A moue traversed his lips. "What do you mean by 'soul'? One can't give a precise answer to an imprecise question."

"I suspect, sir, that you know what men mean when they talk about the soul."

"Mmh." He shrugged. "I suppose that 'soul' is meant to designate some non-material essence, temporarily associated with man's corporeal existence—an es-

sence, in the case of those who believe in immortality, that presumably leaves man's body to continue its existence, in one form or another, throughout all of the future. . . . I do not believe any of this, of course." He blinked. "But that should in no way lead you to think I am a materialist. I am just as doubtful about the reality of the body. . . ."

"Then do you in any way distinguish between mind and matter?"

"That," he sighed, "takes us into rather difficult problems in metaphysics. For my part, 'mind' and 'matter' are merely symbols, conveniences used in philosophical discourse."

"Don't you think that matter exists?"

"There are powerful reasons for holding that neither mind nor matter 'exist.'"

"That, I suppose, would lead you to deny that there is a hereafter."

A cloud of smoke appeared from his pipe. "I have failed to find any persuasive evidence, even—[dryly]—in the most earnest allegations of spiritualists, transmigrationists, or psychical researchers, that would lead me to take seriously the assumption that we, or vaporous parts of us, survive death. But I remain open to conviction; if respectable data ever come along, I should examine them with great care." The tone suggested that Russell was confident such data were not likely to consume much of his time in the years ahead. "You know, agnosticism totally baffles many people. . . . When I was sent to prison as a pacifist, during the First World War, the warden, after asking the conventional questions—name, birthdate, place of residence—asked what was my religion. 'I am an agnostic,' I said. The poor man—a very decent sort—looked bewildered. 'A what?' he asked. 'Agnostic,' I repeated. He said, 'Would you be so good as to spell that out, sir?' So I spelled out 'a-g-n,' and so on. When the warden read the strange word he had written, he looked up cheerfully and said, 'Well, there certainly are a great many religious sects—but I am sure they all worship the same God!' " Russell smiled; he would not elevate his amusement with a laugh.

"What about so-called miracles?" I asked. "Miraculous cures, for example?"

Russell waved a hand in benign dismissal of divin^g therapy. "My dear boy, faith certainly does heal—some people. But that scarcely proves anything 'miraculous.' Even at Lourdes, some diseases and afflictions and physical disabilities have never been cured. . . . Those pious people who do experience a mystifying cure at Lourdes would probably have been cured in another place, or by some physician, if they retained the same confidence in the powers of medicine."

"What about the miracles in the Bible?"

An expression of pain (or dismay) preceded the answer: "Even learned churchmen, if enlightened, think of the Bible as do I: not as holy revelation, but as a compilation of early history, folktales, myths—not much different from, say, the *Iliad* or the *Odyssey*. . . I dare say that Homer makes as strong a case for the gods of Greece as Moses made for the God of Israel."

After his young wife brought us tea, I asked, "What is the meaning of life to an agnostic?"

"What is the meaning of 'the meaning of life'?" he retorted. "I do not believe that life has meaning; it just happens. Individual men and women have their own goals and purposes; and nothing in agnosticism need cause them to surrender those goals or alter those purposes."

"Are many agnostics Communists? They both oppose religion. . ."

"Not at all. Communism simply opposes religions other than itself. Marxism

is a set of virulent and intolerant dogmas. Agnostics must therefore oppose it with all their energy."

I asked, "Let us suppose, sir, that after you have left this sorry vale, you actually found yourself in heaven, standing before the Throne. There, in all his glory, sat the Lord—not Lord Russell, sir: God." Russell winced. "What would you think?"

"I would think I was dreaming."

"But suppose you realized you were not? Suppose that there, before your very eyes, beyond a shadow of a doubt, was God. What would you say?"

The pixie wrinkled his nose. "I probably would ask, 'Sir, why did you not give me better evidence?'"

There is a noteworthy end to my story. After *Look* printed the article, the *New York Daily News* ran a blistering editorial to the effect that Bertrand Russell's shocking ruminations proved that there must be a merciful God: How else could one explain "the continued existence"

of so unpleasant, wicked, and muddle-headed a philosopher?

I sent Russell the editorial. His reply (which I publish by permission of his estate) is vintage irony:

Dear Mr. Rosten:

Thank you for sending me the extract from the N.Y. "Daily News."

I think the evidence for the existence of God supplied by my continued existence is strengthened by the continued existence of the N.Y. "Daily News." It and I can agree in wishing that His mercy were less infinite.

Yours sincerely,
Bertrand Russell

To my surprise, the *His* was capitalized. All else illustrates Russell's unique combination of reasoning and mockery.

I sometimes think the great agnostic could have invented the epigram whose author no one knows: "Let us thank God that there is no God." □

Editor's Note: Leo Rosten's newest book, Dear Herm, will be published soon by McGraw-Hill.

PHILOSOPHERS' CORNER, CONTINUED

(53) Abstracts of 2 papers to be presented at ERS/APA, 12/28/77:

ACQUAINTANCE AND NAMING: A RUSSELLIAN THEME IN EPISTEMOLOGY, Augustin Riska, St. John's University.

Russell's distinction between knowledge by acquaintance and knowledge by description has been recently re-examined in, often controversial, epistemological contributions. The present essay reflects upon the pertinent papers by D.F. Pears, J. Hintikka, R. Chisholm, W. Sellars, A.J. Ayer, P. Hayner, R.G. Meyers, etc., but it is primarily founded on Russell's significant formulations from his writings published between 1910 and 1918. By employing an auxiliary device of a late-Wittgensteinian language-game, I explore at first the situation in which a human subject is 'experiencing' and naming particular objects (Russell's sense-data and sensibilia), and later the subject's acquaintance with universals. The reconstruction of such situations shows that, contrary to Russell's assumptions, even the 'purest' acquaintance cannot function without knowledge by description, i.e., without stating propositions about the object of acquaintance (whatever its nature). Then the only 'descriptionless' alternative would be a kind of intuitive knowledge of such objects which is difficult to reconcile with the position held by Russell in the 1910's. Whatever the consequences, this topic retains its fundamental epistemological significance.

(54)

RUSSELL ON THE ESSENCE OF DESIRE, Raymond Frey, The University of Liverpool.

Both Anthony Kenny and David Pears are highly critical of Russell's theory of desire, and especially of his view of the essence of desire, which he regards as something shared or in common between men and animals. Both men object to Russell's behaviorism in this regard, and they each direct the same, powerful objection against it. In this paper, I argue that a Russellian behaviorism, incorporating and exploiting a distinction between needs and desires, can meet the Kenny-Pears objection.

Non-members of the BRS may obtain a copy of these abstracts by writing to Edwin Hopkins, 2819 N. Calvert Street, Baltimore, MD 21218.

**Program
of
THE BERTRAND RUSSELL SOCIETY, INC.**

**at the December 1977 meeting
of the Eastern Division of
THE AMERICAN PHILOSOPHICAL ASSOCIATION**

Time: December 28, 1977 (Wednesday morning)

Place: The Park-Sheraton Hotel, Washington, D.C.

- I. ACQUAINTANCE AND NAMING: A RUSSELLIAN THEME IN EPISTEMOLOGY, Augustin Riska, St. John's University.**

Commentator: George Roberts, Duke University.

- II. RUSSELL ON THE ESSENCE OF DESIRE, Raymond Frey, The University of Liverpool.**

Commentator: Thomas Simon, University of Florida.

Chairman: Justin Leiber, M.I.T.

Copies of these papers may be borrowed (at no cost) or purchased (for \$2) from Dan Jackanicz, Chairperson, BRS Library Committee, 3802 N. Kenneth Avenue, Chicago, IL 60641.

(56)

4-YEAR INDEX

We have tried to have the Index also serve as a review of the BRS's first 4 years, topic by topic. (There is also a Supplement to the Index, as explained below.)

Under PROJECTS, for instance, you will find the various projects that members have suggested during the 4 years.

Under COMMITTEES is a listing of all committees. Under a particular committee, the SCIENCE COMMITTEE for example, is a review of its activities during the 4 years.

Under NEWSLETTER CONTRIBUTORS we have listed members who have contributed items to the Newsletter and have identified the items. We have probably failed to list a number of contributions, and ask that you notify us of such omissions.

NEWS ABOUT MEMBERS is news that is not related to, or does not stem from, a person's membership in the BRS.

These words in parentheses, (reprinted), (reproduced), mean that an article first published elsewhere is reproduced or reprinted in the Newsletter. Under ARTICLES REPRINTED IN THE NEWSLETTER is a listing of such articles.

This parenthesis (BRS Library) means that the item is available from the BRS Library.

Items are usually listed in chronological order, within a topic. Cross-references are in CAPITAL LETTERS. 8-3 refers to Newsletter #8, Item 3. 8-3++10 refers to Newsletter #8, Items 3 through 10. The pages of Newsletter #1 were not numbered; N11-p.7 refers to the 7th page of Newsletter #1.

The same item may appear more than once, under different headings. Some items have been dropped because they have been replaced by later items, such as 14-41 (John Russell's maiden speech will be printed in the next issue), which has been replaced by 15-45 (the text of the maiden speech itself). Some items have been dropped because they do not seem worth recalling.

A SUPPLEMENT at the end of this Index lists certain items that are not in the Index because they have not appeared in the Newsletter. They have appeared in Newsletter supplements, or in other mailings, and deserve mention because they are part of the record of the BRS's first 4 years.

Please report errors and omissions.

* * * * *

This Index covers the years 1974 through 1977, Newsletters #1 through #16

ADDRESS CORRECTIONS AND CHANGES. 3-58, 4-34, 7-36, 8-43, 9-30, 10-32, 11-27, 12-39, 13-41, 14-30, 15-26, 16-26.

ADLER, MORTIMER includes 3 books by ER among his 95 "of lasting significance" of this century. 15-10

ADVERTISING

First BRS ads in "Saturday Review/World" and "New York Review of Books". 2-34
SR/W ad did well, NYRB ad did poorly. 3-17

Ads scheduled for "Bulletin of the Atomic Scientists", "The Humanist", "APA Monitor", and "Humanist in Canada". 4-7

Advertising by members suggested. 10-50

Rule of thumb for selecting a publication for advertising-by-members. 11-35

The publications that have been productive to date. 11-35

Ads will run in "Mensa", "The Progressive", "Atlantic Monthly", "Harper's", "The Humanist" in August 1975. 7-13

ADVERTISING (continued)

1976 ads will run in "APA Monitor", "Atlantic Monthly", "Bulletin of the Atomic Scientists", "Harper's", "The Humanist", "Mensa", "The New Republic", "The Progressive". 9-8

4 of the 8 magazines on the 1976 schedule did better than the rest. 13-8

Ads in "Atlas" and "Human Behavior" are being tried. 15-7

"Atlas" will be used in 1978, "Human Behavior" will be dropped. Test ads in "The Nation".

AMERICAN HUMANIST ASSOCIATION receives grant for TV series, "Ethics in American Society". 13-54

History of AHA pamphlet, "Faith of a Humanist". 15-8

See "Lamont, Corliss" under NEWS ABOUT MEMBERS

AMERICAN PHILOSOPHICAL ASSOCIATION. See PHILOSOPHERS' CORNER

AMERICAN PSYCHOLOGICAL ASSOCIATION

BRS members who belong to APA. 13-21

"Bertrand Russell's Relevance to Psychology" by Peter Cranford is offered to readers of "APA Monitor". 15-47

See BRS PSYCHOLOGY SYMPOSIUM

AMNESTY INTERNATIONAL

Davis will try to work out an arrangement with them. 6-29

Davis writes to AI prisoners. 10-23

Davis will attend AI west coast meeting. 12-4

Davis visits AI headquarters (England). 13-8

ANNUAL MEETINGS

1974 Founding Meeting in NYC (Feb. '74) reported in ERS Bulletin. 1-p.7

Next Meeting announced for Feb. 7-9, '75 in NYC. 5-1

1975 Annual Meeting in NYC (Feb. '75) reported. 6-8+24

Members will vote on time and place of next (1976) meeting. 6-25,52

Geographical distribution of members in the US and Canada. 6-25

Results of the vote: 1976 Meeting in NYC on Dec. 26-28, 1975. 7-2

Rotation plan (9-year cycle) suggested for locations of Annual Meetings. 7-3

Advance information about the "1976" meeting (to be held 12/75). 8-3+10

Davis responds to rotation plan, offers to do next meeting in L.A. 8-13

"1976" Meeting (held 12/75) in NYC reported. 10-2+15

1977 will be in Los Angeles, Feb. 4-6, 1977. 10-11, 11-4, 12-2

1977 Meeting in L.A. reported. 13-4

1978 Meeting will be at the Russell Archives May 19-20, 1978. 16-4

ANTHOLOGIES THAT INCLUDE BR

McWilliams was introduced to BR in a college freshman reader,

"Toward Liberal Education". 5-19

4 anthologies are listed. 12-14

ANTI-SEMITISM. See HOOK ARTICLE

APPLIED PHILOSOPHY COMMITTEE Martin A. Garstens, Chairperson

Garstens plans to produce a handbook on "great philosophy". 2-29

Garsten's group discuss "Conquest of Happiness". 3-15

More meetings of Garsten's group. 4-5

Garstens plans to concentrate on ethics. 8-17

Garsten's group will read "Human Society in Ethics and Politics". 9-6

Garstens has been in touch with other groups interested in ethics. 9-6

Garstens continues his interest in ethics. 10-15

Garstens thinks a scientific ethic is possible. 13-11

Garstens is exploring the possibility of a scientific ethic. 14-8

See LOCAL BRS CHAPTERS

ARTICLES REPRINTED IN THE NEWSLETTER (all or part)

- "Ottoline at Garsington", book review by Raymond Mortimer in the "Sunday Times" (London), 9/1/74 (part). 4-17
- "Personal Record 1920-1972", Gerald Bregan's autobiography (part). 5-14
- "Are We Any Happier?", article by BR in "Cash's Pall Mall Magazine" (July 1935), a P.S. to "The Conquest of Happiness" (all). 6-31
- "The Woman Who Refused to Live in the Shadow of Bertrand Russell", "The Times" (London) story on Dora, 10/2/72 (all). 7-21
- "From Carson to Mader: The Growth of Public Interest Science," book review by the editor of "Bulletin of the Atomic Scientists" (all). 7-22
- "Impact on Intellectuals of Bertrand Russell" (in Japan), by Kazuteru Hitaka, in "The Times" (London), 5/7/75 (all). 7-50
- Presentation of the Nobel Prize in Literature in 1950 (all). 7-52
- "75 Years of Rationalism" by Hector Hawton, Managing Director of the Rationalist Press Association (England) 1953-1971 (all). 8-56
- "Science and the Biosphere: Coexistence or Catastrophe?" by J.B. Neilands in "Environment Action Bulletin", 11/29/75 (all). 9-47
- "My Father, Bertrand Russell" by Katharine Russell Tait, book review by S.P. Rosenbaum in "Toronto Globe Mail", Fall 1975, exact date not known, (all). 12-46
- "My Father, Bertrand Russell", by Katharine Russell Tait, book review by Brian Glanville in "The Times" (London), 7/29/76 (all). 12-47
- "Bertrand Russell the Man" by Sidney Hook in "Commentary", 7/76 (all). 12-62
- "The Faith of a Humanist" by BR, now a pamphlet from the American Humanist Association (all). 14-14
- "Recollections of 3 Hours with Bertrand Russell" by Lester Denonn, in "Correct English", 12/43 (all). 14-16
- "The Life of Bertrand Russell" by Ronald W. Clark, book review by Dora Russell, in "Freethinker" (England), 12/75 (all). 14-33
- "How I Became a Humanist" by Corliss Lamont (Humanist Award Acceptance Speech), in "The Humanist" (July/August 1977) (all). 15-43
- "Talking to Myself" by Studs Terkel. His interview of BR (all). 15-44
- ATHEISM.** See RELIGION/ATHEISM/AGNOSTICISM *Silly Serson Samples, James Taylor's column in the 4/77 issue 8/2/77*
- AWARDS COMMITTEE** Gary Slezak, Chairperson
- Proposal that there be a BRS Award. 7-25
- Committee established at Annual Meeting. Needs Chairperson. 10-13
- Committee functions described. 10-41
- Taskonis suggests Madalyn O'Hair for the BRS Award. 13-33
- Committee now chaired by Slezak. Members wanted. 14-6
- A. J. AYER faults Clark's "The Life of Bertrand Russell" and Rosemary Dinnage's review of it. 12-48
- BALLOTS**
- Date and location of next Meeting. 6-52
- Should BRS help finance "What I Believe"? Should the BRS approve statement on nuclear power by Science Committee?
- A "mailing page", not a ballot, giving time of arrival for Annual Meeting and names of candidates for Director proposed by member. 8-70
- Voting for 5 Directors, closing date 10/1/76. 11-47
- Voting for 5 Directors out of 6 candidates, closing date 10/1/77 15-40
- See VOTES
- BEACON HILL SCHOOL**
- "Recollections of Beacon Hill" by a student (Joy Corbett). 13-23
- Portions of Joy Corbett's recollections will be quoted in Dora Russell's new book. 16-37
- BEDFORD ANECDOTE.** The cause of the death of the 5th Earl of Bedford's wife. 14-35

BERTRAND RUSSELL ARCHIVES at McMaster University

Jackanicz visits the Archives (11/74). 5-18

Jackanicz visits the Archives (6/77). 15-17

BERTRAND RUSSELL MEMORIAL LOGIC CONFERENCE

A list of the contents of the published proceedings. 12-54

The published proceedings (ERS Library). 13-48

BERTRAND RUSSELL PEACE FOUNDATION

They are mounting a protest against intellectual repression in communist countries. 2-20

Neilands writes to them, offering to visit USSR scientists and inquire about their rights to political dissent, etc. 3-23

Their letter to "The Times" (London), 6/20/74, protesting Solzhenitsyn's charge that BR "connived at, or apologized for, injustice in the Soviet Union". 3-4,32

They are in trouble. Text of their letter. 6-18,46

The ERS's present attitude toward them is one of coolness. 10-51

Davis meets Fleet, Farley, and clears up some misunderstandings. 13-8

"The Bertrand Russell Peace Foundation, its Aims and Work", pamphlet, is distributed to ERS members with NL13. 13-57

Spokesman Books offered for sale by the ERS. 15-27

BERTRAND RUSSELL SOCIETY, JAPAN

Makino cables congratulations on the founding of the ERS. 2-2

Makino compiles "Reader's Index to the Subjects dealt with in Bertrand Russell's Books", 37 pp., in English. (ERS Library) 5-11,7-51

"Impact of Bertrand Russell on [Japanese] Intellectuals" by Kazuteru Hitaka, in "The Times" (London), 5/7/75; full text. 7-50

10th Anniversary Issue, Bulletin 23, Bertrand Russell Society-Japan.

In Japanese (ERS Library). 7-51

"BERTRAND RUSSELL SPEAKS HIS MIND"

Available hardbound from Greenwood, @ \$9.75

Now available from Germany, in English. 11-22

A quote from it, re Paddy Chayevsky. 13-27

Recommended as an introduction to BR for beginners. 16-36b

BLACKWELL, KENNETH Founding Member

Blackwell, Archivist of The Bertrand Russell Archives, is one of the founders of the ERS. 1-p.7

Compiles 4-page Russell book-list, sorting BR's books into 17 categories. 8-29

Refutes Matthew's "alley cat" charge. 9-14

Elected a Director for 1 year starting 1/1/76. 10-6

Re-elected a Director for 3 years, starting 1/1/77 12-12

See "Blackwell" under NEWSLETTER CONTRIBUTORS.

BOOK-LIST by Blackwell, 4 pages, sent with NL8 (ERS Library). 8-29

DIRECTORS

Cranford recommends these 12 Directors at Annual Meeting (12/75). 8-9

15 Directors elected at Annual Meeting (12/75): Cranford, Davis, Eisler, Garstens, Slezak, for 3-year terms; Hopkins, Jackanics, McKeown, Pitt, Tait, for 2-year terms; Blackwell, Denonn, McDonald, Neilands, Reinhardt, for 1-year terms. All terms start 1/1/76. 10-6

Directors to be elected by mail ballot in future. 10-7

Cranford's views on the functions and qualifications of Directors. 11-3

Directors elected by mail ballot: Blackwell, Denonn, McDonald, Neilands,

Reinhardt, for 3-year terms, starting 1/1/77. 12-12

DIRECTORS (continued)

Nominate your candidates for Director. ~~12-37~~ 14-37
 More on qualifications for Director, according to Cranford. 15-2
 6 Candidates on ballot for 5 Directorships. 15-40
 Directors elected by mail ballot: Hopkins, Jackanicz, Pitt, Warren Smith, Tait, for 3-year terms starting 1/1/78.

DUES

Dues \$12, students \$5 (2/74). 1-p.7
 Husband and wife, \$15(9/74). 3-10
 Members outside USA and Canada, add \$5(10/75). 8-54
 Dues raised to \$15(regular), \$20(husband and wife). Student, still \$5.
 Outside USA and Canada, add \$5. 10-12

DURANT, WILL & ARIEL

Guests of honor at 4th Annual Meeting banquet(9/77). 13-4
 Visit BR in 1948. 13-24
 Will include "a few friendly pages" about BR in their "Dual Autobiography", scheduled for 1977. 13-24
 His assessment of BR. 14-19

EISLER, LEE Founding member

Asks question about human sacrifice at Oracle of Delphi. 1-p.4
 See QUESTIONS AND ANSWERS
 A brief profile. 3-68
 His book, "Morals Without Mystery" is in BRS Library. 13-48
 Elected a Director for 3 years starting 1/1/76
 See INFORMATION COMMITTEE, of which he is Chairperson
 See MEMBERSHIP COMMITTEE, of which he is Chairperson
 See NEWSLETTER, of which he is Editor

ELLIS, ALBERT

Gives talk at BRS Psychology Symposium (9/76). 12-3
 See "Ellis" under NEWS ABOUT MEMBERS

ENGLAND

Davis reports on his forthcoming trip to England. 12-4
 Davis reports on his trip to England(12/76-1/77). 13-8

 See HERTRAND RUSSELL PEACE FOUNDATION
 See PENRHYNDEUDRAETH

ENVIRONMENT

Sierra Club's salute to BR as an early conservationist. 3-31
 The Sierra Club understated it, says Blackwell. 4-15
 BR did not share Western man's anthropocentric indifference to the non-human environment, according to 2 papers by George Sessions (BRS Library). 8-35
 "Small is Beautiful" by E.F. Schumacher shares the view expressed by Sessions. 8-63
 See SCIENCE COMMITTEE

EPSTEIN HEAD

One firm may be willing to make replicas of Jacob Epstein's head of BR, if we can get permission to do so. 2-35
 Lady Epstein has refused permission to make replicas, for reasons that are not persuasive. 12-21

"FAITH OF A HUMANIST"

This AHA pamphlet is reprinted. 14-14
 Its history, as provided by The Russell Archives. 15-8
 Recommended by Tobin as an introduction to BR for beginners. 15-9

FILMS

7 commercially available films of BR are listed. 12-12
 The BRS Library has 2 BR films. 13-48
 The BRS Library acquires 2 more BR films. 15-33
 A review of 3 of the BR films in the BRS Library. 15-32
 The BRS Library now owns 5 of the 7 films; 2 to go. 16-43
 See LIBRARY (BRS)

FINANCES

ERS now tax-exempt. 5-31

Cranford on the need for money. 6-49

Contributions are tax-deductible; also cost of attending meetings, for professional philosophers. 6-50

Members will vote on whether the ERS should partly finance publication of "What I Believe." 7-46

A proposal: to finance future projects by vote and assessment. 7-47

Tax-deductible travel (to meetings) for 2 groups of ERS members:

professional members and "essential" members. 8-8

The members vote no on "What I Believe." 8-25

Tax-deduction reminder: report what you deduct to ERS Treasurer.

What is deductible. 9-43

Cranford is now Chairman of the Finance Committee. 10-37

Members suggest ways to raise money. 11-3

Time-Life film on ER is priced at \$275. 11-40

Codicil to a will, for leaving money to the ERS. 15-38

2 films still needed, to complete the ERS Library's collection of ER films; contributions solicited. 16-43

If the ERS is in your will, please notify the ERS Secretary. 16-44

See CONTRIBUTIONS

See FUND-RAISING

FOR SALE (OR SWAP)

ER medallion by Warner Williams, \$20. 5-30

French Government's ER medallion, and costs. 6-47

Little Blue Books, and costs. 7-37

ER autographed photo. 8-45

Books by mail at a discount, from Bookquick. 10-34

"The Tamarisk Tree" by Dora Russell at a discount from the ERS Library. 14-31

Spokesman Books now sold by the ERS Library. 15-27

First editions to swap. 16-29

ERS stationery for members? 16-30

Houchin's 18th Century English books. 16-23

FOUNDING OF THE ERS

ERS Bulletin describes founding, 2/8/74. 1-p.2, #3 and p.7

Cranford discovers "The Conquest of Happiness" in a bookstore, an event which ultimately leads to the founding of the ERS. 6-6

FUN & GAMES

"On the feasibility of coal-driven power stations." 7-45

FUND-RAISING

Members suggest ways to raise money. 11-3

Cranford's thoughts on finances and fund-raising. 15-2

See CONTRIBUTIONS

See FINANCES

FURTHERING ER'S PURPOSES

Scientists, following ER's advice, alert the public to the dangers of technology (review of their book). 7-22

GARSTENS, MARTIN A. Founding member

Describes his visit to Penrhyndeudraeth. 4-26

Elected a Director for 3 years starting 1/1/76

See APPLIED PHILOSOPHY COMMITTEE, of which he is Chairperson

"GUIDED TOUR OF INTELLECTUAL RUBBISH"

Robert Rounseville, who had planned to do this one-man show based on ER's life and writings, dies. 3-33

Marvin Kaye, who wrote it, seeks another actor. 6-20

HONORARY MEMBERS

Procedure for honorary membership. 3-6
 Edith Russell. 3-41
 Lester Denonn. 3-43
 Katharine Russell Tait and John Russell. 14-28
 Conrad Russell. 15-24

HOOKE'S ARTICLE

Sidney Hook's article which calls BR anti-semitic, "Bertrand Russell the Man," in "Commentary" (July 1976), is reproduced. 12-62

PRESS RELEASE ON BRS MEMBERS

- Press releases issued on 11 founding members. 1-p.2,#1
- Newspaper clippings (reproduced) that resulted from press releases on Tait, Eisler, and Pitt. 1-pp.5,6
- Press releases on new members produced no results; discontinued. 13-13

PROCEDURES

- New member sheet: purpose of; how used. 2-41
- Procedure for electing honorary members. 3-6
- Renewal procedure. 9-31
- Method of electing Directors. 10-7
- How to use the BRS Library. 11-39

PROJECTS suggested by members

Project "1976" for the Bicentennial Year (ER quotes on America). 2-45

Slezak is in charge of "1976". 3-50

Malatesha supplies many quotes for "1976". 11-14

A very short biography of ER, 5-page maximum. (Eisler) 3-52

A series of brief pamphlets with titles like RUSSELL ON WOMEN'S RIGHTS
RUSSELL ON EDUCATION, RUSSELL ON HAPPINESS, RUSSELL ON RELIGION, etc.
(Blackwell) 6-20

A film on ER using existing film footage and stills. 6-21

BRS Awards. (Eisler)

Awards Committee established. 10-13

Awards Committee functions described. 10-41

An imaginary Russell-Trotsky dialog on revolution. (Parker) 10-21

A comic book version of the ER short story, "Zahatapolk". (Lorenz) 10-20

Members suggest ways to raise money. 11-3

A mail study scheme. (Sutcliffe) 11-18, 12-28

Reprint "The Faith of a Humanist". (Tobin). 15-9

PROMOTING ER AND THE BRS

Advertising by members suggested. 10-50

Advertising by members: some advice. 11-35

Suggestion: post BRS fact sheet in libraries, to recruit members. 12-19

Cranford shows ER film in Augusta Library. 16-11

QUESTIONS AND ANSWERS

Q: What is the evidence for thinking that there was human sacrifice at Delphi, as ER claims? (Eisler) 1-p.4

A: King Aristodemus killed his own daughter as a sacrifice to the gods to win a war, on the Oracle's advice, according to Pausanias, quoted in "The Life of Greece" by Will Durant. (P.S. He lost the war.) (Arkin) Note: an eminent classical scholar considers Pausanias unreliable.

Q: What is the source of the quote on the French ER medallion, "Je suis libre et le monde sera aussi"? (Eisler) 6-47

A: A BR letter to Ottoline Morrell, written from prison. (Blackwell) 7-38

Q: Which detective/mystery authors did ER like best? (J. Williams) 9-37

A: Michael Innes and Agatha Christie, according to Ved Mehta. (Kraus) 11-32

Q: Any connection between ER and Virginia Woolf? (Butler) 4-31

Q: Has anyone related ER's philosophy to his literary works? (Simon) 7-39

Q: Where does ER make a remark about Kant's remark about the starry heavens above and the moral law within? 7-40

Q: How to explain the title of ER's book, "Human Society in Ethics and Politics"? (Eisler) 7-41

Q: What is the source of ER's remark that politics is a hopeless mess, etc.? (Stahl) 8-46

Q: What is the source of ER's remark about Marx wanting the unhappiness of the bourgeoisie rather than the happiness of the proletariat? (Eisler) 9-19

Q: What books do you recommend on the intellectual history of England, 1880-1930? (Rybnikar) 9-38

Q: What is an Augustan Age, an Antonine Age? (Eisler) 11-31

Q: What reason for the break between ER and Wittgenstein? (Kravig) 10-28

A: Look for answers in Chapters 10, 18 of "My Philosophical Development" (Bae) 11-33

Q: Should the BRS undertake to refute charges against ER that appear false and misleading? (Cranford) 12-22

QUESTIONS AND ANSWERS (continued)

Q: What did ER think of Sartre and Camus? (Taskonis) 12-42

A: ER thought Existentialist philosophy was "pure nonsense". (Davis) 13-43

QUESTIONNAIRE

Questionnaire sent to members with NL2. 2-37

Questionnaire Supplement — or Second Questionnaire — is being sent to members. 3-51, 4-9

Do you know of any anthologies that included BR? 5-19, 12-14

Wanted: your comments on BR's 2 kinds of writing. 6-17

Which book or article by BR would you recommend to a highschool or college student who has never read any BR? 6-19

Wanted: your comments on the suggestion that future projects be financed by vote, and assessment of those voting in favor. 7-47

Wanted: BR quotes on women's rights. 8-38

Blackwell supplies quotes on Women's rights. 9-18

Bae supplies quotes on Women's rights. 9-46

"BR on the Subjection of Women", a BRS compilation, uses the quotes. 9-48

Wanted: BR quotes on Marx. 0-19

Wanted: your comments on the recent books by Tait, Clark, Dora Russell. 10-35

Wanted: your reactions to members' suggestions on how to raise money for the BRS. 11-3

Wanted: your ideas on BRS aims. 11-19

When you have taken an enjoyable trip, let us know about it. 12-37

See QUESTIONS AND ANSWERS

REQUESTS (MISC.)

Request for reviews of the 3 recent books, by Tait, Clark, and Dora Russell.

Please send them to the BRS Library. 10-35 and 12-53

Please send your spare books by or about BR to the BRS Library, and lend them your LPs and tapes to copy. 10-10

REQUESTS FOR VOLUNTEERS

Want to work on the Awards Committee? 7-25

Chairperson needed for Awards Committee. 10-13

Judges wanted for 1976 BRS/APA papers. 10-26

REQUESTS FOR VOLUNTEERS (continued)

If you wish to serve on any committee, notify Slezak. 11-5

Volunteer wanted to make Index for the Newsletter. 15-41

See REQUESTS FOR VOLUNTEERS in the SUPPLEMENT to this Index

RUJA, HARRY

Reviews books by Eames and Jager. (BRS Library). 4-28

Reviews "Russell in Review" (McMaster Centenary papers). 11-37

Tells about compiling "Mortals and Others". 13-4

Supplies ER's article, "Why Are Alien Groups Hated?" which is relevant to Hock's anti-semitism charge. 13-32

See "Ruja" under NEWS ABOUT MEMBERS

RUSSELL-HATERS

"Warning to you from God Almighty." 9-23

Book review in Wall Street Journal (1/15/76) on Clark, Tait and Dora Russell books. 10-35

"The boring old mathematician should have stuck to his sums." 13-26

RUSSELL INTERCHANGE See "Interchange" under PHILOSOPHERS' CORNER

RUSSELL, BERTRAND

Assessments of his work:

"Computer designers are indebted to logicians in general and hence to Russell in particular." 3-30 and p. 24

Sierra Club pays tribute to ER as an early conservationist (25 years ago). 3-31

ER was a conservationist even earlier than the Sierra Club says (50 years ago), according to Blackwell. 4-15

Eames denies charge that ER was sexist. 4-16

How BRS members view ER, a composite picture. 4-19

Nobel Prize presentation. (reprinted). 7-52

"Bertrand Russell's Philosophy", Indiana University's ER Memorial Symposium papers (BRS Library). 8-30,36

"... a distinct distaste for the common man... He never thought out the necessary educational techniques to reach the common man" (Garstens). 14-8

"The only philosopher of his time to face the real problems of philosophy." (Will Durant). 14-19

Mortimer Adler includes 3 books by ER among his 95 "of lasting significance" of this century. 15-10

"He dared to envision a better, more rational humanity." (Alden Whitman). 16-20

Audiences:

ER's 2 audiences. 7-18

ER's "philosophical writings" vs. his "popular writings" discussed at Annual Meeting (2/75). 6-17

Influence on particular individuals:

Jimmy Carter has read "A History of Western Philosophy" 3 or 4 times. 12-17

ER's writings directed B.F. Skinner to Watson's doctrine of Behaviorism. 12-18

ER taught Paddy Chayevsky to act with vigor in spite of uncertainty 13-27

"On ER and a Symphony" by Graham Whettam (BRS Library). 15-14,46

ER's writings gave BRS Member Greg Beaulieu his enthusiasm for learning for a worthwhile end. 16-16

Miscellaneous:

ER introduced peace symbol in 1958 Alderston march. 7-20

ER introduced Vaughan Williams to Whitman's poetry while both were Cambridge undergraduates. Williams later set some to music. 11-16

Will and Ariel Durant visit ER (1948). ;3-24

ER in Burke's Peerage (1967). 15-13

"Recollections of Beacon Hill" by a student (Joy Corbett)(reprinted). 13-23

The words of ER's favorite song, "Molly Malone". 16-15

RUSSELL, BERTRAND (continued)

Personally; what he was like as a person:

Brenan on ER as a host. 5-14

Katharine Russell Tait reminisces about her father at BRS/APA meeting(12/74).6-3

Dora Russell's assessment of ER, in her review of Ronald W. Clark's

"The Life of Bertrand Russell". 14-33

Frank Russell's view of his brother, Bertie. 15-11

Alistair Cooke's unflattering view of ER in "Six Men". 16-14

Quips and witticisms:

"Every American is a democrat in the sense of 'I'm as good as you are',

but very few in the sense of 'You're as good as I am'." 4-14

"When I was young, I liked mathematics. When this became too difficult,

I took to philosophy, and when philosophy became too difficult,

I took to politics." 7-17

Why ER ate in a certain cafeteria at Harvard: "Because I am never

interrupted." 12-16

"A gentleman may use a sword but never a typewriter." 13-28

George Wills quotes ER in "Newsweek" on 2 kinds of work. 14-18

Sex: opinions about ER's sex life:

"The sexual morals of an alley cat." 8-31

"...a great philanderer..." 8-32

"Alley cat" tossed back by Blackwell. 9-14

ER's 4 marriages disturb one ER member. 11-34

Cranford's assessment of ER and sex. 12-22

Writings, interviews, remarks:

ER quote at age 97 in "Humanist of Canada". 5-7

"...philosophers and mathematicians in love..." 5-13

"Are We Any Happier?", a P.S. to "The Conquest of Happiness" (reprinted). 6-31

ER on the movies (4 excerpts). 11-13

ER defines freedom. 12-13

ER on the Americans and Russians exterminating each other on the moon. 12-55

ER's letter to Warren Smith, on not labeling himself (reprinted). 13-25

"Faith of a Humanist" (reprinted). 14-14

Terkel interviews ER (1962) (reproduced). 15-44

ER on canals, including the one in Panama. 16-6b

ER on gay rights. 16-6c

"Bertrand Russell and God: A Memoir" by Leo Rosten. 16-13

James Reston's column on a "Russell Doctrine". 16-17

"...civilized people are generally polygamous..." 16-18

ER quoted and rebuked on Chinese coolies. 16-19

See THE CONQUEST OF HAPPINESS

See INDEX TO ER'S WRITINGS

RUSSELL, CONTRAD

Becomes honorary member of the BRS. 15-24

RUSSELL, DORA BLACK

"The Woman Who Refused to Live in the Shadow of Bertrand Russell", in "The Times"(London)(reprinted). 7-21

"The Tamarisk Tree" by Dora Russell. Cranford's comment. 9-41

Jackanicz' comment on "The Tamarisk Tree". 11-34

Reviews "The Life of Bertrand Russell" by Ronald W. Clark. 14-33

Has another book in work, which will include Joy Corbett's remarks about Beacon Hill School. 16-37

RUSSELL, EDITH

Her letter on the BRS's founding. 3-12

How to address her, in a letter. 3-61

She accepts honorary membership in the BRS. Her letter. 4-29

Her complimentary letter to Davis. 14-5

RUSSELL, ELIZABETH, ANECDOTE

Elizabeth Russell, at her death (1669), turned out to be a man, according to a book published in 1813. 16-41

RUSSELL, FRANK

His view of his brother, Bertie. 15-11

RUSSELL, JOHN the present Earl

Becomes honorary member of the BRS. 14-28

The occasion of his maiden speech in The House of Lords. 15-23

His maiden speech (reproduced). 15-45

RUSSELLITE STATEMENT

2 Russellite statements. 2-46

Hyman's statement. 3-49

SCIENCE COMMITTEE J. B. (Joe) Neilands, Chairperson

Neilands presides at American Chemical Society Symposium on chemical weapons, in Los Angeles, 4/1/74, 2-19, 30 and pp. 10-12.

Neiland's lecture, "Chemical-Biological Weapons", is part of "Biochemistry and Society", a course at University of California, Berkeley, Spring 1974. 2-31 and p.13

Science Committee's aim (condensed): to enhance the quality of life without jeopardizing the biosphere. 2-32

The argument against chemical weapons. 3-22, 4-32

Offer, to Bertrand Russell Peace Foundation, to visit USSR scientists and inquire about their rights to political dissent, etc. 3-23

3 contemplated activities. 3-24, +26

Neilands is writing an article — on science, technology and the biosphere — for "Organic Gardening". 5-5

Neilands submits statement on 6 qualifications for research funding, for BRS approval. 6-11

Proposal for 6 qualifications dropped, because of some BRS objections. Will be replaced by proposed statement on nuclear power. 7-15

Statement on danger of nuclear power, on which BRS members will vote. 7-15

Neilands sends clipping, Letter to the Editor of "Chemical and Engineering News", in which Prof. Mukatis mistrusts the experts on pollution thresholds. 7-16

BRS votes (by mail) approving statement on nuclear power, which becomes the official BRS position. 8-21, 27

Neilands gives Hiroshima Day address at Glide Memorial Church in San Francisco (reprinted). 8-22, 69

The BRS statement on (against) nuclear power is no trail blazer — trails well behind Union of Concerned Scientists' statement with 2300 signatures. 8-28

Neiland's article, "Science and the Biosphere: Coexistence or Catastrophe?" runs in (Rodale's) "Environmental Action Bulletin", 11/29/75. (reproduced). 9-12, 47

Neilands wants American Chemical Society to co-sponsor, with BRS, a chemical weapons symposium. 10-24

Committee members: Allendorf, Block, Garstens, Levine. 10-24

Neilands will chair American Chemical Society Symposium on chemical weapons in San Francisco, 8/31/76. (BRS will not be co-sponsor.) 11-10

Report on the above Symposium, 12-9, 60

The BRS Science Committee will co-sponsor a discussion, "Disarmament and Justice", on the Berkeley campus, 10/21/76. 12-10

Nyet. Russia's mixed reaction to Neiland's article, "Science and the Biosphere: Coexistence or Catastrophe?" 13-16

The discussion, "Disarmament and Justice", co-sponsored by the BRS Science Committee, produced some horrendous facts about the Trident submarine. 13-17

Medvedev accepts Science Committee's invitation to lecture at Berkeley, on 11/22/77. 15-5, 16-2, 58

Idea for a world-wide short-wave network for scientists. 15-6

SHORT AND SWEET See "Quips and Witticisms" under **RUSSELL, BERTRAND**

SIMON, THOMAS W.

Gives paper at BRS Psychology Symposium (9/76). 12-3

SLEZAK, GARY Founding member

Is working on article on BR's stay at University of Chicago, 1938-39. 3-39

Visits Russell Archives (12/74) researching his article. 6-41

Elected a Director for 3 years starting 1/1/76

Appointed Vice-President of the BRS. 10-9

Appointed Co-Chairperson of the Library Committee. 10-10

Vice-President's Report, including ranking of committees in order of appeal to new member. 11-5

Vice-President's Report, on Awards Committee

See LOCAL BRS CHAPTERS

SMITH, BEVERLY C.

Volunteers to be Co-Chairperson, Membership Committee, succeeding Carol Mull. 14-10

See NEWSLETTER CONTRIBUTORS

SMITH, WARREN ALLEN

Candidate for Director. 15-40

Elected a Director for 3 years starting 1/1/78. 16-12

See NEWSLETTER CONTRIBUTORS

See NEWS ABOUT MEMBERS

SOCIETY FOR PHILOSOPHY AND PSYCHOLOGY

3rd Annual Conference scheduled for March 18-20, 1977. Lansdell can provide information about this Society. 13-53

SOLZHENITSYN

Edith, Farley and Coates write letter to "The Times" (London) refuting Solzhenitsyn's charge that BR "connived at, or apologized for, injustice in the Soviet Union." (reprinted). 3-32

Davis's letter to Solzhenitsyn, on "better red than dead". 11-17

"From Under the Rubble", edited by Solzhenitsyn, is recommended by Davis. 14-32

SPOKESMAN BOOKS

Wanted: a North American distributor for Spokesman Books. 13-42

Spokesman Books are now sold by the BRS Library. 15-27

Report: quarter ending 6/30/77. 15-4

UNITED WORLD FEDERALISTS-JAPAN

They plan to visit USA in August 1976. 11-4

Their August 1976 schedule in the USA. 11-46B

Their Los Angeles meeting (8/15/76) was dismal. 12-63

UNIVERSAL HUMAN RIGHTS COMMITTEE

Davis joins Amnesty International. 3-20

United Nations "Universal Declaration of Human Rights" distributed with NL3.

(small pamphlet). 3-21

Davis seeks new Chairperson for this Committee; will try to affiliate with Amnesty International. 6-29

Davis will write to new members who express interest in this Committee. 8-14

Davis writes Amnesty International and International League for the Rights of Man. 10-23

Committee's aims described. 10-45

Dan McDonald becomes Co-Chairperson. 11-11

State Dept. Bulletin on Helsinki Conference (1975) distributed with NL16. 16-11

VENICE BIENNALE

Davis letter to them commending their plan to explore Eastern European culture, including political control and suppression. 16-52

VOTES BY MAIL

Ballot on time and place of the next (1976) meeting. 6-52

Result of the vote: next meeting in NYC on Dec. 26-28, 1975

Should the BRS help finance the publication of "What I Believe"? 30 no, 2 yes. 8-25

Did we stack the cards in the above vote? 8-26

Nuclear statement OK? 25 yes, 7 no. 1 abstain. 8-27

5 Directors re-elected for 3-year terms starting 1/1/77. 12-12

Very brief background on 6 candidates (for 5 Directorships). 15-40

(58)

Medvedev:

ZHORES A. MEDVEDEV was born in Tbilisi, USSR, in 1925. He married Margarita Busina and they have two children: Alexander and Dimitri. He was educated in Leningrad, Moscow, and Rostov, and served in the army in 1943. He graduated from the Faculty of Agrochemistry of Moscow Timiriasev Agricultural Academy in 1950, and received the equivalent of the Ph.D. at the Institute of Plant Physiology of the Academy of Sciences of the USSR.

He was Junior, and Senior (1954) Scientist of the Laboratory of Biochemistry at the Moscow Timiriasev Agricultural Academy. In 1963 he became Chief of the Laboratory of Molecular Radiobiology of the Research Institute for Medical Radiology in Obninsk; and in 1970-72, Senior Scientist at the Research Institute of Physiology and Biochemistry of Farm Animals. In gerontology he developed the "error theory of aging" (1960-62) and the theory of aging rate control by gene repetition processes (1971-72).

Since 1960 he has been actively involved in science freedom and civil rights movements in the Soviet Union. In a number of books and essays, he made strong points against Lyenko pseudobiology, against postal, and general censorship, and against restrictions for scientific travels and international cooperation. During a trip to England in 1973, he was deprived of Soviet Citizenship by decree of the Supreme Soviet, for political reasons. He now lives in London in exile, where he is a Research Scientist at the Genetic Division of the National Institute for Medical Research.

He was given the award of the Moscow Naturalist Society (1965) for the book Protein Biosynthesis and Problems of Heredity, Development and Aging; and the Mendel Medal, by the Mendel Museum in Brno, Czechoslovakia, for research on the history of genetics. He is a Fellow of the American Gerontological Society and a member of The American Society for Cell Biology.

In addition to about 120 technical papers, he is the author of Biosynthesis of Proteins, Plenum Press, N.Y. (1966); Molecular-Genetic Mechanisms of Development, Plenum Press, N.Y. (1970); The Rise and Fall of T. D. Lyenko, Columbia University Press, N.Y. (1969); Medvedev Papers, Macmillan, London and St. Martin Press, N.Y. (1971); Question of Madness (with Roy A. Medvedev) A. Knopf, N.Y. (1971); Ten Years after Ivan Denisovich, A. Knopf, N.Y. (1973); Khrushchev: The Years in Power (with Roy A. Medvedev) Columbia University Press, N.Y. (1976).

NEXT ANNUAL MEETING

- (2) May 19-21, 1978 is the date to save. It's the date of the 1978 Annual Meeting, at McMaster University, Hamilton, Ontario, where the Russell Archives are.

We had hoped to provide more details at this time, but they are not yet available. We will provide details — on what events are scheduled, how to make reservations, costs, etc. — in the next issue, which we expect to mail at least a month before the Meeting.

Of this much we are pretty certain: the events will start Friday evening and continue till Sunday noon.

Those who come to McMaster in May will not only have the satisfaction of participating in a BRS Meeting; they will also be able to browse in the Russell Archives. This is no small treat. There you can see just about every book ever published by or about BR, as well as many photos, letters, manuscripts. And you can hear the great man himself on records and tapes.

We hope you can make it.

- (3) Testimonial. BILL YOUNG publishes "The SEA Journal" for The Society of Evangelical Agnostics (Box 612, Fresno, CA 93709). Here is some of what he had to say in his October 1977 issue (p.7) about the 1977 BRS Annual Meeting:

Your editor attended the annual conference in Los Angeles this year and found the pleasure of good company as well as the excitement of complete immersion in Russelliana for a day.

Doesn't that make you want to come to McMaster in May?

RECENT EVENTS

(4) Philosophers at work. For a report on the latest ERS Symposium at APA, see (14).

REPORTS FROM OFFICERS

(5) Chairman Peter G. Cranford reports:

The chief over-all problem for the society is what direction it should now take. Presently, we have close to 200 members of considerable intellectual merit. The size of the membership seems stable but it is a false stability. Lee Eisler has been successful in recruiting but as fast as he recruits at one end we are losing members at the other. Primarily this is occurring because the major area of compossibility between the society and its members is the exchange of information and ideas. This the newsletter does superbly. What is lacking is that, unlike Christ, we have not yet reached the point where the total membership is going "about doing good".

This is not quite completely accurate. We have kept Russell's ideas alive and have done what we have reason to believe will ultimately result in good. We have succeeded in stimulating increased interest about Russell in philosophy and are slowly but surely making psychologists aware of Russell's neglected panoramic thinking in their field.

But this is not enough for the future. There is much to be done... but precisely in what area? This was the question which Jack Pitt and I have been mulling over both by telephone and in person. What we came up with was not completely new. In fact it was simply an extension of the founders' thoughts at their first meeting in New York in 1974. Although we decided that to begin with we would limit ourselves to "spreading Russell's ideas", we thought, further, that we had an obligation to offer younger generations an applied, rational alternative to the self-destructive mysticism of the 60's in which the young followed a succession of Pied Pipers who played weird tunes in praise of mental and emotional masturbation. For many this led to at best, a useless life or at worst, "freaking out" in hospitals, prisons, mental institutions, and exploitive religions.

I think we are now ready to move into the second phase of our activities...the active promulgation of an applied philosophy. But before we do this we must broaden our present activist base...as Tom Taskonis has suggested (among other good things) in his letter of 12/11/77 to Lee Eisler. To do this we need a system of communication that would keep us all currently informed. George Carter has provided us with a key lead that has promise:

"Another possibility is NSF's Office of Science Information (Dr. Bill Savin). They are funding operational trials of a computer conferencing system. Basically a grant from this office would allow the BRS to establish a computer communications network among about 40 of its members to discuss as a group the proposed activity, say the establishment of a science of applied philoso-

phy. The participants would type their comments into a computer terminal (supplied by NSF) which would be stored by a central computer. Since the computer stores the contributions over time, participants can contribute and peruse the proceedings at their convenience. Other features of the conferencing system would permit computer production of the BRS newsletter. NSF will only pay all the bills on this for 18 months, but it could be an interesting experiment for the Society. Usually the grants (about 75K) are made to established scientific disciplines, but the group of people involved are an exceedingly open-minded lot who I think could be persuaded to support a conference designed to create a new science."

Jack and I with the approval of our president, Bob Davis, have a tentative plan for pushing the idea of an applied philosophy. First, I should mention that "we are not alone". Jack has discovered that there is quite an active group at Amherst moving in the same direction. Bob has appointed Jack to organize a symposium of the highest order at the coming meeting at McMaster, bringing together the best thinkers we can interest to discuss the idea of an applied philosophy. We are aware that we are talking of helping to create a new discipline. There should be a place in this venture for all our members interested in establishing an area of ethics which can serve as the core of a philosophical system acceptable to all people. This means, of course, enlisting the help of prominent leaders who see such a system as a laudable goal for all humanity. This certainly includes the religious and educational community.

Jack and I do not have any idea how this is to be financed, but like Franklin D. Roosevelt said when Eleanor asked him where he was to get the money for a memorial to himself, "It will come from somewhere". We thought we might get the money from Health, Education, and Welfare, but we have been turned down by Dr. Klerman. We requested a grant to examine the feasibility of establishing an applied philosophy discipline and of using unemployed Ph.D.'s to establish a clinical philosophy. He said we were premature.

President Robert K. Davis reports:

(6a)

Plans are developing for the Annual Meeting, at McMaster. Lester Denonn has confirmed that he will talk about his own Russell Library ("Roaming in my Russell Library: Some Adjectives, Adverbs, and Descriptive Phrases Applied to Bertrand Russell"). David Harley will talk about "Educational Theory and Beacon Hill School", which was the subject of his doctoral dissertation. Other topics are being solicited. By the time you read this, I will have visited Chicago and New York in planning this meeting.

(6b)

In November I visited San Francisco and Berkeley, to attend the BRS-sponsored talk by Zhores Medvedev followed by buffet supper at the Neilands. Amy Block is covering this event elsewhere in this issue (13). I was fortunate in having a good deal of time alone with Medvedev. He was curious about the BRS and glad to know that we enjoy good relations with the BR Peace Foundation. He respects them very much, apparently for publishing his books and for their aid in the struggle for rights in Russia.

Since he is an eminent gerontologist, I asked him what things the individual should do to live a long life. His reply "watch your diet, exercise, don't drink to excess and don't smoke." We all know about these things, but here it is from an expert. I told him about BR: BR said he did nothing consciously to prolong life, smoked his pipe incessantly from 21 on, and drank seven Red Hackle scotches a day; yet he lived to be 97. Medvedev said, yes, but if he hadn't done those things he would probably have lived another 10 years! Which means he would still be with us.

ER apparently believed in the importance of heredity in this matter; he recommended that the first thing one should do, to live a long life, was to "choose one's ancestors wisely." There are numerous examples of long-lived Russells, including centenarians. Medvedev and I discussed this aspect; I mentioned Elizabeth Russell, the 108-year old transvestite that we reprinted an 19th Century article on in the last issue. (NLL6-41)

Later I mailed photocopies of some of ER's comments on old age to Medvedev. He informed me that he would use some of the material in a popular book on aging that he is writing.

The ERS has imported several copies of Medvedev's two books published by the Foundation, "National Frontiers and International Scientific Co-operation" and "Secrecy of Correspondence is Guaranteed by Law." I own both of these books and recommend them to members who are interested in the dissident movement in the Russian scientific community. They are also interesting as "detective" literature, showing how he sorted out the truth against the regime's will. They are for sale by the ERS Library.

(6c) I have recently read "The Life of William Lord Russell" (1819) by Lord John Russell — ER's grandfather. This is an interesting account of the Russell beheaded in 1683 by Charles II. Russell had opposed the increasingly arbitrary behavior of the King. In that year, there was an abortive plot by the Duke of Monmouth, a bastard child of Charles', to take the throne, to prevent Charles' brother, James (James II of the Glorious Revolution of 1688) from inheriting the throne. The evidence of Russell's complicity was inadequate, but he was executed anyway.

What I found most interesting was Chapter One, which gave the early history of the Russell family. The oldest record is apparently of a John Russell (the names John and William recur frequently) in 1221. Later in the 13th Century, another Russell entered Parliament, as did others in following centuries. In the 16th Century, another John Russell served Henry VIII as a gentleman of the privy-chamber and in other capacities. He was knighted in 1522 and made Lord Russell (an earl) in 1539, and acquired the Abbey of Tavistock. He benefited from Henry's Reformation and destruction of the old nobility. When Henry died, John was made one of the 16 executors of his will, and acquired Woburn Abbey, the great family estate still owned by the Dukes of Bedford. The family participated in the interesting and turbulent life of succeeding reigns. The executed William's son was awarded the dukedom after the Glorious Revolution as an honor to William.

ER's title (Earl Russell) came from his grandfather, Lord John Russell, who was awarded the earldom for his service in Victorian times. We need a new biography of Lord John, a much neglected figure of the time.

(6d) I would like to mention my sadness on learning of the death of Countess Russell (Edith). I met her twice, first in 1972, at the Centenary Celebration at McMaster, and again at Christmas time 1976. We had exchanged a number of letters. She was devoted to her husband's work, and when she perceived the nature of our Society, gave it warm support. When I visited her at Plas Penrhyn (1976) (NLL3-8), she seemed healthy and vigorous, and I was surprised at the news of her death.

(6e) We sent you a copy of the Helsinki accords, with NLL6. For those with a serious interest in the dissident movement, I highly recommend a small magazine from the Khronika Press, "A Chronicle of Human Rights in the U.S.S.R." (505 Eighth Avenue, New York, NY 10018.) It is a quarterly put out by dissidents in both the West and the Soviet Union, available in English and in Russian. Some recognizable names contributing to the last issue: Pavel Litvinov, Andrei Sakharov, Vladimir Bukovsky, Andrei Amalrik, Yuri Orlov, and Roy Medvedev. (Roy Medvedev's books — and brother Zhores' — are available from the ERS Library. They are published by Spokesman Books.)

A STATEMENT FROM POLITICAL PRISONERS IN PERM CAMP 36

The West faces an unavoidable choice which will establish the moral as well as the political climate in Europe and the world for a long time to come. Although this choice is linked to questions about political prisoners and inalienable human rights, its main focus is not the fate of several thousand hostages confined in labor camps or still living outside in the "big zone" of wrongdoing, violence and lies. The central issue is the value attached to freedom and law by persons who are accustomed to their secure enjoyment.

Before the eyes of the whole world, the Communist Bloc's irresponsible political leaders cynically disregard international obligations and brazenly violate their own laws in the dark of closed courtrooms, concealing their crimes behind false and empty words about service to the people, about some higher form of democracy.

Does the West wish, in pursuit of fragile and temporary safety, of transient political and economic profits, however substantial, to ignore tyranny once again, to pretend to innocence and credulity, to smooth over sharp corners with polite phrases about each side's allegiance to its own social conceptions? Do the military power and the iron will of the totalitarian states constitute sufficient justification in Western eyes to tolerate a situation where criminals sit in judgment over the vulnerable?

We shall call a spade a spade. Do you think your complaisance compels you to shut your eyes to crimes? A lie is effective only if someone believes it or pretends to believe it. The lawbreakers need your acquiescence no less than your dollars, your unconcern no less than your machines.

Or does the West possess:

the wisdom to understand that no more important and urgent task exists than the restraint of violence and of the lies which conceal violence?

the wisdom to stand up for a morality and law common for everyone as constituting the only safeguard for the security of our crowded, interlinked world?

the wisdom to prefer eternal values to the exigencies of the moment, and to defend those values today, not tomorrow?

the wisdom to disregard shortlived and minor conflicts of interest in order to unite for the sake of a great cause?

the courage to declare forthrightly that blood and tears are no one's "internal affair", to grapple with problems with no evident or simple solutions, to strive to halt lawless actions in a land where deceit and the temptation to violence are omnipresent?

the patience and persistence honestly to do everything possible to avert armed conflicts while at the same time refusing to retreat one step?

Will the West display sufficient fidelity to its moral duty?

That is the real question.

They are trying to persuade you that despotism can be peaceloving, that leaders who have made lies, slander and unlawful violence the professional occupation of hundreds of thousands of persons, sincerely wish to respect their external obligations. They are telling you: "Be realistic. Don't forget how strong we are. Don't drag morality into politics. Leave that for sermons on Sunday. Is it sensible to notice things which we are trying to hide and to talk openly about them? That can complicate detente."

The choice is simple in moral terms, although not so easy in the context of traditional politics.

But if liberty once again becomes a bargaining chip in the political game – somebody else's liberty, and your predecessors have contributed to the loss of many persons' liberty by such an attitude – remember this: the base attempt to bargain away somebody else's liberty inevitably threatens the loss of your own.

THE PERSECUTION OF GERMANS IN LITHUANIA

DOCUMENT 6 OF THE LITHUANIAN HELSINKI WATCH GROUP

During World War II Stalin committed one of the greatest crimes of our era: he deported entire peoples from their territories, and on the lands they left behind them he settled people from other areas. Among those resettled were the Crimean Tatars, the Volga Germans, the Kalmyks, the Ingushi, the Chechens, the Balkars, and others. Now, twenty-four years after the death of the tyrant, we have received a communication from forty-nine families of Volga Germans who have been living in Lithuania, in the Radviliskis Raion, describing how the Volga Germans are still treated as outlaws: all kinds of obstacles are put in the way of their getting a job or a residence permit. The Germans have appealed to the main administrative offices in Moscow and Vilnius, but no help has been forthcoming. They therefore declare that if they are not granted equal rights as citizens they will renounce their Soviet citizenship and demand permission to emigrate to their historic homeland – the Federal Republic of Germany.

The foregoing represents a violation of the 1965 Decree lifting the restrictions applied to Germans on the territory of the USSR, a violation of the USSR Constitution itself, and of the International Covenant on Civil and Political Rights.

There are many interesting articles in each issue. Here is a sample:

REPORTS FROM COMMITTEES

- (10) International Human Rights Committee (Bob Davis, Acting Chairperson):
See (6e).
- (11) Library Committee (Don Jackanicz, Chairperson):
See (54).
- (12) Philosophers' Committee (Edwin E. Hopkins, Chairperson):
See (14).
- (13) Science Committee (J. B. Neilands, Chairperson. Amy Block, Committee Member reporting):

On Tuesday, November 22, 1977, Dr. Zhores Medvedev spoke on "Environmental Problems in the Soviet Union." The seminar, sponsored by The Bertrand Russell Society, was held in the Biochemistry Department of U.C. Berkeley. Dr. Medvedev, a Soviet scientist living in exile in London since 1973, addressed a large audience.

Dr. Medvedev began the lecture by identifying two of the major problems of the industrial age: pollution due to oil and coal production, and contamination due to radioactive wastes. The radioactive waste problem was the focus of his talk. He cited a major industrial disaster occurring approximately in 1957-1958. This industrial accident probably involved a steam explosion of stored radioactive waste in the South Urals region of mid-western Russia. Two mining and industrial cities, Chelyabinsk and Sverdlovsk, both heavily populated, were located near the accident's focus. The contamination eventually spread over 1000 square miles, dispersed by rainfall and weather changes.

Dr. Medvedev showed slides to document the contamination. On a map of Russia he pointed out two lakes that were studied in 1966-1967. The lakes, each about 10 square kilometers, contained substantial amounts of ⁹⁰Strontium and ¹³⁷Cesium. Some plant and animal life was investigated to determine to what extent the contamination had changed existing food chains. The soil was in fact so heavily contaminated that forests in the area were almost totally destroyed. Dr. Medvedev cited animal contamination of a similar nature.

The lecture was actually an exposé. Dr. Medvedev drew on many sources, including pages 45-50 of the CIA report of the incident, the latter obtained by American friends under the Freedom of Information Act. The Soviet government has made no mention of the event. Dr. Medvedev's research and report, however, fully documents the disaster. His active involvement in social responsibility is in the Bertrand Russell tradition.

Following the seminar, friends and members of The Bertrand Russell Society reconvened at the home of Dr. and Mrs. Neilands for a delightful buffet supper.

PHILOSOPHERS' CORNER

(14) The BRS at APA (Washington, 12/28/77), as reported by Justin Leiber, Chairman of the event, and member of the Philosophers' Committee:

The Program of the Bertrand Russell Society at the American Philosophical Association meetings, December 28, 1977, consisted of "Acquaintance and Naming: A Russellian Theme in Epistemology" by Augustin Riska, St. John's University (George Reberts, Duke University, commenting) and "Russell on the Essence of Desire," Raymond Frey, University of Liverpool (Thomas Simon, University of Florida, commenting); Justin Leiber (BRS), MFF, chaired. The meeting was well attended, particularly considering the labyrinthine ways of the farflung, neo-Victorian Park-Sheraton Hotel.

Russell often argued that pure — or "real" — names simply pick out objects and in no way describe these objects. For example, "the present King of France is bald" does not consist of a name and the predication of baldness; rather it states that some individual or other has various features, and so consists of a quantifier, some, a variable, x, and predicates such as King of France, bald, and so on. The logical form of the quoted sentence is, roughly, some x is King of France, bald, and uniquely so. (More strictly: there exists an x such that x is King of France and bald, and for any y whatever if that y is King of France, then that y is the same as x.) No names. As Russell also noted, what we ordinarily call proper names have a bit of description in them: for me, "Jimmy Carter" does not pick out someone from my acquaintances, rather it means something like "the individual who is now the President of the United

States, formerly of Plains, Georgia, and so on . . ." Russell came to think that this (and in "this blob in my visual experience") is the closest we have in English to a pure name: there is no way one can be giving a false description when one says this. Professor Riska raised problems about Russell's view of ~~names~~ which Professor Roberts dismissed; Professor Roberts also made some remarks about the possibility of a causal theory of facts (two facts are one and the same fact if and only if both have all the same causal relations to everything else).

Mr. Frey defended a view of Russell's that he took to amount to saying that animals as we have needs but that animals may not (or cannot be shown to) have desires. (One may establish that an animal has a need on behavioral and physiological grounds. To say an animal has a desire is to suggest that the animal has "propositional attitudes" or "intensions".) Professor Simon raised various issues about Mr. Frey's defense. A general discussion ensued that suggested the cause of animal liberation is in much better shape than it was a decade or two ago.

Both papers may be borrowed (at no cost) or purchased (for \$2) from Don Jackanics, BRS Library, 3802 N. Kenneth Avenue, Chicago, IL 60641.

(15) 2 more dissertations, to add to the 62 (NL15-16), from Frank Bertrand:

63. Dennis Earle Bradford, "Russell's Theories of Existence and their Philosophical Background," Diss. University of Iowa 1977, 77-21,117, 428 pgs.

64. Charles Joseph Schlee, "Russell's Critique of Complete-symbol Theories of Definite Descriptions," Diss. University of Kansas 1976, 77-16, 297, 146 pgs.

(16) Dissertations 17, 25 and 30, of the 62 listed in NL15-16, were done at Canadian universities, and should be ordered from:

National Library of Canada
395 Wellington Street
Ottawa, Ont., Canada K1A 0N4

and not from University Microfilms International, Frank Bertrand advises, and it is well to inquire first, since only microfiche copies may be available.

(17)

Re the poor "voter turnout" in the recent vote for directors, (NL16-12), Greg Beaulieu suggests that most people did not vote because there was no real reason to; for the members had been told that all the candidates were first-class, so they were sure to get good directors no matter how many or how few voted.

BY BERTRAND RUSSELL

(18)

"Education for Democracy" is the title of an address given by BR before the Cleveland convention of the Department of Secondary School Principals of the National Education Association, February 25, 1939. The NEA printed the address as a small pamphlet, which we reproduce:

Education for Democracy

I SHALL TAKE it for granted that democracy is a desirable thing, that we should like to preserve democratic government, and that we want to know how it is to be made workable. It is quite clear that education has a very large part to play in making democracy a workable system. You certainly cannot work a democracy when your population is illiterate; if they cannot read or write, all the machinery which is required for democracy does not work. But I am not concerned with this elementary portion of the matter. I am concerned rather with what kind of education is necessary if one is to avoid the pitfalls into which many democracies have fallen and which have led in many parts of the world into dictatorships.

There is a curiously difficult line psychologically to be drawn if democracy is to succeed, because it needs two things that tend in different directions. On the one hand, every man needs to have a certain degree of selfreliance and self-confidence, a certain willingness to back his own judgment and to set forth his own point of view, to defend it, to do propaganda for it, to organize the propaganda if necessary, and so on. But then, on the other hand, if democracy is to be workable, a man must be willing to submit to the authority of the majority when that majority goes against him.

You find that one or the other of those

two things is very apt to fail. Either men become too subservient and follow some vigorous leader into dictatorship; or they are too selfassertive, they do not submit to the majority, and lead their country into anarchy. One or the other of those opposite dangers faces democracy, and the business of education is to try to produce the type of character which is willing to advocate its own opinion as vigorously as may be, but also willing to submit to the majority when it finds the majority going against it.

There are two different parts of what education has to do in this matter. There is on the one hand the relation to character and the emotions, and on the other hand the intellectual part. The part that has to do with character and the emotions I should like to say something about, altho it is in the main not a matter for schools; it is much more a matter that is determined in the home. It is so important that one cannot pass it over, but in this respect schools for parents are as much needed as schools for children.

If democracy is to be workable, the population must be as far as possible free from the fiercer emotions of hate and destructiveness and also from the emotions of fear and subservience. Now, those are emotions which are inculcated in very early childhood. A parent of average ferocity begins with his child by the attempt to teach him complete obe-

dience, and makes him either a slave or a rebel, and neither a slave nor a rebel is what is wanted in a democracy.

It is clear that too much discipline is not a good thing if you want to produce a population capable of democracy. If you want to get people into the habit of initiative, of thinking for themselves and not taking over their opinions from others, you must get them into the attitudes of neither subservience nor rebellion against authority. In a democracy what is needed is equal cooperation, which involves assertion of your opinion up to a point but not further.

This brings us to a source of trouble to a great many democrats, namely, what is called "principle." It is wise to scan rather skeptically most talk about principle, about selfsacrifice, heroic devotion to a cause and so on. There is always more of what appears like heroic, unselfish devotion where the cause is bad. It is not what it appears to be. It is really people's pride, or hatred, or desire for revenge, that has got itself idealized and collectivised and personified in the nation as a noble form of idealism. That is extremely dangerous. When you find a man patriotically devoted to his country, ask yourself, "Now what is it that he is willing to do for his country?" It appears that what the Nazi is willing to do is to kill people. That is the reality of the "unselfish devotion" that he shows for

his country. Killing people, if you do not say you are doing it for your country, is not considered admirable, and it does not seem to me to be any better because a lot of people do it all together. If this activity, which they all believe to be noble, is really one that does harm to mankind, you may be sure that the passion which inspires it is really not a good one. If you had a kindly population, a population who in their childhood had been well-treated and happy, who had grown up imagining the world a friendly place, they would not have had that particular sort of idealism which consists in joining together to kill people in large numbers and is called patriotism.

The temper of intelligence that is needed to work a democracy is exactly analogous in practical life to what the scientific temper is in the intellectual life. The man of science lives in a sort of half-way house between complete skepticism and complete dogmatism. He neither, like the skeptic, says, "All knowledge is impossible," nor does he say, like the dogmatist, "I know the truth already." He is always just between these two, saying, "The truth is impossible to ascertain completely, but up to a point, to a certain degree, some of it can be found out by hard work." That is the scientific attitude of mind.

I do not mean to say that there are no sacred causes, but I do say you want to be very careful before you claim that your particular nostrum is a sacred cause and the other man's is something devilish and horrible. We have to have a kind of tolerance one towards another, and that kind of tolerance is much more easy to have if you think, "Well, I may after all be mistaken. People have been mistaken in the past. Human beings are fallible and I am a human being. It is just conceivable that I may be wrong."

I should like to see people exposed in schools to the most vehement and terrific argumentation on all sides of every question. If you had opposite points of view put on every kind of thing, the opposite propagandists would neutralize each other, and in the end you would get people who might be capable of listen-

ing to eloquence without being carried away by it. That is one of the most important things—to learn to be immune to eloquence. You will not be that by never hearing eloquence; you have to hear a lot.

The whole modern technic of government in all its worst elements is derived from advertising. Advertisers are the practical psychologists of our day. The advertisers led the way; they discovered the technic of producing irrational belief. What the person who cares about democracy has got to do is deliberately to construct an education designed to counteract the natural credulity and incredulity of the uneducated man; not want to teach people one opinion or another opinion; it is not the business of education to do that. The business of education is to teach pupils to form opinions for themselves, and they need for that purpose to be rather impervious to eloquence and propaganda, to be on the lookout for the things that are intended to mislead, and to be able to pick out what really is an argument and base themselves on that. You cannot get any kind of improvement in the world, or any kind of good life, without a basis in the emotions. But you have to be sure that that basis is the right one. I think that the only sort of emotional basis is what I should call kindly feeling, that is to say a wish, not only in regard to your friends and the people you know, but in regard to mankind at large, that as far as possible they should be happy, enlightened, able to live a decent sort of life. The emotion that must inspire our purposes is an emotion of pain in the suffering of others, and happiness in their happiness. That is the only emotional basis that is any good.

Given that, you then want a belief that it is possible to make human life happier. Many people are so pessimistic and so miserable that they feel as if that were impossible, as if it were no use to struggle; the world, they think, is just dreadful, and we cannot do anything about it. I cannot and do not take that view. Whatever the immediate future may be, I do not feel any doubt that human beings will emerge into a world

very much happier than any that we have known in the past, a world in which ordinary men, women, and children will be finer than they were before, freer, healthier, less destructive, and more kindly. While I want as far as possible something like the scientific attitude, I do want also besides that some capacity to feel what are the ends of life and what makes life important to human beings.

That is a matter for the cultural side of education. I do not think that is to be obtained merely by knowing facts. It is to be obtained in different ways by different people. Many get it from music or poetry. Some people get a great deal from astronomy. I sometimes think that if people would reflect upon the size and antiquity of the stellar universe, they would perhaps feel that some of the controversies upon this rather insignificant planet are not so important as they seem to some of us, and perhaps that might take a little of the acerbity out of our disputes. We need negatively the realization that our disputes are not so important as they seem, and positively, thru art, thru music, thru poetry, and so on, the feeling that there are things really valuable that human beings can enjoy and achieve, and that these are different things from the ones that come in the clash of politics, not the sort of things that happen on a battlefield, but individual things, things that happen in your own mind, important feelings, emotions, and insights. All these things are to be kept alive, things not to be sacrificed to the collective, organized life of the community. That life is necessary, it has to go on, but it is not the highest part of our life. The highest part of our life is more analogous to what the religious teachers have always spoken of. It is something more individual. I think perhaps that is the deepest quarrel I have with the people who believe in the corporate state and all the rest of it, that they seem to think that our highest life is in collective activities, and I do not believe that at all. I think our highest life is something more personal, and that where we cooperate in large groups, altho cooperation is immensely impor-

tant and necessary, it is not as a rule with the very highest part of our nature, because we all of us reach our best in somewhat different things, so that where we all work together it is hardly possible that we can each of us reach quite the best that our nature is capable of.

All education ought to bear that in mind and ought to be very conscious of the possibility of individual excellence in

the future. For that reason much the most important of all qualifications in a teacher is the feeling of spontaneous affection towards those whom he teaches, the feeling with each one of them, "This is a person with certain capacities, a person who can do certain things, who has a right to his place in the world," and not "This is a soldier in the army," or "This is one of the persons out of whom

I can make a great power which can do this, that, or the other." That is not the way to use the material which you teach. The right way is one much more analogous to the religious way, which realizes that each human being has in himself certain possibilities, and that the business of education is to bring those out.

(Thank you, Tom Stanley.)

ABOUT BR'S WRITINGS

(19) Science fiction? No, says FRANK BERTRAND:

One's immediate reaction to learning that someone has dared link together Bertrand Russell and Science Fiction is surely that of, put politely, incredulity.

On second thought, however, juxtaposition of the two is not that farfetched. In the June, 1964 Dell paperback 8th Annual Edition The Year's Best S-F, edited by Judith Merrill, is a story titled "Planetary Effulgence" by, yes, Bertrand Russell! Reprinted from the collection Fact and Fiction (New York: Simon and Schuster, 1962), the story was originally published in New Statesman, September 5, 1959 and can also be found in The Collected Stories of Bertrand Russell (New York: Simon and Schuster, 1972), compiled and edited by Barry Feinberg.

If one accepts the notion advanced by literary scholars such as Professors Robert Scholes and Leslie Fiedler, that Science Fiction is preeminently a literature of ideas, in that it seeks to deal with Man in relation to his environment and abilities, or, what it means to be a human being -- the ideas being manifested as problems of perception and knowledge -- it is not a perverse fluke that Russell's story was included in a Science Fiction best of annual.

It is, rather, an uninformed fluke that it was so included, for "Planetary Effulgence" is actually a political parable with a "science fictional" setting. In fact, the story when published in Fact and Fiction appeared with several others under the heading of "Parables." It would seem that Ms. Merrill chose this story on the basis of its other worldly setting and its author's famous name, the latter predominating.

(20)

BR'S WRITINGS STUDIED

"Do We Survive Death?" by BR is assigned reading in the course, "Psychology and Sociology of Death," at Virginia Commonwealth University. It is included in the anthology, "Death: Current Perspectives," G. S. Schneidman, ed.

(Thank you, John Mahoney.)

ABOUT BERTRAND RUSSELL

(21)

BR according to Mortimer Adler. From his latest book, "Philosopher At Large," (Macmillan, New York. 1977) pp.8-9 and 219-221:

As late as 1941 I had no hesitation in talking about education in terms that would have been congenial to Aristotle in the fourth century B.C. I mention that year because I can vividly remember a debate that I had in Chicago that January with Bertrand Russell (who had just become Lord Russell). The subject in dispute was stated as follows: Resolved that the objectives of education are always and everywhere the same. I took the affirmative side, arguing that since human beings are always and everywhere the same in the specific properties they all possess as members of the same species, it must follow that the goal to be achieved by the educational process should be the same for all.

How Aristotelian and repugnant to Lord Russell my argument must have sounded! I summarized it in the following words: "If education must aim at the betterment of men by forming good habits in them, and if the virtues, or good habits, are the same for all men because their natural capacities are the same and tend naturally toward the same developments, then it follows that the virtues, or good habits, as the ends of education, are absolute and universal principles on which education should be founded."

The conclusion follows logically, I conceded, only if the premises—the two *ifs*—are true, but I immediately went on to assert that they were. "If my premises are in fact true, and if my reasoning is valid," I told Lord Russell and the audience, "then the conclusion is inescapable."

I will never forget Bertrand Russell's opening rejoinder. We had been asked to wear dinner jackets, I suppose to ensure the formality of the proceedings. It was to be a formal debate—in dress if not in thought. Respecting Lord Russell as my senior by many years, and also as immeasurably more eminent, I had carefully prepared my initial presentation of the affirmative position. It was all written out. Lord Russell came to the platform without a shred of paper and, I suspect, without a jot or tittle of preparatory thought on the subject. But he did have a clean stiff white cuff on his boiled shirt, and on it, I observed as I looked back at him from the podium in the course of reading my speech, he jotted down notes from time to time. When he arose to present the negative position, his opening sally was "I greatly admire Dr. Adler's rugged simplicity."

From that point on, with one off-the-cuff remark after another, Lord Russell provoked outbursts of laughter. At the end, the applause, won easily by his witticisms, appeared to indicate that he had triumphed. I felt that I should have been adjudged the victor at the bar of reason, though not in the court of laughter. But I now know that Lord Russell had the better side of the question, though not for any reason he gave at the time.

In the summers of 1973 and 1974, the Aspen Institute for Humanistic Studies held conferences on the changing concept of the educated person. It was generally agreed that traditional ideas of what it means to be educated, in the fullest sense of that term, can no longer be applied in the contemporary world, especially not in the technologically advanced industrial societies which are committed to political democracy and, consequently, to equality of educational opportunity. When such a society undertakes to educate its whole population, it must acknowledge the principle that every human being, with the possible exception of those in asylums, should aspire to become an educated person.

In view of individual differences in talent, aptitude, and temperament, the way in which the educational ideal is realized cannot be the same for everyone. On that score, Russell was right. However, if we conceive the educated person as any human being who, having acquired the tools of learning in school, goes on in the rest of life to use them for the fullest possible development of his or her capacities, then the ideal is realizable, at least to some degree, by every member of the population.

* * * * * * *

Is science by itself—without philosophy—enough, either theoretically or practically, to guide us in leading good human lives or to lay the foundations of a good society?

That question framed the issue of the second public debate that I had with Bertrand Russell. My first debate with him took place in January 1941. In that dispute, Lord Russell challenged my thesis that the objectives of education were always and everywhere the same because education must be defined as "the process whereby the powers of human nature become developed by good habits." He doubted that we could know enough about human nature and its powers to know which habits were universally and objectively good for human beings to form. In his rebuttal of my affirmative position he regaled the audience with quips and sallies—a display of great wit rather than wisdom. My distaste for Russell's performance still lingered when, a year later, the People's Church in Chicago asked whether I would debate him again. My first inclination was to say no, but after some reflection, I said I would be willing on one condition—that this time he would take the affirmative position and allow me the pleasures of rebuttal. It took at least six months or more for Russell to come up with a proposition he was willing to affirm, and when he did, it put him on the affirmative side of the resolution that science is enough for the good life and the good society.

Preparing for the debate, I put into my file a letter from Bertrand Russell to the *New York Times*. It filled three columns on the editorial page. The headlines conveyed the gist of the message: "Long-Time Advocate of Peace Approves Present War: Professor Bertrand Russell States Reasons for Changing Positions, Disputes Stand of Dr. Hutchins, and Hopes Ultimately for Federation of the World." Though the letter fell short of being explicit on the point at issue, I thought I could cite Russell's approval of the present war, in spite of his resolute commit-

ment to pacifism, as some indication that he regarded the Allies as being on the right side of this conflict—right in some rationally arguable sense, not just a reflection of personal feelings about what was at stake. I could, therefore, use this letter to rebut Russell's position out of his own mouth.

I was mistaken in my impression that Russell had changed his views about the nonobjectivity of value judgments. As it turned out, I did not need to quote Russell against himself. In the first ten minutes of his defense of the affirmative position, he contradicted the proposition he had undertaken to affirm. In rapid order, he made the following assertions: first, that empirical science constitutes the only objectively valid knowledge available to us; second, that our knowledge of the world and of man is by itself incapable of answering any questions of value, for we have knowledge only of matters of fact, and what is good or bad, right or wrong is not a matter of fact; third, that our decisions on questions of value as opposed to questions of fact are determined by our feelings. From these three propositions, only one conclusion logically follows—that knowledge by itself does not enable us to decide how to lead a good life or establish a good society. That conclusion directly contradicted the proposition Russell was supposed to be defending—that science (for him, equivalent to knowledge) is enough for the good life and the good society.

In my rebuttal, I pointed out this contradiction, but that hardly settled the matter. I proceeded to put Russell into the logical box of a *reductio ad absurdum*. Feelings, he had said, decided our judgments about good and bad, or right and wrong. Was there a difference, I asked, between good and bad feelings, right and wrong feelings? The Nazis and the Allies harbored opposite feelings about which party in the present war had right on its side. Could Lord Russell, I asked, tell us on what grounds he thought his feelings were right and Hitler's were wrong?

If he could not provide us with objective grounds for asserting that rightness or goodness attached to one set of feelings, and wrongness or badness attached to the opposite (if, in short, our feelings are purely personal and subjective), then only might or force in the awful arbitrament of war can decide which of conflicting feelings about what is right and wrong shall finally prevail. I then argued that Russell, in order to avoid this horn of the dilemma, was logically compelled to impale himself on the other: if might should not be allowed to decide who is right, then reason must, and reason can do so only by having recourse to objectively valid knowledge of right and wrong.

Were he to adopt this view, Russell would be able to assert that his feelings about the issues in the European war were objectively sounder than Hitler's, not just an expression of his personal prejudices. However, in doing so, he would also once more contradict the proposition he was supposed to be affirming—that science is enough for the good life and the good society. He had himself maintained, and I fully agreed, that science gave us knowledge only of matters of fact, not about values. For there to be objectively valid answers to questions of value, there had to be valid knowledge other than empirical science. Such "knowledge other than empirical science" was clearly not mathematics or history. There was nothing left for it to be but philosophy.

Russell was correct in thinking that we needed something more than science to settle questions of value; that something more, however, was not feelings, but moral philosophy—the objectively valid principles and conclusions of ethics and politics. If he were to agree to this, in order to avoid embracing the view that might makes right, then he would also have to change his mind not only about the character of philosophical

knowledge in differentiation from empirical science, but, even more radically, about the validity of moral philosophy. He would have to abandon his endorsement of the then current view of ethics as completely noncognitive (as emotive, an expression of feelings rather than of knowledge) which he, with characteristic wit, had epitomized by saying that "ethics consists in the art of recommending to others what they must do in order to get along with one's self."

I wish I could report that my arguments had some effect on Russell. They did win the audience over to my side, but Russell quipped his way out of the box I had put him in without even trying to resolve the contradictions. When I was a philosophy student at Columbia, I had great respect for Russell's views, his philosophical writings before World War I, especially his contributions to the philosophy of mathematics and to mathematical logic. But the more I studied the books he wrote from the twenties on, especially his writings on the philosophy of language, the more my respect for him as a philosopher diminished.

However, on one point I found myself in complete agreement with him at the time of our second debate. In the concluding paragraph of his letter to the *New York Times*, Russell wrote:

There is one hope that is important and, I think, not utopian; that at the end of the war some step, less ineffective than the League of Nations, may be taken toward the Federation of the World.

It may be questioned whether the United Nations has turned out to be that more effective step, but the goal toward which effective steps should be taken is certainly, as Russell indicated, world federation to create world government and to institute and preserve world peace.

That goal, as Russell observed, should be regarded as a practicable objective, not a utopian one. There may be many causes of war, but there is only one cause of peace, and that is government. Civil government produces civil peace. Anarchy, or the absence of government, is identical with a state of war: either the cold war of the diplomats and of espionage or the actual warfare of the generals with guns and bombs.

(22) BR according to Ayer. "At the time of these lectures [at Oxford], he was in his middle sixties, looking his age, but not betraying it in any lack of physical or intellectual vitality. As a philosopher, he was not at all arrogant; not only did he not talk down to us, but he appeared remarkably sensitive to the opinions that we held of his work. This remained true of him also in his later years." "Part of My Life: The Memoirs of a Philosopher" by A. J. Ayer. Harcourt Brace Jovanovich, New York, 1977. p. 214

(23) BR according to Will Durant. Here are excerpts from "A Dual Autobiography" by Will and Ariel Durant (Simon & Schuster, New York, 1977) pp. 118-9 and 273:

The excitement of the lecture platform, and of two debates with Bertrand Russell, kept me from brooding over my hurts. Our first encounter took place in Symphony Hall, Boston, on October 12, 1927, and "attracted the largest audience since the famous Butler-Borah debate." Judging from the five columns given to it in the morrow's *Herald*, our battle over "Is Democracy a Failure?" must have been the best sporting event of the year. Russell, of course, was the major attraction. He was already fifty-five years old, and could hardly have guessed that he had forty-two years still left to him. His hair was silvery white. His sharp nose and gleaming eyes promised an alert intellect and a pointed wit, a keenness and relish in debate. Luckily for me, I had dealt with him

handsomely in *The Story of Philosophy*, so that we were friends even as our swords crossed. I need not summarize my share in the performance; I polished it up to form a chapter in *The Mansions of Philosophy*, where it still stands as proof that I can be as one-sided as a debate requires. The unusually full stenographic report in the *Herald* of October 13 did more justice to me than to Russell, for it could not convey the smile on his lips and the twinkle in his eyes.

The debate was repeated on October 22 in Mecca Temple, then the largest auditorium in New York. The reports in the *Times* and the *Tribune* indicate that neither speaker varied much from the arguments he had used in Boston. We had the honor of evoking editorial comment in some newspapers, and the *Times* whimsically remarked: "It certainly cannot be said of the participants that they . . . were swayed by personal prejudice. Mr. Russell is the author of a *Principia Mathematica* which has probably sold 120 copies. Mr. Durant has written a *Story of Philosophy* which is selling close to 200,000 copies. Yet Mr. Russell believes in the common people and Mr. Durant does not." (I believe in the equal right of common people to access to the education that may make them uncommonly fit for uncommon tasks.)

After the New York debate Mrs. Durant lured Russell to a more friendly bite with me in a nearby hotel. We made a bad choice, for the hotel orchestra disported itself in jazz music of a wild sonority that made conversation impossible; I was ashamed. We—or Russell—had a better time when, a week later, he had dinner in our apartment at 5 West Sixty-ninth Street. I was still at that time under the spell of the Little Corporal, and tried to convince Russell that Napoleon's defeat at Waterloo was a victory for reaction; I failed; I have yet to find an Englishman who can stomach Napoleon.

Our guest preferred Ariel. When he left she accepted his invitation to share with him the ride to his room in Eighty-fifth Street. He did not know that our car was driven by her brother Mike. After a few blocks the engaging Briton began to fondle Ariel's hand; after a few more he asked Michael to make a detour through Central Park. Michael sternly ignored the request and drove without delay to Eighty-fifth Street. When I consider that Russell was soon to publish his view that a man compelled by his business to be absent from his wife for more than three weeks should be allowed a temporary moratorium on monogamy, I tremble to think what might have happened in Central Park.

(24)

BR according to the 14th Edition. We mentioned (N116-36a) that the 14th Edition of the *Encyclopedia Britannica* (1930) (correction:1929) had a good write-up of BR. KEN BLACKWELL tells the story of the good write-up:

BR evidently loathed the write-up in the 13th Edition (1926). There is no mystery, however, as to why the 14th Edition's write-up was so good. The biographical section was written by BR's close friend, Charlie Sanger, who had considerable intellectual and linguistic attainments himself.

The biographical section contains information and judgments which, 50 years ago, only a close friend could have known and could have made: e.g., "his perfect knowledge of French and German"; "lived very simply and worked very hard"; "many valuable books were lost"; "the more philosophic Chinese..."; "his wit, his love of truth, and his capacity for hard work seem to be innate." We don't know if BR vetted Sanger's write-up before it went to the Editor; probably he didn't need to. If he had vetted it, it is unlikely that he would have tolerated the description of the "Everett" leaflet of 1916 — which brought him the

fine of 100 pounds — as one concerning "an early Christian conscientious objector". It in fact concerned a conscientious objector of 1916.

We reproduce the biographical section from the 14th Edition:

RUSSELL, BERTRAND ARTHUR WILLIAM, F.R.S. (1872-), was born May 18, 1872. His father was son of Lord John Russell, his mother a daughter of the second Lord Stanley of Alderley. At the age of three he was left an orphan. His father had wished him to be brought up as an agnostic; to avoid this he was made a ward of Court, and brought up by his grandmother at Pembroke lodge, in Richmond park. Instead of being sent to school he was taught by governesses and tutors, and thus acquired his perfect knowledge of French and German. In October 1890 he went into residence, as a very shy undergraduate, at Trinity college, Cambridge. After being a very high Wrangler and obtaining a First Class with distinction in philosophy he was elected a fellow of his college in the autumn of 1895. But he had already left Cambridge in the summer of 1894 and for some months was attaché at the British embassy at Paris. In December 1894 he married Miss Alys Pearsall Smith at the Friends meeting house at Westminster. After spending some months in Berlin studying social democracy (*German Social Democracy*, 1896), they went to live at a small cottage, some miles from Haslemere, where he devoted his time to the study of philosophy. A visit to the Mathematical Congress at Paris in 1900 with his friend Alfred Whitehead (afterwards professor of philosophy at Harvard) had important results. Russell was impressed with the ability of the pupils of the Italian mathematician Peano, and immediately studied Peano's works. In a short time he wrote his first important book, *The Principles of Mathematics* (1903) and in collaboration with Alfred Whitehead proceeded to develop and extend the mathematical logic of Peano and Frege. The first volume of their joint book, *Principia Mathematica*, was published in 1910.

During all this period Russell lived very simply and worked very hard. He and his wife had moved to a small house near Oxford, but he often went abroad, and from time to time, as when Mr. Chamberlain started his tariff reform campaign, abandoned philosophy for politics. In 1910 he was appointed lecturer at his old college. After the World War broke out he took an active part in the No Conscription fellowship. He was fined £100 as the author of a leaflet describing an early Christian conscientious objector. His library was seized to pay the fine; it was bought in by a friend; but many valuable books were lost. His college

deprived him of his lectureship. He was offered a post at Harvard university, but was refused a passport. He intended to give a course of lectures (afterwards published in America as *Political Ideals*, 1918) but was prevented by the military authorities. In 1918 he was sentenced to six months' imprisonment for an article he had written in the *Tribunal*. His excellent *Introduction to Mathematical Philosophy* (1919) was written in prison. His *Analysis of Mind* (1921) was the outcome of some lectures he gave in London which were organised by a few friends who got up a subscription for the purpose. The *Practice and Theory of Bolshevism* (1920) was written after a short visit to Russia to study the conditions on the spot.

In the autumn of 1920 he went to China to lecture on philosophy at the Peking university. In the spring he caught pneumonia, and for three weeks was on the point of death. To the distress of his friends some enterprising Japanese newspapers announced his death. The more philosophic Chinese, who wished to be present at the deathbed of the philosopher Lo Sou, offered to bury him by the Western Lake. But the German doctors saved his life. On his return in September 1921 he married Miss Dora Black and they lived for six years in a small house in Chelsea during the winter months. He earned a livelihood by lecturing, journalism and writing popular books such as the *A.B.C. of Atoms* (1923), the *A.B.C. of Relativity* (1925) and *On Education* (1926). The summers, spent near Lands End, were devoted to serious work such as the new Introduction to the second edition of the *Principia Mathematica*; the *Analysis of Matter* (1927) and the *Outline of Philosophy* (1928). In 1922 and 1923 he stood for parliament as Labour candidate for Chelsea; and his wife stood in 1924. He also in 1924 and 1927 lectured in the United States. In 1927 he and his wife started a school for young children.

His admirable and lucid English style may be attributed to the fact that he did not undergo a classical education at a public school; his religious views and his moral character may be due to the wise exercise of the paternal jurisdiction of the court of chancery; but his wit, his love of truth, and his capacity for hard work seem to be innate. (C. P. S.A.)

The other sections of the write-up — on philosophy and mathematics — are also first-rate. They were written by the illustrious Frank Plumpton Ramsey, who had worked closely with BR, and whom BR probably recommended to the Editor.

There apparently are 2 versions of the bad write-up in the 13th Edition. If you should come across either or both of these, would you kindly send * a copy to the "News".

ASSESSMENTS OF BR

We also sometimes talked about politics, in which he retained a strong interest, though he was not yet so absorbed in it as he became in the last decade of his life. He had long held the view that the only remedy for the evils of nationalism lay in the establishment of a world government and he then believed that the only practical way in which this could come about was through the hegemony of the United States. Though there was much that he disliked in its political and social climate, he still preferred it to that of Soviet Russia; but this counted with him for less than the fact that the Americans possessed the atomic bomb, while the Russians did not. He was convinced that it would be enough for the Americans to threaten the Russians with the bomb, without actually using it. This did not, however, absolve him from holding the view that in the last resort its use would be justified. In later years, when he was leading the campaign for nuclear disarmament, he forgot that he had ever taken this view and admitted that he had done so only when it was shown that he had expressed it in print. His critics naturally accused him of inconsistency, but they could have been wrong. Taking, as he did, a predominantly utilitarian view of politics, he could have argued that so long as only one power possessed this superior weapon, the evil resulting from its limited employment, though very great, would be outweighed by the probable longer-term good; when two rival powers possessed it, the harm done by their each employing it would almost certainly be greater than any good that could be expected to result. But while Russell might have accepted this argument theoretically, I doubt if he would have been ready to see it put into effect. His reason was often in conflict with his emotions, and this is most probably an instance in which his emotions would have prevailed. If it had come to an issue, I think that he would have recoiled from the infliction of so great an immediate evil, even with the prospect of its leading to a greater good. It was because I believed this at the time that I did not on this point take him wholly seriously.

LEARNING MORE ABOUT ER

(26) Sara Levy was in a high school course titled, "Humanities I: Religion and Philosophy". "The teacher, an innovative man, suggested, in order to achieve a more personal facet of philosophy, that each student try to bring in a speaker or interview a qualified authority. In a few days the class was flooded with gurus, priests, rabbis, and yogis; followers of many faiths, but no one truly creative individual..."

Sara decided to submit some questions on ER to the BRS, and then present the results to her class. Here are her questions, and Bob Davis' answers:

(26a) Q: In the preface to "Unpopular Essays", ER states that most of the material

is intended to combat the "growth of dogmatism". Yet in many of his own works, notably those on education and rationality, he seems to expound a substantial, if unorthodox, dogma himself. Please explain.

A: You ask if ER was establishing a dogma in the areas of education and rationality. I don't think so. ER advocated that opinion be formulated on the basis of evidence and reason, and this by definition is not dogma. Indeed, his willingness to change his opinions on issues is remarked on by philosophers, and is one of the reasons he was able to remain an important contributing figure for over 70 years. You will find differences in his opinions on education in his two books on the subject, due primarily to his experience in running a school.

(26b)

Q: The tone of ER's essays always seems superior, sometimes to the point of arrogance. Is this purely accidental, a by-product of his own natural intellectual superiority; or could ER be accused of snobbery?

A: I don't agree that ER's essays seem "always superior". I have been drawn to him because of his clear, vigorous style. I have the BRS Questionnaires of several hundred people and many have been captivated by ER's style. Most people I have talked with do not feel the way you do; but a few of them do. Perhaps they are put off by ER's clearly superior natural ability. Also, ER, being an aristocrat had that self-assurance and faith in himself that some people interpret as snobbery; as for me, I find it an invigorating individualism. There are a few charges of snobbery that I am aware of; Frieda Utley made this charge in her book, and the Communists of the 30s frequently did so. Considering ER's aristocratic heritage and 19th Century upbringing, he managed to function extremely well in a democratic 20th Century. When he inherited the title, in 1931, he did not use it professionally or socially, though he did use it to catch cabs in London, and took great delight in that fact.

(26c)

Q: ER begins the essay, "An Outline of Intellectual Rubbish", with an extremely pessimistic comment on man's rationality, and follows with dozens of examples of the stupidity of the human race and its great affinity for ignorance and superstition. But the collection of essays titled "The Art of Rational Thinking" supports exactly the opposite view, proposing that all men have high potential for objective thought, and emitting a very positive and optimistic attitude. Why are these works so violently different? Did something happen to change ER's views so drastically?

A: ER had separate purposes in the essays. In one he cataloged the stupidity of man, in the other he catalogued the promise. I don't see any conflict in this; it was a common theme with ER. In many of his essays, you will find a section that is pessimistic, but it will end on a hopeful note, insisting that we can do better — usually with the aid of reason, facts, and a kindly attitude.

(26d)

Q: Why did ER turn to communism in his later years? It has been alleged that his rather ambiguous statements were merely garbled into propaganda. Is there any truth in this hypothesis?

A: ER did not turn to communism; he was never a communist. He adopted guild socialism in 1915 and stayed with it until his death. He did work with communists in the last 15 years of his life, as he worked with Christians, but he did not become one. He states this clearly in his Autobiography, Volume III, and in "Dear Bertrand Russell" (see below)

The belief that he had turned to communism has circulated in some quarters because (a) many people assume that anyone who is left wing or works with communists must be one, and (b) some people — both right wing and communists themselves — have found it useful to circulate this false charge.

(26e)

Q: Are there any comments you would like to make concerning ER, the BRS, philosophy, or these questions?

A: I hope your class will make a positive effort to understand some of ER's social writings. ER was advocating a method — that of science. He felt we should get the facts and use reason, and we should not believe something merely because it was popular in our party, or comforting, or hoary with tradition. I think everyone could benefit from reading "The Practice and Theory of Bolshevism" (one of the greatest communist-debunking books ever written), "Authority and the Individual", and "Human Society in Ethics and Politics."

* * * * *

Sara read the questions and answers to her Humanities class, and then fielded some questions on ER and the BRS. "The class seemed to find the report interesting and enjoyable," she adds.

* * * * *

(26f)

The following exchange of letters, from "Dear Bertrand Russell", (Houghton Mifflin, Boston, 1969), pp. 112-113, seems relevant:

"... Our Class is discussing Communism . . . Under your theory we would like to know:

1. Should we force the individual who doesn't want Communism to accept it?
2. Were the lives lost and the wars fought in the fight for democracy in vain?
3. Which Communism do you advocate, Russian or Marxian?
4. Would your Communistic ideas turn into a second '1984'?
5. Would this result in world wide equality or slavery? . . ."

19 May 1959

DEAR CAROLE KUTNER,

Thank you for your letter of May 11. I judge from it that you have been completely misled as to my attitude towards Communism. I published a book, *The Practice and Theory of Bolshevism*, against it in 1920 which was reprinted a few years ago. I criticized the doctrines of Marx in 1896 in my first published book, *German Social Democracy*. I criticized him again in *Freedom and Organization* (1934). You will find an article called "Why I am not a Communist" in *Portraits from Memory* (1956). In short, I am not and never have been a Communist.

I have been urging recently that, in view of the destructive character of the H-bomb, a world war would now be a catastrophe to mankind. Warmongers have countered my propaganda by pretending that I am a Communist.

Yours truly,
BERTRAND RUSSELL

INFORMATION WANTED

- (27) Undergraduate philosophy. This from LEONARD CLEAVELIN:

I would also like to add a request (read p-l-e-a): as one of the founding members of the Undergraduate Philosophy Association at Washington University in St. Louis, I would like to ask any ERS members (especially those associated with college or university departments of philosophy) to send us information on a) other undergraduate philosophy clubs, b) publications devoted or open to undergraduate philosophical writing, c) undergraduate colloquia or symposia held within a reasonable distance from St. Louis, and d) essay or other competitions in philosophy open to undergraduates. Send any information to me at 6540 Hancock, /St. Louis, Mo./ 63139, and/or to the Undergraduate Philosophy Association/ Department of Philosophy/ Washington University/ St. Louis, Mo./ 63130. Thanks!

LOCAL CHAPTERS

- (28) Fresno. JACK PITT says, "The showing of the Russell film, the one from Time-Life, to our Philosophy Club was a big success, and we met at our place afterwards for general chatter. All in all, Russell had good exposure here (California State University) in 1977."
- (29) Chicago. GARY SIEZAK writes: "The Chicago area chapter has been inactive for several months. We hope to begin meeting again in the Spring."
-

NEWS ABOUT MEMBERS

- (30) Irvin Ashkenazy. "The free-lance writing game is a bit chancy (always has been) and especially slow these past 12 months when I haven't felt much like writing. The luxuries — such as ERS membership, fishing trips, and globs of smoked salmon — have to depend on serendipity. This covers such things as the occasional replays of shows in which I appear as an actor, and a dribble of writing royalties now and then. ABC's anniversary show (Feb. 6) used a clip of an old Disney movie (Davy Crockett circa 1955) in which I appear as a backwoods thug. For such small favors I light candles and genuflect towards Mecca."
- (31) Alex Dely has sent a new report (dated 12/18/77) on his latest round of activities, both here and abroad. Reading it, one realizes that he continues to work at his normal pace (c²) in remarkably many fields. We will lend * his report (5 pp.) on request.
- (32) Francie Dimitt, Albert Ellis, Walter Goodpastor. Francie presented the

results of a joint research project on hyperactivity, at the recent meeting of the American Psychological Association in San Francisco. She has opened a private practice in counseling (Family Counseling and Adolescent Guidance, P.O. 1442, Spring, TX 77373.) She attended ALBERT ELLIS's 2-day workshop on Rational Emotive Therapy, in Houston, in November. WALTER GOODPASTOR was a member of the Ellis workshop panel.

(33)

James Kuzmak's Cortex project (NLL6-46) got no response from HRS members, though he received more than 50 requests for his 7-page prospectus, in response to classified ads in magazines and college newspapers. He has dropped the requirement of a \$25 contribution; there will be no charge for participating in Cortex. His address, in case you want his prospectus: 24 Collingswood Road, New City, NY 10956. Incidentally, he may be attending St. John's College in Annapolis next Fall (the "great books" college).

(34)

Corliss Lamont is listed as Coordinator of the Wilfred Burchett Support Committee, in a large ad in The (Sunday) New York Times (12/18/77), headlined:

THE OUTRAGEOUS CAMPAIGN AGAINST WILFRED BURCHETT

"McCARTHYISM" RIDES AGAIN

IN THE NEW YORK POST, THE HEARST

AND JOHN BIRCH PRESS

Journalist Burchett's reports appear, in the U.S., in The Guardian, self-proclaimed Marxist publication.

(35)

John Mahoney has written us a splendid letter, which will appear in the next issue.

(36)

Jim McWilliams: "Because those Indians got me drunk down in the big canyon in Mexico two years ago, I went to the Oklahoma Horseshoeing School in March. The first day a mule leaned on me. He leaned on me all day, and I took this as a sign to try another profession. So in July I quit hoeing cotton and went to the North Texas Forge at Mineral Wells. There I made a knife. A little later, in Ciudad Juarez, I cut some whores. When I got home, the government called me up and offered me a job as writer-editor. So now I am working for the people who gave us the Bomb. It makes me nervous. I am sorry to be so late with my dues. You see I have had a lot on my mind."

(37)

Steve Reinhardt: "Ten of us from the Sierra Club met at JFK airport in NYC and flew to Nepal for a month (October). Our purpose was to take a 25-day trek (backpack) in the Himalayas of the north-central part of Nepal. Most of the first week was spent crossing rice paddies in tropical lowlands. But as we proceeded north, we gained altitude and the vegetation changed, finally disappearing. Our route took us behind (north of) the Annapurna massif and past Dhaulagiri. At one point, we were within about 15 miles of the Tibetan frontier, and our highest altitude was some 17,500 feet. Following Nepal we went to India and toured some of the cities. Enough. I ramble. But a great trip."

(38)

Gary Slezak's new comic review could have been seen Fridays, Saturdays, and Sundays, February 3rd through 26th, at The Body Politic, 2261 N. Lincoln Avenue, Chicago. Gary was both author and producer.

(39)

Tom Taskonis has a new job, as a Unit Manager with the Fuller Brush Company, in Manhattan. "I found one of the few companies left where one can be hired immediately and advance to management, all within a few months....What is unique about this company is that your background

(education, military, prison record, etc.) is relatively unimportant. All you need is a determination to succeed. Age is not important either; we have a Field Manager, age 20, for all of New Jersey. I am slated to become a Field Manager early next year. I offer this information for the sake of other members who might be interested. We have offices all over the country."

(40) Brace Thompson, whose home is in Riverhead, NY, is presently at Stanford University, studying European history.

(41) NEW MEMBERS

We are very pleased to welcome these new members:

Fred Bechtold/7421 Avenue W/Brooklyn, NY 11234

MEMBERSHIP ANALYSIS & STATISTICS

- (43) The ERS is international (sort of). These are the countries in which ERS members reside: USA 142, Canada 14, United Kingdom 3, and one each in Australia, Colombia, Japan, The Netherlands, and West Germany; total 164.
- (44) When they joined. There are 31 current ERS members who joined in 1974, 30 who joined in 1975, 46 who joined in 1976, 55 who joined in 1977, and 2 who joined during the past month (January 1978); total, 164. The percentages are 1974 19%, 1975 18%, 1976 28%, 1977 34%, and 1978 1%; total 100%.
- The 164 total in the above 2 items does not include honorary members.
-

FOR SALE

- (45) The ERS Library is currently offering these items (prices are discounted, and include postage):
- The Tamarisk Tree by Dora Russell. What it was like being married to ER and running the Beacon Hill School with (and without) him. \$4.50.
 - Bertrand Russell 1972-1970. A selection of tributes paid to Russell after his death. 70¢.
 - Essays on Socialist Humanism in Honour of the Centenary of Bertrand Russell, Ken Coates, editor. \$3.15.
 - History of the World in Epitome by ER. 70¢.
 - Icarus, or the Future of Science. ER's response (1924) to J.B.S. Maldane's optimistic lecture on the future of science, "Daedelus". \$1.75.
 - Justice in Wartime by ER. ER's views on war and peace (1916). When he put his views into action, it resulted in his losing his university lectureship and finally being sent to prison. \$5.95.
 - The Life of Bertrand Russell in Pictures and His Own Words, compiled by Christopher Farley and David Hodgson. \$3.15.
 - Mr. Wilson Speaks "Frankly and Fearlessly" on Vietnam to Bertrand Russell. 77¢.
 - Problems of Knowledge and Freedom by Noam Chomsky. The first lectures (1971) in honor of ER at Trinity College, Cambridge. 77¢.
 - ERS at APA. Papers presented at ERS sessions at American Philosophical Association (Eastern Division) annual conventions. 1976 papers, \$2. 1977 papers, \$2.

To order any item, send payment to Don Jackanics, BRS Library, 3802 N. Kenneth Avenue, Chicago, IL 60641.

(46) Ironside Medallion of BR. The BR Peace Foundation is considering striking more of these medallions. The cost per medallion will depend on the number ordered, but it seems likely that one in bronze will cost more than 100 pounds (\$200), and one in silver considerably more than 200 pounds (\$400). To order, or to obtain more information, write Bob Davis (7025 W. Franklin #86, Hollywood, CA 90068.)

(47) BRS stationery for members? Last issue (NL16-30) we offered to print stationery for members' use, if enough members were interested. Only 2 members have placed orders (\$3 for 100 sheets, including postage). Unless 5 more members place orders, we will have to withdraw the offer. If interested, now is the time to act. Send your order to the "News".

QUESTIONS & ANSWERS

(48) Ferenczi was mentioned in the Saul Bellow's quote (NL15-18), and we asked if he was fictional. Bob Davis advised that he was an "important late 19th and early 20th Century psychologist — Freud mentions him prominently". To this Leonard Cleavelin adds the following:

If I am not mistaken, the Ferenczi referred to by Saul Bellow is Sander Ferenczi, one of Sigmund Freud's most brilliant (and/or erratic) followers. Freud, it seems, advocated sexual abstinence for persons undergoing psychoanalysis on the grounds that the libido, deprived of normal sexual outlets, would be concentrated with greater force in the analytic situation. Ferenczi reasoned that not only sex, but other bodily pleasures were outlets for the libido, and therefore instructed his patients to cut to the absolute minimum such activities as eating and drinking, and cut an even sterner, colder, more reserved figure within the therapeutic situation than did most analysts. He had a couple of notable failures using this method, and decided (obviously Ferenczi was not one who was particularly addicted to moderation) to try the other extreme, and showered his patients with "love and affection." Needless to say, the classical Freudians were not amused. Unfortunately, I don't know enough about Ferenczi's theories to say whether or not the view Bellow attributes to him is an accurate description of his views, though I believe Ferenczi's theories did not differ too greatly from Freud's.

(49) Reston's BR quote. (NL16-17) came from "Sceptical Essays" (Norton, New York. 1928) p. 11, as 5 members were quick to advise us: KEN BLACKWELL, BOB DAVIS, HENRY KRAUS, TOM STANLEY, and JOHN SUTCLIFFE. We thank them.

RECOMMENDED READING

(50)

"Delightism" by John H. Pflaum (Prentice-Hall, Englewood Cliffs, NJ, 1972).
 "I think BR would have agreed with many parts of it," says Tom Taskonis.

BOOK REVIEWS

(51)

"Dear Russell, Dear Jourdain: A Commentary on Russell's Logic", based on his correspondence with Philip Jourdain, by I. Grattan-Guinness. (Columbia University Press, New York, 1977. \$20. 234 pp.)

Reviewed for Russell Society News by LESTER DENONN.

If you revel in the symbols of mathematical logic, here is a glorious opportunity for you to enjoy yourself with significant enlightenment. The correspondence covers the years 1902 to 1919. The author summarizes their contents: "Their correspondence covered many aspects of logicism, with especially substantial discussions of theories of irrationals and the real line, the construction of transfinite ordinals and cardinals, possible solutions to Russell's and Burali-Forti's paradoxes, the possible provability and the ramifications of axioms of choice, and some of the theories which Russell attempted before his commitment to the type theory of 'Principia Mathematica'. There are also extensive accounts by Russell of his discovery of the writings of influential predecessors."

The author has admirably brought attention to many facets hitherto unknown or not sufficiently stressed. His researches at The Bertrand Russell Archives and elsewhere have proven invaluable.

Reference is made to my "Recollections of Three Hours with Bertrand Russell" (NL14-16) wherein it is indicated that Russell recalled that Jourdain's articles were compiled by him from his frequent meetings with Russell.

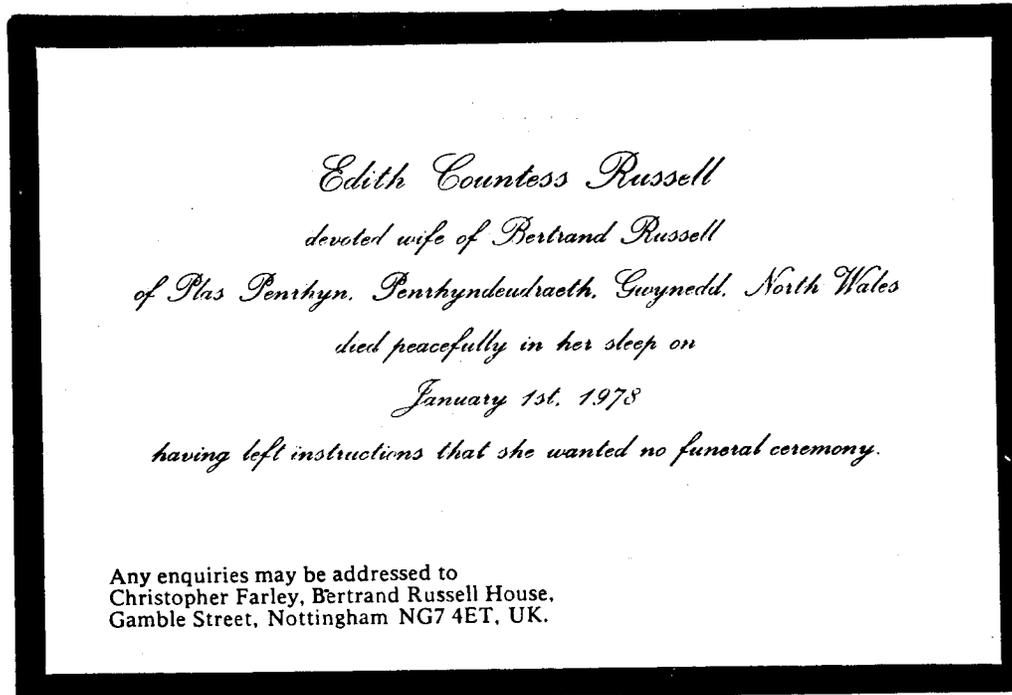

Jourdain died on October 1, 1919. His wife, just four days prior thereto, had written Russell, "You (Russell) are the only person he wanted to see and talk with months ago."

In the Epilogue the author states: "The correspondence between Russell and Jourdain has featured all the issues summarized above, treating some of them very extensively and providing new historical information about them all. It has also shown how often Russell had to change his mind on many problems which beset him."

In conclusion, the author furnishes his translation of a lecture delivered by Russell in Paris in 1911, entitled, "On the Axioms of the Infinite and the Transfinite." He also furnishes some of Jourdain's delightful contributions to "The Granta", the humorous magazine of Cambridge University. He adds some of Jourdain's comments found in his copy of the first volume of "Principia Mathematica", as to which the author comments, "This is the end of Jourdain's critical notes. What a pity that he did not write more."

OBITUARIES

(52a) Edith. Bob Davis received the following card:

(52b) The Daily Telegraph (England) reported it this way, on 1/3/78:

**EDITH, COUNTESS
RUSSELL**

Edith, Countess Russell, who has died aged 77, was the widow and fourth wife of the philosopher Bertrand Russell whom she married in 1952 when he was 80.

She was an American graduate of the famous Philadelphia women's college Bryn Mawr, who studied later at Oxford and the Sorbonne before returning to Bryn Mawr as an English teacher. She met her husband when he lectured there in 1942.

After their marriage she completely absorbed herself in his work and political activities. Both of them spent seven days in prison in 1961 after taking part in a Ban-the-Bomb demonstration.

We greatly regret the loss of this gallant lady, who was an honorary member of this Society and who gave it her warm support.

(53) Rita Haun. We are very sorry to report that JIM HAUN has advised us that his wife, Rita — who had also been a BRS member — died in November.

THE BRS LIBRARY

(54)

Don Jackanicz, Chairperson, BRS Library Committee, reports:

A most noteworthy recent event was the receipt of a tape recording of Graham Whettam's "Sinfonia Contra Timore" (NLL5-14,46), a gift of East German Radio. This music, dedicated to BR, will be available at the May Annual Meeting, at McMaster. (It is Library Item #66.)

Film is well represented in the BRS Library. But 2 BR films are still needed, to complete our collection of BR films that are commercially available. The price of these two is \$270, and we'd be pleased to have members make contributions to help us buy these films. Any amount, large or small, is welcome. We already have one contribution, plus a small amount earned from film rental. We also remind members that we have books for sale — see (45) — which, though sold at a discount, still provide us with a modest profit.

Incidentally, we have recently begun to negotiate with Allen & Unwin, to distribute their publications. They have been BR's chief publishers in England.

The Library now has a new assignment: distributing materials about BR and the BRS to non-members. An ad in the "APA Monitor", which is published by the American Psychological Association, offers Peter Cranford's paper, "Bertrand Russell's Relevance to Psychology", and a BR reading list for psychologists. So far (2/1/78) the Library has filled 80 such requests, and included a BRS fact sheet. The Library also offers to lend or sell the papers presented at the BRS sessions at the annual meetings of the American Philosophical Association (Eastern Division). This offer is mentioned on the program used at the event (NLL6-55). These new activities help spread Russell's views and promote Russell scholarship; they may also recruit new members. The Library's work in this area can easily be broadened, and I expect to discuss the character and potential of the Library — in furthering BR's purposes — at the May Annual Meeting.

(55)

Recent acquisitions:

Previous acquisitions have been listed in NLL3-48, NLL5-33, and NLL6-40. Here are the latest. The donor's name appears at the end of an item.

63. 12 photos of a BR display, prepared by Susan Hunt, on the bulletin board of the Philosophy Department at Moorhead State College, described in NLL8-34. Charles Magel.
64. Syllabus and student evaluation form of a course on BR given by DR. CHARLES MAGEL at Moorhead State College. Author.
65. "Anthropocentrism and the Environmental Crisis" by GEORGE SESSIONS (12 pp.) Offprint of an article in "Humboldt Journal of Social Relations", v.2, Fall/Winter 1972. Author.
66. Tape recording (open reel) of "Sinfonia Contra Timore" by Graham Whettam. The composer has described this work in a supplement to NLL5. East German Radio.
67. Tape recording (cassette) of the 2-LP set, "Speaking Personally: Bertrand Russell" (Riverside 7014-15), recorded 1961. Kenneth Korbin.

68. BRS/APA papers. 3 papers presented before the BRS session at the American Philosophical Association (Eastern Division) meeting in December 1976: "Russell on General Facts" by Antonio Marras; "Russell on General Facts" by David E. Johnson; and "Russell, Frege and the 'Meaning' of the 'theory of Descriptions (or): Did Russell know his Frege?" by Raymond Perkins. The authors.
69. Tape recording (cassette) of excerpts from the LP "Bertrand Russell Speaking" (Caedmon TC-1149), recorded in 1959, and from the LP, "Human Nature and Politics" (Audio Archives LPA-1202), BR's Nobel Prize Acceptance Speech. Kenneth Korbin.
-

FINANCES/CONTRIBUTIONS

- (56) Contributors. We thank the following members for their recent contributions: CRANFORD, COWLES, DAVIS, DELY, EISLER, HOOPES, FRANK JOHNSON, KASANOF, NEILANDS, O'CONNOR, REINHARDT, SECKELS, THOMPSON, TOBIN.
-

"RUSSELL SOCIETY NEWS" MATTERS

- (57) N116 was mailed late — on November 20 — which was at least 10 days later than planned. This was most unfortunate, since N116 did not arrive in time to remind people of the Medvedev talk on November 22. Reason for the lateness: the N116 typescript had been mailed to the printer, and was lost in the mail 12 days.
- (58) New name. As you know (N116-47), we wanted a more appropriate name than "Newsletter". And as you saw on Page 1, we are now using the name "Russell Society News".
One member objected to this name on the ground that we print things that are not news about BRS activities, which is true. But we think it is legitimate also to print items that are likely to interest BRS members, and are relevant to BRS aims, as well as news about BRS activities. On this theory we chose the present name.
Thank you, Jack Pitt, for suggesting it.
- (59) Next issue will be accompanied by a membership list (including addresses.) Some items originally intended for this issue will appear in RSN No.18, because No. 17 was getting too fat.
-

ABOUT OTHER ORGANIZATIONS

- (60) La Biennale di Venezia is the name of a big exhibition of works of art that takes place every 2 years in Venice. The latest one — in November-December 1977 — was on Eastern European culture, including political control and suppression (NL16-51). All writers in the USSR and Eastern European countries who had accepted invitations to the Biennale were denied exit visas (by their governments) to attend, with one exception, George Konrad, of Hungary, who gave a long and interesting talk on "the forcing of political considerations on art." It was published in The New York Review of January 26, 1978, and we will lend it on request.
-

INDEX

- (61) Introductory (1). Time and place of Annual Meeting (2). Testimonial on 1977 Meeting (3). Philosophers at work (4,14). Chairman Peter Cranford reports (5). President Robert K. - (5) Treasurer Stephen J. Reinhardt reports:

See (53).

- (5.5) Secretary Jack Pitt reports:

See (54).

REPORTS FROM COMMITTEES

(6) Membership Committee (Beverly Smith, Co-Chairperson):

Twenty-three new members, representing sixteen states, joined the BRS during the first quarter of 1978. Inquiries totaled one hundred twenty-one and came to the Society from a variety of sources, including publications, present members, and the BRS-sponsored talk by Zhores Medvedev, held in Berkeley in November 1977.

Most members seem to join within two months of our response to their initial inquiry, although one new member has joined after a period of two years!

(7) Science Committee (J.B. Neilands, Chairperson):

The following Letter-to-the-Editor appeared in "Chemical & Engineering News", issue of March 20, 1978:

Social responsibility

SIR: Your editorial on the social responsibility of the scientist vis-a-vis weapons systems and the accompanying article by Wil Lepkowski pose the problem of what action is to be taken on this question, which affects the survival of civilization and the integrity of the life support system of the planet. The Committee on Science of the Bertrand Russell Society makes the following motion: "Resolved, that the professional science societies of the world establish a short-wave radio network, the program content to be divided equally between advances in basic research and the impact of technology, especially modern weapons systems, on the biosphere."

J. B. Neilands

Committee on Science, Bertrand Russell Society, Augusta, Ga.

ABOUT BR'S WRITINGS

(8) On BR's science fiction. LEONARD CLEAVELIN writes:

To comment on Frank Bertrand's musings on BR and Science Fiction, I get the feeling that they are partly based on a deprecating notion of what science fiction is. I haven't read the story in question, but I don't see how it could be a "fluke" that a story by BR was considered science fiction. I don't know that much of the recent intellectualizing over science fiction as an art form is really justified; I think that the important thing to remember is that good science fiction must be good fiction, and the decision by the author to use what we would think of as a science fictional setting as opposed to a more orthodox setting depends on the message he wishes to get across, and how he wishes to affect the reader. It is certainly no blemish on BR's reputation if

he wrote a science fiction story, as long as it was a good story.

(9)

BR according to the 13th Edition (1926) of the Encyclopedia Britannica:
 This is the write-up KEN BLACKWELL told us (RSN17-24) that BR "evidently loathed":

RUSSELL, BERTRAND ARTHUR WILLIAM (1872-), British mathematician and philosopher, grandson of the first Earl Russell (Lord John Russell) and brother and heir of the second Earl Russell, was born at Chepstow, Monmouthshire, May 18 1872. He became a scholar, and subsequently a fellow, of Trinity College, Cambridge, and with peculiar lucidity propounded the theory of Neo-Realism. During the World War Mr. Russell twice infringed the emergency regulations, was for some time in prison, and was deprived of his fellowship in 1916. Thereafter he lectured and wrote on the major questions of metaphysics without the support of academic authority. He travelled through China and Bolshevik Russia and unsuccessfully contested the Chelsea constituency in the Labour interests. His most important works are: *Principles of Mathematics* (1903); *Principia Mathematica*, in which Prof. A. N. Whitehead collaborated (1910); *Mysticism and Logic* (1918); *The Analysis of Mind* (1921); and two books of popular exposition, namely the *A. B. C. of Atoms* (1923) and the *A. B. C. of Relativity* (1925).

Mr. Russell has been peculiarly successful in eliciting from contemporary physics those theorems that are most nearly consonant with his temper. He began by trying to impose upon psychological and metaphysical speculation the orderly logic of pure mathematics. As time went on, he came to despair of a successful issue, and in his later work admits that neither materialism nor idealism can wholly satisfy him. He has therefore tried to formulate a neo-realism, the substance of which is the existence of some primary stuff neither mental nor material. But

temperamentally he is a desperate man, loving extremes, and too many of his speculations are deliberately intended "à épater les bourgeois." His works on Russia *The Practice and Theory of Bolshevism* (1920) and China, *The Problem of China* (1922) deepen the impression made by his works on general philosophy. He is, essentially, an intellectual, who believes that the truth may be acquired by well disciplined ratiocination, but does not believe that the Governments of the world, whether despotic or democratic, will ever attain to the perception of truth. Therefore he is a deliberately lonely figure, almost querulously criticising the world's workings, ever ready to champion unpopular causes, slow in accepting any "fait accompli." He has with some justice been called a Huxley who has not found his Darwin. In collaboration with his second wife, Dora, daughter of Sir F. W. Black, he wrote *The Prospects of Industrial Civilization*, 1923. (See KNOWLEDGE, THEORY OF; RELATIVITY.) (H. C. HA.)

Its author is Henry C. Harwood, Literary Critic, "The London Mercury", "The Outlook" (London), and author of "Judgment Eve", etc.

Thank you, Leonard Cleavelin.

ASSESSMENTS OF BR

- (10) Osmosis. From the column, "Southland Parish", by Dan L Thrapp, in The Los Angeles Times of 2/7/70:

Bertrand Russell, who died this week at 97, in his recently completed 3-volume autobiography, displayed "no allegiance to religion," and may have died rejecting Christianity as he had lived in that posture.

Yet many would deny him that self-proclaimed desert of the soul.

In his autobiography he looked ahead to the specter of ultimate obliteration:

"We stand on the shore of an ocean, crying to the night and the **emptiness** sometimes a voice answers out of the darkness. But it is the voice of one drowning; and in a moment this silence returns. The world seems to me quite dreadful; the unhappiness of many people is **very great**, and I often wonder how they all endure it. To know people well is to know their tragedy: it is usually the central thing about which their lives are built. And I suppose if they did not live most of the time in the things of the moment, they would not be able to go on."

Yet, in a book disavowing Christianity, Lord Russell wrote of the world he desired:

"The world that I should wish to see would be one freed from the virulence of group hostilities and capable of realizing that happiness for all is to be derived rather from cooperation than from strife. I should wish to see a world in which education aimed at mental freedom rather than at imprisoning the minds of the young in a rigid armor of dogma calculated to protect them through life against the shafts of impartial evidence. The world needs open hearts and open minds, and it is not through rigid systems, whether old or new, that these can be derived."

What better definition of Christianity at its finest can there be save in Russell's proclaimed philosophy of love, kindness, peace, cooperation and the alleviation of human suffering?

Religious News Service, in commenting on the skeptic's death, observed: "Ethicists have argued that nowhere are such virtues taught in Western culture except in Christianity. One labeled Russell a 'Christian by osmosis'. If that is what he was, he had abundant company. Sometimes one believes that the most numerous body of Christians are those who deny they are such.

Thank you, JOHN TOBIN.

BR'S INFLUENCE

- (11) Ayer influenced. "I bought Russell's 'Sceptical Essays' when it first came out in 1928, and was immediately captivated by the opening sentence:

"I wish to propose for the reader's favorable consideration a doctrine which may, I fear, appear wildly paradoxical and subversive. The doctrine in question is this: that it is undesirable to believe a proposition when there is no ground whatever for supposing it true."

"Russell went on to say that 'if such an opinion became common, it would completely transform our social life and our political system,' and then and thereafter I was disposed to think him right." Part of My Life. The Memoirs of a Philosopher, by A. J. Ayer (Harcourt Brace Jovanovich, New York, 1977) p.53-54.

This is of course the "Russell Doctrine" that Reston wrote about (N116-17).

(12) Ayer compared. From a review of Ayer's memoirs:

Ayer would like, I don't doubt, to be a living reminder of the late, amazing Bertrand Russell, the impish earl who was only too ready to divide his attention between knotty points of Boolean algebra and the virtues of birth control, with no loss either of zest or authority. Ayer is by no means the lasting force in philosophy that Russell was; he may profess logic but he isn't a strong enough mathematician to work on the questions in symbolic logic that now count for most. Nor is he such an excitable or picturesque man. But the resemblance is there and Ayer knows it. His views on the world are close to Russell's, he is yet another unshakeable, godless empiricist; his physical frame is bony, in some lights almost spectral, as Russell's memorably was; his delivery, when he speaks, is like an imitation of Russell's, impatient, precise, sardonic.

¹ The reviewer is John Sturrock, an editor of The (London) Times Literary Supplement. The review appeared in The New York Times Book Review of 1/22/78.

Thank you, HARRY CLIFFORD.

(13) What Jimmy Carter reads.
What books did President Carter bring from Plains, Georgia, that he could not be without?

Here's the list, as supplied by Walter Wurfel, deputy press secretary, after poking around the President's study and quarters:

- . Carl Sandburg's 6-volume Lincoln biography, "The Prairie Years" and "The War Years"
- . "Rheinhold Neibuhr on Politics", edited by Harry R. Davis and Robert C. Good
- . "A History of Western Philosophy" by Bertrand Russell
- . "Let Us Now Praise Famous Men" by James Agee and Walker Evans
- . "Collected Poems" by Dylan Thomas

These books are in the President's study. The family Bibles are in the residential rooms.

All the above is excerpted verbatim from The New York Times of 11/4/77.

Thank you, STEVE REINHARDT.

(14) BR and a USSR nuclear physicist. The following 4-page article, from "Bulletin of the Atomic Scientists" (11/77), takes its opening remark from BR's Manifesto to Mankind, which led to the Pugwash Conferences, which in turn led to the Salt Talks.

Thank you, Bob Davis.

A Soviet physicist's
warning of the dangers
of nuclear war

An eternal flame commemorates Leningrad's unnumbered World War II dead.

Have we learned to think in a new way?

Since the mid-1960s, the proposition that thermonuclear war would be suicidal for both parties has been used by the Russians largely as a commodity for export. Its chief proponents include staff members of the Moscow Institute of the USA and Canada, and Soviet participants at Pugwash, Dartmouth and similar international conferences, who are assigned the task of strengthening the hand of anti-military intellectual circles in the West.

—Richard Pipes in
Commentary,
July 1977.

Editor's note: Since Pipes and other U.S. "hard-liners" seldom directly quote these alleged Soviet seducers of western intellectuals, and rely instead on the words of Soviet generals of a mentality akin to some of our own, it may be instructive to read first-hand the kind of siren songs to which the deluded Pugwashites are subjected.

M. A. Markov is a distinguished theoretical physicist who is academic secretary for nuclear physics and astronomy of the Academy of Sciences of the USSR. He is also chairman of the Soviet Pugwash Committee. Following are excerpts from his report to the 27th Pugwash Conference August 24-29 at Munich, the latest in a series of international meetings which, since 1957, has engaged scientists and other public figures in a continuing discussion of science and world affairs.

We leave it to our readers to judge the sincerity of Academician Markov's position on nuclear war.

M.A. Markov

Learning to think in a new way" to preserve life on our planet is the motto of the historic Russell-Einstein Manifesto to mankind.

The words of the Manifesto were first heard 20 years ago, when top scientists from many countries got together in Pugwash, a small fishing village in Canada.

"We have to learn to think in a new way. We have to learn to ask ourselves, not what steps can be taken to give military victory to whatever group we prefer, for *there no longer are such steps* [emphasis added]; the question we have to ask ourselves is: what steps can be taken to prevent a military contest of which the issue must be disastrous to all parties?"

Have we learned to think in a new way?

"We are speaking on this occasion, not as members of this or that nation, continent, or creed, but as human beings, members of the species Man, whose continued existence is in doubt."

Have we learned to think in a new way as human beings?

An analysis of international developments over the past decade reveals that we have been successful when we have thought in a new way as "members of the species Man"; but we have suffered defeat when we have been unable to think in a new way and follow the methodological principles of the Manifesto, which formulates the idea of détente in a different language.

With regard to the solution of the main task, *making war impossible*, the answer is, regrettably, negative. Not only have we not learned to think in a new way, but we sometimes seem to have unlearned to think altogether.

The arms race is continuing and even accelerating, contrary to all logic.

It would be wrong, however, to assert that the past 20 years saw no real steps along the "road to peace." The presumptuous pessimism of such a statement would foreclose

the road to a reasonable future.

Let us look back on recent history.

Have we forgotten that intensive nuclear tests in the atmosphere, outer space and the sea threatened life on the planet long before nuclear conflict was possible?

Have we forgotten the declaration of 9,235 scientists, presented by Linus Pauling to the U.N. Secretary-General on January 13, 1958, warning of the grave danger of radioactive contamination by atomic tests?

As a result of multilateral agreements that grave danger for all things living has been essentially eliminated. (All the nuclear powers except China have stopped nuclear tests in the atmosphere, outer space and the sea.) This is but one positive result of international negotiations which go a long way to change the international climate. Here reason was prevailing.

A number of other bilateral and multilateral agreements have been signed which have improved international relations. These are some concrete advances along the road to peace.

We are entering the fourth post-war decade. Let it be recalled that less than 20 years separated the first and second world wars. One can point to real steps along the road to peace taken when reason has prevailed, when we have been able to think in a new way.

A Wartime Budget

On the other hand, the material preparations for war, far from ending, are being vastly intensified. According to the Stockholm International Peace Research Institute, the arms race annually devours \$300 billion. Without a war the world lives according to wartime budgets. About half of all the Earth's scientists and engineers are involved in the death industry.

A new and sinister danger stems from the fact that a disaster can be triggered not only by irresponsibility of government leaders, but also by designs of gangster groups or individuals, or simply as a result of psychic derangement of the people who have their finger on the "push-button." There are more and more people who have their finger on the

"push-button" as autonomous nuclear weapons systems are placed on bases scattered virtually all over the planet.

One of the main tasks along the road to peace that faced the authors of the Manifesto was to make possible the beginning of a dialogue between East and West. At the time it seemed impossible to start such a dialogue without the mediation of third countries, for example India.

The process of détente has initiated a direct dialogue between East and West, a process that the authors of the Manifesto could only dream of. If the dialogue is to succeed in resolving the main problem to which the Manifesto is devoted, the most important thing now is not to allow ourselves to be distracted from the main behests of the Manifesto by the relative trivia of "all the rest."

Mankind, if it escapes the destruction which threatens it, will have its own history which will develop according to its inherent laws. Forgetting the rest does not mean forgetting all ideological and social differences. The greatest minds in the history of our science, the authors of the Manifesto, call on us to "forget the rest" in talks and agreements aimed at avoiding the destruction of mankind, a threat that is becoming more and more real.

"All the rest" cannot be ignored, and it cannot be discussed as we move on our parallel courses along the road to peace. However, it should not impede our progress along the main road to peace.

One of the Manifesto's main points of departure can be briefly summed up in the following words: There can be no winners in a third world war.

What are the motives for the purely military character of the arms race? What purely military considerations could lie at the basis of this point?

Evidently there is one reason: military strategists hope to gain purely military advantages; advantages which could promise military-technical progress.

But scientific and technological progress is nonpartisan; it serves any opposing side in the same way. And it is no secret that these sides care-

fully follow each other's "successes."

But the sides' material resources and scientific and technological possibilities are such that as soon as military advantages arise they are quickly lost. Thus the purely military point of the arms race is lost.

- *"First-strike" strategy.* All the same, there are ideas of a purely military nature in achieving advantages in a possible military clash. What we are talking about is the "first-strike" strategy.

One of the greatest temptations for military strategists is to achieve a decisive victory through a blitzkrieg.

The conclusion is that this temptation ceases to be a temptation when an upper ceiling of military preparations has been reached whereby, in chess language, it is not possible for "white to open and win."

In other words, as we advance toward complete disarmament, obviously, such a level of military preparations exist that the idea of a blitzkrieg is precluded. Perhaps a discussion should be initiated of such a specific stage as a definite stage in the process of universal and complete disarmament. The impossibility of a blitzkrieg, and the prospects of a drawn-out war demand other conditions for the unleashing of a military conflict. They demand global war preparations of the entire country or groups of countries.

- *The possibility of global war preparations.* The possibility of a protracted war demands that armament be at a high technical level and that a psychological climate, so to speak, of "military enthusiasm," be created, or to put it simply, war hysteria.

Our history has already seen such zig zags and our future is not guaranteed against them if the arms race continues and if the chance of military détente is ruled out.

"I feel crushed," wrote the French writer Romain Rolland in his Swiss diary before World War I. "I would like to die. It is terrible to live among this crazy humanity and to see the bankruptcy of civilization, feeling my own impotence. The greatest catastrophe in the history of the world for centuries—the ruin of our greatest hopes for the brotherhood

of man."

At that time Romain Rolland could not imagine that an even greater catastrophe lay in wait two decades hence.

History has shown such an organization of mass insanity—this insanity is called nationalism and great-power chauvinism.

Albert Schweitzer apparently posed the rhetorical question, "What is nationalism?" He answered, "It is vile patriotism taken to a senseless degree and relating to its healthy and noble variety in the same way that the obsession of an idiot relates to normal human conviction."

Examples from the past are a warning to mankind. Mankind must keep a vigilant eye even on slight manifestations of this illness. History has shown us that nationalism is a disease of epidemic proportions.

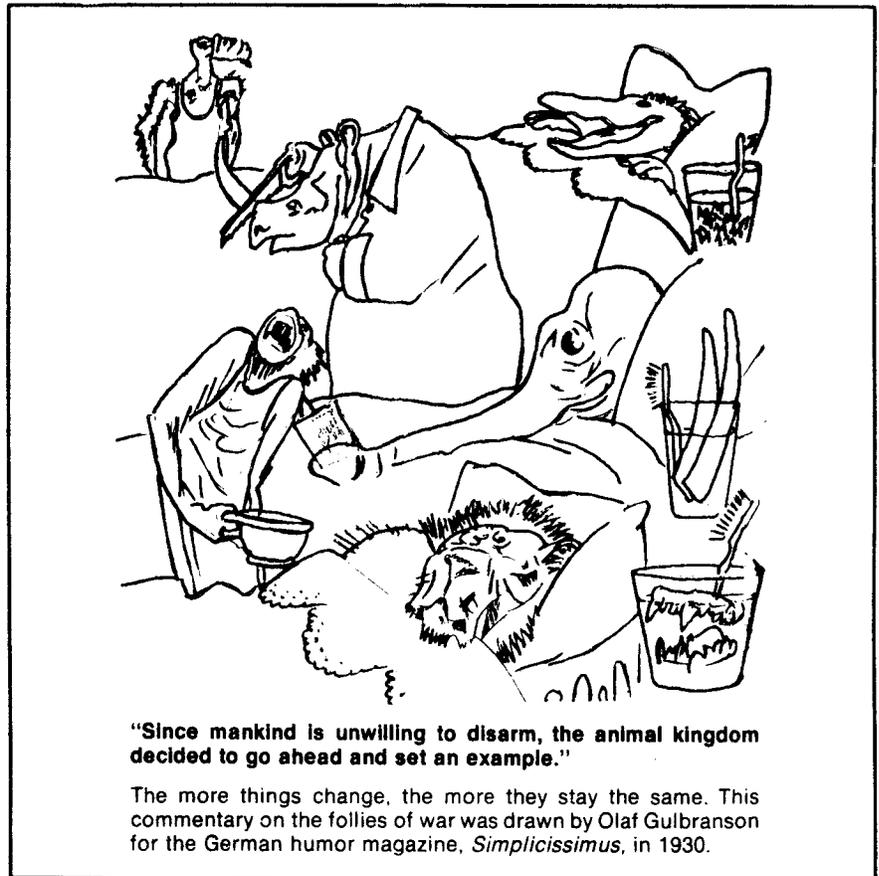

The world recently observed the thirtieth anniversary of the end of World War II. In other words, that part of the world's population between the ages of 35 and 40, who hardly or do not at all recall living

through the nightmare experience of the war years, is coming to dominate our planet. If these people do not as yet completely determine the world's political climate, they will do so in the near future. Therefore, it is necessary to recall and remember the history of the last war, how it arose, the possible psychological climate, and the accompanying mass war hysteria. The lessons of the last war are very instructive.

- *The Pugwash movement and the danger of military pacifism.* With the invention of the machine gun many considered that war had become impossible and absurd, because the threat of weapons of mass destruction had become enormous. But this threat did not prevent wars from breaking out.

Nobel, the inventor of dynamite, thought that the destructive power of the new weapon would make it impossible for a war to start. But wars broke out, despite the growth, if one can say, of the "coefficient of mass destruction" in the course of military conflicts.

With the appearance of the nucle-

"Since mankind is unwilling to disarm, the animal kingdom decided to go ahead and set an example."

The more things change, the more they stay the same. This commentary on the follies of war was drawn by Olaf Gulbranson for the German humor magazine, *Simplicissimus*, in 1930.

ar weapon, and with the threat of global destruction of life on earth, arose the realization that the use of this weapon was tantamount to self-destruction.

It seemed that the unusual nature of the weapon itself contained the impossibility of its use. However, this type of weapon is now being "improved."

It is a question of perfecting the targetability of the nuclear warhead launched from anywhere on Earth. This leads to the temptation to assert that atomic weapons can be aimed at the destruction of military objects alone without harming civilians. Thus, from being the most inhuman weapon it somehow becomes the most "humanitarian" weapon, if one can use such inappropriate terminology. The well-known idea about miniaturizing nuclear weapons and creating the so-called clean-bomb completes the picture of mankind's "well-being" in a future war.

The duty of scientists is to warn the world about this god of war donning the mask of a pacifist, and to warn about the military strategists' temptation to unleash a preventive war for "humanistic" ends.

The history of war shows that wars of the past and present centuries each time become more and more cruel and more global.

The gentlemanly practice of declaring war has long since become a thing of the past: now war is begun with a surprise global attack.

The task of the scientists is to convince government leaders that it is possible for a previously unknown weapon of mass destruction to appear. The history of war shows that in the process of war it always has and always does appear in an unforeseen form.

The genie has been released from the bottle, and it only remains for us to search for different forms of limiting its spread and preventing its aggressiveness. The danger is that an accumulation of plutonium can take place in reactors designed for generating nuclear energy for peaceful purposes.

Once again we are faced with a global problem, which must be decided in the way recommended by the Manifesto.

The situation is such that the industrially developed countries selling reactors and fuel to other countries must, in the first place, in their conditions of sale, be guarantors of nuclear security. But would it not be expedient also to think about organizing a supreme global inspectorate, for example, within the framework of IAEA with extensive overall powers of control enabling checks to be made, particularly of the new reserves of plutonium.

The mutual mistrust which nourishes the arms race must be replaced by a real feeling of security based on real material, technical and other aspects acceptable to all sides. How difficult it is to do this! But we have no alternative. We have to prepare for this and have to study persistently all the difficulties and possibilities of this slogan.

A certain scepticism exists in scientific circles about the problem of general and complete disarmament; they do not consider this to be a current issue. It is among scientific circles that one would expect the problems of the future to be discussed, however. As a rule these problems are only considered by statesmen when they become problems of the present.

New Economic Order

With détente, the need has naturally arisen for setting up a new economic order. This is a global problem of organizing the world economy and, in principle, it can be solved without solving the numerous remaining problems.

The stormy process of decolonization will lead to the appearance of numerous new states. The emergence of groups of states with their own problems will demand the solution of many problems we have not previously encountered.

Military détente will liberate vast material resources so necessary to these people.

Projects of colossal potential will appear for improving living conditions on our planet. With the rational and global organization of a new economic order, unemployment will become a thing of the past. Science will play a greater role under the new economic order. Sci-

ence has long since become a productive force and the most advantageous sphere for capital investment. We scientists can responsibly declare to the world that science has unlimited resources for greater good, bringing full and productive employment to the whole able-bodied population. We appeal to the people of the world to set up a new economic order on Earth, making the twentieth century one of universal flourishing and one of peace and science.

It has become a generally accepted fact that civilized society is intensively working on the transformation of our planet into a wilderness—destroying life.

Everybody understands that it is time to stop this destructive process but we are dragging our feet over making a decisive start. The problem of the environment, being a global problem, can be solved in the same way offered by the Manifesto.

At present, when thousands of millions of people on our planet are undernourished or starving, we are spending \$300 billion a year on armaments and employing in the war industry half a million highly-qualified specialists who are so much needed for peaceful purposes. In effect, in peace time, we are waging an undeclared war of starvation on thousands of millions of people on this planet.

The rapid elimination of the economic and cultural differences between the industrially developed and the developing countries would naturally ease the solution of the problems arising from the population explosion. We all appreciate that population growth in the industrially developed countries is considerably lower than in the developing countries.

Many fundamental, global problems are essentially connected with the necessity of solving the basic task of stopping the arms race and subsequent disarmament. The disappearance of an atmosphere of mutual suspicion and fear in favor of an atmosphere of security will lead to a new economic order and to the peaceful cooperation among people in solving tasks common to all mankind. □

ASSESSMENTS OF BR

(15)

Will Durant:

...we drove out some forty miles, and found him smoking his pipe in rare content, in a room whose walls were almost completely covered with neatly shelved books; here was a library that must be the gleanings of many generations.

Bertrand was now an earl, but there was nothing lordly about him except the confident consciousness of having a mind that moved like a deadly laser among the shams and delusions of his time. This rather awed and frightened me, for I had some romantic fancies of my own. I comforted my pride by wondering whether Russell's sharply quick and decisive thinking, despite his erudition, had ever allowed him to feel the wisdom hiding in the social and moral traditions of the race. But this is ungracious of me after having accepted his tea. He climbed some steps slowly to show us his children; he asked us to remember that he was then seventy-six years old. He lived (1970) into his ninety-eighth year, still leading noble and desperate causes, and sometimes coming out of the contest with glory. I admired him as a miracle among men, but — though I several times met him in friendly debate — I never knew him intimately enough to love him...

from "A Dual Autobiography" by Will & Ariel
Durant (Simon & Schuster, New York, 1977) p.273

PROMOTING BR/BRS

(16)

Psychologists take the bait. Peter Cranford's short paper, "Bertrand Russell's Relevance to Psychology," is offered free to psychologists, via an ad in APA MONITOR that runs in all issues for a year. There have been 126 requests to date (4/3/78). The paper has also just been offered to members of the American Society of Psychologists in Private Practice, through a news item in their newspaper.

SPREADING BR'S VIEWS

(17)

Letter from JOHN MAHONEY:

Please do not construe my withdrawal from the BRS as reflecting any dissatisfaction or malice. I enjoyed the experience, and I still remain an ardent admirer of BR (and the BRS, I might add!)

The simple fact is the grim reality of personal economic retrenchment. I pay my bills first, then my journals and magazines, then the BRS, and finally the various whale funds, Amnesty International, and so forth. The cash ran out before the journals were paid.

But enough of the bad news — here is some good. By virtue of my masochistic bent, I wound up on "another" interdisciplinary project at the

University; I say "another" because, to any research academician, interdisciplinary projects are living death. Not only do they detract from valuable research and writing time, but they also tend to be enormously time-consuming in their own right, since different academic fields must develop an understanding of each other's lexicon — tricky when time is copious, obscenely difficult when communication is via memoranda, which serve only to point up the fact that divisions of academia are essentially islands of ambiguity shouting jargon at each other across seas of misunderstanding.

Anyway, we selected an honors course for freshman selected on the basis of secondary school grades, etc., to represent the upper ten percent of admissions to Virginia Commonwealth University, a 17 k. urban university. The course is taught by many profs from different departments, in the hope that each will provide a different perspective on a common body of data; that is why I was selected, since I am a social/personality psychologist.

BR's "Why I Am Not A Christian" was my sole recommendation for the Philosophy/Religion unit.

There was some trepidation on the part of the committee, about the BR book. There were genuine concerns that it might prove inflammatory; but after rigorous discussion, it was selected as the main text for the unit.

The response was enthusiastic, with many students spontaneously praising the choice. During the class discussion, I circulated my copies of "Russell", which also elicited surprising interest from the group. (Allow me to note, parenthetically, that I thought the freshman would have little interest in a rarefied academic journal; my intent, in bringing "Russell" to class was to illustrate how knowledge is generated and disseminated.)

So, in all, the situation ended quite favorably. The group spent quite a bit of time discussing the politics of academics re the appendix to WIANAC. I also realize the important role the BRS is playing in the situation.

I realize I just talked myself into renewing. To hell with the phone company.

(The appendix to WIANAC is "How Bertrand Russell was Prevented from Teaching at City College, New York" by Paul Edwards. Ed.)

COURSES ON RUSSELL

(18) Jack Pitt, who gives a course on Russell at California State University, Fresno, discusses certain aspects:

The main difficulty in teaching Russell is in deciding which Russell to teach. This is true whether it is an introductory course, a course in twentieth century philosophy, or an undergraduate seminar on Russell. At least three alternatives, plus their various combinations, present themselves. One is to do Russell the professional philosopher, another to do Russell the social essayist, and the third is Russell on other philosophers.

The main problem with the first alternative is that it unavoidably

plunges one into logical atomism, which I have been able to make only partially clear in an entire semester. One can quickly dismiss it as being wholly out of the question in an introductory course, but does it follow that the professional Russell is unsuitable in such a course, or even in the twentieth century philosophy course?

I wish I were confident of the answer to this. What makes it difficult is the variable nature of the students one is talking with. Possibly only "The Problems of Philosophy" could convey some of the professional Russell to general students, yet in many ways this falls into my third category above (Russell on other philosophers). Thus I find that at the introductory level, it is usually best to stay with "Why I Am Not A Christian", say, or "The Principles of Social Reconstruction".

In a course on twentieth century philosophy one might be tempted to try "An Inquiry Into Meaning and Truth" or "Human Knowledge," but both of these books, I have found to my chagrin are a good deal more difficult than they are often regarded as being. A better choice would be "Analysis of Mind", but I do not believe it is presently available in paperback. Depending on the slant of the course, one could try "My Philosophical Development", "Human Society in Ethics and Politics", or "Mysticism and Logic"; yet again, only the latter is available in paper. One soon comes to see that there are a good many commercial as distinct from substantive considerations which affect which Russell is taught.

As it is the aim of our Society "to spread Russell's ideas", I have a suggestions on another issue that those of us who meet teachers could try. Periodically I have found myself teaching freshman English composition, which is essentially the same sort of course students have been having since grade eight. In some mystical fashion, students are to "learn to write". For the teacher this means finding something to write about. I and some of my colleagues in English have found that Russell the essayist fits very well into such a situation, via, say, "The Conquest of Happiness" or "Marriage and Morals" There is precedent then, for supposing that mentioning Russell to composition teachers and to teachers of forensics would fall on fertile ground. It could even result in students switching their major to philosophy.

RATIONALITY

(19)

The view from the top, as reported in The New York Times' "Quotation of the Day", on 2/21/78:

"Frankly, our faith in the rationality of the system has declined somewhat in the first year" — Jody Powell, President Carter's Press secretary.

(20) "The Invasion of the Pseudoscientists" is the title of an article by Boyce Rensberger in the Review of the Week section of The (Sunday) New York Times of 11/20/77, p.16. Here it is:

By **BOYCE RENSBERGER**

Rightly or wrongly, scientists have often been seen as caring little what other people think, if what those people think isn't science. But now a growing number of scientists, philosophers and other defenders of logic and the scientific method are concerned that Americans are being subjected to an increasing barrage of pseudoscientific fictions merchandised as scientific fact.

Besides such old staples of pseudoscience as astrology, U.F.O.'s and psychic phenomena, the new wave includes the Bermuda Triangle, biorhythms, pyramid power, psychic surgery, astral projection, Kirlian photography, Uri Geller's purported powers and the extraterrestrial descent of modern man.

Books promoting occult and paranormal phenomena flourish, with dozens of new titles each year. A recent Gallup Poll indicated that 32 million adult Americans believed in astrology. Newspaper horoscopes have grown in popularity: a generation ago, when there were more dailies than now, only about 100 carried them regularly but today some 1,250—about two in three—do. Enrollment in an increasing number of college courses dealing with "paramechanics" and "experimental parapsychology" is high. Many colleges present the subjects not as sociological curiosities but as genuine mysteries that science is unable to explain.

Some scientists and philosophers are now beginning to strike back with unusual vehemence and persistence. The most visible manifestation of the new attack is a one-year-old magazine called *The Zetetic* (Greek for skeptic) which publishes detailed and sometimes scathing critiques of various claims. The magazine is published by the relatively new Committee for the Scientific Investigation of Claims of the Paranormal, an organization of philosophers, psychologists, astronomers, writers, magicians and others. (Professional magicians have figured prominently in the movement because they are expert at the art of concealing the perfectly normal means used to create the illusion that paranormal events are taking place. Scientists, accustomed to an atmosphere of mutual trust in which cheating and deception are rare, have often been fooled by magic tricks offered as paranormal or supernatural phenomena.)

The committee, led by Dr. Paul Kurtz, a professor of philosophy at the State University of New York at Buffalo, is an outgrowth of the group that in 1975 garnered the signatures of 186 scientists on a manifesto denouncing astrology. Also in the battle is Dr. Kurtz's own magazine, *The Humanist*, a publication of the American Humanist Association. The November-December issue, for example, deals with Immanuel Velikovsky's popular but widely discounted theory that major events on earth were caused by near collisions with other planets, as well as with parapsychology, creationism versus evolutionism and the influence of Mars on athletic performance.

One member of the committee, a magician named James Randi, has publicly duplicated all of Uri Geller's feats: bending metal objects, making broken watches start, deflecting compass needles and reading hidden messages. More than a year ago the committee challenged Mr. Geller to submit to a controlled test of his powers but he never responded.

The committee has also evaluated the predictions of Jeanne Dixon and found her record to be no better than

that of ordinary persons making guesses. The *Zetetic* has published statistical analyses of the accuracy of astrological descriptions and disclosed some tricks of the mind reading trade by which people can learn to "convince strangers that you know all about them."

A current target of the committee is the NBC television network, which has broadcast a number of documentary-like programs about pseudoscientific topics, presenting them as if they either were based on fact or were genuine mysteries confounding science.

Earlier this month the group filed a formal complaint with the Federal Communications Commission, charging NBC with knowingly presenting questionable material that could result in physical harm to the public. The program at issue was a 90-minute show called "Exploring the Unknown," in which Burt Lancaster narrated demonstrations of such things as psychic surgery, communication with the dead, levitation, and the creation of photographic images on film through mental power alone. Viewers were led to believe that experts had authenticated the demonstrations.

The allegation that the program could result in physical harm is based on its favorable treatment of psychic surgery and psychic healing, a treatment the group said could lead people to seek psychic practitioners to the exclusion of needed medical care.

The anti-pseudoscience movement does not have the support of all scientists. Some feel it unnecessarily dignifies the various cults and cliques to frame formal responses to them. Others believe that no matter what scientists say, the true believers have already closed their minds. Still others could not care less; they see the various cults as harmless and the followers as quite unimportant to science.

Some scientists say that if one is to attack unscientific beliefs, one should also attack belief in God. To this, members of the committee respond that they are only interested in claims that are offered as scientifically verifiable. Most religions make no claim that science can show the existence of God.

Scientists who do support the new anti-pseudoscience militarism often give one or more of three reasons:

- The most pragmatic reason is that the more followers there are for pseudoscience, the less public support there is for continuing Government funding of legitimate science.

- A second reason often heard is that the wisest uses of science in a democratic society depend on the public's understanding of science. To the extent that pseudosciences create distrust or ignorance of real science, they create a society unable intelligently to influence the course of science or its impact on society. The pseudosciences create scientific illiterates who find the practical effects of science on their lives bewildering or even frightening. They are unable either to cope effectively or to respond intelligently to what may be science's untoward effects.

- In the third place, many scientists and their allies see merit in encouraging people to use their powers of inquiry and logic to the fullest. The huckster of pseudoscience, in this view, is guilty of a fraud far more profound than is the swindler seeking money. To permit pseudoscience to flourish unchallenged is to condone the debasement of the human mind.

Boyce Rensberger reports on science for *The New York Times*.

COMMENTS/REMARKS

(21) Comments on the Chairman's Report (RSN17-5), by Leonard Cleavelin:

In his report, Peter G. Cranford notes that the BRS must move in the direction of developing and promulgating an applied philosophy. I wholeheartedly agree, but there are a few questions which I would like to see answered. Peter seems to see this development as the creation of a new science. I would like to point out that most of the questions which philosophy (and by extension, I assume, an applied philosophy) deals with are those which are not amenable to scientific method (in fact, BR himself saw philosophy as rational speculation on those topics which did not fall in the purview of science; see History of Western Philosophy, Introduction, and Bertrand Russell Speaks His Mind, chapter 1.) and for this reason I think it misleading to speak of a "science" of applied philosophy, or even, on reflection, a separate discipline. There is much in philosophy which can and should be applied. Philosophical questions do pose quite important problems to individuals living in the real world. But when one speaks of applied philosophy, I would like to separate the question in to two parts. The first deals with philosophers (the academic species). BR stands as a living example that philosophers need not spend their lives in the pursuit of intellectual trivia, but it is up to individual philosophers to get involved in causes that they are willing to support, and bring to them their own special talents and abilities. For example, in the recent controversy over the Panama Canal treaties, I feel that philosophers could have rendered an inestimable service by explicating certain legal and ethical issues, for example, the problem of contracting a treaty "in perpetuity" when the only representative for the other nation is a non-native with a vested interest in the treaty. Discussions which I have had with thoughtful undergraduate majors in philosophy at my university and others have all come to the same conclusion: philosophy is and can be relevant to the lives of the majority of persons who are not professional philosophers, but the professional philosophers have abdicated their responsibility to go to the non-philosophical public and demonstrate the value of philosophy.

The second part of the question of applied philosophy concerns who it will be applied to: namely the (at the moment) non-philosophical public. Before we can really get moving on the acceptance of applied philosophy we will have to educate the general public in some way to the uses and benefits of philosophy, so that the people to whom it is directed will be able to see the purposes and aims of the applied philosophy we develop. I think that this is especially important in order to (and I'm being deliberately vague as to what denominations and groups I'm speaking of) counteract the influence of various religious groups and views which might hinder the acceptance of an applied philosophy by trying to subsume unto themselves matters such as ethics and the nature of man, which I think any applied philosophy should address itself to. However, these questions are generally in the public eye seen as matters of religion. It is up to us to show how philosophy can also (and I think much more profitably) treat these questions, which have hitherto been left solely to religious groups.

A final question for clarity's sake: in what way is our endeavor similar to or different ^{from} that of groups such as the American Humanist Association or the American Ethical Union? I would certainly consider liasons or other contacts with these two organizations, as much of what they have to say (especially concerning a universal ethics and so on) could be useful to us.

(22)

Subtle sarcasm? "I'd like to know," writes Leonard Cleavelin, "what a few other people think about one sentence in the last paragraph of Sanger's write-up of BR in the 14th Edition of Brittanica (RSN17-24), to wit: 'His religious views and his moral character may be due to the wise exercise of the paternal jurisdiction of the court of chancery.' Since Viscount and Lady Amberley desired their sons to be reared agnostics (which Lady Russell successfully thwarted), I can only come to the conclusion that Sanger is being subtly sarcastic here. Any other opinions?"

NEWS ABOUT MEMBERS

(23)

Harry Clifford reminisces:

In the early 30's, if I'm not mistaken, I attended a debate between Bertrand Russell and Will Durant, at Mecca Temple in N.Y. City. The subject of the debate was: "Is Modern Education A Failure?" BR said it was, while WD said it was not. I wonder how many still remember that debate. In 1944 BR gave a lecture at The New School in downtown N.Y., which I attended, and I recall that he said, among other things, that he thought there would be wars for another 500 years, as it would take that long for people to become civilized enough to desist from fighting wars. (This was before the advent of the A-bomb

In 1962, I prevailed upon the East Orange Public Library to arrange a display of BR's books, in honor of his 90th birthday.

(24)

Peter Cranford wrote this letter, which appeared in the March 1978 issue of "Guns & Ammo":

LETTERS

IT'S AN OLD STORY

Although I am undecided as to my position on gun control, it may be of interest to you to note that weapon control was instituted in China about 1,200 years ago when there was unparalleled lawlessness.

The local warlord near Canton, in order to eliminate banditry, forced all civilians to turn in their weapons. This

made matters much worse. When the civilians' knives, maces, spears and swords were confiscated, the only ones who did not turn theirs in were the thugs and bandits. The good people were now completely defenseless against the bad.

In 528 A.D., Daruma invented unarmed defense to give the civilians a means of self-protection. This eventually gave rise to judo, jui-jitsu, karate and more recently, Aikido.

Peter Crawford, Augusta, GA

- (25) Corliss Lamont wins financial damages from Central Intelligence Agency for its unconstitutional opening and copying of 155 letters to and from him, in suit sponsored by National Emergency Civil Liberties Committee. So reads the heading of an ad headlined AN IMPORTANT VICTORY FOR CIVIL LIBERTIES. The ad, in The New York Times, Sunday, March 12, 1978, continues:
 In a decision handed down February 17, Federal Court Judge Jack B. Weinstein of the Eastern District Court of New York awarded \$2000 to Corliss Lamont for the C.I.A.'s gross violation of his privacy, and directed the U.S. Government to send him a "suitable letter of regret" for the C.I.A.'s illegal actions. N.E.C.L.C. attorneys Leonard B. Boudin and Michael Krinsky represented Dr. Lamont.
 The ad reproduces a portion of the Judge's decision, which provides many details, and then solicits contributions to the N.E.C.L.C. at 175 Fifth Avenue, NY NY 10010. (Thank you, Bob Davis.)

- (26) Warren Allen Smith has a letter in UUWorld, March 15, 1978:
 Renee Namaste suggests that we substitute "e" for "he" or "she" plus "E" to refer to an androgynous personal god.
 Because theophagists will never drink to that, and because as a humanist I am concerned lest "I" might be downgraded to "i", I recommend capitalizing all personal pronouns but not capitalizing such unimportant concepts as gods, holy ghosts, god, e, or asexuality.
 Renee, if Ti (singular second person that Ti are) can accept My anthropocentric modifications, and if WORLD readers (opinion makers that They are) can publicize what E has led Me to develop, each surely will lend Ers (her + his) hand in helping You (second person plural) resolve one of Our language's ungodly intricacies.

JOB SOUGHT

- (27) R.N. ("Malt") Malatesha writes: "I have been teaching here at Idaho State University for the past two years and am in process of changing my visa status. The immigration office wants to make sure that I am not displacing a qualified U.S. citizen. And I am desperately looking for a job in the fall of '78 with an employer who would say that I am not displacing a qualified U.S. citizen." Malt's field is neuropsychology.
 * Got any suggestions? His address: Box 8319 ISU, Pocatello, ID 83209

BRS AUTHORS

- (28) Dissertation. We asked GLADYS LEITHAUSER if she could give a copy of her dissertation on Russell to the BRS Library, and she has kindly done so. It was written (recently) to fulfill a requirement for a Ph.D. in English Literature from Wayne State University in Detroit. She received the degree in December. Our congratulations and our thanks.
-

FOR SALE

(31) Allen & Unwin books by and about BR are now available from the BRS Library, and at 15% off of list price. The books are listed, next page. The first price shown is the list price; the second price (in parenthesis) is 15% off of list. Plus postage: 50¢ per book; 25¢ for a book discount-priced under \$1.50. The Library makes a modest profit on these. To order, send

payment to Don Jackanics, HRS Library, 3802 N. Kenneth Avenue, Chicago, Il 60641. These are the books:

Books by Bertrand Russell

- THE AMBERLEY PAPERS. With Patricia Russell. 2 v. 20 plates. 1133 p. 1966. \$16.00. (\$13.60)
- AUTHORITY AND THE INDIVIDUAL. 128 p. 1949. Paper. \$2.95. (\$2.51)
- AUTOBIOGRAPHY OF BR.. Complete in one volume. 752 p. Paper. 1975. \$4.75. (\$4.04)
- AUTOBIOGRAPHY OF BR. v. 1, 1872-1914. 11 plates. 230 p. 1967. \$6.95. (\$5.91)
- AUTOBIOGRAPHY OF BR. v. 2, 1914-1944. 11 plates. 268 p. 1968. \$6.95. (\$5.91)
- BERTRAND RUSSELL: AN INTRODUCTION. Edited by Brian Carr. 152 p. 1975. \$7.95. Paper--\$4.25. (\$4.04)
- EDUCATION AND THE SOCIAL ORDER. 254 p. 1932. Paper \$3.50. (\$2.98)
- FREEDOM AND ORGANIZATION, 1814-1914. 528 p. 1934. \$8.95. (\$7.61)
- GERMAN SOCIAL DEMOCRACY. 2nd ed. 184 p. 1965. \$4.25. (\$4.04)
- HAS MAN A FUTURE? 136 p. 1961. \$1.75. (\$1.49)
- HUMAN SOCIETY IN ETHICS AND POLITICS. 239 p. 1954. \$6.50. (\$5.53)
- THE IMPACT OF SCIENCE ON SOCIETY. 2nd ed. 128 p. 1976. Paper \$2.25. (\$1.91)
- NEW HOPES FOR A CHANGING WORLD. 218 p. 1951. Price to come.
- AN OUTLINE OF PHILOSOPHY. 317 p. 1927. \$10.95. (\$9.31)
- POLITICAL IDEALS. 93 p. 1963. Paper. \$2.95. (\$2.51)
- POWER: A NEW SOCIAL ANALYSIS. 328 p. 1938. \$6.50. (\$5.53)
- THE PRACTICE AND THEORY OF BOLSHEVISM. 3rd ed. 136 p. 1962. \$4.25. Paper--\$2.95. (\$3.61 & \$2.51)
- PRINCIPLES OF SOCIAL RECONSTRUCTION. 174 p. 1960. \$5.50. (\$4.68) Paper--\$1.75. (\$1.49)
- THE PROBLEM OF CHINA. 260 p. 1922. \$6.50. (\$5.53)
- PROSPECTS OF INDUSTRIAL CIVILIZATION. With Dora Russell. 2nd ed. 288 p. 1959. \$4.75. (\$4.04)
- ROADS TO FREEDOM: SOCIALISM, ANARCHISM AND SYNDICALISM. 11th ed. 223 p. 1966. \$6.50. Paper--\$3.50. (\$5.53 & \$2.98)
- SCEPTICAL ESSAYS. 251 p. 1960. \$6.50. Paper--\$3.50. (\$2.98)
- UNARMED VICTORY. 155 p. 1963. \$3.75. (\$3.19)

Books about Bertrand Russell

Gottschalk, Herbert. BERTRAND RUSSELL: A LIFE. 91 p.
Paper. \$.95. (\$0.81)

Mace, C. A. BRITISH PHILOSOPHY IN MID-CENTURY: A CAM-
BRIDGE SYMPOSIUM. \$22.00. (\$18.70)

Wood, Alan. BERTRAND RUSSELL: THE PASSIONATE SCEPTIC.
221 p. Paper. \$1.25. (\$1.06)

- (32) BRS stationery printed. More members sent in orders for the BRS stationery described in NL16-30, enabling us to print it. We now have a supply on hand (\$3 for 100 sheets, postpaid.)
- (33) "American Rationalist" (magazine) has a book service that Leonard Cleavelin recommends to "rationalistically inclined BRS members". (Is there any other kind? Ed.) "For a book list, send \$1 (refundable with first order) to Book Service-AR, 2001 St. Clair Avenue, St. Louis, MO 63144. Mention my name and the fact that you're a member of BRS."
- (34) Etc. For other items sold by the Library — including "The Tamarisk Tree" by Dora Russell (40) — see RSN17-45.
-

CORRECTIONS

- (35) Not a mansion. In the obituary on the deaths of the Crawshay-Williams, the Daily Mail reporter said, "Lord Russell had a mansion only 100 yards away from Mr. Crawshay-Williams' cottage." Bob Davis, who visited the "mansion", says: "ER's house was in fact a cottage. People assume that because he was an Earl, he lived in a mansion."
-

4-YEAR INDEX CORRECTIONS

- (36) Please note the following corrections of errors and omissions in the 4-Year Index (NL16, pp. 24-54). You may wish to mark them in your copy of NL16.
- ✓ ANNUAL MEETINGS (p.25)
Results of the vote: 1976 Meeting in NYC on Dec. 26-28, 1975. Add: 7-2
- BALLOTS (p.26)
Voting for 5 Directors out of 6 candidates, closing date 10/1/77. Add: 15-40
- ARTICLES REPRINTED IN THE NEWSLETTER (p.26), add at the very end:
"Silly Season Samples", James Reston's column in the NY Times, 8/22/77. 16-17

- ✓ BLACKWELL, KENNETH (p.27)
Re-elected a Director for 3 years starting 1/1/77. Add:12-12
- ✓ DIRECTORS (p.27)^{BY}
15 Directors elected at Annual Meeting(12/75)... Add:10-6
- ✓ DIRECTORS (p.32)
Nominate your candidates for Director.12-37. Page number should be 14-37
- HOOK'S ARTICLE (p.34)
Add the following: Taskonis on the Hook article. 13-35
- The following 3 headings incorrectly appear on p. 39: NOBEL PRIZE FOR LITERATURE, NOTICE TO NEW MEMBERS, NUCLEAR POWER. They should appear on p. 42, after NEWSLETTER CONTRIBUTORS.
- ✓ VOTES BY MAIL
5 Directors elected for 3-year terms starting 1/1/78. Add:16-12

If you find other errors or omissions, please notify us.

RECOMMENDED READING

- (37) "Classics of Free Thought" by 36 authors (including BR), edited by Paul Blanshard. "The book is unique and needed," says JOHN TOBIN. \$5.95 paper, \$12.95 cloth (+ 50¢ postage) from Prometheus Books, 1203 Kensington Avenue, Buffalo, NY 14215.
- (38) "Platform for Change" by Stafford Beer (Wiley, 1975), recommended by JAMES KUZMAK. "Beer is an English cybernetician. BR is mentioned in the first few pages because he came up with the key thought of 'the class or classes that are (or are not) members or themselves'. This thought is central to the rest of the book because Beer advocates the development of a metalanguage for management whose logic is superior to the woefully inadequate present one. Beer argues for the applications of cybernetic laws and 'eudemonic' criteria to government and society, and a revolution to bring it about because we don't have much time."
- (39) "Hazards of Nuclear Power" by Alan Roberts and Zhores Medvedev (Spokesman, Nottingham, 1977). Price 95p. Contents: "The Politics of Nuclear Energy" by Alan Roberts (pp.7-57), and "Nuclear Disaster in the Soviet Union" by Zhores Medvedev (pp. 58-73). The book's bland title hardly prepares one for the chilling facts within. It is now in the BRS Library. Sent to us by Ken Coates for the Bertrand Russell Peace Foundation. (Spokesman is the publishing arm of the Foundation.) Thank you, Ken.

BOOK REVIEWS

(40)

Dora. We found "The Tamarisk Tree" a fascinating book. You needn't take our word for it; here are reviews from "Book Review Digest 1975":

RUSSELL, DORA. The tamarisk tree; my quest for liberty and love. 304p il \$9.95 '75 Putnam

B or 92

SBN 399-11576-5 LC 75-18634

"Bertrand Russell's second wife . . . feminist and member of the International Labor Party, gives an . . . account of her marriage to Russell and of the other men in her life in this . . . autobiography. She contradicts Lord Russell's version of their differences and seeks to convince . . . readers that she was truly dedicated to the concept of free love. Her devotion to Russell never weakened, even during her subsequent liaisons, she insists, and she was deeply hurt when he left her to marry an Oxford student." (Publishers' Weekly) The title refers to the tamarisk tree, a remembrance from childhood which came to symbolize Dora Russell's early idealistic aspirations and, ultimately, how her life measured up to those dreams. Index.

Choice 12:1357 D '75 110w

"[This book] is dominated and directed by its author's insistence on feminist values. I respect these, and I admire the way she makes them relevant to the events and relationships which she describes. Her criticism of Freud's essentially patriarchal view of sex is cogent and refreshing. Her loyalty to her spiritual bond with Russell is also to be respected. For the rest, I do not know what to make of the fact that it is Bertrand Russell who emerges from these pages much more clearly than Dora. Dora has opinions, but Bertie is a person. Nor do I quite know what to make of the Bertrand Russell who emerges." Robert Nye
Christian Science Monitor p38 D 1 '75 1050w

Economist 256:106 Ag 2 '75 370w

"Dora Russell's quest led her to an 'open' marriage to Bertrand Russell, dedication to liberal causes, the founding of an experimental school, and a stormy divorce after she bore another man's children, with Russell's approval. The author treats these events with surprising detachment, apparently for objectivity's sake, though the effect, unfortunately, is to make her analyses of her personal struggles and philosophy superficial. But the details of her history studies at Cambridge, visits to Russia and China, involvement in the first stages of movements like communism, progressive education, and feminism, are intrinsically fascinating. Also, since until now we have had only Bertrand Russell's version of the marriage, her book puts their relationship into a new perspective and is essential reading for anyone interested in the mathematician-philosopher." R. W. Tesler

Library J 100:1624 S 15 '75 110w

"There is a good deal of irony surrounding Dora Russell's autobiography. . . . For most readers, the lifetime of hard work and good causes, the political conferences, the humanist gatherings, the committees on birth control and sexual reform, will have less interest than the account of [her] marriage's curious beginning and ending. . . . Impossible as it is, for participants and observers alike, to know the whole truth about such tangles of passion, reason, pride, and revenge, one cannot help being engaged by this hubristic tragic-comedy. . . . The author does not take her story much beyond the ending of the marriage in *The Tamarisk Tree*, though she touches on later tragedies that she suffered and survived. In general she writes with admiration and affection of 'Bertie' and there are nice glimpses of their life together." Rosemary Dinnage

TLS p864 Ag 1 '75 950w

"The school the Russells founded in order to give their children companionship in a free environment is only sketchily described here, but then [Bertrand Russell's] stories about it are well known. . . . At all events, Russell withdrew from both school and marriage in 1932, leaving a bitterly unhappy woman to struggle through the divorce proceedings. Life continued to treat her unkindly—she does not discuss her later political work but mentions some of her personal problems—and she is to be admired for her evident courage as well as her candour. But there is also a streak of astonishing naiveté running through this book: it may have been part of what charmed Russell (she mentions his capacity for cynicism) but it is a dangerous quality in someone who marries an idol." Claire Tomalin

New Statesman 90:57 J1 11 '75 900w

"The Tamarisk Tree" is for sale by the BRS Library. See RSN17-45

FINANCES/CONTRIBUTIONS

(41)

Contributions. We thank TRUMAN ANDERSON JR., PETER CRANFORD, FRANCIE DIMITT, CORLISS LAMONT, and WILLIAM WEBBER for their recent contributions.

OBITUARIES

(42)

Edith. We were glad to receive the following newspaper clipping from Ken Coates, of the Foundation. Written by Ken, it ran in "Tribune" (London), which Ken identifies as "the English socialist newspaper":

DEATH OF EDITH RUSSELL

EDITH RUSSELL, who died on January 1, was Bertrand Russell's staunchest companion and aide; she did more than anyone else to sustain him during the last difficult and sometimes fearfully lonely campaigns of his most active life, writes Ken Coates.

What he thought of her is beautifully recorded in the dedication of his autobiography. She loved him completely selflessly, and he knew her great worth. But she did more than sustain him as a companion: she was an active partner in all his efforts, a shrewd critic and counsel, and a truly prodigious moral support. Wherever he was in those remarkable battles, she was there also: on the plinth at Trafalgar Square, or sitting down with the Committee of 100: off to prison for practising civil disobedience, or standing beside him at the inauguration of the Tribunal on War Crimes in Vietnam.

She was with him at the great London demonstration of the seamen during the 1966 strike: and she was there, unremittingly involved, in all the other quieter initiatives, for political prisoners East, West and neutral, or for the victims of war or political repression, which made their home in Wales, Plas Penrhyn, as busy as a major office, with its constant correspondence and telephoning, coming and going, planning and campaigning.

After 1970, when Bertie was no longer there, she toiled relentlessly to carry on his work. She continued to write many hundreds of letters, fund-raising, lobbying, defending victims of various arbitrary governments, and helping forward the development of the Russell Foun-

ation, of which she always remained a most vigorous and entirely self-sacrificing partisan.

Attacks on Russell continued after his death. She read them all, and painstakingly discussed the more serious ones, taking care to point out the numerous factual errors contained in so many of them. But she was profoundly reluctant to enter public debate on them although she never hesitated to address herself to the substantive issues about which various critics wished to belabour him.

Not all of the offenders were corrigible. Alexander Solzhenitsyn, for instance, never replied either to her private letters or to her public corrections of the various unfounded slurs he uttered against Russell's alleged attitudes to Stalin.

Edith Russell was a gentle, kindly person with a most resolute will, an unquenchable loyalty to the causes and principles in which she believed, and a capacity to encourage others in the face of seemingly overwhelming difficulties. There is no doubt in my mind that she was able to augment Russell's powerful commitments to human survival and against injustice, by joining her extraordinary moral force with his.

This alliance enabled him for years to combat not only the external adversaries, but physical frailty itself. I know of no more impressive evidence of the power of love than this. It has always been fashionable to think of love in the same moment that we think of youth. The depth of affection between these two noble people gives it all a different perspective for me, and I hope that perspective will have its relevance in the world we wish to bring into being.

Thank you, Ken.

ERS BUSINESS

(43) Director-nominations invited. The ERS has 15 Directors. 5 are elected each year, for 3-year terms. 5 Directors present terms expire on 1/1/79: PETER CRANFORD, BOB DAVIS, LEE EISLER, MARTIN GARSTENS, and GARY SLEZAK. We therefore need to elect 5 Directors for 3-year terms starting 1/1/79.

Any member may nominate a member to be a candidate for Director. The names of all candidates will appear on a ballot in the next issue, and each member will vote for 5 names on the ballot. Directors may be re-elected.

There is an innovation this year. We encourage anyone who so wishes to volunteer to be a candidate; that is, you are encouraged to nominate yourself, if you wish to.

Please send your candidate's name, and a brief statement of qualifications, to the Election Committee, c/o Russell Society News (address on Page 1).

P.S. The number of Directors may be increased from 15, at the May Meeting at ^M_c^Master. If so, the number of Directors to be elected this year may also increase.

ACKNOWLEDGMENTS

(44) Thank you, Don. We want to express our gratitude to Don Jackanicz for the excerpts by Adler, Ayer, and Durant that appeared in the last issue (RSN17-21,22,23), that he so kindly provided.

"RUSSELL SOCIETY NEWS" SUPPLEMENTS

(45) Membership list, dated 4/1/78, is being mailed with this issue. It is for members' personal use only, to facilitate communication with other members. Please do not show or lend it to non-members. Outsiders have sometimes used our mailing list for their own purposes; and when they do, members may receive mail they may not want.

PERIODICALS RECEIVED

(46) "World Peace News" (777 U.N.Plaza, New York, NY 10017) is published 9 times a year by The American Movement for World Government (PO Box 472, New Canaan, CT 08840). Its editorial board of 70 includes Isaac Asimov, author; Roger N. Baldwin, founder ACLU and the Int'l League for the Rights of Man; David R. Brower, President of Friends of the Earth; Norman Cousins, former editor of Saturday Review; Theodore M. Hesburgh, President of Notre Dame University;

Carey McWilliams, Editor Emeritus of The Nation; Otto Nathan, executor of the Estate of Albert Einstein. Subscription price: 3 years \$13, 2 years \$11, 1 year \$9. If interested, we suggest you request a sample issue, mentioning that you heard about them through Russell Society News.

PAPER RECEIVED

(47) "The Extinction of the Gadfly — A Plea for Philosophical Commitment" by Leonard Cleavelin and Don Evans, an 8-page paper written for the March 1978 intercollegiate Undergraduate Philosophy Conference sponsored by Illinois State University, is now available from the BRS Library.

The paper urges philosophers to come out of their ivory towers and deal with problems that affect the everyday life of the ordinary man, as BR did.

Note to educators: Leonard is enthusiastic about intercollegiate undergraduate conferences: "It is a fantastic way to get undergraduates involved in the 'meat' of philosophy, the interchange of ideas, views, and speculations; so fantastic that coursework doesn't come close."

SPECIAL PROJECT

(48) "Whettam's 'Symphony Against Fear'", says WARREN ALLEN SMITH, "is a dramatically strong musical statement, an atonal composition which inspires by its regal and rich tones. Like a Prokofiev composition, it is subject to a listener's interpretation. But the selection commences with a scherzo-like movement, as if dawn music, and the calmness proceeds fearlessly through a central section to a finale that includes a crescendo and unexpected final statement, leaving one wishing for more. Highly rhythmic, often irregular, it includes regal trumpet-like assertions with distinctive violin, flute, and percussion. The thematic developments are intrepid, audacious, assertive, cogitative, ponderous, pensive, intriguing (all adjectives in keeping with the work's being dedicated to Bertrand Russell.)"

Warren owns a recording studio in New York City. He took the tape that East German Radio had sent us (RSN17-54), put it on a reel, and listened to it. He is the first — and so far only — BRS member to have heard it.

"The master tape is first-rate, as is the composition," says Warren. "The work needs and deserves a wide audience."

He offers recommendations for making the work available on an LP or cassette. We will hear more about his recommendations at McMaster in May, where we will of course also hear the Symphony itself.

We are greatly indebted to Warren for his technical services and his advice.

ABOUT OTHER ORGANIZATIONS

(49)

The Bertrand Russell Peace Foundation is investigating human rights in West Germany, according to a March 15th story in the Washington University student newspaper, "Student Life":

**Tribunal Questions 'Berufsverbot'
THREAT TO HUMAN RIGHTS IN WEST GERMANY**

by Anne Strauss

During the last week in March the Third International Russell Tribunal will begin public hearings on the state of human rights in West Germany. The initial intention to organize this tribunal was announced by the Bertrand Russell Peace Foundation in February 1977 and came in response to widespread concern caused by the application of Germany's "radical decrees" of 1972 and subsequent, similarly motivated legislation. The Foundation "has come to the conclusion that a situation has been created in the Federal Republic of Germany which initial evidence shows to be characterized by repression and intimidation."

The international tribunal is a central part of the work of the Russell Peace Foundations, established in 1963 to carry out its benefactor's continual struggle on behalf of human rights and world peace. The present Russell Tribunal shares with the two preceding tribunals the object of identifying, investigating and

calling attention to violations of human rights in specific situations, using the United Nations Charter and appropriate local legal instruments as criteria against which such violations can be measured.

Every tribunal is composed of a jury of eminent persons of international renown whose moral integrity is above question. Every tribunal is insulated from political pressure emanating from parties and governments as well, so that, in the words of Jean Paul Sartre, Executive President for the first tribunal, four principles effectively guide the work of the tribunal: "Objectivity, openness, universality and independence."

The present tribunal, constituted on October 16, 1977 in the German city of Darmstadt, is motivated by the desire to prevent the erosion of democratic norms and protections in an established democracy. The Third International Russell Tribunal is mandated to pursue three issues: whether German citizens have been denied the right to practice

their chosen profession because of their political convictions,

whether a state of censorship has been created as a result of the application of criminal and civil laws or extra-legal measures, and

whether basic human rights have been eroded or eliminated in conjunction with criminal proceedings.

In the fall of 1976, some people on this campus concerned about the problem discussed above formed a St. Louis committee for civil liberties in West Germany. Other such committees have sprung up throughout the states and, at present, the N.Y. Committee is publishing a quarterly newsletter meant to inform the American public about restrictions on human rights in West Germany. On Thursday and Friday, March 16 and 17, from 11:30-1:30, the St. Louis committee will have a table in SUPAC where the newsletter will be sold and donations collected for both the work of the NY Committee and that of the Russell Tribunal, and signatures collected in support of the work of the Tribunal.

SUPAC is the university student union. Leonard Cleavelin is a student at Washington University.

Thank you, Leonard.

1978 ANNUAL MEETING

(50a)

May 19-21, 1978 at McMaster University, Hamilton, Ontario. That's when and where the BRS holds its 1978 Annual Meeting.

As Bob Davis has mentioned, Hamilton is within reasonable driving distance for the majority of our members, from Chicago to New England. Air travelers fly to Toronto, which we believe is an hour or so from Hamilton by bus.

(50b) How to reserve. Ken Blackwell — who (for the benefit of new members) is the Archivist of the Russell Archives — has arranged for dormitory accommodations. The price includes the room for Friday and Saturday nights, breakfast and lunch Saturday and Sunday, parking and taxes: \$30.90 per person, double occupancy, or \$36.50 single. The only other cost is the Saturday evening banquet, probably about \$12 more or less, depending on how many attend and on what food is selected.

To reserve a room, send payment (but do not include banquet) to Mr. Kenneth Blackwell, Archivist, Russell Archives, McMaster University, Hamilton, Ontario, Canada L8S 4L6

(50c) When you arrive at McMaster, go to the Russell Archives (located in Mills Memorial Library), and get (a) information about your room; (b) the printed program-schedule for the weekend; and (c) the printed agenda for the business meeting on Saturday.

The first session starts after dinner Friday evening at 7:30.

(50d) Tentative program-schedule:

Friday evening session starts at 7:30

- . Welcome and introductions
- . Film, "The Life and Times of Bertrand Russell" (BBC)
- . General discussion of BR's interests and how they relate to the BRS

Friday evening Board of Directors meeting starts at 10

Saturday morning session starts at 9

- . Short BR film
- . Members' business meeting
- . Lester Denonn talk, on his BR Library
- . David Harley talk, on the Beacon Hill School
- . excerpts from Dora Russell's not-yet-published book on education

Lunch, and free time to visit the Archives

Saturday afternoon session starts at 2

- . Short BR film
- . Harry Ruja talk, on BR and the Jews
- . Discussion of philosophy for high schools
- . Free time to visit the Archives

Red Hackle Hour, 5

Banquet; 7:30

Sunday morning session starts at 9

- . Short BR film
- . Gladys Leithauser, on the Faustian theme in BR's fiction
- . to be scheduled

Lunch, and farewell

REPORTS FROM OFFICERS

(51) Chairman Peter G. Cranford reports:

The most important development since the last issue of Russell Society News has been the realization that the Society is in need of some reorganization. The original founders operated very informally, and we aimed at a democratic organization on the model of a New England town meeting, where everybody votes on every issue. Too, at the time, we thought that the ideas of Russell would be better for the young (in particular) than the philosophical free-for-all of drugs, guru mysticism, and doing one's own thing whatever the personal or social consequences. Most of us operated on the assumption that hordes of people would become enamored of rational substitutes. In fact, one of our ex-members arranged for a hall to hold some 400 seekers of wisdom in a great New York hotel. Fortunately we were able to call it off in time.

The Society has evolved in a totally different fashion. Our membership will probably continue to be small; the intellectual and moral calibre of our members will be high; we will be depending on contributions mainly; we will be influential far beyond our numbers; we will continue to spread Russell's ideas; we will be active primarily as catalysts. Finally, under the limitations of our Bylaws, we are forced to govern more like a representative democracy than like a New England town meeting.

We are in the early stages of expanding our applied philosophy activities, which have been somewhat dormant. Jack Pitt and I would like to recommend an open conference to bring together other groups interested in the field.

(52) President Robert K. Davis reports:

Actually, Bob's report for this issue is not a formal one but consists mainly of items (48) and (50). That is, he has been working chiefly on plans for the upcoming Meeting at McMaster and on the Whettam Symphony project.

(You may recall, incidentally, that it was Bob's meeting, and correspondence, with Edith that initiated the chain of events that resulted in our acquisition of the tape of the Symphony and Warren Smith's evaluation thereof.)

(53) Treasurer Stephen J. Reinhardt reports:

For the quarter ending 3/31/78:

Balance on hand (12/31/77).....	759.06	
Income: 22 new members.....	250.00	
38 renewals.....	463.20	
Total dues.....	713.20	
Contributions.....	357.50	
Sale of Newsletter back issues.....	15.00	
Total income.....	1085.70	1085.70
		1844.76

Carried forward.....	1844.76	
Expenditures: Information & Membership		
Committees.....	588.22	
Subscriptions to "Russell".....	276.50	
Other.....	40.00	
Total spent.....	904.72	<u>904.72</u>
Balance on hand (3/31/78).....		940.04

(54)

Secretary Jack Pitt reports:

Unless the Secretary is an executive secretary, he or she rarely "reports", apart from minutes and other documents of a similar nature. But this time I would like to make a couple of observations.

First, an announcement. Effective as soon as is convenient for the organization, I will step down as Secretary, though I should be pleased to remain on the Board and to serve as Chairperson of the Traveling Fellowship Program.

The TFP will definitely swing into action in the coming year. It has been delayed because a decision from McMaster has been delayed.

Perhaps the Secretary is as good a person as any to observe that we have been rather casual in our observance of our bylaws. The main point is that we should either change our rules or follow them.

We obviously need, but still do not have, a fund-raiser.

Finally, a proposal. As we are so small and North America is so big, it might be worthy of discussion to ask whether we might function better divided into, say, East, Western, and Pacific Divisions (as is the American Philosophical Association, which is many times our size.) The Chairman of the Board could act as syntheizing agent, and Russell Society News could still maintain a level of national unity

I look forward to seeing as many as possible of you at McMaster.

INDEX

(55)

Introductory (1). May '78 Annual Meeting (2,50). Chairman Cranford reports (3,51). President Davis reports (4,52). Treasurer Reinhardt reports (5,53). Secretary Pitt reports (5.5,54). Reports from Committees: Membership (6); Science (7). On ER's science fiction (8). The 13th Edition (9). Christian by osmosis (10). Ayer influenced (11). Ayer compared (12). What J. Carter reads (13). USSR physicist quotes ER (14). Will Durant on ER (15). Psychologists take the bait (16). Mahoney spreads the word (17). Problems in teaching ER (18). View from the top (19). Pseudoscientists (20). On the Chairman's Report (21). Subtle sarcasm? (22) News about members: Harry Clifford (23); Peter Cranford (24); Corliss Lamont (25); Warren Smith (26). Job sought (27). Leithauser dissertation (28). New members (29). Address changes (30). For sale: Allen & Unwin books (31); BRS members' stationery (32); "American Rationalist" book service (33); etc. (34). Not a mansion (35). 4-Year Index corrections (36). Recommended reading: "Classics of Free Thought" (37); "Platform for Change" (38); "Hazards of Nuclear Power" (39). Dora reviewed (40). Contributors thanked (41). Edith (42). Nominations invited for Directors (43). Thank you, Don (44). Membership list caveat (45). "World Peace News" (46). An undergraduate paper (47). Whettam's Symphony reviewed (48). The Foundation & West Germany (49). Index (55).

RUSSELL SOCIETY NEWS

No. 19

August 1978

- (1) The 1978 Annual Meeting, at McMaster (2,49,50). Neilands at Nobel Symposium (12). BR as sociologist (15,47). Herbert Stahl's tribulations (45). Paul Edwards accepts (28). Time to vote (39,52a). Index (51). An asterisk in the left column indicates a request.

1978 ANNUAL MEETING

- (2) The Annual Meeting, at McMaster University, Hamilton, Ontario, May 19-21, 1978, proved to be highly satisfying. To tell it quickly: we discussed BRS business, saw 4 BR movies, heard 5 papers on BR, had a banquet, heard a symphony, and enjoyed the occasion generally. And, if you will forgive a bit of self-praise, we will quote from a letter HERB VOGT wrote later, after he had attended his first BRS meeting, at McMaster: "The best part was to learn how nice everyone was."
- The physical facilities were splendid. We had a large private auditorium (with movie projection booth, complete with operator), and a private dining room, all in the pleasant surroundings of the attractive Mc^Master campus.
- (2a) Two sets of minutes are part of this issue:(a) minutes of the meeting of Members (50), and (b) minutes of the meeting of Directors (49). They tell the story of what happened. We suggest you read them at this point, since the following are details that supplement the minutes:
- . Dr. William Ready, University Librarian, was the moving force behind the acquisition of the Russell Archives by McMaster. He persuaded the Canada Council to provide \$110,000, and Cyrus Eaton \$25,000, toward the original purchase of the Archives.
 - . For Joy Corbett's recollections of Beacon Hill School, see N113-23. She is now Joy Corbett Ray.
 - . In mid-afternoon Saturday, the meeting moved from our auditorium to the Russell Archives. Here we looked at the enormous collection of books and articles by and about BR, listened to tapes, and saw the Archives' most recent important acquisition: BR's own library, desk, and chair. Then followed the Red Hackle Hour, with genuine Red Hackle (unlike last year, when we were offered a mere substitute.)
 - . Saturday evening's banquet — quite a good one — was followed by a playing of Graham Whettam's Symphony Against Fear (N115-14,46). The tape that was played was a copy made by WARREN SMITH from a tape that East German Radio had been kind enough to provide. The original East German tape is being preserved for some possible future use.
 - . An interesting detail in GLADYS LEITHAUSER's paper on BR's interest in the Faustian theme is the name BR chose for the leading character in his early try at fiction, "The Perplexities of John Forstice." Forstice sounds remarkably similar to Faustus.
 - . The BRS Library is acquiring copies (or abstracts) of the papers presented at the Meeting, which may, of course, be borrowed.
- (2b) Officers were elected at the Directors' Meeting (49g) for one-year terms starting 1/1/79, as follows: Chairman, Peter Cranford; President, Robert Davis; Vice-President, Warren Allen Smith; Treasurer, Stephen J. Reinhardt; Secretary, Donald W. Jackanicz.
- (2c) 21 BRS members attended — approximately 10% of the membership, and about the same number as last year: DONG-IN BAE, KEN BLACKWELL, PETER CRANFORD, JIM CURTIS, BOB DAVIS, LESTER DENONN, LEE EISLER, MARTIN GARSTENS, MC KENZIE GOODRICH, ED HOPKINS, DON JACKANICZ, GLADYS LEITHAUSER, DAN MC DONALD, IBRAHIM NAJJAR*, JACK PITT, RAYMOND PLANT, STEVE REINHARDT, HARRY RUJA, WARREN SMITH, CARL SPADONI*, HERB VOGT. (*became members at the Meeting.)
- An equal number of non-members, some of them McMaster students or staff members, attended one or more events (two attended only the banquet): Catherine Beattie, Kandriin Blackwell, Andrew Brink, Grant Corbett, Earl Darlington, Bess Deponn, Jessie Edwards, Helen Garstens, Louis Greenspan, Nicholas Griffin, Barbara Hardt, David Harley, Joseph Harley, Mrs. J. P. Harley, Lourdes Harley, Diane Keress, Duncan Martin, Margaret Martin, Joy Corbett Ray, Mr. and Mrs. George Willie.
- (2d) A final thought about attendance: Dong-In Bae travelled all the way from West Germany to Hamilton to be with us. We hope more of you will be with us next year. We feel sure that cost is what keeps attendance down. How about starting now to put aside a few dollars a week — Christmas Club fashion — so you can come to the next Meeting?

NEXT ANNUAL MEETING (1979)

- (3) Where and when shall we meet in 1979? At the 1978 Meeting, the time and place of the 1979 Meeting was discussed. The general feeling seemed to be that it should be in the East, and that the members should vote on the precise location, and on the time.
- The following cities were mentioned, and are now candidates for 1979: Boston, Chicago, Hamilton (McMaster), New York, Philadelphia, Washington. Some thought we should not go to Chicago if ERA has not been passed.

- * If you think you may attend in 1979, please vote for the city you prefer, using the ballot (53b). Some members seemed to want to return to Hamilton in 1979. Hamilton has certain advantages: the Archives are there; the physical facilities are the best we've had and could hardly be improved on; and it may be possible to schedule our Meeting during the nearby Stratford Festival, and if so, we would have the option of seeing some Shakespeare either before or after the ERS Meeting. We do not yet have the dates of the 1979 Stratford Festival, but they will probably be the same as in 1978: June 5 to October 14.
- As to time, it will be a Friday-evening-through-Sunday weekend. Please indicate (on the ballot) the month you prefer (1st choice, 2nd choice). If any particular weekend is impossible for you, please say so on the ballot.
-

REPORTS FROM OFFICERS

(4) Chairman Peter G. Cranford reports:

I have been in communication with Dora Russell and John Sutcliffe in connection with their formally establishing a British ERS. The Earl Russell has stimulated the idea and Mrs. Russell has contacted Peter Cadogan, a former prominent member of the CTE of 100, and BR's good friend, Michael Scott. As things stand, we will meet in London sometime in August.

The Earl Russell and Dora Russell have written a joint letter to the Master of Trinity investigating the possibility of placing a suitable memorial there. Dora reports, "There is a plaque for Bertie and some of his work is on show in their library." She is also investigating to see if Peter Shore (Environment) has managed to save the terrace of houses in Sydney Street, Chelsea. The Russells lived in one of these and from there fought three elections and Dora started the Birth control campaign. No doubt the British group will begin raising funds for placing a bust of BR somewhere. She has suggested Red Lion Square, facing the Conway Hall "which was sacred to freethinkers."

Dora has two books in progress. She had originally written one but now plans to divide it so as to deal separately with the Beacon Hill School and her autobiography. She is quite active running her house and garden at Carn Voel, Penzance. If Dora had not undertaken the round-the-clock nursing of BR when he was stricken in China and barely survived, more than 50 years ago, his literary output would have consisted of about 15 books instead of some 70 — not to speak of all his other achievements of the years between 1920 and his death in 1970.

(5) President Robert K. Davis reports:

The highlight of the ERS year is always the Annual Meeting, and this year's was no exception. Most of the major news will be contained elsewhere in RSN19. I would like to poll you on a few issues; your responses will help us develop future plans. Please mark the questionnaire portion of the ballot (53c).

REPORTS FROM COMMITTEES

- (6) Applied Philosophy Committee. See (49i).
- (7) Audio-Visual Committee (Warren Allen Smith, Chairperson). See (49e).
- (8) Finance Committee (Peter G. Cranford, Chairperson). See (50a,c; 49c,f).
- (9) Library Committee (Donald W. Jackanicz, Chairperson). See (47,50d).
- (10) Membership Committee (Lee Eisler, Chairperson, Beverly Smith, Co-Chairperson). See (49b,50b).
- (11) Scholarship Awards Committee (Jack Pitt, Chairperson). See (50e,49d).
- (12) Science Committee (J.B. Neilands, Chairperson):

Joe Neilands will be one of the speakers at a Nobel Symposium — at the Royal Swedish Academy of Sciences, August 20-25 — on "Ethics for Science Policy". Among the topics on the agenda: ethical dilemmas in weapons development; priorities and control in the organization of research, from the points of view of society, of the scientist, and of the scientific community; the information problem in science. Joe will speak on the scientist's responsibility to communicate with those outside the scientific community.

SHORT & SWEET

- (13) BR describes hell. "Hell is a place where the motorists are French, the policemen are German, and the cooks are English."
From Lester Denonn's notes for his talk at the BRS Meeting at McMaster University, 5/20/78. He had come across the quotation in Edwards' The New Dictionary of Thought, a book in his extensive BR library.
-

BR QUOTED

- (14) Arnold Beichman, in a review of Arthur Koestler's latest book, Janus: A Summing Up (in the Boston Globe) writes:
Koestler, who shares Freud's gloomy outlook for mankind, has some hope. It's all reminiscent of Bertrand Russell, who once said that "we must proceed in the spirit of unyielding despair."
-

ASSESSMENTS OF BR

- (15) BR's sociological insights were well ahead of the sociologists, according to Sociologist JIM MCKEOWN. His article, "Russell as Precursor of Social Changes"(46), tells us that sociologists could have learned a lot from Russell — and no doubt still can. Jim wrote this paper especially for RSN.

* * * * *

First Peter Cranford wrote about BR as psychologist. Now Jim McKeown has written about BR as sociologist. We hope that people in other fields will write about BR in their fields (history, political science, religion, education, etc.)

- (16) "Bertrand Russell's 'Anti-Semitism'", an abstract of the paper that HARRY RUJA presented at McMaster on 5/21/78, is included in this issue (48).
-

PROMOTING BR/ERS

- (17) Still more requests from psychologists. There have been 204 requests (as of 7/18/78) for Peter Cranford's paper, "Bertrand Russell's Relevance to Psychology." The 5-page paper is offered free to readers of the APA MONITOR and THE PRIVATE PRACTITIONER. The offer is made in the MONITOR — which is published by the American Psychological Association — by means of a small ad which runs in every issue for a year. The offer in THE PRIVATE PRACTITIONER — published by The American Society of Psychologists in Private Practice — is made through an item in the editorial columns.
-

PHILOSOPHY

- (18) John Sutcliffe writes (4/30/78):

I was most interested in Leonard Cleavelin's remarks on Peter's "applied philosophy" (RSN18-21). I agree that an "applied philosophy" is needed but this does not imply it has to be a religious, moral or mystical one. It is a modern superstition of some philosophers that the irrational can be preserved by unpacking logic, on the one hand, from dealing with facts on the other, while retaining religion, morality and mysticism in some arbitrary metaphysical void independent of the other two. Without any basis in logic or fact, any such speculation is a sheer waste of time...

The time has come, I believe, to abstract from philosophy a new "science" derived from the lessons of logical analysis pioneered by Russell and continued by such philosophers as Karl Popper. It would be a science involving a comparative analysis of normative belief systems, whether any one of them fulfills or not the needs and desire of those it claims to serve, and whether the beliefs offer any genuine factual understanding of their condition and the world of which it is a part. I have attempted to construct such an analysis which I have called "ismology" and have employed it in turn as the foundation for a "practical sociology". Both are developments of themes in BR's work although I do not claim they are the only interpretations possible. I have taken the liberty of enclosing

two papers on these subjects which explain in more detail what I might term an "applied philosophy". An example of where this would be useful is in dealing with the invasion of "pseudo-science" a la Boyce Rensberger's piece (RSN18-20).

Another example of this kind of thinking is to be found in RSN18-10, Osmosis, which involves a kind of sentimental reductionism in those unprepared to face a disagreeable fact. Mr. Thrapp's use of BR's quote as exemplifying Christianity is a falsehood in complete disregard of the bloody history which accompanies this "faith". It reminds me of a debate I once had with a clergyman who assured me all Christians were simply members of the same Catholic family. When I pointed out that by the same token all Christians were really Jews, he wanted to change the subject.

John's 2 papers — "Ismology" (2 pages) and "Psychology, Suggestion, and Influence" (8 pages) — as well as his letter of 4/30/78 from which we have quoted can be borrowed from Don Jackanicz, BRS Library, 3802 N. Kenneth Avenue, Chicago, IL 60641.

RELIGION AND ITS ADVERSARIES

(19) This article appeared in The New York Times Review of the Week, 5/14/78, p.20. We're sorry we had to cut off part of Ms. O'Hair's head; we like what goes on in her head. For more on adversaries of religion, see (43) and (44).

Discussion Is Out, Only Experience Counts

Atheism Survives, But Debate Is Dead

By KENNETH A. BRIGGS

The legendary "village atheist," who once symbolized the tough-minded tradition of dissent from religion, is fading from American folklore as the result of changing cultural patterns which have reduced public debate on such issues as the existence of God.

The career of the atheist propagandist Madalyn Murray O'Hair provides an example. Two decades ago, she was the subject of passionate controversy for her attacks on religion. Now, though she has established a center for atheism in Texas, she attracts little serious attention. Recently, she toured the South debating with Bob Harrington, known as the "chaplain of Bourbon Street." The trip resembled a histrionic roadshow more than an intellectual contest.

Nor is the opposite pole of the debate, once typified by a weekly television program in which Archbishop Fulton J. Sheen used logic and a blackboard to try to convince his audience of the truth of Christian claims, any more visible. Perhaps in their heydays Bishop Sheen and Mrs. O'Hair were the last representatives of the robust rationalism that both justified medieval theologians, who confidently proved propositions about God, and nourished the illustrious American infidel, Robert G. Ingersoll, who drew huge lecture fees in the 19th century for proving God's nonexistence.

Talk about God has not entirely vanished from the public forum, but the terms of the discussion have changed; as private, evangelical religion has become the dominant religious force, its language has emphasized direct "testimony" rather than rationalistic approaches. "Discussion has shifted from the head to the heart," says Dr. Jonathan Z. Smith, dean of undergraduate studies at the University of Chicago and a professor of religion. Courses which approach theology from a personal and autobiographical standpoint "are the hottest thing in religious studies," Dr. Smith notes, adding that "a great deal of this approach doesn't lend itself to propositional thinking."

Among the explanations offered for the change is diminished confidence in the power of reason to lead to truth. "There is not the assumption that out of philosophical debate you can find answers or unveil God,"

Ed Malick
Madalyn Murray O'Hair

said the Rev. Richard Unsworth, the chaplain at Smith College. "The whole development of existential thought has much to do with it."

The loss of the leading theological "giants" in the past decade has been another factor. Paul Tillich and Reinhold Niebuhr, who generated intellectual challenge for religious questions, died during this period and there have been no comparable replacements.

Another factor cited is ignorance; students may be less equipped than formerly to carry on religious discussion. A growing number have had little or no religious training and are therefore not in possession of the terminology and basic theological concepts that allowed previous generations to discuss these subjects.

In the past, college students were expected to question the religion of their upbringing. But the growing numbers who now arrive with no spiritual background means that many come to religion first in their college years, usually through a personal experience.

Still another element in the university setting is the drift toward greater religious pluralism. "There is a sense among students that it's okay to differ on these issues," says Mr. Unsworth. "In the 50's we didn't understand how dominated we really were by the need for conformity."

Compared with that decade, the present time is marked not just by increasing secularism and a tendency toward unbelief, but by what the Rev. Claude Evans of Southern Methodist University describes as an increasing polarity between fundamentalist Christianity and a rising number of people who simply

"don't care." Like many others, Mr. Evans believes that public discourse on religious questions has deteriorated largely because, as he says, "anti-intellectual attitudes have taken over the culture." "Most people are not aware of modern, critical methods of Biblical scholarship, nor have they read theologians who really grapple with vital issues," he says.

Instead, he says, the turn toward fundamentalism supplies easy answers and largely rejects modern findings. And beyond the religious community, belief tends to be identified with fundamentalist views. The result is a diminution of thoughtful exchange of viewpoints.

Robert McAfee Brown, professor at Union Theological Seminary, acknowledges that philosophical approaches "are not very high on peoples' agenda," but asserts that the "moral anguish" generated by experiences such as the holocaust has caused some people to look for religious answers to questions.

In the face of enormous tragedy, Professor Brown says, many ask "If there is a God, is He some kind of a moral monster to be permitting this? — this is the way in which the real question gets posed."

The God-is-dead movement passed quickly a decade ago, repudiated by many believers and dismissed as fanciful by many others. What remained after the fad was the fact that, if nothing more, it had signified the emergence of an era in which God would not be spoken about in the same way, if at all.

Kenneth A. Briggs is religion editor of The New York Times.

RATIONALITY

(20) Also from The New York Times Review of the Week, of 7/2/78, p.14:

Note from a Universe-Watcher: 'We Are the Newest, the Youngest And the Brightest Thing Around.'

By Lewis Thomas

Somewhere, on some remote planet set at precisely the right distance from a star of just the right magnitude and right temperature, on the other side of our galaxy, there is at this moment a committee nearing the end of a year-long study of our own tiny, provincial solar system. The intelligent beings of that place are putting their signatures (numbers of some sort, no doubt) to a paper which asserts, with finality, that life is out of the question here and the place is not worth an expedition. Their instruments have detected the presence of that most lethal of all gases, oxygen, and that is the end of that. They had planned to come, bringing along mobile factories for manufacturing life-giving ammonia, but what's the use of risking strangulation.

The only part of this scenario that I really believe in is that committee. I take it as an article of faith that this is the most fundamental aspect of nature that we know about. If you are going to go looking for evidences of life on other celestial bodies, you need special instruments with delicate sensors for detecting the presence of committees. If there is life there, you will find consortia, collaborating groups, working parties, all over the place.

At least this is true for our kind of life.

Mars, from the look we've had at it thus far, is a horrifying place. It is, by all appearances, stone dead. It is surely the deadiest place any of us have ever seen, and it is hard to look at without wincing. Come to think of it, it is probably the only really dead place of any size we've ever caught a close glimpse of, and the near view is incredibly sad.

Or maybe there is life on Mars, and we've simply missed it so far. The innumerable consultants orbiting around NASA are confounded, just now, by intense arguments, highly technical, over this point. Could there be an island of life at the bottom of one of the Martian ravines? Shouldn't we set down fleets of wheeled vehicles on various parts of the surface, deployed to nose about from place to place, in and out of deep crevices, turning over rocks, sniffing for life? Maybe there is a single spot, just one, where living organisms are holed up.

Maybe so, but if so it would be the strangest thing of all, absolutely incomprehensible. For we are not familiar with this kind of living. We do not have solitary, isolated creatures. It is beyond our imagination to conceive of a single form of life that exists alone and independent, unattached to other forms.

If you dropped a vehicle, or a billion vehicles for that matter, on our planet you might be able to find one or two

lifeless spots, but only if you took very small samples. There are living cells in our hottest deserts and at the tops of our coldest mountains. Even in the ancient frozen rocks recently dug out in Antarctica there are endolithic organisms tucked up comfortably in porous spaces beneath the rock face, as much alive as the petunia in the florist window.

If you did find a single form of life on Mars, in a single place, how would you go about explaining it? The technical term for this arrangement is a "closed ecosystem," and there is the puzzle. We do not have closed ecosystems here, at all. The only closed ecosystem we know about is the earth itself, and even here the term has to be expanded to include the sun as part of the system, and Lord knows what sorts of essential minerals that have drifted onto our surface from outside, at one time or another long ago.

Everything here is alive thanks to the living of everything else. All the forms of life are connected. This is what I meant in proposing the committee as the basis of terrestrial life. The most centrally placed committee, carrying the greatest responsibility, more deeply involved in keeping the whole system running than any other body, or any other working part of the earth's whole body, is the vast community of prokaryotic microbes. Without them, for starters, we would never have had enough oxygen to go around, nor could we have found and fixed the nitrogen for making enzymes, nor could we recycle the solid matter of life for new generations.

The technical definition of a system, as summarized in a recent symposium, is as follows: A system is "a structure of interacting, intercommunicating components that, as a group, act or operate individually and jointly to achieve a common goal through the concerted activity of the individual parts." This is, of course, a completely satisfactory definition of the earth, except maybe for that last part about a common goal. What on earth is our common goal? How did we ever get mixed up in a place like this?

This is the greatest embarrassment for our species. Some of us simply write it off by announcing that our situation is absurd, that the whole place makes no sense, and that our responsibilities are therefore to ourselves alone. And yet, there it is; we are components in a dense, fantastically complicated system of life, we are enmeshed in the interliving, and we really don't know what we're up to.

The earth holds together, its tissues cohere, and it has the look of a structure that really would make comprehensible sense if only we knew enough about it. From a little way off, photographed from the moon, it seems to be

a kind of organism. Looked at over geologic time, it is plainly in the process of developing, like an enormous embryo. It is, for all its stupendous size and the numberless units and infinite variety of its life forms, coherent. Every tissue is linked for its viability to every other tissue; it gets along by symbiosis, and the invention of new modes of symbiotic coupling is a fundamental process in its embryogenesis. We have no rules for the evolution of this kind of life. We have learned a lot, and in some biomathematical detail, about the laws governing the evolution of individual species on the earth, but no Darwin has yet emerged to take account of the orderly, coordinated growth and differentiation of the whole astonishing system, much less its seemingly permanent survival. It makes an interesting problem: How do mechanisms that seem to be governed entirely by chance and randomness bring into existence new species which fit so neatly and precisely, and usefully, as though they were the cells of an organism? This is a wonderful puzzle.

And now we have swarmed like bees over the whole surface, changing everything, meddling with all the other parts, making believe we are in charge, risking the survival of the entire magnificent creature.

You could forgive us, or excuse us anyway, on grounds of ignorance, and at least it can be said for us that we are, at long last, becoming aware of that. In no other century of our brief existence have human beings learned so deeply, and so painfully, the extent and depth of their ignorance about nature. We are beginning to confront this, and trying to do something about it with science, and this may save us all if we are clever enough, and lucky enough. But we are starting almost from scratch, and we have a long, long way to go.

Mind you, I do not wish to downgrade us; I believe fervently in our species and have no patience with the current fashion of running down the human being as a useful part of nature. On the contrary, we are a spectacular, splendid manifestation of life. We have language and can build metaphors as skillfully and precisely as ribosomes make proteins. We have affection. We have genes for usefulness, and usefulness is about as close to a "common goal" for all of nature as I can guess at. And finally, and perhaps best of all, we have music. Any species capable of producing, at this earliest, juvenile stage of its development — almost instantly after emerging on the earth by any evolutionary standard of time — the music of Johann Sebastian Bach, cannot be all bad. We ought to be able to feel more secure for our future, with Bach at our elbow.

But security is the last thing we feel entitled to feel. We are, perhaps uniquely among the earth's creatures, the worrying animal. We worry away our lives, fearing the future, discontent with the present, unable to take in the idea of dying, unable to sit still. We deserve a better press, in my view. We have always had a strong hunch about our origin, which does us credit; from the oldest language we know, the Indo-European tongue, we took the word from earth — *DHGHEM* — and turned it into "Human"; "Humble" too, which does us more credit. We are by all odds the most persistently and obsessively social of all species, more dependent on each other than the famous social insects, and really, when you look at us, infinitely more imaginative and deft at social living. We are good at this; it is the way we have built all our cultures and the literature of our civilizations. We have high expectations and set high standards for our social behavior, and when we fail at it and endanger the species — as we have done several times in this century — the strongest words we can find to condemn ourselves and our behavior are the telling words inhuman and inhumane.

There is nothing at all absurd about the human condition. We matter. It seems to me a good guess, hazarded by a good many people who have thought about it, that we may be engaged in the formation of something like a mind for the life of this planet. If this is so, we are still at the most primitive stage, still fumbling with language and thinking, but infinitely capacitated for the future. Looked at this way, it is remarkable that we've come as far as we have in so short a period, really no time at all as geologists measure time. We are the newest, the youngest, and the brightest thing around.

I hope we will keep on with science, now that we've discovered how to use the method. We used to think we could find all the meaning we needed by making up stories, or by reasoning, but we have run out of facts to reason with and most of the stories no longer ring true. We need to know more about ourselves, and about all the rest of nature. We need science for this, more and better science, not for its technology, not for comfort, not even for health or longevity, but for the hope of wisdom, somewhere ahead.

Lewis Thomas, M.D., author of "The Lives of a Cell: Notes of a Biology Watcher," is president of the Memorial Sloan-Kettering Cancer Center. These remarks were delivered at the commencement exercises of the Mount Sinai School of Medicine.

COMMENT

(21) Why Jacqueline experiences a certain sadness:

It is with very mixed feelings and a certain sadness that I read the newspaper clipping (The Spectator, May 5, 1978) reproduced in the Bulletin just received: "Russell Library Arrives at Mac." In a way, I suppose it will be wonderful for McMaster University to possess Lord Russell's library, as well as the desk and chair where Russell worked, even his "floral armchair"...but what about England, what about Wales? Does not he, do not his things really belong there, on the other continent, in the old culture and the Old World that produced him? I guess I am a sentimental fool about these things, being a transplanted "Frenchman" myself, with constant longings for my country, and I am the stupid type who cried when the "Yanks" purchased London Bridge to put it over the Colorado River... The end of an era, even the end of a song...

Although the handsome sum paid for the purchase, and, most importantly, the reverence with which the scholars of B.R. at McMaster will treat his possessions, will justify this exile, I cannot help thinking, with sadness, that Old England was cheated, even if well-intendedly so. This "deportation" has a note of sacrilegiousness — if you forgive the expression! — somewhat like bringing Charles de Gaulle's tomb to the U.S.

I hope my comment is not misunderstood. It is indeed not intended as an insult to McMaster's archivists of B.R.'s works, whom, I am sure, will treat them with the utmost respect and give them a loving and reverential home, as indicated by the second paragraph of the clipping, mentioning Mr. Ken Blackwell watching the move "lovingly". It is just a certain sadness that I felt and had to communicate. I just hope that "my" B.R. (as I have called him to myself for years) would have approved.

We think BR would have approved this latest installment, since he approved the first installment to McMaster. Thank you, JACQUELINE BERTHON-PAYON, for expressing a thought that no doubt has occurred to many.

NEWS ABOUT MEMBERS

- (22) Leonard Cleavelin, philosophy major at Washington University, has been accepted as a candidate for an honors degree in his senior year. His thesis, in philosophy of law, will examine society's right to enforce its morality through the criminal code.
- (23) Albert Ellis is co-author (with William J. Knaus) of Overcoming Procrastination, advertised in The New York Times Book Review of 3/5/78. Softcover \$3.95 + 55¢ shipping, from Institute for Rational Living, Dept. B, 45 E. 65th St., NYC 10021
- (24) Corliss Lamont had an ad in The (Sunday) New York Times of 7/16/78 (Review of the Week, p.7) commemorating the centenary of the birth of John Massfield, Poet Laureate of England 1930-1967, whom he had known personally.
- (25) Herbert Stahl's tribulations are described in the Congressional Record, which is reproduced (45).
- (26) Ira L. Straus writes: "You may add to your list of oddball members that I am the Chairman of the Committee for Reunion with England and the author of its historic Declaration of Reunion, which activity has in large part been inspired by a line from BR (cited a couple of years ago in Russell) to the effect that the whole tragedy of modern nationalism began when Patrick Henry proclaimed death to be preferable to dependence on the British Crown.
"More seriously, I have been working on Trotskyism and American ex-Trotskyism. BR seems to have had considerable personal interest, influence and connections in the latter, although the British publishing establishment at present seems closer to the believing Trotskyists than to the ex-Trotskyists. I look forward to whatever enlightenment I may be able to draw from the BR Archives on this subject."
- (27) Herb Vogt writes about the Annual Meeting: "The best part of our meeting in Hamilton was to learn how nice everyone was. It was fun to share talk and beer. I enjoyed being with Lester Denonn and his wife; for years I had owned a copy of The Wit and Wisdom of Bertrand Russell, which he edited. Dong-In Bae brought back recollections of my own stays in Korea ('55-'56) and West Germany ('59-'62). I borrowed the tape of Whettam's 'Symphony Contra Timore' and made my own duplicate. I like the music very much."

HONORARY MEMBERSHIP

- (28) Paul Edwards. We are very pleased to report that Professor Paul Edwards has accepted an invitation to become an honorary member. He qualifies for honorary membership under Article II, Section 2 (III) of the BRS Bylaws. ("The nominee has made a distinctive contribution to some area of Russell scholarship.")
Professor Edwards edited the volume, "Why I Am Not A Christian," a collection of BR's short pieces chiefly on religion, which also includes his own 40-page appendix, "How Bertrand Russell Was Prevented From Teaching at the College of the City of New York." In The Encyclopedia of Philosophy (Macmillan), the superb 8-volume set of which he was Editor-in-Chief, he wrote the sections on BR's Life and Social Theories, Ethics, and Critique of Religion. He is Professor of Philosophy at Brooklyn College CUNY.
In his letter of acceptance, he graciously said, "Please let me know if I can be of some help to you."

The Bylaws require "approval by a two-thirds vote of the members voting", (Article II, Section 2)
Please vote, using the Ballot (Part 4), which is the last page of this issue.

(31)

MEMBERSHIP STATISTICS

200. The BRS now has 200 paying members, as of July 1st, the largest number since we were founded in February 1974. To qualify for low postal rates (within the USA) that are available to non-profit organizations, we must mail a minimum of 200 pieces to points within the USA.

(32)

BULLETIN BOARD

For sale: Lester Denonn's 5000 volumes, which include what is possibly the largest collection of Russelliana in private hands. This remarkable library includes 327 books by BR or that contain some words by him; 1760 books about BR or in which he is referred to; various articles by BR; letters from BR and Lady R; magazine articles about BR, etc. etc., for a grand total of 3026 items by, or related in some way or other to, BR. Plus books in 60 other categories.

Lester is interested in finding a suitable buyer. A suitable buyer will (1) meet his price, and (2) provide a proper environment — such as a university — for the collection. His address is 135 Willow Street, Brooklyn, NY 11202.

FOR SALE

(33)

Members' stationery price increased. We've had to raise the price on members' stationery (NL16-30), chiefly because of the new postal rates. We've reduced the number of sheets per package, from 100 to 80, so that now the total package weighs slightly less than one pound, and therefore the postage is the same to all parts of the country. The price for 80 sheets is \$3.50 postpaid. A number of members have bought this new stationery, and like it.

(34)

Books from the BRS Library. Most of the following books are published by Spokesman Books or by Allen & Unwin. Prices are discounted, and include postage. Please pay when you order, from Don Jackanicz, BRS Library, 3802 N. Kenneth Avenue, Chicago, IL 60641. (H = hardbound, p = paperbound.)

- The Tamarisk Tree, Dora Russell. \$4.75.
- Bertrand Russell 1872-1970. 80¢.
- Essays on Socialist Humanism in Honour of the Centenary of Bertrand Russell, Ken Coates, ed. \$3.40.
- History of the World in Epitome, BR. 80¢.
- Icarus, or the Future of Science, BR. \$2.00.
- Justice in Wartime, BR. \$6.20.
- The Life of Bertrand Russell in Pictures and His Own Words, Christopher Farley and David Hodgson, ed. \$3.40.
- Mr. Wilson Speaks 'Frankly and Fearlessly' on Vietnam to Bertrand Russell.
- Problems of Knowledge and Freedom, Noam Chomsky. \$1.00.
- The Amberley Papers, BR with Patricia Russell, 2 v. \$14.00.
- Authority and the Individual, BR. \$2.65.
- Autobiography of BR. Complete in one volume. \$4.30.
- Autobiography of BR, 1872-1914. \$6.25.
- Autobiography of BR, 1914-1944. \$6.25.
- Bertrand Russell: An Introduction, Brian Carr, ed. \$8.25 h. \$4.30 p.
- Education and the Social Order, BR. \$3.25.
- Freedom and Organization, 1814-1914, BR. \$8.00.
- German Social Democracy, BR. \$4.30.
- Has Man a Future?, BR. \$1.75.
- Human Society in Ethics and Politics, BR. \$5.80.
- The Impact of Science on Society, BR. \$2.25.
- New Hopes for a Changing World, BR. \$4.00.
- An Outline of Philosophy, BR. \$9.60.
- Political Ideals, BR. \$2.75.
- Power: A New Social Analysis, BR. \$5.80.
- The Practice and Theory of Bolshevism, BR. \$3.90 h. \$2.75 p.
- Principles of Social Reconstruction, BR. \$4.95 h. \$1.75 p.
- The Problem of China, BR. \$5.80.
- Prospects of Industrial Civilization, BR with Dora Russell. \$4.30.
- Roads to Freedom: Socialism, Anarchism and Syndicalism, BR. \$5.80 h. \$3.25 p.
- Sceptical Essays, BR. \$6.75 h. \$3.25 p.
- Unarmed Victory, BR. \$3.50.
- Bertrand Russell: A Life, Herbert Gottschalk. \$1.00.

British Philosophy in Mid-Century: A Cambridge Symposium. C. A. Mace, ed.
\$19.00.
Bertrand Russell: The Passionate Sceptic, Alan Wood. \$1.30.
Papers presented at the 1976 BRS sessions at the American Philosophical
Association (Eastern Division) annual convention. \$3.00.
Papers presented at the 1977 BRS APA annual convention. \$3.00.

QUESTIONS & ANSWERS

- (35) Movie mentions. DON JACKANICZ is seeking information about references to BR in 2 films:
(1) "The Best Man", a 1964 film, based on a play by Gore Vidal, about rival Presidential candidates -- played by Henry Fonda and Cliff Robertson -- and the lengths to which they will go in the hope of achieving success.
(2) "Taxi Driver", a relatively recent film.
Please forward any information to Don care of Russell Society News, address on Page 1 (bottom).
- (36) Anthony Flew. RONALD EDWARDS would like to know about a debate that involved BR and Anthony Flew. Please forward any information to Ron care of Russell Society News.
-

RECOMMENDED READING

- (37) "Letters from The Earth" by Mark Twain (Harper & Row's Perennial Library). A collection published posthumously. "One of the things our grade school teachers keep hidden from us," writes LEONARD CLEAVELIN, "is Twain's essentially humanistic views. In many selections, he exposes foibles and inconsistencies in Biblical religion and the then common morality of his contemporaries (which, I think, haven't changed much since then) with a wit and style reminiscent of Russell's. Especially recommended sections: 'Letters from The Earth', 'Letter to The Earth', and 'The Damned Human Race'."
-

FINANCES/CONTRIBUTIONS

- (38) Recent contributors. We thank the following members for their recent contributions: PETER CRANFORD, FRANCIE DIMITT, DON JACKANICZ, FRANK PAGE, and CHARLES HILL.
-

BRS BUSINESS

- (39) Voting time. Please vote. The last page of this issue consists of a ballot, listing the candidates. We are to elect Directors for 3-year terms, starting 1/1/79.
At the 1978 Annual Meeting, the members voted to increase the number of Directors from 15 to 24. Consequently we may now vote for 8 Directors per year instead of 5 as in the past.
The ballot lists 8 candidates, and we recommend that you vote for all 8. (There would have been more than 8 candidates if more had been nominated.) It is clear that all 8 candidates will be elected, because there are as many openings as there are candidates. You may therefore wonder why you should bother voting. Here is why:
When you vote, you indicate that you take an interest in BRS affairs. This, then, is an opportunity to show your interest, and we hope you will make use of it.
Here are a few facts about the 8 candidates:
PETER G. CRANFORD (Augusta, GA). Founder of the BRS; Chairman of the Board; formerly President; currently a Director. Clinical psychologist in private practice.
ROBERT K. (BOB) DAVIS (Hollywood, CA). Founding member; President, formerly Vice-President; currently a Director. Salesman; former teacher.
LEE EISLER (Coopersburg, PA). Founding member; Chairperson, Information Committee and Membership Committee; Editor, Russell Society News; currently a Director. Retired; former advertising writer and executive.
MARTIN GARSTENS (Silver Spring, MD). Founding member; Chairperson, Applied Philosophy Committee; currently a Director; leader, BRS local chapter (Washington area). Senior Fellow, Dept of Physics & Astronomy, U. of Maryland.
JAMES E. MC KEOWN (Kenosha, WI). Former Director; active in BRS local chapter (Chicago area); author of "Russell as Precursor of Social Changes" (46). Professor of Sociology, U. of Wisconsin -- Parkside.

HARRY RUJA (San Diego, CA). 4-year member; Russell scholar and bibliographer. Professional philosopher; member, Philosophy Department, San Diego State University.
 GARY SLEZAK (Chicago, IL). Founding member; Vice-President; leader, BRS local chapter (Chicago area); currently a Director. Playwright.
 BEVERLY C. (BEV) SMITH (Rochester, NY). Co-Chairperson, Membership Committee. Active in local groups, including "Prison Action Group", "Euthanasia Education Council", "Rochester Memorial Society".

"RUSSELL SOCIETY NEWS" MATTERS

- (40) Single-space, please, when you submit something for possible use in RSN. It saves space, and therefore money. And please check that the typeface is clean.
- (41) Smaller type. We are trying an experiment with this issue: the print is smaller. That lets us put about 65% more on a page. A 30-page issue (printed the old way) can now be done in about 18 pages. The saving on printing is considerable. There is also a worthwhile saving on postage. (3rd class postal rates have just gone up 40-60%.)
 Considering our finances, the new way is a big improvement. We hope you can manage to read the smaller type without too much difficulty. But this is an experiment. We invite your comments.
 * (The smaller print is achieved in this way: we use the same typewriter as in the past, but on 11 x 14 pages, and the printer reduces the pages to 8½ x 11. When we reproduce pages from other publications, as in (19) of this issue, they too are reduced in size.)

ABOUT OTHER ORGANIZATIONS

- (42) The BR Peace Foundation is investigating human rights in West Germany. This was written up in the Washington University student newspaper, "Student Life" (RSN18-49). Here is a somewhat more detailed account, from The New York Times (3/30/78).

Rights Tribunal Opens in Frankfurt

By JOHN VINOCUR

Special to The New York Times

FRANKFURT, West Germany, March 29—The third Bertrand Russell international tribunal began hearings today on alleged human rights violations in West Germany after its purpose was denounced by both the political leadership and leftist segments.

The self-appointed tribunal was described by Willy Brandt, the former Chancellor, as "an insulting and scandalous exercise." At the same time, a left-wing extremist group interrupted the tribunal's first session in a suburban auditorium and charged that it had deserted West Germany's "anti-imperialist resistance." The Russell tribunal, the extremists said, was guilty of focusing attention on people denied employment because of their political opinions, but had forgotten political prisoners jailed under antiterrorism laws.

'Radicals Decree' to Be Examined

The tribunal, established by Lord Russell, the British philosopher and mathematician who died in February 1970, first met as the War Crimes Tribunal in Stockholm in 1967 to consider alleged United States atrocities in Vietnam. It was convened again in 1973 to inquire into torture in Latin America.

The tribunal, which has 28 members, none of them Germans, will be hearing testimony through Sunday on what has

become known here as "Berufsverbot," the exclusion from public-sector jobs of people who are deemed disloyal to the Constitution. Although there are no official statistics, about 4,000 people, mainly leftists, are estimated to have been affected. The exclusion order, also known as the "radicals decree," was issued jointly by the Bonn Government and the state governments in 1972.

The jury includes Josephine Richardson, a Labor Party member of Britain's Parliament; Dr. Noel Browne, a former Minister of Health of the Irish Republic; Lucio Lombardo Radice, a member of the Italian Communist Party's central committee, and Elliot Taikeff, a New York lawyer, the only American on the panel.

Also selected for the jury was Otelo Saraiva de Carvalho, the Portuguese officer who was a central figure in the 1974 revolution and an abortive left-wing coup attempt. However, he was not allowed by Portuguese authorities to leave the country, a spokesman for the tribunal said.

Chinese Leave for U.S.

HONG KONG, March 29 (Reuters)—A delegation of the China International Travel Service left Peking today to visit the United States, according to Hsinhua, the official press agency.

Thank you, Don Jackanicz.

PERIODICALS RECEIVED

- (43) "Other Minds" is the newsletter of the Rationalist Humanist Association, Box 314, Station A, St. Joseph, MO 64503. The 6-page May 1978 issue gives 2 pages to quotes from J.S. Mill, T. H. Huxley, and Bertrand Russell. They will send you their newsletter on request.
- (44) "Humanist Quest for Truth", newsletter of the Colorado branch of the American Humanist Association and of the Freedom From Religion Foundation, Inc., is sent free on request. The May 1978 issue is 5 pages. Box 625, Brighton, CO 80601.

CONGRESSIONAL RECORD

- (45) Dr. Herbert A. Stahl's tribulations, as reported in the Congressional Record of 3/1/76:

S 2536

CONGRESSIONAL RECORD — SENATE

March 1, 1976

ADDITIONAL STATEMENTS

DR. HERBERT A. STAHL

Mr. HRUSKA. Mr. President, historians no doubt will look back upon this, the 20th century, with mixed feelings. On one hand, the past 75 years have witnessed the greatest technological and scientific advances since the first stirrings of recorded civilization. These great accomplishments should have heralded the dawn of the golden age of mankind. Unfortunately, this has not been the case for, in fact, the 20th century has contained some of history's most brutal examples of man's inhumanity to his fellow man.

The details of this century's first 75 years have been well documented. They have included war, genocide, massacres, the mass displacement and movement of countless millions of refugees. I would like to take the opportunity to record one small footnote to this history by relating the case of Dr. Herbert A. Stahl.

Dr. Stahl was born in 1907 in Pressburg—now called Bratislava—of what was then part of the Austrian-Hungary Empire. Bratislava is situated on the left bank of the river Danube, just 1 hour's drive from Vienna. Across the river, readily seen from the Castle of Bratislava, are a few tiny Austrian villages where most of Herbert Stahl's ancestors came from. On the western horizon, the bluish silhouette of the famed Vienna Woods are clearly discernible. He was a citizen of that empire until 1918 when in the wake of World War I the Hapsburgs were deposed and the modern Czechoslovakian state created.

After the establishment of the new state, Dr. Stahl became a Czechoslovakian citizen. During the census of 1928, however, the citizens of Czechoslovakia were required to register according to their mother language. For Dr. Stahl this meant that he had to register using the language also spoken in Vienna, that

is, the Germanic language. This was to have grave consequences in future years.

As the new state prospered and advanced, so did the fortunes of Dr. Stahl who in 1932 had graduated from the University of Prague and was now a scientist and a writer. A 1-year's sojourn in Berlin familiarized him with the model German research institutions, particularly as basic and applied research into physics are concerned. During the early 1930's Dr. Stahl busied himself as a free lance writer of articles some of which opposed dictatorship and advocated the concept of a United States of Europe. Later, he was to be a prolific writer publishing, among others, 18 professional essays, in Czech or Slovak language, centering upon the flagrant absence of applied and industrial research in Czechoslovakia. These were well received and recognition of his work resulted in an invitation to be listed in a Czechoslovak Interservice World Engineering Who's Who, published in Prague. In 1937, he coauthored a Jewish cultural encyclopedia entitled "Jews in German Cultural Sphere."

During all these years, Dr. Stahl proceeded in his favorite field of tube electronics centering on the production of neon light devices. In 1933, he became the licensee for a Jewish-owned company founded in Prague by a refugee friend from Berlin, and continued later in the neon department of a huge shoe concern in Zlín, Moravia, soon to be dismantled by the owners in a wise foreboding of the rapidly approaching apocalypse.

During this same prewar period Dr. Stahl was by his own initiative instrumental in advancing the concept of a central Czechoslovak Institute for Industrial Research. This productive activity, however, came to a halt as a result of a serious traffic accident in 1938, and the concurrent pre-Munich confusion in Czechoslovakia. As Dr. Stahl laid confined to a hospital bed, the German Army under the pretext of protecting the Ger-

man minority, marched into the Sudetenland. The rest is well known, within a short time Czechoslovakia was under total German domination, and the world once again was at war.

Recovering from his injuries, Dr. Stahl soon found that there were practically no professional opportunities whatsoever for reasonable work in prostrate, German-controlled, Czechoslovakia. He had now a third citizenship namely that of Slovakia—to become his last one in Europe. As this puppet state was almost totally an agricultural community, Dr. Stahl returned in 1939 to Berlin where he joined the staff of a leading chemical reference work conducting later active scientific research and development in tube electronics.

In 1943, Dr. Stahl left Berlin and went westward to Hanola near Frankfurt where he conducted similar work, his results being published after the war in Dutch, American, Swiss, and German journals. By now, he was married to a German girl who, as a result of that marriage, had lost her citizenship, to become also a Slovak citizen.

Thus was the situation in 1945 when Germany surrendered to the victorious allies.

The conclusion of World War II resulted in many changes upon the map of Europe. According to some historians, certain of these changes resulted from a deliberate effort on the part of the Allies to eliminate possible sources of future upheavals by moving various ethnic minorities from areas long regarded as their historic homeland to countries where they would be part of a predominant culture. Thus, along with other minority groups caught in the postwar maelstrom of millions of refugees were some 3 million Sudeten Germans who were expelled from their primeval homeland in Bohemia and Moravia. Expelled or not, others were to have their properties confiscated.

Dr. Stahl, who by this time was in Great Britain, had his sizable real estate holdings, including his home in Bratislava with its multilingual library confiscated by the authorities as German reparations. This happened despite the fact that neither he nor his forefathers had ever been citizens of Germany, but of the Danubian Monarchy referred to above. In so doing the Czech Government ignored his stalwart service to the nation in the prewar years, and the oppressing peril throughout the Nazi domination.

Like many other refugees, Dr. Stahl never returned to the land of his fathers. Instead, he came to the United States where he was able to secure a job at the University of Kansas Medical Center. Later, he was to work for Westinghouse and RCA in their electronic tube factories, being mostly engaged in governmental work. In 1957, 5 years after his arrival in this country, he became a citizen.

Since 1962, Dr. Stahl, who had become a senior physicist in optoelectronics, has worked at the Army's Night Vision Lab located at Fort Belvoir, Va.

This story has had a relatively happy ending for unlike millions of others who perished during the turbulent years of the 1930's and 1940's, Dr. Stahl survived, and was able to rebuild his life.

The issue of the moral and legal responsibilities of the Czechoslovak Government which so callously expelled its citizens, and expropriated huge masses of property, however, remains as a thorn in Czech-United States relations to this very day.

Herbert Stahl is a 4-year member of the ERS.

ORIGINAL PAPER

Russell As Precursor of Social Changes

by

James E. McKeown

Professor of Sociology

University of Wisconsin — Parkside

(46)

In his writings Bertrand Russell frequently demonstrated that he possessed sociological imagination, which C. Wright

Mills has defined as the ability to use information and reason "to achieve lucid summations of what is going on in the world."¹

Fond of taking the long view, Russell in Freedom and Organization (1934) attempted to trace the main causes of political changes in the period 1814-1914. Such changes appeared to rise from four sources: economic techniques, as feudalism, capitalism, and socialism; political theories, as legitimacy and democracy; important individuals, as Metternich and Bismarck; and chance or accident in which a rather unimportant occurrence has a great effect, as the minor political assassination that set off the chain of international exchanges that led to the First World War.

At the time of the publication of Freedom and Organization, sociologists were generally aware that shifts in social values and behavior represent adjustments to more basic economic and political changes. The role played by the factor of chance, nevertheless, was to continue to be overlooked until after World War II when statistical analysis came into vogue. Interestingly, sociologists still do not know how to deal with the contribution of the important individual. It might be added that there is little likelihood that they will learn to do so as long as the majority of them still hold that there are no such things as individuals, only group members. While it is true that Thomas Carlyle over-emphasized the "great man theory of history", sociologists seem intent upon under-emphasizing it. Russell placed the important person in perspective, that is, midway between these two extremes.

In his classes at the University of Chicago after World War II Ernest Burgess regularly expressed the hope that sociology would become a predictive science. Yet as early as 1920 the Third Earl Russell was making forecasts regarding the future of the Russian Soviet experiment, whose methods he had found to be so rough, dangerous, and costly that they precluded the establishment of a "stable or desirable form of socialism".² Hence there was to be no bright tomorrow; instead, there would be any one of three kinds of doomsdays. One would be the ultimate defeat of bolshevism by the forces of capitalism. Another would be the decisive victory of bolshevism resulting in a Napoleonic-like imperialistic regime with a complete absence of socialist ideals. While the first would be doomsday for bolshevism and the second would be doomsday for capitalism, the third would be characterized by a prolonged world war in which both would meet their doom. Here, too, "civilization would go under and all its manifestations."⁴ It would almost seem that Russell in 1920 had seen a horrible vision of atomic warfare a quarter of a century before it became a reality.

Some years ago American blacks began to discover identity and roots in the African heritage. Since then various other racial and ethnic groups have also engaged in heritage-questing, thereby creating a trend. Sociologists, of course, have noticed this trend and appropriately have raised their voices in praise of "cultural pluralism." More than sixty years ago, however, in 1917, cultural pluralism was not a trend. In Europe nationalism was at its height; and in America the "melting pot" concept had emerged. It was then that the famous World War I conscientious objector wrote in Political Ideals: "We do not want to lay down a pattern or type to which men of all sorts are to be made by some means or another to approximate. This is the idea of the impatient administrator."⁵

In the later 1960s political sociologists emerged with their principles of conflict and confrontation. This was roughly about twenty years after 1938 when ER's Power: A New Social Analysis appeared. In this work the concept of power was given a remarkably simple definition: "the production of intended effects."⁶ It was then refined into types: namely, priestly power, kingly power, revolutionary power, economic power, and brute force, which Russell calls "naked power."⁷ Power: A New Social Analysis would have been an excellent book for the young radicals who were exercising power in the late 60s to have read. The political sociologists would also have done well to have read it. Unfortunately few did. Anti-intellectualism and anti-elitism were widespread in both groups; and the Third Earl Russell was both intellectual and aristocratic.

It was also in the late 1960's that departments of sociology at American universities were centers of agitation against the Viet Nam War. In the early 1960's, however, campuses had been quiet. Faith in the rightness of government policy, a faith that had emerged as a welcome spark of light in the great economic depression of the 1930's and had glowed ardently during World War II, had not yet burned out. In those early 1960's, nevertheless, Bertrand Russell had learned about the more than 16,000 American military advisors in Viet Nam and warned about the disastrous consequences that would result from escalation of the conflict.⁸ He attempted to promote sentiment against this American involvement but found little support in England and on the continent.⁹ Complacency was as great there as it was in America.

A Treatise on Russell's social views, of course, must include some references to Marriage and Morals, which appeared in 1929 and gave him the reputation that led to his being barred from lecturing at the College of the City of New York and at Columbia University. It might be added, nevertheless, that he was quite a visiting celebrity at the University of Chicago. Marriage and Morals contained predictions of greater liberation of women and greater reliance both upon trial marriage and divorce as hedges against unhappiness in marriage.¹⁰ Now in the late 1970's these predictions have proven rather accurate. On the other hand, ER predicted that as the old morality declined so would prostitution, and in doing so tarnished his record as a forecaster. He greatly underestimated the resilience of the "world's oldest profession."¹¹

Bertrand Russell was interested in things sociological. He probably should have been a sociologist; and despite his early training in philosophy he could have become a sociologist. The doors of sociology were wide open not just in the nineteenth century, but well into the twentieth persons from many other fields walked through them. The Frenchman August Comte, said to be the founder of sociology, had been a mathematician, the Englishman Herbert Spencer an engineer, and the German Georg Simmel a philosopher. William Sumner, who founded the sociology department at Yale, was a minister, while Lester Ward, the first head of sociology at Brown University, was a geologist. Then too, there was Robert Park, a former journalist, who ushered in the "golden age of sociology" at the University of Chicago. All these came to sociology; but why didn't Russell? The answer undoubtedly is that Russell was so well established as a philosopher, celebrity, and controversial figure that his program was full. He had neither the time nor the need to fraternize with sociologists.

REPORTS FROM COMMITTEES (CONTINUED)

Library Committee (Don Jackanicz, Chairperson):

Elsewhere in these pages are reports on our successful 1978 annual meeting. The Library had its own modest role over those three days--films were shown, a tape recording of music was presented, photographs were on display, complimentary materials were distributed, books were sold. It is hoped that the Library fulfilled its promise at least in part by making available such materials within various media.

As part of the Library report given at Hamilton, it was noted that recent postal increases as well as the continuing inflationary spiral required a reevaluation of the Library's prices for sale items and charges for borrowed items. Thus, it has been decided to add a few cents to the prices of books and other materials offered for sale. The most recent issue of RSN should be consulted for current prices. Also, it was agreed that in addition to paying for postage, and in certain cases (e.g. films) deposits and rental fees, borrowers will pay a nominal fee directed toward meeting the cost of Library expenses. As of August 1, 1978, therefore, a 25¢ borrowing fee will be requested for most items borrowed from the Library. As well, the cost for renting a film has been increased to \$15 plus a refundable \$25.00 deposit. Except for films and certain other materials of considerable value whose fees must be paid in advance of shipment, borrowers will be informed of the exact fee involved when materials are mailed to them; payment should be made when returning what has been borrowed. It is hoped that these price increases will not be misunderstood or discourage borrowing and sales. It should be remembered that for over a year, except for films, we have offered items for members' borrowing at only the cost of postage. Following this experimental period it is time to draw the conclusion that small fees must be charged to insure the proper functioning of the Library. With the sales program, on the other hand, price increases are to be expected from time to time; but members will recall that these books are available at discounted prices. Should any member have comments to offer concerning this announcement of increased prices and a new borrowing fee, they will be most welcome to send them to the Library.

With regret it must be said that we are yet awaiting shipments from Spokesman Books and Allen & Unwin. Members have ordered a variety of books, but some of these have not been mailed out simply because the Library has itself not received them. The patience of purchasers is appreciated. As soon as materials are received by the Library they will be mailed out.

In association with the Audio-Visual Committee, the Library is working toward making formerly available records and films of Russell available once again. Also being developed are plans for a possible recording of Graham Whettam Sinfonia Contra Timore. Such activities require quite a bit of time and effort. Again, any thoughts or proposals which members might have would be welcomed.

As always, the Library, or more properly I, the Librarian, look forward to hearing from members. Your contributions, borrowings, purchases, inquiries, and criticisms are together the measure of what the Library is doing and should do.

Founded at the December 1975 annual meeting, the BRS Library was originally intended to be a lending library offering materials relevant to the life, thought and work of Russell. In 1977 the Library was given its second responsibility of distributing BRS-sponsored writings. Also in 1977 the Library began a sales program. The fourth and most recent delegation of work dates from 1978 with the organization of a separate collection of materials documenting the BRS's history. It is not the purpose of the Library to compete with the Russell Archives, any other library or bookseller, or the private collections of individuals. Rather, the Library simply aims to be a convenient center of Russelliana capable of meeting our association's needs.

I. The Lending Library. Every member is invited to donate whatever materials he or she would like to share with others. While the collection grows chiefly through the contributions of individuals, BRS funds are appropriated from time to time for the purchase of comparatively rare or expensive items. Also welcome are monetary gifts from members for purchases. A number of books and other materials have been contributed by publishers and other organizations. Books by and about Russell are the most desirable materials for the lending library, but there is much more worth acquiring. Significantly, the first item contributed was a film. Articles from periodicals, phonograph records, tape recordings, photographs, newspaper clippings, in addition to books and films, are the kinds of things comprising the lending library. Most borrowing makes use of the mail. The borrower pays for the cost of postage and any other necessary charges as, for example, insurance for certain items. A nominal fee, varying from item to item, is charged to provide for Library expenses. Films and certain other materials require a refundable deposit and a rental fee. An interested borrower should write to the Librarian making a request with some estimate of how long the item(s) borrowed will be kept. Recommended maximum borrowing periods are three weeks for printed matter and one week for all other items. When materials are returned, payment for postage and any other charges should be paid; however, deposits and rental fees, when applicable, must be paid in advance. It is expected that all borrowers will respect what they receive and that they will return all materials within a reasonable time and in good condition.

II. Promoting Scholarship and the BRS. Scholarly and more popular writings about Russell, the BRS, and related topics are distributed through the Library to members and interested non-members. While some of these writings are complimentary, others are for sale. Papers presented at BRS-sponsored symposia are examples of these materials. With this activity Russell research and popularization are encouraged and the BRS receives worthwhile publicity.

III. The Sales Program. A variety of books and other materials by and about Russell can be purchased through the Library. Most are usually available to members at a discount. Any profit realized is directed to the BRS Treasury and allocated for Library use. The Newsletter gives information on current offerings and prices. To order, write to the Librarian with payment.

IV. The BRS Archives. For historical purposes the Library has organized a collection of BRS documents and other materials. Examples of this collection's contents are correspondence, Newsletters, posters, and minutes.

All members are encouraged to write with requests and comments. Every contribution to the lending library will be gratefully received and acknowledged. Purchase orders are always welcome and are filled as promptly as possible. Interest and support shown by individual members are appreciated and are vital for the success of the Library's work.

Bertrand Russell's "Anti-Semitism"

by
Harry Ruja

Abstract of paper read at the annual meeting of the Bertrand Russell Society, Hamilton, Ontario, May 20, 1978.

In an article in Commentary for July 1976, Sidney Hook, long-time opponent of Russell's on political issues, branded Russell as "touched with anti-Semitism." He came to this conclusion after reading Clark's recent Life of Bertrand Russell.

He based this indictment on disparaging remarks about Jews Russell transmitted in private letters to Lady Ottoline Morrell and on a statement calling for Israel's condemnation as an aggressor which Russell signed and released to the press in late January 1970, two days before his death.

As for the uncomplimentary remarks, Jews feel threatened by anti-Semitism primarily when it extends beyond private feelings into public action. Hook does not maintain that any of Russell's public actions were anti-Semitic.

Indeed, on a number of occasions BR made public his appeals to the Soviet authorities to abandon certain policies discriminating against Jews--e.g., placing obstacles in the path of Jewish cultural developments, accusing an extravagant number of Jews of "economic crimes" against the state, and of separating families. In 1953 he made a moving address at a ceremony in London memorializing the martyrs of the Warsaw Ghetto, declaring "I feel the tragedy most profoundly with a feeling of shame that such things had happened and we had not prevented them."

As to the statement regarding Israeli aggression against Egypt, he failed to take account of facts which would have produced a contrary conclusion.

Item: Israel's bombing was against military targets, not civilian ones (even the Arabs did not claim that).

Item: The action was a response to Egyptian shelling of Israeli locations which started nearly eight months earlier and which constituted a violation of the cease-fire agreement of June 1967, producing by December 1969, fifty Israeli casualties per week.

Item: Israel had not sought "expansion by force of arms" but had in the two wars preceding the 1970 War of Attrition sought to defend itself against Arab attempts (freely professed) to "annul" Israel

"altogether," to "root out the Zionist cancer," to "throw the Jews into the sea for good," and "to establish a final solution to the Jewish problem." (Documentation of all of these available.)

Item: The "expansion" was not a reality anyway, for, except for East Jerusalem, none of the territories acquired as a result of the Arab failures to liquidate Israel were annexed to Israel but were held in trust, as it were, until "secure and recognized boundaries" (in the UN's phrase) could be achieved by negotiation.

Item: The Jews did not drive the Arabs from their homes. They left at the urging of their leaders who expected quite plausibly to overrun the just-born Jewish state in a short time. When their effort failed and a peace agreement was not forthcoming, Arabs who left their homes became refugees and were forced by their own kinsmen to remain refugees as a cynical instrument of power politics. Israel, in contrast, in 1948 extended a hand of friendship to its Arab inhabitants in its Declaration of Independence and has offered repeatedly to participate in discussions leading to a solution of the refugee problem in the context of a peace settlement.

Russell expressed a noble sentiment in calling at the end of his statement for a new world campaign to bring justice to the long-suffering people of the Middle East. But he failed to understand that Arab refusal to recognize the validity of Jewish national aspirations has prevented that and that in consequence not only have the Arab Palestinians suffered but the Jewish Palestinians as well.

However this may be, none of this in my opinion is sufficient grounds for accusing Russell of anti-Semitism. Neither was it the opinion of the London Jewish Chronicle, or the Israeli newspaper Ha-aretz, or many other newspapers and journals, Jewish and non-Jewish, which mourned the passing of this great champion of freedom and rationality--in a word--humanity. Even when at times his facts were awry, his sentiments were always noble.

* * * * *

Sidney Hook's article in Commentary is reproduced in NL12-62.

1978 ANNUAL MEETING (CONTINUED)

Minutes of the 1978 Annual Meeting of Directors
of
The Bertrand Russell Society, Inc.

The Board of Directors of the Bertrand Russell Society, Inc. met in two separate sessions on Friday, May 19 and Saturday, May 20, 1978 in Room 1A1 of the Health Sciences Centre of McMaster University, Hamilton, Ontario, Canada.

Friday, May 19

The President of the Board, Peter Cranford, called the first session to order at 10:07 p.m. The following twelve Board members were present: Peter Cranford, Ken Blackwell, Bob Davis, Lester E. Denonn, Lee Eisler, Ed Hopkins, Martin Garstens, Don Jackanicz, Dan McDonald, Jack Pitt, Steve Reinhardt, and Warren Smith. Members not present were Joe Neillands, Gary Slezak, and Katharine Tait.

After Peter's opening remarks which included a warning that BRS finances are weak, Steve Reinhardt presented the Treasurer's report. Members were referred to Russell Society News for periodic detailed accounts of income and expenditures. Steve concentrated on suggesting methods by which income could be increased and by which present income could be used more economically. He (a) recommended that independent audits of Treasury operations be regularly made.

(b) Lee Eisler gave reports for the Information and Membership Committees. Noting that the BRS had 184 members, he explained that a minimum of 200 members are required for eligibility for non-profit organization postal rates. Lee elaborated on advertising practices and cited statistics indicating inquiry and membership trends.

(c) In general discussion the question of whether dues should be increased was studied. Topics touched upon included how more funding could be obtained and how increased membership and renewals could be encouraged. A proposal to establish a new Finance Committee was inconclusively discussed. The session was adjourned at 11:50 p.m.

Saturday, May 20

Peter Cranford called the second session to order at 5:00 p.m. The following ten Board members were present: Peter Cranford, Bob Davis, Lester E. Denonn, Lee Eisler, Ed Hopkins, Don Jackanicz, Dan McDonald, Jack Pitt, Steve

Reinhardt, and Warren Smith. Members not present were Ken Blackwell, Martin Garstens, Joe Neillands, Gary Slezak, and Katharine Tait.

(d) The report of the Scholarship Awards Committee was given by Jack Pitt. He distributed a sheet (49j) listing seven motions pertaining to the Travelling Fellowship Program. These seven motions were formally placed before the Board by Lee Eisler, seconded by Bob Davis, and unanimously accepted.

(e) Warren Smith next reported on the Audio-Visual and Administration Committee. He supplied general information on Graham Whettam's Sinfonia Contra Timore and explored the means by which the BRS could produce a recording of it. Discussion ensued on the financing and distribution of such a recording. Two opposing views were aired: (1) that this composition is a meaningful musical tribute to Russell; that the work in itself has artistic merit and should be made available to a larger public; that publicity for the BRS could be engendered through a successful recording; that a potentially substantial profit might be realized from the sale of such recordings; and (2) that the BRS should not become involved in new and complex undertakings when existing ones have yet to be consolidated; that the BRS would be furthering the career of a composer of whom little is known; that the distribution of recordings is problematic and can result in losses as well as profits. It was finally moved by Bob Davis, seconded by Lester E. Denonn, and unanimously accepted that Warren is to investigate further the possibility of the BRS producing a recording of the Whettam composition and that recognition be accorded to Warren's voluntarily made offer that he be responsible for any financial loss which may result from a BRS-sponsored Whettam recording. It was moved by Bob Davis, seconded by Jack Pitt, and unanimously accepted that the Audio-Visual and Administration Committee shall investigate the possibility of the BRS rereleasing out-of-print recordings of Russell.

(f) Lee Eisler reopened the previous evening's discussion of increasing dues. This topic led to consideration of the work of the Finance Committee chaired by Peter Cranford. It was moved by Jack Pitt, seconded by Lee Eisler, and unanimously accepted that Warren Smith and Bob Davis shall be Co-Chairpersons of a new Committee responsible for fund-raising. It was moved by Jack Pitt, seconded by Bob Davis, and unanimously accepted that any proposed changes in dues shall first be discussed at length by the new Committee responsible for fund-raising and that this Committee shall present a report on dues reform to the Board by August 31, 1978.

(g) The next order of business was the nomination and election of officers. Each of the following officers-elect was unanimously elected:

- Chairman of the Board of Directors-----Peter Cranford
(Nominated by Lee Eisler, seconded by Jack Pitt)
- Secretary of the Board of Directors----Don Jackanicz
(Lee Eisler, Jack Pitt)
- President-----Bob Davis
(Don Jackanicz, Lee Eisler)

-- Vice President-----Warren Smith
 (Lee Eisler, Bob Davis)
 -- Treasurer-----Steve Reinhardt
 (Bob Davis, Warren Smith)
 -- Secretary-----Don Jackanicz
 (Bob Davis, Warren Smith)

The Travelling Fellowship Program:
7 Proposals by Jack Pitt

(h) It was moved by Bob Davis, seconded by Ed Hopkins, and unanimously accepted that a Parliamentary and Elections Committee be formed with Lee Eisler as Chairperson. Lee appointed Warren Smith to assist in this Committee's work. It was then moved by Lee Eisler, seconded by Bob Davis, and unanimously accepted that terms of officers-elect shall begin on January 1 of the year following their election.

It was informally agreed that Don Jackanicz, the Secretary-elect, would assist Jack Pitt, the incumbent Secretary, in preparing minutes of the 1978 Board of Directors and general meetings. Also, it was informally agreed (i) that Jack Pitt and Ed Hopkins will work with Bob Davis to locate a new Chairperson for the Applied Philosophy Committee. Problems of financing were again discussed. The question was posed which officers have the power to sign BRS checks; no conclusive answer was agreed upon. Steve Reinhardt announced that he would be on vacation for seven weeks beginning about July 4 and therefore unable to act in his capacity as Treasurer. Board members were advised to make any necessary arrangements with Steve before that date. The final topic of discussion concerned the site and date of the 1979 meeting. It was decided to postpone a decision with the expectation that the general membership will make its preferences known within sufficient time for planning purposes. The meeting concluded at 7:01 p.m.

Respectfully submitted,

Donald W. Jackanicz
 Donald W. Jackanicz

August 1, 1978

(j) I think the useful question to ask is how shall the Travelling Fellowship Program (TFP) swing into operation (rather than why it has not done so). You should have the prior documents pertinent to the Program which I have duplicated and distributed to remind us of the point we had reached last year. I shall now advance some proposals aimed at establishing the Program as a reality in the coming year.

Motion 1 That the Chair of the TFP assume the responsibilities and duties of the Grant Committees. (This person may enlist the help of other interested members, would continue to report annually to the Board, and would keep the President up to date regarding actions taken. In particular, no funds exceeding fifty dollars would be spent without prior authorization of the President.)

Motion 2 That the Chair of TFP be required to assemble a Fellowship Selection Committee of at least three scholars of national/international reputation to judge Fellowship applications. The Chair would function as an ex officio member of this Committee.

Motion 3 That the chair of the TFP be authorized to execute the fund-raising plans.

Motion 4 That the previously adopted motion of setting aside \$1.50 of each member's annual dues to go towards the TFP be implemented beginning July 1st 1978.

Motion 5 (a) that funds earmarked for the TFP not be spent in any other way, and (b) that such funds already so spent be replaced within the current fiscal year from non-TFP sources.

Motion 6 That efforts continue to effect a compossible relation with McMaster University as stated in Motion 6 on this topic at the previous meeting.

Motion 7 That efforts be made to establish similarly compossible relations with Universities which either house Russell material of interest or have on their faculties persons with recognized and exceptional knowledge of some aspect of Russell's work or of his historical period.

* * * * *

These proposals were accepted at the Meeting of Directors.

1978 ANNUAL MEETING (CONTINUED)

Minutes of the 1978 Annual Meeting of Members
of
The Bertrand Russell Society, Inc.

The fifth annual business meeting of the Bertrand Russell Society, Inc. was held Friday, May 19 through Sunday, May 21, 1978 at McMaster University, Hamilton, Ontario, Canada.

Friday, May 19

The first session was called to order in Room 1A1 of the Health Sciences Centre at 7:30 p.m. by Ken Blackwell, Russell Archivist. He introduced Peter Cranford, Chairman of the BRS Board of Directors, Dean A. Berland, Chairman of the Russell Archives Advisory Board, and Dr. William Ready, University Librarian. Dean Berland welcomed the BRS on behalf of McMaster University. Entitling his talk "A Challenge to the BRS", Dr. Ready examined the development of the Russell Archives; he also explained that the papers of Sidney Hook were now available for \$750 and in effect challenged the BRS to raise funds toward their purchase. A film, The Life and Times of Bertrand Russell, was then presented. With President Bob Davis now chairing the session, the remainder of the evening was devoted to a general discussion of Russell's personal qualities and concerns and how they are related to the aims and work of the BRS. The session was adjourned at 9:50 p.m.

Saturday, May 20

Since a sizeable number of members were present at an 8:00 a.m. breakfast in the Green Room of the Health Sciences Centre, it was decided to begin the second session at that time and place. Chairman Peter Cranford presided and (a) was the first speaker. He concentrated on the problems of BRS financing, stating (b) that there is a deficit. Lee Eisler, the Chairperson of the Information and Membership Committees, next presented statistics on member recruiting, enrollments, and renewals. (About one member out of two renews membership.) He reported on results of magazine advertising: Atlantic Monthly and Saturday Review will be dropped; Atlas, Harper's, Mensa, The Nation, and The New Republic will be retained. He stated his appreciation of the fine work that Beverly Smith has been doing as Co-Chairperson of the Membership Committee: during the past year she has answered 400 inquiries and enrolled seventy-three new members, all of which represents a contribution to the BRS of many, many hours of work and reflects a strong desire to help the BRS function effectively. Next, Harry Ruja proposed to offer an honorary presidency or membership to a celebrated person such as an eminent philosopher.

- (c) Discussion briefly returned to matters of financing as Peter Cranford recommended considering a reduction of activities, for example by decreasing the size of Russell Society News, as an alternative to increasing expenses and, by implication, increasing dues and developing other income sources. A report on (d) the BRS Library was given by Don Jackanicz. He reviewed the work of the lending library and the sales program; requested \$280 in Treasury funds to purchase two Russell films whose price has continued to increase; told of discovering a film of Russell on Meet the Press; congratulated Peter Cranford whose paper, "The Relevance of Bertrand Russell to Psychology", has been well received by professionals learning of it through advertisements in the American Psychological Association Monitor; expressed the hope that similar brief papers will be written for professionals in other fields as an introduction to Russell; and supported proposals to produce records or tapes of out-of-print Russell records and the Graham Whettam symphony dedicated to Russell.

At 9:15 a.m. members reassembled in Room 1A1 with Bob Davis presiding. A short film, Bertrand Russell Discusses Happiness, was shown. The following were matters discussed or proposals made and/or acted upon:

- Lee Eisler suggested that annual meetings be held during the first six months of a year to avoid the possibility that meetings might become spaced too close to one another.
- Members voiced their preferences concerning the site and date of the 1979 meeting. Cities proposed included Hamilton, New York, Chicago, Philadelphia, Boston, San Francisco, and Austin. Some members expressed opposition to meeting in states whose legislatures have not passed the Equal Rights Amendment. Members will vote on the 1979 meeting site and date via a mail ballot.
- Bob Davis mentioned the possibility of organizing a charter tour of Britain in which places associated with Russell would be visited.
- Ken Blackwell proposed approaching the Bertrand Russell Peace Foundation through Christopher Farley to learn details of Russell's Plas Penrhyn house which has been put up for sale following Edith Russell's death. Bob Davis and Don Jackanicz are to investigate this.
- The problems of the Awards Committee were reviewed, especially the fact that nothing of substance had been accomplished by this Committee. Gladys Leithauser proposed a BRS book award, a suggestion receiving general approval; Nick Griffin proposed a BRS Award for Folly which many thought could attract media attention. However, no decisions were reached.
- It was moved by Martin Garstens, seconded by Peter Cranford, and unanimously accepted to offer Dora Russell honorary membership.
- It was moved by Lee Eisler, seconded by Harry Ruja, and unanimously accepted to increase the membership of the Board of Directors to a minimum of six and a maximum of twenty-four persons. (The previous numbers were three and fifteen.)

This is Item (50) continued

A series of individual presentations followed. Having traveled from West Germany to attend the meeting, Dong-In Bae spoke about the Korean Bertrand Russell Society of which he was the founder. He elaborated on his hope that the BRS will take stands on political issues. Carl Spadoni then gave his paper, "Philosophy in Russell's Letters to Alys Pearsall Smith", which charted Russell's place in turn-of-the-century Cambridge Neo-Hegelianism. David B. Harley presented his study, "Beacon Hill School", which examined the background of Bertrand and Dora Russell's educational experiment. It was shown that Russell's own educational experiences--many of them negative--and, moreover, tragic contemporary events--especially World War I with its popular support--were decisive factors leading to the School's founding and character. Next, Bob Davis read excerpts from the final chapter of Dora Russell's recently completed book on education. Having attended Beacon Hill School for ten years beginning at the age of two, Joy Corbett responded to a variety of questions from members. Following a break for lunch, another film, Bertrand Russell Discusses the Role of the Individual, was shown. Lester E. Demonn then presented "Some Adjectives, Adverbs, and Descriptive Phrases Which I Found in My Roamings Applied to Bertrand Russell". This talk included diverse biographical and bibliographical material. The session was adjourned at 3:00 p.m.

Sunday, May 21

The third and final session was called to order by Bob Davis at 10:00 a.m. in Room 1A1. A film, Bertrand Russell, was presented. Harry Ruja then spoke on "Bertrand Russell and the Jews". Citing various letters and published writings, he rebutted recent allegations of Russell's anti-Semitism made by Sidney Hook. However, it was claimed that Russell based his 1970 condemnation of Israel on inadequate evidence. The final individual presentation was that of Gladys Leithauser who gave her paper, "A Non-Supernatural Faust: Bertrand Russell and the Themes of Faust". After a review of the Faust legend's evolution, she examined the relevance of Faustian imagery in works such as A Free Man's Worship and "The Perplexities of John Forstice". Joy Corbett returned briefly to address further questions concerning her Beacon Hill School days. The session concluded at 1:00 p.m.

Respectfully submitted,

Donald W. Jackanicz

LAST MINUTE NEWS

(51) A. J. Ayer. We have just received word -- and a welcome word it is -- that Sir Alfred Ayer has accepted an invitation to become an honorary member. He qualifies for honorary membership under Article II, Section 2 (III).

He has admired, and been influenced by, BR's views, for some 50 years (RSN18-11), and has written many philosophical volumes, including Language, Truth and Logic (1936), The Problem of Knowledge (1956). Russell and Moore: The Analytical Heritage (1971), The Central Questions of Philosophy (1973). He is Professor of Logic at Oxford, and a Fellow of the British Academy. For much more about him, see The Encyclopedia of Philosophy, London: Macmillan, 1967.

The BRS Bylaws require "approval by two-thirds of the members voting." Please use the Ballot, Part 4, last page.

INDEX

(52) Introductory (1). 1978 Annual Meeting (2) Next Annual Meeting (1979)(3). Chairman Granford reports (4). President Davis reports (5,53c). Committee Reports: Applied Philosophy (6,491); Audio-Visual (7,49e); Finance (8;49c,f;50a,c); Library (9, 47,50d); Membership (49b,50b); Scholarship Awards (11,49d,j;50e); Science (12). BR describes hell (13). Beichman's BR quote (14). McKeown on BR as sociologist (15,46). Ruja on BR's "anti-Semitism" (16,48). Psychologists' 204 requests (17). Sutcliffe papers (18). Religious debate is dead (19). Lewis Thomas: we need more science (20). Why Jacqueline is sad (21). News about members: Cleavelin (22); Ellis (23); Lamont (24); Stahl (25,45); Straus (26); Vogt (27). Honorary memberships: Paul Edwards (28); A. J. Ayer (51). New Members (29). Address changes (30). 200 members (31). Denon library for sale (32). Stationery price increase (33). BRS Library: books for sale (34). Inquiries: BR mention in 2 movies (35); Anthony Flew-BR debate (36). Mark Twain book recommended (37). Contributors thanked (38). 8 Director-candidates (39). BALLOT

This ballot is in 4 parts. Please read each part before mailing.

(53a)

Part 1. Election of Directors

8 persons are to be elected to the Board of Directors, for 3-year terms starting 1/1/79. Please make a checkmark next to the names of those candidates listed below whom you wish to vote for. Brief remarks about each candidate are given in (39).

- Peter G. Cranford
- Robert K. Davis
- Lee Eisler
- Martin Garstens
- James E. McKeown
- Harry Ruja
- Gary Slezak
- Beverly C. Smith

(53b)

Part 2. Time and place of 1979 Meeting

(Please skip this part of the ballot if you are certain you will not attend the 1979 Meeting. On the other hand, if there is a possibility — even though it's only a slight possibility — that you may attend, please do not skip it.)

Write "1" next to your first choice, "2" next to your second choice.

- | | |
|-------------------|-------------------------|
| Place: () Boston | Time: () December 1978 |
| (2) Chicago | () January 1979 |
| (1) Hamilton | () February 1979 |
| () New York | () March 1979 |
| () Philadelphia | () April 1979 |
| () Washington | () May 1979 |
| () other _____ | () June 1979 |
| | () July 1979 |
| | () August 1979 |

I will not be able to come on the following weekend(s): _____

(53c)

Part 3. Bob Davis' questions

1. What talks or programs would you like to see on the agenda of the 1979 Annual Meeting? _____

Would a panel of students from Beacon Hill School interest you? Yes Have you any other observations or recommendations for the 1979 Meeting? _____

2. The possibility of a BRS-sponsored trip to Britain next summer was discussed and has met with some enthusiasm. Would you be interested in such a trip? No When would be a good time for you to take such a trip? _____

None Here is a tentative list of places to visit. Please circle ones that interest you: London Osford Cambridge Nottingham(BR Peace Foundation) North Wales (Penrhyndeudraeth) Woburn Abbey(Russell family estate, and greatest "stately home" privately owned and open to the public). Other suggestions Great
Idea but I wouldn't be able to go.

3. We discussed establishing a BRS Award for a book that expresses well some issue or interest that BR addressed. Do you have a nominee for such an award? _____
Would you be interested in serving on a selection committee? _____

4. A BRS Folly Award was also suggested. Such an award has intriguing possibilities, but will, it seems to me, be difficult to handle correctly. Do you have any nominees for such an award? _____

5. We are establishing a committee to explore the teaching of philosophy in high schools. Have you any suggestions for books, essays, etc., that might be of value in such a course? Portrait from Memory; "Mind and Matter"; "Why I look to Philosophy"

(53d)

Part 4. Honorary memberships

Honorary members must be approved by two-thirds of the members voting. Please make a checkmark below, to show your approval or disapproval.

- A. J. Ayer Check one: Approve Disapprove
- Paul Edwards Check one: Approve Disapprove

Your name _____ date _____
Remove this page and mail it to The Bertrand Russell Society, Inc., RD 1, Box 409, Coopersburg, Pa. 18036. Must be postmarked before 10/1/78.

RUSSELL SOCIETY NEWS

No. 20

November 1978

- (1) BRS at APA, 12/78 (2,9,10). Proposed BR memorial in Britain (4). Next year's meeting: time & place (50). Report on Nobel Symposium (8). Results of RSN19 ballot (12). BR's 10 Commandments (2 versions)(13,14). BR as political thinker(15). A.J.Ayer on philosophers (19). David Pears and Karl Popper accept (30,31). New procedure for paying dues (44a). Fund-raising volunteers wanted (45). An asterisk in the left column indicates a request.
-

COMING EVENTS

- (2) BRS at APA. The BRS will present its 5th annual symposium at the annual meeting of the American Philosophical Association (Eastern Division) on December 26, 1978. This year's meeting is in Washington, D.C. For more details, see the program (9), and abstracts of the papers (10a,b).
-

- (3) Chairman Peter G. Cranford reports:

The most important development since the last report was the strengthening of our ties with British friends of Russell's: Dora Russell, Michael Scott, Peter Cadogan, and Lord Brockway. I arrived in London during the international humanist meeting, and was well received for several reasons...chief of which was that Dora was with me. She was obviously greatly loved and respected.

Dora, now 83, made the long train trip from Carn Voel to London alone. She is in fine shape physically, mentally and emotionally, and is a delightful conversationalist. She is an excellent promoter, and the fruits of her ability should be apparent before long. She succeeded in interesting key people in a memorial to Russell, and made tentative decisions as to the sculptor and the location in London -- probably Red Lion Square opposite Conway Hall, or (less likely) in ancestral Russell Square.

John Sutcliffe, 36, is an impressive intellectual. Like Dora, he has considerable courage. He is very knowledgeable about Russell's ideas, and could more than hold his own if he were to meet an anti-Russell thug in some dark intellectual alley. John and his mother met with Dora and me for several days, and there was good talk and plenty of it.

I spoke with Rev. Michael Scott. Peter Cadogan, who worked with Russell (and was a World War II air force pilot), described Scott as a "living saint". Scott is a rational theologian, and this has caused him some problems with the church. I agree with Cadogan's assessment of Scott.

I was not able to visit the Bertrand Russell Peace Foundation, for lack of time. Incidentally, there is a suit pending between the Russell family and the Foundation.

I was not able to see Conrad or Lord John Russell. Dora reports that the latter thinks well of the aims of the Society.

Dora reported that Kate and her family would soon be returning to live with her.

One highlight of the trip: Dora took me and my son through the large waiting crowd, to visit Parliament. Lord Brockway showed us around, and we heard "Yes, m'Lord" a number of times, and other marks of deference. Dora, as the former wife of one lord and the mother of another, got her own share of deference, which she augmented by capitalizing on chivalry: she walks with a cane. When I assisted her on one occasion, her eyes twinkled as she said, "Don't worry about me. I don't really need it that much. But you'd be surprised at how much more attention I can get with it than without it!"

I asked Lord Brockway, who at 90 is completely alert (and favorably disposed toward the BRS), in what way age had affected BR's competence. He answered that the only substantial change had been emotional: Russell became short-tempered toward the end. John Sutcliffe, in conversation with Lord Brockway, found him very much in favor of the proposed memorial.

See (50).

- (5) Treasurer Stephen J. Reinhardt reports:

See (51).

REPORTS FROM COMMITTEES

(6) Audio-Visual Committee (Warren Allen Smith, Chairperson):

On the possibility of producing Whettam's "Sinfonia Contra Timore", from the tape supplied by East German Radio, here are excerpts from our letter to Mr. Whettam:

...they will permit the use of the tape only for the 200 members of the BRS, and they say that reproduction in a larger quantity would require rights and be tied to financial obligations which would have to be agreed upon.

Only a few of our 200 members, however, are interested in music, for we are an academic society interested in Bertrand Russell, to whom the symphony was dedicated. Our proposal was to have made 1000 or so LP albums, to give 100 to the composer as well as to the orchestra, to give 100 or more gratis to major radio stations and university libraries, and to sell the remainder in order to pay the estimated costs of \$2500...with any overage going to our non-profit organization. Unfortunately, our modest proposal has been rejected.

We are still interested in purchasing 50 to 100 copies. Is it possible that the Leipzig Symphony might produce the the LP?

BRS Library holdings include phonograph records, tape recordings at 7½ ips, and cassettes of the following:

1. Bertrand Russell (Pye Golden Guinea GGL-0110)--a one-disc abridgment of Speaking Personally: Bertrand Russell
2. Bertrand Russell Speaking (Caedmon TC-1149)--four interviews of BR in 1960 by Woodrow Wyatt
3. Bertrand Russell Speaks: Human Nature and Politics (Audio Archives/Heritage LPA-1202)--BR presenting his 1950 Nobel Prize Lecture, with notes by Irwin Edman
4. Notice to the World:...Renounce War or Perish!...World Peace or Universal Death (Audio Masterworks LPA-1225)--proceedings of BR's 9 July 1955 Claxton Hall press conference
5. Searching for a New Land (Cetra LPX 12-13)--eleven bands of music by New Trolls, a rock group, one band a setting of BR's poem "To Edith."
6. Speaking Personally: Bertrand Russell (Riverside 7014-7015)--two discs; interview of BR by John Chandos
7. Whettam, Graham, "Sinfonia Contra Timore," an LP dedicated to BR by the English composer and performed by the Rundfunk-Sinfonieorchester Berlin (copy of a tape from Leipzig Radio Symphony Orchestra)
8. Wisdom: Conversations with the Elder Wise Man of Our Day, volume 2 (Decca DL-9084)--interviews by Romney Wheeler of David Ben-Gurion, Frank Lloyd Wright, Sean O'Casey, and BR

(7) Library Committee report (Donald W. Jackanicz, Chairperon): See (38 through 41).(8) Science Committee report (J. B. Neilands, Chairperson):

1. Scientists Discuss Ethics in Stockholm

On August 20-25 the Royal Swedish Academy of Sciences, with funding from the Nobel Foundation, presented a symposium titled "Ethics for Science Policy". The meeting was held at Södergarn, which is on an island in the Stockholm archipelago. The participants, all natural or social scientists, were from both eastern and western countries and, with a single exception, represented a broad spectrum of ideological opinion. The group called "Science for the People", comprised of younger, less professionally-oriented persons, was conspicuous by its absence. BR was there of course, in spirit, since it was he, together with Einstein, who started the Pugwash movement.

The symposium began with a dinner at the ornate headquarters of the Academy and on the following morning got down to business. Before the week was out a series of papers had been read on the philosophy of science, organization of research, ethical dilemmas in "big science" (space, nuclear power, defense) and, finally, communication among scientists and between science and the public.

The chairman was about to bring down the gavel on the last session when four participants delivered to the rostrum a resolution calling for greater social

accountability among scientists, with special emphasis on the urgent necessity that science should serve the causes of peace and human welfare. Nobel Symposia are quite dignified affairs and are not given to direct political action. The chairman intoned that to pass such a resolution would endanger the funding of future symposia. Thus chastened, the Gang of Four fell silent and, perhaps not wishing to embarrass the hosts, did not press the issue. The proceedings will be published by Pergamon Press in early 1979.

It was the consensus of almost everyone that spending for military purposes has gotten entirely out of hand. According to Frank Barnaby, Director of the Stockholm International Peace Research Institute, it is not too much to conclude that societies in both the US and USSR have become almost totally militarized.

Can a symposium like this accomplish anything of value? Allowing for the considerable expense of gathering people from the corners of the globe, we are left with the net advantage of meeting kindred souls, the opportunity to organize our thoughts on our ethical responsibilities to society and a forum in which to advance controversial ideas.

2. In early November, Professor Nguyen van Hieu, Vice-Director of the Vietnam Scientific Research Center, will visit Berkeley. The Committee on Science is arranging a buffet supper where Prof. Hieu will meet with members of the faculty of the University of California.

PHILOSOPHERS' CORNER

(9) BRS at APA (December 1978) — the program:

Program
of
THE BERTRAND RUSSELL SOCIETY

at the December 1978 meeting
of the Eastern Division of
THE AMERICAN PHILOSOPHICAL ASSOCIATION

Time: December 26, 1978 (Tuesday morning)

Place: The Washington Hilton Hotel, Washington, D.C.

I. ON RUSSELLIAN CLUSTERS
Eugene Schlossberger

Commentator: David Rosenthal, Graduate Center
City University of New York

II. REPRESSION IN BERTRAND RUSSELL'S ON EDUCATION
Howard Woodhouse, University of Western Ontario

Commentator: Mark Wartofsky, Boston University

Chairman: Justin Leiber, University of Texas, Houston

Copies of the papers presented here today may be borrowed (at no cost) or bought (for \$4), by writing to Mr. Don Jactanicz, Chairperson, BRS Library, 3802 N. Kenneth Avenue, Chicago, IL 60641.

This program is presented by the BRS Philosophers' Committee, chaired by Edwin Hopkins.

BRS at APA (December 1978) — abstracts of the papers:

(10a) I. ON RUSSELLIAN CLUSTERS, Eugene Schlossberger

In his Inquiry into Meaning and Truth Russell adopted a view of things and properties which he had earlier criticized in "On the Relations of Universals and Particulars," namely the view that things are just bundles of co-instantiated properties. This view, if correct, does facilitate Russell's epistemological program and treatment of names. I present, however, a number of arguments concerning spatial location, instantiation, modality and temporal change which clearly suggest that, as Russell himself held in 1912, the bundle theory is inadequate. A better ontological grounding for Russell's views in the Inquiry must be provided if those theses are to be maintained.

(10b) II. REPRESSION IN BERTRAND RUSSELL'S ON EDUCATION, Howard Woodhouse

In this paper I examine the methods suggested by Russell for controlling fear in the education of the young child in On Education. Upon analysis, some of these appear explicitly repressive despite the fact that Russell at the same time condemns traditional education and morality for requiring repression. After also examining Russell's conception of fear as either instinctual or learned, I explain the inconsistency in his educational theory by relating it to two main theoretical reasons:

1) The behaviorist conception of the child which Russell presents in On Education. His analysis is in terms of instinct, reflex and habit. Briefly, the establishment of good habits in the areas of sleeping and physical courage necessitate repression of both instinctual and learned fears.

2) Russell's 'behaviorised' conception of repression, by means of which he dissolves the notion of unconscious motivation into that of conflicting habits. Since these are readily amenable to instruction, Russell sees no need to invoke the metaphysical concepts of 'the censor' and 'the unconscious'.

He thereby abandons the psychological dynamism of the Freudian account. Finally I show that many of the problems inherited in On Education find their source in the philosophical psychology of The Analysis of Mind in which Russell adopted neutral monism. Secondary sources referred to include David Pears 'Russell's Theory of Desire' in J.E. Thomas and K. Blackwell (eds.) Russell in Review, Joe Park's Bertrand Russell on Education and Kate Tait's My Father Bertrand Russell.

(11) BRS at APA (December 1979) — a call for papers:

The following announcement was sent to publications read by professional philosophers:

The Bertrand Russell Society announces a call for papers to be presented at its meeting at the Eastern Division of the American Philosophical Association in New York in December 1979. Papers may be on any aspect of Russell's philosophy. They should have a reading time of about one half-hour and should be submitted in triplicate, typed and double-spaced, with an abstract of not more than 150 words. The name of the author, with his address and the title of his paper, should be submitted on a separate page. The submission deadline is May 15, 1979, and the papers should be sent to Edwin Hopkins, Chairman, Philosophers' Committee, The Bertrand Russell Society, 6165 64th Avenue #5, E. Riverdale, MD 20840. Those desiring the return of their papers should enclose a stamped, self-addressed envelope.

THE MEMBERS VOTE

(12) Results of the RSN19 ballot:

Part 1. Election of Directors. All 8 candidates were elected...PETER G. CRANFORD, ROBERT K. DAVIS, LEE EISLER, MARTIN GARSTENS, JAMES E. MCKEOWN, HARRY RUJA, GARY SLEZAK, and BEVERLY C. SMITH...for 3-year terms starting 1/1/79.

Part 2. Time and place of 1979 meeting: New York City in June.

Part 3. Answers to Bob Davis' questions are to be found in his report (50).

Part 4. Honorary memberships: both nominations (of A.J. Ayer and Paul Edwards) were approved, by the necessary

"two-thirds of the members voting", as required by the BRS Bylaws. The formalities have now been completed.

Only 15% of the members voted. That's better than last year's 11% but nothing to brag about. Can we make a better showing with the current ballot (at the end of this issue)? The current ballot needs no envelope, and is already addressed. Instructions for folding are on the ballot. Please vote.

BY BERTRAND RUSSELL

(13) "My Ten Commandments" originally ran in "Everyman" on April 3, 1930. Here it is:

Everybody, I suppose, has his own list of virtues that he tries to practice, and, when he fails to practice them, he feels shame quite independently of the opinion of others, so far at any rate as conscious thought is concerned, though probably not fundamentally. I have tried to put the virtues that I should wish to possess into the form of a decalogue, which is as follows:

1. Do not lie to yourself.

This I regard as the most essential of all commandments. Some unduly rationalistic person may object that it is useless to lie to yourself, since you will not believe your own lie; this is a delusion. Coué has taught us to cure illnesses by auto-suggestion, and the same method is equally effective in obscuring consciousness of our own defects. If you have been engaged in a business transaction, and have succeeded in driving a sharp bargain with a person much poorer than yourself, you have only to assure yourself every night as you drop asleep that you showed extraordinary generosity and that most people would have been far harsher; after you have said this to yourself for a week or a month, you will believe it. Braggarts soon come to believe in the feats of courage they attribute to themselves. When you wish to believe some theological or political doctrine which will increase your income, you will, if you are not very careful, give much more weight to the arguments in favor than to those against. Generally speaking, unless you practice the habit of telling yourself the truth, you will be able to perpetrate any villainy with a clear conscience.

2. Do not lie to other people unless they are exercising tyranny.

This is the exact opposite to the generally received opinion, which is that one should tell the truth to the strong but not to the weak. It is considered right and proper for governments and great newspapers to lie for public objects, such as the suppression of Bolshevism or the execution of innocent persons with unpopular opinions; it is considered right for parents to lie to children about matters of sex and even about the moral excellence of the said parents. My principle is the opposite of all this. I consider that governments should tell the truth to their subjects, and that parents should tell the truth to their children, however inconvenient this may seem, but I do not consider that tyrants have a right to expect the truth from their victims. In extreme cases, this would be admitted: a conspirator who, under torture, refuses to betray his accomplices, is admired, provided his cause is not too abhorrent. But I think the principle has much wider applications. I should not blame children for lying to their parents if their parents are unreasonably repressive; I should not blame a freethinker for concealing his opinions if the avowal of them would cause him to starve. Those who are intelligent but weak cannot be expected to forego the use of their intelligence in their conflicts with those who are stupid but strong.

3. When you think it your duty to inflict pain, scrutinize your reasons closely.

I should say, "Do not take pleasure in the infliction of pain," were it not a matter that is outside the will. If you do take pleasure in the infliction of pain, you may be able to alter your character by various indirect methods, but you cannot cease to feel this pleasure merely by telling yourself that it is base; you can, however, by an act of will refrain from actions to which you are tempted by the desire for this pleasure. As a matter of fact, the wish to inflict pain is very much commoner than most people realize, and it is at the bottom of a great many beliefs supposed to be moral. It used to be believed among ourselves, and is still believed in Japan, that it is wicked for a woman to have anaesthetics in childbirth. This belief has never had any basis other than sadism, although all kinds of pseudo-scientific reasons have been given for it. I doubt whether operations, such as the extraction of tonsils, are always necessary when surgeons recommend them, and I suspect that some surgeons in some cases derive an unconscious pleasure from the infliction of pain. It is every surgeon's duty to inhibit his natural shrinking from the infliction of pain, and there is a certain psychological tendency for such inhibition to leave room for sadistic impulses.

We admire and praise self-sacrifice, and derive pleasure from the contemplation of virtuous lives devoid of happiness; this also often has its root in cruelty, and causes moralists to commend self-sacrifice even when it does no good to anybody. For all these reasons we are too prone to believe that pain is good for other people; and although this belief is sometimes justified, as, for example, in the case of a necessary surgical operation, we ought to be very sure in each case that our judgment is not influenced by any impulse towards cruelty.

4. When you desire power, examine yourself carefully as to why you desire it.

The desire for power is part of the essential mechanism of human nature, and it is not to be regarded as in itself an evil; it only becomes an evil when associated with certain other desires and impulses. Religious leaders, political reformers, and men of science are all actuated by various forms of love of power, but are not on this

account to be thought ill of. On the other hand, the power that consists in thwarting people is bad. Love of power therefore is an evil when it is associated with hatred or contempt, but not otherwise. Whether love of power is good or bad depends entirely upon those other desires for the sake of which power is wanted. If you desire power in order to be able to be cruel, you had better either subject yourself to a psycho-analyst who will change your character, or else commit suicide.

5. When you have power, use it to build up people, not to constrict them.

This maxim applies especially in education. Those who deal with the young inevitably have power, and it is easy to exercise this power in ways pleasing to the educator rather than useful to the child. The stock example is the father who wishes his son to follow in his footsteps to be, like himself, an eminent statesman, a prominent financier, a distinguished man of science or what not, and who is indignant when he finds that his son's tastes are utterly different from his own. All propaganda in education really comes under this head, since it consists not in teaching the young to think for themselves but in hypnotizing them into the unthinking acceptance of formulas. Power over subject nations comes under the same head. There are very few instances in history of such power being abandoned voluntarily, although there are many instances of its doing great harm.

6. Do not attempt to live without vanity, since this is impossible, but choose the right audience from which to seek admiration.

The man who seeks the admiration of fools has to become a fool, and the man who seeks the admiration of rogues has to become a rogue, but the man who seeks the admiration of the wise and good has to become wise and good. Vanity, like love of power, is an essential ingredient in human nature, and those who imagine that they can live without it deceive themselves: but vanity has forms that are noble as well as forms that are ignoble. Vanity is the motive of Hamlet's dying speech:

O God! -- Horatio, what a wounded name,
Things standing thus unknown, shall live behind me!
If thou didst ever hold me in thy heart,
Absent thee from felicity awhile,
And in this harsh world draw thy breath in pain,
to tell my story.

But this is a noble form of vanity, essential to the greatest characters.

7. Do not think of yourself as a separate, wholly self-contained unit.

A certain degree of egoism is natural to man but theory has made us more complete egoists than we are by nature. The natural man, at any rate for certain purposes, includes within the scope of his egoism his family, his tribe, his nation, and even all mankind. He will include his family when he is protecting his children from death or disaster; he will include his tribe or his nation in time of war; he may include all mankind in the face of some natural cataclysm. This last does not necessarily happen. For example, on the occasion of the earthquake in Tokyo, the Japanese considered that the Koreans were in some way to blame, and set to work to murder them. But in general a collection of men faced with grave danger from some natural cause, such as tempest or shipwreck, will tend to co-operate so long as co-operation offers a chance of escape.

Most co-operation is due to fear, so that as people become more powerful they become more individualistic. This, however, is not an inevitable law of human nature. It is possible to be actuated by hope rather than fear, and to co-operate in securing goods rather than in avoiding evils. So the Athenians, after defeating the Persians, co-operated to make Athens beautiful; so the Elizabethans, after defeating the Armada, co-operated to make England great and splendid. Such co-operation, where it has occurred, has been a genuine instinctive movement, not a mere pale obedience to duty. It is the possibility of such co-operation on a large scale that makes it permissible to have hopes for the future of mankind. But this depends upon the existence of a social sense as deep and instinctive as that of gregarious animals, and the modern world, for reasons which are somewhat obscure, is inimical to this kind of social sense, except in the one form of patriotism, which is too limited and too much bound up with war to be adequate as a source of social progress.

Conscious self-sacrifice should never be called for. Whenever it is, there is an implication of a feeling of dislike towards the object of the sacrifice.

8. Be reliable.

I mean by this to suggest a whole set of humdrum but necessary virtues, such as punctuality, keeping promises, adhering to plans involving other people, refraining from treachery even in its mildest forms. This whole set of virtues used to be commoner than it now is among the young. Modern education, in lessening the emphasis on discipline, has, I think, failed to produce reliable human beings where social obligations are concerned.

9. Be just.

I mean by this that everybody's acts should be judged quite regardless of whether you like or dislike the people concerned. But this is a very rare and difficult virtue, unknown, for example, in law courts. There is no country on earth where a foreigner can rely on getting justice against a native; there is no institution on earth of which the head does not have favorites who are allowed a latitude forbidden to those who are in disfavor. Justice is essentially an intellectual virtue, demanding the power to think dispassionately. Intellectuals, however, by no means always practice it. If it had existed among intellectuals they would not have behaved as they did in the Great War, either in Germany or elsewhere.

10. Be good-natured.

No collection of virtues, however brilliant, will make a person tolerable in daily life who is perpetually in the habit of scolding or complaining. A certain truthfulness and bonhomie are essential to the simpleness and happiness of everyday existence. This may seem a humble virtue, but I believe the lack of it has more to do with causing unhappy marriages than any one other factor.

If all these commandments were obeyed, mankind would be intelligent and happy. At present they are neither.

(Thank you, BOB DAVIS.)

* * * * *

(14) While we're on decalogues, let's have another. This one comes from the Autobiography, Volume 3, New York: Simon & Schuster, 1969, p. 71:

"A LIBERAL DECALOGUE" *

by
Bertrand Russell

Perhaps the essence of the Liberal outlook could be summed up in a new decalogue, not intended to replace the old one but only to supplement it. The Ten Commandments that, as a teacher, I should wish to promulgate, might be set forth as follows:

1. Do not feel absolutely certain of anything.
2. Do not think it worth while to proceed by concealing evidence, for the evidence is sure to come to light.
3. Never try to discourage thinking for you are sure to succeed.
4. When you meet with opposition, even if it should be from your husband or your children, endeavor to overcome it by argument and not by authority, for a victory dependent upon authority is unreal and illusory.
5. Have no respect for the authority of others, for there are always contrary authorities to be found.
6. Do not use power to suppress opinions you think pernicious, for if you do the opinions will suppress you.
7. Do not fear to be eccentric in opinion, for every opinion now accepted was once eccentric.
8. Find more pleasure in intelligent dissent than in passive agreement, for, if you value intelligence as you should, the former implies a deeper agreement than the latter.
9. Be scrupulously truthful, even if the truth is inconvenient, for it is more inconvenient when you try to conceal it.
10. Do not feel envious of the happiness of those who live in a fool's paradise, for only a fool will think that it is happiness.

* This first appeared at the end of my article "The Best Answer to Fanaticism — Liberalism," in *The New York Times Magazine*, December 16, 1951.

(Thank you, AMY BLOCK.)

ABOUT BERTRAND RUSSELL

(15) Liberal, Socialist, or Anarchist? That's the caption under a picture of BR on the front cover of the BBC's "The Listener", of 8/31/78. The following article starts on p. 263 of that issue:

Alan Ryan

Bertrand Russell's liberalism

Bertrand Russell is an underrated political thinker. But, if this is regrettable—and I, at any rate, think it is regrettable—it is not exactly surprising. One thing that must stand in the way of a proper estimate of what Russell contributed to our political ideas is the enormous reputation he acquired for his contributions to logic and the foundations of mathematics. Russell was a leading figure in what amounts to the only revolution these subjects had undergone in two-and-a-half millennia. It was an intellectual achievement which inevitably overshadowed his contributions to thinking about politics.

A second thing that, rather less happily, gets in the way is Russell's tremendously energetic career as a political activist. I am sure that there is much more to be said on behalf of his activities as the persecutor of the American persecutors of the Vietnamese than his opponents were willing to let on. Yet the simple-minded Marxism and the global paranoia with which his secretary and disciple-turned-mentor, Ralph Schoenman, encumbered that hostility to American folly, suggested that Russell was senile if he meant half of what he was supposed to be saying, and just silly if he was letting other people say it in his name. Ronald Clark's biography of Russell, which Penguin have just brought out in paperback, deals admirably with these rather melancholy events. He points out, with some subtlety, what it is very likely that Russell's lifelong allegiances would have led him to think, and what not. We now tend to associate accusations of pursuing an 'imperialist' policy with Marxist critics of American behaviour. But it ought to be remembered that the basis of the theory of imperialism was provided at the turn of the century by an English liberal, J. A. Hobson, a colleague of Russell's at the London School of Economics. Like many other radicals before the First World War, Russell simply took it for granted that capitalist countries would try to gain control of overseas markets and overseas sources of raw materials.

His hostility to America was of almost equally long standing. In the middle of the First World War, one of his fears was that a long-drawn-out conflict would drag the Americans into the European struggle between employers and workers; the pre-war American record led him to think that American soldiers on British soil would be used to put down strikes and intimidate political radicals. None of this, however, demanded the least attachment to Marxism as an intellectual doctrine, and certainly none of it went along with any affection for communism in practice. This can be seen readily enough by the proximity in date of two of his best-known books on politics: *The Principles of Social Reconstruction*, the lectures which give the clearest, most complete and most persuasive account of his political views, came out in 1916, and the cool and unenthusiastic appraisal of the new Soviet régime which makes up *The Practice and Theory of Bolshevism* came out a mere four years later, in 1920.

One of Russell's achievements as a political thinker was to keep alive and enrich the liberalism into which he had been born through the vicissitudes of the 20th century. Russell was of course, the child of liberal aristocrats. But the liberalism into which he was born was not the cautious, commercially oriented, only very mildly reformist outlook of the solid Liberal

Party. True, Russell's grandfather, Lord John Russell, had earned the nickname of 'finality Jack' by declaring that he hoped the Reform Act of 1832 would constitute a final settlement of Britain's constitutional problems; but Russell's parents were decidedly of the radical wing of liberalism. Lord and Lady Amberley were devoted to the causes to which John Stuart Mill and his allies were devoted, so much so that they persuaded Mill to become the infant Bertrand Russell's godfather—stressing, of course, that this was to be in 'no religious sense'.

The Amberleys' enthusiasms in the 1860s look strikingly like the causes for which their son was to fight in his turn. They scandalised their contemporaries by advocating a complete equality of the sexes at a time when almost nobody was prepared to contemplate more than a few timid concessions to a wife's right to physical and economic protection from her husband. It was not just a matter of giving wives some say over the property they brought into marriage; it was equally a matter of women's right to have a marriage dissolved without suffering financial and social penalties.

Kate Amberley worked with John Stuart Mill and his stepdaughter on the Women's Suffrage Society—and she drew from Queen Victoria the wish 'that she could have that young woman whipped'. Her husband scandalised polite society by publicly declaring that there was an urgent need to discuss the whole topic of birth control, since it seemed that the misery and poverty of the working classes could hardly be alleviated so long as they were unable to control the size of their families. Mill, of course, had been jailed for a night many years before, for distributing birth-control advice in working-class districts. One can only hope that the recollection comforted Russell in 1940 when the uproar aroused by his little book on *Marriage and Morals* cost him a professorship in New York.

If radicalism about the relations between men and women was the most obviously scandalous departure from the political proprieties, a more politically explosive issue was the rights of private property. Here, too, Russell's parents displayed the same casualness about the virtues of private property that their son was to display. The old Whig aristocracy had taken it for granted that landed property was an essential prop to the stability of English social and political life; their renegade offspring were inclined to argue that landlords were simply another variety of monopolist, that the rights of landlords were a tax imposed by the idle upon the industrious, and that the conjunction of all this with inheritance was merely to compound injustice by allowing its beneficiaries to pass on their ill-gotten gains to their children.

Earlier liberals had somewhat reluctantly conceded that the state could interfere with the rights of the owners of capital, to the extent of stopping employers exploiting their employees to an intolerable degree. They had agreed, less reluctantly, that the state ought to prevent the exploitation of children and other defenceless beings. Their successors began to explore the possibility of quite different ways of organising industry, such as workers' co-operatives, municipal ownership, outright nationalisation, and so on. It was this movement which made it entirely natural for

Russell to argue, after the First World War, that the liberal cause could be best served by a Labour government, and it was as a Labour candidate that he fought the Chelsea constituency in which he lived during the 1920s.

The picture of his attitudes in foreign affairs and in matters of war and peace is more difficult to summarise. Many orthodox liberals disliked war because it was bad for business. But the radicals' hostility to war was awkwardly allied to their principled hostility to injustice. Mill, for instance, thought that the Northern American states were entirely justified in fighting the civil war to abolish slavery. In the 1860s, Russell's father, Lord Amberley, had written an essay proposing the creation of a 'league of nations' with sufficient power to make an aggressive war a bad risk for any individual nation tempted to embark on it and this, too, demanded a willingness to stop war by threatening war.

It is worth bearing in mind how utterly different this liberal pacifism was from, say, the pacifism of a Gandhi. Gandhi's was all but absolute: characteristically introspective, and concerned with the damage that the violent man does to himself, to his own soul. Liberal pacifism meant scepticism about the efficacy of war, and it was generally piecemeal and instrumental. The point can be illustrated if we look at one of the most notorious episodes in Russell's career; soon after the war, he actually advocated a pre-emptive attack by the United States on the Soviet Union in order to stop the Soviet Union acquiring nuclear weapons. Although he later denied having made the suggestion at all, and although he always said that it was made, so to speak, in passing, and was of no great importance, it was not a moral aberration, nor, I think, a momentary lapse from his usual pacifism. Rather, it was the logical upshot of much the same process of thought that had led him to regard the First World War as a piece of criminal folly.

When evenly matched armies fought one another in what Russell saw as a war between opposing colonial powers, there was no goal at stake which was morally defensible in itself, or likely to be promoted by the means being used. When the existence of the atomic bomb made it likely that any future war would result in the extermination of mankind, it was overwhelmingly worthwhile stopping such a war breaking out; and, at this time, the American monopoly of nuclear weapons made it at least conceivable that that monopoly could be used to stop anyone else acquiring them. In effect, Russell was thinking to the end of the argument that began with the suggestion that the United States should tell the Soviet Union not to develop nuclear weapons, and went on to contemplate what would have to happen if the Soviet Union refused to comply.

There was not much room in Russell's way of thinking for doubts about the way in which the means employed might contaminate the ends for which they were used. He did not exactly relish the idea of world peace endorsed by fear of American bombs, but it was a better prospect than the near-certainty of general destruction.

Thomas Hobbes, 300 years earlier, had said much the same thing: Leviathan is better than war of all against all, with continual danger of violent death. Of course, once the Soviet Union had got nuclear weapons, the whole argument fell to the ground, and for Russell to turn to the politics of nuclear disarmament was not a contradiction of his previous position—it was a recognition of this fact.

All of what I have said so far may suggest that Russell simply took over the ideas of his parents and their political friends

and just applied them to new conditions. Nothing could be further from the truth; his godfather, John Stuart Mill, died when he was less than a year old, and his parents both died within the next two years. In so far as Russell took over the ideas to which he had been born, he had to do so by thinking them out for himself, against the efforts of his grandmother and the tutors whom she hired to bring him up.

Still, even if he had to rediscover his inheritance, there is still the question of what he added to it. Did he add anything to it, other than a good deal of personal courage, and an extraordinary literary talent? Oddly, I think part of the answer is that he subtracted a good deal, and that that was a creative achievement. This negative achievement amounted to taking the defence of individual freedom and diversity out of the rationalist, utilitarian setting in which predecessors like Bentham or Mill had placed it; this he did by appealing to an account of human psychology which owed more to the insights of writers like Nietzsche and Freud than it did to the empiricism of Mill, Hume or Locke.

Russell's *Principles of Social Reconstruction* provides a non-calculating case for liberty. Its foundation, said Russell, was the observation that men are creatures of impulse rather than reason; they do not, and, indeed, cannot, pursue happiness by carefully calculated methods. Impulse is blind and non-instrumental; impulses are organic, are sources of energy which aim at the satisfaction necessary to that impulse, pretty well regardless of further consequences.

The important distinction on which Russell placed most of the weight of his argument is between possessive impulses and creative ones. Creative impulses lead us to do things and make things which others can share without loss to ourselves; possessive impulses lead us to exclude others, to seize what we can and defend it against others. To talk about these impulses being 'a search for happiness' as the utilitarians had done, is either vacuous or misleading; it is vacuous—if all we mean by happiness is that our impulses are satisfied, and it is misleading if we take it literally, if we allow ourselves to forget that men will satisfy an impulse even at the expense of their own lives; to want to die for a cause, say, or to murder in revenge, cannot really be called the pursuit of happiness. The capitalist barons of Russell's days—the Carnegies, Rockefellers and Pierpont Morgans—were impelled by the need to stamp their will on the world, not by the desire to have as much money as would make them happy.

The *Principles of Social Reconstruction* is a hymn to the creative impulses. Although impulse is blind, it can be shaped and redirected, as well as simply repressed or satisfied, and the peculiar cast that Russell gives to familiar liberal themes comes from his concentration on the ways in which creativity can be liberated and possessiveness reduced. Russell's views about the attractions and dangers of socialism illustrate this. He agreed that among the horrors of capitalism in his day, we ought to include the poverty of many workers—their poor diets, inadequate housing, insufficient clothing; but it did not seem to him that it would be very

difficult to abolish poverty in this sense. This is another topic, but Russell was always oddly unperceptive about institutions: he saw that bureaucracy might be oppressive, but he was prepared to take it on trust that it would be efficient, and he did not foresee the sheer technical complexity of trying to abolish poverty.

But even if poverty were abolished, he thought that that would be a small step towards freedom; as early as his first book, his lectures on *German Social Democracy*, written in 1895, he complained that socialists overestimated the importance of material prosperity. Poverty was a very great evil, but it did not follow that affluence was a very great good. Given reasonable prosperity, the greater goods are enjoyable work and self-government at work and in the political realm. State ownership is a very limited step in this direction; you could nationalise the railways overnight and still do nothing to give the workers on the railways any sense that it was their industry.

So, one finds Russell keeping both the admirers of Bolshevism abroad and the enthusiasts for nationalisation at home, very much at arms length. Both were too keen to get men under their control, and therefore insensitive to the claims of diversity and variety; both were obsessed by the goals of efficiency and productivity, and therefore insensitive to the impact that this search had on our characters as well as on our welfare, narrowly considered. Trotsky called him a moth-eaten liberal aristocrat for his pains; but the insult was a compliment to Russell's good sense in seeing that Bolshevism might be permissible in a barbarous society which was being dragged into the modern world by main force, but that it was no model for a civilised society to follow. Equally, the Webbs did not like Russell's private life or his politics—Mrs Webb thought he was a dangerous anarchist in both domains—but he never fell for the powerful as they did.

Like his liberal predecessors, Russell was obsessed with education. Liberals always have been, because, if there is to be change without violence, it will presumably have to come about by persuading people of the need for it. The old empiricist belief that the mind was naturally a clean slate on which the educator might draw what he liked, encouraged a belief in the effectiveness of education; but it also opens up the prospects of a brave new world, in which peace and quiet are secured by indoctrination. Russell's enthusiasm for the psychology of impulse allowed him to defend an education in which social conditioning came a poor second to finding ways of shaping the artistic and intellectual capacities of children.

There is a standard myth about all this, of course, which represents Russell as the advocate of a childhood free-for-all, in which infantile self-expression reigns supreme. This is evidently nonsense: Russell constantly emphasised the need for discipline, self-control and orderliness. A mathematician, whose passion for the subject sprang from his sense of the unique satisfaction to be had from following complex arguments to their remotest conclusions, was not likely to advocate laissez-faire as an educational principle. Teaching yourself to keep alert and attentive is a different

matter from maintaining a sullen silence in the face of teacher's threats.

The importance of this is not just a matter of the educational decencies. Russell thought that there were far too many bored, resentful and unfulfilled people in all the most civilised countries; and this meant that there were far too many people who would welcome any sort of excitement, even if this was the excitement of a war or a pogrom. Commentators have always found it hard to understand the brief friendship between Russell and D. H. Lawrence; but it is not a surprising friendship in itself. Russell thought of the modern world in much the same terms as Lawrence—at any rate, in the sense that he thought Lawrence was right about the lifelessness of too much of it. Russell traced both that lifelessness and the violence to the excessive repression of the instinctual life.

Russell, obviously, and in personal terms, very quickly parted company with Lawrence on everything else; for Russell, like Freud and other embattled rationalists, thought that it was precisely the blindness of the impulsive life which makes the rational organisation of that life more essential. The indirectness of that organisation is obvious—the cultivation of creativity and the redirection of possessiveness is more like the gardener's provision of the right environment for his plants than the mechanical assembly of, say, an engine. But this is far from supposing that there is no such thing as skilful gardening. Freud, to be sure, was a more determined, more perceptive, and, in many ways, a better equipped student of the psyche than was Russell. Russell, however, had strengths of his own. He did not fall back on stoicism and scepticism about politics as Freud usually did, but stood by the liberal belief in the importance of institutional and organisational change.

The crispness of his intellectual style has led a lot of critics to take Russell for an 18th-century rationalist, who had not yet suffered the doubts and uncertainties of the later 19th century. But this is almost exactly wrong. The tone of voice may be that of the 18th century, but the achievement is a 20th-century one. By the middle of the first war, liberalism seemed to many of Russell's contemporaries to have been rendered obsolete by the violence and irrationality that the 20th century had already displayed; they appeared to render the 19th-century liberal's belief in the inevitability of peaceful, rational improvement entirely incredible. Russell's achievement was to keep his nerve in the face of the evidence, to absorb its implications, and to argue that the new disillusionment with human nature made liberalism more necessary than ever. It was not because men found it easy to understand themselves and tolerate each other's peculiarities that they needed Russell to remind them of the importance of freedom and reason, but precisely because they have always found it so hard.

Alan Ryan is reader in politics at the University of Oxford.

(Thank you, PETER CRANFORD.)

PROMOTING BR/BRS

- (16) * Promotion by public events? PETER CRANFORD, who has just visited England, says, "Those with expertise advise us that the better route for the BRS might be events, speakers, public meetings." Any comments?
-

BR QUOTED

- (17) Reflection of Bertrand Russell is the caption on this Letter-to-the-Editor of "Chemical And Engineering News" of 7/10/78:

SIR: I was moved and somehow deeply encouraged by the recent discovery of your editorial "Nothing to kill or die for" in the Jan. 2 issue of your journal. A reflection of Bertrand Russell's came to mind, part of a lecture delivered in the late 1940's, and printed under the title "Science and War" in the book "The Impact of Science on Society":

"Either we must allow the human race to exterminate itself, or we must forgo certain liberties which are very dear to us, more especially the liberty to kill foreigners whenever we feel so disposed. I think it probable that mankind will choose its own extermination as the preferable alternative. The choice will be made, of course, by persuading ourselves that it is not being made, since (so militarists on both sides will say) the victory of the right is certain without risk of universal disaster. We are perhaps living in the last age of man, and, if so, it is to science that he will owe his extinction."

The rationalization of mass killing of his fellow men has been a primary occupation of mankind during historical time, and certainly before it. The position your journal has taken, I like to hope, may be symptomatic of diffusion of insight into the fundamentally self-destructive nature of such lightly promulgated delusions.

Robert Krause, M.D.

Binningen, Switzerland

(Thank you, JOE NEILANDS.)

BR & HUMAN RIGHTS

- (18) Jews in the USSR. The following comes from "Jews in Eastern Europe", June 1966, pp. 82-84:

Bertrand Russell Supports Students

Thirty thousand students signed a petition on Soviet Jews drawn up by the World Union of Jewish Students, the London *Jewish Chronicle* reported on March 27, 1966. It stated that the petition requested the following:

1. Soviet Jewry's right and opportunity of following its national and cultural heritage by studying and teaching its history, language, cultural and artistic traditions: rights which are guaranteed under the constitution of the U.S.S.R. and observed in connection with all other recognised national minorities of the U.S.S.R.: further to permit religious Jewish believers the identical rights and facilities for the practice of their religion, as are guaranteed to other religious minorities in the Soviet Union.

2. The destruction of manifestations of antisemitism, whether they be in defamatory articles in the press, or in discrimination in certain fields of employment and education.

3. The right of families, torn asunder by war and the bestialities of Nazi persecution, to be reunited with their relations, from whom they are still separated twenty long years after the holocaust.

4. The right of emigration for those Jews who wish to leave, such right to be granted freely and in conformity with the Universal Declaration of Human Rights.

The petition ends by stating:

"We hope that the Soviet Socialist peoples who have fought for and

preserved their liberty in the face of great suffering and sacrifice, will accord that same liberty and those same rights to the Jewish citizens of their republics.

"It is with this sole aim of equality that we raise our voice in protest today."

The petition was delivered to Soviet embassies in Belgium, Holland, Denmark, Sweden, France and Switzerland on March 27 and subsequently in England and Israel.

The World Union of Jewish Students received a message from Bertrand Russell in support of its efforts to publicise the facts about Soviet Jews. The message was as follows:

"The situation of Jews in the Soviet Union is one of those tragic anomalies that exercise the concern of those who are steadfastly opposed to the cold war and seek greater understanding between the nations. The irony of this situation is that Soviet Jews, survivors of a people whose destruction was a priority of Nazi Germany's war aims, are still facing a problem of national survival.

"In 1948 Stalin and his secret police executed the Jewish creative intelligentsia and totally destroyed Jewish institutions, publishing houses, schools, theatres and every vestige of national existence outside the synagogue. De-Stalinisation has brought little improvement. Jews still have no schools, no national theatres and no secular communal institutions.

"Although restitution was frequently promised in 1956 and 1957, only token symbols of culture have been permitted—a handful of books in the

Yiddish language published in small editions and exploited as reassuring propaganda abroad, one monthly Yiddish magazine, one or two dramatic groups and a few touring Jewish singers. This represents the total cultural resources of three million people traditionally regarded as one of the most talented and creative Jewish communities in the world.

"A comparison with other Soviet nationalities exposes the basic injustice of their situation, for even the smallest national groups in the Soviet Union are given the opportunity to pursue a cultural, social and political life of their own, denied to Jews.

"Although the anti-religious campaign in the U.S.S.R. is directed against all religions, it is prosecuted with exceptional severity against Judaism, and propaganda against Jewish religion often assumes a character of racial anti-semitism, as in the writings of Kichko, Mayatsky and Osipov. The closure of synagogues has been conducted ruthlessly. At the time of the October Revolution there were some 3,000 synagogues in the Soviet Union. By 1956, according to a Soviet report to the United Nations, only 450 remained. Since then a further 350 have been closed and many cities with large Jewish populations have no places of worship available at all. Religious life is additionally hindered by the denial to Judaism of essential facilities available to other recognised Soviet religions, to the extent that makes it impossible to practise Judaism with the freedom guaranteed by the Soviet Constitution.

(Thank you, BOB DAVIS.)

"It is particularly tragic that the Soviet authorities have still taken no steps to end the separation of members of Jewish families disunited in appalling circumstances during the Nazi war. As a result of repatriation agreements between the U.S.S.R. and other communist countries in Eastern Europe, most of these problems have been solved in regard to Poles, Rumanians and Germans who were allowed to resettle in their own countries, many Germans being permitted to join relatives in Western Germany.

"The one community which suffered most at the hands of the Nazis—the Jews—have many thousands of individuals in the U.S.S.R. who have been waiting for more than 20 years to join their close relatives in Israel and other countries. Elsewhere in Eastern Europe, Jews in similar positions have been allowed family reunification. The Soviet Union, however, has granted exit permits only to a small number of mainly elderly persons. Soviet Jews have no opportunity to voice their feelings publicly and are dependent on the support of public opinion abroad.

"I am happy that students of British universities are engaged in this special effort to make the facts more widely known. Discrimination against Jews in the U.S.S.R., like the persecution of dissident intellectuals, seriously impairs the development of the Soviet Union as a true socialist society and hinders the efforts of all those working for international co-existence."

PHILOSOPHERS

(19) A.J. Ayer on philosophers, as reported by Ved Mehta in Fly and Fly Bottle, Boston: Little Brown, 1962, pp.83-84:

I racked my sleepy brain for some more questions, and finally asked him whether there was one particular quality that all philosophers shared.

He was thoughtful for a moment and then said, "Vanity. Yes, vanity is the *sine qua non* of philosophers. In the sciences, you see, there are established criteria of truth and falsehood. In philosophy, except where questions of formal logic are involved, there are none, and so the practitioners are extremely reluctant to admit error.

To come back to Austin, no one would deny the incisive quality of his mind, and yet when Strawson defeated him in an argument about Truth, it never seemed to have once crossed Austin's mind that he was the vanquished. To take another example, Russell attacks Strawson as though he were just another Oxford philosopher, without reading him carefully. But perhaps at his age Russell has a right to make up his mind about a book without reading it."

DISSENTING OPINION

(20) BR and anti-Semitism (continued). IRA STRAUS writes:

In a paper abstracted in RSN19-48, Harry Ruja "defends" Russell against evidence that the latter held anti-Semitic attitudes. More precisely, he lets the distressing evidence (brought forth by Clark and Hook) pass, denying only that Russell's private sentiments affected his public judgements.

Even this, however, is unconvincing. In Russell's Bolshevism: Practice and Theory (NY: 1920) we find the disgusting remark that the Bolsheviki's orientation toward Asian empire "is probably accompanied in the minds of some with dreams of sapphires and rubies and golden thrones and all the glories of their forefather Solomon." (p. 116) A significantly irrationalizing effect must be conceded to Russell's distaste for Jews if we are to explain the presence of this ludicrous remark in a book which is generally so clear sighted and often so movingly prescient.

In his argument against Bolshevism, Russell dwelt perceptively and at length on cultural and national differences. His anti-Semitism indicates the seamy side of this concern -- linked to insular patriotic attitudes and possibly also to the anarchistic aspect of Russell's politics at the time. The other side of Russell's concern with the present fact of historical particularism -- his advocacy of liberal Anglo-American imperialistic internationalism -- of course won out in the 1940s, when he belatedly supported the war against Hitler and anxiously advocated a preventive war against Stalin.

When the Soviet Union developed its atomic capability, Russell moved on to the indubitable slogan, "Better Red than Dead," but he seems to have deduced from this only an inadequate policy of negotiation, arbitration and disarmament. The logical conclusion, it seems to me, would be to offer and negotiate complete but highly conditional surrender. Russell, by concluding only that one should yield rather than fight on any single question, enabled Hook to make the effective point that this would only encourage recklessly aggressive demands. But we may demolish here Hook's shibboleth that Russell's new position was inconsistent with his old one. To emphasize the urgency of an imperialistic solution, Russell had written in 1945 that "as soon as both sides possess atomic bombs, either side would be more rational if it made complete surrender to the other than if it resisted even the most extreme demands. But rationality is not to be expected in human affairs." (Common Sense XIV, Oct. 1945 p. 4.)

In the late 1960s Russell's universalistic concerns faded from public view as he exhibited an irresponsible enthusiasm for anti-imperialistic, anti-Western nationalism. His remarks against Israel -- which Ruja attributes to so extensive an ignorance of elementary facts as to indicate either extreme personal prejudice or an extraordinarily poor and prejudiced selection of political advisers -- may be better understood in this context, the context of a nexus of anti-imperialism, anti-Semitism, anti-Westernism and, sad to say, anti-rationalism.

And so it is not true of Russell that "his sentiments were always noble" (Ruja). We who are humanistically inclined must again remind ourselves that we can worship only with reservations, for all of our gods are imperfect.

COMMENT

- (21) John Sutcliffe on Jacqueline's sadness: "Jacqueline Berthon-Payon's feelings (RSN19-21) are my own on this point. Russell is still hated by many influential politicians at both ends of the political spectrum. For instance, a former Prime Minister, according to my information, played no small part in preventing the issuance of a commemorative stamp (which Prof. A. J. Ayer had proposed) for the centenary of Russell's birth. If this is true, then it is not surprising that no government money was forthcoming to keep BR's books and papers in England."
- (22) Agnostic, yes! Atheist, no! Writes SIGRID SAAL: "Referring to RSN19-19 (the New York Times story on Madalyn O'Hair and atheism, etc.), I would like to say that I for one certainly am not one of the ones who 'like what goes on in her head'. I am certainly sure that Bertrand Russell, God rest his soul, was not one either -- an agnostic, yes, but never an atheist."

NEWS ABOUT MEMBERS

- (23) Fred Allendorf -- whose Ph.D. is in Genetics, and who has been Assistant Professor of Zoology at U. of Montana -- is now at the University of Nottingham, having received a NATO-NSF Postdoctoral Fellowship to concentrate on research in the area of evolutionary genetics.

- (24) Alberto Donadio is moving to Switzerland (from Colombia), and would be pleased to meet any BRS member who happens to be in Geneva during his stay there (from mid-November 1978 through October 1979.) His address: International Commission of Jurists/109, route de Chêne/1224 Geneva, Switzerland.
- (25) Ed Hopkins has stopped teaching math to high school girls in favor of programming computers for Univac, doing scientific work for Goddard Space Flight Center.
- (26) Justin Leiber has been appointed Associate Professor in the Philosophy Department of the University of Texas (Houston). "The Philosophy-Psychology Symposium that has been operating out of SUNY Binghamton is coming here, so there is room for a lot of activity. I wear my Bertrand Russell T-shirt bravely. I have been rather startled to find both the campus and the city attractive; partly it is that both are optimistic and growing. My landlady, who had been a philosophy major at U. of Texas in Austin, asked the person I gave as reference, 'He isn't given to throwing waffles on the roof, is he?'"
- (27) Malt. We are delighted to report that R.N. ("Malt") Malatesha, who was looking for a job for Fall '78 (RSN18-27), has found one. Or, quite possibly, the job found him, as the following indicates:
While he was Assistant Professor of Education and Special Education at Idaho State University, he won an award given by Oregon State University at Corvallis. His new job is with -- can you guess? -- Oregon State University at Corvallis. The award was for his research paper, "Neuropsychological aspects of reading disability." He writes: "I will be doing research in neuropsychology, as Research Professor."
He had been selected by the International Neuropsychological Association to present one of his papers at Oxford, in summer 1977. His doctoral degree in reading is from the University of South Carolina. He has one master's degree in psychology, another in educational psychology.
- (28) Jim McWilliams writes: "Since I'm about to quit my job here with the government, I'd better send you some money before I get too broke to send it. Just in case I marry one of these (censored) I've been working with, I'm sending you dues for (censored) and wife. And if I don't marry one, you can keep the difference and call it a contribution. These days five dollars won't buy anything anyway, not even in a Mexican (censored)."
- (29) Kouji Tomimori writes from Japan: "My favorite hobby is climbing mountains. I am going to climb Mt. Yari, which is the most famous mountain after Mt. Fuji. It was named after Yar, which was a representative arm of 'Samurai', and its height is 3190 m."

HONORARY MEMBERSHIP

- (30) David Pears has accepted an offer of honorary membership, we are delighted to report. He qualifies under Article II, Section 2(III) of the BRS Bylaws ("The nominee has made a distinctive contribution to some area of Russell scholarship".) He edited the volume, Bertrand Russell: A Collection of Critical Essays, Garden City: Doubleday 1972 (Anchor Books), which includes his essay, "Russell's Logical Atomism", and identifies him as Tutor in Philosophy at Christ Church, Oxford. He is author of Bertrand Russell and the British Tradition in Philosophy, New York: Random House 1967. His essay, "Russell's Theory of Desire", appears in Russell in Review, edited by Thomas & Blackwell, Toronto: Samuel Stevens, Hakkert & Company, 1976.
- (31) Karl Popper. It is good news indeed that Sir Karl has accepted an invitation to become an honorary member. He qualifies under Article II, Section 2(III) of the BRS Bylaws.
He is Emeritus Professor in the University of London, a Fellow of the Royal Society, and a Fellow of the British Academy. He has written many books and essays, including The Logic of Scientific Discovery, The Open Society and Its Enemies, New Foundations for Logic, etc. For much more about him and his work, see The Encyclopedia of Philosophy, New York: Macmillan 1967.
Our letter of invitation to him had mentioned "the general compatibility of your views with Russell's," to which he responded in this way:

I am a great admirer of Bertrand Russell, whom I knew and loved, even though I did not always agree with his political views and activities. He was a great man and, I believe, the greatest philosopher since Kant (whom I value much more highly than he did.) I gladly accept your invitation to become an honorary member of your Society, and so to honour Russell's memory.

* * * * *

* The BRS Bylaws require "approval by two-thirds of the members voting." Please vote, using the ballot on the last page.

- (32) A.J. Ayer and Paul Edwards. The BRS members have voted their approval of these 2 nominees, by mail ballot, as already mentioned (12). Welcome to the Society, Gentlemen!
Their addresses: Professor Sir Alfred Ayer/New College/Oxford, England
Professor Paul Edwards/390 West End Avenue/New York, NY 10024
-

(35) When you change your address, please notify us as soon as possible. 9 copies of RSN19 were lost because members had not notified us of changed addresses. The Post Office notified us of the new addresses (for a fee), but threw away the newsletters, because the Post Office does not forward 3rd class mail. We sent another RSN19 to the 9 new addresses, but this cost money, and delivery was delayed as much as 2 months. So please notify us.

QUESTIONS & ANSWERS

- (36) Movie quotes ER. KEN KORBIN has supplied what DON JACKANICZ was looking for (RSN19-35) -- references to ER in the 1964 movie, "The Best Man", which was based on a play by Gore Vidal:

Reporter: Do you think people mistrust intellectuals in politics?

Candidate: I'm glad you asked that question. Bertrand Russell seems to think so. He once wrote that the people in a democracy tend to think they have less to fear from a stupid man than from an intelligent one.

- (37) A ER-Flew debate? RON EDWARDS had inquired about a BR-Flew debate (RSN19-36). To find the answer, JOHN SUTCLIFFE went right to the source: he asked Anthony Flew about it. Here is Flew's response:

I never met Bertrand Russell, and a *fortiori*, never participated in a debate with him. However, I was once asked to join in a radio or TV programme with him only to have the invitation withdrawn after he had objected to my participation. I do not know whether this objection was grounded on my being an Oxford trained linguistic philosopher, or whether Russell could not bear in his later years to meet a spokesman of the classical Whig position of his own distinguished forebears.

In a forthcoming book of papers on Russell published by Allen & Unwin and edited by George Roberts there will be my own most substantial contribution to Russell studies -- a paper called "Russell on Bolshevism".

THE BRS LIBRARY

- (38) Librarian's report, by Don Jackanicz, Chairperson, BRS Library Committee:

The BRS Library continues to receive various requests for materials to be borrowed, books to be bought, and informational mailings. Please refer to earlier issues of RUSSELL SOCIETY NEWS for the Library's printed holdings. Elsewhere in this issue appears a brief article about films available for rental. Also in this issue appears a revised list of books for sale through the Library.

I am pleased to report that as of October 24, 1978 244 requests have come in for Peter Cranford's paper entitled "Bertrand Russell's Relevance to Psychology". The 243rd request, it might be noted, was sent from Australia! Through this paper's circulation within universities, hospitals, government offices, etc., many readers have been either introduced to Russell for the first time or shown that his writings have varied applications outside the fields of philosophy and mathematics.

In RSN-19 I mentioned that a fee would be charged for the borrowing of materials from the Library. However, except for films (described elsewhere in this issue), I am putting off charging fees, pending further consideration of the need and advisability of so doing. Therefore, all borrowing is free (except for films); the borrower pays postage (and insurance, where necessary) for all items.

As always, I welcome all inquiries, requests, and orders. The address is: Donald W. Jackanicz, BRS Library, 3802 N. Kenneth Avenue, Chicago, IL 60641, USA.

- (39) Recent acquisitions. Previous acquisitions have been listed in NLL3-48, NLL5-33, NLL6-40 and RSN17-55. Here are the latest. The donor's name appears at the end of each item.

70. Notice to the World: Renounce War or Perish!...World Peace or Universal Death. Tape recording (cassette) from the LP, Audio Masterworks LPA-1225. BR's 1955 press conference, with scientists from both sides of the Iron Curtain, on the dangers of atomic warfare; the ancestor of the Pugwash Conferences and the Salt Talks. Gary A. Jacobs.

71. Phil Donahue Show with guest Gore Vidal. Video cassette, 60 minutes. "Intelligent talk by intelligent people," says Lee Eisler, who asked Donahue for a transcript and got this cassette instead. "They almost sound like disciples of ER, and air views that don't ordinarily get a hearing on commercial TV." Multimedia Program Productions.

- (40) Books for sale. Due to recent price increases by publishers, we have had to raise our own prices slightly. However, the prices below, which include postage, are 15% below list prices. Occasionally there may be minor delays due to the need to special-order from publishers. Books are paperbound unless called "hardbound". Please send your check or money order, payable to the BRS, with your order.

BY RUSSELL

- THE ABC OF RELATIVITY-----\$6.50
- THE AMBERLEY PAPERS, with Patricia Russell (2 v.)-----\$16.50, hardbound

ABOUT RUSSELL

- BERTRAND RUSSELL, A LIFE, Herbert Gottschalk-----\$1.10
- BERTRAND RUSSELL, 1872-1970-----\$0.90
- BERTRAND RUSSELL, THE PASSIONATE SCEPTIC, Alan Wood-----\$1.60
- ESSAYS ON SOCIALIST HUMANISM IN HONOUR OF THE CENTENARY OF BERTRAND RUSSELL, Ken Coates, editor-----\$3.50
- THE LIFE OF BERTRAND RUSSELL IN PICTURES AND HIS OWN WORDS, Christopher Farley and David Hodgson, editors-----\$3.50
- MR. WILSON SPEAKS 'FRANKLY AND FEARLESSLY' ON VIETNAM TO BERTRAND RUSSELL-----\$1.00
- THE TAMARISK TREE: MY QUEST FOR LIBERTY AND LOVE, Dora Russell-----\$4.75, hardbound

Papers presented at the 1976 BRS session of the American Philosophical Association (Eastern Division) annual convention-----\$4.00
 Papers presented at the 1977 BRS APA annual convention-----\$4.00

- (41) 5 films for rent, all b&w, 16mm. The borrower pays a rental fee, postage and insurance both ways, and a deposit. Fees are in a state of flux at the moment; if interested in borrowing any of the following films, please write and inquire about the fees (which will probably be in the \$10-\$25 range.) The films:

- THE LIFE AND TIMES OF BERTRAND RUSSELL. 40 minutes. Biographical.
- BERTRAND RUSSELL. 30 minutes. A general interview with BR.
- BERTRAND RUSSELL DISCUSSES HAPPINESS. 14 minutes.
- BERTRAND RUSSELL DISCUSSES PHILOSOPHY. 14 minutes.
- BERTRAND RUSSELL DISCUSSES THE ROLE OF THE INDIVIDUAL. 14 minutes.

Other BR films exist, and the Library is making efforts to acquire them.

FINANCES/CONTRIBUTIONS

- (42) Recent contributors. We thank the following members for their contributions: CAMPELL, CRANFORD, DAVIS, DONADIO, HOOPES, FRANK JOHNSON, KRAVIG, LEITHAUSER, MCVEIGH, MCWILLIAMS, O'CONNOR, READER, RUJA, STOLL, TOMIMORI. (Kouji Tomimori also made a contribution in 1977, inadvertently omitted from previous acknowledgements. Apologies.)
- (43) Contributions solicited. See (44b).
-

BRS BUSINESS

- (44a) New procedure for paying dues. In 1979 everybody's dues will be due on July 1st. This will eliminate (a) the need to send out several hundred renewal-request letters during the year, and (b) a number of record-keeping chores. The May issue of RSN will carry a notice that everyone's dues are due on July 1st. Please mail your dues as soon as you see the notice. We will not deposit your check until July 1st. It is a good idea to pay dues promptly. It not only enables the BRS to pay its bills, it also avoids possible interruptions of our mailings to you of "Russell Society News" and "Russell".
- * If you see any flaws in the new procedure, please let us know. It will go into effect January 1, 1979, unless we learn of some reason why it shouldn't. Suggestions or comments are also welcome.
- (44b) New reason for making a contribution now. One disadvantage of the new renewal procedure is this: The BRS Treasury won't take in any renewal money during the first half of the year. Therefore, a particularly good time to make a contribution to the BRS -- for those who are able to -- is now, to help us over the first 6 months. As you perhaps know, dues cover only a portion of our operating expenses; without contributions there would be a large deficit. Most of our money is spent to publish the newsletter, to pay for members' subscriptions to "Russell", and to recruit new members. If we are to survive as an organization, we need contributions in addition to dues. In order for us not to be overly dependent on a few large contributors (which is the case at present), we need many contributors, each contributing what he or she can spare. We will not be on an economically sound basis until this happens. If we could average a \$15 contribution from half of our members, we think that would solve our money problem for 1979. Can you spare \$15? If you can, please send it; and if you can't, please send what you can spare. Send it to the newsletter (address on Page 1). If you like what we are doing, help pay for it with a contribution. Every bit helps.

FUND-RAISING

- (45) Volunteers wanted for fund-raising. Experience desirable but not essential. The BRS will solicit funds from Foundations, government agencies, individuals -- by mail. We need a supervisor, preferably with some relevant experience, plus several aides. This is important work in a critical area. We will supply basic information, on whom to approach and how to write the solicitation. Many of you, on your Questionnaires, have offered to do some work for the BRS. Here is an opportunity. We do not know at present how much time it might require of you, but this is probably flexible; that is, you would do what you could in the time you could spare.
- * Volunteer, stating your credentials; write (or phone) Peter G. Cranford, 2108½ Walton Way, Augusta, GA 30904 (404-736-3514).

"RUSSELL SOCIETY NEWS" MATTERS

- (46) New, for beginners in philosophy: GARY JACOBS suggests that the newsletter have a section where beginners in philosophy can ask questions (and have them answered.) "We must remember that our ranks are quite diverse," says Gary. Let's try it. Novices, let's have your questions.

ABOUT OTHER ORGANIZATIONS

- (47) The Bertrand Russell Peace Foundation issued this press release, which we picked up from "Die Fackel"(49):

Hon. President: the Earl Russell, OM, FRS (1872-1970); Hon. Vice-President: Edith, Countess Russell
Directors: Ken Coates, Chris Farley

The Bertrand Russell Peace Foundation Ltd.

Press Release

BERTRAND RUSSELL HOUSE,
GAMBLE STREET,
NOTTINGHAM NG7 4ET,
ENGLAND (Reg. Office)

On the weekend of July 1st and 2nd the third International Russell Tribunal met in order to prepare for its second session, beginning January 3rd, 1979.

In the launching statement of October 16th., 1977 the Tribunal had declared that it would investigate in particular but not exclusively the following questions:

- +++ Are citizens of the Federal German Republic being denied the right to exercise their professions on account of their political views?
- +++ Is censorship being exercised through provisions of the criminal and civil law and through extra-legal measures?
- +++ Are constitutional and human rights being eroded or eliminated in the context of criminal court proceedings?

In the first session the week after Easter 1978 the Tribunal considered the first question and some related issues. The Tribunal concluded that citizens of the Federal Republic are frequently denied their right to exercise their professions on account of their political views, and that this constitutes a serious threat to human rights.

During the weekend conference, the members of the Tribunal reviewed various proposals for the agenda for its second session

which had been suggested by its advisory council, its secretariat as well as by other interested organizations and individuals. The principal topics which the Tribunal considered were:

1. Censorship
2. Changes in criminal court proceedings
3. The growth and methods of the "Verfassungsschutz"
4. The relationship between the practice of "Berufsverbote" and discriminatory practices in trade unions, professional organizations and private sector employment
5. Prison conditions and the treatment of prisoners

With respect to the fourth proposal, the Tribunal concluded that since it had devoted the entirety of its first public session to the subject of "Berufsverbote" and because there were other substantial questions demanding thorough public examination no additional time for the taking of evidence on "Berufsverbote" or similar or related practices in the Federal Republik would be allocated in second public session. The jury is now satisfied both by testimony received during the first session and from documentation it has reviewed, that the threat

to human rights because of political non-conformity is not limited to the realm of public employment. The final report on the first session will explore every major facet of this problem.

Furthermore the Tribunal decided that an examination of the criminal process necessarily included an inquiry into the treatment of those who are held in pre-trial detention. The Tribunal recognized that a full inquiry into prison conditions and the treatment of prisoners would require more time than the Tribunal has for the exploration of the subjects it has decided to consider.

Hence, the issues which will be explored publicly in January 1979 will be:

- +++ Censorship in the Federal Republic
- +++ The growth and methods of the "Verfassungsschutz"
- +++ Alleged violations of human rights of persons involved in the criminal process.

Berlin, July 2nd 1978

(48) The Russell Press, Nottingham -- publishing arm of The Bertrand Russell Peace Foundation -- prints Amnesty International's briefing papers, we noticed.

Incidentally, we just heard that the U.S. Department of Justice has asked the State of North Carolina to throw out the conviction of the "Wilmington 10". The "Wilmington 10" is one of the cases that Amnesty International has been working on, apparently with success (although Amnesty International never claims success for any outcome.)

PERIODICALS RECEIVED

(49) "Die Fackel/The Torch/Le Flambeau", Issue No. 5, September 1978, has been received, and forwarded to the BRS Library. As many know, it is published by the Korean Bertrand Russell Gesellschaft, of which BRS Member DONG-IN BAE is founder and President. This 60-page issue is in Korean except for the following items in English: 2 BR quotes, 2 anti-war songs (Buffy Saint-Marie's "Universal Soldier" and Bob Dylan's "With God on our side"), and a BR Peace Foundation press release (47).

REPORTS FROM OFFICERS (CONTINUED)

(50) President Robert K. Davis reports:

I am reporting on the results of the questionnaire in RSN19.

Re the 1979 meeting, the members showed a preference for New York City in June. The meeting will be held there the first weekend in June, June 1-3. The Board has confirmed that time and place. In the past we have stayed at the Hotel Tudor and had our meetings there. Whether we do that again, and other details, will be forthcoming. I hope to have a good series of talks for us. Please plan to attend!

Some of the topics for those talks, that members suggested, were: BR on scepticism, ethics, power, Wittgenstein, mathematics as logic; BR on Vietnam, Beacon Hill School, a talk by Paul Edwards, teaching philosophy in grade and high schools, fictional accounts of BR, a talk by Dora Russell. We hope to provide some of these.

Anyone interested in giving a talk on one of these topics (or on any other), please write me. And soon! (7025 W. Franklin #86, Hollywood, CA 90068.)

There is sufficient interest in a BRS tour to Britain to warrant further efforts. I have spoken to a travel agent and will try to have something definite set up by mid-winter. The places that members were most interested in were: London, Cambridge, Oxford, North Wales, and Woburn Abbey. If we offer this trip, it will not be limited to members; you can bring a friend.

We got little input on the book award idea. People liked the idea, but offered few titles. Most felt it should be a current award. I am going to ask our Librarian, Don Jackanicz, to head this effort.

People were split on the Folly Award idea. Some favored it emphatically; some didn't like it. Nominations were: Sidney Hook, Vanessa Redgrave, Anita Bryant, Idi Amin, and Senator Proxmire.

These books were suggested for a high school philosophy course: Wisdom of the West, A History of Western Philosophy, Authority and the Individual, Why I Am Not a Christian, Sceptical Essays, Philosophical Essays, Problems of Philosophy, Basic Writings of Bertrand Russell, How to Philosophize, Will Durant's Story of Philosophy, Philosophy: an Introduction by Randall, Philosophy for Pleasure by Honton, Plato's Dialogues, The Talit Dimension by Polany.

So! We hope to pursue these ideas in the coming months and tell you more.

On the personal side, I will be talking to the L.A. Humanist group on November 20th about BR. In December I will visit Britain for a month, see some BR-related people, and visit Cambridge, Woburn Abbey, and Oxford for a week.

(51) Treasurer Stephen J. Reinhardt reports:

For the quarter ending 6/30/78:

Balance on hand (3/31/78).....	\$940.04	
Income:		
30 new members.....	\$294.34

INQUIRY

(52) Book by Edith sought. CAROLYN WILKINSON writes: " I have been trying to find some of Edith Finch Russell's writings -- and in particular, the book she wrote in the early 1900's -- the biography of Carey Thomas, President of Bryn Mawr College." Any suggestions? Please respond care of the newsletter (address on Page 1, bottom.)

-

FIVE

- (2) The BRS is 5 years old.

Q: How are we doing, at age 5?

A: Pretty well; but there's plenty of room for improvement.

Here are some of the things we have done during our first 5 years of existence:

- . tapped existing reservoirs of Russell admirers, and enabled them to be in touch with one another;
- . grown to a membership of over 200 (222 at last count);
- . acquired distinguished honorary members;
- . presented a BRS symposium at the annual American Philosophical Association convention, every year for the past 5 years;
- . held a BRS symposium for psychologists attending the American Psychological Association's annual meeting in 1976;
- . propagandized against chemical weapons, nuclear weapons, and uncontrolled technology;
- . set up a BRS Library, that lends books, films, tapes;
- . surveyed U.S. colleges and universities for courses on BR;
- . established a BRS Travel Grant, to enable a scholar to visit the Russell Archives;
- . offered books by and about BR for sale;
- . issued a list of books by BR, sorted into categories;
- . held 5 annual meetings: 3 in NYC, 1 in Los Angeles, 1 in Hamilton;
- . issued 20 newsletters;
- . printed or reprinted a number of short articles, book reviews, recollections;
- . reproduced a list of 62 (+ 2) dissertations on BR.

Here's why we say there's room for improvement:

- . Fund-raising; we haven't yet raised a penny except from our own members.
- . The BRS Award, first proposed in July 1975, has never been awarded. A new attempt will now be made to organize for it(7).
- . The BRS Travel Grant has never been awarded, although funds to cover the first of these awards are on hand.
- . Applied Philosophy. There have been efforts to apply some of BR's views to everyday living, but nothing has come of them as yet.
- . Local chapters. Several chapters were started and seemed to be going well, but none has been heard from in quite a while.
- . Universal Human Rights Committee has done virtually nothing. It now exists in name only, and has no chairperson.

Q: What will the next 5 years bring?

A: Well, that's sort of up to us, isn't it.

COMING EVENTS

- (3) Annual Meeting reminder. The meeting will be held in NYC, June 1-3. Save that weekend; plan to come, if you possibly can.
-

REPORTS FROM OFFICERS

(4) Chairman Peter G. Cranford reports:

Most of the following is a P.S. to the previous report (RSN20-3) on my visit to England in August 1978.

- . The Bertrand Russell Memorial Committee presently consists of Lord Fenner Brockway, Sir Alfred Ayer, Peter Cadogan (General Secretary, South Place Ethical Society), Nicholas Walter (Managing Editor, Rationalist Press Association), John Sutcliffe, and Dora Russell. The Memorial is to be a bust of BR, and the Camden Council has consented to its placement in Red Lion Square, London. (The Camden Council is where BR took refuge, when Trinity turned him out in 1918.) Two inscriptions have been suggested for the Memorial: "The good life is one inspired by love and guided by knowledge," and "Remember your humanity and forget the rest."

* Which one would BRS members prefer, if they could choose?

- . I expressed the hope to Lord Brockway (on behalf of the BRS) that the next British project -- after the Memorial -- would be the preservation of buildings associated with BR.

- . Dora on BR: "Most people who followed Bertie knew nothing about his philosophy. They liked him for what he was -- his cheek, wit, activism and recklessness. He was at his best as a person. That was the person I loved."

- . Dora on BR: "In his very old age, Bertie became dictatorial and became out of touch with all his friends."

- . Dora to BR, on arriving in China (1921): "If we didn't have any money with us, what would you do?" BR: "I'd go to the Jews."

- . Dora agrees to the idea of promoting "compossibility". See (19).

- . Dora believes in massive protests by private groups rather than by governments, such as (presumably) the campaign in Britain against nuclear armaments, carried on by BR and his colleagues and followers. It could also apply to U.S. government protests against violations of human rights in the USSR, which have been counterproductive.

- . Several suggestions about future BRS meetings: (1) from Peter Cadogan, Dora agreeing: no regular meetings; occasional meetings, with lectures, advertised; (2) from John Sutcliffe: meetings at which publishable papers are presented, dealing only with such ideas as can be supported by factual evidence. BR's works should not be used to drift into other targets, as happened with the BR Peace Foundation, according to John.

- . Kate Tait's family will be living with Dora this summer (1979).

(5) President Robert K. Davis reports:

It has been a busy fall and winter for me. In November I gave a talk to the Los Angeles Humanists on Russell, discussing questions of relevance to Humanists: why BR did not accept the label of "humanist" for himself; which of BR's books are particularly apposite to humanists, BR's individualism, the BRS, and a lengthy question and answer session. I enjoyed the event and have the impression that they did too.

In December I left for a month in England and New York. As before I combined a vacation with BRS business. In England I saw a number of people who had been associated with BR, and missed a few who were away for the holidays. My first visit was with Graham Whettam, who was in from North Wales. He is the composer of "Sinfonia Contra Timore" (NLL5-46), dedicated to BR, and was a personal friend. Like BR, he has a talent for telling stories, and he regaled me with many by and about BR. A delightful evening!

As Peter Cranford reported, a Committee has been set up to erect a bust of BR in Red Lion Square -- near the British Museum. I had lunch and a leisurely afternoon with Peter Cadogan, the Director of the Rationalist Press Association and of Conway Hall (which is in Red Lion Square.) He heads the Committee, and we discussed the proposal. I hope to have details for the next RSN. We also discussed politics and BR. Conway Hall (i.e., the South Place Ethical Society), without necessarily being aware of BR's positions, shares a lot of BR's views and values. I obtained a copy of The Practice and Theory of Bolshevism for him, and am sending him copies of D.H. Lawrence's letters to BR. He gave me a copy of his pamphlet, "Direct Democracy". After our meeting, I popped out into a major bomb scare; it reminded me of the urgent need to bring both justice and a non-violent ethic to the solution of political differences.

I did not meet Lord Brockway, as he was in Africa. I have been interested in him ever since I came across him in the literature, as a young figure in the WWI pacifist movement and a colleague of BR's, when I was doing research into that part of BR's career. I was also unable to meet Sir Karl Popper, one of our new honorary members. His assistant called me in Oxford to tell me that he too was out of the country. I bought 4 of his books, which I am studying. I am warming up for an article about BR and history, and Popper's works on historicism are helpful.

In Oxford I visited my friend, BRS member Peter Houchin, and his family for Christmas. We were about a mile from Churchill's grave at Bladen, which I visited. On Boxing Day (the 26th) Peter and I visited Woburn Abbey, the 400-year old home of the Dukes of Bedford (the Russell family). (The proposed BRS tour next summer will include Woburn Abbey.) It is surrounded by a huge animal park. Inside, it has the art accumulated by one of the great English families. I saw a superb Dürer of the founder of the family, and many other paintings, plus books, furniture, china, silver and gold services, etc. It is an hour north of London, and I urge anyone who finds himself in the vicinity to pay a visit to Woburn Abbey.

While in Oxford I found a used-book store (Waterfield's) that was selling Arnold Toynbee's library. I got a personal set, in 6 volumes, of his A Study of History, some Gilbert Murray volumes of Plato -- Murray was a great translator of Greek plays, and a close friend of BR's -- and some books by the Webbs sent to Toynbee. I also got some new Russell books for my collection, including an obscure pictorial biography of BR issued at the time he received the Order of Merit (1949).

I next went to Penzance, to visit Dora and John Russell at Carn Voel. I arrived at the end of a storm and left at the start of another, so that I saw at first hand the tempestuous beauty of Cornish storms and the incredible beauty of Land's End. I spent the day at their cottage. I spoke briefly with the Earl, and talked with Dora for 4 hours. She originated the memorial bust idea, and is working on her own books. She has just won a suit against the Estate and Foundation, for funds for John, and was filled with plans and hopes for the future. As usual, the day went too fast, as she is an engrossing conversationalist.

I returned to London for New Year's and the worst storm in 15 years. The storm seriously disrupted transportation, but did -- as I was told repeatedly -- give the city a "Dickensian air."

I next had a nice talk with Chris Farley, of the Foundation. I told him about the proposed Memorial. We also discussed technical matters of copyright and possible cooperation in publishing at the Spokesman Press. We discussed the volumes not yet published, of ER's writings on and in America, and the hope that at least one will appear this year. The Foundation's plan to issue a BR medallion did not materialize because of high cost. Some questions have been addressed to me, about ER's house in Wales: it was leased by ER, not owned, and the owner recently sold it for a very tidy sum.

On New Year's Day and in the midst of the storms, I visited BRS honorary member, Sir Alfred Ayer. Due to both our schedules and the storm, our visit was short, but very rewarding. We discussed ER and the proposed Memorial. I now have an item I prize greatly: an autographed copy of Language, Truth and Logic.

After a rough flight, I arrived in New York, for a week. I had meetings with Lee Eisler and Warren Smith concerning the annual meeting and other BRS business. I was also there to see the opening of a play in the Village -- "Dungalore" -- co-authored by my friend (and BRS member), Dan Wray. It is a moral fantasy with a comedic approach.

The high point in New York was seeing Lester Denonn's collection of Russell material -- thousands of books and articles he has collected for over 50 years. A humbling experience for a relatively new collector, but also an inspiration and a guide to method in Russell-collecting. I spent a delightful afternoon rummaging in his library with him, and dining with him and his wife.

Lester is concerned about the eventual destiny of his collection. It is unique and superb. It should be preserved for research and not broken up. We need to find a source of funds -- \$100,000 -- to preserve it. It would provide the U.S. with a Russell collection ancillary to, and compossible with, the Russell Archives in Canada. Anyone who has experience in approaching foundations or other sources of funds for such a purpose, please get in touch with me. (7025 West Franklin #86, Hollywood, CA 90068. Phone: 213-874-5568.)

There are two main problems facing the BRS, and typical of organizations such as ours: acquiring funds for projects such as the above, and integrating a greater number of members into our activities. Solving these problems are now our most urgent priorities.

(6a,b) Treasurer Stephen J. Reinhardt reports:

REPORTS FROM COMMITTEES

(7) Awards Committee (Donald W. Jackanicz, Chairperson):

For several years the BRS Award has been discussed, but it has never been awarded, nor have we agreed on all the details. The Award will be given to some individual who furthers some cause or idea that BR championed or whose actions exemplify some quality of character that distinguished BR. (such as moral courage.) The recipient will be invited to the annual meeting to receive the Award, which might be a book or certificate. Whether the BRS pays traveling expenses has not been decided.

At the 1978 annual meeting, a Book Award was proposed. This too deserves further consideration. We are not going to be able to make the Awards in 1979 -- not enough time -- but we ought to start working on them now, to be ready for 1980.

If you might be interested in serving on the Awards Committee, please write to me at 3802 N. Kenneth Avenue, Chicago, IL 60641.

Science Committee (J. B. Neilands, Chairperson):

- (8a) Buffet supper for a Vietnamese Professor was given by the BRS Science Committee, at the home of Joe and Juanita Neilands, on November 3rd. The Professor, Nguyen van Hieu, Vice-Director of the Vietnam Scientific Research Center, is touring the USA under the sponsorship of the Scientists' Institute for Public Information. A physicist, he is interested in meeting American colleagues, to discuss plans for the development of science in post-war Vietnam. Earlier the same day, he gave a talk in the Student Union (UC Berkeley) on "Science in Vietnam".
- (8b) An untimely death in Cambodia. Malcolm Caldwell, long time member of The Bertrand Russell Peace Foundation and faculty member at the University of London School of Oriental and African Studies, was murdered by unknown assassins while on a fact-finding trip through Cambodia in December. Caldwell, an editor of the *Journal of Contemporary Asia*, was well known for his incisive studies of Western imperialism in Indonesia and throughout South East Asia. He had expected to attend the annual meeting of the American Association for the Advancement of Science in Los Angeles, March 30-April 1, and the Science Committee had planned to invite him to lecture in Berkeley on that occasion. The last word from him was received in late November, when he wrote, " I'll have been to Kampuchea by the time I come - Malcolm." Only the barest details of the incident, which occurred at a Government guest house in Phnom Penh, were reported in the December 25 *New York Times* and in the January 8 issue of *Newsweek*. It is urgently necessary that additional facts surrounding the death of this crusading economic historian be developed and, in particular, to establish precisely what special interests were served by his murder.

THE MEMBERS VOTE

- (9) Honorary memberships approved, for David Pears and Karl Popper. For more on this, see (24).

FROM BR'S CORRESPONDENCE

- (10) Atheist yes, agnostic no. A Mr. Major asked BR whether he called himself an atheist or an agnostic. Here is BR's response:

Thank you for your letter of March 9. I do not wonder that you and Mr. Lewis are in doubt as to whether to call me an atheist or an agnostic as I am myself in doubt upon this point and call myself sometimes the one and sometimes the other. I think that in philosophical strictness at the level where one doubts the existence of material objects and holds that the world may have existed for only five minutes, I ought to call myself an agnostic; but, for all practical purposes, I am an atheist. I do not think the existence of the Christian God any more probable than the existence of the Gods of Olympus or Valhalla. To take another illustration: nobody can prove that there is not between the Earth and Mars a china teapot revolving in an elliptic orbit, but nobody thinks this sufficiently likely to be taken into account in practice. I think the Christian God just as unlikely.

Boston: Houghton, Mifflin, 1969, p.5-6

(Thank you, Leonard Cleavelin)

ABOUT BERTRAND RUSSELL

- (11) BR compressed. The New Columbia Encyclopedia (1975) fits 97 years into 17 column-inches, and -- considering the limitations of space -- does it rather well, we think. Judge for yourself:

Russell, Bertrand Arthur William Russell, 3rd Earl, 1872-1970, British philosopher, mathematician, and social reformer, b. Treleck, Wales. He had a distinguished background. His grandfather Lord John Russell introduced the Reform Bill of 1832 and was twice prime minister; his parents were both prominent freethinkers; and his informal godfather was John Stuart Mill. Orphaned as a small child, he was reared, despite his parents' wishes to the contrary, by his paternal grandmother under stern puritanic rule. That experience, although failing in its intended effect, powerfully affected his thinking on matters of morality and education. Russell studied at Trinity College, Cambridge (1890-94), where later he was a fellow (1895-1901) and a lecturer (1910-16). It

was during this time that he published his most important works in philosophy and mathematics, *The Principles of Mathematics* (1903) and, with A. N. Whitehead, *Principia Mathematica* (3 vol., 1910-13), and also had as his student Ludwig WITTGENSTEIN. World War I had a crucial effect on Russell: until that time he had thought of himself as a philosopher and mathematician; although he had arrived at pacifism before that time, it was in reaction to the war that he became passionately concerned with social issues. His active pacifism at the time of the war inspired public resentment, caused him to be dismissed from Cambridge, attacked by former associates, and fined by the government (which confiscated and sold his library when he refused to pay),

and led finally to a six-month imprisonment in 1918. From 1916 until the late 1930s, Russell held no academic position and supported himself mainly by writing and by public lecturing. In 1927 he founded with his wife, Dora, the experimental Beacon Hill School, which influenced the founding of other schools in Britain and America. He succeeded to the earldom in 1931 and in 1938 began teaching in the United States, first at the Univ. of Chicago and then at the Univ. of California at Los Angeles. In 1941 he went to teach at the Barnes Foundation in Merion, Pa., following the cancellation of his appointment to the College of the City of New York as a result of a celebrated legal battle occasioned by protest against his liberal views, particularly those on sex.

These views, much distorted by his critics, had appeared in *Marriage and Morals* (1929), where he took liberal positions on divorce, adultery, and homosexuality. In 1944 he was restored to a fellowship at Cambridge. In 1950 he received the Nobel Prize in Literature. Prior to World War II, in the face of the Nazi threat, Russell abandoned his pacifist stance; but after the war he again became a leading spokesman for pacifism, and especially for the unilateral renunciation (by Great Britain) of atomic weapons. In 1961 his activity in mass demonstrations to ban nuclear weapons led once more to his imprisonment. He organized, but was unable to attend, what was called the war crimes tribunal, held in Stockholm in 1967, presided over by Jean-Paul Sartre, and directed against U.S. activities in Vietnam. Almost until his death he was active in social reform. Throughout his life his dissent had earned easy popularity with either the right or the left. Untamable, he had profound trust in the ultimate power of rationality, which he voiced with an undogmatic but quenchless zeal. Philosophically and ethically Russell's thought grew in reaction against the extremes he encountered. He answered the idealism of F. H. Bradley and J. M. E. McTaggart with a logical atomism founded on a rigorous empirical base: he was deeply convinced of the logical independence of individual facts and the dependence of knowledge on the data of original experience. His emphasis on logical analysis influenced the course of British philosophy in this century. One of his most important notions was that of the logical construct, the observation that an object normally thought of as a unity was actually constructed from various, discrete, simpler empirical observations. The technique of logical constructionism was first employed in his

mathematical theory. Under the influence of the symbolic logic of Giuseppe Peano, Russell tried to show that mathematics could be explained by the rules of formal logic. His demonstration involved showing that mathematical entities could be "constructed" from the less problematic entities of logic. Later he applied the technique to concepts such as physical objects and the mind. Although he came to have misgivings about logical atomism and never assented to all the propositions of empiricism, he never ceased trying to base his thought—mathematical, philosophical, or ethical—not on vague principle but on actual experience. This can be seen in his pacifism as well as in his philosophy: he objected to specific wars in specific circumstances. So, in the circumstances preceding World War II he could abandon pacifism and, following the war, resume it. Similarly, in ethics he described himself as a relativist. Good and evil he saw to be resolvable in (or constructed from) individual desires. He did distinguish, however, between what he called "personal" and "impersonal" desires, those founded mainly on self-interest and those formed regardless of self-interest. He admitted difficulties with this ethical stance, as well as with his logical atomism. As much as anything, his thought was characterized by a pervasive scepticism, toward his own thought as well as that of others. As with his philosophical stance, Russell's positions on social issues grew as a reaction against extremes in his own experience. He believed that cruelty and an admiration for violence grew from inward or outward defects that were largely an outcome of what happened to people when very young. Pacifism could not be effected politically; a peaceful and happy world could not be achieved without deep changes in education, "I believe that

nine out of ten who have had a conventional upbringing in their early years have become in some degree incapable of a decent and sane attitude toward marriage and sex generally." His objections to religion were similarly based. What he tried to draw attention to was the destructiveness of accepting propositions on faith—in the absence of, or even in opposition to, any evidence. "The important thing is not what you believe, but how you believe it." The person who bases his belief on reason will support it by argument and be ready to abandon the position if the argument fails. Belief based on faith concludes argument to be useless and resorts to "force either in the form of persecution or by stunting and distorting the minds of the young whenever [it] has the power to control their education." If Russell's logic was not always unassailable, his life showed that ethical relativism could be combined with a passionate social conscience and that passionate commitment could be stated without dogmatism. In his autobiography (3 vol., 1967-69) Russell summarized his personal philosophy by saying, "Three passions, simple but overwhelmingly strong, have governed my life: the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind." See *American Civil Liberties Union: The Story of the Bertrand Russell Case* (1941); John Dewey and H. M. Kallen, eds., *The Bertrand Russell Case* (1941, repr. 1972); D. F. Pears, *Bertrand Russell and the British Tradition in Philosophy* (1967); E. D. Klemke, ed., *Essays on Bertrand Russell* (1970); John Watling, *Bertrand Russell* (1970); A. J. Ayer, *Russell and Moore: The Analytic Heritage* (1971) and *Bertrand Russell* (1972); Ronald Jager, *The Development of Bertrand Russell's Philosophy* (1972).

Incidentally, this excellent one-volume encyclopedia of 3000-plus pages, list price \$79.50, is being offered at the bargain price of \$29.50 + \$1.75 postage, by Barnes & Noble, 105 Fifth Avenue, NY NY 10003.

(12) The Greatest writes about the reaction to his statement, "I aint got no quarrel with the Viet Cong."

For days I was talking to people from a whole new world. People who were not even interested in sports, especially prizefighting. One in particular I will never forget: a remarkable man, seventy years older than me but with a fresh outlook which seemed fairer than that of any white man I had ever met in America.

My brother Rahaman had handed me the phone, saying, "Operator says a Mr. Bertrand Russell is calling Mr. Muhammad Ali." I took it and heard the crisp accent of an Englishman: "Is this Muhammad Ali?" When I said it was, he asked if I had been quoted correctly.

I acknowledged that I had been, but wondered out loud, "Why does everyone want to know what I think about Viet Nam? I'm no politician, no leader. I'm just an athlete."

"Well," he said, "this is a war more barbaric than others, and because a mystique is built up around a champion fighter, I suppose the world has more than incidental curiosity about what the World Champion thinks. Usually he goes with the tide. You surprised them."

I liked the sound of his voice, and told him I might be coming to England soon to fight the European champ, Henry Cooper, again.

"If I fight Cooper, who'd you bet on?"

He laughed. "Henry's capable, you know, but I would pick you."

I gave him back a stock answer I used on such occasions: "You're not as dumb as you look." And I invited him to ringside when I got to London.

He couldn't come to the fight, but for years we exchanged cards and notes. I had no idea who he was (the name Bertrand Russell had never come up in Central High in Louisville) until two years later when I was thumbing through a *World Book Encyclopaedia* in the *Muhammad Speaks* newspaper office in Chicago and saw his name and picture. He was described as one of the greatest mathematicians and philosophers of the twentieth century. That very minute I sat down and typed out a letter of apology for my offhand remark, "You're not as dumb as you look," and he wrote back that he had enjoyed the joke.

A short time after I fought Cooper, when I had another fight prospect in London, I made plans for Belinda and me to visit him, but I had to explain to him that the outcome of my fight against being drafted to Viet Nam might hold me up. The letter he wrote back was sent to me in Houston:

I have read your letter with the greatest admiration and personal respect.

In the coming months there is no doubt that the men who rule Washington will try to damage you in every way open to them, but I am sure you know that you spoke for your people and for the oppressed

everywhere in the courageous defiance of American power. They will try to break you because you are a symbol of a force they are unable to destroy, namely, the aroused consciousness of a whole people determined no longer to be butchered and debased with fear and oppression. You have my wholehearted support. Call me when you come to England.

Yours sincerely,
Bertrand Russell

By the time I got his letter I had been convicted and my passport lifted, just as his had been in World War I. Four years later, when my passport was returned, the friend I had made with my remark in my front yard had died. I thought of him whenever I visited England and for years I kept a picture of his warm face and wide eyes. "Not as dumb as he looks."

(Thank you, Dennis Darland)

BR HONORED

- (13) India's Bertrand Russell stamp is reproduced below. We don't know exactly when it was issued, but it must have been some time between 1970, when BR died, and 1975, when JACQUELINE BERTHON-PAYON noticed it on a friend's letter. "If India can do it, I would think that England would want to do it also!" says Jacqueline. We share her feelings. (Again!) Thank you, Jacqueline.

BR & HUMAN RIGHTS

- (14) The following appeared in the January 1965 issue of "Commentary":

SOVIET ANTI-SEMITISM: AN EXCHANGE

The following exchange between BERTRAND RUSSELL and ARON VERGELIS, the editor of the Yiddish-language Soviet magazine, Sovietish heimland, was initiated last spring by a letter to Lord Russell from a Russian Jew who wished him to intercede against the suppression of Jewish culture.

Moscow, 20 May, 1964

Dear Mr. Russell:

The Jews of Russia have been very moved by your letters to N. S. Khrushchev concerning the discrimination against them in the trials dealing with economic crimes. But I must say that your advisers have led you to use your influence unwisely. I believe there was a certain tendentiousness in the evaluation of these trials. There was no need to use your name in this matter.

In our opinion, it is much more important that you ask world public opinion and the Soviet leaders to look into the problem of the forced assimilation of Jews that is taking place in the Soviet Union.

Although there are about three million Jews in the USSR, we do not have our own newspaper in Moscow, Kiev, Minsk, or the other population centers; there are no Jewish libraries; there are no

schools or courses for those who wish to study the Jewish language; there are no clubs, theaters, or any other centers of cultural activity; there is no public organization that concerns itself with the welfare of the Jewish population.

We find to our deep regret that it is impossible as well as fruitless to place this problem before the Soviet government or any other responsible organization.

We want nothing more than the rights given to the Jews of Poland, Rumania, and Czechoslovakia.

We ask you and other influential people to write to Premier Khrushchev and request him to solve this problem. It is urgent.

With respect.

(Signature withheld)

Please address all questions concerning our letter to the Jewish journal, *Sovietish heimland*, Mos-

cow Center, Kirov Street. This letter was written on behalf of a great number of people by a war veteran who is an invalid of the war, the father of several children, the bearer of several war medals, and a member of the Communist Party.

22 July, 1964

The Editor,
Sovietish heimland

Dear Sir,

I am writing to you to make known the feelings of several Soviet citizens, including members of the Communist Party in the Soviet Union, who have addressed letters to me recently. These Soviet citizens wish to enjoy the right to a full cultural life in the Soviet Union. They are Jews and they feel that they are denied the means of living a complete and satisfying life in the Soviet Union because they are denied the cultural facilities made available to all other national and minority groups in the USSR. I consider this an important and an urgent problem and I should be glad if you would kindly publish the letter I enclose, as well as my own letter.

I write because I am concerned for justice and for the good name of the Soviet Union. Unless people who are concerned for both raise their voices, the cause of peaceful coexistence and the pursuit of peace and general understanding between peoples and nations will be harmed by silence.

Yours sincerely,
Bertrand Russell

Dear Mr. Russell:

My colleagues and I on the editorial board of *Sovietish heimland* have read your letter very carefully. We greatly regret that we must tell you openly that only total ignorance of Soviet Jewish affairs and cultural life can account for the fact that a person as experienced as you are in public affairs could have allowed yourself to be involved in a campaign based not on facts but on unfounded accusations.

You sent us a copy of a letter you received from an anonymous writer in the Soviet Union. This anonymous correspondent suggests arguments for your intervention on behalf of Soviet Jews, who are supposedly discriminated against. You ask us to publish the letter, with the assurance that this will serve peace and "general understanding between peoples and nations."

But Mr. Russell, wouldn't the publication of an irresponsible letter serve aims contrary to those you mention?

Please bear in mind that the anonymous letter criticizes those who earlier counseled you to base your intercession for Soviet Jewry on the so-called "economic crime" that are allegedly being attributed to persons of the Jewish nationality in the Soviet Union. The anonymous writer admits the tendentious character of the clamor raised in the West about the various Soviet trials involving economic crimes; and he urges you to take up another issue, that of culture. As you can see, the "defenders" of Soviet Jewry are not consistent, or, baldly stated, they opportunistically supply the uninformed person with the "argument" they think has not yet lost its demagogic power.

However, if one objectively considers the development of Jewish culture, I doubt that it can continue to be exploited for political purposes. How, for instance, can you explain the fact that in England there is not one Yiddish school, not one Yiddish newspaper, no Yiddish theater, no variety artists who appear in Yiddish, no Yiddish literary journal, no Yiddish books or translations

from the Yiddish, no composers or artists who deal with Jewish themes?

I might be mistaken, but I don't think I have ever heard you express anxiety about this matter. But I have heard, on the other hand, that your compatriots claim that the Jews of London or Manchester are, as a rule, assimilated and that therefore there is simply no need for special Jewish cultural institutions in your country.

This may well be true. But one wonders why you deliberately ignore the obvious and natural fact that here in Moscow, in Kiev, in the Urals, in Leningrad, the Jews take less of an interest in Jewish culture than they did in the 1920's and 1930's and that it is impossible today to artificially expand the scope of cultural work done in Yiddish. How can one talk of satisfying "the cultural needs of the Jewish population" in isolation from their actual needs?

The fact of the matter is that the actual needs of Soviet Jewry with respect to Jewish culture are being satisfied. It is common knowledge that the main elements of Jewish culture have traditionally evolved chiefly through literature and through the works of painters, composers, and artists who cherish and preserve their bonds with their national environment. Study the facts, Mr. Russell, to satisfy yourself that these elements of Jewish culture are developing with sufficient intensity in the USSR.

At the same time, we are not advocates of what is called "cultural autonomy." On this point you will find many relevant passages in the work of V. I. Lenin, who more than once found it necessary to demonstrate the hollowness of this theory put forward by the Jewish nationalist party, the "Bund," which went bankrupt at the turn of this century.

Here in the land of socialism, libraries and clubs are not built on the national principle. We have no "pure" Ukrainian or Bielorrussian libraries and clubs. And there are also no "pure" Jewish ones. Moscow's Lenin Library has some 70,000 Jewish books on its shelves. The Salykov-Shchedrin Public Library in Leningrad has about 40,000, etc.

The Jewish workers are fully equal members in all Soviet clubs, so that Jewish concerts, plays, and literary soirées can be arranged in any club and palace of culture. As for literary activity in Yiddish, I would like you to name one other country where literary people writing in Yiddish enjoy such conditions for fruitful and creative work as in the USSR, where editions of Yiddish books and periodicals run as high as 30,000, where books by Jewish authors are systematically translated into other languages, where Jewish writers participate with full equality in all of the country's literary organizations and institutions. Incidentally, let me inform you that, as I write these lines, the editorial board of *Sovietish heimland* is engaged in a great and important project: we are preparing to change from a bi-monthly to a monthly publication with the new year.

But, speaking frankly, Mr. Russell, this is not the main point. Nor, of course, is the heart of the matter the "cultural autonomy" within which anonymous letter-writers wish to imprison us. The main point is that socialism has produced in the USSR a new type of Jew, one who is a full and equal member of the great, friendly workers' collective. What astonishes me is that after the definitive answer you recently received on this question from the Prime Minister, N. S. Khrushchev, the same question is again being raised.

Mr. Russell, surely you must know that all of these "questions" being raised by tendentious propaganda are nothing but cold war positions which certain circles consider to be advantageous at the moment. Were you to become more familiar with the life of the Jews in the Soviet Union, I am

certain that you would refuse to allow your name to be exploited by people who operate on the "catch-the-thief" principle: in order to divert attention from the virulent racism and anti-Semitism in some countries across the water, they raise a hue and cry about the allegedly unsolved Jewish problem in the Soviet Union.

Respectfully,
Aron Vergelis*

29th October, 1964

Dear Sir,

Thank you for your reply to my letter of July 22, 1964. I note that this reply was published in the October, 1964, issue of your periodical, *Sovietish heimland*. You did not publish my own letter, or the copy I sent of a letter addressed to me by a Soviet Jew complaining that Jews in the USSR are exposed to forced assimilation and appealing for "nothing more" than the rights accorded to Jews in Poland, Rumania, and Czechoslovakia. The reason you give for withholding this from your readers is that it is "irresponsible" and "anonymously written."

The letter was not anonymous. The decision to withhold the name of the writer was my own and was taken for reasons which you well understand. I should have been content to leave the question of "irresponsibility" to the judgment of your readers and I should have more confidence in the value of your reply if you had published my letter. Not only did you fail to publish the letter, but you misrepresented its content. The writer does not, as you allege, admit "the tendentious character" of the clamor raised in the West" around Soviet economic crimes. He states the opinion that public reaction to "the problem of forced assimilation" of Soviet Jews is much more important. In the long term, he is undoubtedly right, although the shooting of speculators and the singling out of Jewish offenders is properly abhorred by enlightened opinion.

Your reply is equally lacking in scruple when it dismisses as a "cold war" attitude, expressions of concern for Soviet Jews which exist in progressive, pro-Soviet, and also Communist circles in the West, and when it makes the ridiculous charge that the motive is the diversion of attention from "the racist and anti-Semitic orgy rife in some countries across the water." You cannot be unaware that the Communist Parties in Italy, France, United States, Canada, Scandinavia, Australia, and elsewhere have publicly criticized anti-Semitic literature in the USSR, discrimination against Jewish religion, and the depredation of Jewish culture. You are grossly misleading your readers if you suppress this important fact and misrepresent honest criticism of the inequality experienced by Soviet Jews. Your readers are surely able to judge for themselves the sincerity of your statement that it is an "obvious, natural fact" that Soviet Jews today "have less of a yearning for Jewish culture than in the 20's and 30's" and that "one cannot artificially expand, without rhyme or reason, the scope of cultural work done in Yiddish." They will, I am sure, be as astonished as I am that you omit that during the personality cult of Stalin, Jewish culture and its leading exponents were assassinated; and that restitution has since been quite inadequate. This seems to many of us an unacceptable way of diminishing the yearning for Jewish culture.

Nor can one with knowledge of the true situation of Soviet Jews be impressed by what you say about the "fruitful" conditions available to

*This version of the Vergelis letter was translated from the Yiddish (as it appeared in the Sept.-Oct. 1964 issue of *Sovietish heimland*). The English version Vergelis sent to Lord Russell differs in some small details—P.B.

Yiddish writers. Only five or six books in Yiddish have been published in the Soviet Union since 1948, not one by a living writer. I am fully informed of the cultural facilities that have been accorded to Soviet Jews since 1956. I welcome them as some mitigation of the crimes Stalin committed against the Jewish people, but they are meagre, grudging, and inadequate to the needs of a vigorous intellectual community of some three million Jews, of whom almost half-a-million speak the Yiddish language as a mother tongue. The striking cultural amenities supplied to even the smallest Soviet national and linguistic minorities illustrate injustice at present imposed on Soviet Jews.

You ask why I do not express anxiety about the unavailability of Jewish and Yiddish cultural institutions in Britain. *The Jewish Year Book for 1967*, published by the *London Jewish Chronicle*, lists hundreds of Jewish organizations of every kind, scores of libraries, museums, newspapers, and

schools, manifold religious institutions, and a considerable selection of book titles on aspects of Jewish history, religion, sociology, politics, and philosophy. A number of the listed institutions have facilities in both the Hebrew and Yiddish languages. All this exists for a total Jewish population in Britain of 450,000, or rather less than the number of Soviet Jews whose mother tongue is Yiddish and about one-sixth of the entire Soviet Jewish community.

The Jews in Britain are clearly at liberty to decide for themselves if they wish to assimilate, what form that assimilation shall take and in what way they shall express their interests as Jews. If Jews in your country had a comparable choice, within the framework of Soviet society, or if they had opportunities equal to those of the other Soviet nationalities, outside interventions would be presumptuous. Unfortunately, they do not; authority imposes upon them conditions of assimilation in which they have virtually no choice but sub-

mission.

As the appointed editor of the only Jewish journal in the USSR, you are not an initiator of policy on Jewish matters but an authorized spokesman. The present moment, however, requires all of us to explain the need for an enlightened Jewish policy to the Soviet government. More than two years ago, as a sincere friend of your country and its policy of coexistence, I said that this situation would do much harm to the reputation of the Soviet Union. This, indeed, has proved true. It will be unfortunate for both the Soviet Union and the Jewish people if something is not quickly done to accord dignity and justice to Soviet Jews. Nor can this letter end without an expression of concern that little has been done to reunite survivors of Jewish families broken up by the war, and so to terminate their prolonged sufferings.

Yours faithfully,
Bertrand Russell

PROMOTING BR/BRS

- (15) The BRS fact sheet aims to provide outsiders with a quick overview of the BRS -- its aims and ways -- on a single page. Here is the latest version. Your suggestions or corrections will be appreciated.

Some facts about THE BERTRAND RUSSELL SOCIETY, INC.

General aims: to promote Russell's ideas and causes he championed.

Some specific areas of interest: promoting Russell's writings; encouraging new scholarly and popular writings on Russell; presenting Russell's ideas as attractive, rational alternatives to alienation, cynicism, and mysticism; opposing misuses of science and technology; spreading Russell's views -- which deal with virtually all the problems facing modern man, from how to be happy to how to work for nuclear disarmament.

Why people join: most members join (they have told us) for one or more of 5 reasons: to learn more about Russell; to be in touch with other admirers; to work for things Russell worked for; to discuss Russell's work with others; to do something useful for others via the BRS.

Academia: although the BRS is not a scholarly society, one of its aims is to encourage Russell scholarship. A number of professional philosophers are BRS members. A BRS Symposium is held each year at the annual meeting of the American Philosophical Association (Eastern Division). A BRS Travel Grant will enable a scholar to travel to The Russell Archives, at McMaster University. A BRS Psychology Symposium was held for psychologists attending the American Psychological Association's annual convention (September 1976). Symposia papers are available from the BRS Library.

BRS Library lends films and tapes of Russell, as well as books by and about him. Books published by The Bertrand Russell Peace Foundation (England), and a small number of other books, are offered for sale.

Some members: SIR ALFRED AYER F.B.A., author, Russell scholar (Professor of Logic, New College, Oxford). DORA BLACK RUSSELL, pioneer feminist, educator, author, BR's 2nd wife, mother of John & Kate. LESTER E. DENONN, Co-Editor of "The Basic Writings of Bertrand Russell", BRS Board member and director. CORLISS LAMONT, author, philosopher, civil libertarian (Seminar Associate, Columbia University). PAUL EDWARDS, Russell scholar, Editor in Chief of "The Encyclopedia of Philosophy" (Macmillan) (Professor of Philosophy, Brooklyn College). J.B. NEILANDS, member, 3rd Commission of Inquiry, Bertrand Russell War Crimes Tribunal, North Vietnam (1967); BRS Board member and director (Professor of Biochemistry, UC Berkeley). DAVID FEARS, author, Russell scholar (Tutor in Philosophy, Christ Church, Oxford). SIR KARL POPPER F.R.S., F.B.A., author, philosopher (Professor Emeritus, University of London). CONRAD RUSSELL, Russell's son (History Department, Bedford College, University of London). THE EARL RUSSELL, Russell's son John. KATHARINE RUSSELL TAIT, Russell's daughter, BRS founding member, BRS Board member and director.

How the BRS functions: the BRS meets once a year. Other contacts between members are usually by mail. Committees are formed to work in specific areas. 4 BRS newsletters per year go to members, as does the periodical, "Russell", published by the Russell Archives, at McMaster University.

Committees: the Science Committee is chiefly concerned with misuses of science and technology that threaten the biosphere. The Philosophers' Committee promotes scholarly writings by professional philosophers, through its annual symposium at APA. The BRS wishes to develop a Universal Human Rights Committee, an Applied Philosophy Committee (to apply BR's views on the "good life" to everyday living), and an Awards Committee (to select recipients of the BRS Award.)

Degree of activity: members may be as active or as inactive as they wish to be. Some wish merely to be kept informed. No matter. Anyone who is interested in Bertrand Russell is welcome as a member.

RATIONALITY

(16) From the Op Ed page of The New York Times of November 25, 1978, p. 23:

A Possible Remedy for Thinking That Leads Youth Into Easy Acceptance of Cult Figures

By Harold J. Morowitz

NEW HAVEN, Conn.—In light of the cult tragedy in Guyana, I am reminded that the almost desperate effort to understand cults in the United States has ignored a fundamental flaw in our educational system that renders young people so vulnerable to these irrational movements.

Because we are interested in transmitting to our children the beliefs of their parents and teachers, we omit from school curricula training in methods of establishing the validity of ideas.

The primary question of "How do we know the things that we know?" is simply not dealt with.

This most important inquiry is confined to specialized college courses in epistemology, and the vast majority of students never confronts the issues.

As a result, we have a large cohort of young people set loose in a rapidly

changing and confusing world without any conceptual tools for evaluating the extraordinary amount of information that they experience daily.

If a cult leader comes along and states with great charisma "I am god" or "I am the voice of god" many do not know how to evaluate the validity of the statement.

Since education has largely been an appeal to authority (teacher, encyclopedia, textbook), cultists simply replace one authority with another.

The difficulty is that to have given students know-how to question cult leaders would also have provided them with an intellectual framework to question the established mores, religions and political systems of their elders.

I believe that we have reached the point where it is far worse to leave our young people exposed than it is to teach them how to formulate meaning-

ful answers.

They are already beset by doubts. We need to show them how belief can be rationally established.

One proposal advocates the institution of an eighth-grade class in theory of knowledge as an introduction to high-school education.

In such a course dealing with logic, epistemology and philosophy of science, we could develop the framework for rationalism and then allow the young people to use that powerful tool in assessing the subsequent materials they encounter.

In a very diverse cultural setting, we can no longer afford to merely transmit a body of knowledge and beliefs — we must allow the young to explore the bases of those traditions.

Such an approach to education will not come easily. Socrates was condemned for advocating this doctrine, and that condemnation contributed to

his death.

It has been argued that a study of verification is too obscure or difficult for most students at a high school level. If it is important enough, I believe that a way can be found to teach philosophical foundations to the young.

If we fail to render ourselves vulnerable by teaching students critical thinking, then we leave them easy prey to cult leaders, charismatic politicians and other less bizarre irrationalism such as food fads.

Much of advertising is designed to envelop those who do not question. Mass communication is too effective to stand without a truth filter for the recipients. Along with readin', 'ritin' and 'rithmetic we need to teach reality.

Harold J. Morowitz is professor of molecular biophysics and biochemistry at Yale.

RELIGION AND ITS ADVERSARIES

(17) O'Hair counterproductive? LEONARD CLEAVELIN seems to think so:

While I am more than willing to identify myself as an atheist, I would like to point out that that by no means implies that I like everything that goes on in Mrs. O'Hair's head*. She does deserve credit for her role in the School Prayer Case, which brought much-needed attention to some of the problems of church-state separation in the U.S. But...her scheme, concocted, I guess, during her visit to St. Louis, to remove the "St." from St. Louis, serves no useful purpose, and, I fear, may hurt serious humanism.

*We had said (RSN19-19) that we like what goes on in her head.

NEWS ABOUT MEMBERS

- (18) Margaret and Whitfield Cobb, who recently became members, have written as follows:
- We were both delighted to see the quote at the top of your letterhead. You might be interested to know that when we were married — September 17, 1944 — the inside of each of our wedding rings bore the inscription, "Inspired by Love and Guided by Knowledge." Moreover, our wedding vows, which we recited before a Friends Meeting (without a pastor) substituted the phrase, "promising with the inspiration of love and the guidance of knowledge to be unto her (him) a devoted and considerate husband (wife)," instead of the traditional Quaker wording, "...promising with Divine assistance to be unto her (him) a loving and faithful husband(wife)..."
- (19) Peter G. Cranford has written a short paper, "The Possibilities of Compossibility." The term "compossible" was first used by Leibniz to indicate that certain things co-existed. BR used it when two or more desires could be satisfied by the same state of affairs; he called them "compossible desires." Peter wishes to promote the use of "compossible" as a means of encouraging opposing groups to concentrate their efforts on areas of common ground (compossible areas) instead of on areas of irreconcilable differences. The paper is available from the BRS Library (address on Page 1, bottom.)
- (20) Gladys Leithauser has moved from Wayne State University (Detroit) to the University of Michigan (Dearborn), where she is teaching 3 freshman courses in expository writing. She is using BR's Power as the text, and will let us know later how her choice of expository model went over.
- (21) Don Loeb, who has been at Brandeis University, has gone on to Law School (U. of Michigan).
- (22) Warren Smith reports that: he is still teaching highschool (New Canaan, CT); still active in his recording studio (Manhattan), with a little help from his partners; still managing the investment portfolio for the Mensa Investment Club; and still writing "Manhattan Scene" for West Indian newspapers. He's also been practising piano, and (this is new) "after a lapse of three decades" finally performed, at the Stamford Unitarian Society.

HONORARY MEMBERS

- (23) Dora Black Russell has accepted the BRS invitation to become an honorary member, we are very happy to report. The members had voted unanimously, at the 1978 annual meeting, to extend the invitation. She has been a pioneer in the struggle for women's rights, especially women's suffrage, birth control, and civil liberties, as well as other causes that in most cases were unpopular at the time she espoused them. She ran the Beacon Hill School with (and without) her husband, Bertrand Russell, whose second wife she was. She and he are the parents of John (the present Earl) and Katharine Russell Tait. She is a member of The Bertrand Russell Memorial Committee (4).
- She continues to take her usual lively interest in the world around her, and not long ago, delivered a paper, "Religion in the Machine Age," before the South Place Ethical Society, in Conway Hall.
- Her book on the Beacon Hill School (NLL6-37) will be published by Virago, Peter Cranford advises.
- (24) David Pears and Karl Popper. The members have voted their approval of these 2 nominees, by mail ballot (RSN20-54), we are very pleased (though not surprised) to report. What did come as a surprise, and a welcome one, was the size of the vote: 27% of the members voted, nearly twice as many as had ever voted before.
- Welcome to the Society, Gentlemen!
- Their addresses: Professor David Pears/Christ Church/Oxford, England OX1 1DP
Sir Karl R. Popper/Fallowfield, Manor Close/Manor Road/Penn, Buckinghamshire/England HP10 8HZ
- (25) A. J. Ayer. We intend, from time to time, to provide additional background information about BRS honorary members. The following appears in The Encyclopedia of Philosophy, New York: Macmillan, 1967. We will welcome additional information or corrections, from the subject himself or from anyone else.

AYER, ALFRED JULES, contemporary British philosopher. Ayer was born in 1910. He received his education at Eton, where he was a king's scholar, and at Christ Church, Oxford. After graduating in 1932, he spent some time at the University of Vienna familiarizing himself with the logical positivist movement, then little known among English-speaking philosophers. He returned to Oxford in 1933 as a lecturer in philosophy at Christ Church and in 1935 became a research fellow of the college. Army service in World War II kept him from philosophy until 1945, when he went back to university teaching as fellow and dean of Wadham College, Oxford. In the following year he became Grote professor of the philosophy of mind and logic at University College, London, where he remained until his return to Oxford as Wykeham professor of logic in 1959.

Ayer's first book, *Language, Truth and Logic*, was published in 1936. Its combination of lucidity, elegance, and vigor with an uncompromisingly revolutionary position has made it one of the most influential philosophical books of the century. As Ayer explains in the preface, the views he advocates derive from Russell and Wittgenstein among modern philosophers and from the earlier empiricism of Berkeley and Hume and have much in common with the logical positivism of the Vienna circle. But he accepts none of these influences uncritically and clearly puts his own stamp on the position he outlines. He adopts Hume's division of genuine statements into logical and empirical, together with a principle of verification which requires that an empirical statement shall not be counted as meaningful unless some observation is relevant to its truth or

falsity. This starting point has drastic and far-reaching results. Metaphysical statements, since they purport to express neither logical truths nor empirical hypotheses, must accordingly be reckoned to be without meaning. Theology is a special case of metaphysics; affirmations of divine existence are not even false, they are without sense. For the same reason, value statements in ethics or aesthetics fail to attain the status of genuine statements and are exposed as expressions of emotion with imperative overtones. The a priori statements of logic and mathematics are empty of factual content and are true in virtue of the conventions that govern the use of the words that compose them. The tasks left for philosophy after this withdrawal from its traditional boundaries are those of solving by clarification the problems left untouched by the advance of

the sciences. Philosophy is an activity of analysis and is seen, in the end, to be identical with the logic of science.

The second edition of the book (1946) contains an introduction which modifies, though it does not retract, the main theses of the first edition. Ayer's attention here is directed chiefly to giving a precise formulation of the principle of verification. His original version is replaced by a much more elaborate and carefully worded formula. Both versions have, however, been shown to be faulty in admitting as meaningful metaphysical statements of precisely the kind that the principle is designed to outlaw. Indeed, there seems to be a weakness of the principle in that it appears plausible only when its expression is left uncomfortably vague.

The Foundations of Empirical Knowledge (1940) is concerned with two groups of problems, those of perception and those of "the ego-centric predicament" (privacy and publicity in language and in sense experience and the problem of other minds). The most interesting and original feature of the book is Ayer's treatment of the terminology of sense data as a language in which the problems of perception can be most appropriately dealt with rather than as a thesis embodying a discovery about the facts of sense experience. *Thinking and Meaning* (1947) was Ayer's inaugural lecture in the University of London. It is a trenchant application of Ockham's razor to the problems of intentionality and the relations between minds, thinking objects, words, and meaning. This short, powerful essay has so far received less than its due of critical attention. *Philosophical Essays* (1954) is a collection of papers ranging over philosophical logic, the theory of knowledge, and moral philosophy. Half the papers are carefully argued treatments of problems raised in Ayer's first two books; in particular, "The Analysis of Moral Judgements" is a moderate and persuasive restatement of the hints on ethics thrown out in *Language, Truth and Logic*.

In 1956 Ayer published *The Problem of Knowledge*, his most important book since 1936. It is a sympathetic and constructive treatment of the various problems of philosophical skepticism. After a short discussion of philosophical method and the nature of knowledge, he discusses at length the pattern of skeptical arguments. He then examines three problems familiar from his earlier work—perception, memory, and other minds—as instances of skepticism at work. It may be that no statement is immune from doubt, but this does not entail that no statement can be known to be true. Where statements cannot, even in principle, be justified, we may conclude not that they are to be rejected but rather that no justification is called for.

The Concept of a Person (1963) is a collection of essays. The most striking, the one that gives the book its title, is a notable survey of some aspects of the problems of body, mind, and personal identity. The outcome can be roughly summarized as follows: to say that I own a mental state *M* is to say that there is a physical body *B* by which I am identified and that a state of *B* causes *M*.

Ayer's most recent work, embodied in his Shearman lectures at the University of London in 1964 and so far unpublished, is on induction and probability. This is a new field of interest for Ayer, although it was foreshadowed in two papers in *The Concept of a Person*.

Ayer's work is very much of a piece, both in style and attitude. He is now more catholic in interest and more cautious and temperate in expression than in his earlier writings. But his arguments are informed by the same principles and set out with the same grace and clarity. He leans perhaps too heavily on Hume's dichotomy of statements into logical and factual, and he has not so far set himself seriously to meet contemporary criticisms (particularly those of W. V. O. Quine) that have been made of this famous distinction. This is at once a weakness of his present position and, perhaps, a presage of its future development.

velopment.

Works by Ayer

QUESTIONS & ANSWERS

- (28) Rx for medicines. ALBERTO DONADIO asks whether BR ever said something like the following, and if so, he would like the exact quotation and where it can be found:

All medicines should be thrown out at sea; only the fish would suffer from it.

- (29) For California-haters: BOB DAVIS advises that The Los Angeles Times of 12/3/78 reports BR as saying:

"Southern California — the ultimate segregation of the unfit."

Bob asks: Where? When? In what context?

- (30) On brains: Bob also advises that The New York Review of Books of 12/21/78, in a review of Piaget's books, reports BR as saying:

"If you had my brain, you would find the world a very thin, colorless place."

Again Bob asks: Where? When? In what context?

- (31) On alcohol. VANCE INGALLS writes:

Russell has commented that he felt alcohol would have been a possible escape from his periodic bouts of depression, but a fool's way out. So, can the following quote be true?

"If I would observe sobriety, I should recall that Bertrand Russell put down a fifth of whiskey daily."
In My Own Way, by Alan Watts, New York: Pantheon, Random House, 1972, p. 364

* * * * *

Please send answers to any of the above c/o Russell Society News, address on Page 1, bottom.

THE BRS LIBRARY

- (32) Film rental fees have now been set for the 5 films listed in the last issue (RSN20-41): the 14-minute films, \$10; the 30-minute film, \$20; the 40-minute film, \$25. Plus a \$50 deposit on each film.

FUN & GAMES

- (33) Paradoxes wanted. PETER CRANFORD suggests that it might be amusing to collect paradoxes, and he has sent us some. But before we get to his, here are a few you have probably come across before now:
- . BR's original paradox: the class of classes that are not members of themselves.
 - . The sheet of paper slipped under BR's door (by Wittgenstein?). On one side was written, "The statement on the other side is true." On the other side was written, "The statement on the other side is false."
 - . "All Cretans are liars," said the Cretan.
- Here are some Cranford paradoxes:
- . Never take my advice.
 - . The highway lobby argued that there was no highway lobby. (Washington, D.C. 1972)
 - . He said nothing.
 - . There is no truth.
 - . (One for the MSPs): Wife to husband: "You see, I can keep my mouth shut."

Two whimsical ones:

- . Zen guru to his disciples: "Think about not thinking."
- . At a seance to communicate with spirits, a voice from beyond says: "There is no life after death."

* If you know of a paradox — or can invent one — please send it to the newsletter. Specify whether it is original or not, and if not, where it originated, if known. Send as many as you wish.

FINANCES/CONTRIBUTIONS

- (34) Recent contributors. We thank the following for their contributions: CLEAVELIN, CRANFORD, DAVIS, EISLER, LEITHAUSER, LIPIN, REINHARDT, TOBIN, VOGT.
- (35) Contributions, please. Contributions are needed to help us cover expenses. Dues covered only 65% of expenditures in 1978.
 We have discontinued the yearly mailing of a request for a contribution, to each member. From now on, requests for contributions will be made only through the newsletter.
 As we said recently (RSN20-44b): if we can average a \$15 contribution from half of our members, that should solve our money problems for 1979 (at the present rate of expenditures).
 Can you spare \$15? If you can, please send it; and if you can't, please send what you can spare. If you like what the BRS is and does, help pay for it with a contribution you can afford. Every bit helps. Send it to Russell Society News, address on page 1, bottom.
- (36) Volunteers needed. Last issue we asked for volunteers to help us do some fund-raising. The response has been underwhelming; apparently no one wants to work at fund-raising.
 If you have hesitated to volunteer because you know nothing about fund-raising, that need not hold you back. We will supply basic information on how to solicit and whom to solicit. The soliciting will all be done by mail.
 We need a supervisor, preferably with some relevant experience, plus several aides.
 Help!
-

BRS BUSINESS

- (37) Current officers. At the 1978 annual meeting, the following officers were elected for the coming year (1979) and are now serving: Peter G. Cranford, Chairman; Robert W. Davis, President; Warren Allen Smith, Vice-President; Stephen J. Reinhardt, Treasurer; Donald W. Jackanicz, Secretary.
-

INVITATIONS TO CORRESPOND

- (38) Richard Lee enjoys rational or logical discourse, and would like to correspond "with like-minded individuals ...no matter what the topic." His field is hydrology and climatology. He's a Professor at West Virginia University. His address: PO Box 398, Morgantown, WV 26505. He doesn't care whether you use his title or not.
-

ABOUT OTHER ORGANIZATIONS

- (39) The BR Peace Foundation, through one of its Directors, Ken Coates, sent the following letter to The Times (London), where it appeared on August 5, 1978:

Nikolai Bukharin was surely a complex personality. We would find it difficult to disagree with much that you say in your leader (July 28) on our campaign for his rehabilitation. When we approached the Italian communists for support for the appeal of Yuri Larin, Bukharin's son, it was very far from our intention to nominate a new cult figure to replace discredited older ones. But there is one very powerful reason for the rehabilitation of Bukharin which is not covered in your leader.

Visiting Paris in 1936, Bukharin boasted that, single-handed ("with this pen") he had written the entire Soviet constitution of 1936. Whether this boast contained an exaggeration or not, Bukharin was certainly a most active member of the commission which was established to draft this constitution, and the finished document contained a large number of guarantees for freedom of expression and association together with guarantees of the "inviolability of the person". When this constitution was adopted later in the year, it was celebrated by the Webbs with a veritable panegyric. They pronounced it to be a document superior to

the Declaration of Rights of 1776 and to the French revolutionary Declaration of 1793. It is permissible to remain agnostic about the Webbs' judgment: the more so since the Soviet constitution seems never to have been properly enforced.

Since we took up the cases of a number of Soviet dissidents at the beginning of the decade, we have become increasingly aware of the fact that the main demand which is made by critics of present day Soviet society is that the constitution be actually enforced. Perhaps this is one of the reasons why last year a new constitution was proclaimed. However, all of the main provisions concerning civil rights have been carried over from the old to the new versions of this document, yet there remains considerable controversy about their implementation.

Clearly the continuing injustice to Bukharin needs to be evaluated within this context. If the main author of key passages in the fundamental law of the USSR cannot secure justice even posthumously, even after 40 years, what is the value of that fundamental law for other citizens?

(Thank you, Peter Cranford)

PERSONAL COMMUNICATION

(40) Justin Leiber (from Lee Eisler.) Are you out there somewhere, Justin? One postcard plus 2 letters (addressed to Mr. Justin Leiber, Dept. of Philosophy, University of Texas, Cullen Blvd., Houston, TX 77004) have been returned. From the writing on the envelope ("Return to sender" in longhand) it looks like the University rather than the Post Office is responsible. (The PO uses a rubber stamp.) The two envelopes are marked "not Physiology"; apparently they have never heard of Philosophy; with my Easterner's built-in unfairness to Texas (plus my exasperation), I am ready to believe it.

Maybe there's a lot of mail you haven't been getting because you're "not Physiology". The mystery deepens because I know you received RSN19: you returned the ballot. Or did the whimsical person who is returning your mail also return your ballot?

I would send these returned mailings to you, if I knew where to send them. Can you give me another address?

INDEX

(41) Introductory (1). The BRS at 5 (2). Annual meeting reminder (3). Chairman Cranford reports (4). President Davis reports (5). RUSSELL SOCIETY NEWS

No. 22

May 1979

- (1) Annual Meeting, NYC, June 1-3, 1979 (2). New Science Committee Chairperson sought (4). BRS Travel Grant Award in June (5,39). ER hits the jackpot (9). ER and economics (11). List of BRS members (40). Everybody's dues are due (23). ER appears with Sherlock Holmes in new detective novel (34). More paradoxes (29). Time to nominate Directors (35). An asterisk in the left column indicates a request.

- (2a) June 1-3, 1979 (Friday evening through Sunday noon) in New York City at the Tudor Hotel is when and where the BRS will hold its Annual Meeting. WARREN SMITH, who made the arrangements, says this about them:

The Tudor Hotel (304 East 42nd Street, New York, N.Y. 10017)(212-986-8800) is on Manhattan's East Side, about a block from the United Nations, and across the street from the Ford Foundation. Members arriving by car could park in a garage just steps away from the hotel. If you park on the street, be sure you are legally parked or a ticket plus towing can cost you up to \$100. Members arriving by public transportation at Grand Central Station or the Times Square area can take M-104 bus going eastward to First Avenue. From the East Side Air Terminal, walk about 4 blocks or take the short taxi ride. From JFK Airport, take inexpensive \$3.50 bus-subway shuttle to 42nd Street and Lexington Avenue, then walk or take the 50¢ M-104 bus eastward. Rooms at the Tudor are small but comfortable. Three Lions Pub in the Tudor is open until 3 A.M. Meals can cost \$3.50 and up for breakfast, \$8 and up for lunch, \$10 and up for dinner. A less expensive Automat -- one of the last two in the city -- is nearby, as are a hundred other dining spots.

Hotel rooms are at a premium throughout Manhattan. Unless you live in the city or are staying with friends, phone or write soon for reservations. To obtain special, reduced rates at the Tudor, ask for Kathy Capalbo, mention BRS, and quote these prices: single, \$30 per night; 2 people, double bed, \$40 per night; 2 people, twin beds, \$45 per night. Major credit cards are accepted.

When making a reservation, it's a good idea to accompany it with a deposit for one night.

- (2b) The agenda. BOB DAVIS has been planning it, and reports:

On Friday evening Humanist Philosopher Corliss Lamont will speak on some of the wrong things that have been said about ER. On Saturday we have Harry Ruja speaking on ER's views on Israel, Jack Pitt on ER's response to Marx, Lester Denonn on "Bertie and Litigation from Birth until Death: a Lawyer's Commentary", and David Harley on the Beacon Hill School -- "its operation, including details not previously known." We will also have films, a business meeting, a cocktail hour, and a banquet. On Sunday morning, Albert Ellis, will speak on "Psychotherapy and Bertrand Russell."

The Friday evening meeting will start at 8 P.M. in the meeting-room one floor below the lobby of the Tudor. A printed schedule of events for the entire weekend will be available in the meeting-room. We are pleased to note that all of the speakers are BRS members.

- (2c) Many members will probably eat dinner in the Tudor's dining room, before the Friday 8 P.M. meeting. This provides an opportunity to meet and greet other members before the 8 P.M. meeting starts.

REPORTS FROM OFFICERS

- (3) Chairman Peter G. Cranford reports:

The Bertrand Russell Memorial Committee was formally founded in London on March 5, 1979. Present were Lord Fenner Brockway (Chairman), Peter Cadogan (Secretary), Dora Russell, and Sir Alfred Ayer. John Sutcliffe was not able to attend. Alan Ryan, Rev. Michael Scott, Lord Ritchie Calder, John Gilmour, Barbara Wooton, and a representative from Camden borough have been (or will be) invited to become members of the Committee. Its address is Conway Hall, 25 Red Lion Square, London WC1R 4RL.

The plan is to install a bust of ER in Red Lion Square. The sculptor will probably be Mrs. Marcelle Quinton, wife of Anthony Quinton, Master of Trinity College, Oxford. It will cost about 1600 pounds, but the Committee

will try to raise 5000 pounds -- the surplus to be used for a series of memorial lectures. The appeal for funds will be international. Approaches will be made to The British Academy, The Royal Society, The Nobel Peace Foundation, McMaster University, and Humanist organizations.

- . Dora Russell has won her suit against The Bertrand Russell Peace Foundation for her son John's inheritance. John is the present Earl.
- . Ralph Schoenman, BR's former secretary in whom BR eventually lost confidence, has been permitted to re-enter England, after having been classed for some years as an undesirable alien.
- . Jack Pitt will be in Europe this year on a sabbatical, and will confer with John Sutcliffe.
- . John Sutcliffe may visit the USA this summer, and attend our annual meeting. He is a frequent commentator in "The Freethinker" and "The New Humanist", and continues to be very active in promoting BR's ideas. He has a plan for a New Manchester School. See (11).
- . The home office of the ERS (at 2108½ Walton Way) collapsed as the result of flooding brought on by broken water pipes, and is now located at 1500 Johns Road, Augusta, Georgia 30904. The phone numbers are unchanged: (404)736-3514 and 6384.
- . The first ERS was almost certainly founded at the University of Peking in December 1920. For this fact and others about BR, see The May 4th Movement by Chow Tse-Tsung (Stanford University Press, 1978, paperback), recommended to me by Dora Russell.
- . "The Humanist" (November/December 1978 issue) has a section, "Moral Education and Secular Humanism", that deals with applied philosophy.
- . I may have been in error when I said the Camden Council was BR's refuge when Trinity turned him out in 1918 (RSN21-4). Does anyone know the facts?

REPORTS FROM COMMITTEES

(4) Science Committee (J. B. Neilands, Chairman).

Confessions of the Chairman: Having served over the past five years as Chairman, I feel compelled to make this report and general accounting to the membership. I have had a few requests, most of them relayed from Lee, from new members who have expressed an interest in working with the Committee. Well, de facto it has been a two-person operation. Soon after the ERS was founded, Amy Block and I drew up a statement critical of nuclear power and submitted it to the Board of Directors. Locally, we staged two events, a lecture-reception for Soviet dissident Zhores Medvedev and a buffet for Professor Nguyen Van Hieu. The total absence of a democratic process in our deliberations can be rationalized by (a) acute deficiency of time (lectures, seminars, labs, staff and committee meetings, research, grant requests and reviews, publications, travel, etc., etc.), (b) lack of a budget, (c) reluctance to get the ERS involved in controversy, and (d) my willingness to at any time vacate the post in favor of another member, preferably one living in another corner of the country. I now issue a call to all members interested in the Committee on Science to so advise me via a note to my address, Biochemistry Department, University of California, Berkeley, CA 94720. I will tender the names at the June 1-3 meeting of the Board in New York, and that body will, I presume, nominate a new chairman.

(5) Travel Grant Committee (Jack Pitt, Chairman):

The grant (up to a maximum of \$500) to a doctoral candidate for travel expenses during the 12-month period starting June 1, 1979 will be awarded early in June. For details, see the announcement (39).

ERS PROJECTS

(6) Philosophy in high schools. This project aims to promote the study of philosophy in high schools, and is headed by LEONARD CLEAVELIN.

PHILOSOPHERS' CORNER

(7) 155 to 1. Those were the odds against getting the job, as a full-time teacher of philosophy, at Wabash College recently. 155 applied; 1 was hired. Here is the story, as reported in The New York Times of 4/2/79, p. A13:

College's Quest for Philosophy Teacher Provides a Lesson in Academic Hiring Process

By GENE I. MAEROFF
Special to The New York Times

CRAWFORDSVILLE, Ind. — Alan Berger has decided to give up city life in Manhattan for this cornfield-fringed town in central Indiana. Wabash College had offered him something he could not find in the New York area or, for that matter, anywhere else: a full-time job teaching philosophy.

Mr. Berger, who will get his doctorate this spring from Rockefeller University, won the faculty position over 154 other applicants from around the country. They were competing for a two-year appointment, paying \$13,000 a year, with no assurance of reappointment.

The college's search for and careful winnowing of these candidates, observed firsthand, provided an unusual look at the inner workings of academic selection. It dramatized the desperation that pervades the academic job market now that enrollments are no longer expanding and thousands of young scholars are finding their doctorates virtually useless.

Professors on Sabbatical

The quest began last fall when Eric Dean, the chairman of Wabash's joint department of philosophy and religion, realized that some of his professors would be away on sabbatical leaves over the next two years. At Wabash, a small liberal arts college with classes as small as eight students, this meant a replacement would be needed.

Ann Robertson, the department's first woman and its junior member, was dispatched to the annual meeting of the American Philosophical Association in New York at the Christmas vacation to interview possible candidates.

Almost all such academic gatherings have become the scene of frantic job searches by young Ph.D.'s. In what has come to be sardonically known as "the slave market," hopeful applicants submit dossiers and tramp from room to room being interviewed by college representatives. Mr. Berger was one such candidate.

By January, Wabash had 155 candidates, all with a doctorate or on the verge of receiving one.

Many Sought Short-Term Post

"It was sad to see so many experienced teachers applying for a short-term appointment that most of them never would have considered in years past," Mr. Dean commented.

A decade ago, when the academic job market was booming, many young Ph.D.'s limited their search to major uni-

versities, where they would be able to teach and conduct research.

Now, with undergraduates turning toward vocational and preprofessional programs, there are fewer and fewer faculty openings in fields like philosophy. Of 181 students graduating last year at Wabash, only one was a philosophy major.

Until recently, too, Wabash would not have bothered with so extensive a search. A couple of phone calls, one to the University of Chicago and the other to Yale — the alma maters of five of the six department members — would have yielded a man for the job.

This so-called "old boys network," which sufficed at many colleges and universities, has disintegrated in the face of demands for affirmative action to assure job opportunities for women and members of minority groups.

By the time the bleary-eyed department members assembled on the evening of Feb. 27, they had whittled the list down to 19. All the candidates had the background in analytic philosophy and symbolic logic that the department considered essential.

While perusing the dossiers, Bill Placher, who won tenure at Wabash last year and who, at the age of 30, is a contemporary of many of the applicants, said he tried to imagine how he would feel if he had bounced from job to short-term job, as was true of several candidates. He realized that he might be consumed by frustration.

Movers Not Considered

"I eliminated those who had been out of graduate school quite a while and had taught at a number of places," he said. "How long is it possible for someone to keep up enthusiasm when you have to keep moving?"

Plowing through heaps of transcripts, articles and recommendations, the philosophy faculty members at Wabash compared impressions, trying to decide which of the young scholars would be likely to have a commitment to teaching undergraduates that would transcend the instability of a two-year appointment.

Finally, after three hours, Wabash had its three finalists: Robert E. Moore, a postdoctoral fellow at Duke who had been an undergraduate at Rice, where one professor said he was the school's "most talented student"; Cindy D. Stern, who was completing her Ph.D. at Syracuse University, where a professor called her "almost certainly the best graduate student" of his eight years at the institution,

and Mr. Berger, whose file included a letter of recommendation from his thesis adviser, Saul Kripke, one of the nation's best-known philosophers.

Avoiding Smaller Classes

The intense scrutiny came about, in part, because a recent short-term appointee's performance had produced a temporary enrollment loss in philosophy.

"We have no built-in clientele," said I. Hall Peebles, a Yale graduate who for 21 years has watched more and more Wabash students turn to the science courses they think will help them get into medical and dental schools. "Philosophy is not required. We have to have teachers who can attract students."

The regimen of interviews inflicted upon each of the finalists reflected this concern. They came to Wabash, each in turn, for a day and a half, drinking enough coffee with faculty members to float an armada and facing more questions than a candidate for a stretch at Leavenworth.

Mr. Berger was the second of the three, arriving in this bucolic town with all the trepidation of one who has spent 28 and a half of his 30 years in New York City.

All-Male College

At Wabash, he found himself on a 40-acre, wooded campus with simple three-story, red-brick buildings facing onto a mall where students toss footballs. The college is among the nation's few remaining single-sex male colleges, and the social life is anchored by the fraternity houses dotting the campus perimeter.

A disarmingly open man, Mr. Berger was already well into the laborious process of finding his first full-time academic job. Two jobs for which he seemed to be a strong candidate had been withdrawn after the philosophy departments involved discovered that they would not get promised financing after all.

"I knew that once I got my Ph.D. the time remaining for me in New York would be finite," said Mr. Berger, a mathematics major in his undergraduate days at Queens College.

Again and again, the long-haired Mr. Berger, who has a scholarly, disheveled air, was asked if he thought he could adjust to life in the hinterlands of the Middle West. There were discussions of the work of Noam Chomsky, on whom Mr. Berger nervously delivered a guest lecture that he said rambled so much it almost cost him the job, and questions about how he would teach logic to young men from southern Indiana who do not want to be-

come professional philosophers.

Teaching and Writing Required

Another finalist, Miss Stern, a native of Levittown, L.I., put her finger on a different sort of problem. She agonized over the difficulty of teaching a full class load while trying to write enough articles to remain an acceptable candidate for the next college with an opening — an increasingly common dilemma for the young generation of academic gypsies.

For Miss Stern, the youngest finalist, getting so far into contention was a pleasant surprise: It was her first venture into the job market. She could have completed her Ph.D. in time to take the position at Wabash in the fall, but now she will make her work last a little longer, taking advantage of the fact that another year of financing is available to her.

The money is running out, however, for Mr. Moore, whose postdoctoral fellowship will expire in August. He is 29, a member of Phi Beta Kappa, and in 30 tries has yet to be offered a full-time faculty appointment.

'Back to Square One'

"I'm back at square one," a disappointed Mr. Moore said. "I knew when I went into graduate school that it wasn't going to be easy to get a job, so it's no surprise. But this is starting to drain me. I'm considering looking for something in business management."

Mr. Berger is not thinking about what will happen after his two years at Wabash. He is spending much of his time in the library at Columbia University, near his home, putting the final touches on his dissertation, "Language and Science as an Epistemic Foundation of Logic: A Critique." Twice a week he goes over to Hunter College to teach informal logic.

He relaxes in the evening by listening to classical music — on the radio, because his phonograph is broken. His future colleagues in Crawfordsville, where the radios play little but country music, have already suggested to Mr. Berger that he ought to have his phonograph repaired before coming here in the fall.

(Thank you, BEV SMITH)

BY BERTRAND RUSSELL

(8) An ignored report is the heading on this item from "In Search", a 4-page bi-weekly, Issue No. 139:

From a Jan. 3 Washington dispatch in the Washington Post:— The Justice Department indicated yesterday that it would take no immediate action on the recommendations by the House Select Committee on Assassinations for further inquiry into the murder of President Kennedy...

The committee concluded last week after an investigation costing \$5.8 million that "Kennedy was probably assassinated as the result of a conspiracy. ... The experts who conducted the study said that (an accidentally made) police tape recording... showed "beyond a reasonable doubt" that a shot had been fired from the so-called "grassy knoll" in front of the President...

ER also accepted the conspiracy hypothesis. In August 1963 he formed "the British Who Killed Kennedy? Committee" ("an unsatisfactory name") and, among other things, wrote a pamphlet — we assume it was a pamphlet — "Sixteen Questions on the Assassination". This is reprinted in his autobiography, where it occupies 13 pages. The

Autobiography of Bertrand Russell(hardcover)New York: Simon & Schuster,1969, Vol. 3,pp 289-301. Its opening paragraph reads as follows:

The official version of the assassination of President Kennedy has been so riddled with contradictions that it has been abandoned and rewritten no less than three times. Blatant fabrications have received very wide-spread coverage by the mass media, but denials of these same lies have gone unpublished. Photographs, evidence, and affidavits have been doctored out of recognition. Some of the most important aspects of the case against Lee Harvey Oswald have been completely blacked out. Meanwhile the FBI, the police, and the Secret Service have tried to silence key witnesses or instruct them what evidence to give. Others involved have disappeared or died in extraordinary circumstances.

"In Search" is published by The Institute for the Study of Relevant Progressivism, Celebeslaan 13, Hilversum, The Netherlands. It is a non-profit foundation. U.S. subscription office: 345 Hudson Street, New York, NY 10014.

(Thank you, BOB DAVIS.)

BR QUOTED

- (9) BR hits the jackpot.PETER CRANFORD writes:"My small nephew got the usual yellow slip in a fortune cookie,in a Chinese restaurant. His mother casually read it -- as my jaw dropped:

"The good life is inspired by love and guided by reason."

Peter also came across the following in the National Enquirer of April 3rd:

A man who has never enjoyed beautiful things in the company of a woman whom he loves has not experienced to the full the magic power of which such things are capable.

BR & ANTI-SEMITISM (& MARX)

- (10a) The bad and the good.PAUL EDWARDS writes:

In view of recent discussions about Russell's supposed anti-semitism, you might be interested to quote the following passage from p. 187 of Freedom versus Organization: 1814-1914 , New York: Norton, 1934:

Anti-Semitism is an abomination, but it has had one incidental good effect: that it has raised up, among Jews, tribunes of the people who might otherwise have been supporters of the status quo.If this view is just, Marxism is a suitable punishment for the illiberality of well-to-do anti-Semites.

- (10b) The above passage comes right after the following one, in which BR tells why he thinks Marx was interested in improving the lot of the working class, even though he himself had not come from that class:

His devotion to the interests of the proletariat is perhaps somewhat surprising, in view of his bourgeois origin and his academic education. He had all his life a love of domination associated with feelings of inferiority, which made him prickly with social superiors, ruthless with rivals, and kind to children. It was probably this trait in his character that first led him to become the champion of the oppressed. It is difficult to say what caused his feeling of inferiority, but perhaps it was connected with his being a Jew by race and a Christian by education. He may, on this account, have had to endure the contempt of school-fellows in his early years, without being able to fall back upon the inner self-assurance that would be possible to a Jew by religion..

BR & ECONOMICS

- (11) "Bertrand Russell and Social Economy" and "Manifesto of the New Manchester School of Social Economics" are new writings from JOHN SUTCLIFFE. He says these "are intended to advocate the economic views of Dora and Bertrand Russell. The School hopes to use BR's views as a basis for the discussion of contemporary economic and social problems and as an effective alternative to the antagonistic competition of economic nationalism that divides the world and now threatens the existence of the human race.

"Russell's economic views are neglected and are totally misunderstood by many "authorities" on Russell. It is the intention of the School to correct this. My colleagues in this endeavor are Mr. Anthony Deveraux, Senior Training Officer at the Manpower Training Services Agency of the Department of Employment in Manchester, and

Dr. Douglas Fox, Lecturer in Economics at the Victoria University of Manchester.

"We have approached people in various fields interested either in the problems of world economy or in Russell's contribution to them. They include Dora Russell (of course!), Lord Brockway, Sir Alan Cottrell FRS, Sir Alfred Ayer and others. Our hope is to involve as many people as possible in the debate. In particular we are specifically concerned with the effect of the new micro-processor technology and how it may lead to an unprecedented collapse of the existing and destructively wasteful system of economic nationalism. We also hope that BRS members will join in and let us have their ideas, opinion and suggestions. It is our intention to publish a series of short (600 word) articles on Russell's economics and the wide range of related topics they involve. Although we cannot pay a fee for them, we hope nonetheless that many members will find it possible to contribute. (The articles will be distributed either gratis or at cost, and be published at the rate of one per month.)"

The 1-page Manifesto and 20-page paper on social economy can be borrowed from the BRS Library, address on Page 1, * bottom. John as invited comments, questions, and suggestions. His address: 9 Naseby Avenue, Higher Blackley, Manchester, England M9 2JJ.

SPECIAL REQUESTS

- (12) BR in fiction. We'd like to do a series in the newsletter telling about fictional characters who are based (or said to be based) on BR. We don't mean fictional characters who bear the name "Bertrand Russell", as in (30). We mean fictional characters not named "Bertrand Russell" who allegedly are based on him. We are under the impression that there are many such characters, but we don't know who they are. If you know about any of them, * please tell us.

DISSENTING OPINION

- (13) About Peter Cadogan. John Sutcliffe takes issue with Bob Davis's remark that "Conway Hall (ie., the South Place Ethical Society), without necessarily being aware of BR's positions, shares a lot of BR's views and values" (RSN21-5).

John, in taking issue, assumes that the Ethical Society's views and values are those of its Director, Peter Cadogan.

Mr. Cadogan, by his own admission, is a transcendental idealist who advocates that, if man is to survive, "he must transcend civilisation"; we have to "go beyond it" apparently to some marvelous utopia, but he hasn't specified what exactly. He also believes that the Soviet Government will somehow magically vanish in the next half decade to be replaced by an equally transcendent unity extending "from the Rockies to the Urals."

His "Direct Democracy" is hardly credible. Like Rousseau's "Social Contract" it appears to advocate democracy; but, like Rousseau, for Cadogan democracy is an altruistic commitment of individual passionate conviction to the corporate identity of a tribal state. For Russell's opinion of this, I recommend the chapter on Rousseau in BR's A History of Western Philosophy. Cadogan's ideal places agreement of the majority prior to dissent of the minority, and assumes, like some latter-day Puritan that, given his Truth, everyone will naturally choose to embrace it.

Cadogan's view is diametrically opposed to that of Bertrand Russell.

NEWS ABOUT MEMBERS

- (14) Irvin Ashkenazy has an article on sea lions in "Westways Magazine" for March 1979. "It is interesting, sympathetic, and well illustrated with his own photographs," says Peter Cranford.

- (15) Lester Denonn: "My wife and I have just returned from a little over two months in Florida, where our son is a radio news announcer. He warned me against mentioning my keen interest in Russell lest the natives mistakenly deem me a communist. It was a restful stay away from New York City's cold and snow. Part of my time was spent covering court sessions for my son, and doing a lot of reading. The books I read all have Russell references. Among them are recent works about Plato, Kant, Hegel, Heidegger, Lecomte du Notty and Borges. The new volumes bring the total in my Russell library to well over 2100 books by, about, or referring to Russell. The additions will occasion a revised and more informative listing, which I am about to engage in. As some of you may know, I rarely read a book unless it is my own, so that I can underline and make marginal notes. For example, at the end of the Hegel volume, I penned: Hegel is an Egal/ Whom I like/Less than I do a bagel./ As someone said:/ I know who's Hegel,/ But what's a bagel?"

"My son's warning apparently does not apply to all the natives. In one of the book stores I hunted in, across the street from the University of Florida campus, the home of the Gators, I found several volumes of Russell's works and four copies of the Egner-Denonn Basic Writings. I became reconciled to Florida."

- (16) **Paul Edwards** recently completed a monograph on "Heidegger and Death -- A Critical Evaluation." It will be published in the spring by "The Monist" as the first of a series of monographs. It is dedicated to "Bertrand Russell, enemy of humbug and mysticism."

RELIGION AND ITS ADVERSARIES

- (17) **Atheism survives but debate is dead.** That was the headline on the New York Times story we ran a while ago (RSN19-19). It mentioned, among other things, that Madalyn Murray O'Hair -- "the subject of passionate controversy two decades ago for her attacks on religion" -- "now attracts little serious attention." "Recently she toured the South, debating with Bob Harrington, known as 'the chaplain of Bourbon Street.' The trip resembled a histrionic roadshow more than an intellectual contest."

Here is how "the roadshow" was written up in Newsweek, 9/19/77:

The Soul Mates

The ads in the local newspapers bill it as a "fight to the finish," and the deep-voiced emcee announces the challengers with all the buildup of a heavyweight prizefight. Entering on the right, decked out in a purple, red- and white-checked dress, is Madalyn Murray O'Hair, America's No. 1 atheist. From the left, carrying a red Bible, comes "Big Bob" Harrington, the flamboyant fundamentalist "Chaplain of Bourbon Street." The crowd goes crazy, cheering, whistling, hissing and booing, and the contenders settle into their act—a free-for-all debate on the merits of Christianity vs. atheism. "This demon-directed damsel is against God, country, church and home," yells Harrington, "and I'm going to stop her."

patriotic Christian O'Hair rushes back onstage at the offending words "under God" and tries to wrestle the microphone to the ground. From that point, the debates degenerate into a brawl, with O'Hair hooting at the "Christian idiots" and Harrington encouraging the true believers to chant, "We're fools for Christ."

The two continue their pattern of insults and retorts until O'Hair, on cue, gives Harrington the floor to make the pitch for money. As the plastic buckets are passed, the crowd is told to mark the envelopes "For Bob Harrington (God and Country)" or "For Madalyn Murray O'Hair (No God and No Country)." Though Harrington collects the greater number of envelopes, O'Hair has been getting the bigger offerings—including one check in Nashville, for \$1,000. O'Hair, who was

Harrington and O'Hair debate: God vs. the devil, or Punch vs. Judy?

"I'll show you that Bob Harrington is stupid," counters O'Hair, "just like all other preachers and Christians."

The "fight" between Harrington and O'Hair is as carefully staged as a Punch-and-Judy show, and for the past six weeks it has played to packed houses in Alabama, Tennessee, West Virginia and Illinois. The traveling roadshow, which will hit all 50 states by next summer, sprang from Harrington's idea that the pair could get more money and exposure together than either could generate alone. And although the audiences he drums up are stacked with tried-and-true Christians, O'Hair has eagerly accepted his challenge. "People are seeing someone who's not afraid to stand up to one of these goddam evangelists," says the tart-tongued atheist. "If nobody else will tell them they're nuts, I will."

Brawl: The show starts off with a twenty-minute harangue by O'Hair, followed by inspirational patter from preacher Harrington. But the action really gets rolling when Big Bob asks the crowd to stand and recite the pledge of allegiance. In a bit designed to stir the juices of any

instrumental in the 1963 Supreme Court ban on prayer in public schools, is hoping to raise \$1,000 a week from the debates to finance the work of her Society for Separationists. Operating out of a newly opened \$250,000 building in Austin, Texas, the society has just filed a suit in Federal court to stop the government from using the words "In God We Trust" on U.S. currency.

Harrington, who pays for the tour, insists he is just breaking even on it, but his own evangelical organization reportedly grosses \$200,000 a month from contributions and the sale of books, records and a motivational course called "The Total Man." A freewheeling Southern Baptist, he makes his rounds in a bus donated by Hustler publisher Larry Flynt ("The devil had the bus long enough," says the reverend). Harrington says he hopes to convert O'Hair. "Wouldn't she make a great evangelist?" he asks. And if all goes well, the preacher and the atheist hope to end their debates with a nationally televised Superbowl of the Soul.

NEWS ABOUT RUSSELLITES

- (18) Beware of Gore Vidal! This item from The New York Times Review of the Week (8/6/78,p.6) tells why:

**Reluctant Resignation**

Still contending that the issue was censorship, not censure, Robert M. Bonin, the Chief Justice of the Massachusetts Supreme Court, gave up his fight to remain on the bench last week after the state Legislature approved a resolution calling for his removal. Judge Bonin had been censured by the State Supreme Court in July for attending a lecture by author Gore Vidal to benefit 24 men awaiting trial for sex crimes involving adolescent boys. The Court also criticized him for having hired three secretaries who had previously worked for him in the Attorney General's office. In a two-page letter of resignation to Gov. Michael S. Dukakis, Judge Bonin conceded defeat but did not admit guilt. Blaming political pressures and the press for his downfall, he declared, "the Legislature has spoken, but my integrity is intact."

Vidal is a lifelong Russellite, KEN BLACKWELL tells us.

HONORARY MEMBERS

- (19) Karl Popper is written up in The Encyclopedia of Philosophy, Paul Edwards, Editor in Chief, New York: Macmillan, 1967, in this way:

POPPER, KARL RAIMUND, Austrian philosopher of natural and social science. Popper was born in Vienna in 1902 and was a student of mathematics, physics, and philosophy at the university there. Although he was not a member of the Vienna circle of logical positivists and was in sharp disagreement with many of its doctrines, he shared most of the group's philosophical interests and was in close touch with several of its members, having a considerable influence on Rudolf Carnap. His first book, *Logik der Forschung*, was published in 1935 in the circle's series *Schriften zur wissenschaftlichen Weltanschauung*. In 1937 Popper went as senior lecturer to Canterbury University College in Christchurch, New Zealand, and remained there until his move in 1945 to a readership at the London School of Economics in the University of London. Since 1949 he has been professor of logic and scientific method at the London School of Economics. He was knighted in 1964.

Rejection of verifiability theory. The foundation of Popper's wide-ranging but closely integrated philosophical reflections is the bold and original form he first gave in 1933 to the problem of demarcating science from pseudo science in general and from metaphysics in particular. The logical positivists had taken this problem to be one of distinguishing meaningful from meaningless discourse and had proposed to solve it by making empirical verifiability the necessary condition of a sentence's meaningfulness or scientific status—in their eyes one and the same thing. Popper dissented both from their formulation of the problem and from their solution. His view has always been that the important task is to distinguish empirical science from other bodies of assertions that might be confused with it: metaphysics, such traditional pseudo sciences as astrology and phrenology, and the more imposing pseudo sciences of the present age, such as the Marxist theory of history and Freudian psychoanalysis. To identify this distinction with that between sense and nonsense is, he holds, to make an arbitrary verbal stipulation. It is also an unreasonable stipulation because the line between science and pseudo science is neither precise nor impermeable. Pseudo science, or "myth," as he sometimes calls it, can both inspire and develop into science proper: indeed, the general progress of human knowledge can be considered as a conversion of myth into science by its subject to critical examination.

Falsifiability criterion. A crucial difficulty for the verifiability theory of meaning was Hume's thesis that inductive generalization was logically invalid. Being unrestrictedly general, scientific theories cannot be verified by any possible accumulation of observational evidence. Moritz Schlick sought to interpret scientific theories as rules for the derivation of predictive statements from observational ones and not as statements themselves at all, but this attempt came to grief on the fact that theories can be empirically falsified by negative instances. This logical

asymmetry in the relation of general statements to observations underlies Popper's view that falsifiability by observation is the criterion of the empirical and scientific character of a theory. He maintains, first, that scientific theories are not, in fact, arrived at by any sort of inductive process. The formation of a hypothesis is a creative exercise of the imagination; it is not a passive reaction to observed regularities. There is no such thing as pure observation, for observation is always selective and takes place under the guidance of some anticipatory theory. Second, even if induction were the way in which hypotheses were arrived at, it would still be wholly incapable of justifying them. As Hume showed, no collection of particular observations will verify a general statement; nor, Popper adds, is such a statement partially justified or rendered probable by particular confirming instances, since many theories that are known to be false have an indefinitely large number of confirming instances.

For Popper the growth of knowledge begins with the imaginative proposal of hypotheses, a matter of individual and unpredictable insight that cannot be reduced to rule. Such a hypothesis is science rather than myth if it excludes some observable possibilities. To test a hypothesis, we apply ordinary deductive logic in order to derive singular observation statements whose falsehood would refute it. A serious and scientific test consists in a persevering search for negative, falsifying instances. Some hypotheses are more falsifiable than others; they exclude more and thus have a greater chance of being refuted. "All heavenly bodies move in ellipses" is more falsifiable than "All planets move in ellipses," since everything that refutes the second statement refutes the first but much that refutes the first does not refute the second. The more falsifiable a hypothesis, therefore, the less probable it is, and by excluding more, it says more about the world, has more empirical content. Popper goes on to show that the obscure but important concept of simplicity comes to the same thing as falsifiability and empirical content. The proper method of science is to formulate the most falsifiable hypotheses and, consequently, those that are simplest, have the greatest empirical content, and are logically the least probable. The next step is to search energetically for negative instances, to see if any of the potential falsifiers are actually true.

Corroboration. If a hypothesis survives continuing and serious attempts to falsify it, then it has "proved its mettle" and can be provisionally accepted. But it can never be established conclusively. The survival of attempted refutations corroborates a theory; the corroboration being greater to the degree that the theory is falsifiable. Popper's critics have fastened on this theory of corroboration as the point at which the inductive procedure he ostensibly rejects makes an implicit reappearance. Is there any real difference, they ask, between the view that a theory depends for justification on the occurrence of confirming

instances and the view that it depends on the failure of falsifying ones to occur? Furthermore, his critics claim, there is apparently an inductive inference embedded in Popper's doctrine—the inference from the fact that a theory has thus far escaped refutation to the conclusion that it will continue to do so. Popper could reasonably reply that the formal likeness between confirming and falsifying instances conceals an important difference in approach—that between those who glory in confirmations and those who ardently pursue falsifications. However, a certain disquiet about the inductivist flavor of the positive support that his theory allows a hypothesis to derive from the failure of attempted refutations is expressed in Popper's leanings toward a rather skeptical view of the status of unrefuted hypotheses: "Science is not a system of certain, or well-established, statements. . . . Our science is not knowledge (epistēmē): it can never claim to have attained truth, or even a substitute for it, such as probability. . . . We do not know: we can only guess." (*The Logic of Scientific Discovery*, Ch. 10, Sec. 85, p. 278).

Empirical basis. To complete his account of the growth of scientific knowledge, Popper had to explain the empirical basis of the falsificatory operation, that is, he had to make clear the formal character of the observation statements that are logically deduced from theories. It follows from the falsifiability criterion that unrestricted existential statements of the form "There is (somewhere at some time) an X" are unempirical because however many spatiotemporal positions have been examined for the presence of an X, an infinity of further positions remains to be examined. This is not true, however, of circumscribed existential statements reporting the existence of something at a specified place and time. Popper takes the basic observation statements to be of this form, to refer to publicly observable material objects, and to be capable of being straightforwardly affirmed or denied as true or false. Such basic statements are motivated by perceptual experiences, but they do not, as they are held to in the usual empiricist tradition, describe them. They can themselves be empirically tested in the light of the further basic statements which follow from them, together with accepted scientific theories. The infinite regress that this conception involves is not a vicious one: it can be halted by a conventional assignment of truth to basic statements at any point. But this convention is not dogmatic, since it is only provisional; if the basic statements in question are challenged, they can always be exposed to empirical tests.

Epistemology. In recent writings Popper has drawn many further inferences from his initial body of ideas. One is that knowledge has no foundations or infallible sources, either in reason or the senses. He sees the rationalist and empiricist epistemologies of the modern age as united in a determination to replace one sort of authority—a sacred text or an institution—with another—a human mental capacity. Both kinds of intellectual authoritarianism hold

the mistaken opinion that truth is manifest and consequently that error is a sin and its propagation the outcome of some kind of conspiracy to deceive. There is no more comprehensive critique of the quest for certainty in the work of any other modern philosopher.

A second conclusion Popper draws is that the traditional empiricist account of concept formation—essentially Hume's idea that concepts are acquired by perceiving the similarity of sets of particular impressions—is mistaken because it embodies the same inductivist error as Bacon's and Mill's accounts of scientific knowledge. Resemblance is not passively stumbled upon; rather, we classify things together in the light of antecedent preconceptions and expectations. Popper rejects innate ideas strictly so called but believes that we approach the world of experience with innate propensities—in particular, with a general expectation of regularity that is biologically explicable even if not logically justifiable. The influence of Kant is especially evident in this side of Popper's thought. In a sense the proposition that nature contains regularities is for him synthetic a priori: it is neither a logical truth nor an empirical truth (since it is unfalsifiable), but it has a kind of psychological necessity as a general feature of the active human intellect.

Theoretical entities. Popper's dissent from the usual empiricist and positivist view that private, experiential propositions constitute the empirical foundation of knowledge and his insistence on the provisional and incomplete nature of scientific theorizing together determine his attitude to the subject matter or ontological significance of scientific theory. He rejects the essentialism of the rationalist philosophy of science, which conceives the goal of inquiry to be a complete and final knowledge of the essences of things, on the grounds that no scientific theory can be completely justified and that the acceptance of a new theory creates as many problems as it solves. He is equally opposed to the instrumentalist or conventionalist doctrine of those who, like Ernst Mach, Henri Poincaré, and Pierre Duhem, take the theoretical entities of science to be logical constructions, mere symbolic conveniences to assist us in the prediction of experience. The entities of scientific theory (such as molecules and genes) are not distinguishable in nature from the medium-sized public observables (such as chairs and trees) referred to in basic statements: both are possible objects of genuine knowledge.

Probability. A difficulty arises for Popper's falsifiability criterion from the presence in normal scientific discourse of statements about probability in the sense of frequency. No finite sequence of A's of which none are B decisively refutes the proposition that most A's are B. In his first book Popper put forward a modified version of Richard von Mises' view that the probability of the occurrence of a property in an unrestrictedly open class is the limit of the frequencies of its occurrence in finite segments of the open sequence, a version that made probability statements accessible to decisive empirical refutation. More recently he has argued that probability statements, although they may rest on statistical evidence, should not themselves be interpreted statistically but rather as ascribing objective propensities to natural objects.

Determinism and value. Popper's conviction that the mind is essentially active in the acquisition of knowledge and that its progress in discovery cannot be subsumed under a law and made the subject of prediction has led him far beyond the philosophy of natural science, with which his central doctrines are concerned. Scientific knowledge is a free creation; it follows that the mind is not a causal mechanism. He contends that no causal model of the most elementary acts of the mind in empirical recognition and description can be constructed, since such a model would leave out the intention to name that is essential to any real act of description. Although the pursuit of knowledge is guided by an innate propensity to expect deterministic regularity in the world, the existence of knowledge as developed by a series of unanticipated novelties is the strongest reason for rejecting general, metaphysical determinism.

Popper's theory of mind and knowledge also has ethical implications. Judgments of value are not empirical statements but decisions or proposals. Our valuations are not determined by our natural preferences but are the outcome of autonomous acts of mind—a further link with Kant. Popper's own basic moral proposal is, however, not very Kantian. Popper is a negative utilitarian for whom the primary moral imperative is "diminish suffering."

History and society. In *The Open Society and Its Enemies* (1945) and in *The Poverty of Historicism* (1957), Popper applies his theory of knowledge to man and society in the form of an attack on historicism, the doctrine that there are general laws of historical development that render the course of history inevitable and predictable. In *The Open Society* historicism is examined in three influential versions, those of Plato, Hegel, and Marx. In *The Poverty of Historicism*, historicism is formally refuted and attributed to two oppositely mistaken views about the nature of social science. The formal objection is that since the growth of knowledge exercises a powerful influence on the course of history and itself depends on the anomalous initiatives of original scientific genius, neither the growth of knowledge nor its general historical effects can be predicted. Some historicists have been motivated by the mistaken idea that a science of society would have a general evolutionary law as its goal. This is a naturalistic error. The evolutionary process is not a lawlike regularity at all; rather, it is a loosely characterized trend whose phases exemplify the laws of genetics, for example. The historicists who have made this error are right in believing that scientific method applies to society, but they have a false idea of what scientific method is. On the other hand, among historicists there are antinaturalists who hold that ordinary scientific method does not apply to society, for which laws of a special historicist form must be found. Popper asserts that scientific method applies both to nature and to society, and in the same way—to particular isolable aspects of the whole. Social science can discover laws that make clear the unintended consequences of human action, but there can be no laws of the whole system. It follows that social reform must proceed by piecemeal social engineering, not by total revolutionary reconstructions of the social order. Popper presents the central problem of politics in a characteristically falsificationist way: The question "Who

should rule?," he says, should be replaced by the question "How can institutions be devised that will minimize the risks of bad rulers?"

Philosophy and knowledge. Popper does not believe, as do most analytic philosophers, that philosophy is sharply distinguishable from science, either in its methods—which, like science's, must be those of trial and error, conjecture and attempted refutation—or in its subject matter—which is not only language but also the world to which language refers. Furthermore, there is no uniquely correct philosophical method. Both the examination of actual language and the construction of ideal languages can contribute to the philosophical understanding of particular problems, but they are not universal keys to truth. Popper believes that if philosophy is to be of any general importance, it must stand in a close relation to the work of other disciplines. When it is isolated, as a special autonomous craft, from the general pursuit of knowledge, it degenerates into scholasticism and triviality.

Works by Popper

BOOKS

Logik der Forschung. Vienna, 1935. Translated by Popper, with the assistance of Julius Freed and Ian Freed, as *The Logic of Scientific Discovery.* New York, Toronto, and London, 1959.

The Open Society and Its Enemies. 2 vols. London, 1945; 4th, rev. ed., with addenda, London, 1961.

The Poverty of Historicism. London, 1957; 2d ed., with some corrections, 1961.

Conjectures and Refutations; The Growth of Scientific Knowledge. London, 1963. Collected essays.

ESSAYS

"Logic Without Assumptions." *PAS*, N.S. Vol. 47 (1946–1947), 251–292.

"New Foundations for Logic." *Mind*, N.S. Vol. 56 (1947), 193–235, corrections and additions, N.S. Vol. 57 (1948), 69–70.

"Indeterminism in Quantum Physics and in Classical Physics," I and II. *British Journal for the Philosophy of Science*, Vol. 1 (1950–1951), 117–133; 173–195.

"On the Theory of Deduction." *Proceedings of the Koninklijke Nederlandse Akademie van Wetenschappen*, Vol. 51, Nos. 1 and 2 (1948).

"Probability, Magic or Knowledge out of Ignorance?" *Dialectica*, Vol. 11 (1957), 354–374.

"The Propensity Interpretation of Probability." *British Journal for the Philosophy of Science*, Vol. 10 (1959), 25–42.

Works on Popper

Bunge, Mario, ed. *The Critical Approach to Science and Philosophy.* Glencoe, Ill., 1964. Contains 29 articles largely concerned with the whole range of Popper's views. Includes a bibliography of Popper's publications, complete up to the beginning of 1964.

Kaufmann, Walter. *From Shakespeare to Existentialism.* New York, 1959. Chapter 7, "The Hegel Myth and Its Method," is a sympathetic but powerful criticism of Popper's account of Hegel in *The Open Society*.

Levinson, Ronald B. *In Defense of Plato.* Cambridge, Mass., 1953. This substantial critique of Plato's modern opponents gives Popper pride of place.

Neurath, Otto. "Pseudorationalismus der Falsifikation." *Erkenntnis*, Vol. 5 (1935), 290–294.

Reichenbach, Hans. "Über Induktion und Wahrscheinlichkeit. Bemerkungen zu Karl Poppers *Logik der Forschung*." *Erkenntnis*, Vol. 5 (1935).

Schilpp, P. A., ed. *The Philosophy of Karl Popper.* La Salle, Ill., forthcoming. A volume in the Library of Living Philosophers.

Warnock, G. J., review of *The Logic of Scientific Discovery.* *Mind*, N.S. Vol. 69 (1960), 99–101.

ANTHONY QUINTON

We would welcome additional information. Sir Karl is now Emeritus Professor in the University of London.

MEMBERSHIP RENEWALS

- (23) Everybody's dues for 1979 are due now. This is the first year of a new system for renewing membership. It will eliminate our need to mail several hundred individual renewal-request letters during the year, and will simplify record-keeping. Instead of each member's dues becoming due on the anniversary of the date he or she joined (the old system), everybody's dues become due at mid-year.

We hope you have found your membership in the BRS worthwhile, and wish to continue as a member.

We have become an established company of admirers of Russell, intent on learning more about him, spreading his views, and working for things he worked for. If you share any or all of these aims, the time to renew your membership is now.

Strictly, dues are not due till July 1st. But please send us your renewal check now; date it July 1st.

This is the only renewal-request you will receive. When you respond promptly, it avoids possible delays in mailing you the newsletter and "Russell".

Send dues to BRS Membership Committee, RD 1, Box 409, Coopersburg, PA 18036. Regular member, \$15, couple \$20, student \$5. Outside the USA and Canada, add \$5.

Thanks!

FOR SALE

- (24) BRS stationery for members. At the top of each sheet is the quotation: "The good life is one inspired by love and guided by knowledge.*" At the bottom, it says: "Motto of the Bertrand Russell Society, Inc." In between, the 8½ x 11 white sheet is blank. Paper quality: average. \$3.50 for 80 sheets, postpaid within the USA. and Canada. Order from the newsletter, address on Page 1, bottom.

MORE ABOUT...

- (25) India's Bertrand Russell stamp (RSN21-13) was issued on September 16, 1972, BEV SMITH advises -- during the hundredth year after BR's birth. BR was born on May 18, 1872.
- (26) Atheist vs. agnostic, Installment III: from Pamphlet B-864, E. Haldeman-Julius, ed., Girard, Kansas: Haldeman-Julius Publications, 1950:

AM I AN ATHEIST OR AN AGNOSTIC?

A PLEA FOR TOLERANCE IN THE FACE OF NEW DOGMAS

BY BERTRAND RUSSELL

I speak as one who was intended by my father to be brought up as a Rationalist. He was quite as much of a Rationalist as I am, but he died when I was three years old, and the Court of Chancery decided that I was to have the benefits of a Christian education.

I think that perhaps the Court of Chancery may have regretted that since. It does not seem to have done as much good as they hoped.

Perhaps you may say that it would be rather a pity if Christian education were to cease, because you would then get no more Rationalists.

They arise chiefly out of reaction to a system of education which considers it quite right that a father should decree that his son should be brought up as a Muggletonian, we will say, or brought up on any other kind of nonsense, but he must on no account be brought up to try to think rationally. When I was young that was considered to be illegal.

SIN AND THE BISHOPS

Since I became a Rationalist I have found that there is still considerable scope in the world for the practical importance of a Rationalist outlook, not only in matters of geology, but in all sorts of practical matters, such as divorce and birth control, and a question which has come up quite recently, artificial insemination, where bishops tell us that something is gravely sinful, but it is only gravely sinful because there is some text in the Bible about it. It is not gravely sinful because it does anybody harm, and that is not the argument.

As long as you can say, and as long as you can persuade Parliament to go on saying,

that a thing must not be done solely because there is a text in the Bible about it, so long obviously there is great need of Rationalism in practice.

As you may know, I got into considerable trouble in the United States solely because, on some practical issues, I considered that the ethical advice given in the Bible was not conclusive, and that on some points one should act differently from what the Bible says. On that ground it was decreed by a Law Court that I was not a fit person to teach in any University in the United States, so that I have some practical ground for preferring Rationalism to other outlooks.

DON'T BE TOO CERTAIN!

The question of how to define Rationalism is not altogether an easy one. I do not think that you could define it by rejection of this or that Christian dogma. It would be perfectly possible to be a complete and absolute Rationalist in the true sense of the term and yet accept this or that dogma.

The question is how to arrive at your opinions and not what your opinions are. The thing in which we believe is the supremacy of reason. If reason should lead you to orthodox conclusions, well and good; you are still a Rationalist. To my mind the essential thing is that one should base one's arguments upon the kind of grounds that are accepted in science, and that one should not regard anything that one accepts as quite certain, but only as probable in a greater or a less degree.

Not to be absolutely certain is, I think, one of the essential things in rationality.

PROOF OF GOD

Here there comes in a practical question which has often troubled me. Whenever I go into a foreign country or a prison or any similar place they always ask me what is my religion.

I never quite know whether I should say "Agnostic" or whether I should say "Atheist." It is a very difficult question and I daresay that some of you have been troubled about it.

As a philosopher, if I were speaking to a purely philosophic audience I should say that I ought to describe myself as an Agnostic, because I do not think that there is a conclusive argument by which one can prove that there is not a God.

On the other hand, if I am to convey the right impression to the ordinary man in the street I think that I ought to say that I am an Atheist, because when I say that I cannot prove that there is not a God, I ought to add equally that I cannot prove that there are not the Homeric gods.

None of us would seriously consider the possibility that all the gods of Homer really exist, and yet if you were to set to work to give a logical demonstration that Zeus, Hera, Poseidon, and the rest of them did not exist you would find it an awful job. You could not get such proof.

Therefore, in regard to the Olympic gods, speaking to a purely philosophic audience, I would say that I am an Agnostic. But speaking popularly, I think that all of us would say in regard to those gods that we were Atheists. In regard to the Christian God, I should, I think, take exactly the same line.

SKEPTICISM

There is exactly the same degree of possibility and likelihood of the existence of the Christian God as there is of the existence of the Homeric God. I cannot prove that either the Christian God or the Homeric gods do not exist, but I do not think that their existence is an alternative that is sufficiently probable to be worth serious consideration. Therefore, I suppose

that on these documents that they submit to me on these occasions I ought to say "Atheist," although it has been a very difficult problem, and sometimes I have said one and sometimes the other without any clear principle by which to go.

When one admits that nothing is certain one must, I think, also add that some things are much more nearly certain than others. It is much more nearly certain that we are here assembled tonight than it is that this or that political party is in the right.

Certainly there are degrees of certainty, and one should be very careful to emphasize that fact, because otherwise one is landed in an utter skepticism, and complete skepticism would, of course, be totally barren and totally useless.

PERSECUTION

One must remember that some things are very much more probable than others and may be so probable that it is not worth while to remember in practice that they are not wholly certain, except when it comes to questions of persecution.

If it comes to burning somebody at the stake for not believing it, then it is worth while to remember that after all he may be right, and it is not worth while to persecute him.

In general, if a man says, for instance, that the earth is flat, I am quite willing that he should propagate his opinion as hard as he likes. He may, of course, be right but I do not think that he is. In practice you will, I think, do better to assume that the earth is round, although, of course, you may be mistaken. Therefore, I do not think that we should go in for complete skepticism, but for a doctrine of degrees of probability.

I think that, on the whole, that is the kind of doctrine that the world needs. The world has become very full of new dogmas. The old dogmas have perhaps decayed, but new dogmas have arisen and, on the whole, I think that a dogma is harmful in proportion to its novelty. New dogmas are much worse than old ones.

(Thank you, DONG-IN BAE)

- (27) Atheist vs. agnostic, Installment IV. BILL YOUNG -- who heads The Society of Evangelical Agnostics -- writes:

I must take exception to the heading for Item RSN21-10. I think it should have read "atheist, yes, agnostic, yes" on the basis of the letter that was quoted, as well as on such articles as "Am I An Atheist Or An Agnostic?"

in which he says that he speaks of himself both as an agnostic and an atheist under different circumstances, and "What Is An Agnostic?" in RELIGIONS IN AMERICA, in which he says essentially the same thing.

* Incidentally, I know of no time when he used the word "agnostic" in any sense other than as not knowing about, or suspending judgment about, a deity. If BRS members are aware of times when he used the term in the broader sense Huxley defined -- "Positively the principle (agnosticism) may be expressed: In matters of the intellect, follow your reason as far as it will take you, without regard to any other consideration. And negatively: In matters of the intellect, do not pretend that conclusions are certain which are not demonstrated or demonstrable. That I take to be the agnostic faith..." ("Agnosticism" in SCIENCE AND CHRISTIAN TRADITION, p. 246 -- I would be glad to know about it.

(28) Ali. Last issue we reproduced Ali's report on his exchanges with BR (RSN21-12), but failed to name the book it came from. It is The Greatest: My Own Story by Muhammed Ali, New York: Random House, 1975.

FUN & GAMES

(29a) Paradoxes (continued). We're having second thoughts about the way we dealt with paradoxes last issue (RSN21-33). We think we included statements that, strictly, didn't belong there.

Let us consider two kinds of paradoxes. Here is the first kind:

"All Cretans are liars," said the Cretan."

If all Cretans are liars, then the Cretan speaker is lying when he says "All Cretans are liars." Thus it is false that all Cretans are liars. But if it is false that all Cretans are liars, then the Cretan speaker may be telling the truth when he says "All Cretans are liars." Thus it may be true that all Cretans are liars.

The statement tells us that all Cretans are -- and are not -- liars. Here is a grammatically correct statement that has 2 opposite meanings. A nightmare, especially for a logician! This is the kind of paradox -- the paradox of meaning -- that interested BR, and troubled him...until he found a way to eliminate the contradiction with his theory of types.

DAVID MAKINSTER offers this definition of what we are calling a paradox of meaning: it is a statement which implies its own negation, and is in turn implied by its negation.

(29b) Now for the second kind of paradox:

"You see, I can keep my mouth shut," said the speaker."

Here the contradiction is between what the speaker does and what the speaker says. The contradiction involves behavior: the speaker's behavior -- in uttering the statement -- contradicts the speaker's statement. There is no contradiction as to the meaning of the statement. The paradox of behavior is not the kind that interested BR, and strictly does not belong in a Russell Society newsletter.

But let's not throw paradoxes of behavior away; they can be funny. "The highway lobby argued that there is no highway lobby" is a witty remark. That it is a paradox of behavior perhaps becomes more apparent when it is cast in this form: "There is no highway lobby," said the highway lobby." The behavior (the highway lobby's act of uttering the statement) belies the statement ("There is no highway lobby.")

We will therefore continue to welcome paradoxes of behavior, for the fun of it. Here are some more:

. We saw this classified ad in The New York Review of Books, 3/22/79:

Ironist who would not place personal ad seeks woman who would not answer one. NYR Box 1124.

. LEN CLEAVELIN noticed a similar ad in a St. Louis suburban paper:

White male, 27, looking for attractive single-divorced woman, 21-33, for intimate relationship. Should not be the type of woman who would answer this ad...

. Len also heard about a sign in a New York City bus that read:

ARE YOU ILLITERATE? WRITE FOR FREE INFORMATION AND HELP...

. David Makinster sent this one:

It's wrong to make value judgments.

. And of course there's Groucho's remark:

I wouldn't join the club that would have me.

(29c) Now for several paradoxes of meaning:

. BOB DAVIS says this is a variant on the "I am lying" paradox (according to an "Alice in Wonderland" commentary):

I never mean what I say.

. Bob wonders whether this one qualifies. We think it does.

Everyone is mad.

. David Makinster sent us one which we changed somewhat:

The village barber should shave every man in the village who does not shave himself. Should the barber shave himself? (If he does, he shouldn't; and if he doesn't, he should.)

(29d) We present the following from Len Cleavelin, though we can't say we understand it:

Associated with BR are the "paradoxes of material implication," to wit, that a false proposition implies any proposition, and that a true proposition is implied by any proposition. These really aren't paradoxes in the strict sense of the word, but are theorems which follow from the definition of material implication given by BR and Whitehead in Principia Mathematica. As a matter of fact, they hold true in any system of propositional logic. C. I. Lewis was dissatisfied with this, which he defined thus: p strictly implies q if and only if it is not possible that p be true and q be false. Ironically, the system of logic he developed had its own paradoxes of strict implication, namely, that a necessarily true proposition is implied by any proposition, and that a necessarily false proposition implies (both these implies are strict implications) any proposition. Thus, we see another instance of the Severeid law in action (ie., "The chief cause of problems is solutions").

* * * * *

* Please continue to send in paradoxes. All kinds welcome.

TRIVIA

(30) Quotation of the Day in The New York Times of 2/6/79:

Quotation of the Day

"I had a big decision. Whether to teach philosophy for the rest of my life or make sandwiches. I chose to make sandwiches, and I think I've learned more from behind my sandwich counter in New York than I could have in teaching philosophy." — Jimmy Dell, 'Orto of Mangano's restaurant on Ninth Avenue. [B3:3.]

When he spoke those words, he was being a philosopher rather than a sandwich-maker. He had just lost the contract to supply Amtrak with his superb ethnic sandwiches, made fresh 7 days a week, to a line of standardized frozen sandwiches, and was viewing his situation philosophically.

Not to mention that it had undoubtedly been easier to get a job as sandwich-maker.

FINANCES/CONTRIBUTIONS

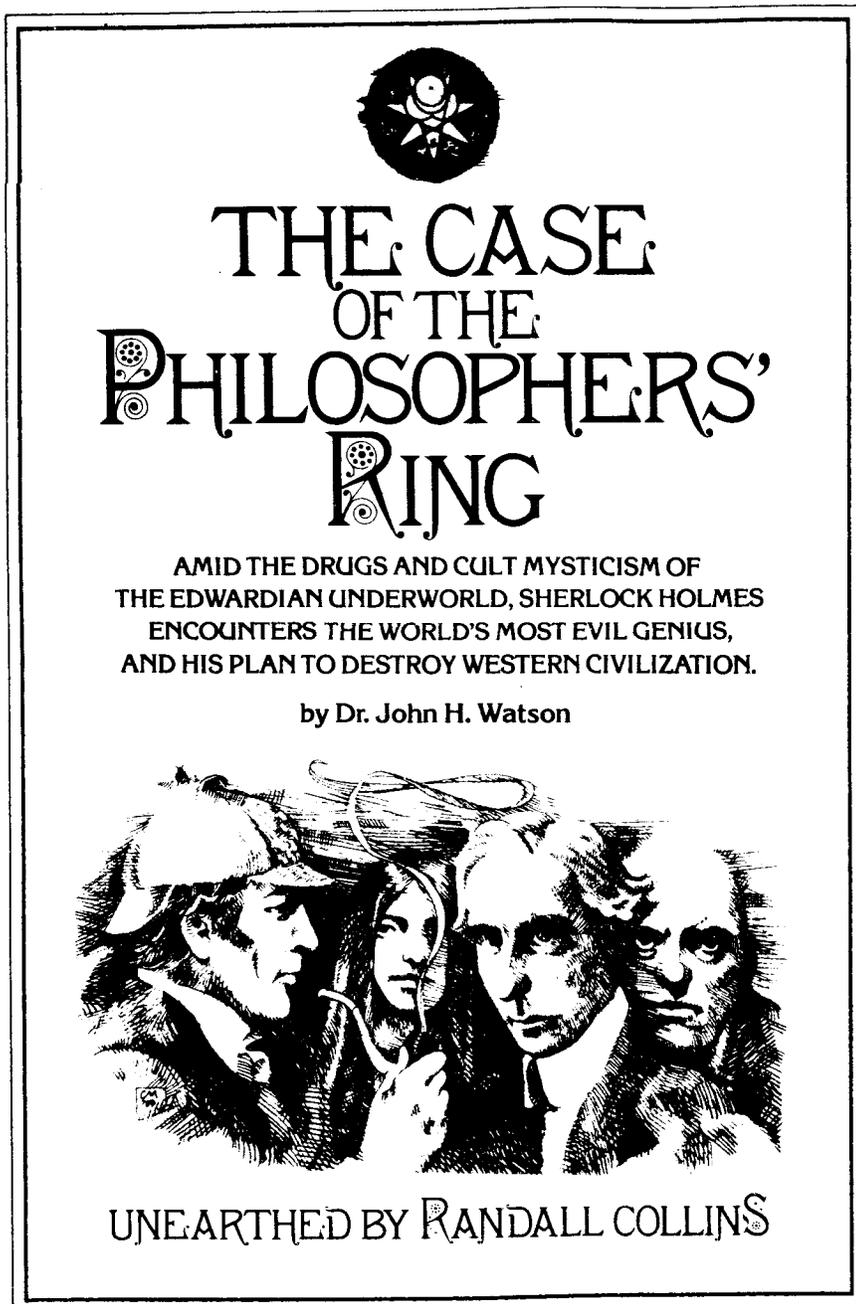

(31) Contributors thanked. We thank PETER CRANFORD and KATHY FJERMEDAL for their several generous contributions. Though our data is not complete for this quarter, please note the scarcity of contributors, Wouldn't you like to help remedy this?

FUND-RAISING

(32) Volunteers. Help us with fund-raising, we said in RSN21-36. We also said we would supply basic information on how to solicit -- and whom to solicit -- by mail. But there have been no volunteers. We are cast down. Restore * our spirits! Win the Approval & Gratitude of your Peer Group: volunteer! Notify the newsletter, address on Page 1, bottom.

RECOMMENDED READING

- (33) Lady Ottoline's Album, Carolyn G. Helbrun, ed., New York: Knopf, 1976, recommended by PETER CRANFORD. "It is filled with photographs she took of members of her circle, which included Russell, Huxley, James, Lawrence, Eliot, and many other well-known figures." It was reviewed in "Russell" 25-28:1977, p. 75. The book is in the ERS Library.
- (34) The Case of the Philosophers' Ring "by Dr. John H. Watson, unearthed by Randall Collins" (New York: Crown, 1978), recommended by KATHY FJERMEDAL. Peter Cranford says, "It will delight anyone interested in ER." BR is a key character in this new Sherlock Holmes mystery. Words spoken by the fictional BR echo words spoken (or written) by the real BR; the author knew his ER. We reproduce part of the dust cover:

ISBN: 0-517-535300

\$7.95

THE CASE OF THE PHILOSOPHERS' RING

It is the summer before the outbreak of World War I. Holmes, at his Baker Street flat, receives a telegram from the brilliant young philosopher, Bertrand Russell, begging him to come to Cambridge to investigate the theft of a uniquely precious treasure—the mind of Ludwig Wittgenstein.

Thus begins one of the most diabolically clever, suspense-laden reimaginings of the Sherlock Holmes legend. Randall Collins, himself a preeminent American scholar, takes us into the intrigues of the Cambridge Apostles, who at the time of this caper include among their members G. H. Hardy, John Maynard Keynes, G. E. Moore, and, of course, Bertrand Russell. Why has Wittgenstein become lethargic and paranoid? Holmes and Watson set out to investigate some of the West's greatest minds.

(continued on back flap)

BRS BUSINESS

- (35) Time to nominate Directors. As you know, the Board of Directors is the ultimate governing body of the BRS. The directors elect the officers, to whom the directors delegate responsibility for running the BRS.

Until last year, the BRS had a maximum of 15 directors, 5 elected each year for 3-year-terms. At the 1978 Annual Meeting, the maximum was raised to 24. This year we would like to elect 8 directors. We would also like to have more than 8 names on the ballot, so that members will have a choice; also so that we don't seem to be having a soviet-style election with no opposition candidates.

There is a problem in getting members to nominate directors. Most members have not met other members face-to-face (because they have not attended an Annual Meeting); and it is difficult -- and perhaps undesirable -- for a member to nominate another member whom he or she has never met personally. And in fact, in past years, no such member (i.e., one who has never attended an Annual Meeting) has ever nominated another member.

One solution to the problem is for members to nominate themselves. This is fully acceptable; it has already occurred, and has worked out well. Perhaps you ought to consider it. The duties of a director are not onerous. Directors are occasionally asked their opinion about something, by mail; and they are expected to attend Annual Meetings. Think it over.

The names of the candidates will appear on a ballot in the next issue of RSN. Directors elected will serve 3-year terms starting 1/1/80. The directors whose 3-year terms expire on 1/1/80 are KEN BLACKWELL, LESTER DENONN, DAN MCDONALD, JOE NEILANDS, and STEVE REINHARDT. Directors may succeed themselves; that is, they may be re-elected.

- * If you wish to nominate someone (including yourself), send the candidate's name -- and a few descriptive lines -- to the Elections Committee, c/o Russell Society News,, address on Page 1, bottom.

- (36) Universal Human Rights Committee. "I am very concerned that this Committee appears to be floundering," writes DAVID MAKINSTER. "Perhaps the situation could be helped by forming a study group to address the problems of selecting issues, techniques, etc., for initial organization of Committee activities. I suggest that RSN readers submit ideas on how to get the UHRC off the ground. Surely addressing Human Rights issues is one of the most important things our Society can do; and surely a diverse group of Russell-admirers would include some individuals whose experiences would be useful in this area."

- * Members with ideas, please write to David, at 645 Hawkeye Drive, Iowa City, IA 52240. He will report back to us.

- (37) Attention, Chairpersons: the following appeared in The Washington Post, 3/10/79:

'Chairperson' Out of Order, Oxford Dictionary Rules

LONDON, March 9 (UPI) — It's "chairman," in a pinch "chairwoman" but never "chairperson."

So rules a new Oxford dictionary published in paperback yesterday. "Chairperson" doesn't even rate a mention in its pages. "Hopefully" is circumscribed. And one should not confuse "definite" with "definitive."

"The public in general is much more conscious than it used to be about what is right and wrong," said the woman who edited the Oxford Paperback Dictionary, Joyce Hawkins of the Oxford University Press. She used "public" as a singular noun in the American way rather than a plural one as in Britain.

"We rather think things are changing away from permissiveness."

"Chairwoman" is okay — or rather, allowed. But "chairman," it says, may be used about persons of either sex.

"Hopefully," it says, means only "in a hopeful way," and must be used with a noun. It is no substitute for "it is to be hoped," nor is the phrase "due to" a proper synonym for "because of."

The dictionary is a grumbling, cantankerous kind of wordbook that for the first time issues flat ukases:

"Ain't this word is avoided in standard speech except in humorous use, e.g.: She ain't what she used to be."

"We feel the time has come to lay down the law on what is right and wrong," said editor Hawkins. ("Lay down the law: to talk authoritatively, or as if sure of being right.")

The new volume, which even before publication ran through two printings totaling 500,000 copies, sets out to be not only definite but definitive, two words it complains are often confused.

PERIODICALS RECEIVED

- (38) THE SEPARATIONIST, Vol. 1, No. 1, is a 12-page newsletter that intends to be a bi-monthly, and calls itself "A Magazine of Freethought and Church/State Separation." It contains good writing and bad proofreading. \$4 per year. 4521 Meadowbrook Drive, Leavittsburg, OH 44430.
-

- (39) Travel Grant announcement:

THE BERTRAND RUSSELL SOCIETY INC.

The Bertrand Russell Society is pleased to announce its sponsorship of a **traveling scholarship** for currently enrolled doctoral candidates up to the maximum amount of five hundred (\$500.00). The conditions of the award are as follows:

- i. The applicant must submit a brief proposal indicating an area of interest in Russell, his thoughts, or his times, and a reason why travel is relevant. This need not exceed two pages.
- ii. The applicant must submit a letter from the chair of the appropriate department which states that all work for the doctorate degree has been completed except for the dissertation.
- iii. The applicant must submit a letter from her/his thesis advisor which evaluates both the applicant and the proposed plan of study.

It is to be stressed that the award can be used only to pay traveling expenses (e.g., air fare, gas mileage) and not to pay for meals and lodging at one's destination. The award must be used between June 1, 1979 and June 1, 1980. Applications and supporting letters are due May 1, 1979, and should be sent to:

Jack Pitt
School of Humanities
California State University (Fresno)
Fresno, California 93740

Announcement of the recipient of the award will be made early in June, 1979.

(actual size: 8½ x 14)

RUSSELL SOCIETY NEWS

No. 23

August 1979

- (1) Last call for dues (43). 1979 Annual Meeting (3,4,58,59,60). BBC-TV program on BR (2). Historian wins BRS Scholarship (8). New Treasurer wanted (11). Gödel upsets the applecart (17). Don Quixote paradox (44). Time to vote (51a, 62). Index (61). An asterisk in the left column indicates a request.

COMING EVENTS

- (2) BBC-TV program on BR. BOB DAVIS received this letter, dated June 29, 1979, from BBC-TV Producer Christopher La Fontaine:

Thank you very much for your letter of May 24th referring to our projected programme on the life of Bertrand Russell and offering to help.

This is most kind of you and I certainly would like to take up your kind offer when we have got the project finalised. As you know, we have made a preliminary film interview with Dora Russell which went extremely well and now it's a question of finding some television station in the US or some other country who will be prepared to share the production costs. As we are considering a dramatised documentary, it's likely to be fairly expensive, but we hope to raise the necessary money as this is a project well worth doing, and I am certain it would be well received.

As soon as we make any progress I shall certainly let you know. Thank you once again for your interest in our programme.

ANNUAL MEETING (1979)

- (3) The 6th Annual Meeting of the BRS was held in New York City, at the Hotel Tudor, June 1-3, 1979 (Friday evening to Sunday noon).

For the gist of what happened, see the Agenda (4), the Minutes of the Members' Meeting (58), and the Minutes of the Directors' Meeting (59), and the abstract of Harry Ruja's paper (60).

We taped all of the talks, and most of the discussions that followed. The tapes are (or soon will be) in the BRS Library; their sound is not of professional quality, but quite audible. The papers presented at the meeting will also be going to the BRS Library, with one exception: Albert Ellis didn't have a paper; he spoke (very fluently) from notes.

These officers were re-elected for one-year terms starting 1/1/80: Chairman, Peter Cranford; President, Bob Davis; Vice-President, Warren Smith; Secretary, Don Jackanicz. The present Treasurer, Steve Reinhardt, was not re-elected at his own request. The post is open starting 1/1/80 (or sooner), and a volunteer is wanted. See (11).

19 BRS members attended one or more sessions: LEONARD CARLSON, JACK COWLES, BOB DAVIS, LESTER DENONN, LEE EISLER, SEYMOUR GENSER, DAVID GOLDMAN*, STEPHEN HAMBY, DAVID HART, ROBERT HOMA, DON JACKANICZ, KEN KORBIN, JOHN LENZ, STEVE MARAGIDES, JACK PITT, STEVE REINHARDT, HARRY RUJA, WARREN SMITH, IRA STRAUS. (*became a member at the Meeting.)

11 non-member guests also attended one or more sessions: Jim Adams, Bernard Auffram, Mrs. Lester Denonn, Diane Hart, Ralph Kean, Norman Roscoe, Rose Ruja, Arline Rubin, Nancy Spataro, P. Tido, Judy Wald.

- (4) Agenda:

FRIDAY, 1 JUNE 1979

6 p.m. Cocktails and Informal Dinner
Tudor Hotel's Three Lions Pub and Dining Room

8 p.m. Welcome and Introduction
Cameo Room (downstairs)

8:15 p.m. "Bertrand Russell," NBC Film (30 min.)

8:45 p.m. "Bertrand Russell on Israel"
DR. HARRY RUJA
Dept. of Philosophy, San Diego State University

10:00 p.m. Board of Directors Meeting

SATURDAY, 2 JUNE 1979

- 9:30 a.m. Opening Remarks
ROBERT DAVIS, President of Bertrand Russell Society
- 9:45 a.m. "Life and Times of Bertrand Russell," BBC Film (40 min.)
- 10:30 a.m. "Bertrand Russell's Response to Marx"
DR. JACK PITT
Dept. of Philosophy, California State University at Fresno
- 11:30 a.m. General Discussion
- 12:00 noon Lunch
- 2:00 p.m. "Bertrand Russell Discusses the Role of the Individual," film (15 min.)
- 2:20 p.m. "Bertie and Litigation From Birth Until Death: A Lawyer's Commentary"
LESTER E. DENONN
- 3:00 p.m. Discussion Followed By Business Meeting
- 5:00 p.m. Cocktails
- 7:00 p.m. Dinner

SUNDAY, 3 JUNE 1979

- 9:00 a.m. "Psychotherapy and Bertrand Russell"
DR. ALBERT ELLIS, Executive Director
Institute For Rational Living
- 10:30 a.m. "Bertrand Russell Discusses Philosophy," film (15 min.)
"Bertrand Russell Discusses Happiness," film (15 min.)

(5) Item deleted.

ANNUAL MEETING (1978)

(6) 1978. Two of the papers presented at the 1978 meeting, at McMaster University, are included in "Russell 29-32:1978": Carl Spadoni's "Philosophy in Russell's Letters to Alys", and Gladys Leithauser's "A Non-Supernatural Faust."

ANNUAL MEETING (1980)

(7) Chicago next? Since we have had several annual meetings on the East Coast and one on the West Coast, it's time we had a meeting between the 2 Coasts, in a city where there are a fair number of members. That points to Chicago. There are reasons besides geography favoring Chicago: BR taught at Chicago; some of his students, now distinguished in their own right, might give talks. But not everything favors Chicago. Some members feel strongly that we should avoid Chicago because Illinois has not passed the Equal Rights Amendment.

If you think you might attend, please vote for the city you prefer, using the ballot, Part 2 (66). As to time of the meeting, it will be a Friday evening to Sunday noon weekend. Please indicate the month you prefer. May or June seem to be the preferred months. If any specific weekend is impossible for you, mention it on the ballot.

RECENT EVENTS

(8) Historian wins BRS Scholarship. The first BRS Traveling Scholarship has been awarded to Kirk Willis, doctoral candidate in history at the University of Wisconsin - Madison. The award pays up to \$500 for travel for purposes of research for a dissertation. Mr. Willis plans to travel to the Russell Archives, at McMaster University, Hamilton, Ontario, to do research for his dissertation, "Bertrand Russell: An Intellectual Biography, 1972-1918."

The BRS intends to award the Traveling Scholarship annually. As this first award indicates, applicants need not be in the field of philosophy, but may be in any of the many other fields that also interested BR.

During the coming academic year, while Jack Pitt is in Europe on a sabbatical, George Sessions will serve as Chairperson of the Traveling Scholarship Committee. His address: Philosophy Dept., Sierra College, Rocklin, CA95677.

A press release announcing the award was sent to publications in the Wisconsin area and to journals in the fields of history, philosophy, psychology, sociology. A "please post" sheet, with the same text, was sent to each of 5* departments in selected universities (Chicago, Columbia, Harvard, Michigan, Pittsburgh, Princeton, Texas, UC Berkeley, UCLA, USC, Washington, Wisconsin, Yale) and to some philosophy departments elsewhere. We expect this to produce many applications next year. *English, History, Philosophy, Psychology, Sociology

REPORTS FROM OFFICERS

(9) Chairman Peter G. Cranford reports:

A chief over-all problem with The Bertrand Russell Society is what appear to be flaws in the organizational set-up dating back to its founding. Chief of these is the cost of getting together, which has made attendance at annual meetings sparse. Another is that communication going out to the larger body of members (as distinct from directors) is limited to the newsletter. Hence the super-democratic organization which we envisaged at the founding has not materialized. A third problem has been our heavy reliance on a very limited number of volunteer workers — fine though their work has been — in the Information Committee (newsletter), Library Committee, Science Committee, the BR Memorial Committee (London), and in promoting Russell as a psychologist as well as a philosopher. A fourth problem has been financing, a problem that is perhaps in the process of being solved with our acquisition of a new finance chairman. Perhaps a reorganization is needed. One director has recommended that we reorganize, with wide input from our membership. To effect this, I am of the opinion that it should be directed by someone with considerable successful organizational experience.

All of this should not be cause for great concern. Our founding fathers were able to rise above the deficient Articles of Confederation.

(10) Treasurer Stephen J. Reinhardt reports:

For the 2nd quarter of 1979:

Balance on hand (3/31/79).....	844.54	
Income: 21 new members.....	242.67	
39 renewals.....	497.20	
	Total dues.....	739.87
Contributions.....	337.50	
Sale of RSN, books, etc.....	176.81	
	Total income	1254.18
		<u>2098.72</u>
Expenditures: Information & Membership Committees.....	441.58	
Subscriptions to "Russell".....	199.50	
Other.....	-	
	Total spent	641.08
		<u>641.08</u>
Balance on hand (6/30/79).....	1457.64*	
*Unrestricted funds.....	957.64	
Special purpose funds (Traveling Scholarship).....	500.00	
		<u>1457.64</u>

(11) New Treasurer wanted. Steve Reinhardt, now in his 4th year as ERS treasurer, feels that he must step down. We are delighted by his news that he has been given new responsibilities in his other job (the one that produces income), even though it will deprive us of a superb Treasurer. His records are models of clarity and completeness.

Steve is able to stay on as Treasurer till the end of the year, if the transition to a new Treasurer cannot be made sooner. How much time does the job need? About 8 hours a month, Steve estimates.

He will brief the new Treasurer on the details of the job.

If you are good at record-keeping and at keeping a checkbook balanced, etc., and would like to be

* Treasurer, please write and tell us your qualifications.

This is urgent!

REPORTS FROM COMMITTEES

(12a) Library Committee (Don Jackanicz, Chairperson):

At the June 1979 annual meeting the BRS Library provided five films of Russell each of which being well received by those in attendance. By the time of the 1980 meeting it would be most welcome were we to have available one or more additional films to supplement these five which have been presented a number of times previously.

NBC and Mr. Lawrence E. Spivak were recently contacted for permission for the Library of Congress to produce an authorized duplication for the BRS of the filmed broadcast of Russell's October 28, 1951 "Meet the Press" appearance. Regrettably, both the organization and the individual refused to allow duplication even though officials at the L. of C. were interested in helping. About ABC there is nothing to mention presently, but CBS has offered to sell us authorized copies of two films of the program "Small World" on which Russell appeared on October 19, 1958 and February 28, 1960. Each is available for \$150.00 plus shipping costs. So, for slightly more than \$300.00 we could have two rare films to offer. I know each member would enjoy viewing these and the other two Russell films (BR Discusses Mankind's Future and BR Discusses Power each priced at \$135.00) about which the membership has been informed but copies of which we have not yet acquired. I do request that the BRS authorize expenditure for at least one of these films now and for the rest within a short time. But now I am appealing to all BRS members to consider making a special donation toward the purchase of all the films needed to complete our collection. Thus far, \$40.00 has been contributed toward this end, but we are very far from having enough for even one new film. All those willing to help acquire these worthwhile films can send a check or money order payable to the Bertrand Russell Society in care of the BRS Library. If action is taken quickly, we will certainly be able to have a premiere screening in 1980 and perhaps even a memorable Russell film festival.

Now I would like to extend an invitation to any BRS member having a certain amount of free time and an interest in participating more fully in our organization's activities. For some time I have been the only person involved with the work of the Library. I hope there are others who would find such work rewarding. So it is that I invite all members to contact me should they be interested in sharing the Library's work. A variety of responsibilities are involved all of which being conducive to meeting others in person and by mail and telephone. Quite a broad perspective on the BRS and the membership can be attained through Library work.

* So, please feel free to make an inquiry or to offer your time and help.

In Don's final paragraph, he asks for a volunteer to assist him. If you offered, on your BRS Questionnaire, to do a bit of work for the BRS, here is an opportunity.

(12b) What's available from the Library? Members who attended the 1979 Meeting were provided with the following lists:

- . Books, articles, papers that can be borrowed.
- . Films that can be rented.
- . Books for sale.
- . Cassettes that can be borrowed.

On request, the Library will send you any of these lists. Specify which list(s) you want. The Library's address is on Page 1, bottom.

(13) Philosophy-in-High-School Committee (Leonard Cleavelin, Acting Chairperson):

* This committee is in the formative stage, and the following remarks are tentative. I would appreciate BRS members' sending me any comments/suggestions, and letting me know if they might be interested in serving on the Committee. My address is 6540 Hancock, St. Louis, MO 63139.

I don't think we need spend much time justifying the teaching of philosophy in high schools. As a very important segment of Western cultural and intellectual history, philosophy needs no more justification for its inclusion in the secondary curriculum than do such subjects as art, art history, foreign languages, and English and foreign literature. It certainly needs no more justification than some of the subjects that were taught for credit at my old high school: Popular Culture (as if that isn't self-contradictory), Rock Music, Ballroom Dancing, Science Fiction, and Practical Economics (i.e., "how to make and save money").

Rather, I see our main problems as being two: first, what kind of philosophy curriculum shall we propose, and second, how shall we get it accepted? I'm sure no one will think me derelict in my duties if I don't worry about the second problem at this moment: until such time as we have a workable curriculum ready, the problem is more or less moot.

How should such a curriculum be organized? What topics should be included in it? What will be our goals and purposes in introducing philosophy to high school students?

There are, I suggest, two purposes. The first would be to help teach students to think and reason logically and rationally. (I believe there is a difference between thinking and reasoning, and between being logical

and being rational.) I was pleased to see the Harold Morowitz article in "Russell Society News" (RNS21-16); he advocates a course very similar to what I hope we would advocate. As Ronal Munson points out, in the preface to his book The Way of Words: An Informal Logic, "It seems to me that our society can only profit from raising the standard of rational discourse." That, I think, is one of our goals.

The second purpose, which goes hand in hand with the first, is to teach something that BR urged time and time again, namely, "that there are things which we thought we knew and don't know," (BR Speaks His Mind, p.12) and therefore to teach students "to act with vigour when they are not absolutely certain" (though always, of course, in a rational manner.)

At least one semester (preferably one year) would be spent studying logic, specifically what we might call informal logic — such subjects as the traditional fallacies of irrelevance (ad misericordiam, ad hominem, tu quoque, etc.) argument by analogy or example, inductive vs. deductive argument, and related subjects. I suggest that it is good to begin with logic, for several reasons. If a curriculum provides both logic and several selected problems in philosophy, it is possible that an initial exposure to logic might make the task of learning philosophical reasoning a little easier. There is also a pragmatic reason: out in the big bad world there are a lot of fundamentalists of various ilk, and "reactionaries" in general, who might take seriously the advice of St. Paul: "See to it that no one makes a prey of you by philosophy and empty deceit (Colossians, 2:8) — and remember too that Socrates was executed for "corrupting the youth"! These well-meaning though misguided persons might well object to the inclusion of philosophy in the secondary curriculum on the grounds that it might be too subversive of the mos maiorum (loosely, "ancient customs" or "practices", in the sense I'm using it, the established religion/morals), which they feel must be passed down unthinkingly from generation to generation. A high school course in logic would not be as open to that objection, and therefore we might get a few schools to introduce their students to logic, if opposition to philosophy proves too great.

Ideally I think the philosophy curriculum should be divided into two tracks: one for college-bound students, one for the non-college-bound. This is not an elitist notion. The non-college-bound would spend one semester doing informal logic. This would teach him/her the basics of rational argument. The second semester would provide a topical introduction to philosophical problems, either theoretical (e.g., metaphysics, epistemology, theoretical ethics) or more practical (e.g., aesthetics, practical ethics). I assume that the non-college-bound need less of a knowledge of the "big names" and doctrines in philosophy and more of an introduction to the more important philosophical problems, and an invitation and opportunity to think for himself about them. Perhaps we can induce in him/her the habit of thinking philosophically, and which might remain for life.

The track for the college-bound would be different. Ideally their course in logic would last a full year, and need not be focused strictly on informal logic. Since it can be assumed that the college-bound students will be taking courses in certain disciplines (mathematics, science, political science, history, etc.) as undergraduates, the college-bound track could introduce topics in philosophy relating to some of these studies. For example, the course in logic might include some formal symbolic logic, some philosophy of science, and some basic epistemology and philosophy of mind; subjects that would fit in well with three areas of collegiate study: mathematics, physical sciences, and psychology.

As for the second course in philosophy, again ideally a full year, I have not quite decided. Since my undergraduate degree is in philosophy, my personal opinion is that the college-bound student should have a grounding in the Western philosophical tradition, which I feel is important to any person who could call him/herself "liberally educated." However I can see where the second course might well be devoted to a topical introduction, like the non-college course, but dealing, rather, with topics relating to collegiate studies (social-political philosophy, philosophy of science, philosophy of history, philosophy of mind, biomedical ethics, etc.)

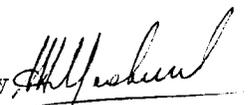

(14) Science Committee (J.B. Neillands, Chairperson) received this letter and book review from Zhores A. Medvedev:

I hope that you remember my visit to the Univ. of Calif. which you sponsored through The B. Russell Society. The subject of my talk was on the Nuclear disaster in the Urals, and because since 1977 (or 1976) there were a lot of contradictory speculations about it, either it was or not, I finally decided to collect and publish all materials in form of comprehensive book. It will appear in few weeks in New York (W.W. Norton Inc. N.Y. 10036) I sent them a list of my friends and colleagues to whom complimentary copy should be sent as soon as the book be available and you must receive it soon. I be glad to hear your comments and if you let your environmental colleagues know about this book — they probably interested to write a review.

Hope that everything is OK in Univ. of California, but collect the facts about position of science I have read about financial difficulties of the University and possible closure of one or two campuses. We are not better under a new Conservative Government and the Institute is already told to cut the experimental as well as personal budget. Because this institute is completely dependent of the government funds this is a serious blow.

All the best

Yours sincerely,

Zhores A. Medvedev

28 June 1979

NUCLEAR DISASTER IN THE URALS
Zhores A. Medvedev, translated by
George Saunders. Norton, \$12.95
ISBN 0-393-01219-0

The recent near-disaster at Three Mile Island should stir interest in Medvedev's important but scientifically demanding book. Medvedev, a Russian biologist exiled in England, set off a controversy when, in an article in *New Scientist* in late 1976, he wrote of a 1956 nuclear disaster in the Chelyabinsk region of the southern Urals, site of the Soviets' first nuclear reactor. A leading British scientist, Sir John Hill, termed his story "rubbish." This book, remarkable as a work of "scientific detection," is Medvedev's convincing response. This famed Russian dissident traces the evidence he has found—mostly disguised and never specifying a particular region—in relatively recent Soviet scientific papers analyzing intense strontium-90 and cesium-137 contamination over a vast area which, he makes clear, can only be the southern Urals. Brief accounts by Russian emigrés now in Israel support Medvedev's findings. The so-called Kyshtym disaster in which untold numbers died after an explosion of buried nuclear wastes, remains unacknowledged by the U.S.S.R. Medvedev authenticates his work with translated documents. Glossary, notes, etc.

- (15) New Science Committee Chairperson proposed. Joe Neillands explained, in RSN22-4, why the Science Committee had remained a 2-member committee, "with a total absence of democratic process in our deliberations", and expressed a "willingness to at any time vacate the post in favor of another member, preferably one living in another corner of the country."

Since then, as a result of a suggestion by John Sutcliffe, ALEX DELY has become interested in the possibility of becoming Joe's successor. Alex calls himself a "philosopher turned physicist". He seems extraordinarily well qualified in science, and endowed with considerable energy. (Some members may recall the 3-page "Dely Report" of 7/1/77, distributed with NLL5.)

Born in Belgium, he has worked at CERN (European Center for Nuclear Research), and during the past 5 years has had several fellowships, the latest being a National Science Foundation Fellowship, at the Laboratory for Astrophysics and Space Research, Enrico Fermi Institute, University of Chicago. Next academic year, he'll be in the Physics Department of Illinois State University. Also, see (35).

Here are some things Alex would do, if approved as Chairperson:

- . Survey BRS members as to their scientific interests.
- . Discuss timely subjects, such as nuclear energy, genetic engineering, etc., "with their many ramifications."
- . Write quarterly articles on areas in physics such as elementary particles, relativity, cosmology, with their philosophical implications.
- . Provide scientific book and journal reviews.
- . And much more

- * Heads of committees must be approved by the Board of Directors, according to the Bylaws, Article XI, Section 2. Directors, please use the ballot (Part 5) at the end of this newsletter, to indicate your decision.

- (16) Universal Human Rights Committee. DAVID MAKINSTER offers the following observations:

1. We need to decide just what the Committee is supposed to be and do.
2. We ought to decide exactly what we construe the phrase "human rights" to mean, i.e., what rights do we hold to be universal for all people by virtue of their being human? Clarification of this would be facilitated if members would write in, pointing out just where BR explained his views on the matter. A basic statement of principles, with reference to BR's own declared principles, seems to me to be essential.

He makes one suggestion as to what the Committee might do:

I have often wished that some sort of "hot line" existed, which could serve as a clearing house for activities of many different groups involved in Human Rights issues, while offering a humane and rational perspective on those issues. Such a set-up would enable many groups to work toward common goals, to keep informed of one another's concerns, so as to use time and energy to best advantage, and to serve as an open forum for debate. If the UHRC could serve such a role, it could consolidate rather than duplicate the work of like-minded groups and individuals.

If you are one of the many members who said, on your BRS Questionnaire, that you were interested in the UHRC, here is an opportunity to take action. Write to David, giving your responses to these 3 questions:

- 1) What should the UHRC do, what activity (or activities) should it engage in?
- 2) What do you think of David's suggestion that the UHRC act as clearing house and consolidator of human rights activities of other groups?
- 3) What do you think BR meant by "human rights", and can you provide quotations in support?

- * Write to David Paul Makinster, 654 Hawkeye Drive, Iowa City, IA 52240.

ABOUT BR'S WRITINGS

- (16A) BR for freshman. GLADYS LEITHAUSER, teaching English to college freshman (U. Michigan-Dearborn), tried using BR's Power as a model of exposition. Here's how it turned out:

On the whole I was quite satisfied with the book as a model for a class in English Rhetoric and Composition. But I must admit that the students did a bit of complaining — many of them seemed to find the book hard going. The fact is, however, that most of them have never had to read a sustained work of exposition or argument, even though they are college freshmen. Consequently, I don't think they are proper judges of what they can handle. What I found gratifying was a situation they, as individuals, could never see — that most of them wrote adequate summaries or criticisms and that their level of discussion became more sophisticated. Their final essays showed a wider grasp of issues and a better sense of organization than their opening papers. The book has a visible structure as a whole. I especially like the analogy of power in human life to energy in the physical world, with its ability to take different forms. Russell is a fine stylist in terms of his sentence variation, his use of transition, his exact vocabulary, etc., as you know.

In the second term, I used Education and the Social Order. It went less well. Perhaps it seems too dated. People did not do well in class discussion; they left everything for me to do. The funny part is that, once again, I was able to see a truly beneficial effect on their final, impromptu essays. I asked them to write on some institution or organization that had a positive effect on their lives. A good many turned in an analytical study of their educational experiences, and the analyses employed many of the topics Russell covers in the book. In conjunction with the second book, I also showed one of the films, A Conversation

with Lord Russell. I think it made their author more real to them.

- * I'm going to choose a different writer for my model this semester. But if anyone wishes to suggest still a third possibility for my Winter Semester, I will gratefully receive the idea of another Russell book. My choice has to be available in paperback, and I'd like something in the 200-400 page range (which is why I'm not using Authority and the Individual, for example). It should also be one sustained work, or I would use a collection of essays.

- (17) Gödel upsets the applecart. According to the following book review, Kurt Gödel proved that Russell and Whitehead were mistaken in what they thought they had done about whole numbers. The reviewer is Brian Hayes, who is "on the staff of 'Scientific American'." The review — the first half of which is reproduced below — is from The New York Times Book Review of 4/28/79, p. 13:

GÖDEL, ESCHER, BACH

An Eternal Golden Braid.

By Douglas R. Hofstadter.

Illustrated. 777 pp. New York: Basic Books. \$18.50.

By BRIAN HAYES

CERTAIN ideas in the sciences have been stuffed almost to bursting with metaphoric meaning. Everybody's favorite is the concept of entropy, a measure of disorder in thermodynamics. Entropy tends to increase, and so the word is called on to express a variety of sentiments about the common fate of dissipation and decay. The uncertainty principle of quantum mechanics has been extended, or distended, in a similar way: From the principle that any observer disturbs the thing he measures comes the notion that no bystander is entirely innocent.

The incompleteness theorem proved in 1931 by Kurt Gödel seems to be another candidate for metaphoric inflation. It is a great truth, and so it ought to have a large meaning; perhaps it should have the power to change lives. Unlike entropy and uncertainty, however, the incompleteness theorem is not the kind of idea that grabs you by the lapels and insists on being

recognized.

The theorem is a variation on the only well-remembered line of the Cretan poet Epimenides, who said, "All Cretans are liars." Another version of the same antinomy is more succinct and more troublesome; it reads, "This sentence is false." The unsettling effect of these statements was for a long time attributed to the looseness and ambiguity of natural languages, where a phrase can refer simultaneously to more than one thing. It was assumed that in a formal language, one constructed on strict rules of logic, no such inconsistent statements could be formulated; they would be unutterable. Gödel showed otherwise.

Gödel's proof employs a formal language invented by Bertrand Russell and Alfred North Whitehead, who had set out to build a secure foundation for the arithmetic of whole numbers. The language has a vocabulary of symbols and a grammar of rules for combining the symbols to form "strings" which can be interpreted as statements about the properties of numbers. A few simple strings are accepted as axioms, or self-evident truths. Any string of symbols that can be derived from the axioms by applying the grammatical rules must also be true; it is therefore designated a theorem. The language is at once simple and powerful, and until 1931 it appeared to have the satisfying

quality of completeness. Russell and Whitehead believed that any true property of the whole numbers could be demonstrated in their language, and that no false propositions could be proved.

The theorem by which Gödel upset that belief is a string of symbols in the Russell-Whitehead language that can be interpreted on two levels. In one sense it is a straightforward statement about the natural numbers that seems to be true; at the same time, it represents a statement of "metamathematics" with the evident meaning: "This string of symbols is not a theorem." The paradox of Epimenides is with us again, and this time there is no escaping through the loopholes of language. If the string can be derived from the axioms, then a falsehood has been proved and the Russell-Whitehead language is inconsistent; by implication, so is arithmetic. If the string cannot be derived from the axioms, then there is a true statement about the natural numbers that cannot be proved in the formal language. There is good reason for choosing the latter alternative and concluding that the Russell-Whitehead language is incomplete. In fact, the result is more general than that: Any system of formal logic powerful enough to describe the natural numbers is intrinsically incomplete.

- * Questions: What did Russell and Whitehead think of Gödel's proof? Did they concede its correctness? Did they do anything about it?

- (18) Hampshire's choices. The New York Times Book Review asked a number of writers the following: Which post-World War II books have already established themselves or may eventually establish themselves in a group of a hundred or so of the most important books of Western literature; also, which prewar books that were not considered in this category might now be, in the light of the history of the last three decades. This is how Stuart Hampshire responded:

Stuart Hampshire

Prewar: "German Social Democracy" by Bertrand Russell, six lectures made by him at the newly founded London School of Economics in 1896. They are a brilliant criticism of Marx's theories, increasingly valid and proven today.

Postwar: "Philosophical Investigation" by Ludwig Wittgenstein, a new conception of philosophy that will continue to be very influential. "1984" by George Orwell, which marked a turning point and will always be read and quoted. "Dr. Zhivago" by Boris Pasternak, the best of the books on the Soviet intelligentsia.

(Thank you, Ken Korbin)

- (19) "Autobiography II" reviewed by William Gass, Professor of Philosophy at Washington University. First published in "Book Week", it is reprinted in Fiction and the Figures of Life by William H. Gass, Boston:Godine (Nonpareil Books), 1979, pp. 242-246.

Ghostly, like a slow sea fog, religious doubts and vague metaphysical disquiets began to darken Bertrand Russell's mind, and when, at eighteen, he read a refutation of the First Cause Argument in Mill's *Autobiography*, he became an atheist. He was somewhat puritanical and priggish in his views, but a day of constant kissing altered that. His first wife, Alys, intellectually freer about sex than Russell was, emotionally had the same beastly Victorian attitudes. In their relationship, she'd decided intimacy

would, by preference, be rare. "I did not argue the matter," Russell says, adding smugly, "and I did not find it necessary to do so." Happy in his marriage, Russell had been leading a calm and superficial life: an imperialist in politics, an empiricist in philosophy, he had scrubbed his mind through mathematics until its surface shone with analytical clarity. One day a witness to the agonies of an attack of angina in Mrs. Whitehead, he changes again, this time going further, faster (in five minutes), and concluding that "the loneliness of the human soul is unendurable," that only intense love can "penetrate" it, that "whatever does not spring from this motive is harmful," that consequently "war is wrong," public school education "abominable," the use of force as well, and "that

in human relations one should penetrate to the core of loneliness in each person and speak to that." Not commonplace sentiments then, as inferences they were even more remarkable; but logic's hold on Russell has always been precarious.

Happy and superficial: these are constantly conjoined in Russell's life; only pain and controversy give his mind its weight; only then does it sink out of sight in the loneliness he speaks of. Is it, for all of us, the same? Once, bestriding his bike, he realized he no longer loved his wife. A grave, tumultuous insight suddenly possesses the rider of the machine. Of course he finds his reasons, but the page is plainer than he is. Over the years he had floated to the surface of Alys; he could no longer penetrate her; and no longer touching bottom there, he could not confront more than the forehead of himself either. For renewal, Russell needed another love affair. The rider would like to be running, feeling his own feet lifting him forward as he had, in the depths of his love, once before.

The first volume of Russell's *Autobiography*, from which these incidents have been taken, shows him to be a man of fairly shallow calculation, cold, and capable of the cruelty of indifference, using his mind as a weapon and a cover; but it shows him also periodically and quite irrationally shaken by instinct and impulse, warm and generous sometimes, noble and fine, or charmingly foolish. Gradually, throughout this brilliant second volume,¹ we see these hidden forces, appearing in his life in bursts, move his heart to the right place, allowing him to speak for peace and gentleness and love—often eloquently, with force, and at great personal sacrifice; but we see, too, that he hasn't yet ceased to simplify, to reduce, as though the weight of experience were mostly fatty excess to be sweated away by a series of vigorous mental exercises. His feelings may run deep, but his view of life remains naïve, and he is constantly surprised, sometimes desperately disappointed, driven to the edge of suicide.

Whitehead once complained of some of Russell's preliminary work for *Principia Mathematica* that "Everything . . . has been sacrificed to making proofs both short and neat." In youth, for a period, a materialist, he nevertheless found consciousness an irreducible datum; still, as this second volume shows, he has continued to feel his self, his inward person, to be like a ghost in some alien, indifferent, Cartesian machine. To touch. To be touched! But you cannot touch a ghost, nor can a ghost touch. *Ghost*. Over and over, unconsciously, he uses this word to describe himself, both in his present account and in the letters he wrote at the time. And the God he seeks vainly for is also a ghost, as is the love he needs.

¹ *The Autobiography of Bertrand Russell, 1914-1944* (Boston: Atlantic/Little, Brown, 1968).

(Thank you, Len Cleavelin)

(20) Russell Bibliographies by HARRY RUJA:

One who wishes to find a "Russell" to read, can do so easily enough in nearly any fair-sized library or bookstore. The current Books In Print, the basic listing of books available for purchase in the United States, has 70 different listings under "Bertrand Russell." Some of these are different editions of the same book, but even eliminating duplications, 51 different titles remain. The British Books In Print lists about 53 different titles for Russell.

It's hard to find a decent library which doesn't have some Russell. If it's a public library, intended for the general public, Russell's popular books will certainly be available, such as The Conquest of Happiness, Marriage and Morals, and the Autobiography; Among his more philosophical works, The History of Western Philosophy and The Problems of Philosophy have attracted, and continue to attract, many readers.

Kenneth Blackwell, Archivist of the Bertrand Russell Archives in McMaster University, Hamilton, Ontario, compiled for the Bertrand Russell Society a most useful Russell book-list, arranging Russell's major publications into 17 categories, and ending with his own list of the Top Russell Ten. Copies of this four-page list are available from the librarian of the BRS, Don Jackanicz, 3802 N. Kenneth Avenue, Chicago, IL 60641.

Blackwell also compiled a more ambitious Russell bibliography for The New Cambridge Bibliography of English Literature, I.R. Willison, ed., vol.4, 1900-1950 (Cambridge University Press, 1972). (The item is unsigned, but

Russell is forty-two when this volume begins, and a well-known philosopher, yet he is astonished to find that most people are delighted at the prospect of war. He had, he says, to revise his views on human nature; but he merely swings from one facility to another, and blithely compares his simplistic views with Freud's. He dreads failure, and has an unwholesome tendency to recant. Even D. H. Lawrence's furious, sick, sadistic, Fascist rant derails him momentarily; for passion appeals to him, as does Lawrence's cult of the deep core. Russell throws off this illness, although from it, slowly, he learns a little more. He honestly wants to be an impulsive man. We find him planning to be impulsive, and congratulating himself afterward for acting in the moment, heedless of consequence, as he does so often in his love affairs. This leads him to mistake the suddenness of his thoughts sometimes for cachets of their truth, though his intellect insists upon a thorough investigation.

Still, he never is able to commit his mind to social issues with the rigor and severity he allows it in logic and epistemology. There is not a little, in Russell, of the scholar's wistful love of power ("Power over people's minds is the main personal desire of my life . . ."), as if, through social action, he could finally penetrate others, materialize his ghost.

Throughout the First World War he carries his pacifism bravely, and there is a fine account of his imprisonment for it. There are also excellent descriptions of his trips to Russia (which he hated) and China (which he loved). With Dora Black, his second wife, he founds an experimental school for children. It swallows much of his money, while thought and theory, like bubbles of air, carry him soon from its depths, as he is carried gradually from Dora's, too. The freedom he wishes to give his pupils, as well as the freedom he wishes to give his wife, both have to be modified, the one in the practice, the other in the hope. "Anybody else could have told me this in advance, but I was blinded by theory." The Nazis then give his pacifism too stiff a test. Nonviolent resistance, he decides, "depends upon the existence of certain virtues in those against whom it is employed." This volume concludes with an account of his trip to the United States with his third wife, Patricia Spence, his teaching and writing here, and especially the (for us) shameful contretemps concerning his appointment at City College.

Clear, incisive, frequently witty, as honest as his inner check and the law will allow, Russell has written the history of an emblematic life: exemplary in its devotion to both emotion and truth, triumphant in its dedication to our freedom to decently pursue them, and symptomatic of the consequences of their separation in its sometimes painful failures.

Blackwell has informed me that the bibliography is mostly his work. The editor lists Blackwell as among those to whose "advice and knowledge" the volume is indebted.) This bibliography runs to three double-column pages, in small print. At that, it lists only books and contributions to books, but it does have a substantial list of books and essays about Russell.

The earliest bibliography of which I know is one compiled by Gertrude Jacob and published in The Bulletin of Bibliography (Boston) in September 1929 and May 1930. Journal articles by Russell and reviews of Russell's works are listed as well as his books, in addition to places of publication of portraits of him.

The fullest bibliography of Russell's works, by far, is that by Lester E. Denonn, which appeared in preliminary form in Who's Who in Philosophy, edited by D. D. Runes, and by Denonn and R.B. Winn as associate editors (New York: Philosophical Library, 1942) and in a much expanded form as an important part of The Philosophy of Bertrand Russell, edited by Paul A. Schilpp (Evanston, Ill.: Northwestern Univ., 1944; other editions by other publishers, 1946, 1952, 1963, 1971). This remains the standard and most useful bibliography of Russell to this day. It lists not only Russell's books and journal articles, and contributions to books edited by others, all arranged in chronological order, but it also lists translations, reprints, and reviews of his works.

I published a less ambitious bibliography in David F. Pears, ed., Bertrand Russell: A Collection of Critical Essays (Garden City, New York: Doubleday, 1977). I listed for the most part only those of Russell's writings which are primarily philosophical. Items in foreign languages were cited sparingly, but I did list books and articles about Russell. I arranged the Russell items chronologically within six categories: history of philosophy, philosophy of history, biography; survey of philosophy, miscellaneous; logic, foundations of mathematics; theory of knowledge, philosophy of science; metaphysics, philosophy of religion; and ethics, social and political philosophy. The secondary materials were listed mostly in alphabetical order, by author.

Blackwell and I have been engaged some 15 years in compiling what we hope will be the definitive bibliography. He is fortunate enough and resourceful enough still to find a new Russell item from time to time. The Archives have been a fruitful source of leads. Just the knowledge of the existence of the Archives has encouraged some Russellphiles throughout the world to bring rare items to Blackwell's attention. It may very well be another five years, however, before that bibliography sees the light of day.

ABOUT BERTRAND RUSSELL

- (21) G. E. Moore. reflects on his undergraduate years in Cambridge (1892-1896), in his autobiography. Parts of it, including the following, are contained in The Philosophy of G. E. Moore, Paul Arthur Schilpp, ed., Chicago, IL: Northwestern University, 1942, pp. 12-16.

II. FIRST TWELVE YEARS AT CAMBRIDGE. 1892-1904

(a) *Four undergraduate years: 1892-1896*

I went up to Trinity College, Cambridge, in October 1892, and for the first two years of my residence there was working for Part I of the Classical Tripos. In this line, in spite of the brilliance of some of my teachers—especially A. W. Verrall—, I do not think that I learned anything startlingly new. I had been so well taught by Lendrum, at Dulwich, that my work during these two years at Cambridge consisted almost exclusively in merely learning more of the same kind of things which he had already taught me.

It was in quite other directions that these first two years at Cambridge made a great difference to me. Towards the end of my first year I began to make the acquaintance of a set of young students—most of them a year or two my seniors, both in ages and academic standing—whose conversation seemed to me to be of a brilliance such as I had never hitherto met with or even imagined. They discussed politics, literature, philosophy and other things with what seemed to me astounding cleverness, but also with very great seriousness. I was full of excitement and admiration. My own part in these discussions was generally merely to listen in silence to what the others said. I felt (and was) extremely crude compared to them; and did not feel able to make any contributions to the discussion which would bear comparison with those which they were making. I felt greatly flattered, and rather surprised, that they seemed to think me worthy of associating with them. I have said that at Dulwich I never became really intimate with any of the clever boys I met there. At Cambridge, for the first time, I did form intimate friendships with extremely clever people; and, of course, this made an enormous difference to me. Until I went to Cambridge, I had had no idea how exciting life could be.

Among the young students with whom I began to make acquaintance at the end of my first year was Bertrand Russell; and it was mainly owing to his advice and encouragement that I began to study philosophy. Russell was two years my senior in academic standing; and hence, when I was in my second year (and it was only in that year that I began to know him at all well), he was already in his fourth year and completing his academic course by working for Part II of the Moral Sciences Tripos: he left Cambridge at the end of that year. In the course of it he must have formed the opinion, from hearing me argue with himself or with friends of ours, that I had some aptitude for philosophy: at all events at the end of the year he urged me strongly to do what he had done and to take Part II of the Moral Sciences Tripos for my Second Part; and if he had not urged me, I doubt if I should have done so. Until that year I had in fact hardly known that there was such a subject as philosophy. I came up to Cambridge expecting to do nothing but Classics there, and expecting also that afterwards, all my life long, my work would consist in teaching Classics to the Sixth Form of some Public School—a prospect to which I looked forward with pleasure. I had indeed at Dulwich read Plato's *Protagoras* under Gilkes; but I certainly was not then very keenly excited by any of the philosophical questions which that dialogue raises, and I do not think I had read any other philosophy at all. What must have happened, during this second year in Cambridge, was that I found I was very keenly interested in certain philosophical statements which I heard made in conversation. One such occasion I can remember. Russell had invited me to tea in his rooms to meet McTaggart; and McTaggart, in the course of conversation had been led to express his well-known view that Time is unreal. This must have seemed to me then (as it still does) a perfectly monstrous prop-

osition, and I did my best to argue against it. I don't suppose I argued at all well; but I think I was persistent and found quite a lot of different things to say in answer to McTaggart. It must have been owing to what I said on such occasions as this that Russell came to think I had some aptitude for philosophy. And I think this example is also typical of what (if I am not mistaken) has always been, with me, the main stimulus to philosophy. I do not think that the world or the sciences would ever have suggested to me any philosophical problems. What has suggested philosophical problems to me is things which other philosophers have said about the world or the sciences. In many problems suggested in this way I have been (and still am) very keenly interested—the problems in question being mainly of two sorts, namely, first, the problem of trying to get really clear as to what on earth a given philosopher *means* by something which he said, and, secondly, the problem of discovering what really satisfactory reasons there are for supposing that what he meant was true, or, alternatively, was false. I think I have been trying to solve problems of this sort all my life, and I certainly have not been nearly so successful in solving them as I should have liked to be.

I have here mentioned one debt which I owe to Russell, and, since I have mentioned his name, I think I had better now (although it will interrupt my narrative) try to give as complete an account as I can of all that I owe to him. His name has often been publicly coupled with mine and, since I came to the United States in 1940, I have found that some misapprehension exists as to the relations between us. For one thing, I discovered that some people supposed that I was the elder of the two. That, of course, is, in itself, a mistake of no importance whatever; but I think it was probably due to another mistake, which is perhaps of some importance, though not much. I have heard it publicly stated (and I think I have also seen the same in print) that Russell was a pupil of mine! Nothing could be further from the truth. It would be far nearer the truth to say that I was a pupil of his, since I really have attended no less than three complete courses of lectures given by him, whereas he has never done more than attend one single lecture given by me. I imagine that this mistake must have been due to a passage in Russell's Preface to his *Principles of Mathematics* in which he acknowledges some indebtedness to me; but, of course, what Russell there says, though it may have been the origin of the mistake, gives no sort of excuse for it. The main facts about the connection between his work and mine are, I think, as follows. I have said that Russell left Cambridge in June 1894, at the end of my second year. But, though he had left Cambridge, I used, for some six or eight years after that date, to see him frequently and discuss

philosophical questions with him. These discussions took place either when I visited him at his house in the country or when he visited Cambridge. For several years in succession he and his wife took a house in Cambridge for the whole of the Lent term, and I had much discussion with him during these visits. In these discussions there was, of course, mutual influence. It is to ideas which he thought he owed to me as a result of them that Russell was referring in the Preface to his *Principles*; and we both of us subsequently discovered that these ideas were largely mistaken. I do not know that Russell has ever owed to me anything except mistakes; whereas I have owed to his published works ideas which were certainly not mistakes and which I think very important. After about 1901 we met but rarely for a period of about ten years, until, from 1911 to 1915, we were both of us lecturing in Cambridge, and both had rooms in Trinity; and I then attended his lectures on the Foundations of Mathematics. I certainly owe much to all this personal contact with Russell; but I think I owe even more to his published works. I have certainly spent more time in studying what he has written than in studying the works of any other single philosopher. I reviewed for *Mind* his first philosophical book, the *Essay on the Foundations of Geometry*, which was developed out of the dissertation by which he won a Fellowship at Trinity. I read the proofs of his *Philosophy of Leibniz*. Later I worked very hard indeed for a very long time in trying to understand his *Principles of Mathematics*; and I actually wrote a very long review of this work, which was however never published. As for his *Introduction to Principia Mathematica*, his *Problems of Philosophy*, his *Lowell Lectures*, a series of articles which he published in the *Monist*, beginning with four entitled "Logical Atomism," his *Introduction to the Philosophy of Mathematics*, and his *Analysis of Mind* (which last I reviewed in the *Times Literary Supplement*), I have, in the case of all these six works, lectured in detail on particular passages in them on various occasions during my lectures at Cambridge. Of course, I have not agreed and do not agree with nearly everything in his philosophy; and my lectures on what he has written have always been partly critical. But I should say that I certainly have been more influenced by him than by any other single philosopher. Perhaps I should have owed to him even more than I do if I had taken another piece of advice which he gave me. About 1900 or a little later he urged me strongly to take private lessons from Whitehead in Mathematics, particularly in the Differential Calculus. This advice I did not take, not, I am afraid, for any well-considered reasons, but mainly from mere inertia and doubt whether it would do me any good. I still have no settled opinion as to whether, if I had taken it, it would have made any great difference to me.

(Thank you, Don Jackanicz)

(22) BR in fiction. Last issue we said we wanted to find out about characters in fiction that were based on BR (RSN22-12). KEN BLACKWELL has obliged with the following:

Most of the fictional Russell characters are covered in Rosenbaum's essay in Russell in Review, with the notable exception of another character discussed by him in Russell 21-22.

(Russell in Review contains papers presented at the Russell Centenary Celebration at McMaster University in 1972. It is edited by J.E. Thomas and Kenneth Blackwell, and published by Samuel Stevens, Hakkert & Co., Toronto, 1976.)

Professor Rosenbaum discusses these characters:

- . Mr. Apollinax, in the poem of the same name by T. S. Eliot (1915)
- . Sir Joshua Malleson, in Women in Love by D. H. Lawrence (1916)
- . Bertie Reid in The Blind Man by D. H. Lawrence (1918)
- . Mr. Scogan in Crome Yellow by Aldous Huxley (1921)
- . Thornton Tyrrell in Memoirs of an Infantry Officer Siegfried Sassoon (late 1920s)
- . Melian in Pugs and Peacocks by Gilbert Cannan (1921)

In general, Russell was "treated as a satiric or at least ironic figure". D. H. Lawrence had a brief friendship with BR, then came to dislike him with great intensity:

The enemy of all mankind you are, full of the lust of enmity. It is not the hatred of falsehood which inspires you. It is the hatred of people, of flesh and blood. (Russell in Review, p. 72.)

This dislike was mutual, as this 1962 letter shows:

Lawrence was a man who was consumed with a desire to punish those who did not share his intense feelings, borne of personal conflict and a wish to do violence. He hated rationality and emphasized violent feeling -- "thinking with the blood". Dear Bertrand Russell, Feinberg and Kasrils, eds., Boston: Houghton Mifflin, 1969, p.158.

T.S.Eliot and BR didn't much care for each other either. Writes Eliot (1926):

I am sorry to include the name of Mr. Russell, whose intellect would have reached the first rank even in the thirteenth century, but when he trespasses outside of mathematical philosophy, his excursions are often descents. (Russell in Review, p. 66)

An inquirer wrote to BR (in 1965), saying:

Eliot's friends all seem to think that he was the epitome of goodness and morality, but his writings seem to me to display an astonishing narrow-mindedness and intolerance...

To this, BR replied:

I entirely agree with your estimate of Eliot's character... I met him by chance just after the beginning of the First War in London in October. I said, "Hello, what are you doing here?" He said, "I have just returned from Berlin." I said, "What do you think of the war?" He said, "I don't know except that I'm not a pacifist." I said, "I see. You don't care what people are killed about, so long as they are killed." (Dear Bertrand Russell, p.156) (And thank you, David Makinster.)

Here is a footnote from Russell in Review, p.85:

...parodies of Russell appear to have begun with the revue, "Beyond the Fringe" (1961). One of the original members of the cast was Alan Bennett, who mocked Russell's and Lady Ottoline's memoirs in his play, "Forty Years On". At one point in the play Russell mentions to "Lady Sybilline Quarrell" that "I had no contact with my own body until the spring of 1887, when I suddenly found my feet. I deduced the rest logically."

This has been a superficial (and distorted) sampling of the contents of the Rosenbaum paper in Russell in Review (pp. 57-87). We recommend that you get hold of a copy and read the whole thing. You can buy Russell in Review from the Archives, or borrow it from the BRS Library, address on Page 1, bottom.

BR MENTIONED

- (23) Lester Denonn told us that this past winter he'd been reading books about Plato, Kant, Hegel, Heidegger, Lecomte du Notty, and Borges, all of which had Russell references (RSN22-15). We asked him to tell us what those references were:

First Plato. What occasion would there be to refer to Russell in a work on Plato? J. N. Findlay found seven in Plato and Platonism. He says: "Platonism was also strongly present in the early thought of the great Cambridge realists, G.E. Moore and Bertrand Russell and in Russell's Principles of Mathematics of 1903..."

Where would Russell appear in Kant's Rational Theology, a work by Allan W. Wood? Says he: "Kant's view has been, and still is, widely accepted and is even (owing to its adoption by Gottlob Frege and Bertrand Russell) incorporated into the standard systems of formal logic, via the existence quantifier."

There are ten references to Russell in J. N. Findlay's Hegel: A Re-examination. He refers to Problems of Philosophy and Principia Mathematica but without quotations therefrom. At one point he says, "(Hegel is here dealing with the puzzles which agitated both Plato and Russell, as to what things can properly be said to be many; it seems that neither things without relation, nor things related to a Whole, can fitly claim the title.)"

We find a not uncommon blast in a quotation from Pierre Lecomte du Notty, as cited in Mary Lecomte du Notty's biography: "If errors had not been committed by the priests of certain religions, materialism, in the shape of a faith reared against religious faith, might never have been born. It would never have been born because man is essentially religious. He has been religious for millenaries, ever since the age of Cro-Magnon Man, and the literary and pathetic explosions of a Bertrand Russell cannot change him."

For a change, however, we can go to South America to learn of Jorge Luis Borges in the biography by Emir Rodriguez Monegal. He says: "Borges, in his discussions of Zeno and Korzybski, Bergson and Bertrand Russell, Nietzsche and Mauthner, was developing (very quietly) a new vision that would enable him to write his metaphysical poems and stories..."

In Heidegger & Modern Philosophy, edited by Michael Murray, there are nineteen references to Russell, not all of which were spotted by the one who prepared the index, a not uncommon fact, I have found: Principia Mathematica and The Principles of Logical Atomism are referred to but no quotations are added. Of course, I added my postcript:

Heidegger/ Geschmeidegger/ Whatever that means!
 I think he was full of lima beans.
 There is a "being" in each lima bean
 At least in each one that I have seen.
 Then why all the fuss about "being" and "is"?
 He ranted about after drinking gin fizz?
 That he was a Nazi there can be no doubt
 That's why all of us should count him out.

And what of our own Sir Alfred, two of whose excellent books I purchased recently? As one would expect, there are eighty-nine references to Russell in Metaphysics and Common Sense. He also refers to The Philosophy of Logical Atomism and to An Inquiry Into Meaning and Truth, Our Knowledge of the External World, My Philosophical Development, A Critical Examination of the Philosophy of Leibniz, Principles of Mathematics, Principia Mathematica, Problems of Philosophy ("...is still as good an introduction to philosophy as there is."), The Analysis of Mind, "Reply to Criticism" in The Philosophy of Bertrand Russell, Logic and Knowledge, Human Knowledge, Its Scope and Limits, A History of Western Philosophy, and Principles of Social Reconstruction. Indeed a most adequate appraisal of Bertrand Russell's philosophy can be found in these pages.

There are two interesting quotations from Our Knowledge of the External World: "Objects of sense, even when they occur in dreams, are the most indubitably real objects known to us. What, then, makes us call them unreal in dreams? Merely the unusual nature of their connection with the other objects of sense." And again: "It is only in the failure of our dreams to form a consistent whole, either with each other or with waking life, that makes us condemn them."

And in Sir Alfred's The Origins of Pragmatism we find occasion for eight references to Russell. I give only one penetrating quotation: "There are philosophers such as Hume and Russell, who have written with greater elegance, but no modern philosopher who matches William James in the vividness and range of his inquiry or the freshness of his humour."

And so I continue my enchanting, interesting, and rewarding search.

BR'S PROPHECIES

* This is a new section in the newsletter, suggested by Peter Cranford, who also sent the following item on **power stations**. If you come across similar prophecies or warnings in BR's writings, please send them in.

- (24) "**Power stations** are acquiring such importance that, if they are left in private hands, a new kind of tyranny becomes possible, comparable to that of the medieval baron in his castle. It is obvious that a community which depends upon a power station cannot have tolerable security if the power station is free to exploit its monopolistic advantages to the full." In Praise of Idleness, New York: Barnes & Noble, 1962 (paperback), p.90. Originally published in London, in 1935.

ASSESSMENTS OF BR

- (25) The 17 inches. "Concerning the Columbia Encyclopedia article on Russell, reproduced in RSN21-11," writes PAUL DOUDNA, "I was surprised at its length. The article in the 1950 edition is only about one-third as long. There are 20 people in the 1975 edition with longer articles than the one on Russell. They are (starting with the longest): Shakespeare, Napoleon, George Washington, Stalin, Woodrow Wilson, Lincoln, Franklin Roosevelt, Julius Caesar, Thomas Jefferson, Jean-Jacques Rousseau, Theodore Roosevelt, Peter the Great, Voltaire, Charles V, Hitler, Henry VIII, Martin Luther, Harry Truman, Andrew Jackson, Thomas Aquinas. Russell tied Nixon and both beat out Jesus Christ by a small margin."
- (26) "Bertrand Russell on Israel", an abstract of the paper that HARRY RUJA presented at the 1979 Meeting is included in this issue (60).

PROMOTING THE BRS

(Next page)

- (27) WIN Magazine is published weekly with the support of the War Resisters League. "Win", May 24th issue, was devoted to resisting nuclear power, and did a good job of it. At WRL's July Conference in Tennessee, they will explore such topics as Full Employment, the J. P. Stevens campaign, Lessons from the Civil Rights Movement, Nuclear Power, Feminism, and Nonviolence Theory. There will also be swimming, dancing, and singing, and the annual Anarchists vs. Socialists softball game."

"Win" has a page called "People's Bulletin Board." It consists of classified ads, for which there is no charge. They ran the following ad for us:

Bertrand Russell Society. Information: W1, RD 1, Box 409, Coopersburg, PA 18036. Russell was, among other things, the first eminent anti-nuclear activist.

We are indebted to HUGH MCVEIGH for letting us know about "Win" and the "People's Bulletin Board". BRS Member Ed Hedemann is on the staff of "Win".

OPINION

- (28) "Holocaust" by Gerald Green, shown on BEC Television, was reviewed by JOHN SUTCLIFFE in "The Freethinker":

Much has been written about the last war. As a member of a generation born during it, I knew none of the glory -- only the aftermath. We played on bomb sites, lived in a seedy drabness, and saw the guilt in our parents' faces for what war makes one human being do to another. We saw too their unspoken pain redeemed in the hopes and love they spent on us.

"Holocaust" is a complete travesty of the facts. Germans are no longer the stereotypes they once were, but the equally false romantic presentation of the past exploits human suffering for commercial success. They see "the Nazi" as something intrinsically distinct from humanity and not as, in fact, a potential in each of us to be evoked by fear and hate to persecute and exterminate the invented enemies of our madness. The dangerous superficiality of "Holocaust" imposes a certain acceptability of the facts and the madness it portrays.

Personally I cannot hate the Nazis. I cannot continue the festering sore that still creates their like, or compromise the hopes and love that came out of the real "Holocaust". We have survived and our survival demands the courage to recognize the facts and their implications, in Russell's words, to "remember your humanity and forget the rest". I cannot but think that in this our survival has some sort of significance.

* * * * *

("Holocaust" was also shown in Germany, and is credited with having been responsible, in part, for Germany's recent decision to eliminate the statute of limitations on Nazi war crimes. Ed.)

ANOTHER VIEW

- (29) Dora on Cadogan & Conway Hall, in a letter to Bob Davis, dated May 3, 1979:

I had just written to you when the latest newsletter from the BR Society arrived. It contains many interesting things.

But there is one paragraph on which I must comment; perhaps you could make what I say known at the forthcoming meeting in New York.

It concerns Conway Hall and Peter Cadogan. Conway Hall carries with it a long tradition of unorthodoxy and dissent. It was built to take the place of the nonconformist chapel at South Place and to carry on the ethical tradition of Christianity, from which belief in God gradually disappeared, succeeded by the Ethical Council(?) and Humanism. It has been associated with the 19th century protesters such as Bradlaugh, with the Rationalist Press Association and with the Secular Society, which publishes The Freethinker and was founded in 1881. The RPA publishes The Humanist. A regular lecture is given each Sunday morning at Conway Hall, by some well known figure in contemporary controversy. The hall and rooms are let to societies for their meetings, on the basis of complete freedom of speech, always provided that order is maintained. Even the National Front was allowed to hold a meeting there, but was later banned because of disorder. In the main, the Hall is very much the home of progressive and struggling minority movements.

Peter Cadogan is the Secretary and Organiser; he does not dictate the views of the Society; on the other hand, like everyone else, he is entitled to his own views and to express them. He works extremely hard and we have reason to be very grateful that he has undertaken to act as Secretary of our Russell Memorial Committee, the more so as the Ethical Society is at the moment in grave financial anxiety, because the Inland Revenue treat it as a political body and refuse the charity status that is accorded to religious organisations. This means a very heavy burden of income tax - penalty for believing in ethics minus God. In fact, in freedom of thought and speech Conway Hall is very much in line with Bertie Russell's views.

As to Rousseau, I have not read Peter Cadogan's opinion about him, with which, of course, John Sutcliffe is at

liberty to disagree. Nor does everyone associated with Conway Hall have to treat everything said by Bertie as gospel — Bertie would hate that. And I myself do not agree with Russell about Rousseau. It is worth while to study what Rousseau says in relation to the recent conflicts of the British Trade Unions with the Labour Government. I also think it nonsense to say that Rousseau is a forerunner of the Nazis; this theory is based on not understanding the true source of the dogmas of the Herrenvolk — the Master Race — in Hitler Germany. If I can do the book I am planning for this summer, I hope to be able to say something about all this.

(Thank you, Bob Davis)

COMMENT

(30) Don Roberts writes:

I enjoyed reading The Case of the Philosophers' Ring (May 79 item 34); thought the first half better than the last, the setting-up of the mystery better than its resolution (for several reasons). Readers of BR News might find it fun to locate sources for some of Collins' "events"; I have located the following, and would be interested in others [I give the page number in Collins' book, and a few identifying words]:

- 15 'Why Bertie' Schilpp vol. 17 (= World of Math I:391) "O Bertie".
- 28 Whitehead writing mathematics Portraits from Memory 103 (=Autobiog I:190).
- 34,35 The formulas are in the Newman article, World of Math I:371, numbered 1.5 and 1.10.
- 56 Leibniz, Principles of Nature and Grace, sect. 7, asks: "Why is there something rather than nothing." Heidegger has made more money on the question than Leibniz did.
- 58 "Whereof one cannot speak" is the 1922 translation of the last sentence in the Tractatus. Reference given on Collins 67, also.
- 61 "Never glad confident morning" My Philosophical Development 75.
- 66 World of Math I:372, number 1.12.
- 67 World of Math I:371, number 1.6.
- 87 World of Math I:371, numbers 1.8, 1.9. Again the last sentence in Tractatus.
- 133 "the same God" Portraits from Memory 30 (=Autobiog II:30); Russell used the term "agnostic" in relating this story.

No doubt there are more (I admit there is not much value in the search). My major objection to Collins' book is that he make of Holmes a kind-of hippie (e.g., 123 Holmes scans the "psychic horizons").

I suspect Malcolm's Memoir of Wittgenstein is the source for the information regarding the furnishing of Wittgenstein's room (page 54), but I haven't taken the time to check it.

* If you locate other sources of Collins' "events", please inform the newsletter, address on Page 1, bottom.

NEWS ABOUT MEMBERS

(31) Dong-In Bae. We had sent Dong-In an ad from the New York Times of June 15th or 16th in which certain Korean organizations protested about President Carter's planned visit to South Korea. Here are some of Dong-In's comments:

I agree with the ad. I also wrote a letter to President Carter on May 17th (copy enclosed), appealing to him not to visit Seoul under present political conditions in Korea. In South Korea and abroad, all groups opposing the Park regime are opposing Carter's South Korea trip, for reasons explained in my letter.

Some groups, including ours (The Korean Bertrand Russell Society) do not belong to the "Union of Overseas Koreans for Democracy and Unification", which signed the Times ad. That organization was founded in Tokyo in August 1978...

I was in New York June 7-10 to take part in the Overseas Koreans Conference. About 80 of us, including 3 friends of the KERS, demonstrated at the White House in Washington, opposing Carter's visit to Seoul and demanding an end to military aid to the Park regime. Regrettably, I could not come to New York earlier to take part in the annual BRS meeting. I hope to meet BRS members again in the future.

Here are highlights of Dong-In's letter of May 17th to President Carter:

You visit to Seoul... (is) an explicit expression of your support of the Park regime, one of the cruelest and most anti-democratic dictatorships in the world. Your visit will legitimize the status quo of this inhuman despotism.

We Koreans don't want another Korean war. If the purpose of your visit to Seoul is to demonstrate to North Korea the firmness of your support for South Korea, you could do so by announcing clearly, during your stay in Tokyo, your unshakeable commitment to the prevention of war on the Korean peninsula, just as you wisely did for the Middle East area.

I therefore appeal to you to reconsider your planned visit to Seoul and to cancel it.

(32) Leonard Cleavelin will attend Northwestern Law School (Chicago) starting this Fall.

(33) Harry Clifford sent this letter to the Star-Ledger (Newark, N.J.), where it appeared May 16, 1979:

Contrary to what reader E.D. Wilkerson says about Albert Einstein and "this hullabaloo about Einstein's relativity," Einstein was, in the words of the Encyclopedia Britannica ... one of the most creative intellects in human history." Each one of four research papers that he published contained a great discovery in physics: the special theory of relativity; the equivalence of mass and energy; the theory of the Brownian movement; and the photon theory of light.

His general theory of relativity was verified during an eclipse of the sun when astronomers ascertained that light rays from stars near the sun bend due to its gravitational force. This brought Einstein international fame.

Bertrand Russell, one of the great mathematicians and philosophers of this century, regarded Einstein's theory of relativity of such importance that he wrote a book about it, The ABC of Relativity. In this book Russell states: "It is true that there are innumerable popular accounts of the theory of relativity, but they generally cease to be intelligible just at the point where they begin to say something."

Einstein's profound theories revolutionized our conception of the physical world and changed the course of science.

(34) Peter Cranford. "The chief activities of the past year have been in bringing to a near close the writing of a series of feature articles and a book on methods of influencing people. The theoretical sub-structure is Russellian although the practical applications are empirically derived. John Sutcliffe has been concerned with the theory and I with the practice. Our joint thinking will be presented to interested groups in Manchester, England, the week of August 19-26, this year. Jack Pitt will also present a pertinent philosophical paper."

(35) Alex Dely writes from the Laboratory for Astrophysics and Space Research, The Enrico Fermi Institute, University of Chicago: "This is where I'll be spending my summer, doing work at Space Lab II (Space Shuttle Program experiments), working with the Meyer groups in cosmic rays, the Kerr black hole studied by Chandrasekhar, and the Nambu elementary particle/high energy physics group. Hope to develop some comprehensive theoretical framework uniting the two. Have recently become involved in nuclear debate, trying to set up a mini-clearing house of nuclear information at Illinois State University." Also see (15).

(36a) Corliss Lamont has written another Basic Pamphlet, "Immortality: Myth or Reality?" An ad for it appeared in The New York Times Book Review of 4/21/79, p. 52. To obtain it, send 50¢ in coin or check to Basic Pamphlets, Dept. BRS, Box 42, New York, NY 10025.

(36b) The National Emergency Civil Liberties Committee (175 Fifth Avenue, New York, NY 10010) issued this press release dated June 5, 1979:

The National Emergency Civil Liberties Committee hails Corliss Lamont's victory, on February 17, 1978 on winning \$2000 damages from the United States government in his lawsuit against the Central Intelligence Agency for illegal and unconstitutional mail openings of his private correspondence. On June 4, 1979 Michael Krinsky, attorney on record for this case, presented Dr. Lamont with the \$2000 U. S. Treasury check (dated 5/2/79).

Dr. Lamont stated: President Carter's Executive Order 12036 issued on January 26, 1978 permits the President and the Attorney General to authorize mail openings of correspondence in either United States postal channels or foreign postal channels without judicial warrant. For 20 years the excuse of "national security" has been consistently abused, yet the Carter Administration has not issued guidelines for a charter for the CIA that will protect American citizens against these government intrusions.

Dr. Lamont is donating the \$2000 check to the National Emergency Civil Liberties Committee's special fund to be used to promote effective guidelines for the FBI and CIA that will adhere to the Bill of Rights.

(37) Jack Pitt is in Europe, on a sabbatical for the academic year 1979-1980. Also see (34).

(38) John Sutcliffe. See (34) and (39).

SPECIAL ACTIVITIES

- (39) New Manchester School. Last issue we reported on John Sutcliffe's "Manifesto of the New Manchester School of Social Economics" (RSN22-11). To this he now adds "The New Manchester School Manifesto on Heuristic Psychology".

"Heuristic psychology," says John, "consists of 3 major elements. Firstly, a theoretical model... Secondly, a system of analysis... (which) in human terms is either a personal biography of an individual or the social history of a community. Thirdly, on the basis of this we have developed a practical technique of rational influence to encourage, by self learning, the adoption of a line of behavior to actualize the positive potential in the psychology of an individual or group and to reinforce it as part of their behavior in order for them to meet the facts of their situation and if necessary to change them.

...

"Peter Cranford and I are preparing a seminar on Heuristic Psychology to be held in August in Manchester. All are welcome to attend... or to submit papers." Also see (34).

The Manifesto which John sent us was accompanied by the following papers, reprints and letters:

- . "Happiness Reconquered" by John Sutcliffe (5 pp.)
- . "Industrial Democracy" by John Sutcliffe (3 pp.)
- . "Inherent Tendencies of Industrialism" by Dora Russell (4 pp.)
- . "Answers and Question" by Peter Cranford (3 pp.) (originally written in 1967)
- . "Bertrand Russell and The New Manchester School" by Lester Denonn (2 pp.)
- . "The Frugality Phenomenon" by Carter Henderson (4 pp.) (reprint from "The Bulletin of the Atomic Scientists", 5/78)
- . Letter of support from Lord Fenner Brockway
- . Brief letters from Sir Alfred Ayer and Sir Alan Cottrell

All of these items, plus John's letter to Lee Eisler of 6/10/79 explaining Heuristic Psychology, will be available from the ERS Library, address on Page 1, bottom.

John's address is 9 Naseby Avenue/Higher Blackley/Manchester M9 2JJ/ England

HONORARY MEMBERS

- (40) About Paul Edwards. Professor Edwards has published a great deal, often as an editor. He was, for example, Editor-in-Chief of the monumental 8-volume Encyclopedia of Philosophy (see below).

A naturalized American citizen, born in Austria in 1923, he received a B.A. and an M.A. from the University of Melbourne, and a Ph.D. from Columbia University. He has had many scholarships, including a Guggenheim Fellowship in 1964-65.

He is presently Professor of Philosophy at the City University of New York, Brooklyn College, and has taught at the University of Melbourne; City College, New York; Columbia University; New School for Social Research, New York; University of California, Berkeley; and New York University.

In 1979 Columbia University awarded him the Nicholas Murray Butler Medal in Silver. It is awarded annually to an alumnus "who has evidenced outstanding competence in philosophy or in educational theory, practice or administration." Professor Edwards says: "I believe that Bertrand Russell was the first one to get the gold medal which is awarded once every ten years."

Books and monographs:

The Encyclopedia of Philosophy (8 vols.) (editor-in-chief), New York: Macmillan and The Free Press; London: Collier-Macmillan, 1967

The Logic of Moral Discourse, The Free Press, 1955

A Modern Introduction to Philosophy (ed. with Arthur Pap) Glencoe, Ill.: The Free Press; London: Allen & Unwin, 1957

Buber and Buberism -- A Critical Evaluation (The Lindley Lecture, 1969), The University of Kansas Press

Why I am Not a Christian and Other Essays on Religion and Related Subjects by Bertrand Russell (ed.), New York: Simon & Schuster; London: Allen & Unwin, 1957. Professor Edwards wrote the editorial introduction and the appendix, "How Bertrand Russell Was Prevented from Teaching at the City College of New York"

Articles:

"Are Percepts in the Brain?" Australian Journal of Psychology and Philosophy, 1942

"Bertrand Russell's Doubts about Induction", Mind, 1949

"Necessary Propositions and the Future," Journal of Philosophy, 1949

"Do Necessary Propositions 'Mean Nothing'?", Ibid.

"Ordinary Language and Absolute Certainty," Philosophical Studies, 1950

"Hard and Soft Determinism," in S. Hook (ed.), Determinism and Freedom, New York University Press, 1958

"The Cosmological Argument," The Rationalist Annual, 1959

"Some Notes on Anthropomorphic Theology," in S. Hook (ed.), Religious Experience and Truth, 1961

"Professor Tillich's Confusions," Mind, 1965

"Is Fideistic Theology Irrefutable?" The Rationalist Annual, 1966

"Atheism," "Atheismsstreit," "Common Consent Arguments," "Life, Meaning and Value of," "My Death," "Pansychism," "Popper-Lynkeus, Josef," "Reich, Wilhelm," "Russell, Bertrand, Sections I and IV," "Why" -- all in The Encyclopedia of Philosophy

"Existentialism and Death — A Survey of Some Confusions and Absurdities, in Philosophy, Science and Method — Essays in Honor of Ernest Nagel, St. Martin's Press, 1969

"Difficulties in the Idea of God," in E. H. Madden, et al. (eds.), The Idea of God, Springfield, Ill.: Charles C. Thomas Publisher, 1969

"The Greatness of Bertrand Russell," The Humanist, London, 1970

"Kierkegaard and the 'Truth' of Christianity," Philosophy, 1971

"A Critical Examination of 'Subjective Christianity'," Question, 1971

"The Greatness of Wilhelm Reich," The Humanist (U.S.) (text of a BBC broadcast, 1973)

"Heidegger and Death as 'Possibility'," Mind, 1975

"Heidegger and Death: A Deflationary Critique," The Monist, 1976

Translator (from the German):

"On the Foundations of Our Belief in a Divine Government of the Universe" (by J. G. Fichte). In Patrick Gardiner (ed.), Nineteenth Century Philosophy, The Free Press, 1967

General Editor of several series of books published by The Free Press, Macmillan and Collier Books. Volumes published so far:

The Idealist Tradition (A.C. Ewing), 1957

Theories of the Universe (M. J. Munitz), 1957

Logical Positivism (A. J. Ayer), 1959

Theories of History (P. Gardiner), 1959

Realism and Phenomenology (R. W. Chisholm), 1960

Twentieth Century Philosophy (W. Alston and G.

Nakhnikian), 1963

A Critical History of Western Philosophy (D.J.O'Connor), 1954

The Existence of God (J. Hick), 1964

Problems of Space and Time (J.J.C.Smart), 1964

Body, Mind and Death (A. Flew), 1964

Perception and the External World (R. J. Hirst) 1965

The Nature of Man (E. Frcmm), 1969

Introduction to Aesthetics (J. Hospers), 1969

General Editor (with Crane Brinton) of Collier Classics in the History of Thought. (14 volumes published so far).

General Editor (with Richard Popkin) of Readings in the History of Philosophy. (7 volumes published so far).

Forcoming Publications:

Heidegger and Death — A Critical Evaluation. First of a new series of "Monist Monographs" published by Open Court of LaSalle, Ill. Scheduled for publication September 20th.

"Reich, Wilhelm," Collier's Encyclopedia, scheduled for 1979.

The Philosophy and Psychology of Death (approx. 750 pages), New York: The Free Press, scheduled for 1980.

In recent years, Professor Edwards has devoted a good deal of his time to a highly critical examination of the works of various existentialists, including Kierkegaard, Heidegger, Buber, and Tillich.

WILLIAM L. WEBBER/615 Fourth St. S.W. (F)/Washington, DC 20024

MEMBERSHIP RENEWALS

- (43) Last call for dues. As we reported last issue (RSN22-23), everybody's dues were due July 1st. Many members have paid their dues but many have not. There is a 2-month grace period, which extends the time to September 1st. If your dues have not been received by September 1st, you are a dead duck. We'd hate to lose you but we cannot afford to keep you without dues.
(If you have joined since the first of this year, i.e., 1/1/79, your dues are not due till July 1, 1980.)
- We suggest you mail us your check right now, while you have it in mind. You wouldn't want to be a dead duck, would you? At least, we hope you wouldn't want to be.
- Send dues to the BRS Membership Committee, RD 1, Box 409, Coopersburg, PA 18036. Regular member \$15, couple \$20, student \$5. Outside the USA and Canada, add \$5.

PARADOXES

- (44) Len Cleavelin sends this splendid excerpt from Don Quixote. This situation is this:

Sancho Panza has been tricked into believing he is the governor of an island Don Quixote has been promising him for years. He sits as a judge and a case is presented to him:

Nevertheless, in spite of his hunger and fortified only by the preserves he had eaten, he undertook to sit in judgment that day; and the first matter that came before him was a problem propounded by a foreigner in the presence of the major-domo and the other attendants.

"My lord," he began, "there was a large river that separated two districts of one and the same seignorial domain—and let your Grace pay attention, for the matter is an important one and somewhat difficult of solution. To continue then: Over this river there was a bridge, and at one end of it stood a gallows with what resembled a court of justice, where four judges commonly sat to see to the enforcement of a law decreed by the lord of the river, of the bridge, and of the seignory. That law was the following: 'Anyone who crosses this river shall first take oath as to whether he is bound and why. If he swears to the truth, he shall be permitted to pass; but if he tells a falsehood, he shall die without hope of pardon on the gallows that has been set up there.' Once this law and the rigorous conditions it laid down had been promulgated,

there were many who told the truth and whom the judges permitted to pass freely enough. And then it happened that one day, when they came to administer the oath to a certain man, he swore and affirmed that his destination was to die upon the gallows which they had erected and that he had no other purpose in view.

"The judges held a consultation. 'If,' they said, 'we let this man pass without hindrance, then he has perjured himself and according to the law should be put to death; but he swore that he came to die upon that scaffold, and if we hang him that will have been the truth, and in accordance with the same law he should go free.' And now, my Lord Governor, we should like to have your Grace's opinion as to what the judges should do with the man; for up to now they have been very doubtful and perplexed, and, having heard of your Grace's keen understanding and great intellect, they have sent me to beseech your Grace on their behalf to tell them what you think regarding this intricate and puzzling question."

"Certainly," said Sancho, "those judges who sent you to me might have spared themselves the trouble, for I am a fellow who has in him more of the dull than of the sharp; but, nevertheless, let me hear the case once more and it may be that I'll hit upon something."

The one who had propounded the question then repeated it over and over again.

"It seems to me," said Sancho at last, "that I can settle the matter very shortly. This man swore that he was going to die upon the gallows, and if he does, he swore to the truth and the law says he should be freed and permitted to cross the bridge; but if they do not hang him, he swore falsely and according to the same law ought to be hanged."

"My Lord Governor has stated it correctly," said the messenger; "so far as a complete understanding of the case is concerned, there is no room for any further doubt or questioning."

"Well, then," said Sancho, "my opinion is this: that part of the man that swore to the truth should be permitted to pass and that part of him that lied should be hanged, and thus the letter of the law will be carried out."

"But, my Lord Governor," replied the one who had put the question. "it would be necessary to divide the man into two halves, the lying half and the truthful half, and if he were so divided it would kill him and the law would in no wise be fulfilled, whereas it is essential that its express provisions be carried out."

"See here, my good sir," said Sancho, "either I am a blockhead or this man you speak of deserves to die as much as he deserves to live and cross the bridge; for if the truth saves him, the lie equally condemns him. And this being the case, as indeed it is, it is my opinion that you should go back and tell those gentlemen who sent you to me that, since there is as much reason for acquitting as for condemning him, they ought to let him go free, as it is always more praiseworthy to do good than to do harm. I would give you this decision over my signature if I knew how to sign my name; and in saying what I do I am not speaking on my own account but am remembering one of the many pieces of advice which my master Don Quixote gave me the night before I came here to be governor of this island. When justice was in doubt, he said, I was to lean to the side of mercy; and I thank God that I happened to recollect it just now, for it fits this case as if made for it."

Don Quixote by Miguel de Cervantes Saavedra, translated by Samuel Putnam, New York: Viking, 1954, pp. 842-843

- (45) Paul Doudna says there is a sign in an office where he works which says: "I never make mistakes. I once thought I did, but I was wrong."

And this: "According to an article in ETC. Magazine, the scholastic philosophers had a famous dictum: 'Never deny; rarely affirm; always distinguish.' They did not intend it to be a paradox, but obviously anyone believing this must deny that one should deny."

- (46) Charles Green says G. K. Chesterton "had a particular fondness for paradoxes. For example, in a Father Brown story, 'The Invisible Man', no one saw the culprit enter the house where he committed the crime because, being the Postman, everyone saw him — but didn't see him. Also, in his autobiography, recalling past events in his life, GKC noted, 'Really, the things we remember are the things we forget.'"

- (47) Nicholas Griffin doesn't agree with what we said about paradoxes in RSN22-29a:

On paradoxes I think you got it right first time, and that the distinction between paradoxes of meaning and paradoxes of behaviour (RSN22) doesn't hold up.

If a paradox of meaning is defined as 'a statement which implies its own negation, and is in turn implied by its negation' then it is clear that the Epimenides ('"All Cretans are liars," said the Cretan') is not a paradox of meaning. In this paradox we have two statements:

- (1) '"All Cretans are liars," said the Cretan'

and the shorter, contained statement:

- (2) 'All Cretans are liars'.

Clearly (1) does not imply its own negation, for its negation is 'The Cretan didn't say: "All Cretans are liars."' But neither does (2) imply its own negation, for (2) is simply a non-paradoxical, if racist, statement about the vices of Cretans. If an Egyptian had said (2) there would have been no logical problem.

What generates the Epimenides paradox is the assertion of (2) by a Cretan. In other words it is the speaker's behaviour in uttering the statement which contradicts the speaker's statement — but this is a paradox of behaviour. It so happens that, in the case of the Epimenides, the speaker's behaviour is linguistic behaviour, and this, presumably, gives rise to the mistaken belief that meaning is involved.

Russell, in particular, could not have adopted the offered distinction between paradoxes of meaning and paradoxes of behaviour, because for him all paradoxical ~~statements~~ sentences were meaningless (i.e. did not express propositions) and thus neither implied, nor were implied by, anything.

To add to your collection, the following paradox was passed on to me by a colleague from his son:

'There is three errors in this sentence.'

* Any comments?

CONTRIBUTIONS

(49) We thank JACQUELINE BERTHON-PAYON, LEN CLEAVELIN, JACK COWLES, BOB DAVIS, LEE EISLER, WILLIAM HULET, DON JACKANICZ, DON LOEB, HUGH MCVEIGH, HARRY RUJA, JON SPRING, for their contributions, and last but not least PETER CRANFORD and KATHY FJERMEDAL for their multiple contributions. Much appreciated.

FUND-RAISING

(50) 3 have volunteered to try to help solve the problem of fund-raising, we are very pleased to report. KATHY FJERMEDAL of 1130 20th St(#7), Santa Monica, CA 90403, DAVID MAKINSTER of 645 Hawkeye Drive, Iowa City, IA 52240, and HUGH MCVEIGH of 311 State St., Albany, NY 12210.
We don't underestimate the difficulties of the problem, the solution to which has eluded us for 5 years. Perhaps these 3 will achieve a breakthrough.
We think we know reasonably well what the merits of our case are -- that is, why ERS projects are worth funding -- but we're less sure of whom to tell it to.

ERS BUSINESS

(51a) We want your vote! There is a ballot on the last page of this issue, for voting on the following:
. Part 1. Election of Directors .Data in (51b).
. Part 2. Time and city of 1980 meeting. Discussed in (7)
. Part 3. Proposal to discontinue the use of "Chairperson". Discussed in (53).
Plus two parts for Directors only:
. Part 4. Proposal to raise dues. Discussed in (52).
. Part 5. Proposal to elect a new Science Committee Chairperson. Discussed in (15).

(51b) Director-Candidates. Here are a few facts about each candidate:
. KENNETH BLACKWELL (Hamilton, Ontario) is Archivist of the Russell Archives, Editor of "Russell", a Founding Member and a Director of the ERS.
. JACK COWLES (New York City), a retired naval officer (Commander/Aviator/Intelligence), has been interested in ER ever since he took ER's course in philosophy at UCLA in 1940.
. LESTER DEMONN (Brooklyn, N.Y.) is a distinguished lawyer, a ERS Honorary Member and Director, and editor or co-editor of The Basic Writings of Bertrand Russell, The Wit and Wisdom of Bertrand Russell, and Bertrand Russell's Dictionary of Mind, Matter and Morals.
. J.B. NEILANDS (Berkeley, Cal.) is Professor of Biochemistry at UC Berkeley; a Founding Member and Director of the ERS and Chairperson of its Science Committee; member, 3rd Commission of Inquiry, Bertrand Russell War Crimes Tribunal, North Vietnam (1967).
. RAYMOND PLANT (Hamilton, Ontario) was the first person to join the ERS after it had been founded. He is thus, except for the 12 Founding Members, the oldest BRS member in terms of seniority. He is Regional Solicitor for the Regional Municipality of Hamilton-Wentworth.
. STEPHEN J. REINHARDT (Wilmington, Del.) joined the ERS in 1974, has attended every meeting since, and has been ERS Treasurer, and a Director, since 1976.

* Please vote!

(52) Higher dues proposed. There are several reasons for raising dues: 1) Inflation raises all our costs (recruiting, newsletter, subscriptions). 2) The Traveling Scholarship needs \$700 per year. The 1979 award was covered by a large donation, which will not be repeated. We have to find the money for 1980 and thereafter. 3) There are other projects that need funding, such as The ERS Award, The ERS Book Award, making out-of-print LPs of ER available to members. The proposed new dues schedule, below, would not provide enough extra money to fund all of these, but it might provide enough to get us started on one of them.

The present dues schedule is: regular member \$15, couple \$20, student \$5. The proposed new schedule, to take effect October 1, 1979, would be: regular member \$20, couple \$25, student \$5.

If 200 members pay an additional \$5 per year, it will raise an additional \$1000.

* Directors, please vote on this, using Part 4 of the ballot, last page of this newsletter.

- (53) "Chairperson". In RSN22-37, we reprinted an item from the Washington Post headed "'Chairperson' out of order, Oxford dictionary rules." We are not bound, of course by what the Oxford dictionary decides, but it does indicate the dissatisfaction that many feel with "Chairperson". One can be for women's lib without being for "Chairperson". A man or a woman can be a "Chairman". A woman can also be a "Chairwoman".

We would like to see the ERS drop the use of "Chairperson". What does the majority wish? Please us the ballot * (Part 5), last page of this newsletter.

"RUSSEL SOCIETY NEWS" MATTERS

- (54) Blank Page 4? Several members have advised us that Page 4 in their last newsletter (RSN22) was blank. If yours was blank, please let us know and we'll send you a replacement for the blank page.

COMMUNICATIONS RECEIVED

- (55) Science for the People has issued an 8-page pamphlet headlined "3 MILE ISLAND NUCLEAR DISASTER -- what the public is not being told -- what antinuke organizers need to know."
It is carefully written, with 41 footnotes citing sources of statements. It describes the TMI affair, and then deals with these topics: Low Level Radiation/Core Meltdown -- the Ultimate Disaster/Plutonium -- the Ultimate Poison/Radioactive Waste -- No Place to Put It/Cheap Power? -- Forget it!/Who Benefits from Nukes?/Are We Hooked?/What Are the Alternatives?/What Needs to be Done/How To Do It.
It closes with a "Resource List" of periodicals, films, books and pamphlets, and 31 antinuclear organizations, plus this: "For an updated list of organizations, write to the Nuclear Information and Resource Service, Groundswell Monthly Newsletter, 1536 16th Street, N.W., Washington, DC 20036."
For a copy of the pamphlet, send 25¢ to Science for the People, 897 Main Street, Cambridge, MA 02139.
- (56) For Non-Believers. The First International Exhibition of Literature for Non-Believers will be held at Stockholm University, Sweden, September 1-31, 1979. Write to: Literature Exhibition, Box 170, S-147 00 Tumba, Sweden.
- (57) CAPP. The Committee Against Physical Prejudice is "Fighting Bigotry Based On Personal Appearance." They say, for instance, that "Television has increasingly made overweight and various types of unattractive people either the butt of jokes or the victims of insult" and they want to do something about it. Their address: PO Box 18118, Cleveland Heights, OH 44118.

ANNUAL MEETING(1979)(cont.)

- (58) Minutes of the Members' Meeting:

The sixth annual meeting of the Bertrand Russell Society, Inc. was held Friday, June 1 through Sunday, June 3, 1979 at the Hotel Tudor, 104 E. 42nd St., New York, NY 10017. Except where noted, the events described below took place in the Hotel's Cameo Room.

Friday, June 1

An informal dinner at the Hotel's Three Lions Pub preceded the calling to order of the first session at 8:30 p.m. by President Bob Davis. Following his welcome, the film Bertrand Russell was presented. Next, Harry Ruja delivered a paper entitled "Bertrand Russell on Israel" which primarily concerned Russell's 1970 condemnation of that nation as an aggressor. While Russell was defended against charges of anti-Semitism, it

was claimed that he had seriously misinterpreted recent Middle Eastern history and had thereby reached an incorrect conclusion regarding Israel's place within the international community. Discussion followed after which the session was adjourned at 10:35 p.m. The Board of Directors then met in separate session.

Saturday, June 2

The second session was called to order by Bob Davis at 10:00 a.m. A film, The Life and Times of Bertrand Russell, was presented after which Jack Pitt addressed those assembled on "Bertrand Russell's Response to Marx." Using German Social Democracy as his principal source, he contrasted Marx and Russell's views on religion and human labor concluding that areas of striking agreement and disagreement exist between the two writers. Discussion followed, and the session was adjourned at 12:15 p.m.

Reconvening at 2:10 p.m., the session continued with the film Bertrand Russell Discusses the Role of the Individual. Lester E. Denonn then presented "Bertie and Litigation from Birth until Death: A Lawyer's Commentary." Included were topics such as the custody case over the child Bertrand, his four marriages and three divorces, his World War I activities, the 1940 City College Case, and posthumous legal disputes. A discussion period followed.

Bob Davis then began the business meeting by examining the question of the future disposition of Lester E. Denonn's extensive collection of Russelliana valued in excess of \$100,000. In the ensuing discussion it was agreed that this rich library would best be kept whole for research purposes and that foundations should be approached toward that end. Next, Jack Pitt, Chairman of the Scholarship Committee, reported on the award of the first BRS Traveling Scholarship to Kirk Willis, a history graduate student at the University of Wisconsin, Madison. Mr. Willis is preparing a doctoral dissertation entitled "Bertrand Russell: An Intellectual Biography, 1872-1918" and was chosen from a field of four qualified applicants. In his report Jack explained the selection process and distributed copies of the poster used to announce the Scholarship. As Secretary, Don Jackanicz stated that copies of the minutes of the 1978 annual meeting and Board of Directors meeting were available for inspection; as Chairman of the Library Committee, he also discussed Library matters with reference to a ten page handout describing materials available for sale and on a lending and rental basis.

Treasurer Steve Reinhardt then reported the BRS remains solvent. Somewhat over \$1000 is in the Treasury. Members were reminded to consult issues of Russell Society News (RSN) for more complete financial statements. It was also stated that dues alone do not provide for the BRS's needs--contributions have always been and will likely remain necessary. Lee Eisler, Chairman of the Information and Membership Committee, began his report by recommending an increase in membership dues because of inflationary pressures. An informal show of hands indicated general agreement. As of May 1, 1979, he stated, current BRS membership totaled 252; in addition, 177 persons are ex-members. The problems of member recruiting, retention, and drop-outs were reviewed. This year, it was explained, an average of \$12 in advertising expense was required to obtain a new member. Lee concluded his report by commenting on the RSN of which he is the editor: by reducing its type size and using non-profit organization postal rates for domestic mailing, considerable savings have been realized; all members are invited to contribute materials to the RSN be they essays, reviews, notices, or letters. In the absence of Ed Hopkins, Chairman of the Philosophy Committee, Lee briefly reported that the December 1979 BRS Symposium at the American Philosophical Association meeting will be held as scheduled and that papers are now being selected.

Following these Committee reports, Lee Eisler proposed that the term "Chairperson" be avoided in all BRS activities. He opined that "Chairman" is appropriate for persons of either sex and that the other term was clumsy and unnecessary. An alternative term, "Co-ordinator", was put forth. Although no definite vote on this matter was taken, it was informally agreed that the RSN will no longer use "Chairperson".

Bob Davis then opened discussion on a variety of topics. He noted that outside fundraising has thus far been unsuccessful although he is investigating the possibilities. Three Committees--Awards, Applied Philosophy, and Human Rights--have been inactive as have the local chapters such as that in Chicago. It was generally agreed that local chapters are at least presently unworkable due to the spirit of the times which does not allow for easily co-ordinated, regular meetings. The Science Committee and the Philosophy in the Schools Committee are functioning, Bob noted, but no one was present to offer reports on them. A site for the 1980 annual meeting has not been chosen. However, Bob suggested that Chicago be considered as previous meetings have been held on the East and West Coasts as well as at the Russell Archives. No one has signed up for the 1979 BRS-sponsored Britain tour. Outlining the manner by which such tours are organized, Bob emphasized the complexity involved when a special tour is made to order as opposed to when a group such as the BRS reaches an agreement, as was done in this case, to join a regularly scheduled tour with general appeal. It was suggested that a future annual meeting might be held in Britain in which event a more Russell-related tour might be arranged. Bob next read an open letter signed by Joan Baez and other members of the Humanist International Human Rights Committee which appeared in the May 30, 1979 edition of the Washington Post and other newspapers; the letter lamented the present domestic situation in Viet Nam and urged that nation's leaders to pursue just and humane policies toward dissenters and minorities. After a group discussion of what Russell's attitude toward recent Viet Nam events might have been, the session was adjourned at 4:40 p.m. Some of those in attendance retired to the Hotel's Three Lions Pub for cocktails as plans for the traditional Red Hackle Hour could not be met owing to a scarcity of that Scotch. At the suggestion of David S. Goldman, the formal annual meeting dinner was held at the Saito Restaurant, 305 E. 45th St., a few blocks north of the Hotel.

Sunday, June 3

After Bob Davis called the final session to order at 9:10 a.m., Albert Ellis spoke on "Psychotherapy and Bertrand Russell." Defining psychotherapy as "the science and art of how humans disturb themselves and what they can do about it," he referred to a variety of Russell's works to illustrate that the rational and the irrational (or the non-rational) must be balanced to foster a long-range hedonism. Following a lively discussion period, two films, Bertrand Russell Discusses Philosophy and Bertrand Russell Discusses Happiness, were presented. At 11:15 a.m. the meeting was adjourned.

Respectfully submitted,

Donald W. Jackanicz

Donald W. Jackanicz
Secretary

July 1, 1979

(59) Minutes of the Directors' Meeting:

The Board of Directors of the Bertrand Russell Society, Inc. met in one session on Friday, June 1, 1979 in the Cameo Room of the Hotel Tudor, 104 E. 42nd St., New York, NY 10017. The following eight Board members were present: Bob Davis, Lester E. Denonn, Lee Eisler, Don Jackanicz, Jack Pitt, Steve Reinhardt, Harry Ruja, and Warren Smith. The following seven Board members were not present: Kenneth Blackwell, Peter G. Cranford, Ed Hopkins, Dan McDonald, Joe Neilands, Gary Slezak, and Katharine Tait.

In the absence of Board Chairman Peter G. Cranford, the meeting was called to order by Bob Davis at 10:40 p.m. The first order of business was the election of officers for the term of one year to begin January 1, 1980. Each of the following persons was unanimously elected:

--Chairman of the Board of Directors-----Peter G. Cranford
(Nominated by Lee Eisler, seconded by Lester E. Denonn)
--Secretary of the Board of Directors-----Don Jackanicz
(Jack Pitt, Lee Eisler)
--President-----Bob Davis
(Lee Eisler, Warren Smith)
--Vice President-----Warren Smith
(Bob Davis, Steve Reinhardt)
--Secretary-----Don Jackanicz
(Jack Pitt, Warren Smith)

The incumbent Treasurer, Steve Reinhardt, announced his desire to step down from that post at the conclusion of his present term. No persons were nominated for Treasurer, and it was agreed that nominees would be solicited via Russell Society News (RSN). While he had the floor, Steve stated he will send copies of the records to Peter G. Cranford who will arrange for an independent audit of BRS finances.

The meeting then turned its attention to the BRS Bylaws and whether any reform of them might be necessary. Lee Eisler proposed (1.) that the Bylaws be amended to mention specifically that the Chairman of the Board of Directors is an officer of the BRS; (2.) that the Bylaws be amended to make the Chairman of the Board of Directors responsible for preparing the agenda for Board meetings and the President responsible for preparing the agenda for the annual general meetings; and (3.) that Article VI, Section 4 of the Bylaws be amended so as to omit "other members" in favor of "member" or to have "including oneself" follow "other members" in the sentence presently beginning "Any member is free to submit the nomination of any other members. . . ." To these proposals Jack Pitt expressed his disagreement by stating that changes in the Bylaws should be considered for only the most compelling reasons. Discussion of this constitutional issue briefly went on, however, it was pointed out that Article X specifies Bylaw amendments require a majority vote of the Society, not of the Board. Therefore, the proposed amendments were put aside with the understanding that future discussion of them and possible others may be forthcoming in the RSN.

Next, the topic of Committees was discussed especially in relation to the problems of those which are inactive. Lee Eisler expressed his regret that certain Committees exist with no head or clearly defined work. Noting that in most cases the work of individuals rather than of Committees has resulted in accomplishments, he suggested that inactive Committees contribute to member dissatisfaction. Bob Davis then recommended that members, especially new members, be located who are willing to give of their time to Committee functions. Don Jackanicz proposed to define a form of subsistence for inactive Committees but did not elaborate on this. In the end it was informally agreed to allow the status quo to continue.

A brief discussion followed concerning the Scholarship Committee with Jack Pitt distributing the résumé of George Sessions who is assisting in that Committee's work.

With no further business at hand, Lester E. Denonn moved that the meeting be adjourned; Jack Pitt seconded the motion which was unanimously carried. The meeting thus closed at 11:20 p.m.

Respectfully submitted,

Donald W. Jackanicz
Donald W. Jackanicz, Secretary

July 1, 1979

- (60) "Bertrand Russell on Israel". Abstract of the paper by Harry Ruja, read on June 1st, at the 1979 Annual Meeting:

Though in June 1943 Russell had written sympathetically of the Zionist ideal ("In a dangerous and largely hostile world, it is essential for the Jews to have some country which is theirs..."), the reality of the Jewish state failed to arouse his enthusiasm. He was silent when Israel declared its independence in 1948 and remained silent during the turbulent years which followed while Israel fought off its enemies. In June 1967, however, he labelled Israel the aggressor in the Mideast conflict, and in January 1970, just a short time before his death, he renewed the accusation.

Russell's adverse judgment of Israel was the result of a misperception of the facts relating to the Mideast conflict. He disregarded the hostility of the Arab nations to the very existence of the Jewish state; he failed to take into account the offers of peace Israeli leaders made repeatedly; he ignored the fact that Israel's "expansion" was not the product of imperialistic ambitions but of the defeat of her enemies who sought not additional territory but Israel's liquidation; and erroneously he assigned responsibility for the Arab refugees to Israel rather than to the Arab leaders who had urged the Arabs living in "Palestine" in 1947-48 to leave while hostilities were in process.

Jews honored Russell at his death for his vigorous messages in behalf of freedom for Soviet Jews and his moving words of pity and sympathy at the 1953 memorial in London for the martyrs of the Warsaw Ghetto. It is a matter of regret that Russell failed to assess the Mideast conflict accurately and condemned Israel instead of defending her in her search for peaceful self-determination.

No. 24

November 1979

- (1) It's Chicago in June 1980 (2). Science Committee seeks our interests (5a). BRS at APA 12/28/79 (8). Results of the vote: "chairperson" out, dues up, Dely in.(10). ER's Kalinga Prize (20). More paradoxes (38-40). Help wanted -- badly! (42). An asterisk in the left column indicates a request.

(1.5) COMING EVENTS

BRS at APA, December 28, 1979. See (8).

(2) ANNUAL MEETING (1980)

Chicago in June. As reported elsewhere (10), members voted to have our next annual meeting in Chicago, and in June. (Hamilton and July were 2nd choices.)

- * Don Jackanicz, who lives in Chicago, is making arrangements. He would appreciate ideas and suggestions about any aspect of the meeting. Anyone wishing to present a paper should let Don know about it. Don's address: BRS Library, address on Page 1, bottom.
- * There'll be a lot more information about the meeting in the next issue.

REPORTS FROM OFFICERS

(3) Treasurer Stephen J. Reinhardt reports:

For the 3rd quarter of 1979:

Balance on hand (6/30/79).....	1457.64	
Income: 30 new members.....	335.57	
74 renewals.....	941.74	
	Total dues.....	1277.31
Contributions.....	332.50

REPORTS FROM COMMITTEES

(4) Audio-Visual Committee (Warren Smith, Chairman):

We have disbanded our project to produce an LP album. In May of 1978 we had considered producing the Leipzig Radio Symphony Orchestra's recording of a work dedicated to Bertrand Russell, Graham Whettam's "Sinfonia Contra Timore." The Rundfunk der DDR dallied so long before assenting to our modest request to use their tape, that we lost interest. However, we did lend our copy of the tape to Robert Sherman, program director of The New York Times's Radio WQXR, asking if he would assess the music. In September 1979 he played the composition, told his listeners about our Society and its plan to produce the LP, and received highly favorable listener response. To invest \$2500 and hope to sell 700 LP's at \$4, however, is considered too risky at this time. Meanwhile, if the East German Radio or Composer Whettam produces the LP, we will be glad to help distribute and sell them.

(5a) Science Committee (Alex Dely, Chairman):

As the new Chairman of the Science Committee, I would like to mention what I have in mind doing, and I would appreciate members' reactions to my proposals.

First, let me say that, as a physicist, I am greatly interested in fundamental physical theory, in fundamental aspects of the universe. I hope eventually to develop a comprehensive unifying philosophy of science (and of knowledge.)

I am presently working with George Elam (New York) on an alternative theory about elementary particles. We have just started to develop it mathematically, and it might interest BRS members to see how a theory gets born instead of merely seeing the end product, which is often complex.

I propose to review certain scientific issues in the newsletter, using journals and other sources that most BRS members do not ordinarily come across. Here are some subjects; I need to know which of them are of possible interest to members:

1. nuclear energy. 2. DNA research and regulations. 3. cosmology. 4. relevance of science.
5. nuclear warfare. 6. science and world government. 7. unified psychology. 8. Russell on science.
9. Einstein on science. 10. other _____

I also propose to have our members meet and talk with some experts in science, probably at an annual BRS meeting. Here too the subject will depend on members' interests.

I invite all members interested in any aspect of science and its applications to become members of the Science Committee. The duties are only what each individual member wants to do, little or much. Our technological society desperately needs the input of all people in its increasingly complex decisions. And this is a place to start.

* Please send me a postcard mentioning which scientific subjects interest you. And if you wish to be on the Science Committee, please say so. My address: Physics Department, Illinois State University, Normal, IL 61761

* * * * *

(5b) We asked Alex where he stands on nuclear power. Here is his response:

I am moderately opposed to it in its present form. Only a year ago, I was in favor of it, but — besides TMI — I have since studied many NRC documents and internal Atomic Industrial Forum publications, and I was shocked. But this is a subject for future correspondence and/or papers.

(6) Russian nuclear disaster disputed. Last issue we reproduced a letter Joe Neillands had received from Zhores Medvedev, and a review of Medvedev's book, Nuclear Disaster in the Urals (RSN23-14). In the book, Medvedev claimed that there had been a nuclear explosion in the Chelyabinsk region of the Southern Urals, site of the Soviet Union's first nuclear reactor, in 1956, which the USSR had never acknowledged.

In the following New York Times story (10/30/79, p. C3), 4 American physicists dispute Medvedev's claim.

By WALTER SULLIVAN

FOUR physicists, including the former director of the Los Alamos Scientific Laboratory, where the first atomic bomb was developed, have questioned reports that a nuclear accident occurred near the southern Ural Mountains of the Soviet Union in late 1957 or early 1958.

They believe, instead, that the reports refer to contamination by fallout from unusually "dirty" Soviet weapons tests, several of which were conducted

at that time over Novaya Zemlya, 1,300 miles to the north. The blasts were in the multimegaton range.

The thesis that some form of accident occurred, with many casualties and widespread radioactive contamination, has been advanced by Dr. Zhores Medvedev, a dissident Soviet biochemist. He has proposed that a spontaneous chain reaction may have occurred in plutonium-laden reactor wastes.

In 1976, after leaving the Soviet Union, he described in the British jour-

nal New Scientist what he took to be evidence for a nuclear accident in the Ural area.

He has spelled out his argument more fully in his book "Nuclear Disaster in the Urals," published this month in Britain by Angus & Robertson and in the United States by W. W. Norton & Company.

His account has been seized upon by opponents of nuclear energy as a dramatic indication of its hazards. The challenge to his interpretation is presented in the Oct. 26 issue of Science, journal of the American Association for

the Advancement of Science, by three Los Alamos staff members, Drs. William Stratton, Danny Stillman and Sumner Barr, and the laboratory's former director, Dr. Harold M. Agnew. Dr. Agnew is now president of the General Atomic Company in San Diego.

Rumors Reached Europe

Rumors of an accident in the Soviet Union began reaching western Europe in 1958. Some accounts said thousands were injured, some of them seriously. If there had been such a catastrophe, Dr. Medvedev reasoned, Soviet biolo-

Dr. Zhores Medvedev
Camera Press

The New York Times/Oct. 30, 1979

gists would have taken advantage of it to study the effects of heavy radioactive contamination.

He searched the open Soviet literature for such accounts and found that unusually high levels of strontium 90 and cesium 137 had been found in several Soviet lakes.

From the life forms identified in the report he concluded that the affected area lay to the east of Kyshtym on the eastern slope of the Urals. Near that city the Soviet Union built the first reactors to produce plutonium for its weapons program.

Dr. Medvedev argues that radioactive wastes stored in metal tanks or dumped into an excavation accumulated a sufficient concentration of plutonium to constitute a "critical mass," leading to a spontaneous chain reaction and explosion.

In reply the authors of the Science article term it "unlikely" that the Russians would allow that much plutonium to escape their refining process. If a such a chain reaction did occur, they say, it would have been "too slow to disturb the ground more than trivially."

Such an accident, the physicists say,

would be unlikely to spread strontium and cesium — and nothing else — over so wide an area. They point out that the report cited by Dr. Medvedev made no mention of plutonium as a contaminant. Strontium and cesium are typical constituents of nuclear weapons fallout in which the shorter-lived radioactive elements have already decayed.

Unusually high concentrations of weapons fallout have occurred in the United States and elsewhere under special meteorological conditions, such as the washing out of fallout particles from the atmosphere by heavy rains.

While the data can be explained as fallout, the four physicists say an accidental release of radiation cannot be ruled out. Nevertheless, they add, the magnitude of the event "may have been grossly exaggerated," the source of the radiation may have been identified "uncritically" and an improbable mode of its dispersal suggested.

Furthermore, they say in conclusion, "we find it hard to believe that an area of this magnitude could become contaminated and the event not discussed in detail or by more than one individual for more than 20 years."

(7) Universal Human Rights Committee (David Makinster, Acting Chairman):

Several members responded to my observations in the last newsletter (RSN23-16). I will make a full report -- including recommendations -- in the next issue.

PHILOSOPHERS' CORNER

(8) BRS at APA: the Program:

Program
of
THE BERTRAND RUSSELL SOCIETY, INC.
at the December 1979 meeting
of the Eastern Division of
THE AMERICAN PHILOSOPHICAL ASSOCIATION

Time: December 28, 1979 (Friday morning)

Place: The Sheraton Centre, New York City

I. DEFINITION AND DESCRIPTION IN RUSSELL, 1900-1910
Thomas P. Barron, University of Texas/Austin

Commentator: Jon Fjeld, Duke University

II. RUSSELL AND ONTOLOGICAL EXCESS
D. A. Griffiths, University of Hong Kong

Commentator: Tom Wartenberg, Duke University

Chairman: David Johnson, Naval Academy

Copies of the papers presented here may be borrowed at no cost, or bought for \$2, by writing to: Mr. Don Jackanicz, Librarian, BRS Library, 3802 N. Kenneth Avenue, Chicago, IL 60641.

This program is presented by the BRS Philosophers' Committee, Edwin Hopkins, Chairman

(9) BRS at APA: Abstracts of the Papers:

Russell and Ontological Excess, D.A. Griffiths

The Theory of Descriptions is usually presented as the means by which Russell liberated himself from Meinongian ontological excess. This presentation is examined, and found to be misleading.

It is argued first that the account of denoting set out in 'The Principles of Mathematics' (POM) avoids (as does Frege's theory) what Russell recognized, in 'On Denoting', to be the Meinongian route into ontological excess. Secondly it is shown that a second route, which Frege's theory does not avoid was recognized in both POM and 'On Denoting', and in the former avoiding tactics were developed. These tactics, however, clearly fail in the case of negative existential statements.

It is concluded, therefore, that Russell of POM does not need the theory of descriptions to curb his ontological excesses; an analysis of existential statements will suffice. A need will arise only if the POM account of denoting is rejected.

Definition and Description in Russell, 1900-1910, Thomas P. Barron

The label "logician" -- commonly applied both to the program of the Principles of Mathematics and to that of Principia Mathematica -- is generally understood as indicating an attempt both (i) to define the concepts of mathematics in terms of logical concepts, and (ii) given these definitions, to derive the truths of mathematics from axioms involving only logical terms. I contend that this label is ambiguous since Russell meant one thing when he spoke of definition in the Principles, and yet another thing when he spoke of definition in Principia. The main function of definitions in the former work is epistemological; in the latter, ontological. I map out the problems that led to these important changes -- changes that the introduction to Principia tends to mask -- and show how they constitute a major discontinuity in the development of Russell's general ontology as well as in his philosophy of mathematics.

THE MEMBERS VOTE

(10) Results of the RSN23 ballot:

Part 1. Election of Directors. 6 candidates were elected, for 3-year terms starting 1/1/80: KENNETH BLACKWELL, JACK COWLES, LESTER DENONN, J. B. NEILANDS, RAYMOND PLANT, & STEPHEN J. REINHARDT.

Part 2. Time and place of 1980 meeting: Chicago in June. When only "1st choice" were counted, May, June and July were tied; but when 1st and 2nd choices were combined and counted, June was out front, followed by July. Chicago led the rest when 1st choice (only) were counted, and also when 1st and 2nd choices were combined and counted. Hamilton came in 2nd.

Part 3. Proposal on the use of "chairperson". "Chairperson" will be discarded. The vote against it was nearly 2 to 1.

Part 4. Proposal to raise dues. The proposal was approved. Dues are raised \$5, except for students. The new rates, effective at once: regular \$20, couple \$25, student \$5. Outside USA and Canada, add \$5, as before.

Part 5. New head of Science Committee proposed. Proposal approved. Alex Dely is the new Chairman.

In 1977, 11% of the members voted; in 1978, 15%; this year the figure is 20%. Not great but improving.

BY BERTRAND RUSSELL

(11) Sham education. TOM STANLEY writes: "I was pleased to see an article on Haldeman-Julius in Russell 29-32. William Ryan overlooked an early contribution Russell made to a Haldeman-Julius pamphlet." Tom sent us the pamphlet, from which we reproduce the overlooked contribution:

LITTLE BLUE BOOK NO. 1125

22 A BOOK OF AMERICAN SHAMS

THE SHAM OF AMERICAN EDUCATION

By BERTRAND RUSSELL

Having not seen America since the spring of 1914, I was expected, during my recent visit, to notice many changes. Americans find it necessary to their self-respect to believe that their country changes fast, and no doubt in the main the belief is true; but naturally the changes are not so readily perceived by strangers as by those who take the constant background of Americanism for granted. Nevertheless I did notice some rather interesting changes. Ten years ago, I saw mainly universities and university teachers. Certainly their attitude then was in many respects different from that of many teachers at the present time. Ten years ago the majority were doing their work with no strong consciousness of outside interference; now many of them seem to feel that they have to choose between hypocrisy and starvation.

There are two quite different kinds of tyranny to which university men are exposed in America: that of boards of trustees in the privately endowed universities, and that of the democracy in the State universities. The former is primarily economic, the latter primarily theological; both, of course, combine on moral persecution, and dismiss any man who becomes involved in a scandal, however innocently. Moreover, methods exist of fastening scandals upon those whose opinions are disliked.

PRINTED IN THE UNITED STATES OF AMERICA

A BOOK OF AMERICAN SHAMS 23

The tyranny of boards of trustees is part of the power of capitalism, and is therefore attacked by socialists. Upton Sinclair's book "The Goose-Step" consists of a long series of instances with names and dates. This book naturally roused great interest in academic circles. As a rule, the Principal of a university denounces it as a gross libel, and quite unreliable in its facts; but the younger teachers, in a quiet corner, will whisper that it is quite correct, at any rate so far as *their* university is concerned. An outsider cannot, of course, form a well-informed judgment on this matter without a much longer study than I was able to make. But obviously it is a bad system to make learned men dependent for their livelihood upon a collection of ignorant and bigoted business men. Some of our provincial universities have tended to imitate America in this respect, but so far the prestige of Oxford and Cambridge has prevented the bad effects that might have been feared.

The tyranny of the democracy raises more interesting problems, and is much less discussed, because those who dislike tyranny are apt to like democracy. In the South and in some parts of the Middle West, Protestantism is as fierce as in Belfast, and the whole intellectual atmosphere is reminiscent of the seventeenth century. Since the taxpayer's money supports the State universities, he feels that these institutions ought to magnify his ego by teaching what he believes, not what is believed by those who have taken the trouble to form a rational opinion. Hence the all but

successful attempts to make it illegal to teach evolution in certain States. In the East, in some States, the Catholics are sufficiently powerful to enforce an Inquisition on State teachers. This atmosphere of theological persecution makes many State universities quite as destitute of freedom as those that depend upon private endowments. And it is, in fact, a more serious matter than capitalist tyranny, for two reasons. First, the tyranny of a majority is harder to endure and to resist than that of a ruling oligarchy, because the latter, but not the former, rouses the sympathy and admiration of the public for the victim. Secondly, theology interferes more intimately than politics with the matters concerned in university teaching. It is very difficult to think of a single subject where a teacher can avoid conflicting with those who believe in the literal truth of the whole of the Bible, as the Fundamentalists do.

(12) About the Chinese. The following ran in "The Atlantic Monthly" in December 1921, pp. 771-777:

SOME TRAITS IN THE CHINESE CHARACTER

THERE is a theory among Occidentals that the Chinaman is inscrutable, full of secret thoughts, and impossible for us to understand. It may be that a greater experience of China would have brought me to share this opinion; but I could see nothing to support it during

the time when I was working in that country. I talked to the Chinese as I should have talked to English people, and they answered me much as English people would have answered a Chinese whom they considered educated and not wholly unintelligent. I do not be-

lieve in the myth of the 'subtle Oriental': I am convinced that in a game of mutual deception an Englishman or American can beat a Chinese nine times out of ten. But as many comparatively poor Chinese have dealings with rich white men, the game is often played

only on one side. Then, no doubt, the white man is deceived and swindled; but not more than a Chinese mandarin would be in London.

One of the most remarkable things about the Chinese is their power of securing the affection of foreigners. Al-

most all Europeans like China, both those who come only as tourists and those who live there for many years. In spite of the Anglo-Japanese alliance, I cannot recall a single Englishman in the Far East who liked the Japanese as much as the Chinese. Those who have lived long among them tend to acquire their outlook and their standards. New arrivals are struck by obvious evils: the beggars, the terrible poverty, the prevalence of disease, the anarchy and corruption in politics. Every energetic Westerner feels at first a strong desire to reform these evils, and of course they ought to be reformed.

But the Chinese, even those who are the victims of preventable misfortunes, show a vast passive indifference to the excitement of the foreigners; they wait for it to go off, like the effervescence of soda-water. And gradually strange doubts creep into the mind of the bewildered traveler: after a period of indignation, he begins to doubt all the maxims that he has hitherto accepted without question. Is it really wise to be always guarding against future misfortune? Is it prudent to lose all enjoyment of the present through thinking of the disasters that may come at some future date? Should our lives be passed in building a mansion that we shall never have leisure to inhabit?

The Chinaman answers these questions in the negative, and therefore has to put up with poverty, disease, and anarchy. But, to compensate for these evils, he has retained, as industrial nations have not, the capacity for civilized enjoyment, for leisure and laughter, for pleasure in sunshine and philosophical discourse. The Chinaman, of all classes, is more laughter-loving than any other race with which I am acquainted; he finds amusement in everything, and a dispute can always be softened by a joke.

I remember one hot day, when a party of us were crossing the hills in chairs. The way was rough and very steep, the work for the coolies very severe. At the highest point of our journey, we stopped for ten minutes to let the men rest. Instantly they all sat in a row, brought out their pipes, and began to laugh among themselves as if they had not a care in the world. In any country that had learned the virtue of forethought, they would have devoted the moments to complaining of the heat, in order to increase their tip. We, being Europeans, spent the time worrying whether the automobile would be waiting for us at the right place. Well-to-do Chinese would have started a discussion as to whether the universe moves in cycles or progresses by a rectilinear motion; or they might have set to work to consider whether the truly virtuous man shows complete self-abnegation, or may, on occasion, consider his own interest.

One comes across white men occasionally who suffer under the delusion that China is not a civilized country. Such men have quite forgotten what constitutes civilization. It is true that there are no trams in Peking, and that the electric light is poor. It is true that there are places full of beauty, which Europeans itch to make hideous by digging up coal. It is true that the educated Chinaman is better at writing poetry than at remembering the sort of facts which can be looked up in

Whitaker's Almanac. A European, in recommending a place of residence, will tell you that it has a good train-service; the best quality he can conceive in any place is that it should be easy to get away from. But a Chinaman will tell you nothing about the trains; if you ask, he will tell you wrong. What he tells you is that there is a palace built by an ancient emperor, and a retreat in a lake for scholars weary of the world, founded by a famous poet of the Tang dynasty. It is this outlook that strikes the Westerner as barbaric.

The Chinese, from the highest to the lowest, have an imperturbable quiet dignity, which is usually not destroyed, even by a European education. They are not self-assertive, either individually or nationally; their pride is too profound for self-assertion. They admit China's military weakness in comparison with foreign powers, but they do not consider efficiency in homicide the most important quality in a man or a nation. I think that at bottom they almost all believe that China is the greatest nation in the world, and has the finest civilization. A Westerner cannot be expected to accept this view, because it is based on traditions utterly different from his own. But gradually one comes to feel that it is, at any rate, not an absurd view; that it is, in fact, the logical outcome of a self-consistent standard of values. The typical Westerner wishes to be the cause of as many changes as possible in his environment; the typical Chinaman wishes to enjoy as much and as delicately as possible. This difference is at the bottom of most of the contrast between China and the English-speaking world.

We in the West make a fetish of 'progress,' which is the ethical camouflage of the desire to be the cause of changes. If we are asked, for instance, whether machinery has really improved the world, the question strikes us as foolish: it has brought great changes, and therefore great 'progress.' What we believe to be a love of progress is really, in nine cases out of ten, a love of power, an enjoyment of the feeling that by our fiat we can make things different. For the sake of this pleasure, a young American will work so hard that, by the time he has acquired his millions, he has become a victim of dyspepsia, compelled to live on toast and water, and to be a mere spectator of the feasts that he offers to his guests. But he consoles himself with the thought that he can control politics, and provoke or prevent wars as may suit his investments. It is this temperament that makes Western nations 'progressive.'

II

There are, of course, ambitious men in China, but they are less common than among ourselves. And their ambition takes a different form — not a better form, but one produced by the preference of enjoyment to power. It is a natural result of this preference that avarice is a widespread failing of the Chinese. Money brings the means of enjoyment, therefore money is passionately desired. With us, money is desired chiefly as a means to power; politicians, who can acquire power without much money, are often content to remain poor. In China, the *tuchuns* (military governors), who have the real power, almost always use it for the sole

purpose of amassing a fortune. Their object is to escape to Japan at a suitable moment, with sufficient plunder to enable them to enjoy life quietly for the rest of their days. The fact that in escaping they lose power does not trouble them in the least. It is, of course, obvious that such politicians, who spread only devastation in the provinces committed to their care, are far less harmful to the world than our own, who ruin whole continents in order to win an election campaign.

The corruption and anarchy in Chinese politics do much less harm than one would be inclined to expect. But for the predatory desires of the Great Powers, — especially Japan, — the harm would be much less than is done by our own 'efficient' governments. Nine tenths of the activities of a modern government are harmful; therefore, the worse they are performed, the better. In China, where the government is lazy, corrupt, and stupid, there is a degree of individual liberty which has been wholly lost in the rest of the world.

The laws are just as bad as elsewhere: occasionally, under foreign pressure, a man is imprisoned for Bolshevik propaganda, just as he might be in England or America. But this is quite exceptional; as a rule, in practice, there is very little interference with free speech and a free press. The individual does not feel obliged to follow the herd, as he has in Europe since 1914, and in America since 1917. Men still think for themselves, and are not afraid to announce the conclusions at which they arrive. Individualism has perished in the West, but in China it survives, for good as well as for evil. Self-respect and personal dignity are possible for every coolie in China, to a degree which is, among ourselves, possible only for a few leading financiers.

The business of 'saving face,' which often strikes foreigners in China as ludicrous, is only the carrying out of respect for personal dignity in the sphere of social manners. Everybody has 'face,' even the humblest beggar; there are humiliations that you must not inflict upon him, if you are not to outrage the Chinese ethical code. If you speak to a Chinaman in a way that transgresses the code, he will laugh, because your words must be taken as spoken in jest if they are not to constitute an offense.

Once I thought that the students to whom I was lecturing were not as industrious as they might be, and I told them so in just the same words that I should have used to English students in the same circumstances. But I soon found I was making a mistake. They all laughed uneasily, which surprised me until I saw the reason. Chinese life, even among the most modernized, is far more polite than anything to which we are accustomed. This, of course, interferes with efficiency, and also (what is more serious) with sincerity and truth in personal relations. If I were Chinese, I should wish to see it mitigated. But to those who suffer from the brutalities of the West, Chinese urbanity is very restful. Whether on the balance it is better or worse than our frankness, I shall not venture to decide.

The Chinese remind one of the English in their love of compromise and in their habit of bowing to public opinion. Seldom is a conflict pushed to its ultimate brutal issue. The treat-

ment of the Manchu Emperor may be taken as a case in point. When a Western country becomes a republic, it is customary to cut off the head of the deposed monarch, or at least to cause him to flee the country. But the Chinese have left the Emperor his title, his beautiful palace, his troops of eunuchs, and an income of several million dollars a year. He is a boy of fourteen, living peaceably in the Forbidden City. Once, in the course of a civil war, he was nominally restored to power for a few weeks; but he was deposed again, without being in any way punished for the use to which he had been put.

Public opinion is a very real force in China, when it can be roused. It was, by all accounts, mainly responsible for the downfall of the An Fu party in the summer of 1920. This party was pro-Japanese, and was accepting loans from Japan. Hatred of Japan is the strongest and most widespread of political passions in China, and it was stirred up by the students in fiery orations. The An Fu party had, at first, a great preponderance of military strength; but their soldiers walked away when they came to understand the cause for which they were expected to fight. In the end, the opponents of the An Fu party were able to enter Peking and change the government almost without firing a shot.

The same influence of public opinion was decisive in the teachers' strike, which was on the point of being settled when I left Peking. The Government, which is always impecunious, owing to corruption, had left its teachers unpaid for many months. At last, they struck to enforce payment, and went on a peaceful deputation to the Government, accompanied by many students. There was a clash with the soldiers and police, and many teachers and students were more or less severely wounded. This led to a terrific outcry, because the love of education in China is profound and widespread. The newspapers clamored for revolution. The Government had just spent nine million dollars in corrupt payments to three teachers who had descended upon the capital to extort blackmail. It could not find any colorable pretext for refusing the few hundred thousands required by the teachers, and it capitulated in panic. I do not think there is any Anglo-Saxon country where the interests of teachers would have roused the same degree of public feeling.

Nothing astonishes a European more in the Chinese than their patience. The educated Chinese are well aware of the foreign menace. They realize acutely what the Japanese have done in Manchuria and Shantung. They are aware that the English in Hong Kong are doing their utmost to bring to naught the Canton attempt to introduce good government in the South. They know that all the great powers, without exception, look with greedy eyes upon the undeveloped resources of their country, especially its coal and iron. They have before them the example of Japan, which, by developing a brutal militarism, a cast-iron discipline, and a new reactionary religion, has succeeded in holding at bay the brutal lusts of 'civilized' industrialists. Yet they neither copy Japan nor submit tamely to foreign domination. They think, not in decades, but in centuries. They have been conquered before, first

by the Tartars and then by the Manchus. But in both cases they absorbed their conquerors. Chinese civilization persisted, unchanged; and after a few generations the invaders became more Chinese than their subjects.

Manchuria is a rather empty country, with abundant room for colonization. The Japanese assert that they need colonies for their surplus population, yet the Chinese immigrants into Manchuria exceed the Japanese a hundred-fold. Whatever may be the temporary political status of Manchuria, it will remain a part of Chinese civilization, and can be recovered whenever Japan happens to be in difficulties. The Chinese derive such strength from their four hundred millions, the toughness of their national customs, their power of passive resistance, and their unrivaled national cohesiveness, — in spite of the civil wars, which merely ruffle the surface, — that they can afford to despise military methods, and to wait till the feverish energy of their oppressors shall have exhausted itself in internecine combats.

China is much less a political entity than a civilization — the only one that has survived from ancient times. Since the days of Confucius, the Egyptian, Babylonian, Persian, Macedonian, and Roman empires have perished; but China has persisted through a continuous evolution. There have been foreign influences — first Buddhism, and now Western science. But Buddhism did not turn the Chinese into Indians, and Western science will not turn them into Europeans. I have met men in China who knew as much of Western learning as any professor among ourselves; yet they had not been thrown off their balance, or lost touch with their own people. What is bad in the West — its brutality, its restlessness, its readiness to oppress the weak, its preoccupation with purely material aims — they see to be bad, and do not wish to adopt. What is good, especially its science, they do wish to adopt.

The old indigenous culture of China has become rather dead; its art and literature are not what they were, and Confucius does not satisfy the spiritual needs of a modern man, even if he is Chinese. The Chinese who have had a European or American education realize that a new element is needed to vitalize native traditions, and they look to our civilization to supply it. But they do not wish to construct a civilization just like ours; and it is precisely in this that the best hope lies. If they are not goaded into militarism, they may produce a genuinely new

civilization, better than any that we in the West have been able to create.

III

So far, I have spoken chiefly of the good sides of the Chinese character; but, of course, China, like every other nation, has its bad sides also. It is disagreeable to me to speak of these, as I experienced so much courtesy and real kindness from the Chinese, that I should prefer to say only nice things about them. But for the sake of China, as well as for the sake of truth, it would be a mistake to conceal what is less admirable. I will only ask the reader to remember that, in the balance, I think the Chinese one of the best nations I have come across, and am prepared to draw up a graver indictment against every one of the great powers.

Shortly before I left China, an eminent Chinese writer pressed me to say what I considered the chief defects of the Chinese. With some reluctance, I mentioned three: avarice, cowardice, and callousness. Strange to say, my interlocutor, instead of getting angry, admitted the justice of my criticism, and proceeded to discuss possible remedies. This is a sample of the intellectual integrity which is one of China's greatest virtues.

The callousness of the Chinese is bound to strike every Anglo-Saxon. They have none of that humanitarian impulse which leads us to devote one per cent of our energy to mitigating the evils wrought by the other ninety-nine per cent. For instance, we have been forbidding the Austrians to join with Germany, to emigrate, or to obtain the raw materials of industry. Therefore the Viennese have starved, except those whom it has pleased us to keep alive, from philanthropy. The Chinese would not have had the energy to starve the Viennese, or the philanthropy to keep some of them alive. While I was in China, millions were dying of famine; men sold their children into slavery for a few dollars, and killed them if this sum was unobtainable. Much was done by white men to relieve the famine, but very little by the Chinese, and that little vitiated by corruption. It must be said, however, that the efforts of the white men were more effective in soothing their own consciences than in helping the Chinese. So long as the present birth-rate and the present methods of agriculture persist, famines are bound to occur periodically; and those whom philanthropy keeps alive through one famine are only too likely to perish in the next.

Famines in China can be permanently cured only by better methods of agriculture combined with emigration or birth-control on a large scale. Educated Chinese realize this, and it makes them indifferent to efforts to keep the present victims alive. A great deal of Chinese callousness has a similar explanation, and is due to perception of the vastness of the problems involved. But there remains a residue which cannot be so explained. If a dog is run over by an automobile and seriously hurt, nine out of ten passers-by will stop to laugh at the poor brute's howls. The spectacle of suffering does not of itself rouse any sympathetic pain in the average Chinaman; in fact, he seems to find it mildly agreeable. Their history, and their penal code before the revolution of 1911, show that they are by no means destitute of the impulse of active cruelty; but of this I did not myself come across any instances. And it must be said that active cruelty is practised by all the great nations, to an extent concealed from us only by our hypocrisy.

Cowardice is *prima facie* a fault of the Chinese; but I am not sure that they are really lacking in courage. It is true that, in battles between rival tuchuns, both sides run away, and victory rests with the side that first discovers the flight of the other. But this proves only that the Chinese soldier is a rational man. No cause of any importance is involved, and the armies consist of mere mercenaries. When there is a serious issue, as, for instance, in the Tai-Ping rebellion, the Chinese are said to fight well, particularly if they have good officers. Nevertheless, I do not think that, in comparison with the Anglo-Saxons, the French, or the Germans, the Chinese can be considered a courageous people, except in the matter of passive endurance. They will endure torture, and even death, for motives which men of more pugnacious races would find insufficient — for example, to conceal the hiding-place of stolen plunder. In spite of their comparative lack of active courage, they have less fear of death than we have, as is shown by their readiness to commit suicide.

Avarice is, I should say, the gravest defect of the Chinese. Life is hard, and money is not easily obtained. For the sake of money, all except a very few foreign-educated Chinese will be guilty of corruption. For the sake of a few pence, almost any coolie will run an imminent risk of death. The difficulty of combating Japan has arisen mainly from the fact that hardly any Chinese politician can resist Japanese bribes. I think this defect is probably due to the fact that, for many ages, an honest

living has been hard to get; in which case it will be lessened as economic conditions improve. I doubt if it is any worse now in China than it was in Europe in the eighteenth century. I have not heard of any Chinese general more corrupt than Marlborough, or of any politician more corrupt than Cardinal Dubois. It is, therefore, quite likely that changed industrial conditions will make the Chinese as honest as we are — which is not saying much.

I have been speaking of the Chinese as they are in ordinary life, when they appear as men of active and skeptical intelligence, but of somewhat sluggish passions. There is, however, another side to them: they are capable of wild excitement, often of a collective kind. I saw little of this myself, but there can be no doubt of the fact. The Boxer rising was a case in point, and one which particularly affected Europeans. But their history is full of more or less analogous disturbances. It is this element in their character that makes them incalculable, and makes it impossible even to guess at their future. One can imagine a section of them becoming fanatically Bolshevik, or anti-Japanese, or Christian, or devoted to some leader who would ultimately declare himself Emperor. I suppose it is this element in their character that makes them, in spite of their habitual caution, the most reckless gamblers in the world. And many emperors have lost their thrones through the force of romantic love, although romantic love is far more despised than it is in the West.

To sum up the Chinese character is not easy. Much of what strikes the foreigner is due merely to the fact that they have preserved an ancient civilization which is not industrial. All this is likely to pass away, under the pressure of Japanese, European, and American financiers. Their art is already perishing, and being replaced by crude imitations of second-rate European pictures. Most of the Chinese who have had a European education are quite incapable of seeing any beauty in native painting, and merely observe contemptuously that it does not obey the laws of perspective.

The obvious charm which the tourist finds in China cannot be preserved; it must perish at the touch of industrialism. But perhaps something may be preserved, something of the ethical qualities in which China is supreme, and which the modern world most desperately needs. Among those qualities I place first the pacific temper, which seeks to settle disputes on grounds of justice rather than by force. It remains to be seen whether the West will allow this temper to persist, or will force it to give place, in self-defense, to a frantic militarism like that to which Japan has been driven.

(Thank you, John Harper)

ER BIBLIOGRAPHIES

- (13) Another ER bibliography. "Harry Ruja, in his article on bibliography (RSN23-20)," writes Tom Stanley, "did not mention the one I've found most useful: 'Bertrand Russell: A Classified Bibliography, 1929-1967' by Harry Ruja, in 'The Bulletin of Bibliography' September-December 1968, pp. 182-190, 192 and January-March 1969, pp. 29-31. This is especially valuable for its lists of book reviews and articles in magazines."

ABOUT BERTRAND RUSSELL

(14) Virginia Woolf's diary provides another point of view about BR:

Saturday 3 December

I dined with the Sangers last night, & enjoyed society. I wore my new black dress, & looked, I daresay, rather nice. That's a feeling I very seldom have; & I rather intend to enjoy it oftener. I like clothes, if I can design them. So Bertie Russell was attentive, & we struck out like swimmers who knew their waters.³ One is old enough to cut the trimmings & get to the point. Bertie is a fervid egoist—which helps matters. And then, what a pleasure—this mind on springs. I got as much out of him as I could carry.

"For I should soon be out of my depth" I said. I mean, I said, "all this" & I waved my hand round the room, where by this time were assembled Mr & Miss Amos, Rosalind Toynbee, a German, & Mrs Lucas—⁴ "All this is mush; & you can put a telescope to your eye & see through it."

"If you had my brain you would find the world a very thin, colourless place" he said

But my colours are so foolish I replied.

You want them for your writing, he said. Do you never see things impersonally?

Yes. I see literature like that; Milton, that is.

The Choruses in Samson are pure art, he said.

But I have a feeling that human affairs are impure.

God does mathematics. That's my feeling. It is the most exalted form of art.

Art? I said.

Well there's style in mathematics as there is in writing, he said. I get the keenest aesthetic pleasure from reading well written mathematics. Lord Kelvin's style was abominable.⁵ My brain is not what it was. I'm past my best—& therefore, of course, I am now celebrated. In Japan they treated me like Charlie Chaplin—disgusting.⁶ I shall write no more mathematics. Perhaps I shall write philosophy. The brain becomes rigid at 50—& I shall be 50 in a month or two. I have to make money.

Surely money is settled upon Russells by the country, I said.

I gave mine away years ago, to help promising young men who wanted to write poetry.⁷ From 28 to 38 I lived in a cellar & worked. Then my passions got hold of me. Now I have come to terms with my self: I am no longer surprised at what happens. I don't expect any more emotional experiences. I don't think any longer that something is going to happen when I meet a new person.

I said that I disagreed with much of this. Yet perhaps I did not expect very much to happen from talking to Bertie. I felt that he had talked to so many people. Thus I did not ask him to come here—I enjoyed it though a good deal; & got home & drank cocoa in the kitchen; & at 7.30 this morning traced a smell of shag in the house & found L. smoking his pipe by the kitchen fire, having come back safe.

3. The Hon. Bertrand Arthur William Russell (1872-1970), grandson of Lord John Russell, twice Prime Minister, and heir-presumptive to his earldom; philosopher, mathematician and pacifist; at Trinity College, Cambridge, he and C. P. Sanger were both Apostles. VW and Russell came to dine without their spouses: LW was seeing his constituents in the north; Russell's wife, Dora Black, with whom he had spent the previous academic year in China and had married in September following his divorce from his first wife Alys, had given birth to their son on 16 November. Russell was at this time earning his living in London by journalism and lecturing.
4. Maurice Sheldon Amos (1872-1940), jurist, was a friend and contemporary of both Sanger and Russell at Trinity; his sister was called Bonté and was a doctor. Rosalind Toynbee, née Murray (1890-1967), wife of the historian Arnold Toynbee, daughter of Professor Gilbert Murray and granddaughter of the formidable Lady Carlisle, was herself a novelist. Mrs Lucas was probably Emily Beatrice Coursolles Jones (1893-1966), not long married to the Cambridge don F. L. Lucas (see below, 3 January 1922, n 3); in 1919 she had reviewed *Night and Day* in the *Cambridge Magazine* (see *I VW Diary*, p 310, fn).
5. William Thomson, first Baron Kelvin of Largs (1824-1907), Professor of Natural Philosophy in Glasgow for over 50 years, mathematical physicist and second inventor; his papers were published in 5 volumes, 1882-1911.
6. On their way back from China in July Russell and Dora Black had visited Japan where they had been pursued by journalists. See *The Autobiography of Bertrand Russell*, Vol. II (1968), pp 133-5.

Saturday 23 February

That reminds me of the celebrated Mr [Bertrand] Russell the other night at Karin's. (She gives her weekly party in the great gay drawingroom which is nevertheless a little echoing & lofty & very very chill). He said "Just as I saw a chance of happiness, the doctors said I had got cancer. My first thought was that that was one up to God. He had brought it off—just as I thought I saw a chance of happiness. When I was just getting better—I had very nearly died—my temperature was 107 twice over—the thing I liked was the sun: I thought how nice to feel the sun & the rain still. People came a long way after that. I wanted people very much, but not so much as the sun. The old poets were right. They made people think of death as going where they could not see the sun. I have become an optimist. I realise now that I like life—I want to live. Before that illness, I thought life was bad. Its an odd thing—both my pessimism & my optimism are instinctive" (I forget which he said was the deeper of the two.) So to Charlie Sanger, who is good all through; & then on to Moore. "When he first came up to Cambridge, he was the most wonderful creature in the whole world. His smile was the most beautiful thing I have ever seen. We believed in Berkeley" (perhaps). "Suddenly, something went wrong with him; something happened to him and his work. Principia Ethica was nothing like so good as his Essay on Judgment (?). He was very fond of Ainsworth.¹⁰ I don't know what happened— It ruined him. He took to putting out his tongue after that. You (I, that is) said he had no complexes. But he's full of them. Watch him putting his tongue round his mouth. I said to him once, Moore, have you ever told a lie? "YES" he said—which was the only lie he ever told. He always speaks the truth at the Aristotelian. An old gentleman met me on my way here, & asked if I were going. No; I said (not such a fool). Joad is speaking tonight. Haldane made a speech once, & old Shad Hodgson had to pass a vote of thanks. He had had an epileptic fit that afternoon. He got up & talked nonsense—utter nonsense. So they asked me. And I had to thank Haldane, though I'd got ready to criticise every argument he used. Never mind: I put them all into an article, & that stung much sharper."¹¹ I asked him, as I ask everyone, to write his life for the press. But my mind is absolutely relevant. I can't ramble. I stick to facts. "Facts are what we want. Now the colour of your mother's hair?" "She died when I was two—there you are—relevant facts. I remember my grandfather's death, & crying, & then thinking it was over. I saw my brother drive up in the afternoon. Hooray! I cried. They told me I must not say hooray at all that day. I remember the servants all looking very attentively at me when I was brought to Pembroke Lodge after my father died. Whitehead's father, who was the local parson, was sent for to persuade me that the earth was round. I said it was flat. And I remember—some seaside place, now destroyed—remembered the sands, I think."¹²

10. G. E. Moore's 'The Nature of Judgment' was published in *Mind*, vol. viii, 1899; his *Principia Ethica* in 1903. Alfred Richard Ainsworth (1897-1959), Scholar of King's, an Apostle, was a close friend of Moore's; in 1894 the two went to Edinburgh together, where from 1903-07 Ainsworth was a lecturer in Greek. In 1908 he married Moore's youngest sister Sarah (an unhappy union which ended in divorce) and joined the Board of Education which he was to serve until 1940.
11. The Aristotelian Society, with lay as well as academic membership, was founded in 1880; the presidential address by Richard Burdon Haldane, 1st Viscount Haldane (1856-1928), statesman and sometime Lord Chancellor, criticised by Russell (see *Mind*, vol. xvii, 1908), was on 'The Methods of Modern Logic and the Conception of Infinity'. Shadsworth Hollway Hodgson (1832-1912) was the first president, 1880-1894, and a leading spirit of the Aristotelian Society.
12. Both Bertrand Russell's parents—John Russell, Viscount Amberley (1842-1876) and Katherine Louisa, née Stanley (d. 1874), had died before he was four years old, and he and his brother were taken to Pembroke Lodge, Richmond Park, the home of his grandfather Lord John Russell, 1st Earl Russell; the elder boy Frank (John Francis, 2nd Earl Russell, 1865-1931) was sent to Winchester, but Bertie was brought up by his grandmother in rigorously disciplined, isolated, spartan conditions. The summer of 1877 he spent with his grandparents in the Isle of Thanet, in the parish of St Peter's, of which the Rev. Alfred Whitehead was vicar; his son Alfred North Whitehead (1861-1947), FRS, mathematician and philosopher, was co-author with Russell of the commanding *Principia Mathematica* (1910-13). See *The Autobiography of Bertrand Russell, 1872-1914*, 1967.

Saturday 23 February (continued)

He had no one to play with. One does not like him. Yet he is brilliant of course; perfectly outspoken; familiar; talks of his bowels; likes people; & yet & yet— He disapproves of me perhaps? He has not much body of character. This luminous vigorous mind seems attached to a flimsy little car, like that on a large glinting balloon. His adventures with his wives diminish his importance.¹³ And he has no chin, & he is dapper. Nevertheless, I should like the run of his headpiece. We parted at the corner of the Square; no attempt to meet again.

13. Bertrand Russell's first, and for almost two decades loveless, marriage to Karin's aunt Alys Pearsall Smith finally ended in divorce in 1921, when he married Dora Black; but he had had in the interim several manifest affairs with married women. See Russell's autobiographical volumes and *The Life of Bertrand Russell* by Ronald W. Clark, 1975.

All of the above comes from *The Diary of Virginia Woolf*, Volume 2, 1920-24, Anne Olivier Bell and Andrew McKeille, eds. (New York: Harcourt Brace Jovanovich 1978) pp.146-148, 293-295.

(Thank you, Don Jackanicz)

- (15) Skinner. From a review, by Rosemary Dinnage, of B. F. Skinner's *The Shaping of a Behaviorist* (Part Two of an *Autobiography*), in *The New York Times Book Review*, 5/20/79, p. 11:

In his first volume of autobiography Professor Skinner took the reader up to his early 20's and his decision to do postgraduate study in psychology at Harvard. He had spent a year after graduation trying, and failing, to become a writer. Bertrand Russell's account of J. B. Watson, founder of behaviorism, aroused his curiosity and he bought a copy of Watson's "Behaviorism." (Years later Professor Skinner met Russell, who was lecturing in Minnesota, and told him that he had converted him to behaviorism; "Good heavens," said Russell, "I thought I had demolished it.")

- (16) An empty house. Leo Abse, M. P., reports the following, in the November 1978 issue of "In Britain":

I WAS born in 1917, when millions of young men were being slaughtered in France, and jingoism reigned supreme. My mother, as wilful as she was beautiful, defying the times, decided to name me after the most provocative and renowned pacifist of the era, the philosopher Bertrand Russell. Only a vigorous intervening grandmother had at the very last second rescued me from the intimidating fate of having his name

inscribed upon my birth certificate. When during the Cuban crisis of 1962 I shared platforms with the twice-imprisoned third Earl, Nobel prize winner and holder of the Order of Merit, he laughed, even at that grim moment, as I recounted the family tale. And, although the philosopher died eight years ago, again, in North Wales last month, in his half empty eyrie - Plas Penrhyn, perched high above the Glaslyn

Estuary - I heard his fluted laugh.

The house he had occupied for twenty years was now half empty and disconsolate: with the recent death of his courageous fourth wife, Edith, the estate is now being wound up. Most of the ungainly furniture had gone, some across the Atlantic for the re-creation, over the ocean, of his study, as an ugly shrine for his admirers, and his massive library stacked high, ready for shipment to the new purchasers, the

Canadian MacMasters University. The shabby buff-coloured walls still had hanging upon them the vulgar embroidered tributes, gifts from Mao and from Ho Chi Minh; the cold linoleum-floored bathroom still had as its centrepiece a stained, chipped, enamelled tub. Only a reproduction of Piero della Francesca's peaceful Holy Ghost, remaining in its position above the bed of the avowedly goddess guru, strove to overcome the cheerlessness.

(Thank you, Bev Smith)

BR QUOTED

- (17) Joan Baez has been crusading recently against "the cruelty, violence, and oppression" that continues under the present Vietnamese regime.

She was not chagrined by the reports that the end of the Vietnam war did not bring an end to violence in that ravaged country. "I was not disillusioned," she said. "I met Bertrand Russell once when he was in his 80s and we sat in his little room and he served us tea. I said, 'All right, Bert, let's get on with it. What do you think our chances are?' 'Our chances of what?' he asked. 'Of survival,' I said. And he said that if people started turning things around in the next 20 years we could make it, and I asked what the chances of that were, and he said, 'Probably none.' So we laughed and ate our little tea cakes. And then you just get on with it. For me, it's all part of having had a Quaker upbringing. You tell the truth as you know it."

From a story in the *International Herald Tribune* 7/5/79.

(Thank you, Alberto Donadio)

- (18) Impulse. DAVID HART had the pleasant experience of looking up a word in a dictionary and finding BR quoted. The word was "impulse", the dictionary was The American Heritage Dictionary, and the quote was: "Respect for the liberty of others is not a natural impulse in most men." (Bertrand Russell)
- (19) Reader's Digest, May 1979, provided the following:

The secret of happiness: let your interests be as wide as possible, and let your reactions to the things and persons that interest you be as far as possible friendly rather than hostile.

Bertrand Russell, The Conquest of Happiness (Liveright)

(Thank you, Peter Cranford)

BR HONORED

- (20) The Kalinga Prize for the popularization of science was established by UNESCO in 1951 and awarded to BR in 1957. The Prize, awarded annually, consists of one thousand pounds sterling, and is based on a grant to UNESCO for this purpose by Mr. B. Patnaik, of India. The winner of the Prize also receives the UNESCO Gold Medal, and is invited to visit India as a guest of the Kalinga Foundation Trust.
- Kalinga was the name of an ancient empire that covered a great part of India and Indonesia. The empire was conquered by the sovereign, Asoka, more than 2000 years ago, but the campaign of conquest gave him such a distaste for war that he spent the rest of his life working for peace.
- In 1957 there were 7 candidates from 6 countries. BR was nominated by the Venezuelan Association for the Advancement of Science. The jury of 3 consisted of a Belgian, an Englishman and a Pole — designated by the Director-General of UNESCO.
- Winners in other years include such well-known names as Julian Huxley, Waldemar Kaempffert, George Gamov, Ritchie Calder, Arthur C. Clarke, Gerard Piel, Warren Weaver, Eugene Rabinowitch, Konrad Lorenz, Margaret Mead. Professor Pierre Auger spoke, at the Kalinga Prize Ceremony in Paris, January 28, 1957:

The Director-General, in his speech, emphasized the great importance of the interpretation and dissemination of science for the present-day world. In this field, the man whom we honour today has, during a long and fruitful career, made an outstanding contribution. He has written books like "The Analysis of Mind" and "The Analysis of Matter", where interpretation of the results of science takes the form of personal creativity; and he is also the author of general works like "A History of Western Philosophy" and "Human Knowledge, its Scope and Limits". Through him, countless men of good will have been guided towards a deeper understanding of the value of science, of what science brings us, and what it means.

Ladies and gentlemen, it is both a very easy and a very difficult thing to describe Bertrand Russell's achievement. It is easy if one confines oneself to its world impact, to the simple fact that the list of books I have before me comprises 48 separate works, translated into many languages and read throughout the entire world, and that to these must be added a host of booklets, essays, articles and lectures. The vast scope of this output should also be mentioned, since the subjects range from politics — his first book dealt with German social-democracy — to the theory of relativity, to which should be added mathematics and philosophy, as well as numerous problems of sociology and ethics.

Its very scope, however, makes it exceedingly difficult to define his work and to summarize it in a single formula. Bertrand Russell wrote for logicians, and taught them many things — how, for example, to construct and demolish paradoxes. He wrote for mathematicians, for whom he defined their principles; but in addition, he wrote for an educated though non-specialist public, to whom he explained the practical significance of the relativity or quantum theories. Finally, he wrote for what may be described as the public at large, dealing, either seriously or humorously, with the problems that beset us all when we reflect upon ourselves and try to find our bearings amid the tumult of our century.

Yet it seems to me that, when all this is said, there emerges, not indeed a formula, but a sort of general light shed upon our problems, as a result of which we find these problems more clearly stated, nearer solution and sometimes, indeed, actually solved. Bertrand Russell has re-analyzed the discoveries of the theoretical and experimental sciences, combined and connected them, and identified those features in them which are new and of importance for our future and that of our communities — in short, he has "humanized" them. And for this reason I venture to recognize in his work a particularly brilliant example of scientific humanism, that new humanism which is so great a need of the world today. Every subject of concern to thinking men is examined by Russell from an essentially rational standpoint. He applies to political, moral and economic questions a sort of generalized scientific method. One outstanding feature of this method is undoubtedly his constant and, I would say, almost instinctive care to avoid all "conventional" theories, all statements based on a particular tradition, habit of thought, or prejudice. This is a thread leading from Montaigne, through Descartes, to Russell which I, as a Frenchman, am particularly glad to see. But systematic doubt, though essential in the application of the scientific method, is not in itself constructive; it has to be fought and overcome by hope. And that hope is there, in all Bertrand Russell's works — the hope of learning, the hope of understanding, the hope of acting more effectively, more usefully and more happily; a hope based on a complete conviction that the world of the future will be built for man, by man himself.

ER responded to the above in this way:

This present occasion is one in which I am very happy to be a participant. I wish to express my thanks to the Jury who awarded the Prize and to the donor, Mr. Patnaik. My only regret is that, owing to old age, I am not able to go to India as I should have wished to do had it been possible. I am very conscious of the importance of India both in the distant past as the inventor of the numeral zero and of the numbers which in the West are mis-called Arabic, and also as a rapidly increasing contributor to the corpus of scientific knowledge. I think that Mr. Patnaik deserves the gratitude of mankind for his recognition of the importance of popular science. There was a time when scientists looked askance at attempts to make their work widely intelligible. But, in the world of the present day, such an attitude is no longer possible. The discoveries of modern science have put into the hands of Governments unprecedented powers both for good and for evil. Unless the statesmen who wield these powers have at least an elementary understanding of their nature, it is scarcely likely that they will use them widely. And, in democratic countries, it is not only statesmen, but the general public, to whom some degree of scientific understanding is necessary. To insure wide diffusion of such understanding is by no means easy. Those who can act effectively as liaison officers between technical scientists and the public perform a work which is necessary, not only for human welfare, but even for bare survival of the human race. I think that a great deal more ought to be done in this direction in the education of those who do not intend to become scientific specialists. The Kalinga Prize is doing a great public service in encouraging those who attempt this difficult task.

In my own country, and to a lesser degree in other countries of the West, "culture" is viewed mainly, by an unfortunate impoverishment of the Renaissance tradition, as something concerned primarily with literature, history and art. A man is not considered uneducated if he knows nothing of the contributions of Galileo, Descartes and their successors. I am convinced that all higher education should involve a course in the history of scientific knowledge in so far as this can be conveyed without technicalities. While such knowledge remains confined to specialists, it is scarcely possible now-a-days for nations to conduct their affairs with wisdom.

There are two very different ways of estimating any human achievement: you may estimate it by what you consider its intrinsic excellence; or you may estimate it by its causal efficiency in transforming human life and human institutions. I am not suggesting that one of these ways of estimating is preferable to the other. I am only concerned to point out that they give very different scales of importance. If Homer and Aeschylus had not existed, if Dante and Shakespeare had not written a line, if Bach and Beethoven had been silent, the daily life of most people in the present day would have been much what it is. But if Pythagoras and Galileo and James Watt had not existed, the daily life, not only of the Western Europeans and Americans but of Indian, Russian and Chinese peasants, would be profoundly different from what it is. And these profound changes are only beginning. They must affect the future even more than they have already affected the present. At present, scientific technique advances like an army of tanks that have lost their drivers, blindly, ruthlessly, without goal or purpose. This is largely because the men who are concerned with human values and with making life worthy to be lived, are still living in imagination in the old pre-industrial world, the world that has been made familiar and comfortable by the literature of Greece and the pre-industrial achievements of the poets and artists and composers whose work we rightly admire.

The separation of science from "culture" is a modern phenomenon. Plato and Aristotle had a profound respect for what was known as science in their day. The Renaissance was as much concerned with the revival of science as with art and literature. Leonardo da Vinci devoted more of his energies to science than to painting. The Renaissance architects developed the geometrical theory of perspective. Throughout the eighteenth century a very great deal was done to diffuse understanding of the work of Newton and his contemporaries. But, from the early nineteenth century onwards, scientific concepts and scientific methods became increasingly abstruse and the attempt to make them generally intelligible came more and more to be regarded as hopeless. The modern theory and practice of nuclear physicists has made evident with dramatic suddenness that complete ignorance of the world of science is no longer compatible with survival. On this ground, above all others, I am happy to be associated in the work which the Kalinga Prize exists to promote.

ER MEMORIAL

(21) Peter Cadogan, in a letter dated 7/10/79 to Bob Davis:

Bertrand Russell's bust has been finished in its original clay by Marcelle Quinton. Freddie Ayer has seen it and he told me last Thursday that he was very impressed. We are still awaiting the O.K. from Camden Council concerning the site in Red Lion Square. My hope is that we will make the Appeal to coincide with the beginning of the University term in October.

BR'S INFLUENCE

(22) Underground admirer. The following cartoon, by Robert Crum, ran in the underground publication, Hydrogen Bomb and Chemical Warfare Funnies, copyright 1970 by the Rip Off Press, San Francisco.

(Thank you, John Mahoney)

INTELLIGENCE

(23) Una Corbett's letter appeared in The Baltimore Sun, 3/9/79:

Special Schools

Sir: After the debacle more than 10 years ago of the effort to make City College a haven for bright academic students and later to create a special elementary school for Hopkins Hospital medical personnel, both of bitter memory, it is shocking to learn that school authorities still foster a strange notion of education and the role of the public school system in a democracy.

The current effort to garner bright

children for Roland Park Elementary School confirms my teaching experience that the bright students get the major attention of school authorities. Easy to teach, well motivated, with parental interest and support, they are supposed to bring prestige to the school.

I once struggled with a class of 40 tenth-grade English students while across the hall a Latin teacher read *Catullus* with seven college-bound seniors. The practice of changing deteriorating

junior high schools to middle schools with careful districting to assure admission to only chosen students is in the same pattern.

Under the pressures of our current turbulent society have educators lost their vision? The public schools are our greatest socializing and humanizing institution. Their chief job is training for citizenship with independence of thought and concern for action toward the betterment of individual and community, the ultimate goal.

Administrators, teachers and parents concerned with education would do well to ponder the following comment in a recent *Newsletter* of the Bertrand Russell Society:

"Intelligence measured by smartness has very little value.

"Real intelligence is judgment embodied in useful knowledge, a good set of emotions, habits of diligence, a reasonable dedication to altruism and a minimum of self-destructiveness."

Una Corbett.

Una tells us what prompted her to write the letter:

In my letter, I quoted from a letter Peter Cranford had written to The Atlanta Constitution, as reported in RSN16-21. I liked his statement so much that I copied it and used it wherever possible, and was delighted to include it here, as The Sun is widely read.

The effort to set up special schools for bright children is a device to avoid integration. The City College mentioned is a comprehensive public high school for boys, founded in 1840 and having great prestige, as many leading Baltimoreans are alumni. After the 1954 Supreme Court decision, deprived blacks flocked to it. In the Johns Hopkins Hospital case, the School Board planned a special school so that the children of the medical personnel would not have to attend neighboring inner city schools, largely black. The Roland Park School is in an affluent neighborhood where white children have fled to private schools as black children are bused in. This school has recently set up a special program for bright children, inviting children from other schools to transfer to it. Of course, the other schools resent this raiding and are protesting.

This seemed a good opportunity to remind citizens of what the public schools are all about, to use the Peter Cranford quotation, and to mention the Bertrand Russell Society.

CURRENT PUBLIC ISSUES

(24) "Carter's energy policy is a disaster!" writes JOE NEILANDS. "It appears to be a scheme to capitalize the synthetic fuel development process on behalf of the oil industry.

"A group here has been trying to raise consciousness about nuclear energy and the weapons lab with some success. Although we have not yet induced the Regents to sever connection with Los Alamos and Livermore, we have the votes of the Governor and about half of the other members of the Board."

OPINION

(25) More on Cadogan. This letter appeared in "The New Humanist" (date of issue not known) pp.38-39:

HUMANIST sectarianism is no better than any other kind, but I think it is necessary to say something about a recent publication by Peter Cadogan, who has been general secretary of the South Place Ethical Society throughout the 1970s. In a series of articles printed in the *Ethical Record* (February, March, April 1979) and reprinted as a leaflet called *Humanism* (May 1979), he gives his "opinion as to what the organised humanism of the future, in England, needs to amount to if it is to be credible and to command new and significant support".

Most of the text is unexceptionable in the context of the romantic and rhetorical tradition of ethical Humanism. The opening paragraphs on Faith, Inspiration, Belief, Philosophy, and Vision resemble a sermon more than an argument, but I am worried about something more serious than mere style. For most free-thinkers in this country, the essence of Humanism—the one thing without which it is not Humanism—is the rejection of religion. Yet Cadogan seems to be saying that this may have been a mistake. He insists that "we detach religion from supernaturalism" and "we are in a period of transition from supernaturalist to humanist religion", that a "society without a religion is a contradiction in terms, a society without meaning", that the arts are "linked inextricably with religion" and science is linked with religion as well as with the arts, and that the Humanist movement is "akin to the best tradition of the churches" and "we should be actively associated with them".

No one wants to deny that there is a strong religious component in the history of Humanism and a weak religious component in the Humanist

movement today, and no one wants to damage the legal claims of the South Place Ethical Society to be considered as a religious organisation with charitable status. But I am sure it is true to say that in this country most Humanists see religion as being linked inextricably with the supernatural and therefore reject it, and few Humanists are still impressed by or even interested in the various attempts to establish a non-theistic form of religion—whether the "Rational Religion" of the Owenite movement, or the "Religion of Humanity" of the Positivist Churches, or the "Religious Humanism" of the Ethical Societies. This tendency is still relatively strong in Continental Europe and North America, but I suggest that it scarcely exists today in Britain and that Cadogan's attempt to impose it on the Humanist movement as a whole will lead not to its revival but to its destruction. Most Humanist individuals and organisations are opposed to humanistic as well as theistic religion, and naturalist as well as supernaturalist nonsense.

As well as this general objection, I find some objectionable details in this new statement of his case. "What are the sacred books of humanism? They include the works of Sir Thomas More, Francis Bacon and William Shakespeare, William Blake and D. H. Lawrence." Cadogan no longer says that "the sacred" is "beyond criticism"; but, even so, should we really give reverence to More's writings advocating the death penalty for Protestants, Bacon's essay against atheism, Shakespeare's frequent praise of monarchy, Blake's frequent sneers at atheism and science, or Lawrence's frequent praise of irrationalism? Humanists who seek support from the great figures of

English literature would surely do better with William Morris, Bertrand Russell and Shelley, Thomas Hardy and E. M. Forster.

"Since the seventeenth century the philosophy of science has been greatly inhibited by Cartesian dualism of mind and body and its mechanical/material explanation of the universe." That kind of dualism hasn't played much part in science for two centuries or in philosophy for a century, and the reductionist explanations of the universe have surely been much more successful than the transcendental ones of the past.

"Surveys show that some 93 per cent of the population no longer go to church." The most recent of such surveys—two carried out a year ago, by National Opinion Surveys and for the Mormon Church (see the *New Humanist*, Autumn 1978 and February 1979)—give much lower figures, between 30 and 60 per cent never going, the more significant fact being that only about 15 per cent go both regularly and voluntarily. "The same surveys show that most of that majority think 'there is something' nevertheless. No organised body of opinion has yet been able to define and structure the opportunity that this presents." The implication that the Humanist movement should represent the large section of the population who don't go to church but believe in "something" is surely based on a complete misunderstanding of the nature of Humanism and of the history of our movement.

I am finally worried by Cadogan's postscript. He asks: "Is there such a thing in this country as a Humanist movement? Or is Humanism a mere shaky verbal umbrella held over ethicism, secularism and rationalism to give the appearance of unity without its substance?" He then says

that on most issues "we have a large number of friends who may be humanists with the small *h* and to whom we are much closer than Humanists as such", and that this "real humanist movement", this "humanism of the future" is to be found among people who are "agnostics," Christians, Jews", and who are in "ecological and environmental movements", "decentralists", "Women's Libbers", "life-stylists", the "consciousness movement", "networkers", "humanistic psychology".

In a further paragraph which was not reprinted in the leaflet, he adds that "if we really started to think in these terms and broke with the pathetic and frustrating belief that the movement consists of four organisations only (SPES, NSS, RPA, BHA) we would be in a position to get out of our present cul-de-sac". Apart from the obvious fact that no one believes the movement consists only of the four organisations in question, there is the harsh fact that when South Place appealed for help in its current crisis the response came from the organised Humanist movement and no one else. It is surely unwise to turn against old friends when new friends turn away from you! What emerges from this attempt to answer these questions is another question—not whether there is a Humanist movement, but what Peter Cadogan is doing in the Humanist movement.

The seriousness of this question is shown by his reply to criticism from Barbara Smoker in the *Ethical Record* of June 1979. He says that attempts at liaison between the Humanist organisations during the past ten years have failed "because there is no agreement about positive objects we want to pursue together" (his emphasis). He adds that "this is a serious matter and one reason for the overall decline of organised

Humanism over recent years". He doesn't add that during the past four or five years there has been substantial agreement between three of the organisations in question, and that sectarian disagreement has come almost entirely from representatives of the South Place Ethical Society. As a result there is now close and constant liaison between the British Humanist Association, the National Secular Society, and the Rationalist Press Association on a day-to-day face-to-face basis. So it is certain that there is a formal Humanist movement, though it is small and weak; but it is not certain that the South Place Ethical Society is part of it. Is this what Peter Cadogan wants, or what the rest of the South Place Ethical Society want? Nearly all Humanists sympathise with their legal and financial problems, but we should be sorry if South Place ended by ceasing to be either religious in law or Humanist in identity.

* * *

WHILE I am about it, I might as well make another criticism of Peter Cadogan. In a South Place lecture on Bertrand Russell, given at Conway Hall in July 1978 and summarised in the *Ethical Record* of March 1979, he included the following passage:

Russell was a Cartesian Newtonian dualist and he remained so even though he began to work at the discoveries of

Einstein and Rutherford. Those discoveries threatened his original logical atomist position and they were not pursued. . . . He chose to ignore the Darwinian revolution in biology and led English philosophy into an impossible cul-de-sac from which it is only now beginning to emerge. Physics and mathematics are not the scientific bases of the life sciences. They turn upon the study of cells and their function. This is a different order of thinking and is a higher and more complex scientific dispensation from which to take off into human enquiry. Russell ignored it and, sustaining the 17th century dualism of mind and body, added substance to the archaic and inhibited the processes of enlightenment.

It is no part of our work to defend prominent rationalists against attack, and I myself made several public attacks on Russell's social and political ideas while he was still alive; but it is part of our work to put the record right and correct inaccurate attacks. Leaving on one side things which seem to me to make no sense at all, I think nearly everything in that passage is wrong.

Russell took different views at different times of the old problem of what kind and how many basic forms of reality there are, but one view he never held and always opposed was dualism—the view that everything is either appearance or reality, mind or matter, soul or body, and that these two substances are quite separate. As A. J. Ayer says in his *Modern Masters* book *Russell* (1972): "An opinion

which has been widely held, both before and after it was given the authority of Descartes, is that objects or events are divisible into the two classes of mental and physical, which do not overlap; but this is a view which Russell consistently contests." According to Russell's own accounts, from 1894 to 1898 he accepted the idealist monism of Hegel and Bradley (that there is a single form of reality, mind or spirit), then he preferred pluralism (that there is an infinite number of forms of reality), then soon after the completion of *Principia Mathematica* in 1910 he accepted the view known as neutral monism ("The stuff of which the world of our experience is composed is, in my belief, neither mind nor matter, but something more primitive than either"). So Cadogan's basic thesis is the reverse of the truth.

Then Russell did not just begin to work at the discoveries of Einstein and Rutherford, but completely absorbed them into his philosophy of science and indeed became one of the popularisers of their view of the world, writing a whole book on relativity. Moreover, he went beyond their discoveries when they were in turn superseded about half a century ago. But all this had nothing to do with his logical atomism, because this had nothing to do with science. As he said, "The atom I wish to arrive at is the atom of logical analysis, not the atom of

physical analysis."

Again, Russell did not ignore the Darwinian revolution in biology, but took it completely for granted, so that summaries of its importance and implications may be found in several of his books. I am no more a biologist than Cadogan, but it seems odd to say that physics and mathematics are not the scientific bases of the life sciences in view of the remarkable contributions made by physics and mathematics to recent advances in biology—the mathematical theory of evolution developed by J. B. S. Haldane, the molecular biology of Jacques Monod or James Watson and Francis Crick, and the experiments from Stanley Miller to Sidney Fox which have shown how life might have originated. Biology obviously involves different emphases from physics and mathematics, but surely no biologist would claim that it is a higher order of thinking or a higher or more complex scientific dispensation. In the end human inquiry must rest on all the branches of science, and Russell, as the philosopher closer to science than any before him, was perfectly well aware of this. Whether he led English philosophy into an impossible cul-de-sac or inhibited the processes of enlightenment, I know no more than Cadogan, but it seems unlikely, and at least he didn't falsify the arguments of the thinkers he disagreed with.

NICOLAS WALTER

(Thank you, John Sutcliffe)

- (26) Holocaust. "I was among those who were offended by the cheap, commercial untruths of the TV docudrama, 'Holocaust', writes Eliot Freemont-Smith in "The Village Voice" (8/20/79, p.52). "But sometimes one must weigh the pains against the gains. 'Holocaust' was shown in Germany earlier this year -- over howls of nationalistic insult and outrage -- and is generally credited with forcing the Bundesrat to rescind the statute of limitations on Nazi crimes. So you never know."

This view should perhaps be kept in mind when considering John Sutcliffe's unqualified condemnation of 'Holocaust' (RSN23-28).

NEWS ABOUT MEMBERS

- (27) Professor Sir Alfred Ayer was one of the speakers at the "Fifty Year Retrospective in Philosophy" at the University of Delaware, on October 24th. (Thank you, Steve Reinhardt)
- (28) R. N. ("Malt") Malatesha has just received a grant from NATO to conduct an international meeting on Neuropsychology and Cognition.
- (29) Joe Neilands attended the week-long American Chemical Society meeting in Washington, in September, and is now taking a two-quarter leave from his duties as Professor of Biochemistry at UC Berkeley to do some writing.
- (30) Kathryn Powell is working for her M.A. in International Affairs, at American University in Washington, D.C.

QUESTIONS & ANSWERS

- (31) Poor fish. Alberto Donadio asked (in RSN21-28) whether BR had ever said something like, "All medicines should be thrown out at sea. Only the fish would suffer from it."
We happened to come across the following in The Mind/Body Effect by Herbert Benson (New York: Simon & Schuster, 1979) p.103:

We can no longer state, as did did Dr. Oliver Wendell Holmes, the physician and man of letters, in 1860: "Throw out opium...throw out a few specifics which our art did not discover...throw out wine...I firmly believe that if the whole materia medica, as now used, could be sunk to the bottom of the sea, it would be all the better for mankind -- and all the worse for the fishes."

Benson gives the source of his quotation as The Works of Oliver Wendell Holmes. Vol. 9. Medical Essays. Boston: Houghton, Mifflin, 1892.

RECOMMENDED READING

- (34) "D. H. Lawrence's Nightmare" by Paul Delany (New York: Basic Books, 1978): "It has a good deal about Russell in it," says MARTIN GARSTENS, which is possibly an understatement. Here is the Russell entry in the index:

Russell, Bertrand, x, xi, 27, 29, 33, 45, 52, 75, 84, 243, 318, 320, 327, 382; affair of, with C. O'Neill, 252-53, 276; blood-consciousness and, 180; break with, 206-8, 245; breaks with O. Morrell, 276; collaboration with, 115-18, 122; end of war and, 384; esoteric ideal of male comradeship and, 89; excess of reason of, criticized, 178-79; feud between O. Morrell and Frieda and, 200; Frieda criticizes, 100; and Frieda's divorce from Weekley, 95; and Frieda's visitation rights, 95; D. Garnett compared with, 87; "Goats and Compasses" and, 198; and imperiousness of O. Morrell, 92; Lawrence to, on Foister, 53; Lawrence to, on giving power to working class, 181; Lawrence's attack on, 82; and Lawrence's discovery of principle of evil, 84, 85; Lawrence's nervous breakdown and, 189-90; Lawrence's quarrel with liberalism and, 132-35, 137, 140; and Lawrence's struggle with powers of darkness, 112; and Lawrence's visit to Trinity College, 78-80; O. Morrell, revolution and, 64-74; Mansfield's flirtation with, 252-53; Mountsier's arrest and, 283; need for supreme leader and, 119-21, 123; new Ranamin and, 172, 173; pacifism of, 67-68, 109-11, 124, 145, 319; position of, at Trinity College, 77; and reissue of *The Rainbow*, 194; renewing friendship with, 349-50; *The Signature* and, 141, 143-46, 148; Smilie and, 374; visit by, 83; *Women in Love* and, 273; in *Women in Love*, 68, 179; world government and, 250

BOOKS BY BR

- (35) Autobiography III. David Hart writes:

As you may know, Allen & Unwin has never had the U.S. distribution rights for volume 3 of BR's Autobiography. Although the rights for volumes 1 and 2 have been reverted to A & U, Simon & Schuster retains exclusive U.S. rights to volume 3. Those who, like myself, appreciate the fine quality of the A & U edition have had either to forego purchase of volume 3 or settle for the inferior S & S edition. No more! The A & U clothbound edition is available from Blackwell's, Broad Street, Oxford OX1 3BQ, England. The price, as of August 1979 is £ 6.22, including postage.

ERS LIBRARY

- (36) New BR film needed. Don Jackanicz reports that "we've received 3 contributions of \$25 each toward the purchase of a new film. This is very encouraging, even though films are expensive -- \$175-300 each. We would like to have at least one new film for the 1980 meeting. (There are still 5 commercially available BR films that we don't own.) This is therefore a timely moment for anyone who can do so to make a contribution; please give it careful consideration. Any amount is welcome, modest or otherwise."

FUN

- (37) Fun with Smullyan. JOHN HARPER and TOM STANLEY each sent us the following pages from What Is the Name of This Book? by Raymond Smullyan (Englewood Cliffs, N.J.: Prentice-Hall). Martin Gardner calls it "the most original, most profound, and most humorous collection of recreational logic and mathematical problems ever written." (Wow!)

243. A Proof that You Are Either Inconsistent or Conceited.

I thought of this proof about thirty years ago and told it to several students and mathematicians. A few years ago someone told me that he had read it in some philosophical journal, but he could not recall the author. Anyway, here is the proof.

A human brain is but a finite machine, therefore there are only finitely many propositions which you believe. Let us label these propositions p_1, p_2, \dots, p_n , where n is the number of propositions you believe. So you believe each of the propositions p_1, p_2, \dots, p_n . Yet, unless you are conceited, you know that you sometimes make mistakes, hence not everything you believe is true. Therefore, if you are not conceited, you know that at least one of the propositions, p_1, p_2, \dots, p_n is false. Yet you believe each of the propositions p_1, p_2, \dots, p_n . This is a straight inconsistency.

Discussion. What is the fallacy of this argument? In my opinion, none. I really believe that a reasonably modest person has to be inconsistent.

B. MORE MONKEY TRICKS

244. Russell and the Pope.

One philosopher was shocked when Bertrand Russell told him that a false proposition implies any proposition. He said, "You mean that from the statement that two plus two equals five it follows that you are the Pope?" Russell replied "Yes." The philosopher asked, "Can you prove this?" Russell replied, "Certainly," and contrived the fol-

lowing proof on the spot:

- (1) Suppose $2 + 2 = 5$.
- (2) Subtracting two from both sides of the equation we get $2 = 3$.
- (3) Transposing, we get $3 = 2$.
- (4) Subtracting one from both sides, we get $2 = 1$.

Now, the Pope and I are two. Since two equals one, then the Pope and I are one. Hence I am the Pope.

245. Which Is Better?

Which is better, eternal happiness or a ham sandwich? It would appear that eternal happiness is better, but this is really not so! After all, nothing is better than eternal happiness, and a ham sandwich is certainly better than nothing. Therefore a ham sandwich is better than eternal happiness.

246. Which Clock Is Better?

This one is due to Lewis Carroll. Which is better, a clock that loses a minute a day or a clock that doesn't go at all? According to Lewis Carroll the clock that doesn't go at all is better, because it is right twice a day, whereas the other clock is right only once in two years. "But," you might ask, "what's the good of it being right twice a day if you can't tell when the time comes?" Well, suppose the clock points to eight o'clock. Then when eight comes around, the clock is right. "But," you continue, "how does one know when eight o'clock does come?" The answer is very simple. Just keep your eye very carefully on the clock *and the very moment it is right* it will be eight o'clock.

PARADOXES

- (38) Little old lady. "I remember an old story about the little old lady," writes H. F. Cooke, Jr., from Denmark, "who always sat in her pew after church services until everyone else had left, and said that if everyone would just wait as she does until everyone else has left, there would be no crush at the door."
- (39) Insanity. Another from HFC Jr.: In a letter to Time Magazine (October 1) about the violence in Ireland, a Mr. Smith asks: "What is the purpose of their insanity?"
- (40) Jeremy Bernstein in his delightful book, Experiencing Science (New York: Basic Books, 1978), starts his chapter on Gödel's Theorem this way (pp. 246-248):

APRIL 28, 1906 was a good day. Soft spring breezes wafted over the River Cam. Stem-bent daffodils assisted the chorus of earliest birds. Bertrand Arthur William Russell, the third earl, had just descended from his railway carriage in the Cambridge Station. His step was brisk as he walked along St. Andrews Street. The Great Gate of Trinity College was not far away. He was looking forward to a discussion of ethics with his colleague G. E. Moore. His work with Whitehead had been going well—they were writing the *Principia Mathematica*. The title stirs the blood. Newton's *Philosophiæ Naturalis Principia Mathematica* created theoretical physics. Their book, so they thought, would create the foundations of mathematics. All of mathematics, they felt, would be shown to be derivable from a few self-consistent axioms, a few symbols, and a few rules of inference. It would be a logician's dream come true. Russell's sense of well-being was nearly total. Almost accidentally, his left hand swept over his chin. He was temporarily disconcerted by a disagreeable sensation of stubble. In his eagerness to come up from London, he had forgotten to shave.

"No matter," he thought, "I shall visit my barber—Barrett," whose shop was located on the corner of St. Andrews and Market streets. "'Barrett the barber' belongs to the class of all men whose professions have the same first initial as their last names," thought Russell. "'Locke the logician,' 'Plato the philosopher,' 'Maxwell the mathematical physicist'—they're all members of the class," Russell noted. He stopped in front of Barrett's shop. Before entering it he looked in the corner of the shop window for the familiar hand-lettered sign. It was there—faded but still legible. It read: "Barrett is willing to shave all, and only, men unwilling to shave themselves."

Russell chuckled softly to himself. The sign had first appeared in the summer of 1902. That June, Russell had written a note to his German colleague, the logician Gotlob Frege. After reading Frege's *Grundgesetze der Arithmetik* (*The Foundations of Arithmetic*) Russell had found an absolutely fatal flaw in it. Frege's definition of "class" was faulty. The class of all classes that are not members of themselves is *not* defined.

Think about it. Turn it over in your mind. If this class is a

member of itself then, by definition, it is not a member of itself, and if it *is not* a member of itself then it is a member of itself. One is awash in a paradox. Frege understood this almost at once. He wrote to Russell, "Your discovery of the contradiction caused me the greatest surprise, and I would almost say consternation, since it has shaken the basis on which I intended to build arithmetic..." Russell and Whitehead had worked for years afterward to eradicate the contradiction. A "theory of types" had been formulated and a notion of "meta-mathematics" had been introduced. All was now secure—or so they thought.

As Russell entered Barrett's shop, his nostrils were assailed by the smell of perfumed shaving tonics and bubbling soaps. Barrett

greeted him with pleasure.

"Ah, Your Grace," he said. "I see that you have come up from London."

"Yes, Barrett," Russell replied. "And I see that the old sign is still there."

Barrett braced himself for the inevitable question. "Tell me, Barrett," Russell went on, "in view of your sign, are you willing to shave yourself?"

Barrett flinched.

On this same day, a thousand miles away in the town of Brünn, in the Austro-Hungarian Empire—the same town, by the way, in which Gregor Mendel was born—Kurt Gödel was born.

This was to be the start of something big.

(Thank you, Steve Reinhardt)

CONTRIBUTIONS

- (41) We are grateful to the following members who have made contributions to the BRS Treasury during the past 3 months: ED COCHRAN, ALBERTO DONADIO, ALEX DELY, UNA CORBETT, CHARLES HILL, JIM MCWILLIAMS, IBRAHIM NAJJAR, JOE NEILANDS, JIM O'CONNOR, RAY PLANT, STEVE REINHARDT, WARREN SMITH, KOUJI TOMIMORI, and not least to PETER CRANFORD and KATHY FJERMEDAL for their continuing multiple contributions.

HELP WANTED

- (42) Help wanted very much! Please give the following your most careful consideration.

3 BRS jobs need to be filled, and soon.

If you are one of the many who said, on your BRS Questionnaire, that you were willing to do some work for the BRS, now is the time that we need you.

Please speak up!

These are the 3 jobs:

- Treasurer. This is for someone good at keeping records and balancing a checkbook, etc. Steve Reinhardt says it takes about 8 hours a month.
- Membership Committee Co-Chairman: sends BRS printed matter to persons who inquire about the BRS, and to those who join. Inquiries come in from all over the USA, and occasionally from foreign countries (with colorful foreign stamps.) Sometimes a letter tells why the inquirer is interested in (and indebted to) BR, which can be quite interesting. Takes 3 to 6 hours a week.
- Library Committee Co-Chairman will share the work with Chairman Don Jackanicz. The Library lends books, films, and tapes, and also sells books.

If you wish to volunteer for one of these jobs, please notify the newsletter (address on Page 1, bottom.) Or if you'd like to know more about any of them (before making up your mind), tell us so and we'll send information.

It is important that these openings be filled without excessive delay, so that we can continue to function the way we ought to. So...

Please speak up! Write now.

BRS BUSINESS

- (43) Renewal procedure. In 1979 we made some changes in membership-renewal procedure. We suspect that the new system is not well understood by at least some members. So please allow us to be repetitious and explain it once more.

Under the new system, everybody's renewal dues are due on the same date, July 1st. Notification that dues are due consists of an item in the May newsletter. (Under the old system, your dues were due 12 months after the date you joined, and you were sent a letter notifying you that dues were due.)

We realize that a renewal-notice in the newsletter is not as visible as a letter; it is more easily overlooked. Therefor next year, in the May newsletter envelope, there'll be an extra, separate sheet of paper, of a different color, that says dues are due.

The new system has a certain built-in unfairness to some members. Renewal dues for a member who joined in December come due in about 6 months (July 1st); so his first year's dues cover only about 6 months of membership. On the other hand, renewal dues for a member who joined in January come due in about 18 months (July 1st of the following year). These are the extreme cases. To the extent that the month in which you enrolled comes closer to July, your first year's dues will come closer to covering 12 months of membership. Thus, no matter when members joined in 1978, their renewal dues were due July 1, 1979.

We try to compensate for the unequal lengths of first-year memberships. A member who joined anytime in, say, 1978 receives all 4 1978 BRS newsletters and all 1978 issues of "Russell".

The new system saves the Membership Committee a lot of time and work, and also eliminates one source of possible error (the due date).

After the first "year" of membership, renewal dues always cover 12 months of membership.

- (44) Agenda for 1980 meeting. It might be well if some thought were given to the 1980 agenda well in advance of the meeting. This is what the bylaws say about the agenda:

Article IX, Section 1. Agenda. The agenda for Society meetings shall be prepared by the Board of Directors. Items for the agenda may be proposed by any member, and must be submitted to the Chairman of the Board of Directors in writing.

Article XI, Section 2. Additions to the Agenda. At a meeting of the Society, additions to the agenda may be made by a majority of those members present and voting.

- * Send your agenda suggestions to Chairman Peter G. Cranford, 1500 Johns Road, Augusta, GA 30904.

FOR SALE

- (45) Lester Denonn's Russell Library -- which now consists of over 2100 books by, about, or referring to BR -- is looking for a good home, which will probably be a university. Three conditions must be met: (1) the university must be considered suitable; (2) the university must be willing and able to provide appropriate facilities; and (3) money must be raised. A donor (or donors) must be found who will buy the Library -- the price is said to be in the neighborhood of \$100,000 -- and present it to the university.
For further information, write to Lester Denonn, 135 Willow Street, Brooklyn, NY 11202.

ABOUT OTHER ORGANIZATIONS

- (46) Humanists Mid-South is organizing an AHA chapter for humanists living in the South and Midwest, Len Cleavelin advises. BRS members who might wish to look into it should write to Humanists Mid-South, c/o Stewart V. Pahl, 210 Combs Street/ Hot Springs, AR 71901.
- (47) The Fellowship of Religious Humanists sponsored The Institute for Humanist Leadership, in Chicago, on October 11-13, as part of its annual meeting. The Institute was "planned primarily for humanist leaders and those preparing themselves to become humanist leaders. Other interested parties are invited to attend." Speakers included a Unitarian minister, 2 rabbis, and 5 professors (including Paul Kurtz, editor of "The Humanist" and of Prometheus Press). The group celebrated a John Dewey Day and a Charles Darwin Day. The Fellowship publishes a quarterly, "Religious Humanism." Its address: PO Box 278, Yellow Springs, OH 45387.

COMMUNICATIONS RECEIVED

- (48) Religious tax-exemption is anathema to Aura Dawn Veirs. Here is an excerpt from her letter:

I believe religious tax-exemption must be repealed, because religions are accumulating wealth and investing it, and are placing their candidates into public office, where they subvert civil law, such as calling abortion and homosexuality "religious crimes," and demanding they be punished by civil law. All laws oppressing women (and thus their families) are based on purely religious argument.

She enclosed photocopies of certain pages of Religious Wealth and Business Income by Martin Larson (New York: Philosophical Press, 1965) — a book that apparently supplied her with some of the facts (or alleged facts) that she mentions in her letter:

Page 75 mentions the 1958 "Der Spiegel" articles which said the Jesuits owned 50% of the stock of the Bank of America, and controlled Phillips Oil and Creole Petroleum, and were invested in munitions factories, aircraft plants, steel, and DiGeorgio Fruit Company, a notorious exploiter of farm labor here and abroad.

Her address is 4346 Via Padova, Claremont, CA 91711.

INDEX

-

ANNUAL MEETING 1980

- (4) The plans. Don Jackanicz is in charge of arrangements. Here is his report:

The seventh annual BRS meeting, in Chicago, will run from Friday (evening), June 20th to Sunday (noon), June 22nd. With a site closer to the geographic center of North America, it will perhaps be easier for a greater number of members to attend.

I invite you to consider a longer stay in Chicago. If you stay longer, you can probably take advantage of bargain fares from airlines, bus lines, and Amtrak. There are plenty of things to see in Chicago.

The BRS annual meeting will be welcome — I have been notified — at all 3 major Chicago-area universities: University of Chicago, Northwestern University, and University of Illinois at Chicago Circle. I am investigating facilities, housing, costs, and will report in the next (May) issue of RSN.

Three distinguished scholars will make presentations. Lester E. Denonn (Brooklyn, NY lawyer; Russell bibliographer; creator of one of the largest Russell libraries; honorary member and director of the BRS) will discuss "Characterizations of Bertie — Pro and Con — as Revealed in L.E.D.'s Russell Library." George Nakhnikian (Professor of Philosophy at Indiana University, Bloomington; moving spirit behind the University of Indiana's Symposium of March 9-11, 1972 to commemorate Russell's centenary; editor of "Bertrand Russell's Philosophy" — New York: Harper & Row, 1974 — which consists of papers presented at that Symposium) will discuss the thought behind BR's statement, "The good life is one inspired by love and guided by knowledge." Paul Arthur Schilpp (Professor Emeritus of Philosophy at Northwestern University; Professor of Philosophy at Southern Illinois University, Carbondale; editor of the series, "The Library of Living Philosophers", of which one volume is on Russell) will speak on the TLOLP project, Russell's role in it, and his reminiscences of eminent philosophers.

I invite members to send suggestions or ask questions. If any member or non-member wishes to propose an additional presentation for the meeting, please let me know what it is, and soon. My address is on Page 1, bottom.

Finally, I encourage you to attend and participate, if at all possible. It is very satisfying to meet fellow-admirers of Russell, and learn things about them (and him) you never knew before!

See you in Chicago, I hope.

- (5) Are expenses tax-deductible? We repeat an item from the October 1975 newsletter (NL8-8):

Some but not all BRS members are entitled to deduct the cost of travel, lodging and meals, to attend the Annual Meeting, the IRS informs us. These members fall into 2 groups: (1) Professional members — including philosophers, educators, psychiatrists, psychologists, etc. — who benefit in the field of their professional competence through their membership in the BRS. (2) Essential members — whose presence is essential to the proper conduct of the meeting. This includes Directors, who elect the officers at the meeting; Officers, who conduct the meeting; Committee Chairmen who report to the meeting; and Committee Members who amplify the Chairman's report.

Note: if you take a tax-exemption, you must also report it to the BRS Treasurer, Dennis Darland (1406 - 26th St., Rock Island, IL 61201). The BRS is required to report it as income -- even though it pays no tax on income -- when income exceeds \$5000.

REPORTS FROM OFFICERS

(6) Chairman Peter G. Cranford reports:

On First Looking Into Russell's Letters to Lady Ottoline

Ever since Ken Blackwell told me about a year ago that most of Russell's psychology was revealed in Russell's letters to Lady Ottoline, I had the desire to examine them. Recently I made a trip to the Humanities Research Library at the University of Texas to scan the 2,000 letters or so prior to deciding how to tackle them.

His relationship with Lady Ottoline began on March 19, 1910. His first letter was written on April 8th. He was now about two months shy of being thirty-eight. Principia had recently been finished and so was his marriage.

I had hoped, ambitiously, to scan the letters at a clip of fifteen seconds each, and if I could not keep up the pace I would sample all I could. It took me forty minutes to absorb the short April 8th. letter.

My impression of this letter follows:

He quickly revealed himself as a person with very sensitive feelings. He was capable of great joy and great pain--with the latter more predominant. He had strong guilt feelings about not being able to love Alys any longer, but was solaced by the fact he may not have been totally to blame since she was heartily disliked by the Whiteheads. He had an unusually quick perceptiveness in when analyzing another's intellectual strengths and limitations. He had a great need to be understood. He was still in some quandary about his religious beliefs and already was using Ottoline as a sounding board, perhaps subconsciously feeling that no one could help him much--except by listening sympathetically. The sympathy and empathy he had for others was no doubt augmented by own intense suffering that began in childhood. He expressed his emotional indebtedness to Spinoza, and confessed to an emotional inability to "appeal" to others--as he had tried to do in his Free Man's Worship. What he really meant by "appeal" was "reach and help others". He felt that his FMW was of value only for people in great unhappiness.

He made it clear that his work came first, and although he intimated otherwise in his autobiography, I think that if "push came to shove", even Lady Ottoline would have been second. However, he was clearly in love with her, and reacted to her as almost anyone else reacts to new found love--looking to be inspired to find a certain meaning in life akin to religion--which he then did not have.

This first letter saddened me greatly. I felt that I was examining a patient destined to be tortured for a long time. I hoped that I was wrong. If I proved to be wrong it could only be because, he was successful in applying to himself the "therapy" he preached to others--notably in the Conquest of Happiness.

Or did he achieve it simply via love?

(7) President Robert K. Davis reports:

I have just returned from England and France. In England I visited Peter Cadogan at Conway Hall, and we discussed the Russell Memorial. The fund drive is now on. Peter Cadogan asked me to handle the North American drive; members wishing to make contributions should mail them to the newsletter or to the Committee in England; see (22). All contributions, however modest, are welcome.

I attended a talk given by Peter Cadogan at the Sunday Humanist meeting at Conway Hall, and met various members. Of special interest was Peter Hunt, President of the H.G.Wells Society, with whom I had tea.

I also made my first trip to Cambridge, saw Trinity College and ER's brass memorial in the chapel. It is all as impressive as I had always been told. While there, I visited JACK PITT, who is spending the academic year in Cambridge.

I will be the convocation speaker February 20th at Morningside College in Sioux City, Iowa. In a week of activity revolving around the subject of pacifism, I will be speaking about "Bertrand Russell and Some Philosophical Conundrums of Pacifism", and I will be visiting classes to speak about Russell. Members in the Sioux City area who wish to should contact me in advance, and we can meet and chat and have tea.

(8) Treasurer Stephen J. Reinhardt reports:

For the quarter ending 12/31/79:

(9) Secretary Donald W. Jackanicz reports:

See (4) and (35).

REPORTS FROM COMMITTEES

(10) Science Committee (Alex Dely, Chairman):

The major aim of the Science Committee will be to present as unified as possible a portrait of the strengths and weaknesses of science, its uses and abuses, and its interrelation with every other aspect of man's activities on Spaceship Earth

As we and our earth are extremely vulnerable, both laymen and scientists must know where to obtain significant information, to discuss and resolve the many problems which beset us, and in the most efficient way possible.

I have set up a clearing house -- partly at my house, partly at the University -- of about 1000 books, articles, papers and studies dealing with all aspects of the environment and its pollution. These items have come from the Nuclear Regulatory Commission, Environmental Protection Agency, etc. (and their associated state divisions), from local and national environmental groups, university research institutes, and industrial mailings. Mention any environmental subject, and I believe I have in-depth information on it! I invite BRS members to make use of these resources.

I am working on the possibility of inviting a scientist to talk, at the June BRS annual meeting.

I expect, in future newsletters, to present position papers on a number of scientific topics.

George Blam and I are ready to compose our first account of a new theory of elementary particle phenomena.

- * I repeat my invitation to BRS members interested in any aspect of science or its applications to become members of the Science Committee. Why not look into this? My address: Physics Department, Illinois State University, Normal, IL 61761.

PHILOSOPHERS' CORNER

- (11) Jobs for Ph.D.s. For some time now jobs have been scarce for professional philosophers and others in the humanities. Earlier we reported the situation at Wabash College, where 155 applied for one job, teaching philosophy (RSN22-7).

Well, NYU is trying to do something for PH.D.s who can't get jobs in the fields for which they were trained -- at least for those who can come up with \$1000 for tuition -- as the following ad in The New York Times shows:

Humanities Ph.D.s: Business Can Use Your Skills!

Careers in Business

An innovative and successful program offered for the third successive year by New York University's Graduate School of Business Administration.

Recent Ph.D.s and A.B.D.s in the humanities and related social sciences are invited to enter the national competition for 50 places in the intensive summer program designed to orient them in substantive areas of business administration. Placement services are offered by the School and interviews with major business corporations and organizations in the public sector are provided.

Program dates: June 20-August 15, 1980
Application deadline: January 15, 1980
Tuition: \$1,000

NEW YORK UNIVERSITY
Graduate School of
Business Administration

For applications, write or call:

Telephone: (212) 285-6234

New York University is an affirmative action/equal opportunity institution.

BY BERTRAND RUSSELL

- (12) "The Sham of American Education" that we reproduced last issue (RSN24-11) from E. Haldeman-Julius' "Little Blue Book No. 1125" (1926) -- and that TOM STANLEY had kindly sent us -- turns out to have been a reprint of an article that originally appeared in the "Nation and the Athenaeum" (London, 11 October 1924). The original article, titled "The American Intelligentsia", was twice as long as the reprint. It is reprinted in full in Bertrand Russell's America by Barry Feinberg and Ronald Kasrils, London: George Allen & Unwin, 1973, pp.232-235. Writes HARRY RUJA, who let us know about all this: "I had a moment of excitement thinking Stanley had found a new item to add to my bibliography!" Harry and KEN BLACKWELL are collaborating on what will probably be the authoritative Russell bibliography.

BR, WRITER OF LETTERS

(13) On statesmen's euphemisms for mass-killing, in this 1962 letter:

From: The Earl Russell, O.M., F.R.S.

PLAS PENRYN,
PENRYNDEUDRAETH,
MERIONETH.
TEL. PENRYNDEUDRAETH 242.

9th May 1962

Sebastian Arrieta,
2209 Pacific Avenue,
Manhattan Beach, Calif.

Dear Mr. Arrieta,

Thank you for your letter, which I read with great interest.

I entirely agree with what you wrote to Kennedy about Franco and Guernica. It seems to me inevitable that when the major powers base their policies on the threat of a million Guernicas they will support regimes like Franco or Syngman Rhee on the one hand, or like Kadar and Ulbricht on the other. You tell Kennedy that history will remember him by his actions and not by his words. The complete prostitution of words like freedom, humanity, decency, peace, or liberation, and the euphemisms of deterrent, over-kill, strategic bombing, have robbed words issued by the so-called statesmen of any meaning. Franco said he was determined to destroy half of the Spanish population to achieve his purpose: the men of power in your country and mine are determined to destroy mankind.

Yours sincerely,

Bertrand Russell

Bertrand Russell.

(Thank you, Sebastian Arrieta)

BR ON WRITING

(14) The Buckley vocabulary. HARRY CLIFFORD sent this letter to the Star-Ledger (Newark, NJ). It appeared 1/31/80:

In expressing his conservative views, William Buckley invariably uses long or unusual words that the average newspaper reader does not always understand.

In a recent article in The Star-Ledger he used words such as "vaticinations, antipodal, salvific, typhonic vectors and decocted." It should not be necessary to use an unabridged dictionary when reading a newspaper.

Buckley would do well to heed the advice of Bertrand Russell, that great master of English, who, in commending a few simple maxims to writers of expository prose, said: "Never use a long word if a short word will do."

Harry W. Clifford,
East Orange

BR, PUBLIC SPEAKER

(15) On cruelty, BR spoke at the Tenth Anniversary Memorial of the Warsaw Ghetto Uprising, in London in 1953:

"Perhaps I have not the same intimate right to mourn these martyrs, as I cannot feel it the way you do, but I assure you with all my heart that I feel the tragedy most profoundly and with a feeling of shame that such things had happened and we had not prevented them... In the company of those who suffered, I feel a certain humility..."

"One ought to have found something to say to mankind that would have prevented such horrors. Mankind has an extraordinary capacity for cruelty. What is it that makes people be like that when they might be decent human beings?"

To find an answer to this question was essentially a scientific problem, Earl Russell said. Cruelty was the manifestation of a disease which sprang from fear, greed and humiliation. Punishment of persecution, whilst necessary, was not enough. Wars may be necessary, but did not make people any better.

Earl Russell said he had fought throughout his life to diminish persecution, cruelty and wickedness in the world and would continue to do so, even against his own government. "I do not think we should tolerate oppression. We must all try to stand for human rights and human dignity. Everybody belongs to some minority; and we must stand up for them if they are unjustly treated, whether we belong to them or not. That is a principle I have endeavored to make the rule of my life."

The first paragraph above is from the London Jewish Chronicle, 17 April 1953. The remaining paragraphs are from Bulletin 140 (16 April 1953), News and Feature Service, World Jewish Affairs, 55 New Cavendish Street, London W1.

(Thank you, HARRY RUJA and BOB DAVIS)

ABOUT BERTRAND RUSSELL

- (16a) Quiz, here are 3 non-scholarly accounts of certain aspects of BR. Can you spot inaccuracies? Let us know what * you find.
- (16b) From the section, "Anatomy of some Celebrated Marriages", in The People's Almanac #2 by David Wallechinsky and Irving Wallace, New York: Morrow, 1978:

Bertrand Russell and Alys Pearsall Smith

Courtship: Bertrand Russell and Alys Pearsall Smith met at her home in the summer of 1889. He was 17 and staying at his uncle's home in Hindhead, England, while he waited for classes to begin at Cambridge. An aristocrat, he had been raised by his grandparents, Lord and Lady John Russell, after he was orphaned in early childhood. Alys was five years older than Bertrand. She had been raised in America by Quaker evangelists who had recently resettled in England. Now she was visiting her parents during her vacation from college.

Reluctantly, Bertrand accompanied his uncle on a welcome call to their new neighbors. Dreadfully shy, he was afraid that his uncle would accept an invitation to supper. The Americans did ask them to stay for supper and his uncle accepted.

At the table the boy met the worldly Bryn Mawr student, Alys. She seemed more emancipated than any woman he'd ever known. She had gone to school on her own, she had crossed the Atlantic unchaperoned, and she was an intimate friend of Walt Whitman. Alys was also attractive and good-natured. "She was kind, and made me feel not shy," Russell later recalled. "I fell in love with her at first sight."

Over the next few summers he often walked the 4 mi. from his uncle's house to eat supper with Alys's family and spend the evening with them singing Negro spirituals around a campfire. The family's vigor and freshness, as well as—or in spite of—their "funny grammar" and the Quaker "thee" and "thou" that peppered their speech, invigorated Russell, who envisioned America as a romantic land of free-

Bertrand Russell and his first wife, Alys Pearsall Smith, 1894.

dom. He admired the family's "absence of many prejudices" and "emancipation from good taste." More important, he found himself strangely devoted to Alys. He decided that if she were still single when he became 21, he'd ask her to marry him.

Proposal: He celebrated his 21st birthday in May, 1893, at Cambridge, and immediately gained control of £20,000 from his father's estate. Now a man of means, he went to Alys's home in Friday's Hill in mid-September and took her for an early stroll before breakfast, hoping to take advantage of the misty pastoral dawn. His nerve stuck somewhere in his throat. A few hours later, fortified by breakfast, he walked her into the nearby woods again, and this time, with "hesitation and alarm," he proposed to her. "I was neither accepted nor rejected," he said. "It did not occur to me to attempt to kiss her, or even

take her hand." They simply agreed to keep on seeing each other and let time decide.

Seven months later, in snowy London, Bertrand finally got around to kissing Alys. And in the fall of 1894, a year after his proposal, she accepted him.

Lord and Lady Russell hit the roof when he told them about the engagement. They called the 26-year-old Alys "no lady, a baby snatcher, a low-class adventuress... whose vulgarity would perpetually put [Bertrand] to shame." To dissuade him further, they called the family doctor, a muttonchopped Scotsman, to the ancestral estate to tell Bertie about the history of insanity and instability in the Russell family. His aunt was subject to hallucinations, his uncle was mad, and his own father had been an epileptic before his death.

These exaggerated tales plunged young Bertrand into a depression. He saw madness everywhere and feared his own latent insanity. He worried about one of Alys's strange uncles and the quirks he'd observed in her parents, and wondered seriously if their marriage would produce a madhouse of idiots. Alys, however, ingeniously put these fears to rest during one of their walks. She said they'd simply have a childless marriage.

Bertrand rushed back to his grandparents to tell them the good news. Again they brought in the doctor, this time to give him a gloomy lecture about the injurious effects contraceptives had on health. Lady Russell even hinted from the wings that contraceptives had contributed to his father's epilepsy.

When this ruse failed, Lady Russell resorted to another stalling tactic. Glumly clinking her numerous medicine bottles, she told him that since she had so little time left on earth, he and

Lord John, she added, had persuaded the ambassador to Paris to offer Bertrand the post of honorary attaché. If their love withstood the test of his absence, she would no longer oppose the marriage.

Wedding: Bertrand agreed to go to Paris. The family sent his older brother along to keep tabs on him. After three months of dull paperwork, Bertrand hurried back to Alys. They were married on Dec. 13, 1894, in a simple London Quaker meeting, "without being congratulated by a host of silly fools who don't think in their hearts that we are to be congratulated." None of the Russells showed up, and Lady Russell notified her grandson in a pleasant but cool letter that he had been disinherited.

Happily Ever After: Though Alys had in theory defended free love whenever she had had the opportunity, she was determinedly hesitant to sacrifice her virginity on her honeymoon. Thanks to her fanatically, often maliciously religious mother, Alys considered sex dirty and just a curse to marriage. She believed that intercourse was strictly for propagation, and since they'd already decided to remain childless, sex promised to be a rare event. But Bertrand wasn't having any of that nonsense, not after gritting his teeth through 22 years of virginity. He reported later that, due to his insistence, they caught on fast. When they eventually decided to have children, it turned out that Alys was sterile.

The marriage went smoothly for several years. For Bertrand it was a great intellectual period, a time of fruitful work unhampered by emotional drain. He and Alys traveled extensively in Europe and America. She spent a good deal of time speaking to temperance and suffrage groups. He lectured at various universities, published two books, and began work on his monumental *Principles of Mathematics*.

Alys owed it to her to consider a trial separation.

One day in 1901, while Russell was riding his bicycle along a country road, he suddenly realized he no longer loved Alys. His feelings had probably been changing for some time before he realized it. As Lady Russell had predicted, Alys's quaint Quaker mannerisms, her earnestness about "good work," and her American vulgarisms had often embarrassed him. His

great intellectual awakening had left her far behind. And he had finally admitted to himself that Alys was not the saint he'd taken her to be.

Though they grew apart after that day, he stayed with her—sleeping in a separate bed—for ten years. In 1911, while she raged at him for telling her about a newfound love, he rode away on his bicycle and never came back. They were

divorced in 1921.

They didn't meet again till 1949. Alys, then 81, had remained true to him, never remarrying. She had kept track of his career and had occasionally attended his lectures unnoticed. Russell, now a widely read philosopher on the subjects of love and marriage, had been through three additional marriages as well as numerous

affairs. An international figure, he had been awarded the Nobel Prize for literature, and the king of England had conferred upon him the Order of Merit. After Alys had arranged his 78th birthday party in 1950, she wrote him a letter in which she said, "I am utterly devoted to thee, and have been for over 50 years."

Russell died in Wales on Feb. 2, 1970, three months before his 98th birthday.

(16c) From the section, "Inside the Nobel Prize Awards: Literature," in The People's Almanac #2:

1950 Bertrand A. Russell (1872-1970), British Work: *Human Knowledge*
Nobel Laureate: He was a rebel with many causes, a pacifist who fought on a dozen far-flung humanitarian fronts. Scion of aristocratic individualists, the orphaned infant was brought up by his grandfather (twice prime minister under Queen Victoria). He was educated privately and at Trinity College, Cambridge. Writing at the rate of 3,000 words a day, he wrote over 40 books, dealing with logic, mathematics, morals, sociology, politics, polemics, and education. But the founding father of modern analytic philosophy was no ivory-towered sophist. This activist's activities were always getting him into trouble and even into jail (for opposing con-

scription in 1918, for nuclear disarmament agitation in 1961). In 1916 Trinity College fired him for his pacifist principles (28 years later they had second thoughts and appointed him a Fellow). In 1940 New York's City College went to court to annul his appointment because of his immoral views. He inherited an earldom in 1931, received the Order of Merit in 1949, and was awarded the Nobel Prize in 1950. He started to write fiction (*Satan in the Suburbs*) at 81, and in his 90s he was energetically opposing U.S. involvement in Vietnam and proposing assorted peace plans. In spite of (or because of?) his variegated matrimonial career (three divorces and four wives), he called himself "a happy pessimist."

(16d) From the section, "Atheists and Agnostics" in The People's Almanac by David Wallechinsky and Irving Wallace, New York: Doubleday, 1975:

BERTRAND RUSSELL (1872-1970)

His Person: British philosopher who contributed to the fields of mathematical logic, education, religion, and politics. Lost Labor party's support when he stood for Parliament in England and a Fellowship at Trinity College because of religious beliefs. Lost a teaching position in the U.S. because of his agnosticism and his "alleged advocacy and practice of sexual immorality" (case was tried by a Roman Catholic judge). Nobel Prize winner. From staunch Presbyterian background. Imprisoned while campaigning for nuclear disarmament. Established Bertrand Russell Peace Foundation. Wrote: *The History of Western Philosophy, On Education, Marriage and Morals, Why I Am Not a Christian, Which Way to Peace?*

His Belief: "The whole conception of God is a conception derived from the ancient Oriental despotisms. It is a conception quite unworthy of free man. . . . A good world needs knowledge, kindness, and courage; it does not need a regretful hankering after the past or a fettering of the free intelligence by the words uttered long ago by ignorant men."

(Thank you, LEN CLEAVELIN)

(17) A most important person. Here is a popular account of ER, in The 100 Most Important People in the World by Donald Robinson, New York: Putnam, 1970:

BERTRAND RUSSELL's voice is quavery now. Much of what he says is divorced from fact or logic. But it is still the voice of a brave thinker who believes deeply in the worth of individual man.

"I find many men nowadays oppressed with a sense of impotence, with the feeling that in the vastness of modern societies there is nothing of importance that the individual can do. This is a mistake," he wrote a while back. "The individual, if he is filled with love of mankind, with a breadth of vision, with courage and with endurance, can do a great deal."

Russell is still doing a great deal of importance. In recent years, he led the protest movement in Europe against the United States' policies in the Vietnam War. His tone was often overwrought. "Within living memory, only the Nazis could be said to have exceeded in brutality the war waged by your Administration against the people of Vietnam," he passionately wrote President Lyndon B. Johnson. He was so rabid at times that many people felt he had become a captive of the Communists in his very old age, and it may have well been true. But multitudes of non-Communist Europeans listened to him and believed him. He did more probably than any one person to trigger the international outcry which eventually forced President Johnson to halt the bombing of North Vietnam.

Looking back on almost a century of vibrant, provocative living, Russell eloquently wrote in his autobiography at the age of ninety-four, "Three passions have governed my life: the longing for love, the search for knowledge, and unbearable pity for the suffering of mankind."

Out of these three searing passions of the third Earl Russell have come many galvanic thoughts for mankind to weigh and act upon. He has long been considered the world's greatest living philosopher. As far back as 1950, he was awarded the Nobel Prize for Literature "in recognition of his many-sided and significant authorship, in which he has constantly figured as a defender of humanity and freedom of thought."

The second son of Viscount Amberley, Bertrand Arthur William Russell was born near Trelleck, England, on May 18, 1872. Both his parents died before he was four years old, and he was brought up by his grandmother. His father provided in his will that the boy be reared by some agnostic friends of his, but a British court set the will aside. Nonetheless, by the time he was eighteen, Russell had lost all his belief in Christianity.

After he was graduated from Cambridge in 1894, he spent a brief period with the British Embassy in Paris, then moved on to Germany

where he made a study of politics, the basis of his first book, *German Social Democracy* (1896).

In 1900, Russell became interested in the new system of "symbolic logic" developed by the Italian mathematician Giuseppe Peano. It led him to write *The Principles of Mathematics* (1903) in which he extended Peano's theories and asserted the then-startling view that mathematics actually was a part of logic.

This book gained him the attention of the entire intellectual world. Its successor, the three-volume *Principia Mathematica* (1910-13), on which he collaborated with the great Alfred North Whitehead, created a new syntax of mathematic logic, so important that it is included on many lists of the 100 great books of all time.

Since then he has written more than forty books, among them *The Problems of Philosophy* (1911) in which he laid the groundwork for the evolution of modern realism; *Mysticism and Logic* (1918) in which he assailed mysticism for its "illogicality" and held that the first law of morality was to think straight; *An Outline of Philosophy* (1927); and *A History of Western Philosophy* (1946) in which he helped to make philosophy clear and readable to the general public.

In these books, he was always the "analytical empiricist," maintaining that there were solely two kinds of knowledge: the empirical—that which could be observed directly—and the logical.

In addition to philosophy, he has written on a myriad of other subjects: on education, objecting to the teaching of the classics in schools and urging more science instead; on sex, opposing family life and conventional morals; on politics, castigating all illiberal tendencies and urging freedom of thought and action. His *Why I Am Not a Christian* came out in 1957 and his despairing *Has Man a Future?* in 1961. The fascinating three-volume *The Autobiography of Bertrand Russell* appeared between 1967 and 1969, with a wealth of memories that was incredible, such as the most intimate details of Russell's numerous love affairs, to say nothing of how much he masturbated at the age of fifteen. The *Autobiography* was a great financial success. He got \$202,000 for the American rights alone.

Russell has taught at many schools: Peking's National University; the University of California; Harvard; Chicago; Princeton; Cambridge, among others.

He has gotten into endless controversies over his outspoken views. During World War I, he was fired from the Cambridge faculty and imprisoned for six months for pacifism. His appointment to the faculty of the City College, New York, in 1940 provoked violent

protests by right-wing and church groups on the grounds that he was "lecherous, salacious, libidinous . . . atheistic . . . untruthful." His contract was canceled, leading him to remark, "Precisely the same accusations were brought against Socrates—atheism and corrupting the young."

For all his opposition to war, Russell vigorously supported the democracies against the Nazis in World War II. Immediately after the war, though, he began crusading for nuclear disarmament. A nuclear war would put an end to civilization, he warned. At the age of eighty-eight, he went to jail again, for a week, for participating in a peace demonstration.

He was long a staunch critic of Communism. As far back as 1920, he wrote a persuasive book, *The Practice and Theory of Bolshevism*, predicting the death of freedom in a Communist Russia. But in his last decades, he came under the influence of an unsavory, pro-Communist American who turned him into an apologist for the Soviet Union and her allies. He sponsored an "International War Crimes Tribunal" in Stockholm in 1967 that was an unabashed exercise in anti-American propaganda.

The first Russell marriage was in 1894 to Alys W. Smith. She divorced him, and in 1921 he married Dora Winifred Black by whom he had two children. In 1936, a year after this marriage was dissolved, he wed his young red-headed secretary, Patricia Helen Spense, and they had one son. They were divorced in June, 1952, and he quickly married Edith Finch, a fifty-two-year-old American author. Upon his brother's death in 1931, the philosopher became the Earl Russell of Kingston Russell. He doesn't use the title.

At ninety-seven Russell looked much as he had for the past twenty years, a thin, wiry little man, with a hatchet face, wrinkled leathery skin, and a thatch of unruly white hair. He and his wife make their home in Wales, at Plas Penrhyn, Penrhyndeudraeth, Merionethshire. Because of intestinal trouble, he lives entirely on a diet of liquids, including tea, soup, and seven double scotches and water a day.

In the last volume of his *Autobiography*, Russell summed up the failures and successes of his life. His books were among the successes. "They have been acclaimed and praised, and the thoughts of many men and women have been affected by them. To this extent I have succeeded," he said.

As to the failures, he wrote, "I set out with a belief that love, free and courageous, could conquer the world without fighting. I came to support a bitter and terrible war. In these respects, there was failure."

* If you disagree with any of the details above, let us know about it.

(Thank you again, Len Cleavelin)

(18) A game of croquet. Corinna Lindon Smith Norman tells about a visit to the Smith household (BR's in-laws) in 1897, in Interesting People, University of Oklahoma Press, 1962:

Mary Costelloe, the Smiths' elder daughter, and her two children, both girls, were living at Friday's Hill while she flitted back and forth between her former home and Paris. She talked to me about the marital difficulties that had ended in separation, as though I were a contemporary in experience. Her many kindnesses to me made a deep impression and laid the foundation for a real friendship during the long years when, as Bernard Berenson's wife, her intellect found an outlet in helping him in his work.

At the same moment I was being disillusioned about marriage, I came in contact with romance in the same household. Bertrand Russell had married Alys, the younger Smith daughter, three years before, and obviously they were very much in love. She was unusually tall and very graceful, her wavy brown hair, bright blue eyes, and exquisite complexion made her a striking figure in my eyes.

(Thank you, TOM STANLEY)

"Bertie," as Russell was called, was not handsome, because his forehead was too prominent and his chin receded a little, but his was an arresting face, full of character, with clear-cut features and keen eyes. He was so frank in mentioning his dislike of being bored that I kept out of his way until one afternoon, after tea, he invited me to join him and Logan in a game of croquet, a procedure that continued throughout the remainder of my stay. He attacked the ball on the croquet grounds with the logic and devastating skill he used in demolishing arguments contrary to his unconventional opinions, and as effectively.

Logan was no match for him, and the only time I beat him Bertie attributed to my luck, not skill. When I told him this was not fair, he sized me up in a searching glance, as though considering my words, and remarked, "You are right."

ER QUOTED

- (19) Christopher Lasch in The Culture of Narcissism, New York: Norton, 1979, p. 187:

Bertrand Russell once predicted that the socialization of reproduction -- the supersession of the family by the state -- would "make sex love itself more trivial," encourage "a certain triviality in all personal relations," and "make it far more difficult to take an interest in anything after one's own death."

(Thank you, KATHY FJERMEDAL)

- (20) Forbes Magazine, the business publication, has a regular column called "Thoughts on the Business of Life." The issue of February 4, 1980 starts off with a statement by Bertrand Russell:

The good life is one inspired by love and guided by knowledge.

It then quotes Sophocles, the Bible, Solzhenitsyn, Havelock Ellis, Carlyle, Lyndon B. Johnson, Malraux, Hodding Carter, Ralph Waldo Emerson, and J. C. Penney. The Russell statement has become the motto of the BRS.

(Thank you, WHITFIELD COBB)

ER HONORED

- (21) The Sonning Prize -- funded by C. J. Sonning, a Danish editor -- is given to "a man or woman -- Danish or foreign -- who has accomplished meritorious work for the advancement of European civilization." The prize amounts to at least 100,000 Danish kroner -- in recent years, 200,000 kroner -- and is awarded at least every two years.

It is administered by the University of Copenhagen (to which Russell Society News is indebted for most of this information.) All European universities may nominate candidates; the final choice is made by a committee elected by the Senate of the University.

The first Sonning Prize was awarded to Albert Schweitzer in 1959. The second went to Bertrand Russell in 1960. A partial list of recipients also includes Niels Bohr (1961), Sir Laurence Olivier (1966), Arthur Koestler (1968), Karl Popper (1973), Hannah Arendt (1975). In 1950 an extraordinary prize was presented to Sir Winston Churchill.

Professor of Comparative Linguistics, Louis Hjelmslev, made the presentation speech, on the occasion of the award to ER:

Our thanks are due to Lord Russell, not only for having expressed his willingness to accept the Sonning Prize, but, even more, for having consented to come in person and address this audience. For this kindness we tender our heartfelt thanks.

Lord Russell's personal presence gives an added value to this meeting. It is true that it can safely be assumed that Bertrand Russell is well-known to all those present. Bertrand Russell is known to be a brilliant and stimulating writer and an extremely productive and fertile writer at that, on a very large scale ranging from the exact sciences and linguistic theory through philosophy in all its aspects on to social science, including educational and political problems. Not only is he well-known as an interesting writer. To describe his writings as being merely interesting would indeed be an understatement. Throughout his writings no reader can fail to be constantly aware of the character that makes its presence strongly felt in the background. The strict logical reasoning which he imposes on himself and on his reader, the deliberate severity that mostly predominates in his style and which sometimes entails some pungent remarks to dispose of what he likes to call muddleheadedness, all this does not prevent him from revealing that he is not only engrossed by his subject, but personally engaged in it, not so much for his own sake, but for the sake of the humanity whose fate he shares.

Nor does the logical severity prevent him from expressing good-humoured sympathy with professional or other fellow-creatures. The reader feels he is in good company with a fine representative of the human species, not only a universal and versatile intellect, not only a great thinker, but an engaging personality entitled to take as his motto as far as knowledge is concerned, but also ethically: homo sum, humani nil a me alienum puto.

It is beyond doubt that for these reasons Bertrand Russell enjoys much popularity in academic circles and is familiar to the world. It may be pardonable to add: familiar to us in Denmark and in the Danish capital. In addition, there are quite a few people in this city to whom Bertrand Russell is a personal acquaintance and who recall the time when he lectured here.

These, then, are some of the reasons why we have been looking eagerly forward to seeing Lord Russell and to listening to him.

This is bad logic. Admittedly. If it were not for the friendly attitude he is taking towards us, the sharp intellect of Bertrand Russell might now produce a logical razor and turn the tables against me, saying that if we know him so well as I have just said, this would not be a reason for listening more, but for listening less to him. Fortunately for us, however, Bertrand Russell would be more likely to admit that there are more

things in the human mind than are dreamt of in formal logic. If the logical razor were produced, I might have answered that we believe we know Bertrand Russell as a writer and as a scientific personality, and we believe we know him quite well, but we feel convinced that we do not know him sufficiently well. And to this last statement we expect Lord Russell to subscribe whole-heartedly. Incidentally, it so happens that it is founded on experience: reading and re-reading Bertrand Russell's numerous writings shows that there is always something new to be found and that there are surprises in a good many pages and hidden between the pages.

No single person would venture to undertake a complete survey of Bertrand Russell's numerous activities. Since an incomplete survey would be a contradiction in terms, I am not going to give any survey. What I am giving you is far from being an academic or professorial lecture. This, I hope, will appeal to Lord Russell and meet with his approval. He has told us that Aristotle is the first European to write like a professor. But several reasons make me believe that he did not mean this as a flattering observation.

Of all great thinkers mentioned by Bertrand Russell, Aristotle is perhaps the one who appeals least to his mind. He gives us to understand that Aristotle's work has had a detrimental, disastrous effect on his successors. We learn, incidentally, that "a science which hesitates to forget its founders is lost." Aristotle is one of these founders, though by no means the only one. Thus, to some extent, others are consigned to the same fate.

One feels that Bertrand Russell speaks with much more sympathy of Plato than of Aristotle. But he refutes -- and I think on perfectly good grounds -- Plato's theory of ideas, according to which (to quote Bertrand Russell) "there is laid up in heaven an ideal cat and an ideal dog...and...actual cats and dogs are more or less imperfect copies of these celestial types." It is to the metaphysical part of this doctrine that Bertrand Russell takes exception rather than to its logical part, since it seems respectable enough to admit in some way the logical existence of a universal semantic content underlying, say, the linguistic form, "cat".

"Language cannot get on," says Russell, "without general words such as 'cat', and such words are evidently not meaningless. But if the word 'cat' means anything, it means something which is not this or that cat, but some kind of universal cattiness. This is not born when a particular cat is born, and does not die when it dies. In fact, it has no position in space or time; it is 'eternal'."

The Aristotelian theory of universals, by which he intended to overcome some of the metaphysical implications involved in Plato's theory of ideas is, according to Bertrand Russell -- and he may be right again -- "a common-sense prejudice pedantically expressed," and so has to be rejected, at least in the form adopted by Aristotle.

Now here is Bertrand Russell on Aristotle:

He is the first to write like a professor: his treatises are systematic, his discussions are divided into heads, he is a professional teacher, not an inspired prophet. His work is critical, careful, pedestrian, without any trace of Bacchic enthusiasm. The Orphic elements in Plato are watered down in Aristotle, and mixed with a strong dose of common sense; where he is Platonic, one feels that his natural temperament has been overpowered by the teaching to which he has been subjected.

He is not passionate, or in any profound sense religious. The errors of his predecessors were the glorious errors of youth attempting the impossible; his ~~errors~~ are those of age which cannot free itself of habitual prejudices. He is best in detail and in criticism; he fails in large construction, for lack of fundamental clarity and Titanic fire.

Thus far Bertrand Russell. One shadowy thought might perhaps steal its way into the reader's mind, as far as Aristotle and professors are concerned: is it really as bad as that?

There is no denying, however, that large constructions, based on fundamental clarity and nourished by Titanic fire -- and this is exactly what we find in Bertrand Russell -- should not be watered down by professional teachers. Bertrand Russell is a wonderful teacher himself, and it is far from us to make a second-hand textbook of his theories. Suffice it to say that Bertrand Russell's achievements inspire us with admiration. This is self-evident, and on my part it is nothing but a preliminary statement which I shall have to amplify in my final remarks.

But you will permit me now to stress a few points which may have particular bearing on today's situation, the award of the Sonning Prize.

The Sonning Prize is awarded for an outstanding achievement for the benefit of European Civilization.

I should prefer to refrain from definitions, those slippery things. But sometimes there is no getting around them. Anyhow I feel it incumbent on me to make it clear how the purpose of the award may be said to be fulfilled in the present case.

Let me state first that by Europe we understand Great Britain and the continent (including, of course, some adjoining islands such as the Greek and the Northern archipelago.) We Danes do not conform to the British usage, according to which Europe is taken to mean the continent (with adjoining islands) as opposed to Britain.

May I state next that it may be very hard to find a justification for the term European Civilization.

I should think that the only available clue to a definition is to be found in the tradition transmitted from Ancient Greece through the ages up to the present day. Indeed, nowhere in Europe is education more strongly influenced by classical tradition than in Great Britain, Britannia, which in effect shared with most

of the rest of Europe the fate of being under the sway of Rome long before Great Britain created an empire of her own -- and Rome in its turn would hardly have existed as a metropolis of European civilization had it not received a strong impact from Greek civilization.

It is not a question of admitting this dependence on ancient tradition or rejecting it. It is a question of being in its power or not. The fact of combatting it is a sufficient sign of feeling its strength.

A moment ago I happened to speak at some length of Bertrand Russell's views on Greek philosophy. Whether Lord Russell agrees or disagrees, his attitude may serve as an illustration. In his "History of Western Philosophy", where his critics have not failed to note that some philosophers of good repute have been tacitly left out, ancient Greek philosophy plays an important part. On the other hand, in his book, "The Scientific Outlook", and elsewhere, Bertrand Russell makes a distinction between science and philosophy. Scientific method, as he understands it, does not really come into the world until Galileo. In this connection, we are told as follows:

"The Greeks ...did surprisingly little for the creation of science. The great intellectual achievement of the Greeks was geometry, which they believed to be an a priori study...not requiring experimental verification... The Greeks observed the world as poets rather than as men of science, partly, I think, because all manual activity was ungentlemanly, so that any study which required experiment seemed a little vulgar. Perhaps it would be fanciful to connect with this prejudice the fact that the department in which the Greeks were most scientific was astronomy, which deals with bodies that only can be seen and not touched."

This is what Bertrand Russell wrote in 1931. Alas, could the Greeks have seen what human beings are now tampering with, they might, accordingly, have given up their astronomical research and failed to make their glorious astronomical discoveries!

Without the unbroken tradition from the ancient Greeks with all its good or bad qualities, I fail to see how we could define European Civilization. The Dialectics of Plato are being continued in all European civilization and do not cease to leave their mark on the European mind. If they were given up, and only then, European Civilization would cease to exist as such. In all other respects it may prove difficult or impossible to speak of a common European Civilization. East and West are very different worlds in our time. Hardly any European thinker has done so much as Bertrand Russell to grasp the nature of these two worlds, to bridge the gap between them, and to promote a policy designed to save the future of mankind in a true European spirit.

Civilization is not necessarily nor exclusively science only, even if science is taken in a wider sense. Art in all its aspects has merits of its own and forms part of civilization. It is, as Bertrand Russell points out, much older than science. We may add that art, as a time-honoured tradition, is not found in Europe only. It is older than Europe and much more widespread. So is Philosophy, particularly if Philosophy is taken to include speculative cosmology or other kinds of metaphysics.

As opposed to Art and speculative Philosophy, Science seems to me to be the hallmark of European Civilization. Only sporadically is Science found outside the European tradition and its later offshoots. If we take scientific method in its narrower sense and define it by induction and experience, Greek astronomy may well be included. But the scientific method need not necessarily be opposed to the deductive method, but only to Metaphysics and speculative Philosophy. In that case even Greek geometry can be included. Not only Aristarch the Samian, but also Euclid and Archimedes seem to be typical Europeans in the sense I am here advocating.

What is really characteristic of European thinking at its best is, to my mind, the combination of scientific research with general philosophy. As one great linguist of our time has said, the ancient Greeks had the gift of wondering at things that other people take for granted. In the Introduction to his "Inquiry into Meaning and Truth", Bertrand Russell rightly points out that "the first difficulty is to see that the problem is difficult." This is, if I may be allowed to say so, a very Greek and a very European remark.

All deeply rooted European Civilization tends towards philosophy through strictly scientific research, including induction and deduction, experimental observation and constructive hypothesis.

In the same way as the notion expressed by the Greek word politics, this philosophy, purely theoretical in its essence, tends to become an applied philosophy. We can hardly choose any better example to show this than that of Bertrand Russell, the scientific and theoretical, and at the same time, realistic

Πολιτικὴ κατ' ἐξοχήν.

Bertrand Russell carries with him a good many marks of genuine Greco-European traditional civilization.

He is, like the ancient Greeks, an entirely independent mind. Faced with authority, this may make him a rebel, a revolutionary. Faced with narrow-minded traditionalism, this may make him something of a gamin, like Galileo, according to Bertrand Russell's own statement.

He has, like the Greeks, a noble respect for the individual and for other people's opinions, although he would, like Socrates, want them to state, dialectically, the reasons for their judgments before deeming them worthy of attention.

He has, like the Greeks, the courage of his convictions. It is highly meritorious to have submitted ancient idols to merciless criticism and to have pointed out emphatically what he does not hesitate to call the "two millenia of muddleheadedness" to which some fundamental errors of the so-called founders have given rise. It takes courage to do this, and it needed a man like Bertrand Russell to accomplish this task. He has hit the Greeks with their own best weapons. He is the boldest dialectician since Socrates. Indeed, his war against the

Greeks is extremely Greek.

If European thinking tends towards a general philosophy based on objective research, it can hardly be true, as it is often maintained, that science — in the wider sense of the word — is becoming constantly more specialized. What is really becoming specialized is not science, but scientific technique. In all our efforts to reach an intimate understanding of the basis on which experimental data are founded, the various branches of human knowledge are more dependent upon each other than ever before.

That is why not only analysis, so often mentioned by Bertrand Russell as one of the characteristics of the scientific method, but even synthesis is an important element in European thinking. No better example could be found than that of Bertrand Russell. The scientific progress would consist, according to him, in making "successive approximations of the truth, in which each new stage results from an improvement, not a rejection, of what has gone before."

Such improvements can often be achieved through the discovery of complementarities to replace contradictions, that is: through a synthesis which enables us to view conflicting aspects as complementary.

It is a great achievement on the part of Bertrand Russell, who perhaps at first saw an insurmountable barrier between deductive and inductive methods, to have combined them in the logical empiricism of which he is the originator. In the era of "two millenia of muddleheadedness", "logical empiricism" would seem to be an obvious contradiction in terms. It has proved to be just the opposite.

Other efforts to achieve synthesis have followed.

Just as through Einstein, space and time combined into space-time, so Bertrand Russell, in his endeavors to find a solution of the old dualism, "mind versus body", following and refining the great idea of William James, arrived at the neutral monism, the discovery of a possible "neutral stuff", mind-body.

In the final chapter of "An Inquiry into Meaning and Truth", Bertrand Russell suggests the possibility which is not quite expressly stated, but nevertheless seems clearly inferential: that there may well be a complementarity between verbal and non-verbal structure, or, in other terms, between the structure of language and the structure of the world.

Finally, it is worthy of notice that through a synthesis of logic and metaphysics, Bertrand Russell here also arrives at stating the possibility, or even necessity, of a metaphysics on purely logical grounds.

I said before that Bertrand Russell inspires us with admiration. But not only do we admire him: we think much of him — just as he himself states about Plotinus: "Whatever one may think of him as a theoretical philosopher, it is impossible not to love him as a man." But we think much of Bertrand Russell as a man because we think much of him as a theoretical philosopher. We think much of him because he inspires us with confidence in Europe, in European tradition, in European Civilization. He is one of the exponents of European Civilization at its very best, and one whose example gives us confidence in the future.

In his "Scientific Outlook", Bertrand Russell gives some examples of [practitioners of] scientific method. They are: Galileo, Newton, Darwin, and Pavlov. All these are Europeans. Others might be added, all Europeans. I suggest that we add one more name, which could hardly have been included by the author, that of Bertrand Russell.

BR responded with the following, which he called "Old and Young Cultures":

THE STUDY of differing cultures is somewhat modern. It has been pursued in recent times, with an immense wealth of erudition, by Arnold Toynbee. There is, however, one aspect in the history of cultures which he does not seem to me to have adequately emphasized. I mean the changes which most cultures undergo with the lapse of time. There are some features common to young cultures, and others common to old ones, and these are, to a considerable extent, independent of the particular characteristics of the cultures in question. Most cultures begin with a revolt of some class or nation or creed against what they consider unjust treatment. But after they have conquered an important place in the world, they lose their original rebellious features and become a help in the maintenance of stable government. Perhaps I should say a few words as to what is to be meant by a "culture." I should mean a system of beliefs, or at least of habits, an artistic or intellectual tradition, and ways of making social coherence possible. There are two ways in which a culture may die: one is by foreign conquest, and the other is by a new native culture. Foreign conquest destroyed the Minoan and Mycenaean civilization, though important elements of it were incorporated in the later civilization of Greece. The Aztec and Peruvian civilizations were completely exterminated by the Spaniards and contributed practically nothing to the subsequent culture of the regions in which they had flourished. The most outstand-

ing example of the growth of a new culture from within is that of Christianity in the Roman Empire.

It by no means always happens that victors in war impose their own culture upon the vanquished. When the Romans conquered the Greeks, they adopted Greek culture almost in its entirety; and when the Teutons conquered the Western Roman Empire, they, in turn, adopted the culture of Rome.

In our own day, a new culture has been gradually replacing the Judeo-Hellenic culture which has been connected with Christianity. This new culture is that of science—not, mainly, of science as knowledge, but, rather, of science as technique. Christianity took about three hundred years to acquire control of an important government. Scientific technique has taken about the same length of time—namely, from Galileo to Lenin. It has, at present, all the characteristics of a young culture, as Christianity had in the time of Constantine. But if, in any large part of the world, it acquires secure supremacy, it is to be expected that, like Christianity, it will gradually acquire artistic and philosophic maturity with all the trappings of cathedrals, church music, sacred pictures, and ecclesiastical potentates.

It may be argued that the scientific culture which is tending to replace that of Christianity is not really a new culture, but an inevitable development, having its source in Greek curiosity about the universe. However, it must be said that the distinc-

tion between different cultures and divergent branches of the same culture is largely arbitrary. It might, for instance, very plausibly be maintained that Muslim culture is only a continuation of that of Greece. Such questions have no substance and can be decided in accordance with the taste of the author concerned. However we may choose to decide this question, history shows that what are indubitably different branches of the same culture may display a mutual enmity as implacable as that between completely distinct cultures. An example of this is the hostility between Protestants and Catholics during the first hundred and thirty years after the Reformation.

We, who are accustomed to the heritage of cultural wealth that is associated with Christianity as we know it, have difficulty in realizing how hostile it was to culture while it was still new and fighting for supremacy. St. Jerome records a dream which illustrates this point. He had been a deeply sensitive student of the literature of Greece and Rome in their great days. He was sensitive to matters of style and found it difficult to give the same literary approval to the somewhat barbaric Greek of the Gospels as he had given to the objects of his unregenerate literary admirations. The qualms which these hesitations gave rise to found expression in a dream. He dreamt that at the Last Judgment, Christ asked him who he was, and he replied that he was a Christian. The answer came: "Thou liest. Thou art a follower of Cicero, and not of Christ." And thereupon, he was ordered to be scourged. Still in his dream, he cried out: "Lord, if ever again I possess worldly books, or if ever again I read such, I have denied Thee." The dream influenced him profoundly, and, for some years, his letters were free from quotations of pagan literature. Although, gradually, such quotations reappeared, it was half-heartedly and apologetically.

One can imagine almost exactly the same dream, *mutatis mutandis*, occurring to a brain-washed Chinese scholar in the present day. He might remember in a dream the fable of Po Lo, who asserted that he understood the management of horses, and, by means of the bridle and the whip, tamed them until more than half of them were dead. The fable concludes: "Those who govern the Empire make the same mistake." Or he might remember Tao Ch'ien's poem about *New Corn*:

*Swiftly the years, beyond recall.
Solemn the stillness of this fair morning.
I will clothe myself in spring-clothing
And visit the slopes of the Eastern Hill.
By the mountain-stream a mist hovers,
Hovers a moment, then scatters.
There comes a wind blowing from the south
That brushes the fields of new corn.*

(Translation by Arthur Waley.)

In his dream, he would be summoned before an earthly, not a heavenly, tribunal, and would assert valiantly that he was a Marxist-Leninist. But the judge would frown and say, "Thou liest. Thou art a disciple of Chuang Tze." Culturally, there is very little difference between St. Jerome and the brain-washed Chinese scholar. Each represents a young culture, hostile to ancient beauty, and not yet sufficiently mature to produce new beauties of its own.

There are certain antitheses between old and new cultures. Broadly speaking, the new value work, while the old value what may, in a large sense, be called play. The new make appeal to the poor, and the old to the rich. The new believe that happiness is only obtainable in another world, the old find *this* world full of things to enjoy. The difference between an old and a new culture is epigrammatically expressed by Marx when he says, "Philosophers have only *interpreted* the world in various ways, but the real task is to *alter* it." To any person appreciative of an ancient culture, this is a dusty saying. Such

a person, when he contemplates a great painting, a piece of exquisite music, or the verse of some supreme poet, does not think that his real task is to alter all this. St. Jerome and Marx do think so. For some centuries the Christian Church continued to take St. Jerome's view as to classical learning. As Gregory the Great said, "The praises of Christ cannot find room in one mouth with praises of Jupiter."

When the new culture has become established, and the struggle for supremacy is no longer necessary, the worldly successors of St. Jerome, Gregory the Great, and Marx may allow a place for contemplation as opposed to action, and may concede that a busy-body is not the highest type of human being. But this difference is not a difference between one culture and another; it is a difference between an old culture and a young one. If one reads the objections of Plotinus to Christianity, they are extraordinarily similar to the objections which those of us who are not Communists feel to the doctrine of Karl Marx. Plotinus complains, for example, that the only souls acknowledged by Christians are those of God and human beings, whereas, in his philosophy, the sun has a soul, the moon has a soul, and every separate star has a separate soul. Compared with this philosophy, he says, how jejune and dry and lifeless is the world of Christian theology. If he lived now, he would be saying much the same things, no longer about Christianity, but about Marxism.

History, as based upon written records and not only upon archaeological evidence, begins several millennia sooner in Egypt and Babylonia than it does anywhere else. About the time when history begins elsewhere, great religions which had extraordinary vitality began in various parts of the world. Confucius and Buddha belong to this time, and so, according to some authorities, does Zoroaster. In the Hellenic world, the religion of Bacchus probably began at about the same time. This religion illustrates within a rather short period, and in a very striking way, the development from youth to age. At first the religion of Bacchus, which came from the uncivilized Thracians, was associated with drunkenness and ritual murder. But, before long, in the reformed shape of Orphism, it became the inspirer of much that was best in Greece. Pythagoras and Plato owed much to it and, what is perhaps more surprising, whole chunks of its theology became imbedded in Christian doctrine. At the beginning of Plato's *Republic*, there is an old man who has hitherto been indifferent to religion, but now, from fear of death, has adopted Orphic views as to the future life. What Plato relates of his beliefs is amazingly similar to what was afterwards believed by Christians. It is Orphism, also, that first taught the need to be twice born, once physically and once spiritually. The savage elements of the original Bacchic worship still appear in the *Bacchae* of Euripides, but they are then already a somewhat ancient memory and are in process of disappearing.

I said a moment ago that young cultures emphasize work and old cultures lay more stress upon what, in a certain sense, may be called play. But in saying this I am including under the head of play whatever is not designed for practical utility. I include under this head art and literature and contemplative philosophy, and the pursuit of knowledge when not subservient to technique. The Greeks pursued knowledge in mathematics and astronomy, but, with the exception of Archimedes, they valued knowledge for its own sake and not for its usefulness. This was still largely true in Europe after the Renaissance, but gradually, especially after the Industrial Revolution, knowledge came increasingly to be valued for its economic and military utility. There has been, in consequence, a profound disruption in what it has become customary to call "Western values." European civilization, as it existed before this disruption, came from a synthesis of Jewish, Greek, and Roman elements. One may describe the new culture, which is gradually arising, as the result of thrusting out the Greek

elements in the synthesis and substituting scientific technique in their place. The result, in its extreme form, is Marxism, but something of the same process is visible in all countries that are industrially developed or hope soon to become so. It is only, however, the contrast between its extreme Eastern form and its more moderate Western developments that is producing the political and military strains from which we are suffering. It is profoundly unfortunate that the process of disruption has divided the civilized world between two hostile cultures. There have been such divisions before: between Christianity and Islam, and between Catholicism and Protestantism. But never before have men possessed such scientific power of inflicting disaster upon each other, and never before has tolerance of cultural diversity been so important. I could wish this diversity to be viewed as the inevitable difference between old and young, and, therefore, as something which the passage of time can be relied upon to soften. The apostles of traditional culture are not without their share of blame, since they have been unwilling to admit that science deserves its place as an enricher of culture and not as a destructive enemy to it. If there is something barbaric in the new creed—that has generally been a characteristic of what was new. Christianity was, itself, a successful synthesis, but new elements have be-

come important since that synthesis was established; and these new elements have made a wider synthesis indispensable. We must hope that men will develop sufficient new wisdom to live in the new world that their own ingenuity has created, for, if they cannot, the race will perish.

In the world in which we are living, there is a great danger and a great opportunity—both greater than any at any former time, and both created by our power to realize our wishes. We can, if we choose, destroy the human race. We can, on the other hand, create a happy, prosperous, civilized, and peaceful human family, embracing all nations, all colours, and all creeds. Which we shall do depends upon collective passions, and collective passions are the sum of individual passions. Each one of us, if he allows himself to be dominated by hatred, envy, pride of superiority, or the pursuit of safety by means of large-scale murder, is contributing his quota towards universal disaster. Each one of us, if he is inspired to action by hope and tolerance and the realization that strife is as foolish as it is wicked, is doing what lies within his power to bring about an earthly paradise, never before possible, but now realizable through scientific technique. The choice lies within the scope of human passions. Life or death? Our century will decide.

BR's remarks were later published in Fact and Fiction, New York: Simon & Schuster, 1961, pp.151-159, which we have reproduced above. We were tempted to reproduce BR's original typescript, with corrections and additions in BR's own hand — that KEN BLACKWELL supplied us with — but that would have required much more space.

We have provided Professor Hjelmslev's talk in full, despite its length. If you think it was longer than it had to be, remember, BR had to sit through the whole lengthy thing. Can we do less?

BERTRAND RUSSELL MEMORIAL

(22)

An appeal for contributions.The letter below speaks for itself.

We are sure that a lot of BRS members will want to contribute to the cost of the new BR memorial in London.

The letter:

BERTRAND RUSSELL MEMORIAL

An Appeal made by Sir Alfred Ayer, Lord Brockway (Chairman of the Appeal Ctee), Peter Cadogan (Secretary), Lord Ritchie Calder, Frank Dobson MP, John Gilmour, Dora Russell, Lord Willis and Baroness Wootton.

c/o SPES, Conway Hall, 25 Red Lion Square, London WC.1. Tel:01. 242. 8032/3.

14th November 1979

Dear Sir,

Bertrand Russell, one of the most important philosophers of this century, awarded academic honours in many countries and the Nobel Prize for Literature, revered by multitudes all over the world for his untiring efforts for peace and human understanding, has not so far received the recognition that is his due.

Permission has been given by Camden Council for the placing of a bust of Russell in central London in the gardens of Red Lion Square and a committee has been formed to promote the project. Robert Davis, President with Peter Cranford, Chairman of the Bertrand Russell Society in the USA and members of Russell's family are giving encouragement to this venture.

("Bertrand Russell Memorial" letter, continued)

We think that there will be many admirers of Russell and his work who will wish to contribute to the cost of the memorial and we invite them to respond to this Appeal.

The sculptor will be Marcelle Quinton.

Yours sincerely,

A. J. Ayer

Sir Alfred Ayer

Artchie Calder

Lord Ritchie-Calder

Dora Russell

Barbara Wootton

Baroness Wootton

BERTRAND RUSSELL MEMORIAL APPEAL

When some day (probably in the near future) you see a picture in this newsletter of the completed Bertrand Russell Memorial in the gardens of Red Lion Square -- or if, when in London, you see it with your own eyes -- you will get great satisfaction out of knowing that you helped put it there, with your contribution.

To make your contribution, make your check payable to "Bertrand Russell Society, Inc." (which makes it tax-deductible) and mail it to the newsletter, address on Page 1, bottom. We will mail a BRS check to Conway Hall, with a covering letter naming all contributors.

Alternatively, you can mail your check, made out to "Bertrand Russell Memorial" directly to Bertrand Russell Memorial, c/o South Place Ethical Society, Conway Hall, 25 Red Lion Square, London, England WC1R 4RL. (If you do this, it will not be tax-deductible.)

* Right now could be a very good time to write your check and mail it in.

RELIGION AND ITS ADVERSARIES

(23) Christianity/immorality. Humanist Quest for Truth, a chapter of the American Humanist Association (PO Box 625, Brighton, CO 80601) issues a spritely newsletter, where we found this item in the Late December 1979 issue:

QUOTATION FROM A STANFORD UNIVERSITY PROFESSOR, V. A. Harvey:

"...the genuine lover of truth is a person who does not entertain any proposition with a greater degree of assurance than the proof it is built upon will warrant. Since Christian belief, by definition, is the entertaining of propositions incommensurate with the evidence, the Christian cannot also be regarded as a lover of truth. Moreover, if love for the truth be a virtue, and most Christians would have said that it is, then faith must be a vice. In short, it is immoral to be a Christian!"

ASSESSMENTS OF BR

(24)

(Thank you, New Yorker. Issue of 1/21/80, p. 33)

RECOMMENDED READING

(25) Whitfield Cobb writes: "My wife, our eldest son (Dartmouth '68) and I read aloud Katharine Russell Tait's My Father, Bertrand Russell last spring. I thoroughly enjoyed it and thought it made Russell seem much more a real person than his Autobiography did."

BRS TRAVEL GRANT

(26) The following announcement of the BRS Travel Grant for 1980 has been sent to 15 major universities, addressed to the chairmen of the Philosophy, Psychology, History, Sociology and English Departments:

Announcing
THE BERTRAND RUSSELL SOCIETY'S
1980 Travel Scholarship

The Travel Scholarship -- of The Bertrand Russell Society, Inc. -- will be awarded to a currently enrolled doctoral candidate in any field. It will pay up to \$500 for travel for purposes of research for a dissertation.

The conditions:

- i. The applicant must submit a brief proposal indicating an area of interest in Russell, his thoughts, or his times, and a reason why travel would be useful.
- ii. The applicant must submit a letter from the chairman of the department which states that all work for the doctorate has been completed except the dissertation.
- iii. The applicant must submit a letter from his/her thesis advisor which evaluates both the applicant and the proposed plan of study.

The award covers travel expenses only (e.g., air fare, gas mileage) and does not pay for meals and lodging at the destination. It is to be used between June 1980 and June 1981.

Applications and supporting letters are due April 15, 1980, and should be sent to:

George Sessions
Humanities Division
Sierra College
Rocklin, CA 95677

The recipient of the award will be announced early in June 1980.

In 1979 the recipient was a doctoral candidate in history at the University of Wisconsin - Madison.

QUESTIONS & ANSWERS

(27) Retirement homes. WHITFIELD COBB asks a question which we hope will be answered:

The retirement "homes" or similar institutions for the able elderly with which I am familiar are usually affiliated with some religious denomination, even though membership in that denomination is not prerequisite for admission. Are there facilities operated by, and maintaining an atmosphere supportive of, humanists, agnostics, or atheists? In other words, where would members of the Bertrand Russell Society find congenial companions for the last few years of lives with no illusions about a heavenly reward?

OPINION

- (28) Dora supports Cadogan's views on the direction that Humanism ought to take. Here is her letter to "The New Humanist", Autumn 1979 issue:

A Humanist synthesis

AS ONE who calls herself a Humanist and atheist, I consider it of very great importance at the present time, to create a climate of opinion—or feeling—"movement" that will encourage people, especially the young, to find something worth living for in what we are pleased to call our pluralist society. To this end, the *New Humanist* of June 1979 contains much useful discussion, but a regrettable lack of cohesion. I do not like to see old friends quarrelling.

Our world, our culture is heading for destruction. Surely what matters most is to try and find out why this is happening and how to avert disaster. Those who begin to be aware of the present human predicament are still pitifully few. Eminent among them was Bertrand Russell, whose philosophy, as Nicolas Walter rightly says, was not dualism, but "neutral

monism", based on his interpretation of science. He wrote of "a world of events in space-time" and "logical atomism". The difficulty for all who are not versed in higher mathematics is to understand what modern scientists and philosophers are talking about. But Peter Cadogan is not wrong in saying that they derive the tools of their trade from the 17th-century Cartesian stress on the impartial intellect: "Cogito ergo sum".

Bertrand Russell wrote to Lady Ottoline:

I have a perfectly cold intellect which insists upon its rights and rejects nothing. It will sometimes hurt you, sometimes seem cynical, sometimes heartless... you won't much like it. But it belongs with my work—I have deliberately cultivated it and it is really the main thing I have put discipline into... the sudden absolute cessation of feeling when I think must be trying at first. And nothing is sacred to it—it looks at everything quite impartially... (29 April 1971).

One must then place Russell among the scientific or rational Humanists—with, I think, Nicolas Walter and

many others. But was it this intellect that inspired Russell's protests against war in 1916, or his long battle against nuclear power?

These scientists and philosophers were at least heirs of Descartes in the way they set themselves to take their material world to pieces: the *Analysis of Matter* and the *Analysis of Mind* of Russell; Rutherford and the physicists splitting the atom right down to invisible particles; the chemists taking molecules to pieces and changing them into others; molecular biology and the double helix that determines the genes. All this clearly demolishes old superstitious religions, but reverence for the scientific world outlook can in itself become a religion, yet at the same time, engender that scepticism which Paul Kurtz calls "the dissidence factor". Having analysed everything, these intellectuals jib at synthesis: they want to *know*, not *believe*, because experience shows that dogmatic faiths and ideologies mean persecution.

Can any of us *know* that life is worth living? Each intellectual really lives by some concept of his imagination: mathematicians and astronomers in space-time; physicists' dancing atoms; chemists' dreams of their new substances; some biologists—as Joseph Needham suggests—in the growth force of living organisms to expand even into a basis for a new structure. Ordinary people believe all sorts of things—whatever may come their way.

Human beings can only build on what they are, and know. We need a synthesis which Humanism can provide. The National Secular Society has set out a fine new Manifesto. All I am saying is: Peter Cadogan is right that it will take more than cool-headed negative rationalism to persuade people to accept those aims. Humanists do have a faith capable of resolving conflict. Could they begin by believing in themselves?

DORA RUSSELL
Porthcurno, Cornwall

(Thank you, John Sutcliffe)

"Holocaust" again. JOHN SUTCLIFFE objects to our having called his remarks an "unqualified condemnation of 'Holocaust'" (RSN 24-26). He says his criticism was not "unqualified":

The programme distinguished two kinds of humanity, "the Nazi" and "the Jew", as exclusive moral entities. It was this I objected to. Russell showed the limits of this kind of thinking in the example of socialists who assume the moral pre-eminence of the proletariat and condemn the capitalist. In both cases, the human nature common to all these absurd dichotomies is ignored or denied to serve moral prejudice. To quote Terence, "I am a man, and nothing human do I consider alien to myself."

Finally, the real influence on the Bundesrat decision to continue to prosecute Nazi warcrimes was foreign public opinion (especially in America and Israel) for economic reasons, as many former Nazis still occupy positions of power in Germany.

We agree with what he says in his first paragraph.

But it is not relevant to our contention that his condemnation was "unqualified. He condemned "Holocaust" ("Holocaust" is a complete travesty of the facts.") and had nothing good to say about it (RSN23-28). That's what we mean by "unqualified condemnation".

In contrast, Eliot Fremont-Smith condemned "'Holocaust's' cheap commercial untruths", but went on to say "...one must weigh the pains against the gains..." His condemnation was not unqualified.

As for John's second paragraph, we question whether what he says explains the event. The fact that the Bundesrat rescinded the statute of limitations (on the prosecution of Nazi crimes) not long after the showing of "Holocaust" suggests that "Holocaust" was the immediate — though not necessarily the exclusive — cause of the rescission.

Finally, in our opinion, "Holocaust" was not ill-suited to the job it tried to do: it used unobtrusive fictional devices to get a somewhat indifferent general public to sit through a monstrous horror story that was not fictional. It undoubtedly made a lot of people vividly aware, with penetrating specificity, of things they had never known before — or had known of only in a vague, general way — about events that occurred in Nazi Germany.

NEWS ABOUT MEMBERS

- (30) Amy Block has filed her thesis and has been graduated. "Believe it or not, I'm done!" We think this means she got her Ph.D. Her specialty is nutrition and she was due to spend December doing nutrition field work in Ecuador.

(31) John Lenz writes: "I collect rare books and have especially been trying to build up a collection of all material relating to Russell that I could find. If any members have scarce Russell books or letters that they might wish to sell at retail prices, please let me know." John's address: Apt. 2B, 305 Riverside Drive, New York, NY 10025.

(32) Steve Reinhardt was asked by us about his recent vacation:

I went to Nepal with a Sierra Club group and enjoyed two treks (backpacking) in areas different from the region I visited two years ago. The first trek took us to that region in the Himalayas north of Kathmandu known as Laugtaug. We were accompanied by eight Sherpas who handled the logistics, i.e., procuring and preparing food, and generally getting us to where we should be at the end of each day. We also had porters, mostly of the Tamaug tribe, to carry food and equipment.

The trek lasted 18 days and took us past small villages surrounded by cultivated fields of barley, millet and rice as well as uninhabited areas that ranged from dense bamboo thickets at low altitudes to barren, rocky landscapes as we ascended. Our highest elevation in the Laugtaug region was about 15,500 feet. At one point we were able to see mountains in Tibet standing just across the border.

The second trek took us to the Khumbu region for 22 days. This is the northeastern part of Nepal, known for its Sherpa population, Mount Everest, and the yeti (abominable snowman). Mention of the latter always brings a smile to a Sherpa's face. They seem to be more sceptical than climbers who periodically find mysterious "footprints". Eight of us made one climb on this trek and reached the summit, a little over 20,300 feet, of a mountain that qualifies as a foothill in Nepal. The last three hours were on snow and ice but did not involve technical climbing.

The weather for both treks was near perfect and the views ranged from spectacular to more spectacular. One of the many highlights, however, was getting to know the Sherpas. Several times we were guests in their houses and got some inkling of the integrity and beauty of a culture that may not survive in its protective isolation for too many more generations.

I will always remember how we celebrated last Thanksgiving in Namche Bazaar as guests of one of our Sherpa guides. Mingma's house was, like most of them in the comparatively prosperous town of Namche, two storeys, made of stone and solidly set below the brow of a hill well over 12,000 feet high. One entered the first storey, a large dark room, where cattle were housed part of the year, and groped toward a corner where a wooden ladder led up to the second storey. This was where Mingma, his wife and two young children lived, a large room with a small curtained-off area at one end for cooking. It was sparsely but efficiently furnished; chests and shelves were built against panelled walls; equipment lay about -- a coil of rope, an ax, an enormous copper pot containing the water supply that was carried each day from a spring some distance away, and whatever else was needed to survive in comfort.

On Thanksgiving Day we gathered together in this room, my group, some of Mingma's friends and most of the neighborhood children. The room was warmed by two small charcoal stoves that frequently showered sparks on the wooden floor or onto a stray dog, which then yelped in the merry confusion as we stamped out the stray coals.

The significance of the holiday was easily grasped by the Buddhist Sherpas and they joined in the festivities. There were the roast chickens Mingma's wife prepared, her version of a pumpkin pie using a local squash substitute, the cans of cranberry sauce we had brought from the USA hoping to use this way...rakshi ladled from a large can where the rice had been fermenting in yeast for about two months...Sherpas doing traditional dances...everyone singing...dogs barking when a tail got stepped on...three Tibetans pounding drums and clapping cymbals together while a fourth took over the floor and improvised a dragon dance...and the centerpiece that Mingma had made of local twigs, branches, etc., that he had found along the trail and had decorated with seven candles that were toppling over or burning down and setting the greens on fire.

I am sure none of us will ever forget that Thanksgiving. Unfortunately, it meant that your Treasurer was away from home for almost two months and many of the members must have wondered why their checks had not been deposited. The delay was entirely my fault -- I was off having a good time.

NEW MEMBERS

(33) We welcome these new members:

BRS LIBRARY

(35) BRS Librarian Don Jackanicz reports:

The BRS Library will participate in the June 20-22 annual meeting in several ways. Books by and about BR will be offered for sale. Films from the Library's collection will be shown. All materials in the Library will be on hand, for those wishing to borrow. Exhibit displays and a bibliographical assistance project are being planned. More information on all this

I would like to thank E. B. COCHRAN and LEE EISLER for their recent contributions toward the purchase of a Russell film. It would be good to have at least one new Russell film to present at the June meeting. \$75 has been accumulated for this, but at least another \$75 is needed. Please consider making a contribution. Thank you very much.

JOHN LENZ has volunteered to assist in the work of the BRS Library. He and I are working on a plan to improve service to members by dividing the work and responsibilities of the Library. Should any other member desire to help, he or she is invited to write to me. (Address on Page 1, bottom.)

(P.S. BOB DAVIS has just contributed the \$75 needed for a new film. Ed.)

PARADOXES

- (36) IBM. DENNIS DARLAND tells about a paradox he often encounters in his work with computers: "In IBM manuals, there are occasionally pages which are blank except for this statement: 'This page was intentionally left blank.'"

BR'S PROPHECIES

(37) Concerning oil:

The supply of oil in the world is limited, and the consumption of oil is continually and rapidly increasing. It will probably not be very long before the world's supply of oil is practically exhausted -- unless indeed the wars which will take place for its possession are sufficiently destructive to reduce the level of civilization to a point where oil will no longer be needed. We may, I suppose, assume, if our civilization has not suffered a cataclysm, that some substitute for oil will be discovered as oil becomes more expensive through rarity. The Scientific Outlook, New York: Norton 1959. Originally published 1931.

(Thank you, Peter Cranford)

CONTRIBUTIONS

(38) Contributions needed. Please remember that membership dues do not cover our costs. In 1979 dues covered only 72% of costs. Members make up the difference with contributions.

In order not to be overly dependent on a few large contributors (which is the case at present), we need to have many contributors, each contributing what each can afford. We will not be on an economically sound basis until we have many members who make contributions each year, in amounts ranging from, say, \$1 to \$100.

We realize that not all members can afford to make contributions, and we emphasize that no member is expected to make a contribution. We urge members who can afford to, to send a (tax-deductible) contribution to the BRS Treasury. Send it c/o this newsletter, address on Page 1, bottom.

Thanks!

(39) Contributors thanked. Our thanks to GEORGE ALTOMARE, DONG-IN BAE, BOB DAVIS, LEE EISLER, DON LOEB and DONNA WEIMER for their contributions, and our special thanks to PETER CRANFORD and KATHY FJERMEDAL for their continuing monthly contributions.

HELP WANTED

(40) Help wanted, help received. Last issue, we asked for help (RSN42-42) and got it. All 3 BRS jobs have been filled.

.The new BRS Treasurer is DENNIS DARLAND, of Rock Island, Illinois. He is a computer programmer for Rock Island County. Is he going to keep track of BRS moneys by computer or by hand? We don't know and are almost afraid to ask.

. The new Co-Chairman of the Membership Committee is P. K. TUCKER. She will handle inquiries and enrollments. PK first learned of BR's existence from her father, who had taken a course with BR. Her field is psychology and she is currently the Youth Services Coordinator of Lincoln County Youth Services.

. The new Co-Chairman of the Library Committee is -- as mentioned in (35) -- JOHN LENZ, a student at Columbia University. For more about John, see (31).

We thank Dennis, PK and John for volunteering to handle these jobs. They will enable the BRS to continue to function the way it ought to.

And we thank STEVE REINHARDT, outgoing Treasurer, and BEV SMITH, Outgoing Co-Chairman of the Membership Committee, for the really marvelous jobs that both did, and for many years. Their standards of performance were very, very high. We salute you!

FOR SALE

(41) Lester Denonn's BR Library. For details see RSN24-45.

BRS stationery for members: at the top of each sheet is the quotation: "The good life is one inspired by love and guided by knowledge." At the bottom, it says: "Motto of The Bertrand Russell Society, Inc." In between, the 8½ x 11 white sheet is blank. Paper quality: average. \$3.50 for 80 sheets, postpaid within the USA and Canada. Order from the newsletter, address on Page 1, bottom.

PERIODICALS RECEIVED

- (43) Humanist Quest for Truth. We have great admiration for this newsletter, issued by the Brighton, Colorado chapter of the American Humanist Association -- mentioned earlier (23). A partial list of captions indicates the contents of the 6-page November 1979 issue: Meeting News, News from Other Humanists, Help for the Cambodians, Textbook Review, Freedom From Religion Foundation Convention, Charles Colson, ACLU Notes, Catholic Bishops and Elections, Idi Amin Speaks, After-Life Experience, Church and State Problems, The Born Again Sceptics Guide to the Bible*. It also tells about efforts (later successful) to have the City of Denver eliminate the Nativity Scene from city property.
- *Available from Freedom From Religion Foundation, 726 Miami Pass, Madison, WI 53711. "One of the few books which interprets the Bible with great humor. It does not have the sting or nastiness which accompanies other books of this nature."
- (44) The San Diego Humanist: the attractive 4-page December 1979 issue reports on events in its area -- the Humanist Convention in San Diego January 25-27, 1980, discussion group meetings, philosophy forum meetings, etc. -- and contains several short articles ("What is the Good?" "Apologia for Atheism", "Humanism Past and Future"). It is published by the Humanist Association of San Diego, Suite 208, 953 Eighth Avenue, San Diego, CA 92101
- (45) World Peace News, an 8-page tabloid-size publication, consists largely of quotations -- many of them! -- mostly favoring world government. Its address is 777 U. N. Plaza, 11th Floor, New York, NY 10017. 9 issues per year; \$11 for 1 year, \$13 for 2 years, \$15 for 3 years. It is published by the American Movement for World Government, 20 West 40th Street, New York, NY 10018, which is sponsoring the Tenth Annual World Government Seminar, May 10th, at 777 U. N. Plaza, for which Isaac Asimov has written the following:
- How strange it is that no club, however small, would dream of operating without officers and bylaws -- but we're perfectly willing to let our planet and ourselves go to destruction because it doesn't occur to us that the world can't do without officers and bylaws any more than a club can.

INDEX

- (46) Introductory (1). 1980 Annual Meeting (2,4). Are expenses deductible? (5). 1980 Travel Grant (3,26). Reports from officers: Chairman Cranford (6); President Davis (7); Treasurer Reinhardt, 4th ¼ '79 and full year '79 (8); Secretary Jackanicz (4,35). Science Committee report (10). Jobs for Ph.D.s (11). "The Sham of American Education" (12). BR on statesmen's euphemisms (13). The Buckley vocabulary (14). BR on Warsaw Ghetto uprising (15). Popular presentations of BR: "The People's Almanac" (16), "Important People" (17), "Interesting People" (18). BR quoted: by Lasch (19), by Forbes (20). The Sonning Prize (21). BR Memorial appeal (London) (22). Christianity/immorality (23). New Yorker cartoon (24). "My Father, Bertrand Russell" recommended (25). 1980 Travel Grant announced (26). Retirement homes for agnostics? (27). Dora supports Cadogan (28). "Holocaust" again (29). News about members: Amy Block (30), John Lenz (31), Steve Reinhardt (32). New members (33). Address changes (34). Library report (35). IBM paradox (36). BR's oil prophecy (37). Contributions needed (38). Contributors thanked (39). New Treasurer Darland, new Co-Chairman of Membership Committee Tucker, new Co-Chairman of Library Committee Lenz (40). For sale: Denon's BR Library (41), BRS stationery for members (42). Periodicals received: "Humanist Quest for Truth" (43), "San Diego Humanist" (44), "World Peace News" (45). Index (46). Davis at Morningside College (47).

LAST MINUTE ITEMS

- (47) Davis at Morningside College. See (7). Bob expects to be there from February 18 to February 22. People wishing to get in touch with him should call Chuck Wetzal, (712)276-2763, 3416 Davis Street.

RUSSELL SOCIETY NEWS

No. 26

May 1980

- (1) Annual Meeting, June 20-22 (2). Science Committee's nuclear symposium (6). The BBC on BR 10 years later (10). BR Memorial contributions lag (17). JBN's Nobel Symposium talk (22). Dora's "Tamarisk Tree 2" reviewed (26). 7 BR films in BRS Library (27). Time to nominate Directors (31). Renewal dues are due (32). Tom Horne's choral manuscript sought (33). Amnesty International USA will petition on death penalty (34,43). Theory about elementary particles (40). Current members (41). Index (42). An asterisk in the left column indicates a request.
-

ANNUAL MEETING

- (2) 1980 Annual Meeting will be held June 20 (8 PM) to June 22 (noon) at the Center for Continuing Education (of the University of Chicago) 1307 East 60th Street, Chicago, IL 60637. For lodging (at \$34 single, \$38 double, per night), write directly to the Center. For lodging at \$10 per night, write International House, 1414 East 59th Street, Chicago, IL 60637. A 4-page memo providing complete details was mailed (First Class) to all members on April 5th. If you have questions, write or phone Don Jackanicz, PO Box 1727, Chicago, IL 60690; (312)286-0676.
- (3a) 7 BR films to be shown at the June meeting. See (27) for a listing of the 7.
- (3b) Footnote on whiskey. Let DON JACKANICZ tell it in his own words:

Several members have asked whether it is possible to locate Red Hackle Blended Scotch Whiskey in the USA or Canada, and whether we will have an ample supply of it for our June Red Hackle Hour. I am pleased to report that Russell's favorite brand is still being produced, is available for retail sale here and there, and will be present at our Annual Meeting in plentiful supply.

In my attempt to locate Red Hackle, I was referred to BRS Newsletter (now Russell Society News) 11-29 and 12-41. These references listed wholesalers and retailers who handled Red Hackle. I wrote to some of them, and to Hepburn & Ross, Ltd., of Glasgow, Red Hackle's distiller, which finally led me to Armanetti's Liquor Stores of Chicago. I visited the one at 7324 N. Western Avenue (Chicago, IL 60645) and had a pleasant talk with Mr. Max Ponder, its manager. He plays racquetball with Saul Bellow, told me many things about the liquor business, and knew quite a bit about Red Hackle, though he was not aware of Russell's preference for it or, for that matter, of Russell. In a second conversation with Mr. Ponder, I found that he had looked up Russell and had been impressed by the fact that Russell, like his friend Bellow, had received the Nobel Prize for Literature. I have invited him to our meeting, and he may come, at least to our Red Hackle Hour.

Alcoholic beverages cannot be shipped across state lines. But anyone coming to Chicago this June, who has been seeking a source of Red Hackle, can acquire as much as he wants at Armanetti's.

REPORTS FROM OFFICERS

- (4) Chairman Peter G. Cranford reports:

As the number of members approaches the 300 mark, it seems that the Society is now solidly established and should continue indefinitely. Its growth, which on the surface seems slow, parallels that of the American Association of Practicing Psychologists, which grew very slowly at first, but which is strong and useful.

Since the founding of the BRS in 1974, we have functioned informally, and indeed with some violations of the charter. Since this involves a danger to our non-profit status, I have culled from the bylaws what needs to be done.

Among the duties which the charter requires the board to fulfill are: determine the place and time of the annual general meeting; notify the members of it at least 30 days in advance; draw up agendas; elect directors (by the members) by mail ballot; appoint committees and their chairmen; elect the 5 officers — chairman, president, vice-president, treasurer, secretary — for a period of one year.

- * The agenda is in the process of being drawn up. I will greatly appreciate suggestions from board members and the general membership.

In view of the world situation, I suggest as an "activist" project the promotion of BR's idea of compossibility. Shortly before his death, he had expressed to Lady Russell the hope that others would do something with it.

Members to whom the idea is new can get a quick understanding of his basic position on intra-personal, inter-personal and inter-group relationships by reading a few pages in Human Society in Ethics and Politics (paperback) Mentor Books, 1962, p. 121, last 12 lines; p. 123, lines 9-16; p. 127, first paragraph. Also Autobiography of Bertrand Russell, Vol. III (hard cover) p. 29, last paragraph.

In the light of past history and present world conditions, compossibility may be the most important of all of Russell's ideas.

- * Please feel free to forward any comments on any of the above to me at 1500 Johns Road, Augusta, GA 30904. I am particularly interested in hearing from each board member, since the feasibility of a press conference needs to be discussed in advance.
- * I should like to urge members to contribute about \$3 payable to the Society and designated for the Bertrand Russell Memorial. (We have had contributions of 352.50 up to this point.) It will take an average of that to fulfill a guarantee of \$1000 I made to the British Committee. Our part in the Memorial was to serve as a catalyst for Dora Russell's original idea.

* * * * *

(4a) Here is the last paragraph of p. 29 of Autobiography III referred to above:

There is one approximately rational approach to ethical conclusions which has a certain validity. It may be called the doctrine of compossibility. This doctrine is as follows: among the desires that a man finds himself to possess, there are various groups, each consisting of desires which may be gratified together and others which conflict. You may, for example, be a passionate adherent of the Democratic Party, but it may happen that you hate the presidential candidate. In that case, your love of the Party and your dislike of the individual are not compossible. Or you may hate a man and love his son. In that case, if they always travel about together, you will find them, as a pair, not compossible. The art of politics consists very largely in finding as numerous a group of compossible people as you can. The man who wishes to be happy will endeavour to make as large groups as he can of compossible desires the rulers of his life. Viewed theoretically, such a doctrine affords no ultimate solution. It assumes that happiness is better than unhappiness. This is an ethical principle incapable of proof. For that reason, I did not consider compossibility a basis for ethics.

REPORTS FROM COMMITTEES

- (5) Philosophy-in-High-Schools Committee. LEN CLEAVELIN undertook to be Acting-Chairman shortly before he entered law school last Fall. He says: "I grossly underestimated the amount of time law school would eat up. You might want to open the position up to someone as interested in the project as I am but who has a lot more time than I have in the present circumstances."
- * Does someone wish to volunteer?

- (6) Science Committee (Alex Dely, Chairman):

The Science Committee has a continuing interest in the energy crisis and the environment, and the effect each has on the other.

At the June meeting, the Science Committee will sponsor a symposium on nuclear energy, with input from the Nuclear Regulatory Commission, the Environmental Protection Agency, other government agencies, and many non-governmental energy-oriented organizations.

If there is time (at the June meeting), I will offer a paper on the social responsibility of the scientist, as I see it.

I am trying to get permission (for BRS members who are interested) for a tour of the Laboratory of Astrophysics and Space Research at the University of Chicago, where I worked last summer.

Finally (and perhaps rashly!) I am including in this newsletter a summary of an alternative theory of elementary particles that George Blam and I have been working on for ever a year (40). If you're wholly unfamiliar with elementary particles, it probably won't make too much sense to you. At least I can tell you that there's no mathematics in it. Just let your eye run gently down the page. Even though you don't understand every sentence, it may give you an idea of the process by which a theory is developed; and that, I suggest, you might find interesting.

PHILOSOPHERS' CORNER

(7) A report on the 1979 BRS/APA session, by David Johnson, who chaired the session:

The program of the Society was convened by the chair, David E. Johnson of the U. S. Naval Academy, at 10:00 a.m. on Friday, December 28, 1979 at the Sheraton Centre Hotel in New York City. The session was attended by about thirty philosophers, generating a lively discussion in the latter half of each session of the program.

Presenting his paper, "Definition and Description in Russell, 1900--1910", Mr. Thomas Barron of the University of Texas discussed the shift in Russell's ontology that occurs from Principles of Mathematics to Principia Mathematica. The key to understanding Russell's move from a lavish to a frugal ontology is to be found in a change in Russell's use of 'definition', a change rooted in Russell's development of his theory of descriptions in the 1905 "On Denoting". Barron argued that Russell moves from "direct definitions" (a rule for replacing one syntactical unit of a sentence by another expression belonging to the same grammatical category, without otherwise altering the sentence in which the replacement takes place) to "contextual definition" (a set of rules for paraphrasing entire sentences in such a way that no syntactical unit in the resultant sentence corresponds to the phrase defined). The latter sort of definition is seen by Barron as central to Russell's move to ontological frugality. Russell's use and interpretation of incomplete symbols (definite descriptions and other contextually definable signs) eliminates the ontologically misleading feature of these expressions in negative existential sentences, e.g., "The Queen of France does not exist", so that we need not be misled into holding "that the grounds for the truth of these sentences must involve entities correlated with these descriptions." In other words, since expressions for e.g., classes, similarity relations and some functions are all contextually defined, Russell can eliminate "the apparent need to posit the mysterious entities in the first place". Therefore, Mr. Barron's conclusion was, "Whereas the Principles endeavors to convince us that the numbers really are classes, Principia quietly maintains that, ontologically speaking, there are no numbers, although the truths of mathematics are still truths."

Mr. Jon Fjeld, Duke University, commenting on Barron's paper, granted the accuracy of the interpretation of Russell. His questions focused first on the importance of the shift outlined by Barron for a discussion of Russell's logicism, and second on the actual frugality of Principia's ontology. Mr. Fjeld pointed out that in Principia, propositional functions still remain and the world is not reduced to one of individuals. That is, Fjeld questioned whether the Russell of the Principia is trying to be a nominalist.

The second portion of the program consisted of a paper by Mr. D.A. Griffiths, University of Hong Kong, "Russell and Ontological Excess" commented on by Mr. Tom Wartenberg, Duke University. The focus of Mr. Griffiths' presentation was on the ontological excess in Principles of Mathematics. Thus, the two parts of this years session dovetailed effectively. Mr. Griffiths urged the following points: (1) there is no ontological excess in the Principles; (2) if there is ontological excess there, it can be handled by something other than the theory of descriptions; and (3) anyway, the theory of descriptions will not prune the ontological jungle.

Mr. Wartenberg argued that Mr. Griffiths had failed to clarify his use of 'excess', and that he, Wartenberg, would contend that Russell has an excess of ontological realms. In the lively exchange that followed with the audience, there was focus on whether or not denotations matter for the meaning of expressions, on the role of propositions in Russell's ontological excess, and on the distinction between truth-bearer and truth-maker in generating ontological excess. David. E. Johnson

Abstracts of the 2 papers discussed at this meeting — of the BRS at the annual convention of the Eastern Division of the American Philosophical Association — were presented in the November issue (RSN24-9).

- (8) Want to comment at the 1980 BRS/APA session? ED HOPKINS, Chairman of the Philosophers' Committee, puts it this way:

Any member who wishes to comment on a paper presented at a meeting of the Society with the American Philosophical Association this December should contact me, giving qualifications and the specific area of Russell's philosophy on which he/she can best comment.

Ed's address: 6165 64th Avenue (#3), Riverdale, MD 20840.

BR, PUBLIC SPEAKER

- (9) More on the Warsaw Ghetto speech (RSN25-15), from KEN BLACKWELL:

A year or two before she died, Lady Russell copied her recording of BR's Warsaw Ghetto speech for the Russell Archives. It is considerably longer than the extracts you print, and will some day be published in The Collected Papers of Bertrand Russell. In my opinion, this speech is the definitive rebuttal of those who see BR as an agent of anti-Semitism.

ABOUT BERTRAND RUSSELL

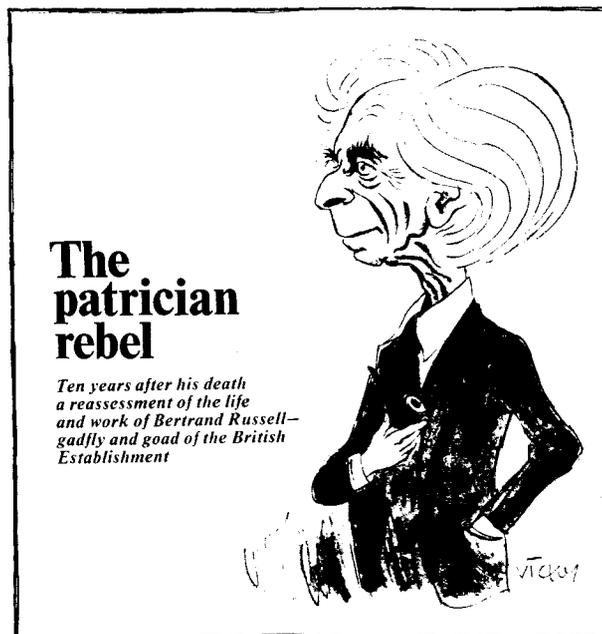

- (10) From "The Listener", 17 January 1980, published by the BBC, London:

17 January 1980

30p

The Listener

USA AND CANADA: 90c

This is the front cover of "The Listener" reduced to one-fourth the area of the original.

Anthony Howard

Bertrand Russell: the patrician rebel

Throughout my life I have imagined myself, in turn, a liberal, a socialist or a pacifist. But I have never been any of these things in any profound sense. Always the sceptical intellect, when I have most wished it silent, has whispered doubts to me, has cut me off from the facile enthusiasms of others and has transported me into a desolate solitude.

BERTRAND RUSSELL (1872-1970)

The words of Bertrand Russell, third Earl Russell, grandson of a prime minister, godson of John Stuart Mill, looking back at the end of his life on a career that made him—'desolate solitude' or not—probably the most celebrated private British citizen of his age. And, in longevity, what an age it was. When he was born in 1872 Queen Victoria still had almost 30 years left on the Throne; he was to live through six successive reigns—for most of the time the gadfly and goad of the British Establishment. Strangely, however, he himself was every inch a child of the Establishment. Both his parents were to die before he was four; and he was brought up at Pembroke Lodge, a grace-and-favour residence in Richmond Park, by his grandparents: Lord John Russell, then already in his eighties, who, 40 years earlier, had fought the 1832 Reform Bill through Parliament, and his much younger wife, Frances, herself the daughter of an earl.

By the time 'Bertie' was six, his grandfather was dead—and it was very much a women's household in which Russell grew up. He had an elder brother, Frank, but he was seven years older and, anyway, was away at school—an experience that 'Bertie' himself was never allowed to enjoy. Brought up instead by aunts, governesses and tutors, he did not leave home until at 16 he was sent to a 'crammers' at Southgate in North London just before going up as a mathematical scholar to Trinity College, Cambridge, at the age of 18 in 1890.

He was to remain attached to the college for the bulk of the next five years—becoming first a prize Fellow and then a lecturer (ironically, he was not to be elected to a full Fellowship until 1943 when he was over the age of 70). But it was this initial Cambridge period that really laid the foundation of Russell's academic reputation. It was certainly in the early part of his life that he wrote his most intellectually distinguished books: *The Foundations of Geometry* in 1897; *The Principles of Mathematics* in 1903; *Problems of Philosophy* in 1911; and, perhaps above all, jointly with A. N. Whitehead, *Principia Mathematica* in 1910.

The unkind—or perhaps merely those endowed with his own sharp, critical faculty—were later to say that all Russell's original work was done before he was 45. Certainly, he was to write many more books—nearly 50 in all; but his later works tended to be popular and polemical rather than scholarly and serious. It may, of course, have been that he simply tired of philosophy—he never, after all, was one for unchanging affections. But, in any case, the great watershed in his career was provided by his opposition to the 1914-18 war. In 1916, having been convicted under the Defence of the Realm Act and fined £100 for writing an anti-conscription leaflet, he was stripped of his lectureship by the Council of Trinity College. But the greatest drama was yet to come, for by 1918 Russell was again in court and this time was sent to prison. The sentence was six months

—though as it was eventually served in what was then known as the First Division, which meant having what books and newspapers you liked as well as enjoying your own food, the hardship was not great.

By the time Russell emerged from jail—just two months before the war ended—he had become a national celebrity. The years of the ivory tower were over; from now on, his forum was the political arena. Henceforth, the pattern of his life was to be combative and controversial rather than contemplative and collegiate. But it was not just fame—or notoriety—that Russell discovered in early middle age; he also embarked on what was to be an abiding interest in the opposite sex.

His first marriage—entered into at the age of 22—had not been a happy one and it broke up in 1911, when Russell launched on his celebrated 'Bloomsbury' five-year affair with Lady Ottoline Morrell of Garsington (the wife of an anti-war Liberal MP). His private life, which had been reasonably orderly and staid till early middle age, now became reckless, some might even say racy. Lady Ottoline was eventually succeeded in his affections by an aristocratic actress called Lady Constance Malletson and she, in her turn, by a young Girton graduate, Dora Black, whom Russell married in 1921.

In 1920 Russell had visited the Soviet Union—and, remarkably, for an intellectual in the heady days that followed the Russian Revolution, was in no way taken in. For Michael Foot, who as an undergraduate at Oxford in the 1930s came to know Russell, the view that he then gave remains evidence not only of clear-sightedness but of considerable courage.

Many of the things he said that were anti-Soviet were legitimate. First of all, he was anti-Marxist—he did not accept the doctrines of Karl Marx in any sense at all, and indeed was highly critical of them from what I suppose you could call a liberal-democrat point of view. And he didn't believe in all the doctrines of the materialist conception of history—he was anti-Marx, anti-Hegel, anti-Plato, anti—a whole stream of semi-totalitarians, however you like to

describe them. So that was part of it. Then when he went to Russia in 1920 or so, I suppose that what he saw then helped to confirm his own judgments on the matter. When he came back from there and put these views in the atmosphere of the left of that time, I suppose that was considerably difficult. I don't remember the 1920s all that well myself, but I know that in Oxford in the 1930s most of the left were denouncing Russell for what he had said in *Roads to Freedom*. But if anybody reads it now—and I recommend anybody to go and do it—they will see that it's a pretty remarkable judgment on Marxism and on the Soviet state and on what has happened subsequently. He saw its dangers much earlier than anybody else, or pretty well anybody else, on the left.

In the interwar years Russell's voice certainly carried—especially to the younger generation. Part of the reason for that rested, of course, on the solid basis of his work as an academic philosopher. About his stature as a philosopher Sir Alfred Ayer is in no doubt:

One thing is his range and the second is the fertility of his ideas; in every field that he approached he came up with interesting and original ideas. For one thing he wrote what probably still is the best introductory book to philosophy. *The Problems of Philo-*

sophy, which came out in 1911. In some ways it is old-fashioned, and people, including myself have tried to write books which supersede it, but I don't think anyone so far has succeeded.

Why, then, did Russell's reputation as a philosopher suffer a decline even in his own lifetime? Partly perhaps it was that his own approach necessarily began to seem dated in the austere era of logical positivism.

It was always difficult to pigeonhole Russell into any normal human category. To his second wife, Dora, with whom he founded one of Britain's first progressive schools in the 1920s, it sometimes seemed as if he was, like Lloyd George, only a 'half-human visitor' from some 'magic and enchanted woods':

I can still see his profile silhouetted, you know, and his hair blowing back, his peculiar profile, his rather receding chin . . . he always looked rather like the Mad Hatter, you know. T. S. Eliot, in that poem he wrote about Bertie's coming to the United States, begins: 'When Mr Apollinax visited the United States, his laughter tinkled among the teacups'. And it goes on to represent him as being a sort of elfin person.

Hardly therefore the kind of individual normally entrusted with the education of the young. And, sure enough, Beacon Hill—the school the Russells started in Hampshire in 1927—soon ran into a blaze of notoriety. Free thought, free expression, free love—to the popular press it soon came to represent a trinity of sin. The attacks on the school particularly infuriated Dora Russell (or Countess Russell as she slightly embarrassedly became when her husband inherited his brother's earldom in 1931); it simply is not true, she insists, that the school had no discipline or control of any kind. Yet the school's family scandalous reputation was hardly helped when, in the early 1930s, Dora, having borne Russell two children, had two further children by another man, and Russell himself started yet another affair, with the children's governess—whom he was to marry as his third wife in 1936. By then, however, Russell had withdrawn from the school, leaving it to Dora to run by herself until, having moved to Essex, it finally closed after the end of the Second World War. In any event, Russell himself hardly devoted all his energies to it—even in September 1927, when the school first opened, he was away on a lecture tour in America.

America, in fact, in his middle age, became very much his sounding-board and stamping-ground; like other British celebrities after him, he made a dead set at the always lucrative American lecture circuit, touring it in 1924, 1927, 1929 and 1931. The by-products tended to be essentially potboiler books, one of which, *Marriage and Morals*, was to return to haunt him when he finally decided, in 1938, to embark on an academic career in America. He went first to Chicago and then to the University of California at Santa Barbara, but trouble only really arose when he was offered, in 1940, a visiting professorship at the state-funded City University of New York. It was an appointment that he was never allowed to take up, for the uncontrolled fury of that city's always influential Roman Catholic community broke over his head. Though the state's Board of Higher Education initially upheld his appointment, Russell soon found himself arraigned before the Bar of Public Opinion for his moral views—an experience about which, it must be said, he contrived to adopt a predictably lofty, disdainful view:

Civilised people didn't mind them, but there was a whole rabble in New York of uneducated Irish people, and they had completely, absolutely ignorant views. There

was a woman who was intending to send her daughter to the College of the City of New York, where her daughter was not going to study mathematical logic, which was the subject I was going to teach. Nevertheless, this woman professed to be afraid that I would rape her daughter or corrupt her in some way by my mere presence in other classrooms in the same university, and on that ground she brought an action.

The woman who brought the action succeeded—the university, in the words of the judge who tried the case, having convicted itself of being interested in 'establishing a chair of indecency'. At the age of 68, Russell with two ex-wives and three children to maintain (his third wife had provided him with a further child) found himself without visible means of financial support. It was probably, none the less, the luckiest break he ever had, for to his rescue there rode an eccentric American millionaire, Albert Barnes, who invited him to lecture at his personal foundation outside Philadelphia.

The relationship was not to be an easy one—indeed by the end of 1942 Russell found himself once again dismissed; but it was while working at the Barnes Institute that Russell wrote and prepared the bulk of the lectures that were later to form the corpus of far and away his most commercially successful book, *History of Western Philosophy*. On both sides of the Atlantic it had a tremendous sale and was to ensure for Russell what he had always previously lacked—financial security.

By now, in fact, he was even threatening to become a respectable person: in 1940 he made it clear through the columns of the *New Statesman* that he renounced his former pacifist convictions and had even gone on to give his active support to the war against Hitler's Germany.

Though he remained in America for the greater part of the war—returning to England only in 1944—he was luckier than, say, Isherwood or Auden, in never having it held against him that he preferred the safety of exile to the perils of the home front. In fact, when he ultimately returned to his native land, it was to take up the 'full' Fellowship at Trinity College, Cambridge, that had always been denied to him. The young man who had been court-martialed and stripped of rank by Trinity College in 1916 was now transmogrified by the unanimous decision of the College Council into its principal academic ornament and public trophy.

Nor was that all: in the whole of Russell's career there is no stranger episode than the five years that followed the ending of the Second World War. Whether it was a reaction against his treatment at the hands of the Americans—or simply joy at a sinner that repenteth—Russell became in effect the prodigal son for whom the fatted calf was prepared. There were official lectures for the British Council and the Foreign Office, the founding BBC Reith Lectureship, talks to schoolboys (including one which I myself heard at Westminster School in which he seemed to advocate preventive nuclear war against Russia); finally, in 1949, the ultimate Establishment accolade—the award of the Order of Merit, by King George VI at Buckingham Palace.

But if the British power structure thought they had finally lassoed and tamed the heir of the aristocratic nonconformist tradition they were soon to be disabused. Not only was Russell by 1952 divorcing yet another wife and marrying a fourth (this time an American), he was also soon reverting to type and rebelling against the conventional wisdom. Undeterred by the award of the Nobel Prize, he chose, though the prize was for literature and not for peace, to make his speech of acceptance into an impassioned plea for the banishing of nuclear fear from the world. Was there

not, though, a contradiction between his new position and that which he had publicly adopted at a time when the Soviet Union possessed neither the H-bomb nor even the A-bomb? Russell himself, with the aid of his logician's mind, remained totally unembarrassed. Had he, in fact, originally advocated a pre-emptive nuclear strike by the West?

It's entirely true and I don't repent of it; it was not inconsistent with what I think now. What I thought all along was that a nuclear war in which both sides had nuclear weapons would be an utter and absolute disaster. At that time nuclear weapons existed only on one side, and therefore the odds were the Russians would have given way. I thought they would and I think that still could have prevented the existence of two equal powers with these means of destruction which is causing the terrible disaster now.

Other members of the Campaign for Nuclear Disarmament found the evident contradiction harder to overlook. A. J. P. Taylor, for example:

I always regarded him as erratic. I remembered the saying in 1948 and had been very shocked by it. On the other hand, it was perfectly characteristic of Russell to go to the other extreme and say, which in this case I think was right, that atomic bombs should never be used, but it didn't impress me that he said it, because I remembered the opposite . . . When we set up the Campaign for Nuclear Disarmament we wanted a distinguished figure and there was Russell who'd spoken out very frankly against nuclear weapons, and he was made President. Like any President of a society, he was meant to be a figurehead—not to come to executive meetings, not to lay down policy, but just to give us his benign blessing and there his name would be at the top of the letter paper. But instead of that, he thought he was much better fitted to run the Campaign for Nuclear Disarmament than we were. I thought he was a frightful nuisance.

By now, there were those ready to say that Russell had become a publicity hunter. He had perhaps first courted the charge when, in 1957, he addressed a joint open letter to Mr Khrushchev and President Eisenhower in the columns of the *New Statesman*. Even in the world of 1957 it was a remarkable initiative for a private citizen to take—but the sequel was even more remarkable. Paul Johnson, then on the editorial staff of the *New Statesman*, describes what happened:

I very well recall looking through the box which was full of all the letters that had come in, and the top letter was about 50 pages long—all in Russian. And I said to the editorial secretary: 'Well, at least we've got one reader in Russia!' She replied: 'If you look carefully, you'll see that that letter is from the Kremlin.' So I did and I went to the end of the letter and there it was signed N. Khrushchev—Nikita Khrushchev.

An answer eventually came, too, from John Foster Dulles, President Eisenhower's Secretary of State. And it was perhaps the success of this original exchange that persuaded Russell, or at least those around him, that he had only to speak for world leaders to listen. At the time of the Cuban missile crisis in October 1962 no fewer than five long cables were dispatched from his remote home in North Wales, including ones to Mr Khrushchev, President Kennedy, and Prime Minister Macmillan (even though the latter two figures had only a year earlier been described by Russell as men 'much more wicked than Hitler').

On 12 September 1961 Russell, at the age of 89, found himself once again in court. He was charged under a Criminal Statute of 1361 with inciting the public to

civil disobedience following a sit-down demonstration in Trafalgar Square by members of the breakaway group of the Campaign for Nuclear Disarmament, the Committee of 100, of which Russell was President. He and his fourth wife were sentenced to two months' imprisonment, but such was the outcry that the sentences were both almost immediately reduced to one week, served in each case in a prison hospital.

Next it was the turn of the Labour Party, to which Russell had belonged for nearly 50 years, to resort to punitive measures. In the summer of 1962 his expulsion from the party was recommended by the National Executive.

In 1965 Russell voluntarily tore up his Labour Party card, anyway, at a public meeting, as a protest against the Labour Government's passive acquiescence in American actions in Vietnam. It was his last great public fling. From the age of 93 he spent almost all his time at his home near Portmeirion. Sir Alfred Ayer visited him there a year or two before his death:

Both his hearing and his eyesight were failing a little bit, so that he was a bit confused in company, but if you talked to him alone he was still absolutely lucid and made jokes and understood what was being said, and retained, I think, until the end a very powerful mind.

A powerful mind, but still a prejudiced one? Paul Johnson is in no doubt:

My last contact with Bertrand Russell was in 1968 when the Russians invaded Czechoslovakia and various people got together to sign a letter to *The Times* which I had to organise. Bertrand Russell signed it, along with a lot of other well-known, famous people, but *The Times* people got on to me and said: 'Don't you think that this ought to be signed Bertrand Russell, and others?'—in other words, bring his name to the top of the list. So I said yes. The next thing I knew was Bertrand Russell ringing me up in a tremendous fury. He said: 'Why should my name be at the head of the list? Why am I not in alphabetical order, like everybody else?' I replied: 'Do you mean you didn't want to sign the letter, Bertie?' And he said: 'Yes, of course I wanted to sign the letter, but why should my name be at the head of the list?' I replied: 'Bertie, I have detected you in a logical error because you were prepared to sign the letter but you're not prepared to sign at the head of the letter!' 'Logical, fiddlesticks!' he replied. I think the truth of the matter was that he wanted to sign an anti-Russian letter but he didn't want to sign a pro-Western letter, because he was so anti-West, and I think that therein lay the origins of his logical dilemma.

Not that Russell was ever one to deny that dilemmas existed even in the world of logic. Indeed as a philosopher he never ruled out the possibility that his own deductions could be wrong, as Sir Alfred Ayer confirms:

Russell was a man, I think, of religious feeling—he had a kind of sense of the mystery of the world and at one time had almost a religious attitude towards mathematics; he was a man of religious *temper*, but he rejected the ideas anyhow of a transcendent deity, an other-worldly deity, a Christian god or anything of that sort, simply on intellectual grounds. There is a famous story that when at one meeting somebody asked him: 'What will you do, Lord Russell, when, after your death, you are confronted by the Deity?' and Russell replied: 'I shall say to him, "God, God, why did you make the evidence for your existence so insufficient?"'

Anthony Howard wrote and presented 'Bertrand Russell: A Reassessment' (Radio 4). The producer was Michael Gandon.

Author Anthony Howard is the Editor of "The Listener".

* * * * *

- (11) Inaccuracies. Last issue we reproduced some popular accounts of BR (RSN25-16,17), and invited you to let us know if you noticed any inaccuracies. BOB DAVIS found some; he also agrees with (and adds to) some of the statements. In the following, the original statements are underlined, Bob's comments are not.
- (11a) In "Anatomy of Some Celebrated Marriages", a section in "The People's Almanac #2" by David Wallechinsky and Irving Wallace (1978) (RSN25-16b):
- Lord and Lady Russell hit the roof when he told them about the engagement.
Lord (John) Russell could hardly have objected to the engagement to Alys, as he was dead. He died when BR was 6.
- To dissuade him further, they called the family doctor...to tell Bertie about the history of insanity and instability in the Russell Family. His aunt was subject to hallucinations, his uncle was mad, and his own father had been an epileptic.
Apparently all those nasty thing were said, and were correct. BR's first son, John, has the hereditary schizophrenia, as do John's daughters, one of whom killed herself by setting herself on fire.
- Bertie agreed to go to Paris. The family sent his older brother along to keep tabs on him.
I'm not positive but I don't think Brother Frank was sent to keep tabs on BR. Frank was off on his own career, which included several marriages — a British court later found him guilty of bigamy — and he was too self-centered for that kind of assignment.
- After the wedding, Lady Russell notified her grandson in a pleasant but cool letter that he had been disinherited. Lady Russell did not disinherit BR, but he was treated coldly after this.
- Though Alys had in theory defended free love whenever she had the opportunity...she considered sex dirty... She believed that intercourse was strictly for propagation...and they had already decided to remain childless... But Bertrand wasn't having any of that nonsense... He reported later that they caught on fast. They caught on so fast that BR says he suffered from sexual fatigue at the end of 3 weeks.
- (11b) In "I_nside The Nobel Prize Awards", a section in "The People's Almanac #2" (RSN25-16c):
- ...the orphaned infant was brought up by his grandfather (twice Prime Minister under Queen Victoria.) BR was raised by his grandmother, because, as mentioned above, his grandfather had died when BR was 6.
- ...he wrote over 40 books...
He wrote over 70.
- This activist's activities were always getting him into trouble and even into jail (for opposing conscription in 1918...)
BR was sent to prison, not for opposing conscription (which he did oppose) but for writing an article in which he said the American Army was accustomed to intimidating strikers. The war was on, and the British Government felt that BR's statement might prejudice relations with America; BR was sentenced to 6 months.
- In 1940 New York's City College went to court to annul his appointment (to teach at City College.) City College did not go to court. The lawsuit (which annulled the appointment) was a private action brought by a mother whose daughter was going to attend City College.
- (11c) In "Atheists and Agnostics", a section in "The People's Almanac", same authors (1975)(RSN25-16d):
- Lost Labour Party support when he stood for Parliament in England and a Fellowship at Trinity College because of religious beliefs.
He lost Liberal Party support (1910). And he lost the Fellowship because of his 1916 conviction (for writing the "Everett Leaflet" against conscription) and for his pacifist work.
- (11d) In "The 100 Most Important People in the World" by Donald Robinson (1970)(RSN25-17):
- He was so rabid at times that many people felt he had become a captive of the Communists in his very old age, and it may well have been true.
I don't think the idea that BR was a captive of the Communists is credible.
- ..."The Problems of Philosophy", in which he laid the groundwork for the evolution of modern realism;...
I don't think it can be said to have laid the foundation for modern realism. It is simple and popular. BR called it his shilling-shocker.
- But in his last decades he came under the influence of an unsavory pro-Communist American who turned him into an apologist for the Soviet Union and her allies.
He was never a Soviet apologist.

She (Alys) divorced him...
He divorced her.

Upon his brother's death in 1931, the philosopher became the Earl Russell of Kingston Russell. He doesn't use the title.

He didn't use the title professionally, that is, on his books and articles, but he used it socially. In the Wyatt interviews, he is addressed as "Lord Russell". Ayer's autobiography reports on BR defending the title.

There are also some slightly incorrect dates:

- . "History of Western Philosophy" was published in 1945, not 1946.
 - . BR was sent to jail (a second time) at age 89, not 88.
 - . The 3rd divorce (from Peter) was in 1949, not 1952, though it may have taken till then before it became final.
-

BR POPULARIZED

- (12) Instant philosophy. The American Association of Retired Persons' bi-monthly publication, "Modern Maturity" has -- in its April/May 1980 issue -- a 5-page article, "Introduction to Philosophy. The Meaning of Life" by Graham Berry. In 5 pages it covers all of philosophy from Thales ("636? -546?") to Wittgenstein (1889-1951). Actually the text is even shorter than 5 pages, since the pictures of 10 philosophers -- BR is one of the 10 -- are included in the 5 pages. This is what it says about BR:

Continuing the preoccupation of British philosophers with science, Bertrand Russell (1872-1970), Nobel prizewinner in literature and a noted mathematician, set out to translate philosophy into the clear-cut language of mathematics. He found that Christianity could not be phrased in mathematical equations and abandoned all but its moral code.

Says JOHN TOBIN, who told us about all this: "I do not believe it sizes up Russell correctly." We agree.

In fairness, let it be said that the article is a sort of philosophy sampler for senior citizens. It aims to induce them to read books on philosophy -- it names several -- or to take a course at the Institute of Lifetime Learning.

BR QUOTED

- (13) In "The San Francisco Chronicle" (3/29/80), in L. M. Boyd's column, "Grab Bag":

"A happy life must to some extent be a quiet life," observed Bertrand Russell, "for it is only in an atmosphere of quiet that joy can live."

(Thank you, TERRY ZACCONE)

- (14) In "The Los Angeles Times' Home Magazine" (3/30/80), in Alfred Sheinwold's column on bridge:

Bertrand Russell defined mathematics as the science in which you don't know what you're talking about nor whether what you say is true. Mathematicians make good bridge players.

This is BR quoted and misquoted. BR didn't define mathematics this way; rather, he made an observation about mathematics. His remark is both funny and true, i.e., witty.

(Thank you, JOHN TOBIN)

- (15) In "Forbes Magazine" (3/17/80). This is the 2nd month in a row that Forbes is quoting BR. Clearly BR's star is rising in the world of business!

The secret of happiness is this: let your interests be as wide as possible, and let your reactions to the things and persons that interest you be as far as possible friendly rather than hostile.

(Thank you, WHITFIELD COBB)

- (16) In a "Unitarian Universalist" newsletter. We thank OPHELIA HOOPES for this one, which she says comes from "Sceptical Essays" (1928):

William James used to preach the Will to Believe. For my part, I should wish to preach the Will to Doubt. What is wanted is not the will to believe, but the wish to find out, which is the exact opposite.

BERTRAND RUSSELL MEMORIAL

- (17) The appeal for funds from London — to help pay the cost of the memorial bust of BR to be placed in the gardens of Red Lion Square, London — was distributed by us to about 25 publications. "The New York Review of Books" ran the appeal in its April 17th issue; "The Humanist" will run it; and one or more scholarly journals have run it. The results to date have been pretty thin.

Nor have BRS members responded in great numbers. Consider this situation:

Here is Russell, a man who inspires the most intense devotion. We know (because you have told us) that many of you feel greatly indebted to him...are grateful that he lived, and acted, and wrote...and liberated you from something or other...or opened your eyes...or fortified you...or untangled things...or gave you a new vision ...and reassured you, by his own example, about the human spirit.

And here is an opportunity to pay homage to this man you owe a lot to, by translating your feelings of gratitude into concrete action.

Philip Stander is one who has done so, and he summed it up well when he made a contribution; he said it was made "with gratitude for all that Russell has given on behalf of humankind."

Act now, so that when the bust is unveiled in Red Lion Square, you will know that you helped put it there, with your contribution.

You can send your contribution directly to London (RSN25-22), made out to "Bertrand Russell Memorial".

To make your contribution tax-deductible, send it — made out to "The Bertrand Russell Society, Inc." — to RD 1, Box 409, Coopersburg, PA 18036. A BRS check will be sent to London, and all contributors will be named.

Peter Cranford has suggested a contribution of \$3 (4), but some members will no doubt wish to do more than that.

There will never be another opportunity quite like this one, to pay your respects to Russell's memory.

Act!

- (17a) Some members have already acted. We are glad to report that the following members have already contributed to the Russell Memorial: ADAM PAUL BANNER, LEN CLEAVELIN, PETER CRANFORD, BOB DAVIS, LEE EISLER, DON JACKANICZ, CORLISS LAMONT, JOE NEILANDS, BILL PASTOR, PHILIP STANDER.

NUCLEAR AFFAIRS

- (18) "Nuclear Disaster in the Urals"? Yes. No. Yes. First, there was a book by this title, by Zhores A. Medvedev. A review of the book, in "Publishers Weekly" (6/28/79) and Medvedev's letter to Joe Neilands are reproduced in RSN23-14. Second, there was a science article in "The New York Times" (10/30/79) disputing Medvedev's claim that a nuclear disaster had occurred in Russia (in 1956) (RSN24-6). Third, a later story in "The New York Times" (3/8/80) says Medvedev was right. We reproduce it at the top of Page 10. (Thank you, JOE NEILANDS)

- (19) A Sunday newspaper-magazine shocker that really shocks. The following appeared in "Parade", in the Allentown (Pa.) Call-Chronicle of 3/9/80:

Frightening Quotation From Dr. George Kistiakowsky, emeritus professor of chemistry at Harvard, former head of the explosives division of the Manhattan Project (atom bomb), science adviser to President Dwight Eisenhower, and one of the world's most knowl-

edgeable scientists on nuclear weapons: "Given the present geopolitical trends and the quality of political leaders that burden mankind, it would be a miracle if no nuclear warheads were exploded in anger before the end of this century and only a bit smaller miracle if that did not lead to a nuclear holocaust."

Science adviser George Kistiakowsky with President Eisenhower in 1960

Item 18 continued. From "The New York Times" (3/8/80):

The Editorial Notebook

The Lesson of the Poisoned Urals

While Americans argue over the odds of a nuclear accident, the Russians already know what such an accident can be like. They apparently suffered one more than two decades ago — an explosion of nuclear wastes at a weapons production complex in the Ural Mountains.

The incident was first revealed in 1976 by Zhores Medvedev, an exiled Soviet geneticist living in London. His story was promptly denounced as a fraud by Western nuclear and intelligence experts who noted, correctly, that it was based on rumors. Yet everything learned since suggests that Dr. Medvedev was essentially right.

Discovering the truth has required scientific detective work. Superficial confirmation came quickly: other exiles said they knew of a large area in the Urals contaminated by radioactivity. Documents pried loose from the C.I.A. by Ralph Nader reported rumors of major accidents at a secret weapons complex there. Then Dr. Medvedev, determined to clear his reputation, combed through Russian scientific journals and found scores of articles about heavy radioactive contamination of land, water, plants and animals. He deduced that they actually described the aftermath of an explosion of nuclear waste that killed hundreds, hospitalized thousands and poisoned hundreds of square miles.

Nuclear Accidents Really Can Contaminate Large Areas

Experts still disagree with him over the cause and extent of the accident. But two recent studies by American laboratories confirm that the Ural accident almost certainly occurred. One argues (rather implausibly) that the area was contaminated by fallout from a nuclear weapons test in the far-away Soviet Arctic. The other, conducted by environmental scientists at the Oak Ridge National Laboratory, agrees with Dr. Medvedev that nuclear waste was the problem.

It suggests that a powerful chemical explosion ruptured one or more waste storage tanks, spewing a radioactive plume 40 or more miles in one direction and releasing liquids that contaminated lakes and rivers in another. At least 40 square miles were poisoned, and perhaps 400 square miles were affected. A comparison of maps made before and after the accident indicates that the Soviets evacuated some 30 small communities and built a reservoir and canal system to hold back contaminated water.

How many people died is uncertain.

Dr. Medvedev had cited reports of thousands, dead or injured; the Oak Ridgers doubt there were severe injuries beyond the site of the accident.

Is any of this relevant to America's nuclear safety debate? The waste storage techniques that blew up on the Russians have apparently never been used here. Nor, almost certainly, did the accident involve reactors, the chief concern here after Three Mile Island. Yet the scientists at Oak Ridge do not completely dismiss the accident as a freak, with no chance of recurring.

Radioactive discharges can contaminate large areas and require long evacuations and vast engineering projects to limit the damage. The accident in the Urals thus underscores the wisdom not only of careful emergency planning but also of locating any future nuclear facilities — whether civilian reactors or weapons factories — far enough out in the hinterland that no accident can do much damage.

The C.I.A. knows more than it has revealed about the accident; it could assist emergency planning by releasing the pertinent documents. But only the Soviets know exactly what happened and which corrective measures worked best. Their knowledge, which could help other nations avoid a similar disaster, is worth bargaining for.

PHILIP M. BOFFEY

RELIGION AND ITS ADVERSARIES

- (20) Evolution vs. Creation. The Campus Crusade for Christ is sponsoring a "debate-like panel discussion", scheduled for March 19th, at San Diego State University. The crusade people would like the Biblical story of Creation taught in high school science classes along with the theory of evolution.

There will be speakers from the Creation Science Research Center (sic) as well as from the AHA, etc.

"The contention of the pro-creationist speakers will probably be that evolution is the religion of secular humanism in the public schools and so should be balanced with the religion of the creationists," says "The San Diego Humanist" of March 1980 — which is published by the Humanist Association of San Diego (953 Eighth Avenue, Suite 208, San Diego, CA 92101.)

We'll report on the "debate" in a future issue.

Query: Would a dedicated creationist (is there any other kind?) be willing to have the Biblical story of Creation taught as theory (a possibility) rather than as fact (a certainty)?

- (21) Lavanam. From "The Humanist Quest for Truth", March 1980 (which is published by the Brighton, Colorado chapter of the AHA, PO Box 625, Brighton, CO 80601):

Lavanam is anxious to visit the United States again this year to promote the World Atheist Center. Donations towards his fare should be sent to Dr. George Willoughby, 4722 Baltimore Avenue, Philadelphia, PA 19143. If you would like Lavanam as a speaker, phone Dr. Willoughby at 215-727-2671. He is a force for uniting non-believers and an extremely interesting man. We are happy to report that his Atheist sister has been elected to India's Parliament.

THE SCIENTISTS AND THE REST OF US

- (22) Joe Neilands was one of the speakers at a Nobel Symposium on "Ethics and Science Policy" held in August 1978 at the Royal Swedish Academy of Sciences (RSNI9-12). He spoke on the scientist's responsibility to communicate with those outside the scientific community. We reproduce his talk, next page. For the benefit of new members:

Joe — Professor of Biochemistry at UC Berkeley — is a founding member of the BRS, and was Chairman of the BRS Science Committee for its first 5 years.

COMMUNICATION WITH OTHERS— THE SCIENTISTS' RESPONSIBILITY

J. B. NEILANDS

Biochemistry Department, University of California, Berkeley, California, USA

Introduction

There are many reasons why I have looked forward to this Symposium with keen anticipation. Within the United States, public support of scientific research appears to be entering another crisis in which people are questioning the value of the money spent. At least this is true of cancer research, an activity which up until now has been well funded, as epitomized by the statement 'more people are dying off cancer than are dying from it'. I have looked forward to this opportunity to exchange ideas with social scientists and with other natural scientists, since I have often wondered if my chosen profession has been of any net value to humanity. Finally, this meeting has provided a forum at which I can describe some of my own experiences in working at the interface between science and society.

California is perhaps an overdeveloped corner of the globe, and hence my report will be a 'burp from the belly of the beast'.

At a symposium of this type we should be satisfied if we can define the problems, make contacts with others, and evaluate any plans or suggestions for remedial action.

It will be assumed in what follows that the research scientist has a special responsibility for misdirected technology, simply because it is we who preside over the wellsprings of knowledge in this arena.

The problems

It is inherent to the nature of basic research that its ultimate impact on society cannot be predicted with any degree of accuracy. Consider, for example, the work of the organic chemists of the previous century who first extracted from plant sources and characterized the simple chemical substance styrene. As the years went by, other chemists found out how to polymerize this molecule into a plastic, polystyrene. This polymer enjoys very wide application in industry. The delicate apparatus which arrives at the loading dock of our building is usually packed in it to prevent breakage, and it is used on a massive scale as an insulator and for numerous other domestic purposes. Apart from a general objection to the industrial way of life, there is no really serious quarrel with these uses. On the other hand, when the Second Indochina War began in earnest, there was a sudden requirement for a large volume of napalm^{1, 2}. Polystyrene was examined and found to be well-suited for the manufacture of napalm. In the formulation known as napalm B, the type commonly used in Indochina, it constitutes fifty percent of the bulk of the material. So much polystyrene was diverted to napalm in those years that there was a shortage of certain other items, among which were certain small dishes which we use for the culture of bacteria.

Should we hold the early organic chemists responsible for the development of that hideous weapon, napalm? Naturally not; but the point is well made here that it is impossible to peer into the future and to predict the ultimate uses of any piece of fundamental research. The basic research I have in mind is not to be confused with that concerned with applied aspects of weapons development, experimentation on human subjects without consent, etc.

Since we cannot foresee the eventual uses of the knowledge which we create it would seem incumbent upon all natural scientists to devote at least a portion of his/her time to the humanization of the profession. There are so many problems in our contemporary society that one must perforce be selective, and I have hence concentrated on two aspects which I believe to be of overriding significance, namely, *militarism* and *environmental degradation*. Alternatively, this hierarchy of priorities could be restated as *survival* and the *quality of life*.

Militarism

A study of the history of arms development teaches us that those weapons which are made are eventually used on the battlefield. This includes the atomic bombs of the type deployed at Hiroshima and Nagasaki, which, as we all know, were really primitive weapons by the standards of today. Strong pressures were undoubtedly applied for the use of nuclear weapons in the recent Indochina wars. Only the combination of a diffuse, unsuitable target and excessive international political costs appear to have deterred this ultimate obscenity on the part of the Johnson-Nixon regimes.

Over the past three decades, nuclear weapons development has 'progressed' through the atomic and hydrogen bombs, to exotic delivery systems, to the latest refinement, the enhanced radiation (neutron) bomb. The nuclear arms race seems, in general, to have

been initiated by the USA, with the USSR playing the game of 'catch-up'³. Other nations, for less than obvious reasons, have felt compelled to join in this race to extinction. Nuclear power reactors, designed for the generation of electricity, have been instrumental in the dissemination of fissionable material around the globe.

The life-threatening hazards of atomic weapons can be relegated to two classes, i.e. instant devastation or a more gradual extermination based on the after-effects of ionizing radiation.

An equally important reason for ending the arms race is connected with its social cost. A recent report by the US Arms Control and Disarmament Agency (ACD) reveals that world expenditures for military purposes in 1976 touched 400 billion dollars. This can be calculated to be the better part of a million dollars per minute. *In the USA, the size of the military budget determines, by difference, the budgetary allocation for all other departments and programmes.* The US ACD report also contains the distressing news that arms exports and imports are on the increase and that spending for military purposes in the Third World is rising sharply.

After he assumed office, President Carter told the world that one of his objectives would be to rid the earth of nuclear weapons. However, he did not appear personally at the recent special session of the United Nations on disarmament, which concluded:

'The time has come to abandon the use of force in international relations and to seek security in disarmament . . . The hundreds of billions of dollars spent annually on the manufacture or improvement of weapons are in sombre and dramatic contrast to the want and poverty in which two-thirds of the world's population live . . . Mankind is confronted with a choice: we must halt the arms race and proceed to disarmament or face annihilation.'

Since the tentacles of the military budget extend to every hamlet in America and account for the employment of large numbers of workers, it is futile to call for an immediate reduction in spending *per se*; rather, some of the money should be allocated to research and development in benign technologies, such as solar energy. This was the thought behind the Transfer Amendment to the Military Appropriations Act, an initiative promoted by the Women's International League for Peace and Freedom and other groups. While it failed of passage this year, the amendment received substantial support in the Senate and will undoubtedly be tried again in future years.

Environmental degradation

While the insane weapon systems and the exorbitant expenditures for arms that can never be used and which only enhance the insecurity of nations must be the primary target for elimination, we should not lose sight of another process by which the human race and its civilization could be terminated. I refer to the industrial mode of life, with its attendant, inevitably negative impact on the integrity of the biosphere and the quality of the life-support system of the planet^{4, 5}. Industrialism is a disease which is rampant in our society, east and west. Thus, man persists in searching for new sources of energy, such as fusion reactors, apparently without considering that the process itself may result in excessive heating of the earth and a radical change in climate, to say nothing of the accelerated rate of depletion of the natural resources connected with the use of such large reservoirs of energy. Just as with a thermonuclear exchange on a large scale, the unremitting pursuit of industrial development will, with equal certitude, bring us to the same level of degradation—only the timetable is different.

Ultimately, the sun will have to be accepted as the sole energy source for all domestic and industrial needs. The particular type of political organization adopted will be predicated in the first instance by its environmental compatibility. This means a decentralized, fully recycling sun-driven economy based exclusively on bio-elements and materials.

The response

Both of the salient problems which I have outlined above; namely, *militarism* and *environmental deterioration*, arise from technology, which, in turn, is rooted in scientific research. It is part of the inevitable 'peril and promise' of science. The basic researcher cannot escape responsibility for this situation, since, as we have seen, even the most obscure investigation can lead in the end to negative applications. However, at least within the USA, the academic researcher, if properly motivated, has recourse to an alternative behaviour which may perhaps help to redress the balance. Herewith some personal examples, drawn from the three sectors of our duties; namely, *teaching*, *research* and *public service*.

Teaching

In drawing attention to weapon systems, I have naturally stressed the nuclear variety as pre-eminent in their possible and probable impact on the biosphere and the works of man. Here the physicist has an opportunity to bring the bomb into the classroom, at least to the extent of describing both the principles of its operation and the biological and physical consequences of its use. This is not difficult to do at my own institution, the

University of California, From the time of the Manhattan project, there has been an intimate relationship between the Berkeley campus and the bomb. Every nuclear device designed in the USA bears the *imprimatur* of the University of California via our administration of the federally-owned facilities at Livermore, California and Los Alamos, New Mexico. For this, the University receives a few million dollars; in return, a thin veneer of academic gloss has been applied to the weapons programme of the Pentagon. My colleague in the physics department, Charles Schwartz, has given vigorous leadership to a movement seeking to end the alliance between the University and the Defense Department.

The biological scientist has a corresponding opportunity and responsibility to impart the correlation between biology and the needs of the military, a connexion which did not escape the attention of industry. Thus, nerve gas weapons can be demystified by pointing out their mode of action and by using them, in biochemistry, to help explain the catalytic activity of enzymes of the proteolytic variety.

Since the student revolution, beginning at Berkeley in 1964, very few changes have been instituted into the academic structure. However, it has become easier to initiate courses and to teach controversial subjects. Thus, in biochemistry we have a course, 'Biochemistry and Society', which is concerned with herbicides, pesticides, food additives, drugs, etc. I have taught this course for a number of years and have made it a strict rule to have at least one lecture on weapons or on some aspect of the military infrastructure.

Research

It is perhaps more difficult to orient a basic research programme in an applied direction but, according to Bruce Ames, who developed a simple bacterial test for mutagenesis-carcinogenesis, with a little imagination it can be done. My own research is concerned with the mechanism whereby microbial cells take up the inorganic nutrient, iron. One would anticipate, *a priori*, that the societal impact of this particular research theme would be very slight. Not so. Let me give a few examples.

It turns out that when microbes are starved of iron they fight back by elaborating special chemical substances, called siderophores, which have an outrageously high affinity for iron. Over two decades ago we discovered how to induce microbes to make practical quantities of these substances, with the result that several dozen have been thoroughly characterized as chemical entities and a few have found their way into the clinical laboratory. In certain types of anaemia, the patient can be kept alive by constant, periodic transfusions with whole blood. Eventually, however, since there is no biological mechanism for eliminating the accumulated iron, the individual dies of iron poisoning. Thus, the siderophores of microbial origin show promise as drugs for the treatment of transfusion-induced siderosis. The National Institutes of Health, Bethesda, Maryland, have an active programme of support for the development of suitable drugs of this type, and my laboratory has been the beneficiary of such support for a number of years¹.

By a quirk of coordination chemistry, ferric ion and plutonium (and related transuranium elements) prefer to bind to the same type of organic molecule (ligands). As expected, siderophores display a very high affinity for plutonium and may be useful for the excorporation of this element, which is, on a weight basis, the most toxic inorganic substance yet discovered. Since siderophores are generally produced by microbes living in the water and soil of the surface of the earth, and since the presence of siderophores in such sources can readily be demonstrated by applying sensitive biological tests, the movement of the transuranium elements through the food chain may be promoted by these microbial ligands, which are intended for iron. Recently, I have become a consultant to Batelle Northwest, a contractor for the Department of Energy located near the Hanford Reservation on the Columbia River, which is investigating the role of siderophores in the transport of plutonium in the soil.

Public service

In addition to teaching and research, the usual American academic person is expected to perform in another, vaguely defined, frequently ignored category designated 'public service'. This has sometimes been interpreted to be consulting to government or industry. In any controversy with a major scientific or technological dimension, the public often goes unrepresented because the experts have been hired away by the special interests.

In the early 1960s I became aware of the plans of a local utility company to place a nuclear reactor on a particularly scenic stretch of the California coast in Sonoma County, some fifty miles north of San Francisco. The site was to have been taken over for the construction of a marine laboratory by the University of California, but the latter, which had close ties with both the power company and the Atomic Energy Commission, promptly abandoned the site to industrial development. Together with Harold Gilliam, a local writer, Joel Hedgpeth, a marine biologist, and Karl Kortum, curator of a maritime museum, I organized an association to preserve the area, known as Bodega Head and Harbor, in its native form. It was remarkable that at Berkeley, the epicentre of nuclear knowledge, we could find not a single reputable scientist to testify to the hazards of the nuclear process as a means of generating electricity. Eventually, the

project was scrapped, ostensibly on the grounds that the site was too close to a major earthquake fault line (San Andreas), but in reality, I believe, because of public indignation. The old Atomic Energy Commission, later Research and Development Agency and now Department of Energy, was supposed to be neutral in the matter but was, in reality, a vigorous advocate of the reactor behind the scenes.
